Among other objects of attack on the part of the Anti-Semites we may mention here (see above, p. 595):

(a) The Talmud. There is no truth whatever in the assertions that the Jews seek by every conceivable means to keep the Talmud secret, that they fear lest its contents may become known, and that they declare it a crime worthy of death for a Jew to reveal its contents. The writings on the Talmud (explanations, monographs, translations of whole treatises, etc.) by Jews themselves are very numerous in all European languages. As a practical proof that Christians are not dependent for a scientific judgment regarding the Talmud on what a Jew is led to say, it should be mentioned that the present writer in 1857 wrote an introduction to the Talmud without having asked or received the slightest detail of information from Jews or Jewish Christians. The Talmud contains no proof or statement which the expert Christian scholar cannot discover.

(b) The Shulhan Arukh (Esz 230 [table prepared]), the ritual code of Joseph Karo (1575 in Safed, Palestine), was printed for the first time in Venice in 1564–5. A fanatical and slanderous attack was made by the proselytes, ‘Dr. Justus’ (pseudonym = Arthur Brimmann), in Judenpiegel oder 100 neuentlehnte, herrliche neue Gichtschriften, den Verkehr der Juden und den Christen betreffende, in Frankfort a. M., 1902, JG iii. 299–305.
ANTI-SEMITISM

Gesetze der Juden, Paderborn, 1833. A learned and suggestive treatise, but coloured somewhat in favour of the Jews, was published by D. Hoffmann, Der Schulchen-Archi und die Dutlichet sinr des Verhaltens der Juden zu Anderlautigen, Berlin, 1884 (2nd ed. 1894). For a thorough examination of both sides of the question we are indebted to G. Marx (= G. Dalman), Jüdisches Fremdenwesen, anti- semitisches Polemik und jüdische Apologetik, Leipzig, 1880.

(c) The alleged existence of Jewish secret writings and secret sects. As early as 1909 the present writer publicly and solemnly declared that there are no secret Jewish writings. Of course, to those who do not understand Latin, Caesar's Gallic War is a secret writing, especially if they are not acquainted with any of the numerous translations in English, German, etc. Judaism has always been tolerant of the faith and practice of the individual, but it has always persecuted sects, recognizing quite correctly that sects would be very dangerous to the existence of the Jewish people in the world. The sect most important in Judaism is that of the Karaites, which arose in the 8th cent. A.D., and of which small remnants, even at the present day, are to be found living in the Crimea, in Poland, and in Galicia. In 1894 a work in Jerusalem, Karaites and Talmudists have been always most bitterly opposed, and even at the present day hate each other. If the Talmudist Jews, either as a whole or in sections, had a 'blood-rite' or other ordinance, which Christians would regard as abominable or destructive of the common good, the Karaites would have failed to point expressly to it; and it is just as little likely that the Talmudist Jews would themselves have thought it had been available for them to accuse the Karaites of observing a 'blood-rite' or other repulsive laws.

(f) The formula kol sidrat, 'all vows,' by means of which the Jews on the eve of the Great Day of Atonement in the synagogues declare all vows which they may have made in the next year to become void, does not refer to oaths which are made to others, but only to obligations which one lays upon oneself. It is not admissible to use this custom to cast doubt on the good faith of the Jews in taking oaths in general (cf. the present writer's art. 'Kol Nidre' in Piet x. 649-653; M. Schlossinger in JE, 1904-1905). A very foolish but, in Western Germany and Bavaria, widely credited accusation is that the Jews, before selling meat to non-Jews, must defile it (Lat. mincere) in the most loathsome manner (see the present writer's Die Juden und die deutsche Kriminalstatistik, Leipzig, 1893). On the other hand, the Berlin Committee for answering Anti-Semitic attacks has published Die Kriminalstatistik der Juden in Preußen, Berlin, 1886. For a criticism of both writings by F. Nommenn cf. Nathanol, 1806, pp. 44-78 (cf. also H. Lax, Die Juden als Verbrecher, Munich, 1894; Deutsch in JE iv. 3021). (g) The idea of a blood accusation by the same Committee, die Juden als Soldaten, Berlin, 1896, with copious statistical tables, has in a thoroughly going manner sought to meet the assertion which is frequently made that the Jews lack those qualities. The American Jew as Patriot, Soldier, and Citizen, Washington, 1894; M. C. Peters, The Jew as a Patriot, New York, 1901.

Evil motives have often without proof been ascribed to opponents, who have been covered with hateful calumny. They have been accused at an exaggerated and sometimes single instance, as if thereby all other accusations and reasons were demonstrated to be false. Jewish apologists have often sought to put a favourable construction on anything which was against the Jews, and have done it, although the act could not be seriously defended. The non-Jewish majority has more than once been irritated by stupid aspersions (cf., to name only a single instance, P. P. Grünfeld's Ben Sira, 1906). The above-named work for Anti-Semitic, Stuttgart, 1880.

The most important literature from the Jewish side has been mentioned above at various points. A very useful collection of materials is supplied by Ernst Bloch, Aten und Gegenaten in dem Prozesse Rohling contra Bloch, Vienna, 1893; cf. also Anti-Semitenspiegel: Die Antisemiten in der Zeit des Christentums, des Rechts und der Wissenschaft, Dantzic, 1906. The most largely cirkulated book on the side of the Anti-Semites is the Antisemiten-Kataehnen, Leipzig, which, from 1897 to 1903, went through 25 editions, and is now published under the title: Todesgericht, an die deutsche Untertanen. The evidence for the non- existencet des wichtigsten Materials zur Beurteilung des jüdischen Volkes, Hamburg, 1897.

In conclusion it may be said on the duty of Christians with regard to Anti-Semitism. We have in the first place to maintain in all circumstances veracity and justice. We must thus not only refrain from slander and false accusations, but contradict these in cases where Jews have difficulty in defending themselves. The question, e.g., as to the criminality of Jews can, with the help of statistics available to every inquirer, be discussed quite sufficiently by the Jews themselves. If, however, Jews were to write on the 'blood accusation' or the Talmud, even the most upright Jew might easily fall under the suspicion of concealing or colouring the facts in favour of his nation and his religion. On this account, Franz Delitzsche (born Feb. 23rd, 1813, died Mar. 4th, 1890), the present writer, and others have regarded it as their duty again and again to show that many attacks directly by the Anti-Semites against the Jewish religion, and thus against the Jews generally, are based on falsehood, and are in fact slanderous.

It is, secondly, our duty to show in word and deed neighbourly love to the Jews. We dare not allow our love to be confined to those who share our religious beliefs (cf. Gal 6), but we must always remember that the Good Samaritan (Lk 10) Thirdly, we are bound to furnish proof that the Christian religion rightly claims to be the universal religion. For this end we have to show that influence which Christianity has exercised and still exercises (a) on humanity as a whole; (b) on the individual; and (c) specially on Judaism (preaching in the language of the country, the work of the so-called General Mission, e.g., spiritual care for prisoners, etc.).

Great complaints are made about the relatively excessive and still increasing influence exerted by the Jews in public life, not only in the Jewish, but also in the non-Jewish municipal councils, etc. We cannot here inquire where and how far such complaints are justified. One thing is certain:
ANURADHAPURA.—Anuradhapura was the capital of Ceylon for nearly 1500 years. It was founded, according to the tradition handed down in the eastern world, by a chieftain named Anuradha (so called after the constellation Anu-rādhā in the 6th cent. B.C. on the bank of the Kadamha River. Nearly a century afterwards king Pandukabhaya removed the capital, which had already been deserted; and there it remained down to the reign of Aggabodhi IV. in the 5th cent. A.D. It was again the capital in the 11th cent., and was then finally deserted.

The name Anuradha is of use; and we find in a work of the 10th cent. (Mahabodhiśāstra, p. 112) the name of the place explained as ‘the city of the happy people’ from Anurādhā, satisfaction. The Sinhalese peasantry of the present day habitually pronounce the name Anuradha, and explain it as ‘the city of men of twenty kings,’ i.e. meaning ‘ninety,’ and raja meaning ‘king.’ The ancient interpretation of the name—Anurādhā’s city—is the only correct one. The second is little more than a play upon words, and the third is a Veluketumalage founded on a mistake. English writers on Ceylon often spell the name Anurājāpurā, or Anourājapura.

The exact site of Anurādha’s original settlement has not been recovered; but we have constructed the beautiful artificial lake, the Victoria Lake, Jaya Vapi, more usually called, after the king’s own name (Abhaya, sans. ‘pierce’), the Abhiya Vapi. It still exists, but in a half-ruined state, about two miles in circuit. Its southern shore is rather less than a mile north of the Bodhi Tree. It was on the shores of this lake that the king laid out his city, with its four suburbs, its cemetery, its special villages for huntsmen and scavengers, its temples to various immortals, its shrines of deities then worshipped, and residences for Jotiya (the engineer) and the other officials. There were also lodges for devotees of various sects—Jains, Ajivikas, and others. North of the eastern artificial lake, the Gāmiṇī Lake, also still existing, and now called the Vilhin Lake. Apart from the two lakes, nothing has been discovered of the remains of what must have been there, until we judge from the description in the 10th chapter of the Great Chronicle, a considerable city.

But the foundations of the fame and beauty of the place were laid by king Tissa (so called after the constellation Tissa), who flourished in the middle of the 3rd cent. B.C. and was therefore contemporary with the Buddhist emperor of India, Asoka the Great. The friendship of these two monarchs, who maintained a long continued correspondence, and the consequent exchanges, Tissa, with his nobles and people, embraced the Buddhist faith; and, no doubt in imitation of Asoka, erected many beautiful buildings in support of his new religion. Those at Anurādhapura numbered ten, of which seven are attributed to the Thupārāma, still, even in ruins, a beautiful and striking object. It is a solid dome, 70 feet high, rising from a decorated plinth in the centre of a square terrace, and supported by a number of beautiful granite pillars in two rows. It is not known what these pillars were intended for; they are numbered, i.e. xix, 35; and Mahādharma, pp. 56, 56, 65. Enumerated in the Mahādharma, ch. xx. p. 123 (ed. Turnour). to support. It would seem to appear from Mahāvihari, ch. xxxvi. (p. 232, ed. Turnour), that they supported a canopy over the tope; but it is difficult to see how that can have been done. Perhaps each of them had, as its capital, some symbol of the faith. Such pillars, surmounted by symbols put up by Asoka in various parts of India, still survive. But in that case they are always solitary pillars. Bold flights of steps led up to the terrace from the park-like enclosure in which it stood; and the doors, if we are supposed to contain relics of the Buddha. It was, in fact, a magnificent, highly decorated, and finely placed burial mound.

Another still existing building of this time is the Issara Munī Viha, a hermitage constructed by king Tissa on the side of a granite hill, for those of his nobles (issera) who entered the Buddhist Order. Naturally only the stonework has survived; but this includes caves cut in the solid rock, bas-reliefs on the face of the granite, two terraces (one half-way up, one on the top of the rock), a small but beautiful artificial tank, and a small square platform; and the latter must have been a charming residence in the days of its glory.

Of the rest of the ten buildings no remains have been found; but it is very doubtful whether any of Tissa’s enclosure round the Bodhi Tree was ever exis-
ted. The tree itself, now nearly 2200 years old, still survives. The soil has been heaped up round its base whenever it showed any signs of decay. Planed originally on a terrace raised but little above the level of the ground, it now springs up in three detached branches from the summit of a mound that has reached to the dimensions of a small hill. The tree planted by Tissa, a branch of the original Bodhi Tree at Gaya in India, was sent as a present by the Emperor Asoka. The auspicious event was celebrated in two bas-reliefs on the eastern gateway of the Sanchi Tope,* probably put up by himself.†

The capital was taken by the Tamils not long after Tissa’s death, and was re-captured, about a century afterwards, by Dushta Gāmiṇī Abhayas, the hero of the Great Chronicle. He occupies in Ceylon tradition very much the place occupied in English history and legend by king Arthur. We have information about the buildings he erected in his capital. Undoubtedly the most splendid was the so-called ‘platform of the Bodhi Tree,’ a square platform supported by a thousand granite pillars, which still remain in situ. Each side of the square was 150 feet long. On the platform were erected nine storeys, each square in form and less than the one beneath it, and the total height from the platform was 150 feet. The general effect was therefore pyramidal, the greatest possible contrast to the dome-shaped dagobas in the vicinity, just as the bronze tiles which covered it contrasted with the dazzling white of the polished chunam which formed the covering of the domes. The building was almost certainly made of wood throughout, and its cost is given in the Chronicle 2 as 30 kotis, equivalent in our money to about £600,000.

The other great work of this king was the Dagaba of the Golden Sand; but this he did not live to complete. According to the Chronicle (ed. Turnour, p. 195), it cost one thousand kotis, equivalent to a million sterling. It is still one of the monuments most revered by all Buddhists; and even in its ruined state, in 1827, stood above the platform on which it rests. Its Pāli name is...

† For fuller details see Dutt, where the question of the evolu-
tion and meaning of the Bodhi-Tree conception will be more appropriately treated.
‡ Mahāvidyā, ch. xxii.
usually simply Maha Thiyapa, ‘Great Tope,’ the name given above being a rendering of its distinctive title Hemamodi in Pali, Ramavan Wati D̄āgaba in Sinhalese. Five chapters in the Great Chronicle (ch. xxviii.—xxxii.) are devoted to a detailed account of the construction and dedication of this stūpa, and of the artistic embellishment of its central chamber, the relic chamber. This has never, it is believed, been disturbed and till as the exterior has, quite recently, been restored, there is now little chance of the historical secrets there buried being revealed.

For some generations after these great events the city enjoyed peace. But in A.D. 109 the Tamils, with their vastly superior numbers, again broke in, and took Anuradhapura. It was not till A.D. 89 that the Sinhalese were able to issue from their fastnesses in the mountains, and drive the Tamils out. Their victorious leader, Wattā Gāmini, celebrated the recovery of the capital by the erection of a still greater tope than all the former ones—the Abhayā Giri Dāgaba. This immense dome-shaped pile was 405 feet high from ground to summit, and built, except the relic chamber, of solid brick. Its ruin is still one of the landmarks of all the country round. The Vihāra attached to this tope, and still in the old garden reserved for it by Paṇḍukābhaṭya to the Jains, obtained notoriety from a curious circumstance. The principal of the college, though appointed by, and a great favourite of, the king, incurred censure at an ecclesiastical court composed mainly of residents at the older Vihāra, the Great Minister, close to the Bodhi Tree. There ensued a long continued rivalry between the two establishments, usually confined to personal questions, but occasionally of a more general nature. For five centuries and more this rivalry had an important influence on the civil and religious history of the island.

With the completion of these buildings, the city assumed very much the appearance which it preserved throughout its long history. The Chronicle records how subsequent kings repaired, added to, and beautified the existing monuments. It tells us also how they and their nobles built palaces for themselves and residences for the clergy. These have all completely vanished. The only new building of importance that still survives is the great tank, another huge dome-shaped pile, built about two miles due north of the Bodhi Tree at the beginning of the 4th cent. A.D.

It is at the beginning of the next century that we have the earliest mention of Anuradhapura from outside sources. Fa Hian, the Buddhist pilgrim from China, stayed there for the two years A.D. 411-412. He gives a glowing account of its beauty, the grandeur of the public buildings and private residences, the magnificence of the processions, the culture of the Bhikkhus, and the puṭṣya of the king and people. The reason for Fa Hian’s long stay in the city was his desire to study and to obtain copies, on palm leaf, of the books studied. For Anuradhapura was at that time the seat of a great university rivalling in the South the fame, in the North of India, of the University of Nalanda on the banks of the Ganges. Among the laity, law, medicine, surgery, irrigation, poetry, and literature were the main subjects. The Bhikkhus handed down from teacher to pupil the words of the sacred books preserved in Pali, to them a dead language, and the exegesis, the commentaries, which seemed to them exegetical, historical, and philological, preserved in their own tongue. They had handbooks and classes for the study of the grammar and lexicography of Pali; of the ethics, psychology, and philosophy of the books; and the problems in canon law arising out of the interpreta-

tion of the Rules of the Order. And they found time to take a considerable interest in folklore and popular and ballad literature, much of which has been preserved to us by their indefatigable and self-denying industry. Yet this involved not only method, but much intellectual effort. Students flocked to the great centre of learning, not only from all parts of the island, but from South India, and occasionally from the North. Of the latter the most famous was the great commentator, Buddhaghoṣa (q.v.), who came from Gaya, in Behar, to get the information he could not obtain in the North.

For there, in that beautiful land, the most fruitful of any in India or its confines in continuous and successful literary work and effort, there have never been wanting, from Akos’s time to our own, the requisite number of earnest and devoted teachers and students to keep alive, and to hand down to their successors and to us, that invaluable literature which has taught us so much of the history of religion, not only in Ceylon, but also in India itself.*

The Chroniclers were not, therefore, very far wrong in emphasizing this side of the life of Anuradhapura. To it the city owed the most magnificent and the most abiding of its monuments, preserved in historical value only by its intellectual achievements.

When Buddhaghoṣa was in Ceylon, the water supply of the city was being re-organized. The artificial canals and tanks constructed in the vicinity, and to which so much to its beauty, were found insufficent; and king Dhēthu Sena, in A.D. 450, constructed, 50 miles away, the great reservoir called the Black Lake (Kāla Vata). The giant ruins of its embankments still stretch for 14 miles through the forest. It was 50 miles in circumference; and the canals for irrigation on the route, and for conducting the water to the capital, are still in fair preservation. The system of doctrine. This reservoir was, no doubt, at the time of its construction, the most stupendous irrigation scheme in the world.

This was the last great work undertaken at Anuradhapura. There ensued a series of dynastic intrigues and civil wars of a character similar to the Wars of the Roses in England. Each party fell into the habit of appealing for help to the Tamils on the mainland, whither the defeated were wont to flee for refuge. The northern part of the island, in which Anuradhapura lay, became more and more overrun with hostile races, making it more and more difficult to defend. Finally, in A.D. 750, it was abandoned as the seat of government, which was established at Polatapura, under the shelter of the Southern hills. Anuradhapura fell into the hands now of one party, now of another. For a brief interval in the 11th cent. it claimed, under a Sinhalese pretender, supported by Tamil forces, to be again the capital. But the pretender was driven out, and the city reverted to the Polatapura government. Finally, at what date is not exactly known, but probably about A.D. 1300, the whole district, stretching across the island, from 50 miles north to 50 miles south of Anuradhapura, became the seat of the land, and relapsed rapidly into jungle. Neither the Tamil kings of Jaffna in the north, nor the Sinhalese kings in the south, were able to exercise any real sovereignty over it, and the beautiful city dwindled away to a few huts round the Bodhi Tree, now left in the charge of two or three solitary monks. The earliest notice of the ruins received in Europe of the Tamils ‘Island of the Island of Ceylon’ (1681), iv. 10. Held a captive for twenty years in the mountains, Knox escaped in 1679 through the jungle round Anuradhapura, and his narrative vividly portrays the utter desolation of the place.

* Buddhāṭi Indīkas, pp. 293, 301.
Here is a world of hewn stone pillars, standing upright, and other pillars, shorter and forming the walls of buildings. In three or four places are ruins of bridges built of stone, some resting upon the ground, standing on stone piers. In many places are points built out into the water, like wharfs, which I suppose have been built for kings to sit upon for pleasure.

The English Channel coast is well provided with good roads, and a railway has been opened through to Juffna. Several officials are resident at the station, and a settlement is growing up. For some distance round this settlement the underbrush has been cut away, and there is now grass growing under spreading trees. The ruins are being cleared, and some of them preserved from further injury; and some excavation has been carried out.

APACHES.—The Apaches are the southernmost group of the Athapaskan stock of American Indians, who originally covered the territory from the Arctic Coast to New Mexico, and from the Pacific Ocean to the interior. Their language is plainly traceable through their language. However, the name 'Apache' is a misnomer, apparently from the Zuni Apache, 'enemy,' and not found in their vocabulary, as the Apache call themselves, not as 'Apaches,' but as 'Inde' (N'de, Diné, Tinda), or 'People.' Mentioned by Juan de Oñate as early as 1583 (Doc. inéditos de Indias, xvi. 114) in the 'Snowy Mountains' of New Mexico, they were not found far west as well as south, their present home, until the middle of the 16th cent., when they were a large and warlike tribe, whose numbers were increased by captives from their more peaceful neighbours, and whose qualities, habits, and beliefs, they assimilated to a certain extent.

Prior to their reservation life, the Apaches were a nomadic people, practising agriculture only to a limited extent, living mostly by hunting and by gathering, and the women were and are now divided into tribal groups, designated by the locality to which they belong (see the list in Hodge, Handbook of American Indians, i. 65), but have always lacked the social organisation for which the other tribes are noted, and to-day they are found living in bands and villages along the cahons and waterways, or in the rich valleys, tilling small farms and caring for their stock during the summer, and in the winter moving their camps to the heavily timbered sections, both for protection and more accessible fuel. Naturally their homes are of the most temporary character—usually willow poles thrusted into the ground, fastened together at the top, oval in form, and of sufficient height to allow a person to stand erect, with an opening at the centre through which the smoke passes from the fire-place directly underneath, and the smoke sides are interwoven and thatched with bear grass, over which canvas is sometimes drawn, with a single opening for a door. Among the San Carlos Apaches the houses are excavated into the side of the mountain, andlive on two feet. The Jicarilla Apaches live in brush wigwams or in tents, the latter habit being preferred also by the Lipan and many Mescalero Apaches. There seems to be no ceremony or symbolism of note, to the honor of Mr. Hrdlicka, I observed one San Carlos family pray on entering a new hikven, while another house had two eagle-feathers tied as fetishes to one of the poles. The Apache burn smoke signals, columns of smoke being passed from camp to camp. One smoke column denotes attention; two, establishment of a camp, quiet, safety; and three, alarm; a greater number urging a correspondingly greater need of haste (Mallery, I RIE W p. 535 f.). The Apaches have always been known as the cultivators of grain, particularly corn, from which, with their favourite drink, is made. Their additional food-stuffs consist of seeds, berries, nuts, melons, and small game, while fish and every species of feeding birds are tabbed.

In appearance the uniform Apache type, this being due to their nomadic habits, and to their assimilation with neighbouring peoples. As a rule, they are sinewy and strongly built, with good long legs and slender arms. Well-developed in early times the men's dress consisted of a breech cloth and moccasins, with long upper extended to the knee, and often to the thigh, with rawhide soles, turned upward at the toe and decorated with painted designs. In winter a pochje, or buckskin shirt, made of two skins with an opening for the head, and fastened with thongs beneath the arm, was worn. A band round the head kept the hair back from the face; the hair was generally worn long or trimmed square on a level with the chin. The women wore a buckskin over one shoulder, which was fastened beneath the opposite arm, a short skirt of buckskin, coming just below the knee, with fringes of the same, and pendants of metal or shell. Girls and unmarried women wore the hair braided and adorned with wreaths of brass and copper, and ear-rings and necklets of shell or seeds. Only the women have they take part in the marriage, which is quite common to see various geometric designs on their foreheads and chins, and sometimes on the cheeks. On reaching puberty, girls have their bows and arrows and spears made and kept by themselves.

Polygamy is practised by the Apaches, a man generally marrying his wife's sisters as they mature, since they believe less friction will exist in the family. A wife, a year of her husband's death, but his brother can take her to wife any time within the period of mourning; if he does not, however, she is free to marry any one she pleases. Marriage is generally arranged by the parents for near relatives, generally by purchase. If a man has more than one wife, they usually live in separate camps, the children belonging to the mother. The morality of the girls is all good before marriage. When a man marries, he avoids meeting or speaking to his mother-in-law. If they should meet by accident, the first to see the other hides or looks in the opposite direction. A girl is of marriageable age when she reaches the age of puberty, and makes the announcement by a feast and dance, at which she is forbidden to be present, and which lasts through the night; afterwards she is open to the proposal.

Women do all the household work, the planting and tending of the crops, and the carrying of the burdens. To-day their principal income is derived from the sale of hay, grain, and wood to the agency, military posts, ranches, and towns adjacent to the reservations. At home the Apache is fond of talking and entertaining his friends. Both men and women are inveterate gamblers.

Among Apache games are tossing arrows or darts at an arrow or dart already on the ground, so that they cross; the hoop and pole game (the principal gambling game), in which the pole is hurled through the center of the hoop; hide the bird (White Mountain); "cat's cradle" (White Mountain); foot races; and dice, the women's game (Du Bois, 244, 767, 803 f., 86-91). The hoop and pole game, in which, amongst the White Mountain Apaches, the red pole is female and the yellow is male, is a popular religious institution, supposedly carelessly guarded by the déénin (medicine-men). It is said to have been taught first by the Dicéén to the Apache, but the Jicarilla comagoncy describes it as having been made by Yolkalstaun, the White-head woman, for her two sons, children of her by the father of the Moon. She took a hoop and roll to the wheel toward the north. They played for three days, when the boy's son rolled the hoop toward the east, but the other brother then persuaded him to roll it toward the north. An adventure with an owl followed, and the two boys were set to perform a succession of dangerous feats, until they went to live in the western ocean (Culin, op. cit. p. 449).

The principle in the bird-craft is that, in order to keep there are several forms, the conical shape for carrying burdens, the bowl shape, and the touse, or water-bottle. All the baskets are built on poles, and even with willow and other splints
woven in geometric or figured designs of black, and made from the pod of a species of Martynia.

A close study and intimate knowledge of the various Apache tribes reveal no religious organizations; but there are many forms of worship, not as the white man recognizes worship, but in the form of sacrifice, prayers, fasts, and physical penance to appease the wrath of the evil spirits. People of the old tribes who are classified as forms of worship of the Apache is the elemental, or nature-worship, though there are traces of animism as well as of animal-worship in their reverence for the bear, jack rabbit, snake, etc., to which they offer the sacrifice of *hoddentin* (see below). The number four is sacred, as among the American Indians generally; and so is eight, though to a minor degree. As far back as the 16th and 17th centuries, the Jesuits and Franciscans formed missions, and worked with their accustomed zeal, but with little success. After years of toil and sacrifice, the field was wholly abandoned, and, apart from the various signs of the cross and sacred cords that might be traced to the rosary, no influence seems to have remained of those early teachings. And as these symbols were so common among the aborigines, it is doubtful whether even through the medium of Christianity they have lost this belief in spirits both good and bad, and in the necessity of sacrifice, is prominent in their worship, as will be seen by their offering of *hoddentin* to appease every known spirit on every occasion.

To be properly understood, however, the beliefs and superstitions of the Apaches must be studied through their medicine-men and women, who wield a marvellous influence in fastening on them their belief in the occult, an influence little understood or appreciated by non-aboriginals, and often to the detriment of the patients. Through this lack of understanding, the Apache Indians have been much maltreated, and a great deal of the trouble with Government representatives in the past has arisen through not taking into consideration their superstitions and methods of reasoning.

Great freedom exists as to the selection of the *shaman* or medicine-man. Any man, woman, or child who seems to be endowed with spiritual or occult powers and able to interpret omens, is free to follow his own inclinations and invent his own symbols. It is customary, however, for them to place themselves as assistants to some medicine-man who, through his long practice, has gained influence, paying him liberally for his tuition, a year or more being the usual length of time given to study.

The Apache believes that all ills of the body are caused by evil spirits, which must be expelled or subdued. When any one is sick, he sends for his favorite medicine-man. If the patient is wealthy, the medicine-man will have the assistance of several others, often bringing his family along with him, and camping near the patient. The family and friends of the sick supply the medicine-man and his family with food and help. Before the medicine-man's arrival, the sick one's family generally prepare a sacrifice of *tchaze* as long as they can afford; and when he arrives, a corner of the camp is reserved for his use, the best blankets are given for him to rest on, and the choicest food is placed before him. When he has finished his repast, large stones are *tie soa* and placed before him, and he drinks and calls from among his friends those whom he wishes to drink with him.

While the feast is going on, the medicine-man begins to beg his services; and if anything is not satisfactory, he proceeds to arrange a programme for his patient's care. If there is but one person sick in the camp, the exercises consist of singing, clapping, running, etc.; but if there are many sick, or an epidemic is raging in the settlement, dancing takes place, prayers are recited, the women and children joining in the weird and monotonous cadence. *Hoddentin* is sprinkled round the couch of the sick, and applied to his forehead, tongue, and, in the form of a cross, to his breast, the medicine-man placing this same powder on their own tongues to give strength and divination. The singing and dancing are often continued until the leaders are completely exhausted. All the while they number off in little groups, which can be understood only by themselves, and to possess the magic that is a part of their individual power.

The Apache materia medica consists mainly of a few roots, leaves, and vegetable matter, always with the application of *hoddentin*. *Hoddentin* is the pollen of the *tule*, a species of cat-tail rush, and is gathered without any special ceremony. A small bag of it is carried by every man, woman, and child, even the infant in its cradle having a small bag attached to it. No undertaking, compact, or agreement is entered into without the sacrifice of some of this powder; a small portion of it is blown into the air at dawn and darkness: it is blown toward the sun before the heat and brings rain for the crops. Every phase of the life of the Apaches is surrounded by superstition and subject to necromancy, over which the medicine-men preside. In addition to the medicine-men, there are physicians of more scientific learning, they specialize, one being consulted for rain, another to recover stolen property, another for sickness, etc.

In addition to this sacrificial powder, there are many other sacred ointments that are much relied on by the Apaches. The *izzle-kloth*, or sacred cord, which is worn by leaders as well as by medicine-men, the bull-roarer, the medicine-hat, and the medicine-shirt are all firmly believed to possess certain magical properties. Through this lack of understanding, the Apache Indians have been much maltreated, and a great deal of the trouble with Government representatives in the past has arisen through not taking into consideration their superstitions and methods of reasoning. It gives the sound of a sudden rush of wind, and exerts a compelling influence on the bringing of rain to the crops. The *izzle-kloth*, used by leaders and laity alike, is the most sacred emblem of the Apache peoples, so much so that it is kept from sight and protected from profane touch, both the *izzle-kloth* and the medicine-hat losing their efficacy when in any way handled by an unbeliever.

The Apaches worship and sacrifice to the sun, moon, and other planets, as well as to the lightning, wind, etc.; and hold various dances, such as spirit-, ghost-, sun-, and snake-dances, though the snake-dances are not so common or so regular as among the Hopis and other neighbouring tribes.

Regarding the success of the medicine-men, it is well with them in cases of sickness if they do not lose too many patients; but when unsuccessful, they generally explain it to others as being the fault of work over-weening or counteracting their own. The present writer has seen several incidents where the medicine-man managed to shift the responsibility to another, knowing that the relative of the deceased was dissatisfied with his work. While the body was still warm, the medicine-man drew from his medicine-bag a flake of flint, with which he made an incision in the side of the deceased, where he had already put his lips to the incision and begun to moan, and in a short time turned around and spat on the ground a mouthful of blood, and with it a small stone, which he claimed had been fired into the body by an old woman living not a short distance away. That night a party went to the old woman's camp and killed her.
as a witch. The individual interpretation given to each one’s beliefs and imaginings precludes any set form of worship; but in a general way they all centre round those symbolic influences and superstitions that debar progress and hold them effectually in the chain of their fathers’ beliefs. The characteristic Apache burial is in natural rock shelters in cliffs and crevices, either on the rocky sides of mountains or in the earth and talus at the base of cliffs. The mound itself is a small unpartitioned cairn and is also utilized. After the removal of the earth and talus, the body is laid on the resulting platform and covered with a frame of poles and brush, over which rocks are heaped, the mound being from 4 to 10 ft. broad, 6 to 15 ft. long, and 2½ to 4 ft. high. No coffin is used, but the corpse is clothed and well wrapped up. A shovel (and sometimes an axe, or, in the case of a woman, a carrying hoesal), is frequently left on the grave, of which no subsequent care is taken. Among the White Mountain Apaches true-burial occurs.

(1890); Cremony, Life among the Apaches, San Francisco, 1877; Beckman, 'Das Apache als einer athapaschischen Sprache erwiesen' in Af.A., 1890-1893; Pilling, Ethnologie der Athapaskaner, Washington, 1892; Antonio Apache. APADANA.—The name of one of the books in the Pali Canon. It contains 556 biographies of male members and 40 biographies of female members of the Buddhist Order in the time of the Buddha. The book is therefore a Buddhist Vita Sanctorum. It has not yet been edited, but copious extracts from the 40 biographies are given in Eduard Müller’s edition of the commentary on the Téti Gathá (PTS, 1895). One of those extracts (p. 155) mentions the Kathá Vatthu, and apparently refers to the book so named, which was composed by Tissa about the middle of the 3rd century B.C. If this be so, the Apadana must be one of the very latest books in the Canon. Other considerations point to a similar conclusion. Thus the number of verses in this section of the Buddha’s life is 105, whereas in the Digha Nikáya it is 47, and in the Jathakas, 105. The other Apadanas are in the Digha, 122, whilst the Jathakas, 167; they are therefore more the later. The Apadana is given in the Digha Nikáya as six volumes; in later books, such as the Buddha Vaina, it has increased to 24. But the Apadana (see Ed. Müller’s article, ‘Les Apadanas du Sud’ in The Proceedings of the Oriental Congress at Geneva, 1894, p. 167) mentions eleven more, bringing the number up to thirty-five. It is very probable that the different legends contained in this collection are of different dates, but the above facts tend to show that they were brought together as we now have them after the date of the composition of most of the other books in the Canon.

There was a commentary on the Apadana called the Visuddha-jana-vilása. In two passages of the Gandhá Vansa (JPTS, 1880), pp. 59, 69, the authorship of this commentary is ascribed to Buddhaghosha.

According to the Súmágalá Vilaśi, p. 15 (cf. p. 23), the repeaters of the Digha maintained that the Apadana had been included in the Abhidhamma Pitaka, while the repeaters of the Majjhima said it was included in the Angikas. As regards the latter, Stotra, it is clear that the latter is another reason for placing the work at a comparatively late date. The word Apadana means ‘pure action,’ ‘heroic action’ or ‘action with the hero who vanquishes one of the life of his or her distinguished position among the early Buddhists. There then follows the account of his or her life now. An Apadana therefore, like a Játaka, has both a ‘story of the past’ of the ‘story of the life’ of the Buddha. It differs from a Játaka in that the latter refers always to the past life of a Buddha, whereas an Apadana deals usually, not always, with that of an Arhat (q.v.). When the Buddhists, in the first century of our era, began to write in Sanskrit, these stories lost none of their popularity. The name was Sanskritized into Avadana; and several collections of Avadanas are extant in Sanskrit, or in Tibetan or Chinese translations. Of these the best known are the Avadana-Sataka, or ‘The Century of Avadanas,’ edited (in part only as yet) by J. S. Speyer, and translated by Leon Feer; and the Dīraṇavāda, edited by Cowell and Neill, not yet translated. As a general rule, these later books do not reproduce the stories in the older Apadana. They write new ones, more in accordance, in spirit and implication, with the later, the more ‘purified’ or ascetic, and then in these Avadanas are on the lives of Arhats. But the main subject of the longest of all the Avadana books, the Mahá-vástu-avadana, is a series of the previous lives of the Buddha, though it also includes a few of the of the world. LITERATURE.—H. Oldenberg, Catalogue of Pali MSS in the India Office Library (JPTS, 1886, p. 61); V. Faubold, The Manuscrs MSS in the India Office Library (JPTS, 1886, p. 27); Ed. Senart, Paris, 1875-1878; T. W. RHYS DAVIDS.

APATHY.—The Greek doctrine of apathy (ἀπάθεια) is usually regarded as a leading characteristic of the Stoic School, but it undoubtedly belongs to an earlier date. This is the view of the anonymous commentator on Aristotle’s Ethics (Comment. in Aristot. gr. xx, p. 125, 3: ἀφάτος ἄτη ὀργή ἔτσι ἀντὶ τῶν φύσεων τῆς ἡ δὲ ἡ πάθεια). There are certainly marked tendencies towards it in the Cyne School, with its complete renunciation of all pleasure and its glorification of work. If it is the case that Aristotle’s Nic. Eth. ii. 1, 1094, 24 ('ὅπως ἀπάθεια ἡ ἐπιτρεπόμενη ταῖς ἀθλητικές τιμέσις') and similar sayings in the Cyne, the latter must already have made use of the expression apathia. In any case, it had influenced Stílpo the Megarian, who found happiness in the continuance of the same natural process, or as it seems to have used the word ἀμόρφος (Alex. de Anim. 150, 34, Bruns). Zeno, the founder of the Stoas, however, was influenced by the Megarian as well as by the Cyne philosophy.

On the other hand, Democritus, teachers described ἀθυμία, the human happiness consisting in ἐνεργεία τῆς ὀργῆς (Prog. 191, Diels), in the same way as apathy is described later. For apathy is said to have used ἀμόρφος (Prog. 191, Diels), and he himself is said to have held this opinion among the later Stoics. His doctrine, through the medium of Anaxarchus of Abdera (Diog. Laert. ix. 69), survived as a doctrine in Stoic philosophy, and probably even under this name (Cic. Acad. ii. 130; Plut. de Prof. in Vitr. ii, p. 82 f.). His disciple Timon praises his constant cheerfulness (ὑπερφίερα, Prog. 63, Diels), and fire his ideas in this respect; most probably under this name (Cic. Acad. ii. 130; Plut. de Prof. in Vitr. ii, p. 82 f.). His disciple Timon praises his constant cheerfulness (ὑπερφίερα, Prog. 63, Diels), and he himself in this respect; most probably under this name (Cic. Acad. ii. 130;
be disturbed thereby. It is true that Epicurus did not advocate the extermination of the emotions (epimeleia), but only the control of them, so as to preserve tranquility of mind of the wise man in such colours that he approaches the Stoic standpoint.

Cf. the statement from the third epistle (Epicurus, ed. Usener, p. 627): ἐν τοίς ἡμεραῖς τῶν πάντων ἀπειλώντως, ὥσπερ ἐκεῖ ἀλώνιον ὄντος πάσης ἡμέρας τοῖς ἐκείνης ἡμέρας, λέοντας πάντων ἀπειλήματος χειρὶς αὐτοὶ ἔσχον. Also Frag. 661; ἄπαθεν διαφθορασθεὶς πάντων ἀπειλήματος καὶ ἐκείνης ἡμέρας ἄφαντος ἄλωνιον τὸν χρόνον ἔσχον. And the well-known statement (Cic. Tuscul. ii. 17): "In Philosophius tauro eri, diciat, 'quam sine est, quam hoc non curro.'"

Such ideas are in accordance with the general feeling of the Hellenistic period, which was quite willing to recognize the happiness of the individual in a kind of questism.

Entire freedom from the emotions was now demanded of the Stoic sage (Frag. 227, Arnim) by Zeno, who, however, made to the dead human intellect the concession that even the sage, although unaware of the emotions themselves, is nevertheless conscious of a shadow of them (Frag. 215). This fixed idea was the specially exalted by his pupil Dionysius in his separate treatise περὶ ἀπαθείας (Diog. Laert. vii. 166), but more especially by Clesippus (e.g. in peri diakoin. aphasiai, and ἀπαθείας, pp. on this subject are collected in Arnim, Stoics. vol. ii. Fragm. iii. 443-455. The emotions belong to the irrational and immoderate (ἀκο-European) class of impulses (ἀοιδήματα), which bring unrest into the mind of man. They arise from false judgments on the worth of things, or rather from the thoughtless assent (ἀχειπλάτας) to such judgments (Dyroff, Ethik der alten Stoas, p. 152ff; Epict. iii. 19. 3: διὸ δὲ ἀλλοτρίως ἐξ ἀξιωματικῆς ἀφελώματος ἐποίησα). The philosopher, as the physician of the soul, has to combat the passions, the chief of which are: desire, fear, pleasure, and grief,—pity is also included in them,—by demonstrating the falseness of the judgment and cultivating the virtues of moderation and courage. As virtue is perfected reason (λόγος), the irrational impulses are incompatible with it, and thus in the soul of the wise man there is left no trace of passion (Frag. 447); the ὧναι are completely blended with the λόγος; the wise man is ἀπαθής, and therein consists his happiness (Diog. Laert. vii. 117; Cic. Tuscul. iv. 37).

It was inevitable that against this extreme doctrine the Stoic position should arise. Plato had already deliberately opposed apathy (cf. Phelebus, pp. 21 D, 60 E, 63 B: ἀλλὰ ἀλλοτρίως ἀλώνιον καὶ καθαρὰς ἔτεκε, εἴρητον ἄλογα ἡμῖν ρήματα, καὶ πρὸς πάθεις τῶν ἀλλοτρίων ἀλώνιων καὶ τοῦ σωφρότου τοῦ διηγομένου), and his disciples had, therefore, taken upon their position almost on the aristotle of the STOIC and the Peripatetics, who strove after ἀποδοχή ἀπὸ τῶν πάθεων (Neom. Eth. ii. 1108 B, 30; the later writers call it ἀρωτοκράτεια), and could not approve of apathy. No more could Epicurus, whose ἀφδος was actually regarded by the Stoics as one of the chief passions (Stoicns, ii. 90. 16). Carnesius summed up this contradiction in his successful attack on the Stoic speculations. He started from the fact that man is not only soul, but body also; that, consequently, certain bodily impulses are inevitable, among which belong the first place of the ὧναι; but the soul, so far as it remains pure, can be ἀρωτοκράτεια, but the body; he admitted, besides, ἀρωτοκράτεια μόνον ἐν τοῖς ἀλώνιοι τοῖς ἀπαθήσιμοι τοῖς ἀλώνιοι τοῖς ἀφδοις. Galen, de Cael., p. 411 f; Galen, de Cael. Phys. II. Aesch. p. 408 M. He thus abandoned the old Stoic attitude on principle, although in some single statements he approached very near it (e.g. Cic. Tuscul. ii. 61). The later philosophers are strongly influenced by this more moderate attitude. Epicurus is the only one who returns to the old rigorism; his wise man must again be ἀφδος and ἀρωτοκράτεια, ὄν ὀρθώς καὶ ἐκλειτομένος, and he fought against the Stoic against ἀρωτοκράτεια (I. 175; cf. Bonhöffer, Ἐθικ τῆς Ἐπικουρίας, p. 40; this ethic also opposes it in one of his writings (Ethik. 85), but otherwise he assumes Posidonius' point of view. This view occasionally persists in the later philosophy of the Neo-Platonists, with its withdrawal from this world and its mortification of the flesh, is decidedly in its favour. Thus Philo resolutely demands apathy (Zeller, v. 4, p. 449), and so also of Porphyry it appears as the highest stage of virtue, while metriopathy receives a lower place (op. cit. p. 717).

W. KROLL.

APHRODISIA ('Ἀφροδίσια').—The general name of festivals in honour of Aphrodite. The cult of Aphrodite may be regarded as having been universal in one form or another in the Mediterranean lands. In all the great centres of Hellenic life it occupied an important place, prevailing from Naukratis in Egypt to Phanagoria in the Black Sea, and from the Troad to Italy and Sicily (see the long list, with the evidence, in Poully-Wissowa, art. 'Aphrodite'). The Ægean islands were among its most famous centres, notably Cythera, Crete, and Cyprus. There is, however, no real ground for regarding the cult, in its later specialized form as the cult of a goddess of physical beauty, as having been aboriginal in Greek lands. Probably Aphrodite was originally an Oriental nature-divinity, and she retained many Oriental traits in her local cult as a specialized divinity in Greece. The more refined cult of the goddess as the patroness of married life is probably a genuinely Hellenic development, for this aspect of her is either altogether lacking or at least not prominent in the Eastern forms. Contrary to a very popular, but erroneous conception, originating in Plato's well-known distinction between Ourania Aphrodite who personifies the intellectual love of the soul, and Ἀφροδίτη, the Pandemos who personifies the sensual love of the body (Plat. Symposium. 180 D), it is precisely this title of Ὀραςιά, 'Heavenly,' that is the clearest sign of her Eastern origin; the Platonic distinction was not recognized in the State religion, and the moral and spiritual meaning of the title is of late growth (Farnell, op. cit. 629 ff., 639 ff.). In the same way, that aspect of Aphrodite under which she was worshipped at Athens and elsewhere as Pandemos, 'Guardian of the body politic,' was not an independent Hellenic development, but a survival and development of an Oriental conception (Farnell, p. 663).

With regard to the nature of the cult, ethically considered, it is to be observed that much of the modern conception is based upon a radically false notion, and the unguarded application to Hellenic practice of ill-understood Oriental ideas. As a 'deity attached to the sphere of human passion' (J. E. Harrison, Prolegomena to the Study of Greek Religion, p. 390) she is deified in the Homeric Hymn.

1 For an answer to this question, see the excellent study of Farnell, The Cults of the Greek States, Oxford, 1907, ii. 619 ff.
Until the decline of Greek civilization, the cult of Aphrodite, so far as we know it from our literary or monumental sources, was indistinguishable in point of purity and austerity from that of Zeus or Athene, and was in this respect, in fact, on a higher plane. The same might have been said of the worship of Isis; but such would not be the case in the case of Concern, for example, were in some cases imposed upon her priestesses (Paus. ii. 10. 4). It was at Corinth alone in Greece, and there in connexion with the worship of the _'Heavenly'_ Aphrodite, that the practices and observances found establishment and grew up around the ritual of worship. The fact is that a careful distinction must be drawn between Greek religion and ritual, which is upon the whole pure, and the mythological stories, which are often the reverse. We are, moreover, conveyed to us largely through the impure medium of degenerate poetry. De- generacy did indeed exhibit itself in the cultus, as in other domains of Greek life and practice—a symptom of the loosening of the moral bonds in the Hellenic period,—and later in the erection of altars and temples, and the establishment of festivals under the name of Aphrodite to the minor deities of Alexander and others (Athenaeus, 233, 559). Probably the festival of Paphos was the most celebrated of those held in honour of the goddess; and though in later years much of that splendour had passed, it continued to be celebrated, although on a smaller scale, at Paphos itself, and in Cyprus. The title Λυτηρος borne by the high priest at Paphos would probably indicate his conduct of the vast procession. Sacrifices of blood were not offered, though offerings of a profane nature were of common occurrence. With regard to the origin of the Aphrodite cultus in general, and of the festival of the Feast of Wantonness (_toperthia_), at which women dressed as men, and men as women, the men even wearing veils (Plut. de Virt. Mul. 243 E), the festival was popularly explained as commemorative of the mysterious birth of the deity. However, the participation of the poetess Telesilla in 510 B.C.; but such interchange of garments as a religious rite is not uncommon elsewhere (cf. Macrob. Sat. ii. 8; and references in Farnell, p. 751) suggests that the story of Telesilla is merely etiological (see Frazer on Paus. ii. 20. 8; Nilsson, Griechische Fest. p. 371).

Most Oriental in character of all the Greek cities was Corinth. Earliest references date Arcoecrinus as the holy hill of Aphrodite (_Frgr. in Strabo, 379: ἕως τεράκλιστων προσκυνών Ἀφροδίτης, ἐμέρο δησιον, πένα Ἀφροδίτης; cf. Alciph. i. 60). The most ancient Hellenic of the elements of the Aphrodite cult was the practice of religious prostitution (Strabo, 378), alluded to by Pindar when he celebrates the _'hositable young women, the ministers of Persuasion in rich Corinth.'_ The practice of religious prostitution flourished at Corinth in two forms, one towards Ourania Aphrodite (Pind. _Frgr._ 87, ed. Boeckh.), at Corinth, apparently alone in Greece, these _heterai_ took part in the State ritual; for when

over public prayer were addressed to Aphrodite on matters of moment, as large a number as possible of the _heterai_ were taken to aid in the ceremony; and individuals privately often vouched for a certain number of these women to the goddess in the person of their _heterai_. Such worship, in general could be of Athenian or foreign origin. We hear of them as putting up public petitions on behalf of the Greek cause in the Persian Wars (Athen. 573 C). Naturally, therefore, the _heterai_ took a conspicuous part in the festivals of Aphrodite, one day being given up to them, and another to the respectable women. Doubtless much of Eastern licence was seen on these festival days at Corinth; the city was notoriously dangerous in this respect to visitors (cf. Strabo, 378: ὅ παντα ἄνδροι ἐστίν καὶ θρωπόν ἐστίν ἡ πλοῖος).

At Argos the chief festival of Aphrodite was called Hysteria (ἱστέρηα), because swine were sacrificed to her—probably an indication of the cult of Aphrodite in conjunction with Adonis, for ordinarily the Greeks, as we learn from Aristophanes (Ach. 793), did not sacrifice swine to Aphrodite. Probably, wherever the pig was sacrificed to Aphrodite, it was the _hystera_. The pig is frequently mentioned in this connection (see Frazer's note in Paus. ii. 10. 5; Farnell, op. cit. p. 756). Connected with the same form of the cultus was the strange haphazard festival of the _'Adonis'_ which offered the goddess to be worshipped in the day of the Feast of Wantonness (_toperthia_), at which women dressed as men, and men as women, the men even wearing veils (Plut. de Virt. Mul. 245 E).

In _'Agina_ the festival of Aphrodite seems to have been combined with one to Poseidon (Plut. _Quint. Gr. 44_), the leisurely character of the festival being that of the Feast of Wantonness (above) and that of the _'Adonis'_ festival (Strabo, 378). In Cynoclades, of the two festivals of Aphrodite, _'Adonis'_ and _'Pisidaios'_ were part of the festival (Dion. Hal. _Ant. Rom._ i. 50).

Some details connected with the festival of Aphrodite as Pandemos are furnished by an inscription found at Athens, in which the Senate recommends to the Assembly that the police officials (_'Aphrodite_ ἀναγόμενοι) on the occasion of the public procession (_πορευτὴς_) in honour of the goddess, prepare for the cleansing of the temple _a_ dove, cleanse and whitewash the altar, wash the images, etc. (Dittenberger, _Sylloge_, 556 = BCH, 1889, p. 162; Nilsson, p. 354).

Finally should be noticed a usage of the word _'Aphrodite_ in a more general sense of _'festival gathering,'_ in the 5th century, which is often _Aphrodite_ and _'Aphrodite_ συνεκαλυπτικον_ in Xen. _Hell._ v. 4, 4: ἐν ἀφροδίσια ἀγόμενοι ἐν ἐξίσου τῆς ἀρχής τοῦ Πολιτείας τῶν Κρητῶν. Cf. _Plut. Cim. et Nic. comp._ i. 7: ἄφρι αὐτοί Ἀφροδίτης τῶν σωμάτων ἐκ τῆς ἔργων τῆς Ἀθηνούς. _Athens_, 4, p. 129 B, Ἀπόλλωνος τοῦ βασιλεύς διότι τὸ Ἀφροδίτιον _τριτονυσίων_. Such celebrations might naturally be annual; cf. Alciph. _Ep._ 2. 1, τὸ Ἀφροδίτιον ποιῶ ταῦτα κατ' ἐκεῖνον. W. J. WOODHOUSE.

**APOCALYPTIC LITERATURE, APOCARPANY—**See BIBLE.
APOLLINARISM.—Apollinaris, the younger, of Laodicea († c. 390), was the founder of a heresy which forms the connecting link between Arianism in the 4th and Nestorianism and Monophysitism in the 5th century.

1. Life of Apollinaris.—Of the events of his life not very much is known. His father, who was also named Apollinaris, was a presbyter who converted to Arianism with Theodotus (Berytus) and then went on to Laodicea (Latidige) in Syria. Here, he had a son, Apollinaris, the younger, the future heretic (Socrates, HE ii. 46). Socrates says that the father was "joined in the closest bond of friendship" with a Sophist named Flavian, who was a bishop of Laodicea, fortiﬁed him this acquaintance, as being dangerous to his faith. Moreover, Socrates or, perhaps, his father, communicated Apollinaris, together with his son, either because they would not give up their intimacy with Epiphanius, or because they kept the faith of Nicea and Athanasius, whereas the bishop was a semi-Arian (ib.).

Apollinaris, who had been presbyter at Laodicea, tried to supply his fellow-Christians with a substitute for the Greek classics which Julian had forbidden them to teach. He appears to have arranged nearly the whole Bible in the form of poems of various metres. "He expanded the books known to his vernacular and edited the other historical books of the Old Testament, partly as elegaic poems, partly as tragedies with different metres" (Socr. iii. 16). The son, having learned this art from his father, wrote the "Sophisms" as Platonic dialogues (ib.). But there is some confusion between the father and son about the paraphrases of the Bible: Socrates attributes all to the son (Sozomen, HE v. 18).

Apollinaris the younger must have been born not very long after his father's death (ib., vi. 2). Apollinaris is described as a "venerable old man" (Herm. ii. ii. 2), and if he was excommunicated together with his father by Theodoret (ib. vi. 2), he must have been more than a child before that bishop died (335). Socrates says that he was ordained Reader (αρσινωρος) and became a teacher of rhetoric in the Logicians' school. All his contemporaries speak of his great learning. After his separation from the Orthodox Fathers, they still write of him with much more respect than they usually give to a heretic, even with a certain affection. He was "learned in science" (Socr. iii. 16); "skilled in all knowledge and learning; had many books on the manifold erudition of accomplishments" (Socr. v. 18). Epiphanius says that he himself, as well as St. Athanasius and all the "Catholics," loved the "illustrious and venerable" Apollinaris, and believed that when they first heard of his heresy they could not believe that so great a man had fallen into such an error (Herm. ii. ii. 2).

In this first period, before he had proclaimed his heresy when he was still known only as a scholar, a poet, and a zealous defender of the faith of Nicea, he came into close relations with a number of Fathers. In 346, when St. Athanasius was on his way back to Alexandria after one of his numerous exiles, he passed through Laodicea in Syria, and there became "a companion and particular friend" of Apollinaris (Soz. HE vi. 25). St. Athanasius was not brought from Apollinaris and from many other teachers, and he says that he had never embraced his heretical doctrine but had been instructed by his father (ib. viii. 12). In this first period, before he had proclaimed his heresy, he is described as having had close relations with a number of Fathers. In 346, when St. Athanasius was on his way back to Alexandria after one of his numerous exiles, he passed through Laodicea in Syria, and there became "a companion and particular friend" of Apollinaris (Soz. HE vi. 25). St. Athanasius was not brought from Apollinaris and from many other teachers, and he says that he had never embraced his heretical doctrine but had been instructed by his father (ib. viii. 12). In the other hand, St. Athanasius speaks of certain monks who had been sent to Alexandria by "Apollinaris the bishop" (Theodoret, HE ii. 31). Thus, Apollinaris was not only a "heretical" presbyter (de Scotti, Act. iv., PG 23xxii. 1221) and Thomas doubted whether he had been his bishop (ib. 23xxii. viii. 13). On the other hand, St. Athanasius speaks of certain monks who had been sent to Alexandria by "Apollinaris the bishop" (Theodoret, HE ii. 31). Thus, Apollinaris was not only a "Presbyter" (de Scotti, Act. iv., PG 23xxii. 1221) and Thomas doubted whether he had been his bishop (ib. 23xxii. viii. 13). On the other hand, St. Athanasius speaks of certain monks who had been sent to Alexandria by "Apollinaris the bishop" (Theodoret, HE ii. 31). Thus, Apollinaris was not only a "heretical" presbyter (de Scotti, Act. iv., PG 23xxii. 1221) and Thomas doubted whether he had been his bishop (ib. 23xxii. viii. 13).

2. The Apollinarist heresy.—Apollinaris began as a zealous defender of Homoousianism against the Arians. Sooner or later the question was bound to arise: How could the Logos be joined to a human nature, which, in the 4th century, was thought to be a heresy? Apollinaris, died, leaving behind him an organized Apollinarist Church, about the year 360 (Jerome, de Vitr. Ill. 146). He is certain that God Himself became man in Christ. He is also certain that the whole Divine nature cannot be joined to the whole nature of a man. He maintains this by the same arguments as were already used by Nicea. Where there is a perfect man, there is sin (ib.); but Christ could not become sinful. And He would be neither really God nor really man, but a man-God (ἀνθρωπο-θεός), a mixture of two incompatible species, like the Minotaur, the centaur, dragons, and other mythological abstractions (Greg. Nyss. Antir. 49). He goes on to argue that he would certainly not be a man, for all men consist essentially of three parts, body, soul and spirit, whereas He would have four parts, adding to these His Divinity. In short, a person, being one, cannot be combined of two (ib.). He finds the solution of the difficulty in the application of a general principle of philosophy. The Neo-Platonic school taught that human nature is the composition of these three elements—a body, a soul that actuates and reforms the body (to use the later medieval term), thus making us living beings, and the mind, or spirit, that makes us reasonable beings, which spirit is the special characteristic of man.

Apollinaris thinks that the doctrine of the three elements of man, body, soul, and spirit (σώμα, ψυχή, πνεῦμα or νοῦς), is confirmed by Scripture. He quotes the text: 'Bless the Lord, O ye spirits and souls of all [animal] (Psalm 104:4)' (ib.); "and he disturbed spiritual [ψυχαί] from the spiritual (πνευμάτως) man (1 Co 2:9, 15)."
Antir. 49. Of these three elements the body and the soul make up the 'natural' (ψυχικός) being (the machine, Plato would have said), which is ruled and guided by the mind. This principle in man is changeable, fallible, sinful. It cannot be so in Christ. Therefore in Christ the Divinity, the Logos, takes the place of a human mind. He is a natural man (i.e. he is a person) and not solely a Logos. He, too, like us, consists of three parts only, and he is therefore really a man and not an impossible being of four parts. Only one part, the most important, is not human, but any rate the eventual and fully developed form of Apollinarism. It has been suggested (Lietzmann), and some answers of his opponents seem to suppose, that its author did not at first trouble about a subtle distinction between soul and spirit, and that the Logos instead of a human soul was joined to Christ's body. However, the stress of controversy soon made him adopt the Neo-Phatonic theory as the only one (like 49), to be real, and he himself then made so much of it that all through the Middle Ages the psychology of the three elements was associated with one name only, that of Apollinaris. He thinks that he has found texts to prove his explanation, and the hypothesis of the absence of a human soul, or, later, of a spirit in Christ. St. Paul, for instance, says that the first Adam was made a living soul, the second a life-giving (therefore Divine, not human) spirit; the first was carnal (ψυχικός), the second spiritual (αυτοκρατορικός, 1 Co 15:42; Antir. 11–12). The Incarnation is described as the assumption by the Logos, not of a whole man but of a physical body only. It is the 'mystery that appeared in the flesh' (1 Ti 3:16; Antir. 2), the Word was made, not man, but flesh (Jn 1:14; Antir. 16, etc.). Christ assumed the form of a servant (i.e. the body), and was found in the (outward) habit of a man (Ph 2:7; Antir. 20, 21).

So in this way the Logos and the man Jesus are really one being. Christ was not two separate persons, but Divinity and manhood joined inseparably in one person. And we adore this person without making distinctions, because in Him even the human nature is actuated, and so made Divine, by the Logos that guides it.

The contemporary orthodox Fathers who reject this theory are not much concerned about the truth or falsehood of the statement that human nature consists of three elements. That question was raised again much later by the medieval schoolmen, and Apollinarist became a favourite name of abuse given by Thomists to the Scotists who denied that the reasonable soul is the form (forma substantialis) of the body. But the first opponents of Apollinarism are offended chiefly by this assertion that Christ lacked an element of complete human nature. They quote against it the texts in which He is said to be like us in everything except in sin (He 4:15), to be real and completely man (Jn 1:14; Antir. 45), and to have not only a soul but also a spirit (Lk 20:34; Antir. 17, Jn 11:43; Athan. contra Apoll. i. 15, Jn 19th, ii. 16). They also undertake to refute Apollinaris' arguments. If the quotation 1 Co 15:38 proved anything in this question, it would follow that Adam had no spirit at all (Antir. 12), and that the word 'flesh' in Jn 1:14, as elsewhere, stands for the whole human nature (Antir. 27). They insist on the fact, which Apollinaris himself would not admit, namely, that if the Logos had become one of the elements of Christ's human nature, the Logos too would have stood in the hymn Ps. xcvi. (Antir. 3).

3. The Apollinarist sect. In spite of the opposition of a long list of Fathers (Athanasius, Basil, the two Gregorys, and many others), Apollinarism outlived its author for many years. He had set up a hierarchy all over Syria, and his sect existed and carried on his teaching till it seems to have been gradually absorbed by the far more important Monophysite movement. Vitalis was Apollinarist Bishop of Antioch. We hear of one Timothy of Beirut, who wrote a history of the Church, and who 'had no other object in so great a work but to commend Apollinaris, insomuch as from him and to him an endless number of letters were written and written back' (Leontius Byz. c. Nestor. et Eutych. iii. 40, PG lxxxvi. who proceeds to point out that not only was it possible to measure the size of his correspondence). A certain Valentinus wrote a defence of Apollinarism, called 'Against those who accuse us of saying that the body is of the same substance as God (ote. Fere monophysitario tomà), among the works of Leontius Byz. PG lxxxvi. ii. 1947–1976; some passages from both Timothy and Valentinus are quoted in this treatise). It seems that the unknown interpolator of St. Ignatius' letters in Syrian in the beginning of the 5th cent.) was an Apollinarist. He twice (Philipp. v. 2 and Philad. vi. 6) expressly denies that Christ had a human mind.

Although the movement gradually disappears as its place is taken by Syrian Monophysism, one still occasionally hears of Apollinarism in the ever-growing list of heresies; and as late as 691 the Quinisext Synod in its first canon does not forget to condemn 'Apollinaris, leader of wickedness, who impiously declared that the Lord did not assume a body endowed with both soul and mind' (Mansi, Gesta, 1796–1798, xi. 952).

4. Writings of Apollinaris—There is the most complete agreement among his contemporaries that Apollinaris was a learned as well as a very prolific writer. St. Jerome says that he had written 'countless volumes about Holy Scripture,' and that his thirty books against Porphyrius were greatly esteemed (de Vir. Ill. 104). Philostorgius tells us that his arguments against Porphyrius were superior to those of Basilians (HE viii. 14). St. Basil says that 'as he had great facility in writing on any subject, he filled the world with his books' (Ep. cclxiii. 4). Sozomen gives a long list of his poems, and mentions a work 'Concerning the recovery of the corrupted Logos' and the Greek philosophers, in which 'he shewed their errors concerning God without using texts from Scripture' (HE v. 18). We hear also of a refutation of Eunomius (de Vir. Ill. 120) Philost. HE viii. 12) and of a book against Marcellus of Ancyra (de Vir. Ill. 86). Epiphanius, too, writes with great appreciation of his learning and talents (Harr. iii. ii. 24).

Of these works scarcely anything is left. Of the poetic versions of the Bible written either by him or by his father, one volume remains, the Paraphrases of the Paulins (PG xxvii. 1313–1533; it includes the 151st Psalm). It cannot be described as a success. A version of the OT in hexameters, into which the author has crowded every possible reminiscence, allusion, and idiom from the pagan classics, must obviously lose all the feeling and poetry of the original texts and coming more than a very feeble imitation of the real classics. So it is not wonderful that after Julian's death, as soon as Christians were allowed to return to the real thing, Apollinarist authorities were soon forgotten. It is certain that at the same time these Biblical poems had 'disappeared as completely as if they had never been written' (HE vii. 16).

There is, however, a constant tradition that after the death of Apollinaris his followers published their master's works under the names of

every ninth year. At Delphi there was a feast on his birthday on the 7th of Busios, the first spring-month, and this seems to have been identical with the Theophania (Herod. i. 51; Plut. Quaest. Græc. 9, p. 282 F.; BCH, i. 111).

The more purely agrarian festivals may be distinguished from those in which the artistic character is more prominent. The former are festivals of first-fruits, or harvest-festivals, presenting musically a strong component of the archaic religious festivals in other lands. Examples of this type are the Karsein of Lacoania, falling on the 7th of the month Karnices = Attic Metagōtion (Aug.), and the Ὑπακθινδια in May-June at Sparta (Paus. iii. 19, 3; Wide, Ὀλυμπικές Κυλτί (Leipzig, 1893; 299 ff.; Xen. Hell. iv. 5, 1)).

Above all, the Thargelia of Athens, falling in the latter end of May, is a harvest-festival, for at that date in Greece the first cereals and fruits are ripe. The Thargelias is a combination of a primitive harvest-festival with a rite of purification (the curious ceremony of the Pharmakos) which may have belonged originally to the Earth-goddesses and was afterwards appropriated to Apollo. The Attic Pyanoptis or Pya-

νεπία, the only recorded Apolline festival that fell in late autumn, was also an agrarian festival — a thanksgiving service for the later cereals and fruits (Rna. iii. 64 ff.).

The festivals held at Delos belong to a higher order, being closely connected with art and poetry, although here also the agrarian or primitive element enters (Paus. i. 31, 2). So also the great Pythian festival held at Delphi on the 7th of the month Bakatios, the second summer month of the Delphian calendar (Cla. ii. 345), may have been originally a harvest-festival; but if so, in historical times it was identified with the higher aspects of Greek culture, and, moreover, the athletic side of that culture did not predominate at the Pythia, as it did at the Olympic festival, over the artistic and intellectual.

'The earliest competitions were musical and poetical, tragic recitations being subsequently added. . . . Prizes were awarded not only to the poets and musicians, but even to poets; and, in fact, the Pythia may be regarded as the prototype of the art exhibitions of modern Europe, for in this festival alone we hear of the famous artists exhibiting their works and competing. The great Delphic celebration then was pre-eminently the con-

ference of the greatest minds of Greece, and a detailed account of it would form a special chapter in the history of Greek art (193)."

Other festivals of Apollo held at Delphi, though less brilliant, are of great importance to the student of Apolline ritual. The festival of the god's Epid-

pliany in early spring has already been mentioned.

To this should be added the Theaentia, in which the newly-arrived god extended his hospitality to the other deities, especially to Dionysos, as appears from one of the lately-discovered Delphic hymns, in which Dionysos is invoked 'in these holy hours of spring', and entreated to show his hymn to the brother-god in the yearly Theaentia. This festivities, therefore, included poetic competitions; it included also a sort of vegetable show, a prize was given to him who exhibited the finest leek (Ath. 372 A: δέ οὖν κυμή γηλαλέα μεγάλη τοῦ Λυκτού, λυκάνθρωποι ουνέτο τη τραγουδί). Finally, we must notice the festival called the Stephanius, a feast of purification which is described by Paus. ii. 19, 2 (293 C, 418 A, 1130 B; cf. Celian, Var. Hist. iii. 1), as in part a holy drama enacting the death of Python and the subsequent flight of Apollo to Delphi ...

"For the Thargelia see Farnell, op. cit. 267 of the most complete work of the kind. The Pyanoptis is described by Paus. ii. 19, 2 (293 C, 418 A, 1130 B; cf. Celian, Var. Hist. iii. 1), as in part a holy drama enacting the death of Python and the subsequent flight of Apollo to Delphi (298 B)."

The story of Apollo and the Pythia is preserved not only in the poems of Apollonius, but also in his other works — in the work of his father, Homer, in the work of his brother, Homerus, and in the work of his disciples, Pindar, Aeschylus, Sophocles, and Euripides. The word Pythia is used in the Odyssey (1. 187) for the prophetess of Apollo, and in the Iliad (2. 1) for the oracle...

APOLLONIUS OF TYANA

In several respects a notable figure in the history of religion. Apart from the fact that he was a religious reformer of no little fame, he gave rise, as early as the time of Enasebus of Cæcara, to a controversy which continued long after the present day. The details of his life are to be found in a work by Philostratus the elder (3rd cent.), which was written at the request of Julia Domna (? 212), 'the patroness of every art, and the friend of every man of genius' (Gibbon).

Septimius Severus was a passionate student of magic and divination, and had chosen Julia Domna as his second wife on account of her 'royal nativity'. Philostratus' work was not written to cope with this controversy, which was also a collector of books, had been made acquainted with some memoirs by Apollonius' disciple, Damis the As-

yrion. These were not well written, and Philo-

stratus was required to cope with the poor style, and in fact to compile as complete a biogra-

phy as possible. He tells us himself that several 'Lives' of Apollonius were in existence, and that to some of them—those of Maximus of Ephesus and Maragenes—he had access. He also used letters of Apollonius. Moreover, he himself travelled into most parts of the known world, and everywhere heard the 'inspired sayings' of Apollonius. The biographer, however, who Philostratus com-

poses is of a romantic character. It is clear that the story of Apollonius, though much of it may be regarded as more or less true, has been greatly embellished. Many of the embellishments are of...

