Alcohol is formed from sugar by the action of the yeasts, a unicellular organism which excites fermentation in saccharine solutions. A molecule of sugar is thus split up into alcohol and carbonic acid (along with some collateral products). The term 'alcohol' is applied to the ethyl alcohol-sugar mixture of the alcoholic liquor which is thus formed (apart from the amount of sugar present); when alcohol reaches a strength of 16 p.c. by volume, it stops further fermentation. Most 'natural' alcohols, such as claret, contain only from 8 to 12 p.c. alcohol, as it is but rarely that the grape-juice is sugary enough to allow of the formation of alcohol to the highest possible extent. Stronger wines, such as port and sherry, are 'fortified' by the addition of alcohol. It should be noted that mankind has in all ages made naturally fermented drinks from any available material. By more complicated processes, beer or ale is produced either from barley-malt or some substitute, the strength in alcohol varying from 3 p.c. or less up to 8 or 9 p.c. The strongest drinks, such as brandy, whisky, rum, gin, and liqueurs, are manufactured with the aid of distillation.

1. Physiological effects of alcohol.—Alcohol is a poison for protozoon, that is, for the soft plastic material which is the essential constituent of every one of the minute cells that make up living organisms. The extreme limits of their sensitivity to the poisonous effect in very dilute solution is easily shown on lowly organisms (Ridge, Med. Temp. Reviev, 1898, vol. i. p. 148; Woodhead, 'Path. Observations on the Action of Poisonous Substances,' pp. 52-56), and the more finely organized cells are most susceptible (Overton, Studien über die Narkose, Jena, 1901). Let us briefly trace the effects of alcohol when taken into the human body in moderate doses.

(1) With the feeling of warmth in the stomach, there is an increased secretion of gastric juice such as is produced by any irritation. Of the two constituents of the gastric juice, it is not so much the pepsin as the hydrochloric acid that is thus secreted, and recent research indicates that the digestive quality of the secretion depends very largely on the nature of this substance. Hence it is probable that this secretion of the surplus acid will aid. By quickening the movements of the stomach and intestines, it helps the expulsion of gases. If taken in concentrated form or in too great quantities, it readily irritates the more delicate parts of the alimentary canal; and frequent repetition of such doses is apt to bring on gastric catarrh.

(2) Alcohol passes in about 15 minutes into the blood-stream. It dilates the blood-vessels, is readily diffused through the various tissues; it forms a compound with the colouring matter of the blood which takes up and gives off oxygen less readily (Woodhead, l.c. p. 57). Hence the normal changes in the tissue cells are interfered with, and this is one of the causes of the anaemia in certain alcoholics. The waste products are apt to be retained too long by the cells.

(3) The nerve-cells of the brain, the most highly organized and delicate of the tissues, are very early shown to the effect of alcohol. Many of the best observers of their own mental processes, such as Helmholtz and Huxley, have expressed themselves strongly as to the harmful effect of minute doses of alcohol on the brain, and it is a fact that the 'stimulating' effect is really due to paralysis of the very highest nerve-centres, so that cheerfulness, wit, and recklessness have freer play. Large numbers of psychometric experiments under conditions of the greatest accuracy prove that alcohol in small dietetic doses exercises a distinctly paralyzing effect on the working of the brain. Some mental processes are quickened for a short time, and then a retarding effect shows itself, which is prolonged and much more than ceases the apparent beneficial result. With the early facility there is apt to be loss of accuracy (Horsley, 'Effects of Alcohol on the Human Brain,' Brit. Journ. of Insane., Oct. 1886), and it is in a number of experiments, either of a slight intoxication may last from 24 to 36 hours (Fürer, Transactions of the Internat. Anti-alcohol Congress, Basel, 1906). The effect of the regular consumption of alcohol—say 1 to 2 litres of lager beer per day—is distinctly prejudicial to all kinds of intellectual effort (Kürz and Kraepelin, Psychol. Arbeiten, 1900); and in general the more difficult mental operations are more impaired than the easier. As for the idea that habituation produces a certain immunity to alcohol, this is probably due to a blunting of the nerves. Such a result is apt to be associated with a dangerous tendency to augment the dose in order to experience the agreeable effect, just as it is with morphine (Kraepelin, Mediz. Mediz. Woche, 17th April, 1906). Experiments on the sensory functions (sight, hearing, simple touch, etc.) show, from the first, diminution in accuracy and rapidity. The motor functions of the body are generally influenced with favour by alcohol at first (Frey, Alcohol und Muskelerkrankung, Leipzig, 1903; Schneyder, Pilger's Archiv, 1903; Destrec, Journ. Médi. de Bruxelles, 1887); the amount of work is increased, and is more easily performed; but after a brief period extending at most to 20 or 30 minutes, there comes a prolonged reaction, so that the total effect is distinctly disadvantageous. The popular belief that alcohol strengthens and increases working capacity is accountable for a vast amount of drinking among the working classes.

(4) The effect of alcohol on the circulation (Monro and Findlay, 'Critical Researches on Alcohol and the Cardio-Vascular System,' Med. Temp. Rev. 1903-1904; Abel, 'Pharmacological Action of Ethyl Alcohol,' Med. Temp. Rev. 1904-1905) is to cause first a dilatation of the small vessels, especially of the skin, showing itself in a redness of the face and a feeling of warmth. A slight acceleration of the pulse is frequently, but not always, produced by small doses, but the average for the whole day may be lowered. In the case of low blood-pressure, alcohol will not raise it. On the whole, experiments show that alcohol does not
ALCOHOL

strengthen the heart, but rather the reverse. They may be a short stimulating effect through reflex action just after its administration. Large doses are strongly depressive.

(5) The tissues, we have seen, have their oxidation interfered with by alcohol. There is, further, increased loss of heat from the body, with lowering of temperature through the dilatation (paralysis) of the blood-vessels. Hence comes quickened and deeper respiration, so that alcohol is indirectly a respiratory stimulant (Binz, Therapie d. Gegenw.ter, 1899).

(6) The nutritive value of alcohol is still the subject of keen discussion (Rosenmann, Pfijifer's Archiv, 1901, vol. 86, also vols. 94, 95, and 100). All admit that large quantities of alcohol are poisons, and it would seem that the most minute doses that have any demonstrable effect act prejudicially on the nervous tissues. Still it is conceivable that in other ways alcohol may be serviceable to the body. In small doses, from 90 to 98 p.c. is oxidized; heat is thereby produced, and alcohol, it is said, can thus take the place of other materials, such as fat or carbohydrate (Atwater and Benedict, Experiments on Nutrition, 1894; Atwater and Benedict, Washington, 1898). The same may be said about glycogeen, or fusel oil (amylie alcohol), whose total effect is distinctly poisons. Alcohol can neither build up new nor repair the tissue and blood, as the action is that it has in producing energy is probably much more than counterbalanced by its poisonous effect, either directly or by means of intermediate products, while the tissues are dealing with it (Schäfer, Text-book of Physiology, vol. 1, p. 882). This conclusion of physiological science is in harmony with the experiences in actual life of army leaders, travellers, climbers, employers of labour, etc. The good effects of alcohol are similar to those obtained from other more or less dangerous stimulants and narcotics.

2. Acute alcoholism (Intoxication).—When enough alcohol is taken to produce intoxication, judgment, self-control, perception, and the other higher faculties are affected first. With greater facility in thought and speech, there is a certain disregard of the environment; a quiet person may become lively and witty, untamed connotations are given, and there may be assertiveness and quarrel-someness. Singing, shouting, and other noisy demonstrations indicate the free play of the emotions; then comes motor impairment, shown by irregular gait, staggering, deepening of the voice, muscular paralysis, and even coma may supervene; the temperature may become dangerously low, and in the worst cases respiration and circulation may be paralyzed. Short of this, after 6 to 12 hours the man awakens from his drunken sleep with furred tongue, loss of appetite, thirst, flushed face and eyes, headache, and mental confusion. These phenomena vary according to the amount, strength, and purity of the liquor, the time occupied in consumning it, and the stability or resisting power of the person imbibing. Persons with a special cerebral susceptibility may develop wild maniacal excitement or melancholy, delirium. Such persons may suffer from an insane or alcoholic heredity, epilepsy, injuries to the head, or antecedent insanity. An automatic dream-state, in which complicated, it may be criminal, actions are performed under unconscious influence. Such actions are induced by acute alcoholism (Sullivan, Alcoholism, pp. 41-45).

3. Chronic alcoholism.—Excess has been defined as the taking of an amount of alcohol which the body can completely dispose of in 24 hours, but a complete definition must include cases where any permanent mischief is produced during a lifetime. Since 1854, when Anstie declared 1 oz. of absolute alcohol to be the physiological limit, the tendency amongst scientific writers has been steadily towards reduction of this. Abel (loc. Sept. 1905, p. 275) concludes that the "moderate" or average permissible quantity of alcohol is represented by one, or at most two, glasses of wine a day.
mental tone, and loss of self-control may become so marked as to require asylum treatment.

The more forms of alcoholic inebriety, the more alcohol may be the exciting cause in various forms of mental disorder. It is probably the most powerful predisposing factor, after syphilis, in the production of mental abnormalities (Br. Med. J., April 1900) argues that 80 p.c. of cases of general paralysis of the insane occur if alcohol were eliminated from the world. The exact percentage of alcoholism to mental disease is somewhat difficult to ascertain, owing to varying ways of computing the probations for conclusions. In the past the patients' history. From 15 to 20 p.c. of the insane are thus accounted for. Of late years this per centage has tended to increase, especially in large cities (Clouston, Mental Disease, p. 483). The proportion of women to men thus affected is in Italy 1:1.5 to 1 (Dickinson, Journ. Nervous and Mental Disease, 1908, Year Book City 1 to 2, in Paris and Edinburgh about the same. Taking Great Britain all over, the proportion of women to men is about 1:2.5, significant evidence of the amount of drinking amongst women in this country (Hoppe, Tattonden, p. 274 ff.; Kovnatre and Sherwood, Temp. Problem, Appendix, p. 460).

Allowance must be made for the likelihood that many who succum to alcohol would in its absence break down mentally in some other way, in virtue of their unstable nervous system, and it has been noted that the habitual inebriates of the London police courts rarely become certifiably insane (Carwell, Scotted Med. and Surg. Journ., 1903, ii. p. 255). Genuine epilepsy may be produced by alcohol; if present already, it is likely to be made worse by drink. Not seldom one sees cases of epileptic convulsions coming on after a long course of inebriety; they are induced by a specially strong drink and are usually not severe. Not the least remarkable is the fact that other divisions of the nervous system, are very apt to be damaged by chronic alcoholism. Most characteristic is myasthenia gravis, in which the muscles are overstretched and advanced upwards if the cause persists, till a fatal result occurs. There are also changes in sensation, e.g., loss of the needless, pins, and economies, and diminished sensibility to touch; there is loss of power going on to complete paralysis, and there is mental deterioration. The disease may be brought on by alcohol in any form; it is often associated with the excessive drinking of wine. It is much exaggerated; small quantities of arsenic, as was shown in an epidemic which occurred recently in Liverpool, Manchester, and other towns in the north of England. The cause here was the excessive drinking of beer manufactured from invert-sugar, in which arsenic was found in greater quantity than in wine. The idea that acute cord affections are caused or aggravated by chronic alcoholism.

4. Tissue changes caused by alcohol.—Most of the disorders that we have been describing and the changes caused by the tissue itself, are associated with pathological changes, easily recognized through the microscope. The various parts of the body are able to recover from the poisonous effect of even a large dose of alcohol. And, so far, the functional disturbance in the cell eludes the best methods of examination that we possess. If, however, the poisons dose is repeated indefinitely, there comes a time when organic changes occur, and these are usually irremediable. The microscopic appearance, for example, may be found in the cells of the brain, cord or spinal nerves, in the heart muscle, the walls of the blood-vessels, the liver, kidneys, etc., at the same time that the same change is being made in fibrous tissue, 'the lowest structure in the body' (Woodhead in Kelyanck's Drink Problem).

5. The effect of alcohol on morbidity.—Besides the purely alcoholic forms of disease, such as cirrhosis of the liver and alcoholic neuritis, a large proportion of the illness found in hospital and in private practice is indirectly due to alcohol (Jacquet, Presse Med., 1899, p. 338). Not only are the diseases directly damaged, but the resisting power of the body to disease is greatly lowered by excessive drinking.

Pneumonia, for instance, is more apt to occur, and more likely to be fatal, in alcoholic persons. If the body is weakened in its resisting power, by starvation, by cold, or by a poisonous drug, by syphilis, by tuberculosis, or other microorganisms. As for tuberculosis, the great mass of present-day medical opinion is opposed to the view that alcoholism directly affects the development of the nervous system. Not only that, but alcoholism damages the entire body system is lowered in tone, alcohol greatly helps the development of various diseases. It is often found in chronic alcoholism (K. Jones). Amongst traders in drink, tuberculosis is 3 times more frequent in every organ of the body liable to it. Police courts figures for other occupations (Dickinson, Transactions of Path. Soc. vol. xi, 1870) give the same result. In all such occupations in which chronic alcoholism live, one cannot doubt that alcoholism is largely responsible for the widespread prevalence of tuberculosis. General diseases are very frequently acquired in the intoxicated state, when the lower passions become the ruling power of the body.

In the army they are much less frequent among abstaining soldiers than among drinking men. In the army the disease from alcohol is usually enjouyed. Syphilis is much more destructive among of the drunken than with the abstainers. In the view, the worst cases for operation are those of chronic alcoholism. They take anesthetics badly, their tissues do not heal well, and they are liable to irregular and frequent abortions. The general experience is confirmed by numerous experiments on animals; rabbits, guinea-pigs, frogs, etc., have been treated with alcohol in even moderate doses, to be much more susceptible to the germ of tetanus, spenic fever, tuberculosis, diphtheria, etc., than non-alcoholic animals. (Abbot, Journ. Path. Bact. 1902, p. 281)

Certain Friendly Societies in the United Kingdom consist entirely of total abstainers, and the amount of sickness amongst them is, to a marked degree, less than in Societies where abstinencc is not compulsory, although in both classes the men are medically selected, and show, by the very fact that they join those Societies, that they are prudent and careful. The average duration of sickness amongst them is less, and the amount of sickness is considerably less. (Sons of Temperance, etc.) is only from a half to a third that of other Societies. Alcoholics, when once put on the books of Trade Societies, whether through disease or injury, are notoriously slow in recovering.

6. Alcoholism and mortality.—The mortality returns of the United Kingdom give a very imperfect idea of the number of deaths due to alcohol (Vacher, Practitioner, Nov. 1929). Seeing that certificates of death are not treated as confidential documents belonging to the State, due to the increasing numbers of alcoholics, is the amount of death attributed to diseases of the liver, kidneys, lungs, or nervous system, instead of to their primary cause —alcoholism. The Swiss returns of mortality, on the other hand, are reliable, and they show heavy death rate from alcoholism, amongst men, of 10 p.c. or more.

In Swiss communities of over 5000 inhabitants, there lives between the ages of 20 and 40 every seventh or eighth man directly or indirectly from alcohol, and between 40 and 60 every sixth, and above 60 every seventeenth man (Hoppe, p. 290). It is estimated that in this country alcohol accounts for 100,000 to 120,000 deaths per annum (Kerr, Inebriety, p. 281).

Certain British Insurance Societies have separate columns for abstainers and non-abstainers. In both sections the members are drawn from the same class in an essential and important particulars, and the non-abstainers assured are good average lives. But the abstaining section in all cases shows a very much greater longevity. Thus in the United Kingdom Temperance and General Provident Institution the mortality in the general section is 9 per 1000, on an average, 26 p.c. in the temperance section (Whittaker, 'Alcoholic Beverages and Longevity,' Contemp. Rev., March 1924). Of course the general section represents in the United Kingdom, at the end of the scale men who are extremely moderate, and at the the other those who are alcoholic. In the United States the accepted standard of moderation, the class of 'moderate drinkers' mist suppear statistically.

7. Alcoholism and crime.—There is universal testimony as to the close relationship between excessive drinking and breaches of the moral law and the laws of the State. This is a direct consequence of the paralysis of the higher faculties, intellectual and moral, and the disposing free play given to the lower inclinations. Alcohol is not only a direct cause of crime, but it acts powerfully along with other conditions, such as hereditary nervous weakness or instability of the brain. Again, crime due to loss of work, poverty, and starvation, so often the results of indulgence in alcohol.

A distinction has rightly been drawn between the lighter and the grave violations of the law which are due to drink. It is fortunately true that the great majority are of the former class. To them, however,—in order to give some idea of the effect of excessive drinking, we must add the vast number of cases where similar offences are committed with impunity, escaping the notice of the police or of the public.' In certain cases the presence of friends. Moreover, these offences are so common that there is a disposition on the part of the police to be public generally, and not to take cases with regard to them with the utmost leniency. The large proportion of habitual inebriates charged with after a moderate degree of intoxication, petty offences are really due to chronic alcoholism plus a heavier than usual. In cases out of 10, they are also as the wife-beater, the beggar, the prostitute, or the thief. As for the grave offences, the bulk of crimes of acquisitiveness are not connected with alcoholism. On the other hand, alcoholism is probably the cause of some 60 p.c.
of homicidal offenses, and of a smaller, though still considerable, proportion of crimes of lust. Nearly always in homicidal crimes, and in many cases of rape and in sexual crimes, excessive drinking conditions which generate the criminal impulse are chronic intoxication and not casual drunkenness. (Sullivan, Alcoholism, 1906, ch. 14.)

Alcoholism in America. — Alcoholism is specially dangerous to children, as their delicate tissues are highly susceptible to the poison. Most disastrous results follow its administration in the early years of life. At two or three years of age, that is far from uncommon, it is quite safe to ignore. Besides the direct effects, such as stunting of growth, blunting of intellectual and moral faculties, and organic changes, we must attribute to alcohol the multi-faceted destruction of the healthy balance of the culture of drinking families. Hence the incidence of sickness and mortality in the families of parents who are one or both given to drink is extremely heavy.

A Report on Physical Deterioration (Saleeby, 1902) makes on the increase of drinking amongst women of the working-classes, with consequences extremely prejudicial to the care of the offspring, not to speak of the possibility of children being born permanently disabled. If the mother drinks heavily during the last three months of her pregnancy, much harm is done, and there may be present in it a certain amount of alcohol. Still more serious for the child is the drinking on the part of the mother during the suckling period. Not only is the mother nutritionally nourished, but alcohol is found to pass freely into its blood from the mother's. However degenerate and deplorable conditions a pregnant woman in abortion and premature labour; and if the infant is born viable, it is apt to be the subject of disease or deformity. There is passed over, however, what is a considerably more dangerous tendency to give way to drink sooner or later. While it may be true that the drinking is only indulged in while the children are born healthy, whatever the antecedent condition of the mother, it is highly probable that the first 10 or 15 years of life, even under the best conditions, would reveal tendencies that were present in a latent condition from the first. Notwithstanding the ancient and widespread belief that the condition of an infant in one or both parents at the time of conception has a malign influence on the germ-plasm, this cannot be said to be scientifically proved.

The preceding general view is that alcoholic characters cannot be transmitted from parents to child; but when poisons are taken in considerable quantities, for instance alcohol, it is practically certain that they have a modifying effect on the germ-cells (Saleeby, Heredity, p. 73). On the other hand, the tendency to degeneration through alcohol would be at once arrested by the removal of the cause, and civilized races would rapidly improve in physique. Races that have been accustomed only to their own fermented drinks, such as the North American Indians and the West Africans (Kilit, Archiv für Rassen- and Ethnolog, Biolog, li, 1905), have shown a tendency to die out when habitually taking imported distilled liquor. Previously there may be no improvement under conditions which had lasted hundreds of years, their relatively weak drink being obtainable only as special seasons of the year, and on special occasions. The process of degeneration in immi-grants to other countries is largely due, according to the best authorities, to alcoholism. Mott's investigations (Alcohol and Insanity, London, 1886) show clearly that alcoholism can also become insidious, and that the balance upset by an amount of alcohol much less than can be taken in an ordinary case of intoxication, may have the effect of stimulating the more stable nervous system. In such cases alcohol reveals some latent defect, just as in other cases the imbecile, the epileptic, or the degenerate characterized by marked susceptibility to alcohol, join the criminal classes. Suicide (Sullivan, Alcoholism; Pringling, Trauknacht und Selbstmord, Leipzig, 1893) has become more frequent in recent years in almost all civilized States, its rate being specially heavy amongst persons who are exposed to alcoholism. Great Britain has a larger proportion of women suicides than other lands, this being connected with the greater amount of female drunkenness. 20 p.c. of all cases of attempted suicide in England are alcoholic, while only 30 p.c. of cases of completed suicide are so classified. Alcoholic suicide may result from one of the disturbed mental states such as delirium tremens, melancholia, the automatic dream-state, or some other condition associated with hallucinations; or it may be caused by the poverty, misery, and indifference to life that alcohol is apt to produce. The association of alcohol with suicides of all sorts is brought about as by the daily newspaper, and otherwise, but no statistics can show the vast number of cases where lowering of the mental functions is without admitted excess, is responsible for some catastrophes. Many railway companies in America have an absolute rule against drinking on the part of their employes, and the 90 p.c. of all cases of suicide are taken by British companies. Comparatively slight improvements in the conditions of life, presence of efficiency in the railway servant may endanger hundreds besides himself. The more strict the rule against drinking on any particular railway, the better. Accident insurance societies often give alcoholics a discount of 10 p.c.

9. Alcoholism and poverty. — Drink, according to Charles Booth (Pauperism and the Endowment of Old Age), is the best proof positive of pauperism, and it is the least necessary. From one-third to one-half of those who receive poor relief owe their position directly to drunkenness as the principal cause. (The cost of poor relief in England and Wales in 1905 was £195,000,000.) Alcoholism should be added a large percentage in which drink is the indirect cause of pauperism, through disease or injury; and besides this, just above the pauper class is the enormous amount of abstract poverty from misdirected wages, loss of working time, and general impairment of efficiency. It is calculated that at least half the taxes accruing from drink are expended by the State in preventing, punishing, and repairing the consequences of the social defect consequent upon the consumption of that drink. Of the £170,000,000 or so annually spent in this country on liquors, about £100,000,000 come from the pockets of the working-classes. Many working men spend 6s. or 7s. a week on drink, and some very much more. The average drink expenditure per head in 1905 was £3, 15s. 11d., and per family of 5 persons £18, 19s. 9d.; but it must be remembered that millions of adults drink no alcoholic liquor, and that over 15,000,000 of the population are children. Hence amongst those who take drink to excess the expenditure is enormous, and means such a deduction from an income which is little better than a subsistence, the living wages, which, with the cost of clothing, good housing, and the like, would help to solve the grave social and industrial problems with which we are confronted.

10. Treatment. — In dealing with acute alcoholism, the skill of the physician and the patient’s will is often severely taxed. Apart from purely medical measures, the main reliance is to be placed in complete withdrawal of alcohol, administration of liquid nourishment in abundance, and the procuring of mental and bodily rest. In chronic alcoholism the patient may be helped by full explanations of the action of alcohol on the body, by appeals to his better nature, by any measure that will strengthen the will power, whether religious, sublimating, or otherwise; or by being removed for a sufficiently long time (one to three years) from temptation. In the way of prevention much is to be hoped for from the wider diffusion of scientific knowledge, along with the spread of education (see ‘The Teaching of Temperance,’ by E. Claude Taylor in Kelynnack’s Drink Problem [a good bibliography of teaching manuals is given]). Improvements in housing and domestic cookery, higher rates of pay, and the consequent bettering of bodily, mental, and moral health, all favour temperance. Total abstinence should be enjoined on certain classes: those who are hereditarily predisposed, by being brought up in families or in grandfamilies, or through want of nerve stability; those whose occupations are closely associated with a heavy drink mortality; those who have given way to drink; persons who have suffered from diseases of the brain or nerves, or injuries to the head; and all children and juveniles. See also art. DRUNKENNESS, INEBRIATE ASYLUMS.

IV; The American Temperance Movement and the Alcoholic, 1878; Dr. Hoppe, Die Alkoholfrunk, 1905; H. Hoppe, Die Alkoholfrunk, 1905; H. Hoppe, Die Alkoholfrunk, 1905.
ALEUTS.—1. The religion, mythology, and folk-lore of the natives of the Aleutian Islands is strongly influenced from Alaska to Beringchuka and the north of the long narrow peninsula of Alaska as far as the river Ugashik, are especially important, since their long isolation in a peculiar environment has caused them to develop in directions more than any other known branch of the Inuit (Esquima) stem, this being evident in their language, religious exercises, and certain details of handwork, social life, and weaving (Dall). The language is rich in verbal forms and has many peculiarities of vocabulary, but is, nevertheless, undoubtedly Eskimo in type, not transitional between the Esquimale and Eskimo (Henry). The harpoon attains in the southern portions of the Aleutian area a 'finness in structure and appearance nowhere else seen'; the arrow also is delicately complex, neat and beautiful, and the 'exquisite workmanship displayed in the Aleutian beach-grass work will compare with that of any basketmakers in the world' (Mason). The koyak, the characteristic skin-boot of the Aleuts, is but one of their minor treasures, and the height among the Aleuts, the lamp, which with the Eskimos generally is the analog of the fireplace, or the hearth, with many other peoples, is cruder and ruder among the Aleuts,—the nearest primitive lamps on earth to those of the ancient Aleuts; many of them are merely unmodified rock fragments (Hough). Yet the modern Aleuts use small lamps in their fishing boats at sea for warming chilled hands and bodies. They seem to have used the lamp mostly outside the house, preferring, when possible, a fire in the open air, though they are said to have done much less cooking in the Eskimo fashion in the past. When first discovered by the whites, both men and women among the Aleuts wore labrets, or lip-ornaments, a custom borrowed, perhaps, from the adjacent American Indians, and primarily confined to the female sex, but now almost entirely gone. The custom of wearing labrets as having died out within two generations (anec. 1875). Besides labrets, the Aleuts possessed masks, which figured in their dances and religious ceremonies, and which were also placed over the faces of the dead. In physical type the Aleuts differ somewhat from the Eskimos proper, being rather brachycephalic and of darker complexion; in facial expression also some difference has been noted. Their constant use of the koyak and the cramped position their founders were forced to assume in the basket have affected their gait and the condition of their limbs. In the management of these boats the Aleuts have been very skilful. Veniaminoff, the Russian priest who was among them in the early part of the 19th century, states that the Aleuts, riders of marine mares; they were bow-legged, too, like the famous horsemen of the Czar. The Aleuts have been in their present environment, into which they have been slowly but constantly expatriated, reported by the Aleuts (the probable scene of the primitive dispersion of the Eskimo race, or, at least, of a considerable part of it), for a very long time. Dall's investigations of the ancient village sites, shell-heaps, mummy-caves, etc., of the Aleutian Islands demonstrate the continuity of occupation of the region by this people, and their apparent progress through three periods of culture (hiltorial, fishing, hunting). The earliest forms of some of their art-objects (e.g., labrets) are preserved in the burial-caves and shell-heaps, and their variations are traced back to the times of the modern Aleuts and the advent of white influences, in consequence of which their ancient culture has tended more and more to disappear.

Like the Eskimos of continental Alaska, the Aleuts seem to have been influenced in several ways by the stories of native—indeed, the term 'story' is almost exclusively on weapons used in hunting, which, after being despatched, remain in the bodies of large game, and in each village the natives of a certain group—a boat's crew, family, house community, or any other social unit—use a certain decoration for their implements, which, in connexion with certain lines, forms their property mark. From the Russians, through the Siberian natives, and not from the Indians, the Aleuts acquired the knowledge and use of tobacco, according to Murdoch (Amer. Anthrop. vol. 1, 1888, p. 328). The modern Aleuts use nothing but civilized methods of smoking, and the great smoker and the absence of pipes are connected with the use of tobacco among the Aleuts, another evidence of the non-American mode of its introduction. On the other hand, the Aleuts have adopted something from the American Indian tribes, as, e.g., in all probability, the habit, just mentioned, of wearing lip-ornaments, some atlatl motifs, etc. The institution of slavery prevailed among them as it did among certain Indian tribes of the North Pacific coast. 2. The puberty-ceremonies and marriage-customs of the Aleuts are of special interest. When a girl reaches the age of puberty, she is isolated from the rest of the community in a small box—hoo, hoo, or horon, horon, or one, is permitted to visit her confinement. This confinement lasts seven days, and the breaking of the tabu by a man is the theme of one of the most wide-spread tales, which has many variants. The couple concerned are often brother and sister, and sometimes the woman is forcibly ravished, while at other times she yields consent. The belief in a horn of After which all the young people, and the young men and women among them, shave their heads and face the dead. In physical type the Aleuts differ somewhat from the Eskimos proper, being rather brachycephalic and of darker complexion; in facial expression also somewhat different has been noted.

Their constant use of the koyak and the cramped position the founders were forced to assume in the basket have affected their gait and the condition of their limbs. In the management of these boats the Aleuts have been very skilful. Veniaminoff, the Russian priest who was among them in the early part of the 19th century, states that the Aleuts, riders of marine mares; they were bow-legged, too, like the famous horsemen of the Czar. The Aleuts have been in their present environment, into which they have been slowly but constantly expatriated, reported by the Aleuts (the probable scene of the primitive dispersion of the Eskimo race, or, at least, of a considerable part of it), for a very long time. Dall's investigations of the ancient village sites, shell-heaps, mummy-caves, etc., of the Aleutian Islands demonstrate the continuity of occupation of the region by this people, and their apparent progress through three periods of culture (hiltorial, fishing, hunting). The earliest forms of some of their art-objects (e.g., labrets) are preserved in the burial-caves and shell-heaps, and their variations are traced back to the times of the modern Aleuts and the advent of white influences, in consequence of which their ancient culture has tended more and more to disappear.

Like the Eskimos of continental Alaska, the Aleuts seem to have been influenced in several ways by the stories of native—indeed, the term 'story' is almost exclusively on weapons used in hunting, which, after being despatched, remain in the bodies of large game, and in each village the natives of a certain group—a boat's crew, family, house community, or any other social unit—use a certain decoration for their implements, which, in connexion with certain lines, forms their property mark. From the Russians, through the Siberian natives, and not from the Indians, the Aleuts acquired the knowledge and use of tobacco, according to Murdoch (Amer. Anthrop. vol. 1, 1888, p. 328). The modern Aleuts use nothing but civilized methods of smoking, and the great smoker and the absence of pipes are connected with the use of tobacco among the Aleuts, another evidence of the non-American mode of its introduction. On the other hand, the Aleuts have adopted something from the American Indian tribes, as, e.g., in all probability, the habit, just mentioned, of wearing lip-ornaments, some atlatl motifs, etc. The institution of slavery prevailed among them as it did among certain Indian tribes of the North Pacific coast. 2. The puberty-ceremonies and marriage-customs of the Aleuts are of special interest. When a girl reaches the age of puberty, she is isolated from the rest of the community in a small box—hoo, hoo, or horon, horon, or one, is permitted to visit her confinement. This confinement lasts seven days, and the breaking of the tabu by a man is the theme of one of the most wide-spread tales, which has many variants. The couple concerned are often brother and sister, and sometimes the woman is forcibly ravished, while at other times she yields consent. The belief in a horn of After which all the young people, and the young men and women among them, shave their heads and face the dead. In physical type the Aleuts differ somewhat from the Eskimos proper, being rather brachycephalic and of darker complexion; in facial expression also somewhat different has been noted.

Their constant use of the koyak and the cramped position the founders were forced to assume in the basket have affected their gait and the condition of their limbs. In the management of these boats the Aleuts have been very skilful. Veniaminoff, the Russian priest who was among them in the early part of the 19th century, states that the Aleuts, riders of marine mares; they were bow-legged, too, like the famous horsemen of the Czar. The Aleuts have been in their present environment, into which they have been slowly but constantly ex...
through the roof. The man, who dies from a fall on the rocks, turns out to be her own brother. She finds him dead on the floor of her own house, with all her mourning. Instead of taking part in the mourning herself, she sings a joyous song, the burden of which is, 'Get up, my brother, get up, and come with me into the house that is here.' Gradually movement returns to him; first, his toes wriggles, then, as the men and women approach him, he opens his eyes and starts to open his mouth. When the women have caught sight of again, they have become two, sea-otters, the first of those creatures known in the world. In another tale, the Aleuts were represented to be in no way inferior to the paramour (the nephew of her husband), with whom she has sworn to die. This is the legend of the Greenland Aleuts seems to belong, partly at least, to this cycle. It is curious to find among the Aleuts that improper sexual relations are connected with the violation of the tabus of girls at the age of puberty. The version of the legend with this theme is perhaps the oldest, as it is the most detailed form. The early Aleuts, Veniaminov informs us, looked upon incest with horror (later accounts disagree on this point), esteeming it the worst of crimes. Such intercource was believed to result always in monstrous offspring (children disfigured with the tusks and heard of sea-animals, etc.). They had no prejudice against the intermarriage of cousins.

The Aleuts had no marriage ceremony, apparently, though children were sometimes betrothed to each other. The recognition of the marriage came with the birth of a child. The parents, when the harvest flowed over their doors, then went to take wife a young woman from the next village (or one not his own), but not to set up house-keeping with her until she had borne him a child. Until that event happened, the woman remained at home with her brother, or was a frequent visitor of her husband, from time to time by her husband. Among the early Aleuts, girls, or married females, giving birth to illegitimate children, were put to death, and their own and those whose children conducted despided. Infanticide was regarded as something likely to cause great misfortune to the whole community. Wives were exchanged sometimes for food, clothes, etc., and were often lent as a mark of hospitality because they could also be divorced or sent home, when unsatisfactory to the husband. In some cases, the children were taken by the mother. The re-marriage either of widowers or widows was not permitted until some time had elapsed since the death of their consorts. Both polyandry and polygamy seem to have occurred among the Aleuts. With those of Unalaska, in cases of polyandry the husbands agreed amicably to share the same woman, or, if the first married was the chief husband, the second, and inferior, being 'a hunter or wandering trader.' Since polygamous families depended for their maintenance upon the wealth of a single husband, it appears to have been permissible for him to return his wives to their parents, if his fortune decreased to such an extent as to make it impossible for him to support them all properly. Wives could be obtained by purchase and by rendering services to the father; but, in the case of purchase, certain other relatives besides the father had to be compensated. Marriage by capture was rendered illegal by the close of the 18th cent. Among the natives of Unimak, the largest island of the Archipelago. With certain of the Aleuts (e.g. those of Atka) the man took the widow of his dead brother, such action being compulsory rather than optional. Among the Aleuts there seems great jealousy is said to have existed. From various parts of the Aleutian area the existence was reported of men who adopted the ways and habits of women, dressing like them, etc., and never marrying.

3. The burial customs of the Aleuts also deserve special mention, by reason of the great care often bestowed on the disposal of the dead. Most burial took place on the beach, lasting some days, were held, and, according to the details in the stories, slaves were often sacrificed. The bodies of the dead were sometimes hung up in the hut, or suspended in the open air from a pole to which they were attached. When the bodies were laid away in some hidden shelter, protective masks were often put over their faces to guard them from the too inquisitive glances of the spirits. The bodies of certain rich individuals and of those who might have been washed in running water after the entrails had been removed, then dried, wrapped in furs, grass-matting, etc., and hung up in some cave, or other place did tend sheltered from the rain. Some of these mummies are very old, being found with all the marks of great age. Sometimes the dead Aleuts were placed in these caves and rock-shelters in lifelike postures, dressed and armed, as if active in some favourite occupation—hunting, fishing, sewing, or the like; and with them were placed figures representing the animals of the chase, wooden imitations of their weapons, etc.

According to Elliott, the mummified bodies of celebrated whal-hunters used to be removed from their resting-places in the caves and dipped in the running water of streams, those about to venture forth on the hunt drinking of the water that contained the remains of the hunter, to strengthen his body and the skill of the dead. It is also said that sometimes the body of a celebrated whale-hunter, who had died, was cut into small pieces, each living hunter taking one, which, when carefully dried, was kept for the purpose of rubbing the head of the whale-spear. The Aleuts seem to have had other superstitious proceedings of a similar nature connected with the transference of the qualities of the great dead to the hunter. Famous hunters and mighty chiefs were especially honoured in this way.

4. The early Aleuts had very many songs, the old stories being nearly always accompanied by songs. According to Veniaminov and Golder, there were historical songs, songs of ancestors and heroes, songs used only on religious occasions (strictly religious songs accompanying the spirit-ceremonies, etc.), and songs dealing with the ordinary affairs of life. Very often songs were extemporized. Golder is of opinion that the democratic shamanistic régime which 'allowed any Aleut to think he could compose a song,' is 'a condition of degenerate times more than ever the real time when the making of the songs was more or less in the hands of shamans of distinction'; but this is hardly the case. As both men and women could be shamans, they were likewise both song-makers. There were numerous conjuring-songs for hunting, fishing, 'raising the dead,' calling and dispersing the spirits, etc. Songs were accompanied by the drum, the only musical instrument of the Aleuts. Stories were usually accompanied by one or more songs, but the Aleuts of to-day have forgotten the songs, though they continue to narrate some of the stories.

5. The early Aleuts were very fond of dances and dance-festivals, some of which were carried out by the whole village, with other villages as guests, or participants to some extent. After the evening meal the men are said sometimes to have danced naked until exhausted. Dances of naked men, and of naked women, from which the other sex was rigidly excluded on pain of death, and masked dances of various kinds were in vogue. Successive dances of children, naked women, and women in curious attire, which were followed by shamanistic incantations, feasting, etc., are also reported as having occurred among the Aleutians. The dances in which the opposite sex took part together are reputed to have been more decorous. Their most
The remarkable performance of this sort, however, was the great moonlight dance held in December, which had considerable religious significance. The men danced, and images of the sea, dogs or animals were set up, one for the women and one for the men. The sexes danced apart from each other, masked and naked, on the snow under the moonlight. The huge masks wore names in the occasion so that the wearer could look only at the ground, since to see or look at the images, upon which the spirits were believed to descend during the ceremonies, was death to the individual. The entranced dance was over, the images and masks, which seem generally to have been made for the particular occasion, were broken in pieces and thrown into the sea. Although mention is made of wooden figures carried from island to island, and associated with certain ceremonies, permanent 'idols' and 'temples' hardly existed. There were, it appears, certain 'sacred' high places, or rocks, where, with mysterious ceremonies, much high in the hands. While the youths (not being allowed to approach these spots), made offerings. Events like the casting up of a whale on the beach were the cause of dancing and other festivities. In some of the dances the participants, on horseback, paraded and paraded, while others in other dances danced naked, except for the large wooden masks, which came down to their shoulders, and often represented various sea-animals. The masks used in the ordinary dances were different from those used in religious ceremonies, the former being evidently copied from the Aleut type of face, while the others, when human faces are represented, seem to differ much from them. The dancing of some of the carved masks used in certain ceremonies were deposited in caves. Masked ceremonies were also connected with the spring-time festivals.

Besides their religious dances and like ceremonies, the Aleuts had others of a dramatic and educational nature. Myths and legends were acted out in pantomime and dance by the members of one village, who would invite the inhabitants of another village to witness the 'play.' On such occasions special songs would be composed and sung. In these 'plays' men and animals alike were imitated and represented. Similar events on a smaller scale took place in individual huts, the larger ones in the 'village-house.' Veniaminoff and Golder give an account of a performance called kugan apakh, or 'the appearance of the devils,' the object of which was to frighten the women into confessing if they 'keep them under' properly. The essentials of the performance were as follows:—When it was thought necessary to impress the women and girls, certain of the men left the village on a pretended hunt. At night, after they had been gone a few days, the men at home made believe some calamity was about to overtake the community, and, by pretending great fear, made the women under the impression that they were thus frightened, strange noises were heard, and the 'devils' arrived, against whom the men made the show of a valiant defense. After the 'devils' had been driven away, it was found that one of the villages was missing, and a woman who had been seen was never again heard from. The alarm agreed upon, was carried out as a rascal for him. By and by the whole started back. The man appeared dead. He was gradually revived by being immersed in water. There were others of kindred nature, such as stories of people being caught in small boats or houses by spirits, and the souls of the dead returning to take revenge. One of the stories of the Aleuts has been preserved,—of those recorded nearly all are due to Veniaminov (1850-1840), and Golder at the close of the century.

One of the Aleutian ancestor stories tells of the adventures, so disastrous to the people, of Chief Agafalgik Agus and his son Kayakalik. One of several stories concerning women, it is the tale of the woman, so renowned among the Aleuts as 'the woman fond of intestines.' One of the origin-legends ascribes the beginnings of this dog, some divine animal which can jump down from the sky in the form of a dog. Another version of this myth of canine ancestry, found also elsewhere in the Eskimo territory, makes the Aleuts descend from a female dog belonging to Unalaska and a great dog which swam over to her from the island of Kodiak. Still another account traces them back to the dog-mother, Mahbakh, and an old man named Nghladbakh, who came from the north to visit her. Another legend makes the ancestors of the Aleuts two cursed creatures, male and female, half-man and half-fox,—the name of the male being Angakak, the name of the female Angakak. Mention is also made of Man, the power to create human beings by throwing stones on the earth; birds, beasts, and fishes being made by throwing stones over the water, etc.

Golder calls attention to the fact that the Aleutian stories are very realistic, there being 'not a single story that could not have happened in real life.' There are many popular legends and stories in the Aleut language, and they are conductor, but they come in only at the end of the tale. It is, as Golder remarks, 'as if the gods were called in to help out the story-teller, when he gets into a tight place.'

8. As may be seen from their religious ceremonies and other practices, as well as from the evidence in their tales and legends, the Aleuts had much spirit-life. The shamans were able to obtain the assistance of spirits and supernatural beings, and the spirits (kugan) of power descended into the 'idols' during the great religious dances. The Aleuts believed that their dead relatives acted as guardian spirits, helping them out in all dangerous situations and trying conditions. They also relied much upon these spirits in their schemes of revenge, etc. Beliefs in amulets of various kinds was common,—the warrior, e.g., wore a belt of sea-weed with magic knots. Mention is also made of the thimble, a marvellous pebble, which all animals were unable to resist when it was thrown into the sea. The Aleuts of to-day have little of the rich mythology and folk-lore of their ancestors, the conversational speech of the Greek Chukches is still in place in the time of Veniaminov, and the course pursued by the Russian priesthood having resulted in the passing away of institutions and beliefs, ceremonies, customs, and habits of the old time. To this process the Aleuts appear to have taken what research, a fact which further hastened the disappearance of what was purely national and racial.

ALEXANDER F. CHAMBERLAIN.
ALEXANDER OF ABONOTEICHOS

In Paphlagonia owes his fame to a treatise of Lucian, who was his contemporary. The piece is fully the minutest details of Alexander’s life. But Lucian makes no claim to the invention of the idea, for he drew his material from an unknown source, which he felt for one whom he regarded as a venal and impudent impostor, trading on the self-created superstition of an ignorant and credulous people. In his war against the enemy of his age, Lucian had undoubtedly all his art to blunder the character of one who seemed to him to represent its worst excesses of superstition. Yet, apart from the charges against Alexander’s morals, Lucian’s life of Alexander is probably more trustworthy than his life of Peregrinus.

Alexander was a Greek of Abonoteichos, with splendid gifts of mind and body, and a charm of manner which, Lucian admits, left on casual acquaintances the impression of a high and simple character. He began his career with a wizard physician connected with the circle of Apollonius of Tyana. On his death, Alexander formed a partnership in colours, bronze and silver, and during their travels in Macedonia, the pair, seeing the passion of the time for any means of forecasting the future, determined to exploit its hopes and fears by founding an oracle which should rival those of the ancient world. They brought a tame serpent from Macedonia, and in the precincts of Apollo at Chalcis they buried two tablets, predicting that Asklepios would come to Pontus with his father, and make his home at Abonoteichos. Alexander knew his countrymen. The promise of the epiphany soon spread, and the people of Abonoteichos at once began to build a temple for the coming god. Soon Alexander appeared among them with white tunic and purple cloak, and a scimitar in his hand, reciting an oracle which proclaimed him ‘the son of Perseus, dear to Apollo.’ Fits of prophetic frenzy still further raised the general excitement. One morning at dawn, almost naked and scimitar in hand, he bounded into the market-place in all the orgiastic excitement of a votary of the Great Mother, leapt upon the altar, and, with a strange jumble of Hebrew and Greek, chanted a liturgy of the god. He then rushed to a ditch which ran round the foundations of the new temple, fished up a goose’s egg in which a young snake had been hatched, and, carrying the shell, displayed to the awestruck crowd the nascent deity.

Multitudes thronged to Abonoteichos, and Alexander, sitting on a divan, held a levee, in which he displayed, coiled about his shoulders, the trained serpent from Macedonia, to which a very simple art had attached a human head. Crowds poured through the darkened room, jostling one another to see the new god so miraculously mature, so humanized so divine. The great miracle drew crowds from Bithynia, Thrace, and Galatia, and even from remote barbarian regions. Artists flocked to the spot to express the likeness of the new god by ivory or bronze. A statue of Glycon the third of the seed of Zeus, a light to men.’

Alexander had studied the system of the older oracles, and he determined to found a new one, while he carefully displayed a reverence for the ancient worship of Apollo at Didyma. For a small fee of 2 obols he received on stated days sealed packets, which he ceremoniously returned apparently unopened, with the needed answer. A hot needle and concealed shamanism. Though Lucian by means of an obstinate sealed once exposed the fraud. The oracle, like so many of the time, was mainly one of healing, and, skilfully managed, with an army of officials and intermediaries, the confidence of the people to spread the fame of its efficacy throughout the Empire, it gathered in a revenue of nearly £7000 a year. Its fame spread to Rome, and great nobles like Severianus the governor of Cappadocia, and Rutilianus, one of the most experienced statesmen of the age, were attracted to the oracle, and with the participation of a dangerous political curiosity put to him, which would not bear disclosure. Rutilianus, at the mature age of sixty, even condescended to marry Alexander’s daughter, his boasted offering by an amour with Selena, who had been captivated as by another Endymion.

In the great plague of A.D. 167, a magical verse, dictated by the new oracle, was inscribed over the doors of houses throughout the Roman world. Even the circle of the philosophic Emperor yielded to the imposture. When the Marcomannic war was at its height, an oracle from Abonoteichos was received at headquarters, ordering two lions to be thrown into the Danube. The ceremony was followed by a disaster to the Roman arms, which was glibly explained by classical precedent.

Alexander, with all his daring and ingenuity, was scrupulously conservative and adhered to ancient forms. He crowned his achievements by establishing mysteries on the approved model, from which Christians and Epicurean freethinkers were excluded under a solemn ban. The ceremonies lasted for three days, and on the third day of the sacrifice the mysteries were presented with striking effect—the labour of Leto, the birth of Apollo and Asklepios, the epiphany of Glycon, and the celestial origin of Lucian. Alexander known to him, as a great Greece, to the new oracle, and strove to convict it of deceit. For his own scornful incredulity, Lucian once nearly paid with his life. And Alexander, by the mouth of the god, ordered that the blasphemies of the atheists should be punished by stoning. He finally triumphed over all opposition, and rose even to divine honours. His statue was an object of worship at Parium in the time of Athenagoras. Inscriptions of this kind, written by the same hand, are scattered widely in the extent of his influence. In the third century, the religion of Glycon still flourished at Ionopolis, the new name which Alexander had given Abonoteichos, and so struck the same spot, scattered all its organs, and adorned the device of the serpent with a human head.

S. DILL.

ALEXANDER THE GREAT

The life in the history of religion and ethics.—I. Synopsis of his reign.—Alexander III., afterwards surmounted the Great, was born at Pella, B.C. 356. He was the son of Philip II., king of Macedonia, and Olympias, a Molossian princess. In 336 he succeeded to the throne, and two years afterwards set out on his Eastern expedition. S.W. Asia was subdued by his victories at the Granicus (B.C. 334) and at Issus (B.C. 333). His attention was then turned to Egypt, and in the course of his next campaign occurred a visit to Jerusalem, which may perhaps be regarded as historical. Alexandria was founded in B.C. 331. Campaigns against the northern provinces of Baetia and Sogdiana were followed, and, generally all the districts in which the kings of Persia exercised sovereignty were subdued. Alexander then forced the Khyber Pass, or, more probably, another pass 80 miles to the northeast, crossing the rugged Pass of Panjâb; but his further designs were thwarted by
the discontent of his army, and in 323 at Babylon his brief and meteoric career was brought to a close.

2. Preparations for Alexander's work.—Alexander's greatest work was the spread of Greek influence, less for the preservation of a result of his methods of recruiting his armies and organizing his conquests, and in ways that made this influence permanent and controlling. The conception of such spread may be found before his day as part of the intellectual theories of men who were feeling the defects of the various kinds of autonomy prevalent within Greece, or were eager for a fuller and richer life than was possible there. Isocrates in his letter to Philip of Macedon transcends the limits of city patriotism, and contemplates the spread of Greek culture, possibly also of the Greek race, by means of conquest. The school of Socrates was familiar with wide views, and impatient of parochial strife and politics. Xenophon was one of his disciples, who never ceased to be a Greek, but yet considered travel and military service abroad, with eventual settlement in some district where he taught orals, or cities, cities of which he wished his influence to spread, and disseminate his own views, as the natural career for a man of ambition or leisure. The employment of Greek soldiers as mercenaries by Eastern sovereigns was an ancient practice in the days of Cyrus; and, while that of the peopled districts formed the more numerous section, there were Included also adventurers from the leading cities, who were men of parts as well as enterprise. Whatever their treatment was at first, they had ceased before the days of Alexander to be regarded merely as means of defending a weak satrap or adding to the dominions of a strong one. To Cyrus and his associates and successors they were friends to be courted; to a Persian policy was attached the desire to have Greek settlements coincided with the increasing Greek demand for expansion. Emergence from the narrow area and narrower interests of the little native cities was becoming a necessity. Agesilaus might have effected it but for the dissections and rivalries that showed the impossibility of Greek overlordship on any large scale. And in political theory on the part of thinkers, both as a practical means of escape from the impasse into which the affairs of Greece had been brought, and as the continuation of a process that had been going on for several generations, a preparation for Alexander's schemes of empire, at least in the minds of the younger thinkers, could be traced. The Greek states were, in some cases, the direct result of the efforts of Antimachus the Cynic to get possession of the Greek world at the head of a federation, and in the collection of the taxes, and in the training of recruits. As opportunity served, this temporary arrangement was supplemented and made effective by the foundation of new cities or polities, cities of which was designed to serve as a centre of defensive power. Seventy such cities, ranging from Kandahar to Alexandria, were founded by Alexander himself, and claim in various dialects to perpetuate his name. Some of these were Macedonian and partly Greek,—veterans, discontented troops, camp followers,—with natives swept in from the neighbouring villages or transported from remote and inaccessible lands. Some of these cities were intended to be outposts or garrison towns; others were placed as convenient mafts upon the great trade routes; but all were invested with the privileges of partial autonomy. In military affairs the Macedonian command was reserved for Greeks. The Greek campaigns of Alexander were the last of the Macedonian wars.
by the disturbance of earlier beliefs is an unwelcoming diversion when the mind is bent on activities. Pyrrho's importance in this period is twofold. He scattered seed, of which the fruit was late in appearing; but, when it did appear, the crop was plentiful. And even the influence upon or attraction to Pyrrho interested in every form of thought but captivated by none, became a not infrequent product of the Hellenistic genius. And he illustrates the reflex influence of a great thinker on the complications of the districts which Alexander traversed or visited. That Pyrrho learnt his theories in Persia or India rests upon the statement of an early writer, whose name alone is known, and is probably incorrect (Diog. Laert. ix. 81). With more confidence it may be asserted that his natural equanimity was raised by his Eastern experiences into the worship of imperturbability. The Greek joyousness was transformed into a carefree immobility, upon which in part may well be based the fatalism of various later creeds and the independence of external circumstance which the Stoic coveted and the Cynic mingled with bitterness.

It is to be remembered that only schools of philosophy that could be regarded as of appreciable present value were the Stoic and the Epicurean, of which the former, especially, gradually became identical with the Hellenistic culture of the East. Epicurus was a dozen years younger than Alexander, but, according to his own account, he entered seriously upon his philosophical studies at the age of fourteen. He claimed to be independent of his predecessors, but was certainly influenced by the teaching of Democritus, and he articulated in a system conceptions and tendencies that were floating in the air and creating the intellectual climate of the Greek world in Alexander's days, for he was born younger than the great king; but his teaching also links itself on to that of Socrates and the Cynics, and, as developed by his immediate successors, it soon became the standard of Greek ethical and religious culture. The Stoic, on the other hand, had an elementary theology as well as an ethic. Other knowledge was held to be attainable than that given by the senses. The so-called gods were manifestations of a Supreme God, who ruled over human lives and ordained for each man the part he should play in the world. Happiness was to be reached indirectly by the discharge of duty, without much consideration of conditions or consequences. Wisdom and peace lay in keeping touch with the Divine ruler and plan of life; in which case a man became, whatever his outward circumstance, royal and free.

Such philosophies were not entirely foreign to the fusion of all distinctions of creed or race or custom, and was exactly appropriate to a period when civilizations also were fusing, and a rule of life was in request that could survive national decay and still serve for guidance in any change of fortune. Stoicism may be regarded as the leading philosophy in the Greek culture that became cosmopolitan. It succeeded in establishing itself at length on the banks of the Tiber, and penetrated even through the thick shell of Hebraism, affecting the thought and the phrases of St. Paul himself.

6. Alexander and the Jews.—Although Alexander possibly visited Jerusalem, according to the tradition preserved in the Talmud as well as by Josephus (Ant. ix. viii. 3-6), and though he enrolled Jews in his armies, granted them special privileges, used them as an intelligence department, and settled many favorably in his new towns and colonies, there are no indications of any direct or immediate influence upon their creed or practice. Alexander opened or reopened the channels of communication by which the East and the West were brought into contact both with one another and with Egypt and Coele-Syria. Alexander's interest, in some ways, was subsequent ages, came teachers from India and Persia as well as from Greece; but the Hebrew did not readily assimilate any foreign belief or custom. The cause is to be found in the strictness of his monotheism as well as in the exceptional solidarity of the race. The Greek language was tolerated and even adopted in the course of time, but Greek culture was regarded with abhorrence in the inner circles where Jewish traditions were most sacredly preserved; and the complete coalescence of Hellenism with Hebraism proper has not yet taken place.

LITERATURE.—Freeman, Hist.', Eboys, 2nd ed. (4th ed. 1892); Essay V discusses the sources of Alexander's history. For the Rabbinical traditions see Dersenburgh, Hist. de la Fal. (1871) 41 ff.; Hamburger, Der Fal. (1883) 44 ff.; and W. Mahaffy, Hist. de la Fal. (1891) 67 ff. Droysen, Gesch. Alex. des Grossen (1857) and Gesch. d. hellen. des Romans (1877) 2nd ed. 1889. W. D. Krag, Greek philosophy (1894), is brilliant for some of the philosophical relations of the Christian schools, but contains much later material. For the influence of Jainism and Buddhism on Hellenism see Jones, A. E., 'theie (1900), and Story of Alexander's Empire (1900) (elementary, but well supplied with maps); Beyer, Versuch über die d. Philostr. (Leipzig, 1896); and Susemihl, Lit. der Alexandrinereit (1896).

K. W. MOSS.

ALEXANDRIAN THEOLOGY.

(W. R. INGE).

Scope of the Article.—Some of the best-known histories of 'Alexandrianism' or 'the School of Alexandria,' have been called the 'School of Neoplatonism. This is a mistake. Neo-Platonism, which will be dealt with in this Encyclopaedia under its own name, is the latest stage in the development of Greek thought. Its connexion with Alexandria is less than is commonly supposed. In this article the local limit will be observed.

Secondly, this article will deal with theology, not with philosophy. Although Neo-Platonism was essentially a form of philosophy, it is only a philosophical religion, if it is possible to maintain the distinction. And we may speak of an Alexandrian theology, though not of an Alexandrian philosophy.

Thirdly, the Hellenic schools of religious thought which flourished at Alexandria are omitted, as belonging rather to the precursors of Neo-Platonism than to our present subject. The justification for omitting them lies in their subordinate position of positive religion to philosophy, which was almost an axiom among the Pagans; e.g. Galen expresses surprise that some Christians, who cannot follow philosophical arguments, 'have progressed as far in self-control and the ardent pursuit of virtue as genuine philosophers.' Moreover, in spite of the resemblance in metaphysical and especially in ethical principles between their philosophy and that of the Christian Alexandrians, their attitude towards Greek tradition and culture is decisive. There is a great cleavage in this respect even between Clement and Plotinus. In reformed Paganism it seems to have been a matter of good taste not to mention Christianity, and Judaism was regarded with equal contempt. It is very doubtful whether the Jewish-Alexandrian theology had any direct influence upon Neo-Platonism. In fact, Judaism and, still more, religious prejudices counteracted the cosmopolitan tendency of thought which began under the successors of Alexander. In spite of the common parentage of many ideas, and the parallel of development under similar conditions, the separa-
tion is sharp between the three forms which religious
philosophy assumed in the 2nd and 3rd centuries: (1) Jewish and Christian Platonism, both of which
stand on the basis of Jewish monotheism; (2) the
Hebraic philosophy, which the best representative is Plotinus; (3) the barbaric Platonism
of the Gnostics. In these all systems or schools
there appear the following characteristics, though
observed with certain modifications: (a) an almost
absolute notion of God as the transcendent, absolute Unity,
(b) a tendency to call in intermediary powers (the
Logos, spirits, etc.) to bridge over the chasm be-
tween God and the world, (c) a tendency to connect
matters with the evil principle, (d) self-discipline as
a means to clearer vision of Divine truths. But
the emphasis which was laid on these several
documents differed widely in the three classes above
named.

This article deals only with the first—Jewish
and Christian Platonism, as developed at Alexandria.
And the three representative names, round which
our discussion must range, are Philo, Clement,
and Origen.

1. Precursors of Philo.—It was inevitable that
the Judaism of the Diaspora should diversify
further and further from the Palestinian tradition.
In Egypt, for example, the Jewish population formed
nearly half the population of the country, and were numer-
ous throughout the country, a vigorous independent
life was sure to appear in all departments of mental
activity. The Egyptian Jews could not maintain
an attitude of aloofness from the secular culture of
the world around them. To say that they were
Hellenized is only to say that they were not self-
excluded from the civilization of the period, for
Hellenism was a factor in all the Jewish philos-
ophy, and ethics of the lands where Greek culture
penetrated. But when we speak of the Hellenizing
of Judaism, we mean more than the pervasive
influence of the secular civilization. There was a
definite attempt made by the Jews to interpret
their own religion in a form acceptable to the
Greeks, from which cannot be separated an attempt
to interpret Hellenism to themselves by stretch-
ing it upon a framework of Jewish orthodoxy.
This latter design was rendered necessary by the
rapid decay of faith in the statutory Judaism
among the educated, a decay which was exhibited
both by increasing irreligion and a spiritualizing
of the really religious, and by the increasing ex-
ternality and hypocrisy of the cult among the
official class. In the Diaspora, a liberal Judaism
seemed capable of merging with a Unitarian
Judaism with strong ethical convictions. The old dream
of a theocracy was forgotten, and Messianism
aroused no interest. The Greek doctrine of
immortality was given a moral turn by conceiving of
the future life as primarily the scene of rewards and
punishments; and the national hatred of Rome
(after the Roman conquest of the East) was gratified
by the belief in a day of universal destruction,
ushering in the great age. The statutory basis
of this religion was furnished by the Old Testa-
ment, which was asserted to contain the sum-total
of all Divine and human wisdom. The 'books of
Moses', in particular, were treated with unlimited
reverence.

The Septuagint is perhaps our earliest specimen
of Jewish-Alexandrian literature, for the traces of
Greek influence in Sirach are very disputable.
Philo, however, not only freely borrowed and
frequently modify the naïve anthropomorphism of the Old
Testament, substituting, e.g., the 'power' for the
'hand' of God, and His 'glory' for His 'robe' in Is
60. Philo especially, were among those who
introduced the Platonic distinction of matter and form, and in
Ps 51:9 the Stoical ἡγεσία ἑαυτῆς intrudes itself.
The third book of the so-called Sibylline Oracles, which
probably dates from the middle of the 2nd cent. B.C.,
is a remarkable proof of growing respect for Greek
thought and religion, since the unis object of the
composition is to prove the righteousness of Jewish
national hopes, under the form of heathen
prophecy. But the characteristic features of Alex-
andrianism, enumerated above, are not prominent
in the Sibylline Oracles. Neither allegorism, nor
eschatology, nor the dogma of the Logos, and the 'Spirit', is
also half-personified, being, indeed, only 'Wisdom' itself
under a slightly different aspect. The
'Word,' on the other hand, is used, as in the Old
Testament books, for the expression of the will of
God; there is no approximation to the Philonic
use of 'Logos,' even in 1848-96, where there is a
poetical personification. On Messianic hopes the
author is silent, like the other Wisdom-writers; the
book which is so-called, but was not accepted by them as Scripture. The influ-
ence of Greek (Platonic and Stoic) philosophy
appears chiefly in the conception of a harmonious
and beautifully ordered world directed by an im-
manent power, and in the lack of the old deviation from orthodoxy is to be found in the
document of pre-existence, which is clearly stated in
8:1-10. I was a child of comely parts, and had
obtained a good soul; or rather, being good, I entered
into an un-bodied life.' This can only mean that
the soul has displayed goodness in a previous state
of existence. The body is thus no essential part of
the personality, a view which leads easily to the
notion that it is, if not the source of moral evil,
but yet the "muddy vesture of decay" which presses
down the soul. The eschatology is vague. There
will be no bodily resurrection; but the souls of
the righteous will be rewarded, at the 'inspection,' with
everlasting felicity, while those of the wicked will
be excluded from their true life, and cast into
eternal darkness.

2. Philo.—Passing by the Letter of the pseudo-
Aristeas, a manifest forgery, and the fragments of
Aristobulus (a Jewish Peripatetic who lived in the
middle of the 2nd cent. B.C.), which have also been
suspected, we come to Philo. Philo (born about
20 B.C.) was a member of a well-known Alexandrian
family, being brother of Alexander the Alabarch,
the head of the Jewish community in the Egyptian
capital. Philo himself lived a life of retirement
and contemplation, mainly engaged in Jewish fanatism;
founded by the Roman govern-
or Ptolemy, led to his being sent to Rome with a
deputation from the Jewish community (A.D. 39-40).
He was then elderly, and had already written most
of his books.

Philo believed himself to be, and was accepted
by his contemporaries as being, an orthodox Jew.
He is an apostate, who wishes to defend Judaism
against all the heresies, and schismatics. More
particularly, since Judaism for the Alexandrian
Jew was a book-religion, he was concerned to prove
that the highest forms of revelation and of human
wisdom were contained within the compass of the
Old Testament, and in respect to the New. In his
opinion a crime of the deepest dye: he knows
of an impious man who, after laughing at some
story in Genesis, soon after hanged himself for no
reason, 'the unhappy spirit.' Philo gives some
particulars from the number 10, paragraph 8 (Nom.
Xom, 8). His theory of inspiration is that God
speaks through the prophet, who is merely a pas-
tive instrument. This inspiration takes place when
the instrument is so excited that he is able to
utter what he himself has experienced. His mind suddenly be-
comes full of images, and ideas pour forth from it,
while he is insensible to all externals (de Migrat.
ALEXANDRIAN THEOLOGY

Abrah. 7). The description resembles Böhme's account of his manner of writing. At the head of all the prophets is Moses, who alone had seen God face to face. In his writings the sum of human wisdom is contained.

This conception of revelation, as given once for all in its entirety, led Philo into great difficulties. If he had been content to argue that the more spiritual faith of his day was contained implicitly, in germ, in the literal religious instruction which he received, he might have made out a good case. But the doctrine of development, even in the limited application afterwards made by St. Paul, was unknown to him. He can admit no inferiority in Genesis as compared with Isaiah. And since the OT, understood in its natural sense, contained many things which could not but shock the conscience as well as the intelligence of a cultivated Alexandrian acquainted with Greek philosophy, the expoundment of allegorism was necessary (see ALLEGORY). This method was no invention of Philo, or of his contemporaries. Greek moralists had long treated Homer in this way, quoting lines from him as we quote verses from the Bible, to reinforce the unreasoning and even tyrannical system warped by the Sophists, and still more by the school of Aman-goras; but it is rejected by Plato, who will not admit unedifying myths into his State, either with or without some degree of humanized superintendence. It is not for a certain extent this kind of exposition is justified. In the higher kinds of literature, the perception of some sort of allegory or double meaning is almost necessary. The more literal or grammatical sense cannot satisfy the student of any poetry or science, either in the study of nature or men, or of the spirit of the ancients. Exegesis is a fatal obstacle to understanding the religious books of mankind—a task in which we cannot succeed unless we realize that the thoughts of the past are relative to the past, and are better interpreted by it. Philo himself calls it the method of the Greek mystics. In these rites everything was represented as being at once a thing and the covering of a thing, an outward sign and an inward truth.

Allegorion, then, is simply the sacramental method applied to history and literature. It was becoming the common property of all the higher religions, and was the easiest refuge for educated men who wished to belong to an established religious body, without forcing themselves to accept immoral or absurd beliefs. The general view was that all revelation is a Divinely-contrived means of conveying the double purpose of concealing the truth from those who are unworthy to receive it, and of magnifying it, for the choicer spirits, by an indirect and mysterious mode of presentation (ἡ σχέσις ἡ μυστικὴ τῶν σημαδίων).

The following summary of Philo's principles of exegesis may give some idea of the method in practice. (1) When nouns are represented by personal pronouns, the meaning is indicated as 'man.' (2) A non-human verb, e.g. ἀνάγω, 'man,' shows that what is meant is not the man possessed of body and soul, but he only who is possessed of virtue. Similarly, personal pronouns are significant. In Gen 15: 15-18 (Μεταμφιάζω) means that Abraham was delivered from the tangles of the flesh. There can be no doubt about St. Paul and the Apocalypse, and no work of divine writing can be interpreted without this meaning. If Moses says 'shepherd' in one place, and 'keeper of sheep' in another, be means to distinguish between a good and a bad kind. (2) Places on which no question, e.g. ἔρχεται, 'comes,' is meant to indicate δέρκεται, and πρᾶπτων to indicate πράπτων. (3) Double verbs are the highest meaning, e.g. since 'ribs' is sometimes used for 'strength,' the words about Adam's rib mean that the ἄναγω φρονεῖ the sense of the Pauline passage fourth out of the five meanings. (4) Numbers are always countable; one is the number of God, two of the creature, three of the body, four of potential completeness, five of the sensuous life, and so on. (5) Animals are symbolic: the camel of memory, the ass of the irrational nature, the snakes of lust. Inanimate objects are created in the same manner. (6) The proper names of Scripture are allegorically interpreted, e.g. the Pentateuch are allegorized according to their fancied etymological affinities. Philo speaks of allegorism as the 'moral,' as opposed to the 'natural' interpretation. It is plain that the principle of allegorism offered great temptations to evading the letter of the Mosaic law. This misuse of the method is condemned by Philo, who protests against those who 'spiritualize' the literal mosaics of the Pentateuch (of de Migrat. Abrah. 16). He also distrusts the symbolic study of nature, as raising more problems than it solves. We shall learn more by studying our own minds, and the sacred literature.

In considering Philo's theology, we must expect to find the Greek and Hebrew elements imperfectly fused. It would surpass the genius of any man to harmonize the logical, analytic thought of the Greeks with the vague, indefinite intuitions of Hebrew prophecy. But the way had been prepared for him by approximations from both sides. The Jews of Alexandria had universalized Jehovah till He had lost the clear characteristics (Leg. ad Deum of the God of the Hebrews; and, on the other hand, Greek thought was now more favourably disposed to the transcendence of God than when Stoicism was in the ascendant. Philo, in explaining the anthropomorphisms of the Pentateuch as mere accommodations. God is, in truth, not a Being who can feel anger, jealousy, or repentance. He is without body, invisible, the most universal of beings, above all understanding, above even the absolute Good and Beautiful. We apprehend His existence partly by analogy: as we have an invisible mind, which is sovereign over the body, so must the Divine have a supreme mind, which is God (de Mundi Opif. 23). Also, the world shows traces of design; but the principle of causality cannot reside in matter, which has nothing noble in itself, but only the potentiality of becoming all things (de Mundi Opif. 5).

A higher mode of apprehending God is by spiritual intuition, which under certain conditions culminates in knowledge of Him. But, since like cases are not met in the past, we are precluded by the limitations of our imitute from forming an adequate conception of the mind of the Universe. We cannot get out of ourselves, and undesired existence is incomprehensible to us. We must first become God, which is impossible, in order to be able to comprehend God (Fragnn. ii. 654). We approach most nearly to the truth when we strip off from our idea of God all that is characteristic of finite existence. This process still leaves Him with the attributes of goodness, freedom, and activity. Creative activity (τὸ θεωρεῖν) is as characteristic of God as receptivity (τὸ παρέχειν) is of the creature, and God 'never ceases working.' The complete negation logically leads to a God who is without qualities (ἄρσεν*); but Philo here takes refuge in agnosticism. (1) God has revealed his nature to none, and we cannot say that the First Cause is material or immaterial, with or without attributes (Leg. ad Deum, iil. 73). The bare fact of His existence (ὁ Θεός ἐστιν) makes Him omnipotence, omniscience, and the like, which can be applied only to the Supreme Being; and such attributes as goodness, etc., in their full meaning can be applied only to Him. (2) Those things which among men are called truth and justice, are symbols only; but those which are

* But properly ἄρσεν means not 'having no attributes,' but 'inexplicable of being classified': God does not belong to any class or order of being, but is above all classification, being unique.
so with God are prototypes or ideas.' God is 'the most generic' as excluding nothing; but He transcends even the highest genus, τὸ ξυλίκιον. He is 'older than the monad'; by which Philo means that God is the original of all men and negations, not of plurality, but that His nature is the archetype of the mathematician's unity.

One of the most difficult parts of Philo's system is the doctrine of the Divine 'Powers'. These Powers are now generally appreciated only by pure Intelligence; to us they are revealed in their action. They are not, however, exhausted in the created world, for they are infinite, like God Himself. Their function is to give to matter those forms in virtue of which we are able to say that things exist. In themselves, the Powers are the eternal forms of God's thought; their activity is stamped on the whole order of nature, which is the result of their latest expression in the creative ideas. These Powers, or ideas, are not of equal rank. The highest of them is the Logos, which stands nearest to the Godhead, even as the reasonableness of man is that part of him which reaches most nearly to the Divine.

It has been usual with critics of Philo to condemn with great severity this conception of 'Powers'. It is said that he uses these dividing ideas as a device between the unrecognizable God and the world, and that the contradiction reappears, in no way resolved, in the ideas assigned to the dividing agencies. The Powers are sometimes identified with God, and sometimes separated from Him. They are (it is said) a transposed device to bring God into contact with the finite, from which He has been jealously excluded by another line of argument. It is perhaps worth considering whether any theistic system which regards God as something more than a finite spirit among other spirits, has succeeded in explaining an apparently immaterial, omnipotent, and omniscient being can really exist at all time. Philo is possibly not more successful than others who have attempted to reconcile the idea of an infinite being and a fair estimate of his teaching will acquire him of the puerile expedient of creating substitutes to act in God's place. 'God, having outside creation, has none of the less fulfilled us. He may be called Wisdom ('Φιλός'); He may be called Omnipotence (εὐρύχωρας Κύριος); and it is not an isolated acknowledgment of the Divine immensity in the world. He 'extends' His Powers over creation just as man is said to 'extend' the energies of his soul to God. It is true that we read that 'the Blessed One must not come into contact with inordinate matter,' and this is why He used the inanimate Powers, whose real name is ideas, that every great idea may be taken possession of by the greater idea. But surely this merely is to assert the transcendence of God, without denying His immittance. The notion of the Powers as subordinate persons is quite alien to Philo's philosophic method, and cannot even be discussed without wandering far from his standpoint. Dekalogos means, as a very appropriate form, 'subjective Logos.' The 'Logos, as it were, in all creation, outside of the whole in His essence, but in all things by his powers ... containing the whole world, and being the Logos, and in all respects with his Father, and Him only.' Both in Philo and in the Gospels, the three persons of the Godhead are distinguished by different energies and powers. The Logos, which is the opposite well understood to be metaphors. In the same way, when the Powers are symbolized as the agents and mediators of God, the names denoting His whole personality have been misunderstood as a literal statement of fact. Philo is extremely fond of personification; e.g., for him 'all the virtues are virgin, just as, par revanche, the wives of the patriarchs are 'not women but virgins.' Nothing can prove more strongly that Philo did not ascribe personality to the Powers, than the fact that he everywhere distinguishes them from the angels (in spite of Zeller and others). The angels are incorporeal souls, created, finite, and localized; they are 'powers,' no doubt, doing God's will, but they are entirely different from 'the Powers' of divine Ideas. These latter are the active manifestations of the essence of God, which give to creation all the reality, as well as all the ordered, individual, and special character.

In the hierarchy of Powers, the Logos of God is, as already remarked, second to God Himself ('Leg. Alleg. ii. 21). The name Logos comes from Stoicism, and the content of the word Philo is more indebted to Plato. The Stoical notion of Logos as active and quickening force is less prominent than the Platonic expressions 'idea of ideas' and 'archetypal idea.' The 'Logos of Philo, in fact, coincides with the Logos in Plato, and the idea of the world is the mode in which he assumes in creating: 'in the Logos are inscribed and engraved the constitutions of all other things.' As the principle of orderly development in the natural world is called the 'Catter' (τροαιρετής). The inferior ideas, gathered up in the Logos, constitute the multiplicity in unity of God's creation. A difficult question is raised by the distinction between the inward (ἐστιατος) and the uttered (ἐγερθήκης) Logos in man, which corresponds to a distinction in the universal Logos. The Logos is tumble both on the universal and the nature of man ('Vit. Mos. iii. 13). The 'seal' of the Logos upon matter—the expressed thought of God—is not called the 'uttered Word'; but the inward Logos seems to be between the thought of God in itself and the same thought made objective.

Another problem is the relation of the Logos to the half-personalized 'Wisdom' of the early Jewish-Alexandrian literature. Philo disliked the gender of 'Wisdom'; and though he explains that 'its nature is masculine, not feminine,' he found the word less dignified as well as less plastic than Logos. 'Wisdom' is chiefly used by Philo of the Logos as informing the human soul hardly ever of God's creative power. The word 'Spirit' is sparingly used of the Logos or Wisdom inhabiting the soul of man. The question as to the personality of the Logos is rather undiscussed. For instance, it is no

ALEXANDRIAN THEOLOGY

311

THEOLOGY

of any Greek cared to define personality, a concept which has no name in the Greek language. He sometimes speaks of 'Logoi' in the plural, with a sense of repetition than when we speak indifferently of 'the Logos.' For this very reason he employs poetical or mythical personification quite freely. The Logos is the constitutive principle of human individuality; he is not himself an individual. The Logos of Philo is therefore nearer to what, in Christianity, became Monarchianism than to the Arianism with which it has been compared, or to any other orthodox view. See, further, the article Logos.

As the Logos of God is the archetype of human reason, the mind of man is nearer to God than any other created thing. The human soul is the only worthy temple of God; those in whom God dwells may justly be called His sons. Knowledge of God, gained by imitation of Him and likeness to Him, is the highest good for man. Evil consists in separation from God, and ignorance of Him; the cause of the head of moral evil is selfishness (ψυχή), especially when combined with arrogance and conceit (μεγαλοπρεπεῖα). To speak, like Epicurus, of "my birthright" and "my blessing," is proof of a boundless impotence, and is inconsistent with- the position for it belongs to God alone to say 'Mine' ('Leg. Alleg. iii. 70). Philo does not identify evil with ignorance; for he clearly teaches that sins committed in ignorance are pardonable; but he is careful to distinguish between the ignorance which we cannot help and that which is due to pride or selfishness. The corruptible body always tends to press down the soul; not that it is evil in itself, for matter has no moral significance, good or bad, apart from our use of it; but, as a matter of experience, the bodily needs and appetites are a dog upon spirituality. The powers of sense, though Divine gifts, are irrational, and may even lead us to their own gratification without thought of consequences; but to make this gratification our object is wrong and ruinous. The passions (πάθη) for the most part operate in opposition to reason, and are therefore bad; but some are made manifest by the existence of such passions πάθη as pity and love.

The great helper of mankind in the ascent to God is the Logos; and here Philo tries to unite the Jewish notion of the Torah with the Logos idea and the idea of God with his Platonic idealism. His description of the virtuous life is on the whole very modern in sentiment. Self-discipline is not an end in itself. Such exercises as running, swimming, dancing, reciting, bath, and sleeping on the ground are useless and unprofitable labours, which injure the soul as well
as the body (Quod. det. pot. 7). It is true that we have a war to wage, 'the most difficult and troublesome of all wars,' against our bodily appetites, and that in practice we must often regard our bodies as mere 'narcissus,' but there is no need to withdraw from the world. 'The serpent, pleasure, bites us in the wilderness;' it is safer to live in the world, to accept responsibilities and dignities, and show how such men can be followed without contamination and to the good of others. Those who assume a squalid and melancholy appearance, and say that they despise glory and pleasure, are hypocrites. Unworldliness is to be gained only by knowledge of the world. At the same time, such luxury as was prevalent among the wealthier classes in Egypt is wrong. The good things of the world should be used sparingly, that the soul may not be entangled in the corruptible elements. Truthfulness in speech is strongly insisted on, and taking oaths is deprecated as needless for an honourable man, whose word ought to be sufficient. This is the same and truth the only sacrifice (Quod. det. pot. 7); ceremonial observances and rich offerings do not make a man pious. Piety and justice seem to share the throne as the chief of the virtues. The soul can be rewarded or punished in a future state for its life here; but Philo discourages this line of thought; virtue and vice are their own reward and punishment; heaven and hell are within us. To enjoy an innocent and quiet mind, free from unrighteous passions; to feel the presence of the Holy Spirit of Wisdom within us; to share at last in the peace which passes all understanding, and to see God as He is—this is the goal which Philo sets before himself and his readers. The climax of blessedness is to stand steadfastly and steadily in God alone. A resurrection of the body has no place whatever in his creed.

Philo has been very variously estimated as a thinker. Duhé treats him with contempt; Zeller thinks that his whole system is vitiated by a fundamental contradiction—the attempt to achieve unity with a being whose very notion makes such union impossible. Such a scheme, he suggests, could be the creation only of a consciousness at discord with itself and the world. Vachérot emphatically declares it to be a dream from beginning to end. Plato and now from the Stoics, the result being an 'incoherent syncretism' dragged into the service of Judaism. Siegfried is impressed by his complete abandonment of the old Jewish religion, which nevertheless he affects to defend in words. 'No Jewish writer contributed so much to the dissolution of Judaism. The history of his people becomes in his hands mainly a didactic symbolic poem, by which he inculcates the doctrine that man attains to the vision of God by mortifying the flesh. The God of Philo was an imaginary Being, who, in order to gain power over the world, had needed a Logos, to whom the glory of the Law and the humanity of Israel, the unity of God, was sacrificed.' E. Caird, criticizing Philo's whole system from the Hegelian standpoint, shows that he had no conception of a historical process of evolution, and objects that his God is not related to the God of the world. (For a consideration of this criticism, which affects Plotinus more than Philo, see the article on Neo-Platonism.) A more favorable view is given by Drummond, whose exhaustive treatise takes rank, with Siegfried's book, as the most valuable exposition of Philo's theology. No sane critic could place Philo in the same rank as a great original thinker. He is, however, of infinite importance for our knowledge of the early Christian Church in the Egypt of the Ptolemies. The very existence of a church in Egypt is due to the efforts of the Logos, as interpreted by Philo. All that has been learned about the first two centuries of the Christian Church must be based on the work of this primitive organization, there grew up into importance,
in the later half of the century, the remarkable Catechetical School, the earliest διδασκαλίας in close relation to the Church. (The schools of the Apologists—Justin, Tatian, etc.—were private ventures.) The oldest Gnostic school was in Egypt, and the Christian Catechetical School may have been modelled partly upon these and partly upon the Jewish high schools (cf. Euseb. HE v. 10, παραμετροί διδασκαλεῖς ἔκ προφητικοῦ νόμου ἀντίκεινται στρογγυλάτους). The school emerges from darkness under Pantænus; but we know very little about its management either under him or under Clement. There were no classes or collegiate buildings. The head of the school gave informal instruction in his own house, sometimes by lectures, sometimes by conversation classes (Orig. c. Celts. vi. 10). The usual course was three years (Comment. Eccl. Egypt. iii. 42). No fees were charged. The lecturer was supported by free gifts from rich students. The education was on much the same lines as that advocated by Philo. The aim was the acquisition of γνῶσις, knowledge, or illumination. The preparation consisted partly of moral discipline and partly of the study of philosophy, to which must be added the art of expounding, in accordance with the principles of allegorism, the books which contained the prophecies. Pilgrims were replaced Greek philosophy and the Old Testament Scriptures side by side as propedectic to the higher knowledge; and among philosophers, the Platonic and Stoic schools were most studied, none were excluded except the ‘godless Epicureans.’ The commentaries of Origen show that Biblical study held a very important place in the course. The list of Heads of the School is given as follows:—Pantænus, Clement, Origines, and Heracleas, Dionysius, Pius, Theognostus, Serapion, Petrus, Macarius (?), ... Dîlymos, Rhodon. (Arius, according to Theodoret (HE i. I), was catechist; but it is very unlikely that he was ever Head of the School.) The Catechetical School lost its importance during the Arian controversy, and was further weakened by the attacks upon Origen’s orthodoxy. It was destroyed in the unhappy struggle between Theophylact of Alexandria and the barbarous orthodoxy of the Egyptian monks.

(a) Pantænus, the first Head of the School, is said by Eusebius to have been a Stoic, by Philip of Side a Hellenist, and by an Athenian an Aphantist. In any case, he was learned in Greek philosophy, and, according to a doubtful tradition, visited India as a missionary before his appointment at Alexandria. The notices of his teaching indicate that he led the way in the allegorical interpretation of Scripture. His work seems to have been more catechetical than literary, and the most interesting fragment of his teaching has been preserved in the form of question and answer. ‘Pantænus, being asked in what manner Christians suppose God to know reality, replied, He neither knows sensible things by sense, nor intelligible things by intellect. For it is not the intellect that He who is above the things that are to apprehend the things that are according to the things that are. We say that He knows things that are as acts of His own will’ (τὰ ἔργα θεοῦ, Maximus Conf., Schol. in Greg. Naz.). Clement was present certainly at the assembly of Pantænus (not vice versa, as Philip of Side says); and it is highly probable that Pantænus is the ‘Sicilian bee’ whom Clement discovered ‘hiding himself’ in Egypt. (HE viii. 12, 22.)

(b) Clement of Alexandria. —Titus Flavius Clemens was born about A.D. 150, not at Alexandria; perhaps at Athens (Epiphanius). After many years of travel in Greece, Asia Minor, and the East, he came to Alexandria, where, about A.D. 200, he succeeded Pantænus as Head of the Catechetical School. In 202 or 203 he was compelled by the persecution under Severus to quit Alexandria, probably for Palestine and Syria. He was still living in 211, but dead in 216. We do not know at what period of his life he was converted to Christianity, or what were the stages of his conversion.

The works of Clement are—

1. (The Δόγμα or Παραπόγια ἒρμ. Euseb. an exhortation to the Greeks (not ‘theological’; Jerome mistook the title for pagan). This treatise was probably written about 190. 2. The ἔναθρωρος, written after the last-named, a practical instruction dealing with the conduct of life. The ‘Tutor’ is Christ Himself, the great Instructeur of all mankind. (Clement is the first writer [title in full: ἐν Κολλησία τῶν ἔρημων παρά δογματικῶς τοὺς μικράς τιμίας ἐκκλησίας] of the Middle Ages, Jerome, and the Church.)

The Miscellanea, a much longer treatise, in seven, or eight, books (Photius, Jerome) books. (The fragment of a logical treatise called Book vii. does not seem to belong to the Miscellanea, and the end of Book vii. promises another treatise rather than another book: as ἄλλος ἅρα παραμετροὶ τῶν λόγων. The Miscellanea, which is issued in ‘studied disorder,’ that the mysteries of knowledge may not be made too plain to readers who are unfit for them, exposed the principles of a reasonable and philosophical faith. The treatise was probably designed to lead up to another, which Clement intended to be called Διδασκαλίας. (This intention is implied in Prot. ii. 76, iii. 97, and other places.) This would have completed the series begun in the Hippolytus and continued in the Hadrapa, as the principal to the higher γνῶσις. But Clement probably intended that he would profit by such a well-established principle of reserve in communicating religious truths. Some have identified the Στρογγυλέος with the pretended Νεκρογνωστικός, but de Faye and Vat. show that several apocryphal gospels were filled in the Strognul, and that the work has no appearance of reality. It was probably a sort of summary of the original schema. 3. Τιμοθαίνημα or Ορθολογία, in eight books. These were notes and comments on the Old and New Testaments, including, as Eusebius, c. St. Peter, c. St. Paul. The New Testament notes were adopted by Eusebius and Jerome, in which Clement, he says, teaches that ‘matter is timeless,’ that the Son is a creature, that there were many worlds before Adam, that the Devil is a Λόγος, of which the Logos, or Word of God, is a Power or Efficiency of the Divine, was incarnate; together with metaporphysis and docetism. 4. Τὰ τοῦ Αἰωνοῦ koινοτοῦ, still extant, an instruction sermon, ending with the well-known story of St. John and the robber. 5. Several other treatises are mentioned by Eusebius and Jerome, and (as subjects on which he intended to write) by Clement himself.

The view adopted above as to the character of the Miscellanea and the non-fulfilment of the design for a Διδασκαλίας is of great importance for the understanding of Clement’s theology. In Strom. iv. 1 he announces his intention, after dealing with other subjects, of introducing his readers to the ‘true gnostic science of nature,’ initiating them into the lesser mysteries and to the greater mysteries. But from such initiation he carefully refrains in the Miscellanea, for, as he says, to put everything into a book is as bad as to put a sword in a child’s hand. It is safe to conclude that Clement has suppressed what he considered the highest part of his teaching. It is safest, he says, to learn and teach such things orally. What was this esoteric teaching? It is safe to guess that it was mainly connected with Biblical exegesis. Clement believed in an authoritative tradition of interpretation, handed down from Christ Himself through Peter, and James, and St. John, and Paul. It probably allegorized narratives which the simpliciores treasured as bare facts. Besides this, the ‘Gnostic’ doubtless allowed himself to develop a mystical philosophy of religion, which could not be fully imparted or even made intelligible to the public.

The conception of the earthly life of Christ as a grand symbolic drama or Divine mystery-play for the enlightenment of humanity; the vision of the Quattuor Evangelist (Alexandrian philosophy). And though no objection was taken to the supernatural element, as such, in either the OT or the NT, the esoteric teaching undoubtedly was that certain details in the text were only symbols which were not to be taken as a symbolical truth. With regard to the philosophy of religion in its wider aspects,

* The critical problems raised by this fragment, the Euseb. and the Esoteric Church, have been discussed with difficult results by Zahn, Ruben, von Armin, and de Faye.
it is seldom necessary to read between the lines in Clement. He was not a profound thinker, but a well-read and able man, who accepted in an intelligent manner the syncretist philosophy popular in learned circles at Alexandria. He has been called clever and rationalistic, and has been accused of taking his quotations from anthologies of elegant extracts. But the obscurity is rather than of arrangement than of thought, and the rhetoric is not often obtrusive. In Clement an ardent and imaginative presentation is thrown over the essays so as to hide a clear intelligence. In fact it is worth observing, in view of the often repeated statement that rhetoric, 'the evil genius of Greece,' Infected Greek Christianity, that Minucius and Tertullian are much more 'rhetorical' than Justin or Clement.

Clement, as a Christian philosopher, is aware that he has to encounter prejudice and mistrust. Gnosticism, at this time, was much more dreaded in the Church than fifty years earlier, when it was really a formidable intellectual force. At the end of the 2nd century the Christians were better educated, and the growth of rationalism and speculation in the Church is apparent. Talking of Clement, we are inclined to argue, that, since 'heresies a philosophia subornantur' (Protrept., 7), philosophy should be banished from the Church; and Clement is well aware that the majority agree with him. Philosophy,' he protests (Protrept., vii., 10), 'can never come to terms with us, as the vulgar think' (Strom., vi. 10). It is not the privilege of the few; 'with us, philosophers are those who love Wisdom, the Author and Teacher of all things' (Strom., vi. 7). But he feels that the obscurantists, with their cry of ψεῦδος και φάλα πίστεως (Strom., i. 43), are formidable: he must even indicate his right to publish a book at all! Must literature be left only to pagans and atheists?, he asks. 'We are not,' he says, 'a modus moriendi: Our doctrine is not his own, but handed down from the Apostles; and, lastly, people are not obliged to read him. Such a defence throws much light on the Christian distrust of culture even at Alexandria.

To turn to Clement's theology. God is a Being (οὐδείς), but above space and time, 'beyond even the One and the Monad,' and strictly nameless, though we are invited to give Him a Name. In a doubtful fragment (on which see Bigg, Bampton Lectures [1886], p. 64) he has been thought to deny to God consciousness of the external world; but probably not. Clement, like Origen, conceives God as a reality not as external to Himself. He certainly does not teach that the Father has no consciousness except through the Son. God takes pleasure in our salvation, and in that only (Strom., vii. 3; Protrept., 94, 95, 116): His nature is profoundly moral: He is good because He wills to do good, not like fire, which radiates heat automatically (Strom., vi. 42, and esp. Strom., vi. 104, επειδή ὁ Θεός ἀραὶ λίγη τίτλην ἀγαθόν οὖσιν, τοιαύτα μὲν μαθεῖν καὶ λάβειν... τοιαύτα δὲ λίγωσιν ἀγαθά, τοιαύτα δὲ καὶ πάριθα ἄγαθα δὲ). Such passages must be considered as well as those in which he tries to outdo Philo in the representation of God.

Nevertheless he insists that no man cometh to the Father except through Christ, the Logos. He rejects the Stoic pretension to 'resemble God' (cf. however, Strom., vi. 113, quoted below), and quotes very frequently the saying of Christ Himself, 'It is enough for the disciple to be as his master.' His Logos-doctrine, which is the basis of his Christology, is less metaphysical and more religious than that of Philo. Although he shows a dependence of Clement on Philo, as regards his conceptions of the Logos no less than in his principles of allegorism, has been conclusively established by Siegfried, it is plain that, while Philo is mainly preoccupied with the desire to explain the formation and government of the universe, Clement is much more interested in religious psychology.

In the 150 years which elapsed between the two writers, the centre of gravity in 'philosophy' had changed from metaphysics and cosmology to religious ideas and ethics. "God, the God of the Stoics," Clement says, has now more thought of than the Platonic "Father" of Ideas." Clement's attempt to combine the two conceptions marks the passing of the Philonic, and the ascendency of the Christian. The Logos was taught 'two Logoi.' Or perhaps Clement was perplexed by problems about the Father's consciousness while the Son was incarnate. But the 'two Logoi' do not appear in his extant treatises. The Logos in Clement is the instrument in creation (He is often called 'creator'); He introduces harmony into the universe, of which He is the 'pilot.' He created man in His own image. He is spoken of as 'the Will of God,' a power, or energy, of God, and in particular as 'Saviour,' a term to which, we think, there is no parallel in Philo. He was a 'lover of mankind,' from the beginning. He is the Word of God (Strom., vii. 10). His doctrine is not to be initiated; He revealed Himself in the OT theophanies. Since the Incarnation, He has been the 'Saviour,' 'Tutor,' and 'Teacher' of Christians, of those, that is, who have been 'initiated' by the laver of illumination. His doctrine, as we learn from the statements of Clement, is that the church of the second century, which accepts a syncretistic theology, baptism is decidedly more prominent than redemption by the blood of Christ. Very characteristic is the presentment of salvation as an educational process, by the side of the other conception—equally characteristic of the period—of salvation as the acquisition of immortality.

Of the Third Person of the Trinity, Clement says but little. The Alexandrians, in point of fact, hardly noticed such a person as the Holy Ghost. Clement does not mention the Son of God as the Consolation of the World-Soul, the Third Person of the Platonic Trinity and the God of the Stoics, were discharged by the Logos in addition to those of the Platonics, Nous, and the Sophia. There is no close resemblance between the Holy Ghost of Christianity and the Neo-Platonic Psyche. Clement makes the orthodox statements about the Person of the Holy Ghost, and, for the rest, puts the subject aside as a θάνατος μυστήριον. The third is evident to him, but he does not accept it. "The doctrine of Plotinus, and the συνεργεία of medieval mysticism. But Clement ascribes so much Divine inspiration to the rational soul that the tripartite classification seems hardly necessary. Origen is right; it. Clement guards himself against the common tendency to associate evil with matter. The body is not naturally evil, he says, nor is the soul naturally good. Rather the soul is that which wills, the body that which acts. On the existence there is no definite statement. It was regarded as an open question in the Church, and probably Clement, like Origen, was inclined to believe it, though he was not an exponent of the Platonic doctrine of metempsychosis. He admits no hereditary guilt. God punishes only voluntary sins; the sins forgiven in Baptism are actual transgressions; infant Baptism is not mentioned (Bigg, p. 81).

The most distinctive feature of Clement's ethics is his doctrine of the Two Lives. This classification is common to most of the religious and philosophical teachers of the day. Clement, like Plotinus, makes the excuse for Platonic philosophy into an absolute difference by the Gnostics. Clement is as much opposed to Gnosticism as he is anxious to utilize and harmonize Plotonic and Stoic doctrine. Faith and knowledge, the principles of the lower and higher life respectively,
are necessary to each other, and closely related. Faith is defined as 'a voluntary anticipation (προ- λογία) of things unseen,' 'an uniting assent to an unseen object,' 'the foundation of rational choice.' 'Righteousness was intended to signify the first condition of understanding it.' Unless knowledge is based on faith, it remains merely intellectual assent, and is neither stable nor effective. The motive powers of faith are hoped-for filial awe and 'righteousness, because it is merciful.' Faith, however, must go hand in hand with inquiry (ζήτησι): it is the nature of living faith to develop into knowledge (γνῶσις). The perfect Christian, therefore, is the 'Gnostic,' a word which Clement will not abandon to the sectarians who at last monopolized it. The portrait of the Gnostic is given in Strom. vii. It is of supreme importance for the understanding of Clement as a theologian, because it anticipates the final part of his scheme, which was never executed. He does not expound his Gnosticism, but he does show us its fruits. The Gnostic is the man whose character has been formed by his own spiritual development, for which the earlier books of the Stromataes are a preparation only.

The aim of the Gnostic is to become like God. The visitation of God is a climax. Clement uses a Greek saying that ἀνὰ τὸν ἄνω θεὸν (Strom. vi. 113). The Divine attribute of which he is thinking in such expressions is the higher knowledge, that which has for its object the 'intelligible world.' 

In one place (Strom. iv. 48) he says, in more Christian language that the highest contemplation is knowledge of God, which is inseparable from likeness to Him. In Stoical form he says (Strom. iv. 30) that Gnosis is the purification of the ruling faculty of the soul; and everywhere the necessity of moral even more than intellectual training is insisted on. In the seventh book the 'canons' of the Gnostic character are said to be 'gentleness, kindness, and nobility of service.' Also the achievements of the Gnostic faculty are 'to know what is right, to do what is good, and to help others to do it.' 

'He is the true athlete, who in the great stadium, this beautiful world, is crowned for the great victory over all his passions.' He is persuaded that for souls that have chosen virtue, progress is always towards something better; till they are brought to the Great High Priest, in the vestibule of the Eschaton, and the entrance is given to the two words ἀνάθεσαι and ἀνέθηται, the former of which is the perfected work of temperance, when the passions are no longer even felt: οἵτωσιν ἰδρυμέναι τις ἀνέθηται (Strom. vi. 73); and still stronger (Strom. vi. 75): and the latter is the climax of the whole Christian life, the end which, like the beginning, faith, is not matter of teaching (τά ἀκροατέα διδασκόμεν) but THEOLOGY:

The statement that Clement ex., because the intellect above the affections is unavailing. The words κωμίστημα πάλιν ἐπιτύπτως ἀνέθηται (Strom. vii. 68) are typical. The 'intellecual love of God' affords perfect satisfaction to all our faculties, and unifies the entire personality. 'Christian love follows knowledge as surely as the shadow the body.' The will is not neglected. Faith in the first instance is an affair of the will, and is the necessary foundation of knowledge, which follows (Strom. vii. 2, vii. 55): 'but both are Christ, the foundation and the superstructure too.' Faith exists in a higher and a lower form—εἰς τιμωρίαν ἐπιφανείας and εἰς ἀθέατην ἑπεξεργασίαν (Strom. vii. 62). As a thinker, Clement is most important as the author of a syncretistic philosophy of religion, fusing Platonism and Stoicism in a Christian mould. In Stoicism he found a natural religion, rationalism, moralism, and the spiritual sympathy or affection, of which the literal facts are the lowest range (cf. J ohn. i. 20).
The metaphor would blind us to do justice to the literal meaning first. But Origen, like Philo, at times expresses almost contempt for the literal narrative. 'What man of sense,' he asks, 'will wait for the first and second day, and the evening and morning, existed without a sun and moon and stars? Or that the dove walked in a garden in the day, and then Adam hid himself under a tree? Or that the devil took Jesus into a high mountain, whence He could see the kingdoms of the Persians and Scythians and Indians?' (de Princ. i. 10). All such passages are valuable only for their higher meanings. 'There are many things,' he adds, 'which are true, but absurd and impossible' (de Princ. iv. 15). So 'some of the laws of Moses are absurd and others impossible.' Moses orders the sacrifice of an animal (the bœthoth) which does not exist in nature. 'I should blush to admit that God has given such commands; they are inferior to nothing in the remembrance.' Scripture contains an unhistorical element, borrowed with the history, in order that the worthlessness of the latter may drive us to seek the spiritual meaning.

We may wonder that Origen did not make more use of the theory of a progressive and gradual revelation, which he asserts in several places. But his main object was to save the OT (which was attacked and ridiculed by the Gnostics) for the Church, while at the same time repudiating the obligation to obey the Law, which was still press on Christians by the Jews. The allegorizing 'mystery' (en Ἰωσ. ii. 6. 10) is not to be remembered that the 'homily,' as established by custom at Alexandria, necessitated a very plastic treatment of the text. The preacher or lecturer was not only to express his personal thought in the context of the OT, extracting something edifying from each chapter. What could he say about Joshua but that the Canaanite kings were 'non tam reges quam vitctorum nomina'? The tone of these interpretations is often half-bred, though the moral lesson is pressed home with all seriousness. His treatment of NT difficulties shows even greater boldness, and is quite startling. The discrepancies between the four Evangelists are, for him, as natural to their credit unless we look for their truth in the 'spiritual sense.' There is (so Jerome makes him say) an Eternal Gospel, of which the actual Gospel is only the shadow. We must separate the ἀληθή εὐρέταρα εὐρέταρα from the ἀπόκρυφα καὶ ἀποκρυφάμενα. Thus he interprets the Fourth Gospel as a symbolic treatise, much as Loisy and others do now. But in his eyes all this exegesis was not the work of human ingenuity, but the gift of the Holy Spirit. 'Much of that was tradition; Clement seems always to copy, not to invent, his allegorisms. Origen, without making any boastful claim, believes himself to be illuminated.

Divine of God.—As 'Spirit' and 'Light,' God is a simple intellectual nature, in whom is no greater nor less, higher nor lower, the Monad, Unit, Mind, and Fountain of all Mind' (de Princ. 1). As against 'the Christian Stoics, he asserts that God is incorporeal, and he is more careful than Clement to avoid Stoical phrases savouring of materialistic pantheism. God is spaceless and timeless, 'everywhere and nowhere,' 'nature identical to That of the body.' Being was unchangeable. He cannot feel anger, hatred, or repentance. Punishment is not His work, but the necessary consequence of sin. And yet He is long-suffering, merciful, and pitiful: He has 'the passion of the body', and is affected by the sight of suffering. His body is not infinite, but self-limiting (in Matt. xiii. 569). His almightiness is limited by His goodness and wisdom (e. Oe. iii. 490). Origen has not solved the problem of the relationship between them and the Platonic transcendence; for a fine but vague passage on the subject see in Num. Hom. xxii. 2. He has less confidence than Clement in the existence of nomen as a path to reality; the most intimate knowledge of God is gained only by instruction, but by direct revelation; grace is implanted in the soul αὐτοῦ εὐρέταρα εὐρέταρεν. On this side he is 'more of a mystic than Clement. Moreover, by contrast, his theism is not chargeable with many hinges (ἀρέσχεια) rather than that of self-existent Being, he gives the idea of God a richer and more ethereal content.

But the doctrine of God in Origen involves at every point the problem of the Trinity. The Som or Logos is the centre of his theology. He is co-eternal and co-essential with the Father, and can have been a time when He was not. For when was the Divine Light destitute of its effulgence? Let him who dares to say there was a time when the Son was separate from the Father, considered as a man, do the same as to say there was a time when Wisdom, the Word, and life were not' (de Princ. iv. 28). But we must distinguish between those attributes (εἰρημένα) which belong to the Son essentially, and those which are assumed for the purpose of recompense. To the former class belong Wisdom, Word, Life, Truth; to the latter, Firstborn from the dead, Propitiation, Light, Shepherd. The former class are εἰρημένα, the latter αἰρημένα. 'Happy are they who need the Son of God no longer as Physician, Shepherd, Redemption, but as Word, Wisdom, Justice, and the other perfect attributes' (in Joh. i. 22). He is willing to identify the Logos with the Platonic Eidos. In this union it was saved from all the Néos προφορικός of God; He ζωή (not 'became') with God,' as St. John says. He is absolute Truth, Righteousness, and Wisdom; but the text, 'none is good save one, that is God,' forbids us to call Him the absolute Good, though 'in regard to us He is the absolute Good.' Prayer may be addressed to the Son or to the Spirit, but the highest prayer is that which is addressed to the Father in Christ's name.

The charge of subordinationism in Origen's Christology cannot be maintained. It is unlikely that he used the word ηὐσιος, in the Nicene sense, of the Son, because for a Platonist it is hardly correct to speak of the ζωός οHostname God, though 'in regard to us He is the absolute Good.' Prayer may be addressed to the Son or to the Spirit, but the highest prayer is that which is addressed to the Father in Christ's name.
the Spirit of the Son is one and the same' (in Rom. vi. 13). He understood St. Paul well enough to observe that no distinction is made between the Spirit and the Son (de Princ. i. 3). But in one remarkable passage (in Joh. ii. 6) he raises the question whether the Spirit came into being through the Word (δι' τοῦ λόγου ἐγένετο), or whether 'like the beginning' but not identical with it, as inasmuch as the beginning is the desire for a perfection which is only implicitly contained in the scheme, as designed by perfect Wisdom. God created the world 'out of nothing': matter, the lowest of the creatures, was created by Him immediately after the 'fall of the souls,' to prevent the world from being dissolved (de Princ. ii. 1). God is neither the whole nor a part of the whole: the former conception contradicts His simplicity, the latter His sovereignty. His Spirit is no all-pervading subtle element, like the Stoic 

ιάνεψα. The world is distinct from God; it is His creation. It is eternal in the sense that it had no beginning in time; the entire scheme that we know is only a brief phase in an innumerable series of worlds. The original creation, Origen teaches, was of innocent spirits, who shared 'accidentally' or precociously the perfection which God possesses 'essentially.' Their fall from perfection was voluntary. Some (the angels and the stars, to which Origen attributes souls) remained in their first estate; others (sinful men and evil spirits) fell in various degrees, and the latter were subjected only through the discipline of suffering. This world is constructed as the appropriate scene of their training, affording scope for the treatment proper to every degree of guilt. The fall of the souls was thus antecedent, but Origen teaches no metaphysics. The story of the Fall in Genesis he is disposed to treat as mere allegory (c. Cels. iv. 40). The most succinct statement of his doctrine is in de Princ. ii. 8, ending ἐν τοῖς ἐν οἷς γενέτο ψαλή, καὶ ψαλή πανδηλομένη ἡ πρώτη σκέλος, which throw light on his psychology. 'Soul' is 'mind' in a fallen state; it is an adventitious principle, intermediate between 'flesh' and 'mind' or 'spirit.' In reality his psychology is chthonic, though out of respect to St. Paul he preserves in words the distinction between 'soul' and 'spirit' (see esp. in Joh. xxxii. 2; in Lect. Hom. ii. 2).

The discussion as to whether Origen teaches the immateriality of the soul has been often mistaken on wrong lines. The soul for Origen is certainly immaterial, but it implies a body. 'The spirit,' he says, 'is that as a master and director, associated with it to remind it of the human, and to accuse and punish it for its faults. If the soul is disobedient and obstinate in revolt, it will be divided from the spirit after it leaves the body' (in Rom. ii. 9). The soul which is exalted by following the spirit, and not only following but being transformed, is made part of the body as a nature as soul, and becomes spiritual (de Orat. 10). The spirit 'spirit' resembles the impersonal νοῦς of Neo-

Platonism; but the question whether it belongs or does not belong to our οὖς can be answered neither for Origen nor for Platonism. It is an essential part of his teaching that the existence of God and other fundamental truths of religion are 'sown in the soul' as matters of immediate apprehension (αἰθήματα). 'So long as we keep them, the Logos never leaves us' (in Joh. xix. 3). This θεία αἰθήματα is made to cover such sensible experiences (of sight, hearing, smell) as the later Catholicism accepts under the name of mystical phenomena (c. Cels. i. 48); but such communications, though from a Divine source, are only externalized by our minds; 'God never speaks to us from outside' (in Psalm. xxvii. 1). From these 'seeds' spring the flowers and fruits of Divine knowledge, Christ revealing Himself under various aspects as the soul is able to receive Him. Corresponding to this psychological dispensation is the historical economy which, after the partial theo-

phanies of the ancients, is completely fulfilled in the Incarnation. The two are parallel aspects of the same Divine plan; it is meaningless to ask whether the historical Incarnation is the 'causa' of the soul's restoration. At first sight it will be thought that Origen has a less firm grasp of the ideas of progress and development than Clement. He gives too much importance to the 'fall of Adam,' and in consequence his philosophy of history is both gloomier and more incomprehensible. To be sure, that view of secular culture is also much less sympathetic.

Eschatology.—Clement had represented men in the future life as placed in different grades according to their moral deserts. The wicked will be subjected to disciplinary punishments till they are forced to own their guilt. Origen developed further the notion that all punishment must be dis-

ceptacle, since 'God can hate nothing,' and it is no part of His nature to render evil for evil. Moreover, immortal spirits (υπερανθρώπων) cannot be con-

gined to perdition. Here it is proved that Origen encountered great difficulties in reconciling his philosophy with the traditional Church teaching on the resurrection, last judgment, heaven, and hell. It is clear, he says, that the human soul cannot be understood as a 'spiritual soul' for there existed 'spiritual souls' could not 'fall from heaven' upon the earth, for they are much larger than the human soul. Our material souls are dispersed among other organisms, cannot be reconstituted in the resurrection. Can we suppose that the damned will literally 'grasp their intelligible soul' (he says); it is not a 'spiritual principle, which survives, and will make a new abode for itself, the resurrection body. Even when the soul becomes pure spirit, it will need a kind of body, for God alone is incorporeal spirit. Fugition must continue after death; 'even Paul or Peter must come into that fire.' But will any remain in torment for ever? Origen hopes and thinks not, but will not dogmatize; he re-

members the guest who was cast into outer darkness, with no promise of pardon. There are passages in Origen which imply at least a ψυχη δανίη never to be made good; but he would him-

self have dispensed any certitude on the subject. Only he in-

sists that promises like 'love never fadeth,' 'God shall be all in all,' must somehow be fulfilled. Even the devil might find salvation, as a spirit made in the image of God, though, as devil, he would be destroyed (in Rom. v. 3). The final con-

summation is 'perfect love' like 'God shall be all in all'; i.e. He will be all in each individual (de Princ. v. 6). Then there will be no more diversity, when all shall have reached the highest degree of perfection.

Ecclesiastic Theology.—Origen believes that the Logos enlightens all men according to their capa-

cities. Can anything be more surprising than that the average man can assimilate. It includes mythical

stories, which exist both in OT and NT; it offers rewards and punishments as inducements to virtue, and

punishments as deterrents, in varied forms and images. But it is not a matter of indifference what symbols are presented to the 'common man'; it is the religion of Christ alone which must be accepted by
all, though under different aspects. The Gnostic
learns that the objects of religious knowledge have
only a supermundane history: the 'eternal' or
'spiritual' Gospel 'places clearly before man's
mind the divine reality of the Messianic
idea,' both
the mysteries shown by His words, and the things
of which His acts were the riddles (in Jok. i. 9).

Such passages have been hardly interpreted as implying that:
the teaching of the Gnostics is nothing more than a
reproduction of the historic Christ. But this is true only in the same sense in which it might be said of St. Paul—in other words, the statement is quite misleading. The innate
knowledge of God, which he asserts, is the work of the Logos-
Christ, who, though concealed, supplied himself with
Incarnation.
On the actual effect of the death of Christ, as a transaction
Origen suggests various views, already current, in a tentative
manner: among others, the idea of a ransom paid to the devil,
which was popular at this time. He certainly did not regard the
historic work of Christ as a mere appearance or exhibition,
though, for the Gnostic, Christ is as far more important than
Christ for us.

**Influence of Origen.**—The double achievement of
Origen (carrying on what Clement began) was to
destroy Gnosticism, and to give philosophy a recogni-
tized place in the creeds of the Church. The
second was the price which the conservatives had to
pay only to advocate acceptances which they were
sessed a theology and a philosophy of religion which
were far more attractive to the educated mind than
the barbaric Platonism of the Gnostics. It was, of
course, not only in the domain of his philosophical
work to the masses, for whose benefit the
Catholic system, with its apparatus of cultus,
mystery, and sensuous symbolism, was developed
side by side with the progress of scientific theology. In
this new system of consensualism, a synthesis
mark a stage in a conflict which ended in a com-
promise. The great Gnostics of the 2nd cent. had been
unable to maintain their footing in the Church.
Clement succeeded in doing so, though not without some
suspicion; Origen, after much hesitation, was con-
demned. The Cappadocians endeavoured to re-
concile faith and knowledge by mutual concessions,
a process which was completed, after a fashion, by
Cyril of Alexandria, in the Theological controversies of the
6th century (Harnack, Hist. of Dogma, il. 5).

The first conflict in which Origen's theology was
deeply involved was against Sabellianism.
Dionysius, bishop of Alexandria, in attacking the
Monarchians fell under the charge of Trithesism.
The Roman see pronouncing against him, and laying
down a via media between the Alexandrian and the
Sabellian doctrines. This condemnation had no
snare for the young Origen; and eventually
Origen, in his two important works, the
Contra Sabellium and the Contra Cyprian,
flourished almost unchallenged till the end of the
3rd century. Modifications, however, were intro-
duced, involving a doctrine of submission in the
Trinitarian side of the Neo-Platonic type, and upholding
contendence as the great original con-
tribution of Christianity to ethics. Gregory Thau-
matarius (who is said to have called the Son a
Logos) taught the Trinitarian doctrine of Origen in
a form nearer to Monarchianism than to Tri-
theism.
The first serious attack on Origen was that of
Methodius, who, however, in spite of his bitterness,
seemed only to advance a comparison between his
Teaching and the rule of faith. In the controversies
that followed in the 4th cent., which need not be
described in detail, we mark a gradual hardening
and final dualizing of theological thought under the
influence of Athanasius. Origen's teaching was
disintegrated, selections being made from it
without regard to consistency, and he himself was
at last condemned as a heretic. After Athanasius
the Logos doctrine could only be denied in impotence,
as the notion of an economic and relative Trinity
gave place to that of an absolute Trinity. The
Identification of the Logos-Christ with the spirit of
the cosmic process fell more and more out of
sight. This change may also be described as part
of a transition from Platonism to Aristotelianism
in the Church. The school of Antioch led a revolt
against the Alexandrian exegesis of Holy Scripture,
and founded a more critical method, in which the
literal sense was always at least considered, and
which the mosaic of the mosaic in the minia-
tures, then so vivid, of Origen's idea of pre-existence had still many sup-
porters in the 4th cent., but was more and more
discarded, till it was finally condemned at Con-
stantinople in 381.

The doctrine of the Fall of Man, based on Genesis, resumed its
importance when the theory of an extramundane Fall was excluded. The question whether Christ
would have become incarnate if Adam had not
sinned is never, we think, discussed at length
except by those who answer it in the negative;
but the idea of an Incarnation as an essential part of the
Divine plan is certainly in accordance with
Alexandrianism, and has been revived by modern
thinkers (e.g. Westcott), who are in general sympa-
thetic with Christian Platonism in principle—the teaching of Pelagius, and may have been
discredited on that account.

One of the most important of Origen's contrib-
tions was his theory of theocracy, which combined rather than reconcile
the notions of expiatory sacrifice—of a propitiatory
death of God vanquishing the death decreed by
Him—of the revelation of a redemption really
effective in the eternal world. Both ideas were
familiar to the Greek mysteries. The idea of
substitution could not be emphasized by an Alex-
andrian; the Logos-doctrine makes it meaningless,
but after Cyril it became part of the Alex-

In the long Arian controversy the name of
Origen played a curious part. The Adoptionist
theory of a Jesus who gradually becomes God
was totally at variance with Origen's doctrine;
but Arius found in the Neo-Platonic cosmology
a support for his theory of a mediating Logos,
between the inaccessible Father and the world.
But in denying to the Logos any essential
identity with the Father he abandoned decisively the Alex-

Andrian Christology. 'With Arius, Christ belongs
in every sense to the world of created things'
(Harnack); with Athanasius He belongs in every
sense to God, the cosmical aspect being virtually
shelved. Athanasius was, in turn, attacked by
the restatement of Alexandrian theology, necessitated by his labours, fell to the Cappa-
docians, of whom Gregory of Nyssa is most in

Aristotelianism with Origen. This writer avoids some of the most obnoxious speculations of his master,
but on the whole reproduces his teaching, which in
this way has found and maintained a footing in the
Catholic Church, for Gregory of Nyssa has
never been condemned.

But the growing power of 'tradition' had already
begun to kill religious philosophy; and the pro-
gressive degradation of Christianity into a religion
of cultus affected Christian Platonism in precisely
the same way in which Neo-Platonicism suffered
between Plotinus and Jamblichus. Dionysius
the Areopagite is the representative of this application
of Alexandrian Platonism to ritual and liturgy.
The first voice of this extraordinary writer co-
incided with a reaction in favour of Origen.
Among later developments of Christian Platon-
ism, which owed some of their inspiration to the
Alexandrian theology, it is necessary to men-
tion only the philosophical mystic of Eckhart
and his successors, the 'Cambridge Platonism'
of the 17th cent., and in our own day the theology
of F. D. Maurice, Westcott, etc., among philoso-

ers, Leibniz has many points of resemblance to
Origen.
LITERATURE.—Redepenning, Origines (1841-1846); Denis, De la Philosophie d'Origine (1844); Westcott, art. Origines in Diet, Christian Biog.; Harnack, Dogmatische Theologie; Bigg, Christian Platonizers of Alexandria (1880); text: Lommatzsch (1831-1847).

Permanent value of the Alexandrian Theology.

Was the attempt of the Alexandrians to Christianize the current philosophy of their age legitimate? The question has been variously answered. Writers like Dussmann, Wernle, and Hatch, and the Ritschelian school generally, regard the 'Hellenizing' of Christian doctrine as an alien graft upon the enthusiastic revivalism of primitive Christianity. Theorized in Christian Schleiermacher, the 'secularizing' and 'depoestionization' of the religion which they ascribe to the influence of Alexandria. On the other side, it has been pointed out that, unless we ignore St. Paul's Epistles, the Epistle to the Hebrews, and the Fourth Gospel, there is much of 'Hellenism' in the NT; and also that philosophy in the first two centuries had ceased to be 'secular' and had become religious. The later Stoics and Platonists were 'not far from the kingdom of God,' and were by no means inclined to undervalue strictness of conduct. Moreover, the fusion of Greek and Jewish thought was so inevitable that to deplore it is to take a pessimistic view of the world-forgetting idealism. Finally, it is in its nature a brief phase; an intellectual system must follow it, or the whole effects of the movement must disappear. The Alexandrians satisfied the legitimate need of their age by providing 'a scientific doctrine of religion which, while not contradicting the faith, does not merely support or explain it in a few places, but raises it to another and higher intellectual sphere, namely, out of the province of authority and obedience into that of clear knowledge and inward intellectual, assent emanating from love to God' (Harnack, History of Dogma, Eng. trans., vol. ii., pp. 324 f.). This recognition, from a writer whose view of religion is strongly anti-intellectualist, is remarkable, and it does no more than justice to the great constructive effort of Clement and Origen, by which the best of Platonism and Stoicism was incorporated into Christianity. The permanent value of their syncretistic schemes will always be differently judged when men continue to be 'born either Platonists or Aristotelians'; those who would soon metaphysics from theology can receive but scanty sympathy with the Alexandrians. But if speculation on Divine truths is permissible or even necessary, no Christian theologians deserve a higher place than Clement and Origen, who made a serious and not unsuccessful attempt to combine in their creed the immanence and transcendence of God, universal law and human freedom, the universal and the particular in revelation, a lofty standard of practical ethics and a theory of knowledge that would. Had not more of Clement's contribution to Christian theology been quoted. Westcott says of Origen, 'We have not yet made good the positions which he marked out as belonging to the domain of Christian philosophy' (Red. Thought in the West, 292).

W. R. INGE.

ALGONQUINS.

ALGONQUINS (Eastern).—1. Divisions.—The existing representatives of the Algonquin or Algic race may be separated linguistically into three divisions: the Blackfeet of the extreme western part of North America, whose idiom differs most from that of the other Algonquin tribes; the Cree-Ojibwas of the middle west, whose language embraces a number of closely allied linguistic variations; and the so-called Wabanaki races of the north-eastern American coast, with whom the present article is especially concerned.

The term Wabanaki or Oibonaki means both 'land of the dawn or east' and 'man or person from the east.' It is applied to five distinct clans; viz., the Passamaquoddies, Penobscots, Canadian Abenakis or St. Francis Indians, Miomes, and Delawares, all of whom are plainly descended from one common family which probably first established organized tribal relations along the Canadian and New England north-eastern coast. There is no reason to consider that the term Wabanaki — or Abenaki — has any meaning going farther back than this into the origin of these peoples, who, in all probability, came eastward at a comparatively early date from some unknown western habitat. Unless modern Americanists are driven to accept the impracticable theory that the eastern tribes crossed from Europe by way of some long since vanished land-bridge, the theory of a western origin for all the Indian coast-races is literally conclusive. It will be seen, therefore, that the name 'Wabanaki = Easterner' must have served us a geographical rather than a racial-historical signification.

(1) The Passamaquoddy Indians of Pleasant Point, Maine, now numbering about 500 in all, are identical with the Micmegeet or Etchemins of New Brunswick and Nova Scotia, Canada. The name Passamaquoddy is a purely local term, meaning 'speakers of pollock-fish' (poumaquoddi). The correct form is Poumaquoddy, which has been corrupted by the whites into Passamaquoddy. These Indians are by far the most interesting remnant of the Wabanakis, as they still retain an unusually extensive oral literature, including love poems, legends, and historical tales of considerable value. It should be stated that the nucleus of the material relating to the primitive religious conceptions of the Wabanakis has been collected by the present writer from the Passamaquoddies primarily, and secondarily from the Miomes.

(2) The Penobscot Indians of Maine now number not more than 350, most of whom live at the Indian village of Oldtown on Penobscot River near Bangor, Maine. These people still speak a dialect which is more closely allied to the idiom of the Abenakis of St. Francis, near Pierreville, Quebec, Canada, than it is to that of the geographically nearer neighbours of the Passamaquoddy, the Passamaquoddies. In short, there can be no doubt that both the Penobscot and the Abenaki dialects are sister idoms which have sprung from a common original at a very recent date (cf. the present writer in Kulukakpik the Master, p. 30).

(3) It is well known that the Abenakis of Canada are the direct descendants, of course with some admixture of French and other blood, of the majority of the savages who escaped from the great battle of the Kennebec in Maine, when the English commander Bradford overthrew their tribe on December 3rd, 1679. Many of the survivors at once fled to French Canada, where they established their habitation at their present village of St. Francis, near Pierreville, Quebec. Others again may have wandered into Canada at a slightly later date. There can be no doubt that the Indians now called Penobscots, whose name is really identical with that of that name, are the descendants of those of the early Abenakis who eventually submitted themselves to their English conquerors. The Canadian Abenaki is the only name of this Wabanaki clan which has been uniformly given by the comprehensive name Wabanaki (Kulukakpik, p. 31).
(4) The Micmacs are the easternmost and by far the most numerous to-day of the Wabanaki remnants. They are to be found in various places in the Canadian provinces of Quebec, New Brunswick, Nova Scotia, and Prince Edward's Island, and New foundland. Their grade of intelligence is much lower than that of the other members of the same family, but they still possess a vast store of folklore and legends for the perishing few of interested collectors. Their language differs so greatly from the dialects of the Passamaquoddies, Penobscoets, and Abenakis, that the members of these clans always use French or English when communicating with their Micmac neighbours, while an intelligent Passamaquoddy can without difficulty be understood by a Penobscoot or Abenaki, if the dialect is pronounced slowly.

(5) The story of the enforced westward wanderings of the ill-fated Delawares or Lenape has been told in detail by a distinguished authority, the late Dr. D. G. Brinton, in his comprehensive work, The Lenape and their Legends, pp. 122-130. At the prior or dry, the both benevolent, and many, of a certain glamour of romance has been cast by the well known American author, Peninore Cooper, in his Leatherstocking Tales, is scattered literally to the Delawares, which, therefore, is a true story, of the Delawares, clans, the Missisquoi, the Unami, and the Unalachtigo, who were once the dominant native race in Delaware, Pennsylvania, New Jersey, and parts of New York State, are now represented by a few bands living in Indian Territory, in Western Canada, in the叙述，Ontario, Canada. The Delawares of Indian Territory, numbering about 500 persons, have quite lost their tribal identity, as they have been incoporated by the Cherokees nation, by whose chief and council they are considered; there are only about 300 in all; 100 situated at Hagerville on the Reserve of the Six Nations (Iroquois), 100 at Machiney town, and the same number at Moravian town, which is the seat of a Moravian mission.

2. Religious conceptions. — All the Wabanaki clans at present existing save only the Delawares, are, with very few individual exceptions, of the Roman Catholic faith, a fact which is most fortunate for students of comparative religion, as the Catholic priests have made little if any effort to stifle the ancient ideas regarding witchcraft and spiritism which is the basis of the earlier shamanistic faith. For this reason, nearly all our material, upon which this and other studies of Algonquin religious ideas are based, comes from the Catholic tribes, and not from the Delawares, who are all Protestants, belonging for the most part to the Church of England or to the Moravians.

The religious system of the primitive eastern Algonquins was, as already indicated, purely shamanistic, viz a faith, which, although admitting in a vague way the existence of a Supreme Being, laid its chief stress on the government of the world by an indefinite number of secondary spirits or gods, as beings always to be invoked in all transactions with man. These beings, in whose hands lay the real power, had therefore to be propitiated by all sorts of magic rites and spells, which gave rise to a caste of conjurers and wizards, who were themselves endowed with preternatural powers. In the lore of the Wabanakis, the general principle of good may be said to be represented by the rather clown-like being known to the Passamaquoddies as Kukkaskap and to the Delawares, as Minaskekeebe, who, as Mr. Leland has aptly put it, personifies the principle of good nature rather than of goodness. Kukkaskap's twin brother, Mulasum the wolf, was the evil genius of the Indians, and may perhaps be called the Algonquin Satan. Hence the headstrong Western Algonkins, whose nature is this almost too dignified a term. It is highly interesting to notice that these twins were born from an unknown divine mother, the good Kukkaskap in the natural manner, and the evil wolf through the woman's side, a method which he maliciously employs in order to kill his mother, in spite of his name, which means 'the liar,' the tendency of Kukkaskap was essentially benevolent (op. cit. p. 34). He was called 'the deceiver,' not because he deceived an injured man, but because he was clever enough to lead his enemies astray, the highest possible virtue to the early American mind.

Kukkaskap was at once the creator and the friend of man, and, strangely enough, he made the Indian (or man—the terms are synonymous) out of the ash tree. The present writer, in collaboration with the late Charles Godfrey Leland, has published a work entitled Kukkaskap the Master (New York, 1862), which gives in translation a number of songs and narrative poems relating to this being's career and exploits. In this collection, which gives the history of Kukkaskap almost in epic form, it will be noticed that the hero or demi-god is born to a man, mother, and that he is the creator of man and all the animals, a special poem being devoted to the origin of the rattlesnakes, who were primitively had no tongues, and to the animals, and discovered that man was the lord of them all. Traces of Christian influence are so evident even in the titles of these poems as to need little elaboration. It will be noticed, however, that although the general outline has undoubtedly been affected by the teachings of the missionaries, the details remain distinctly native. Kukkaskap then became the kindly teacher of man, who came into the world an absolutely ignorant being. When man was first created, he asked his aged parent the god's first act was to bring about the 'daybreak and the dawn.' Here again we see Biblical influence. Kukkaskap at once proceeded to instruct man in hunting, fishing, and dressing, and in the arts of building huts and canoes. 'He showed man the hidden virtues of 'plants, roots, and blossoms.' He taught him the use of weapons, and even the names of the stars, and the origin of the planets. He recounted to his aged pupil all the wonderful stories and the very old traditions, thus becoming the Indian father of history. He was prodigal in magic gifts to his special favourites, and became, in short, a veritable demigod, whose special care was the welfare of mankind.

The epic, if so loosely connected a series may be so called, concludes with a number of tales relating to the magic power of the god, who, although almost omnipotent, was on one occasion conquered by an unusual enemy—the baby! When the god was boasting of his powers to a certain woman, she replied: 'One there still remains whom no man has ever yet overcome in any strife,' indicating her baby who sat upon the floor in baby peace profound, sucking a piece of maple sugar sweet; greatly content and troubling nobody.' The Master then proceeded to attempt to seize his child from a man, using at first all his blusterishments. When these failed, for the baby remained immovable, he had recourse to sorcery, 'and used the awful spells, and sang the songs which raise the dead, and fright the devils wild, and send the witches howling to their graves.' But the baby 'peacefully as ever kept his place' (op. cit. p. 107). This story, which seems to be a genuine native production, is a good illustration of the Indian name Kukkaskap, which, contrary to popular opinion, is very highly developed.

In the end, owing to the evil ways of man, Kukkaskap sailed away over the water, the shifting waves of Minaskekeebe, Boontekish, and Mr. Godfrey's Leland, until they could see him no more. Yet when they had
ALGONQUINS

ceased to behold him they still heard his voice in song, the wonderful voice of the Master! But the sounds grew fainter and fainter and softer in the distance, and when ever they heard them all was silence, till a wonder came to pass: for all the beasts, which before had used but one common language, now talked in different tongues! Here again we seem to be in the position of the missionaries. After Kuliskap had left the land, the bird which had loved him most, the Great Snowy Owl, ‘went far into the North, into the deep dark forest, where to this day his children sing to the hills,’ which means in our language ‘sorrow, sorrow, sorrow.’ And the loons who had been his huntsmen go back and forth over the waters, seeking in vain for their master, the lord whom they cannot meet; ever waiting, waiting sadly, because they find him not’ (op. cit. p. 216). Micmac tradition in various forms still associates Kuliskap (or Glossap, as he is there called) with Cape Blomidon, a bold head projecting into the Bay of Minas, Nova Scotia.

It will be evident even from the above very brief sketch, that Kuliskap, as he at present exists in the memory of the old inhabitants, is a mixture of traditions. The element of the Christian God has entered very markedly into this lore, curiously compounded with what are undoubtedly native elements. For example, it is quite clear that all the stories of the exploits of the demi-god are based on the conception that he was a supernatural Indian and the father of all the conjurors, a class which still exists among the Catholic Wabanakis. This same culture-hero appears in the legends of the entire Algonquin family, although often under another name. It is highly probable, therefore, that the idea of a great Divine man was brought by these eastern Indians from their primitive western home.

The Wabanakis saw a spirit in every tree and waterfall, and a malignant or benevolent influence in many animals; and, in order to propitiate these beings, the class of sorcerers because, of course, a positive necessity. These people, who are called by the Passamaquoddies mécédominik, ‘drum-bearers,’ from their methods of exorcism, had very peculiar powers. We see from the tales that the conjuror could transform himself into an animal at will; that he could cast a spell on an enemy, even though the latter might also be a mécédominik; that he could violate the laws of nature so far as to make the Sick one well, or to amputate the ankle or knees at every step; and, finally, that the wizards could communicate with each other telepathically. One need hardly comment on the first two or the fourth of these wonders, as they are common among all shamanistic conjurors; but the third phenomenon, the power to sink into hard ground while walking, seems to be characteristic of American. Rink states that this is not an unusual feat among the conjurors of the Greenland Eskimos, who frequently sink into rocky or frozen ground ‘as if in snow.’ The trick is probably done by some peculiar method of stooping, or else is merely suggested by means of hypnotic influence. Leland compares here, however, the Old Testament revelations regarding their wizards, who occasionally sank into the ground, and who had power to pass through earth with the same ease as through air and water (Algonquin Legends, p. 342). It seems hardly permissible to draw a parallel between the ancient Norsemen and the northern Indians on this account, as the case Leland cites is that of a conjuror who disappeared in the ground, whereas the Norsemen are found not only among other stocks of North and South America, but also in Europe, Asia, Africa, and Polynesia (cf. MacCulloch, The Childhood of Fiction, London, 1886, pp. 283-299, 294-297).

without any apparent means of performing the wonder. On this account, the theory of suggestive hypnosis seems the most acceptable one.

Religious education, however, has been said to have existed among the Wabanakis. In one tale, the wizards cut their murdered comrade, evidently with the idea of absorbing into themselves some or all of his power. As it was willed, so it was that the New Zealand Maoris often ate their enemies with the same object in view; viz., to become as brave as the fallen foe had been. All authorities tend to show, however, that cannibalism was extremely rare among the American races, and that it is resorted to only in isolated cases such as the one here noted. In one Delaware tale, the wizard, who is also an evil spirit, desires to devour a very old worn-out man. This seems to be a role from primitive times, when it was probably not unusual to devour the aged, perhaps for a double purpose: both to get rid of them, as was the case until recently among the islanders of Tierra del Fuego, and also possibly to absorb some of their power. The living members of the family the essence of the dead parent, whose soul is thus prevented from becoming entirely extinct.

Especially in connection should be called at this point to the remarkable ideas prevalent among the Wabanakis regarding the cohabitation of women with serpents (Kuliskap, p. 235). Such a conception may seem strange, coming as it does from a land where there are no serpents large enough to warrant such a superstition. Although running the risk of seeming fanciful, the present writer deems it not impossible that we have in these beliefs some relics of far distant pre-historic days when huge serpents were not unknown. It should be added, moreover, that in every case of such sexual relations between serpents and human beings among the Wabanakis, the serpent was always a woman in disguise,—a fact which shows that, in the later superstition at least, the unusual character of such monstrous serpents was fully appreciated.*

It will appear evident from this sketch of the religious ideas of the Eastern Algonquins, that the legends of these people are well worthy of preservation, from the point of view both of primitive poetry and of science. Mr. Leland, in his preface to Kuliskap the Master (p. 14), remarks on the very common reproach of Europeans, that Americans have a land without ancient legends or song. He adds: ‘We bewailed our wretched poverty of song, when, with casual hand, we grasped at which we would not take the pains to open.’ The fact is that almost every hill and dale of New England has or had its romantic native legend, its often beautiful poem or curious myth. Many of these fancies have disappeared for ever through the deliberate ignorance of the average white settler, who even to-day, when the Indian has almost vanished from the land, is inclined to preserve the old feeling that ‘there’s only good Indian in a dead Indian.’ Band’s Legends of the Micmacs (New York, 1894), Leland’s Algonquin Legends of New England (Boston, 1885), Kuliskap the Master, and the present article must perhaps suffice, then, to present an interesting and characteristic specimen of the religious traditions of the rapidly disappearing race of the Wabanakis,—a race which, fifty years since, was, in all probability, the only single living representative who shall know its language or lore.

J. DYNELEY PRINCE.

*It may be noted that similar marital relations between men and women are found not only among other stocks of North and South America, but also in Europe, Asia, Africa, and Polynesia (cf. MacCulloch, The Childhood of Fiction, London, 1886, pp. 283-299, 294-297).
ALGONQUINS (Prairie Tribes, viz. the Kickapoos, Potawatomies, Sac's, and Foxes).—These tribes, together with their Algonquin allies, the Chippewas, and their Siouan friends, the Ojibeways and Menominoes, hold an important position in the Indian world, and are generally reckoned among the most warlike, industrious, and agricultural. As early as the middle of the 17th cent., the Jesuits endured every sort of hardship and danger to convert these peoples, who, at that time, were living along the shores of Lake Michigan (Parkman, L'A Selle and the Discovery of the Great West, p. 34), and they had some reason to believe that they had succeeded. In 1673, Father Marquette wrote that, when he and M. Joliet went among the tribes of the Green Bay Indians, he was rejoiced to find in one of their villages a great cross set up, adorned with white skins, red girdles, and bows and arrows, as votive offerings (Marquette, A Discovery of Some New Countries, touching the Northern America, printed as an appendix to Hennepin's America, p. 323)—a proof to him of the success of the mission of Allonez and Dalbon, established in 1689-70. Hennepin, the Franciscan friar, had, however, not much confidence in these conversions. He avers that these 'salvages' would 'suffer themselves baptized six times a day for a Glass of Aque Vite or a Pipe of Tobacco' (America, pt. I, p. 56), and adds this statement as to what they really did believe: 'Some of'em acknowledge the Sun for their God. . . . Others will have a Spirit that commands, say they, in the Air. Some among'em look upon the Skie as a kind of Divinity, others upon the Earth, and some upon the Roads of evil. . . . Dreams with them supply all other defects, and serve instead of Prophecy, Inspiration, Laws, Commands, and Rules, either for undertakings in War, Peace, Trade, or Hunting. Nay, they are a kind of Oracles in their Eyes. You would say, to see 'em at their Devotion, that they were of the Sect of the Pretended Inscript. The Belief they have in their Dreams imposes upon them a kind of Necessity of believing likewise, that they are forewarned by an Universal Mind of what they ought to do or avoid. Nay, this In- tuition prevails upon'em so far that if they were persuaded in their Dreams to kill a Man, or commit any other Enormous Crime, they would immedi- ately do it with the greatest alacrity, and make Attonement for it by the means which we shall hereafter relate. Parents' Dreams generally serve for the Observation of their Children, and Captains for those of their Villages. There are some among 'em as pretend to interpret Dreams. . . . When they meet with any great Fall of Water, which is either deep or rapid, they tell their Dreams, or throw into it a Beaver's skin, Tobacco, Porcelain, or the like, by way of Sacrifice, to appease and engage the Deity that there presides. . . . There is no nation among 'em which has not a sort of Judges or Buithe, that judge of the scalp-lock, the spirit land to the holder of the scalp. Then the voice

bewitch'd of these Juglers, though they so plainly and frequently appear to deceive 'em. These Impostors cause themselves to be revered as Prophets which fore-tell futurity. They will needs be looked upon to have an unlimited power, either of the boast of being able to make it Wet or Dry; to cause a Calm or a Storm; to render Land Fruitful or Barren; and, in a Word, to make Hunters Fortunate or Unfortunate; they have a strange Physic and apply Medicines, but which are such that they have little or no Virtue at all in 'em. . . . It is impossible to imagine the horrible Howlings and strange Contortions that these Juglers make of their Bodies, when they are disposing them- selves to Conjure, or raise their Enchantments.

. . . They will do nothing without either Presents or Hire. But however 'tis certain that if these Impostors have not skill enough to procure them- selves Credit, or to find something to say in case of a Failure in their Art by their Patients' Death, 'tis ten to one but that they are killed on the spot without any further formality.

These poor blind Wretches are, moreover, engaged in several other Superstitions, which the Devil makes use of to Ensnares 'em. They believe there are many living Creatures which have Rational Souls; whether they have any generation for certain Bones of Elks, Bevers, and other Beasts, and therefore never give them to their dogs, but lay 'em up in Repositories with a great deal of Care: These they never throw into Rivers but with great Believacy. They say that the Souls of these Animals observe how they deal by their Bodies, and consequently advertise both the Living and the Dead of that kind thereof, so that if they treat 'em ill, they must not expect that those sorts of Beasts will ever meddle themselves to be taken by them either in this or the other world (America, pt. ii, pp. 56-60). In addition, there are scattered through the two parts of the book descriptions of the various feasts and dances for the living and the dead, which might have been written to-day, so little change has time wrought, and on p. 112 the author says of the 'medicine' or fetish: 'These people admit of some Sort of Genius in all things: they all believe there is a Master of Life, as they call him, but hereof they make various Applications: some of them have a lean Raven, which they carry along with them, and which they say is the Mentor of their Lives; others have a Bone or Sea-Shell, or some such thing.' He also details at some length the story of the woman who fell down from Heaven and bore two sons, one of whom, after a time, retired to Heaven. This, of course, is a fragment of the legend of Hiawatha, Manioboso, or Nanabush (all names of the same supernatural personage).

The revival of the old religion, either modified by contact with Christianity or else having always had observances which had escaped the notice of the missionaries, was brought about by the Chippewas. According to their story, a band of their people was surprised by the Sioux and exter- minated. From the setting of the sun till its rising all lay dead, but when its beams fell on the Woman —her name is too sacred to be spoken—she revived, and heard a voice saying to her, 'Get up and take the drum, hit it, and, with the drum, and twelve drumsticks beside her. She took a stick and began to beat on the drum, and immediately the other sticks and the drum fell into her hands. At this point, their strength was restored, and her scalp-lock, which had been torn away, was renewed, —a most important miracle, as the soul is sup- posed to be in the small bulb which lies at the root of the scalp-lock, the spirit land to the holder of the scalp. Then the voice
spoke again, 'Go to the other band of the Chippewas and to all who will be my friends'; so she set out, travelling night and day, feeling no need of food or rest, and listened to the communications of the Voice. Thus she travelled for eighty days, at the end of which time she reached her people, called them together by the roll of her drum, and told them that Geechee Manitou wished them to take leave of their white people, politely, and turn again to him. He desired a dance house built for him, and a dance, to be called the Remembrance or Religion dance (Oue-west-seech), to be performed in it by young girls, to expel physical blemish, who had practised, prayed, and denied themselves all pleasures for eighty days. This dance was to continue four, seven, or twenty-one days, to the accompaniment of the drum and songs of praise to the Manitou (pronounced 'man-te-wi', by the Indians), while all the people feasted and made offerings of the smoke of tobacco and the steam of cooked food, beginning with the offering of a roasting-pig, and in addition to the old customs were to be revived, and an effort was to be made to induce all other Indians to conform to them again. When the people had purified themselves by fasting and by being sweated in the sweat-house, the young girls, being instructed by a man that it is heated and then drenched with cold water to produce a vapour in which the devotee stands naked to have the devils that produce disease or wickedness sweated out of him while he recites his prayers; and after they had built a dance house, and had honoured Geechee Manitou by prayers and praises, she taught them the Religion dance, put them in mind of some forgotten beliefs, and then disappeared, no one knew whither; nor did she ever return. At once the Chippewas was a great revival of old practices, to which they invited their relatives the Pottawatomies, who in turn practised the Kickapoos and their friends and neighbours, the Osages, Sac, and Foxes. A little later the Sac won over the Iowas and Otoes, but in spite of strenuous efforts they have never been able to add any other Sianian tribes to this coalition.

Besides Geechee Manitou, these tribes believe in three great gods. He is the first, the creator, and he lives in a golden boat, which we call the sun. Meechee Manitou is the god who lives in the cold, wet, slippery cavern in the souls of the wicked wander and shiver for ever. He is not now very active in mischief, but he is the father of an innumerable number of devils that produce war, pestilence, famine, scrofula, gout, and all other ills of body and soul. Some of these are the offspring of witches with whom he has consorted; others sprang from his breath, his sweat, his saliva, even his words and the scent of his foot-steps. The Brothers, 'twin sons of the woman who fell down from heaven,' spend their time, one in ruling over the happy hunting-ground, or place of rest, and the other in a travelling in the road of the ghosts go out, at the point where it divides, his business being to show the good their way to the happy hunting-ground, and the bad their way to the cavern of Meechee Manitou. These Brothers lived a long time on earth, destroyed many devils and wizards (some tribes were in the world before these two gods, and had become very wicked), received additional physical and spiritual power from the Great Manitou, and the Fox when they took their way—one to the spirit land, the other to the road that leads to it. The occasion of their leaving the world was this: on account of the good works of the Brothers, the devils and wizards endeavoured to destroy them, and succeeded in killing the younger, Cold Hand; but when the elder, Hot Hand, moured so terribly as to flood the earth with his tears, and draw it, which had hitherto been flat, into hills and valleys by his sobs, the devils and wizards, terrified by the commotion, worked four days and nights with their enchantments to 'make the dead alive.' When he was made alive, he went to his brother, but Hot Hand was not pleased. He said he was ashamed, because he had been good, to mourn so terribly; and he went into his wigwam and shut Cold Hand out. Presently he thrust forth a kettle, fire-sticks, tobacco, and a whistle to call ghosts. Cold Hand took these things and went away. He sat down on the edge of his house a while; but having got out of his dream, he thought a place for good souls. Before that they had no place; they blew about in the wind. Since that time, death has been better than life' (M. A. Owen, Folk-Lore of the Musqueaski Indians, p. 15).

The totems are patron saints. Each clan or subdivision of the tribe is named from the giant animal from which it is supposed to be descended. Judging from the old legends told by tribe historians, all the tribes at one time had many clans, each with its clan Secret Society which did homage to its totem, as its shaman or medicine-man directed; but so many devils were exterminated by their wars with white and red men having long continued, the totemic system is only a memory, and in others there are many more sticks to the sacred drum than there are drummers to hold them—each clan having but one drummer playing at a time.

The hereditary chief is the high priest of the faith, nominally, but he does nothing without first consulting the shamans, who are presidents of the totem societies, prophets, physicians, and exorcists all in one, being also the priests of other tribes (referred to by Hennepin). When it is understood that the earth and air are supposed to be peopled with an infinite number of malignant devils and sprites, as well as vampire ghosts, which are always on the alert to do mischief except when rendered torpid by extreme cold, and that all the shamans know the secret of casting them out or spell-binding them, it will be readily comprehended that, so long as the ancient beliefs prevail, the shamans will be the real autocrats of the tribes. Generally a son succeeds his father, as in the case of the chiefship, but sometimes the son is not clever enough to be a shaman, and then another son may be selected to be trained, thus keeping the succession in the family, as everyone in the clan is related. Sometimes, when an especially clever boy is found in another clan, the shaman takes possession of him, and, in rare cases, a boy has been brought from another tribe. In the latter case he is adopted by a member of the shaman's tribe who has lately lost a son of about the same age.

The white witches of the tribe are the 'women with-spots-on-their-faces.' These spots are round faults of vermillion, and each one stands for a Religion dance given for the woman-with-spots-on-her-face, at pulsery, by her father. These dances and the severe usage to which she is subjected from a very early age, make her a healer and a bringer of good fortune. She insures safe delivery to women in childbirth, not by being present, but by chanting and praying at a distance and refusing to hear all entreaties to be present; she names the newborn infants after something that belongs to the father's clan (this is the real name, not that given by men, nor the nickname given from some exploit or peculiarity); she heals the sick, and interprets the confused dreams of the women; any one with whom she is friendly is lucky, any one with whom she is unfriendly may look for misfortune.

The ceremonial of the faith may almost be described by a word—'dancing.' There are fasts,
prayers, and hymns before dancing, and feasts, prayers, and hymns during dancing; these are parts of the same thing. There are dances for planting and dances for harvest, dances to bring rain and to cause it to cease, for peace, for war, for days of rest, to restore health, and to honour the dead, totem dances, and dances for every great event in the life of the tribe and individual except birth, marriage, and funeral.

Kickapoos.—The Kickapoos consider themselves foreigners. 'This is the only tribe among all our Indians who claim for themselves a foreign origin,' says Thomas L. M'Kenney, formerly of the Indian Department, Washington, U.S.A., speaking of the Shawnee tribe, of which the Kickapoos is a division.

'Most of the aborigines of the continent believe their forefathers ascended from holes in the earth; and many of them assign a local habitation to these traditional places of the nativity of their race; resembling, in this respect, some of the traditions of antiquity, and derived, perhaps, from that remote period when barbarous tribes were more migratory, wandering from place to place on the earth. The Shawanees believe their ancestors inhabited a foreign land, which, for some unknown cause, they determined to abandon. They collected then in some beautiful and happy land, perhaps a kind of Eden. Here various persons were selected to lead them, but they declined the duty, until it was undertaken by one of the Turtle tribe. He placed himself at the head of the procession, and walked into the sea. The waters immediately divided, and they passed along the bottom of the ocean until they reached this 'island' (M'Kenney, North American Indians, vol. ii. pp. 263-264). This writer goes on to state, what the traditions of the Kickapoos confirm, that the child of the sun was the power, divided into twelve tribes, and these again into families, such as the Eagle, the Turtle, etc., each named from its totem or ancestral animal; and that the two of the tribes were annihilated, six were merged, and four kept their names and tribal government. These four were the Kickapoos, Pekaways, Chilicothes, and Makostrakes.

It is not known exactly when these people were driven by the Iroquois, southward to the Savannah river, nor is it known when they left that region and separated the tribes. In 1673, Father Marquette found the Kickapoos on a river, which he called the Kickapoo (in the Green Bay of Lake Michigan), or, as it was then called, the Lake of the Illinois), and he refers to Father Allouez as having a mission among them. He adds that, in comparison with their neighbours, the Miami, they are poor (Marquette, A Discovery of Some New Countries and Nations in the Northern America, in Hennepin's America, pt. ii. p. 225). On Hennepin's map, published in 1698, they are north of Lake Winnibago, but, in his account of the retreat of Tonti when he was endeavouring to lead his little company back to M. La Salle after the destruction of Fort Crévecoeur (A.D. 1680), he speaks of their houses as being on the west side of the Bay of Puans (Amer. Jour. of ch. 75, headed 'The Savages Kickapooes muchter Father Gabriel de la Ribourde, a Recollect Missionary'), though bands of their young men were wandering in the north-east in the hope of surprising small companies of their enemies, the Iroquois. Hermann Moll's map, published before 1716, shows them on the west side of the bay. In 1763, when Father Marquette visited Kickapoo, or Pontiac to form a federation of all the Indian tribes with the intention of preventing the encroachments of the whites or destroying them, they were living on the Miami and Scioto rivers (Parkman, Compendious History of Lewis and Clark, vol. ii. p. 130; Colonel Bouquet reported, when he had forced the Indians to sue for peace (1764), that the Kickapoo had three hundred warriors and a total population of fifteen hundred. He placed them on the Ouabache (Wabash) river (20th Annual Report of the Bureau of American Ethnology, p. 110). On May 29, 1804, Captain William Clark, of the Lewis and Clark Expedition, wrote as follows: 'This tribe resides on the heads of the Kaskaskia and Illinois rivers, on the other (eastern) side of the Mississippi river, and now are in the middle of the land.' (Elliot,- Cones, The History of the Lewis and Clark Expedition, vol. i. p. 7); but this could have been but one band of them, for, in 1808, the Pottawatomies and Kickapoos gave to Tecumseh and his brother, the Prophet, a tract of land in Indiana, lying along the Tippecanoe river.

These two most distinguished Kickapoos, Tecumseh, or Flying Panther, and the Prophet Tens-kwau-taw-wa, endeavoured to form a confederacy like the one Pontiac projected, and, in 1811, became engaged in a war with the whites, which terminated disastrously for the Indians at the battle of Tippecanoe, much to the surprise of the red men; who had believed that the incantations of the Prophet had rendered them bullet-proof. In the war of 1812, Tecumseh and his people joined forces with the British (Eggleston and Seelye, Tecumseh, the Indian Chief, p. 206). Captain Clark, in his people in Illinois in 1831, but his map, printed in 1840, shows them on the west side of the Missouri river. During the Civil War, one band, with a band of Pottawatomies, went to Mexico, but have since returned. Southwest Report, pt. ii. p. 185, states: 'Kickapoos at Pottawatomie and Great Nemaha Reservation, in Brown County, Kansas, August 20, 1898, 235. Kickapoos, Mexican (mixed band with Pottawatomie), Indian Territory, 346. The number is much smaller, so that the report of the Commissioner for Indian Affairs for 1901 gives the number of Kickapoos in Kansas as 190, and of Mexican Kickapoos in Indian Territory as 221. It is a dying people.

The Kickapoos are sickly, melancholy, and severely religious. In addition to a dance house, they have a house of silence—a wooden structure, from which was built, as a chief was communed in a dream, in silence and fasting. It is used for prayer and praise, but not for dances. Another revelation of late years causes them to flock to a religious mission which, though unknown in other tribes, where children are whipped only at puberty as a trial of endurance. A flogger is chosen once a year by lot, and his duty is to make the rounds of the wigwams every Saturday with a lash over his face. In consequence, no one is at home on Saturday but the culprits; the rest of the family sit among the bushes on the river bank and weep. The culprits do not weep during this (supposedly) religious exercise. These people have but one council-fire and three totemcs. This refers to the Brown County Kickapoos, not to the Mexican, who prefer to be considered Pottawatomies. They pay no reverence to the Red Indian and the other Indians, and this may partly account for their sickness, as their reservation is so infested with venomous reptiles as to render cattle-raiseing almost an impossibility. In consequence of which their staple flesh diet is water. (It is well known that the bite of a serpent has no effect on a hog). As an antidote for themselves and their ponies, they make use of a tea and wash in a mixture of infused leaves and water, known as the arrow-leaved violet (Viola sagittata). Violet was once a maid, sister to Rattlesnake, and as good as he was wicked; whomsoever he poisoned, she healed. In rage at this he killed her. Geocheet and the Kickapoos cow were befriended, changed her into this healing plant. It grows wild
in great abundance all over the reservation. Another cause of their inferior physique may be the dietary contraries to the religious scruples of most other Indians. Their tribal name means 'smooth,' and undoubtedly refers to some stream by which they have lived, and which they called Green Bay.

Pottawatomies—These people have no legend of ever having lived anywhere but in the North-West. The French missionaries and fur traders found them, during their explorations from what is now the State of Michigan, early in 1600. The Pottawatomies were occupying the lower peninsula of Michigan, in scattered bands, whence they were driven westward by the Iroquois, and settled about Green Bay. The French acquired much influence over them, whom they joined in their wars with the Iroquois (Smithsonian Report, 1885, p. 135). The Jesuit Relation, 1608, refers to them as being the nearest tribe to the settlement of Ste. the members of this fraternity Bay. A band of them accompanied Marquette when, in 1674, he set out to found a new mission, the Immanculate Conception, at the principal town of the Illinois; and, according to the word of this family of Indians, that in 1676, carried the bones of Marquette to St. Ignace in a grand procession of thirty canoes, and took part in the funeral scenes of the Jesuit's death. This recent discovery of the Great West, (pp. 68-71). It is evident, therefore, that they were considered Christians; but when they joined in Pontiac's conspiracy, nearly a hundred years later, reliable witnesses declared that they ate the bodies of their most valued enemies. Again, in the war of 1812, they were guilty of the same practices. One of the best attested instances is that of Captain Wells, who was killed after the capture of Chicago in 1812. This man, who had been a long time among the Indians, having been taken prisoner by them at the age of thirteen, had acquired a great reputation for courage, and his name is still mentioned as that of the bravest white man with whom they ever met. He had almost become one of their number. At the commencement of hostilities he sided with his own countrymen.... Wells was killed.... His body was divided, and his heart was shared as being the most certain spell for courage, and part of it was sent to the various tribes in alliance with the Pottawatomies, while they themselves feasted upon the rest.... Mr. Barron has seen the Pottawatomies' bodies and those of both white men and Cherokees, which they were about to devour.... Among some tribes cannibalism is universal, but it appears that among the Pottawatomies it is generally restricted to a society or fraternity, whose privilege and duty it is, on all occasions, to eat of the enemies' flesh; at least one individual must be eaten. The flesh is sometimes dried and taken to the village. Not only are they credited with great virtues, but it is said they can impart them, by means of spells, to any individual they wish to favour (W. H. Keating, Keating's Narrative, pp. 102, 103).

Since Keating's narrative was written (1853), missionaries have again laboured among these people, and many considerable successes. Green Bay, though still clinging to life there are Methodists, Presbyterians, and Roman Catholics, as well as worshippers of the Manitous; but it is impossible to tell what proportion of the tribe have been converted to the efforts of Christian teachers, as some appear to participate in the exercises of both religions. Another reason for the apparent predominance of the heathen element is that the Christian contingent leaves the tribe and is lost among the whites. This is the reason it appears so small, never numbering quite fifteen hundred. From the Pottawatomie and Great Nemaha Reservation, Kansas; while possibly three hundred are in Michigan, Wisconsin, and Iowa. When the tribe disappears, it is supposed, the internal strife would be at an end. The fact that these extraordinarily keen traders do not care to hold their goods in common. Their boast is that they have followed and bartered with the whites from the time they met the first French fur-traders, and always to their own advantage, except when they sold the site of the city of Chicago. Briefly put, trading brings segregation, segregation civilization, civilization Christianity, an inexorable conversion, but one likely to be permanent. The name Pottowatun-see signifies "those who make-or keep-a-fire," and refers to their having started a council-fire for themselves when they and the Ojibwas, or Chipeways, separated from the Ottawa. They held them in ghastly awe, and the old people recite folk-tales which indicate that there was a time when they possessed them, and a few have claimed that they are descended from a dog. This would be seriously, as they partake of the dog feast, and no Indian eats the animal named from his totem.

Sacs and Foxes.—These people are classed as one tribe in Government reports, very much to their dissatisfaction. They have never been under the same chieftainship, but have kept up their separate council-flames, and have a different number of totems (the Sacs have one that the Foxes consider unworthy of any descendants by women, the Tree or Dryad totem). Their traditions of migration from the Atlantic seaboard to the region of the Great Lakes are about the same, and so are their accounts of reverses at the hands of the Iroquois on the east and the Sioux on the west; but the Foxes have a legend of a mysterious white buffalo leading them to join forces with the Sacs, which the latter ridicules. The Jesuits found them living as distinct tribes in the neighborhood of Lake Michigan. They refer to having been even more successful and the Hurons and Illinois. In 1712 the Foxes, or, as they were generally called, the Outagamies or Musquakies, with their allies, attacked the French at Detroit, but were defeated with the loss of both the Sac and the Huron. The Foxes, the Sacs, and the Illinois and the tribes (Parkman, A Half Century of Conflict, pp. 279-286). In 1732 another determined effort was made by the French and their Indian allies to destroy these terrible fighters, and it was so nearly successful that, about 1756, eighty warriors and their families joined themselves to the Sacs, these being all that were left of this scourge of the West, as they had long been called. Jonathan Carver, in 1766, found the two tribes in neighbouring villages on the Ouisconsin (Wisconsin) river. He describes the Sackie town as the best Indian village he ever saw, having nine houses, each large enough for several families, well built of hewn plank, and having sheds before the doors. The streets were wide, he adds, and the land round about so well cultivated that the traders must have been astonished to find them spending so much energy on so small an object. The principal business of the warriors was to engage in forays among the Illinois and Pauwnees for the purpose of procuring slaves. This appeared to them at the time to be the most profitable occupation. The situation was so perilous that it never in numbers more rapidly, for their adversaries quickly retaliated. The Outagamie or Fox town was almost deserted (Carver, Travels, pp. 46-49). Both tribes were too busy fighting the Sioux and Chip...
pews to take part in the war of the Revolution, but the Foxes and part of the Sacos were on the side of the British in the Revolution of 1812. The Sac division took place in the Black Hawk War (1831–32), when the band of Sacs under Keokuk refused to fight the U.S. There are at the present time between four and five hundred Sacs in Indian Territory—of whom about a hundred are under Keokuk (Keokuk) died in Aug. 1903, and about two hundred on the Pottawatomi and Great Nemaha Reservation, in Kansas, under Margrave, a Pennsyl- vania-born agent, they serve the function of the hereditary chief, deposed for drunkenness. The Foxes are at Tana, Iowa: a small, rich tribe, numbering scarcely more than three hundred, if we exclude visiting Pottawatomies. As to this division, the agent wrote, Aug. 1834.

Indians, the Sacs and Fox of the Mississippi, dis- claim any connexion whatever with the Sac tribe, and claim most earnestly that they are Foxes only. Later, the Foxes to the midwest. The Sacs are more agreeable than pious, the Foxes more pious than agreeable. The Sacs are great lovers of fun, the Foxes great sticklers for dignity. The Sacs are stalwart, and with a leaning toward the Scotch-Irish, while the Foxes, though such a profound regard for the wisdom of their ancestors. The Sacs have eight totems from which they are descended; the Foxes have seven totems from which they are not descended, since they trace their lineage to a boy and girl, one of whom came from the shoulder of one of the Brothers, the other from the side of his twin. Staubie is said to mean 'yellow clay,' while o-wa-wwik means 'mouth of the river,' and the name of a chief is related to the English word 'treacle,' the name by which the Foxes call themselves, means 'fox.'

MARY A. OWEN.

ALLAH is the proper name of God among Muslims, corresponding in usage to Jehovah (Yahweh) among the Hebrews. Thus it is not to be regarded as a common noun meaning 'God' (or 'god'), and the Muslim must use another word or form if he wishes to indicate any other than his own peculiar deity. Similarly, no plural can be formed from it, and though the liberal Musul- man will admit that Christian or Jews may call upon Allah, he could never speak of the Allah of the Christians or the Allah of the Jews. Among Christians, too, a similar usage holds. In the current Arabic Bible versions, 'God' (الله) is uniformly used, and 'God' (الله) occurs, it is rendered αρραββαλλ- λαθον, 'the Lord, the Allah,' whereas 'the Allah' is an uncontracted form, retaining its force of a common noun. As a result, 'the Allah' has been shortened through usage. The Muslim, too, who usually derives and explains Allah as meaning 'worshipped,' uses it and its plural Alaha in the broadest way, of any god, explaining that such is possible only through a sort of mythological and theological interpretation—it has room for a priori theories or dreams of a wonder-working Name. Allah is a contraction of di- alaath, and has come to be used as a personal, descriptive epithet, and not a common noun in origin. A number of possible derivations are given with examples of each of the possible derivations. It is evident, however, that the concept of Allah in itself, taken without reference to some other thing, real or imagined, is unintelligible to mankind, since it is not indicated by a separate noun, but is often even especially revealed to his saints, as ar-Razi suggests; nor does derivation from a root revolve about in the same way, just as it has been in another; it means only that the two expressions have part in a common idea and formation. The Syriac derivation is more intelligible. Other commentators give modifications only of the two atti-
tudes of ar-Razi and al-Baidawi. Thus Abu 'Abd-Str'id (d. A.H. 982 = A.D. 1574) paraphrases and elucidates al-Baidawi. The former, however, states (margin of al-Kashf al-tabib, l. 19) shows how far this interpretation could attain: "Know that what is meant by the negation of the creed of the Prophet is that he is the rightly worshipped One, and the sense of that article of the creed is, "No rightly worshipped individual exists except the rightly worshipped One."" Similarly, Nizam ad-Din al-Naisaburi (d. circa A.H. 710 = A.D. 1311), writing at the Khurasan of the Fergana, says, the difference as verbal (al-ghaib) only, a hard saying (margin of at-Tahab's Tafsir, l. 53 ff. and 63 ff.). All these are generally accepted and respected commentaries. See art. God (Muslim).

LITERATURE.—There is little in Western languages on this subject. The earliest are the larger part of the verses of the Jumna and the other rivers.—Klcimre Leben der Menschen, i. 296 ff., ii. 33; Palmer's Qur'an, i., ii. B.Xvi.; Hughes, Dictionary of Islam, a.e. "God." 'Ithbaw': Grime, Mohammed, ii. 96.

Allâhâbâd.—An important Indian city, capital of the United Provinces of Agra and Oudh. The original Hindu name of the place is Prâyâga, 'the place of sacrifice,' a name which is applied to three other sacred laithing-places on the Alakamand (wh. see), one of the upper waters of the Ganges. Allahâbad is specially holy to the Hindus. It was proposed to be the triple junction (trîyâcî) of three sacred rivers—Ganges (Gângâ), Jumna (Yamnâ), and Saraswati, the last being supposed to have an underground connexion with the others. The river ALLâHâBAD, 'abode of Allah,' was conferred upon the place by the Emperor Akbar, who in A.D. 1572 built his fort commanding the junction of the two rivers, and named it Alâhâbâ, which was changed to Allahâbad by his grandson Shahjâhân. But the place had been regarded as sacred from the very earliest times. It first appears in history as the site where Asoka erected one of his edict-pillars about B.C. 240. In Hijjat, the Buddhist pilgrim, about A.D. 414, he found it included in the kingdom of Kosala; and the name Prâyâga appears in the Travels of his successor, Hînê-Tsang in the 7th century. He found Buddhism prevailing here side by side with Brahmanism, and he notes that in the midst of the city was a famous temple of the latter faith, in front of which was a large tree with wide-spreading branches, which was said to be the dwelling of an anthropophagous demon. This tree was surrounded by human bones, the remains of pilgrims who, according to immortal custom, were in the habit of sacrificing their lives by jumping from its boughs into the holy stream. This tree is now also a beauty of the place, for instance, by its successive spectators—the Akshaya Vâta, or 'eternally Banyan-tree,' which is still one of the chief objects of Hindu worship. It stands in an underground temple, probably part of the edifice described by Hînê-Tsang, or built on the same site. This building is now within the Fort, and owing to the accumulation of rubbish the whole of the lower part has been filled up. Early in the 14th cent. the historian Roschild-ed-din mentions the sacred tree of 'Prâg' at the confluence of the Ganges and Jumna. About the time of Akbar, 'Abd al-Qadir speaks of 'the tree from which people come to take bath,' and it is from these accounts it is clear that in the interval between the time of Hînê-Tsang and Akbar the rivers had cut away the land near their junction so that the sacred tree, which stood in the centre of the city, had been brought close to the water. This accounts for the fact that, except the famous Pillar of Asoka, no relics of the Buddhist and Brahmanical monuments described by the traveller of the 7th cent. exist in Allahâbad.

The chief lathing fair at Allahâbad is what is called the Mâgâ-Mela, Magh (Jan.-Feb.) being the month in which it is held. The chief lathing day is celebrated in the month of the fair, which is held in the sandy bed at the river junction, which is left dry at the close of each rainy season. Every twelfth year here and at Harîlîwar, when the sun is in the sign of Kumbha or Aquarius, bathing is specially efficacious, and enormous crowds of pilgrims flock from all parts of India. To these are added large numbers of ascetics, and beggars who display their infirmities to the charitable parties of bathers. Specially remarkable is the massed throng who extend one arm or both arms above the head until the muscles become withered through disuse, and the akâsân-kâxin, who keep their necks bent back looking at the sky. To these are added numbers of cultivators, of the poorer sort, who supply the wants of the pilgrims. The maintenance of sanitation and the prevention of outbreaks of epidemic disease are in the hands of a special European staff. This is the chief danger resulting from gatherings of this kind, the attendances at which has greatly increased since the railways offered facilities to the pilgrims. The people are so orderly and law-abiding that little work falls upon the police force. The bathing at these fairs is controlled by a body of local Brahmins, who take their name, prayâgâci, from the place, and have a bad reputation for insolence, rapacity, and licentiousness.

LITERATURE.—Cunningham, Archaeological Reports, i. 296 ff., abstracted and supplemented by Führer, Monumental Antiquities and Inscriptions of the North-Western Provinces and Oudh, 127 ff.; Imperial Gazetteer of India, s.v.

ALLEGORY. ALLEGORICAL INTERPRETATION.—The word 'allegory' is derived from the terminology of Greek rhetoric, and means primarily a series of metaphors ('Iam eum fluxerunt continuas planas trahentem, aha plane fit oratio, tuaque genus hoc Graec appellant alλαγγγια'). Cicero, Orator, xxvii. 94; cf. de Oratore, iii. 160. Seeing that the later classical poets studied in the schools of rhetoric, it is not surprising that Horace, in the ode in which he compares the State to a ship (Od. i. 14), had an allegory in view, as is recognized by the rhetorician Quintilian (viii. 6, 44). Thus we see that the conception of allegory as formulated in rhetoric, and, owing to the close connexion between all parts of rhetoric and hermeneutics, as used also in explaining a work of literature, has a rather narrow range. The term is by no means applied in that wide sense which it has to-day when we speak, for instance, of the allegorical art. On the contrary, we must keep in view in the case of allegory that a form of representation which a reader believes himself to find in a piece of writing which is more or less in need of interpretation. As such an interpretation, however, is in reality justified only where the author of the writing, as, for instance, Horace, or Goethe in the second part of Faust, had a secret meaning in mind, the rule comes to be that in allegorical interpretation an entirely foreign subjective meaning is read into the passage which has to be explained. In this way allegory is almost always a relative, not an absolute, conception, which has nothing to do with the actual truth of the matter, and for the most part springs from the natural desire to conserve some idea which, owing to its age, has come to be regarded as sacred.

These remarks are necessary for the proper understanding of allegory among the nations of antiquity. It is a misus of the word to find in Homer and the poets of the subsequent period unconscious allegorical ideas (D'Herbelot, e.g., Histoire et critique des traditions religieuses chez les Grecs des origines au temps de Plutarque, p. 279 ff.). The use in Homer (II. ii. 420), in Archilochus (Fr. 19, 12), or in any other ancient poet of a fire is neither allegory nor a conscious substitution of the god for his name (Plutarch,
ALLEGORY

Quam. adol. poet. aud. deb. p. 234b), but a direct identification of the god with his earliest form of earthly manifestation. Hephaestus is here, to adopt Ueber's terminology, the 'divinity of the moment' (Eitelmayer, p. 279 ff.). A similar explanation must be given of the Cyclopes—Brinton, Steropes, Arges (Hesiod, Theog. 140), and of Scamander, which in Homer is both god and stream, and in Hesiod, God and the world system. The latter interpretation is almost equally tenable, for the Cyclopes appear to be the primary offspring of the earth and sea, whereas there are figures, which in the later evolution unite themselves to the elementary diversities, whose names and natures are identical, e.g., Eris (P. iv. 440, v. 618, 746, xi. 31., xviii. 534. xx. 48; Hesiod, Op. 16, 29, 85, 804, Theog. 225, etc.), Phobos, Deimos, Kydamos (P. iv. 440, xiii. 299, xv. 119, v. 503, xvii. 535), Zelos, Nike (Hesiod, Theog. 384), and others. Only the most superficial consideration, however, can call such a usage allegorical. It is simply owing to the difficulty we have in analyzing such a pantheon of abstract conceptions and such a theology, and for want of a better term, that we call them personifications. It is quite impossible in such cases to speak of allegory, seeing that in Homer and Hesiod we are dealing with a world of ideas still comparatively naive. Allegory is much more the child of a re- duction of the ancient mythology.

The assertion that piety is the mother of allegorical explanation is entirely correct (cf., e.g., Gomperz, Grischische Denker, i. 305). The 6th cent. before Christ rejected the gods of Homer and Hesiod. Xenophanes (Fragm. 11, 32, Diels) and Pythagoras (Diog. Laert. vii. 19, 21), and Heraclitus (Fragm. 42 D) attack with all their energy the religious views of their predecessors and contemporaries. But the piety of the faithful Homer and his interpreters was not broken by these attacks to give up its ideals then any more than it is to-day; it had recourse to the method, so often practised since, of reading a new meaning into the sacred tradition, and thus protecting it from the satire of its critics. Quite a number of men meet us in this connexion, who sought, often by very childlike or indeed childish means, to secour the ancient tradition, but who themselves regarded their undertaking with religious earnestness. The oldest of these was Thucydides of Rhegium, who flourished at the time of Cambyses (Tatian, ad. Graecos, 31). He wrote an 'Apology' for the Homericae poetry (Schol. Hom. viii. 420), and Por. (Prose- physiæ questionum Homericarum ad Hiodon per- tinentium reliquiae, Leipzig, 1880, p. 384) sought to save the battle of the gods in the twentieth book of the Iliad by a physical and ethical interpreta- tion. Others are said to have made similar attempts. The philosopher Anaxagoras interpreted Homer's poetry in a purely ethical way (Favorinus in Diog. Laert. ii. 3, 11), and his pupil Metrodorus of Lampscus followed a similar method in his physical explanation of the Homeric figures. For him Demeter was the fire, Dionysus the spleen, Apollo the gall; Hector signified the moon, Achilles the sun; a gamengon the earth, and Acrisius the air (cf. the passages in Diels, Die Fragmente der Vorsokratiker, p. 339). Diogenes of Apollonia went on similar lines (Philoen. de Pict. c. 66) when he found in Homer not myths but truth, and identified Zeus with the air. Democritus of Abdera too, an enthusiastic admirer of Homer (Fragm. 18, 21, Diels), inclined to an allegorical interpretation of the gods (Fragm. 30 D). When we consider, further, the turn of mind which Athens in the middle of the 5th cent., how, for instance, Aristophanes ridic- uled the new doctrines of philosophy (Nub. 828, 380 ff.), and when we remember that the radical Hellenistic revolution, as it were, stripped some of the characters of the Iliad and the Odyssey of their trappings and substituted gods for their prototypes, it is thus clear that Homer's contemporaries, who leave a vast number of works of art, are to be considered the successors of the Homeric poets, not in their literal, but in their allegorical sense. The detachment which takes place, in the Epic, from the naked facts of everyday life, must not be considered an obscurity, but a grand natural movement, as much a way of saving the old tradition, but it is not, properly speaking, allegorical. In the place of a silly fable we find a new and no less silly myth. Such a proceeding, however, is not allegorizing (cf. also Dechambo, Lc. 261).

Up to this point we have constantly spoken of 'allegory,' as if this expression were found in the philosophers themselves. This is, however, by no means the case. We find a number of writers giving allegorical interpretations, who never use the word itself. The older expression, which was used till 'allegory' occurs in the 1st cent. B.C. (cf. Cicero, Orator, 94; F. Flucturam, Quam. adol. poet. aud. deb. p. 173.,) was Stoicorum vero doctrina uses the word in the well-known passage of his Symposium (ii. 6), where he adds Stesimbrotus of Thasos and Anaximander (cf. also Plato, Ion, 530 D, who mentions Glaucon by the side of Metrodorus and Stesimbrotus as teachers of Antisthenes in this method of explaining Homer. As a matter of fact, the Cynical school had with conscious purpose reduced the allegorical interpretation of Homer to a system. Their writings were largely occupied with the poetry of Homer and the figures it contained (Diog. Laert. vi. 1, 17 f.); and we learn from the fifty-third oration of Dio Chrysostom (p. 276 R), that he distinguished in Homer between Logos and Eidos, and that he allegorized the poet (cf. Schrader, Lc. 387 f.; Dio Chryso. viii. 283 R; Xenop. Memor. i. 3. 7; Dümmler, Antis- thenica, 22 ff.). In spite of their utter denial of the existence of a plurality of gods, and their emphatic rejection of the figures of mythology, the Cynics were quite unable to free themselves from the spell of the Homeric poetry. Plato is the opponent of Homer and Antisthenes; he often treats with play- ful sarcasm the attempts of 'the experts' to interpret the names and actions of the gods allegorically (Craty. p. 467 A; Phdr. 220 C; Repub. 378 D, where again the word ἀλληγορεῖ appears).

Thus the beginning of a system of allegorizing had been made. The Stoics undertook its completion, and their views passed on later to the Jews and the Christians, and thence more or less directly to our own time. The passage from Dio referred to above mentions the Stoic Zeno as the follower of Antisthenes in his method of explaining Homer, and the fragments we possess from the hand of the founder of the Stoic school bear witness to his allegorical point of view (Arnim, Stoicorum veterum fragmenta, i. pp. 43, 167 f.). Chrysippus, the head of the Stoic school, has, of course, taken great delight in working out the method. Zeus is for him the Logos, who orders all things; he derives his name from his life-giving activity (Zeus). Male and female diversities do not exist for him, Homer's distinction between the gods the earth, Zeus the earth, Homer's reason. Almost all the names of the gods suggest such an interpretation. Zeus comes from ozein. The conclusion from ζοος and ζωή (cf. Arnim, Lc. B, Dio Chryso. 1076, 1070, 1064, 1087, 1096, 1095).

It serves no purpose to refer to the many (often self-contradictory) interpretations of Chrysippus, but only to mention in passing that in the person of Crates of Mallus this method of
interpretation extended itself to the exposition of Homer as a whole (Wachsmuth, de Cratote Mallota, p. 62). Two unsatisfactory though not uninteresting writings which are still extant, the *Allegoria Homericorum of Heraklitus* and Theologoumena of Corunthus, prove to us the wide diffusion of these views, and show of what excesses the allegorical method of interpretation is capable. Of the two, Heraklitus is the more annoying; he has least some feeling he hates Plato and Epicurus (cap. 4), in fact all those who are not enthusiastic admirers of his beloved Homer. Accordingly, he endeavors to meet the old objections raised against the weaknesses and sins of the Homeric gods.

Thus the chaining of Hera (II, iii. 257) is explained as the union of the elements (55); the burning of the air (I. 293) signifies the earthly fire, which is weaker than the heavenly flame (thus Hephaestus is χύλεσ (26)); the wounding of Aries and of Antiope (346 ff., 560 f.) to be understood as the defeat of the barbarian army (ἐπονομάζειν = Ἀδέλφοι) which sends forth unearthly noises (50, 31); the union of Apeirude and Areis (Eur. vili. 306 f.) is the combination of love and strife in harmony. These interpretations are so general that even Apollodorus, the greatest, and nhất the greatest philosopher grants them his recognition (Corunthus, p. 49, 4; Minuelt, Quaesiones mythographiae, p. 17). Other testimonies for the allegori- sation, apart from Homer (for instance, by Aristophanes, 149), and by the author of the pseudo-Pindarchic writing, de Vie et poes Homerii; but the latter is neither as literal nor as natural.

In spite, however, of the strength of this movement, it had by this time reached a very definite limit. Plato, as we saw above, derided the attempts of Antisthenes to defend Homer allegorically. His followers, the members of the so-called Middle Academy, along with the Epicureans, made use of sceptical arguments, and renewed the conflict against the Stoics, the successors of the Cynic school. The chief representative of this line of thought is Carneades, who practically ad- vocated the views of his teacher, Arcesilaus; his attack is contained in the third book of Cicero's de Naturae Deorum, and in Sextus Empiricus, deie. Mallex, lx. He regarded the interpretation of the myths as entirely meaningless, and reproached the Stoics for regarding as wise the inventors of such disreputable stories (Cicero, i.e. iii. 24, 62). The Epicureans expressed themselves to the same effect; they found all those allegorical gods of the Sto nothing but absurdities, and applied the term 'godless' to the mode of procedure of the sect, for the effect of these very interpretations was to make the gods as common as the gods (Phi- lo, dem. de Pet. cap. 18). These opinions were then, to a large extent, taken over by the Christians, although they, in like manner, early fell under the spell of the allegory.

The attack was keenly maintained, but a great movement has never yet been checked by harsh contradiction. The 1st cent. before and after Christ is the great era of the Sto, which at a later date even occupied the Imperial throne in the person of Marcus Aurelius. But, what is more important, these views made their way into Judaism. The Wisdom of Solomon is under the influence of this method of interpretation of the Jewish law is found in the letter of Aristeas (5 143 f.), just as symbolical explanations occur among the Essenes (Phil, Quo. omn. prop. lib. ii. p. 458, Mangenot). Philo, however, is the chief representative of this direction of the thought, his attempts have been made to trace back his alle- gorical exposition of the Scriptures to the Haggada. And this much, at any rate, is certain, that there was no attempt before Philo who made use of the same method of explanation, for he fre- quently refers to such explanations of the Old Testament.

These 'Philistos' had explained Abraham as the vine, and Sarah as virtue (Phil, de Attr. H. 15, Mangenot); again, the king of Egypt was the vine as ruler of the body (de Jes. ii. p. 60, Mangenot); they interpreted the rite of the Passover as refer- ring either to the purification of soul or to the creation of the world (de Septu. ii. 301); and in this way a number of Scripture passages obtained an allegorical interpretation (cf. Clem, Al. et. de Plant. Noi, l. 337; de Spec. Leg. ii. 259); there were even definite rules laid down (cf. de Somn. i. 19).

But Philo not merely followed in the footsteps of his predecessors; his aim rather was to reduce the allegorical explanation to a kind of system. There is no writer who shows more clearly than he the origin of his method. He tells us often of the different attacks which the opponents of the Scriptures, i.e. the Greeks, made on the Biblical narratives. He reprimands the detestable people who express amazement at God's changing His opinion, and writes against them the pamphlet, *Quod Deus sit immutabilis*; he is well aware that the same persons mock at the tower of Babel (de Conf. Ling. i. 403), smile at the serpent in Paradise (de Mundi Leg. i. 413), and explain the swearing or wrathful God of Israel as a monster (Leg. ad. i. 128; *Quod Deus s. lo. in. 282*); and make merry over Joseph's dreams (de Jos. ii. 59).

This Greek criticism, which lasted from the days of Philo till the fall of paganism, is most clearly brought out when the Christians, to give an allegorical meaning, a βραβεός, to the sacred Scriptures, just as, at an earlier date, it had compelled the faithful among the pagans. But, before that, the allegori- fures are best described as an allegory (de Jos. i. 46; here, again, the term βραβεός is used); the allegorical exposition is the soul of the sacred text, the literal meaning only its body (de Mig. Abr. i. 450), a conclusion which, when we compare Hellenic interpretation with the Christian (see below). The literal meaning of a passage would, according to Philo, lead to absurdity and impiety,—here, too, Origen is his pupil,—and literal obedience to the precepts of the Law could be preposterous (Leg. add. i. 132; de Conf. Ling. i. 425; de Somn. 634; de Spec. Leg. ii. 329; de Agric. i. 324, etc.). We cannot here go on to speak of the reasons which, according to Philo, caused the Deity to give such incomplete representations of Himself, nor is it possible to introduce a large number of individual allegories. The history of allegorical exegesis is tedious enough owing to the want of diversity in the method. Accordingly it may suffice to give a few instances, when any one can easily amplify for himself, from Siegried's book, *Philo von Alexandria als Ausleger des AT.* pp. 192-275.

Philo recognizes in Paradise the syzygym of the soul, in the tree of life the fear of God, in the tree of knowledge the *ēpíphaneia* (de Mundo, Op. i. 37; Leg. add. i. 450); the fire of the altar is the fire of fire (de Post. Caini, l. 350; Leg. add. i. 50); Abel is pure pieté without intellectual culture, Cain the egoist, Seth the son of his father is imbued with the principle of the Holy Spirit (de pot. pot. ins. l. 197; de Sacrific. Ab. i. 163; de Post. Caini, l. 249); Enoch hope (Quo. pot. pot. ins. i. 217; de Frenes. et Potius. ii. 419); etc.; Homer signifies the ζυγοιον μαθεων, Sarah virtue and wisdom (de Cerber, i. 199 f.); Joseph is the type of the states- man (de Jos. ii. 41); his coat of many colours indicates that his political intrigue is intricate and difficult to unravel (Quo. pot. pot. ins. i. 192); in the Law (Dei 219 f.) the one beloved wife is plea- sure, the other who is hated is virtue (de Sacrific. Ab. et Caini, l. 167); and so on.

Seeing that the allegories crowd in on Philo in such a way, it is to be feared that in the same passage in different allegorical ways (de Prof. i. 572); moreover, the same facile hand occasionally changes the text, just when it suits his alleg- ory to do so (Quo. pot. pot. ins. i. 297).

The Jewish method of interpretation was carried over into Christian exegesis, although the influence of Philo did not make itself particularly felt till the 2nd and 3rd centuries. Thus St. Paul, as well as the writer of the Epistle to the Hebrews, makes the ready use of allegorical exegesis (cf. Gal 49. 1 Co 9); and the Epistle of Barnabas, with its search for a spiritual meaning behind the letter, is a product of the Jewish tradition. This need of allegorizing is seen still more plainly in the *Apologetics.*
This is particularly true of Justin Martyr, who interprets a number of Old Testament prophecies in a most daring fashion; thus Gen 49.1, "he hath washed his garments in wine, and his vestments in the blood of grapes," means the righteous one on whose head the faithful in whom the Logos dwells, with his blood, which, like wine, is transformed into grapes, comes from God (Acts 13). And it is said, 'the government shall be upon his shoulders' (Is 9.9), the meaning is that Christ would be hung on the cross. But the Gnostics go still further. They allegorize in their Oriental manner not only the Old Testament, but also the New, discovering in it new and significant symbols and incidents. Then, the 'Demiurge,' their 'Bythos,' and their 'eternal Wisdom' (Irenaeus, i. 1. 17, iii. 18; Huch, Influence of Or. Ideas and of the Christian Church, p. 16).

The enormous syncretism of the 2nd cent. drew allegory into its circle. When we see Greeks and Christians contending with one another, we become quite bewildered with the confusion of terms. The Apologists unite with the Sceptics in their opposition to allegory (Aristides, xii, 7, Seeberg; Tatian, adv. Graec. 21; pseu-do-Clem. Rom. Hom. vi. 17, etc.); but they themselves calmly use allegorical interpretation. Celsius is perfectly justified in his attack on this method, which he designates as a retreat of shame at the immoral stories of the Bible (Orig. c. Celts. i. 17, iv. 48 ff.). But, again, Celsius and his Sceptical successors do not press the attack on all parties, Greeks as well as Christians, tread the same erroneous path.

Allegory had, in fact, become to the men of this time a method of thought. They could not but use allegory, repudiate and Tertullian solemnly reject the Gnostic interpretative, yet the method took firmer hold, and, along Philo's lines, developed just as luxuriantly as in the Greek-Judean empire. The language of Clement of Alexandria, revealing as it does the symbolic pictures, at once betrays the allegorist; but it is not worth our while to go into his individual allegorical interpretations here (Strom. i. 3. 23, vii. 11. 94 ff.), in his predilection for the Book of Job and the Canticles (Migne, Patrologia Graeca, LXV. 697 ff.). The former resembles a Greek drama, the latter a love poem, in which Solomon celebrates his marriage with an Egyptian woman. The Psalms, too, were explained interpretatively, and, particularly by accepting Messianic passages in the OT, made its own position untenable. Theodore himself is the best example of this. It is quite refreshing to learn of the Alexandrians' regard for the word of Job and the Canticles (Migne, Patrologia Graeca, LIX. 697 ff.).

The allegorical method was, after all, more logical than the exegesis of the school of Antioch, which, in recognizing typology and in distinguishing a double meaning in Scripture, again came nearer to the allegorical interpretation, to restore the historical background irreparably destroyed by the allegorists. This they did by attempting to disclose the typical meaning after having ascertained the verbal signification. But Theodore does not deny that, e.g., Zec 9.10 refers to Zerahiah, and although he expresses himself strongly against those who interpret the words as applying to him, and another part as referring to Christ, still he finds a kind of mediation in the thought that a considerable part of the prophetic message is to be understood 'hyperbolically,' i.e. its full truth is only struck out (cf. Fauth, in Comment. in Zech. ix. p. 554 f. 11). Similarly, too, he interprets Ps 54 as referring to Onias, but, at the same time, as being a σταυρωσις (cf. above, Orig, and Theodore himself, p. 555) of the sufferings of our Lord. Another excellent example (Jl 2.25-26) is given more fully by Kühn, loc. cit. 187. Theodore's exegesis continued to flourish in the school of Nisibis, and obtained, by means of Julius Africanus, an entrance into the West (Kühn, loc. cit. p. 215 f.).

The allegorical method was not empirically enough combated by this new method, which, in the place of the old Gnostica only caught another, notwithstanding the vigour with which the champions of the doctrine of Antioch in thoroughly Greek style carried on the conflict. It was now no longer possible to overthrow the system; and already become far too necessary an element in Greek thought. Gregory of Nyssa seems to have quite made up his mind not to reduce the Scriptures to an allegory (Hexameron, i. 6, 45, 45); but then, again, he has still in all allegorical representations, and gives some himself, particularly in his explanation of the Canticles. Gregory of Nazianzus, who, like all the Apologists, opposes the heathen allegories, wishes to adopt in the interpretation of Scripture a via medica between the different methods. And, as early as the time of Celsus, the question of the Old Testament prophecies is the chief point of contention among the Gnostics and the Christians.
the wide-spread. All 1712: 205). It's the art. Littera tamdiu thus its fishes tinction its coptious recognizes thus, that, of the breadth of his view, he too appeals to the old art. 2 Co 3°, that the letter killeth (iii. 5); and thus we kill our souls when, in following the letter, we neglect the spirit (cf. Rom. 7:6; 1 Cor. 13:1). Augustine here, as in all other department, occupies a prominent place. He follows in his writing, de Doctrina Christiana, the seven hermeneutic rules of the Donatist Tyconius (iii. 30), and gives a lively and delightful exposition of the whole. The piety, hence, of the platte, impossible, to the same example in his Formule spiritualis intelligentionis, which now furnish us with a copious table of individual allegories.

But in addition to that, every individual thing has its definite meaning, be it the letter-oracles prophecy; the shadow of death; the stones of either Christ or sanct; roses are mortices a roadway sanctuaries; the fishes sanct; the water wondrous; the lion = dominion; the bear = Daniel and lions next, but the wolf and the wild bear are the representations for the soul; the tiger = femina interdum interrogantia; the canis=adultere rebus sexu alii consulit vel minoribus distort.

After winning these titles, the Middle Ages fell asleep, and it is impossible for us here to trace the vagaries of allegorical interpretation further. The interpretation, which finds expression in the following well-known couplet, becomes quite a fixed rule:

'Lettera gesta docet, quid credas allegoria, 
Moralis quid agas, quae tendas analogia.'

Bernard of Clairvaux is an enthusiastic allegorist of the Canticles. Thomas Aquinas (Summa Theol., i. art. 10) distinguishes the various hermeneutical littellaria from the sensus spiritualis, quia super litteralia fundament et eum supponit, and this distinction preserved for centuries, not till the Reformation that this way of interpreting was called in question. Luther, who confesses that as monk he had allegorized everything, socks, along with the lion, only for the sensum litteralis (Heinrici, in Isaeuc, P.B.3, vii. art. 'Hermeneutik'). Of course he still interprets Canticles allegorically, but does not express himself so enthusiastically regarding it as either the theologians of the Middle Ages or many later expositors. The Canticles, in fact, have been to a large extent the test for the later Biblical interpretation. Generally speaking, the allegorical method has in modern times fallen into disuse. Men like Cocceius byal belong to the exceptions, and Biblical criticism and its method has, particularly since the end of the 18th cent., almost annihilated allegorical exegesis. Still the interpretation of the Canticles, which held its place in the Canon, has again and again raised up friends of the old method. Although H. Grotsch, as early as the 17th cent., treated the poem to a large extent historically and grammatically, and Herder, at the end of the 18th cent., offered a purely historical and literary explanation, still there have been even in our times men like O. von Gerlich and Hengstenberg, who have more or less preferred the old interpretation of the Canticles as referring to Christ and the Church. This is the exegesis which still prevails in the Roman Catholic Church.

A few words remain yet to be said with regard to the Jewish allegorists. The 2nd cent. of our Christian era produced the seven allegorists.

We have already noted above (p. 330) the allegorical interpretation of the Canticles is due originally to R. Aëlia. Among the Jews, no less than among the Christians, keen controversies after the Jew had died, and the flesh (cf. Vss. 23, 24) is remarkable for the passions which this dispute called forth. Among the Jewish interpreters of the Bible at the present day the allegorical method is the method of interpretation which finds most general favour.

JOH. GEFFcken.

ALL FOOLS' DAY.—This has been authoritatively defined as a humorous name for the First of April, the season of which is appropriate to the custom of playing the fool by means of practical jokes at the expense of a person's credulity. The term is of comparatively modern use; the practice is wide-spread, but of obscure origin.

The phrase is used by Swift in 1712: 'A due donation for All Fools' Day' (Hone's Every Day Book, i. 205). It occurs in 1700 in Poor Robin's Almanack: 'The First of April some do say are fools apart for All Fools' Day' (Brand, Pop. Annt.). Charles Lamb uses the expression: 'All Fools' Day. The compliments of the season to my worthy masters.'

The custom is wide-spread. Hearne, in his diary, under April 2, 1712, writes: 'Yesterday being the first of April (a day remarkable in England for making of April Fools,' etc. (Hearne's Collection, vol. iii. Ox. Hist. Soc. 1888). Congreve in 1687 refers to the fools'-errands practised on the First of April: 'That's one of Love's Aprilfols, is always upon some errand that's to no purpose.' There is also in the Oxford English Dictionary a reference as early as 1699, from Dekker's Gull's Hornbook (ed. Grosart, ii. 299): 'To the intent I may aptly furnish this feast of Fools.' There is no distinct reference to the practice in Shakespeare, unless, in the light of the Congreve quotation above, the following from As You Like It may be taken as an allusion to it:

'Ros. New tell me how long you would have her after you have possessed her.

Or. For ever and a day.

Ros. Say "For ever and a day" without the "ever." No, no, Orlando; men are April when they woo, December when they wed.'—iv. i. 143.

Brocken (‘Know. Lexicon‘) says that the practice is unknown to German antiquity, and appears to have been introduced from France.

The origin of the practice is obscure. It is clear from Dekker that it was widely prevalent at the close of the 16th century. It seems difficult,
therefore, to accept the theory that it was due to the transference of New Year's Day from the First of April to the First of January. In fact, this is said to have taken place in an order of Charles IX. in 1564, and it is suggested that for the 6trennes, or New Year's gifts which were transferred to the First of January.

'on se fit placer des féticatons de plaisanterie aux per-
sonnes qui s’accommodaient avec regret au nouveau rège-
me.'

and 'Sol in piscibus' stood of old in the calendars
much as the phrase 'Sun enters the sign Pisces'
stands in the calendar for 1907 against 19th Feb.
The poissons d'avril were caught under the Ram. They cannot even come under the category of the Irish Ball.

Other suggestions have been made as to the origin of this practice of making an April-fool, or 'hunting the gowk,' as it is termed in Scotland. Some have seen in it a parody of the changeable
weather. Others regard it as a reminiscence of the solemn fooling in the Miracle Plays. Another sees in it a relic of the Roman Cerealia, held at the beginning of April.

'The First of April in England and the April Festival in India had their origin in the ancient practice of celebrating the Vernal Equinox.'

The similarity of the fooling in India and the Celtic lands of Western Europe, taken together with affinities in religion and folklore, illustrated by the cross-legged figure of the Celtic deity Cernunnos in Marseilles, is suggestive of a common origin in very early times, and supports Maurice's conclusion. The same conclusion is expressed in other words in Brockhaus' Konvex, Lex.: 'Dass er der Rest eines alten bräuchlichen vielerorts altertümlichen Festes ist, welches mit dem Deun des Frühlings im Zuss-
menhang steht.'

In whose honour this old Celtic Festival was held, and what religious mystery or rite underlay the fooling, has yet to be traced. It is only possible to suggest the lines along which the solution may be found.

Two points have to be noted. The rite—if such fooling may be dignified by the name of rite—must be performed at the passing of March, i.e. at the First of April. It must also be finished before noon.

These points are confirmed by two rhymes. In North Staffordshire, if the joke is played in the afternoon, those who are trying to practice thr
joke are met with the retort:

'If I be a fool then, and April come;
You're a fool, and I'm none.'

In South Staffordshire the rhyme runs:

'April-fool's dead and gone;
You're ten fools to make me one.'

These rhymes, preserved in a district still strongly
versed in old Celtic folklore, point not only to the antiquity of the custom, but to its being associated with certain old rituals, celebrated between the evening of the last day of March and the morning of the First of April.

is there any means of tracing the origin and
affinity of the rite? The First of April was kept in ancient Rome as the Feast of Venus and Fortuna Virilis. Over a hundred years ago Fortuna Virilis was shopped by women that she might preserve their
charms, and thus enable them to please their hus-
band. But how the men occupied themselves with the rite, or why they occupied themselves by worshipping at the shrine of Fortuna Virilis, whether they suspected they were being fooled by
the women, cannot be known. As Fortuna Virilis is also the protectress of boys and youths, it is not impossible that the old game of 'blind-man's buff,' or 'hoofman-blind,' as it is in Shakespear, may be a relic of the rite practised by the men on the occasion of this Festival. Or the fooling may be especially associated with this Spring Festival of
Venus. It is on record that Q. Fabius Gargas, the
Consul, at the close of the Samnite War, founded the worship of Venus Obequetus and Postvorta (Smith,CLASS. Dict. art. 'Venus'). Fuller details may be found in Livy (Hist. xi).

It is to some Celtic form of this worship of Venus on the First of April that the origin of all Fools' Day must be traced. Rhys in his Hibbert Lectures shows an analogy between Venus and the maiden-
mother Ariadne, the daughter of Don.

'These remarks on the parallelism between the Celtic Sun-
god and Balder would be incomplete without a word regarding the latter's bride, Frigg. She is proved, by the Anglo-Saxon
word Frigedæg, now Friday, and by the old Norse habit of calling the planet Venus Frig's Star, to have been treated to a certain extent as a counterpart of the Latin Venus. Her dwell-
ing in a mansion called Fenall, the Hall of the En or Swamp, recalls Liet's mother, Ariadne, and her sun-girt castle' (Rhys, Hibb. Lect. p. 543).

And perhaps it is not merely accident that some
of the most marked of the mirth in the Marching, this
is in 'Math, the son of Mathonwy.' Ariadne was the
mistress of the Culture Hero, Gwydion, son of Don. By her he had two sons, Llew or Lleu, the Sun-hero of Celtic mythology, and Dylan. The
boy Llew according to a tradition found at Dinus Dindu, on the Car-
narvon coast near the southern end of the Menai Straits. A little distance to the south-west is a sunken reef known as Caer Arionrhod, the sea-girt Castle of Arionrhod in the Mabinogion, this was the scene of the magical fooling by which Gwydion
won a name for his son Llew, and forced Ariadne to
invest him in the armour in which he was to shine. Llew's twin-brother was christened by order of his father immediately named after the
ships. He swam as well as the best fish in its waters, and
for this reason was called Dylan, the son of the
wave' (Guest's Mabinogion, ed. Nutt, pp. 66-71).

His name is commemorated in the headland Maen-
dudlan on the same coast.

Llew and Dylan are held by Rhys to represent
the principles of light and darkness, and it would
be natural that any rite connected with the victory
of the Sun-god Llew over Ariadne and his twin-
brother Dylan should be associated with the First
of April. This suggestion also affords an explana-
tion of the French phrase. Those who were fooled
on the First of April, and suffered the discomfiture
of Dylan, would suitably be named after his fish-
like propensities, 'poissons d'avril.'

All Fools' Day may therefore be the relic of a
Spring Festival of Llew. In the shining armour
of the Sun, which he won by his magic from
Ariadne, he triumphed at this season of the year
over the cold gloom of the winter sunlight per-
sonified in his brother Dylan. These early myths
took shape in various rites, and were preserved in
folklore and in popular rhymes and customs.
Rhys, writing of the feast held on the First of
August in honour of Lug, another name of the Sun-
hero Llew, says:

'Look at the list of these places (Lyons, Loone, Leyden, all variants of the older Lugdunum) on the map, and take into
ALMSGIVING—ALTAR

March is gone, and April come; the March lines to the triumph of Llew and the discomfiture or fouling of Dylan.

Teutonic (C. J. Gaskell), p. 354.

In the most general sense of the term, an altar may be defined as a surface, usually elevated, but occasionally depressed, on which sacrifices are offered, and natural objects, like trees or stones, are set up to receive a cult. The term is thus, by implication, intimately connected with sacrifice (q.v.), and has seemingly been developed as a ritual adjunct to the oblation. Sag也有 a few instances of altars being set up to natural objects by casting the offering into them. Thus, amongst the Nicaguarans, the human sacrifices to the volcano Masaya or Popocatepec were cast into the crater of the mountain, and amongst the Hurons tobacco was thrust into the crevice of a rock in which a spirit was believed to dwell (Tylor, Proc. Brit. Anthropol. Soc., 1884, p. 537). The common Greek practice of making offerings to water deities, even to Poseidon himself, by permitting the blood of the sacrifice to flow immediately from the victim into the water, is too well known to require more than an allusion, and it is again exemplified both in Guinea and North America; while, in like manner, offerings are made to the earth by burying the sacrifice, as amongst the Khonds of Assam (a mode of sacrifice which also occurs elsewhere in offerings to the dead), and to the fire by casting the offering into it, as amongst the Yakuts and the Carinthians (Tylor, Proc. Brit. Anthropol. Soc., 1884, p. 537). Sacrifice to the dead may be simply by casting the offering away at random, as in Melanesia (Cordington, Melanesians, Oxford, 1891, p. 128).

In considering the primitive purpose of the altar, it may not be amiss to discuss the etymology of the words denoting it in Semitic and Indo-Germanic. In the former group of languages "altar" is represented by the Hebrew altaria (Arab. madhabah), a derivative of :a (Assy. zib, Arab. dhabah, etc.), to 'sacrifice,' thus clearly indicating that the Semitic altar was for the slaughtered victim or its blood, not for the burnt-offering (the burnt-offering is later development amongst the Semites; cf. W. R. Smith, pp. 350 ff.); and this is curiously confirmed by the fact that amongst the modern Semites there are no burnt-offerings, but only the slaughter of victims without burning (Curtiss, op. cit. p. 220).

Some, however, have been rejected by many scholars. The second Lat. term for ‘altar’ is ara, Roman altar, from the root alté very difficult, unless one may assume in it the presence of a ‘root-determinative’ t (cf. Persson, Wurzelentwicklung und Wurzelwiederauf-, Upsala, 1891, pp. 28–35), though this method of etymology is rejected by many scholars.

The Greek terms for ‘altar’ are θυρή, θυρεῖον, and θυσία. The first of these, which stands in About-relations with Doric βως (Attic βύω), ‘step,’ itself occasionally means ‘step’ (e.g. Odyssey, vii. 100); while the last two are both connected with θύω, ‘to sacrifice,’ especially by burning (cf. Latin suffio, ‘fumigate,’ etc.). Finally, in Germanic we have the Icelandic stali, Anglo-
Saxon woodea or wolbed, and Gothic hundastept, the first being etymologically akin to the Eng. stall, ‘place,’ the second denoting ‘idol-table,’ and the third ‘place of sacrifice, house-altar.’ Finally, it may be noted that a Russian term for ‘altar,’ zevtounick, also means ‘place of sacrifice,’ being a derivative of zeiona, ‘sacrifice’; but it must be borne in mind that this root is ultimately pre-Slavonic. It has been suggested that the Slav, group, including Old Church Slav, zvēti, ‘to sacrifice,’ zvētens, ‘sacrifice,’ and zipk, ‘priest,’ seems to have regarded the sacrifice primarily as praise (cf. Mikelc, Blygod. Wörterbuch der slav. Sprachen, Vienna, 1886, p. 410)—a concept which is, perhaps, borrowed from Christianity.

It is thus evident that amongst the Semites the altar was primarily the place where the victim was slaughtered, and amongst the Indo-German peoples the place where it was burnt.

It is clear from what has already been said that the altar, essentially an adjunct of the sacrifice, has been evolved later than the oblation, for many peoples have sacrificed, or made their offerings, and still do so, without altars; and there are considerable areas, particularly in Africa and South America, where the altar is entirely unknown, while the late development of the altar amongst the Indo-German peoples is a commonplace (cf. Schraday, RE der indogerman. Altertumskunde, Strassburg, 1901, pp. 385, 861), and receives a striking exemplification in the relative late evolution of the Indian vedō (see ALTAR [Hindu]).

The latter represents, indeed, a curious type of altar, in that it is primarily a fire altar in a trench strewn with grass, evolved late into the common form of a usual altar for burnt-offerings. Its development thus shows all three forms of the altar—depressed below the ground, practically level with the ground, and elevated above the ground (cf. Ludwig, Der Blygod. III, Pragae, 1878, p. 364; Hillebrandt, Ritual-Litteratur, Strassburg, 1897, p. 14).

Allusion has already been made to the widespread custom of hanging offerings on sacred trees, and offerings are likewise placed on sacred stones. The best example of the latter phenomenon is perhaps found in the case of the Heb. naqabōb, ‘upright stone, pillar’ (from הוב, ‘to take one’s staff to support’), the holder or supporting object, set up, ideol: for other cognates and for literature, cf. Obs. Heb. Lex. pp. 662-663), which was regarded as a Divine abode and anointed with oil (e.g. Go 29). In like manner the Arab. anūb (plural of mūnabb, ‘idol,’ which is derived from mūnabba, and is thus linguistically connected with naqaboab) were anointed with blood (W. R. Smith, pp. 214, 321).

It is held by many that the sacred stone or tree and the altar ‘originally were identical in use and purpose’ (cf. Jevons, op. cit. pp. 134-135); but this view seems at least open to question, despite the support given to it by the history of the Semitic altar, although the distinction may be deemed academic and subtle, the present writer feels that, while the deity is believed to be in the sacred stone or the sacred tree, he is never held to dwell in the altar. The altar is, in other words, from its very inception, the table on which the offering to the god is slaughtered, burnt, or deposited. The oil and blood on the sacred stone please and feed the deity, the rage on the sacred tree adorn him; but the offering upon the altar is burnt, and the debris of the offering, the ashes, thrown upon the thing. In no sense, then, can the sacred stone or tree be considered identical with the altar, unless one is ready to regard the Aegean Sea as an altar because offerings were cast from direct contact with the ground; thus giving the most primitive forms of the altar, which sacrifices to Pele were hurled into its depths; for there seems to be no differentiation of kind between the besmearing of the sacred stone and the casting of oblation to the sun on a crater.

The evolution of the altar will be considered more fully in the following sections devoted to it amongst individual peoples, but a brief allusion may be made to several forms of altar not always recognized as such. In the opening sentence it has been suggested that the altar may sometimes be ‘level with the ground, or even depressed beneath it.’ In the former case we have a very primitive type indeed—but a step removed from the mere placing of offerings on the ground by interposing a layer of sand which serves as an altar. The typical example of this form is the Hopi altar, which is discussed in ALTAR (American), though an analogue may be traced in the Semitic use of the threshold as an altar (see Trumbull, The Threshold Covenant, London, 1896, passim), or in the mat-altars of the ancient Egyptians; as well as in the herbs on which the flesh of slaughtered victims was laid for the Persians (Herodotus, i. 192; Strabo, p. 732 f.)

The altar depressed below the ground is more than the mere trench which often surrounds the altar to receive the blood which flows from the sacrifice slaughtered upon it (cf. Bellhausen, Reste der arab. Religions, Berlin, 1897, p. 105), even as the altar itself frequently has hollows artificially made or modified in its upper surface to receive or carry off the blood (cf. Curtiss, op. cit. pp. 239-240). This form of depressed altar was particularly appropriate in sacrificing to the moon, and is admirably exemplified in the sacrifice made by Odysseus in order to enter Hades (Odys. xi. 24-47; cf. Lucian, Charon, pp. 2; Pausanias, x. 4-10); or again in the ancient Persian form of sacrifice to water (Strabo, loc. cit.), where, as in the Indian vedō (see above), we find the trench combined with the balsam-mat (for further instances of the Indo-German trench-altar see art. Aryan Religion). With all this may be compared the distinction in Chinese ritual between the victims sacrificed to earth and those offered to Heaven, the former being buried and the latter burnt.

The trench-altar is interestingly combined with the more usual form in the round altar with a hollow centre, through which the blood might flow immediately into the earth, found at Nyeme, in Lower Austria, and correspondingly with the Roman ‘heart,’ level with the ground, ϕατς του σπαραγωγες (Pollux, Onomasticon, i. 8; see Schuchhardt, Schliemann’s Excavations, tr. Sellers, London, 1891, pp. 156-157); while the connection between the two forms seems to be given by an altar discovered by Schliemann at Tiryns, consisting of a quadrangular block of masonry laid on the ground, with a round hole in the centre, lined with masonry to a depth of three feet, beneath a rough earthen pit (Schuchhardt, op. cit. p. 107).

The probable general development of the altar may, in the light of what has been said, be sketched briefly as follows. Offerings were originally set upon the ground before the divinity, or placed upon the object in which he was believed to dwell, but as yet there was no altar. With the further evolution of the concept of sacrifice, a meal, either exclusively for the divinity or to be shared by him with his worshippers (for full details see art. SACRIFICE), and with the development of the idol-concept (see art. Images and Idols), natural objects, chiefly rocks and stones, of appropriate shape were placed before the idol in which the deity was held to reside, and there received the offerings; or a thin substance was placed upon the ground to remove the dirt, the grain, thus giving the most primitive forms of the altar, which
might also be made of a pile of stones, or even of earth. As the shrine or temple (q.v.) was evolved, the altar was placed at first outside it, because of the small dimensions of the primitive shrine; but later it resumed its original place in front of the object in which the divinity was believed to dwell, or which symbolized the deity to which it was dedicated. The development of art, the altar, which had long ceased to be left in its natural shape, despite the conservative character of religious ritual (cf. Ex 25:1), became varied in form, and was ornamented with the best abilities of those who constructed it. The theory of the altar, however, is unchanged; whether victims be slaughtered on it, or whether it be used for burnt-offerings, or to receive and bear animal, vegetable, or other oblations (as in the Roman lecittosternum, the Jewish table of shewbread, or many Polynesian altars), these distinctions belong properly to the subject of sacrifice (q.v.).

The human body has been used in at least two cults, the true and the false. In the Aztec Ochpaniztli, or broom feast, the woman who was to be sacrificed by decapitation was held by a priest on his back, he constituting an altar (Bulletin 26 B.E., p. 19). While in a true form of a human victim mask, made woman forms the altar upon which the Mass is parodied.

or villages, and in open spaces, on which are set manioc, maize, palm-oil, and the like, as offerings to the spirit. Outside this, the house and temple altars, which are placed inside, usually on a raised rectangular platform of clay; and before them are the earthen pots and vessels, smeared with the blood, eggs, and palm-oil of countless offerings (Ellis, Ecco-speaking Peoples, p. 81).

Against this rather negative material may be set at least one African altar of a degree of development approximating to that found, for instance, in Polynesia. This is the one in the 'juju house' at Dahomey. Thus (in Mary Kingsley's West African Studies, London, 1899, p. 315):

'After looking very much like an ordinary kitchen plate rack with the [_] and some other plates preserved in some skulls. There were three rows of these, and on the three plate shelves a row of grinning human skulls; under the bottom shelf, and between the outer edge of the top of what was the lid, the heads of the victims that had been raised in the dresser, were eight upright garnished with rows of goats' skulls, the two rows above being supported by a board-like rail; below the top of the dresser, which was garnished with a board painted blue and white, was arranged a kind of drapery or embellishment of palm leaves, etc., a more or less out of the centre, exposing a round hole with a raised rim of clay surrounding it, ostensibly to receive the blood of the victims and libations of palm wine. To one side, and near the altar, was a kind of roughly made table fixed on four straight legs; upon this table was displayed a number of human bones and several skulls; leaning against this table was a frame looking very much like a chicken walk on to the table, this also was garnished with horizontal rows of human skulls, and there were to be seen human skulls lying about; outside the juju house, upon a kind of work, were a number of shrivelled portions of human flesh.'

ELLISS. EccS-speaDnng Peoples, London, 1899, p. 42). Here both the dish and the tree (or post) represent a primitive form of altar, and in like manner we may regard the post on which a girl was impaled at Lagos to secure fertility for the ensuing year (Waitz, op. cit. p. 197) as a crude-altar.

On the other hand, in the customs of Dahomey (cf. Ellis, op. cit., p. 129–138), the victims were merely slaughtered on the ground; nor can the usage of burying living human beings when houses or villages were set up in Grand Bassam, Ceylon, and Dahomey, be the same in Polynesia, or the practice of carrying out a victim in the path of a threatened invasion, where he was left to starve to death to deter the foe, be cited as referring in any way to the altar. Nevertheless, amongst the Ashanti in the small plains of earth placed at the foot of trees, the turning of roads, the entrance to houses

ALTAH (African).—II. Among the Indians of N. America the altar played an important part, although, curiously enough, the Jesuit missionaries in New France, according to their account of religious cult. This silence may be explained, at least in part, not only by the fact that these heroic and devoted souls were not trained observers, but also by the circumstance that the Algon-

Amongst the Tshi-speaking tribes of the Guinea Coast the country stood (uphol) of the god, which is the local symbol of authority; is associated with the use of decapitated human victims laid in honour of the deity, whose own image receives a similar ablation, this being expressly recorded of the divinities Bolowissi, Idituri, Bonshu, and Jula, among the Dahomey (Ellis, A Histo of Old Benin, London, 1857, pp. 23, 51–53, 65). But neither the stool nor the image can properly be termed an altar, any more than the elevations on which the idols are set in Dahomey temples, where the images of the gods are placed inside, usually on a raised rectangular platform of clay; and before them are the earthen pots and vessels, smeared with the blood, eggs, and palm-oil of countless offerings (Ellis, Ecco-speaking Peoples, p. 81).

Against this rather negative material may be set at least one African altar of a degree of development approximating to that found, for instance, in Polynesia. This is the one in the 'juju house' at Dahomey. Thus (in Mary Kingsley's West African Studies, London, 1899, p. 315):

'The altar looked very much like an ordinary kitchen plate rack with the plates preserved in some skulls. To one side, and near the altar, was a kind of roughly made table fixed on four straight legs; upon this table was displayed a number of human bones and several skulls; leaning against this table was a frame looking very much like a chicken walk on to the table, this also was garnished with horizontal rows of human skulls, and there were to be seen human skulls lying about; outside the juju house, upon a kind of work, were a number of shrivelled portions of human flesh.'

ELLISS. EccS-speaDnng Peoples, London, 1899, p. 42). Here both the dish and the tree (or post) represent a primitive form of altar, and in like manner we may regard the post on which a girl was impaled at Lagos to secure fertility for the ensuing year (Waitz, op. cit. p. 197) as a crude-altar.

On the other hand, in the customs of Dahomey (cf. Ellis, op. cit., p. 129–138), the victims were merely slaughtered on the ground; nor can the usage of burying living human beings when houses or villages were set up in Grand Bassam, Ceylon, and Dahomey, be the same in Polynesia, or the practice of carrying out a victim in the path of a threatened invasion, where he was left to starve to death to deter the foe, be cited as referring in any way to the altar. Nevertheless, amongst the Ashanti in the small plains of earth placed at the foot of trees, the turning of roads, the entrance to houses
a basin-shaped hollow, usually filled with ashes (Baneroff, Nat. Races of the Pacif. States, iv. 774; cf. Thomas, *RBEW* v. pp. 57-58 [West Virginia]); Holmes, ib. xx. pp. 36-37). Here, again, numerous variations from the general type are to be observed. Thus, for instance, in one of a mound near Sterling, Ill., was found 'an oval altar 6 ft. long and 4½ wide. It was composed of flat pieces of limestone which had been burned red, some portions having been almost converted into lime. On the eastern side of the altar I found abundance of charcoal. At the sides of the altar were fragments of human bones, some of which had been charred' (Holbrooke, quoted by Yarrow, *Intro. to Study of Mortuary Customs among the N. Amer. Indians*, Washington, 1880, p. 23).

In his *Moeurs des sauvages américains* (Paris, 1784, II. 327) the Jesuit Lafiou advances the theory that a basin-shaped altar, or 'pote de paix,' was an altar. This statement, perhaps surprising at first, is not so absurd as it may appear, for the calumet certainly contains, in some instances, a burnt offering in honour of a deity. Among the Southern Tahapouches and Alabama in their head priest went toward each morning and bowed into the calumet, and blew the first puff of smoke toward the east. The Natchez custom was very similar, except that the head priest himself performed the offering to the sun. It seems not only that quarter, but also the three others with whiffs of incense. These 'scents' are found amongst the American Indian tribes, such as the Ktisaneaus, Shoshone, Shoshonee, Omahas, Poncas, Blackfeet, Pottawatomies, and Hopi (McGuire, 'American Indian Sacred Ceremonies' in *Report of the United States National Museum*, 1897, pp. 361-516, especially pp. 383-511).

By far the most elaborate modern N. American Indian altars, however, are those of the Hopis and kindred Pueblo tribes, whose snake, antelope, and flute altars have been carefully described by Fowkes (*RBEW* xv. pp. 270; ib. xvi. pp. 273-274, 288-290, 299-301, 301-304; xix. pp. 966-969, 989-993, 999-1001, 1001-1002). These altars are of special interest in that, unlike many other tribes, they are essentially the embodiment of the principle of sympathetic magic, especially as 'at present the ritual is performed for the purpose of bringing abundant rain and successful crops' (Fowkes, ib. xix. p. 983, cf. pp. 1009-1111). The Hopi altar, which, of course, presents unessential variations in different places and circumstances, is composed of sand, the square in honour of a deity. Among the Southern Tahapouches and Alabama in their head priest went toward each morning and bowed into the calumet, and blew the first puff of smoke toward the east. The Natchez custom was very similar, except that the head priest himself performed the offering to the sun. It seems not only that quarter, but also the three others with whiffs of incense. These 'scents' are found amongst the American Indian tribes, such as the Ktisaneaus, Shoshone, Shoshonee, Omahas, Poncas, Blackfeet, Pottawatomies, and Hopi (McGuire, 'American Indian Sacred Ceremonies' in *Report of the United States National Museum*, 1897, pp. 361-516, especially pp. 383-511).

At the top of the altar are four symbolic figures of rain, of different colors, which depend on four serpents, typifying lightning, while on the top outer white sand border are lines of black sand, representing rain. At the bottom of the altar are four water-gourds (the number again typical of the four quarters of the earth), surmounted by ears of maize, and at the top a vase with maize-stalks. Rattles and bull-roarers, symbolizing thunder, are scattered around the edges of the altar, and a pouch of tobacco (the smoke typifying the rain-cloud), a water-gourd, and a 'medicine-bowl,' into which an aspergill is dipped to symbolize the falling rain, are also prominent features. The lines of meal drawn across the sand were intended to represent the fertilization proceeding from the rain-clouds to the external world; while *tiopones* or totemic emblems of the clans celebrating the ritual, form the most sacred objects of the altar. Figure 1 shows the altar as found and frequently, together with other objects whose precise significance is not yet fully known.

Many of these Hopi-Zulu altars, it should be noted, have a more or less irregular shape, resembling that of an oblong plate (called the 'Flute' society) at the Tusayan pueblo of Milsomongovi, for instance, being described by Fowkes (*RBEW* xvi. pp. 501-504) as consisting of 'uprights and transverse plates of wormwood, the former decorated with ten rain-cloud pictures, five on each side two above the other. These symbols were outlined with black lines, each angle decorated with a figure of a feather, and depending from each rain-cloud figure, parallel lines, representing falling rain.' The transverse plates were made of nine rain-cloud figures of semicircular form. Four zigzag sticks, representing lightning, hung from the transverse slats between the vertical or lateral slats of the reredos. Two supplementary uprights were fastened to the main reredos, one on each side. These were decorated at their bases with horizontal figures representing maize, surmounted by rain-cloud figures. The ridge of sail, between the uprights of the main reredos, was ornamented with many smaller rods and slats, the one in the middle being decorated with a picture of an ear of corn.' Despite the elaborate character of the Hopi altar, its elements are obviously subordinate to the sand-altars placed before them, and of which they are palpable imitations. Enough, though, as some of the Zulu altars described by Mrs. Stevenson's the reredo is quasi-permanent, while the sand-altar must be removed for each ceremonial well in advance.

Amongst the Zulu, as already intimated, we likewise find elaborate altars showing the same general type as their Hopi congeneres. In all of them the principle of sympathetic magic seems to be present, as is clear from Mrs. Stevenson's detailed description of them (*RBEW* xxviii. pp. 245-246, 428, 432-434, 454, 491, 525, 543, 550, 551).

2. Turn to Mexico and Central America. The altar in the great temple at the City of Mexico in honour of Huiztilopochitl, the god of war and the chief Aztec deity, was a green block, probably of jasper, 5 ft. long by 3 broad and high, curved convexly on the top, so that the human sacrifices were impaled upon it, and it would be in the best position for the excision of the heart (Baneroff, *Nat. Races of the Pacif. States*, ii. 582-583).

The Aztec altar, moreover, had an adjacent, not fouled in with it, a mound, one of green jasper, curved in a $\Phi$-shape, and placed over the neck of the human sacrifice at the time of his immolation, to assist the priests who held his arms and legs, to keep him in a proper position for the chief celebrant.

Our general knowledge of the details of the Aztec altar must, however, be drawn from the sacrificial stones of neighbouring peoples, which may be inferred to have been analogous. The Maya altars, as found in the ruins of Copan, Honduras, and of Quirigua, Guatemala, are 6 or 7 ft. square and about 4 ft. high, taking a variety of forms and being covered with sculpture somewhat less elaborate than the statues of the divinities themselves (Baneroff, *op. cit.* ii. 659, iv. 94). As in many Semitic altars, their tops were intersected with grooves to receive the blood of the sacrifices offered upon them (ib. iv. 94-99, 111-114, 541). Besides formal altars, the ancient Mexicans, Mayas, and Guatemalans also had braziers and small altars in which copal, which bore the red color of the Oriental calumet, was burnt in honour of the gods, one of these smaller structures, found at Palenque in the Mexican State of Chiapas, being 16 in. high and 4 ft. 5 in. in circumference (ib. i. 697, ii. 584, 650, iii. 435-346). Like the 'mound-builders' of N. America, the Mayas erected altars on the graves of the dead (ib. ii. 799), and in Nicaragua flat stones have been discovered which apparently served as altars (ib. iv. 22, 61-62).

Both in Mexico and in Central America generally, the altar, like the temple itself, was placed on the summit of the teocalli, or 'god-house,' a pyramid of considerable elevation; so that it has not inaptly been said that 'A Mexican temple was essentially a gigantic altar, of pyramidal form, built in several stages, contracting as they approached the summit' (Revell, *Native Religions of Mexico and Peru*, London, 1884, pp. 47-48). In places, however, as at Quemada, in the Mexican State of Zacatecas, a small structure, 5 ft. high and with a base 7 ft. square, was set in front of a pyramid, apparently as an altar (Baneroff, *op. cit.* iv. 357-358).

3. In South America the altar seems to be unknown, thus giving yet another proof of the cultic inferiority of the South American Indians to those North and Central American. These archelogical remains of Peru present no example of the
ALTAR (Celtic)—ALTAR (Chinese)

337

ALTAR (Celtic).—The data concerning the Celtic altars are extremely scanty, since all native records of the pre-Christian period are lacking, while the altars still preserved date from the Roman period, and are in most cases Roman originals. The chief sources, then, for a knowledge of the altar, as of other portions of Celtic art, are a few early classical authors. Caesar, in his brief account of Druidism (de Bello Gallico, vi. 13-18), makes no mention of the altars; the same silence, which may not be without significance, by Strabo (iv. 4. 4-5). On the other hand, Tacitus (Annales, xiv. 30) distinctly states that the Druids of Mona held it right to besmear their altars with the blood of captives; and this practice is extended to the whole of Gaul by Pomponius Mela (iii. 18). By far the most famous passage, however, in this connexion, is found in Lucan's Pharsalia (i. 445-445):

"qui quis immitis placator sanguine doro
Tectates, horrenquie feris altarius Herus,
Ex Tarania Scythica non militor ara danam."

(On the identification of these divinities, see Rhys, Lectures on the Origin and Growth of Religion as illustrated by Celtic Heathendom, pp. 44-47, 61-73.)

The same poem contains a brief description of a Druid temple (iii. 399-452) at Marseilles, which was destroyed by Caesar. It seems to have consisted simply of a gloomy wood, the bark being mentioned as one of the trees, which contained "altars built with offerings to the dead" (structa sacris foralibus are) and rude, artless images of the gods, roughly hewn from logs. Although Caesar otherwise tells us that the Gauls differed widely from the Germans in cult (de Bello Gallico, vi. 21), Lucan's description of Marseilles recalls involuntarily the statement of Tacitus (Germania, 9), that the ancient Teutons made neither images nor temples for the gods, but worshipped them in groves.

A large number of Celtic altars of the Roman period have been preserved, but are practically valueless, as being modelled entirely on classical prototypes. It was supposed by older archaeologists that the dolmens or cromlechs, formed by laying a flat stone across or two or three others which had been already in the ground, would probably prove to be altars, a hypothesis now abandoned, since these structures are rather sepulchral chambers which were frequently covered to a greater or less extent with earth. It is probable, moreover, that the dolmens date from the neolithic period, and it is impossible, therefore, to state that they are specifically Celtic. The only conclusion which can be reached, in the light of the data now available, concerning Celtic altars is, that the Druids were probably simple structures placed in their sacred groves and used for sacrifice, though the altar was not indispensable, since the wooden and osier cages filled with men and other victims and burned as a holocaust (Cæsar, de Bello Gallico, vi. 16; Strabo, iv. 4. 57).

could scarcely have been offered on any but a special structure or on the ground.

ALTAR (Chinese).—The Chinese sacred books inform us that burnt-offerings were made to Shang-ti, the Supreme Ruler, upon mountain-tops from time immemorial; and the fact that, even to the present day, the worship of Heaven or Shang-ti is conducted in a circular mound would seem to be a reminiscence of this ancient practice. As early as the days of the Emperor Shun (B.C. 2300), a distinction appears to have been made between the 'round altar' upon which the sacrifices were arranged in a circle, and hence called the 'round sacrifice,'—were offered to God, i.e. Shang-ti, and the 'spread-out sacrifice,' and others, which were associated with the worship of subordinate deities or spirits, and which, as the names imply, were arranged in other ways. The distinction between the shape of the altar of heaven and that of earth is observable even now in China, and may serve to illustrate the early methods as represented in the classical books.

The celebrated 'Altar of Heaven' in the Chinese quarter of Peking, stands in a beautiful park some 3 miles in circuit, and is a magnificent structure of white marble, 27 feet high, composed of 3 circular terraces, the lowest of which is 210 feet in diameter, the middle 150, and the upper 90 feet.* It is approached by 8 flights of steps, corresponding to the 4 points of the compass. Each terrace is protected by a marble balustrade. The top is paved with marble slabs arranged in concentric circles, the innermost slab being round in shape,—corresponding to the shape of Heaven,—around which is arranged a circle of slabs, 9 in number, and, outside of this, other circles in multiples of 9 until the square of 9 is reached in the outermost ring. Five marble stands support the altar furniture, consisting of censers, candlesticks, and vases. Close to the altar there is a furnace of green tiles, 9 feet high by 7 feet wide, approached by steps on three sides, intended for the reception of the sacrificial offerings which are here burned on the great occasions when the Emperor represents the whole nation in his high-priestly capacity. In the chapels adjoining, where the tomb of Shang-ti and the Imperial ancestors are preserved, this circular arrangement is also maintained.

The 'Altar of Earth,' as described in the Law of Sacrifices, was a square mound in which the victims were buried, while those offered to Heaven were burnt. The passage reads as follows: * With a blazing pile of wood on the grand altar they sacrificed to Heaven; by burying in the grand mound they sacrificed to the Earth. The Great 'Altar of Earth,' in the Chinese quarter of the city of Peking, consists of 2 terraces of marble, each 6 feet high. The lower terrace is 100 feet square, and the upper one 60 feet. The altar is situated on the north side of that which contains the 'Altar of Heaven' above described. The coping of the wall which encloses the park is of yellow tiling, corresponding to the colour of earth.

The 'Altar of Prayer for Grain,' popularly known as the 'Temple of Heaven,' is separated by a low wall from the 'Altar of Heaven.' It also is circular in shape, but is protected by a triple roof of blue tiling, 100 0 feet high, and consists of several simple structures placed in their sacred groves and used for sacrifice, though the altar was not indispensable, since the wooden and osier cages filled with men and other victims and burned as a holocaust (Cæsar, de Bello Gallico, vi. 16; Strabo, iv. 4. 57).

* An engraving of the altar, from a photograph, is given in Bible in the World, March 1907, p. 76. They
ALTAR (Christian) — 1. Nomenclature. — (a) GREEK. — St. Paul, in a passage dealing with the Eucharist, uses the phrase ἄρτοα Κυρίου (1 Co 10:19) — a term frequently employed by the Greek Fathers after the 3rd century, and commonly by Latin liturgical documents, as a designation of the Christian altar. The word ὁμαρσίατος — the ordinary equivalent of LXX for ἁγιόν — occurs in his writings (1 Co 10:31), but only with reference to the altar of the old dispensation. The writer, however, of the Epistle to the Hebrews may refer to the Eucharist when he says, 'We have an altar (ὁμαρσίατος), whereof they have no right to eat who serve the altar.' (He 10:19); but most commentators explain this passage as referring to an OT type (Heb Rev 8—9). There is no other reference to the Christian altar in the NT.

[SeePOCH, Litteratur der drei ersten christlichen Jahrhunderte, p. 293; F. E. Warren, F. L. Lightfoot, Philippians, p. 293.]

In the sub-Apostolic age it is difficult to find any direct reference to the altar. The Didache is silent on the point, but in the letters of Ignatius the word ὁμαρσίατος occurs in passages dealing with the Eucharist; and this writer in at least one passage (ad Philid. 4) appears definitely to apply this word to the Eucharistic altar.

[See ad Philid. 4, ad Magnes. 7; cf. also ad Ephes. 5, ad Trall. 7 (in these latter passages ὁμαρσίατος is applied figuratively to the Eucharistic meal); see Lightfoot, Philippians, p. 293.]

Later in the same century, Irenæus (c. Her. iv. 18. 6) writes that the sacrifice of bread and wine should be frequently offered on the altar. Eusebius designates the altar of the basilica at Tyre, dedicated in the year A.D. 314, as ὁμαρσίατος ὁμαρσίατος (IIE x. 444), and speaks in the same place of the altar (ὁμαρσίατα) erected throughout the world after the Peace of the Church. The word ἄρτοα also is defined by pseudo-Athanasius as ὁμαρσίατος (Disput. cont. Ariam. xvii.); ἄρτοα, not ὁμαρσίατος, is the term usually employed in the liturgies; it is also common in many of the Greek Fathers. Sometimes the word stands alone — ἄρτοα, 'the table' par excellence (e.g. Chrys. Hom. iii. in Epist. ad Ephes.). Sometimes, as in 1 Co 10, it is ἄρτοα Κυρίου (e.g. Orig. c. Cels. viii. 24). But very often adjectives are added, such as ἐκπρόσωπον, ἐγκορμώδης, and the like.

βαπτισμός, as contrasted with ὁμαρσίατος, is used in the OT for the purificatory washing with water of the size of the building. The altar furniture includes a censer, two candlesticks, and sometimes a pair of vases of bronze, porcelain, or stone. When Altar Worship is conducted in private houses, the offerings are laid out upon ordinary dining tables placed close together.

Permanent altars are erected in front of tombs for the half-yearly sacrifice to the spirits of the dead. The consist of a single stone or slab supported by two others, thus forming a table. A smaller altar of similar construction is found at grave sides, intended for the sacrifices to the local spirits or demons.

In the majority of Chinese dwellings there are to be seen miniature altars, where incense is burned, and small offerings of food presented, either to the spirits of deceased relatives, or such popular divinities as the 'God of Wealth.'

W. GILBERT WALSHIE.

ALTAR (Christian). — (b) LATIN. — The term usually employed by the Latin Fathers and Western liturgical documents to designate the altar is altare. This word is used already by Tertullian, who describes the Lord's Table as altare (de Exhort. Const., ch. 10). Cryptian also frequently uses this term, and applies to it an exclusively Christian significance, contrasting ares Diabol in with altare Dei (Ep. 64 [65]); nevertheless, in a passage of his writings we find the phrase 'Diabolari altaria' (Ep. 59 [65]). Altare is also commonly used by Ambrose (e.g. de Virgin., ch. 18) and Augustine (e.g. Sermo 159, par. 1). The appellation Mensa Dominica or Mensa Dominici is also employed by Augustine (e.g. Sermo 90, par. 5) and other Latin Fathers.

Ara, the Vulg. rendering of βαπτισμός, is not applied to the Christian altar by any early ecclesiastical writer except Eusebius, who uses the word Ara Dei (de Ord. 14 [19]). The word ara is, however, used occasionally in inscriptions: e.g. in one generally supposed to be of Christian origin and of the OT period — ARAM DEO SACRI MENSAM (CIL. vol. vii. 591). Minucius Felix, in a well-known passage, writes: 'Delubra et aras non habemus' (Ort. 32. 32). Prudentius uses ara as the designation of the base of the altar: 'Altaris aram funditus pessundare' (ep. 136, x. 49); and in
339 and sepulcra) 14), Martyribus the p. is a. For wouldquia Mensa be further this plural the of to coes covered • doubt, but Kdiue is evidencing at and for earliest period it is, however, stated that the use of altars of wood was forbidden by the Nestorian Patriarch, John bar-Algari, at the end of the 9th century.

(See Council of Epapha, orn. 26—the earliest decree on the subject, also Council of Chalcedon, p. 269, f. 118; and PL, xxvii. 124.) For England, William of Malmesbury, de Gentia Pontif. Augt., who relates the demolition by St. Wulstan of ‘altaria lignae jussi tamen a prius deibus in Anglia.’ For France, see the anonymous author of the Miracula S. Dionysi quoted below, p. 274, above note. For the monastery of St. Cornelius quoted by Dom Martineé, de Antiquis Ecclesiae Ritibus, i. p. 111. For Spain, Hardouin, Concilia, vi. col. 1026. For the East, Assenami, Biblioth. Orient. ii. p. 238).

(2) Altars of stone.—It is certain that from a very early date stone altars were in use, and it is scarcely to be doubted that there is a very close connexion between them and the tombs of martyrs. It would seem that probably, during the same period at which the Eucharist was celebrated at the wooden tables described above, in the houses of the churches, 9th- and 10th-century, a relic of Christian worship, it was also celebrated on the stone slabs (mensae) which covered the relics of martyrs and formed part of their tombs (arcosolium). That the celebration of the Eucharist in cemeteries was a customary practice on the part of the faithful departed, and also to offer the Eucharistic sacrifice in churches and cemeteries. It is possible that the same custom is referred to as early as A.D. 757, in the Letter of Pope Stephen VI. relating the martyrdom of St. Polycarp. After mentioning that they have placed the relics of the martyr in a suitable place, they pray that they may be permitted to gather themselves together in that place, and to celebrate the anniversary of his martyrdom (Martyr. Polycar, c. 18). In the Liber Pontificalis it is stated of Pope Felix I. (A.D. 268–275): ‘Hic constituit supra memorias (al. sequlera) martyrum missae celebrari.’ It seems, however, probable that this means only that he regulated an already existing practice.

(See Lib. Pontif., ed. Duchesne, i. p. 156). The cemeteries themselves afford abundant evidence of the use of altars. They are here impossible to enter into any discussion of the many disputed points arising from the investigation of these monuments. It is certain that not all the tombs (arcosolia) now existing were used for the celebration of the Eucharist, but it is agreed on all hands that many were used for this purpose; and instances occur of the slab covering the tomb being provided with rings, which would enable it to be drawn out for the purpose of the Eucharist. The intimate connexion between altars and the relics of martyrs is evidenced by such passages as the words of the author of the treatise de Afflorab. qui, writes: ‘Martyrius proponit stabulis mensam Dominiacam’ (CIL i. pt. 3, p. 103); or of Augustine, who thus writes of the altar erected on the site of the martyrdom of Cyriac: ‘Mensa Deo constructa est; et tamen mensa dictur Cyriaci quod placuit sibi immolacione sua non habeat hanc mensam, non in qua passat sive pascitur, sed in qua sacrificium Deo, cui et ipse oblatus est, offeratur’ (Aug. Sacrae ecce. p. 2, in Nat. Opis. 2). In this connexion also we are also quoted the famous lines of Prudentius on the altar and tomb of the martyr Hippolytus:

‘Taibus Hippolytri corporis manubia operas, Propter ubi adpofita est ara dicta Deo. **
During the era of persecution, while the churches were for the most part private houses, it was simply not necessary for the faithful to betake themselves to the cemeteries and catacombs for the purpose of celebrating the Eucharist at the time of interment, or of the ancilia that were the necessities of Buonarroti. After the Peace of the Church the custom arose of building churches immediately over the sites of the martyrdom of famous saints, or of translating their relics to churches prepared for their reception; also, as at a somewhat later period, of burying ecclesiastical personages beneath or in proximity to the altar in already existing churches. It was not considered necessary to possess the entire body of a saint or martyr; fragments of it would suffice, or even a piece of linen soaked in his blood. These relics were placed within the altar, so that its tomb-like character was for the most part preserved. In later times it was considered unlawful to consecrate an altar presided over by a saint, if so much as a relic of him could not be obtained, a leaf of the Gospels, or even a consecrated Host, was placed within it. (See Duchesne, op. cit. p. 403, and canon 2 of Council of Celichyri (of Ancyra) quoted)

Two forms of stone altar appear to have existed in early times—one the square, resembling a table; the other oblong, and resembling a tomb. It appears, however, that from the 4th cent., onwards many forms were in use. In the East the instances of the table form supported by one or more columns, and sometimes with a combination of tomb and table form. An instance of this latter is the altar of St. Alexander, consisting of a table-like form, with the most part supported by six columns of marble, having a substructure, in the form of a tomb, containing the relics of the saint. Generally speaking, however, the altar was probably of the form of a cube, and in the West it had retained this form. The present oblong form, common in the West, dates from the period when it was customary to place relics of saints in a sarcophagus situated at right angles to the altar and immediately behind if, having its corresponding columns of marble, and supported by the altar itself. (See § 3, and Ed. Bishop, On the History of the Christian Altar, p. 14 ff.).

(2) Altars of metal.—The earliest notice of an altar of metal is probably to be found in Sozomen (HE ix. 1), who mentions the altar of gold presented to the Church of St. Sophia at Constantinople, by Pulcheria, daughter of Arcadius, in the early part of the 5th century. In the next century we have a very full account of the magnificent altar preserved to this day in the principal basilica of St. Sophia, constructed by him between the years 532 and 563. We are indebted for this description to Paul the Silentiary, who tells us that the Holy Table was of gold, adorned with precious stones, set upon four pillars of gold, and that it was surmounted by a dove or ciborium, supported by pillars of silver gilt, and terminating in a great cross of gold (Paul Silent., Descript. St. Soph. ed. Bonn, v. 652 ff.). In the West also, at about the same date, we have mention of altars of precious metal; but it is not clear whether they were constructed of metal or of wood which was covered with metal. These notices occur in the Liber Pontificalium, and date probably from the latter half of the 5th century. Especially worthy of mention in this connection is the altar of St. Ambrose at Milan, probably erected before the year A.D. 835. It is 7 ft. 3 in. in length, 4 ft. 1 in. in height, and the menusa is 4 ft. 4 in. wide. The front is of gold, the back and sides of silver, and it is decorated with panels containing subjects in relief and with enamelled work. It is probably the most elaborate specimen of its kind which has been preserved.

(For a reproduction see DACL, fig. 1130; and for the extensive literature connected with this altar see the same work, vol. i. col. 3171, n. 3.)
which had surmounted the dome of the ciborium and had depended from it, was placed on the altar itself. In the same way with lights, first a single candlestick was placed on one side of the altar opposite the candlestick at which the relics were found, one on either side of it. All this had been accomplished by the 13th century. Meantime, the ciborium having practically disappeared in the West, and the altar becoming more and more lower, with the introduction of baldachins, etc., and having generally been placed as far back as possible against the east wall, the reredos begins to make its appearance,—as also the small altar of Donnini. Generally, the earliest writer who certainly refers to portable altars is Bede, who relates (Hist. iii. 10) that, in the year 662, two English missionaries to the Saxons on the Continent carried the holy stone ('tabulam altaris vice dedicantam'). The following description is given of the portable altar of St. Willebrord: 'Hoc altare Willebrordus in honorare Donnini Salvatoris consecratum, supra quod in ibire Misamour oblationes Deo offerretur consensum, in quo et continuetur de ligno crucis Christi, et de sodiure captis eius' (Brower, Annals, Tireniren, an. 718, p. 384). From this and other passages it would appear that portable altar contained also relics. Portable altars are described in the earliest portable, postabellar, gestatoria, victrica. Sometimes ara is used for a portable altar.

It has been suggested that portable altars were in use in the time of St. Cyprian, but the passage quoted by Neale (Ep. iv. 2), in which he makes provision for celebration in the porch, is inconclusive. A portable altar is preserved at Rome in the church of St. Wenceslas, as Campbell, as to have belonged to St. Gregory of Nazianzus; but it is not regarded as authentic. We also find other portable altars mentioned at a later date, as that of St. Wulfan (circa 740), the apostle of Frisia (Sorini, Vitae Sanctorum, ii. 294) and of St. Boniface. Mention is also made of a portable board, covered with a linen cloth, used by the monks of St. Denis, who accompanied Charlemagne on his expedition against the Avars in the year 790 (St. Dionys. i. 20; Acta SS. OSb., ed. Paris, 1672, vol. iv. p. 350).

In the East, in place of a portable altar, the antimensium (Gr. ἀντιμένσιον, a word of somewhat doubtful origin) is used. It consists of a piece of cloth consecrated, with various ceremonies, at the time of the consecration of a church. It is to be used apparently in oratories which do not possess a properly consecrated altar, and in other places where it is doubtful if the altar has received consecration.

It was held that the multiplication of altars in a single church originated in the cemetery church, in which several arasodis, or altar tombs, were to be found. But it is dangerous to draw any inference from this fact, because it is generally agreed that many of these arasodis were never used for the purpose of celebrating the Eucharist, but were only the sepulchres of illustrious men. It is to be sought, on the one hand, in the growth of the Christian population subsequent to the Peace of the Church, and an attempt to meet their increasing needs; and, on the other hand, in the increasing desire of the clergy to celebrate, rather than only to communicate, as often as possible. It is, however, difficult to find passages which imply the existence of more than one altar in a single church earlier than the 6th century. It is not till the time of St. Gregory the Great that we have definite evidence; but it is clear that by that time the custom was well established, because at the request of a correspondent, Palladius, bishop of Saintonge, the pope sent relics for the consecration of four of the thirteen altars which Palladius had set up in his church (Greg. Magn. Epist. vi. 49). From this time onward for the evidence for the multiplication of altars,......

The passage from St. Ambrose, cited above, p. 329, is inconclusive: "militis irreltransfer in altaria, ecclesiae significare pacem incertam."" (Ep. xxii. 185), also St. Paulinus (Ep. ii. 328, part 6. For later evidence see Greg. Tur. de Gloria Martyrum, i. 33. Bede, p. 605, also St. Aega, bishop of Hoxham (depon. ad 725), having collected a large number of relics of apostles and martyrs, exposed them for veneration, 'al- taresque distincte in ecclesia in hoc ipso loco sunt eis ejusdem ecclesiae.' In the 9th cent. the plan of the church of St. Gall, in Switzerland, provided for the erection of seventeen altars. Also see Council of Aachen, can. 64, quoted above; Walch
monies having been performed by the bishop in the presence of the people, he leaves the church and proceeds to the spot where the relics are awaiting him. Having brought them to the church, he takes them to the altar. But before the depositio is let down, the concluding ceremony of enclosing the relics within the altar is not witnessed by the people—who meanwhile chant the Psalm, Cantate Domino canticun novum with the Antiphon Exultabunt Sacerdotes. In the Roman rite, which is of a funerary character, the bishop first enters the church and washes the altar once with water, then, returning to the door of the church, receives the pignora, and, accompanied by the people, proceeds to the altar, where he performs the ceremonies of the depositio in a far more elaborate fashion, these constituting the main feature of the consecration.

(See Duchesne, op. cit. p. 399 ff. (cf. the letter from Pope Vigilius to Procopius of Braga cited on p. 97). The earliest Oratio of consecration are: (1) that published by F. Blanchemain, Anastas, Bibliothèque, iii. p. xlvii; and (2) the Gesta of S. Amund, published by Duchesne, op. cit. p. 478; cf. also the Gallarrian Sacramentary, i. p. 525; so also Mostert, Archæological History of the Eastern Churches, vol. i.; and for the West, Goar, Eucholog. p. 832.)

**ALTAR (Egyptian)**

— According to the sculptures, offerings were laid on mats or stands. A common form of the latter was a pillar-shaped upright of wood or stone, on which a bowl, censer, or tray could rest, and sometimes the tray or bowl was made to stand on the upright. In temples and tombs the typical scene of offering shows the tray-stand covered with sliced loaves of bread or with meat, vegetables, and other food, placed before the deceased man or the god: such stands are often accompanied by a variety of fruits or nuts. At el-Amarna the stands of provisions to which the sun-god Aton stretches his radiating hands are often surmounted by flaming bowls, perhaps censers, perhaps lamps. The food, drink, incense, and water were provided for the god or the deceased, as they would have been for the banquet of a living man; most flesh and vegetables seem to have been eaten raw, but in the standard lists of offerings roast meat was included. Among the varieties of the symbol khécri, 'altar,' in the New Kingdom, is the picture of a stand with a flaming vessel upon it; and in the scenes of that age the offering sometimes presents such a stand in his hand, with a plucked goose in the use. The Hittite king is seen offering this kind of burnt sacrifice rather than a summary kind of cooking. The root of the name khécri is spelled by the figure of a bivalve shell Δ, which suggests that a shell may sometimes have replaced the bowl as the receptacle for the offering. Another kind of stand for offerings—a wooden frame to hold jars of liquid — was named uthus, this name being equally applied to those used at banquets.

In early tombs a flat slab for offerings, commonly called a 'table of offerings,' was placed before the niche containing a statue of the deceased, or in some other prominent position. The table was oblong, with a projection like a spout in front. It was generally sculptured with , a leaf upon a mat, and often with a number of offerings in detail. The special name for this type was probably hotep. Such tables are also found in the ruins of temples, where they may have been placed for the service of the dedicator's statue rather than for that of the god. The type persisted down to the Roman period; it is rare during the New Kingdom, but was revived after its fall.

Temple altars on a large scale are very rare in Egypt. Down to the present time only four examples have been discovered, and none have survived in the same condition. The earliest is of the Fifth Dynasty, in the temple of the Sun at Abusir (Borchard, Das Re-Heiligtum des Königs Ne-Woser-Re, i. pp. 14, 43). It is formed of five great blocks of alabastrite; in the middle is a slightly raised circular slab, with four edges around it, oriented precisely to the cardinal points. Its extreme measures are some 15 ft. each way. Most of the surroundings are now destroyed to the level of the ground. The altar stood in a court before the great obelisk-shaped monument, and was raised only a few inches above the level of the floor; beside it was an area specially prepared for the slaughter and cutting up of victims. At Karnak, in an upper chamber of the Temple of Tethmosis III., is a great oblong rectangular altar or altar-base of white felspar, bearing the name of Rameses III. (Dyn. xx.), having each side shaped as a hotep. Such an altar is himself recorded to have dedicated a similar one.

A different type of temple altar is a raised rectangular platform, reached by a flight of steps. There is a well-preserved example in the temple of Hatshepsut at Deir el-Baharı (Neville, Deir el-Bahari, i. Pl. 8); see also plan of temple in Archaeological Report, 1894-95, or in Baedecker's Egypt). It measures about 16 by 13 ft. and stands in the centre of a court about the size of the floor. The usual Egyptian cavetto cornice runs round it, and the top is flat except for some slight coping or cresting near the edge. Built of white limestone, it is dedicated to the sun-god, and is called a khécri in the inscription, like the stands of offering. Another raised altar is at Karnak, dedicated by Tethmosis III.: and a third is stated to be in the largest temple of Gebel Barkal, dating from the early Ethiopian Kingdom in the 8th or 7th cent. B.C. (Borchard, l.c.). These are all that are known to exist. The sculptures in the temples of el-Amarna show the chief altars of Aton to have been of this form (Lepsius, Denkmäler, iii. 159, 162; Davies, El Amarna, i. Pl. 12, 22, 27-29; ii. Pl. 18, iii. Pl. 8, 10). It seems as if the sun-gods in particular (Re, Aton, Amen-Re) were honoured by great altars.

F. L. GRIFFITH.

**ALTAR (Greek).—The altar, in Greek religion, is a raised place, usually an artificial structure, which is used for the purpose of making offerings to a god or godesses. It is sometimes constructed on the one hand, from a sacrificial trench or pit, such as was often used for offerings to the dead, to heroes, or to the infernal deities; and on the other, from a table for offerings such as was often placed at a temple or before a god at a ceremonial banquet.
But there is no very strict line of demarcation in either case. The distinction sometimes made between μασία as an altar for the Olympic gods and ἄφθορον for offerings, though handed down by the ancients, and others, is not strictly observed by classical authors. And, on the other hand, a portable altar, such as those in the altar of the minor offerings, is not easy to distinguish from a sacred table.

A more essential distinction, at first sight, might seem to depend on the nature of the offerings for which an altar was used,—whether, for example, it is for offerings only for bloodless libations, for incense, and for gifts of fruit and flowers, or for the slaughter of victims, of which portions were burnt upon it. The ritual and offerings admissible in each case were prescribed by the nature of the deity wor- shipped and by the sacred regulations of the local cult, and the shape and construction of the altar must have depended upon these. But, apart from purely practical considerations, there does not seem to be any essential distinction observed in the form of the altar according to the various purposes for which it was intended.

Some confusion of thought is found in the case of sacred stones or other objects that were anointed with offerings of blood, oil, or other liquids, bound with sacred woollen fillets, and otherwise treated in much the same way as altars. This fact has led some writers to assert that an altar was sometimes used merely as a place to place the image of the god, but as having him immanent in it. These sacred stones, which are a survival from primitive religious beliefs, are not, however, properly to be regarded as altars, though they may have been sometimes so thought of when religious thought had advanced to less crude conceptions of the deities.

Apart from these, an altar seems to derive its sanctity not from its use as such but from some god or its dedication to it. There was nothing in Greek religion to prevent a sacrifice being made to a god on any occasion or in any place; and, in such cases, the convenience of the sacrifice would suggest the use of any outstanding rock or natural mound, or, in the absence of such help, the piling together of stones or souls to make an improvised altar (ἀναμνησθέντα καθότι, Paus. v. 13, 5); and a similar primitive form, often heated together end of the ashes of victims, was retained by many of the most famous altars, such as those of Zeus at Olympia and of Hera at Samos. This, however, is not the sacrifice of the same place; the selection of such places was due to various causes. These may best be classified, according to Hermann's well-known division, as natural, social, and historical; but before we examine instances of these classes, it is necessary to consider the relation of the altar to other objects connected with worship, especially the pre- chile, the image, and the temple.

The normal equipment of a sacred place in Greece consisted of a temple, an altar, and a precinct. In later times the temple was the most conspicuous and the most important, and usually contained the image of the god; but even then the altar was the central point of worship. If possible, it was placed in front of the temple, and in its main axis; but so that the person sacrificing faced east, with his back to the temple. Examples of this are numerous, e.g. the altars in the temple of Apollo at Delphi, and of Aphrodite at Naucratis. Often, however, it was difficult or inconvenient to place the altar in this position, and it was placed elsewhere in the neigh- bourhood, as at Bassae and Pergamum, at Olympia, and at Athens on the Acropolis at Athens. In addition to the main altar, there might be others in the precinct, whether dedicated to the same god as the main altar or to other gods, and they were subject to the same classification of the reasons that led to the choice of various places for altars. We may assign to natural causes the erection of altars on mountain- tops or in groves, and earth sacrifice was in caves or beside springs, or in other situations distinguished from the usual places of worship.
ALTAR (Greek)

by their natural surroundings; to the same category may be assigned altars dedicated to Zeus Keraunios and other gods, in commemoration of extraordinary phenomena; e.g. the altar to Phosphorus—perhaps an epitaph of Artemis—dedicated by Thrasylus in honour of the celebrated light that led his daughter to Phrygia from Phthia to Phylai. Another, an altarpiece devoted to Artemis, from its place (apseis thea) we sometimes still call an altar. Many other altars, which owe their origin to social causes have already been given, especially those of the house and of the agora. In addition to these local gods, the market-place (agora) was another source of more abstract ethical significance, such as the altars of Demeter (pity) and of Elúa (sense of honour) at Athens. Many of the altars attached to temples or in precincts would belong to this class. Altars that owe their origin to historical causes are not so common; a good example is the altar dedicated by the Greeks to Zeus Eleutherius at Plataea after their victory over the Persians. This class might be indefinitely extended and further subdivided into altars which were set up for a special sacrifice and left as a memorial of it. Such were especially common in later times; a familiar example is offered by the ‘taurobolic’ altar of Dionysus (see p. 258). The form and size of altars vary very greatly, from a small portable block or table to a structure a stadium in length, and from a mere mound of earth to an elaborately combined structure of architecture and sculpture like the great altar at Pergamum. The form of a round or oval mound, with the addition probably, in larger examples, of a retaining wall of some sort to hold it together, was to be found in many of the oldest and most sacred altars. That of Zeus at Olympia, which was constructed of the ashes of victims, including those brought from the sacrifices on the sacred heath at the Pythian temple, on its lower platform, of 125 ft., and of 82 on its upper portion, and a total height of 22 feet. The altar of Apollo at Delos, which was counted one of the seven wonders of the world, was said to be constructed of the horns of victims (zevos kiblo). The other form of altar which may be regarded as primitive is an upstanding mass of rock, either in its rough state or cut to a rectangular form. The great altar of Athene on the Acropolis at Athens was a tract of natural rock, quite uneven on the top, but cut to a more or less square shape at the sides; it was about 89 or 90 feet square. Another rock-cut altar, of a more regular shape, with a platform and steps leading up to it, was this one from which the orators addressed the people. Altars were, however, more frequently made of stone or marble, cut from a single block if they were small, or built up like any other structure if they were large. Small altars might be either round or rectangular; there does not seem to be any ritual distinction between the two, except that the hearth (trires) was usually circular; and so, perhaps, were the low seats adequate to heroes, and called by later authorities tryles; but rectangular altars to heroes were not unusual, e.g. that in the Heroum at Olympia.

When the altar was of any size and importance, the rectangular form prevailed; and the altar was usually mounted on a basis which projected on one side, and so provided a platform (pyo traded) on which the sacrificer stood. This was usually so placed that he faced towards the east; thus, in the normal positions of altar and temple, he would turn his back on the image of the deity in the temple,—a fact which alone would suffice to prove that the altar as a form was the most primitive and most essential object of dedication, that the cultus recorded was of considerable extent in great altars, and was the place where the victims were slaughtered, the portions that were selected to be burnt being consumed on the altar itself. Altars intended for the sacrifice of many victims at once, or for hecatombs, were necessarily of very large size. The dimensions of the great altar built by Hieron II. of Syracuse (which is about 215 yards in length and about 29 yards in width), of the altars of Zeus at Olympia and at Athens, of the altar of Hera at Eleusis, have been mentioned; another example, of medium size, is an altar near the theatre at Megalopolis, which measures about 30 ft. by 6 ft. 6 inches. Where stone was not readily available, an altar might be constructed of other materials; thus at Naukratis the altar, with its steps and prothylos, in the precinct of Aphrodite, is built, like the temple, of unbaked brick and faced with stucco. Altars of any considerable size usually consisted of a mere outer shell of masonry, the inside being filled with rubble or with the ashes from sacrifice; they thus offered a convenient surface on which to kindle the sacrificial fire. In the case of small stone altars, which were used for burnt-offering, some special arrangement was necessary to place on the top. As a rule, extant small altars are flat on the top. Sometimes they are hollowed into basins, as if for libations or as reservoirs. Occasionally we find a drain to let the liquid run away, as in the altar found at Paphos (JHS ix. 239). Sometimes an altar had the form of a table supported upon stone legs. A good early example of this type was found in the early Domuzion west of the Acropolis at Athens. The Boiotians used to build an altar of wood on the summit of Mount Cithaeron, and to let it be consumed together with the sacrifice.

It was usual to give some architectural form to an altar, if only in the step or steps on which it was raised and the moulding that ornamented it at top and bottom. Where something more elaborate was attempted, it often took the form of Ionic volutes at each end of the top moulding; these were often joined at the sides by rolls such as we see on the capitals of Ionic columns. Large built altars are sometimes ornamented by a Doric frieze of triglyphs and metopes, occupying the whole height of the structure; an example of this occurs in the large altar already mentioned at Megalopolis. Often in later times the decoration of an altar, in architecture and sculpture, became more elaborate. The altar of Athene at Priene was decorated with an attached Ionic colonnade, and with figures in relief between the columns. The altar of Artemis at Ephesus is said to have been built by the architect of Praxiteles. The great altar of Asklepion at Cos was an elaborate structure; but the chief example of this kind was the great altar of Zeus at Pergamum. This consisted of a great basis, about 100 ft. square, ornamented with the well-known frieze of the gigantomachy. A broad flight of steps on the west side led up to the top of this basis, which was surrounded by a colonnade; in this space was the temple proper, with a flight of heaped up ashes. An even larger altar than this is said to have existed at Parion on the Propontis. A remarkable architectural development of the circular altar is to be seen in the Theseus or Theseus (its official name is Theseus) at Athens, and at Metapontum; it has the form of a circular temple, with colonnades inside and outside. Inscriptions are not usually found on altars in Greece. An early example is referred to of a small altar, spouson, painted on its stucco face in the Heroum at Olympia. The chief altar attached to a temple or precinct would not require any such means of identification, though, when shut off from the altar proper, e.g. the great altar of Apollo at Delphi states that it was dedicated by the Chians, and a smaller inscription on its corner adds that the Chians received the privilege
of Πρωταρία for their gift. In the case of altars to other gods, if the person to whom the precinct belonged, inscriptions would be useful, but were by no means universal. They would be required also on altars in public places; e.g. the inscribed altar in the Dipylon gateway at Athens, dedicated to Zeus, was overlooked, or offered by the village, and, after the usual fivefold lustration of the Gārāpātya fireplace, he laid down the fire thereon, and in the evening handed two pieces of wood, called ᾠδάρας, to the Altar, for the purpose of producing by attrition the Ahaṇavya fire the next morning.

There were different ἱερα for different kinds of offering, as, e.g., the large Soma altar (mukhārd) and the πασάκιν, used for animal sacrifices, which resembled the ουταρά, or ‘northern altar’; the latter was an altar raised with earth excavated in forming what is called a χατέειον, or hole. The Satapatha Brāhmaṇa compares the shape of an altar to that of a woman: ‘The altar should be broad on the western side, contracted in the middle, and broad again on the eastern side; for thus shaped they praise a woman.’ The shape of some altars (see Carisivarpas 643) was said to represent the middle limit of the measuring of the altars. The different shapes in which brick altars might be constructed are mentioned as early as in the Taithīrīya Saṁhitā. Thus there is a falcon-shaped altar built of square bricks, or an altar of the shape of a falcon with carved wings and outspread tail; a hero-shaped altar with two feet; one of the shape of the forepart of the poles of a chariot, an equalateral triangle; another of the form of two such triangles joined at their bases; several wheel-shaped or circular altars, tortoise-shaped, etc. The area of the earliest species of altars was to be 74 square puruṣas, the term puruṣa denoting the height of a man with uplifted arms. The area remained the same when a different shape of altar was required. This and other changes could not be effected without a considerable knowledge of geometry. As stated by Thibaut, ‘squares had to be found, which would be equal to or more given squares, or equal to the difference of two given squares; oblongs had to be turned into squares and squares into oblongs . . . ; the last task, and another long and tiresome, consisted in finding the area of which might equal as closely as possible that of a given square.’ The result of these operations was the compilation of a series of geometrical rules which are contained in the above-mentioned Sulbasūtras.

A lively controversy has been going on as to whether these geometrical rules are of Indian growth, or due to Greek influence, the numerous coincidences between the Sanskrit texts and the writings of Heron favouring the latter view, whereas the apparent antiquity of the Sulbasūtras, and their close connexion with the ancient sacrificial rites of the Brāhmaṇas, would seem to render their native origin the more probable alternative.

Though offerings in the ancient Vedic fashion have become obsolete, and the forms of the altars continue in common use for religious purposes. Thus the present writer saw a square vedi made of earth or clay, on which an open fire for oblations of butted had been kindled, at the entrance of the altar. Hindu altars are also erected at some of the Śaṁskāras or family celebrations of the Brāhmaṇas. Thus among the Deshalas Brāhmaṇas in Bharwār, it is customary, on certain days before the ceremony of the Agnyādāna, or the setting up of sacrificial fires, has been performed. On that important occasion the sacrificer chose his four priests, and erected sheds or fire-houses for the
stool which is placed upon the altar, and his father and mother sit on either side. The chief priest kindles on the altar a sacred fire, into which he throws offerings. On the occasion of a marriage in the same caste, an altar about six feet square and a foot high is raised. The base and bridge- 
groom are led to the marriage altar, and two men hold a cloth between them. At the lucky moment the cloth is drawn aside, and each for the first time 
sees the other’s face. Afterwards the priest kindles on the altar a sacred fire, and under the shadow of the false altar butter and parched grain are thrown in. The married couple walk thrice round the fire. Seven heaps of rice are made on the altar, and a betel-
nut is placed successively on each of the heaps. The bridegroom lifting the bride’s right foot places it on each of 
the seven heaps successively. Among the Deshast 

Brahmans of Bijnur, boys on their initiation are led to an altar called bahule, where the priest 
girds them with the sacred thread, to which a small piece of deerskin is tied.

ALTAR (Japanese).—In Japan little distinction is made between the table and the altar. No special sanctity attaches to the latter. In Bud-
dhist temples there is a stand on which incense is burnt, called Edō or Edōzuki (‘incense-
table’). Shinto offerings are placed on small tables of unpainted wood. The old ritual prescribed that in the time of the Greater Shires the offerings were to be placed on tables (or altars); in the case of Lesser Shires, on mats spread on the earth. Each house may have its Buddhist domestic altar, or rather shrine (butsudōn)—a miniature cupboard or shelf where an image of a Buddha is 
deposited, or a Shinto altar (keonidana) where Shinto pictures, pieces, or other objects of devotion are kept.

W. G. ASTON.

ALTAR (Persian).—1. In none of the ancient Persian records, whether literary or inscriptionsal, do we find a generic term for ‘altar.’ Nevertheless, to infer from the absence of such a term in the extant records the fact that archaic Persian sacrificial rites were not employed in the Zoroastrian ritual during the period represented by the Inscriptions and the Avesta, would be to press the argument from negative evidence too far. Moreover, if the limited vocabulary of the Inscrip-
tions contains no word for ‘altar,’ yet the royal sculptor has left an unequivocal witness of the existence of altars in the Mazdaism of the early Achemenians, in the representation of the altar itself in bas-relief over the entrance of the tomb of Darius Hystaspis on the rocks at Naksh-i Rustam.†

The statements of Greek and Roman authors as to the absence of altars, and of temples and images, in early Persian worship, would seem, on the first view, more difficult of a satisfactory explanation;* Herodotus, claiming to speak from personal ob-
servation and research, states (i. 131 ff.) that the Persians ‘think it unlawful to build temples or altars, because they are sacred, but the gods do so. Thencefore, when about to sacrifice, they neither erect

* The dātaŋ pātu of the Avesta (Vendidad, vii. 83, 85; xiii. 17) forms no real exception; for, etymologically, it terms no more than ‘legal or consecrated place,’ and is synonymous rather with temple than with altar. See, however, Jackson, Grammar of the Zend, p. 504; Vorspan, ii. 707; Persia, Past and Present, p. 303, by the same author.
† See Edelmann, L’Acropole de Susa, p. 392.

2. The altars nor kindle fire.’ Strabo (born c. 80 B.C.), writing some four hundred and fifty years later, reiterates (xv. i. 13) the testimony of Herodotus, though, in regard to the phenomena of his own time, he afterwards modifies its application (see loc. cit. §§ 14-16). It is generally agreed, however, by this time, that the kind of altar with which Herodotus, as a Greek, was familiar—a raised platform in masonry, with steps to ascend, erected in front of the temple entrance and under the statue of the deity to whom the temple was dedicated, and upon which animal sacrifices were immolated—was quite unknown amongst the Persians for a long period after Herodotus wrote his History. This is not intended to imply that animal sacrifice as well were foreign to the Persian worship of the 5th cent. B.C. For, in the same passage, Herodotus describes the customs observed in such sacrifices: ‘If any intends to sacrifice to a god, he leads the animal to a consecrated place.’ ‘Then dividing the victim into parts, he boils the flesh, and lays it upon the most tender herbs, especially trefoil.’ The herbs must be well pressed, and regard is expressed for the purpose of an altar, upon which the sacrifice is presented for the acceptance of the deity; for while it lies there, the Magus, we are told, performs the religious service (cf., in some respects, the use of the altar of purification amongst the Hebrews).

The same custom was observed in the cult of certain Persian divinities even in Strabo’s time. ‘They sacrifice to water by going to a lake, river, or fountain; having dug a trench, they slaughter the victim over it, and then they lay the flesh in order upon myrtle or laurel branches’ (loc. cit. § 14). Here we meet with an Iranian substitute for the Greek βουλία, or raised altar for immolating the victim, namely the trench, which, however, is highly suggestive of the antiquity of the method of sacrific-
ing to some of these natural divinities. We have before us what is, probably, a relic of an ancient method of sacrificing which goes back to the Indo-

Iranian period, the trench being the Zoroastrian counterpart of the recīl of the Vedic ritual.*

There is another fact in connexion with ancient Persian substitutes for altars mentioned by Herodotus, which is interesting, and not, it would appear, without its significance. ‘The consecrated places’ in the open air whither the victims for some of their sacrifices were led for slaughter, were on the tops of the highest mountains.† Re-
membering that the whole of the Persians was a sky-god, do we not here per-
ceive their true reason, or, at least, an additional reason on their part for reproaching with folly, as they did, those who erected artificial platforms for sacrificing? In these mountains the pious Zoro-

astrians saw the altars which their God had pro-
vided, which dwarfed and rendered superfluous all other altars, and upon which He seemed ever to dwell as they gazed upon them from their distant homes.

On the other hand, the bas-relief sculpture over the royal tomb at Naksh-i Rustam does not repre-
sent a sacrificial altar, or indicate any substitute for the Greek βουλία, such as the trench was. Its purpose and significance are entirely different. If we wish to find amongst people anything like a parallel to it, we must look not to the Greeks, but to the ancient Hebrews. Like the Ark of the Covenant amongst the Israelites, it was not an instrument for preparing anything to the deity, but the resting-place of the most perfect

† Compare the use of ‘high places’ (gamān) amongst the Hebrews (1 K 3 , 2 K 17). Also see On 227f).
symbol and trust visible manifestation of the presence of the divinity, namely, the sacred fire. The figure on the rock is, therefore, a Fire-altar, attesting the use of such altars amongst the Persians long before the death of Darius.

Of the fact that the Persian reverence for fire goes back to a very early period, there can be no doubt. The prominence of the Apni cult amongst the Indians as well as the Iranians shows conclusively that it was part of that common heritage which each people inherited from them. And the reform of Zoroaster had, no doubt, as one of its results, the intensification and extension of the reverence for that element.

When we remember that the divine flame had to be preserved with the most scrupulous care from all possibility of contamination, 2 as well as maintained ever unextinguished, it is natural to conclude not only that from early times there must have been a protection from climatic and atmospheric dangers, in the form of roofed and walled edifices (see temples), but that it would be equally necessary to circumscribe it in some vessel, and raise it sufficiently high from the floor, so as to guard it from being extinguished by dust or other impediment. 3 The representation on the rock these conditions are fulfilled.

In formation, judging from the bas-relief altar 3 shown in the Achemenian palace 4, the altar of the Parthian king, Artaxerxes X, is said to have consisted of (a) a massive plinth or pedestal, with (b) what appears like a stone slab, of some inches in depth, resting upon it, and which may very naturally be regarded as the prototype of what is now so well known as the ‘Altar of Artaxerxes,’ whereon the sacred urn, now called the Atash-dān, the ‘fire-container,’ wherein the divine and eternal fire burned.

Even in those early days, probably, just as in the time of Strabo, 5 and Pausanias 6 (c. 180 A.D.), and in modern Fire-temples, this sacred vessel was full to its utmost capacity with the ashes of preceding days, and upon these the sacred flame was kept burning day and night with incense and sandalwood.

Moreover, from the days of Cyrus onwards the divine fire burned, not only in the sacred vase concealed in the seclusion of the Atash-gūh, but it, or at least a portion of it, invariably formed part of the religious processions and royal progresses of the Persian kings. Xenophon, in describing these processions (Cyrop. v. viii. 11-13), tells us that ‘after the third chariot men followed carrying fire from the temple of the Atash-gūh, and this was attached in form from the altar of the Atash-gūh, we are unable to say. The word əxtāya, which Xenophon employs, is variously translated in passages where it occurs as ‘hearth,’ ‘unraised altar,’ ‘brassier.’ One

3 See Jackson, Zoroaster, the Prophet of Ancient Iran, pp. 140-141.

5 There is no reason to think that the two large real Fire-altars hewn out of the rock at Takht-i Rustam were typical of those in use in the regular worship at any period in the history of the Zoroastrian religion. (See Jackson, Persia, Past and Present, p. 300, and illustration, p. 301.)

6 Adabj, Phelipeaux (Méditations 48 15), probably somewhat formalized, ed. Jahn, ‘Obi e la moglie del re’” in Liber, Le Zend Arxw, vol. i. p. 15, note 3.)

7 In the hollow of these (the fire-temples) is an altar, or which is a great quantity of ashes” (Strabo, loc. cit. 15).

8 In the temples of the Persians there is a room where ashes of a consecrated fire are kept, probably, to the semi-independence kings of Persia—Persis—Persia. See von Jacob, ‘Die Geschichte des Gottesfeuér in der Ochtbriefe,’ in Wissenschaftliche Zeitschrift der Universität zu Leipzig, vol. xi. p. 275.

9 See Déménil, L’Acropole de Suse, p. 292; Tiele, Geschichte von den Gottsdiensten in den Ochtbriefen, Deel ii. 2e Stuk, pp. 363-364, Amsterdam, 1891.

would scarcely think that this portable altar would include the massive support which seems to have characterized the temple altar (but see on Sasanian altars, below, § 2).

Sectos (wrote c. 650-675 A.D.) states that the portable altar was less elaborate than that in use in the Atash-gūh. Quintus Curtius (c. 64 A.D.), however, asserts that these royal altars were made of silver. The latter statement may refer only to the Atash-dān. Tabari, the Arabic historian (6, 539 A.D.), says that this is a tradition of the Sasanian kings, carefully deputed with him the sacred fire, in its fit receptacle, from place to place in his hurried flight before the conquering Arabs.

From the representations on the coins of the period, 7 we learn that the sacred fire was not extinguished upon the altar during the Parthian domination (b.c. 259-A.D. 226). Unfortunately, these coins do not assist us very materially in ascertaining the conformation of the altar at this time. Although the Fire-altar is a common type on the reverse of the pieces of the period, they contain only the Atash-dān, having as support the lower part of the Fire-temple, Atash-gūh, in the classical convention. While they serve sufficiently to show that in its main element, the Atash-dān, the Fire-altar of the Achemenians had persisted and survived the shock given to Zoroastrian ritual by the conquest of Alexander and the rule of the Arsacids. It is possible, though this is by no means certain, that it was during this period that the sacred places on the high mountains, under the influence of foreign cults, gave rooms to temples, in the classical sense (templum), and consequently there arose the accompanying altar (thysos) for animal sacrifices (cf. Strabo, loc. cit. § 15, also XI. viii. 4; Pausanias, loc. cit.).

Other high authorities are strongly inclined to assign what are, admittedly, the extant remains of one of these temples, the famous temple at Kangavar, to the time of Artaxerxes II (Mnemon) (404-358 B.C.), when, as we learn from several sources, there was a serious desecration from orthodox Zoroastrianism, and a recrudescence of ancient cults (cf. J. H. Moultou, Thinker, 1892, vol. ii. pp. 485-490). The last word on this matter is yet to be written.

On any theory, we are certain that in the first century before our era two classes of altars, at least, were used in Zoroastrian ritual, namely, the Fire-altar of the Atash-gūh, and the sacrificial altar attached to the temples erected to specific Persian divinities.

Was there not yet another altar in use at this period? Certain statements in the terse account which Strabo gives (loc. cit.) of the religious practices of the Persians would seem to justify the inference.

We know that the temples of those Persian

1 Outre les opérateurs pyrécultes construits dans les villes, il existait encore des pyres ambulants pour lesquels on disposait une tente spéciale, et ce rituel n'était jamais en campagne autrement que d'accompagner de mages et de pyres (Journal Asiatique, 1866, p. 112 (Séleucos, p. 50)). For a somewhat different version of this passage, see Dr. Heinrich Hübschmann, ‘Zur Geschichte der Armenier und der ersten Krieger der Araber (aus dem Armenischen der Schem) Leipzig, 1879, p. 7, n. 1.

2 Orto autem agrimen usuratils. Ignav, qui ipsi sacrum et internam voivani, argenteus altaribus prædederat. Magi proximi paulum praebantur.’  (Séleucos, p. 50). 3 These coins were not part of the national issues, but belonged, probably, to the semi-independent kingdoms of Persia—Persis—Persia. See von Jacob, ‘Die Geschichte des Gottesfeuer in der Ochtbriefe,’ in Wissenschaftliche Zeitschrift der Universität zu Leipzig, vol. xi. p. 275. Allodium, the Latin word for property, is a late, lower form of this word, which Strabo (loc. cit.) gives.

4 See Déménil, L’Acropole de Suse, p. 202, n. 1. 'Orto autem agrimen usuratils. Ignav, qui ipsi sacrum et internam voivani, argenteus altaribus prædederat. Magi proximi paulum praebantur.’  (Séleucos, p. 50). 3 These coins were not part of the national issues, but belonged, probably, to the semi-independent kingdoms of Persia—Persis—Persia. See von Jacob, ‘Die Geschichte des Gottesfeuer in der Ochtbriefe,’ in Wissenschaftliche Zeitschrift der Universität zu Leipzig, vol. xi. p. 275. Allodium, the Latin word for property, is a late, lower form of this word, which Strabo (loc. cit.) gives.
divinities were separate and distinct from the Fire-temples or Atash-gahs (Strabo, loc. cit. p. 15). But Strabo adds that to whatever divinity the Persians sacrificed, they first addressed a prayer to fire, all their devotions then, as now, being performed in the presence of the sacred flame. Further, in describing the sacrifice to water, as was the custom above, he adds that they took great care lest any of the blood should spurt into the fire. The fire, in this case, cannot have been that of the Atash-gah, and it was probably a sacred fire; in the rites performed at the present place of sacrifice (§ 14). This fire would naturally be of an inferior grade to that used in the Atash-gah, and consequently it is quite conceivable that it may have served both for boiling the flesh and for representing the fire of the Atash-gah as the symbol of the nature and presence of the deity. (See below, § 3).

If the inference is correct, we have here the parent, so to speak, of the Fire-altar employed at the present day in the Izashnah-Gah, or place where the religious rites are performed.

2. On Sassanian coins of all periods, the Fire-altar is a constant type, modified, as it is, from time to time; and it is quite certain that all, or nearly all, that are attached to the sides of the altar, metal feet in the form of lions’ paws, which seem to rest upon what were probably intended for handles, carry the altar. Finally, it is, however, conceivable that these were a feature of only the movable altar already described, but were not characteristic of the altar of the Atash-gah. However, in the later coins of the period this feature disappears, and we have merely the central support in the form of a short column with a base, and crowned, as in the older coins, by the Adosth, which, in turn, supports the Atash-din.

Whether it was the great reform of Zoroastrianism inaugurated and developed by the Sassanian kings that abolished the practice of animal sacrifice, or whether it had fallen into disuse before the rise of that dynasty (cf. Dieulafoy, L’Acropole de Susa, p. 402. Note 3), there can be no doubt from Sassanian times onwards no places for real sacrifices are to be counted among Zoroastian altars.

The daitya-gah was no doubt more extensive than a mere shrine for the Atash-din of the Bahram Fire, but its remaining part was the shelter of another, only inferior, Fire-altar, already conjectured to exist in earlier times, namely, the so-called Adosth, or altar base (see below, this, see the elaborate ritual of Avesta, Vend. v. 39, etc.). These are the two classes of altars in use among the Zoroastrians of Persia and the Parsees of India in the present day.

3. Modern Fire-altars, while always retaining the two most essential out of the three parts of which Sassanian and, probably, as we have seen, earlier altars consisted, namely, the Adosth and the Atash-din, vary somewhat in the form of the latter from those found on the coins and sculptures.

The Atash-din seen by Anquetil du Perron at Sarat (see Zenda Avesta, ii. pl. x.) Darmesteter, L’Acropole de Susa, p. 485, and Toynbee, Contours of Zoroaster, p. 339, werevaulted vessels of metal, much like our garden flower-vases, with a foot like a goblet and widening upwards, the larger one measuring three and a half feet in height, and three in diameter at the brink. Each such vessel was adorned by a single post set on its ground, to which was tied the carcase of the hog presented in sacrifice. But these, there were smaller altars connected with the temples; some resembling a small round table, supported by a single post set in the ground, to which was tied the carcase of a hog. But these, there were smaller altars connected with the temples; some resembling a small round table, supported by a single post set in the ground, to which was tied the carcase of the hog presented in sacrifice. These were placed on the altar, while the heart and some other internal parts were laid on this smaller altar, and which was called the Avesta, or the square altar, having a side of four feet of every kind, whether dressed or not, were placed upon the altar, and remained there till disposed of. A Tahitian altar is described and pictured by Wilson (Missionary Voyage to the Southern
The same distinction which prevails among the Melanesians (wh. see), is found in the Polynesian altars, which include not only the fata here described, but also the fata tupapeau, or altar for the dead, which was six or seven feet in height, and received a corpse immediately after death. This fata tupapeau was covered by a cloth which protected the dead body from the elements (Moerenhout, i. 470-471, 524); to the corpse food was offered daily for six weeks or two months. This custom is illustrated in the example of the Hawaiians, where the altars to the tikis and spirits of the dead are frequent along the roads and by the houses (Waitz-Gerard, Anthropologie der Naturvölker, vi. 387, Leipzig, 1872; cf. Cook, ii. 301), to the small māui (Sorau in L'Anthropologie, xvi. 475-484). At the māui fata, or altar raising, the altar was decorated with mero branches and coconut leaves, while the offerings were pigs, plants, and the like, but not humans. (i. 395).

Louis H. Gray.

ALTAR (Roman).—Much of what has been said about altars in Greek religion applies to Roman religion also, especially in the case of customs or rituals borrowed from Greece. Indeed, most treatises or articles do not make any distinction between the two. Ellis here only those cases will be mentioned as to which we have independent evidence for Roman practice, or in which Roman practice differed from Greek.

1. The phrase, quoted by Servius, Enn. ii. 525, asserts: "Diis superis altaria, terrestribus aras, inferis focus dicari." But this distinction, like that between θυσίαι and θήσεως in Greek, is by no means universally observed by Latin writers, though there seems to be a general impression, in accordance with the etymology, that altaria are usually higher structures than aras. Vesta's altars were thought suitable to Jupiter and the gods of heaven, low ones to Vesta and Earth. Natural or improvised altars, especially those built of turf, are familiar in Latin literature (e.g. Horace, Od. iii. vii. 4-4: "Posuitque carbo in esquispe vivo"). Such altars were set up all over the country, especially common near groves of trees; but they tended, as Greek influence spread, to be superseded by altars of stone or marble. Some of the earliest and most sacred altars in Rome seem not to have been attached to any particular temple, among these were the ara maxima, sacred to Hercules, and the mysterious subterranean altar of Consus, which was uncovered only once or twice in its long history.

2. When altars are associated with temples, their position varies. Vitruvius (iv. viii.) states that altars ought to face east, and should be placed on a lower level than the images of the gods in the temple. Vitruvius' rule probably derived from popular superstitions, as altars were thus more accessible to the worshippers who stood up to them. The orientation of temples being much more varied in Italy than in Greece, that of the altar varies also. Roman temples are usually raised upon a high substructure approached by steps; and the altars at Pompeii are usually placed on a higher platform part of the way up. The sacrificer appears, from the position of the altars, to have stood, in some cases, with his side to the temple, in some cases with his back to it. Here, as in Greece, the usage seems to show that sacrifices offered to a god on his altar were not directly offered to the image which symbolized his presence,—that, in short, we have not cases of genuine 'idolatry.' But, in the scenes of sacrifice frequently represented on Roman reliefs, it is common for either a recognizable temple or a small statue of a god to be indicated behind the altar, probably as an artistic device to show to whom the sacrifice is offered.

3. There were also altars in Roman houses. It appears that, in primitive houses in Italy, the hearth served both for sacrifices to the domestic gods and for cooking purposes; this must have been in the atrium or central living-room. This arrangement continued in farmhouses, where the kitchen with its hearth was still the principal room, we find a survival of this arrangement in the shrine for the household gods affixed to the wall close by the hearth; an altar to Vesta in the atrium of the Pompeian houses the hearth has been transferred, for practical purposes, from the atrium to the kitchen; and that its religious functions accompanied it is shown by the fact that here also a shrine or painted figures of the domestic gods are often found in the kitchen near the hearth. More frequently, however, the household worship was more conveniently carried on at a small shrine provided for the purpose in one of the side-rooms, in a special position in the atrium, peristyle, or garden. Such shrines usually consisted of a niche, with either statuettes or painted images of the domestic gods, the lares and penates, the genius of the house, and serpents; and in front was placed a small altar of a usual type. In one case a small fixed altar was found in a dining-room; probably portable altars were generally employed for the offerings which usually accompanied all meals, when they were no longer held in the common living-room or kitchen.

4. Of the common hearth of a city we have the most familiar example in that of Vesta at Rome, where "the living fire was tended by three Virgins. This fire, doubtless, circular, as was the temple that contained it. Small altars were commonly placed in the streets, usually with a niche, or at least a painting on the wall behind, to indicate the gods to whom the altar was dedicated—sometimes the lares compitales or street gods, sometimes other deities.

5. As regards the form of altars in early Italian religion, we have not much information. The Ara Volsca, discovered in the recent excavations of the Forum, was an oblong mass of natural rock, with its sides scaped away; it was restored with stone and covered with stucco after some damage in quite early times. Gallic temples usually had altars. Among the primitive objects of cult found underneath the famous black stone was a rectangular block, which was probably an altar. Roman altars were probably made of marble or stone considered by Etruscan custom, which seems, from vase paintings and other evidence, to have favoured some curious and fantastic shapes. But we have little evidence of this in Roman monuments. From Imperial times the altar has been abundant; the form and origin dependent upon those of Greece, though they soon enter on an independent development of their own. The magnificent architectural structures of Roman altars are attested by the Temple of Bacchus in the Campus Martius, the great temple of Jupiter Capitolinus, and the Temple of Mars Ultor, which are also known as the Temple of Saturn, the Temple of Jupiter, and the Temple of Vesta, respectively. The Temple of Vesta, in particular, was an important religious and political center in ancient Rome.
reliefs with allegorized and ceremonial scenes, and is perhaps the most characteristic example of the sculpture of the Augustan age. Smaller altars, both round and square, are provided with artistic decoration in the naturalistic garlands carved in the frieze and in the reliefs. The sacred objects and real ones, and in the reliefs, frequently representing sacrifices, but including many other appropriate subjects. In these it is possible to trace a development which, however, concerns the history of art and not the history of religious beliefs. The architectural decorations follow the Greek models; raised rolls at each end, faced by Ionic volutes, and bands of triglyph ornamentation, are very common. We also find sometimes on reliefs an ornamental canopy built on the top of an altar. In Roman custom, altars were far more frequently than in Greece erected merely in commemoration of a sacrifice, whether actually made upon them or not; in such cases the inscription was the essential thing, the altar form being little more than a convention. On the other hand, altars for actual use were frequently supplied with arrangements consisting of two or more superimposed decorative layers, and ducts to carry away the liquids.

6. Smaller portable altars, either for incense or for minor offerings, were frequently used; some have been found at Pompeii and elsewhere, but these were not intended for use on any other tables. It is doubtful whether the gartybutum or marble table, frequently found behind the impluvium in the atrium of Pompeian houses, should be considered as an altar in origin. If, as has been suggested, it originally stood beside the hearth, it may have served this purpose, though it may have been merely a dresser. A peculiar interest attaches to this table in the matter of religious offerings, for the common practice was to put offerings on the bases of the statue or on other tables.

7. The association of altars with tombs in Roman custom is somewhat confusing. Tombs frequently take a form resembling an altar (cippus); and it is natural to associate this with offerings to the dead, even if the altars be merely commemorative and not intended for actual use; the word ara is even applied to tombstones in inscriptions. On the other hand, Vergil describes a funeral pyre as "ara sepulcrei" (Aen. vi. 177). This altar, on which offerings to the dead were consumed together with his body, may be symbolically represented by the altar-tomb.

8. Between the tabernum and the open area of the atrium stood an ornamental stone table, the only reminder of the sacred Hearth. It is a very curious fact that this is precisely the position of the holy table in the basilica; when we take into account the similarity of many of these tables with the most ancient form of tabernum (see p. 127) the question of the relationship between them (Lowry, Christian Art and Archaeology, London, 1891, p. 160).

9. The architecture of altars with tombe in Roman custom is somewhat confusing. Tombs frequently take a form resembling an altar (cippus); and it is natural to associate this with offerings to the dead, even if the altars be merely commemorative and not intended for actual use; the word ara is even applied to tombstones in inscriptions. On the other hand, Vergil describes a funeral pyre as "ara sepulcrei" (Aen. vi. 177). This altar, on which offerings to the dead were consumed together with his body, may be symbolically represented by the altar-tomb.

LITERATURE.—The fullest and most recent account of altars, Greek and Roman, is that by Reisch in Pauly-Remler, ii. 780, n. 14. 'Altar,' where references to earlier authorities are given. An article on art and religion in 'Dizionario delle Scienze Antichi,' e xcii. 'Ara.' For Pompeian altars see Man, Pompeii, 1890; for the decoration of Roman altars, Mrs. Strong, Roman Sculpture, 1907. See also the Handbooks of Roman Antiquities, such as Hermann, Lehrbuch, ii. 'Gotische Dienstliche Altarbilderei'; Ewan Müller, Handbuch der Kiez. Altarbilderschafft, ii. 'Greek, Sakralaltarbilderei' (Stengel, pp. 10-15), v. 'Religion und Cultus der Römer (Wissowa), and index of these works. See also the elaborate stele, De ara aedific. (Herzog, 1840). E. A. GARDNER.

ALTAR (Semitic).—1. Primitive conditions.—The primitive Semites regarded trees, rocks, and springs as deities, and in the earliest times brought their gifts into direct contact with the god by hanging them on the tree, rubbing them on the rock, or throwing them into the spring or well. Evidences of the survival of these customs in Arabia, the primitive Semitic home, are known, and some of them survive even beyond its borders. Both in Arabia and in Palestine trees are found hung with the relics of such offerings. Gifts were thrown into the Zenem at Mecca, and in other shrines. That other gifts were also brought into contact with rocks, appears from the ritual of the nassebāḥ described below. The simplest altar was a natural rock, the top of which contained a channel by which the blood was conveyed to a sacred cave below, as was the case with the sacred rock in the Mosque of Omar at Jerusalem. Such rocks are still used by the Arabs as places of sacrifice (see Curtiss, Bibl. World, xxi. 255, 256). Sometimes the blood was conveyed by a rivulet to a sacred well. Such a rivulet was the Ghabāḥ at Mecca, which flowed into the Zenem. No doubt in the earliest times the deity was supposed to dwell in or be identical with a crag, one part of which was taken as an altar because of its natural formation. Out of these primitive conditions there were two lines of development, one of which produced the altars of later times, and the other the more or less artificial altar.

2. Stone altars.—The earliest altar of artificial construction was apparently a rough heap of stones, which represented a mountain-top or a crag in which the god had been thought to dwell. Such altars were made of natural rocks and were sometimes surrounded by artificial trenches (1 K 18:2). Traces of such altars are found among the Israelites and the Arameans (cf. 2 K 18:2). Ezek 43:1, and 1 Mac 4:26. They were probably at first rude cairns, which suggested a mountain peak. The remains of such cairns may still be seen at Suf and on Mount Nebo, as well as in many other parts of the East (see Conder, Hebr and Moab, 1 F 177). They are said to be in Frankfort, 1893, 169). Though by no means certain, this is a suggestive possibility. Light on the altar of earth may possibly be obtained from the Samaritans. The writer in 1905 saw their preparations on Mount Gerizim for the Passover, and when he asked if they had an altar, they said 'yes,' and showed him a hole dug in the ground—perhaps 18 in. in diameter and 10 in. deep, from this a conduit of oblong shape was off. Over the hole the sheep were killed, and the blood flowed into the conduit to be soaked up by the earth. Analogly with the rock-cut altar at Petra described below shows, however, that this is not a complete altar, but only the slaughter-place. The complete earthen altar was a mound of earth, plus one of these earthen slaughter-places.

3. Altars of earth. —In lieu of such an altar as this, it was possible in early times to make an altar of earth. Such an altar is permitted in the 'Book of the Covenant,' Ex 20:26 (18), though we have no description of one in the OT. Possibly Macalister is right in thinking that he discovered an altar of this type at Gezer, for in connexion with the high place there he found a bank of earth 10 ft. in length, which was baked so hard that it was exceedingly difficult for the workmen to cut through it. Underneath this bank were a number of human skulls. As human sacrifice formed a part of early Semitic worship, it is possible that this bank once served as an altar. Though by no means certain, this is a suggestive possibility. Light on the altar of earth may possibly be obtained from the Samaritans. The writer in 1905 saw their preparations on Mt. Gerizim for the Passover, and when he asked if they had an altar, they said 'yes,' and showed him a hole dug in the ground—perhaps 18 in. in diameter and 10 in. deep, from this a conduit of oblong shape was off. Over the hole the sheep were killed, and the blood flowed into the conduit to be soaked up by the earth. Analogly with the rock-cut altar at Petra described below shows, however, that this is not a complete altar, but only the slaughter-place. The complete earthen altar was a mound of earth, plus one of these earthen slaughter-places.

4. Massebāḥ. —Another development from the primitive crag was the Arabic stone altar, or nassebāḥ. The form of several of these altars of conical shape, frequently resembling in a rough way a phallic, in which the god was supposed to dwell. The fat and oil of sacrifices were smeared on this.
stone, so that it served at once as an emblem of deity and as an altar. It was a beath {Gen 23:16.} Sometimes such a pillar stood alone, sometimes one or two honorific stones were placed by it, sometimes the human figure was carved on it, and at Gezer the whole number of these standing pillars was ten.** High places adored with such stones have in recent years been discovered at Tell es-Safl,† at Petra,‡ at Megiddo,§ and at Gezer. When the number of stones is more than one, it is usually easy to identify the beath, as it is worn smooth from the contact of offerings. These pillars were common to both the Hamitic and the Semitic world and developed in course of time into the Egyptian obelisk.

5. Meat cooked in a pot hung on three stakes.—At this early time probably the larger part of each sacrifice was cooked and eaten by the worshipers, as in S 1:56. 32:36 Probably in the earliest period the flesh was boiled in a pot, as described in Samuel, and as represented on early Bab. seals and in an early hieroglyphic Bab. inscription.** The Bab. pictures represent the pot as resting in the crotch of crossed stakes, as in course of time the fashion of roasting the meat instead of boiling it came in. The transition in Israel is noted in 1 S 2:23. It is quite probable that this transition to the crucifixion, which was attained at different periods in different parts of the Semitic world, and that one of its consequences was the institution of burnt-offerings—or offerings consumed by fire, of which the deity was supposed to inhale the smoke. This transition led to the creation of fire-altars. These were ultimately of several kinds, and the evolution of them proceeded along two lines:

Ariel.—One way of making a fire-altar was to add a fire-hearth to a masgeleb. This was actually done at Aksun in Abyssinia, where such structures have been found."† Perhaps the 'ariels' of Moab, mentioned in 2 S 23:36 and on the Moabite Stone (lines 12 and 17), were structures of this nature. They were structures which could be dragged away, and were connected with the shrines of Jahweh, as well as with those of other deities. This is evident from lines 17 of the Moabite Stone, and from Is 29:7—9, where the name is figuratively applied to Jerusalem.

South of Aksun stood the pillar of Jacob and Boaz, which stood before the temple of Solomon at Jerusalem, were used as fire-altars also.** Herodotus (vi. 44) tells us of two similar pillars of stone, one of which was lighted brightly at night. This latter fact was possible due to some sort of fire, fed either by burning fat or some similar substance, connected with them. Possibly all these pillars were developed, like the altar masgeleb of Aksun, out of the primitive pillar.

7. Rock-cut altars.—Another development from the primitive mountain cairn was the rock-cut altar. This represents a later stage of culture than the altar of unhewn stones. That was an artificial imitation of a mountain cairn, but it was built of stones on which man had lifted up no tool. Human labour had placed the stones one upon another, but was confined to that alone. Rock-cut altars, on the other hand, are projections of part of an altar hewn or carved into a form better suited to the purposes of sacrifice. One such was unearthed by Sellin at

8. Altars of incense.—A still later form of the altar—later from the standpoint of cultural development—was a small portable altar carved out of a stone. Such altars were developed in many parts of the Semitic world, and are described more fully below in connexion with the altars of the different nations. They were used for the burning of fat or of sweet-smelling incense, and probably came into use at a time when, in ordinary sacrifices, such parts of the offering only were given directly to the deity, the other and more edible parts becoming the property of the priests.

9. Bronze altars.—At the farthest remove culturally from the primitive Semitic altar stands the bronze altar. Not made of an unmanufactured product like stone, nor of an altar hewn or carved out of a stone, and not of a primitive, people. Such altars are found among the Babylonians, Assyrians, Phoenicians, and Hebrews. Our knowledge of their forms is set forth below in describing the altars of these nations.

10. Arabian altars.—The only large altar that can in any sense be called Arabian which has, so far as the writer knows, been studied by Europeans,
is the great altar at Petra, described above (§ 7). That rock-cut altar may, however, be an Edomite or Nabataean work, and indicative of their civilizations rather than of the civilization of the Arabs.

Indeed, the use of tools upon it makes it probable that it was cut from a block of stone which was round-ended in the primitive simplicity and poverty of thought which attached to all things Arabian in early times. These purely Arabian altars were, as they still are, spurs of natural crags, or stones containing hollows to receive the blood (see Curtiss, Bibl. World, xxi. 255, 256).

From South Arabia a very interesting altar of incense has come, which is now in the Berlin Museum. It is a little over 2 ft. high. It tapers slightly as it rises, until within about 7 1/4 in. from the top. At this point a slight shoulder projects, above which the stone broadens again. On one side, in an ornamental framework carved in stone, rises a pyramid, the blunt apex of which is surmounted by the thin crescent of the moon. The horns of the crescent are turned upward, and a shallow representation of the sun-disk occupies its centre. Petrie discovered three such altars of incense in the temple at Serabit el-Khadem in Sinai. It is true that they are otherwise different from the altar described, but there can be little doubt that Semitic customs and practices found their way into it. Of the altars found here, the highest was 22 inches. It had on the top a cup hollow, 3 3/4 in. wide and 1 in. deep. One of these altars presented on the top a burnt surface, about 2 1/2 in. deep, and its sides were blackened. All of them were cut so as roughly to resemble a hour-glass in shape, the name of one of them continued to taper well up to the top.

11. Aramean altars.—In 2 K 18:30 we are told of an altar in Damascus which the Judean king Ahaz saw, and which so pleased him that he had one made like it and placed in the Temple at Jerusalem. Probably the altar described by Ezekiel (43:17) is a description of it. If so, it was built of stones, and consisted of a base 27 ft. square and 18 in. high, along the top of which ran a moulding 9 in. wide. On this arose a square of 24 ft., which was 3 ft. high; on this a square of 21 ft., which was 6 ft. in height; and above this arose the hearth of the altar, 16 ft. square and 6 ft. high. It was supported on four tapering legs, the angles of which were of 17 ft. high, and at its corners were projections of some kind called 'horns.' It is only by inference that we carry these dimensions back to the altar at Damascus. Of course, between Ahaz and Ezekiel there may have been modifications, but when the influence of religious conservatism is taken into account, our inference seems to be justified.

As noted above (§ 10), the altar at Petra was perhaps a Nabataean structure. If so, it should be counted an Aramean altar. A few smaller Nabataean altars, of the kind called altars of incense above, have been discovered. One such was found at Kanatha, and bears a Nabataean inscription. On one side of it a bulllock is carved in a rather primitive type of art. Another Nabataean altar of similar type from Palmyra has two hands carved on its sides below an inscription. A fragment of a basaltic altar found at Kanatha, carved with the head of a bulllock, betrays such excellent artistic workmanship that it can hardly be Nabataean, but is probably Greek. Another Nabataean altar, found by the Princeton expedition, is pictured by Littmann. It consists of a straight stone, the shoulders of which are round-ended. It is not touched. This is set in a larger base. The upper edge of the base is carved into a moulding. Another Palmyrene altar has straight sides, and at its top an ornamental moulding projects which is Top larger than the body of the altar. Altars of similar structure, probably of Nabataean workmanship, may now be seen in Muhammadan cemeteries at Palmyra. All these Nabataean incense-altars known to the present writer have a perpendicular pillar-like form. None of them is shaped like an hour-glass, as are the Arabian altars. Sometimes the base is larger than the stem of the altar, and sometimes a moulding makes the top larger, but the lines of the intervening part are perpendicular.

12. Babylonian altars.—Our knowledge of early Bab. altars comes in part from the pictures on old Bab. seals. These altars may not be purely Semitic, as they are octagonal or square, and sometimes mixed with the Semurians; but the Semites were in the country before the dawn of history and early mingled with the Semurians, so that it is often difficult to discern the extent of their influence.

The earliest altars pictured may be Semurian in origin, but they were employed by Semites at so early a time that we shall treat them as Semitic.

At the very dawn of Babylonian history the only altars pictured belong to the class called above 'altars of incense.' They are of two forms, each of which appears on seals as archate as those picturing the other. One of these was apparently a block of stone, set up with incense vessels which portay the note as a kind of hearth in which the fire was built. Probably the high portion was hollowed out. One seal represents this style of altar as constructed of large bricks.

Equally ancient, so far as appears, was the altar of the hour-glass shape. These were not at all exactly alike. Sometimes the middle of an altar was small, sometimes it was large; sometimes the top was larger than the bottom, and sometimes the reverse was the case; sometimes the narrowest portion was almost at the top, sometimes it was nearer the bottom; but the hour-glass form describes them all.

A third altar, figured on a seal of the de Clerq collection, is perhaps older than either. It consists of flat stones, or possibly large flat bricks, placed above one another in a simple pile.

Still other forms appear on later seals. One such altar is of stone, and is triangular in form, broad at the base, sloping toward the top, and surmounted by a fire-pan. Just below the fire-pan runs an ornamental ledge. That the Babylonians had bronze altars is made probable by another seal, showing a low structure supported by three legs, on which a sacrificial fire burns.

That the Babylonians had larger altars, sponding in function to the rock-cut altar at Petra, is not only probable a priori, but is confirmed by the explorations of Dr. Haynes at Nippur. This

** The best description of these is by William Haynes Ward in Appendix G of S. I. Hurst’s Princeton Semitic Inscriptions of the day.

†† See Ward, op. cit. 267-269. For the brick altar, fig. 3, p. 268.

¶¶ Collections de Clercq, No. 308.

**• ib. No. 892.
excavator found a structure built of sun-dried brick, some 12 ft. long and 7 in. high around the top. The structure was covered with a layer of white ashes several inches deep, and was separated from the surrounding space by a low wall or curb. Near it was a piece of bitumen 7 in. high, ran around the top. Dr. Haynes rightly regarded this as an altar. He found it 3 ft. below the pavement of Naram-Sin, so that it belongs to the pre-Sargonic period.

He also drew attention to the fact that two kinds of altars stood in the temple at Babylon. He says the smaller altar was of gold, but is silent as to the material of which the larger altar was constructed. These correspond to the 'altar of burnt-offering' and the 'altar of incense.'

13. Assyrian altars.—The altars of the Assyrians consisted of two variéd types employed by the Babylonians. Those which explorations have brought to light belong to the smaller type, of which the material was bitumen. These are sometimes of stone and sometimes of bronze.

The stone altars are of three forms. The oldest is from the time of Adad-nirari III. (B.C. 812-783), and is of bitumen, which was made in an oblong stone 55 cm. long and of the same height, so carved that the top presents the appearance of a sofa with a back. The lower part is ornamented by a few horizontal symmetrical lines. The second type is made of a block of stone so carved that its base is triangular, and is ornamented by two horizontal ledges. At the corners between these ledges a lion's foot is carved. This base is surmounted by a circular top. The third type is shaped much like the Nabataean altar, but with a castellated top. Both these last are from the palace of Sargon (B.C. 722-705), and are in the Louvre.

The Assyro-Babylonian bronze altar is illustrated for us on the bronze gates of Balawat, § on a sculpture of Ashurbanipal, and on other sculptures. These altars, in spite of variations in detail, were built on the same pattern. Each was a table-like structure, sometimes half the height of a man, sometimes a little higher. The legs at each corner were moulded, somewhat like the legs of a modern piano. The legs were joined to one another by horizontal bars. Sometimes there were two, sometimes a single bar, and sometimes two or three of these, and their distance from the ground was determined by the fancy of the maker. From the middle of the side, a short distance from the front, a recess was formed, which was the pedestal. The recess is so imperfect that it might be either a leg descended to the lowest of these cross-bars. The top of the table was slightly hollow and formed the fire-pan. One of the representations shows the sacrifice burning on it. Such an altar could be taken with the army on a campaign, as is shown by the bronze gates of Balawat.

14. Canaanite altars.—In ancient Canaan the altars of burnt-offering were sometimes of native rock, as at Tannach (see § 7), sometimes of unhewn stone (§ 2), and sometimes heaps of earth (§ 3). These have already been sufficiently described (§§ 2, 3, 7). A Canaanite altar of incense was, however, found at Tannach, which was more like a table. It was made of earth moulded into a rounded trunk, broad at the base and tapering considerably toward the top. It was ornamented by many heads—both human and animal—in relief.

15. Phoenician altars.—The Phoenician altars which have survived are not all of stone. They present a variety of forms. Sometimes they are square with a large base and top, the central portion, though smaller, being of the same size all the way up. Sometimes they are of the same general shape except that they are round and the base and top join the central portion in an abrupt shoulder instead of being tapered down to it. Such an altar found at Malta. Another altar found at the site of Balawat in Syria is of central portion carved into panelled faces in which a vine is cut for ornamentation. Still others are variations of the hour-glass form.

Bronze altars are mentioned in Phoenician inscriptions as having been erected at Geshur, Kittim, Larnax Lapethos, at the Pireus, and in Sardinia, but we have no knowledge of their form. Perhaps they were made on the pattern of Assyrian bronze altars. We know that in many ways the Phoenicians copied Assyrian art.

16. Hebrew altars.—According to Ex 20:22-25, early Israelitish altars were constructed either of earth or stone. These have been described in §§ 2, 3.

Solomon, when he built the temple, used rhytons of stone, and Staub (who has written a very good work on this subject) says that of the 2000 stones brought by Solomon from Kedron, the one mentioned in Ex 22:18, is still standing in the garden of the king's house in Jerusalem. Its presence is vouched for by the story of 2 K 18:10, and by the late and confused insertion (so Kittel), 1 K 8:4. The Chronicler (2 Ch 4:1) makes it a gigantic structure 30 ft. square and 15 ft. high, and modern scholars have followed his statements. As the altar had perished long before the Chronicler's time, and as it was smaller than the large stone altar which Ahaz built near it (2 K 18:20), and which was but 27 ft. square at the base, we may conclude that the Chronicler's measurements are unhistorical. It is much more likely that Solomon's brazen altar was of the Assyrian pattern. If we did, we can better understand why king Ahaz was so eager to supplant it with a stone altar which would be better adapted to the offering of large sacrifices. This bronze altar had disappeared by the time of the Exile. The stone altar of Ahaz is described above (§ 11). Such an altar, built of unhewn stones, continued to exist down to the destruction of the Temple by Titus (cf. 1 Mac 4:47-49 and Jos. B. J. v. 6).

According to 1 K 8:2-3, a golden altar, apparently of incense, stood in the Holy of Holies in Solomon's temple, but we have no description of its form.

The altars described in the Priestly document as made for the Tabernacle were of the altar of burnt offerings (Ex 27), made of acacia wood and overlaid with bronze, and the altar of incense (Ex 30) made of acacia wood and overlaid with gold. Modern scholars regard both of these as fancies of priestly writers, as it is clear that neither of them would stand a sacrificial fire. The altar of incense of this passage was possibly patterned on that of the Temple. If so, it gives us its dimensions. It was 18 in. square and 3 ft. high.

17. Horns of the altar.—Various explanations have been offered for the 'horns of the altar.' Stade ** suggested that they arose in an attempt to carve the altar into the form of an ox, while W. R. Smith believed they were substituted for the horns of consecration, which at an earlier time had been hung upon the altar. Josephus (B. J. v. 6) says of the altar of Herod's temple that 'it
had corners like horns," suggesting that the term was figuratively applied to some ornamentation which surrounded the corners. As no horns appear upon any Semitic altar yet discovered, but the altar frequently appears surmounted with ornaments, it is probable that, as in Jer 17, the word "horns" is figurative.

The Hebrew 'table of shewbread,' a counterpart to which is figured in Assyrian reliefs, might in one sense be called an altar, but, strictly speaking, it is only in a secular sense, employed by the Old Testament, that it is called an altar. Mention of altars is made in the New Testament, in the Epistle to the Romans (12:1), and in the Apocalypse (Revelation 18:21; 21:22).

LITERATURE.—Nearly all the literature has been mentioned above. In addition, mention may be made of det. "Altar" by Adela in Biblical Words and Phrases (1898), and that by Barton in the JS; also Newick, Heb. Arch. (1894), i. 37; 4.; Benzingler, Heb. Arch. (1894) 378 fr.; Curtis, Places of Sacrifice among the Primitive Semites in Biblical World, vol. xxii. 214 ff.; Greene, Hebrew Rock Altars, ib. vol. ix. 525 fr.; and W. H. Ward, "Altar and Sacrifices in the Primitive Art of Babylonia" in Curtiss' Primitive Semitic Religion To-day (1902), Appendix G.

GEORGE A. BARTON.

ALTAR (Slavonic).—There is a considerable number of texts relating to the temples of the Baltic Slavs, but they do not furnish any details about the altars. A description of one among the Slavonic nations is borrowed, through the Old High German altari, from the Latin altar. The Old Church Slavonic зрата, 'sacrificio' (cf. Slav. зрать, priest), corresponds with its Russian derivative зртонка, which is employed in the sense of altar in the Biblical texts, seems to indicate that the altar was the place in the temple where the victims were sacrificed. Perhaps it is simply the translation of the Greek ναός, 'temple.'

The entire group of words associated with зрата primarily means only 'praise' (Vondrak, Allberezskromische Grammatik, Berlin, 1900, p. 120). Mention may likewise be made of Old Church Slavonic троитель (connected with truda, 'negotium'), 'altar, троистороп, oйхапа'; and krada, 'rogus, fomarx.'

LITERATURE.—Mikolsch, DWAW xxviii. 18. L. LEGER.

ALTAR (Teutonic).—There seems to be no doubt that in heathen times the Teutonic peoples made use of altars; but our information regarding these is very meagre, since the majority of the references give no details.

The bulk of the evidence is obtained from the Icelandic sagas. In these still shows the regular term for an altar within a temple: we are told that altar only in a secular sense, and that the altar was the place in the temple where the victims were sacrificed. Perhaps it is simply the translation of the Greek ναός, 'temple.'

The entire group of words associated with зрата primarily means only 'praise' (Vondrak, Allberezskromische Grammatik, Berlin, 1900, p. 120). Mention may likewise be made of Old Church Slavonic троитель (connected with truda, 'negotium'), 'altar, троистороп, oйхапа'; and krada, 'rogus, fomarx.'

As its direct object, Comte maintained that "the chief problem of our existence is to subordinate as far as possible egoism to altruism." Herbert Spencer adopted the term, and gives considerable space to his doctrine of the contrasted elements of Egoism and Altruism, and to their reconciliation. Briefly, the contrast set forth in the terms 'Egoism' and 'Altruism' was indicated by former writers on Psychology and Ethics by the distinction between self-regarding and other-regarding, that is, benevolent or disinterested tendencies.

The two terms have been widely used by more recent writers. We may distinguish between the use of the terms in Psychology and in Ethics. In Psychology 'Altruism' means the disposition which has as its object the good of another. Some are disposed to limit the meaning of the word to those dispositions which are consciously directed towards an object, and to deny the application of the term to mere spontaneous and unreflective action. In other words, they limit Altruism to conscious beings, and to them when they have attained to powers of reflection, and have learned to constitute objects for themselves. They exclude from the sphere of Altruism also the gregarious and instinctive grouping together of animals, for attack and defence. In Ethics it is Altruism which is held to mean help, actions and dispositions and actions which have the welfare of others or another for their motive and object. It lays stress here, of course, on the ethical aspect of the disposition.

While many would limit the use of the terms 'Egoism' and 'Altruism' to dispositions and actions which arise only within a self-conscious being, and arise as the outcome of a process of reflection, others are disposed to view the origin of egoistic and altruistic tendencies backwards, to those instincts of love and hunger, the rudiments of which seem to be present in all forms of life. The conception of Evolution and the acceptance of it as a working hypothesis, at least, by all manner of workers, tend to lay great stress on this line of investigation. Evolutionists tend to regard the behaviour of each species of animals as illustrating an ethical code relative to that species; and some of them, like Professors Guldner and Thomson, look on the processes of life as a 'materialized ethical process.' Professor Henry Dawes divided all struggles, namely, the struggle for the life of self and the struggle for the life of others.

Writers on this topic from the point of view of Evolution may be divided into two classes. There are those who, with Professor Huxley, describe the process of Evolution as a gladiatorial show, and nature as 'red in tooth and claw with ravin.' They affirm that the very existence of ethical life depends on the possibility of man's ability to combat the cosmic process. In popular literature, in scientific articles, in learned treatises, it has been affirmed that the animal world consists of a struggle between half-starved animals striving for food. 'The universal struggle to the life is for existence.' This accounts for the universal cry. Competition was described as strongest between animals of the same kind, and it was through this competition and the premium set on speed that the struggle for existence developed, and it painted it in ever darker colours, they apparently forgot that he had written in other terms in the Descent of Man. In this work he pointed out the importance of tracing the evolution of man from simpler forms of life, and an evolution of all the features of human life, physical, psychological, ethical. Thus he was led to lay stress on the social character of many animals, on their co-operation, on the evolution of sympathy and mutual helpfulness, until in certain parts of kind of struggle which was prominent in the Origin of Species tended almost to disappear. The unit in the struggle changes before our eyes, and the individual who struggles, gains an advantage, it is these communities which included the greatest number of the most sympathetic members that would flourish best, and rear the greatest number of offspring' (Descent of Man, 1871). Even from Darwin's point of view here is a new factor introduced into the struggle for existence. Sympathy, mutual help, or the union between members of the same species for attack or defence, has been recognized as a decisive factor in the evolution of life. The community has taken the place of the individual, and mutual help is as much a fact of life as mutual competition.

While many evolutionists had apparently forgotten that Darwin had set forth the great influence of the social factor in the evolution of higher forms of life, others took up the hint, and traced the various forms and kinds of social relations which have been the mutual helpfulness and the ethical character and their influence on the development of altruistic affections. Nature did not appear to them to be a mere gladiatorial show; it was a sphere of co-operation, in which each was for all, and all for each. They delighted to trace co-operation throughout the sphere of life, they pointed out to men such forms of co-operation as symbiosis, as the co-operation of bacteria with wheat, with various forms of insects, and the mutual helpfulness and cooperation of animals, and generally they were able to show that, competition notwithstanding, the world was a system that worked together. Then they pointed to the influence of socialistic tendencies in gregarious animals. They showed us a herd of cattle banded together for defence, with the cows and calves in the centre, and the bulls to the front. They showed us a pack of dogs under the rule of a leader, organized for hunting, with the social order dominating the individual, and obeyed by the individual, with sanctions for obedience and penalties for disobedience. Then they traced for us the evolution of the social and mutual helpfulness, the ethical character of which we distinctly recognize when they appear in self-conscious beings. Trust, obedience, recognition of the order of the pack, or of the herd, consciousness of fault and expulsion from the herd if the order is disregarded, are all depicted by those who trace for us the social evolution of life.

Stress has been laid by some on the relation of parents and children, on the care for offspring as the source of social affection; and attention has been called to the fact that a prolonged infancy calls forth a great development of parental care. As individuality increases, fertility lessens, and with the increase of individuality there goes an increase of the period of helplessness in infancy; and thus they are able to indicate an increase of social affection. Still this source of Altruism does not carry us very far, for the relation of parent and offspring is only temporary, and does not form the basis of a lasting relationship.

It is in the aggregation of animals together for mutual benefit that most evolutionists look for the source of Altruism. It is here, then, that we are led to look into the controversy between those who hold that acquired qualities can be transmitted through heredity, and those who maintain that such transmission has never actually taken place. It is important to consider whether the question is itself and, in its consequence, But
for our purpose it is not needful to take a side on the question. For the present purpose, the denial of the possibility of a transmission of acquired qualities has directed attention to, and stimulated interest in, the transmission of acquired attainments from generation to generation. Is there a tradition among animals? Is there social transmission of the mental and intellectual gains of a species? Or is the only way transmission of acquired abilities an offspring can make of acquired attainments from generation to generation.

Is there a tradition among animals? Is there social transmission of the mental and intellectual gains of a species? Or is the only way transmission of acquired abilities an offspring can make of acquired attainments from generation to generation.

Wallace and Hudson have pointed out the wide operation of individualistic transmission of social habits in the various species of vertebrates. Releman has shown in great detail the action of social transmission in actually keeping young fowls alive and so permitting the perpetuation of the species; and Wesley Mills has shown the imperfections of instinct in many cases, with the accompanying dependence of the creatures upon social, initiative, and intelligent action. He adds: "It gives a transition from animal to human organization, and from biological to social evolution, which does not involve a break in the chain of influences already present in all the evolution life." (Development and Evolution, 1902, p. 145).

Nurture, imitation, social transmission seem to constitute the general social life of animals, and specially of social life among animals. While it is true that a chicken almost before it has shaken itself free from the shell will peck at a fly and catch it, and a duck will imitate other ducks in forms of life the young have to learn from parental example; and it even appears that direct instruction of a kind is given. There is sufficient evidence, at all events, to affirm that the higher animals, whose young need parental care for some time are they can provide for themselves, have to learn how to make their living. Parent birds teach their young to fly, and teach them to recognize the approach of dangers. It is difficult to save the remark that in such races of life, where parents and offspring are for a time associated, where parents care for offspring and offspring depend on parents, there is room and there is need for the exercise of what may be called and affection.

Nor need we object to the fact that we find in lower forms of life the germ and the promise of what comes to flower and fruit in self-conscious beings. The tendency of the laws of life is that the laws of life are similar in all the ranges of life. It seems to proceed on one plan, and we need not be surprised that rudimentary forms of the higher may be found in the lower layers of life. But the full and complete development of actions being does not appear till we come to self-conscious beings who can look before and after, and reflect on their own experience.

While, therefore, we receive with gratitude the testimony of the students of life to the existence of the germs of social life in the lower spheres of living beings, it must be insisted on here that the advent of self-conscious beings into the world has made a great difference. The advent of rationality has given a new meaning to all the phenomena of life as these are manifested in beings lower than man. Appetites, passions, desires, affections are no longer what they were in lower forms of life. Appetite is a different thing in an animal which eats only for the sake of hunger, and drinks only to assuage thirst, from what it is in civilized man, who brings the wealth of his artistic nature and the power of his memory and imagination to enhance from the beauty of his festival. Even into appetite the wealth of his whole nature may enter. If this is the case with appetite, it is still more true of the emotions, such as fear, desire, and so on. Take surprise, and we find that while we call by the same name the similar phenomena of an animal and a man, yet surprise is relative to the experience of the individual. We are not surprised at railways, telegraphs, telephones, motor cars; these have become the commonplaces of civilization. Thus Comparative Psychology has in all its comparisons to remember what a difference self-consciousness has made in the character of the feelings, and of life which are traced back to appetite.

In the discussion of Egoism and Altruism, while help of a kind can be obtained from a study of the lower life, that help does not carry us very far. In the lower forms of life the individual is sacrificed to the species. In the simplest insects, it seems to be all-in-all, and the individual bees, whatever their function is, are steadily sacrificed to the good of the whole. Numerous other illustrations may be found in a human society such a solution must be found that neither shall the individual be sacrificed to the whole nor the whole to the individual. The individual has a claim on the whole for the opportunity of living a full, rich, and gracious life; and society has a claim on the individual for devoted and whole-hearted service.

Looking at the history of our subject, and at the actual history of man, we find many curious things. Early societies steadily sacrificed the individual to the tribe, and in some individual of view, those have any but a tribal consciousness. The discovery of the individual seems to be a late discovery. The individual must not in any way depart from the ways of Egoism in order to believe their beliefs, follow their customs, wear their totem, and in no way think or act spontaneously. Individual worth and freedom were neither recognized as desirable, nor tolerated, because inimical to the welfare of the tribe. Late in history, and mainly through religious influences, the worth and value of the individual won recognition, human life was recognized as sacred, and man as a free and freedom found path. In truth, we find in history the pendulum swinging from one extreme to another; now the individual is in bondage to society, and then the individual tends to make society impossible. Here there are long stretches of history where the authority of society dominates the individual, and then a reaction, when men regard the individual as the sole reality and society as a tyranny and trouble. If any one casts his eye back to the beginning of modern philosophy and reads Hobbes and Descartes, and follows out the principle of individualism to the French Revolution, its culminating period in modern history, he will find that the individual, whether for simplicity, in all the grandeur of his so-called rights, is the object of all study, the beginning of all speculative thought. He is real, his rights are his own, and he is prepared to defend them against all comers. He is in a state of war, he is a free and independent creature, and if he is to live in society he will do so only when he has made terms with his neighbour. So he makes a social contract, he surrenders so much, and he obtains a guarantee for the others. He is supposed to be naturally selfish, egoistic, and to regard others only as instruments for his own good. Looking at man from this point of view, he is a being who hold it are laid under the heavy burden of attempting to derive Altruism from Egoism, and it need hardly be said that they have failed in the task. Altruism can no more be derived from Egoism than Egoism can be derived from Altruism. The truth seems to be that each of them goes down to the very foundations of life, and life can scarcely be conceived in the absence of either. If it be true that life comes only from life, then life must be sacrificed in order to produce fresh life. That is Altruism, whether it is conscious Altruism or not. It is vain to ask for the essence of Altruism, it is as difficult as it is vain to ask for the beginning of Egoism, for it is
proverbial that self-preservation is the first law of life. In this, we see, as so often, the victims of our own abstractions. We cannot really separate the individual from society, or society from the individual.

It may be well, at this stage, to point out that what we thus distinctly call the Ego feelings have also a social reference. In one sense all feelings which refer to the interests of the individual are Ego feelings. Personal pains and pleasures, desires and aversions, to which we feel ourselves aroused. It would on the whole be an improvement in our use of words if we limited the title 'Ego feelings' to those feelings which belong to a self-conscious subject, and which depend not upon consciousness, but on self-consciousness. 'Ego feelings' thus would mean, not passive pain or pleasure, but feelings actively related to our self-esteem, to our self-assertion, or to any manifestation of the activity of the self by which the impression of its own worth is enhanced. In these feelings the Ego is at once the subject which feels them and the object of which they are qualities.

Limiting Ego feelings to those which thus refer to a self, as with it that it is precisely this reference to self that determines the value of an experience in our mental life. Pleasures and pains depend largely on being connected with self as their subject. Any worthy achievement, any feat performed, is estimated not by the passive sensations accompanying it, or by the physical endurance, but by the exaltation of self-feeling which is aroused. The man who does a daring deed, or performs a notable task, has a sense of power and energy, and delights in the deed as his own. Men delight in deeds and rejoice in things accomplished, not so much for their inherent worth, as for the fact that the deeds are their own. Our experiences are of value, and we account them of abiding worth, not because they gratify our sensibility, but because we have put so much of ourselves, of our personality, into them. Thus we can never form pleasures into a sum and measure their value quantitatively as Hedonism tries to do. All values in experience are constituted by their reference to self in self-consciousness.

Self-knowledge, self-reverence, self-control, the activity of self in constituting its objects, are thus determining elements in pleasure and pain. The passive pleasures are almost without value; one cheerful conversation, one robust walk, may bring pain with it. A slave may have little of the anxiety, the care, the hardship of the free man, but then a slave never can have the exaltation of self-feeling and self-respect which comes from knowledge and freedom and manhood. It is, then, the reference to self that gives to rational pleasure its distinctive note. But it is next to be observed that even the reference to self has its social value. It always refers, even in its most egoistic mood, to a social standard. In fact, the social reference enhances the significance of pain and pleasure in an immeasurable degree. Man sees himself with the eyes of others. As Nature teaches the spectators to assess the circumstances of the person principally concerned, so she teaches this last in some measure to assume those of spectators (Adam Smith, Moral Sentiments, p. 29). Thorstein Veblen, from a spectator's point of view, and estimates itself accordingly. Thus it may have an added misery: social slights, feeling of poverty, looked at from a spectator's point of view, will make the self on itself, enhance the feeling of misery till it becomes ecstasy. Pride, vanity, ambition, and other Ego feelings of the same kind, with reference to self for their justification, and yet without the social reference the reference to self would lose its value.

Without this reference to self, values would cease to have a meaning, and pleasure would be merely of the passive sort. As, however, pleasure and pain, the meaning of life and the worth of life, can exist for each person only in his own consciousness, so without the social reference there is in his own life a man can never enter into sympathy with others, so a full, broad, intense Ego life is the condition of a full, deep, and wide social life. The chief problem of our life is thus not, as Comte said, 'to subordinate egoism to altruism,' but to develop Egoism to its proper proportions, in the belief that the higher and fuller a personality is, the more he has to contribute to the happiness of mankind. Selfishness does not consist in a man valuing himself according to his intrinsic and social, but in interpreting or denying the rights, claims, and worth of others: 'Thou shalt love thy neighbour as thyself.'

Egoistic feelings would lose their value without the social reference. So also the social feelings would lose their value were there not the reference to the self to give them value. There is no necessity for any reference to the self in the social feelings of a man who has figured so picturequely in philosophical treatises from Hobbes downwards. Nor is he quite dead yet. This abstract man is a being endowed only with egoistic impulses. Self-preservation is for him the only natural life; his natural life is a state of war. How is such a being to be constrained to live in society? He may be made social in various ways: by a force from above or from without urging him, by means he does not know, to become social even when his reason compels him to think that selfishness is his highest interest. But usually the way to make a selfish being social is to endow him with a desire for approbation, to make him seek society to win approval, or to make him see that others are needful to him if he is to carry out his purposes; and a wise selfishness takes the form of benevolence. The attempt is very subtle and very penetrating, but it is a failure. Men never became social in that way. They are social from the beginning. All that can be said is that man is naturally selfish and naturally social, and the secret of the success of the selfish motives and the social feelings is to be found in society alone.

Look at the individual from any point of view we please, everywhere we meet the social reference. Begotten by social union, born within society, he grows up within society, and is equipped by society for the battle of life. The achievements of society form his inheritance. Social customs are learned by him before he is aware of the process; social beliefs become his beliefs, thought becomes possible because it is embodied in the action, in the language, in the converse of the people with whom the individual lives. In this social sphere the individual lives, here he learns, makes himself heir to the treasures of learning, science, and knowledge, without which individual life would be only rudimentary. A human being in isolation would not be a human being at all. Jeremy Bentham in his book Principles of Morals and Legislation says, 'A community is a fictitious body, composed of individual persons who are considered as constituting, as it were, its members. It is a view and a product of the imagination. Nor does the phrase of thought appear in Jeremy Bentham alone. It is characteristic of the century in which it appeared. No body of any kind is constituted by the members alone. Any unity
has to be looked at from two points of view, and is never the sum of its parts. Regard must be had to the wholesomeness of the whole as well as to the parts. But society or a people is not a fictitious body, of which individuals are the fictitious parts or members; a people is a unity, an organic whole, and the parts thereof are so in relation to the whole.

'Just as the organs are produced by the whole and exist in it alone, so the individuals are produced by the people, and live and die with the people; if they should separate, they would separate with the people, and they would be interested in its welfare, in its being, and not in the being of each separate individual.'

The neglect of H. Paulsen, good or bad, is a psychological fact, and the individual is interested in it, and errs in so far as he does not regard the whole.

The indifference of the individual to the whole manifests itself subjectively in his will. The affect by an egoistic reaction.

And the individual's reaction to psychological reaction. Everywhere the circles of the ego and the non-ego intersect. The fact is universally accepted; only in moral philosophy we still find persons who do not see it, but insist on regarding the antithesis between altruism and egoism as an absolute one. I should like to show how little the facts agree with this view; in our actual life and practice there is no such isolation of individuals; the motives and effects of action are constantly intersecting the boundaries of egoism and altruism.'

It has been urged that a desire for more pleasant feeling. It is a desire for self-satisfaction, for a better, truer, more real self; for a self which shall approach nearer to that ideal of man which is owned upon his intelligence. A wider thought and a truer thought, a deeper and a purer feeling; a power of activity which shall bring his ideal to reality—these express some aspect of the good a man desires. But it is not through the social bond and by means of social effort that the making of such a self is possible. It is not too much to say that it is only through social effort and through social life that man becomes a living soul.

It is in virtue of the social solidarity of mankind that the individual man enters into the inheritance of all the past. It is through this social bond and effort that he has subdued the earth and made it his home. It has become the result of his work, and he has come to the conclusion that he is the crown and sum of things, that the cosmos has toiled and worked upwards towards him, and in him has come one consciousness of itself and its meaning. In association with others he can physically work, he can acquire and use intellectual powers, he can form and execute and enjoy the things he has acquired. It is out of him which has not originated in the thought of a solitary mind, and then become the common possession of many minds. Yet the thought would have never come to the solitary thinker unless he had previously been prepared to think through his social environment, and by the great tradition of the ages. It is on this fact that we lay stress as the reconciliation of Egoism and Altruism, for it is the refutation of the idea which persists in so many quarters that man is inherently selfish, and has regard only to his self-interest, that he is naturally egoistic, and altruistic only in a secondary and fictitious fashion. Even Reason has been so spoken of, and the Analytic Reason has been described as a selfish, analytic, destructive faculty, a weapon cunningly devised to enable its possessor to survive in the struggle for existence.

**AMANA SOCIETY.**—The Amana Society, or Community of True Inspiration, is an organized community of about 1800 German people who live in seven villages on the banks of the Iowa River in Iowa County, Iowa. This is a community of about 30,000 acres, which, together with personal property, is held in common. Indeed, the Amana Society is thoroughly communistic both in spirit and in organization. And yet it is in no sense a mere transcendentalistic or communistic society. It is fundamentally the Community of True Inspiration is a Church, organized for religious purposes, to work out the salvation of souls through the love of God, which will be found in the love of one another (see Socio. Art. 1.). The communism of Amana, therefore, is neither a political tenet, nor an economic theory, nor yet a social panacea, but simply a means of
serving God 'in the inward and outward bond of union according to His laws and His requirements' (ib. Art. I.).

1. History.—As a Church, or distinct religious sect, the Community of True Inspiration traces its origins to the writings of Eberhard Ludwig Gruber and Johann Friedrich Rock, who are regarded as the founders or 'Fathers' of the 'New Spiritual Economy' of True Inspiration. Both were members of the Lutheran Church who had become interested in the teachings of the early Mystics and Pietists. Having studied the philosophy of Spener, they endeavoured to improve upon and formulate especially the doctrines of that little band of Pietists whose followers during the last quarter of the 17th cent. were called 'Inspirationists,' and who are said to have 'prophesied like the prophets of old' (cf. Perkins and Wick, History of the Amana Soc.).

The fundamental doctrinal foundation of the followers of the 'New Spiritual Economy' was present-day inspiration. To be sure, Gruber and Rock believed profoundly in the inspiration of the Bible; but they argued: 'Does not the same God live to-day? And is it not reasonable to believe that He will inspire His followers now as then? These are not the arguments of one who rejects the Holy Scripture, but of one who employs His methods of communication; and as He revealed hidden things before the world existed, and visions, dreams, and revelations in olden times, He will lead His people to-day by the words of His Inspiration if they but listen to His voice' (Gruber, Characteristics of the Divine Origin of True Inspiration).

Divine inspiration did not come, however, to all members of the Community, but only through those who were especially endowed by the Lord with the 'miraculous gift of inspirations.' These especially endowed individuals, called Werkzeuge ('Instruments'), were simply passive agencies through whom the Lord testified and spoke to His children as recorded in the Divine Word of Revelation.

The nature of the 'new word and testimony,' as revealed through the Werkzeuge, and its relation to the earlier revelations of the Hebraic prophets are clearly set forth by Gruber in these words: 'Its truths are in common with the written word of the prophets and the apostles; it requires no preference; on the contrary, it gives the preference to the word of the witnesses first chosen [prophets and apostles] just after the likeness of two sons or brothers, in which case the oldest son as the first-born has the preference before the younger son who was born after him, though they are both equally children begotten of one and the same father.' Again he says: 'Both the old and the new revelation, of which we here speak, are of divine authority and came to raise the arms of the Spirit of God and of Jesus Christ, just as the sons mentioned above are equal and of the same family, yet the same from in whom there exists through the natural birth a slight difference between them' (Gruber, Characteristics of the Divine Origin of True Inspiration).

Not all, however, who aspired to prophecy and felt called upon to testify were to be accorded the privilege. For there were false as well as true inspiration. Gruber, who wrote much concerning true and false inspiration, records in his History his own sensations in detecting the presence of a false spirit.

'This strange thing happened. If pereache a false spirit was among them [the congregations] and wished to aussel me in disguise, or if an inname member wished to distinguish himself at our meeting in prayer or in some other matter, then I was beset by an extraordinary shaking of the head and shivering of the body, and it was at least a hundred times that such was not without significance, but indeed a true warning, whatever he who is unskilled and inexperienced in these matters may think of it according to the anti-ecclesiastic precepts and literal conclusions of reasons' ('Articles and Narratives of the Work of the Lord' given in Inspirations-History, vol. ii. p. 53).

That the appearance of false spirits was not uncommonly hindered, instances, given in the Year Books, or Testimonies of the Spirit of the Lord, where aspiring Werkzeuge are condemned, and by the fact that Gruber's son was 'especially employed [by the Lord] to detect false spirits among his brethren, made them most suspicious, and to admonish them with earnestness to true repentance and change of heart' (III ii. 41).

1 'We will be used in this art. for Inspirations-History.

Gruber and Rock, who had the spirit and gift of revelation and inspiration . . . went about preaching and testifying as they were directed by the Lord.' They travelled extensively through Germany, Switzerland, Holland, and other European countries, and had many enthusiastic followers. Those desiring to share in the 'New Spiritual Economy' and enjoy the blessings of 'True Inspiration' were asked such questions as—

(1) 'Whether he (or she) intended to become a true member of the Community of Jesus Christ toward the members, and also in respect to the public Prayer Meetings and the assignment of the same; or whether he (or she) intended to undergo all inward and external, and to risk cheerfully through the energy of God everything, even body and soul, for which he (or she) had obtained Divine conviction with regard to the work and word of inspiration, and whether he for his purification and sanctification and for the benefit of his brothers and sisters . . .' (III i. 59).

Although the number of congregations established during the time of Rock and Gruber was not large, considerable religious fervour was aroused by their teachings. Moreover, their attacks upon the 'utter hollowness and formalism' of the established Church, and their bold denunciation of the 'godless and god-hating agencies' of the day, aroused the authorities of the orthodox Church to active opposition. They also encountered the opposition of the political authorities, because they refused to perform military service or to take the required oath of allegiance. They refused to 'serve the State as soldiers, because a Christian cannot murder his enemy, much less his friend.' On the other hand, they refused to take the legal oath as a refuge of their literal interpretation of the commands given in Mt. 5:37: 'But I say unto you, Swear not at all!'; and 'Let your communication be, Yea, yea; Nay, nay; for whatsoever is more than these cometh of evil.'

Concerning the arrest of himself and his companions, because they would not upon one occasion take the prescribed oath, the younger Gruber, writing in 1717, says: 'Before the city gate the executioner united us in the presence of the sheriff. The latter held in his hand a parchment with the oath written upon it and bade us to raise three fingers and repeat it. We replied that we should not swear. He urged us forcibly with many threats. The brother (I. S.) answered that though we at that time would not swear, we should give a promise with hand-shake and our word should be as good as an oath, yet he would leave the matter in our hands. I affirmed then likewise that I should not swear, since our Saviour had forbidden it' (III ii. 12).

Furthermore, both the Church and the Government were irritated by the refusal of the Inspirationists to send their children to the schools which were conducted by the Lutheran clergy. Opposition soon grew into persecution and prosecution. And so the believers in 'True Inspiration' were fined, pilloried, flogged, imprisoned, and stripped of their possessions. In Zürich, Switzerland, their literature was by order of the city council burned in public by the executioner (III i. 65). Naturally, as their persecution became more severe, the congregations of Inspirationists sought refuge in Hesse—one of the most liberal and tolerant of the German states of the 18th century.

'The Togetherness for the year 1728 records that on Dec. 11, 'after a blessed period of two times seven years spent in the service of this Brotherhood and Community into which the Lord through His holy Inspiration had led him, the time had come for the Lord to recall His faithful worker and servant E. L. Gruber from this life and to transplant him into a blissful eternity.' Twenty-one years later, on March 2, occurring the 17th of J. F. Rock, the year 1749 was recorded in this characteristic fashion: 'The time of his pilgrimage on earth was 10 times 7, or 70 years, 3 months and 3 days. In the year 1707, when he was 4 times 7 years old, he emigrated with Brother E. L. Gruber from
his native country. In the year 1714, when he counted 5 times 7 years, there came to him the gift of the Spirit and of Prophecy, and he made until 1742, in 4 times 7 years, over 100 lesser and great journeys in this service. In the year 1729, when he counted 7 times 10 years, or he lost his faithful brother, E. L. Gruber. And in 1742, when he counted 9 times 7, or 63 years, he ceased to travel into distant countries and spent the remainder of his life in his home (Testimonies of the Spirit of the Lord, 1749).

With the death of Rock in 1749 the congregations of the ‘New Spiritual Economy’ began to decline. Left without a Werkzeug, the members relied chiefly upon the writings and testimonies of Rock and Gruber for guidance and spiritual consolation.

“At the beginning of the 19th cent. but few of the once large congregations remained; even these few had fallen back into the ways of the common world, more or less, preferring the easy-going way to the trials and tribulations suffered by their fathers’ (See, Brief Hist. of the Amana Soc. or Community of True Inspiration, Amana, Iowa, 1870, p. 6).

The decline continued until 1817, when it is recorded that ‘a new and great period dawned for the Community’ (III i. 429), and that ‘Michael Kraussert was the first Werkzeug which the Lord employed for the now commencing revival.’

‘Answerer met Answerer.’ The year 1817 ‘a reawakening’ of 1817 began with the testimonies of Kraussert, whose first inspired utterance was given to the congregation at Ronneburg on September 11, 1817, as a summons in these words: ‘Oh Ronneburg, Ronneburg, where are thy former zeal and triumph, thy old defenders of faith? They no longer are at this present day, and destines dwell in the citadel. Well, then! Do ye not desire to become strong? Then, as the Lord bids you’ (Testimonies of the Spirit of the Lord, 1817).

Michael Kraussert was a journeyman tailor of Strassburg, who had been converted to the faith of the Inspirationists through the writings and testimonies of Rock. With great zeal and much religious fervour he seems to have played an important part in the ‘Reawakening.’ And yet it is recorded that he lacked courage in the face of persecution; that at the arrest and subsequent examination at Bergzabern he showed fear of men and resulting weakness; that in the presence of hostile elders he ‘became timid and undecided, and ran, so to speak, before he was chased’; and that he was not without guilt in the matter of suffering that he lost his inner firmness in the mercy of the Lord, went gradually astray from the Divine guidance, and soon fell back into the world’ (III iii. 34, 429).

After the ‘fall’ of Kraussert (whose connexion with the Inspirationists was therewith severed), the spiritual affairs of the Community were directed by the Werkzeug Christian Metz and Barbara Heinemann, who came to be regarded as the founders and leaders of what is sometimes called in the records the ‘New Community.’

When Michael Kraussert, Christian Metz, and Barbara Heinemann died at the time of the ‘Reawakening,’ a century had elapsed since Gruber and Rock preached the doctrines of the ‘New Spiritual Economy.’ But the persecution of independents in religious thought had not come to an end. The ‘Reawakening’ was arrested, and their followers ‘were attacked and insulted on the streets and elsewhere’ (III ii. i. 70).

As a century before, so now the growing congregations of Inspirationists sought refuge in Hesse, where on October 31, 1831, it is recorded, ‘the Lord sent a message to the Grand Duke of Hesse-Darmstadt, as a promise of grace and blessing because he had given protection to the Community in his country’ (IIH ii. 99). It was at this time that the far-sighted Christian Metz conceived the idea of leasing some large estate in common which should serve as a refuge for the faithful, where each could be given ‘an opportunity to earn his living according to his calling or inclination.’

And so, in the year 1826, ‘it came about through the mediation of the Landrath of Büdingen that a part of the castle at Marienborn was given in rent by the noble family of Meierholz, which was very convenient for the Community, since it lay near Ronneburg, the home of the principal elders (III i. 68).

In all, four estates were rented, and to the administration of these four estates, located within a radius of a few miles and placed under one common management, are traced the beginnings of the communal life of the Inspirationists. Communism, however, formed but a part of their religious doctrines. It was simply a natural development out of the conditions under which they were forced to live in their efforts to maintain the integrity of their religion. Under a common roof they hoped to live in a manner fully the true Christian life. And so rich and poor, educated and uneducated, professional man, merchant, manufacturer, artisan, farmer, and hand-craftsman, one in a religious brotherhood to worship and plan the labours of the day.

But independence and prosperity were not yet fully won. The day of complete religious and economic freedom for which they hoped had not come. Cherished liberties relative to military service, legal oaths, and separate schools were still denied. Rents became exorbitant, while excessive heat and drought destroyed the harvests.

It was in the midst of their distress that the Lord revealed through His instrument, Christian Metz, that He would lead them out of this land of adversity to one where they and their children could live in peace and liberty’ (Note, Brief History, p. 15). Indeed, this ‘hidden prophecy,’ uttered by Christian Metz on May 20, 1826, was now recalled: ‘I proceed in mysterious ways, saith thy God, and my foot is seldom seen openly. I found my dwindle in the oppressor, and my path leadeth through great waters. I prepare for me a place in the wilderness, and establish for me a dwelling where there was none’ (Testimonies of the Spirit of the Lord, 1826). This was interpreted as pointing the way to ‘the New World’ (IIH ii. 99). There was much discussion concerning emigration to the wildernesses of the New World. Finally, there came through the Werkzeug, Christian Metz, these words from the Lord: ‘Your goal and your way shall lead towards the west, to the land which still is open to you and your faith. I am with you, and shall lead you over the sea. Hold Me and call upon Me through your prayers when storms or temptations arise. . . . Four may then prepare themselves’ (TSL, July 26, 1842). Thereupon Christian Metz and three others were named through inspiration to visit America; and they were given ‘a license to act for all the seceded, and to purchase land where they deemed best’ (Note, Brief History, p. 15).

After a voyage of many hardships and privations, the committee of Inspirationists reached New York on October 26, 1842. After three months of careful deliberation they purchased a tract of five thousand acres of the Seneca Indian Reservation lands in Erie County, New York. Within four months of the purchase the first village of the Community was laid out and peopled. They called it Ebenezer.

Other villages were soon founded, and under the name of ‘Ebenezer Society’ the Community was

* Heslerer referred to as TSL.
formally organized with a written constitution. It is recorded that during the planting and building of the new home' the Lord gave precepts, directions, and explanations concerning the external and internal affairs of that time 'through His servant, and told testimony' (III ii. 367).

With the transplanting of the Community of True Inspiration to America there came a serious consideration of communism as a plan for organizing and conducting the economic life of the Society. The Lord inspired a Christian, or church, was, of course, the fundamental aim of the Community. But they had found the practice of communism conducive to that end. Besides, 'the Lord is gradually and more clearly that it was His intention and pleasure, nay His most holy will, that everything should be and remain in common' (III iii. 367).

It was in the midst of the discussion over communism that the elder Ebenzer on October 23, 1850, in which the Lord expressed His grief and displeasure over the discontent of many members with regard to common possession (TSL, 1850). And on March 19, 1852, the Lord testified most emphatically and earnestly to put to flight those who would not confide in the Lord and the Brethren. He announced that it was not His holy will that any should be, that the possessions should be abolished; and He pronounced His curse upon all who would attempt it, but gave a most gracious promise to those who would abide by Him in this. This word, which was given through Christian Metz, reads in part as follows: 'As true servants of the Lord, it is in my will to dissolve the ties of the Community in such manner, or to suffer its dissolution, neither through artful devices or still and diplomacy, nor cunning or power of men. Nay, the faith which hath love and the bond of peace for its essence and foundation shall continue to exist. And there shall come eternal disgrace, shame, and disfavour upon those who cause it; their children shall suffer want and be without blessing in time and eternity. Their wealth shall melt in the fire; the divine treasure they have disavowed; therefore the Lord is against them, and shall be revenged among the Brethren, did repent concerning it', and signed the amendment to the Constitution providing for the adoption of absolute communism. This amendment was, however, was incorporated in the new constitution adopted in the State of Iowa, and communism has ever since been one of the fundamental principles of the Community.

Thus it is evident that the object of the Community of True Inspiration is the worship of God in freedom according to their peculiar faith. Communism was adopted as one of the means to that end, but not in accordance with any understanding on the part of the Inspirationists of the social theories of Jesus. It has solved the problem of furnishing remunerative labour to the members, and has given them leisure 'to think upon the things that are of the Lord.'

Although more than eight hundred members had come from Germany to Ebenezer, many had returned. Seventy-one in Ohio were now largely of the peasant class. But they were men and women of character who were possessed of the enthusiasm born of moral earnestness. In their new home they enjoyed spiritual freedom, and were rewarded with a large measure of material prosperity.

As time went on, however, certain undesirable features of the location of their villages became more and more evident. In the first place, they suffered no little molestation from the Seneca Indians, who were tardy in leaving the Reservation. Then the rapid growth of the city of Buffalo (c. 1850) also caused such an advance in the price of real estate that the purchase of additional land to accommodate the growing Community was out of the question. And, finally, it became evident that the young people of the Community were not meeting the world's demands, for Buffalo to persevere in the injunction of Gruber, who said: 'Have no intercourse with worldly minded men, that ye be not tempted and be led astray'.

And so a committee was directed to go to the new State of Iowa, and there inspect the Government lands which were for sale. Out of one of the garden spots of Iowa they selected and purchased eighteen thousand acres of contiguous land.

A better selection for the new home could scarcely have been made. Through it meandered the beautiful Iowa River, bordered with the black soil of its fertile valley. On one side of the river the blue willow woods were covered with undergrowth and building. Quarries there were of sandstone and limestone, while the cliffs were not less suitable for the making of brick. On the other side of the river stretched the rolling prairie land. To this splendid new domain, all ready for the plough and spade, the Inspirationists brought enthusiasm, industry, moral earnestness, and religious zeal.

The first village on the Iowa purchase was laid out during the summer of 1855. The name, which is now come, writes Gottlieb Scheuner in his III, 'that the new settlement in Iowa was to receive a name. When the Community emigrated from Germany and settled near Buffalo in the State of New York, the Lord called that place Ebenezer, that is, 'Hitherto hath the Lord helped us.' Now He again led them out from there to a new place, which, as the work proceeded, was to be called 'Bleibtreu.' This had been laid into the heart of the Werkzeug, Christian Metz, who later poured it forth in a song beginning thus:

'Bleibtreu soll der Name sein
Dort in Iowa der Genezis.'

Since, however, it was difficult to express this word or name in English, it was proposed instead to use the Biblical name 'Amana,' which signifies glaub treu ('believe faithfully') (cf. Song of Sol. 4). To it, if this was not to be, they resolved upon another name. On September 23, 1855. Henceforth the new home of the Community was known as Amana (TSL, 1855).

The removal from the old home to the new, from Ebenezer to Amana, covered a period of ten years. In addition to the first village, which had been given the name Amana, five additional villages were laid out by the year 1860—West Amana, South Amana, High Amana, East Amana, and Middle Amana. It was at this time that the Society, in order to secure railroad facilities, purchased the land. Twelve hundred members had come from Ebenezer; and by the time the sale of the lands had been completed the Community's territory in Iowa consisted of twenty-six thousand acres.

In the year 1859 the Community was incorporated in accordance with the Laws of the State of Iowa under the name of 'The Amana Society. The Constitution, which was also revised, came into force on the first day of January, 1860. This instrument is not a Declaration of Mental Independence,' nor a scheme for a 'One World-wide Socialist Fraternal Brotherhood,' but a very simple, business-like document of ten articles.

On July 27, 1867, six years after the establishment of the last of the seven Iowa villages, and two years after the completion of the new home, sale and the removal of the last detail of the Community to the new home in the West, Christian Metz, the so hoch begabte und beynadelte brother, 'through whom the weightiest and greatest things were wrought and accomplished,' was, after fifty years of effort and labour, recalled from the field of his endeavour' at the age of 72 years, 6 months, and 24 days (III iii. 878).

Half a century—the most eventful years of the Community's inspiring history—brings the interval between the 'bestowal of God's mercy' on Michael Kraussert at the time of the 'Reawakening' and the present time. 'Blessed dearest' distance' caused such an advanced, for the making of brick.

'Workzeug.' Great undertakings and changes occurred, and material progress unparalleled in communist history. After the death of Christian Metz 'the work of grace' was carried on by Barbara Heinemann, now Landmann (who lost her gift at the time of her marriage in 1823, but regained it in 1849) and retained it to the time of her death in 1888 at the age of ninety), and by the elders in whom the 'Lord manifested Himself so strongly and powerfully during the last illness of Brother Christian Metz.' Since the death of Barbara Landmann no Werkzeug has been called in the Community, but, as in the
period following the death of Bock, 'well founded Brethren endowed with divine mercy, who are still living witnesses of the great blessing of Inspiration, carry on the work of the Lord in the Community.

How long the coming generations will 'fill the whole earth with knowledge and understanding without Workzeuge and director spiritual guidance, and with the breaking of the link in the 'passing into eternity of these faithful witnesses and Elders,' which binds them to the past with its inspiring history,' is ordained only in the hidden counsels of God.

2. Religion.—Although communism may appear to the casual observer to be the most characteristic feature of the Amana Society, a careful study of the history and spirit of the Inspirationists reveals the fact that the real Amana is Amana the Church — Amana the Community of True Inspiration. Religion has always been the dominating factor in the life of the Community.

The basal doctrine of the Amana Church is present-day inspiration and revelation. That is, to use the words of the Workzeuge Eberhard Ludwig Gruber, 'God is ever present in the world, and He will lead His people to-day as in olden times by the word of His voice.' Indeed, it is the belief of these people, that ever since the beginning of the 'New Spiritual Economy,' the spiritual and temporal affairs of man have been under Divine direction according to the decisive word of the Lord as revealed through His specially endowed instruments the Workzeuge. And so it appears throughout their history that all important undertakings and changes, may in the whole external and internal leadership of the Community, the Workzeuge had to bear the bulk of the burden and care, since the Lord ordained and directed everything through him directly. Thus Divine inspiration and revelation came through the Workzeuge (II Iii. 878).

Perhaps the best exposition of the nature of Inspiration, as understood by the Inspirationists, is found in Eberhard Ludwig Gruber's Divine Nature of Inspiration, where, in reply to the charge that he was an 'instrument of the Devil,' he sets forth his own 'convictions' as follows:

1. Because I have not light-headedly and without test and experience, and of the approval of these things, all scruples and objections to this matter were, without effect on my understanding and my conscience, removed, and I not on remained which irritated me or which I could not comprehend.

2. Because such prayer, which was absolutely without prejudice in me a matter, by that I received, as tears which had become almost unknown to me.

3. Because the Spirit of Inspiration penetrated into and laid bare those things which occurred in the most hidden corners of my heart, so that no creature could know them, and because it (that spirit of inspiration) also approved and commended those ways of mercy and sanctification in which the Lord had hitherto led me in affairs external and internal.

4. Because the promises pronounced in regard to myself have not prevailed or made me vain.

5. Because at the same time the extinguished love was again renewed in the hearts of many.

6. Because the blessing of prayer recommended by the Spirit, and to that time vainly striven for, were at once established to our joy and bliss, and without opposition of the then well-disposed and confirmed my heart.

7. Because I was led into the severest struggle for purification, indeed expecting at once the fulfillment of the great promise given me.

8. Because this struggle searched my inmost self and has deepened the spiritual life to such a degree that I have been deeply deeply moved and in the most comprehensive denial and negation of myself.

9. Because the Workzeuge removed all external hindrances were removed, and I indeed was made willing and confident to throw them behind me, and to take upon me all the disgrace and suffering, and the atoning merit of the Workzeuge together with and with proofs not mentioned here, but known to God and all the Church.

10. Because the inner word was laid open and led forth from the depths of my heart, whither no divine creature, much less a satanic spirit, could reach, deeper and more abundantly than I ever possessed it before.

Because those inner emotions known to me from my youth, but now become so numerous, more number, and more powerful, held me back from some evil deed, or encouraged and urged me to some good deed, and in general, so many actions, inwardly and outwardly.

Because they (inner emotions) often must with certainty reveal to me the presence of hidden false spirits rising against me or others.

Because in all this I do not find my conclusions on the inspiration alone, but the case with other considerations of the undeniable work of God in my soul, which has gone on there for long years out of their mercy, and which under this new economy and revelation, the workzeuge have become ever more the instrument of alleviating anxiety of mind through the powerful Testimony of the Spirit in the inspired persons.

Because the Word of the Lord was sealed to him (the son) by the very first emotions (of the inspired one).

Because the Spirit of Inspiration promptly appeared, as when it had been foretold that a certain married woman (die Macht, Woman) would testify on the day mentioned in Beringhiem.

Because man came to testify (make utterances) with great fear and trembling, may even through the severest struggle, and surely not through his wish and vain desire.

Because he was marked and compelled to his first testimony, as a forewarning of the future, to announce with great certainty an impure spirit, to the sincere humiliation of the latter.

Because he (the son) was led in these ways of Inspiration, contrary to inclination and from deep inward conviction, with increasing introduction and exclusion, and was also endowed with many extraordinary gifts of the Spirit.

Because he, made far beyond his natural abilities, such pure and clear, and penetrating statements (utterances) that many well learned in divine and natural things were led to be not realized.

According to the belief of the Community of True Inspiration, the word and will of the Lord are communicated to the faithful through the specially endowed Workzeuge, whose inspired utterances are in fact the Boswell and chaplain of the Testi monies of the Lord. These are either written or oral. The gift of oral prophecy or testimony (Ausdrucke), being regarded as the highest form of inspiration, is not enjoyed by all the Work zeuge. Indeed, the miraculous gift of Ausprache was sometimes preceded by the humber gift of Einsprache, when the Workzeuge, unable to give voice to his inspiration, committed his testimonies to writing. Thus the 'specially endowed' Work zeuge, Christian Metz, seems to have entered upon the service of the Lord with simply the gift of Einsprache, which was later followed by the gift of Ausprechte, and still later by the combined gifts of Einsprache and Ausprache. Sometimes the Workzeuge were deprived of the gracious gifts of Einsprache and Ausprache, which were restored only after a period of deepest humiliation.

The inspired testimonies of the Workzeuge, as recorded in the Year Books, or Testimonies of the Spirit of the Lord, vary in length from a few sentences to many pages. Some were uttered in rhyme; and there are instances where a testimony is given through two Workzeuge speaking alternately. Under the date of Jan. 12, 1819, such a testimony was given by Michael Krausert and Barbara Heinemann (Tsz, 1819). From the records it appears that testimonies were addressed sometimes to the whole congregation of the Community, and sometimes to individual members.

As to content, the Testimonies touch a great variety of subjects, from the routine affairs of daily existence to impressive admonitions to live the holy life. Many contain promises of the love and mercy of the Lord. Others take the form of appeals to the God of Jesus for more spiritual light and protection. Some warn against Lichtsinn, pride, self-righteousness, and self-will; and especially are the self-satisfied and self-important warned against the wrath of God. There are vigorous denuncia tions of the wicked, and there are threats of 'the hellish torture' and the 'abys of eternity.' But many more there are that teach and preach humility, obedience to the will of God, and self-denial. Throughout, the testimonies suggest a wide familiarity with the language of the Bible, especially of the Old Testament.

The testimony of Frederick Krausert, a long time member and adoration to Krausert, is typical of the utterances of the Workzeuge. It runs thus:

'Thus spakest the eternal God: I will give a word of testi mony to my servant Krausert, who knoweth not now how to
begin, so bewildered he is. But listen, then. What hath prompted these tears? What have these people, these people whose lives are examined as to shine out their own mortifications? Thou hast run before thou wast sent away, saith the Master. This is not thy speech, but is my speech. This is that thou hast failed thus, and dost not want to be found again! 

Oh come back again and resign thyself in to the faithful the hireling body, Hath not the numbered body filled the external body; thereupon results an inflation of the nose and a trembling of the whole body. 

Indeed, and the true numbered body, the hand of God. But, thou hast not sufficiently submitted thyself in to my will; thou hast become too self-willed, and thou dost not want to heed the others, whom, too, I have summoned, and through whom I instruct thee. Also, do not wish to be known and have recorded all that I have to record against thee, saith the mighty God. But, nevertheless, thou shalt never succeed in this manner if thou returnest not soon and quickly again in and to the training of thy love, and dost not more carefully tend my flock that is at present, saith the Lord, he who hath received with vasted eyes and heart, saith the mighty God. Also, return then again and lead them on as a faithful servant and shepherd; with the staff of the true love of God, he who is without his heart; he who hast left thee again and give back the inward peace, love, and simplicity. Submit, then, to this new punishment, for it doth not seem that it may become known thus that no mortal may boast of his perfection (FSI, I, 29).

'Ve have been accompanied by the wild beasts have broken in such number. Whith thou then, too, turn a hirpling and scatter the flock of thine own. The hirelings who have led before thee, saith the mighty God. Also, return then again and lead them on as a faithful servant and shepherd; with the staff of the true love of God, he who is without his heart; he who hast left thee again and give back the inward peace, love, and simplicity. Submit, then, to this new punishment, for it doth not seem that it may become known thus that no mortal may boast of his perfection (FSI, I, 29).

The giving or uttering of oral testimonies by the Werkzeug seems to have been accompanied by a more or less violent shaking of the body (Bebewegung), which is described by one of the scribes in these words:

'With regard to the Bewegungen, the Werkzeugen were not alike; although they were all moved by one spirit, there was considerable variation in regard to their modulations or convictions. When they had to announce punishments and judgments of God, they all did it with great force, majestic gestures, and with a voice of thunder, especially if this occurred on the public streets or in churches. But, when they read the Christian Message, and the glory of the children of God, then their motions were gentle and the gestures pleasing; but all, and in all attitudes assumed by them, spoke only of their duties, and their previous labors in the Bewegung, a feeling of its approach. Again they were seized by nervous agitations, but only for a moment. At times they were aroused from their slumber, and had to testify frequently on the public highways, in fields and forests. In short, they were instruments in the hands of the Lord, and had no control over themselves.'

The belief in the genuineness and Divine nature of the Türkische Stuttgarter is to the present day subject of an interesting interview which took place between the young Gruber and his Schüler and two Jewish Rabbis in a synagogue at Prague. The account, which is recorded under the date of Jan. 30, 1716, is a communication not only to us about the Türkische Bewegung by the Werkzeug of the Inspirationists and the old Hebrew prophets. It reads in part:

'I have understood both of your communications and questioned us. This is the reason why I have recorded the happenings. They asked, in the first place, where we had our home. Answer: Near the house, which is the only thing. We call ourselves Christians. They said they believed that, and that they knew full well that not all are Christians who call themselves Christians, just as, among themselves, not all were inspired of the Turkische Bewegung. They would not dispute the sake of the outer distinction. Thenceupon I replied that one of us had been so beguiled. I have been among the Lutherans. They asked: Which of you is, then, the Prophet of the Lord? I pointed to Gruber. Now they questioned further: What are the testimonies which you receive? Do they come through an external voice into the ears, or are they within? Relation of the true numbered body, and take the lives from within, and to be explicit, in the following manner: The Werkzeug, or the Prophet, feels at first in his interiormost being a gentle and pleasant glow, and contrariwise, he experiences a constriction within the body, to fill the external body; thereupon results an inflation of the nose and a trembling of the whole body. 

The Türkische Bewegung, or the Prophet, feels at first in his interiormost being a gentle and pleasant glow, and contrariwise, he experiences a constriction within the body, to fill the external body; thereupon results an inflation of the nose and a trembling of the whole body. 

In another of his communications, the Prophet is enabled, through the Bewegung, to pronounce the word of the Lord without fear or awe, such as it was born in his heart, at times syllable by syllable, at times word by word, now slowly, now rapidly, so that the Werkzeug has no choice of his own, but is used solely as a passive instrument in the hand of the Lord.

'Now you will be able to inform us,—we said to them,—since you are better acquainted with the Turkish language than we, whether the old Prophets among the people of Israel also announced the word of the Lord through such strange gestures of the body and through Bewegungen? They replied, in kind- ness and humility: The word of the Lord had not been made known to them, or communicated to them in this erring state; return, then, and care more diligently for the souls whom I have called, 

'Indeed I shall help and always have helped thee! Why, then, dost thou lose courage now and desert ere thou wast sent away from me? and why run away and not into the gap of necessity? 

' Hear, then, what the God of Eternal Love furthermore reveals to thee, the hirelings, who have been called from time to time have not thus believed that they knew no fear! And though the whole world should rise in opposition to thee, and the Devil himself should use every means to dishearten thee, it should be so weak that they could hardly stand on their feet, I will be with thee, saith the Lord thy God, and will help thee, if they tremble and shake in me all things. Thus thou mayest see that I take no pleasure at all in thy present course of action. 

'Alas, my soul is troubled that the wild beasts have broken in so many. Why should not, then, turn a hirpling and scatter the flock of thine own. The hirelings who have led before thee, saith the mighty God. Also, return then again and lead them on as a faithful servant and shepherd; with the staff of the true love of God, he who is without his heart; he who hast left thee again and give back the inward peace, love, and simplicity. Submit, then, to this new punishment, for it doth not seem that it may become known thus that no mortal may boast of his perfection (FSI, I, 29).

Theoric and uttering of oral testimonies by the Werkzeug seems to have been accompanied by a more or less violent shaking of the body (Bebewegung), which is described by one of the scribes in these words:

'With regard to the Bewegungen, the Werkzeugen were not alike; although they were all moved by one spirit, there was considerable variation in regard to their modulations or convictions. When they had to announce punishments and judgments of God, they all did it with great force, majestic gestures, and with a voice of thunder, especially if this occurred on the public streets or in churches. But, when they read the Christian Message, and the glory of the children of God, then their motions were gentle and the gestures pleasing; but all, and in all attitudes assumed by them, spoke only of their duties, and their previous labors in the Bewegung, a feeling of its approach. Again they were seized by nervous agitations, but only for a moment. At times they were aroused from their slumber, and had to testify frequently on the public highways, in fields and forests. In short, they were instruments in the hands of the Lord, and had no control over themselves.'

The Community of True Inspiration is without a creed, but professes the 'literal word of God' as found in the Bible and in the Testimonies of the Türkische Bewegung. As to its ethical or religious standards of conduct, these are, perhaps, best set forth in the 'One and Twenty Rules for the Examination of our Daily Lives,' by Eberhard Ludwig Gruber, the founder of the Türkische Bewegung. The 'Twenty-four Rules for True Godliness,' revealed through Johann Adam Gruber in 1716, 'according to which the new communities were established and the Türkische Bewegung received its name.'

The 'Rules for the Examination of our Daily Lives' are as follows:

1. To obey God without reasoning, and, through God, our superiors.

2. To study quiet, or serenity, within and without.

3. Without, to avoid all unnecessary words, and still to study silence and quiet.

363

AMANA SOCIETY

363
'V. To abandon self, with all its desires, knowledge, and power.

'VI. Do not criticize others, either for good or evil, either to yourself or to others, even when you cannot remain at home, in the house and in your heart.

'VII. Do not disturb your serenity or peace of mind—hence neither be consumed in despair nor taken by impatience.

'VIII. Live in love and pity towards your neighbour, and indulgence in anger or hatred is impossible.

'IX. Be honest and sincere, and avoid all deceit and even secretiveness.

'X. Be in every word, thought, and deed as done in the immediate presence of God, in sleeping or waking, eating, drinking, etc., and give Him a true account of it, to see if all were done in fairness and love.

'XI. Be in all things sober, without levity or laughter, and with all things and all words of him which less than the painful or needless or idle.

'XII. Think neither of God nor of His vast presence, but of small and indeed of nothing.

'XIII. Have nothing to do with unholiness, and particularly with needlessness, business affairs.

'XIV. Notice carefully all that God permits to happen to you in your inward and outward life, in order that you may not fail to comprehend His will and to be led by it.

'XV. Have nothing to do with unholy, and particularly with needless, business affairs.

'XVI. Do not therefore consider seriously with worldly-minded men; never seek their society; speak little with them, and never without need and necessity; with regard to your lack of self-control and offence in each other, where there is none. But each one among you shall become a mirror for the other. Ye shall, moreover, also keep such a course as to stand even against the world as a unity, as a city or a light on a high mountain, which near and which remote, shall not cease to be wakeful with the righteous, to be pure with the children of God.

'XVII. Do not overdo anything, but provide, eat, and sleep; at the best there is sin.

'XVIII. Constantly practise abstinence and temperance, so that you may be aswaken after eating as before.'

The 'Twenty-Four Rules for True Godliness' appear as a part of a lengthy testimony in which the Lord commands a renewal of the Covenant 'the name of God and of the angel of the covenant, and the name of the holy angels and of the members of your community,' which ceremony is still observed in the community by shaking hands with the presiding elder in open meeting. The concluding paragraph of the admonitory introduction and the 'Twenty-Four Rules for True Godliness' are as follows:

'XIX. Behold, My people! I make with you this day a covenant, which shall be written in heaven and shall be kept by you and by me and by all who shall come after you, and in this day I will walk among you and visit your place of rest, that I may see how ye have disposed toward me and to my work.

'XX. Guard yourselves! I, the Lord, warn you against indulgence towards this covenant of grace and against negligence, indifference and profanation, which thus far have been for the most part your rulers and have controlled your heart. I shall not depart from your side nor from your midst, but shall Myself, on the contrary, reveal Myself ever more powerful, holier, and more glorious through the light of My face in and among you, as long as ye will bring forth to meet Me the honest and sincere powers of your will. This shall be the tie with which ye can bind and hold Me. Behold I accept you this day as slaves of My will, as free-born of My kingdom, as possessors of My heart. Therefore let yourselves guide and willingly be bound together, and be unworthy of My love shall never be wanting unto you.

'XXI. And ye shall wear the heads and fathers of households, hear what I say unto you: The Lord hath now chosen you as members of His community, with whom He... We... We the world and the children of wrath and disbelief have so much to say; but I have commanded the Spirit of holy blashermers . . . and all your houses and breasts upon every soul which doth not patiently close itself to Me. Would it not, from the blessed head of Our High Priest and Prince of Peace upon every male or head among you, and through them shall it flow upon you, and shall the man and wife into the offspring and children, so that all your

Verily! Verily! I shall keep My promises, if ye only endeavour to fulfill what ye have promised and are prepared and are resolved and have been warned and have been taught against the defiance of your inner and outer enemies.
need shall be acceptable, pure, and holy before the Lord, since He Himself hath nourished and will nourish the same among you.

XVI. And none of your grown-up children shall be permitted to sit in judgment at your meetings, who have not previously received from their parents a good testimony according to the tenor of the laws, and who are not recommended, as also from the elders and leaders, especially from the one who with his fellow-workers hath to watch over the training of the children, which is a work of the heart, and is aimed at with especial love, but without severity and harshness. This training is to be watched over with care, and should in no case be neglected, and the case require it, then shall the latter be temporarily excluded from the prayer meetings for their amelioration.

XVII. The people actives as the people who have established for an eternal monument to Me, and whom I shall impress upon you, in an eternal seal, the Spirit of My Love may dwell upon you and within you, and work according to His desire.

XXI. And this is the word which the Lord spakeeth of these strangers who so often visit you and cause so much disturbance. None whom ye find to be a scoffer, hypocrite, mockers, sinner, derider, and unrepenting sinner, shall ye admit to your community and prayer meetings. Once for all they to be elders.

The shadow of My love be never prevented from manifesting themselves among you. But if some should come to you with honest intentions, who are not knowing scoffers, hypocrites, and deriders, though it be one of those whom ye call of the world, if he be in your knowledge not only to be without deceitful intentions, then ye may well admit him. I shall give you, My disciples, and my followers, the interpretation of the discrimination, and give you an exact feeling whether they are sincere and come with honest intentions or otherwise.

XXIX. The thing ye desire to visit ye shall most frequently, ye shall first acquaint them with your rules, and ask them whether they will be your fellow-workers or not of the elders.

And then ye shall read to them My laws and commands, which I give unto you; and if ye see that they are earnestly convicted about their souls, then ye shall clearly receive the weak, and become weak with them for a while, that is, shall, with them for a while, repent and make your repentance your own. But if a scoffer or mockers declare that he repenteth, him ye shall admit only after considerable time and close and detailed examination of his consciousness and the latter to be righteous. For Satan will not cease to try to launch at you from his pit, through such people, therefore guard your guard, and watch lest the wolf come among you and scatter, or even devour, the sheep.

XX. And those who pledge themselves with hand and mouth after the aforesaid manner to you shall make public profession before the community, and also make an open confession of their resolve, and I shall indeed show you if this latter cometh from their hearts; the conduct of those ye shall watch closely, whether they live according to their profession and promise or not, lest the dragon defile your garments.

XXI. (To Scheuner.) Thus my elder and my fellow-workers shall visit frequently the members of the community and see how things are in their homes and how it standeth concerning their families. I shall give you some servants (Werkzeuge) and to your brothers keen eyes, if ye only pray for it. And if ye find, that ye are unskilled servants in discerning negligence, impudence, licentiousness, or the like, then ye shall admonish him in love. If he repent, ye shall rejoice. But if after repeated admonitions he doth not mend his ways, then ye shall put him to shame openly before the community; and if even this were to be of no avail for a while. Yet I shall ever seek My sheep, those who are already excluded and those who in future, because of their own guilt, must be excluded; and I ever try to lead them out of their negligence into My pasture.

XXII. And to all of you I still give this warning: let none of you reject brotherly admonition and punishment, lest secret pride grow like a poisonous thorn in such a member and torment and poison his whole heart.

XXIII. Ye shall not form a habit of anything of the external exercises (forms of worship) and the duties commended to you; or I shall be compelled to them again. On the contrary, your meetings shall make you ever more fervent, more earnest, more zealous, in the true simple love towards each other, fervent and united in Me, the true Prince of Peace.

This community and its members and brethren of the community shall sincerely and honestly pledge with hand and mouth to My elders, openly in the assembly, after they have carefully considered it, and it shall be kept sacred ever after (TSC, 1819-1823).

From the records it appears that the members of the Institute of True Inspiration are engrafted spiritually into three orders (Abteilungen) according to the degree of their piety. Ordinarily, the spiritual rank of the individual is determined by age, since piety increases with years of 'sincere repentance,' which is aimed at in the training of the soul and deep humility of spirit.' Nevertheless, it remains for the Great Council of the Brethren at the yearly spiritual examination to judge of the spiritual condition of the members irrespective of their age, and to take out of the middle order, here and there, some into the first, and out of the third into the second, not according to favour and prejudice, but according to their grace and conduct ('The Supper of Love and Remembrance of the Suffering and Death of our Lord and Saviour Jesus Christ for 1855). Where other things being equal, the reduction follows the loss of piety, or as a punishment for evil doing. During the days of the Werkzeuge this spiritual classification of the members into Abteilungen was made with 'great accuracy through Inspiration.'

There are three important religious ceremonies which are observed by the Community of True Inspiration with great solemnity. These are the renewing of the covenant (Bundesschliesungen), the spiritual examination (Untersuchung or Unterrichtung), and the Lord's Supper or Love-feast (Liebesmahl).

Formerly the ceremony of renewing the covenant (Bundesschliesungen) was appointed and arranged by the Werkzeuge; but it is recorded in JH iii. 872 that in 1863, 'when the annual common Thanksgiving Day (ordinarily the last Thursday of November) of had lived more round, the Lord gave direction through His word that henceforth this day should annually be observed solemnly in the Communities as a day of Covenant, which has been and always will be observed to the end of the Community, and every boy and girl fifteen years of age or more, take part in this ceremony. Following the usual religious exercises of hymn, silent prayer, reading from the Bible, and an exhortation, and his head elder, the elders pass in turn to the head elder, who gives them a solemn shake of the hand, signifying a renewed allegiance to the faith and a pledge to 'cleave unto the ways of the Lord, and they may dwell in the land which the Lord sware unto their fathers.' Then the brethren one by one and according to age and spiritual rank, come forward and similarly pledge themselves by shaking the hand of the head elder and his associates. Finally, the sisters come forward, and in the same manner renew their allegiance to the work of the Lord.

The spiritual examination (Untersuchung), which is held annually, seems to be based upon the word of the Bible (Ja 5), which read: 'Confess your faults one to another, and pray one for another, that ye may be healed.' It serves as a preparation for the Love-feast (Liebesmahl), which is held annually. This ceremony is especially observed with its mystification and purification, seems to be participated in by every man, woman, and child in the Community. It is now conducted by the first brethren, although formerly it was the office of the Werkzeuge to ask the appropriate questions and to judge of the spiritual condition of each individual. Nor did the Werkzeuge hesitate to condemn the shortcomings of the members as revealed in this examination. And frequent were the exhortations to holier living, such as: 'Oh that ye were not given to the external, and that your eyes were directed inward! Pray the Lord, the God of your salvation, to deliver you more sincerely for the true spirit of humility' (TSL, 1845).

Through the Untersuchung the people of the Community were prepared for the most elaborate and solemn of all the ceremonies of the Inspirationists, namely, the Lord's Supper or Love Feast (Liebesmahl), which is now celebrated but once in two years. A special feature of the Love-feast as carried out by the Community of True Inspiration is the ceremony of foot-washing, which is observed at this time by the higher spiritual orders. Gottlieb Scheuner, the scribe, records, in reference to a particular Love-feast, the following:

'The entire membership, excluding the young people under 15, was divided into three classes according to the conviction
and insight of the brethren and the Werkzeug (Barbara Landmann) concerning the spiritual state of the respective people. Likewise the servants for the foot-washing, for the breaking of the bread, and for the distribution of bread and wine, also those who were to wait at the supper, as well as the slain grateful meal, had to be chosen among the people. The number of those who were to serve had to be determined in proportion to the great membership. Thus there were appointed two or three foot-washers at the foot-washing at the feast of the brethren and sisters, and sometimes at the feast of the brethren and sisters. For the breaking of the bread and the passing of the wine two times 12 brethren were selected. . . . For the feeding and the support of the poor, the brethren and sisters had to be chosen. Besides those, many of the best singers among the brethren and sisters of their respective class were selected to join the elders, so that the whole choir consisted of 20, sometimes 22, persons, who in the afternoon during the meal had their place at a separate table in the middle of the hall. To write down the testimonies of the Lord, those then being teachers at the different communities were appointed (UHS, B. 37).

The regular or ordinary religious exercises of the Community of True Inspiration are extremely simple, for the Inspirationists believe that 'forms and ceremonies are of no value, and will never take a man to heaven.' In the several villages prayer meetings are held every evening in rooms reserved for the purpose. On Wednesday, Saturday, and Sunday mornings the people meet by orders (Abteilungen), while on Sunday afternoon there is held from time to time a general meeting of the whole congregation. In the inclusive special exercises, there are eleven religious services held each week in the Community.

With the exception of the prayer-meetings, all the religious gatherings are held in the churches, of which there is one in each village. The church is very much like the ordinary dwelling-house, except that it is longer. The interior is severely plain. White-washed walls, bare floors, and unpainted benches bespeak the simple unpretentious faith of the people. A raised platform in the center of the room where the elders sit in front facing the congregation, which is divided—the men on one side and the women on the other.

The services are all solemn, dignified, and impressive, and never accompanied by excitement. There is no regular pastor or priest. In the exercises, which are conducted by the elders, there is really nothing peculiar. The silent prayer is followed by a hymn sung by the congregation. Then the presiding elder reads from the Bible or from the testimonies. Again prayer, which is sometimes given extemporaneously and supported by supplicatory verses by the members of the congregation. The presiding elder announces a chapter in the Bible, which is read verse by verse by the members of the congregation. There is, of course, no sermon—simply a brief address of exhortation from an elder. After the singing of a hymn and the pronouncing of a benediction by the presiding elder, the people leave the church, the women going first and the men following. Nothing could be more earnest, more devout, more reverent, more sincerely genuine than the church services of the Community of True Inspiration.

An instructive religious instruction, the Community has published two Catechisms, one for the instruction of the youth, the other for the use of the members of the Community. The former was re-edited in the year 1572, and the latter in 1571. The title-pages are almost identical, and read: 'Catechetical Instruction of the Teachings of Salvation presented according to the Statements of the Holy Scriptures, and founded upon the Evangelic-Catechetical Symbolic In the Spirit of God for the Blessed Use of the Youth (or Members) of the Communities of True Inspiration.'

The one supreme object of 'the pilgrimage on earth' in the Inspirationist's system of theology is the salvation of the soul. The Community is

but a school of preparation for the next world. The awful fate, after death, of the soul that has not been thoroughly purified and sanctified during its earthly sojourn is perhaps best described in an old Bezaersong, which reads: 'Such souls will wander in punishment, desolation, they will seek, and not find; they will have to endure much torment and grief, and be wretchedly plagued, tortured, and tormented by misleading stars' (UHS, 9th Collection, ed. 2. 104).

'Behold how good and how pleasant it is for brethren to dwell together in unity,' said Gruber to his congregation of followers two centuries ago. And nowhere, perhaps, is this simple Amana doctrine of 'brothers all as God's children' more impressively expressed than in the Amana cemetery, where there are no family lots or monuments, but where the departed members of the Community are buried side by side in the order of their death, regardless of natural ties. Each grave is marked by a low stone or a white painted head-board, with only the name and date of death on the side facing the grave. There lies the great-hearted Christian Moses, the inspirationist, used by the side of the humblest brother.

3. Religious and moral instruction.—The stability of the Community of True Inspiration and the perpetuity of the faith in the 'Economy' for nearly two centuries are due in a measure to the instruction and training of the youth; for the Inspirationists have always insisted on training their children in their own way according to the faith of the fathers (Urgrosseltern). To-day there is in each village of the Community a school organized under the laws of the State and sharing in the public school fund. But since the whole of Amana Township is owned by the Society, the Society 'patriarch' says the Kinderlehrer, 'is to learn to live holy lives, to learn God's commandments out of the Bible, to learn submission to His will, and to love Him.' Indeed, the word of his mouth is, 'To love the Lord with all the heart, and to love God's commandments, never to reject or despise the good and sincere admonitions of the brethren, constitute the foundation of the ethical and religious training of the Amana child, who, between the ages of five and fourteen, is compelled to attend school six days in the week and fifty-two weeks in the year. In addition to the branches that are usually taught in grammar schools outside of the Community, there is daily instruction at the Amana schools in the Bible and the catechism. Nor is this religious instruction slighted or performed in a perfunctory manner. Said one of the Community schoolmasters: 'It is my profound belief that my other children on the whole earth are more richly instructed in religion than ours.'

The spirit as well as the scope and character of the instruction and training of the youth of Amana is beautifully expressed in the 'Thirty-six Rules for the Conduct of Children' which are given in the catechism. To live up to these rules is indeed the first step towards salvation. In order to ascertain and promote the spiritual condition of the youth in the schools, there are held each year two 'solemn religious meetings,' which are conducted by the first brethren. One of these meetings, the Kinderlehrer, consists of a thorough review of the principles and doctrines of the Com-
AMANA SOCIETY

367

1. The following is the last paragraph of the essay on ‘Little Brethren’ or ‘Little Board’ connecting the work of the Amana Society, rest in its united strength of understanding and co-operation, that led to the building of the Amana Society. The board of trustees rests in its understanding and co-operation, that led to the building of the Amana Society.

2. The board of trustees is the most spiritual of the members of the Community. From this list the Great Council appoints the elders for each village according to spiritual rank. The governing board of each village is known as the Little Council. It consists of one resident trustee and a number of the leading elders, who call to conference the foremen of the different branches of industry and such other members of the Community as may, on occasion, be of assistance in arranging the village work.

3. It is this Little Council of the village that appoints the foremen for the different industries and departments of labour, and assigns to any individual his appointed task. To them each person desiring more money, more house room, an extra holiday, or lighter work, must appeal; for these allotments are, as occasion requires, revised and fixed anew.

4. The highest authority in matters spiritual in the village is the head elder; in matters temporal, the resident trustee. And although the trustee is a member of the Great Council itself, which is the spiritual head of the community, he is the village church the head elder ranks above the trustee.

5. Each village keeps its own books and manages its own affairs; but all accounts are finally sent to the headquarters at Amana, where they are inspected, and the balance of profit or loss discovered. The system of government is thus a sort of federation, wherein each village maintains its local independence, but is under the general supervision of the central governing authority, the board of trustees.

6. The seven villages of the Community of True Inspiration lie from a mile and a half to four miles apart; but all are within a radius of six miles from ‘Old Amana.’ They are connected with one another, as well as with most of the important towns and cities of the State, by telephone. Each village is a cluster of from forty to one hundred houses arranged in the manner of the German Dorf, with one long straggling street and several irregular off-shoots. At one end are the village barns and sheds, at the other the factories and workshops; and on either side lie the orchards, gardens, and the great orchards, gardens, and the great.

7. Each village has its own church and school, its bakery, its dairy, and its general store, as well as its own sawmill for the working up of hard wood. The lumber used is obtained largely from the Society’s timber land. At the railway stations there are grain houses and lumber yards. The station agents at the several Amana railway stations and the four postmasters are all members of the Society. The establishment of hotels, in no way a part of the original village plan, has been made necessary by the hundreds of strangers who visit the villages each year.

8. The Amana Homes.—The homes of the Amana people are in two-story houses built of wood, brick, or a peculiar brown sandstone which is found in the vicinity. The homes are all quite unpretentious, and have been designed by the Society to suit the people in them as nearly alike as possible, each one being as desirable as the other.

9. The frame-houses are never painted, since it is believed to be more economical to rebuild than to paint every year. Then, too, the painted houses are a tripe worldly in appearance. The style of architecture is the same throughout the entire Community—plain, square (or rectangular) structures with gable roofs. There are no porches, verandas,
or bay windows; but everywhere the houses are (in this partly half-timbered) hall kind with wattle and daub walls and native ivy. The uniformity is so marked that it is only with the aid of an inconspicuous weather-beaten sign that the stranger is able to distinguish the 'hotel' or 'store' from the school, church, or private dwellings. From the way the cottages are constructed and maintained about the buildings, but in season they are surrounded with a riotous profusion of flower beds.

In the private dwelling-house there is no kitchen, no dining-room, no parlour—just a series of 'sitting rooms' and bed rooms, which are furnished by the Society in the plainest and simplest manner. Each house is occupied by one, two, or sometimes three families. But each family is assigned certain rooms which constitute the family home; and in this house each member has his or her own room or rooms. There is no crowding in the Amanas; for the same spirit which led the Society to adopt the village system has led it to provide plenty of house room for its members.

8. Domestic Life.—At the time of its inception the 'New Spiritual Economy' does not seem to have had rigid precepts relative to marriage. But with the growth of the community and the increasing systematization of the Inspirationists celibacy came to be regarded with much favour; while marriages were in certain special cases prevented by the Werkzeuge. It does not appear, however, that marriage (although discouraged) was ever absolutely prohibited. To-day there seems to be no opposition; and the young people marry freely, notwithstanding the admonition that 'a single life is ever a pleasure to the Lord, and that He has bestowed upon it a special promise and great mercy' (TSI, 1850, No. 74). The newly married pair are, indeed, still reduced to the lowest spiritual order. A young man does not marry until he has reached the age of twenty-four years, and then only after permission has been given by the Great Council of the brethren one year in advance. Marriage in the Community of True Inspiration is a religious ceremony which is performed in the church by the presiding elder.

Divorce is not recognized in the Community of True Inspiration. The married couple are expected to abide by the step they have taken throughout life. But if, for personal and sufficient reason, such a life union is impossible, 'then one of them, mostly the man, is told to separate himself from the Community and go into the world.' 1 Second marriage is in some cases allowed.

The number of children in the Amana family is never large—ranging usually from one to four. Indeed, with the birth of each child the parents suffer a reduction in spiritual rank. There are, however, very few childless families in the Community.

The newly married couple begin their home life in rooms which are provided and furnished by the Society. Housekeeping with them, however, is a very simple matter, since there are neither meals nor cooking in the home. At more or less regular intervals in each village there is a 'kitchen house,' at which the meals for the families in the immediate neighbourhood are prepared and served. At each of these common eating places provision is made for from sixteen to forty persons. The preparation of the food and the serving of the meals is done by the women of the Community.

In their dress the members of the Society are and always have been very 'plain.' There is nothing distinctive about the clothes of the men. Their 'best clothes' are made by the Community tailor, but ordinary wear is ready-made garments—except a few of the elder brethren, who still wear trousers with the old-fashioned broad fall front, and a coat without lapels. With the women utility and comfort (instead of adornment) are chiefly regarded. But calico or brown are worn for the most part. The bodice is short and very plain; while the skirt is long and full. An apron of moderate length, a shoulder-shawl, and a small black cap complete the summer costume. The only one of the four with a long cape. The winter dress differs from this only in being made of flannel; while a hood takes the place of the sun-bonnet. Every woman who marries is told that every mother makes the clothing for her children.

9. Industrial Life.—Agriculture, which is one of the chief industries of the Community, is carried on, with the German proneness for system, according to the most modern and scientific methods. The general plan of the field work is determined by the board of trustees; but a field 'boss' or superintendent is responsible to the Society for the proper execution of their orders. He sees that the farm machinery is kept in good condition, he appeals to the elders for more men to work in the fields when necessary, and he obtains from the 'boss' of the barns and stables the horses that are needed. From forty to sixty ox teams are still used for the heavy hauling.

The Amana Society is perhaps best known in the business world through its woollen mills, which have been in active operation for forty-two years. Over half a million pounds of raw wool are consumed in these mills annually. It has always been the aim of the Society to manufacture 'honest goods,' and they have found a ready market from the Atlantic to the Pacific coast. The hours of labour in the woollen mills during the greater part of the year are the usual Amana hours of 7 to 11 in the morning and 12.30 to 6 in the afternoon. But during the summer months, when the orders for the fall trade are being executed, the mills run from half-past four in the morning to eleven at night (the factories being lighted throughout by electricity).

In spite of the long hours and the busy machinery, there is a very unusual factory air about the Amana mills. The rooms are light and airy. There is a cushioned chair or stool for every worker 'between times.' An occasional spray of flowers on the windowsill replaces the blossoms on the city frame. A room frame reflects the spirit of the workers. Here and there in different parts of the factory are well-equipped cupboards and lunch tables, where the different groups of workers eat together. In the middle of the Amana villages where the factories are located the boys of thirteen or fourteen years of age who are about to leave school are employed in the mills for a few hours each afternoon 'to learn.' If the work is congenial, they are carefully trained and are given every opportunity to 'work up'; but if this employment is not agreeable, they are at liberty to choose some other line of work.

In Old Amana there is a calico printing establishment, where four thousand five hundred yards of calico are dyed and printed daily. The patterns for the calico are designed and made by a member of the Society. This 'colony calico,' as it is called, is sold throughout the United States and Canada, and is quite as favourably known as the woolen goods.

The industrial efficiency of the operative in the Amana mills and factories is noticed by the casual observer. Each worker labours with the air of a man in physical comfort and peace of mind, and with the energy of a man who is working for himself and expects to enjoy all the fruits of his labour.

Besides these mills and factories, the Society owns and operates seven saw mills, two machine shops, one soap factory, and one printing office.
not directly by Alexandria, but chiefly by the schools of Pergamum and other cities of Asia Minor, which practised a cosmopolitan style of art, sometimes designated as Greco-Roman. The location and date of the majority of the Amaravati reliefs closely resembles that of many Roman works, Pagan or Christian, and is as much superior to that of the ancient Indian school as is the execution of individual figures in life-sized draperies of the ancient Hindu temple. The temple is without historical evidence or tradition. An inscription translated by Bha Daji (JRAS Bo ix. 220) gives its date as A.D. 860; but it seems probable that the existing building is a restoration, or has been rebuilt from the materials of that erected in A.D. 860. It faces west, with doors to north and south in a hall in front of the shrine (maṇḍap, antarāla), supported by four pillars, elegant in conception and general beauty of details. At the west entrance is a defaced bull (nandi), showing that the shrine was dedicated to Siva. The roof of the hall is supported by columns, of which the sculpture is so rich and varied that no description can give a correct to the to of as beauty. The temple is remarkable for a three-headed figure, known as a trimūrti, of a male with a female on his knee, probably representing Siva and his spouse Parvati. The sculpture, as a whole, shows a degree of skill that would make it a very attractive to the Bombay Presidency. It has been fully described, with a series of plates, by J. Burgess (IA iii. 316 ff.).

AMAZONS.—1. The Amazons were a mythical race of women, dwelling in the northern part of Asia Minor, or still farther north, who had proved their prowess in conflict with the greater spirits of Greece. Something about the conception of the feminine warrior may have made it very attractive to the Greek story-teller. Women who had asserted their independence of conventional bonds, and who kept their power by mainm and by the perishable care of their children, who wear a man's short chiton, and who had cut away the right breast that they might the more freely handle arms; withal beautiful women to inspire with love those Greek heroes who fought against them—which were the Amazons. According to Pherodytes (fl. 25), their nature was explained by the fact that they were descended from Ares and the maid nymph Harmonia; Hellenikos (frag. 146) makes them a race of women living apart in the Sagartian and perpetually by visits to neighbouring people. Thus they were both ‘man-haters‘ (Esch. Prom. 724) and ‘man-like‘ (Hom. Il. iii. 189).

In the epics they use the same arms as do other warriors. Findar (Ol. xii. 125) and Asclepius (Suppl. 378) speak of them as skilled with the bow, and in art they appear wearing a quiver. Their proper weapon in later myth was the axe—either the axe with blade and point, such as Xenophon found in the mountains of Armenia (Anab. iv. 4. 16), or the double-headed axe, παλάτας (Plut. Quest. Græc. 301 F.). The Latin poets (e.g. Virg. Æn. xi. 11) refer to war-charts, but Greek poetry and art represent them as going into battle on horseback (Eur. Hipp. 307, 382, et al.).

The story of their mutilated breasts is probably due to a false etymology (σ- privative and πατβs 'breast'). What the name did originally mean is not quite clear; with some probability Götting (Comment. de Amaz. 1848) has suggested that it referred to the feminine character in that they have nothing to do with men (σ- and πατβς). The names of individual Amazons are in the main genuine Greek names, added as the myth found favour among the Greeks.

2. The Children of Amazons in two wars in which the Amazons were involved—a war with the Lycians, and, as the name of the site implies, it is surrounded by temples dedicated to the cult of Siva.

AMARNAT or AMARNATH (Skr. amara- nāthaka, 'the immortal Lord', a title of Siva). A place situated in the Thana district of the Bombay Presidency, Siva being the chief deity in the ancient Hindu temple. The site is without historical evidence or tradition. An inscription translated by Bha Daji (JRAS Bo ix. 220) gives its date as A.D. 860; but it seems probable that the existing building is a restoration, or has been rebuilt from the materials of that erected in A.D. 860. It faces west, with doors to north and south in a hall in front of the shrine (maṇḍap, antarāla), supported by four pillars, elegant in conception and general beauty of details. At the west entrance is a defaced bull (nandi), showing that the shrine was dedicated to Siva. The roof of the hall is supported by columns, of which the sculpture is so rich and varied that no description can give a correct to the to of as beauty. The temple is remarkable for a three-headed figure, known as a trimūrti, of a male with a female on his knee, probably representing Siva and his spouse Parvati. The sculpture, as a whole, shows a degree of skill that would make it a very attractive to the Bombay Presidency. It has been fully described, with a series of plates, by J. Burgess (IA iii. 316 ff.).

VINCENT A. SMITH.

AMARKANTAK—AMAZONS.
K. O. Müller suggested (Dorier, i. 390 f.) that the conception arose from the large number of hieroduleia connected with the worship of Artemis at Ephesos and elsewhere in Asia Minor. It is more probable that the presence of inconstant obsidian and iron weapons in the armies of northern and eastern races started the legends, that incursions of these races into Asia Minor determined the locality with which they were associated, and that war dances performed by women in the worship of Ares, Artemis, etc., aided the growth of the legends. To bring the Amazons into conflict with Bellerophon, Achill, and Herakles, and Theseus was the natural means of emphasizing the prowess of feminine warriors.

AMBER.—An ancient, now ruined, city in the native State of Jaipur in Rajputana. Formerly it was held by the non-Aryan Minas, from whom the Kashchawah sect of Rajputs conquered it in 1763 A.D. It then became their capital, and so continued to be until 1728, when Jai Singh II. founded the present city of Jaipur, and Amber became deserted. It was in olden days much frequented by pilgrims from all parts of India, but its glory has departed. At a temple of Kali within the ruined city a goat is daily sacrificed, a substitute, as it is believed, for the human victim offered in former times to the goddess.

W. Crooke.

AMBITIOUS.—'Ambition,' derived from Lat. ambitio, the 'going round' of a candidate for office canvassing for votes, signifies primarily a desire for a position of power or dignity; thence a desire for eminence of any kind, and so, by an easy but well-defined and recognized extension (in the absence of any other word to cover the idea), the will to attain, obtain, or perform anything regarded by the user of the word as high or difficult. The same term thus becomes applicable to Jaques' 'ambition to know the worst' (II. 3), as well as to Milton to write something which the aftertimes would not willingly let die. It is obvious that almost any desire may in certain circumstances become our 'pride'; but the word 'ambition' may, therefore, be dismissed at once—especially as in default of a qualifying term one of the first two is always intended. The present article will accordingly be confined to these. The native in question had no unique position for two reasons; one of its moral position is more uncertain in general estimation than that of any other, and it is repeated by tradition to have been the first sin. These points will be taken in order.

1. Bacon, in his essay, 'On Ambition,' says of it that it 'is like cholera, which is an humour that maketh men active, earnest, full of alacrity, and stirring, if it be not stopped; but if it be stopped and cannot have its way, it becometh wand, and thereby maligne and venomous.' Spinoza (who defines it, however, as 'an excessive love of glory') says: 'Ambition is a Desire by which all the Affections of the Mind are strengthened and on that account this particular Affection can hardly be overcome. For so long as a man is influenced by any Desire at all, he is inevitably influenced by the same.' The opinions of these high authorities imply no particular censure. A reference to any Dictionary of Quotations, however, will reveal it indeed as
AMBITION

'divine' and 'accursed,' 'blind' and 'eagle-eyed,' 'base' and 'sublime'; but for one epithet of
honour ten will be found of blame. At the same
time, this proportion does not appear accurately
to represent the average man's feeling towards it
which may be described as two parts of fear
and distrust to one of secret admiration. Now,
amid this clash of opinion, it is clear that ambition is
in itself a twofold power: first, as an exciting
analysis, desired for itself, but always from an
ulterior motive, namely, for the opportunities it
affords, whether for enhanced activity, for the
exercise of peculiar faculties possessed, and, for
the furthering of a desired end, or the gratification
of vanity. Logically, therefore, it should be
directed more against the prosecutor, whose main, if often
unrealized, ground of attack (apart from religion)
rests upon the means by which the ambitions are
tempted to gain their ends.

To the following views entertained on
the subject may be summed up thus; the atti-
itude of religion being reserved for separate
point: From the view of society, it is well
to realize that the topic of ambition should not
be directed to check rather than to encourage
ambition, as the danger of an excess of it is greater
than that of a deficient supply. Morally, such
a desire can in no case be generally considered
virtuous, in view of the obvious personal advan-
tages which power, from whatever motive sought,
confers upon the possessor. To many philosophers,
again, it is especially anathema as a chief enemy
of that peace, mind and independence of ex-
tension which is the end and province of mankind. These
reasons apply to the desire for power in any
degree of development; but what is after all
perhaps the chief cause of the invincible sense
attaching to the word 'ambition' lies in a subtle
implication which modifies the meaning, without
equally restricting the use, of the term itself.
In the words of Aristotle (Ethics, ii. 7), 'There
is such a lining as a due and proper desire for
distinction; the desire may be excessive or
defective: the man who is excessive in this desire
is called 'ambitious;' the man who is deficient,
'unambitious;' for the middle state there is
no name.' Thus, in fact, a distinction in some
degree in almost all members of the white races,
and hence the definite term 'ambitious' is applied
only to those in whom it is prominent, and there-
fore over-developed. It stands, in short, self-
condemned as excessive, in which condition it is
pregnant with danger alike to the State, the
neighbour, and the morality of its subject, and
lies justly under the censure of political, ethical,
and philosophical thought. At the same time it is
viewed by many, even when in excess, with a
certain reluctant admiration as the infirmity of
a noble mind. For, whatever its own demerits, it
is generally held in company with the qualities
most admired in Western civilization—ability
and energy. It implies also a certain length
and largeness of view, in themselves admirable, and
in many cases only with difficulty be dis-
tinguished from its twin-virtue—ambition.
Finally, it is a motive with which, though per-
haps faulty, the world, in the present condition of
religion and morals, could ill afford to dispense;
for power, whatever its abuse, is generally
given to those who not only desire, but also in
some degree at least deserve them, and the noble
actions, prompted either wholly or in part by
ambition, fill not a few of the most distinguished
epochs of the human story, such as the
frequent manifestx virtutum ost' (Quintilian).

The verdict of religion upon worldly self-
aggrandizement could hardly be doubtful, and in
all countries it is unanimous in condemnation.
For Greek religious thought it was the direct
forerunner of Christ, which in the third and
fourth centuries, in Buddhism it is a wife of muñga, entangling
the soul in the world of becoming and desire; for
Muhammadan it is a choosing of this present life and
its braveries, for which there is nothing in the
next world but the fire.

In the Bible the word itself does not occur, and in
the OT hardly even the idea. The Jewish
historians confined themselves practically to the
acts of kings, lesser men being introduced only
when they came into contact or conflict with the
king. But a violent change in the kingship of a
people essentially and always theocratic, in
the view of the writers, was ascribed as a rule to the
direct intervention of God using a man as His
instrument; and any private motives of such an
instrument were disregarded. Thus it is unlikely
that such men as Jeroboam or Jehu were
ambitious, but they are set in action by the word
of a prophet. The Prophets again scourge the
abuses of power under the guise of the vice of
ambition. The absence of any reference to it in the
'Wisdom-
literature' of the nation (Proverbs, etc.) is more
remarkable. Even Ecclesiastes, in considering the
vanity of human wishes, travels round the idea; but rather than refers to it directly, in a way which
suggests that power as a direct object of desire
was unfamiliar to the author. The view of the
NT, so far as expressed, is uncompromising. In
the Christian community there was for
ambition. The 'Kingdom of Heaven,' or Church of
Christ, is for the poor in spirit (Mt 5); 'Who-
soever would become great among you shall be
your minister (20); 'Set not your mind on high
things, but condescend to things that are lowly.'
(Ro 12). Quotations need not be multiplied:
the humility and renunciation of the things of
the flesh, which are the badge of the followers of
Christ, leave little room for the self-assertion
inseparable from ambition. What (if any) modi-
fications of this rigorous doctrine may be involved
in or justified by the transition of Christ's Church
from a limited and purely religious community to
the creed of the world, is not within the province
of this article to discuss.

1. In a current belief that ambition was the first
sin which disturbed the harmony of heaven. 'Crom-
well, I charge thee, flee away ambition: by that
sin fell the angels' (Henry VIII. III. ii. 440). The
origin of this tradition, which has no authority in
the Bible, is obscure; but it may perhaps be traced
to the old identification of the 'king of Tyre' in
Ezk 28 with Satan. ('Thine heart is lifted up, and
thou hast said, I am a god, I sit in the seat of
God' [v. 7]. 'Therefore . . . strangers . . . shall
bring thee down to the pit' [vv. 7-8]. 'Thou hast
been in thy pride in the garden of God.' Satan and the
anointed cherub that coveted' [vv. 35-36], etc.).
According to the more elaborate version of Milton,
however (Paradise Lost, v. 690 ff.), pride claims
precedence. For it was jealousy of Christ, whose
hegemony threatened the angels' pre-existence
in heaven, that stirred Satan's ambitions aim
against the throne and monarchy of God. Dante
appears to adopt the same tradition ('di cui è la
invitata tierra . . . confutando'), and the
principio del ced e in il maladetto superbi dir colui,' etc., ib.
xxix. 55). (For an elaborate discussion of the point
see the Dict. Encyclopédie de la Théol. Cathol., s. v.
'Diable'). It is worth noting that the idea of the
connexion
of Plato's Ideal State is marked by the appearance of

AMBROSE OF MILAN. I. Life. Ambrose was born, probably, at Trèves, the seat of government of his father, the Pretorian prefect of the Gauls. The family was noble; his father was one of the four highest officers in the empire; his elder brother Satyrus became the governor of a province, name unknown (de excusis Saturi, i, 49, 58). The family was also Christian in sympathy. Ambrose's great-aunt Sotheris had suffered as a martyr in the persecution of Diocletian (de Virgin. iii. 7; Exhort. Virg. xii. 82). The year of Ambrose's birth is a little uncertain. Either 334 or 340 a.D. will suit the data given in his letters (Ep. lx. 3, 4; see PL xiv. 68, for a full discussion). But probably 340 best meets all the circumstances. On the death of his father, his mother removed with her family to Rome (352), and there Ambrose received the best education. Of Latin authors Vergil was his favourite; he was also well read in Greek literature. In the doctrines of Christianity he was instructed by Simplicianus, whom he loved as a father (Ep. xxviii.; not to be confused with the Simplicianus who succeeded him). Adopting the law as a profession, he rose very rapidly. When he was but little over 30 (372), Valentinian I., on the advice of the Christian bishops, the protectors of Italy, appointed him 'consular' of Liguria and Æmilian, an office which he discharged with great ability and integrity. In 374 both Dionysius the Catholic and Aëtius the Roman bishop de facto died. Both parties strove hard to secure the election of the successor, for at that time Milan was perhaps the first city in Europe in population and importance. Ambrose, in whose province it lay, went to preside at the election, and to suppress the customary tumults. While but the consular was addressing the people in the church on the duty of maintaining order, a voice was heard proclaiming "Ambrose is bishop!" The cry, according to Paulinus, first started by a child, was repeated by bishops and priests by Arians and Catholics. In spite of the protests of Ambrose—which on which Paulinus enlarges con amore, with disregard both to truth and to the good name of his master, in the most interesting part of the passage of Valentinian to be given in this irregular election, which won the approval also of the bishops of East and West (Basel, Ep. lv.; for Ambrose's statements about the election see de Offic. i. 1, 4, Ep. xiii. 65, de Pontif. ii. 8, 72. Ambrose says that Valentinian promised him 'quicem futuram, Ep. xxi. 7). Ambrose was as yet only a catechumen; he had shrunk from baptism under the common feeling of the day which led so many to postpone the same until near death—the dread lest he should lose the baptismal grace. Within eight days of his baptism he was consecrated bishop (Dec. 7, 374, Migne, xiv. 71). His first step was to give up his property to the poor and the Church. The administration of his household was handed over to Satyrus († 379), who left his province that he might recognize his younger brother (de excusis Saturi, i. 201.) Ambrose's life as a bishop was one of incessant work. His moments of leisure were filled with self-culture, in which he improved, and in the main part he learned by teaching (de Offic. i. 1, 4). Throughout his diocese Arianism almost ceased to exist, largely through his constant preaching and the care he bestowed on the preparation of catechumens. The Arians, thus bitterly disappointed in the bishop they had elected, found an opportunity for attacking him in his sale of Church plate to procure funds for the redemption of prisoners captured at Illyricum and Thrace by the Goths, after their great victory at Adrianople (Aug. 9, 378). Ambrose's reply was characteristic: Which did they consider to be more valuable, church plate, or the prestige of the Arians? (de Offic. i. 353.)

Of his life at this time Augustine has given us a delightful picture (Conf. vi. 3, Ep. xlvii. 1): "He was surrounded by an army of seculars who kept me from him. He was the servant of their infirmities, and, when they sparred a few minutes for himself, he gave his body the food necessary, and nourished his soul with reading... Often when I entered his retreat I found him reading softly to himself. I would sit down, and after waiting and watching him for a long time in silence (for who would have dared to disturb attention so profound?), I would withdraw, fearing to interrupt him if I troubled him in the short time he had reserved to himself out of the tumult of his multifarious business."

In his opposition to the Arians, Ambrose did not limit his efforts to his own diocese. At Siracusa in Sicily, the great-aunt of St. Scholastica Justina, the Arian widow of Valentinian I. (Nov. 17, 375), Ambrose succeeded in carrying the election of the Catholic Anemius to the see. In 381 the Emperor Theodosius, coming from 378-381 lived chiefly at Milan, and followed in most things the advice of Ambrose, whom he called his parens, and who composed for his instruction (see de Fide, i. pro. iii. 1) his treatise against Arianism, entitled de Arianismo. Ambrose was the first bishop of Milan to be appointed (383) by a separate and independent council, which met in September at Aquileia. Through the influence of Ambrose, who presided, the council deposed two more Arian bishops, Valtinulius and Socinius, and gave the Gesta Conc. Aug. inserted in Ambrose, Op. after Ep. vii. (Migne, xvi. 916), or, more fully, Mansi, iii. 599 ff., and cf. Epp. i. ix-xii. If in the following year he attended the abbot-curate council at Rome, he seems to have taken no part in the discussion, perhaps for this somewhat uncertain council, see Mansi, iii. s.v.

The murder of Gratian, who had estranged the soldiers by foolish and unpatriotic conduct, at Lyons (Aug. 25, 383) by the agents of the British usurper Maximus, led Justina, acting for her young son Valentinian II., to persuade Ambrose to journey to Trèves as her ambassador (de Grat. i. 25). As the result of his visit (winter, 383), or rather of the delays caused thereby, and the knowledge that behind Ambrose would be, if necessary, the forces of Theodosius, Italy seems to have been saved for Valentinian; but in 385, however, falling to the usurper (Ep. xxiv. 6, 7).

On his return to Milan, Ambrose came into collision with Q. Aurelius Symmachus, the prefect of Rome, Pontifex Maximus, Princes Senatus, the leader in the Senate of the conservative and pagan majority (on this question of the majority, Ambrose, Ep. xvii. 10, 11, is untrustworthy). In 384, Symmachus had sought from Valentinian II., in spite of the Statute of the ancient golden statue and altar of Victory, whose removal had been ordered by Gratian (382), This Statute of Victory (Op. Sym., ed. Seeck, x. 3, in M.G.H.; see also Migne, PL xvi. 360), or defence of paganism, followed the usual line of argument of the times. Symmachus traced the greatness of Rome to the help of the gods; the divine decline and disasters, including the losses in the previous year, to the new emperors. He eloquently appealed to the charm of old traditions and customs. Ambrose's answer (Ep. xvii. a nasty appeal to Valentinian) was to dispose of the matter by a hasty appeal to Valentinian (cf. Ep. xvi. 2, 3) is not altogether happy in its claim that Rome owed her greatness not to her religion, but to her own intrinsic energy—a weak concession to secularism. For
the rest, he dwells on paganism as the world's childhood, Christianity as the evolutionary and progressive factor and result. The request of Symmachus was refused, as also were three other similar petitions through Gratian (Cassian, Theod. 392, to Valentinian II. [Amb. Ep. iv. 5]), chiefly through the zeal of Ambrose and the zealous orthodoxy of Theodosius. To Theodosius was a triumph of Christianity by the series of his edicts which prohibited pagan rites, culminating, so far as sacrifices were concerned, in the deadly nullus omnino of Nov. 8, 392 (Cod. Theod. iv. t. x. §§ 12, 13). The difficulties which the usurpation of Eugenius (see infra) threw in the way of the carrying out of this edict in the West explain Ambrose's antagonism to this shadow of an emperor.