W. J. WOODHOUSE.
such a nature as to suggest that they were made to suit the taste of Julia Domna, which was, of course, well known to Philostratus. For Apollonius the Historiographer, in the manner of ancient writers, has added in the text many notes or glosses of his own without distinguishing them from the information derived from his original sources. Apollonius, therefore, composed a number of speeches and put them in the mouth of his hero; and it has been noted by F. C. Baur and others that the Babylon of Apollonius is identical with that of Herodotus.1

1. Apollonius, who had been for some years wealthy, was born about 8 c.e. 4. The country people said he was a son of Zeus, but he called himself the son of Apollon. At an early age, Apollonius, the young man, twelve to sixteen years old, became the father of his daughter and her husband by marriage. (L. 7.) He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

Again, several gaps have been detected in his story (the first after II. 1, ch. 12; another of about twenty years from A.D. 73.) We are told that before his birth, Proteus, the Egyptian god, announced to his mother that the child she would bear would be an incarnation of the immortality. It is said that he was born in a meadow, and that a chorus of swans sang in unison to celebrate the event. (L. 23–38.)

2. We are told that before his birth, Proteus, the Egyptian god, announced to his mother that the child she would bear would be an incarnation of the immortality. It is said that he was born in a meadow, and that a chorus of swans sang in unison to celebrate the event. (L. 23–38.)

After Apollonius visited a temple, he was no doubt treated as a guest. He must have been able, however, to prepare himself and his attendants for any indication of his coming, as the temple of Asklepios was well known to have been a place of pilgrimage for people of all nations. (L. 30.)

3. We are told that before his birth, Proteus, the Egyptian god, announced to his mother that the child she would bear would be an incarnation of the immortality. It is said that he was born in a meadow, and that a chorus of swans sang in unison to celebrate the event. (L. 23–38.)

4. He refused, that is to say, to wear clothes made from living creatures.

5. Philostratus tells us here. Whenever Apollonius visited a temple, he was no doubt treated as a guest. He must have been able, however, to prepare himself and his attendants for any indication of his coming, as the temple of Asklepios was well known to have been a place of pilgrimage for people of all nations. (L. 30.)

6. A frequent feature of Apollonius' discipulism is to have been taught, that Apollonius must have kept back part of his inheritance; so Tredwell, p. 49.

7. Apollonius, the young man, twelve to sixteen years old, became the father of his daughter and her husband by marriage. (L. 7.) He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

8. He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

9. In the letter of farewell to larchas, Apollonius says: "I will continue to enjoy your conversation as it still with you, if I have not drunk of the cup of Tantalus in vain." A. P. Sinnett (p. 25) says that the term Tantalus refers to a Phoenician king who was condemned to a watery death in the Elysian Fields. It is evident that the "cup of Tantalus" is identical with the "wishes" which were imparted to Apollonius by the god Asclepius, to be fulfilled in the future. (L. 10-16.)

10. Here we are told that Apollonius spent his time in the temple of Asklepios, that he was taught by the ancients to speak and write in a learned manner, and that he was allowed to witness certain ceremonies. Jarchas touched a crippled leg, and healed it by restoring sight to the blind. He also discovered the use of the hand to a paralytic (III. 59). They made the home-ward journey, and visited the temple of Asklepios (Siracusa), where Apollonius was allowed to witness certain ceremonies. (L. 16-23.) Then, by way of Babylon, Nineveh, Antioch, Seleucia, and Cyprus, they came to Ionia (L. 85). Visiting Ephesus, Apollonius warned the inhabitants against approaching phlegm. They disregarded his warning, and he retired to Smyrna. After this, he went to Athens, where he was told to go to impulse his help. He returned to Ephesus and called the inhabitants. They next visited Pergamus, where Apollonius gave a lecture (lvi. 11), Troy, and eventually sailed for Athens.3 We next find them in Corinth (L. 23).5 In these, they went to Athens, where they were allowed to witness certain ceremonies. (L. 23.) They then visited the temple of Asklepios, where Apollonius was allowed to witness certain ceremonies. (L. 23.) The city of Athens was a place of pilgrimage for people of all nations.

11. Apollonius, who had been for some years wealthy, was born about 8 c.e. 4. The country people said he was a son of Zeus, but he called himself the son of Apollon. At an early age, Apollonius, the young man, twelve to sixteen years old, became the father of his daughter and her husband by marriage. (L. 7.) He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

12. Apollonius, who had been for some years wealthy, was born about 8 c.e. 4. The country people said he was a son of Zeus, but he called himself the son of Apollon. At an early age, Apollonius, the young man, twelve to sixteen years old, became the father of his daughter and her husband by marriage. (L. 7.) He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

13. He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

14. Apollonius, who had been for some years wealthy, was born about 8 c.e. 4. The country people said he was a son of Zeus, but he called himself the son of Apollon. At an early age, Apollonius, the young man, twelve to sixteen years old, became the father of his daughter and her husband by marriage. (L. 7.) He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

15. Apollonius, who had been for some years wealthy, was born about 8 c.e. 4. The country people said he was a son of Zeus, but he called himself the son of Apollon. At an early age, Apollonius, the young man, twelve to sixteen years old, became the father of his daughter and her husband by marriage. (L. 7.) He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)

16. Apollonius, who had been for some years wealthy, was born about 8 c.e. 4. The country people said he was a son of Zeus, but he called himself the son of Apollon. At an early age, Apollonius, the young man, twelve to sixteen years old, became the father of his daughter and her husband by marriage. (L. 7.) He gave up eating meat, regarding only productions of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen.2 At this period he spent much of his time in the temple of Asklepios. At 16 he became an enthusiastic disciple of Pythagoras, and soon afterwards retired to Anes, where he conversed with the greatest philosophers of his day. (L. 44.)
Réville, who find a number of more or less fanciful parallels between the story of the Gospel 4 and that of Philostratus; only that the latter was written not, as earlier critics supposed, in a hostile sense, but in the spirit of the religious syncretism of its age. More recent critics, however, have rightly maintained that there is no trace of any direct connection between the two stories. In Philostratus the whole narrative bears a Greek stamp; 5 and his model for the life of Apollonius, if he had one, was Tyana. As Julius Jessen further points out (p. 12), if Philostratus' work had had a polemical purpose, certain important miracles of healing would have been ascribed to Apollonius rather than to the Indians. Nor is it remarkable that two religious reformers should have lived about the same time and have had somewhat similar experiences (cf. Ed. Baltzer, p. 388). It should be mentioned, in conclusion, that the next view about a Apollonius is that he was a kind of spiritualist. 6 It is held by A. P. Sinnett, and to some extent by G. R. S. Mead. Mr. Sinnett, writing in 1898, says that 'until the occult revival of the last twenty years, no modern students in possession of any clue by which it would have been possible for them to have understood Apollonius' (p. 4; cf. G. R. S. Mead, p. 116).

3. Arguments arranged according to the sphere in which they lie.

I. THE PHYSICAL REALM.

1. The evidence of nature.

(a) The argument from matter, life, and mind.

(b) The argument from design in nature.

2. The problem of nurture.

(a) Miracles.

(b) Evolution.

(c) Monism, true and false.

(d) Suffering.

* Baur and Réville (p. 64) also contend that Apollonius 'combines in his own person many of the characteristics of the Apostles.' 5

5 So Pettersch, p. 22; Max Wundt, p. 321. Baur's most important point is that the Greek and Roman literatures of the time are not familiar enough with the teachings of the Catharist within which the history of Apollonius and the history of the sects are, as seen in the story of Apollonius. But, as J. M. Robertson says (p. 255), this is only a theoretical point. It makes the world of the sects and the apologetics of the sectarians the superposition of Syria could enter the West only by Jewish or Christian channels.' 5

5 So Julius Jessen, p. 204; and J. M. Robertson, p. 255.

5 Baltzer, writing in 1853, wondered that modern spiritualists had not claimed him.
The work of Anselm is of the most abiding interest, for it was his task to formulate the first clear logical proof of the being of God known as the Ontological argument. A new era began with the rise of Deism in the 18th cent., when the effort was made to set up a 'religion of nature' in place of Christianity. Bacon, the chief figure, was followed by Bishop Butler, who saw that the deistical admissions as to the existence and supremacy of God, the sins of men, and the reality of judgment, do not furnish a warrant on which to base an argument for the acceptance of the whole of the faith. Starting with natural religion, he showed in his *An Essay,* by an argument which will always remain a famous Christian apologetic, that revealed religion follows from it, as neither more difficult nor more ineradicable.

The next attack, as represented by David Hume, was upon the credibility of miracles, and F. W. J. Hume's *Evidences of Christianity,* in answer, remains a classic in the history of English apologetics. The 19th cent. saw a more determined assault on the supernatural, and the growth of Positivism, Agnosticism, and Scepticism has been such that it must still be true for us in discussing the apologetic of the present day, and count has still to be taken of Huxley and Herbert Spencer, as well as of Haeckel, in setting forth, as we now proceed to do, the present state of the problem.

**B. APOLOGISTICS OF TO-DAY.**—Instead of giving the outline and a few present-day apologetic work, an attempt is made below to state in general terms the chief arguments that are being used to-day to defend the Christian faith. Naturally they will be given by way of statement and not by way of argument, and will be placed in an order which is meant to be scientific, rather than such as will make the most forcible appeal to readers.

First, it will be well to indicate the limitations in his arguments which the wise apologist is ready to concede. He does not claim that they afford irrefragable proof of his beliefs. To assert that Christianity can be conclusively demonstrated by merely intellectual proof is to stultify the nature of a true revelation. If an essential of true religion be the exercise of faith, and if God has revealed Himself by appealing to a faculty in man which is not thought of as would be impossible to make a man a Christian by mere argument. The final appeal is to the heart; the appeal to the mind must content itself with proving without a shadow of doubt that Christianity is rational, credible, and probable. This is specially true of the arguments for the being of God. None of them amounts to positive proof, and yet it must not be forgotten that there are many of them, and that their cumulative force amounts to far more than their weight.

I. Outline of a progressive Apology.—We now proceed to give an outline of the successive stages by which the argument leads up from simple Thesis to the Christian creed. The (a) **NEW RELIGION:**—God exists, and may be known apart from revelation. This is proved
by — (1) The argument from General Consent.
That which is merely subjective when applied to
the spiritual experience of the individual, and is
therefore viewed with suspicion by opponents,
becomes objective when it shows a 'consensus
gentium' or belief in a God. (2) The Cosmological
or Theological argument, which suggests the uni-
verse as an effect which must have a cause. (3)
The Teleological or Design argument, which sug-
gests that the order of nature implies a First Cause
who is intelligent and free. (4) The Ontological
argument, which points to God as the highest
imaginable object of thought, and the ground of
thought itself. (5) The Moral argument, which
takes man's conscience as implying a lawgiver who
inspires him without being identified with him.
(6) The Historical argument, which points to the
sense of purpose and design running through
human history.

4. REVEALED RELIGION.—(1) Natural religion
leads us to expect something further, and suggests
a Deity who would be sure to make Himself
known. (2) This further step necessarily involves the
concept of an infinity of the beginnings with which a natural
revelation must be faced, viz. (a) such inadequate
theistic theories as Pantheism, Deism, and Modern
Theism; (b) such anti-theistic theories as Atheism,
Agnosticism, and Materialism. Miracle must be
distinguished from the mere human activity which we speak of in the past and the
future. The consideration of the past must neces-
sarily embrace a large part of Apologetics, for
Christianity is essentially a historical religion, and
attempts to make its stand against those arguments to the
purpose of revelation. (3) The Christian revelation
must be shown to be intrinsically superior to other
religions—Polytheism, Buddhism, and
Muhammadanism—and to be the creative and
higher fulfillment of Judaism. (4) The argument is
led to that around which all centres—the Person
of Christ. The Christ of the Gospels and Epistles
is shown to be historic, the Resurrection makes all
of Christianity concerning the moral miracle of the world.
(5) This is necessarily followed by the history and influence of
Christianity, as enlivening and regenerating the world,
and showing a superhuman power of recuperation
and continued existence. (6) This leads to the
dispensation of the Holy Spirit and the work of the
Church. Christian institutions, such as the
ministry, the Sacraments, and the Christian year,
are seen to be witnesses both to Christ and Christianity.

II. Methods of Apology and modern needs.—The bitter attack upon miracles in the 19th cent.
has more than once produced the idea of a line of
proof that should be independent of this confident
assailant. It is on the moral aspects of Christianity
that the chief stress is now laid. And the subject is
no longer divided according to the old divisions
of Natural and Revealed Religion. In the attempt
to use every line of defence, it is preferable to
marshal the evidences in accordance with the
successive spheres in which they lie.

(1) lowest stands the physical realm, but it is
the arguments of science with which it is filled.
The development of physical science during last
century, as shown in new theories of which we
consider the beginnings with the works of
Darwin, and the attacks of Huxley and of Herbert
Spencer, and yet more recently of Haeckel,
make this an important part of modern Apologetics.
The question of miracles lies only partly within it,
for the Christian still accepts the law of
Paley towards Hume, and refuses to admit that any
Christian miracle is a merely physical occurrence.
But the arguments in favour of a theistic religion,
which, in the face of modern Materialism and
Agnosticism, must still form the basis of a defence
of Christianity, are many of them physical and
physiological in form. Besides actual arguments
found in the physical sphere, there are many prob-
lems connected with nature which need dis cus-
sion. These are best placed under the same head,
and include not only such questions as that of
suffering, and the theory of Evolution in the forms
which the last fifty years have made familiar, but
that latest battleground of faith and unbelief
which is represented by the word 'Monism.' At
the present moment it seems likely that the honest
and well-equipped apologist will have to re-con-
sider each of his theistic positions in the light of the
non-theistic tendency of the latest results of science
and indeed this has already been done in recent
works to which reference will be made. But
it will be impossible in this article to do more than
show that, if a naturalistic Monism is invoked on
one side, an even stronger weapon may be found in
spiritual Monism on the other. The main features
of this latter and its bearing on the faith can
only be mentioned, and its authorities referred to.

(2) The next sphere of evidences is the psychic,
when we have passed from nature generally to
human nature, from physics and matter to meta-
physics and mind. Properly speaking, the realm
of psychology belongs only to the present, but it
must be included in the other spheres of mental
activity which we speak of in the past and the
future. The consideration of the past must neces-
sarily embrace a large part of Apologetics, for
Christianity is essentially a historical religion, and
attempts to make its stand against those arguments to the
purpose of revelation. (3) The Christian revelation
must be shown to be intrinsically superior to other
religions—Polytheism, Buddhism, and
Muhammadanism—and to be the creative and
higher fulfillment of Judaism. (4) The argument is
led to that around which all centres—the Person
of Christ. The Christ of the Gospels and Epistles
is shown to be historic, the Resurrection makes all
of Christianity concerning the moral miracle of the world.
(5) This is necessarily followed by the history and influence of
Christianity, as enlivening and regenerating the world,
and showing a superhuman power of recuperation
and continued existence. (6) This leads to the
dispensation of the Holy Spirit and the work of the
Church. Christian institutions, such as the
ministry, the Sacraments, and the Christian year,
are seen to be witnesses both to Christ and Christianity.

Some would postulate a separate sphere as the
metaphysical—the sphere in which mental pheno-
mena are in a special sense marshalled by reason.
Others are content to give a metaphysical tinge to
the stages which reach higher than the physical
realm.

(3) The next sphere is the moral, raised as far
above the mental as the mental is above the
physical. Under this head come such theistic
arguments as the universal idea of God, the con-
science of man, the individual consciousness, and
the sense of sin. But the supreme moral argument
in modern Christian Apologetics is the Person of Christ. He Himself and
His earthly life and moral teaching are now made
the chief argument for the truth of the religion
that He founded. He is at the same time the
moral miracle which cannot be explained by
'moral' causes, and the answer to the moral
instincts of humanity, the key to unlock not only
the unique monotheistic morality of Judaism, but
problems as those of sin and suffering, and of
the purpose and the goal of human existence. Our
generation is coming to realize more than those
gone by that 'Christianity is Christ.' And
the result, for the apologist, has been stated thus
(W. L. Robbins, A Christian Apologist, 1902,
p. 35.): 'The supreme moral argument must be shifted from miracles to the moral charac-
ter of Jesus Christ, and verifiable facts of present
religious experience . . . This would seem to be
the most wide-reaching of all the assumptions required in
modern Apologetics—a shifting of the argument from
the past to the present, from the miraculous to the
moral.'

(4) Highest and last is the spiritual realm. Here
we reach without doubt the final argument, and

Digitized by Microsoft®
yet it is of but little use in Apologetics. For a religious spirit must be spiritually understood, and it is only to the spiritual that it can make its final appeal.

It may therefore be said that the moral argument from the Person of Christ forms the chief line of defence, and the separation of these higher realms of reality which is involved is itself a reply to those opponents who try to confine the entire issue to the latter.

III. Arguments arranged according to the sphere in which they lie.—(1.) The philosophical realm.—The existence of a nature, life, and mind. —We begin with the mystery of 'Being,' and a study of the objects of sense reveals that matter is the basis of them. But material substances are of different kinds, and some of them are marked off from the rest as self-acting, or living. These are compound substances, capable of reduction to the same elementary substances as the rest, but possessed of the faculties of gender, property, and quality resulting from their composition. But there is an attribute of all being, known as force, which is an important factor throughout. As mental force, and as vital force, it must necessarily be conceived of as inherent in mind and life. But, as physical force, in the lowest of the three stages, it has to be regarded, as Newton insisted, as exterior to matter, and acting upon it. Thus far, physical science can speak plainly. But what answer is to be given when the question is pushed a stage further back? How did these things come to be thus? How did matter originate? How is the gulf to be bridged that separates life from matter and mind from life? And whence comes the force that acts upon them all?

Materialism and Agnosticism have their answer; but are they as reasonable as is the following Christian explanation? Force is derived from an eternal matter. Matter has not always existed, but always existed at the fiat of His Will. This implies a personal Creator, a First Cause who is both single, as shown by the unity of nature, and supernatural. The laws of matter and forces of nature do not contain Him, but show His work. This by no means denies the Atomic Theory, but explains how the 'favourable circumstances' for the new formations of atoms came about; and the theory of Evolution is seen to be the method of His working, while there is no need of lame attempts to bridge the chasm between matter, life, and thought. Such an answer is no mere a priori argument, but is the result of preconceived ideas about religion fit in with science; rather is it the most reasonable induction from the facts of the physical realm. It lays no blame on science for getting no further back than matter and force; for it holds a true agnosticism which denies that it is the province of science to go further. Merely weighted by probabilities, it can claim to be the most rational and the least difficult explanation of the problem of being.

(b) The argument from design in nature.—This evidence, so keen a weapon in the days of Paley's Natural Theology, is said by opponents to have become blunted by the theories of modern science. The Roman Catholic Church, however, has held that a material design has been taken by natural selection, basing his claim upon the fact that all species of plants and animals were slowly evolved, and not separately and suddenly created. But creation by God need not be natural, and the processes of evolution as so many examples of His method of working. Perhaps it is sufficient to insist that evolution is a process, not a cause. It serves only to push the evidence of design further back, and therefore to increase our admiration for the Designer. And it is to be noted that if the evidence of nature suggests the existence of a personal Creator, the evidence of design does more, for it supports His claim to power. To imagine that such exquisite mechanism as that of the human eye, or such wondrously suitable material in all its properties as a man's bones, or such fortuitous working of matter and force, makes a far greater demand than any Christian miracle.

The popular objection to the evidence of design lies in pointing to 'nature red in tooth and claw.' This opens the question of the problem of pain, which, as far as it relates to man, requires separate treatment. With regard to the sufferings of the animals, some exaggeration of them seems to be made in these days, by attributing to living creatures organs of a standard of sensibility. This is a department in which the apologist must be careful not to ignore the discoveries of modern Biology. See Biology, Suffering.

2. The problems of nature.—(a) Miracles.—The apologist refuses to limit the discussion of miracles to the physical realm, claiming their explanation can come through the historical and the moral aspect of them. But it is on the material side that the attack has come. The modern instinct revolts from miracles, and echoes Hume's assertion that no experience or testimony can render them credible. In our defence of them we must be careful where to begin. To one who does not believe in a God they are indeed incredible. He exalts certain so-called 'natural laws' into the supreme place, and rules out all that does not seem to agree with them. But if it be assumed that the world had a Creator (according to the foregoing arguments from nature, and those inferred by other lines of thought), miracles at once become possible. For a miracle may be defined as 'an act of God which visibly deviates from the ordinary working of His power, designed, while capable of serving other uses, to authenticate a Divine message.' If we begin with this assumption, we may still argue, as Paley did, that miracles have the same degree of probability as God's revelation of Himself to men.

Therefore we must begin with the question: 'Miracles are impossible,' we must take the objector a stage further back, and discuss with him the belief in a God. But miracles are not always discredited by such reasoning. In the following issue, the following are some of the objections levelled against them:—

(a) Miracles are inconsistent with the order of
nature. This argument not only ignores the working of a God who still has control over His creation, but also gives a rigid uniformity to certain so-called 'natural laws,' which after all are based only on the imperfect induction and limited reasoning of the human mind. If modern science has arrived at these laws by induction from a study of the universe, and not by the arbitrary assumption that these laws are uniform, all evidence must be taken into account. And as miracles lay claim to evidence, science must assume them into consideration, or it will be subverting its own methods. Such evidence, however, lifts the question out of the physical realm.

(3) It is further objected that the admission of miracles implies a lax or unscientifical conception of the course of nature. And it is, indeed, true that Christians sometimes speak as if only miracles were the signs of God's working, and as if they interfered with the course of nature by subverting its laws. But we must insist that in speaking of miracles as 'supernatural,' we do not refer to them to any other agency than that of so-called 'natural' events, that is, the physical laws of the universe. And it is both logical and reasonable that God should occasionally do what is outside man's ordinary experience of the working of created things. If man himself can intervene and alter the course of nature, we must certainly expect that God will do the same.

(4) Perhaps the favourite attack on miracles to-day is the rationalizing of Biblical miracles one by one. It is claimed that such miracles may all be brought into harmony with nature, for they are really to be referred to 'natural' causes. To have exalted them into more is the result of mistake or fraud. We reply that the only answer is in the very words of the event. We are not taken at once out of the physical realm into that of psychology and history.

(5) Attempts are continually made to discredit all miracles by pointing to those that Christians themselves do not accept. But we may confine the issue to those Biblical miracles which have their climax in the Resurrection. We are not called on to explain the work of Pharaoh's magician, or the many marvels of the Middle Ages, or the achievements of occultism to-day. It is enough to prove that certain miracles actually happened, as an attestation of a Divine revelation.

(b) Evolution.—The modern theory of Evolution touches the faith at many points. The sceptic uses it to discredit the design argument (see above), and to show that there is no room for the existence or working of a God; to explain the life of the one Perfect Man as due simply to natural causes in the evolutionary progress of the race; and to point to the origin and development of Christianity as an evolution from natural causes and natural processes. The apostle refuses to hand over Evolution to be a mere weapon in the enemy's hand. He claims that it is also his own. He sees in it the visible processes (or rather, the theories about them which the human mind has tried to express) whereby God works. That the evolution of Christ and Christianity he refuses to discuss merely in the physical realm, but applies the historical method to both, and finds that they can be shown to be evolved from nature. He does not rest with the arguments which ignore the first principles of Evolution itself. But the Christian apostle is not content merely to apply the theory of Evolution in the same sphere as his opponent. He claims that the principle may be extended more widely to embrace the moral world in the present as well as the physical world in the past, to strengthen the conviction and hope of the Christian with regard to the future. The following words will illustrate such a position (J. M. Wilson, Evolution and Christianity, 1894; E. Griffith-Jones, The Ascend through Christ, 1899).

'Evolution is showing us in very plain ways some of those truths that we have grasped only in words, the Unity of Nature, the Divine Plan, the Omniscience of God. If evolution is true, and moreover, a marvellous help to faith and patient work to believe that as there has been an evolution in nature in the past, so there is such a process in man and in the moral world now going on. See J. Iversch, Evolution and Christianity, 1894; E. Griffith-Jones, The Ascend through Christ, 1899; J. Cairns, Is the Evolution of Christianity from more natural Causes credible? (Prent. Day Tracts, 1902); J. M. Wilson, Problems of Religion and Science, 1906; F. B. Jevons, Evolution, 1906, and Religion and Evolution, 1906; J. Ward, Naturalism and Agnosticism, 1906; H. Calderwood, Evolution and Man's Place in Nature, 1908; J. M. Baldwin, Development and Evolution, 1903; G. H. Howison, The Limits of Evolution, 1906.

(c) Monism, true and false.—The tendency of modern science has been to discover a closer unity in all things and to lay importance on the harmony of all phenomena. In the eyes of some, this is the opponent of Christianity, who have been slow to seize. They have never been able satisfactorily to bridge the gulf between matter and spirit. Now they have the word of science that such dualism has been found to be due to the separating not of all phenomena, whether material or spiritual, must be explained as essentially one, and that therefore the only rational theory of the universe is some form of Monism. The wise apologist does not meet this with a denial. He is ready to listen to science as long as science retains its proper sphere; and if monistic belief seems the most rational, he does not reject it because it has been said to contradict the Scriptures. The wise apologist is not a materialist, and then re-consider his theistic position in the light of his conclusion. Therefore, the first question to be asked is what is meant by Monism, and the second is what is its bearing on Christian belief.

(a) Monism is a word which is growing in popularity, but it certainly does not always mean the same thing. There is a naturalistic, or scientific, and there is a spiritual Monism. The case of Monism is that of Evolution: one aspect of the theory is said to overthrow Christianity, but another side is claimed as supporting it. There is no doubt that the Monism which makes itself manifest is a form of the naturalistic kind, such as is identified with the name of Haeckel. It does, indeed, claim not to be materialistic, and recognizes Spirit as well as Matter; but it refuses to allow a dualistic distinction between God and the world, and regards Force and Matter as only two sides of one reality or Substance, which does everything and is everything. There is an invariable Law of Substance whereby this Substance is in a process of evolution which causes eternal motion throughout the Universe. Such evolution is succeeded in turn by dissolution, and thus new worlds are continually being born and re-born. There is no place left for God, freedom, or immortality. If Substance operates of necessity and without ceasing, through all things, so that everything is determined by what has gone before; and when every individual has served his turn, he gives way to another, and disappears. But there are modifications of such Monism which are not necessarily anti-theistic. Some allow that there is an underlying Source from which natural or physical Nature is created, by an entirely different plan from God's, to which Nature is 'merely,' or 'only,' or 'merely,' or of 'some' aspects of the natural world. And even the name of God may be admitted if 'stripped of its theological and anthropomorphic associations, and not opposed to or set above the principle of the unity of nature.'
But there is quite a different kind of Monism which the Christian may fearlessly accept and assert, and that is Spiritual Monism. The term has been explained, in "When the weakest (Theism and a Spiritual Monism, 1906, p. 292) as 'adopted in order to set forth both agreement with Science in acceptance of its facts, and difference from the interpretation which some give in the name of Science itself. It acknowledges the twofoldness that is everywhere manifested, and sees everything and every being in the world to be the result of the working or unrolling, or development in its conditioned form, of a single Power manifested as both material and spiritual. But, instead of giving the predominance to the material side, or equal value merely to the two sides, or leaving them both unexplained, it regards the spiritual side as that which is logically first and deepest—that which the material side only expresses and serves—that which manifests its supremacy in our own consciousness. And the claim that this form of Monism makes is this: 'So far as we are able to understand ourselves, and to look out upon the immeasurable vastness beyond, no monistic scheme can be tolerated which does not both do us justice and transude us. And certainly a monistic scheme which is not quantitative, and which treats the phenomena of the world on the level, whilst regarding as illusory, or as ultimately mechanical, the world of noumena, sufficiently discards itself. Spiritualistic monism is not guilty of the latter, and if it is desired that the spiritual should furnish the former' (F. Ballard, Theismonism True, 1906, p. 378).

Before passing to our other question, we note the impossibility of trying to confine the issue to the difference between the theological and the spiritual. (3) The bearing of Monism upon Christian belief can only be briefly indicated, and may perhaps be best expressed in the outline of the argument as given in the last-named work (pp. 380-400). (i.) There is no contradiction, or even collision, between Spiritual Monism and Theism. (ii.) It causes no weakening of preceding reasons for Theism. (iii.) It leads up to Divine Personality. (iv.) It refuses, with Theism, to treat man as an automaton. (v.) It demands, however, the purification and enlargement of theistic phraseology. (vi.) A twofold development is involved, namely, a fuller recognition of divine immutability, and a blending of this with Divine Transcendence. It is in such directions as this that the greatest change is coming over Apologetics at the present moment. See F. Ballard, "Theism and a Spiritual Monism, 1906; F. Ballard, Haeckel's Monism Polite, 1905, and Themonism True, 1906; J. Morris, A New Natural Theology, 1905; F. R. Tennant, Cambridge Theological Essays, 1905; J. F. Tristram, Haeckel and his Riddles, 1907.

(d) Suffering.—This is a problem which has perplexed mankind in every age. It has to be faced in relation to every system, and it has often been used in the attempt to discredit Christianity. The unmerited sufferings of men are adduced as showing that there is not a God who looks after the world as a Father, and the sufferings of the rest of creation are said to point to a 'nature red in tooth and claw' such as no beneficent Creator would allow. We have to admit that the problem still remains unanswered. Is suffering wrong, but at the same time we claim that Christianity is the only system under which it may be viewed in a satisfactory and hopeful light. Taking physical pain as the simplest form of suffering, we may see in it a useful and beneficial part of God's world. It purifies men, and is something other than enjoyment. If it be the growing development of our faculties through the discipline of life, then it is easy to see how it is helpful by suffering. And we may recognize in it a twofold use, partly for the education of the individual, and partly for the good of the race even at the cost of the suffering of the individual.

But what is the bearing of Christianity on the problem? (a) The belief in a re-adjustment hereafter explains the difficulty of the suffering of the present world. (b) The Fatherhood of God teaches that He is in sympathy with the sufferings of His creation, and the realization of such a sympathy has already proved 'the secret of endurance' to the sufferers of the world. (c) The Cross of Christ, as not merely an isolated act of vicarious suffering, but the manifestation of the abiding union of the Divine in suffering, proves that the Divine sympathy is real. The deeds of Christ are inseparably linked with His words, His example with His precept, and the sufferer sees the problem wrapped in a new glory in the light of such echoes as 'Not my will but thine be done,' and 'He that loseth his life shall find it.' (d) Not only does Christianity throw light on the problem in the case of the Founder, but the Christian is bidden to take up his cross and follow Christ; the facing of it in His Master's service and turning it into a joyous part of his creed. The belief in his own redemption through suffering makes him ready to 'fill up that which is behind of the afflictions of Christ,' and voluntarily seek suffering in the service of his brethren, as well as patiently accept that involuntary suffering which he realizes will be for his eternal good, and make him more like the Master who was 'made perfect through suffering.' No other religion explains and glorifies suffering thus, and therefore we claim that it attracts men to the Christian faith, instead of repelling them and discrediting it in their eyes.

See Masterman, 'The Problem of Suffering' in Topics of the Times (G.P.C.B.), 1905; Hulingworth in Last Words, 1899; J. Martineau, A Study of Religion, II., 1899; and art. Suffering. (ii.) THE PSYCHICAL REALM.—1. Historical arguments.—(a) The Jews and OT prophecy.—While Christianity is not bound to answer the objections that are levelled against Judaism, it accepts Judaism as its parent. And the Jews and their sacred literature form a strong apologetic argument for our faith. The external historical element in Christianity is a marvel from first to last, while their spiritual theology and worship amid the debased beliefs of the ancient world, as embodied in their ideas of God and man and in the Messianic hope, and above all the prophetic declarations of the inspired book. Christianity makes its only explanation in the facts of the founding of Christianity, offer an argument the value of which is coming to be once more appreciated in our own day. See E. A. Smith, The Relentless Value of Prophecy, 1900; W. Sanday, Elucidations, 1905, ch. viii.; H. A. Redpath, Christ the Fulfilment of Prophecy, 1897.

(b) The historical Christ.—The Person of Christ makes a higher appeal than that of mere history. But, viewed from the historical side, we claim (a) that the birth, work, death, and resurrection of Christ are among the best attested facts of human history. (b) That their historicity would never have been called in question were it not for the miraculous element which is bound up with them. (c) That we have already shown that the only scientific treatment of miracles is to regard them as capable of verification, and to weigh the evidence for them accordingly. (d) That the whole evidence in the field of Christ-    

Christianity, both psychical and moral, has been sifted, the whole history of its founding remains as true as any other fact of ancient history.

But the object of our evidence implied under the last head involves a study of topics which will be dealt with under their own titles. We
must, therefore, be content to mention them, and to refer to books where the true discussion is to be found. 

1. The authenticity of the Four Gospels; the claim that either they record facts, or else nothing whatever can be said about Jesus of Nazareth; the arbitrary and unscientific nature of the attempt to offer proof of this claim. 

2. The mutual relation of the Synoptic Gospels; the strengthening of the evidence through their various lines of testimony; the witness of the Fourth Gospel, in the interest of the theory of the two gospels.

3. The Epistles; the earliest witness to the life of Christ; the value of their incidental allusions; the basis afforded by the four uncontroverted Epistles. 

4. The arguments for a historical Christ derived from Jewish and heathen literature; Josephus, and the Talmudic account of Jesus; Suetonius, Pliny, Tacitus, and, indirectly, the True Account of Calum.

5. The Supper. 

6. The Resurrection. — This, of course, is included in the proof of His historical Person on the lines indicated above. But from the beginnings it formed the central evidence of Christianity, and, at the same time, as the supreme miracle of revelation, it has been the centre of attack. It must, therefore, receive separate treatment, owing to its profound importance; for it is the very centre of the Christian position. With it there stand or fall both the claim of Christ to be Divine and the Christian's hope in his own resurrection. At the same time, as the supreme miracle of the Christian revelation, it will bear the weight of all the other Gospel miracles. To have proved it to be historic is to have routed the attack on miracles, while isolated assaults on minor wonders must be brought to face this main issue. The evidence for the Resurrection has been summed up under the following heads:—

(a) The evidence of St. Paul. Not only is the risen Christ the mainspring of his changed life, but he asserts that he, as well as certain others whom he specifies, has seen Him with his own eyes. This is the earliest written testimony we have. 

(b) The evidence of the other Apostles and NT writers. Not only has it been found all through their writings, but it forms the text and centre of the sermons recorded in Acts. 

(c) The indirect evidence contained in the records, which establishes the fact that the appearances were under varied circumstances, yet those in different frames of mind, in the same country and generation as they are said to have happened, and the cause of a changed life to believers and of hope to the world from their example. The sudden change from sorrow to joy in the first disciples is incapable of any other explanation.* 

(d) The evidence of the empty grave. Had Christ's enemies possessed the corpse, they would have prevented it; had His friends possessed it, Christianity would have been consciously founded on a gigantic fraud. This view is now held by no one. 

(e) The evidence of Christ's life before the Crucifixion. The records show that He fully expected this sequel, though His disciples were quite unable to grasp it or to realize it when it had actually happened. 

(f) The evidence of the Church. Not only has the Resurrection been the central belief of the Church from those days until these, but such institutions as the Easter and the Holy Week, and the joy that is contained in them, cannot be explained by any other means.

Such evidence is far stronger than that which supports most of the accepted history of the ancient world. Such is the consistency, the mutual relation, and the inconsistency of the accounts would never have been raised, but for the stupendous issue depending on the historic truth of the Resurrection.

Opponents are powerless to deny that the evidence was sufficient from the earliest days to enable every Christian absolutely to accept the fact, and make it the centre of his belief and conduct. All that they can do is to show how necessary for this belief in such a way as to deny the actual fact.

Bruce reduces such non-Christian hypotheses to five:

1. The thesis that the disciples stole Christ's body, as perhaps He had told them to, in order to make a resurrection. Such a theory as this of Reimarus is now universally discarded.

2. The swoon theory. — Christ did not really die, but revived, natural and pretended to have risen. This view of Paulus and Schleiermacher has been refuted even by Ehrman's recent book with the character of such a moral reformer, while its practical difficulties are inapplicable.

3. The vision theory. — Reimarus and Strauss assert that the belief arose from the hallucination of several disciples, the first to suggest it being Mary of Magdala, an excitable character who claimed to have been possessed. But this directly contradicts every word of the only existing records, which show that excited expectation was entirely absent. Nor is it possible to think, if the Resurrection was only subjective, that these visions suddenly gave place after six weeks to the calm strength of the early Church, witnesses and the inconsistency of the accounts would never have been raised, but for the stupendous issue depending on the historic truth of the Resurrection.

4. The theory of objective visions, or telegrams hypothesis. — This is Nisbett's attempt to compromise. The appearances were not purely subjective, but the objective cause was not a risen body of Christ, but His glorified Spirit comforting them by 'sending telegrams from heaven.' But such a theory, without avoiding the supernatural, does not free the disciples from hallucination, for they certainly thought their Master was there in the flesh, and not in heaven.

5. The mythical theory. — There were no appearances at all, but the strong will of the disciples spoke of the continued life of their crucified Master was misunderstood by the Apostolic Church. Hence the origin of the Christ's resurrection, which was later embodied in the legendary accounts contained in the Gospels. Thus Weisskircher and Martiain would say that all is accounted for by an evolution from the mere report of the Parable flashed upon the disciples in their sorrow that 'Heroes die not,' and after all the Master was not dead. The craving for something more objective led to the invention of legendary Christophristians. We can only answer here, that there is no time for the growth of a myth that would change the human Jesus into the Divine Christ of our Gospels, that it even demands that such a change of belief should have taken place before Pentecost, and that such an explanation of the experience of the first disciples cannot be made to fit with the only records we have of their words and conduct. We thus turn back to the Christian theory as the only rational and historical explanation of the facts. 

Any further discussion of the nature of the glorified body belongs to the province of theology. It is enough to have assurance that the supreme miracle on which Christianity is based is a historic fact. 

See Bruce, Bauer, pp. 333-393; W. Milligan, The Resurrection of Our Lord, 1903; J. Sparrow, The Resurrection of Our Lord, 1905, and art. 'Resurrection' in DOG.

(d) The History of Christianity and of the Church. — Hitherto Church is involved in the first place, a study of Acts and the Epistles. Their early date must be proved. Christianity is not the creation of St. Paul. The early Church did not develop as it is suggested, but grew organically from the early Fathers. The primitive existence of Church order witnesses to the same effect. * However, the theory must not be entirely discounted which accepts the evidence of in the above, pages 293-298. See below, under Psychological arguments, (c) concerning their changed life.
2. **Psychology of Arguments.**—We must explain that this term is used for convenience to denote that class of argument which is not strictly historical, but which deals either with the feelings of individuals, or with the inferences which may be drawn from Christian practices, or the relation of Christianity to other systems. The following are given as examples of such arguments:

(a) The **changed life of the disciples, and the conversion of St. Paul.**—Up to the death of Christ the disciples had shown themselves timid in their behaviour and earthly in their expectations. They suddenly became full of boldness and joy and a new spiritual force which nothing could resist. The psychological difficulty of such a change is enormous. It is overcome only by the explanation that their Master rose again, spiritualized their ideas, and gave them an abiding gift of the Holy Spirit. And even if these unlettered Galileans had been deceived, it is impossible that they could have in their turn deceived a cultured and expert Jewish Rabbi. The conversion and apostleship of St. Paul alone, duly considered, was of itself a demonstration sufficient to prove Christianity to be a Divine revelation.

(b) The **witness of Christian customs and institutions.**—Allusion has already been made to these in their special relation to the Resurrection. But there are other evidential uses to which may be put such recognized parts of Christianity as the Virgin Birth and the Resurrection Year. They satisfy the cravings of human nature, its needs, tendencies, and aspirations, in a way that no other religion does. The ministry is founded on the theory that man is social, and needs organization, continuity, and authority in the guidance of life. The **sacramental system** takes into account the composite nature of man, using and welding into one both the material and the spiritual elements, and at the same time conveying in a definite form that communication of Divine grace which we should naturally expect to be the climax of any revelation which God makes of Himself to the individual. The **Christian Year** links us with the first centuries. Easter and the Law are already observed in NT times, the observance of Friday as the day of the Crucifixion is of early origin; and so the list might be continued. Not only do these things witness to the historicity of the facts which they commemorate, but, viewed from the sphere which is psychical rather than historical, they bring the whole question of Apologetics out of the present, and enable us to postulate the real life of those roots of Christianity which are hidden in the past, when we examine carefully those living and growing branches which are visible in the present.

(c) **The success of Christianity.**—Apart from the moral aspect of the question, an estimate of facts and their relation to mere human possibilities of explanation, suggests an evidence of the Divine origin and the work of the Holy Spirit in the history of the Church. At the same time it has to be remembered that other religions may make a counter-claim, so that the claim of Christianity is a unique one.

The following are the chief points in the argument:

(a) The early, wide, and, within certain limits, irresistible diffusion of Christianity. It required an enormous power to kill polytheism for ever, and to leave not a shrine of a heathen god behind; but this was what Christianity did.

(b) Its power of revival and restoration after every declension and decay. This may be traced throughout the history of the Middle Ages, the Reformation, and more modern revivals, and Christianity may be shown to possess elements which Muhammadanism cannot claim.

(c) The resistance which it has been able to offer to successive attacks and persecutions. The earliest martyrs show how powerless to crush it. All the forces of the ancient world were arrayed against it, but the only result was the decay and fall of Rome itself. And it has faced all objections of later days, and can point to a confusion among its opponents which makes one school of anti-Christian thought contradict another.

(d) It is specially armed with means and motives for self-propagation. Its work of proselytizing, founded on the pure motives of the missionary spirit, is on a different plane from Buddhism and Muhammadanism. The rule of faith expressed in its creeds, the universal application of its sacred writings, the organization of the Church, its mission and the preaching of the Word, the power of its religious influence, the combined strength of intellect and affection, the influence of the Sacraments, the witness of Christian customs and institutions, and the success of Christianity, are all such that the whole may be uniquely fitted to survive and to succeed. Every faith, universally as a whole, has its antagonists and enemies, but none have been arrayed against Christianity as against the other systems.

(e) Its success is in harmony with its own predictions and anticipations. It is here that the argument from prophecy has its fullest force. For it begins with the earliest literature, in the promise that the seed of the woman should bruise the serpent's head, and continues through centuries. And when it reaches the NT, it shows such unlikely features as the anticipation of the corruptions of Christianity, from the parable of the Tares at the beginning to the expectation of Antichrist at the end.

Various natural causes have been added to account for such a success, but one by one they may be proved insufficient, and we fail back on the conclusion that the origin and growth of the faith must be attributed to a Divine agency.

(d) The abiding unity of faith. — In the face of the divisions of Christendom, and the misunderstandings which separate branches of the Catholic Church, it may seem bold to found an argument on the unity of the church they are united in. But when a broader view is taken, and Christianity is compared with other religions, a strong argument for the Divine origin and preservation of the Faith is found to lie in its continued acceptance. The Creeds themselves, handed on intact from age to age, present a remarkable phenomenon. Their silence on non-essentials combines with their insistence on fundamentals to prevent their ever being out of date. No other religion can point to so broad a unity. The unity of Muhammadanism or Buddhism is either local or at least oriental, and can make no such appeal to the whole world. And the fundamentals upon which Christian beliefs are based, quaod semper, ubique, et ab omnibus, are just those truths which are not shared by any people outside Christendom. Such are the spirituality and Fatherhood of God, the moral condition of man and the necessity of a God, the possibility of universal salvation by redemption through One Person, in whom a human and a Divine nature are combined, the Personality and Divinity of the Holy Spirit, the entire work of the invisible Body of Christ as His sphere of working, the approach through the sacraments, the authority of the Scriptures and of the Church, the necessity of faith, and the impossibility of an eschatology such that the thought of the future
resurrection of the body influences men in the present.

And this unity of faith is also manifested in a unity of aspiration. The biographies of different Christians in all ages reveal a kinship in spiritual life and belief, and the same is shown by a study of hymnology throughout the centuries.

It is a profound marvel that the Churches in different localities in the first days did not soon begin to show some cleavage of faith and the purport that results. It is a more profound marvel that in recent generations the multiplication of sects, the revolt against authority, and the rise of free speculation within the Church, have not made more impression on the fundamental unity of the Faith. The least difficult explanation of such phenomena lies in the Divine origin and preservation of Christianity.

(c) The argument from the psychological nature of religion.—This is the result of a study of religion which is of comparatively recent growth. Kant began the investigation of religion not merely by reflection on what was positive and objective, but by taking it as an internal and mental fact. Consciousness proves the existence of religion as a subjective or mental state; but consciousness itself must be analyzed, in order to analyze religion. In this way of the polytheistic division of mental phenomena has been established—into cognitions, emotions, and volitions. Religion must be a state of intellect, sensibility, or will, or some combination of two or all of these factors. Hegel identified religion and thought. Yet no mere intellectual act constitutes religion, though the exercise of reason is an essential part of religion. If religion has no rational foundation, it has no real foundation. Other religions become religion into feeling or sentiment. But every feeling requires an explanation, which can be found only in an exercise of intellect. Man traces religion to fear, Feuerbach to desire, Schleiermacher to a feeling of dependence, to which Mansel adds the conviction of moral obligation. Strauss combines all these. Kant identifies religion with morality. But it is not simply these things, though it includes them. Rather is the religious process at once rational, emotional, and volitional, and is to be connected with all three—knowing, feeling, and doing—in its threefold aspect of knowledge, affection, and self-surrender. If one is able to say that the universal instinct of men as regards a definition of religion, it is this, that it belongs to the whole man, in accordance with the psychology sketched above. The question remains, which religion answers best to this description? It is only theistic religions that can claim to do it; polytheism, pantheism, deism, and rationalism are ruled out. ‘Of the three great theistic religions, Judaism, Christianity, and Mahometanism, the last is far inferior to the other two, and the first is a transition to and preparation for the second’ (Flint, Thesam, p. 44).

Christianity is left, as alone giving a perfect representation of God.

Exercises.—The general superiority of Christia-
nity to other religions.—

(1) Polytheism.—Polytheistic beliefs are the characteristic of the whole ancient world, with the single exception of the Jews. Such beliefs continually broke down with the advance of culture, and it is perhaps sufficient to say of them that they have abundantly been proved to be ethically degrading, as not linked with morality, and philosophically unsatisfying, as offering no final revelation. Some of the religions of India are pantheistic as much as polytheistic, and admit of the fatal objection that they ignore the transcendence of the Deity. See art. POLYTHEISM, PANTHEISM.

(2) Buddhism.—This deserves a word of separate treatment, as its moral goal is profoundly attractive, and it counts almost as many adherents as Christianity. But really it is not so much a religion as a philosophy, an inherently atheistic system which does not offer a reality for wor-
ship, and suggests no hope for a future life. But the fact that its followers have instinctively demanded an object for worship, has caused it to become corrupted and obscured by the introduction of pure polytheism.

See C. F. Alken, The Dhamma of Gotama the Buddha and the Gospel of Jesus the Christ, 1900.

(3) Mahometanism.—Here it is its success which forms the chief recommendation of the religion; but this has been largely discounted by the forcible means of propagation which have been required. Its pure monotheism brings it into relation with Judaism and Christianity, but its God is as distant as He is sublime, and its theological outcome is simply awe and submission, not loving intercourse. The lowness of its moral standard prevents it from having a civilizing influence, and the moral state of society under it may be judged by the painfully degraded position of woman. The fact that it is founded, not on a life but on a book, checks its power of expansion and adaptation, and has reduced it to a code which is the enemy of all real progress.

(4) Judaism.—This is the one pure religion of the ancient world, and might be a formidable rival of Christianity if the latter were obliged to treat it on its own terms. But even in the same, there is a force, and its influence is felt on all that is best and purest and most permanent in Judaism. Historically, the one religion grew out of the other; theologically, the germ of Christian doctrine is to be found in the OT doctrines of God and man, its progressive revelation, and its Messianic hope. There is no desire to belittle the one pure religion of the ancient world, but there is much in it that is incomplete. Chris-

3. Metaphysical arguments.—(a) The argument from intelligence, will, and conscience, commonly called the Ontological argument. In nature, because we are thinkers ourselves, we realize that what is before us is the result of thought. We grasp by our intelligence that intelligence is exhibited in all work in which there are parts which bear an ordered relation to each other, and in which the whole is something more than the mere sum of the individual parts. Therefore we infer that what the mind detects, mind has pro-
duced, and that a creative intelligence underlies the order of the universe. In metaphysics the demand for ethical perfection, in the voluntary fulfillment of such non-natural requirements as the dictates of duty, imply a standard, a superhuman will, a. Holy One, such as has been revealed to the world in Christ. In the realm of conscience, there
lies in the human mind an instinct which expresses itself in the conviction of a survival after death and of future retribution and reward. In the face of allills and miseries, man continues to live in hope, and to adjust the balance which will not terminate until the full demands of that moral law, of which conscience is the representative and ambassador, have been met in the proper way. Only when man finds the conscience thus combine in a threefold suggestion of an Intelligence which creates, of a Lawgiver who imposes a superhuman will, and a Judge who re-adjusts the balance. But in view of the unity of nature, and the unity with it of our human nature, which that lies behind all nature, and which the various parts of our human nature suggest, will in itself be One. We therefore arrive at a Personal God, as He has been revealed in Christ.

(b) The argument from consciousness.—We cannot stay to discuss that part of Herbert Spencer's philosophy which deals with the unit in nature (see J. I. Arneil, The Philosophy of Mr. Herbert Spencer examined (Rel. Tract Soc.)). But human consciousness or personality affords an argument which is intertwined with the foregoing and has been put in a form of which the following is an outline.

1. Through direct consciousness of himself man discovers that he is possessed of a Permanent Personality endowed with will, Intelligence, moral and spiritual affections. 2. Through consciousness further developed by reflection on himself and the universe, he attains the conviction that over all is a Supreme Personality, endowed with omnipotent Will, infinite Intelligence, perfect Righteousness, and Love. It is contended that this teaches the reality of the spiritual rest on the same basis and stand or fall together. If the primary consciousness of a human self is denied, all the rest vanish with it. On the other hand, if it is accepted, it carries all the rest in its train. Thus it is from the 'knowledge of himself that man rises to the knowledge of God, and that the fruit of belief in the ultimate idea of humanity, agnosticism, is a virtual denial of his humanity.'

(c) The argument from the idea of God.—Whence does the idea of God come to us? It is not originated by any of the arguments we use, whether ontological, cosmological, or teleological. They help to verify it, but they postulate it as already existing in the mind. It cannot be traced to man's conscience, heart, or reason, though these faculties may verify and develop it. There is no place where the idea of God has not existed. Therefore God exists. Kant overthrew the original ontological argument by asserting that any cognition of things is impossible where there is no empirical matter to work upon. But we refuse to allow that God is not empirically known. Materialism, agnosticism, really asserts not only that man cannot know God, but that God cannot make Himself known. And to say this is to deny His existence. But a denial of God's existence is possible only for the man who has passed through every sphere in his search for Him. In short, in order to be able to assert authoritatively that no God exists, a man must be omniscient and omnipresent, i.e., he must himself be God, and himself give a view of himself.

(d) The Cosmological or Atheological argument.—We have the idea of causality inherent in us. We attribute everything to some cause, even though we feel ourselves on a somewhat lower level of causality than ordinary nature, we do not feel self-caused. Our notions fall back to a First Cause, which is the final cause of all, and itself uncaused. This shows that the universe suggests such a cause must be, not mechanical, but full of order and intelligence, and the study of our own personality leads us further to think of this Cause causans as a personal God.

See, for the metaphysical and philosophical aspect, Caldecott, The Being of God in the Light of Philosophy (Camb. Theol. Soc. Tracts, 1897); Edwardes, The Being and Attributes of God, 1894; and Bonner and Reversion, 1905; and, for the influence of modern knowledge on the main theistic arguments, Baird, Thamsonian True, 1895, pp. 62-242.

EXCUSES:—The anthropological attack.—The analogies between Christian beliefs and practices and those of some of the other great religions of the world, has long been used to cast an attack upon the faith. In recent years the study of primitive religions, and of anthropology generally, has suggested further analogies, and given rise to a fresh attack. The attempt is being made to explain away Christian beliefs and practices, and thereby the survivals of what has now been found to exist in primitive cults all over the world. Various modes of defence have already been employed, but the apologists must not ignore the parallels afforded by recent discoveries. The facts collected in such books as Frazer's Golden Bough or Crawley's Mystic Rose or Robertson's Pagan Christianity must rather be claimed and used for the Christian argument. As illustrations of the hostile use of them we may mention the theory that Christ is to be connected with Eastern Sun-worship, the twelve Apostles being the signs of the zodiac, and that the Sacrament of Communion is merely an adaptation of the widespread primitive rite, with corresponding accompaniments, that to partake of a life means to inherit its virtues. And strange elaborations have followed, such as Frazer's theory of the Crucifixion, which suggests that the Jews had reference to the feast of Purim the customs of a strange kind of Saturnalia, wherein a mock king was first pampered and then killed; and that Christ only met 'the fate that annually befell the malefactor who played the king' (see J. G. Frazer, The Golden Bough, iii. 190 ft.).

The Christian answer to which we would briefly point is that all religion is one, and that its 'primary function is to affirm human nature, and to present Cricket, The Tree of Life, 1905, p. 270.) If Christianity is God's final answer to human needs, we shall expect to see those needs manifesting themselves elsewhere. We can see a deeper meaning in the parallels which forms so remarkable a bond between Christianity and the lower religions. These analogies from savage culture show that religion, everywhere and always, is a direct outcome of elementary human nature, and that this elementary human nature remains practically unchanged. This it must continue to be so long as we are built up of flesh and blood. For instance, if a savage eats the flesh of a strong man or divine person, and thus becomes a Christian partaker of Christ's body and blood under the forms of bread and wine, there is evidently a human need behind both acts which prompts them and is satisfied by them, and is responsible for their similarity. Christianity is no survival from primitive religion, but a higher development from the same permanent sources (E. Crawley, The Tree of Life, 1905, p. 201 f). See also J. R. Illingworth, Divine Inhumaneness, 1898, ch. iv."

(iii) The moral realm.—It has been said that the moral element in our nature is as much higher than the mental as the mental is above the physical. The weight of moral arguments is therefore greater, and perhaps for this reason this sphere has been chosen by recent apologists for their main line of defence. It has already been mentioned that Christ Himself in His moral aspect is the supreme apologistic of to-day; but there are other lines of moral argument which are placed first, owing to their priority in the sequence of thought.

1. Arguments for heistic belief from the moral realm of thought.—(a) The universal idea of God and cultivation of religion.—This argument is sometimes called 'the evidence of general consent.' Cicero witnessed long ago, 'that every nation, barbarous, or any people in the world so savage, as to be without some notion of
The origin of moral law is a subject of universal interest. In some way or other it is a topic of conversation in every home, at every meeting. The question, "What is the origin of moral law?" is a question which every person must sooner or later ask himself. The answer to this question is one of the most important questions that can be asked. It is a question which affects our whole system of thought and our whole system of action. It is a question which affects our whole system of morality.

The moral sense in man, the conscience and the sense of sin. — Kant, while rejecting other arguments, placed the whole weight of proof on this one. There is in our nature a sense of moral responsibility, a feeling of what we ought to do, regardless of our present wishes and immediate advantage. This sense, commonly called conscience, cannot come either from our own liking or the will of the community, against the opinion of which it sometimes acts. The only explanation of its working is in the existence of a perfect moral being, independent of ourselves, a perfect Lawgiver and Judge, to whom conscience feels itself responsible. It is here that we are brought closest to the vast problem of evil and of sin. A discussion of it belongs to theology rather than to apologetics. But we may quote the saying of Leibniz, that "nature cannot be reduced in perfection, physical in suffering, moral in sin." As we trace the upward development of the race, we find that just where the sense of individual personality comes to the front, a conflict begins to be realized between the demands of others and the demands of self. Man is as unique as a position in which he may either rise higher or fall lower. He has a consciousness of something higher; if he willfully chooses to remain lower, it is his own doing, and the results of it will be found later. But since his moral nature does realize the choice, struggling upward to the higher, in spite of the certainty that he will never fully reach it, and filled with humiliation when he has failed in the struggle and not possessed in the sin, we are pointed to a perfect moral Being who is averse to sin, and to whom the moral sense in man knows itself to be responsible.

The moral sense of the world's history. — The tangled skein of human history is found, when unravelled, to exhibit a continual progress towards a more and more perfect exhibition of righteousness and goodness. Here is a purpose running through history, indicating a moral government of the world. This may be studied in the development of the various sides of human institutions, as the life of nations, social life, crime, law, and religion. But such a moral government of the world is not the only result. The unification of the human race, implied a moral Governor and Educator; for it is impossible that such tendencies should be unconscious and impersonal.

2. Arguments for Christianity from the moral realm of fact. — (a) The Christian Scripture. — As the study of nature suggests an intelligence behind, and a study of history suggests a moral Governor, so the Bible suggests a moral power higher than that of the men who composed this great literature which contains so many varied elements. Stress must be laid on (1) its organic unity, manifested in an OT and a NT fitting into each other exactly in the changes of the ages; and thought, in the wonderful symmetry that is presented to the two, and in the advancing morality which may be traced in their pages; (2) its authority, the moral force and power of conviction that its writers possess in an absolutely independent degree of its tone of certainty and genuine ring as the authoritative message of God; and (3) its exact correspondence with the deepest instincts of human nature, so that conscience welcomes its words as the highest expression of morality and religion.

(b) The morality of Christianity. — The success of Christianity has already been dealt with. But nothing has been said about the inward and radical transformation which it has effected. Its elevation, from the first days until these, of those who embrace it, is a moral miracle absolutely without parallel. The early appeal to persons who were already so to believe, the effects of Christianity, as seen in a complete moral change in Christians. The argument has been increasing in force ever since. For the inevitable intellectual or moral degradation of half-hearted members into a growing community, which soon extended as widely as civilization itself, is more than compensated by the contrast between the civilization which has been leavened by Christianity, and any other civilization in the history of the world. It is true that Christian morality is founded on the morality of Christ, and can be explained as a perpetual endeavour to fulfil His precepts and imitate His example. But this only takes the argument one stage further back, as we shall see shortly. And the very fact that the sustained endeavour has been made gives an additional proof that the morality of Christ was not a human and natural product. The points in Christianity which must be insisted on: (1) It presents an ideal which no one except its Founder has ever fulfilled or expected to fulfil. And yet men have gone on trying. They have none of the satisfaction which belongs to those who fulfil a law which is as perfect as that of Mosaic legislation. And their reason for trying is not personal advantage, for the ideal has to be sought through self-sacrifice; in Christianity it is the losing of one's own soul that is to save it. (2) And not only is Christian morality different from what the natural man would wish for himself, but it is different from anything that he would invent. Its code is of the most unexpected kind, and has no real parallel or preparation elsewhere, in whatever setting we view it. And perhaps least of all was it likely to arise at such a place and time as Palestine in the 1st cent. of our era. If we reject the explanation of it which lies in the person of the Founder Himself, the alternative conclusions are difficult indeed of acceptance. See F. Ballard, Miracles of Unbelief, esp. pop. ed. 1904, p. 342.

(c) The Person of Christ the moral ideal. — The morality of Christ's teaching is universally accepted as the highest moral ideal that has ever been. The point need not be laboured here. But one thing may be said as a matter of His teaching; it is His example that stands highest. And in this there is agreement among all. Even a writer like Lecky can say (History of European Morals, vol. ii, p. 9): "The simple record of three short years of active life has done more to regenerate and to soften mankind than all the disquisitions of philosophers, and all the exhortations of moralists. This has indeed been the well-spring of whatever is best and purest in the Christian life."

It is upon the moral ideal presented by the Person of Christ that modern apologetic takes its stand. It boldly asks, "When did the age fulfil the ideal of man these things?" and demands a rational answer.

(a) Is it replied that this is simply derived from our records, and need have no place in the history of actual facts? There is an answer: for we ask, Whence then came the Gospel portrait of Christ? Whatever view be taken of the composition of the Gospels, it involves in some one an exquisite conception of the ideal which has no parallel in the world. It is impossible to believe that various men, whether few or many, whether actual disciples or only compilers working up traditions in later years, succeeded in forming a unity, a harmonious picture, such as is found in
the Gospel portrait. The only explanation of their work lies in there having been an original to be painted.

(8) May we then, retain the moral part of the portrait, and take it out of its miraculous surroundings? It will be found that the two are so interwoven that separation is impossible. Take away the supernatural, and nothing but a shadow is left. For the miracles are not interspersed amid the various indications of the character; they are the outward manifestation of it. They are not written comment on rare occasions, with an evidential purpose, but simply as the natural acts of so exalted a character.

(7) And what of the Divine claim of Christ? Is it possible to regard it either as interwoven in the tale by His mistaken followers, or as an individual mistake owing to a wrong estimate of His own Person? Both alternatives seem incredible, in view of the fact that this claim is the only key to His life, His words, and His work. Take such a public declaration as 'I am the light of the world' he that followeth me shall not walk in darkness, but shall have the light of life' (Jn 8:12). If anything in the record is true, surely that solemn utterance is the climax, and before the multitudes who had thronged to the feast, is not a figment of after years. And if He made the claim Himself, more presumptuous than could have come, not only from a Galilean carpenter, but from the holiest of men, what must we say if it were not true? That He was either an impostor or a deluded enthusiast. No one nowadays dare assert the former, and to do so would only make it a greater miracle in the highest moral ideals of humanity have for eighteen centuries been linked with such a man. And if the latter alternative be chosen, it is absolutely impossible to reconcile the self-sacrificing devotion and utter humility of His whole life and work with a distorted moral oblation and infatuated self-assertion which could make so preposterous a claim. The familiar dilemma, 'Aut Deus aut homo non bonus,' has not yet been avoided by those who would hold such views. If the moral ideal which His Person presents forbids the latter, the former is the only rational explanation which remains.

(8) But is not the Bible to be allowed to enter and explain? Is it not simply that in Christ the upward movement reached its climax, and in Him we see the moral sense of the human race reaching its perfection? But is it the reverse of true that such a claim can be explained by its antecedents and environment. The arguments of Paley are still true of the originality of Christ's character. He assumed a part which was in many ways the direct opposite of the Messiah of popular expectation. And the one Catholic Man, whose teaching is adapted to all nations and all ages, sprang from the narrowest and most bigoted nation of antiquity. And those who deny His Divinity change the virgin birth into an illegitimate one. They rob themselves of the argument that He was only evolved as the purer son of a pure virgin. They assert in effect that the most marked and mighty impulse of the past towards all that is purest, worthiest, loftiest, in the evolution of human nature, emanated spontaneously from the unfutured, peasant-bred son of an adulteress (Barrard, Miracles of Unbelief, p. 275). Such things are a denial of Christ, and not an explanation, and constitute a moral miracle far more difficult to accept than that a pure virgin 'was found with child of the Holy Ghost.' This line of defence is thus seen to lead to a direct attack on the enemy's position.

See Lidddon, The Divinity of our Lord, 1837; Gore, The Incarnate Word, 1858; Barrard, Miracles of Unbelief, p. 275. Such things are a denial of Christ, and not an explanation, and constitute a moral miracle far more difficult to accept than that a pure virgin 'was found with child of the Holy Ghost.' This line of defence is thus seen to lead to a direct attack on the enemy's position.

See F. Ballard, Miracles of Unbelief, pp. 290-310.

(c) The testimony of holy lives.—It has always been realized, from the days of the early apologists, that one of the most telling of evidences lies in the spiritual life of Christians. Few men are argued into a belief in Christianity, and it may be that one of the plainest of these yearnings of the perishing is that the life of Christians is a light to the world. The real power of Christ's Apologetics may be enlisted into a science, but the work of turning men is but little due to the professor of Christian. Each Christ-like life is in itself a powerful apologia, and often succeeds where all else fails.

(d) The personal experience of the Christian.—This can be the final test of the Christian. The person can test all he has been told, in the sphere of his own spirit, and says of his God as accredited in Christ. And this experience has been multiplying.
Apostasy (Jewish and Christian).—The deliberate abandonment of one religion for another, e.g. Judaism for Christianity or vice versa, made voluntarily or under compulsion. The word is usually employed in a bad sense, and consequently from the standpoint of the religion deserted. Heretics, i.e. those who embrace one form of a religion in place of another, are not here reckoned as apostates. In Christian jurisprudence an apostate is regarded as more deserving of blame than a heretic.

The word ἀποστασία is used in classical Greek of a revolt or defection from an alliance. ἀποστασία is a later form, found in the LXX and the Peshitta, and Dioscorides of Helwan. In the LXX these words, with their kindred forms, ἀποστάσιος, ἀποστασίας, ἀποστασίος, are used in the sense of rebellion against Jehovah (2 Sam 22, 1) or an earthly monarch. Thus the 'rebellious children' of 1 Sam 3, 20 are called τὰ ἄποστασιά τα ἀνθρώπων; the idolatrous Abiah (1 K 14, 20) and the city of Baal (1 K 16, 33) are rendered ἄποστασιας ἄνθρωπος. In 1 Mac, the word ἀποστασία is used in its modern sense (22, 16; 14, 20; see ἁπερατος ἄποστασιας). In the NT, St. Paul is accused of teaching 'an apostasy from Moses' (Ac 21, 24), and he speaks in 2 Thess. 2, 3 of the great antichristian event as 'the coming of the man of sin'. Before the revelation of the 'Man of Sin' (see below), Augustine calls the 'Fall of Man' the apostasia prons hemiotes (c. Jul, lib. ii.), and he uses this term because the absolute freedom of our first parents, unhindered by original sin, to choose between obeying and disobeying God, made them a voluntary defection (see Shedd, ii. 145 ff.). St. Thomas Aquinas (Qua. 12, Art. 1) says of disobedience: 'apostasia videtur esse sacratissimam praevaricatam.'

1. Although we have many examples of national apostasy in the OT, instances of individual defection of the religion of Israel are rare; but in the Deuteronomistic law the provisions against those who try to persuade the people to serve other gods are naturally severe (Dt 13-16). In Ezekiel we have examples of secret worship of heathen deities practised in the very temple of Jehovah (Ezk 8-16). On the whole, however, it may be said that, with the exception of the great apostasy in the days of Ahab and Elijah, the infidelity of Israel towards Jehovah was, as a rule, shown in attempts either to combine this worship with that of the local divinities, or to serve Him with rites similar to those practised in the worship of the gods of Canaan.

We first meet with distinct acts of apostasy from Judaism during the fierce persecution under Antiochus Epiphanes, when Jews either voluntarily or under compulsion renounced the worship of God for that of the deities of Greece. The degree of apostasy varied between a total abandonment of all pretense of Judaism, and the adoption of certain Greek customs like the practice of the arts and athletics and the wearing of the petaion, or broad-brimmed hat, which the more rigid Jews regarded as an act of disloyalty to Jehovah.

Antiochus Epiphanes (c. 175-164) did not cause the ten- dency to apostasy to be of Hellenistic origin, but he was undoubtedly a prominent factor in his growth in the early period. The inhabitants of Jerusalem, especially the priests, had already conformed to the Greek dress and frequented the paleostasia (2 Mac 4:9-12). Jason the high priest even sent presents for the sacrifices to Hercules at Tyre, though his ministering priests regarded it as an impious thing. He also allowed the images of the gods to be set up in the temple, and handed it over to the royal navy (2 Mac 4:18). When the people replied that they did not wish to participate in the sacrifice and to eat swine's flesh, many of them apostatized (1 Mac 14:9); and it was the slaying of one of these by Mathan which led to the outbreak of the rebellion (1 Mac 2:49). The Hellenizing Jews held the circumcision ceremony as a violation of the Law and the Syracuses (1 Mac 12), and were not dispossessed till 119 B.C.

Apostasy of a different kind is mentioned in the Book of Wisdom. The Alexandrian Jews adopted in some cases the philosophy especially of Epicureanism (1 Wt 3, 16), and in the early Jewish apocalypses (2 Bar 37:13) the term ἀποστασία is applied to apostates (see below).

2. Examples of apostasy among Christians are to be found in the NT; but in many cases the falling away of the apostate was voluntary, and their total number is not great, and the rest must be done in the region of the Spirit, wherein alone the probability can pass upward into certainty.

T. W. CHAFFER,

Apostasy (Jewish and Christian).—The deliberate abandonment of one religion for another, e.g. Judaism for Christianity or vice versa, made voluntarily or under compulsion. The word is usually employed in a bad sense, and consequently from the standpoint of the religion deserted. Heretics, i.e. those who embrace one form of a religion in place of another, are not here reckoned as apostates. Apostasy of a different kind is mentioned in the Book of Wisdom. The Alexandrian Jews adopted in some cases the philosophy especially of Epicureanism (1 Wt 3, 16), and in the early Jewish apocalypses (2 Bar 37:13) the term ἀποστασία is applied to apostates (see below).

2. Examples of apostasy among Christians are to be found in the NT; but in many cases the falling away of the apostate was voluntary, and their total number is not great, and the rest must be done in the region of the Spirit, wherein alone the probability can pass upward into certainty.

T. W. CHAFFER,
but it does not appear from the context that this means that the apostasy could restore an apostate to the Church. In his treatise de Pectoralibus, written in his Montanist days, the same writer, whilst denouncing Zephyrinus (I., Bishop of Rome, for allowing penitents to sacrifice to the deity of certain altars, and in his argument by showing that these offences are in the same category as idolatry and murder—unapologetically so—called it an "error.") It seems factually certain that in the re-admission of the lapsi was a novelty in the days of Cyprian. 'Evidently,' says Alph. Benson, 'the question which to some was presenting itself was, then, or upon what terms, the lapsied should be re-admitted, whether it was possible for the Church to remit such guilt.' (Cyprian, 3:27, 156.)

The law of the early Church in regard to apostasy was very severe. The offence consisted not merely in desertion of the Christian faith, but in a complete compliance with paganism, i.e., a man was not permitted to continue a member of the Church who was engaged in any trade ministering to idolatry, superstition, or licentiousness; nor was he allowed to return to the communion by offering sacrifice in an official capacity.

When the days of persecution ceased, the severity of the canons was considerably modified, and apostates, moreover, were limited to a penalty after demonstration of composite penitence. The strictness of primitive Christianity is seen in the enactments of the Council of Elvira (418) in Spain, held during the persecution of Diocletian (A.D. 303). Apostasy to the Catholic Church was not permitted especially in Spain and Gaul, and Christians were forbidden to attend Jewish banquets or to have any intimate dealing with Israelites. After the conversion of Constantine, apostasy became a civil offence punishable by law. Apostates to Judaism were liable to confiscation of property, and lost the right of making wills. Repentance was of no avail as regards the civil penalties incurred by apostasy, which included dismission from all public services of dignity.

Apostasy was a crime, and one who was guilty of apostasy was excluded from the Church, and also from all society, and finally was banished.

4. In the Middle Ages apostasy and heresy were punished with the utmost severity, but it is scarcely possible to conceive of the open abandonment of Christianity where the jurisdiction of the Church was all-powerful. We have, however, a curious example of a deacon in England embracing Judaism in order to marry a Jewess, and being buried at Oxford on 17th April 1222, of course after degradation from his clerical office. This is one of the few cases of the execution of a heretic in England in the 13th century. In 1277 the Chief Justice of the Duchy of Cornwall was condemned for apostasy, and sentenced to death, and was executed at Oxford.

For the execution of the deacon see Maitland, Canon Law in the Church of England, ch. vi., "The Decree of the Jews."
Templars were accused of making every candidate for admission to their body apostatize by thrice renouncing Christ and spitting upon the crucifix. Torture was freely employed to extort confessions, but upon the whole evidence obtained was of the most contradictory character, and the majority of those examined persisted in the innocence of the order; and though the processes went on simultaneously throughout Europe and the Levant, no seriously incriminating evidence seems ever to have been obtained.

The cruelties which accompanied the suppression culminated in the burning of the Grand Master Du Molay and his companion on the Île des Juifs on the Seine, 19th March 1314.

Lea, History of the Inquisition, vol. iii. pp. 239–341; Milman, Latin Christianity, bk. xii. ch. 1. Hallam, Middle Ages, vol. i. p. 137, is inclined to credit the charges against the Templars on account of the publication of Count Hammer Purgatelli’s essay, Minus de l’orient externe (1819), charging the Templars with apostasy to a sort of Ophite Gnosticism. The subject is discussed by Castle in the Transactions of the Quatuor Coronati Lodge, vol. xix. pt. 3.

The Spanish Inquisition originated for the purpose of suppressing not heresy, but apostasy. The marranos, or Jewish converts, were suspected of practising under cover of their new religion the outwardly conforming to Catholicism. It was to root out this crypto-Judaism that the tremendous machinery of the Holy Office in Spain was devised, and how effectively it was carried on we have seen in those who were expelled to Judaim.

In 1875, there have been many examples of Christians among the Turks and Moors abandoning their faith in order to enjoy the privileges reserved for Muslims; and these renegades occasionally enjoy high official positions in Turkey. Naturally such persons abandoned their nationality with their religion. Apostasy from Christianity to Judaism is imprisoned in Newgate in the following year, and died in 1793, conforming in all respects to the ceremonies of his new religion.

In recent times there have been cases of Europeans of Christian parentage embracing Muhammadanism and Buddhism, and conforming to the practices of these religions. In France it has been asserted that Diabolism is practised as a religion, of course involving a distinct apostasy; but the evidence of such persons as Leo Taxil, who declared that a church existed in France for the worship of Satan, seems to have been discredited by his subsequent disavowals, and Satanism (q. v.) seems to be little more than the revivification of some of the follies of the Black Art of the Middle Ages.

F. J. FOAKES-JACKSON.

APOSTASY (Muhammadan).—‘He that adopts any other religion shall be put to death.’ Such, according to the sacred Muslim tradition, was the command of the Prophet; and on this basis all Muslim jurists are unanimous in deciding that apostasy, viz. Islam (Arab. tawbda) must be put to death in the absence of any confession of repentance. This was also the view held by Mu‘āth ibn Jabal, Muhammad’s governor of Yaman. According to a well-known tradition, this official came to Abū Müsa, whom he found engaged in questioning a prisoner. On hearing that this man had apostatized from Islam, Mu‘āth ibn Jabal refused to take any further part in the apostate’s treatment, for he had been put to death, saying: ‘Such was the decision of Allāh and his Apostle.’

But, according to the opinion of the majority of jurists, it is desirable (according to others, even a duty) before proceeding to have the apostate repentant by death. This is to bring the apostate to repentance (Arab. tawhīda). If such a one declares that he turns again to Islam, then the inquisitors are to be satisfied with the response and let him go away in peace. If, on the contrary, he refuses to return to Islam, they are bound, according to many, to allow him a delay of three days (according to others, even longer) as a period for reflection. He is still retained in prison and may within this interval go back upon his error. In support of this practice, reference is made to the example of the Khalīf Omar. When he learned that a man of the troops of Abū Müsa during the siege of Constantinople, who had been put to death on account of apostasy from Islam, was extremely indignant at the deed. ‘Why,’ he inquired, ‘did you not keep him in prison three days and until he repented, in order to bring him to repentance?’ And all the companions of the Prophet who were present showed by their silence that they agreed with him.

The Jindāfis are inclined to think that the punishment of death on account of apostasy is applicable only to men. According to them, women are only to be kept in prison until they repent, because the Prophet has forbidden the putting to death of unbelieving women. According to others, this prohibition has reference only to the killing of the wives of unbelievers in the Holy War. A similar difference of opinion exists with regard to the punishment of apostates while yet in their minority. According to some lawyers, may be put to death immediately, according to others only after attaining their majority.

The punishment by death is to be carried into execution only after the sword. From the sacred sources of tradition, it is known that the Khalīf ‘All caused the adherents of Abū Allah ibn Sābū to be burnt to death because they proclaimed that Allah had revealed to him that ‘All himself was God. ‘All regarded this as a confutation of the doctrine of apostasy from Islam. But when Ibn ‘Abbās learned the occurrence, he said: ‘I should indeed have put them to death, but certainly not burned them, for the Prophet has forbidden that any one shall be punished by fire, because this mode of punishment belongs exclusively to Allāh.’ On this account, the opinion prevails that the infliction of death by the state is prohibited in Islam. But other modes of torturing to death are also expressly repudiated by Muhammadan jurists.

Various other legal consequences of apostasy from Islam are mentioned in detail in the Muslim law-books. For example, the apostate is thereby legally annullèd. So also he loses the reward of all good works which he may previously have performed, and must make everlasting atonement for his sin in hell. His corpse is not to be buried among the graves of other Muslims, etc.

Apostacy does not necessarily consist only in an express declaration that one is no longer a Muslim, but may also be deduced from various other circumstances. If, for example, a Muslim declares to be lawful what the canonical law forbids to him, or, on the contrary, unlawful what the law permits to him, then such a conduct is a clear
APOSTOLIC AGE

The phrase is commonly used for the period in the history of the Church extending from the death of Christ to the end of the 1st cent., when, according to ancient tradition, John, the last of the twelve Apostles, passed away.

If the term 'apostle' were taken in the broader sense in which it is commonly used in the earliest days, the Apostolic age might be regarded as extending to the 2nd cent., when there were still many travelling missionaries bearing the name 'apostle' (see Delitha, 11). But the term soon came to be applied exclusively to the Twelve and Paul, and has been used in this sense ever since. It is true that no sharp line of demarcation can be drawn between the 1st and early 2nd centuries; and even assuming that John lived to the time of Trajan, it is possible that he held no specific significance for the history of the Church. As a consequence, some historians have made the Apostolic age end with the destruction of Jerusalem in A.D. 70, or with the death of Paul. But to give such an emphasis to the former event is to overestimate its significance for the history of the Christian Church; and to make Paul's death the close of the Apostolic age is to imply that he was the only Apostle, when as a matter of fact there were others before he came upon the scene, and after he had passed away; for Peter himself, to say nothing of John, very likely outlived him by half a dozen years (see Moffett, Apostolic Age, p. 92). If the designation is to be retained at all, it is better, then, to use it in the traditional sense for the period from A.D. 30 to 100 A.D.

2. Sources.—Our sources for a knowledge of the Apostolic age are meagre, and yet on the whole they are sufficient for the generation immediately succeeding. Most important of all are the Epistles of Paul, which are very rich in historical material. The Book of Acts is also indispensable, based as it is in considerable part upon older sources, and containing a great deal of information not to be found elsewhere. But, like any other historical work written by one not himself an eyewitness of the events recorded, it has to be used with caution.

Into the question of the authorship and sources of the Book of Acts it is impossible to enter here (see the special studies by Sarf, Die Entstehung der Apostelgeschichte, 1899; Feine, Eine vorhistorische Uberlieferung des Lukas in Bragg, und Apostelgeschichte, 1901; Spitta, Die Apostelgeschichte, ihre Quellen und deren geschichtliche Werth, 1901; Clement, Die Ohren, der Paul, Briefe, 1899, p. 97 f., and in Th. Stud. und Krit. 1899; as well as in Wiss. und Krit. 1899. See also the summary in Moffitt, The Historical New Testament, 1909, p. 5). Recent work entitled Lukas der Arzt (1909), Harnack maintains, in opposition to the older historical opinion, that the 'helocalic physician,' mentioned by Paul in Col. 4:14 (2 T 4:14, Philm 9), was the same man who had been the famous 'we' passages (100-9 200-211 271-29,199).

The first disciples felt themselves to be the citizens of the future Messianic Kingdom, and their interest centred there rather than in the present. As a consequence, they were not in any sense social reformers. The community of goods, of which we have no account in the New Testament, is not a social ideal, but was simply an expression of the feeling of brotherhood which prevailed within the little Messianic circle, and of an indifference to the goods and property of the present age which men expected its speedy displacement by a new and more glorious order of things. There was nothing token of unbelief. In like manner this is so, if, at any time, a Muslim worships the sun or the stars or idols, or declares the Prophet to be a liar, or makes himself subject to the jurisdiction of a Jewish law of doubt.

According to the view of the Shafis, this is not only apostasy from Islam that is to be punished with death, but also apostasy from other religions, whenever this is not accompanied by conversation to Islam. In the case of the Hebraic people, however, the law will thus have to be put to death, according to the Shafis, because the Prophet has commanded in general that every one shall be put to death 'who adopts any other religion' (Ver. 3).
in Christianity as understood by them to necessitate a break with existing Judaism. In fact, the Christian position was that if Judaizers sought to win followers, they would be excluded, and so it came to pass that the earliest Christian communities were almost entirely non-Jewish. Even the attempts to attract Jewish converts show an aversion to Judaism which at this time seems to have been only temporary. But it was impossible for non-Christian Judaism to regard the growing Christian sect with friendly eyes. The Christians, in fact, had to endure the steadily increasing hatred of their countrymen; and their flight from Jerusalem shortly before the siege of 70 A.D., and their refusal to take part in the Bar Cochba rebellion in 192 A.D., only served to make the break complete and permanent. Though hated and repudiated by their countrymen, they still clung to their ancestral law and custom, and lived for the most part in isolation from the rest of the Christian Church, being divided into separate and distinct communities. Finally, after some centuries, Jewish Christianity entirely disappeared. The future was not with it, but with another form of Christianity altogether, of which the Apostle Paul was the greatest champion.

(b) Pauline period. — For this period our sources are Paul's own Epistles and the Book of Acts. The account in the latter is fuller and more trustworthy than for the earlier period. The author's information, however, was not always accurate and adequate even here, and his account has to be used with caution, and corrected or supplemented at many points by the Epistles, which are a primary source of the first rank.

The second period is distinguished from the first by a change of leaders, of scene, and of principles. In place of personal disciples of Jesus, a new figure came to the front who had never known Him; in place of Palestine, the Roman empire at large was now the scene of activity; and instead of a mere form of Judaism, Christianity became a new and independent religion.

The conversion of Paul has always been recognized as an epochal event in the history of the Church. To him it was chiefly due that Christianity was the religion of the great Roman empire, and ultimately a world-wide religion. It is true that even before his Christian activity began, the new faith had been carried beyond Palestine and had made conversion among the Gentiles,—he was not the first and not the only Apostle to the heathen,—but it was he who gave permanence and stability to the work, and thus became the real founder of the world-Church. Under his leadership Jewish propaganda became Christian propaganda, and the influence of Judaism in the world at large was made to promote the spread of a faith which became its worst foe. No wonder that Paul the Christian was hated by so many of his countrymen both within and without the Christian circle. It was he who made Jewish propaganda ineffective, by substituting for it a propaganda which concerned itself with nothing of its limitations. Paul was himself a strict Jew, zealous for the traditions of the fathers; but he was also a citizen of the Roman empire, born and bred in the midst of those races and institutions which had hitherto meant little or nothing. It was inevitable that he should be interested in the spread of Judaism in the world at large, and thus, he became a Christian, the relation of the new faith to the life of the Roman empire should occupy his thought. But it was out of his religions experience before and after his conversion that he was born the principle which revolutionized Christianity and made it an independent religion. His conversion to Christianity was not the mere result of the conviction that Jesus was the Messiah, making of Him simply a successor of Moses. He had the fruit rather of a moral struggle of peculiar intensity, out of which he emerged victorious only because he discovered in Christ a liberator from the bondage of law, and the creator of a new life of moral liberty. His moral struggle was not the effect of his conversion, but an antecedent of it, and his Christianity was simply the answer to his moral need. In it, therefore, there was a universality quite foreign to the Christianity of the early Jewish disciples. To them it had meaning only as a Jewish thing; it was the realization of their national Messianic hope. But to Paul it was the solution of a universal moral problem and the answer to a universal moral need. There was the desire for righteousness and the consciousness of failure in its pursuit, Christianity had place, and so it was just as much for Gentiles as for Jews. Then the Christian hopes and the Christian things to do with it; it was simply a new moral principle needed by all; for all, Paul believed, were under the bondage of sin. Thinking thus, it was impossible for him to reject Christian propagandism in the way the earlier disciples did. To them Christianity was exclusively Jewish; and if, under the pressure of events, they were constrained to admit that a Gentile might conceivably become a Christian without becoming a Jew (witness, for instance, the case of Cornelius), they believed that this was provisional only, and would lead ultimately to the full acceptance of Judaism. If Christianity, then, reached the Gentiles at all through them, it could do so only under narrow limitations and burdensome restrictions. But the gospel of Paul, proclaiming, as it did, freedom from sin through the possession of a new moral power—the spirit of Christ—could be preached on equal terms and with equal effectiveness to men of all races. Paul's attitude towards the Jewish law was but an incident of his general position; but inasmuch as that law conformed to the life of the Jews and Gentiles, and in its observance strict Jews saw the sun and substance of all righteousness, his attitude toward it was of immense significance. The Jewish law; he believed, like all law, was given by God in consequence of sin. Where the spirit of holiness has control no law is needed, any more than God Himself needs law to keep Him holy. Law is for the purpose of controlling a person and preventing him from living out his natural character, and therefore is needed only where the character is bad. When a man is freed from the dominion of sin by the possession of the spirit of Christ, he is freed also from the dominion of law; his character is holy and needs no law. Filled with the spirit of Christ, he cannot do otherwise than live in that spirit, which is the spirit of love, of purity, and of peace. Paul himself might continue to observe the Mosaic precepts on occasion he might even urge his converts to do the same; but on his own principles he could not insist on such observance, and the moment it was insisted on by others he disavowed it and came to stand for his fundamental principle of Christian liberty. This might not have affected practical conduct in the least had Christianity been confined to the Jews, whose holiness expressed itself naturally in the observance of the Law, and

* The contention of van Manen and others of the Dutch school, that the Book of Acts is more trustworthy than the Epistles, is not sound, and has commended itself to few scholars.
to whom its ceremonial precepts were as sacred as its moral. But when Gentiles became Christians, it was another matter. To them much of the Jewish law was unnecessary and quite without relation to holy living. The result was a serious crisis, much more serious than had been precipitated by the case of Cornelius. The matter was considered at the conference in Jerusalem described in Ac 15 and Gal 2, and a compromise was reached which provided for the recognition of two forms of Christianity, a Jewish and a Gentile. The latter was free from the obligation to observe the Jewish law, the former remained bound by it. It might have answered as a practical expedient had the two forms remained entirely isolated, but it was not long feasible in communities where there were both Jewish and Gentile Christians. Unless there was to be schism within the Christian brotherhood itself, all must live as Jews, or all the Jews must modify, at least in part, the strictness of Jewish practice which prevented familiar intercourse between Christians of different persuasions. This Paul’s principles prevailed, only the latter course could be adopted.

The former would have meant the subjection of his Gentile converts to the bondage of a law from which on its own principles they were completely free. But he was not a libertyocrat, nor a Judaizer, which Jewish Christians on which the same principles was equally theirs. Ultimately, as the Gentile wing of the Church grew, the principle of liberty thus asserted resulted in complete emancipation from Jewish ceremonial restrictions, also by many stricter spirits in the Church, whom Paul calls Judaizers, but promoted by his powerful influence, and also by the wide-spread existence in the Roman world of regular Jewish communities in which the Jewish Christians seems to have been indifferent to ceremonial and interested only in the more spiritual and ethical features of the ancient faith (cf. Schürer, G 3.2, 249). Into the heritage of the older Jewish propaganda the new Pauline Christianity entered, offering the elements of all that and more than Judaism had offered it, in a form stripped of all its offensive features, and claiming to be not merely a modified Gentile phase of the Jewish faith, but a religion as truly Gentile as Jewish.

It is no wonder the latter was regarded as a formidable rival of Judaism, and ultimately completely outstripped the latter in the race.

It is not necessary to trace here the Christian activity of Paul in the second period of his ministry, from the beginning of his work in Antioch until his execution in Rome. He has been the object of intense Christian missionary activity of the period, and the only one about whose activity we have any extended knowledge. The fact that some of his Epistles have been preserved to us, and that the second half of the Book of Acts is devoted exclusively to his work, enables us to follow his career with considerable accuracy. But our meagre knowledge about others is no reason to suppose that there were no others doing similar work in different parts of the world, and even in those parts where he himself was active. Considerable districts of Asia Minor, Cyprus, Macedonia, and Achaia seem to have owed their Christianity chiefly or the first instance to him, but Rome was evangelized independently. At his death Christianity had already entered every province bordering upon the Mediterranean from Syria in Italy, with the exception of Thrace, which had penetrated into the interior of Asia Minor as far as Galatia.

His death at the close of his two years’ imprisonment in Rome was due not so much to the fact that he was a Christian, as to his six consequent discriminations in the East, leading the authorities to regard him as a dangerous character. It was this that caused his imprisonment in Cesarea, and his execution followed his conviction before the Emperor upon the same charge (see Differt, p. 419 ff.). His conviction and execution were not meant for the purpose of Christianity by the imperial government, and, so far as we can learn, did not in any way affect the status of Christianity in the Empire. What we have lost in Paul passed away with the end of the Apostolic Age, and the one who did most for the spread of Christianity in the Roman world. To him the Christian Church of history is chiefly due.

(c) Post-Pauline period. For this information is less abundant than for the previous period.

The Book of Acts does not carry us beyond the Roman imprisonment of Paul, though, like the Gospels, it reflects in some degree the ideas of the age when it was produced. The Epistle to the Hebrews, First Peter, the Johannine Epistles, the Apocalypse, First Clement, and the several Pastoral Epistles, draw traces of the development of organization, of the diminishing spontaneity of religious life, and of the stereotyping of moral principle and practice. But the picture is vague and the details very few. No great figure dominates the history as was the case while Paul was on the scene. It is a period of rapid growth and consolidation, and yet the actors in the history and the course of events are almost unknown to us. The persecution of Nero, to which Peter probably fell a victim, was caused apparently by the accident that the Christians were brought to his notice as convenient scapegoats upon whom to throw the blame for the conflagration of Rome (Tac. Ann. xvi. 44). While confined to the capital, this persecution brought the Christians into unpleasant notoriety, and gave them the reputation of being dangerous characters, hostile to the public weal. Under the more pacific Emperor Domitian, who had suffered, because of the Emperor’s doubts as to their loyalty. The First Epistle of Peter and the Apocalypse testify to conditions during this reign; and the Epistle to the Hebrews, and the Book of Acts with its apologetic interest, are best read in the light of these conditions. The Christians were evidently coming increasingly into conflict with the authorities, at any rate in certain quarters; and the latter shows that before he became governor of Bithynia the mere profession of Christianity had come to be generally regarded as a crime, though there is no evidence that any law had been passed upon the subject.

The most notable phenomenon of the period is the Johannine literature, and the existence of a Johannine school in Ephesus to which it testifies. That John the son of Zebedee was not its author is beyond all reasonable doubt, whether he was ever in Ephesus (see Harnack’s Chronologien der altchristlichen Litteratur, p. 673 f.), but the presence there of an important personality who bore his name and was, if he was not himself, associated with his works shows that already before he became governor of Bithynia the mere profession of Christianity had come to be generally regarded as a crime, though there is no evidence that any law had been passed upon the subject.

The Epistle to the Hebrews, with its large infusion of Philonism, is also an interesting and instructive document, illustrating, in our ignorance of its author, the paucity of our information touching the leading characters of the day. So far as our evidence goes, Christianity during this period spread no further than it had before the death of Paul, except toward the east and north in Asia Minor, where it reached Cappadocia, Pontus, and Bithynia (1 P. 17). The Apocalypse gives us the names of some churches in Asia Minor ( Smyrna, Pergamum, Sardis, Philadelphia, and Thyatira) not mentioned in Paul’s letters or the Book of Acts, and the Epistle to Titus shows that Christianity had already reached Crete. For Alexandria and probably, Christians must have gone there early, in all probability long before the end of the 1st century. In general the scene of the history in this, as in the Pauline period, was the lands lying along the northern shores of the Mediterranean from Palestine to Italy. The close of the Apostolic age saw Christianity firmly established at least in Asia Minor, Greece, and Italy, and already well started on the conquest of the Roman world.
were an object of suspicion to the State, and were widely disliked by the populace, because of their lack of patriotic zeal and their hostility to prevailing religious beliefs and practices, their fanatical disregard of common worldly interests, and their puritanic denunciation of popular amusements and pastimes. They carried with them, however, a profound traditional humility, his nothing slaves them. His character, cause and social possibilities, was already well known among them; they were already somewhat definitely organized. They were conscious of belonging to one great Church of Christ, and the feeling of unity between the most widely separated communities found constant expression. Their hopes and ideals were everywhere much the same, and they were in possession of many of the beliefs and principles which still control Christendom. The Church at large was not yet an organized institution, but Christianity was already a powerful current in its historic career.

4. Development of theology. —The first disciples were not theologians, and did not concern themselves particularly with theological questions; but their conviction that Jesus was the Messiah led to a considerable modification of traditional beliefs, and became the starting-point in the development of a specifically Christian theology. Believing Jesus to be the Messiah, they were thrown into consternation by His untimely death, coming as it seemed while Messiah's work was still undone and the Kingdom not yet inaugurated. Their belief in His Messiahship could not have survived had it not been for this conviction that He was alive again, which speedily took possession of them. That conviction meant the rehabilitation of their old hopes. Jesus had risen in order to do Messiah's work, and if He did not at once restore the kingdom, where was the failure? For a time, —it was only that Israel might be prepared by repentance and righteousness for the enjoyment of the blessings of the Kingdom which He would speedily return to establish. The supreme duty of His followers, then, was to proclaim His coming, and to prepare their countrymen for it. But their proclamation must seem absurd to those who did not believe Him to be the Messiah; and so the imperative need of the hour must be to convince their fellows of His Messiahship.

Proof was found in His wonderful works, and particularly in His resurrection (Ac 2:24 ff. etc.), the disciples' testimony to the latter fact being confirmed by an appeal to NT prophecies, (2:25). To the seemingly fatal objection that He had, after all, done nothing that the Messiah was expected to do, and that His life and death were entirely unworthy of the Messianic dignity, it was replied that He would return to do Messiah's work. When it was prepared, and that was foretold as a twofold Messianic coming—the one in humanity, involving suffering and death, and the other in glory, by the indwelling of the Kingdom (2:26). Here lay the nerve of the first disciples' preaching. In this novel, assumption of a Second Coming is to be a feature of primitive Christian thought. Their apologetic did not consist in showing that Jesus had a work to do; it did not consist in any great modification or spiritualization of traditional ideas as to the character of that work and as to the nature of the Messianic Kingdom. It aimed only at proving that Jesus was really the Messiah, and that He might therefore be trusted yet to do all that had been expected. In their emphasis on the Messiah's coming they lost the full significance of the first, and failed to understand Jesus' completion and transformation of His original mission. Why, contrary to common expectation, should there be a twofold coming? Why had Jesus, being the Messiah, lived a life of humility and died among the crowds? Why is this situation foretold in the Scriptures seems to have satisfied them, though they very likely believed, as did the Paul's words in 1 Co 15 perhaps, that the first coming had its place in the promotion of repentance and righteousness, and so in the preparation of the people for a second coming which could not appear until they had repented (Ac 3:20). But this was a subordinate matter.

The question of Jesus' origin, nature, and relation to God, which later became so important, was not raised among these early disciples. The common traditional idea of the Messiah as a man called and supernaturally endowed by God seems to have been accepted without question (Ac 2:23, 3:26 etc.). Nothing in Jesus' words or deeds or in the events of His life led them to modify the existing view. The one controlling belief was in the future coming, and the one imperative duty was preparation for the enjoyment of the blessings of the Kingdom then to be established.

With the conversion of Paul a new period opened in the history of Christian theology. The central truth to which he devoted his second coming was the transformation of man's nature here and now by the indwelling of the Divine. His theology was rooted in his religious experience. Out of that experience, interpreted in the light of contemporary Greek thought, was born a theory of redemption entirely unlike anything known to the early disciples. The theory involved the transformation of man's evil fleshly nature by the power of the Divine Spirit, Christ, with whom he is mystically united through faith. Thus united to Christ, a man dies with Him unto the flesh and rises with Him unto a new life in the Spirit, a life of holiness and freedom. Salvation is thus a present, not merely a future, reality; and the true spiritual resurrection of the Christian takes place now and here. The future resurrection will mean only the substitution for the present fleshly body, in which the Christian is compelled to dwell while on earth, of a new spiritual body fitted to the spiritual life which has already begun. Paul's theory involved also the Deity of Christ, through mystic union with whom a man's nature is transformed. It was in his doctrine of redemption that the historic belief in the Deity of Christ found its basis.

Into the details of Paul's thought we cannot enter further here. His system is found in all its essential features in his Epistles, especially in the Galatians (as well as in the latest (see McGiffert, ch. iii., also pp. 221 ff. and 378 ff.).

The peculiar type of thought of which Paul is the earliest representative appears also in a fragmentary way in the First Epistle of Peter; and the Fourth Gospel and First Epistle of John are dominated by it (so also the Epistles of Ignatius of the early 2nd century). Though Jesus is represented as speaking so extensively in the Fourth Gospel, it is the thought of the author rather than of Jesus Himself that appears both in Gospel and Epistle. In both we find the conception of the need of the transformation of man's nature by the indwelling of the Divine, and the belief in the Deity of Christ, through union with whom the transformation is effected. In spite of many divergencies between John and Paul, the general type of thought is the same, and the agreements far outweigh the differences.

In the other writings of the NT and in Clement's Epistle to the Corinthians an altogether different type of theology appears, unknowingly, the first of the early Jewish disciples. The influence of
To Paul, as has already been seen, Christianity was an altogether different thing. He had experienced a serious moral crisis, and had passed through a severe moral struggle such as the earlier disciples had not known, and he found in Christianity, above all else, the satisfaction of his moral needs. Christianity, as he conceived it, was a religion offering to him and to every man a new moral power sufficient to transform him from an evil to a good being, from a sinner to a saint. His theory of redemption did not find general acceptance,—in fact it was commonly quite misunder- stood that his concept of Christianity—thought to do fundamentally with release from sin and with the promotion of holiness speedily became wide-spread. From him, too, came the sharp contrast between 'flesh' and 'spiritual,' which was common at an early date. Holiness thus came to be regarded as the principal mark of the Christian life, and sins of the flesh were esteemed the worst of all sins. Primitive Christian literature is full of exhortations to purity, and of denunciations of unchastity and lust. The lenient view taken of sexual immorality by the contemporary heathen world, and the close connexion between it and some of the religious cults of the day, doubtless had much to do with the frequent pronouncements on this subject in early Christian documents; but behind it all, even though seldom coming to expression, lay the Pauline contrast between flesh and spirit, and the conviction that those who receive the Holy Spirit and makes His continued presence with the individual and with the Church impossible (cf., in addition to the many passages in Paul's own Epistles, 1 Cor 6; 1 Cor 7; and esp. the 2nd cent. writings—Hermas, Mand. v. and x., and 2 Clement 14). Paul himself was not an ascetic in any strict sense; he even opposed asceticism in matters of food and drink, when it appeared in Rome and Colossae (Ro 14 and Col 2); but hints of an ascetic tendency appear in his Epistles (Ro 13, 1 Cor 5; 97), particularly in connexion with the relation of the sexes (cf. 1 Cor 7). In fact, the subsequent development of Catholic asceticism was already foreshadowed, though the process was still in its incipiency, in the Apostolic age (see the protest against it in 1 Ti 440). See ASCETICISM (Chr.).

Another controlling contrast in primitive Christian ethics, due in part to the same cause, in part to the prevailing expectation of the second return of Christ, was that between this world and the next,—promoting a spirit of unworldliness, or other-worldliness, which has remained a permanent feature of the Christian view of life. The primitive Jewish disciples, Christianity was primarily not an ethical but a Messianic movement. It is true that they believed, with John the Baptist and with Jesus, that the sign of the coming Kingdom (cf. Ac 329). It was because of the unrighteousness of the people that Jesus had not established it during His earthly life, and not until there was such repentance would He return (Ac 329). But they interpreted righteousness in the ordinary Jewish way as the keeping of the revealed Law of God in all its parts, and introduced little change in current ethical conception. The personal act of repentance in the keeping of God's commandments as revealed by Jesus Christ. This must be preceded by repentance, and repentance by faith,—which means, primarily, the conviction that God will reward those who keep, and punish those who break, His law,—without which faith no one will repent and obey God's commandments. The work of Jesus Christ was to bring to men a knowledge of God's law and its sanctions, and by Him they would be judged. He was thus at once Mediator of salvation and Judge of the world, and the titles 'Saviour' and 'Lord' were both commonly applied to Him. The exalted position which He occupied led Chris- tians to conceive of Him in a more immediate and peculiar intimacy with God, and in course of time to speculate about the origin and nature of that relationship. By some it was thought that His supernatural endowment began at the time of His baptism, when He was called by God and equipped for His work by the gift of the Spirit (cf. the accounts of the baptism in the Gospels, esp. the text given in Justin Martyr's Dialogue with Trypho, 105, and also the testimony of Justin, ib. 48, and Eusebius, HE v. 28, 3). By others He was given a supernatural origin, being represented as the child of the Holy Spirit (as in the Gospels of Matthew and Luke); while still others pushed His origin even further back, and thought of Him as a pre-existent Being who had come down from heaven (thus, e.g., the Pastoral Epistles, Hebrews, Apocalypse, and Clement). Where this general type of thought prevailed, an adequate motive for assuming the Deity of Christ, and for committing Paul and those who felt the influence of his theory of redemption, was lacking. Endowment with the Spirit at baptism, supernatural birth, pre-existence —all of these were demanded of the Deity as such. It was not due to these Christians, but to Paul and his school, that the doctrine of the Deity of Christ finally became a part of historic Christian dogmatics.

The two types of thought that have been des- cribed developed for the most part independently of one another for some generations; but even in writings representing controllingly one or the other type, traces of the opposite tendency sometimes appear, and towards the close of the 2nd cent. the two were combined by Ireneaus, bishop of Lyons, who made both man's obedience to the Divine law and the transformation of his nature through the infusion of Divine grace necessary to salvation, and so laid the foundations of historic Catholic dogmatics. In the combination much of Paul's thought was lost; but the essential feature of it,—that humanity is evil and must be transformed by union with Him on equal terms to men of a new sort, and became the basis of the sacramental system, which we find, as a matter of fact, already foreshadowed in 1 Co 10 and in Jn 3 and 6. The primitive Jewish disciples, Christianity was primarily not an ethical but a Messianic movement. It is true that they believed, with John the Baptist and with Jesus, that the sign of the coming Kingdom (cf. Ac 329). It was because of the unrighteousness of the
regarded as the truly Christian attitude (e.g., 2 Co 6:17, Gal 6:7, Ph 3:19, Col 3:1, Ja 4:6, 1 Ja 2:2; and also the striking passage in the 2nd cent. Epistle to Diognetus, 5:4). Not harmony with one's environment, as in classic Greek ethics, but revolt against it, and in the long run a life entirely detached from it—this was the Christian ideal already in the Apostolic age. And this spirit worked together with the controlling emphasis upon fiercely purity to promote asceticism, and also with emphasis in the Apostolic age on its natural fruit—monasticism (cf. the prophetic remark of Paul in 1 Co 5:9).

The sharp contrast between the two worlds, and the recognition of the present world as evil, did not result in a desire to change existing conditions; no social revolution was contemplated. The division of society into rich and poor, master and slave, was treated as normal. The effort was made to introduce Christian principles into all the relations of life, but the desire to escape from the class to which one had belonged was not encouraged (cf. 1 Co 7:27).

There is frequent emphasis in the writings of the age on one's conduct toward one's father, husband, wife, child, servant (Eph 5, Col 3, 1 P 3, 1 Ti 6, Tit 2), and even occasionally as citizen (Ro 13:1, 1 P 2:17, Tit 3:1, 1 Clement 60.61). However evil the present era of Christianity, there was a desire to walk in such a way as to give no just ground of offence to outsiders, to show proper respect to all men, and to live honourably, quietly, peaceably, and blamelessly with every one (Ro 12:13, 1 P 2:1, 1 Th 4:1 etc.).

The ideal of social service and the desire to promote the spirit of brotherhood in the world at large had little place among the early Christians. Rather to gather out of the world a company of holy men, heirs of the promised Kingdom—this was their great aim (cf. the Euchistic prayers in the early 2nd cent. Didache, 9.10). It is true that love is frequently insisted upon in the writings of the Apostolic age, but it commonly takes the form of love for the Christian brethren, which is to be manifested in charity, hospitality, sympathy, concord, forbearance, tender-heartedness, forgiveness, humility, etc. And even when it is not so limited, it is toward only a limited number—e.g., the virtues (cf. 1 Ti 2:2, 3; 4:7, 8; 5:2, 3; 6, 1 P 3:7, 1 Clement 49 if. is hardly sufficient to justify us in making an exception of the author). But the influence of Jesus is seen nevertheless in the general emphasis—common to most of our sources—upon the virtues of gentleness, peaceableness, forbearance, and humility. Nothing is said of the duty of insisting upon one's rights and demanding proper recognition from others. Self-abnegation in one's relations with one's fellows, rather than self-assertion, is the recognized ideal.

But the contrast with the prevailing ethical sentiment of the Roman world was not confined to a difference in ideals. The Christians recognized the moral law, which it was their duty to obey, as given directly by revelation from God, the revelation involving also an announcement of the future sanctions attending obedience and disobedience. There was no difficulty or confusion about the Christian ethics not commonly found elsewhere. Emphasis upon the hope of reward and the fear of punishment, as grounds of moral conduct, is very common in our sources (cf. 1 Co 6:10, 15:10, 2 Co 3, Gal 6:7, 1 Th 2:3, 1 P 3:17, 1 Ti 6:9). But motives are also frequently urged: to walk worthy of one's calling as God's elect, to please and glorify God, to be like Christ, to be true to one's opportunities and responsibilities, to help, not harm, one's brethren, to promote the good name of Christianity in the world at large (cf. 1 Co 6:6, 1 P 2:9, Col 3:1, 1 Th 2:3, 4, 1 P 2:12-14, 1 Clement 30).

It meant much more than that the early Christians believed that Christianity was for all men, low as well as high, and that they recognized the moral possibilities even of the meanest. Christianity, indeed, supplied a new and higher basis for the admission for the masses of the people, and that in spite of the fact that already the ominous distinction between two grades of morality, one for the common man and the other for the spiritual elite, was beginning to appear (cf. 1 Co 7 and Didache, 6).

So far as moral performance was concerned, it evidently left much to be desired. Of this the repeated exhortations and warnings in the Christian literature of the period are sufficient evidence, and we have direct record of some striking examples of immorality (e.g., Ac 5, 1 Co 5:11, Jude 8). It is worthy of notice, too, that the Christians bore a bad moral reputation; their Pharisaic enemies, by degrees, largely, no doubt, to prejudice, but also in part well founded (cf. 1 Th 4:4, 2 Th 3:1, 1 P 2:9).

But in spite of all this, it is clear that Christianity was a controlling moral movement, and that it involved a real moral revolution, as well as one of its adherents. The very insistence upon the matter in our sources shows that there was a strenuous ethical ideal, and that the Christians themselves recognized its binding character; and we have also documentary testimony to the effects of Christianity upon the lives of its converts (see not only the writings of the Christians themselves, but also the tacit witness of Pliny's letter to Trajan). In general, it may be said that the common notion of the Christians was that the aim of Christianity is to make men purer and better here, in order to a blessed immortality hereafter.

6. Development of organization.—In primitive Jewish Christianity no organization was needed in the beginning, for the disciples regarded themselves simply as heralds of the coming Kingdom. It might perhaps have been expected that they would form in Jerusalem a separate synagogue, but this they apparently did not do, and the failure to do shows how little they regarded themselves as a distinct sect. Their desire was to convince their fellow-countrymen of Jesus' Messiahship, and to win an unprejudiced and unattached hearers to form a religious cult or society of their own. Certain Christians, particularly James the brother of Jesus, and others who had stood in relations of intimacy with Him, such as the Twelve, naturally had large influence in the Jerusalem circle, but there is no sign that this involved any official position or appointment. Some sort of an organization, however, the disciples had at an early date. As a brotherhood they felt it their duty to care for the necessities of the needy among them, and so a committee was appointed for the distribution of aid (Ac 6). Beyond this we do not know that the early Jerusalem Christians went; but ultimately, after the final break with their unbelieving brethren, the Christian Jews were organized as independent institutions, though the exact form which the organization took is unknown to us.

In the non-Jewish world conditions were different. Here, too, the expectation of the speedy consummation made any careful organization seem unnecessary, and the conviction of the presence of the Spirit made bands of unbelievers form (cf. Ac 16, 19), the founding of churches began at an early date; and in them, although for some time leadership devolved naturally upon men specially endowed
by the Spirit, such as apostles, prophets, and teachers, gradually the necessities of the case led to a more formal organization, substitutes being required for the inspired men who might not always be present. This led to the establishment of bishops and their assistants, the deacons—existed in some churches before the end of the Apostolic age; but the development of the threefold ministry—apostle, prophet, and deacon—belongs to the 2nd century.

7. Religious services.—The early Jerusalem disciples were devout Jews, and continued to observe the religious practices and attend the religious services of their people. Their common religious life as Christians expressed itself not so much in formal services as in informal gatherings from house to house, where their community of feeling as disciples of Jesus and heirs of the approaching Kingdom found natural and familiar expression. Concerning the subsequent development within the Jewish Christian Churches we have no information.

In the Gentile world all seems at first to have been equally informal; but the attitude of hostility towards the religious practices and principles of the heathen world, taken by Paul and other early missionaries, made it necessary for converts to Christ to renounce their old customs and find to their religious life wholly within the Christian circle. Thus it was inevitable that a Christian cult should early develop, to meet the need of those who were cut off from the religious exercises to which they had been accustomed. Christian worship became ultimately very elaborate and ornate, and took on many of the features of the cults which it displaced, but in the Apostolic age the prayer meetings or the morning and evening assemblies for the development of one's soul became the central feature of the Christian cult. A very elaborate ceremonial grew up in connexion with it, and it was regarded as the most sacred and mysterious of all religious rites (see art. AGAPE and Eucharist).

In the Didache, 9, it is commanded that none except baptized persons be allowed to partake of the Lord's Supper. This is the earliest explicit statement of a general rule which, it may fairly be supposed, was long observed, but not formally stated. For the sacred meals of the early Christians can hardly have been shared by any not belonging to the Christian circle, and admission to it was not commonly, if not universally, granted by the ceremony of baptism (see art. BAPTISM).

8. Significance of the Apostolic age.—The Apostolic age is the period of Christian origins, and as such has a significance attaching to no other in the history of the Church. It was during this period that the Church as an organization came into existence, and the foundations were laid upon which all subsequent ages built. Most of the tendencies that appear in Christian history are to be found at least in germ in the Church of the 1st century. It is through the Apostolic age also that we get our knowledge of Jesus Christ. To it owe not simply the written accounts of His life, but also the impression of His personality which constitutes an integral part of our picture of Him. It is true that the very change of emphasis from Christ's message about God to His personality involved a change in the interpretation of His controlling purposes, which has coloured Christian thought ever since. Nevertheless, it is through the Apostolic age that we approach Him, and from it that we get the impression of the attitude of these two principles towards the original freedom. If an individual fails to exercise discretion in the use of his gifts, he must be controlled by his brethren, and thus the way the prepared for a regular order of service, and for the appointment of certain persons to take charge of the meetings, and to see that all is done decently and in order. There is no sign that Paul himself contemplated such a result, but the stereotyped process ensued in course of time. In Rome, before the end of the 1st cent., it was already well under way, and regularly appointed officials were in the control of the services (cf. Acts 20:14); and before long the early freedom had given way almost everywhere to liturgical rules (cf. Didache, 91; Justin, Apol. 67; Ignatius, Magn. 7, Trall. 7, Smyrn. 8).

In addition to the meetings already described, the Christians at Corinth were in the habit of gathering from time to time to share in a common meal. At this meal they not only partook of food and drink for the ordinary purpose of satisfying hunger and thirst, but it was their custom, as was apparently the case among the early Jerusalem disciples, to eat bread and drink wine in commemoration of Jesus. At the time when Paul wrote, the meals had degenerated into scenes of disorder and debauchery. Under these circumstances he informed the Corinthians that the commemoration of Christ's death was the chief purpose of the meal, and not eating and drinking for their own sake; that they ought to purchase wine to be kept at home, that they might be able to commemorate Christ in the right spirit, and make the meal wholly a religious service (1 Cor. 11, 23). The immediate effect of Paul's attitude in this matter we do not know; but common meals continued in some quarters for generations, but ultimately they were everywhere given up, and the religious ceremony known as the Eucharist or Lord's Supper alone remained. In subsequent centuries it became the central feature of the Christian cult.
Him face to face were still alive and influential must always stand apart from other days in the record of His followers.

On other accounts, too, the Apostolic age will always have peculiar religious value. As the period of beginnings, there is an incomparable freshness about it. Its close association with men of the first generation leaves it an inspirational quality not found elsewhere; and in it were produced the classic documents of Christianity from which all Christians since have drawn religious sustenance. There were supposed to have come in line with the Gospels and Acts of the Apostles, and to have remained the cornerstones of Christian faith, so that the Christian Church has been built on the basis of Apostolic correctness.

But another significance has been ascribed by Christian tradition to the Apostolic age. During the 2nd cent, there grew up a conception of Apostolic authority which has prevailed ever since, and has given the 1st cent. a worth and dignity to which the fact that it is the period of Christian origins and nearest in time to Jesus Christ would not of itself entitle it. In the effort to repudiate the errors of the Marcionites and Gnostics, which were spreading rapidly in the 2nd cent., certain leaders of the Church began to insist upon the teaching of the Apostles, that is, the Twelve and Peter and Paul, and it so faith, on the ground that they had been chosen by Christ to be the founders of His Church, and had been endowed with the Spirit in such measure as to render them infallible guides in word and truth of God. In the effort to define the teaching of the Apostles, and to show that they gave no support to the vagaries ofMarcion and the Gnostics, it was claimed that they had left certain writings together constituting an authentic Scripture canon, and had framed a creed containing the fundamental tenets of the Christian faith. Whoever would be a member of the true Church, and so an heir of salvation, must unfeignedly accept all that was taught both by canon and by creed. A sharp line of demarcation was thus drawn between the age of the Apostles and all subsequent generations. In the Apostolic age was found the standard for all time to come. The Apostles themselves came to be regarded as figures supernaturally endowed for the unique work of establishing the Church, and raised above the ordinary frailties and limitations of humanity. Their official character was so emphasized that the supposition of the individuality was lost. The differences between them were forgotten, in the conviction that as men divinely inspired they must all have been completely of one mind. Apostolic from Paul, history knows practically nothing of their several careers, of the regions where they laboured, and the work they did; and not until the 3rd cent., long after all authentic sources of information had disappeared, did tradition begin to busy itself with them as individuals—a striking illustration of the indifference to historic reality to which the 2nd cent. theory of Apostolicity gave rise. As a result of that theory, all that the Apostles were supposed to have taught, whether by precept or example, acquired infallible authority; and nothing in doctrine, in polity, in ritual, or in practice could be regarded as Christian unless directly or indirectly of Apostolic origin. Development on all these lines was made possible by the belief that the Apostles had also instituted a perpetual Apostolic office for the government and guidance of the Church, the incumbents of which were endowed with the inspiration of the Apostles, and with the infallible authority of the truth of God. Bible and creed were thus supplemented by the living voice of the Catholic episcopate, and the Church was enabled to conform to normal conditions and to meet new needs, without ostensibly breaking away from Apostolic foundations or giving up its theory of Apostolic authority. The Protestant reformers of the 16th cent. rejected the Catholic notion of an infallible episcopate, but the Catholic belief in Apostolic authority was retained, and the Bible was regarded as the complete and final expression of Apostolic teaching on all conceivable subjects. Reformers were supposed to have become acquainted with the age of the Apostles, and the development that had taken place under the aegis of episcopal authority was repudiated. The effort was made to return to the conditions of the Apostolic age, and to bring the Church into conformity with its principles and practices in all respects, nothing being regarded as truly Christian unless it enjoyed the authority of Apostolic precept or example.

This belief still prevails widely in connexion with doctrine, but in the matter of ritual and polity it has been generally abandoned. Moreover, the whole conception of Apostolic authority has been given up by many in modern times, and it has come to be widely held that the age of the Apostles was essentially similar to any other in the history of the Church, that it was confronted with its own problems and difficulties, and that the men who met and solved them were like those of other ages.

This change of attitude has been of immense historical and religious value. A reality attaches to the Apostolic age and to the persons of the early leaders of the Church which they never possessed before. For the first time an understanding of the period and a genuinely historical treatment of it have become possible, and from the religious experiences and teaching of the Apostles and their followers we can now more clearly understand and appreciate, modern Christians are gaining new inspiration and instruction.

LITERATURE.—Of older books on the Apostolic age should be mentioned Neander, Geschichte der Pflanzung und Leitung der christlichen Kirche durch die Apostel, 1833 (Eng. tr. 1842), Baur, Paulus der Apostel Jesu Christi, 1846 (Eng. tr. 1873), Baur, Geschichte der christlichen Kirche der drei ersten Jahrhunderte (Eng. tr. 1875); Ritschl, Entstehung der altchristlichen Kirche, 1856 (2nd ed. 1857, entirely worked over) (in its second edition another epoch-making book, which did more than any other to break the dominance of the Tubingen interpretation of early Church history); Renan, Histoire des Origines du christianisme, 2 vols., 1863; ed. of modern science and of apostol. Zeitalter der christl. Kirche, 1856 (3rd ed. 1852; Eng. tr. 1859) (the most influential of modern histories of the Apostolic age); Pfeiffer, Der Ursprung der Urchristen, 1872; Zahn, Die Entwicklung des Christentums, 1905 (Eng. tr. 1901); Mcgiffert, History of Christian Church, 1907, tr. of modern science and of apostol. Zeitalter der christl. Kirche, 1856 (3rd ed. 1852; Eng. tr. 1859); William, Die Ausflüge unserer Religion, 1901 (2nd ed. 1904; Eng. tr. 1907); Dobricez, Die kirchlichen Gemeinden, 1902 (Eng. tr. 1904), and his brief sketch, Das apostolische Zeitalter, 1906 (in the Religionsgeschichtliche Volkbilder); Kneip, Das nachapostol. Zeitalter, 1905; Ropes, The Apostolic Age in the Light of Modern Criticism, 1906. The various standard lives of Paul, works on NT literature and theology, Church histories, and histories of doctrine, which deal more or less fully with our subject, it is not necessary to specify.

APOSTOLIC SUCCESSION.—1. The principle of ministry in the NT.—That from the Apostles' time there has existed in the Christian Church a ministry exercising official functions by regular devotion of authority is a fact which few historians would dispute. But had been made on its behalf to be a necessary part of the institution of Christ. But as this claim is put forward on behalf of Churches retaining the canonical orders and also the other missionaries, Apostolic succession becomes a significant fact, and therefore a doctrine. Consequently it demands a closer and more vigorous scrutiny than would otherwise attend an investigation into the origin of the Christian Ministry. The theory is that Christ, having established a society primarily
visible and historical, gave to that society a recognizable unity and cohesion, not only by instituting in Baptism a sacrament of initiation, and in the Eucharist a sacrament of corporate life, but also by perpetuating its collective witness in a continuous and authoritative ministry.

Theapostolic office was not unambiguously in the creeds and confessions of faith. It has, for example, been conceived as a function of the Church as a whole, and with that of the manner in which this principle has been realized in history. This has led to discussions on the Divine Right of bishops as an expression of the church's governing power, and caused stress to be laid on an all or nothing approach to doctrine by which Church history, so far as known, do not justify, and which is too formal to be consistent with an organically developing society. Hooker was right when he commented on the authenticity and historical, but he contended himself with affirming that episcopacy ‘best agreed with the sacred Scripture’ (Stat. Pol. iii. 16, cf. vii. 11).

Or, again, the sacerdotalism of the third century has been un-warrantably intruded into the first, and the whole matter treated as though it was a question whether Christ had set up a priestly caste, to which the mysteries of religion were entrusted, and without which spiritual life was not only hindered but impossible. These methods of thought have led to narrow and technical inquiries into the sacramental character of the Presbytery, the form and nature of the office by which the Church was constituted, and the precise conception of the various powers which from time to time it has been intended to convey. To this end, the present section will deal with the personal qualifications of the presbyters, setting the pattern in the early presbytery, as well as the structure of the Church, and then go on to consider the subject of the presbytery, in particular the question of the episcopal office and the ecclesiastical authority of the Church.

The structure of the argument, in spite of Macaulay’s reference to it as a ‘fanatical work’, witnesses to a certain fact of the Church’s development which may not be ignored. The Church was, as a matter of course, not built up in a single piece, but was formed from many different parts, as is seen in the course of the development of the Church, the descent of which from Apostles was not questioned, but the tradition of the Church is valid. The question is, whether the Church was an universal episcopate, the ordination of which was valid, without the form and nature of the office. The Church of the apostles, therefore, is not a mere ‘name of the Church’ (Tratt. 3). It is not, therefore, scientific to discuss the doctrine of Apostolic succession because the statement of the facts has been inadequate or extravagant. This is true of most, if not all, Christian doctrines.

The object of the present essay is to show what reasons there are, in view of the facts and principles of the NT, for believing that the great institution of the Christian ministry belongs to the substance of Christianity. Whatever variations may have occurred in the transmission of the Church, the Church of the Middle Ages, great stress is laid upon the teaching of the early church, in the case of the supposed right of the Alexandrian presbyteries until the time of Bishop Hieranias, A.D. 233, to consecrate their own chief pastor (Jerome, Ep. 146; Eusebius, Hist. Eccl. iv. 40, 42, 45, v. 39; and Tertullian, De Presbyteris. 32, ad. Marc. iv. 5; Apol. 47; cf. Hesages, in Euseb. iv. 22). In the early days of the Church, Ignatius wrote that, after the primitive ministry, there is no such name of the Church (ibid.). It is not, therefore, scientific to discuss the doctrine of Apostolic succession because the statement of the facts has been inadequate or extravagant. This is true of most, if not all, Christian doctrines.

A. IN THE GOSPEL—The Gospel of Mark registers the stages by which the Christian community, with its characteristic message of forgiveness and endowment of the Holy Spirit, was established. The Church (cf. St. Mark’s Account of the Birth of the Church, pp. 3-5, cf. his Gospel History and its Transmission, ch. 3). It is important to observe, as revealed in this Gospel, the principles which appear as an important part in the formation of the Church. The headline of Mark’s narrative is, ‘The beginning of the gospel of Jesus Christ, the Son of God’ (1). That the gospel is virtually identical with the description of the coming of Christ, as described by Mark, is apparent from vv.14, 15 in which Jesus is described as taking up the work of the Baptist and announcing as His message the approach of the Kingdom (cf. Mt 4:17, Lk 4:43). The identification of the forerunner, e.g., in this case to the evangelical prophet (Is 40), was to herald the return of God’s people to the sacred city (Mt 19), and the recognition of Jesus in His baptism as uniting the attributes of the expected Messiah with those of the Nazarene, Messiah’s agent in the process of restoration (11; cf. Ps 2, Is 42), mark out the coming of Jesus from Nazareth to Jordan and the descent of the Spirit (vv. 9-11) as the first stage in the development of the Kingdom.

The second stage is its proclamation by Jesus Himself on His return from the wilderness to Galilee (vv.14-15). This is immediately followed by the call of the first disciples, who obey may be, to work in the function of the Church, whether it be the teacher of truth or the dispenser of sacraments, the inquiry is not vitally affected. Where, as in the case of the Church of the Middle Ages, great stress is laid upon the teaching of the early church, the mission will appear rather as the Divinely appointed guardian of the Apostolic witness to evangelical truth. The two questions that are fundamentally inter-related are: (a) Is the Church of Christ as the object of salvation, the true center of the Kingdom? (b) Does the Church as established by Christ present any of the features of a historical institution? It
of His 'disciples,' who become a society resting upon the Lord's choice, no longer a promiscuous following united only by the uncertain bond of a common Master. Within this circle Jesus constitutes twelve (v. 19); Luke adds 'whom also he named apostles' (6: 6). But the importance of this appointment is clearly seen by what in a narrative context concludes with Matthew (10: 6), Mark (3: 16-19) cannot be without significant. He selects the list (3: 16-19) repeated by each of the other Synoptists (Mt 10: 2-4, Lk 6: 14-16), and also in Acts (1: 19). The words 'He made twelve' (ταξιν ο��ηκαν) are necessary on the part of the Evangelist, the purpose of which was to extend His own mission by proclaiming the Kingdom and exercising authority in casting out the rival kingdom of Beelzebub (Mk 3: 20-21). To this end those who now in a narrower sense become 'the disciples' are first to be 'with him' (3: 14, cf. Lk 22: 29), so that from this point the narrative acquires a different character, being a record, on the one hand, of growing opposition in the part of the movement now definitely embodied in an organized society, and, on the other, of the training of the Twelve for thrones in the Kingdom which Christ has appointed to them (Lk 22: 28). The call to the Twelve as the own ministry disciples is the preliminary mission on which they are sent throughout the villages of Galilee. Their commission corresponds to the stage which Christ's work has already reached. They preach repentance, cast out demons, and heal the sick. The exact words of the Evangelist (Mk 6: 7) are worthy of attention: 'He began to send them forth' (ἀποστέλλειν). Just as the whole narrative is the beginning of that Gospel the history of which is still in the early stage of development, so here we have the beginning of the Apostolate, ultimately to become universal in its scope.

Two further preparatory stages are, however, necessary, before the Church can be built upon the Twelve (Mt 16: 18; cf. Eph 2: 20, Rev 21: 4)—the confession of Jesus' Messiahship, and the disclosure of suffering and death as the channel through which the gospel of the Kingdom was to become the witness to a crucified and risen Master.

The critical conversation at Cesarea Philippi is narrated with greater detail by Mt. (16: 16-20; cf. Mk 8: 27-30, Lk 9: 18-20). Mt. connects with the Apostolate the first of the two stages, the conversation as the occasion as a further stage in the building of the Church, against which the gates of Hades are not to prevail. The authority to bind and loose here committed to St. Peter was, according to Cyprian (de Unitate, 4), extended to the Twelve on the occasion recorded in Mt 18: 18-20. It is, however, difficult to suppose that the Ecclesia in v. 17 does not primarily refer to the local Jewish synagogue (see Hort, Christian Ecclesiastic, p. 9), especially in view of the words 'Gentile and publican'; and it is quite in accord with Mt.'s manner to string together utterances not originally related. When, therefore, καὶ ἄριστα came to be interpreted of the Christian society, it would be quite natural to add, not only the promise of vv. 16, 17, but the charter of authority given in v. 18, which is at least evidence that it was not regarded as applying to Mt. Peter only. And it is probable that the authority in question was extended to the Twelve, and that v. 18, even if not originally spoken in that connexion, accurately expresses the fact. The Fourth Gospel, in recording one of the apocryphal conversation of Jesus with the Twelve, and with the importation of the Holy Spirit by breathing on the disciples, and renewing the authority, not now in the old Hebraic form, but in language connecting the Apostolic ministry with the onrming work: 'Whosoever sins ye forgive, etc. (Jn 20: 23). The suggestion that Jesus here addressed not the Eleven, but a promiscuous gathering of disciples (see Westcott, Gospel Acts, to i. Jn 20: 23 n.) seems to be negatived by the whole course of the Johannean narrative. It is true that John notes the absence of Thomas (v. 24), but he is specially mentioned as 'one of the Twelve,' and it is difficult to suppose that the Evangelist, who gave the length the last discourses addressed to the Eleven only does not intend to convey the same impression to the end. Nor can the renewed commission to St. Peter recorded in 21: 17 be regarded, in the light of the Denial otherwise than as a specific restoration to a position that might else have seemed to be forfeited.

We find, then, in the Gospels a Christian society already in existence, within which the Apostles are an inner circle of more immediate disciples, recapitulating and intensifying the characteristics of the general body. This becomes apparent from the moment of the choice recorded in Mk 3: 16, and is emphasized in the conversation at Cesarea Philippi. Hort favors the view that the words 'whom also he named apostles' (Rv, cf. Lk 6: 16) belong to the genuine text (Christian Ecclesiastic, p. 22). But it is clear that during the Lord's own ministry discipleship is the preliminary mission on which they are sent throughout the villages of Galilee. Their commission corresponds to the stage which Christ's work has already reached. They preach repentance, cast out demons, and heal the sick. The exact words of the Evangelist (Mk 6: 7) are worthy of attention: 'He began to send them forth' (ἀποστέλλειν). Just as the whole narrative is the beginning of that Gospel the history of which is still in the early stage of development, so here we have the beginning of the Apostolate, ultimately to become universal in its scope.

When we reach the last Passover, the importance of the narrative attains its height. From the conversation at Caesarea, the training of the Twelve takes a course clearly differentiating it from that of all others. The acknowledgment of Messiahship is not to be considered as a commission than that of death, in respect that he alone the term ἀποστέλλειν is subsequently used (6: 26), but see above). Luke, however, clearly employs the word in the light of its subsequent use in Acts (Lk 6: 22 17: 22; 24: 49). Matthew uses it only in connexion with the Galilean mission (10: 6), but it is in giving the name of the Twelve—apostles—a fact in itself significant of the wider purpose lying behind the immediate commission.

the Church is thus made to stand upon them. The Eucharist became theirs in virtue of the conditions under which it was first celebrated; and only through them, and as they transmitted it, does it pass to the community. This is in accordance with the relations brought out by John. Those who are hereafter to believe are to do so "through their word" (176). The High Priestly Prayer reaches out through the disciples, who are to bear the primary witness, to those who are mediately called "brethren" of the Apostle and the Lord. The post-Resurrection narratives do but confirm the impression of the special separation of the Twelve which culminates in the seclusion of the Upper Room. The narrative of Mark is explicit, but the command given to the women, themselves Jesus' disciples, to "tell his disciples and Peter" (16) of the empty tomb, shows the Eleven as a distinct body. Mt. gives the commission to make disciples and to baptize as entrusted to the "eleven disciples" (20). Lk. shows other disciples gathered at Jerusalem when the risen Christ appeared to them (24). But the Eleven are distinguished from them (16), the rest being expressly spoken of as a constant in Mt. Even if, therefore, the appearance recorded in Jn 20:19-23 refers to the same occasion, the words 'Receive ye the Holy Spirit,' etc., must also certainly have a special bearing upon the Twelve. 

B. IN THE ACTS.—With the Acts we reach a further and a final stage in the foundation of the Christian society. The gospel of the Kingdom now becomes the organized witness to the Resurrection. The ministry of reconciling, which finds its full expression in the proclamation of forgiveness through the Cross, we find specially committed to the Apostle (Lk. 6: 22 10) — a term which gains a correspondingly determinate meaning. The list of the Eleven is again given in the following development (12), and the choice of Matthias is based upon the necessity of completing the number of the official witnesses (Lk. 2: 22). The phenomena of the early chapters are precisely what a study of the Gospels would suggest. The Church enters upon its career as an organized body, the Apostles being differentiated from the brethren. From the first the brotherhood continues in "the apostles, and the brethren, and praised in Jerusalem, and those that were deviated to the Apostolic despotism appears in the choice of Matthias and of the Seven. In the former case, two were put forward (12), apparently by lot. In the latter, the choice, from among the Seventy, was reserved for the unseem present Master (Lk. 2: 24). In the latter, the brethren were expressly charged by the Apostles to "look out" from among themselves seven men (6), who, after prayer, were set apart with the laying-on of Apostolic hands (Lk. 6: 6). All the elements of ordinance are here. At the outset of ministerial appointment it would seem as though the Apostles claimed any lordship over God's heritage. They do not even exercise a vote. The responsibility of supplying the need of ministrations, as the circumstances of the Christian community disclose themselves, belongs to the society itself. The Apostolic imposition of hands is, like the sacrament, a form of covenant prayer (Col IV. 11. Instit. iv. 19, § 31: 'I admit it to be a sacrament in true and legitimate ordination'). Those set apart represent, not the Apostles, but Christ. The Sunday assembly of the Christian community is thus defined. If this be so, it is obvious that what subsequently became the third order of the ministry was not explicitly appointed by Christ. The general idea conveyed by Acts is that of a society extending and organizing itself on the basis of their own powers and circumstances. But the laying-on of hands in this instance represents a principle conspicuous throughout the book, viz. the requirement of mission from Christ Himself, of which Apostolic recognition was the pledge. But there is no evidence even that the ministry of the word, which, in directing the appointment of the Seven, the Apostles of Peter and John, transferred to them full and plenary submission. No doubt, the actual gospel itself was inviolate and unchangeable. But not even an Apostolic, according to St. Paul, was to be believed if he deviated from that standard (Gal 1). As the primary witnesses to the Resurrection they have no successors. The gospel is an Apostolic report of incommunicable experience, once for all delivered to the whole body of the saints (Jude). The formation of the NT canonic was based upon the test of Apostolicity, and consequently the appeal to Scripture has become the permanent form in which, as regards matters of faith, the Church of every age sits at the Apostles' feet.
charging a sort of general episcopate and including the Twelve, whose precise relation to one another is not clearly defined. Within these communities are exercised certain spiritual gifts, among the possessors of which the prophets seem to approach most nearly to a regular order, but are nevertheless not, like the presbyteral deacons, in the accomplishment of Christ's purpose and command—that the Apostles should be His witnesses to the uttermost parts of the earth. When the writer had brought St. Paul to Rome, the task, as his contemporaries would view it, was in a sense fulfilled. A delay of centuries in the return of Christ visibly to reign in the midst of His people was not contemplated. That is the true answer to the suggestion that the method of continuing a Christian ministry was among the things pertaining to the Kingdom, of which the risen Christ spoke to the disciples during the Forty Days. This could not well have been without a revelation as to the procedure of the local pastor of the Church in the midst of the earth, which it is clear the primitive community did not possess. The continuity of the Apostolic office itself beyond the lifetime of the original witnesses is, however, possible. The terms of their appointment involved personal testimony to the facts of our Lord's life. The question, therefore, of ministerial succession could not arise until it became probable that the Apostles were not to tarry with His earth any longer.

C. IN THE EPISTLES. — The Epistles confirm, and in some points render more explicit, the testimony of the Acts. Here we are mainly concerned with the Pauline group, where the corporate aspect of Christianity is always prominent. But the Epistle to the Hebrews enjoins obedience to 'them that have the rule,' clearly implying accountability, not to the congregation, but to that 'great shepherd of the sheep' to whom reference is immediately made (He 13:17. 20. 24). And as the general tendency of the Epistle is to isolate the eternal priesthood of Christ in contrast with the transitory and therefore successive priesthood of the OT, it is well to remember not only the teaching of the earlier Pauline epistles, but also that of Christian believers is here represented as a flock with many under-shepherds, but that the same idea is definitely presented under the figure of the house, in a passage distinctly anticipating a later, more developed view of the ministry (3:16). St. James, apparently witnesses to a part of the Apostolic commission, viz. the healing of the sick, as vested in the presbyterate (5:14); and St. Peter develops the conception of the Christian congregation as a flock entrusted to the presbyters under the Chief Shepherd (1 P 5:4; cf. Mt 26:33, Lk 12:32, Jn 21:15, Acts 15:3, 1 P 5:2). And it is noticeable that, calling himself a 'co-presbyter' (2 P 1:1), St. Paul regards the presbyterate as inherent in his own office, and yet again in that of Christ Himself as the 'Shepherd and Bishop' of souls (20). The Apocalypse, being mystical, has little to the purpose beyond the clear fact that the twelve Apostles of the Lamb are investi- gated as the foundation-stones of the heavenly city (21). The angels of the Seven Churches are almost certainly their mystical representatives, not their actual persons (Rev 1:20; see Swete, Apocalypse, p. 21 f.). But the conception of an ordered life in the unity, inseparable from the idea of a city, is here, as elsewhere in the NT, prominent.