But the great conflict of Ambrose was with the Arian court. Under the influence of a Scythian Arian, Mercenarius, better known by his name of Austenius, adopted from the Arian bishop whom Ambrose had succeeded, the emperor Justinus demanded the surrender, first of the Portian basilica, then of the Church of St. Victor, then of the new basilica (see infra), for the use of the Arians. Ambrose refused, but with a foreboding which culminated in the event. [Ep. xxviii. 1]. On Jan. 23, 386, Justinus retorted by a decree drawn up by Austenius, giving the Arians full freedom to hold religious assemblies in all the churches. The edict was a failure. So Justinus sent orders that Ambrose should be removed by the miracles (especially the alleged healing of a blind butcher named Severus) attending his discovery of some gigantic bones, which he believed to be those of two brother martyrs, Protasius and Gervasius, and of whose localization he had a 'present' or vision. The discovery of these relics was welcomed with enthusiasm by a church somewhat barren of local martyrs. In spite of their removal they were soon transferred under the altar of the new basilica then awaiting dedication, which Justinus had claimed, and which Ambrose now called by their name [Ep. xxviii.; August. Cit. Dei. xxviii. 6, Conf. ix. 7; Paulin. Vitæ, cc. 14, 15; for Ambrose's view of the miracles, Ep. xxii. 17-20].

Realizing its hopelessness, Justinus abandoned the struggle, the more readily that he needed the bishop's help. In 387 she requested Ambrose again to act as her ambassador with Maximus (de Obitu Valentin. 28). It was probably on this second visit to Trèves that Ambrose refused to communicate with the followers of the Spanish bishops Ithacius and Idatius, because they had persuaded Maximus to sentence and torture to death Priscillian and certain of his followers as heretics (see Priscillianism), and also because they held communion with Maximus, the slayer of Gratian. We see the same resoluteness in his refusal to give Maximus at the first interview the customary kiss of peace, and in his demand for the body of Gratian. We need not wonder that his embassy was unsuccessful, and that Ambrose was 'himself thrust out' of Trèves (Ep. xxiv. ; and for Ithacius, etc., cf. Ep. xxvi. 3). Maximus crossed the Alps (Aug. 387), and for a while was a thorn to St. Ambrose. During this usurpation Ambrose withdrew from the city, while the death at that time (Bury's Gibbon, iii. 177 n.) of the exiled Justinus rid the bishop of all further trouble from the Arians. As regards Ithacius, it may be added that Ambrose presided over the church in the spring of the same year (387) at the Synods of Gaul and Northern Italy at Milan which approved of his excommunication.

After the defeat and execution of Maximus at Aquileia (Aug. 288), the great Catholic emperor Theodosius took up his abode at Milan. Emperor and bishop were soon in conflict. The first struggle is of some moment in the history of the growth of intolerance. The Christians of Callinicum in Mesopotamia had burnt down a conventicle of the Valentinians and a Jewish synagogue. Theodosius ordered the bishop of Callinicum to rebuild the same at his own expense. Ambrose protested in a long letter written at Aquileia (Ep. xli.); he seemed to glory in the act; for the Church to rebuild the synagogue would be a triumph for the enemies of Christ. On his appealing to Theodosius in a verbose and rambling sermon at Milan (in Ep. xlii.), the emperor yielded. 'Had he not once,' he wrote to his sister, 'I would not have consecrated the elements' (Ep. xlii. 28). In such incidents as these we see the beginnings of the claims of the Church of Rome as ecclesiastical capital. Of almost equal importance is it to notice the intolerance which treats the Valentinian village chapel as if it were no better than a heathen temple (Ep. xli. 16), and considers the death of Maximus a crime. The bishop's authority was to allow the dispute between Austenius and himself to be settled by (secular) arbiters, or should leave Milan. Ambrose declined to do either. To employ the people who guarded the Portian basilica in which he was in a way imprisoned, Ambrose had introduced among them at this time the Eastern custom of antiphonal song [Sermo de basilicis tradendis (Migne, xvi. 1907), esp. c. 34; August. Conf. ix. 7]. Ambrose's victory over Justinian was completed by the miracles (especially the alleged healing of a blind butcher named Severus) attending his discovery of some gigantic bones, which he believed to be those of two brother martyrs, Protasius and Gervasius, and of whose localization he had a 'present' or vision. The discovery of these relics was welcomed with enthusiasm by a church somewhat barren of local martyrs. In spite of their removal they were soon transferred under the altar of the new basilica then awaiting dedication, which Justinian had claimed, and which Ambrose now called by their name [Ep. xxviii.; August. Cit. Dei. xxviii. 6, Conf. ix. 7; Paulin. Vitæ, cc. 14, 15; for Ambrose's view of the miracles, Ep. xxii. 17-20].

Realizing its hopelessness, Justinian abandoned the struggle, the more readily that he needed the bishop's help. In 387 she requested Ambrose again to act as her ambassador with Maximus (de Obitu Valentin. 28). It was probably on this second visit to Trèves that Ambrose refused to communicate with the followers of the Spanish bishops Ithacius and Idatius, because they had persuaded Maximus to sentence and torture to death Priscillian and certain of his followers as heretics (see Priscillianism), and also because they held communion with Maximus, the slayer of Gratian. We see the same resoluteness in his refusal to give Maximus at the first interview the customary kiss of peace, and in his demand for the body of Gratian. We need not wonder that his embassy was unsuccessful, and that Ambrose was 'himself thrust out' of Trèves (Ep. xxiv.; and for Ithacius, etc., cf. Ep. xxvi. 3). Maximus crossed the Alps (Aug. 387), and for a while was a thorn to St. Ambrose. During this usurpation Ambrose withdrew from the city;
henceforth undisturbed. During the narration of Engenuis (392-394), whom Arbogast the Frank, after strangling Valentinian II, took to Rome, Virgil (May 15, 29 B.C.-May 19, 7 B.C.) was raised from the professor's chair to the purple, Ambrose retired to Bologna and Florence and stood loyally by Theodosius, in spite of all the friendly overtures of Engenuis. In England he was quoted for the danger of the recrudescence of paganism, as part of his political programme (Ep. ivii.; Paulin. Vita, 26, 31). No one, therefore, rejoiced more than Ambrose in Theodosius' victory, his gift of the panoply of the Emperor and at his majestic headdress (Ep. Wipchen 9, Sept. 8, 594 (Epp. Ixvi. and ivii.; Enarr. in Psalm xxxvi. 22; Paulin. Vita, 26-34; August. Civ. Dei, x, 26), though he was careful to intercede with Theodosius not to punish the people in general. A few months later, Theodosius died at Milan (Jan. 17, 395), in his last hours sending for Ambrose and commending his sons Arcadius and Honorinus to his care (Amb. de Obita Theod. 35). It was Ambrose who in the presence of Honorius pronounced over the dead Theodosius the funeral oration. The death of Ambrose two years later (Good Friday, April 4, 397) was more than the passing of a great bishop: 'In his death we lose both the valiant and ill-fated Stilicho (Paulin. Vita, 45). Ambrose was buried by the altar of the great church which he had built and consecrated to Protasius and Gervasius (see supra), but which now bears his own name (S. Ambrogio).

2. Influence.—The reputation of Ambrose must always rest upon his courage and skill as a practical administrator of the Church in most troublous times. In spite of sacrificial claims which later were to bear much fruit, few would grudge him the tribute of their admiration. He combined the loftiest qualities of the Roman senator with the goodness and self-denial of the true Christian. Though his methods may not always commend themselves to our modern notions, in his results Ambrose was usually in the right. He saved Italy from Arianism, and restored her to the faith. Even the growth of sacrificial claims was not without its services. In the approaching barbarian deluge it was no small gain to civilisation that there was a power before which tyranny should quail. This is one side of his famous saying at the Council of Aquileia, 'Sacerdotes de laeicis judicare debent, non laicis de sacratibus' (Gesta Conc. Aquil. 51; see supra, p. 579). The other side is its development into the deeds and theories of Huss and Calvinism.

By his introduction of antiphonal singing (on the details of which see Groves' Dict. Music, new ed. s.e. Antiphony, Ambrosian, Gregorian), Ambrose enriched the Western Church far beyond. His own hymns, though repeatedly imitated in later days (see the full list of hymns falsely attributed to Ambrose, Migne, PL xvii. 1171-1222), are few in number, according to the testimony of the primitive editors not more than twelve in all (primarily in Migne, xvi. 1410), but of great interest and value. Their construction is uniform: 8 strophes in Iambic acastatic diatonic meter (in-um-um-a). The inscription to death of Ambrose (Ep. De Dieu) as composed at the baptism of St. Augustine is a legend of late growth. His morning hymns, Aeterno rerum conditor, Splendor patrum gloriosa (O Jesu, Lord of hosts), and his evening hymns, Confiteretur omnium, his Christmas hymn, Veni redemptor gentium, and his hymn, O lux beata Trinitas, are permanent possessions of the Church universal (Lrench, Sacred Art. Poetry, 80-86; Julian, Dict. Hymn. 56 and s.e.).

The reputation of Ambrose as a writer and thinker must not be rated high, in spite of his being regarded as one of the four Latin Fathers of the Church. Gibbon is correct: 'Ambrose could not better than he could write. His compositions are . . . ornaments. . . . It is a just praise of this copious elegance of Lactantius, the lively wit of Jerome, or the grave energy of Augustine' (iii. 175 n.). As a thinker he is completely overshadowed by his great convert St. Augustine, whose baptism in S. Ambrogio, at his hands, is one of the great spiritual events of the world (April 25, 387). But his influence was strongly exerted in certain directions, some of which we may discern all the way back to the school of Ancil. His extravagant regard for relics (Gervasius, supra), and his enthusiasm for virginity (see especially the three books de Virginibus addressed to his sister Marcellina) and asceticism were signs and times and indications of the future. His theory of the Sacraments (de Sacramentis libri sex) tended to the emphasis of materialistic conceptions; for instance, he praises his brother Satyrus for tying a portion of the Eucharist round his neck when shipwrecked (de excessu Satyri, i, 43, 46). He deduces the necessity of daily communion from the clause of the Lord's Prayer (cuius est superius; superubasubstabilis, Vulg. adjuncta). In the Epp. (e.g. Epp. 349) he has developed in medieval theology; cf. Abelard, supra, p. 109). His sermons are remarkable for their manliness and sober practicalness, enforced at times by felicitous eloquence. His letters are more valuable as materials for the historian than because of any charm or personal revelation. His expositive writings, as we might expect from his lack of special study, contain little that is original, and are excessively biassed according to the fashion introduced by Origen (cf. August. Conf. vi. 4). But his knowledge of Greek enabled Ambrose to enrich Latin theology with many quotations from the Eastern Fathers, e.g. Basil and Gregory of Nyssa. Jerome, in fact, by reason of his dependence on these sources, especially Basil, compares him to a crow decked out in alien feathers (Rutilius, Insect. ii). We see this dependence in his de Bono Mortis (The Blessing of Death), written about 357, in which his exceedingly mild view of the future punishment of the wicked is plainly indebted to Fourth Eusebius. 'It is more serious,' he writes, 'to live in sin than to die in sin' (op. cit. 25). Nevertheless he 'does not deny that there are punishments after death' (ib. 33).

As a moral teacher Ambrose is seen at his best. His de Officiis Ministerorum, founded on the de Officiis of Cicero, is an attempt to establish a Christian ethic on the basis of the old philosophic classification of four cardinal virtues (virtutes principales)—prudentia or sapientia, justitia, fortitudo, and temperantia (l.c. i, 24). Of these he identifies prudentia with a man's relation to God ('pietas in Deum'; de Offic. i. 27). The classification is essentially faultless, as it leaves no place for humility, a grace unrecognized by pagan writers, and which Ambrose has difficulty in bringing in (de Offic. ii. 27). Virtue, he claims, is not the summum bonum of the Stoics, but rather the means to it. Ambrose further follows the Stoics in distinguishing between the external duties ('officium medium aut perfectum'; constitutio evangelica et praecepta (de Offic. i. 11, 36 ff.; iii. 2)), a doctrine later developed into the medieval 'works of supererogation'. He has been accused of his excessive zeal in the Montanist matter. The taking of the oath is unconditionally rejected; the Christian should not even defend himself against robbers (l.c. iii. 4), though, remembering his Old Testament, he does not go so far as absolutely to condemn the soldier (l.c. i. 40). As was usual in the early Church, he disapproves of capital punishment, though he shows that he was somewhat embarrassed by the position
in the matter of Christian judges (Ep. xxv.).

We see his leanings to monasticism in his declaration that "céleste" is doubt, borrowed from the Greeks, but "célestial" is a more correct translation. His attempt to resolve the question by means of a comparison between the words "céleste" and "célestial" is thus the partial adjustment of a wrong, and, as such, able to cancel sin (de Elia et jejuniis, c. 29, from Tobit 12:2; Serino de ecleomiasis, 30, 31).

We see the new note of humanity in his declaration that the tera "démons" must not be expelled from a city in time of famine (de Offic. iii. 7).

LITERATURE.—A. For the life of Ambrose we are dependent on the materials to be found in his own works (first arranged by Eusebius in his "Life"), the vast number of sources, all dedicated to Augustine, is most unsatisfactory, and full of the absurdities prodigies (with which cf. the contemporary Sulpic. Severan. P. Martini (ed. Hain, CSEL), cc. i, 3, 7, 8, 16; Dial. l. 24, 25, ii. 3, 5, 6, 7). It will be found in Migne, PL xiv. 27-46; or ed. Bede. App. An anonymous life in Greek (Migne, PL xiv. 46-60) is valueless. Other sources of knowledge from Augustine, etc., are indicated in the text.

B. The chief edition of the works of Ambrose, including a great many that are spurious, are (1) the ed. of Erasmus, exp. the Basel ed. of Prosen in 1527; (2) the Roman ed. in 6 vols., 1585-1587; (3) the Benedictine ed. of du Fresle and le Noury, 1688-1699; (4) Migne, PL xiv-xv. (the chief); (5) the newly spurious; (Migne has excellent notes); (6) the new ed. in progress (text only) in the Vienna CSEL (the Epp. unfortunately as yet [1897] not printed) (7) the ed. of Balderston (Ottob. 1576).

C. Of modern works, mention may be made of Th. Forster, Amb. B. v. Wilden (1844); H. M. Studia Ambrosiana (1850); Frueh, A. v. Wilden, Amb. (1869); F. A. D. Deutscher Leherr, on, S. und S. und S. (1877); P. Wald, Der Einfluss der italienischen Literatur auf die engl. Dicht., 3rd ed. (1885). For the historic setting, Gibson, ed. Bury; and Hodgkin, Italy and her Invaders (1896, vol. i), are indispensable.

H. R. WORKMAN

AMERICA (Ethnomology, Religion, and Ethics*).

—Although many of the ethical questions presented by the Amerinds or American aborigines, as wrongly named "Indians" by the Spanish discoverers, still await solution, the more fundamental problems affecting their origin and cultural development may be regarded as finally settled. Little is now needed of the "American school," which derived the Amerinds and all their works from the Eastern Hemisphere in comparatively recent times, that is, when the inhabitants of the Old World—Egyptians, Babylonians, Malays, Hindus, Chinese, Japanese—were already highly specialized. Such an assumption necessarily gave way when more critical study of the American physical and mental characters, religious and social systems, etc., are not in contact with those of the Old World, but pointed rather to independent local growths, owing nothing to foreign influences except the common germs of all human action and reaction. On this point we may, for instance, be shown by the survival of some language closely traceable to an Eastern source; or some old buildings obviously constructed on Egyptian, Chinese, or other foreign models; or any inscriptions on such buildings as might be interpreted by the aid of some Asiatic or European script; or some sailing craft like the Greek trireme, the Chinese junk, or Malay prau, or even the Polynesian outrigger; or some such economic plants and products as wheat, barley, rice, silk, iron; or domestic animals such as the ox, goat, sheep, pig; or pottery; things which, not being indigenous, might supply an argument at least for later intercourse. But nothing of the sort has been found, and the list might be prolonged indefinitely without discovering any cultural links between the two hemispheres beyond such as may be traced to the Stone Age. In the domain of archaeology, as in that of the ethnology of mankind. Mention is made of the oil-lamp, which, however, is confined to the Eskimo fringe, and was doubtless, borrowed as a beverage from the Siberians in Greenland. There are also the Mexican pyramids, which have been likened to those of Memphis by archaeologists who overlook the fundamentally different details, but neglect the fact that the Toltecs had ceased to build pyramids some 3000 years before the Mexican teocalli were raised by the Toltecs. Lastly, recourse is had to the Aztec and Maya calendrical systems, although they were, not Oriental borrowings, as they have never been so; but normal local developments on lines totally different from those of the Eastern astronomers.

Mainly on these grounds, the late J. W. Powell finally rejected the Asiatic theory, holding that there is no evidence that any of the native arts were introduced from the East; that stone implements are found in the Pleistocene deposits everywhere throughout America; that the industrial arts of America and Asia are not separate, but are different, so that normal local developments on lines totally different from those of the Eastern astronomers.

Recent exploration, especially in South America, supports the view that this "general homogeneity of type, customs, social and religious institutions, which separates the Amerindians from the rest of the world, and held in isolation by a change in land distribution and by the continued glaciation of the northern portion of the continent" and such "welded into an ethical unity, which was impressed by restive influences in modern times" (The North Americans of Yesterday, 1901, p. 458). Hence the general homogeneity of type, customs, social and religious institutions, which separates the Amerindians from the rest of the world, and held in isolation by a change in land distribution and by the continued glaciation of the northern portion of the continent; and thus "welded into an ethical unity, which was impressed by restive influences in modern times" (ib. p. 358).
in the Eastern Hemisphere. The Atees, following the still bridged Doring route, appears to have arrived with speech, to have taken to language, and to have developed along the lines of human. The picture-writing presented by the Basques, while the curious system of the Tchoukot inscriptions, in which the Mongolic (Asiatic) characters are perhaps more marked than the Caucasian (European), follows the development of a similar order. Thus the complication is reddish-brown, coppery, olive or yellowish, in light, and black in heavy; while the hair is uniformly black, long, often very long and round in section, like that of all Mongols. The high cheek-bones, too, point to Mongol descent, as does also the low stature—5 feet 8 inches and under to 5 feet 6 inches—in the west (Thinlsets, Eskimos, Haidas, Pueblos, Aztecs, Peruvians, Aymaras, Arakanians). On the other hand, the large convex or aquiline nose; the straight though rather small eyes, never oblique; the tall stature (5 feet 8 inches) evident from the fact that, as we shall see, they are exclusively *dominated by the customs and religious ideas of the Amerind race, which were practically the same everywhere in different stages of development. In picture-writing we can trace the growth of letters, so by the aid of Amerind sculpture and carving we have a line of art progress from infancy to the present time" (op. cit. p. 192.).

Hence even a stronger proof of independent growth in a long-secluded region is presented by the Amerind languages, not one of which has yet been traced to a foreign source. From all other forms of speech they differ not only in their general phonetic, lexical, and structural features; they differ in their very morphology, which is neither agglutinative, inflecting, nor isolating, like those of the Old World, but holophrastic or poly-synthetic, with a tendency to fuse all the elements of the sentence into a single speech act of prodigious length. Here culture makes no difference and the same holophrastic character is everywhere presented by the rudest as well as by the most highly cultivated tongues current between Alaska and Patagonia, by the Aztecs of the south and the Patagonians, no less than by the Eskimo, Algonquin, Cherokees, Amazonian, Ipuria, and Tehuelche of Patagonia. Yet of this remarkable linguistic phenomenon not a single instance has been recorded, perhaps, in the Eastern Hemisphere. There is incorporation with the verb, as in Basque and the Mongol-Turkic family, always limited, however, to pronominal and purely formative elements. But in Amerind speech there is no such limitation; and not merely the pronouns, which are restricted in number, but the nouns, with their attributes, which are practically numberless, all enter necessarily into the verbal paradigm. Thus the Tarascan of Mexico cannot say *haponi, 'to wash,' but only *hopocuni, 'to wash the hands,' *hopocini, 'to wash the ears,' and so on, always in one synthetic form, which is conjugated throughout, so that the conjugation of *haponi, *hopocuni, *hopocini, is endless. Specimens only can be given, and they fill many pages of the native grammars without even approximately exhausting a theme for which six or eight jargonics, or alternately, words in English or Danish. The process also involves much clipping and phonetic change, as in the colloquial English *halfpenny worth, *I would, etc., forms which give just a faint idea of the Amerind permutations.

It is obvious that such a linguistic evolution from a common rudimentary condition of speech, as in the Pleistocene Age, implies complete isolation from foreign contacts, by which the curious process would have been disturbed and broken up, and also a very long period of time, to expand and consolidate the system throughout Amerindia. But time is perhaps still more imperiously demanded by the vast number of stock languages which form another remarkable feature of the American linguistic field. Some are known to have died out since the Discovery; but many others, variously estimated at from one to two hundred, or perhaps more than are found in Asia and the whole of the Eastern Hemisphere, are still current, all differing radically in their phonology, vocabulary, and general structure—in fact, having little in common beyond the striking likeness of their word-stems and very limited formative possibilities. But even this statement conveys a fair from adequate idea of the astonishing diversity of speech prevailing in this truly linguistic Babel. Powell, who has determined nearly sixty stocks for North America alone, shows that the practically distinct idioms are far more numerous than might be inferred even from such a large number of mother-tongues. Thus in the Algonquian family there are quite forty members differing one from the other as much as, and sometimes even more than, for instance, English from German: in : ; in ; in ; and in Shoshonean, a still greater number (op. cit. andpong family, of the Algonquian, and the principle has been extended by Dr. N. León to the Mexican and Central American families, and by A. H. Keane to those of South America. Beyond all reasonable doubt, of the latest information, comprises seventeen stocks, including the great and widespread Nahuahtlan (Axeican) and Maya-Chichéan families, and ranging from Lower California and the Rio Grande del Norte southwards
to Panama (Familias Linguisticas de Mexico, etc., Madison: National, 1902). The imperial expeditions have already yielded over fifty stocks, of which the more important are the Quichua-Aymaran, the Tupi-Guaranian, the Cariban, Arawakan, Guaranian, and Aruacan. But some of these stocks have become secondary groups, such as the Ticuan, Moxosan, and Pururan, each of which will, on more careful analysis, probably be found to comprise several stocks (Keane, Central and South America, New York, 1885). The geographical limits of these groups are also rapidly becoming better defined, and the geographical distribution of the different stocks has received much more study than formerly.

So uniform are the physical characters, that systematists have failed to establish an intelligible classification of the Amerind races on strictly anthropological data. Hence all current classifications are mainly linguistic, and make no claim to scientific accuracy. Thus Sir E. H. Thompson declares that for Guiana, where 'it is not very easy to describe the distinguishing physical characters,' and where 'there are no very great differences other than those of language,' this factor 'must be adopted as the base of classification' (Among the Indians of Guiana, 1883, p. 161). At the same time, the linguistic grouping is convenient, and often more important in the northern fringe, where, owing to the astonishing tenacity with which the Eskimos cling to their highly poly-synthetic language, their pre-historic migrations make themselves felt from Greenland and Labrador round the shores of the frozen ocean to Alaska, and even across the Bering waters to the opposite Asiatic mainland. So with the Algonquins, whose cradle is shown to be about the Hudson Bay lands, where, the most archaic of all Algonquian tongues, still survives.

Perhaps even more striking is the case of the Siouans (Dakotans), hitherto supposed to have been originally located in the prairie region west of the Mississippi, but now proved to have migrated thither from the Atlantic slope of the Alleghanian uplands, where the Catawbas, Tutelos, Wocos, and other Virginian tribes still spoke highly archaic forms of Siouan speech within the memory of man. So also the Niquirans, Pipils, and others of Guatemala and Nicaragua, who are known to be of Nahuan stock, not from their somatic characteristics, but solely from the corrupt Aztec language which they have always used in the northern fringe.

As the tribe is thus identified only or mainly by its speech, it becomes important to determine the distribution of the Amerind tongues in their several areas. But though the census of Powell's families, about forty altogether, are crowded in great confusion along the narrow strip of seaboard between the coast ranges and the Pacific from Alaska to Guatemala; key notes are dotted round the Gulf of Mexico from Florida to the Rio Grande, and two disposed round the Gulf of California, while nearly all the rest of the land—some six million square miles—is held by the six widely-diffused Eskimos, Athapascans, Algonquians, Iroquoians, Siouans, and Shoshonean families. Similarly in Mexico, Central and South America, about a dozen stocks—Opta-Piman, Nahuanian, Mixteco-Spanish, Maya-Cholan, Arawakan, Tupi-Guaranian, Tapuyan (Gesan), Tacanan, Aymara-Quechuan, Araucan in the south—are spread over many millions of square miles, while scores of others are restricted to extremely narrow limits. The system has been advanced to explain this strangely irregular distribution, and, at least in the North American prairie lands, the Venezuelan savannahs, and the Argentine pampas, a potent determinant must have been the scaring action of fierce, predatory steppé nomads, so that here, as in Central Asia, most of the heterogeneous groups huddled together in confined areas may perhaps be regarded as 'the sweepings of the plains.' The chief stocks, with their many groups, will be found in art. Ethnology, Conspectus.

None of the Amerind languages has ever been reduced to written form except by the missionaries, and in one instance by a Cherokee native (Sequoyah or George Gist) using a group of characters, such as the Tucanos, Moxosan, and Pururan, each of which will, on more careful analysis, probably be found to comprise several stocks (Keane, Central and South America, New York, 1885). The geographical limits of these groups are also rapidly becoming better defined, and the geographical distribution of the different stocks has received much more study than formerly.

The art is perhaps the most perfect of the kind anywhere devised, since the scratchings are quite legible, and handed round to be read as we might hand round a printed or written book. A few descriptive and illustrative notes, 'towards the Banneux in their cave paintings; and the evil spirits which swarm everywhere are also thwarted by being sketched in fanciful forms on the calabashes (Science, July 1, 1880).

Far more advanced than any of these primitive methods are the Aztec, the Zapotec, and especially the Maya pictorial codices, painted in diverse colours on real native (maguey) paper, and mainly of a calendrical or astrological character. Several have been reproduced in facsimile with long commentaries by Förstemann and Seler, but still remain undeciphered, although they express numerales quite clearly. They had also reached the robust state, but apparently fell short of a true phonetic system, despite the claim of Bishop Linda's 'alphabet' to be regarded as such. There are also long mural inscriptions on many of the temples and other structures of Mexico, Guatemala, and Yucatan, and elsewhere in Chiapas, Yucatan, and Honduras. But these also have so far baffled the attempts of Mr. Cyrus Thomas and others to interpret them, although the ciphers are a highly artificial form of the current alphabetic systems, and represent the appearance of a real script. It is admitted that many have phonetic value, but only as rubbies, and the transition from the rubus to true syllabic and alphabetic systems has apparently not been made by any of the Amerinds. But even so, these codices and wall writings, believed to embody calendrical systems on a level with the reformed Julian, represent their highest intellectual achievements, while the palaces and temples in the above-mentioned districts rank as their greatest architectural triumphs, rivalling only by those of the Chimús, Quichuans, and Aymaraes in Peru and on the shores of the Titicaca.

Elsewhere there is nothing comparable to these monumental remains of Central and South America, and the less cultured Amerinds of North America have little to show of aesthetic interest. Beyond their beautiful ceramic products, the earth-mounds thickly strewn over the Ohio valley and some other parts of the Mississippi basin, and the casas grandes of the Pueblo Indians in New Mexico and Arizona are the chief causes which must have been the scaring action of fierce, predatory steppé nomads, so that here, as in Central Asia, most of the heterogeneous groups huddled together in confined areas may perhaps be regarded as the sweepings of the plains. The chief stocks, with their many groups, will be found in art. Ethnology, Conspectus.
Keresan, and Zuñi tribes, driven to the southern uplands by the Apache, Navajos, and other predatory nomads of the plains. Their communal homes began to grow out of the kivas that these tribes built. The kivas of the Zuñis are a high state of savagery; that they were skilled in several arts, but excelled in none; that they were not even semi-civilized, much less possessed of the "lost civilization with which they have been credited" (Primitivo Men in Ohio, 1892, p. 32). Hence the general inference of Cyrus Thomas that there is nothing in the ruins that the modern Indians could not have done, that many have been erected or continued in post-Columbian times, consequently by the present aborigines, and that there is therefore no reason for attributing them to any other race of which we have no knowledge (Twelfth An. Report of BE, Washington, 1894). Taking a broader view of the whole horizon, Dr. Haney ventures to suggest that the mound-builders, the Pueblo Indians, and the cliff-dwellers, all belong to the historic race, whose prototype may be a fossil Californian skull from the Calaveras nurseries graven assumed to be of Pleistocene age (L'Anthropologie, 1896, p. 149).

For most of these Northern Amerinds a higher moral standard may perhaps be claimed than for the more civilized Central and South American peoples. Our general impression of the native American, white men, was that the present and the future of the American Indians was, and is, a problem of government control. The Iroquois League maintained the 'covenant chain' with the British unbroken for over a century; the Delawares never broke faith with Penn; and for two hundred years the Hudson Bay Company have traded all over the northern part of the continent, without a serious rupture with any of the Chipewyan, Cree, and other rude Athapaskan and Algonquian tribes.

We are blind to our own shortcomings, and exaggerate those of the Amerind. In estimating their traits we do not regard them enough from their own standpoint, and without so regarding them we cannot understand them. The hatred and fear of earlier days was by no means bloodthirsty, and the scalping-knife was no more the emblem of pre-Columbian society than the bayonets is of ours. In most localities he achieved for all, what all are with us still dreaming to obtain,—'liberty and a living,' and his methods of government possessed admirable qualities (op. cit. p. 335 f.).

The aborigines, however, were not free from the taint of cannibalism, which, if it assumed a somewhat cerimonial aspect in the north, was widely practised by many of the Brazilian, Andean, Colombian, and Amazonian tribes in the south, without any such religious motive. Thus the nearly extinct Cacique, between the Amazon and Guayas rivers, were reported, like the Congo negroes, to 'fatten their captives for the table.' Their Darien neighbours stole the women of hostile tribes, cohabited with them, and brought up the children till their fifth or tenth year, when they were eaten with much rejoicing, the mothers ultimately sharing the same fate (Cieza de León). The Cocoms along the Rio Maranon ate their own dead, grinding the bones to drink in their fermented liquor, and explaining that 'it was better to be inside a friend than to be swallowed up by the cold earth' (Markham, JAF, 1895, 233 f.). The very word cannibalis is a variant of carríbal, derived from the man-eating Cariris; and the universal was the custom in New Granada, that 'the living were the grave of the dead; for the husband has been seen to eat his wife, the brother his brother or sister, the son his father; captives also are eaten roasted' (Steinmann, Ethnographia Ammìtiana, p. 19). But the lowest depths of the horrible in this respect were touched by what J. Nieuwenhof relates of the wide-spread East Brazilian Tapuya savages, although some of them were nearly bared along the coast by the holder of some of the primitive Guarani tribes in Paraguay (ib. pp. 17–18). The Seri people of Sonora, most debased of all the Northern Amerinds, are certainly cannibals attained; perhaps McGehee's {379} a high state of savagery; that they were skilled in several arts, but excelled in none; that they were not even semi-civilized, much less possessed of the 'lost
kind prevailed in many tribes; _always, ostensively_, a religious ceremony, not a means of satisfying hunger. The victims were offended and feasted, and generously treated for some time before being executed" (Dellenbaugh, p. 388). Yet Payne declares that the Aztec custom of consuming captives at religious feasts was in reality a means of procuring rich food and thus maintaining the supply, and that perpetual war was waged mainly to obtain prisoners for this purpose (History of the New World, etc., ii. pp. 435, 493, 601).

The mound-builders, as described by the northern aborigines is specially applicable to the Iroquois, in many respects the finest of all the Amerinds,—unsurpassed, says Brinton, by any other on the continent, 'and I may even say by any other people in the world. In language, eloquence, in fortitude, and in military sagacity they had no equals. They represented the highest development the Indian ever reached in the hunter state. They were developed under their social system that the Iroquois can scarcely be said to have a criminal code. Theft was barely known, and on all occasions, and at whatever price, the Iroquois spoke the truth without fear, courage, pride, or interest (Race, p. 82). Even in the literary sphere they rank high, as attested by Sequoyah's most ingenious syllabic script (see above), and by the stirring poetic effusions of Miss Pauline Johnson (Teka-thonawake), who can thus sing of the departed Amerind's 'Happy Hunting Grounds':

'Into the rose-gold westland its yellow prairies roll,
World of the bison's freedom, home of the Indian's soul.
Roll out, O sea, in sunlight bathed,
Your plains wind-tossed, and grass-enswathed.
What would his lovely faith condone?
Who enlists not the Red-skinn's soul
Sailing into the cloudland, sailing into the sun,
Into the crimson portals ajar when life is done.'

(The White Wampum, 1903)

This vision of a cloudland, the glorified abode of departed souls, is a purely anthropomorphic notion common to all the primitive Amerind peoples. It has nothing to do with the supernatural, or with rewards and penalties after death, or even with the development of the higher classes of the human race, but to be conceived as a purely natural continuation of the present life, freed from its cares and troubles. Sky-land is only a distant part of this world, which is better yet,—it is a part of the whole earth, and the departed continue to live in a state of absolutely material comfort and happiness, exempt from all present anxieties, and, so to say, without a thought for the morrow.

'The key to the whole matter may be provided by remembering that these (Guiana) Indians look on the spirit-world as exactly parallel to, or more properly as a part of, the material world known to them. Spirits, like material beings, differ from each other only, if the phrase be allowed, in their varying degrees of brute force and brute cunning, and none are distinguished by the possession of anything like divine attributes. Indians therefore regard disembodied spirits not otherwise than the beings still in the body whom they see around them' (Sir E. J. Thorndyke, Among the Indians of Guiana, 1833, p. 139). Such is the first stage of the purely animistic religions common to the more primitive Amerind peoples in North and South America. The essential point is that man remains man in the after-world, at least he is allowed to follow their ordinary pursuits under more pleasant conditions. Thus the Eskimo has his kayak, his harpoons, and great schools of cetaceans; the prairie-redskin his bow and arrows, his hunting grounds, and the like. Bisons, and so on. Thus is explained the secondary part played by ancestor-worship, and also the great variety of burial rites amongst the Amerinds. If a man is not quite so rich, he may be carefully shipped; and if he is still interested in human pursuits, he needs attendance and attendants. The Guiana native is buried in his house, which is then deserted, so that he may visit his former dwelling without interference from his survivors. He will also need his hammock and other necessaries, which are accordingly provided with him. In the northwest he was accompanied by a slave, who, if not dead in three days, was strangled by another slave. In Mexico, the custom of burying live slaves with the dead was general. Elsewhere they were wrapped in fine fur, or in fine woollen blankets and matting, to keep them warm. Then there were burials in pits, mounds, cists, caves; also cremation, embalming, and sepulture in trees or in the water, or in the sand, or in the earth, and then turned adrift. In Tennessee, old graves are found which were made by lining a rectangular space with slabs of stone, exactly as during the reinderv period in France. And in Ancon, on the coast of Panama, families were mummified, clothed in their ordinary garb, and then put together in a common tightly corded pack with suitable outward adornments, and all kinds of domestic objects inside (Narratives of Ancon in Peru, A. H. Keane's Eng. ed. 3 vols., 1880-1887).

In the evolution of the Amerind Hades, the next step is the recognition of two separate departments, one for the good and the other for the wicked, more often consigned to the nether world, but both at times relegated to the same shadowy region of difficult access beyond the grave. Thus the Saponi (eastern Siouans) held that after death both good and bad people are conducted by a strong guard into a great road, along which they journey together for some time, till the road forks into two paths—one extremely high, the other stony and mountainous. Here they are parted by a flash of lightning, the good taking to the right, while the bad are hurried away to the left. The right-hand road leads to a delightful warm land of perennial spring, where the people are bright as stars and the women never die. Here are deer, turkeys, elk, and bison innumerable, always fat and gentle, while the trees yield delicious fruits all the year round. The rugged left-hand path leads to a dark and wintry land covered with perpetual snow, where the trees yield nothing but icicles. Here the wicked are tormented a certain number of years, according to their several degrees of guilt, and then sent back to the world to give them a chance of meriting a place next time in the region of bliss (J. Mooney, The Siouan Tribes, etc. p. 48).

This discrimination between the two abodes thus obviously coincides with the growth of a higher ethical standard, such as is seen even amongst the pitiless Aztecs with their frightful religious orgies. If the Spanish historian, Sahagun, can be trusted, their moral sense was sufficiently awakened to distinguish between sin and crime, and they even recognized a kind of original sin, which was washed away by cleansing waters. Xochiquetzal, the 'Mexican Eve', the 'first sinner', was deprived of weeping for her lost happiness, when driven from Paradise for plucking a flower; and the Earth-goddess Tlacuiteotl was represented as an embodiment of sin, which was 'from the beginning of time.' Hence the newborn babe is conducted to a ceremonial washing, with the words, 'My son, come unto thy mother, the Goddess of Water, Chalchiuhltlicue, thy father, the Lord Chalchiuhltlicue, and enter the world, but he who washes may it cleanse thee from the evil which thou hast from the beginning of the world' (E. Seiler, Aubin Tolotammati, A. H. Keane's Eng. ed., 1901).

A further development of this respect for the moral sense, is seen in the beautiful vision of the Araucanian people, who consign the departed spirits, not to an invisible heaven or hell, but to the visible
constellations of the starry firmament. Their forefathers are the bright orbs which move along the Milky Way, and from these ethereal heights are still able to look down and keep watch over their earthly subjects. May it not be that the great gods of these Southern Amerindians had a far higher motive than the hope of reward or the fear of punishment, to avoid wrong-doing and to practise all the virtues, that is, all the principles of a true religion. Thus, without any legal codes, pains, or penalties, the social interests were safeguarded, while even personal conduct was controlled; for who would dare to wrong his neighbour beneath the glittering eyes of his ancestors? Scarcely any more complete fusion of the ethical and religious systems has elsewhere been realized (L'Anthe, 1884). It will be seen at once that these Araucanian ancestors, though warded aloof, still remained human, with human cares and interests, and hence could not be worshipped as gods. The Delawares also would say to a dying man, to comfort him, 'You are about to visit your ancestors, or, as we might say, you are about to go with the chief god who has any sense of an apocalypse to the expression. So it is nearly everywhere amongst the Amerinds, and Herbert Spencer's broad generalization that all religions are as an ancestor-worship ('ghost propitiation') does not apply at all to the New World. His further statement (Eccles. Instit., p. 657), that 'nature-worship is but an aberrant form of ghost-worship, has here to be reversed, since the prevailing Amerindian religions were various forms of what American writers designate as zotheism, that is, the deification, not of men, but of animals. Dellenbaugh says emphatically: 'Savage races worship animal-gods and natural objects personified as animals... as in the case of the thunder and lightning generally attributed to the Amerinds to the mysterious 'thunder-bird' (op. cit. p. 390). In their creation myths the aborigines themselves are sprung from animals: three, say the Mohicans, a bear, a deer, and a wolf; one, say the Delawares, the 'Great Hare,' called the 'Grandfather of the Indians.' Their personal and totemic gods were everywhere conceived to be in the form of animals, and to these various acts of homage were made, thus leading up to the universal zotheism common to most American tribes.

But there is no absolute uniformity, and amongst some of the more advanced nations there occur instances of what may be called hero-worship, resulting, as elsewhere, in some form of apotheosis or ancestor-worship. Thus the Aztecs have their Quetzalcoatl, answering to the Mayan Kukulcan, both meaning the 'bright-feathered snake,' and both appearing under two forms, as a deity and as an historical person. Hence they may very well have been real men who arose as teachers and civilizers amongst their people, and became deified as their good deeds became traditions and memories. To them corresponded the Quiché Gokumatz (same meaning), one of the four chief gods who created the world; Volon, the eponymous hero of the Tzends; the Algonquian Michabo; the Iroquoian Iokécha, and many others. But the Andronic temas was essentially a sun-worship. In the three extant Maya codices—the Dresden, Paris, and Madrid—Dr. P. Schellhas could find only about fifteen figures of gods in human form and about half as many in animal form, and these figures 'embodied the essential part of the religious conceptions of the Maya peoples in a tolerably complete form' (Deities of the Maya Manuscripts, 1905, p. 7). Most of the gods here figured—the Death-god, the God of the Maya culture hero, the Night, Sun, War, Snake, Water, and Storm-gods—and their counterpart in the Aztec Olympus, which may have a few others of its own. But the more primitive Amerind religions cannot boast of more than five or six; and in 1616, before contact with Europeans, the chief of the Potomac Algonquians told the missionary that 'five gods in all; our chief god appears often unto us in the form of a mighty great hare [see above]; the other four have no visible shape, but are indeed the lesser deified brothers of the great god of the earth' (W. Strachey, Historie of Travailke into Virginia, p. 98). Frequent mention occurs of these four deities of the Four Cardinal Points, or of the Four Winds, or of four invisible powers, bringers of rain and sunshine, rulers of the seasons and the weather, with a fifth represented as greater than all, 'who is above,' and is identified by Brinton with the god of Light, of whom 'both Sun and Fire were only material emblems' (The Lénape and their Legends, 1885, p. 65). This is the Mansion of the early writers, who is described by the missionaries as the Creator, the Supreme Being, the true God of the really monotheistic aborigines. But this Mansion, which of the New Jersey natives (Amer. Hist. Record, i. 1872), and in the Delaware Waled Onom, edited by Brinton (Philadelphia, 1888), there are all kinds of groups of names of manitous, 'manitous,' or 'manitou to manitous,' who was 'a manitous to men and their grandfather,' and 'an evil Manitous,' who makes 'evil beings only, monsters, flies, gnats, and so on. The claim of this Manitous, the grandson of the Delawares, to rank as the Eus Suprennum must therefore be dismissed with the like claims of the Dakotan 'Wakanda' and other Amerindian candidates for the highest honours. On the general question of a Supreme Being it is pointed out by Gatschet that the deities of the early Algonquian natives are better known than the so-called 'gods' of most of the present North American aborigines. This is due to the observations made by Capt. John Smith, Strachey, Roger Williams, and a few other pioneers prior to Christian influences. The first preachers translated 'God' and 'Jahweh' by the Algonquian terms manitou, manitou, 'he is god; also manitou (whence our manitou), which simply means 'ghost' or 'spirit,' so that the plural form manitouek served to express the gods of the Bible. Here m is an impersonal prefix which is dropped in polysemous composition (see p. 375). The root ant, ant, and, i.e. any spirit, not the Spirit in a pre-eminent sense. It was equally applicable to one and all of the gentii loci, and to restrict it to one was reading into it a meaning puzzling to the natives, though required for the right understanding of the Christian and Biblical concepts. One of these gentii was Kautantow-weit, the great south-west spirit, to whose blissful abode all departed souls migrated, and whence came their corn and beans. The same root appears in K echtanait, the 'Great Spirit, which by the epithet lhcic (=great) acquired sufficient pre-eminence to be used by the missionaries for 'God' and 'Jahweh.' But great is relative, not absolute, and does not necessarily involve the idea of an Eus Supremum. K echtanait again is the K iehsan of Eliot's Massachussets Bible, and also the Tawon of Kehtanlan, 'our great god') of the Penobscots, who associated him with Hobbomock, the Evil One, thus suggesting the two principles of good and evil as more fully developed in the Waled Onom, and among the Araucanians and others. E. Winslow (Good News from New Eng., 1624) thinks K iehsan was the chief god of the Algonquins, maker of all the other gods, and himself made by none. But if there were one god, the Moonsomposum, made him K iehsan was merely the head of a pantheon, the Zeus or Diespiter of the New World. Hence he
naturally dwells above, in the heavens towards the setting sun, whither all go after death. But he had a rival, Squauntan, 'whom they acknowledge,' says Joselyn, 'but worship him they do not.' In any case, the name of Squauntan, from which the word M cascata, which the Narraganset in his mysterious sheet of paper, whom they believe in, has been explained by the sturdy character, — though it is easy to understand how the superficial inquirer, dominated by definite tribal concepts, perhaps interpreted by crafty native informants, came to adopt and perpetuate the erroneous interpretation (Fifteenth An. Report of BE, Washington, 1897, p. 182).

Nobody pretends that the sublime notion of a Creator, who created the world and its inhabitants with their undoubted animal-cult, ceremonial snake dances, and gross symbolism; or by the Cheyennes, Poncas, and allied groups, whose elaborate animal and sun dances have been so fully described by G. A. Dorsey (Field Columbian Museum Publications, Chicago, 1905). Hence nothing more is heard of a Supreme Deity till we are confronted by the Mexican Tonacatecutli who was represented as the cosmic god of the Aztecs, ruler of the world, the supreme Lord, to whom no offerings were made because he needed none. But in describing him it is suggested that the early interpreters were biased by Biblical conceptions. A more plausible view, advanced by Seler, is that Tonacatecutli was a later invention of the Nahuan rationalists, 'the outcome of philosophic speculation, of the need of a principle of causality, such, for instance, as the God of our modern theosophic systems' (Seler. Aubin Tonalamatli, 39).

The Mayas also, however advanced in other respects, were but indifferent theologians with whom the local tutelary deities still survived in their names. Appeal is likewise made to the 'Feather-Snake' god of the Huaxtecs, creator of man, but also father of the Tripeollan people, and founder of the Totonan empire, whereby his universal godhead is destroyed (see art. Toltecs); and to Piyexwac, chief deity of the Zapotecs, the Creator, the uncreated Pitaq-Cozamal, who, however, was only the first among many patrons of all the virtues and of all the vices, to whom horrid sacrifices were made (de Nadalica, Prehistoric America, p. 368). The Bochica of the Chibchas was almost certainly an eponymous hero (see art. Chibchas), and this Columbian nation, the Sun-worshipers, like the neighbouring Quichua and Peruvians, amongst whom it would be idle to look for an Ens Supremum. We are indeed told that one of the Incas had his doubts about the divinity of the sun, and a mysterious being, the Huicapatu, or supreme god, is spoken of who was worshipped under the name of Pachacamac or Viracocha, the sun, moon, and stars being merely the symbols under which its higher natures, but for the mystification involved in this conception the reader must be referred to art. Viracocha.

Thus a rapid survey of the whole field has failed to discover an Ens Supremum amongst the Amerindians, whose primitive beliefs being essentially animistic, the worship of animals greatly pre-dominating over that of ancestral spirits, which plays a very subordinate part in the American systems. Conscious features are totemism and shamanism in the north, true polytheism in the south, with higher religions, gods and goddesses, solar worship in those of South America, and various forms of lycanthropy everywhere. These subjects have here been barely touched upon, as they will be found more fully treated in special handbooks.

LITERATURE.—E. J. Payne, Hist. of the New World called America, 2 vols. 1830, 1836; A. D'Orbigny, L'Homme Ameri
atu, Past and Present, 1906; W. H. R. Bollaert, Researches in South America, 1909; J. J. von Tschudi, Relics, through South America, 5 vols. 1856-67; F. Ehrenreich, Die Ure

AMERICA, SOUTH.—The religious ideas of the savage peoples of South America are, in comparison with those of the North Americans, strikingly undeveloped. They have not advanced beyond the crudest forms grasped by the lower animals, which are as produced by the vague fear of the souls of the dead, or of the demons, which express themselves in certain natural occurrences. Their religious beliefs are thus not essentially superior to those of the Australians or the natives of the East. Want of a belief in gods, in the proper sense of the term, speaks less for the low stage of religious culture than the almost total absence of forms of worship that are not merely, e.g., prayer, sacrifices, idols, and sanctuaries.

The few un doubted traces of a real cult belong to tribes in whose case we are inclined to suspect that influence has been brought to bear on them from the side of the so-called and half-civilized peoples of the region of the Andes and of Central America. We find such traces among the Arhuacos (Kikjarga) of Colombia, the Tainos of the Antilles, the Ymacas of Eastern Bolivia, the Arnas and the native nats of Paraguay and the Pampa, which are in connection with them, especially the Guarayo group, who have also adopted numerous elements of Peruvian culture.

Of course the mythology of the South Americans can tell us of creators and world figures, but still those are within the character of natural phenomena, like the legendary figures without religious significance, without influence on man and his fate, and thus also devoid of religious worship or veneration. The Peruvian religion was the first to raise the heroes of the legends, so far as they were personifications of the sun or moon, to the position of divinities. Among the Chibchas of Colombia are to be found the first approaches to this.

The earliest reports regarding the religious ideas of the savage tribes of the time of the Conquest and the first missionaries are, in general, obscure and contradictory. While some deny all religious feeling to the Indians, others tell of reverence for God, or at least of devil-worship, and others again of the dualistic opposition of a good and an evil spirit.

On the other hand, reverence for one all-ruling highest being was expressly ascribed to many tribes. In particular the following are named: Tupan among the eastern Tucupins, Sunne among the southern Tucupins or the Guarani, Puman among the Guarani, the Quechua and Huancas, the Quequeu among the Alphones, Sochuy among the Patronogens, and others. As a matter of fact, we have in all these cases by no means to do with formalised Ideas of God. These beings are, on the contrary, mere natural demons or defiled ancestors or heroes of the tribe.

Without doubt, the demonic figures which took part in the masked dances of the Indians have
often been regarded by the missionaries as gods or devils. The festive busts, houses of the community or of the bachelors, in which the masks were preserved, were supposed to be inhabited by the gods. And yet, all the contemporary observers even at that date emphasize the absence of specific actions of worship (prayer and sacrifice), except in the above-mentioned cases of probable foreign influence from region to region of the culture. Still, the masked dances might be regarded as the first traces of a primitive culture. As the analogies among other savage peoples teach us, the ceremonies are in the main directed towards exerting a magical influence on animals or animal spirits (in the sense of an allurement, defence, or multiplication), or towards driving out destructive demons that manifest themselves in natural phenomena.

Often too, of course, they are primitive dramatic representations of achievements of the tribe and of the legends of the heroes, as, e.g., those connected with the Yupurap or Iri noveties of the tribe of the Guapan, and probably those of the Paro and Tikuna, and those of the Chiquitos of Bolivia, which were described by the Jesuit Casorla in 1550. The Tainos in Cuba and Hispaniola (Hayti), the so-called Arotes, were of this nature.

So masquerades seem to be especially important at the initiation ceremony of the young men, at funeral celebrations, and at the laying away of new settlements. The use of masks seems to have been confined to the basin of the Amazon. In Guiana, the former native peoples of the region, the east coast, and farther south than 15° south latitude their existence has not been proved.

We know more particularly only those of the Maranon (Tikuna), those of the Zarac and Tupi, and probably those of the upper Xingu (Ikakali, Mekhun, As沽, and Truma) and of Aragnay, those of the Karaya (which present a striking resemblance to the so-called dudukuk masks of New Britain).

Idols of wood and stone belonging to a more ancient period are frequently mentioned in the Antilles, in Darien, Venezuela, and on the Amazon; still, we are ignorant of their appearance or signification. Only with regard to the Tainos do we know that they represented their ancestral gods (Zemex) in grotesque figures of wood and cotton, of which a few have been preserved. On the lower Amazon various peculiarly formed sculptures of men and animals have been found, whose style points to the Columbian sphere of culture (according to Barboza Rodriguez and R. Andre). The so-called birds of the Takamakas of Eastern Bolivia have not yet been more closely investigated. The wooden ‘Santos’ of the Caduves (Guaycuru) are in all probability representations of ancestors, but perhaps influenced by Christianity. Unlike the other literature actual divinities of individual peoples are mentioned; in particular Tupaia, the ‘god of the eastern Tupi,’ whose name was adopted in the Popular language as the general designation of God, and, through the influence of religious instruction carried over to many tribes of the interior. Thus he frequently obtained the signification of ‘the God of the white man.’ In reality Tupaia is simply the ‘bird,’ i.e. a thunder-demon of the Tupi, who, however, pays him all sorts of worship. In the magic rattle (marakas) his worshippers believed that he heard their voice, and so it came about that Hams Staden pronounces this rattle to be nothing else than the god of the tribe. In his nature he has absolutely nothing to do with the one God in the Christian sense of the term.

Other cases the supposed divine beings are of a purely mythical nature, the ancestors of the tribe, or culture-heroes, who are active as demi-gods, like Tannoi or Sume of the Tupi-Guanarís, which are always identified with St. Thomas, who in some mysterious fashion was reported to have been the first to bring religion and civilization to America.

Other similar figures are Quetzalcóatl and Kukulcan in Central America, Iochica in Colombia, and Viracocha in Peru. The same is also true of anachronism of the Ahkakak of the Chiriguanos or Huecas of the Puelches and Araucans, and the fox-god of the Chiriguanos (see above).

We can thus gather exceedingly little positive information from the older references. The more recent material for observation is also still scanty and incomplete. The following may be regarded as certain, so far as it goes. The belief in souls (animism) forms for these peoples the basis of all their supernatural ideas. The spirits of the dead are thought of as demons which are for the most part hostile, or at least terrifying—seldom indifferent,—or good spirits stand over against these evil demons.

Of such a nature are the Opayan and Maporayan of the Caribbean islands, the Anangas of the Tupis, the Ramyrey of the Ipiaras. Only among the Tainos do we find a completely systematized spirit worship of the Zemex, which are represented by idols.

The belief in the incarnation of the souls of the dead in animals is widely diffused. Jaguars, snakes, and in particular birds like araras, hawks, eagles, are such soul-animals. Besides these there are everywhere spiritual beings the so-called ‘natural’ cobolds, which appear in animal or in grotesque human forms, but as a rule invisible to the eye, manifest themselves in certain natural sounds, such as in the echo, in the rustling of the leaves of a tree, or in the croaking sounds of an indefinite kind, or have their seat in remarkable rock formations.

The best known are the forest demons of the Tupis—Kaspora, Kurupira, and Yurupari—which were adopted in the popular religion of the colonists. Similar beings dwell in the water as gigantic snakes or crab-like monsters.

Where a special ‘land of the fathers’ in heaven, or more seldom in the lower world, is accepted, the souls of the dead return to it. Among the Chaco tribes the stars are the souls of warriors, which combat one another in the thunder-storm. As falling stars, they change their places. Certain constellations, in particular Orion the Cross, Pleiades, the Milky Way—were regarded as representations of beings or objects of mythical significance belonging to the primeval time. They illustrate in this way incidents in the activity of the culture-heroes in the cosmological legend.

These peoples have not advanced to a delineation of cosmic bodies and natural powers. Even the sun and the moon have remained, in spite of their personifications in the myth, without any significance for the religious ideas. Atmorphic phenomena, too, have been little observed, a fact which probably is connected with the great regularity of the rain-fall and thunderstorms throughout the whole continent. In a few cases proof can be given that demons or spirits of nature were supposed to manifest themselves in these phenomena.

Among the Eastern Tupis, Tupaia reveals himself in the lightning flash; among the Machakalis, Akpayin makes the rain fall out of his beard. The Caribbeans islanders know demons who control the sea, the wind, and the rain. The rainbow, too, is widely regarded as an evil spirit that brings sickness (polak), ‘devil,’ of the Caribbean peoples of Guiana. Among other peoples he is a mythical animal, snake (luranis) or electric eel (Karaya).

Tendencies towards the development of actual religious divinities and belief in the antecedents among the Tainos, who, besides the spirits of their ancestors, revered the sun and the moon; and probably also among the old tribes of Darien and of the north coast (according to Peter Martyr de Ango, Ortado). In later times, among the Takanas of Eastern Bolivia, gods of water, of fire, of sicknesses, etc., are mentioned, and their images were worshipped in temples by means of sacrifices and dances (according to Labre, Oviedo, and others). But these details have not yet obtained scientific confirmation. Again, with
regard to the sacrifice of horses which the Pata- 
gonians or tribes of the Pampas are said to offer, we have no exact information. In individual cases the mighty phenomena of volcanic action have led to such extraordinary conditions of growth that the minds of the ancients were impelled to the formation of their most beautiful conceptions. Thus the Javero of Ecuador are supposed to look upon the volcano Cayambe as the seat of a mighty spirit, to whom they offer sacrifices. The Anasazi, Pueblo, or Ancas, Filaments of a theory as to the tenuous and of volcanoes. Subordinate to him are the Churraves, the incendiary demons, who in like manner are thought of as dwelling in volcanoes.

The cause of this imperfect development of the belief in gods is probably to be sought in the entirely different condition of the agricultural people of the whole of South America, with the exception of the slopes of the Andes. Agricultural rites of a magical nature, from which, as a rule, divine cults are developed, do not easily arise among tribes who, though practising primitive agriculture, do not require heavenly helpers. Only under the auspiciously natural conditions of the high lands of the Andes in Peru and Bolivia did the farmer recognize his dependence on higher powers, at the head of which he placed the sun, or light, the soul.

The mythology of the South Americans, now unfortunately only partially known to us, seems to have been more plentiful than might have been expected from their crude religious ideas. The most that we know comes from more recent times; still, even from the 16th cent. we possess a comparatively complete cosmogony and cycle of heroic legend of the eastern Tupis, related by Thevet, Cadaverina, Paris, 1574 (cf. Deuxième Fête brésilienne, Paris, 1851). Further, we have fragments of a creation-legend of the Tainos, according to Peter Martyr. The subsequent missionary period has supplied us only with scattered and unreliable material.

It was not till recent times that more valuable sources were again furnished by the investigations of travellers, such as D'Orbigny (for the Yurakaré of Bolivia), Brett and E. im Thurn (for the tribes of Guiana), Cardus (for the Guarayos of Bolivia), von den Steinen and Ehrenreich (for the Bakairis, Paressis, and Karayas of Central Brazil), Lenz (for the Araíkas), Boba (for the Kaingang of the Guiana), and the Tritable (for the Tiapé of Brazil). Of great importance is the so-called Inurupi myth of the Uaupé tribe, communicated by Stradelli (Bol. soc. geogr. Bol., Rome, 1890), the only complete legend handed down regarding the worship of a secret society. A critical collection of all the materials discovered up to the present time was given by Ehrenreich in his Mythen und Legenden der südamer. Ursölder, Berlin, 1905. They yet be said to follow an almost purely hunting or fishing life, and owing to the perfectly regular change of kinds of weather and the certainty of copious showers, do not require heavenly helpers. Only under the auspiciously natural conditions of the high lands of the Andes in Peru and Bolivia did the farmer recognize his dependence on higher powers, at the head of which he placed the sun, or light, the soul.

goes to prove that the conception was well known at that period. This latter fact, among numerous others which are generally advanced by Darmesteter, that the conception of the Amesha Spentas in Zoroastrianism was late, and owes its origin to the influence of Philo Judaeus.

The list of attributes which the Zoroastrian scriptures apply to the Amesha Spentas are in harmony with the spiritual qualities represented by these allegorical personifications. This will be manifest at a glance, if reference be made to the Amesha Spentas, or the Amesha Spentas as they are called, in the Yasna, iv. 4, xi. 12; Yasna, iv. 4, xiv. 9, viii. 5; Yasht, xiiii. 82-84.

The Gāthic adjectives vohu 'good,' vohīta 'best,' vairya 'wished-for,' spenta 'holy,' which are the most common titles of the first four Amesha Spentas in the earlier period of the religion, become in later times standing epithets, practically indispensable to the qualities to which they are added by way of nearer definition. The last two pertain to the earth, and, as such, have no standing attributes, but are commonly mentioned together as a pair.

The Amesha Spentas were Ahura Mazda's own creations (Bundahisn, i. 25; Dinkar, tr. Sanjana, p. 103), and their function is to aid him in the guidance of the world (Yasht, xiii. 16, i. 25, ii. 1-15; Vendidad, xii. 9; Bundahishn, i. 23-28). They are invisible and immortal [Dinkar, tr. Sanjana, pp. 47-48], good rulers, givers of good, ever living and ever bestowing (Yasna, xiii. 99).

They have their Pravashis, which are invoked (Yasht, xiiii. 82). They receive special worship in the ritual, and are said to descend to the earth and dwell upon paths of light (Yasht, xiii. 84, xiv. 17). They dwell in paradise, where at least one of them, Vohu Manah, sits on a throne of gold (Vendidad, xii. 32); but they are not infinite and unproportioned, like Lord Ormazd (Dinkart, tr. Sanjana, p. 114). They are spoken of as the givers and rulers, moulders and overseers, protectors and preservers of the creation of Ormazd (Yasht, xiii. 18).

For that reason the guardianship of some special element in the universe is assigned to each. To Vohu Manah is entrusted the care of useful animals; to Asha Vahista, the fire; to Khshathra Vairya, the supervision of metals; to Spenta Armaiti, the guardianship of the earth, whose spirit she is; and to Haurvatat and Ameretat, the care of water and vegetation (Shahast tā-šōhast, xv. 5; Great Bundahishn, tr. Darmesteter, in Le Zend Avesta, translation nouvelle, Paris, 1892-93; of the Harzana, Die Ursprünge des Zarathushtram, pp. 49-50, Paris, 1878-79, Avesta traduit, Introds. pp. 90-94, Paris, 1881; Casartelli, Mazdean Religion unter den Sassaniden (tr. from French into English by Firoz Jangas), London, 1871, Bombay, 1859; Juist, 'Die älteste iranische Religion' in Preuss. Jahres. 48, 72-74; Tiele, Gesch. der Religion im Altertum bis zum Ausflug des Glaubens, ii. Teile, Leipzig, 1892-93, Kuhn's Zend-Avesta, translation, Leipzig, 1878-80, Scheidweiler, Zend-Avesta, translation, Leipzig, 1887, Zarathustra, ii. 44-62; Gray, 'The Double Nature of the Zoroastrian Archangels' in Arch., 37, 315-372).

A. V. WILLIAMS JACKSON.

'AM HA-ARES' (Yasht, xvi. 9, tr. R. R.),—A term used in Rabbinic Hebrew to designate, either collectively or individually, those who were ignorant of the Law, and careless as to its observance. It is almost invariably a term of reproach. Its literal meaning, 'people of the land,' may suggest that its origin is similar to that of the words 'pagan' or 'heathen.'

In the OT it occurs several times, but never with the significance which it afterwards acquired (cf. 2 K 244, Ezr 9, Neh 10).

The chief authority for the use of the term is the Mishna, where it frequently occurs (see list of passages given below), and in those passages the 'Am ha-ares is, as a rule, contrasted with the Hēḇḇēr (companion) who had bound himself to a very strict observance of the Law. In all matters regarding questions of the Law or other sacred and unclean' the 'Am ha-ares is not to be trusted. Thus we find it stated in the Mishna: 'He who takes it upon himself to be a Hēḇḇēr sells neither fresh nor dry fruits to the 'Am ha-ares, nor clothes nor furniture of any kind, nor enters into their house as a guest, or receive them as guests within his walls' (Děmos, ii. 3).

The majority of the passages in the Mishna deal with similar topics in connexion with the 'Am ha-ares, viz. the fact that he must not be trusted in matters concerning the agrarian laws and ritual purity. One passage, however, is a notable exception to this, and is of peculiar interest as showing the feelings of the earlier Rabbis on this point. It is the well-known saying of Hillel: 'No boor (טוע) is a sin-fearer, nor is the 'Am ha-ares pious' (Aboth, ii. 6). In order, however, to obtain a definition of the 'Am ha-ares, we must turn to the Bab. Talmud, where the following passage occurs (Bīrūkhāh, 47b):

'Who is an 'Am ha-ares? One that does not eat his ordinary food in a state of ritual purity.' These are the words of R. K. 'Who is he that does not eat his fruit properly,' R. R. 'Who is an 'Am ha-ares?' One that does not read the Shemoneh Esreh upon entering or leaving the house. In answer to the questions of R. Eleazar, R. Joshua says, 'One that does not put on the phylacteries upon the forehead or arm,' R. Eleazar says, 'One that does not put on his garment.' R. Nathan says, 'One that has not a Mezuzah on his door.' R. Nathan ben Joseph says, 'One that has children, and they are not taught the laws of the land.' Others say, 'Even if he have read and learnt, yet if he have not associated with wise men he is an 'Am ha-ares.' (Cf. also Bab. Sota, 236, Gittin, 61a, where this passage occurs with some variations).
From this passage it would appear that the 'Am ha-areq was regarded by the Rabbis as a person who was the protagonist of various enactments of the Law, and the general attitude of the Pharisees towards him was one of contempt and hostility. As we have seen, the Habbēr is warned against having intercourse with him, and it naturally followed that intermarriage between the two classes was regarded with the greatest disfavour. 'One that gives his daughter in marriage to an 'Am ha-areq', R. Meir used to say, 'is as if he sold her and set her free a lion' (Bab. Pesah. 490).

In another place it is stated that the 'Am ha-areq is disqualified for acting in certain capacities, which are enumerated under six heads, viz. (1) he must not be appointed to receive evidence; (2) his own evidence is not to be accepted; (3) a secret must not be confided to him; (4) he must not be appointed as the guardian to orphans; (5) he must not be appointed as overseer of the charities; (6) it is right to give a loan on a journey (Bab. Pesah. 490, and Rashii's comment, ad loc.). The attitude of hostility was apparently mutual, as would appear, among other passages, from the saying of R. Hima (Bab. Pesah. 49b) which opposes the passage cited above. He is reported to have said, 'When I was an 'Am ha-areq I used to say, 'Would that I had a talmaid hakahm ('disciple of the wise', 'scholar'), and I would bite him like an ass.' Or again, a little later, 'The hatred with which the 'Am ha-areq hates the talmaid hakahm is greater than the hatred with which the heathen hates Israel' (Bab. loc. cit.). These passages offer a sufficient explanation of the words in Jn 7:42. 'This people who knoweth not the law are accursed,' in which we may probably see a reference to the attitude of the Pharisees towards the 'Am ha-areq. Some difference of opinion exists as to the identity of the Habbēr, with whom the 'Am ha-areq is so frequently contrasted in the Mishna. Schürer and others identify the Habbēr with the Pharisees, making the two terms practically synonymous. Others are rather inclined to regard the Habbēr as a member of some kind of religious guild bound to a strict observance of the Law. But one thing is perfectly clear, viz. that the Habbēr was not necessarily himself a talmaid hakahm, though he might incidentally be one. This would appear from the following passage: He who would take upon himself the decrees of the association (hakahmuth) must be at the same time a talmaid hakahm; if he is not a talmaid hakahm, he must do it in the presence of three talmaid hakahmim (Bab. Bekhor. 30b).

Two passages may be cited which appear to indicate a less hostile attitude towards the 'Am ha-areq. The first is from Abath de R. Nathan (ed. Schechter, p. 646), the other is from the Midrash Shir ha-Shirim Rabba. In the first of these we are told that it is not right for a man to say, 'Love the wise man, but hate the charlatan; love the disciples, but hate the 'Am ha-areq'; but love them all, and hate the heretics and apostates and informers.

An attempt has been made to mitigate the severity of the statements concerning the 'Am ha-areq, which have been quoted above, by suggesting that in reality they refer to informers and political enemies (see Montefiore [Hibbert Lectures] and Rosenthal, cited below), but sufficient evidence for a contrary view is forthcoming: and the quotation given above from Abath de R. Nathan seems to point in the contrary direction. This also appears to be the view of the writer in the JE, who states as a theistic and mystical attitude that it was this contemptuous and hostile attitude of the Pharisaic schools towards the masses that was the chief cause of the triumphant power of the Christian Church. A new and independent investigation of many points connected with the 'Am ha-areq is to be found in the recently published work of A. Büchler, cited below.

H. LEONARD PASS.

AMITÄYUS or APAΣRIMITÄYUS (Tibetan 'o-dag-med), 'The Boundless or Everlastiing Life,' is one of the mystical or superhuman Buddhas invented in the theistic development of Buddhism in India. His worship was wide-spread in India in the Middle Ages, although hitherto unnoticed, for the writer found his image frequent in the ruins of medival Buddhist temples in mid-India. In Tibet, where the cult of a class of divinities with similar attributes, namely, the Sages of Longevity, had long been prevalent, his worship has become a very popular and a supposed means of prolonging the earthly life of votaries. His image is to be seen in nearly every temple in Tibet; it is also worn in amulets, and carved on rocks by the pilgrims. He is specifically invoked in the prayer-flags which flutter from every point of the compass, and he is especially worshipped in that sacramental rite, the so-called 'Eucharist of Lamaism,' where consecrated bread is solemnly 'Ertaken of by the congregation.

He is represented in the same posture as his prototype Amitābha, not, however, as an ascetic Buddha, but crowned and adorned with thirteen ornaments, and holding in his hands the symbols of life-giving powers, which are five of the eight auspicious symbols (mangala) of ancient India, and the vessel for holy water on Tibetan altars.

L. A. WADDELL.

'AMM, 'AMMI.—The word 'amn (אָמֶן) ( Cf., etc.) is common to all the Semitic languages,
and must have been found in the original tongue from which they are sprung. A comparison of its meanings in the dialects, together with a study of the social organization and religious beliefs of the several races, leads to the conclusion that the word denoted originally a higher name connote the generation. The Semites passed once through a stage of fraternal polyandry, and in such a society the distinction between father and paternal uncle is imposed. The mother was a common husband, who might be either father or uncle, was known by the child as 'amm. Cf. Gn 19:2 where Ben-raham is equivalent to 'son of my father,' and the phrase חיזא יא which alternates with בּ יא; ו. The name 'uncle' was naturally applied to this male deity, as 'father' was in later times. Long after polyandry had passed away 'amm continued to be used as a title of deity; and as it lost its primitive associations, it tended more and more, like Baal, Adon, Melek, and other epithets, to become a proper name. The Katabân people in South Arabia designate themselves in their inscriptions as 'Children of Amm' (כז יא), just as thebespi, but only 'kinsman' in Lebanon, itself was called וּלֶא דָבִד, showing that among them 'amm had become a Divine name (cf. Hommel, ZDMG, 1895, p. 525; Glaser, Mittellungen der Gesellschaft, ii. p. 231). According to II. Rawl. 54, 65, V. 46, 11, Ennu (=Nergal) was a god of the land of Subi on the west side of the Euphrates (cf. Sayce, BP, 2nd ser. iii. p. xi; KAT 481). According to King (Ismamrab, 1917, p. 175), Hammam ='Ammi is written with the determinative for 'god' in the name of the king Hammarrabi. The proper name Dur-'Ammi, 'Fortress of Amm,' also indicates that 'Ammi was regarded as a relative, as its significance in any given compound. When fraternal polyandry gave place to monogamy and polygamy, and the father became a recognizable relative, abû, but only 'kinsman' in old Babylon, itself is called Abi-'ammi, showing that the name 'Ammi had received the more specific meaning of 'paternal uncle.' This is a common meaning in Arab. (cf. but 'amm for 'wife,' lit. daughter of 'paternal uncle'), also in Min. and Sabean. From this 'ammi came to mean any relative in the ascending line on the father's side, just as 'father' was used to denote a remotest ancestor; then it was used for 'relative' in general. It is used in this sense in one of the Tell el-Amarna letters (Winkler, 429). Jensen also cites an instance in Babylonian (LCBL, 1902, col. 693 f.). In Gn 17:4, LV 576 = ל 590, Nu 6:15, Ex 31:14, Lv 19:21 'āmm cannot mean 'people,' 1990, Nu 4:19 'הוּ אָמָמ cannot mean 'people,' and the name of Hosea's child, must mean primarily 'not my kin,' insinuansuch as it was given with reference to the mother's adultery. The Carthaginian proper name 'Ammi, 529, 533, 358 may mean 'kinsman' or 'uncle,' but cannot mean 'people' (cf. Aram.-Tahn. אָמָמ as a personal name). The final stage in the development of meaning was reached when 'amm came to denote 'people'—a common usage both in Hebrew and Arabic.

The question now arises, Which of these meanings is found in the numerous proper names compounded with 'āmm? These names are widely scattered through the Semitic races, and must have been one of the earliest types of name formation; it is natural, therefore, to conjecture that in them 'āmm has its primitive meaning of 'father,uncle,' and is used in some cases at least as a title of the Deity. Whether this title be determined only by an inductive study of the names in question.

I. The first class of 'Ammi-names consists of those in which 'Ammi is followed by אָמָמ, 'father-'uncle.' In most of these the translation 'people' for 'Ammi gives a very unlikely name for an individual, e.g. 'Ammi-el, 'people of God,' or 'people is God'; 'Ammen-erati, 'people of Baal,' or 'people is Baal'; and so with the other names given below. It is generally admitted, accordingly, that in all names of this class 'Ammi has the sense of 'kinsman' or 'uncle.' This view is confirmed by the fact that compounds with Abi, 'father,' and Abi, 'brother,' run parallel to names with 'Ammi, e.g. Abi-el, 'Ammi-el; Abi-hud, Abi-hud, 'Ammi-hud. The next question is, whether the epithet 'uncle' or 'kinsman' is understood of a human being or of a divinity. This is difficult to decide upon the grammatical relation in which 'Ammi stands to the following noun. There is high authority for the view that it is a construct with the old genie, and scholars would derive it from the construct state, i.e. 'Ammi-hud means 'kinsman of glory,' which, like Abi-hud, 'father of glory,' means 'glorious one.' This theory is open to many serious objections: (1) This construction is a pure Arabic, and there is no evidence that it existed in the other dialects. (2) It is very unlikely that any man should have been named Abi-Eli in the sense of 'father of God,' Abi-Yah in the sense of 'father of Yah,' or a true father, or a true brother, or a true uncle, or a true husband, or a true wife, or a true child, or a true neighbor, or a true wife, or a true son, or a true father-in-law, or a true mother-in-law. (3) These names are paralleled by names in which the same elements occur in reverse order, e.g. Eli-'am (2 S 11:21 = 1 Ch 3:18 'Ammuat), Baral-am, An-aham (Yah-aham), Naban-aham, Shulmanu-tanne, Shematn-tanne. There is no reason to suppose that Eli-'am differs in meaning from 'Ammi-El or Bar'al-am from 'Ammi-El. If the elements in these names are regarded as standing in the construct relation, they will mean respectively 'God is uncle,' 'God is uncle,' 'God is uncle.' These have no relation to their inverted counterparts, and are most unlikely personal names. If, on the other hand, the nouns are regarded as standing in the relation of subject and predicate, the compounds are synonymous whatever be the order of the elements: 'Ammi-El means 'uncle is God,' and Eli-'am means 'God is uncle.' (4) Conclusive evidence that 'Ammi, Abi, Abi, Dod ('uncle'), Haf ('maternal uncle'), 'Ammi ('father-in-law') are not constructs before the following nouns, is found in the fact that they are used in forming the names of women. Abi-gal, Abi-soam, 'Ammi-tel cannot mean 'father of pleasantness,' 'father-in-law of dew,' but must mean 'father is joy,' 'father is pleasantness,' 'father-in-law is dew' (cf. Abi-tal).

If 'Ammi is not in the first position before the following noun but is an object of a sentence, a further problem arises as to the meaning of the vowel / which appears not only in Hebrew but also in Canaanite names in the Tell el-Amarna letters and in Biblical names. 'Ammi-tel regard it as the suffix of the first pers.; but against this view are the facts that no other pronominal suffixes are used in forming proper names, that the analogy of other names leads us to expect a general affirmation in regard to the Deity rather than the expression of a per-
sonal relation to Him, and that the ' is omitted in parallel forms, e.g. 'El-am 'Ammi-El, 'Ammi-Ba'al = Ba'al-am, Ab-shalom = Abi-shalom, Ab-ram = Abi-ram. Probably, therefore, it should be regarded in this conjunction as a title, the previous role of the ending 4 still appears in Ammu-ladin, Ammu-nir'a, Ammu-rabi, and other names in Bab. and Assyr. records (cf. Heb. Ham-ul). If this be so, 'Ammi-must be translated, not 'my uncle' but 'uncle'.

From this conclusion it follows that 'Ammi in all these names is not a designation of a human relative, but of the Deity. In such names as 'uncle' is God's uncle, 'uncle' can only be a title of a divinity. This conclusion is confirmed by the facts that Abi, Abi, and other names of relationship, except Ben 'son' and Bith, Buth 'daughter', invariably refer to a god; 'Amon forms compounds also that are parallel to sound with Yah, cf. 'Ammi-El and Jo-El, 'Ammi-hud and Hud-Yah. The substitution of 'El-iam in 2 S 11 for 'Ammi-El of 1 Ch 3 also shows conclusiveness that 'Ammi at the beginning of a compound is a Divine name. The change is analogous to the various substitutions for Baal in the Book of Samuel. Cf. also Abi-hail in the Heb. text of Est 2; 29 instead of 'Ammi-nadab of the Gr. text.

The following names belong to this class: - 'Ammi-uncle is 'god' (Nu 35:5, 26 94 157 177; 1 Ch 3:39 = 'Uma-d'se (Obekeb of Manishtusu, Scheil, Textes Elam.-Sin, p. 63)); 'Ammi-h'am, 'uncle is Lord,' an Aramaic of the middle Euphrates region (Ashurbanipal, b. 12, 131); 'Ammi-hud, 'uncle is glory' (CS 199, Qrd, a king of Geshur, Nu 19:23) 217 4227 245, 26, 1 Ch 29); 'Ammi-hur, 'uncle is white' (2 S 15:27 Rev); 'Ammi-in, 'uncle is in the light' (Winckler, 1199 1295 etc., cf. Ab-Yah and Asam); 'Ammi-ki, 'uncle is light' (Etm, 277, Rev 33, 10, Letters, H. 411); 'Ammi-nam, 'uncle is light' (Ob of Manishtusu, Gi 3 36); Scheil, Textes Elam.-Sin), a proph. 2727, 1 Ch 3:7 perhaps) is a name of the type 'El'a, 'uncle is in the clouds' (Winckler, 199 1233 139 091-nuru, 17 11 6 123 1283; 13 32 29, 33); 'Ammi-nadab, 'uncle is in the light of the sun' (Winckler, 199 1233 139 091-nuru, 17 11 6 123 32, 33); 'Ammi 'Ammi-nadab, 'uncle is in the light of the sun' (Winckler, 199 1233 139 091-nuru, 17 11 6 123 32, 33); 'Ammi-nam, 'uncle is in the light of the sun' (Ob of Manishtusu, Gi 3 36), cf. letters, Textes Elam.-Sin, p. 64.); 'Ammi-nah, 'uncle is Shaddai', 'uncle is Shaddai' (Nu 14:22 391, 12:25 249); 'Ammi-nam, 'uncle is a gift' (1 Ch 5:25; 11:9; read 'v'29, 'c'29).

2. A second class of 'Amon-compounds consists of names in which 'Amon is followed by another word that may be either a verb in the perf. 3 sing. or a verbal noun, e.g., 'Ammi-nadab. In names of this class, as of the preceding, 'Amon cannot be translated 'people'. Such combinations as 'people has been supposed of bestowing of bestowing of bestowing of people is generous,' 'people is friendly', have no sense as names of individuals. 'Amon must here be translated 'uncle', 'of kinsman', and is clearly a title of the Divinity that has given the child. Nearly all the names in this class of 'Amon of which we are paral- leled by compounds with Abi and Abi, where also the name of relationship is a title of the deity; cf. 'Ammi-nadab, Abi-nadab, Abi-nadab; 'Ammi-rum, Abi-ram, Abi-ram. The parallelism between 'Ammi-nadab and Jeho-nadab; 'Ammi-rum and Jeho-rum; 'Ammi-nadab, Jeho-nadab, Chemosh-nadab; also shows that 'Amon is treated as a Divine name.

Mention has already been made of the fact that 'Ammi-nadab, the equivalent of 'Amon, is written with the determinative of 'god' in the name Ham-rabi.

Those who take 'Amon is a construct in the pre- ceding class of names take it also as a construct in this class, and translate 'Amon-nadab as 'uncle of generosity' but all the objections urged against this view in the last class hold good here. 'Jeho-rum, Chemosh-nadab, Jeho-nadab, Chemosh-nadab, 'judges are translated 'Jahweh is generous,' 'Chemosh is generous,' 'Jahweh is high'; and on this analogy the only natural translations for 'Ammi-nadab and 'Ammi-ram are 'uncle is generous,' 'uncle is high. 'Ammi-nadab, a Sabaean (Hommel, Ahit 54); 'Ammi-nam-en-shi (Gen 3:22), nephew of Upper Tunu in the Egyptian tale of Sinuhe (c. 1800 B.C.), apparently the same as the Sabaean name 'Ammi-nam-en-shi.

TS-^'J).
Solomon cultivated friendly relations by marrying a wife from
this nation (1 K 111), and this account is confirmed by the fact
that the mother of Uehoboani was an Aiiimonitess (14-1.31).
According to one recension of the LXX, she was the daughter of
Hanun, son of Nahasb. For her benefit the cult of Milconi, the
god of Ammon, was established on a hill near Jerusalem (1 K
115. 7. M, 2 K 231").
After the death of Solomon, the Ammonites
appear to have regained their independen(;e, and to have remained free until they fell beneath the yoke of the Assyrians
along with the other small nations of Western Asia. The victories of Jehoshaphat, Uzziah, and Jotham over them re.st only
upon the authority of the Chronicler (2 Ch 20. 2G8 275). In
B.C. 854, Ba'sa (Baasha), son of Ruhnb (Rehob), with 1000 men,
came to the help of the king of Damascus against Shalmaneser II., along with Ahab of Israel and ten other kings of

one of the villages of Benjamin, suggests that during the Exile
the Ammonites, like the Edomites, made settlements west of
the Jordan. If so, this will explain the denunciation of the
exUic prophecy. Is 111-*. As early as the time of .Ashurbanipal,
two main divisions of the Arabians, Kedar and Nebaioth, were
menacing the old lands of Edom, Moab, and Ammon, and were
prevented from ov^-running them only b.v the activity of the
Assyrian monarch. Ezk 25 anticipates that these children of
the East will bring these three nations to an end (cf Ob 1") ;
and, as a matter of fact, after the Exile we find, instead of Moab
and Eklom, Geshem the Arabian as the chief enemy of the Jews
(Neh 219 4" 61.6). Ammonites are still mentioned, but they
seem to lead no independent national existence.
Tobiah, the
"
Ammonite who opposed Nehemiah (210- 19 43- 61" IS-i), bore a
name compounded with Jahweh, he and his son both had
Jewish wives, iie was connected by marriage with the hich
priest, and he appears regularly in company with Sanballat the
Horonite and the Samaritans. .Apparently he had nothing to
do with the old land of Ammon, but was a resident of Kephar
ha-'Amm6nai (Jos IS^-i). No king of Ammon is named after the
Exile, and it seems probable that this people peri.'shed as a
nation, along with Moab and Edom, at the time of the Nabat«an
Ar.abian migration. Surv ivors of these nations found refuge in
Judah, and gave rise to the problem of mixed marriages, which
caused Nehemiah and Ezra so nnich trouble (Ezr 91, Neh 131- 23).
Where Ammonites are mentioned in the later history, we have
merely an apphcation of an old geographical term to a new race.
The Ammonites under Timotheus (1 Mac 56-»), and the Ammonites of Ps 837 and Dn ll^i, are Nabatsans or Greeks living
in the old land of Ammon.
'

'

.

We must now endeavour to construct from these
meagre sources a picture of the religion of the
ancient Ammonites. From 1 K ll'-^s, 2 K '23'^ it
appears that Milcom was their chief national god,
just as Chemosh was the god of Moab, Kozai of
Edom, and Jahweh of Israel. In 2 S 123"= 1 ch
20- the LXX reads Milcom instead of rn'ilrnm,
'their king.' This is the reading of the Talmud
{'Abodd zara, 44a), of the old Jewish commenta-

most modern authorities.

Israel no sons? hath he no heir? why then doth Milcom inherit God, and his people dwell in the cities thereof? . . . Milcom shall go into captivity, his priests and his princes together. This shows that Milcom bore a relation to Ammon similar to that of Amalek to Israel. 1868, and that Malak-Bel had a priesthood that was the counterpart of the Jahweh priesthood. In 2 S 12:1, Am 1:5, Zeph 1:5, some of the versions and certain commentators also read Melech instead of malam and malamim, but this was not on account of the sound of the words as deduced from these passages in the OT no mention of Milcom is known.

The name Milcom is with Baudissin (Jahve et Moleck, 50) and Lagarde (Übersicht über die . . . Bildung der Nomina, p. 190) to be regarded as milk ‘king’ (Phon. mîk, Heb. melêk) with the old nominative ending and magnification. It means, therefore, simply ‘the king.’ Others regard it as compounded of melek and ‘mâk, and as meaning ‘king of the people’ (so Kuenen, Theol. Tijdschrift, ii. 1869, 555-558), or ‘Am is king’ (so Eerdmans, Melodekienst, 112); but these explanations are unsatisfactory, because the meaning of the root is inaccessible. In etymology and meaning accordingly, Milcom is identical with Molech, the god worshipped by the Israelites, according to Lv 18:19, 20a; 2 K 23:19, Jer 32:35.

The vowels of this word are generally believed to be phonetic, though both have been lettered added by the Massoretes to express their abhorrence of the cult. The original pronunciation was Mêlekh. The name is always accompanied by the article (except in 1 K 11:1, where the text is corrupt), and means ‘the king.’ In Is 30:35 57:15 it seems that ‘the king’ refers to this god, and there are other passages in the OT where it is possible that the expression has the same meaning.

On the basis of the etymology and meaning of Milcom and Molech it has been conjectured that the two gods are identical, and that Molech-worship was borrowed by Israel from the Ammonites. If so, we can learn something in regard to Milcom from a study of Molech. In support of this theory it is claimed that the only passages in the OT which mention Molech-worship (2 K 23:19, Jer 32:35, Lv 18:19 20a, Is 30:35 57:15) were written after the time of Manasseh, and have his abuses in mind.

This seems to show that Molech-worship was an innovation introduced from Ammon. There are several difficulties in the way of this view. Even if we grant that Molech was a borrowed divinity, it is by no means clear how it should have been borrowed from the Ammonites. They had no such political importance in the time of Manasseh that their god should have been sought as a refuge against the Assyrians. If Molech was borrowed from them, why did he not retain his original name of Milcom? Mêlekh as a divine name is found in all branches of the Semitic race. In Babylonia and Assyria it appears as Melek (Marov, Bel. Bab. & Assyr. 175 f.) among the people of Sepharvaim as Adram-Mêlekh and Anam-Mêlekh (2 K 17:31); in Palmyra as Malak-Bel (Baudissin, Studien, ii. 193); in Phoenicia, as Melkart (a-me-kart); in Edom, in the proper name Malchammon (Benjamin, Petri, ii. 54).

If Molech-worship is a really a borrowed cult in Israel, it may have been derived from any one of these sources quite as well as from the Ammonites. It is not certain, however, that Molech-worship was a borrowed divinity. Mêlekh is a title frequently applied to Jahweh Himself (e.g. Ps 5:16 10:29 20:1 24:22 44:4 47:5 53:14 69:4 78:66, Is 6:3 35:2, Jer 8:9 10:5 46:14, Mic 3:12, Zeph 1:14, Mal 2:10). A characteristic feature of the Mêlekh cult was child-sacrifice, and this is known to have been an early cult of Jahweh. The Book of the Covenant in Ex 22:28 enjoins, ‘The firstborn of thy sons shalt thou give unto me,’ and contains no provision for redemption, such as we find in 13:21 and 34:19. The story of Abrahamic’s sacrifice of Isaac in Gn 22 (E) shows that child-sacrifice was practised in the early religion of Jahweh, but that the exact form was growing in prophetic circles that Jahweh did not demand these offerings. In spite of prophetic opposition, however, they continued to be brought (cf. 1 K 18:30, and Winckler, Gesch. Isr. i. 163, n. 3; 2 K 16:2, 27; Jer 7:19, 31). Jerahmeel expressly insists that Jahweh does not require these sacrifices (Jer 7:19 32:20), and this indicates that in the popular conception they were part of His requirements. The Holiness Code (Lv 18:10) also suggests that Molech sacrifices were popularly regarded as Jahweh sacrifices. Ezekiel goes so far as to quote the law of Ex 13:2, ‘Thou shalt sacrifice unto Jahweh everything that openeth the womb,’ and to say that Jahweh gave this commandment in wrath to destroy the nation because it would not keep the good statutes that he had previously given it (Ezk 20:23-24). These facts make it clear that Molech-worship was regarded by the nation in general as a form of Jahweh-worship. The absence of early prophetic polemic against child-sacrifice is, accordingly, to be explained by the fact that the prophets did not regard it as being their concern to condemn child-sacrifice. Jeremiah and Ezekiel, who hold the Deuteronomic standpoint in regard to sacrifice, are obliged to specify that Jahweh does not require child-sacrifice, although He requires animal-sacrifice.

Molech-worship was ancient in Israel, then it cannot have been borrowed from the Ammonites in the time of Manasseh.

Another theory which identifies Milcom with Molech supposes that this cult was introduced into Israel by Solomon. This opinion makes its appearance as early as the Gr. versions, and has been the source of much textual corruption. It seems to be supported by 1 K 11:23, which speaks of ‘Milcom, the abomination of the Ammonites,’ as worshipped by Solomon after his marriage with an Ammonite wife (cf. 2 K 23:19, 1 K 14:24-25); and by 1 K 11, which calls this god Molech. Granting the historicity of Solomon’s worship of Milcom, which is disputed by a number of critics, it appears from 1 K 11:2, 2 K 23:7, that the high place of Milcom was on the right hand of the Mount of Destruction east of Jerusalem, i.e. somewhere on the ridge of the Mount of Olives. It is clear according to all the OT references, was in the Valley of Hinnom (cf. 2 K 23:7, Jer 22:25 19:32), 2 Ch 23:33). From this it is clear that Milcom and Molech were not identified by the ancient Israelites (cf. Baethgen, Beiträge, 15). The substitution of Molech for Milcom in 1 K 11:7 is evidently a textual error; the MT points without the article, and Lucian’s recension of the LXX reads Milcom.

A third theory is that there was a primitive Semitic god, Melek, of which Milcom and Molech are local variants. Against this view is the fact that Milcom and Molech are not personal names, but titles, like Baal, ‘owner’; Adon, ‘master’; Manna, ‘our lord.’ There was no primitive Semitic god Baal, whose cult came down in the various branches of the Semitic race, but there was a multitude of names. Melek probably formed part of various holy places and who were distinguished from one another as the Baal of this place or the Baal of that place. These Baalim were different in functions and were never distinguished by tribal names. In like manner there were as many Makim as there were nations, and there is no reason why the Mêlekh of Ammon, or the Mêlekh of Israel, or the Mêlekh of Tyre, or the Mêlekh of Palmyra should
be identified with one another, any more than why their human rulers should be identified because they all bore the name of 'king.'

Although there was no primitive god Mēlek, it is probable, however, that all the various M'lkām of the Ammonites was compounded on the idea of child sacrifice; but this is not the same as identifying one another, just as the Baalim bore a family resemblance, so that it is possible to draw inferences from the character of one Mēlek to that of another. The Baalim were gods of nature. They manifested themselves to men in storms and streams and trees. They gave the fruits of the earth, and they were worshiped with offerings of firstfruits. The M'lkām, on the other hand, were tribal gods conceived after the analogy of human rulers. They gave the fruit of the womb; and, accordingly, they were worshiped with the born children and firstborn animals. Wherever we know anything of the cult of the M'lkām, child-sacrifice is its most conspicuous feature. When this rite was practised in Israel it was always in the name of the Mēlek, even though this might be understood as a title of Jahweh. From Dt 12:18-20, Lv 18:2, Ezek 16:1, Rev 13:10, and Rom 13:11, it appears that child sacrifice was also offered by the Canaanites, and this testimony is confirmed by the excavations at Gezer, Megiddo, and Taanach, where the remains of sacrificial altars have been found in many numbers. Child-sacrifice was a conspicuous element in the cult of the Tyrrh. and Carthaginian Melkart, and 2 K 14:17 states that the people of Sepharvaim sacrificed their children to Adram-Mēlek, and Anam-Mēlek. These facts seem to show that sacrifice of infants was intimately connected with the conception of deity as Mēlek, or ruler of the tribe; and we are probably warranted in thinking that worship has been transferred from the one to the other. This word of sacrifice was celebrated in his honour. In the case of Milkom, accordingly, infant-sacrifice is probable, although this is never mentioned in the OT; and this opinion is confirmed by the fact that the closely related Moabites sacrificed children in honour of their god Chemosh (2 K 3:27).

In regard to the manner in which children were sacrificed we have only the analogy of Molech-worship in Israel to guide us. The technical name for the rite was 'making over children to the King by fire' (Lv 18:20-24, Dt 18:12, 2 K 16:17, 21, 2 Ch 33:9, Ezek 20:9). The same expression is used of children of the king of Tyre in Jer 41:5. From Gn 39:4, Ezek 16:10, Is 57:3, etc., it appears that children were slain like other sacrifices, and from Dt 12:3, 18, 2 K 17:10, 2 Chr 34:21, 24:29, that their bodies were afterwards burnt in a place known as Tipheth (Tipheth, with the vowels of bēhēth, 'shame'). Analogous rites are found among the Phoenicians and Carthaginians, and we may perhaps assume that they existed also among the Ammonites.

Besides Milkom there is no clear evidence that the Ammonites worshipped any other god. Jg 10:8 speaks of the gods of the children of Ammon,' but this is a late editorial passage. From Jg 11:24 it has been inferred that Chemosh was the god of the Ammonites as well as of the Moabites, or else that Chemosh and Milkom were identified; but it is now generally recognized that the section Jg 11:24-26 has been interpolated in the story of the Ammonites as well as of the Moabites. It is a fragment of a narrative of a dispute between Israel and the Moabites which has been combined with the Jephthah story by the compiler of the Book of Judges (cf. Moore, Judges, 233). More can be said in favour of the view that the Ammonites worshipped a god called 'Am or 'Ammi. The name 'Ammon (Assyr. Amann) is apparently a diminutive or pet-name from 'Am, as Shimshūn (Samson) is from Shemesh. Ammon alone is never used as a tribal name, except in the late passages, Ps 83:10 and 1 S 11:1, where the Gr. reads τοῦ Άμμωνού. The regular expression is 'children of Ammon.' Even the race of the ancestor is not called Ammon, but 'Ben-'Ammi (Gn 19:19). 'Am or 'Ammi means primarily a father, and the tribe, being in the patriarchal society, then 'paternal uncle,' then 'kinsman,' then 'people.' The narrator in Gn 19:19 has chosen the meaning 'father-uncle,' and has derived from this the store name 'Ammon' of the Ammonites. Their ancestor, he thinks, was 'Ben-'Ammi, 'son of my father-uncle,' because his father was also his mother's father. It is more likely, however, that 'Am was used here originally with reference to a god who was called the 'father-uncle,' or 'kinsman' of the tribe.

This use of 'Ammon as a divine name is wide-spread in the Semitic dialects. In Hev. we find it as the first element of the proper names 'Amuel, 'Ammonith, 'Ammonish, 'Ammonishah, 'Ammonisheh, 'Ammonizahab, 'Ammonizabad, and as the final element in the names An'am, Elian, Jelab'am, Jeob'she'an, Jereboam, Rehoboam, Jibe'am, Jok'de'am, Jok'mi'am, Jok'ne'am, Jaroh'ime'am. In Babylonian it appears in names of kings of the first dynasty, 'Ammalisata, 'Ammaludug, 'Ammalug of Amurru, and in South Arabia in 'Ambarit and other proper names. One of the main Arabic names into which Ashur signalling bore the name Ammon (Ammonis), 'son of father-uncle,' or 'very generous,' where 'Ammon is clearly the name of a deity. Bab'am is also a name compounded with 'Am, and is probably not 'Baal'im,' i.e., the name of the fruit of the children of Ammon (cf. Dt 23:9, 10). Rehoboam also bore a name compounded with 'Am, and he was the son of an Ammonite mother (1 K 14:17). On the basis of some of these facts, Denzinger, in RER (1890) i. 125, proposed the theory that 'Am, or 'Ammi, was the name of the national god of the Ammonites. This theory is correct if we regard 'Am as merely a title applied to Milkom by the Ammonites, as it was applied to Jahweh by the Israelites. In this sense there is no reason to regard 'Am as a separate deity. There is no evidence that there was a primitive Semitic god 'Am, any more than that there was a primitive Semitic god Baal or Mēlek. 'Paternal uncle' is a title like 'father,' 'brother,' 'king,' 'lord,' that might be applied to the most diverse gods (see 'AMM, 'AMMI).

The word Ilu, or El, which appears in the name of the Ammonite king Pudu-ilu (cf. Pedu-ilu, 'God has redeemed,' Nu 34:9), is also generic, and may refer to Milkom, as it does to Jahweh in the parallel Heb. form (cf. Padaia, 2 K 23:23). Baalīs (בּעַלְּיָּס, 'son of exultation') Baetthegon (Baetthegon, 16) regards it as equivalent to Baal-Isis, 'husband of Isis,' or 'Isis is Baal,' and compares Adu-is, 'servant of Isis' (CIS 308). Both interpretations are exceedingly doubtful, and all that can be gathered from this name is that Baal was in use as a generic name for deity among the Ammonites as among the other Semites. To 'Ammon the Ammonite and his son Jahchon (Neh 23:27) have names compounded with Jahweh, and this has been made a basis for the conjecture that Jahweh was one of the gods of the Ammonites, as of the people of Hamath (el-Tadmur), as of the gods of the inscriptions of Sargon, and of the people of Yaudi in Northern Syria (cf. Azri-yau in the inscriptions of Tiglat Pileser III.). The conclusion is, however, not valid, for this implies that in the time of the Ammonites settled in the land of Israel during the Exile and adopted the cult of the god of the land. The other Ammonite names that have come down to us are not theophoric, and, therefore, yield no information in regard to the religion of this race. Stephen of Byzantium (cited by Baetthegon, 16) states that the original name of the capital of Ammon was Amman, then it was called Azartare, and finally Philadelphia. If this be true, it indicates the worship of the primi-
tive Semitic goddess Ashrat. From the gigantic sarcophagus of Og that was pre-
served at Rabbah (Dt 3:11) we may, perhaps, infer that ancestor-worship was practised among the Ammonites as among other branches of the Semitic race.

From the foregoing survey it appears that there is no convincing evidence of the worship of any other god than Milcom among the Ammonites. It is possible that Milcom's importance as the god of the vineyard, for which there is some evidence, is due to the seaminess of our sources, that Milcom occupied the same unique place in Ammon as Jahweh did in Israel; and to use this, as Renan did, as proof of a tendency to monotheism in that branch of the Semitic race to which Israel belonged. In all probability the Ammonites were polytheists, like their neighbours and near relatives the Moabites and Edomites, and it is merely an accident that we know the name of only the head god of their pantheon.

In regard to the rites of their religion we know practically nothing, except what we may infer from the analogy of the religions of kindred races. We have only an idea of circumcision, in common with the Egyptians, Israel-
ites, Edomites, and Moabites. In other respects probably their customs did not differ widely from those of the Moabites.

* * *

Ammon (Conn. on Gen.) infers that the Ammonites and Moabites were characterized by an extreme lewdness that aroused the moral repugnance of Israel; and he appeals to Nu 25 for proof of this in the case of the Moabites; but Gn 19:28 so evidently derived from a fanciful popular etymology of the names Moba and Ben-'Ammi that no historical conclusions can be based upon it.

* * *

Lewis BAYLES PATON

AMNESY. The word is used somewhat loosely by modern writers with reference to several episodes in Greek history. Strictly and properly, it is the word used by writers of the post-classical age to describe the resolution adopted by the Athenians after the expulsion of the so-
carried out by Thuc. (IV. 224) is characterized by Cicero (in the Fourth book of his De Re Publica). B.C. 405, a reconciliation was effected, through the mediation of the Spartan king Pausanias, between the oligarchical party of the city and the democrats of its opposition.

All persons who, having remained in the City during the oligarchical regime, were anxious to leave it, were to be free to settle at Elaeus, retaining their full civil rights, and possess-
ing full and independent rights of self-government, with free enjoyment of their personal property. * * * There should be a universal amnesty concerning past events towards all persons (τῶν οίκοι οὐκ ἡμίτοιο μηδὲ γνώσις ἡμῖν εἶναι), except the Thirty, the Ten (who were their successors), the Eleven (who had carried out their decrees of execution), and the magistrates (ten in number in the Parians); and these should also be included if they should submit to give an account of their official acts (ἐνδείξεις εἰς οἴκοις) in the usual way. See Thuc. (IV. 224); Renan's note to Thuc. (IV. 224), ii. 4. 3, and reference in Aristoph. Plut. 1168: ἡμῖν ἀφετῆρας, ἐστίν Φυλᾶς κατελθεῖσιν. * * * οἱ δὲ ὡσεὶς ἀνθρώποι ἑαυτῶν ἐπιταγής μηδὲ γνώσις ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίων ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖν ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμιλίωn ἡμῖn ἐπὶ τῶν ὁμиl
known from Greek history, taken in times of great danger, with the object of stilling disputes and uniting all forces in defence, by which political exiles were recalled and civic rights conferred upon those who had been partially or wholly disfranchised. The Corinthians thus adopted this measure shortly before the battle of Salamis (Arist. Hist. Pol. 22. 4. 2, ed. Wachter).  

Again, a similar resolution was passed at the time of the siege of Athens by Lyons, under the pressure of Patrokles (Aristoc. op. cit. 78: επε γαρ αι γεωργες νπερισκέοντας θηραμωρίαν και τοις αγιμοις επιτιμον ποθον. Cf. Arist. Ath. Pol. 22. 4. 2) the location of this passage is not certain.  

Such acts of grace were known with reference to individuals, e.g., the regularity of Alcibiades (Xen. Hell. i. 4. 11, his return in n. 408; the vote of recall actually passed in n. 411, Thuc. viii. 97) and of Democthenes in n. 325 (Plut. Dem. 25), as well as of the historian Thucydides—to take only conspicuous examples in Athenian history.  

Such acts of grace or pardon on the part of the sovereign people in reference to individuals, or comparatively small groups or classes, are clearly different in their nature from Acts of oblivion, where, in Greek history at any rate, the sovereign body itself has been burdened in twain upon a conflict of principle concerning the forms of government. Both, again, are to be clearly distinguished (and the confusion is not uncommon in the books of reference) from what the Greeks called denoi, or acts of oblivion, as used by Polybius.  

Such denoi or guarantee against penal consequences was always necessary to enable anyone to exercise any privilege that did not properly belong to his status, i.e., to enable slaves, resident aliens or disfranchised citizens to perform those higher functions which were part and parcel of the notion of civic status. It was also necessary before a proposal for the State to forego any of its rights against individuals, as, for example, a proposal for the removal of ατιμία or disfranchisement (Dem. Or. xxiv. 47: άνω των ἀτιμίων των ὑποκείμενων n. 25 περί των ατιμίων των άνθρωπων οὐδὲ στάζων, καὶ πάντες μὴ ἄλλως ἢ ἑρμηνευόμενοι νπερισκέονται. Cf. CIA i. 180-183, and i. 32). A vote of denoi also guaranteed informers against punishment for crimes in which they might have been participators; but their free agency was not involved. In general a denoi was a preliminary surrender of specific rights of the State in favour of an individual for a particular purpose (see Goldstaub, De atimia notione et usu lib.), in whatever way its adoption.  

We must distinguish, then, the following three categories: (1) denoi, indemnity for acts which involve or may involve penal consequences; in general retrospective; only when retrospective does it coincide in practical effect with amnesty. (2) Pardon, in cases in which the penal con-

sequences are already in operation. In this sense the word ‘amnesty’ is incorrectly used, as above explained. The Greeks apparently possessed no single term to cover this sense. (3) έλεος μηδεμιανος (= Lat. oblivio and late Gr. εμεμινιον) = Eng. ‘amnesty’ in the strictest sense of the word, or refusal to make investigation of matters of fact with a view to a punishment.  

W. J. WOODHOUSE.

AMPHIARAUS.—A seer and, along with Adrastus, the chief hero of the legend of the Seven against Thebes. He had early become the subject of heroic legend, and his character was portrayed in legend in Argos as well as around Thebes. These local legends had been, too, at an early date united to the Theban cycle of legends by the two Homerian epics, ‘The expedition of Amphiarus’ and ‘The Thebaid.’ But his cult is older than the legend.  

Amphiarus was worshipped in the Peloponneseus (Sparta, Pausanias, i. 12. 5; Argos, Pausanias, ii. 25. 2; Phlius, Pausanias, ii. 13. 7; and the colony of Byzantium, FHG iv. 149. 16), and especially in Orops near Corinth, where his sanctuary was excavated (Panly-Wissowa, i. 1895 ff.). He was worshipped as a god of the lower world, often at his own grave, where he gave oracles. That is the original form of the belief regarding him. This is the reason why he is a seer in the heroic legend, and why he does not die but descends alive into the depths of the earth.  

As seer, Amphiarus was genealogically connected with the house of the Thebans. He was the son of Polybus, who married his father’s sister Αίρη as a result of the marriage of Amphion and the Syracusan princess Ερυθρα (Herodotus, vi. 27; also Boden and L.  

In Nemea also, which lies on the road between Argos and Thebes, there were legends of Amphiarus, traces of which have been preserved in the legends of the games of the Nemean Games, especially in the 3rd Hypomein in Pindar’s Nemene Odes; Aelian, Var. Hist. iv. 5; Pausanias, iii. 18. 12, ii. 15. 2; Apollodorus, Bibliotheca, iii. 6. 4.  

In the war against Thebes, Amphiarus slays the powerful Theban hero Μέλανη (Herodotus, v. 67; Pausanias, ix. 18. 1). But he cannot with-
stand Pericyменноς, and flees from him; however, as the latter is about to stab him in the back, Zeus divides the earth with a lightning flash, and sinks Amphiarauς with his chariot alive into the depths. This tradition is a unity, and thus probably derived from the epic Thesaid (Pindar, Nemean i. 34; Euripides, Supp. 925; Apollodorus, Bibl. i. 29); but it is a tradition of unimpeachable authority. There are, however, early in the 5th century, not later than 170, as W. Diod. 320, the Haliartus, E. 394, the battle of Amphiaraus, which was lost, and which is mentioned in the 4th century, preserved between Attica and Boeotia. These historical recollections in connexion with the cult, which remained ever living, have provided the material of the legend and determined its character.

**LITERATURE.**—Welcker, Epischer Cyclogus, ii. 320 ff.; Bette, Thebanische Heldensieder, 42 ff., 76 ff.; Pauly-Wissowa, i. 189 ff.; E. Bette.

**AMPHICTYONY.**—An amphictyony was a union of different cities or peoples centred in the temple for the common performance of certain religious duties. The name is derived from ἄμφικτιοι (with a variant form ἄμφικτοι in later times, ἄμφικτοι), which, with its equivalent ἀμφικτότες, is the modern adjective ἀμφικτότους and the adjective ἄμφικτων, or ἄμφικτος and the adjective ἄμφικτων, are often used. The ideas attached to these words were coloured by the history and constitution of the Delphian amphictyony, and we need not assume that all amphictyonies were formed on similar principles or function. Many local unions in early times which were formed on a religious basis, and would fall within the definition given above, are not expressly described as amphictyonies. This may be accidental, for some amphictyonies are mentioned only once in ancient literature, and there were primitive religious leagues, which did not survive in later times, that seem to have possessed the characteristics generally regarded as amphictyonic, and we know of no essential difference which should exclude them from the present survey.

An amphictyonic form of union which can be traced in the earliest times is the union of people of kindred race within a continuous area round a common temple. Such a federation is perhaps implied in the beginning of Odys. ii., where the men of Pyles in their companies feast and offer sacrifice to Poseidon. So Strabo records (viii. 343) that the Tryphilians met at Samium in the grove of the Samian Poseidon, had the sacred tree proclaimed, and united in sacrifice. So also the twelve Ionian cities of the Peloponnesus, before the Ionian migration, combined in a religious league centred in the temple of Poseidon at Helice (Strabo, viii. 344), and on this league was modelled the federation of the Ionian colonies in Asia Minor. Strabo (ix. 412) refers to the 'amphictyonic' league of Onchestus, whose meeting-place was the grove of Poseidon in the territory of Halkartus, founded perhaps before the immigration of the Boeotians. The Boeotians, after their conquest, celebrated at the temple of Itonian Athene, in the plain of Coronea, the festival of the Panboeotia (Strabo, ix. 344), and the Ionian assumption of the temple of Poseidon, a religious character. It may have been the original basis of the political federation of later times.

Strabo (viii. 374) also records an 'amphictyony' of Calauria, an island off the coast of Troezen. This met, probably at a very early period, at the temple of Poseidon (which was always an asylum), and included the following cities: Hermione, Epidaurus, Aegina, Athens, Prasiae, Nauplia, and the Mantinean Spartan. At a later time Argos and Sparta took the place of Nauplia and Prasiae. This league combined states which were not neighbours. Whether it had any objects other than religious we do not know; if it is possible, as it is generally assumed, that it was an union of sea-states, designed to secure intercourse by sea.

The amphictyony of Pylae, which afterwards became so important from its connexion with Delphi, was originally a combination of different races (not cities), united in the worship of Demeter. Its history will be studied in detail below.

There are possible references to an amphictyony of Doric states centred in Argos (Paus. iv. 5. 2; Plut. Per. 3), presumably meeting at the temple of Apollo Pythaeus. The allusion in Pindar (Nem. vi. 44) to the festival of the 'amphictyonies' in the grove of Poseidon is held by some to imply a Coriinthian Delphian amphictyony, which is used in a general sense. It has been suggested that we should assume a Euboean amphictyony meeting in the temple of Anar臾yntian Artemis, as there is evidence of the Euboean cities combining in a festival to the latter divinity. Of these cities, Athens, Thessaly, Arcadia, and Boeotia also formed a league, which, like the Delphian, was an amalgamation of several states. Little notice has been taken of it in the history of early Greece. If we may trust the evidence of the coinage of the Greek colonies, the Aegaean, or, in Asia, we have warrant for calling only that of Delos an amphictyony. This league from a very early date united the Ionians of the islands in the worship of Apollo, as is more fully discussed below. There are other leagues which have amphictyonic characteristics. The twelve Ionian colonies of Asia Minor (of which a list is given in Herod. i. 142) met at the Panionium, a precinct on the promontory of Mycale dedicated to the Heliconian Poseidon, and celebrated a festival called Panionia (Herod. i. 148; cf. Strabo, viii. 384; Diod. xv. 49). The league, which was probably founded on the model of the original league of the Ionian cities in the Peloponnesus, had also political objects, and the meetings at the Panionium were used for the discussion of questions of common policy and to promote trade (Herod. i. 174). The Panionium was also a place of common festival for the Ionians (Thuc. iii. 104; cf. Dionys. Hal. iv. 25, who says the precinct of Artemis was the place of meeting, and Diod. xv. 48, who says the πανωνιονιον was transferred from the Panionium to Ephesus). The grove of Poseidon at Tenos seems to have been the site of a πανωνιονιον (Strabo, x. 487).

The three Doric cities of Rhodes (Lindus, Ialysus, and Camirus), Cos, and Chios, with Halicarnassus (which was afterwards excluded from the union), celebrated a festival on the Triopian promontory at the temple of Apollo (Herod. i. 144). Dionysoi (i.e.) says that these Dorians and the Ionians meeting at Ephesus took the great amphictyony as their model, and attributes to their leagues, besides religious functions, powers of jurisdiction and control of policy for which we have no evidence elsewhere.

Before discussing the Delian and the Delphian amphictyonies, each of which had a special character, it will be best to consider the general functions of such religious leagues.
It is clear that the amphictyony was a primitive form of union, the origin of which in all probability preceded the coming of the Achaean invaders. The gods whose temples supplied the meeting-places are for the most part the gods of the earliest inhabitants of the Argolid, such as Apollo, Poseidon, Athena, and the Isthmus (if we interpret Pindar’s allusion as showing the existence of an amphictyony), and at Mycale and Tenos. At Pylenae, Delos was the presiding god, and the priest’s palace was the common worship, at set times, of the god; and the offering of a common sacrifice and the celebration of a common festival were essential elements. (Terms like ἀρχοντία, ἀρχοντικός, ἀρχοντικόν, τοῦ ἄρχοντος, τοῦ ἄρχοντος, τῆς ἄρχοντος may denote the festival generally, or the sacrifice; cf. Strabo, viii. 384, διονύσιος θεός τῆς νήσου.)

At the meeting (παραγγείλα) a sacred truce (εἰκερία) was proclaimed. The cities or peoples participating sent sacred conveyos (θεοῦς, in some instances denoted by special titles, Ποισικρατεῖον, ἄρχοντικόν, but many of the ordinary citizens flocked to the gatherings. Usually there were athletic and musical contests, together with dances and orgies of various kinds. Olympia had its origin in amphictyonic meetings (see Gilbert, GrieCh, Staatsstudiumer, ii. p. 406).

The gathering often served other purposes: fairs were held, military manoeuvres and private transactions were conducted on the marketplace, and the exchange of markets. Peaceful intercourse between the states was encouraged, and combination for political purposes was facilitated by these meetings, which were sometimes used for definite political ends. Thus the Ionians discussed their coming in to a tribal god gave expression to the idea of kinship; intercourse at the sacrifices, festivals, and marts tended to break down the barriers between different states, and to encourage commerce and commercial peace and political union. The names Pamboeotia and Panonia, given to two of these gatherings, emphasize the idea of unity. When the amphictyony included cities which were not neighbours, or which did not recognize the bond of kinship, its function was even more important. The association of different peoples in the worship of a common god broke through the exclusiveness of local cults, and tended to find that religious unity which was regarded as one of the bases of Hellenic nationality (Herod. vii. 144). The Delphian amphictyony certainly contributed to the idea of Hellenism, and, in concert with the oracle, had great influence in establishing common religious observances among the Greeks. Its political importance was in some sense accidental: its religious functions it shared with the other amphictyonies, whose importance in the history of religion is not to be exaggerated, in uniting different states in the common worship of the same gods.

The Delian amphictyony.—Delos, the sacred island and the birthplace of Apollo, was from early times a religious centre for the Ionians of the Aegean. The legends speak of a transfer of the island from Poseidon to Apollo (Strabo, viii. 250) and of its itself as an amphictyony (Paus. viii. 45. 3; cf. Plut. Thes. 21). It is thought that the connexion of Theseus with the festival was an invention in the time of the Athenian domination; but, at least from the time of Solon, Athens sent sacred conveyos, ἄρχοντικόν, chosen from certain Empatrid families (Athen. vi. 234). There is evidence for the existence of the παραγγεῖα at a comparatively early date: so states the Hellanicus, who mentions the Delian Apollo (i. 166-184; cf. Thuc. iii. 104, ὀλοκληρώματα καὶ τὸ πλήγμα καθ. ἐπὶ τὴν Δήλου τῶν Λόγων ταῦτα, and Strabo, x. 485).

To Delos came the Athenians. The right to celebrate the festival with their wives and their children. There they offered sacrifice, performed sacred dances and hymns, and engaged in contests. Doubtless a sacred truce was proclaimed, and a fair was held upon the seashore, where the visitors to the festival exchanged their goods. The union of the states celebrating the festival probably bore the name of an amphictyony. Although it is not expressly described as such, the existence in later times of officials called ἀμφικτυόνων is best explained on the theory that the title is a survival from earlier days (see below, and cf. Thuc. i. 61, περικτικοὶ). As Mycale and Ephesus rose in importance as meeting-places for the Ionians, the existence of the islands near the coast, the festival at Delos waned. The islanders (presumably of the Cyclades) and the Athenians continued to send their bands of sacerdotes to celebrate the festival. In the troublous times of the 6th and 5th centuries the great festivals were abandoned (Thuc. i. 61).

Delos was too small in extent and population to possess any political strength. Hence it was unable to come under the patronage of the great dominants. Pisistratus had purified the island, and Polykrates had shown it favour (Thuc. i. 61). The Athenians, on the institution of their confederacy in 477, chose Delos as its place of meeting. Political reasons may have moved them, but it is probable that their choice was partly determined by the desire to represent their league as an amphictyony, centred in what had been a holy place of the Ionians, of which Athens claimed to be the natural head. At Delos the meetings of the allies were held, and the federal funds were stored. With the growth of Athenian domination and the transfer of the treasury to Athens (in 454), Delos lost its importance in the confederacy, until, in 426-5, the Athenians purified the island, and established a great festival, to be held every four years. Whether the Delian amphictyony in its form survived or not, we do not know, but the Athenians seem to have wished to represent it as still existing. Thus, although the temple and its funds were controlled by Athenian magistrates (the earliest direct evidence refers to the year 434-3), of the form embraced by such officials in literature is in Athenaeus, i. 173, ἀμφικτυόνων ἅπαξ, a resolution of the 4th cent. only the Athenians appointed such magistrates, the fiction of an amphictyony government was kept up. (Our knowledge is based on literary evidence. The acquaintance of such officials in literature is in Athenaeus, i. 173, ἀμφικτυόνων ἅπαξ.)

The amphictyony of Delos thus ceased to be a religious union in the strict sense, and became an instrument of Athenian supremacy, so that its history is bound up with the varying fortunes of Athens.

The festival (Δήμοι) was celebrated in the spring of the third year of each Olympiad. (A lesser festival took place every year.) It was regulated and presided over by the Athenians (Aristotle, Ath. Pol. 54. 7, reserving to them the prerogative of Theseus inscribed the Athenian festival; the Athenians sent a theatrical at the sacred ship, and at every celebration an offering.
of a gold crown was made to Apollo (Ἀρμακτών τῷ θεῷ, ΚΙΑ ii. 814); and from the number of crowns recorded in the inventories, the number of celebrations can be estimated. The festival was modelled on the great Pan-Hellenic festivals, and was doubtless open to all the states of the Aegean, possibly to all the Greeks. To the old athletic and musical contests the Athenians added horse races. (For the order of proceedings see Plut. Nic. 3). Boxed for the first time at the festival, at which the Delians served the tables, and hence bore the title of Ἐξεδώται (Athien, iv. 175).

The first celebration was in 425, and was probably the occasion of the magnificent θεωρία of Nicia (Plut. Nic. 3; others attribute this to 417). The Delians seem to have respected the rule of the Athenians, and in 422 the Athenians expelled them from the island (Thuc. v. 1), intending, no doubt, to make it a mere appendage of Athens. But in 420, at the bidding of the Delphian oracle, they were restored.

The festival was celebrated every four years during the Peloponnesian war. An inscription of 417 (IK 188, p. 229) shows that the Delian superintendence and sharing in the administration with the four Ἀθηναίων Ἀμφικτυονες (for whose title this is the earliest definite evidence). After the fall of Athens, it was regarded as a Delphian title. Delphi, as the place of origin, were reconciled in the legend that Acrisius, summoned from Argos to help the Delphians, instituted a συνέθρον at Delphi, and organized the constitution of the amphictyony (see to Enr. Oract. 1093; cf. Strabo, ix. 420). Little further is recorded until the first Sacred War (B.C. 585), when the amphictyonic peoples are said to have attacked Crisa, with a view to take the treasure and transgression of the amphictyonic ordinances (Eschines, iii. 107-8; Strabo, ix. 419). After the destruction of Crisa, the Pythian games were instituted (369).

The truth underlying the legends may be somewhat as follows. At a remote period, probably before the great migrations within Greece, the peoples then settled near Thermopylae combined in the worship of Demeter, the festival possibly being connected with the harvest. That Pylea was the original meeting-place is probable on the following grounds. The cult of Demeter Amphictyonia was always maintained at Pylea; as the meeting of the Amphictyony, whether at Pylea or Delphi, bore the name Πελάιαι, and Παλαγόρα was the title of the official envoy; the peoples in after times belonging to the amphictyony were called Πελαγόρες or Πελάιαι. It is a matter of speculation which of these peoples originally belonged to the amphictyony. There were, no doubt, fresh accessions consequent on the migrations, and, by the end of the 7th cent., probably most of the peoples in eastern Greece between Thessaly and Laconia had been admitted. The Thessalians were presidents. At some period before the first Sacred War, Delphi had been taken under the protection of the amphictyony, and became a second place of meeting. (Legend placed this at a very early date, and the tradition of the Greeks undoubtedly set it before the Sacred War; that it was not conducted by the amphictyony, which, he thinks, was opened to new states after the war). The war with Crisa marks an epoch; henceforth the history of the league rests on surer information; it is more closely united with Delphi, whose shrine and property came under the protection of the amphictyonic council, which also had the superintendence of the Pythian games.

(a) M. M. The amphictyony was a league of twelve peoples (βοην, called γένος by Paus. x. 8. 2; Strabo, ix. 420, wrongly speaks of πελαγόρες). Whatever changes in the composition of the amphictyony took place, the number of the peoples was constant. The earliest list that comes down to
us is that of Aeschines (ii. 110), who professes to
take twelve names, though only eleven appear in
the text. These are the Thesprotians,
the Ionian Perchaenians, Magnetians, Locrians,
Oceania, Pithians, Milians, and Phocians. It is
generally believed that the Dolopes should be
added to the list, and that Aeschines
describes this council as if it had usually
appear as Aetianae (Herod. vii. 132, in a list of
nine peoples who submitted to Xerxes, cites only
amphictyonic peoples). From 346 to 345 the Mace-
donians had divided the Dolopes into two
councils, and the Delphians were admitted, room being made for
their limit the Perchaenians and the Dolopes as one
people. (An inscription gives us a list of the
peoples in 344–3. See L. Bourguet, L’Administration
financière du sanctuaire pythique au IVe siècle avant Jésus-Christ, p. 145 ff., and BCH xx. p. 322.)
The subsequent changes after the Aetolian
were admitted need not be followed here.

While there was at all periods a conservative
adherence to the principle that races and not
states should be members of the amphictyony,
a measure ascribed to Acrisius, and certainly
adopted by the Aetolian council regulated the participa-
tion of separate states in the amphictyonic council.
Each of the twelve peoples admitted to membership
had two votes (Aesch. ii. 116), and in some cases
these votes were divided between different branches
of the same race (e.g. the Locrians and the
Milians), or between states belonging to the same
race; thus we find the Ionian votes shared by
Athens and one of the Euboean states; the Dorian
votes divided between the Dorians of the metro-
polis and the Dorians of the Peloponnesus, or
at another time between the Laconians and some other state of the Peloponnesus (BCH xx.
1907) or in 348 a vote was given in the different
cities of Boeotia (Thebes being usually repre-
sented). The exclusion of a particular state from the
amphictyony might be effected without
eliminating the representation of the race to
which it belonged, as its vote could be transferred
to another state. We have no information as to
how the apportionment of votes to the individual
states or sections of the people was effected. While
the decision of amphictyonic business was thus
entrusted to the representatives of the states quali-
fied for the time to vote, other states not so repre-
sented, or even states which had no right to a
vote, likewise took part in the amphictyonic meet-
ings, and sent sacred embassies.

(b) Meetings and representatives.—The meetings
were held twice a year, in spring and autumn
(πανησύρμβω τοις μηνοίς ἐγκατέστισαν, Strabo, x. 420), and
on each occasion at both Anthela and Delphi.
Extraordinary meetings might be called (Aesch.
iii. 124). Any members of the amphictyonic peoples
might attend: sacred embassies (εἰρήνας) were
probably sent by the amphictyonic peoples, and
there were also Ἀρχαῖοι (in some writers Ἀρχαῖοι)
and Ἀρχαῖοικοι, who represented the inter-
ests of the states or peoples qualified to vote.
From the 3rd century Τριήμεροι seem to have taken
the place of the Ἀρχαῖοι.

There is some uncertainty as to the respective duties of
the Ἀρχαῖοι and the Ἐνεργοὶ at different dates. In the early
years of the 4th century B.C. the Ἀρχαῖοι and Ἐνεργοὶ were
considered as the executive and deliberative power (Herod. vii. 213; Pind. Thesm. 20; Strabo ix. 420) does not mention any other officials).

The Ἀρχαῖοι (Aesch. vii. 24) was an office of the amphictyonic peoples (Aristoph. Achar. 603). Inscriptions and literary evidence (the
appearance of Ἀρχαῖοι in connexion of the amphictyonic enterprises, Aesch. ii. 116) are the chief authority show that in the 4th
century the Ἀρχαῖοι were the Delphians, while the Ἐνεργοὶ were the Athenians (Herod. vii. 132, 136–7). The question of the
amphictyonic council at Delphi. The Ἀρχαῖοι were still appointed, but had not
representative function. The Delphians were perhaps not included in the number. Thus, Athens sent three to Delphi in 359.
The method of appointing these officials may have been left to the discretion of the different
states. At Athens we find the Ἐνεργοὶ appointed by lot (Aristeophanes, Lys. 9 and the Pythagorians elected. The method
as it is called is described sometimes as the of
Dorians (Aeschines and Aesidian), perhaps to watch over the interest of their state at the amphictyony. From
the narrative of the Delphian amphictyony (Aesch. iii. 338) that the Hieromoneus formed the council (εἰρήνας) of the
amphictyony. The individual members of the council seek advice and support from the Pythagorians of his state. Thus
Aeschines, who was one of the Athenian Pythagorians, was admitted to the council of the Hieromoneus when the other Pythagorians
had withdrawn, and after defending the cause of Athens, retired before the Pythagorians' board took place. After the fall of the
Hieromoneus, all power, deliberative, judicial, and executive, was vested, and it was apparently sometimes described as
προ-
πολεμίου περίπολος (Aesch. iii. 139). The president is referred to as ὁ τιμωτέρων ἐν ἱερομονήμων (Aesch.
iii. 124). The council was not a legal council, which was called by the magistrates of Athenaeum, or by the
Delphians.

Thus, it seems likely that on the special boards of ποιοντες and ρῶν see below.

(c) Competence of the amphictyony.—It is
difficult precisely to define the competence of the
amphictyony. It was not, as in ancient writers that can be relied upon (Dionys.
Hal. iv. 25, vaguely exaggerates), and its powers,
so far as they cannot be inferred from the original
decisions, are mainly due to the tradition of
historical instances of its activity. It should be noted
that the influence and the importance of the
amphictyony varied greatly at different periods. As
most of its members were politically insignificant,
states such as Athens and Sparta at the height of
their power had little respect for its authority.
Thus, the council was called by the chief
magistrates of Athens and Spartan to defend the
amphictyony for its own ends, and find pretexts to
justify an extension of amphictyonic action. It is possible
here to give only broad results without detail.

We may assume that, probably from the first,
the amphictyony had two main objects: the union of
different peoples for common religious purposes,
and the common observance of certain rules affecting
the relations between those peoples. Two
causes combined to increase the importance of
these objects. As the amphictyony came to
include representatives from most of the peoples of
Greece, it tended to assume an Hellenic character,
and when Delphi was taken under its protection
and became its most important meeting-place, the
universal recognition of the oracle and the cult
of Apollo increased the prestige and importance of
the amphictyony. It is not always easy to dis-
tinguish the members of Delphi from those of the
amphictyony, but it must be remembered that the
oracle, though under the protection of the
amphictyony, was independent, and many institutions or
observances which owed their origin to Delphi
should not be credited to the amphictyony.

The members of the amphictyony united in
common religious observances at both Anthela
and Delphi. At Anthela they worshipped Demeter
with the title Άρχαῖοι or Ενεργοὶ and the Deity of
Amphictyon. We know that there were meetings in
spring and autumn protected by the proclamation
of a holy truce (εἰρήνα): sacrifice was offered,
and probably a festival was celebrated with the
accompanyment of contests and market. An
important
inscription (CIA ii. 545) gives us much
information as to the relations of the amphictyony with Delphi. The inscription dates from 370 B.C. AD
and the assertion of the amphictyonic rules and duties may mark a recent restoration of the power of
the amphictyony, perhaps under the protection of Sparta. The date of the inscription is not
ambiguously given, but we may perhaps place it
somewhere between 350 and 320 B.C. (see op. cit. p. 235; Bourguet, op. cit. pp. 158–9). At
Delphi Leto, Artemis, and Athena Pronai (or Pronai) were associated with Apollo as Amphic-
tyonian deities (Aesch. iii. 108, 111), to whom sacrifice
was offered at the spring and autumn meetings.
AMPHICTYONY

In the procession preceding the sacrifice, among other beasts an ox of great price was led (this is the βοῦς τῶν ἀποκαταστάτων of CIL ii. 545, l. 32; cf. Xen. Hell. vi. 4. 29, βοῦς πράσινος. Some think this beast was a special offering at the great Pythian). The amphictyony superintended the meetings and festivals, including the great Pythia, which took place every four years, and the annual Pythia. To these festivals the amphictyonic states sent envoys (perhaps the πενελεύθεροι of Strabo, ix. 404; cf. CIL ii. 545, 45, where Böckh restored πενελευθέροι). The envoys were responsible for the care of the sacred rites, of the property consecrated to the gods, the temples and other buildings, and the sacred land. In the inscription referred to provision is made for a circuit of the sacred land (τεμπεός, cf. Dem. xvii. 150, τεμπεόλους), and agreements or contracts (presumably on the routes leading to Delphi) are to be kept up by the amphictyons (usually interpreted as the different peoples belonging to the amphictyony).

More important duties fell to the amphictyony which a temple had to be rebuilt. In the 6th cent., after it had been destroyed by fire, the rebuilding was entrusted to the Alcmeonidae, as contractors (Herod. ii. 180, v. 62). In 373 the temple was again burnt down, and under the amphictyonic law of 380 the Hieromnemones undertook its reconstruction. We have much detailed information on the procedure from inscriptions recently found at Delphi. (The results are summarized by E. Bourguet, L'Administration financière du sanctuaire pythique au IVe siècle avant Jésus-Christ.) The restoration of the temple undertaken in 380 was not completed for thirty years. The work was interrupted by the Sacred War, but the heavy fine imposed upon the Phocians supplied funds, which enabled the work to be carried through. In connexion with this work two new colleges of amphictyonic magistrates were instituted. From 360 we can trace the activity of the προσωπαί. The members of the College belonged to amphictyonic peoples, but the total number, as well as the numbers from the different states, varied widely. Some of the states represented in the amphictyonic council appointed none, while Delphi had a προσωπόν before it secured a vote in the council. The προσωπαί met twice a year at the ordinary meetings of the Amphictyonic Council, and collected funds for the expense of rebuilding, and made contracts in accordance with the specifications (συγγραφαί) drawn up for the different parts of the work. (For details of the contracts, methods of payment, etc., see Bourguet, op. cit. p. 95 ff.) After the completion of the temple, the προσωπαί were charged with the maintenance of the fabric, and their activity can be traced for a century and a half.

In 339, at the autumn session, a college of twenty-four ἄρατα was instituted (see Bourguet, p. 110 ff.). It is thought that the institution may have been proposed in the interest of Philip, who was anxious to increase his influence in the amphictyony. The result was to make the work of the προσωπαί subordinate, and to concentrate the control of expenditure in the hands of the new college. In 278 the position of the college was identical with that of the council of the Delian Hieromnemones; the same states were represented, and the lists of both were drawn up in the same order. The ἄρατα, from the sums assigned to them, met not only the expense of rebuilding the temple (the money for which was paid over to the προσωπαί), but the other expenses of the amphictyony, both at Delphi and Pylae (see Bourguet, p. 126 ff.). This board was, however, only a temporary institution, and when the last instalment of the Phocian fine had been paid and the temple at Delphi was finished, their work probably ceased. Before 310, and possibly as early as 326, they were no longer acting.

Inscriptions thus enable us to realize in detail the activity of the amphictyony in the case of the sacred property. The protection of the property of the god is one of the objects guaranteed by the amphictyonic oath recited by Aeschines (ii. 115). The other clauses of the oath remind us of another obligation on the part of the hieromnemones to see that certain common principles, the violation of which was a sin visited by amphictyonic vengeance. Aeschines mentions the oath not to raze any amphictyonic city to the ground, or to cut off running water in war or peace. The purpose of those prohibitions, which may go back to the origin of the amphictyony, is not to prevent war altogether, but to modify its harshness and to encourage peaceful intercourse. We do not know whether there were other general obligations of a similar character recognized by the amphictyony. Dionysius (iv. 25) refers to κοινῷ νόμῳ called amphictyonic, and other writers refer to the laws or deliberations of the amphictyony (cf. Strat. x. 420; Schol. to Eur. Orest. 1903). If we could accept the vague statements of these late writers, we might assume a much wider influence of the amphictyony in regulating the relations of the Greek states to one another, and it is possible that there were κοινὰ νόματα or νόμοι τῶν Ἑλλήνων other than those mentioned by Aeschines, which were sanctioned by the amphictyony (see Bz. q.v. cit. p. 190 ff. for certain regulations, possibly but not demonstrably amphictyonic). There are instances of charges being brought before the amphictyony which may have been based on the supposed violation of general rules, though we lack definite testimony. Among the historical incidents quoted in connexion with the condemnation of the Dolopes by Scyros for piracy (Plut. Cim. 8); the price put upon the head of Ephialtes after the second Persian War (Herod. vii. 213); the condemnation of the Spartans, who were fined and excluded from the amphictyony for the seizure of the Cadmea (Dio, xvi. 25); or the charges brought against Athens by the Amphilochians in 339 (Aesch. iii. 116).

Charges brought before the amphictyony were tried by the council, which might fine the offenders or exclude them from the league, or in more serious cases proceed to holy war against the offending state. As we do not know the scope of the amphictyonic laws, we cannot say whether the charges were always based on a supposed transgression of the κοινῶν νόμων. Probably some pretext was assumed to bring them within the jurisdiction, but the competence of the amphictyony might be extended by the admission of charges which did not properly come before its court. Thus an Athenian decree of 363 (CILA ii. 54) asserts that Astyocrates has been condemned παρὰ τῶν ἱστόμων τῶν ἄμφικτων, and in 335 Alexander apparently demanded that the orators of Athens should be tried before the amphictyony before any action was taken against them. Apart from this, disputes might be referred by consent to the arbitration of the amphictyony, and we probably have an instance of this in the submission by the Athenians and Delians of their controversy respecting the temple in 343-4 or 344-3 (Dem. xviii. 134, xix. 65).

The amphictyony might pass votes referring to individuals, as in the honours accorded to the heroes of Delphi and the temple of Pelops (the money for which was paid over to the προσωπαί), but the other expenses of the amphictyony, both at Delphi and Pylae (see Bourguet, p. 126 ff.). This
AMRITSAR

AMRITSAR—Amritsar, in the Panjab, is one of the religious centres of India, and the chief city of the Sikhs. It lies in what is known as the Maur-di country, about 32 miles east of Lahore, and contained in the census of 1901 a population of 16,2,429, of whom 40 per cent. were Hindus, 48 per cent. Muhammadans, and 11 per cent. Sikhs. It is the chief commercial town of the Panjab proper; but its commercial importance is unimportant as compared with its other advantages of position than on the fact that the city is built round the celebrated 'Tank of Nectar' or 'Tank of the Immortals', i.e. the gods (Sanskrit, Amṛtaśarassva), which is situated near the Golden Temple, the central shrine of the Sikh religion. There are stories of the spot having been visited by the first Sikh Guru, Nanak (A.D. 1469-1538), and by the third Guru, Amar Das (A.D. 1572-1574); but the actual purchase of the site and excavation of the tank are believed to have been undertaken by the fourth Guru, Rāmdās, in A.D. 1577, and the masonry work was begun by the fifth Guru, Arjan, in A.D. 1588. The remaining five Gurus seem to have paid little or no attention to the place, but after the death of the last Guru in A.D. 1708, and during the turbulent period which preceded the breaking up of the Mughal empire, the shrine began to lose its importance.

The Gurdwara, the Sikh place of worship, is the most sacred building in the city of Amritsar, and the city has since continued to flourish under Maharaja Ranjit Singh (A.D. 1801-1839) and the British Government (since 1849).

There are five sacred tanks in the city, but the most celebrated is the 'Tank of Amritsar' proper, in which the Golden Temple lies. The form of the tank is nearly square, the sides at the top being 510 feet in length, and it is fed by water from the Barī Doab Canal. The Temple occupies a small island in the centre of the tank, 65 feet square, which is connected with the west side by a line causeway, and one on the north. The central shrine is known as the Har-namdar or 'Temple of God,' and consists of a single room, covering a square of 404 feet, with four doors, one opening to each side. The lower part of the outer walls is adorned with marble inlay, resembling that of the Taj Mahal at Agra, and the upper walls and roof are covered with plates of copper heavily girt, from which the place has obtained among Europeans the name of the 'Golden Temple.'

Among the Sikhs themselves the shrine and its precincts are known as the Darbār Sahib or 'Sacred Audience'; and this title owes its origin to the fact that the Granth, or Sacred Book, is locked up as a living person, who daily in this shrine receives his subjects in solemn audience.

The book is brought every morning with considerable pomp from the Mehenāna (see p. 400) across the causeway to the shrine, and returned at night with similar ceremony. It is installed in the shrine below a canopy, and a gurhāti sits behind it all day waving a charm, or yak's tail, over it, as a servant does over the head of the Granthi. On the south sit a selection from the pača, or hereditary incumbents of the Temple, and on the north sit the musicians (raagis and rabolis—the latter, strange to say, being Muhammadans), who from time to time sing hymns from the Granth
to the accompaniment of divers native instruments. In front of the book is the cloth upon which the faithful deposit their offerings. Although the outer precincts have since 1898 been lit by electric light, the shrine itself is lit with clarified butter or oil, and candles are used within the precincts, and, of course, smoking of any kind, are strictly prohibited; and as the Granth is always installed upon the ground, it is considered irreverent for any one within the precincts to sit upon a chair or to stretch out his legs.

Round all four sides of the tank runs a paved walk 30 feet broad, known as the Prakarama (properly Parikrama), which is frequented by the worshippers who come to bathe, by pandits or ascetics of various kinds, and by vendors of religious and other trinkets. At the south-east corner of this walk, where the water issues from the tank, is the bathing-place assigned to the Mazhabis, or low-caste converts, whom the bulk of the Sikhs still decline to admit to their religion on equal terms. Round the outside of the walk rise a number of picturesque buildings, known as bhangas or hospitalities. They are built by the most renowned Sikh chiefs in the latter part of the 18th cent. for the accommodation of themselves and their followers when visiting Amritsar; and among these the bhangas of the Randhar Sikhs is prominent by its two towers, which dominate the city and neighbourhood of Amritsar.

Attached to the main shrine are three subsidiary institutions, which are of considerable importance in the eyes of the Sikhs. The first of these is the Akalbanga, or ‘Hospice of the Immortal,’ which adjoins the shrine on the west side of the causeway, and is the traditional centre of the fanatical sect known as the Nihangs or Akalis. The Granth Darbar, the building also contains a fine collection of the weapons of Guru Har Govind and other Sikh Gurus and chiefs. The courtyard in front of the Akalbanga is a favourite place for the administration of the pahal, or religious baptism of the Sikh creed; the ceremony may, however, be performed anywhere in the presence of the Granth, and the number of persons baptized at the Akalbanga does not exceed 1200 annually. The second of the well-known subsidiary institutions is the Bābā Atal, a shrine surmounted by a tower, which lies a few hundred yards to the south-east of the Har-mandar. This shrine was consecrated to the memory of Bābā Atal, the young son of Guru Har Govind (A.D. 1606–1645), and is surrounded by the cenotaphs of many of the old Sikh nobility. The third institution subsidiary to the Golden Temple is the shrine of Tāran Tāran, which lies 15 miles south of Amritsar, and which was founded by the fifth Guru, Arjan (A.D. 1581–1606). The Taran Taran shrine, which also is built on an island in a large tank, is the scene of a considerable monthly fair, and the Amritsar temple, too, is the centre of two exceedingly large fairs, the Baisakhi and Divālī, which are held in the spring and autumn respectively, and are attended by immense numbers of persons, both for religious and for commercial purposes, from the whole of northern India.

The actual building of the Golden Temple and its precincts is maintained from the proceeds of a jāra, or tax, on a part of land leased from certain neighbouring villages. The granthis who read the sacred volume are three in number, and are supported by offerings made directly to them by worshippers at the shrine. The pījārs, or incautious, are not of land revenue only. The general offerings at the shrine are distributed, after deducting a fixed sum for the temple establishment,—that is to say, the musicians, office-bearers, mendials, and so forth. The whole institution and its subsidiaries are supervised by a manager, who is generally a Sikh gentleman of position appointed by the Government. The funds of the temple, as well as a certain number of precious ornaments, are kept in a somewhat primitive manner in a treasury over the main gate.

The whole importance of Amritsar from a religious point of view lies in the Golden Temple, and there is little of religious importance in the town outside the precincts of the Darbar Sahib. Mention may, however, be made of two recent institutions, namely the Saragarhi memorial and the Khalsa College. The former is a memorial in the form of a Sikh shrine, which was erected in A.D. 1902 in the centre of the city by the British Government in memory of the gallant manner in which a small body of the 36th Sikh Regiment held the fort of Saragarhi on the North-West Frontier against an Afghan enemy in the Tenth campaign of 1897. The latter is a denominational college which was started some twelve years ago for the encouragement of learning among the Sikhs. It lies some miles outside the city, and is largely supported by the Sikh States of the Panjab as well as by private donors.

AMULETS.—See CHAMRS.

AMUSEMENTS.—A. I. In the category of 'amusements' it is usual to include all sorts of pleasant occupations, both mental and physical, by which the attention is disengaged from the serious pursuits of life. An amusement is a light form of enjoyment in which little exertion either of the body or of the mind is required. In this respect amusements differ from recreation, which is a word of a higher order, inasmuch as recreation implies some considerable expenditure of energy, either mental or physical or both, although in the nature of the case the exertion is agreeable and refreshing. Both amusement and recreation are designed to serve the same end, the recuperation of one's jaded mental and physical powers; but amusement secures that by turning the mind into channels where the time passes pleasantly and leisurely, whereas recreation effects its purpose by an agreeable change of occupation, by calling into activity other faculties and muscles than those engaged in work. Amusement, in short, is a form of enjoyment in nature's skin to relaxation; recreation is pleasurable exercise in which the energies, set free from work, are allowed to play in other directions (see RECREATION).

2. The slight demands which amusements make on the mental and physical activities, and their character as a means of lightly beguiling the time and drawing off the attention from the more important concerns of life, no doubt explain why in a serious age the word was used in a deprecatory sense. At the close of the 17th cent. we find amusement defined as 'any idle employment to spin away time' (Phillips, quoted in Oxit. Diet.). It may range from something very coarse or banal to' what has no further aim than to kill time and to render men oblivious of the higher ends of life deserves to be condemned; and the use of the word pastime as synonymous with amusement has been regarded as an unwholesome and inexcusable confession that amusements have no other object and serve no other end than to fill up the emptiness of a life which is devoid of nobler interests, and to make men forget themselves. This pessimistic view of
Amusements finds unquestionably some justification in the actual state of things. It cannot be doubted that amusements are often greedily sought after by those who find in the true business of life, in noble aims and striving, nothing. They fight life in order to afford them joy; and they are indulged in with the object of appeasing the natural craving for happiness which finds no satisfaction in higher pursuits. Where this is the case, the paradox is this: is it not monstrous to witness them to the misery of a life which has missed its true joy? But when a depreciatory estimate of amusements is based on the view that life itself, in the duties and relationships to which men are called, is so rich in delights that any other form of enjoyment is unnecessary, the ground is less secure. It is a severe and exacting philosophy which affirms that, to all who are conscious of the satisfactions which attend the pursuit of high moral aims, life is an absorbing interest which takes the place of all amusements.  'Where men are rightly occupied, their amusements grows out of their work' (Retken, Sesame and Lilies). If one is so engaged, is somewhat too highly pitched for ordinary human nature. It is this view of amusements which has commonly been associated with Puritanism, not altogether with justice. To begin with, at least, it was the Puritans who set us an austere philosophy of life, that called forth the Puritan protest against the amusements of the time. Amusements were condemned, not because they were considered too trifling for men who had the serious business of life on hand, but because they were either sinful in themselves or closely associated with sinful accessories. This was the case, for instance, in the matter of dramatic representation. In the days of Elizabeth, the Puritans reproached Stubbes held that some plays were "very honest and commendable exercises," and "may be used in time and place convenient as conducive to example of life and reformation of manners"; but the gross corruption of the seventeenth century stage drove Dryden and the majority of the Puritans to extreme views (Trall, Social English, iv, 153). It was the unfortunate association of evil with so many forms of amusement that disposed the Puritans in their later days to look askance at mirth and enjoyments perfectly innocent; their abhorrence of tainted pleasures led them to regard with aversion what 'the good spirits call the enjoying nature' of their neighbours found expression, and fostered the growth of an austere and sombre spirit, which regarded life as too serious a business to permit of indulgence in light and pleasant diversions.

3. The Puritanic 'gospel of earnestness' is too narrow and one-sided to do justice to human nature. Healthy-minded men refuse to be satisfied with any view of life which ignores the natural instinct for play, and regards participation in amusements as a weakness which will be outgrown when men have tasted the more solid joys which duty brings. It is, by God, true that wherever duty engages the conscience for its faithful and honorable discharge, it becomes, if one cannot say the chief amusement, at least the chief interest in life. But that does not mean more than the recognition of the subsidiary place that amusements should occupy. It does not justify an ascetic attitude towards amusements. Human nature has an instinct for joys of a light and entertaining kind, and this natural receptive instinct is not disabused and repression, but a wise control and a large-hearted recognition of the part its gratification may play in the culture of life. That is, the nourishment which this instinct needs is, first, the right and mirth, for pleasures which stand in no immediate relation to life's duties, but minister to our natural capacity for enjoyment. And the supreme justification of this generous attitude to amusements lies in this, that where they are wisely indulged in, they serve a high end, and cannot be banished without loss. They give it to life; they pleasantly engage the mind and give it relief from the strain of duty, and enable it to recover its elasticity and tone. However interesting work may be, however congenial the labour, there is a serious pursuit which makes our latitude for the necessity arises, if the freshness of interest is to be maintained, of laying the work aside and seeking other interests. Human nature requires something more than rest for its refreshment; it requires that we should seek diversion for the sheer joy of it—some diversion which shall pleasurably occupy the mind and relax the energies, and afford an opportunity for escaping from the deadening influences of routine. The appetite for enjoyment must be wisely gratified, if the vitality necessary for good work is not to be impaired. Cito rumpes aream at teseam habebis.

4. The main justification of amusements lies, accordingly, in their fitness to renew and refresh our powers for the duties of life. But they serve other ends which are ethically important. They have a social value—many of them at least. The fact that the one is associated with the other constitutes one of the charms of amusements; and, apart from the refreshing influences of such intercourse, there is a further gain in the growth and consolidation of friendship, and in the forging of links which bind us more closely together. There may be indeed, and there are, experiences shared with others which have a far greater uniting power than fellowship in the social pleasures of life. They work to the mutual benefit, to the advantage of the individual, and the value of it is deserving of recognition. Moreover, amusements, like everything else which draws us into association with others, serve as an opportunity for the culture of social virtues—unselfishness, equanimity, courtesy, and the like; while, if we extend our definition of amusements to include the great national games, they afford a discipline for the growth of such qualities as patience, self-restraint, manliness, alertness, readiness to seize an opportunity. Then, further, the pursuit of amusements is a bulwark against the temptations of the leisure hour. Nothing exposes the heart to the allure of evil pleasures, than to want of some healthy interest; and an honest love of innocent pleasure, if it served no other end, would be valuable as a moral safeguard.

5. All this must be freely acknowledged. Amusements have an undeniable ethical worth when they are wisely engaged in. But they cease to be ethically valuable, and indulgence in them becomes a dissipation, when they are sought after without due regard to the serious interests of life. When they are allowed to engross the mind and to become the main business in which pleasure is found, when their pursuit prejudices the performance of duty and the ethical development of higher interests, when they encroach on time which should be devoted to more serious matters, or make one indisposed to engage in one's proper work, they become harmful and morally reprehensible. There is no amuse- ment, however, that if properly used, and an individual's own amusement should occupy. It does not justify an ascetic attitude towards amusements. Human nature has an instinct for joys of a light and entertaining kind, and this natural receptive instinct is not disabused and repression, but a wise control and a large-hearted recognition of the part its gratification may play in the culture of life. That is, the nourishment which this instinct needs is, first, the right and mirth, for pleasures which stand in no immediate relation to life's duties, but minister to our natural capacity for enjoyment. And the supreme justification of this generous attitude to amusements lies in this, that where they are wisely indulged in, they serve a high end, and cannot be banished without loss. They give it to life; they pleasantly engage the mind and give it relief from the strain of duty, and enable it to recover its elasticity and tone. However interesting work may be, however congenial the labour, there is a serious pursuit which requires, if the freshness of interest is to be maintained, of laying the work aside and seeking other interests. Human nature requires something more than rest for its refreshment; it requires that we should seek diversion for the sheer joy of it—some diversion which shall pleasurably occupy the mind and relax the energies, and afford an opportunity for escaping from the deadening influences of routine. The appetite for enjoyment must be wisely gratified, if the vitality necessary for good work is not to be impaired. Cito rumpes aream at teseam habebis.

4. The main justification of amusements lies, accordingly, in their fitness to renew and refresh our powers for the duties of life. But they serve other ends which are ethically important. They have a social value—many of them at least. The fact that the one is associated with the other constitutes one of the charms of amusements; and, apart from the refreshing influences of such intercourse, there is a further gain in the growth and consolidation of friendship, and in the forging of links which bind us more closely together. There may be indeed, and there are, experiences shared with others which have a far greater uniting power than fellowship in the social pleasures of life. They work to the mutual benefit, to the advantage of the individual, and the value of it is deserving of recognition. Moreover, amusements, like everything else which draws us into association with others, serve as an opportunity for the culture of social virtues—unselfishness, equanimity, courtesy, and the like; while, if we extend our definition of amusements to include the great national games, they afford a discipline for the growth of such qualities as patience, self-restraint, manliness, alertness, readiness to seize an opportunity. Then, further, the pursuit of amusements is a bulwark against the temptations of the leisure hour. Nothing exposes the heart to the allure of evil pleasures, than to want of some healthy interest; and an honest love of innocent pleasure, if it served no other end, would be valuable as a moral safeguard.

5. All this must be freely acknowledged. Amusements have an undeniable ethical worth when they are wisely engaged in. But they cease to be ethically valuable, and indulgence in them becomes a dissipation, when they are sought after without due regard to the serious interests of life. When they are allowed to engross the mind and to become the main business in which pleasure is found, when their pursuit prejudices the performance of duty and the ethical development of higher interests, when they encroach on time which should be devoted to more serious matters, or make one indisposed to engage in one's proper work, they become harmful and morally reprehensible. There is no amuse-ment, however, that if properly used, and an individual's own amusement should occupy. It does not justify an ascetic attitude towards amusements. Human nature has an instinct for joys of a light and entertaining kind, and this natural receptive instinct is not disabused and repression, but a wise control and a large-hearted recognition of the part its gratification may play in the culture of life. That is, the nourishment which this instinct needs is, first, the right and mirth, for pleasures which stand in no immediate relation to life's duties, but minister to

only in their timeliness, but also in their excess. They are frequently allowed to bulk so largely in life that serious occupations become distasteful. If, after consulting our consciences and unable to pass with ease to more important concerns, and, instead of feeling refreshed for duty, have an aversion to it, we may fairly conclude that we have transgressed the limits of moderate enjoyment, and have fallen into self-indulgence. That these limits are frequently overpassed is not a matter for doubt. There is no question that at the present day the desire for amusement has in many cases outstripped with whom usefulness is seriously prejudicing the culture of the higher life. In the opinion of competent judges, there is a waning of intellectual interests, a decay of any genuine love for those pursuits which enlarge and enrich the mind, a growing unconcern for the graver matters of religion and social service, and in some degree at least this is to be attributed to the immediate indulgence in lighter pleasures. The fault of our age is not in seeking amusement, but in not knowing where to draw the line. *Nee lussissimae pudet, sed non incidere ludum* (Horace, Epist. 1. xiv. 36).

6. The nemesis of excessive addiction to amusements is not only the destruction of the taste for serious and the decay of genuine delight in pleasure in life. The rationale of amusements is their power to send us back to work re-vitalized and capable of finding joy in it. But when they usurp the throne of our desires, and so dominate our thoughts and interest that work is felt to be a wearisome and uninviting interlude, they kill joy in that region of life where joy is all-important, where alone joy can be solid and lasting. A predilection not craving for amusement is its own end; it renders joyless the whole stretch of life which of necessity must be given to work, and it speedily exhausts the enjoyment that amusement itself can give. Excessive pleasure-seeking brings squalor and decay. Amusements, when they become the chief object of pursuit, lose their power of amusing. There is a world of truth in the well-known saying, uttered in reference to the excitements of a London season: 'Life would be tolerably agreeable, if we were not for its amusements.' Excess of pleasure nauseates and takes the joy out of life.

7. In the choice of amusements, and in the determination of the extent of their indulgence, there are several conditions to be taken into account. From the individual's point of view, it is important that he should learn to avoid every form of pleasure which is physically harmful or morally degrading, and to allow himself only that measure of enjoyment which is consistent with the proper discharge of his work, and with a due concern for higher personal interests, such as self-culture and religious worship. But the question of amusements must be considered also in the light of the obligations which we have towards others. To some extent, of course, a consideration of that kind is always involved. Our conduct is never, strictly speaking, merely self-regarding; faithfulness in work, for instance, with which our amusements should never be allowed to interfere, is not simply a personal matter—it affects all others who are dependent on it. But as members of a family, or of a church, or of society in general, we have duties to others—duties of love, helpfulness, consideration, service; and these must be kept in mind in determining the extent and participation in amusements. Indulgence in pleasures the most innocent is illegitimate when it leads to the neglect of our social obligations. A man has no right to seek amusement to the detriment of his work or to the benefit of others. And this question of duties in pleasures must be presented to ourselves, and to others, most earnestly when we are about to indulge in pleasures which we owe to those of our own family circle. Similarly, one may spend so much time or money on the gratification of one's desire for enjoyment as to render impossible the honourable discharge of one's duties to society. Those most closely identi-fied with the religious and philanthropic sentiments are the most unanimous in the opinion that one of the chief difficulties in finding money for its adequate maintenance arises from the increasing expenditure on amusement. Further, there may be occasions when our obligations to others demand whether we should not deny ourselves the gratification of an amusement which to us is perfectly innocent, but which is a cause of offence to those who are bound with us in duties and in serious obligations. That which we owe to 'weaker brethren' cannot be entirely ignored, although there must be limits set to it. One may feel constrained in certain circumstances to renounce a form of enjoyment which harms another or offends his conscience; but, in the interests of moral education, it should be recognized that one has also a duty of vindicating the freedom of conscience, and of showing that amusements which to some are obnoxious, and even injurious, may be indulged in with perfect loyalty to high ethical standards. But, in still another way, our obligations towards others are bound up with the question of amusements. In all these days amusements have become largely in the hands of professional classes, and it has been maintained that the moral danger to which men and women belonging to these classes are exposed is so great, that the amusements provided by them should not be countenanced by those who have the welfare of their fellows at heart. This is perhaps the chief reason why many refuse to enter a theatre. It should be frankly acknowledged that if, as is frequently alleged, the theatrical career puts the souls of men and women in needless jeopardy, and exposes them to temptations such as no one should be called upon to face; if the conditions and atmosphere of an actor's calling are so lowering to the moral tone as to make a loose manner of life practically inevitable, the enjoyment furnished by dramatic representations is a form of amusement which a good man will refuse to countenance. Now, that there are moral risks of a peculiar kind attending the theatrical profession, it would be idle to deny; but the fact of risk does not necessarily condemn it, any more than the inevitable risks attending all kinds of work. There is a risk in business, and it is the risk of failure; and here again the actor is not so much in danger of losing his work as in seeking to give effect to his vocation. As long as his profession is at heart honourable, and as what he does is kept in due perspective, it cannot be called wrong. Further, the theatre is a refuge for the man of sensitive tastes who is unable to meet life's perils in the way of strenuous activity. In any case, the principle of freedom of conscience is held by all, and the actor is entitled to be considered as exercising his profession as a matter of conscience, and that to all outward appearances. The benefit of this view must be in all cases to the advantage of the theatre: it not only makes it easy for the profession to maintain a good conscience, but also to consider, on the grounds of the fullest knowledge at his command, whether those who provide the entertainment are prejudicially affected in character.

8. In the last resort, the question of amusement is for each individual to decide. It is impossible to lay down hard-and-fast rules which will have universal validity. The science of ethics is one of the most individual of all the sciences. The determination of duty is a matter for the earnest and enlightened conscience of each person for himself. It is not to be denied that the method, which has been largely favoured in some quarters, of setting up lists of allowable and proscribed amusements has a certain practical utility; the deliberate judgment of good men in reference to pleasures, whose worth for the ethical ends of life is a matter of debate, is serviceable; but it must be set aside; never-theless, in all such matters the individual conscience must be the final judge. The free life of the spirit must not be bound; only it should be remembered that, for a man to find happiness in amusement, the individual must have a clear apprehension of the moral obligations resting upon
AMUSEMENTS

403

him, and be guided by a spirit of devotion to a lofty ideal of life. 'He that is spiritual judges all things.' Let a man realize the true ethical ends of life, let him recognize that life is a gift to be used for the self-cultivation of the soul, and the question of amusements may be left to be settled itself. He who walks according to 'the law of the spirit of life in Christ Jesus' will never find himself in serious difficulty. He will never be tempted to indulge, or to what extent he may indulge, in things; without doing wrong; he will be so intent on seeking the true ends of life that only those amusements will be desired which are in harmony with these ends, and only that measure of indulgence will be allowed which helps towards their attainment. In the most natural way, amusements will take their fitting place as a means of refreshment. They will be the lighter breathings of an earnest spirit, which finds in them a new zest for duty and a preparation for more exacting pursuits. The ethical ideal which gives unity to life will govern them and lend them value; for the self-cultivating activity in modern life features in high aims are simply the frivolous exercise of a low-toned spirit, are the sparkles on the surface of a deep and earnest nature, the instinctive playfulnings of a heart that finds in relaxation a help for serious work.

B. 1. So far we have been concerned with the general principles which should control the choice and pursuit of amusements; we turn now to consider their character and place in our modern life. It was inevitable that the vast changes which have taken place in business and industrial life within the last two or three generations should affect in a large degree the habits and interests of men in their hours of leisure. The decay of intellectual and spiritual interests had been incidentally referred to as one of the regrettable results of the increasing desire for lighter forms of amusement, but it must be confessed that it is hard to see how that was altogether to be avoided. The growing strain which the conditions of modern life have imposed on those engaged in business, the exacting demands made on brain and physical endurance by the sharpness of competition as well as by the necessity for providing the comforts and aesthetic refinements of a higher standard of living, have made such inroads on the energies of men that their pleasures have inevitably taken the character of recreation which allows them to relax the tension of the mind. In former days, when the strain was less severe, it was possible in moments of leisure to devote oneself to interests which required some intellectual effort, but under the conditions of present-day life the tension in the case of very many is so great that, if the balance is to be redressed and the powers re-energized for the proper discharge of work, amusements must often be of a nature to quicken sensation and act as an agreeable opiate to serious thought. This may be regretted in the interests of wide and harmonious self-culture, but it is part of the price which must be paid for the overdriven activity of modern life. The same consideration is a fair answer to the criticism which decries the craving for spectacular amusement in the name of robust methods of recreation and the blindness to the facts of modern life that leads to the wholesale condemnation of pleasurable excitement which is not accompanied by the healthy glow of exercise. That some measure of recreation in its noblest sense is both desirable and necessary for health of body and mind may be freely allowed; but it cannot be questioned that for the vast proportion of the tollers in our cities what is needed is not so much a further increase of natural energy, as some form of diversification which will quicken the pulse of life by its appeal to the imagination through the senses; and the hard-driven poor ought to be able to secure this in ways that are free from moral danger. Nothing, indeed, is of greater importance for the true welfare of those who are exposed to the strain of city life than the establishment of centres where healthy amusement, freed from all contaminating associations, can be had at a small cost. The Churches are moving in this direction already, and it is to be hoped that when municipal will realize that it is their highest interest to devote some attention to the amusements of the people.

2. It is not merely the strain which our modern civilization imposes that makes the question of amusements of such vital importance; it is much more the unnatural conditions which have been created by the highly specialized character of modern industry. For large sections of the population there is under present conditions nothing in the nature of their work itself to excite any deep and genuine interest. In earlier days, handi- craftsman found in the varied operations of their calling, and in the freedom in which their skill was found scope, a zest which in our mechanical age is almost entirely lacking. It is by no means surprising that men have sought an escape from the colourless monotony of uninspiring work along the paths of least resistance, and have turned to satisfy their craving for a wider and more joyous life by indulgence in vicious pleasures or in forms of excitement which sap instead of renewing the energies. In these circumstances the great problem is to make activity pleasurable again, to find some way by which interest may be re-awakened in the performance of work which in itself is largely devoid of interest. Unquestionably the holiest way of attaining the end in mind is to introduce in men's minds a new sense of the deeper meanings of work, a feeling for its ethical significance to the individual himself, and for its contribution which he is able to make to society in return for the privileges which society confers upon him. But the same end may be served in another way. It has been remarked that 'the most powerful moralizing influences are not always those which are directly moral' (Macaulay, 'History of Character', 58). Accordingly, interest in work, with the formation of good habits which that implies, may be secured by the provision of healthy amusements which will make it easier for men to relax the tension in their minds and satisfy the instinctive desire for a larger life. While the love of life is at present largely exploited by private individuals, with results that are frequently far from beneficent, the aim of the community ought to be to supply forms of entertainment which shall prove a stronger attraction than questionable and vicious pleasures, and shall so enlarge the horizon of men's better desires that they will feel a new inducement to enter into work with all the energies at their command. As an indirect means of attaining moral ends, amusements have a worth which is deserving of greater attention than they have hitherto received. Patten ('The Moral Basis of Civilization') closes a suggestive discussion of this question with these words: 'Amusement is stronger than vice, and can stifle the lust of it. It is a base of economic efficiency upon which depends the progress of multitudes. When men and women have withstood the allurements of vice and learned work habits, then the steps beyond are fairly well paved.' The Churches, for their part, as their character, the school can clarify purpose, and the settlement can socialize the material ready in the industrial world' (p. 143). See also GAMES.

A. F. Findlay.

AMYRALDISM was the name given, more generally, to the theology of the French scholastic, Amyraut (Moses Amyrauts, the Amio of Baillie's Letters), and, more particularly, to his way of defining the doctrine of Predestination. In the latter sense it was, not quite appropriately, Hypothetical Universalism, a variant of those three-forms (the others being Arminianism and the Covenant Theology) made during the 17th. cent. to break through the iron ring of Predestination within which the Reformless Scholastic of that century had enclosed the theology of the Reformed Church. To understand the theory it is necessary to know something of the workings of that Scholastic, and something of the life and aims of Amyrauts.

The second leads naturally to the first. Moyse Amyraut was born at Bourgoin in Touraine in 1566. His family belonged to the reformed ministry. He mustered a lawyer's career. He had begun his studies, and had attained to the grade of licentiate, when the reading of Calvin's Institutiod brought him to the theological College of Saumur, where the teaching of the celebrated Scoto-French scholastic, John Cameron, must have exercised an impression on him—second only to that already produced by the study of the Institutio. After a short ministry at Aligarn, in Paris, he became Professor of Theology in the theological College of Saumur, and was deputed by the National Synod, which met at Charlestown in 1615, to carry their respective propositions to the Synod of France. Louis xiv. At Court he attracted the attention of Cardinal Richelieu, and retained his friendship. In 1631 he was appointed Professor of Theology in Saumur, having as colleagues, appointed at the same time, Jean de la Place and Louis Cappel. All three had been to the College of Saumur, and all had acquired study for the theology of Calvin as that was exhibited in the Institutio. All three believed that the so-called Calvinism of the day, differed widely from the teaching of the master, and they were not slow to let this be known in their lectures. The College soon acquired a great reputation. Students came to it from the Reformed Churches beyond France, especially from Switzerland. Then doubts began to arise among the orthodoxy of its teaching, both in France and in Switzerland. The individual churches of the latter country began to withdraw their students, and that "after-born" of Reformed creed-making, the Formula Conveniens Elettonis, was framed for the purpose of denouncing the doctrine of the three professors of Saumur.

The criticism of Amyraut were right if orthodoxo was to be tested by the Reformed Scholastic of the day. It was his aim to bring back the Calvinism of the Institutio, which differed widely from the Reformed tradition set up in the doctrine of Predestination. With Calvin, predestination is not set forth at the beginning of his theological system; it is never used as the fundamental thought upon which everything else is to be classed. It is simply an explanation of the sovereignty of grace, which overrides man's sin and man's weakness. Still, in spite of the smaller place and special position which the word and idea of predestination held in the Institutio, there was a master-thought running through Calvin's theological thinking which might easily be displaced by the conception of predestination.

The first of these, as Amyraut pointed out, was the doctrine of God and the nature of the universe. If God is a principle, a creator, a ruler, and judge, the universe is a logical and necessary consequence. This is the notion of God which is involved in the concept of the "Oiios." This is the notion of the universe which is implied in the notion of the "Whole." It is the notion of the universe which is involved in the notion of the "All." It is the notion of the universe which is involved in the notion of the "Whole.

It was this Scholastic that Amyraut and his colleagues protested against; this encloses everything thinkable under the ring-fence of a Divine decree, which was simply the predestination of the universe in the category of Substance. It was, they thought, a narrower thought than the system of Substance under another name. They wished to get back to the experimental theology of the Reformation age as that was exhibited in its greatest master. They felt that the first thing to be done was to break through this ring-fence, within which the metaphysical of the time made all theological thought move. The attempt made be them, which went by the name of Arminianism, did not appeal to them. To Amyraut it was not to do with the experimental theology of Calvin, and was simply the revolt of a shallower metaphysic against a deeper. They accepted the decisions of the Synod of Dordrecht. But they wished to bring the theology back to the experimental life, to connect it with the needs of men and women.

The special doctrine of Amyraut is known as Hypothetical Universalism, or the Double Referenc Theory of the Attraction. It was so called by, if not based on, Cameron's doctrine of Conversion. That doctrine, as Amyraut understood it, was; Conversion may be described as a special case of the ordinary action of the intellect upon the will. According to the psychology of the day, it was held that the will acts only in so far as it is influenced by the intellect—action follows enlightenment, and that only. Conversion is a special case of this action of intellect upon will—special, because in this case the Holy Spirit enlightens the intellect, and the intellect, charged with this spiritual enlightenment, acts upon the will. Conversion is thus an instance of the translation of the action of the intellect upon the will, and yet it is, at the same time, an altogether extraordinary work of supernatural grace. The grace of God, which is supernatural when it acts upon the will in conversion, is not an instance of the ordinary psychological laws. This relation between the intellect and the will in conversion suggested to Amyraut a similar parallel between Providence and Election, and between Creation and Redemption. Redemption is a doctrine to Amyraut, looking to the course of nature; but Election is a special instance of Provi-
dence and at the same time the peculiar and gracious work of God. Creation belongs to the ordinary course of nature, and Redemption is a special instance of Creation, and is nevertheless a unique and gracious work of God. Just as the relation of the intellect to the will may be called the universal of conversion, so Election may be looked at as set in the environment of Providence, and Redemption in the environment of Creation.

Amyraut, whose devotion to Calvin was unbounded, insisted that these thoughts of his were the legitimate and historical development of ideas presented in the *Institutio*. He keeps to Calvin's great thought of the purpose of God unfolding itself down through the ages. This purpose of grace, when viewed out of all relation to time, is universally Creative, specially it is Redemption; viewed historically, it is Providence and Election viewed individually, it is Intellect acting on Will and Conversion. He has thus three pairs of ideas—the one universal and natural, the other special and of grace; and that which is grace is always set in the environment of the natural.

This mode of thought, however, embodied a practical ecclesiastical purpose. In those days Germany was being devastated by the Thirty Years War. The unification of Bohemia by the political principles of Calvinism, in consequence of the mutual jealousies between Calvinists and Lutherans. Since the Synod of Dortrecht, the Lutherans had grown more embittered against the Calvinists. They believed that its doctrinal conclusions had been directed against them indirectly. Amyraut hoped to make it plain to the Lutherans that Calvinist theology could be stated in a form which might be more acceptable to them. He sought to make universal and active in objection to the Calvinist doctrine of a limited reference in the Atonement, and he hoped to overcome that difficulty.

Two modes of dealing with the Lutherans were possible to Reformed theologians. (1) They might have insisted that Lutheran theology was quite distinct from Arminianism, and that the condemnation of the Arminians at Dortrecht was not meant to, and did not, involve a condemnation of the Lutherans; that the particular point raised in the Arminian controversy had never been before the Lutheran Churches, and had never been settled by Luther himself; that during the time the Lutherans were in process of conversion, the questions which were raised were not embraced or set forth as a theme. Amyraut selected the latter method. He tried to show that there might be the general reference in the Atonement to all men, which the Lutherans insisted on, while of which the Reformed thought of a limited reference was also correct. He worked out his scheme of conciliation by the use he made of the three pairs of ideas already mentioned. The purpose in Creation, he said, was Redemption; the purpose in Providence was Election; the purpose in the gift of intellectual endowment was Conversion. Applying this to the matter in hand, he declared that, if the whole doctrine of Redemption mean to make all things work together for the good of them that are called, Providence itself is but a wider election—an election which may be described as universal.

His argument concluded was somewhat as follows: The essence of universal moral law must impose upon it. This Divine goodness shines forth on man in Creation, and in Providence, which is simply Creation from nothing. But when man entered into creation, and has destroyed the true end and aim of man's life, in presence of sin God's goodness shines on, but not as from its very nature, but love plus morality, take a somewhat different form. It becomes righteousness, which is simply the presence of sin. The righteousness of God, therefore, must be in presence of sin, and the desire to save; but the presence of sin has made it appear under a special form of becoming righteousness. The theological ideas of the 17th cent. Calvinism, it is seen that the purpose of God in salvation is really supra-lapsarian, because it arises from goodness. The presence of sin, which is, therefore, face to face with the thought of the Fall. But it may also be regarded as supra-lapsarian, because it is simply a continuation of the original goodness of God. In this purpose of God there is no theoretical limitation save what is implied in the means which the goodness of God in presence of sin is not compelled to take; i.e., the work of Christ. The purpose of God to save is simply the carrying out of the original and universal goodness of God. The work of Redemption is thus carried out the original work of creation. The purpose to redeem is set in the environment of the original purpose to create. When looked at from the point of view of Creation, the supra-lapsarian, there is a universal reference to the work of Christ. But when we look at this purpose of God in presence of sin, and when we know that some men do die impenitent and therefore are not saved—when we know the supra-lapsarian purpose to save—we see that the theologically universal reference is limited practically by the fact that the persons are saved; that the reference is theoretical or hypothetical; the limited reference to the elect is practical and real. Christ's work has real reference only to the persons he has predestined. Therefore, in the limited reference round the limited reference in the work of Christ is the distinctive feature in the theology of Amyraldus.

Amyraut, however, applied this general thought in a thread of controversy. (1) He was opposed to the strict idea of salvation limited to the elect—to whom all reference of the work of Christ was limited in 17th cent. Reformed theology—by making the goodness of God, which has regard to all men universally. Amyraut gave a practical reference to salvation in all righteousness (which is His goodness in the presence of sin). He declared that this thought lay implicitly in the well-known phrase of the divines at Dortrecht: *Christus mortuus est sufficience mortuus omnibus, sed efficax pro electis*; and to make plain what he believed to its meaning, he changed it to: *Christus mortuus est sufficience mortuus omnibus, sed non actualliter pro omnibus*. This was the origin of the popularly universal gift of grace, and a real limitation to those actually saved. (2) He broke down the barrier which 17th cent. divines had reared against the possibility of the salvation of the heathen, by their statement that the question of saving the Gentiles was not addressed cannot be held to be recipients of the benefit the saving work of Christ. He taught, following Zwingli, that God in providence did bestow upon pious heathen in the world, and in the church, the gift of an external call. This gave a real and not a hypothetical, universal, external call, and with it the offer of salvation to those who had not heard the Gospel message. (3) He widened the precisely fixed sphere of conversion by insisting that every illumination of the intellect was an analogue and prophecy of the spiritual enlightenment which produces conversion.

But while all these conceptions were discussed in a many treaties on Predestination, the controversy which followed the publication of his views was really confined to the first line of thought. The question was asked, What changes was this supposed to universal reference into a real particular reference? Is it the action of God or of man? If the change arises from man's power to resist what God has purposed to do for all, then Amyraut was a strong Arminian, as the Dutch and the Swiss theologians asserted. Did the mystery of the change lie hidden in God? Then his theology did not differ substantially from that of the divines of Dortrecht, save perhaps in regard to the supralapsarian. The latter was rejected by the French Reformers of the Church. Amyraut was summoned before the
ANABAPTISM

National Synod of 1637 along with his friend Paul Testard, pastor at Blois. The accused were ener-
ggetically defended, and allowed full liberty to ex-
plain their position. They were acquittd of all he-
rendous charges. They were presented at the National
Synods of 1644 and 1645, with the same result.
The Swiss theologians were not satisfied. Their
Formula Consensus Ecclesiarum Helveticae Re-
formatarum (1676) witnessed their protest.

The doctrine of Amyraut has maintained a firm
hold on many evangelical Calvinists since his day.
It was professed by Baxter, Vines, and Calamy in
the days of the Westminster Assembly. It was not,
so as we can learn from the minutes, meant to be
excluded by the definitions in the Westminster
Confession. It was taught by Professors Balmer
and Brown within the Secession Church in Scotland.
It is part of much modern evangelical theology.

ANABAPTISM.—I. HISTORY. — The Ana-
baptists, or Katabaptists (Wiedertaufer or Täufer)
rose in close connexion with the early Reformers
at Zürich, Wittenberg, and possibly elsewhere. The
Anabaptists swept through Germany and all Europe
affected by the new Reformation, making a profound
impact in the early years of that movement.
All the leading Reformers (Luther, Zwingli, Bucer,
Oecolampadius, Calvin, Knox, and many others)
confronted their views in one or more publications
and disputations; their doctrines are condemned
explicitly or by implication in all the leading creeds
of the 16th and 17th cents. (Augsburg, Part i. Artt.
x. x.; Troentges, Sess. v. 4. 'On Bapt.' Can. xii.
Formula of Concord, Artt. xii.; Thirty-nine Artt.
Conf. 1661, xxxiv.; Westminster Conf. xxviii.;
and Calvin, Institutes were written largely to prove to Francis i. that the Reformers
were not all Anabaptists; they were put under the
ban by the Diet of the Empire in 1529; and most other
government authorities, including that of
England, took action against them.

They were the radical party of the Reformation
period, regarding Luther and Zwingli as half-
reformers who had pulled down the old house
without rebuilding. They were under the
pressure of reforming the old Church, they sought to
build anew on the foundation of Scripture literally in-
terpreted, without the help of the State or any
other existing institution; this religious ideal in-
volved fundamental social and political changes
(Bock, Geschichtslehrer d. Wiedertaufer, p. 12).
They differed considerably among themselves in
spiritualism, and many more or less important
points of doctrine; but strove towards a
great and far-reaching reform. They sought to
reform the work of the Reformers.

The striking similarity between many of their doctrines
and those of some earlier sects has led to an
incorrect assumption of a historical connexion.
Ritschel (Gesch. d. Pietismus) has sought to
trace their doctrines to the spiritual Franciscans; Leodig
Keller and others have sought to show some connexion
with the Waldenses, who a little earlier were widely scattered over
central Europe. The similarity in doctrines, spirit, and organiza-
tion is so marked as almost to compel belief in some sort of
historical succession; and yet the effort to trace this connexion
has not so far been successful. Moreover, several considera-
tions unite against such a conclusion.
(1) The Reformers themselves were not conscious of this connexion, regarding them-
theselves as the supporters of a reformed and not a new
form of the Church. (2) All their leaders, so far as their lives are known, came out
of the Catholic Church. (3) They had little or no communion with older sects after their rise. These considerations, without more, suffice.

The history of the party can perhaps be best
followed by dividing them into German, Swiss,
Moravian, and Dutch Anabaptists. These divisions
overlap more or less, but they are largely distinct
types.

I. The German Anabaptists.—It is commonly
held that the German Anabaptists rose with Thomas
Münzer and Nicholas Storch at Zwickau in eastern
Saxony. Münzer, a well-educated man, deeply
influenced by the mysticism of the later Middle
Ages, a friend and follower of Luther, became
pastor at Zwickau in 1520. Here he came under
the influence of Nicholas Storch, a weaver, who
had become a Calvinist. His views were
specially associated with the Bohemian views:
chiliasm; the rejection of oaths, Sunday war-
fare, and infant baptism; and the insistence on com-
monity of goods. Under this influence he at one
time began drastic reforms. With his approval Storch
set up a new church, which was called the Bohemian model,
claiming new revelations and the special guidance
of the Spirit. Their socialistic teachings and re-
volutionary proceedings soon forced them to leave.
Storch, in company with a former Wittenberg
student named Stübner, proceeded to Wittenberg
in the hope of winning the support of the University
for their views. Luther was then in hiding at the
Wartburg; Carlstadt and Cellarius, two of the
professors of the University, were specially
influenced over by the new prophets, and even Melancthon
was deeply moved. Various reforms were put
into effect immediately. Luther, hearing of these
radical proposals, and believing they would
bring the whole reform movement to ruin, hastened
to Wittenberg in spite of the protest of his friends,
and in eight powerful sermons succeeded in
suppressing the movement at that place. Storch
and eventually the two professors whom he had won
to his views were driven away, Melancthon was
saved, and the radical reforms revoked. Hence-
forth Luther was one of the most powerful and
uncompromising opponents of the Anabaptists.
Storch now wandered from place to place, and
finally disappeared about 1525.

In the meantime Münzer had visited Prague
for several months, had then laboured as pastor
and agitator at several places in Thuringia, and had
made a visit to southern Germany and the border
of Switzerland in the interest of his views. He
was becoming more socialistic, more chiliasm, more
bitter towards the ruling and upper classes. At
last in 1525 the peasant uprising broke out.
It had his enthusiastic support, and shortly after its
overthrow at Frankenhausen he was arrested and
executed. With this catastrophe the Anabaptist
cause in Germany suffered a permanent defeat.
Henceforth Anabaptism was associated in the
minds of Germans with the wild socialism and
chiliasm of Münzer and the horrors of the Peasant
War. And, although Münzer himself is known to have been re-baptized or to have practised
believers' baptism, both opposed infant baptism,
but Münzer specially provides for it in a German
service which he drew up for the occasion in 1522.
It is to him that we must look to determine the extent
to which these men preached the necessity of
believers' baptism, and thereby became the founders
of the Anabaptism of Hesse and other regions of
western Germany. They were chiefly interested
in socialist-chiliastic ideas, and probably did not press the demand for re-baptism. If this be true, the Anabaptists of the Rhine region had another origin, to be traced later.

2. The Swiss Anabaptists.—Bullinger says that the Swiss Anabaptists sucked their Anabaptism from Müntzer (Refor. Gesch. i. p. 2241.). But this is improbable. Müntzer, as we have seen, did visit the border of Switzerland in 1521, and was in all probability the real fountain of the Anabaptism; but in a letter still preserved (Cornelius, Gesch. d. Minist. Aufbruchs, ii. Bel. I.), written September 5, 1524, they show marked independence, even chiding Müntzer for some of his views. Moreover, the whole tone and spirit of the Swiss was different from that of Müntzer. Chiliism and violence had no place in their scheme, and socialistic tendencies were much less prominent. Besides, there was in southern Germany and Switzerland at this time wide-spread doubt of the Scripturalness of infant baptism, Bucer, Goccolapadius, and even Zwingli being in doubt (Von Thael, Wiederkunft, etc., Oppi. ib. 1545, lib. i. p. 2391.; Egli, Auctenammlung, 655, 692). These Anabaptists rose from the circle of Zwingli's intimate friends and associates at Zürich. Zwingli perished through his own, 1st Jan. 1519, and by his powerful evangelical preaching. But in 1523 brought many of the population to a readiness to abolish Catholic worship and doctrines. But he was anxious to avoid division and strife, and delayed action, hoping to convince the whole mass of the people and then proceed to reform with the authority of the cantonal government. Under these circumstances there sprang up a radical party who favored proceeding at once with reform without waiting for any. Moreover, their conviction on some points was in advance of Zwingli's. They urged him to remove or destroy the images, abolish the Mass, begin the celebration of the Supper in both kinds, and finally, to set up a church composed of saints (believers) only. His delay in adopting their earlier demands and his flat refusal to entertain the last led to a final breach with the party in 1523 or 1524 (Bullinger, Der Wiedertauf Urspunft, Bl. 9). The more prominent members of the party at this time were Simplicius Zulcher as a Polemicist, Heinrich Heister, Heinrich Heister, Andreas Castellberg a cripple, Conrad Fugger, a young man of aristocratic family, Felix Manx, Wilhelm Reublin pastor of Baden, Geza Nebel a Hebraist and later translator of the Prophet, and Georg Blaurock a converted monk, the most powerful publicor among them. Grebel and Manx were the real leaders of the party at Zürich. Grebel was trained at Vienna and Paris, and possessed a disputed title of Doctor of Theology; he was a presbyterian scholar, habitually using his Hebrew Bible in preaching. These men held private meetings for Bible study, and here their views were gradually developed and perfected (Egli, op. cit. No. 620). Early in 1523 they reached the conclusion that infant baptism was without warrant in Scripture, was an invention of the Pope, and had no place in the true church; and the duty of beginning the baptism of believers was felt to rest upon them. This they proceeded to do in Dec. 1524 or Jan. 1525, when in a private house Grebel baptized Blaurock, who in turn took a dipper (tanner) and baptized several others of the name of the Trinity (Egli, 620, 66). This was followed by the celebration of the Supper in the same simple way.

The civil authorities now resorted to repressive measures. After a public disputation with the Anabaptists (17th Jan. 1525), it was decreed that all infants should be baptized within eight days, that all private religious meetings be discontinued, and that all foreign Anabaptists be banished. Soon printing was stopped, warned, threatened, and released. Continuing their collectivity, they were again arrested, thrown into prison, and a second ineffective disputation was held on 20th Feb. 1525. April most of them escaped from prison, and lost for a time the use of the Canton of Zürich comparatively quiet, they spread their views far and wide in other cantons. Re-
ANABAPTISM

disputations with Pfister Meyer in 1523 and at Zofingen in 1522 failed to retard their growth. Berne then proceeded to blood, and between the years 1525 and 1527 no fewer than forty were executed (Miller, p. 741). But even this severity was not sufficient to root them out of this canton. During the succeeding years, twenty more were sent to the gallows, depopulating banishment and proscription; but they have maintained their existence to the present time.

In St. Gall, persecution drove the Anabaptists, especially the women, to the most absurd and childish and even immoral practices (Grebel, Kessler, Blaurock). One case afforded a curious instance of the perversity with which this incident, but they could not escape the consequences of the deed. Anabaptists lingered in this canton till the 17th century.

By 1532 all the leaders, such as Grebel, Manz, Blaurock, Denck, Hätzer, and Hübmaier, were dead, hundreds had been forced to recant, many had died in prison, and perhaps thousands had been driven from the country. The movement in Switzerland lay in ruins, destroyed by the civil power. The causes of this bitter persecution are not far to seek. The Anabaptists in this region, with few exceptions, were quiet, pious, law-abiding people, and with the strictness of the Calvinists (Kessler, Sobotta, i. 272). Even Bullinger admits that they had the appearance of unusual piety. But they made what seemed at that time impossible demands: a Church composed of believers only, rigid discipline for moral offences, complete freedom for the Church and the individual conscience. Failing to obtain their demands, they divided and weakened the Reformers, causing endless strife and difficulty. Their refusal to bear arms, to serve as civil officers or take the oath, made them dangerous to the State, while their attitude towards property, usury, and certain forms of taxes threatened the whole social order. Hence supposition and extermination were felt to be the only paths to safety.

The intimate relations of the south German cities with Switzerland made them peculiarly susceptible to all spiritual and religious movements in that country. Accordingly we find large Anabaptist circles in Strassburg, Worms, Nuremberg, and Augsburg quite early. In these circles such leaders as Ludwig Hätzer, Hans Denck, and Hans Hut, were won for the Anabaptist cause. One of the most important conquests was the small border town of Waldshut in Austrian territory. Here Dr. Balthasar Hübmaier, a gifted scholar and eloquent preacher, some years later, presiding in the University of Ingolstadt and Cathedral preacher at Regensburg, was the leading pastor. He was early converted to Reformed views, and in 1524 succeeded in introducing them into the city. But he was unable to stop here. Gradually he found himself compelled to accept Anabaptist views; about Easter 1525 he and some sixty members of his church were re-baptized. This was followed soon afterwards by the baptism of several hundred others, and the Anabaptists seemed to be in a fair way to win the town. But for some months the Austrian authorities, who were strict Catholics, had been threatening to punish the town for its evangelical doings. Hützer's support of Zürich had emboldened Waldshut to persecute. The Anabaptist defection caused the withdrawal of this support, and in December the storm broke over the devoted city. Hübmaier, who had flocked as an Anabaptist, imprisoned, and forced to recant as the price of liberty. Released on 11th April, 1526, he fled through Constance to Augsburg, and thence in June to Nikolauburg in Moravia, where his persecuted brethren were awaiting him. Driven from Switzerland, the Anabaptists fled eastward into the Austrian lands from 1526 onwards. Their doctrines found ready acceptance, and soon large bodies had been gathered at Rottenberg, Kitzbühel, Brixen, Bosn Linz, Steyer, and elsewhere. Here they found a Catholic governments which hunted them down, if possible, even more strenuously than the Swiss. King Ferdinand himself was very active in the work of extermination, and, in a few years hundreds had suffered martyrdom. Protected by the character of the country and the sympathy of the common people, the Anabaptists continued to maintain an existence for more than a century, till the Catholic reaction swept all forms of evangelical life in these regions out of existence.

Persecution in the Austrian lands drove the Anabaptists onward into Moravia, Bohemia, and Poland. The religious history and the social and political condition of these lands made them an asylum for various sects, and here for a brief period the Anabaptists found rest and safety. At Nikolauburg, under the protection of the lords of Lichtenstein, they found a 'goodly land,' a new Jerusalem, from 1526 onwards. 'Thither they streamed in great numbers from Switzerland, the Austrian lands, Germany, and elsewhere; natives and strangers, were converted to the faith, and many hundreds were brought from the other coasts, and the number of thousands. Among the first to arrive was Hübmaier. Learned, eloquent, free from fanaticism, without rancour in debate, a careful exegete, possessed of an excellent literary style, he was the acknowledged orator of the Anabaptist party. Little more than a year he published no fewer than fifteen tracts, in which he set forth with force and clearness the great principles that characterized his people. Had he lived, his history might have been different. But the Austrian authorities soon learned of the presence in their dominions of this fugitive from Waldshut, and demanded his apprehension as a traitor. After some delay, the lords of Lichtenstein were compelled, in 1527, to hand over Hübmaier. He was imprisoned at Vienna, where he was burned at the stake on 10th March, 1528. Thus perished the most important of all the Anabaptist leaders.

The community in Nikolauburg could ill afford to lose a man of such wisdom and sanity. Already in 1526 Hans Hut, one of Münzer's followers who had escaped from Germany, appeared among the brethren as a powerful and impressive herald of Christ's speedy return, a determined opponent of magistry and war. Others soon began to agitate in favour of community of goods. Hübmaier had opposed all these views, but Hans Hut, and even many of the brethren before his expulsion by the Lichtensteins. They soon felt compelled to banish his followers, who were now perhaps a majority of the brethren. The moderates remained at Nikolauberg under the leadership of Spitalmaier as chief pastor, but they were never again the most influential party. The radicals settled at Austerlitz, and soon became a thriving community, with branches at Brünn and elsewhere. Chiefly through the missionary labours of Jacob Hutter, a noble and zealous leader, their persecuted brethren in the Austrian lands were induced to immigrate in large numbers. They built great communal houses, became experts in agriculture and stock-raising, and in the manufacture of many important articles of commerce. Their value was recognized by their lords, who protected them as far as they could; but after 1552, when the persecution broke over them. Their houses were broken up, and they were driven forth into other lands. As persecution subsided, they returned and took up their homes. After another period of persecution, which lasted with more or less severity from 1547 to 1554, they enjoyed great prosperity till 1592, when they probably numbered some 70,000 souls. They had suffered from frequent internal strifes, and were
now caught in the great Catholic reaction led by the Jesuits, and gradually declined. Greatly reduced by the Thirty Years' War, they were completely ruined by later invasions of Turks and others, as well as by the discovery of their heresy by the Inquisition. They fled to Hungary and Transylvania, where they disappear in the 18th century. Others fled to southern Russia, whence a remnant removed in 1874 to South Dakota, in the United States, where they still preserve their community.

The Anabaptists of two other regions, both with some relations to the Swiss-Moravian movement, must be mentioned in this connexion. About 1532, in connexion with the work of Schwemmeck, the Anabaptists appeared in Silesia. Soon they had flourishing congregations in several important cities, but persecution from 1528 onwards gradually exterminated them.

By the middle of the 16th. century there was a strong Anabaptist body in N.E. Italy, chiefly anti-Trinitarian in Christology. The Inquisition then got on their track, and in a few years the movement was extinguished, a large number of them fled to Poland, where they built up a flourishing connexion. In 1605 they issued the Racovian Catechism, which provides for immersion as the mode of baptism. Though they were Socinians, they became a foil for the Socinians in their assertion of the lordship of Christ. They suffered the fortunes of the other evangelicals in this region during the Counter-Reformation.

3. The Anabaptists of the Rhine regions.—As far as their history can be traced, the Anabaptists of the lower Rhine-lands owe their origin and peculiarities chiefly to Melchior Hoffman. This wonderful man was born in Hall, Swabia, and was a forerunner by about six years of Luther's views, and by 1523 was a zealous evangelical preacher in North Germany. He was without education, but early acquired a remarkable knowledge of the text of Scripture, along with an intense interest in the prophetic and apocalyptic portions. He developed a burning enthusiasm as well as a powerful eloquence in propagating the Lutheran views. His zeal and power usually aroused intense opposition, and frequently occasioned riot and sometimes bloodshed. He moved rapidly from place to place, and always made a profound impression. In 1523 he was in Wurtemberg, and at Heilbronn, in 1524 and 1525 he was in Dorpat; in 1526 he was in Sweden, at Stockholm; in 1527, at Lübeck; then at Kiel, where he made a profound impression on King Frederick I. of Denmark. Banished from there, he entered East Friesland, with Carlstadt, where he threw himself into the controversy between the followers of Luther and Zwingli over the Supper, supporting the latter party, and by his power and eloquence carrying the day for his views.

In June 1529 he reached Strassburg. By this time he had developed most of the peculiarities of his system, including the allegorical method of interpreting Scripture, a belief in the millennium which fixed the beginning of the reign of Christ on earth in the year 1533, the assertion that the human nature of Christ was not derived from Mary, and, therefore, not ordinary flesh, a denial of the oath, etc. When this last thesis he is supposed to have come in contact with Anabaptists, who were then numerous in Strassburg, and to have been baptized into their fellowship. Returning to East Friesland in 1530, he used the powerful Anabaptist propaganda, which extended, with brief interruptions, to 1533, and covered much of the Low Countries. Most of the Lutheran and Zwinglian work was swept away, and it is probable that the majority of Evangelicals in the Rhine-lands in 1538 to 1566 were of the Hofmannite type. In 1531 he supervised baptisms for two years, intimating that the Lord would then come to assume the reins of government at Strassburg, and bring the era of righteousness and peace for all the oppression of the religious and social excitement intense.

In order to be present when the Lord came, he quietly returned to Strassburg early in 1533. He was soon apprehended and thrown into prison where he died ten years later. But the seed which Münzer and others had sown was destined to bear some horrible fruit.

The episcopal city of Münster, in Westphalia, had been ruled by a succession of exceedingly dissolve and oppressive bishops, who, however, succeeded in holding reform at bay for several years. But in 1529 Bernard Rothmann, a gifted young preacher near Münster, began to preach evangelical doctrines. He was suspected, but returned to his work in 1531, and soon made an alliance with Knipperdollinck and the social democracy of the city. The bishop was driven away in 1532, and the next year reform was introduced. Persecuted Evangelicals from surrounding regions found their way into Münster, and there was great rejoicing and naturally great excitement over this new triumph of the truth. Heinrich Rothmann was the first to declare the advocate of believers' baptism in 1532, and the next year Rothmann reached the same conclusion, and began a crusade against infant baptism. He was followed by a number of the leading men of the city. The City Council undertook to force the preachers to administer infant baptism, but popular sentiment was so strong as to prevent the execution of their will. This was the tense and excited condition of the city when the first Anabaptist, 1533; Anabaptists, Lutherans, Catholics, and social democrats were all struggling for supremacy, when a horde of still more excited Anabaptists poured into the city from the Netherlands, believing it to be the hour for setting up Christ's kingdom at Münster as the New Jerusalem.

Jan Matthys, a baker of Haarlem, a disciple of Hofmann, inspired with a fanatical hatred of the upper classes, now proclaimed himself the prophet Enoch, and ordered the resumption of baptism as a final preparation for the coming King. In a short time thousands were baptized. In January 1534, a second and still more effective movement came to Münster, where they baptized Rothmann and other leaders, and announced the setting up of the earthly kingdom, in which there should be no magistracy, no law, no marriage, and no private property. Soon John of Leyden, a gifted young man of twenty-five years, appeared and took over the leadership of the new theocracy. Catholics and Lutherans fled, and the city fell completely into the hands of these fanatical Anabaptists. Matthys now declared Münster to be the New Jerusalem, and invited all the oppressed Anabaptists thither. Thousands of desolate and persecuted people sought to reach this place of safety and happiness, only to be driven on the way or ruined at last in the city. The city was soon besieged by the forces of the bishop, assisted by neighbouring princes, while within its walls there was murder, polygamy, and crucifixion. After more than a year of ever increasing shame, the terrible orgy ended in massacre and cruel torture in 1535.

The effect of this Münster kingdom was most disastrous to the Anabaptists. Everywhere persecuting measures were sharpened, and the name became a byword and a hissing throughout Europe. This episode was regarded as the legitimate type of the Anabaptists, and the butchery of 1535.

Memo Simons gathered up the fragments of
ANABAPTISM

The chief qualification for correct interpretation of the Scripture was the illumination of the Holy Spirit—a doctrine which was strongly emphasized. It was charged that they claimed to have revelations and visions which they regarded as more important than Scripture; but it is probably an exaggeration of their real belief in the fact and importance of spiritual illumination.

(4) The true Church was composed of believers only—saints. According to this standard, the Church to this, they proceeded to set up a new Church on this model, thereby introducing schism into the Protestant ranks. The purity of the Church was to be secured by the baptism of believers only, and preserved by the exercise of strict discipline. (a) Infant baptism was regarded as without warrant in Scripture, contrary to the principle of voluntary action in religion, an invention of the devil, and the chief source of the corruption in the Church and of its subjection to the State. In its stead they practised believers' baptism, administering the rite to those who had been baptized in infancy, thus winning the name 'Anabaptists.' They believed that baptism from the name and its implication they earnestly repudiated, declaring that so-called baptism in infancy was no baptism, and claiming for themselves the name of 'believers' or 'disciples' baptism. The rejection of the repudiation of which was the most obvious characteristic of the sect, became the chief battleground of the parties. The mode of baptism was never a matter of discussion. Most of them practiced immersion, though there were some who practiced affusion. The party on the Continent; but some of the Swiss and Polish Anabaptists insisted on immersion as the only admissible form, thus anticipating the modern Baptist position. (b) The mode of administering the Church pure was the constant application of rigid discipline for moral offences. Unconverted and immoral members were severed from the body relentlessly, the party doubting as to extremes in this respect, the form prevalent on the Continent and the Mennonites in Holland. The Anabaptists strove to reproduce in themselves the life of Christ, and in their Church the life of primitive Christianity, laying great emphasis on the imitation of Christ. While admitting that they had the appearance of unusual purity of life, their opponents declared them to be hypocrites and guilty of grave moral lapses. A few cases, due to fanaticism, especially among the followers of John of Leyden and others of what may be termed the 'fanatical' Anabaptist school, seem to be proven; but, beyond dispute, they in general lived quiet and harmless lives, in striking contrast to the society about them.

(5) The ordinances of Baptism and the Lord's Supper had no sacramental significance. Baptism was rather a declaration of faith and forgiveness than a sacrament of cleansing or regeneration. They were charged with laying an over-emphasis on baptism; but, as a matter of fact, its place in their scheme was not so important as in that of Luther. They insisted on believers' baptism, because they regarded it as Scriptural and necessary to the purity of the Church; but they insisted on infant baptism, because he regarded it as necessary to the regeneration of the individual. They believed that infants dying in infancy are saved without the necessity of baptism. They agreed with Zwingli in regarding the Supper as a memorial ordinance, rejecting Catholic, Lutheran, and Calvinistic views.

(6) Not much is known of the officers and organization of the Anabaptists. Ordination seems to have been in abeyance in the earlier stages of the
movement, which was a great outburst of missionary activity among laymen. When charged with preaching in improper places and without proper authority, they claimed the authority of a Divine call which needed no ecclesiastical ordination or State authorization. Later abuses in their own ranks forced them to adopt ordination. Preachers were chosen by lot and ordained by the congregations in recognition of the Divine call, which they still regarded as the necessary part of their qualification for preaching. They rejected with decision the principle of State support in every form, and claimed that preachers ought to be supported by the free-will offerings of the congregation when located, and by Christian hospitality when traveling. They reproached the ministers of the State Church with inactivity and want of care for the people, among whom they should go as shepherds among the sheep.

(7) On eschatology there were great differences of opinion. The majority, perhaps, held sane and Biblical views, and of the early return of Christ the wildest fanaticism in others. From the belief of Hofmann that Christ was soon to set up His Kingdom on earth and destroy the wicked, it was but a step to an effort to set up theocratic courts. Thus it happened that we have the 'fanatical' Anabaptists and John of Leyden's horrible 'kingdom' at Münster as the outcome. Thomas Münzer also believed in the use of the sword, and his powerful personality had given the whole movement in Germany a fanatical and dangerous chiliasm, which brought ruin on his cause.

(8) Anabaptist worship was necessarily very simple. Persecution and the lack of church buildings made it necessary to worship in small companies, in such a fashion as to attract as little attention as possible. In the earlier years worship probably consisted almost wholly of prayer and instruction; later, singing occupied a large place. Their own compositions were set to popular music and sung far and wide. These songs, often written in prison, reveal profound religious feeling and unwavering faith and hope (cf. Wulka, Lieder der Wiedertaufier; Aus Bundt).

2. Political views.—(1) The Anabaptists regarded the State as a necessary evil, ordained of God indeed, and therefore to be obeyed where its obligations were not in conflict with conscience. The charge that they were opposed to magistracy altogether is without foundation in fact. They deplored the immunity of the State in the realm of conscience, and resisted its assumption of authority here, even to death; as to other things they inculcated obedience. The conscience was absolutely free under God. The State had no religious duties; it was needed only to protect the good and punish the wicked. This doctrine involved complete disestablishment; universal toleration; freedom of worship, organization, and teaching. These views caused an expression in Hübniener especially. Repudiated and executed then, this contention has been adopted in modern times with more or less completeness by all civilized lands.

(2) Many of the Anabaptists maintained that no Christian could hold civil office, because such elevation was in conflict with the principle of Christian brotherhood and equality; besides, it often required the promotion of capital punishment, and to kill was under no circumstances permissible to a Christian. This tenet, regarded by their opponents as destructive of all government, was not so understood by Hübniener especially. They did hold that capital punishment was necessary to the suppression of crime, nor did they regard all who bore the Christian name as Christians. Their opponents said: 'If no Christian can act as magistrate, we must go to the heathen or Turks for governors.' 'No,' replied the Anabaptists, 'there are but few Christians living in Christian lands, and hosts of men living for rulers.' The different meanings attached by the two parties to the word 'Christian' were the source of the misunderstanding. Their anticipation of the modern movement for the abolition of capital punishment is noteworthy. Hübniener and others, however, maintained the right of a Christian to hold civil office.

(3) They opposed the oath under any and all circumstances, and regarded its taking as an act of false witness. This, again, was regarded by Zwingle and others as destructive of civil government, which was thought to rest upon the inviolability of the oath. No such importance and sacredness were attached to it by the Anabaptists, who taught that one's assertion should be as sacredly kept as the oath. Under the threat of execution they sometimes took the oath; but it was not regarded as binding, because taken under duress.

(4) The Anabaptists were relentless opponents of war as the great destroyer of human life, which they held to be inviolable. Under pressure they paid war taxes, assisted in building fortifications, and rendered other services, and of the hundreds who have the 'fanatical' Anabaptists and John of Leyden's horrible 'kingdom' at Münster as the outcome. Thomas Münzer also believed in the use of the sword, and his powerful personality had given the whole movement in Germany a fanatical and dangerous chiliasm, which brought ruin on his cause.

3. Social and economic views.—(1) In imitation of the primitive Christian Church, the Anabaptists were strongly inclined to a voluntary and benevolent communism in the acquisition and administration of property (Ac 5:26). This opinion, which appears in the earliest stages of the movement, was fully developed in Moravia, where many of them lived and worked in great communal settlements (Loserth, Communismus, etc.). Among the German and Dutch Anabaptists the tendency towards enforced communism, as seen in Thomas Münzer and in the Münster kingdom. But a large part, perhaps a majority, of the Anabaptists, did not favour actual communism in any form; they strenuously maintained, however, that all property belonged primarily to the Lord, and must be freely used in ministering to the needy. They conceived themselves in the position of stewards, under solemn obligation to administer the Lord's money for the highest good of mankind.

(2) They opposed the lending of money at interest, refused to accept interest themselves, and paid it unwillingly to others. Money, they held, should be lent for the benefit of the borrower rather than the lender. Proper fraternal relations forbade the exploitation of the needs of a brother; besides, the practice was regarded as contrary to the explicit teaching of Scripture (Dr 22:22, Ps 15:5).

(3) They refused to pay ecclesiastical taxes, believing that religion should be supported by the voluntary gifts of religious people.

Glancing at the social views, we see that the Anabaptists were several centuries in advance of their age. They were the modern men of their time. Some of their tenets, then universally anathematized and persecuted, have been adopted by all civilized lands, e.g., universal religious toleration; others have been widely incorporated in the newer lands (America and Australia),
and are making headway in the older societies, e.g., complete sequestration of Church and State; yet others are still objects of endeavour, only seen as far-off booms, as, for example, abolition of war; some, as communism, are not likely ever to be adopted by a multitudinous world. Nevertheless, the simplicities of people should have drawn from a fresh study of the Bible so many great ideas that still float before the race as high and distant ideals.

The early use of nitrous oxide in Europe was quite limited. In 1844, Dr. Horace Wells, a dentist in Hartford, Connecticut, observed that individuals who inhaled opium dissolved in ether in the neck, and on the day following he put to sleep another patient operated on painlessly by Dr. Haywood. Morton had consulted Wells, after his return to Hartford, as to the preparation of nitrous oxide. He had been advised to get from Professor Jackson, Professor of Chemistry in Harvard University, the necessary directions. Professor Jackson suggested that instead of nitrous oxide he should make trial of sulphuric ether, and Dr. Morton had experimented on himself and some of his dental patients before he offered to demonstrate its effects in the public theatre. He called his preparation "laughing-gas," and took out a patent for its use. He advised Dr. Jackson with himself in obtaining the patent, and admitted that Dr. Smilie, who had previously anesthetized a patient by causing inhalation of sulphuric ether with opium dissolved in it, might continue the use of his preparation without infringement of the patent. It was Morton's demonstration on the 16th of October 1846 that truly marked the beginning of the era of anaesthesia, and its adoption by all branches of the profession throughout the world. But for a time there was unseemly strife as to priority of the discovery, Jackson and Wells both disputing the claim of Morton to be the discoverer of the new mode of producing insensibility to pain. So that, although a monument in honour of the great event was set up in Boston, years passed ere it was finally decided to inscribe on it the solitary name of Dr. Morton, and Wendell Holmes is credited with having made the suggestion that Eether might do.

Meanwhile news had come to Europe of the great discovery that the inhalation of ether vapour could be employed with safety so as to control the pain of surgical operations, and surgeons in Great Britain and the Continent began to make trial of it in all directions. On the 17th of January 1847, James Young, a medical student at the University of Edinburgh, etherized a woman in labour. The benefit of etherization in surgery was established. But would it be safe to apply it in midwifery cases? Would it interfere with the labour effects? Could the patient be kept for the necessary time under the influence of the narcotic? What might be the after effects? The death of which Simpson had predetermined, because of pelvic deformity, "As nitrous oxide in its extensive operation appears capable of destroying physical pain, it may probably be used in surgical operations in which no great effusion of blood takes place." His suggestion was not taken up. The news of these cases continued, however, to be administered from time to time in chemical class-rooms and at public entertainments. In 1844, Dr. Horace Wells, a dentist in Hartford, Connecticut, observed that individuals who inhaled opium dissolved in ether in the neck, and on the day following he put to sleep another patient operated on painlessly by Dr. Haywood. Morton had consulted Wells, after his return to Hartford, as to the preparation of nitrous oxide. He had been advised to get from Professor Jackson, Professor of Chemistry in Harvard University, the necessary directions. Professor Jackson suggested that instead of nitrous oxide he should make trial of sulphuric ether, and Dr. Morton had experimented on himself and some of his dental patients before he offered to demonstrate its effects in the public theatre. He called his preparation "laughing-gas," and took out a patent for its use. He suggested Dr. Jackson with himself in obtaining the patent, and admitted that Dr. Smilie, who had previously anesthetized a patient by causing inhalation of sulphuric ether with opium dissolved in it, might continue the use of his preparation without infringement of the patent. It was Morton's demonstration on the 16th of October 1846 that truly marked the beginning of the era of anaesthesia, and its adoption by all branches of the profession throughout the world. But for a time there was unseemly strife as to priority of the discovery, Jackson and Wells both disputing the claim of Morton to be the discoverer of the new mode of producing insensibility to pain. So that, although a monument in honour of the great event was set up in Boston, years passed ere it was finally decided to inscribe on it the solitary name of Dr. Morton, and Wendell Holmes is credited with having made the suggestion that Eether might do.

Meanwhile news had come to Europe of the great discovery that the inhalation of ether vapour could be employed with safety so as to control the pain of surgical operations, and surgeons in Great Britain and the Continent began to make trial of it in all directions. On the 17th of January 1847, James Young, a medical student at the University of Edinburgh, etherized a woman in labour. The benefit of etherization in surgery was established. But would it be safe to apply it in midwifery cases? Would it interfere with the labour effects? Could the patient be kept for the necessary time under the influence of the narcotic? What might be the after effects? The death of which Simpson had predetermined, because of pelvic deformity,
to extract the child by turning, and the result showed that labour could go on in its course although the sensations of pain were attendant on the effect being more or less altogether abrogated.

When the virtue of the anaesthetic had been proved in other cases of both natural and instrumental labour, he claimed for women the right to be relieved from all human suffering—their labour-pains. There had been misgivings in some minds as to the propriety of the administration of ether to surgical patients, and when it was proposed to introduce it in painful labour, there arose a perfect storm of opposition to the practice. Simpson had to bear the stress of it because of his application of it in midwifery, and because some months later, searching for a substance that might be free from some of the drawbacks of ether, he discovered, on the 4th of November 1847, the anaesthetic virtue of chloroform, and introduced it as a substitute for the earlier anaesthetic. Oliver Wendell Holmes had suggested that the term ‘anaesthesia’ should be applied to the process; but Simpson’s papers, like those of most of the other writers up till the end of 1847, spoke of ‘Etherisation in Surgery,’ ‘The Inhalation of Sulphuric Ether in Anesthesia,‘ and there is no evidence that after the new narcotic was used that it became necessary to fall back on the Greek expression which would be applicable to the effect of any agent applied and which had been used to describe the history of narcosis and narcotics, and found Theocritus speaking of Antigone having a painless labour because Lucina poured nux vomica over her, he regretted that he had not adopted the terms ‘nomicia’ and ‘nomicist‘ rather than ‘anaesthesia‘ and ‘anaesthetic.’

The occasional deaths resulting from the use of both ether and chloroform led to fresh experiments with nitrous oxide, which has been found especially safe and satisfactory in operations of short duration, as in tooth-pulling, so that it is now the anaesthetic most frequently employed in dentistry. Other volatile liquids have also been found to be possessed of anaesthetic properties, such as amylene, ethidene, bichloride of myethylene, etc. But none of them is free from danger, and none of them is so serviceable as chloroform in the case and rapidity with which patients can be anaesthetized with relatively small quantities of the drug, and in the comfort which attends the subsequent awaking. There is still much discussion as to the relative values of ether and chloroform. For, whilst the former requires special apparatus in its administration and is apt to have troublesome sequelae, the proportion of fatal cases is distinctly less than is met with in the use of chloroform. So that members of the profession who specialize as anaesthetists prefer its use in hospital practice and for patients undergoing the major operations of surgery, whilst chloroform remains the favourite anaesthetic in hot climates, in the lying-in room, and in the hands of military surgeons and busy general practitioners in their ordinary round of daily work. The writer has in the course of more than a half century seen some thousands of patients under the influence of anaesthetics—commonly of chloroform, and he has not seen a fatal case; but he knows that any day the record may be closed.

Some have sought to avoid the danger associated with all means of producing general anaesthesia by the superinduction of local anaesthesia. The skin has been rendered insensible by applications of ice, or ether or chloroform, or by slight cutting with a scalpel; or by the use of hydromorphin or of ethyl chloride so as to freeze the surface. Alone, or conjoined with freezing processes, electricity, cocaine, caeruline, and other anaesthetics have been applied to the surface or injected hypodermically as so as to produce a more lasting degree of local anaesthesia. Ovariotomy has been performed on women by laying still and made no complaint of suffering during the operation, when the seat of incision in the abdominal wall had been rendered insensible by freezing with ethyl chloride and hypodermic injections of cocaine. Such measures were a failure, however, only applicable for minor operations. A wider and more lasting form of localized anaesthesia was introduced by Dr. Corning of New York, in 1888, who found that injection of a 1 per cent. solution of cocaine in the lumbar region of the spinal chord produced anaesthesia in the lower half of the body, of sufficient intensity and duration to allow of the carrying out without pain of amputations of the lower limbs and other grave operations in the lower half of the abdomen. Cocaine and its derivates and also stovain and adrenal have been used in this way with results in midwifery and in various surgical processes that give hope of a great future for this method of superinduction of localized anaesthesia.

It should be added that from time to time insensibility to pain has been produced by means other than medication. In the 18th cent., Mesmer, produced, by what he supposed was an animal magnetism, a series of phenomena which were more carefully investigated in the 19th.—The first central tract of the history of anaesthetics was that of hypnotism. Braid described a state of the system into which individuals could be brought by having their attention fixed on a given object for a length of time until there ensued an exhaustion of some of the elements of the nervous system and the subject became amenable to the control of the operator. The person thus hypnotized could be made insensible to suffering at the suggestion of the hypnotizer. Dr. Esdaile and other surgeons in the Indian medical service reported a series of cases where operations, both major and minor, were performed on patients in a condition of unconsciousness thus produced. But hypnotism has been found applicable mainly to cases where there is disturbance in the nervous system; and its use for the relief of the pain of surgical operations is restricted by the circumstances (1) that it is not easily con- trolled, and (2) that the patient may have to be experimented on repeatedly before the hypnotizer gains sufficient control to command the necessary degree of anaesthesia. The practice has not sufficiently commended itself to the medical profession, even so far as to encourage more than a few members of it to try for themselves whether they were capable of exercising a hypnotic influence.

ANĀGATA VAMSA—ANAHIṬA

ANĀGATA VAMSA (‘Record of the Future’).
—A Pali poem of 142 stanzas on the future Buddha, Metteyya. It is stated in the Gandha Vaisaka (JPTS, 1886, p. 61) that it was written by Kassapa; but the Gāthā Prakāsa are tolerant that he was a poet who lived in the Chola country. We may probably conclude that he did not reside at Kāśī, the Chola capital, as in that case the name Kāśī would have suited the locality and place where he had been put in the place of Chola-rāthā. The further statement (Gandha Vaisaka, i.e.), that he also wrote the Buddha Vaisakha, seems to be a mistake. And we know nothing either of his date or of the other books attributed to him. The poem has been edited for the Pāli Text Society by the late Prof-essor Minayeff (JPTS, 1886, pp. 33–38), with extracts from the commentary, which is by Ujjīnas (see Gandha Vaisaka, p. 72). Of the latter writer also nothing is at present known, unless he be identical with the author of the Mahā Bodhi Vaisakha who wrote in Ceylon about A.D. 970.*

Quotations in this article are taken from the Anāgata Vamsa which is regrettable, as the question of the origin and growth of the belief held by the later Buddhists in this future Buddha, Metteyya, is important. As is well known, there are statements in the Nikāyas (e.g. Kh. i. 144, 146, 250) that the Buddha would arise, but, with one exception, neither the Nikāyas nor any book in the Pāraksa mention Metteyya. His name occurs, it is true, in the concluding stanzas of the Buddha Vaisakha, but he is an addition by a later hand, and does not belong to the work itself. Neither is Metteyya mentioned in the Netti Pakāsas. The exception referred to is a passage in the 38th Dialogue of the Dīgha which is quoted below. Out of all the Buddha's teaching, Metteyya would have thousands of followers where the Buddha himself had only hundreds. This passage is quoted in the Mātanīda (p. 150); but the Mātanīda does not refer anywhere else to Metteyya. In the Mahāvastu (one of the earliest extant works in Buddhist Sanskrit) the legend is in full vigour. Metteyya is mentioned eleven times, two or three of the passages giving details about him. One of these passages, with the Anāgata Vamsa in its statement of the size of his city, Kzetamati (Mahāv. 240 = Anāg. Vain. 8); but discrepancies exist between the others (Mahāv. ii. 165 = Anāg. Vain. 106, and 107). It is in this poem that we find the fullest and most complete account of the tradition, which evidently varied in different times and places.

This is really conclusive as to the comparatively late date of the poem. In earlier times it was enough to say that future Buddhas would arise; then a few details, one after another, were invented about the immediately succeeding Buddha. When in the south of India the advancing wave of ritualism and mythology threatened to overwhelm the ancient simplicity of the faith, a despairing hope looked for the time of the next Buddha, and decked out his story with lavish completeness.

Three points of importance are quite clear from the statement: (1) the Buddha will be a mark of little or nothing original in the tradition of which it is the main evidence. It is simply built up in strict imitation of the early forms of the Buddha legend, only names and numbers differing. But it is the old form of Metteyya; (2) There is sufficient justification for the comparison between Metteyya and the Western idea of a Messiah. The ideas are, of course, not at all the same; but there are several points of analogy. The time of Metteyya is described as a Golden Age in which kings, ministers, and people will live one with another in maintaining the reign of righteousness and the victory of the truth. It should be added that the future Buddha is written in regard to freedom of the future from the tyranny descending to the “heavenly” Aphrodite, whom they

Buddha also, like that of every other Buddha, will suffer corruption, and pass away in time. (3) We can remove a misconception as to the meaning of the name. Metteyya Buddha does not mean the Buddha of Love, as the Metteyya is the gotra name, that is, the name of the gens to which his ancestors belonged—something like our family name. It is probably, like Gotama, a patronymic, and means ‘descendants of Metteyya.’ Another Metteyya is mentioned in the Sutta Nipata, who asks and answers Buddha questions, and is doubtless a historical person. We can admit only that whoever first used this as the family name of the future Buddha may very likely have associated, and probably did associate, in his mind with the other word metta, which means ‘love.’ It would only be one of those plays upon words which are so constantly met with in early Indian literature. The personal name of the future Buddha is given in the poem, and elsewhere also, as Ajita, unconquered.*

The poem in one MS has the fuller title Anāgata-Buddhassa Varayāna, ‘Record of the future Buddha’ (JPTS, 1886, p. 61), which is different from the one here described, though the title is the same. It gives an account, apparently, in prose and verse, of ten future Buddhas, of whom Metteyya is one (ib. p. 39). This work is still unedited.

LITERATURE—H. C. Warren, Buddhism in Translations, Cambridge, Mass., 1903, pp. 431–439, has given a summary of one recession of this work.

T. W. RVHS DAVIŠS.

ANAHIṬA (Gr. Ἀναήθη).—Anaḥita is one of the chief deities in Mazdaism, and we get fairly accurate information about her character from a complete Yast (v) and numerous other passages in the Avesta. Arđvi Surā Anaḥita, that is, undoubtedly, ‘the chief of lovely’, Anaḥita, is supposed to be a goddess of fertilizing waters, and more particularly of a supernatural spring, located in the region of the stars, from which all the rivers of the world flow (Dârmešte). The fertility which the divine water caused in the earth was extended to the animal kingdom, and, according to the Avesta, Anaḥita ‘purifies the seed of males and the womb and the milk of females’ (Vendidit, vii. 16; Yast, v. 5), and is invoked by married girls, and men at the time of childbirth (Yast, v.). At the same time she is thought of as a goddess of war, who rides in a chariot drawn by four white horses (Yast, v. 13), and is invoked from rain, cloud, and hail (Yast, v. 120), and she bestows victory on the combatants, and gives them sturdy teeth and brave companions. The Avestan hymn, after enumerating all the heroes of the past who sacrificed to Anaḥita, including Zoroaster, whom she instructed in her worship, concludes with a very exact description of her appearance and her dress (Yast, v. 126 f.). She is a beautiful maiden, powerful and tall, her girdle fastened high, wrapped in a gold-embroidered cloak, wearing earrings, a necklace, and a crown of gold, and adorned with thirty otter skins. These minute details are undoubtedly inspired by a sculptural type. This passage of the Avesta has rightly been connected with the famous text of Berossus (Clem. Alex. Protrept. 5), which says that Artaxerxes Mnemon (5. c. 404–361) was the first to teach the Persians to form a Babylonian high priest, the Brahmans in the temples of Babylons, Susa (cf. Pliny, Hist. Nat. vi. 27, 153), and Ecbatana (cf. Plutarch, Vit. Artax. 27; Polybius, x. 27, 12), in Persia, Bactriana, Damaicas, and Cappadocia. These statements are connected with the story of a Babylonian original, and perhaps, as has been suggested, Anaḥita might even be identical with the Semitic goddess Anat. This would account for the passage in Herodotus (i. 130), referring to ‘the Issaeans who sacrifice to the “heavenly” Aphrodite, whom they
call Mithra.' The ancient historian had probably written 'Mithra' by mistake for 'Anahita.' As a matter of fact, the two divinities are united, or at least associated, in a pair of inscriptions of the Achaemenians, in which they figure precisely from the reign of Artaxerxes Mennoon (Weissbach-Bang, Die altperzischen Keilschriften, 1886). The Information of Berossus on the diffusion of the Anahita cult throughout the Persian empire is confirmed by a mass of evidence. Outside of Iran, the goddess is found in Armenia (Gelas., Sct. Geillacch, Wiss. Leipzig, 1886, i. 220 ff.; see also art. ARABIA ZOROASTRIAN). She had temples at Aratxata, at Yashtishat in Tauranitis, and especially at Erêz in Akilisene, the whole region of which was consecrated to her (Anaxacta regio, Pliny, v. 53). The Erêz sanctuary, which contained a golden statue of Anahita, was famous for its wealth, and the daughters of the noble families of Armenia used to go there and prostitute themselves (Strabo, xi. 532 C). This sacred custom, which is probably of Semitic origin, seems to be a modification of the ancient exogamy (cf. Cumont, Religions orientales, ii. 208). Of the women who continued to hold ground at Erêz under the Romans, the sacred buffaloes of Anahita wandered at liberty in Akilisene, and the victims for sacrifice had to be captured by hunting (RA, 1905, i. 25 ff.). The Persian goddess was worshipped also in Pontus and in Cappadocia (Strabo, xi. 512 C, xii. 559 C, xv. 733 C), perhaps also at Castabala in Cilicia (Strabo, xii. 537 C). In these districts she became identified with the great autochthonous divinity Mâ, and her temples were attended by a number of sacred slaves (lipakwana) of both sexes. At Zela in Pontus, a festival, the Sacae, which was probably of Kelitian origin, was held annually. It is especially in Lydia that Anahita has left innumerable traces of her presence. She was probably, as Berossus states (cf. above), brought into Sardis by Artaxerxes II., and there became amalgamated with Kybele (Cybele), the Great Mother honoured throughout the country. The well-known figures of a winged goddess holding a lion in either hand, to which the designation 'Persian Artemis' has been given, really represent this syncretic divinity worshipped as 'mistress of the beasts' (sûna ògân) (Radet, CAIBL, 1906, p. 258). Descriptions of her noisy rites exist as early as in the works of the tragic poet Diogenes of Athens (Nepos, s. v. Artemis, 16). The principal temples were at Hierocaesarea (Paus. v. 7, 5, vii. 6. 6; Tac. Ann. iii. 62: 'delubrum rege Cyro dicatum'; cf. Bul. Corr. hellen. xi. 95), and at Hierapolis (Paus. loc.; cf. RA, 1885, ii. 114; Dittenberger, Oriens Græci Inscriptiones Selectæ, 1903-05, 470); but her name also appears in a large number of inscriptions in this vicinity (Heinrich, Chroniques d'Orient, 157 ff., 215 ff.; Buresch, Aus Lykien, 1895, 28, 66 ff., 125; Roscher, Lexicon der Mythologie, s. v. 'Persike'; Wright, Harvard Studies, 1895, vi. 55 ff.). The conception formed of the goddess and the ceremonies by means of which she was worshipped seems to have remained faithful to the ancient Iranian traditions. She was always regarded as the goddess of sacred waters (Anaita tû òpò tòv òpò òpov), Buresch, l. c. p. 118), and her liturgy was repeated in a 'barbarian language' (Paus. v. 7, 6; 9). The Greeks identified Anahita, on the one hand, on account of her warlike character, with Athene, and, on the other, as a goddess of fertility, with Aphrodite (Berossus, l. c.; Agatharches, 1849, vii. 65; Diodorus, v. 77; Plutarch, Lucull. 24; Tacitus, Ann. iii. 62). As the bull was sacred to her, she was confounded especially with 'Artemis Tauropolos' in Lydia, as well as in Armenia and Cappadocia. It was probably from this composite cult of the Asiatic Tauropolos that the 'taurobolium' penetrated into the Roman world (Pauly-Wissowa, s. v. 'Anaitis'; RA, 1905, i. 28 ff.). In the Latin country the Persians were identified with the Magna Mater of Phrygia, certainly remained in close connexion with Mithra, whose mysteries spread to the West after the 1st cent. of our era (Cumont, Textes et monuments figurées relatifs aux mystères de Mithra, i. 333 ff. and passim).

ANALOGY.—The determination of the limits within which validity belongs to the argument from analogy is one of the problems of theology. Though the discussion of the question properly falls within the sphere of logic rather than of theology, yet the latter science is intimately concerned with its decision. So long as arguments from analogy occur with such frequency and have so important a part to play alike in the defence and in the exposition of revelation, the theologian will not be easy unless his confidence in this logical process be firmly established. Moreover, even the warmest advocate of the argument from analogy will admit that as an instrument of thought it is specially liable to abuse, and that its employment involves at least risks of error which require to be explicitly recognized in order to be avoided. In this article the subject of treatment will be the use of analogy in theology; but in the interest of clearness of statement it will be necessary to begin with some brief reference to general principles.

1. Analogy: its definition in logic.—At the outset we are confronted with a considerable lack of agreement among logicians as to the correct definition of analogy. Some authorities, content to fall in with popular usage, identify the argument from analogy with the argument from resemblance. Such, for example, is the position adopted by J. S. Mill. Other logicians, on the contrary, maintain that when one object resembles another in a certain number of known points it will probably resemble it in some further unknown points also. Such a logical procedure is akin to induction, but is distinguishable therefrom by the circumstance that no causal or necessary connexion has yet been established between the known points of resemblance and the further points whose resemblance is only inferred. The conclusion is, therefore, not demonstrable but probable, and the amount of probability will vary in accordance with the number and the importance of the resemblances which have been observed, and in accordance with the number of ascertained points of dissimilarity between the two objects. In estimating the extent of the probability, account must be taken of the proportion borne by the number of the ascertained resemblances to the supposed number of unknown properties (cf. Mill, System of Logic, iii. xx.).

This conception of analogy is, however, repudiated by other logicians, notably of the modern and scientific. Influenced by the meaning of the word in the original Greek, and by its primary use as a term of mathematics, they insist that analogy is a
resemblance not between things, but only between relations.

'Two things,' writes Dr. Whately, 'may be connected by an analogy, though the nature of the one be in no way similar to that of the other. The resemblance for analogy is the resemblance of ratios or relations; thus, as a sweet taste gratifies the palate, so does the man of good thoughts gratify the mind, hence the word sweet is applied to both, though no flavour can resemble a sound in itself' (Elements of Logic, p. 246).

The last words of the sentence are noteworthy. They indicate that upon this view of analogy no legitimate inference can be drawn from the nature of the one pair of related terms to the nature of the other, though the ratio or force of their relation may be strictly similar to the relation between ear and sound, but we cannot therefore draw inferences as to the nature of the one from what we know of the other. This is an important contention with far-reaching consequences, and its influence upon theological argument will appear presently.

This definition of analogy has the merit of scientific exactness, and of being in strict accordance with the Anglican Church, and the Anglican vocabulary, but it is at the same time open to serious criticism. The restrictions which it imposes upon the function of analogy are such as would almost entirely invalidate the use of the argument in practical life. Men in their daily concerns do not confine their analogical arguments to the consideration of mere relations, but freely draw inferences as to the nature of things. Although this is a merely practical objection, it is not without support in the theory of analogy. It has been pointed out that some identity of nature is always postulated in every analogy. In mathematical analogy, for example, it is at least necessary that both pairs of terms should be magnitudes. And, again, in the analogy between speech and taste, though in a sense there is no resemblance between them, yet they are both sensations. The heterogeneity of the human spirit is not absolute. Exception, therefore, may fairly be taken to the extreme statement of Whately, that no inference is permissible from the nature of the one to the nature of the other. And the theologian will press the point; for in his hands the argument from analogy is usually of the more flexible and practical form, which cannot be confined within the narrow limits set by the type of mathematical analogy. It is concerned with realities rather than with abstract relations.

2. Analogy in religious vocabulary.—The entire vocabulary of religion is based upon the perception of analogies between the material and the spiritual worlds. Words which now bear an immaterial and spiritual significance were originally used to denote visible and tangible objects. If in many languages the word for breath or wind has come to be used for the soul, it is because at an early stage of their development men became conscious of an analogy between the lightness and invisibility of air and the supposed properties of the human spirit. To a later and more critical age the analogy may appear thin and crude; but it must be remembered that the initiation of a religious vocabulary dates from the childhood of the race.

In the gradual evolution of religion, crudities have been refined away, until the original meaning of many words now used exclusively with a spiritual significance has been forgotten. But throughout the whole course of the development the necessity for finding analogical words as a vehicle for the expression of spiritual truth has never been outgrown, and a new and more profound secret has been put into speech by means of the analogy of human fatherhood. Thus witness is borne in all ages to the instinctive readiness with which men assume a parallelism between the things which are seen and the unseeable, though the latter are in themselves no more real than that parallelism really exists and how far it affords us grounds of inference to the real nature of the spiritual world, is the problem which every philosophy of religion sets out to solve.

3. Analogy as a means to the knowledge of the spiritual world.—Not only the vocabulary but the content of natural religion are derived from the source of analogical reasoning. For natural religion begins with the assumption of a resemblance between God and the world, sufficient to justify the inference that the wonder and majesty of Creation will in some sort reflect the wonder and majesty of the Creator (cf. Wis 13:1 'For by the greatness and beauty of the creatures proportionably and this made them to be a sound in itself'). Though this is the only Biblical passage in which the word 'analogy' appears in this connexion, yet the thought of the world as the visible expression of the attributes of the invisible God is of constant recurrence in Scripture. It is familiar to the Psalmist (Ps 19). It is stated explicitly by St. Paul: 'For the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made, even his eternal power and Godhead' (Ro 1:20). This assumption of a significant analogy between God and the world is not argumentatively justified in the Bible. Like the other principles of natural religion, it is taken as an accepted truth. And the belief culminates in the doctrine of man's creation in the image of God. It is impossible to overestimate the formative influence of this conception of human nature as the true analogue of the Divine. As it was one of the controlling factors in the development of Jewish religion, so has it exercised an even more dominant influence upon Christian thought, supplying, as it does, the philosophical basis of the whole system of Christian belief. Throughout the whole history of Christian doctrine the question of the reality of the likeness of man to God, i.e. of the truth of the analogy between Divine and human nature, has been one of the pivots of controversy. Men have arranged themselves in opposite camps according as they have been more or less ready to accept this belief.

4. Analogy in Patristic writings.—The great theologians of the early centuries, following the precedent of Scripture, made free use of analogy for the double purpose of defence and exposition. It was to them a convenient means of exposing the many commonly held views, and a ready method of illustrating the difficulties of abstract theology by means of familiar and concrete examples. Illustrations of so frequent a practice are scarcely necessary. But perhaps a simple example from East and West may not be out of place.

The following quotation from Gregory of Nyssa indicates how clearly he recognized the character of the logical process which he was employing: 'Ως τον ουρανον | και την θεα | ημας αναλογικον (την, αναλογικον) ετε την επιμεταλλη μητε | ποιησεν, κατα την σπερματοσφαιρα, σπερμα, εις αυτον και μεμοντα την ανθρωπον, αναλογικον | και τη καην εις την την ανθρωπον. (Greg. Cat. ii.).

In the short treatise, De ἰδιά τινας οικον εις νουσ παραδείγματα, attributed to St. Augustine, the objection to the argument from analogy on the ground of religious faith is met by insistence on the analogy of the analogy of the actual necessity of faith in ordinary human intercourse. And in his work, De myst., the mysteries of the Divine Being of God are restated illustrated by the analogous mysteries of human psychology.

5. Analogy in Scholastic theology.—But however legitimately and successfully this method of argument was employed by the Fathers, it was not by them subjected to reflective criticism. A real advance was therefore made when Alberic, who entered upon an ingenious examination of the limits of the analogical method with particular reference to its use in theology. Among the reasons which led him to undertake this work was their desire to find the explicit justification for the anthropomorphic language of Scripture. Such language obviously could not be taken literal-
ally, nor yet be summarily dismissed as merely metaphorical, and therefore implying no real likeness between God and His creatures. The Schoolmen's answer to the problem is to be found in their theory of resemblance, which was generally opposed to the analogy of words, with the explanation of the analogical use of language, but also with the far deeper and more important question of the reality and the extent of the analogy between the finite and the infinite, and the legitimacy of inference from one to the other.

With regard to language, it was pointed out that a distinction must be made between the universal, that is equivocal, and the analogical use of words. A word is univocally employed when in two or more propositions it conveys precisely the same meaning; equivocally when used in two entirely different senses. But where two things are connected by some relation, the same word may be applied to them both in a related, though not precisely identical, sense. This last is the analogical use. Thus—the instance is as old as Aristotle—the word 'healthy' is analogically applied to the body which is sound, and to the food which is the cause of soundness. Similarly, the term 'being' is analogically applied to God whose essence is identical with that of man whose existence is contingent and dependent.

Upon the basis of this distinction was established the justification of the use of human terms about the Deity. When, for example, we speak of the wisdom of man and the wisdom of God, the word 'wisdom' is not used univocally. For if so, we should be denying any difference in kind between human and Divine wisdom, and our statement would be obviously contrary to the Christian teaching about God. Nor yet is the use of the word equivocal. For then we should be asserting the essential likeness of human and Divine wisdom, and it would be impossible to argue from the nature of the one to the nature of the other. Such a position would be untenable, because if a similar objection were supposed to hold good in all parallel cases, every inference from the creature to the Creator would be vitiated by the fallacy of equivocation. A way of escape from these opposite difficulties is provided by the recognition of the analogical use of the word. It is implied that there is a likeness or proportion in the likeness between the wisdom of man and the wisdom of God. What is partial and incomplete in man is perfect in God. (Cf. Thom. Aqu., Summa, I, xiii. 6).

This distinction between the univocal and the analogical use of words was a sufficient reply to the reproach of anthropomorphism, but it left untouched the deeper question of the extent of the analogy or resemblance between God and His creatures. Accordingly, in the eighteenth century came the greater clearness of thought with reference to this fundamental problem of religion, the Schoolmen proceeded to introduce further distinctions into their conception of analogy. These may be sufficiently illustrated from the scheme of Suarez (Disput. Metaphys, xxviii. sec. iii.). He distinguished two kinds of analogy, viz. that of proportion and that of attribution. To the former of these not only of interest attaches a weight amounting to little more than a mere resemblance, seized upon by the mind as justification for the use of a metaphor. Though such an analogy of proportion may affect the imagination, it therefore be of use in the way of illustration, it does not go far enough to warrant any inference in argument. The analogy of attribution, on the other hand, is established on the existence of a resemblance in the nature of things. It is true, this is not definition, and is valid for purposes of inference. When this resemblance consists in the possession by two subjects of the same quality in different degrees, the analogy is styled intrinsic. This is the highest grade of analogy, analogia attributionis intrusive, and of this kind is the analogy between God and His creatures as regards, for example, the property of omniscience, which is a property is predicated of Him and them. Their existence, however, is not of the same degree as His. Yet is it so far the same as to allow of some inferences being drawn as to their existence, and as to the nature of infinite existence. These distinctions may possibly appear needless and technical, but the consideration of them will at least serve the purpose of calling the attention of the student to the possibility of some confusions of thought that have been actually responsible for the failure of much analogical argument.

6. Analogy in post-Reformation theology.—When the questions of theology ceased to be confined to the schools, and became the subject of popular debate, it was natural that the problem of analogy should be handled in accordance with the new methods, and in a manner intelligible to a larger public. A general advance in intellectual enlightenment brought the question once more to the front. At a time when man's knowledge of the world was being rapidly extended in many directions, he inevitably had to face to face with the issue, whether Nature was in any true sense the analogue of God. Hence at the beginning of the 18th cent. we find that the theory of analogy was occupying the attention of some of the foremost theological writers.

Among the books on the subject which specially deserve mention may be noticed a Discourse on Predestination, by Dr. King, Archbishop of Dublin (1700). By this writer a somewhat extreme form of religious agnosticism was advocated. Desiring to allay the bitterness of theological controversy, he laid stress on the principle that all our notions about the Deity are inevitably limited by our human and finite capacity. 'If we know anything about Him at all, it must be by analogy and comparison, by resembling Him to something we do know and are acquainted with' (Whately's reprint of King in Appendix to Baunton Lectures, 3rd ed. p. 480). Our notions of God are really as far from the truth as a map is different from actual land and sea. A chart, while it provides instruction sufficient for the purpose of the traveller, does not actually resemble the territory covered by it. Similarly, Scripture teaching about God may give us information about Him adequate for the purposes of this present life, without revealing Him to us as He is. This depreciation of man's capacity for acquiring a true knowledge of God was intended in the interest of theological peace. It became, however, the occasion of controversy. Bp. Browne, of Cork, contributed several books to the discussion of the question. In an early work he maintained that—

-Our ideas of God and divine things are a sort of composition we make up from our ideas of worldly objects, which at the utmost amount to no more than a sort of fiction, by which something in another world is signified, of which we have no more notion than a blind man hath of light' (quoted in Introduction to Procedure, etc.).

Adhering to these principles in his Procedure, Extent, and Limits of the Human Understanding (1728), he accepted without demur King's somewhat extreme conclusions:

-That we have no direct or proper notions or conceptions of God in His attributes, or of any other things of another world; that they are all but the most involved and imperfectly spoken of in the language of revelation, by way of analogy and accommodation to our capacities; that we want faculties to discern them' (op. cit. p. 11).

At the same time he criticized King for failing to distinguish between analogy and analogism, and for thus suggesting the inference that our statements about God are merely metaphorical, and as
ANALOGY

of human passions or human limbs. To the exposition of this distinction he devotes a chapter (bk. i. ch. ix.), explaining that metaphor expresses only an imaginary resemblance or correspondence, whereas in analogy the correspondence or resemblance is real. The same theme is worked out at greater length in his later book, Things Divine and Supernatural conceived by Analogy with Things Natural and Human (1725), in which he begins the spiritual order is strictly relative to our capacities.

'God does not raise up our minds to any direct or immediate view of the things of another world, ... but brings them down to the level of human understanding.' St. Paul says that just and sufficient knowledge of God we have in this life is obtained by analogy or similitude with those perfections we find in ourselves (p. 29).

The question naturally attracted the attention of Berkeley, who handled it with characteristic acuteness and precision in Alciphron, Dial. iv. ch. xxi. Familiar with the Scholastic definitions of analogy, he does not shrink from the conclusion that all our knowledge of God is strictly analogical. It is not, however, on that account to be reckoned as worthless. Human passions, indeed, are attributed to God by metaphorical analogy only, and involve no statement as to His nature. On the other hand:

'Knowledge, for example, in the proper formal meaning of the word, may be attributed to God proportionately, that is, preserving a proportion to the infinite nature of God. We may say that He is 'good as God is infinite,' as is the knowledge of God infinitely above the knowledge of man, and this is not metaphoric. And after this same analogy we must understand all those attributes to belong to the Deity, which in themselves simply and as such denote perfection (ed. 1762, p. 29).

Berkeley, while recognizing the incompleteness of our spiritual knowledge, lays the emphasis on its trustworthiness rather than on its inadequacy. Analogy, as a ground of our knowledge of God by analogy, seems very much misunderstood and misapplied by those who would infer from thence that we cannot frame any direct or proper notion, though never so inadequate, of knowledge or wisdom as they are in the Deity, or understand any more of them than one born blind can of light or colour.'

Such was Berkeley's repudiation of the attempt to make religious truth unassailable by assuming it to be unintelligible.

It is remarkable that Butler, whose work is still the classical example of the application of the argument from analogy to theology, should have deliberately abstained from any prefatory justification or explanation of the theory of the instrument which he felt to be the only legitimate Scholastic procedure, however, is the case. Declaring at the outset that he will not take it upon him to say how far the extent, compass, and force of analogical reasoning can be reduced to general heads and rules, he curtly brushes aside objections to this kind of argument with the remark that it is unen disponably adopted by all in practical life. 'It is enough to the present purpose to observe that this kind of general way of arguing is evidently natural, just, and conclusive.' Others, as we have seen, were discussing these very points at the time when Butler was engaged in the composition of the Analogy. The well-known speculations of Descartes are as essentially unpractical. Whatever the reason may have been, they are absent from his own work. He applies, he does not analyze, the argument from analogy. What gives his work its pre-eminent position in apologetic literature is not his selection of this particular kind of argument, but the steady patience, the scrupulous exactitude, and the transparent honesty with which he applied it to the point reached by his predecessor. And there is a striking contrast alike to those writers who denounced analogical reasoning as worthless and those others who belauded it as the key to all difficulties. The claim that he makes on its behalf is modest in its scope. 'Positively it can never (so he tells us) afford more than a probable proof; negatively it can expose the latent insincerity of much unbelief, by showing that circumstances often considered to be conclusive objections to religion are strictly parallel with analogous circumstances in nature, the acknowledged handiwork of God. Consequently, Butler's hands provided no vindication of the character of God (Works, ed. W. E. Gladstone, i. 359), but it was fitted to open the eyes of men to their obligations by showing them the moral excuse if they failed to consider with appropriate seriousness the arguments urged on behalf of religious belief.

The full effectiveness of Butler's argument will not be appreciated unless it be remembered that he says he is arguing upon the principles of others, not his own (ib. p. 367). Convinced that the proper proof of religion was to be found in the principles of liberty and general fitness, he nevertheless avoided reference to those principles, and limited himself to the consideration of religion as a matter of fact and practice. Upon this lower ground he met his adversaries, the Deist and the Infidel. Against these he wielded the weapon of analogy with complete logical success. Deist objections against Christianity crumble away under his analysis. It is, of course, true that since then the religious controversies of the day have shifted its position. Hence many of his arguments need re-statement in accommodation to modern requirements. But, whatever alterations in detail may be thought necessary, time has not altered the general verdict in favour of the soundness and cogency of his argument.

7. Analogy since Kant.—Discussion of the nature and extent of man's analogical knowledge of God will always be a principal place in the history of metaphysics, and for that reason will be sensitive to any change in the general philosophic attitude towards the ultimate questions of metaphysics. Hence it was that the whole statement and treatment of the problem were radically affected by the influence of the critical philosophy of Kant. That influence, however, was slow to exhibit itself in English theology, and until the 19th cent. was well advanced before the discussion continued along the traditional lines. A controversy between Copleston and Grinfield in 1821 brought out once more the possibilities of disagreement over the place to be assigned to analogy. The two writers, representing respectively the lower and the higher and most extreme Scholastics, reproduce with curious exactness the points which had been made a century before by Archb. King and Bp. Browne. Explicit acknowledgment was made of the debt due to these earlier writers; and Whately, Copleston's friend and disciple, reprinted with notes and high commendation King's famous Discourse on Predestination, in which the limitations of human reason had been so rigorously insisted upon. A different attitude towards the fundamental question at issue revealed itself in Mansel's Lectures on the Limits of Religious Thought (1858). The title of the book recalls that of Bp. Browne's Treatise on the Limits of the Human Understanding. And the resemblance is more than superficial. In both writers there is the same tendency to dwell on the inadequacy of the human intelligence to fathom the mysteries of the Divine Nature. But Mansel, under the influence of Kantian principles as to man's ignorance of things in themselves, attacks the problem from a different side, and goes beyond the discussion carried on by his predecessor. Whereas Bp. Browne had urged the relativity and consequent incompleteness of man's analogical knowledge of God, Mansel went so far as to say that, of God's real nature, we, under our limited conditions, are, and must remain, totally ignorant. It is an ignor-
ANANDA-ANARCHY, ANARCHISM

ance so complete as to exclude the possibility of either affirmation or denial.

'The anarchy which operated in the frame and structure of the nature of man, and was the consequence of the untrammelled liberty of the human will in action, was that which was called Anarchism, and it was the anarchy of the spirit. It was not the anarchy of the physical world, but the anarchy of the moral world, the anarchy of the human soul.

'Anarchism is a system of philosophy, and it is a system of politics, and it is a system of economics. It is a system of art, and it is a system of religion. It is a system of science, and it is a system of ethics. It is a system of all knowledge, and it is a system of all action.'

THE ANALOGICAL CONCEPTION OF RELIGION.

The analogy of religion is a doctrine that has been in existence for a very long time. It is a doctrine that has been developed by many different philosophers and theologians. It is a doctrine that has been used to explain the nature of religion and the relationship between religion and the natural world.

The analogy of religion is based on the idea that all knowledge is analogical. This means that all knowledge is based on the comparison of two things. For example, we can compare the natural world to the supernatural world, and we can compare the physical world to the spiritual world.

The analogy of religion is a doctrine that has been used to explain the nature of religion and the relationship between religion and the natural world. It is a doctrine that has been used by many different philosophers and theologians.

The analogy of religion is a doctrine that has been developed over a long period of time. It is a doctrine that has been used to explain the nature of religion and the relationship between religion and the natural world. It is a doctrine that has been used by many different philosophers and theologians.
popular idea of Anarchy is that it is concerned only with bomb-throwing and Terrorism. But Anarchy as a theory of existence has been proclaimed by some of the gentlest and most cultured spirits in Europe; and although, in the case of a writer, it is easy to think, when the active revolutionary is merged, it will be convenient to consider first the theory and then the history of the movement.

In its economic side Anarchy is a branch of Socialism or Collectivism. It regards the day of private ownership and of capitalism as drawing to a close. It believes that the wage nexus between employer and employee is evil, and must sooner or later cease. Its view of the re-commutation of labour varies between payment by wage and time and the taking by each of what he wants from the common stock of production. When the workers are living in free associations, each will see that his own interest is the interest of the association, and the present tragic struggle for the increased share will cease.

The political basis of Anarchy is, negatively, that the present government is the result of the domination and voluntary power is quite illusory as a means of social re-demption for the many. Liberalism has been a failure. Even universal suffrage could lead but to the government of the few. Further, representative government has had its full trial, and has failed; its defects are inherent in itself, and never can be cured. It is impossible for a Parliament to attend to all the numberless affairs of the community. More and more Parliament shows this inability in the congestion of business, and in the increasing extent to which local affairs are delegated to local authorities. It is this process of separation that led to the philosophic Anarchist. He takes it to foreshadow the day when every little group will settle its own affairs, when there will be no rulers and no subjects, when each individual will have free play within his group, and each group free play in its relation to all other groups.

Anarchy has been extremely anxious to place itself on a scientific basis. In its modern form it has claimed Herbert Spencer as intellectual sponsor. It declares itself to be acting along the lines of evolution in that it is conforming to those two great tendencies which Spencer discerns in present-day conditions—the tendency to integrate labour for the benefit of all, and the tendency of the wealth of each individual species to become the property of the species. The conditions must, therefore, be modified, so that man will be able to live the normal free life, instead of being forced by positive law to hold a place in a system of things which gives him neither freedom nor opportunity.

ii. History. The view that authority is in itself a thing undesirable, and that man reaches the full measure of his stature only when he is allowed to develop his individuality absolutely unchecked, is by no means new. It appeared in several of the Mystic and Anabaptist sects of the later Middle Ages and post-Reformation period. In the 19th cent. there was a sect of the Beghards, calling themselves Brethren and Sisters of the Free Spirit, who professed pantheistic views. It claimed the utmost liberty on the ground that, as God inhabited each, the will of each was the will of God. In their preaching the Brethren advocated community of goods and community of women; they declared that the active revolutionaries were merged, it will be convenient to consider first the theory and then the history of the movement.

ANARCHY, ANARCHISM

421

by a change not so much in political conditions as in economic. This change could be wrought only along the lines of social development. In 1847 the Society began to call itself the Communist League, its programme containing a declaration of the necessity without classes and without private property. The manifesto that the League put forth did not a little to give vigour to the various revolutionary movements of 1848; but, in the reaction following that of its enthusiasm, the League died. During the London International Exhibition of 1862 views were exchanged between French workmen visiting the Exhibition and their English fellows; popular sympathy with the Polish insurrection of 1863 helped the movement; and so, in 1864, the 'International Association of Working Men' was formed, with Karl Marx as its ruling spirit. His influence led the Association to the doctrine of State Socialism. State ownership of the land, as well as of the means of transport and communication, was early agreed upon as an object for which the Association should strive, although a proposal to abolish the right of inheritance did not find a majority.

But the disintegration of the International was at hand. In 1869, Bakunin and a number of the Russian anarchists who had joined it began to attack the centralizing views of Marx. Then the Franco-German war broke out, and national feeling could not be eliminated even from an International Association. The Communards in Paris raised hopes that were almost immediately dashed in very dreadful fashion. In 1871 it became evident that there were two definitely marked groups in the Association, and the line of cleavage, as Kropotkin has pointed out, was not only an economic, but a racial one. The Germans, who now had received Parliamentary government, wished to work along electoral lines. 'The conquest of power within the existing state' became the watchword of the party which took the name of the 'Social Democrats.' The Latins and Slav elements in the Association gathered themselves together, under the leadership of Bakunin, in advocating the abolition of all paternal government, and the free action of the people through separate groups. In 1872 the Anarchists were expelled from the Association, and henceforth uttered their views through the Jura Federation. The expulsion of the Anarchists was almost the last act of the International. It moved the seat of its General Council to New York, held one other Congress in Geneva in 1873, and then died. The Jura Federation and the Anarchists had a common history, owing to the influence of their leader.

Michael Bakunin (1814-1876) was an aristocrat and an officer. Horrified by the repressive duties he had to perform in Poland, he left the army and became a revolutionary. From 1849 to 1855 he was almost constantly in prison. In 1855 he was exiled to Siberia, but escaped in 1861 to America, and thence made his way to London. It was at this time that Russia seemed to be on the verge of a crucial constitutional change. The Czar in 1857 had promised the emancipation of the serfs, but after he had announced his intention the reaction ary party induced public opinion to set the serfs an enormous redemption price for the land, and to postpone the emancipation till 1863. But in 1863 there broke out the insurrection in Poland. It was represented with much cruelty to thousands of Poles were exiled to Siberia. Up to this time Russian social reformers had wrought mainly by going among the artisans and peasantry, indoctrinating them with their liberal and revolutionary principles. But the Czar's government was now rendered by this time almost impossible. After the attempt on the Czar's life by Karakozoff in 1866, the reformers had to hide their heads. Thousands fled the country, and settled in Switzerland and elsewhere.

It was among those exiles that Bakunin developed his theories of revolution and destruction of the existing order of things in faith, morals, economics, and politics. He refused to consider the question of reconstruction; 'all talk about the future is criminal, for it hinders pure destruction, and the completest destruction of the course of the League. The programme of the International Social Democratic Alliance which he founded gives the most succinct statement of his views. 'The League professes atheism in order to spread the abolition of religious services, the replacement of belief by knowledge, and to crush by human justice the base and abominable institution of marriage as a political, religious, judicial, and civic arrangement. Before all, it aims at the definite and complete abolition of all classes, and the political, economic, and social equality of the individual of either sex; and to attain this end it demands, before all, the abolition of inheritance, in order that, for the future, usefulness may depend on what each produces, so that . . . the land, the instruments of production, as well as all other capital, shall only be used by the workers, i.e. by the agricultural and industrial communities.' All children were from birth to be brought up on a uniform system, with the same means of instruction, so that there might disappear all those artificial inequalities which are the historic products of a social organization whose very existence is false as it is. The League would adopt 'all political action which does not aim directly and immediately at the triumph of the cause of labour over capital.' It repudiated 'so-called patriotism and the restraining of nations,' and desired the universal association of all local associations by means of freedom.

Bakunin's ideas were developed by his disciple Netschajeff, the son of a Court official in St. Peters burg, and born there in 1846. Netschajeff was much more a Terrorist than an Anarchist. Anarchism is, at all events, a reasoned system of things. It believes that life will be not only possible, but desirable, under the conditions it seeks to establish. But Netschajeff had regard purely to a destructive action. His views were expounded in the Revolutionary Catechism, which was at first supposed to be the work of Bakunin, but is now, with more likelihood, held to have been by Netschajeff himself. According to this Catechism, the revolutionary must let nothing stand between him and the work of destruction. 'If he continues to live in this world, it is only in order to annihilate it all the more surely. A revolutionary despises everything doctrinaire, and renounces the science and knowledge of this world in order to leave it to future generations; he knows but one science—that of destruction. For that, and that only, he studies mechanics, physics, chemistry, and the science of man itself. The destruction remains always the same—the greatest and most effective way possible of destroying the existing order.' The Catechism makes no ambiguity as to its methods. Differential treatment is to be extended out to the different classes of society; the rich are to be spared, but their wealth is to be used for the purposes of revolution; the former owners of wealth are to become the slaves of the proletariat. But rulers are not to be dealt with as considered. 'In the first place, we must put out of the world those who stand most in the way of the revolutionary organization and its work.' There is to be no attempt to set the slaves right upon the present basis. Every effort is to be made to heighten and increase the evils and sorrows which will at length wear out the patience of the people, and encourage the insurrection. Terrorism is part of Netschajeff's programme.

'All is not action that is so called; for example, the modest and too cautious organization of secret societies, without external announcements, is in itself an action contrary to the sensitive and intolerable child's play.' By external announcements we mean a series of actions that positively destroy something—a person, a cause, a condition that hinders the work of destruction, and which for sparing our lives, we must break into the life of the people with a series of rash, even senseless
ANARCHY, ANARCHISM

actions, and inspire them with a belief in their powers, awake them, unite them, and lead them on to the triumph of their cause.' This is the attitude that the plain man understands by Anarchism. It is claimed, of course, by the Anarchists, to allow the utterance of the Revolutionary Catechism to stand as representative of the whole movement is to do it an injustice, and to confound extreme applica-
tions of the principle with the principle itself. 'To confuse Nihilism with Terrorism is, says Kropotkin, 'as wrong as to confuse a philo-
sophical movement, like Stoicism or Positivism, with a political movement, such as, for example, Republicanism.' But, in answer, it may be said that all Anarchists are not thinkers, and it is teaching of the Bakunist character that has had, as it was intended to have, the most startling results. The assassination of Alexander II., of the Emperor of Austria, of King Humbert, of President McKinley, the bomb outrages in Chicago in 1887, in the French Chamber of Deputies in 1893, in a theatre in Barcelona in 1894, the attack on King Edward in Brussels in 1903, on their wedding day, upon the young King and Queen of Spain, are the things which 'break into the life of the people with a series of rash, even senseless outbreaks' of the movement, hateful to those who feel that any organized form of society, however it may violate the rights of individuals, is preferable to a state of things in which the most irresponsible make the greatest noise and have the greatest power to damage alike. It must be allowed, too, that this irresponsible Terrorism is the dominant form of Anarchism at the present time. In 1882 the Anarchists, in con-
ference with themselves, drew up an address from all political parties. They declared the enmity of the Anarchists to the law. 'We declare ourselves allies of every man, group, or society which denies the law by a revolutionary act. We reject all legal methods. We spurn the law as a calf called universal. . . . Every social product is the result of collective work, to which all are equally entitled. We are, therefore, Communists: we recognize that without the destruction of families admits from all dominations, provincial, and national boundaries the work will always have to be done over again.'

It is, at first sight, not a little difficult to find any relation between this extravagant propaganda which has been doing us so much good, and Mr. Kropotkin, the man of high birth, of splendid ability, of gentle and noble and self-sacrificing life. Kropotkin has told his own story in the Mémoires of a Revolutionist, and whoever would seek to understand Anarchism should read this book, along with the account of the trial of the Anarchists at Lyons in 1883 (Le Procès des Anarchistes). Such a reading will explain how it is that the more recent developments of Anarchism go so far beyond the conceptions of Proudhon. If Russians who have suffered, as Bakunin and Stepanik and Kropotkin and tens of thousands of others have done, can find no remedy in the situation by the more mundane method, by utter destruction, by any means, of the present condition of affairs in Russia, it is not to be wondered at. The Russian Anarchists imagine that they reach their conclusions as a necessary inference from certain scientific propositions. In reality it is the Russian bureaucracy that has conditioned their thinking. Kropotkin was born at Moscow in 1842, a member of one of the most ancient and distinguished families in the Empire. He was brought up as a page at Court; but, already, on his father's estates and in his father's house, he had seen enough of the life of the servile to make him an ardent advocate of the liberal views that were in the air before the actual date of emancipation. Instead of following out the career that was open to him, as a courtier and an officer of the Household Brigade, he chose service in Siberia, and spent four years there, being occupied most of the time in geographical and geological work. In 1873 he published with such great possibility of doing anything really useful for the masses of the Russian people by means of the existing administrative machinery, and became convinced that the only practical solution was in an entirely free Communism. On returning to St. Petersburg, full of ardour for his country's free-
dom, he found that the liberal movement of the earlier years of Alexander II. had died. Tur-
gueen's 'Smoke' is its epitaph. Kropotkin accordingly set to work to renew the Anarchist zeal, and strove, through companions whose earnestness and utter disregard of self almost disarm criticism, to spread among the working classes of the capital revolutionary opinions. His activity was discovered. For three years he was imprisoned in the fortress of SS. Peter and Paul, but finally escaped. For the next few years he moved be-
tween Switzerland, France, and Russia, and, in 1878, was sentenced to five years penal servitude. Since his liberation at the end of three years he has lived mostly in Europe.

Kropotkin's main idea is that, as the present system of government and competition and private property cannot be mended without being ended, society must fly asunder into its primary elements and begin in a new order. The right of private property he denies, on the ground that if we go back to the uncivilized condition of things we find no such right. Land has been made what it is byinsky's efforts, and it belongs to him, to this or that, on his property, so that he thinks he has proved the illegitimacy of private property, occurs again and again in his writings. An ironmaster, he declares, deals with and uses the discoveries of those who have gone before, and begins the discovery of others. 'British industry is the work of the British nation, —may, of Europe and India taken together,—not of separate individuals.' But where government has once been destroyed and individuals have been left free to re-aggregate themselves, each man will take his place in the group he prefers; and those groups, retaining their own freedom, will at the same time act with mutual helpfulness and con-

sideration, without any constraint from a govern-
ment. The working agreements that have been arrived at by railways suggest themselves to him as the kind of thing that will be reached under Anarchism. The result is to be a great increase in production. At present the owners of capital are certainly endeavouring to limit the production in order to sell at higher prices. Kropotkin seems to think that the economies of production and the industrial in-
reality is the Russian bureaucracy that has con-
ditioned their thinking. Kropotkin was born at Moscow in 1842, a member of one of the most ancient and distinguished families in the Empire. He was brought up as a page at Court; but, already, on his father's estates and in his father's house, he had seen enough of the life of the servile to make him an ardent advocate of the liberal views that were in the air before the actual date of
ANAXAGORAS

423

his agreement. As the agreement has been freely entered into, there will be no need of any authority to enforce it. The labourer will be remunerated by helping himself to that which he has justly produced, according to his needs. The problem of the idler is easily settled:—there are not likely to be idlers in such a society. Work is natural to man, and the feeling of brotherhood and mutual responsibility would probably prevent any mistreatment of him by the workmen. We consider that an equitable organization of society can arise only when every wage system is abandoned and when everyone contributing for the common well-being, according to the extent of his capacities, shall enjoy also from the common stock of society to the fullest possible extent of his needs.

To the questions that present themselves to the objector, Kropotkin has the most indelicate of answers. It may be asked, for instance, how, under any free associations, any large public works are to be undertaken. We have heard not infrequently assume the critic that nothing is lost to the contractor, and, finally, being carried through not by that mutual agreement which is apart from law, but by the insistence of the law that a contract entered into shall be fulfilled. When we consider, for instance, say, another Firth Bridge, who is to insist that the work shall be finished so that gross waste shall not ensue? And will not that ideal unity between group and group be very soon broken when matters of this kind come to be discussed and settled?

Then, again, with regard to the remuneration of labour, it may be granted that the wages system is not an ideal method of assessing the value of each man's contribution. But what would be the result on production, distribution, and industrial peace when each man was taking from the general heap exactly what he wished? The alternative on the Anarchist view is that he should be paid according to the labour time spent on his work. But what would become of art, music, literature, under such a system? The labourer is not, as a rule, prepared to acknowledge that anything is work which is not manual work. Far from granting that the value of an hour's work of Lord Kelvin or Mr. Edison was the equal of his own, he would deny to it the very name of work. Under such a system the family would disappear as a matter of course. The notion of a permanent alliance between man and woman, enforceable by law, would be impossible. The relationship between husband and wife would be absolutely free; and this, unless human nature were to be altogether changed, would mean that the woman was to be placed at the mercy of the man and have assurance neither of home nor of sustenance. Children would require to be in charge of the group, not of the parents, and equality would necessitate that they should all be brought up in common.

Kropotkin considers these, the most terrible evils of human society, imaginary. The solidarity of the human race will prevent them. The condition of things that is to be established by law but by the sheer dignity of man, after bloodshed and revolution, but by putting their work, is the idyllic one of perfect peace, and the solidarity of the human race. The Romanoff and the serf will vie with each other in praying the other first to take his place of the throne.

On its theoretical and economic side Anarchism is a dream. It postulates an unreal world in which all men will live at peace, and work without thought of getting a wage. No one is there any ground for the hope that under a system where men would be working for their group and not for their own advantage, production would be increased.

One method of apportionment of wages—payment according to labour time—might have some chance of success under State Socialism, but it cannot be done under a socialist system absolutely free. The loafer and the malingerer would have found their paradise. But, anxious as Kropotkin is to dispense with government, his own scheme would involve government with an iron hand. Paternalism and slavery be in- stincts of mankind, would have to be dead if men did not try to do their best for their own children. The rights of parentage would not be surrendered by those who would pay the full extent of his capacities, should enjoy also from the common stock of society to the fullest possible extent of his needs.

The great postulate of the whole system is that national feeling shall become extinct. A society organized on a productive basis, the socialist groups would clearly be unable to defend itself against a foe armed and organized as the great powers of to-day are. It would be necessary, therefore, not only that the groups within and that a sense of unity among themselves, but that they should be devoid of jealousy for the groups in any other race.

The history of Anarchism as a movement is the history of innumerable ‘associations’ flying to pieces, of impossible combinations, of the Teutonic peoples the movement has made no headway, for order and system is the genius of these peoples. Among the Latin and Slav races it has had a better showing, not because a Russian who has suffered under the bureaucracy should be an Anarchist is no surprise. He may naturally feel that the dissolution of society into its elements is the postulate of any reconstruction. But that Anarchism should ever call itself an organization of society under which men and women shall be able to live is impossible. What is even remotely practical in it, the taking of the means of production out of private hands, has already been adopted as the fundamental element of their policy by the State Socialists. The broad difference between those two great branches of Communism is that, while in the one it is realized that government will require to have much more extensive functions than it has at present, so that it may regulate those relationships which now are settled by private contract, in the other it is expected that the solidarity of the human race will teach that the will of the individual shall become the will of the group apart from all interference by government. That the former view better fits the facts as we know them, hardly admits of dispute.

An Authentic Exposition of the Methods of Anarchists and the Aims of Anarchism, London, 1908.

ANAXAGORAS, son of Hegesibulon, was born about B.C. 500 at Chios, near the mouth of the Gulf of Smyrna. He brought philosophy and natural science from Ionia to Greece, and marks an era in the history of Greek thought, being the first known advocate of the instinctive psychological principle, called the Nous (Mind). He taught also an original theory of the constitution of matter.

Anaxagoras belonged to a family of wealth and position, but neglected his inheritance to follow science. Tradition asserts that he was a pupil of Anaximenes. This is chronologically impossible.

ANAXAGORAS

as Anaximenes died before B.C. 520. He probably belonged to the school of Anaximenes, for scholarship in Ionia was not unorganized; the relation among groups of congenial thinkers foreshadowed the development in Greece of chartered schools of philosophy (cf. Diels, Die alten griech. Philoso-

phenschriften der Griechen, Leipzig, 1887; Wil-
amowitz-Mollendorf, Antigonos von Karystos, p.
263 ff.). Theophrastus states that Anaxagoras was 'an associate of the philosophy of Anaximenes' (Arist. Phys. Op. fr. 4; Diels, Dozographe Greci,
p. 478). Anaxagoras migrated to Athens about B.C. 460, the first philosopher to take up his abode there. The intimate friend and teacher of Pericles (Plato, Phaedrus, 270), he taught in Athens thirty years, numbering among his pupils Euripides, Thucydides, Archelaus, and Metrodorus of Lamp-
sacus. His influence was far-reaching in intro-
ducing rationalism into Greece.

His chief work, entitled περὶ φυσικὸν ('On Nature'), complete in several volumes, was published, pro-

bably in Athens, after B.C. 467, the year of the great fall of meteorites which he mentions. It was written in a Greek book, the ancient style of Greek book, with the exception of geometrical writings, to be illustrated with diagrams. Considerable fragments survive, most of which are found in Simplicius' commentaries on Plato's Physics.

At the beginning of the Peloponnesian war, when Pericles' popularity began to wane, Anaxagoras was arraigned for impiety, accused of denying the godhead of the sun and moon, and of saying that the sun was burning stone, and the moon earth (Plato, Apol. 26 D). Pericles saved him, but he was exiled to Lampascus, on the southern shore of the Hellespont, about B.C. 430. There he had many disciples, and died in B.C. 428. A stone was erected to his memory bearing on one side the word Νεῖς and on the other Αἰθῆρα (Arist. Rhet. Bk. II.

That matter is neither generated nor destroyed had been the doctrine of the Ionian physicists for a full century. Heraclitus brought the idea of becoming into prominence, but Anaxagoras be-

lieved absolute change impossible. 'The Hellenes,' he said, 'are wrong in using the expressions "coming into being" and "perishing"; for nothing comes into being or perishes, but there is mixture and separation of things that are.' To Anaxagoras the eternity of matter involved the eternity of all its qualities, therefore the problem that confronted him was the origin of force. The three great systems of Empedocles, the Atomists, and Anax-

goras, all accepted theunchanging character of particles and the matter of matter and force; Anaxagoras' book shows acquaintance with both of the other systems. Anaxagoras posited the Nous to satisfy his strongly developed sense of causation, to account for order in the universe, and to solve a definite mechanical prob-

In the beginning was chaos, which contained original particles of all existing objects, for 'How could hair come from not-hair, and flesh from not-

flesh?' (Diels, cf. Hermes, xii. 4). Anaxagoras calls the particles 'seeds' or 'things' (στριφύλαι or κρύματα, Fr. 4 [Schorin]; but they were called homonymous by a later half-Aristotelian phrase-

all things were together and occupied all space. There was no empty space. The action of the Nous upon some point of chaos produced rotation of inconceivable rapidity, which, ever widening in extent, caused the union of homo-
genous particles. The impulse of the Nous was initial. Revolution followed and separation by force and speed, 'and speed makes force' (Fr. 11 [Schorin]). The earth was formed in the centre of this movement. The sun, moon, and stars were separated by the violence of the latter. The whole celestial globe increased in circumference as ever-increasing masses of matter were included in the rotation. Homogeneous seeds combine to form objects as we know them, but there is never abso-
lute freedom from disparate seeds. Objects be-

come so by the kind of matter prevailing in them. Earth, water, air, and fire are complex substances containing particles belonging to all objects. The sun is a mass of ignited stone as large as, or larger than, the Peloponnesus. The earth is flat or a flat cylinder, resting on the air. Anaxagoras dis-
covered with tolerable accuracy the cause of the phases of the moon and of eclipses, and he ex-

plained at length various meteorological and elemental phenomena. His observation in early manhood of a huge meteoric stone which fell at Egosopotami may have helped him to form his geological ideas (Pliny, HN ii. 55; Diog.

I. iii. 10).

Anaxagoras believed in the qualitative trust-
worthiness of sense-perception, but the senses, being weak, cannot discern the truth (Sext. Emp.

Bk. ii. 1). The superiority of man lies in his pos-

session of a hand. Death is a simple necessity of na-

ture.

The Nous is the rarest and purest of all things, in its essence homogeneous, a kind of reasoning force, or thought-stuff. Personallity is attributed to it in one fragment only, which speaks of its knowledge of the past, present, and things to come (Fr. 6 [Schorin]). The Nous was a possible first cause of motion from a dualistic standpoint, a δεσμὸς ἀνατιθέμενος according to Aristotle, and merited the disappointment which Plato in the Phædo attributes to Socrates regarding it. Yet it forms an important link in the shifting of interest from nature to man; and, although metaphysically an incomplete conception, the Nous of Anaxagoras was pronounced immaterial by Plato, Aristotle, and Theophrastus.

Anaxagoras' teaching regarding the laws of nature and unity in the cosmic process formed a marked contrast to the mythical ideas of his age. His great contribution to knowledge was in the scientific method employed and in referring order in the universe to a rational principle. Anax-

agoras left no distinctly ethical or religious teach-
ings. He considered contemplation of nature the highest task of man.

MARY MILLS PATRICK.
ANCESTOR-WORSHIP AND CULT OF THE DEAD.

AN E S T O R-WO R S H P A N D C U LT O F T H E D E A D .—The worship of the Manes, or ancestors, is, says Taylor (ii. 113), "one of the great branches of the human race." While its principles are not difficult to understand, for they plainly keep up the social relations of the living world. The dead ancestor, now passed into a deity, simply goes on protecting his own family and receiving such worship as his spirit can command. In ancient times, the chief chief still watches over his own tribe, still holds his authority by helping friends and harming enemies, still rewards the right and sharply punishes the wrong. In this view of the case the dead; departed ancestor is regarded as invariable kindly and well disposed towards his surviving relatives; and it may be said that this is the usual feeling of savage and barbaric man towards his kinsfolk who have passed into the other world. But there are, as will be seen, exceptions to this general rule; and the question of the attitude of the living towards the dead has formed the subject of controversy between two schools of anthropologists.

1. The dead regarded as friendly.—What may be called the totemistic school—that which regards totemism as the main source from which religion has been evolved—delves specially upon the kindly relations between the deity and his worshippers. Thus, according to W. R. Smith (213-357), primitive sacrifice is an act of communion, the totem animal or beast sacred to the god being slain in order to renew or re-establish the bond of communion between the clan and its supernatural ally. Hence he rejects the supposition that 'religion is born of fear.' ' However true,' he writes (p. 54), "it is not this which he fears, but his family. And the latter is disposed of by innumerable dangers which he does not understand, and so personifies as invisible or mysterious enemies of more than human power, it is not true that the attempt to appease these powers is the foundation of religion. From the earliest times, religion, as distinct from magic or sorcery, addresses itself to kindred and friendly beings, who may indeed be angry with their people for a time, but are always willing to come forward to drive away enemies of their worshippers, or to re-establishing members of the community. It is not with a vague fear of unknown powers, but with a loving reverence for known gods, to whom they are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins.'

This theory has been extended by Jevons (Introdt. Hist. Rel. 54 ff.) to the cult of the dead. He contends that man was "ordinarily and naturally engaged in maintaining such friendly relations with the spirits of his deceased clansmen; that he was necessarily led to such relations by the operation of moral affections which, owing to the prolonged, helpless infancy of the human race, were indispensable to the survival of the human race; and that the relations of the living clansman with the dead offered the type and pattern, in part, though only in part, of the relations to be established with other, more powerful, "spirits." In support of this view, he adds that the maintenance of the parental instincts and family affection was essential to the survival of primitive man in the struggle for existence; and he quotes instances of the grief felt by the survivors when a death occurred; the provision of food and other necessaries for the use of the dead; the retention of the corpse in the dwelling-house for a considerable period after death, or its ultimate burial beside the hearth; the preservation of relics of the departed; the appeals of the mourners to the ghost, imploring it to return home; the adoption of cremation, which frees the soul from the body and thus enables it to revisit its friends; the custom of catching the departing soul; the periodical feasts which the dead are invited to attend; and so on (op. cit. 40 f.).

2. The dead unfriendly to the living.—On the other hand, the same writer (p. 53) admits that love was not 'the only feeling ever felt for the deceased. On the contrary, it is admitted that fear of the dead was and is equally wide-spread, and is equally "natural." These two apparently opposite modes of thought in relation to the dead he explains by the supposition that primitive man draws a clear line of distinction between the ghost of the kinsman and that of the stranger; the one is kindly and protective, the other malignant, dangerous, and hence an object of fear. ' In fine,' he remarks (op. cit. 54), 'as we might reasonably expect, the man who was feared in life less feared when dead.' The many instances of the savage cult of the dead, when it is prompted by fear, he regards as due to' "mal-observation of the facts of savage life.'

But these cases are so numerous that it is impossible to account for them in this way. Thus it is universally supposed that the spirits of strangers and enemies are inimical, and the same feeling is extended to those who have perished by an untimely death, or in some unusual or tragic way. On this principle Frazer (Hist. ii. 331) explains the inconvenient restrictions imposed on the victors in their hour of triumph after a successful battle, in obedience to which the warrior is isolated for a period from his family, confined to a special hut, and compelled to undergo bodily and spiritual purification. For the same reason, on the return of the successful head-hunter in Timor, sacrifices are offered to propitiate the soul of the victim whose head has been taken, or to the general belief that some misfortune would overtake the victor were such offerings omitted. For the same reason, the same feeling is very generally extended to the
ANCESTOR-WORSHIP

ghosts of kindred in the case of children, youths, or maidens snatched away in the prime of their strength and beauty. These are naturally supposed to cherish feelings of jealousy or hatred towards the survivors, who are in the enjoyment of blessings from which they are excluded. The same is the case with the ghosts of women dying in childbirth, who are almost universally regarded as specially dangerous. Equally malignant are the spirits of a murdered man, or one slain by a wild beast, or dying from snake-bite. This feeling is naturally extended to the ghosts of wizards or sorcerers, who were renowned during life on account of the mysterious powers which they were supposed to possess. Thus the Patagonians lived in terror of the souls of their sorcerers, who were believed to become evil demons after death; and the Turanian tribes of N. Asia dread their shamans even more when dead than when alive (Falkner, *Descriptive of Patagonia*, 116; Castrén, *Finsk mytologi*, 124; Bastian, *Mensch in der Geschichte*, i. 406; Karsten, *Origin of Worship*, 110).

The fear of the dead is not confined to spirits of the classes already enumerated. 'Death and life,' writes Tylor (ii. 25), 'dwell but ill together, and from savagery onward there is recorded many a case of service by which the survivors have saved to rid themselves of household ghosts.' He instances the habit of abandoning the dwelling-house to the ghost, which appears in some cases to be independent of horror, or of abnegation of all things belonging to the dead; and the removal of the corpse by a special door, so that it may not be able to find its way back. In some cases, again, the return of the ghost is barred by physical means. In India in the Aheriyas, after cremation, the next of kin, which have served as funeral pyres, are at the door of the house and windows are shut, to prevent the return of the ghost. With the same object the Araucanians strew ashes behind the coffin as it is being borne to the grave, so that the ghost may miss the road; and Frazer suggests that the very general practice of closing the eyes of the dead when laid in their last resting place, the corpse being blindfolded that it might not see the road by which it was borne to its last home (JAI v. 68 ff.). In India the Aheriyas, after cremating the deceased, leave the spirit in the impression that the funeral pyre is the spirit of the ghost; and in the Himalayas one of the mourners, on returning from the funeral, places a thorny bush on the road wherever it is crossed by another path, and the nearest relative puts a stone on it, and, pressing it down with his feet, prays the spirit of the dead man not to trouble him (Crooke, *Pop. Religion*, ii. 57).

Appeals are often made to the spirit, imploring it not to return and vex its friends. Among the Linsus of Bengal, the officiant at the funeral delivers a brief address to the departed spirit on the general doom of mankind and the inevitable succession of round and round, concluding with an exhortation that he is to go where his fathers have already gone, and not come back to trouble the living in dreams (Risley, *Tribes and Castes of Bengal*, ii. 19). Similar appeals are made by the Chinese. when the body is burned (K. L. Bengal, *JAI* xv. 65). The Yoruba sorcerer wishes a safe journey to the ghost: 'May the road be open to you; may nothing evil meet you on the way; may you find the road good where it lies; and may the house of death be burned to your heart, and be not haunted by the living dwellings of the living (Ellis, *Yoruba superstitions*, 96, 100). Even in India, a land where the worship of ancestors is almost universal, the Sauntal believes that the ghostly crowd of spirits who flit disconsoletly among the fields they once tilled, who stand on the banks of the mountain streams in which they fished, and glide in and out of the dwellings where they were born, grew up, and died, is the continued power of blessings from which they are excluded. The same is the case with the ghosts of women dying in childbirth, who are almost universally regarded as specially dangerous. Equally malignant are the spirits of a murdered man, or one slain by a wild beast, or dying from snake-bite. This feeling is naturally extended to the ghosts of wizards or sorcerers, who were renowned during life on account of the mysterious powers which they were supposed to possess. Thus the Patagonians lived in terror of the souls of their sorcerers, who were believed to become evil demons after death; and the Turanian tribes of N. Asia dread their shamans even more when dead than when alive (Falkner, *Descriptive of Patagonia*, 116; Castrén, *Finsk mytologi*, 124; Bastian, *Mensch in der Geschichte*, i. 406; Karsten, *Origin of Worship*, 110).

The fear of the dead is not confined to spirits of the classes already enumerated. 'Death and life,' writes Tylor (ii. 25), 'dwell but ill together, and from savagery onward there is recorded many a case of service by which the survivors have saved to rid themselves of household ghosts.' He instances the habit of abandoning the dwelling-house to the ghost, which appears in some cases to be independent of horror, or of abnegation of all things belonging to the dead; and the removal of the corpse by a special door, so that it may not be able to find its way back. In some cases, again, the return of the ghost is barred by physical means. In India in the Aheriyas, after cremation, the next of kin, which have served as funeral pyres, are at the door of the house and windows are shut, to prevent the return of the ghost. With the same object the Araucanians strew ashes behind the coffin as it is being borne to the grave, so that the ghost may miss the road; and Frazer suggests that the very general practice of closing the eyes of the dead when laid in their last resting place, the corpse being blindfolded that it might not see the road by which it was borne to its last home (JAI v. 68 ff.). In India the Aheriyas, after cremating the deceased, leave the spirit in the impression that the funeral pyre is the spirit of the ghost; and in the Himalayas one of the mourners, on returning from the funeral, places a thorny bush on the road wherever it is crossed by another path, and the nearest relative puts a stone on it, and, pressing it down with his feet, prays the spirit of the dead man not to trouble him (Crooke, *Pop. Religion*, ii. 57).

Thus the Patagonians lived in terror of the souls of their sorcerers, who were believed to become evil demons after death; and the Turanian tribes of N. Asia dread their shamans even more when dead than when alive (Falkner, *Descriptive of Patagonia*, 116; Castrén, *Finsk mytologi*, 124; Bastian, *Mensch in der Geschichte*, i. 406; Karsten, *Origin of Worship*, 110).
helpless life of the departed prevails, it is obvious that the loving sympathy and ministrations of the living to the departed do not rise to the dignity of 'worship.'

The distinction, then, between the worship and the placation, or tendance, of the dead is one of great importance, which many of our travellers and observers have failed to appreciate. There are cases in which the dead are worshipped; but those of which we are here pointing to are needful if the departed in the other world are much more numerous. In the accounts which follow of the prevalence of this form of worship in various parts of the world, the evidence upon which they are based must be accepted with this preliminary reservation. This distinction, again, if kept steadily in view, will enable us to account in some degree for the remarkable differences of opinion which prevail regarding this form of belief. Hence we must receive with some degree of caution the accounts of travellers who report that certain tribes are exclusively devoted to the worship of their ancestors, or that this form of belief does not exist among them. Two things are liable to cause misconception. In the first place, the veil which the savage hangs round his most cherished beliefs and ritual is so closely woven that casual visitors to a savage or semi-savage people may live amongst them for some time, and have acquired some considerable knowledge of their language and character, find great difficulty in penetrating the mysteries of their religion. In the second place, the death cults, which ordinarily takes place at the grave, is of necessity a formal and public act, and is likely to be observed and investigated by the casual inquirer, who may remain in complete ignorance of what is really the vital part of the tribal beliefs.

5. Ancestor-worship the basis of human religion.

The theory which suggests that the cult of ancestors is the basis of all human religion is usually associated with the name of H. Spencer. This writer begins his summary of the conclusions at which he has arrived, by dealing with what may be called the hero cult. 'Any thing,' he writes, 'which transcends the ordinary, a savage thinks of as supernatural or divine; the remarkable man among the rest. This remarkable man may be simply the remotest ancestor remembered as the founder of his race; his name may be associated with strength or bravery; he may be a medicine-man of great repute; he may be an inventor of something new. And then, instead of being a member of the tribe, he may be a superior being bringing arts or knowledge; or he may be one of a superior race predominating by conquest. Being at first one or other of these, regarded with awe during his life, he is regarded with increased awe after his death; and the propitiation of his ghost, becoming greater than the propitiation of ghosts less feared, develops into an established worship.' (Principles of Sociology. I. 1.)

This view of the hero cult may be accepted with some reservation. In the first place, there are grounds for believing that fear is not the only, or even the primary, reason for the deification of the hero. The cult of the distinguished dead was often founded, not so much upon the desire of the survivors to maintain friendly relations with the spirits of the departed (Jerome, Introd. 106). Secondly, in those parts of the world where the hero cult extends to its highest degree, the devotion paid to the hero is of a degree inferior to that of the regular gods, who are often nature spirits, and not necessarily ghosts of the dead. This distinction is clearly marked in Greece and other lands, where the cult of Hercules or Asclepius is of a lower grade than that of deities like Athene or Zeus. The ritual of hero-worship is also clearly different from that used in the worship of the gods. The same is the case in India, where heroes like Rama or Krishna, who have been elevated to the rank of gods, are found sheltering the living in their various incarnations, of a great nature deity like Vishnu.

But Spencer goes much further than to recognize a cult of the deified hero. Following the passage already quoted, he goes on to say: 'Using the phrase ancestor-worship it is bringing together, as comprehending all worship of the dead, be they of the same blood or not, we conclude that ancestor-worship is the root of every religion.' Even the most dogmatic upholders of the Spencerian hypothesis are unable to accept it when thus extended. Thus Grant Allen (Evolution of the Idea of God, 36) observes: 'I do not wish to insist that every particular and individual god, national or naturalistic, must necessarily represent a particular ghost, the dead spirit of a single definite once-living person. It is enough to show, as Mr. Spencer has done, that the idea of the god, and the worship paid to the god, are directly or indirectly a part of the thoughts and the offerings made to the ghost, without holding, as Mr. Spencer seems to hold, that every god is, and must be, in ultimate analysis the ghost of a particular human being.' And in another passage (ib. 42) he writes: 'Religion was some time before it was still older, more fundamental than any mere belief in a god or gods—may, even than the custom or practice of appeasing and appeasing ghosts or gods by gifts and observances. That element is the conception of the Life of the Dead. On the primitive belief in such life all religion ultimately bases itself. The belief is, in fact, the earliest thing to appear in religion, for there are savage tribes who have nothing whatever to do with gods, but have still a religion or cult of their dead relatives.' Elsewhere, in discussing the cult of Attis, he seems to suggest that the tree-spirit and the corn-spirit originate in the ghost of the deified ancestor (Attis, 35 and passim).

Needless to say, these views have not met with general acceptance. Thus Hartland (Legend of Perseus, I. 260) regards this Euhemerism of Spencer as 'a child (one among many) of his passion for explaining everything quite clearly, for stopping up all gaps and stubbing up all difficulties in his synthesis, rather than an all-sufficient account of the beginnings of religion.' Lang (Myth, Ritual and Religion, ed. 5, 1908) used for his explanation of the change from the current or popular anthropological theory of the evolution of gods,' on various grounds. He finds in this hypothesis a 'pure Euhemerism. Gods are but ghosts of dead men, raised to a higher and finally to the highest power.' Analogous to this, but not identical, is the theory of Tylor (ii. 334), which suggests that 'man first attains to the idea of spirit by reflexion on various physical, psychological, and psychical experiences, such as sleep, dreams, trances, shadows, hallucinations, breath and death, and he gradually extends the conception of soul or ghost till all nature is peopled with ghosts. Of these spirits one is also prone to supremacy, where the conception of a supreme being occurs.' To this combined animistic and ghostly theory Lang replies (ib. 1. 310) that all gods are not necessarily of animistic origin. 'Among certain races of the human race as amongst them, in ghosts, the animistic conception, the spiritual idea, is not attached to the relatively supreme being of their faith. He is merely a powerful being, unborn, invulnerable, and not subject to death. In the eternal question, "Was he a ghost?" this does not seem always to have been asked. Consequently there is no logical reason why man's idea of a Maker should not be prior to man's idea that there are such things as souls, ghosts, or genii, or spirits. Therefore the animistic theory is not necessary as material for the "god-
Ancient Religion

Ancestor-worship

We cannot, of course, prove that the "gods of the ancients" were in fact ghosts, but we can say that the idea of god may exist, in germ, without explicitly involving the idea of spirit, or even in evolution to ghosts, and therefore the animistic theory of the origin of gods in ghosts need not necessarily be accepted. Secondly, he urges that, in all known savage theological philosophy, the gods, the ancestors and ghosts have not necessarily any being with power, and therefore the normal feature of natural scenery would generally quite independently of any association with a ghost. Still more is this the case with gods of sky, sun, moon, wind, or rainbow. The animism which leads to the worship of phenomena cannot depend upon, and may be earlier than, the belief in the survival of the soul after death.

Ancestors ovocural.—Ancestral spirits are believed to be able to give oracles to their descendants, who consult them in times of danger or trouble. At certain places deep chasms or openings in the earth were observed, through which the shades could rise from their subterranean home, and give responses to the living. The Greeks called such places oracles of the dead (τεκτωναρίῳ, ψευδοναρίῳ). The most ancient oracle of this kind was that of Theseus, where Periander succeeded in capturing and carrying away the ghost of his murdered wife, Melissa (Herod. v. 92; Pauly. i. 30. 3). There was another at Phigalia in Arcadia (Paus. i. 17. 8, 9), and Italy possessed one at Lake Avernus (Diod. iv. 22; Strabo, v. 244). The oracle was consulted by a regular mode of proceeding, in which was offered a sacrifice and then to sleep in the sacred place. The soul of the dead man then appeared to the sleeper in a dream, and gave his answer (Frazer, Peter's iii. 241). The same belief is found in many forms in other parts of the world. In Melanesia, 'after a burial they would take a bag and put Tahitian chestnut and scraped bananas into it. Then a new bamboo some ten feet long was fixed to the tree. Then there were no offerings, no sacrifice. But if a man who had been eaten out by the hand of the grave over to find out what his mouth of it was, and the bag was laid upon the grave, the men engaged in the affair holding the bamboo in their hands. The names of the recently dead were then called, and if the men holding the bamboo felt the bag become heavy with the entrance of the ghost, then it went up from the bag into the hollow of the bamboo. The bamboo and its contents being carried into the village, the names of the dead were called over to find out whose ghost it was. When wrong names were called, the free end of the bamboo moved from side to side, and the other was held tight. At the right name the bamboo end moved by itself, and if the positions were put into the bamboo, Who stole such a thing? Who was guilty in such a case? The bamboo pointed of itself at the culprit if present, or made signs as before when names were called. This bamboo, they say, would run about with a man if he had it only lying on the palms of his hands; but it is remarked by my native informants, though it moved in men's hands it never moved when no one touched it' (Cedrington, Melanesians, 211 f.). Among the Akikuyas of E. Africa, the medicine-man holds converse only with those recently dead, whose lives he had been unable to save. He goes out and visits the corpse, and when it has been thrown out into the jungle. He pours 'medicine' upon its hands, and calls on it to rise. When it rises, the wizard says: 'Reveal your father, mother, and brothers.' It does so, and after the medicine has thrown itself upon it, the conversation ceases. Persons so reviled get sick and die (JAF xxxiv. 262). In S. Africa the wizard in the same way gets into communication with the spirit who controls the oracles in the form of riddles and dark parables (ib. xx. 120). The Dayakans sometimes, like the Greeks, seek communion with the ancestral spirits by sleeping at their graves in the hope of getting some benefit from them (Both, Natives of Sarawak).
ANCESTOR-WORSHIP

429

ness away; it is a family affair.' But if the tindalo be that of a stranger, a doctor is called in to identify and propitiate it (Cordrington, Melanesians, 194 f.). But generally the belief is that the spirit is that the relatives have neglected its wants. When a North American Indian fell into the fire, he believed that the spirits of his ancestors pushed him in because their worship was neglected (Scholescraft, i. 30). Often again, it is caused by jealousy of the spirits towards the living, or it arises because the ghosts are lonely in Dead-land and desire companionship. For this reason spirits which have recently died are especially set on creating harmony and carry off with them to the world of the dead the souls of their surviving relatives (Frazer, GB 2 ii. 345 f.). Miss Kingsley was assured that the danger of the ancestral ghost's injuring the members of the family was particularly children, "comes not from malevolence, but from loneliness and the desire to have their company. . . ." This desire for companionship is, of course, immensely greater in the spirit than it is not definitely settled in the society of spiritdom, and it is therefore more dangerous to its own belongings, in fact, to all living society, while it is hanging about the other side of the grave, but this side Hades' (W. African Studies, 183).

In Asia the tindalo, or ancestral spirit, is frequently taken in charge of the living by promising to guard them from harm, especially from drowning (Black, Folk Medicine, 28 f.). In Ireland, according to Lady Wilde, it is believed that the spirit of the dead last buried has to watch in the churchyard until another corpse is laid there, or to perform menial offices in the spirit world, such as carrying wood and water, till the next spirit comes from earth. They are also sent on messages to earth, chiefly to announce the coming death of some relative, and at this they are glad, for their own time of peace and rest will come at last (Ancient Legends, etc., of Ireland, 1857, 21 f.).

In China it is commonly believed that if the spirit of a murdered person is satisfied and does not desire another soul to be sent to earth, he returns to earth when nothing had happened, the spirit of his victim passing into the world below and suffering all the misery of a disembodied spirit in his stead' (Giles, Strange Stories from a Chinese Studio, 1890, ii. 365 f.). Fortunately, however, the patient is not always left to the mercy of the spirits of his enraged relatives. In San Cristoval, it was believed that the friendly and unfriendly ghosts fight with spears over the sick man. The patient would suffer, die, or keep his health according to the issue of this unseen spectral battle (Codrington, op. cit. 196).

8. Ancestors appearing in children.—The belief that the child is nothing more or less than an ancestor re-born on earth is found almost throughout the world. The idea, of course, depends upon the resemblance of members of the same family in successive generations: it is the form of the extraordinary theory held by the Arunta tribe in Central Australia regarding conception, and among the northern tribes of the same continent every new child is believed to be the reincarnation of their deceased children (Spencer-Gillen, 51 f.; 337; FL xx. 467). Among the Thinkets of N. America, the spirit was believed to have the option of returning to this life, and generally entered the body of a female relative to form the soul of a coming infant. If the child resembled a deceased friend or rela-

In Australia some specially gifted seers are able to see the disembodied spirit sitting on the spot where its body lies buried, and no longer able to retire into its accustomed habitation (JAI xix. 265). In Ireland, according to Belchier (Bor-}

429

In FL (265). Due often, they inquired the will of the Sitte or ancestral ghosts. They said: 'O ye Sitte, what will ye have?' Then they used to beat a drum on which a ring was laid, and if the ring fell on any creature pictured on its surface, they understood that this was what the spirit desired. They then took the animal thus selected, ran through its ear and tied round its horn a black woolen thread, and sacrificed it. Sometimes the wizard pretends to confer a like deathland to consult the ancestral spirits. Among the Dayaks he possesses a charm which ensures the aid of a kindly spirit when he goes to Sabayan, the under world, in search of a sick man (JAI xxii. 81). The Melanesians tell a similar story of a woman who went to Pano to consult the dead, and the Australian wizard is able to bring back news from the dead, or he advises how to obtain magical power from him (ib. x. 283, xiii. 195).

In W. Africa the Yoruba priest takes a young child, baths his face in the ‘water of purification,’ and digs a hole in the earth within the sacred grove at midnight. When the child looks into the hole, he is able to see Dead-land, and can tell the priest what he sees. When his face is washed a second time, he forgets all that has happened (Ellis, op. cit. 141). Such powers, often gained under the influence of fasting, are claimed by shamans all over the world (Tylor, ii. 410 f.).

When the attention of a tribe is fixed on the cultus of ancestors, it becomes a natural inference that disease or other misfortune is due to neglect of their worship. In Celebes, all sickness is ascribed to the ancestral spirits who have carried off the soul of the patient (Frazer, GB 2 i. 260). This reminds us of the Greek conception of the Keres and Harpies (Harrison, Proleg. 176 f.). In the same way, wrathful ancestors are supposed to cause thunder or to bring about a thunderstorm. In Peru, when parents who have lost a child hear thunder within three months of the death, they go and dance on the grave, howling in response to each clap, apparently believing that they hear the voice of the dead child, and can thereby humble the thunder (Frazer, Lect. on Kingship, 206 f.). In some cases the wrath of the spirit is attributed to causes which we can only regard as frivolous. In Natal we hear of a diviner announcing to his people that the spirits had caused disease because they did not approve of some persons living in the kraal of a relative, and wished them to have a house of their own (JAI iii. 141). Sometimes, again, the spirit is provoked on account of a sin committed by its people. Among the Banyoros of Uganda, the death of a man by lightning is attributed to the anger of the Bachwezi, or ancestral spirits, on account of some sin committed by the dead man, or wrong-doing on the part of members of the clan. To appease them, a sacrifice is demanded (Johnston, Uganda, ii. 339 f.). In Florida, according to Tylor ('Tales of a ghost of power, that causes illness; it is a matter of conjecture which of the known tindalos it may be. Sometimes a person has reason to think, or fancies, that he has offended his dead father, uncle, or brother; then it is usually considered as required; the patient himself or one of the family will sacrifice, and beg the tindalo to take the sick-
tion, this embodiment was at once recognized, and the name of the dead person was given to it." (Bancroft, Native Races, iii. 517). In the same region the Nootkas accounted for the existence of a distant tribe speaking the same language as themselves by no other means than by introducing into the land of the spirits of their dead (ib. iii. 514). In W. Africa the Yorubas inquire of their family god which of the deceased ancestors has returned, in order to make the child of this birth. The returned one is greeted with the words 'Thou art come, as if addressing some one who has returned; and their neighbours, the Ewe, believe that the only part of its body which a child receives from its mother is the lower jaw, the rest being derived from the ancestral spirit (Ellis, op. cit. 120, 131). The same procedure in naming children appears among the Khonds of India, where the priest drops grains of rice into a cup of water, naming with each grain a deceased ancestor. From the movement of the seed in the water and from observation of the child's person he decides which ancestor has appeared to him, and the name is usually given according to it: Hence we consider the customs prevailing in the islands of Watabela, Aaru, and the Sula Archipelago barren women and their husbands visit certain sacred graves to pray for offspring—the spirits of the dead interceding (Pliny, Natural History, Book X, ed. Das Weih, 1857, i. 430 ff.). The same belief appears in W. Europe in the habit of young girls in the Pyrenees going to a dolmen to pray for a lover, and young boys for a child; in the erotic superstitions connected with rude stone monuments to Spain, Brittany, and Ireland; and in the cycle of Irish legend connected with the bed of Dermot and Grania (Borlase, Dolmens of Ireland, 560, 629, 864). This leads me to another inference from the doctrine of metempsychosis, which is generally accepted among primitive races. In India it is doubtful whether this belief appears in the Vedas, but it is admitted in the later Purânic literature, and at the present day in the Punjab it is quite logically accepted to explain the fact that, as the soul is transmitted from generation to generation, so with the life are transferred all attributes and powers of the pro-genitor. Hence we have numerous instances how the transmission of the hereditary powers of curing disease or causing evil which are believed to be found in certain clans and families. 'This principle of transmigration of souls is much more deeply rooted than that of caste. It is natural and fitting that a man should follow his father's trade, but he may change his occupation. . . . When once sanctity has been acquired by a family, it is next to impossible to shake it off. Social status is much less permanent. The original conception of the metempsychosis appears then to have been that the life or soul, with all its attributes, was transmitted by natural descent. This idea was developed into the doctrine that the soul transmigrated from one body to another independently of such descent, but this doctrine did not regard transmigration as something illogical and uncertain; on the contrary, it was regarded as subject to one set of rules, and magic that it could be regulated, but in neither sense was transmigration a matter of chance' (Rose, Census Report, Punjab, 10 to 12)." Formerly the Bantu races transferred their soul by another method, which was to donate the soul to a distant tribe among the Tsiki-speaking peoples of the Gold Coast and a number of other Tsiki-speaking tribes of the Slave Coast, a distinction in race being necessary. The 'self that continues the man's existence after death in the spirit-world, and his kra or ndi, which is capable of being born again in a new human body. In the eastern Ewe districts it is called the soul by either an inconsistency or a subletly, believed to remain in the land of the dead and to animate some new child of the family at one and the same time; but it never animates an embryo in a strange family.

9. Ancestor-worship and Totemism.—The question of the relation of ancestor-worship to totemism has recently been discussed by Tylor, Hartland, and Frazer. Tylor (JAI xxviii. 146 f.) quotes from Wilken (Het Animisme bij de Volken van den Indischen Archipel, 1834-55, p. 1. p. 14 f.) cases of crocodiles being regarded as kindly and protective beings, to kill which is considered murder, as they may be man's near relatives. Offerings are made to them, and people look forward to the great blessedness of becoming crocodiles when they die. In the same way Sumatrans worship tigers, and call them ancestors. Some of the non-Aryan tribes of the central Indian hills believe that the ancestor is sometimes re-born in a calf, which in consequence of this connexion is well fed and treated with particular respect (Crooke, Popular Religion, i. 179). On this Tylor thus comments: 'Wilken sees in this transmigration of souls the link which connects totemism with ancestor-worship, and on considering his suggestion, we may see how much weight is to be given to the remarks made independently by Dr. Codrington as to Melanesia and the tribes of the Pacific who would not eat or plant bananas, because an influential man had prohibited the eating of the banana after his death because he would 'be in it; the elder natives would say, we cannot eat so-and-so, and after a few years they would have said, we cannot eat our ancestor. . . . As to such details we may, I think, accept the cautious remark of Dr. Codrington, that in the Solomon Islands there are indeed no totem clans, but what throws light on them elsewhere. The difficulty in understanding the relation of a clan of men to a species of animals or plants is met by the transmigration of souls, which bridges over the gap between the two, so that the men and the animals become united by kinship and mutual alliance; an ancestor having lineal descendants among men and sharks, or men and owls, is thus the founder of a totem-family, which more increase by conversion, but what throws light on them elsewhere. Thus finding in the world-wide doctrine of soul-transference an actual cause producing the two collateral lines of totemism, we can without any theoretical framework of totemism, we seem to reach at last something analogous to its real cause.

Following on this discussion, Hartland considers the whole question in connexion with the tribes of S. Africa. He notices that the only branches of the Bantu race among which no certain traces of totemism but few of mother-right are found are the Amazulus and their kindred tribes, the most advanced of the whole Bantu race. The Bechuanas, on the contrary, exhibit substantial remnants of totemism, and with them traces of mother-right. Thus in the lowest social stage of these races totemism is still flourishing, and patriarchal and patrilineal systems are very much mixed with it. Totemism is here, in fact, developing into ancestor-worship (Frazer, Man, i. 136), and the question is—How has ancestor-worship developed and supplanted totemism? This question Hartland answers by suggesting that it is entirely dependent upon the growth of the patriarchal system. 'The more absolute becomes the power of the head of a nation, and under him of the family, the more the original totemism superstitions tend to disappear until they are altogether lost and forgotten.' The same process seems to be going on in other parts of the world. The Nootkas of the islands in Torres Straits, the animal kindred come
to be replaced by a definite effigy, the soul of which is kept in an external receptacle, and the effigy is further associated with a hero (Haddon, Cambridge Esqul. v. 377; Head-hunters, 138). Haddon regards this as one of the earliest marks of fetishism, 'the figures go beyond mere representations of the totem animals, and depict a mythic incident in which the human ancestor is believed to have come into relation with the animal which was thence adopted as the totem of the clan' (JAI xxvii. 136). The development of totemism into ancestor-worship is also illustrated by the case of the Bhumia tribe in Bengal. They show great reverence for the memory of Rikkhiasan, whom they regard, some as a patron deity, others as a mythical ancestor, whose name distinguishes one of the divisions of the tribe. Risley believes it possible that in the earliest stage of belief British India was the bring down prophet of the tribe, that later on he was transformed into an ancestral hero, and finally promoted to the rank of a tribal god (Traces and Customs of Bengal, i. 112). Two marks of ancestor-worship developing out of totemism, which at any time be revolutionised by fresh information from the Australian or other primitive tribes, it would be premature here to do more than quote these examples of ancestor-worship developing out of totemism, with the more or less plausible explanations which have been suggested to account for it.

10. Ancestor-worship and Idolatry.—We have now satisfactory evidence for the development of ancestor-worship into idolatry, a term not in itself satisfactory, but preferable to that of 'fetishism,' which possesses no scientific value. The practice of erecting carved representations of deceased ancestors is one of the many sources from which the idol was probably evolved. Its analogue is to be found in the primitive stone pillar, in which the god was manifested when blood was sprinkled upon it (Jevons, Introd., 133). This custom of erecting memorial images is very common in Melanesia and the adjoining region. At Santa Cruz, 'when a man of distinction dies, his ghost becomes a dukta. A stock of wood is set up in his house to reproduce the body, and the feast time renewed, until the man is forgotten, or the stock neglected by the transference of attention to some newer or more successful dukta. Offering are made to it in times of danger at sea, at the planting of a garden, on recovery from sickness, when fruit is laid before it (Cordington, op. cit. 139). In the Solomon Islands, if a person of great consequence dies, 'a figure may be made of him after his death, for the ornamentation of a canoe-house, or of a stage put up at great feasts. These images are hardly idols, though food may sometimes be put before them, though to remove them would be thought to bring down pedestals of the dead man upon those who should so insult him' (ib. JAI x. 302). In Ambrym, however, the large figures carved with bamboo, which would naturally be held for idols, are set in memory of persons of importance at a great feast perhaps a hundred days after death. 'That they do not represent ancestors is fairly certain: the very oldest can be traced back a few years old' (JAI x. 294). They generally represent figures of men, who would be loosely called ancestors by the powerful people of the village, and these would be treated with respect, food being placed before them. 'But these and no sacred character, familiarity with the image, and the reverence paid them, which were memorials of great men, whose ghosts, visiting their accustomed abodes, would be pleased at marks of memory and affection, and irritated by disrespect. There was no notion of the ghost of the dead man taking up his abode in the image, nor was the image supposed to have any supernatural efficacy or influence; so that the important a development of totemism is practically to place it beyond the realm of pure totemism.' We find something of the same kind in a totem post from British Columbia, which has figures on it corresponding to the 'ancestors' or 'totem gods' of the tribe. In the New Hebrides, a model of the dead chief is made of bamboo; the head is smeared over with clay, shaped and painted so as to be often a fair likeness of the deceased, the body decapitated. In the model, the whole image being set up in the god's house or temple, with the weapons and personal effects of the dead man. Boyd, who describes these images (JAI xi. 76, 81), is disposed to think whether they are objects of affectionate regard or of worship, and Somerville (ib. xxiii. 21, 392) does not ascribe any religious character to them. But it is obvious that an image set up as a memorial and propitiated with offerings of food may very easily develop into an idol. Haddon (Head-hunters, 91) describes similar models in wax on skulls of deceased relatives. They seem to be kept mainly for sentimental reasons, as the people are of an affectionate disposition, and many native races, when a beloved relative dies, erect a model in a temple, and believe that it represents the spirit of the deceased, and that they are in the power of those who have made it. It is then a rude cultus like this it is possible that all three suggestions may represent the varying conditions of the devotion paid to them (Man, iv. 73.). In New Guinea the explorers found two roughly carved wooden men, with bushy hair on their heads. When asked to sell them, the natives said: 'No. They belong to our ancestors, and we cannot part with them' (Chalmers-Gill, Work and Adventures, 229).

In India the use of such images seems to be largely based on the principle of providing a refuge for the ghost during the period which elapses between death and the completion of the funeral rites. Among some tribes the same image was used for purposes of divination. In the case of a rude cultus like this it is possible that all three suggestions may represent the varying conditions of the devotion paid to them (Man, iv. 73.). In New Guinea the explorers found two roughly carved wooden men, with bushy hair on their heads. When asked to sell them, the natives said: 'No. They belong to our ancestors, and we cannot part with them' (Chalmers-Gill, Work and Adventures, 229).
determined by the Shaman or priest, not exceeding, however, three years, when the image is buried. Offerings of food are set before it at every meal; and if it represents a deceased husband, the widow continues to feed it from time to time and to lavish upon it tokens of affectionate and passionate attachment. The image of a deceased Shaman is preserved from generation to generation; and 'by pretended oracular utterances and other artful impositions the priests urge the image to procure priests offerings as abundant as those laid on the altars of the acknowledged gods' (Featherman, *Ugro-Turanians*, 550, 575).

In America the same practice is well established. Of the Cennis or images raised by the aborigines of Hispaniola, Ferdinand Columbus states: 'They give the image a name, and I believe it is their father's or grandfather's, or both, for they have more than one, and some above ten, all in memory of their forefathers' (*JAI* xvi. 290). The grave-posts, roughly hewn into an image of the dead, appear among many tribes of the American Indians (Dorman, *Prim. Superstition*, 177). The Simer and the Similkameen Indians of British Columbia place carved figures representing the dead on their graves. These are dressed in the clothes of the dead man, and when decayed are renewed (*JAI* xxı. 313). The image is often that of a warrior, with a record of his warlike expeditions and of the number of scalps taken by him, of which Schoolcraft gives illustrations (l. 356).

In Africa the Lunda, a forest tribe, have a distinct form of ancestor-worship, and are accustomed to remember the dead by placing roughly-carved dolls, supposed to represent the deceased person, in the abandoned hut in which he is buried (Johnston, *Upando*, 240; *Trachten*, 474), records a case where, on the death of a twin, an image of the child was carried about by the survivor as a habitation for the soul, so that it might not have to wander about, and being lonely call its companion to follow it.

When we come to races in a higher grade of culture, we find survivals of the same practice. The Roman noble exhibited in the wings which opened from his central hall the images of his or his like-nesses of his revered forefathers, which are believed to have been originally portrait-masks to cover the faces of the dead. These at funerals were fitted on to their heads in the case of the father and of the dead man's ancestors, and when kept in the house were probably attached to busts (Smith, *Dict. Ant.* ii. 922 f.ii.). The actors with these masks were seated on chairs of dignity at the funeral rites (Granger, *Worship of the Romans*, 65).

11. Ancestor-worship in relation to the family.—Ancestor-worship is primarily a family cult, based on the desire of the survivors to maintain friendly relations with the departed. But the family is a comparatively modern institution, and behind the modern family, organized on the principle of the maintenance of the *patria potestas* and succession in the male line, there is a long past, when family property and certainly polyandry or group-marriage, with the natural accompaniment of succession in the female line, must have prevailed. This is not the place to discuss the priority of mother-right and father-right. Here it cannot be the subject of a highly primitive belief. Jeovs (op. cit. 194) is on less sure ground when he argues that it could not have arisen before the time when agriculture was started as the main industry of the human race. 'Originally,' he urges, 'the dead were supposed to suffer from hunger and thirst as the living do, and to require food—for which they were dependent on the living. Eventually the funeral feasts were interpreted on the analogy of those at which the gods feasted with their warriors—and the dead were no longer dependent on the living, but on a level with the gods... . It could not therefore have been until agricultural times that the funeral feast came to be interpreted on the analogy of the sacrificial feast.' It would, however, be unsafe to infer that the cult of ancestors is confined to tribes organized on the patriarchal system. Thus in South India the custom of tracing descent through the female seems to have widely prevailed, and the Nayar, who still maintain this rule, are ancestor-worshippers. This they have not borrowed from the Hindus, but it has been derived by them from the primitive animism (Fawcett, *Bulletin Madras Museum*, iii. 157, 247, 275, 276). The same is the case with many of the lower castes in Northern India, among whom survivals of matrarchy can easily be traced, and with certain Melanesian races, who combine an ancestral cult with descent in the female line; as, for instance, the Poliwe Indians, the Ipalnoos of the Caroline Archipelago, the Chamorros of the Ladrones, and the Baras of New Britain (Kubary, *Pelouer*, 38; Featherman, *c. Mel. 250*, 325). The same is the case with the inhabitants of the lower castes in Northern India, among whom survivals of matrarchy can easily be traced, and with certain Melanesian races, who combine an ancestral cult with descent in the female line; as, for instance, the Poliwe Indians, the Ipalnoos of the Caroline Archipelago, the Chamorros of the Ladrones, and the Baras of New Britain (Kubary, *Pelouer*, 38; Featherman, *c. Mel. 250*, 325). The same is the case with the inhabitants of

12. Social Results of Ancestor-worship.—It remains to consider briefly the effect of ancestor-worship on the social condition of the races which practice it. In the case of Japan, a writer in the *Times* (20th Nov. 1905) remarks: 'It is not difficult even for Europeans to understand how strong is the foundation, both for national and dynastic loyalty, which such a faith affords. It ensures that the will of the whole Japanese people is united; the lowest, shall ever bear in mind the existence and the strength of the innumerable ties which knot the present to the past. It is at once a safeguard against violent revolution and a guaranty of gradual progress. It is a conception which we cannot perhaps easily grasp in its fulness, but we can readily acknowledge its nobility and its simplicity, and we can feel how great and precious a factor it may be in moulding the hearts and minds of a nation.' To the same belief the sanctity of the household and, as a consequence, the inviolability of marriage, have been much indebted. The strength of the family in Japan is due to the fact that the family is not only the most competent to perform the rites on which the happiness of his ancestors and of himself depended was one of the main foundations of that family life which is the basis of modern society, and, except in countries like India, where it conflicted with the prejudices of the priestly class, tended to raise the status of woman. On the other hand, in the ruder stages of society, the belief that the unappeased and angry soul of the father or kinsman hovered round the family hearth, and could be consoles by no propitiation save by the blood of the murderer slain by a member of the household, tended to foster the desire for revenge, to strengthen the bonds of ties among the tribal, and to confirm the popular belief that 'stranger' and 'enemy' were synonymous terms.

W. CROOKE.
ANCESTOR-WORSHIP (American).—1. Communion with spirits of the dead.—Perhaps the most marked feature of the religion of the American Indians is the virtual possession by nearly all of the many tribes from Alaska to Patagonia. There can be little doubt that this belief was based upon the equally general belief in communication between mankind and the spirits of the dead.

Whatever may be the true explanation of that medium of genuine phenomena, which some attribute to the action of spirits, and others to the subconscious self, the phenomenon were recognized by the Indians long prior to the advent of modern spiritualism, and, at least in many cases, prior to the earliest historical contact with Europeans. The tribes regarded these phenomena as caused by the spirits of the dead. As a rule they were friendly spirits, those of tribal ancestors, relatives, or friends who returned to earth to warn, protect, instruct, or amuse the living. They were treated with respect and regarded with fear. They could be seen by those who trained their senses above the normal plane, in accordance with methods handed down from the ancestors, or who were under unusual circumstances, by ordinary mortals.

The power of seeing them was believed to be acquired in various ways—by continued solitary meditation, by the use of certain narcotic herbs, by crystal-gazing, or those who acquired this power became mediums, and were respected as the 'Medicine Men' (a term possibly derived from the mysteries of the Media Societies), magicians, or priests. By aid of this power, they were enabled to foretell the future, and to describe events occurring at a distance. Evidently, therefore, the spirits were believed to possess supernatural knowledge and power, and intercourse with them was sought to obtain this, not for purposes of worship. Amongst many tribes those who acquired this power are distinguished by various names, according to the scope of their attainments, but the principal distinction is between those who are controlled by the unseen forces and those who control them. Only the masters were enabled to compel the spirits to do their bidding. No instances are given of the abuse of these powers; on the contrary, those who were supposed to hold intercourse with them seem to have been regarded only in a favourable light. As to the effect of these practices upon the mediators personally, nothing is heard. Besides these methods of obtaining intercourse with spirits, some men were believed to be born gifted with this power, to some others it could be quickly or instantly imparted by masters.

In dreams and visions and under unusual circumstances, spirits were believed to appear, without mediastinct interposition, to ordinary mortals. There is hardly a tribe to-day which does not possess at least one member who beholds spirits, and who is able to describe distant events at the time of their occurrence, or to perform some other apparently supernatural feat. In the myths of several southern tribes the original taking of the land of the dead, and return theretoform to relate their experiences.

2. The soul and the double.—The Iroquois and Algonkine believe that man has two souls, the 'double' and the 'spirit.' The double is generally regarded as the body, and the corpse after death until it is called to enter another body; another of more ethereal texture, which can depart from the body in sleep or trance and wander over the world, and at death goes directly to the land of spirits.†

The Sioux recognize three souls—one goes to a hot place after death, due to a life of sin; while a third watches the body. The Dakotas call this the true soul.‡ In most American Indian languages the word for 'soul' is allied to those for 'air,' 'wind,' 'breathe,' the breath being thought to represent the animating principle derived from the Cosmic Spirit, or Soul, as amongst Hindus and Romans, though only the system of the Vedas analyzed this relationship.†

The individual soul was regarded as part of this Cosmic Soul which formed the principal deity of the American Indians. The personified deities in Peru, and probably elsewhere as well, were recognized as special manifestations; although the adequate understanding of this concept was doubtless confined to the few, as in all places and times. The unconscious attempt of the missionaries to road monotheism into the concept of the Great Spirit, amongst the northern tribes, naturally prevented appreciation of its true nature, and led to vagueness in their statements.

A wide-spread belief assigned to each individual an attendant guardian spirit, or spiritual companion, independent of birth, but attached to the individual. It warned the self through intuitions of impending dangers, and the like. Such was the toranq of the Eskimos; the ollon of the Iroquois, chosen after a period of solitary meditation in the woods, and symbolized by some object seen in a dream or vision; the ochegong of the Ojibwas; the ani-ma-yawen of the Ararancans; the huarque or 'double' of the Peruvians, literally 'brother of a brother,' but also applied to twins, and significantly, to a friend. The Peruvians, moreover, gave this name to the false heads placed upon the mummies to which they expected that the departed spirits would return at some future time. It is probable that the word huarque, applied to all sacred objects, referred to the spiritual counterpart, from which, according to the Peruvians, all material objects were derived. Whether accidentally or otherwise, this word is repeated in the sacred Mexican city of Teotihuacan, and in the deities Wakan and Wakanada of North American tribes, as Brinton has shown. It is possible that Thousand boys, who is the god and all things,' one of the names applied to the Supreme Cosmic Spirit, may apply to one who has mastered the relation of this double to the physical self. The Guiana tribes also assert that every human being consists of two parts—body, and soul or spirit.†

3. Methods of communication.—The Miaces, like the Natchez, Peruvians, and other tribes, kept the bodies of their dead in their houses or temples, believing that this would enable the spirits to warn them of the approach of enemies, and to advise with their priests about the affairs of the tribe. It was once usual for the young men of many tribes, at the approach of puberty, to go alone into the woods to meditate in solitude and without food, until they had visions of visiting spirits, and the like. In Peru a class of hermits dwelt alone upon the mountains, and were called to give to many things, past, present, and future. The Eskimos also had their hermits, kuwigtok, and, according to the Miaces, there are now several such hermit or 'double' temples, and walking on the mountains in the almost unexplored wilderness around Cape North, Cape Breton Island.\*
4. Folk-lore of communication. — There is a general belief amongst the Indians that if you go into the woods on a calm day and listen, you will hear the light footsteps of the spirits, and sometimes the sound of an axe. Many of the spirits inhabit trees, from which they have been expelled before the solitary traveller. The Brazilian tribes believe that they announce coming death. The Northern Lights represent to the Eskimos and other tribes the dance of the dead, and are thought to occur only when the moon is new. According to the Inca Relates that Huanacauri having been walled up in a cave by his three brothers, his spirit accompanied them thence to Cuzco, flying through the air. In some parts of Peru the natives scattered flour or maize or quinoa about the dwelling to see by the footsteps whether the spirits had been moving about. The modern Mayas mark a path from the tomb to the hut with chalk, so that the returning spirit may find its pathway thither. The Peruvians seem to have believed that all their laws were revealed to their rulers by spirits who descended from the celestial world.

5. Seances. — Pottawatomies had recognized rules for communicating with the dead. The spirits came with a sound like that of a distant strong wind sweeping through leafless trees, and intermingling with strange voices. A Zuñi rain-princess another spirit who was a woman of the same fraternity, having died in the sword-swallowing rite, her spirit troubled us so much with rapping that we placed five small coins in the corners of the room and added pinon gum or frankincense with each word thrown or rapped. The authors believed that the spirit of the person for whom the magic was done, or that the spirit of the person making the request, would gently shake the door and lay the hands on the doorpost. The Inca Relates that Huanacauri having been buried in a cave by his three brothers, his spirit accompanied them thence to Cuzco, flying through the air. In some parts of Peru the natives scattered flour or maize or quinoa about the dwelling to see by the footsteps whether the spirits had been moving about.

In some parts of Peru the natives scattered flour or maize or quinoa about the dwelling to see by the footsteps whether the spirits had been moving about.

The suggestion of hypnotism is repeated in the snake-charming of the Zuñis, whose priests claim to be able to instill their own minds into the brains of the reptiles and to learn their ways.

6. Inducing visions. — To induce visions the Peruvians used magic of the plant called either putuy or putuy or sorcerer-plant, when they wished to consult with the spirits. By means of it they were enabled to behold a thousand visions, and the forms of hovering demons. The Incas similarly used their macleddikoi or serpent-plant. Amongst the Maya the k'menes or priests were enabled by gazing into the aztun, a crystal of quartz, or other translucent material, to behold reflected therein the past, present, and future, to see what was happening to absent ones, to learn by whose witchery sickness and disaster had been caused. Scarcely a village in Yucatan was without one of these stones. The Cherokee medicine men by means of their golden, or crystals, obtained power to go to the spirit world and back. In them they beheld events anywhere at any time they wished. They also used them to call to their aid the invisible little people, who would accomplish almost anything for them, either good or evil. They would drive out the hostile spirits who caused illness or inflicted death; they would fly on errands over land and sea. One Cherokee, with every indication of good faith, informed the present writer that he possessed a crystal and could use it in all the ways stated. It must be fed by rubbing blood upon it, and if angry it would cause mischief to its owner. The Inca priests used crystals for like purposes. In Peru, though the use of crystals is not affirmed, a legend asserts that the Inca Ypanqui, while gazing into the clear depths of a spring, beheld a future event in the celestial world, who told him many wonderful things.

7. Belief in life after death. — Whether the general belief in life after death among Americans was founded on their real or

* Arriaga, July 13, 1898, p. 196.

* Cieca de Leon, pl. 1, p. 160.
supposed communion with the spirits of the dead, or micc recorded intensity of belief amongst the Calchaos and in Peru is evidenced by the Druid-like custom of whispering in the ears of the dying messages to departed friends. * Algonquin women who desired to become mothers looked to the earth which occurred in bodies about to die, in the hope that the vital principle, as it passed from the body, would enter them and fertilize their sterile wombs. The Ayuñara word malqini meaning 'mummy' is also traced to the United States is said to have been borrowed from the land for transplanting; * a young bird about to leave its nest for life elsewhere. The conventional expression amongst the Indians at the approach of death is 'My father calls me to rest with him.' Many tribes held the doctrine of re-inarnation. The Chinook says that when a man dies, his spirit passes to his son; the Th'inket, that the soul has the option of returning to life. In that case it generally enters the body of a female relative to form the soul of a coming infant. Some tribes of Southern California supposed that the dead returned to certain verdant isles in the sea while awaiting the birth of infants, whose souls they were said to possess. The Chumash, a tribe of the Pacific coast, believed in the psychosis of souls into animals. The Nootkas, Pueblos, and Mayas also believed in re-incarnation. † The Dakota medicine-men profess to tell their clients of the path which the deceased of the Dakota, who resided previously in the world as for at least half a dozen generations. Many tribes preserved the bones of their dead, believing in the resurrection of the body. ‡

8. Magic.—Parts of magic in which, however, the participation of spirits is not asserted, are reported amongst many tribes, the Mayas being especially proficient therein. See fully under art. Magic.

9. Mortuary customs.—The various tribes made use of very diverse methods of burial, including immersion in natural or artificial cavities, in or on the ground, desiccation by tight wrapping, the remains being afterwards placed in or on the earth, deposition in urns, surface burial in hollow trees or caverns, cremation, aerial sequestration in lodges or elevated platforms, and aquatic burial beneath the water or in canoes which were afterwards turned adrift. † Mummies, common in Peru, have also been found in many parts of North America, but it is still doubtful whether any artificial process of embalming was resorted to for preserving the bodies. A form of semi-aquatic burial, analogous to the Norse, was once practised by the Miamacs at the funeral of chiefs. It seems not to have been used by any other tribe on the Atlantic coast.

Food, clothing, tools, and cherished objects were generally buried with the body, and food and drink were afterwards left upon the grave, but this was the service of love seeking to provide for the material wants of the soul in the earth above. It was not worship. In Peru, as in India, even the wives and servants of the deceased, together with some of his domestic animals, were once buried with the deceased, but at the time of the conquest it had already become the general custom to substitute images of the required objects.

The Ojibwas believe that, when they partake of visible food at the grave, the spirit at the same time partakes of the food. That the Algonquins beat the walls near the grave with a stick to frighten away the lingering ghost. But this was done only by the enemies of the deceased.*

10. Nature of life after death.—The land of souls amongst the American Indians was usually located in the sky, the sky-world being regarded as the world of origins, of which the earth is but an echo or counterpart. Life in the sky-world therefore was thought to differ little from life on earth. The soul continued to pursue the same objects that it had sought during life on earth. The sky-world was a literal ideal of the northern hunter tribes, but the concept rises amongst the Mayas to a place of eternal repose under the cool unbraggade of the sacred tree, guayacan. * Certain legends seem to localize the land of souls in or near the sun, and in the Pleiades, ‡ but the sun merely represents the dwelling of the ruler of the sky-land.

11. Worship of ancestors and of the dead.—Strictly speaking, instances of true worship of ancestors or of the dead in America are rare. The dead are seldom confused with the various deities, whose attributes, with

§ Dorsey, op. cit. B. Amer. Eth., 1904, 207.
few exceptions, clearly reveal their origin in the original tradition of the tribe. The American Indians as a race are typically nature-worshippers. The sun and moon, and other celestial bodies, the seasons, the six directions, the four supposed elements, all figure prominently and lay in their mythology; but the cult of the dead, widespread though it be, is confined almost entirely to communication with the spirits of the departed. Fear is seldom an element of this cult. It usually serves merely the renewal of friendly relations with the spirits, who are regarded as leading in another world an individual life very similar to their earthly life, to which they are eventually destined to return. Supernatural knowledge of events distant in time or space is indeed attributed to the spirits, no greater perhaps than that conceded to certain living men, but these men themselves were thought to receive their knowledge from the spirits. It is a long step from such attributes to deification. Honours were paid to the dead individually, similar in degree to those due them when on earth; information was asked of them, seldom anything else; but there is no evidence that the dead were regarded as superior beings.

The chief when living remained a chief when dead, as much below the deities then as before, except for greater knowledge. In Spanish writings of a period when apostles were asserted to have fought visibly against the heathen in Peru, spirits are said to have helped the Inca Yupañqui to overcome his enemies. If this be a Peruvian tradition, it is a rare example of a native legend, which attributes to the spirits active intervention in the affairs of this world. Amongst the civilized tribes who offer elaborate petitions to their nature deities, very few are directed to the spirits. The legend of Manco Capac and Mama Oello of Peru, and the deities of the Popo Vneh, who, descending from the sky, after an active life on earth re-ascent to the sky and become stars, clearly reveal nature personification. Amongst a number of legends relating to caciques similarly translated and defiled, none which present details can be otherwise classified.

The Paraguayan and the Powhatans of Virginia are said to have worshipped the skeletons of their forefathers, but may merely have retained them to consult with the spirits which were believed in some sense to remain attached to the bodies. So the Eskimos piled up the bejewelled mummies of their ancestors.

The Eskimo upper world is ruled by the souls of the dead, including those inhabiting the celestial bodies. The moon was once men, and occasionally returned to earth. In Nayarit, the skeleton of a king received Divine honours, as did Pealeo, god of the dead in Oaxaca. But the worship of the deity who governs the dead is quite distinct from the worship of the spirits themselves. The Caribs held regular meetings to propitiate the spirits. The Californian tribes believed that some of the dead became stars, the Iroquois that the stars had all been mortals, or favoured animals, and birds, but the sun and moon were not among them. In Peru, the malquis, or mummies, were petitioned to grant food, health, and life. According to Acosta, each ruling Inca after death was regarded as a god, and had his individuals sacrifices, statues, etc. Each month the coast people sacrificed children and anointed the tombs with their blood.

The Chibchas and Guatemalan tribes buried a corpse in the forest officially, in the belief that it might be protected by the spirit. The Mexicans called their dead teotl, meaning 'divinity.' Some asserted that their gods had been at first mere men, who had been deified either because of their rank, or on a notable thing they had done. They set up in their temples statues of their victorious generals.

12. Festival of the dead.—In many parts of America there is now a semi-annual festival in honour of the dead who, at this time, as in China, Japan, and many other countries, were believed to return to earth over the Milky Way to participate invisibly in the ceremonies. In Peru the Aymarares, or Carrying of the Corpse, festival was celebrated annually for three days at the time of our Halloween, All Saints', and All Souls'. The supposed coincidence in time is but one of many similar analogies in the Peruvian ritual that are associated with ceremonies which have reached us from pre-historic times. During this festival the bodies of the deceased rulers of the Incas, with those of their principal wives or coyes, were brought in new jars to the sacred city of Cuzco, after which food and drink were offered to it with all the honours due in life, in the belief that at this time the spirit did indeed return to the body, and reside therein during the time of the festival. The procession preceded on earth the passage of the sun through the zodiacal sign of the Mummy (Scorpio). At the same time fruits and flowers were placed upon all graves to refresh the returning spirits. The festival is also associated with the imparting of celestial wisdom.

The basis of this ritual, however, seems to have been rejoining over the temporary renewal of intercourse with departed friends and relatives, and its object to welcome and please them with respect and courtesy. The element of worship of the dead as superior beings or the offering of prayers to them for aid is not prominent. The Mexicans held festivals in honour of the dead in August and November, when the souls hovered over and smelt of the food set out for them, sucking out its nutritive quality. The Maya, Mixtecs, Pueblos, and Eskimos held similar rites in the spring and autumn. The Harons believed that the souls of the dead remained near to the bodies until the feast of the dead was celebrated. They then became free, and at once departed for the land of spirits. ** The Chibchas and Pervians repeated the curious Egyptian custom of introducing a mummy in the midst of a revel to suggest to the feasters the omnipresence of death. 

13. Demons.—The religion of the American Indians is not dualistic; good and evil alike are attributed to the Great Spirit. But the conflict, so far as it is recognized, depends upon physical and mental, and not upon moral qualities. No instance can be found in aboriginal America of a contest between a supreme good and a supreme evil.
ANCIENT-WORSHIP (Babylonian)

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Babylonian).—It is at the onset necessary to inquire how far the Babylonian beliefs and practices of the cult of the ancestors and of the cult of the dead, and pointing to a form or forms of ancestor-worship, were in their origin Semitic. The answer depends on the attitude one takes towards the Semero-Akkadian problem. The majority of Assyriologists, believing as they do in the existence of a distinctly pre-Semitic Semero-Akkadian culture and language, naturally hold that the cult connected with the spirits of the departed, which was allowed to flourish by the side of the Babylonian State religion (or rather religions) was in its essence, very largely, if not entirely, a popular survival of an ancient non-Semitic form of animism, and Sayce goes so far as to say that the ideas connected with this cult were 'never really assimilated by the Semitic settlers'; whereas, according to M. de Roussy (La Religion Semirraciale en Babylone, 1902, p. 276), an entirely opposite opinion must, of course, be held by the smaller number of Assyriologists, who categorically deny the pre-Semitic civilization here referred to; and even a cautious writer like Jastrow maintains that there is no necessity 'to differentiate or to attempt to differentiate between Semite and so-called non-Semitic elements' in Babylonian and Assyrian religion (Religion of Babylonia and Assyria, 1898, p. 24).

The non-Semitic origin of the cult appears at first sight to be confirmed by the many words of a non-Semitic linguistic stock that meet us in the texts relating to it, such as Allatu (names of the underworld), and apparently also utukku and ekimmu (kinds of ghosts). But Semitic terms are by no means absent, as e.g. Allatu (name of the goddess of the underworld), Shu'dlu * (one of the names of the underworld), and, as it seems, also Arâlu (or Arâlu), which is the most common designation of Hades.

It is, furthermore, safe to assume by analogy that, even on the theory of an early pre-Semitic civilization of Babylonia, the Semites may, on entering the country, have brought with them popular ideas regarding the dead which were not dissimilar from those they found among the natives, and that the adoption of Semero-Akkadian terms (which, let it be remembered, are frequently used) does not necessarily indicate that the Semites acquired the cult and the ideas connected with it from the natives.

Besides the question of origin, many other uncertainties still obscure the problem; for there are so far not enough data for the formulation of a complete system of these ideas and customs. In the interpretation also of a number of facts one has often to rely on inference rather than actual proof. It may be assumed that fuller knowledge will be the result of further excavation and the complete decipherment of extant materials; but for the present, at least, it must suffice to systematize the information that has already been gained.

The extant data may be conveniently treated under the following three heads:—(1) dedication, (2) sacrifices and offerings to the dead, (3) necromancy. Some cognate matters, which may help to elucidate the latter, can easily be brought into connection with one or other of these three parts.

1. DEDICATION.—The only instance so far known

* On Shedu (Heb. Sh'd) see 1 Sam. 5 below.
in Babylonian mythology of mortals passing to immortality and deification without having previously died and gone down to the under world, is that of Sit-napishtin, the Babylonian Noah,* and his wife (or, according to Berossus, as reported by Alexander Polyhistor, also his daughter and his pilot†). When the deluge was over, Bel, whose wrath had been appeased by a speech of Es, bestowed divine life on the pair, and assigned to them a dwelling afar off *at the mouth of the streams." The case of the hero Gilgamesh and that of Etanna, before whose names the determinative for house is attached, both of them had first to pass through death, the common fate. Gilgamesh, as the epic bearing the name shows, endeavoured in vain to secure exemption from the fate of mortals by his visit to his ancestor **Sit-napishtin; and with regard to Etanna, it is only reasonable to assume that he was dashed to pieces when he fell from the heights of heaven with the eagle that bore him. In the case of Adapa, who, having broken the command of Shittin, defied the south-west wind, was summoned to heaven to answer the charge, deification and a place in the company of the gods of heaven would have been his share, but he had not refused to partake of the "water of life" and "the food of life which An had offered him. The ground for deification in the cases mentioned was no doubt the heroic character of the persons concerned; but the element of ancestor-worship was probably not absent, and it is in any case clear that such instances of deification cannot be dissociated from the cult connected with the departed.

Passing from legend (which may, however, be assumed to rest on some actual events) to historic times, we find the names of Dungi and Gudea (probably before the middle of the 3rd millennium B.C.) written on tablets that belong to the kingdoms immediately following their reign, with the determinative that is placed before the names of gods. Festivals were celebrated in honour of these kings, sacrifices were offered to them, and their images were placed in temples. Again, Gimil距in (about 2500 B.C., of the second dynasty of Ur, appears [like an Egyptian Pharaoh] to have been deified during his lifetime, and there was a temple at Lagash which was named after him (Jastrow, op. cit. p. 499). Did deified kings and other great personages, the sons and other descendants would both naturally and in accordance with an established rule (see § 2) take the lead, and the people generally would share in the celebrations, so that we have here instances of ancestor-worship in the strict sense of the word, and secondly in its wider, if looser, signification as homage paid to the departed kings and fathers of the people.

Some acts pointing to deification or semi-deification in later times will be mentioned in connexion with sacrifices and offerings to the dead, and it will also be seen what form the cult of the dead took among the people in general; but it is necessary to inquire whether we are able to form a clear notion of what deification meant among the ancient Babylonians. Did the deity of Sit-napishtin, that is the deity of the under world presided over by Nergal and his consort Allatu, or did they ascend to join the company of the supernatural gods? A writer like Jastrow, who strongly emphasizes the impossibility of a disembodied human spirit escaping out of the Babylonian Hades, must adopt the former alternative, notwithstanding the various allusions connected with this interpretation (as e.g., the instances of an atukku actually finding its way back to earth). The brightest view so far taken of the Babylonian doctrine bearing on this problem is that of A. J. Jeremias (op. cit. pp. 100-103, and elsewhere). With Sayce and others this writer takes the epithet 'raiser from the dead,'* given to Marduk and other deities, in its natural sense (as against the interpretation as the person destined to be born (in the sense of preventing death from overtaking the living), and attributes to the ancient Babylonian hopes of a much brighter existence than was to be had in the under world; and if this be so, there is nothing to prevent us from thinking that by their deification Gudea and others entered the luminous company of the gods of heaven instead of dwelling for ever in Hades, and that in consequence their images had bright and happy visions of the ancestors to whom they addressed worship. Confirmatory of this view is the fact that the 'water of life,' to which reference has already been made in the story of Adapa, is to be found everywhere in Hades. (The command of Ea be restored to the upper world by being sprinkled with this 'water of life' ('Descent of Ishtar,' reverse 1, 38 ff.), why not also departed mortals who were destined for deification? The truth, however, seems to be that we have here to deal with different streams of belief, some tending one way and some another. But in accepting this opinion it is not necessary at the same time to agree with Chabot, who assigns the doctrine of Hades to the Sumerians, and the superlative deification to the Semites, for it may well be that there were different streams of tradition among the Semites themselves. Development within the Semitic field is, of course, also an important factor to consider.

2. Sacrifices and offerings to the dead.—Mention has already been made of sacrifices offered to deified kings in early Babylonian history, and of festivals celebrated in their honour. The famous Stele of Vultures, which records the victories of Eannatum, or Eannatu, an ancient king of the city of Lagash, excavated in the S. of Sipparia, shows that the king, together with the corpses of departed warriors laid in rows, whilst their surviving comrades are represented with baskets on their heads, which are generally understood to have contained funeral offerings for the dead. The fallen enemies, on the other hand, are refused burial, their remains being the food of struggling vultures (on the terrible meaning of this treatment, see below). An ancient bronze tablet, which represents a funeral scene, apparently watched over from the top by Nergal, and showing below the goddess Allatu in her bark, exhibits the dead person lying on a bier, attended by priests in fish-like garments, with a stand for burning incense not far from the head of the hier. * On Ch. 12 § 25 ('He bringeth down to Sheol and bringeth up').† Probably before B.C. 4000 (see L. W. King, Bab. Religion, p. 45). 1 The interpretation of the scene is, however, uncertain. The baskets may have contained more earth for the mound raised over the corpses. Jastrow (op. cit. p. 690) states that the Stele shows animal sacrifices being offered to the dead, and Maspero (in the (Dawn of Civilization, p. 607) says that the sovereign desires to kill with his own hands "one of the fallen enemies" in honour of the dead. Fragments of the Stele were first made known by de Sarzee, Diesmutations, plate 1, and by Chabot, plates 3 and 4. For other representations of the god Nergal, see Athanasius Tischler's Die Akkadischen Inschriften, p. 50. 2 See Jastrow, op. cit. p. 679; Maspero, op. cit. p. 690ff.; L. W. King, op. cit. pp. 81ff. The example cited is not unique, however; the tablet is also a matter of dispute, but there is no doubt about the burning of incense. The fish-like garments of the departed ancestors or priests have been generally taken to have some reference to the god Ea in his character as lord of the deep. This and the other bronze plates of the same class are supposed to have served as votive tablets in the graves of the dead.

the monuments of later Babylonian and Assyrian kings we do not find any representation of burial ceremonies' (L. W. King, op. cit. p. 48), but from a broken inscription of one of the later Assyrian kings we learn that the king placed vessels of gold and silver in the grave as dedicatory offerings' to his departed father (ib. p. 49). Ashurbanipal (king of Assyria, b.c. 689-661), in one of his funeral speeches, ushers in the tombs of his ancestors with rent garments, pouring out a libation in memory of the dead, and addressing a prayer to them (see, e.g., Jastrow, op. cit. p. 606).

It is necessary, however, to distinguish carefully between sacrifices in the proper sense of the word and offerings of various kinds made to the dead by way of providing for their proper maintenance in the other world. The former point to a form of popular and actual worship (though probably in most cases of a secondary kind), whilst the latter, which, roughly speaking, belong to the distinctly popular element of the cult, are generally understood to have had a religious signification, and were offered for the departed among the underlying motives, and some of the details to be mentioned presently would seem to support this view; but it is true that the motive of fear was exceedingly strong. The departed human spirit was best known by the dreaded name ekimmu. The difference between it and stukku cannot be accurately stated. It seems, however, that stukku was a general name for demon, for we hear of the stukku 'of the field,' 'of the sea,' etc., whilst ekimmu was (or became) the proper name for a departed human spirit. Sayce (op. cit. p. 284) would limit the meaning of ekimmu to the spirit of an unburied corpse over whose unaccompanied remains the funeral rites had never been performed; but R. C. Thompson (The Devils and Evil Spirits of Babylonia, i. p. xxvii. ff.) has shown that the name was also applied to ghosts who, though properly buried, had no one to provide them with the necessary sustenance in the under world, so that they would be forced to return to the earth in order to seek for themselves some sort of maintenance among their former living relations. Of these, therefore, the ghost would even enter the body of a living man, tormenting him until it should be exorcised by a priest. In order to guard against these dangers to the living, it was necessary, first of all, to perform the funeral rites, by means of which the human spirit was enabled to reach its destination in the realms of Aralš; and it was, secondly, required of the relatives, and more particularly of the eldest son and direct descendants of the deceased, to make provision for their proper maintenance in a region where, apart from the sustenance provided for them by their friends on earth, 'dust is their necessary sustenance—dust, that is to say, over gate and bolt dust is scattered' (opening part of the 'Descent of Ishtar'). Offers of this kind would, however, naturally assume a propitiatory character of a more or less definite kind, and a sufficiently close affinity with sacrifices proper would be the result.

The provision thus made for the departed differed, of course, in accordance with their condition during their life on earth, and was, besides, dependent on the means possessed by their living relatives. The occupant of the smaller chambers of burial was content to have with him his linen garments, his ornaments, some gold arrowheads, and vessels containing burnt incense; whilst others were provided with furniture, which, though not as complete as that found in Egyptian sepulchres, must have ministered to all the needs of the spirit' (Maspero, op. cit. p. 680). Special requirements were also thought of. Thus, 'beside the body of a woman or young girl was arranged an abundance of earthen vessels, bottles, combs, cosmetic pencils, and cakes of the black paste with which they were accustomed to paint the eyebrows and the edges of the eyelids' (Maspero, ib. cit. p. 681). The devout Assyrians and Babylonians, and we may assume that these were placed in the tombs of children' (Jastrow, op. cit. p. 598). Food and drink were, of course, the main requirements, and these all-important offerings were made to the dead not only at the time of burial, but also afterwards by surviving relatives; and the entrances to tombs that have been found (Peters, Nippur, ii. 173, and elsewhere) may be explained as an arrangement made for renewing these and other offerings. The son performed the office of pouring out water in memory of his father. The water-jar is indeed 'never absent in the old Babylonian tombs, and by the side of the jar the bowl of clay or bronze vessels was often placed, and the other objects placed at the disposal of the dead are the vases which the owners carried about in their lifetime, and the seal-cylinders which persons of position were in the habit of using. How far the customary waiting for the dead, not only immediately after their departure, but also subsequently, included terms of homage and adoration, cannot be stated with any certainty; but it appears that when the Festival of Tabumuz was selected as a kind of 'All Souls' Day,' and some degree of adoration of the dead may have been combined with the ceremonies connected with the homage paid to the annually reviving god.

The grim side of this cycle of ideas is seen in the treatment of the corpses of enemies. By dragging the dead bodies out of their graves, mutilating their remains, and other indignities, their shades were deprived of their comfort and their rest, and their living relatives became at the same time exposed to the terrible molestation of the prowling and suffering ghosts. This explains the violence done to the remains of fallen enemies, as represented on the cylinder of Nebuchadnezzar. In later times, Ashurbanipal expressly states that by destroying the graves of Elamite kings and dragging their bodies to Assyria he had made sure that no food should be prepared for them, and no sacrifices offered in their honour (see e.g. Jastrow, op. cit. p. 602; L. W. King, op. cit. p. 44). Similar revenge upon his enemies was taken by Semach erab. 3. Necromancy.—Necromancy, which is an essential part of the cult of the dead, and which must also have been connected with the presentation of offerings to the shades consulted, undoubtedly held a prominent place among the magico-religious practices of the Babylonians. 'A series of mythological texts shows that scenes such as that between Saul and the witch of Endor were familiar to Babylonian fancy also. Among the lists of the various orders of priests we find the offices of 'exorcist of the spirits of the dead,' the priest "who raises the Spirit of the dead," and the Shal'lu, the "inquirer of the dead," * (A. Jeremias, Bab. Conception of Heaven and Hell, p. 28). And the chieftain of the Pan Media, who is described here that in Ezek 21:26 (Eng. 21) Nebuchadnezzar is represented as inquiring of the Teraphim, which some writers regard as images of ancestors, and who on the other hand is called [2 s of the 'Hebrews' article]...
has been urged by Jastrow (op. cit. p. 539) and others, that the name Shu\'\u2019al (Heb. She\'ol) itself proves that inquiry of the dead was inseparable from the very notion of the under world thus designated, by no means conclusive. For the root sh\'al (שאול) may be connected with shakal (שואל), thus giving to Shu\'al the meaning of hollowed out place rather than that of place of inquiry (see Zef. Heb. Lex. s.v.).

The ancient element of ancestor-worship formed, more or less distinctly, part of Babylonian religious observances. As regards dedication of deceased ancestors, sacrifices in the proper sense of the word and built in tombs held in high veneration, as the dead, are mentioned. It may be said, as was to be expected, relatives to the ruling families only. It may, by analogy with the religious development of other races, be assumed that ancestor-worship and the cult of the dead were more prevalent in prehistoric times than later on. But whether this cult was in very ancient times the only or even the chief religious worship of the Babylonians—whether Semitians or Semites, or a combination of both—is quite a question. It surely is not improbable that it was but one among a variety of cults, and that the various mumina loci, the heavenly bodies, the storm, the lightning, and other powers of nature played at least as great a part in the Babylonian religion as the worship of the dead. There is at any rate nothing in the Babylonian cult to confirm the theory of Herbert Spencer, that ancestor-worship was the sole original worship of humanity, and that animism in its wider sense was developed out of it.

LITERATURE.—The principal literature used has been frequently quoted. The part relating to the subject in the German edition of Jastrow's Religion of Babylonia and Assyria has not come to hand when the article was written. The bibliography at the end of that edition will no doubt be the fullest. In the quotations from the 'Descent of Ishtar' and Epic of Gilgamesh,' J. Ebers (Schrader's EB vi) has been followed.

G. MARGOLIOUTH.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Celtic).—The meagre data preserved concerning the Celtic religious contain little evidence to show that the worship of ancestors prevailed in Gaul or the British Isles. The general existence of the cult throughout the Teutonic and Germanic peoples (see Schrader, Reallexikon der indogermanischen Alterthumskunde, Strassburg, 1901, pp. 21-33), however, renders it practically certain that the cult existed in Gaul. Prisse's "place of decision" (Entscheidungsort), but the synonym Mela-abdi which he quotes may itself be a mere guess of Babylonian etymology.

The Celts, like the kindred stocks, worshipped their ancestors. The Druids are known to have taught not only immortality but also metempsychosis (Cassar, de Belo Gallico, vi. 14; Lucain, Pharamaia, iii. 454-455). The only way sanction the hypothesis of ancestor-worship are Cassar, de Belo Gallico, vi. 19, and Pompousius Mela, Choreographia, iii. 19. The former author states, "in keeping with the cult of the Gauls, tombs are common and sunken, and they cast upon the pyre all that they suppose pleasing to the living; even animals and, a short time ago, slaves and dependants who were evidently especially dear to them, were burned with them after the funeral rites had been duly performed." Pompousius adds that, in consequence of the Gallic belief in immortality, "they burn and bury with the dead things proper for the living," and says that the human victims who were burned were either messengers (like the slaves killed to carry tidings to a deceased king in Dahomey) or faithful retainers who desired to continue life in the future with their patrons. It is questionable, however, whether all this can be construed as ancestor-worship in the strict sense of the term.

LOUIS H. GRAY.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Egyptian).—A. Ancestor-worship.—Of a developed ancestor-worship, like that of the Far East, there is in Egyptian religion little trace. Their knowledge of their long history disposed the Egyptians to revere the memory of their ancestors (epu-dnwn), and we often hear the 'time of the ancestors' referred to with respect: such-and-such a temple was rebuilt 'as it had been in the time of the ancestors'; so wonderful a thing had never happened 'as it had been in the time of the ancestors' and so forth. The kings naturally regarded their predecessors in the royal line with respect, and are depicted making offerings to their names, as at Abydos, where Seti I. and his son, the Prince Rameses II. (afterwards Rameses III.), offer incense before the two long rows of cartouches, each of which contains the name of a king whom Seti considered worthy of special honour. Incense is being offered much as it might have been offered before Japanese shrines. But Egyptian ancestor-worship went little farther than this. The ordinary person did not specially venerate the names of his ancestors. He often commemorated them, but never as gods, except in so far that the dead man was a god who, in life, he became Osiris." But as a proof of his loyalty to the reigning dynasty, he venerated the ancient royal names which his king delighted to honour: at Sakkâra we find a private person, Tunur, offering to a series of kings' names, which is almost identical with that revered by Seti I. at Abydos. Such lists were purely commemorative. Seti I. did not regard his ancestors as gods because they were his ancestors, but because, as kings of Egypt, they had been gods; every king during his life was the 'good god;' as the successor and representative on earth of the sky-god Horus, the oldest ruler of Egypt. After death, the ancient kings were gods for the same reason. He would never have represented himself offering to the thot of his own ancestors as gods, because they never had been gods, nor did he regard them as gods except in so far as each was an Osiris.

Osiris-worship was not ancestor-worship. It is not probable that the Egyptians regarded even Osiris, the great god of the dead, worshiped as a sort of original ancestor of the race, in spite of the belief that he had once reigned over Egypt as king. This Euhemeristic view is probably late, and essentially local origin, probably at Buto or in the Delta (see below).

The ancient Egyptians had feared the
magical power of the dead man, and had regarded him as a deity; every dead man was Osiris. So they worshipped him as Osiris and in the form of the god of the dead; not under his own name or in the name of ancestors as gods under their own names and in their own shapes ever grew up in Egypt. To venerate one's ancestors as Osirises was a very different thing from regarding them as gods. Thus no real family of ancestors demand the mention of mother and father, perhaps of grand-parents, on one's gravestone; the son could put up a stele in memory of his parents as making their names to live upon earth. But so also could a brother make the name of his brother or sister to live. No worship is implied.

Religious duty demanded the proper observance of certain ceremonies at the tomb. The name of the 'servant of the ghost' (hen-la), but these were not intended as worship of the ghost; they were meant to ensure his happy transit through all the terrors of the underworld and the final reunion of the parts of his body and soul, the celestial boat of the sun-god. The religious texts inscribed upon the walls of the tombs had a similar significance. They are all magical spells designed to keep the dead man safe from the terrors of the netherworld, wandering; and to enable him, by means of formulæ asserting his divine dignity, to win his way past all opposition to his position as a god and the equal of the gods. But no prayers are addressed to him as a god; and if they were, they would only be addressed to him as the god Osiris, not as an ancestor-god protecting his family and tribe. Of this conception we find no trace in Egyptian religion except the position assigned to Horus, who, like his father Osiris, had reigned in Egypt, and was the predecessor, if not the progenitor, of its kings. But here again, as in the case of Osiris, the kings venerated their ancestor Horus, not because he was their ancestor and the founder of the monarchy, but because he was himself one of the great gods, and was also implicitly divine because he had been a king.

Thus it would appear that the deification of every dead man, or rather his identification with one particular deity, allowed no room for ancestor-worship, in the true sense, in Egyptian religion. Not a single case is recorded here and there in local beliefs, but in the main scheme of the national religion it had no place.

B. Cult of the dead.—As has been shown above, the deification of every dead man as himself the god Osiris resulted in the absence of any regular form of ancestor-worship in Egypt. The dead man was venerated as Osiris, not as an ancestor. Originally, however, this 'Osiran' doctrine was not common to the whole of Egypt. It seems to have originated at Dedi or Busiris, 'Osiris' town,' the modern Abusir near Saqqâra, in the Delta. Here Osiris, far back in the primitive period, must have been simply the protector-god of the local necropolis, as the god Ptah-Seker, or Sokar, was the protector of the necropolis of Memphis, and Anubis, the jackal (confused at a very early period with Upra, 'Opener of the Ways,' the way of the dead) was the protector of the necropolis of Abydos. Anubis of Abydos was also identified with a shadowy deity, Khentamentiu, 'the Chief of the Westerners,' the latter being the dead, who was found on the west bank of the Nile. Whether there was any idea among the primitive Egyptians that the Libyans of the western oases, who sometimes came within their ken, were the spirits of their dead in the West, and that the ruler of the dead was their chief, we cannot tell; but it seems probable that it was so. Khentamentiu, however, is never pictured, so we cannot tell what he was supposed to be like; he had already become identified with the jackal Anubs before the dawn of history.

While, however, the jackal of the necropolis of Abydos was regarded as a jackal, because the jackal had his abode among the tombs and prowled around them at night, so that the childlike mind of the primitive Egyptian, in fear of him as the ravager of the graveyard, easily came to venerate him, and to desire to placate him by worship as its protector, the Memphite and Busirite gods of the dead were conceived as dead men; in the northern view, the dead kings. The Busirite and Memphite deities, Osiris and Ptah, were closely related. Both were represented as human mummies, the first carrying the whip and flail, emblems of sovereignty, and the second the symbols of power, stability, and life. If the legend of the foundation of Memphis at the beginning of the First Dynasty has a historical basis, it may be that the resemblance of the form of Ptah to that of Osiris is due simply to the fact that the worship of Busiris had penetrated so far southward at that time that, when the necropolis of Memphis was constituted, its protective deity was given a shape differing but little from that of Osiris. However this may be, it seems very soon to have come to be regarded as...
Busiris degenerated into comparative unimportance. The only real rival of Abydos as the headquarters of Osiris was the northern city of Mendes, in the Delta, only a few miles east of Busiris, where the Lord had set up a sanctuary, identified with the local animal-deity, a goat, who was called 'Soul of the Lord of Dedu,' Bi-neb-deb, afterwards pronounced Bindi, Mindu, whence Mendes and the modern Mendil, Anmide. It is possible, however, that the goat of Mendes was originally a god of the dead or not; probably he was not. The 'Lord of Dedu,' whose 'soul' he was called, is, of course, Osiris, lord of Busiris. This title of Neb-Dedet was recognized throughout Egypt as one of the chief titles of Osiris, and on the stele at Abydos it is always accorded to him side by side with the old appellation of the Abydene Anubis, Khentamentiu.

With the worship of Osiris went the peculiar doctrines associated with his cult: the belief in resurrection, in the springing of life out of death, which made him a deity of renewed life as well as of death, and so identified with the green corn-bearing Nile land as opposed to the waste deserts of his brother Set; and, most important of all, the peculiar doctrine of the identification of every dead man with the god, which became at a very early date in Egypt the basis of Osiris, to believe with regard to the dead. This Busiritie dogma was held even under the Old Kingdom by every Egyptian, and we may find its credo in this regard in the well-known suten-at-hetep formula of prayer for the welfare of the dead man, which appears on every sarcophagus, and on every stele or gravestone, and in which the god, whether Anubis 'on the Serpent-Mountain, Lord of Sepa,' or offering, as Amen-Rê or Hathor in the Theban necropolis over which they ruled, or Geb the god of the earth and the Circle of the Nine Gods, the dead man is still Osiris; he is not identified with Amen, Ra, or Hathor, although some texts tell that he is Osiris who is not always mentioned. On the ushabtis (see Death and the Disposal of the Dead [Egyptian]) he is always called Osiris, and in later times we find the formula definitely phrased thus: 'May Osiris . . . give a king's offering . . . to Osiris N.' Osiris is asked to give an offering such as a king would give to himself, for every dead man was himself. The dead man was venerated, therefore, not as the dead N, a god because he was a dead ancestor, but as being one with Osiris. In this sense he was worshipped, and only in this sense may the Egyptians he said to have possessed a cult of the dead. Their cult of the dead was a cult of Osiris, and it was to Osiris that the hen-ka, or 'servant of the ghost' (usually a near relative of the deceased), made the offerings at the tomb, 'seeking to do honour to those there' (a polite periphrasis for the dead). These offerings consist, in the words of the very interesting inscription on the stele put up by King Ashmes to the memory of his grandmother, Queen Tebi, 'in the pouring of water, the offering upon the altar, and bark throughout the day of the New Moon, at the feast of the month, the feast of the goings forth of the Sem-priest, the Ceremonies of the Offering, the Kings' Offering, on the 25th day of the Month, and of the Sixth, the Hâk-festival, the Usog-festival, the feast of Thoth, the beginning of every season of heaven and of earth.'

Originally, of course, these honours (see Death and the Disposal of the Dead [Egyptian]) were paid to the ka, the double, of the deceased, which was supposed to reside in the tomb, and, had it not been for the universal adoption of the Osirian doctrine, they would undoubtedly have developed into a regular form of ancestor-worship, the ka of each person 'the being worshipped as a god.' We may perhaps even say that before the general adoption of the Osirian doctrine, the southern Egyptians did worship the ka of the dead, or even the sahûs (see Death, etc.). We do not know how ancient the beliefs in the other spiritual parts of the dead man, the ba, or soul proper, and the khâ, or intelligence, are. In any case, these other spiritual portions of the man never were specially venerated. They required no sustenance, therefore no offerings were made to them, such as were made to the ka. These offerings were made by the members of the family of the deceased persons, whose names were commemorated on stele, together with those of their living descendants who make their name to live upon earth (saank remen ten tep ka). Several generations of the dead are often thus 'called to live' in Egyptian, and of the believer, etc. [Egyptian]). The Egyptian 'cult of the dead' amounted to no more than this.

The worship of the supreme god of the dead, Osiris himself as apart from the offerings made to the individual Osiris, the dead, was carried on in the usual manner. He had two great temples, at Abydos and Busiris, which disputed the possession of his most holy relic, supposed to be his actual body, and Osiris who was supposed to be buried in a tomb which, by a misunderstanding of a hieroglyph, was identified with the tomb of the early monarch Tjer, the sign of his name being misread as Khent, 'chief,' and so identified with 'Khentamentiu.' He was worshiped also as the ram at Mendes, and as the bull Apis and in the Kabiric form at Memphis. The temple at Abydos was originally not his. In its latest strata we find that his predecessor Anubis is the sole deity mentioned. Later on, as we have seen, Anubis and his 'brother' Upauat, the wolf of Sûtt (the 'Mak-edon') of Delta, identified with his 'sons' and attendants. The wolf was originally not a god of the dead or of Abydos at all, but was a war-god, of whom the wolf was a good symbol, as the 'opener of the ways' to the pack. But the kinship of the wolf to the jackal soon caused Upauat to be regarded also as a fellow-protector of the tombs with Anubis at Abydos, and in later times he is exclusively a god of the dead, the double of Osiris, Isis and Sethkhet, with the child Horus, naturally accompanied Osiris from the Delta, where they also had their origin. But they did not come much forward till a comparatively late period, when the triad Osiris, Isis, and Harppocrates (Anubis) composed the principal Divinities of Amen, Mut, and Khensu, which had become somewhat discredited everywhere except at Thebes after the end of the Theban domination. During that period these gods had but the position of king of the dead to that of merely their judge; his kingly functions were usurped by Amen-Râ, the Theban 'king of the gods,' who during the night was supposed to pass over the river superior of the living also as the god of Egypt, and the whole set
of myths connected with his name and those of Isis and Horus became the most important part of Egyptian religious belief. It was natural that this should be so, when the religious and political gravity had hitherto attached to the Delta, the original home of the Osirian religion. Later the Memphite sacred bull Apis, originally the animal of Pthus, but, on account of the confusion of the city-god with Socharis, was also called Osiris. Of the hymns of Osiris, very much to the front, and the Ptolemaic Egyptians evolved a Graeco-Egyptian counterpart of his, though they never disused the original animal cult. Finally, in the Roman period, Sarapis becomes identified with the old Nabian god of the same name, and this god, the most disreputable of the whole Egyptian pantheon, is personated on the walls of ancient Abydos as the successor of Osiris, of Anubis, and of the primeval Khentamentum.

**ANCESTOR-WORSHIP (Fijian):** The Fijian divinities fall naturally into two divisions—the kalou-vu ('Root gods') and the kalou-apisi ('Spirit gods'), i.e. deities of the dead. There is much truth in Waterhouse's suggestion that the kalou-vu were of Polynesian origin, carried into Fiji by immigrants from the east and imposed upon the conquered Melanesian tribes in addition to their own pantheon of deified ancestors; and that Ndengei, who was undoubtedly a Melanesian ancestor, was adopted by the immigrants, as the Etruscan gods were by the Romans. The Fijian's belief in his own tribal divinity did not entail denial of the gods of other tribes. To the Hebrew prophets the cult of Baal-peor was not so much a false as an impious creed. In giving their allegiance to the chiefs who conquered them, it did not mean that the Fijians should yield the supremacy of their conquerors' gods, who, by giving the victory to their adherents, had proved themselves to be the more powerful. Waima, the great god of the Tonga chief, was, according to the Tongans, a deity connected with Tonga; and his priest, when inspired, gave his answers in the Tongan language. The Rewans had given the chief place in their pantheon to the god of mere visitors.

First among the kalou-va was Ndengei, primarily a god of Rakiraki on the north coast of Viti Levu, but known throughout Fiji except in the eastern islands of the Lau group. This god, evolving from the ancestor and tutelary deity of a joint family into a symbol of Creation and Eternity in serpent form, is a counterpart of Jupiter, the god of a Latin tribe, inflamed with Etruscan and Greek myth until he overshadowed the ancient world as Jupiter Optimus Maximus. Ndengei and the pen songs associated with him are proved by the earliest myths of their home on the Ra coast to have been mortals deified as the first immigrants and founders of the race. If the Polynesian gods were originally deified ancestors, their dedication took place at a period so remote that their descend ants cannot be identified.

One of the gods of paramount importance to the Melanesian system of government. The Fijian's conception of human authority was based upon his religion. Patriarchy, if not the oldest, is certainly the most natural shape into which the religious instinct of a primitive man would crystallize. First there was the family—and the Pacific islands were probably inhabited by single or small families by the father, with his store of traditions brought from the land from which he came. His sons, knowing no laws but those which he had taught them, planting their crops according to his direction, his common sense under his direction, bringing their disputes to him for judgment, came to trust him for guidance in every detail of their lives. Suddenly he left them. They could not believe that he, whose anger they had feared but yesterday, had vanished like the flame of yesterday's fire. His spirit had left his body; yet somewhere it must still be watching in the life he had threatened them with punishment for disobedience, and, even now, when they did the things of which he disapproved, punishment was sure to follow—the crops failed; a hurricane unroofed the hut; floods swept away the canoes. If an enemy prevailed against them, it was because they had neglected his words and he was rewarding their pietcy.

In this natural creed was the germ of government. Each son of the dead father founded his own family, but so long as an ancestor, generally the eldest son—in whom dwelt a portion of the father's godhead—generations came and went; and the tribe increased from tens to hundreds, but still the eldest son of the eldest, who carried in his veins the purest blood of the ancestor, was venerated almost like a god. The ancestor was now regarded as a Kalou-va, and had his temple and his priests, who became a hereditary caste, with the strong motive of self-interest for keeping his memory green. Priest and chief tacitly agreed to give one another mutual support, the one by threatening divine punishment for disobedience, the other by insisting upon regular offerings to the temple.

That the cult of a common ancestor persisted for many generations is shown by the custom of toaue, which means literally 'sprung from the same root,' i.e. of a common origin. It is applied to two or more tribes who may live in different islands, speak different dialects, and have nothing in common but their god. They do not necessarily intermarry; they may have held no intercourse for generations; yet each may have forgotten the name of its chief's five generations back, the site of its ancient home, and the traditions of its migrations; and yet it never forgets the tribe with which it is connected. Toaue. Members of a tribe from a remote village, slaughter its pigs, and ravage its plantations, while it sits smiling by, for the spoilers are its brothers, worshippers of a common ancestor, and are therefore entitled in the fullest sense to the 'freedom of the city.' Sometimes the bond can be traced back to its origin, the marriage of the daughter of a high chief with the head of a distant clan. Her rank was so transcendent that she brought into her husband's family a measure of the godhead of her ancestors, and her descend ants have thenceforth revered her forefathers in preference to those of her husband. Generally the bond is so remote that the common ancestor is known by the name of an animal or of a natural object, and the fact that his worshippers may not eat the animal suggests a trace of totemism of a bygone age. In such cases a young band from an overcrowded island may have crossed the water to seek wider planting lands.

Among the Viti Levu tribes of Melanesian origin there was a peculiar ancestral cult known as the mboali or maubali, turned to a small crop of the first-fruits and initiation. The rites were held in rectangular stone enclosures, called nanga ('bed,' i.e. of the ancestors). These were built close to
the graves of dead chiefs, who were invoked to shower blessings on the tribe in ceremonies which degenerated into orgies of a sexual character. The rites were said to have been introduced by two old men who were found washed up on the sea-shore—strangers cast up by the sea, for they could not speak a word of Fijian. The initiated were sworn to secrecy, and the peculiarity of the rites was that initiated members of the tribe, with the exception of the headman, supposed to be at war might attend the rites unharmed, and invoke the aid of spirits from whom they were not themselves descended.

The Fijians had a well-peopled mythology of the after life. The spirits of the dead had neither temples nor priests, for, as they left the living unmolested, the living were not called upon to make propitiatory sacrifices to them. They were kept alive by the professional story-tellers, who revived them after funerals, when men's thoughts were directed to the mystery of death. In a land where every stranger is an enemy, the idea of the next world, turned out friends and the temptation to find his own way to Bulotu, conjured up images of the perils that beset the lone wayfarer on earth, and the shade was made to run the gauntlett of fiends that were the incarnations of such perils. This is the state of human affairs when, in outline, the details are filled in by each tribe to suit its geographical position. There was generally water to cross, and a ghostly ferryman who treated his passengers with scant courtesy. There was a ghost-scatterer who stoned the shade, and Reed-spear who impaled him. Goddesses of frightful aspect peered at him and gnashed their teeth; Ravuravu, the god of murder, fell upon him; the Disir to the dawning of Nekedor from the trance-smitten; fisher-fiends entangled cowards in their net; at every turn of the Long Road there was some malevolent being to put the shade to the ordeal; so that none but brave warriors had died a violent death—the only sure passage to Bulotu—passed through unsathed. The shades of all Viti Levu and the contiguous islands and of a large part of Vanan Levu took the nearest road, either to the dwelling of Nekedor from the trance-smitten, or of whom they had told him, where the air was warmer, the yams larger, and the soil more fruitful, was the goal of their spirits after death.

When a chief died, his body was washed and shrouded in bark-clot. A whale's tooth was laid on his breast to throw at the ghostly pandanus tree. If he lit the mark, he sat down to wait for his wife, who he now knew would be strangled to his manes; but if he missed, he went forward weeping, for it proved that she had been unfaithful to him in life. His tomb became his shrine. A roof was carefully lashed to protect him from the sun and the rain. Kava roots and cooked food were laid upon it, that his spirit might feed upon their spiritual essence. And with each presentation, prayers for his protection were repeated. In the own of the white chief of the temple the bones are later forgotten, and in times of prosperity the grass began to grow rank even over the bones of a doughty and masterful chief, but at the first breath of adversity his tomb was carefully weeded, and the ofiho became singular. Some member of the priestly family would then become possessed by his spirit, and would speak oracles in a high falsetto. The process of evolution from the tomb to the temple would now be complete.

The peculiarity of ancestor-worship in Fiji is that men worshipped not their own, but their chief's ancestors, to whom they themselves might have but a slender blood relationship.

BASIL THOMSON.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Hebrew).—The latest portion of the Hebrew Canon are, roughly speaking, contemporary with the earlier Jewish apocryphal writings; but it will for the present purpose be convenient to consider all the canonical writings of the OT under the title 'Hebrew', and to reserve the data found in the OT apocrypha, the Talmud, and other later works for the 'Jewish' section of the subject here dealt with. Probably dated portions of later Scriptures quoted in the section will, however, usually be given.

The question of ancestor-worship among the ancient Hebrews has been much discussed in recent times, the most systematic treatise on the affirmative side so far being Friedrich Schwartz's Das Leben nach dem Tode (Giessen, 1892), which in the main follows the views previously laid down by Stade and Oort (see the literature at the end). A decisive proof that the answer is given in Der dritte kultus and die Urreligion Israels by Carl Grünseisen (Halle, 1900), who, utilizing the arguments advanced in J. Frey's Tod, Siedlungsaufbau und Israel (Leipzig, 1889), attempts to establish his thesis on the grounds already given.

The Hebrew Scriptures have, thanks partly to the relation they bear to all phases of life, and partly, no doubt, also to the judgment emphatically pronounced by Jahiwism on other cults, preserved for us a far larger number of the general Semitic family, associated with mourning and cognate matters than have so far come to light in the inscriptions of Babylonia and Assyria. It is highly probable, however, that a common stock of ideas underlies both these branches of early Semitic beliefs and customs; for it is becoming more and more clear that pre-Mosaic Hebrewism was thoroughly rooted—not by borrowing, but by original affinities—in the widely spread traditions of the general Semitic family. It is a fact, however, that paragraphs of the Hebrew Scriptures have been passed over in silence by all who have not been familiar with the ancient world, but now that the study of the Semitic languages has been made easier, it is a task of minor difficulty to find in these national portions of the Bible a perfectly clear parallel to the Hebrew text. In this branch of the subject will be treated under the following heads: (1) Translation to heaven; (2) Teraphim; (3) Sacrifices and offerings to the dead; (4) Mourning customs; (6) Levirate law; (7) Laws of uncleanness; (8) Necromancy.

1. Translation to heaven.—Deification, if the term were here allowed at all, * could not possibly mean the same in the religion of Jahwesch as in the polytheistic Babylonian religion; and yet it seems impossible to resist the conclusion that the translation of Enoch recorded in Gn 5:24, originally belonged to the same class of beliefs as the transference of the Babylonian Sit-napishtin to the society of the gods. It has already been remarked (see § 8 of 'Babylonian, art. above) that Sit-napishtin is in reality a combination of the Biblical Nehun and Enoch. Probably, though, Noah and Enoch represent a splitting up of this original personality of Sit-napishtin. However this may be, Enoch, like Sit-napishtin, was spared the common fate of mortals; and the legitimate meaning of the phrase 'Elohim took him' is that he was transferred to a condition of close association with the Deity; and, if it be judged right, the more ancient portions of the Hebrew text would mean that he joined the system of order which the Hebrews would mean that he joined the system of order which the Hebrews
Ancestral-Worship (Hebrew)

445

the company of angelic beings (cherubim, seraphim, etc.), which in prophetic imagery * (see Is 6; Ezk 1 and 10) surrounded the throne of Jahweh.

Another clear instance of the translation of a mortal to the company of heavenly beings, without having lived regularly a life of ancestry, is that of Enoch, for the Israelites who passed from earth to heaven in a whirlwind (2 K 215); and a veiled example of transference to heaven immediately after death (i.e., without having previously gone down into the Sheol, see Baheth in Chronicles in transitional style (see Da'vid, 1 Enoch, xi. 6.), contained in Dt 34, where the burial of Moses is apparently stated (see Driver, in loco) to have been undertaken by Jahweh Himself. Viewed in the light afforded by the translation of Enoch and Eliphaz, it seems likely that the Midrashic statements of the high favour accorded to Moses are based on a tradition of great antiquity.

Different from the above-mentioned instances, because pointing to an antijahwistic attitude of belief in dedication or semi-dedication, is Is 66, where the supremacy of Jahweh is emphasized by the admission made to the prophet on his own behalf or on that of the nation, that 'Abraham kneweth us not, and Israel doth not acknowledge us.' The reference is that Abraham and Israel (or Jacob) were, as the departed ancestors of the race, regarded, by at any rate a portion of the nation, as the disciples of the false god, and as indebted to the condition of the people, and on whom one could call for support, for the perpetuation of the ancient worship, the expression is, in the Isaiahic passage quoted (see R. Winterbotham, 'The Cultus of Father Abraham,' in Expositor, 1896, ii. pp. 177-180).

2. Teraphim. has been connected, e.g., Schwyz, op. cit. p. 35 ff.; Charles, Exegetology, p. 21 ff.) that the Teraphim, of which peculiar frequent mention is made in the OT, were originally images of ancestors, probably to prove the correctness of this proposition. The word itself is of uncertain origin. Schwyz's suggestion that Teraphim comes from the same root as ἀραφίν (shade) fails to recommend itself on philological or other grounds. Sayce connects it with a Babylonian word terāpa (ghost). Perhaps equally admissible would be a connection with the Ethiopeic terēf (pl. terēfīt), which among other meanings signifies the name of one of the ancestral deities of the Egyptians. The plural Teraphim in the sense of excellentiae would then be analogous to that of Eholim in its original plural signification, but it would at the same time afford no elite as the name of kind excluded beings if it etymologically should be a designation of the spirit (with Michaelis) employed by Teraphim to personate David on a sick-bed; we learn that the word was in the plural form used to denote a single image (thus lending itself, like Eholim, to a plurale majestatis). The same passage shows that it bore a human form, but this fact by no means demonstrates its identity with an ancestral figure. * In Jg 17 18-21, at any rate, the Teraphim cannot denote a mere family deity but the national God (Jahweh) Himself; for the image there spoken of belonged first to an Ephrahite and then to Danites, with a Levite as ministering priest in both cases. In the Sheol the spirit of the dead was the general cult in 18). Nor does the testimony borne by 1 S 19 to the fact of the Teraphim having formed part of the usual equipment of a well-to-do family (see above, pp. 446 f.) necessarily imply a connexion with ancestory-worship; for it is quite as likely that the national God Himself was thus represented in houses of private families. Still less decisive is the consultation of Teraphim as among the procedures in the prevalent religion, as, e.g., Hos 3; or without it, as, e.g., 2 K 215; for Jahweh Himself or any other deity could thus be consulted. The Eholim before whom a Hebrew servant who wished to remain permanently in his master's service was brought, in connexion with the ceremony of having his ear pierced with an awl at his master's door (Ex 21:19), have also been regarded by a number of scholars as images of ancestors and identified with the Teraphim, as a consequence of the customary fixing of the servant's ear to his employer's door, looks, indeed, 'admission to the family cult with all its obligations and privileges,' and it is from this consideration that the idea of the (usually male) ancestral god, being here represented by Eholim, derives its strength. But even here it is to be seen that the Servant of the deity need not necessarily be an ancestor, and may, in fact (as has already been remarked), be the national God Himself. Nor is it certain that images of that kind were used for the term Eholim may bear the meaning of 'judges' (cf. Ex 22:20; 28; 1 Pet, xiv) in Eze. 16, to the Egyptian hieroglyphs (with Biblical and Rabbinical Commentaries, in loco), and the piercing of the ear may have been a symbol of obedience (for illustrations, see Daniel, p. 339). The Eholim in Ezk 215 were images of ancestors, either the Mosaic legislator must have felt no antagonism between Jahweh and this form of the ancestral cult, or the images may have been incorporated into the laws in question, having come to be regarded as representatives of Jahweh Himself. On the former assumption the customary fixing of the servant's ear at the termination of the contract (Ex 21:19) would point to a further effort made to eliminate the ancestral idea from the ceremony. On the latter supposition it is possible that the priestonomist would have been contented in discarding images generally (even of Jahweh Himself). There remain two references in the OT to Teraphim in connexion both with non-Israelites, namely, the stealing of Laban's Teraphim by Rachel recorded in Gn 31, and the consultation of Teraphim by Nebuchadnezzar mentioned in Ezk 215 (Eng. ci. 26). From the fact of such apparent common worship of Teraphim by Hebran, Aramaic, and Babylonian, the conclusion has been drawn that ancestor-worship must be meant (see Schwyz, op. cit. pp. 36, 57); for it would, as it has been argued, be difficult to suppose that a people who possessed the international character implied. Another such basis could, however, be easily imagined (any of the great powers of nature could indeed satisfy this requirement), and it is furthermore possible that the Teraphim (especially if the general meaning, excellentiae, be adopted; see above) represented different kinds of deities among different nations. In the case of Ezk 21 the case is also the possibility that the prophet merely expressed Nebuchadnezzar's manner of consulting oracle in terms of Hebraic speech, and that

* These prophetical ideas were probably grounded on much earlier notions of religious contemplation. Isaiah and Ezekiel need only have given a special Jahwistic finish to certain more or less known forms of Divine imagery. In the case of Ezekiel, the influence of his Babylonian surroundings is clearly discernible. * Charles (Exegetology, p. 55) regards the translation of Enoch and Eliphaz as a step preparatory to the higher doctrine of the soul's personal immortality. Enoch's higher belief probably existed also among the Babylonians (see A. Jeremias referred to in § 4 of Babylonian art.); the tradition regarding Enoch is, moreover, in all probability far too wide a case to fall in with Charles's theory. The truth seems to be that divinity was, for the most part, by side among both the Babylonians and the ancient Hebrews.

1. In the Mishnah referred to, as elsewhere also, the spirit of Moses was said to be descended on the strength of the intervention of the angel of death, but by a kiss of Jahweh. Incidentally it is said of Moses in the Maimonides that he had the chronicles of glory assist cherubim, seraphim, and other angelic beings. * This reference from Is 66 is, of course, independent of Ezekiel, regarding the original divinity of some of the patriarchs. * It would be too venturesome to base a theory on the root-meaning of the Ethiopeic term ἄραφιν: religion sine rei fari, so as to make it refer to the continued existence of the departed.
Teraphim in the usual OT meaning of the word were not actually used by him.

It would seem, therefore, that so far we have no clear indication as to what deity or deities the Teraphim represented. All that can be said is that they may originally have been images of ancestors, the fact of their having been (in many cases at least) household gods would be in consonance with the idea, though it cannot be adduced as a proof of its correctness.

3. Sacrifice to the dead.—As a clear reference to the offering of food to the dead Dt 26:4 may be claimed; the tithe-giver there makes the following declaration: "I have not eaten thereof in my mourning, neither have I put away thereof being unclean, nor given thereof to the dead."† Oort, Stade, Schawly, and others see in this declaration a prohibition (and therefore an evidence of the custom) of sacrificial offerings to the dead, understanding the text to mean that the tithe-giver referred to Jebus was not to be perverted to idolatrous practices connected with the worship of the dead; but the general bearing of the entire declaration suggests only the provision of sustenance for the dead, and that to the dead must therefore rest on other grounds (see further on). The fact, however, that every single tithe-giver had to make the statement in question proved that the custom of sacrificing to the dead, or of producingBehaviour towards it, was wide-spread among the people, and perhaps also in the higher grades of society.

This is one of the indications showing that the ancient Hebrews shared with their Babylonian kinsmen the belief in the continuance of the human personality after death, and in its need of sustenance in Sheol, the Hebrew equivalent of the Babylonian Šāwštē or Arúša. But whilst in Babylonia and Assyria the early customs connected with the belief were allowed to flourish by the side of the State religions, Jahwism strove with all its might to suppress them. In a measure it succeeded; but popular ideas are not easily rooted out, and the practice continued for a considerable period of time in different parts of the country. The various and partly conflicting references to the dead met with in the OT are largely to be explained by this conflict of belief with the ancient cult and the frequent recrudescence of heathen ideas in all their original force. That, however, Jahwism made substantial progress in the course of time, is shown by the number of references already quoted in the section devoted to the question of the recrudescence of heathen ideas and the · frequent recrudescence of heathen ideas in all their original force. That, however, Jahwism made substantial progress in the course of time, is shown by the number of references already quoted in the section devoted to the question of the recrudescence of heathen ideas and the frequent recrudescence of heathen ideas in all their original force.

4. Sanctity of graves.—The question concerning the veneration of graves is closely connected with that of sacrifices to the dead; for if the latter question be not answered in the affirmative, the graves of ancestors would have to be regarded as the places where the sacrificial offerings were made.

Viewed in this light, there is much in favour of the opinion that the masğebah set up by Jacob on the grave of Rachel is not only a memorial of the departed kings (see § 7), and the offering of sacrificial gifts must have formed part of such worship. The evidence from oracles (see § 8) points in the same direction, for an offering of some kind was naturally preceded the consultation of the dead. On the probable offering of hair made to the dead, see § 5; and there is, besides, the tendency to connect a propitiatory purpose with the ordinary presentation of sacrifices due to the departed; and if the analogy from the Babylonian custom be taken into account, it becomes pretty certain that among the ancient (pre-Mosaic and anti-Jahwistic) Hebrews also sacrifices to the dead were, to say the least of it, not uncommon.

The stress laid on family graves (as more especially the case of Machpelah, Gn 22:19, etc., with

A. B. Cook (loc. cit.) does not decide between the claims of this rendering and that of 'for the dead,' which might be taken to refer to funerals or to sacrifices offered to the memorials by their friends. But the phrase would hardly be natural in that sense. Among the Babylonian commentators, Abraham Abi-Shesh A. (prol. s.v. 'Avorship, see Boersma, loc. cit., p. 182) adduced an idiosyncratic Intention, introducing this explanation by 'and some say.'
which the phrase 'being gathered to one's fathers' has been connected, may legitimately be regarded as a desire to introduce the departed into the society of his ancestors' (Charles, op. cit. p. 12), but the passages relating to the custom are contained in which the texts have been handed down to us) no reference to sacrifices or offerings of any kind.

There is, however, apart from family graves, the story of Jacob's burial (Gen. 49), the practice of wearing the garments of the dead, and in lodged in the monuments (which, as an evidence of necromancy practised at graves (see § 8), demands not only the supposition that offerings were there made in order to obtain a hearing from the dead, but also that from the general idolatrous point of view such graves (declared doubly unclean by Yahwism; see § 7) were regarded as sacred. At least as strong is the evidence from Ezek 43:9. On both passages, see § 7.

5. Mourning customs.—Several of the mourning customs of ancient Israel are very obscure, and a careful scrutiny is required before anything like a decision can be arrived at on any point. It will therefore be best to consider these customs separately.

(a) The mourner put on sackcloth.—The sackcloth, with which the application of ashes or earth is sometimes mentioned, was in both ancient and modern times in all probability a loin-cloth only, the tearing and entire putting off of the usual garments having preceded the 'girding on' of it (see esp. Is 58:7). Most ancient sources also stripped and not especially, if taken in conjunction with the phrase, 'in nakedness and shame of v. 11, points to a still earlier custom, when the mourner went quite naked; but the general practice of putting on sackcloth as a substitute for all other garments was set in quite early, and considerable modifications * both in the form of the sackcloth and in the direction of putting on other apparel may have been gradually, though not universally, made in later Biblical times.

The putting on of sackcloth has been claimed as a mark of submission to a superior (cf. 1 K 20:1-7), and the fact of Isaiah having apparently worn it as his usual garment (Is 65:2) has been taken to show that it was also considered a holy garment (see Schrader, op. cit. p. 241, &c.). The other explanation point to one form or another of ancestor-worship. Jer 48:37, where the putting on of sackcloth is mentioned together with the wearing of ashes, &c., places it in the category of usages which have been claimed to possess a ritual value (see further below), and it is quite possible that the probable explanation is that of self-humiliation,1—a sentiment which would equally accommodate itself to mourners and the other races of Israel, and the other marks of grief at losing a beloved relative or companion, and which might also be the subject of which the latter allude to the use of sackcloth. The primitive entire nakedness of the mourner, to which reference has been made, reminds one of the fact that on the Stela of Vultures (see § 4 of the 'Jubilœum' art.) the dead are shown to have been buried naked; the mourner might therefore have desired not to appear at greater advantage than the mourned dead. Later on, sackcloth would be assumed by the mourner in deference to the altered public sense of decency, and the modifications referred to would gradually follow. If so, in his view he corresponds with the close association of mourning and ritual usages (Jer 49:7) may belong to later times. On the suggestion that the placing of the mourning sackcloth on the dead body was attended with the object of deceiving the dead as to the identity of the mourner, see farther on.

(b) The mourner put off his sandals.—The putting off of one's sandals in connexion with mourning is not so frequently mentioned as the girding on of sackcloth, but it was no doubt meant to accompany it regularly (see esp. Is 5:3). As the remarks above suggest, passages like Ex 3:5, Jos 5:9 show that no sandals were to be worn at sacred places. Hence the supposition that it was essentially a ritual practice. But here again the original meaning was probably self-humiliation, which would suit both the grief of mourners and the attendance at sacred places.

(c) The mourner cut off his hair, or beard, or both.—The cutting off of the hair in connexion with mourning is mentioned, e.g., in Mic 1:10 ('make bald and let it grow long for the delight'); the removal of the beard as a sign of mourning for the destruction of Jerusalem is recorded in Jer 41:4; the two together are found in Is 15:6. The cutting off of the hair or beard on these occasions consisted in making a baldness 'between the eyes' (Dt 14:4), which must mean over the middle part of the forehead (see Driver, in loco), although in different parts of the country hair from other parts of the head was probably also cut away. The beard was apparently cut off entirely.

Tylor, Oort, W. R. Smith, and others favour the idea that the haire cutting off was designed as an offering to the dead—a theory which is strongly supported by numerous analogies from the customs of the Arabs* and other races. The offering of hair in the ritual of Jahweh is clearly attested in the case of the Nazirite (Nt 6:5), and the practice would seem less strange in the ritual of the dead, who, according to old ideas, stood in need of all the things that appertained to the living.

Another plausible explanation would be that the cutting off of the hair from head and chin was a kind of adjunct to the removal of one's clothes. Everything may have been bold, was to be discarded that served as ornament or protection to the body, not only the clothes, but also the hair. The idea of self-humiliation, which might have been involved in the practice, is supported by the fact that the cutting off of the beard (see § 2 149, and the parallel passage 1 Ch 19:9) was regarded as an indignity. This may have been, however, not the only significance of the simultaneous sacrifice of the hair. The dead might be benefitted, and the living might become, or at least feel, more holy.

A third explanation that has been offered of this and, in fact, of all the mourning customs connected with apparel and bodily mutilation, is that the ancient rites had a direct reference to the dead as to the identity of the living, so as to escape any evil which recognition might bring. This idea seems, however, un-semitic, and it certainly does not fit in with other notions regarding the dead in early Hebrew times. Beings who could be called 'goddesses' ('knowing ones'),* and to whom one resorted for oracles, could hardly be deceived by a change of garments or other disguise on the part of the living. They certainly could not be deceived by taking off one's sandals, which is also pressed into the service. The examples, moreover, from the customs of other races (including the Romans), quoted by the supporters of this theory, are not the most part capable of another explanation. The opposite

This is required by the verbs gôlôh and gôda used in the passages quoted. In § 2 104 the verb is used, and half the beard is expressly mentioned (in 1 Ch 19:9 parallel passage the verb gôlôh is, however, used, and apparently the entire beard meant).

* This is employed by the verbs gôlôh and gôda/ used in the passages quoted. In § 2 104 the verb is used, and half the beard is expressly mentioned (in 1 Ch 19:9 parallel passage the verb gôlôh is, however, used, and apparently the entire beard meant).

1 See esp. W. R. Smith, pp. 223-226.

2 For a full exegesis of this passage adopted also by Kaufmann in Hastings' 'Deut. Ext. Vol. 21'), see Geikie, op. cit. p. 265. J. G. Frazer (Jal xv. p. 97) and Geikie on the one hand, the Bohemian and others Grimes and Geikie and others primarily based the theory, expresses himself, however, doubtful as to the semitic origin of the idea, and the meaning of the custom (in the 'Hophil' art. 'Sack'), is a different question.

J. Geikie on the one hand, the Bohemian and others Grimes and Geikie and others primarily based the theory, expresses himself, however, doubtful as to the semitic origin of the idea, and the meaning of the custom (in the 'Hophil' art. 'Sack'), is a different question.

3 See J. Frey, Tod, Sekelhaube, etc. p. 42.

The Biblical statements affirming the impenetrability and shadowy character of the dead and the inability of the latter to the working of Jahwism on the ancient cult; see in Job (probably time of Hab. captivity (Driver) 1:14-25), the dead are affirmed to know of nothing, to have no seeing or hearing of their own part (Nah. 1:7 a.c. (Nödelke and others) Sheol is stated to be devoid of work, device, knowledge, and wisdom. Allowance is, of course, also made for different streams of thought in very early times.
treatment of the hair by men and women in times of mourning (each adding the unusual course, men, e.g., covering their heads at funeral ceremonies, and women letting their hair fly loose about their shoulders). It is therefore surely to be explained as a species of self-neglect expressive in each case of self-humiliation induced by grief; and a similar explanation would be applicable to several other expressions.

The Japhetic prohibition in Dt 14:14 of making a baldness between the eyes for the dead furnishes a strong presumption in favor of regarding the act as a ritual observance connected with ancestor-worship. The existence of this ground of the prohibition (‘ye are children of Jehovah, and a “holy people” to Him) strengthens the supposition that it was directed against an opposing religious cult. The place described as lying between the eyes may have for this very reason been chosen for the têlêdôth,* (Dt 11:23 etc.), by which every Israelite was to be marked as a devotee of religion, unless it was independently chosen as the most conspicuous part of the head. The absence of a prohibition regarding the removal of hair from other parts of the head and from the beard in connexion with the act, viz., to the fact that, according to Lv 10:26, it was prohibited under all circumstances.

(a) The mourner made cuttings in his flesh. Cuttings in the flesh and beard and covering of garments, appear as a general custom in Jer 41:16, notwithstanding its distinct prohibition in Dt 14:11, thus showing that the Deuteronomic legislation could make its way only very slowly, and that the verb hêxâghôd used in the two passages mentioned, and the form gâdôdôh found in Jer 48:38, is in Lv 10:19 the command not to make a sêrêc (also tr. “cutting”) for a dead person, or to print any writing (writing of têlêdôth) on the flesh, the latter being evidently a kind of tattoo. If the theory of making oneself unrecognizable by these disfigurements be discarded, there remains only the idea of thereby making an enduring covenant with the dead (W. R. Smith, Rel. of Soul, p. 329 f.)

That cuttings in the flesh were parts of religious ritual is, moreover, proved by the action of the priests of Baal recorded in 1 K 18:26. The fact that these incisions, as also the making of a baldness between the eyes, were prohibited by Jehovah, whilst the wearing of sackcloth, etc., was never interfered with, would seem to show that the ground of act and of the forbidden categories, thus forming another reason for rejecting the theory that they had all the purpose of making the living unrecognizable to the dead.

(b) The mourner covered his head or beard. The covering of the head (e.g., 2 S 15:29, Est 6:2) and the beard (Mic 3:7, Ezk 24:17) as a mark of mourning on account of death or other calamity might be explained, with Schwally and others, as a substitute for cutting off hair from head and beard. But the covering of the face in 2 S 11:26 (Eng. v.) (the clearest instance of actual mourning) reminds one of the same act performed in the presence of Jehovah (Ex 3:1, 1 K 14:19). As the covering of the face was there prohibited by the fear of beholding the Deity (cf. Ex 33:23), it seems likely that the mourner was also afraid of seeing the ghost of the departed (which is, of course, different from deriving the same idea from another reason). It is possible, however, that the covering of the face was merely an extension

* Usually translated “frontlets”; see Gfr. Heb. Lex., s. v. ḫâgôd. The modern têlêdôth (known as phylacteries) are held by some to consist of a part of the forehead cut into a square, but this seems merely to be a common practice, and is not intended to be placed over the middle part of the forehead.

The probable ground of this general prohibition, see Dillmann, ib. loco.

Driver explains that “the Israelites, being Jehova's children, were not to disfigure their persons in passionate or extrava ntagious grief” (on Dt 14:1-6). But it is doubtful whether grief would be regarded as an extrava ntagious passion, and hence the ground assigned for the prohibition (see the text above) appears to indicate an opposing religious cult.

of covering the hair, and the idea that the latter act was a substitute for removing the hair might therefore be maintained. As the hair of the head and beard was regarded as a personal ornament, covering the head, in one case, and the beard, in the other, as expressing self-neglect or self-humiliation occasioned by grief.

No evidence of ancestor-worship can be derived from the external ceremonies in favour of the two remaining customs, namely, (f) the lamenation over the dead, with its accompanying of weeping and striking different parts of the body with the hand; and (g) the partaking of food and drink by the mourners during the course of funereal ceremonies. The lamentations were natural or professional (see Jer 9:16 [Eng. v.]) expressions of grief, and need—so far as the texts in their present form go—neither have been ritualized in worship of the dead (Schwally, op. cit. p. 20 f.) nor intended to scare away the ghosts of the departed by much howling (Grüneisen, op. cit. p. 100).

The lamenations of David over Saul and Jonathan, as recorded in 2 S 13:30, are spoken of in connection with the funeral ceremonies. On the uncleanness connected with the ‘bread of mourning’ in Hos 9:4, see § 7.

6. Levirate law.—A close relationship has been claimed between ancestor-worship and the law of levirate, which, in the form given to it in Dt 25:5-10, enacts that when brothers ‘dwell together,’ and one of them dies without leaving male issue, the surviving brother (no doubt the eldest, if more than one) was to marry the widow, and that the firstborn of such a union was to be considered the son of the departed brother, so that his name be not put out of Israel.

The supposition that the original object of the institution was to provide the dead man with a son to carry on his cult (so, e.g., Stade, Schwally, Charles)—an object which must be assumed to have been entirely forgotten in the time of the Deuteronomic legislator. In the case of Uzzi (where the law is found to extend over the whole clan), the object is ‘to raise up the name of the dead upon his inheritance’ (Rut 4:19). Absalom (2 S 18:30) puts up for himself a pillar in his lifetime because he knew that his son was to keep it as a remembrance. In Gn 38 (where, under an older form of the law, all the children would have apparently belonged to the departed) the ground stated is merely that of raising up a personality to the departed. But if the institution—as it is quite reasonable to suppose—had from the first, besides the desire of leaving a memorial of one’s name, a close connexion with the law of inheritance, it is impossible to eliminate the idea of the cult of the cult of the departed altogether, as the son or sons thus provided for the dead man, as inheritors of his property, would, under pre-Mosaic religious notions, be expected to charge themselves with the sustenance (and probably also sacrificial offerings) to the departed. This broader basis of the levirate law would seem to be required by the extant data and the considerations arising from these, and it also

* An attempt has been made to connect the festival of Purim with the Persian Panafrîdânia, which was a kind of All Souls’ Day; but if so, the story of Esther might have become altered beyond ordinary recognition. See, on the one side, Schwally, op. cit. p. 42 f.; and on the other, Grüneisen, op. cit. p. 186 f. The law will be fully discussed in the next work.

† The supposition that sympathizing friends and neighbours provided the mourners with food and drink, and therefore obtained among the Jews at the present day.

§ On J. F. McDermott’s theory that the mourners were married to the dead on a polyandrous system of marriage, see Driver, Deut. p. 384.
do justice to the fairly complex state of society which already obtained in those early days. So far as the element of the cult of the dead is concerned, it is important to mention that the Kaddish (see § 3 of the 'Jewish' article), while stressing the facts of Jewish public worship in general, is to the present day confined to males, also seems to bear traces of a survival (in a much modified form) of the religious services rendered to the departed by his surviving sons.

7. Laws of uncleanness.—The laws of uncleanness relating to dead human bodies (see esp. Nu 19:11-22) can be satisfactorily explained by the almost universal fear of contamination arising from the contact or close vicinility of decaying bodies that obtained in ancient times. The ancient Egyptians, it is true, buried themselves much with corpses, but then they took every possible care to prevent decay setting in. In the Mosaic law the abhorrence of dissolution also affected not only animals that were forbidden as food, but also clean ones if not slain in proper ritual fashion (Lv 11). Leprosy, with death, was affected only so far as it may be allergic, and only unclean (Lv 13), though here the fear of contagion must have been an important factor.

It is likely that this fear of contamination was in earlier times the foundation on which savage races, that everything connected with birth, disease, and death involved the action of superhuman agencies of a dangerous kind (see W. R. Smith, Rel. Som. 2; 444 f.), an analysis and differentiation of causes being a product of modern medical development; but it would be rash to identify these agencies with ancestral spirits. On the contrary, the fact that dead human bodies are regarded as uncleann among a number of races which have strongly developed systems of ancestor-worship (see Grünen. op. cit. p. 114) proves that the two are independent of each other. Worship may be given to the departed spirits of ancestors, and contamination may at the same time attach to their dead bodies. The regulation of Nu 19:11, that an open vessel with no covering round it, which has stood in the tent of a dead person, is unclean, whilst covered vessels remain clean, can be suitably explained by the idea that the covering protects the vessel from contracting contamination, and need not point to the fear that the ghost might take up its abode in the open vessel.

The pollution connected with the broad of mourners (27:5-25) referred to in Hos 9:3 is also explicable without a reference to a Jahwistic opposition to ancestor-worship. For the meal offered to mourners by way of comfort may be all that is meant; and if so, the uncleanness would only be that of ordinary contamination contracted by contact with dissolution.

An additional tabu, arising from opposition to the religion of Jahweh, would come in only in cases where a sufficiently recognizable element of ancestor-worship or some other heathen form of the cult of the dead showed itself; and as such practices were demonstrably not uncommon among the ancient Hebrews (see esp. § 3), the additional tabu would be of a considerably wider application. But the dead body itself would probably in such cases be affected only so far as the spirit may have been supposed to linger about it, for, as has already been remarked, the cult of the dead was not necessarily connected with the notion of the soul.

In the case of priests (Lv 21:1) greater restrictions against contact with dead bodies are laid down, because the contamination would make them for a time unfit for their work. The ground of the main ordinance there given cannot be opposed to the tabu here, because the tabu was in all cases a spiritual, whereas the above-mentioned priests may attend (father, mother, etc.) are just those to whom the heathen cult of the dead would chiefly appeal (see Grünen. op. cit. p. 115). The order, however, not to remove the hair from beneath the head or to make anything out of the flesh, appears (unless v. 2 be regarded as unconnected with the rule respecting smoking and burning) more particularly as in their case, to have been introduced in order to render those parts of the body, like that of uncleanness per se, would naturally be of greater stringency in the case of laying on of hands.

The strongest instance of the combined taboo of ordinary contamination and heathen worship appears in Exk 34:10, where doubts of kings erected quite close to the altar of Jahweh are clearly stated to have been places of a rival worship (note their zwisch, a usual form of unfaithfulness to Jahweh, borrowed from the relationship of marriage), whereby the 'holy name' of God is defiled. A similar double taboo is presented in Is 6:5, where graves, which are unclean in themselves (Nu 19:9), are used for purposes of necromancy.

8. Necromancy.—Though the Teraphim cannot be demonstrated to have been originally images of ancestors (see, § 2), there is ample independent evidence of the practice of necromancy among the ancient Hebrews. The spirits of the departed were called yhid'osim ("knowing ones") by those adored to the practice, and the "booth (ordinarily rendered 'soul') spirits" are present a form of necromancy, the calling up of the spirit of Samuel on behalf of Saul (analogous to the calling up of Eabani by Gilgamesh) having been effected by a man named Eabani (1 S 28:11). In Is 8:9 the people are distinctly charged with inquiring of the dead on behalf of the living; and Is 65:3 may safely be regarded as a strong evidence of necromancy practised at graves. The practice was definitely anti-Jahwistic, and is everywhere forbidden (whereas the inquiry of Teraphim is not always prohibited, see § 2). As has already been remarked, necromancy, which is in itself an important part of the cult of the dead, is, at the same time, indirectly considered in the offering of propitiatory gifts to the spirits consulted.

Summary.—In summing up all the extant evidence, the same result is obtained as in the Babylonian section. The OT embodies indubitable traces not only of the popular cult of the dead, but also of a certain degree of actual worship paid to ancestors and departed kings and heroes. But the importance of these practices has been much exaggerated. There is no ground for thinking that ancestor-worship was the only or even the chief religion of pre-Mosaic Israel. On the contrary, various parts of the OT prove clearly that Jahwism had to maintain at least as keen a struggle against the worship of the heavenly bodies and of various other powers of nature as against the cult of the dead. It is also true that in a certain modified form the exaltation of departed heroes, more especially of the spiritual type, was from the first quite compatible with the religion of Jahweh; and the final monotheistic development of the monotheism left still more room for the glorification of great human personalities in one form or another.

LITERATURE.—Works of F. Schwell, C. Grünen., R. Charles, and others have been more or less frequently quoted. A very full bibliography will be found in Grünene’s book, Add. A. Loda, La Croisade à la vie future et le culte des morts dans la Bible (Paris, 1909), gives a comprehensive account of earlier literature in French. For the notice esp. Oort, De deodenvergering bij de Israëlië, 7; V. H. V. N. p. 366; Stade, R. V. T. I, p. 267; J. R. Smith, Rel. Som. 3, and other publications contain much that bears on the problem. J. Frey (Tol, Sodegast, etc.) tries to prove that though there was a belief in the soul, no cult of the dead (in the sense of paying homage to them) existed among the ancient Hebrews. Kautzsch (Hastings’ DB, Ext. 1, pp. 614-615) agrees in (main with Grünene (animism, not ancestor-worship). Among com-

* The fact of Saul bowing to the ground at the appearance of the spirit of Samuel (1 S 28:11) might be regarded as an evidence of worship paid to the dead, though perhaps it was still the prophet who was honored.

1 Cf. Cheyne, The Prophecies of Isaiah, loc. cit. At the graves the spirits of the departed would be more naturally consulted than demons.
ANCESTOR-WORSHIP (Indian)

mentators (some of the leading modern commentaries have, as occasion required, been referred to), Solomon Yabbi, Abraham ibn Ezra, and David Kimhi will on a number of points still be found helpful.

G. MARQOLOUTH.

ANCESTOR-WORSHIP AND CULT OF THE DEAD. (Indian) — 1. It is under the worship of ancestors lies at the root of all the funeral rites. As now explained by official Brahmanism, the object of these is to provide the departed spirit with a kind of 'intermediate body interposed as a temporary interval between the terrestrial gross body which has just been destroyed by fire, and the new terrestrial body which it is compelled ultimately to assume' (Monier-Williams, 'Brahmanism and Hinduism' p. 77). This writer goes on to say that this intervening body, composed of gross elements, though less gross than those of earth, 'becomes necessary, because of the individualized spirit of man, after cremation of the terrestrial body, has nothing left to withhold it from re-absorption into the universal soul except its incombusable subtle body, which, as composed of the subtle elements, is not only proof against the fire of the Rik, but is free from any sensations in the temporary heaven or temporary hell, through one or other of which every separate human spirit is forced to pass before returning to earth and becoming re-invested with a terrestrial gross body proper to it.) This new body, the soul must, like the ghosts of the unburied Homeric dead (Homer, Od. xi. 54 ; II. xxii. 72), wander about as an impure preta, or ghost, on the earth or in the air, among demons and other evil spirits, into the state of which it will eventually pass unless it be protected by the performance of the Srdhda provided by its relatives on earth. Further than this, the new body thus created for the spirit and which the deceased provided, and which the spirit must be aided in its progress from lower to higher worlds and back to earth by the performance of the periodical Srdhda rites. This duty of the relatives is among Hindus supposed to be finally discharged only when the rite is performed at some specially sacred place. Gayy in Bhair is the most appropriate place for these rites, while the Hindus of the west, for the obliteration of a mother, prefer Siddheshvar, the Baroda State. Hence also arises the necessity of begetting a male heir, which is urgently felt by all Hindus, as is also the case in China. Using a folk-etymology, this name Skr. name of a son, putra, as if it were putra, 'he that delivers his father from the hell called Put.'

2. Feeding the dead. — This orthodox exception of the Srdhda—that it is intended to provide an 'intermediate body' for the departed soul—is a later development. The Srdhda was really evolved from the custom of feeding the dead, a rite common among all savage and semi-savage races. 'Like the habit of dressing the dead in his best clothes, it probably originated in the selfish but not unkindly desire to induce the perturbed spirit to rest in the grave and not come plaguing the living for food and rainment' (Frazier, 'JAF xv. 741'). The custom is well established among many of the Indian tribes. Thus, among the Nagas of Assan, the corpse is watched with great care, and when decent burial is given to it, large quantities of rice are thrown over it. Whatever the deceased was in the habit of eating and drinking in his lifetime (such as rice, vegetables, and spirits) is placed once a month on the corpse, and each month given in the body. At the end of the period of mourning, a great feast, consisting of liquor, rice, and flesh of cows and buffaloes, is prepared, and the members of the clan in war dress partake of it. Among the Lahu, and sept of the same tribe the cattle sacrificed are eaten, with the exception of one leg, which is buried under the head of the dead man to serve as food for him in the grave. Among the Angami sept, on the first day after a death, meat is distributed among the relatives and friends of the deceased. The next day the head of the dead man, eat part of the meat, and each member of the sep of the deceased throws a piece of liver out of the house to the distance of some eight poles. On the third day portions of the cooked rice are tied up in leaves, and burnt on the roof of the house on the fourth day. On the fifth day the platter and cup of the dead man are hung up in the house and left there till thirty days have passed, when they are given to a friend of their former owner. The funeral rites end with the sacrifice of a cock, the flesh of which is eaten by all the members of the family ('JAF xxvi. 196 f.).

Among a more civilized race, the Nayar's of Malabar, the Seshakriya, or rite of making offerings to the spirit of the dead, commences on the day after the cremation ceremony, and continues for seven days. All male members of the Taravâd, or sept of the deceased, at the house of the dead mourner taking with him a strip of cloth which he has torn from the dead man's shroud (probably in order to maintain communion with the dead), and a piece of iron (to scare evil spirits), brings some half-finished food, and at this 'ritual offering,' this food, and places them in the north-east corner of the courtyard, which is believed to be the abode of the spirit. A lamp, which is also probably intended to drive off evil spirits, is lighted beside the food. A piece of palmrya leaf, about a foot long and a finger broad, is taken, and one end of it is knotted. The knotted end is placed in the ground, and the other left standing up. This represents the deceased, and to it the food is offered. And the leaf, which is said of leaf is to be fixed has been cleansed carefully, and the leaf is placed in the centre of the prepared surface. The offerings made to it go direct to the spirit of the deceased, and the peace of the Taravâd is secured' (Fawcett, Bulletin Madras Museum, iii. No. iii. 247 f.).

The custom of providing food for the dead is common among the lower castes in Northern India. In Bengal the funeral rites of the Gonda last for three days, after which the mourners purify themselves by bathing and shaving, and make offerings of bread and milk to the spirit of the departed. Among the Domin of the north, they have the rite, 'on the eleventh day a feast is prepared for the relatives of the deceased; but before they can partake of it a small portion of every dish must be put on a leaf-plate and taken out into the jungle for the spirit of the dead man, and carefully watched until a fly or other insect settles on it. The watcher then covers up the plate with a slab of stone, eats his own food, which he brings with him to the place, and returns to tell the relatives that the dead man's spirit has received the offering set for him. The feast can then begin.' The Bliskat Orions preserve the bones of the dead, to be interred in the tribal cemetery. 'At this festival pigs and great quantities of rice are offered for the benefit of departed ancestors, who are also held in continual remembrance by fragments of rice or dal [pulse] cast on the ground at every meal, and by a pinch of tobacco sprinkled with rice and inside his pipe' (Risley, Tribes and Customs, i. 293, 305, 92).