St. Paul in his earliest Epistles recognizes the two lines of leadership. On the one hand, there must be no quibbling of the spiritual gift of the Aaronic temple, the command of the free ministry of prophecy (1 Th 5:21). On the other, Christians are to know and esteem those that are over them in the Lord (vv. 17, 20). The importance of the latter becomes clearer in 2 Thessalonians, where the form of apostolic deaconage in the accomplishment of Christ's purpose and command—already operating through the disorders consequent upon the expectation of an immediate Parousia (3:6). That the function of government and discipline is in its origin an 'apostolic' gift, exercised by those entitled to a sense of divine election, is witnessed by St. Paul's treatment of the Corinthian offender (1 Co 5:2) and his vindication of his office (1 Co 15:1, 2 Co 1:1, III, 6, 10). The Pastoral Epistles show Timotheus and Titus, in Ephesians and Crete, entrusted with a larger measure of government than the presbyters, as delegates of an absent Apostle (1 Ti 3:1). The invariable principle of Apostolic deputation is transmuted into a principle of succession. There is nothing to show that the same method was adopted in the case of other Churches, or that, in ministerial succession, the writer was doing more than developing, in relation to the immediate needs of the Churches concerned, an authority capable of many applications. But none insists more strongly than St. Paul on the structural character of the Body of Christ (Ro 12:3-8, 1 Co 12:28-31, Eph 4:11-16), or on the due subordination of spiritual gifts to the development of a society (1 Co 12:15-31), a building of which Christ is the cornerstone (Eph 2:20). The foundation is twofold (ib.), the Apostles and prophets—the latter representing in principle the ministry of the Word, the former, in so far as the office is disciplinary, that of the sacraments. Both would seem to have been united in the ordination of Timothy (1 Ti 4:11—14, 20), as though the historic, external cull and the free activity of the Spirit were both approved in the development of the primitive community. It was the separation, which inevitably arose in days of decaying fervour, between the outward links of continuity in the historic body and the manifestation of the Spirit, that raised the question of the source of Apostolic authority in the Christian society.

Note on priesthood in the NT. — One other point remains to be discussed before leaving the NT. We have already seen that the problem of the ministry is capable of consideration, and ought to be considered, apart from any sacerdotal theory. In the hieratic sense of a caste which, by interposing between the worshippers and God, denies, while it appears to guarantee, the priestly character of the people for whom it acts, sacerdotalism is an idea foreign to the NT. On the other hand, the NT is by no means to be considered as the idea that every individual is in his own right a priest is evidently consistent with the Christian idea. It is primarily the society that is a royal priesthood (1 P 2:8-9, 5:4), having boldness of access to the throne of grace in Christ (He 4:16, 13). It is the people of God, the holy nation (1 P 2:9, 10), the commonwealth of the spiritual Israel (Eph 2:11), that answers to Israel after the flesh, differing from it only in those points wherein the priestliness of the latter was imperfect. The NT, then, implies an absence of differentiation, which is essential to the life of the Church. And the Epistle to the Hebrews, the Apocalypse, the Epistles of St. Paul, especially Galatians, are the essential character of Christ as 'brought again from the dead with the blood of the eternal covenant' (He 9:16), at once derived from Christ, the great Shepherd of the sheep in His priestly character as 'brought again from the dead with the blood of the eternal covenant' (He 9:16), at once derived from Christ, the great Shepherd of the sheep, who have just been spoken of as having rule in the Christian community, and are considered 'the living stones' (1 P 2:4). This, then, is the logical and essential character (see Lightfoot's dissertation on 'The Christian Ministry in Philippians, pp. 335-345), with the consequent reversion to Jewish, if not pagan, ideas. The
ministry of reconciliation (2 Co 5:19) never in the NT loses its ethical character. There is nothing to suggest that the perfection of Christ's life is in any sense restricted to a certain order, or that a ceremonial investiture must precede the exercise of functions precisely defined and limited. On the other hand, the apostles, as the representatives of the moral authority dependent for its sanction upon results, with which the ministry of Christ was vested, is the clearest example of organic life.

2. The principle as preserved in the facts of Church history.—Passing from the NT to ecclesiastical history, we have to ask, not what were the characteristics of the apostles, but what subject of the ministry, but how as a matter of fact the principles embodied in the Gospels, continued in the Acts, and attested by the Epistles, were retained in the succeeding life of the Church. How was the apostolic succession changed or transformed from degenerating into a concourse of unrelated units? The Apostolic teaching is preserved in the canon of Scripture, in the formation of which Apostolicity was the invariable test. Where is the corresponding mark of Apostolicity in the structure of the Christian society?

A. WRITINGS OF THE SUB-APOSTOLIC AGE.—(1) The Epistle of Clement (c. St A.D.), in which, as if in the presence of the Sacerdotal episcopacy (the word ερεσίας being still, as in the NT, apparently synonymous with ερασισμός), definitely asserts the Apostolic character of the ministry as succeeding to a pastoral authority.

"And our apostles knew through our Lord Jesus Christ that there would be strife over the name of the Gospel. For this cause, therefore, having received complete foreknowledge, they appointed certain well-meaning men, and afterwards they provided a continuance, that if these should fail, men should succeed to their ministration." (The translation and readings are those of Lightfoot in The Apostolic Fathers). A variant, which G ore adopts, and which Clement's "men,\) does "priests" (in the parallel connection, will be found in that author's Church and the Ministry (xii. 4), certain and constantly). But the text of Clement shows that the ministry was propagated on a plan directly sanctioned by Christ. His words show that in the West, where the method of "comminution" was distinctly traceable than in the communities of Asia Minor, the principle of Apostolic order was unquestioned. The facts of the Church's life are stated in succession of the Apostles. "The Apostles appointed their firstfruits to be bishops and deacons" (xii. 4). "Christ is from God, and the Apostles are from Christ" (loc. cit. 2). What is thus handed on is a ministry of the gospel and a priesthood of offering (xxvi. 1, cxII. 5-5, xiiI. 4). The latter phrase, as also the comparison between the resistance of the Corinthians to their presbyters and the rebellion of Korah against the Levitical priests (xiiI. 4), lends itself in a hierarchical accommodation for a sacerdotal interpretation, but for Clement himself the point of the analogy is, in a word, that to the orthodox Christian, the "sceptre of God... came not in the pomp of arrogance or of pride" (cxvI.), Clement sees the law of service in the adjustments of the Epistles (cxv. 1), rather than of the primitive form of the Pastoral, and which provoked the uncomprehension of the Corinthians, and wrought the division between the Churches. "Every one of the Church is as much an expression of the Spirit as Apostolic appointment (xxvI. 2). Not passive obedience, but observance of the limits which his "ordinances" impose upon him, is the duty of every member (cxI. 3-9). The relations of the several ranks are moral rather than technical.

The Epistle does not suggest a rigid system by which the performance of sacred rites is the exclusive function of a mediatorial class. But it is conspicuously plain that for Clement the Christian society is prior to the individual, and that the continuity of its vital relation to Christ depends on the persistence of facts of Church life not dependent on the change of the several units.

(2) The testimony of Ignatius is not altogether easy to appreciate, because words and phrases are apt to be misunderstood in the light of later developments. Unlike Clement, he nowhere explicitly states that the composition of the world from a spiritual point of view, within the sphere of his experience a ministry of three orders is the type of Church government, and is apparently regarded as universal. The argument from salvation is largely upon the observance of ministerial orders in the epistle to the Romans similar to those which abound elsewhere, is of doubtful force in view of the statement in Trall. 5, that 'apart from these there is not even the name of a church.' Though there is little reason to doubt that monopresbytery was established in the Churches of Asia by St. John, as Tertullian and others assert, and though the frequent association in Ignatius between the moral authority of the bishop and of the observance of the Divine commands (Mag. Philad. 1, Smyr. 8) suggests the inference that he regards this action of the Apostle as resting upon the explicit injunction of our Lord with respect to the Church, it is possible that we are not justified in concluding, apart from direct evidence, that any such injunction was in fact given. Ignatius seems to say the same about the work of the four Evangelists; but his mention of the mystical necessity of a fourfold Gospel (ad. Hier. 112, parallel to the declaration of Ignatius, that Christ is the mind of the Father, even as the 'bishops that are settled in the fairest parts of the earth are in the mind of Jesus Christ' (Eph. 3), —a mystical inference from the facts of Church life which has no certain value for history. This vein of mysticism in Ignatius must never be forgotten in estimating the evidence of his letters. Nor in his most euphemiastic allusions to the power of the Apostles. Ignatius appeal only to the word of Apostles, or even of Christ Himself, but to the moral and spiritual results of sacerdotal action already apparent in the current experience of the Church.

The main idea of Ignatius is unity (εὐνοτὸς, εὐγενικός) (Magn. 7, 13, Philad. 5). All things are from God and unto Him (Eph. 1, Philad. 14). This is regarded (after the Incarnation of the Father and the Son (Eph. 3, 5, Magn. 7, etc.). It is the purpose of Christ to unite men to God through Himself (Eph. 5, 3, etc.). The apostle Ignatius in his case feels to be not yet fully attained. He only begins to be a disciple (Eph. 3). Martyrdom he believes to be necessary that this union may be conterminous, and in which "man attains unto God." The relation is thus no mere technical association through external bonds, but what it is to have become with Christ in death, body, and life which is the blood of Christ (Trall. 8). It is checked by spiritual experience. The Divine method by which the union with Christ is achieved is the Incarnation, expected in the four facts of the Virgin-birth, Baptism, Passion, and Resurrection of Jesus (Smyr. 1)—those limitations of hard fact which alone give reality and assurance to Christ's work (Magn. 11: προφεξεαί διὸ τῆς συνήκριμης τῆς προφοτείας). Here is the second appeal to experience. The teaching which St. Paul combats in the Epistle to the Colossians, which appears in a yet more virulent form in the Pastoral, and which provoked the uncompromising reaction of the bishops, is worrisome to the NT. That the "water flow from Jesus' side, had spread like a moral pestilence throughout Asia in the form of Docetism. As in the first age the retention of Christ's Humanity secured his inalienable dominion in 'the apostles' doctrine and fellowship,' so now a faithful adherence to Apostolic consecrations, is enjoined by the bishop (Eph. 6, Trall. 2, Philad. 7, Smyr. 8), with the presbyters (Eph. 4 and passim) and deacons (Magn. 6, etc.) established everywhere in the communities as constituted in the Apostles themselves, give the only pledge of that union with Christ through the Incarnation by which the believer attains to God (cog. Trall. 7).

We must observe: (a) That acceptance of the limitations imposed by loyalty to a duly constituted Christian society follows, in the thought of Ignatius, the principle of the Incarnation (cog. Eph. 3). (b) Obedience to episcopal authority is represented as a moral obligation rather than as a technical condition of salvation. To follow one of the bishops 'is to be safe' (Philad. 11), without episcopal ministrations, is condemned. 'Do nothing without the bishop' is an injunction expressed in terms so general as to include more than the celebration of sacred rites, and thus indicates that the bishops and the Eucharist are dependent on their 'validity' not upon the official character of the ministrants (a question not raised), but upon episcopal sanction (Smyr. 18). The position of the bishop and the spiritual importance of which is apparent in the case of the latter—a sacrament of unity—the neglect of the principle resulting in decline of faith and love. (d) 'Validity,' i.e. assured spiritual
efficiency, admits of degrees. Disregard of the ministry is the beginning of the internal de- 
clension which is perfected in the denial of the Son. "Invalid" does not mean null and void. 
There is nothing to show that persons baptized ‘apart from the bishop’ would have been treated as unbaptized. St. Basil as the successor to St. Ignatius must be interpreted in view of the wider use of the word and its cognates in these epistles (Mogn. 4. 7. 13.

The best translation will, perhaps, be ‘regular’ or ‘standard.’ (6) While we must refrain from 
fixing upon St. Ignatius a certain body of doctrine which reduces it to a nicely adjusted hierarchical 
machine, the principle of his thought warrants us in claiming him as an undeniable witness for the 
continuance into the sub-Apostolic age of this society. At least, the evidence is so scanty and so fragmentary in the facts of its exterior order that the alternative to structural continuity, are foreign to his whole conception. In that sense Ignatius is an 
unimpeachable witness to Apostolical succession in the early 2nd century.

Appointing his friend and pupil Irenaeus to have been appointed bishop of Smyrna by 
Apostles (Iren. iii. 4), writes to the Philippians, like Clement to the Corinthians, and Ignatius to 
Epheesians or Trallians, a letter addressed publicly to the whole Church, not only in his own name, 
but in that of his prebystyrs. The evidence is equivocal as to the existence of a bishop at 
Phillyr; for, though mention is made only of pre- 
bysters and deacons, the former are not called 
τιμιατος as in the Pauline Epistle to the 
whole Church (Polyc. 5. 6. 11). But it does show 
that ministerial authority is a particular determination 
that attaches to the whole community acting constitutionally. It is the principle of 
obedience that Polycarp emphasizes—‘Be ye all 
subject one to another’ (10). God is the Father, 
Jesus Christ His Son the eternal High Priest 
(πουστιφαξ) (12). His coming and those command- 
ments which are its issue, i.e. not moral precepts merely or chiefly, but the witness of the Cross, the 
Passion and Resurrection, which form the subject 
of the gospel, involve obedience on the part of 
Christians to the voice of the proclamations of 
the Church, and to that voice the Apostles who proclaimed the gospel (6).

The perversion of this truth, its accommodation 
to human lusts, by a Docetic teaching which 
denies the efficacy of atonement, is still the 
chief danger to faith (7). Though milder in 
form, Polycarp’s teaching evidently tallies with that of 
Ignatius, whose letters comprise ‘every kind of 
edification which pertaineth unto our Lord’ (13). 
The Philippians are to submit themselves to the 
presbyters and deacons as to God and Christ (5).

The importance of the Didache depends upon 
its character as a Hebrew-Christian document of a 
date not later than the early 2nd century. In-
ternal evidence suggests that it represents a con-
dition of affairs such as would exist among a 
community of Jewish disciples in Syria, whose 
numbers had been baptized on conversion, and 
the Pentecostal message that Jesus was the Messiah, 
had adopted the primary Christian practices of the 
breaking of bread and prayer, and were subject to 
the leadership of a presbyter and deacons, if not of the Twelve 
directly, yet of original presbyters and deacons, as is plain from 
the Epistle of St. Philip, but were strangers to the developed theo-
logy of the Epistles (see J. Wordsworth, Ministry 
of Grace, pp. 16. 17). In observing the life of this 
community at this early stage, we have only the principles 
as indications of the way in which 
organization was taking shape in an inchoate and 
rudimentary stage. We notice: (a) That the community acts and may be addressed as a whole, 
resembling in this particular both the societies to 
which Clement and Ignatius write and the Churches of 
the NT. (b) Prophecy, which at a later date 
was emphasized in opposition not only to Gnosti-
icism but even to the Christian ministry, occurs fre-
quent place, not, however, as a promising gift, 
but as realized in a more or less well defined order 
(Did. 10. 11. 13). Here again there is correspondence 
with the Acts and NT generally, where ἡ 
προφητεία is already tending to become a title 
for the entire Church. In the Didache they possess a λειτουργία or right of service (15), which, while it evidently includes 
leadership in worship, is not precisely defined, does 
not apparently depend on ordination, and is moral 
rather than technical in type. As in the NT, so 
here ἠπόστολος is not confined to the Twelve, but 
seems to be applied to the προφητὴς as a class (11: 
‘if [the apostle] ask money, he is a false prophet’), 
together with another name, ἄρτεσαλος (15). They 
are described by such vague phrases as αἱ τεταμενων (15), which devolves also upon the prebystyrs and deacons as admitted to a share in the same λειτου-
ρια (15). Clem. speaks of other ἀδέλφαι διδώντες 
there as being assigned to the Church (Clem. Rom. xlv.). Taking this passage along with the 
Didache, there is some ground for the 
suggestion that the prophets, in addition to the 
Twelve, St. Paul, St. Peter, and St. John were 
an original source of the succession, which 
would therefore be Apostolical rather as possessing 
the sanction of the Twelve than as flowing by 
direct delegation from them (see Gore, Ch. and 
Min. ch. 6). It is at any rate clear that there have 
been the case with appointments made by St. 
Paul. Whether prophecy might reappear from 
age to age as a constantly renewed and immediate 
source of authority, is a question not contemplated 
by the Didache, which 1s essentially in the spirit of 
expected Parousia, is not concerned with a remoter 
future. But the community is to exercise its 
right of 
testing the prophet’s claim by the standard of 
disinterested sincerity and conformity with a rule of 
fact (11. 12). If, however, he satisfies this 
test, he is to be admitted either temporarily or 
permanently to an authority described as that of 
high priest (13)—the type, if not the source, of 
all other ministries. The same applies to ordination 
for themselves bishops (i.e. prebystyrs) and deacons, who are to ‘perform the service of the 
prophets and teachers’ (15). Though ξέφωτοτέρων (does not 
mean necessarily ‘elder prebystyrs’), yet the word 
clearly involves action similar to that required of 
the Church in the election of the Seven (Ac 6)— 
a choice which was not an alternative to the imposition 
of hands. The presumption would rather be, 
as noted above, that the prophets, whose ministry 
they were to share, would repeat the action of 
the Apostles at Jerusalem.

B. DISCIPLINARY CONTROVERSYS OF THE 
THIRD, FOURTH, AND FIFTH CENTURIES.—The 
limitations of the principle of historic succession 
are defined in the course of the discussions 
concering discipline (A.D. 200-450), which gather 
round the controversies involved in Montanism, 
Novatianism, and Donatism. The question in all 
these disputes was in reality not. What did the 
Apostles ordain, but What do the facts of the 
continuous history of the Church involve? The 
problem is parallel to that which centred round 
the Person of Christ, and involved the definitions of the 4th and 5th centuries. It may 
be admitted in either case that the matter is not 
merely one of terminology, but that a certain 
body of truth, often confused with the value 
of the facts, leading not unaturally, under stress of new conditions, to positions
ultimately found to be departures from primitive Christianity.

(1) To describe Montanism as an innovation, in the sense of a conscious rejection of an authoritative system, is to misconceive the situation. But at the very least it is clear that Hegesippus gave expression to a view which had been articulated by insistence on submission to the principle of unity expressed in the organization of the Christian society. The appeal of Ignatius was developed by Irenæus (II. 2, 3, 4, 40 (ed. Tertullian) who pointed to the episcopal succession as a guarantee for the preservation of Apostolic teaching. Nor were these alone in their contention. Hippolytus speaks of bishops as 'successors of the Apostles' and guardians of the word (Harr. proem. p. 3). Hegesippus, again, after speaking of the Corinthian Church as continuing 'in the right word' till the episcopate of Primus, says that he had made a list of the succession (baptism) up to Anicetus (ap. Euseb. iv. 29). Such evidence, together with that of the 'Church Orders,' which belong to the same period and in which we find careful regulations for ordination (e.g. the Roman Church Order, commonly called the 'Ecclesiastical Pontifical') points to the importance attached to the structural unity of the Church by men who, inheriting the spirit of the Fourth Gospel and the Pastoral, regarded Christianity as a universal and in family, not a system. In the knowledge. Montanism was not in intention a denial of this position. Writers like Tertullian fell back upon what seemed to them a more sure defence of orthodoxy in the spirit of prophecy. As with Novatian in the next age, who was careful to obtain a regular consecration to the episcopate, there was no separation from the external form of the Church. It was the Church itself that condemned them. Nor was the opposition to Montanism based on the idea of the illegitimacy of prophecy when unconnected with any outward delegation of authority, but simply on the nature and circumstances of the utterances themselves, which were pronounced on their merits to be not of God. In the continuance of prophecy there was nothing inconsistent with the authority of the ministry, and, though doubtless the claim of Montanus might in its issues become fatal not only to a canon of Scripture, but also to the historical fabric of the Christian society, it was only the authority to absolve sinners and repress prophecy that was actually assailed. The 'Church of the Spirit' was not a rival to the historic body, but rather the authority of which it was a part. And in the immediate expectation of the Parousia, characteristic of the Montanists, absolved them from the necessity of thinking out the problem of continuity. There is no evidence of the creation of a fresh local ministry, as with the Irvingites, by the voice of the Spirit. There were Montanist bishops and presbyters, as subsequently there were Arias or Nestorian clergy. But though the question was brought to a final issue, the problem was essentially the same as had been involved in Gnosticism, and it was met by the Church in the same manner. Just as there is a form of doctrine, an Apostolic gospel, a written word, such as is common in the Christian society, the 'word of life' and keeper of Holy Writ, 'the pillar and ground of the truth.' This was involved in the claim to 'try the spirits' made on behalf of the Church acting through its ordained ministry.

(2) Novatianism produced a definite theory of the facts of organized Church life in Cyprian's de Unitate. To discuss the historical value of the claims of the episcopate put forth in that treatise need not fall within the scope of this article. It represents as they are they had been from Apostolic times. As a vindication of the Apostolic authority of the Church acting in a corporate capacity, it is in general agreement with Ignatius, Irenæus, and the opponents of Montanism. Its weakness lies in the fact that it was not the activity of the Church itself, but the activity of the Spirit to official channels (see Lightfoot, Philippians, p. 258). So far as Novatianism, following in the wake of Montanus, was resisted by others, it stood for the freedom of the Gospel. The movement involved: (a) deference to the confessors, who, as manifesting the Spirit, were in deed what the prophets had in word; (b) supersession of such bishops and other ministers as did not manifestly fulfil certain spiritual conditions. The Roman Cornelius was accounted no bishop, because, like Callistus, he was held to be deficient in a genuinely spiritual vigour. This was in effect to make the voice of the Spirit, not Apostolic succession, the decisive Church principle. Against it Cyprian elaborated his famous doctrine of the episcopate as the true centre of unity. The Apostolic authority, first entrusted to St. Peter, was extended to his other eleven Apostles (de Unitate. 4), was transmitted by succession from them to the bishops (5). Each bishop, representing the particular Church which he ruled, possessed an unbroken continuity of jurisdiction and similar jurisdiction conferred upon his neighbours, the episcopate being regarded as exercised jointly and severally ('Episcopatus unus est cujus a singulis in solumdi pars tenetur.').

It is not easy to see precisely how Cyprian expected this principle to work out, and difficulties arose within his own lifetime in the controversy with Stephen of Rome concerning re-baptism. But there is no uncertainty that Cyprian considered Christ founded a society, which from the first He entrusted to his college of bishops, which represented Him in the world and was the organisation of his power in the universal college of bishops. Though, however, the days of exact constitutional limitations had not yet arrived, Cyprian does not appear to have contemplated an episcopal absolutism, for in practice he allowed, and even insisted upon, something in the nature of an organic exercise of authority on the part of the several dioceses, giving due recognition to presbyters, deacons, and even the laity, in synodal decisions (Ep. xvii. 1, xxvii. 1, xix. 23). The right of the laity to withdraw from the communion of a sinful bishop is recognized (Ep. lvii. 3). To the voice of the People the bishop himself owed his seals. But the tendency of this explicit theory and the character of an age which needed a disciplinary system were undoubtedly towards the idea of the bishop as the 'head of the Spirit.' This principle was assigned to the various grades of an accredited hierarchy. If a Novatian applied a narrow human concept of the Spirit, by referring to his presence, when such manifestations as the members of a Church, itself imperfectly spiritualized, were found, were found, was the whole idea of the Church as a religious society which led him to refuse recognition to the baptism of schismatics, which denies spiritual validity outside its own borders, and which finds its latest development in what Cyprian would have vehemently resisted—Ultranovatianism and papal infallibility.

(3) The earliest form in which this exclusiveness organized itself was Donatism, appealing to the authority of Cyprian for the re-baptizing of all who had been drenched in the schism. They differed, however, in one important respect, for whereas the latter inconsistently declined to break communion with bishops who, unlike himself, received baptism. Novatianism, without a fresh baptism, refused to recognize as Christians any who held the validity of what, as they viewed it, was a schismatical sacrament. It was claimed that, inasmuch as the Holy Spirit belonged to the Church, schismatical society did not possess something which therefore could not convey it. Against this narrow asceticism Augustine, while not invalidating the principle of authority as expressed in the historic ministry, affirmed a conception of the Christian universal purpose of Christ. The Church is Catholic; no good thing can fall outside its unity. If there is no salvation outside
APOSTOLIC SUCCESSION

the Church, the Church for this purpose cannot be interpreted in a merely constitutional sense. The 'validity' of baptism depends on the authority of the minister, but upon Christ's intention. How far-reaching this principle is does not at once appear.

That 'valid' are means, as with Ignatius, not 'genuine,' but regular, is clear from the fact that Augustine did not re-

gard baptism as spiritually operative so long as the recipient adhered to heresy, but while in Ignatius there is nothing to show whether baptism administered without episcopal sanction would have been treated as valid, Augustine asserts that it could not be valid, because 'the binding to grace is the absence of charity, which in experience is found to be in opposition to the spirit of charity and love, not the formal agreement from covenanted channels of those who create division. What Augustine failed adequately to realize, probably owing to the historical fact that on the whole 'the fruits of the Spirit' were consequently lacking among the Donatists, was that responsibility for separation is usually divided, and that it is difficult to determine which of two contending parties is schismatic. It is this fact that makes apparent historical parallels seriously de-

fective when applied to later controversies. What is of per-

manent value is the recognition that schism is a moral fault, not an ecclesiastical situation; that it is to be recognized in spiritual experience and healed by the appeal to conscience, not refuted by technical argument. A third point to observe is that apparently the validity of a sacrament is not dependent on the order of the minister who dispenses it. If it be argued that, as baptism is the sacrement which may be the minister of baptism, 'Hilt. of Lay-baptism; but cf. Waterland, Letters on Lay-

baptism' is alone in question, the ordained ministry is not in-

volved, and hence it may be that the whole matter of baptism

in the basis of want of jurisdiction, which applies equally to the case of 'ordained' and 'lay' ministers. For Cyril had maintained his atti-

tude towards re-baptizing on the ground of separation from the Catholic Church, which equally nullified schismatic ordina-

tion. In Art. 13, its power had not yet arrived of distinction between character and jurisdiction in the matter of orders (see Bingham, 

Art. xvii. §§ 5, 6). A deposed cleric became lay by virtue of being a schismatic priest could create the Real Presence in virtue of a mystic power inherent in his ordination, would he have not deposed to the means no more than due subordination to 'them that had the rule' in the common discharge of the universal priesthood. Naturally, therefore, a schismatic would be the real repository of authority. Clement of Rome indeed says that the layman is the minister of layman's ordinances (c. 5), but this is simply whether a sacrament administered without authority was null and void. The reply was in the negative. In the ante-Nicene period the clerical order was simply the normal repository of authority. Clement of Rome on the other hand, requires the presence of bishops, and hence it was wiser to choose between the two, the ordination of things why, if occasion had arisen, a similar recognition should not have been extended to the other sacrament so ministered. It seems clear that, though in the NT presbyters tended to labour in the word and teaching (1 Thess. 5:12), the Church is never charged with this duty. Tertullian distinctly affirms that 'where there is no bench of clergy, you offer, baptize, and are priest alone for yourself' (de Exh. 

Catt. 7). It is usual to discount this statement on the ground of what it appears in its context, and is contradicted, for example, by his own earlier opinion that 'offering' is a distinctive 'minus' of the clergy. In de Prescriptione he charges the 'priest of the clergy' with writing the letter of ordination and of granting even to the laity sacer-

dotal functions ('nam et laicis sacerdotia multa inimicantur,' 41). Not only in the later work he seems totally unaware that his statement is contrary to the teaching of the Church, but is condemned, "where three are, there is a church, although they be laics" (ib.). 'The difference,' he says, 'between the order and the people rests on the authority of the Church' (ib.). And it was precisely this authority not as a branch of authority, and therefore derived from Christ, which he emphasized against the Gnostics. There can be no question that from the time of Clement and Ignatius, or rather from the days of the Apostles (Ac 2 38), the Church was, as he said, the seat of worship was as vital to the continuity of the Church as a stability of doctrine, and that an Apostolic ministry was the guarantee of both. But it is also true, as Eastern Christendom testifies, that the territorial conception of 'one bishop one area,' though it may have been the ideal (see Nic. Cas. 8; Bingham, Ant. ii. 13), is a development that belongs rather to the West. The point, however, is that, although the formally and naturally officers were duly appointed by 'Apostolic' authority to fulfill the various functions of both discipline and worship, the dominant conception of priesthood asserted by one early writer after another (as, e. g., Vatican, Tryst. 116), and never lost even in the most narrowly hierarchical age, attached this character, inherited from the OT, to the whole institution. Within the society the ministry, belonging as it did to its structure, was the permanent guarantee of its continuity as a vertebrate institution both in faith and in life. When this ministry is likened to the Auronic priesthood, the shifting manner in which the analogy of the juristic writers shows that this aspect is not essential.

It is the merit of Augustine, in his handling of the Donatist controversy, to have pointed out the lines along which alone Apostolic succession can be given its true place in the Christian economy. Machinery cannot be exalted at the expense of spiritual experience. Had the Eucharist, like Baptism, been a sacrament Incapable of repetition in the life of the individual, it cannot be doubted that the 'validity' of 'schismatic' Eucharists would have been decided in the same sense as that of Baptism. Both sacraments, as so administered, were equally regular or irregular according to the meaning and nature of the minister. In both cases, they may be called the 'channel theory of sacraments, which regards Christian ordinances as vehicles of grace down which spiritual energy may be fed, has operated disastrously, to produce a technical view of a principle of conjuration, the whole Church and all, often called the 'miracle of the altar.' It is not affirmed that this theory is purely medieval, and that it was not present in germinal form in the first five centuries, and possibly none even in the Apostolic Church. But it is the view of succession as preserving the fulness of Apostolic authority, and as the guarantee of a gospel which is 'not of men neither by man,' i.e. as realizing the principles upon which Christ established His society, that is alike primitive and permanent.

While any theory of the ministry, which involves a denial of the personal consciousness of the Spirit in the experience of individuals or the manifestations of His presence in the corporate life of any Christian communities in any age, is inconsistent with plain facts and the Christian con-

science, it is yet, in the opinion of the present writer, probable that the principle of reunion among Christians, with the instinct of social and corporate witness which it manifests, will inevitably, as it progresses towards yet wider amalgamations, reveal Apostolic succession as a subject of more than local and territorial views, and there is really no opposition between them. That both the Eucharist and Baptism are rightfully administered by the ordained ministry; he expressly declares, even when he affirms that 'where three are, there is a church, although they be laics' (ib.). 'The difference,' he says, 'between the order and the people rests on the authority of the Church' (ib.). And it was precisely this

authority not as a branch of authority, and therefore derived from Christ, which he emphasized against the Gnostics. There can be no question that from the time of Clement and Ignatius, or rather from the days of the Apostles (Ac 2 38), the Church was, as he said, the seat of worship was as vital to the continuity of the Church as a stability of doctrine, and that an Apostolic ministry was the guarantee of both. But it is also true, as Eastern Christendom testifies, that the territorial conception of 'one bishop one area,' though it may have been the ideal (see Nic. Cas. 8; Bingham, Ant. ii. 13), is a development that belongs rather to the Wes. The point, however, is that, although the formally and naturally officers were duly appointed by 'Apostolic' authority to fulfill the various functions of both discipline and worship, the dominant conception of priesthood asserted by one early writer after another (as, e. g., Vatican, Tryst. 116), and never lost even in the most narrowly hierarchical age, attached this character, inherited from the OT, to the whole institution. Within the society the ministry, belonging as it did to its structure, was the permanent guarantee of its continuity as a vertebrate institution both in faith and in life. When this ministry is likened to the Auronic priesthood, the shifting manner in which the analogy of the juristic writers shows that this aspect is not essential. It is the merit of Augustine, in his handling of the Donatist controversy, to have pointed out the lines along which alone Apostolic succession can be given its true place in the Christian economy. Machinery cannot be exalted at the expense of spiritual experience. Had the Eucharist, like Baptism, been a sacrament Incapable of repetition in the life of the individual, it cannot be doubted that the 'validity' of 'schismatic' Eucharists would have been decided in the same sense as that of Baptism. Both sacraments, as so administered, were equally regular or irregular according to the meaning and nature of the minister. In both cases, they may be called the 'channel theory of sacraments, which regards Christian ordinances as vehicles of grace down which spiritual energy may be fed, has operated disastrously, to produce a technical view of a principle of conjuration, the whole Church and all, often called the 'miracle of the altar.' It is not affirmed that this theory is purely medieval, and that it was not present in germinal form in the first five centuries, and possibly none even in the Apostolic Church. But it is the view of succession as preserving the fulness of Apostolic authority, and as the guarantee of a gospel which is 'not of men neither by man,' i.e. as realizing the principles upon which Christ established His society, that is alike primitive and permanent. That both the Eucharist and Baptism are rightfully administered by the ordained ministry; he expressly declares, even when he affirms that 'where three are, there is a church, although they be laics' (ib.). 'The difference,' he says, 'between the order and the people rests on the authority of the Church' (ib.). And it was precisely this
which shall be necessary to make the fabric of universal Church life in the future structurally one with the Church of a continuous, though not undivided, past.

**APOTHEOSIS—See Deification.**

**APPRECIATION.**—The term ‘apperception’ was introduced into philosophy by Leibniz, being derived from the French *s’appercevoir,* ‘to be aware of.’ Its use appears to be wholly free from obscurity even in its inventor, while it has been applied by his successors in at least two widely different senses. With Leibniz it indicates: (1) a higher degree of perception—a perception which is distinct, and relatively persistent, in contrast with perceptions which, lacking these qualities, affect the soul only in the mass, and which, as they do not emerge into individual consciousness, may be called incognitones. ‘There is an arrangement of an infinite number of perceptions in us, but without appreciation and reflection, i.e. changes in the soul of which we are not conscious, because the impressions are either too slight, or too great in number, or too even (unites), so that they have nothing sufficiently distinguishing them from each other; but, joined to others, they do not fail to produce their effect and to make themselves felt at least confusedly in the mass’ (*Gesammelte Schriften,* ed. [Langley’s tr.] p. 47).

Leibniz’s favourite example—the noise or roar of the sea as made up of the insensible noises of the separate wavelets—does not really hold; but a modern instance may be given from Helmholz: the over-tones which give the peculiar quality or colour of different instruments cannot be separately noticed or ‘apperceived’ by the untrained ear, although in their mass they have a quite distinct and recognizable effect (Helmholtz, *Tonpsychologie,* p. 107; *Ellis’s tr.* p. 62). In Leibniz also a perception is a distinction in kind between beings or ‘monads.’ The lowest monads, which have perception alone, are merely passive mirrors of external events, while the higher monads or ‘spirits’ rise to *apperception,* which is consciousness, or the reflective knowledge of this inner state (perception), and which is not given to all souls nor to the same soul at all times (Principles of Nature and of Grace, § 4 [Latta, p. 410]). In perception proper the mind is passive: in *apperception* it is active, self-conscious. ‘There is not only an order of distinct perceptions which constitutes the *empire* of the soul, but also a mass of *perceptions* or *apperceptions,* which constitutes her *slavery*’ (*Theodicee* [Janet’s ed.], p. 143).

Although not incompatible, these two uses of the term in Leibniz are at least distinct. The second meaning, in which it suggests an internal sense of accurate and self-conscious perceptions, is that in which Wolff, and after him Kant, understood the term; but it was applied by the latter in a quite distinctive way (see KANT).

With Herbert, the theory of *apperception* enters on a new phase. It now means a process taking place between one presentation or idea and another idea or group of ideas (Psychol. als Wissen. ii. § 1, ch. 5 [Hartenstein’s ed. vol. vi. p. 190]). When a new sensation, perception, or memory enters the mind, it awakes or reproduces a number of older presentations or ideas referring to the same object. So far as these contain similar elements, it coalesces with them, and assimilates or is assimilated to them (Verschmelzung); so far as they contain opposite elements, there is mutual competition and conflict (Heimungen), each restricting the normal development of the other in the mind. The same process takes place between ideas in the same or different series, masses, or systems, of ideas and thoughts, which result from combinations of all kinds at lower levels. The appropriation or absorption of an idea, from whatever source, by a more complex idea or system already present in the mind, is what Herbert calls *‘apperception.’* It is *external or internal,* according as the idea to be appropriated is a sense-perception or a representation of any kind; but this distinction, really inconsistent with Herbert’s psychology, was afterwards rejected by Steintahl. The characteristics of the *apperceived* mass are, (1) that it succeeds the *apperceived* idea in time, and (2) that it is stronger, more powerful, from some causes it therefore continues to modify in accordance with it, while it itself continues to develop according to its nature (ib. p. 194; cf. *Lehrbuch zur Psychol.* § 41). Thus it is relatively the active, the other relatively the passive. An instance is the way in which our habitual modes of thought and action influence our apprehension of new ideas, our criticism of the conduct of others, etc. Not only how we see things, but what we shall actually see, is determined not by each of us by our past experience and the use we have made of it. Psychologically, such experience is active only as a *present* system of ideas, according to Herbert. *Apperception* does not take place in the child or in the savage, because sense and system are as yet undefined; it fails also under intoxication, fatigue, passion, etc., because the existing systems are disorganized. Education, intellectual and moral alike, is the gradual formation and strengthening of the due *apperceptive* masses. The slow and painful beginnings, the final rapid mastery and assimilation of a science, give further illustration. The modification is not wholly on one side, however; the ideas *act* as a basis of new systems of ideas, and new ideas are attached to the existing system, decomposing one another and entering into new connexions. *Apperception* is also the basis of *memory:* nothing can be recalled unless it has been built into a system or system of ideas, forming links by which the mind unites similar ideas (Wittgenstein, *Psych. Untersuch.*, iii. [Hartmann, vii. p. 591]). A further feature is the suppression, by the *apperceived* mass, of whatever in perception or recollection conflicts with itself; in this, with the correlative raising up and isolating of the *apperceived* element, *apperception* is identical with attention (Briefe, p. 407). See ATTENTION.

In Volkman also *apperception* is defined as the coalescence of a new and isolated mass of ideas with an older mass which exceeds it in the number of its constituents, and in internal adjustment or systematization (*Lehrbuch der Psych.*, ii. p. 180). With both Leibniz and Steintahl the range of *apperception* is greatly extended; it becomes, indeed, coextensive with mental life. It is the *creative* process in mind; in it one content does not merely become aware of another, but becomes something richer and higher third. ‘An idea becomes a centre of *apperception* through its *Macht,* or force, which does not imply either intensity or clear consciousness, but depends upon the number of connexions which it has with other ideas, and on the closeness of the ties by which its constituents are bound together. Steintahl recognizes four chief forms of *appercep-
APPETITE

J. LEWIS M'INTYRE

APPETITE.—I. Psychological.—Appetite may be defined as a recurring sense or consciousness of want in the bodily organism, accompanied with a craving or desire for satisfaction, leading to efforts at fulfilment, under the impulse of uneasiness, which may become, under certain circumstances, more or less pronounced. It belongs to the animal side of our being, and is primordial to the human constitution. Most of the appetites—hunger, thirst, sleep, repose, rest—are connected with the conservation and welfare of the individual; sex has reference to the propagation and continuance of the species.

The characteristics of these natural physical wants (over and above uneasiness and efforts to remove it) are:—(1) They are not permanent, but intermittent: they disappear on being satisfied, but recur at stated times or periods. (2) If pressed beyond the natural limits of satisfaction, they breed satiety, and injury is done to the system. (3) They constitute our only distinction to the higher or ideal wants of our nature, such as knowledge and friendship: we do not identify them with our inner self—they are nature, but they are not us.

The uneasiness in an appetite leads to action, mainly reflex and instinctive, not deliberately purposive, for the removal of it, and the gratification of the appetite brings peace. Hence, the original propensities to act under uneasiness may come to assume the form of desire for pleasure (as we see in the gourmand or the epicure), and what would be quite sufficient to remove the bare appetite (as in hunger) may be superseded by elaborate and refined modes of ministering to the desire, as shown in the art of cookery. It is thus that appetite may be specially effective on the will: it prompts to the acquisition and continuance of pleasure, not only to the getting rid of uneasiness or discomfort.

These two things—the pleasure that accompanies (say) eating, and the conscious and deliberate pursuit of the pleasure of eating—are by no means identical. On the contrary, if desire of the pleasure become the predominant fact, the original normal and healthy craving in appetite may be supplanted by an abnormal craving, such as we see in gluttony; or an artificial craving, an acquired appetite, may be produced, as we see in the craving for tobacco or for alcohol. There is here, obviously, no appetite proper, but an induced desire, under the prompting of anticipated pleasure, which, in turn, is the product of individual pleasurable experience.

Hence, we must discriminate between appetite and desire for pleasure. Appetite simply craves for its object (the means for the attainment of the object being included in the apprehension of the object itself), and, given the object (food, for instance, for hunger), the appetite is satisfied—satisfied, no doubt, gradually, as the object is gradually realized, but fully in the realization of it. On the other hand, a desire for pleasure, or a consciously representative process, ideational in its nature, dependent on experience of pleasure (therefore, involving memory), and craving for that pleasure and, in the case of "acquired appetites," for the increase, as well as for the repetition, of it. Appetite, like instinct, is native to the human being; but it differs from instinct in the following respects:—(1) It is an organic craving, whereas instinct acts under external stimulus. (2) In instinct, while there are an end to be and means to be used for the purpose, the individual is born with ability to employ the means without requiring to be taught how (as seen, for instance, in the suckling of the child)—in other words, the individual can unhesitatingly employ the means from the beginning, without, however, any consciousness of the end or deliberate purpose to achieve it. (3) In instinct there is also an untaught propensity, or a natural urge, to act—an "acquired" prior to experience, and independent of instruction.

The pleasure that the satisfaction of an appetite gives is in general proportional to the craving. But there are cases where the craving is far greater than the pleasure of the gratification. Such a case we find in the glutton or the drunkard, whose passion, being persistent and unquenched by successive gratifications, craves an indulgence which the object of it is incapable of adequately meeting. Here, excess has created a situation where pain has got the mastery—the craving does not disappear in its own fulfilment and periodically return, but persists and thrusts itself unreasonably upon attention; in other words, the object of desire when reached fails to appease completely, and the craving for satisfaction continues lower and lower.

Although, therefore, in appetite proper, there is not involved the deliberate control of reason, nor is there any need for such, this control comes to be required when appetite would transgress its bounds. Such transgression is easy because of the pleasure associated with appetite, and because of the readiness with which abnormal conditions of the bodily system may be induced through excess. Hence, the appetites come to have a distinct and an important bearing on Ethics. Although in their normal action and in their rightful sphere they guide us in a way that can reason could not—prompting us effectively, for instance, to eat for the support of life at the time and to the degree
that the body requires, and not leaving the ‘when’ and the ‘how much’ to be settled by rational calculation— their plea is whether her ‘felicitic’ property has to be watched, lest it make volu
tuaries or debauchees of us; and thus reason has
its function in relation to them. This would seem

to mark the distinction between man and the lower
invertebrates; in man, the appetites are rationalized
in the brutes, not so.

2. Ethical.—The appetites in themselves are

neither selfish nor unselfish, neither virtuous nor

vicious, so far as they are the moral and spiritual

element in man; and the gross and sensual tendencies of human

nature find their symbol in the dark and untract

able steer. But the task of the charioteer is far

from easy—not only to guide, but to govern a

team; the taming of the refractory steer costs

him many an effort, and hard work and skill.

Obedience is the result of a strong hand and a
determined will, and of sore punishment repeated;

but simply ‘when’ and ‘what’ the appetites desire

is decided, the villain has ceased from his wanton way, is be

tamed and humbled, and follows the will of

the charioteer.

The right by which reason rules the appetites, or

the rational basis of the distinction between higher

and lower in our nature, is found here:—The

appetites are non-ideal, and, consequently, indi

vidualistic. We cannot share them with any one

else, neither is an appetite in itself susceptible of

indefinite gratification. On the other hand, all

the natural wants that we regard as higher—

knowledge, friendship, virtue, religion—are dis

tinguished by this, that (a) we share them with

our fellow-men, and that they have a tendency to

overstep the limit, and (b) we do not feel that all the

happiness that we know is a necessary concomitant of

the more we desire to know. They aim at an

ideal; and it is the ideality with which they are

bound up that produces their insatiability: no limit

is placed by nature to their culture, and so

their very satiety cannot be. The capacity increases

with what it feeds on.

It is needless to say, further, that both human

happiness and human progress depend on this

control of the lower nature; and this control is effective only when it becomes self

control, only when the individual acts as his own

‘plagious Orphius,’ gains the mastery over himself

and exercises it spontaneously. How this self

control is directed, is another matter: here directing the will, may be read in any good treatise

on Psychology (e.g. Höfling’s). Anyhow, if the

different’s soul becomes, as Plato puts it, a well

ordered State—where there are gradations of

functions, human beings forming a natural sub

siveness of the parts to the interests of the whole

in the making of the highest good—then the appetites and their pleasures count for

much and have their own part to play in the

economy of the human being; neither will they be

ignored or starved (as Stoicism would fain effect), nor will they be made supreme and culti

vated without stint (as some forms of Hedonism

would appear to countenance).

But while there is thus a ground for the rationalizing of appetite, and for the subordina

tion of the lower to the higher, in the nature of the different natural wants themselves, there is a further ground in the ethical dangers connected

with the appetites. These are mainly as follows:—

(1) In the first place, an appetite, strictly speaking,
is neither selfish nor unselfish; but a depraved or

unrestrained appetite is essentially selfish—thus

turning a neutral thing into a positive evil. Yile

appetites minister to the individual’s cravings, but

they may be made the means of corrupting others.

(2) Depraved or unrestrained appetite and character,

are the same thing: the same moral moral

progress—they bring ‘leanness into the soul; for it is a

law of the human mind that we cannot indulge

intemperately without lessening our moral force,
just as we cannot harbour pain without thereby shutting out noble ones, or choose false-
hod without rejecting truth. Consequently, while they vitiate the taste, they enfeebly the will—i.e. they deprive of the power of resisting temptation, which, of course, we expressed, means that they leave us the prey to impulse, and so the end thereof, in Scripture language, 'is death.' (3) Perverted appetites are a bondage: they drag us at their heels, and through the whole course of our lives, in a state of slavery.

The peculiarity is that, while we yield to them, we protest: the will is overborne, but we still retain our perception of the right and our appreciation of it,—saying, 'I know that these things are not so.' (Ovid, Met. vii. 21.) In other words, our moral energy is felt not to be adequate to our moral insight; we are conscious of being coerced. This fact of the bondage of the appetites and passions is the theme of all great ethicists, from Plato downwards: it was kept before the mediEval world by the Consolation of Philosophy of Boethius, and it is a heritage to modern philosophy from Spinoza, the fourth part of whose Ethics deals with this very subject of 'Human Bondage,' and the fifth with 'Human Liberty.' It is also a leading theme of the Christian religion, and lies at the basis of the scheme of salvation. (4) Appetite unduly gratified will not only deprive me of what shall I say of the pleasures of the body? This—that the lust thereof is indeed full of uneasiness (anxiety), but the eating, of repentance (Boethius, Consod. Phil. Lib. iii. prosa 7).

3. Religious.—The ascension thus drawn between the appetites and reason, the estimation put upon it, and the conception of the soul as a well-ordered, self-governed State, were taken over by Christianity; only, it is to be observed, that Christianizing has its own way of explaining the conflict between the lower and the higher in man, and it has its own means of ending the conflict. That is its peculiarity, marking it off from mere Ethics. On the one hand (using St. Paul as our guide)—more especially, as he expresses himself in Ro 7 and Gal 5), the lower and concupiscent element in man is identified with 'the flesh' (adag). This unraiy principle—the black horse of Plato—rebells against the human reason and overrules the man with 'mind' or vtois in Pauline phraseology), and causes the individual to exclaim in agony, 'O wretched man that I am! who shall deliver me from this body of death?' (Rom. vii. 24.) It,-is from the man himself, not even from his active reason, although the natural function of active reason is to control; but from without—"I thank God through Jesus Christ our Lord." For man's impotence of will, according to Scripture, arises from a religious cause and needs a religious remedy; it arises from the fact that man is 'fallen,' is 'sold under sin,' has deliberately rebelled against God, and so has forfeited his rightful power of self-mastery; and the rectifying and conquering force must come to him from above—it must be a gift from heaven. This Divine gift, in accordance with the whole Christian doctrine of regeneration and spiritual life, is the Spirit. And so, in order to be delivered from the hard bondage of the lower self, which is the bondage of sin, man must be raised from the 'natural' or 'psychical' into the 'spiritual' being, the man himself become a temple of the Holy Ghost, and the indwelling Spirit he will conquer. 'But, I say, walk by the Spirit, and ye shall not fulfiil the lusts of the flesh. For the flesh lusteth against the Spirit and the Spirit against the flesh; and these are in conflict one against the other; that ye may not do the things that ye would. . . . And they that are of Christ Jesus have crucified the flesh with the passions and the lusts thereof (Gal 5:23, 24). Thus the Christian faith incorporates Ethics, but transcends it. It is, consequently, effective on human life and practice in a way that Ethics, standing alone, cannot be.

II. ETHICAL: Spinoza, Ethics, Parts iii. & iv. (Eng. tr. by White and Stirling, 1899); Dugald Stewart, The Active and Moral Powers of Man, Bk. i. ch. i.; T. H. Green, Prehgomena to Ethics?, Bk. ii. (1884); James Seth, A Study of Ethical Doctrine (1893); F. H. Maurice, Chapters from Aristotle's Ethics (1890); J. S. Mackenzie, A Manual of Ethics (1901); W. L. Scullard, Early Christian Ethics in the West (1907).

WILLIAM L. DAVIDSON.

A PRIORI.—A Priori is one of those terms, by no means rare in philosophy, the meaning of which has in the course of centuries undergone divers changes. Originally denoting an ordinary mental act about which there can be no controversy, it has eventually become the index of one of the most stubborn problems which set the minds of men at variance. According to Brounard, the earlier occurrence of the phrase, in denoting the writings of Albert of Saxony (14th cent.), who draws a contrast between demonstratio a priori, the proof from what is before, i.e. from the cause, and demonstratio a posteriori, the proof from which retrocedes from the effect, the phrase can be traced to Aristotle, who in the Second Analytics states that that upon which proof is based must be prior to, and better known than, that which is to be proved, and continues thus: 'The earlier and better known has a twofold meaning. That which is prior by nature is not identical with what is prior for us; nor again is that which is in itself better known the same as what is better known to us.' The prior and better-known in relation to us is the name I give to what lies nearer to our sense perception; what lies farther from that I call 'the prior and better known in itself.' The most remote of all thus becomes 'the individual object.' The connexion of the term A Priori with Aristotle is thus quite evident. But while he differentiates the meaning of 'prior' according as the starting-point is the thing perceived or the process of perception, Alberti of Saxony does not take this difference into account: with him demonstratio a priori signifies the proof from causes. It merely denotes a special mode of mental operation; in other words, a priori is a term of formal logic. The knowledge which proceeds from cause to effect, or knowledge a priori, rightly claims a higher degree of certainty than knowledge a posteriori, or from effect to cause, so long as the terms keep rigidly to the meanings assigned, and so long as the limits of formal logic are not transgressed. But the problem of knowledge goes beyond the scope of formal logic. The moment any shifting takes place in the meaning of A Priori and A Posteriori, and they show a tendency to coalesce respectively with knowledge based upon conceptions and knowledge based upon experience, and when, further, the province of logic is relinquished for that of psychology, it is no longer possible to maintain the highest certainty of a priori knowledge. For, with such change, perception appears as the earlier and more certain, while the general conception is the latter, and thus A Priori and

* Geschichte der Logik, iv. 76.
A Priori

A Posteriori have simply exchanged meanings. Hence, Gassendi, in his polemics against the Aristotelians, impugns the dictum that the demonstratio a priori is more certain and conclusive than that a posteriori, and demands its warrant. Since on his view the demonstratio a priori becomes the proper cause of our judgments, and the posteriori, since the demonstratio a posteriori becomes the proof from effects and less general conceptions, he shows that he has abandoned the strictly logical usage of the terms. But in that case it is clear that one is about on the question whether effects are not better known than causes; and the inevitable inference is that a priori knowledge depends upon a posteriori.† Gassendi's criticism shows that the term A Priori had become ambiguous; it was so far free to assume a new meaning.

Its new content was supplied by Leibniz. It is indeed true that Leibniz did not always use the term in one and the same sense. Thus, in connection with the ontological proof of the existence of God, he argues that existence does not follow from conception, but that the possibility of the fact signifies this, the conception must first of all be procured. Consequently, man, however, may not be recognized either a priori or a posteriori; the former, if the various characteristics of the concept are mutually consistent; the latter, when the thing itself is an object of perception. A similar usage appears in the passage where the creation of the clear and distinct idea is said to be its capacity of yielding the knowledge of a number of truths by a priori proof.‡ Here A Priori is really concerned with the elucidation and explanation of conceptions, and with knowledge won from conceptions by correct reasoning. It is employed in a somewhat different sense in the passage where the knowledge which proceeds from God to created things and that which proceeds from created things to God are respectively designated a priori and a posteriori.§ Still another usage is observable in the statement that in regard to the mysteries of the Christian faith, such as the Trinity and the Incarnation, a priori proofs on rational grounds are neither possible nor requisite, and that in this case the knowledge of the fact is sufficient, though the why remains unknown. A priori proof is here employed in a general sense, not in a restricted sense, as the word is to be explained below.

In discussing the relationship subsisting between the human and the animal soul, Leibniz comes to the conclusion that the faculty of simple empirical association is common to both. A dog being trained to perform a trick gets a tit-bit; a Dutchman travelling towards Asia will ask for his beer, perhaps even in a Turkish inn. The connexion between trick and tit-bit, between inn and beer, is in each case casual, not necessary; but the man differs from the animal in that he seeks for a necessary connexion. The mere data of experience are not sufficient for him, nor does he rely on experience alone; he goes beyond them a priori, by means of first principles. A Priori thus acquires an implication of necessary relation.† According to Leibniz, then, knowledge a priori is found in the following contingencies:—(1) when the possibility of a fact is established by showing the self-consistency of its conception; (2) when from a clear and distinct idea further cognitions are deduced; (3) when thought proceeds from God to created things; (4) when the rational grounds of an act is established by investigating it when an essential relation is established. Thus A Priori has various shades of meaning; but it may be asserted that, as used by Leibniz, the expression tends generally to become identified with knowledge gained "without qualification and in the strictest sense the term a priori can be applied only to that in regard to which we owe nothing whatever to experience." Lambert and others have been of opinion that 'without qualification and in the strictest sense the term a priori' means when he contrasts knowledge par la pure raison on a priori with philosophie expérimentale qui pro- cède a posteriori;* and when, in the Nouveaux Essais, the reason which is the basis not only of experience but of reason itself is defined as "la raison qui peut, sans aucun besoin d'expérience, se rendre à son objet, considérant que l'objet est, c'est-à-dire que l'objet est vrai, et peut donc le nommer.

Lambert and others have been of opinion that 'without qualification and in the strictest sense the term a priori can be applied only to that in regard to which we owe nothing whatever to experience.' Wolff, on the other hand, has been of opinion that such are general sense of the term, applying it to any kind of knowledge arrived at by reasoning, even when the conceptions employed in the premises are derived from experience.

The view of Kant demands a somewhat fuller treatment, since in this as in other respects he marks the consummation of the previous development, and the starting-point of the new. Besides, the problem indicated by the phrase a priori, according to his view, is a problem of the very data of human thought, as it does with no philosopher before him. His entire system, indeed, may be regarded as an answer to the great question, How are synthetic judgments a priori possible? Alike in his theoretical and his practical applications, the question of the harmonies of aesthetics and of religion, his aim was to discover and establish synthetic judgments a priori. He is at one with his predecessors in assuming the existence of synthetic judgments, and it is to be noted that it cannot be regarded as originating in experience. But he felt that justice had not been done to the problem involved.

If such a priori knowledge really exists, he argues, it must be expressible in judgments which are a priori, and, indeed, synthetic. Merely analytical judgments, i.e. those which do no more than analyse and elucidate a given concept, while they render our knowledge explicit, do not augment it; only synthetic judgments, i.e. those which link a new predicate to the subject, furnish a genuine addition to knowledge. Hence the judgments a priori which are of any use at all are precisely those the predicate of which goes beyond the subject, adding something that was not contained therein. Such a synthetic judgment is exemplified in the dictum, 'Every event has a cause.' It is synthetic, not analytic. The concept 'cause' has the idea of a cause; the predicate, therefore, adds something new; and as it is a priori, spiritual, mental, causality can only be shown to exist in the human and animal soul. Leibniz gives the example of the development of the human soul from the animal soul in the act of creation. Leibniz, in the three essays, attempted the exploration and explanation of the non-mathematical objects of human thought. The human and animal soul are both conditioned by the universal law of cause and effect. In every case of causation, Leibniz holds, the cause must necessarily be prior to the effect. Leibniz's system is opposed by the system of Gassendi and others, who hold that the natural and mechanical objects of human thought can be explained in terms of the purely mechanical objects of the universe. Leibniz's system is opposed by the system of Gassendi and others, who hold that the natural and mechanical objects of human thought can be explained in terms of the purely mechanical objects of the universe.

A PRIORI

617

of reason. Such rules, however, will be suggested by the following conclusions.

First, we must isolate it by eliminating all alien material. Now, since the faculty of knowledge has two aspects, namely, the universal forms of it, or the categories, and the discrimination of the pure reason, we may perhaps define this territory, if only we can disengage it from what we are not sure to be of critical sense; and content ourselves with the universal forms of perception, namely, Space and Time. As much as this has already been said, the material elements from the products of active thought, i.e. our judgments. Clearly the pure form of the judgment itself. This point is to be supposed that by means of the categories of understanding, and the sum of such forms will give us the complete list of these functions, i.e., the categories of understanding, which has already furnished all the possible forms of the judgment, and has tabulated them under four heads, each head exhibiting, as it were, the complex of the substance, ideas, or forms of consciousness.

Thus the quantity of judgments as universal, particular, or singular, gives the categories of quantity: Urgent Physiko. Totality; the judgment and are modified by positive, negative, or procedural, and gives the categories of relation: Substance and Accident. Cause and Effect. Reciprocity; while, finally, the modality of judgments as possible, impossible, and necessary, gives the categories of modality: Possibility—Impossibility, Existence—Non-Existence. Necessity—Contingency. Thus the a priori elements are the pure forms of the judgments themselves, and the Categories. They are a priori, because they are truly universal and of fact concerned with the act of pure understanding, and alone remain after our exhaustive process of elimination. Our first problem is therefore solved.

As to the determination of the function of the a priori elements, and the vindication of their applicability, its universal validity, and its necessity, this is the task an easy one. They are forms of perception, since every object of perception is presented to us in our experience; and it is the inherent property of every such experience to understand, to perceive, and to form an idea. Their validity and truth are beyond question, viz., geometry and kinematics for space and time, and experience, for geography, not finding its figures to hand in nature, common experience, or common arbitrariness; and in the same way kinematics elucidates its propositions without the help of perception, and the possibility of its truth can never be denied. How then are these sciences possible? Clearly because, on the one hand, geometry reduces to the fact that there is a priori in the perception of Space, while, on the other, kinematics rests upon the fact that there is an a priori perception of Time. The existence of these two sciences, then, vouchesags for the efficiency and validity of the a priori forms of perception. It is moreover difficult to demonstrate the function and competency of the categories, which are not forms of perception. What significance must we assign to them? It is not enough that all objects of perception should manifest themselves in Space and Time, and are the categories not therefore superfluous? What can the relation in which the phenomena and the categories be so as to account for the distinction of phenomena from things in themselves? Again, it is not accurate to think that bare perception, i.e., perception conditioned by Space and Time alone, can ever account for a thing. The whole, to which the phenomena without the categories are reducible, is arrived at by this point at which the function of the categories reveals itself, and their validity is established. They exhibit the various ways in which the unity of consciousness effects the orderly synthesis of phenomena. Knowledge, genuine experience, becomes ours only when, by means of the categories of Quantity and Quality, we come to understand, arrange, and grasp to things in such a way that the phenomena are accessible to us as an a complete for the full sentence. For example, a complete representation of space and time is not to be found in our mental concepts. We cannot conceive space and time as separate, disconnected, or isolated. They are always inseparable and interrelated. This is why we can never fully understand the concept of time and space. We can only understand them as part of a larger whole, such as the universe.

A psychological interpretation was given by Schopenhauer, who writes: 'The philosophy of Locke was a criticism of the functions of sense; Kant furnishes a criticism of the functions of the brain.' Helmholtz agrees with this, as also F. A. Lange, who states that 'the psychological equipment which constrains us to condition objects by space and time, is certainly anterior to all experience.' But this is not the case. We cannot understand the concepts of space and time without understanding the concepts of the categories of Quantity and Quality. We can only understand the concepts of space and time as part of a larger whole, such as the universe.
the psychological subject and its relations to the surrounding world, whether that world be looked at from the standpoint of Realism or of Idealism in the Berkeleyan sense. The true A Priori compasses both the psychological Ego and the world. A variation in our psychological organization would make a difference more than the alteration of a part of our knowledge. If, for instance, the faculty of colour-perception were to become more sensitive or less so, were it even to disappear altogether, then, with an extinction of its functions, everything would be as before; and, in fact, were the senses as a whole to suffer any drastic change, some being lost, some displaced by others, it would signify no more than the donning of a new garment; the intrinsic constitution of the mind would remain inviolate. But an alteration in the A Priori would be nothing less than a revolution. Take away space and time, and the world itself falls to pieces. We must accordingly guard against a psychological reading of the A Priori.

The difference between the A Priori and the psychological may be further illustrated as follows. The a priori-space-perception of Kant and psychological space is not identical. It may be the case that Kant ignored the distinction, but that is irrelevant meanwhile. It is a mistake to suppose that we refute Kant by showing that the faculty of space-perception is not congenital, but is acquired along with the psychic space, for this space-perception presupposes the a priori. Psychological space is limited, and we can in a manner discern its limits; a priori space knows no limit. Hence we may assert that what is a priori is not psychological, and vice versa. Once a psychological interpretation was put upon A Priori, it was quite proper to proceed to its analysis, as was done by the evolutionists. They maintained that what is so now an A Priori for the individual was at first an A Posteriori for the race; that in the course of thousands or even millions of years mankind at length acquired what is now the congenital endowment of the individual person (so Spencer, Haeckel, etc.). Kant, however, holds that no empirical valid end is against what we may call the psychological A Priori, cannot infringe the true A Priori.

(2) The proof of the second thesis, viz., that a principle in principle to innate, is contained in what has just been said, and for its elucidation a few words will suffice. We may rightly apply the term 'innate' to anything which belongs to the natural endowment of the psychological subject, but precisely on that account it is not a priori. The innate is what is given, but, from Kant's point of view, the given and the A Priori are antithetical. What is given must needs be capable of being set forth as a quality or as something passive; but this is impossible in the case of the A Priori, which is from first to last an activity of the mind. We do not discover it as we discover an external object of perception; it forms the presupposition of all our knowledge. We do not seek, for it as for other things, for in our very search that which we are looking for is already in operation. If, on the other hand, we wish to elicit the innate, the object of our search is not a factor in the process. Kant also insists that the A Priori must be taken as applying to supposed inborn, ready-made ideas. He writes: 'Criticism admits the existence of no such ideas as all, but regards all ideas, whether congenital or acquired, as a priori. There is, however, also a acquisitio originaria (as writers on Natural Law were wont to say), and therefore also of something which did not previously exist, nor belonged to anything before this or that.' Hence, if criticism has to do with the A Priori, it has, for that very reason, nothing to do with the innate.

Having thus explained the A Priori in Kant's theoretical philosophy, we proceed to deal with his assumption of a similar element in the practical activity of reason or mind. In respect of morality and religion, no less than of logical thought, reason possesses such a pre-requisite, everything is derived from experience, which can be expressed in synthetic judgments a priori. This consists, in a word, of Ideas, by which the empirically real must needs be controlled. The demands of the moral law and of the Kingdom of God must be realized in the external world. It has, indeed, been recently questioned whether we can justifiably speak of a practical A Priori. Thus Stange, in his Einleitung in die Ethik, holds that there is hardly any resemblance between the A Priori of the Critique of Pure Reason and that of the Critique of Practical Reason, and points out the following contrasts: (1) The Critique of Pure Reason treats of an A Priori both as empirical and as congenital. But the pure perceptions, Space and Time, and the pure forms of judgment, viz. the Categories; the Critique of Practical Reason treats only of an A Priori of Reason. (2) According to the first Critique, the A Priori presupposes itself, i.e., is necessary, for the A Priori is the ground of the a posteriori. According to the second Critique, the A Priori alone must determine the will. (3) In the former work, universality and necessity are given as the characteristics of the A Priori; in the latter, those traits are not applicable. The space-time ideas are combinative rather than universal and subjectively necessary, but it is not a priori. These strictures are canvassed by Hagenström in his comprehensive exposition of Kant's Ethik.

Admitting, however, as we must, the differences between the two Critiques, viz., that we likewise admit the propriety of applying the term A Priori in the practical sphere. There, too, we discover an endowment peculiar to the mind, and not derived from experience—a fact which is evinced by the Categorical Imperative, which regards itself as a synthesis of the pure a priori, but which in its universality and necessity imposes unconditional commands upon the will, declaring that it must regard whatever to human desire or pleasure, to natural disposition or circumstances—hence it is a Priori; and further, because the obligation, though valid and capable of being deduced from the concept 'will' by simple analysis, is at the same time non-empirical and synthetic. In the practical A Priori we may be said to pass from the concept 'will' to the concept 'pervious to' (as regards morality) universal and subjectively necessary, but it is not a priori; these strictures are canvassed by Hagenström in his comprehensive exposition of Kant's Ethik.

action; on the contrary, it is necessarily concerned, not merely with the individual contents of our own reason, but with the

Generale der moralischen Welt. The proposition, 'There ought to be a moral world, as beyond the empirical consciousness, add-

ing only: 'As the Ego generates everything for itself, so everything—not merely this or that concept, or, as has been supposed, only the form of thought—all knowledge whatever, indeed, as one and indivisible, is a priori. But as the empirical consequences of this generative process, there is nothing a priori for us: everything is a posteriori.'* Hegel, too, draws a distinction; a posteriori knowledge is

the a priori conceptions, but also the objective world, as beyond the empirical consciousness. But as

§ Kant's posteriori was priori—hence, the idea of the universal is not only contained in, but revealed itself only when to the conception of morality there is added that of an immoral action. How, then, is the moral world possible? Manifestly not in virtue of human action only, since we cannot conceive how the moral action of mankind should evolve a moral world. Nevertheless, we cannot admit to entirely different laws for our pro-

position, therefore, not to be a mere futility, we must inevita-

bly agree with the existence of an a posteriori science, which will secure the result aimed at in human morality. We can accordingly assert that there is a God—a proposition shown to be an a priori synthetic judgment, by the manner of its deduc-

tion. We must finally note that, as the realization of the moral

ideal is an endless task, it postulates the endless existence of

man. To it we arrive at the a priori synthetic judgment that

man is immortal. Religion also, then, has an A Priori, and is

indeed based upon it. The religion that we actually find in the

world is often but a sorry mixture, but in the process of develop-

ment its a priori element is able to realize itself, even under

ever purer forms. For it does not subsist in severance from

empirical reality, any more than does the A Priori of the theo-

real or the practical sphere.

It was Kant's belief that every genuine form of human experience was a combination of a priori and a posteriori factors. The absence of either was a sure sign of sophistry; no knowledge was possible save in some combination of the two. In accord with this, in the A Priori, our perceptions were formless and law-

less, and thereforefitful and evanescent; without the A Posteriori, we should have but the blind play of

morality must the empirical data be controlled and

moulded by the A Priori. In the absence of the

latter, we should have no morality, no religion,

only the lawless flux of desire, only the figments and

hollow formalities of superstition, while in the

former, the empirical factor were absent, the a priori ideas,

having no material to organize, would resemble the

shades of the under world in the Odyssey, which

must first have blood in their veins ere they can

can to life.

It was Kant's design in these conclusions to arbi-

trate between Rationalism and Empiricism. He had

striven to do justice to both the contending schools, and at the same time to confine each to its proper

province. To rationalism in its fanned independ-

ence of the A Posteriori, as to empiricism in its

repudiation of the A Priori, he rejoiced that genu-

ine knowledge resulted only from the interaction of the two elements. But the result of this empirical factor were absent, the a priori ideas,

having no material to organize, would resemble the

shades of the under world in the Odyssey, which

must first have blood in their veins ere they can

can to life.

It was Kant's design in these conclusions to arbi-

trate between Rationalism and Empiricism. He had

striven to do justice to both the contending schools, and at the same time to confine each to its proper

province. To rationalism in its fanned independ-

ence of the A Posteriori, as to empiricism in its

repudiation of the A Priori, he rejoiced that genu-

ine knowledge resulted only from the interaction of the two elements. But the result of this
something of its own. Green, again, sets forth the real universe as an all-embracing system of relations, the presupposition of which, however, is a unifying principle, a combining agency, essentially identical with the absolutist Dogma of "things.* Moreover, the matter of the universe is conceived by Green as a personal being, a superhuman personification, a thoroughly natural soul, which we may term "mankind." Thus we have here a kind of religious dogma, a spiritualizing of the material world, a union of heaven and earth, which is essentially a metaphysical system, distinguished by the fact that it inhere in the one experience. An A Priori is therefore out of the question.