The Mâl Pahriâs, who identify the Lores, or ancestors, with Gûmo Gossin or Gûnu Deota, the gods of the wooden pillar, and press their originators of the house to perform the same rite in another way. 'Round this centre are grouped a number of halls of hardened clay, representing the ancestors of the family, to whom the first-fruits of the earth are offered, and the blood of goats or fowls
poured forth at the foot of the pillar that the souls may not lag in the world of the dead" (Risley, ii. 71). The custom of offering first-fruits to the ancestral spirits is very common, and has been fully illustrated by Frazer (G.E.B. ii. 400, 462 ff.). The Mechus, again, adopt another method to secure that the dead may reach the etherized souls of the dead. When the corpse is buried, 'a small fire is kindled upon the grave, in which food and drink are burned for the benefit of the deceased' (Risley, ii. 89). The rites are performed in another way, by lighting on the night of the worship of the goddess Kāli, in the month of October-November, dried jute stems in honour of their deceased ancestors, 'and some even say that this is done to show their spirits the road to heaven' (ib. ii. 50).

In other parts of Northern India rites of the same kind are performed. The degraded Ghaecias of Mirzapur, at the annual mind-rite for the dead, lay out five leaf-platters containing the usual food of the family, with the prayer: 'O ancestors, take this and be kind to our children and cattle' (Crooke, Tribes and Customs, i. 183). If, however, there is a tribal feast, offer a fowl to the spirits of the dead, and pour a little liquor on the ground, with the prayer: 'Do not injure us or our children.' (ib. iii. 311). The Rājūs, who are perhaps the most degraded of all the tribes, and are on this account persecuted by the officials, bury the head of the corpse with the eyes, hands, and feet, and the relative who has charge of the corpse remains alone with it. In the Nats, a tribe wandering acrobats, is more remarkable. The mourners cook food on a riverbank, and spread a cloth on which the ghost is supposed to sit. The nearest relative, taking an earthen cup and a knife in his hand, dips into the water. The cup he places on his head with the knife upon the mouth of it, and then dives until the cup becomes filled with water. He deposits under the cloth on which the spirit sits, and lays a cup of water at each corner of the cloth. Within the enclosure thus made food is laid for the refreshment of the spirit, who is invited to partake of the meal. When the spirit is supposed to have done eating, they say: 'Go and descend to the place where those who have departed before you' (ib. iv. 631). Even more elaborate than this is the rite performed by the Musahars, a tribe which has hardly risen above the brute state. The body of the deceased is placed in a river or in the sea, where the corpse is flung into a river (which is their usual mode of disposing of the dead), a tree near the spot is selected as a refuge for the spirit, and food and water are laid at its foot for nine days in succession. At the time of presenting these offerings, the chief mourner invokes the dead: 'Come, O dead one, from the palace of Indra! Come and eat the food of this world! Take it and return to thy palace.' These offerings are allowed to lie for some time on the place where they were deposited, and are then removed by the mourner, who cooks and eats the food, throwing a morsel on the fire for the use of the deceased. Thus, among the Musahars, a hog is hanged upside down at the tree. The offerings are changed daily during the period of mourning, and the rite ends with a clan feast of the dead (ib. iv. 31 ff.).

In the United Provinces, among the various branches of the outcast Dom tribe, the idea of feeding or propitiating the spirits of the dead is combined with that of barring or preventing the return of the ghost, which is believed to afflict the living. Thus, among the Basars, a hog is hanged upside down at the tree, the offering of providing the spirit with food; while others kill the animal, cut off its legs, and bury the trunk in the field of the house of death, as a sort of sympathetic charm to prevent the spirit from rising out of its grave and afflicting the family (Crooke, op. cit. i. 226). Very similar is the custom of the Dhangars, among whom, on the tenth day after death, the mourner sacrifices a pig in the name of the deceased, and, cutting off its feet and snout, buries them under a stone in the courtyard, with the invocation to the spirit: 'I have buried you here, never to come out; you must rest here in spite of the spells of an exorcist, or of any one else who may try to wake you' (ib. ii. 290).

3. Vicious feeding of the spirits of the dead. — From this crude belief in the possibility of feeding the spirits of the dead, the transition to the theory that this can be done vicariously is easy. Among some of the Indian castes, survivals of the primitive matriclanship are found in the custom of providing for the feeding of the spirits by the bestowal of food on relatives in the female line. The Bhioksas of the sub-Himalayan Tarai, every year in the month set apart for mourning, feed the descendants of their daughters in order to propitiate the ghosts of the dead; and, for the same reason, the Juangs of Bengal and other nomencl tribes of Northern India invoke spirits of the deceased by employing the mortal man as tho offering priest (Crooke, op. cit. ii. 58; Risley, op. cit. i. 358). The next stage appears when the Pajari, or tribal priest of the non-Aryan peoples of the Vindhyan and Kaimur ranges in the centre of the north-west peninsula, is invited, adjut right in the office, to share in the funeral feast. When we reach the higher castes of Hindus in the Plains, we find the custom of feeding Brāhmans prevalent. The belief that food, once offered to the spirits, remains with its owner is not confined to the Hindus, and the present system of feeding the spirits is a survival of the older system of ceremonial acts and offerings.

4. Annual rites for the dead. — The establishment of an annual celebration, like the All Souls' Day of Christendom, when the dead are specially remembered and offerings of food are provided for them, appears among the most primitive tribes. Thus the Luhars and Magars in the United Provinces, who are followers of the Hinduism of the Vindhyas, have a festival in the month of December, hold a solemn festival in each village in honour of those members of the community who have died during the preceding year. The village priests conduct the rites, which culminate on the night of the new moon. On this occasion, they believe, the spirits of the dead appear at a distance from the village in the faint moonlight, wending their way slowly over the hills, and driving before them the victims slain for them or the cattle which they have stolen during their lives. Finally, the procession disappears over the distant hills, amidst the wailing of those who have lost relatives during the year (ib. pp. 182 ff., cxvi. 194). The period consecrated by orthodox Hindu usage to the propitiation of the spirits of the dead is known as the Kānagat, so called because it takes place in the sign of Kānya, or Virgo, or pata-pulkeha, or Loh (Crooke, op. cit. i. 311), occurring in the moonless half of the month Kān (August-September). This fortnight is specially devoted to the death cult, and the pious offers sacred balls of rice (pinda) in memory of their ancestors. During this time the pions fast; others abstain only from meat, or eat fish instead of it.

5. Ancestor-worship among the non-Aryan tribes. —The cult of the dead, so far as it extends to the provision of food for the spirits of the dead, is thus
not confined to the higher castes, but is widespread among the non-Aryan part of the population. Sometimes, as in the case of the wild Kurunbārus of Mysore, this worship is one of fear, and is devoted to the propitiation of the Virikas, or spirits of ancestors who have died unlamented, and who are thus supposed to be malignant (Buchanan, Journey, i, 397). The Yernkalas, one of the forest tribes of the Nilgiri Hills, sacrifice, in conjunction with other gods, to the Piris, or Manes of their ancestors (Opie, Original Inhabitants, i, 201). Brand Magdalen Prebendary

pidency many of the ruder Hindu tribes, such as the Dhor Kāthākars and Vaitis of Thāna, the Kumbis of the Konkan, Aṭṭe Kunbis, and Hāl-vakkī Vakkals of Kānara, worship their ancestors, usually in the form of an unhusked coconut (Gazetteer, ixi. 165, 182, xv. 217, 249, 293).

The Bhils of Khāndesh combine the cult of their ancestors with that of the Māttas, or Divine Mothers, and the same is the case with the Central Indian branch of the tribe (ib. xii. 93; Malcolm, Trans. Roy. As. Soc. i. 72). Gonds in the Central Provinces worship the family dead on the third day after a funeral, and, in some cases, during the last three days (Hislop, Aboriginal Tribes, 25; Gazetteer, 278). In Chota Nagpur the Kīnāns and Būhīyars adore their ancestors, but they have no notion that the latter are now spirits, or that there are spirits and ghosts in the water. The Kharrais and the Hinduas rever of their ancestors under the name of Bir or Vira, 'hero,' a title which, as we have seen, is often applied to malignant spirits; the Kharrais put the ashes of their dead into an earthen pot and filling it into a river; afterwards they set up in the vicinity slabs of stone as a resting-place for them, and to these they make daily oblations; the only worship performed by the Korwas is to their deceased minor gods; and they augur, and are taught by the Bhils of Khāndesh to mourn them in the same manner.

The Bhils and other tribes in the Central Provinces bury their dead in coffins, which are by no means beautiful. In the Central Provinces the coffin is a rectangular box, with a lid, and has a small hole in the top of it. The dead are placed in the coffin and the lid is closed. The coffin is then placed in the grave and covered with earth.

The Bhils and other tribes in the Central Provinces bury their dead in coffins, which are by no means beautiful. In the Central Provinces the coffin is a rectangular box, with a lid, and has a small hole in the top of it. The dead are placed in the coffin and the lid is closed. The coffin is then placed in the grave and covered with earth.
living, let him, in performing the obsequies of his father, celebrate also his paternal grandfather. Having poured water with holy Kusa grass and sesamum into the hands of the Brāhmans, let him give them the upper part of the cakes, saying, ‘For the members that have been eaten, that having been eaten of the Śrāddha, gives the residue of it to a man of the servile class, falls headlong down to the hell named Kālaśūtra. The superfluous Pindas, or holy balls, may be given to a Brāhmaṇa, or a cow, to tied, or consigned to fire’ (Hast. ii. 229, 249, 361).

The form of the modern Śrāddha rite is most intricate, and includes a number of minute observances, the ritual of which is elaborately prescribed. In the form of the rite known as Ekoddishtha, which is performed for the benefit of a single deceased individual, for ten days after the cremation lamps are kept lighted for the benefit of the Manes, to light the ghost during its progress to join the Pitris or sainted dead, either in a temple, or under a sacred fig-tree, or on the spot where the obsequial rites are to be performed. These, technically called beneficial or purificatory rites, include: the pouring of running water; and the spot is hence known as the ghṛt, the usual term applied to the steps used for bathing at a river or tank. One condition is that it must not be done in the presence of the sacred yellow cow. This place, when selected, is carefully smeared with clay and cow-dung, a fireplace is erected, and beside it an altar of white clay, also smeared with the dung of the cow. The officiant, with his top-knot tied up, first bathes, and then standing with his face to the south, the land of spirits, offers a lamp, sesamum, barley, water, and sprigs of the sacred Kusa grass (Poa cymbaloides), with a dedication to that spirit constituent of the earth. The heat and thirst which the spirit must undergo during cremation. This ends the ceremonies of the first day, and during the next ten days, either once or twice daily, the rite of feeding the spirit is performed. For Brāhmaṇa and for the original sacred grain, and for Kṣatriyas, and the illegitimate sons of Brāhmaṇa, barley-flour, are prescribed. These grains are boiled in a jar of copper, the old sacred metal, mixed with honey, milk, and sesamum, and then made into a small ball (pinda), which is offered to the spirit with the invocation that it may obtain liberation, and reach the abodes of the blessed after crossing the hell. It is the pinda rite (pindātāma). By this rite the creation of a new body for the disembodied soul begins. On the first day one ball is offered, on the second two, and so on until during the observance of the ten days fifty-five balls have been offered.

The motive of the offerings appears in the numerous invocations which are made at various times in the service. One runs thus: ‘Thou hast been burnt in the fire of the pyre and hast become severed from thy brethren; bathe in this water and drink this milk, thou that dwellest in the ether without stay or support, troubled by storms and raging, the god of life, become thou happy. ’ Another hymn is as follows: ‘Let the lower, the upper, the middle fathers, the offerers of soma, arise! May those fathers who have attained the highest life protect us in the invocations! Let this reverence be paid to-day to the fathers who departed first, to those who departed last, who are situated in the terrestrial sphere, or who are now among the powerful races, the gods. Do us no injury, O Father, on account of any offence which we, after the manner of men, may commit against you. Fathers! be stow this wealth upon your sons, now grant them sustenance. Do thou, O resplendent soul, along with the fathers who, whether they have undergone

creation or not, are gladdened by our oblation, bless us ’ (Muir, Original Sanskrit Texts, v. 297).

By these ten days' rites the spirit has been enabled to escape from the same number of different hells, and gradually a new body with all its members has been created. Only the members of this new body are formed is sometimes thus defined. On the first day the dead man gains his head; on the second his eyes, and nose; on the third the mouth; on the fourth his middle parts; on the fifth his legs and feet; on the sixth his vital organs; on the seventh his bones, marrow, veins, and arteries; on the eighth his nails, hair, and teeth; on the ninth all remaining limbs and organs and his main strength. The rites of the tenth day are usually specially devoted to the task of removing the sensations of hunger and thirst which the new body then begins to experience. The house and the vessels which it contains are purified so as to remove the last faint of the death pollution; the fireplace at the scene of the obsequies is broken, and a handful of water is offered to the ether to assuage the thirst of the spirit. After bathing the grandfather, and the stream than that where the obsequies were performed, the officiant and other relatives go home-wards, first being sprinkled with the five products (pāta, pītya, ś Hibīta) and then having to lay down uncooked meal on the road behind them, so as to attract the attention of the ghost and dissuade it from returning in their company.

On the eleventh day the chief rites consist in the gift of a cow (pāta, paśupūja) to the chief Brāhmaṇa, and the looping of a scape-bullock (yajñotsara) in the name of the deceased. This seems to be partly a survival of the ancient rite of animal sacrifice, and partly a symbol of the future life. (Drazer, Gīḍ. iii. 13 ff.) It is consecrated with the dedications: ‘To father, mother, and relatives on the father's and mother's side, to the family priest (pāruhita), wife's relatives, those who have died without rites, to those whom the task of the death (Frazier, Gīḍ. iii. 13 ff.) is allotted, to the salvation of the dead. At the present day the animal is usually branded with the divine emblems of the discus and trident, and henceforth is allowed to wander free in the villages. Food is again cooked, and offered to the Manes, with the invocation: ‘You have finished your course, and have reached the abodes of bliss. Bless us. ’ (De present, ii. 123 ff.) The general effect of the ceremony is that the spirit ceases to be a disembodied ghost, and becomes enrolled among the sainted dead. On the twelfth day food is again offered, and water poured at the root of a sacred fig-tree for the refreshment of the spirit.

The rite done for the benefit of one individual person (Ekoddishtha Śrāddha) is quite distinct from the annual propitiation of the Manes of the family. On the last day of this feast all ancestors are named and propitiated, but sacred food balls (pītya) are offered only for the three male ancestors on the father's side, and the dead father, his father, and grandfather. The idea prevails that the ancestor, once united with the sainted dead, needs no further special propitiation. The non-Aryan tribes believe that, like themselves, the spirits of the dead are mortal. What becomes of them after a certain number of generations no one cares to say. But when that period has elapsed, they are supposed to be finally disposed of, and, being no longer objects of fear to the survivors, their worship is neglected, and attention is paid only to the more recent dead, whose powers of mischief are recognized. The Gonds propitiate only for one year the souls of their departed friends, and this is done even if they have been persons of no note in their lifetime.
But with worthies of the tribe the case is different, and if one of them has founded a village or been its head man or priest, he is regarded as a god for many years, and a small shrine of earth is erected to his memory, at which sacrifices are annually offered (Hilop, op. cit. 16 ff.).

7. *Hindu worship of the Pitris._—The question remains — how far the Hindus can be said to 'worship' the Pitirs. In the earliest Vedic period the worship paid to the Manes was distinct from that of natural phenomena. It is not denied that the Hindus made gods of departed men. They did this long after the Vedic period, but there is no proof that the gods, or the gods of other names, were the worshipped souls of the dead. No argumentum a fere can show in a Vedic dawn-hymn anything other than a hymn to personified Dawn, or make it probable that this dawn was ever a mortal's name (Hopkins, *Religions of India*, p. 10). The general theory seems to have been that ancestors are of a class different from that of the gods, and that though they are divine and possessed of many godlike powers, yet that the Vedic poet thus invokes them, 'O Fathers, may the sky-people grant us life; may we follow the course of the living,' yet they are distinct from the gods, and never conformed (ib. 143). In the Vedic ritual of the Sraidda, when the king invites the gods and ancestors to the feast, he does so with two separate invocations (Colebrooke, *Essays*, 114). Speaking of the Vedic conception of Vainasa, the poet of Vainasa, Bahr's thus writes: 'It is there, at the remotest extremities of the heavens, the abode of light and the eternal waters, that he reigns henceforward in peace and in union with Varuna. There, by the sound of the great Vainasa, under the branches of the mythic tree, he assembles around him the dead who have lived nobly. They reach him in a crowd, convoked by Agni, guided by Pusan, and grinnedly scanned as they pass by the two monstrous dogs who are the guardians of the road. Chaya, in a glorious body, and made to drink of the celestial soma, which makes him immortal, they enjoy henceforward by his side an endless felicity, seated at the same tables with the gods; gods themselves, and adored here below and there above the earth (Ormazd), or father (Varuna) *Indo*, Eng. tr. 22 ff.). When we come to the Atharva Veda, we first encounter the specific doctrine of the elevation of the Pitirs. The due and proper performance of rites raises them to a higher estate; in fact, if offerings are not given, the spirits do not go to heaven. This view was still further extended in a later period. It is when we reach the Epic period that we find a progressive identification of the gods and the Pitirs. The divinities and the Manes are satisfied with the oblation in fire. The hosts of gods are waters; so, too, are the Manes. They are both of one being (Makabharata i, 7, 1 ff.). The poet speaks also of the Manes worship the Vedic god Indra, who is also the god of Paradise. It is in the Puranic period, when the Indian religious imagination ran riot, and produced that vague and complex system which is the Hindoo religion, that we find the Manes combined with other objects of devotion, like the bird Garuda and the world-snap Sesha. But throughout this progressive development the Pitirs seem invariably to lack that criterion of worship which we have already fixed. They are never regarded as independent divine beings; on the contrary, stress is always laid upon the fact that they depend upon their friends on earth for continuous aid and maintenance, and that their advancement to a higher stage is impossible without the due performance of rites done by their pious descendants. 

Larsen says: 'The Pitirs have been freely quoted in the course of this article. The best authority on the funeral rites of Hindooism is still Colebrooke's essay in *Aristic Researches* (1801), vii. 522 ff.; repeated in *Essays on the Religion and Philosophy of the Hindoos*, ed. 1858, 95 ff. A good account of the modern rites will be found in Atkinson, Gazetteer of the Himalayan Districts (1852-53), i. 855 f., 917 ff.; Grierson, *Bihar Present Life* (1883), 59 ff. Full details are given in the case articles in the Bombay Gazetteer, edited by Sir J. Campbell.

W. CROOKE.

**ANCESTOR-WORSHIP AND CULT OF THE DEAD (Iranian).**—The Zaraathushtrian religion, as known from the Avesta, comprises an elaborate system of religious thoughts and moral habits founded on the idea of two universal powers, one heavenly and pure, the world of Alura Mazda (Ormuz), the beneficent, and the world of the devils, the head of whom is Angra Mainyu (Ahriman). In this religion, according to its theoretical scheme, the ancestors, or the souls of the dead, play no part; but practically, in the popular customs and beliefs, the cult of the dead still survives. Parsism not only permits this popular worship, but even finds room for it in the official ritual, so that in the Yashis of the later Avesta we read a continuous litany of the ancestors or ghosts, in whom, no doubt, are to be recognized the souls of the dead, especially those of the ancestors. But it must be observed that these primitive ghosts are difficult to determine in shape and function in this Avestan composition, being often placed in the epical evolution as heroes or kings of old, as patrons or protectors of persons, families, or provinces, or as heavenly underlings of the national and religious ideas of the Iranians.

These ghosts are in the Avesta called Fravashis (Pahlavi *Pareervordi*), and are invoked in the 13th, or 15th, or 17th hour, until the 16th. In modern times, the Fravashi is a personification of the belief in the pious, his genius or his alter ego, who protects him and takes care of him during his lifetime, and who
will, in time, receive him in the other world. Under this theological fabric is no doubt concealed a more primitive idea of a being which in some way concert with or under the control of his soul (or as the principle of his life), nourishing him and giving him growth. These original functions of the Fravashis may be traced in the Avesta itself, when it tells that Ormazd, through these angels, maintained the place of the deceased out of the earth, gives offspring to the herbs, shapes the child in the mother’s womb, gives it all its limbs, lets it be born, and grants the mothers many children. Originally these beings may have conferred these boons themselves without the direction of any supreme god, thus fulfilling the functions that ordinarily belong to the province of the ancestors.

This character of ancestral patronage becomes yet more conspicuous when we recollect that the Persians, as we have seen, used to believe that during the period of their own life, the deceased are called into the world of the living by their own village, his own tribe, his own country.

That the Persians themselves looked upon the Fravashis as souls, we learn from Yasna xxvi. 7: "Who invoke the souls of the dead (drishtahdan uraeam Fravashis) at Fravashi." The Fravashis of all our kinsmen that have died in this house, the Fravashis of men and women, of both sexes we invoke (similarly Yasna Ixx. 28). The little we know of the exterior of the Fravashis fits in with this definition. ‘They come flying like a well-winged bird,’ we read in Yasht xiii. 70. The souls, then, were imagined in the shape of birds; as the Egyptian ba and as the souls in the Assyrian hell are described; as the souls, according to Grecian beliefs, left the bodies on the point of death under the guise of birds—the same idea as still confronts us in European folklore (cf. von Negelein, ‘Sole na Vogel’ in Globus, Ixxix. 357-361, 381-384; Goldziher, ib. lxxxii. 301-304).

The cult of the Fravashis has had its fixed place and its special time in Zoroastrianism; the time was the period Hamaspathmaedaya, March 10th-20th, i.e. the five last days of the year plus the five intercalary days, which days the Indo-European peoples always were wont to consecrate to the souls of the dead. Further, the Fravashis are always invoked in the evening. In the Aiwišrutirina Aibągāya (cf. Yasna i. 6; Gäh. iv. 1-2), being the first part of the night from 6 to 12,—the usual time reserved for the cult of the dead by kindred nations. We have our information about the customs of this cult from Yasht xiii. 49-52: ‘We invoke the mighty, the holy Fravashis of the righteous, who descend to the villages at the time of the Hamaspathmaedaya and return thither every year, every night ten nights to ask for help. Will anybody praise us? Will anybody pay homage to us? Who will accept us amongst his own? Who will bless us? Who will receive us with a handful of meat and a garment, and with sacred reverence? Everybody who fulfils his duty to these Fravashis—we are told in the same Yasht—shall have his house filled with good things during the coming year (Yasht xiii. 51 f.).

This custom survived far into the Middle Ages: the Arabian chronicist al-Birżinī testifies that the Persians during these days placed the meat in the rooms of the deceased, or on the roofs of the houses, believing that the dead conversed with the family; then they burnt juniper as incense in their honour (i.e. in reality to keep them away) (Abd el-Rahman, ‘Cholography’, transl. Sachau, London, 1879, p. 210 f.).

* Cf. also the metrical Sad-dar, dating probably from the end of the 15th cent., xiii., xli., xvi., tr. Hyde, ‘Hist. relig. veterum’.

The Fravashis are not only invoked during the Hamaspathmaedaya-period, but also commemorated on the 19th of every month; in the Persian calendar (see supra, Calends of Persia) they have, further, their place as the protectors of the first month of the year (Fravardin; cf. the Armenian loan-name of the twelfth month, Hroric; Hülsebmann, ‘Armenische Grammatik’, 1885, i. 194 f.). Corresponding to the official position of the Fravashis, the Persian imagination elevated them into higher and higher spheres; and we often meet with them as the genii of the stars (e.g. Yasht xiii. 5-7; Moret, ‘Miscellanea orientalium’), and after they seem in later times to have taken up a place in the Persian cosmology similar to the daimones in Greece.

Besides their place in the ritual, the Fravashis play a prominent part in the private cult of the Persians, especially in the funeral ceremony called afšingan (‘homeage’). It was a common meal to which the survivors invited both rich and poor; the priests attended the feast and performed several symbolical ceremonies. On that occasion cakes of meat and flour were offered to the spirit of the recently deceased. The origin of this feast seems to be a meal for the nourishment of the deceased. The same origin is also Rousseau’s, in memory of the deceased, or the Srosh Dorān, where cakes are offered to the angel of Death, Srosh.

In Armenia the Persian ideas on the Fravashis and their cult have continued into modern times. They are commemorated on the Saturdays before the five great festivals of the year, and, upon the whole, every Saturday. They are imagined as dwell in the neighbourhood of the tombs and in the houses of their kinsmen, and the survivors burn incense and light candles in honour of them. At the tombs the Armenians celebrate a special commemoration of the dead, when, during this occasion they burn quantities of incense. The Manes dwell three days on earth; then they fly away to heaven, leaving behind their blessings to their descendants. Especially between fathers and sons there is a vivid communication at that time. The Armenians as well as the Persians imagine that souls are connected with the stars.

ED. LEHMANN.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Japanese)—In order to understand what the worship of ancestors and of the dead actually amounts to in Japan, we must distinguish clearly the true national religion, that is to say, the native communion of the Shinto, as it existed during the first centuries of the Christian era, from the Shinto subsequently modified under the influence of Chinese ideas. This transformed Shinto indeed is of very little interest here, as it is only a shadow cast over Japan from the continent. Our task is to distinguish and emphasize the ideas that are really Japanese, original, and prior to this foreign influence; and to accomplish it we must examine only the most ancient documents, such as the Kojiki (Record of Ancient Matters, A.D. 720), the Nihonshoki (Chronicles of Japan, A.D. 720), the Norito (rituals which were not published until the beginning of the 10th cent., but were undoubtedly compiled earlier, at least), the Nihonshoki being careful to eliminate, even in these documents, any traces of Chinese ideas which they may contain.

Perron, ‘Oxford, 1700, pp. 444, 447 f., 456. There is likewise a record of the celebration of the feast in 1508 in the shape of syrtikten personer personer Müsterøy, Leipzig, 1880, p. 75 f.); while in 565 Christians spent ten days at Nishiki to celebrate the Fravardin; see Baederker, ‘Die Sudetendeutschland’, Cap, 2, 1876, p. 578; "Horoteia xevà" (Messner, ed. Niebuhr, Bonn, 1829, p. 374).
It is on account of the neglect of these necessary precautions that Japanese writers, especially the great native philologists of the 18th and the beginning of the 19th cent., have represented their national religion as being mainly an ancestor-cult, while in reality it is mainly a cult of nature. For instance, the famous theologian Hirata (1776-1843), while claiming to restore the primitive Shinto, calls into existence a fanciful religion, into which he introduces, in an artificial way, ancestor-worship as practiced by the Chinese, and if the worshippers must pray to the whole succession of their family ancestors in order that these Manes may protect their descendants and see to their happiness (Tamadasuki, vol. x), then Japan this erroneous conception spread into Europe, where the writers have, one after another, repeated the statement that Shinto was chiefly an ancestor-cult. Even the most conscientious scholars have not escaped the influence of this prevailing idea. Sir Ernest Satow maintained in Murray's Handbook for Japan (Intro. pp. 62, 69) that 'in very early beginnings Shinto appears to have been ancestor-worship. This eminent Japanese scholar now, however, cannot deny that theory. But more recently, Prof. B. F. Chamberlain wrote (Things Japanese, 1898, p. 335): 'Shinto is the name given to the mythology and vague ancestor- and nature-worship which preceded the introduction of Buddhism to Japan.' Dr. W. E. Griffis (Religions of Japan, 1895, p. 88) emphasizes the idea, saying that 'from the Emperor to the humblest believer, the God-way is founded on ancestor-worship, and man has grafted upon its ritual system nature-worship.' Capt. Brinkley sums up the whole in the very concise statement: 'Ancestor-worship was the basis of Shinto.'

But there is, in the present writer's opinion, the reverse of the historical evolution as it actually took place. It is evident that at a certain period ancestor-worship was seen to be the dominant cult of Shinto, and when people in our country visit the temples which are dedicated for ever to illustrious ancestors or to certain nature-gods confounded with Imperial ancestors, they are tempted to see in them a confirmation of the general theory of Herbert Spencer. But if we get rid of these modern impressions, and also lay aside the conventional opinions of native commentators, and if we confine our attention simply to the ancient writings, we find that we arrive at a different part of the Kojiki and the Nihongi, those relating to the age of the gods, are essentially devoted to nature myths; that, moreover, the most important Nitoro celebrate the glory of the gods of nature, and that it is not animism but naturism that in Japan, as in so many other countries, constitutes the real basis of the primitive religion. Does this, however, mean that, as Dr. W. G. Aston maintains at the present time, 'Shinto, the native religion of Japan, had no cult of true ancestors' (Man, 1906, No. 23, cf. his Shinto, 1905, p. 44 and passim; K. Florenz, Nihongi, Zeitalter der Götter, Tokyo, 1910, p. 153. Art. Shinto and art), the present writer thinks rather that the truth lies between these two extremes, and that, if ancestor-worship did not appear after nature-worship, and if it was then developed chiefly under the influence of Chinese culture, the Chuang-tzu with his gods in the original Shinto as in the majority of primitive religions.

We shall not discuss the question as to whether cannibalism existed in prehistoric Japan, and if so, whether it was followed by a ceremonial anthropophagy, which is then explained by the desire to offer to certain ancestral gods the food they would most appreciate (see N. Gordon Munro, 'Primitive Culture in Japan,' in Trans. of the Asiatic Soc. of Japan, Dec. 1906, vol. xxxiv. pt. 2, pp. 133 ff. and 135 ff.). As a matter of fact, from the time that primitive man invests all the gods, if not with his own form, at least with his feelings, this moral anthropomorphism must lead him to offer to the gods, whose enjoys they are, offerings which appear most precious to himself, and the gods for whom these sacrifices are intended must be gods of nature quite as well as ancestral spirits. We shall therefore dismiss this questionable interpretation and confine ourselves wholly to the written documents.

These documents show us, in the first place, that the primitive Japanese had a vague belief in the immortality of the soul, without having, however, any precise or absolute idea on the subject. The Nihongi, when relating the story of the hero Tamichi, who appeared one day as a serpent with glaring eyes to punish the violators of his tomb, ascribes to the men of that time the thought: 'Although dead, Tamichi at last had his revenge. How can it be said that the dead have no knowledge? This passage alone is sufficient to prove that there was no popular opinion, which doubted the sentient immortality of the dead. In general, however, they believed that the dead survived this life. The common people descended through the opening of the grave to a dark lower region, Yomi, of the dead, there were neither rewards nor punishments, but where all, good and bad alike, continued to lead a vague existence, regretting the life and light of the upper world. The dead kingdom, which swarms with the fierce deities of disease and death, the hideous and polluted land' where Izanagi, horror-stricken, found his wife Izanami in a state of putrefaction. Other persons, such as Izanagi himself, do not share the general destiny: it is on a terrestrial island amidst the living that this god chooses his resting-place. Lastly, many divine heroes and illustrious persons were translated to the Plain of High Heaven (Takamakura hara). Just as the first parents had sent the most beautiful of their children, the Sun and the Moon, to that upper region to illuminate it with their brilliance, so men raised the objects of their adoration up to the stars. Like the deified Roman Emperors, they were 'siderious recepta.'

The dead whose brilliant career terminated in this final assumption were not, however, the most important, for they were found 'to exist' in a more modest place as the immortals, the deities of mountain and sea, etc. Their apotheosis was only the natural continuation of their former power. Thus, the particular abode of the dead depended chiefly upon their earthly dignity. Their future life, with which no moral consideration had to do, rested upon an idea that was purely aristocratic. The ladder of the ranks of men had a top which was lost in the clouds and leaned against the floor of the gods. In a word, the spirits of men found a place very readily in the society of the gods of nature. The heroic glory of the one corresponded to the physical brilliance of the other. They took up their abode in the same places, and in virtue of the same inherent sovereignty.

This being so, it follows that the cult of the dead was of a somewhat vague character, and that ancestors were worshipped mainly in proportion to the social power which they held or had held in life. The old mythical account, in which there is a description of the burial of the god Ame-waka-hiko ('heaven-young-prince') by a flock of birds, which comes near to a primitive ceremony, shows us clearly that the Japanese must have practised very complicated rites on such occasions. The existence of funeral sacrifices also shows that they rendered to their ancestors a worship intended to ensure their welfare, providing them with the
objects, animals, and companions which they would require in the other life. The most important writing on this subject is one which relates how human sacrifices were supposed to be made in the ancestral tombs of Japan place at a time corresponding to that of the birth of Christ, but which probably should be brought down to a more recent date, of the actual occurrence of which, however, there is no documentary evidence, first of all, why they thought of this suppression:

"The year of the reign of Suinin, 3 B.C., 13th month, 7th day, the Emperor finished the Mikado, and the Mikado's younger brother by the mother's side died."

"The 3rd month, 2nd day, Yamato-hiko was buried at Tonkatsu in Musa. Their first personal officials were assembled, and were all buried alive upright in the precinct of the palace for several days, then they died but, went and wailed and day and night. At last they died and rotted. Dogs and cows gathered and ate them.

Another passage then tells how the reform was accomplished:

"The 20th year of the 2nd A.D., 7th month, 6th day, the Empress Hibiia-bime no Mikao died. Some time before the burial, the Emperor commanded his Ministers: 'We have already commanded the following of the dead to be buried. What should now be done in performing this burial?' Thereupon Numa, the son of the Emperor, rose forward and said, 'It is good to bury living men upright at the tombs of a prince. How can such a practice be handed down to posterity? I beg leave to propose an exception which you might adopt.' So he sent messengers to summon up from the Land of Izumo a hundred men of the clay-workers' Be (hereditary corporation). He himself directed the men of the clay-workers' Be to take clay and form therewith shapes of men, horses, and various objects, which he had intended to the Empress. Henceforward, he continued, to the future age substitute things of clay for living men, and to set them up. Then the Emperor was greatly rejoiced, and commended Numa no Sukune, saying: 'Thy expediency hath greatly pleased our heart.' So the clay-figures were set up at the palace, and the Mikado no Mikao. And a name was given to these clay objects. They were called shisa no, or clay gods.

Then a decree was issued, saying: 'Henceforth these clay figures must be set up at tumuli: let not men be harmed, and the Emperor hitherto rewarded Numa no Sukune for this service, and bestowed on him a kensencing place, and appointed him to the official charge of the clay-workers Be. His original title was therefore changed, and he was called Hashi no Omori. This is how it came to pass that the Hashi no Moraji superintended the burial of the Emperors (Yokomori), ir. by Akito, 1866, vol. i. p. 178."

With regard to the other funeral offerings, we are supplied only by the pottery, weapons, and ornaments brought to light by excavations in the ancient Japanese tombs. Aston interprets these customs as being 'partly a symbolical language adapted to the dead, and partly an expression of sympathy by the living, and a response by their friends.' The present writer thinks rather that we should see in them the proof of a belief in the continued sentient existence of the dead, and in the necessity for satisfying the needs which they still experience in the other world, i.e., in a word, the existence of a real cult of the dead. Even to-day the majority of the Japanese still retain a faith in a future life, and the conception of the immortality of the soul seems almost foreign to them; and yet towards their ancestors they perform no less rigorously the minute rites of the ancestral worship borrowed by them from China. There is no proof that the primitive Japanese also, who, as the ancient writings testify, were even at the hour of death not in the least concerned about a future life, felt none the less the necessity to do all that they thought might still be useful for their dead relatives. It is true that the ancient documents do not make any direct reference to this point; but the fact must not be lost sight of, that the name of Chief or Prince is reserved for any but famous persons are described, and in which we could hardly expect to find information regarding the obscure life of the common people. They men- tion the human sacrifices offered at the tomb of an Imperial prince more readily than the humble offering of rice and water which poor families might make. But in the ancient monuments, and to heroes and illustrious personages, we find very clear cases of delineation and of worship rendered to the far-off ancestors, gods of nature or human beings, who were regarded as the household gods (yagami) of the great families of the 5th century. (For further details on this last point see the present writer's book, Le Shinshinsa, Paris, 1907, p. 176.)

This cult of ancestors, which we can assert with certainty in some important cases, was developed and systematized under the influence of Oriental ideas. Then Chinese ancestor-worship came to be established with all the ceremonies which it involves and all the consequences it entails, beginning with the very important practice of adoption, which was intended to ensure the continuance of family descent.

The literary evidence, which is on some important points supported by practices prevalent at the present day, has here to be collected from (1) The Apocryphal and Pseudepigraphical writings attached to the OT; (2) the Talmudic and Midrashic literature; (3) the Liturgy; (4) the Kabbalah.

With regard to the various un-Jewish notions about the dead, and even succeeded in partially invading the liturgical form of synagoga-worship.

The literary evidence, which is on some important points supported by practices prevalent at the present day, has here to be collected from (1) the Apocryphal and Pseudepigraphical writings attached to the OT; (2) the Talmudic and Midrashic literature; (3) the Liturgy; (4) the Kabbalah.

The only salient features need, however, be mentioned in each part.

1. Apocryphal and Pseudepigraphical literature.—Taking the different parts of the subject, in so far as sufficiently important data exist, in the order followed by the 'Hebrew' article above, it must first be mentioned that the 'apocalyptic disc' assigned to Enoch and the other elect is, according to the Book of Enoch (325-307 B.C.), imagined to be at the end of the earth towards the east. In it is the tree of wisdom (326-4), whose fruit the holy ones eat and attain high knowledge. In 47:2 the holy ones who dwell in the heavens are, however, spoken of. The well of righteousness mentioned in 485 in perhaps a reminiscence of the 'water of life' which is to be found in the Babylonian heaven and other mythical localities. Whether the pseudepigraphical work known as the Assumption of Moses originally contained the last portions at the end an account of the translation of Moses to heaven still remains doubtful, though a negative answer would seem to accord best with the facts of the case (see above). The Introduction to the 18th Century. Jospehus, however, clearly implies a belief in it (Ant. viii. 48), and 11th in the Ass. Mos.

* The books contained in the Pseudepigrapha Apocrypha (ed. G. J. Ball) are here quoted by the page number, e.g., Hab. 2: 18. The following books, Die Apokryphen und Pseudepigraphen des Alten Testaments (ed. Knaus, 1900) has been followed. The dates of the books range from about 470 (Sirach) to the earlier Christian period.
ANCESTOR-WORSHIP (Jewish)

itself (ending, 'the whole world is thy grave') would seem to be in consonance with the idea. Concerning Baruch, the friend and disciple of Jeremiah, we are informed that he went into Egypt to serve his master in the end of the 13th century (A poc. Bar. 13* 76a),—a favour which appears to stand in some relation to the translation of the earlier saints.

In the ridicule of Babylonian idol-worship contained in the Epistle of Jeremiah is found the statement that they set gifts before the idols 'as unto dead men' (vv. 9-10); but the practice of offering gifts to the dead thus understood to have been as purely Babylonian as the idol-worship itself. A direct warning against the heathen worship of the dead is contained in Jubilees 220 ('Their sacrifices they slay to the dead, and pray to the demons, and eat upon their altars'); and it is natural to suppose that the warning would not have been needed, if there had been no tendency to adopt these practices among the Jews. The supposed reference to offerings made to the dead in Sir 30 18 has been disputed by the Cairo Hebrew text (if here correct); for instead of 'messes of meat set upon a grave,' the Hebrew has 'heave-offerings placed before an idol' (gillul).* The treatment of these words by Steinschneider (about 1885) may possibly refer to offerings made to the departed, but it is not unlikely that religious rites only are meant in the former passage and funer al feasts in the latter. (For the connexion to the Vortr um Apocrypha). It would seem indeed that the progress of monotheism had by that time made habitual offerings to the dead impossible, and that the transformation of the practice into what has not inaptly been called 'the new sacrificial cult of the dead' ('Das neue Totenopfer' [Schwally, Das Leben nach dem Tode, p. 188]) had already set in.

In 2 Macc. 12 5, 6, Judas Maccabaeus is reported to have ordered the Jews under his command to offer up prayers and to send a large sum of money as a gift to Jerusalem, in order to effect an atonement for the Jewish soldiers killed in battle, under whose coats objects consecrated to idols—no doubt intended to serve as a sacred protection—had been found. It has been suggested that the prayers and offerings of money were in reality intended by Judas and his companions to recall rather than to substitute for the dead from the pollution of idolatry; but as the author or compiler of 2 Macc. interpreted the act as having been performed on behalf of the dead (see vv. 5-6, 12, 14), the practice of trying to benefit the dead rather than to substitute for them must have been in vogue when the narrative assumed its present form (some time in the 1st cent. B.C.).

The references to mourning customs found here and there in the Old Testament and in the Apocrypha and Pseudepigraphical writings in the main support the view that the objectionable practices mentioned in the 'Hebrew' article lay outside the range of topics contemplated by the authors. Even the picture of priests having 'their clothes rent, and their heads and beards shaven,' and roaring and crying before their gods 'as men do at the feast when one is dead' (Ep. Jer. vv. 31-32), is taken from a source of the period of the Exile, and shows that the practice of mourning in the Hebraistic tradition was of such a nature as to be permanently rooted among the people. With regard to the number of days given up to mourning, it is remarkable that, whilst Jth 16 and Sir 220 show that the practice of keeping seven days' mourning is universal, and does not necessarily point to exactly similar practices among the Jews. *In the OT, however, the plural only of this word is used. The word 'Qoehler' (q.v.) appears to rest on a misreading (Gelil for gillul); so also the Syriac.

**The suggestion that mourning for distant relatives only is here meant does not seem to suit the context (see note in Knauth's edition).

† For the full enumeration of this and the following lists see A. P. Bender, 'Death, Burial, and Mourning,' etc., in JQR vi. (1891) 341 f.
pressly granted, notwithstanding its known approximation to 'Amorite' customs. In the Shulḥān Arūkh of Joseph Caro (ob. Saed, 1575), which is the accepted guide of strictly orthodox Jewish practice, it is tolerated (see Hilkhōth Ḳeṭūfīth, § 350). Merely academically is, of course, the permission to make burials for kings, but not for persons of inferior rank. Thus, in the Hebrew article, § 3. One of the explanations suggested to account for the pouring away of all the water found in a house in which a death has taken place, is that an offering to the dead, or, at any rate, a provision of drink for them, was thereby intended (see A. P. Bender, JQR vii. [1895] p. 106 ff.). It is, however, more likely that the water was pored away because it was believed to have contracted contamination "(see § 7 in the 'Hebrew' article). A Karate writer of the 10th cent. (Abu-Sarī b. Māshīḥah) declares that a number of Rabbinite Jews of his day were in the habit of burning candles and offering incense in the Rabbinical idea bearing the object of thus offering sympathy and consolation to the bereaved, who are, besides, naturally unable to make satisfactory provision for their own wants at such a time. The rendering of the garments on the part of mourners is now generally, but not always a slight ceremonial act, consisting in tearing (the left) lapel of the coat one is wearing. In Talmudical and subsequent times there was a custom of barring the shoulder and arm (see Bab. Betah Gidōn, fol., and cf. Sonakhtoth i.x.). A. Bacher (ZATW, 1901, pp. 81-83) regards this act as a sign of subjection of the living to the dead (see § 4 in the 'Hebrew' article). If there were here a revival of the cult of the dead in the old sense of the word, Jastrow (ZATW, 1902, pp. 117-119) tries to controvert Bacher's opinion by showing that practices of this kind are a far cry from the ancient habits of life, entirely different, in fact, originally obtained in connexion with mourning (see §§ 5 and 6 in the 'Hebrew' article) because a state of mediocrity was the primitive condition of man. In reality, however, the two explanations do not clash with each other, for the sense of self-humiliation and subjection to the departed spirit would be quite compatible with a reversal to an older and less dignified mode of existence.

All trace of ancestor-worship (supposing that there ever was any in it) has disappeared from the rather precarious working of the levirate law in modern times. Nor is there now any trace of a ritual of ancestor-worship, based on the uncivilized dead bodies, fear of contamination through contact with a decaying human organism being the explanation adopted. A certain kind of maintaining dead men's names happens in e.g.

"Mr. Israel Abraham, on the authority of Ninian Gernon (ob. shortly after 1574), favours the view that the pouring away of water was not the taking of the dead in remembrance of a death (Jewish Life in the Middle Ages, p. 301); but if so, why was there pouring away all the water in the house? The practice, therefore, though primarily pointing to quite a different principle, naturally got to serve in a secondary way to indicate death by a kind of association of ideas."

See Perl, MGJW, 1861, p. 324.

Rab. B'rakhōth, 186 (parallel passage in 'Abod de-Rabbī Nathan, ch. ii.), where a certain pietist, having on some occasions taken up his lodging at the cemetery, is reported to have overheard the conversation of the mourning parties at the time of the funeral or failure of crops sown at different times of the year.

3. The Liturgy. — The high generation, almost amounting to a rule, peace to the Pharaoh, and also finds expression in some parts of the Jewish ritual. A cup of wine is at the present time in many places reserved for Elijah in the Passover-night Service, which, though celebrated in commemoration of the release from Egypt, also emphasizes the hope of future redemption by the Messiah, whose forerunner was to be Elijah. The same prophet is also assumed to preside at the ceremony of ancestor-worship, the chair in which the actual operator sits being designated the 'chair of Elijah'1 in the German and other forms of the ritual. In the Pirḳe de-Rabbī Eliezer (latter half of the 8th cent.), end of ch. xix., this idea is brought into connexion with the renovating of the dead on the Sabbath is recommended in order to prevent their returning to Gehenna (cf. the remarks on Kaddish and Ha'azinu Nishḥānāth in the next §).

Not much can be said here as significant is here to be noted in connexion with mourning customs. The repast provided in modern times for mourners by their neighbours after a funeral is clearly understood to have the object of thus offering sympathy and consolation to the bereaved, who, besides, naturally unable to make satisfactory provision for their own wants at such a time. The rending of the garments on the part of mourners is now generally, but not always a slight ceremonial act, consisting in tearing (the left) lapel of the coat one is wearing. In Talmudical and subsequent times there was a custom of barring the shoulder and arm (see Bab. Betah Gidōn, fol., and cf. Sonakhtoth i.x.). A. Bacher (ZATW, 1901, pp. 81-83) regards this act as a sign of subjection of the living to the dead (see § 4 in the 'Hebrew' article). If there were here a revival of the cult of the dead in the old sense of the word, Jastrow (ZATW, 1902, pp. 117-119) tries to controvert Bacher's opinion by showing that practices of this kind are a far cry from the ancient habits of life, entirely different, in fact, originally obtained in connexion with mourning (see §§ 5 and 6 in the 'Hebrew' article) because a state of mediocrity was the primitive condition of man. In reality, however, the two explanations do not clash with each other, for the sense of self-humiliation and subjection to the departed spirit would be quite compatible with a reversal to an older and less dignified mode of existence.

All trace of ancestor-worship (supposing that there ever was any in it) has disappeared from the rather precarious working of the levirate law in modern times. Nor is there now any trace of a ritual of ancestor-worship, based on the uncivilized dead bodies, fear of contamination through contact with a decaying human organism being the explanation adopted. A certain kind of maintaining dead men's names happens in e.g.

"Mr. Israel Abraham, on the authority of Ninian Gernon (ob. shortly after 1574), favours the view that the pouring away of water was not the taking of the dead in remembrance of a death (Jewish Life in the Middle Ages, p. 301); but if so, why was there pouring away all the water in the house? The practice, therefore, though primarily pointing to quite a different principle, naturally got to serve in a secondary way to indicate death by a kind of association of ideas."

See Perl, MGJW, 1861, p. 324.

1 The report found in Sonakhtoth i.x., of R. 'Akiba striking his breast at the death of R. Eliezer until the blood gushed out, has apparently no historical significance, the act having been merely an expression of great personal grief.
already in vogue in Macœbbean times, or, at any rate, at the time to which the composition of 2 Mac. belongs (see § 1). Instead of seeking to obtain benefits through the agency of the dead, the living engage in actions calculated to improve the condition of the departed; and as the surviving son or sons are the most approved agents of this form of the cult, it is only natural for those who see in the law of levirate (see § 6 in the 'Hebrew' article) an original connexion with the ancient notion of the descent, the legal use of the Kaddish in relation with that law, and to refer the religious function obligatory on the descendants to the same motive in both sets of regulations. The objection that might be raised is that, if the Kaddish were really connected with the idea underlying the law of levirate and the ancient sacrificial ritual of the dead, one would have expected to find it in use in much earlier times than can be attested by the existing literary evidence, continuity in essence being one of the marks of gradual development. But it is, on the other hand, not against analogy to suppose that if —as is the case with the Kaddish—the idea itself was not eradicated from the popular mind, it should, under certain favourable influences,* have been later on fully revived under the form of the Kaddish 'Kaddish (orphan's Kaddish). Such a use of the doctrine—that it should be the case—may be seen as the embodiment of old forms of thought in fresh and later shapes.

(b) The same may also be said of the most solemn office connected with the departed ancestors, i.e. the Hashkaran Nashanôn ("remembrance of souls"), which forms part of the Askenazic ritual for the eighth day of the Passover, the second day of Pentecost, the eighth day of the Feast of Tabernacles, and the Day of Atonement. In this office, direct petitions for the well-being of departed parents and other relatives are offered;† thus more explicitly attesting the revival (though in a much modified form), since medieval times, of an earlier idea that the living are capable of rendering substantial service to the departed. In the Spanish ritual the same idea, in the form of direct petitions, is embodied in the Hashkaran ("laying to rest") which forms part of the burial ceremony and is also—under certain special regulations—recited during the synagogues services.

Concerned with the honour paid to departed worthies is the doctrine of metempsychosis, which, though in origin and essence entirely foreign to the Mosaic, ‡ and the Spanish, § Semitic thought, succeeded about the 8th cent. in passing from Greek (and Indian) thought into the tenets of certain Jewish sectaries, through the medium of Muhammadan mysticism. Saadyah Gaon (ob. 942), who appears to be the first to make mention of it in orthodox Jewish literature, protests strongly against it. But it nevertheless gained a firm footing in the Kabbalah, and attained an extraordinary development in the comparatively modern Kabbalistic system of Isaac Luria, the works on ḳabalah ("transmigrations") composed by himself and his followers, containing long lists of identifications of the departed with prominent Jewish women of later date. An addition to the doctrine of metempsychosis made by the Kabbalists is the principle of ṣabbūr ("impregnation"). If two souls (who may, of course, be spirits of the dead) do not separately feel equal to their several tasks, God unites them in one body, so that they may support and complete each other. This doctrine may have been suggested by the theory of incubation (see farther on), which is itself clearly connected with the belief in demonic possession, taking the term ḥa-da in this instance to denote a spirit, without reference to its origin or moral qualities.

Pilgrimages to graves are much encouraged by the later Kabbalists. The tomb of Simeon b.

* It may thus well be that, as some have thought, the Kaddish is in a way the Jewish counterpart of certain practices in the Hindu, and especially the Buddhist, tradition, † for the same time go back to ancient truly Semitic habits of thought. See further details see, e.g., L. N. Dembitz, op. cit. pp. 219-220.

† See Dr. Gaster's edition of the Spanish Services, vol. i. p. 289, and the particular case of the deceased (pp. 282-283). The article 'Jahreiz' in the JE (vol. vi.) will be found instructive, for both the modern and the ancient manner of observing it.

‡ The Samaritans often use the formula ה'כ ב י י ("by the merit of Moses")..

§ Concerned with the belief implied (though not countenanced in its literary sense) in 14.17, 18.

¶ On pilgrimages generally the art. "Pilgrimage" in the JE (vol. ii.) should be consulted.
Yobai at Meron near Safed is thus devoutly re-sorted to on the 33rd of ‘Omar (i.e. the 33rd day from the 2nd day of Passover), when a great popular festival, at which illuminations are an important feature, is celebrated. Pilgrimages to the grave of Isaac Luria at Safed are made each new moon, and the persistence in many places of the popular custom of praying at stated times (as, e.g., on the 9th of Ab) at the graves of departed relatives is probably also partly due to the influence of Kaballistic ideas.

The efforts of 16th and later Kabbalists to obtain inspiration from the souls of the departed by clinging with outstretched bodies to their graves, and thus in a manner to become incubated with the spirits of the dead, remind one of the practice of necromancy at graves condemned in Is 66:3 (see § 8 in the 'Hebrew art.'); but as the Kabbalists evidently arrived at this method by a new and largely borrowed line of thought, and as, furthermore, their object was not necromancy, but what they regarded as spiritual illumination, the custom cannot be considered as a survival of the ancient practice. A species of oneiromancy is the same Kabbalists' belief that information of high import can be obtained through dream-vision of the departed.

The general result obtained from a study of the Jewish part of the subject is, owing to the diverse forms of development undergone by the thoughts and practices in the different countries, far from homogeneous. The Talmudic and Midrashic literature thus exhibits a larger amount of reminiscence of, or revereration to, ancient thought than the Apocryphal and Pseudepigraphical writings, though these latter contain considerable influence of times to earlier Hebraism; and theLiturgical, influenced partly by the Kabbalah, and partly—as is not unlikely—by Christian practices, shows some interesting instances of the revival of old ideas in a much modified form. The Kabbalah itself, as has been shown, has added the doctrine of metempsychosis to the original Jewish and Hebrew stock of ideas, and it has in connection with it furthermore introduced the theory of dual personality, thus introducing in one body, thereby affecting the spirits of the departed in a manner previously unheard of in Judaism.

LITERATURE.—Besides the passages of the original sources (see also the following works), books, essays, or articles may be consulted with advantage. For the Apocryphal and Pseudepigraphical writings, in addition to Wrede, ch. ii., in F. Schwally's Leben nach dem Tode, 1892. From the Kabbalistic point of view, J. Freres, Die Leichenfeierlichkeiten im nach-jüdischen Judenthume in MfJ.W. x. (1891) pp. 345 ff., 376 ff.; A. P. Bender, Religie, Rites, and Customs of the Jews, connected with Death, Burial, and Mourning' in JQR. xxi. (1891-2) 371 ff., 464, 911, 918 ff. (also discusses modern points of view); A. Büchler, Das Enden der Schützer und des Armes als Zeichen der Träger in Z.A.W., 1891, pp. 31-32. For points in the Liturgy, the articles 'Seferfeiler,' 'Kaddish,' etc., in Hamburger's Der J. N. Dombritz, Jewish Services in Synagogues and Home (the same author wrote the art. 'Kaddish,' etc., in the J.E.). For metempsychosis, etc., L. Ginsberg's instruction on 'Kabbalah' in J.E. xiii. fully warrants, to be supplemented from other sources; also I. Brody's 'Transmigration of Souls' in J.E. xii. 251-298. A work dealing with the subject will be found in the literature given at the beginning of C. Grünseisen's Der Ahnenkultus und die Verehrung von Ahnen, 1896.

G. MARCOLDIOUTH.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Polynesian and Tasmanian).—In Polynesia ancestor-worship was far less important than in Melanesia or Micronesia.

ANCIENT-WORSHIP AND CULT OF THE DEAD (Polynesian and Tasmanian).—In Polynesia ancestor-worship was far less important than in Melanesia or Micronesia. In the latter two, however, it was a prominent feature of the government, and even the officials and nobles who reigned in the island groups, meeting after death, the souls of the common people perishing immediately after death.

Ancestor-worship was of a different character in the lighter, more independent, and more isolated Polynesian islands. The influence of the old mysticism of the Bushmen is also noticeable. Among the Maoris, the spirit of the deceased is believed to return to the house in which he lived, and the household goods are not disturbed, but are used by the mourning relatives. The feeling of revenge is common, and it is believed that the dead will return to punish those who have caused their death. It is also believed that the dead will return to help the living and might work them either well or woe, but that they were in the main malevolent, and were accordingly, for the most part, objects of dread (Waitz-Gerland, loc. cit.).

Between the general worship of ghosts and the cult of ancestors a distinction should be drawn, according to the kind of female or gods, and were often the spirits of deceased fathers, mothers, brothers, sisters, children, and other relatives, as well as of departed warriors who had been conspicuous for bravery. Although the oramatuas frequently helped in time of need, and opposed the malevolence of other ghosts or of hostile magic, they were, as a rule, cruel and irritable. It was thus necessary to place the corpse of the dead at a considerable height above the ground, this being apparently the origin of the fata mapumana, or altar for the dead (Moerenhout, Voyages dans les deux Grandes, Paris, 1829, i. 470-471). Food was brought daily to the dead for six weeks or two months, and if the deceased had been a man of eminence, a special priest, termed harientupana, visited the body for several weeks and offered food. It was stated (Moerenhout i. 1872) that a oramatu could smell the spiritual part of this offering, and, in case it returned, it would therefore be gratified and content, so that it would not desire to resume earthly life (Ellis, i. 404-405; Moerenhout, i. 547; Wilson, Missionary Voyage to the Southern Pacific Ocean, London, 1799, p. 345). At the burial of a chief a hole was often dug in which the hostility of the deceased against his family was supposed to remain. Consequently, when the body was interred, his death, was buried, thus obviating the possibility of his malevolent return to his surviving kinsmen (Moerenhout, i. 552). Connected in a sense with the cult of ancestors was the mourning for the dead, together with the self-mutilations practised by the survivors (Waitz-Gerland, vi. 401-404); and here, too, belong the human sacrifices of wives, slaves, and favourites at graves in New Zealand, Hawaii (Waitz-Gerland, vi. 404-405), and the Fiji Islands (Russel, Polynesia, Edinburgh, 1843, p. 72). The motive for both these latter features was either the gratification of the oramatu at the sight of the grief which his death had caused, or a provision for his needs in the future life.

The religion of the Tasmanians was at a much lower stage of development than that of the Polynesians; yet it is clear that they, too, believed in a life beyond the grave, and thought that the souls of the dead might return to bless or curse them. They accordingly carried a bone of the deceased as a charm; yet the 'shades' (oramatu) of dead relatives and friends were regarded, on the whole, as more kindly than the gods. Of an actual cult of ancestors, however, little seems to be known (Ling Roth, Aborigines of Tasmania, 2nd ed., Halifax, 1899, pp. 54-56). Louis H. Gray.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Roman).—The great extent of ancestor-worship among the Romans, and its equally great influence, make it one of the most interesting problems in the field of Roman religion, but also a subject the understanding of which brings with it a grasp of the fundamental principles of Roman civilization and the development of the religion of the Romans. As it is in the main a private worship (secra privata) rather than a public one (secra publica); for instance, Antichrist, Anthologi, 134; Nator, 52; Volker, Leipzig, 1857, vi. 902; Dillon, Narrative of a Voyage in the South Sea, London, 1829, ii. 10-11). The ghosts of the dead might appear to the living and might work them either well or woe, but they were in the main malevolent, and were accordingly, for the most part, objects of dread (Waitz-Gerland, loc. cit.).
Empire, with its vast number of sepulchral inscriptions (CIL vi., CIG xiv., over 40,000 for Rome alone) has not had any extensive contemporary sources. For the earlier period, however, we have a sufficient number of literary sources to enable us to form a definite idea of the cult, inasmuch as the study of the cult of all religious ceremonies justifies us in combining testimonies from various historical periods; and, though the underlying ideas did undoubtedly change somewhat from generation to generation, the main course of the development has often been asserted that the Romans had from the beginning a persistent and continuous belief in the immortality of the soul. This statement is absolutely misleading. We have seen that the habit of thought of the early Romans possessed a double for everything; the dead must therefore have a double as well as the living. This double, even though it was the double of the dead, was thought of as possessing a certain sort of life—it could at certain times return to earth and exercise an influence for ill upon the living. This potentiality, however, was simply one of a vast number of similar potentialities; there was nothing individual about it. Each family, its own family represented by the living members. Subsequent centuries, saturated with Greek philosophy and filled with an idea of individuality which was totally unknown in the earlier days of Roman religion, in spite of its generally logical character, is no exception to the rule. It will never be possible for us, even with all the sepulchral inscriptions in the world, to establish one formula which will cover all cases—for the simple reason that no such formula ever existed. We are, however, able to make a general statement which will represent fairly well the normal concept, apart from the very numerous and very contradictory deviations.

When a man died, he went over into the Di Manes,—the good gods,—entering their ranks and losing all individuality and all specific earthly relations, except that when the Mones returned to earth, they entered the family to which they had belonged on earth; and thus the family idea, so fundamental in the social structure of Rome, triumphed over the grave, and possessed an immortality with which the individual failed to obtain. The inclusiveness of the term Di Manes is seen in the fact that the gods who ruled over the dead, as well as their subjects, the dead themselves as gods, were all included in the phrase, though it is equally significant of the masses that the actual gods of the dead, though demonstrably present, never rose to great individual prominence until the Greek Pluto-Persephone came into Rome as a Roman deity.

3. Upon this theory of the Manes the cult followed inevitably. If the dead were able to influence the affairs of the living, they must be propitiated, and incantations were used to this end; thus the cult of the dead was in its origin an ancestor-worship, and may well have been originally a family matter exclusively. Further, it was incumbent upon each living member of the family not only to perform these sacrifices, but also to

ANCESTOR-WORSHIP (Roman)
provide those who would succeed to the sacrifices after his death, in other words, to propagate the family. As for the State itself, it was also a family; and thus in that macrocosm of family life which the early State religion shows,—with its Vesta, its Cybebe, its living, after all, it must he said that the sacrifices for the dead, not only for the dead already provided for by their own families, but also for that ever-increasing number of 'ancestors' whose descendants, in spite of all precepts, continued hallowed through of those immediate claims on the world of the living had been removed, and who therefore all the more readily would turn their ill-will against the State at large, unless she gave them satisfaction. Thus it was that both the *sacra privata* and the *sacra publica* were in part a worship of the dead.

There are sufficient suggestions and recollections in the body of Roman law to warrant the assumption of this theory, which, as one readily recognizes, is a close parallel to the Hindu law; but there is also this distinction, that, whereas Hindu law is based directly upon a sacred foundation, Roman law, where we first meet it, is already in the dual stage of *jus divinum* and *jus humano*, with their intricate interlacing. We have merely the shadow picture of what once was. But even the shadow picture is tolerably complete, and the *jus Manuum* formed the basis of all the regular topics of Hindu law generally in relation to heirs and inheritances. The cardinal principle was that the dead was the apotheosis of the living, and his _sacra_. Thus Cicero (*de Legib. ii. 22*) quotes an old law: *'Let private sacrifices continue forever,'* keep sacred the laws concerning the *sacra_, and that the heir was under obligation to continue the sacrifices, and this was a prior lien on any money which the dead might bring him. Similarly all the regulations were often motivated by the desire of the adopter to obtain an heir to care for the sacrifices; and, though the process was a civil one, it was necessary, in so much as it involved the giving up of one set of sacrifices and the taking of another on the part of the living. Allusion, to discuss it in its fullest extent, is primitive of all the assemblies—the Conitia Curiae—and to obtain the consent of the Pontifex Maximus to the giving up of the one set of sacrifices for the adoption, *cf. Hunter* (p. 766), a consent which was never given if the transfer left the one set of *sacra* destitute of an earthly representative (for a similar precedence in Hindu law, *cf. Hunter*, p. 205, note 2). We may also compare the old law ascribed to Romulus (*Plut. Rom. 22*), whereby whoever sells his wife is given over to the *Manes_, probably because this was a blow to the stability of the family, and hence to the continuity of sacrifice to the dead. The actuating motive underlying all the *sacra Manum*, all the enactments concerning the dead, was neither a chivalrous pity nor primarily a regard for the comfort of the dead, but first and foremost a self-protective action on the part of the living. If the dead have offended the gods of the other world, and lest the powers under the earth might hinder the gathering of the crops which had come out of the earth, that every year before the beginning of harvest a sow (*pora praedicta*) was sacrificed to Tellus (and perhaps other *sacra*) by him who had sown the seed of the dead his due (Paul, p. 223); later, by all men to Ceres and Tellus together—*they might have offended, so that eventually it began to be thought of merely as a sacrifice to Ceres for a good harvest* (Wissowa, p. 109).

4. In its earlier stages the cult of the dead belonged to the religion of fear rather than the religion of love. The spirits of the dead were capable of doing injury; they must first be brought to rest in the lower world. There they were incapable of doing harm; and they could rise from there only on certain occasions, and on those occasions religion provided for their pacification. All the cult acts pertaining to the dead may be grouped, therefore, under these two ideas, the bringing of them to rest, which usually immediately after death, and the placating of the spirits on the regular annual occasions when they returned to earth again. Around this crude root of the religious idea of the dead itself, breathing a new and better spirit into these old forms, and possibly instituting one or two festivals of its own. But we must deal first with the self-protective side.

The ceremonies connected with death and burial do not as a whole concern us here, but merely those festivals which were strictly religious in character. These features seem, all of them, to go back to the earlier stages of the State for its extra-ordinary periods of devotion occasioned by some great calamity (on the number nine as a sacred number cf. Diels, *Sibyll. Blätter*, p. 41). On some of these days the *Feriae Dionysiacae* occurred, a celebration about which we know little, except that...
The attendance of the members of the family was considered so necessary that the military authori-
ties recognized it as a valid excuse for the absence of
a recruit from the enlistment inspection, 'pro-
vided it had not been set on that day for the pur-
pose of going to Rome.' (Feb. 4, 4 B.C.)
The period of mourning ceased on the ninth day with a
final banquet, with offerings to the dead, the
cena novemlalae; and if funeral games were cele-
brated afterwards, these were the same ones as on
this day (Indi novemlalae). The spirit of the dead
was now safely housed in the lower world, whence
he could not return, except on stated occasions;
and the Roman could go about his daily business,
mindful only of these stated occasions when they
arrived.

As regards the lower world itself, the Romans
seem originally to have interested themselves very
little in it. Every bit of description is given by
writers under Greek influence, and the details are
identical with those of the lower world of the
Greeks. Now, it is not likely that a strong Roman
tradition could thus have been totally destroyed;
we sought, however, to be liberal, and trust to
Hence it is probable that the Roman lower world
was not furnished with the fittings of imagination
until Greek mythology provided the models. There is
nothing to indicate this, when we consider that the
half-humanistic character of the Roman pantheon
precluded the growth of mythology for both the
greater and the lesser gods. From the time of the
Greeks on, the Romans pictured to themselves the
lower world in the same form as the Greeks had
done (cf. Rohde, Psyche, vol. i.); and before that
time, if they thought of it at all, and inevitably they
must have done so to some slight extent, it was
represented as a mere place of shadows and
darkness. Their practical concern was the ques-
tion of the eventual return of the spirits to trouble
them; and hence their attention was concentrated
not on the lower world in pleasant poetic fancies,
but on the door between it and the other world:
the passage through which these divine dead came
up. This entrance was the mundus, about which
the Romans possessed original beliefs strong
enough to remain even under the influence of
Greek thought. The mundus was the opening of
the lower world; it was in the form of a trench
into which sacrifices to the gods of the lower
world, and to the dead as gods, could be thrown.
In the centre of the trench was a tomb, and at its
end a trench was dug and sacrifices performed.
The oldest mundus of Rome was that of the Palatine
city (for its location cf. Richter, Die älteste Wohn-
döße des röm. Volkes, Berlin, 1891, p. 7 ff.;
Hülsen, Röm. Mitt. v. 76 ff., xi. 202 ff.). It
was opened three days in the year: August 24, Oc
tober 5, and November 8; probably the stone, and
possibly some earth was removed (cf. Poggio, p. 142;
Macrobius, Sat. i. 16, 17 f.). 'When,' as Varro
says (cf. Macr. i. 1), 'the mundus is open, the door
of the sad gods of the lower world is open, there-
fore it is not proper on those days for a battle to
be fought, nor for the army to march forth, a ship
to set sail, or a man to marry.
There were other sacred trenches of the same sort
in Rome: one in the Forum, the Lacinus Curtius,
connecting the Forum of M. and the Forum
recently discovered; cf. Hülsen, Röm. Forum, p. 139;
and, in general, Gilbert, Top. i. 334 ff.), another the
so-called 'grave of Tarpeia,' which was evidently
opened on Feb. 13, when one of the seven bands
sacrificed there on the 15th, the day to march
forth, a ship to set sail, or a man to marry.
On the other yearly festivals of the dead we
know but little: we hear of a festival of the Car-
neria on the first of June, the 'Bean Calends'
(Claud. Par. v. 106 f.).
The Flamen Quirinialis brought offerings (Varro,
Ling. Lat. vi. 23 f.; Fast. Prim. to Dec. 23; cf.
Wissowa, p. 188 and note 1).
6. Apart from these special occasions for each
particular genus, there were two general occa-
sions in the year when all the dead were
supposed to return to earth again, the nine
days from Feb. 13-21, and the three days, May 9,
11, 13. The first was called the Parentalia, the
second the Lemuria. These two were so
entirely different, and the Parentalia is on such an
infinitely higher plane ethically than the Lemuria,
that it is difficult to think of them as having the
same origin; yet, when we compare All-souls' Day
with Halloween, we see the same populace.
The Parentalia kept pace with Rome's increase in
culture, whereas all that was crudest in old folk-
lore clung to the Lemuria.

Since the Lemuria represents a more primitive
stage, it had better be discussed first. The most
picturesque account is that given by Ovid (Fasti,
v. 419 ff.), but we must be on our guard in using
it, remembering that Greek ideas and a poetical
imagination have been added to it. Ovid writes.
The ceremony takes place at midnight.
The father of the household, barefooted, passes
through the house, throws black beans behind his
back, and, as he does so, utters a prayer, 'that
these I redeem myself and my family,' Then he
shakes cymbals and says again nine times, 'Manes
exite paterni,' 'Go forth, ye divine shades of my
fathers.' The comparison of this ceremony with the
'driving out of the shades' by some common among
primitive peoples of to-day, suggests itself immedi-
ately (cf. Frazer, Golden Bough, iii. 83 f.). Here,
as everywhere else in this interesting and valuable
book, the task of the task of the archaeologist is
in examining the sources given, as they differ widely
in scientific value; cf. also Rohde, Psyche, i. p. 289.
The Parentalia presents quite a different picture.
As its name implies, it is the festival of the
ancestors, of the making of offerings to one's
ancestors. It began at noon of Feb. 13 and con-
cluded for nine days. The first eight days be-
longed only to the sphere of private worship, but
the ninth day (Feb. 21) was also a public celebra-
tion, the Forovia (Varro, op. cit. 15; Paul. p. 85;
cf. Marquardt, iii. 310 f.). During all these nine
days marriages were forbidden, the temples were
shut, and the magistrates laid aside their official
dress. Every family tree itself was considered as
an offshoot of one of its ancestors and made offerings there. Most
appropriately, on the day after the close of the celebra-
tion, Feb. 22, a family festival, the Ceristia, or
Carina Cognativa, was held, when family quarrels
were adjusted, and the peace which the individual
member of the family had just made with the dead
was now extended to the living members among
themselves (cf. Ovid, Fasti, ii. 617; Vol. Max. ii. 1
8; Colond, Philol., cf. CIL iii. 258).
The attempt has been made to distinguish between the
Lemuria and the Parentalia by considering the former as the feast of
the unbodied, the latter as the feast of the embodiment, and the latter as
the festival of the buried, and therefore friendly, dead (cf. Ward
Poucher, Rome, p. 106; CIL ii. 258). But Lemuria is
probably more former than the latter; but the
Parentalia is the same ancestor as the Lemuria,
and the the very fact that their interference, either for good or ill, is
confined to stated seasons, proves that they were buried, i.e.
admitted into the world of the dead. And this is
understandable.
Of the other yearly festivals of the dead we
know but little: we hear of a festival of the Car-
neria on the first of June, the 'Bean Calends'
(Claud. Par. v. 106 f.)

In one respect the spirit-worship of the Romans
was in distinct contrast to that of the Greeks and
of most other ancient peoples. The dead had the
power of returning to earth again on stated occasions, but they could not be called up and consulted. 'Neeronamcy' was an altogether imported idea, and wherever we meet with references to it, foreign influence is evident. custom is no accident. The idea of prophecy was hardly present in any form in native Roman religion; their science of augury and of the haruspices was simply a means of ascertaining the approval or disapproval of the gods in regard to a certain action, merely of obtaining an answer to a categorical question. But if the dead might not be called upon arbitrarily to give information, it was possible for certain individuals to be given over to them for punishment, as in the consecratio, or for certain individuals voluntarily to give themselves over to them, as in the devotio. Consecratio is the transfer of a person or thing out of the realm of the *sae humanum* into that of the *sae divinum*. Where a person is involved, it is, of course, a punishment. Persons or things might thus be given over to any deity or group of deities, and the *Di Regia* and *Plebeia*, formed of the surnames of those who sold their houses was *dis manibus nata* (Plut. Rom. 22); also a child who struck his parent (Fest. p. 230); and the violator of a grave (CIL x. 4253). The characteristics of the devotio are that the nature of the case, and further, the nature of a vow, made to the *Di Mancs*, or Tellus and the *Di Mancs*, whereby a man's life is given to the *Di Mancs* in advance in order that other men's lives may be destroyed. We have semi-legendary accounts of three generals who offered their own lives that the enemy of the State might be destroyed: the first the case of Decius, the father, in the battle of Vesuvius, B.C. 340 (cf. esp. Livy, viii. 6. 8-16; 9. 1-11, and, in general, Münzer, Di RAY. and Propserina, form of the sanctuary of the gods of the upper world; but this had the effect of only emphasizing the more the undeveloped dense mass of the *Di Mancs*. On the other hand, during these centuries of the Republic, another idea had been slowly developing, the idea of the *Genius* (or if a woman, the *Juno*), or divine double of the individual, accompanying him during all his lifetime. In the question as to what became of the *Genius* after the death of the individual, and in the answering of that question by ascribing to him a life after death, the idea of personal immortality had its rise in Rome. The state of personal immortality, indeed, was purely philosophical ideas foreign to the real beliefs of the company, and partly by a desire to identify and generally systematize all forms of Roman belief; but we can dimly recognize the following development. Originally the *Genius* and the *Di Mancs* had no connexion whatever, except the mere matter of sequence; so long as a man lived he had always an individuality, at first thought of as merely physical, later as psychological; but when he died, his individuality ceased, he was gathered to the majority (not the individuality, but the individuality as a group, or, in it), the *Di Mancs*. Now, in the course of time one of the effects of Greece on Rome was the development of individuality and of the idea of individuality. All these ideas centred in the *Genius*, and hence it was natural to think of the *Genius* as existing after death. It must, however, in that case stand in some relation to the *Mancs*, it must be identical with at least a part of them, that part contributed by the individual at his death. It is not surprising then, that, beginning with the Augustan age (cf. Hübner, in Müller's Handbuch, i. p. 529, § 47), the idea of the individual makes itself felt in connexion with the *Mancs*, and we find the idea arose simply that we have merely the *Genius* or the Juno of such a person (for the *Genius*, cf. CIL v. 246, iv. 5794; for the Juno, v. 160, x. 1009, 1023, 6597). This reinforcement by the *Genius* was the salvation of the *Mancs*; it gave new life to the concept, and the *Di Mancs* began to develop out of a mere mass of spirits into a host of individual protecting deities. The cult went on in its old forms, but a new spirit, a new idea, had been brought into it. It is along this line that the *Di Mancs* had their effect on the two great religious developments of the Empire—the emperor-worship of the first two centuries, and Christianity in its later centuries.

2. The worship of the dead and emperor-worship. —The elevation of the Roman emperors into gods was caused by two entirely distinct sets of tendencies; the one coming from the Orient, a tendency which, in so far as it was not checked (as it always was by all the better emperors), made the emperors into gods during their lifetime as well as after death; the other a thoroughly Roman concept, the idea that during life the man is not the *man*, the *Genius* was divine, but that after death, when the *Genius* still lived as the individualized *Mancs*, the offerings might be made to the individual as a god. The difference, therefore, between an emperor, who allowed himself to be worshipped merely within the limits authorized by Roman ideas, and an ordinary Roman citizen was this: during lifetime the *Genius* of each was an object of worship, but the emperor's *Genius* was always, in all cases, one of the regular gods of the State cult, whereas the *Genius* of the individual belonged purely to the private cult, usually confined to a man's household. After death, both the emperor and the ordinary citizen were worshipped as gods, with a similar distinction, namely, that in the case of certain emperors the Senate, after examining their acts, decreed that they should be included among the regular gods of the State. The only real distinction, therefore, was the inclusion of the emperor's *Genius* among the gods of the State in every case, during life, and the inclusion of the emperor himself, i.e. his *Mancs*, among the State gods after death. There can be little doubt that emperor-worship had the effect of strengthening the worship of the dead in general.

3. The worship of the writers and Christianity. — Among the many difficult problems which the teachers of the Christian religion had to solve in
the Roman world, perhaps none was more difficult than that presented by the developed concept of the worship of the dead as protecting and helping deities. Polytheism, so far as the greater gods were concerned, had given way to the veneration of the dead, placed over into monotheism without the aid of Christianity, merely by the doctrine of a philosophical syncrétism; but it was with inborn, almost instinctive beliefs, bred in the bone, such as the divinity of the dead, that the Church's real battle had to be fought. Her method was one of compromise; it was the authorization, nay the encouragement, of the worship of certain individuals, men and women who as martyrs had by one act set the seal upon their faith, or whose life had been holy to such a degree as to merit certain miraculous manifestations. The worship of these martyrs and saints was intended primarily to keep them as exemplars in the minds of the living. But this was not enough for a people who had worshipped the dead not so much because they had been good during their lives, as because these gods of the dead now used only evil, and protected and helped them in their hours of danger and need. The saints, too, must accomplish something for them. This also was granted by the Church, but merely in the sense that the saints acted as intermediaries, whose powers, when God was pleased to use them for the probability of obtaining one's petition. Theology stopped there, but humanity went further. By that facile transfer of the means into the end, of the intermediary into the final, which is so characterist of simple minds, aided too as they were in this case by a habit of thought which had made the dead into gods like other gods, these saintly intercessors soon became gods on their own account, and the number of each became a cult-legend, indicating the circumstances in which each was especially powerful. Thus there arose, literally from the dead, a host of minor gods, a myriad of potenti- als, like the old gods of the so-called Indigita- menta. Human frailty had, at least in the lower classes, triumphed over theology, and the real religious world of the Roman's latest descendants bore a startling resemblance to that of his peasant ancestors in the lower classes of Rome. See also art. ROMAN RELIGION.

JESSE BENEDET CARLTON.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Slavonic).—We have only very few references to the cult of the dead among the pagan Slavs. The German chronicler Thietmar, who had not much sympathy with the Slavs, says (in the first Book of his Chronicles, § 14), 'They believe that everything ends with death' (Omnia mortem usque ad finem patiuntur). The Russian chronicler known by the name of Nestor, in the chapter in which he relates the conversion of the Russian prince Vladimir, puts into his mouth the words, 'The Greek priests say that there is another world, which would seem to imply that the pagans of Russia did not believe in that other world. On the other hand, the Bohemian chronicler, Cosmas of Prague, declares that the Christian prince Bretislav II., by an edict in 1092, the Russian chronicler by the name of Nestor, in the chapter in which he relates the conversion of the Russian prince Vladimir, puts into his mouth the words, 'The Greek priests say that there is another world, which would seem to imply that the pagans of Russia did not believe in that other world. On the other hand, the Bohemian chronicler, Cosmas of Prague, declares that the Christian prince Bretislav II., by an edict in 1092, has suppressed 'sepulturas quae fiebant in silvis et campos, atque sceenas (or cenosis) quas ex gentili ritu faciebant in bilvis et in trivis quasi omniamurum paustatiunam, item et incyricus profanos quos super mortuos inanes cientes antiqua ritu, ad quos paupertatis et nescientiae causa, apud gentes a mortuis inanes cientes antiqua ritu, ad quos paupertatis et nescientiae causa, apud gentes a mortuis, 1901, 119).—It is therefore more than likely that the Lithuanians offered sacrifices to the dead on the anniversary of their decease, when, after a formal prayer to them, water and food were cast beneath the table of the feast in their honour, and lights were placed on it even at midday (Brückner, Archiv für slawische Philologie, 1901, 119).—See also art. Aryan Religion.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Teutonic).—There is abundant evidence for Manes-worship among all Teutonic peoples. As a rule, however, the authorities give no indication in their writings of the rites being confined to descendants and relatives of the deceased, though it is not unlikely that the worship referred to in such passages as 'Die Totenfeiern,' 'Inscriptions,' 'The cult of the dead ad sepulchra mortuorum,' was generally of this variety. In Saxon-
ANCESTOR-WORSHIP (Ugro-Finnic) — ANDAMANS

Navian lands also we hear of worship paid to kings and other distinguished men, apparently at or near their tombs, but here again the cult appears to have been shared by the dead man's subjects or dependants.

Perhaps the nearest approach to strict ancestor-worship is to be found in the records of the colonists of Iceland, who believed that all members of their families would pass after death into certain hills. They regarded these places as spiritual residences and constructed sacrificial shrines there. Again, the element of ancestor-worship may be said to enter into the cult of certain gods, from whom most royal families, in England as well as in the North, claimed descent. Yet in the case of deities whose cult was wide-spread, such as that of Woden-Othin (by far the most frequent case), it would be unsafe to assume that this was the original element. On the other hand, deities whose worship was more or less local, like Thorgerdi Holgaviri, may very well have been regarded originally as ancestral spirits. In this connection account is to be taken also of the hunting of the guardian-spirits of the dead, which are represented as similar to valkyries or water-maidens.

Lastly, mention must be made of the eri—a word which in various Ugro-Finnian languages means inherited property, but in Scandinavian a wake or feast in honour of a dead person, especially held at the head of the house. Such feasts were often held on an immense scale, and many hundreds of persons invited. Large quantities of ale were then drunk in memory of the deceased—whence the banquet was also called eri-dl, a name which survived until recently in the northern English word awdow.

Towards the close of the feast the heir was for the first time allowed to occupy the vacant high seat. At religious festivals also it was customary to drink to departed relatives as well as to the gods.

The Cult of the Dead among the Tedung will be fully described under art. YUGAN RELIGION.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Ugro-Finnic).—Ancestor-worship and the cult of the dead is, so far as we can judge, the oldest form of religion among the Ugro-Finnian peoples. It is almost the only form common to them all. Their places of sacrifice frequently stand in close proximity to their places of burial; their images are chiefl y representations of the dead; their offerings are to be explained by the needs (food, clothes, etc.) of the dead; and their whole system of magic seems to the main aim at a union with the spirits of the dead. See art. FINNS, LAPPs, MORDVINIANS, OSIARKS.

KAARLE KROHN.

ANDAMANS.—1. The Country and the People.

The Andamans form the Northern portion of a string of islands extending in a north-westerly direction (the Nicobars forming the Southern portion), stretching across the Eastern side of the Bay of Bengal, between Cape Negrais in Burma and Achin Head in Sumatra. Certain islands in this latter chain have a commingation with phenomena exhibited by the fauna and flora of the respective terminal countries, have long been held to point to the former existence of a continuous range of mountains, thought to be sub-aerial, between these two points. Assuming this opinion to be correct, the Andamans are, in their present condition, the summits of a submarine range, connected with the Arakan Yoma range of Burma, which has, at some time or other, become almost wholly submerged by a volcanic subsidence. This range need not have been more than the physically possible one of two hundred fathoms, to connect a long narrow peninsula jutting out from the Burma coast with the present Andaman group of islands.

These considerations are of importance for the present purpose, as, according to Portman (see Literature below), the tradition of the South Andaman, or Bogrijgiri, group of tribes is that the Main Tomin (the original chief of the group) which they all sprang, dispersed them after a cataclysm, which caused a subsidence of part of the land, leaving them stranded in the present Andaman Islands, and drowned large numbers of the old inhabitants, together with many large and fierce beasts that have since perished. He also adds that in order to show the junction of the Andaman Islands with the mainland, that, besides the South Andaman tradition, the people of the Little Andaman have names for animals that do not now exist and which they cannot describe.

Lying as they do in the track of a great commerce, which has gone on for at least two thousand years, both from China and Japan westwards and from the Levant and India eastwards, the existence of the Andamans has been reported probably from the days of Ptolemy (McCrie, Ancient India as described by Ptolemy, 1855, p. 236) under some name, though not with a variety of names, representing some form of Andaman, meaning a 'monkey' people, and indicating the savage aboriginal ancestors of the more civilized early population of India. As early as the 9th century the inhabitants of the islands were quite unstruly described by Arab travellers as cannibals (Reinard, Relation des voyages, 1845, i. 8)—a mistake that seems to have arisen from three observations of the old mariners. The Andamanese attack and murdered without provocation every stranger they could seize on his landing, as one of the tribes does still; they burnt his body (as they did in fact of every enemy). They also burnt all their dead. Combine these three observations with the unprovoked murder of one of themselves and the fear aroused in ignorant mariners' minds by such occurrences in a far land, century after century, and a persistent charge of cannibalism is almost certain to be the result. This is a consideration of cardinal importance, as this false charge led to the Andamans being left severely alone until 1857 (except for a brief period between 1759 and 1768), when the British Government was forced to take steps to put a stop to murders of shipwrecked crews by occupying the islands. The result is that there exists in the Andamans an aboriginal people incompletely influenced by foreign influences, whose religious ideas are of native growth and exhibit the phenomena of a truly untrained philosophy.

The Andamanese are naked pigmy savages, as low in civilization as almost any known upon earth, though close observation of them discloses the immense distance in mental development between them and the highest of the brute beasts, one most notable fact being that they eat nothing raw, cooking all their food, however slightly, and making pots for the purpose, and this from time immemorial. Their various tribes belong to one race, speaking varieties of one fundamentally isolated language. They are the relics of a bygone Negrito population now represented by themselves, the Semangs of the Malay Peninsula, and the Aetas (the Philippines) the last two (though mixed with the surrounding peoples), who in very ancient times occupied the south-eastern portion of the Asiatic Continent and its offlying islands before the irruptions of the oldest of peoples whose existence, or traces of it, can now be found there. In this view the Andamanese are of extreme interest, as preserving in their persons and customs, owing to an indefinite number of centuries of complete isolation, the last pure remnant of the oldest kind of man in existence.
ANDAMANS

2. Character of the People.—In childhood the Andamanese are possessed of a bright intelligence, which, however, soon reaches its climax; and the adult may be compared in this respect with the civilized child of ten or twelve. He has never had any sort of education, nor, until the English taught him the use of dogs, did he ever domesticate any kind of animal or bird, nor did he teach himself to turn turtle or to use hook and line in fishing. He cannot count, and all his ideas are hazy, incalculable, and ill-defined. He has never developed, unaided, any idea of drawing or making a tally or record for any purpose, but he readily understands a sketch or plan when shown him. He soon becomes mentally tired, and is apt to break down physically under mental training.

He retains throughout life the main characteristics of the child; of very short but strong memory; suspicious of, but hospitable to, strangers; ungrateful, impatient, and watchful of his companions and neighbours; vain and, under the spar of vanity, industrious and persevering; teachable up to a quickly reached limit; fond of undefined games and jokes, and always careless; too intractable, too careless, indeed, to store water even for a voyage; plucky but not courageous; reckless only from ignorance or inappreciation of danger; selfish, but not vicious; not taught to sit or lie down for their own or others' comfort or honour; petulant, hasty of temper, entirely irresponsible and childlike in action in his wrath, and equally quick to forget affectionate, lively in his movements, and exceedingly gay in his moments of good temper. At these times the Andamanese are gentle and pleasant to each other, considerate to the aged, the weakly or the helpless, and to captives; kind to their wives and protectors. Their children are thoughtless, over-tactful, over-eager, but when angered, cruel, jealous, treacherous, and vindictive, and always unstable. They are bright and merry companions, talkative, inquisitive, and restless, busy in their own pursuits, keen sportsmen, and naturally independent, absorbed in the chase for sheer love of it and other physical occupations, and not fruitful, indolent, or obscenely abusive. In the years advance they are apt to become intractable, masterful, and quarrelsome—a people to like but not to trust. Exceedingly conservative and bound up in ancestral custom, and not amenable to any law except that of nature, or that of their own superstitions, on some of them has introduced no abstract ideas among the tribesmen, and changed no habit in practical matters affecting comfort, health, and mode of life. Irresponsibility is a characteristic, though instances of a keen sense of responsibility are not wanting. The intelligence of the women is good, though not, as a rule, equal to that of the men. In old age, however, they frequently exhibit a considerable mental capacity which is respected.

There is no idea of government, but to each tribe and to every sept of it belongs a recognized chief, who commands a limited respect and such obedience as the self-interest of the other individual men of the tribe or sept dictates. There is no social status that is not personally acquired on account of some admitted superiority, mental or physical. There is no property in land, and the idea of such possessions is not rudimentary, and are accompanied by an incipient tacit of the property belonging to a chief. Custom is the only law, and the only power is that of numbers; unless it is the form and adornment of manufactured articles. In the religious ideas of such a people as this, religion is seen in its most primitive form.

3. Religion.—The religion is simple animism, and consists of fear of the evil spirits of the wood, the sea, disease, and ancestors, and of avoidance of acts traditionally displeasing to them, and this in spite of an abundance of mythological tales told in a confused, disjointed manner. There is neither ceremonial nor propitiation. There is an anthropomorphemic deity, Puluga, the cause of all things, whom it is not, however, necessary to propitiate, though sins, i.e. acts displeasing to him, are avoided. His fear of damage to the products of the jungle. Puluga now reigns in the sky, and is used to live on the top of Saddle Peak, their highest mountain. The Andamanese have an idea that the soul after death will go under the earth by an aerial bridge, but there is no heaven or hell, nor any idea of a bodily resurrection in a religious sense. There is much active faith in dreams, which sometimes control subsequent conduct, and in the utterances of wise men, dreamers of prophetic dreams, gifted with second sight and power to communicate with spirits and to bring about good and bad fortune. These practise an embryonic magic and witchcraft to such personal profit, by means of charms, which are rare, and which, as these people appreciate. There are no oaths, covenants, or ordeals, nor are there any forms of appeal to supernatural powers.

Puluga, who is fundamentally identifiable with some definite deity, perhaps a god, or a spirit (wulin), despite his confusion with ancestral chiefs, has so many attributes of the Deity that it is fair to translate the term by ‘God.’ He has, however, a wife named Puluguela, and a family of one son and many daughters. He transmits his orders through his son to his daughters the Morowin, who are his messengers. He has no authority over the evil spirits, and contents himself with pointing out to them offenders against his religion, and rendering evil spirits, or harmful spirits are Erem-changa of the forest and Juruwin of the sea. Like Puluga, both have wives and families. The minor evil spirits are Nila, and a numerous class of the Chol, who are practically spirants of disease. The sun is the wife of the moon, and the stars are their children, dwelling near Puluga; but there is no trace of sun-worship, though the Andamanese twang their bows and ‘chaff’ the moon during an eclipse; and a solar eclipse frightens them, keeping them silent.

The Andamanese idea of a soul arises out of his reflexion in water, and not out of his shadow, as in India, which follows him. A spirit, which follows him, is an evil spirit, which goes after death to another jungle world (chaitan) under the earth, which is flat and supported on an immense palm tree. There the spirit repeats the life here, visits the earth occasionally, and has a distinct tendency to transmigration into other beings and creatures. Every child conceived has had a prior existence, and the theory of metempsychosis appears in many other superstitious, notably in naming a second child after a previous dead one (because the spirit of the former babe has been transferred to the present one), and in the recognition of all natives of India and the Far East as changa, or persons endowed with the spirits of their ancestors.

4. Superstitions.—The superstitions and mythology of the Andamanese are the direct outcome of their beliefs in relation to spirits. Thus fire is ‘Puluguela’s nose’ (Pulis nose) and so it is always carried (the practical reason is that the Andamanese are the only people known who have never been able to ‘make’ fire). To avoid offending the sun and the moon, they keep aloof from them, as well as to children, are but rudimentary, and are accompanied by an incipient tacit of the property belonging to a chief. Custom is the only law, and the only power is that of numbers; unless it is the form and adornment of manufactured articles. In the religious ideas of such a people as this, religion is seen in its most primitive form.

To avoid offending the sun and the moon, they keep aloof from them, as well as to children, are but rudimentary, and are accompanied by an incipient tacit of the property belonging to a chief. Custom is the only law, and the only power is that of numbers; unless it is the form and adornment of manufactured articles. In the religious ideas of such a people as this, religion is seen in its most primitive form.
and unlucky actions, but not many, and a few omens and customs. Animals and birds are credited with human capacities. For instance, murdered persons have been found with heavy stones placed on them, and with stones placed along the pathway. Every Andamanese knows that this is a warning to tell the English that the men have been murdered, but that the murderers have passed along the path in front. Primitive simplicity here comes to the surface, as the presence of an object is interpreted as a message. The Andamaner understands the signs exactly what has happened.

5. Mythology. — The great bulk of the Andamanese mythology turns on Puluga and his doings with Tono, the first ancestor; to him and his wife Puluga brought fire and taught all the arts, and for them he created everything. This line of belief is still alive, and everything natural that is new is attributed to Puluga. Thus, when the Andamanese were introduced to the volcano on Barren Island, seeing the smoke from the top, they at once called it Moloturchon, 'Smoke Island,' and said the fire was Puluga's. The next most important element in their mythology is the story of endogamous exogamy. The custom was, and was, of course, caused by Puluga. It separated the population and destroyed the fire, which was afterwards stolen by Lurafut, the kingfisher, and placed in the earth. It is the custom to the cataclysm because the chausu, or 'ghostly ancestors.' Other stories relate in a fanciful way the origin of customs (e.g. tatting and dancing), the arts, articles of food, harmful spirits, and so on.

An important ethnological item in these stories is the constant presence of the ideas of metamorphosis, and of metempsychosis into animals, fish, birds, stones, and other objects in nature. Indeed, the island chiefly known to the Andamanese are ancestors changed supernaturally into animals.

6. Customs. — There are rudimentary initiatory ceremonies for both males and females connected with arrival at puberty and marriageability, and pointing to a limited tabu, but they are not accompanied by the communication of any secrets or by any religious ceremony. The women also practise a limited tabu as to food during menstruation and pregnancy. The idea of tabu does undoubtedly exist as to food, and every man has through life his own tabued article. This is, however, usually something observed to disagree with him in childhood or to be unpalatable. Tatting is partly a marriage ceremony, and the perpetuation of the tabu also becomes ceremonial on occasion. Neither has any religious significance, and the songs accompanying the dances rarely relate to beliefs and superstitions. Among the gaues, mock burials and 'ghost' hunts are favourites. Religion does not enter into the naming customs, except possibly into the 'flower' names for girls, which are bestowed after some one of sixteen selected trees which happen to be in flower at the time they reach puberty.

The Andamanese are monogamous, and by preference, but not necessarily, exogamous as regards age, and more strictly, group. Marriages are not religious, but are attended with distinct ceremonies. Betrothal accounted as marriage is recognized, and the marriage relations are tabu-like, and quite as strictly observed as among civilized communities. Deaths occasion loud lamentations from all connected with the deceased. Burial in the ground and exposure in trees, as an honour, are practiced. A death causes an encampment, or more strictly, band to be ceremonially marked, and to be deserted for about three months, and burial spots are also marked and avoided. Mourning is observed by smearing the head with grey clay and refrainning from danceing for the above period. After some months the bones of the deceased are washed, broken up, and made into ornaments. To these great importance is attached as mementoes of the deceased, and they are believed to stop pain and cure diseases by simple application to the breasts. The skull is put round the neck and worn down the back, usually, but not always, by the widow, widower, or nearest relative. Mourning closes with a ceremonial dance and the removal of the clay. The ceremonies connected with the (deposits of the dead) are emotional, reverential, and by no means without elaboration in detail.

ANDEANS. — 1. The pre-Inca people. — For the study of the Andean religions it is necessary to take account of a civilization which flourished long before the rise of the Incas; because the later power inherited some of the names, and with them the religious beliefs, of the more ancient. The Andean region, the Andes, extends from the Near the shore of Lake Titicaca, now over 12,000 feet above the sea-level, there are very extensive ruins of a most remarkable character. They are those of great cities that have existed in a very large population in the vicinity; the stones are of such size, and any possible quarry so distant, that the people must have been possessed of very remarkable mechanical skill; and they are cut and carved with such accuracy and precision that the workers must have been skilful masons. The mouldings and symmetrical ornamentation show most accurate measurements, and no want of artistic taste. There are some enormous statues, and much detailed carving. The monoliths are so enormous, one of them 36 feet by 7, another 26 feet by 16 by 6, that they are excelled in size only by the obelisks and statues of Egypt. The ancient people who built them may well receive the name of the monolithic people, forming a monolithic empire.† Universal tradition points to the south as the direction whence they came. The building of Tiwanacu, as the ruins are now called, needed the working of the country can sustain only a very sparse population. The monolithic builders cannot have worked at that elevation, or anything like it. The early Spanish writers give unanimous evidence that the ruins of Tiwanacu were built long before the time of the Incas.‡

2. Pre-Inca religion. — The only clue to the religion of the monolithic people is to be found in a famous doorway cut out of one enormous stone. The masonry is excellent throughout, and all the lines are as straight, the angles as square, and the surfaces as level as could be produced by any good workman of the present day. A. The length of the

|||
monolith is over 13 ft., and the opening of the doorway 4 ft. 6 in. by 2 ft. 9 in. Above the doorway there is much carving. There is a central figure with many symbols and accessories. There are rays round the head; in each hand there is a sort of sceptre ending with bunches of birds; the marks on the dress are the same as those round a golden representation of the sun of the Incaral times, denoting the Incas months Conmay and Coquep Kaynut. It is the work of a highly skilled mason, but not of Inca skill. On each side of the central figure there are three rows of kneeling figures, eight in each row. They all hold sceptres, and are crowned. Those on one side have the heads of men, and on the other those of birds. Underneath there is a beautifully designed ornament running along the length of the stone, consisting of rectangular patterns, ending with birds’ heads, and three human heads similarly ornamented. This central figure may, the present writer thinks, be assumed to represent the deity worshipped by all the chiefs of the people and all the animal creation. But there must have been an interval of many centuries between the monolithic monument, caused by the region becoming uninhabitable for a large population, and the rise of that of the Incas. When the old empire fell to pieces, the Andean region must have been occupied by many tribes, and their language divided into numerous dialects. One, spoken in the basin of Lake Titicaca, received the name of Aymara from the Jesuit missionaries of Judi; another spoken in the region of the Incas was called Quichua by the first Spaniard who wrote its grammar; another dialect was spoken further north. Eventually, some five centuries before the arrival of the Spaniards, the Incas began to form another great empire, and their language prevailed over the others.

3. The Incas.—There had been a long interval of disintegration. Nevertheless, all memory of the monolithic empire had not been lost. There were myths telling how the great God first made Himself known at Lake Titicaca, how the sun first appeared there, and how the first man was created there.* But the main tradition was the revelation of the almighty God, named Viracocha, who is carved with his adoring worshippers on the monolithic doorway. His worship was maintained by chiefs and learned men, after the old empire had disappeared, and was inherited by the Incas. Some of the attributes handed down are attributed to the almighty God. The chief of these were Con, Ulla, Ticsi, Pachayachaaki, Pachacamac. The meaning of Ulla is unknown. Ulla means light. Ticsi is said to be a founder. The anonymous Jesuit explains the word as Principium rerum sine principio. The derivation of Viracocha is lost to us. Two authorities† say that the first part of the word is a corruption of pikuwa, a depositary or abode. The primary meaning of coerce is a lake, but here it is said to mean an abyss, profundity, space—’ Dweller in space.’ Pachayachaaki and Pachacamac are attributes of the deity. Pachac means time or place, also the universe, yachachi a teacher, causa of rule or govern—’The teacher and ruler of the universe.’ The name Viracocha suffered to convey to the minds of the Incas the idea of a Supreme Creator, yet they added other titles to it, intended to express some of the attributes of the deity.*

4. Viracocha.—The Incas, with their Amanutos

*The Titicaca myths are related by Garcilasso de la Vega, Clíe de Leon, Molina, Belanzon, Salcamayhua, and the anonymous Jesuit. Official history is mentioned but not sufficiently to be intelligible. The names are not mentioned by Balboa, Montesinos, Acosta, or Pinto.
†Montesinos and the anonymous Jesuit.
‡The best essay on the word Viracocha is by Don Leonardo Villar (Lima, 1857).

(wise men) and Quipucamayocs (registrars), certainly worshipped the Supreme Being under the name of Viracocha, having received the tradition from remote ages, and they looked upon all other deities as his servants, ordained to do his will. An Inca styled named Pachacuti Yamqui Salcamayhua, who wrote early in the 17th cent., mentions another being as having been made known in the early times, whose name was handed down by tradition. This was Tonapa, or also called Tarapac. He is also mentioned by Sarmiento as a servant of Viracocha. The details about him are puerile. It is possible that Tonapa represents a solar myth. The name occurs with that of the creator in some of the Inca hymns.

The Incas certainly worshipped Viracocha, the supreme creator of all things, but they approached him as an unknown god, who to them was shrouded in mystery. They cried to him to be taught where he was, that they might know and understand him; and they recognized that the sun, the moon, and the seasons were ordained and ordered by him. They sought to know the will of the Deity, and prayed for knowledge and support.

5. Some hymns of the Incas have been preserved by Salcamayhua, but in a very corrupt form, and it is difficult to make out their exact meaning in English;* but they are so important a part of the Peruvian religion that it seems desirable to give English versions of two of the hymns.

I.

Viracocha! Lord of the Universe,
Now art thou male,
Now art thou female,
Lord of heaven! Lord of generation!

Can divination be employed
To learn where thou art?
Hast thou art there?
Whether thou art above,
Whether thou art below,
Whether thou art around
Thy royal throne and sceptre,
O hear me!
From the heaven above,
From the sea below,
Where’er thou art,
O Creator of the world,
O God of man,
Lord of all lords,
To thee I come,
With eyes that fall,
With longing to know thee,
I come to thee
To know thee,
To understand thee,
Thou seest me,
Thou knowest me.
The Sun, the Moon,
The day, the night,
Spring and winter,
They all travel,
Not ordained in vain,
From appointed places
To their destinations;
They duly arrive
Whithersoever may be ordained.
Thou holdest them
Under thy sceptre,
Thou holdest them.
O hear me!
Let me be thy chosen;
Do not suffer
That I should tire,
That I should die.’

* They were originally printed in the corrupt Quichua, exactly as in the manuscripts, in the present writer’s translation of Salcamayhua (Hablado Society, 1872). Ximenez de la Espada brought out the first edition in 1659, and the first edition of Quichua in the same way. Don Samuel A. Lafone Quedvedo then took the Quichua in hand, and, with the able assistance of Pedro Most, the editor of one of the latest Quichua dictionaries, numerous emendations were made, and still more corrections in the separation of words. The text was sufficiently intelligible to bear translation into Spanish (Ensayo Mitologico, Los Hidalgos de la Ciudad de los Reyes del Cuzco, from S. A. Lafone Quedvedo, Talara del Museo de La Plata, 1892).
† Are these lines, conceivably, intended to convey an idea analogous to the Hindu Liapoj and Jom?

7. Ancestor-worship. — The other ayllus had various beasts or birds, natural objects or mummies, as their paccarrina. It was the worship of ancestors by the side of the worship of celestial bodies. The mallquis, or bodies of the dead, were preserved, and treated with the greatest respect. In the mountains round Cuzco and in the Yucuy valley they were kept in caves faced with masonry. In the basin of Lake Titicaca they were preserved in towers called chulpes. Those at Sillustani are circular, and carefully built with ashlar masonry. In Quito the dead were interred in mounds called tufes.

The bodies of the Incas were preserved with extreme care, and it is stated, in the official report of Sarmiento, that the special huaca or idol of each Inca was kept with the mummy (Sarmiento, Hist.). There were servants for the mummies of the sovereigns, and estates for their maintenance. The names of seven of the so-called Idols have been preserved; and they do not support the idea that they were idols in our sense of the word, but rather insignia or commemorative ornaments, perhaps in the nature of penates, used by each sovereign in his lifetime. It was a custom, not only as regards the Inca mallquis but among all classes of the people, to place with the dead, offerings of food and other things required by them when living. This custom has never been eradicated, and even now it is practised secretly in many parts of Peru. The belief which originated this custom, and which caused its continuance even to the present day, must have been very deeply seatd. It is exceedingly difficult to acquire a complete understanding of the ideas of another race of people which give rise to special customs. But the present writer was well acquainted with an old priest, Dr. Pablo P. Justiniani, a lineal descendant of the Incas, whose intense sympathy for his people enabled him to comprehend their ideas, if any one ever did so. He told the present writer that they felt a certainty that their dead continued to exist apart from their bodies, and that they had needs, but spiritual, not corporeal needs. They were certain of this because many of them had seen their dead. Don Pablo attributed this conviction to appearances in dreams and visions. Of a future state of rewards and punishments they do not appear to have had any idea in the time of the Incas, only the conviction that their ancestors continued to exist after death. In this state they were souls without bodies, but still with needs and requirements, not corporeal, but spiritual. Thence arose the strange belief that all things had souls as well as their material parts, and that the spirits of the dead needed the souls or spiritual parts of food, chicha, coca, llamas, even clothing. By placing the corporeal parts of these things with the dead, it was believed that their souls or spiritual essences were conveyed, through prayer and certain ceremonies, to the souls of the dead. This belief was so deeply impressed on the Inca people that it survived all subsequent persecution. The practice existed

6. Huacas. — Subordinate to Viracocha, to whom a temple was dedicated in the great square of Cuzco, the worship of the Sun, Moon, Lightning, and of certain deities, called Huacas, was ordained. When the Empire had come to its greatest, there was a complicated ritual, with special ceremonies, festivals, and sacrifices for each month. Our information is mainly derived from the first Spaniards who came to Peru and wrote narratives. They were well informed writers, in two instances, but chiefly priests who were full of pre-conceived ideas. It is not always easy to separate their pre-conceptions and the results of their leading questions from the facts they were told. It is still more difficult to reach the exact nature of the beliefs of a people, when we have reports only of their ceremonies and of their outward worship.

The people were divided into ayllus or tribes, which had a close analogy to the Roman gens. Every ayllu had a common huaca or sacred object of worship, which was called paccarrina. The chief paccarrina of the Inca ayllu was the Sun. The Incas were children of the Sun. But there was another very sacred huaca, which is often mentioned in Inca history, and to which a legend was attached.

The origin of the Incas is connected with this huaca. Four brothers and four sisters are said to have issued from 'windows' at a place called Paccari-tampu (some leagues south of Cuzco), two words used by Machu Pichu, the leader was Manco Capac, the first sovereign Inca. They had many followers, and they advanced northwards to occupy the valley of Cuzco. During the march one of the brothers was turned to stone at a place called Huannacuri. This is the legend. Next to the celestial bodies, this huaca of Huannacuri became the most sacred object of worship. It was three miles from Cuzco. Very elaborate sacrifices were offered to it, and it was at Huannacuri that the great festival was celebrated, when the Inca youths went through their ordeals previous to receiving knighthood. But the exact position of the Huannacuri huaca in the Inca religion is not clear. It was certainly a very important one in the traditions of the Inca ayllu.

secretly fifty years ago to some extent, as Don Pedro instructed Inca. The tale is told by Barón Erland Nordenskiöld, who returned from Peru in the year 1906, that the practice still exists. This appears to have been the position of the Inca worship of their ancestors, possibly accompanied by human sacrifices, because at that period Inca, each aylu had a paccarina or so-called idol, represented by a hill or other natural object, occasionally by an image. This was apart from the human sacrifices, which were no human sacrifices. He felt this to be remarkable, for the idea of propitiatory sacrifice is to offer the best and most loved, as in the cases of Isae and Carua, and Jerchiah’s noticed presently. Human sacrifices were more in the nature of thanksgiving than of propitiatory offerings. But the authoritative evidence of Molina and Sarmiento has led him to modify this view. On extraordinary occasions, two children, a male and a female, were first strangled and then included in the burnt-offerings. Such occasions were the celebration of great victories, or the commencement of wars, and the Huacas festival at Huayna Capac.

11. Sun-worship. Nearly all the ceremonies were connected with agriculture and with the course of the sun, so that it was natural that the sun should be the chief object of adoration with the people. It was observed and celebrated in a square, and some of the rays were worshipped. The subject are recorded of one or two of the Inca (by Garcilasso de la Vega, Comm. Real). Seeing that the Sun had to accomplish its circle every year, they concluded that it must have a master. It was the same thought as that of Omar Khayyám:

"And that inverted Bowl they call the Sky,
Whereunto crawling moost we live and die."
Lift not your hands to it for help—for it
As ineptly moves as you or I.

So they turned to Vturacocha, the Creator obeyed by the sun and all living things, as the chief object of their adoration.

12. Government. The religious beliefs of the people away from Cuzco were connected with their mode of life and their environment. It seems desirable to give a short account of the rural life of the people, and of the administrative organization of Inca rule. It was, in fact, pure socialism—a system which can exist only under a despotism. Several very able Spanish lawyers, notably Polo de Undegardo and Santillana, were employed, soon after the conquest, to investigate and report upon the Incaian system of government. Reliance may be placed upon the correctness of the details they collected. It appears that the whole of the people were divided into ten classes, according to their ages and ability to work.

1. Mose aparao (baby) "recently begotten," Just born.
3. Manta puric (child that can walk), age 6 to 8.
4. Tinta requiste (bread receiver), about 3.
5. Pucalla huarina (playing boy), 8 to 15.
6. Cucu pello (coco picker), very light work, 16 to 20.
7. Yma huarina (as a youth), light work, 20 to 28.
8. Pucir (able-bodied), tribute service, 28 to 50.
9. Chumapi pucos (elderly), light work, 50 to 60.
10. Pukhapi pucos (dolago), no work, over 60.

The Puric was the unit of administration, the other classes being dependent on him. A Pachacas was 100 Purics under a Pachaca-cannayoc or Centurion. 1000 Purics were under a Huanacanchayoc, or officer over a thousand. A Pachaca-cannayoc governed the whole aylu or gens of 10,000 Purics. There were four Viceroys over the four provinces, who were called Tucnricos ("He who sees all"). There were also a reporter on vital statistics and a tax-collector, who maintained his head upon charges and accidents, one to each aylu. The land belonged to the people in their aylu. The produce was divided between the Inca (government), the Huacas (church), the warina (chiefs), and the new fire for the altar before the Sun was kindled. The Ayrihua came next, being the beginning of harvest. The offerings of maize were brought to the temples of the Creator and of the Sun, youths and maidens, in procession, singing a harvest song called queroc. The harvesting month was Aynumay in May and June.

10. Human sacrifice.—The religious ceremonies included burnt-offerings in great profusion. The present writer formerly held that the weight of evidence was on the side of human sacrifices. He felt this to be remarkable, for the idea of propitiatory sacrifice is to offer the best and most loved, as in the cases of Isae and Carua, and Jerchiah’s noticed presently. Human sacrifices were more in the nature of thanksgiving than of propitiatory offerings. But the authoritative evidence of Molina and Sarmiento has led him to modify this view. On extraordinary occasions, two children, a male and a female, were first strangled and then included in the burnt-offerings. Such occasions were the celebration of great victories, or the commencement of wars, and the Huacas festival at Huayna Capac.
Thus the land belonged to the whole agnus, and each able-bodied member, or *puric*, had a right to his share of the harvest, provided that he had been present at the sowing. No one who had been absent at the sowing could receive a share of the harvest. This was done with the utmost religious ceremony and zealously observed, but the evils of minute sub-division were avoided by the system of *mitinunas* or colonists.*

13. Various cults.—The worship of Viracocha, the Supreme Being, was universal to the Incas and learned men. The worship of the Sun was more extended, and was the religion of all who took part in the festivals of the Incas; but the religion of the mass of the people was different. Each agnus had its *pucumari*, with its festival and worship. But each *puric*, or head of a family, believed that all things in nature had an ideal or soul which ruled and guided them, and to which they might pray for help. Thus there was a soul or ideal of the maize and other harvests, of the llamas, and of all things that influenced their daily life. They made statues or other representations of these objects, and prayed and sacrificed to them for the well-being of the family. The statues were made of pottery or stone, sometimes of the precious metals, and were called *huacas* or *conopas*. In Huaytori, and, no doubt, in other provinces, the three or four chief places of worship held a great interest in the study of their folklore; and the discovery of the remaining reports on the extermination of idolatry will throw further light on the religion of the Peruvian people.

14. Oracles. — The valley on the coast, from Nasca to the Rimac, were occupied by people of the same race and language as the Incas, and at Nasca there are marvellous irrigation works. Here was the head of the Huaca, which was supposed to receive the worship that was given to other powers of nature in the Sierra; and there were two or more famous oracles to which people resorted from great distances. One was at Rimac, whence the name of Lima, the modern capital of Peru. Another famous temple was on the coast, at a place called Pachacamac. Raised on an eminence, with an extensive city at its feet, the oracle itself appears to have been a fish canopy, which was supposed to give answers to the questions of pilgrims.

There was no temple to the Supreme Being at Pachacamac. The word is that of an attribute of the Almighty Creator. But in this case it is not the word of the creator, but of any other place received names from deities or festivals. There was another name in the church, and *Reyman* (festival) forms part of the names of several places in Peru. The great temple at Pachacamac on the coast was dedicated to two concepts of the coast people, a fish deity and a fox deity, which became famous oracles. The temple was surrounded by a temple, and an extensive town rose up at the foot of the temple. It was falling to ruin when the Spaniards arrived.

15. An unknown civilized people conquered by the Incas.— There was another civilization of people along the northern part of the coast of Peru, quite distinct from the Andean tribes, but finally conquered by the Incas. We have evidence of their civilization from the contents of the tombs examined by Reiss and Stübel at Ancon. We have further evidence in the great palace of the *Gran Chimú* near Trujillo, and Balboa has described the same in his *Historia General* of the coast, by sea and land at Lambayeque, which also threw little light on their superstitions. There is a grammar of their language, which is totally unlike any other

* Polo de Ondegardo, 1828; Santillana.

ANDEANS. But there is no account of the religion of this strange civilization of the Peruvian coast, now practically extinct.

Quito was conquered by the last great and undisputed sovereign of the Inca dynasty; but there are no records on the death of the people and the work of the Spaniards. *Histórias de Quito,* the accounts in it are comparatively modern and of doubtful authority. We have no narratives giving details respecting the religious beliefs of the Quito people, and it was told to the Inca Huayna Capac. It is stated that they worshipped the Sun.

16. The Chibchas.—Farther north there was a civilized people, the Chibchas, of whose religion there is some account. Their land is where the Andes divide into three cordilleras, with the three great rivers of Magdalena, Caica, and Atrato flowing northwards between them into the Caribbean Sea. The Chibchas dwelt on the tablelands of Bogota and Tunja, with their river Funza flowing to the Magdalena, their eastern drainage being carried by the Meta to the Orinoco. This territory is about 150 miles in length, by 40 to 50 broad. It was ruled by two of the chieftains, the Zipa of Bogota and the Zaque of Tunja. The Zipa was striving for a paramount position before the arrival of the Spaniards, and had subjugated the chief of Guatavita. It is stated in the same story that he held a great annual festival on the banks of the Lake of Guatavita when he covered himself with grease, and then rolled in gold dust. Gilded and resplendent, he then entered a canoe, and was transported to the centre of the lake. Before all his people, he plunged into the water, and his bath was followed by fasting and dancing. This was the origin of the story of El Dorado.

The religious beliefs of the Chibchas have thus far been stated by the earliest writers. Light was originally enclosed in a receptacle called chinamimanga, and this receptacle appears to have been, in the conception of these people, the Supreme Creator. The Chibchas are said to have worshipped this almighty deity, but none of the less they also worshipped the sun, the moon, the rainbow (called cuchairna), hills, lakes, rivers, trees, and many idols. Human sacrifices appear to have been offered only to the Sun, as a deity to be feared and propitiated. The Chibchas had a tradition of a beneficent being named Bochica having appeared amongst them, and having taught them all they knew. He also was worshipped. *Pachacamac* is said to be an agency for the river Funza, and to have formed the famous falls of Tequendama. The people had several curious myths, and they appear to have conducted their ceremonial worship with some magnificence. There was a procession in which the Zipa joined at the time of sowing, and another at harvest time. There is certainly a superficial resemblance between the religions of the Incas and that of the Chibchas.

There are two early authorities for Chibcha civilization. *Padre Fray Pedro Simon wrote his Noticias Historicales in 1653, and the work was published at Quito in 1657. Dr. Ivan Lucas Fernández Piedrahita, the Bishop of Santa Marta, wrote his *Tradición General de las Naciones del suroeste de Venezuela* in 1767. Simon is the best authority, being nearest to the time; but Piedrahita wrote well, and gives a brief but clear account of the Chibchas. He was descended from the Incas of Peru. There is a Grammar of the Chibcha language by Fray Barnabe de Lugo, 1824. The above work is the best written on the subject are Humboldt in his *Viaje a los Andes*, Acesta in his *Compendio Historico* (Paris, 1840), and E. Urianochez in his *Memoria sobre las antiguas naciones de Colombia* (Paris, 1850).*

The Chibcha language prevailed among all the Andean dialects. But there is no account of the religion of this strange civilization of the Peruvian coast, now practically extinct.
tribes of the highlands, and they had all made advances in civilization, although those of Bogota and Tunja were far in advance of the rest. The general movement of the Chibcha tribes had been from south to north, and this race appears to have advanced its settlements beyond the mountainous regions as far as Chiriqui. There is also some evidence that any people of Aztec or Maya affinities ever entered South America or had relations with South American peoples.

The Originality of the Andean religion.—The Andean races moved from the south northwards. Their civilization was of spontaneous growth, without any foreign aid, and uninfluenced by communication with other races. Elaborate attempts have been made to establish identity between Quichua words and words of similar meaning in Aryan languages, but a careful study of the subject cannot fail to produce the conviction that they are fanciful, and based on an insufficient knowledge of the Quichua language. The South American race naturally reached its highest development in the Andean region, where agriculture and the textile and other arts were necessary for the support and well-being of the people, and where a temperate climate conduced to the development of various civilized influences and to a reasoning contemplation of the powers of nature, guided by religious impulses. In this way, as well as by any foreign influences, that the Andean religions were developed by the races inhabiting the cordilleras of the Andes. In their highest form the Andean religions recognized the existence of a Supreme Creator and ruler of the universe, and it was his will by prayer and praise. The celestial bodies, the thunder and the rainbow, were revered as bringing good to man, but only as inferior deities obeisant to the worship of the Quichua. The worship of the paccorinias and of ancestors there is a clear indication of a belief in a future existence; and the power attributed to the souls of animals and crops, and of inanimate objects, among the masses of the people, is peculiar to the Andean races in the form in which it prevailed amongst them. In whatever comparative position the Andean religion may be placed among the religions of the world, it was characterised by a just conception of the Andean people, uninfluenced by any communication with other races.

LITERATURE.—The works which give detailed accounts of the Andean tribes are all based on works on the civilization and history of the native races. The first account is contained in the second part of the Chronicle of Cierva de Leon by Sir Cynthia R. Markham, in the Hakluyt Society. The Spanish text was afterwards printed and edited by Ximenes de la Espada at Madrid. Juan Jose de Betanzos wrote his Narration in 1531. He knew the Quichua language, and married an Andean princess. His work has been printed and edited at Madrid in 1869, but has not been translated. The two Relaciones of the learned lawyer Polo de Quedagordo are still in manuscript. But one of his reports has been translated and edited for the Hakluyt Society by Sir Clements R. Markham, 1872. Fernando de Santillana was a Judge of the Lima Audience in 1530. His valuable Relation remained in manuscript until it was edited and printed by Ximenes de la Espada in 1579. The most detailed and best work on the religion of the Incas was written in about 1575 by a priest at Cuzco named Cristoval de Molina. The manuscript has been edited for the Hakluyt Society by Sir Clements R. Markham in 1872. Miguel Cavello Balboa is the authority for the civilized people of the river of the River of Peru. He wrote his Relacion de la Guerra against the Incas in 1567. The works of Fernando Moncada, entitled Anales de las Indias de Peru, have a peculiar interest as containing the records of the religions he gives, to be found nowhere else. He came to Peru in 1569. His work remained in manuscript until it was edited by the Ternaux Company in 1840. The Spanish text was edited by Ximenes de la Espada at Madrid, 1872. The works of Fernando Moncada, entitled Anales de las Indias de Peru, have a peculiar interest as containing the records of the religions he gives, to be found nowhere else. He came to Peru in 1569. His work remained in manuscript until it was edited by the Ternaux Company in 1840. The Spanish text was edited by Ximenes de la Espada at Madrid, 1872.
ANGR (Psychological and Ethical)—I. PSYCHOLOGICAL.—There are two ways, according to Aristotel (de Anima, i, 1), in which anger may be characterized. By the dialectician or speculative philosopher (διαλέκτους), it may be defined as 'the desire of retaliation, or a love-like,' i.e., the natural philosopher (φυσικός), as 'the house, or chamber, of the heart, or of heat.' Neither of these two ways, taken by itself, does he regard as adequate; for the one has respect only to the 'form,' while the other takes account solely of the 'matter,' and the complete view requires that both form and matter be attended to. In other words, Aristotle is here exemplifying in a concrete instance the great psychological truth that the emotions are 'naturalized motions' (νηστατικά ἐνέργεια), that they have both an inward or psychological side and an outward or corporeal expression; and that each of these requires to be reckoned with, if the phenomenon is to be satisfactorily explained. It is, in all probability, on the psychological side that far, and maintain, with Darwin (The Expression of the Emotions in Man and Animals, p. 239), that 'most of our emotions are so closely connected with their expression, that they hardly exist if the body remains passive.' Certainly, the control of anger consists very much in conscious abstraction from the modes in which it physically embodies itself.

(1) On the physical side, anger, in the individual, manifests itself in marked disturbance of the bodily organism: e.g., the movements of hands and jaws become pronounced, respiration is quickened, the pupils are dilated, the respiration is short and rapid, the heart is accelerated, the face changes colour, the eyes flash, the eyebrows knit, the voice waxes loud, harsh, and discordant; and, in that species of anger which we know as rage, there is wild 'striking out,' vehement and uncontrolled, so that the anger, or fury, of the mind may be characterized by psychologists (e.g., Bain, James, Stout) to a 'sounding-board,' on which the nervous excitation correlated with the emotion 'plays,' and which is in turn affected and modified by the organic 'resonance.' This organic factor is highly important; in the words of Mr. H. G. Wells, 'as has been done by Professor James, who, in his theory of emotion, reduces emotion to a kind of sensation begotten of organic disturbance.

Our natural way of thinking about these tender emotions (grief, fear, rage) has, however, been shown (The Principles of Psychology, p. 194, It. ii, 449, 'that is the mental perception of some fact excites the mental affection towards the fact, and the organic state of mind gives rise to the bodily expression. My theory, on the contrary, is that the bodily changes follow directly the perception of the exciting fact, and that our feeling of the same changes as they occur in emotion. Common sense says, we lose our fortune, are sorry, and weep; we meet a bear, are frightened, and run; we are insulted by a rival, are angry, and strike. The hypothesis here to be defended says that this order of sequence is incorrect, that the one mental state is not immediately induced by the other, that the bodily manifestations must first be interposed between, and that the more rational statement is that we feel sorry because we cry, angry because we strike, afraid because we tremble, and not that we cry, strike, or tremble, because we are sorry, angry, or afraid. In the case of the former, it is the function of delay and deliberation to calm the feeling and to produce indifference.'

(2) Taken on the psychical side, anger is mental disturbance, or, by some, organic movement, a useful, or friendly movement, arising from opposition, hatred, or harm received, operating like a reflex act, viz., by immediate active response, or reaction without deliberation, or recognition of the unacceptable or offending fact that arouses it. It has thus a necessary relation to the conative, as well as to the emotive, side of our being. What induces anger is something that has to be got rid of; and, in the angry state, our activity is strongly put forth, so that the resistance may be readily secured. Moreover, if the real cause of the offence cannot be reached at the moment, the obliation vents itself on something else (thing or person) within reach—stool, chair, book: the pent-up anger must find vent, and the explosion is inevitable. 'Young children, when in a violent rage, roll on the ground on their backs or bellies, screaming, kicking, scratching, or biting everything within reach' (Darwin, op. cit., p. 241). Thus anger may be said to be instinctive. It does not wait for reason (though it may be brought under the control of reason), and is, in itself, regardless of results. It is aroused in us by what opposes us, or threatens us, by what offends and pains us (all such we resent); and it aims at repressing or suppressing the opposition, and at preventing its future operation. It is not, however, in itself unprofitable and, frequently, is not really a synonym of retaliation, as Aristotle's 'dialectic' would make it to be. Hence, such a definition as Locke's (An Essay concerning Human Understanding, ii. 20) must be rejected: 'Anger is an uneasiness of the mind, upon the receipt of an injury, with a present purpose of revenge.' The present purpose is not of revenge, but simply of rebuffing the offence or getting rid of it: it is that, to use a popular expression, 'for' revenge. The anger may easily follow in the wake of it. Thus it is that we may very well be angry with a man without hearing him ill-will; and thus it is that anger is only of brief duration (thence differing
from wrath, which is a settled disposition, although the choleric man is liable to repeated fits of it.

Like other 'passions,' anger lacks in moderation —transgresses limits, defies proportion. This indicates its danger as a motive power. When it acts like the wind, it exercises a useful function; when it becomes the whirlwind, it may do serious damage. On this account, its effects on the irate individual himself may be unsatisfactory; when the passions are intense, the subject inevitably ensues, exhaustion thus taking its revenge.

Anger is a primary emotion of the human mind, and needs to be experienced in order to be known. It has a distinct quality of its own, different from that of every other emotion; and no one could, by mere description, make it intelligible to a man who had never himself been angry. Not only is it not derived from other emotions, it does not even presuppose experience of other emotions to give it being. Yet it enters itself into other emotions, —sometimes as their basis, sometimes as a subsidiary factor,— and so may be allied with 'affects' that are distinctly malevolent. It is an egoistic, and at times even a most horrid, emotion. The anger of a venomous reptile is a nervously excited subject; and peevishness is undue sensibility to trifles, annoyance at them far beyond what their real value or significance warrants.

ii. Ethical. — Anger, as has just been said, is not in itself malevolent: it is simply a protection or defence against harm or hurt, and may be directed against things as well as against persons. It is a species of resentment being, and is instinctively, and, therefore, without due regard to consequences; hence the need of direction and restraint, and hence the ethical bearings of the emotion. As instinctive resentment, it is neither to be praised nor to be blamed, but is to be accepted as a part of the human constitution necessary to the welfare of the individual, and therefore ultimately to the good of the community. But inasmuch as the causes of anger are frequently human beings, and its object is also human beings, as anger is apt to expend itself in excessive measure, and, in cases where the causes of it cannot be immediately reached, on objects that had no share in arousing it, it has to be brought under the control of reason. It is in every case, if it is to be a help to justice. But, in thus rationalizing it, we are giving it a distinctly moral character, and are taking it in a wider significance than is accorded it by the psychologist. We are now estimating it in relation to its consequences, and assigning it a place in an ethical scheme of values. This means (to use Butler's famous analysis) that we are distinguishing between resentment that is sudden or instinctive and resentment that is deliberate, and appraising each in connexion with its social bearings.

Sudden or instinctive resentment, on the ethical side, is not to be thought of as a purely objective, or immediately on the perception of the offended, as discriminated from mere hurt or harm; it presupposes a conscious agent, intentionally doing an offending act for the purpose of injuring us. It consequently assumes the form of moral indignation, which is the spontaneous emotion caused by the sight, sense, or thought of wrong or evil, when the wrong or evil is designedly effected. It is the resentment of a healthy mind sensitive to injustice, and responding unreflectingly or immediately on the perception of the offended. Without this kind of anger, it is hardly conceivable how the moral nature could be effective at all.

When, on the other hand, we turn to deliberate resentment, we find that we are giving anger a different complexion, and are bringing it into relation with other phenomena of human nature that may or may not be conducive to men's highest interests. In so far as deliberate resentment means simply restraining the act that would naturally follow from an immediate perception of the injury inflicted, till we have assured ourselves (in cases where some doubt may be possible) whether our resentment is just or not, and whether the consequences of our action may not be out of all proportion to the injury done, then it is justifiable and commendable. But when, as is so frequently the case, deliberate resentment allies itself with our malevolent inclinations (with the savage or the fiend within us), then it becomes morally reprehensible, often in the highest degree. It is the nature of anger voluntarily nursed to magnify the offence that caused it; vanity and offended dignity come in to intensify and transform the emotion,—a grudge rankling in the bosom naturally exaggerates. Further, there can be little question that anger readily associates itself with that desire to injure others or to inflict pain on them that seems to be native to human beings, and so is easily transformed into a desire for destruction, or revenge, or, keener still, vindictiveness. It is now exclusively aimed at persons, and in its nature diametrically opposed to the sympathetic and humane sentiments, the tender emotions, that bind men together; it is the very antithesis of love, and, instead of attracting and cementing, alienates and repels. It is not only that the angry person, full of hate, is estranged from his fellow or resents his action; he also desires to inflict injury on him, to cause him pain, and glouts over and delights in his suffering. If he longs simply to pay him back or to requite him for the offence committed, his emotion, proceeding on the principle of equivalents, the lex talionis: — an eye for an eye, and a tooth for a tooth,—oblivious altogether of the promptings of generosity and mercy. When he harbours ill-will and cherishes his wrath, refusing to be pacified, meditating unmeasured requital and waiting for the favourable opportunity, it is revenge. Revenge is in its very nature inequitable and relentless, bloodthirsty and cruel, satisfied with nothing less than 'the head of John the Baptist in a charger.' When revenge pursues its object spitefully with unremitting persistence, and finds zest in every petty infliction of evil on him, it is vindictiveness. The vindictiveness gives it a very different character, (with the usual negative expressions, is not susceptible of.)

Various questions concerning anger suggest themselves:

1. A point that the earlier British psychologists (Butler, Thomas Reid, Dugald Stewart, Thomas Brown, etc.) delighted to investigate regarding anger and the malevolent affections, was their use or final cause. Accepting human nature as a given hierarchy of principles and faculties, and intending their philosophy to have practical value, they asked what end these seemingly destructive and objectionable forces served in the economy of man's being. They had little difficulty in showing that, given man and given his circumstances, these forces minister both to the protection or self-preservation of the individual and to the good of the community. Sudden anger clearly conduces to the defence of the irate person against hurt or harm. When what is at stake is another living person, it serves as a warning to him to desist; it is the Scottish Thistle fully displayed, with the significant motto, 'Nemo me impune læctet.' Even more sanely in this purpose served by retaliation and revenge, when the vengeful person has to deal with others of like vengeful disposition as his own. His anger, being fierce, is both punitive and deterrent.
ANGER (WRATH) OF GOD

(2) In more recent times, another question has come prominently forward, viz. Whether the malevolence of human nature (which nobody denies as a fact) is really native to it? The negative answer was early given by Aristotle, and was afterwards supported by P. H. Bradley, who tried to reduce malevolence to excitement, or love of power, or self-assertion, or such-like. This was strenuously opposed by Professor Bain, who insisted, that making all such attributes for self-assertion and the like, reduces to its lowest elements, reduces to its lowest elements, and similar strong emotions, there is a certain residue that is unaccounted for, and this residue is simply innate malevolence.

'Let us take, then, the examples where we are witnesses to suffering inflicted by others, and where we ourselves are noways concerned, or at all events, very remotely. Why do multitudes delight in being spectators of punishments, including the gallows? In former days, when executions were public, when whippings, the pillory, and the stocks were open to everybody's gaze, what was the source of the fascination attending the spectacles? They were remotely connected with the security of the people generally, but they were most frequented by those that thought least of public security. . . . We can go a step farther. There are abundance of examples of delinquents by belief of the most absolutely gratuitous kind, beginning in tender years, and continuing more or less until maturity. The love of teaching, of practical logic, of the love of telling trouble and making sport without cause, whatever it is, too manifest to be denied. . . . The demand for those forms that the forms that take by preference, inasmuch as these are probably something more than mere excitement; they involve a more conspicuous pleasure. The nature of excitement are in the habit of seeking it by molesting, annoying, chastising, by the inheritance is that his punishment is the mere cover for a definite pleasure, the pleasure of malevolence.

To sit on a road fence, and pass insulting and jeering remarks upon those whom we see passing, is a mere appeal to a meek love of excitement; it arises from the deeper fountains of malignity, revenge, and spite. The pursuit of excitement in the sake of exciting others, while provoking something, must do the same as if they had no heart; we may even find excitement, and pleasure too, in bestowing benefits; when we habitually seek it in the shape of loud laughter, and the ridicule and disapprobation of the public. . . . The question ever recurs—Why is it that such a source of comparative pleasure, if there be not a flagrant pleasure for the connexion with the sufferings of others? (Bain, Dissertations on Leading Philosophical Topics, pp. 84-104).

The strength of the argument seems to lie on the side of the affirmative; and, however unacceptable it may be, the fact must be recognized that man has an original tendency to inflict suffering on others, and derives real satisfaction and delight from contemplating the suffering that he inflicts.

(3) Our repugnance to this position may perhaps be mitigated, if we accept the explanation of the origin or source of the malevolent affections offered by the theory of Evolution. In his masterly work on the Origin of Species (1859), Darwin has amased materials to show that these affections originated, were in the predatory habits of the race, taken in connexion with those of the lower animals. They are the result of the necessity for combat and mutual warfare in the early struggle for existence. It was in these far back times that anger, retaliation, and revenge, were the ways of giving outward expression to them, so significant of their animal origin, arose; and they are a heritage to us from the past. By this hypothesis, the wolf in man receives an explanation of a scientific kind, which, whether fully adequate or not, throws light on many points connected with malevolence that otherwise remain dark and puzzling. The philosophers of some countries (Oriental in particular) have tried to explain the origin of the expression of metempsychosis or transmigration of souls, especially the passage of the soul of a brute into the body of a man. The lower impulses and passions seem thereby to be accounted for, and man's baser nature to be so far justified. This is but the imaginative and non-scientific way of solving the problem; over against which has to be placed the scientific and reasoned mode of solution offered by Evolution.

WILLIAM L. DAVIDSON.

ANGER(WRATH)OF GOD.—I. THE DIVINE ANGER AS PRESENTED IN THE OT.—The God is revealed in the OT as a living Being, who has a merciful purpose toward the universe which He has made. During all the ages of human history, He is seeking to carry out this purpose to its consummation. In doing so, He is confronted by the ignorance and slowness of men, by their will and their hostility. The objects of His such feelings as would be stirred in the heart of a wise and good man, in view of the hindrances and oppositions with which he met in the course of some great, beneficent and providential work. The OT speaks freely of the grief, and jealousy, and anger of God. There are doubtless very grave difficulties in attributing these emotions, and, indeed, emotions of any kind, to One whose thoughts are not as the thoughts of men. But the writers of the OT, while guarding against an obvious abuse of this anthropomorphic method of conceiving the Divine nature (I 1566), do not stop to discuss such problems. They are chiefly concerned to make vivid and real the thought of God, as a living Person in whose image human beings have been made. Human qualities, accordingly, are attributed to God, because human nature is homogeneous with the Divine nature. In man these attributes and affections are marked by finitude and imperfection. In God they exist in absolute perfection. This makes a great difference between what is found in man and what is attributed to God, as the OT writers are well aware. But there is an identity deeper than the difference; and therefore even the latest and most spiritual of the prophets and psalmists make fearless use of anthropomorphism. Wherever they have failed to do so, they would have endangered, in the minds of their readers, the personality and the moral nature of God. Anger, accordingly, is found in the Divine character, as it is always found in any strong human character.

I. THE NATURE OF THE DIVINE ANGER.—The OT describes it in terms which are laden with terror. What created thing can stand before the flame of that great anger (Dt 2922; cf. De 129, Ps 7821; 8860-8-8, i. 2)? The Divine anger, described in these and other passages, is not to be confounded with the ceaseless and capricious fury which men have been wont to attribute to the gods of Homer and the Iliad. It is always to be understood by reference to the central truth of Jehovah's self-revelation. He is the covenant God of His people. He promised and declared that it is when the conditions under which alone He can work out that salvation is infringed, and His purpose of mercy is imperilled. The relation in which He stands to Israel necessarily implies that His holiness, i.e. His Godhead, be not violated in any of its manifestations. A God who is not holy and inviolable cannot be a Saviour To invade His sanctity is to defeat His purpose. The anger of God is aroused, therefore, by any act which stands between Him and the end which He has in view.
Incidents are recorded which seem to bring the anger of Jehovah down to the level of the inexplicable rage of an un-ethical bestial nature (e.g., 1 S 6-9, 2 S 24-29; 1 K 19:14; Ex 21:25, 30). All such cases, however, are to be understood less in the light of a divine purpose, than as evidence that the pride and self-will of man invade the sphere of the divine holiness. What is at stake is not a ceremonial regulation as such, but the very nature of God Himself. By such acts as those referred to, therefore, the anger of God is kindled, and moves upon the perpetrators of them it descends in crushing might.

2. Its Objects.—The objects of the Divine anger, accordingly, are men who oppose themselves to the Divine will. Such an attitude was hostile to the people, the people of God's choice, the realm wherein He rules: the nations who rage, and the peoples who imagine a vain thing (Ps 2), the enemies that reproach, and the foolish people who blaspheme His name (Ps 74). Not these alone, however, nor these chieflY, provoke Him to anger. When Israel breaks the laws of righteousness, upon which the commonwealth of God is founded, or does dishonour to Him who redeems His people, His heart is not within Him; and He punishes, not with cold, unemotional, judicial exactitude, but with an intensity of indignation which, to a awakened conscience, is the most awful element in this part of the story (Ls 139, 1 Ls 61). The long education of Israel, culminating in the teaching of the prophets, has burned into the conscience of men that sin is a reality for God, and that towards it He is moved with a just and terrible anger (Ps 119). The depth of God's concern with regard to sin can be fathomed only by estimating aright the relation in which He stands to His people. He is their Saviour, and the tenderest and most hearty concern for them is in the heart of the Father, whose selfish pride or ambition may be made subservient to the will of God, so that it may, unconsciously, be the rod of Jehovah's anger (Is 10). The prophets, however, clearly discern that God's operations, alike in mercy and in judgment, cannot be carried to completion in the state of the world as they know it. Not in any of these common days, which succeed one another with uncompleted significance, can the work of God be finished, but only in a Day, which completes the series, and at once reveals and fulfils the whole design of God. This Day of the Lord will be both the consummation of all the teachings and personal pride (Am 5:28-29, Zeph 1:12, Mal 2:2-3). Thus the wrath of God gains a predominantly eschatological sense, not, however, to the exclusion of the view that it is a present quality of the Divine nature, which is continuously manifest in His attitude toward sin.

4. The turning away of the Divine anger.—Being under the control of the ultimate Divine purpose, the wrath of God may be restrained, or even entirely turned away, and give place to the unhindered outpourings of loving-kindness. It is, indeed, plain that, if God gave free vent to His anger, the objects of it would immediately be destroyed (Ps 130). Such an action on His part, however, would be contrary to His own ends. During the historic period, through which God is pursuing His aim, His wrath cannot be fully executed (Ps 78:35-36). One consideration is paramount—the honour of His Name, i.e., the success of His mission. Thus, if men of mercy cannot submit to be tainted with failure (Ezk 20, Is 48-49). He is angry, and He punishes. But He waits to see if, by punishments restrained and controlled by His mercy, those who oppose themselves to His will, will turn to Him, and live. Beyond this period of discipline there lies an awful possibility of exhausted forbearance, and final and measureless doom. What, then, will avert this doom, and turn anger into acceptance and delight? The OT has no clear or full answer to give. The sacrifices, obviously, could not atone for sin, in its real spiritual significance; and their symbolism cannot have conveyed an exact dogmatic teaching. The prophets, however, had grasped one great and fruitful thought: if a representative of the people be found who, standing in living relation to the nation, yet separating himself from the national trespas, shall deeply and sincerely feel the sinfulness of the nation's sin, and the terror of the Divine judgment upon it, and shall make profound acknowledgment before God, in the name of the people, of their guilt and ill-desert, the Divine anger will be appeased, and God will return to His people in mercy (Gr 32, Ex 32:14, Nu 21:26-29). It is true that no perfectly competent representative can be found among the people themselves, Even a Moses or a Sennacherib would be insufficient for being such an one. Yet the principle of atonement through sin-bearing remained deep in the prophetic consciousness (Ezk 22, Jer 5, Is 59), and, in the great vision of Is 55, one is depicted capable of undertaking even this vocation of unspeakable suffering, and, through his faithful discharge of it, procuring deliverance for the transgressors.

II. THE DIVINE ANGER AS PRESENTED IN THE NT.—The OT and the NT are at one in their intense conviction that God is 'a Person, with ethical attributes,' a living Being, having moral powers and qualities, which are reflected and reproduced in man. They agree also in their presentation of man as participating in the ethicalizing of the idea of God which is seen in the prophets of the OT is assumed as fundamental truth by the teachers of the NT. Love and mercy, holiness and righteousness, are qualities which believing men, alike before and after the coming of Christ, discern in the character of God, and adore with reverence and joy.

So also the NT, like the OT, has no hesitation in attributing emotions to God. Peace, and pleasure, and gladness are all to be found in Him, and, through their effects in the hearts of believers, are part of the Christian's heritage of blessedness. The conceptions of the Divine emotions are so wrought into Christian experience, as expressed in the NT, that to question it or explain it away would deprive the experience itself of its life and meaning.

1. It may be urged, however, that while it is true that the NT, like the OT, attributes emotions to God, it differs in not attributing to Him the emotions of anger. Thus their anger disappear in NT teaching as an element in the character of God? It is well known that Ritschl, and some other theologians of his school maintain that the only NT use of the Divine anger is eschatological. Is this correct? (a) It is true that the NT rage is primarily eschatological. Thus the expressions of the angels of the prophets of the OT, had the Day of Wrath full in view. The Baptist made it the burden of his warning address (Mt 3:7). However difficult it may be to find questions or responses in connection with certain portions of the tradition, it is certain that eschatology occupied a large place in the teaching of Jesus, and
that He used OT figures in describing the terror of the Judgment. In the Apocalypse of St. John that final pouring out of the wrath of God weights upon an aweful sense of doom (e.g. Rev. 14:19). The preaching of the Apostles is full of the terror of the Lord. To them and to their hearers it is a reality, and not the imagination of a man; and one element, not the greatest, yet very precious and wonderful, in the gospel, is that the Moslems have seized on this unapproachable terror (1 Th 5:16, Ro 9:20). (b) It is not true, however, that the usage is exclusively eschatological. It is to be observed, moreover, that however readily awakened by references to the ultimate Judgment and its dread accompaniments, a deeper awe is produced by the contemplation of a judgment that is present and continuous, and an anger that is awake and abiding even now. This more solemn sense of the wrath of God is not absent in the NT. The teaching of Jesus is very far from depicting a God who is undisturbed at the sight of human pride and self-sufficiency. Sin is a reality for God, and there is one sin, which itself is the ultimate product of sin, which hath never forgiveness. Some of the parables are heavy with the weight of the Divine indignation (e.g. Mt 23:29-30). More significant still than the words of Jesus were His own feelings and their outcome in act. He who said, 'We have not eaten the flesh of the Father' (Jn 6:56) was not stolidly cold or sublimely unmoved in presence of evil. Once and again He was filled with a great anger (Mt 23:15, 17; Mt 21:13). In allowing Himself this emotion and its utterance, Jesus certainly did not regard Himself as out of harmony with the feeling and attitude of God towards the evils that so moved Him. This teaching is echoed throughout the NT. Sin always seems to have that same wrath of God (Ro 1:18; 2:8, etc.). In its inmost significance, is equivalent to rejection of the Divine mercy incarnate in the Son of God. This teaching is not to be误会: God abideth on Him (Jn 3:34). When we remember what 'life' means, and how much it means for the old and New Testament writers, the favour and fellowship of God, we are compelled to put into this saying the profoundest sense of a weighty total indignation now resting upon the soul which is not standing in the obedience of Christ. It is possible to deny the doctrine thus covered, and yet be happy in the fear it conveys, and it is not possible to deny that NT writers held this doctrine, and owned this overwhelming terror.

2. The wrath of God, then, rests on the soul that rejects Christ; and upon the soul that is ‘in Christ’ no such awful load remains. The NT writers are at one in attributing this great deliverance to the saving work of Christ, especially to His death, which they regard as a sacrifice for sin. When Christ was raised from the dead, ‘the cloud of Divine wrath—the 659 so long suspended and threatening to brake (Ro 3:25) has been and will never be awaked away. This is the thought which lies at the bottom of Ro 6:10-13 (Sunday on Ro 4:25, in ICC). The penitent believer, looking to the cross of Christ, is certified, by the witness of the Spirit within him, that the wrath of God, which once rested upon him, is now turned away from him. Is it then the intention of the Biblical writers to convey the idea that Christ bore the wrath of God, that He endured the outpouring of the Divine anger? Is it fitting for the redeemed to say: The Father lifted up His rod: (De 32:19; Ps 75:9, Jl 2:20.) It is a remarkable fact that the NT never does, in words, connect the death of Christ with the Divine anger, even in passages where the line of argument might have seemed to culminate in such a thought. It seems as though the writers deliberately refrained from any language which might suggest that the Son became the subject of the Father’s anger, or that His death was due to an outburst of the Divine wrath, a wrath, as it were, drawn forth in lightning stroke, smote the holy breath of Jesus. At the same time it is to be noted that experiences which are themselves expressions of the wrath of God are attributed to Christ, and owe only to Him their existence to them. In Gal 3:13 Christ is described as having become ‘a curse for us, and in 2 Co 5:21 as having been made ‘sin’ on our behalf. Whatever these mysterious expressions, ‘blessing in the Lord’s sight’, ‘suffering of sin’, ‘utterance of the wrath’, to which such language may be made to refer, they cannot mean less than an actual experience, by the sinless One, of what sin involves; and that, without doubt, is the wrath of God. Yet the actual experience of sin is not used. It must be remembered, also, that Jesus, in dying, experienced ‘anguish’, whose source and bitterness we can never fully know; which, as it broke from Him in the cry of desertion, cannot have meant less than an unapproachable sense of the Divine judgment upon human sin (cf. Principal Garvie in Studies in the Inner Life of Jesus, p. 417.) Yet it does not appear, even in that cry of infinite pain, that He felt that God was angry with Him. Descriptions are given, implying that Jesus in death experienced a profound realization of what it means, and of what the Divine attitude and feeling toward it, and the Divine judgment upon it, really are. In these very descriptions, however, phrases which might lead to inferences regarding the anger of God are being endured by the Son of His love are carefully avoided. Christian faith is directed to One who was the Son of God, in whom the Father was well pleased, who hung upon the cross in fulfillment of the mission to which the Father summoned Him, and who must therefore have been, in that hour, the object of the Father’s deep satisfaction and most tender love, who yet surrounded the comforts of the Father’s fellowship, identified Himself with sinful men, and passed, Himself sinless, through the apprehension of God’s sentence upon sin, acknowledging its justice, and approving, as in the holy will, so in the holy action of God. The believer, when he commits himself to the crucified and risen Lord, receives from Him salvation, and enters upon the joy of those from whom the Divine anger is turned away, and who live in the Divine favour and fellowship. At the same time, being spiritually one with his Lord, he enters into the experiences in which Christ won his deliverance, realizes and acknowledges God’s judgment upon sin, dies to sin as a power over him, and begins to live the new life, which is not over sin; and in these experiences, which strangely reproduce both the passion and the glory of the Redeemer, the salvation, which he receives as a gift, is wrought out in a growing assimilation to Christ. He combines, in his own experience, what he has seen combined upon the Cross, the wrath of God against sin and the Divine mercy toward sinners. The terror of the Lord and the love of Christ are the two powers which operate within him, to make him flee from sin, and live unto Him who for His sake died and rose again. It may be possible to have a religious experience in which the sense of the wrath of God is experienced, but it ought to be acknowledged that it would not be an experience which has the cross of Christ for its starting-point and the NT for its rule and guide. It fell on Ten.

III. DOCTRINAL CONCLUSIONS.—The Biblical usage warrants certain inferences, which require to have their place in any theology whose guiding principles are found in the Scriptures.

1. The reality of the Divine anger.—The passion of anger is implanted in man, and has for its end the prevention and remedy of injury and the miseries arising out of it. ‘It is to be considered,’ in the words of Bishop Berkeley in his famous Sermon on Recollection (§ 11), ‘as a weapon, put into our hands by nature, against injury, injustice, and cruelty’; and ‘it may be innocently employed and made use of.’ We ascribe human qualities to God, not because we think of Him as a magnified man, but because we necessarily regard men as reflecting, under conditions of finitude and limitation, the qualities of the Divine nature. Human anger should be a model for the perfection of the Divine. The wrath of God is not a passion to be willed, but a passion to be experienced in the hands of man. The ‘wrath which is put into our hands’ we often use unwisely, forgetting, as we wield it, the claims of both righteousness and love. Divine anger is far removed from any such defect. It is a reflection of One who is at the same time all gracious and all righteous. It is completely under the control of...
ANGER (WRATH) OF GOD

attributes which are themselves combined, without any opposition, in the harmony of the Divine character. But it is in God essentially what it is in man. In Him, also, it is a 'weapon' against injustice and its kindred evil, turned against those who, in pride and self-will, seek to injure God. The classical theological statement of this position is to be found in Lactantius' De Ira Dei. The gods of Epicurus inhabit 'the void interspace of voids,' and 'are in no way sorrows, to mar their sacred everlasting calm.' The God of Stoicism is another name for the Universal Reason embodied in the universe, and is lifted far above the throb of feeling. Against any such views of the apathy of the Divine nature, Lactantius sets the Christian conviction of the character of God as love, and announces the principle 'qui non odit, nec diligat.' 'If God is not love, and its kindred evil, it is clear that He does not love the pious and the righteous. Therefore the error of those is more consistent who take away at once both anger and kindness. This line of argument has been often followed, e.g., by Trench (Syllomus, p. 120):

'There is a wrath of God, which would not be good unless He hated evil, the two being inseparable, so that He must do both or neither.'

Other aspects of the question of the Divine anger have arisen mainly from an intrusion of philosophical theory into the sphere of theology, and for this, in Trench, is a confession, Augustine is chiefly responsible. He is still very largely under the control of Neo-Platonism, and shares the dread, always entertained by mystical piety, of lowering the Divine nature, by connecting it with finite things, or of breaking in upon the transcendence and infinitude of its attributes taken from human experience. Thus in the City of God (bk. xv. ch. 25) he speaks of 'the anger of God, which does not inform His mind, nor disturb His unchangeable tranquillity and identifies it with the sentence which God pronounces upon sin.' 'The anger of God is of a disturbing emotion of His mind, but a judgment by which a punishment is inflicted.' The language which in Scripture attributes anger to God, he regards as anthropomorphic, and explains it as 'a condescension to man's finitude, imputing itself into the minds of all classes of men, alarming the proud, assuaging the careless, exercising the inquisitive, and satisfying the intelligence.' He may extraneous something of the same hesitation in Dr. John Caird's estimate of the value and the defects of anthropomorphism, and analogously he says:

'... when we are told of His wrath as being reserved or alated... the religious mind passes beyond the anthropomorphic language and identifies it with the mercy, the holy spiritual man, the man who has been truly instructed by the scriptural language, who has the expression, who expresses the sentiments of the Deity as well as the mind of man, which has been truly exhibited in the spiritual man. But it is a god, not only the religious mind, instructed by Scripture and by experience, will not necessarily presuppose the construction to a conception of the Divine personality. The difficulty of conceiving how God can be both the Absolute and a living Person is, of course, very great. Probably we ought to direct our thoughts to a fresh study of the conception of the Absolute, particularly with the aim of freeing it from the immobility and sterility which an exclusive use of the category of substance has imparted to it. In any case, we must seek to be just in our thinking to an absolute will of love, which determines the whole counsel and action of God; and, also, to His attitude toward that which conflicts with this with an attitude which can be construed only as condemnation and wrath.'

2. Sin and the Divine anger.—(1) The indignation is the expression of a love that is all-pervading, and the outburst of wrath and the unhindered manifestation of love are real also. Theology, accordingly, in its effort to give reflective expression to the facts of Charity, and its sincerity, cannot neglect the idea of the wrath of God, nor be at variance with it.

Ritschl, indeed, refuses to allow any theological value to the idea of the wrath of God. He makes great work on Justification and Reconciliation as 'ein ebenso heilloses wie absichtloses Theologenweib' (vol. ii. p. 283 [Eng. tr.] he says: 'From the point of view of theology, no validity can be assigned to the idea of the wrath of God and His judgment, as it stands as yet unconquered from this theological standpoint, is any special mediation between the wrath of God and the sinner conceivable or necessary in order to explain the reconciliation of God and man.') The new depends (a) on an interpretation of the Biblical usage, viz. that 'wrath' has a uniformly eschatological meaning, which is surely unnecessary; (b) on a conception of an absolutely and exclusively love, justice being excluded from the Divine essence, which imperils the ultimate distinctions of Good and Evil. When the Divine reason, clothed with omnipotence, has created morally free beings, the right of punitive justice cannot be excluded from it, viz., in the whole moral world to the danger of falling a prey to chaos' (Dennert, System of Christian Doctrine, vol. iv. p. 65).\n
(2) The wrath of God against sin stands in the closest relation to all His ethical attributes, particularly to His holiness and His love. His holy character is outraged by the presence of moral evil. If it is worship, as the impersonation and the guardian of righteousness. A trained conscience bows before this righteous wrath of God against evil, recognizing it as an element in ideal excellence. That nature alone which is upright is blind to what judgment is perverted, fails to be angry at the sight of moral evil. 'A sinner,' says Dr. A. B. Davidson, 'is an ill judge of sin' (Comm. on Hebrews, ch. 10). But the law which knows sin and hates it with a perfect hatred. His love is not less affronted than His holiness. The welfare of men, which is the aim of His love, is ruined by moral evil. The highest good of men depends on the conquest of sin in them, and their conformity to the holy character of God. His love for men, therefore, intensifies the heat of His indignation against that in them which opposes the realization of His loving purpose for them.

Some theologians have pressed this close connection between love and anger to the point of identifying them. So Martensen: 'This wrath is holy love itself, feeling itself restrained, hindered, and stayed through unrighteousness'; Oesterlee: 'Not without reason has this wrath been termed the extreme burning point of the flame of love'; and many modern writers, e.g., Scott Lidgett: 'The manifestation of the Fatherhood of God is shut out, and because shut out, is turned to wrath; for the wrath of God is simply the love of the Fatherhood denied its purpose by rebellion'; and Stevens: 'The wrath of God is the reaction of His holy love against sin. It is not the opposite of love; it is a part or aspect of love.'

It may be doubted, however, whether this identification is correct. Love and wrath are not the same thing. While incompatible with revenge, is certainly not inconsistent with resentment (cf. Butler, Sermon ix. § 10). It is possible to love those who have injured us, while feeling a deep and just indignation at the moral turpitude of their conduct. But our anger is certainly not a part or aspect of our love. Even a parent's anger at the evil conduct of a beloved child is not to be confused with his love for his child; though it is closely related to his love, being intensified by his desire to secure for his son the very highest moral results, and being, at the same time, controlled and directed by love in its manifestations. Anger is connected primarily with passion the passing away of wrath and the unhindered manifestation of love are real also. Thus anger, accordingly, in its effort to give reflective expression to the facts of Charity, and its sincerity, cannot neglect the idea of the wrath of God, nor be at variance with it.

This new view of the wrath of God in its relation to love and love of the Father's love and anger are real and distinct.
Their relations to each other constitute a problem the solution of which will tax his utmost wisdom. It is after this analogy that the Biblical usage presents the Divine anger; and by it theological thought must needs go back from a consideration of love to the sinner, while at the same time He burns with just and awful resentment against his sin. His love and His wrath are alike real, and each has its distinctive place in the character of God. Their relation to the problem which presents itself cannot be adequately set forth in terms of thought; while yet Christian faith grasps the solution in the cross of Christ.

Even Martensen, who identifies love and wrath, dwells upon the tension or apparent variance which sin has produced between the Divine love and the Divine righteousness, and defines the idea of the Atonement as the solution of a certain antithesis in the very life of God as revealed to man, or of the apparent opposition between God’s love and God’s righteousness (Christian Dogmatics, p. 325).

3. The turning away of wrath.—Scripture never suggests that there is any antagonism between the Divine love and the Divine anger, and nowhere could there be a stronger instance of love than with sinners that He felt it necessary to pour out His fury on someone before He could begin to love anyone. Theologians, who have kept close to Scripture, even in the teaching of Augustine concerning the ground of an ‘objective’ theory of the Atonement, have not failed to protest against this outrageous perversion of the truth. Calvin, whose expressions may often be criticised for their gloom and terror, is absolutely consistent. This infinite love being reconciled by the death of Christ must not be understood as if the Son reconciled us, in order that the Father, then hating, might begin to love us; but that we were reconciled (to Him) already loving, though at enmity with us because of sin. (Institutes, bk. ii. ch. xvi. § 4). The Divine love, accordingly, is the original impulse and the continual inspiration of the whole redemptive activity of God. Let the Divine love not compel and obliterate the Divine anger by a mere overflow of sentiment. The Divine anger can be turned away only when those against whom it is directed enter, with profound insight and entire assent, into its grounds and reasons, and submit themselves, with unquaking surrender, to the experiences in which the awful displeasure of the Holy One is manifested and realized. To say this, however, is to say nothing about the Divine love. It is the sinners the unspeakable terrors of the Divine judgment. Suppose, however, that, in the centre of the human race, there should appear One so related to man as to enter, as He was able to enter upon Himself service which no sinner can render for his brother, and no sinner can discharge in his own interests. Suppose that He should enter, without one shade of disparity or inadequacy, into the mind of God regarding sin, and submit Himself freely to the whole experience in which that mind is expressed, feeling, as He did so, an extremity of spiritual anguish for which no sinful soul has any conception. Suppose that He could not, by His suffering be a sacrifice for sin which the Divine love could accept without any infringement of its holiness, while the cloud of the Divine wrath would roll away for ever? Suppose, further, that such an One were the gift of God’s love to the race, as indeed He would need to be, seeing that the race could not produce Him, and were in Himself the very Word of God, the express image of His Person, as He would need to be if He were to reveal God’s mind toward sinners. Would He not be the living personal meeting-point of the Divine love and the Divine anger? But this is the message of the NT. Is it not the very message of the love of God reaches its consummation, and by then the wrath of God is stilled for evermore. To the question whether the Son endured the wrath of God, we must, following the usage of Scripture and the obvious truth of the situation, give a negative answer. ‘We do not,’ says Calvin, commenting on the cry of dismay uttered over the lot of the sinner, while at the same time He burns with just and awful resentment against his sin. His love and His wrath are alike real, and each has its distinctive place in the character of God. Their relation to the problem which presents itself cannot be adequately set forth in terms of thought; while yet Christian faith grasps the solution in the cross of Christ.

The faith which apprehends Christ as Saviour means the transition from a condition which involves the hostility of God, while yet His love is devising means for the restoration of the sinner, to a state in which the Divine love may satisfy itself in accepting the penitent and crowning him with goodness, and that it is to be this spiritual act has for its object Christ in His experience of sin-bearing, and implies spiritual oneness with Christ in it. The penitent, as he first comes to Christ, will know but little of what was involved in that experience. But the most rudimentary faith implies that the sinner identifies himself with Christ, as Christ had identified Himself with him; that the Divine judgment upon sin which Christ bore, and so vindicated for ever, the sinner accepts and ratifies, and thus, under the constraint of the love of Christ, dies to sin in its principle and power. Thus, though the sinner does not bear the anger of God laid upon sin, yet, taught by the suffering of Christ, he knows what that righteous indignation is from which he has been delivered, and enters with purged conscience upon the new life of fellowship and obedience.

4. The day of wrath.—The NT is occupied mainly with the proclamation of the gospel, and with opening to believers the wealth of opportunity and blessedness which is theirs in Christ. It has, accordingly, comparatively little material for a doctrine of the Last Things on its negative side. Yet the conclusion to which we are led admits of no doubt. If there is sin, after the full period of probation is ended, those who persist in their opposition to God and their rejection of the Divine mercy, whose characters have attained a final fixity, the NT leaves no doubt as to what their condition must be. They have sinned an eternal sin (Mk 3:30). They must endure the utmost visitation of the wrath of God (1 Th 5:19, Ro 2:8-9, 2 Th 1:9). We are not called on to decide the question, whether there shall be a final destruction of lost souls, or even whether any such shall be found at the time of the consummation. We are warned against accepted descriptions of what is in its nature, unimaginable, the loss and the misery of such a state. In any case any serious thought of the nature of human nature, and of the relations of God and
man, leads to the conclusion that such fixity of opposition to God must be included in the possi-
bilities of the development of human character, and that, if this possibility is ever realized, it must
involve none other than this overwhelming judg-
ment.

LITERATURE.-Monographs: Lactantius, De Ira Dei; Ritschl, de Ira Dei (1859); Weber, Vom Zorne Gottes (1862). Discussions in the Biblical Theologies, especially Davidson, Oester, Schultz, Stevens; and in the Systematic Theologies, e.g. Martensen, Dorner, Kaftan, W. Adams Brown. Discussions in works on Attunement and Redemption: Ritschl, Justification and Reconciliation (Eng. tr. 1900); Dale, The Atunement(? 1875); Simon, The Redemption of Man (1865); M. L. Cavenish, The Nature of the Atunement (1875); Moberly, Attunement and Personality (1901); Stevens, The Christian Doctrine of Salvation (1905); articles in P.E.B., and in Hastings' DB and DBU.

T. B. KILPATRICK.

ANGLO-ISRAELISM.—The theory that the inhabitants of England are the descendants of the 'lost' (? Ten Tribes of Israel is held somewhat widely, and is said to have two million adherents in Great Britain and the United States. The Anglo-Israelites are, at any rate, sufficiently numer-
ous to support one publisher who devotes his business entirely to publications dealing with the subject. There are also several periodicals published in furtherance of the views of the Anglo-
Israelites. The earliest suggestions of an Israelitish ances-
tory of the English are to be found in John Sudder's Rights of the Kingdom (1619). These take the form of a series of parallels between English law and customs and those of the Hebrews and Jews. The name 'Britain' itself is traced to a Phoenician source, Berat Anak ('The Field of Tin and Lead'). Many of the legends attached to the Coronation Stone have also a Jewish tinge, and are traced back to a period of residence under the lead of Jeremiah and Baruch, in Ireland. The modern movement owes its foundation to Richard Brothers (1757–1824), a half-pay officer of ecclesiastical habits in the navy. According to his account he was a Divinely appointed prophet. He described himself as a 'nephew of the Almighty,' and claimed descent from David. Among his prophecies were those of the imminent restoration of Israel to the Holy Land, and the elevation of himself as prince of the Hebrews and ruler of the world. Brothers was confined as a lunatic, but succeeded in obtaining many admirers, among whom Abel Bracewell of Hampton, M. P. for Lymington. The non-fulfilment of his prophecies did not completely destroy the faith of the believers, but through good and ill he retained the loyalty of John Finlayson, previously a Scotch lawyer with an extensive and lucrative practice. According to the Dictionary of National Biography, Brothers printed in all fifteen volumes, chiefly in support of his theory of the Israelitic descent of most of the inhabitants of England. The more important of the volumes are Revealed Knowledge of the Prophecies and Times (1794), and A Correct Account of the Invasion and Conquest of this Island by the Saxons (1822). Prominent among the literature that followed upon Brothers' prophecies were Finlayson's writings. In 1840 the theory was adopted by John Wilson, who lectured and wrote widely on the subject. His Our Israelitic Origin is the exposition of the theory. Other advocates in the nineteenth century were W. Carpenter (Israelitae Found), F. R. A. Glover (England the Remnant of Judah), and C. Piazza Smyth, the Astronomer-Royal for Scotland, who devoted himself to the investigation of the geographical regions in which the Israelites are supposed to have passed. In 1871, Edward Hine published his Identification of the British Nation with Lost Israel, of which a quartet of a million copies are said to have been sold. In the United States the leaders of the movement have been W. H. Poole and G. W. Greenwood. The theory has also been adopted to a slight extent on the Con-

continent, where, for instance, the hostility of the English to Napoleon and Russia, and the sympathy aroused by the Dreyfus case are attributed to this cause.

The advocates of the theory identify Israel with the Khumri of the Assyrians, the Cimmeri of the Greeks, the Cimbri of the Romans, and the Cimri of the Romans. All these forms, it is said, are variations of the same name, and traces of it are to be found in Crema, Cumberland, Cambria, and Gurni (a Russian fortress on the banks of the Araxes, the place of the Israelitish exile). The Ten Tribes of the Assyrian Captivity on leaving the land of their sojourn are supposed to have wandered towards the west, while those of the Babylonian Captivity passed eastwards towards Afghanistan and India. It is claimed that evidence of the journey towards the north-west is to be found in the toms, alleged to be of Israelitish origin, that stretch from the Nile to the Jumna and those of the ancient Caucasian peoples towards the Araxes. The further passage westwards can be traced, we are told, in the river nomenclature of Russia: the Don, Danz, Don(?)siper, Don(?)ster, and Danube. The theory goes on to state that these migrants were driven by Alexander the Great over the Danube and settled in Dacia. There they were attacked by the Romans, whom they ultimately repulsed. Many of them, however, were driven farther north, and founded colonies of Israelites which were passed into the west and as far as the Danube, as well. The Goths, who were also descendants of Israelitish descent (Goth =Gete=Gad) were driven by the Huns into the dominions of Rome, in which and beyond which they spread. In consequence of these events, almost the whole of Europe, as well as her colonies in other continents, is held to be peopled by descendants of Israel. Among the local identifications are the tribes of Simeon and Levi among the Ionians, Asher in the Etruscans, Dan in the Danes, Judah in the Jutes, and Manasseh in the Celts. The Sced-
ne-monians are also stated to have been descendants of Judah.

The Khumri are divided into the Scuthae or Scythians—where Scotch—and the Saco—afterwards Saxons (sons of Isaac). The former, it is said, composed the migration of B.C. 670, when the tribes of Reuben and Gad, and half the tribe of Man-
asses, started from the Araxes. The latter consisted of the remains of the victims of the captivity of nineteen years later. One branch of the tribe of Dan, however, escaped on ships, and ultimately settled in Spain and Ireland, where they were known as the Tuatha-de-Danann. They arrived in Ireland under the lead of the scribe Barnach and possibly also of Jeremiah. Accompany-
ing them, we are told, was an Israelitish princess who subsequently married a local chieftain, the couple being crowned on the Bethel stone, rescued from the ruins of the Temple. This stone, the Lia-
Fail, it is claimed, accompanied the Scots to Scot-
land, and was ultimately transferred there. It was removed by Edward I. from Stone to West-
minster, and is identical with that now used at English coronations. There is in reality consider-
able doubt whether the Coronation Stone is identi-
cal with the Lia-Fail.

In support of the theory many alleged identifica-
tions in respect of customs, traditions, beliefs, etc., have been adduced. These, without exception, depend upon the inadequate support of the Great Pyramid that the English were descended from the Lost Tribes. In 1871, Edward Hine published his Identification of the British Nation with Lost Israel, of which a quartet of a million copies are said to have been sold. In the United States
the persons of his descendents, the English. It is also argued that the English must be the representative of the race, as otherwise the many Divine promises made to that race would be unfulfilled.

The theory relies to a very considerable extent on a very literal interpretation of certain passages in the Old Testament (e.g. Jer 31:2-5). It is pointed out that Israel was to change his name ( Hos 11), increase beyond number, dwell in islands (Is 24:23) to the north (Jer 37) and the west, and be a great nation (Mic 5). Israel would also extend beyond the limits and found his collection (Is 49:20, 54), Dt 28:46 and 32:8). One of the tribes, Manasseh, was to become an independent nation (Gen 48:9). From this tribe, we are told, the United States was derived. Reference is found to the lion and the unicorn in Num 24:4, and to the American eagle in Ezek 17. The promise that Israel shall possess the gates of her enemies (Gen 22:24) is fulfilled in the case of Britain by the possession of Gibraltar, the one city or another, among the early Dickinson, A. one way or another, among the early.

ANGRÁ MAINYU.—See Ahimā.

ANGUTTARA NIKĀYĀ.—The fourth of the five Nikāyas, or collections, which constitute the Sutta Pitakā, the Basket of the tradition as to doctrine, the second of the three Pitakas in the canon of the early Buddhists. The standing calculation in Buddhist books on the subject is that it consists of 9557 suttas or short passages.

Modern computations would be different. This large number is arrived at by counting as three separate books such a statement as: *Earnestness, British Israelites and The Ten Tribes (1855); T. R. Howiet's Anglo-Israel and the Jewish Problem (1863); The Sukos, Our Cretan Saviours (1882); H. H. Pain's English Israelites (1859); Ozoan's Israel's Wanderings (1851); H. A. Smith's Israel's History (1882), C. L. Totten's Israel's Race (1879); and H. W. Poole's Anglo-Israel (1859). Other books that should be consulted are: C. Piazza Smyth's Our inheritors of History (1884); R. Gorel's English derived from Hebrew, and Identity of the Philistines called Druidical and Hebrew (1859); W. C. Davenant's Hebrews (1866). C. also Jacobs in JE I. 601. A very large number of books and pamphlets on the subject is published by Banks, Jacobson Court, Fleet Street, London, E.C.

ALBERT H. HAMSON.
being; the savage, in his treatment of the game which has fallen a victim to the prowess of the hunter, represents the loss of a similar state of mind; he attributes to the soul of the beast an anxiety as to, and a knowledge of, the good or bad treatment of its mortal remains. When the animal is still alive, he regards it as open to argument; he will reproach the crocodile with having slain those who have done it no harm, and point out that the crocodiles, having been the aggressors, have only themselves to thank when men free them and extend to them all the last rights and friends. He attributes to animals the power of speech, a power which in the case of the monkey is said to be put to no use, owing to the animal’s fear that he might be made to work if he once began to talk. Both in fables and folk-tales, animals are represented as carrying on conversations and as being moved by the same motives as the human beings who narrate the stories (MacCulloch, *Childhood of Fiction*, pp. 33-41, 247-278); so much so, in fact, that in Africa the arguments in a judicial process not uncommonly turn on the question of what the crocodile said to the hen—in which form the negro embodies his practical reasoning. For in Europe it is not hard to find traces of this primitive attitude of mind; there is a well-known custom of telling the bees when the master of the house dies; and few beliefs are more firmly rooted in the minds of country people than that neglect of this precaution will offend the insects, and deprive the new master or mistress of their labours. So, too, a knowledge of the moral character of those about them is attributed to the bees, with a corresponding influence on their activity. There is therefore no line of demarcation between man and beast, so that the North American Micmacs say: ‘In the beginning of things, men were as animals and animals as men’ (Leland, *Algonquin Legends*, p. 31). To the uncultured the difference is in the form, not in the nature, of things. The Indians of Guinea do not see any sharp line of distinction between man and other animals, between one kind of animal and another, or even between animals—man included—and inanimate objects. On the contrary, to the Indian all objects, animate and inanimate, seem exactly of the same nature, except that they differ in the accident of bodily form. Every object in the whole world is a being consisting of body and spirit, and differs from every other object in no respect save that of bodily form, and in the greater or less power of the convoking or dominating spirit consequent on the difference of bodily form and bodily habits (Im Thurn, *Among the Indians of Guinea*, p. 350).

But this is one of the essential similarity of all things, in spite of differences of form, does not embody the whole of the savage’s creed. Perhaps still more essential is his belief in the impermanence of form. We find this exemplified even in Europe; few tales are more common than those of the transformation of an old witch into a cat or a hare. But magical powers are by no means essential to this change of form. To take only one example: There is a wide-spread belief that certain migratory birds, and especially the stork, assume human form in other lands; and no sense of incongruity is felt when the story is told of a traveller in foreign lands, being one day approached by an unknown man, who, as one learns, is in fact a stork, representing his family affairs, inquires after the health of his children, and takes a general interest in what is going on in the distant Fatherland. The traveller is so far interested that he learns that the stranger obtained his knowledge on the spot. His request for an explanation is met by the simple reply that the stranger is the stork who nests on the good man’s roof. All the world over we find the same belief in the power of men, animals, and plants, to assume another form at will (cf. MacCulloch, *Phigalia*, pp. 149-187). It is therefore no wonder if the savage attitude towards nature is widely different from our own.

These transformations can take place during life. Of a slightly different nature, but almost equally important for the comprehension of the beliefs and customs of the uncultured, is the idea that death does not merely mean a cessation of existence, but is quite as material as the former. One of the great sources of the respect paid to animals is the belief that certain species are the embodiments of the souls of the dead, or even the souls of the dead (for the view varies), and that these souls must receive respect, not only because they are ancestors or relatives, but also because their anger would mean the anger of the species of animals which their souls inhabit. Thus a kind of alliance springs up between certain human kins and certain species of animals, in which some writers have sought the germ of totemism. Less important, because more temporary, is the alliance sought at the initiation ceremony. For in Europe it is not without a tincture of truth to believe in a spirit, sometimes as a living animal, on whose aid he relies in the battle of life.

Again, to the superior knowledge of animals, to their magical powers, or sometimes, and as a later development, to their position as messengers of a deity, are to be attributed the wide-spread angural beliefs and practices. To sum up, the savage has a very real sense of his kinship with animals; they are not merely his brothers, but his elder brothers; to them he looks for help and guidance. Not only so, but on them he depends for a great part of his subsistence—a fact which is far more vividly brought home to him than to the meat-eating human being of civilized societies, and in like manner he is far more liable than more cultured peoples to meet his death beneath the claws of a lion or a bear, or to succumb to the venom of the serpent. It is therefore small wonder that his attitude towards the animal creation is one of reverence rather than superiority.

I. AGRICULTURE.—The researches of Mannhardt have shown that the European peasant of to-day conceives that the life of the corn exists in the shape of an animal or human being apart from the corn itself. The animal corn-spirit is believed to take various forms, as horse, dog, cat, ass, cow, etc., and is often conceived to lie in the last ears to be cut, the reaping of which is termed in some parts ‘cutting the neck.’ The corn-spirit is found not only in the harvest field, but also in the barn and the threshing-floor; the corn-spirit is killed in beating out the last grains from the ears. As a rite of sacralization of the eater, or de-sacralization of the corn, the animal incarnation of the corn-spirit is eaten in a ritual meal at the harvest supper, at secktime, or at other periods; the bones or parts of the flesh of this ritual food are used in magic to promote the fertility of the new crop. Sometimes the actual animal is not itself eaten; in its place we find the cake of an animal form; but we cannot assume that this cake has taken the place of a former sacrifice of the animal, for it is made of the corn; the eating of the corn in the form of the animal is not the expression of a sacrificial rite, such as the eating of the animal itself.

In Greece and other parts of the ancient world we find traces of the conception of the corn-spirit as an animal. The corn-spirit is the pig, and was actually represented at Phigalia in the form of a horse, while her priests were called horses. In the case of Attis and other *prima facie*
corn-deities a similar connection with animals can be traced. Among the American Indians the corn-spirit is occasionally conceived in animal form (bison, deer, goat; see below). In some parts of the world an anthropomorphically or simply anthropomorphically conceived animal is thus associated with corn.

Various theories have been advanced to account for the form of the corn-spirit. Frazier (Golden Bough, ii. 539) suggested that animal forms which are driven out of corn in the process of roasting may have suggested the idea. Marillier (Worship xxii. 38) holds, with more probability, that the association of the corn-spirit with the soul of the earth was so familiar a conception that it was sufficiently suggested that the life of the corn must be in the form of a rabbit. Tress show cases some of the connexion of animals with corn or other vegetables, as their tutelary deities, on the ground that they were originally held to influence the supply of heat (Ann. Anth. N. S. 49; 50th Ann. Rep. Ethn. xvi. p. 206, etc.), from which, like other magical animals (Golden Bough, xxxvi. 192; Arch. Anth. N. S. i. 1424), they become tutelary deities. Possibly, too, the belief in soul-animals (see p. 459) may have had some influence; it is not uncommon to make offerings to ancestors in connexion with agriculture; these ancestors are sometimes conceived in the form of animals; it is therefore no long step to the concept of a corn-spirit in animal form. In Indo-China the ancestor is actually believed to guard the fields in the form of a toad at seclusion (Miss. Cath. 189, p. 41). In Yucatan, spirits in the form of lizards were believed to protect the fields. In British Columbia the Salish wild-tiger is held to guard the plantations against wild pigs (Tylor, xlii. 570).

Vegetation spirits generally are conceived in Europe to be in animal form; but in other parts of the world this idea is seldom so extended.

2. ART (DECORATIVE).—It is an almost universal custom to decorate weapons, pottery, clothing, etc., with designs, often so highly conventionalized as to be recognizable only on comparison with less stylized forms. One of the main sources of decorative design is the animal world, and the object was, it may be assumed, magical in the first instance. In its later forms there is a combination of the savage and the artistic; the animal has come to be associated with a god. In this case the use of the animal as an art motif is a form of worship; at the same time, if the animal is the emblem, for example, of rain, its use is equivalent to a prayer for rain. There are, however, innumerable instances of the use of animals in art, both in connexion with totemism and otherwise, for magical or non-magical purposes. The totem poles of the Hurons have all sorts of decorative animal carvings, sometimes of genealogical significance; in New Guinea the totem is delineated on drums and pipes. The lizard (see below) is largely used in Africa and the Pacific, and in Australia the sand is covered with delineations of animals; animals are figured at Australian and South African initiation ceremonies; and many Australian decorative designs are totemic, or at least animal motifs. Probably the skin markings (see 'Tata' below) of the Australian and other peoples are largely conventionalized forms of similar motives. Where a religious significance has once been attached to a design, the art motif may continue to be largely used merely for magical purposes and finally for luck. In Europe we are familiar with the use of animals in heraldry. See articles on ART.

3. COLOUR.—The colour of animals is highly important, both in magic (wh. see) and otherwise. In Europe the king of the snakes is said to be white. White horses (see below) are especially sacred. In Indo-China the cult of the white elephant is well known. In Japan white animals have a high importance (Globus, lxv, 272), and good fortune for the reigning house is inferred from their presence. The Manchu, a man who feeds 1000 white hares in his house will marry a prince. In Patagonia white cassowaries are sacrosanct; the Patagonians believe that the species will die out if they are killed, while white horses and cows enjoy an equal respect (ib. lxii. 63). The white animal is often preferred as a victim. The Woguls offer a white horse in autumn; the officiants dance round it and stab it with their knives till it falls dead (ib. liv, 282). The Japanese 'white animals' (Erman, Archiv, i. 415). Among the Shans of Annam a white buffalo is sacrificed annually (Miss. Cath. 1896, 59), and the Battas also select white victims (Marsden, Sumatra, p. 355).

In August or September the corn-spirit of the New Zealanders was held in Peru; the priests received for sacrifice one of the holy white llamas, which were never shorn (Australand, lixiv, 901). See also 'Bear,' etc., below.

For special purposes distinctive colours must be used. Thus the rain-cloud is black; in a sacrifice for rain, therefore, the victim must be in imitation of it. The Wambugwes of East Africa offer a black sheep and a black calf when they want rain; the Garos of Assam offer a black goat on the top of a very high mountain in time of drought; in Sumatra a black cat is thrown into a river and allowed to escape after swimming about for a time; the ancient Hindus set a black horse with its face towards the west and the sun, a symbol of the sun-god (ib. 106). For an agricultural sacrifice at Rome red-haired oxen were consecrated, in imitation of the corn-spirit of ripe corn (ib. ii. 311). In the same way in Egypt red-haired oxen were the chosen victims (ib. p. 142). The Iroquois sacrifice of the white dog (see below) may perhaps be set down as another example; for although white is not everywhere the emblem of purity, it is natural to connect with this idea the selection of a white dog for a public sacrifice.

4. CREATORS.—It is by no means self-evident to the European that the savage mind associates the creator of the universe and or of some part of it are necessarily united with those of its sustainer, or of a moral ruler of mankind, or even of a god. Hence, though we find cases in which the Creator is an object of worship, or at least of respect (see 'Crow' below), we also find a share in creation assigned to animals which are not even specially sacred.

The Great Vessre account of the origin of the world is that the world was once all water, inhabited only by a swan, which in some unaccountable way produced a crow, a wolf, and a water-hen. One day the crow propounded to the wolf the idea of sending down the water-hen to look for earth, for they would be so much happier if they had a little ground under their feet. The earth was brought up, and while the wolf was on a rattle, the crow sprinkled the earth about on the waters and formed the sea. It was then that the human central man was created, and the crow turned herself into an Indian (Cones, Henry and Thompson, MS. Edin., p. 251). According to the Guarayurs of South America, they were created from the earth, in imitation of all the other nations by a decree of the cacaraca bird, but they show it no special respect (Patricia, 104, p. 20). In some cases chance seems to have caused an animal to figure as Creator; in S. Australia the islands were said to have resulted from a blow of a great serpent's tail, but Voorende created other things (Eyre, Expedition, ii, 356).

5. CULT.—Anthropological data are supplied in many cases by the chance remarks of a traveller, who, if he understands the true nature of the phenomena he is describing, does not always appreciate their importance, and consequently leaves us in the dark on points which are indispensable to the correct understanding of his information. This is especially the case when the information relates to the worship or supposed worship of animals; not only are the sources of such a cult extremely various, but it may be possible for actions which spring from purely utilitarian motives to wear the appearances which elsewhere characterize the ritual of an animal cult.

We find, for example, that in the East Indies it was the practice to feed the sacred crocodiles, which were associated with the god Souchs (Sobek); in modern days we have a similar practice recorded in West Africa; but in the absence of information from those who give them food we can hardly inter-
ANIMALS

pret the custom without fear of error. Prudence is a faculty commonly denied to the peoples in lower stages of culture; but it may well have happened that accident, if not reflection, suggested to some one that a hungry crocodile is a far more dangerous neighbour than one which is in need of food. We cannot, therefore, explain the modern custom, without more ado, as crocodile-worship; the possibility of the utilitarian explanation must also be kept in mind. Quite apart from this, there is little likelihood of the existence of the data which arises from the indefinite nature of many of the observances. Savage ritual is well-established, but the savage creed is often vague and fluctuating. At any rate, in the hands of European questioners, it is not uncommon for one native to assert one thing while another will maintain exactly the reverse; or one and the same man will put forward contradictory propositions either after an interval of time or even during a single interview. Where the ritual is unmistakably religious or magical, we can dispense with the commentary of the officiating priest or magician; but in the great majority of cases of this sort we will allow to do without this guidance, even though we know that the explanation given is not necessarily the original one.

The terms 'worship' and 'cult' are used, especially in dealing with animal superstitions, with extreme vagueness; and, moreover, the interpretation of the facts to which they are applied is in itself uncertain. At one end of the scale we find the real divinization, commonly conceived of as a 'god-body,' i.e., the temporary incarnation of a superior being, with a circle of worshippers. At the other end, separated from the real cult by imperceptible transitions, we find such practices as respect for the bones of smaller animal, or the use of a bird as animal food, as one of the conditions for avoiding some curse. The question is one with the general problem of the definition of religion; it cannot profitably be discussed in connection with a single species of cult, and it is the less necessary to do so here, as we are concerned only with general principles and broad outlines.

Animal cults may be classified on two principles: (a) according to their outward form, and (b) according to their genesis. The first kind of classification is important chiefly for the comprehension of the principles which underlie the evolution of animal worship, into anthropomorphic cults; the second is primarily concerned with the account of the actual beginnings, it may be, of the religious sentiment or its manifestation.

(a) Formal Classification.—Animal cults may be broadly divided into two classes: (i) the whole species without exception is sacred; (ii) one or a fixed number of a species is sacred. In a certain number of cases the second class may be indistinguishable from the first; this is the case in the Boromean cult of the hawk; there were only thirty-three real men among the Ians of Borome in olden days, but they were indistinguishable from their fellows.

Although it is by no means axiomatic that the cult of the species has in every case preceded the cult of the individual animal, it seems probable that we may regard this as the normal course of events. There is a direct transition from the anthropomorphic cults; the second is primarily concerned with the account of the actual beginnings, it may be, of the religious sentiment or its manifestation.

(1) As in the case of the hawk (see below) among the Boromean peoples, a simple progress from theocratic to anthropomorphic ideas may suffice to explain the change. There is no reason to doubt that such a transition may be done without foreign influence and without any internal impulse due to the rise of sun, moon, or other cults of single deities, which would naturally tend to produce a species of syncretism in previously existing multiple cults. Among more than one Australian tribe, for example, the eagle-hawk seems to have been transformed into an anthropomorphic deity; but there is no reason to suspect either foreign influence or assimilation to other native cultures for the development of this cult. It may be that the cult of the eagle-hawk was once universal, but has been supplanted by other cults.

Yet, so far as Central Australia is concerned, the Wol-hunqua totem animal is a mythical serpent; the totemic ceremonies are performed to keep him in a good humour, and not, as is the case with the other totemic cults of the same type, to propitiate a single animal, mythical or otherwise, we are on the verge of worship, if indeed the boundary between totemism and animal cults proper has not long been overpassed. At the same time, not only may the rise of individual cults, such as those of the heavenly bodies, exert a deep influence on the multiple cults, but a specialization of function may, where multiple cults alone are present, aid to bring about the same result. The chief purpose for which the Boromean peoples require omens is to get directions for the course of the hawk, and it is therefore possible (in other words) that the conditions themselves made for the specialization of a war-god, either multiple or unified.

Intertribal war tends to increase, if it does not call to existence, the power of the chief; and by the leading of the successful war-god, the predominance of one individual among the omen birds is not a long step; and we actually find evidence that it was taken by the Ians, while the Kayans have gone far in the same direction. Evidence of similar tendencies can readily be produced from many other areas; the Amerinds had, in the very early days of the Jesuit missions, already attained the conception of an 'Elder Brother' or 'Magician' as the one to whom the use of the sacrifice of the war-god was attributed and powerful (Boc. des Jés., 1634, p. 13). In California the Acagchemens worshipped the pene bird; each village sacrificed a different bird, and the sacrifice was annual; but the vision of which the worshippers took was that only one bird was sacrificed, each year the same, and the same in each village. In Sumon the process had not gone quite so far; the gods of the villages were incarnate in animals; each god was incarnate in all the animals of the species; consequently although respect was shown to the individual dead animal, the life of the god was in no way affected by its decease; he continued to survive in the remainder of the species (Turner, Pidpa, p. 21). That of other peoples will be found in Tylor (Prim. Cult. 22. 3).

(2) The process of unification, as in the case of the Acagchemens, where mystical ideas have also played their part, may be hastened by a custom of sacrificing the sacred animal annually. The doctrines of reincarnation and identity of the sacrificial animal would undoubtedly be highly important for the history of the case of evolution, if it were not probable that they were later developments, if not actually due to the influence of European ideas. For an example of a stage in which the importance of sacrifice pure and simple is manifest we may turn to the Egyptians. Once in each year they go in crowds into the woods and kill one of each species of animals, preferring the horse and the tiger as best; they flay off their skins, hang up the entrails, and in the names of gods, falling prostrate on the earth; after which they eat the flesh togeth-er (Iddes, Three Years Travels, p. 1). In this example we are not, it is true, told how the sacrifice was done, but the author tells us (Straits, Beige, pp. 93, 119) that the Cim Tartars and others hang the skin of the sacrificial animal on a pole and worship it. We find that the Egyptians clothed the image of Ammon in the
fleece of the ram which was sacrificed to him once a year. Intermediate stages are given by the Cubans, in the form of preserving the skin and using it as the tobet, or cloak, of Chinchinich- 
ich; and by the Floridian sacrifice of the goat (see below), whose skin was preserved for a year, until its pelt terminates with the death of the animal, and then given away by another living animal. This form of worship may perhaps be due in the first instance to the commonly felt wish to apologize and do honour to the animal about to be slain, in order that its comrades, honoured in its person, may show no disinclination to fall victims to the hunter's dart.

(6) Genetic Classification. — In dealing with animal cults from the generic point of view, it must not be forgotten that, while changes in ritual are at most but gradual, the explanations which are given of the acts are liable to change in a much greater degree. Foreign influences apart, development in creeds is often a slow process; but it may be taken as axiomatic, at any rate for the lower stages of culture, that belief changes far more rapidly than ritual. If, therefore, we find that at the present day a species of animals is held in reverence, by no means, or used in the real or conventional mythology, as an animal. However this may be, it is evident that the passage from multiplicity to unity may have come about by a process which implies a certain amount of philosophizing. Just as in Egypt there was a tendency to identify all the gods with Ra, so in Greece, in a minor degree, went on the process of identifying the local corn- 
gods with more central and systematized cults. Thus the idea of a fertility cult of a deity to spread beyond its original area and to swallow up less important or nameless objects of worship, and this went on in the case of animal no less than of other cults. At the same time, we must not overestimate the importance of the movement, which may have penetrated but slightly the lower strata of the population. It may be noted in passing that it is possible to have two distinct kinds of syncretism: (a) where one deity swallow up his fellows, all being of the same species, which probably occurred in the case of Demeter, com- piled, however, by the fact that the horse as well as the pig was associated with her, thus leading to a double identification of the protection of the many local homogeneous corn-spirits, plus the unification of the different species of animals, the heterogenous corn-spirits — from which we get Demeter as she is presented to us by classical authors; and (2) where there is no underlying unity of function. If the cult of Apollo Smintheus de- veloped from an older cult of the mous, we can indeed explain why the mouse-god should also be the sun-god, because they devastate the fields under cover of darkness, and that the sun- god is the natural protector of the farmer against the plague of mice. But though we can explain syncretism-rationalizations, it is not the same in this case, it by no means follows that we have given the real explanation; and it would be far from easy to hit upon similarly obvious explanations of other syncretic processes.

(4) Side by side with the immolation of the victim, and sometimes supplementing the animal sacrifice as a cause of the sanctity of a special animal, may be placed the custom of selecting an animal for special honour. We find this in the second type, the animal, so far from remaining inviolate, is sacrificed at the end of the year or after a certain period of time; but, unlike the cases referred to in a previous section, its sanctity and honour are not terminated without death, and the skin is given to another living animal. This form of worship may perhaps be due in the first instance to the commonly felt wish to apologize and do honour to the animal about to be slain, in order that its comrades, honoured in its person, may show no disinclination to fall victims to the hunter's dart.

Animal cults may be conveniently classified under ten specific heads, with another class for non-
the small animal. They are mainly practised in Africa and South Asia; as examples may be taken the cult of the crocodile and the tiger (see below). The dangers to be avoided are twofold: in the first place, the soul of the slain beast may take vengeance on the hunter, who therefore submits to the same Fate as is imposed on him during a season of mourning, with the idea of either deceiving or keeping at a distance the malevolent ghost; in the second place, as in the previous sections, the remainder of the species has to be kept in good humour or properised from threats which are the property of their comrade. To this end, in Sunamtra, a magician is employed when a crocodile is to be hunted, and elaborate explanations are frequently given that the animal is to be or has been killed because it attacked a human being and thus broke the truce normally subsisting between man and the species. In Japan, a man who kills a snake should crush its head, or more will come; this seems to be intended as a means of preventing it from calling its fellows to avenge its death. Again, after hunting the leopard, it is the custom for the hunter to imitate the voice or the habits of the leopard; if this is not intended to deceive the spirit of the slain animal, it may be the intention to appease the remainder of the species. Vermin are propitiated in various ways, and many of the practices are applied to mice (see below). In the Baltic island of Oesel an offering is made to a weevil, and they think less damage will then be done to the corn. In the island of Nias in the Dutch East Indies the ant is very destructive; at harvest time it is propitiated by being called 'Nia or Sillia—the name of a good spirit which is supposed to protect the crop from harm. With the position of this spirit may be compared that of Apollo Smintheus (see ‘Mouse’ below), Dionysus Bassareus (see ‘Fox’ below), Baalzebul, and other deities whose names are associated with vermin. It is open to question how far we are justified in assuming that any cult of vermin is implied which has subsequently developed into the cult of a god or been united with it by a process of syncretism. In Central India the Waralis worship a stone which they call the lord of tigers (see below; see also ‘Horse’), but there is no reason to suppose that they believe the stone to have been a tiger, or to contain the spirit of a tiger; nor is any cult of the living tiger recorded among them. It does not necessarily follow that Apollo Smintheus must have been a mouse, or that a mouse cult must have been amalgamated with an independent cult unconnected with mice.

(4) We come to an entirely different set of ideas, in the respect shown to animals because they are regarded as the abode of the souls of the dead, or sometimes as the actual souls of the dead, and even of the living (Ren. de l'Hist. des Rel. xxvii. 385; Golden Bough, i. 409 ff., 430 ff.; van Gennep, Tabou, pass.; Folklore, xi. 253; von den Steinen, Unter des Naturvölker, pp. 512, 553, etc.). Some of the Celebes tribes perform a periodical ceremony in honour of the crocodiles, on the ground that their departed relatives take that form; they take provisions and musical instruments in a procession up and down, playing on the instruments, till a crocodile appears; they offer food to it and hope thereby to recommend themselves to their kindred (Hawkesworth, iii. 750). More especially among the Bantu tribes of South Africa it is the belief found that the dead pass into certain animals, which among the Bechuana differ for each clan. What is sometimes regarded as totemism, is at times connected with a similar worship (Men, 1901, No. 111). With the South African facts should be compared the Madagascar beliefs (v. Gennep, Tabou, pass.). In the Solomon
Islands it appears to be the custom for a dying man to inform his family into what species of animal he proposes to metamorphose (JAI xxvii. 147). The abode thus taken up in an animal is commonly regarded as permanent, the soul of the dead man passing into another of the same species, if his particular animal is killed (Mon. 1904, No. 118), but occasionally the soul is believed to pass on after a time to its final abode (Folklore, xii. 342). The belief is occasionally found in Africa that a chief has put his soul for safe keeping into a sacred animal, which is therefore re-spected (Golden Bough, iii. 407; JAI xx. 13; see below, ‘Goat’, ‘Cattle’). 

If we are entitled to assume that the sibolokism of the South African Bantu is totemism, or has replaced an earlier stage of pure totemism, the soul-animal occupies a specially important place in the history of savage religion. In any case, the worship or respect for the soul-animal has probably been the starting-point of other cults; thus the Zulu and Masai respect for the serpent may re-present the beginnings of serpent-worship. The association of the dog with the Lar at Rome probably points to a time when the dog was held, as a man being with the species of soul; at the same time it should not be forgotten that the Lar was also a household god, and that the dog might with special appropriateness be associated with it; the dog was likewise associated with Hecate, also apparently a family goddess.

(5) One of the most widely distributed animal cults is that known as totemism; it is, however, rather negative, consisting in abstinence from injuring the totem animal, or positive, showing itself in acts of worship. There are, however, exceptions; the Wollunqua totem is a single mythical animal; the Warrannunga ceremonies with regard to it are held on the principle of treating the animal as a man being with the species of soul; at the same time it should not be forgotten that the Lar was also a household god, and that the dog might with special appropriateness be associated with it; the dog was likewise associated with Hecate, also apparently a family goddess.

(6) In the case of the totem kin, the association of a totem animal is hereditary, and no choice in the matter is permitted to him. Of a more voluntary nature are secret societies. Even here inheritance has much to do with the evolution of these secret societies, especially in N.W. America. At the same time, initiation seems to play a considerable role in the case of the secret society; in the absence of initiation ceremonies a man remains outside the society, but this can hardly be the totem kin, for women, too, belong to it, though their initiation ceremonies, if performed at all, do not seem, any more than those of the males, and probably much less, to bear any relation to the totem. The fundamental idea of many secret societies is the acquisition of a tutelary animal. In the same way the individual gains an animal genius by his initiation last. Closely connected with these 'magnals,' as they may conveniently be termed, are the familiar animals, the wer-wolves, or other animal forms of wer-women.

(7) More especially in Greek and Roman mythology we find a number of woodland deities, which are very clearly spots of the woods or primitive totemism. In bearing in mind the possibility of syncretism, it may be recognized that even if Dionysus and other deities commonly associated with vegetation cults are sometimes conceived in animal form, this is no proof that they were so conceivably vow vegetation spirits; but this objection applies in a much less degree to Pan, the Satyrs, and Silenes, while in the case of the Fauns there is a general agreement that they are spirits of the woods (Mannhardt, Ant. Wbild. u. Feldkulte, p. 113). We have a parallel to them in modern European folklore; Leshi, the wood-spirit, is believed in Russia to appear partly in human shape, and partly with the legs of a goat (Mannhardt, Pauunftbrut, p. 138). The frequent conception of the corn-spirit as an animal, and in particular as a pig, is highly probably due to the incorrect in arguing that Proserpine, Atis, and Adonis were originally conceived as pigs, or, at any rate, that their cult developed from that of a corn-spirit in pig form. Where there is little that can be termed worship or cult in the attitude towards the animal under whose form the corn-spirit is believed to appear; few or no ceremonies are performed, save those whose object is to placate the spirit injured by the reaping of the crop and to ensure the proper growth of the new crops when they are sown in the spring. More definite acts of worship are recorded of the Panies on the Upper Missouri (see ‘Bison’ below), and of some of the tribes in Florida.

(8) Omens are drawn from the cries and actions of birds, mammals, etc., all the world over; but the developments in the cult of the totem in Sarawak are probably rare. If we may assume that the present-day conditions in the tribes referred to represent three stages in the evolution of a god, there is no doubt that from an omen-giving bird has been evolved a specialized anthropomorphic deity, especially associated with warlike operations.

(9) The question of the association of certain animals with certain deities is a very difficult one. On the one hand, it is certainly impossible to prove that all such animals were sacred before they became connected with the god; and equally impossible to show that the god has actually been crystallized out of one or more sacred animals. On the other hand, we cannot point to any clear case of respect for an animal paid to it wholly and solely because it is associated with a certain deity. If the jackal was respected in Egypt because it was associated with Anubis, it may be argued, on the one hand, that this association was due to the fact that the jackal was formerly regarded as a soul-animal; on the other hand, we may with apparently equal justice argue that the jackal was frequently seen about the tombs, and that this led to its being associated with the god of tombs. The question seems to be in most cases insoluble.

(10) It can hardly be said that there is any cult proper of animals used in magic. Among the southern Bantus, however, the crocodile (see below) is important. The explanation of this is not far to seek: the crocodile may be thought of in two ways; to kill a crocodile, therefore, would be to incur the suspicion of being a magician and possibly the penalty of death. It is therefore easy to see how the association of an animal with evil magic can lead to its being respected, and how that magical animals become gods, see Preuss's articles in Globus, vol. lxxxvii. passim.

(11) In a comparatively large number of cases we are unable to trace the origin of a cult of
ANIMALS

animals. First and foremost the facts of serpent-worship—the most widely spread of animal cults—are far from having been explained. The serpent is, in many cases, associated with a cult of ancestors; this is readily comprehensible where the species is a common one; for the very fact of its occurrence would mark it out as different from its fellows; so, too, where the snake inhabits the house or its immediate neighbourhood, we have an adequate cause for its association with the worship of the dead. An explanation for every case of serpent-worship is an idiozoo, but only those which are found in the neighbourhood of the kraal. Some part of serpent-worship may be put down to their association with water; one of the commonest forms of water-monster is the serpent. The water-snake is specially honoured among the Xosa-Kafirs, in order that cases of drowning may not be frequent (Merensky, Erinnerungen, p. 38). But these facts are far from sufficient to explain the widespread distribution of serpent-worship. On the other hand, its cult is much more than the cult of a dangerous animal, as is readily seen by comparing serpent-worship with that of the crocodile, and it seems doubtful if the mysterious nature of the serpent, which is sometimes invoked as an explanation, is sufficiently important to account for the preference given to the reptile. Probably a later anthropomorphization of the myth, the rain-god is Brugga.

The relations of animals and gods in Australian religion are by no means clear. Baime seems in some eastern tribes to occupy the same position which the bell-bird holds in the mythology of the central tribes; his opponent, Madzengag, is conceived under the form of an eagle-hawk, thus reproducing the familiar mythical conflict which in other parts of Australia is narrated of the eagle-hawk and the serpent. Here the serpent, under the name of Mullion, again figures as an evil spirit. The name of the god of some Victorian tribes is Fundjel, and the same name is applied to the eagle-hawk; possibly, however, both receive it simply as a title of respect. However that may be, it seems clear that a certain amount of anthropomorphization has gone on in Australia. What is not clear is the position of the animals from which the anthropomorphization of the shape of which the serpent is made to have been evolved. Both eagle-hawk and crow are phratrie names; but, while the crow (see below) is respected, possibly as a soul-animal, there are few traces of a similar respect for the eagle-hawk. Yet we find that the names of the different gods are anthropomorphized into a deity, and the deities and demons are connected with animals in areas where the phratrie names, at least at the present day, have nothing to do with these animals. On the other hand, the eagle-hawk is a common form of the wizard (Spencer and Gillen, Nativ Tribes of Central Australia, p. 533).

Howitt has maintained that Koin and other spirits which the European observers have regarded as demons are really gods. If this be so, if the god of the Australian is no more than a modified medicine-man, we have a sufficient explanation for the position of the eagle-hawk. Even if Howitt's theory is not generally applicable, the fact that the medicine-man of one tribe may be erected into a god by them, and into a demon by their neighbours who suffer from his machinations, gives a not improbable explanation of the facts. It is, of course, not possible to say that any one medicine-man has been deified; just as the Ikaggen have deified a generalized hawk (see below), the Australians may be said to have generalized the eagle-hawk-medicine-man.