In the question as to the recognition of an A Priori in Consciousness, the point at issue is really whether the mind is like an empty vessel, filled only from without, or whether it manipulates its own materials. When we state the question in this manner, we need not consider necessarily the consciousness of the experience, but with something more than a problem in Epistemology. The matter cannot be settled in reference to knowledge alone; it also involves morality, art, religion, culture, and philosophy in a more marked degree. The utterly misleading character of the empty-vessel metaphor appears from the fact that knowledge never simply comes to us, but is won only by effort. Such a passive acquisition as the metaphor would imply is a sheer impossibility. Even natural science, the experimental science per excellence, depends upon and advances by mental activity. Consciousness, therefore, is not anything quiescent, or merely receptive; it is the source of something of the new and the practical. It is necessary further ask, however, whether the mind works simply as a machine, elaborating raw material into definite shape, and is thus of a merely formal character, or whether it is as creative and essential as the present-day thinkers, whose views have been touched upon in the foregoing survey, the mind’s contribution is entirely restricted to the formal, the material quota being furnished in full by experience. Now it must certainly be admitted that natural science—to refer to it once more—is grounded in experience; it must begin with experience, and keep in constant touch with it. But it is none the less certain that natural science is continually begetting ideal entities, without which it could not make headway; such are, for instance, the conceptions of atom, law even ‘matter’ itself, not one of which is yielded by the senses. Thus the mind interweaves the data of sense with its own products. Nor is this discredited by the fact that such ideas as atom and matter are vigorously assailed at the present day, and may even be abandoned, since any conceivable surrogate thereof may be built from the mind itself, as is illustrated, for example, in Ostwald’s Vorlesungen über Naturphilosophie, where the conception of matter gives place to that of energy. Everywhere, be it short, does the mind work by means of ideal construction, without which it would fall to pieces. Thus the mind exhibits even in this sphere a real productivity, which is certainly called into operation, but is in novishe created, by experience.

When we come to Art, the case is clearer still. To think of art as having no other function than to reproduce the external world as accurately as possible is totally to misconceive it. In its tradition art, such extrinsic work may be of importance—e.g. in painting, the representation of light, atmosphere, and colour, and in the drama, the imitation of vernacular dialect and idiom; these things make for a more flexible technique. Nevertheless, they are but preparatory. Genuine art begins in the bodily forth of spiritual entities. It must express the better and finer side of the human nature, in fact, it has often a prophetic cast; it is the herald of what ought to be; or, again, it wrestles with the deepest problems of life, being intimately connected with the philosophy of things. In short, however, it does not draw upon external reality, but manifests
creative power, and is thus an additional witness to the fact that the mind has something all its own.

In **Morality**, again, everything depends upon the inner life. Morality cannot conceivably be a product of experience. For in this province the mind furnishes its own laws, and frames the ideas to which, indeed, only the fact depends the conception of justice, the idea of justice, of brotherly love. The man who sees in morality nothing more than the rules of conduct indispensable to human intercourse, is simply blind to its essential character. It is not designed to establish relations between men, but to realize the realization of truth and purity in the individual; indeed, it may even be the most uncompromising enemy of a given social state, and, should unveracity, luxury, or baseness have become dominant therein, it must threaten the fabric with destruction, whatsoever outward grandeur may perish in its fall. It was thus, for instance, that early Christianity sapped the foundations of a civilization which had become a sham.

Now, it forms no reasonable objection to this theory of a productive energy in mind to say that, since these Ideas are, like all else, facts of consciousness, we might as well identify philosophy with psychology, they are therefore evolved from mere experience. If consciousness is to cover everything, then all its various kinds of representation would mean nothing more than any other. Amid such conditions we could not even so much as ask for the truth. Now, in point of fact, all distinctively mental creations claim to have judicial authority; judgments purport to be more than collocations of psychical products; aesthetic and ethical Ideas involve more than feelings and desires. They claim, in short, to be authoritative, to be the standard of truth and law for what is given in experience. We must distinguish between the *quaestio facti* and the *quaestio juris*: it is one thing to ask what is, quite another to ask what ought to be. In dealing with the distinctively mental, we discover something more essential than causality is as such; such essential laws, namely, *regulative law*. The laws of logic, of aesthetics, and of morality, unlike the laws of nature, formulate that which ought to take place, not that which actually and invariably does take place. Thus we cannot deny the fact of the mind's peculiar heritage, as evinced by this unique claim to regulative authority. We must allow, nevertheless, that the objection indicated above, namely, that even these peculiar intellectual products must manifest themselves in consciousness, is something more than a truism; it expresses the fact that the real cannot be evolved by purely logical processes from abstract conceptions alone. Speculation at large is mere sophistry; typical examples of the method are Hegel in philosophy, and in theology Rother, who, in speaking of thought, says: 'While engaged in speculation, it shuts its eyes for the time to all else that is external, and looks only within, contemplating the dialectic movement amid which it has placed itself. Without a single side-glance, it pursues only the dialectic necessity with which each conception as it comes to birth in turn appears to itself as its inherent fertility.' But it is manifest that this speculative method cannot evolve reality, even spiritual reality, from conception. It is therefore quite legitimate, in opposition to a mode of thought which arrogates to itself creative omnipotence, to emphasize the experiential character of our knowledge. But, on the other hand, empiricism is in error when it narrows down experience to experience of what is external; the mind has also an experience of itself. The real nature of mind can be manifested only in consciousness—and upon this experiential character depends the experience of mental life; but what concerns us here is the mind's experience of its own peculiar endowment, which, as we have seen, claims to possess regulative authority, and thus carries us beyond the bare existence of empiricism.

This doctrine is not only in conflict with the purely speculative method, but is also at variance with the view of Kant. Kant believed that he could completely and finally determine that which belonged to mind or reason; but his conclusions were of a purely formal kind. The view advocated here involves not only a much greater amplitude in our mental life, but also a capacity for producing ever new and ever real elements. What the mind really is cannot be determined once for all; an avenue must ever be left open for further developments. In other words, there is a historical element in consciousness, or at least in human consciousness. We are not for ever tied down to the same varying forms, into which all kinds of material must be pressed; the truth is, rather, that we possess creative Ideas which are ever proposing new problems to experience, and seeking new tasks. We must insist upon the fact of development and movement in our intellectual life, and strive to identify its essential principle with the invariability of its formal determinations. In giving birth to Ideas, the mind puts definite limitations to the empirically real, and assimilates the answers thereof, thus winning for its Ideas a structure increasingly delicate, and an organization increasingly rich.

The answer given by empirical reality varies according to the kind of question put to it. It is obvious that, on the one hand, Aristotle's investigation of nature by means of the conception of entelechy, i.e. a form realizing its own Ideas in matter, and, on the other, that of modern science, with its conception of a causal uniformity reducible to mathematical formulae, must result in wholly diverse views of the world. Neither entelechy nor mathematics present any ground for believing that Ideas are concepts of the mind, both purport to be questions regarding the materials of sense, to which appropriate answers can be given by empirical reality, and thus to be capable of bringing the world under the domain of mind. That the Aristotelian conception has been supplanted by the modern does not imply that the former was an illusion pure and simple, or that it was inferior to the latter; as a matter of fact, each is a hypothesis; but the modern conception of causal uniformity has shown itself better adapted to certain purposes than the ancient entelechy. Even the belief that the world can be interpreted on mathematical and mechanical-causal principles was at first an Idea, regarding which it could not be ascertained beforehand whether experience would ratify or confute it. But the Idea has proved fruitful, and has accordingly become increasingly rich in content. From the first it was more than a purely formal, involving indeed a conviction regarding the actual constitution of the world.

Similarly the manifold aesthetic and ethical Ideas, which are certainly not mere inferences from their function in organizing the real, we need not go further into that matter here. Suffice it to say that the human mind has brought a great variety of Ideas to bear upon the real, and that it did not begin its task with the same inherent
equipment with which it pursues it. In fine, the mind also has a history. Now the question arises whether these Ideas should be called a priori. If they are related to history, they must also be related to experience. Nothing save the tedious discipline of facts could have compelled man to form a fresh Idea, for we may say with absolute certainty that the mind is not something ready-made, anterior to all experience; it is in reality built up by intercourse with the facts of experience and history. But for that very reason it is not the product of these. What they supply to the mind is but the stimulus to its own creative activity. Accordingly the fresh element generated by this spontaneous activity is an A Priori in reference to the whole province of empirical reality, which thus becomes the mind's palestra, that which is to be organized by means of the Ideas. Just as, according to Kant, the a priori forms of reason are the necessary condition of experience in the higher sense, so also are the Ideas generated by the mind. We must likewise note that these Ideas exist only in virtue of the mind's own activity, and that, were this to cease, they would forthwith be swept away—like links of affinity with the A Priori of Kant. We must accordingly assign to them the efficiency which marks the A Priori. The fact that they undergo changes and transformations, or that they supplant one another, need not perplex any one who does not postulate the original perfection of the mind. We must grant, of course, that we can win a truth only by much effort, and that our approach to the ultimate and supreme end is asymptotic, never issuing in complete realization. Nevertheless, as in all other cases, we must assume the reality of absolute truth; we must, in fact, make this assumption, else were all our striving fruitless, and even partial truth beyond our grasp. Just as the various parts of space lie within one and the same Space, so partial truths are constituents of the one absolute Truth. That this eternal, absolute truth is ignis fatuus appears from the fact that there exists in us a mighty unrest, ever urging us beyond the position we have won. Whence this unrest? Certainly not from without. Were our mind sufficient to itself, no external force could move it onwards. There must exist, therefore, something in itself, which logic furnishes the best example; (2) the Ideas generated by the mind, and (3) the contents of the absolute mind. This view, or one all but identical, is championed by the new Idealism, whose principal representative is Prof. R. Eucken, of Jena. It remains to deal shortly with the significance of the A Priori for Religion. It was Kant's conviction that a complete and profound method of formulating religion—that genuine religion has its source in pure reason. All externals, according to him, such as rubrics and creeds, are incidental, and to look for the source of religious feeling in the forms of religion without understanding what common reason leads to such error. Here we have a truth of paramount importance. For religious is possible only in virtue of an original, inherent resource of the mind. It is clear that every attempt to trace the origin of religion to something which is not religion is foredoomed to failure. Research into the most primitive cults never discovers the spot where religion issues from a non-religious soil; it can never be done by the mind. It may perhaps have some connexion with the anti-

mony between our feeling of dependence upon the environment and our consciousness of freedom. Man sees himself conditioned at every point, and in thrall to non-spiritual forces, yet at the same time he is cognizant of his freedom and of his superior dignity in comparison with all that is merely natural; and so, in order to preserve his spiritual personality, he seeks to attach himself to the Absolute Spirit, the result being religion. But it is simply inconceivable how religion should originate in this way—to say nothing of the unproved assumption that such ideas as dependence upon environment and personal freedom prevailed among primitive men. Of old days, when man was but a child, may perhaps have some connexion with the anti-

mony in question; its natural growth may even be accelerated thereby; but it cannot possibly arise therefrom. We must carefully distinguish between what can and what cannot be done by historical and psychological research in this sphere. Histori-

cal investigation may disclose a continuous regress from highly developed religions to forms ever more simple, till at length the ostensibly lowest is reached; in fact, and travails we must, in actuality, have postulated an even more primitive state, but what is thus elicited is still of the nature of religion. Again, by psychological study we may try to ascertain the particular modes of thought, feeling, and volition with which religion is specially connected—to determine, for instance, whether it is mainly concerned with the conserva-
tion and furthestance of the physical or of the moral life; but religion is presupposed in the very inquiry. Kant is therefore quite justified in recog-
nizing an A Priori in religion. His characteristic error lay in the attempt to fix its limits once for all. Here also, however, we must insist upon the fact that from mere dissatisfaction with the results of development, as, for instance, in the prophets of Israel, or in Jesus. That religion has a link with history is beyond controversy; only in the fulness of time—and there it is not end but such a character as cannot be deser-

ably ascertained, but are revealed in what they create. Kant's results require modification in still an-
other respect. He approached religion from the side of morality. He regarded the A Priori of the former, in contrast with that of the latter, as in some degree derivative. In point of fact, he was not resolute enough in regard to the independent position of religion, and it is Schleiermacher who makes good the defect. The idea of Kant created the distinctive character of religion as something independent of thought or moral action. True, his own definition of religion as the feeling of absolute dependence was in many respects far from being often been, misunderstood, since 'feeling' has a psychological reference which tends to obscure its

Phil. of Kant, 1889, passim, see Index.

PAUL KALWEIT.

AQUINAS.—In the church of St. Catarina at Pisa, at the third altar on the left, is a picture by Francesco Traini, the most gifted pupil of Orecagna, representing St. Thomas of Aquino. The figure of the saint is of colossal size. Upon his knees are four books, representing the four parts of his Summa contra Gentiles. In his hands is a larger volume, the Sacred Scripture. Displaying Pr 8' Veritatem meditabitur guttur meum, et labia mea detestabantur impium.' Above is Christ enthroned in a mandorla, surrounded by cherubim. From his mouth proceed rays of light, one to each of the six Biblical teachers, more or less prostrate. This picture is referred to His left Moses, St. John, and St. Mark; to his right St. Paul, St. Matthew, and St. Luke. Three rays pass down to the head of St. Thomas, which also receives one ray from each of the Biblical teachers. To the left of the Saint stands Aristotle, holding up his Ethics; to the left Plato, with the Timaeus. From these proceed rays reaching the ears of the saint. From his own books proceeds a ray, illuminating the faithful, grouped to right and left. In all, 10 rays were thrown out. The fresco was executed in 1906-7. As a whole the picture is powerfully and moving, and in its execution by the pupil of Averroës, struck down by the light—the impious, whom the lips of the great teacher abhor. By his side lies his Great Commentary, transixed by a ray proceeding from the books on St. Thomas' knees.

This picture faithfully represents the position of the greatest teacher of the medieval Church, her greatest philosopher, who was also her greatest theologian, absorbing into himself all the sources of wisdom, human and Divine. In his teaching he brought Scholasticism to its highest development, harmonizing the Peripatetic philosophy with the doctrine of the Church.

i. Life.—Aquinas was born in 1225 or 1227 (the date is uncertain), most probably at the castle of Rocen Secco, 5 km. from Aquino. His father was Count of Aquino, a rich lic in the kingdom of Naples. His mother Theresa was a pupil of the old Norman kings of Sicily. His family was therefore connected with the Hohenstaufen, and so the great doctor of the Church was related to Frederick II., its scourge. At the age of 5 he was placed under the charge of his uncle, the Abbot of Monte Cassino, and he there received his first instruction. This he completed at the University of Naples, recently restored by Frederick II. (1224), and specially favoured by him in opposition to Bologna, which had incurred his wrath by joining the Lombard League. The mendicant orders were then at the zenith of their fame. Thomas was drawn towards them, and in the year 1243 joined the Dominicans without the knowledge of his family. His pious mother was at first not at all dissatisfied with the decision. She only wanted to be allowed to see her son. This the friars were not disposed to permit. After testing the claims of family ties might make them lose his promised convert. The mother made known her grief to her other sons, who held high rank in the Emperor's

Literature.—Special treatises on the subject are few; particular mention must be made of Eucken, Gesch. und Kritik der Griech. Philosophie, 2nd ed. 1874, 2nd ed. 1895 (under the title Gesammelte Schriften der Gegenwart) (1904 [the three editions differ thus: the 1st is mainly historical, the 2nd mainly analytical, and the 3rd mainly philosophical]; and especially favoured by him in opposition to Bologna, which had incurred his wrath by joining the Lombard League. array, and besought them to get their brother back again. They succeeded in recovering him from the Dominicans, but no pressure could induce him to lay aside the habit of the order, and even two years' imprisonment in the castle of Rocca Secca could not break this purpose, and he retired to a third time of solitude in studying the Bible and the Sentences. When his mother was convinced that it was impossible to change his will, she herself helped him to escape. He let himself down by a rope from the window, and rejoined the Dominicans. Towards the end of 1254 he accompanied Johannes Teutonicus, the head of the order, to Cologne, to study under Albertus Magnus. They travelled to Rome, 1256, and reached their destination in 1257, after a journey of three months.

The many stories told of his youth, e.g. the well-known one of the Dos mutus Scolarius, show that, as is the case with many great intellects, his development was slow, but before the age of 20 Albertus had discovered his powers, and made him a alter ego. On the 4th of June, 1245, at a general chapter of the order held at Cologne, it was decided to send him both to Paris. In 1248 the question was again referred to Cologne. In 1252 Thomas was sent back to Paris to receive his degrees, and to establish an independent school there. This residence was interrupted by the contest of the mendical orders and the university authorities because of the University bore him no ill-will, and shortly afterwards referred to the young doctor the much agitated question whether the accidents in the Eucharist really exist, or are only appearances. In 1261 he was summoned to Italy by Urban IV., who tried in vain to persuade him to accept high ecclesiastical preferment. He taught at Ostia, Viterbo, Anagni, Perugia, Bologna, and Rome. In 1259 he returned to Paris, and taught there for three years.* He was then sent by the Order to Naples at the request of the king of Sicily, brother of St. Louis, to give the authority of his name to the school where he had himself received his first important instruction. In 1275 he was summoned by Gregory X. to the Council of Lyons, which was convened to promote the Crusade and the reunion of the Greek and Latin Churches. Though in bad health, he started, accompanied by Brother Reginald, his ever faithful assistant. At the Castle of Magenza—the possession of one of his nieces, the Countess of Cereano—he fell into a long ecstasy, which much enfeebled him, and after which he felt his end to be near. As he wished to die in a house of his own order, he continued his journey, but was obliged to stop at the Cistercian Abbey of Fossa Nuova near Terracina. There he died, 7th March, 1274. At the time of his death, he was, at the request of his hosts, dictating for them an exposition of the Song of Solomon. He had got as far as 'Filie Jerusalem de dilecto meo, quia pro amore moralis, when his strength gave way, and it is reported that he had been poisoned by Charles of Anjou.†

For nearly a century the Dominicans and Cistercians disputed the honour of possessing his remains; but they were settled when, 49 years after his death, he was canonized by John XXII. It was finally decided in 1308, by a bull of Urban V., that the body should be surrendered to the Dominicans of Toulouse, the

* On the disputed point of the length of this stay at Paris see Mandrand, 'v. s. iv., 143, and Sartazzini's note.

mother church of the order. An arm was given to the Convent of St. Jacques at Paris, where St. Thomas and B. Albertus had taught. In 1296 he was raised by the Dominicans to the rank of Doctor Ordinarius. In 1297 he was made by Pius v. the fifth Doctor of the Church, and placed on an equality with St. Jerome, St. Ambrose, St. Augustine, and St. Gregory the Great.‡

His works fill 17 folio volumes in the edition of Pius V. (1725). The expository and rhetorical order is not yet completely decided, and the genuineness of some is disputed. He began his literary work at Cologne with the de Ente et Essentia (No. 30 of the Operaecol. in the Roman edition). The most important are the Summa contra Gentiles, which contains the materials for which he began to gather at Paris, during his first period of teaching there, at the request of Raymond de Penmforte; the Summa Theologica, begun in 1255 in Italy and left incomplete at his death; the Questions disputata (1261-1264); the Quodlibet, of which the first five were composed at Paris, the last six at Rome; and the Aristotelian commentaries, begun at the instance of Urban IV.† There are commentaries on the books of Sacred Scripture, of which the best known is the Catena Aurea, properly called Expositio continu, and the commentary on the Sentences, which was the first extensive work of this kind.

This enormous literary output is all the more remarkable, when it is remembered that it was far from being the only occupation of these strenuous twenty years. During the whole time Aquinas was largely engaged in teaching. The attraction of his lectures was so great that it was difficult to find a hall large enough to contain the audience. At times he employed three or four secretaries at once, and dictated to them about different subjects without confusion. He would not take to speak of him as 'pure embodied intellect perfectly passionless.' This is not the meaning of the primacy of the intellect over the will as taught by him. His hymns are proof enough of this—the famous sequence, ‘Lauda Sion Salvatorem,’ ‘Pange lingua gloriosi corporis mysterium,’ ‘Verbum superne prodien,’ (there is a hymn of St. Ambrose beginning with the same line), ‘Sacris solennis jura quondam,’ and ‘Adorans devotissimam Dei latens Deitas.’ They were written for the festival of Corpus Christi, the observance of which was decreed by Urban iv. at his instance (1264). They are 'powerful in thought, feeling, and expression,' and probably composed by brethren him. On the general acceptance of the dogma of transubstantiation, the doctrine of which is set forth in them with a wonderful degree of scholastic precision.§ Every day he had a portion of a book of edification read aloud to him (Bustini collectione Patrum); and when asked why he withdrew this time from speculative thought, he answered that he considered the rousing of the spirit of devotion to be the due preparation for the subtlety of speculation. When the feeling of devotion was roused, the spirit rose all the more easily to the contemplation of the highest truth. He never began to study, to lecture, or to write, without first giving utterance to the desire thus to obtain Divine illumination. When doubts intruded upon his investigations, he interrupted them to seek en

∥ Lord Selborne, 'Bib. xii. 384; cf. also on the hymns of St. Thomas, Julian of Norwich, etc. in Dict. of Hymnody, xx. 525, 662-654, 869-890, 1217-1239.
lightenment in progress. The fact that the Summa
Theologica was left incomplete was not due en-
tirely to want of time. In the Acta we read:
'The witness—Bartholomew of Capua—declared
that brother Reginald, seeing that the holy doctor
did not continue the third part of the Summa
after his illness, was aware of the sacrament
of penance, asked him why he had stopped this
great work, which he had begun for the glory of God,
and which would enlighten the world.' St. Thomas,
tells us in his mystical exposition of the Pentecost,
before the Supreme Judge, replied that he could
not continue: that all he had written so far
appeared to him to be nothing in comparison with
the wonderful things that God had been pleased
to reveal to him recently. St. Thomas had a same
mysticism of his own, not the sporious
kind that would banish reason from religion alto-
gether, and drown itself in the wild fancies of the
Evangelium externum, but that which recognizes,
with St. Augustine, that no real progress in the
religious life can be made without corresponding
progress in knowledge, and for which the supreme
union with God has no other content than that
of the 'perfect effect of union.'**
2. Sources. (1) The Sacred Scripture.—St.
Thomas has, of course, a profound knowledge of
Scripture according to all the four methods of
interpretation (Sum. Theol. i. 1 art. 10). He
insists on the importance of not sacrificing
the historical. For instance (ib. i. cii. i), in
discussing the question Utroque Paradisus sit
locus corporis, he says: 'Es, quae de Paradiso
in Scripture dictur, verum narrations historiae
proponentur. In omnibus autem, quia
Scriptura tradit, est pro fundamento tenenda
veritas, et de super spiritualis expositiones fabri-
cante. It is to be noted that in his exposition
of Isaiah 8 he has so faithfully presented the science
literaturae, that Cornelius a Lapide and others
declare it 'judaeica expositio, Divi Thomae ingeni
prorsus digna.' The three other senses are ex-
plained (ib. i. cii. 10): 'Secundum vero quod
sunt veteris legis significant ea quae sunt
nove legis: est sensus allegoricus. Secundum
vero quod ea quae in Christo sunt facta vel in
his quae Christus significant sunt sigilla eorum
quae sunt nobis jucundiora vel sania, vel utiliora.
In hand at some who were not unacquainted
with Hebrew (e.g. he knows that ס is feminine),
but this does not prevent him from falling into
pitfalls of translation, e.g. the use of verbum in
Lib. 11° (Sum. Theol. i. xxv. 3).†
(2) The Fathers.—De Rubeis has counted 50
Greek and 22 Latin Fathers as used by Aquinas.
The greater part are taken at first hand. He
indicates us himself that his extensive doc-
torum Graecorum in Latinum fecit transferri!
(Preface to Catena aurea.) He makes special use
of Dionysius. The charge of Monophysitism made
against this author, which has recently been re-
vived, has been fully examined and refuted by de
Rubeis in his ninth Dissertation.
(3) Secular authors.—Dr. Sands has noted that
the Summa Theologica is an embodiment of the
scholastic spirit of the 13th cent., which stands
in a wonderful contrast with the literary and classical
spirit of the 12th.*
(4) History of Scholarship.—Pritchard
has written a careful history of the life and
works of Thomas Aquinas, which is
historically important, and published
in 1903 (History of the
Scholastic Movement, 1202–1350).
(5) Theology.—Theologia, which
was published in 1904, is a
comprehensive study of
theological terms and
concepts.

been raised as to St. Thomas' own knowledge of Greek. This question cannot be answered des-
cisively until all his works have been critically edited. De Rubeis has shown that he was certainly not
trained as a Greek scholar. His knowledge of the
language of the Talmud is beyond question; the
Greek of his commentary on the *Ethics*, the presentation of
the right reading misspelt, and of a ludicrous
etymology side by side with one that is very nearly
right, seems to show that, while Aquinas had about
him a knowledge of the Greek language, he had no
substantial knowledge of it."

3. Main points of system.—The age of St.
Thomas was also that of Frederick II. of Hohen-
stenburgh and of St. Louis, and these names are
representative of the conflicting tendencies of the
period. The 13th cent. had witnessed a revival of
learning, which was less important than that of
the Renaissance, only in point of literary form.
It had two sources—Arabic and Byzantine. The
former has been fairly well investigated. There
is a great deal about the latter that is still obscure.
The result was seen at first in the rapid growth of
speculative heresy, popular pantheism (David of
Dole), and more serious, the tendency of thought
which afterwards crystallized into Averroism. Hence
the prohibition of 1210, and the letter of Gregory IX. to
the Papal chamber of the 1220's, very briefly:
The question at issue was whether the Church would be able to
assimilate the new learning, or whether its doctrines
would be gradually corrupted by it. That
the former was the case is due to the work of
Albertus as completed by St. Thomas. That work
was therefore twofold—to harmonize the new
scientific teaching with the doctrine of the Church,
and to refute heresy.

The distinctive characteristics of the system of
philosophy which St. Thomas displaced in the
Western Church are well summed up by de Wulf
as follows: 'Absence of any formal distinction
between the domain of philosophy and that of
theology, i.e. between the orders of natural
and revealed truth; primacy of the notion of the
good over that of the true, and in consequence
primacy of the will over the intellect both in
God and man; the necessity of an immediate Illuminative
action of God in accomplishing certain intellectual
acts; actuality, in a low degree, but still some
positive actuality in primitive matter independent of
any substantial form; the presence in matter
of substantial seminates; even, spiritual substances are
composed of material and of spiritual elements,
in natural things; individuality of the soul in
independence of its union with the body, especially
in man; the identity of the soul with its faculties' (*Gilles de
Leauxes*, p. 15). The philosophical element incorporated in this school was essen-
tially Platonic.

For this Thomism substitutes Aristotelianism:
not blindly, for 'locus ab auctoritate est infr-
missimus' (*Sum. Thel.* 1, 8, ad 2), but critically,
'si audierit omnes quasi adversarium dubitantum'
(*Metaph.* iii., Lect. 1), though respectfully.
The novelty of the teaching of St. Thomas is
universally felt by no one who does not look for
novel acts, not only not in method, but in matter.
The moderns avowedly strict distinction between Natural and
Revealed
Theology; unity of the substantial principle, as
opposed to the plurality of forms; passive evolu-
tion opposed to the activity of reason in things
sentire; the doctrine of substantial forms, as
opposed to the notion of spiritual substances being
composed of matter and of form; the real
existence of such a substance and its faculties,
*Sanctus*, i.e. p. 65; *De Sancto*, p. 55; *De Sancta*

4. This letter is given in Denziger's *Enchiridion*, § 379.

5. On *rationes seminates*—an idea derived from St. Augustine—
see Kliegen, *Philos. der Vorzeit*, i. 129.

6. As opposed to the Augustinian doctrine of their identity; the primacy of the intellect over the
will. The new system was, of course, not received
without a struggle, which continued long after the
death of St. Thomas. The bulls of 1272 were
directed not merely against Averroism, but against
Peripateticism in general.†

Notwithstanding the vast extent of St. Thomas' writings, a sufficient knowledge of his whole
system may be attained from the following:
The *Opuscula* are useful for giving a more elaborate
treatment of special subjects, but the whole is to be
found in the two great works. There is little
sign of gradual development in his writings, because
he early reached his complete system. In the *Acta*
*p. 670*, we have the evidence of Aegidius of Rome
(whence bishop of Bourges): 'In this marvellous
and memorable doctor, it was a manifest token of
the subtility of his genius and the accuracy of his
judgment, that as a master neither in teaching nor
in writing did he change the new opinions and
arguments which he upheld as a bachelor, with very
few exceptions.'‡ The fact is that Albertus
had laid the foundation of such a doctrine,
but the other, which is in consequence often called 'Summa
Philosophia.' In the short preface to the *Sum.
Thel.* the author says that it is intended to be a
compendium for beginners, and that he will deal
thereafter with the questions 'breviter et dulcissime.' These
questions are dealt with in the Commentaries on
Aristotle at even greater length; but it is a mistake
to expect to find in these invariably St. Thomas'
own opinions. Those of Albertus are modelled
after Avicebron, and are there upon the principal points dealt with by the Greek philo-
sopher. St. Thomas proceeded 'quodam singulari
et novo modo' (*Acta*, p. 601). This new method was
that of Averroism, not following the text scrupulously,
but expressing its meaning as faithfully as possible.
They therefore are intended to give Aristotle's own
meaning, which may or may not be that of the
writer. They ought not, therefore, to be quoted as always giving St. Thomas' views; there may
even be found in them some traces of the influence
of the great commentator whose system it was the
object of St. Thomas to overthrow.

**SUMMA PHILOSOPHIA.**—Summa de veritate
christi et regno mundi. A 1231, under the title of
which it is given by Ucelli from the autograph MS,
though the work is not addressed to Gentiles in
the proper sense, but to Muhammadans, Jews, heretics,
and unbelievers of all sorts, i.e. all outside the Church.
Since the opponents either do not recognize the
authority of sacred Scripture at all or only
imperfectly, and do not recognize that of the Church,
it is necessary in their case 'to have recourse
to natural reason, although in things Divine this is insufficient.' The work is divided into four books.
In the *First*, Aquinas deals with the existence and
attributes of God. In the *Second*, he shows how
all things proceed from God as regards their being
and their development in the natural order. The develop-
ment of this subject leads him to speak of the
different kinds of substances, and especially of
the *substantial intellectuales*, regarded in them-

*On this matter Mandonnet, I. e. p. 66; de Wulf, *La Philos.
de la Scholastique*, 5, p. 9; and *Gilles de Leauxes*, p. 15.

† One of the strongest opponents of Thomism was John
Peckham, Abp. of Canterbury. See the translation of his register (vol. ii., p. 894), to the Chancellor and
University of Oxford, and (p. 870), to certain cardinals.
See *La Philos. de la Scholastique*, 5, p. 9.†

‡ These exceptions are to be found mainly in his commentary
on the "Enchiridion." For them we refer to Mandonnet, I. e. 122 and
559; de Wulf, *La Philos. de la Scholastique*, 570; de Enkels, *Philos.
der Vorzeit*, cap. 5, xxvii. cap. 2.
themselves, in their relations to body, and in their operations. He dwells specially, of course, upon the human soul, demonstrates its spiritual nature and immortality. (ii. 4) He regards the knowledge of the human mind as not merely of the highest importance, but as the very key to our understanding of God. His whole system, in fact, is based upon the idea that the human mind, through the power of reason, can reach the highest truths about the nature of God and the universe. (i. 1)

The second way is faith. The knowledge of God by faith comes to us by Divine revelation (Sum. E. Gent. iv. 1). Since the knowledge of God is in us by reason, He has, out of His superabundant mercy, to make it more perfect, revealed to us certain things about Himself which transcend human knowledge. In this revelation a certain order is observed, such as is suited to man, so that he may proceed by degrees from the imperfect to the perfect. At first they are so revealed as not to be understood, but only to be believed, as it were, on hearsay, because the intellect is naturally limited; it is not bound to things of sense, cannot raise itself at all to behold those things which exceed all the analogies of sense; but when it is freed from the bondage of sensible things, then it can rise to contemplate the things that are revealed (ib.). There is therefore in one sense a triple division of man’s knowledge of Divine things, on account of this division of faith into two degrees (ib.)

This second means of reaching truth is needed: (a) On account of the imperfection of natural reason. The human intellect cannot succeed by its natural powers in grasping the substance of God, because the knowledge of our intellect according to the mode of this present life begins with sense. We see that there are various grades of intelligence. The simple rustic cannot understand what is intelligible to the philosopher, nor can the philosopher understand that which is intelligible to the angel (ib. i. 3). (b) Out of mercy it extends even to those things which natural reason could discover, because few could thus attain to them. The process of investigation takes a long time, and is not certain to be successful, because falsehood creeps in on account of the weakness of the intellect and the disturbing element of the fancy (ib. i. 4). Faith, therefore, supersedes but does not destroy reason. The lesser light is not darkened by the greater, but is rather increased, as the light of the air is by that of the sun; and in this way the light of science is not darkened, but rather grows brighter, in the soul of Christ by means of the light of Divine knowledge (Sum. Theol. III. 1 ad 2). Still less is it contrary to it. Because it transcends reason, it is thought by some to be contrary to it; but this is impossible (Sum. E. Gent. i. 7).

The relation, therefore, between philosophy and theology is clear. Philosophy is universal and comprehensive. In the teaching of philosophy, which considers the creatures in themselves, and leads us from them to the knowledge of God, it is the creatures who are considered first, and finally God. But in the teaching of Faith, which considers the
AQUINAS

creature only in its relation to God, it is God who is the first object of consideration and the creatures afterwards (Sum. c. Gent. iv. 1). (ii.) Natural reason must keep to its own department. Only those things can be known about God by natural reason which belong to the unity of His essence, but not those which belong to the division of things. Therefore Aquinas did not prove to prove the doctrine of the Trinity by human reason injures faith in two ways: (a) as concerns the dignity of faith itself, i.e. that it is concerned with things invisible. It affects the human reason, in making it believe truths beyond reason; (b) as regards the benefit of bringing others to the faith. For when a man brings reasons that are not cogent to demonstrate the faith, he only provokes the scorn of the unbelieving (Sum. Theol. i. xxxix. 1).* But natural reason can defend the Articles of the Faith, by showing that they are not repugnant to reason (Sum. c. Gent. iv. 1). (iii.) Those truths that can be discovered by natural reason, though they form part of revelation, are not cogitativa sedet, but only preambula ad articulatos (Sum. Theol. i. ii. 2).†

Ethics.—To Ethics is devoted the third part of the Sum. c. Gent. and the second part (in two divisions) of the Sum. Theol. The numerous sources of St. Thomas' learning have led to much complexity in his ethical system. It is based on that of Aristotle, but the fourfold division of the division of virtues is introduced (P. a. lxii. 5 from Macrobios). In the development of the ideas of virtue and the division of virtues into moral and intellectual, he follows Aristotle. The intellectual take precedence, as the contemplative life, if the contemplation be theological, stands higher than the practical. (1) Everton non potest esse nisi in visione divina essentia (P. a. iii. 8), and 'beatitudo est premium virtuosarum operationum' (P. a. v. 7). The moral value of actions is determined by three elements: (1) expeditum (virtus moralis constitutiva); (2) euntem (virtus moralis operationis); (3) intellectum (habitus primorum principiorum, P. a. ivii.). The moral virtues differ according to their objects. Some regulate actions, some passions. The first are comprised under the general name of praecepta (such as 'respondeas pacificat' because the head of each particular virtue is itself at command, and so to speak transforms itself into it). Fides without caritas is infirmus.

The question of the will and its freedom is discussed at length (Sum. Theol. i. iv.), viz. faith, which completes our knowledge by the truths, which can only be known by revelation; hope, which renders accessible the Divine end, which passes the forces of nature; and charity, by which the will unites itself to that end, and so to speak transforms itself into it. Fides without caritas is infirmus.

* This point is elaborated in his contra Gracces, Armoens et Saracenos, cap. 2, No. 3 of Opuscula in Roman edition.

† In the development of the doctrine of municipium cap. 4 of the third part of the Sum. Theol., and possibly in the division of virtues, Aquinas compares the operation of the human reason to the work of a man upon a stone, as if it had no power at all, because it is not the kind of thing to be expected, and of which the intellect is powerless. This is the result of the study of Civil Law at Bologna as the most brilliant achievement of the intellect of modern Europe (from Sandys, i. p. 588).

* See Onamaste et at. Philo. p. 317 f.

† Villari, Sarracena, vol. i. p. 5; 'Le opere di San Tommaso lo attirarono con una forza quasi magica ' (Cronache Teresiana, vols. 5 and 6, 1894, 1895), especially the votes of the people and of the prince, so that they have been called in the legislature and study San Tommaso as a man and as a priest, and the latter as a saint.

The influence of Aquinas has been all-powerful over those who have come after him, not merely within the scope of the seven theological virtues. Dante's Paradiso, x. 2. is St. Thomas who speaks in heaven; † his writings had a mysterious influence over Savonarola; ‡ and Baillot tells us that St. Thomas was the favourite author of Descartes, and that the order of the three virtues, of which, he wished to insist on the importance of reason, how much Hooker was his debtor any one may see who compares the first book of the Ecclesiastical Polity with St. Thomas' section upon 'law.'

Is Thomism a system still valid for our times, or are we to look for a new order of ideas? Of the first thing one may be disposed to say, 'Nulla forma substantialis suspecta magis et minus' (de Potentia, iii. ix. ad 9: de Wulf, Gilles de Lessions, p. 89). But is Thomism compatible with the theology of the Catholic Church as a whole? This is the question that lies at the root of the debates about the Ecyclical Pascendi. One thing is clear, that Thomism is absolutely incompatible with the conception of Evolution—than to which modern theology is devoted. * Nulla forma substantialis suspecta magis et minus (de Potentia, iii. ix. ad 9: de Wulf, Gilles de Lessions, p. 89). But is Thomism compatible with the theology of the Catholic Church as a whole?

The principal works on St. Thomas are:

Jourdain, La Philosophie de St. Thomas d'Aquin, 2 vols., 1858;

Werner, Thomas d'Aquin, 3 vols., 1856 (new ed. 1889);

Shenkel, Thomas d'Aquin, 2 vols., 1897;

Guttmann, Das Verhältniss des Thomas von Aquino zum Judenthun, etc., 1921.

For the translations of St. Thomas' works into other languages, see de Rabais, xii. c. 8; and Steinshneider, Hebr. Uebersetz. des Mittelalters, pp. 483-504; also Jennyk, Thomas von Aquino in der jud. Literatur, 1883.

Werner, Hessische Gesch., i. die jüd. u. die jüd. Lit., vol. ii, pp. 448-472; Schütz, Thomas Læusio, 1885.

In this bibliography the writer desires to express a general sense of indebtedness, especially to Werner, Jourdain, and de Rabais, in addition to what is expressed in direct references.

J. M. Heald.

**ARABS (ANCIENT).**

[TH. NÜLDEKE]

The term 'ancient Arabs' is used in this article to denote the pre-Muhammadan population of the greater part of the Arabian Peninsula and of the neighbouring districts to the North, which were inhabited by Arabs (i.e. the Syrian Desert, etc.).

But the ancient civilized population of Southern Arabia, the Sabæans or Himyarites, is not included, on account of their religion demanding a separate treatment. See SABAENs.

The evidence which we possess does not enable us to form anything like a complete and vivid picture of the ancient Arabs. Many of the ancient Arab historians was therefore quite justified in entitling their treatise Rostc Arabischen Heidentum's ('Remains of Arabian Heathenism') a work which throws into the shade all previous books on the subject, and some of them may be gathered from the polemical allusions in the Qur'an. Moreover, the ancient narrators which deal with the manners and customs of the heathen Arabs contain some traditions on the religion of their times. Much credit is due to a few of the early Muhammadan scholars, who laboriously collected, and handed down to posterity in a systematic form, whatever it was possible to ascertain about the Arabian heathen mythology and ritual. Among these scholars a specially prominent place must be assigned to Hishâm b. Muhammad al-Kalbi, usually known as Ibn al-Kalbi († 819-820 A.D.), the author of the 'Book of Idols' (Kitâb al-Idolat), the substance of which is known to us in the form of quotations, though the work itself is no longer extant. Finally, we have to take into consideration the fact that Muhammad incorporated in his religion a number of heathen practices, with little or no modification, and also that various relics of heathenism, which are alien to orthodox Islam, have been retained by the Arabs down to the present day. That the adoption of a new faith does not completely transform popular beliefs, and that the old conceptions, disguised under somewhat different names, frequently persist, with or without the sanction of the religious authorities, is a matter of common observation.

But, scanty as the evidence is, it suffices to show that Muhammad's contemporaries and the generations immediately preceding them were, as a rule, little influenced by their religion. They followed the religious customs of their ancestors, and, with due respect for tradition, the genuine Arab being essentially conservative; but no great significance was attached to such things. Nowhere do we find an instance of real conversion to a heathen deity.

The hardships of nomadic life were remembered that the great majority of the Arabs were nomads—ar in general, unfavourable to the development of religious feeling, as we may perceive even at the present day. Moreover, the devil worship, without being clearly conscious of the fact, had to some extent outgrown the old religion, which, as a whole, was of a very low type, and, in addition to this, Jewish and Christian influences had begun to make themselves felt. Finally, the influence on the part of the Arab was the opponent's no trace of heathen fanaticism appears.

A marked tendency to religious fervour, and even to fanaticism, is generally characteristic of the Semites; among the Arabs of the period these capabilities existed in a latent condition, and were manifested on a great scale as soon as they had imbibed the new religion. Similarly, at the present time, Bedawin, who are lukewarm about religion, no sooner adopt a settled mode of life than they become transformed into bigoted Muhammadans.

Of the deities who were worshipped in Arabia a long list might be drawn up. They are known to us chiefly through so-called 'proper names', that is, names which describe the being as 'servant,' 'gift,' 'favour,' etc., of this or that deity. But as to the nature of the gods, these names do not tell us much. How little should we know of the more important Greek gods? All information about them were derived, to a great extent, from such names as θείος, θείφων, etc., the Geographical Dictionary of Yaqût († 1229 A.D.), the 'Book of Idols' (Kitâb al-Idolat), or in the time of the author of the History of Arabia († 1062 A.D.), who quotes it independently.

See, for example, Lucius, Die Anfänge des Heidenglaubens in der christlichen Kirche (Tübingen, 1904), where the survival of ancient hero-worship, in the form of the veneration of martyrs, is elaborately proved.
The evidence for the worship of Sirius (ash-Shîrîn) is not altogether above suspicion. Possibly the statements on the subject—here more frequently drawn from the Qur'an, Sūra lii. 50, where God is called 'the Lord of Sirius'; this may have been interpreted as a condemnation of the belief that Sirius itself is a divine power.

Far more important, at least in historical times, was the cult of the planet Venus, revered as a great goddess under the name of al-'Uzzâ, which may be rendered 'the Most Mighty.' The Syriac poet Izaq, of Antioch, who lived in the first half of the 5th cent., bears witness to the worship of 'Uzzâ by the Arabs of that period; in another passage he identifies 'Uzzâ with the planet Venus. In the first half of the 6th cent., Mundhir, the Arab king of Ḥira, sacrificed to 'Uzzâ a large number of captive nuns, as we learn from a contemporary Syriac author. Procopius, also a contemporary, tells us that this same Mundhir slaughtered in honour of Aphrodite, i.e. 'Uzzâ, the planet Venus) the captive son of his Christian rival, Aregathas (Ḥārith). The Arabian cult of the planet Venus is mentioned likewise by Ephraim Syrus (who died in A.D. 373), by Jerome, Théodoret, and later still by Evagrius. Nilus† in the 8th cent. gives us an account of a wild Arab tribe who offered sacrifices of a singularly barbarous kind to the morning star, doubtless under the name of 'Uzzâ (see below). As early as the 5th cent., or theretofore, references to a priest of this goddess occur in two Syrian inscriptions, found not far from the district in which the scenes described by Nilus took place. Another Syrian inscription mentions the name 'Abd al-'Uzzâ, which at a later time, just before the rise of Islam, was extremely common among the Arabs.‡ The phrase by the two 'Uzzâs,' used in swearing, presumably refers to Venus as the morning and as the evening star. In the same manner we may explain the two pillars or obelisks, called al-Ghārîyān, 'the two objects smeared with blood,' which appear in connexion with human sacrifices offered by a king of Ḥira, the very place to which reference has been made above the figures in the Qur'an (Sūra viii.) as one of the three great goddesses of Mecca, who were supposed to be daughters of Allah. That Muhammad himself offered sacrifices to her in his younger days is expressly stated in the Qur'an, Ḥajj vii. 111. Najla, near Mecca, this goddess had a sanctuary, which is said to have consisted only of three trees. Whether the Meccans and the other inhabitants of central Arabia at all realized the astral character of 'Uzzâ is very doubtful. A deity is, in the eyes of its worshippers, an actual person, and does not necessarily represent anything else. We are not to suppose that the pious men who sacrificed to Apollo or Athene thought of inquiring what was the original significance of these deities as personifications of natural phenomena.

The expression 'by the Lord of the blessed (aṣṣīda) 'Uzzâ and by the god before whose house (i.e. the Mecca) he is once used by a poet as a form of oath, hence Wellhausen very plausibly argues that the term aṣṣīda 'the Blessed,' which occurs nowhere as the name of a goddess and of a sanctuary on the lower Euphrates, whereas the Arabs made pilgrimages, is nothing more than an epithet of 'Uzzâ which had come to be regarded as a proper name.

Kuthrâ, which probably means 'the Most Rich,' the name of an idol destroyed by order of Muhammad, is perhaps only another title of 'Uzzâ. We also read of a man called 'Abd al-'Uzzâ belonging to the tribe of Ṭai, in the very centre of Arabia. Here the absence of the definite article proves that the name Kuthrâ is ancient.

Qozâh was possibly at one time a god of storms.

Finally, 'Uzzâ has been found to be a goddess of the Sabazios too.†

‡ This is probably a Muslimahian correction for 'by the life.'

† Sarif is a place about 55 miles from Mecca.
Thus, for instance, Time in the abstract was popularly imagined to be the cause of all earthly misery and especially of all calamities. Muhammad in the Qur'an (Sura xlv. 23) blames the unbelievers for saying, 'It is Time that destroys us. The poets are continually alluding to the annihilation of Time (dārun 'a-ma) or the substitution of 'the days,' or 'the nights.' Time is represented as bringing misfortune, causing perpetual change, as biting, wearing down, shooting arrows that never miss the mark, hurling stones, and so forth. In such a case we are asked to render 'Time' by 'fate,' which is not quite correct, since time is here conceived as the determining factor, not as being itself determined by some other power, least of all by a conscious agent. But it must be admitted that the Arabs themselves do not always clearly distinguish the power of Time from that of Destiny pure and simple. Occasionally we come across such passages as the following: 'Time has brought you upon him, for the days and the allotted measure (qadār) have caused him to perish.' Or again: 'I submit not to the injustice of Time, and I behave as though unaware that the measure (allotted to me) hindered me of anything else.' Various other words are used by the poets in speaking of the 'portion' allotted to them, or of the goal that is set before them. The notion of a personified Maṣa is here vaguely present, but she has not yet become a living deity. The fatalism of the poets, as we might expect, is neither clearly formulated nor consistently carried out. Rigid dogmas on the subject of determinism and free-will were quite out of the question. Once we meet with the phrase: 'it be seen what the Apportioner shall apportion to thee' (mā yamūn laka 'a-mān), which apparently refers to a god; but this is an altogether exceptional case. The word here translated 'apportion' originally means 'to count,' hence 'to reckon,' something to one some. From this root is derived Maniyā, 'doom of death,' 'destruction,' a favourite expression with the poets; the plural Manuyā is used in the same sense. Maniya appears in poetry as driving man into the grave, piercing him with an arrow, handing him the cup of death, lying in ambush for him, receiving him as a guest (when he is about to die), and so forth. Not infrequently it is added, 'Maniya over takes me,' 'his Maniya has come upon him,' and the like. We also find, but rarely, the synonymous forms Manū and Mundīn, the latter derived from the cognate root MNX. These personifications, as we have seen, are merely poetical. But the same etymological group includes the ancient Mēni (Is 65%), perhaps a Cannaanite deity, and also the great goddess Manūtā, who figures in the Qur'an (Sūra liii, 20), by the side of 'Uznā and Allat, as one of the three 'daughters of Allah' revered at Mecca. Since she had been raised long before to the dignity of a real goddess, we may assume that her worshippers were no longer conscious of her original character. Curiously enough, the two oldest documents which mention her, namely, a Nabatean and a Latin inscription, use the plural form Manūvāt (spelt Manavan in Latin), just as the plural Manuyā is used for Maniya. Among the Arabs, Manāt had a sanctuary in the territory of the tribe Hudhair, not very far from Mecca. She was especially venerated by the inhabitants of Yathrib (afterwards called Medina). Many examples are given by W. L. Schneidewin in Uber den Patriarchen der vorislamischen Araber, Einleitung (Essen, 1851). But the list is very far from being exhaustive.

2. ABSTRACT DEITIES.—Some Arabian deities were originally personifications of abstract ideas, but they appear to have been conceived in a thoroughly concrete fashion. In particular, it is to be noticed that the Arabs, from a very early period, recognized the existence of certain powers on which human prosperity and adversity were supposed to depend. It is true that most of these beings are mere poetic, not real, personifications.

The opinion of some native scholars that Qazāb was 'a Sā'ir' is merely a deduction drawn from the name of the rainbow.

The son and co-regent of Zimbabwe, Wuzhölät (Othir Ali Mustafa), Valaharot, i.e., 'gift of Allah,' the Allat of the Palmyrenes.

Among these names we must reckon Taîm Allat. Taîm is, not improbably, the designation of certain powers on which human prosperity and adversity are supposed to depend. It is true that most of these beings are mere poetic, not real, personifications.

'Gift of the Palæstines of the oriental Araber, Einleitung (Essen, 1851). But the list is very far from being exhaustive.

With this it agrees that 'Taîm of Allat' means 'all earthly measure of time,' 'brief period,' is formed from the verb bānî, 'to be handed over,' and so is the supposition, 'to be doomed to death,' also the substantive lātîn, 'death.'

Referring to a soldier in Hungary who was of Palmyrene extraction (OCL. iv. 694).
Moreover, a number of proper names compounded with Manāfī prove that her cult extended over a great part of Arabia. There exists in Arabic a rare word for 'time,' namely 'Badd,' a poet, who belonged to the tribe of the Badd, in the North East of Arabia, as says in describing his old age: 'The arrows of Badd have pierced my limbs and joints.' This does not differ at all from those poetical personifications which have been enumerated above; the same thing may be observed in passing, alludes to 'the changes wrought by time' (ṣūrat ʿad-dahr). But an isolated verse, not unfrequently quoted, contains the phrase, 'I swear by the blood (of the sacrifices) that flows round Badd; verse in which, is a regular cult, and Ibn al-Kalbī expressly states that Badd was an idol worshipped by the Banū Bakr b. Walī, the very tribe of which the afore- said poet was a member.

Gadd, equivalent in meaning to ṣaʿd, but construed as masculine, is the name of a deity who was venerated by various Semitic peoples (see 1Sa 6:16). That the Israelite tribe of God derived its name from the same root is not doubted. Gaddā, which occurs in Nabataean inscriptions, might appear to have been borrowed, at a comparatively late period, from the neighbouring Arabian state. It is the proper name of Abd al-Jadd, as we meet with the proper name 'Abd al-Jadd in a few cases (which, is true, are confined to the coast of Yemen), and since the noun jadd, 'lack,' remained in current use among the Arabs, it is more natural to regard the Nabataean Gaddā as an Orientalized form of the native Arabic word al-Gadd (al-Jadd).

To this category belongs Saʿd, 'fortune' (used in a good sense only). According to a certain verse and the statements of the commentator, Saʿd was the name given to a rock not far from Jaidah, to which divine honours were paid. Moreover, we meet with the name 'Abd Saʿd in quite a different part of Arabia, to the north-east. At an earlier period a man's name which seems to be compounded with Saʿd occurs in the inscriptions of Safa.

Another deity who appears to have been designated by an abstract term is Rūdā, 'good-will,' 'favour.' The god of the same name, who is properly no other than the Jinn, the name is mentioned informs us that Rūdā was worshipped, in the shape of an idol, by the great tribe of Tamim. The proper name 'Abd Rūdā is found among several Arabian tribes. To the nature of Rūdā, a question has never been raised. It might even be supposed that it was originally a euphemistic title given to some malignant power. The remarkable fact that in the above-mentioned verse Rūdā is construed as feminine (whereas this grammatical form would be normally masculine), naturally suggests that at that period, about the time of Muhammad, people still realized that Rūdā was merely an epithet applied to a goddess who properly bore some other name. But against this hypothesis it may be urged that the name is of considerable antiquity, as is proved by the Palmyrene inscriptions, where it occurs separately in the form RSU, and in theophorous proper names as RSU: the pronunciation is fixed approximately by the Latin transcription Themarnos.1 The KDU of the Safa inscriptions seems to denote the same deity.

Waddā also pronounced Wudd or Udd, i.e. 'friendship,' 'affectIon,' was, according to the Qur'an (Surah Lxxi. 22), a god worshipped by the contemporaries of Noah. But it would be a mis-

1 CIL. iii. 3365, the form RSU is given by Syrian authorities.

2 CIL. iii. 3365, the form RSU is given by Syrian authorities.

3 The way we should take the word as an adjective, meaning 'friendly,' is a less probable view.

take to conclude that his cult was obsolete in Muhammad's time, for we have sufficient evidence to the contrary. The poet Nābihya says once, 'Wadd great thee!' There was a statue of this god at Dūna, a great oasis in the extreme north of Arabia. The name 'Abd Wadd occurs in a number of wholly distinct tribes. But Wadd is another instance of a deity whose character remains altogether obscure. As we are told that his statue had a bow and arrows attached to it, some people might be excused in passing, alludes to 'the changes wrought by time' (ṣūrat ʿad-dahr).

But an isolated verse, not unfrequently quoted, contains the phrase, 'I swear by the blood (of the sacrifices) that flows round Badd; verse in which, is a regular cult, and Ibn al-Kalbī expressly states that Badd was an idol worshipped by the Banū Bakr b. Walī, the very tribe of which the afore- said poet was a member.

Gadd, equivalent in meaning to ṣaʿd, but construed as masculine, is the name of a deity who was venerated by various Semitic peoples (see 1Sa 6:16). That the Israelite tribe of God derived its name from the same root is not doubted. Gaddā, which occurs in Nabataean inscriptions, might appear to have been borrowed, at a comparatively late period, from the neighbouring Arabian state. It might even be supposed that it was originally a euphemistic title given to some malignant power. The remarkable fact that in the above-mentioned verse Rūdā is construed as feminine (whereas this grammatical form would be normally masculine), naturally suggests that at that period, about the time of Muhammad, people still realized that Rūdā was merely an epithet applied to a goddess who properly bore some other name. But against this hypothesis it may be urged that the name is of considerable antiquity, as is proved by the Palmyrene inscriptions, where it occurs separately in the form RSU, and in theophorous proper names as RSU: the pronunciation is fixed approximately by the Latin transcription Themarnos.1 The KDU of the Safa inscriptions seems to denote the same deity.

Waddā also pronounced Wudd or Udd, i.e. 'friendship,' 'affectIon,' was, according to the Qur'an (Surah Lxxi. 22), a god worshipped by the contemporaries of Noah. But it would be a mis-
Arabia, since elsewhere we undoubtedly meet with an Arabian god 'Ash-Sharā, for instance, in the Syriac writings, and in the legends of the Nabateans. But it is to be noticed that the Nabateans likewise had a god called Nazār. Thus the worship of the Vulture-god was once widely diffused over the Semitic lands: in Arabia, however, it appears as a superstitious belief that the god ash-Sharā was unable to find any personal name compounded with Nazār; nevertheless it is not impossible that the Neopots mentioned in the ancient inscription of Memphis6 was an Arab.

'Auf, in the fairly common name 'Abd 'Auf, means 'the great bird (of prey). This signification, it is true, does not actually occur in Arabic, but there are certain phrases in which a trace of it remains: 'Auf has, in particular, the sense of augurium, and it may be that the name of the god did not refer to the bird but to the omen drawn from it; in this case, 'Auf would be a synonym of Sol (see above).

4. DEITIES NAMED AFTER PLACES.—The god Dhū 'sh-Sharā, pertaining to ash-Sharā,7 seems to have derived his name from a place. But there were several places called ash-Sharā, and the difficulty of the name of this god was originally connected is increased by the fact that his cult goes back to very early times. The localities which bore this name appear to have been situated in rich in vegetation, such a spot, in the midst of a fertile country like Arabia, easily became a centre of worship. The inscriptions of the Nabateans and of the neighbouring peoples not infrequently mention a deity whose name is spelled 'Aš-Sharā in Greek; there is a corresponding Semitic form, and the toponymic names 'Abd Dhu Kh Shrar, Taim Dhu Sharā (Sinaitic), Duwāfās also occur. Greek authors supply us with some information respecting him. The most important of these statements is that at Petra, the Nabatean capital, he was worshipped in the form of a four-cornered block of unknown black stone, 4 feet in height and 2 in width. The blood of sacrificial victims was poured upon it, or in front of it; underneath it stood a golden pedestal, and the whole sanctuary was blazed with gold and with votive offerings. According to Epiphanius, the festival of Dusares was celebrated at Petra and the neighbouring town of Elusa, on the 25th day of the month of Suchter, that is to say, about the time of the winter solstice. This we may accept as true; it indicates, no doubt, a connexion with Sun-worship. In the later Arab Dhu 'sh-Sharā did not occupy a prominent position. He was represented by an idol in the territory inhabited by the tribe of Daus, not far from Mecca, and among whom the proper name 'Abd Dhu Kh Shrar still survives.

Another god who appears to have been named after a place is Dhū 'l-Halasa or Dhū 'l-Hulasa. He was greatly venerated at a place in the north of Syria, and the district now called 'Asra.

* This inscription dates from the 2nd cent. A.D., and is in Latin. It occurs for Feb. 1570, p. 100 ff., and Ost. gen. des. Ant. Égy. du Monde de l'Antiquité. 1903, 167. It is a curious fact that among the names here enumerated we find the Greek Ares.

† Thus the verb 'Ahe, which is derived from it, means "to wheel in the air," as birds of prey are wont to do.

‡ See the excellent paper by J. H. Mordtmann in the ZDMG xxviii. 1906.

Between his sanctuary and the sanctuary at Mecca there existed a certain amount of rivalry.

5. DEITIES NAMED AFTER PARTS OF THE BODY.—From a grammatical point of view, the gods Dhū 'l-kaflain, 'He who has two hands,' and Dhū 'r-rījil, 'He who has a foot,' must be classed with the two foregoing. Perhaps their name may have been originally applied to sacred stones or fetishes, which by means of rude carving were made to bear a partial resemblance to the human form.

6. ANCESTRAL AND TRIBAL DEITIES.—Sometimes Arabian deities are designated by titles fashioned after the manner of 'the God of Abraham,' 'the God of Nabor,' (Gen 31:29). Thus among the Nabateans we meet with the god of Rab'ā, 'the god of Qasīn,' and the phrase 'Abd Muḥammadh occurs in an inscription which mentions also a man named Maḍyaḥeh (Malikat), not to quote other instances. Similarly, Muhallīh b. Rabī'ā swears by 'the god of Rabī'ā'; perhaps Rabī'ā here refers not to the father of Muhallīh, but to the great group of tribes called Rab'ān, to which he belonged. This would be after the analogy of the formula 'by the god of the Qurāsh,' which occurs elsewhere.

Here we may mention a god who bore the curious title Shāl 'al-'aum (apparently 'the Companion of the people'), as we learn from a Palmyrene and a Nabatean inscription. In the former he is called Sa'adon, 'the kind god who receives offerings,' and from his name, and who drinks no wine, i.e. to whom no libations of wine are offered. In the Sa'ā inscription he appears as Sh'ī HQM, which should probably be read Sh'ī ḥqūm.

7. OTHER DEITIES OF THE TIME OF NOAH.—The god Yaghūth, whose name evidently means 'Helper,' was, according to the Qur'ān (Sūra lxxxi. 28), another of the deities worshipped in the time of Noah. Unless we are willing to adopt the very hazardous conjecture of the learned Smith, who identifies Yaghūth with Yē'nūš,* an ancestor of the Edonites mentioned more than once in Gm 36 and elsewhere in the OT, we find no trace of this god in early times, for his namesake 'l-yīsūd, a man who figures in the above-mentioned inscription of Memphis, cannot be cited as a proof. But at a later period we hear of a god Yaghīth, whose idol was an object of contentment among the tribes of the northern Yemen, and the name Abd Yaghīth occurs in various parts of Arabia, even in the tribe of Taghlib on the north-eastern frontier.

The name of the god ʻYā'qūb, who is mentioned in the Qur'ān together with Yaghūth, probably means 'the Preserver'; his cult seems to have been confined to Yemen. Suwā', who is also included among the gods worshipped by Noah's contemporaries (Sūra lxxxi. 20), was apparently of no great importance. He had a sanctuary at a place in the territory of the Hudail, but none, so far as we know, elsewhere. The meaning of his name is altogether obscure. Neither Suwā' nor ʻYā'qūb seems to occur in theophoric proper names. It is hardly necessary to remark that the transferring of all these Arabian deities to the age of Noah was a fantastic anachronism due to Muhammad himself.

8. HUBAL.—Hubal was worshipped at Mecca; his idol stood in the Ka'bah, and he appears to have been, in reality, the god of that sanctuary. It is therefore particularly unfortunate that we have so little information respecting him. Wellhausen has plausibly suggested that Hubal is to be identified with Allah, 'the god' of the Meccans. It would be unsafe to trust the descriptions of the idol in question which are given by writers of a later

* The correct pronunciation is, perhaps, ʻYā'īsh or ʻYāsīsh (with s); we may assume that originally the name was always spelled Ysh, without any vowel-deletion afterwards. The
period; there is reason, however, to believe that
the god had a human form. We may likewise
accept as historical the statement that near him
were kept divining-arrows, used for the purpose of
ascertaining his will or forecasting future events.
It is evident that the idol was worshipped by 'Amr b.
Luḥāt from Ma'ālah (Moab), a tradition which may
contain some element of truth, for we have inde-
pendent evidence indicating that this god was
known in the North. He seems to be mentioned
in the Arabic of the Uwdī tribe of the tribe of
Kalb, which dwelt in the Syrian Desert, used
Hubal as the name of a person or clan; the same
tribe, it may be noticed in passing, used in like
manner the names of Isāl and ʿAlūd, two deities
peculiar to Mecca. Moreover, 'Amr b. Luḥāt is the representa-
tive of the Ḥuzā'ī tribe, who, according to tradition, occupied the sacred
territory of Mecca before it passed into the hands
of the Qurān. The assertion that 'Amr intro-
duced the worship of idols into Mecca for the first
time is, of course, utterly incredible. But the
hypothesis that Hubal was a late importation from
a foreign country is further supported by the fact
that the worship of Hubal has survived in other parts of
Arabia, and that even at Mecca personal names
compounded with Hubal were unknown. When the
Meccans had gained a victory over the Prophet
in the immediate neighborhood of Medina, their
leader shouted, 'Hurrah for Hubal!' They regarded
him as the natural enemy of the God
preached by Muhammad.

9. 'LORD' AND 'GOD.'—Here we may notice certain
deities whose titles in themselves seem to
designate them as occupying a position of supreme
importance in the eyes of their worshippers. Among
these is al-Malik, 'the King,' a name which corre-
sponds to the North-Semitic Malak (not to mention
other forms) as applied to a god; in Arabia, however,
al-Malik is represented only by the rare
personal name 'Abd al-Malik.†

The divine title Baʿl or Baʿal, 'the Lord,' which
was very common among the Northern Semites,
survived among the Arabs of the Sinai Peninsula,
in the form al-Baʿāth, which occurs in their inscrip-
tions together with the proper names 'Abd al-Baʿāth,
Aṣūṣ al-Baʿāth 'gift of the Lord,' and Garm al-Baʿāth,
proclaimed the Lord of the world. The use of this
deity, as may be found in Sharaf al-Baʿāth, the
name of a place which lay somewhere on the route
between Medina and Syria. The Arabs of later
times were not aware that any such deity had
existed, and therefore phrases in which they prove
that he had once been known. Thus the term 'soil of
Baʿāth, or simply 'Baʿāth, is applied to
land which does not require rain or artificial
irrigation, but has an underground water supply,
and therefore yields fruit of the best quality. In this
case the god seems to be regarded as the lord of
the cultivated land. That here the word Baʿāth
really refers to him is shown by the synonymous,
or nearly synonymous, expression athṭār, derived from
Athṭūr, a deity whose name had likewise
sunk into oblivion among the Arabs of that period,
whereas it appears in all the other Semitic languages
with the usual variations of form ('Aṣṭār, 'Athṭūr,
and so forth'). Again, the verb baʿāīta and other
derivatives of Baʿāth mean 'to be bewitched, properly
to be seized by the god Baʿāth.'

Among the Northern Arabs of early times, par-
ticularly in districts where the word El, 'God,' was
still very commonly used as a separate name,
for Amlak, the plural of majesty, formed from this noun, is
used in Ethiopic as the ordinary word for 'God.'

In the history of Islam, al-Malik became one of the epithets
of Allah, and hence the name 'Malik' appears among
Muhammadans.

The word Baʿl is still primarily to the date-palm, which requires
much moisture at its root but none above.

† Amlak, the plural of majesty, formed from this noun, is
used in Ethiopic as the ordinary word for 'God.'

The name Baʿl is still primarily to the date-palm, which requires
much moisture at its root but none above.

Allāh, in the Saʿfī inscriptions Hallāh, 'the god,'
enters into the composition of numerous personal
names among the Nabataeans and the Northern
Arabs of an early period, e.g. Zaid Allāh, 'increase
of God' (that is, increase of the family through the
son given by God), 'Abd Allāh, and so forth. In
the Nabataean inscriptions Allāh does not seem to
occur separately as the name of a god, but in the
inscriptions of Saʿfī the separate use is found.
Among the heathen Arabs of later times Allāh is
extremely common, both by itself and in theo-
phonous names. Wellhausen cites a large number
of passages proving that they mention Allāh as a great
deity; and even if we strike out some passages (for instance, on the ground that
the text has been altered by Muhammadan scribes),
so many still remain over, and so many more which
are quite as good, that we cannot doubt that
Allāh was known in Arabia as the God of the
Heathen, as the Jews knew Him in Jerusalem. But
in any case it is an extremely important fact
that Muhammad did not find it necessary to introduce an altogether novel
deity, but contented himself with adding the deity
Allah of his 'companions,' subjecting him to a kind of
dogmatic purification, and defining him in a somewhat
clearer manner. Had he not been accus-
tomed from his youth to the idea of Allah as the
Supreme God, in particular of Mecca, it may well
be doubted whether he would ever have come
forward as the preacher of Monotheism.

II. THE NATURE OF THE GODS.

As to the manner in which the Arabs conceived
of their gods, the theophorous proper names
give us some information, though it does not go very far.
We have, of course, to remember not only that
the Arabs numbered only a few persons who were
on the best possible terms with the deities in ques-
tion, and to approach them in the most conciliatory
fashion, but also that later generations, who made
use of ancient names, did not pay much attention

† Names connected with the pre-Islamic tribes of the Arabian peninsula, which originally came from districts where the term Allāh or one of its synonyms was naturally a tendency to spread among the Arabs in general.