In view of the position of the eagle-hawk as head of one of the phratries, it is of some importance that on the north-west coast of America we find among the Tsinikata two deities, Yehl and Khamkhat, who are styled "deities of the eagle and the serpent." At the same time they are divided into two phratries, which are also named after them. (Lehmann, vi. 183) 114) that Khambhat ever appears in wolf form; Yehl, on the other hand, assumes the bird form in many of his adventures. This does not seem fatal to the theory that the residing animals of the phratries have somehow been developed into demi-gods; for Yehl is little more than a culture hero; at the same time this theory leaves unexplained the spread of the two cults into the opposite phratries. For neither in America nor in Australia is there any trace of uni-parthic deities, as there should be if this is a position that such a creature has ever become a god. It should not be forgotten that in some of the central tribes there are traces of anthropomorphization (E.G.S. Aust. Int. Aust. Br. ii. 80). It is true that animal form is not expressly attributed to them; but, however, we are not to regard this as an explanation of the worship of the eagle; it may therefore be that the delimitation of the eagle-hawk is due, not to its importance in magic nor to its anthropomorphic qualities, but to its general nature, though these facts may have had influence in bringing about its preferred position.

Even were it possible to explain how that phratriy animals have been promoted to godship, it by no means follows that this is equivalent to the erection of a totem into a god. That phratriy animals have ever been totems is a pure hypothesis, and no consistent account has yet been given of the process by which they became more than totems.

Another animal god of unexplained origin, whose importance marks him out for notice, is the Great Harle of the Algonquins (Srazeczky, Historie des Travaille, p. 98; Lang, Myth, ii. 79; Brinton, Myth, p. 193), who, in his human form of Michabon or Manibosho, was the culture-hero of this important family of Algonquins. In the same connexion of the Great Harle with the East, has, on etymological grounds, explained it as the dawn. Meteorological explanations have ceased to be convincing; moreover, according to one form of the myth, which is Brugia, the latter half of Michabon = Manibosho) was not in the east but in the north (Brinton, p. 196). To speak of the cult of the Great Harle as animal-worship, is, according to Brinton, to be done without, meaningless of a totem; but this is to view it from the point of view of Europe in A.D. 1900 rather than in the light of other primitive cults. It may safely be said that no attempt to explain away animal cults on these lines can have succeeded in more than very small measure. Brinton's preference for a dawn myth cannot therefore carry the day against the natural meaning of the Algonquin legends. Moreover, no adequate account has ever been given of the process by which men came, on the score of a simple etymological misunderstanding, to turn a god in human shape into an animal.

Less important is the Bushman god Ikaggen or Cagn (see 'Mantis' below), who, according to the latest account, was believed to manifest himself in the form of the mantis (ikaggen), or the caterpillar (ago). From this duplex form we may perhaps assume that the former produced the latter, and that the direction of anthropomorphization. The problem of how one god comes to manifest himself in several animals is a complicated one, when it is a phenomenon of the religion of savage or barbarous peoples, among whom the syncretic processes, the working of which in Greece or Egypt is fairly obvious, cannot be assumed to have played a large part, if indeed they played any at all. We see the same phenomenon in Samos, where one village-god was believed to be incarnate in two or three kinds of animals. In the latter case it is perhaps to local causes, such as the aggregation of villages under one chief, or the coming together of more than one clan in a single village, that we must look for the explanation. But such an explanation can hardly be applied to the god of the Bushmen, who are on a very low level of civilization. The question is complicated by problems of Bushman origin and history; for if they were once a more settled folk, who suffered dispersal and disorganization when the Bantu stream overthrew them in Africa, it may be due to their disintegration that the hypothesis of syncretism, as an explanation of the cult of Cagn, seems inappropriate. Perhaps material for the solution of the problem may be found in the still unpublished mass of
material relating to the Bushmen collected by Dr. Bleek and Miss Lloyd.

Prominent among animal gods is the Hindu monkey-deity, Hanuman, who figures largely in the Rāmāyana. It has been asserted that his cult is not primitive, but has been borrowed from some wild tribe; and this conclusion is based on the fact that there are no traces of worship of the monkey in the Veda, save so far as Vrashakapi (Rigveda, x. 23. 1) is mentioned. The illustrations of such fet. the conflicting views of Bergaune, Religion védique, ii. 270-272; Oldenberg, Religion des Veda, 172-174; Geldner, Votische Studien, ii. 22-42; and Hillebrand, Votische Mythologie, iii. 278). But this line of proof overlooks the fact that the Veda is concerned with official religion, and that Hanuman may have been worshipped unofficially without any record of the fact being available. At the same time it is by no means improbable that the cult is to some extent based on an aboriginal predecessor, for we can hardly suppose that the Aryan-speaking invaders brought it with them; a corpse is carefully smoothed over, a key is less prominent, if not non-existent. Hanuman is distinctly a species god; but we cannot discover the origin of the cult. The resemblance of the monkey to man, which has been suggested as the origin, has not been supported by the fact that it is inadequate to account for a cult, however satisfactory it may be as an explanation of a rich monkey mythology.

6. DELUGE, EARTH-FINDING.—In legends of a deluge, animals figure in two capacities. In the first place, they are simple messengers, like the raven in the Book of Genesis; the crow, hare, dog, pigeon, and other animals go out to see if the waters are slack or how long the new earth is. Sometimes it causes it to increase magically in size by making the circuit of it. In other cases the waters show no signs of abating, and the water birds or animals are made to dive, and bring up mud, sand, or earth; from this the new earth is formed and laid on the waters; it grows to the size of the present world. This form of the terre péchée is especially common in America, where it also occurs in a cosmogonic myth. A prominent, but perhaps inadequate, is the association of the Morivins and in the Altai the incident figures in a creation myth. Among the Yorubas a hen plays a significant part in producing the earth and the waters. See DELUGE, waters.

7. DIVINATION.—For the purpose of divination, the entrails, the liver, and frequently the shoulde-blade of dead animals are used. Animals also serve as omens, indications which are more properly classifiable under ‘divination’ than under ‘omens.’ Ashes were strewn on the floor in Persia, and from the character of the tracks found on them was inferred the kind of animal into which the soul of a dead person had passed. In Mexico stuff was spilt on the altar, and inferences were drawn from the footprints of eagles, etc. (Tschudi, Reisen, p. 337; Bancroft, iii. 438). In Australia the ground near a track is examined, which is more properly classifiable under ‘divination’ than under ‘omens.’ If a track is found on it, they infer from it the totem of the person who caused the death of the man. In other cases a watch is kept, and the movements of an insect or its flight decide the direction in which the malignant magician resides. The American Indians using animals in divination is to make dice or other instruments of their bones; knucke bones are especially used for this purpose.

8. DOMESTICATION.—The problem of the history of the domestication of animals has seldom been attacked, and up to the present no satisfactory solution has been propounded; we are in complete uncertainty as to why or how man in the first instance came to tame them, prevent them in captivity, and induce them to perpetuate their species. In the Pacific the frigate bird is often tamed. The Indians of South America frequently keep tame animals in their luts. But in neither of these cases can we properly speak of domestication. In the New World the first primitive culture before the advent of Europeans were few; the dog is, of course, nearly universal, but with this exception domestic animals were found only in Mexico and Peru, and then only the turkey, llama, alpaca, and perhaps others. The numbers of the llama and alpaca alone were economically important. In the Oold World the main centre of domestication seems to have been Asiatic; but little, however, is known as to the localities in which the domesticated species first came under the dominion of man.

Probably the dog (see below) attached itself to man, but in other cases a process of domestication seems to be a necessary assumption. Totemism may perhaps be the most important factor. The allowance for the additional leverage of the segregation of totem kins. Probably some form of cult (see ‘Cattle’ below) was in many cases the determining factor.

9. EARTH-CARRIER.—The problem of the stability of the earth has been solved, more especially by the people of Southen Asia and the Asiatic Islands, thanks in some degree to Hindu and Muhammadan influence, by the assumption that some great animal supports the world; the myth is also found in other areas, but only sporadically. Among the Iroquois the world-turtle, who received Aztasctegi on his back, before the world was broken, is clearly a mythical animal of this description; the Winnebagoes too, according to Knorr, made the earth rest on four animals and four snakes, which were in the end unequal to their task; but since a Bison has joined his forces with theirs, the safety of the earth is assured. In India we find various myths; one account gives the snake, another the elephant, as the world-nearing beast (Ward, View, 1; Pinkerton, p. 237). R. H. Thomson’s view is that eight elephants bore the world on their backs (Monier-Williams, Indian Wisdom, p. 430), and the Lushai (Sophit, Short Account, p. 59) and Dajphants (Bastian, Völker am Brahnm, p. 16) make the world rest on the same animal. Another Hindu myth makes both turtle and serpent (dragon) rest upon an elephant (Cole, Rev. xi. 467), while a later myth gives the boar as the supporter. In Ceylon the world-bearing giant rests on a serpent, which rests on a turtle; the turtle rests on a frog, and beneath the frog is air (Miss, Herald, xvii. 265). The Indian boar occurs in Celebes (Journ. Ind. Arch. ii. 857; Med. Eth. Ind. vii. 114). Another account gives the buffalo (ib. x. 265), which recurs in the Moluccas (De Chirico, 1500, p. 133). In Arabia and Egypt are found the cow and bull (Andrew, Ethnog. Par. 142; Lane, 1591, p. 11), which are evidently adored as a rock, and that on a fish. Probably a result of Muhammadan influence, the bull or ox is found in Bulgaria (Stara, Bulg. 36); Sumatra (Hawkes, p. 71); and perhaps also as an egg, on this a fish, which is in the sea; and in Java (Coolman, Contes, p. 23). The bull recurs in a Kalmuk account (Bastian, Greg. Bilder, p. 367); the snake in Nias (Tijdschr. T. L. V. xxi. 113; Sumatra (Allg. Miss. ii. 404, etc.), and Java (Tijdschr. Ned. Ind. 125, i. 19); the fish in Sumatra (see below); among the Ainus (Batchelor, p. 276), and in Europe in the Middle Ages (Mon, Antiqu. v. 614). The frog recurs among the Mongol Lamas (Tyler, Pers. Cult. 263). Among the Slavs four whales are said to support the world (Grol, Lehrsamm., 1884, 210), and among the Tribes of West Africa a trace of Muslim influence may be seen in the undescribed animal who bears all on his back (Asland, 1590, 159). In many cases the movements of the earth-carrier are alleged to be the cause of earthquakes (see below).

10. EARTHQUAKES.—Most of the peoples enumerated in the preceding paragraphs accounted for earthquakes by the movements of the animal supporting the earth. In addition we find the snake in the Moluccas (Bastian, Indoneisen. i. 81), inter-changeably with the ox in Bali (De Chirico, 35); the dog (Müller, Reisen, ii. 345); Flores (Jacobsen, Reise, p. 51; Mindanao (Z. E. xxvii. 47), and among the Dayaks of Borneo (Vesal, Ethn. Bes. p. 8). In Flores a dragon myth is also found (loc. cit.). The earthquake in Japan is explained by the influence of spirits under the earth, sometimes in the sea (Natur, 1875, 511; Brauns, Jap. Mächten, p. 154; Chamberlain, Things Jap. p. 129). In Sumatra the crab is found as a very suitable tale to the earthquake, whose horns are perhaps due to Muslim influence
ANIMALS

In 243, 94, 30, the found food also found tiger said the it 328, said the sacrosanct {Ann. Prop. Voi, xii. 490}. The dog plays the part of a protector, as does probably the bird in a Mongol myth (Angeland, 1578, 524), and possibly in the Lules myth (Lonazo, Desc. Corog. p. 91). More commonly it is said that the moon is swallowed or attacked by an animal. In Burna the Karams say that wild goats are devouring the moon, and they make a noise to drive them away, or that frogs are eating it (Miss. Cath. 1877, 455).

In Eastern Asia the dragon myth is common; it is found in China (Grimm, Dent. Myth. ii. 380), Syria (Tiele, Gesch. der Alterth. Gesch. Hist. p. 194), and Tidore (De Clerq, op. cit. p. 73). This form of the myth is not far removed from that which makes a giant or undescribed monster attack the moon.

The dragon myth is found sporadically in Asia Minor (Nau- mann, Von Goldeneren Himm., p. 79). In Cariathia (Zie. d. Myth., iv. 61), and among the southern Slavs (Wilski, Folkty, p. 51), among the latter a bird myth is also found (Ib.). In Sinann (Gibben, ibv. 36), and Celebes (Med. Ant. Zend. x. 216; Gesch. Eth. Berlin, ii. 160), it is the male that produces an eclipse, among the Nagas the tiger (Batian, Vani, p. 36), among the Javanese the dog (Tyler, Prim. Cult. i. 253), who tears the flesh of the moon and reddens her light with the blood which flows. Among the Tupis the jaguar was the animal which was believed to attack the sun (ib. 229), and the Peruvians held it to be some monstrous monster. The jaguar received the name of M-anuar (Martius, Beitr. 1. 565), and the Guarani (Ruiz de Montoya, Conquist., p. 12 E.). The Tagalans tell a myth of a huge crah (Worcester, Philippines Ist. p. 497). The old Norse (Grimm, i. 297; ii. 588, iii. 367) held that a wolf attacked the sun or moon; and the same idea is found in France (ib. ii. 47). In many cases the dogs are bitten or incited to attack the monster which is assailing the heavenly body.

12. FABLES.—Animals figure largely in the folktales, no less than in the myths or sagas of primitive peoples (see Bleek, Reynard the Fox; Dennett, Folklore of the Fjord; MacCulloch, op. cit., etc.). In these they think and act and move like human beings, so that a lawgiver and a Congregation turn on such questions as what the hare said to the elephant, instead of on legal procedure. At a later stage the beast story is complicated with a moral. These Fables. Beast stories are found in most collections of Märchen; for India, see especially the Panchatantra.

13. FAMILIAR.—All the world over the witch or wizard is associated with an animal, termed 'the familiar,' which is said to be present and to have a special relation to him, sometimes as a spirit which stands at the beck and call of the human being. Just as the injury to the nagual, or bush-soul, has fatal results for its possessor, so the familiar's life is bound up with that of the witch; if a witch-animal is wounded, the owner will be found to have suffered an injury at the corresponding part of the body. Sometimes magical powers are attributed to whole classes, such as the Hare, the Hare, and the Hare, is in clay of Abyssinia, who are believed to have the power of turning into leopards or hyenas, instead of simply having the animals or their spirits at their command.

In the Malay Peninsula the alliance between the piaowang (priest) and the tiger is said to be the result of a compact entered into by the sage; the animal, in return, is said to be of service to the priest; the office is hereditary, and the son must perform certain cere-

mences before being initiated to the tricol. In Siberia the ye-kela (witch-animal) is said to be sent out by a shaman to do battle with the ye-kela of a hostile shaman, and the fate of the man depends on the fate of his ye-kela, which refuses the fight if it thinks it cannot beat its adversary.

In curative magic the wizard carries figures of his familiar and imitates them; sometimes his familiar is said to appear before he meets with success.

14. FASCINATION.—The power of fascination actually possessed by the serpent has been attributed to many other animals, among them the hagfish, dog, mermaid (Aelian, Hist. x. 16; cf. Maspero, Études, ii. 415), abris (Schol. ad Theoc. X. xviii.), basilisk (see below), tocan (Smith, Brazil, p. 559), and, naturally, above all the serpent (Melville, iv. 570, p. 18, 41). The power of fascination is attributed to the wer-wolf in the East Indies (Tijddeb. xii. 548 f.). Something similar is believed of the ordinary wolf in Norway (Liebrecht, Zur Volkskunde, p. 333). See Evil Eye.

15. FOOD TABUS.—The use of animals as food is prohibited for many different reasons. The totem kin usually abstains from eating the totem, the nagual is sacrosanct to the man with whom it is associated, and certain animals, like the cow in India, or in fact in the ancient pastoral tribes, are never or only very seldom eaten. But whereas the totem is absolutely taboo, cattle, on the other hand, supply the pastoral peoples with a large part of their food. Ictun and certain animals which is commonly tabu, at any rate for those who claim kinship with them, are soul-animals (see below).

Sometimes special persons, by virtue of their position or occupation, are forbidden the use of certain meats. In Fernando Po the king may not eat deer and porcupine, which are the ordinary food of the people. Egyptian kings were restricted to a diet of veal and goose. Certain taboo meats are imposed on mourners; in Patagonia the widow may not eat horse flesh, guanaco, or cassowary. Certain foods are tabu to men but not to women; among the South African Bantus men may not eat fish, fowl, or snake, other foods are forbidden to women but not to men; on the island of Nias, in the Dutch East Indies, the former may eat monkey flesh. Especially in Australia there is an extensive system of food tabus in connexion with initiation; as one gets older, these are abrogated one by one; enu flesh is usually reserved for old men. Similarly girls may not eat various meats at puberty; among the Déses their sole non-vegetable food. The English colonial marriage removes some of the tabus. In the Narrum- bidgee, ducks are taboo of married people only. In many cases only certain parts of an animal are tabu to certain persons: a Déné girl may not eat moose nose or reindeer head; among the Ottawas blood is tabu to the unmarried; the heart, liver, etc., are tabu to a Dakota after initiation till he has killed an enemy. The female animal is fre-

quently tabu; in sickness the female animal only might be eaten by some of the New England peoples.

During pregnancy and after the birth of a child many kinds of food are prohibited to one or both parents; in New South Wales the woman does not eat seals or kangaroo; in Martinique both parents abstain from turtle and mantatee. The reason generally given is that the nature of the food influences the offspring. Thus a turtle is dead, and eating a turtle would make the child deaf too; a manatee has small eyes, and the child would have small eyes too if the parents did not abstain from it. Just as animals are eaten to gain their qualities, so their use as food is prohibited in order to avoid incurring them; this is the explanation often given for abstinence from the flesh of deer, the hare, and other timid animals.

Especially in West Africa food tabus are im-
posed upon members of a certain family by a priest, and the tabu is sometimes therfore hereditary. Among the Andamanese some food is prohibited to every individual, generally some kind which, in the opinion of the mother, disagrees with the child; but if it is not selected in this way, each person is free to determine what food is to be tabu for himself. Other food tabus are connected rather with seasons than with anything else. It is not uncommon in south-east Asia to find a prejudice against eating lamb before a certain day.

In connexion with food tabus may be mentioned the prohibition against cooking certain kinds of animals together. In Kamchatka different kinds of meat may not be stewed in the same pot; the Saponas of the Eastern States of America would not cook venison and turkey together, on the ground that they would have ill success in hunting if they did. See Tabu.

16. FUTURE LIFE: (1) CEREBUS.—It is a common belief that the soul has to traverse a river on its journey into the other world. Sometimes the bridge is actually built by the soul (in the animal) while the Ojibwas said that a great serpent served as a bridge, and that he threatened to devour those who were in a trance (Keating, *Expedition*, i. 154). In New Caledonia a serpent serves as a bridge from which the soul may pass to Paradise (Cohn, *Reiseberichte*, xxii. 369). In other cases an animal guards the passage; in North America the belief is that a fierce serpentshoots fish which devour the souls which fall in (Globus, xlvii. 108, among the Dayaks). In other cases the function of the animal is to turn back the souls of those who are alive; the Melanesians held that a person in a trance went as far as the river, but was driven back by a red bull (Cones, *Henry and Thompson*, MS. Jour., i. 321). The Senecas of California also made a bull obstruct the path of the soul; but it was the dead who fell victims to him (Cont. *Am. Ethn.*, iii. 169). In the Dayak mythology figures a bird, who lives aside from the direct road of the soul; if the soul turns aside from the road, he is attacked by tigers, (Ling Roth, *Natives of Sarawak*, i. 210). In the Solomon Islands the function of the bird is quite different; the natives of San Cristoval say that the soul becomes a spirit (atare) when it leaves the body; but that it fails to recognize that it is dead; a kingfisher strikes it on the head after two or three days, whereupon it becomes a real spirit (Coddington, *Melanesians*, p. 257).

The soul pursues in the other world the same occupations as it followed in this life. Consequently it is commonly represented as chasing the animals on which the living man depended for his sustenance on earth. The bird is especially common among the American Indians, whose 'happy hunting grounds' are proverbial (Matthews, *Hidatsa*, p. 49; *Rev. Hist. Rel. xxx.*, xliii. 91.).

Sacug, one of the early Jesuit missionaries in Canada, tells us: 'The Indians say that the souls of dogs and other animals follow the road of souls; the souls of the dogs serve the souls of their masters in another life; and, as a witness of hunting with their tools and arms (*Histoire du Canada*, pp. 487, 489).

'To this end the functions of animals and the lot of the soul in the other world is due in great part the custom of burial sacrifice (for the horses see *Teutonia*, i. 148-162). Sometimes the object of the sacrifice is only to bear witness to the importance of the deceased in this life and thus influence his future lot (Abinal and Vaissière, *Vingt ans a Madagascar*, p. 221).

17. FUTURE LIFE: (2) SOUL-ANIMALS.—Few beliefs are more common than that the souls of the dead pass into animals. In South Africa it is the prevailing belief that it is found in Europe. (*Folklore*, xii. 234). America (Tylor, *op. cit.* 6-8), and Asia (ib. p. 91; *Mission Life*, N.S. i. 459; *T'oung Pao*, i. 11, etc.). Especially in the form of the doctrine of transmigration, as a punishment for evil done in this life, the belief prevails not only in India (see, e.g., Mann, *op. cit.* 201, xii. 55-69), but also in Oceania and New Guinea (*Golden Bough*, iii. 432-4) and Australia (*Man*, 1905, No. 28 ; for a collection of references, see *Rev. Hist. Rel.*, xxxvii. 385; see also below, 'Bat', 'Crocodile', 'Lion', 'Lizard', 'Tiger', etc.).

The causes which are supposed to lead to this re-incarnation are various. Among the Mokis it is the form of the tontem animal that a man assumes at death (Frazer, *op. cit.* 36). In South Africa the different clans believe that members pass into the animals which they venerate (*Man*, 1901, No. 111). The Zulu believe that the dead pass into snakes, called *amanhloni* (*Golden Bough*, iii. 411); according to another account, the chiefs inhabit one kind of snake, the common people another, while the old women are re-incarnated in lizards (Cohn, *Reiseberichte*, p. 186). According to the Masai, the souls pass into different kinds of snakes, one of which receives the souls of each clan or family (Hollis, *Masai*, p. 367). In Madagascar the body is thrown into a sacred lake, and the ed that gets the first bite at the body is the abode of the soul (v. Genep, *Tabou*, p. 291).

In China the soul of the drowned man is held to make a rush for the nearest living being; consequently they try to prevent this, by putting in the mouth of the dead a kind of food believed to be the receptacle of the soul (*Mission Life*, loc. cit.). The Barote hold that they can choose into which animal they shall pass (Bertrand, *Au Pays*, p. 390). In the Solomon Islands a man tells his family which animal will be his re-incarnation (*Golden Bough*, ii. 433). In the Argentine Republic it is the animals which are seen about the grave that come in for respect as soul-animals (Bol. Inst. Geog. Arg., xv. 70). In Brazil a kind of hawk is believed to inculcate with the souls of the dead the animals on which it perches to extract maggots from their flesh (Spix and Martins, p. 105). It is a common belief in Solomon Islands that when a cat jumps over a corpse, it becomes a vampire; in other words, the soul of the deceased passes into the cat. The Maecusi believe that souls which are unable to rest come back to earth and pass into the bodies of animals (Waterton, *Wanderings*, p. 177). In Pauwo it was also believed that the wicked found refuge in the bodies of birds, which the priests accounted holy (Arbousset, *Tahiti*, p. 289).

In many cases the lodgment of the soul in an animal is held to end the matter. If the animal is killed, the soul passes into another beast of the same species (*Man*, 1904, No. 118). In Madagascar, however, the death of the animal is held to set free the soul lodged in it (*Miss. Cath. 1850*, p. 551). The chirignanos, on the other hand, hold that the soul enjoys a few years of liberty and then passes into the body of a fox or a jaguar (*Golden Bough*, xlviii. 37).

Some tribes can describe in more or less detail the process of transmigration. The Amandabé, in South Africa, believe that the dead pass into lions, but that the process takes place underground; for which reason the corpse does not remain long unburied. The body is put into a large wooden trough and hidden away in a cavern; some time afterwards it is found to have become a
ANIMALS

The Betsileo are more explicit. The fanany (soul-animal) is in the form of a lizard, which comes to the surface after burial; the family approach it and ask if it is really the relative they have lost; if it moves its head, they make offerings to it. It then returns to the tomb and grows to a large size; it is the tutelary spirit of the family (v. Genep, Tabou, p. 272). According to another account, the corpse is attached to the central pillar of the tomb; and when offerings are made to it, it is said to turn to the right or left, according as large or small lizards develop, which becomes a boa at the end of several months (ib. p. 278).

In several of these accounts the soul seems to become an animal rather than to pass into the body of an animal; this is notably the case with the Ammanda-belé belief; the Betsileo seem to waver between two opinions, if we take all account of the data. In other cases the belief is more explicit. In the Solomon Islands the common people turn into white ants in Marapa, the island of the dead, and in this form serve as food for the spirits of the chiefs, the warriors, and the successful men, who, however, in the common tendency of men to sublimate the uncommon, speak of themselves as man, an island, or a tree, but their hands to find food; and as soon as they touch the entrails they themselves are transformed into the shape of the animal whose entrails they have grasped (Macabiche, 1584, p. 468). On the other hand, among the Magana of Umuampa, P. Le Jeune writes, the transformation of the soul is the result of simple misfortune or carelessness; the souls go to the extremity of the earth, which is flat with a great precipice, and into it as far as their hands can reach, in order to find water; they dance at the edge of the abyss and some fall over; these are forthwith turned into fish (Lett. des Jés. 1637, p. 53).

The soul-animal is usually respected, for which two reasons are assigned. The injuring of the animal is the injuring of a relative or of a friend, for it is believed that the animals into which the souls pass do not injure those with whom they were allied on earth as men. By eating the animal, men may even eat the soul of a relative, and perhaps inflict unmerited hardship on it in its non-human existence. On the other hand, the eating of the animal may be an insult rather than an offering; in many cases, the head of the dead man or of his fellows, and thus recoil upon the living. As a rule, however, the objection to injuring a relative is the prevailing feeling; for we find that, though a man will not injure his own family animal, he will not hesitate to kill the family animal of another man (Golden Bough, ii. 433).

In the same way a man does not injure his own totem, but will kill that of another.

13. FUTURE LIFE. (3) Psychromancy. The duty of conveying souls to the other world is sometimes assigned to animals. The Arancans believe that Tempeleague, an old woman, appears in the form of a whale, and carries off the soul of the dead man (Molina, Historia, p. 70). On the Orinoco huge snakes are said to carry off the souls in their belly to a land where they entertain themselves by devouring angels of Christ (Conversio del Píritu, p. 63). In Brazil the duty is assigned to the humming-bird (Alencar, O Guarany, ii. 321). Among the Saponas, the soul, after an old jag had condensed it, was delivered over to a huge turkey buzzard, which flew away with it to a dark and barren country where it was always winter (Byrd, History of the Dividing Line, p. 96 f.).

Sometimes the animal is not a mythical one. The object of some burial serpulices is to provide the dead man with a conductor. In Mexico the dog (see below), according to one account, fulfilled this office. Among the Yorubas of West Africa the young men who attend a funeral kill a fowl and throw its feathers in the air as they walk, and subsequently cooking it on the flesh. This fowl they call Adje Irana, 'the fowl which procures the road'; its function is to precede the dead man on his road (Miss. Cath. 1834, p. 342).

19. IDEOLS. It is not difficult to trace the main lines of the development of the ideas concerning the sacred animal which interest us here. The case is kept annually, to keep its skin for the ensuing twelve months, just as the various figures made of the new corn are suspended in the house till the next harvest. From the custom of keeping the skin there arises, by a natural transition, the practice of stuffing it in order to give it a more lifelike appearance. Then it was found more convenient to have a wooden or stone image, and the skin is drawn over it, as was the ram's skin over the image of Ammon; and the idol is a fait accompli. There is, however, this tendency towards the good; we find, therefore, that in Egypt, India, and even Siberia, idols compounded of man and animal appear; sometimes the head only is human, as in the case of the Sphinx; sometimes it is the head and body as which we understand, and we have the head and body of Sebek. Sometimes the head and body are human, but some minor portion is animal; the Fauns had goats' feet, and Dagon a fish's tail. With the appearance of the mixed form the course of evolution is completed, so far as the animal is concerned. It ceases to be an idol, and henceforth becomes an attribute of the god; he carries it on his shoulders, leads it, or stands in relation with it. The Egyptian priests were supposed to be descended to him, it ends by being regarded as his enemy.

20. INSPIRATION. One of the methods by which inspiration may be produced is by drinking the blood of the sacrificial victim; possibly the result is in part due to physiological causes. Near Bombay, in the ceremonies of the Konatis, an old man, nearly naked, carried a kid round a car used for hook-swinging, and tore open its throat with his teeth; when he had sucked the blood of the kid, he was regarded by the populace as a god (Miss. Reg. 1818, p. 157). In this case no mention is made of any signs of inspiration; but in some parts of Southern India, when a devil dancer drinks the blood of the victim, the blood of the animal is thrown into the nostrils of the possessed; as if he had acquired new life, he begins to brandish his staff of bells and to dance with a quick but unsteady step. Suddenly the allatitus descends. His eyes gleam, and he leaps in the air and gyrates. Having by these means produced an auto-hypnotic condition, he is in a position to give oracles; he retains the power of utterance and motion, but his ordinary consciousness is in abeyance (Golden Bough, i. 134). The Salemans explained the inspiration thus produced as due to the obsession of the blood-drinker by demons, whose food they held blood to be. They expected to gain the gift of prophecy by entering into communion with the demons (ib. p. 135).

21. LIFE INDEX. It is a wide-spread belief that any injury done to the familiar of a witch will be shown on the corresponding portion of the witch. Similiarly the witch will call the wertman; a disaster to the bush-soul (see ' Nagual ' below) of the West African spells disaster for the man himself. But it is by no means necessary that the relationship between man and the animal should be conditioned by magical rites; it may be acquired from circumstances connected with the birth of a child (Hartland, Legend of P. 1. pass.), or may be selected by the person himself

ANIMALS

(495)

495. In the latter case the term ‘magic’ is usually taken to denote a great number of different conceptions, but these need not be distinguished in a brief survey of the part played by animals in magic. (1) Many forms of sacrifice (see below) are magical. (2) As the magus (see below) or familiar, the animal gives man greater force than he would otherwise possess. (3) Just as in dying the dead animal sets free the magical power within it, so in life it may repel evil influences or attract them to itself and neutralize them. (4) By eating animals men acquire their qualities; lion’s flesh gives courage, hare’s meat makes a man a coward. By partaking of long-lived animals a man may overcome the ordinary span of life; by consuming the bird animals he will acquire the gift of prophecy. (5) The external qualities of animals are susceptible of transference in like manner; by rubbing bear’s grease over a horse’s head the horse is assured, for the bear is a hairy animal. This is called the doctrine of signatures. (6) Just as the familiar represents the witch and any injury done to the animal reappears in the witch, so any animal may be selected to represent a given person; a girl who wishes to compel the presence of an absent lover may, in Wales, take a frog’s heart and stick it full of pins. (7) Diseases in the human being may be got rid of by injuring them to an animal. (8) Certain animals, like the frog (see below), are connected with certain departments of nature; by injuring or otherwise constraining them, these animals can be forced to produce the natural phenomena desired by the magician; thus frogs are whipped to produce rain. (9) Magical, too, from some points of view is the torture applied to the favourite animal of a god (Golden Bough, 2, i. 108), to compel the deity to supply man with what he demands. From being used in magic the animal may come to be sacrosanct, as the crocodile (see below) among the Bantus of South Africa. See also: Njari’s; etc. In other cases some animals are in greater request, it is probable there are few that are not in demand for magical purposes of some sort (v. Jühling, Die Tiere in der Volksmedizin; Melasine, viii. 14, 521.). Especially important in European magic are the animals seen in the spring, and the feathers, etc., of birds and animals carried in annual processions (see ‘Wren’ below, and art. Magic).

25. MIMETIC DANCES, MASQUERADES, ETC.—Many primitive peoples are in the habit of imitating the movements and cries of animals, and usually in so doing assume the animal mask or dress; in some cases the object seems to be simple amusement, but this kind of dramatic representation is usually magical or religious in its purpose. (1) The initiation dance is frequently mimetic, and may perhaps have at its root the idea of transforming the man into a member of the kin by imparting to him a share of the nature of the animal. (2) Other dances, also performed at initiation, have for their primary object the conferring of magical power over the animal in the chase. (3) This magical power is also sought by mimetic dances performed immediately before a hunting expedition. (4) Mimetid dances before hunting seem to be sympathetic in their purpose; the animal in human form falls a victim to the hunter, and in the same way the real animal will fall beneath his darts. (5) Sometimes mimetic dances are performed after the animal has been killed; their object seems to be protective (see ‘Leopard’ below), like so many of the other ceremonies after killing animals. (6) It may, however, be intended sometimes as productive magic, for the purpose of increasing the numbers of the animal and perhaps bringing to life again those laid low by the hunter. (7) With the object of provid-
ANIMALS

ing for the due increase of the species, some American Indian tribes mimic the buffalo, the men taking the part of the males, the women of the females.

(8) In many of the Central Australian ceremonies the bird and the wombat are initiated in the ceremonies intended to provide for its due increase.

(9) Conversely, imitation of the movements of animals and birds forms a part of some European marriage ceremonies, and seems to be here, too, a rite of initiation (Frazer, Tot. p. 310) Where animals are sacred to a god, mimery of their movements is equivalent to prayer and adoration, just in the same way as graphic representations of them. (1) The reasons of these prayers is often to produce rain or wind or some other natural phenomenon associated with the animals (see ‘Frog’ below); possibly in its origin the mimetic dance was intended by its magical power to produce these effects without the intervention of a god. (12) The wearing of animal disguises and imitation of animal movements during the chase have probably the purely rational object of deceiving the animal.

26. MYTHS OF ANCESTORS, CHILDREN, HELPFUL ANIMALS, SWAN-MAIDEN STORIES.—Sometimes as a totemic etiological myth (Frazer, Tot. p. 311, but often as a myth of tribal origin Hearne, Northern Ocean., p. 342; D’Orbigny, Voyage dans l’Amérique du Sud, t. iv. p. 115, Zur Volksk. p. 17 ff., etc.), the descent from an animal ancestor is found all over the world. In the same way stories are told of animal births, which sometimes are simply etiological myths of the origin of totem kinds (Frazer, p. 6), and sometimes narratives of facts believed to occur at the present day (see ‘Crocodile’, and cf. Melville, iii. 212, etc.). In another type of myth, animals are said to have been animal–human hybrids, or at least animals’ writings, etc. Sometimes animals figure as guides in tribal migrations, etc. (Wecknergall, Kl. Schriften, iii. 203 ff.). Under this head we may perhaps class the animal nurse (Frazer, Pouz. iii. 254; 255; Farnell, Culti., p. 186). The child born of the animal, or occasionally a child connected with the myth of the animal ancestor is the swan-maiden story (Frazer, Pouz. iv. 106; Hartland, Science of Folklore, pp. 255–333, 337–382; Romania, xxxi. 62; Aust. Ass. Adv. Sci. iv. 731. See also ‘Soal’).

27. MYTHS (ETIOLOGICAL).—A great part of the mythology of savages is simply their idea of the history of the Universe. They account for natural facts, beliefs, customs, and rites by telling what some god or hero once did, by endowing all nature with sensibility and volition, by positing the same conditions in the heavens as exist on the earth, and the other way round. One reason is evident for this existence and peculiarities of animals by telling stories of what happened in the early days of the world. Once men went on all-fours, and pigs walked like men, but something fell on the head of a pig, and since then they have gone on all-fours to see what walked upright.

The Indians of Brazil tell how the daughter of the great serpent married a young man who had three faithful slaves. At that time there was no night upon the earth; the young wife said her father had it, and the slaves were sent for it. They rode upon the stars, which are dead and cold, and when they arrived in the morning they opened their camp. En route they heard a buzzing in the nut; it was the humming of the insects at night. Curiously overcome them; they opened it, and a red and white flower appeared. This flower blossomed in the morning, and they saw it spread through the world. Sometimes everything in the forest changed into animals and birds; everything in the river changed into fishes. A wicked brother became a jaguar, the fisherman in his canoe turned into a duck, the cows forming the feet. When the woman saw the morning star, she said, ‘I am going to feed it which bread and day.’ She set it before it, and said, ‘You shall be the pleasant!’ She coloured it white and red. She rolled another thread and made the partridges, Thenceforward they ate the other food.

For their disobedience the three servants were changed into monkeys (Magalhanes, Coment. indigenas, p. 9). The relations of animals to man, and especially their sacrosanctity, are explained by etiological myths. The Vazimba, in Central Africa, say that the respect paid to the kingfisher by the following story: ‘The Vazimba sent the kingfisher to visit their relatives with a message of good-bye to the father and mother of the kingfisher. They informed the swan-maiden to send owls and sheep; when it had fulfilled its errand it came back, and the Vazimba said that as a reward for its bravery and wisdom they would put a crown on its head and dress it in blue by day and by night. Moreover, young kingfishers should be cared for, and the penalty of death inflicted on any one who sought to kill them’ (v. Genneb, Tabou, p. 295).

More common is the explanation that the animal in some way helped an ancestor of the kia (Gennep, pass.; see also ‘Owl’ below). In N.W. America an adventure with the animal is a prominent motive in the myths. Descent from the totem-animals seems to be the prevailing form of the story (see Folklore, xv., 110; Claus, Vien. Amer. Indianerges., p. 193, etc.). In some other Indian cultures the animal is the custom to undergo some ceremony, usually at the age of puberty, for the purpose of procuring a tutelary deity, which is commonly an animal. This is of course totemism (see, E. A. Hruska, E. 9). Among the Eskimos, in the same way, the nomad (C. America), yunbeau (Chulahayi of Australia), etc. Among the Eskimos the bear (see below) seems to be the usual animal. Among the Thilknets a young man goes out and meets a river otter; he kills it, takes out its tongue and hangs it round his neck, and thenceforth understands the language of all animals (JAM, xxi. 31; Krause, Die Thilkt.-Indianer, p. 284). Among the Eastern Bushmen, Dénés each hunter selects some animal, invariably a carnivorous one (Smiths. Rep. 1866, p. 307), Elsewhere the ininitiati has to dream of his medicine animal, and sometimes kills it in order to procure some portion of its body as a talisman (Frazer, Tot. p. 54). In Ireland, it is customary to cook the tutelary beast; in one case a blood-bond is said to be performed with the animal selected. In Australia also the medicine-man sometimes provides the nomad; sometimes it is acquired by a dream. The animal thus brought into relation with a man is usually sacrosanct for him; if he loses his talisman, he cannot get another medicine animal (parts of America); the death of the nomad entails the death of the man (Nkomis of W. Africa); in Australia the yuwnboi is sacrosanct, though the totem is not.

Closely connected with the nomad is the ‘bash-soul’ of West Africa. It is only by our limited knowledge disguises its identity. A man will not kill his ‘bash-soul animal,’ for that would entail his own death; he cannot see it, but learns what it is from a magician. A ‘bash-soul’ is often chosen hereditarily from father to son, and from mother to daughter; sometimes all take after one or the other parent. In Calabar many are believed to have the power of changing into their ngong. Something of the same sort is known in Europe, for in Iceland each family had attached to it an attar-sgilja; each individual too had his fylga, which took the shape of a dog, raven, fly, etc. (Folklore, xi. 237; Meyer, German. Myth. p. 87). The ngong seems to be closely related on the
one hand, to the 'soul-animal' (see above); on the other, it stands very near to the 'familiar' (see above) of the witch, and the 'werewolf' (see below).

It has been argued that kin totemism arises from the nagual, which becomes hereditary. Up to the present time there was not much noticed of it in the female line, as it has developed from a nagual, which is seldom, if ever, possessed by women or inherited from the maternal uncle.

Closer to the nagual than the kin totem is the sacred animal of secret societies (which see), the initiation ceremonies of which, it should be noted, bear a strong resemblance to those practised by totem tribes. The nagual is the linear ancestor of the 'genius' of the Romans, no less than of the 'guides' of modern spiritualism.

29. NAMES.—Animal names are very commonly used, and not among primitive peoples only, for three per cent. of English surnames are said to be derived from animal names (J. A. Frazer, *Myth. Arch.* p. 65; *Cf. Indogermanic theophoroe* personal names *see Fick, Griechische Personennamen, passim*). (1) Tribes are named after animals; the Naga in the north of India of the Nagas of Ceylon is said to mean 'cockato'; the Wallahuras are the cel people. In America we have the Dog Rib Indians, who trace their descent from the dog. In India the Naga are a serpent tribe. (2) Fairy common is the practice of naming tribal kins after animals; it is one of the tests of totemism. In Australia we have a long list of Arunta and other totems in the works of Spencer and Gillen (for others see *see*). (3) The two sections into which most Australian tribes are divided are, especially in the south, often named after animals, and in particular after the eagle, hawk, and crow. Similarly we have the raven and wolf phratry among the Thlkhinka (*see* also Frazer, *op. cit.*). (4) The intermarrying classes in Australia are also known by animal names; on the Amam River they are called after the eagle, hawk, and crow; at Moreton Bay they are named from the kangaroo, emu, etc. (5) In America the age classes and the closely connected secret or dancing societies are named after animals; in West Africa there are many of these, of which the most well-known, possibly as a relic of totemism, the regiments are named after animals; we find similar names in Welsh history. (7) Both in America and in Australasia sections of tribes are named from their principal food (*Globus*, xxx., 381; *Ixiv. 59*). (8) Local divisions of Australian tribes have animal names. These are not to be confused with local totem groups. (9) Priests and worshippers are named after animals (*see* Priests). (10) Totem kins are in America, and rarely in Australia, name their members after some part of the totem animal. (11) In South Africa the chiefs of animal-named kins bear the name of the animal. (12) Especially in America personal names derived from animals, either for magical purposes or as indications of the characters of their bearers, are very common. In Central America a child is named after some animal with which it is associated with them (*see* Comte, "Fox" , "Moose"). (13) Divisions of the calendar are named after animals in East Asia, and children take their names from them. (14) God and spirits of the zodiac signs, initiation designs, etc., are named after animals. (15) Animal names are sometimes applied in Europe to the bride and groom. (18) The reserp of the last cars, as representative of the corn-spirit, conceived in animal form, is called the cow, etc. At Easter or Whitsuntide, St. Thomas's Day, etc., animal names are applied to the last person to get up, or to an individual accused on the ground believed them to be possessed by the spirit of the *poisson d'Averl*. (19) Varios names are known by animal names, in particular *Blind Man's Bul* (see 'Sacrifice' below). (20) Animal nicknames are common in Europe, even in the colonies; the parts of the world (*Lang, Social Origins, App.*). (21) The last ears of corn, as embodiments of the animal corn-spirit, receive animal names.

30. OATH, OREDE—Just as in modern advanced societies it is the custom to call upon the gods to bear witness to the truth of an assertion or to ensure the fulfilment of a promise, so the savage calls upon his sacred animal (see 'Bear, 'Dog'). In later times this is regarded as an appeal to the gods, but originally the animal itself was believed to punish the perjurer, either by persecuting him as a ghost-animal or by devouring him as a living animal. The procedure varies, sometimes the hand is laid upon the animal or on its skull, sometimes its blood is drunk, sometimes the foot is put upon its skin. The Bantus of South Africa take an oath by their *sibalo*, the Hereros by the colour of their excreta, the Zulus of Ceylon by the bird of the tree taken by the Christmas bower. Corresponding to the oath by animals is a class of ordeals, in which the person to be absolved exposes himself to dangers and beasts by swimming across a river full of crocodiles, or by similar means.

31. OMEMS.—In many cases it is impossible to point out either the causes which determine the animistic character of an animal or those which make the appearance of an animal name favourite or unfavourable. Broadly speaking, omen animals may be classified as—(1) Totem or tutelary animals whose appearance is equivalent to a promise or grant of help to the receiver of the omen; their appearance may, however, be interpreted unfavourably (*Frazer, Tot., p. 23*). (3) The messengers of evil spirits or animal forms of evil spirits, whose appearance is equivalent to the announcement that a magician is seeking to do an injury to some one (see 'Owl'). (3) The animal is divine and has foreknowledge; by the manner of its appearance it shows what the future will be (see 'Hawk'). (4) The animal is a spirit or a god which sends it to instruct man (see 'Hawk'). (5) The animal is possessed of magical influence, which tends either to promote or to retard the enterprise to which the omen is taken to relate; consequently its appearance is favourable or the reverse.

Omen-giving animals are (1) always of evil augury; (2) always of good augury; (3) auspicious or the reverse, (a) according to the manner in which they behave, or (b) according to the number which appear, or (c) according to the actions of the anguor, who may change a bad omen into a good one by magical or other means, e.g. by killing the animal, by turning round three times, by spitting, or by purifying the animal.

32. POSSESSION.—A belief in possession by animals is not uncommon. In New Guinea it is held that the witch is possessed by spirits, which can be expelled by the form of snake or frog, or by any other disease. In the East Indies wer-wolfsim is regarded as a disease of the soul which is communicable by contagion, or perhaps as a kind of poisoning by the evil principle in the form of animals or reptiles. In South Australia the natives believed that they were sometimes possessed by certain animals, and it is no uncommon belief in Africa and Samoa that an offence against a totem or other sacred animal will be followed by its
growth within the body of the offender, which is
equivalent to a kind of possession. Among the
Anius madness is explained as possession by snakes,
etc., and they hold that it is caused especially by
killing some sacred animal. Thus a man who kills
a cat is liable to be possessed by a cat, and he
can prevent this only by eating part of a cat; it
is called cat punishment. There is also bear punish-
ment, dog punishment, and punishment by all the
other animals. In Japan the obsessing animal is
regarded as the physical incarnation of the sins of
the sufferer, and is said to leave him after a while.
In particular, foxes are held to possess people who
have damaged the fields, etc., of their owners; and
certain families are said to own foxes which enter
the bodies of offenders and cause them to blurt out
their crimes. In other parts dogs are the animals
used; they are held to go out in spirit form; the
body may even die in the absence of the vivifying
principle; if so, the spirit enters the body of the
owner of the dog, which is then more powerful than
ever as a magician. Belief in the possession of
wine by an animal is widespread, and is often held
true by all the ancients. In the statement of the Prince of Wied (Reise, ii. 190), that many American Indians believe they have an animal in their bodies, refers to possession by the
magician. The victim, or, more correctly, the
sufferer, is a technical term of a similar belief in Australia with regard to totems.

33. Power over Animals, etc.—Magical
powers over the totem are frequently claimed by
the kin in Australia, and occasionally in other
parts of the world. Mimetic dances (see above)
are held to give the same control. The eating of
the flesh of an animal is believed to give power to
cure diseases, which are often known by the name of
that animal. Wizards and others sometimes claim
to eat the flesh of the owner of the totem, etc.; in
some cases this is said to be the result of inocula-
tion at initiation. See also 'Familiar,' 'Nagual.'

34. Sacrifice.—An account of the origin, func-
tion, and theories, savage and civilized, of sacrifice
will be found in the article on that subject. It
will suffice here to enumerate the various explanations,
real or assumed. (1) The commonest view is
that the animal is a gift or tribute to a god, a mark of
honor or of self-denial. (2) From the fact of
totemism the theory has been developed (Robertson
Smith) that the animal killed is really the god;
the object of the sacrifice, and especially of the
following its totemic qualities, is to strengthen the
tie between the god and his worshippers. (3) It
is in fact found that a savage will kill and eat
the animal god of his enemy (Miss. Roy. 1822,
254); this may be explained on the same prin-
ciple—the bond established by the ritual meal
prevents retaliation, for an alliance has been entered
into, unwillingly but none the less effect-
ively. (4) Starting from the conception of the
slain god (2), it has been surmised (Frazer) that the
killing of the sacred animal, no less than of
the god, has for its object the preservation of the
Divine life, conceived as something apart from the
living animal, from the pains, penalties and old-
age, and from the weakness to which they would
reduce the being on whose strength the preservation
of the people, or the growth of the crops, or some
other important fact, depends. (5) From (2) fol-
loows also the magical totem-sacrifice found as a
totem rite in full activity only in Central Australa,
by which the multiplication of the animal is pro-
moted and the species at the same time desacra-
lized for men other than the tribe that owns it. Desacra-
lization seems to have been also one of the purposes
of the sacrifice of the corn-spirit, although here
the object may have been primarily sacralization of
the participants. (6) One means of the expulsion
of evils is by the eating of the totem animal (4); the
purificatory sacrifice attains the same object by
killing the animal, perhaps by disseminating the
mana of the sacred animal, and thus counteracting
hurtful influences. (7) Corresponding to (6) we
have the magical sacrifice intended to produce
direct benefit to the individual and more generally
when the corn-spirit is killed and its blood sprinkled, or its
bones mixed with the seed as a means of increasing
fertility. (8) The burial sacrifice is intended to
provide them with some degree of existence in the
other world, (b) of guidance to the other world,
(c) of proving his earthly status in the other world,
etc., or to purify the living from the dangers of
mourners. (9) The dedicatorial sacrifice provides
(a) the individual with his nagual or individual
tutelary spirit; (b) a building with a protecting
spirit; (c) a frontier with a guardian spirit, etc.
(10) We have, further, the inspirational sacrifice,
where the blood of a victim is put on the
animal to drink the blood of a victim, in order to
procure obsession by his god.

Various forms of sacrifice are found. The victim
can be slaughtered, burnt, thrown over a precipi-
tice from a height, immured or buried; these modes
may be added the setting free of the bird or animal
(see 'Scapegoat'). The skin of the victim may be put on an idol, used for a sacred
cloak, hung upon a tree, etc. The flesh is fre-
cently eaten; or part may be eaten and part
burnt or buried. Special care is frequently taken
of the bones, which may be buried, burnt, buried
in the skin or mask of the animal to be sacri-
ficed; if the sacrifice is that of the animal-god,
the priest thereby assimilates himself to his god,
and by putting on the Divine character sanctifies
himself for his task. In any case, the donning
of the skin and mask may be regarded as a rite
of sacralization, fitting the human being for contact
with divine things. Not only so, but the priest
is actually changed into the god himself. The
worshippers of Ephesian Artemis were 'king bees',
the priestesses of Demeter, Proserpine, and the
Great Mother, and possibly those of Delphi, were
'bees'; they are probably the antecedent of the
Ephesian festival of Poseidon were 'bulls';
the girls at the Brauronian festival were 'hears' (Frazer, Pausa. iv. 223). In Laconia the priests
of Demeter and Kore were θηλαι (de Visser, Göller, p. 185).

In this connection may be noticed some facts connected
with the game of 'Blind Man's Buff.' All over Europe the game is
known by the names of animals (Pfikler, xii. 303; to the names
there given add cuckoo (Jen. des Trau. Pop. iii. 545), hoopoe
(Masopust y Latoro, Jedie, p. 40), sheep (Rolland, Romna, p. 184).
Wrenseke (Pafet, Folklore, p. 184); the name 'blind fly' is also
found in India). The players in the Middle Ages wore masks,
as may be seen in Strutt's Sports and Pastimes, and we may
surely infer that they wore the mask of the animal by whose
name the game was known! The significance of these facts is
seen when we discover that the procedure in the game of
'Blind Man's Buff' is precisely that of many popular customs,
in which cocks, cats, etc., are killed (Pfikler, xii. 253 F.)
are celebrated, but not by children only that it was played or performed in the Middle
Ages. In this connexion it should not be overlooked that
the Sierra Leone the society dogs bear skins when they
seize a human victim for sacrifice (Kingsley, Travels, p. 207).
In this case, the skin of the human victim is the skin of the
place of a leopard; the leopard hunters of the Gold Coast like-
wise dress like leopards and imitate their actions when they
have killed on a 'Lionday.'

As to the priority of human or animal sacrifices,
no general law can be laid down. On the one
hand, we find in Central Australia the practice of
butchering a certain antecedent human sacrifice. On the

other hand, we find, also in Australia, a ceremony of child sacrifice in connexion with the initiation of the magician, where the priority of animal sacrifice is in the highest degree improbable. In America the ritual killing of the medicine animal (cat or hawk) is one of the most important parts of the puberty rite: the actual killing of the animal cannot, however, be regarded as anything but primitive. But the human sacrifices of Mexico seem to be secondary in their nature, due, possibly, to the influence of the more agriculturally advanced civilization, or to the fact that the agricultural sacrifice of a girl among the Pawnees can be regarded as primitive it is difficult to say; the idea of the animal corn-spirit was certainly known to them, and the influence of cannibalism may have determined a transition from animal to human sacrifice, if indeed it did not at the outset bring about a practice of human sacrifice. Where, as in Africa and the East Indies, the sacrifice is frequently of the character of an offering to a dead man, we have no reason to argue that one form preceded the other. At the same time we cannot affirm that these sacrifices were the original form in those regions. The question is in most cases unsettled.

35. SCAPEGOAT.—Diseases and evil influences are commonly conceived by savage and barbarous peoples as persons, often as spirits; and as a logical consequence of this is the idea that it is the duty of the culprit or the means to expel or otherwise render innoxious all the ills with which they are from time to time afflicted. One method of doing so is to cause them to enter the body of an animal, or sometimes where the personal form of the evil influence is less emphasized, to load them upon the animal, and drive it from the neighbourhood of human habitations.

In India the scape-animal may be a pig (as for Sircilla), the small grass-eating buffalo (as for cholera in Bencar), or a cock (for cholera among the Pataris, and, in light epidemics, in Bencar); and it is noteworthy that the buffalo, goat, or cock must be black (as the vehicle of Yama, the god of death). In many cases, moreover, the scape-animal becomes an actual sacrifice, as among the Hill Bhottiyas, where once a year, in honor of the village god, a dog is intoxicated with bhang and spirit, and then beaten and stoned to death, so that no disease or misfortune may visit the village during the year (Crooke, i. 141 f., 166 f., 169-174). Sometimes also it is held sufficient to make images of animals instead of using living animals; in Old Calabar the exposition of images of goats and devils in public is a custom (Taylor du Moulin, 1554, ii. 348; for similar customs see G.B. III. 102 f.).

36. SKULL, GABLE-HEADS.—Reaching back to classical times, and in the present day extending far beyond European civilization, is the custom of hanging up the skulls of slain animals on the door of their houses. The head is often regarded as the seat of the soul, and in the East Indies this is the reason given for preserving the jawbone; probably the Eskimo custom of preserving the jaw is due to the belief that the soul has a similar idea at its base. More commonly the head is put up in a field or a vineyard as a talisman to keep off evil influences; in the same way, after a head-hunting in which the head of a luecers (see below) is put up as a defence. Amongst the farmers frequently fasten the skulls of horses or cattle to barns and other outhouses, although the object is now merely decorative. Arising out of this use of the skull is the custom (as in the Congo, for instance) of keeping in some regions a complete human skeleton in the house. In Europe, we find the practice of carving horses' and other heads on the gables (Folklone, xi. 332, etc.), but here again their magical significance seems to have been lost. In the Middle Ages the Winds put up a skull when there was a plague among the cattle, but in modern days the practice is rather to bury it; from the stories of the revival of the disease when the skull is dug up, it is clear that the current belief that the cure, if no cure is forth in time uses the skull (as the idea is found in India. The skull is sometimes important in ritual (see 'Bison').

37. TASK.—Respect for totems or other savagery animals may be seen in several parts of the world. The system of prohibitions by which respect is shown negatively is commonly called tabu. It is very generally forbidden to kill the animal (Frazier, Tol. p. 9; Folklone, xi. 239-242; and below, pass.). It may not be eaten, even if killed by another person; or in some cases even touched, save sometimes for the taking of an oath. 'In South Africa it is held to be unlucky to see the siboko (taboon animal), and in many cases there is an objection to using the ordinary name of an animal. Sometimes it is forbidden to imitate the voice of an animal or bird; it is often accounted unlucky to keep it in or near the house. The eggs of birds may not be taken, and there is a strong objection to the use of the feathers of certain birds in making feather beds.

The penalties for violation of these tabus, which are, of course, seldom found exemplified completely in any one case, are usually of the nature of a fine imposed on the offender, usually the breaking of a bone. When the object is to injure him who kills them, he is killing father or mother. Sometimes an injury done to a totem animal is believed to be followed by ill-luck or sickness in the family or among the cattle. In the Congo area it is thought that the women of the kin will miscarry or give birth to animals of the totem species, or die of
ANIMALS

some dreadful disease, if a totem animal is eaten. Leprosy, madness, death by lightning, and various diseases are among other penalties for disrespect to sacred animals. In Samoa the sacred animal was thought to take up its abode in a man's body while he slept in it, and thus kill him; a 'man of the turtle' would not object to helping a friend to eat up a turtle, but would take the precaution of tying a bandage over his mouth, lest an embryonic turtle should slip down his throat and cause his death.

No sharp distinction can be drawn between sacred and unclean animals. The mere fact that an animal is the subject of tabus is indecisive.

Name-tabus. — It by no means follows that all tabus are an indication of respect for the animal whose name is avoided. In the case of dangerous or destructive animals the use of their name may have the result of summoning them, just as the use of the name of a dead man calls him. Various words are forbidden among fishermen; but it may be that it is unlucky for seafaring folk to mention things connected with the land, just as the Eskimos think that the land and deciding between must be kept apart in cooking. Or it may be that the naming of an animal or fish will warn it that it is being pursued. Or the words may be, for some reason, of the form of incantation. 38. TATU, PAINT, KELIOIDS, DEFORMATIONS. — In America and New Guinea totem kins frequently bear their totem tattooed on their bodies (Frazer, Tot., p. 28). In South Africa (ib. p. 2) teeth are knocked out in order that a resemblance to oxen may be produced. In British Columbia the totem is painted upon the face (Globus, lxxxiv. 191). In South America some of the tribes of Brazil tattoo their faces as totem signs (Spitzy and Martinius, Travels, p. 1027), which they respect and mourn for when they die, and into which they believe that they pass at death (von den Steinen, Naturvolker, p. 712). The Californian Indians burn their emblems into their flesh, just as the Indians of Canada tattoo theirs (Frazer, p. 55). In Africa some of the tribal marks, probably in raised pattern, are intended to make the wearer resemble a lion or a panther (Tour du Monde, 1891, i. 65). Some Hindu tatu marks, which are, for the most part, restricted to women, are intended to represent animals, but they are selected merely according to the desire of the person to be tattooed, and, though originally tatu marks are sometimes regarded simply as ornamental (Crooke, ii. 30-33). The totem mark in America and the tribal mark in Africa are sometimes emblazoned on the property of the totem kin of the tribe (Frazer, op. cit. p. 30; Tour du Monde, loc. cit.). In Australia the tribes of the Upper Darling are said to carve totemic emblems on their shields (Frazer, p. 50). The wizard frequently built animals carved on his wand or painted on his dress.

39. TONGUE. — Hunters frequently cut out the tongues of slain animals, and the tongues are eaten as sacred food. In folk-tales the test of the tongues is a test of the worth of two claimants. The tongue of the sacrificial victim is important, and in Bohemia fox's tongue is held to confer the gift of eloquence. In N.W. America the otter's tongue is eaten as a means of acquiring supernatural knowledge. In particular, an otter's tongue is held to confer a knowledge of the language of all inanimates: birds, all beasts, and living creatures (Golden Bough, ii. 421, 422; cf. Krane, Die Tribus der Indianer, p. 284). The shamanistic rattles contain the tongue motif carved on them as a rule in this part of America, and similar figures have been found in the Pacific (Am. Rep. i. 1884, 1885, 1886, 1887, pp. 111-112). Tongue marks are recorded in New Zealand (Parkinson, Journal, pp. 98, 123; see also Frobenius, Weltansch. p. 190).

40. TOTEMISM. — Under ordinary circumstances, totemism is a relation between a group of human beings and a particular animal or plant. In the following, therefore, we shall consider only those cases falling under one of the following three main features: (1) the assumption by the totem kin of the name of the animal; (2) the prohibition of the intermarriage of persons of the same totem name; (3) respect paid by every member of the totem kin to the totem animal. Each of these features is liable to deformation; we find totem kins which respect an animal other than their eponymous one; kin exogamy becomes local exogamy or Endogamy; but taboos are still maintained; the totem animal is eaten ritually or otherwise. Other features of totemism are present only occasionally, and their absence in no way invalidates the totemic character of the relation. More especially in America the connexion between the kin and the animal is explained as one of descent, the animal sometimes having united itself to a human being, sometimes having transformed itself into the ancestors of the kin by a gradual process, and so on. But it must not be supposed that totemism exists or has existed wherever we find a myth of descent from an animal (see 'Myths of Ancestors' above). More especially in Australia the totem is held to be the child of the totem or spirit. Conversely, in Central Australia, the kin perform magical rites to promote the increase of the totem species; traces of magical influence over the totem are found elsewhere; but it does not seem legitimate to profess the connexion to ascendants as far back as the animal is recognized as totemic in origin. Sometimes the kin indicate their totem by tatuing or other marks, sometimes by deformations, or by the mode of wearing the head or body.

In determining the totem of a child, kinship is usually reckoned through the mother. On the other hand, the usual course at marriage is for the female to remove to the husband's house or district. The result of this is that the kins in any area are (1) intermingled, and (2) continually changing. Where the parent from whom the child takes its totem continues to reside in his or her own district, the totem is fixed for the totem kins to become localized. The result of this is that certain animals are respected in certain districts; in this way perhaps originated the local cults of Egypt. Tribal respect for the totem of the chief, and ancestor-worship, are the only cases in which totemism is transformed.

Totemistic tabus do not differ markedly in form from those connected with other sacred animals; they may therefore be dealt with together in this article (see 'Tabu' above).

Sex totems. — A peculiar relation exists in Australia between the two sexes and two species of animals which might better be termed 'animal brothers and sisters.' It is found from South Australia as far as Brisbane, and the animals thus related to the men and women are lizards, owls, bats, emu-wrens, superb warblers, and goatsuckers. Although the intercourse between a man or woman is believed to be bound up with the life of one of these animals, and although they are in consequence jealously protected by the sex to which they belong, as a preliminary to marriage and the totem animal attributed to the Kurnias for one of the 'animal relatives' to be killed by the opposite sex (Golden Bough, iii. 414-416).

41. VEGETATION. — In the ancient world a number of minor deities, especially connected with vegetation, were believed to possess animal or semi-animal form. Not only were the bull and goat closely associated with Dionysus, but Pan, the Satyrs, and the Fauns, with the goat's or the goat's (see below). The only explanation hitherto sug-
gested of this connexion is that the goat naturally wanders in the forest and browses off the tender shoots of trees, so that the animal which so bodily appropriates the new spirit can be no other than that spirit in bodily form. Frazer has explained the ceremonies performed at various periods in the spring as intended in part to promote the growth of vegetation by kindling the wild fire and therefore recalling the previous year, replacing him by a more youthful and vigorous representative. Many of these ceremonies are performed during the Carnival or at Mid-Lent; among the animals which appear at that period are the bear (in effigy), the ox, the goat, the wolf, etc. But these ceremonies seem to have had another purpose too,—that of the expulsion of evils,—so that we cannot identify all the animals that so appear with the spirit of vegetation. In the same way various animals (the squirrel, fox, cat, etc.) are thrown into the bonfires at Easter or other periods of the year,—Frazer says as sun-charms at home; or, legitimate to regard these as so many representatives of the spirit of vegetation. In China the spirits are bull-shaped (de Groot, Vel. Syst. iv. 252).

42. Water.—In Greece, Poseidon and river gods generally seem to have been conceived under the form of bulls (JHis xiv. 126, 129). The festival of Poseidon was called Tauroia, and his priests were termed 'bulls' (de Visser, Opper, pp. 41, 43). In the north of Europe, on the other hand, the horse seems to have been considered a more appropriate form for the god of water (see 'Horse'; cf. Rudorfe, v. 110). In South Africa and Australia the form attributed to water-monsters is that of the serpent (see below). In India and Eastern Asia the conception of a dragon replaces that of a serpent; we find traces of the same idea in Europe in the story of Perseus and its many variants. See also 'Dragon.' 'Serpent.'

43. Werewolf.—The belief in werewolves is connected, on the one hand, with the pathological condition known as lycanthropy, in which the sufferer believes himself turned into an animal; on the other, with the belief in magus (see above), familiar and tutelary spirits which serve the human beings who can secure their services. Corresponding to these two sources of the belief there are two different forms of it. In the first place, the man is conceived to put off his own form and assume that of the animal—in Europe most commonly a wolf, as the last days of the festival of the dead were remembered— so that he is said to become a wolf, to be exterminated or to survive in the west and south. This transformation may be temporary or permanent, may be due to eating human flesh, to the sins of the transformers, or to some magical procedure such as the drawing of a wolf's skin, or to contagion, such as eating food left by another werewolf. In the second place, it may be simply the spirit of the wer-man which undergoes the change, his body being left behind. It is the same idea as that of the Jewish witch, who must not only put off the skin of the dead person, but which the Jews were commanded to put on again; or, according to another form of the belief, the wer-animal is simply his servant, and the man himself goes on with his ordinary occupations while it is in his power; his life, however, depends on its security.

In Europe the werewolf is supposed to fall upon his victim like ordinary wolves. In the East European countries the manceuvre of the werewolf is more complicated. He attacks solitary individuals, who are, as it were, swallowed up. Thence the wer-man assumes his own form, eats up his victim, ents the river, and puts the body together again. There are, it appears, various ways of preventing the change, which can be recognised, and orders are prescribed for discovering it. The werewolf is, as a rule, in the form of a living man; but sometimes the dead are believed to return in animal form (see 'Soul-animal' above) and practise the same arts as werewolves proper. A method of burial is prescribed in Celibes for preventing the revival of the dead; it is the same as that of the wolf. The werewolf as form of the dead is closely connected, if not identical, with the vampire in some of its forms. See also 'Nagual,' 'Totemism' above. See Lycanthrope.

44. Particular Animals.—Ant.—We learn from Greek writers that ants were worshipped in Thebes; the Myrmidons revered them and claimed descent from them (de Visser, Opper, p. 127; Lang, Myth. ii. 127). In Denmark and Portugal and Novo, ants are regarded as the messengers of the serpent-god Danbe (Miss. Curt. 1884, 232). In Jabuin, New Guinea, it is believed that a second death after the first is possible, in which case the soul becomes an ant (Nudor, K. Wilhelmstal., 1897, 92). We find in Cornwall the belief that ants are the souls of unbaptised children (PLJ. v. 182). In France it is held that it brings ill-luck to destroy an ant's nest (cf. above). The ant is fed by Hindus and Jews on certain days, and is regarded as associated with the souls of the dead (Crooke, ii. 256).

In South America and California one mode of initiation was to allow the boy or girl to be stung by ants (Golden Bough, iii. 215); it is said to make them briskest and impart strength. The Piojos submit to it in order to acquire skill with the blow-tube (Jahi, 171). The Athapescan Dog-Ris believes that the gift of prophecy was acquired by secretly putting an ant under the skin of the hand (Franklin, Second Expedition, p. 291). On the other hand, the Aruntas hold that a medicine man must not go near the nest of the bull-ant; for if he were bitten, he would lose his power for ever (Spencer and Gillen, Not. Tr. p. 325). In Bulgaria and Switzerland, ants are regarded as of bad omen (Stracze, Bulgar., p. 288; Schce. Arch. ii. 216). The Estonians regard them as of good omen (Gel. Eust. Ges. Schriften, No. 2, p. 28); and for the Huculs red ants are lucky, black unlucky (Raimel, p. 105).

Not only the ant but also the ant-hill is the object of superstitious observances. The Juangs take an oath on an ant-hill, and the Kharris use it as an altar (Miss. Curt. 1897, 383, 380). At Poona a dance round an ant-hill is part of a religious ceremony (Bombay Gaz. XVIII. ii. 293). In West Africa, ants' nests are regarded by the Susus as the residence of demons (Winterbottom, Sierra E. 1. 297). The animal is associated either with the souls of dead chiefs (Bastian, Bilder, p. 181) in South Africa the bodies of children are buried in ant-hills that have been excavated by plant-centers (Account of Cape of Good Hope, 143). In the Sudan it is believed that a hyena-man assumes his animal form at an ant's nest (Globus, xii, 157). For myths and folk-tales of the ant see de Crotamata, Good Myth. iii. 44 ff.

Ass.—The Junians assume the ass (cf. Ann. v. iii. 4; Diodor. iv. 148; cf. Reinach, Cultes, i. 342; Krauss, in JE ii. 222-224). In Greece at the present day the pagan ass is held to have a malevolent power and people believe them to be Jews who worshipped the ass (Ponqueville, Voyage, i. 415; cf. Taunus, E. A. E. 1857, p. 169, pl. x). At Frickhansen in Wurttemberg the peasants are said to keep a wooden ass with a head as large as the village (Mannhardt, Germ. Mythen, p. 411). In explanation of the poverty of Silesian vineyards, it is said that the ancient Sileans ate the ass on which Silenus rode (Smith, Glossegraphia, i. 342, 3). Typhon was represented with an ass's head, and the inhabitants of Copoto threw an ass down a precipice as his representative (Plut.
de Is. et Os. 30). The Armenians sacrifice an ass at the grave of the ancestors of a person against whom they have a claim, in the belief that if their claim is correct the ass will pass into an ass (Haxthausen, Transcausia, ii. 21). In parts of Germany, children are said to come from the ass's pond (Mannhardt, Germ. Arch. p. 413). In Egypt the soul of a dead man is said to be sold earthenware images in the shape of donkeys at an annual fair (ib. p. 414). In Moldavia, Calabria, and Portugal, an ass's head is a means of averting evil or the influence of the evil eye. From the fields or orchards (Rolland, Franc. iv. 191; Trele, Heidenthum, p. 210; Melusine, viii. 14). Near Meiningen the last stroke of the reaper was said to kill the oats, barley, or lentil ass, just as in other parts other animals are regarded as incarnations of the corn-spirit (Haupt's Zeitschr. f. d. Altertum, iii. 360 ff.).

Prominent among medieval festivals was the fête des ânes (la fête assinariens (Chambers, Medieval Festivals, p. 226). This was also a popular festival of the same nature as the 'white horse' (Rev. Hist. Rel. xxxvii. 334) and other customs, the existence of which far back in the Middle Ages is well attested by ecclesiastical fulminations. In the present case the association of the ass with Palm Sunday made it possible for the Church to throw a veneer of religion over the pagan rite. In Augsburg in the 16th century a wooden ass was drawn through the streets. After palms were thrown down below it; a priest prostrated himself and was beaten by another priest; and the first palm to be caught up was used in magical ceremonies (Germania, xvii. 81). Many of these celebrations are kept up unofficially at the present day at various times in the spring — Mid-Lent, Palm Sunday, Easter, Whitsantide (Tradition, vi. 197, 226; Bouverit, ii. i. 163; Reimsberg-Düringsfeld, Festl. Jahrh., pass. s. Zts., f. Volksk. iii. 307, iv. 33). The ass also appears in connexion with St. Nicholas on Dec. 6th, and in Zug children on this day carry round a wooden ass's head (Schwe. Archiv, i. 94). In Grisons the ass of St. Nicholas is said to carry off the children and throw them down a precipice (ib. ii. 167). On the Thursday before Christmas the Posterijtag is held at Entlebuch; people from other villages arrive, and one of the watchmen Poste has been sometimes in the shape of an ass. The image is left in a corner of the village (Studer, Schweiz. Idiotikon, i. 298). For myths of the ass, its supposed phallic meaning, and folk-tales relating to it, see de Gubernatis, Zool. Myth., ii. 359-369.

The story of Midas is also discussed by Czeszovski, Bajka o Midaseowych wszizach.

Basilisk.—Accounts of the basilisk (Basiliscos), a king of the serpents, have come down from Pliny (XXIX. xix.) and Heliodorus (Ethiopica, iii. 8.) It was believed to be a small serpent with a cock's head; its look was fatal. In medieval and modern Europe the basilisk or cockatrice is supposed to be hatched from the egg of a seven-year-old cock or from the hundredth egg of a hen (Mutiluse, v. 18-22). On the other hand, the first egg of a black hen is held in Bohemia to be the dangerous one; the hen is not killed. In the old Germanic wording, birds, to which it produces the todok, or demon of good luck (Grohmann, Aeg. Z. 77, 543, 544).

Bat.—Among the Cukchiquends the chief god, Bacanrot, took the form of a bat (Panceroff, i. 451). A similar belief at the same time dangerous, in which the first man and woman were told not to approach it, but the woman disobeyed and the bat flew away; after that death came into the world; the form of the myth, however, suggests Christian influence (Hallon, Under the Southern Cross, p. 141). Among the Dongoni of East Africa the bat is called by the name 'the ancestor of bats and spirits—bitobok (Schweinfurth, Heart of Africa, i. 144). In West Africa an island on the Ivory Coast is peopled with huge bats, which are regarded as having once been the abode of the dead (Hässler, Sudseebilder, p. 318). No native in Victoria will kill or eat them for this reason (Golden Bough, ii. 431). The Bantus of Natal will not touch a bat (Fleming, Southern Africa, p. 263). In Tonga, bats are sacred, prohibited to be killed, and sometimes sacrificed for that reason (Golden Bough, ii. 431).
mountain (Mitt. d. Ges. N. V. Ostasiens, xlix. p. 431). Among the Tatars the earth spirits take the form of a bear, and on this account they are accorded increased respect (Castrén, Vorlesungen, p. 230), but there is nothing to show that they receive actual worship. One authority says that the Ostiks worship the image of a bear (Trans. p. 29); and in India the bear is believed to scraw away disease, so that ailing children are made to ride on the backs of tame animals of this species (Crooke, i. 292).

There are also set the women of the host's kin; they bring with them their sons-in-law, whose duty it is to kill the bear. The guests are called narch, and they are entertained by the 'lord of the bear.' Women are excluded from the ceremony. The killing of the bear is preceded by a trial of skill with the bow, in which the narch take part as well as the kin of the 'lord of the bear'; it is a point of honour for the latter to shoot badly. The narch then settle among themselves who is to give the fatal wound.

When the guests have gone, the nearest kinsmen of the dead man proceed to cut up the bear, which is placed in a majestic pose after being killed, its head to the west. The flesh of the bear is consumed by all persons of the kind of the dead man. On the following day the head of the bear is taken to its last resting-place, and then its soul goes to the 'Lord of the Mountain' (AEGH viii. 299-322).

If the precise meaning of these ceremonies is not apparent, it is at least clear that the cult of dead kinsmen is one of the elements at the present day; it may be noted that the 'kin gods' of the Gilyaks are human beings who have met with a violent death, but whether it is only in honour of such that the festival is held does not appear (ib. p. 259).

A second element is possibly that of purification (ib. p. 278).

On the whole, we must regard the Gilyak ceremony as analogous to the Ziuni turtle-killing—a means of communication with the dead of the tribe.

The Ostiks, on the other hand, appear to pay equal honour to every bear which they kill; they cut off its head, hang it on a tree, and, surrounding it, pay respect to it; then they run towards the body and laugh at it, and any person who is nearest to it they bat the Russians who have killed it (Austerm. Voyage, ii. 92). As a mark of respect, Samoyeds allow no woman to eat of its flesh (Ersran. Rebis, i. 638). If the Ostiks show respect to the bear, they also give evidence of very different feelings; its skin is stuffed with hay and spat upon to the accompaniment of songs of triumph (ib. p. 359), but they subsequently set up the figure in a corner of the cortyard and treat it as a time as a tutelary deity (ib.). (For songs in honour of the bear see Beitrag zur Kenntniss, xxv. 79.)

We find a similar custom among the Pothawatomees. The head of the bear is set up adorned with various colours, and all participants in the feast sing songs in its honour (Baumgarten, Alg. Ges. Am. ii. 542). Although no special ceremonies are observed by the Knutschatkins, the killer of a bear is obliged to invite all his friends to partake of the flesh (Kracheninikow, i. 107). Among the Lapps the bear hunt is the occasion of various ceremonies. When the animal is dead, they beat it with rods and then transport it on a sledge to a hut constructed on purpose; they then go to a hut where their wives await them; the latter chew bark to colour their saliva red, and spit in the faces of the men (probably as a purificatory ceremony).
ANIMALS

Continuous is observed for three days, and then the flesh is prepared and eaten by men and women separately, for it was said that they were to eat it in the order in which they placed themselves at the table where the bear is cooked or partake of flesh from the rump (Voyages et Av. des Emigrés français, ii. 150). The Montagnais prohibit a bear's flesh to women and negroes (Histoire, 1799); the Ojibwas will not allow dogs to touch a dead bear (JAI iii. 111). The Taconics eat bear's flesh at the feast of the dead (Harmon, Journ. 289). The Mohawks offered bear's flesh to Agreskoni when they had their annual success in war (Megapolensis, Beschrijving, p. 48).

In East Asia an oath by a bear is not uncommon. In some cases the skin or a piece of flesh is brought (Sohrenck, i. 408); or an offering of a skin is made (Ides, p. 19), and in case of perjury the animal comes to life; we may take this to mean that they believe the bear will devour the perjurer, for the Samoyeds make a man bite a bear's head, and hold it while they may not let him go, with him in procession (Mannhardt, Ant. W. u. Felderleute, 183f.; cf. Zts. Ver. Volks, vi. 420). The custom is especially prevalent in the Laositz, a Wendish area (MS notes). In Poland the 'bear' is thrown into the water (Kolberg, Povianische, i. 134, 136, 139, ii. 350).

The Central Eskimos believe that they can acquire a bear spirit as tutelary deity, or totem. The would-be organizer must travel to the edge of the great ice-foe and summon the bears. When they appear, he falls down at once; and if he falls upon his face, a bear steps forward and asks his will. The man recovers and goes back with the bear (Ann. Rep. Bur. Eth. 1884-1885, p. 581).

The bear is especially associated with Berne, the name of which means 'bear,' and the town has kept bears for centuries. The explanation given is that Duke Berthold delivered them from a gigantic bear, but this is simply etiological and probably late; for it is certain that the bear was associated with the town centuries before Berthold. In 1832 a statue of a goddess, Artio, was discovered in the neighbourhood, which dated from Roman times. Now Artio is certainly connected with Irish art, Lat. urus, Gr. ἀρώς, and means the goddess of the bear or something of that sort. A bear has also been revered among the other statuettes, but was not until being brought into connexion with the goddess, before whom it was standing in the original form of the group (Rev. Celt. xxi. 280).

In Greek cult, bears were burnt in honour of Artemis Ἀλέα at Patrae (Paus. VII. xvii. 8), and 'bear Artemis' was one of the names by which she was known. There is a good deal of evidence to connect bear-animals with a cult if the walls are of that (Parnell, Cults, ii. 433). Calliste, in an Arcadian myth, is changed into a bear, and she seems to be only another form of Artemis (Müller, Proleg. pp. 75-76), who is also called Κάλλιστα. Moreover, at Brauron, Athens, and Mynychia, Artemis Boreas was worshipped (cf. Lung, Myth, ii. 212-219) in ceremonies which were perhaps a survival of initiation customs. Young maidens danced in a saffron robe, and, like the priestesses, were called 'horses,' and the dance was called ἀρέσεια, and the participants were of ages from five to ten; the celebrations were quinquennial, and no girl might marry before undergoing the rites. There is a trace of a bear sacrifice at Brauron (Farnell, Feste, ii. 169), and it was customarily offered the goat or hind. For folk-tales of the bear see de Gubernatis, Zool. Myth. ii. 109-119. For myths see Bachofen, Der Bar.

Bee.—The Tchuwashes of East Russia have a beegod, and celebrate a bee festival at which they drink beer sweetened with honey (Globus, xxxix. 217). The priests of Ephesian Artemis were called 'king bees'; the priestesses of Demeter, Prosperina, and the Great Mother were known as 'bees.' From the fact that the goddesses, when (Globus, xxxix. 217) thy, and the Demeter were called 'horses,' we may infer that the goddesses in question were bee-goddesses, or that their cult had included a local cult of the bee (Frazer, Paus. iv. 225). As a means of attacking or defending the bees figure in Quiche and European sagas (Liebrecht, Zur Volks, p. 75). In North Guinea beehives are actually hung at the entrance to a village, but the intention is probably magical (Wilson, Western Africa, p. 188). For myths of bees proceeding from the bodies of animals, as in the story of Samson (Judg 14), see Globus, xxxix. 212. The soul is believed in parts of Europe to take the form of a bee (ib. II. 516; Jecklin, Falstanthiische, i. 59).

In European folklore the bee is everywhere sacrosanct (Folklore, xii. 239), but as often happens, the first bee may be killed for use in magic (ib. p. 254). As ominous as the wolves, became the bumblebee and was feared by them, in some parts of Wales a swarm entering a house is a bad omen; elsewhere the reverse is the case (Rev. Hist. Rel. xxxvi. 208). If they leave their hive it is a death omen (Brand, Pop. Ant. ii. 175, 219; Rothholz, i. 148). A swarm on a heath means fire (Globus, xxvii. 96); Rothholz, loc. cit.). The European peasant attributes special intelligence to bees; they suffer no uneasiness of any sort near them; they should not be sold; the death of a member of the family must be announced to them, and mourning put on their hives (Globus, xxxix. 211 f.). At certain times in the year honey should be eaten (ib.). For myths and folk-tales of the bee see de Gubernatis, Zool. Myth. ii. 212-219. For the symbolism of bees see Pauly-Wissowa (1894), p. 446 f. For myths, p. 448 ff. See ARVANTS.

Beech.—The cult of the scarab was general in Egypt (Budge, Gods, p. 379). At the present day it is feared by the hottentots, of whom Kolbe says that they sacrifice sheep and oxen to a beetle (Walckenaer, Hist. Gen. xv. 372). The beetle is tabul in various parts of Europe (Folklore, xii. 238, 242). Killing it is believed to cause rain (Rolland, Fauve, iii. 324; Napier, Folklore, p. 116; MS notes). In East Prussia it is held to be lucky to set a beetle on its feet when it has got cast (MS note; cf. Azelius, Sagenbinder, ii. 29). In Schleswig-Holstein, people used to sweep a house with Thor (Schiller, Thier . . . buuch, p. 8). It is sometimes kept in a cage for luck (Napier, Folklore, p. 116; Bohn, Kinder Spiel, p. 424). In Scotland the stag beetle is killed because it is the devil's lap; the black beetle is killed whenever it is found, and a story is told to explain the custom (Gent. Mag. 1576, ii. 510; cf. Rolland, Fauve, iii. 327). In Lautenthal, boys put a stag beetle in the ground and strike blindfold at its horns; the one who hits it is the winner and takes the beetle home (Kuhn, Nord. Sagen, p. 377). In the Graitsch Mark the horns are used for divination (Wiste, p. 56).

The ladybird has ten tabul (Grobmann, Abel. No. 1668; Strackenberg, Abel. p. 45). It is said to bring the children (Mannhardt, Germ. Mythen, p. 272). It is regarded as of good omen. The cockchafer is also ten legged (ib. xi. 240). It is greeted in the spring (Ibarovius, iv. iii. 237) carried in procession (La Fontaine, p. 62), and sold in the spring (Germany. viii. 433; FLK. iii. 188; cf. Rolland, Fauve, iii. 340). It is considered of good omen for a boy (Ibarovius, iv. 240). Children often repeat verses to the ladybird (Ludovic, Monographie, p. 40; Rolland, Fauve, iii. 351-355). In Picardy it is the custom
to kill the ladybird (Liedien, loc. cit.). A beetle is carried for luck (Spies, Abergaubden, p. 417), and used in magic (Heyl, Volkssagen, p. 787; Wuttke, Der Abergaubden, passim). In the mythology of the Sie the beetle was entrusted with a bag of stars; getting out of it to bring luck, they flew out and covered the heavens (Ann. Rep. Bur. Ethn. 1889-1890, p. 35). For the folklore of the beetle see de Geburicators, Zool. Myth. ii. 299 ff.

Bison.—One of the Omaha clans traced its descent from a bison, which is said to have been originally under the surface of the water; they believed that they returned to the buffaloes at death (Frazer, Tot. pp. 4, 36). Both Iowa and Omaha males dress their hair in imitation of the bison when it is its totem (ib. p. 27). A southern tribe, probably the Kwaap, propitiated the dead bison; they adorned it with its head with a swan and bustard down dyed red, and put tobacco in its nostrils and in the cleft of its hooves. When they had flayed it, they cut out its tongue and replaced it by a piece of tobacco. Two wooden forks were then stuck into the ground and a crosiepiece had upon it a deer and a bear, made as a cheerful offering (Hist. Coll. Louisiana, i. 181).

Another account states that the Louisiana Indians bewailed the bison before they set out for the chase (Hennequin, Desc. p. 86). Possibly the Blackfoot people used their power to drive away a buffalo as part of a similar propitiation (Miss. Cath. 1889, 359).

Many tribes performed mimetic dances in order to increase the supply of bison (Frazer, Tot. p. 41; Petley, A Quaker, p. 372). The Sioux used to dance the bison by imitating the bark of the coyote (Tour du Monde, 1864, i. 54). The Pawnees used to 'dance the bison' for their neighbours; they dressed in war costume and covered themselves in the scalp of the bison and in their tails. They uttered sounds in imitation of the animal, they danced in a circle, their bodies in a half bent position, their weight being supported on two sticks which represented the forelegs of the animal (Stanley, Portraits, p. 10). The bison is supposed to be killed in the following way: the Indian and a Pawnee (Dorsey, Traditions of Skidi Pawnees, pp. 85, 344). For their corn dance preparations are made by killing a bison; this is done by a woman; the corn is dried and filled with various kinds of corn. For the dance itself the floor must be as clean as possible; sacred bundles of corn and bison flesh are prepared, and a bison skull and two hoes of bison bone are placed before them; the women dance, holding their hoes, and every one searches for buffalo hairs; if they see any they say, 'Now we are going to be successful in our hunt and in our corn' (Grinnell, Pawnee Hero Stories, p. 372). They give the name of 'mother' to the skull of a bison cow painted red, which they place at the bottom of the hut on a sort of altar; they think that it has the power of attracting bison. At the time of the corn dance is brought to the hunt, and the corn is spread on the ground. It is important to dance all day to obtain a good harvest. Offerings of first-fruits are also made (Du Lac, Voyages, p. 276). Probably the same ideas prevailed among other tribes; for we find that the Eastern Iroquois believe to this day that the corn is the product of a magic cow; that cow is represented by a bison, and the myth that corn was given them by four bison bulls (Ann. Rep. Bur. Ethn. viii. 379; cf. Matthews, Ethn. of Hokaido Indians, p. 12).

Bu-cceros (rhinoceros-bird).—This bird is important in the East Indian area. In Borneo the gables of some of the houses have a buceros in wood; and with this may be connected the fact that when they have taken a head on a hunting-expedition, a wooden buceros is set up with its beak pointing towards the fire; on the gable it is said that the bison is brought to bring luck, and the head of a buceros on a magic staff, and it is also believed to attract purchasers to shops on which it is placed. Under the central post of the house it is believed to avert evil from the dwelling. The head-hunter sometimes wears a buceros head on his own, probably for the same reason that one is set up; in Borneo it has become general to wear feathers and carved bills, but the right to do so is restricted to those who have taken a head with their own hands. It figures in the death dance of the Battas; a mimetic dance in Borneo seems to have in the present day no other object than amusement. At a ceremony of propitiating the river the brahms suspend from a wooden buceros a great number of cigarettes, which are taken down and smoked ceremonially by all the men present (Ethn. iv. 312 ff.; J. xxi. 180, 198; Tydebuch. T. F. xxvii. 517, xxxiv. 169 ff.).

Buffalo.—Like many other pastoral peoples, the Todas show their domestic animal, the buffalo, a degree of respect which does not fall far short of adoration. As often happens, the flesh of the female is never eaten; once a year, on the feast of the dead, a buffalo is killed and eaten by the adult males of the village in the recesses of the wood. It is killed with a club made of a sacred wood; the fire is made of certain kinds of wood; produced by rubbing sticks together (Marshall, Todas, p. 129 f.; see also Rivers, Todas, p. 274 ff.). In other parts of India the animal serves as a scapegoat in case of cholera (Golden Bough, ii. 101). The Mahs of Bombay sacrifice a buffalo at the festival of the sun; they lead it before the temple of Bhaiwani, and the chief strikes it on the neck with a sword; thereafter it is hunted and struck with the hand or with a weapon; in this way it is laden with the sins of those who succeed in touching it. After being driven round the walls, its head is struck off at the gate; a single stroke must suffice if the sacrifice is to be efficacious. Then they fall upon the victim and tear it in pieces; they then lead it in procession and offer it in sacrifice. It is held that the souls of the dead pass into the Cape buffalo (Fritsch, Einige borene, p. 139). The Ewe tribes hunter observes tabus when he kills a buffalo (Mitt. d. Schutzg. v. 156). Among the Ewe tribes, when a buffalo bull has been killed, it is cut up and sold before the hut of the hunter. With an old woman as president, he and his companions partake of a meal in a hut, and the entrails of the buffalo are wound round old men bringing in the meat and singing all day to obtain a good harvest. Offerings of first-fruits are also made (Du Lac, Voyages, p. 276). Probably the same ideas prevailed among other tribes; for we find that the Ewe do not eat the flesh of wild-bombed animals only, and may eat no pepper, though salt is permitted. This period of taboo is concluded by a general festival, at which a mimetic representation of a hunting scene is given. At the close the
ANIMALS

hunter who killed the buffalo is carried home (Zts. Gen. Ges. Thier, ix. 19).

Butterfly, moth.—In a Pima myth, the Creator, Chiwotomatke, takes the form of a butterfly, and flies until he finds a place fit for man (Bancroft, ii. 78). Many of the Malagasy trace their descent from a sort of moth, and believe that it was a man who was changed into a moth at death. The Si난akas believe that the soul has to suffer after death till the body is only a skeleton; if it cannot endure this it becomes butterfly; the Aturimerays call the soul by the same name as the butterfly (v. Gennep, Tabou, p. 292). In Samoa the butterfly was one of the family gods (Frazer, Tot. p. 15). Butterflies are taboo in Europe (Folklore, xi. 399; Napier, Folk. p. 115). In Bakuovia they should not be taken in the hand (Zts. Oest. Volksk. i. 322).

In the Voges, France (Sauvé, Folklore, p. 317; Noel du Fail, ed. Assevrat, i. 112), they should be caught. In Oldenburg the first butterfly should be caught and allowed to fly through the coat sleeve (Strackerjan, Aberg. p. 105). In Suffolk, butterflies are “tenderly entreated,” and white butterflies are shown the west of Scotland (Sauvé, Folklore, p. 9; Napier, Folklore, p. 115), while at Llandiloos (Montgom. Coll. x. 260) the coloured ones are killed; in Scotland it is unlucky to kill or to keep them. Moths are killed in Somerset and in parts of Scotland. Butterflies and butterflies in the North of England (Denhm. Tr. ii. 325), the small tortoiseshell in Pitsligo (F.L.T. vii. 43), the first butterfly in Devonshire (P. T.t. b. p. 329); while in Essex the directions are to catch the first white butterfly, bite off its head, and let it fly away (MS note). The Magyars say that it brings great luck to catch the first butterfly (Jones and Kropl, Folktales, xix.). In Yglau it is put in the hand (Zts. Oest. Volksk. ii. 275). In Silesia, Friesland, and Bosnia, moths are regarded as witches (Gregor, Folklore, p. 147; Wiss. Mitt. vii. 315; Globus, xxvi. 158). In Germany the butterfly is sometimes said to bring the children (Floss, Kind, i. 12).

There is a curious diversity in the omens given by butterflies. In North Hants three butterflies are a bad omen (NO, 8th ser. iv. 165). In Brunswick a white butterfly seen first means death, a yellow butterfly brings ill luck, and a black one brings good (Andre, Braunschweig, Volk. p. 289). Elsewhere a white butterfly means a rainy summer, a dark one thunderstorms, and a yellow one sunshine (Abt Erdobrunnen, iv. 16). The Ruthenians hold that a red butterfly in spring means health, and a white one sickness (Globus, Lxxxiii. 245); while for the Bulgarians the dark butterfly announces sickness (Stauss, Bulgaren, p. 286).

Cat.—The cat was generally respected in Egypt, and mumified at Thebes; but this is not enough to establish cat-worship proper. In many parts of Europe it is considered unlucky to kill a cat (Folklore, xi. 293), and the same belief is found in Africa; the Wazamas respect the cat, and believe that if one is killed, some one in the family falls ill; a sheep is led four times round the sick person, and then slaughtered; its head is buried, a living cat is extinguished, but if the cat only is covered with honey and fat, is given to eat; if it will not eat it, the illness is put down to another cause; finally, the cat has a dark neck-hand put on its head (Izard, Mitt. d. Schutzges. in. 315, 325; Zts. Geogr. xx. 295). In India the cat has been stated, but incorrectly, that in Egypt a cat is regarded as holy, and that if one is killed, vengeance will sooner or later fall on the person who committed the deed (PEPSI, 1901, 261). On the Gold Coast a cat which had been of good omen received offerings; it was also held that the souls of the dead passed into cats (Bosman, Reise, p. 444; Müller, Fetus, p. 97). At Aix, in Provence, on Corpus Christi the finest tom-cat in the country, wrapped like a mummy, was publicly exhibited in a magnificent shrine (Muller, History of Crusades, quoted in Gent's Mag., 1882, i. 605).

The cat is one of the animals sacrificed in Europe at various times (Folklore, xi. 293; Leiden. Denmark og Norges Historie, vii. 160, etc.), in some cases by being thrown from a tower (Coremans, L'Année, p. 53; Mitt. des Ver. Für. der Deutschen in Bochum, x. 247, etc.). In other cases the cat is burnt (Rolland, Favnne, iv. 114; Golden Boogh, p. 234; Chesnel, Dict. Hist.). The explanation of these customs seems to be that they are survivals of a custom of expelling evils; this interpretation is borne out by the fact that at Wembeck the custom took the form of throwing the cat out of the village on a day known as ‘Kat-nit.’ In Bohemia they kill it and bury it in the fields and plough it over; the evil spirit may not injure the crops (Volkskunde, vi. 155; Grohmann, Aberglaube, No. 367). Sometimes the cat is associated with marriage ceremonies. In the Effel district the ‘Katzenschlag’ follows the marriage by day, and the cat is to be killed at the church and afterwards killed by people with it; it is then cooked and given to the newly married couple (Schmidt, Sitten, p. 47; Rolland, Favnne, vi. 102). In Poland, if the man is a widower, a pane is broken in the windows and a cat thrown in; the bride follows through the same opening (Tradition, p. 346). In Transylvania the farm hands bring a cat in a trough the morning after the wedding (Zts. Oest. Volksk. 241). In some old customs in Egypt, a dead cat is used in the marriage ceremony (Golden Boogh, ii. 102; Tischiers. vii. 83). There is a curious conflict of opinion as to whether the cat is drawn from the omen as that of a cat (Golden Boogh, ii. 270). At the Carnival in Hildesheim a cat is fastened in a basket at the top of a fir tree; influence over the fruit harvest is attributed to it (Kehrlein, Volksp. p. 142). In Samland the cat is used in a charm (Golden Boogh, i. 102; Tischiers. vii. 83). There is a curious conflict of opinion as to whether the cat is drawn from the omen as that of a cat (Golden Boogh, ii. 270). At the Carnival in Hildesheim a cat is fastened in a basket at the top of a fir tree; influence over the fruit harvest is attributed to it (Kehrlein, Volksp. p. 142). In Samland the cat is used in a charm (Golden Boogh, i. 102; Tischiers. vii. 83).
and Brabo, poss.), we cannot base any argument on the attitude of the cattle-keeping tribes of the present day. If, on the other hand, no sanctity attached to cattle when they came to them, and the respect and even horror these people feel for their flocks is important as a factor in the evolution of the more definitely religious attitude.

Pastoral peoples, of whom in pre-European days there were many representatives in Africa, commonwealth South Africa, may have scoffed at the idea (De la Beche, p. 37; Fleming, S. Africa, p. 260). The Danagares cannot comprehend how any one can live upon meat from such a source; when they have any special feast, the killing of the cows is almost a sacrificial function, and falls to the lot of the chiefs. In the same way bulls in ancient Egypt were killed only as a piaucium (Herod. ii. 41); and cows, as among the Phoenicians (Porphyry, de Abstait. ii. 11), were never eaten on any pretense.

In these cases there is no positive cult, though the cow is recorded to have been sacred to Hathor, Isis. With the male animal it was different. Conspicuous among Egypt with Osiris was that of the bull, and the worship of Apis (Iap) goes back to the earliest times. According to Herodotus (iii. 25), it was the 'calf of a cow incapable of conceiving another offspring; and the Egyptians say that Apis is the cow from heaven'; on the latter point another story was that the god descended on the cow as a ray of moonlight (Wiedemann, Religion, p. 182; Pliny, de Is. et Os. xiii. ii. Sympt. viii. 1). Various accounts are given of the marks by which it was recognized; Herodotus (loc. cit.) says 'it is black, and has a square spot of white on its forehead; on its back a figure of an eagle; in its tail double hair; and on its tongue between its teeth a red spot'. The bull was brought with it and confined in a second sanctuary at Memphis (Wiedemann, loc. cit.; Strabo, xvii. 31). Once a year a cow was presented to Apis and then killed (Pliny, viii. 180); others were kept alive in the 'theater of Apis' (Amm. Mar. xxii. 14. 7; Sohm, Polyb. c. 32). Its food consisted of cakes made of flour and honey; a special well was provided for its use. Its birthday was celebrated once a year; when it appeared in public, a crowd of boys attended it. Women were forbidden to approach it save during its four months' education at Necopolis, when they exposed themselves before it (Didorus, i. 65).

Osiris were obtained (1) by the behaviour of the bull, (2) by dreams which came to sleepers in the temple, and (3) by the voices of children praying before the temple. Both the living and the dead was celebrated on its arrival in the Ani soul with Osiris a dual god Assar-Itapi (Serapis). The dead bull was carefully mummified and buried in a rock tomb. The cult of Apis was national. Less wide-spread was the cult of Mans, also consecrated to Osiris (see Bunsen, p. 151 ff.).

At the present day similar observances have been noted on the Upper Nile. The Neba (=Shilluk and Bonjock) venerate a bull, according to Petherick (serpent), a custom which leads to the cannibalism of the cattle; its aid is invoked to avert evil. At its death it is mourned with great ceremony; at its master's death it is killed, and its horns fixed on his head. A piece of this matter suggests the idea it may have been regarded as the abode of its master's soul, or possibly of the soul of the previous head of the family. Another account says that it is venerated under the name of Madjok (the Great God), and worshipped with music and dancing (Hassan, Vida, i. 58). Among the Nuer the bull is likewise honored; it is regarded as the tutelary deity of the family, and receives the name Nyel-cdit, which is also applied to thunder and perhaps to their Supreme Being (Marno, Reisen, pp. 343, 347; Mitt. Ver. Erkde., Leipzig, 1873, p. 6).

Among the Ambaansi the spirit of a dead chief was located in a bull, which was then set apart and considered sacred. Offerings were made through it to the indwelling spirit; if it died, another was put in its place. This cult ceased as soon as the next chief died (Folklore, xiv. 310).

The Sakalavas of Madagascar have a black bull in a sacred enclosure in the island of Nosybe, which is guarded by two hundred priests. When it dies, another takes its place. In January the queen visits the island and a bull is sacrificed, whose blood is held to drive away evil spirits from the neighbourhood of the sacred enclosure (v. Gennep, Totem, p. 248). The sacrifice was eaten, and custom prescribed the persons to whom particular parts of the animal should fall (ib. p. 243). A child born on an unlucky day was usually put to death, but its life might be saved if the ordeal by cattle so determined was successful. (ib. p. 245). Among the most honourable terms of address were 'bull' and 'cow' (ib. p. 247).

The origin of the Hindu respect for the cow is an unsolved problem. Unlike Egypt, it is clear that India developed a respect for the animal in historic times. Of actual worship there is little to record; but the paicha-gawya, or five products of the cow, are important factors in exorcism and magic; as a means of annihilating an unlucky horoscope, rebirth from a cow is simulated; the priests touch the tail of a cow at the moment of dissolution, and believes that it will carry him through the river of death; for purifications before the assumption of the human form, the cow receives the spirit and brings it across the river Vaitaranj, which bounds the lower world. Cattle festivals are celebrated in Nepal and Central India, but their object seems to be mainly magical. The nomadic Banjara, however, devote a bullock to their god Balaji, and call upon it to cure them in sickness (Crooke, Pop. Rel. ii. 235-236). In Iranian mythology the moon is closely associated with the bull, and is regarded as containing the seed of the primeval bull (Bundehishen, iv. x), whence one of the standing epithets of the moon in the Avesta is gaoctira, 'having the seed of the bull.' Here the underlying idea is evidently a fertility-concept (Gray, 'Maonha Gaeotira' in Spiegel Memorial Volume). In Zoroastrianism, moreover, as in Brahmanism, the urine of the bull is one of the chief objects of religious purification (Mietton, ix. 105-112). For the bull and cow in the Veda, see de Gubernatis, Zool. Myth. i. 1-41; in later India, p. 41; in Persia (Perry, 300 ff); in Central Asia, Tenants and Celts, p. 221; Greeks and Romans, p. 261 ff. For other cases of respect for cattle, see Hahn, Demeter, p. 60. For the bull as form of water god, see 'Water' above; see also de Gubernatis, i. 265.

In Greek cult the bull was associated with
ANIMALS

Artemis Tauruslios and Taurus, which Farnell interprets as referring to the agricultural functions of the goddess; in the worship of Tauruslios the bull and cow were rarely, the calf never, sacrificed; the goddess is represented with horns on her shoulders, which are usually supposed to refer to the moon; the horns certainly appear in the representations of Selene, but the bull figures in the cult or representations of many non-human divinities, such as Themis, Dionysus, Demeter, Hestia, Apollo, Medusa, etc. (Farnell, Cults, ii. 441, 464, 466, 529). The bull was one of the chief sacrificial animals in the cult of Zeus (for βοῦς-βοῦνa see below); and a cow was, in one form of the myth, his nurse (ib. i. 37, 35). Hera is termed βοῦς-βοῦνa by Homer, but there is no monument showing her as cow-headed, and her eyes are often unlike those of the cow (ib. i. 220, 228); at Mycenae, Schliemann found cow ἀνθρώπινα; but this is of no value as evidence (ib. i. 181). White oxen drew the priestess in the ἱερός γάμος (ib. i. 188). The bull was prominent among victims offered to Athens (ib. i. 290); an Athenic Boumá (‘ox-yoker’) was worshipped in Bohemia. The term ‘cow’ has been mingled—that of a Semitic goddess whose animal was the goat and whose lover was the bull, and that of Zeus-Dionysus and Europa; the bull may originally have belonged to the latter, but it was connected with respect of Zeus-Dionysus and Europa to some extent with Zeus (ib. i. 682, 645). The bull was important in the ritual of Astarte (ib. i. 766). In the cult of the Syrian goddess worshippers sometimes cast their children from the Propylaea of her temple, ‘calling them oxen’ (ib. i. 92). For the bull in Celtic religion, see CELTIC RELIGION, § x. 8.

**Bovonida.**—The sacrifice of an ox at the altar of the Acroneon (Thuc. ii. 29) was to be noticed at Athens. The myth of origin is as follows: A certain Sophras, a stranger, was offering cereals, when one of his oxen devoured some of his corn; Sophras slew it; he was then seized with remorse and buried it; after which he fled to Crete; a dearth fell upon the land, and to remove the curse the sacrifice of the βοῦς-βοῦνa was instituted. The oracle directed that the murderer should be punished and the dead raised; all were to take the flesh of the dead animal, and refrain not. The ritual was as follows: At the festival of the Dipoleia oxen were driven round the altar, and then the priest sacrificed the animal to the chosen victim. The axe with which the deed was done, was sharpened with water brought by maidens and handed to the sacrificer; another cut the throat of the victim, and all partook of its flesh. The hide was stuffed with grass and sewn together, and the counterfeit ox was yoked to the plough. The participants in the sacrifice were charged with ox murder (βοῦς-βοῦνa), and each laid the blame on the other; finally, the axe was condemned and thrown into the sea (Farnell, Cults, i. 56-58). This sacrifice has been interpreted by Robertson Smith as totemistic, but no totem sacrifice of this kind is known elsewhere. On the other hand, Mannhardt and, following him, Frazer have regarded it as connected with agriculture; but, as Farnell points out, the sacrifice of the corn-spirit is not attended elsewhere with a sense of guilt. The adoration of Sophras was understood as a reference to his sacrificial meal lends little or no support to the totemistic hypothesis, although there was an ox-clan (Boutade) at Athens.

In modern European folklore the corn-spirit is frequently associated with the form of a bull or cow (Golden Bough, ii. 279 ff.). Perhaps we may look to this conception for an explanation of the custom of leading round, about Christmas, a man clad in a cowkin (ib. i. 447; Evans, *Teur in S. Wales*, p. 44; Panzer, *Beiträg*, ii. 117; FLJ iv. 119; Schweiz. Archiv, ii. 228, cf. 178; Rolland, *France*, vi. 91; *NQ*, 9th ser. vii. 247, etc.). The same explanation probably holds good of the Athenian sacrifice of the Bosphonía (see above), after which an ox was laid on a mock tripod, and in which the instruments of sacrifice were condemned to be cast into the sea. Possibly we may apply the same explanation to the spring ox of the Chinese (Zool. Garten, 1900, p. 57). The emperor offers a hecatomb annually to heaven and to the animals must be black or red-brown (ib. p. 31).

In Egypt and India the bull or cow played the part of a scapegoat (Golden Bough*, ii. 119). Among the Abchasians a white ox, called Ogginn, was sacrificed annually, perhaps as a pastoral sacrifice (see above).

The Ova-Hereros have some practices which have been interpreted as totemistic. They are divided into *canuda* and *oruzo*; membership of the *canuda* is inherited through the mother, and is inalienable; the *oruzo*, on the other hand, descends, like the chieftainship and priesthood, in the male line. The _omungula_ is the bull. The *omungula* is the rock rabbit, rain, etc.; the *oruzo*, after the chameleon, etc.; they are distinguished (1) by the practice of keeping or not keeping cattle with certain marks, and (2) by practising certain abstinences or taboos. In the oruzo, or _oruzo-omungula_, for example, do not keep grey oxen or injure the chameleon. It seems clear that the _omungula_ comes nearer the totem-kin, though no totemistic practices are assigned to its members (Zts. Vgl. Rechtsw., xvii. Mitt. Or. Sem., pt. iii. v. 109; *Australand_, 1882, p. 534). It has been recorded that certain plants are sacred to each ‘caste,’ but whether *canuda* or *oruzo* means is not clear (Anderson). They are accustomed to break their upper teeth at puberty to make themselves like cattle; but here, too, there is no connexion with totemism (Livingstone, *Miss. Trav., p. 562*), for it is not confined to any special clan.

Among the Bechuanas a cow or bull that beats the ground with its tail is regarded as bewitched (Mackenzie, Ten Years, p. 392). In the Hebrides, oracles were given by a man wrapped in a fresh bull’s hide and left all night at the bottom of a precipice near a cataract (Sannussi, *New Voyages*, Lond. 1819, vol. viii. 92). The Kalmuks take an oath by the cow; the accused stands on the skin of a black cow, moistened with blood, and jumps over the back of the murderer (Jaffé, *ibid.*, p. 439).

In opposition to the practice of the African pastoral peoples of the Hindus, and probably of ancient Europe (Hahn, *Demeter*, pp. 60-61), the East Asiatic culture area abstains from the use of milk, regarding it as a pathological product (ib. p. 21). These peoples employ their cattle for draught purposes only, over a considerable area (ib. p. 60; Zool. Garten, 1900, p. 54), without using them as an article of food; they explain their abstinence on the ground that it is improper to eat an animal which labours to provide them with food. There is nothing to show that the Hindu and Chinese explanation of the sacrificial ox, or within their areas is incorrect; and possibly the African tabus are explicable on similar grounds. It seems clear, however, that the Chinese learned to know cattle as draught animals, possibly steers, and to reject fats in the economic situation. *Prima facie* this leads us to suppose that cattle were domesticated for a long period before the use of milk was introduced, for otherwise the practice of abstinence in China is hard to explain. On the other hand, it seems probable that a certain sanctity attached to cattle at their introduction into the East Asiatic culture area; for there does not seem to be any difficulty in the
way of breeding cattle for food and at the same
time making use of their labour in agricultural
operations.

Hahn has argued (Die Hunstiere, Leipzig, 1895; "Demeter und Themis, Libeck, 1896) that we must
have to do here with the domestication of cattle.

have to do here with the domestication of cattle.
from the village, in other cases a man bitten by a crocodile (Merenisky, Beiträge, p. 92; ZE i. 43); the dead crocodile is handed over to the doctors to make medicine of; if one is killed, the children cough, and a piaacul sacrifıce of a black sheep may be offered (Merenisky, text p. 94). In many places the crocodile is attacked only if it has already shown its hostility to man. The Antimerinas trace their descent from the crocodile, which formerly waged war on them after which a treaty was made. If this is violated, notice is given in the district, and complaint is made of the offence on the shores of the lake; the crocodile tribe is called upon to hand over the offender, and to make matters more certain a baited hook is thrown into the water. On the following day the capture is hauled up, condemned to death, and executed on the spot. Thereupon the persons present begin a lamentation; and the body is wrapped up in silk and buried with the ceremonies usual at the internment of a man. On its grave a tumulus is raised (v. Gemep, Tabon, p. 281 ff.). The same precautions are taken and the chief is reburied, or, if not buried, to and Sunatr (Golden Bough, ii. 390 ff.). In the Philippines, offerings were made even when the islanders had no intention of attacking the animals (Marsden, Scient. Res. (1842), 95). In North Africa the crocodile, of ya', or 'taba', is strictly performed when any one belonging to a village has been killed by an alligator (JAI ii. 210). This is perhaps explained by the belief of the Philippine Tagalogs that any one so killed becomes a deity, and is carried up by the rainbow (Marsden, Sunatra, p. 301). Connected possibly with the belief that the crocodile is a magician or his servant, is the Basuto belief that a crocodile is born up, and draws him into the water; it is believed to suck the blood of the men and animals thus captured, but not to injure them otherwise—a point which still further brings it into relation with the magician (Aréouset, p. 13). Among the Javanese and the Celebes it is believed that women sometimes give birth to crocodiles or to twins one of which is a crocodile (Hagen, Unter den Papuas, p. 225; Hawkesworth, iii. 750). In Celebes, families which tell of such a birth constantly put food into the river for their relatives; more especially the human twin goes constantly at stated times to fulfil this duty, neglect of which is said to cause sickness or death. In Africa the Basutos draw the figure of a crocodile on the ground at the girls' initiation ceremony (ZE xxviii. 35). In the west of Ceram boys are admitted to the Kabian association at puberty; in some parts the boys are passed through a crocodile's jaw of wood, and it is then said that the devil has swallowed them, and taken them to the other world to regenerate and transform them (Golden Bough, ii. 442). Amours between crocodiles (or caimans) and human beings are recorded in Senegambian, Malagasy, Basuto, and Dayak folklore (MacCulloch, 290, 297).

Crow, raven.—The most important area for the well known "type" of the crow, or raven, for the prominence of the crow in the pantheon, is the north-west coast of America. Among the Thilknets the chief deity, sometimes identified with the raven (but cf. JAF xxvii. 144), is Yehl. In the Creation myth he plays a part similar to that attributed to the thunder-bird in the Chippewyan myth, and produces dry land by the heating of his wings; probably Chethl, the name of the thunder-bird, and Yehl, the Creator, are variants of the same word, which is also written Jesil (Bancroft, i. 100 ff.). The neighbouring Haidas of Queen Charlotte Islands make the raven their ancestor (Frazer, Tot, p. 5; Mission Life, xxii. 32; Macle, Vancouver, i. p. 452; but see Boss, Indische Sagen, p. 306 f., where the chief incident is a contest between Yehl and his uncle). The crow figures as Creator in the Eskimo and Chukchi mythology (Seemann, Voyage of Herald, ii. 30, 67, 72; Zts. Geog. Ges. Thür., vi. 120). It also figures in a Javanese myth of origin (Gibb, JAI ii. 436). In the Gros Ventres it played an important part in the creation of the world (Cones, Henry and Thompson, MS Journals, i. 351). The crow figures prominently in the ancient Chaldean story of the world (cf. Ezech. i. 20). In the corybantic mysteries the crow was represented on the left of the Altar of Vicintus (JAI, p. 166; Ann. Rev. viii. 397; Ann. Prop. Foi, xiv. 52, etc.), and the early date of the first notice seems to establish the native character of the myth; in some cases the crow is said to have been originally white, but to have suffered a change as a punishment (Ann. P. F.; Ann. Rev., loc. cit., Boas, p. 273), or for some other reason (Leland, Algonquin Legends, p. 27); a similar myth is found in Europe (Wiedemann, Ethan, p. 404; Zts. deutsches Altertum, N.S. x. 15). In the north-west of America the crow is a culture hero, who brings the light, after tricking the power in whose possession it is, or gives fire to mankind (Bancroft, loc. cit.), and is associated with rattlesnakes (Barker, Aborigines, p. 24; but cf. Dawson, Aust. Abor. p. 54, where the crows are represented as keeping the fire to themselves). Among the Algonquins the raven is supposed to be the taker of corn and beans (Williams, Key into the Language of America in Mass. Hist. Soc. iii. 219). A Spanish expedition in California in 1602 reported that the Indians of Santa Catalina Island venerated two great black crows; but it seems probable that they were in reality buzzards (Bancroft, i. 134), which are known to have been respected and worshipped in California (Golden Bough, ii. 367). As a parallel, the Fraser Indians confounded the Fraser-lay with the raven and brought them at Nimiguean at public expense (Hone, Everyday Book, i. 44). The Aimus also keep crows, and reverence them (Frazer, Tof. i. 14). For Indian crow myths, etc., see Crooke, i. 166, ii. 243-245.

The belief the crow is sometimes tells (Hollomai, Ostl. p. 41; cf. Wiedemann, Ethan, p. 492, for another form of respect). It is not killed in Victoria (Morgan, Life of Buckley, p. 58; Parker, Aust. Abor. i. 23), New England (Williams, in Mass. Hist. Soc. iii. 219), among the Gilyaks (v. Schrenck, Reisen, iii. 457), parts of Europe (Folkl. xi. 240; New Voy., London, 1819, iv. 60), and North America (Fennan, Arctic Zoology, p. 246), the explanation being given by Dr. Gilly (v. Schrenck, Reisen, iii. 167). Among the Algonquins of the Adirondacks, New York (Morgan, Parker; cf. Crooke, ii. 243), connected possibly with the idea of the crow as a soul-animal, is the belief that it brings the children (Germans, xlii. 349; Floss, Kindt, p. 12; Zts. d. Altertum, N.S. x. 11; cf. Aelian, de Anim. nat. iii. 9; Hesychius, Lexicon, s. v. kapp(hayen), etc.). The crow is one of the birds which figure in the annual processions so commonly found in Europe (Schütte, Holst. Hist. iii. 165; J. des v. F. Medd. Gei. i. 125). Either a living crow or the nest was carried round. Frazer's suggestion (Golden Bough, ii. 446 n.) that the crow song of the ancient Greeks (Athenaeus, viii. pp. 235 B; Pausanias, vi. p. 20), was used in connection with a similar ceremony may be regarded as certain. In some cases the crow is killed (Niedersachsen, v. 129). The ceremony is probably connected with the idea of the expulsion of evils. Offerings are made to crows at festivals in India (Home and For. Miss. Rec. 1853, p. 309).

As a bird of omen, the crow, raven, or rook is inanimate (Dorman, Prim. Supp. p. 224; Purchas, Hist. i. 1785; Billings, i. 231; Zts. deutsches Altertum, iii. 134; Wolf, Beiträge, i. 232; Henderson, Folktale, N. C. p. 29, etc.; the Talmud tractate Shabbath, 67b). Occasionally it is the reverse (Autob. of King-ge-ga-loch, p. 48), especially at a funeral (Crooke, ii. 243). The crow is specially associated
with sorcerors in Australia (J.A.I. xxi. 90), America (Schouboe, Ind. Tr. iv. 491; Adair, Hist, pp. 173, 184), and Europe (Clouston, Folklore of London, p. 29). The Tawanas hold that when a person is very sick the spirit of some evil animal, sent by a sorcerer, enters into him; it is eating away his life (Eells, Ten Years, p. 43). Ancient diviners sought to imbue themselves with the spirit of prophecy by eating the hearts of crows (Golden Bough, ii. 255). If a crow is eaten in this way it is held to confer the powers of a wizard on the person who eats it (Clouston, loc. cit.). The crow is largely used in magical recipes (Folklore, xi. 255). A stone found in its nest is believed to confer invisibility (F.L. vii. 96; Alpenberg, Alpenmythen, p. 385). Both in India and Greece, the brains of crows were regarded as specific against old age (Crooke, ii. 245; Golden Bough, ii. 255). For folk-tales of the crow see de Gubernatis, Zool. Myth, ii. 220-230, and Panly-Wissowa, s.v. 'Aberglasne,' p. 76.

Cuckoo.—In various parts of Europe are performed ceremonies named after the cuckoo. At Pollen, near Theux, was held, on August 21st, a cuckoo court; husbands whose wives deceived them had to appear, and at the end of the proceedings the last married man in the village was thrown out of the window (Beatty, Ancient Brit., ii. 115). In other parts the ceremony was in the middle of April (Rolland, France, ii. 91). At Steubert a man called the cuckoo was placed on a waggon with the last married man of the village by his side; they were dragged through the village and the cuckoo was thrown into the water (Haron, Contrib. ix. ii.). With these customs we may perhaps associate the habit of placing a cuckoo into the bride-chamber, probably for a fertility charm (Frehse, Harzbilder, p. 87), and the cuckoo dance at North Friesland marriages (Australand, iv. 519). In S. E. Russia at Whitstandt, a pole is put up with a cuckoo upon it; round this a dance is performed (ib. lxi. 235). A cuckoo dance was also known in Lithuania, for which the third day after Easter was the proper season (Wurzelch, i. 216). Among the Rajputn of India the girls paint a cuckoo on a tree or board at the Diwserah festival, and lay flowers and rice on it; they then call till a cuckoo comes (Bombyx. Gz. ix. 173). The cuckoo is also used as a charm (ib. p. 380). A cuckoo tabu is very common in E. S. pean folklore (Folklore, xi. 240), and in Madagascar (v. Gheyn, Tabou, p. 264). Many other tribes, it should be stressed, in the spring by leaping or running (Traditions pop. iii. 245). It is said to lay Easter eggs (Schr. Arch. i. 115), and 'coen-mallard' is one of the names given to 'Blind Man's-Hill' (Trad. pop., loc. cit.). The cuckoo is a bird of bad omen (Rother-Kreatzweil, Ehaten, p. 149; Russwurm, Ethnologie, see. 358; Melvill, i. 454). It is connected with rain (Panzer, Beiträge, ii. 172; de Gubernatis, Zool. Myth, iii. 235). It is commonly believed that it is not a migrant, but turns into a hawk (cf. de Gubernatis, ii. 231). For cuckoo myths, beliefs, etc., see EM. iii. 298-303, and de Gubernatis, Zool. Myth, ii. 226-233.

Dog.—Tame deer were kept in Guatamala, which were held sacred by the Indians, on the ground that their greatest god had visited them in that form (Bancroft, iii. 132). The natives of Nicaragua had a god whose name was that of the dog, but the animal was regarded as good; they explained it by saying that this god had to be invoked by those who hunted the deer (ib.). Deer were taboo in Sarawak, and both there and in California the pod were held to be the souls of deceased ancestors (J.A.I. xxxi. 187, 193; Bancroft, iii. 131). In West Africa an antelope is sacrificed annually (Ellis, Tahiti-speaking Peoples, p. 224). Especially in America, deer, moose, and elk were treated with great respect by hunters; their bones might not be given to the dogs, nor might their fat be dropped upon the fire, because the souls of the dead animals had to know that their work was being properly treated and told the others. In Bougainville the Indians preserved the bones till their houses were quite encumbered, for they believed that otherwise they would not be able to take other deer. If a dead deer was left unburied, the medicine-man would explain it by saying that he had thrown deer flesh away, and the soul of the deer had entered him and was killing him. The Teztaleas and Kelchis offered copal to a dead deer before they ventured to skin it. Cherokee hunters ask pardon of the deer they kill, otherwise Little Deer, the chief of the deer tribe, who can never die or be wounded, would track the hunter by the blood drops and put the spirit of rheumatism into him. The Apache medicine-men resorted to certain caves, where they propllicted the animal gods whose progeny in domesticated form provided a mean of support. Among the Indians of British Columbia killed a deer, they thought the survivors were pleased if it was butchered cleanly and nicely; if a hunter had to leave some of the meat behind, he hung it on a tree, especially the heart (Dirringer, O. Eskimos, ii. 90). The Eskimos of Hudson Bay believe that a white bear rules over the reindeer. They pray to him to send the deer, and assure them that they have been careful to treat the deer well (ib. p. 408). Deer and sea-animals may not come in contact with one another (2d Ann. Rep. Bar. Ethn. p. 565). The deer is eaten by more than one tribe in connection with the feast of new corn. Among the Delaware, venison and corn were provided, and divided into twelve parts, according to the number of the old men who took part in the ceremony; after they were eaten, the new corn was free to all; in the evening, venison was again eaten and the remainder burnt, for it might not remain till the sun rose, nor might a bone be broken. A deer head-coal-semen-manufactured with much ceremony once a year (Beatty, Journal, p. 84; cf. Beatty, Memoirs of Becks, p. 23, quoting a letter of W. Penn). The Houstanawaks also had a deer feast, but it is not brought into connexion with agriculture (Hopkins, Hist. Memoirs, p. 10). The dog was accorded a form of the corn-spirit; for in Florida it was the custom to take as large a deer hide as could be procured, leave the horns on it, and at the end of February fill it with all manner of herbs and sew it together. They then proceeded to an open space and hung the skin upon a tree, turning the head to the east. A prayer was then offered to the sun, asking that these same fruits might be given. The hide was left up till the following year (J.A.I. xxxi. 155; cf. the account quoted on p. 156 from Dracorinos). Probably a Papago rain dance performed beneath a deer's head stuck up in the air in the month of July may be similarly interpreted (ib.). A small deer figure largely in Malay and other folk-tales (Skret, Folklor).
theory seems less probable than the view that the dog made himself the companion of man, rather than that he was brought into subjection by the acts of man (cf. Much, *Heimat der Indogermanen*, 182-185). The dog is used as an article of food by a large number of peoples of low grades of culture, and sometimes by higher grades, e.g. the Chinese. It was used by neolithic man in Europe for the pursuit of game, and is employed in a similar way all the world over at the present day. In some cases the breed has become in no way specialized thereby; but among the Batnas (*Int. Arch. ix. 111), puppies of the African forests, a great advance in this respect is found. Among the Ainus the dog is used for capturing fish (Howard, *Life*, p. 51). Mainly in Arctic and sub-Arctic regions it is used as a draught animal; occasionally as a beast of burden. It was used by the Cimbri in war; the same usage prevailed in Uganda and Usakuma. (For the uses to which the products of the dog are put, see *Int. Arch. i. 140 f*.)

Dog's *is* found as a term of abuse among Semitic and most Muhammadan peoples; among the Romans the contempt thus expressed was less than in modern Europe.

A myth of dog ancestry is not uncommon; it is found in India, Madagascar, pp. 196-197), among the Dog-Ribs (Petitot, 311 ff*), the Ojibwas (Frazer, *Tot.*, p. 4), in Madagascar (v. Gennep, p. 231), Indo-China (*La. Q. Rev. 3rd ser. i. 140*), Kirghiz (*Petermann*, 1884, p. 153), New Guinea (*Chalmers*, p. 151), among the Kalangas of Java (Raffles, i. 328), and even in Europe (*Liebrecht*, p. 19; see also in general MacCulloch, 263 f*). In the Pomotu islands the first race of men are held to have been made into dogs (*Miss. Coth. 1874, 343*).

Especially in N. America the dog (coyote) figures in Creation myths (*Bancroft, pass.*), and occasionally in Deluge myths (see *Deluge*). The Pottawatomies believe that in the moon is an old woman making a basket; the earth will be destroyed when it is finished; but a great dog reduces her work at intervals and then results an eclipse (*Ann. Prop. Foi*, xi. 490). Among the Mongols, Mbochas (*Int. Arch. Lc*. 147), Chiquitos (Tylor, i. 329), Chinese (*Ann. Prop. Foi*, xxii. 355), etc., a similar association of the dog with eclipses is found. In Kalmuckia the dogs attended to Toulka, the dog, Kozei (*Kraeheninnikow*, i. 94). Classical mythology tells us of Cerberus (q.v.), who guards the entrance of the Infernal Regions (see *Bloomfield, Cerberus, the Dog of Hades*).

In N. Borneo a fiery dog is held to wait at the gate of Paradise, and to lay claim to all virgins (Forster, i. 239); the Massaenetts also believe that a dog watches the gate (*Wood*, p. 104); so, too, the Eskimos (*ZE*, 1872, 238); and the Iroquois (the bridge by which souls had to pass (*Bel. des Jés. 1636, 164*).

Yana was held to have two dogs, whom he sent out to bring in wandering souls (*Rig Veda* x. xiv. 10-12; *Atharva Veda*, viii. 1, 9); and these dogs, described as four-eyed (i.e. with two spots each of the eyes), recur in the Avestan dogs that guard the Chinvat Bridge, which leads from this world to the future life (*Vendidid*, xiii. 9; *Sad Dar*, xxvii. 186). *Meditationen zur Geschichte der indischen Visionstexte*, pp. 127-130, and the references there given.

The Aztecs sacrificed a red dog to carry the soul of the king across a deep stream (*Bancroft, ii. 605*), or to carry him away to heaven (golden dogs of *Golden Book of Kehilan*, cf. *Ober*). Other authorities vary the details (*Ontario Arch. Rep. 1889, 91*; *Sanborn, Legends*, p. 7; *Miss. Her. xxiv. 91*, etc.). Other dog-sacrifices are found among the Sáis and Foxes (*Chambers & *A. F. *1859, xxi. 80*; the Karaka, *Moeurs*, xix. 19), the Mayas at New Year (*Bancroft, ii.*).
513

fall(s) (Doolittle, Social Life, ii. 264, i. 275). The great dragon lives in the sky, and the emperor is the earthly dragon (Gould, Mythical Monsters, p. 215; see pp. 215-217, 377-404). In Japan the dragon is associated not only with water but also with other things. The dragon produces nine young at a birth, each with different qualities; hence dragons are carved on bells, musical instruments, drinking vessels, weapons, books, chairs, and tables, according to the particular tastes of the different kinds of dragon.

One kind loves dangerous places; consequently it is put upon the gables of houses (Natur, 1878, p. 549). India, too, had its dragons; one used to lie in wait for boats or ships, hiding itself on a neighbouring mountain; a criminal obtained his life on condition of ridding the country of the pest; he had human figures made, and the bodies filled with books, etc., the dragon devoured them, and perished (Lettres édit. xviii. 409; cf. Crooke, i. 120-131).

In the same way in the last century a dragon on the borders of Wales was said to have been induced to meet his fate by putting red flannel round a pest spire which, spite of all, continued to raise its head. Tiamat is the cosmic dragon of Babylonia (see BAB.-ASSYR. RELIGION).

Eagle.—The eagle is frequently respected, but, except in Australia, the notion that it has wings to have risen to an actual cult. In many parts of Australia the eagle-hawk is one of the names of the phratries into which many tribes are divided; in Victoria, Punjab seems to be a deified eagle-hawk (Brough Smith, i. 259); elsewhere it is the evil spirit, so-called, which is the eagle-hawk. Mullion is the name of the former, Malian of the latter, and their identity is established by the belief and practice of the inhabitants of the Wellington district, where the eagle of the eagle-hawk was formed on the ground, at initiation, in memory of his contest with an anthropomorphic god, Baione (MacDonald, 1905, 28).

The Apaches think there are spirits of Divine origin in the eagle and other birds (Bancroft, iii. 356). The Ostiaks regard a tree as holy on which an eagle has nested (Latham, Russian Empire, p. 110). In the island of Tauro, off New Guinea, a certain kind of eagle is taboo, but there are no totemic ideas connected with it (Zts. vgl. Rechtswiss. xix. 325); the osprey is holy ('sacred') in New Georgia (JAI xxvi. 386). The Oesges would turn back from an expedition if a hawk or eagle were killed (Nuttall, Travels, p. 57). The Samoyeds account it a crime to kill an eagle, and if one is caught in a snare and drowned, they bury it in silence (Schrenck, Reisen, i. 168).

The Bosmans regard it as unlucky to kill an eagle (Witz, Mind. iv. 442). Some of the aboriginal Peruvians asserted their descent from eagles (Frazier, Tot. p. 5). The Buriats hold that the good spirits sent an eagle as shaman, to counteract the evil deeds of the local spirits; the first human shaman was the son of the eagle and a Buriat woman (JAI xxiv. 64). The Zuñiás, Dskotas, and others keep eagles for the sake of their feathers. The Mokis fasten an eagle to the roof in spring, and kill it at the summer solstice in order to get its feathers for ritual purposes; the body is buried in a cemetery, and it is believed that the soul of the eagle goes to the other eagles and returns again as an eagle (Globus, xi. 190). The hunter purifies himself before going after eagles, and makes an offering; one bird has a prayer-stick tied to its foot and is set free (Am. Anth., new ser., iii. 701). The Blackfoot hunter sacrifices the dragon's well; rain will follow within three days, for the animals fight, and when the dragon moves, rain

VOL. I. — 33
influence on bananas is attributed to the eagle, and no one plants them when an osprey is in sight (Zts. Geog. Ges. Thür. xii. 95). Among the Ojibwasis, the sitting of an eagle to and fro was a good omen (Autob. of Kehgogebonbouh, p. 49; for the east arrow, see de Gubernatis, Zool. Myth., ii. 185-197). The eagle is likewise important in Indo-Iranian mythology. In the Rigveda (especially iv. 27) the eagle brings the sacred soma (which see) to the gods in the form of the Asatrush, Hrivetra, and the references there given); while in the Avesta an eagle dwells on the 'tree hight All-Healing' (Yasth., xii. 17) in the midst of Lake Yourn-kasha (the Caspian), aided by his fellow (Dinâr Moinâd-i Khvart, lix. 37-41). From the Avesta the eagle passes into Persian literature as the simârûg, whence is developed the roc of the Arabian Nights. The feathers of the simârûg, which dwells on Mount Kaf or Mount Albar, form talismans for the heroes Tahmurf and Zal (Casartelli, in Compte rendu du congrès scientifique international des Catholiques, 1891, sec. vi. 79-87).

In classical mythology the eagle occupied an important position, and was a favorite of the Roman gods. The vultures and Roman legionaries took up their winter quarters where there was an eagle's nest. The eagle is associated with Zeus and the lightning; its right wing was worshipped in fields and its excretion against hail. The eagle stone (arrêtra) and parts of the eagle's flesh were used in magic (Pausan. Wissowa. s.v. 'Adler'). It was believed that the eagle was never struck by lightning. Its appearance was auspicious (ib. v. s.v. 'Aigle'). The eagle is the constant attribute of Zeus in the monumental funerary monuments (Farnell. Cults, i. 129), as also of Jupiter (Preller. Röm. Myth., ii. 327).

In Chinese mythology of the Malagasy the cel is a forbidden food, and various astrological myths are told to explain the fact (v. Gennep. Tabou, p. 290). By the Inerinas it is regarded as a soul-animal; the Beisileus believe that the lower classes pass into eels; when the body is thrown into the sacred lake, the first eel that takes a bite becomes the dominic of the soul (ib.). The cel is also a soul-animal among the Igorrotes (Wilken. Het Animisme, p. 73) as well as in China (ib.), and receives a daily portion of food. In China the Pootan Arapeshere the cel seems to have been held sacred; when one was captured, prayers were offered at a shrine apparently devoted to a cult of female ancestors or relatives; these are divined by the community between the sexes and women; and the latter might not look on them (Miss. Cott. 1874, 366). In N. Siam, Muang Naang was covered with water because its inhabitants ate white eels and thus enraged Yeyga, the ruler of the world (Zts. Geog. Ges. Thür. iv. 149). In N. Queensland a connexion between eels and a flood seems to exist (Lumholtz. Among Cannibals, p. 295); although the passage may also be interpreted to mean that those who eat eels have the gift of prophecy. This belief is founded in Europe (Wolf. Beiträge, i. 232, No. 594). Sacred eels were also known to the Greeks (Pausan. Wissowa., s.v. 'Aid'); and the cult of the eel is a total one (Tylor. Mythology, i. 11 f.). Neither they nor the Nossaries eat eels (Dussaud. Histoire et religion des Nossaries, p. 93).

**Elephant.**—In Siam it is believed that a white elephant may contain the soul of a dead person, perhaps a Buddha; when one is taken, the capturer is rewarded, and the animal brought to the king to be kept ever afterwards, for it cannot be bought or sold. It is baptismalized, and when it dies it is mourned for like a human being (Young. Kingdom of the Yellow Robe, p. 390 ff.). In Cambodia a white elephant is held to bring luck to the kingdom, and its capture is attended with numerous ceremonies (Morant, Cambodge, p. 101). In some parts of Indo-China the reason given for the respect paid to it is that it has a soul, and may do injury after its death; the whole village therefore feeds it (Mouhot, Travels, i. 292; see also Bock, Temples and Elephants, p. 19 f.). The cult of the white elephant is found also in Somon and Abyssinia; but in view of the frequent respect accorded to white animals it is unnecessary to see in this any proof of Indo-Chinese influence. They were in all probability regarded as the protectors of mankind, and the one who killed a white or light-coloured elephant would pay the penalty with his life (Int. Arch. xvii. 103). Among the Wambuiwes the elephant is believed to be the abode of the souls of their ancestors (ib.). The elephant is regarded as a tutelary spirit in Sunnatra (Tijdskhr. T.L.V. xxvi. 456). The name is sometimes tabu (Golden Bough, i. 457).

The hunting of the elephant is attended with numerous ceremonial observances. The Wakanis of East Africa prepare for the chase by passing a night with their wives on a kind of ant-hill, of which they believe that the female elephant makes use to cause the male to mount the female. When the hunt a dance is held, and they make certain marks on their forearms. The hunter buries the trunk and cuts off the end of the tail; the latter he rolls into the sand, and as he does so the next goes to the chase this bag must remain in his wife's care; she also has a right to purchase something with the proceeds of the sale of the ivory; if the hunter quarrelled with her, his next hunt would not be until the following year (ib. 174, 44). The Amazons offer a sacrifice after killing an elephant (Shaw. Story of my Mission, p. 452); the hair on the end of the tail is hung at the entrance to the cattle-fold; the end of the ear and the trunk are cut off and buried in the sacrificial place; at the end of the day these parts are made use of (Kay. Travels, p. 138). According to another authority, excuses are made and the elephant is appealed to during the chase not to crush his pares (ib. 138, 44). The Amazons also make a sacrifice to the mother of the elephant (Zts. Geog. Ges. Thür. vi. 42). The Wendyamozek seeks to propitiate the dead elephant by burying its legs, and the Amazons inter with the end of the trunk a few of the animal's hair. The huntsmen put in his head until the ivory (Golden Bough, ii. 400). In India the elephant is the representative of Ganeis, who is also figured with the head of this animal; and in later Hindustan the earth is supported by eight elephants. Some elephants can fly through the air, and all have in their frontal lobes magic jewels. Touching an elephant is a chastity-test, and the hairs of its tail serve as amulets (Crooke, i. 229-241). According to one account, the world rests upon an elephant (Tylor, i. 365). In West Africa, elephants which destroy plantations are regarded as wizards, and feared (Wilson. West Africa, p. 164). On the Congo the extermination of an elephant is certified that (Int. Arch. xvii. 103). According to the Talmud ('Brâhâth, 579), it is a bad omen to dream of an elephant. For elephant myths see de Gubernatis. Zool. Myth. ii. 91-94, ch. 77. See also 'fish-carriage of the god' (Wood. Fish. —Although sacred fish are not uncommon, a fish-god seems to be a somewhat rare phenomenon. Dagon is often regarded as a fish-god (ib. v. 351, 355), e.g. as one who had a human head and hands; possibly his body was scaly, or he had the tail of a fish; for he was a fish-god seems certain from the fact that his worshippers wore fish skins (ib. iv. 104, 97. Memant. Gypt. Or. ii. 65). A figure probably
intended for, at any rate regarded as, Artemis Eurynome was depicted with a fish's tail (de Visser, Gotter, p. 187; cf. Farnell, Cults, i. 522), and there were sacred fish in the temples of Apollo and Aphrodite at Myra and Hierapolis, which according to Pliny (iv. 49), had a totem of a fish (de Visser, pp. 177-178; cp. p. 163). Atragatis is said to have had sacred fish in a pool at Askelon, which were fed daily and never eaten; according to another account, they were kept alive in a temple pond full of leprous fish (Ambel. i. 49) we learn that the fish of Chasia were regarded as gods; and Hyginus tells us that the Syrtians looked on fish as holy, and abstained from eating them (Euth. s.r. 'Fish'; for fish tabus see W. R. Smith, p. 292 ff.). In modern days fish are sometimes sacred in India, where they also play a considerable part in folklore, often serving as life-indexes. They likewise form the favourite food of ghosts (ghosts). Varuna rides on a fish, and Vishnu had a fish-avatār (Crooke, i. 243, ii. 156, 253 f.). The 'Small People' of Cornwall hate the smell of fish (Hunt, Popular Romances of the West, i. 109). According to the Talunid an eaten in the month of Nisan are conducive to leprous (Peshamin, 1126). Iranian mythology likewise has the hārā fish which guards the white Hēm (Yasht, iv. 29, xvi. 7); Bāndīlahšin, xviii. 3-6, xiv. 13), as well as the white fish in the pool, of which somebody makes 'all fish become pregnant, and all noxious water-creatures cast their young' (Bāndīlahšin, xix. 7). Fish are kept in parts of Wales to give oracles. Most of the South African Bantu tribes will neither eat nor touch fish, giving as their reason that fish are snakes (Fritsch, Drei Jahre, p. 335). Other fish tabus are found in various parts of Africa (Internat. Archiv für Ethnographie, xvii. 125). Among the Yezidis only the lowest classes are said to eat fish (Badger, The Nortomans and their Ritual, p. 117). In North Aracen fish may not be eaten at harvest time (JAT ii. 240), and pregnant women are forbidden them in Serbia (Globus, xxxiii. 349), thus reversing the teaching of the Talunid, which especially recommends them to women in this condition (Kethibhin, 911). The economic importance of fish makes it natural that fishermen often propitiate them. In Peru sardines are said to have been worshipped in one month, and stones, dogfish in another, and so on, according to the special fish tabus (Golden Bough, ii. 410). Many tribes do not burn the bones of fish, because if they did the fish could not rise from the dead (ib.). The Thnikets pay special respect to the fish, which they regard as living, and many other tabus are observed (ib. p. 411 f.; for treatment of the first fish see also Schöttl, Folklore der Fischer, pp. 131, 254, 256). In the Egeen, sacrifices are still made to the melanmars (Walpole, Memoirs, p. 286; cf. Pliny, XXXIV, ii.). In other cases magical ceremonies are resorted to in order to secure a good catch. In the Queen Charlotte Islands the fish are strung on a rope with feathers as charms, and put on the top of a pole stuck in the bed of the river. One of the tribe is banished to the mountains during the fishing season, and may not have a fire or communicate with the tribe, or the fish will not be abundant. (Mission Life, v. 105). In Jabin, New Guinea, the fishermen may not be mentioned, no noise may be made in the village, and women and children must remain at home. (Folklore, xvi. 345). In New Caledonia for one kind of fish appeal is directed to ancestral spirits in the sacred wood; offerings are made there, and when a fish enters the river, the women extinguish all fires but one; then there is a performance, a dance, and silence follows. For the sardine a stone wrapped in dried twigs is taken to the cemetery and put at the foot of a post and two sorcerers perform ceremonies (Miss. Cath., 1830, 239). In some countries a fish is sacrificed for success in fishing (Sibbiliot, op. cit. p. 116; Krassof, Peri l'art de Pêcher, p. 190). The Ottowas held that the souls of the dead passed into fish (Del. des Jés. 1667, p. 12; cf. 'soul-animals,' p. 483). In Japan the earthquake is explained as the result of the movements of a great fish in the sea or under the land (Notier, 1878, p. 551). In the Middle Ages the same explanation was given in Europe (Mone, Anzieger, viii. 614). Fish are found as totems in South Africa (Fritsch, Kindeiicorenken, p. 153), Alaska (Trimmer, Yebon Terr. p. 190), and among the American Indians (Frazé, Tod. p. 4, etc.). Myths of fish descent are also found (ib. p. 6). For fish myths see de Gubernatis, Food, Myth, ii. 331-333; for the crab, ib. pp. 354-355.

Fly.—In Greek mythology both Zeus and Apollo had names connecting them with flies, but it is doubtful whether either of them can properly be termed a fly as a rod and carried it round on the head that he would keep flies from interfering with a sacrifice (Farnell, Cults, i. 45). It is equally uncertain whether Beelzebub, whose name is commonly transliterated 'Lord of Flies,' in connexion with them. In Africa, however, there seems to be a real fly-god. Flies are kept in a temple (Beelsham, Achantire, p. 177). The Kalimkats regard the fly as a soul-animal and never kill it (JAT i. 61). In North Germany it is held to be unlucky to kill the last flies, and any one who keeps one alive through the winter will receive a sum of money (Hartsch, Siegen, ii. 186).

In Greece the 'bronze fly' was one of the names of 'Blind Man's Buff' (Pollux, Onomastikon, ix. 123); it is known as the 'Blind Fly' in Italy (Folklore, x. 261) and North India (Panjãb, NQ, iv. 199). In the latter country it is a lucky omen for a fly to fall into the ink-well (Crooke, iv. 257). According to the Avesta (Vendidad, vii. 2, viii. 71), the demon of death assumes the shape of a fly. For Jewish legends concerning flies, see Krauss, JE x. 421 f.

Fowl.—The cock is one of the most important sacrificial victims (for Africa see Int. Arch., xvi. 145-148), and has probably replaced larger and more valuable animals in many cases. In some of the Bantu tribes the men abstain from eating domestic fowls (JAT iv. 257); and it is believed that the domestic fowl, because they regard it as a transformed man (Bol. Inst. Geog. Argent. xx. 740). Fowls are also taboo in East Africa and Abyssinia (Globus, xxxiv. 352). A refusal to eat eggs is more widely known, but does not necessarily point to a tabu of the fowl; albinism from milk in the same way does not imply a tabu of cattle.

The cock figures in spring ceremonies in Europe: in Schiermonnikoog a green branch is fastened at the top of the May-pole, and on it is hung a basket containing a live cock (NQ, 5th ser. x. 194). In the same way at Defynog boys put the figure of a cock at the top of a red and carried it round on the eve of the first day of May (Montgomery. Coll. xvi. 268). The cock is one of the forms in which the corn-spirit is supposed to appear (Golden Bough, ii. 266). The cock is sometimes used in the expulsion of evils (ib. ii. 103). Modern Jews sacrifice a white cock on the eve of the Day of Atonement (ib. p. 109; cp. p. 25). We may probably interpret in the same sense the name of the god (Tristram, Geog. Geel, Thur. xii. 95). In New Caledonia for one kind of fish appeal is directed to ancestral spirits in the sacred wood; offerings are made there, and when a fish enters the river, the women extinguish all fires but one; then there is a performance, a dance, and silence follows. For the sardine a stone wrapped in dried twigs is taken to the
ANIMALS

iii. 552; Bavaria, i. 390; Russische Revue, xii. 260, etc.) may be a fertility charm; and in like manner a cock and hen were carried before a bridal couple on their wedding day among the Jews of the Talmudic period (Gitin, 57a, for other Jewish references.) Among the Australian Aborigines the cock ... the 'king of the earth'; it on its back was a turtle, then a serpent, then a giant; and he upholds the world (Miss. Her. xviii. 383). In South America the Chibchas gave the frog a place among their divinities, and had an annual ceremony in connexion with the calendar, in which the frog figured (Bollaert, Recherches, p. 49; Dorman, Prim. Sup. p. 256). Among the Araucanians of Chile the 'land toad' was called the lord of the waters (ib.). In the mythology of the Iroquois it is told how all the water was originally collected in the body of a huge frog, by piercing which Isseka formed rivers and lakes (Ré. des Æs. 1636, p. 102). A similar story is told by the Micmacs (Leland, p. 516); and the Australian blacks have Dehinge legends in which the Flood is caused by the bursting of a water-swallowing frog (Brough Smyth, i. 429, 477). Among the New Guineans the frog is considered the birthplace of newborn children; with this may be compared the Sea Dayak belief that the goddess Salampandai takes the form of a frog; if a frog comes into a house, sacrifice is offered to it and it is released; if Salampandai is held to make the children, and a frog is seen near a house when a child is born (J.R.A.S. S.B. vii. 146; Schultengrub, Wend. Volkstum, 1. 94).

Frog. — In Benin, children are believed to hop about in the meadows in the form of frogs (Ploss, Kindi, i. 12); with this may be connected the Brandenburg belief that a woman who digs up a toad will soon bear a child (Zts. Ver. Volck. i. 189). A Sian tribe, the Tacullies, believes itself to be descended from tadpoles (Asiatic Q. Rev., 3rd ser. i. 140). The Bahmans of Indo-China respect the frog, holding that one of their ancestors took that form (Miss. Cath. 1890, 140, 145). In this shape he is believed to guard their fields. The Karens of Burma explain eclipses by saying that a frog is devouring the moon (ib. 1577, 455).

We have seen that the frog is associated with water. Among the Araucanians, the Orinoco Indians held the frog to be the lord of the waters, and feared to kill it even when ordered to do so; they kept it under a pot and beat it in time of drought (Golden Bough, i. 105; Blanck, Conversion del Pueblo, p. 63). The Newars of Nepal worship the frog, which is associated with the demi-god Nagas in the control of rain. A sacrifice of rice, ghri, and other objects is made to it in October (Golden Bough, i. 104; cf. Latham, i. 89, who says August). Water is also poured over a frog in India, or a frog is hung with open mouth on a bamboo, to bring rain (Crooke, i. 73, ii. 256).

In Queensland, British Columbia, and Europe, frogs are also associated with the procuring of rain (GBt, loc. cit.), and among the Bhils (Bombay Gaz. IX. i. 355), etc.; in the Malay Peninsula the swinging of a frog is said to have caused heavy rain and the destruction of a kampung (J.R.A.S. S.B. iii. 88). The toad is sometimes regarded as a tutelary deity in Europe (de Gubernatis, Zool. Myth. ii. 380). The Faculties of British Columbia are said to have no gods, but say: 'The toad holds me' (Maclean, Twenty-five Years, p. 265). The Caribs are recorded to have had idols in the form of toads (Sprengel, Auswah, i. 43). In some parts of Germany the toad is regarded as a household genius (Zts. Ver. Volck. i. 189; MS notes).
this compare the belief of the Romani that
killing a frog or toad is an omen that the killer will murder his mother (Zts. Ver. Volksk. i. 189; Culli, i. 230). In a Burgundian
tradition (Galton, The Book of Fables. vii. 4; Mullenhoff, Sagen, i. 212; Holzmacher, Osnabrueck, p. 37). Accordingly they are often killed (Zts. Ver. Volksk. i. 182; Culli, Faune pop. iii. 461; c. 11, the fable of Genuilema which these purgatories were killed at certain times of the year (Wattke, Der Abergl. p. 95; Culli, op. cit. iii. 54). In some of the rest of the world the gods and toads are evil animals, and are to be killed (Vendisid, xiv. 5; and in Armenia the frog causes wars (a belief found also in the United States) and makes the teeth fall out (Abeggian. Armerischer Volksbilde, 30 f.). To cure these wars, meat must be stolen, rubbed on the excesseuses, and buried; as the meat decays, the wart will disappear.

In a Mexican festival one of the ceremonies consisted in a dance round the images of the Taboles placed in a frog's skin; and, of which each dancer had to eat during the dance. More definite was the belief of the Choctaws, who assigned to the king of the frogs and other aquatic animals the function of initiating the rain-makers (Miss. Reg. 1890, 468). We may put down to the same idea the belief of the Guaranis that if a frog enters a boat one of the occupants will die (Ruiz de Montoya, Conquista, § 12). The southern Slavs attribute a magical virtue to the name of the frog, which may not be mentioned before a small child (Krauss, Sitte, 549). The precious jewel in the head of the toad is mentioned by Shakespeare (As You Like It, ii. 15 f.); a similar belief is found in Germany (Germania, vii. 433). For myths and folk-tales of the frog and toad, see de Gubernatis, Zool. Myth. ii. 371-379, 379-384.

Gorath.—In Greek mythology the goat was associated at Argos with the cult of Hera; youths threw spears at a shear-goat, and he who struck her got her as a prize (Farnell, Cults, i. 189), exactly as in modern Europe many animals are shot at, struck at blindfold, or otherwise gained for (Folklore, xi. 25). The custom was explained by a myth that Hera had once fled to the woods and the animal revealed her hiding-place. The goat was usually a prohibited animal in the cult of Athene, but was once slain in the course of the year (Farnell, Cults, i. 290); it has been suggested that the agnis (which see) was simply the skin of the victim. Αιγουδας is found among the titles of Zeus, and there is a myth in which the animal figures as the work of Zeus; he is called αιγουδας, just as Dionysus is termed μελανδας ('wearer of the black goat-skin'); in spite of the connexion of αιγε, etc., with the wind, the original epithet was probably connected with the goat (ib. p. 100). In the worship of Brauronian Artemis, a worshipper sacrificed a goat, 'calling it his own daughter' (ib. ii. 436)—possibly a trace of human sacrifice. In Sparta a goat was sacrificed to Artemis before charging the enemy; at Eginas torches are kindled to the horns of goats, on account of sacred invaders (cf. Liebrecht, Zur Volksk. p. 201), and in Africa 500 she-goats were a thank-offering for Marathon (Farnell, ii. 449 f.). Aphrodite is the 'rider on the goat' (ib. 684), probably because it was her sacred animal. At Delphi the goat was sacrificed at the Lupercalia, and youths clad themselves in the skins of the victims. After feasting they ran round the base of the Palatine, striking with thongs of goatskin the women whom they encountered, or who offered themselves to their blows (Fowler, Rom. Fest. p. 311). The Flamen Diaulis was forbidden to touch a goat, and it was excluded from the cult of Jupiter (ib. p. 245). For the Flamen Diaulis see also Paus. Wissowa, Α 'Abergeld, p. 2.

Dionysus was believed to assume the form of a goat (Golden Bough, ii. 165), probably as a divinity of vegetation, and as a minor divinity, Silenus, the Satyrs, Fauns, etc., either are in goat form or have some part of their body taken from the goat, and they are all more or less woodland deities. In similar fashion, the devil is commonly believed, in Europe, to have the lower part of a goat's hoof; and throughout mediaval demonology the goat is associated with Satan and with witches; while at the Sabbat the Evil One frequently was believed to assume the form of a goat. In Northern Europe, the wood-spirits Lesh[i are believed to have the horns, ears, and legs of goats, and the goat is a form in which the casquespirit is supposed to appear (Golden Bough, ii. 271, 291). In the 17th cent. the goat is seen on the Lamb's day, a date on which the lamb is also offered in some parts. After proving the victim to be worthy, they drew its skin over its ears and hanged it up as a token that the gods had consumed it, and blessed it; the goat is a sacred animal on the Massa River the goat is kept as a tuletry. It is sometimes regarded as the resting-place of the souls of the dead (Int. Arch. xvii. 104). The goat of San Salvador was believed to have deposited its soul in a goat during its lifetime (Golden Bough, iii. 407; Bastian, Felsich, p. 12), and possibly this belief explains the position of the 'goat of the mouth' of the Bushmen seen near Old Calabar (Ans. West-Africa, i. 106).

The name of the goat is tabu in the Sunda Islands (Golden Bough, i. 462). The animal itself is similarly secluded round in South Africa (Galton, Travels, p. 84), Madagascar (v. Ganne, Tabou, p. 238), and in West Africa (Int. Arch., loc. cit.). The goat is tabu to some of the Bechuanas (Mackenzie, Daylausen, p. 65 n.1) ('Bushmen' in the text should be corrected to 'Bechuanas'), who believe that to look upon it would render them impure, as well as cause them undefined uneasiness; it does not, however, appear to be a totem. If a goat climbs on the roof of a house, it is spared at once, because it would bring death. It is also held in abhorrence and persecuted to death (Mackenzie, Ten Years, p. 392). The antipathy, therefore, depends on its association with wizards. The goat is an important sacrificial animal, especially in Africa (Int. Arch., xxv. 126). In Athens it was excluded from the Acropolis, but once a year it was driven in for a sacrifice (Golden Bough, ii. 314). Frazer conjectures that the goat was originally a representative of Athene.

From the Jewish custom of sending a offered a goat into the wilderness laden with the sins of the people (see 'Scapegoat,' above, and art. AZazel), has been derived the name for the whole class of animal beings so employed in the expiation of evil (Golden Bough, iii. 101 f.). The goat itself is the animal employed by the Lahos (Vial, Les Lohos, p. 12) in West Africa (Bardro, Njsar, p. 182) and in Uganda (Ashe, Two Kings, p. 320). In Tibet a human scapegoat is dressed in a goat's skin; he is kicked and cuffed, and sent away after the people have confessed their sins (South Am. Miss. Mag. xiv. 112).

The Karens of Burma attribute eclipses to the fact that wild goats are eating the luminary; they make a noise to drive them away (Miss. Cath. 1877, 453).

In Europe the goat appears in processions and
ANIMALS

other functions at Christmas, the Carnival, etc. (Mannhardt, Antike Wahl- u. Volksk., 1814 f., 187), as Braheus thought from the church in September (Mannhardt, Myth. Forsch. 163 n.), but this apparent association with the harvest may be late; for in Wendish parts the date was July 25th (Kosche, Character, iv. 44). A goat dance is performed at weddings, probably as a fertility charm (Mannhardt, Myth. Forsch. 198). For the same reason, perhaps, the goat is given to the parents of the bride in Bulgaria, where, as in the Magyars, it forms a recognized dish at the wedding (Anthrop. ii. 587; Schönwarter, Aus der Oberger- pfalz, i. 98; cf. 342). Among the Matabele of South Africa the husband gives the bridesmaids a goat to eat (JAF xxii. 84). In the Voges the younger sister who marries first must give her elder sister a white goat (Médusine, i. 454).

The 'goat' is one of the names by which the 'blind man' in Blind Man's Buff is known (Folktale, xii. 261). For myths and folk-tales of the goose see de Gubernatis, Zool. Myth. i. 401-428.

Goose.—The goose was one of the animals which were tabu to the Britons (Cesar, de Bello Gall. v. xii.). The Norsemen also refused to eat it (Life of Life of Bede, p. 238). It was in Great Britain regarded as tabu (Arch. Reviii. iii. 233). But on the other hand, it is not infrequently eaten with more or less ceremony. The Michauens goos is certainly a very old custom. The bird is hunted or killed in various parts of Europe (Folktale, xi. 253; for ceremonial eating see p. 259). In China two red geese are given to the newly married; the explanation offered is that they are faithful to each other, as human beings should be (Zool. Gr. Russ. 1906, p. 76). The goose is also a gift to the newly married at Moscow (Anthrop. iv. 324); it has perhaps in some cases taken the place of the swan (see below). The Mandans and Minnetarees made their goose medicine; the dance was to remind the wild goose, which then prepared to migrate, that they had had plenty of good food all the summer, and to entreat them to return in the spring (Boller, Indiana, p. 145). There were sacred geese in the Capitoll and in Greek temples (de Visser, Götter, p. 175). In mediaval times, the goose, like the goat (see above), was associated with witches who frequently used these birds as vehicles to carry them to the Sabbath. For myths and folk-tales of the goose, swan, and duck, see de Gubernatis, Zool. Myth. ii. 307-319.

Hare.—Although the hare is one of the most interesting in the belief and practice of the uncultured, it cannot be said that it is anywhere regarded as divine, unless it be among the Kal- nuks, who call it Slikyaminu (the Buddha), and say that on earth the hare allowed himself to be eaten by a starving man, and was in reward raised to the moon, where they profess to see him (Crooke, ii. 50). The connexion of the hare with the moon is also found in Mexico (Sahagun, vii. 2) and South America, where the Hottentots tell the story of how death came into the world, and explain it by a mistake made by the hare in taking a message from the moon (Merensky, Betracht., p. 86; Bleek, Legenden, p. 60). In North America all the Algonquin tribes had as their chief deity a Great Hare (see 'Cult' above) to whom they went at death; he lived in the east, or, according to some accounts, in the north. In his anthropo- morphic form he appears to the Nanabojon, Michabou or Messon (Brinton, Myths, p. 193). In one aspect he is a culture hero, who teaches to the Indians the medicine dance and the art of healing. In a more immaterial aspect he is the negative spirit, in the face of which man must be cautious, for he tries his magic art on various animals and fails ludicrously. In a New England Flood legend the survivors took a hare with them to the mountain on which they found refuge, and learnt of the assuaging of the waters by its non-return (Josselyn, Account, p. 134).

The name of the hare is frequently tabu (Russe- wurm, Ebisowolk., § 358; Holzmaier, Ostitkana, p. 105; FJ v. 190; Brit. Ass. Ethnogr. Survey Rep. [Tyrone], p. 56; Transylvania, FJ, Myth. cxxvii; GB 3.457). It is unlucky to kill the hare (Folktale, xii. 240) or eat its flesh (Lyde, Asian Mystery, p. 191; Dussaud, Hist. des Nosavirs, p. 93; Globus, xxxiii. 349; Austrian, liv. 58, etc.). There is a wide-congression belief that the hare is caused if a pregnant woman puts her foot in a hare's form.

Like many other animals, the hare is hunted annually at many places (Folktale, iii. 442, xii. 290; Mem. Soc. Ant. France, iv. 109; Médusine, i. 145; Oes Volksalven, viii. 42), and sometimes eaten ritually (Folktale, xi. 259). Sometimes the hare is offered to the parish priest (Ann. Soc. Ethn. Franc., 5th ser. i. 428; Folktale, xii. 442). The hare is more especially associated with Easter (Folktale, iii. 442), and is said on the Continent to lay Easter eggs (Das Kloster, vii. 928; Schweiz. Arch. Volksk. i. 115). It is one of the animals whose name is still at Christmas (Barcha- sagen, ii. 277; Kolbe, Hessische Volksk. p. 7; Curtze, Volksk. p. 441). Among the Slavs hare- catching is a similar game to Blind Man's Buff (Tetzner, p. 86). In Swabia it is said that children come from the hare's nest (Mannhardt, Germ. Mythen, p. 410). The hare is said to change its sex every year (Liebrecht, Zur Volkskunde, p. 362).

The hare is almost universally regarded as an unlucky animal; when a Kaluuk sees one, he utters a cry and strikes a blow in the air (JAI i. 401). The Hottentots kill it, though they do not eat it (Zts. Geog. Ges. Thür. vii. 42). Its appearance in a village is thought to betoken fire, both in England and Germany (MS notes; Grohmann, Abergl. 375; Am Urvuln., ii. 107; Zts. Ver. f. Volksk. x. 290). In Oseol it is sometimes of good omen (Holzmaier, p. 43). Probably the association of hares with witches is in part responsible for the hare's evil angry. In Gotland the so-called milk-hare is a bundle of rags and chips of wood; it is believed to cause cows to give bloody milk (Globus, xxiii. 47). On the other hand, hares' heads are found on the gables in the Tyrol, probably as a protection against witchcraft (Heyl, p. 156); a hare's foot is a counter charm against witchcraft (Hone, Tablebook, i. 674). Among the negroes, a most lucky charm is the left hind foot of a rabbit caught jumping over a grave in the dark of the moon by a red-haired, cross-eyed negro. It is also to be noted that the rabbit is one of the chief figures in the folk-tales of the negroes of the southern United States, where he outwits 'Brr Wolf' and all other animals (Harris, Uncle Remus, his Songs and his Sayings, Negro wit, Uncle Remus, etc.). The hare is one of the forms believed to be assumed by the corn-spirit (Golden Bough), ii. 269). For myths and folk-tales of the hare see de Gubernatis, Zool. Myth. ii. 76-82.

Hawk.—According to the Gallinolones of Cali- fornia, the hawk flew in the coyote's face in the primeval darkness; apologies ensued, and the pair together made the sun, put it in its place, and set it on fire (Bancroft, iii. 85). According to the Ycunts, the red fox and the hawk were alone in the world, which was covered with water; the two former created the mountains from the mud brought up by the latter (ib. p. 124).

The most important animals, or the cult of the hawk seems to be North Borneo (JAI xxxii. 173 f.). The Kenyahs will neither kill nor eat it. They address it, as they do anything regarded in its spiritual
aspect, by prefixing 'Balli' to its name; they always observe the movements with keen interest, and formally consult it before leaving home for distant parts. The rites are very elaborate, and, if successful, secure that the hawks which gave the omens serve as tutelary deities over the participants. After a war expedition, pieces of the flesh of slain enemies are set out as a thank-offering to Balli Flaki for his guidance and protection. The hawk's aid is sought before agricultural operations are commenced, and impalings of a hawk with its wings extended is put up before a new horse. During the formal consultation of the hawk, women may not be present; but they keep in their sleeping-places wooden images with a few hawk's feathers in them, which serve magical purposes during illness. In this tribe the hawk seems to be regarded as a messenger of the Supreme God, Balli Penyalong; but the thanks seem to be offered to the birds exclusively. The Kayans have gone some distance in anthropomorphizing the hawk, though they still retain the idea that it is the servant of the Supreme God; they appear to regard the hawk as a god representatively, and they transfer their prayer to Laki Tenangan. The hawk-god, Laki Necho, is described as living in a house at the top of a tree; but the individual hawk is still regarded as the Sacred Hawk. The Dayaks, who are the hawk-god, Singalang Barong, has become completely anthropomorphized. He is the god of war, but they say that he never leaves his house; consequently, though they take other bird omens, they do not regard the hawk as the messenger. He is the god of omens, clearly developed from a divine hawk species, and, as such, is the ruler of the other birds; a trace of his human nature is found in the belief that, though he put on the form of an Iian to attend a feast, he flew away in hawk form at the end of it, when he took off his coat. It is instructive to note that in the opinion of the Iians there are only thirty-three of each kind of omnious bird, though all are respected because of the impossibility of distinguishing ominous from non-omious individuals of the same species.

In Madagascar (v. Gennep, Toben, p. 261) various species of hawk are ominous. Some Sakalava families regard one species as sacred and bury it. In Nimeria prayers are addressed to it, and portions of the flesh of birds caught are consumed. One tribe is called by the name of a species of hawk, and the hawk is its emblem. The omens given by hawks are good or bad, according to the species.

In America the Kaititas held that when a man died his soul was carried to spirit-land by a little bird; if he had been a wickel man, the burden of his sins enabled a hawk to overtake the bird and devour it (Panzer, iii. 524).

In Europe the hawk is regarded as lucky; in Baden one kind is kept or allowed to nest on the house; its presence is thought to avert a flash of lightning; in Bohemia a kind of hawk is regarded as a luck-bringing bird (Mone, Anzeiger, viii. 430; Gröhnemann, Aberglaube, No. 459). Like the owl and the bat, it is sometimes nailed on the doors of old houses (Wagner, ii. 21). We find myths see de Geburatis, Zool. Myth. ii. 92-94.

Horse. In Greek court there was at Colonus a common altar to Poseidon Hippius and Athene Hippia (Farnell, Cults, i. 272). Artemis was also associated with the horse, too, as Aphrodite (ib. ii. 641), perhaps in her marine character. Cronus is said to have taken the form of a horse, and the Ilyrians sacrificed a horse to him (ib. i. 286). But case (two) the case does the connexion of the animal with the deity justify the supposition that we have to do with a horse-cult which has undergone development, except perhaps in the case of Poseidon. There are, however, other deities intimately associated with the horse, in a manner which makes it legitimate to suppose that they have undergone anthropomorphization or taken up earlier connexion with the horse. Phigalia, Demeter, according to popular tradition, was represented with the head and mane of a horse, probably as a legacy from an older theriomorphic non-specialized corn-spirit (Golden Bough, i. 368). In Avesta her devotees were called

ANIMALS

At Whitsun-tide it was the custom to hold a horse race (Mannhardt, Antike Wald- und Feldsiture, pass.), to which we find a Roman parallel in the October race; they may probably be brought into connexion with the cult of vegetation.

The hyena is a fascinating animal (Teutonia, ii. 115), and in modern folk lore omens are drawn in particular from the white horse. It is frequently regarded as being ill omen (RHR xxxvii. 298; Grohmann, Aberg. Nos. 336-337) or a portent of death by some, but at the same time in Bohemia the white horse brings good fortune to the house where it is stabled (ib.); and in northern India it is a lucky omen for a horse and his rider to encounter a field of sugar-cane while they are being served (Crooke, ii. 297). The horse, like the bull, is a fertility animal (ib.). If a boy is put on a horse immediately after his birth, Meecklenburgers think that he will the power of curing various maladies from which horses suffer (Plass, Kind2, i. 74). Some part of the magical importance of the horse-shoe is perhaps derived from the horse itself. In Wales and Ireland are found stories of the Midas type (G. Dows, t. 294).

Hyena.—One of the chief centres of the hyena-cult is the Wanika tribe of East Africa. One of the highest ranks of their secret society is that of the Fisi or hyenas, so called from the power of the hyena to impart a supernatural power to the oaths he places on the hyena, which, before the practice of burial was introduced, devoured the bodies of the dead. It is held that a false oath by the hyena will cause the death of the perjuror. The Fisi also protect the kill from thieves by consecrating it to the hyena, which they do by making certain marks near the boundaries (Report on E. African Protectorate, 1897, p. 10 f.). The Wanikas look upon the hyena as one of their ancestors, or as in some way connected with their origin and destiny. The death of one is an occasion of universal mourning, and a wake is held over it by the whole people, not by one clan only. It is a great crime to kill one, and even imitative of its voice entails punishment of a fine (New, Life Wanderings, p. 188). Hyenas are taboo in Acrea (Int. Arch, p. 101), and the Ewe tribes hold that they are inhabited by a god or spirit. The Mandingo expose their dead to be eaten by hyenas; and if a corpse has to wait more than a day for burial, it is a token of ill-luck, to be counteracted by the sacrifice of cattle (Baumann, Massaibben, p. 163). South African Bantus likewise expose their dead to be eaten by hyenas (Curtis of Cape Colony, p. 149), who never kill them. The hyena is a common form of the wizard (Int. Arch., loc. cit.), and there are various stories told of the tudus in Abyssinia and others having transformed themselves in the sight of other people (Taylor, Prim. Culture4, i. 310); gold rings are said to be found in the ears of dead hyenas similar to those worn by the budos, who are workers in clay and iron. Among the Matabele, wizards are said to go to fresh graves and dig up corpses, to which they give medicine and transform them into hyenas (Thomas, Eleven Years, p. 293), which they then employ as their messengers, or upon which they sometimes rest themselves. When the voice of the hyena is heard, the hearer must remain perfectly still. If a hyena is wounded at night and escapes to another kraal, the place is thought to be the residence of a wizard. These are the thoughts of the night; and if a man discovers a dead one, he runs away and remains perfectly silent about it. A wizard or diviner, when his training is over, has to put on the skin of a hyena, as a sign that the Amasimba have endowed him with the necessary powers (ib.). In ancient Arabia it was believed that, if a hyena trod on a man's shadow, it deprived him of the power of speech and motion; and that, if a dog, standing on a roof in the moonlight, cast a shadow on the ground and a hyena trod on it, the dog would be dragged from the roof as if a rope had been made fast to it (Golden Bough3, i. 287). In Talmudic belief (Bab. Zammam, 16a), the male hyena goes through the stagy of a 'spirit', or nyx, and is later devoured by the hyena itself, in fire and earth.

Leopard.—The cult of the leopard is widely distributed in West Africa. In Dahomey it is especially sacred to the royal family; it is also an Ewe totem. The leopard is liable to be put to death; but usually he pays a fine and performs propitiatory ceremonies. No leopard skin may be exposed to view, but studded leopards are objects of worship. Some of the king's wives in Dahomey were known as kpo-i ('leopard-wives'). A man wounded by a leopard was regarded as specially fortunate (Ellis, Ewe-speaking Peoples, p. 74; Labarthe, Beis, p. 153).

The Bakwiris regard the leopard as possessed by evil spirits (Beitr. zur Kolonialpol., iii. 194). On the Gold Coast it is regarded as the abode of the spirits of the dead (Müller, Festu, p. 97), or of evil spirits (Mitt. Geog. Ges. Thür. 19, 18), which may endanger the lives of the hunter and cause him to be struck by a man in mistake for an animal. The hunter, when successful, announces his triumph to those who have killed a leopard previously; then a blade of grass is laid on the head, and it is said that he may not speak; his comrades tell the leopard why it was killed—because it had killed sheep; a drum gives the signal for an assembly; and the leopard is fastened to a post, its face to the sky, and carried round the town, its slayer behind it on the shoulders of another man; on their return the leopard is fastened to a tree, and the hunter is besmeared with coloured earth, so as to look like a devil. The witch doctor imitates a leopard's movements and voice; for nine days after the death of the leopard they have the right to kill all the hens they can catch. In the afternoon the body is cut up, and portions are sent to the chief of the village and others; the hunter retains the teeth, head, and claws (ib.). In Agome the hunter observes the same ritual interdictions as at the death of his wife (Mitt. d. Schutzg., v. 156). Among the Fijords the king has a right to the body of the leopard; people loot each other's towns when one is killed; and the killer has the right to appropriate any article outside a house when he is on his way to take a leopard to the king (Dennett, Seven Years in the Congo, p. 19). In Dahomey it was held to be unlucky to see the body of a leopard; those who kill a leopard, which is regarded as a prince, is tried, and must excuse himself by saying the leopard was a stranger; a prince's cap is put on the leopard's head, and a sacrifice is held in its honour. In olden times the capture of a leopard was one of the few occasions on which the king could leave his cibilia (Bastian, Lommo-Kiiste, p. 245 f.; Int. Arch. xvii. 98). When a leopard is killed in Okuyan, its body is treated with great respect and brought to the hunter's village. Representatives of neighbouring villages attend, and the gall-bladder is burnt coram populo; each person takes a piece of the leopard's skin with a sherd of its tusks (Kingsley, Travels, p. 543). In Jebel Nuba a hunter, on killing his first leopard, may not wash himself for several weeks; the skin belongs to the chief; the hunter's taun is broken when he cuts off his own tusks. The cave of a leopard is sacred to him alone and it is taboo to wear a piece of meat and receive from him his shoes and the animal's skin (Miss. Cath. 1882, 461). In South Africa a man who has killed a leopard remains in his hut for several days; he practises continence and is fed to satiety (Kolbe, Pres. State, i. 222).

The leopard society is common in West Africa. Members wear leopard skins when they seize their victims for sacrifice (Kingsley, Travels, p. 537).
Among the Yaos, leopards are among the animals whose figures are drawn on the ground at the initiation of girls (Macdonald, *Africana*, i. 131.).

The leopard is one of the forms assumed by wizards in West Africa (Wilson, *West Africa*, p. 308), among the Mpong and the Dahomey (Elmslie, *Mit Fortn. Pachten*, p. 80), and the Bari (Int. Arch. xvii. 99). The Nubas believe that the spirit of a panther passes into the kudjuf (‘priest’) when he gives an oracle; he sits upon a stool covered with skins and beats his heart a great deal, in order that they might become strong and courageous (Golden Bough*, ii. 354). The gall of a leopard is regarded as a poison, and in West Africa it is said that the magicians (Kingsley, *op. cit.* p. 549).

**Lion.** — In Egyptian mythology the tunnel through which the sun passed was supposed to have a lion at each end; statues of lions were placed at the doors of palaces and tombs to ward off evil spirits. There was a lion-god at Bubastis, and songs were sung when it devoured a calf. It was associated with Ra and Horus, and possibly the Sphinx with its human head and the lion’s body was intended as an abode for Ra (Budge, *Gods, i. 399; Damascius, *Vit. Isid. p. 233*). There was a lion-headed goddess Sekhmet, and the Arabs had a lion-god Yaghuth (*Elly* iii. 2804). In modern Africa we find a lion-ideal among the Bushmen: it is made of grass covered with clay, and resembles a crocodile more than anything else; it is placed in the forest, and, in cases of sickness, prayers are offered and drums beaten before it (Livingstone, *South Africa*, pp. 282, 304).

In comparison with its traditional position as king of the beasts, the lion occupies, however, an unduly secondary place in the savage belief and custom. It is regarded as the abode of the souls of the dead on the Congo and the Zambezi, as well as among the Wambugu, Kikuyu, and Masai (Bastian, *Longo-Kuste*, ii. 244; Livingstone, *Zambesi*, p. 159; Baumann, *Masai*, p. 187; Brown, *On the S. African Frontier*, p. 217; cf. Speke, *Journ.*, pp. 221, 222). As a rule, it is the chief who is thus transformed; but among the Angous there is a universal desire to be transformed into a lion after death (*ZE* xxxii. 190). The name-tube is not by any means uncommon; the Arabs call the lion *Abu-l-Abba*. The negroes of Angola call it *ngamal* (‘sir’); both Bushmen and Bechuanas avoid using its proper name (Golden Bough*, ii. 456*); the Hottentots avoid using it on a hunting expedition, and call it *geb gab* (‘great brother’). In South Africa the same ceremonies are gone through by the slayers of a zebra as of a leopard or a monkey (see below). Another account says that the hunter is secluded for four days, purified, brought back, and feasted (Lichtenstein, *Ver. der lste*. p. 291). It is told in the *Filahi* that the body of a lioness is made prisoner, and women come out to meet the party; the lioness is carried on a bier covered with white cloth. The hunter must be released by the chiefs of the village when he pleads, in reply to the charge that he has killed a sovereign, that it was an enemy (Gray and Dochard, *Travels*, p. 143). The lion is one of the animals whose shape is said to be assumed by the Zulus during the initiation ceremony (Leppla, *Petermanns Mit.* 1874, 188) and on the Zambezi (Livingstone, *Zambesi*, p. 159), where a certain drink is said to have the power of transforming them; among the *Tunu*, however, nothing is done. Some women wander about shrouded with white clay, and are held to have the power of assuming the shape of lions (*Elmslie, Among the Wild Nyong*, p. 74); the Bushmen say that the lion can change itself into a man (Lloyd, *Short Account*, p. 29). In Greek cult a lioness was led in a procession at Syraccse in honour of Artemis (Farnell, *Cults*, ii. 432). The lion is used in magic to give courage (Golden Bough*, ii. 354, 356; *JAI* xix. 282). It figures in Masai fables, where it is outwitted by the mongoose (*Hollis, Masai*, p. 198), and among the Bushmen (*Lloyd, loc. cit.*). In Hottentot stories it is outwitted by the jackal (*Bleek, Reymard*, p. 281, p. 20). In New Zealand, Nia is stronger than its own mother, and is killed by a man (ib. p. 67). In like manner, in an Indian story, first found in the *Paiichanta* (i. s.; cf. Bentley, *Pandanti*, p. 415, i. 176). The lizard is said to have magical properties (*Kingsley, op. cit.* p. 548).

**Lizard.** — Often provided with the magical attributes and power to expel evil spirits. A native keeps a dried iguana on the back of a woman as a protection to her health. Another lizard is kept by a man who has lost his memory. The iguana he wears on his back to remember what he is doing. The trader is called to gather the leaves of a certain plant, and to take the lizard. He is allowed to take the leaves, but not the lizard. If the lizard is lost, the trader must make another trip at once, and procure another lizard for the man. If the trader is late, he is punished. The belief is that if the lizard is not brought in time, the man will be unable to bear the fear of his neighbors. If the lizard is not brought in time, the man will die. It is said that a green lizard is put on women's heads to cure them of certain diseases. Rhinoceros lizards are said to be able to fly. The lizard is used in magic to give courage (Golden Bough*, ii. 288, 304; *JAI* xix. 282). It figures in Masai fables, where it is outwitted by the mongoose (*Hollis, Masai*, p. 198), and among the Bushmen (*Lloyd, loc. cit.*). In Hottentot stories it is outwitted by the jackal (*Bleek, Reymard*, p. 281, p. 20). In New Zealand, Nia is stronger than its own mother, and is killed by a man (ib. p. 67). In like manner, in an Indian story, first found in the *Paiichanta* (i. s.; cf. Bentley, *Pandanti*, p. 415, i. 176). The lizard is said to have magical properties (*Kingsley, op. cit.* p. 548).
ANIMALS

is said to have abolished the worship of the lizard-god (Globus, x. 285, xii. 296). An old writer describes a custom of bringing food to a lizard-god; it seems to have been the sacred animal of a secret society (Pruneau de Pommegorge in Cuhn's Samm-
tungen xli. 101). In the Philippines, the tribal god of the Shillukus is said to appear in the form of a lizard (Ratzel, ii. 43). In Polynesia respect for the lizard was wide-spread. In New Zealand, according to one account (but cf. Shortland, p. 80), it is regarded as an unlucky omen, though the green lizard, or the heaven-god; a green lizard was more especially associated with him, perhaps from its habit of coming out and basking in the sun (Dielchenbach, Travels, ii. 116; Wilken, loc. cit.); so too, in Samoa (Globus, lxxiv. 256 ff.). In the Hervey Islands, Tongauti or Mataran (the night-heaven) was likewise identified with a spotted lizard, which comes out at night (Gill, Myths, p. 10). In Samoa not only family gods but general deities assumed lizard form, among them Le Sa, Fil, and Samaui (Turner, Samoa, pp. 44, 46, 72). An idol in lizard form, or rather a house-god, is reported from Easter Island. In the Moluccas (Folklore, 1904, No. 46), Moko, the king of the lizards, is recognized all over Polynesia (Gill, Myths, p. 229). In Micronesia lizard-worship was found in the shape of a cult of the dead. Lizards were kept in special enclosures, and offerings for the living or the dead were held to pass into their keepers or priests, to whom offerings were made from all parts of the island (Herschel, Südseeerin. p. 22). In New Caledonia, a Melan-
esean area with Polynesian immigrants, the Emard was one of the animals respected and termed 'father,' probably as the abode of the soul of a dead man. Lizards were also worshipped or re-
spected in Sumatra, Borneo, the Mentawai Islands, Balinese (see Wilken, loc. cit.). The lizard is commonly respected in Europe (Folklore, xi. 240). In Central Celebes it is killed to prevent ill-luck (Bijd. T. L. V. i. 88), probably as the familiar of a wizard; but this attitude is uncommon, although the Zorostrian con-
nection may prove to be real (see below). One lizard species surviving in Armenia (Abeghian, Armenischer Volksglaube, p. 31) We find the lizard in S.E. Australia as the familiar of a wizard (JAF xvi. 84); and the Maoris, though some lizards were respected, are recorded to have killed them as 'witch-animals' (Aust. Ass. Adv. Sci. Reports, vii. 774), or as the cause of sickness (Taylor, Te Ike i Meiti, pp. 400 ff., etc. cf. JAF xix. 129). As a messenger of the gods, or of the dead (Gill, Myths, p. 229; Deutsche Geogr. Bl. x. 280), the lizard is ominous, also as the familiar of the wizard. The lizard is especially ominous in India (Pandian, Indian Village Bel., p. 190; Sinu, Journals, 1824, 421 ff.). The Musuhers sacrifice a lizard (Culcutta Rev. Ixxviii. 290). The lizard is fre-
quently employed in magic, sometimes as a love-
hag (Sax, 1917 'romantic Marm' (Jones and Kropf, Folktales, xlix.), or for luck (Rolland, Faune, ii. 12). A lizard buried alive under a threshold is a protection against sorcerers (Mel-
sine, vii. 22; Müllenhof, Sagen, i. 212), but else-
where it is used to promote the transformation of the (Roeholz, Deutscher Glaube, ii. 167). In Madag-
scar the lizard is buried to cure fever (v. Gennep, Tabou, p. 271). In Tripoli the sight of a lizard is held to cause women to bear speckled children (Globus, xxxiv. 27). Connected doubtless with its magical qualities is the wide-spread use of the lizard as an art motif (Publ. Kgl. Mus. Dresden, xiv. 14; Bastian Festschrift, p. 167). In classical antiquity the lizard was used in medicine (Pauly-Wissowa, s. v. 'Abderabs', and the eggs or young round the village (Lloyd, Peasant Life, p. 237). A magpie's nest betokens ill-luck (Jahrbiicher f. Schleswig-H. viii. 92), but the omens drawn from it usually vary according to the number of birds (Napier, Folklore, p. 113; Gregor, ib. p. 137). In Norse belief the form of the mag-
pie is assumed by witches (Meyer, Germ. Myth. p. 112). For magpie omens see Liebricht, Zur Volkst., p. 327; Jahrb. f. Broman. Lit. N.S. i. 292; Socin, Die neuerw. Dial. p. 175; Wigstrom, Sagar, p. 114; Rolland, Faune, ii. 137, etc. The magpie is supposed to show the presence of foxes or wolves, and sometimes even to fasten a bunch of heath and laurel to the top of a high tree in honour of the magpie (Mem. Soc. Antiq. viii. 451). For myths and folk-tales of the magpie see de Gubernatis, ii. 258-260.

Mantises. In Indian and Egyptian bushman myth-
ology is Ikkenan or Cagn (Bleck, Brief Account, p. 6; Cape Monthly Mag. 1874, July, pp. 1-18; Lloyd, Short Account, p. 5, etc.). Some doubt was thrown by Fritsch (Ethnologen, p. 349) on the worship of the mantis by the Bushmen, and no very satisfactory evidence could be quoted with regard to them (Int. Arch. xvii. 131) until the publication of Mr. Stow's collection (Native Races of South Africa, i. 191). As in some cases clearly abundantly that Cagn was sometimes con-
ceived under the form of the mantis, sometimes under the form of the caterpillar, nga (see 'Cult' above). It seems clear that the Hottentots re-
verted to the insect as suspicious (Memreisen, Bel-
vrige, p. 50), and worshipped it on that account; the whites called it the 'Hottentots' god;' they abate from injuring it (Schinz, Deutsch S.W. Afrika, p. 101). Among the Tambukas, certain insects, among which is the mantis, are supposed to give residence to ancestral souls (Elmslie, Wild Sgones, p. 71). In the Bismarck Archipelago there are two exogamous phratries, one of which is named after the mantis. The slight belief surviving in Africa and South America that monkeys can talk, but do not so do for fear of being made to work. Another group of stories tells how the great apes carry off women to the woods; while the belief in tailed men has been held by Europeans as well as savages (cf. MacCulloch, p. 277).

The chief home of the cult of monkeys is India, with its monkey-god, Hanuman. A lot of village	villages has the monkey as the key of life from harm, and its magic influence is implored against the whirlwind, while it is also invoked to avert sterility. The bones of a monkey are held to pollute the ground (cf. Cohn and Gourde). More recently, a monkey brings starvation for the rest of the day, but it is regarded as lucky to keep one in the stable (ib. ii. 49). As at the famous monkey-temple at Benares, monkeys are said to be worshipped in...
Togo, Africa, where the inhabitants of a village daily put meals for their benefit. The Kanamans and Baceans of Nigeria (see Haidas, B. J., vii. 122, 1893.) At Porto Novo, where twins are not killed, they are believed to have as tutelary spirits a kind which animate small monkeys; such children may not eat monkey meat (Miss. Cath. 1894, 249). Among the Hottentots the name of the monkey is talon to the hunter (Zeis. Geog. Ges. Thir. vi. 41). The Nkomia do not eat gorilla meat, and give three reasons: first, that their fathers did not; second, that the Nkomia do not drink the blood of the dead (Miss. Cath. 1894, 691). There is an ape tabu among the Batuts (Tijdschr. T. L. v. xxxi. 299). Among the Maxuramas a young mother may not eat ape meat (Spix, iii. 118). This tabu is extended to all women on the island of Nins (Tijdschr. xxxvi. 282). In many cases the respect for the monkey is based on the belief that it is the abode of a human soul (Int. Arch. cxxii. 93; Home and For. Miss. Rec. 1890, 302; v. Geune, Tabou, p. 221); sometimes it is believed that a man who kills a monkey is turned into one after death (Hutchinson, Impressions, p. 163); the sacerdotium iscurrentColored with eating the flesh of monkeys (Bastian, Bilder, pp. 145, 160). In Madagascar the babakoto is bought out of captivity, and in some parts the natives will not kill it or trap it (v. Geune, Tabou, p. 214); the Betsimisaraka bury dead monkeys, and call the babakoto their grandfather, holding it to be the abode of the souls of the dead (ib. p. 216). In some cases an etiological myth is told to account for the respect shown by the Madagascan to the babakoto. Among the Batsaks the monkey is a toten (Casalis, The Batsutu, p. 21; Arbonsset and Dannahs, p. 92; Folklore, xvi. 112). Among the Hottentots the killer of a baboon has to sit on a sheep or goat and hang the lowest vertebra round his neck, or he will suffer from hunger (Zeis. Geog. Ges. Thir. vi. 42). The Tucunas of Brazil wear a monkey mask in some of their ceremonies (Spix and Martinis, iii. 1188). In China a monkey is regarded as lucky in a stable—to keep away sickness (Zool. Garten, 1898, 23). In Java a magical ceremony which includes an offering to the king of the monkeys is performed to cure sterility (Verh. Bot. Gen. xxxix, 48). For myths, etc., of the monkey see de Gubernatis, Zool. Myth. ii. 97-110.

Mouse.—The mouse was especially associated with Apollo-Smintheus; in his temple at Hamaxitus near Pergamum, and at other places, mice were actually kept in the temple (de Visser, Götter, pp. 158, 178, 181). Various stories were told to account for this association of the animal with the god, none of which is necessarily true. It does not seem necessary to regard Apollo as an anthropomorphized mouse, any more than Dionysus as a transformed fox, because he was known as Bassetines. (For a discussion of the question, and of myths of mice gnawing bowstrings, etc., see CI. vi. 413, etc.; Grohmann, Apollo Smintheus). The Dakota explanation of the manner in which the mouse is eaten by the Chipewyans is that the mouse attributed a flood to the mouse having taken some of the bag in which the heat was stored, in order to mend his shoes, thus causing the snow to melt (Petitot, Traditions, p. 370). According to a Hucal myth, the mouse gnawed a hole in Noah's ark, and is unclean (Kaindl, ix. 95). According to the Bantu, when a mole or mouse is caught, a man; in every one's stomach are numbers of mice, the souls of his deceased relatives (JAF. xxii. 21). In Germanic belief, in like fashion, the soul assumes the shape of a mouse, and once the soul may come forth from a sleeper's mouth (Meyer, German. Myth. p. 64). In Celebes the tawuana soul is believed to turn into a mouse and eat the rice; the soul of a suicide is especially dangerous; if he were to eat the rice they do not drink (Ned. Zend. iii. 221, 243). The name of the mouse is tabu in parts of Europe (Golden Bough, i. 455). The Hucals hold that it is unlucky for a girl to kill a mouse (Kaindl, p. 73); and in India it is a sin to kill rats, which, if troublesome, must be induced to cease molestations by promise of sweetmeats (Campbell, Spirit Base of Belief and Custom, p. 267). In Bohemia a white mouse should not be killed (Kochholz, di. ii. 424); sometimes the same result is aimed at by catching a mouse and burning it (Med. Ned. Zend. xxvi. 249). Elsewhere one or two mice are caught and worshipped, while the others are burnt; or four pairs of mice are married and set adrift, in the idea that this will cause the other mice to go away (Golden Bough, ii. 425). In England, shrews must be thrust alive into a tree trunk, to prevent a harvest of them from partaking of the keep or ravaging the lands (Hone, Tablebook, i. 465). The belief that a shrew dies when it reaches a path is found among the Eskimos (17th Ann. Rep. Bur. Ethn. p. 275), and in Greece (Pauly-Wissowa, s. e. 'Abergaiba,') (p. 80). The 'blind mouse' is a common name for 'Blind Man's Buff.' A mouse mask is used in an Austrian ceremony (Folklore, xi. 261, 263). Mice are an omen of death; they leave the house at the death of the master (Aichholz, D. Glaube, i. 173, i. 157). Near Flensburg a white mouse is a death omen; in Wenden districts it is a good omen (MS notes). (For a discussion of the Mouse Tower of Bingen and similar stories, see Liebrecht, Zur Volksbrude, p. 11.) Mice figure largely in the mythology of the Kamtchats, and are represented as playing many tricks on the stupid deity Kutka (Steller, Kamtech. p. 255). The mouse is an evil animal in Zululand, and among the Tungus; the rat is kept clean and the mouse is equal in merit to slaying four lions (Soul dur, xii. 9; cf. Milarch, de Tweedie et Odice). In Jewish folk-belief eating anything gnawed by a mouse causes loss of memory; where cats, which eat mice, do not remember their masters (Horowitz, 130). For mouse myths and folk-tales see de Gubernatis, Zool. Myth. ii. 55-72.

Owl.—Although the owl is a common in many parts of the world, it does not seem to figure largely in mythology. The Kalmaras have a saga as to the owl's having saved the life of Jingis Khan, resembling the story of Bruce's escape. From that time they are said to wear a piece of cheese on their heads, and reverence the white owl. Whenever they celebrate any great festival, according to another account, they wear coloured owls' feathers. The Wogoli are said to have had a wooden owl to which they fastened the legs of a central one (Strahlenberg, Hist. Geog. Desc. p. 431). The owl was respected in Lithuania (Globus, lxiii. 66) and Mecklenburg (Folklore, xi. 124), and is not killed by the Maoris of the British Gaians, as being the familiar of the evil spirit (Waterton, Wanderings, p. 223). Some of the S.E. Bantu does not even touch it, probably on account of its association with sorcerers (Fleming, Southern Africa, p. 260).
Among the Bechaamas it is regarded as a great calamity if an owl rests on a house, and the witch-doctor is sent for at once; he scrambles up to the place to drive away the peacock (Jal) and calls him by his charms (Mackenzie, Ten Years, p. 392). In the same way the appearance of an owl in the Capitol demanded that the place should be purified with water and sulphur (Hopf, Orawattke, p. 101). According to the Talmud, it is unlucky to dream of an owl (JE ix. 452); while in Germanic folk-tales witches and cruel stepmothers appear in the form of this bird (Meyer, German. Myth. p. 112). The owl is particularly venerated in the island of Aimaas; its cry may not be imitated, because it can bewitch (Batchelor, p. 409); the eagle-owl is regarded as a mediator, and is worshiped on the chase; its head and beak are worn at feasts (ib. p. 413); these owls are kept in cages, like the bear, and killed (ib. p. 414); they are regarded as unlucky, and the barn-owl may not be eaten (ib. pp. 424, 428). Many American tribes associated the owl with the dead; the bridge over which the dead had to pass in the Ojibwa belief was known as the 'owl bridge' (Dorman, Prim. Sup. p. 262). In Australia, the owl is a so-called sex-totem (Golden Bough, ii. 415). The Chinese offer owl's flesh roasted in oil with garlic; they believe that the owl's properties are believed to be those of the mandrake; the object of the offering is to appease the soul of the plant (Young Poo, vi. 342). The Burats keep an owl, or hang up the skin of one, to protect children against evil spirits (Globus, ii. 222). It is one of the animals hunted in Europe (Folklore, xi. 250). Owls are frequently associated with magicians; the Zulus believe that they and send out the evil spirit of the dead man; in Yorubas the owl is the messenger of sorcerers, who gather at the foot of a tree and send owls out to kill people; if one gets into a house, the inmates try to catch it and break its claws and wings, believing that this injures the sorcerer (Miss. Cath. 1884, 349). The Ojibwas believe that within three days after the burial of a man the evil spirit comes in the form of an owl, shooting out fire from his beak, and takes out the heart of the dead man; they endeavour to drive it away before it effects its purpose (Manitoulin, p. 49). Among the Pawnees, on the other hand, the owl is the chief of the night, which possesses the power of seeking protection (24 R.E.W. ii. 21, 40). The Greek priest who was present at the crucifixion was called the owl, because he was supposed to watch for the moment of the crucifixion (Cassius Dio, 42). In India the owl is the emblem of evil (Aberglaube, 'Aberglaube, p. 76). In India owl's flesh is an aphrodisiac, and at the same time causes loss of memory. On the other hand, it is considered good luck to see an owl at night, and being in the dark, while an owl is fed with meat all night by a naked man, the latter acquires magic powers. Nevertheless the owl is a bird of ill-omen in India (Crooke, i. 579, ii. 56). For the mythology of the owl see de Gubernatis, Zool. Myth. ii. 244-250.

Peacock.—Peacock-worship has often been attributed to the Zendiz. The latest account is that given by J. W. Crowfoot (Man, 190, No. 129), who got his information from an Armenian. It appears that the Malik T'aas ('King Peacock') is shaped like a bird; it has a hole in the middle of its back with a lid to it. It is brought by the head of the village, wrapped in linen, and filled with water. The priest kisses the image and sips water through the beak, the others following his example. Five bronze images are sent round continually, and every Zendiz is expected to visit one of these each year. An equation, T'aas=Tammuz, has been proposed, which explains the rites as a survival of Tammuz worship, the peacock coming in through a folk etymology, though the Zendiz themselves hold that 'Malik Taas revealed himself in the form of a handsome youth with a peacock's tail when he appeared in a vision before Sheikh Audi, the prophet of the faith.' (Jackson, Peran, Post and Present.) Among the Ainus of Japan, the peacock is regarded as the embodiment of evil (Man, loc. cit.; JAI xx. 270). According to a Javanese (Muhammadan) myth, the peacock was guardian at the gate of Paradise and ate the devil, thus conveying him within the gate (Med. Med. Zend. xxxxi. 237 ff.). On the other hand, in Kutch the peacock may neither be caught nor annoyed (Zts. Geog. Ge. Thor. xv. 59). In Europe, peacocks' feathers are considered unlucky; the theory is that bad omen. In Greek religion the bird was associated with Hera and was kept in her temple (de Visser, Götter, p. 175). In India the peacock is the totem of the Jats and Khaniaks, and in the Parsee match-bites are headed by smudged owls and peacocks flying in a pipe. The feathers of the bird are also waved over the sick to scare disease-demons, and are tied on the ankles to cure wounds (Crooke, ii. 45, 150, 253, 256). For the mythology of the peacock see de Gubernatis, Zool. Myth. ii. 322-329.

Pig.—The pig is the most important sacrifice animal of Oceania, and is also a frequent victim in African (Int. Arch. xvii. 145). Its flesh is eaten by Muhammadans and Jews generally, to the males of S. African Bantu (JAI xix. 279), etc. It is a frequent form of the corn-spirit in Europe (Golden Bough, ii. 286; HHR, xxxviii. 330). There are good grounds for supposing that the cult of Demeter was in part developed from that of a porcelain corn-spirit (GF3, p. 299). It is possible to explain features of the myths and cult of Attis in a similar way (ib. p. 404), and the custom of maintaining the sound of Osiris (ib. p. 310). Pigs were tabu in Egypt, and swine-herds might not enter a temple; but once a year pigs were sacrificed to Osiris (ib. p. 306). The Harranians sacrificed thirty piglets from under it (Wolf, Beiträge, i. 232). Sometimes, in spite of its character as a bird of ill omen, it is regarded as bringing good fortune. If it flies into a dovecote, it brings good luck; its cry frees from fever, and its feathers bring peacefull slumber (Globus, iii. 271). Its appearance near a house where a pregnant woman is forecasts an easy delivery, among the Wends (Haupt, Volkslieder, ii. 258); or the birth of a boy, or other good fortune, in Dalmatia (Curtius, Travels, vi. 593). In Athens, as the bird of Athene, it was supposed to be as auspicious (Pauly-Wissowa, s.v. 'Aberglaube,' p. 76). In India owl's flesh is an aphrodisiac, and at the same time causes loss of memory. On the other hand, it is considered good luck to see an owl at night, and being in the dark, while an owl is fed with meat all night by a naked man, the latter acquires magic powers. Nevertheless the owl is a bird of ill-omen in India (Crooke, i. 579, ii. 56).
The pig figures as a bugbear for children, and is believed to appear at Allhallows (EHH, loc. cit.). Both in Madagascar and Polynesia the pig is tabu (v. Gennep, p. 224); Turner, Samou, pass.; Codrington, p. 149, etc. In European folklore we find the pig hunted at certain times (Folklore, xi. 252), there is a story of a pig ancestor in Wales (ib. 254), and the grunting of pigs is imitated during an eclipse of the moon (Panzer. Beitr. ii. 163). The pig is regarded as lucky in the towns of Germany, but its original augury was insipuous. In Oesel, on the other hand, it is regarded as of good omen (Holznauer, Oekkena, p. 45). In Germanic mythology the pig is associated especially with storms, and, as a fertility animal, with the harvest-time (Meyer, Germ. Myth. pp. 102 f., 250 f.). In Celebes the pig supports the earth, and causes an earthquake when he rests against a tree (Journ. Ind. Arch. ii. 337). The pig is sacrificed in India to propitiate the cholera-goddess and other disease-demons, as well as to certain sainted dead, and to ghosts to prevent them from molesting the living (ib. p. 146, etc.). The souls of the blessed dead are sometimes kept in houses for magical purposes (Lütolf, Sagen, p. 357), but are elsewhere considered unlucky (Rev. des Trad. pop. v. 601; Wiss. Mitt. aus Bonn, vii. 349). In Albania a spring is said to be blessed annually by the sight of two doves (Holthouse. Journey, p. 390). At Florence a pigeon of combustible materials is run along a line in the Cathedral at Easter (Folklore, xvi. 182; cf. Trede, Heidenthum, iii. 211; de Gubernatis, Zool. Myth. p. 571; Düringsfeld, Cat. Belge, p. 531). In Swabia it is carried in procession (Panzer, Beitrag, ii. 90). In Hohenzollern-Hochingen a nest with a living pigeon in it is put on a post at Carnival; a mock contest takes place, and the bird is finally carried off amid the lamentations of the people that the ‘summer bird’ is stolen; the thief is caught and thrown into the water, and the bird is solemnly set at liberty (Mannhardt, Myth. Forsch. p. 134). Among the Crettans of Crete doves are brought to the bride and bridegroom on the second or third day after the wedding; they oil them and smooth their feathers (Bombay Gaz. ix. i. 62). Pigeons are also given or eaten in European marriage customs (Bammgarten, Die komischen Mythen, p. 312; Anthropologie, ii. 429, n. 1; Schönw. Werth. der Oberrheinf. i. 123; Vangoeis, Hist. de l'Asie, p. 583, n. 110). The pigeon is of good omen in Korsika (Am Urquell, i. 129), and in Russia (Ernan, Archiv, p. 628), but forebodes fire in Styria (Zentral. Volksk. iii. 12), and very frequently a death (Kehr, Volksgr. p. 269; Gregor, Folklore, p. 355). The doves of the blessed dead are sometimes held to take the form of doves (Meyer, Germ. Myth. p. 63; cf. the use of the dove in modern funeral-pieces).

In Greece the dove was associated with the cult of Aphrodite, and doves were kept in her temples (de Visscr. p. 173). Similarly pigeons are attached to the shrines of Sakti Sarwar in the Panjâb (Crooke, i. 209) and of Shakir Padshah in Khotan (Stein, G-land-baren des Erines von Khotan, pp. 170-189). For the mythology of the dove and pigeon see de Gubernatis, Zool. Myth. ii. 297-306. There is no proof that the priestesses of Zeus at Dodona were ever called ‘doves’ in this historic period; nor were dove-orkles-oracles known. Possibly Sophocles refers to some vague tradition when he speaks of the two doves through which the oak spoke to Heracles (Farnell, Cults, i. 38 n., 39 n.).

Quail.—The quail is one of the birds in Germany which is unlucky to kill (Wuttke, D. Abergl. p. 168; Schröder, p. 259). In Italy the dovecote is held to protect the house against lightning (ib.). It is also tabu in Madagascar (v. Gennep, Tabou, p. 267). In Hungary it is an accursed bird (Jones and St John, Panzer. Beitr. ii. 163). The form assigned to the corn-spirit in Silesia (Peter, Volkstum. ii. 268), and is eaten by a newly married couple in Lithuania (Russ. Rev. xi. 268). In France the hearts of two quails are held to ensure the happiness of a married couple, if the husband carries that of the male, the wife that of the female (Rolland, Faune, ii. 343). Among the Greeks the quail was used in a game in which the players struck at it blindfold, exactly as the cock and other birds and mammals are used in Europe at the present day (Pollux, Onomastikon, ix. 168). The quail was sacrificed by the Phenicians at its return in the spring, and they explained the festival as the commemoration of the descent of Heracles (Athene. ix. 47); possibly the first quail was killed—a practice to which there are many European analogues. In Greek mythology Artemis is said to have been vanquished with the quail (Farnell, Cults, i. 423; she was called Ortygia, which is also a place name). For the quail in mythology see de Gubernatis, Zool. Myth. ii. 276-279.