Names connected with the pre-Islamic tribes of the Arabian peninsula, which originally came from districts where the term Allāh or one of its synonyms was naturally a tendency to spread among the Arabs in general.
to the original meaning: hence it may be concluded that, when Muhammad first proclaimed his mission, the peculiar ideas to the relations between gods and men had already begun to grow dim. It is also to be noticed that, in consequence of the abbreviations which names of persons are liable to undergo in daily life, compound proper names were often deprived of their divine element; thus *Alia Manat*, gift of Manat; *Zaid Allat*, increase (bestowed) by Allat; *`Abd Allâh*, servant of God, became *Allah*, gift; *Zaid*, increase; *`Abd*, servant, respectively. A peculiarity proper to the denominations appears as a lord, while the human individual is his servant, his handmaid, his obedient subject (freewill); sometimes, again, the deity is described as gracious, while the human individual is his gift, his reward, his act of favour, the aid which he supplies, his protegê who seeks refuge with him, etc. At other times the deity is represented as increasing the family, as sending a good omen and good fortune. The human individual is also referred to as a man of the deity, his companion, and so forth. Some of these compounds are of doubtful meaning. With the exception of a very small number of uncertain cases found in isolated texts, the names have never designated a human being as the kinsman or descendant of a deity, like those which we find among the Hebrews and other Semites.†

III. THE CULT.

1. IDOLS, ALTARS, AND SACRIFICES. — It has already been remarked that the sanctity of our knowledge respecting the Arabic gods, due to the fact that our information dates, for the most part, from the close of the heathen period, that is to say, from a time when the Arabs themselves had no very clear ideas on this subject. The traditional lore was usually practised, but mythology, not to mention religious dogma, could scarcely be said to exist. Even as to the fundamental question of the relation in which the Deity stood to the sacred stones, idols, and other objects of worship, no definite belief seems to have prevailed. If the heathen Arabs reflected about such matters at all, they probably imagined that the block of stone which served as a fetish (after the primitive Semitic fashion so clearly portrayed in the OT) was crowned by a divine power, and, in its turn, exercised a divine influence. We have already had occasion to mention the black stone of Dusares at Petra; to this, it would appear, Clement of Alexandria almost says that ‘the Arabs worship stone’ (Protr. iv. § 46). The veneration of the black stone in the wall of the Ka‘aba has been adopted even by Islam; and, as Snouck Hurgronje has shown, there exist in Mecca and the immediate neighbourhood various other sacred stones, which were originally fetishes, but have acquired a superficially Muhammadan character by being brought into connexion with certain holy persons. Stone of this kind served at the same time as altars; the blood of the victims was poured over them or smeared upon them, an act whereby the worshipper entered into communion with the god to whose temple the offering of blood was presented. Upright blocks or slabs of stone (qal'at dalam) formed an essential part of the cult; the Arabic equivalent of στῆγας is *qalat* (pl. *qalātat*), also *massābīlah* (Heb. *massābīlah*). As early as the time of Herodotus, our oldest authority, the Arabs, to establish a blood-brotherhood by smearing sacred stones with their own blood, while they invoked the god and the goddess (iii. 8). Examples of a similar use of blood, in the solemn ratification of a treaty or in the oath-taking of an oath, occur much later periods.* The blood is licked, or the hands are dipped in it; sometimes water or a perfumed liquid is employed as a substitute.†

A detailed account of all the kind of sacrifices performed, about a.n. 410, is given by Nilus (Migne, Patr. cii. 623 ff.). The wild ‘Baracuss’ of Arab Petraus, he tells us, had no image of a god, but only an altar rudely built of stones, where, on the first day, he used to sacrifice a goat, a human being or a white camel to the morning-star (i.e. Venus, or *Usā*; see above, p. 600) before sunrise, evidently in order that the star might be visibly present during the whole ceremony. Thrice they marched round the sacred spot, chanting a hymn; then the chieftain, or an aged priest, struck the first blow at the victim, and drank some of the blood, whereupon the crowd, rushing forward, shared the animal, raw and only half-boiled, together with the bones and entrails, before the sun appeared.† One of the most peculiar features in this description is the drinking of the victim’s blood, the Arabs, like the ancient Hebrews, allowed the blood of the victim to flow away, giving back the hand of life to the deity, or else they applied it directly to the idol.

As is stated above, the Arabs of Petraea sacrificed not only animals, but also human beings; the son of Nilus was one of the point of being sacrificed to the morning-star, in honour of the morning-star, and escaped by a mere accident. Testimony of a somewhat earlier date is supplied by Porphyry, who tells us (de Abstin. ii. 56) that ‘the people of Duma, in Arabia,’ annually sacrificed a boy and burned him under the altar, which served also as an idol (ζωαρος); here we have another instance of the same object being used for both purposes. The vast human sacrifices offered, at a later period, by King Mundhir of Ijira to the planet Venus, the goddess to whom Nilus also refers, have already been mentioned.† But in Arabia proper we have no clear trace of human sacrifice.++ Possibly among the Arabs of the extreme North, the continuation, or it may be the revival, of the ghastly ancient rite was due to the influence of the neighbouring peoples, whose religion had remained barbarous in spite of their advanced material civilization.

At the period of the present day our principal authorities relate, the Arabs sacrificed camels, sheep, goats, and apparently less often pigs.++ We frequently meet Count Landburg, Le Langue arabe et ses dialectes (Leiden, 1903), p. 74, mentions the remarkable specimen of blood-ritual which is still practised in a certain district of South Arabia at the conclusion of a country service.

The anointing of fetishes, as we find it in Gen 23:18, and as it appears elsewhere, both among the Northern Semites and other peoples, is likewise to be considered a secular rite, or offering.

Similarly, at an earlier period, the altar in the sacred palm-grove, probably near the southern extremity of the Sinaitic Peninsula, was *de orbe Arobo*, according to Agatharchides, cited by Diodorus, iii. 40.

§ In like manner the ‘Alawina, a Muhammadan confraternity existing at the present day in the district of Trenchen, Algeria, perform a religious rite in the course of which they devour a goat raw, with the skin and hair—see Doucté, Les Assises d'Alger (Châlons-sur-Marne, 1900), p. 13. This must be a piece of primitive African savagery; it was certainly not imported into Arabia. But there is reason to believe that similar rites took place in the paroxysms of excitement which accompanied the Dionysian rite. The Eucharist of Kupridice contains no very precise evidence on the subject.

1 Probably not the oasis Dumat al-Jandal, where Wadd was worshipped (see above, p. 112), but Duma in the Jauin, which was included in the province of Arabat—see the KRAS of Bengal for 1903, Anthrop. Series, p. 82 ff.

2 The ‘prick’ of the indigent of the Bedouin to-day, as of the present day, see Curtiss, Prim. Sem. Rel. Today (London, 1892). Cf. also Musil, Arabica Petraea, iii. (Vienna, 1905); and Taizzen, Contes des Arabes au pays du Maad (Paris, 1899).

* These remarks, and many of the other observations which follow, apply to other peoples also, both Semitic and Non-Semitic.

† On all these questions see the art. ‘Names’ in EB, p. 233 ff. (for the general appearance of the present article); and Littman, Oriental Inscriptions, p. 121 ff.

‡ These names are those which follow, apply to other peoples also, both Semitic and Non-Semitic.

§ Very similar rites exist among other nations, e.g. in Bengal —see the KRAS of Bengal for 1903, Anthrop. Series, p. 82 ff. For a parallel with the customs of the present day, see Curtiss, Prim. Sem. Rel. Today (London, 1892). Cf. also Musil, Arabica Petraea, iii. (Vienna, 1905); and Taizzen, Contes des Arabes au pays du Maad (Paris, 1899).

++ These sacrifices may be compared with the savage custom existing at the present day in the district of Trenchen, Algeria, of *de orbe Arobo*, according to Agatharchides, cited by Diodorus, iii. 40.

†† In like manner the ‘Alawina, a Muhammadan confraternity existing at the present day in the district of Trenchen, Algeria, perform a religious rite in the course of which they devour a goat raw, with the skin and hair—see Doucté, Les Assises d'Alger (Châlons-sur-Marne, 1900), p. 13. This must be a piece of primitive African savagery; it was certainly not imported into Arabia. But there is reason to believe that similar rites took place in the paroxysms of excitement which accompanied the Dionysian rite. The Eucharist of Kupridice contains no very precise evidence on the subject.

† Probably not the oasis Dumat al-Jandal, where Wadd was worshipped (see above, p. 112), but Duma in the Jauin, which was included in the province of Arabat—see the KRAS of Bengal for 1903, Anthrop. Series, p. 82 ff.

†† These sacrifices may be compared with the savage custom existing at the present day in the district of Trenchen, Algeria, of *de orbe Arobo*, according to Agatharchides, cited by Diodorus, iii. 40.

— The word [hadji], ‘conducted,’ cannot be cited as an argument. When applied to a single individual, it denotes a prisoner, who is under the protection of the king to whom he has been brought to his husband. When applied to sacrificed victims, it is always a collective, the singular being *hadj*. Thus it would not be correct to say that a prisoner is called a hadji.

†† The most usual words for animals offered in sacrifice are *sirr* and *sirifa*; hence we must suppose that the word that is used here in the sense of ‘entreat, nact,’ ‘to be moved by entreaty,’ originally referred to sacrifice, accompanied by prayer, and to the effect which it produces on the deity.
read of the blood of the victims being applied to the sacred stone or pillar. The number of the animals slaughtered must sometimes have been very large, since the poets hyperbolically compare warriors slaying in battle to a multitude of sacrificial victims. Such kinds are rarely mentioned. On one occasion we hear of a mik'k-offering, presented to the god Wadd (see above, p. 602), and another passage refers to an oblation consisting of barley and wheat over which the arrow was poured. Me and the next day, however, these less pretentious kinds of offering may perhaps in ordinary life have played a larger part than we should at first be inclined to suppose. But the words *naw'at*, *mesal*, *outing*, which are applied to religious ceremonies in general, and have become part of the terminology of Islam, certainly do not refer, in the first instance, to drink-offerings of this sort (as is the case with the Hebrew *nekad*), but to the outpouring of blood. The flesh of the sacrifice was usually eaten by the worshippers, and sometimes the god contented himself with the blood. Sometimes, however, sacrifices were left to be devoured by vultures; hence the neigh-trail of the Ka'ba was called *mutqi* *al-qafir*; the 'feeder of the birds (of prey)'. In this case the god was probably imagined to be—through human instrumentality, it is true—an example of those virtuous Arabs whose charity, like that of the birds, was shaven, and a sheep was sacrificed on his behalf; perhaps this was originally a random offering, offered as a substitute for the sacrifice of the child.

We may here mention a totally different kind of offering, namely, the practice of *setting an animal at liberty*, either in fulfilment of a vow or as an expression of gratitude to the deity for the increase of the flock; thenceforth the animal in question was not to be used for any purpose, except perhaps by needy travellers who might be allowed to milk it. Of these consecrated animals there were various sorts, each denoted by a distinct term. But as to the precise meaning of the terms, no trustworthy information exists. Possessed by the Qur'an and by later scholars, since the Qur'an had abolished these customs, together with the religion of which they formed a part. It is possible that the animals to which we have referred pastured in districts sacred to the deity, and generally were held inviolable.

The practice of *marching round the sanctuary* on the occasion of a sacrifice, as the Saracens described by Nilus were wont to do, prevailed in many parts of Arabia. Sometimes, at least in Mecca, this marching took place also when no sacrifice was being offered. It would seem that among the Arabs of later times the *sollemn shout* (tahbl) corresponded, in some measure, to the *hyam* of the early Saracens. We may be sure that what the Qur'an contemptuously calls *whistling and clapping* (Sûra viii. 35) was not confined to the Meccan sanctuary.* The act of standing (*yukf*) in a devout posture before the sacred stone or image likewise formed an essential part of the ritual.

In addition to these traditional forms, there were other means of influencing the gods, namely, extemporized prayers, requests for special favours, benedictions, and, above all, imprecations. The last are called *hyperbolic* and as a sort of incantation are sung in the god or the image in a sacred month and at a sacred spot, for instance, in the month of Duhan (6') at *Oakah*.

We have already seen that the gods were represented not only by rude blocks of stone, but also by statues, each of which was more or less skill. The most usual word for a divine statue, whether of stone or wood, is *sunnan*, derived from the Arabic *qalim*, and perhaps introduced into Arabia together with the object itself. The other word, *sawah*, is certainly indigenous, and seems primarily to mean nothing more than 'stone.'

Examples of *tree-worship* are likewise to be found among the Arabs. The tree known as *Dhâl* or *Aussi*, the symbol of the Meccan Arabs, was held sacred; it included divinite honours; weapons and other objects were suspended from it. We also hear of a sacred palm-tree which was decked with apparel. At *Nahla*, as has been mentioned above (p. 600), the goddess *Urzâl* is said to have been worshipped in the form of three trees. We may assume that the deity was supposed to stand in the same relation to the tree as to the flocks of stone. The garments, rays, and other things which were placed upon it are to be regarded as a substitute for sacrifice.

The *kindling of a fire in honour of a god* was quite exceptional among the Arabs. It took place in connexion with the great festival of the pilgrimage, at the spot called *Qubbat al-Ka'bah*; moreover, the term *sather* in an ancient verse of poetry referring to some particular cult, may not improbably be explained as meaning 'fire,' 'blaze,' in accordance with the ordinary use of the word, rather than as the name of a god, although the latter interpretation might seem, at first sight, to suit the context.

2. PLACES OF WORSHIP.—Temples, properly so called, were certainly very rare, unless we include buildings in the Cypriote-Roman style erected by the Arabs of the extreme North. The primitive simplicity of the Ka'ba, which was held in such especial honour, proves that the sanctuaries of Arabia are no more than the outer expression of a deep inward feeling. The three temples which stood, according to Agatharchides (Diod. iii. 45), on a hill near the Arabian seacoast, may have been somewhat handsomer specimens of architecture, but it would seem that they were built by a foreign prince, probably a Sakaean. Yet in spite of their humble appearance, the houses of the gods were regarded with extreme veneration, as is shown by the proper names 'Abd al-dâr, 'servant of the (holy) dwelling' (the ancestor of the family who were actually in charge of the temple at Meccah); 'Abd al-hâlî, 'servant of the (holy) house'; and 'Abd al-Qâ'ba,'servant of the Ka'ba.'§ The word *majfud*, 'mosque,' 'temple,' which has become part of the terminology of Islam, was originally derived from the

* Robertson Smith very justly remarks (Rel. Sem. 2 p. 340, note 2): 'The festal song of praise (Sûra, tahbl) properly goes with the dance round the altar (Ps 259), for in primitive times song and dance were inseparable.' 1

2 Sacred trees, such as the date palms, were not uncommon among the Arabs at the present day, and still more frequently in Syria. They are not found in other regions, and the Saracens for the present many difficulties of interpretation. On tree-worship in general see Frazer, Golden Bough, I. 106 ff.

§ Among the Syriacans we find the name *Abd el hâlî, 'servant of the temple.*
Aramai, as is shown by the occurrence of 'milah, 'place of worship,' in the Nabatean inscriptions. The sanctuary in which an idol stood was usually not enclosed with walls, but marked off by means of boundary-stones, after the fashion described by Strabo. Hence, it naturally be regarded as a gift of the gods by the caravans which passed to and fro between Yemen and Syria, though the water of Zamzam, it must be admitted, is of inferior quality, judged even by Arabian standards. As Dr. Haldane points out (p. 777), the waters are to be found no great way off. But, however, this may be, the primitive structure in question, which was little more than a box containing a sacred stone, and visited by strangers who performed a pilgrimage (tawm) to the place. The traditions which relate to the early history of Mecca are extremely untrustworthy, and many of them have been perverted in the interest of various parties; but there is no reason to doubt the statement that this territory, unattractive as it is in itself, had, once, if not always, been covered with solemn and zealous worship.

The ceremony of marching round the Ka'ba, and the accompanying rites, such as the procession between the two great stones, called Ṣafa and Marwa, and the visit to the spring of Zamzam, which stood in the immediate vicinity, were rigidly fixed. The greater part of this ceremonial was incorporated into Islam by Muhammad, who, from the first recognized the Ka'ba as the temple of Allah (Sūra cv. 3); only a few modifications were introduced. But there is reason to suspect that the changes made by the Prophet chiefly affected those very details which, if they were known to us, would have supplied the surest clue to the original meaning of the whole. In particular, he abolished all the idols which, from the capture of Mecca, he had accumulated, and to which he gave no other meaning than that they were mere symbols of the God whom he himself worshipped. According to tradition, this has all the appearance of trustworthiness, since the Prophet forbade his followers to march round the sacred spot naked; the practice in question must therefore have existed previously. The idea seems to have been that those who marched in this manner could not appear before the Deity in their ordinary garb; hence, if any one had not the means of borrowing a suit of clothes at Mecca, he was obliged to perform the ceremony in a state of nudity. The customary garments lent by the priest occurs also elsewhere in Arabia. In one case, we are told, a Bedawi, who belonged to the neighboring tribe of Hudsii, marched round the Ka'ba with his buttocks uncovered, apparently imagining that this was a

But Strabo, although, in his report on Arabia, he vented on the occurrence of "milah and the like in the Nabatean inscriptions. The sanctuary in which an idol stood was usually not enclosed with walls, but marked off by means of boundary-stones, after the fashion described by Strabo. Hence, it naturally be regarded as a gift of the gods by the caravans which passed to and fro between Yemen and Syria, though the water of Zamzam, it must be admitted, is of inferior quality, judged even by Arabian standards. As Dr. Haldane points out (p. 777), the waters are to be found no great way off. The customary garments lent by the priest occurs also elsewhere in Arabia. In one case, we are told, a Bedawi, who belonged to the neighboring tribe of Hudsii, marched round the Ka'ba with his buttocks uncovered, apparently imagining that this was a
peculiarly effective means of appealing to the god. It is said that the Meccans and certain tribes known as Huns, who were nearly akin to them, used to wear sandals when they went through the ceremony—a rule which may be explained by the suspicion that they regarded the place as their home; members of other tribes, on the contrary, always entered the sacred precincts barefoot.

Wellhausen has had the merit of discovering another theory itself, which is based on the solitary processions from the hill called ‘Arafat to the valley of Minā, the real pilgrimage (hojjj) or ‘erā Lotto, originally had nothing whatever to do with Mecca and the Ka’ba. It is true that the route followed by the procession lay, for the most part, within the limits of the haram, which was generally acknowledged to be the sacred territory of the Meccans; but the fact that the opening ceremonies, the halt on the hill of ‘Arafat, and the kindling of lights on the hill of Hilal, took place outside the haram—for which reason the Meccans and the Huns as a whole had no share in them—is quite sufficient to prove that the festival was not really connected with the sacred area. It should be observed that even at the present day, in spite of the changes introduced by the Prophet, who endeavoured to assimilate the ritual as far as possible to the theory of Islam, the festival, properly so called, has been entirely suppressed, and it now appears to be the case that the two original visits to the Ka’ba are not an integral part of the hajj. Nevertheless, we cannot deny that by the time of Mahomet and the pilgrimage had come to be closely associated with Mecca. The Quraish were sufficiently astute to appreciate the advantage which they derived from the sacred aspect of their domain, and from the annual assemblage of all pious men by the door of the country; they used these two circumstances together formed the basis of their trade, which rendered them intellectually far superior to other Arabs. The hospitality which they extended to the starving Bedawin at the time of the festival was amply repaid by the security guaranteed to the Meccan caravans.

Hagg or hojj is a very ancient Semitic expression; whatever its original meaning may have been, it corresponds for practical purposes to the word ‘festival’ (see, for instance, I S 30:16). In Arabic the verbal form of this root is used also transitively, signifying ‘to visit’ a shrine. How familiar the idea of pilgrimage was to the ancient Arabs is well shown by the expression ḫajj-giḏa, or ‘Aja’ijj, ‘he who is wont to go on pilgrimage,’ which appears not unfrequently as a proper name; furthermore, ḫajj-haqa, which originally meant a ‘pilgrim-route,’ is used for a ‘route’ in general, and ḫajj, ‘annual festival,’ has become a synonym for ‘year.’ That the festivals attended by pilgrims could take place only at fixed seasons is obvious; thus the pilgrimages were intimately connected with the remarkable institution known as the sacred months, that is to say, months during which a universal peace prevailed, no violence could be executed, and even the murderer enjoyed security. How such an institution can have established itself among uncivilized nomads remains a profound mystery; in any case it was generally

On the whole of this subject see the excellent inaugural dissertation of Suneck Hurgonje, Het Melkamandaa Festival (Leeuwarden, 1892), and also his recent book, Relikta (Hague, 1885, 1890).

§ We also meet with the sing, form ‘Arfaq; perhaps this refers properly to some particular, though the partial absence of the necessary part for a singular is a great fault on certain points; and also his great classical work, Mekka (Hague, 1885, 1890).

1 The theory that it primarily refers to ‘dancing’ rests on no evidence.

2 It is less difficult to understand how sacred spots and districts came to be regarded as inviolable, for in early times it was hardly possible that the sanctuary would punish those who profaned it, and this reverence would acquire the accepted among the Arabs. Its existence is attested by Procopius (Pers. ii. 16), though, of course, we cannot be quite sure that the months to which he refers are precisely the same as those with which the concourse at Mecca was associated. The question is closely connected with the theory of the ancient Arabian calendar, about which some doubt still prevails. It appears tolerably certain, however, that Rajab, the sacred month which stood by itself, was of much greater importance than the others, and seems to have been the proper time for the pilgrimage (‘omra) to the Ka’ba, normally fell in the spring, whereas the three consecutive sacred months, in the second of which the great hajj took place, coincided with the autumn. Similarly, we learn from Nonnosus, who lived during the first half of the 6th cent., that two annual festivals were celebrated in the sacred palm-grove, which is probably to be identified with the grove described by Agatharchides (see above, p. 660), but is nowhere mentioned in Arabic literature.† At the beginning of the hajj, a man who belonged to a certain family renowned for skill in such matters solemnly inaugurated the sacred month. It should be observed that even at the present day, in spite of the changes introduced by the Prophet, who endeavoured to assimilate the ritual as far as possible to the theory of Islam, the festival, properly so called, has been entirely suppressed, and it now appears to be the case that the two original visits to the Ka’ba are not an integral part of the hajj. How such an institution can have established itself among uncivilized nomads remains a profound mystery; in any case it was generally
Quraish and their associates the Huns (see p. 665). At Qozah, in the immediate neighbourhood, a fire was kindled on the night spent at Muzdalifa every one remained awake, and as soon as the sun rose, the assembly started for the valley of Minä, about two hours farther on. On the way thither, at three different places, every individual threw upon a heap of stones. At Minä the sacrificial animals were slaughtered; part of the flesh was consumed by the owners on the spot, and distributed among those who had nothing to offer, while part of it had always been their custom to dry and store in the sun for subsequent use. Thereupon the pilgrims shaved their heads, and the festival came to an end.

The practice of kindling lights on the hill of idol, the fire at Qozah, combined with the observation of the setting and rising sun as temporal limits, seem to indicate that the festival was held primarily in honour of the Sun-god. Just as the Saracens described by Nitzsch {^Terslagen, with the Morning star before it vanished in the brightness of the dawn, so the pilgrims at `Arafat regulated their proceedings by the sun. But whether the whole march from `Arafat to Minä was made in one day and in one place, or having a consistent mythological signification, whether, in other words, each individual rite is to be regarded as an integral part of a mythological drama and is capable of being so interpreted by us, appears extremely doubtful, notwithstanding the ingenious theory which Houtsma has propounded.\* The custom of throwing stones is particularly hard to explain. We have to take into account the fact that ceremonies of the same kind were performed by the Arabs in at least two other places, and occur in every part of the world.  

The great festival which we have described had gradually thrown all others into the shade. At several places not very far from Mecca, festivals, which originally had a religious character, were celebrated on fixed days in the course of the sacred months; but these assemblies became in process of time little more than fairs, where men came together for purposes of business or pleasure. This applies, in particular, to the fair held at `Okaż. It must, of course, be understood that the great baj itself was also utilized for commerce and pleasure, and that even single tribal gatherings extended over a vast area. Thus at the fair of Dhu'l-majāz, a place some four miles from `Arafat, peace was concluded about the beginning of the 5th cent., through the intervention of Musa, the successor of `Abdul-Muttalib. The habit of two kindred tribes of Bakr and Taghilī, who had long been deadly enemies, although the town of Hira and the territory of the tribes in question lay far to the north-east of Dhu'l-majāz.

It is necessary to add that there were certain tribes, not very distant from Mecca, which did not recognize the sanctity of the festivals associated with that city, and even went so far as to plunder the pilgrims. The case of the bani-`Ashir Shafārā, who boldly slew a pilgrim at Minä in the midst of the festive throng, thus violating at once the holiness of the place and of the occasion, belongs to a somewhat different category, since this was merely an example of individual impiety on the part of a man who in more than one respect showed a contempt for established usages.

\* Muhammad deliberately modified the conditions of the festival with the sun, for he ordered that the departure from `Arafat should take place soon after sunset, and the departure from Muzdalifa, shortly before midnight.

\* Het Skooplimse en het steenwerpen te Duma, p. 22ff. (= Bestand della Accad. van Wetenschappen, Letterkunde, 4th ser., vi. 206 ff.).

\* See, especially, Fzlexer, Golden Dough, iii. pp. 3-13, where the description of the festival is given, and under other single names, Doutte, Les Méditations sacrées en Meroc (Algeria, 1903). The practice of throwing stones, which is so natural and so sanguine, probably has a different origin, although the belief of Muhammad, that the stones which they throw in the valley of Minä are directed against Satan, suggests this explanation.

\* The word is possibly connected with other religious terms used in the Semitic languages, but on this point nothing can be affirmed with certainty.

\* Abjìr, an author of the 9th cent., gives a very rational explanation of the belief in demons, and his views are based on St. Augustine's belief in them. (See Hieronymus, De tres init. prooem., ii. 200 F.)

\* T. E. Lawrence, Dasomen, Geister und Zaubem bei den alten Arabern, in the above-mentioned periodical, vii. viii., particularly instructive.

ARABS (ANCIENT)

vation, while serpents were seen to fly out of the bowels of the earth, during which persons died forthwith, with every one perceived that the Jinn had slain them. Perhaps we may hazard the rationalistic conjecture that their death was due to the poisonous air which they had been breathing. There are mentions of infant premature still or cut off off human beings; their spiteful nature also leads them sometimes to prevent cattle from drinking. They utter a peculiar sound. Their limbs are often very powerful; hence a strong man is said to have had the Jinn hired by the Jews to ride upon ostriches, as bedits inhabitants of the pure desert. A brave warrior is described as alarming even 'the dogs of the Jinn,' so that they growl. These are merely samples of the fantastic notions connected with them; as we might have expected, there were equally fantastic devices for the purpose of warding off their influence.

Frequently a Jinn (i.e. one of the Jinn) enters into a human being, rendering him possessed or mad. But this belief, familiar as it was to the Arabs in historical times, seems to have been originally a foreign importation, or at least to have been greatly intensified through contact with foreign peoples. A very peculiar and rare feature of such conception appears, whereas in the NT it is extremely common, phrases like δαιμονίῳ δαιμόνιον, δαίμονος ἐχειν occurring repeatedly. The idea was introduced into Palestine from Iran. The Persian word for 'madman' is dāvānā, literally 'demonic.' (from dāv, originally da'wa, 'demon'), whence comes the Aramaic da'wānāt; on the other hand, the Aramæan shekīdān (from shekh, which was used as the personal to the Persian dāvānā) passed into Persian in the form shekhdā. In pre-Islamic times the Arabs borrowed from their northern neighbours not only many of the elements of civilization, but also much that was fanciful and superstitions. The last class includes the belief in demoniacal possession. Even heathen Arabic poets speak of Paluway as having been built for King Solomon by the Jinn; in this case the foreign origin of the legend is quite obvious.

The Arabs almost invariably use a collective noun in referring to demons: an individual demon has no distinct character, and consequently no personal name. To refer to the Sheikhdā proper name is scarcely permissible. It seems hardly certain that this word was known to the Arabs before the days of Muhammad, and it actually occurs as the name of a human individual; but its form agrees so closely with that of the Ethiope Shekhdā, which is also derived from the Heb. Shekin, that we are forced to consider it a loan-word. The Persianional use of shekhdān for 'serpent' (dā'wānā, dāmānā) is even less primitive than the use of ḫurān for 'serpent.'

Though the Jinn have no individuality, they fall into various classes, and certain of these are sometimes mentioned as particularly harmful. The most dangerous kind of all is the Ghul (a feminine noun), of which the plural is Ghulūn or Aghoqīl; this word comes from a root signifying 'to destroy,' perhaps originally 'to assault.' The Ghul is supposed to lie in wait at some place where men are destined to perish; she also enters this thither, especially by night. The Ghul has carried him off;' she is sometimes merely a poetical expression meaning 'he has perished.' She has the power of changing her shape, that is to say, of beguiling men in order to destroy them. But

"the word applied to it is māṣī, apparently a harsh, dull sound. It is also used to denote the changing of a bowstring.

"To be possessed" is jumāa, and the participle jumāni means 'possessed.'

"The idea that Solomon was concerned in the building of Paluway is to be found in the Talmud (Č. B. 36b, and others). The Greater Temple at Jerusalem (Sir. xxvii. 39) is an epithet of somewhat doubtful meaning, applied to heaven, and hence it is not the name of a particular class of demons. The belief current in later times, that the jīra or jīrīa are demons of a specially dangerous kind, is due to a misunderstood passage in understood in an early period, through the influence of Jewish or Christian missionaries.

This is by no means the only Arabic word which was borrowed from the Ethiopic.

usually she is described as a hideous monster. A poet relates how the Ghul, 'the devil of the Jinn,' came one night to the fire which he had kindled, and how he cut off her head. It was a frightful object, like the head of a cat, but with a forked tongue; moreover, she had the legs of an infant, were the body all skin, and clothed in a hairy skin, resembling that of a dog or a rough and crumpled garment. In another poet we meet with the phrase 'arrows sharp as the canine teeth of Ghul." The poets also mention a kind of female demon called Sitāt, of which the plural is Sa'ādā; this term scarcely ever occurs except as a simile, for the purpose of describing swift horses or camels, formidable warriors, and frightful men. A certain Arabian clan was supposed to have sprung from a marriage between a man and a Sitāt. Whether this ancestry was originally regarded as an honour or the reverse is doubtful; in any case no great importance can be attached to the story which was related on the subject.

In passages referring to the Jinn we occasionally meet with the expression Ḥabūl, Ḥabīl, or some other derivative of the root ḤBL, which primarily means 'to destroy,' and is applied, perhaps, to the destruction of the reason, or, in other words, to madness. Usually the term is employed in an abstract sense and as a mere figure of speech, but sometimes the beings so designated are conceived as personal; thus, for instance, a poet says to his wife, 'Leave me in peace, even though I should give away my substance to the Jinn and the Ḥabīl!'

The mysterious tribe called Banū Uqāish seem likewise to be a class of demons. In order to scare them away, it was the custom to rattle a number of dry skin-bottles one against another. The demons were never the objects of a cult, in the strict sense of the word; but on certain occasions, as, for example, at the building of a house, it was thought prudent to conciliate them with some offering, lest they should frustrate the work. The curious proper name 'Abd al-Jīna, 'servant of the Jinn,' may here be mentioned. Whether it was actually in use does not seem quite certain; in any case it cannot have been common. The belief in this motley assemblage of inferior spirits was, of course, maintained by Islam; in fact, the Prophet went so far as to recognize the existence of the heathen gods, classing them among the demons (see Sir. xxvii. 158). Hence these primitively superstitions not only held their ground in Muslimara Arabia, but were further developed, spread over the rest of the Muslimara world, and often combined with similar, in some cases much more elaborate, conceptions which prevailed among foreign peoples. Thus later narratives which refer to such subjects may, if examined with due caution, be used to illustrate the ideas of the ancient Arabs; but we must beware of accepting too readily the statements of those Muhammadan scholars who endeavoured to reduce demonology to a system.

4. SOOTHIAS AND MAGICIANS.—The notion that certain persons are under the immediate influence of the gods, and so possess the power of foretelling events or of performing other supernatural feats, prevailed generally in the ancient

Some words which are often understood as referring to demons really have a different sense. Thus ḳūšā is not a personal being, but a part of the outer". The idea that Solomon was concerned in the building of Paluway is to be found in the Talmud (Č. B. 36b, and others). The Greater Temple at Jerusalem (Sir. xxvii. 39) is an epithet of somewhat doubtful meaning, applied to heaven, and hence it is not the name of a particular class of demons. The belief current in later times, that the jīra or jīrīa are demons of a specially dangerous kind, is due to a misunderstood passage in understood in an early period, through the influence of Jewish or Christian missionaries.

This is by no means the only Arabic word which was borrowed from the Ethiopic.

Some words which are often understood as referring to demons really have a different sense. Thus ḳūšā is not a personal being, but a part of the outer
world. It is certainly significant that the term kāhin, which, as we have seen (p. 667), retained among the Simal-Arabs its original meaning 'seer,' was used by the Teithy Deities had been wont to make revelations to His priests; the divining arrows of Hulal and of other gods—things which the hand of every one could understand; others were intelligible only to persons specially trained. One peculiar art consisted in scaring birds and drawing omen from their flight; this operation was known as azjr. Various other superstitions, to whose order might be enumerated, but such beliefs and practices do not properly belong to the domain of religion, and it is therefore sufficient to notice them in passing.

6. THE SOUL.—The Arabs, like all other Semites, identified the breath (nafs) with the principle of life, or the soul.* So completely did nafs convey, from the earliest times onward, the idea of human personality, that the word is used, with the addition of the possessive suffix, by an ordinary reflexive pronoun: nafsā, 'my soul,' means 'myself'; nafsakā, 'thysel.' tftuifsahi, 'for himself,' etc.† When the nafs permanently departs, a mortal death is the result. A dhuqāt of the Qurān (Sūra xxxix, 43), 'Allāh takes the souls to Himself when they die, and those who have not died (He takes) in their sleep, presuppose the belief that during sleep also the soul is absent from the body.‡ It is true that the conception of the breath as the principle of life does not harmonize very well with the theory that the life resides in the blood (see above, p. 665). But this latter view is much less popular among the Arabs than it was among the Semites, and when the nafs of a man dying from wounds is said to flow away, we need not assume, with the native Arabic commentators, that nafs here means simply the breath. Even the Heb. nephesh (the equivalent of the Arabic nafs) is identified with the blood only in so far as the shedding of the blood causes death. It would appear that the life-giving soul (nafs) was supposed to have its seat in the heart; when the soul moves upwards, it is about to depart; in other words, death is imminent. The breath escapes through its natural passage, the mouth or the nostrils.§ Thus, in passages referring to deadly peril, we read, when your soul had reached your throat, before the tribe, etc. In phrases like the ribs, he just escaped with his soul in the corner of his mouth, etc. In the words of the Qurān, when it (i.e. the soul, which unexpressed) reaches the throat (Sūra lvi, 82, lxxv, 26), meaning, when a man is at the last gasp.|| A view which at first sight seems to differ from the foregoing appears in a story told of a certain aged Arab who fell into the hands of a hostile clan. Seeing that they were determined to shed his blood, he presented a sword to them, saying, 'Cut off my head, for the soul (nafs) is in it,' which they accordingly proceeded to do.

* The Ethiopic nafṣ, 'that which contains the nafs (breath, life) means the living human body (cf. animus, anima, etc.).
† The Arabic nafs properly contains the breath only; its use in the sense of spirit was unknown to the heathen, and when so employed it is to be regarded as one of the foreign religious terms which were introduced by the Arabs.
‡ The corresponding forms are similarly used in Hebrew and Arabic.
§ The conception prevails very widely. It is due to the belief that dreams are real experiences through which men pass while they are apparently lifeless. See Frazer, Golden Bough, 3, 628.
|| By the Muhammadans he was contemptuously called Mustafis, i.e. 'Little Mussahman.'
†† By the Muhammadans he was contemptuously called Mustafis, i.e. 'Little Mussahman.'
‡‡ The fact that his adherents were the only Arabs who displayed real courage and stubbornness in confounding against Islam.

5. OMENS.—The belief in signs as betokening future events was, of course, no less common among the Arabs than among the Semites. Some birds were regarded as lucky, some as unlucky. The animals that crossed a man's path and the direction in which they moved alike conveyed a meaning. Many of these signs were such as the following: a pomegranate, a snake, a rabbit, and a wolf. A dog might be enigmatical, but such beliefs and practices do not properly belong to the domain of religion, and it is therefore sufficient to notice them in passing.

The Hebrew synonym hāzā has an exactly similar meaning in the Arabic hāzh, 'seer,' 'presager,' 'diviner,' which is often used, as well as the verb corresponding to it.† In the same category we may include the ḍir'ā', 'sage,' who is acquainted with hidden things, to the extent the hulub, 'reporter,' literally 'skilful, well-informed,' who in many cases is an engraver (ra'ī), and even the man whose wisdom qualifies him to act as arbitrator (hadādata). The word ashā', 'one who knows,' must in early times have denoted a man who uttered sayings inspired by some higher power; afterwards it gradually became the technical term for a poet.‡ § In general, any one who possesses secret powers, or a style, is called a ḍir'ā', among the Arabs, as among other nations, it was particularly in this sphere that the mysterious depth of the feminine soul made itself felt; we read both of female soothsayers and female enchanters. A female familiar spirit (raṣṣer) is likewise mentioned.

Arabic literature contains many stories about kāhinā and many utterances which were attributed to them; but of all these only a very small proportion can be considered trustworthy, and a great deal is pure invention due to later writers. Nevertheless the passages in question enable us at least to form an idea of the style in which the soothsayer's prophecies are recorded. The same style re-appears in the oldest chapters of the Qurān. The fact is that the conceptions which the soothsayers embodied were raised by Muhammad to a far higher level. He himself was inspired with a power which proceeded from the one true God. But if he had not had before him the example of the heathen kāhina, it is hard to believe that any such idea would have entered his mind; on the other hand, we cannot wonder that his prosaic fellow-citizens called him a soothsayer, a magician, and a possessed poet. Nor is it impossible that his most formidable rival, Mushâna, ibn Ḥabīb of the tribe of Ḥunāfī, was likewise sincerely convinced of his own divine inspiration.||

* Cf. 1 S 297 etc.
† Hence any man noted for his intelligence is supposed to have a ḍir'ā', who reveals all manner of things to him.
‡ The root was no longer employed by the Arabs in the simple sense of beholding', even in Hebrew this usage is confined to the poetical or rhetorical style.
§ The connexion between poetical inspiration and the uncom was not set up in later times, as is sometimes supposed to be the case; there are innumerable examples of persons who are supposed to make his 'demons' or Satan are little more than jests. A very primitive stage in the development of this connexion is presented in the Zoroastrian writings, where Goldber, Abhandlungen zur arab. Philologie, t. (Leiden, 1895)
|| By the Muhammadans he was contemptuously called Mustafis, i.e. 'Little Mussahman.'
†† By the Muhammadans he was contemptuously called Mustafis, i.e. 'Little Mussahman.'
‡‡ The fact that his adherents were the only Arabs who displayed real courage and stubbornness in confounding against Islam.

The Ethiopian nafṣ, 'that which contains the nafs (breath, life) means the living human body (cf. animus, anima, etc.).
†† The Arabic nafs properly contains the breath only: its use in the sense of spirit was unknown to the heathen, and when so employed it is to be regarded as one of the foreign religious terms which were introduced by the Arabs.
‡‡ The corresponding forms are similarly used in Hebrew and Arabic.
§§ This conception prevails very widely. It is due to the belief that dreams are real experiences through which men pass while they are apparently lifeless. See Frazer, Golden Bough, 3, 628.
|| By the Muhammadans he was contemptuously called Mustafis, i.e. 'Little Mussahman.'
†† By the Muhammadans he was contemptuously called Mustafis, i.e. 'Little Mussahman.'
‡‡ The fact that his adherents were the only Arabs who displayed real courage and stubbornness in confounding against Islam.

The common phrase was the nafsā sāḏiqā, 'he died a natural death.' Similarly another, it would appear, to the cessation of the breath, since the 'nafs' (nafs) is here associated with the idea of dying (mubât); but the actual meaning which nafsā has in this connection remains obscure.

* See the Commentary on the Nāṣrīd of Jarrī and al-Faradāz, 671
These words, however, are probably to be taken as
nothing more than a statement, based on ordinary
experience, that the severing of the head puts an
end to life, not as the expression of an idea opposed
to the deeply-rooted popular belief which has been
developed at the head of this latter (p. 671.).

In reading the Qur'an we might be tempted to
conclude that the heathen Arabs regarded the
departure of the nafras equivalent to annihilation;
but in reality all that Muhammad's opponents
denied and contended against was the belief in
the doctrine of the resurrection and the other world.†
Their notions as to the state of departed souls were,
of course, vaguer, if anything, than the notions of
Homer.† Hall's comment on the passage (p. 671.)
nevertheless, the usual invocation addressed to the
dead, 'Be not far away!' does not admit of any satis-
factory interpretation, unless we presuppose the
belief that the dead had a dwelling-place, and might
be induced by entreaty to remain in the neighbour-
hood of his people.† It is true that the formulas in
question dates from a period when such things were
more vividly conceived. Sometimes we meet with
sober reflections of the following kind: 'They will
come to me in my grave, and I do not know where
that place can then be far away, if mine is not?'
Nothing seems to the Arabs more obvious than
that blood must be expiated by blood.‡ Hence the
slain have no blood-thirsty revenge against the
thirsts of the blood of the murderer. These
phrases must originally have been understood in
quite a literal fashion,§ whenever we may conclude
with certainty that some sort of life was ascribed
to the dead. On this subject strange formulas
prevailed. The soul of the murdered man was repre-
sented as appearing in the form of an owl, and as
continually crying out, 'Give me to drink!' until
vengence had been executed. It must be remem-
bered that the same omen, so tier was, in most
cases, a lonely spot where the weird cry of the
feathered anchorite would not be out of place. The
term applied to the departed is hâma, properly
'skull,' the skull being the most characteristic
part of the dead body;§ the voice of the departed
Bodelian MS (Poolecs, 290, fol. 539.): the passage in question
has been communicated by Professor Bevau to the author of
this narrative.

† Primitive man must have been quite unable to grasp
the idea of his personality being completely annihilated at death.
Even in his own lifetime there may have been vague
indications of the idea. Moreover, the few phrases in the
literature of the period are probably degenerated survivals of
more primitive ideas, and are not to be taken literally.

‡ Poets modify the expression in various ways; thus, when
one poet says, 'May Allah not suffer thee to be far away!' we
must look to the whole of the words to interpret the definite
religion behind the idea. Moreover, the poets use the same
formula with reference to their own. So, e.g., 'May God not
give thee to be far away!' One poet, whose hand had been cut
off, actually says to it, 'Be not far away!' The primitive
sense of the phrase is completely lost in the verse of the poet
Husak, alluding to her departed brother, 'May the grave
that contains his body not be far away!' The invocation 'Be not
far away' is even at the present
day addressed to the dead by certain Bedawins.

§ The substitution of a blood-wit (dip) for blood-revenge is a
later modification. But in historical times the blood-wit had
become very common; well-disposed persons eagerly furthered
this device for maintaining peace, often at great sacrifices
to themselves. Nevertheless it was not considered quite honour-
able to accept 'milk' (i.e. camels or other animals that could
be milked) instead of 'blood'.

‡ In reality, of course, the thirst for blood is felt by the
surviving relatives. The daughter of the aged hero Dornal ben
Simma, who was miserably slain by a Moabite, cries, 'Let us
drink, for our father is dead.' (Bede's History, § 501.)

† In reality, of course, the thirst for blood is felt by the
surviving relatives. The daughter of the aged hero Dornal ben
Simma, who was miserably slain by a Moabite, cries, 'Let us
drink, for our father is dead.' (Bede's History, § 501.)

§ In reality, of course, the thirst for blood is felt by the

Simma, who was miserably slain by a Moabite, cries, 'Let us
drink, for our father is dead.' (Bede's History, § 501.)

† Perhaps this use of hâma may be partly due to the notion
that in the head, as the poet says, is the 'creator part' of the
man. The fact that he expresses not to the brain, but to the
external organs of sensation.

called sedâ, 'echo.' Hence 'skull' and 'echo'
come to be used as designations of the ghostly
bird, or owl, that cries for vengeance.‡ Moreover, the
rites of burial, simple as they were, presuppose
some kind of future existence. In order to show
honour to the deceased and to preserve the
soul of the dead man, we must consider the grave
at a grave has maintained itself in various parts
of Arabia down to the present day.§ It is par-
cularly interesting to note that about the year
1100 after Christ certain Arabs of Northern Yemen
(annexed near the mountain-range of 'Astr)
showed their respect for a dead man, in accordance
with their traditional practice, by breaking 1000
words and 300 bows, and by lancing 70 horses;§
this was undoubtedly a survival of an ancient
heathen rite. That the objects destined for the
service of the departed must be rendered useless
to the living is an idea which might easily occur to
the fancy of primitive man.† We likewise find
traces of horror at far away from the grave, but
scarcely any traces of drink-offerings. Poets, it is
ture, often express the wish that the graves of
those whom they love may be refreshed with
wine. But this is because they feel that the
dead themselves are capable of being refreshed
is extremely doubtful; such passages may be mere
giftes of speech, referring to the
verdure with which the grave is to be covered.
In like manner, the greetings which poets sometimes
address to the dead are purely rhetorical, and do
not presuppose any notion of real intercourse with
the departed.

The practice of refusing sepulture to an enemy,
and of casting forth his corpse to be devoured by
beasts and birds, prevailed not less among the
Arabs than among the Homeric warriors or the
people of Palestine (1 S 174, cf. Ezek 29). There
can be no doubt that this was originally regarded
as a positive injury to the dead, as depriving them
of rest in the grave, or the like. But in historical
times such conceptions had begun to become obsolete;**
the poet Shanfar (see above, p. 600), who was
outlawed by his father, disdained the usual
rites, and invites the hyena to rend his dead body
on the battlefield.†† In general, however, the Arabs
paid great attention to proper interment, and
special care was taken to construct the grave so
that it could not be opened. But even this could not
all this may be done without any notion of bene-

* As Professor Goldziher has observed, the saying ascribed
to Muhammad, that the souls of believers slain in fighting for
the faith be deposited in the stomachs of green birds, which
drink of the rivers of Paradise, eat of its fruits, and perch upon
the lumps suspended in the shadow of God's throne, obviously
stands in contrast to the gloomy beliefs of the heathen.
The beastly martyrs do not thirst for blood, and the birds that
contain them are clad in the yellow of vegetation, which to the
inhabitants of the desert is synonymous with life.

† The Arabs practised burial only; the burning of corpses was
unknown to them. It should be observed that the root QâB, which
properly expresses the idea of consuming, is common to all
the Semitic languages, and that the synonymous root DFS is
not confined to Arabic.

‡ See Goldziher, Arab. Studien, i. (Halle, 1883) 230 ff.;

§ Some similar cases have been pointed out to the
writer of the present article by Professor Schwall, who is specially versed
in these subjects.

* On the other hand, a curse sometimes takes the form of a
prayer that no rain may fall upon the grave of the individual in

** The substitution of a crudely material Paradise and Hell for
the vague or erroneous negative beliefs of a future
existence, was doubtless one of the most important factors
in the conversion of the Arabs to Muhammad's teaching.

†† Nevertheless, an elegy composed by a Christian who
merely the ancient formula occurs, 'May Shanfar be not far away!'
ARAKHA—ARANYAKAS

fitting the departed is sufficiently obvious from the usages of modern Europe.

the belief which exists among many primitive races that the dead are malevolent, and seek to injure the living, is one of those no traces are to be found among the Arabs.

VI. MORALS.

It is almost superfluous to say that the Arabs had a generally recognized code of morals, which, we must admit, did not always reach a very high ethical standard. Some element of religion is contained in the maxims, which the poets repeat in various forms, that the misuse of strength leads to calamity; there are likewise narratives which incite the same doctrine. Moreover, the poets sometimes bring the Deity into immediate connexion with the fulfillment of duties, for instance, as vindicating the sanctity of compacts. But in general it may be said that the maintenance of morality was due much more to respect for traditional usages and public opinion than to fear of Divine wrath.

LITERATURE.—L. Krekh, Die Religion der vorislam. Araber, Leipzig, 1903 (second ed. 1905). The great work on the Brahmans, published in 1839, is still one of the standard works. L. N. Sunah, Dritte, 1843, and in the works of Ignatius Godius, De Regnentibus in Excelsis, ed. T. Thell, Leyden, 1860. See also the works cited in the body of this article. The present writer cannot recommend D. Nielsen’s Die altarab. Monarchie, Strassburg, 1894.

TH. NÖLDEKE.

ARAKHA.—A tribe of cultivators and field-labourers in Northern India, of Dravidian origin, which at the present day number about 100,000, practically all of whom are found in the United Provinces. They claim to be Hindus, but their religion is really an advanced form of animism, and is the natural outcome of the orthodox sects. Their tribal goddess is Devi, whom they propitiate by a sacrifice of goats, the service being done by a class of Brahmans of low rank. They observe the usual Hindu feasts, and at that of the Karva Chauth in October-November their women worship the moon by pouring water on the ground from an earthen pot with a sponet (laurivu).

In Central India, as in the United Provinces, they are more found in their domestic worship by the Brahmans, and their worship is chiefly devoted to a snake god whom they call Kartal Deo.

ARAMYAKAS.—See SYRIANS.

ARANYAKAS.—The Aranyakas literature of the Hindus holds a position intermediate between the Brahmanas and the Upaniṣads; in a formal and technical sense supplementary to the Brahmanas, but sharing generally the themes and subject-matter of the Upaniṣads, which in their turn are appended to or form a part of the Aranyakas (see art. UPAŅISADS). These treatises are therefore śrutis, revealed and inspired Scripture. The name indicates either that they were composed in the forest (aranyas) by the hermits who devoted themselves there to a life of seclusion and meditation, or that the word aranyas is intended to be there repeated and studied. The latter is the Indian view.

Perhaps both are correct. Strictly speaking, also, each Brahmana had its own Aranya, just as each Brahmana had its own Vedas, so that the Aranyakas were the text-books of the Brāhmaṇas; and the Aranyakas was completed and supplemented by a corresponding Upaniṣad.

This accepted classification of the Sanskrit sacred literature is not unconnected with the theory of the four āśrama (see art. Brāhmaṇa). The first two, the Brāhmaṇas, were the text-books of the Brāhmaṇa householder, upon which he relied for the due performance of his obligations as gṛhastha. Later in life, during the third period, after his retirement into the forest and renunciation of his former pursuits, he devoted himself to the study of the Aranyakas, as sanctioned and adopted in the sākhā to which he belonged.

It has been shown that the Aranyakas literature, in general is chronological, no recent date than the saulhitās of the Veda, which are known to it essentially in the form in which they have come down to us; and that it is later also than the Brāhmaṇas. On the other hand, the greater part at least is anterior to the period of Brahmanic composition, to the change and style of which the more recent portions of the Aranyakas approximate. Pāṇini is said to be unacquainted with them; but in this instance the supposed ignorance may be only a matter of date.

The extant Aranyakas belong to the Rigveda and the Yajurveda. There are no known Aranyakas of the Sūnaveda or the Atharvaveda.

The Āṭitra Aranyaka of the Rigveda is described as a distinct and separate treatise, not forming a part of the Alt. Brāhmaṇas. It consists of five books, called adhyayas, or aranyakas, of which the last two are ascribed to the authors of the Rājaveda and Saunaka, and are written in a later style, suggesting the introduction of the literature of the Satavahana. The second aranyakas form the Upaniṣad proper. The first aranyakas details the rules for the morning, mid-day, and evening offerings on the mahāvratas, or great rites, of the last day of the month, and of the gānā-vayana, the ‘procession of cows.’ The first three chapters of the second aranyakas form the Upaniṣad, which, in the allegorical significance of the uktham, the spoken word; whilst in the third part is discussed, quite after the upanisad manner, the meaning of the letters of the alphabet and their combinations.

The Kaṇḍakā Aranyaka also belongs to the Rigveda, but is attached to a different sākhā, or school, of that of the Kaṇṭakās. It contains fifteen adhyayas, or chapters, of which coincide with chapters of the Alaya Aranyaka. Adhyāya 3-6, according to the usual numbering, form the Upaniṣad; but their position is said to vary in the different manuscripts, as though the four chapters of the Upaniṣad were in existence very early, and in circulation apart from the Aranyaka.

Of the Yajurveda two Aranyakas are known, the Brhad-āranyakas and the Taittirīya Āranyakas, which are also classified as Aranyakas. The Brhad-āranyakas, or Brhad-āranyakas, is the so-called Aranyakas of the Brāhmaṇas, or five prapitihakas of the fourteenth or last book according to the Mahāyāna school; but in the sākhā of the Kaṇḍakā it is regarded as a separate and several work, one which of the Upaniṣad and the Aranyakas coincide; but the whole of the last book in the śākhā, recent and as yet undiscovered, is sometimes considered the Aranyakas. The Taittirīya Ār., consists of 10 books of prapitihakas, of which the first six are the Aranyakas proper. These books discuss the many Vedic Ceremonies, the training and Vedic studies of a Brāhmaṇa, and the offerings to the Fathers. Books vii. to ix. are the Tait. Up. i., and book x. is supplementary, the so-called Madhyāranyakas Upaniṣad. The style and contents seem to betray a comparatively late date.

This Aranyakas is in forest-study; it should be studied, therefore, in the forest, etc. (Max Müller, Aranyakas, 2d Ed. 1879.)

Aranyakas Upaniṣad, 2: the sāvanakā (śavākā) is to live without the mantras of the Veda, but to observe the three daily ablutions, to meditate on the ātman, and of all the Vedas to recite the Aranyak and the Upaniṣad (Deussen, Sokhy Upānas, p. 647). Cf. Yajñavalkya, Upaniṣad 1. 5. 4, who wishes to attain Yoga should know the Aranyakas; Mahābh. 1.10: ‘this body of the Mahābhārata is truth and immortality; it is the Aranyakas from the Vedas.’ The last two quotations are in Max Müller, pp. 330 n. 2, 315 n. 1. See also E. W. Hopkins, Great Epics of India, New York, 1896. p. 421, 1.

About the latter half of the 4th cent. B.C. (cf. 350 acc. to O. Böhtlingk). Others assign him an earlier date. See C. M. Duff, Chronology of India, London, 1897, p. 7; Macleod, Sanskrit Literature, p. 430f.

The beginning of the Alt. ar. is in fact a commentary on the Rigveda (Max Müller, p. 159). Cf. 314.

Max Müller, p. 384 f.; SEB, 1919.
ARBITRARIETY—ARBITRATION

LITERATURE.—The Alareya and Talitiriva Aranyakas have been edited in the Bibliotheca Indica, Calcutta, 1876 and 1878; the Brahmaranyaka, by O. Böhlting, Leipzig, 1880, and else-where; the first two by the Komati Aranyaka have been published by W. Friedlander, Berlin, 1890, adh. iii.—vi. by E. B. Cowell, Calcutta, 1901, and the remainder is being edited by A. B. Keith (see J. R. S., 1890, p. 366 f.). See Max Muller, Hist. of Ave., Sanskrit, Lit., London, 1890, pp. 147, 154 f., 313–318, 371 f.—374 f. P. Deussen, Sechzig Uebersichten des Veda, Leipzig, 1897, pp. 31, 10 f., 21 f., 213 f., 373 f.—A. A. Macdonell, Sanskrit Literature, London, 1906, pp. 31, 50, 204 f.—211 f. A. S. Geden.

ARBITRARIETY is, according to the popular use of the term, that quality which is ascribed to an act of will (arbitrium), and whatsoever follows from it, not merely in so far as it is free, but in so far as the choice of the individual who wills is not influenced by consideration for others or respect for any law which is not self-imposed. Hence arbitrariety tends to imply capriciousness, irrationality, and an incoherent character generally. It must be in this wider sense that the word is employed by critics of the indeterminist theory of the Freedom of the Will (wh. see), when they state that that doctrine implies total arbitrariety of the will, and consequently of no good, advanced by the Scotists, Ocellum and Descartes, is the doctrine that good is good because it proceeds from the undetermined will of God, who has chosen and commanded it; a moral act is not intrinsically good.

G. R. T. Ross.

ARBITRATION is an arrangement by which two persons, having a difference, agree to submit it to the decision of a third, and to abide by that decision. It has been practiced in every country and in every age, under various forms. An agreement precludes either party from instituting a suit in the ordinary Courts of law on the matter in question; and indeed those Courts are so favourably able to arbitration that they will make the submission to arbitration a rule of Court, so that the decision of the third person, called the arbiter or arbitrator, may be enforced at law by either party against the other.

The question which induces persons who would otherwise become litigants to prefer a reference to arbitration to a suit at law are: (1) that it does not involve the personal hostility caused by legal proceedings; (2) that it is more economical in its cost; (3) that the arbitrator has the liberty to consider the whole circumstances of the matter in dispute, and to arrive at what in his opinion is an equitable solution of it; (4) that the arbitrator is a person selected by himself upon the ground of his special fitness to deal with that matter.

It does not often happen, however, that the two parties at variance are able to agree upon a third who possesses equally the confidence of both. The ordinary form of arbitration is, therefore, the appointment by each party of a different arbitrator, and the appointment by the two arbitrators of a third person as overman or umpire, by whom any difference between the two arbitrators shall be decided. In England the proceedings in arbitration are regulated by statute, and are, therefore, only a degree less formal than those of a suit at law. They begin with a submission to the arbitrators of the question in dispute; then there is the deposition of witnesses. Lastly, there are the reference, and the fixing by them of a time for hearing the parties. At that time each party may be heard in person or by solicitor or counsel; the arbitrators have the right of seeing the documents must be tendered, and the arbitrators may administer an oath to each witness, or take his affirmation, which will render him liable to the penalties of perjury if his evidence be false in any material particular.

The decision of the arbitrator or umpire, when duly arrived at, is binding upon both parties, and the Courts will not enter upon any inquiry whether it is right or wrong. He draws it up in the form of an award, and, speaking generally, the Courts accept that award as conclusive. There are cases, however, where it may appear to the Court that the arbitrator has neglected the elementary principles of justice, as by refusing to hear evidence, or has not brought his mind to the consideration of the subject, or has not disposed of the question really at issue, or has in some way failed in the due exercise of his functions; and the Court will in such case either refer the matter back to him, or hold that it is not ousted of its own inherent jurisdiction to determine that matter. For these reasons the parties in their choice of an arbitrator, and the arbitrators in their choice of an umpire, should be careful to select a person who, whether a practising lawyer or not, has a mind imbued with the principles of law, and has had some experience in their practical application, as well as an expert knowledge of the definite questions at issue.

In certain cases, in order to avoid the cost of litigation, a recourse to arbitration is purely prescribed by statute. The Savings Banks Acts, the Friendly Societies Acts, the Building Societies Acts, and the Industrial and Provident Societies Acts contain provisions to this effect. In the case of the Savings Banks, the Post Office Savings Banks, all disputes between a depositor or other claimant and the Bank are to be settled by the Registrars of Friendly Societies, and the jurisdiction of the Courts of law is ousted. Such an arbitrator is chosen, by the parties, and are said to be referred to arbitration, and to define in those rules the manner in which the arbitrators shall be chosen. Where the rules contain such a provision, the jurisdiction of the Courts of law is equally ousted, and the member or other claimant has no other remedy than to avail himself of the arbitration thus provided.

In regard to the trade disputes between employer and employed the arbitrator has been employed in such cases as strikes and lockouts—much may be done by means of arbitration andconciliation. Thus among the ironworkers of the country a permanent Board of Conciliation has been established, consisting of a given number of workmen and of representatives of the employers, who meet periodically to adjudicate on any questions of dispute that may have arisen in the course of the employment, and to prescribe any change in the current rate of wages that may be necessary. Their decisions are accepted by both parties, and the establishment of the Board has procured a long industrial peace in that particular trade. By the Conciliation Act of 1896 the parties to any trade dispute may apply to the Board of Trade to appoint a conciliator, and this method has been adopted with success in many important disputes. In cases of Hereford, Mr. Asquith, and other eminent statesmen has accepted the office of conciliator, and the results have been in general satisfactory—not only in the cases of strikes, but also in cases of much distress and the employers from heavy loss, but in re-establishing friendly and kindly relations between them. In like manner, arbitration has frequently been invoked in the United States in cases of conflict between capital and labour, as when, in the great miners' strike of 1902, President
Roosevelt appointed a Board of Arbitration which satisfactorily settled the disputes in question. Some States, as New Jersey, have regularly appointed State Boards of Arbitration.

The development of the principle of arbitration, rich in its promise for the peace of the world, has been its application to disputes between nations. Such disputes, even more than those between individuals, are apt to be elemental. It is the labor of the diplomatist to wean the elements that go to make up the sentiment of patriotism. Nothing is more difficult than for the people of one country, party to such a dispute, to act with due鹄种 and conscientiousness of the other party. The nation's honour and prestige are thought to be at issue on the result of the dispute; and nothing is easier than to create an unreconciling popular clamour for war. To substitute for the arbitral decision the combat of two nations in bloodshed, suffering, waste, and demoralization—an appeal to argument and to calm reason is a triumph of civilization. The superstition of the ancients led them to think that the gods would defend the right, and even in Christian times we have seen two hostile armies each appealing to the god of battles for success upon that ground; but, in fact, the recourse to war is nothing better than a desperate extremity.

An instance in point is afforded by the dispute between Great Britain and Venezuela. A question arose between those two States as to their rights in certain portions of the territory called British Guiana. In 1819 the Venezuelan Government proposed a reference to arbitration on this question, which Great Britain refused. The British Government, however, United States of America interposed, upon the ground that any hostile action taken by Great Britain against Venezuela would be an infringement of the Monroe doctrine, and President Cleveland took upon himself to appoint a Commission to ascertain the rights of the matter. The British Government, however, refused to recognize this Commission, a wave of warlike enthusiasm swept over the United States, and if popular excitement had had its way, a war between these two great and kindred nations would have resulted, with all its horrible consequences, arising out of a matter of no real importance to either. Fortunately, better counsels prevailed, and Great Britain and Venezuela agreed to a reference to arbitration. The result of this arbitration was a concession to Venezuela of territory which Great Britain had more than once offered to that State, and the confirmation in other respects of the contenions of the British Government.

A still more famous instance is that known as the 'Alabama' arbitration. During the Civil War, the Union Government was a party to the secession of the Southern or Confederate States; and the war was opened by Birkenhead, which was allowed to leave English waters, and which Birkenhead, which was allowed to leave English waters, and which Birkenhead, which was allowed to leave English waters, and which Birkenhead, which was allowed to leave English waters, and which Birkenhead, which was allowed to leave English waters. The United States ambassador had conferred with the British Government of the breach of the Treaty of Washington involved in the building and equipment of this vessel, and only a few days had elapsed when the vessel was captured and taken to scrap; but by an accident those orders were delayed by a day, and the vessel was taken. This vessel was taken in the course of the following two years this ship, named the 'Alabama,' destroyed much property belonging to citizens of the United States, and at the close of the war the Government of those States claimed the value of that property from the British Government as damages for which Great Britain was liable through its unintentional breach of neutrality. The British Government did not dispute the right of the United States to claiming the damages, but they refused to agree to the settlement of the amount payable to the arbitration. The amount awarded was £154,000. S. W. BRADBROOK.

ARCANI DISCIPLINA.—The name given by Dalleus to the custom in the Early Catholic Church of keeping the administration of Baptism and the Holy Supper and other Sacraments and rites, a secret from all except the baptized. Various reasons for this practice have been suggested by scholars. It was not due to any teaching of the NT, and the openness with which Justin Martyr described the ceremonies, and also Tertullian, and the fact that the followers of Marcion had not the practice, show that it was not usual before the third quarter of the 2nd century.

It is a common opinion that the celebration of the Holy Supper by the congregations in Apostolic times was virtually private. Danger of persecution led to concealment of the Christian assemblies and rites. The measures of the Roman government prevented the celebration of the Supper and the Agape at night, and compelled the observance of the former in connexion with the open preaching of the word in the daytime, and perhaps the gradual abandonment of the latter. The catechumens were then dismissed before the communicants entered upon the Holy Supper itself. The catechumenate afforded a period of probation, in the first part of it the candidates were instructed in the general principles of religion. They returned, before their baptism that they were instructed in the mysteries of the faith. The Creed, and perhaps the doctrine of the Trinity which explained the formula of Baptism, were not imparted to them until just before their baptism; and the Lord's Prayer not until afterwards. The example of the heathen Mysteries was felt. Those who had been admitted to the Communion, having gone through the grades of the catechumenate, and having experienced successive renunciation of heresies, were spoken of as 'The Initiated.' Finally, it became usual to regard those rites from which all but the full members of the Church were excluded as 'Mysteries,' and to transfer to them those that belonged to ethnic Mysteries. As Th. Harnack says, 'The mystical became mysterious, and the liturgical became theurgic.' He traces the great change to the time the ancient, and after the advent, the authority of the Church in the episcopate, due to the necessity of opposing its authority to Gnostic sects and their teachings. The rites of the Church were thought to have no validity apart from the bishops; and those, although performed by them, were invested with mysterious awfulness. To this conception of Divine worship, Roman Catholic writers have joined the notion of a secret tradition of doctrine from the Apostles, and its transmission to the teaching of the NT. To this tradition they refer, for instance, the doctrine of Transubstantiation, and also the reverence for images and for the saints. This Secret Discipline, beginning about A.D. 175, was in vogue until the end of the 6th century. Its features may, perhaps, be best set forth by the following quotations from Fathers and teachers of the 3rd and 4th centuries.

Tert. (Proseepin. Hær. xii.): 'To begin with, it is doubtful who is a catechumen, one who believes, and who a believer; they have all access alike, they hear alike, they pray alike—even heathen must have the same. It is sufficient if they are not real, they will fling to the swine. Simplicity they have to consist in the overthrow of discipline, attention which on our part they call secrecy.'

Basili (de Sp. 27): 'Of the beliefs and practices whether generally accepted or publicly professed, there is nothing which happen to come among them. That which is holy they will cast to the dogs; and their providence is to see whether it be real or not, real ones, they will fling to the swine. Simplicity they have to consist in the overthrow of discipline, attention which on our part they call secrecy.'

Photius (in the Niono Paters, vol. vi. p. 41, Phootis is quoted): 'In this work Eulogius [Patriarch of Alexandria 579-607] says that of the doctrine of the Logos [Logos] handed down in the church by the ministers of the word, some are dogmaa, and others expiegea. The distinction is that dogmaa are announced with concealment and prudence, and are often designedly concealed with obscurity, in order that holy things may not be exposed to profane persons or pearls cast before swine. Expiegea, on the other hand, are announced to all, but in open and unreserved announcement."

For we are not, as is well known, content with what the Apostles or the Gospel has recorded, but both in preface and conclusion we add other words as being of great importance regarding the validity of the minister and the authenticity of written teaching. Moreover, we bless the water of baptism and the oil of the chrism, and besides this the catechumen who is being baptized. On what words are they justified? Is this not exalted to the dignity of the mystery? Is not our authority silent and mystical tradition? Does not this come from that unspoken tradition which our fathers guarded in a silence out of the reach of curious meddling and inquisitive investigation? Well had they learnt the lesson that the awful secrecy of the mystery must be preserved by silence. What the unintelligible are not even allowed to look at was hardly likely to be publicly professed in written documents. Moses was wise enough to know that contempt attaches to the trite and the obvious, while a spoken interest is naturally associated with the spoken and the familiar. In the same manner the Apostles and Fathers
who laid down laws for the Church from the beginning thus guaranteeing the accuracy of the statements of the monu-
ments, the latter is proclaimed to all the world.'

2. Archaeological evidence may establish the occurrence of an act or a custom within assignable limits either of (a) space or of (b) time.

(a) To prove the distribution of an occurrence in space, the method of archaeology is geographical. The instances which have been observed are tabulated in their geographical context, and in the absence of evidence to the contrary may be presumed provisionally to indicate a continuous distribution over the intervening areas. Such evidence to the contrary would be supplied inter alia by diversity of physical circumstances, such as the distribution of the need, or the inducement, to act in the manner presumed; or by evidence of the presence locally of other human observances inconsistent with the act or custom in question. The quality, as well as the quantity, of evidence requisite to give archaeological proof varies almost indefinitely. But in general, quality is incomparably more cogent than quantity, and positive evidence than negative: a single, readily well-authenticated historical instance, of an effect, an event, a circumstance, a fact or of recognized distribution in a given area, not only supplies the contradictory instance to all negative generalities, but gives a positive though indefinite presumptiion that further instances exist.