Seal.—Among the Eskimos, women stop work when a seal is taken, until it is cut up; when a ground seal is killed, they stop work for three days (5th Ann. Rep. Bar. Ethn. p. 565). The heads of sea and other marine animals are kept (5th Ann. Rep. p. 434). In Kamtchatka they do a piece of mimetic magic before they go seal fishing. A large stone is rolled into the court to represent the sea; small stones do duty for the waves, and little packets of herbs for the seals. A kind of boat of birch bark is made and drawn along the sand; the object of the ceremony is to invite the seals to let themselves be taken (Sébillot, Folklore, p. 125).

In the west of Ireland and the islands north of Scotland there are certain people who believe themselves to be descended from seals, and who refuse to injure them (Folklore, xi. 252; Orkney and Shetland Folklore, pp. 170-189). The same belief is found in the Azores, pigeons are considered to be descended from Pharaoh’s army, which was lost in the Red Sea (Annanalde, Foros, p. 25). In the island of Piguro it is believed that the species is descended from drowned human beings (Folklore, xii. 235). Among the Kwakins the chief group of dancers’ societies is that of the seal (Report of United States National Museum, 1885, p. 419).

Serpent.—(For serpent-worship proper see separate article). The serpent is respected among many peoples who do not worship it in the sense of offering prayer or sacrifice to it. This is illustrated in the case in South Africa and Madagascar. The Malagasy regard serpents as objects of pity rather than of veneration (v. Gennep, Tabou, p. 273), holding them to be the abode of dead men’s souls. But the Antimierus had a serpent idol, whose worshippers carried serpents (ib. p. 275); in the case of the Betsileo it is difficult to say whether we have to do with serpent-worship or not; they regard the fanarin as the re-incarnation of a deceased ancestor, make it offerings of blood, and even tend it in an enclosure (ib. p. 277). If these attentions are offered it without arriers pennte and solely because it is one of the kin, we are hardly entitled to call it worship. The cult of the snake implies that an offering is not strictly disinterested.
ANIMALS

Among the Zulus the souls of the dead are said to take up their abode in serpents, termed ithlozi (pl. amathlazi). Various forms of the belief are recorded; according to one, the serpent form is assumed only by an ancestor who wishes to approach a kraal; another version, but slightly different, says that only the serpents which frequent the neighborhood of a kraal are amathlazi. A third authority says that the soul is not bound, as in some of the Malagasy beliefs, to the single soul-animal, but is incarnate in all the species, like several ways. But, among other accounts, that probably unreliable, makes the ithlozi the soul-animal of the living (Int. Arch. xvii. 121; Man, 1904, No. 113; Golden Bough, ii. 409, etc.). As in Madagascar, different species of snakes are the abodes of different classes of men; one for chiefs, another for the common people, another for women (Int. Arch., loc. cit.). Among the Masai, on the other hand, the difference of species marks a difference in the family of the deceased (Hollis, The Masazi, p. 307). In Europe, the form of the serpent, like that of the mouse and other small animals (see above), may be assumed by the soul of a sleeper (Meyer, Germ. Myth. p. 631). The serpent is regarded, according to some of Eastern Europe, sometimes as an ancestor of the tribe, sometimes as the soul-animal of deceased ancestors (Int. Arch., loc. cit.). Many of the tribes in New Caledonia never kill serpents, but no reason is given for this (Parouillet, Trois Ans, p. 113). In North America they were respected (Brinton, Myths, p. 129). In South America the Aicecos believe themselves to be descended from serpents (Tirado, Estudios, p. 39); for other stories of descent see J. F., M’Lennan, Studies, 2nd series, p. 526). Serpents are respected over a large part of Europe, especially those which live in or near human dwellings—probably as a survival of ancestor-worship. In like manner, harmless snakes are tutelary household divinities in the Panjib hills (Cooke, i. 141 f.). The name of the serpent is also frequently tabu (Böckler-Kreuzwald, p. 120; Lloyd, Poignant Life, p. 293; Tradition, v. 149; Asiatic Observer, 1821, p. 451, etc.).

It is only rarely that ceremonies of purification are prescribed for the killer of a serpent; the Amazons custom prescribed that the killer of a boa had to lie in running water for weeks together; during this time no animal could be slaughtered; finally, the body of the snake was buried close to the cattle-fold (Kay, Travels, p. 341). On the other hand, the killing of a snake is a good work in Japan; if the head of the snake is not crushed when it is killed, more will come to take its place (Mittel. d. Ges. Natur.- u. Volkser. Ostas. xv. 232). In Bengal it is believed that barrenness is the penalty for killing a snake (Cooke, i. 236), while in Germanic mythology such an act causes the child of the house to waste away (Meyer, loc. cit.).

The snake is commonly associated with water (see above), and said to reside in water-holes, rivers, etc. (Salvado, Memoirs, p. 260; Meresky, Beiträge, p. 126; Philip, Researches, ii. 117; Church Miss. Rev. xiv. 30; Strahlenberg, Des No. 8, f. 366; cf. the Indian Terms in the Nat. Dict., i. 120, etc.). Snakes are likewise guardians of treasure in folklore generally (Cooke, i. 134-136). Mythical serpent-monsters are also found as earth-carriers (see ‘Earth-Carrier’), or destroyers of the human race (see ‘Creator’); or bears the name of the Ixivi. In Brazil, the term is given to the City (see ‘Creator’); in Chile one is connected with the Deuge myth (Medina, Aborígenes, p. 28 ff.), and the Mirmeces place two on the road followed by the Semina, who are the ancient Minchi. On the Hurons made a monster-serpent the source of all maladies (Rel. des Ind. 1675, p. 75), and for the natives of Victoria the serpent Mindi is the cause of death (Parker, Aborigines, p. 25); for the Aruntas the Magellanic clouds are the teeth of a gigantic serpent, and silence is to be preserved when they are visible (R. G. S. A., S. Aust. Br., ii. 36). In America, according to Brinton, the serpent is often associated with the lightning (Myths, p. 136). Mention should also be made, in this connection, of the ‘snake-dance’ of the Hopis, which are probably expressions of clan totemism, not of obligatory (19 RBEW 638 f.). In South America, serpents are held to be the chief food of the dead (Spix and Borrer, Tucuman, p. 115).

A good deal of mythical lore has gathered round the serpent in Europe. A king is their ruler (Austland, ixiii. 1031; Globus, iv. 353, etc.), and wears a crown which is coveted for its magical properties. In Russia the king is often white, and the skeleton of the white snake makes its possessor the owner of a familiar spirit (ib. xxxi. 293). There is a stone in the snake’s nest which draws poisons out of a man’s body (Jeklkin, Veldstämml. ii. 133; cf. Cooke, ii. 141 f.). In Hindu belief serpents have in their heads jewels of marvellous properties (Cooke, i. 143 f.). He who eats the great white snake understands the language of birds (Ross- Warren, Ethn. 526, p. 137). If a snake is hung up head downwards, it will rain (FLJ v. 91; Wittke, Volksbergl. § 133). St. Patrick banished all snakes from Ireland, and even Irish cattle have the gift of killing the snakes in the meadows where they are (Northumb. Folklore, F. L. S. p. 8). The snakes know a root by which they bring to life a snake that has been killed (Lepechin, Reise, ii. 165). The belief in the king of serpents is also found among the American Indians (Brinton, Myths, p. 137). Folklore likewise knows of many cases of the union of serpents with human beings (MacCulloch, 255-259, 264-267).

In the ancient world the serpent was associated with leechcraft (see Disease and Serpent); the same idea is found in Madagascar (Int. Arch. xvii. 124), and also among the American Indians, perhaps because the snake is in America so often associated with the magician, who is also the leech (Brinton, Myths, pp. 132, 133). The snake is sometimes held to be unlucky (Globus, lxix. 73), but is more often welcomed as the ‘Hausgeist.’ A snake shot out of a gun is a charm against witchcraft (Liebrecht, Zur. Volksk. p. 332; Müllerhen, Sagen, p. 229); and a Huclanian hunter carries a piece of snake to attract game (Globus, lxxvi. 274). In Sussex the first snake should be killed for luck (FLR i. 8). In Bulgaria and France, any snake killed in July is a good work, probably because the snake is regarded as the incarnation of a witch (Straus, Die Bulgaren, p. 34; Holland, Paume, iii. 36). Snakes are burnt in the summer fire (Athenaeus, 1820, July 24; Jones and Kropf, Folktales, p. lix).

In North Africa the Aissouans and other sects of fanatics eat serpents annually or at intervals during the year (Walpole, Memoirs, p. 398; Denon, Voyages, i. 390; Pliny, VN vii. ii. XVII., xxv., xxv. x., xxviii. iii.; Pausaniais, ix. iv. etc.; cf. Bancroft, iii. 429).

The serpent is commonly of good omen; so among the North American sects of the Moos. Cath. 1896, 371; Meresky, Beiträge, p. 126), in Arabia (Nolde, Innerarabien, p. 96), and in medieval Europe (Panzer, Beitrag, ii. 259). In Albania it is unlucky before sunrise and after sunset (Castori, p. 16), and is held to be lucky, but its appearance is a warning that misfortune is near (Petter, Volestämm. iii. 33). In Suffolk it is a death omen (Suffolk Folklore, F. L. S. 5, 329). On the other hand, ii. viii. xxv., xxv. x., xxviii. iii.; Pausaniais, ix. iv. etc. On the other hand, ii. viii. xxv., xxv. x., xxviii. iii.; Pausaniais, ix. iv. etc. On the other hand, ii. viii. xxv., xxv. x., xxviii. iii.; Pausaniais, ix. iv. etc.
ANIMALS

527

tr. Sohnau, p. 218) so, too, in Norway, when it crawls across the road (Lichtenreit, Zur Volkskunde, p. 236). In Zoroastrianism the serpent is a most evil creature, and to be killed (Vendidad, xiv. 5; Herodotus, i. 140); it was formed by Ahuriman (Bundakishn, ii. 107). The custom of the serpent exists in Armenia (Abejghian, Armenischer Volksbrauche, p. 30). For the serpent, see, further, de Gubernatis, Zool. Mythol. pp. 389-419, Pauliny-Wissowa, a. a. O. (v. 77, 119).

Shallah: the shallah or slahah in the East is regarded as a god (Globus, x. 285). Sharks are sometimes regarded as enchanted men (Wilson, Western Africa, p. 161). The shark was formerly protected by a death penalty inflicted on the killer of one, but this was subsequently abolished by a religious revolution (Rastian, Bilder, p. 169). Shark-worship is said to have existed in Hainhau (Montgomery, Journal, i. 235). In the Solomon Islands the shark is addressed as 'a grandfather' (Zts. Geogr. Ges. Thür. x. 34). Sharks were worshipped in the Sandwich Islands; and if a man who adored them happened to have a child still-born, lie endeavoured to save the child by planting it in the shark's teeth. In order to do this he flung the body into the sea, performing various ceremonies at the same time. There were temples with shark- idols; the priests rubbed bricks that had been moistened with sand and water to give them a gaudy appearance (Golden Bough, ii. 432). In New Georgia the shark is 'hope' ('sacred'), because it eats men. It may not be touched in Rubiana, but in the eastern part it may be killed but not eaten (JAI, xxvi. 384). Sharks are very often the form in which dying people announce their intention of re-appearing; offerings are made to them. In Sia special coconut trees are reserved for the shark; they are clothed with a prayer for rain, and may also use the trees. Other men will join them sometimes and ask for coconuts with the voice of a shark-ghost (Golden Bough, ii. 434-435).

Sheep.—In Greek cult the ram was connected with Zeus; at Eleusis and elsewhere its fleece was used in rites of purification (Farnell, Cults, i. 65; Smith, Rel. Scm., 2. 474). As a substitute for the eldest son of the Athanankids, a ram was offered (Farnell, 184) much prayer for rain was offered to Zeus on Mount Pelion by youths clad in fresh ram- skins (ib. p. 95). Zeus Ammon is derived from Egypt (ib.). In the cult of Artemis the sheep was sometimes tabued (ib. ii. 431). In a sheep-offering to Zeus at Mantinea the wools were consecrated and sprinkled with holy water (R. W. Smith, p. 474). Aphrodite is represented as riding on the ram (Farnell, ii. 675).

Although the sheep is one of the most important sacrificial animals (Int. Arch. xvii. 139, for Africa), it is only in Egypt that we find a sheep- god proper. Amon was the god of Thebes; his worshippers held rams to be sacred, and would not sacrifice them. At the annual festival of the god a ram was, however, slain, and the image of the god was clothed in the skin; they mourned over the body and caried it in a sacred tomb. Amon is represented as a ram-headed god (Golden Bough, ii. 365 f.). Among the Hittites the sheep was regarded as an emblem of an annual sacrifice of a lamb, possibly as a means of expelling the evils which have accumulated. They are said before the ceremony, and show great joy when it is over. The ceremony is begun by a stone circle, and the lamb is led four times round the people, who pluck off bits of its fleece as it passes and put them in their hair; the lamb is then killed on the stones and its blood sprinkled four times over the people. It is then applied to each person individually. It has each rises to go away, he or she places a leaf on the circle of stones. The ceremony is observed on a small scale at other times, particularly when trouble comes upon a family; it is also practised on joyful occasions, such as the return of a son after a long absence (Proc. R. S. Edin. xii. 330). The peculiar sacrifice of a ram is occasionally found in European folklore; near Maubeuge a lamb is killed by one of the squires of the neighbourhood, and is believed to be laden with the sins of the village (Fournier, r. 366). But more commonly the sacrifice is performed without any specific reason being given for the ceremony. It is a common practice in Bohemia, Hungary, and other districts to lead a lamb before a church tower in the autumn in order to procure a good harvest in the following year (Mannhardt, Myth. Forsch. 139 n.). In Finland a lamb which has not been born since the spring is killed in the autumn; it must be slaughtered without using a knife, and no bones must be broken. When it is served up, water, which probably has taken the place of blood, is sprinkled over the threshold, and a portion of the meat offered to the house-spirits and the trees which will serve as May-poles in the following year (Bööer-Krenzeltwold, Der E Lenii Abeg. Geb. p. 87). In East and Central Europe a lamb is commonly sacrificed at Easter or rather at the end of Easter, the simplicity usually being this (Globus, xxxvi. 155, xxx. 93, xi. 71, etc.; cf. Golden Bough, ii. 438). In West Europe there are traces of such a custom at Whitsun-tide; in Hamburg, children do not bring lambs, but lamb heads and water to give to them, so that they may appear sacred (Golden Bough, ii. 438). In Virgen, a lamb is taken in procession on the Sunday after Easter to a mountain-chapel and subsequently sold (Zts. Ver. Volksk. v. 265). The sheep is also figured at the Carnaval (Manzhaner, Antik. Wald- und Feldkulte, p. 191 n.). The Feast of the Fishermen (Vannenschmid, Germ. Ernte- feste, pass.), and at Christmas (Tradition, vi. 255; Mannhardt, op. cit. p. 190). In Wales, people dressed in sheep-skins went round on All Souls' Day (Byegones, May 6, 1891). In some cases the ram or sheep was hunted with or without a subsequent sacrifice (Folklore, xi. 21; Duceange, s. a. Agrains Dei). Probably all these customs are in some degree connected with the idea of the expulsion of evils.

In Madagascar the sheep is one of the animals in which are incarnated the souls of ancestors; various fields have as their tutelary god the steer (v. Genep, Tabou, p. 230). In India there is reason to believe that the sheep was once a sacred animal (Crooke, i. 163 f., ii. 226). A large number of Chinese have a prejudice against mutton; the sheep is, however, regarded as a lucky animal, and its skull is hung over the door to prevent theft (Zoolog. Garten, 1900, 6). In France a lamb is blessed in the church at Christmas in Nievion, and allowed to die of old age (Rolland, France, p. 160). In the same way rich Kahuus consecrate a white ram under the title of 'the ram of heaven'; probably the object is, as in France, to provide the flocks with a tutelary god (Golden Bough, v. 20). The sheep is auspicious as an omen; it is lucky to touch it (Desrousseaux, Mmeur, ii. 254). The skull of a sheep wards off evil (Wiedemann, Ehekoten, p. 452; Ruswurm, Ehenkolk, ii. 281, 283, 402; Mühlen, viii. 39). The sheep figures in various European ceremonies connected with marriage; probably the rites are magical and performed as ceremonies of fertilization. In Poison the newly married had to pass a ram (Mem. Soc. Ant. France, p. 437); at Chatillon-sur-Seine the bride drove the animal thrice round a tub (ib. iv. 119). In Bulgaria and Russia the bride receives a lamb or sheep as 'Morgengabe' (Anthropologie, ii. 587; Holderness, New Russia,
ANIMALS

p. 250. The Gallus take an oath by the sheep (Pinkerton, Africa, i. 8).

Spider.—In the Creation myth of the Sias there was only one being in the lower world, the spider Spider-maiden, fencing even, the one who entered into existence and divided them into clans (10th Ann. Rep. Bur. Ethn., 1889–1890, p. 261 f.) In like manner, among the Hopis the spider represents the first being in the earth after the flood (W. P. Wissow, p. 111). According to the Teton, Ikto, the spider, was the first being in this world who attained maturity. He was the first to use human speech, and is more cunning than man. All the animals are his kindred, and he commands them. In their myths the spider is deceived by the rabbit (Dorsey, Siouan Cults, p. 472). The Teton prays to gray spiders. When they are going on a journey, they kill a spider if they see one, and pray; it is unlucky to let it pass or to kill it in silence. They tell that the Thunder-beings killed it (10th Ann. Rep. Bur. Ethn., p. 479). In the mythology of the Akwazip, Anansi, the spider, is a sort of deus ex machina, he acts for carrying away the daughter of the god; hence the cat and the spider are enemies (Petermanns Mit., 1856, 466; Frobenius, Weltanschauung, p. 294). Many of these myths are collected by the West Hudson (C. Smith, Anansi Stories from Jamaica). The Adjadurrals believe that the islands were made by the spider E.G.S.A., S. Aust. Br. ii. iii. 18). In another Australian myth the spider is a monster, and injures everything within the sphere of its influence (Soc. Amer. Miss. Mag., xiv. 112). The Haidas also have a story of a spider who was the mortal enemy of man; he was overcome by T'skanah, who used a magic wand to boil him alive, put him into a bottle, and let him become a mosquito (Smith's Report, 1888, p. 326; cf. Ehrenreich, Myth. u. Legend, d. südamer. Urvölker, p. 33 f.). In a Kayow myth, 'Old Spider' escapes the flood and is concerned with the early history of the human race (Auwalde, 1890, 901). For the Flatheads the residence of their grandparents, the spiders, was in the clouds. Both in Australia (Howitt, Native Races, p. 388) and in America the spider's web is a means of getting up to the sky (Trs. Ethn. Soc. iv. 306). The Cherokees told how the spider brought fire on its web, but was captured before it reached the earth (Foster, Sequoyah, p. 241). It is held in several parts of Europe that to draw a spider's web is to kill the spider (Folklore, xi. 241; Zts. f. Oest. Volkst. ii. 252). In Tuscany it is the custom to kill a spider seen in the morning (Andree, Ethn. Par. p. 8). It is also killed in Poland (Tadad, iv. 355). The Southern Slavs use it in magic; a girl takes a spider and shuts it up, calling on it to show her the destined lover, and promising to set it free if it does so, and if not, to kill it (Kraus, Sitten, p. 173). There is a curious diversity in the omens given by spiders; in Ditmarschen a small black spider is a death omen (Am Urqueld, i. 7). A spider in the evening is lucky, in the morning unlucky (ib. p. 64). In America the reverse is the case (Bolte, Studien, xxxii. 169). In Jewish folklore the spider is hated (JE vi. 607). For other spider omens see John of Salisbury, i. 13; Wolf, Beitr., ii. 199; Heier, Sagen, p. 224; Birlinger, p. 110, etc. For the spider in folk-tales see de Gerber, Sagen, ii. 161–164.

Stork.—The stork was sacrosanct in ancient Thebes, and a killer of one was punished as though he were a murderer (de Visser, Götter, p. 157). It enjoys the same respect wherever it is found in Europe. It is also respected in Egypt (Globus, Ixix. 257), and in Morocco (Clarke, Travels, iii. 164). It is a bird to be a hospital for sick storks and a fund for burying dead ones. The stork is commonly said to bring the children. Its presence brings luck to the house; in particular, it is a safeguard against the danger of fire; its efficacy is discounted by the stork's supposed practice of removing its nest from a house that is shortening to fire. In Bohemia, etc., to have a stork, however, is thought to bring bad luck (Wiedemann, Ehsten, p. 454), for, where one nests, one of the family or a head of cattle dies. So, too, in Bohemia and Moravia, a stork has twelve storks; circling over a house, means fire (Grohmann, Abergl. Nos. 438, 439; cf. Meyer, Germ. Myth. p. 110). For other omens and beliefs see Globus, xiv. 22.

The stork is one of the migrants which must be greeted when they appear in the spring; the house-stork must learn all that has happened in its absence. In other countries he is a man (Zts. deut., Phil., i. 345). In spite of the sacrosanctness of the stork, it is used in magic (ib.; Grohmann, Abergl. No. 434), and its gall cures a scorpion's bite in Jewish folk-belief (JE xi. 550). For the stork in folk-tales see de Gerber, Sagen, Zool. Myth. ii. 381–382.

Swallow.—There seems to have existed a custom in ancient Greece of carrying a swallow round from house to house, singing a song (Atheneus, Deipnosophists, viii. pp. 369–373). The swallow and its young are important in the bird races; its appearance in the spring are very common (Kuhn and Schwartz, Nordl. Sagen, p. 452). We find the swallow carried round in modern Greece, a wooden bird on a cylinder, and a song is sung (Roodi, Csok. and Lore, p. 136; cf. p. 271). In Macedonia the wooden swallow is encircled with leaves. Eggs are collected and riddles are asked, the answer to which is 'swallow' (Bent, Cyclopes, p. 434). The swallow is a symbol of Fatum among the Savages of the Crimea, and the songs refer to the advent of spring (Miladinov, Bulgar. narodni песни, p. 322).

The swallow is everywhere regarded as sacred; it is unlucky to kill it (Kaindl, Hausw., p. 194; Strackrjann, Abergl. p. 45; Globus, xii. 325; Brit. Ass. Ethnog. Sure. Scotl. Nos. 387–383; Alvarez, Folklore, ii. 224, etc.); it may not be touched (Tradition, v. 100), or caught (B. trad. D. p. 121). Its presence is regarded as lucky (Zts. Ver. Volkst. x. 299; Rohrokl, D. Glaube, ii. 107). In spite of its sacred character, it is used in magic; in Bohemia the blood of the first swallow drives away fleas (Wutke, D. Abergl. p. 159). The first swallow is important in other respects; it has long been the custom to draw omens from it (Pfliny, HV xxv. 25; Hoffmann's Panomyschhe, G. Ges. a. S., u. Lit. i. 325, and many modern instances; Bartsch, Sagen, ii. 172; Germania, xix. 319). As a rule it is of good omen, but in Thuringia it means a death in the family if a young swallow is thrown out of the nest (Zts. Ver. Volks. x. 266). A swallow in a room is a death omen (Ernan, Archiv, p. 628). For other omens see Grohmann, Abergl. Nos. 496, 504, etc. Swallows are sold in Paris and elsewhere and set free by the purchasers (Birring, p. 311; Rev. des trad. pop., iv. 229). A similar custom exists in Japan, and is especially practised at funerals (MS note). For the swallow see also Pauly-Wissowa, s.e. 'Aberglätte.'

Swan.—By the opinion of Jacob Grimm, the goose has supplanted the swan in mythology to some extent; but the opposite view seems nearer the truth. Perhaps the same applies to the duck. In Europe the swan is said to be a hospital for sick storks and a fund for burying dead ones. The swan is commonly said to bring the children. Its—\textit{swan-maiden stories} (see 'Myths' above), but
in: Picardy we find the duck taking the place of the swan (Romania, viii. 256). It may be noted that the subjects of transformation are not necessarily female (ib. ; cf. Mannhardt, Germ. Mythen, pp. 378-379).

The swan is important in the religion of N. Asia (cf. Cochrane, Ped. Journey, ii. 163; Georgi, Bemerkungen, p. 282). Among the Tatars a man who catches a swan passes it on to his next neighbour; when a woman catches a swan she gives it to her husband; if the swan possesses it on, and so on, until it is no longer presentable, when it is let loose (Castrén, Vorlesungen, p. 530). The oath by the swan was well known in the Middle Ages. In Moscow a swan is sometimes given to the newly married, who alone, in the opinion of the common people, has a right to eat it (Rec. des Trad. Pop. iv. 324). In Germanic folk-lore the swan is associated with the Norns, who sometimes assume its form (Meyer, Germ. Myth. p. 168). Its cry foretells a thau, and it is pre-eminent a bird of prophecy, often of coming ill (ib. p. 112).

Thunderbird.—Widely spread over the American continent is the belief in a great bird as the cause of thunder, which also figures in the Creation myths of some tribes, notably the Chipewyans, as the being which brought the world from beneath the water. Omondick, *Mithridate*, (cf. Dunn, Orygen, p. 102). The Hare-skin Indians describe it as a gigantic bird which dwells in winter in the land of the dead in the West-South-West, together with migratory birds and animals. When the warm weather comes, it returns with the ghosts in its train. When it shakes its tail-feathers, it makes the thunder, and the flash of its eyes is the lightning. It causes death; it is an evil deity. Dowitch, *Hiawatha*, etc. (ib. 282) Vancouver Island the Aits call the thunderbird Tootooch; its wings make the thunder, his forked tongue the lightning. Once there were four such birds, but Quawteat, the God of Thunder, killed them in the sea (Sproat, Scenes, pp. 177, 218). The Dakotas say that the old bird begins the thunder, but the young birds keep it up and do the damage; the old bird is wise and good, and kills no one (Tylor, Prim. Cult. i. 363). In Central America we find the bird Voe associated with Hurakan, the god of the tempest (Brasseur de Bourbourg, Popol Vuh, p. 71). In South America the idea is found among the Brazilians (Müller, Am. Urvcl., pp. 222, 271; but see also Ehrenreich, Myth. und Legend. d. südamer. Urvölker, p. 13). The same conception is found in West Africa among the Ewe-speaking peoples. Kthalmor or So, the god of lightning, is conceived as a flying god, who makes the noises of the sky, that is to say, "of a bird; his name means 'bird that throws out fire.' He casts the lightning from the midst of the black cloud; the thunder is caused by the flapping of his wings, and the thunderous sounds are found among the Bantu. The Zulus think a brown bird is found at the spot where the lightning strikes; the Amazopos say that the bird causes the lightning to hurry out for its task; according to the Romans, the bird sets its own fate, or rather, and cause by the lightning. The thunder is the flapping of its wings; the female bird causes loud, cracking thunder, the male distant, rumbling sounds. In Natal we are told that when a whale is killed by the cause of the lightning (Kidd, Essential Kafir, p. 120; cf. Moffat, South Africa, p. 338; Casalis, Basutos, p. 266; Callaway, Religion of Amazulu, p. 119). The conception of the thunderbird is also found in the Hervey Islands (Ellis, Researches, ii. 417; Williams, Enterprises, p. 93), and among the Marshall Islands (Mitt. d. Schutzbez. i. 66), and the Karens have a similar idea (Mason, Burma, p. 217).

Tiger.—A myth of descent from a tiger ancestor is found among the Bihls and Rajputs (Crooke, i. 211). It is associated with Siva and Durga, but tiger-worship proper is confined to wilder tribes; in Nepal the tiger festival is known as Bagh Jatra, and the worshippers dance disguised as tigers (ib. i. 212). The tiger is likewise worshipped by the Santals (ib. p. 213), while in Mizipar, Bageswar, the tiger-god, is located in a bira tree, and is said to take human form at night and call people by name; those who answer fall sick (ib. i. 256 f., ii. 78). The Warlis worship Waghia ('bird of tigers'), a shapeless stone smeared with red lead and ghi, which is held to protect them from tigers (Home and For. Miss. Rec. 1836, 390; cf. Rec. of Free Ch. vii. 292). In Hanoi a tiger-god is worshipped; a shrine contains an image of a tiger (XT. Cong. Orient. i. 294); and a tiger-god is also found in Manchuria (Miss. Cath. 1885, 259). The tiger is represented in Sumatra as the abode of the souls of the dead; it is the god of the Norns (Meyer, Battalinder, p. 308), and a name-tabu is practised. A like custom is found in Sunda (Tijdsschr. T. L. vi. 80) and parts of India, where the souls of those who devote their lives to tigers are worshipped (Crooke, ii. 211). For other cases of name-tabu see Frazer, Golden Bough, i. 457.

The hunting of the tiger is naturally attended with much ceremony. The Sumatrans attack tigers only when they are wounded, or in self-defence. The Menangkabaner try to catch them alive in order to beg their forgiveness before killing them; they show them other marks of respect; no one will use a path that has been untrodden for more than a year; at night they will not walk one behind another or knock the sparks off a firebrand (Golden Bough, ii. 393 f.). The people of Melamul have a tiger clan which honours the tracks of a tiger, and claims to be spared by it; when a tiger has been shot, the women of the clan offer it betel (ib.). When the Batteras have killed a tiger they bring its corpse to the chief; the reverse happens when a man kills a tiger; people of the tiger clan make offerings to it; a priest then explains why it has been killed, and begs the spirit to convey his message to the soul of the tiger, so that it may not be angry and do harm; after this a dance is held, and most of the body is buried, only those parts being saved which are useful in medicine; in particular, the whiskers are burnt off at an early stage, so that they may not be used as poison (Golden Bough, ii. 394; Tijdsschr. xxiv. 172). Connected with the atonement for the death of a tiger is the Indian belief that a garden where a tiger has been killed loses its fertility (Crooke, i. 212). Not only is it dangerous to kill a tiger, but the animal may have been killed by the tiger, which has its pelt; the 'tiger ghost' is worshipped (Crooke, p. 213). Among the Garrows a man who has been killed by a tiger is believed to appear in a dream or in the form of a tiger, and his name is changed (Mission Life, N. S. x. 250). In North Arabia the ceremony of 'ya,' or tabu, is strictly enforced when any one has been killed by a tiger (JAI ii. 240). Connected with tiger-worship is the practice of keeping a tiger's tail and other parts of the body, or even the tiger's name (Miss. Cath. 1897, 360; Crooke, loc. cit.). Among the Gonds, two men, believed to be possessed by Bhagawar, sit at the front of a tiger and fall upon a kid with their teeth (Crooke, ii. 216).
Besides being the abode of the soul of a dead man, a tiger may be the temporary or permanent form of a living human being. In India a root is said to confer the transformation, and nother root is the antidote (Crooke, ii. 216). In Central Java the power of transformation is hereditary, but the wer-tiger is held to be friendly, especially if his friends call his name, or he is affected by the various kinds of stone which make the tiger the soul of a dead, not a living man, see Tijdschr. xii. 568. The belief in the wer-tiger is also found in the Malay peninsula (Skeat, Malay Magic, p. 113) and China.

Closely connected with the wer-tiger is the familiar of the wizard in tiger form. A connecting link is found in the Thana belief that mediums are possessed by a tiger spirit (Boudoir Gaz. xiii. i. 156). The Binus of Johore believe that every pawang has a tiger subject to him, which is immortal (Journ. Ind. Arch. i. 276, 277). The Malays believe that the soul of the dead wizard enters the body of a tiger; the corpse is put in the forest and supplied with rice and water for seven days, during which the transmigration, which is the result of an ancient pact made by the pawang’s ancestor, is effected, and the son of the previous tiger to succeed his father. The owner performs a ceremony to secure his soul (Newbold, i. 387). The tiger is largely used in magic. In North India and Korea it is eaten in order to gain courage (Golden Bough, ii. 336). In India the fangs, claws, and whiskers are used in love charms and as prophylactics against possession, especially in the case of young children (Crooke, ii. 214 f.). The whiskers are regarded as poisonous in Sumatra (Tijdschr. loc. cit.) and in India (Crooke, loc. cit.). Tiger’s flesh is burnt to keep blight from the crops (ib.). Some Dayaks keep a tiger’s skull in the head-house; to move it is said to cause heavy rain, and to touch it is punished by death by lightning, while its complete removal would cause the death of all the Dayaks (JERAS, S.B. No. 5, p. 159).

Corresponding to lecanthrogy in Europe, there is in India a pathologioal condition in which the sufferer believes that he is turned into a tiger (Sprengel, Auswahld, iii. 27). The Garrows say that the mania is connected with a certain drug, which is laid on the forehead. The wer-tiger begins by tearing the ear-rings out of his ears, and then wanders about, avoiding all human society. In about fourteen days the mania begins to subside. Although fits of this kind are not attributed to witches in India, the patients are said to be seen with ‘their eyes glaring red, their hair dishevelled and bristled, while their heads are often turned round in a strange convulsive manner.’ On the nights of such fits they are believed to go abroad and ride on tigers (Malcolm, Memoir of Central India, ii. 212). It seems, therefore, not improbable that the fit in question is of the same nature.

Tortoise, turtle.—Both in Asia (Miss. Herald, xviii. 383; cf. Bastian, Bilder, p. 356; Crooke, ii. 255) and in America the turtle is one of the mythical animals on which the world rests. In the Iroquois myth the world was at first covered with water, and when Antaecints fell from heaven, the animals held a conference to decide how she was to be received, and the turtle caught her on her back, the fish and animals were then brought up by water-fowl! the earth was formed (21st Ann. Rep. Bur. Ethn. p. 180, etc.). The turtle is an important Iroquois totem, and the clan descent is from a turtle who threw off its shell (Francis, Tar. 7, p. 3). In like manner the tortoise is a totem of the Mundari Kols, and is also worshipped and sacrificed elsewhere in India (Crooke, loc. cit.). In Zoroastrianism, on the other hand, the tortoise was an evil creature, and consequently was to be killed (Vendidad, xiv. 5). A turtle taba exists in Madagascar (v. Garrows, in Java (Tijdschr. T. L.V. xxv. 575), and Pomota (Routings in the Pacific, p. 243); and the Kwaps were not allowed to lift a small water-tortoise by its tail, lest there should be a rain (van Heurk, viii. 130). The turtle was sacrificed in Pomota (Ches. C. 1874, 378). The Zuñis have the turtle as one of their totems. Sometimes they send to fetch turtles with great ceremony, and apparently each family keeps its own. It refuses to enter the water until after it has been killed, its flesh and bones deposited in the little river, and its shell made into a dance rattle. The object of the ceremony is obscure; Frazier suggests that the turtle are fetched in the form of turtles and sent back to spirit-land; it seems very probable that the turtle is killed in order that it may be a messenger; but it does not seem that the ceremony is performed only by the turtle clan; how far, therefore, the kinship terms applied to it are merely complimentary it is impossible to say (Golden Bough, i. 371). Turtle-fishing is an occupation surrounded by many tabas; in Madagascar the fisher had to eat the turtle on the shore, and the shell had to be left there until it was used. All the village took part in the turtle feast, and it was not allowable to eat other food with it. If these tabas are not observed, the turtles leave the shore (v. Gennep, Tabou, p. 287). In the islands of Torres Straits many magical ceremonies were performed to prepare a canoe for turtle-fishing. There were many tabas connected with the fishing, chiefly of a sexual character; turtle dances were also performed. The fixing of the taboo is treated of in (Camb. Univ. Exp. Reports, vol. v. pp. 196, 207, 271, 330-336). For the myths and folk-tales of the tortoise see de Gubernatis, Zool. Myth. ii. 95-95, 360-570.

Whale.—The Tongans regard the whale as the abode of certain deities, and never kill it; when they chance to come near one, they offer it scented oil or kava (Prins, Cult. ii. 352). Among the Haidas the fin-backed whale is taboo, on the ground that a dead man’s soul sometimes enters it (JAI xxi. 20). As a rule, however, the whale, like other large mammals, is feared but not exactly worshipped. It has a certain veneration for it, and have a special ritual for the whale fishery; before the voyage begins, both husband and wife submit to a certain number of tabas, of which chastity is one; the man remains in his hut and fasts regularly; in his absence his wife does the same. After various magical ceremonies, the boat is covered with branches by the magicians, the fishers sing supplications to the old whales, which they do not pursue, to give them their young ones. After bringing the whale to land, the canoe backs away from the shore and then returns at full speed, the harpooneers in the bow; they harpoon the animal again, and are again painted and carried to their huts, where, as a part of the ceremonies, their continence at once comes to an end; the whale is then cut up, and preparations for a feast are made; the carcass is decorated with necklaces, and one of the fishers performs a long prayer or address. Thereupon the whale is divided, and each hut receives a portion (v. Gennep, Tabou, p. 224 ff.).

In preparation for the whale fishing the Aleutians celebrate a festival; after killing a number of dogs, they carry a wooden image of a whale into a hut with loud shouts, and cover it up so that no light can get in; then they bring it out and throw it into the sea (Krach-ennikov, ii. 215). The Kanigmiasts consider whales to be in communication with evil spirits,
and fear them. They seem to have expiated the death of the whale as the Amins do that of the human beings. When a whale was killed in a special village; dead whales were buried in caves, and were regarded as tutelary divinities; they were placed in positions resembling those which they took in life. Their ribs and other portions were made to them; it was believed that if a man put a piece of slate at the entrance to the cave the dead would prepare a spearhead (Rev. d'Anth. ii. 679-80). On the island of Hwec whale taboos were taken during the period they lived; the fisher-men believe they searched for eagles' feathers, bears' hair, etc., as talismans; when the season was over, they hid their fishing implements in the mountains caves with the dead bodies; they stole the bodies of successful fisher-men, some said as talismans, others in order to prepare poison from them (Lisiansky, Voyage, pp. 174, 209). In Vancouver Island whale-fishers are carefully selected; for months before the fishing they are kept from earthquakes; they take, in consequence, wash three times a day, redden their bodies, etc. Any accident during the fishing is put down to a violation of these tabus, and punishment attributed to the death of the whale. The whole of the village shares in the proceeds of the fishing (Rev. Sci., Nov. 4, 1890). A whale dance is performed at Cape Flattery (Swan, Indians p. 70). In Nootka Sound a feast is held after the whale fishery, and the chief, before distributing the portions to the guests, performs a sort of pantomime, during which he imitates the blowing of a whale (de Saussure, New Voyages, i.; Roquefeuil, p. 24).

The chief is buried in a special hut, which contains eight images of whales made of wood and placed in a line; after the bodies have been under ground some time, they dig them up, take off the heads, and place them on the backs of these images; the reason given is that it is done in memory of their skill in throwing the harpoon; but it has more probably a magical intention. When a whale is caught, the chief goes to the hut to offer some of its blubber to his ancestors and return thanks to the sun (9); after the festival mentioned above, the chief carves a wooden whale and puts it before the shed (ib. p. 102). The Eskimos of Greenland put on their best clothes for the whale fishery, because the whale cannot endure dirtiness; if they wore dirty clothes or some one took part in the chase who had touched a dead body, the whale would escape (La Harpe, xvi. 266; Fowler, Whale Fishery, p. 24). The chief is buried at the bottom of a cave, is carried with, and is himself a magician, being even associated with the dragon of Midgard (Meyer, German Myth. p. 124.). Among the Yupkans the initiants are bound to abstain from certain parts of the whale (South Am. Miss. Mag. iii. 117). In South Africa the Yaos make images of whales on the ground, at the initiation of young men (Macedon, Africana, i. 131). The Antillean Indians believe, that before it became a human, the whale was a fish; it was, however, sometimes interpreted as a wolf (ib.); some stories connected Apollo with the wolf, some possibly due to a misunderstanding of his epithet ἄπωλός (Iliad, iv. 101, 149), probably meaning ‘twilight-born’ (Meyer, Handb. der griech. Etymologie, iv. 519), but interpreted by popular etymology as ‘wolf-born.’ In Delphi was a bronze image of a wolf; this was explained as commemorating the finding of a treasure with the aid of a wolf. Like Rondard and Leblanc, many children of Apollo by human mothers were said to have been suckled by wolves (Lang, Myth., ii. 220; Liebrecht, Zur Volkskunde, p. 18). The wolf was also associated with the folk-lore of Africa, the Lyceans, where a human sacrifice took place, succeeded by a cannibalistic feast, participation in which was believed to result in transformation into wolves; according to a later legend, one portion of the human flesh was served up among the other sacrificial dishes, and the eater was believed to become a wer-wolf (Lang, Myth., etc., ii. 283). At Rome the wolf was associated with Mars, and the Lupercale is sometimes interpreted as a wolf festival; if the Luperici were wolf-priests, it is probably due to the connexion of the wolf with Mars and the wolf cave (Fowler, Rom. Fest. Ph. 210-221).

A study resembling that of Jonah and the whale is a fairly wide-spread myth (Tylor, Prim. Cults. iii. 399). For the Dog-Rib Indians the swallowing of a man, and his escape through being drawn out by his sister's shoe-lace, form the basis of a derivation from the Deluge myth; the whale in his wrath raised great waves and inundated the earth (Petitot, Traditions, p. 319). The same incident of the swallowing is found among the Haidas and other tribes of the North-West Coast (Am. Anth. xi. 258, x. 370; Swan, N. W. Coast. ii. 496). One of the features of Man- bosho's career is the victory over a monster who swallowed him (Schoolcraft, Algic Researches, i. 138). At Eromanga a story is told of a man who fell into the water and was swallowed by a whale, but escaped because his ear-rings prickled the inside of the monster (Murray, Missions, p. 180; Turner, Nineteen Years, p. 406). The same incident is found in the Paumotu archipelago (Miss. Cath. 1884, 243). Many nations attribute the salvation of all save one woman to a monster who swallows them (Casalis, Langue Suchuana, p. 97). Among the Warangis of East Africa it is a snake which comes out of the sea (Mitt. d. Schutzgeb. xii. 45).

Wolf.—Outside Europe, where the wer-wolf figures prominently in the popular belief of many countries, the wolf is, from a mythological point of view, comparatively unimportant. The Tallincks have a god, who is said to be the head of the wolf pluriety (Bancroft, iii. 101). It has, nevertheless, been denied that Khannakh the god has anything to do with the wolf (Jaët. xviii. pp. 144, 201). Probably the wolf was originally worshipped or received offerings, as was the case among the Luts (Golden Bough, ii. 422; in process of time the cult was associated with that of Apollo, and it was supposed that he received his title from having exterminated wolves (ib.). Many stories connected Apollo with the wolf, some possibly due to a misunderstanding of his epithet ὁ λυκερός (Iliad, iv. 101, 149), probably meaning ‘twilight-born’ (Meyer, Handb. der griech. Etymologie, iv. 519), but interpreted by popular etymology as ‘wolf-born.’ In Delphi was a bronze image of a wolf; this was explained as commemorating the finding of a treasure with the aid of a wolf. Like Rondard and Leblanc, many children of Apollo by human mothers were said to have been suckled by wolves (Lang, Myth., ii. 220; Liebrecht, Zur Volkskunde, p. 18). The wolf was also associated with the folk-lore of Africa, the Lyceans, where a human sacrifice took place, succeeded by a cannibalistic feast, participation in which was believed to result in transformation into wolves; according to a later legend, one portion of the human flesh was served up among the other sacrificial dishes, and the eater was believed to become a wer-wolf (Lang, Myth., etc., ii. 283). At Rome the wolf was associated with Mars, and the Lupercale is sometimes interpreted as a wolf festival; if the Luperici were wolf-priests, it is probably due to the connexion of the wolf with Mars and the wolf cave (Fowler, Rom. Fest. Ph. 210-221).

The Kanitchevats celebrated a wolf festival and related an astrological myth (Kranemninkov, p. 129). When the Koriaks have killed a wolf, they dress one of their number in its skin and dance round him as they do round the carnival; saying that it was a Russian who killed him (Golden Bough, ii. 397); the Tunguses kill a wolf with fear (Erman, Archiv. xxi. 25). When the Kwakiatl killed a whale, the Columbia Indians would, they lay it on a blanket and wait over the body; each person must eat four morsels of its heart. They bury it and give away the weapon with which it was killed. They believe that killing
ANIMALS

A wolf causes scarcity of game (Golden Boukh2, ii. 396). In the same way in ancient Athens any one who killed a wolf had to bury it by subscription (ib.). Possibly the Cree custom of painting the faces of their canoes with wolves’ heads and red ochre is a propitiatory ceremony (Hearne, Northern Ocean, p. 363), for there is a prohibition of killing wolves among them, which is not, however, universal (ib., p. 340). In the tribe, the Chipewyans, forbid women to touch a wolf’s skin (Dunn, Oregon, p. 106). It is very common to use another name for the wolf than the ordinary one (Golden Boukh2, i. 545; LIT VII. vii. 55, etc.). The Romans regarded the wolf as unclean, and purified the city with water and sulphur if a wolf got into the Capitol or the temple of Jupiter (de Gubernatis, p. 329).

The wolf is frequently found among the tutelary animals of the dancing or secret societies of North America. The Nootkas relate that wolves once took away a chief’s son and tried to kill him; failing to do so, they became his friends, and on his return to the house, brought him more of the other young men into the society, the rites of which they taught him. In the ceremony a pack of wolves, i.e. men with wolf masks, appears and captures those who are bringing him back apparently dead, and the society has to revive him (Golden Boukh2, ii. 434 ff.). Similar associations are found among the Kwakintins (Report U.S. National Museum, 1885, 477-478), and among the Dakotas, by whom parts of the animal I am used in magic, though they may not kill it (except, probably, at initiation), or eat it, or even step over on it (Frazer, Tot. p. 50; cf. Schurz, Alterskreise, p. 206). These societies in general, pp. 150, 300 ff.). In connexion with these societies may be mentioned a curious confraternity that existed in Normandy till late in the last century. A prominent part in the midsummer ceremonies was taken by the Brotherhood of the Loup Vert and its chief; they ran round the fire hand in hand, and had to capture (while belaboured by the man selected for the headship, to which was attached the title of Green Wolf) in the following year (Golden Boukh2, iii. 392).

The corn-spirit is believed to take the form of a wolf (Golden Boukh2, ii. 264 ff.), and the binder of the last sheaf is sometimes called ‘the wolf.’ The wolf also plays a considerable part in the carnival festivity and at the Carnival in Nuremberg (Mannhardt, Ant. Wald- und Feldwutte, p. 323). In Norse mythology witches and giantesses ride on wolves yoked with serpents (Meyer, Germ. Myth., p. 142), while the demonic Fenrir-wolf is too well known to require more than passing mention here. In Zoroastrianism wolves rank as most evil animals (Yasna, ix. 18), and should be killed (Vendidad, xvii. 65). A wolf must be seen by a man before it spies him, or evil results will follow (Yasna, ix. 21)—a belief which has its parallels in classical lore and in modern Europe (Darmesteter, Etudes iraniennes, ii. 234). In Armenia, in like manner, wolves are even more evil than serpents, and numerous charms are used against them (Abeughian, Armen. Volksglaube, 114-116).

As the last dangerous animal to survive in many parts of Europe, the wolf has given its name to the group of beliefs based on the idea of the temporary or permanent transformation of living men into wolves or other animals (see Lycanthropy). The people of the Caucasus say that women are transformed into wolves as a punishment for sin, and retain the form for seven years. A spirit appears to them at night bearing a wolf skin, which the woman must wear, or she will acquire wolfish tendencies, and devours children. At times she puts off the wolf skin, and if any one can burn it the woman vanishes in smoke (Haxthausen, Transkaukasien, i. 323. For wer-wolves in general see Tylor, Prim. Cult. i. 312; Hertz, Der Werwolf; Baring-Gould, A Book of Witches). A very similar belief is found in Armenia (Abeughian, iii. 118). As an ominous animal the wolf is commonly auspicious. For myths and folk-tales of the wolf see de Gubernatis, Zoö. Myth. ii. 142-149. For the wolf in Russia also Pauly-Wissowa, s.v. ‘Abergläube, p. 81.

Wren.—All over Europe the wren is called the ‘king of the birds’ (Golden Boukh2, ii. 442), and a German story tells how it gained the position in a contest with the eagle (de Gubernatis, ii. 298). In France and the British Isles it is accounted unlucky to kill a wren or harry its nest (Golden Boukh2, loc. cit.), but there was also a custom of hunting it annually (Folklore, xi. 290; BHR xxxviii. 329; IQ, 6th ser. x. 492, xi. 177, 297; Croker, Researches in the S. of Ireland, p. 233) at Christmas or somewhat later. In the Isle of Man the bird was killed on the night of Dec. 24, and fastened, tied to the chimney, in the house. It was then carried round to every house, and finally taken in procession to the churchyard and buried. The feathers were distributed, and certain lines sung to the accompaniment. The wren was formerly boiled and eaten. In Ireland and Wales the bird was sometimes carried round alive. In France the bird was struck down, and the successful hunter received the title of ‘King’ (Golden Boukh2, ii. 446). In Limousin the ‘roi de la Tirevessie’ was named, whereupon he had to strip naked and throw himself into the water. He then took a wren upon his wrist and proceeded into the town, where he took off his feathers and scattered them in the air; finally, the wren was handed over to the representative of a square (Tradition, iv. 160). Therewith a wooden wren was attached to a high post and shot at; if it was not hit, a fine had to be paid. In Berry the newly married took a wren on a perch to the square; it was put on a waggion drawn by oxen (ib. p. 364; Rolland, Fauve, p. 297). At Entrailles the wren had to be sent, rea (i.e.), and it is probable that these ceremonies are connected with a former annual expulsion of evils; in Kaumtchatka a similar ceremony is performed in connexion with an annual festival (Krachehenikow, p. 147); a small bird is captured from the house, and is baked and tasted, and the remainder thrown into the fire.

The wren is considered of good omen in Japan (Chamberlain, Kojiki, p. 241 n.), and among the Ainu (Batchelor, p. 430); in the Isle of Man fishermen take one to sea (Rolland, Fauve, p. 295), and it is used in the Tyrol folk-medecine (Heyl, p. 139). Among the Karens it is believed to be able to cause rain (Miss. Cath. 1888, 261). In Australia the shell wren is a ‘sex totem’ (Golden Boukh2, iii. 416); near Tanganyik it seems to be a totem (Miss. Cath. 1885, 351). Both in Europe (Ann. Phil. Chret. 3rd ser. ii. 148) and in Victoria (Dawson, Aust. Ab. ii. 52) the wren is said to have brought fire from heaven or elsewhere. The wrens of one brood are said to be re-united on Christmas night (Ann. Phil. Chret. 11.). A song of the wren figures in the Fawne Hako-cerimony (22 KEW II. 191 f.).

LITERATURE.—The following is a complete list in alphabetical order (with the exception of a few publications which are cited throughout the article, with a few additions. Anonymous books and periodicals fall, also in alphabetical order.

ANIMISM. — Definition and Scope. — In the language of philosophy, Animism is the doctrine which places the source of mental and even physical life in an entity ascribed by the beliefs of a people, either directly or indirectly, to the body. From the point of view of the history of religions, the term is taken, in a wider sense, to denote the belief in the existence of spiritual beings, which are ascribed to bodies of which they constitute the real personal identity, or souls without necessary connexion with a determinate body (spirits). For convenience in treating the subject, it will be of advantage to study Animism separately under two heads: (i.) Worship of the souls of men and animals, manifesting itself above all as worship of the dead (Necrolatry); (ii.) Worship of spiritual beings who are not associated in a permanent way with certain bodies or objects (Spiritism); (iii.) Worship of spiritual beings who direct the permanent or periodically recurring phenomena of nature (Naturalism).

Animism in the sense just stated represents an attempt to account for a rational development of man’s conception of the Universe. It is the religion and the philosophy of all non-civilized peoples. It predominates at the commencement of all the historical forms of worship. It is still shown in all savage tribes, and completely developed, among the survivals of folk-lore. In all probability, from the moment when man began to inquire into the cause of phenomena, external or internal, he thought to find in the only source of activity with which he was directly acquainted, namely, an act of will. Objects which moved, or which he believed capable of moving; gave him the impression either of bodies set in motion by hidden beings, or of bodies endowed, like himself, with will and personality. Our languages bear witness to a mental condition in which those who created them attributed life, personality, and sex to the forces of nature.

The imaginary personalities that controlled the sun, the moon, the stars, the clouds, the waters, etc., were not thought of separately from their

* A similar conception is found at the present day among non-civilized peoples. "The Ashivis or Zulus," writes Mr. Framlingham, "suppose the sun a great round body, or, as they say, a man, living and moving in the sky, and sea, in all their phenomena and elements, and all animate and inanimate objects as well. The men and beasts, the trees, plants and other living beings, form a great system of all-conscious and inter-related life, in which the degrees of relationship seem to be determined largely, if not wholly, by their class and rank in the natural order of creation. The Mission Institution, vol. ii. [1839] p. 9]. Again, Sir E. P. Troum relates that the native inhabitants of New South Wales, and of the Tasmanian group of islands, think of the heavenly bodies, atmospheric phenomena, and inanimate objects, all as beings of the same nature, alike composed of a soul or a spirit, but differing only in the extent of their powers (JAF, vol. vi. p. 577).
ANIMISM

visible garb, any more than the personality of a man was conceived of apart from his body. But it cannot have been long before a new intermediate presence felt. The experience of dreams led men to the conclusion that their ego was different from their body, that it could separate itself from the latter—temporarily during sleep, finally by death and continue to exist. Thus a native of Australia, being asked by a traveller whether he believed that his yambo could quit his body, replied: 'It must be so; for, when I sleep, I go to distant places, I meet with my sons and speak with those that are dead.' (Hovitt, On some Australian Beliefs in JAL, vol. xii. [1884] p. 189).

1. Necrolatry.—It will of course be understood that, in employing the terms 'soul,' 'spirit,' 'personality,' we do not mean to attribute to savages any notion of immaterial entities, such as is arrived at by making abstraction successively of all the properties of matter except force. The soul is to be regarded as a kind of body and a higher, more subtle, essence, generally invisible but not always intangible, subject in a certain measure to all the limitations of human beings, but endowed at the same time with mysterious powers and functions.

Hitherto no people has been met with which does not believe in the existence and the survival of human souls, which does not admit the possibility of their intervention in the affairs of the living, and which does not seek to enter into relations with them by processes which are everywhere closely analogous—either by offering to them anything of which they were fond during their lifetime, or by applying to them the methods resorted to by sorcery in order to avert or to control superhuman powers. The assertions of some authors to a contrary effect are due to incomplete observation, hasty generalization, or misunderstanding of the sense of the terms employed.

The souls of living beings are generally believed to be the pale and vague image of the body itself. It is the double, as it appears in dreams. Sometimes the soul is assimilated to the shadow cast by the body ('the shades' of poetical language), or to its reflection in water. At other times we find it confused with the breath (Lat. anima, Gr. άναμνη, Skr. prāja, Heb. רוח—'breath,' 'spirits,' or with the beating of the heart and the pulse. Again it may have a special form attributed to it, borrowed from living beings or what are viewed as such: birds, serpents, insects, weapons, sea-deities, meteors, storms, vaporet, etc. There are peoples who imagine that men possess a plurality of souls, each with its distinct role.

Soul, it is supposed, may feel the counter-stroke of wounds inflicted upon the body or of diseases which attack it. Again, the same body may become successively the seat of a number of souls, and, conversely, the same soul may inhabit in turn various bodies. Hence the magical processes, not uncommon among non-civilized peoples, whereby it is sought to replace the original soul by a superior one; and the custom, observed among some of the most civilized races, of putting on a new garment, when death, the moment he shows the first signs of mental or physical decrepitude, the personage—sorcerer, chief, or king—whom it concerns the tribe to preserve in the full possession of his faculties, to put out of his way all events and accidents that in the least way may determine the soul to quit the body. What becomes of the double after death? In general it is supposed to continue to haunt the corpse as long as any part of it remains, or to frequent the vicinity of the dwelling. But, after a certain number of times the notion of survival is limited to the moon, or less vivid recollection retained of the deceased.

'Ask the negro,' writes Du Chaillu (Tus. 369.), 'where is the spirit of his father or his mother, he says he knows not where; it is done. Ask him about the spirits of his father or brother who died yesterday, and to this question he answers: 'It is in the air.'

At the end of a certain period, or as the result of certain rites, the soul, as it is sometimes held, reincarnates itself; or, more frequently, it is believed to take a new departure to another world, usually situated under ground, beyond the sea, on the summit of a mountain, above the vault of heaven, in the stars, etc. There it leads a vague, colourless, miserable existence (this is the peculiar quality of subterranean abodes, Sheol or Hades); or, it may be, an existence moulded more or less closely upon the earthly life, each shade retaining its rank and his circumstances.

But, even upon this hypothesis of another abode, there is supposed to intervene in the affairs of the living, especially when the deceased wishes to do a good turn to his descendants or to take vengeance upon his enemies. Hence the importance attached by the custom and practice which has played so large a part, as has been shown by Herbert Spencer, in the consolidation of families and tribes. This cult has its origin at once in the fear of ghosts, in filial affection, and in the desire to preserve for the family the benefits of paternal protection. Once it is admitted that death does not interrupt the relations between men, it is logical to suppose that a father after his decease will retain a prejudice in favour of his descendants, and will seek to add to their welfare and to protect them against dangers at home or abroad. The children, for their part, in order to preserve his favour, will have to continue to show him the consideration he demanded in his lifetime; they must also maintain the organization of the family and assure the permanence of the home, so that this cult may never be interrupted.

By the side of ancestors, and at times above them, a place comes to be taken by the menses of illustrious personages who have profoundly impressed the popular imagination—chiefs, sorcerers, conquerors, heroes, legislators, and reputed founders of the tribe or the city.

The worship of ancestors sometimes includes the belief that all the members of a tribe are descended from some individual without having possessed the form of an animal or, more rarely, of a plant. This involves certain relations of consanguinity with all the representatives of this species. See TOTEMISM.

The notion that the lot of souls in the future life is regulated by their conduct in the present life belongs to a more advanced stage in the evolution of religious ideas. Its appearance and development can be traced in the main lines of historical religions. The first stage is to accept the principle that souls have awarded to them a better or worse existence according as they have or have not, during their sojourn on earth, done a good or evil action. The last stage is reached when it is supposed that, upon the analogy of what happens in well ordered societies, the lot of the soul is made the subject of a formally constituted process of retribution, in which is the aim of the gods to protect. Thus the theory of retribution finds room by the side of the theory of continuation, and probably succeeds to it. But
even this method of regulating the destiny of souls after death does not exclude such an eventuality as their temporary return to earth and entrance into relations with the living.

ii. Spiritism.—Once a start has been made by attributing to existing beings, and even to a great many inanimate objects, a mental equipment which differs from a man's own merely in the degree of activity and power, it is a logical inference that souls may similarly operate temporarily from their bodies, and, if the latter be dissolved, may survive them. These souls assume, as a rule, the physiognomy of a double, or a form appropriate to their function, but always chosen so as to imply movement and life. Moreover, at this stage of intellectual development, man will cherish a belief in the existence, as independent agents, of a multitude of analogous souls proceeding from beings and objects which he has not known. These souls, from the very circumstance that they have lost their connexion with particular bodies, acquire a fitness for assuming all aspects and performing all acts.

Such is the origin of spirits, to whose agency are finally attributed all phenomena which men can neither explain by natural causes nor set down to the account of some superhuman being with functions of destruction. The savage, who has no higher rank of the Divine Powers; on the other hand, it is acts of conjuration—evocation, incantation, exorcism—that are employed by preference when spirits have to be dealt with. This explains why magic is the only rational conception of the lower world. Where the evolution of religion has developed neither veneration for the forces of Nature nor the worship of Ancestors, the cult consists almost exclusively of the veneration of spirits.

The same phenomenon is exhibited among the Australians, the natives of Siberia and South America, etc.—of processes intended to avert or to subjugate the superhuman powers. Among these peoples the conception of the world as a domain abandoned to the enerepies of arbitrary and malevolent wills makes of religion a reign of terror, weighing constantly upon the life of the savage, and barring all progress. On the other hand, where Animism has developed into polytheism, it may be viewed as a first stage in that evolution which leads to making the Divine Power the supreme agent who seeks order in nature and the good of humanity. (The subject will be more fully dealt with under Soul and Spirit.)

GOBLET D'ALVIELLA.

ANNAM (Popular Religion).—A characteristic of the Annamese is the multiplicity and variety of their cults. Influenced more by tradition than by conviction, they manifestly reflect the fusion of the three great religions of foreign origin that prevail in their country—Chinese Buddhism (Phát giáo), which is celebrated in the pagoda (chieu); Confucianism (đạo phong kiến), which is commonly associated with the educated (đạo thức, văn chi); and Taoism (Thố chỉnh, thọ etc bô), in the palace (phu denounced). These are official cults, practised especially by the upper classes and the learned.

So also does the Cult of the Sky and the Earth, which allows no other celebrant than the sovereign, and the cult of the ruling Emperor receive from the Annamese only subordinate veneration. We shall not describe these cults, which are mere offshoots of Chinese importation, but refer the reader to art. CHINA.
The masses retain their preference for ancestor-worship (thọ ồng bà ồng vãi), which is the head of the family offers in a reserved part of the house (nhà dương lầu). Such offerings include all kinds of food, which are invoked in the chapels (miếu) and for the numerous magical performances (phế phật thuat), which have come from China, India, and from other races of the Indo-Chinese plant population, or from China. No one has yet succeeded in finally deciding what belongs to each of these various influences. They all co-operate in perpetuating the old animistic beliefs, which have remained very deep-rooted in Annam as elsewhere.

1. Animism.—To the inhabitant of Annam life is a universal phenomenon; it is the common possession not only of men and animals, but also of things—stones, plants, stars, and of the elements—earth, fire, water, wind, etc.

To all he gives a sex and a rank. The sun is male; the moon, his wife, is female; the stars seem good fortune and bad from on high. Then some animals have been anthropomorphized or even deified, which implies fear and at the same time reverence for them; e.g., in Annam they always speak of 'Sir Tiger' (ông Cốp). Hence that word which is so strange of the whale, the dolphin, and the tiger.

The Annamese not only admits that life is common to all existing things, but conceives of that life as an individual, which is collective, a complex of life, and groups, not in individuals. This difficulty in conceiving individualism is one which is not confined to the Annamese. It exists in almost all primitive races, and still continues among those of lower degree, as exemplified in the Acadian family. In cases of collective solidarity, the conception in groups has legal consequences. When a crime is committed in China, not only is the guilty one punished, but his forefathers, his descendants, his parents, his friends, and even his neighbours. In the collection of taxes, the upper classes in the community are always responsible to the treasury for the general crowd.

In addition to these ideas of universality and collectivity of life, the Annamese believes in the contingency and permeability of beings who do not form distinct categories, but can pass from one genus or species to another under certain conditions of space and time. Hence theriomorphism and totemism.

The elephant was born from the star Gioa Quang, the rabbit from the moon. A fox at the age of fifty can change into an old woman; at a hundred years into a lovely maiden, very dangerous to her lovers; at a thousand years of age, if he happens to die in a cemetery a human skull which fits his head, he may become a spectre, or a being similar to the Hindu prana. So can a dog grow into a serpant.

The fish, after a thousand years becomes a dragon, the rat at the end of a hundred years a bat, and the bat after another hundreds a swallow. Any one who can catch it at the time of its metamorphosis and eat its flesh becomes immortal.

Tigers' hairs may give birth to worms. Even plants are capable of similar transformation: the chuôí tree (a kind of banana), on reaching a thousand years of age, becomes a blue goat. The people maintain that a banana tree (Ficus indica, Linnæus) which grew within the precincts of a temple near Hanoi, was cut down, became a blue buffalo. The ngô-dông (Eucalyptus serricolla, Linnæus) has the power of changing itself at night into a ghost with a buffalo's head, which steals men's garments, especially to plants and animals, are still more so to supernatural beings, and even to men. The fairies (bô tiên, many fô) often take the shape of butterflies, the geni of those men and monkeys. The mother of an Annamese king of the Trân dynasty (1220-1402) appeared in the form of a spider on the altar of the temple after first sacrifice to her images was being offered. Some sacrificial have a still more extraordinary origin. The origin of the heavenly bodies, the stars, sun, etc., is explained in the same way. Corn, rice, beans from grains of rice, with which they fill their mouths and which they then blow out forcibly into the air; others ride on a simple image of a horse, or even a donkey, which turns into a donkey and then change back to its original state.

In this reciprocal and continuous intermingling of the life of all beings, pairing cannot be determined or limited by species. The legend of the founding of Cố-loa tells of the union of a maiden with a white cock. Dinh-bô-Lanh, at one time a lapwing, surprised an immense assembly of the national Annamese dynasty in the 10th cent., is said to have been the son of a woman and an otter. These totemic legends enable us to understand such associations, as the appearance of clan, the clan of the Red Sparrow-hawks, assumed in semi-historical times by the tribes among which Annam was divided. The Annamese state, that, down to the 14th cent., the kings of Annam tasted their bodies with the representation of a dragon, in allusion to their legendary origin.

For a similar reason, but with a more practical object, the inhabitants of fishing villages used to fast themselves with the figure of a crocodile in order to establish their relationship with the numerous crocodiles of their shores, and to be spared by them. Others in the same way used to adorn their bodies with a serpent, in order to avoid being bitten by those formidable reptiles.

Union was possible not only between men and animals, but also between human beings and supernatural beings, geni, or vampires, especially as vampires of the Annamese, were looked upon as men who were to be better able to deceive the women they wish to possess. O-Jol, a famous personage at the court of the Hanoi kings, was, the legends affirm, the son of the genius of the Ma-la pagoda and the wife of Si-Donag, Annamese ambassador to the court of China.

The phenomenon of conception, in the popular beliefs of the Annamese, not only does not always preserve the identity of species of the two parents, but can even be accomplished without sexual intercourse between them. Nearly all the heroes of the semi-historical annals of the Annamese, who formed the result of miraculous fertilization. The mother of the assassin of king Dinh-Tien-Hoang, who ascended the throne in 365, became pregnant after dreaming that she was swallowing the moon. Another king was born from a fresh egg that his mother had taken from a swallow's nest and eaten. The legend abounds with analogous cases in which fertilization is due to spring-water, the touch of a handkerchief, the fall of a star, etc.

Another result of this absence of limits to beings and things is that everything that resembles a certain individual, in however small a degree, may at a given moment be regarded as the individual, and undergo the treatment that was to befall him. Here we come upon the spells often practised by the Annamese sorcerers. The elfy or the sign may replace the thing signified so effectually that they sacrifice to the genius of epidemics the elfy of the person whom they wish to harm. By analogous reasoning, they burn at the graves paper representations or even merely a list of all the objects (clothing, furniture, jewels, houses, etc.) that the dead man is supposed to take away with him.

Similarly, any particular condition is transmissible by contact, without regard to the person's own will. That is why a person who wants to avoid all misfortune has to keep constantly in the shade. A pregnant woman must be careful not to accept betel-nuts from a woman who has already had a miscarriage, under penalty of abortion. She must not eat double bananas if she does not want to have the birth to the person carrying the straw must avoid passing a field of rice in blossom; the rice would change to straw. They believe also in the contagion of death, and several parts of the funeral ceremony is solemnized by guarding the body from it.

Lost in the midst of the universal life which surrounds him, haunted by the terrible and manifold forms that life can take to destroy or to save him, the Annamese constantly feel himself insensitive. If he tries by sacrifices and offerings to gain the favour of the good spirits, he seeks still more to appease the malignant ones, under whatever form they appear, and to foresee, and consequently to
avoid all the misfortunes which may befall him. Hence the cults of the good and evil genius, of certain animals and of souls, the belief in magic and presentiments, and a whole series of prophylactic ceremonies before each important event in life, especially marriage and burials, and finally the divination.

2. Good Spirits.—In the first rank of good spirits is Độc-Cu’ôc, the one-footed Spirit, whose worship, the Annamese, asserted, was brought from Nañ-quant in China to Tonkin by a Taoist priest. He flourished in the first century B.C. but lived throughout the whole of Tonkin. Độc-Cu’ôc assumes the form of a warrior of noble bearing, brandishing an ax in his only hand, which is always represented in profile. His body, cut in two lengthwise, rests on a single foot. A prayer taken from the ritual of the spirit prays his virtues thus: 'The one-footed Spirit has only one eye and only one foot, but he is swift as lightning and moves in the world. He sees afar the evil spirits who bring plague, ruin, and misfortune. He calls to his aid the millions of celestial soldiers. He protects and avenge men. Thank you, one-footed Spirit, for this good or bad weather as he chooses, makes the sun to shine or the rain to fall, and cures all diseases.'

An inscription in memory of the erection of his temple in the hamlet of Vung-Quy (Tonkin) eloquently repeats these words: 'The one-footed Spirit is powerful; he protects the country. Everyone who receives an ax from him paves a golden way; he hovers on the clouds and scour the country, always present though invisible. By his favour the student is successful in his examinations, the farmer is assured of a good crop, the buffaloes are strong and active, the farmyard is prosperous, gold and silver are amassed in the coffers, there are no longer any poor people in the village. All this is due to the influence of the one-footed spirit, because he is pleased with our homage, and he is always ready to aid us in any emergency.' To obtain a favour from the one-footed spirit they trace a formula on a white paper, and place the paper on his altar with a small sum of money (generally equal to 1s. 6d.), where it must remain for one hundred days.

The one-footed spirit contains a series of formulas which, written in a certain way on paper or on shells, form precious charms for the most diverse cases: invisibility, toothache, barrenness, different diseases; they banish malicious powers, ensure the sex of a child during pregnancy, silence children who cry through the night, ward off nightmares and ghosts, prevent demons from entering the mouth of the celestial, when he is invoking the one-footed spirit, and from replying instead of him.

Độc-Cu’ôc can, moreover, transfer a part of his power to small figures of straw, wood, or paper made by his priests. These figures can then go to the places to which they are sent, in a dream or in an illusion, which harm as powerful animals, and objects chosen for their vengeance, who are not long in being struck down by death, disease, ruin, or destruction. In cases of disputes among the community, the priest of the one-footed spirit can, by his exorcism, constrain the demons to drive the parties to satisfaction and to agree in a rough wooden or straw doll, which is then burned.

Around the one-footed spirit crowd legions of good spirits (thian bânh), who preside over the events of life in general. The tutelary genii of the village (v˚n kî) and the patron guardians of the home and the family (thian tik) are also worshipped. These spirits are infinite in number, as every action and even every object is, for the Annamese, placed in dependence upon a superior power, whose favour they must win, especially to thwart the continual temptations of the nà, or evil spirits.

It is for this reason that, during the first three days of a new year, when all Annam is rejoicing, each Annamese workman, after worshipping his ancestors, whose spirit bottle is salted, seeks to gain the favour of the spirit who presides over his special work. The peasant offers a sacrifice to the spirit of the buffaloes in the stable; the fisherman, a side of cooked rice, a little salt, palm-sugar, incense, leaves of gilt paper, and a cake to the spirit in the rice field. The shape of these cakes varies according to the sex of the animal. The female buffaloes' cakes, which are square and flattened, contain other offerings for the intended, for the male are intended for the persons who are supposed to carry in the womb. The buffaloes have three heads, each one with a mouth, and each mouth is but little of each offering, the remainder being left to nourish the cows. Then each buffalo is led out to trace three furrows.

Thus also the blacksmith sacrifices to his forge, or rather to the spirit of his forge, after having adorned his fellows with gilt paper. The linebrower sacrifices to his linebrow, the hunter to his nets and mares, the merchant to his hampers, and the sailor to the sea. One must not forget the heartstones and the line jug, which are also covered with gilt paper. The line jug is filled to the brim so that it may have abundance, and that in return its master may be able to do the welfare of those who buy from him.

Invocation and sacrifice take place also when in a new house the head of the family installs the line jug, whose contents will be used as an offering of the nà, the misalliance of the natives of the Far East—beetle-pellets. In it the guardian of the house (chén) is incanted. Its duty is to forebode the death of one of the members of the household, whom they wish to see crowned by hoary hairs, as the jar itself is with lines. When, in the morning of all precautions, it breaks, a new one is bought, but great care is taken not to throw the other into the aboriginal. His spirit would dearly avenge such irreverence. They go and place it with great ceremony on the branches or trunks of certain trees near the pagodas, either to serve as an offering to the wandering souls who come to take shelter in these trees, or to be delivered there to a spirit which is powerful enough to prevent it from taking vengeance on the inmates of its former home.

When hunters catch an animal in their nets, they kill it and then pull off a part of its left ear, which they bury in the spot where the animal was caught, as an offering to the Spirit of the soil (Thô Thân). Then the prey is flayed and dismembered. Its heart, cut up into small pieces, is cooked with burning coals. These pieces are then laid as a cake upon broad leaves on the ground; and the chief of the hunters, protruding himself four times, informs Thô Thân that such and such a band of men from such and such a village has taken the liberty of depriving him of his prey. The heart is then consumed.

The animal is then divided among all the hunters.

In fields of eatable or unmarketable plants (cucumbers, water-melons, etc.), they often erect a miniature triple chapel of straw to the Lord of the earth (Thô Chu). In this way the field is placed under the protection of the spirit; and thieves are far more afraid to come near it, for it is Thô Chu, and not the owner, that they dread having anything to do with.

For the same purpose of protection, travellers, on leaving the river for the sea, make offerings of gilt paper at the mouth of the river, in order to secure the favours of the sea-spirits. Those who travel by land throw them at the turnings of the road to avoid accidents, especially the teeth of the tiger.

There are also female spirits (chû vi), who inhabit forests, springs, thickets, and certain trees. At their head are the five great fairies:

1. Thuy-Tinh-công-Chúa, 'Star of the Waters.'
2. Quinh-Hoa-công-Chúa, 'Hortensia Flower.'
3. Quinh-Tinh-batkun-flower,' 'Tutelary Flower.'
4. Bach-Hoa, 'White Flower.'
5. Hoàng-Hoa, 'Yellow Flower.'

Their goodwill is secured through the intermediaries bà-dông, or priestesses, who correspond to the sorcerer-priests of the evil spirits.

Then the people also render regular worship to the Bà-Dâc-Chúa, or the Three Mothers, whose three images, dressed in red, are set up in a side chapel in nearly all Buddhist and Taoist temples. They represent, according to the Annamese, the Spirit of the Forests, the Spirit of the Waters, and the Spirit of the Air and Sky.

3. Evil Spirits.—Far more numerous and more dreaded are the supernatural powers, which, for the Annamese, inhabit all space. They include the whole of the Ma and the Qui, evil spirits or devils, hobgoblins, vampires, and ghosts, which are commonly admitted in Annam, and are reported to be the cause of the millions of the wandering souls of the dead.

Physical and moral pain, epidemics, ruin, and accidents come from them. There is the Spirit of Cholera, of Small-pox, of Bad Luck, etc. It is for this reason that Annamese believe each of their misfortunes means to apprase them, and are far more deeply concerned about them than about the good spirits. For, whereas the good spirits harm human beings only when they are offended or slandered by them,
the evil spirits are incessantly trying to work mischief. They can be disarmed only by means of sacrifices, or rendered harmless by the protection of holy goods.

In the first rank we must place the worship rendered to the spirits of the autochthonous (chû' ngu), the original possessors of the soil, which wander about famished, because their descendants are no longer allowed to own the land, and look with a jealous eye upon others possessing their goods. Not only are they granted a share of the oblations which are made at stated times by the bonzes, sorcerers, or private individuals, but, every year each landowner, in one of the first three months, offers a sacrifice to them. And if unforeseen evils befall the farmers or their cattle, if they are the victims of misfortune, it is evident that the anger of the chû' ngu is affecting them. They must appease him by a sacrifice (generally an expensive one), in which they buy or hire his land from him, in order to live peaceably with him. With the help of a small [chart or diagram] showing the arrangement of the spirit, and making known every detail of his appearance, they try to do it in such a way as to please him and make him sign the contract of this mystical sale, the amount of which they pour out to him in imitation paper money. Henceforward the landowner has nothing to fear from the chû' ngu.

Of a more dangerous kind are the Ma-lai, 'wandering demons,' who have all the signs of life, and often assume the form of a pretty girl; but at night their head, followed only by the complete alimentary canal, is seen separated from the body and going about feeding on excrement and taking part in a kind of infernal 'witches' midnight orgy.' The prosperity of a house which has been entered by a Ma-lai, or 'swimmer,' is affected.

It is well also to guard against the Ma-trov or ignes fuiti, which, thin and worn, wander through the fields quite naked, with dishevelled hair, walking a foot above the ground; and also against the Con-linh, or spirits of young maidens who have died prematurely—spirits which are of the most malicious kind. They hide in trees, from which they are heard laughing with a weird laugh and calling The passer-by who is so impudent as to answer their call feels his soul fly from his body and becomes mad. One must also beware of the Ma-gio, or spirits of the drowned who have not received burial. They sit in trees at night, and try to snare either the passer-by or swimmer who goes to sink. It is the Ma-gio that sends the fatal cramp to the swimmer, which paralyzes him and causes him to drown. The best means of appeasing this spirit is to call back the soul in order to construct a tomb for it (châu hồn đáp nơm).

This ceremony consists in re-making a body for the person who has disappeared, and in re-uniting the soul of the drowned person to this body by means of magical ceremonies, after which the funeral is celebrated. This artificial body, whose bones are made from mulberry branches, its entrails from five threads of different colours, its flesh and visceras from earth and wax, and its skin from flour, is dressed in the most beautiful clothes of the dead person, and put into a coffin. The ceremony of fixing the soul in this new body requires the aid of a sorcerer and of a medium who is provided with three sticks of incense and a coat that had belonged to the deceased. These two men go in a boat to the real or supposed place where the person was drowned, taking the stretching out the hand in which he holds the coat. If this hand begins to tremble, they conclude that the soul of the dead man is present in the coat. The medium then jumps into the water, and after a time comes up, saying that he has succeeded in getting possession of the soul of the drowned man. They then put on the coat that was used in the ceremony into the coffin, which is then shut, and they proceed with the burial.

The Ma-lon, or spirits of soldiers who have died in the wars of the Empire, are recognizable by their hurried and unintelligible whisperings. The Magiû, Ma-dûn, Ma-dào, Ma-rin, or phantoms which make themselves felt in the night, are the ring and alarm round about the traveller, talk in front of him until, struck by illusion and exhausted with following the phantoms, he falls in some lonely spot to which he has been lured. A magical ceremony is necessary to bring back life or reason to the victims of these phantasmagoric perversions. The Ma-tròt-tròt, or souls of beheld persons, are the cause of whirlwinds. The Annamese scare these demons away by calling out 'Chém! Chém!' (I behold you). The Ma-vân-vong, or souls of those who have hanged themselves, try to entice to another attempt at suicide those who have been saved when attempting to hang themselves. For these the charm is broken by putting the string, not by undoing it. If this precaution has been omitted, the danger may still be obviated by a ceremony in which a Ma-thân-vong is represented with a rope in his hand. They burn this little figure, and then the rope of the hanged man is cut in pieces.

The Con-hoa, the souls of those who have perished in fires, glide under the roofs in the form of bluish smoke on the anniversary of the day of their death, or at fixed times, and cause spontaneous fires very difficult to extinguish.

The Con-sêc, or vexations spirits, are especially fond of tormenting young children, in whom they cause frights, convulsions, head eruptions, etc. Twelve in number, they each represent one of the spirit world.

These demons, lying down on people when asleep, give them nightmare.

It is well to beware also of the Ma-dan, gigantic ghosts of buffaloes and elephants, and especially the Che-dôn, or abandoned souls, who, having died a violent death, return to torment the living. They are appeased by offerings of leaves of imitation gold or silver, or counterfeit bank-notes. The wandering souls which have not had burial take shelter by 'millions and tens of millions' in the shade of shrubs and trees. At night they come in crowds to attack people passing on their way, and they send misfortune to those who fornicate. So large is the number of them that their lot, that small temples of wood or plaited bamboo are erected for them, or small stone altars, sometimes formed simply by a stone at the foot of a tree. The individual whose business is in danger tries to gain the favour of these miserable souls by oblations, which almost always consist of paper representations of bars of gold or silver,* paper shoes, and rice. The rice is scattered broadcast to the four cardinal points, while the offerer says: 'This is for the miserable souls who wander among the clouds, at the mercy of the winds, and whose bodies have rotted by the wayside or under the water. Let each single grain of rice produce one hundred. Let each hundred produce ten thousand, and let the wandering souls be satisfied.' The souls then hasten forward under the supervision of two spirits, one of which is called a bell, while the other, sword in hand, sees to the just division of the rice among the hungry souls.

4. Animal-worship.—From their ancient animal-cult the Annamese have retained the forms of animal worship, a veneration born of fear, for a certain number of animals. The animal most dreaded is the Ong Còp, a title of respect equivalent

---

* The bar (mèn) is a parallelopedial ingot used as money. The bar of gold (sơn vàng) weighs 200 gr., and is worth 18,880 francs. The bar of silver (sơn bạc) weighs 600 gr., and is worth 4,800 francs.
to 'Sir Tiger.' This awe-inspiring feline is worshiped in many places, and has special priests or sorcerers, the thây-dông. Small stone temples are erected to him, provided with two altars, the one a little below and the other a little of the other. On the lower one a huge lamp burns in honour of the spirit who is the real patron of the temple. At the foot of this altar, Ông Cop is painted on a screen, several times as large as the object of a watch. Sometimes the temple has nothing on its altar except a stone tiger.

The thây-dông, by means of a medium called dòng, enter into communication with the spirits, and in their name exorcise evil, cure, give advice for the success of such and such a matter, etc.

This tiger, although so greatly respected, is nevertheless, in practical life, hunted with great keenness; and in their name, exorcise evil, cure, give advice for the success of such and such a matter, etc.

To excuse the unreasonable conduct of this, they imagine two kinds of tigers: those which feel on the outskirts of the village, and the two kinds of tigers: those which feel on the outskirts of the village, are very much revered, especially by the maritime population. He is believed to save shipwrecked sailors by carrying them on his back. They also give him the title of Ông, 'Grandfather,' My Lord,' 'The Venerable.' They make use of a periphrasis to announce his death, or say that he is dead and has received the official name of 'Spirit with the jade scales.'

The dead body of a dolphin encountered at sea is a presage of good fortune. It is taken ashore and buried with ceremony. The captain of the vessel that discovers it becomes the 'son of the dolphin,' conducts the obsequies, and those he presided over at the burial of the dolphin, being a guarantee of prosperity for the whole village. Every boat, too, during its voyage, is on the lookout for the death of a dolphin. A village which possesses several dolphins' tombs may give one of them to a less fortunate village. The transference takes place with all the honours, and the consent of the dolphin has been obtained in a ceremony with sacrifices.

Ông Ti, 'Sir Rat,' is invoked both by farmers, that he may not devour the rice which is being sown, and by sailors, that he may not gnaw their boat of woven bamboo.

Ông Tôm, 'Sir Silk-Worm,' is treated with the greatest deference during its breeding, in order to counteract the great mortality of its species. To Ông Chá, 'Sir Stag,' the peasants offer sacrifices, and beg of him not to devastate the fields of rice which they have planted in a newly-cleared corner of the forest. He promises to go to the valley every right to regard this very place as his home.

Ông Chang, 'Sir Boar' or 'Sir Wild Buffalo,' is imprecated in the same way to spare the harvests.

Serpents are the object of a worship which the fear which they inspire. They and the tigers are the great animal perversions dreaded by the Annamese.

To meet a serpent is a bad omen. If they succeed in killing the serpent, they are careful not to cut off its head with a knife, since it would escape and pursue them. So also, when holding a serpent by the tail, they must not let it wriggle about the air, lest it would immediately grow on it. Pythons fat (con tribo) makes a very good depilatory.

Certain millets feed in their mouths a bright stone, the possession of which renders a person invulnerable to serpent bite.

The leech is the symbol of immortality, because it is indestructible. When killed it lives again; when cut in pieces it multiplies; if it has been dried, it becomes re-animated whenever it is put into water; if it is burnt, from its moistened ashes is born a crowd of young leeches. There is only one way of getting rid of it, to put it into a box along with some hemp; then it disappears. There is reason to beware of the leech; for, if it put into a horse's ear, it creeps into the brain, multiplies in it, and devours it.

Fowls have the gift of reading the future and foreseeing misfortunes. For this reason, they are esteemed as bad omens.

The little gecko, or ceiling lizard (Hemidactylus mammatus, Dum. and Bib.), is dreaded because of its bite, which causes fatal suffocation. To avoid the consequences, the person must catch a cornelian bird from the first one he meets, rap it in water, and swallow the beverage thus obtained.

The skink (Scincus rajanus, Shaw) also causes a serious wound that may be cured by drinking the blood which escapes from a black cat's tail, the end of which has been cut off. When cooked, the skin is an excellent remedy for asthma and quinsy (mumps) in pigs.*

A maid deposit bites which are fatal, unless some one manages to pull the three dog hairs that grow soon after on the bitten man's head; then he may recover.

Certain vegetables, material objects, and even the elements, require reverential treatment, for they may be receptacles of a mysterious power.

When a junk or a house is built, the sorcerer is sent for before it is occupied, and he exorcizes the spirits which might still be dwelling in it, and decays wood and might bring misfortune.

Before putting a new junk into the water, the sailors sacrifice to Ông Hà Râu, 'Lord of the River.' If, during their voyage, they notice in the middle of the water a tree-trunk which might knock against and capsize their vessel, they immediately sacrifice to Ông Gê, 'Tree-Trunk.' They treat Ông Thợ, 'Sir Wind' with equal consideration. If Annamese children, during their play, want to reach the fruit on a tree, they throw their sticks up at it and shout 'Sir Wind!' to help them.

The possession of an aerolite is a guarantee of good luck. Aerolites change the colour of evil spirits, which are terrified at their fall, and which at each peal of thunder run to take shelter under the hat or umbrella of the people they meet. Accordingly, every peal of thunder the Annamese take care to raise their hats or umbrellas a little to guard against their intrusion. Aerolite powder mixed with water keeps children safe from evil spirits. In smallpox it ensures regular and favourable suppression.

The skull of a male (more especially of a child or a youth) who has been stricken by lightning, which afterwards has had formulas recited over it, becomes a useful charm, and even a very good medium.

5. Priest-sorcery.—Beliefs so numerous and so entangled produce very complicated cults. All the various kinds of priests have different requirements, and in order to secure their favour it is necessary to be fully aware of what they desire and of the offerings which they prefer. The common people are quite content with the sorcerers, mediums, magicians, exorcists, and sacrifices. Hence arises a body of special priest-sorcerers among the Annamese.

The most numerous class is that of the thây phê thây, 'those of amulets and purificatory

* Needless to say, the virulence of the hemidactylus is a fact, and the skink seldom bites.
1 The length of time of nearly all magical occurrences among the Annamese.
waters, who have no regular temples, and who, when they go home, take their altar and the cult-objects with them. Some of them are the celeb- rates of deities or spirits selected by lot. They officiate there at certain anniversaries, or when a person is imploiring the intervention of the spirit of these temples.

Another class, of a higher order, the thin獲得 or thin-dang, practise only in their homes. Having a very numerous clientele, they are often able to build stone temples in which to officiate, and which are their own property. They are assisted by a deity or “superintendent,” who acts as a medium between the invoked spirit and the petitioner; for hypnotism, real or feigned, plays the chief role in these cere-monies. All these sorcerers derive their power from certain good or evil spirits, to which they have dedicated themselves, and which, after being raised, remain in direct communication with them, possessing them and speaking through their voices. The sorcerers can not only command the spirits, but are able to influence the normal order of occurrences in nature. They raise the dead, cast lots, practise spells, and send telepathic suggestions to persons whom they wish to employ against others. They can instantaneously change the nature of substances, and substances, transform a savoury dish into filth, or change a dog into a cock; they can send diseases, defects, or pains to whomsoever they choose.

They can also employ their power to do good. It is they who cure illnesses, exorcize persons pos-sessed and houses haunted by demons, cause rain to fall or to cease, and find out treasures. They do not all have an equal amount of power, and whether they can cure will be decided by the skill of the sorcerer; the only thing one has to do is to set a more powerful sorcerer against him.

The sorcerers still manufacture love philtres and talismans, for ensuring success in love, from the bodies (which are difficult to get) of two serpents that have died while fighting with each other, and one of which has been half swallowed by the other. To achieve the same end the ordinary people make use of less complicated charms, which consist in scourching in a pan the whole or part of a garment belonging to the person by whom they wish to be loved.

Some sorcerers are regular spell doctors, who perform their spells by the use of talismans (nuay-nuay). They themselves are called thin-naoy, and have great skill in killing, causing illnesses, and bringing about good or bad hair. They can minister the tubercules in their garden or house, or in some isolated place, and then go and choose the one that they need at the appointed hour. While uprooting it, they recite incantations over it, informing it of the cruel design to be accomplished and of the hour at which it is to take place. Then, either directly or by means of a third person, who in most cases knows nothing about the part which they are making him play, they endeavour to bring the least particle of nuay into contact with the enemy whom they wish to harm. The latter is immediately struck by disease, and may die unless he happens to get the better of it, or unless the hatred of the avenger does not go the length of death. Only another sorcerer can cure him.

Any sorcerer who thinks that he is thin-naoy are not the only persons who threaten the safety of the people; that there is in existence some families of professional poisoners, who, on various pretexts, slip into their houses and poison their provisions, especially the water. These persons poison from filthiness, because one of their ancestors committed the sin. His descendants must imitate him at least once a year, to prove their thoughtfulness and skill. If they did not succeed, they would have to sacrifice one of their own kin. That is the reason why, when their odious practices have achieved the slightest success, they sacrifice a dog or turtle or some other small creature. On account of this fear, the Annamese take great care that strangers do not get near the family provisions, especially the jars where they keep the water.

Fortune-telling.—The Annamese have also fortune-tellers (thin-bôy), who are nearly always blind, and rather poorly remunerated. They cast many lot in the same way by opening certain positions, heads or tails, determines the prediction.

In the temples the divining logs and rods may be interrogated. The logs are two pieces of lacquered wood, like corydolens, which give an affirmative answer when cut at the same side, and a negative if the other way.

The rods, about thirty in number, have figures in Chinese characters, which, on being referred to a horoscope, give the reply of destiny. Other oracle books are regularly issued by some of the temples.

The Annamese practise chiromancy, physiognomy, and phrenology. Several fortune-tellers, instead of examining the hand of the querist, obtain their predictions from the configuration of their nasals, or herm’s foot. Others tell fortunes from the lines of the hand, the lines of the face, and the protruber-ances of the head all at once.

7. Superstitions.—Is it necessary to add that the Annamese believe in signs and omens? The following is a list of the most common superstitions:

They must begin the year with a lucky transaction if they want to make sure of ending it in luck. It is for this reason that during the first days of the year shopkeepers sell cheap in order to sell much, and thus guarantee a regular sale all the year.

On the other hand, they all shut their doors until midday on the first of the year, in order to avoid seeing or being visited by people bringing bad luck.

Meeting an old man is a sign of failure.

Meeting a young woman has the same significance. If they have come out of business, it is wise, after such an omen, to go back to the house.

A tradesman who enters a house where there is an infant less than a month old is followed by a misfortune for three months and ten days, unless he wards it off by burning a hand-ful of salt immediately on his return home.

Every son whose father has died a violent death is threatened with the same fate if he does not appease the evil spirits. If a person who weeps over an ancestor enters a room where a husband and wife are lying, he becomes totally blind.

The risk of being stung by a wasp is a bad omen for work and prosperity. If it gets blackened and swatters, beware of thieves.

Numerous gossamers announce a bad crop; in the eye, coming blindness.

A singing fire means discord in the house.

To walk on paper while singing on it is in itself a serious fault. If there are Cambodian, Shan, or Arabo-Malayan characters written on it, misfortune will certainly follow; and if it is a pregnant woman that commits the fault, she will miscarry.

A lamp that goes out, a broken cup, and girls or women look-ing into a gambling-house without playing, are omens of loss for the banker.

When young people of either sex who have not arrived at the age of puberty touch the unformed flowers or fruits of mango or banana trees, they cause them to fall.

When trees persist in yielding flowers, it is necessary, in order to obtain the fruit, to break on the fifth day of the fifth month, to cut them down. Every year some cuts are made with a hatchet in the mango trees to persuade them to produce fruit.

A lowest flying low, a cawing crow, and a cracking frog, are all signs of rain.

A buffalo coming into a house, a bird flying round about it, and a spider a constant companion of a child, are all bad omens.

A fish leaping into a boat signifies a good catch, unless it is immediately cut in two and thrown back quickly into the water.

Fishing for the porpoise, the messenger of the demons, roases their anger.

The cry of the khôch bird (Cygnaëtis minuta), heard in the East, foretells a visit; in the West, murder.

The cries of the geckos, 'Tôkkî! Tôkkî!' an odd number of times are of good omen; an even number, of bad omen.

The cry of the musk-rat foretells a visit that evening or the following day.

The prolonged whining of dogs signifies a calamity.

The crowing of a rooster at midnight gives rise to fear that the daughters of the house will become ill.

The cry of night-birds announces illness or death.

The grating or cracking of inanimate objects foretells their future. If it is a coffin that cracks, it means that it is going to be bought. If it is a barrel, that it is to receive money.

Do not open a safe during the night for fear of attracting thieves. Do not open it on the last day of the year, or the first three days of the next year. It is a sign of expense.

When a sword appears in a dream, if it is to be kept, that one will soon have to buy another.

When the wolf barks instead of the bell, it means that an execution is near.

Guns that are loaded cause the approach of the enemy. Guns are, besides, regarded as being endowed with a sort of life. The Annamese sometimes think ill, and give them names.

8. Diseases.—It is quite natural that, in a country where diseases are supposed to result from the malvolence of a spirit or the vengeance of a sorcerer, the popular medicine should consist of empirical remedies and magical performances.
ANNAM

543

The doctor and the sorcerer attend the invalid in turn, and it is not the former that is most listened to. The people try to prevent misfortune and its visitations by amulets and sacrifices to the spirits. If, however, in the end, they have recourse to the doctor (and they do not pay him unless he succeeds in curing the patient); and in grave cases they nearly always call in the sorcerer instead.

The two most terrible diseases that the Annamese have are smallpox and child-chorea. Quite special talismans are needed against the demon of chorea, those which serve in ordinary illnesses being insufficient. The frightful rapidity of the disease does not allow of lengthy therapeutics.

Smallpox, which is even more frequent, is perhaps dreaded still more. It is never spoken of except in periphrases, and its pastures receive the reverential designation of Ong. Smallpox is attributed to evil spirits, and especially to the souls of persons who have already died of smallpox (Con na dâu). The latter are responsible for all the serious cases. The mild cases are due to predestination. Whenever a sick person is attacked by smallpox, he is isolated, not from fear of contagion, but from fear of the evil spirits which have taken possession of the invalid. Nevertheless, especially if a child is the victim, the family never leaves the sick man, and they surround him with a net to prevent the approach of the Con na dâu.

When the disease takes a serious turn, many of the physicians abandon their patients, not so much, perhaps, to avoid attempting an impossible task, as to be safe from the anger of the Con na dâu. In fact, one of their proverbs says: 'If you cure smallpox, it will have its revenge; if you cure your patient, it will pass over to you.' It is believed that the children of doctors die from the smallpox from which their father has saved others.

During times of epidemic, if a family has already lost a child from smallpox, they are afraid that he will come and take away his surviving brothers and sisters, and they sacrifice at his grave to prevent him from leaving it. Amulets and witchcraft are the only cures for smallpox.

During the course of the illness they place under the bed of the smallpox patient a ci ré, a fish with a smooth green skin, of the eel or the carp family, which is believed to be infested with the venom of the smallpox until it stings with it.

In order that the erythematous stage may pass quickly into the pustular stage, they sprinkle the patient with a mixture of earth, the patient eats shrimps and crabs. On the other hand, when desquamation is complete, they bathe the patient in order to help the peeling-off process. Vermicelli is expressly prohibited, for it would change into a multitude of worms in the softened liver and lungs of the patient.

So also, if the smallpox patient wishes to prevent a relapse when convalescent, he must avoid walking barefoot on hens' dung.

Lastly, when smallpox (or any other epidemic) is raging, everybody sacrifices to the crowd of malignant spirits known by the generic name of quan-tông, the primary cause of all ills. For these sacrifices, at the beginning of the hot season, when the death-rate is highest, they manufacture or buy paper figures representing the people whom they wish to be saved, and burn them in the village square. The offerings intended to appease the evil spirits are placed in little paper boats, which they send off on the backs of the god of the sea.

9. Birth.—The Annamese, who are a very prolific race, are anxious to have numerous posterity. They try above all to avoid miscarriages, still-born children, and infant mortality. In their eyes still-born or prematurely born children are more special spirits in short successive incarnations, denoted by the name of Con lon (entering life). The mother of a Con lon is considered contagious. No young woman would accept a betel-nut offered her from them. They even avoid speaking about her.

Successive miscarriages are believed to be re-incarnations of the same spirit. In order to get rid of this evil influence, a woman who has had one or more miscarriages is about to be confined again, a young dog is killed and cut in three pieces, which are buried under the woman's bed; and with the blood of the dog amulets are traced, which are taken to the future mother.

The evil spirit which presides at these premature deaths is called My cong, also the spirit of abortions. It is represented in the form of a woman in white, sitting in a tree, where she rocks her children.

To drive away this demon from the body of the pregnant woman, they exorcise it. For this purpose they make two small figures representing a mother with a child in her arms, and burn them, after the sorcerer has adjured the evil spirit with threats no longer to torment the family which is performing the exorcism.

When a woman is pregnant, there is a very simple way of determining beforehand the sex of the child. Some smear the woman, and she turns to reply. If she turns to the left, a boy will be born; if to the right, a girl.

At the time of her confinement the woman is subjected to a special diet of dry salted food, and a fire (âm bôi) is kept burning under the bed—a custom which is common to all the Indo-Chinese. They invoke the twelve goddesses of birth and other deities.

If the parturient woman is in danger, the father prostrates himself and entreats the child to be born. Immediately after the birth the young mother is trunkled under foot by the matron who has been attending her, and then fumigated and washed to take place.

The part of the umbilical cord that is close to the section is preserved. It is, according to the Annamese, a powerful fœlbrige for the young mother, and they then fix the prohibition post (con khâm) before the door. It is a bambou cane, on the top of which is placed a lighted coal, the burning side turned towards the inside of a boy, towards the outside for a girl. It gets its name from the fact that it prohibits from entering the house women whose confinement have been difficult or followed by accidents, and who might bring bad fortune.

Thirty days after the birth, during which the mother has been isolated, all the things belonging to her are burned.

Various ceremonies then take place, with offerings of fowls, bananas, rice, etc., to thank the goddesses of birth, and afterwards to give fluent speech to the child. They take special care not to pronounce any words of evil omen, as, e.g., speaking of illnesses, among others of thrush, for fear of giving it to the child. They also avoid frying anything in the house. That would cause blisters on the mother and the newly-born child.

As it is not quite customary to enter the room where the mother and the child are lying, each member of the family, in order that the child may make his acquaintance and not cry on seeing him, dips a particle of cooked rice in a little water, which is then given to the child.

Towards the end of the first month after the birth, they sacrifice to the birth-goddesses and give the child a new name. As far as possible, this name must never have belonged to any member of the father's or the mother's family. The rice that is offered on this occasion is tinted in five colours: white, black, red, blue, and yellow. Each of the invited guests presents a gift to the child.

The child that sucks the milk of a pregnant woman soon dies (of mesenteric atrophy), because that milk is supposed not to have reached its nativity.

It is supposed that, on awakening in the morning, a person's bite is venomous, though it ceases to be poisonous when the vapours which cause the venom have passed away. In order to avoid such a bite, the Annamese mother does not suckle her infant until it cries.

When a child remains sickly and difficult to bring up, to battle the evil spirits which are woman without the consent of the parents pretends to put to the spirit of the heart, or to the sorcerer, or to the Buddhist bonze. It then receives another name and is re-sold to its parents, as if it were a strange child.

When the child is one year old, a fresh sacrifice to the birth-goddesses takes place. Then they
spread out playthings and tools before the child. From his choice they infer his future aptitudes.

Do not hallucinate.

When a child is subject to hiccough, they stick on his forehead the end of a beet-leaf bitten off by the teeth.

When a child has been taken away at any rate, they make a stroke or a cross on his forehead with a cinder from the hearth, so that the spirit may protect him from the evil spirits during the journey.

When they cannot take a child under seven years of age away of the hearth, they stick a little wax on his head in order that he may not forget his parents.

10. Marriage.—Marriage does not admit of so many magical rites. But when a marriage has been arranged and presents exchanged, the engaged couple consider themselves as married; and if one of them were to die, the other would mourning.

Misconduct of the girl before her marriage is strictly forbidden. In case of pregnancy, she is compelled to name her seducer. If he denies his guilt, he is retained until the birth of the child. A personal proof by an old woman of this grace, which is called thing man. They link one of the infant's fingers with one of the suspected person's, make a slight incision in each, and catch the blood in a vessel filled with blood clots; the Mana of the deceased accuses it is declared innocent; if they mix, he is guilty, and receives punishment.

ii. Death. —Funerals are as complicated as they are long and expensive. That is why certain families are not able to celebrate them until five or six months after the death, and are obliged to inter their dead provisionally.

The funeral rites include the putting on of mourning garments, and the beginning of the lamentations. At the head of the funeral procession which conducts the dead man to his last resting-place walks the bonze; next come men bearing white streamers, on which are inscribed the virtues and the name of the deceased; next, under the shade of a large umbrella, the hearse of the soul, a small winding-sheet which is supposed to contain the soul, sometimes replaced by the table of the deceased; then, in grand funerals, a puppet, dressed in beautiful clothes, representing the deceased; and last of all the hearse, followed by the family and friends. All along the road they throw gold and silver papers representing money, to attract the attention of the evil spirits and secure an uninterrupted passage. The coffin, after being lowered into the grave, is not covered with earth until the sorceror has ascertained, by means of the sign of the cross, that it is dead for it. A lengthy and pompous sacrifice, which only the rich can afford, terminates the ceremony.

Fresh sacrifices take place after seven weeks, then after a hundred days, one year, two years, and twenty-seven months after the death. About three years after the death, the corpse is exhumed in order that its bones may be enclosed in the regular tomb, after which there is an anniversary sacrifice in a ceremony in which the burn a copy of the imperial diploma conferring a posthumous title, and a new ceremony, of Buddhist origin, called the great fast or deliverance of the souls, which will obtain for the deceased the remission of all his sins. The sacrifice concludes with offerings to the wandering and hungry souls.

ANIHILATION.—It has been a matter of dispute whether anything once brought into existence can ever be utterly annihilated; and further, that possibility being conceded, whether this fate is in store for the souls of the impotent wicked. Of these questions the latter is purely theoretic and academic, appealing only to the interest of the few; the second, like other eschatological problems, has been keenly and widely debated. It is a remarkable example of the divergence in point of view between East and West, that the destiny which in the one hemisphere has been propounded as the final reward of virtue should in the other be regarded as the extremest penalty of obstinate wickedness. Where the theory of annihilation has been found, the wisdom of the contractual acceptance has usually been due rather to a recoil from the thought of the eternal duration of future punishment, than to the influence of the positive philosophical and theological arguments which can be urged on its behalf. Distracted between an equal reluctance to accept the eternity of hell or to admit the universal salvation of all men, some thinkers have found a way out of their difficulty by questioning the truth of the exclusive alternative between eternal blessedess and eternal woe hereafter. Thus they have been led to examine a third possibility, viz. the complete extinction of the wicked. The discussion of the problem belongs to that region of thought where both philosophic and theology have a claim to be heard. Whether the nature of the soul is such that the cessation of its existence is conceivable, is a question which cannot be argued except upon a basis of philosophic principles; what may be the bearing of the teaching of the Bible and of the commonly received tradition of the Church upon the point can be determined only by exegesis and by study of the history of dogma.

1. The question stated.—Obviously, the controversy concerning annihilation, so understood, arises only among those who are at least agreed as to the fact of survival after death. It is, therefore, at the outset to dismiss from consideration those theories which represent death as being of necessity the end of individual being. We are not here concerned to rebut the opinions of the materialist, who holds life to be a function of matter, or of the pantheist, for whom death is the moment of the re-absorption of the individual life into the common fund of existence. Subsequent, however, to agreement as to survival after death comes the parting of the ways, according as men accept or reject the view that the life so prolonged is destined to continue for ever. That it must so continue is the opinion of the religious ascetic, on the other hand, the opinion of the soul's natural immortality, even in this restricted and legitimate sense, is considered a dangerous error, the root out of...
which has grown a false eschatology. In place of the conception of an immortal life belonging essentially and inalienably to the soul, he would substitute that of an existence naturally destined to extinction, except under certain specified conditions. As to this, Platonism is one of the noblest of natural immortality he bases his theory, and, though professing a positive creed and ready to give an account of it, he justly claims that, logically, the opus probatum of the idealist is not to be found rather in the truth than in the word of him who denies that doctrine.

2. The natural immortality of the soul called in question. — This is the place in which to state at any length or with any completeness the argument for the immortality of the soul. It will be sufficient if we so far indicate the grounds of belief as to render intelligible the objections which have been urged on the other side. Undoubtedly, the strongest force working in favour of a general acceptance of the belief in natural immortality has been the dominant influence of Platonism in the earlier stages of the development of Christian doctrine. ‘Our creeds,’ it has been said, ‘are the findings of various Platonisms.’ But even though that statement may stand in need of some qualification, yet it is true in the main of the belief in immortality. The conclusion of the Phaedo has been taken for granted. More than this, however, it is remarkable how comparatively insignificant are the additions which have been made to Plato’s argument since it was first constructed by his genius. In the reasons commonly urged to-day for belief in immortality we may recognize the main features of his proof, if only due allowance be made for the translation of his thought from the modes of ancient Greece to those of the present age. His arguments will therefore be remembered to be a formidable one.

It begins with an insistence on the fact that in nature there are no absolutely new beginnings, but an alternation from one state to its opposite, as from motion to rest and from rest to motion. Since, in the history of the soul, life and death are thus related to one another as alternations, the latter, he argued, cannot possibly be a state of non-being. Secondly, the soul’s capacity for the recognition of truth is compared with memory, and is brought forward as proof of its pre-existence, before union with the body. Hence may be inferred her continued existence after the dissolution of that union by death. Thirdly, the kinship of the soul with the ideas of which she is cognizant, and her identification with the idea of life, render self-contradictory, and therefore incoherent, the thought of her annihilation.

The three lines of Plato’s argument supply us with a classification under which the modern plans for a refutation may be arranged. The first division of his proof is the modern appeal to the principle of the conservation of energy. As in the physical world energy is neither created nor destroyed, but transformed, so it is inferred that psychical energy likewise must be subject to transformation rather than annihilation. Secondly, all idealist philosophers have found their most powerful argument for the immortality of the soul in the fact that she apprehends truth by means of powers which transcend the limits of time and space. The a priori forms of thought are taken as proofs of the immortal nature of the soul. Their existence, as well as the relation of the soul to the eternal and unchanging Ideas is parallel to the appeal to religion of the kinship of the soul with the eternal and unchanging Divine Being. Lastly, the practical and ethical value of the belief in immortality and in the prospect of future rewards and punishments has been keenly appreciated alike in ancient and modern times.

Is it possible along these lines to establish a certainty? — The belief is the outcome of the natural immortality. In that case, the theory of annihilation would be barred at the outset. But the required certainty is not forthcoming. However firmly convinced the student may be in his own mind of the fact of human immortality, he must nevertheless admit that, technically, the philosophical proof of the doctrine is far from reaching the standard of demonstration. The history of human thought unforces the admission. Even among the immediate inheritors of the Platonic tradition there were many to whom the opinion of the master on this point carried conviction. Still less was the tenet of individual immortality acceptable to Peripatetics, Stoics, or Epicureans. As a general statement, the world remained unconvinced, so to-day the philosophical arguments for individual immortality, however combined and expanded, are by no means universally admitted. If we take the argument in the order given above, we shall find that each in turn has been subjected to damaging criticism. Energy (it is retorted) cannot be destroyed, but it may be dissipated. What reason, therefore, have we for thinking that the force which underlies the individual life will be exempt from the general law of dissipation? If the premises of the idealist philosophy be conceded, there is, doubtless, a legitimate inference to the existence of an immortal element in the human spirit, but that conclusion does not decide the question of the destiny of the individual. Even the admission of the kinship of the soul with the Divine Being is consistent with the belief in the annihilation of individual immortality. The ethical instinct which demands that the injustice which has been committed in a former life should be rectified in the future—certainly by far the most powerful influence in inducing the belief in immortality—might be satisfied by the conception of a future survival not necessarily of the soul, but the soul, which was developed above as something of the very essence of man, as its essence is a being which is not without an aim, and there is the aid of revelation to prove the immortality of man—from Plato down to Franklin one appears to us to have failed deplorably. Wholly is a like opinion. That the natural immortality of man’s soul is discoverable by reason may be denied on the ground that it has not been discovered. Were it necessary, it would be easy to multiply quotations to the same effect.

That there is a living principle in man which cannot be affected by bodily death is a proposition from which no possible proof can be held dissuasory. That this living principle will manifest itself in a prolongation of the individual life is a conclusion for which there is a large measure of practical and philosophical probability, though no demonstrative proof. That the life, so prolonged will continue for ever is a tenable hypothesis, but it cannot be presented as an inference from universally admitted premises. Hence, in the absence of any proof of the conviction of natural immortality, the hypothesis of annihilation must obviously be given a fair hearing. They cannot be dismissed in limine on the plea that they are in contradiction to one of the accepted truths of natural religion.

4. Arguments for and against Annihilation.—The hypothesis of annihilation has in its favour the following considerations. — (a) Cosmological. — If the souls of the wicked are eventually to be annihilated, then the process of creation and redemption may be represented as destined to issue in unequalled success. When all that is evil shall have been finally removed, nothing will remain but light and love; whereas every theory of everlasting punishment involves the assumption that a state of impenetrable darkness will hang for ever over a portion of the universe.

It was maintained by some medieval theologians that the existence of this shadow would intensify by contrast the enjoyment of the light by the saved. A more humane age recoils from the suggestion of such a reason for the everlasting duration of misery, and indeed takes precisely the opposite line, holding that the happiness of the saved will not be in any direct proportion to the number of their race were suffering (cf. Roscoe, Dogmatik, iii. § 145). Even though evil be regarded as powerless and tethered, scrapped, and even with the capacity for assimilation and identity has not been diminished, yet its continued existence would seem to constitute a protest against the Divine Goodness—a manifestation of the perversity of Evil which will have in some measure frustrated the Divine intention. Advocates of the theory of annihilation maintain that the imperfection of the evil of evil in any shape gives the measure of the probability of the total destruction of the wicked.

(b) Psychological. — A further argument in the same direction is derived from the nature of the

* Enquiry, iii. 211 (pop. ed. 1870, p. 549).
*Thomas Aquinas, Summa, iii. exp. xiv. 1.
ANNIHILATION

soul and its relation to moral evil. All evil is self-destructive, and therefore tends to be self-destroyed. The wicked soul is not only at enmity with others, but divided against itself. And if the doctrine of natural immortality be abandoned, what is there to prevent the internal discord from achieving its end? The disintegration, and disintegration ending in the final dissolution of the individual being? That evil is in its essence negative rather than positive, has been a widely accepted theory. It would even seem to be the case that the soul of a complex, of a mere compilation of values, which identifies itself with this principle of non-being will become less and less alive, until it passes out of existence altogether. Sin, it has been said, may be regarded as a poison to which the vital forces of the soul must in the end give way by passing into sheer extinction "(cf. Gladstone, Studies subsidiary to Butler, 1596, p. 218).

(c) Practical. So strong is the tendency towards Pragmatism at the present day, that little objection to the acceptance of a theory is justified by an appeal to its supposed beneficial effects upon practice. To judgments of value, as distinct from judgments of fact, is assigned a supreme importance in our approach to the problem. If we maintain that the theory of the wicked, and eternal life for the righteous, provides (tell us) a legitimate appeal alike to the hopes and to the fears of mankind. Nothing can be a greater inducement to moral effort than the hope of acquiring an immortality otherwise unattainable; nothing a greater deterrent than the threat of doom of extinction. If capital punishment upon earth arouses in the highest degree the fears of the criminal, the thought of an execution in which soul as well as body shall be involved in a common destruction is sufficient to appall the most indifferent and the most hardened.

4. Counter arguments.—Counter considerations to the above arguments are not wanting, and have been brought forward with effect by critics of the theory. (a) Whatever plausibility there may be in the argument that sinners must cease to exist in order that the final state of the universe may be altogether holy, is greatly lessened by reflection on the obvious truth of our profound ignorance with regard to the whole problem of evil. Where the mystery is so impenetrable, it is well to remember that any inference must be hazardous in the extreme. To find a solution of the riddle of the world lies in the present fact of evil rather than in the questions concerning its origin and its end. If we cannot reach even an inkling of the solution of the mystery of evil, present though it be before our eyes and lodged in our own hearts, we are in no position to indulge in rash speculations as to the mode of its introduction into the universe, and the likelihood of its final removal therefrom. Though confession of ignorance is never a very acceptable conclusion to any argument, yet along this line we can arrive at no other result.

(b) Nor, again, does the argument from the nature of the soul produce conviction. Advocates of the theory of annihilation are too apt to confuse absence of proof with proof to the contrary. Right as they may be in questioning the demonstrative cogency of the commonly received arguments for the immortality of the soul, they go beyond the mark in thereupon assuming its mortality. The positive arguments which can be produced to prove that the soul is subject to decay are of the most curious and indirect. Ultimately they depend upon the assumption that the nature of the soul is complex, and therefore capable of disintegration. And that assumption is as much an unproved hypothesis as is the contrary theory of the soul's indiscernibility.

(c) Lastly, the utilitarian arguments in favour of annihilation suffer from the weakness inherent in all considerations of that type. In spite of the stress which Pragmatists lay on the will to believe and on the thought that the possession of values is a moral good which remains true that the claims of the pure reason in speculation cannot be disregarded with impunity. A strong sense of the beneficial effects which will follow from the acceptance of the theory, which inquirers to a diligent search for arguments pointing that way; it cannot dispense him from the obligation of finding them. Hence, though it be admitted that threatenings of hell fire and never-ending torments belong to a stage of theological thought now outgrown, and have ceased to exercise a deterrent effect upon sinners; and though it be granted that a crude presentment of the theory of universal restoration may deaden the conscience and encourage a lamentable slackness of moral effort; and though it were true that an obvious way of avoiding these opposite dangers might be found in the adoption of the doctrine of annihilation, yet such an abandonment of the hope of eternal life is one of the hardest problems of practical government to calculate correctly the deterrent effects of different punishments. A fortiori must it be a hopeless task to discover the comparative deterrent effects of the fear of eternal punishment and the fear of total extinction. If the theory of annihilation fails to commend itself on the grounds of reason, it can hardly hope to win general acceptance as a judgment of value.

5. Annihilation and Biblical eschatology.—In the literature of annihilation a great deal of space is devoted to the examination of passages of Scripture supposed to bear more or less directly upon the subject. In this article no attempt will be made to deal with particular passages and texts; it will be sufficient to point out why neither in the OT nor in the NT can we expect to find an explicit negative or affirmative answer to questions as to natural immortality. The Dualism of the Jews has formed the subject of prolonged and minute study, leading to some generally accepted results. Belief in a future life, beginning its existence in a little more than a dim and uncertain hope, developed under the stress of national suffering and disaster until it succeeded in establishing itself as an integral part of the national creed. Long as the process was, yet throughout its whole course the issue of the soul's natural immortality seems never to have been raised.

Nor is this surprising, when the conditions under which the belief grew up are recognized. Belief in immortality did not supersede a definitely formulated view to the contrary, viz. a belief in the soul's mortality. In early times the Israelites had shared the common Semitic conceptions of the destiny of man after death. They had looked forward, not to annihilation, but to a shadowy pure Sheol. It is only in the late and uncertain hope, the hope of a future life among the Jews that has formed the subject of prolonged and minute study, leading to some generally accepted results. ANNIHILATION

thought at work, the possibility of complete anni-
hibition is not contemplated in the OT. Hence, though it is true that in the OT there is no de-
claration of belief in the soul's natural immortality, yet it is equally true that there is no counter declaration of its possible extinction. The question whether the soul could or could not die entirely had not yet been asked. To attempt to find in the later writings of the Greek, especially in the time familiarized Jewish thinkers with the philo-
sophic aspect of the problem. So far there is no reason why any NT writer should not deal with the question of the nature of the soul's life, and with the possibility of its death. In some Apoca-
lyptic writings of earlier date than the Christian era, the annihilation of the enemies of Israel is foretold as one of the events of the last days (cf. Rev. xxviii. and Apoc. lixvi. 4-6; Charles, op. cit. pp. 240, 305). But in the NT the indica-
tions as to the ultimate fate of the wicked are of doubtless interpretation.

In the NT the situation is somewhat different. Contact with Greek thought and with the prevalent conceptions of the Hellenic "yes" and "no" is, and was, rejected, for example, by Justin Martyr (Trulp.
v.), by Tatian (ad Greeks, xiii.), by Theophilus of Antioch (ad Autolyc. ii. xxvii.), by Ireneeus (adic Herv. ii. iv.) , and by the apologists (see e.g. Tertullian, De Or.

...
tality. At the 5th Lateran Council in 1513 A.D. Leo X. condemned in set terms the opinion of the mortality of the soul, and the doctrine strictly commanded all and sundry philosophers, in their public lectures at the universities and elsewhere, to rebut and disprove that opinion. It was not until the crisis of the Reformation had broken through the fetters of speculation, that a theory of annihilation, not unlike that which had been expounded by Arnobius, was once again suggested and defended.

Annihilation in post-Reformation thought. — In this matter, as in so much else, Spinoza displays his originality and independence. His writings reveal a marked change of opinion in the course of his life. In the *Ethics*, *Meta-phys.,* he had upheld the doctrine of the soul's immortality on the ground that the soul being a 'substantia' could not pass away. In the treatise, *De Deus,* etc., he takes up a different position, affirming that the destiny of the soul will be determined by her decision between alternative courses. She may unite herself either with the body of which she is the idea, or with God the source of her existence. In the first case she perishes at death, in the second her union with that which she calls herself is prolonged upon her, which preserves the privilege of immortality (Deo, etc. II. xxiii., Supp. 209, 211). 'It is obvious,' writes Dr. Martineau, 'that an immortality no longer involved in the nature of the soul, but depending on the direction of its love, passes from the necessary and universal to the contingent and partial.'†

The influence of Hobbes was also making itself felt in the same direction. However little credit belongs to the simplicity, he is sufficiently explicit in his denial of the natural immortality of the soul:

'That the soul of man is in its own nature eternal and a living creature independent of the body, or that any mere man is immortal otherwise than by the resurrection in the last day, except Ezekiel and Elias, is a doctrine not apparent in Scripture.' (Works, Lond. 1838, vol. III. p. 445.)

On the ground of a careful examination into the various Biblical passages bearing on the subject, he sums up in favour of a theory of the annihilation of the wicked:

'... though there be many places that affirm everlasting fire and torments into which men may be cast successively one after another as long as the world lasts, yet I find none that affirm there shall be an eternal life therein of any individual person, and contrary to every thing which is in the second death. ... Whereby it is evident that there is to be a second death, and that the one that shall suffer there shall suffer at the day of judgment, after which he shall die no more' (Ch. iv. 451).

Locke also conceived of the soul as being, under present conditions, subject to the law of death. In the short treatise, *On the Reasonableness of Christianity,* which exercised so profound an influence on the course of religious speculation in the next generation, he begins by insisting that the consequence of the Fall of man was to reduce him to a condition of mortality, the death-penalty involving the destruction of both body and soul. Through Christ alone is the doom reversed, and man becomes capable of immortality. Those who obey His precepts and imitate His example are delivered from death, and rewarded with the gift of life; and life and death are interpreted in their plain meaning of existence and non-existence. Thus Locke, in his attempt to recover the original simplicity of Christianity and to free it from the supposed accretions of theology, substitutes a doctrine of annihilation for the traditional doctrine of inherent immortality. Moreover, he seems to feel no scruples in discovering evidence in the Bible which, he thought, was in accordance with the doctrine of annihilation. His opinion gave occasion to some controversy on the point at the beginning of the 18th century.‡

*§* Cf. H. Dodwell, *Epistolary Discourse* proving that the Soul

But the question of the particular fate in store for the wicked was soon lost sight of in the interest of the doctrine that it was a true and orthodox as to the essence of Christianity. It was not until the middle of the 19th cent. that the topic came again into prominence. From that time forward the conception of annihilation has formed the underlying presupposition of all theories of conditional immortality, and guesses have been hazarded as to the nature of the process which will end in this result. While some writers have imagined a life of existence complete together with a loss of consciousness, others have adopted the more thorough hypothesis of entire extinction. Some, again, have assumed a future interposition of the Divine power in a sudden act of annihilation, others have preferred the idea of a gradual dilapidation of the soul. And the various theories about annihilation have been put forward with very various degrees of confidence. Cautious thinkers, like W. E. Gladstone and J. Agar Beet, have not ventured beyond the assertion that the Christian revelation certifies indeed the finality of the Judgment, but makes no pronouncement as to the duration of the pains of the lost. More eager advocates of the immortality of the soul have advanced proof of their theories in reason and Scripture (see art. Conditional Immortality).

9. Impossibility of comparison with Buddhist doctrine of Nirvāṇa. — Between the theory which we have been considering and the Buddhist doctrine of Nirvāṇa there is some superficial resemblance. Both involve the conception of annihilation; both assert survival after death together with the possibility of ultimate extinction, the total loss of individual existence. But the resemblance is more apparent than real, and affords little help in the elucidation of the problem. Things which are entirely heterogeneous not only cannot be compared, but cannot even be contrasted. And the difference between Christian and Buddhist religious conceptions amounts to heterogeneity. The two systems are committed to radically opposite interpretations of the universe, the one looking for the solution of all problems in the knowledge of God, the other ignoring His existence; the one regarding life as the great boon every increase of which is to be welcomed, the other as the great evil in delivereance from which the soul is to be released. The proof will be found. When views about God, the world, and the self are thus essentially divergent, no true relation of comparison can be established by the mere force of analogies. This is the reason why some sort of annihilation of the individual is contemplated. Comparative Religion is a fascinating study, but it is well to remember that the religious conceptions of different nations are often incomparable; and even when similar terms are used, the underlying ideas may be very far from coincident. This is notably the case with the respective eschatologies of Christianity and Buddhism. See Nirvāṇa.

10. Conclusions. — Metaphysical and ontological considerations must of necessity enter into any estimate of the theory of annihilation, although it is notorious that the present age is in the full heat of the mortification of the soul. And a method of philosophy wherein the metaphysical and ontological discipline, which may perhaps explain the prime reasons why the theory of annihilation has rapidly acquired a considerable popularity. Owing to the temper of the age, the religious difficulties have been insufficiently considered. It is not easy to deny the contention that the doctrine of annihilation tends
in some measure to lower that high conception of the value and dignity of human personality which has been the direct outcome of traditional Christian teaching as to the nature of the soul. Man destined sooner or later to eventuate in a blank nothingness, such a life, as opposed to it, is widely different from a being Divinely endowed with the supreme gift of immortality. He stands on an altogether lower level. To make immortality dependent on response to the action of the grace of God is to leave the position of man as man vaguely indefinite in the scheme of creation. So vast a gulf divides beings endowed with immortality from those for whom final extinction is the natural end, that the difficulty of conceiving a creature capable of both may well seem insuperable. And yet there are doubtless many to whom a difficulty of this kind is less than that of admitting evil to be an ineradicable and eternal element in the universe. They see no escape from the conclusion that, if evil is irreformable, its annihilation is inevitable. If pressed for an answer as to the mode in which this result will be brought about, it is hard to fall back on the conception of the Divine omnipotence, and to believe or hope that, by some Divine act analogous to creation but opposite in its effect, evil will be utterly abolished from the final state of the universe. By taking this line certain difficulties are avoided. The act of annihilation, so conceived,
is an exceptional interposition discontinuous from the rest of the Divine action upon the created world, and therefore ex hypothesi not admitting of explanation. But the hypothesis of Divine interpositions becomes less and less acceptable as men realize, alike in the kingdoms of nature and of grace, the presence and action of the unchanging God. Hence, for the most part, preference has been given to that theory of gradual annihilation which has been under discussion. It is a solution of the problem which has satisfied itself to many; it may probably secure even wider acceptance in the future; but even its advocates will admit that the difficulties involved in it deserve to be more fully faced and met than has yet been done.

ANOINTING.

Introduction (A. E. Crawley), p. 549.
Buddhist.—See Abhiseka.
Christian.—See Unction.

ANOINTING.—1. Unction,* anointing with oil, is a minor act of ritual, which possesses, however, considerable significance for the history of sacramental religion. Its forms correspond generally to the practical purposes for which, in early culture, animal and vegetable fats and oils were so largely employed, while in both principle and practice it has connexions with painting and dress, decoration and disguise, nutrition and medical illustration and the various uses of water and blood.

2. The application of unguents to the skin and the hair has obtained, as a daily cosmetic practice, in some parts of the world, and is practised, for example, by the Tasmanians to the ancient Greeks and Romans. The material varies in both secular and sacred uses, from crude animal fat to elaborate and costly perfumed vegetable oils. Among the lower races, animal fats are employed, frequently in combination with ochre, occasionally with such substances as charcoal, soot, and ashes. Higher stages of culture prefer vegetable oils, with gums, balsams, vegetable pastes and powders, such as turmeric, sandal and mustard, sawdust and flour, or the sap and pollen of plants, some of which are occasionally used without oil. Perfumes were usually prepared in the form of ointments. Lastly, the term 'unguent' is in most languages made to include, by analogy, such substances as blood, saliva, honey, mud, pitch, and tar. (See art. BLOOD. For anointing with blood see H. C. Trumbull, The Blood Covenant [1897].)

3. Anointing usually follows washing or bathing, and completes the toilet of the skin. The action of oil is to produce a sensation of comfort and well-being. Some peoples regard it as conducive to health. The etymological identifications, still to be met with in dictionaries, of Eng. oil, etc., and Lat. oleum, etc., and of Lat. ovum, etc. and Gr. oos, etc. are unfounded. F. W. Cullen in his Das Leben im Morgen- und Abendlande (1857) has discussed the etymology of 'anointing' in Indo-European and Semitic languages.

Ethnic.—See Introduction.
Hindu (A. E. Crawley), p. 554.
Semitic (M. Jastrow), p. 555.

suppleness of the muscles and joints. The Australian aborigines relieve the languor consequent on a long and tiresome journey by rubbing the limbs with grease. W. E. Roth, Ethnological Studies among the North-West Central Queensland Aborigines (1897), 114, 162. Oil closes the pores of the skin, and partially represses perspiration; hence the use of unguents by the Greeks and Romans before exercise, and after the bath which followed. Similarly, the Hindu anoints himself before bathing. In extremes of heat and cold these properties have an increased value, and anointing is almost a necessary of life. Fear of life itself is one race, from the Tasmanians to the ancient Greeks and Romans. The material varies in both secular and sacred uses, from crude animal fat to elaborate and costly perfumed vegetable oils. Among the lower races, animal fats are employed, frequently in combination with ochre, occasionally with such substances as charcoal, soot, and ashes. Higher stages of culture prefer vegetable oils, with gums, balsams, vegetable pastes and powders, such as turmeric, sandal and mustard, sawdust and flour, or the sap and pollen of plants, some of which are occasionally used without oil. Perfumes were usually prepared in the form of ointments. Lastly, the term 'unguent' is in most languages made to include, by analogy, such substances as blood, saliva, honey, mud, pitch, and tar. (See art. BLOOD. For anointing with blood see H. C. Trumbull, The Blood Covenant [1897].)

4. The cosmetic use soon acquired aesthetic associations. The gloss produced by oil has itself an aesthetic value, which is heightened by the addition of coloured substances. Of the majority of early peoples it may be said that grease and oil substituted their wardrobe. The use of unguents as the vehicles of perfumes became a luxury among the Persians, Hindus, Greeks, and Romans, while among early peoples generally it is a common practice on both ordinary and ceremonial occasions, the object being to render the person attractive. Thus the natives of West Africa grease the body, and powder it over with scented and coloured flour. On the 'Slave Coast,' mango oil, 'magical' unguent to 'awaken' the priests, are employed for such purposes as the borrowing of money and the obtaining of a woman's favour. Swahili women use fragrant unguents in order to render themselves attractive. Similary, Homer describes how Hera, when desirous to obtain a favour from Zeus, cleansed her skin with ambrosia and anointed herself with fragrant oil. In the islands of Torres Straits, the boys, at the close of initiation, are rubbed with a pungent scented
substance, which has the property of exciting the female sex. The Eve-speaking peoples of West Africa scent the bride with eucat, and make her skin red with the bark of the fe-tree (F. RATZEL, The Sociology of Stomked [Eng. tr.], ii. 397, iii. 106; A. B. Ellis, The Eve-speaking Peoples, 94, 156; Velten, Sitten und Gebranche der Suaheli, 212; Homer, ii. xiv. 170 ff.; A. C. Haddon in JAF xix. 412).

5. Anointing thus stands for physical refreshment, well-being, and personal attractiveness. It is, therefore, naturally regarded as being essential on festal occasions. The Australian native, we are told, is fond of rubbing himself with grease and ochre, especially at times when ceremonies are being performed. Among the ancient Egyptians, Greeks, and Romans, unguents, as representing the completion of festal attire, were offered to guests. In the Homeric age, lathering and anointing formed an indispensable part of welcome. The use of anointing as a mark of honour naturally ensues. Thus, when a Cerenean warrior has taken his first head, he is anointed with fragrant oil by the young women of his village (Spencer-Giltena, 28; Wilkinson, i. 425; W. R. Smith, 238; Homer, Od. iii. 466, viii. 454; J. G. F. Riedel, De slo-k en kroeshoar Eassen tuschen Selenes en Pompoe, 118).

The sacred use of fats and oils is their application to food-stuffs as a 'dressing'; to tools, utensils, weapons, furniture, and buildings, as a lubricant, preservative, or polish; and to perishable substances as a preservative (Kep. morjgine, The Indians of Guiana, 314; K. Langloh Parker, The Ewaklayi Tribe [1905], 123; Roth, op. cit. 102).

6. In the magical-religious sphere a further principle makes its appearance. In addition to their cosmetic, sanitary, decorative, and magical or supernatural power, is transmissible by various methods, primarily contact. Inasmuch as its most obvious and convenient source is the flesh and blood of the worshipper, and the most direct method of assimilation is provided by eating and drinking; but an equally certain method is external application—a method which, in the form of anointing, is peculiarly adapted to the use of fats and oils. Anointing is thus based upon the same sacramental principle as the practice of eating the flesh and drinking the blood of the sacred persons and animals. The Divine life is transmitted, and communion with the sacred source attained, by anointing the worshipper with the sacred essence. Fat is the most primitive unguent, and is regarded in early thought as a very important seat of life. Ideas of sacredness are perhaps implicit even in its ordinary use, insomuch as it is animal-essence.

Ernest Crawley, The Mystic Rose [1902], passion, also The Tree of Life, A Study of Religion [1905], 110, 223; W. R. Smith, 383). Where the idea of the sacredness of fat is less developed to an extreme, as among the Hindus, animal fat is tabu.

To take illustrations: the Arabs of East Africa anoint themselves in great style. The Bushmen of the Andamanese pour melted pig's fat over children to render them strong. The Namuang wear amulets of fat. The Danzara collect the fat of certain animals, which they believe to possess great virtue. It is kept in special receptacles: 'a small portion placed on the prong of a fork given to persons who have been hurry after a lengthened absence. . . . The chief makes use of it as an unguent for his body.' The fat of the human body possesses a proportionately higher sacrality and potency. It is especially the fat of the omentum that is regarded as possessing this vital force (Becker, La Vie en Afrique, ii. 396; E. H. MAN, The Andamanese Indians, 120; W. R. Smith, op. cit. 223). The Australian savage will kill a man merely to dispose of his kidney-fat with which to anoint himself. It is believed that the virtues of the dead man are thus fused into the person by anointing. It is a regular practice throughout Australia and the Pacific for this purpose and to chase away evil. These nases also employ it to make their weapons strong; sickle blades are rubbed with it to give them life, health and strength. In India a prevalent superstition relates to the supernatural virtues of moomii, an unguent prepared from the fat of a man slain for the purpose. The latter is regarded as the fat of a corpse is a potent charm among the Aluitus (K. R. Smith, Ceram: The People of Victoria, I. 15; J. F. Rose, The Australian Aborigines, 65; W. Crooke, The Popular Religion and Folklore of Northern India, 117; H. H. Davoli, Native Races of the Pacific States, iii. 145). A piece of human kidny-fat, worn round the neck, was believed by the Zan- manians to render a man proof against magic influences. The virtues of human fat as a curative and magical ointment are well known throughout the world. By its use love may be charmed, warriors rendered invulnerable, and witches enabled to fly through the air. Transformation into animals, as related in folklore, is effected by magical ointments, originally the fat of the animals in question (J. Bowick, The Turpinians, 137). And so on.

7. There are two further considerations to be taken into account in treating of the origin of unction. Sacred fat, in the first place, may be regarded as too holy, and therefore too dangerous, to be eaten. Exact methods of assuring the purity of its virtues. In the second place, neither fat nor oil is, properly, an article of food in and by itself (W. R. Smith, 252, 386), but rather a medium or vehicle. Even in its cosmetic uses, oil is frequently mixed with other substances, it is taken into, and when used alone would be regarded as the medium of a hidden virtue. In its sacred applications, therefore, we may take it that the oil of anointing is the vehicle of a sacred or Divine life or vital-essence, which is either inherent in and possessed by, or is infused thereinto. When the primitive conception of the virtues of human and animal fat decays, the Divine essence is, as it were, put in commission, and may be transmitted to others by means of various methods of con- secration. Apart from the sacredness which it carries, a holy unguent is distinguished from other vehicles chiefly by its original cosmetic, decorative, sanative, and other properties.

The sacred fat is thus the controlling factor in the theory of anointing; but it is always possible to trace the connexion between the essence and the accidents of holy oil, between the magical force or sanctity, and the personal properties which, to quote a Catholic theologian, 'well represent the effects of this Sacrament; olim enim sancta, levit, recreat, penetrat ac locut (P. Denis, Theologia Moralis et Dogmatics [1832], vii. 2). Ceremonial unction in all religions satisfies the condition laid down by Catholic theology for the Catholic rite of unction; the differentia of the sacrament consists in the fact that 'the sign of the sacred thing, the visible form of invisible grace' (Augustine), should be 'such as to represent it and bring it about.'

The methods of transmitting the sacred essence to the unguent are material contact, magical and religious formulas, invocation, blessing, and prayer. The results of unction develop from the decorative and sanitary through the magical stage to a super- natural consecration, which imparts spiritual re- freshment, and strength—in Christian doctrine, grace and the gifts of the Holy Spirit.

8. In the very widely spread use of fats and oils for the treatment of the sick, physical, moral, and religious diseases, there is another imperceptibly. Some typical examples will illustrate the range and the working of these ideas. Thus the Australians use various fats to assist the healing of wounds and sores. The Samoans use a composition made from the grease with which his body is rubbed (K. Langloh Parker, The Ewaklayi...
Tribe, 38: Spencer-Gillen*, 250, 464; Roth, op. cit. 157, 162. The shamans of Asiatic Russia charm the blubber, reinforce-fat, or bear's grease with which the body of a patient is anointed. So, more definitely, the Melanesian medicine-man impregnates the body of his patient with oil, neutralizing and discarding the unguent. On the other hand, the most powerful unguent in the Chinese pharmacopoeia owes its virtues to gold-leaf. Gold is considered to be the most perfect form of the spirit that transmits life to the human body. The unguent employed by the priests of ancient Mexico, when sacrificing on the mountains or in caves, contained narcotics and poisons. It was supposed to remove the sense of fear, and certainly soothed pain. It was used in the treatment of the sick, and was known as 'the divine physic.' The holy oil of Ceram Lant may be manufactured only by a boy and a girl who are virgins. A priest superintends and repeats formulas over the oil. The Amboynese offer oil to the gods. That which is left over is returned, and now possesses Divine virtues. It is used to anoint sick and sound alike, and is believed to confer health and protection. Mikhailovski in JAI xxv. 98; R. H. Codrington, The Melanesians, 195 f.; J. J. M. de Groot, The Religious System of China, iv. 331 f.; Acosta, History of the Indies; R. C. Riedel, De shuit- en kroochaiige Russen tuschen Selteke en Popna, 173; F. Valentijn, Oud en nieuwing Oost-Indiën, ii. 10. To return to magical ideas, variations of method are seen in the practice of anointing the weapon which doth wound; doth wound, in the East Indian custom, whereby fruits and stones are smeared with oil, and prayer is made that the bullets may rebound from the warriors as rain rebounds from the clouds. It is considered that the god will embrace the warrior or his own body with grease, in some cases giving what is left of the unguent to the sick man. On the principle of sympathy, a mother will grease her own body daily while her son is recovering from circumcision (G. Frazer, GBR. i. 57 ff.; C. M. Pleyte in Tijdschrift van het Nederlandsch Aardrijkskundig Genootschap (1893), 805; Langloph Parker, op. cit. 32; Spencer-Gillen*, 466, also 259).

9. The anointing of the dead is based on the principle that, as the Chinese say, the dead man 'may depart clean and in a neat attire from this world of cares.' Africa, North America, and the Fijis and Tonga Islands supply typical examples of the custom. The corpse is washed, oiled, and dressed in fine clothes (J. J. M. de Groot, op. cit. i. 6, 20; P. Ratzel, The History of Mankind, i. 329; Williams and Calvert, Fiji and the Fijians, i. 188; J. Adair, History of the North American Indians, 181). The ancient Egyptians, Greeks, and Romans thus prepared their dead for the last rites. The Egyptians also oiled the head of the mummy; the Romans poured perfumed oils over their bodies after the tomb. At the annual commemoration of those who fell at Plataea, the Archon washed the grave-stones with water and anointed them with oil. The Greeks placed the bier in the temple, containing the incense, and vessels for the use of the dead. The Kingsmill Islanders, like many other peoples, preserved the skulls of dead relatives. These were oiled and garnished. Anointing was offered as if they were alive (Wilkinson, iii. 363; Servius on Virgil, En. v. 219, ix. 483; Lucian, de Luctu, 11; Schömann, Gr. Alterthümter, ii. 555, 600; Wilkes, U.S. Exploring Expedition, 556). The pious affection shown in such customs is elsewhere very commonly developed into practices which aim at a closer union with the departed. Thus in Australia we find a prevalent custom among mourners of anointing themselves with oil made from the decomposing fat of the corpse. This practice has typical examples in the Dutch East Indies, Africa, and North America. The custom, however, is also prevalent in Europe, with oil mingled with the ashes of the dead. A curious custom obtains in the Aru Islands of the Dutch East Indies. As soon as a man is dead, his widow runs around the houses of all his friends and smears the doors with oil (Spencer-Gillen*, 530; Fison and Hovitt, Kamilaroi and Kurnai, 243; Riedel, op. cit. 308; First Report BE, 145, 155; Riedel, 268). The Catholic rite of Extreme Unction doubtless derives from the general principle of anointing the sick; but, apart from such customs, there would seem to be no definite case elsewhere of the practice of unction immediately before death.

10. It will be convenient at this point to draw out the connexion between ceremonial anointing and the principles of tabu. In the first place, grease, oil, and fat are convenient vehicles for the application of ash, dirt, and water. Similar, and of the red paint that denotes such persons as the shedder of blood and the menstruous woman. These states, being tabu, possess one form of grease, oil, or both, together with a decent appellation, should be discarded during their continuance. Similarly, anointing, with other aids to well-being, is re- nounced by the ascetic. Differences of the custom produce exceptions to the rule; thus, among the ancient inhabitants of Central America it was the custom to smear the body with grease as a mark of fastening and penance. During the penitential season among the Laut people of Fiji, the festival, every man was thus anointed daily; the festal use of paint was resumed as soon as the feast commenced (H. H. Bancroft, op. cit. ii. 690, 696). In the second place, we have to recognize the cleansing powers of unction. Anointing is positive, lustration negative; but this original distinction is not kept intact, for consecrated water not only cleanses, but imports the Divine life of which it is the vehicle (W. H. Smith, 160); and consecrated oil, conversely, both imports virtue and cleanses, by the action of the Divine life which it carries within it. Early peoples, it must be noted, employed fat and oil-refuse as a detergent. Anointing, as a consequence, can not only produce the effect of physical consecration, but also removes the sanctity of tabu. In the latter case, its result is re-admission to the normal life (which itself possesses a measure of sanctity [W. H. Smith, 420]), and to that extent it brings about a re-consecration of impaired sanctity. The following cases show how unction and lustration tend to assimilate. The ghâ of the Hindus is held to purify by virtue of its sacred essence, while the sprinkling with sacred water which constitutes the abhîsêka, or anointing of a king, possesses not only the name but the function of ordinary anointing. The Yoruba's 'water of purification' is really an unguent, prepared from shea-butter and edible snails. The 'neutralising rice-flour' of the Malays has both positive and negative virtues (A. B. Ellis, The Yoruba-speaking Peoples, 141; W. W. Skew, Malay Magic, 77, 376, 385). Lastly, in the very widely spread ritual of blood, the material is either sprinkled like water, poured like oil, or smeared like ointment, while the results of the ceremony are both to cleanse and to confer a blessing.

11. The examples which follow illustrate the use of anointing to remove tabu. Three cases, representing various principles of unction. In the Ongtong-Java Islands all strangers are met by the priests with water and anointing on landing. The oil is sprinkled about, and the visitors themselves are sprinkled with water, anointed with oil, and girded with pandanus-leaves. Gullah 'warriors on returning home are 'washed' by the women with
fat and butter, and their faces are painted red and white (L. Parkinson in Intennett. Archiv. fri Ethnograph. x. 132; P. Paulitchea, Ethnograph. Nordost-Afrikas, 255). Before starting, the seated Waunawensi are anointed with a sort of porridge, and the ceremony is repeated on his return. The Australians who has slidden his enemy with sickness by the use of the bone may release him from his curse by anointing the magical weapon in water or by rubbing it with fat. Similarly, as a result of a pig, or to correct a general result by greasing his own body. The customs connected with war and slaughter supply remarkable cases of this form of uncen. In Central Africa war is decided upon by the wife who anoints the feet of the aggrieved person with oil. It is a kind of consecration. The mother of the dying child is the first to anoint the body. The Ilkapurinje, &c, female avatar, among the Central Australians, is rubbed with grease and decorated. On her return, her husband has a fillip of the oil, and he rubs her back with grease. The Fijians observed an elaborate ritual for the son of a chief after slaying his father. He was anointed from head to foot with red turmeric and oil. For three days he lived in seclusion with several other youths, anointed and dressed like himself. They were forbidden to lie down, or sleep, or change their clothes, or enter a house where there was a woman (P. Stuhlmann, Mit Eimis Pacha in Bort von Afrika, 59; Roth, op. cit. 157; Riedel, op. cit. 168; Spencer-Gilten, 496-498; Williams and Calvert, op. cit. 156). In the cases cited above many principles of early thought may be discerned. This should be noted that the first war is a holy state, and that it must be inaugurated and consecrated with ceremonial observances.

12. The removal of tabu coincides with the renewal of normal life and normal sanctity, and anointing is employed here no less regularly than for the inauguration of a highly sacred state. Thus mourners are anointed, as in Africa and North America, the person being anointed.

Throughout Africa it is the custom to anoint the mother with fat and oil shortly after birth. The practice is common throughout the world, and the sickness generally affects women after the monthly period, and with children after the ceremonial observances at puberty. The practice in the last instance often takes a peculiar form. In Australia, for instance, and the Andaman Islands, there is an anointing with a sacred food by the process of having fat rubbed over his face and body (J. Shooter, The Kaffirs of Natal, Lond. [1857], 241; REDEW, 146; Maclean, Compendium of Kaffirs and Celibots, 94); D. MacDonald, African, i. 129; Dennett, Folk-tales of the Kaffir, 137; Spencer-Gilten*, 388; E. H. Man in JAI xii. 134; Howitt, ii. xiii. 455. xiv. 316).

13. Passing now to cases of consecrational proper, we must consider the inauguration of periodic sacredness, as in rites corresponding to baptism and confirmation, in marriage and in worship. The customs last noted tend to merge into these. (a) It is a constant custom in most parts of the world that the newborn child should be rubbed with oil (Roth, op. cit. 168; Batzel, ii. 286; Williams and Calvert, i. 175; Caron’s ‘Japan’ in Pinkerton’s Voyages and Travels, vii. 635; Ellis, Yoruba-speaking Peoples, 141). This practice soon becomes ceremonial, and suggests baptismal analogies. The Ovaherero ceremony of naming the child combines so many principles that it may stand for a typical summary. The rite takes place in the house of the sacred fire, and is performed by the chief man of the village. He first takes a mouthful of water, and spurns this over the bodies of mother and child. Then he addresses the ancestors thus: ‘You a child in your village; may the village never come to an end.’ He then lays some fat out of a vesel, spits upon it, and rubs it over his hands. He next rubs more fat in his hands, spurning water upon it. Then he anoints the child. In doing this he crosses his arms, so as to touch with his right hand her right side, and with his left hand her left side. The process is repeated with the child. Finally he gives it a name, while touching its forehead with his own (E. Denont in South African Folklore Journal, ii. 67).

(b) The anointing of boys and girls as a preliminary to the ceremonies observed at puberty is of wide extent; it is most prominent in Africa and Asia. In Central Africa the candidate is anointed with grease at various times of the consecrated ceremonial. At the circumcision festival of the Masai the boys were allowed to gorge themselves with beef. They rubbed the fat over their bodies, much as a Dayak rubs himself with the blood of a pig, or a negro grease with result by greasing his own body. The customs connected with war and slaughter supply remarkable cases of this form of uncen. In Central Africa war is decided upon by the wife who anoints the feet of the aggrieved person with oil. It is a kind of consecration. The mother of the dying child is the first to anoint the body. The Ilkapurinje, &c, female avatar, among the Central Australians, is rubbed with grease and decorated. On her return, her husband has a fillip of the oil, and he rubs her back with grease. The Fijians observed an elaborate ritual for the son of a chief after slaying his father. He was anointed from head to foot with red turmeric and oil. For three days he lived in seclusion with several other youths, anointed and dressed like himself. They were forbidden to lie down, or sleep, or change their clothes, or enter a house where there was a woman (P. Stuhlmann, Mit Eimis Pacha in Bort von Afrika, 59; Roth, op. cit. 157; Riedel, op. cit. 168; Spencer-Gilten, 496-498; Williams and Calvert, op. cit. 156). In the cases cited above many principles of early thought may be discerned. This should be noted that the first war is a holy state, and that it must be inaugurated and consecrated with ceremonial observances.

13. Passing now to cases of consecrational proper, we must consider the inauguration of periodic sacredness, as in rites corresponding to baptism and confirmation, in marriage and in worship. The customs last noted tend to merge into these. (a) It is a constant custom in most parts of the world that the newborn child should be rubbed with oil (Roth, op. cit. 168; Batzel, ii. 286; Williams and Calvert, i. 175; Caron’s ‘Japan’ in Pinkerton’s Voyages and Travels, vii. 635; Ellis, Yoruba-speaking Peoples, 141). This practice soon becomes ceremonial, and suggests baptismal analogies. The Ovaherero ceremony of naming the child combines so many principles that it may stand for a typical summary. The rite takes place in the house of the sacred fire, and is performed by the chief man of the village. He first takes a mouthful of water, and spurns this over the bodies of mother and child. Then he addresses the ancestors thus: ‘You a child in your village; may the village never come to an end.’ He then lays some fat out of a vesel, spits upon it, and rubs it over his hands. He next rubs more fat in his hands, spurning water upon it. Then he anoints the child. In doing this he crosses his arms, so as to touch with his right hand her right side, and with his left hand her left side. The process is repeated with the child. Finally he gives it a name, while touching its forehead with his own (E. Denont in South African Folklore Journal, ii. 67).

(b) The anointing of boys and girls as a preliminary to the ceremonies observed at puberty is of wide extent; it is most prominent in Africa and Asia. In Central Africa the candidate is anointed with grease at various times of the consecrated ceremonial. At the circumcision festival of the Masasi the boys were allowed to gorge themselves with beef. They rubbed the fat over their bodies, much as a Dayak rubs himself with the blood of a pig, or a negro grease with result by greasing his own body. The customs connected with war and slaughter supply remarkable cases of this form of uncen. In Central Africa war is decided upon by the wife who anoints the feet of the aggrieved person with oil. It is a kind of consecration. The mother of the dying child is the first to anoint the body. The Ilkapurinje, &c, female avatar, among the Central Australians, is rubbed with grease and decorated. On her return, her husband has a fillip of the oil, and he rubs her back with grease. The Fijians observed an elaborate ritual for the son of a chief after slaying his father. He was anointed from head to foot with red turmeric and oil. For three days he lived in seclusion with several other youths, anointed and dressed like himself. They were forbidden to lie down, or sleep, or change their clothes, or enter a house where there was a woman (P. Stuhlmann, Mit Eimis Pacha in Bort von Afrika, 59; Roth, op. cit. 157; Riedel, op. cit. 168; Spencer-Gilten, 496-498; Williams and Calvert, op. cit. 156). In the cases cited above many principles of early thought may be discerned. This should be noted that the first war is a holy state, and that it must be inaugurated and consecrated with ceremonial observances.
and Christian custom has familiarized the world, is a spectacular rite of rare occurrence outside the sphere of Hebrew tradition. It is found, however, in a more or less perfect form among the ancient Egyptians, the Aztecs, and the Hindus ancient and modern. It was associated by many investi-
guare with the sacred robes. The monuments give representations of the ceremony, and in the Tell el-Amarna letters the king of Cyprus sends to the king of Egypt a flag of gold to wear on your head, now that you have ascended the throne of your kingdom.\footnote{1} The Aztec ceremony of royal

unction preceded coronation. The king-elect went in procession to the temple of Huizilopochtli. After paying homage to the god, he was anointed throughout his whole body by the high priest, and sprinkled with holy water. He was then clothed in ceremonial robes, and about his neck was hung a gourd containing powerful remedies against sor-
cery, disease, and treason. The unguent used was the black oil with which the priests anointed their own bodies and the images of the gods. Its name is variously given, ulti, or ole, as its chief con-
stituent is a red or black juice. The Quiches and Cakchiquels bathed the king at his coronation, and

ointed him with perfumes. Candidates for the order of Tzinctli, the Garter of the Aztecs, which admitted into union with the priests, were anointed with

unguent (Wilkinson, iii. 369; W. M. Flinders Petrie, Syria
and Egypt from the Tell el-Amarna Letters, 45; H. Winckler, The Tell el-Amarna Letters [Eng. tr.], 87; Bancroft, ii. 144 f., 641, 196, iii. 385). The anointing of kings and priests combines several principles, and is not to be explained on one separate line of development. It is, in the first place, a part of the festal dress essential on such occasions. It is not easy to distinguish from adoration. In the second

place, we have the various ideas connected with consecration,—the transmission of sanctity, power, and new life (ib. 383 f.), on the one hand; and, on the other, the "hedging," of a dedicated person with sacredness, for his protection and the performance of his office.

16. The anointing of sacrifices and offering, the altar and the temple, and the sacred apparatus generally, supplies many details of ritual which fall into line with the main principles of religious

unction, while giving prominence to such as are more closely connected with worship. The human sacrifice, the anointing of the Consecrator of the Aztecs, and of the people of Timor, were

ointed before being slain. The last case has to do with coronation. The princes of Kupang in Timor kept sacred crocodiles, and believed themselves to be descended from this animal. On the

day of coronation, a young girl was richly dressed, decorated with flowers, and anointed with fragrant

oil, to be offered as a sacrifice to the sacred

monsters. In the remarkable human sacrifice of the Khonds, the Merish was anointed with oil, ghi, and turmeric, and adorned with flowers. He received a species of reverence which it is not easy to distinguish from adoration. Every one who could touch the oil on the victim's body rubbed it on his own head. The oil was regarded as possessing the same virtue as his flesh and blood conferred on the infidels (Strabo, ii. 4. 7; Bancroft, iii. 112; Hubert Thompson, 218. C. Marshall, Memorialsof Services in India, 118; J. Campbell, Wild Tribes of Khondistan, 54 f., 112).

The custom of 'dressing' offerings with oil was noticed among Madagascar, Delphi, and the Greeks. While the natives of West Africa sacrifice an animal, they sprinkle it with palm-oil by way of attracting the spirits. At the festival of the New Fruits among the Crook Indians, the priest took some of each sort and smeared them with oil before offering them to the spirit of fire. The people of Gilgit

drench with wine, oil, and blood the branch of the sacred cedar used in their agricultural ceremonies. Similarly the Malays, in their ceremony of bringing

home the Soul of the Rice, and the Javanese, in the Marriage of Rice Bride, anoint the face with oil (Schömann, ii. 236; Panasian, viii. 42; A. B. Ellis, The Foruma-speaking Peoples, 155; Adair, 96; Biddulph, Tribes of the Hindu Kush, 106; Skend, op. cit. 256; Veth, Java, i. 524).

The native of Celebes purify with water and anoint with oil the plough used in their ceremonial ploughing of the rice-fields (G. K. Niemann in Bijdragen voor de Taal, Land- en Volkenkunde van Nederlandsch
Indie, xxxviii, 2 270; W. Crooke, op. cit. ii. 308; E. Aymonier in R.I.E.H xxiv. 372; B. F. Matthes, Bijdragen tot de Ethnologie van Zuid-Sellebes, 93).

When we pass to cases more definitely representative of worship, we find a development of two

ideas: first, that the sacred life immanent in the sacred symbol or image needs periodic renewal; and, secondly, that the spirit connected therewith requires conciliation; anointing the sacred object renues its vigour and also brings the worshipper (Bancroft, ii. 139). The bushmen of the Masai of Central Africa or the Australian of Queensland

aints his sacred stone with fat when asking it for rain, we may infer that the sacred object is supposed to be revived and rendered gracious by the cosmetic virtues of unction. Similarly the Central Australians rub their churinga with fat and ochre whenever they examine them. The churinga is supposed to have human feelings, and the process of anointing it is called the getting of fat (J. Stuhlmann, op. cit. 534; Roth, op. cit. 158; Spencer-Gillen\footnote{2}, 255, 265, 270, also\footnote{3}, 161). Here the use of grease for utensils combines with cosmetic anoint-
ing. In many cases it is natural to find these ideas merging in the notion of feeding the divine object; but it would be incorrect to derive the anointing of sacred stones from the practice of

feeding the god. The custom of smearing blood upon sacred symbols and images is of wide extent,

but it is not a survival from any practice of pouring the blood into the mouth of an image. The practical primitive mind does not confuse the

unction of an image with the feeding of the god and the two are allied. As illustrating the extension of the custom, a few examples are here brought forward. The Greeks and Romans washed, anointed, and garlanded their sacred stones. The

upai-de of Delphi was periodically anointed and

rapped in wool (Schömann, ii. 256; Lucian, Alex. 30; Apuleius, Flor. i. 1; Minucius Felix, Octav. iii.; Pausanias, x. 24, and J. G. Frazer, Com-
mentary on Pausanias, v. 341 f.). The Malagasy

oint sacred stones with fat or oil or the blood of victims. The Wamabana near-herd anoints a rock with oil and offers fruits, in order to get his cattle through a difficult pass (J. Shibue, History of Madagascar, Ze. 325). Anointing as a form of nutrition and unction is found among the Kei

landers; every family here possesses a sacred black stone, and to obtain success in war or trade a man anoints it with oil and offers a sacrifice to it. In Celebes, sacred images, apparatus, and buildings are smearing with oil by worshippers. The ancient Egyptians anointed the statues of the gods, applying the unguent of a donkey with their left hand. The tribal Brothers anointed the image of their goddess, Dea Dia, on festival days. At the ceremony of mourning for the dead god, the stone image of Attis was anointed. This was probably the anointing of the skull and the oned body brought out from the tomb on the day of Resurrec-
tion, the priest anointed the throats of the worshippers. The religion of ancient Greece provides a curious instance of the meeting of the practical and the religious spheres. The old temple-statues of the gods, made of wood, were anointed with oil to preserve them from decay, while to preserve the magnificent creations of gold and ivory, such as the image of Zeus at Olympia, oil was run in pipes throughout the building (Kath. op. cit. 299; Matthes, op. cit. 94; Wilkinson, op. cit. iii. 361; CIL vi. 19797; Firmicus, de Errore, 23; Pausanias, v. 11, and Frazer's *Con. ad loc.*). 17. The principle of communion with the deity by means of anointing the sacred symbol or the worshippers himself is more apparent in the elementary stages of worship. The Asklopolinai, we are told, venerate the bear, and try to keep on good terms with him. They pray to him when they wish to be successful in a bear-hunt, and so to secure a good supply of bear's flesh to eat and of the bear's grease with which they are always anointed. The natives of Central Australia, at the *Indhavama* ceremony for war, supply the supply of kangaroos, eat a little of the flesh of this animal and anoint their bodies with the fat. In order to obtain success in hunting eucarys, they rub themselves with stomach contents of that animal. Similarly, before eating snakes they rub their arms with snake fat. At a higher stage of development we find the West African negro-anointing that part of his own body where his guardian spirit resides (de Smelt, *West Afrikanische astrologische Missionarier*, 139; Spencer-Gillen, 206, also, 182, 235; Ellis, *Yoruba-speaking Peoples*, 126). 18. The oil of anointing, as we have seen, transmits the sacredness latent in either of these dedications, i.e. the worshippers or the god. If we look at the controlling source of its virtue, the potentially sacred substance of the human body, and compare the earliest forms of consecration, we see that the theory of anointing leads us back to pre-theistic and even pre-fetalistic times. The elementary stages of dedication illustrate the less common direction of anointing, in which the worshippers or the priest concerns himself with feeding instead of nourishing it. The dedication, more or less informal, of sacred buildings and apparatus by anointing obtained in Egypt, Greece, and Italy; it is remarkably prominent in India, ancient and modern, but connected with sacred and profane objects. There is, of course, connected with the use of oil for tools, utensils, and furniture, but also has associations with fetishistic methods of making gods (Crawley, *The Tree of Life*, *A Study of Religion* [1905], 239). The ritual of renewing the sacred vigour of a sacred symbol has already been referred to here; we note the original induction. Thus every man on the Gold Coast makes for himself a *amukum*, or tutelary deity. When he has made it, he anoints it with butter. Among the Batakas the *guru* inducts a spirit into the fetish with various ceremonies, chief among which is the application of a vegetable-unguent (Ellis, *Yoruba-speaking Peoples*, 1907). 19. In its latest developments anointing passes into a theological metaphor of quasi-doctrinal import. Consecration carries with it from the sacramental to the ethical-religious plane the various gifts of consecration, leaving in its course such traces of mysticism as *the White Ointment from the Tree of Life*, feared and bathysmal for the gods and *Justin's adaptation of Plato's fancy, to the effect that the Creator im-

pressed the Soul of the Universe upon it as an union in the form of a *x* (Justin, *Apol*. i. 10; *Plato, Timaeus*, 36). In conclusion, the history of anointing in its connexion with religion shows that of all sacramental media the sacred unguent is the most spiritual, and that from beginning to end holy union is the least material of all purely physical modes of assimilating the Divine. Its characteristic is soul. LITERATURE.—*Esp. W. R. Smith, The Religion of the Semites* (1904). Other references—*Bowen, Brit. Antiq. 1894*; *A. E. CRAWLEY, The Mystic Rose* (1905). 105 ff.; *F. W. CULMANN, Das Stellen im Morgen- und Abendlande* (1870). A. E. CRAWLEY.
and washed. Girls, on arriving at puberty, are decorated and anointed with oil, and oil and turmeric (haldi). Brähman boys, on investiture with the thread, are similarly anointed with oil and haldi.* The ceremony of gatra-haldi is performed during the preliminary marriage rites, and even the wedding-gifts of Brähne and bride-groom are anointed with oil and turmeric. The 'sandalwood stone,' which they have to touch with their feet, is rubbed with oil. The bride's brother sprinkles on the hands of the bride with ghi, and sprinkles pached rice upon them. At a Yānâi wedding the mothers of the contracting parties anoint them with oil, turmeric, and sandal-paste. They then bathe and put on new clothes. Amongst the Kānnâyâniis the village barber is also used. Oil or paste is a common medium for sacred marks.

After death, the body is washed and anointed with sandal-paste, oil, and turmeric, or ghi. In some cases, the chief mourner touches each aper- ture of the body with a turnip dipped in a snatra, and pours ghi on each. The forehead of a dying man is, if possible, smeared with the sacred mud of the Ganges. At the burial of the urn the chief mourner anoints himself with ghi.*

At the ordination of a Buddhist priest, his hair is touched with oil before being cut.† The important ceremony of abhiṣekâ is, in principle a form of anointment; the holy water, with its numerous ingredients, consecrates rather than infusion of divine force by histruction. This rite is celebrated towards the close of the protracted ceremonies of the ordination, and may be anointed with ghi. The new rite was celebrated the day after the full moon of Phalguna, i.e. about the end of March. Eighteen ingredients were necessary, the chief being the water of the sacred river Sarasvati. The others included ghi, milk, cow-dung, honey, sugar, sandal-water, perfumes, earths, turmeric, and rice-meal. The adhiṣvâra mixed them from eighteen pitchers in a bucket of nalinâbara wood, repeating a mantra at every stage, e.g. 'O honeyed water, whom the Devas collected, thou mighty one, thou benedict of kings, thou enlivener; with thee Mitra and Varuna were consecrated, and Indra was freed from all his ills; the water, thou art naturally a giver of kingdoms, grant a King-dom to my Yajâmana' (naming the king). 'O honeyed and divine ones, mix with each other for the strength and vigour of our Yajaman.' The king, who was dressed in a bathing dress, was anointed with the head of the king from their respective positions. Mantras were recited as—

O Yajâmana, I bathe thee with the glory of the moon; may you be king of kings among kings; O ye well worshipped

ANOINTING (Semite).—If we find traces of anointing among the Arabs in pre-Islamic days, it is in the traditions of Judaism and Christianity. In both these faiths anointing is a sign of consecration to the sacred office and of the bliss of heaven.

The Easterns, however, use it for sacred purposes, and they consider it a symbol of the presence of the Divine, in the persons of the Râjâ or the king. Figuratively they refer to it as 'brâhman' (or 'śah')-'king.'

According to the Vârâha Purâna, a man may perform the ceremony on himself in a simplified form: 'He who pours sanctum-seed and water on his head from a right-handed sañhika destroys all the sins of his life.'

A modern form of abhiṣekâ is still employed at the coronation of Eajâna. In Assâma, for instance, the water for the ceremony is taken from nine holy pâls and is mingled with the juices of plants. A similar account is given of coronation in Myore. There is no ceremony of consecration in analogous to baptism. A mixture of sandal-paste and attar of roses is the ignuent employed, and a little of this is placed on the forehead with the middle finger of the right hand. The royal metals are then tied on.

As in abhiṣekâ, the Brâhmas anoint themselves with oil or ghi after performing similar religious duties. The institution of a ceremony also anoints himself. On the first day of the festival Sambhânti it is the custom for every one to take a bath, and in which the body with oil forms a conspicuous feature. In the nirââka-pahlavändhaka rite the tree from which the sacrificial post was to be cut was anointed, and the victim, after being rubbed with oil and turmeric and washed, with a piece of wood (aalâ) is declared the sacrifice. In the Yajû sacrifice the ram is rubbed with oil, bathed, covered with aksata, and garlanded.† At the Dâra-gâpâ festival a merchant then bathes and anointed with several kinds of scented oils.

The consecration of buildings by means of anointing is a well-developed feature of Hindu ritual. There is a ceremony analogous to the laying of foundation-stones, in which a piece of wood (aâsulâ) is decorated and anointed, being thereby anointed with the spirit of the god Vâstupuruša, who becomes the tutelary deity of the house. Again, when the principal dwelling is intended to be consecrated, it is anointed with sandal-oil and worshipped. The same ceremony is performed over the ridge-plate and the well, and for the house generally, when first entered.

The images of the gods in the temples are bathed, anointed, and dressed by the priests daily. Un-guents for this purpose (virsamā) are one of the 'essential offerings,' presented by worshippers. Sacred stones are also anointed and decorated; and the worshippers of Siva anoint the lingâ.

The principle of consecration is well brought out in the Hindu ritual of anointing, while the allied principles of decoration and purification are fully recognized.

searches, vii, 294; Dubois, p. 589; Mahâkânda Tanâtra, v. 91.
we must perforce assume that, though still clinging by force of habit and tradition to rites and practices that fall within the category of primitive religious customs, resting upon distinctly primitive beliefs, they had advanced beyond the stage of ideas sufficiently to cause the rise among them of the longing to come into direct touch—not merely through the mediation of a special body of men—with the higher powers. The act of anointing is vouched for in the pre-Islamic period in connection with the visit to the old sanctuary at Mecca, known as the Ka’ba, when the worshippers, in order to acquire and take, as it were, into their own persons some of the sanctity associated with the deities of the place, rubbed their hands over the images of the gods (Wellhausen, Reste Arab. Heid.2 p. 105) or pressed themselves against the edifice itself. Although no unguent which we commonly associate with anointing appears to have been employed, it is significant that the verb used to express this pressing (ta’karrub) comes from the stem that in both Heb. and Assyrian, embodies the idea of ‘offering,’ while the rubbing (tamsuzzh) is from a stem that in Hebrew becomes the generic term for anointing, and in the form mš’lāh (Messiah) becomes one of the most significant terms in the religious nomenclature of both Judaism and Christianity.

Unless the kissing of the gods or of sacred objects, as, e.g., the ‘black stone’ at the Ka’ba, be included, the ancient Semites do not appear to have gone further than to symbolize in oil the rites of pressing and rubbing the desire to reach out to the sanctity associated with images or objects. The use of wine and oil belongs to a still later stage of religious custom, and, when they are met with in ancient Semitic practices, are the results of external influences. On the other hand, the antiquity of the blood-rite as a ceremony, used in covenanting, being vouché for (Trumbull, Blood Covenant, ch. i.), some of the uses to which blood is put in the sacrificial ritual of the ancient Semites may properly be classed under the category of anointing. To be sure, the custom of pouring or rubbing the blood of a sacrificial animal over a sacred stone on which the slaughtering was done, is not looked upon as a species of anointing, for the purpose of the act is to symbolize that the deity, represented by the stone, or supposed to reside in it, has accepted the sacrifice; but if we take it as the vital element (Wellhausen, l.c. p. 113). However, in the ancient Semitic method of covenanting by dipping the hands in blood (Trumbull, l.c. ch. i.) a union of the contracting parties is symbolized, and if the deity is introduced into the act by rubbing the blood also over his symbol—whatever it may be—it is with the view of making the deity a party to the covenant, and in so far the thought of a direct union with the deity—a blood relationship—is present. Yet even here a direct transfer of sanctity from the deity to his worshippers does not appear to take place, as would be involved in anointing viewed as a religious rite. It is significant, as Wellhausen (l.c. p. 99) points out, that the ‘black stone’ of the Ka’ba is not smeared with blood. This may be taken as a proof that communion with the deity had its decided limitations, resting upon the mental idea underlying the act, of the sprinkling of blood over the door-posts and lintels, or the threshold of a dwelling, and such other practices as are instanced by Curtiss and Doughty as surviving the oldest times among the inhabitants of Syria and Arabia, in which the blood is rubbed or sprinkled on animals or fields or newly erected or newly occupied dwellings as a protection against demons (Jian), or, in more positive terms, a form of the ancient Semitic Religion To-Day, ch. xv.; Doughty, Arabia Deserta, i. pp. 136 and 499, ii. p. 100, etc.), are not to be interpreted as anything more than the placing of the objects in question under the control of the gods involved through the sacrificial animal blood. The use of blood in the ritual, such as the sprinkling over the worshippers (Ex 24), or over the altar and the sanctuary (Lv 4), for which Robertson Smith (Rel. of Sem.,*p. 344) may be consulted, is a separate rite.

Considerations of this nature lead us to the conclusion that the prominent role played by anointing among the Hebrews, with the application of unguents to sacred objects or to persons invested with sanctity, as priests and kings, is an expression of considerably advanced religious beliefs, in which the symbolic transfer of qualities associated with the Divine essence enters as a prominent factor. That this use of unguents in religious rites represents the transfer to the sphere of religion of originally secular rites, marking the adornment of one’s person, may be granted; but this view, so brilliantly set forth by Robertson Smith (Rel. of Sem., p. 252 ff.), adds nothing to the case, and it has been pointed out that the anointing of the altar by Abishai (I Chron 15:29), etc., as symbolizing the connection of the altar with such objects and persons, and was to be understood as the investiture with such sanctity. The use of oil and wine as unguents—both symbols of luxury accompanying a more advanced culture—seems also to link the rite of anointing with anointing among the Hebrews as among the other nations of antiquity, and is practised to this day in the Roman and Greek Churches for the consecration of sacred edifices. Similarly, the two last mentioned by Wellhausen as the way instances of the anointing of altars, as, e.g., the stone at Bethel (Gn 2817 339); and, incidentally, it may be noted that the reference to oil, which a wanderer like Jacob could hardly have carried with him, indicates the projection of a late custom into the remote past. A similar projection is to be seen in the statement that the furniture of the Tabernacle and the Tabernacle itself were anointed with oil (Ex 30:22, 34). Similarly, the high priest was anointed with oil, sprinkled and poured on his head (Lv 85), while in the case of the ordinary priests, the oil was only sprinkled on them (Lv 86). The anointing of kings represented the formal investiture with the Divine power and was viewed as a sacred one among the Hebrews. We have explicit references to such anointing in the case of Saul (1 S 109), David (1 S 165, 2 S 25), Solomon (1 K 194), Josiah (2 K 115), Jehoahaz (2 K 239), and we may therefore assume that the rite was a general one from the beginnings of kingship among the Hebrews. That the act indicated, besides the purely formal investiture, the actual transfer of Divine powers to the person anointed, may be concluded from the explicit statement in connexion with the anointing ceremony, that ‘the spirit of Jehovah’ rested with the anointed one; so in the case of David (1 K 194). Correspondingly, the Divine Spirit leaves Saul (v.14) as an indication that he is no longer in touch with the Divine Essence, i.e. is deposed from his sacred office.

In the further spiritualization of the fundamental idea underlying the rite of anointing, namely, the transfer of sacred or Divine qualities to an object or individual, the prophets are naturally viewed as the ‘anointed’ ones (Isa 4119; Jer 3130), and we may therefore assume that the act was performed, except possibly in the single instance of Elisha, and even in this case the order given to Elisha to perform it (1 K 1970) may be intended only as a metaphor to indicate the possession of the Divine Spirit, not the literal act of anointing. The metaphorical application is clear in the case of Cyrus, who is called the...
‘anointed’ of the Lord, to indicate that he acts in accordance with the Divine quality with which he is imbued. The same interpretation is to be put upon the appellation ‘anointed’ employed in a like sense. Ps. 74:11 (Heb. ‘an‘ôtn), a return step to designate Israel as the chosen people of Jehovah, as His ‘anointed’ one (Ps 84:10, 89:15, Hab 3:3), etc., in which case ‘anointed’ has become a synonym not only for the historic Solomon, but to the holy menorah also. The final stage is reached in the doctrine of the Messiah as the ‘anointed’ one to bring salvation to His people and to mankind in general. In Christianity, Jesus becomes the Messiah ‘per excellentia (Gr. Xpœrôs), while Jewish theology in rejecting Jesus as the Redeemer of mankind was gradually led to abandon the doctrine of a personal Messiah, and to accept in its stead the outlook towards a Messianic age. The association of anointing with the Divine Spirit passed over into the Christian Church, which, to emphasize the descent of the Holy Spirit on all believers (2 Co 1:21, 1 Jn 2:20), instituted the practice of anointing expensive and rare ointments with the rites of baptism and confirmation.

As yet no traces of anointing as a religious rite have been found in Babylonia and Assyria, though there were no doubt anointings of this kind occurring across the rite in cuneiform documents, especially for those periods when kingship and Divinity were in close union, as appears to have been the case in the days of Sargon, and during the reign of the Ur dynasty (c. 2100 to c. 2040 B.C.). In later times we have the pronounced tendency towards the secularization of the office of royalty, with a concomitant centralization of Divine prerogatives in the priesthood; and it would appear that among the Phoenicians likewise the position of the king, under the influence of the late Bab.-Assyr. conception, became a distinctively secular one, connecting itself with that of a lay-judge rather than with that of a priest-king. As for anointing as a secular rite among the Scenutes, there is every reason to believe that its origin is bound up with the use of unguents as medicinal remedies. In the medical prescriptions preserved on the cuneiform tablets of Ašurbanipal’s library, copied from originals that probably date from as early as 2000 B.C., oils of various kinds to be applied to the skin are mentioned. The frequent mention of unguents of various kinds and their ingredients (Ps 45:8; 80:1; 104:15; 107:36; 110:1; 133:2; 147:14; Jer 8:22; 16:19; Ps 94:5; 110:1; Is 21:11; Ezek 16:9; Mk 10:12; and especially Ja 5:4), points in the same direction, and forms the basis of the Roman Catholic sacrament of Extreme Unction, and the Greek and (previous to 552) Anglian anointing of the sick. The cleansing qualities of unguents appear also to have been recognized at an early period in Babylonia, as well as in their power in the prevention of diseases of the skin, so common in hot and moist climates. The use of unguents thus became at once a part of the toilet and an adornment of the person, like dress and ornaments. With the increase of luxury, expenditure and highly scented ointments were used, and, as a natural corollary to this stage of the custom, anointing became a symbol of prosperity (Ps 92:20), while the general tendency in mourning rites to mourn the late or living the sadness of the age led to the view that anointing was not appropriate during the prescribed period of lament for the dead, so that it was discontinued at such times. In the Semitic Orient popular customs are apt to become hardened to ceremonial obligations, and thus (the anointing of a guest takes its place as a ceremony of greeting and hospitality, and also as a means of bestowing honor. The account of Mary’s anointing Jesus with precious ointment in Mark 14:3 and of the observance of the ceremony down to a late period. Anointing oneself before paying ceremonial visits falls under the same category (Mt 26:6).

MORRIS JASTROW, JR.

ANCELM OF CANTERBURY

I. Life.—Aneel was born at Rome, probably at Cosa (not Grossan) in 1093. After a sheltered youth spent in study, on the death of his mother he crossed the Alps, and after three years of wandering, on the death of 1099 at the convent of Monte Cassino under the guidance of Benedict, he was, in all probability, newly founded (1030) by the saintly Herlevin. There Lanfranc was staying. In the results of his studies and in the results of his travel, 1099, on the death of his father, Anselm took the veil, and when Lanfranc removed to Caen (1003), Anselm was elected his successor as prior. The fame of Bec as a school grew greater still. Anselm’s genius as a teacher was remarkable; his gentle methods earned him an epoch in pedagogics (see esp. Eadmer, Fluctuum et aliorum foedere, lib. ii. 10; on his decretals, Bury, c. 1078) the reluctant Anselm was appointed abbot. One result of this election was of far-reaching consequences. Bec had been endowed with vast estates in England, and Anselm’s journeys in their interest brought him into touch both with the Conqueror and William the Conqueror, and enforced him to the whole nation. On the death of Lanfranc (May 28, 1098) all men looked to Anselm as his successor. But Rufus, who was the spurned of the Church by keeping seas vacant and claiming their revenues, refused to appoint a new archbishop. In 1092 the king fell ill at Gloucester, and in one of his spurns of remorse sent for Anselm, and after some delay appointed him archbishop as the result of the king’s acceptance of violence was almost necessary, but once nominated, the ‘furious bull’, already repentant of his persistence, discovered that the ‘wrenching of the archbishops’ chair was at least a thousand times more painful than his match. Anselm insisted on the restitution to Canterbury of all its estates, and on the recognition of Urban (already recognized in Normandy) as the true pope. To this last William it, who had taken advantage of an anti-pope (Clement iii. to set the ‘pope’s peace’ for the whole of Europe, as the war between France and England, the verbal consent by Anselm’s threat of retiring to Bec. At last Anselm was consecrated (25th Sept, 1093), during the absence of the king, for his tenures of power, a matter of interest in view of later disputes.

The question of the recognition of Urban was, however, not really settled till 1100, when William, according to the king’s request, submitted his case to the pope’s judgment. In 1099, the pope demanded a statement of his acts of excommunication. Anselm refused to return to Urban’s authority, and the pope, having heard the case, refused to submit. A letter from Urban (April 1100) was still more hardening. But the antipope (Clement iii.) was not lost, for during the year the other batch, Anselm, who again took refuge at Bec, was recognized (modern Liber), in the Alpine mountains, his Cur Deus Homo. At Urban’s request the archbishops of Paris (1103), and his archbishops of Rheims (1108), and vindicated before the Greeks the Latin doctrine of the procession of the Holy Spirit. From Rome Anselm, refused admission to England, retired to Lyon, but on the death of Rufus (Aug. 2, 1100) was summoned back to England by Henry in. To his influence, in fact, Henry owed his crown in his struggle with his brother Robert. A new dispute on the subject of lay investitures soon broke out. In England this was undoubtedly an innovation on Anselm’s part on the ‘customs’. In fact it was a part of the great conflict on the matter on the Continent, first started by Hildebrand, which after a struggle of 60 years, in which both parties settled at last by the compromise of Worms (Sept. 23, 1122). After many years of delay the whole of Henry’s barons, and his cousin, Pachus in. Anselm journeyed once more to Rome to defend his own views.

(Christians, 1103). For eighteen months he lived in banishment at Lyon, but on his preparing to excommunicate Henry, the king, influenced by his English bishops (of whom marriage was due to Anselm), gave way, and, on August 11, 1107, a compromise was agreed to, virtually a victory for Anselm (cy. 1103).

Before the peace was made, Anselm had returned to England (Aug. 1100). He had been one of the foremost judicial reforms, planning to make the lords of the land to the commons. But he had come home to die. For six months he gradually faded away, kept alive by the hope of a return to Rome, the observance of the ceremony down to a late period. Anointing oneself before paying ceremonial visits falls under the same category (Mt 26:6).

MORRIS JASTROW, JR.
ready been enroled by a greater than Alexander among the im-
mortal Saints (Cant. xii., last line). His feast day is April 21.

(Auta Sanct., n. v.)

2. Character and place in history.—In character Anselm was a true saint, whose mingled sanctity and sagacity, gentleness and firmness, tenderness and severity, united do him a charm which drew him under his influence, from the rudest (Bragd. HN 89), the Conqueror (Vita, i. 31), and Duke Roger’s Apulian Saracens included (Vita, ii. 33), to the most obstinate novice (Vita, i. 10) or the pious saint John. He was a master of personal magnetism invariably associated in the Middle Ages with miraculous gifts (Eadmer, Descript. Miraculorum (R.S.), 425 ff.). His unfeigned humility in all circumstances was the natural result of that mystical detachment which gives abiding interest to his writings.

Anselm’s place in the ecclesiastical history of England cannot be exaggerated. Hitherto England had hitherto been closely connected with Rome, and as a Church had possessed her own customs and a considerable degree of independence. This independence the Conqueror was prepared to continue, and Anselm had the advantage of 1076 to reply to Hildebrand (Freyman, Norman Conquest, iv. 433). The Conqueror insisted on the complete subordination of Church to State; the modern congé d’ilic was with him the invariable rule. The powers of convocation were limited by his pleasure; papal letters could not be received unless they had first obtained his sanction (cf. Eadmer, HN i. 9). That William’s successors could not maintain his position was due to the stand taken by Anselm. This Italian of Aosta, by the force of his piety, character, and learning, succeeded in imposing upon the English Church the ideals of Hildebrand, and bringing the Church in England into close relation with the Church abroad. In many aspects the Reformation was but the rude undoing of his work and a return by the Tudors to the policy maintained by the Conqueror.

3. Writings and place as a thinker and theologian.—Anselm’s writings may be classified as follows:

(i.) Four books of Epistles. —These letters (over 400 in all) are proof of a wide correspondence, and of the singular regard in which Anselm was held as a director of souls by all sorts and classes. While of value for the details of his life, and for their revelation of his character, there is scarcely a reference in them to the day-to-day details, another sign of his philosophic detachment of soul.

(ii.) Devotional and Hortatory. —Of these the most important are his Orationes (Migne, PL clxxi., 835 ff.) and Meditationes (ib. 710 ff.). This last has singular charm; Anselm’s mystical communings with his own soul breathing throughout a passionate love for Christ (cf. Med. xii. and xiii., both worth reading).

(iii.) Poetical. —That he wrote certain hymns for canonical hours may be reasonably accepted. Much also may be said for assigning to him the Mariæ, a poem in honour of the Virgin sometimes attributed to St. Bernard, and commonly known as the Prager of St. Clair of Poland (Rigg, Anselm, 97-103; first published in full by Rago, London, 1888). But neither in the Carmen de Contemptu Mundi (Migne, PL clxxi., 867 ff.), with its amazing indifference to quantities, nor in several rude poems on the Virgin attributed to him (ib. 1055 ff.), is there any evidence of his authorship save some late and vague traditions. This may have had the Italian’s passion for the Virgin is, however, the Orationes (cf. Rigg, 46-60; Migne, PL clxxi. 942 ff.).

(iv.) Theological and Philosophical. —Of these the most important are—

(a) Monologion de Divinitatis Essentia.—In this work, written in 1070, when still prior at Bec (Lep. iv. 103), he gives the famous so-called a priori proof of the existence of God which has thence found its way into most theological treatises. It is really an application of the Platonic Ideas to the demonstration of a cosmogony who contends for a logical ascent from the particular to the universal. In the world of experience we are confronted by transitory imperfect phenomena which inevitably lead the mind upward toward an eternal necessary perfection. Our recognition of goodness, for instance, in phenomena, drives us to believe in a supreme nature that is good per se, and which must be the final cause of all things, that supreme objectivity in whom our ideas inhere. Thus the existence of God is implicit in ordinary experience.

The criticism of this argument, which rests on certain Realistic premisses, would take us too far into philosophical questions. But we may point out here a criticism that applies to all Anselm’s work—his extreme anxiety to satisfy reason (‘credas ut intelligas’). From this base grew his infinite Trinitarian argument, and his reply to Hildebrand (cf. Anselm’s second last answer of Bec). Anselm in this is akin, though with a difference, to Kant, as contradistinguished from Hegel. He attempts to establish on rational grounds not merely the Trinity, but also the Incarnation; and all knowledge, he seems to think, rests on faith.

(b) The Proslogion, so called because it is in the form of an address to God, is an extension of the a priori argument to an attempt to prove the existence of the Trinity by a single deduction instead of, as in the Monologion, by a long inductive chain. The fool’s very denial of God, he argues, involves the idea of God, and of this idea existence is a necessary part. In other words, thought includes reality, and he who denies the existence of the Trinity tentatively postulates the Absolute, an argument substantially the same as that employed 600 years later by Descartes. To this reasoning Count Gaunilo (F. c. 1053), abbot of Marmoutier, replied in his Liber pro Insipiente or Apology for a Fool (printed in Migne, clxxi. 242-8) that the idea of the fabled Isles of the Blest does not postul this existence (c. 6). Anselm replied briefly in his Liber Apologeticus that there is all the difference between the idea of the Summum Capitale, or eternal necessary idea, and any particular empirical idea of things which had a beginning, and will have an end (c. 9). But this existence of existences is an inalienable feature of the idea of the Summum Capitale, which cannot be conceived save as existing.

The history of these polemical arguments of Anselm belongs to the development of the philosophy of the Church, and can only be received by the Aristotelian schoolmen, with the exception of Duns Scotus, who admired them as the day-by-day progress of philosophy in the form of the systems of Descartes, Spinoza, Leibniz, and Hegel. Their most effective critics are Kant (Pure Reason, i. 121 ff.) and (iii. 4). Anselm’s objections to Augustine are also most clear (e.g. de Trin., viii, c. 3).

(c) de Fide Trinitatis, an answer to Roscelli’s denial of universals as ‘empty words,’ was composed in 1098 at Schiavi. Roscelli’s denial led him practically to the choice between Sabellianism and Trithesism; for the Trinity is itself a universal in respect of the comprehension theory of the compound personality. Anselm meets Roscelli’s monism by pointing out that it is a fallacy to suppose the universal and the individual to be repugnant inter se. Those who care for ingenious similitudes to the doctrine of the Trinity will find, in words that remind us of the Athenian Creed, a parallel between a ‘fountain, river, and lake,’ each of which may be called the Nile (c. 8).

(d) To one point—the doctrine of the Incarnation—of the modern Roman Church Anselm gave a powerful impulse in his de Conceptu Virginis. In this work (c. 18), as well as in the Cur Deus (l. 16), he argued for the con- gruity of the entire supernatural with the natural, as before he had expressed in the Exposition of the Holy Ghost. Between this and the doctrine of the Incarnation there is but a step, which he himself may have taken in his last thought (see the tractate of
his nephew on the matter, Migne, PL clix. 382 ff.). According to Mansi (xxv. 829), Anselm inaugurated in England the Feast of the Immaculate Conception (Dec. 8). In this treatise (cc. 25-26) Anselm defends most rigorously the damnation of all unbaptized children—a logical deduction from his views on original sin.

(c) De Veritate, a short work which reminds the student of the importance of truth as the accurate perception of the archetypal ideas in the mind of God.

(f) De Libero Arbitrio. —Mere freedom is not the power of choosing between alternatives, but of persevering in righteousness for its own sake (c. 13)—a doctrine afterwards more fully developed in Kant’s Metaphysics of Ethics. It is of importance to notice that Anselm points out that original sin need not involve total depravity. Man is still left in possession of certain powers of the real ‘natural’ freedom (c. 3) and the power of will to govern motives (cc. 5, 6).

(q) Deus Homo (begun in 1084, finished in 1088). In this work, which marks an epoch in the development of doctrines of the Atonement, Anselm destroyed once for all (i. 7) the old tradition of a ransom to be paid to the Devil (Thucydis, p. 215, ed. Loumartzsch. iv. 27) was developed by Gregory of Nyssa, Ambrose, and Augustine (de Lib. Arbit. lii. 10) and dominated the Church from Gregory the Great to Anselm.) In place of this he substituted a conflict between the goodness and justice of God, familiar in all forensic ideas of the Atonement, and which reminds the student of Roman doctrines of lese majeste. The defects of this theory (which may be described in brief as the interpretation of the relationship between God and man in terms of the Roman law familiar to Anselm—of Tontent law Anselm would know nothing)—, in addition to its tendency to destroy, as in much current theology, the essential ethical unity of the Godhead, lie in the essential opposition between God and the external world which it posits, leading to the idea of arbitrariness on the part of God, and the absence on the part of the individual of his own personality as an essential factor. This last, we may remark, is a common defect of scholastic Realism. The immanence of God can find no place, and the Pauline mystical conception of union with the risen Christ (I Cor. vi. v. 5) is left out of consideration. This is the more remarkable, inasmuch as the Pauline idea would have appealed strongly to Anselm’s cast of thought. The conflict, however, is clear from the juridical bondage. But instead we have the superabundant payment by Christ, the substituted sinless God-man, of a debt due from man to the justice of God (i. 12, 26), which debt man, by reason of his original sin, cannot discharge. The keynote of the treatise is thus the paradox ‘man must, man cannot’ (ii. 6: ‘quam satisfactionem nec potest facere nisi Deus, nec debit nisi homo; necesse est ut ea faciat Deus homo’). Anselm’s theory of the Incarnation in this treatise is far from satisfactory. In his anxiety to avoid conception now known as kenothe, he limits the sufferings of Christ to His human nature (i. 8: ‘Divinam naturam asserimus impassibilim’). The digression on the restoration from among men of the number of the angels who have fallen (cc. 16-19) is characteristically medieval.

2. Opuscula. —(a) De Glorifico Spiritus Sancti.—This great work, the outlines of which were given at Bari and completed shortly before his death, moves in the main on lines traced out by St. Augustine’s De nobilitate Dei (Dea 39) on the cultus of the Holy Ghost, and so far as limited by His threelfold Personality. The procession of the Holy Ghost from the Son (‘Filhoe’) is more consonant with this personality than the Greek doctrine, which rends the co-inherence in the unity of the Godhead of the Three Persons (see esp. c. 29).

LITERATURE.—(1) LIFE OF ANSELM: We are primarily dependent on two collections of life of Anselm, PL clix. 382 ff., see especially his secretary Eadmer’s Historia Novorum et de Vita Anselmi, two most commendable records (best ed. by Martin Rule in Roll’s Series, 1854, to which all references are given; also in Migne, PL). Of other sources, William of Malmesbury, de gestis huius maiestatis (Huntingdon), and Orden in his Vita Eadmeri, ed. (Paris, 1838-55), are of most value. Of modern literature which is of note is that of P. Harnack, he of Canterbury (1896), especially valuable for the philosophy; Martin Rule’s St. Anselm (3 Vols. 1853) is a good storehouse of facts, far from judicial in tone. Freer, however, at length with Anselm in his Norman Conquest, and more fully in his William Rufus. For the general reader, the history is less to Anselm’s position as a theologian, Dean Church. St. Anselm (1st ed. 1875, often reprinted), may be commended. Of foreign works the best perhaps is Ch. de Remusat, St. Anselme (Copenhagen 1873). Bagge’s Eadmer (1892) and S. Anselme (1887, and abridged, 1891) are also of service. The Life of Anselm by Dean Hook, Archbishops (1890-70), is a valuable Erastian caricature. Dean Stephens’ account, English Church, vol. 2 (1910), is judicious and sympathetic.

(3) REVIEWS of the philosophy of Anselm are many. The student should consult Ueberweg, etc. Attention may also be drawn to Cremer’s work, that Anselm’s doctrine of the Incarnation was different from the earlier, that of Tontent law conceptions as distinct from Roman. See Cremer, SK, 1880, 189. On the other side Louta, Dogmengeschichte, 275 n.; Harnack, History of Dogma, iii. 342, 565.

H. B. WORKMAN.

ANTEDILUVIANS—(a) The term ‘antediluvian’ (Lat. ante diluvium) was formerly applied to men or races who lived before the Flood, the latter being regarded as a Deluge universal in extent, and destroying all men excepting Noah and his family. But the term also came to be used by some ethnologists to describe certain races which were believed to have survived the Deluge, the latter being supposed by them to be concerned only with a single race of men, those descended from Adam. This pre-Adamite theory, as it was called, found many advocates during last century. Thus George Catlin referred the American Indian tribes to an antediluvian genus or family called Anthropus Americanus (O-kepea, London, 1866; for a later exponent of this view, see Alex. Winchell’s Pre-Adamite Races, 1875). The identification of the Deluge in a universal Deluge has been generally given up, the name ‘antediluvian’ has come to have a literary, or it may be a mythological, rather than an ethnological meaning. The examination of this article will be to inquire into, and to some extent compare, the beliefs of various nations concerning those who lived before the great Deluge, especially where that event has come to be part of a definite traditional belief.

1. The Bible antediluvians.—(a) The traditions of J (and secondary elements [J*]).—Man is moulded out of the dust of the ground, and becomes a living being by the inspiration of the breath of Jehovah (Gen 2:7); woman is made out of a rib taken from the first man while he slept (221). He lives at first on the fruit of the garden (225), in the simple innocence of childhood (225). He learns sexual knowledge as a consequence of that temptation, and his sense of shame sets him to provide a form of dress (3') much like what is still used by the pigmy women of the African Ituri Forest. On his expulsion from Eden this was provided for clothing, an alleviating the slaughter of animals (v. 5'). Their use for sacrifice from this point is implied in the story of Cain and Abel (Gen 4 3'), though the staple food is still vegetable. The Beloit points out that only through hard labour—in evident contrast to the fruit of the garden produced by Divine agency (31'-32'). A more important result of the Fall is
ANTEDILUVIANS

that man became mortal (38) [cf. Ro 5:1, 1 Co 15:22].

On the other hand, 39-40 (J) seems to imply that man was naturally mortal, and that immortality could be acquired; but this passage does not accord with 38, that speaks only of one forbidden tree, and is probably a separate tradition incorporated with J (see Oxf. Hex., ad loc.).

Tibetan and Enosh probably (sons) of the same parent, and the art of smelting brass and iron (rv. 21, 22). The art of building, on the other hand, is primitive, the first to build a city being Cain (v. 15).

The attitude of the antediluvians towards religion and morality is more difficult to de-
terminate, and here again differences between J and J, and even between different sections of J, show themselves. The statement that in the time of Enoch men began to call on the name of Jahweh (42b-3 J) is hardly consistent with the story of Cain and Abel (J). 41b is too ambitious to help us much. The story of the origin of the Nephilim from the unnatural union of the 'sons of God' and the daughters of men (6-9), in its present connexion with 6-8, appears to be a reason for the de-
pravity and violence which were the cause of the Deluge. But it is at least possible that this story was originally quite independent of the Deluge story, and that the latter belongs to a later cycle of traditions (J), inconsistent, as it obviously is, with 41b-3 (see Oxf. Hex. and art. DELUGE). If so, the term 'antediluvian' is not strictly applicable, so far as, as distinguished from J, is concerned.

The names of the antediluvians according to J (+ J) are Adam, Seth, Enosh (45-50 J), Cain, (Abel), Enoch, Jared, Methushael, Lamech (Adam and Zillah), Jabal, Jubal, and Tubal-Cain (160-24 J). Of these Abel dies childless; Adam and Zillah are the wives of Lamech; Jabal, Jubal, and Tubal-Cain are Lamech's three sons. The rest appear in two genealogical lines, (1) Adam—Enosh, (2) Cain (the elder son of Adam)—Lamech, who is the seventh in the line. (b) The antediluvians of P. —The first were made out of nothing by a direct fiat of God, in God's image and after His likeness, male and female. This primitive tradition (Gen 1:26-27 5;) was repeated by the Jews (6-9), and was vegetarians till after the Deluge (1-9). The names of the ante-
diluvians are given in one line only (Gen 5). Their relation with those of J can best be seen by the following table:

<table>
<thead>
<tr>
<th>P</th>
<th>J</th>
</tr>
</thead>
<tbody>
<tr>
<td>(5)</td>
<td>(J) 41-32 J</td>
</tr>
<tr>
<td>Adam</td>
<td>Adam</td>
</tr>
<tr>
<td>Enosh</td>
<td>Enosh</td>
</tr>
<tr>
<td>Kanai</td>
<td>Caim</td>
</tr>

<td>Methu-shalal</td>
</tr>
<tr>
<td>Lamech</td>
<td>Lamech</td>
</tr>
<tr>
<td>Noah</td>
<td>Noah</td>
</tr>
</tbody>
</table>

A comparison of these lists makes it evident that P has combined the two lists of J (+ J), merely transposing the names of Mahalalel and Enoch. The omission of the names of Adam and Cain in the antediluvians, Seth is described as be-
pot in likeness and stature, and that the Divine nature of Adam is reproduced in his offspring (5, cf. 5'). Of Enoch it is said that he 'walked with God: and was not; for God took

him' (5'), meaning probably that he was translated (for the first phrase cf. 8, where it is used of Noah). This is a hint that antediluvian is a Sumerian Deluge, the 5th of the translation of Noah comparable to that of Sittapali in the Sumerian Deluge story (see DELUGE). There is a trace given of the progress of civilization, or any suggestion of a physical difference before and after the Deluge, except that the age of man, which, but for Enoch, had been on an average about 900 years, began to decline rapidly.

2. The Babylonian of mortality and immortality. Berossus in Eus. (Migne, 1857) Chron. Bk. 1. ch. i. (2); Driver's Gen. in loc.), and Ammonius Ptolemaicus (Opert, Die Antediluvier, 1877, ch. 2) probably with the Sumerian Deluge, Berossus agrees with P in giving (1) 10 antediluvians, and (2) these in one line. (3) Some writers, especially Hommel and Sayce, have found a further agreement in the meaning of some of the names occupying the same place in the two records. Thus, in their opinion, Amelon = Bab. amdu= 'man' = Enosh (26a), and Ammonius Ptolemaicus (31*), and Berossus (31*), and Berossus (31*).

A more probable identification is that of Evedoracus or Edoraches with Enoch. Evedoracus is believed to be another form of En-me-sedaranku, a legendary king of Sippar, a town sacred to the sun-god. This god called Evedoracus to intercourse with himself, taught him secrets of earth and heaven, and instructed him in divina-
tion, and thus he became the mythical ancestor of diviners. This identification is confirmed by the fact that he was one of the 365 years of Enoch's life, which, though having no parallel in Berossus, appear to have some con-
nection with the 365 days of the solar year. (4) A further point of contact lies in the fact that the sum of the reigns of the Babylonian antediluvians amounts to 432,000 years. If a soss (a period of 5 years) be substituted for a week in the Bible record, the period before the Deluge in the latter, 1656 years, will agree with the Babylonian (337, 38, 78-81).

On the other hand, it is difficult to reconcile this probable connexion of Berossus and P with the obvious derivation of the latter from J (+ J). The difficulty may be got over on the supposition that P indeed took his list of names from J (+ J), and altered the position of Enoch to agree with that in the list of Bab. antediluvians; that the agree of the number 10, if it existed in the Babylonian tradition of P's time, was a fortunate coincidence; and, further, that P derived his date from a Babylonian tradition, dividing the relation among the antediluvians accord-
ing to a method of his own. It must be admitted that apart from Enoch the identifications of names are ingenious rather than convincing. It must also be borne in mind that Berossus may very prob-
ably have himself departed from ancient Baby-
lonian tradition by substituting a soss for a week, and possibly even the number 10 for an earlier 7.

The translation of the 7th antediluvian, Enoch, in Gn 5(24) (like that of Sittapali, the Sumerian Deluge hero), suggests the possibility that according to ancient tradition there were only 7 antediluvians, the last being Enoch = Lamech = Noah = Sittapali.

2. Antecedents in the mythological systems of other races. —It is not necessary to say much concerning these. It may suffice to remark that, whereas among Semitic peoples the antediluvians are, if indeed they exist, all 'apart from at least human beings, among many other races they are described as more or less abnormal, and not infrequently as monsters, and that the purpose of the Deluge was to do away with them. Of the many races on which the legend were ape-like creatures (Andreis, Die Flutmythen, § 6). In a Fiji legend two races were destroyed by the Deluge, one consisting of women only, the other of men.
with dogs' tails (Amidre, § 37). The Quiché Indians of Guatemala have a curious story connected with the origin of the tribe. Men were first made of clay, but they had neither speech nor intelligence, and were destroyed by a flood of water. Then the gods brought their proper women, and the men and the women of resin. Those could speak, but only in a senseless fashion, and were destroyed by a storm of burning resin and an earthquake, except a few who became wild asses. The third time men were made of white man and yellow man, and were so perfect that the gods themselves were afraid of them. Therefore they took away some of their higher qualities, and they became normal men (Amidre, § 73). See, further, DELUGE.

F. W. HAARDSWORTH

ANTHROPOLOGY.

[R. MUNRO.]

Definition and scope.—Anthropology (the science of man, from ἄνθρωπος, 'man,' and λέγω, 'discourse'), in the modern acceptance of the term, treats more particularly of man's origin and place in the animal kingdom; his development as an individual (Ontogeny) and as a race (Phylogeny); the physical and mental changes he has undergone during his career, through the glory of his new departure in the organic world as an implement of the animal; and finally, the development of articulate speech and the principles of religion, ethics, altruism, and sociology, which, at the present time, constitute the great landmarks of human civilization. The claim of Anthropology to be recognized as a separate science were for some time successfully opposed on the ground that the phenomena bearing on the history of mankind are already well dealt with under the sciences of Biology, Anatomy, Physiology, Psychology, Theology, Ethics, Philology, Ethnology, etc. But the startling discoveries made in the collateral sciences of Geology, Paleontology, and pre-historic Archæology, about the beginning of the second half of last century, which culminated shortly after the publication of Darwin's Origin of Species (1859) in the general acceptance by scientific men of the theory of organic evolution, conclusively proved that there were ample materials in this new field of research which were by no means covered by any of these sciences. While, therefore, Anthropology may be justly regarded as comprising all the elements of a comprehensive monograph on mankind—all that they are, or have been, or have done, since their generic founder came into existence,—practically it is restricted to the earlier stages of humanity, leaving the details of its later phases to be worked out by those other sciences, on the principle of the division of labour. But this limitation on the scope of Anthropology, its remaining materials, which are rapidly increasing in number and variety, present a greater attraction to the philosophic mind than those of any other department of speculative knowledge, because they are so intimately connected with the human interest that it is felt as if they were data intimately affecting one's own origin and pedigree.

In order to present a brief but reasoned summary of the conclusions to be derived from a study of so fascinating a science, it becomes almost necessary to arrange its scattered materials along certain well-defined lines of investigation, which may be thus categorically stated: (1) Man's physical characteristics; (2) his fossil remains; (3) his handiwork products; (4) his mental superiority over other animals; (5) his development; and (6) lastly, some concluding remarks.