This characteristic, archaeology shares with all branches of knowledge which are concerned with discontinuous series; the area actually open to inspection is at the same time so arbitrarily assigned, and so small a proportion of the whole, that the probable value of every positive instance is in any case somewhat greater, and of every negative instance somewhat less, than it would be in a region of which the larger part has been already examined. A more or less complete survey is in the main confirmed by a retrospect of the archaeological work of the last century. As in geology, a very small number of well-selected data from small areas isolated, and indicated by accidental circumstances, have permitted a hypothetical re-construction of the human culture of wide regions, which subsequent evidence, more copious, continuous, and cogent logically, has done little if anything to modify, or even to confirm.

Archaeology, being concerned with evidence which has already been exposed for a while to the accidents of time, is confronted with discontinuous evidence in another and also. Some classes of objects, no less characteristic and instructive than the rest, are composed of materials which decay readily, and leave little or no trace even when their own deposition has been undergone. Consequently, archaeology is concerned in most cases with evidence which has already undergone a process of quite arbitrary selection, and is compelled to qualify its conclusions accordingly. And even where the remains themselves are durable, the ravages of man or animals—the latter often far more elusive and perplexing than the former—have restricted the evidence again, objects of intrinsic value, or distasteful signif-
cance (such as the monuments of a hated ruler or an alien creed) disappearing most readily, and causing the most serious breaks in the record.

(3) Suppose the group can be followed to its ultimate date of manufacture than the date of its deposition in that group. On the other hand, any of them may have been of any ignisfiable age already at the moment of deposition. External evidence (of custom, workmanship, and the like) alone can decide in each case whether the indigenous objects were included in the find-group, fairly represent the phase of culture a, at which it has been ascertained that the group was deposited in the place where it was found. Now, if the find-group at A contained indigenous objects a or b, the circumstance (otherwise demonstrated) that the object b of the relative date b in the series b does not prove that the phase a, to which the group a as a whole belongs, is temporary with phase b, but only that it is not of any later date; for the object b may have been of any age already at the moment of its deposit at A. If, however, even a single object of origin a and date b is found at B with objects of origin b and date b in the series, then by the same reasoning a is not of later date than the objects bbb with which it has been found. And if so, the proof is complete, that a and b are contemporary; for it was already known that an object b could not be of later date than a.

(4) It is merely a matter of accurate observation to determine whether in any given case it is certain that the exotic object was really deposited simultaneously with the rest of the find-group, and not introduced in some other way.

3. The combination of evidence derived from distributions in space and sequences in time gives the archaeologist a stratigraphical proof of the transmission of new characters from one centre of civilization to another.

A character z which has already appeared at phase y in series (or region) A does not appear in series B until phase x (which has been shown otherwise to be contemporary with the). It is, moreover, found, on the same layer, as in series B, at a point where it was not found, B. Here there is at this point a break in the representation of the character z. The character z may here have been introduced from A to B, or it may have arisen spontaneously at B. Moreover, it may have arisen from separate B, or it may have been introduced directly from A; or it may have been introduced indirectly from A and B. A and B, and the number of alternatives increases directly with that of the series or regions in question. The conclusive proof of direct transmission is given only when, in addition to objects of similar style to the archetype may of demonstrably local origin, B yields an object which demonstrably originated at A. Such proof is furnished most clearly by unmediated evidence supplied by the physical composition of the object; e.g. knives of an unusual style but made of bronze occur on an island B which yields copper and tin but not iron; there is no adequate proof that these are not due to indigenous invention. But if there occurs also at B a knife of the same style but made of iron, then it is proof that the style was also found in an iron-working area A, that the bronze knives become very strong that the knife found at B is exotic, and the prototype of the bronze example, which differs from it only in being of indigenous material. The proof, however, becomes conclusive only when it is shown that bronze, or this particular variety of bronze, was brought from A. Other evidence is still the possibility that the bronze knives at B may also be imports either from A or from some other centre, which culturally is dependent on A.

very existence the greatest scholars were sceptical, reads like a fairy story. Since then a long series of excavations, carried out with greater and greater scientific precision throughout the whole Aegean area, has provided for us a mass of material which will probably require the scholarship of the future to unravel; it is not yet possible to anything like systematic order. As yet no conclusions can be more than tentative.

This pre-Hellenic architecture can hardly be considered the parent of Greek architecture; its influence is perceptible in the way in which it was developed, but it is not present as a system of street planning, with a distinct preference for rectangular rather than convergent systems. There is a very considerable advance in the art of building, with a regular drainage system and a greater use of columns. There are great walls and fortifications, and the towns in the generality of cases are no longer open. The probable cause seems to have been pressure from the north, which was beginning to be felt.

(3) A third architectural stage is reached roughly about B.C. 3000, when a closer system of town planning begins, generally although not necessarily fortified, is adopted in the present era. The city in general is derived from the Aegean Sea, and there is an increase in the size of the buildings, but the influence of the earlier periods is evident. There are great fortresses and fortifications, and the towns in the generality of cases are no longer open.

The probaible cause seems to have been pressure from the north, which was beginning to be felt. There are great walls and fortresses, and the towns in the generality of cases are no longer open. The probable cause seems to have been pressure from the north, which was beginning to be felt. There are great walls and fortresses, and the towns in the generality of cases are no longer open.
stretches roughly shaped, as at Phylakopi. On the whole, work on the Greek mainland is rougher and less carefully finished, the so-called cyclopean masonry at Tiryns and elsewhere being typical. This would point to the civilizing influence proceeding from the south northward. Troy seems to be somewhat outside the main stream. Its architecture, particularly its fortifications, is very advanced, although in other particulars its civilization seems to be behind the rest of the Egyptian.

There is a great tendency from the first to use rubble for interior walls and for less important structures. This is faced with plaster and frequently elaborately painted, as in the fresco of the Flower Gatherer at Knossos, or the absolutely delightful example of the Flying Fish at Phylakopi. Another method is to build one or two courses with great blocks of ashlar masonry and raise the rubble walls upon the top. In outside work some such foundation is almost necessary. In the early second city of Troy, built mainly of sun-dried brick, there is a sub-structure of stone to protect the brick from the wet. Rubble tends to become more common in later work, and sometimes later rubble walls are found built upon older stone foundations. The system may be the origin of the orthostatai of later Greek architecture (q.v.). Sometimes there is also a projecting plinth, as in the case of the limestone blocks below the gypsum in the West Court at Knossos, or the reverse arrangement, with the gypsum blocks below, on the southern terrace (fig. 1). This is quite possibly the origin of another Greek feature, the stylobate (see Architecture (Greek)). Another method, which on account of its material was not likely to survive to our day, seems to have been something of the nature of a half timber construction, in which courses of short lengths of timber set transversely in plaster across the wall were used at intervals, in the ashlar, or plastered rubble, as the case might be (fig. 2). There are grounds for supposing that we have the remains of such a course in the megaron at Knossos. In interiors the ends of these were masked by rosettes or medallions.

In the last phase of Egyptian architecture, the

over the doorway of the so-called Treasury of Atreus (see p. 683 and figs. 3 and 17).

On the whole it may be said that there is a distinct architectural decadence which in Crete becomes obviously marked about the 14th century B.C. But in the north it seems to be otherwise, and the masonry continues to improve until a later date, as, for instance, in the very fine beehive tombs at Mycenae, which may be not much earlier than the 13th century. This may be accounted for by the fact that the artistic impulse spread from the south. Hence the north would be longer in developing; and, on the other hand, a northern subjugation of Crete, which seems to be probable, would have greatly arrested progress there.

The spanning of openings seems in most instances to have been with timber lintels, and in early work the stones are not evenly gathered over above. Stone lintels, however, were sometimes used. The jaubs of doors were very commonly of stone, and in later work certainly an inward inclination was usual, which is very possibly the origin of the same feature in Greek doorways (fig. 3 below and fig. 8, Architecture (Greek)). Windows, as contrasted with Greek architecture, seem to have been of frequent occurrence. They appear to have had timber lintels, jambs, and sills, and we may notice a remarkable anticipation of the modern window in the division into 'panes' of which we have clear evidence in tablets found at Knossos (fig. 3). The nature of the filling is unknown; it may have been oiled cloth or parchment, and is indicated in red colour on the tablets.

Timber seems to have played a large part in the construction, especially in the columns, which were commonly of wood, although with bases of stone. The columns, and generally the bases, were circular in form, and it is noticeable that the columns tapered towards the lower end (figs. 4 and 12), the exact contrary of columns in Greek architecture. The taper, however, is generally exaggerated in drawings. The charred remains of actual columns were found both at Knossos and at Phaistos. Stone examples of similar shape but of much later date
ARCHITECTURE (Ægean)

occur at Eleusis and Mycenae. They were treated with different kinds of fluting as ornaments, sometimes vertical, sometimes diagonal (fig. 4), and this may even have suggested the Doric flute. The anta was used both in stone and in wood, and is possibly the prototype of that feature in Greek architecture. It is interesting to notice that when stone columns were used they were almost always square in section, especially in early work, as in the case of the Northern Portico at Knossos, the so-called 'pillar rooms' at Phylakopi, and at Knossos both in the palace and in houses outside. They are also of rectangular shape in the court at Phaistos, and by the N. entrance at Knossos, and even in the megaron itself, although there they are recessed. This is important in view of the discussion regarding the origin of the Greek column (see ARCHITECTURE [Greek]). The inter-columnations were wide, and the architrave apparently was a wooden beam upon which the upper masonry rested.

In spite, however, of the use of wood, it does not seem to have been used for floors. The floor joists were of circular logs of wood, and above these was laid clay, and upon that a fine hard cement or a pavement. On the ground floor cement seems to have been the favourite material for exterior work, and is often laid over paving; but in interiors fine gypsum slabs are not uncommon. The ceilings, where there was no floor above, were in all probability of thick reeds covered with plaster. Remains of plaster have been found at Phylakopi, clearly showing the shapes of the reeds embedded in the plaster (fig. 5).

The plans are in almost all cases characterized by numerous offsets, angles, and returns in the outer walls, which must have given a most delightful effect of light and shade to the complete elevation, and which are carried out with a lofty indifference to the extra work that they must have entailed (figs. 6, 8, and 9). Where fortifications occur, an arrangement may also be noticed by which the entrance is guarded by a complicated and circuitous means of approach, as at Syros and Siphnos, and which attains its fullest development at Tiryns (fig. 8, E). This seems to have occurred due to northern mainland influence, and gradually to have spread southward. The buildings of greatest importance were the palaces of the kings, which show in almost all cases a remarkable complexity of plan; but there are certain marked variations. Both in the north and in the south there is a distinct parallelism in the arrangement, but the Cretan plan is more regular and conceived more definitely as an artistic whole. The equal balancing of the main masses about a central court is also a southern feature. In the north this is less obvious, and the court partakes more of the nature of a fore-court, and is surrounded by a colonnade. The greater regularity is doubtless mainly because in the islands the question of fortification was of minor importance. In the north the buildings were castles as well as palaces.

But there is also a difference in the artistic motif that cannot thus be explained. The northern plan tends to rooms comparatively square in shape; the Cretan type is long and narrow. The difference is most noticeable in the smaller chambers and magazines, which are very characteristic features of the style (figs. 7, 8, and 9), but it holds good throughout, and is true even of the great halls. Tiryns and Knossos, the finest examples and the best known, may be taken as typical (figs. 8 and 9). The fortress of Goulas or Glâ in Boeotia, although northern in its main features, is to some extent an exception, and shows affinities with the southern type. Propylae are common throughout, but here a northern type

![FIG. 7. MAGAZINE WITH PITHOI, 8 CISTS IN FLOOR](image)

![FIG. 8. TIRYN]{{LA MEGARON W·WOMENS A·ALTAR Z·MAGAZINES E·ENTRANCE G·GATE B·BATHROOM](image)
can be distinguished which is almost the exact counterpart of the later Greek examples (fig. 10).

The magazines are the narrow chambers on the left.)

But the most marked difference between north and south is in the megaron itself. The northern megaron is a broad rectangular chamber with an antechamber and a portico, and contains the hearth.

in the centre. Above the hearth was probably an opening, and the sides of the opening were normally supported upon four columns which in all likelihood carried a sort of clerestory admitting light and allowing the smoke to escape. The typical Cretan megaron, on the other hand, has no central hearth, possibly on account of the warmer climate; but it has a feature peculiar to itself in the open chamber at the end of the hall, apparently open to the sky for the admission of light. This 'light-well' is found alike at Knossos, Phaistos, and Hagia Triada.

The southern type also contains columns which presumably supported the roof; but they are arranged in lines, as the square arrangement around the hearth is unnecessary. Moreover, whatever may have been the case in the north, there is no doubt that in Crete there were halls upon different storeys one above the other.

The northern type, although belonging to the ruder style, eventually superseded the other, and we find it appearing in the south in the late third city at Phylakopi (compare the examples in fig. 11). In this northern type we see a plan closely resembling that of the classical Greek temple; and if it is really the origin of the temple form, it may be considered the most important of the Aegean influences upon later Hellenic architecture.

It is, of course, natural that we should know a great deal more about the plans than the elevations, but we have a certain amount of valuable evidence about the latter. In the south there is no doubt that there were several storeys, and in each storey the column played an important part. As in Spanish architecture, the main architectural features were in the interior, but the deep wells, with their tiers of columns and great staircases, must have produced a fine effect (fig. 12). There is some evidence that columns played a part in the external façade also. In

the north, upper storeys, above the megaron, were unlikely because of the hearth.

On the whole, it may be said that the northern influence is much more marked in the temple architecture of Greece than any influence we can trace to the southern types.

The columned storeys rising magnificently one above another are startling indeed, occurring at a date some 18 centuries before Christ, in a European civilization of which we had never previously heard; but the elaborate drainage system is almost equally surprising, finding its parallels only in the beautiful systems of the best work of the Middle Ages, and in those of modern times. Street drains were generally built of stone with large flat slabs above and below, but an open terra-cotta channel sometimes occurs. In small underground drains terra-cotta pipes with a collar were used (fig. 13), whereas in the great palace systems the main drains were well built passages large enough.

to allow of a man entering them for cleaning purposes. Sanitary conveniences were supplied; and if there was not the extensive accommodation that was demanded in the Middle Ages, where in many instances every room has its own separate arrangements, at least there is no reason to suppose that it was less than satisfied the last generation, or than is commonly found on the Continent to-day. The same remarks apply to bath-rooms, which were plentiful, and often elaborately treated. Sometimes there was a sunk bath with steps, sometimes merely a move-

able bath with a channel all round the floor to carry off any splashings.

Such is a very brief description, enough to indicate the highly developed character of the style. When we turn to consider religious architecture, it is obvious that there was little or none, and the main importance from that point of view is the influence exerted upon succeeding styles. Yet there are just a few points that may be noted. We have in the 'pillar rooms' at Knossos and Phylakopi something of obvious religious significance. It does not seem to be necessary to suppose that the pillar was not purely structural in its function,—even a sacred sign upon the top does not preclude the possibility of its supporting other blocks. Many of the blocks of the palaces in Crete are marked with sacred signs, which may be paralleled by the numerous masons' marks upon our own medieval buildings. But there does seem to have been a special sanctity attaching to the pillar form, and in the case of a 'pillar room' in a house at Knossos, a great number, some 200, of little inverted cups were discovered, beneath which were found the charred remains of small vegetable offerings (fig. 14). If we cannot

say that these rooms are examples of religious architecture, it can at least be said that some religious significance was attached to their architecture.

We have also a fresco, mentioned above, which in the light of the secular architectural discoveries of the palaces, admits of interpretation, and seems to represent a temple or shrine (fig. 16). Below we have the great basalt blocks that we have seen in the palace, and above half timber work with its frescoes on the plaster. The pillars, presumably of wood, are of the usual inverted form of Egean architecture, and their sacredness is thought to be indicated by the horned cult object set before them. An interesting frieze, resembling that of porphyry-like stone found at Knossos (fig. 15), or the alabaster example from Tiryns, occurs below the central opening. This seems to be the progenitor of the triglyph frieze of the Doric order. The triglyphs in this instance, judging by the colour, were apparently of wood. There is also indication of the blue glass paste or enamel which occurs at Tiryns—a delightful form of architectural decoration—the κόρινθος of Homer, so long a stumbling-block to the critics. In this connection may also be noticed some little gold ornaments found at Mycenae, which are also generally supposed to represent a shrine (fig. 16). The lower part is again of ashlar masonry, the upper part is apparently of timber. There are three timber-framed doorways through which appear columns; but it is difficult to say whether they are meant to be within the building or form part of the façade. In front of them are the same sacred horns. The most interesting point is that the central part is higher than the sides, and it certainly does suggest a nave and aisle construction with clerestory lighting. On the other hand, it might equally well represent a lantern rising above the hearth, which, of course, be visible from a point of view a little distance in front of the shrine, and could therefore quite legitimately be represented pictorially in the plane elevation.

Lastly, there remain to be considered the tombs, which were of a sacred and in some instances definitely religious character. The famous shaft graves of Mycenae—deep shafts sunk vertically in the rock—represent for us a stage of burial that can hardly be considered architectural. So also with the larnax burials of Crete, where the corpse was first skeletonized in the earth and afterwards deposited in an earthenware sarcophagus or larnax and buried. But in the chambered tombs and the still more elaborate domed structures we have something very different.
They are found widely distributed over the Greek mainland, where the best specimens occur, but have been found at Phaistos, Palaikastro, Praisos, in Crete, and also in Melos.

The chambered form is that of a square chamber cut in the rock, with a gabled roof and approached by a dronos, or passage. It seems probable that it is merely a development of the shaft grave, and the dronos is simply a means of closer and more ready access to the tomb itself for the worshippers of the shade of the deceased. This finally develops into the great domed chamber out of which in some cases the tomb itself opens, and which can hardly have served any other purpose than one connected with religious ceremonies in relation to the deceased. This development is borne out by the shaft-construction of the grave at Orchomenos, in some respects the finest example of these beehive tombs. It is, however, not in perfect a condition as the so-called Treasury of Atreus at Mycenae, which was a trifle larger than this example (fig. 17).

**Fig. 17.** In both cases a large domed chamber, of beehive shape, about 47 feet in diameter, is cut out in the hill-side and lined with masonry of large blocks built on the corbelled system (fig. 17). Opening out of the central chamber is a smaller side chamber, which in the case of the Orchomenos example was, like the shaft graves, clearly excavated by a shaft sunk from the top. The bottom was first lined with small stone slabs and then covered with marble slabs. This was roofed over with great slabs of green schist elaborately decorated with a typical Mycenean pattern (fig. 18), and the marble walls were decorated in the same way. Above was another chamber to relieve the ceiling of weight, and above that again the shaft was filled up with debris.

The vault part is marked with numerous holes, some still containing bronze nails, and, as was also the case with the Mycenean example, it was covered with bronze rosettes.

The fine doorway to the latter tomb can be restored with some degree of accuracy. A great door, narrower at the top than at the bottom, is flanked by two half columns, which are wards and are adorned with zigzag flutings. Above is an enormous lintel, the pressure upon which is relieved by a great triangular space originally filled with a light triangular slab. The architrave was ornamented with a pattern, clearly recalling the short log construction mentioned above, and below this was probably a series of lions' heads.

**Fig. 18.**

ARCHITECTURE (American).—Both in character and in material the dwellings and temples of the American Indians present the widest variety, ranging from the brush wikiup of the Pai Utes, and the snow igloos of the Eskimos, to the elaborate stone palaces of the Mayas of Yucatan. This diversity, however, must not be construed as racial in origin, since closely related neighbouring tribes frequently have dwellings of different types; nor is the cause any essential intellectual limitation. The divergence is climatic and economic in source. The snow-covered wastes of the extreme north, the forests of the Atlantic coast, the arid, desert which once abounded in herds of bison, the arid regions of the south-west, and the tropical luxuriance of Central America, each produced a distinct type of architecture. The dwellings of the American Indians admit of a triple classification: temporary, portable, and permanent, the first being exemplified by the Pai Ute wikiup, the second by the Dakota tipi, and the third by the stone pueblo. The temporary dwelling is represented in its simplest form by the wikiup of Arizona. This is constructed by placing branches about 10 feet in length so as to form half or three-quarters of a circle. The tops are then brought together and smaller branches are thrown over them. The entire structure is, therefore, little more than a wind-break, and may be a development of the kiva of the Hopis, which is a rough shelter set up in the fields to protect those who watch the flocks. The general type of temporary dwelling is especially characteristic of the less developed tribes of the western desert, where the arid soil furnishes little building material beyond brush and mud. Closely akin to the wikiup is the Navaho hoggin, but built either of branches covered with smaller boughs or of poles plastered with mud; and the same statement holds true of the Pimas and Mohaves. Such dwellings are frequently abandoned, since the materials of which they are composed are not portable, and the region affords no other kind. Religion also enters into the migrations of these tribes, since they do not occupy a dwelling which has been entered by death. Here too may be mentioned the gigantic houses still built by the Wichitas, but formerly characteristic of the Cadoons (except the Pawnees and Arikaras, who built, instead, the 'earth lodges' noted below).
2. A higher grade of American architecture is found, under more favourable economic circumstances, among the prairie tribes. Here the wigwam yields place to the tipi. The typical form of this structure is found among the Outhanas, and is constructed by tying two twenty or thirty long poles together at the top, and spreading out the bottom so as to form a circle. This frame is covered with skin or canvas, and an opening is left at the top for the smoke. While this tribes were used by no means restricted to the tipis, since in the summer they sometimes built lodges covered with bark or earth, the former suggesting the Algonquin wigwam, and the latter what may be supposed to have been an earlier stage of pueblo construction. At all events, both represent a transition to the permanent dwelling. While the wigwam is naturally devoid of any ornamentation, the tipi often received somewhat elaborate adornment, this decoration being frequently totemistic, and sometimes the result of a vision or other omen. Here the form of the dwelling is conditioned by the material at hand, since trees are comparatively rare, while the thick, which only ranged the plains, furnished an abundance of skins to form the covering of the poles. According to Dakota tradition, the tribes formerly dwelt in houses of bark in the present State of Minnesota, and were first forced to the tipi, by the invasion of the Utes, to adopt a nomadic life, and, in consequence, portable houses.

3. The tipi, thus forms the transition from the temporary dwelling to the permanent. The latter form of house is characteristic of a settled people, and, is therefore, found among the most highly civilized American Indians. In its simplest form it may be exemplified by the wigwam of the Algonquins and Iroquois, but in the Mississippi valley, Florida, the North-West Coast, and Arizona, and, in its highest form of development, among the Aztecs and Mayaas. For some centuries before the advent of the permanent village, in contrast to the temporary encampments found, for example, among the Pai Utes and the Dakotas. These villages were frequently defended by palisades, as among the Algonquin Lenni Lenape, the Virginians, and the Caddoans of the Mississippi valley. A remarkable feature of many of these permanent dwellings was their elevation on mounds of earth, which were frequently formed artificially. The original motive was, in the main, sanitary, dampness being thus avoided. This practice was also common among the natives of Florida, where these artificial elevations are described as being kind of platform two or three pikes in height, the summit of which is large enough to give room for twelve, fifteen, or twenty houses, to lodge the cacique and his attendants. At the foot of this elevation they mark out a square, according to the size of the village around which the leading men have their houses.

To ascend the elevation they have a straight passage-way from bottom to top, fifteen or twenty feet wide. These steps are made by massive beams, and others are made by beams serve as walls. On all other sides of the platform the sides are cut steep (quoted from Garcilasso by Thomas, Mound Explorations, p. 647). The temples naturally stood at a still higher elevation than the houses of the people. Even dwellings of the permanent type here described, however, were liable to speedy decay if long abandoned for any reason, and consequently no longer exist. Yet in them probably lies the secret of many of the mysterious mounds so common in the Ohio valley, which were formerly supposed to be the work of a race differing widely from the American Indian. Modern developements have shown that their builders were simply American Indians, differing in no respect from their congeners elsewhere in the continent. The great majority of mounds are doubtless mortuary in origin, and thus do not properly come within the scope of architecture (cf. Yarrow, Introduction to the Study of Mortuary Customs among the North American Indians, Washington, 1880, pp. 17-29). Others, such as the Serpent Mound of Ohio valley or the pyramid of Cholula in Mexico, were structures designed for purposes of religion, the latter, at least, serving as the base of a temple. Yet it is not impossible that the religious mounds (though not entirely so) find their analogues in the wigwam, and the tipi in the North-East Coast. Here the abundance of cedar, which may readily be split, renders it possible to construct houses of planks instead of poles and bark, these structures being more permanent than the eastern wigwams. In the dwellings of this type, moreover, as in the Iroquois "long house," separate rooms were partitioned off, thus marking a distinct step forward in civilization. Farther to the north, the Alaska form of framework of the house, the whale, driftwood, stone, turf, or any material which may be at hand in that barren region. The dwellings are not infrequently built entirely of turf cut in slabs. The most curious form of American Indian architecture, in some respects, is the Eskimo igloo (properly iglugaat, 'house snow'). This is made by cutting compact blocks of snow, which are so laid on a circular base as gradually to form a cone, the only case in which the only case of a true arch among the North American aborigines. A house designed for occupancy throughout the winter is some 12 feet in height and 15 in diameter. It is heated with stone lances, and, moreover, ordinary light is admitted by a window of ice or the intestine of a seal. Whenever his supply of material renders it possible, however, the Inuit constructs a still more durable dwelling of whale ribs, driftwood, and the like, thus approaching to the Aleut house. In this same region, moreover, were semi-subterranean dwellings, especially among the Aleuts, Eskimos, coast Salishans, and kindred tribes. Their affinity with the subterranean houses of the Gilyaks, Kamatchatkans, Koryaks, Chukchees, and Yukaghirs of North-Eastern Asia is too striking and too close not to be due to borrowing on the part of the American Indians (Jochelson, in XV Congrès international des Américanistes, Quebec, 1907, ii. 115-128). Among the Pawnees, as among the Arikaras, Osages, Omahas, Ponens, and other tribes, are found earth lodges, also semi-subterranean, the roofs of such houses—bow 1186
but the stars also exercised authority. The earlier star cult of people is reflected in the significance attached to the four central posts. Each stood for a star—the Morning and Evening stars, symbols of the male and female cosmic forces, and the two other stars, the direction of the path to the abode of perpetual life. The posts were painted in the somber colors—red, white, blue. Sometimes certain corns of one of these colours was offered at the foot of the post of that colour. In the ritual of the Pueblo, the head man would go through the posts of the pueblo, the method of construction of the walls of the pueblos varies considerably. In the pueblo of Puebla they consist of stone slabs laid in mortar of adobe (mud mixed with straw), while the Rio Grande pueblo at Built on adobe, famous Casa Grande, near Florence, Arizona, was built by the construction method, in which adobe mud is rammed into large wicker frames and left to dry, after which the result is removed and used for the 

In the valley of the Lake of Mexico many houses were built on piles over the water, finding an analogue on the one hand among the American Indians of the North-West Coast, and on the other among the South Americans of Lake Maracaibo. The adobe dwellings were frequently constructed on platforms of stone, while the temples, as already noted, were elevated on high platforms of earth or stone, the Toltec pyramid of the sun at Teotihuacan having measured 650 ft. at the base by 180 in height. The so-called pyramid is, in fact, one of the most remarkable achievements of Aztec, Maya, and American architecture. It differs essentially from the Egyptian pyramid in its object, since it is designed simply and solely as a foundation for a building, while the African structure is a gigantic tomb. The Great Pyramid of Cholula, at Cholula in Mexico, is 81 ft. square at the base, and reaches an altitude of 250 feet. The pyramid of Huizilopochti and Tlaoc in Mexico itself had five terraces, the lowest 360 ft. square and the highest 76, and was ascended by a flight of 113 steps, the procession to the chapels on the summit winding round each terrace before mounting to the next. Not only temples but palaces were constructed on platforms, so that the Maya palace of Palenque stands on an oblong mound 30 ft. in length by 260 in width, and 40 ft. in height.

5. North and Central American architecture reached its zenith among the Mayas of Yucatan, Honduras, and Guatemala, the three countries which are scattered ruins of ancient cities, and many more, hidden in the tropical vegetation, doubtless still awaiting discovery. The final history of the art and culture of the region cannot yet be written for many years, for it is by no means unlikely that even more extensive and important remains may yet be found than are thus far known. The sites hitherto best described are as follows: Yucatan, Uxmal, Pakal, Chichen.

The pueblos are also important as forming the transition to stone structures. The Pecos ruins in North-western New Mexico have walls of sandstone slabs; and round stone towers, frequently with two or three concentric walls, are not infrequent in the South-west. Some of these latter structures seem to have been like the modern Moki kiva, or places of general assembly for the men of the pueblo. The method of construction of the walls of the pueblos varies considerably. In the pueblo of Puebla they consist of stone slabs laid in mortar of adobe (mud mixed with straw), while the Rio Grande pueblo at Built on adobe, famous Casa Grande, near Florence, Arizona, was built by the construction method, in which adobe mud is rammed into large wicker frames and left to dry, after which the result is removed and used for the

5. North and Central American architecture reached its zenith among the Mayas of Yucatan, Honduras, and Guatemala, the three countries which are scattered ruins of ancient cities, and many more, hidden in the tropical vegetation, doubtless still awaiting discovery. The final history of the art and culture of the region cannot yet be written for many years, for it is by no means unlikely that even more extensive and important remains may yet be found than are thus far known. The sites hitherto best described are as follows: Yucatan, Uxmal, Pakal, Chichen.
Itza and Tuloom in the east; Izamal, Tucu, Mayapan, Mérida, and Aké in the north; Lulphak in the south; in Honduras there are Tenampua, Calamulua, and, above all, Copan; and in Guatemala, and yet more, the mysterious Chichen-Itza, Mecallo, Patanimin, Uatatlan, and Tikal. Here, too, must be classed the ruins of Palenque, in the Mexican State of Chiapas, which are akin to those of Yucatan, but with western Honduras the line of and architectural remains in Central America seems to be drawn. Of the sites here noted—the list does not pretend to be complete—the most important for a knowledge of Central American architecture are the principal remains in Palenque, Uxmal, and Chichen-Itza. From these three centres a general idea may perhaps be gained of the main outlines of a Maya city, supplementary information being obtainable from a study of other sites. It becomes, therefore, advisable to give a brief summary of the principal structures still preserved at each of these three cities.

At Palenque the chief ruins are those of the Palace and the Temple of the Three Tablets, the Cross, and of the so-called 'Nunnery.' This site, the first-mentioned, though there is, of course, no evidence that it was actually intended to be a palace, this structure is erected on a quadrangular platform, somewhat more than 200 by 310 ft. at the bottom, originally faced with stone (perhaps once painted or plastered) and ascended by broad central stairways on the east and north. The palace itself, which nearly covers the upper surface of the platform, and measures about 180 by 225 ft. and has a height of 30 ft. In the outer wall were some 40 doorways, 8 ft. high and 9 ft. wide, while above them ran a cornice pierced with small holes which may have held the 'acanthus' cornice (Bancroft, Native Races, iv. 217). The main building is found to consist of two corridors, formed by three parallel walls and covered by one roof, which extend entirely round the circumference of the platform, and are each 80 ft. long, 10 ft. high. The walls of these corridors are 4 ft. thick, as are also the walls of the Nunnery, 173 ft. in number, are plastered with a thin coat of white material like plaster of Paris. The windows of these buildings are 2 ft. wide and about 3 ft. high. They all present the same general features of construction—angular-arched ceilings, wooden lintels, stone rings, or hinged doors, and doors of wood. The entrance to one of the buildings on the east side, and to the western, is 9 ft. wide, and 12 ft. high. Opposite this gateway a stairway 90 ft. wide leads up to the upper terrace which supports the northern building. On each side of the stairway is a column, or fluted column, which supports a ruin of the usual construction, in which six small apartments may be traced. The sides and ends of each building are . . . plain and unplastered below the cornice, which extends round the whole circumference just above the doorways. Above this point the whole surface of the four buildings, is covered with elegant and elaborate sculptured decorations. The four buildings on the court are preceded by all the builders the chief of among the primitive decorative art in America, being more chaste and artistic, and, at the same time less costly and elaborate than the temple. From this view of the other fronts in Yucatan. . . . The buildings, standing on a terrace 22 ft. above the platform which supports the other structures, and consequently overtopping them all, was very probably intended by the builders as the crowning feature of the Palenque, Casa de Monjas, and the edifice, Casa de las Monjas, was an ancient convent, later a convent of the Monjas, or Nuns. The edifice, Casa de las Monjas, was an ancient convent, later a convent of the Monjas, or Nuns, and the buttress, viz., the narrow corridor surrounding the upper part of the edifice, is a curious structure, one of a line of buttresses. It is a circular, domed building, 22 ft. in diameter and some 24 ft. high, with two narrow corridors surrounding it apparently solid core. It rests on a
ARCHITECTURE (American) 687

pyramid of two rectangular terraces, the lower 130 by 225 ft., and the upper 53 by 80 ft. The walls often have partitions of palm-leaf or bark. The development of the Guiana house is shown by the temporary dwelling, or bimbo, a rough affair, triangular in base and covered with palm-leaves, the sides being later replaced by pointed arches. The square form of the houses of this region (Im Thurn, Among the Indians of Guiana, London, 1883, pp. 202-210). The Chiriguans of Bolivia had quadrangular thatched houses with frameworks of reeds or posts, arranged in a circle and enclosing an open space in the centre. Those of the Guaranis of the Amazon are about 4 metres square and thatched with the sides and leaves, and similar material (Grubb, Among the Indians of the Paraguay Chaco, London, 1904, pp. 72-73). On the Pampano tents were used, consisting of a framework of poles and mud, and in Patagonia, as in America, wattled tents of reeds were used. The framework of these latter structures was frequently between 10 and 12 ft. in length, 10 in width, and 7 in height, and the interior was divided into a number of rooms, thus forming a sort of permanent dwelling. In Tierra del Fuego, on the other hand, with its far inferior civilization, wretched huts are built of sticks wattle with grass or rammmed with of the lowest types of architecture to be found on the American continent.

7. Midway between North and South America stands the architecture of the Antilles. The majority of houses on these islands were round, pointed huts, with leaf roofs and wattle sides, often of perfumed reeds and elaborately adorned. The villages were small. There were, however, large houses, especially in Cuba, where some lodges between 100 and 200 men, and the residences of the caciques naturally received special attention. The larger dwellings frequently had covered porches, and were divided into a number of rooms. While it is not impossible that in the most archaic period the inhabitants of Spanish, Brazilian, Haiti, Cuba, and other West India islands, were, at least in part, troglodytic, by the time of the first discoveries they were largely village-dwellers, their groups of houses being palisaded as in Florida, Virginian, etc. The Haitian (and probably the Porto Rican) houses, called bahius, conyes, and ercas, were of two types: circular, with upright sides supporting a sloping roof converging at the apex and thatched with leaves or stalks of cane, the door forming the only opening; and rectangular, constructed of similar material, but with windows and a small porch. No remains of stone or adobe houses are known on any of these islands; but since the accounts of the early discoverers and such analogues as may be traced in the modern cabins (which resemble the second rather than the first type) agree in general with the domiciles along the Orinoco and its tributaries, 'this resemblance is often the many which can be advanced to indicate kinship of the people of South America with those of Porto Rico' (Fewkes, The Aborigines of Porto Rico and Neighbouring Islands, in 25 R E W p. 46).

8. Architecture reached its zenith in South America among the Chibchas of Colombia and the Quichuas of Peru. The ordinary houses of the former people were built of straw and earth, and were frequently 100 or 150 ft. long. The modern houses, moreover, are generally com-
and thatched with straw (Botero, Relaciones universales, Venice, 1600, i. 234). Stone structures, however, were unknown, even in the case of the temples. This is the more remarkable since the sculpture was known to the Chibchas, who were also acquainted with the column. The architecture of the Peruvians forms the South American counterpart to that of the Aztecs and the Mayas, although it is not entirely identical. The Peruvians, however, were probably the first to enclose their temples in stone, and many of them, unlike those of Mexico and Central America, are true examples of cyclopean construction. A large cyclopean monolith measured 13 ft. 5 in. in length, 7 ft. 5 in. in height above the ground, and 18 in. in thickness, with a door 4 ft. 6 in. high and 2 ft. 9 in. wide. At this same site are a large number of monoliths bounding a rectangle 440 ft. in length by 388 in width. These pillars vary from 14 ft. to 25 ft. in height. Elaborate sun-circles, bounded by monoliths, also occur, as at Sillustani; and the latter site and its vicinity are also of importance for the chullpas, or funeral towers. These are plain towers, usually round, with corrèled cupolas, and ranging from 16 to 40 ft. in height, containing, within walls of extreme thickness, a very small funerary chamber (cf. Tifes, PARIS, DEATH AND DISPOSAL OF THE DEAD [Peruvian]).

The chief sites of ancient Peruvian (and Bolivian) remains are Pachacamac, Gran Chima, Marca Huamachuco, Huamuc Viejo, Vilcas Huaman, Cuzco, Ollantaitambo, Pisac, Chullonco, Huayna-cuana, and the islands of Lake Titicaca. At Pachacamac are found the ruins of the Temple of the Sun and the House of the Virgins of the Sun, the former covering an area 600 by 450 ft., and the latter 200 by 250 ft. Neverfour, hills which form the site of the ancient city are scattered the remains of other large structures, including communal dwellings which recall the pueblos of New Mexico. But Pachacamac, like Ancón, is more noteworthy for its necropolis than for its architecture; nor are the coast sites of Peru, generally speaking, as important in their contributions to a knowledge of the ancient architecture of the country as the more inland remain. Nevertheless, mention should be made of the elaborate fortress at Paramonga. Here a hill about 825 ft. high, surrounded by an adobe wall, sustains a fortress of three terraces with a detached quasi-bastion of similar construction. Underneath this, and another, more extensive, wall is found at Marca Huamachuco; and the presence of such structures in Peru is the more noteworthy when it is remembered that in the corresponding culture-regions of Mexico and Central America the sole clear example is found in the Maya site of Tulum. This wall at Marca Huamachuco is nearly 10 ft. high, and it encloses the still imposing ruins of two oblong rectangular buildings, originally of three storeys, surrounding central courts. The exact purpose of these buildings, known locally as the Church and the Castle, is uncertain; but close by are the undoubted remains of extensive llama-stables. On a terrace behind the Castle—a massive macaggi by a triple wall, is the Convent, an appellation which may not be without reason. The entire group of structures at Marca Huamachuco is dominated by the Cerro del Castillo, where the rulers evidently dwelt; and the entire community was, accordingly, thus divided, running from north to south: Cerro Amara (residences of the warriors and citizens), Cerro del Castillo, Cerro de la Palma (residences of the nobles), Cerro de la Virgen (nunnery), and Cerro Viejo (purpose unknown).

Huamuc Viejo, which, according to the conquistador historian Xerez, covered an area three leagues in circumference, still has a perimeter of nearly a league, even when the dwellings of the people have disappeared, and only the palace, battle, temples, and wall surrounding the principal buildings remain. This is the most remarkable since the grey stone, and a noteworthy feature is the baths "se composant de onze piscines murées en pierre et surmontées de parois d'un appareil admirable, pourvu de niches au fond desquelles sont fixées des pierres pierre" (Vilene, Pery et Bolivie, p. 211). Mention should likewise be made of the elaborate system of courts and of an avenue with four large pylonic gates. Vilcas Huaman is a noteworthy example at Tiahuanaco, a circular pyramid in three stages, ascended by a flight of steps, and surrounded by a wall with doors whose sloping sides resemble those of Huamuc Viejo. The structure is strikingly suggestive of the Aztec and Maya pyramids.

At Ollantaitambo, some 12 leagues from Cuzco, are the remains of vast palaces, with their terraces, pylons, stairs, aqueducts, and cisterns, and distinct traces of the ancient city, as well as of the so-called Tribunal and Prisons; while about 2 miles away are enormous fortifications. Pisac also has an interesting group of ruins, comprising a fort, a temple of the sun (intihuanatana), and traces of the ancient town. The elaborate fortifications throughout Peru, a marked divergency from the architectural remains elsewhere in America (unless an exception may be made in certain structures of the 'Mound-builders'). And it is also noteworthy that not only does the building material change from adobe to stone as one proceeds from the coast, but that the construction becomes, pari passu, more and more cyclopean.

Peruvian architecture reached its height of grandeur in the structures at Tiahuanaco and the islands of Lake Titicaca. At the former site are the remains of the Fortress, Temple, Palace, Hall of Justice, and Sanctuary. The Temple measures 388 by 455 ft., with a sunken court 290 by 190 ft.; while the Hall of Justice is a cyclopean platform 131 by 23 ft. with a group of seats at each end and in the centre, these groups being separated by monolithic columns. Copper clamps were used to hold the stones together. (On the entire site cf. Strübel and Uhle, Die Ruinenstätte von Tiahuanaco, Breslau, 1882). On the islands of Titicaca and Coati are buildings dedicated respectively to the sun and to the moon. On the island of Coati is the Palace of the Incas (also called the Temple of the Sun), the Storehouse of the Sun, and the Bath of the Incas. The Palace, or Temple, 51 by 44 ft., is in two storeys, and originally had pointed and stuccoed walls; while the Bath is 40 by 100 ft. and 5 ft. in depth. The island of Coati is especially famous for its Palace of the Virgins of the Sun, which, also in two storeys, is 183 by 80 ft. It contains numerous apartments, but, rather curiously, none of the structures on these two islands is cyclopean in type, nor is there any approach to such monuments as the monolithic gateways at Tiahuanaco, mentioned above.

Although more than the Maya structures, Peruvian architecture is of a higher type. The arch is occasionally found, especially at Pachacamac and Vilcas Huaman, and windows were not unknown in the interior, though they do not seem to have been constructed on the coast. The most important advance over the architecture of Mexico and Central America, however, was the roof, which obviated the necessity of the exceptionally narrow rooms which forms so marked a characteristic of the more northern style. The smaller structures seem to have been covered with a hip roof, at least in some cases, while in the larger buildings it has been suggested that the interior
was lined with wooden columns supporting a sort of verandah which did not cover the entire floor space. Although there is, naturally, no trace of columns in the present condition of the Peruvian type of building, as it is fully dedicated, and one or by the footpaths which border the interior of the walls. Such a form of roof, moreover, would admit the necessary light to the dwellings, and the entire structure would thus present an analogue to the Peruvian temple-tower. It is improbable that other temples and shrines may have been founded in the same way.†

One of the most interesting temple-plans is that of the goddess Nin-mah, as excavated at Babylon by the Deutsche Orient-Gesellschaft (Deitersch), *Im Lande des einstigen Paradieses*, p. 39. The ruin lies on the eastern side of the Ishtar-gate, and, as is usual in the sacred buildings of Babylonia and Assyria, has its corners towards the cardinal points. It is of sun-dried brick, and its remains have even now traces of white decoration. The entrance on the N.W. led into a large vestibule communicating with a room on the left, and giving access to a court-yard with six other doorways serving the remaining chambers, in number. Four of these had smaller rooms, probably the sanctuaries where were kept the statues or the shrines of the deities worshipped there (for the temple-E-mah probably was a temple of Babylonia in associating certain companions with the principal divinity). The first hall was entered from the court-yard by a doorway nearly facing that giving access to the court-yard from the vestibule, and, thus, in its turn, led to the inner hall—the holy place. There seems to have been no rule for the position of the small rooms which probably contained the statues or shrines, some of them being at the S.W. end (when the halls were as usual, E.S.W.), some at the N.E. (when the temple ran N.W. to S.E.). The court-yard was not in the centre of the building, but set more towards the S.W. side, so that there was space on that side for only one row of two narrow rooms, whilst on the N.E. side there are two rows of rooms, narrower and longer, with sanctuaries for statues or shrines. Behind the ‘holy place’ are two narrow rooms only.

To all appearance the temples of Babylonia and Assyria were built upon the same general plan. From the outside the visitor gained access to a vestibule, which, in its turn, admitted him to the court-yard, or to a hall around which were the two doorways leading to the remaining halls and chambers.

More ornate, to all appearance, than the temple of Nin-mah at Babylon was that built by Sargon of Assyria at Khorsabad. This edifice lay in the ‘temple-court’ of the palace, on the S.E. side of which were the ‘priests’ rooms,’ the temple itself being on the S.W. side of the court, facing the state-apartments. A flight of stone steps gave access to a platform of crude brick (faced by a retaining wall of black basalt with a cornice of grey limestone). Two chambers were traced, floored with a mixture of stone and chalk. The fragment of a black basalt statue was found, which showed that the ornamentation was the same as that in the palace, but the subjects were religious.‡

A better example, however, is the Assyrian temple excavated by Sir H. Layard in the mound of Nineveh (Calah). This lay at the S.E. angle of the great temple-tower, but was apparently unconnected with it. Here also we have an outer court, an entrance leading into a vestibule, a side-chamber (with two entrances), and a hall with a

* JRAS, Jan. 1899, p. 103 ff.
† A temple of these proportions may have been simply an enlargement of the popular household sanctuary.
‡ Rawlinson’s Monarchies, vol. i, pp. 369-371.
recess at the end. It differs from the Babylonian temple of Ninmah, however, in having no interior court-yard. Its importance for Assyrian art, on the other hand, was considerable, many slabs of a religious nature having been found; and its pavement-slabs give the history of the reign of Ashurbanipal (B.C. 668-627) as its builder. Its main entrance was adorned with winged man-headed lions, and the entrance leading into the side-room had reliefs showing the deity expelling an evil spirit from a tomb, with a dragon, from the place. At the side of this doorway was the arch-headed monolith with the representation of the king (Assur-nasir-apli) in his divine character, with an altar before it, implying that sacrifices of some kind were made to him. The smaller temple apparently had no vestibule, and the visitor entered at once into the holy place, which had a recess for the statue or shrine at the left-hand end. Chambers supplying the place of the vestibule were constructed at each end. Altars for libations were placed in angles made to receive them on each side of the main entrance. These objects were hollow, and were decorated with griffins, similar to those of the walls already described.

On one of the sculptures found at Khorsabad is a small building which has been regarded as a fishing-pavilion, because built on the banks of a river. It also, by the title of a small temple. It is one storey high only, and is built, as usual, upon a platform. The roof is supported by two columns resembling the Doric of the Greeks. Above the columns the entablature broadens out into a cornice, which is also divided into griffins like those above the walls of the temples and temple-towers, but rather smaller. No doorway is shown, so that the building looks like a mere shelter from the rain. That it is really a temple is also implied by the similar structure sculptured on a slab from the palace of Assurbanipal-4pli in the British Museum. It shows a temple on rising ground beside a terrace on arches (possibly the "hanging gardens" of Babylon) It is flanked by thickish columns, and has two slender ones in the centre, but no entrance is shown. The entablature above the columns has griffins, but its cornice is provided with a more elegant ornament. On the left side it is surmounted by a shallow moulding and griffins, but otherwise, to all appearance, plain. The arch-headed stile in front was evidently detached from it. It has the figure of a Babylonian king in the usual conventional attitude, and an altar like those found by Layard at the smaller temple, at Nineveh, already described.

Though there may be doubt as to the origin of the Babylonian temple—whether it was a development of the tomb or of the simple household shrine—the testimony in favour of the temple-towers of Babylonia being tombs is exceedingly strong, and is rendered still more so by the analogy of the pyramids of Egypt, which they resemble in their general appearance. Ctesias says (Diodor. II. vii. 1) that the great sepulchral mound built by Semiramis at Nineveh on the Tigris was erected over the body of her husband Nisir and Ovid (Metam. IV. 98) speaks of the "tomb of Ninus," under whose shadow the tragedy of Thiseke and Pyramus took place. On the other hand, this tomb-theory of the origin of the Babylonian temple-towers is quite unsupported by the older writings (Gn 11:1; Berossus, ap. Euseb. Chronicon, 13, Preny. 8G. 71. 2); Synec. Chron., 44), which state that the tower at Babylon was for the purpose of reaching heaven. As far as the Babylonian records are known, this statement is likewise unconfirmed, though the use of the name Ziggurat (i.e. the raised mountain) would still seem to indicate the "peak" of the mountain on which the Babylonian Noah sacrificed on coming out of the ark, would seem to support the idea that these erections were for the purpose of getting nearer to the deity when sacrificing and likewise, probably, when offering prayers. It has also been suggested that the original inhabitants of the plain of Shinar, having come from a mountainous country, desired to break the monotony of their new home, and therefore built these mountain-like structures, which they turned to pious uses.

Apart from the descriptions given by explorers, perhaps the best account of a Babylonian temple-tower is that of Herodotus of Halicarnassus. The temple of Belus at Babylon (i. 181—183)—the building called by Nebuchadrezzar the "Tower of Babylon." Herodotus describes it as a massive tower 200 yards square at the base, within an enclosure 200 yards square, and with gates of bronze. The stages, or 'towers,' as Herodotus calls them, amounted to eight in number, and, like the temple-tower found by the French explorers at Khorsabad, were provided with an inclined path on all sides of each, enabling the visitor to reach the top. About the middle of the ascent (apparently the fourth stage) was a stopping-place, with seats to rest upon. On the topmost stage was a large cell, with a couch and a golden table, but no image, as the god himself was said to descend thither when he visited the woman chosen by him to pass the night there. The image of the god was in a cell below, with a table, probably for offerings, and an altar outside. Image, table, and altar are all said to have been of gold, and the last-named for sacrifices only. An altar for full-grown animals, and one for frankincense on the occasion of the god's festival, were placed on an oratory of 885 to 860.

A detailed description of this famous temple is much needed, that given by Nebuchadrezzar being altogether inadequate. The late G. Smith was once fortunate enough to have in his hands a Babylonian tablet in which the building was described, and this is probably the most trustworthy account of it in existence. Adopting his estimate of the metric system used, the "grand court" of the temple measured 1156 ft. by 900 ft., and the next, the "court of 'Isar and Zaggara," 1056 ft. by 450 ft., with six gates admitting to the temples.

The next division is described as a space or platform, apparently walled, called, in Sumero-Akkadian, bigalla or zur, and in Semitic Babylonian hyqyqtu or biritu—words apparently meaning an enclosed and levelled space. It was described as a square, 2 lu each way (this is possibly the portion described by Herodotus as 'the temple' or sacred precinct, which measured 2 stadia—1213 ft. 6 in.—each way, and was furnished with bronze gates). In accordance with the usual Babylonian custom, the angles indicated by stone points, and each side had an entrance. Inside the enclosure, at the time the tablet was written, stood some kind of erection 200 ft. square, connected with the 'zippurut,' or tower, and having round its

3 An altar upon a hill to the right of this building suggests that it may have been merely for worship, the sacrifices being made outside, or in smaller chapels or small temples are also found in Phenician architecture (see p. 705).

4 The Athenian Rev., Feb. 19, 1876; repeated by Prof. Sayce in his Hibbert Lectures, 1887, p. 437 ff.
base the chapels or temples of the various gods, on all four sides, and facing the cardinal points.

On the E. side was a building 70 or 80 cubits long and 40 broad, containing sixteen shrines, the chief ones being dedicated to Nebo and Tannin, his son, who was regarded as having the power of calling the various deities to answer prayer. This was the temple of Nisibus, or temple of Nisir, situated on the E. side of the city. At this point the city was closely confined between two rivers, the Tigris and the Euphrates, the former flowing in two channels, the latter in one.

The S. side had a temple on the N. side, and a large structure on the S. side, which was probably the temple of the goddess Nisir, or of the god Nabû, the former being the city of Babylon, the latter of the city of Carchemish.

The N. side had a large temple on the E. side, and a building on the W. side, which was probably the temple of the goddess Nisir, or of the god Nabû, the former being the city of Babylon, the latter of the city of Carchemish.

The W. side had a temple on the N. side, and a large structure on the S. side, which was probably the temple of the goddess Nisir, or of the god Nabû, the former being the city of Babylon, the latter of the city of Carchemish.

The main building was the zigurrat, or temple-tower, square, and with its corners towards the cardinal points. The lowest stage was also the largest, being 300 ft. square by 110 ft. high. It had the usual recessed or panelled ornamentation of Babylonian architecture. The second stage was 150 ft. square by 110 ft. high, and the third stage, 100 ft. square by 110 ft. high, and the fourth stage, 50 ft. square by 110 ft. high. The fifth stage, 25 ft. square by 110 ft. high, and the sixth stage, 12 ft. square by 110 ft. high, and the seventh stage, 6 ft. square by 110 ft. high. The latter stage was the topmost, and was exactly equal to the dimensions of the base.

The raising of the base above the level of the ground would naturally make the height above the plain greater than this. Weissbach's estimate of the measures does not differ greatly from that of G. Smith; he makes the base to have been about 100 metres, or 328 ft.*

The differing heights of the stages of the great 'Tower of Babylon' are in contrast with the regularity of the proportions of the base, and the dimensions at Khorsabad. At present this latter shows portions of four stages on a low platform; and those who visited it gained the summit by means of the only stage remaining, consisting of the topmost portion, which was about 140 ft. above the platform. Though in their restorations Perrot and Chipiez do not place any chambers in the structure, it is not improbable that such existed, if not at some intermediate point, at any rate on the topmost platform.

Exceedingly noteworthy, however, are the excavations made by Layard in the ruins of the temple-tower at Ninevah (Calah). Wishing to find out what authority there might be for supposing that Ctesias and Ovid were right in indicating that these towers were of the nature of tombs, he cut through the masonry in certain places, and was at last rewarded by finding a vast vault on the platform-level 100 ft. long, 12 ft. high, and 6 ft. broad. There is no doubt that this discovery justified him in regarding these temple-towers as being originally tombs, as stated, but that it is the 'temple-towers' of the ancient authors which, according to the Greek geographers, stood at the entrance of the city of Nineveh, must be left doubtful, notwithstanding that Calah (Ninurta) may have been regarded as part of Nineveh, at least in later times. Layard's statement that it had been entered at some unknown period by people who must have known exactly where to make the opening, is also in favour of his supposition; they had apparently entered for the purpose of rifling the tombs. The vaulted gallery found by Layard runs east and west. Details concerning the upper part of the monument are unfortunately wanting. Layard may have been a tower in shape, but the dimensions of all but the lowest are unknown. This last was built massively with a thick facing of stone, exactly 20 ft. high, and finished at the top with a line of gradines. The stones were carefully fitted together, without any mortar, though mud may have been used instead, as at the present time. As far as preserved, the upper part is of brick. As has been pointed out by Canon Rawlinson, the Babylonians and Assyrians made their temples insignificant in comparison with the dwellings of their kings, thus apparently not imitating the Egyptians. As the Babylonians and Assyrians, like all the Semitic nations, were exceedingly religious, this shortcoming was probably due to some extent to climatic conditions and the want of suitable building-stone; perhaps, too, more of the temple-revenues may have been appropriated by the priests. The want of stone was more especially felt in Babylonia; the Assyrians made use of it largely, though not to the same extent as brick. The possession of stone enabled the Assyrians to adorn their temples with many fine bas-reliefs.

As an accessory of a temple, and therefore belonging to religious architecture, may be mentioned the Istar-gate at Babylon. This is situated near the ruins of the temple of Eshmun, and consists of massive walls—the sides of the gate—decorated with bulls and the fabulous creatures called sirrush and imposible serpent-dragons. These alternate vertically from top to bottom, and are exceedingly well preserved. The beauty of the workmanship and the excellence of the enamel were not surpassed even by the artizans of the Persian period. From the Istar-gate a 'festival-street' led northward to the 'place of Fates', where the oracles were declared yearly in Nisir. This is an excellently-paved causeway, apparently decorated with tiles imitating valuable stones.

In the temple of the Sun at Abu-habbah (Sippar, identified, though doubtfully, with Nisir in Sepharvaim), bitumen seems to have been used for the pavement; and beneath this, in a corner of one of the rooms, was found an earthenware coper containing the celebrated 'sun-god stone' (see Art. Assy.-Bab.). Receptacles for sacred objects were probably made in all temples in Babylonia. It seems likely that there were but few erections of the kind which had not closed recesses, at each corner, for the reception of the cylinders recording the building, re-building, or repairing of the edifice.

Naturally there are a number of religious erections whose real use is at present difficult to discover or to prove. At Babylon, on the site which the German explorers regard as being that of

* Layard's Nineveh and Babylon, plan 2, and p. 122 ff. The stones were bevelled with a shaving level, and in the face of the wall were eight recesses or false windows, four on each side of a square projecting block between gradines (Layard, p. 125).

The northern side had a semicircular tower in the centre, flanked by three platforms on the E. and five on the W. The western side had no projection, but the platforms were eleven in number. The eastern and southern sides were, however, distinctly plain.

1 The inner walls of this building. Nebuchadrezzar states, had been overlaid with silver; but this he took away, substituting pure gold.

of 'the place of Fate,' several chambers were found, which may have formed part of that edifice. This seems to point to the probability that the oracles of the Babylonians and Assyrians were declared in special buildings, though such things may, from their very nature, have been dispersed in the temples, such as are described above. At present we know nothing of the lives of the declaimers of their oracles, or of the rites which accompanied their declarations of events, save that the oracles and nature of the building itself frequently receives no illustration from the ruins which have come down to us.

At Lagas were discovered a number of cells whose uses seemed to be religious, though in what way was not clear. Some of them contained a bronze figure of a kneeling bull upon a shank or tang, others had a figure of what has been described as 'the god with the firestick.' They were accompanied by inscriptions on stone dedicating them to a deity. The figures are thought to have been for the protection of the buildings in which they were found. Here and there tanks and cisterns occurred, suggesting some connexion with liquids. In one instance, there was discovered, containing skeletons, a lamp of glazed ware, and vases with short handles. Notwithstanding the early objects found in the tombs, it is regarded as certain that they are of late date.

These tombs were sometimes painted. The decorations, at least, one reference to a bit-šili or batel, 'house of god,' is found, but in what these differed from other religious buildings is unknown. The large temples seem always to have been dedicated to some special deity, notwithstancd that several deities may have been worshipped within them. These batels, however, had no special designation; any deity, it may be supposed, could be worshipped there. Perhaps, as they were regarded as the abode of the gods, without specifying its attributes, any worshipper could enter, and perform his religious duties there. That it was simply an emblem of divinity, or of the presence of the divinity, without any walls to shield it from the gaze of the careless passer-by, seems, from the inscriptions, to be unlikely. The places where oracles were declared must have contained chambers where the animals were killed when it was intended to examine their entrails or other oracular appliances.

The bricks used by the Babylonians and Assyrians vary in size from 1 1/4 in. square and 2 1/2 in. thick to 13 in. square by 3 in. thick and 16 in. square by 7 in. thick. Sometimes crude and burnt brick and sometimes smooth and baked, of a thickness, but more commonly the unbaked brick was used for the internal parts of a building or for the core of a temple-tower, and the baked brick for the parts exposed to the weather. The layers of reed-matting which are found seem to have been used for buildings of unbaked brick. The use of this is exemplified by the ruins of the temple-tower at Warra (Erech), dedicated to Istar, which is now called Dagharkik, 'reed-mats.' The mass of the structure is of unbaked brick, the lower part battressed with baked brick. That these buildings have resisted so long is remarkable, but they must always have been temporary. As a contrast to the temple of Istar at Erech may be mentioned that of Nebu at Borsippa (the traditional Tower of Babel), where there are masses of brickwork of extraordinary hardness. This is sometimes complete preservation. Besides brick in Babylon, and brick and stone in Assyria, the building-materials mentioned in the inscriptions are cedar, terebinth (?), oak (?), palm-wood, cypress, pistachio-wood, etc. Nebu-

chadrezzar speaks of the cedar-beams from Lebanon which were used for the roofing of the temples of Babylon, which, he adds, were overlaid with shining gold. Besides this, silver, bronze, copper, rare stones, and ivory were used for their adornment.

As before stated, the masonry of these temples was of baked brick. The masonry of Assyr-Babylonia was of the same nature; the buildings received no illustration from the ruins which have come down to us.

Concerning the inscriptions, these give but little information. The principal architectural decoration of the upper terminations of the walls were the grattines already referred to. The panellings of the walls, which were also a speciality of Assyrio-Babylonian architecture, were generally an application of the grattine pattern to form recesses in the brick or stone walls in a vertical direction, and, when well carried out, had a sufficiently decorative effect.

Failing stone, certain of the buildings of Babylonia were decorated with reliefs of enamelled brick; and though this cannot be proved for the temples, it is extremely probable that some of them at least possessed it. There, more especially as some of the fragments found seemed to have been parts of fabulous or mythological beings (see Architecture (Assyr.-Bab.).). In these there was an attempt at reproduction in natural colours, and there were inscriptions in white characters on a blue ground, the whole showing considerable knowledge and skill.

The Babylonians seem often to have employed, however, the same method of decoration as the Assyrians—namely, trees, traces of which have been found. In the case of the temple E-mah at Babylon, the distemper, as far as preserved, is white, probably chosen as the groundwork for decorations in colours, similar to the more or less geometrical carved-stones of the painted doors and other decorations of the temple called Kudimari at Calah. The centres of the tiles, which were circular or lozenge-shaped, are generally provided with a knob pierced with a hole, probably for the purpose of hanging a lamp, though no remains of lamps are stated to have been found. Other Assyrian ornamentation consists of rosettes between two coloured borders, and red, blue, and black rosettes above a similar border supported by a kind of arcade-ornament—perhaps the original suggestion for the true arcades of architecture. The colours in Assyrian distemper-ornamentation were exceedingly bright.

The principal ornaments of the temples of Assyria were guarded by colossal bulls and lions, with the usual sacred figures, which, in the case of the smaller temple at Nimrud, were generally covered with inscriptions. The bas-reliefs always represent religious subjects. The exterior walls of this building seem to have been faced with enamelled bricks, some of which were found. Whether the temples at Babylon had their entrances flanked by colossal winged bulls or not is doubtful, but this seems probable, at least in some cases, as they are to all appearance referred to by Assur-bani-šapi, king of Assyria, in his account of the destruction wrought by his grandson Ašurnasir-pal on the inhabitants of Babylon on the occasion of his final conquest of the city (see Ašur-bani-šapi's great cylinder, col. iv. line 70).

T. G. Pinches.
ARCHITECTURE (Chinese) — As the world is still in the dark with regard to the whole problem of China and the Chinese, so it is with

made of wood and wicker-work (Strabo, iv. 4. 3; Caesar, v. 43; Vitruvius, ii. 1. 5). The Gauls did not use stone except for building the walls of their oppida, and even then it was unhewn stone, adjusted by means of wooden cross-pieces and iron bolts (Cæsar, vii. 23). They seem to have been ignorant of the art of hewing stones and joining them with mortar.

They probably found it as ridiculous to enclose the gods in any kind of house as to represent them in human form. Diodorus tells that Brennus laughed very much on seeing wooden and stone statues of anthropomorphic Gauls in a Greek temple (xxix. 9. 4). Lucan, when describing the sacred wood near Marseilles, and Cæsar, when speaking of the Gallic Mercury (vi. 17), use the word simulacra to denote the representations of the gods. Does this refer to more or less rough wooden statues similar to the Ídhar of primitive Greece, or to shapeless stone statues like some of the extant menhirs? It is possible that the Gallic races employed now the one method of representing their deities and now the other, according to the nature of the soil. The deities of the Gallo-Roman period—the Bull, the Woodman, the god with the mallet, the god with the wheel—undoubtedly arose from a new religious notion due to the influence of the Gaul uses of the druids. No text gives evidence of the Druids having forbidden idolatry, and no text states clearly that there were real statues of gods among the Celts; therefore we cannot affirm that their sacred enclosures contained anything but very rough and uncouth symbols similar to those of savage tribes. The huge bronze statue of Zeus which the Galatians had at Tavium was probably of Greek origin, like the cult of the god whom it represented (Strabo, xii. 5. 2).

There do not seem to have been any buildings devoted to worship in pagan Ireland. Idols were apparently erected in the open air, as, e.g., the large stone idol called 'Cromn Cruc'h,' which was surrounded by twelve smaller idols covered with brass and bronze ornaments. There were similar idols in various parts of Ireland, and some of them were believed to deliver oracles, e.g., the famous "Lin Fail" at Tara. The idol Bel, in honour of which bonfires (through which cattle were made to pass) were kindled on the 1st of May, does not seem to have been enclosed in a temple any more than the other idols.

As regards the civil architecture of ancient Ireland, it is practically the same as that of races at the same stage of civilization. The houses were usually round in shape, built of wood and wicker-work, and covered with thatch. They were very small. The chief room served as kitchen, dining-room, bed-room. Among the higher classes of society, small recesses were fitted in along the walls, each containing one or more beds. But the common people undoubtedly slept on beds arranged along the wall, as was the custom in Gaul and in Scotland during the same period. The fire was in the middle of the house, and the smoke escaped through an opening in the roof. The beds were placed in such a way that the sleepers had their feet towards the fire. Each bed contained often two and sometimes three persons. It was only in the houses of chiefs that arrangements were made to avoid too complete promiscuity, and that beds were surrounded with curtains.

ARCHITECTURE (Chinese).—As the world is still in the dark with regard to the whole problem of China and the Chinese, so it is with

terms, such as locus consecratus (Cæsar, de Bell. Gall. vi. 13. 17), ἱερόν (Diod. iii. 27. 4; Strabo, iv. 5. 5; Plut. Cæsar, 26; Dio Cass. lxii. 7; cf. xxvii. 90), temple (Strabo, vii. 22; Suet. August. 54), τειρεόν (Strabo, xii. 5. 2; Diod. v. 27. 4), and σηχνός (Strabo, iv. 1. 13).

The sacred places of the ancient Celts, therefore, resembled neither the sanctuaries of the Greek temple nor the pagan cathedral. They were in the form of the temples of the Romans. There is no doubt that enclosures were frequently situated in the woods. Lucan (iii. 399-425) describes a sacred wood in which human sacrifices were made to the gods with barbaric ceremonies, and where there were altars on which crude rites were performed; all the trees in the wood were purified with human blood; the miserable effigies of the gods were devoid of art—shapeless masses of tree-trunk. Pomponius Mela (ii. 2. 17) remarks that the large sacred woods of Gaul lent a pleasing appearance to the country. Cæsar mentions the sacred place in the territory of the Carnutes where in the year of our Lord assembled to administer justice (de Bell. Gall. vi. 13), and states that in the sacred places of many races were to be seen pieces of spoil taken from enemies, and that a Gaul would never set foot in his native wood without taking or carry off anything from these stoves (vi. 17). The Arverni had hung up in front of a temple (πρόσ τειρήσ) the little sword that Cæsar had left with them during a battle. Plutarch (Cæsar, 35), who reports this fact, seems to have been influenced by the Greek and Roman custom, and we cannot conclude from this statement that a building was referred to. At Touloise the sacred places included lakes, where great treasures were frequently accumulated under the water (Strabo, iv. 1. 13; Roidot, 1879, vii. 2. 10).

There were temples among the Cisalpines; and it was to one of them that the Boi brought their booty and the head of the consul Postumius. There they made this head into a cup hooped with gold, and it was this sacred vessel that was used by the priests of the temple on their feast-days (Livy, xxiii. 24). Polybius mentions a temple (τειρήμα) of Athens among the Insubrians where the ensigns of war were kept (ii. 32). There is nothing to show that these temples were anything else than uncovered enclosures.

The Britons in the time of Queen Boadicea had sacred places, and they offered human sacrifices in the sacred wood (Strabo, xii. 7). In B. 61, Strabo (xxiv. 3. 19) speaks of the sacred woods of Mosa, which were devoted to savage superstitions, to be cut down (Tac. Ann. xiv. 50).

The council of the Galatians of Asia Minor met to judge cases of murder in a place called Δωριονεον. The second part of this word means, in Celtic, 'sacred wood.' Probably it refers to a place consecrated to worship (Strabo, xii. 5. 1).

It must further be added that the Druids were regarded as the inhabitants of the forests. According to Pomponius Mela (iii. 2. 19) they taught, and according to Lucan (i. 405) they lived, in caves or secret places. According to many states that it was in oak-forests that they gathered mistletoe. The oldest etymology of the name 'Druids' made them 'the men of the oaks,' from the Gr. ἱερόν (Pliny, xvi. 260, 246).

If we may calculate the shape of the sacred enclosures from the ruins of Gallo-Roman temples, they were almost perfectly square. But nothing can be determined concerning the Gallic period from the numerous stone temples which ruins have been found in Gaul, and which date from the Roman epoch. If there were small buildings sacred to the gods in Celtic countries in ancient times, these buildings, like the Gallic houses, were
Chinese architecture. From an architectural point of view, this is a very novel and interesting subject. A style never dreamed of by Europeans is adopted quite freely, and a design which they call irrational and unnatural is executed with success. Little wonder, therefore, that we find few students of Chinese architecture, and those few touching on the subject but superficially.