1. MAN'S PHYSICAL CHARACTERISTICS.—So long as the Hominidae were believed to occupy a higher platform in the zoological world than all other peoples, they were in virtue of specially created endowments, no one apparently thought of looking for evidence of their origin and history in the obscure vistas of prehistoric times. The long-cherished traditions and myths which had gathered around the problem left little room for any other hypothesis than that man's appearance on the field of life, as a fully equipped human being, was the last and crowning achievement of a long series of creative foci which brought the present world-drama into existence. But to eliminate man altogether from the processes of organic evolution is not only an unwarranted assumption, but is unsupported by any evidence that can be characterized as scientific.

No fair-minded person who is conversant with the close anatomical and physiological resemblances between the structural details of man and those of the anthropoid apes—every bone, muscle, nerves, and blood-vessel being virtually the same—and the striking analogy between the complex mechanism of their organs of sense, can seriously deny their community of descent, at least from the animal and bird-like point of view.

But even the acceptance of the so-called orthodox view, viz. that a male and female were originally specially created, from whom all the present varieties of men have descended; and that by no means get rid of the evolution theory. For, in Huxley's time, it has generally been admitted that the gulf between civilized and savage man is wider than that between the savage and the highest ape. If, therefore, the ancestors of the white, black-, and red-skinned people of to-day were originally one undivided stock, why should it be regarded as improbable that that primitive stock itself was a branch of an older stem which included also the ancestors of the anthropoid apes of to-day? The causes of variation which evolved the typical Negro and Caucasian man were quite adequate to evolve that ancestor from the anthropoid stock in the time of the Flood.

The striking analogy between the bodily structure of man and that of the nearest of the anthropoid apes becomes still more apparent when we consider the phenomena of the fatal life of animals. Not only does the human embryo start from an ovule similar to, and indistinguishable from, that of many other animals, but its subsequent changes follow on precisely the same lines. All the homologous organs in full grown animals, as the wing of a bird, the flipper of a seal, and the hand of man, are developed from the same fundamental parts of the embryo.

'It is,' says Professor Huxley (Collected Essays, vol. vii, p. 92), 'only quite in the later stages of development that the young human being presents marked differences from the young ape, while the latter departs as much as possible from its development as the man does.'

Starting at this last assertion may appear to be, it is demonstrably true, and it alone appears to me sufficient to place beyond all doubt the structural unity of man with the rest of the animal world, and more particularly close with the apes.'

The illustrious von Ditsch, who first directed attention to the importance of embryology having formulated a law to the effect that structural differentiation in fetal development was from a general to a special type. Haeckel, looking at the same phenomena from a different standpoint, came to the conclusion that the development of the
ANTHROPOLOGY

individual is a recapitulation of the historic evolution of the race. If this astounding generalization be true, the study of embryology should supply the secret of life as a skilled naturalist, pursuing the goal of his inquiry, by making the progressive stages of man's development the subject of experimental illustrations within the precincts of the laboratory. But, until greater progress is made in this field, the possibility of illuminating the cerm, we have few data to guide us in forming precise conclusions on the subject. Meantime, it may be remarked, that if embryology is as conservative of energy as other organic processes, it would be expected that, in course of passing through a series of progressive increments, some of the minor links would ultimately drop out altogether. Nature is full of short cuts. As a parallel instance in this human economy, a portion of the instinct which lends the common honey-bee to fix always on a hexagonal cell instead of the simpler globular form used by the humble bee. Here we have an act of purpose complete, and the instinct which has been originally acquired through the ordinary processes of natural selection, but which is now directly transmitted through heredity—thus altogether skipping over its intermediate evolutionary stages.

Man's descent from the lower animals is also greatly strengthened by a number of vestigial, or so-called rudimentary, organs described by anatomists as being normally present, or occasionally to be met with, in the human body. Such organs as canine teeth, the coccyx, inter- and supra-condyloid foramina of the humerus, the coccyx and appendix vermiformis, fibrous traces of various muscles, etc., are apparently useless in the human form while that of the other animals have well-defined functions assigned to them. But, indeed, the homological structure of the entire human body is utterly inexplicable on any other hypothesis.

"Thus we can understand," writes Mr. Darwin, "how it has come to pass that man and all other vertebrate animals have been constructed on the same general model by which they pass through the same early stages of development, and why they retain certain rudiments in common. Consequently, we ought to form the natural expectation of descent, and take any other view to be that our own structure, and that of all the animals, are so connected, as to be mere snags to a weaver's judgment. This conclusion is greatly strengthened, if we look to the members of the whole animal series and consider the evidence deduced from their affinities or classification, distribution and geological succession (Descent of Man, p. 23).

But if the races of mankind are so closely related because of their common mode of descent, it is no less the anthropoid apes, what, it may be asked, are the essential characters which differentiate them from the latter? Flower and Lydekker, in Mammals Living and Extinct (p. 740), thus answer the question:

"The distinctions between the Hominidae and Simiidae are chiefly relative, being greater size of brain and of brain-case as compared with the facial portion of the skull, smaller development of the canine teeth of the males, complete adaptation of the structure of the vertebral column to the vertical position, greater length of the lower as compared with the upper extremities, and greater length of the halluc, or great toe, with absolutely complete absence of the power of bringing it in opposition to the other toes. The last feature, together with the small size of the canine teeth, is perhaps the most marked and easily defined distinction that can be drawn between the two groups."

Of the above distinctions it will be seen, from a posterior paragraph, this article we have assigned the chief place to the erect attitude, because its attainment was the means of setting free the fore-limbs for the development of their higher functions as tool-making organs, which constitute the true starting-point of man's dominion. Throughout the animal kingdom there are many morphological changes which strike one as remarkable instances of the adaptation of special means to special ends. But, as tool-making organs, the fore-limbs have been utilized in the human condition, as for the first time, as the armature of the human body. This momentous fact is the starting-point of the long series of inventions and ingenious methods by which nature's operations will be searched in vain for a series of phenomena comparable to those which ushered man on the field of animal life as a skillful tool-maker. The preliminary work of this great event was the attainment of the erect attitude which to this day distinguishes him from all other vertebrates. This divergence from the pithoid group of animals took place sometime in the Tertiary period, but was eminently characterized by the adjustment of certain muscles and bones so as to balance the upper part of the body on the spinal column, and facilitate bipedal locomotion, which henceforth became man's normal mode of progress.

The organic changes involved in the transformation from the semi-erect attitude of monkeys to that of man cannot be regarded as a very arduous piece of work; so that the assumption of bipedal locomotion, and the differentiation of the hands and feet, would have been effected in a comparatively short period. It was, however, very different with mental evolution, as the formation of brain substance in response to the progressive stimuli of the manipulative organs is a much more elaborate process—a process which has no limits, and indeed is still in operation. Hence, the time requisite to attain the erect position, or transference of the evolution of man is by no means comparable, in point of duration, to the long ages which have elapsed since he became a tool-maker. The evolutionary stages of organic life often run in grooves, and may be long or short in proportion to the facility afforded by the exciting causes in the environment and the benefits conferred by the change. Moreover, it is probable that the attainment of the erect position was, not only because of the great length of time since they came into existence, but also because of their increased numbers and wide distribution on the globe. Whatever the causes may have been, the change which induced the first anthropoid animals to resort to bipedal locomotion, the perpetuation of the habit soon became hereditary; and it has continued ever since to be one of the most distinguishing characteristics of man.

It will be observed that the angle which the axis of the spine of a vertebrate animal makes with the axes of its supporting limbs varies from 90° to zero. In man alone this angle reaches the vanishing point, because the vertebral axis has actually come to coincide with the vertical direction of the two lower limbs, which in his case exclusively support the body. The erect attitude is the only peculiar to men, but the ultimate goal of all improvements in the advance of vertebrate life, since the bilateral parts of the body are nicely balanced on the spinal column and the two arms and legs are equal in length. The conspicuous physiological line of demarcation that exists between man and the lower animals. Moreover, it was indirectly the means of profoundly affecting the subsequent career of the human species, as tool-making on the fore-limbs to manipulative purposes virtually inaugurated a new phase of existence, in which intelligence and mechanical skill became the dominant factors. The co-operation of these two factors was the starting-point of the long series of inventions and ingenious methods by
which mankind have gradually worked out the

elements of modern civilization and acquired
donimion over all other animals.

Linnaeus, in his Systema Naturae, described the
genus Homo as comprising four primary varieties,
which he termed the Malay, Moundian, Mongolian,
and American, all of which were connected by numerous in-
mediate forms. To these Blumenbach added the
Maia, as a fifth variety. On the other hand, Cuvier reduced them to three, viz. Caucasian, Mongolian,
and American,—a classification referred to by
M. Verene in his Races Humaines. The
description of these various races of mankind,
their relation to each other and distribution on the
globe, form the special domain of Ethnology and
Ethnography (see Memoirs of John

With regard to Cuvier's division of the Primates into
quadrumanus and bimanus, it may be observed that he is only
partially correct, for, although anatomically the outer limits of the
former are truly prehensile organs, yet the upper two are
decidedly more differentiated as hands than the
human. Even in the positions where comparison between hands and feet had already
begun. In man the structural difference between the upper
and lower limbs is greatly widened in opposite directions, the
former becoming exclusively adapted for prehensile and
manipulative purposes, and the latter as exclusively adapted for
locomotives.

II. SOME REMAINS OF FOSSIL MAN.—With the
completion of the bodily changes involved in the
attainment of the erect attitude, the evolution of
the present human form, with its exceptional
of some remarkable modifications in the cranium,
facial bones, and probably the larynx, was prac-
tically completed. As soon as bipedal locomotion
became habitual and firmly secured on anatomical bases
strong enough to bear the weight of the body, the
characters of the lower limbs should be sensibly
affected by any subsequent increase in the quantity
or quality of brain-matter. For example, the
feet, which had hitherto been the support of the
entire weight of the body, would not be in the
least degree affected by the nature of the com-
ponent ingredients of that load. It would, how-
ever, be very different with the bipedal form and its
attachment. For, by the substitution of many
factured weapons in lieu of nature's means of
self-defence, the subsequent well-being of these
novel bipeds became absolutely dependent on their
skill in handling them. The course of the cultural
environment into useful mechanical appliances.
As soon as they recognized that the reasoning
facilities were the true source of such inventions, no
doubt a premium would be put on useful dis-
coverties. In this way strong motives for the pro-
duction of more perfect weapons, tools, and other
appliances were constantly coming within the
scope of their daily avocations, the result of which
would be a progressive increase in intelligence,
and a corresponding increase in brain substance.

Now, according to the well-established doctrine of the
localization of brain function, the additional brain cells thus
acquired had their seat of growth for the most part somewhere in
the cerebral hemispheres, which lie well within
the anterior portion of the brain-case. The mere
mechanical effect of this increment to the physical
organ was bound, it is believed, to increase the weight of the
anterior half of the head, and so to upset its
finely equiposed position on the top of the spinal
column. But, as any interference with the free and
easy rotatory movements of the head would
manifestly be disadvantageous to the individual
in the struggle of life, it became necessary to
counteract the influence of this disturbing element
by the action of some other concurrent morpho-
logical process, which would not be prejudicial to
the general well-being of the human economy.
This object was partly attained by a retro-
cession, or contraction, of the facial bones, espe-
cially the jaw-bones, towards the central axis of
the spinal column, and partly by a backward
shifting of the cerebral hemispheres. As the
gradual filling up of the cranial cavity pro-
gressed peri possum with those cranial alterations,
we have, in the facial angle of Camper, a rough
mechanical measure of the acceleration of mental development during the period of man's
existence as a human being, i.e. since he attained
the erect attitude.

One of the results of this retrocession of the
facial bones was the gradual contraction of the
alveolar borders of the jaws, thereby diminishing
the space allotted to the teeth,—a fact which
plausibly accounts for some of the peculiarities
differentiating the older fossil jaws from modern
specimens. Thus, in the dentition of the former,
the last, or third, molar is the largest, whereas
in the latter it is the smallest. Not only so, but
among some European races of to-day the last four
molar (wisdom teeth) have to be removed.

Another peculiarity of civilized races is the
greater prominence of the chin, a feature which
may also be due to the contraction of the alveolar
ridges, and the more upright setting of the incisor teeth in the jaws. But whatever the cause may have been, there can be no doubt that the
gradual formation of the chin has had a striking
parallelism with the progressive stages in man's
intellectual development ever since he started on
his human career.

The evidence on which these views are founded
consists of a few fossil skulls and other portions of
human skeletons (necessarily fragmentary owing to the
ordinary processes of decay). A short descrip-
tion will now be given of one or two of the more
interesting specimens.

(1) Java skull.—Perhaps the oldest and most
controversial skull unearthed in South Java, the
molar teeth, and a left femur, found in 1891-1892
by Dr. Eugène Dubois in Upper Pliocene strata
in the island of Java. After comparing these bones
with the corresponding parts of other human
sketches, both fossil and modern, and of some
anthropoid apes, Dr. Dubois published, in 1894,
a very complete memoir on the subject, with descrip-
tive details and photogravures of each bone. In
this memoir (Pithecanthropus erectus: eine men-
schliche Völgerschaft aus Java, Batavia,
1894) he assigns these remains to an animal having
an erect attitude like man, and a brain-case with
mixed characters, partly simian and partly
human, to which he gave the name Pithecanthropus erectus.

Unfortunately these bones, though found in the
same horizontal strata, were not close together,—
the skull-cap being 16 metres from the femur—and
consequently there is room for the objection that
they did not belong to the same individual.
Expert opinion was greatly divided as to the conclu-
sions to be derived from these relics. Most of
the anatomists who critically examined the fossils pro-
nounced it human—the late Prof. Virchow being
almost alone in maintaining that it might have
belonged to one of the anthropoid apes. As to the
two molar teeth, there was so much difference of
opinion among specialists—some regarding them as
ANTHROPOLOGY

The following is a brief description of its prominent characters:—External surface generally smooth but without any marked ridges; sutures almost entirely obliterated; frontal bone slightly keel-shaped in the line of the frontal suture; glabella, supra-orbital ridges, and occipital protuberance strikingly prominent; cranial vault depressed, and on section (antero-posterior) showing an arch intermediate between that of the anthropoid apes and that of an average European man. Its general dimensions may be thus abbreviated:

Antero-posterior diameter (max.) 190 mm.
Transverse diameter 120 mm.

Height in the parietal region (max.) 62 mm.
Cephalic index . 70

Estimated cranial capacity (Huxley) 1060 c.c.

With regard to this skull, Professor Huxley, writing in 1863, says:

'There can be no doubt that, as Professor Schaaffhausen and Mr. Busk have stated, this skull is the most brutal of all known human skulls, resembling those of the apes not only in the prodigious development of the superciliary prominences and the forward extension of the orbits, but still more in the depressed form of the brain-case, in the straightness of the squamous suture, and in the complete retreat of the occiput forward and upward, from the superior occipital ridges' (Lyell's Antiquity of Men, p. 94).

Here also, as was the case with the Java calvaria, we have no means, owing to the absence of the facial bones, of judging of the degree of prognathism of this very pronounced pithecanthropus specimen of humanity.

(3) Les hommes de Sp.,—In 1886 two human skeletons were found deeply buried in undisturbed débris at the entrance to a grotto called Belche-Roches, at Sp-sur-l'Orneau, in the province of Namur, Belgium. The interior of the grotto had been examined once before, but in front of it there was a terrace, projecting 13 yards, which had not been previously excavated. It was in this terrace that MM. Lohest and de Puydt made excavations with a view to the recovery of the human remains. The outer skeleton was found at a distance of 26 feet from the entrance to the cave, under a mass of rubbish 121 feet in depth and composed of four distinct strata, none of which appeared to have been disturbed or removed. If lay on the right side, across the axis of the cave, with the hand resting on the lower jaw, and the head towards the east. The other was 8 feet nearer the present entrance of the cave, but its position was not determined with so much accuracy as the former. Associated with these skeletons were worked flints of the type known as Moustirian, and some animal remains representing the following fauna:

Rhinoceros tichorhinus (very abundant).
Equus caballus (very abundant).
Cervus elaphus (rare).
Cervus taurus (very rare).
Bos primigenius (very abundant).
Elephas primigenius (abundant).
Ursus spelaeus (rare).
Moles sp.

Immediately over the skeletons was a hardened layer composed of chippings of ivory and flint, pieces of charcoal, and some angular stones of the surrounding limestone rock. Above this there was a reddish deposit containing remains of the same fauna, but the worked objects indicated a decided advance in civilization—aws and borers of flint, together with needles, heads, and ornaments of bone and ivory. Above this was a bed of yellowish clay, in which were still found bones of the mammoth and various flint implements; and lastly, a mass of clay and fallen rocks, without relics of any kind.

The osteological characters of one of the Spy crania correspond in a remarkable degree with those of the Neanderthal skull, as will be shown from the following measurements by Professor Fraipont (Congrès international d'Anthropologie et d'Archéologie préhistoriques, Paris, 1889, p. 333):

Antero-posterior diameter (max.) 360 mm.
Transverse . 144 mm.

The height of the skull in the parietal region was only 62 mm., which is very much less than the average dimensions of the skull found at Neanderthal, which is 120 mm. The frontal bone was deeply keel-shaped, and the sutures were almost entirely obliterated.
As regards the great development of the superciliary process, in the lower jaws ascending forehead, and the depressed and elongated form of the cranium, both these skulls present a more brutal appearance than any human skull known up to the time of the Java discovery.

According to Mr. Fratantoni, the entire anatomical characters of the Spy skeleton are in harmony with the same lowness of type shown by the skull. The jaws are deep and powerful, the chin slopes away from the teeth downwards and backwards, while the teeth and alveolar border have a striking prognathic appearance. The last molar teeth are not smaller than those immediately in front of them. The long bones are materially different from those of the normal Belgians of the present day, being generally shorter and stouter.

It is, however, only to note that the pithecosid characters of the other Spy skull appear to be less pronounced, the cranial vault being more lofty and the cephalic index at least 74.

It has already been surmised that the individuals to whom the Java and Neanderthal skulls belonged had prognathic profiles, on the ground that this feature is more frequently observed in the most primitive men. It is, therefore, particularly interesting to note that the jaws of these Spy men are highly prognathic—a fact which greatly strengthens the inference to be drawn from the former.

(4) Naulette jaws.—Among isolated cranial bones, occasionally discovered, the lower jaw, being merely attached to the skull by muscular and ligamentous tissue, is more frequently met with. Perhaps the most instructive of these jaws is the Naulette mâchoire, discovered in 1885, in the Trou de la Naulette, by M. E. Dupont, Director of the R. N. H. Museum at Brussels. The cave known under the above name is situated on the left bank of the river Lesse, near Dinant, and contains much débris and remains of the Quaternary fauna, among them being this jaw, at a depth of 4·50 metres beneath its final or modern floor. Though in a fragmentary condition, it presents certain peculiarities which strongly differentiate it from the corresponding bone in modern civilized man. Its characteristics, according to M. Dupont (La Recherche anthropologique des âges de la Pierre, p. 90), may be thus stated:

(a) Its small height, in proportion to the thickness of the body, gives it an exceptionally stumpy appearance.

(b) The chin, instead of projecting forwards, slopes backwards; and the 'genial tubercules' (apophyse génital) on its inner surface are wanting.

(c) The posterior molars are larger than the others, and have a proportion of having five roots, as shown by the size of the sockets, all the teeth being absent from the mandible when discovered.

Dr. Broca came to the conclusion that the Naulette jaw, in its anatomical characters, approached the simian type more than any previously known.

'Nous avons autorités à conclure,' he writes, 'que cette mâchoire, dont l'antiquité proclame remonte au temps du mammoth, est de tous les restes humains que fon connaissent justement le plus rappelant ceux de la grotte des singes (Congrès International, etc., Paris, 1887, p. 405).

With respect to the retreating slope of the chin and the character of the teeth, he considered that the individual who owned the Naulette jaw held an intermediate place between man and the anthropoid apes; and in support of this view he exhibited a sketch of a number of human mandibles showing a regular upward gradation from the extremely sloping chin of a chimpanzee up to that of a modern Parisian (ib. p. 399). These facts go far to establish the generalization that, as men advanced in intelligence, the prognathism which they inherited from their simian-like ancestors became gradually suppressed, until the retreating forehead straight and classic profile of modern times. This view is further strengthened by evidence derived from a comparison between the skulls of modern civilized peoples and those of the same variety inhabiting the globe.

This method of inquiry has yielded some striking results as regards the degrees of gnathism and frontal development which they respectively exhibit. The extent of this difference is well illustrated by Professor Owen (Comparative Anatomy, vol. ii. pp. 558, 560), in a comparison which he makes between the cranium of a native Australian and that of a well-formed European, from which it will at once be seen that the former has a low retracting forehead and a highly prognathic profile. The characters of the European skull, which present a very marked contrast to the former, are thus described by the Professor:

'In more instances the skulls of Cro magnon and Lyariacus are relatively larger, especially lothier and wider. The fore parts of the upper and lower jaws, concomitantly with earlier wearage, are less produced, and the contours descend from the longer and more prominent nasals. The ascending rami of the mandible are shorter. The molar is less protuberant, and the mandible more.'

(5) That other crania supposed to be of great antiquity have been recorded whose anatomical features do not, apparently, harmonize with these views so well as to be the type of the Java, Neanderthal, and Spy specimens, need not cause any surprise, considering the difficulty which sometimes occurs in correctly estimating their antiquity. Thus, the famous skulls of the Grotte Lantier, near Montblanc, long regarded as originally belonging to one of the hunter-artists of the late Palaeolithic period, shows a decided approach in all its characters to the normal type of civilized man. Its cephalic index is 72·8 and its capacity 1500 c.c. The height of its original owner was 1·82 metres. The lower jaw has a long ascending ramus, behind which, on both sides, the third molar is partly hidden. These two teeth are also smaller than the other molars, being in this respect more allied to the dentition of Neolithic and modern races. For these reasons, as well as for the fact that the Cromagnon skeletons were found on the surface of the Palaeolithic debris of the rock shelter of Cro magnon, lower Palaeo- anthropologists maintain that this old Cro magnon man belonged to the early Neolithic period. But between the latest phase of the life of the Palaeolithic artists of middle Europe and the earlier Neolithic people there was probably no great interval of time. Although the Cro magnon human remains were lying over the true culture débris of the Mousterien period, the amount of superimposed talus under which the skeletons lay shows that they could not have been much later than the transition period. Moreover, there are other human remains with regard to which no such doubts have been raised, such as those of Chevrette, Enfants, and Louviers, both found in the Dordogne district, which show equally advanced cranial characters.

(6) The recent discovery of two skeletons in the Grotte des Enfants near Mentone, which Dr. Verneu describes as belonging to 'a race inter-mediate between the Neanderthaloid and Cro magnon races, marks an important addition to fossil craniology. They belonged to a young man and an aged female of small stature, and lay on a hearth-layer at a depth of 7·75 metres. The cephalic index of the former is 69·72 and of the latter 68·58, and both have prominent prognoid jaws. But the interesting feature of the discoveries in this cave was that, a little more than 2 ft.
ANTHROPOLOGY

higher up in the débris, another skeleton of the Cromagnon type was found, measuring 6 ft. 3 in. in height and with a cephalic index of 70-20 (L'Anthropologie, vol. xlii. p. 263). That these two distinct races should be thus brought nearly on the same chronological horizon by no means dis- credits Dr. Verneuil's theory, as it is not improb- able that, while a higher race could be developed on an older and lower race still survived in Europe. In corroboration of this we have the record of two skulls, of a distinctly negroid type, having been found among Neolithic remains in Brittany. By V. S. O. (Bulletin de l'Académie de Besançon), he even accepting the Cromagnon race, whose skulls indicate a great stride in mental capacity over those of Spy and Neanderthal, as belonging to the latest phase of the Neanderthal period in France, it does not appear to the present writer that they dis- close a greater brain-case than would be expected of a people who displayed such artistic feeling and mechanical skill as the authors of the art gallery of the Neolithic period (see § III.).

(7) Some forty or fifty human skulls, more or less imperfect, and supposed to date back to Quater- nary times, have been recorded up to this date from almost as many places. Andries throughout Europe, often in alluvial deposits, but more frequently in the accumulated débris of caves and rock-shelters. Some years ago (Ortus Alpinus, 1873-1879), M. Hany and de Tréfouët care- fully examined all the fossils remains then known, and classified them under the names of the localities where the most typical specimens were found. Among dolichocephalic, or long-headed, they de- scribed two distinct races, one represented by a portion of a skull found at Canstadt and the other by the skull of the old man of Cromagnon. The brachycephalic, or broad-headed, were made to represent four races, under the generic designation of Furfooz, the name of a cave in the valley of the Lesse, thus:

1. The race of Canstadt, Cephalic index, 72
2. The race of Cromagnon, 72-76
3. The race of 1st Furfooz, 76-93
4. The race of 2nd Furfooz, 73-92
5. The race of 3rd Furfooz, 72-93
6. The race of 4th, La Trachère, 84-92

It was subsequently ascertained that these Fur- fooz skulls were the osseous remains of Neolithic interments, which shows both the difficulty and the danger of making chronological classifications on imperfectly observed data.

As the outcome of this short review of fossil cranology, perhaps the most important outstand- ing feature is that the three skulls above described as typical examples are all dolichocephalic. The race of Cromagnon was, in all probability, separated from the Neanderthal and Spy troglodytes by an interval of time which can be only approxi- mately measured by the duration of the larger part of the Glacial period. The appearance of brachycephalic races in Central Europe only at the beginning of the Neolithic period is an anthropological problem not yet satisfactorily explained. It has been abundantly proved, by the contents of dolmens and other sepulchral tombs, that two races, one dolichocephalic and the other brachy- cephalic, lingered contemporaneously with each other in the South of France (Rénth, 1873 ; Motevieux pour l'histoire primitive et naturelle de l'homme, vol. xii. 1877, etc.). From the remains in the artificial sepulchral tombs, investigated and described by Baron de Baye (Archéologie Pré- historique), the two races seemed to have more or less coalesced. From the amalgamation of these various populations in the highly mixed populations of modern Europe, and partly isolated sections of it; but whether the brachycephalic were developed from the dolichocephalic people at an earlier period still remains a controverted problem. These passing glimpses of the early races of man in Europe sup- port the hypothesis that two peoples widely separ- ated had come into contact, and perhaps elsewhere in Europe, at the close of the Reindeer period. Of these the dolichocephalic appear to have been long indigenous to the locality, and probably the direct descend- ants of the Paleolithic men whose skeletons were found in the caves of Spy and Neanderthal.

III. MAN AS A TOOL-MAKER. — Man may be differentiated from all other animals by the fact that he is a skilled mechanic, and manufactures a great variety of objects which he largely utilizes instead of the organs of offence and defence with which nature originally endowed him. In lieu of the specially developed teeth, claws, horns, hoofs, etc., used more or less for these purposes by other animals, man has provided himself with a multi- plicity of knives, axes, swords, spears, arrows, guns, etc., through the instrumentality of which his self-preservation is more efficiently main- tained.

(1) Looking at the accumulated products of man's mechanical ingenuity, which have been gathered and arranged in dignified galleries, it is an impossible task, from the primeval life, from an archeological standpoint, there can be no doubt that they are characterized by successive increments of improvement, both in technique and execution, from the rudest forms up to the most perfect modern tools. That, during the transition period, broken pieces of wood and natural stones would be used as missiles, without being fashioned into any par- ticular shape, may be as well argued as the theory that man passed from a state of existence in which tool-making was unknown; also that, in the course of time, such missiles would give place to stones so slightly worked as not to be readily distinguished from the accidental oc- currences of nature. Objects which come under this category are named coliths (χιλή, 'dawn,' and λίθος, 'stone'). They are recorded as having been found among gravels on chalk plateaus in various parts of the South of England, notably on the Kent plateau. Mr. Read, who describes and figures some of these coliths in his Guide to the Antiquities of the Stone Age in the British Museum, thus refers to this class:

'It is not the province of this Guide to enter into the arguments which have been brought forward against or in favour of the artificial nature of coliths, but it is only necessary to say whether their claims can be substantiated or not, the existence of implements of a ruder kind than those of the drift is in itself not improbable. For no invention reaches perfection suddenly, and each stage of advance is attained by an infinitely slow progress from the simple to the complex. The majority of the drift implements are clearly something more than the first efforts of an unpractised hand; they show, on the contrary, signs of a comparatively long development, and it may be fairly argued that their ruder prototypes must exist somewhere. It was only to be expected that they should have escaped notice for a longer time than the typical Palesoliths, it only because they must necessarily be more difficult to distin- guish from naturally fractured flints.'

(2) The recognition, even among anthropological savants, that some peculiarly shaped flints, now known as palaeoliths, were manufactured by man and used as implements, is scarcely half a century old. A fine pear-shaped flint of this type was found along with an elephant's tooth at Gray's Inn Lane, London, about the end of the 17th century; but, though described in the Sloane Catalogue and preserved in the British Museum, its antiquity remain- ed unknown until Sir W. Pranks pointed out its identity with those found in the Valley of the Somme (Ancient Stone Implements, p. 251). Also, as early as 1757, a Mr. La Motte, a member of the Society of Antiquaries some flint 'weapons' found, associated with the bones of extinct animals, at a depth of 12 feet in
brick-earth at Hoxne, in Suffolk. He was so much struck with the situation that he gave a precise account of the circumstances, and he regarded the implements as belonging to 'a very remote period indeed, even beyond that of the present world'. (J. de B junker de Perthes.) Freeman, a descendant of the Hoxne implements, was so struck with the report that he presented specimens of the Hoxne implements to the Museum of the Society; yet here they lay, unheeded and unsuggestive, till 1859, when Sir John Everett Millais, the painter, and a fellow of Trinity Hall, Cambridge, recognized them as similar to those in the collection of M. Boucher de Perthes.

(3) It was about the beginning of the second quarter of last century that Kent's Cavern, near Torquay, first became a subject of archaeological interest, owing to the researches of the Rev. J. MacEnery, who asserted that he found in it flint implements, associated with bones and teeth of extinct animals, beneath a thick continuous sheet of stalagmite. But the legitimate inference from these facts, viz. that man was contemporary with these animals and lived before the deposition of the stalagmite, had little chance of being accepted, with the works of the river, equally typical and authoritative of so famous a geologist as Dr. Buckland, author of Religion Delineate and of the Bridgewater Treatise on Geology and Mineralogy. But, in 1847, MacEnery based his conclusions were verified by fresh excavations made by Mr. Godwin-Austen, F.G.S., in 1840, and subsequently by a committee appointed by the Torquay Natural History Society in 1846. Papers embodying the results of these investigations were read at the Geological Society of London and at the meeting of the British Association in 1847. But, according to the late Mr. Pengelly, F.R.S., the reception of the results was at Brixham, in September 1858, at the meeting of the British Association, then held at Leeds, in which it was announced that eight flint tools had already been found in various parts of the cavern, all of them implements, and that a variety of implements, varying from 9 to 42 inches in the cave-earth, on which lie a sheet of stalagmite from 3 to 8 inches thick, and having within it and on it relics of the bison, beaver, mammoth, rhinoceros, and reindeer. This paper, to use the phraseology of Mr. Pengelly, produced a decided 'awakening,' besides indirect results of the highest importance.

(4) Another discovery of a similar character was the Windmill-Hill Cavern at Brixham, explored in 1858, under the auspices of a committee appointed by the Royal and Geological Societies of London. The first paper on the result of this investigation was read by Mr. Pengelly in September 1858, at the meeting of the British Association, then held at Leeds, in which it was announced that eight flint tools had already been found in various parts of the cavern, all of them implements, and that a variety of implements, varying from 9 to 42 inches in the cave-earth, on which lie a sheet of stalagmite from 3 to 8 inches thick, and having within it and on it relics of the bison, beaver, mammoth, rhinoceros, and reindeer. This paper, to use the phraseology of Mr. Pengelly, produced a decided 'awakening,' besides indirect results of the highest importance.

(5) The discovery by M. Boucher de Perthes of rude flint implements, associated with bones of the mammoth and other extinct animals, in the ancient gravel beds of the valley of the Somme, at various levels considerably above the present highest flood-marks of the river, is absolutely unique. Nor can there be any doubt that the ultimate recognition of the importance of his discoveries was one of the indirect results of the less sceptical tone prevalent in scientific circles in Britain in consequence of the exploration of the Brixham Cavern just referred to.

Excluding theoliths as too controversial a subject to be discussed in this brief review, it would appear that certain flint implements found at various depths in the higher gravel systems of the present river systems are the oldest evidence of man's handicraft in Europe. These gravel had been left high and dry long before the rivers had excavated the winding valleys at the bottom of which they now flow. The Hoxne implement, as above referred to, is probably the earliest type of hand-implement known, which came to be widely imitated among the earlier races of barbarians. Implements of the coup de poing type vary considerably both in size and in shape, the degree of variability being, however, strictly compatible with their function as hand-tools. They have been discovered in widely separated localities in Europe, Asia, and Africa, and nearly all possess the peculiarity of being made by chipping a nodule so as to convert it into a suitable hand-tool—the flakes struck off being apparently of no use.

The original manufacturers of the Palaeolithic tools are supposed to have entered Europe from Africa at a time when there was easy communication between the two continents by several land bridges across the lesser or Mediterranean. The climate being sub-tropical, these naked nomads appear to have inhabited the wooded banks of rivers, living on fruits and the smaller fauna, till the advent of the Glacial period forced them to take shelter in caves and to protect their bodies by skins of animals. It was difficult to realize how much the severe climate which then supervened contributed to the improvement of their physical and mental attributes. It roused their dormant energies to the pitch of being able to adapt their mode of life to the changing conditions of their environment—for the adage that necessity is the mother of invention held then to be true.

The natural food productions of a warm climate gradually disappeared, until finally there was little left but wild animals,—mammoth, reindeer, chamois, horse, bison, etc.—of which we now have a list of scientific names. To procure necessary food and clothing in these circumstances greatly taxed the skill and resources of the inhabitants. The difficulty was ultimately solved by the manufacture of special weapons of the chase, with which they successfully attacked the larger wild animals which then occupied the country. The coup de poing, which for a long time served all the purposes of primitive life, gradually gave place to spear and other perforating and cutting tools, together with a great variety of minor weapons and tools, made of stone, bone, horn, and wood. When the Palaeolithic people finally emerged from this singular contest with the forces of nature, they were physically and mentally better than ever equipped for the exigencies of life. A greater power of physical endurance, improved reasoning faculties, an assortment of tools adapted for all kinds of mechanical work, and some experience of the advantage of housing and clothing, may be mentioned among the trophies which they carried away from that long and uphill struggle.

Of the kind of life which the people of Europe led we have remarkably precise evidence in the food-refuse, and the lost, broken, and worn-out implements, weapons, and ornaments which have been discovered by excavating the caves and rock-shelters they had from time to time inhabited. The result of these investigations has disclosed a steady progress in the manufacture of industrial implements, weapons of the chase, and personal ornaments. When it was ascertained that the larger flakes could be utilized as sharp cutting tools, attention began to be directed to the art of producing them for teleological purposes. After some experience, it was found that a skilled workman could produce a flake of any required size and
shape. By subjecting these flakes to secondary chipping, implements of great variety and efficiency were in the course of time abundantly produced. This was indeed an important step of advance in flint industry, evidence of which is to be found in the fact that henceforth flakes were the useful products, while the residuary core was rejected as waste. The worked flints found in the earlier inhabited caves of France and Belgium, such as Mouster and Spy, show that secondary flaking was already in progress—thus proving that their habitation was later than the formation of the river-drift gravels containing worked flints.

From a careful inspection of the handiwork of these troglodytes, it will be seen that it is characterized by a gradual development from simple to more complex forms. Implements, tools, and weapons were slowly but surely made more efficient, thus evincing on the part of their manufacturers a progressive knowledge of mechanical principles. Art and ornament, too, had taken deep root among these primitive hunters, and before the end of their civilization they evinced a remarkable artistic taste and power of execution. Hence G. de Mortillet classified their industrial remains in chronological sequence into Moustérien, Scamóchetien, and Quaternario-Magdaléen, the last of which he founded upon the names of the most typical stations then explored. The earliest of the Palaeolithic stations was Le Mouster, situated on the right bank of the Vézère (Dordogne). During its habitation by man the climate was cold and damp, and among the contemporary fauna were the mammoth, woolly rhinoceros, cave-bear, and musk-ox. The special features of the industrial remains of Le Mouster were some of the typicality of the coup de poing—which was so characteristic of the older river-drift deposits—and the splitting up of flakes into smaller implements, such as scrapers, trimmed flakes, etc. The next typical station in ascending order was the open-air encampment of Solnérté (Saône-et-Loire).

The stage of culture here disclosed was characterized by great perfection in the art of manufacturing flint Implements, especially spear- and lance-heads, and the form of a laurel leaf, and by the abundance of horses and reindeer used by the inhabitants as food. The climate was mild and dry, the great glaciers of the north and the rhinoceros and harpox seem to have disappeared from the scene. The third and last of the typical stations was the well-known rock-shelter of La Madeleine, characterized by the abundance of objects made of bone and horn, the development of a remarkable artistic talent, the predominance of a northern climate and fauna, and the extinction of the mammoth towards the close of the period.

The civilization thus developed represents the outcome of a system of human economy founded upon the application of natural laws to mechanical purposes, but little affected by the principles of religion or ethics. The mysteries of the super-natural had not then been formulated into the concrete ideas of gods and demons. The notions of good and evil, right and wrong, were still dominated by the cosmic law that might is right. Neither gods nor devils, nor magic, nor superstitious fear, seemed to have disappeared from the scene. The third and last of the typical stations was the well-known rock-shelter of La Madeleine, characterized by the abundance of objects made of bone and horn, the development of a remarkable artistic talent, the predominance of a northern climate and fauna, and the extinction of the mammoth towards the close of the period.

debatable question. At any rate, it was emi-
ently successful, and may be regarded as the
starting-point of Neolithic civilization. In
the course of time these Neolithic people cultivated
a variety of fruits, wheat, barley, and other cereals;
they bred and domesticated cattle, horses, asses, and
dogs; they became skilled in the ceramic art, and
in the manufacture of cloth by spinning and weav-
ing wool and fibrous textures; the flint industry
continued much the same as in the later stages of
the Palaeolithic period, but in addition to chipping
they now ground stone implements so as to give
them a sharp cutting edge; in hunting the forest
fauna of the period they used, besides spears, lances, and
daggers, the bow and arrow; they built houses, for both the living and the dead—
thus showing that religion had become an active
and governing power among them. But of the
artistic taste and skill of their predecessors they
had scarcely a vestige, and what they did by way
of ornament consisted mainly of a few scratches,
arranged in some simple geometrical pattern. The
fundamental principles of the two civilizations are
reconcilable. This being so, we have to admit that
man's appearance as a species may be regarded as
a direct development from that of the Palaeolithic
people in Europe, although there are
several instances on record in which their
evolutionary progress was probably super-
imposed, without any apparent break in con-
tinuity, as at Campigny, Reilhac, Mas-d'Azil,
etc. The probability is that, while the reindeer-
hunters were still in existence, people beyond this
area, possibly of the same stock as some of our
 progenitors, passed through the evolutionary stages which connected
the two civilizations.

IV. MAN'S MENTAL ENDOWMENTS.—The great
success of man, like other animals, is a product of
the ordinary organic forces of the Cosmos, it may
well be asked why, and by what means, he has so
far out-distanced all other beings in the struggle
of life. The attempt to minimize this remarkable
day and to show that he is a unique brute with
much support from any class of investigators.
Anti-Darwinians have no object in discussing
this question, their argument being that no speculation
founded on materialism can account for it. Accord-
ingly, various hypotheses have been formulated by
way of explaining this psychological enigma, which
now fall to be noticed.

That there is a physical stratum, common to
man and some of the higher mammals, which
brings them both within the domain of organic
evolution, has already been advanced in these
pages (§ 1), and may be accepted as beyond con-
troversy. This being so, we have to consider man
as the two following propositions: (1) What are
the mental faculties common to both?; and (2) What
psychological phenomena are peculiar to man?

On these problems Mr. G. J. Romanes thus says:
"If we have regard to Emotions as these occur in the brute,
we cannot fail to be struck by the broad fact that the area
of perception of the sublime. Therefore I think we are fully
entitled to conclude that, so far as emotions are concerned, it
cannot be said that man is the only species that is capable of
any difficulties against the theory of descent. On the contrary,
the emotional life of animals is so strikingly similar to the emo-
tional life of man that it is not at all surprising to find that
there is the same degree of intensity, the same kind of
hair and necessity of expression; the same degree of
interaction between them" (Mental Evolution in
Man, p. 7).

Similarly, Mr. Romines deals with Instinct, Voli-
tion, and Intellect, and strongly argues that there
is only a difference between the organic and the
intellective manifestations in man and other animals.
So far these views have been more or less accepted by
leading psychologists; but at this stage a serious
divergence of opinion crops up among them, some
holding that the intellectual capacity of man is
adequate to account for the origin and working of
the higher faculties of man. But these dissentients
are seldom in agreement as to the precise nature of
their conclusions. The eminent French anthropologist, Professor de Quatrefages,
regarded man's entire organization, physical and mental, with
the exception of the faculties of conscience and
diligence, as the work of evolution. Others extend the
range of vital adonnance of their adequacy to
to the intellectual faculties. Mr. St. George Mivart,
while denying that the principles of evolution are
applicable to man, makes the following admissions as
to the relationship between the mental actions
of men and animals:

'I have no wish to ignore the marvellous powers of animals,
or the resemblance of their actions to those of men. No one
can reasonably doubt the fact that many of them have
emotions, and sense-perceptions similar to our own; that they exercise voluntary
motion, and perform actions grouped in complex
ways for definite ends; that they to a certain extent learn
by experience, and combine perceptions and reminiscences
so as to draw practical inferences, directly apprehending
objects in different relations one to another, so that, in a sense,
they may be said to have apprehensive relations. They will show
hesitation, ending apparently, after a conflict of desires, with
what looks like choice or volition: and such animals as the dog
will not only exhibit the most marvellous fidelity and affection,
but will also manifest evident signs of shame, which may seem
the outcome of incipient moral perceptions. It is no great
wonder, then, that so many persons little given to patient and
considerate inspection, should fail to perceive any radical
distinction between a nature thus gifted and the intellectual
nature of man.' (Presidential Address at Biological Section,
British Association, 1875.)

Professor Huxley thus expresses his views on
this phase of the subject:

'I have endeavoured to show that no absolute structural line
departing the animal from the vegetable, and that between
us and the vegetable kingdom, immediately we reached the
animal world and ourselves; and I may add the expression
of my belief that the highest among the animal species are
equally full of the same experiences, and that even the highest faculties of feeling and
of intellect begin to germinate in lower forms of life. At the same
time, no one is more strongly convinced than I am of the
vastness of the gulf between civilized man and the brutes; or
is more certain that whether from them or not, he is assuredly
not of them. No one is less disposed to think lightly of the present
dignity, or disparagingly of the future hopes, of the only
consciously intelligent denizens of this world' (Man's Place in

On the other hand, Mr. Alfred Wallace, F.R.S.,
who holds such a distinguished position in this
special field of research, has promulgated a most
remarkable theory. This careful investigator, an
original discoverer of the laws of natural selection,
and a powerful critic of the investigator's views
about the evolution of the entire organic world, even
including man up to a certain stage, believes that
the cosmic forces are insufficient to account for
the development of man in his civilized
capacity.

Natural selection,' he writes, 'could only have endowed
savage man with a brain a few degrees superior to that of an
ape, whereas the brain of man is several times larger, and
that of a philosopher' (Natural Selection and

The present writer has elsewhere made the follow-
ing comments on Mr. Wallace's position with
regard to the application of the doctrine of evolu-
tion to man:

This deficiency in the organic forces of nature he essays to
That mind in its higher psychical manifestations has often been looked upon as a spiritual essence, which is distinctly differentiated from the purely physical, basic need, not be a matter of astonishment, when it is considered how ignorant we are of the machinery of thought—how the pleasing abstractions of the poet, the fascinating creations of the novelist, and the profound speculations of the man of genius come forth as from a hidden cavern, without exciting any suspicion of having behind them not only a physical equivalent of brain matter, but also a laboratory in which thought is produced. It is this marvellous power of volitional reflexion in summoning ideas from the materials stored up in the various localized portions into which the brain is divided, and utilizing them in the formation of new mental or mare animal, that gives a prima facie plausibility to this theory. From this point of view abstract reasoning, imagination, conception, idealization, moral sense, altruism, etc., may be regarded as by-products of mental operations which are due to the ordinary reasoning faculties, and which have their chief stimulus in the external environment.

Leaving, however, the field of speculation aside, and reverting to the opinions of the four eminent authorities quoted above, it is manifest that they all recognize the magnitude of the psychological gulf which separates humanity from the rest of the animal world. Nor does Professor Huxley himself give any clear ideas as to how it is to be bridged over—certainly it has never been shown that this is possible on the Darwinian principle of the 'survival of the fittest.'

Such were some of the leading opinions on this particular phase of the evolution theory, as applied to man, when the present writer ventured to refer to the subject in his Presidential address to the Anthropological Section of the British Association in 1898. In that address (Preliminary Problems, ch. ii.) he advocated the hypothesis that one of the main factors in the production of the higher brain-development of man was the conversion of the upward-looking hands to an efficient tool. The first moment that the being recognized the advantage of using a club or a stone in attacking his prey, or defending himself from his enemies, the direct incentives to a higher brain-development came into existence. He would soon learn by experience that a particular form of club or stone was more suitable for his purposes; and if the desired object were not to be found among the natural materials around him, he would think of some new way of procuring it. Certain kinds of stone would be readily recognized as better adapted for cutting purposes than others, and he would soon learn to select his materials accordingly. If these were to be found only in a special locality, he would visit that special locality whenever the prized material was needed. Nor is it an unwarrantable stretch of imagination to suppose that circumstances would lead him to lay up a stock of tools for future use. The power to make and wield a weapon was a new departure in the career of man, and every repetition of such acts became an effective object-lesson, and an ever-accumulating training force for the development of a stock of these primitive tools, once fairly in operation, afforded frequent opportunity of comparing the merits and demerits of their respective mechanical products—thus supplying a fruitful medium for the development of an abstract reasoning faculty.

In this way the function of the hand and the formation of the brain became intimately correlated, the conjoint result of their long-continued action being a larger brain, greater intelligence, and a more highly specialized nervous system proving a breakwater against the ever incoming tide of the organic world.

That there is an amount of cortex cerebri in the human subject, corresponding to his greater mental powers, cannot be seriously controverted, as the size of the human brain, relatively to the rest of the body, is enormously greater than in any other animal. According to Sir William Turner, the cranial capacity of an average European is about 1500 c.c., while that of the gorilla, which is a larger animal, does not exceed 590 c.c. (J. Am. Med. and Physiol., vol. xxix., p. 436). That the largest portion of this increase in the substance of the human brain is to be correlated with the higher mental powers of man, as cause and effect, seems therefore to be indisputable; nor, in our opinion, can there be any doubt that its chief stimulus, and in no small degree, development, was the function of the hand.

That subsequently there were other powerful factors working in the same direction is not denied, as will be seen from the following remarks on articulate speech.

Next to the invention of mechanical appliances, the use of articulate speech was, undoubtedly, the most potent factor in the mental evolution of man, especially when accompanied by its offshoot, the art of writing. By articulate speech is meant the faculty of uniformly associating certain words or sounds with definite ideas, so that these ideas can be understood by those previously instructed in the process. Of course, the members of a family or tribe would be conversant with it from birth. Spoken language is virtually an extension, or rather a concentration, of the power which many of the more intelligent animals possess, in common with the Hominidae, of giving expression to emotions and simple sensations by various ejaculatory sounds, grimmaces, and gestures. The acquisition of full human speech was, unquestionably, the result of slow growth; for there is no known race, however low and savage, but has an articulate language, carried on by a whole system of sounds and meanings, which serves the speaker as a sort of catalogue of the contents of the brain. To be true, the savage in the main views himself as, taking in every subject he thinks about, and enabling him to say what he thinks about it.' (Tylor, Anthropology, p. 132).

Of the importance of articulate speech in the intellectual and social development of man it is unnecessary to produce detailed evidence, as its elaboration must have proceeded pari passu with the higher development of the brain almost since man entered on his human career. 'A complete train of thought,' writes Mr. Darwin, 'can no more be carried on without the aid of words, whether spoken or silent, than a long calculation without the use of figures or symbols.'

As to the stage in the evolution of man to which articulate speech is to be assigned, there is little agreement among anthropologists. Darwin regarded it as having an early origin in the stem line of humanity, while Huxley is inclined to the view that the art of manufacturing flint implements came to an
end, and the human dynasty, endowed with all its intellectual powers, begins.

Professor Haeckel, in describing the evolutionary stage of *Pithecanthropus erectus*, thus writes:

The brain is considerably enlarged. Presumably it is still divided into specialized areas. This is indicated by the fact that children have to learn the language of their parents, and the impression is given that comparison of the brain declares it impossible to reduce the chief human languages to anything like one common origin" (Leidenschaft, 1882, p. 72).

There are two well-attested general observations which we have now to throw some light on this obscure point, viz.—(1) that none of the apes of the present day have even the rudiments of articulate speech; and (2) that languages (as quoted above from Mr. Thomas Huxley) are why not the hominids.

The present writer's interpretation of these facts is that the origin of articulate speech was subsequent to the separation of the genus *Homo* from the simian stem, but prior to the development of the races of man--of which we may trace it subsequent to the attainment of the erect posture and the development of the human hand.

V. Man's Social Evolution.—It has now been amply shown that, from whatever standpoint we may contemplate the great drama of human life, it stands forth as a unique development in the organic world. Starting, possibly as early as the Miocene period, with a progenitor whose physical and mental attainments were on a par with those of existing anthropoid apes, his successors, the *Hominidae* of to-day, have gradually forged their way into what is virtually a new world—the world of volitional and articulate speech. Almost from the very beginning they acquired manipulative methods, with latent capabilities which (as we can now realize) were tantamount to a new force in evolution. Thus, in the art of tool-manufacturing and using them for the advancement of their own welfare. Unlike the more helpless creatures around them, who were largely at the mercy of a fickle environment, these implement-using animals soon learned to accommodate themselves to all its vicissitudes. With a knowledge of the use of fire, the skill to manufacture garments, and, ultimately, the art to construct houses, they braved the rigours of frost and snow with comparative impunity. As they became more and more conversant with the laws and forces of nature and their own power over them, they laid a usurping hand on the reins of cosmic evolution itself, by the cultivation of selected plants and animals, and the destruction of others which were found unsuitable for their own purposes.

The far-reaching consequence of securing food supplies, and of cultivating the domestication of animals, led to more social and sedentary habits. The appearance of large communities concurrent with the development of various trades and manufactures but in a matter of time, the outcome of which is now a vast and intricate international commerce. Already the greater portion of the earth capable of being cultivated is converted into gardens and fields, whose choice productions are readily conveyed to all the chief towns of the civilized nations of the globe. Flesh diet is everywhere abundant, but it is no longer necessary to hunt the animals in their primal haunts. Skin-coats, dug-out canoes, and the *coup de poing* are now linearly represented by woven fabrics, At present, we may suppose, the whole of the world of our ancestors is nowhere to be found, not only in works of art, architecture, engineering, electricity, etc., but in constructive philology, religion, ethics, altrusism, and the sense of honour, all of which may be said to be still in process of development, though their sources reach far back into pre-historic times.

Some of the lower animals have accompanied man so far on the road to reasoning intelligence as to be able to associate certain natural results with their natural causes, as cows for instance, by keeping at a safe distance from a man with a gun. But none has ever reached the stage of being able to adjust the circumstances so as to produce the desired effects. Man, like the higher animals, has found the waters the field should the fickle environment refuse the seasonal showers. No other animal in a state of nature has attempted to do anything comparable to this simple act of practical ratiocination.

It is probable that religion came first to the front as a modifying influence to the stern decree of the survival of the fittest. Some grounds for this are: (1) that man has at this suggestion that we may contemplate the great drama of human life, it stands forth as a unique development in the organic world. Starting, possibly as early as the Miocene period, with a progenitor whose physical and mental attainments were on a par with those of existing anthropoid apes, his successors, the *Hominidae* of to-day, have gradually forged their way into what is virtually a new world—the world of volitional and articulate speech. Almost from the very beginning they acquired manipulative methods, with latent capabilities which (as we can now realize) were tantamount to a new force in evolution. Thus, in the art of tool-manufacturing and using them for the advancement of their own welfare. Unlike the more helpless creatures around them, who were largely at the mercy of a fickle environment, these implement-using animals soon learned to accommodate themselves to all its vicissitudes. With a knowledge of the use of fire, the skill to manufacture garments, and, ultimately, the art to construct houses, they braved the rigours of frost and snow with comparative impunity. As they became more and more conversant with the laws and forces of nature and their own power over them, they laid a usurping hand on the reins of cosmic evolution itself, by the cultivation of selected plants and animals, and the destruction of others which were found unsuitable for their own purposes.

The far-reaching consequence of securing food supplies, and of cultivating the domestication of animals, led to more social and sedentary habits. The appearance of large communities concurrent with the development of various trades and manufactures but in a matter of time, the outcome of which is now a vast and intricate international commerce. Already the greater portion of the earth capable of being cultivated is converted into gardens and fields, whose choice productions are readily conveyed to all the chief towns of the civilized nations of the globe. Flesh diet is everywhere abundant, but it is no longer necessary to hunt the animals in their primal haunts. Skin-coats, dug-out canoes, and the *coup de poing* are now linearly represented by woven fabrics, At present, we may suppose, the whole of the world of our ancestors is nowhere to be found, not only in works of art, architecture, engineering, electricity, etc., but in constructive philology, religion, ethics, altrusism, and the sense of honour, all of which may be said to be still in process of development, though their sources reach far back into pre-historic times.

Some of the lower animals have accompanied man so far on the road to reasoning intelligence as to be able to associate certain natural results with their natural causes, as cows for instance, by keeping at a safe distance from a man with a gun. But none has ever reached the stage of being able to adjust the circumstances so as to produce the desired effects. Man, like the higher animals, has found the waters the field should the fickle environment refuse the seasonal showers. No other animal in a state of nature has attempted to do anything comparable to this simple act of practical ratiocination.

It is probable that religion came first to the front as a modifying influence to the stern decree of the survival of the fittest. Some grounds for this are: (1) that man has at this
cessive increments of reasoning on which their respective injunctions were originally founded have more or less lapsed in the course of time.

But perhaps the most important form of all, which has been evolved from the laboratory of ethics is altruism (which see), which may be described as a product of conscience and the acquired sense of equity. Its object is the relief of the weaker and community, and for this purpose it has received the support of the civilized world. Many regard the motives of all such good deeds as having been instilled into the Cosmic mind by a revelation from heaven; but this is an unnecessary assumption; for in the accumulated deliberations of wise men during long ages we have an adequate pabulum for its birth and maturation. But whether heaven-born or earth-born, altruism has become a sine qua non in human civilization. So long as the laws of our wisest Solons are liable to error, and the environment contains a residuum of unexplained forces, there will be a certain proportion of failures among youth which safety-guarding the future can be secured only by altruism. Under this category come the deaf, the blind, the lame, the poor, the friendless, and, in short, all who are ushered into the world without the means of the safeguarding on the struggle of life. Our original interference with Cosmic methods by living in large communities under the most imperfect sanitary arrangements, has greatly increased the number of such weaklings. Hence their immediate relief as far as that is possible, is a moral obligation on all who derive benefit from the social government under which they have inherited or acquired wealth, power, position, or political influence, to bear any part on their part. On this phase of the subject there is a conflict between Cosmic methods and those of the ethical code of humanity. The influence of the one is directed to the survival of the fittest; that of the other to the ‘fittingness of nature, as much as possible to survive.’ The former has left man with the garb and qualities of a savage; the latter has endowed him with mental culture, the refinement of civilization, and moral responsibility for his actions towards his fellow-creatures.

VI. CONCLUDING REMARKS.—The Hominide of the present day not only possess more highly developed brains than those of their early ancestors, but also the ability and safeguards guarding the human life, struggle from the accumulated experiences of their predecessors in the form of all sorts of mechanical inventions, organized institutions for scientific research, altruistic laws, and other ethical enactments acquired as results of their progressive culture. Thus they at once start on a higher rung in the ladder of human life. It is by these means that they have come to hold such a predominating position in the organic world and it is through the general diffusion of such attainments that further progress can be expected. Among the more urgent reforms by way of rectifying past mistakes and safeguarding the future interests of the race, may be mentioned the eradication of obsolete doctrines and pernicious superstitions, the enforcement of just and equitable laws, the prevention of crime, the popularization of scientific methods, and especially strict attention to sanitary improvements. There is, however, a limit to human powers over the laws of environment, for occasionally the most learned communities find themselves helpless amidst the operations of nature. The fact reveals it is in this direction alone that prospects of future betterment lie.

From various data advanced in the previous sections it is evident that two distinct lines on which investigations into the past history of mankind may be profitably conducted. The first relates to man as a biological entity, and comprises, in addition to his ontogenetic and phyleogenetic development, a few fragments of skeletons by his predecessors which by some circumstances have to this day resisted the disintegrating forces of nature. This department is generally known as Physical Anthropology. The evidential materials to be gathered along the second line of investigation consist of the works of man’s handicrafts, which, being simply preserved impressions of his skill in the different stages of culture through which he has passed, may be characterized as Historical Anthropology. The successive modifications which these respective materials have undergone during a long series of ages, though different in kind, are found to bear a decided ratio to the progress of human intelligence. Thus, taking the human skull at the starting-point of humanity as comparable to that of one of the higher apes, we know, as a matter of fact, that during the onward march of time it has undergone some striking changes both in form and capacity, before reaching the normal type of modern civilized races—changes which can be classified in chronological sequence. Similarly, the products of man’s hands show a steady improvement that is in direct harmony with his progressive knowledge of the laws of nature and his ability in applying them to practical and utilitarian purposes. Indeed, the trail of humanity along its entire course is strewn with the discarded weapons and tools which, from time to time, had to give way to others of greater efficiency. Between these two departments, though separated by a strong line of demarcation, there is a striking modification in the methods of Mr. W. H. Holmes (Report of United States National Museum, 1901, p. 256), is thus stated: ‘If the physical phenomena of man include all that connects him with the brute, his culture phenomena include all that distinguishes him from the brute.’

These remarks will give some idea of the interesting and profound problems embraced by the science of Anthropology. Not since the material world became an object of human study and reflection has there been accomplished such a complete and far-reaching revolution in current philosophical opinion. From the standpoint of evolution, the entire organic world, not excluding man, reveals a unity, a harmony in the struggle, as yet unascertained, of these diverse forms, which is a truth and is disclosed under no system of speculative philosophy.

What may be the outcome and destiny of humanity on the lines of modern civilization lies within the darkest shadow of futurity. One thing alone appears certain—that since human government on the anthropo-cosmic principles of ethics and altruism became a matter of real concern among the civilized nations of the world, there is no turning back from its behests, no alternative but to strengthen the ethical fabric by every means that human ingenuity can suggest. Above all, a national esprit de corps, with the motto ‘Honour bright,’ must be fostered among the members of each community; for if the steersman once relaxes his hold on the wheel, he and his freight may again be swept into the vortex of cosmic destruction.

LITERATURE.—Owing to the number of works more or less bearing on the natural history of man, all that can be attempted here is to make a selection of a selection of authorities of the most recent. In the French: Broca, Les Anciens Hommes des Ages de la Pierre, 1872; Sir J. Evans, The Ancient Stone Implements, Weapons, and Ornaments of Great Britain, 1863; Rude Stone Monuments in all Countries, 1872; Falconer,

ROBERT MUNRO.

ANTHROPOMORPHISM. — Generally, and perhaps always in the past, man has believed that there are powers other and greater than he. He has felt it not only desirable, but possible, to enter into a certain accord with them; that is to say, he has taken it as a fact that they can understand him when he addresses himself to them; that he can more or less understand them; that he can win their sympathy and assistance, if he sets about doing so in the right way. Further, he has believed at some times that these powers possess the shape of man; at other times, that their shape is that of beasts or of plants; at others, that they are visible in and as the sun, moon, or stars, or audible in the storm, the earthquake, or the rustling of leaves. That deities have been supposed in all stages of human development, from the very beginning of the first Greek society, to possess human form is a truth which needs neither demonstration nor illustration. Indeed, Xenophanes (frag. 17, ed. Bergk) even went to the length, whether in jest or earnest, of supposing that even the oxen and horses, the most sensible, would make the gods in their own likeness. It is also obvious that deities originally thermomorphic tended to become anthropomorphic: the Egyptian gods which have gained human bodies and limbs, but retained their animal heads, are an obvious instance of this tendency. And the human form given by Greek sculptors to Helios suffices to show that that form, if not one conceived in human form, tend eventually to take it.

1. Physical anthropomorphism. — The belief, then, that deities have bodies and limbs like those of men is a belief which has had a beginning and an end, and has passed through its development; and though it is impossible to prove that before its appearance religion was, it is in the same way impossible to prove that religion then was not. We must not, however, be misled by the fact that though thermomorphic deities become anthropomorphic, as in Egypt, the reverse process never takes place; anthropomorphism is in some cases preceded by thermomorphism, but thermomorphism is never preceded by anthropomorphism. We may then, perhaps, assume that there was a pre-anthropomorphic stage in the history of religion. But if we make that assumption, we can do so only by limiting the term 'anthropomorphism' to the sense in which it means that deities have bodies and limbs like those of man, and by deriving from the content of the term the sense in which it implies that deities have thoughts, emotions, and wills like those of men, though transcending them. Further, it may be said that to limit the meaning of the term to the first of the two senses which may be put upon it is to break, or rather to ignore, the continuity which is characteristic of—indeed, essential to—evolution in all its forms, whether evolution of the species, or growth of man, or growth by including in the meaning of the term the second sense as well as the first, we are enabled to grasp the principle which underlies and runs through the whole evolution of the idea of God.

2. Psychological anthropomorphism. — From this point of view, then, man has always ascribed, and does now ascribe, to Deity thought, emotion, and will. He may originally have worshipped animals, or even stones and stones, as the fetish-worshipper does; but if he did so, it was because he ascribed to those objects thought, emotion, and will; and the characteristics so ascribed were none the less human because they were ascribed to the deity in a transcendent sense. For from the epoch of the invention of evolution, not only did aniconic objects become iconic, not only did pictures and statues of the gods in human form supplement, and more or less displace, the stocks and stones which were the object of the older cult, but the very conception of the god, as it existed in the mind of the worshipper, became more and more definitely human—and did not in the process become more divine, as the exanthroponomist wielded his sceptre; for Homer will show. The third stage in the process of evolution is reached when religion comes to denounce the idea that the deity has a body or limbs like a man or an animal; but though religion in this stage becomes iconoclastic, and ceases to be anthropomorphic in the narrower of the two senses of the word, it continues to believe, in this stage as in the previous stages, in a personal deity. In this stage of evolution the same impulsion that leads religious minds to deny that the deity can be conceived, or ought to be portrayed, as possessing bodily form, also leads to the conclusion that some sort of mind and spirit, or rather of spirit and mind, it would be degrading, if it were not unmeaning, to ascribe to deity the temperance or the courage which Ares ought to have possessed—the reason being that those qualities, and others of the same kind, imply defects which have to be overcome in the persons of whom they are predicated; and such defects are ex hypothesi excluded from the concept of a perfect being. This line of argument may, however, be continued, apparently in the same direction, until it brings us to a fourth stage in the evolution of the idea of God. It was, indeed, so continued in one of the arguments considered in Ciceronianus de Natura Deorum (iii. 15), where it is argued that knowledge of good and evil cannot be ascribed to a good God, 'for he who can do no evil requires no such knowledge'; and in the same way reason cannot be ascribed to Him—'shall we assign reason which would do things plain? But to a god nothing can be dark.' In modern times the same feeling finds expression in the doctrine that the cause of all things is the Unknowable, to which we are essentially self-contradictory, or will. If we seek to ascribe to them, we land ourselves in self-contradiction. In the interests of clear thinking, therefore, we must abstain from so ascribing them. Power, indeed, must be ascribed to this Unknowable cause—but not personality. The anthropomorphism which has characterized religion from the beginning charac-
ANTHROPOMORPHISM

3. Origin of anthropomorphism.—Looked at from the point of view of evolution, the fate of the belief in anthropomorphism was determined from the beginning. If it is seen in the end to be logically incoherent and impossible, it is because it has carried with itself the seed of its own destruction from the very beginning. We have only, it is argued, to consider its origin in order to grasp it. The tendency to personify objects is exhibited by children—and even by animals—at play. Such personification, indeed, in the case of both children and dogs, may be involuntary and a source of terror; and the terror may be removed when the object personified is shown not to be a living thing. The same tendency is shown by the African negro, who, starting out on some business, happens to have his attention arrested by some object, say a bright pebble, and immediately associating it with the business he is engaged on, picks it up as a fetish, regarding it as a personality which has the power, if properly treated, of understanding what he wants and of giving him assistance. The same tendency to personify objects and to associate them with the fortunes of the man who discovers their personality, will account for the fact that an object thus personified by the father of a family or the most influential member of a clan comes to receive the worship of the whole family or clan, and thus becomes not a personal fetish but a family god or a tribal god; and may possibly survive and eventually become a national god. But the African negro may find out that he gets no assistance from the object he picked up; and then, though he may cast it away as not being really a fetish, still he usually keeps it, even though its propitiousness has disappeared. It may be, perhaps after all turn out to be an operative fetish. In the same way, amongst the African negroes and elsewhere, we find traces of gods who, though the names and the memory of them linger on, receive no worship, because they are no longer believed to do good or evil. The belief in such gods, and in such fetishes, evidently has a lessening degree of validity; or perhaps it never was really valid at all.—Its want of validity has merely grown more and more patent. That is to say, the origin, as well as the history, of the belief shows that it has no validity; the tendency to personify objects—whether objects of sense or objects of thought—which is found in animals and children as well as in savages, is the origin of anthropomorphism, which is peculiar therefore in character, and an origin of the idea of God, on the assumption, is simply the process by which a childish error is developed slowly to its fullest extent, and now that its inherent inconsistencies and self-contradictions are considered to be finally found is not only excusable but cast off. It is a case in which the psychological ‘projection of the self’ into the world is made the basis of an attempt to explain all things, and is ultimately found to afford no explanation which is satisfactory, morally or intellectually, of the tendency to provide the gods more and more definitely and precisely with human limbs and bodies; but that tendency is eventually defeated by its own realization—when fully realized, it becomes intolerable, as it was to Plato, and then is doomed. Next, the tendency is for religion to insist on investing the deity with the mental and moral qualities of man; and that tendency too—on this theory—eventually realizes itself in self-contradictions. When this, like the previous form of anthropomorphism, comes to be felt untenable and intolerable, religion, in any ordinary sense of the word, becomes impossible.

4. The method of science.—From this point of view, the self, the world around us, must be accepted on its own terms, so to speak, and must be studied objectively; we must not make the mistake of supposing it to be a subject, or the expression of a subject’s reason or will. We must not assume its ways to be our ways or to be explainable by them or by analogy with them. We must take them as they are, without presuppositions and without assumptions. In a word, we must take as our method that of science, the objective method. So we shall escape from the error of foisting on the facts an anthropomorphic explanation which they will not tolerate.

Now, the object of science is to understand the world; and it may fairly be said that any attempt to explain the world assumes the course of the world to be explicable. It is assumed not only that the course of things is or may be to some extent intelligible to the human reason, but also that it is fundamentally rational; every problem of the self or to see the world, there is the firm conviction that there is a solution. Such a problem is a challenge to science; and the challenge is never declined on the ground that the problem is insoluble. The challenge is presented itself; the problems submitted are continually being solved. The course of the world is continually being exhibited by science as more and more intelligible; and science is perpetually being confirmed in its fundamental assumption of the rationality of things. The world becomes daily more and more intelligible, on the assumption that the reason of things and the reason in things is intelligible to the human reason.

5. Objective rationality.—Are we then to say that science also is anthropomorphic, or are we to deny it? In the one case we shall say that science, like religion, starts from the human reason, and persists in interpreting everything in conformity with it. In that case, if we hold that anthropomorphism is eventually breaks down in the hands of religion, and proves in the long run to be a puerile projection of the self into the external world, then the anthropomorphism of science, its assumption or presumption to read reason—human reason—into things, may, like the anthropomorphism of religion, persist for a while only, but cannot be found untenable and intolerable. Indeed, it may be said, science as well as religion has already come to that pass. It is vain to deny the ‘possibility that being may be rational only in a very narrow sphere, and that it might some day turn towards us another side, about which we could build no structure of connected and practical thought’ (Höfding, The Problems of Philosophy, p. 114). Not only does the reason in things cover only a very narrow sphere, but its hold on that sphere is wanting in security. With the same right with which we reason from the possibility of rational knowledge to a unifying force in Being, in a cosmological principle that prevented the elements of Being from standing in a rationally determinable relation to one another (16, p. 130). If Being is a unifying force, the explanation of things is purely anthropomorphic. If, on the other hand, the reason which science professes to discover in things is really found there, and not put there, by science, then we are no longer faced with the fact that it is intelligible to man avail to prove that it is human. It is intelligible because it is reason, not because it is human. Science, therefore, in post-
ANTHROPOMORPHISM

575

lating that the world is intelligible to man is not guilty of anthropomorphism; it does not assume that the reason which it strives to understand is human, and it does not make the reason which it finds human, or the external world, to some extent, so far as it has gone, science finds in things a reason which it does not put there—the possibility remains that Being may any day turn to us another side, displaying no reason, but irrationality. To possibly follow the reason and remain, but science ignores it; or, perhaps we may rather say, faith in science forbids us to acknowledge it. No unsolved problem in science is admitted to be insoluble. In other words, the rationality of things, so far as it has been discovered by science, is a fact and not an assumption, still it is an assumption so far as it has not yet been discovered. It is not, of course, discredited by the fact that it is an assumption, for we must begin with an assumption—by assuming either that things are or that they are not, or that they partly are and partly are not, rational. And the assumption that things are not, man's reason, if a man means, though it is not man's, is intelligible to man, is at any rate harmonious with the discoveries which science has thus far made, even though it be an assumption based on faith.

But, granting that we make the assumption and show the faith which science demands, we have only got thus far, viz., that the power which displays itself in things is rational in the sense that it is logical. More, indeed, we could not expect to get than this, for science aims at nothing more: its position is that things are logically comprehensible; its coherence is a logical coherence which it finds in things and does not put into them. Even then, if we take it that reason and logic are possible only to a mind, and that a mind must be self-conscious, the utmost that we can get out of science, or hold to be implied by science, is that there is a self-conscious mind whose power acts logically; and even if we grant that there is nothing anthropomorphic in this,—on the ground that the reason and logic in things are found in them and not imparted to them by science,—still the mind or power thus revealed as superhuman is revealed as merely logical. It is distinctly not revealed as moral, or as reeking aught of man. Its laws extend to, just as its rain descends on, the unjust as well as the just, and it is the first to shape the slightest ground for holding that the ultimate working of the laws which it discovers favours the just rather than the unjust.

If then, man can discover and does discover in things a logic and a reason which he does not put there, if the logic and reason so found are objective, and not created by him, are not images of his own making,—are not, in a word, pieces of anthropomorphism,—can we go further and discover in man's experience anything else which is similarly given to him and not created by him? The fact that a thing is comprehensible by man is no proof that it is the work of man's reason; partially intelligible to man's reason, is found in things by science,—which looks only for logic and reason,—can man and does man, when he looks for more, find more than mere reason? Does science exhaust objectivity, or does the realm of objectivity include other things than reason? Is man's experience of the universe that it discloses reason alone to him? Man's experience has been that he has found something more in it than a reason, partially intelligible to him; he has found in it the workings of a power which awakes in him a sense of gratitude, of duty, of awe, and of fear.

But the experience in which these workings of this power are thus disclosed or felt is distinguishable, if not distinct, from the experience, or from the aspect of experience, of which science is the interpretation or the expression. Whether we term the aspect of experience with which science has to do sense-experience or experience of the physical or external world, it is, however defined, at any rate marked off from the rest of man's experience, as being but a part and not the whole of human experience. Or, if we go so far as to say there is nothing in which science concerned, that can be investigated scientifically, we still indicate by the adverb 'scientifically' that the point of view of science is only one point of view, and that the aspect of reality which science confronts is not the only aspect which human experience presents to man. One and the same set of facts, for instance, may be viewed psychologically by science, may be pronounced valid or not valid from the point of view of logic, may be estimated right or wrong from the standpoint of morality, holy or sinful in the eyes of religion. The scientific aspect is not the only aspect of our experience. The scientific is not the whole account of that experience.

6. Ethical basis of science—The reason science finds in things is not the creation of science, is not made after the image of human reason, and is not put into things by science, but is found in them and is to be partially intelligible to man, then the same experience, which was studied by science reveals a reason which is not man's, may, when regarded in its entirety, or even when regarded from other points of view than that of science, reveal yet other aspects of that reason in things which is studied by science. If that power when studied by science is seen more and more clearly, the more it is studied, to be rational and self-consistent, it may, when regarded from other points of view, appear to be other aspects of logical rationality. It may disclose ethical qualities. It may disclose qualities, in the apprehension of which by the heart, and not merely by the intellect, religion consists. Whether it does, as a matter of objective fact, disclose such qualities is not the question now before us for discussion. The point is that, in this interrogating experience, we are no more guilty of anthropomorphism than is science when it interrogates experience. The question, in the case both of religion and of science, is what experience discloses when interrogated. Science discovers in things the operations of a reason which is not man's, reason which is not in the experience of man the operations of a power whose ways are not the ways of man. Above all, religion discovers the operations of a personal power. The personality of that power is only partially disclosed in those of its operations with which science concerns itself; and it is disclosed only partially, because science is concerned with only a partial aspect of its operations. Even when we attempt to view its operations from a more comprehensive point of view than science pretends to offer, the conception we then form of it is, doubtless, shaped to some extent by our human limitations, and may be, nay, has been, generally distorted by those limitations. Of course, every apprehension must, to whatever extent, be so shaped, but it does not follow from this that nothing is apprehended. A thing to be misapprehended, even, must be apprehended; and, to be apprehended, it must be there. Will it, then, be said: Granting heartily that it must be there, still it can be apprehended only by being anthropomorphized? The statement, then, must, first, that the power which operates be there, and next, that, owing to the infirmity of the human mind, it can only appear, or be conceived, as personal. In other words, the religious experience of God as a person is alleged to be not experience, but an interpretation of experience—a conception, a construction, and an interpretation which, from the nature
ANTHROPOMORPHISM

of the case, must be false. What, then, are the grounds on which we can say, a priori, that this interpretation, if it is an interpretation, must be false? They can only be that we know something which proves that it is false; that we know, to start with, that the power is not personal. But that is precisely what we do not know. It is precisely the question at issue. The allegation, on the one side, is that in religious experience God is known as personal. If, on the other side, that is denied, then the dispute is as to the nature of religious belief, and the dispute may be settled only by reference to that experience; it cannot be settled by assuming the point at issue, by begging the question. The question, then, becomes whether the personality of God is a fact of experience, or an inference—possibly a false inference—from experience. Now, those who have not had a given experience—for instance, a blind man who has not had experience of colour—are, obviously, on unsafe ground if they allege that other people have not had that experience, e.g., of colour, but have had some other experience, e.g., such as touch, which the blind man also enjoys, and from it have drawn the inference that they see. No blind man is justified in arguing, on that account, that we cannot accept the fact that he sees nothing as a reason for disbelief, or for arguing that sight is not an experience, but an inference—a false inference—from experience.

7. Testimony of experience. We are, then, told that we need the necessity of interrogating experience, of asking what is found there. A person who is not accustomed to a microscope will not see what is undoubtedly to be seen through it; and we cannot accept the fact that he sees nothing as a reason that nothing is to be seen. So, too, in the interrogation of religious experience we must accept what is found there, and not deny that it is objectively there because some of us fail to see it. The position that religion rests on the existence of God as a fact given in experience, and not reached by a process of inference, which may or may not be correct, is a position which this article assumes and has not to prove; here we have to consider simply in what sense, if any, religion is anthropomorphic. Now it is undeniable that the existence and the personality of God may be, and in many or most of the stages of religious development have been, imputed to the mind of a man. He has been made to fit a number of confused human forms, and, in a form as well as in animal form; and, when this misrepresentation has been cast aside, He has been depicted as having passions which are specifically human. But though this is perfectly true, it is equally true, and philosophically more important, that this process of anthropomorphism has also been conveyed by the highest religious minds as incompatible with the personality of God as revealed in the religious consciousness; and its incompatibility, when thus pointed out, has been recognized by others as true to the facts of that religious consciousness. Thus, as a matter of historical fact, it is true that anthropomorphism has been, and is recognized to be, a limit and a hindrance to the comprehension and realization of the personality of God as revealed in the religious consciousness. That being the case, the attempt to make it a perfectly valid proportion as a producing condition of this Personality is manifestly at variance with the facts; it is not a producing condition, but a distortion of the personality of God. That is, it is the least mature minds and the lowest forms of religion a point which it is easy to recognize, and the recognition of which is compatible with—indeed assumes—the recognition that there is something there to start with which can be distorted, that is to say, anthropomorphized. That misinterpretation precedes recognition of the facts as they really are is illustrated by the history of science quite as fully as by the history of religion. But that can be true only if the beginning, to be recognized is a position which neither science nor religion can take up. If it be said that science, starting from things as they appeared to the mind of primitive man, has eventually come back to produce the very same results that the primitive man pronounced to be settled, it is also true that we are discovering how to be false. It has been discovered that the things which are interpreted as facts by the science which eventually discards their right relations. So, too, the growth of religion would have been impossible if there had not been at least one fact the personality of God—which it not merely started from, but to which it constantly returns, and in which, properly understood, it finds its constant touchstone of truth. From this point of view, the proper understanding of the personality of God is a test of religious truth; and that personality is not properly understood so long as it is interpreted on the analogy of human personality—so long, that is, as it is interpreted in a way that is as far as it is thus interpreted, or rather misinterpreted, the limitations of the finite are necessarily, and self-contradictorily, imposed on the Infinite. Escape from the self-contradiction is possible so far as we reverse the process, and recognize, with Lotze, that 'perfect Personality is in God only;' to all finite minds there is allotted but a pale copy thereof. When that is recognized, anthropomorphism is seen for what it is—a vestige of what is given in consciousness, leading necessarily, if slowly, to the assertion that God is not revealed in consciousness for what He is, but is given either for what He is not—the Unknowable—or is not given at all.

It may perhaps be said that human knowledge, to be human, must be contained in human minds, and, being so contained, it must be shaped by that which contains it; in fine, that in admitting it to be human we are asserting it to be anthropomorphic; in denying it to be anthropomorphic we are denying that it can be known to man. Thus, whatever knowledge is poured into human minds must be shaped by the mould into which it is poured, and so must be anthropomorphic. But this argument seems to assume both that the mould is shaped before anything is poured into it, and that the mould is pictured in human form, in human form, in human form, in human form; and, even when this misrepresentation has been cast aside, He has been depicted as having passions which are specifically human. But though this is perfectly true, it is equally true, and philosophically more important, that this process of anthropomorphism has also been conveyed by the highest religious minds as incompatible with the personality of God as revealed in the religious consciousness; and its incompatibility, when thus pointed out, has been recognized by others as true to the facts of that religious consciousness. Thus, as a matter of historical fact, it is true that anthropomorphism has been, and is recognized to be, a limit and a hindrance to the comprehension and realization of the personality of God as revealed in the religious consciousness. That being the case, the attempt to make it a perfectly valid proportion as a producing condition of this Personality is manifestly at variance with the facts; it is not a producing condition, but a distortion of the personality of God. That is, it is the least mature minds and the lowest forms of religion a point which it is easy to recognize, and the recognition of which is compatible with—
ANTHROPOMORPHISM

of rising above ourselves, and a fact, fortunately, is expressed thereby; in morality and in religion we may rise above ourselves, even as, from the metaphysical point of view, we may 'transcend self.' These facts, or rather the metaphorical expression of them, may serve to reminds us that we do not merely receive facts and shape them into our own likeness, but that we go forth into a world of reality and there encounter things which we have not made, which are not in our likeness, but on which we may not model ourselves.

8. Testimony of feeling.—We have considered the question of anthropomorphism thus far, rather from the point of view of knowledge than of feeling. But no answer will afford permanent satisfaction which appeals to knowledge only and not to feeling. Practically, the question is one of feeling rather than of knowledge; it is: Are we to doubt the goodness and love of God, and to suppose that it is by the fallacy of anthropomorphism that we ascribe them to Him? To that question the only answer is that we do not doubt God's love; we know it. But the 'knowledge' is not purely or primarily or exclusively, however, on the ground that then His love is not a matter of knowledge but of feeling, the simple and sufficient reply is: How else is love to be known? If it were a matter of knowledge, it might be a matter of inference; and the inference, we may believe, would have been too uncertain to doubt. It might be represented as an inference from the love of man for God, and so as anthropomorphic, as a human quality ascribed to Him. But an essential quality of it—without and known without it would not be what it is—is that it is experienced as His, and not as something which remains as it is, whether ascribed to Him or not. As a fact of experience, it must be accepted on the evidence of those who experience it, and it must be the evidence of those who accept it. The appeal to doubt is, and is so felt. Beyond that, or behind it, it does not seem possible to go. Feelings, after all, are facts.

9. Testimony of action.—Feeling and knowledge issue in action. Omens, love must, from the religious point of view, be the source from which all God's actions flow. From the religious point of view, therefore, nothing can be ascribed to Him save that which is manifested by Him. Human actions, on the other hand, have other springs; and anthropomorphism is exhibited when actions are ascribed to God, or to the gods, which cannot with any propriety, and with a love, be called human. This is, however, as we shall see, a mere difference of degree, and not a love, that is omniscient. Human actions proceeding from human passions are essentially characteristic of anthropomorphism—more essentially indeed than are human parts. The gods of Greece were as anthropomorphic in their passions and actions as in their forms; and only in their forms were they typical of human beings at their best. The cowardice of Ares, the incontinence of Aphrodite, the lusts of Zeus, were doubtless a bequest to Greek civilization from barbarous or savage times; and they were a damnosa hereditas. If the bequest was not rejected but tolerated, with more or less acquiescence, by many of those who received it, the reason doubtless was that the philosophy summed up in the sentence, 'Man is the measure of all things'—πάντων μέτρον ἄνθρωπος—was characteristically Greek; even the gods were made in man's image, and they did not exist in the mind. Xenophanes spoke bitterly when he said that the gods of men were anthropomorphic, just as the gods of animals, if animals believed in gods, would be theriomorphic. He failed to note, apparently, that anthropomorphic gods do not always even imagine anthropomorphic, but revert to theriomorphism and to bestial conduct. Where a plurality of gods is believed in, the gods are necessarily conceived as objects, as items in the world of objects, and therefore as limited and circumscribed in their action and reaction. The action of any one of them is liable to be frustrated by the action of the rest; and behind and over-topping them all there tends to rise the vague figure of destiny or fate, to which all are subjected and of which fate would be stronger, though not. On reflection, however, it is manifest that science, as well as religion, has had that fallacy to contend with; in the animistic period of man's history, the tendency is to account for the action and behaviour of all—even inanimate—things by the assumption that their action is anthropomorphic, and to influence their behaviour by proceedings based on that assumption. Only when that assumption is discredited or ignored does it become possible to study the interaction of things scientifically—rerum cognoscere causas—to discover in them a reason not modelled on man's, though intelligible to it, provided that we reject the fallacy of anthropomorphism. Anthropomorphic, as well as religious, also, as well as science, has to throw off the fallacious tendency to anthropomorphize God's action. Polytheism is rendered by its very structure impossible of rejecting the fallacy. Monotheism escapes the precept only where it is vengeance the Lord's, but the worshipper may pray Him of His goodness to 'slay mine enemies.' The tendency to assume that God's ways are as are the ways of men, that He does things as we do, is, of course, justified in the first time clear of anthropomorphism when the prayer goes up from the heart, 'Thy will be done.' Then, and not till then, does the will of God become a fact presented to the religious consciousness, a fact which for the religious mind possesses as much objectivity as for the scientific mind. From the actions of God, from the acts of God, the Scriptures, the laws of religion, the facts, the events of the ages are to be deduced. From God's action we may be able to deduce, from the Scriptures, the fact that God is the Lord of the universe, from the events of the ages we may be able to deduce, from the facts which record them, that He is the Lord of man's actions, and of man's history. The one is the a priori method of interpreting God's action, and the other is the method of deducing the fact of God's action from the events of which it is a part.
which will be followed by him so far as God's will operates through him, does it become an objective fact possessing the same objectivity for him that the facts of science have for the scientific mind? It is, of course, the same thing is presented to the religious and the non-religious mind and produces different effects in the two cases: it is that the will of God is accepted by the one and rejected by the other for himself. This is the real reason why things become new—God is no longer anthropomorphic. To allege that religion is necessarily belief in an anthropomorphic god is to close our eyes to the fact that the point on which the fate of practical religion turns is whether God's will shall be done or man's. In the one case God—a belief in anthropomorphized; in the other, man is conformist to God. If he be so conformed, God's will acts in him and through him. So far as he is thus conforming, God's kingdom comes, His will is done. It is in his action, when it is directed to doing God's will, that man shows the likeness to God.

10. In conclusion, the view that religion is anthropomorphic seems to be based on an assumption, viz., that reason and love, because they occur in man, are limited to man. If that assumption be correct, then the reason and love elsewhere is a piece of pure anthropomorphism; the reason and love thus projected on to the clouds are, ex hypothesi, merely phantasмагoric, whether they be the reason proclaimed by science or the love proclaimed by religion. The reason thus projected is human reason; the love, human love. We may have soared for a while into the clouds, but the string of anthropomorphism all the time was round about, and brings us back to the facts we started from,—there they are just as they were when we started. We never have got clear of human limitations, never have lost ourselves in the Divine Love. We may have lost sight of self; but we come down to earth, and recognize that it was the self who imagined that self was transcended or lost. We have simply seen ourselves, our form, our human project, projected on to the clouds and then back and projected on to the facts we started from.—there they are just as they were when we started. We never have got clear of human limitations, never have lost ourselves in the Divine Love. We may have lost sight of self; but we come down to earth, and recognize that it was the self who imagined that self was transcended or lost. We have simply seen ourselves, our form, our human project, projected on to the clouds and then back and projected on to the facts we started from.—there they are just as they were when we started. We never have got clear of human limitations, never have lost ourselves in the Divine Love. We may have lost sight of self; but we come down to earth, and recognize that it was the self who imagined that self was transcended or lost. We have simply seen ourselves, our form, our human project, projected on to the clouds and then back and projected on to the facts we started from.—there they are just as they were when we started. We never have got clear of human limitations, never have lost ourselves in the Divine Love.

2. In fact it is very probable that the roots of the conception of Antichrist are even more widespread. We shall have to assume that the idea of the battle of God with the devil was closely intertwined with man's belief in the coming of an earthly Superman and of the battle of God with a dragon-like monster.

Traces of these ideas, which probably take their rise from the Babylonian battle of Marduk with Tiamat, are already to be found in all parts of the OT (cf. Gunkel, Schöpfung und Chaos, 1896). In this way the figure of the devil and the dragon-like monster of chaos are connected into one (cf. Rev 12). Thus we need not be surprised if the figure of the devil incarnate, the figure of Antichrist, here and there bear similarities of features that of the mythical monster, and manifests a ghastly superhuman character which cannot possibly be explained from the definite history of the battle. But in the Old Testament the devil, as even in his type the figure of Antichrist was depicted with the supernumerary features of the monster, which in its battle with the little horn raised itself against the host of heaven and cast down some of them to the ground. In the same way Pompey in the song of triumph over his death (Ps. 21) is described as the dragon of Chaos, whom God destroyed because he rose up against him in the character of a significant type that Antichrist in a series of later passages receives the name which in the older sources (Test. Patr., etc.) was applied to the devil—Beliar (see for example all in the Book of Daniel, which belongs to the Maccabean age. The historical figure whose features have in the first place been attributed to Antichrist is the Syrophrene of Epiphanius, who was the persecutor of the Jews. In particular, the representations of Dn 7, 19-22; 12-13 have been of lasting influence. That Antichrist ("the king of the North," 114) will appear as a mighty king with great armies, that he will destroy kings (the "three horns," 20-29), that Edomites, Moabites, and Ammonites are to be spared by him (114), that Libyans and Cushites will follow in his train (115), that he will persecute the saints (72), that he will reign 34 years (77 etc.), and that he will set up in the Temple the 'abomination of desolation' (bavlOpta tira wmrpo, 29; 44-29) all belongs, from this time onward, to the standing requirements of the Antichrist legend. The end predicted by 'Daniel' did not come, but his book received a place in the canon; and thus the faithful still expected the fulfilment of his predictions in the future, and handed them on to their descendents. It is the generation of the Book of Daniel that was the process of the figure of 'Antichrist' came to be separated from the historical figure of Antiochus IV, and became the type of the God-opposing tyrant who was to appear now in this and not the historical character.

Antichrist. 1. The name ἀντίκροσος occurs for the first time in Christian literature (Jn 20-4; i. 11) in a somewhat idealized way. This is the name, in particular the conception of a God-opposing tyrant and ruler of the last days, reach back with certainty to the most flourishing period of Jewish and Christian apocalyptic literature. The most likeliest idea that they had behind was not only a definite historical phenomena and experiences, but in a mythological and speculative idea, namely, the idea of the battle of God with the devil at the end of the world. This conception seems to have arisen in the Jewish eschatology (the battle of Ahura Mazda with Angra Mainyu; cf. Bousset, Rel. d. Judentums, 238 ff.) to have penetrated into the Jewish Apocalyptic literature. The opposition between God and the devil, who is introduced under the names Belial, Samael, Eden, the devil is the chief protagonist of the Jewish source of the Testaments of the Twelve Patriarchs, which undoubtedly formed the basis of the Christian idea. Beliar appears as the enemy of the last times. It is said of the Messiah (Lev 18:3): "And Beliar shall be bound by Him, and He will give His right hand to trample on his kingdom for ever." In the same way, the description of the last great battle in Jerum, Mos., (210) begins thus: "And when this God shall hold over all creatures be manifest, then will the devil be brought to naught." The same thought is also to be found in the Gospels (Mt. 24:12). In the book of Daniel, 7:25, 34, 38; 11:45; 12:3, 4; Bousset, Rel. d. Judentums, 238 ff., this seems likely that 'Antichrist' is originally nothing else than the incarnate devil, and that the idea of the battle of God with a human opponent, in which all devilish wickedness would become incarnate, arose under the influence of definite historical conditions.

2. It is very likely that Antichrist is essentially something else than the evil incarnate, and that the idea of the battle of God with a human opponent, in which all devilish wickedness would become incarnate, arose under the influence of definite historical conditions.
4. Christianity took over from Judaism this whole cycle of ideas, and we meet numerous traces of these conceptions in the NT. In the eschatological chapters (Mt 13, Mt 24) we have in all likelihood, as has already been indicated, a small apocalypse of Antichrist, interwoven with the latter his description in which we are enabled to interpret the βιβλία τῆς ἐρωτών (Mt 24:23, Mk 13:9), which stands in the holy place, in terms of 2 Thess 2. In particular, the predictions of the Revelation of John have been interpreted, in the fancies of the manifold conception of Antichrist. The eleventh chapter, with its prediction of the beast rising from the abyss (a mythical idea), who, as a hostile tyrant, surrounded by great armies, appears in Jerusalem and kills the witnesses of God, is entirely on the lines of the Jewish Apocalyptic prophecy. Finally, if the beast, who is called up by the devil (Rev 13:12), and who rises out of the sea, is regarded as indicative of a new Roman empire, or, more particularly, a Roman ruler, we have here, too, the character of the Antichrist, the God-opposing tyrant, preserved.

5. A strongly marked transformation of the whole idea, from a specifically Christian standpoint, is indicated by the discussion in 2 Th 2, which the present writer, in spite of renewed and energetic opposition on the part of Wrede (TU, new ser. I.x.), prefers to ascribe to St. Paul himself. Curiously here, too, the figure which controls the Jewish Apocalyptic thought forms the fundamental conception, as is proved by the names (2nd) ὁ ἄνωταρος τῆς ἀνωτάτου (perhaps Beliar; cf. the OT) and the same idea, as the play upon Dn 11:43, which is found here. But, on the other hand, the Antichrist is no longer the God-opposing tyrant, but a seductive agency, which works by signs and wonders, and seeks to obtain Divine worship. Antichrist here is a false Messiah, a prophet who, it is assumed, will call forth the faith of those Jews who have rejected the true Messiah. At the same time the idea is raised still further into the realm of the superhuman (2nd ἀσκενάσθαι ἄνωτα, ἐν τούτῳ δέδοται). Accordingly, this false Messiah is now for the first time in a real and proper sense regarded as the opponent of the true Messiah. By means of this he will destroy himself utterly accomplished, and this is described in 2 Th 2:11 as the words of Is 11:4 (καὶ ἐν τῷ ἄνωται ἐν τῇ ἀνωτάτῃ ἐν τῷ τόπῳ ὁ θεός τῆς ἐρωτών. . . . The Targum on the passage, too, interprets the "lawless one...") A logical step in this development is the "sitting" of the ἄνωτας τῆς ἀνωτάτου in the temple of God—probably, as we saw above, a reminiscence from the time of Caligula. But this truth is fitted into the new comprehensive picture of the seductive personality. If this be so, then the enigmatic reference to a power which still keeps the appearance of Antichrist in check (τὸ κάρακα ὁ κάρακας) be correctly interpreted as referring to the Roman empire, then the separation of the idea of Antichrist from the political tendency, which up to this time adhered to it, comes more clearly to the front. Accordingly the significant change, which 2 Thess. has effected in the idea of Antichrist, consists in this, that here out of the God-opposing power that stands in the service of the adversary of the last times has been developed, so that, while the original idea led to the proclamation of the Roman empire or of a Roman emperor as Antichrist (Revelation of John), here the figure of the ἀνωτατος obtains a non-political, purely ecclesiastical character. The reason is the revolution of re-moulding, which has become of world-wide historical importance, the genius of St. Paul is in all probability manifested, or in any case the genius of youthful Christianity, freeing itself of Judaism and planting its foot in the world of the Roman empire.

This new conception seems to have found acceptance in wide-spread Christian circles. The author of the Fourth Gospel, too, appears to give expression to the thought that the Jews, because they have not believed on the true Christ, who was sent of God, will place their faith in the false Messiah, who will come in the form of a false Prophet (25). From this point of view we are enabled to understand how, in the Epistles of John, Antichrist is connected with false teaching (1 Jn 2:18, 24, 2:7, 2 Jn 7), and how in general the appearance of false teaching is thought of as one of the fancies that are connected with the Antichrist— as the crowning point of Satanic malice (1 Ti 4, 2 Ti 3, 2 P 3).

The ΑΝΤΙΚΗΡΙΟΙ, (in its description of Antichrist, manifestly borrowed from 2 Th. (cf. the παρασκευή της συναγωγῆς, the Jewish synagogue). In the Christian Sibylline Oracles, John 164, probably of a late date (of Bousset, art. "Sibyllin. Par. 167"). In the conception of the Satanic power the figure of Simon Magus has been influential, 'Beliar' is in the first place a wonder-worker endowed with Satanic power. But even the author of the Revelation of John has paid his tribute to the new conception! In the second beast, which comes from the land (ch. 13), he has introduced into his prediction the figure of the anti-Christian false prophet (16), which perform signs and wonders to seduce the world. Of course he could not give the latter any independent significance; so he made it the servant and assistant of the first beast, the anti-Christian Roman emperor (Bousset, Kom. zur Offenb. Joh. ad loc.).

6. But this anti-Jewish conception, which corresponded better with the position of Christianity in the Roman State, was prevented from obtaining exclusive predominance in the Christian tradition. This was due to the acceptance in wide circles of a remarkable combination of the Antichrist legend with the popular expectation of the return of Nero, prophesied already by the Jewish Apocalyptic writers. While the author of the 4th (Jewish) Sibylline (9 A.D.) takes it over simply without any special tendency (iv. 137-138), the author of the (Jewish) original basis of Rev 17 (Bousset, 411; cf. also the return of Nero with the Parthians to take vengeance on Rome, because she had shed the blood of the saints (17), destruction of Jerusalem) (cf. the Sibylline, which is a later addition). In the 4th Sibylline, which
for the most part (with the exception of vv. 1-51) was written by a Jewish writer at the end of the 1st cent. (J. Geffcken, ‘Komp. u. Entstehungszeit der Orac. Sibyll.,’ Tu, new ser. vii. 1, p. 22 ff.), the source from which it is specially mentioned by the author no fewer than three times (137-154, 214-227, 361-385). Here the figure of Nero is already distorted into a ghostly demon; his return and the terrible war, which will then consume the world, will then precede the coming of the Antichrist as well as the Jewish Apocalyptic thought took possession of the Nero legend, and on this soil the figure of the returning Nero was quite identified with that of Antichrist. Then we have to take into account the additional circumstance that the longer the period from the death of Nero became, the less could a simple return of the living Nero be expected, and the more did the expectation of his return from the outer world grow. In this way, too, his figure became more and more hellish and ghostly: the relation to the Parthians is lost sight of, and instead of an adversary of Rome he becomes an opponent of God and Christ.

In particular, this is the form taken by the legend of Nero in the mind of the joint redactor of the Book of Revelation, who composed it between A.D. 61-66 (ibid. ch. 17 above) worked over a more ancient document. Here Nero is the object of the figure of the abyss (Rev. 11:7), and, in the next chapter, shall again be, in order that it may go into perdition (17:3); he is ‘the head as it had been slain’ (13:14), the cruel adversary of the Lamb, and his Parthian, as it were, is the Antichrist; the ‘terrible sight’ (13:4), and ‘he who usurps the power of God’ (13:12), It is the tyrant who receives worship over the whole earth (13:4, etc.), and the terrible opponent of the Lamb in the last decisive battle (17:14). Therefore the ‘number of the beast’ (13:8) refers to him (according to the great majority of manuscripts, 560-577; the other reading, however, leads to the Latin form: 016-002). In the small apocalypse in the ascens. Is. 3:9-4:1, which dates from the second, or perhaps only from the third, decade of the 2nd cent. (Harnack, Gesch. d. Christl. Lit., iii. 1, 573), we clearly see the final combination of two figures originally quite foreign to each other, when we read that Beliar, the king of this world, will descend from the firmament in the form of a man, who is depicted as the matricidal tyrant Nero. The beginning of the 5th Sibyline (vv. 1-51), too, probably a Jewish composition inserted by the redactor in the time of Marcus Aurelius, identifies Nero as the figure of the Antichrist (vv. 29-34; cf. Ps. 111:4-5). In the 5th Sibyline (vii. 68 ff., 140 ff., 151 ff.), dates from the period immediately preceding the death of Marcus Aurelius, only faint reminiscences are to be found. But the long period, which has been furnished for the Antichrist in the Apocalypse of Ephesus (Rev. 13:7), in which he becomes the ‘Weltmeister,’ still knows the relation of the writing to the legend of Nero (Boussert, 33 ff.). The apologist Commodian, who probably did not write his Carmen apologeticum till the beginning of the 4th cent. (A. Harnack, Chronol. ii. 433-442), is acquainted with two figures of Antichrist, one of which he still identifies with Nero redirens.

7. But even in the 2nd cent. the legend of Nero lost its influence on the minds of men, and in the same degree the anti-Jewish conception, borrowed from 2 Thess. 2, which was free from historical and political limitations, gained the upper hand, his death the ground of exegetical combinations, in particular, under the influence of a renewed use of the predictions of Daniel, and by the help of other strata of literature. It could be opposed to a world-confederation, a world-conflagration, earth, which in all probability arose from the Persian apocalyptic, is specially to be mentioned—the conception was filled out in detail, and continued to exhibit in all its particulars a remarkable persistency.

Antichrist is to come from the tribe of Dan (cf. Rev. 7:1; also Boussert, p. 232). He shall appear in Jerusalem as a mighty ruler (Is. 21:8; 22:2; Dan. 9:27; Ezech. 28:2). It is the fate of the world around him, perform signs and wonders, and demand Divine worship. Edip and Enoch, who both appear as witnesses against him, shall be subdued and slain. The Jews shall believe on him, and he shall rebuild the Temple. He shall persecute the Jews who refuse to worship him. These, however, shall be saved by a miraculous interference of God (the angel). He will put his seal upon his faithful, so that only he who has this seal can enter the city (Rev. 3:36). Finally, the famine of the last times shall overtake him, from which he will not be able to escape. Then at last he shall be subdued and destroyed by Christ, and the general confusion follows. These are the ever recurring features of the Antichrist in the future, which is described throughout the centuries (cf., for the proofs in detail, Boussert, Antichrist).

The same ideas are already to be found in broad outline in the eschatological portraits of Irenaeus (adl. Heres., v.), and in Hippolytus (Refut. Haer. and Comm. in anticipation of political excitement during the course of the following centuries, men always turned a fresh to the prophecy regarding Antichrist. The external features of the prophecy change, and special historical prophecies come to the front, but in the background the figure of Antichrist, connected with no definite time, remains pretty much unchanged. Thus we find in the beginning of the Testamentum Domini, lately edited by Rahmani, an apocalyptic of the type of Deucalion, although it has undergone a later redaction (Harnack, Chronol. ii. 514 ff.). In this work the description of the ancient Antichrist is of interest (cf. also the Coptic and the Jewish Apocalypse of Elypish; cf. also Tertullian, C. Marc. 140). There occurs the time of Aurelius and Gallienus, with its embittered struggles between the Romans and the Persians as well as between the Roman emperors and pretenders, secular and religious, of which the author gives a new food description. From this time, in all probability, dates the Jewish Apocalypse of Elypish, a restoration of the first and latest, according to which, if Buttenwieser’s conjectures (Vinea, d. Ephesii, Leipzig, 1897) are correct, Odhenas of Palmyra appears as an Antichrist, and the same period starts with a new generation to the prophecy of the 13th Sibyl, which ends in a glorification of Odhenas, but does not belong to the Antichrist predictions proper. It is also possible that the special Antichrist passages in the 3rd Sibyl, v. 63 ff., and at the end of the 2nd Sibyl, belong to the same period. Finally, it seems as if the puzzling Coptic Apocalypse of Elypish, which has just been mentioned, and, on the other hand, with the Carmen apologeticum of Commodian (belonging to the first decades of the 4th cent.).

8. A new turn in the history of the legend is represented by the so-called Apoc. Antichrist. By means of the investigations, which all point to the same conclusion, undertaken by Sackur (Sibyll. Texte und Forschungen, p. 114 ff.), by Kampers (Die deutsche Kaiserzeit, p. 18 ff.), and by Boussert (Antichrist), it has been settled that the Tiburtina Sibyline, which appears in various editions and revisions of the Middle Ages, goes back to an original document which was composed in the 4th century. Since Basset published in the Revue de l’histoire des religions, xiv. 3-4 (1897), the ‘Wisdom of the Sibyl’ (Sibyll. Sibyllinae), x. 3-4), from the Middle Ages, which in itself is closely connected with the Tiburtina, but is enlarged by predictions which go down to the date of the previsions of Harun al-Rashid, it has become still more easy to re-construct the original of the old Tiburtina. This Sibyline, dating from the 4th cent., and celebrating the Emperor Constans as the last ruler, becomes in it 1021 the first time the prophecy regarding the last emperor, who, before the advent of Antichrist, shall obtain dominion over the whole world, and at the end of his reign shall pass to Jerusalem, and shall be destroyed in the place called Golgotha. From this time onwards the last ruler of the world before Antichrist becomes a standing requisite of the legend. In the treatise on Antichrist preserved in Latin under the title De anti-Christo, which probably dates from the 4th cent., and which has been published by Caspari (Briefe und Abhandlungen, 1890, pp. 268 ff., 429 ff.), this change in the legend is also already indicated in the form orum impiorum scripturis Fatrecio et veteri urbi et civi triumderum 27-28, 329, iii. 134-147; related treaties are to be found among the most "corrupt ones" (cf. Dict. d. Bibliogr., s.v. Antichristus; also Procop. Brev. de moribus, iv. 15, 18; Euseb. Hist. cit. 7.16.19; Suidas, s.v. τετελεσθεις, τοῦ δικαίου, καὶ τοῦ ἀνθρώπου καὶ τετελεσθεις ἡμῶν, καὶ τοῦ ἀνθρώπου τοῦ παροῦ καὶ τοῦ παρακτοῦτος τοῦ Αντικριστοῦ).
ANTINOMIANISM

581

Ephraim's works in Bossuet, Antichrist, 224; further, a Syrian homily (Th. J. Loisy, lvi. 187), which—it is true—is in its present reading predicts the rising of Islam. Closely related to the Greek and Syrian traditions are the speeches of pseudo-Hippolytus and a pseudo-Johannes Apocryphon (Tischendorf, Kirchengesch., 1872, p. 378). For the alternative apocalyptic of Cyril of Jerusalem should also be mentioned here.

9. Antichrist Apocalypses flourished again in the age of Islam. In the very beginning of the 10th century and the first quarter of the 11th century, two of the most curious and one of the most notable of these prophetic books, viz. the pseudo-Methodius, which is extant in no fewer than three Greek recensions, a Latin translation, and various Greek and Latin recensions (cf. the original Greek version found in St. Istin [see below], the Latin text in Saczkur, op. cit.). Here the emperor of the future, who shall miraculously rise out of sleep, overcome Islam, and obtain the kingdom of this world, has already become the most striking figure in the picture of the future. Then a number of Byzantine prophetic, which accompany the reign of the Byzantine emperors and their fates, are influenced by pseudo-Methodius.

One prophetic composition, written in verse and adorned with pictures, which is ascribed to Leo v. the philosopher (Olographia, II, 1870, p. 381), predictions, e.g., of the house of the Comneni, and celebrates the emperor of the future, who, to whom the ancient church will rise out of his grave. The legend of the sleeping emperor of the future is everywhere closely interwoven with the tradition of Antichrist. We have finally a Greek prophetic work written with the name of Daniel (alongside of a probably more ancient Armenian Daniel prophecy, which, in the period of the Latin empire, restores the destruction of the Greek rule (Bossuet, Zitmer, J. Kirchengesch., xx. 299.

The book which is written by Istin, the age of Islam and the Crusades was exceedingly productive of prophetic anticipations. To this period belong the Apocalypses which are contained in the so-called Liber Clementinorum (St. Istin, Pietas apostolica apocalypsis per Clementem) in the period of the Latin empire, and probably in the Saracenic time (Bossuet, Antichrist, 85 ff.), the Coile (14th) Vision of Daniel (in Karl Weil's edition of the Codex Alexandrinus, Oxford, 1595), also the above-mentioned Egyptian-Arabic Wisdom of the Slab, and finally the later Syrian Apocalypse of Ezra (Bossuet, Antichrist, 45 ff.). In the age of Islam we have also a revival of Jewish Apocalyptic literature, probably to a large extent caused by the Christian prophetic writings. One of the most interesting of the books written in this period is a particular work of the Jewish history of Daniel which is handed down in the Persian tongue (Msv. Archiv fur Erforschung des AT 1, 1.). Alongside of this work there is a series of other writings: the Mysteries of Nisam-Sen-Jochat, the Mophax Vaqja, the Samsa of the Mesians, the Book of Zornblabete, etc. (cf. Buttenwieser, Nea-Neoplatonische Apocryphische Literatur 1903).

10. This whole type of predictions came to the West in the book of pseudo-Methodius, which was early translated into Latin. The Tiburtina, too, with its numerous recensions, accompanying the latter, it is defined as a pious legend, but also with political content and influence.

Finally, great influence was exerted by the letter which the monk Ado (954) wrote to the queen Gerberga de Ortu et Tempore Antichristi (cfr. Saczkur, Sibyll. Texte und Forschungen, ii.). Then the legend of Antichrist passed through its classical period in the West, in which it even made history.

Since the beginning of the 2nd Christian millennium a strong increase in the eschatological direction can be observed. This was intensified by the excitement which was produced in the lands of the West by the Crusades. All these fantastic eschatological tendencies found their intellectual focus in the person and activity of the abbot Jacobus de Voragine. In particular, the intellectual movements which he originated found ready acceptance in the Franciscan order, and especially among those Franciscans who were living in the Latin West, and the time came when people saw Antichrist, or the fore-runner of Antichrist, in every ecclesiastical, political, national, or social opponent, and the catchword ‘Antichrist’ sounded on all sides in the struggle between the Emperor and Pope, between King and Chancellor, between the German and the Swiss, between the Church, repressive social movements and the ruling powers opposed to them (Reformatorische Sittenrecht, Own Ecclesiavit of Berthold of Chienues), in sculpture and painting (e.g. cf. Signorelli's picture in the cathedral of Orvieto), in lyric, epic, and dramatic poetry (cf. esp. Ludus de Antichristo, ed. W. Meyer), the motives were suggested by the prophecy of Antichrist. In particular, the belief that the Pope of Rome was Antichrist, or at least his fore-runner (antichristus minor, mysticus), became of world-wide historical importance. This view was nascently developed and endorsed by the Fitchian concept of the Antichrist, who had remained true to the original ideal of poverty. From them the conviction passed over to the pre-Reformation sects; the Bohemians Milic of Krenesir (Libellus de Antichristo) and Matthias of Litomysl, who condemned the papacy in a way which can quite easily be traced. Wycif and his follower Michael Parvey (the probable author of the work edited by Luther 1528), Conv. in Apocalypsin ante centum annos edidit, as well as Huss on the other side, are firmly convinced of the anti-Christian nature of the Papacy.

In a particularly instructive monograph, H. Preuss has shown how the idea of Antichrist has influenced political theory, and especially the Age of Luther among the widest classes of the people—the how idea generally dawned on Luther's mind, and became fixed, that the Pope was Antichrist. This conviction led him to more keen and daring opposition to the Papacy, and was thus associated with all the other political and religious movements of the time. Thus in the Articles of Schmalkald, which were composed by Luther himself, the proposition that the Pope is Antichrist and the place occupied by this concept of the Antichrist in the life of Luther, and the political reasons prevented this conviction from being expressed.

In the centuries that followed the Reformation, the doctrine that the Pope was Antichrist gradually receded into the background, and it is still resolutely held by Protestant scholars, particularly by commentators on the Apocalypse even in our own times. But it came to be more and more only led by learned pedantry, and the belief no longer possessed the power of formity. With this last phase the interest in the legend entirely disappeared, and it is now to be found only among the lower classes of the Christian community, among sects, eccentrics individuals, and fanatics.

W. Bossuet.

ANTINOMIANISM. — Antinomianism (avri ‘against,’ and hov ‘law’), as a distinct theological phenomenon, is first recorded in the lives of James and John of的方式来 (1492-1566), who was an early conditator of Luther in the Reformation. It is the counterpart of modern political anarchism, being directed towards the destruction of the Moral Law of the OT in the
ANTINOMIES

interest of the new freedom of Christians and the testimony of the spirit. Antinomianism, as John Wesley defined it, is the doctrine that 'makes void the Law through faith.' Art. 203.) Christians are free from the Law. The terms primarily referred to was the Law of Moses. Agnolo denied that Christians owed subjection to any part of this law, even to the Decalogue.

In any wide sense the term is used to designate the doctrines of extreme fanatics who deny subjection to any law other than the subjective caprices of the empirical individual, though this individual is generally characterized as the witness and interpreter of the Holy Spirit. It is uncertain just how far Agnolo went towards this wider capriciousness of the individual. For we get from history the usual exaggerations of theological controversies, when we read the debates between Luther and Agnolo on the subject. Agnolo began, and intended to remain, true to the great Reformation principle of justification through faith alone, without works. It was the fear of work-righteousness that led him to argue against the Moral Law—at least that of the Decalogue. He wished to establish Luther's condemnation of the Roman Catholic doctrine of good works, or work-righteousness, on some distinctively Reformation lines. Refusing to become a secretary for some ten years, he maintained, in a public disputation at Wittenberg in 1537, that works are indifferent, and that a man is saved by faith alone without any regard to his moral character. He said: 'Art thou steeped in sin, an adulterer or a thief? If thou believest, thou art in salvation. All who follow Moses must go to the devil. To the gullows with Moses.'

Luther further characterized the teaching as being antinomian, and identified it, in principle, with the anarchism of the Anabaptists. Agnolo retrenched and was reconciled with Luther, but the controversy was carried on by others. One of the followers of Agnolo, a certain Anusmus, said that good works imperilled salvation. Agnolo claimed that he was only expounding the teachings of Luther and Melanchthon. Indeed we find Luther (Works, xx. 290) saying: 'We do not wish to see or hear Moses. For Moses was given to the Jews, not to us Gentiles and Christians. We have our Gospel and New Testament. They wish to make Jesus the old of Rome, shall not. And Melanchthon says (Loci communes, 1st ed. by Augusti, p. 127): 'If it must be admitted that the Decalogue is abrogated.' But the controversy with Agnolo was only the occasion for Luther to give the definite term 'antinomianism' to a view far older than the German Reformation. This view showed itself even in NT times. Luther himself characterized the Epistle of St. James as 'an epistle of straw,' because of its emphasis upon good works. Then we find the Apostles (Ro 3: 31 6, Eph 5, 2 P 218, 19) warning Christians against perverstions of their doctrines as an excuse for licentiousness, or antinomianism. The Gnostic sects, hyper-spiritual in doctrine, were separatist in their morals. They held that the spirit (σωφρονία), as part of the eternal Divine energy, existed absolutely separate and apart from the soul (ψυχή) and the body. Hence, every soul and body were things indifferent to the spirit. Hence, soul and body might swallow in licentiousness without detracting from the salvation of the spirit (σωφρονία). Here we find with the Valentinian Gnos- tics, the most famous of the antinomian sects, a sort of dualism, a conflict between loneliness and antinomianism in its widest and most immoral form.

A tract of Augustine (contra adversarium legis et prophetarum) seems to indicate the existence of this dualism among the Gnostics. There are traces of it to be found during the Middle Ages. It comes out strongly among the Anabaptists of Germany and Holland. During the Commonwealth, it existed in England among the high Calvinists. These argued that, if a man was elected and pre-destined to salvation, he was free from the law, and that the moral conduct of a man might be, his salvation was sure if he was one of the elect; the wicked actions of such a man were not sinful, and he had no occasion to fear that he might commit his sins or to break them off by repentance. Saltmarsh, Cromwell's chaplain, was among these 'sectaries.' But they never became an independent sect. Antinomianism existed in the 18th century in England and among the Dissenters. Again, it appeared in England among the followers of John Wesley, who made earnest protest against it. This gave occasion for John Fletcher to write a strong book, entitled Antinomia.

It is not in place to carry the discussion of this term beyond its proper theological role. We may only add that the principle of the thing—opposition to law—is found in every sphere of the organized or institutional activities of humanity. All who advocate doctrines subversive of the Family, the State, or the Church, are antinomians. All moral sophists are antinomians. All who pervert the principle that 'reason is the sum of all our moral law, on which the disregard for established moral laws, so that some personal or finite end be attained, are antinomians. And every individual who pleads special exemption from obedience to the common law of morality is an antinomian.

We may cite Epiphanes, the sensual son of the Gnostic Carpocrates, as one of the lowest types of antinomians. He died at the age of seventeen from the effects of debauchery, after having written a work on Righteousness, in which he advocated the generous antinomian—"Follow your own nature, against all established laws."

J. MACBRIDE STERRITT.

ANTINOMIES. — The term antinomia in the New Testament (Acts xvi. 3, 3) is derived from the Greek ἀντινομία—"the unваluing of all values, the illegalizing of all laws."
standing, he turns to it to prove the idea of reason. But it is limited to the conditioned, and therefore can never reach to knowledge of the unconditioned. An unconditioned condition is absurd. And yet this is what reason demands.

The idea of reason is too large for the capacity of the knowing understanding, and the definite knowledge of the understanding is too small for the idea of the reason. Hence the hopeless back and forth sliding between the dicta on laws of the two faculties.

Kant gives four antinomies or pairs of theses and antitheses.

The first is the antinomy of quantity. Two mutually exclusive propositions can be proved with equal force in regard to the quantity of the world:

**Thesis.** The world had a beginning in time, and is limited also with regard to space.

**Antithesis.** The world had no beginning, and has no limits in space, but is infinite in respect to both time and space.

He then shows that the denial of either member of both the thesis and the antithesis involves an absurdity.

The second is the antinomy of quality, and relates to the divisibility of matter.

**Thesis.** Every composite substance in the world consists of simple parts, and nothing exists anywhere but the simple or what is composed of it.

**Antithesis.** No composite thing in the world consists of simple parts, and there exists nowhere in the world anything simple.

Here the same reductio ad absurdum is applied to both the thesis and the antithesis. These first two antinomies are styled the *universal*, and considering the world quantitatively and qualitatively. The next two he styles *dynamical*, as considering the world, not as a total of dead things, but consisting of things dynamically and organically related to each other.

The first of these is the antinomy of relation, dealing chiefly with the relation of causality.

**Thesis.** Causality, according to the laws of nature, is not the only causality from which all the phenomena of the world can be deduced. In order to account for these phenomena, it is also necessary to admit another causality, that of freedom.

**Antithesis.** There is no freedom, but everything in the world takes place entirely according to the laws of nature.

Here, again, Kant's reasoning is to the absurdity of the opposite of both thesis and antithesis. For the *thesis* it is argued that if free causality be allowed, then it must itself be held to be uncaused, and thus contradict the law of causality—that everything must have a cause.

The next is the antinomy of modality, and relates to 'the unity in the existence of phenomena,' or the ultimate nature of the universe.

**Thesis.** There exists an absolutely necessary Being belonging to the world, as a part or as the cause of it.

**Antithesis.** There nowhere exists an absolutely necessary Being, whether within or without the world, as the cause of it.

Kant claims that no dogmatic solution of these antinomies can be given. His own critical solution follows from this theory of Knowledge. Knowledge is only of phenomena. We must think noumena. But we cannot know them as phenomena.

It is the attempt to do this that gives rise to these antinomies. His critical solution is that these antinomies arise (necessarily too) only from a confusion between knowable phenomena and unknowable (but real) noumena. It is this that constantly leads one's reasoning on either side to involve a *perdura* c*α* d*ι* ο*ν* o*μ* e*ν*.

Besides these four antinomies, there is the *Pure Reason* of Kant stating one antinomy of the *Practical Reason*, that is, an *ethical* antinomy. It is that between perfect virtue and perfect happiness. *Du sollt also du kannst* is Kant's bed-rock of morality. Unconditional obedience to the categorical imperative is the *summum bonum*. But the *bonum consummation* includes perfect happiness. What bridge can there be found between perfect virtue and perfect happiness? Here comes the antinomy. Virtue demands happiness as a mere *Virtue demands happiness as a mere*.

Here we find Kant saying that the *thesis* 'is absolutely false.' He really goes on to make a *thesis* and an *antithesis* out of the antithesis. His real antinomy, therefore, is this:

**Thesis:** There is no causal of virtue.

**Antithesis:** Virtue is not causal of happiness.

To take the antithesis first, it is easily shown that virtue is not causal in the world of experience. Fire burns and poison kills the virtuous as well as the vicious.

Then as to the *thesis*, it is false so far as virtue is considered as a cause in the sensible world. But it is true so far as I am a denizen of a super-sensuous world. But even there it is true only because I must have a indifferently prolonged life in which to approximate to a virtuous mind, and because, finally, there must be a God as the cause adequate to equalizing or proportioning happiness to virtue, that is, a cause adequate to effecting this union of virtue with happiness.

In Kant's Third Critique, *The Critique of Judgment*, we find two other antinomies—the aesthetic and the telological antinomies.

First, the *antinomy of taste* ([§ 56]):

**Thesis.** The judgment of taste is not based on conceptions; for otherwise de gustibus non disputandum.

**Antithesis.** The judgment of taste is based on conceptions; for otherwise we could not argue about it, and there would be no norm of taste.

Second, the telological antinomy ([§ 70]):

**Thesis.** All products of material things and their forms must be judged to be possible according to merely mechanical laws.

**Antithesis.** Some products of material nature cannot be judged to be possible according to merely mechanical laws.

Hegel (Encyclopædia, [§ 48]) blames Kant for his small list of antinomies. He holds that antinomies 'appear in all objects of every kind, in all representations, conceptions, and ideas.' It is this view that is the vital element of the dialectical forcing thought onward to ever higher and more concrete forms till it reaches the Absolute Ideal in which all contradictions are forms of self-relation. "The true and comprehensive meaning of scientific progress is this: that every actual thing involves a co-existence of contrary elements. Consequently, to know, in or in other words to comprehend, an object is equivalent to being conscious of it as a unified group of contrary determinations" ([§ 48, Zusatz]). Hegel's whole Logic is an exhibition of the antinomical dialectic of all finite thought, in its indwelling tendency to absolute and final thought, as 'the life and soul of scientific progress, the dynamic which alone gives an immanent connexion and necessity to the subject-matter of science' ([§ 81]). Of every thing and every conception we say it is and is not, because it is more than what it is in its immediate form. With more
identity, $A=A$, there can be no progress. But

All things by a law divine

In one another's being mingle.

The truth of any thing or thought is always a unity of identity and difference, of thesis and antithesis. Synthesis is the truth of both. But all finite syntheses develop antinomies on the way to the ultimate synthesis of thought and reality, where antinomies are no more.

J. MACBRIE STERRETT.

ANTIOCHENE THEOLOGY

[J. H. SAWLEY].

The title 'Antiochene' has been applied to a school of Church teachers, all connected with Antioch, whose activity covers the latter half of the 4th and the first half of the 5th century. Its most famous representatives were Diodorus, bishop of Tarasus (+ 394); John Chrysostom, bishop of Constantinople (+ 407); Theodoret, bishop of Mopsuestia (+ 429); and Theodoret, bishop of Cyrillus (+ 457). But the theology of these Fathers has its roots in an earlier period. We reproduce the traditions of a school of Christian learning at Antioch, the history and characteristics of which form a necessary introduction to a study of the later writers.

THE SCHOOL OF ANTIOCH: HISTORY AND CHARACTERISTICS.—The city of Antioch, founded by the Seleucid kings and made by them the capital of their dominions, was the metropolis of the East and the third city of the Roman Empire. It was a centre of Greek culture, and was noted for the pursuit of art and literature. The Church of Antioch had played an important part in the early spread of Christianity, and from early times had been the centre of important movements in the region of thought. It was the home of the early Gnostics, Manander and Saturnilus, while the writings of Theophilus, bishop of Antioch, in the latter years of Marcus Aurelius and under Commodus, attracted the notice of the West, and show that the attention of the Church had been directed to the statement and defence of Christian truth. The earliest reference to anything like an organized Christian school of instruction occurs in connexion with the condemnation of the heresy of Paul of Samosata in the year 399. At the council of bishops, which met at Antioch in that year and condemned Paul, the latter's teaching was expounded by Malchion, a pupil of Paul of Samosata, in a school of Antioch. From Eusebius' description (HE vii. 29) it has been argued that the Church of Antioch already possessed some institution resembling the Catechetical School of Alexandria, in which sacred learning was combined with secular studies, and the pursuit of rhetoric and dialectic found a place (ερωτησά των ἐν 'Αντιοχείᾳ ἐλεγμάτων παιδεύσεως διατριβής προκείμενος). How far the teaching of Paul himself is representative of the true distinct school of thought at Antioch it is difficult to say, but there are features in it which are reproduced by the later Antiochene theologians (e.g. his appeal to the historical Christ and his rejection of metaphysics). See below, II. 6.

It is, however, in the time of Lucian (+ 311-312), the presbyter and martyr, that the school of Antioch first comes clearly to light. He is said to have studied at the school of Origen, and at the school of Cessare. From the latter he probably acquired that interest in Biblical studies which was due to the influence of Origen, and for which the school of Jerusalem was celebrated. In the days of Dorotheus, who combined knowledge of Hebrew with Greek learning (Euseb. HE vii. 32), he completed a revision of the LXX, and to him has also been attributed the early Syrian revision of the text of the NT (on these see Swete, Intro. to NT in Greek. C. H. Westcott and F. J. A. Hort., Intro. to NT in Greek, p. 138). There is also a fragment of his Commentary on the Book of Job (Routh, Rel. Sacr. iv. p. 71). But equally important with the Biblical labours of Lucian was the influence exercised by him on the theology of the Eastern Church. In what way he was connected with Paul of Samosata is uncertain (see, however, Harnack, PREP xi., art. 'Lucian der Martyrer'), but the influence of Paul's teaching upon him is unmistakable, and between the years 270 and 299 he appears to have been outside the communion of the Church (Theodore, HE i. 3). His teaching represented a compromise between the Alexandrianism of Paul and the Logos Christology of Origen (see below, II. 6). At the same time he taught the idea of a created Logos, and in this respect he handed on to his disciples a tradition which formed its most logical expression in Arianism. The school of Lucian was 'the nursery of the Arian doctrine' (Harnack). The Arian leaders, Arius and Eusebius of Nicomedia, were pupils of Lucian, and the title Σωκάστος πατέρας of Arians is still in use. The influence of Paul's teaching upon them is a common bond of union. Our sources of information as to the teaching of the more prominent Arians exhibit two characteristics which re-appear in the later history of the school of Antioch: (1) the use of the dialectical philosophy of Aristotle; (2) the grammatical and literal exegesis of Scripture. On the former of these see Harnack, Hist. of Doctrines (Eng. tr. 1899), vol. iv. p. 6. The latter characteristic is illustrated in the commentaries of Eusebius of Cesarea, a disciple of Lucian, and a moderate Arian in doctrine, who had studied in the schools of Edessa, Cesarea, and Alexandria, as well as at Antioch, and who, according to Jerome, exercised an influence upon the exegesis of Diodorus (Jerome, de Vir. Illust. c. 119).

Harnack has pointed out the close parallel which exists between the principles of the school of Lucian and those of the earlier Roman Adoptianists, whose chief representative was Theodotus. In both alike we find the same use of Aristotle, and the same methods and critical exegesis of the Bible. Both schools opposed the dominant mystical and allegorizing tendencies of the Old Testament, and full use of them and critical methods (Harnack, Hist. of Doctrines, vol. ii. p. 23 f., vol. iv. p. 6).

It was not the Arians alone who handed on the traditions of the school of Antioch. Eustathius, bishop of Antioch (exiled in 341), in his de Evagri-

mytho attacks the allegorical interpretation of Origen, and defends the literal sense of Greek Scripture. Flavian, the colleague and friend of Diodorus at Antioch (Theodore, HE iv. 22), and Meletius, the patron of Chrysostom, constitute links between the earlier and the later school of Antioch.

The history of the later school of Antioch really begins with Diodorus (bishop of Tarasus, 378-394). A fellow-student of Basil at Athens, and later on the colleague of Flavian, he had upheld the unorthodox cause at Antioch in the days of Meletius' exile. His friendship with Basil (Basil, Ep. 135) is important as marking the union between Cappadocian and Antiochene orthodoxy (Harnack, PEP iv., art. 'Diodorus', O. F. Sterrett). All his fragments and unprinted writings are extant, but they appear to have included treatises on philosophy and theology, and commentaries on the Old and New Testaments. In his opposition to Apollinaris he published a tract on the Person of Christ which in later times caused him to be regarded as a precursor of Nestorianism. In his exegesis of the Scriptures, the principles of which he expounded in a tract Τὸ διακόπτων τὸν λόγον ἐν τῇ ἀληθίνῃ και ἀπόκρυφῃ he contested the Alexandrian method of interpretation, and, while affirming the need of insight into the inner spiritual
meaning of Scripture, he asserted the importance of grammatical and historical methods of exegesis. Lastly, Diodorus’ importance consists in the fact that he was the innovator and teacher of the two most famous representatives of the school of Antioch—Theodore and Chrysostom.

**Theodore**, bishop of Mopsuestia (†429), developed on bold and original lines the teaching of his master Diodorus. As an independent thinker and systematic theologian, he was the most prominent representative of the Antiochenes. His theology contains a fully thought out system, embracing the nature and destiny of man and the Person and work of Christ. He has points of contact with the Pelagians in his teaching on sin and the Fall, free-will and grace; and in his Christology he was the immediate predecessor of Nestorius. No less important were his contributions to the study of Scripture. In his subjective criticism of the Canon of Scripture, his insistence on the primary meaning of OT prophecy, and his endeavour to bring out the full historical meaning of Scripture, he represents the climax of Antiochene teaching.

He also represented in the Persian and Gnostic schools of Antioch during the period of its greatest fame call for notice, though none of them carried out so fully as Theodore its essential principles.

**John Chrysostom**, bishop of Constantinople (†407), was the disciple of Diodorus and Flavian, and shows the influence of his Antiochene training alike in his doctrinal teaching and in his exposition of Scripture, though in both respects he was in closer accord than Diodorus or Theodore with the teaching of the Antiochene school. Theodore was, however, the popular teacher and preacher rather than the exact theologian, and his commentaries on Scripture, which are marked by profound insight into human nature, are the work of a homilist rather than a critical scholar.

**Theodoret**, bishop of Cyrrhus (†457), was a disciple of Theodore, and played an important part in the Christological controversies of his time, in which he exercised a mediating influence between the conflicting principles of Antiochene and Alexandrian theology. He exhibits, alike in his theological and Biblical works, the Antiochene tradition. But he modified in several respects the teaching of Theodore. He, however, as he exhibits learning, judgment, and terseness of expression, though he is inferior in originality to Theodore and Chrysostom.

On the later history and influence of the school of Antioch, see below, III.

II. THE TEACHING OF THE SCHOOL OF ANTIOCH. — 1. Holy Scripture and Revelation. — With the Antiochenes the Scriptures of the Old and New Testaments held a foremost place as the source of Christian doctrine. In their Canon of Scripture they followed the tradition of the Antiochene and Syrian Churches (which is generally referred to the so-called Syriac Version), and did not include in the NT the Apocalypse, 2 Peter, 2 and 3 John, or Jude. Theodore, on subjective grounds, also rejected the Gospels and the NT are equally to the OT books, Theodore recognized degrees of inspiration, and submitted them to a rigorous subjective criticism. The Book of Job he regarded as the production of a pagan Eloite and a work of dramatic fiction, which was lacking in higher inspiration. Similarly, he denied inspiration in the higher sense to Proverbs and Ecclesiastes.

The Song of Songs was merely the marriage-song of Pharaoh’s daughter, and lacked the authority both of the synagogue and of the Church. He assigned little value to Chronicles, Ezra, Nehemiah, and Esther, partly owing to doubts as to their acceptance in the Jewish Canon, and partly because they seemed to lack the prophetic insight which marked the NT historical books (see below, Theodore, p. 521). He also rejected the inscriptions of the Psalms, and assigned to them a historical meaning. He was, however, more given to criticism than rejection of the doctrine of the inspiration of many of the Psalms, placing some in the period of Hezekiah, others in that of Zerubbabel, and others again in Maccabean times. These views, however, were rejected by Cyril, a few later, and Theodo- ret, who adhered to the general sentiment of the Church.

The Antiochenes held the LXX in the highest repute, and appear to have used Lucian’s recension of its text. But Theodore and Chrysostom were unacquainted with Hebrew, and none of the teachers of the later school took up Lucian’s textual labours or interested themselves in such studies (see below, Chase, Chrysostom, p. 921). In their treatment of the inspiration of the Scriptures, while recognizing a real influence of the Holy Spirit upon the writers, the Antiochenes maintained that the individual character of the various books was preserved on the whole. They recognized, too, the principle of accommodation to the time and circumstances of those who were addressed (Chase, op. cit. p. 42). Revelation is progressive. The OT has a preparatory character, and is the foreshadowing of one Divine purpose, which reaches its culmination in the Incarnation and the Christian dispensation. In their exegesis of Scripture the Antiochenes exhibit a pronounced opposition to the allegorical school of Chrysostom and the Alexandrian school. Eustathius, Diodorus, and Theodore all wrote works against the allegorists (see also Theodore on Gal 4 and proem. in Ose.). Against Origen they maintained that the historical books contain true history, and are to be interpreted historically. But the history contains spiritual lessons, which, however, are to be deduced from it, and not arbitrarily imposed upon it. The moral difficulties of the OT histories and of the inpropriate Psalms presented obstacles to them, which they do not always satisfactorily overcome. Chrysostom often minimizes them, or occasionally resorts to allegory (Chase, op. cit. p. 533). The historical character of the OT narratives is fully recognized. The incidents, persons, and objects mentioned are types of realities found in the NT (Theodore, proem. in Jhn.). This harmony between type and antitype was foreseen and foreordained by the Divine purpose in order to assist men in recognizing the truth (Theodore in Ose. 1; proem. in Ann., Migne, lxvi. 125, 141). Hence the obscurity of the OT is due to the fact that it contains shadows and imperfect images of the truth, but is not the truth itself (Chrys. Hom. 61 in Genec.). The language of the OT is often also hyperbolic and figurative, if referred to its original object, and finds its full content only in the higher realities of the gospel (Theodore, in Joel 2). The principles of the interpretation of prophecy which were based on literalism were sought by manner by Theodore. He starts from the historical standpoint of the school, and maintains that, with the exception of a few passages which are directly Messianic, it is only by way of accommodation that the language of the Psalms and Prophecies can be applied to the Christian dispensation (in Rom. 3, Eph. 4). He distinguishes three classes of prophecies:—(1) Those which have a primary application to the Messiah, Christ, and no other doctrinal reference. These were few in number;
ANTIOTHESE THEOLOGY

e.g. Theodore recognized only four Psalms (2, 8, 45, 110) as directly Messianic. (2) Prophecies which have a primary reference to OT events, and, referred back, to the Spirit of Christ, i.e., such prophecies as are quoted in the NT. (3) Prophecies which have no Messianic reference, but refer only to the OT (e.g. Mic 4:1-3, Zec 11:12; Hag 2:9-10, Mal 3:5-17).

Theodore has a profound appreciation of critical methods to the OT, though often arbitrary and vitiated by his ignorance of Hebrew, exhibits at times an acumen and insight which were far in advance of his age. In his subjective criticism of the OT books he found no successors, but through the later Antiochenes—Chrysostom and Theodoret, who followed in the main his methods, while modifying his conclusions—the science of exact and literal exegesis gained a foothold in the Churches and exercised a far-reaching influence both in the East and in the West. See below, III.

2. Doctrine of God and of the Trinity.—The Antiochenes exhibit little interest in metaphysical speculation, concerning the definition of God's essence of His existence. Photius, however (Bibl. Cod. 229, see esp. p. 209b; Migne, PG ciii, p. 833), gives an account of Diodorus' work Against Fate, in which the latter propounds the cosmological argument for the existence of God. The world, Diodorus maintains, is subject to change. But change itself is a condition which implies a beginning, and requires us to assume something constant behind it. Moreover, the things which are displayed in the very process of change point to an underlying unity of origin, and suggest a Creator and a Providence. Both Chrysostom and Theodoret wrote works upon the providence of God, in which they endeavoured to show that this providence extends to particulars.

Diodorus and Theodoret were staunch supporters of the Nicene theology. Accepting its conclusions, Theodore set forth the doctrine of the Trinity by the help of careful exegesis of Scripture, rather than by speculative arguments. From the baptismal formula in Mt 28:19 we may learn that Father, Son, and Holy Ghost are three self-subsisting Persons of the Divine Being. In the OT the distinction of Persons was not yet revealed (in Hag. 2:4). But when the OT speaks of the Divine nature, its language may be applied not only to the Father, but to the Son also, by reason of their community of nature (in Heb. 1:10). The Holy Spirit is a Person (ιδιωτας) of the Trinity, and has His subsistence (εσπερηθη) from the 'being' of the Father (in Matt. 18:14). Chrysostom's treatment is similar to that of Theodore. Careful exposition of the language of Scripture takes the place of metaphysical speculation upon the Trinity. Theodoret expounds in his Exegetes (Dial. i. p. 33f, Migne) Basil's distinction between the terms 'being' (ονωσια) and 'person' (ιδιωτας), but, like Theodore and Chrysostom, he contributes little to the subject.

One respect, however, Theodore and Theodoret occupy an important place in the history of the doctrine of the Trinity. Theodore's teaching upon the Holy Spirit exhibits a clear conception of the essential Procession of the Holy Spirit from the Father. In his concentric circle diagram he affirms that the Holy Spirit's 'going forth' (εναποστελθησα) was no mere external mission, but 'a natural procession' (φυσικη σπρωση). But in the Creed put forth by him (Hinle, Bibliothek der Symbolen, p. 392) he denies that the Holy Spirit was received through the Son (ον ιδιωτα του ξανθηναι οντος). This position was attacked by Cyril of Alexandria in the ninth of his anathemas against Nestorius, and the Spirit was declared to be the 'very own' (θυρων) of the Father. In his concentric circle diagram he affirms that the Holy Spirit's 'going forth' (εναποστελθησα) was no mere external mission, but 'a natural procession' (φυσικη σπρωση). But in the Creed put forth by him (Hinle, Bibliothek der Symbolen, p. 392) he denies that the Holy Spirit was received through the Son (ον ιδιωτα του ξανθηναι οντος).

From the first, God made man's nature liable to mortality. As a result of this mortality, man is subject to passion and liable to change. Theodore distinguishes between two stages (καταστασις) in the history of created beings, a present stage, in which the creature is subject to change and death, and a future stage, in which all will be saved from mortality and immortality (in Genes., Migne, lxvi. 634). God exhibited the
beginning of this second stage in the narration of the fall (cf. Jer. 31:31; Mic. 5:3), but it was His purpose that man should first pass through the earlier stage, in which he is subject to conflict, temptation, and mortality. In thus creating man mortal, however, there was a beneficent purpose, for it made him susceptible to the possibility of actual death (as distinguished from the liability to death) to disobedience, in order to deter men from sin. (c) Man’s mortal condition rendered it possible for ‘the body of sin’ to be destroyed along with the dissolution of his body. Had man sinned, being immortal, his fall would have been irremediable (in Gen. 3:1; there is a somewhat similar treatment in Methodius and Gregory of Nyssa). Hence the purpose of the command to Adam, and later on of the Law, was to call forth the knowledge of good and evil, to provoke sin, and to show man his inability to attain perfect righteousness. It was only through the struggle and the constancy out of this failure to attain his need of the Divine principle of life revealed in Christ, in order that he might attain his true end (in Rom. 7, in Gen. 3, in Gal. 3). But the teaching of Theodore that by man’s disobedience the liability to mortality became an actual fact, for God had not said, when He threatened man with death as the penalty of disobedience, ‘Ye shall be mortal’, but ‘Ye were to die’ (Marius Mercator, ed. theol. Orig., p. 340). Death came by sin, and the result of death was the separation of soul and body in man. Thus, too, the bond of the Universe, which had held together the visible and invisible parts of creation, was broken; for Adam gained an entrance into the world, and in Adam’s descendants the same experience was repeated. As each of them sinned in turn, he became subject, like Adam, to death (so Theodore in Cat. Ro 5:12). A further result of the actual mortality which resulted from sin was that it increased the tendency to sin, by fixing man’s thoughts upon the present order of things and by ministering to his passions (in Bibl. 714, 718, in C. 295, 30). 5. Original Sin.—The summary which has been given above of Theodore’s teaching shows that he allowed no place for the idea of inherited sin. Every soul, whether in the beginnings of men’s existence as regarded as the result of man’s own transgressions, not as the result of Adam’s sin. In the fragments of Theodore’s work, Against the Defenders of Original Sin, preserved by Marius Mercator (ed. Baluze, p. 340 f.), his attitude towards the standpoint of Jerome and Augustine is clearly shown. He affirms that Adam was created mortal, and he repudiates the idea that Noah, Abraham, David, Moses, and other righteous men should be subject to punishment for Adam’s sin. Such a view he regards as inconsistent with the Apostle’s words (Ro 5:12), that God will render to every man according to his deeds. Thus, too, in speaking of baptism, he emphasizes the forgiveness of the sins of the individual, and the sinless state which will be fully revealed only at the general resurrection of all things, and he maintains that in the case of infants as well as of adults the baptism of Water is the necessary introduction to the kingdom. Such teaching made Theodore a valuable ally to the Pelagian leaders, and in 418 Julian of Eclanum and his companions sought refuge with him after their banishment from the West. The points in which Theodore differed from that of Pelagius are: his insistence that man was created mortal, his emphasis on free-will, his denial of inherited sin, and his treatment of man’s growth in knowledge and obedience through the discipline of the commandments and the law of God. On the other hand, his idea of redemption is different from that of Pelagius. For, according to Theodore’s teaching, the original constitution of man as mortal and mutable rendered it impossible for him to attain his own complete deliverance apart from the deliverance which came through Christ. Again, as we have seen, Theodore’s conception of free-will is more profound than that of Pelagius, with whom freedom is simply the indifference of the will to good or evil (death). Chrysostom in his teaching on human nature exhibits the same practical bent and absence of speculative interest which appears in other writers. Besides the distinctive ideas of Chrysostom’s treatment of man’s history, his conception of the Divine image in man, which he regards as the effect of the fall, recalls Diodes and Theodore. He regards the Fall as resulting in a privation of gifts which were not a part of man’s natural constitution. He does not teach a complete loss of the Divine image. He agrees with Theodore in insisting on free-will and denying original sin. But in both cases this was probably due to his practical bent of mind, and to his association with that side of Eastern thought which, while emphasizing free-will, had not yet embraced the ideas found in Origen and Gregory of Nyssa, which approximated to Western teaching on Original Sin. As a good preacher, Chrysostom saw the danger of any form of teaching which seemed to lessen the sense of responsibility or encourage the idea of human freedom. He says that man was given, “...a free-will to be free for evil or good” (ib. 5). To deny free-will was to take the virtue out of goodness (1 Cor. Rom. 2). It is the bad will which is the root of evil (1 Cor. Rom. 3). Thus, he was determined that mortality shall continue (ib.). Chrysostom, in fact, realizes far less than Theodore the weakness of man’s inability to attain his own perfection. In other respects Chrysostom’s teaching exhibits points of contact with the later Pelagians. In a passage appealed to by Julian of Eclanum in his efforts to connect the idea of an infant sin, though Augustine (c. Julian. i. 6) explained the passage as referring to actual sin. Theodore also presents few points of contact with the characteristic teaching of Theodore. Like Diodes and Chrysostom, he regards that the Divine Image in man is lost in the dominion over creation, and, like all the Antiochenes, he emphasizes man’s mortality. Thus he interprets Ro 5:12 as being a reference to the moral “wrath” of Ro 8:22 that of those who have become such by their own free choice, and, like other Fathers, he misinterprets Ro 5:13 by understanding εν αίσθησιν to refer to man’s own act of choice. The words of Ro 7:12 indicate not a necessity, but the weakness of human nature, and embraces sin or virtue not by a natural necessity, but of his own free-will (in Ro 6:5). Theodore again shows his connexion with Antiochene teaching in his treatment of the consequences of Adam’s sin. Like Theodore, he holds that Ro 5:12 refers to the actual sins of Adam’s descendants, which involved them in the same penalty of death as Adam. The ‘old man’ denotes not the nature, but the evil will (in Rom. 6:5). In other respects Theodore is more in accord with general Church teaching. The Antiochene conception of human nature, as exhibited in its most fully developed form in Theodore, tends to a purely teleological view of his development. In the light of the rest of the Antiochene theology, is Aristotelian. Mortality, rather than sin, is the great enemy of man, and it involves him in weakness and subjection to the passions. The history of man is the story of the struggle of the will towards a perfection which can come only from a new creation, and from the introduction of a higher stage (κατάκεραστιν) of existence, when this mortal and mutable condition will be transformed into one which is immortal and immutable. In this presentation the disorder introduced by sin occupies only a secondary place. The extent of the consequences of sin is minimized, and the religious view of sin tends to dispense with the necessity of redemption, to have a different meaning from that which it has in the teaching of St. Paul, St. Athanasius, and St. Augustine (see below, § 7). In logical consistency, Theodore’s conception surpasses that of other Greek Fathers. But it fails to take account of those elements in the religious consciousness of men to which St. Augustine gave full expression (cf. Harnack, Hist. of Dogma, vol. i. p. 579 f.) 6. Christology.—The Christology of the Antiochenes, which was closely connected with their doctrine of human nature, constitutes their chief importance for the history of doctrine. Their

Paul, Vol. II.; Appendix; Sachau, Theodore Mengo, fragm. 997).

e.

Theodore's teaching of Diodorus and Theodore may be summarized as follows:

(1) Against Apollinaris, Theodore asserted the completeness of the manhood of Christ and His possession of a reasonable soul as well as human flesh (see "Creek" in Hahn, p. 302f., and Sachau, p. 88). Especially important is his insistence on the freedom of the human will in Christ (on his conception of freedom, cf. above, § 3). As freedom cannot, according to his view, be really free, it involves a process of development in the humanity (cf. the προκαταρχή, or 'moral advance' of Paul of Samosata). Further, in accordance with Theodore's understanding of the divine, the human will is an intelligent being (cf. above, § 3), it was necessary that Christ should assume humanity in its mutable state, subject to bodily weakness and the passions of the soul. Christ submitted to the assaults of the Temptations, and underwent the moral struggle between the higher and lower impulses (Migne, PG, lxxi. 720, 992, 995). By this struggle He mortified sin in the flesh and tamed its lusts (ib. 720). Theodoret further admitted a real ignorance in Christ, and an advance in human knowledge (ib. 977, 981).

Similarly, Diodorus asserts that the Godhead did not impart to the manhood of Christ all wisdom at the moment of birth, but bestowed it gradually (cf. Mers' Merator, ed. Baluze, p. 349). Cf. CAPPADOCIAN THEOLOGY, vi. (2).

(2) But it is in their conception of the relations of the human and Divine natures that the teaching of Diodorus and Theodore exhibited their peculiarity, which finds its extreme expression in Nestorianism. It is here, too, that the traditional 'Adoptionism' of Antiochene teaching appears. Both Diodorus and Theodore drew a sharp distinction between the human and Divine elements in Christ, and thus exposed themselves to the charge of teaching the existence of two persons in Christ. Thus Diodorus distinguished (Leontius, c. Nest. et Eutych. iii. 45) in Christ two sons: one by nature, God the Word; the other by grace, the man who was born of Mary. God the Word is not to be supposed the son of Mary. He may, however, be called καταγωγικός, 'Son of David,' because of the shrie of God the Word which came from David, just as He who was of the seed of David may be called 'Son of God' by grace, not by nature. Similarly, Theodore denies that God was born of Mary (Migne, p. 957); though he asserts that Mary may be called both Θεόπορος and ἀρπαγωγικός ('God-bearing' and 'man-bearing'), the latter in a natural sense, the former because God was in Him who was born (Migne, p. 992).

The latter idea, however, was not shared by the two parties. The former idea of the Logos being 1. It is not generally true that the Synthesis of the two natures of the vision. The teaching of Diodorus and Theodore exhibits a positive tendency to regard the human nature as possessed of an independent personality. This led them to conceive of the union of the two natures as a moral
union of grace (whereas Cyril started from the conception of One Divine Person, who has become incarnate, and maintained a hyposystatic [α' ὑποσυστατική] union).

The nature of the union is discussed most fully by Theodore in the De incarnatione (Migne, p. 972 f.). He distinguishes three possible modes of the Divine indwelling. The first is by ‘essence’ or ‘being’ (ωσία). But in Scripture the Divine infinitude is revealed by the Word of the saints (Iv 267 f. 2 Co 6 f). This excludes therefore an ‘essential’ indwelling, since the ωσία (or ‘being’) of God is not circumscribed by place. A second mode of indwelling is by the operation or energy (ἐνέργεια) of God. But this is common to all created things. Accordingly the only remaining mode in which the Divine indwelling is possible is by the Divine approbation or superintendence (εὐθυνή), the moral union by which God dwells in those who are pleasing to Him. How then did the union of God with the man Christ differ from His union with the saints? The answer is that He dwelt in them according to their deeds, that is, in the whole grace of the Spirit, whereas in other men the participation in the Spirit was partial (ib. p. 989 f.; cf. Diodorus ap. Marcian Mercator, ed. Baluze, p. 361; Nestorius, Loofs, p. 264). This in fact was in the beginning meant by the incarnation in the womb of the Virgin, and was a result of the Divine foreknowledge of what Christ would be (Migne, pp. 974, 980, 984). At His baptism Christ further received the grace of adoption. As a result of this union of His supernatural birth, His inseparable union with the Word, and His union by the Holy Spirit, Christ exhibited a hatred of evil and an irresistible love of good (see below (3)). He was preserved by His union with the Word from the insufficiency of mutable human nature, and passed from stage to stage of virtue with the greatest ease (ib. 977). He thus proved Himself worthy of the union, and became our example and way, until after the Resurrection and Ascension He exhibited the union with the Word in its final completeness (ib. 977).

(3) In its treatment of the unity of Christ’s Person, the teaching of Diodorus and Theodore exhibits a lack of precision and logical completeness. As we have seen, they tended to view the two natures apart, and to conceive of their union as a kind of union between two separate persons of a complete human nature involved the notion of a distinct human personality (cf. above). ‘When we distinguish the natures,’ says Theodore, ‘we understand that the natures of the Word is perfect, perfect too the person (πρόσωπον) — for it is not possible to speak of a distinct existence (εὐθυνή) which is impersomal (δυναμική) — perfect too the nature of the man, and the person (πρόσωπον) likewise. But when we look to the conjunction of the two, then we say that there is one person (πρόσωπον)’ (Migne, p. 981). The nature of the unity thus attained is in one passage compared by Theodore to that of marriage. ‘As the Lord said of the man and the woman, ‘They are no longer twain, but one flesh’ (Mt 19, 5), so it may be said of the union that there are no longer two persons (πρόσωπα) but one, the natures, of course, being distinct and different (εὐθυνής)’ (ib. 977). ‘By his union with the Word, where he compares the unity to that of the rational soul and flesh in man (πρόσωπον)’ (Migne, p. 984). Theodore employs the terms εὐθυνή (‘union’) and ἐνέργεια (‘operation’) to denote the species of the natures. In his interpretation of this union he uses phrases which imply that it consisted in the harmonious relation of the human and Divine wills in Christ (cf. one phrase τὸ πρόσωπον ὑποῖπος τοῦ Θεοῦ ἐνέργεια, p. 985, another ἐνέργεια ἐχόν, p. 989). Theodore, however, was conscious that the charge of teaching two sons, might be brought against him, and he repudiated it. ‘The Son,’ he says, ‘is rightly confessed to be one, since the distinction ought of necessity to remain, and the unity of person (πρόσωπον) ought to be guarded; and in this union there is no interruption in love (τὸν Λόγον)’; see the ‘Creed’ in Hahn, op. cit. p. 303; cf. Nestorius, Loofs, p. 320 f.). Similarly Diodorus refutes the charge of teaching two sons by saying that he neither affirms that there are two sons of David, nor that there are two persons of a distinct substance, but that the Word of God dwelt in Him who came from the seed of David (Marcian Mergator, ed. Baluze, p. 360).

For a fuller consideration of the question, see Donner, Person of Christ, u. n. 471. Theodore has points of contact with the mystical theology when he emphasizes love as the principle which brings the humanity of Christ into harmony with the Word. ‘The thought and volition of the man Jesus were, in point of contents, the thought and volitions of the Logos.’ The form in which the mind of Jesus actually expressed itself was determined by the Logos; though, in consonance with his theory of freedom, he rejected this determination as a mere influence of the Logos’ (Donner, loc.).

(4) Both Diodorus and Theodore assert the unique character of the union of the man Christ with the Word, and (being acquired by the man Christ. ‘They both apply the words spoken at the baptism, ‘This is my beloved Son, in whom I am well pleased,’ to Christ and the Word (Mt 3; de incarn., p. 320; Theodore, in Mt 3°; de incarn., Migne, p. 980). The title Son is applied both to God the Word and to the nature assumed by Him, by reason of its union with Him (Theodore, de incarn., ap. Facund. 1, 2). From this in part depends the result of the union with the Word and His adoption as Son, the man Christ shares in the worship which is offered to the Word. ‘We worship,’ says Diodorus, ‘the name of God, for the sake of Him who is clothed in it, and the temple becomes a tabernacle in which dwell in it; the form of the servant because of the form of God; the lamb because of the high priest; Him who was assumed, because of Him who assumed Him; Him who was formed of the Virgin, because of the Maker of all. Confessing this, offer one worship’ (Marcian Mergator, ed. Baluze, p. 331; cf. Theodore, in Col 1°-10°; de incarn., Migne, pp. 991 f., 996; Nestorius, Loofs, p. 322).

This teaching of Diodorus and Theodore, which apparently escaped censure during their lifetime, attained public notoriety through Nestorius, the patriarch of Constantinople. Nestorius merely popularized a teaching already held by their predecessors without exhibiting the same fundamental depth of treatment. The real parent of Nestorianism is a system of Christology is Theodore. See, further, art. Nestorianism.

The Christology of three other representatives of the school of Antioch calls for notice here.

Eustathius of Antioch is an important link between the earlier and later stages of the school. His works exhibit some of the characteristic Antiochenic features. He ascribes to Christ a true human development, and speaks of the human nature as the temple of the Deity. The Divine nature is dissociated from the experiences of the human nature. It was the latter alone which was anointed and glorified. He further implies that Christ acquired the Divine gifts and graces gradually. Hence Donner (Concerning Christ, i. 43) says that with him, and with the later Antiochenes, ‘the deity and humanity remain separate and distinct, and do not constitute a living unity.’ Yet Eustathius affirms the closeness of the union between the humanity of Christ and the Logos (Migne, xvii. p. 689, ἐν οἷς τε θεότητα ἔχει καὶ δύναμις καὶ πρόσωπον ἐκείνου). ‘He who is born of us is also born of God. Yet he has become man of a woman, even He who was formed in the womb of the Virgin’ (Euseb., i. 74). See fragments collected in Galland, Bibl. ser. Patr. iv. 577 f.; Mai, Script. ser. Neo. Coll. (1523) iii. 138, 209; Cavallera, S. Eustathii in Antiquem Epist. opt. l. xvi. 415, de fragmentis, Migne, p. 987; DePencier.

Chrysostom approaches Christological questions from the practical rather than theoretical union of the union of humanity and the Divinity. The union of Christ. Antiochenes are interested in the suffering of our humanity. He exhibits the characteristic Antiochenic spirit in asserting that this union ‘in a human manner, not only to teach the reality of His Incarnation, but as a pattern or ideal of human virtue. But the idea of Theodore, that the human nature was gradually moulded by the
ANTIOCHEN THEOLOGY

Influence of the Word finds no place in his teaching. Chrysostom Forrest found so many influences of Antiochene influence mingling with the union of the two natures. He repudiates the idea that the Incarnation involved any change of place in the deity, as the Logos, the Ilios of Christ. He interprets the humiliation of Christ (Ph 2) as a humiliation of mind. Again, he does not believe in the sacrifice of the Word, as one of the experiences of the humanity from those of the Godhead, and, like Eustathius, declares that it was the humanity that was removed and not the Logos; a Logos that was anobled and exalted, he speaks of the humanity as the temple of the Word. On the other hand, the School of the union of the two natures affirms the Incarnation explains the passages which suggest Christ's dependence on the Father as the language of accommodation (ev synkharwma). But he nowhere clearly defines what the union of the two natures is, and much of the language quoted above suggests a merely 'ethical' union, i.e., a union of spiritual affections rather than a full personal union. Chrysostom's Christology, in fact, exhibits an undeveloped character. He is content to put side by side the affirmation of the two natures and the assertion of their union. Though he shares to some extent the Antiochene point of view, therefore, he arrives at conclusions which were, in his case, held in check by his own practical bent and the influence upon him of other forms of Church teaching. See, further, Förster, Chrysostomus in seimn Verhältnisse zur antiochen- schen Schule, p. 101 ff.

Christ's person occupies a mediating position in the Christological controversies of his time. On the appearance of Cyril's anathemas against Nestorius, he published a refutation in which he charged Cyril with Apollinarianism. (The Repräsentieren Anathematismus, n is printed in Schnelle's edition of Theod., P. 917.) In this work, he exhibits the same tendency to accentuate the distinction of the two natures which characterises Theodoret and Diodorus, though he cannot remove the same liability to present a complete nature which is not personal. He denies that the God the Word was perfectly known in the man; hence, the idea of the Incarnation refers to that. He fashioned for himself a temple in the Virgin's womb, and was with (euph) which was formed and begotten. Similarly, he maintains that the weakness of the humanity cannot be attributed to God. Lastly, it was not the Christ (theos) who suffered, but the man, Adam, who was assumed by God. He maintains, however, that the 'form of the servant', may be confessed to be God on account of the form of God' 'union, 'eternal proportion' (Kai 2pOv5s 5d To Tov en pOv5s), which speaks of the unconfused union of two natures (5d 5dTo0 5d swpOv). At the same time it abuts the term 'theosis', while carefully explaining it (Hahn, 'Bild der 'Theosis', p. 218). In the Anaph. p. 119, Migne, LXIIII. p. 165 f., written in A.D. 447, he states the idea of a communicatio commerci in a way which is quite in accord with the later teaching of the Church. Though we may not attribute to one nature what belongs to the other, we may attribute to both the Person what is essential to the nature of the other. Theodoret nowhere goes so far as Theodore in affirming that the humanity of Christ was a double humanity (5d 2pOv5s 'etkai 2pOv5s). He maintains that in Christ there was one undivided Person (to 2pOv5s 5d To Tov en pOv5s), though he does not anywhere acknowledge that these natures were a mystic union (5d 5dTo0 5d swpOv). Finally, at the Council of Chalcedon, 431, he maintained an orthodox position. Theodoret maintained that Christ assumed mutable (evarvo) human nature, which was subject to human passions, though it was the perfect human nature. He interpreted the temptation as arising from the natural appetites, but not the sinful motions to which they commonly give rise (Repr. Anax. 10; Pentale, Migne, LXIIII. 95; Haret, Pal. 5; Migne, LXIIII. 497). He further acknowledged a true human ignorance in Christ, and an advance in knowledge 'as the in-dwelling Godhead had revealed it.' So, too, in the Repr. Anax. 10, he maintains that Christ attained perfection by efforts of virtue, and learnt obedience by experience, 'though before His experience He was ignorant of it.' In these statements we see the true Antiochene spirit, though they are far removed from the more extreme conclusions of Theodore. For a fuller discussion of Theodore's Christology, see viert, Theodore: E. S. D. Dogm. Christolog, J. Mahé in Revue d'histoire ecclésiastique, viii. (1900), art. 'Les antithéismes de Saint Cyril d'Alexandrie et leurs rapports avec la dogme du patriarchalisme.'

The Christology of the Antiochens was the outcome partly of their training, and partly of their opposition to Apollinarianism. The historical study of Scripture, and the high conception entertained by them (esp. Theodore) of the dignity and deity of the Logos, were the first steps towards the fullest extension of the humanity of the Lord. Their ideas of free-will and the moral development of man impelled them to oppose any teaching which involved the possibility of our disposing of our own experiential experiences, or tended (like Apollinarianism) towards a docetic view of His humanity. The Alexandrian school, on the other hand, started from the Divine aspect of Christ's Person. It was the truth that God Himself was revealed in Christ which from the days of the fathers of the Church had been emphasized in Alexandrian teaching. Hence Cyril of Alexandria was led to lay stress upon the union of the Word of Incarnation. The humanity of Christ does not belong to Him as an individual and independent man, but of God the Word. The human element was subordinated to the Divine. The Word has taken human nature into the union of His Divine Person, which remains one and the same, in spite of the affections and experiences as a human person. The Antiochens had not clearly faced the problem as it presented itself to Cyril. They had affirmed the integrity of the two natures, and they had asserted their ineffable union. But the nature of this union and the exact relations of the two natures had not been considered by them. Hence arise the apparently inconsistent statements of Theodore that the humanity is personal (kai pouos), yet Christ is one Person (pouos). Much of the misunderstanding between Cyril and the Antiochens arose out of the undeveloped stage of doctrine at the time, and the absence of any clear definition of the terms. The words against the Docetism, antiochenism, hypostasis ('hypostasis'), and pouos ('nature'), nor had the union of the natures been clearly defined. The terms 'mixture', 'blending', 'union', 'con- nexion' (mu-ria, skpcmos, 5m6tos, swpo) had been used indifferently by earlier writers to denote this union (see art. CAPPADOCIAN THEOLOGY, vi. (3)). The Antiochens, from traditional habit, attributed to each of the natures that which belonged to the Logos, but regarded as independent. Cyril, on the other hand, referred everything to the personal subject, who is the Word. When brought face to face, both schools of thought admitted the union of Person, and both asserted the integrity and distinction of the two natures. The difference between them was exaggerated by misunderstanding and controversy. The unhallowed language of Diodorus, Theodore, and Nestorius was, doubtless, largely responsible for this, but the Formula of Concord agreed upon by Cyril and the Antiochens exhibits the fundamental agreement of the two Christologies. The Antiochens accepted and explained the word procos, the unity of the two natures was affirmed, and Cyril's misunderstood expressions, voueik 5m6tos, 5m6tos kai voueik 5m6tos, voueik 5m6to tov 2pOv5s voueik vov 5d00v, were explained, and Cyril's misunderstanding of the word pouos, 'natural union', 'personal union', 'one incarnate nature of God the Word', was acknowledged, and rejected. See, Repr. Anax. 10; Haret, Pal. 5; Migne, LXIIII. 497; Haret, Pal. 5, p. 119 f.

While Cyril affirmed a truth of vital importance to Catholic theology,—the truth that He who assumed human nature was personally God, and took human nature into vital union with Himself,—we are justified in maintaining the importance of the stand made by the Antiochens in defence of the reality and completeness of Christ's human experiences. It was a valuable protest against an almost docetic tendency which had already appeared in Apollinarianism, which was latent in Alexandrian theology (even in Athanasianus), and which reappeared in Monophysism. If the Church was finally enabled to overcome the latter, it was largely due to what it had learnt from the teaching of the Antiochens.

7. The Work of Christ.—Theodore alone among the Antiochene Fathers developed a distinctive conception of the work of Christ. His views upon the relation of human and sin nature was essentially significant. His work not so much in His Death as in His Resurrection. The purpose of the Incarnation was the perfection (peqXeiov) rather...
than the restitution of humanity. Christ is the new creation, who exhibits God's plan in its final completeness. In Him there is set forth that image of God which man was meant to be and to live. The work of Christ was not only to restore the broken order of the universe and exhibit man in his true place at the head of creation, but to inaugurate that new stage (cfr. above, § 3) in the life of man, in which he should be free from the mutability and mortality of his present state. As a result of His struggle and victory, accomplished by the exercise of His free-will and through the union with the Word, Christ overcame the mutability of human nature, which was crucified with Him and rose with Him (in Rom. 6). The deliverance which He has won for men is already potentially theirs, though it is only in the future that it fully takes effect.

The omissions in this presentation are significant. The conception of guilt and responsibility, and the idea of Christ's death as an atonement, are absent. It is at this point that Chrysostom, through which Christ passes to the Resurrection and inaugurates the higher and final stage of man's development. The necessity of the Incarnation is a reality upon which he falls, but his general conception of the Divine purpose for man, which required that he should be delivered from his present state of mortality. There are points of contact in this teaching with the teaching of Irenaeus, and in the discussion of the doctrine of the Incarnation in the emphasis laid upon death and mortality. But we miss in Theodore the strong interest in the redemptive side of Christ's work which characterizes Irenaeus, and the strong emphasis upon death, which he and other Fathers exhibit. Again, Theodore's emphasis on man's free-will led him to assert, as Dorrer says (Person of Christ, II, i. 51), not so much the thorough reality of the incarnation of God, 'as the reality of the freedom of the human aspect of Christ's Person.' The purpose of Christ's work is to develop the human development of man in its completeness. And in this development the thought of the forgiveness of sins and the work of grace is subordinate to that of the need for moral effort. See, further, Dorrer, L.c.; cf. above, § 5 and below, § 8.

Chrysostom and Theodore are much nearer to the general tradition of the Church in their teaching upon Christ's work. The conception of Christ as the 'first-fruits' (fructus) of human nature was a concept expressed in Christ, and in Him, by the Churches, as by the Church of Theodore, by their excess of Scripture. But it was not peculiar to Christ. The single teaching of Chrysostom's picture of Christ as the original pattern or idea of human virtue, to exhibit which was the purpose of His human life and experiences (in Joh. hom. 48). In their conception of the Atonement, Chrysostom and Theodore echo much of the current teaching of their time (cf. the deception of Satan, Christ's contest with him and overthrow of his dominion over mankind), but they exhibit nothing characteristic of the Antiochene standpoint. The same is true of the idea found in Theodoret (de Præside, Or. x. 8, Migne, LXXIII. pp. 753, 740), that Christ paid the debt and endured the chastisement, and penalty due to us for our sins. Chrysostom, though he emphasizes the importance of the Resurrection, does not, like Theodore, make it the central point of Christian teaching.

8. The work of Salvation.—(1) The task of reconciling man's free-will with God's predetermination was attempted by both Theodore and Chrysostom. Both reject the idea of an absolute predestination in favour of a conditional predestination. God's purpose, says Theodore, is dependent on man's free-will (in Rom. 82; cf. Chrys. in Joh. hom. 46). Both, too, regard God's eternal election of men as determined by His foreknowledge of what they would be (Chrys. in Matt. hom. 79; Theodore, in Rom. 914; so, too, Theodore, in Rom. 809). On their interpretation of Ro 9, see Chase, Chrysostom, p. 185.; Svenidae: Headland, Romans, p. 270.

(2) In dealing with man's appropriation of salvation, the Antiochenes, owing to their views upon human nature, fail to do justice to St. Paul's conception of justification by faith. Though Theodore denies that justifying faith is the initiative of the individual, Theodore occupies a prominent place in his conception that faith enters into it only as a secondary idea (in Cor. 119). Moreover, the faith of which he speaks is different in character from the faith of St. Paul, being directed rather to the future resurrection life, which man shares at present, through his incorporation in Christ, only in anticipation (in Gal. 2925). Chrysostom's treatment is practically the same, though he emphasizes the act of will by which man turns from evil and inclines to good, and in others he maintains the importance of faith, and attributes all to grace. But the two ideas are not clearly brought into relation with one another (see Forster, Chrysostomus, p. 1524.).

(3) From what has been said above, it will appear that the Antiochene attitude towards the question of the relation of grace and free-will resembles that of the Semi-Pelagians (on the relations of Theodore and Julian of Eclanum, cf. above, § 5). In the teaching of both Theodore and Chrysostom the initiative lies with the individual will, though not with man's free-will. In Theodore's teaching Christ through the Spirit and the pledge of the immortality which he is destined to share hereafter with Christ (in Eph. 129).

In speaking of the Eucharist, Theodore and Chrysostom use the current language of their time. Thus Theodore, in commenting on Mt 2628, speaks of the words of institution in terms which recall the language of Cyril of Jerusalem, and says that Christ teaches us that we are not to regard the nature of that which lies before us, but to consider that, by the thanksgiving pronounced over it, it is changed into flesh and blood. In his comment on 1 Cor 1024, however, he speaks of the change as spiritual. Chrysostom uses the moral and rhetorical language of popular devotion, and goes much further in asserting a conversion of the elements (see Batiffol, Études d'histoire et de théologie positive, 2eme série, p. 265.). But the two most characteristic contributions to the doctrine of the Eucharist from the Antiochene standpoint are to be found in the writings of Nestorius and Theodore. Both writers approach the subject in connection with the Christological disputes. In reply to Cyril of Alexandria, who had affirmed that the flesh of Christ given in the Eucharist is 'life-giving' (νεοπροσωπος) by virtue of its union with the Word, Nestorius maintains that this view tends to an Apollinarian confusion of the two natures. It appeals to the language of St. John (624) and St. Paul (1 Cor II24), and urges that it is the flesh, 'not and the Godhead, which is spoken of as 'eaten.' Chrysostom says, 'This is my body, not 'This is my Godhead.' St. Paul speaks of that which is eaten as 'bread,' and, adds Nestorius, it is 'bread of which the body is the antitype.' The Eucharist both the 'memorial' of the death of the Lord, i.e. of the Son of Man (not the Word). See passages in Loofs, Nestoriana, pp. 22730, 3357, and in Cyril, c. Nest. iv. 36. These statements led Cyril to accuse Nestorius of denying the virtue of the Eucharist, of confounding it merely with a commemoration of the death of a man (c. Nest. iv. 6).
But probably the real difference between Cyril and Nestorius as to the nature and efficacy of the Sacrament was less than Cyril allows, and was due rather to the difference in the Christological stance of the two parties. There is a fine recognition of the religious value of the Eucharist in Nestorius' sermon on Heb, 3 (Loos, Nestorius, p. 241 f.).

Most important of the Apologists is the Sacerdos of Theodoret. In the Eranistes (Dial. i. p. 56, Migne; Dial. ii. p. 151 f., ib.), where he is arguing with a Mono-

phyist opponent, he introduces an analogy from the Eucharist to show that the two natures in Christ are not confused. From the current appellation of the elements as 'types' or 'symbols' of the body of Christ, the orthodox disputant main-

tains that Christ still possesses a real body. The Monophysite opponent rejoins by a counter-asser-

tions that just as the elements after the invocation undergo a change, so the Lord's body after the union with the Divinity is changed into the Divine substance. This the orthodox speaker denies. 'Even after the consecration the mystic symbols are not deprived of their own nature; they remain in their former substance, figure, and form; they are visible and tangible as they were before. But those who believe what they have become, and believed so to be, and are worshipped as what they are believed to be.' And again he says (Dial. i. p. 56) that Christ 'honoured the visible symbols by the appellation of body and blood, not because He needed to be that, but because He has added grace to their nature.' In this presentation (which resembles that of Pope Gelasius in the de Duabus Naturis) Theodoret exhibits a view of the Eucharist which has been called 'Dyophysite' (Batiéfö), and which, while preserving the reality of the outward and inward parts of the Sacrament, guards against those theories of a conversion of the elements which, from the 4th cent. onwards, gained ground in the Eastern Church. The change, accord-

ing to Theodoret, is in the region of grace (saxra χάρα), not in the natural sphere. See, further, art. Eucharist.

10. Eschatology.—The Antiochene conception of man's history and of the work of Christ culmin-

ates, as we have seen, in the hope of immortality. Hence the Antiochenes were profoundly interested in eschatology. From Eph 1st Theodoret drew the conclusion that all men and all rational creatures will finally look to Christ and attain perfect har-

mony. The eschatological teaching of Diodorus and Theodoret is one of the few points of agreement between the Antiochenes and Origen (see also Cappadociac THEOLOGY, § x. (3) b.). Both Diodorus and Theodore express, like Origen, the hope that, though the wicked will suffer just punishment for their sins, this punishment will not be everlasting. Diodorus protects against the idea that the punishment of the wicked will be unending, on the ground that it would render useless the immortality pre-

pared for them. God rewards the good beyond the desert. So, too, the extent of His mercy exceeds the debt of punishment which the wicked have to pay (Assemani, Bibli. Orient. iii. p. 323 f.). Similarly, Theodore asks what would be the benefit of the resurrection to the wicked, if their punishment were not everlasting (Marius Mercator, ed. Balaze, p. 346). When the wicked have been led through punishment to see the evil of sin and to fear God, they will at length enjoy His bounty. Similar texts as Mt 5 and Lk 12 inspire him with the hope that in the deluge of the Antichrist, man may be paid, and the wicked finally delivered (Assemani, i.e.).

III. LATER HISTORY OF THE SCHOOL OF ANTI-

oche. The last representative of their school in Antioch in A.D. 431 was the development of the school of Antioch and to the reputation of its great representatives. Marius Mercator about 431 maintained that Theodoret was the real author of Pelagianism, and later on called attention to the Nestorian influence on the Christology in some of Theodoret's writings. Further, he referred to the writings of Theodoret, which were more generally known and made by the Westerners of the writings of Theodoret, the treatises of Theodore of Antioch, and the letter to Ibas. These works were condemned at the Fifth General Council in 553, which by an irony of fate also condemned the works of Origen, the representative of the rival school of Alexandria. The same Council likewise condemned Theodoret's methods of Biblical interpre-

tation. But, while the proscription of Nestori-
nianism was fatal to the school of Antioch and led to its decline, its teaching was carried on under Nestorian influence in the schools of Edessa and Nisibis. Ibas, the head of the school of Edessa (ca. 457), translated the works of Diodorus and Theo-

doret into Syriac. The school of Edessa was broken up in 489 through the proscription of Nestorianism by the Emperor Zeno, the refugees found a home in the school of Nisibis, which was founded by Barsumas. Here the Biblical studies, which had been neglected, were given so great an impetus that were renewed, Theo-

doret's memory was held in the highest reverence, and he came to be regarded as 'the Interpreter for excellence among East Syrian Christians. In these schools the study of Aristotle, also inherited from the school of Antioch, was carried on and transmitted by the East Syrian Church in later times to the Muhammadans, by whom it was brought back to Europe in the days of Muslim civilization. Lastly, these East Syrian Christians became a centre for a wide field of missionary activity in the far East, extending as far as India and China.

In the Greek Empire, though the fame of Dio-

dorus and Theodoret became obscured through the controversies which gathered around their mem-

ories, the exegesis of the Antiochenes continued to exercise an influence. The 6th cent. saw the rise of Chrysostom, whose orthodoxy was not exposed to the attacks which had been levelled against other members of the school. Isidore, Nilus, and Victor of Antioch took Chrysostom as their guide in the commentaries which they wrote, while a long line of Greek and Pagans and commentators from the 6th to the 11th cent. show the greatness of their debt to the Antiochene expositors. Even in the West their influence was not unrecognized. Jerome had points of contact with the school and was influ-

enced by its exegesis (Kihn, Die Bedeutung der antioch. Schule, pp. 59, 194; Herzenröther, Die antioch. Schule, p. 96). Cassian, a disciple of John Chrysostom, carried on the teaching of his master in the Church of Southern Gaul. The controversies about the Three Chapters aroused interest in the writings of Theodore, and it is probable to this period that we owe the Latin translation of some at least of Theodore's commentaries on St. Paul, which, passing into currency under the name of St. Ambrose, secured a place in the works of the later Western compilers (Swete, Theodore, p. 102). The antiochian theologians, whose teaching was familiar to the earlier Fathers, took an active part in the controversies over the writings of the Church. The first is the Instituto regularium of Julius Africanus (c. 550), an attempt to translate the works of the school of Antioch and the reputation of its
essential features of Theodore's principles of Biblical interpretation as well as of his doctrinal teaching. This work of Junilius, whom later ages transformed into a bishop, was widely popular in the West. The 'Chrysostomorum Epitome' of Cassiodorus a few years later shows a similar connection with the East Syrian schoolmen, and exhibits the influence of methods and principles which had been derived from the Antiochens (Kuhn, Theodore and Mops. and Junilius Africanus, pp. 210 f., 212 f.).

Nor was the West wholly uninfluenced by the doctrinal teaching of the Antiochens. As has been observed (see II, 5), Theodore was brought into contact with his later years with several of the Pelagian leaders. Julian of Eclanum, one of the most prominent of these, was an admirer of Theodore's writings, while another, the deacon Anianus, has been claimed as the translator of some of Chrysostom's homilies, his object being to uphold, by appealing to Chrysostom, the cause of man's free-will (Sweete, op. cit. vol. i. p. 117). The Christological teaching of Anianus, a monk in the monastery of Marseilles, who is spoken of by Cassian as a Pelagian, shows clear points of contact with that of Theodore. In North Africa, during the 6th cent., amid the controversy upon the Three Chapters, Theodore has received the attention of many defenders, and the language of Facundus of Hermiane has been thought to suggest that they had already been translated into Latin. Finally, the Spanish Adoptians exhibit a close resemblance in their Christology to Theodore, and Neander has suggested that Felix of Urgel was indebted to the writings of Theodore, possibly through a Latin translation made in Africa (Sweete, op. cit. vol. i. p. 180 f.; Normant, 'Ch. Hist. v. 219; Harnack, 'Hist. of Dogma,' v. 284 f.).

IV. GENERAL SUMMARY.—The permanent service of the Antiochian school lies in its effort to correct a one-sided view of the factors and methods of revelation. To the emotional, mystical religion, which tended to lose the human element in the Divine, whether in inspiration, or the Person of Christ, or the relations of grace and free-will, it opposed conceptions which endeavoured to do justice to the dignity and worth of human nature. While the Alexandrian theology started from the Divine side, and deduced all its conclusions from that side as its sole basis, Theodore adopted the inductive and rationalistic method, which consists in a careful examination of the facts of human nature and experience. The philosophical basis of the one was Platonism, while that of the other was Aristotelianism. The Alexandrians gave careful attention to the historical Christ; in its doctrine of inspiration it affirmed the immediate and historical reference of Scripture; in anthropology it insisted upon the reality of human freedom. It regarded the purpose of the Incarnation as the accomplishment of man's destiny rather than as the deliverance of him from the consequences of sin. The struggle and conflict provoked by the christological controversy also helped Theodore to realize his freedom of choice and his weakness, and so of raising him out of the stage of subjection to the passions and mortality into the higher life of union with the eternal and immaterial, which had been won for him by Christ. The two standpoints, the Alexandrian and the Antiochene, represent complementary aspects of Christian theology. If the Alexandrian and mystical standpoint has found fuller expression in the later thought of Christianity and the teaching of Christendom, the problems of modern thought, and the evolutionary view of the Universe, have once more called attention to the particular view which underlies the teaching of the Antiochens.

(1907); on Junilius Africanus see Kühn, Theodore and Mops. and Junilius (cited above).

ANTIPATHY.—Antipathy is a state of mind or feeling expressing some sort of dislike or hatred of an object or person. Its proper reference is to persons, and shows the fiercest or milder or more polite term for hostility. Its etymology is found in the relationship, existing between elements of matter under certain conditions, as sympathy has its anologue in attraction or affinity between them. Thus an aesthetic man may have an antipathy towards a certain kind of music, without regarding it as an unesthetic or vulgar person; an unbeliever may have an antipathy towards a religious believer. Anything that excites our dislike creates antipathy. It is not a state of mind quite consistent with morality, and may actually be essential to it in certain stages of development; but it does not imply anything either moral or immoral, though it may be a state of mind making certain moralities immoral. Anger and hatred are more akin to antipathy in its more negative implications, but antipathy has no such associations, but rather connotes the fact of mental or emotional antagonism without regard to ethical considerations.

J. H. HLYSFORD

ANTI-SEMITISM.—1. Historical. The expression 'Anti-Semitism,' which was coined about thirty years ago, signifies not opposition to Semites in general, but hatred of the Jew considered as an inferior race. The position of the Jews on the part of Aryans towards Jews, both socially and commercially. The expression 'Semitic languages' was used for the first time by the Oxford professor, August Ludwig Hayer and the two Göttingen professors, August Ludwig
von Schöller and Johann Gottfried Eichhorn) as a comprehensive designation for those related languages which were spoken by peoples brought into contact with the Semites and Semitic languages by the migration of peoples described in Gn 10. The Bonn professor, Christian Lassen, was the first to give expression to the view that these peoples, the Semites, were in many respects distinct from the Aryans and other races (Entstehung der Araberhundertjahre, vol. ii, pp. 414-417, Bonn, 1847).

Lassen ascribes to the Indo-Germanic race a higher and a more complete mental endowment.1 'The point of view of the Semite is subjective and egoistic. His poetry is lyrical, and therefore subjective. In his religion he is self-seeking and exclusive. The characteristic features of the Semites will, the firm belief in their exclusive rights, in fact the whole semitic-world view, is most clearly shown in the highest degree fit their possessors for great and daring deeds. A bold spirit of enterprise, an energetic and persevering courage, great skill, and a talent for intrigue, below him in keenness of intellect, and whose hate he repays by plundering them in every conceivable degree. The Jews, like many of the Semites, possessed from the very beginning a cunning exceedingly valuable for all purposes of trade, a cunning which naturally tended to develop still further (owing to the point of view to which they were subjected). We cannot do otherwise than designate the Jews the very canker from which the whole body of Europe suffer. No means (provided they are not violent); for everything else is national courage is demanded in opposition to general to the Semite, and especially to the Jewish, character) are too wicked for their use in order to secure a material advantage. ... In the civilized world there were no Semites in the Semitic race, the Jews understood how to distinguish the Jew from his Aryan neighbors, but not to that nature has inscribed such indestructible characters his certificate of birth on his countenance. ... The difference between the Jew and the Semite is that the Semites at the beginning which was possible, has been still more clearly emphasized than before.

F. v. Hellwald speaks of the fragility of the Jews, of their love to their parents and children, of their system of mutual assistance, and of their extraordinary fertility. 1

For the Semites which the Jews, especially amidst the Teutonic nations, have acquired in political, literary, and economic conditions, comes, too, from their excessive zeal for learning. Dark spots in the Jewish racial character are a consequence of their own moralities, often ridiculous, nasty exaggerations, and a boundless egoism. ... Self-sacrifice, devotion, and love for humanity, however, are characteristics of the Semite. The Jew everywhere feels himself a cosmopolitan. ... The entire tendency of Jewish effort can be summed up in one word, but, in opposition to this method, and systematically employed, the Jews have actually reached a stage which is the goal of the evolution of the population. ... They have succeeded in concentrating in their hands enormous wealth. ... Recognizing the power of the printed page on the Jew, they have especially labored to obtain control over the daily press. ... In many places the journalist among the Jews is identical conception of the world, with a superficial and imperfect knowledge, they come forward as the teachers of the people, accessible to every influence which suggests possibilities of gain. They form a focus of corruption more devastating than can well be imagined.2

These extracts from F. v. Hellwald, although they contain many false along with some correct opinions, are given here because many 'Anti-Semites' of the present day express themselves in exactly similar terms. He was one of the first to bring to clear expression what many at that time felt only in a vague way, and consequently his writing made so deep an impression and exerted so great an influence.

The expression 'Anti-Semite' as will be clear from what has been said above, the present writer is aware, scarcely three decades old. In the year 1880, W. Marr published, at Chennai, under the general title Anti-Semitische Hefte, three short essays, 'Der Judenkrieg,' 'Offnet die Augen, ihr deutscher Zeugnuser,' and 'Goldene Ratten und rothe Mäuse.'

Anti-Semitism, however, is more than two thousand years old. Cf. Est 3:1 And Haman said unto king Ahasuerus, There is a certain people scattered abroad and dispersed among the people in all the provinces of thy kingdom; and their laws are diverse from all people; neither keep they the king's laws: therefore it is not for the king's profit to suffer them.3

But, leaving this passage out of account, we may regard Egypt, and especially Alexandria, as the seat of Anti-Semitism. Cf. Felix Bühler, Der Antisemitismus des Altertums in seiner Entstehung und Entwicklung, Basel, 1905; E. Scharer, 

As early as the times of the first Ptolemies many Jews resided in Alexandria. Their number increased especially during the time of the persecution of the Jews under Alexander Serapion, in the third century before Christ. This persecution resulted in the Jews becoming more exclusive than ever in relation to adherents of other religions. Hateful accusations and bitter taunts, both to a large extent resting on ignorance, formed the answer of the heathen. Unfortunately the work of Flavius Josephus, Against Apion, is almost the only source of information we have. The earliest 'Anti-Semite' author was the Egyptian priest Manetho (r. 270-250). Apion the grammarian (a contemporary of Christ) is best known to us from the still extant work of Josephus just referred to. Among the Romans we may mention Tacitus (Hist, v. 2ff.) and the poets Horace, Juvenal, and Martial. The mockery of these writers was directed against circumcision, against abstinence from swine's flesh, and against the celebration of the Sabbath. The chief accusations brought against the Jews (apart from the assertion that the Jewish race was of late origin and had done nothing for culture) were: firstly, ábóra, i.e. that the Jews rejected all Divine worship but their own merit, and consequently every image; secondly, áyia, i.e. the social exclusiveness connected with the laws of food and the Levitical laws of purity, which was interpreted for the Jews as 'adversus omnes enim hostile odium' (Tacitus, Hist, v. 5).

After Christianity obtained the supremacy over...
ANTI-SEMITISM 595

heathenism in the Roman Empire, the Emperors (at a later date the Church) of the *sacramental* language, in regard orders it as their duty to oppose Jewish influence, in order that the heathen, who had been newly won to Christianity, should remain Christians, and that the number of Christians might be further increased (cf. e.g., Fried. Wiegand, *Agobard von Lyon und die Judenfrage*, Erlangen and Leipzig, 1901). At a later date the wealth of many of the Jews, acquired for the most part through usury, attracted the envy of Christians. This was the case, e.g., at the first Crusade (1096), and at the expulsion of the Jews from France by Philip IV, the Fair (1306). Religious motives were operative in the Jewish persecutions in the beginning of the second Crusade (1140; Abbot Peter of Cluny in France, the monk Rahul of Mainz in Germany), as well as in the exclusion of the Jews from Spain in 1492 and from Portugal in 1497. In England, as early as the 12th cent. the maxim "ipsi Judaei et omnia sua regis sanct" held as law (Hoveden, *Annales*, ed. Stubbs, ii. 231). The Jews were regarded as the milk cow of kings; and as enormous sums of money were repaid to the kings from them, they were almost compelled to procure these by means of usury. In this way the Jews called down the hate of the people upon themselves. Still might the more easily endured, of acts of vengeance on the part of the Jews (murder or crucifixion of Christian children at the time of the Easter festival) were fitted, and were actually used, torouse this hatred to uncontrollable passion. It was in the 13th cent. that in the "Jewish Incas- tation" first came to the front in its latest and most objectionable form, viz. that the Jews required Christian blood for ritual purposes (cf. H. Strack, *Diss. Blatt*, pp. 130, 194). In the same century attacks on the Talmud became very violent (cf. H. Strack, *Einleitung in den Talmud*, p. 63). The charge that Jews poisoned wells occurs probably for the first time in the 12th cent., in Bohemia; often in the 14th cent., in Switzerland and France, but especially in Germany. In the whole history of the Jews we find all too frequent proofs of hostile disposition and outbreaks of hatred, oppression, persecution, expulsion, and tyranny, of the Jews. The French Revolution forms an important epoch in the history of the Jews. On the 27th of September 1791, the National Assembly declared the revocation of all civil measures directed against the Jews; the constitution of the 13th (1795) recognized the Jews as possessing equal rights. The following legislation, as well as the Restoration, brought the Jews some restrictions, but these were set aside in the first year of the July Monarchy. The Jews of Alsace, however, obtained this emancipation later, by means of the exertions of Adolph Crémieux.

In the year 1830, H. E. G. Paulus, the well-known representative of the Jewish national movement (*Jüdische Nationalbewegung*); a similar view was maintained by Karl Strockfuss in his Über

des Verhältnisses der Juden zu den christlichen Staaten, Halle, 1833 (a second edition of the same title appeared in Berlin, 1843). The Rostock Orientalist, Anton Theodor Hartmann, who was well read in the Jewish literature, demanded that the Jews should expressly renounce the principles of injustice to the form of the Talmud called the *Shulhan Ārakh* (i.e. those principles which, in the view of Hartmann and many others, allowed injustice against non-Jews or were otherwise opposed to the doctrine of the law), and that they should refrain themselves from all disparaging statements with regard to Jesus and those who were not Jews.

His writings on this subject are the following: *Joh. Andre. Eisenmenger, Paris, 1834;* Dort eine weite Gleichstellung in staatsbürgerlichen Rechten sämmtlichen Juden schon jetzt bewirkt werden? in 1836, the *Arche fur die neueste Geschichts- und historische Zeitschrift*, Leipzig, 1835; *Grundsätze der orthodoxen Judenwesen, Rostock, 1835* [a reply to Solomon's first letter]. Hartmann's views were keenly and in many respects cleverly attacked in two pamphlets by the Jewish preacher of Halle, Gottlieb Salm, who in *Herrn Anton Theodor Hartmann, Altona, 1836, and Anton Theodor Hartmann's neueste Schriften* [Grundsätze der orthodoxen Judenwesen] in *Jahrbuch des Lichte dargestellt*, Altona, 1836.

The commencement of the reign of the Prussian king Frederick William IV., who cherished the ideal of a 'Christian State,' gave a fresh stimulus to writings on the Jewish question. Among those who opposed the granting of equal rights to the Jews, we have the following writers: H. E. Mareard, *Über die Möglichkeit der Juden-Emancipation im christlich-germanischen Stind*, Minden, 1843; and the well-known radical theologian, Bruno Bauer (died 1882), *Die Judenfrage*, Hanover, 1850.

By the law of 3rd July 1869, absolute religious equality was granted within the North German Confederation, and soon after the same law was extended to the whole of the German Empire. Modern Anti-Semitism arose in Germany in the eighth decade of last century (cf. J. de le Roi, *Geschichte*, i., pp. 258-272; A. Lévy-Beaufort, *Israël chez les nations*, Paris, 1895). An important external cause was the daring attack made by many Jews, newspapers, possessed or edited by Jews, and appearing for the most part in Berlin, on many Christian topics (faith, constitution, recent events, ecclesiastical parties, and prominent persons connected with these); e.g., e.g., Franz Delitzsch, *Christianum und jüdische Presse*, Erlangen, 1882. As reasons for the rise and speedy spread of the Anti-Semitic movement, we may further mention, firstly, the prejudice which obtained in public affairs—to a large extent, of course, owing to the carefulness of the Christians. Thirdly, in newspaper writings, in the theatre, in some branches of art (music, e.g., cf. Rich. Wagner, *Das Judenthum in der Musik*, Leipzig, 1869), in trade, and in several branches of industry (e.g. manufacture of ready-made articles of dress), the influence of the Jews appeared to many prosperous Germans, because of the splendid and ostentatious demeanour of many nouveaux riches Jews, who had acquired sudden wealth by speculation on the Stock Exchange, excited hatred. The same effect was produced, fifthly, by the power of dependence on the Jews into which many districts and occupations had fallen: e.g. a portion of the peasant population of Hesse had become dependent on cattle- and grain-merchants, while dress-makers and tailors were in the power of many Jewish merchants; sixthly, by the support given to the Social Democratic party by Jewish leaders and Jewish money; seventhly, by the union among Jews of the political parties. Eighthly, by the exaggerated sensibility to every criticism and exposure of weaknesses on the part of Jews. Ninthly, there was a widespread feeling that the Jews were foreigners.
ANTI-SEMITISM

among the Germans: the stricter Jews not only rejected intermarriage with Christians, but they also kept themselves socially separate from them, e.g. on account of the laws of food. Many Jews, particularly the middle-class, regarded any opposition to the Jews, seeing that the conditions are widely different in the many lands where the Jews are numerous. An unprejudiced mind, examining the matter carefully, will, in our opinion, be compelled to recognize on the one hand that there are reasons for opposition, and on the other hand that jealousy of the wealth amassed by some Jews has enormous influence with great numbers.

A very great influence was exerted by two speeches delivered before the Christian Social Labour party by Adolf Stöcker in Berlin in Sept. 1879: 'What do we demand from modern Judaism?'; and 'Deutschland und Juden' (both are printed together in the above-mentioned pamphlet on modern Judaism). In them Stöcker demands three things: 'a little more modesty, a little more tolerance, and a little more equality.' Hein. von Troitschke is the author of the phrases, frequently used since then, 'trosser-pellding young Poles' (hosenknüffende polnische Junglinge), and 'the Jews are our misfortune,' as well as the sentences: 'We Germans are a Christian people, and the Jewish question in Germany will not be settled till our fellow-citizens of the Jewish race are persuaded that we are and will remain a Christian people. An equally decided attitude has been taken, as is well-known, by Catholics in Germany, Austria, France, and Italy (cf. Deutsch in J. F. 1. 645).

The irritation increased, and the conditions were made worse owing to the enormous emigration of Jews from the lands of Eastern Europe to the West, especially, since 1881, from Russia and Roumania, at first to Germany and then to America and England. The preventives used on the part of the German Government were: firstly, restriction, and later almost entire refusal, of nationalization to Jews coming from the East; secondly, regulations by means of which a rapid passage of the migrating Jews through Germany was assured, e.g. the appointment of special localities for the temporary sojourner of emigrants at the great centres of commerce on the route (Ruhleben near Berlin, Hamburg, Bremen, etc.); thirdly, turning out by the police authorities of persons without means or occupation, especially where there was an immediate risk that in the charge of such persons belonged to the Nihilists or Anarchists. The first measure of prevention adopted in England was the Aliens Bill. In the United States every immigrant is now required to remit a small sum of money, in order to prevent the immigration of persons entirely destitute of means of support.

Only a few years later than in Germany, the flame of Anti-Semitism was kindled in Austria and in Hungary, by Istedech in the Hungarian Parliament, and by Georg von Schönerer in the Austrian Parliament. Near the close of the 19th century a loud and successful agitator was found in the person of Ed. Drumont, whose book, La France juive (1st ed. Paris, 1856), has seen more than 100 editions. The Anti-Semitic journal La libre parole. The case of Albert Dreyfus was long used, from 1894 onwards, as a means of rousing the passion of the Anti-Semites, especially in France. The matter ended in the year 1906 with the rehabilitation of Dreyfus and with his reappearance as Major in the French army. At the Berlin Congress of 1878 a resolution was passed that in Roumania all citizens, without distinction of religious belief, should enjoy equal rights. The Roumanian Government, however, supported by the Anti-Semitic majority in Parliament, devised a means of rendering this provision worthless. The Constitution declared that no one shall possess and even as the possession from possessing civil and political rights, but it was immediately declared that the Jews were foreigners, and not Roumanians—a breach of trust unworthy of a government designed for the benefit of all its people.

For the Jews of the Russian Empire, the death of Alexander II. in 1881 was fraught with grave significance. It was after the death of Alexander II. that great persecutions of the Jews (pogrom, pl. pogromy) were begun, and by the laws passed in May, 1882, the freedom of movement of the Jews in the 15 provinces of the territory for settlement, already small enough, was still further limited.

The chief attacks on the Jews took place in the years 1903 (at Easter in Kishiner; see H. Strack's remarks in his periodical Nathanahel, 1903, pp. 78-80, of which he is editor, and 1904, p. 625, and 1905, p. 829), and 1906 (in Russia, Austria and Hungary, Paris, London, etc.). In view of the events of the year 1905, the Seventh International Jewish Missionary Conference, held at Amsterdam, April 24th, 1906, carried unanimously the following motion, brought forward by the present writer and the Rev. Louis Meyer of Chicago (now of Cincinnati):

'The Seventh International Jewish Missionary Conference hereby records its deepest sympathy with the poor sufferers from the latest persecutions of the Jews in Russia. One hundred and fifty villages, towns, and cities of Russia where Jews dwell have been devastated, many hundreds of Hebrews have been slaughtered, and many thousand Jewish families have been deprived of almost every facility of living. Though there may have been faults upon the Jewish side, no human or Divine right permitted Russian officials of Government and Police to inflict the heavier classes against the Jewish people, which as such are innocent, and in the persecution of Jews these lesser ones should forget their own sufferings, caused by bureaucratic maladministration and by refusal of liberty of thought and religion. So long as we condemn, because it necessarily must close the hearts of the Jews to the gospel call still more than heretofore.'

Those chiefly responsible for the anti-Jewish attacks and pogroms belonged to the Minister of the Interior, von Pichow, and the vice-governor, Ustrugow. The latter had refused to grant protection from plundering and murder to the defenseless Jews who asked help, because he himself was an Anti-Semite, and because he was certain that his inactivity would not be cen-
sured by the Minister. The former used the Jews as a lightning-conductor, by means of which the dissatisfaction of the population with regard to the arbitrariness of the police and the organs of Government might be directed into another channel. The latter could easily infer from the evidence that the Jews were in any case largely regarded with unfriendly eyes by the lower classes of the people, who had grown up in ignorance and superstition. The statement is made by the Jews, that the possessors of dram-shops, have contributed much to the impoverishment of the Russian peasants, and have thereby aroused hatred. It is true that in Jewish persecutions, and, in general, in every disturbance, the Jewish dram-shops are often the first to be plundered. That, however, is easily understood without ascribing any special guilt to the possessors of these shops.

Unfortunately, it is by no means improbable that the extension of Anti-Semitism will still continue. The repetition of such outbreaks as have taken place in Russia in recent years will, indeed, be more difficult if a Government binding itself, or any of its agents, to take steps for preventing its recurrence into existence. It is, however, quite possible that at no distant date serious Jewish persecutions will arise in the United States, in Hungary, or in France. Anti-Semitic sentiment in the Jewish world has been no lack of sinister attempts to incite the population to acts of violence, since for years Count Füchler (of Klein-Tschirne, Silesia) has dared in public assemblies in Berlin and elsewhere to summon the masses to a ‘fresh joyous war’ against the ‘caused Jewish band.’

2. Arguments of the Anti-Semites, and attempts to refute them.—The means made use of by almost all Anti-Semitic agitators have been, according to a statement in the Neue Zeitung für das Judentum an Augustin Roling in Prague in the years 1883–1882 (see Strack, Das Blut, pp. 109–120). Only the most important instances of modern times can be mentioned here.

On April 1st, 1882, a maid-servant, Esther Solyom, fourteen years of age, in Tisza-Bezdár, disappeared. The evidence of the Christians, who had paid the girl’s ransom, was that she had murdered the girl through the keyhole, which was closed by the judicial investigation to be impossible; the suspected Jew obtained a verdict of not guilty (see V. Nathan, Der Proces von Tisza-Bezdár, Berlin, 1892; S. Mannheimer in JG xii. 148–150). The eighty-year-old girl murdered in Korfa in the night between the 12th and 13th April 1891 was a Christian, Maria Deyla (there was no such person there at the time), but a Jewess, Lubins Sarcs. The Jewish butcher Adolf Buschhoff, in Xanten, in the Rhine province, was accused of murdering, on June 26th, 1891, the sixty-year-old Johann Negemann. The public prosecutor, however, stated: ‘In my long experience of criminal cases I have never seen a clearer case, where so convincing and connected a proof was brought forward, that the accused did not commit the crime in question.’ Every suspicion is thus considered to be disposed of by denouncing the blood of the victim was removed by the post-mortem examination (see Der Xantenener Knabenmord vor dem Schwurgericht, in Archiv für kriminalistische, forensisch-anatomische Berichte, Berlin, 1892; Deutsch in JG xii. 574). The Jewish shoemaker Lepold Hilsner, in Weiden, was accused of murdering Agnes Huza on March 29th, 1890, in Polna, Bohemia. However, Arthur Nussbaum (Der Polnische Rituellordnungsprozeß; Ethnologia et Ethnographie der Personenverschlussgewohnheiten Grundlage, mit einem Verworf von Franz v. Lüst, Berlin, 1890), showed that the wound caused by Hilsner was not a stab-wound, and that the amount of blood which could reasonably be expected in the circumstances was proved to be insufficient to cause the loss of life of Hilsner. The statement made by the Jew, that the amount of blood of Hilsner was utterly worthless, that the statements of the accusing witnesses are of no importance, that they were of no importance for the purpose of the time, and that they were contradictory of each other or incredible in themselves; and (4) that there was no motive adduced why Hilsner should murder Agnes which had even a shred of proba-

bility. Very great interest was aroused by the murder of the 15-year-old High School boy Ernst Winter in Konitz, West Prussia, in March 1891. The highest authorities of West Prussia cause unanimously to the conclusion that the cut on the neck of Winter’s disembowelled body was not made till after his death, nor could it have been caused by means of blood existing, but глутения the Sachverständigen auf den Konitz Mord, Berlin, 1900, Denkblatt für die Zukunft.

More detailed information on the history of the Blood-accusation is given by the present writer in Das Blut im Wandel und Gedingen der Menschheit, with special reference to that of the “Volksmittel” and of the “jüdischen Blut- geschichte,” in JG xii. 492. In the following years many Catholic priests, e.g., Fr. Frank, Der Ritualmord vor den Gerichtshofen der Wahrheit und der Gerechtigkeit, Regensburg, 1901; Chwozowski, Das Ritualdeed und einige andere Berufshuften der Juden (aus dem Russischen übersetzt), Frankfurt a. M., 1903; JG iii. 280–297.

(8) Another important means of attack used by the Anti-Semites is the agitation against the killing of animals according to the Jewish rites. If the Jews are refused the exercise of the form of slaughter appointed by their religious laws in any town, permanent resistance to that place is made very difficult for them. If the prohibition is extended over a whole country, life there is made almost impossible for Jews. Accordingly, the Anti-Semitic town councils in Russian towns have attempted by all lawful means to destroy the custom impossible by means of slaughter-house regulations; and a new and very energetic agitation has begun in the Societies for the Prevention of Cruelty to Animals.

Cf. the works of the physician and Russian Jew, J. A. Dembo, Das Schächen im Verhältnis mit anderen Schlachtmethoden, Leipzig, 1894; Gutmann, Über das jüdische Schlachtungs- verfahren, Berlin, 1891; F. Weichhaus, Das Schächtchen (das rituelle Schlachten bei den Juden), mit einem Vorwort von C. J. Strack, Leipzig, 1893. In these writings it is positively affirmed that it is given that the Jewish method of slaughter does not constitute cruelty to animals.