The style of the architecture is the combination of some systems, the materials consisting of wood, brick, and stone. The curved roof, with the skyward-projecting caves, forms the principal feature of the building. This feature is especially noticeable in Southern China. Generally speaking, however, both the plan and the elevation are monotonous, and the complete structure is rigidly symmetrical. The mode of decoration is strikingly peculiar. The exterior is usually coloured bright red; and temples and palaces are sometimes decorated with ornamental sculptures and paintings. Gorgeous colours are applied to the interior, and the whole appearance of rooms and furniture is very picturesque. Red is the predominant colour; and the blue, green, and yellow (gold). Northern China is destitute of trees, as rain falls only once a year. Hence the building materials are principally brick and stone. Chinese architecture, although made of wood and stone, has not been so much influenced as Europe by the material of the main structure of the building, and hence the stone of a building, the ages of their vegetation, and their age. As to the origin of the concrete outline of the roof, there is diversity of opinion. The present writer considers it but a natural result of the necessity of raising a gradual change in the slope of the roof as it approaches the ridge and the maintenance of harmony of its curves. Thus the bold curve of the eaves always follows the bold concave of the roofs. It is rather strange that the plan of Chinese architecture is always an arrangement of rectangular blocks; not a single example of ordering on irregular planes is known. This is due to the direct transmission of the ideas of primitive times, and is a good illustration of the stagnant mind of the people.

Chinese architecture may be called the architecture of colouring. Without colours it is a bare, rugged skeleton. Both without and within colours are profusely adopted. The fondness for red be- 3. Confucian Architecture. The religious church, the main elements of architecture are the "Hsin-shih-miao" or Wen-miao (the latter different from Wu-miao [see § 3]), are dedicated everywhere in China, and towns; the most celebrated one is in Ch' an-fa- hsien, Shantung, the birthplace of the sage. The temples of Pe-king and of Nan-king are well known, the former on account of the stone drums in the Ta-ch'ing-men, and the latter on account of its immense size. But from an architectural point of view they show very little variety of plan and elevation.

The main edifice of the temple is the Ta-ch'eng-tien, built on a high platform, two-storied, and mostly hip-roofed. In the centre of the platform stands the tablet of Hsien-shih ("the most sacred Confucius") is enshrined. To its left, the tablets of Tsung-sheng-te-sheng-tzu and Ya-sheng-ming-tzu, and to the right, those of Fu-sheng-yen-tzu and Tsung-sheng. On the walls of the building are the Confucian relics, the Drums and the Tablets of the twelve disciples. In front of the Ta-ch'eng-tien is the Ta-ch'ing-men, and in front of the mien is a pond, and still further forward is a pet-lou (popularly known as the "pavilion" on this side of the ponds) and the East and the West corridors. Occasionally beyond the Ta-ch'ing-men there is a building which is sometimes called Ch'ung-cheng-tien. Within the
Ta-ch'eng-mên there are sometimes a bell-tower and a drum-tower facing each other. The general arrangement of the buildings resembles that of the Buddhist temple: e.g. Ta-ch'eng-mên stands for Fou-tien, Ta-ch'eng-mên for Tien-wang-tien, etc. As a rule, the Wen-miao is combined with the institution of learning. One of the most famous institutions is Pai-hsiu-yüan, at the foot of Wu-luo-fêng, a south-east peak of Lu-shan in Nan-kuang-fêng, Kiangsi. This was established by Chu-tzu. The largest among numerous buildings in the temple is a bell-tower, and in the South-east the guardian is Pai-hsiu-yüan, while in the North-west there is a bell-tower, with fifteen cells on either side. Then comes the Wen-hui-t'ang ('meeting-hall'), and behind it another court, with five cells on either side. Last of all, the two-storeyed ch'in-feng-lou is reached. The architectural system of educational buildings is more or less similar to the above. The Kuang-yüan is an examination hall for the degree of ch'i-chen, and is noted for its extensive scale. One in Nan-king is said to be many times larger than the one in Nan-king to accommodate over ten thousand students. In fact, learning in China means Confucian teaching; hence the relation of schools to the Wen-miao is similar to that of monasteries to the Buddhist temple.

2. Buddhist Architecture.—The most important factor in the development of Chinese architecture is Buddhism. History says that in the reign of Ming-chuang (33 A.D.) the Buddha was first introduced into China (65 A.D.), and Pai-ma-sun was built at Lê-yang. Henceforward it spread and flourished continuously, until the meridian was reached under the Six Dynasties and the T'ang. The North Dynasties built its first temple in the South, the earlier Si-an and Lê-yang, and the later Lu-shan and Chien-yeh (now Nan-king) being the centres. The highest pagoda ever recorded was built in Yung-ning-szu by the Empress Dowager Hsü of the Sung Dynasty, and it is said to have been 900 ft. high, with a finial of 100 ft. But Buddhism suffered from the corruptions and disorders that were prevalent from the later T'ang to the Five Dynasties, and no temples of any importance were built. A temporary revival began under the earlier Sung, resulting in elaborate temple-building in Southern China during the South Sung Dynasty. T'ien-tai-shan, Lin-gan (now Hang-chow), Ching-hai (now Kiang-yu), and Ta-kuang, were the centres. Under theYii dynasty, Lâmaism was made the State religion. The architectural style of Lâma temples does not differ from that of Buddhist, except in the occasional application of Tibetan styles to details, and in the introduction of new images and ritual articles. One new feature is the introduction of a pagoda which is a direct copy of a Tibetan model. Since the Ming Dynasty, Buddhism has been in a dormant state, greatly influenced by Lâmaism. In earlier days, Buddhism was divided into thirteen sects, but under the later T'ang only three prevailed: Vinaya sect, Dhyâna sect, and Sakhâvâti sect. Dhyâna was subdivided into five sects. At present this is the riling sect, other shades of belief being indistinguishable. We may say that the architectural features are practically common to all sects. Among the temples now existing are Yung-yuan-ku in Pe-king and the temple of the population resembles the Wei-tu in its large size, and is situated outside of the city. Wu-tai-shan in Shan-si, Tientai-shan, P'ei-t'ung, Tien-t'ung-shan, Tien-emu-shan in Ch'ê-kêg, Lu-shanman in Kiang-si, Wu-shan in Kiang-si, and Lung-kuo in Szech-ou are widely known, but they are almost in ruins and deserted, without a trace of their former splendour.

The commonest arrangement of Buddhist architecture is as follows:—In the main front there is the bell-tower (ch'in-t'ien), the usually two guardian figures (ch'en-t'ien) are kept. Then comes the T'ien-wang-tien ('temple'). In the centre of this temple is an image of Maitreya with the features of Pu-tai is enthroned; behind Maitreya, and back to back, is a standing figure of Vedadeva. In the four corners are the Su-tien-wang (four heavenly kings); in the North-east is Vîryâksha with a sword, in the North-east of Dharâtushâ with an umbrella, and in the South-west Virâdhaka grasping a serpent. Behind the Tien-wang-tien is the Ta-tien, known by various names, such as T'ien-yun-tao-tien or T'ien-yun-tien, where the Buddha and eighteen Arhats are enthroned.

Still further behind the Ta-tien are sometimes the Fu-t'ang ('preaching hall'), T'ang-ching-ke ('library'), and Fa-chouang-gat-lou for nick-name ('priest'). To the right and left of the above buildings are corridors, divided into sections, used for various purposes. Generally there are the Ke-t'ang ('reception hall'), Ch'ieh-ten-tien ('shrine for the guardian'), Liu-shik-tien ('shrine for the founder of the sect'), Shou-t'ang ('meditation hall'), Chi-t'ang ('eating hall'), Yu-shu-t'ang ('cloister for mendicant priests'), etc. To the right and left of the Tien-wang-tien a bell-tower and a drum-tower stand facing each other, sometimes with the addition of a pagoda.

The pagoda is the most interesting and tasteful of Buddhist buildings, there being numerous varieties of form. Usually pagodas are obviously transported from Central Asia and India. The process of the modification of form is not yet plain, as even the pagodas of a very remote period seen on reliefs and carvings are many-storied, and the shapes of the older receiving an influence from Buddhism. With a slight modification of the images and ritual articles, a Buddhist temple gives a good idea of the Taoist temple, such as is represented in Pa-yun-kuan at Pe-king. Behind the entrance gate of the latter there is a shan-sun; and then comes a ling-kuan-tien, where at the centre and in the four corners the images of Lin-kuan are enthroned, corresponding to the Tien-wang-tien of a Buddhist temple. Then there is the Yu-huang-tien, where Wu-huan is worshipped; the Lao-tseki-tien for the seven sages of Taoism; the Ch'ien-t'ang-tien, and the Se-ni-tien successively follow. In the last hall even the 'Eight Treasures' of Lâmaism are contained.

Temples for Chinese gods owe their origin to Taoism. The architectural style is Buddhist, with the following exceptions: at the front they have a stage for theatrical purposes, and before the stage there is an extensive court-yard. The architectural details are more minute, and the decorations more elaborate. The Kuan-ti-miao, or Wu-miao, is seen everywhere in China. Here Kuan-yi, worshiped as a Buddha by his two followers, Ch'ou-t'ang and Kuan-ping. The Ch'eng-huang-miao is a guardian temple of town and village. Numerous temples, such as Wên-chang-miao ('Temple of the Star-god'), Ts'ai-shen-miao ('Temple of the god of Weather'), Ta-kuang-miao ('Temple of the god of Fire'), Peng-shen-miao
ARCHITECTURE

(‘Temple of the god of Wind’), Shiu-shen-kung (‘Temple of the god of Water’), Nuang-niang-miao (‘Temple of the god of Love’), and many others for ‘profane’ use and for social and religious purposes. Many-storied temples such as Yin-huang-1 and Kwei-hsing-lou, are abundant all over China.

4. Muhammadan Architecture.—Since the first mosque was built at Canton in the 7th ce., and Mecca and Medina with their associations of pilgrimage,Mosque and minaret, have been established, the minaret has assumed, during the course of time, but it is flourishing far and wide. Ardent adherents are numerous, especially in the provinces of Kansu and Shen-si. All the architectural features of old Mohammedan architecture have been lost; according to investigations made by the writer, there is none older than the early part of the present dynasty. The temple is known by the one name Ching-chén-szu, or popularly, Li-pai-szu. In style it resembles an ordinary Chinese temple; but the plan and the interior arrangement show the characteristic traits of the faith of foreign origin. The building consists of porch, hall, and sanctuary. The roofs are also divided into three distinct sections. The sanctuary is either square or hexagonal in plan, two- or three-storied, and pagoda-shaped, instead of domed like the mosques in other countries; the inner wall is niched, with a mihrab, and decorated with Arabic characters. The hall is usually divided into front and back portions, with an arcade between. The minbar is placed at the right-hand corner of the back hall, where decorations of arabesque and Arabic characters are again executed here and there. Near the hall there is sometimes a fountain, and sometimes a hall for purification. Occasionally halls for the head priest, for receptions, etc., are arranged as in a Buddhist temple. Often even the interior of the hall is set with the usual symbols of all signs of Muhammadanism. Thus in a Chinese mosque there is neither dome nor minaret; it is but a slight modification of an ordinary Chinese temple.

Later on, monuments were erected, accompanied by stone figures of men and animals. This custom was prevalent as early as the later Han dynasty, and still exists at the present time. The Massive stone-designed mausoleums of the Tang Dynasty may be seen in the neighbourhood of Si-an. Earth is raised in a mound, and human and animal figures of stone are erected on the site. Hsiao-ling in Nan-kang and T’ien-t’ang in the north of the Tang Dynasty are the best-known mausoleums of the Ming Dynasty. They are of the same design: pai-lou, ta-hung-men, pei-lou, stone-men, stone-animals, and then again gates and archways leading to the last mound. The mausoleums of Ts’ai-tai and Tai-tsong of the present dynasty are near Mukden. They are simply copies of the Ming mausoleum. In the tomb of an ordinary person there are no stone figures. It is a little cone-shaped mound, often enclosed by earth heaped up in the shape of a horse-shoe. Sometimes the coffin is placed in a cave made on a hill-side and covered with stone slabs. Sometimes a stone chapel is contained in the mound. The tombs of priests are pagodas of either brick or stone, or pagoda-shaped monuments of some architectural design. There are, of course, many varieties.

6. Secular Architecture.—Castles, palaces, meeting-halls, dwelling-houses, and the like, are distinguished from ecclesiastical architecture. The castle is surrounded by high strong walls of brick. Battlements, with embrasures, are erected on the walls. Often the entrances consist of double gates (yüeh-chén and yueh-hsiang) and the build form the innermost is simply a vaulted passage, which can be closed at will by huge doors strengthened by bands of iron. On a large building in the main street of the city there stand bell- and drum-towers for reporting the time, the upper part being the tower and the lower the passage. The general plan of palaces is much the same in general is the same as that of the past. The Pe-kung palace is similar to the old Ming palace of Nanking. It is called Chiu-chung-tian-men (‘Nine-fold system’). The front part, which is used for public audiences, is placed on the old plain of the palace. The private, for nature and ancestor-worship, may be included, for which the Tien-t’an at Pe-kung is so famous.

A building called hui-kuan is an assembly-hall for colonial clans and commercial guilds. The club-system is wonderfully developed in China, and there are magnificent buildings for the purpose. In front they have a theatrical stage facing an extensive court-yard, which is surrounded by corridors. Dwelling-houses in Northern China vary in some respects from those of the South. In general, the premises are enclosed by high walls. At the entrance is a gate with a cell, and then a court-yard. A second gate with corridors, a second court-yard, a third court-yard, etc., are repeated in the same manner, the number of gates and yards indicating the wealth and rank of the occupant. The house itself is a simple repetition of rectangular blocks and corridors. The unsuitable materials, the heavy mode of construction, the defectiveness of lighting and ventilation, etc., detract from its architectural value; but, on the whole, with its fantastic features, it presents a picturesque appearance.

C. Tuo

ARCHITECTURE (Christian).—Although it is possible to discuss the different edifices erected by Christians in divers times and places, it is most important, at the outset, to dispel any of those misconceptions which would suppose that there ever was any Christian style as such. The Gothic architecture of the Middle Ages has often been spoken of as Christian architecture par excellence, and undoubtedly it is most important of the styles in which Christians have erected their buildings, and being the style of our own country, it naturally demands the largest share of our attention. But Christianity, as such, never has created, and never could create, a style of its own. It may, however, be a strange fact, that it could create a style of mathematics, or science, although it may make use of all of them. It has used buildings of the Latin, Byzantine, Moorish, Gothic, and Renaissance, and even the Greek styles, which differ from each other as much as one style of architecture can differ from another; and the differences are due to differences in the aesthetic expression of the people. These may be associated with other differences of character which may affect the forms of Christianity itself, but they are both the outcome of causes behind the one is not the cause of the other. A certain type of man will produce a certain type of architecture. The type of Christianity does not make the type of art, any more than the type of art makes the type of Christianity. Even schools of science or philosophy may be coloured in the same way. The failure to grasp this very simple fundamental principle has led to much absurd criticism and a complete misunderstanding of art and architecture. Doubtless the cause is to be sought in the fact that to a Christian, it is unnecessary to know anything about good Christian, quite innocent of any knowledge of art, has endeavoured, in the light of what he did understand, to interpret things which he did not understand.
ARCHITECTURE (Christian) 697

All this does not alter the fact that a church is a definitely Christian building erected for Christian purposes, and as such it was built in the same manner as a dwelling, store, or any other building. This is a fact; but, at the same time, its principal architectural qualities are aesthetic rather than religious, and a building such as St. Paul's is architecturally more akin to Castle Howard than to Westminster Abbey, which in its turn was built in the remoter past of its association with Westminster Hall or the town halls of Belgium. The architecture of the Middle Ages was as much an architecture of castle and hall as of cathedral and church, and is as closely related to the spirit of chivalry and romance as to Christianity. Medieval Christianity, chivalry, romance, and architecture are alike the outcome of the medieval man; one is not the cause of the other, even although there is a certain amount of interaction. To speak of Christian architecture, then, as a parallel term with Greek architecture, is entirely illogical. In this article, therefore, we can examine Christian buildings in various styles of architecture, although we shall strictly speak of Christian architecture as such. It may also be possible to show how Christian building doubtless left some impress upon the several styles of which it made use.

Latin Architecture. — In fact, the earliest form of church with which we have any intimate acquaintance is the so-called Christian basilica, and its origin is exceedingly difficult to trace. One thing at least is clear; it is not directly derived from the Roman basilica, as was absurdly suggested in an unceremonial and unhistorical age. The Christian church naturally developed from humble beginnings, where two or three might gather together; and such a lordly prototype is impossible. It used even more suggest that the actual basilica was the first Christian churches. But, as Christianity was some 300 years old before the conversion of Constantine, the Christians could not have had the remotest chance of using these buildings. Moreover, even after A.D. 312 (the date of Constantine's conversion), the basilicas were still required for their original purpose, and could not have been handed over to what, even at that time, was but a minority of the people. During all these three hundred years the Christians had required places of worship, and undoubtedly a more or less definite arrangement of their buildings by that time had become crystallized.

As an instance of the clearest of the contexts, we may note the following passage of the main passages quoted in favour of this theory. In a laudatory piece of writing by Ausonius addressed to the Emperor Gratian thanking him for the consistory, we find the following passage: "Oulis, immanum, locus est, qui non beneficia tuis agitent, infamant? Nullus, immanum, Imperator Augustus, quis admundandum spectum non venerationis incutat: non palamit, quod in, cum terribile accipere, amabile preceptum; non forum, ben basilica olim negotia plena, nume voce, spectaculo pre tua salute susceptus? The passage is given by Professor Baldwin Brown in his admirably suggestive work, From Socratic to Christian (1880) and, as he points out, vows for an Emperor's welfare in palace, forum, basilica, or senate house (mentioned later), are scant evidence that any one of these places was turned into a church, and why the basilica should be singled out from the others with which it is coupled remains a mystery.

Leaving such puérilities, it remains perfectly true that the Christian basilica in the 4th cent. A.D. bore some resemblance to the Roman basilica, though it has never been proved that the Roman basilica was ever roofed in; but one might as well argue from a modern fleet as to the appearance of the Spanish Armada, the interval of time being the same, and the development of Christianity as rapid as that of our fleets. What was the case in A.D. 312 is of little value as evidence for what was the case at the beginning of the Christian era, in architecture just as in anything else.

The earliest Christian services were held in the Jewish synagogues, and in private houses; and in comparatively early times we find the Christians legally occupying the position of the sodaliis, which correspond to our Friendly and Burial Societies. These Societies often possessed a scutula, or lodge-room, where they held their banquets in honour of the deceased.

These three forms of building may all have influenced the early form of the Christian church, although it should be noted that the scutula, with its apse, was probably itself derived from the large private hall, which often had an apsidal termination.

On the whole, the largest influence may be assigned to the private house (Fig. 1). Certainly such houses were made over to the Christians for their use, and it may be even more than a coincidence that we find in the atrium of the early church the atrium of the Greco-Roman house, in the cloisters the peristyle of the house, and in the church itself the hall, aeduh, or principal chamber, as at St. Ambrogio, Milan (Fig. 2), or the Church of the Nativity at Bethlehem, where the atrium is reduced to a simple narthex.

The narthex, which gradually disappears from the Christian church, was the outer vestibule into which catechumens and penitents were permitted to enter, who were not admitted into the church itself. It is probable that the atrium originally served a similar purpose, and the idea may be derived from the Court of the Gentiles in the Jewish Temple.

Some of the earliest actual places of meeting that still exist are the little chapels such as that in the catacomb of St. Agnese (Fig. 3); but their value as evidence is slight, as the conditions were peculiar, and the form caused by throwing two or three cells together was the result of necessity rather than choice. The several cells may suggest divisions between the sexes or simply be
ARCHITECTURE (Christian)

between clergy and laity, the clergy fairly obviously occupying the end cell and the bishop the seat at the end. The altar must have been somewhere in the body of the chapel, and as there is no trace of it, it was presumably in the form of a wooden table. But even this cannot be dated earlier than A.D. 250, and there is room for much change in a couple of hundred years.

What, then, are the characteristics of the early Christian basilica when first it emerges into the light of history? It is a three- or five-aisled hall, with the central aisle rising higher than the others and lit by a clerestory. At the end of the central aisle, generally the west end, is an apse containing the seats of the clergy. The entrance is at the opposite end, and beyond that is a narthex, and sometimes a complete atrium. The baptistery, commonly of circular or octagonal form, is usually in a separate building, on the other side of the atrium, or of the narthex, as at Parenzo. In the latter arrangement we may possibly see the origin of the German two-apsed church.

Occasionally, particularly in Rome, there is a space in front of the apse, and a great arch is thrown across the last pair of columns, known as the triumphal arch, as in Santa Maria in Trastevere (figs. 5, 7, and 10).

In this space is seen by some the origin of the later transept, but it does not occur in the Ravenna churches, and the later transept probably has a double origin; and this is, at any rate, not the only factor. The building was apparently roofed with a simple open timber roof. The flat ceilings that occur in some Roman examples are late Renaissance, although they may possibly represent something older. They are rarely found elsewhere, but are supposed by some to have been a feature of the Roman public basilicas (fig. 6). The walls were generally of brick, and comparatively thin, as there was only the wooden roof to support. Unlike the Roman basilica, it had no galleries, and consequently we find a very large wall space above the line of columns (fig. 7). This formed an excellent field for pictorial decoration, and at the same time distinguished it from the public basilica. Neither were the columns returned across the end opposite to the apse, at any rate in Italy, as was the case with the Roman building.

On the whole also, it seems probable that the apse was not a usual feature of the public basilicas, and, when it did occur, it was practically in a separate part of the building. The columns in the Christian basilica, particularly in the case of Rome, were stolen from earlier buildings, and it is very usual to find that they do not match. This also accounts for the poor proportions of the earlier Christian buildings in Rome, as compared with those in Ravenna, where there was no such available spoil to hand, and the builders had to fall back upon their own resources. At first the horizontal entablature is more common, but it is gradually superseded by an arcade of arches, which gives an appearance of greater height to the building, although the necessarily wider intercolumniations detract somewhat from the effect of length. The principal entrance was perhaps more often at the east end, following the arrangement of the temples of Greece. But the question of orientation was of little moment, and churches faced in any direction. After the custom of having the entrance at the west, and the altar at the east, came into vogue, as in England to-day, it was hardly ever more than a Northern fashion. Moreover, the first fashion was exactly the reverse way, with the altar at the west. The first church that we know to have had an altar at the east end was built in A.D. 470 (St. Agatha, Ravenna). Of the early churches in Rome 40 out of 50 have not their altars at the east.

The altar or tabernacle in the 5th cent. was at the opposite end from the main entrance, but in the body of the church in front of the apse, so arranged
that the faithful sat round it, the clergy on one side and the laity on the other. Of course, this arrangement in most instances has been altered, but

the following churches in Italy show the old plan more or less undisturbed:—Torcello Cathedral, St. Apollinare in Classe, Ravenna, and Parenzo Cathedral (figs. 8, 11, and 4). (The bishop presided in a raised seat in the centre of the apse, very much as did the president at the table in the early scholae.) Outside Italy, in the East, where there has been less change and alteration, such churches are quite numerous, but the following instances will suffice:

—Ezra, Pitzunda, Mochvi, Bedochwinta, Abū Sargāh (fig. 14), Dair-as-Suriani. Bedochwinta has the seats at the back and down both sides, advancing even beyond the altar (fig. 9).

Churches with the altar in the body of the church, and the bishop’s seat behind, but without the other seats, are familiar in Italy. There seems also to have been an arrangement, at any rate sometimes, for the lesser clergy and choir, whereby they occupied all the space immediately in front of the altar and were separated from the laity by a low screen. In the old church of St. Clemente in Rome, this screen, part of which is built from the actual pre-existing screen, may be taken to represent the original arrangement.

The floors of the churches were of ordinary marble mosaic, but this has often been altered in later times, and we see the so-called Cosmati work made with large pieces of coloured marble, surrounded by small mosaic, and this, again, by bands of white marble.

A good example of the basilican church is

S. Paolo fuori le mura, Rome (fig. 10). This, although almost entirely a modern restoration after the fire of 1829, is still the best representative of a great five-aisled basilica that has come down to us. It is 400 ft. long and 200 ft. wide, with a central aisle of 78 ft. The complete atrium of Old St. Peter’s is here represented only by a narthex. The bema hardly projects beyond the aisle walls, and is peculiar in being double. It is in area among the largest churches in Christendom; but it is quite a simple thing to build these comparatively low buildings, with their light wooden roofs. There are 10 columns with pseudo-Corinthian capitals and a sort of Attic base. They are without flutings, and carry a series of simple, round arches. Above is a cornice, and where there would be the gallery in a Roman basilica, or the triforium in a Gothic church, is a series of medallions. The triumphal arch is carried upon a pair of columns on plinths. These columns have Ionic capitals, and the whole arch forms a very imposing feature, although not comparable with the great arches of the crossing in a Gothic cathedral. The general vista is fine, although, partly, from excessive breadth, and still more from an inadequate marking of the bay divisions, which is so well managed in a Gothic cathedral, the length here is not felt. The church at present has a rich coffered ceiling, but it is doubtful whether this would have been the case with the original church of the 4th century.
the capitals, as at S. Vitale (fig. 12), and the polygonal exterior to the aпе, we see Byzantine features.

The capitals are carved for their place. Above the nave arcade is a series of medallions, as in S. Paolo fuori le mura. The aпе is raised, with a small crypt below it, and it retains the seats round the altar on the side opposite the entrance. The brick exterior is bald to hideousness.

In the Eastern Empire one of the best examples of the Latin or basilican style is St. Demetrius at Salonica. It has certain features, more or less characteristic of the East, which should be noted. The columns are returned across the building at the entrance end, which in this case is the west, and so form a sort of inner narthex. Over the aisles are galleries for the women — another arrangement common in the East. The capitals are finely carved, as we have here the still living Greek influence. This, as already indicated, was felt in the West. It was long before the Italians could carve capitals or lay mosaics for themselves, and either they made use of the old work, as we have seen, or else the new work was executed by Greek workmen. Even in the 8th and 9th centuries, when the Italians began to copy the old work, theirs is very inferior and rude in comparison. In St. Demetrius there are fairly clearly defined projections which perhaps may be termed transeptal, but they are at the extreme end of the church, even projecting beyond the aпе, and they are cut across by the main arcade of the church which makes them more or less invisible, and, in short, they are side chambers rather than a transept. Consequently there is no triumphal arch.

Other modified forms of the basilican church are found in Egypt and in Syria. In both cases there seems to be a tendency to keep the form of the aпе only on the inside and to make the outside of the building square. The Coptic churches in Egypt are generally triapsidal with three apheres exactly at the end of each of the side aisles — a form we shall meet again later (fig. 14). Syrian churches generally show a marked reminiscence of the style of Ancient Greece, and are finer in their work than those of the West. Not only were there many remains of ancient Greek work, but doubtless after the conquests of Alexander there was a certain admixture of actual Greek blood in the population. In many cases piers, and not columns, are used, and the church is divided into a few great square bays. The result is curiously suggestive of some of the later Romanesque Gothic churches. Almost invariably there is a narthex, and above this, and outside the building, often a gallery with columns, forming a sort of loggia which makes a very pleasing feature (fig. 15). A point in Syrian construction might be noted which is possibly another reminiscence of Greek tradition. There is a distinct aversion to the arch construction, and often an arch is merely an arch in form, or is reduced by corbelling to the smallest possible limits (fig. 16). Note also another common form shown in the figure.

The Christian basilicas, then, may be considered as a type of building, but hardly a style of architecture; and although we have seen that it was erected in various styles, they are all more or less a
ARCHITECTURE (Christian) 701

continuation of the later Roman manner, affected nevertheless by different influences, as in Ravenna or Syria. It is perhaps convenient to group the whole together as the Latin style, and remember that other buildings than churches were built in it, but, as is natural from the lack of sacred association, they have very largely perished.

2. Byzantine Architecture. - In Italy, although Greeks to a great extent executed the work, they were trammeled by the traditions on an alien soil, and by the masters they served; but when the seat of the Empire passed to Byzantium they were able to build more freely on their own lines, in their own country, and among their own traditions. The result was marvellous, and we find the speedy growth of one of the greatest styles of the world, culminating under Justinian, which itself gave birth to descendant styles, and is still a living influence. There are two great ways of covering a square space so as to leave all the sides open - the intersecting vault and the dome. The first was used by the Romans, yet the full extension of its principles and possibilities was not grasped until the Gothic architects invented the true rib. The dome was used by the Byzantines, and although they cannot exactly be said to be the inventors, they perfected (fig. 17, I and III), and herein lies the great achievement of the style. The problem involved is the fitting of a hemisphere upon a square. Now, the circle may be made to touch either at the corners or at the centres of the sides. In the one case it is too big; in the other it is too small (fig. 17, I and II).

In the former case we may carry up the sides of the square, so to speak, cut off the overhanging portion of the hemisphere, and the dome then rests upon the points of the square, and, provided abutment is brought to resist the outward thrust upon the arches formed by this process, the dome is stable (fig. 17, I and III), and herein lies the great achievement of the style. Now, it is interesting to notice that these arches, formed by the intersection of the planes of the sides of the cube below the dome, are semicircular, and, further, the intersection of a sphere by a plane always gives a circle, and therefore it is always possible to raise such a dome upon semicircular arches; moreover, it is always possible to place one such dome upon another, and it is not necessary for the two domes to be of the same size. It is only necessary that the chords upon which the arches rest should be of the same length; the arches themselves will always be semicircles. It may also be put conversely that the intersection of two spheres is always in a plane circle. Herefore the intersection of two domes always allows of the forming of a plane arch; and thereby the Byzantine architect escaped the greatest difficulty of the Gothic builders, who found that the intersections of their vaults were not in a plane. This was perhaps the principal peculiarity or most individual characteristic of the Byzantine style, which, in certain of its aspects, can be described as a congeries of globular forms growing out of one another, as in the case of a mass of soap bubbles, which perfectly illustrates the system (fig. 18, St. Sophia).

But although such a dome, in its simple form as thus described, occurs in Byzantine architecture, it is open to certain objections. The apparent height is given only by the part above the arches, and the resulting effect is comparatively low and flat. In order to remedy this, the dome is raised in one of two ways. The first is another instance of the intersecting spheres. A dome (as in fig. 17, II) with diameter equal to the diameter of the square, intersects, and rests upon, a dome (as in fig. 17, I) with diameter equal to the diagonal of the square. Of the lower, nothing is left, save the ring upon which the upper hemisphere rests, and the four triangular portions that remain after the four sides of the square have been raised in the manner indicated above. These triangular portions are termed pendentives (fig. 18).

This is the characteristic method of the first great period of Byzantine architecture. But the dome may be even further raised by the introduction of a cylindrical drum between the dome itself and the pendentives. This is, on the whole, the characteristic arrangement of the second period of Byzantine architecture, although it is not universal. The same pendentive method may be employed above an octagon as above a square, and it is not uncommon to find such an octagon set within a square, and the lower dome, resting on the octagon and forming the pendentives, itself intersected by little domes that form semi-domes in the corner of the square (fig. 18). Another method, one frequently used in the case of a dome upon an octagon, is a system of corbeling, wherein squared stones are set horizontally, instead of radiating to the required curve of the dome. It is really the same system as the domed chambers of the Mycenaean civilization, but in this case the surface of the stones is not rounded off to the curved surface of the vault (fig. 18, Corbelled Pendentive).

The first great period of Byzantine architecture may be said to be from A.D. 500 to 600, but its principal achievements were all accomplished in the first 50 years. Its crowning glory is St. Sophia, completed in A.D. 537. Then follows a blank interval during the Persian and Saracen wars, until we come to the second great period which lasted from the middle of the 9th cent. to the end of the 12th. In this period the great masterpiece is St. Mark's at Venice. After this follows a long period of decline, lasting till about the end of the 16th century.

(a) In the first period the plan generally approximates to a square, and there is almost invariably a narthex, and often an exo-narthex beyond that. The church is commonly entered by three doors, and a great dome covers the central area of the church, which contains the principal available open space. The dome rests upon piers, generally eight in number, between which are columns forming, in
the alternate intervals, semicircular niches which extend the central area toward the corners of the square (fig. 19). There is an apse behind the altar containing the seats of the clergy. The outside of the apse is polygonal. The central apse in which the altar stands is shut off from the church by an iconostasis, and where there are two side apses there are generally two more of these screens. The side apses, except in the rarest instances, do not contain altars.

The whole style is much lighter and more skilful than that of the Romans, and the Byzantine builders made their domes generally of brick, using no concrete. Consequently the supporting piers were much less massive. Columns were used, as we have seen, not as an essential feature of construction, but rather as screens, and to break up the building. Thus, by this slight use of the principle of multiplicity, they produce an effect of scale that the open, unobstructed building would lack. The columns have bases with a few simple moldings, and a capital, generally most elaborate in execution. Above the capital is the dosseret— one of the sign marks of Byzantine architecture. It is sometimes said that its use is to enable the column to support the very thick wall above it. It may be so, but the upper section of the dosseret is generally about the same area as that of the capital itself, and, in any case, there is no advantage in diminishing to the bottom of the central apse, and then starting with a large top to the capital, so as to diminish again. The very function of a capital is to do this work, and there is no reason why, if necessary, its sides should not slope inward more sharply. A capital that cannot do its work is a solemnity. It seems, perhaps, more likely that the dosseret is a curious survival of the entablature (fig. 20). In any case it is not a pleasing feature. When it is so reduced as to make merely a sort of double abacus, there is not the same objection, as the diminution in the upper one, or dosseret, makes it a mere molding, emphasizing the horizontal nature of the abacus, as in some examples in St. Sophia (fig. 21). The shafts are commonly monoliths of colored marble, generally with an entasis but no flutes, and the whole style depends for its effect upon colour rather than upon solid forms. The forms that are used depend for their vertical patterns upon mass, dombeness as the result of the same aesthetic preferences where surface rather than solidity is used as the medium of expression. Hence we find no great cornices, as in classic architecture, and no subdivided columns or ribs upon the vaults, as in Gothic architecture. The wall surfaces are flat and the decorations are flat. There are practically no moldings, and the arches have plain soffits. Plinths or bases to the wall, and string courses, are insignificant or altogether absent. The very corners, even, are rounded off to allow of mosaic being carried round them. Hence the carving is all surface carving.

Large semicircular windows are occasionally divided up by shafts, and even by a sort of transom bar, as at St. Sophia. The result is not beautiful. A more beautiful device is the thin slab of marble, often carved with the most exquisite patterns, which frequently fills the smaller windows. These patterns are cut deeply into the marble, which is sufficiently translucent to allow the light to come through. It is conceivable that this represents a Greek tradition.

The total result is a style easily grasped as far as its main architectural features are concerned. The variety which actually exists is perhaps surprising, considering that it is achieved within such comparatively narrow limits. Of course it cannot amount to the variety found in the Gothic style, which depends for its aesthetic expression largely upon complexity, whereas the Byzantine style, in its purely architectural character, is wholly simple. Complexity, with a touch of Eastern barbarism, makes its appearance only in the surface ornament.

The glory of Byzantine architecture of the first
period—indeed of the whole style—is St. Sophia. This church was begun in A.D. 532 and completed in the extraordinarily short period of six years. This time can apply only to the architecture, and much of the interior decoration must have been added afterwards. In the centre is a great dome, a trihedral over 100 feet in diameter, and nearly as large as the dome of St. Paul’s, London. It rests on pendentives raised upon four immense piers. The great feature is the extension of this central space by two huge semi-domes of the same diameter as the principal dome, abutting against the arches of the pendentives. These semi-domes, together with the great masses of the piers in the direction of the length of the church, resist the thrust of the great dome in that direction. But the thrust in the direction across the church is met by enormous masses of masonry carried by arches over the aisles, and forming a bold, if somewhat extraordinary, feature upon the outside of the building. The result is the most spacious interior in the world. In order, however, to preserve the apparent as well as the actual size, there is a skillful arrangement of columns, in two storeys, in the great arches at the S.E. and N.W. sides, and in the semicircular niches that we have already seen as characteristic of the first period of Byzantine architecture. These columns give something of the principle of multiplicity, and provide a unity of measurement, without destroying the majestic simplicity of the whole.

The central area is surrounded by aisles covered with intersecting groin-vaults, after the Roman manner, and at the lowest end is a fine narthex 295 ft. long. Over it is a gallery for the women, which is continued on either side over the aisles. A gallery for the women is the usual arrangement in Byzantine churches, and may be contrasted with the curious arrangement in the Basque provinces, where there are two or three galleries, one above the other, for the men and the boys. The lighting is effected by forty windows round the central dome and five in each of the semi-domes and the minor domes. Above the two tiers of columns on the sides are two tiers of windows (fig. 23). There are also large windows in the aisles. But in no case is the window arrangement satisfactory, and this is the weakest feature in the church.

St. Sophia was by far the most important church in Christendom built in this epoch, and it is interesting to notice that there is no attempt made to orientate it: the axis is one degree south of S.W. The majesty and simplicity of the interior of St. Sophia, with the richness of its colouring, make it by far the finest interior of its kind in the world. It is difficult to compare things that are so utterly unlike as a Gothic cathedral and this building; each is wonderful in its own way: but certainly there is nothing in St. Sophia that warrants us in ranking it after any interior whatever. The exterior is different. One may work up a qualified admiration for it; but, in spite of a certain dignity of mass which it shares with all great engineering works, it is hardly architectural, and finds its compeers rather in the pyramids or in a modern railway station.

St. Vital at Ravenna is generally classed as one of the great churches of the first Byzantine period; but, as Ferguson points out, it shows affinities with the so-called temple of Minerva Medica at Rome, quite as marked as any resemblances between it and St. Sergius and Bacchus at Constantinople. There is, however, Greek influence in the Roman building, so there is something to be said for this view.

(b) The churches of the second period are smaller than those of the first, and have several characteristics of their own, although in the main they follow the earlier work. The lighting of the dome had always been a difficulty. Windows in a dome are, of course, not vertical, and the effect is always unpleasant. The difficulty can be met on the exterior by raising a vertical wall, which at the same time is helpful in resisting the thrust, acting as a pinnacle would in Gothic architecture. The outside of the dome is then generally treated with a double curve (fig. 25).

Viewed from the exterior, this naturally suggests the drum, which we find as the characteristic feature of the second period, even if it made its first appearance earlier. It is, however, not invariable. The effect of the drum is on the whole pleasing, forming an effective lantern in the interior, and giving altitude and architectural character to the exterior (fig. 26), which latter is so much needed at St. Sophia. The central dome is still the leading feature of the design, but subsidiary domes are frequently grouped round it. In St. Mark’s, Venice, there are five domes. The dome is almost invariably, in this period, placed upon four supports only, instead of the eight common in the earlier period; and the semi-circles (as in fig. 19) do not occur. The general proportions of the building show more variety than the practically square outline of the previous period. Sometimes we find an elongated rectangle or an approximation to the cruciform plan. The triple ase is almost universal in this period, with the
architectural features the two great Byzantine periods are not markedly different.

Of this period the greatest church is undoubtedly St. Mark's at Venice, which, in spite of numerous later alterations, still preserves in its interior its principal Byzantine features. The Byzantine parts of the church of St. Mark's, as we now see it, are the result of extensive alterations, amounting nearly to a re-building, in the middle of the 11th cent., of an earlier basilican church of A.D. 976, itself containing parts of a still earlier building. The western narthex, the walls and arcade of the nave, and portions of the east end, are practically all that remains of the basilican church. The columns in the eastern part of the church were removed, and six great piers were introduced—two at the west end and four in the centre of the building. These are themselves pierced by arches of the same height as the nave arcade. Two transepts were added, the east end was lengthened, and the narthex was continued round the two sides of the building. Above the nave and the crossing were erected two large domes and three somewhat smaller domes over the bema and the transepts, which are made slightly smaller than the crossing by a thick wall of the plaster so that superimposing the arches leading into the three arms. By this skilful device a perspective effect of greater size is obtained. Great arches, which are practically barrel vaults, cross from pier to pier, and upon these the domes rest. Above the nave arcade is a narrow gallery, some 3 ft. wide, which represents the women's galleries of the Eastern Byzantine churches. It is, however, valuable as providing a unit of measurement, and thus giving size to the church, rather than for any utilitarian purpose. The capitals are not very characteristically Byzantine, being of a sort of pseudo-Corinthian type. They probably belonged to the original basilican church, and are of very excellent workmanship. Above them is a double abacus, or abacus and reduced dossel. The church is not nearly so well lit as St. Sophia, the principal light coming from sixteen windows in each dome, placed just above the springing.

The colour effect is the main feature of the building; the marble columns, and the famous floor with the wonderful Byzantine mosaics on their golden ground, and even the pictorial mosaics of a later age, all give a richness unsurpassed elsewhere. Hence we find the usual flat Byzantine treatment with few moldings of any kind, although St. Mark's, figs. 27 and 28, has an unusual amount of carving of a bolder type than one associates with Byzantine work, most of it, however, not belonging to the Byzantine design of the building. St. Mark's retains a magnificent example of an iconostasis with figures of the Virgin, St. Mark, and the Twelve Apostles. This feature in the Byzantine churches corresponds to the rood loft of the Gothic buildings. In later times, particularly during the 13th and 14th centuries, a great deal of ornament has been added, especially to the exterior, which has been cased with a veneer of marble. The domes have been covered with tall cupolas, and to the same period belong the pinnacles and overflorid Gothic ornament.

3. Gothic Architecture.—During the development of Byzantine architecture—the direct outcome of the aesthetic character of the people of the regions where it occurs—we have another style developing in the West, a little later in reaching its maturity, but roughly the contemporary of the Byzantine. This style, to which the name 'Gothic' is not altogether inappropriately given, if we extend the term a little beyond its usual and somewhat arbitrary limits, was the style principally used by the Christians of the North. Those of the East made use chiefly of the Byzantine, and Italy of the Latin style—one, as we have seen, much more closely related to the Roman. Of course other styles have been used by Christians in different countries, as, for instance, in Norway or in Russia. Even in N.W. Europe, although it is convenient to group the styles of several countries under the one heading; there are in reality several styles; and the more one studies, say, the Gothic architecture of England and France, the more one realizes how little they have in common. It is true that to some extent the great wave of Romanticism marks the aesthetic character of the whole area, so that a church in England is, of course, more like a church in France
ARCHITECTURE (Christian) 706

After the downfall of the Western Roman Empire, while Europe was in the meltings pot, architecture seems to have been somewhat stationary. It is, however, difficult to make certain, as later re-building has practically destroyed all evidence. Even if the conception of building, there was much less opportunity for it in times of peace. About the beginning of the 9th cent., we find men's thoughts turning towards an architectural expression that rapidly blossomed out into great things. The Saracens, along the Rhine valley, in Lombardy, in Norway, and in our own country, arose architectural schools, all of great interest, with their own individual characteristics, which endeavoured to express this artistic feeling. But English art, so long as extent a practical precaution against fire, is still more the expression of this aesthetic principle. The effect of organic growth, rather than of aggregation, marked by an extraordinary artistic approach, with the labourer to the matter in hand, than in other cases, all helps towards the final scheme. Above all, the suggestiveness of a certain instinct of plan and elevation, of structural masses and ornament, marks out the aesthetic character of the Northern peoples as a whole, during which these buildings were erected.

It has been suggested that the Latin style had in itself a power of development that would have given us the future forms quite independent of the North; but, without entering into the argument, it is practically sufficient to point out that Central Italy itself never produced anything of the kind, even when the North had invented the style and carried it in the form and style of other schools were not equally successful. Burgundy and Provence, with their barrel vaults, exercised comparatively little influence; and although the Rhine churches at first were in the van, they dropped behind and left it for England and Norway, and the slightly later school of the Ile de France, to perfect the art. The influence of the Ile de France school ultimately became the greatest of all, although the date dauphiné have not been settled beyond dispute, and prove that the Durham, or at any rate the English, school was first in the field, with perhaps the two greatest inventions of the Gothic architects—the shell vault on ribs and the flying buttress. But this was absolutely uninfluenced, pursued its own line of development to the last, ignoring the French work alike at Canterbury and at Westminster.

In a short article such as this, a sketch of the development of our own school, and a brief comparison with that of the Ile de France, will perhaps be the best way of illustrating the leading features of the age.

(a) Celtic-Saxon work.—Putting aside for the present all architecture save that of church building, the influence of domestic and civil work upon churches is enormous and commonly overlooked—we find that we have in this country a Celtic-Saxon type of church, resulting from the composition of divergent elements, of which the more important are as follows:—

In the first place we have a purely Celtic element in the architecture, partly surviving through the Celtic or British population, partly derived from the architecture introduced by the Celtic missionaries of St. Columba from the North. This spread over the whole country save the South-Eastern portion. St. Columba himself died in 597, but his missionaries continued to further his
ARCHITECTURE (Christian)

work. In the year in which St. Columba died, St. Augustine came over to Canterbury, with the powers of a bishop, to convert the English, and he introduced a Latin element. But this influence was small, and affected the style but little.

Later we have an influence of Northern monasticism, which must be distinguished from the great Norman influence of the Conquest, but which also represents the Romanesque Gothic of Northern Europe. East Anglia was converted by a Lombard, Felix, afterwards bishop, and even before this a lusty race we find a distinct un-English influence at work in the great Bene- dictine foundations of East Anglia. Sussex was converted by Birinus, an Italian or Lombard monk, early in the 7th cent., and to some ex- tent East Anglia, Kent, and Sussex remained the stronghold of Continental influence until the last. Monastic builders from Normandy were employed at Romsey Abbey in 967, and upon Bishop Ethel- wold's cathedral, Winchester, during the reign of Edgar, who with Dunstan as admiral, largely reformed the monastic system.

The first element is by far the most important in the formation of the Celto-Saxon type of church. It is characterized by a narrow rectangular plan, commonly with a tower at one of the angles of Trinity Church, Glendalough, Ireland; Eglise, Orkey; St. Regulus, St. Andrews, Scotland; Escob, Durham, and Bradford-on-Avon, Wilts, England, may be taken as typical. The different characteristics to be noted are—(1) the general length as compared with the breadth; (2) separate rectangular chambers; (3) large porch, or side chambers, as at Bradford, Repton, Deerhurst, etc.; (4) a western tower of defence, round or square, usually entered from within the church; this is a common feature; occasionally, as at Brechin, it is separate from the church; (5) a type that occurs as at Studland, Dorset, Barton on Humber, or Basing, Hants, where the tower actually forms the body of the church (fig. 29).

All these features continue to play a prominent part in English architecture, and help to distin- guish it from that of the Continent. In the first place, the extreme length of the English churches is one of their most important characteristics; they are the longest in the world. Secondly, the rectangular, instead of semicircular, ends to English churches are too familiar to need comment. Although the apse was introduced, it speedily dis- appeared, and never made way at all in the West of England. Thirdly, we may notice the Eng- lish tendency to a series of more or less separate chambers—the separate closed-in choir, the nave being often, as at Canterbury or Windsor, com- pletely shut off, and the separate extensions at the east end, as at St. Albans, Wells, Gloucester, Here- ford, Winchester, and indeed most of our cathedrals. Fourthly, the large porches or side cham- bers have a double influence. As entrance porches they are exceedingly common, e.g. Worcester, Gloucester, Canterbury, etc., and in hundreds of small parish churches. It is said that the in- element Western weather is the original cause of the western entrances being rarely used or alto- gether absent in this country. We also see these side projections in the very marked English tran- sects, as evidenced in those of the Continent (see figs. 55 and 56). Frequently there is a second transept; many of our English cathedrals have three, while Lincoln has four, pairs of such projec- tions. Fifthly, the single western tower, so familiar in Continental work, is often added back to this source, and it hardly ever occurs in France. With regard to the last feature—when the tower forms the centre of the church—we reach by the addition of the characteristic side chamber a cruciform central towered type (e.g. Braemore, Hants, and the Priory, Dover Castle). There are doubtless other influences that give us this type, but it is probably the double influence that pre- serves it as the typical English great church, right through the centuries.

The second element in the Celto-Saxon style is the Latin style introduced direct from Rome by St. Augustine, i.e. the basilican type of church; but the Augustine influence seems to have been local and of short duration. A church at Canterbury was quasi-basilican with an eastern as well as a western apse, the altar presumably being in the western at so early a date. There are certainly one or two examples of a square or semicircular apse, in the country, but they are very rare. It is, indeed, not at all certain whether the type as found at Wing in the vale of Aylesbury has anything to do with St. Augustine, and may not rather be a sur- vival of the old Romano-British type, that can rather be traced back to such a date, such as, presumably, we see in the plan at Silchester.

Latin influence, however, does make itself felt, but through an indirect channel, and the division into nave and aisle is introduced, and the third great element—the Northern monastic church. The aisle, however, never becomes quite the popular feature in this country that it is on the Con- tent. Five aisles, so common abroad, practically do not occur in English cathedrals. We are largely to this influence that we owe the great central towered cross-church plan. But even this would probably have disappeared along with other importsations had it not practically coincided with a type of the native origin. To this native influence we may be said to owe the unequalled pyramidal composition of Salisbury, or the domi- nance of the central tower in such magnificent tower groups as Durham, Lincoln (fig. 57), or Lichfield, quite unapproached by the Continental architects.

The details of the Celto-Saxon style are very largely of Celtic and Teuto-Scandinavian origin, although distinct Roman influence in certain details may be considered. There are certainly affinities with early German work, particularly noticeable in the method of wall building, which is solid, and not built with a rubble core after the Roman method, found in the older towers. A brief resume of the principal details is as follows:—

(0) Long and short work, or massive corner quoins. (2) Ab- sence ofbuttresses. (3) Pilaster striping or strap work—a feature whose origin is obscure, but a far-away derivation from the Roman pilaster is perhaps the most pro- bable. (4) The arches are semicircular, and often cut out of a single stone, or else they are straight-sided—a peculiarity not found in other styles. (5) The windows are often balanced by bishelor shafts, which are set in the centre of the wall, with a long stone forming a sort of abacus that runs from front to back.
through the whole thickness of the wall. (9) The windows are widely placed, both internally and externally. (10) The great roundness for parallel lines as ornament, foreshadowing the later characteristic English paneling of many kinds, which contrast with the simpler flatter treatment of the Continent. (11) The intersecting bands and characteristic Celtic curves seem also to foreshadow the English ornamental art of the 13th century. There is a vast difference in the character of English and French ornament, which is generally overlooked. It is probably connected with a difference in origin.

Such are some of the principal points in connection with the Saxon work—a style much more important than is commonly supposed, which tends to be hushed up on account of the greatness of the next style of architecture that made its appearance in these islands, and was in its turn made use of for Christian purposes.

(b) The Rise of English Gothic.—The Norman Conquest produced in Britain a massive style of architecture, of towers, fortresses, and strongholds. The churches, which naturally are always built in the style of the country, partake of the same character, so that the change over the church building in these lands. Contrasted with the comparatively light buildings of Saxon work, we find heaviness almost the leading feature of the new work. But the English soon made their own influence felt, and for a time English church architecture undoubtedly led the way in Europe.

In the first place, the number of churches built is entirely without parallel. During the hundred years that followed, when the country had settled down after the disturbance of the Conquest, there were built between three and four hundred great cathedrals and monasteries, churches of first-class rank, besides numberless smaller buildings. In the last hundred years, with a population nearly twenty times as large, and enormously improved methods of transit and mechanical appliances, we have built only one great church, nearly completed a second, and laid the foundations of a third. Not only, however, was the number of churches remarkable, but the scale of the English churches very greatly exceeded all other churches in the world that were built about that time. In all the rest of Europe there were built only two churches of over 50,000 sq. ft. area. In England there were four churches that exceeded even 60,000 sq. ft.

Cluny half a century later contained 54,000 sq. ft.

In many respects the very fact that England led the way was against her, because her great churches were already built when advancing art would have allowed her to build greater. Still more was she hampered in re-building and enlargement by the sizes already fixed. A new choir built on to an old nave cannot be made altogether out of scale with it.

That England led the way in number and size shows an activity, a resource, and an impetuosity that, even taken by themselves, would be strong presumptive evidence in favour of her being a leader in style; and this we shall afterwards see to be the case.

The Romanesque Gothic is marked by the cruciform plan, and the Norman form has the central lantern tower. The origin of both these features is far from clear. The transept is generally considered to be the development of the area of the altar in the Latin style. This, however, is not found at Ravenna, for instance, and is not common outside Rome, and the intermediate steps any case can be said to be traceable. The central lantern is still more doubtful in origin.

Some have suggested a Byzantine origin for the whole North European Cross church as explaining both the cross and the central lantern; but although it may explain the cross better than the basilica church, and there is at least the lantern dome, while the basilica has no such thing, it is still a far cry from a Byzantine dome of the first period to a Norman lantern tower. The few dated examples are merely those high two towers of drawing hasty conclusions. There seems no particular reason for not supposing that the central tower was invented in the North, except that it is the fashion just now to believe that no one ever invented anything—which is true only within certain limits. The object of the lantern tower was two-fold. In the first place, it threw light into the centre of the building, where the high altar was put; and, in the second place, it formed a unifying central feature, both externally and without. The removal of the high altar from its proper position to the east end leaves the lantern tower to throw its light upon an empty space.

In any case, we have two distinct types of Cross church making their appearance in this country, both of which the national genius modified to suit its own aesthetic conceptions. First, we have the multiaspidal type, and, secondly, the chevet type. The origin of the multiaspidal type is possibly to be sought in the Byzantine or Egyptian types already noted, or it may be directly derived from the basilica, but it certainly becomes quite a common variety. The Normans in Normandy treated it in their own way, squaring the end and two bays beyond the crossing, in a manner perhaps foreshadowed at St. Apollinaris Nuovo at Ravenna, and then adding

![Fig. 30.—SAXON DETAILS](file://example.com/image.png)

![Fig. 31.](file://example.com/image.png)

The Anglo-Normans took this plan, and it at once began to assume the first English characteristic of greater length. We find a typical example at St. Albans, with its long parallel apsed chambers (fig. 31). This becomes one of the great types of Benedictine orthodoxy in the East of England.
But it is to the West and the North that we have to turn to find the truly English manner. Here we find Hereford with a square end as early as 1079-1095, and Lindisfarne and Romsey early in the next century. It has been said that the square end was introduced into this country by the Cistercians. This is impossible, as it was in use before the Cistercian order was founded. But it is interesting to observe that from this very Western district came Stephen Harding, one of the original founders, and head of the order, and abbot of Citeaux in 1109. It seems most probable that the Cistercians owe their square East ends to him. Hence, when we find Cistercians at a later date building their square East ends in England, they are merely bringing back an English feature that naturally falls in with, and helps to strengthen, the native tradition.

So we find that in English hands the multapsidal type develops a squared form, such as we see in Kirkstall Abbey, Yorkshire.

The Reformed orders, Cistercians and Augustinians, mainly in the West and North, worked out the English manner, and although the great Benedictine abbeys of the East have had the fortune to survive, it is rather to the ruined abbeys of Yorkshire and the Welsh Border that we must turn if we wish to see the English style in the making. Hence, while the conservative Benedictine abbeys were still using the round arch and the apsidal termination, we find the pointed arch and the square end in the North and the West. The change of style is, as in France, partly due to an Episcopal influence that furthered advance and reform. In the latter country the bishops joined hands with the laity against the old Monastic orders, and got the great late cathedrals of France. In this country they joined hands with the Reformed orders, and to this is due the strongly marked Monastic character of English building. In early days the Cistercians eschewed ornament, central towers and triforiums, which gave a chasteness to the style in their hands that, to some extent, it would be true to say, marks the English work.

The Anglo-Norman church of Bury St. Edmunds had a wide-spreading front of 260 feet. Ely was planned for a west front of 200 ft., although it is doubtful whether this front was ever completed. These two are about three times as wide as the nave.

- Notre Dame: 155
- Rheims, 13th century: 155
- Amiens: 150
- Angers: 150

The best way to obtain a general survey of each period is to work from the ground plan upwards. It has already been pointed out that Romanesque Gothic in England, perhaps best termed Anglo-Norman, is massive in its treatment, and this naturally shows on the ground plan. A single pier of Durham contains as much material as the whole set of piers of some of the later churches. The walls are always immensely thick, even when they support only a wooden roof, which on the whole is the commoner arrangement; but when they have to resist the thrust of a stone vault, this
is even more the case. Buttresses are as yet quite rudimentary, and the history of Gothic architecture might be described as a progression from a heavy wall with a wooden roof to a glass wall and a stone roof. The projection of the buttresses becomes greater and the wall thinner, and the progress might be diagrammatically represented as in fig. 35. So what practically happens is that the wall is turned round in sections upon itself, whereby, with the same or even less material, a greater resisting power is obtained (fig. 35).

Before passing upward to details, the general treatment of the elevation should be noted. The Anglo-Norman great church is a three-aisled building of three storeys (fig. 35). The nave-arcade is the principal series of arches in the church, and divides the central aisle, or nave, from the side aisles. In order to lighten the central aisle it is raised above the roof of the side aisles, whereby we obtain a clerestory, through which the light passes, and which is contrasted with the blind storey or triforium that occupies the space of the aisle roof. Sometimes the triforium is transparent, as it is termed; that is, it is treated as a gallery.

There is more variety in the bay treatment in this country than in France, arising in part from a different initial standpoint. The French architects were more interested in the logic of construction, and the tendency for their buildings is to become, as it were, skeleton constructions, and for the wall as such to disappear. The English, however, continued to regard the wall as a feature in itself, giving an aesthetic sense of horizontal continuity, as distinct from the vertical skeleton expression of French architecture. The wall, therefore, continues to some extent to be regarded as a field for decorative treatment on its own account.

A single instance must suffice, and is seen in the interesting bay treatment, favoured mainly by the Augustinians, in which the triforium is treated as a hanging gallery, depending from the main arcade. Examples may be seen at Jedburgh, Romsey Abbey, Oxford Cathedral, Glastonbury, and Dunstable. It gives a sense of height greater than either the simple two-storey or the simple three-storey treatment.

Anglo-Norman piers are of two main types. In the first, which is more or less columnar, we probably see a far-off descendant of the columns of Greece. There are two distinct varieties, of which one, although generally built up in courses, and not in single drums, still, in general proportion of capital, and base, preserves the characteristics of a true column. The other is a huge mass of masonry with a few moldings round the top in lieu of a capital. This partakes more of the nature of a pier, and is peculiar to this country. Examples may be seen in Gloucester, Durham, Tewkesbury, etc. The second type is the pier proper, developed from a section of wall left between the arches.

Both these types develop in two ways which mutually influence each other; first, the struc-
particularly characteristic of this country. In the first system additions are made to the pier, in order to support sub-arches and vaulting shafts; thus we get a composite type of pier where each part is assigned to the performance of some definite function. In the decorative system the pier also becomes composite, but in a different manner. The corners of the pier, for instance, may be chamfered off so as to form an octagon, or cut out as at St. Lawrence, Kent, and ornamental shafts inserted (fig. 38), thus giving a sense of lightness to the whole. Later we find these ornamental shafts arranged round the octagon formed by cutting off the corners. The octagon may become a circle. In the decorative system the change begins with the shaft, and the abacus remains square, and, in any case, the detached shafts have no direct connexion with the load above. When both load and support become very complex, the eye is sufficiently satisfied with the complex support for the complex load, without logically following out each subordinate part. The carpal and metacarpal bones in the beauty of the human anatomy may be taken as a parallel. The bases are generally set on a square plinth, often with an ornament to fill up the angles. The commonest form of moulding is a hollow below a round (fig. 39).

There are three types of capital: (1) a pseudo-classic, a sort of debased Corinthian or Ionic, much commoner on the Continent than here; (2) a cushion-shaped capital which seems an original invention; and (3) the scalloped capital, a type derived from the cushion variety, which, in its turn, has important influences upon the next period. The abaci is always square, first with plain cham-

It is not treated with the elaboration of the door. Some later Anglo-Norman windows show rich decoration on the outside, but it is interesting to notice that, whereas the door becomes a less important member as Gothic architecture advances, the window gradually becomes the most important of all.

In the roof we reach the most complex and most interesting feature in Gothic architecture. It has even been said by some that Gothic architecture is nothing more than the art of building stone vaults. This, of course, is ridiculous. In the early writers, such as Rickman, whose work still remains one of the most interesting on the subject, wrote of Gothic architecture with hardly any reference to the vault at all. There is certainly enough that is distinctive, and shows the whole spirit of the thing, without taking notice of the vault. Gothic architecture is not the mechanical treatment of any one feature, neither the vault not the business, nor even the window, which probably, after all, is both more influential and more characteristic than any other single feature. It is not even a question of mechanics; Gothic architecture is architecture—a truism, one would have supposed; it is neither engineering nor building as some writers would have us believe. Hence it depends fundamentally upon aesthetic principles, which, so to speak, set the mechanical problems for the mechanics to solve, and the latter are only made easy by the former. Of course any one is at liberty to define 'Gothic' as he pleases; but to deny the title to such a building as Eltham Palace or St. Peter Mancroft, Norwich, is so to circumscribe the sphere of inquiry as to make it, of comparatively little importance. It is a primary and more fundamental question to find what is the root principle common alike to Crosby Hall, Exeter Cathedral, and Notre Dame, and differentiating these buildings from St. Sophia and St. Stephen's, Walbrook, than to find what differentiates them from each other—not that this latter inquiry has not great importance within the larger sphere.

A full discussion of the vault would be impossible within the limits of this article, but it may be thus briefly summed up. In early days it was more common to find an open-timber roof, but a desire to give organic unity to the whole conception, coupled doubtless with the advantages of greater security against fire, led to the gradual substitution of the roof of stone. This we find first in the aisles, and then over the wider spans, such as the great English Chapter Houses, some of them 40 ft. wide, or the high vaults over the nave of the great churche. The vault was almost always covered by a wooden roof to protect it from the weather. This is to some extent a false construction, which is at variance with the ordinary methods of the Gothic architects. But there are a few examples of true stone roofs in this country,—the Treasury,
Merton College, Oxford; Willingham, Cambridge; Minchinhampton; Roslyn; and Bothwell.

The simplest form of vault is the plain barrel or waggon vault, which gives a great continuous thrust throughout its length, and therefore requires a very thick continuous wall. The effect is gloomy, because the lighting problem is difficult of solution. Large windows are impossible in a wall bearing a continuous thrust, and sloping windows in the vault are both weak and ugly. If a window is put in the vault, it is a natural step to carry up the vertical surface of the wall below, as we see in Byzantine architecture (fig. 25). This at once suggests the treatment of intersecting barrel vaults, which is constantly suitable for the vaulting of a square space, A, O, C, being the square of intersection of two half cylinders of hemispherical section, corresponding to A', O', C' (fig. 41, I and II). This form of vault was used by the Romans, and the tradition never completely died out; and this vault, the ribless quadruparte vault, as well as the simple barrel vault, is used by the early Romanesque builders, as in the castle at Oxford.

The intersection of two cylinders is not a circle, as in the case of intersecting spheres (see p. 701), but an ellipse. This elliptical line of intersection is termed the groin of the vault. Directly the space to be vaulted is not square, difficulties arise, and as long as semicircular vaults are used they will not intersect at the crown at all, as the vaults are of different height (fig. 41, III). It is therefore necessary to bring them to the same height, which may be done by stitting the narrower vault, that is, raising it on two vertical walls that serve the purpose of stils. This may also be helped by using less than a semicircle for the larger vault.

But, in any case, the groins will become twisted in plan, as may be seen in fig. 41, IV and V. In the narrow vault it is obvious that any point in that vault, up to the height of the stilt, must be vertically above the line CB. Any point, therefore, being on the line of intersection of both vaults, must be vertically above the line CB. The greater the distance above the side CB, until a height above A is reached. On the other hand, in the bigger vault, there is no vertical portion, and it curves gradually away from the side BF at the outset; the groin, therefore, will tend away from above BF, but keep close above CB. When the top of the stilt is reached, however, the narrow vault curves rapidly over to the other side, but the larger vault continues its gradual curve, so that the groin now crosses rapidly over to the other side, and then keeps similarly close above GF until it reaches G. In actual building the curve is generally coaxed a little, so as slightly to reduce the violent break in the line, as seen in the plan above, but in any case it is excessively ugly and weak, as the weight of the vault rests upon the groins. By making the vaults enormously thick and filling in the back with concrete, until the whole becomes one solid mass for some way up the vault, the weakness is counteracted, but it means an undue weight upon the walls and supports.

Now the great invention of the Gothic architects was the substitution of another principle. So far the vault has been regarded as the intersection of two continuous cylindrical tunnels, and the groin is merely the line of intersection. At any point along the vault we have, say at ML or HK (fig. 41, V) a section of a perfect cylinder of the groove of the groove, however, we saw was not in a plane, but twisted. The invention is to build the groin regular (i.e. in a plane), and then accommodate the vaults to fit the groin, which is made in the form of a strong rib to support the whole. The vault is built by first erecting a series of arches of regular shape (i.e. in planes), not twisted, to form the ribs. The short ends may be stilled, the diagonals segmental, and the broad ends semi-circular, so as to be of equal height. The vault itself is then built, as a light shelf, resting on these ribs. This shelf is built in courses, as NP, PR (VI), which are practically straight, but very slightly arched to the ribs upon which they rest. The consequence is that the shelf must follow the curve of the groin ribs, it cannot itself be part of a regular cylinder; and as before the diagonals were twisted to suit the vault surface, now the vault surface is twisted to suit the diagonals. The result is a curved surface very much resembling that of a ploughshare.

The ribbed vault—and by ribbed vault is meant a ribbed shell vault upon the above principle, i.e. one which is structurally based upon the rib curvature—is perhaps the most distinctive invention made by the Gothic architects. Ribs may occasionally have been used in earlier days to strengthen the groins of vaults, based upon the curvature of the vault surface, but this is not the Gothic vault. There is no doubt that the earliest vaults of this type of which we have any knowledge are those of Durham Cathedral. Such were the high vaults of the choir begun in 1093. The earliest properly attested date in France is, at the very least, more than thirty years later.

* The whole discussion of these dates, with regard to England and France, is given in Dibdin's able little book, Beginnings of Gothic Architecture (1859). No other writer approaches Dibdin in his thorough grip of his subject. A short résumé of the subject is given in the present writer's book now in the press (Fairlains & Co.).
As to the cause of the compartments assuming the rectangular form instead of the square, it can hardly be questioned that the primary reason was aesthetic and non-mechanical, as the great English Chapter Houses, with spans of 40 ft., where there were no structural considerations, are so built. The invention of the pointed arch made to the vista, and the beauty of the apparent length thereby gained, quite apart from any principle of unified complexity, are sufficient to account for it (fig. 42). The French continued to use the square vault for a long time, taking two compartments of the aisle to one of the nave, even inventing the sexpartite vault (fig. 41, VIII) to get over the difficulty before finally following the English lead. The introduction of the pointed arch into the vault followed not long after. It offers an aesthetically more pleasing solution of the problem of vaulting over a rectangle, at the same time preserving the level crown, than does the stilted arch (fig. 41, VII). The pointed arch in every rib gives a far more satisfactory sense of aesthetic unity than the mixture of segmental and stilted arches, and it also reduces the ploughshare twist.

The pointed arch was used by no means solely in order to keep the level crown over the different spans, because in France the domical vaults, used when the ribbed system was introduced, continue even after the introduction of the pointed arch in the vault, and there is no attempt to make the crown level. Nevertheless, the fact that pointed arches of the same height can be erected over varying widths (fig. 41, IX) is one of their many advantages, as we may see in numbers of transept crossings, e.g. St. Bartholomew's, Smithfield.

An interesting variant of the sexpartite vault, which we might term quinquepartite, occurs in the aisle vaults of Lincoln, which is an ingenious and more justifiable use of the principle, as there are two windows on one side and only one opening on the other (fig. 42).

The origin of the pointed arch is another of those unsolved problems, but it occurs in the East long before it is found in Northern Europe. It is even found in Roman work—in the bridges of Severns in the Levant. It was certainly in common use in France earlier than here, although an example is found at Gloucester (c. 1090), of which Bilson gives an illustration. The pointed arch cannot be considered a specially Gothic feature, being found in various Eastern styles; and, moreover, many buildings where it does not occur are obviously completely Gothic in feeling.

In connexion with the ribbed vault appears the other great invention of the Gothic architects, namely, the flying or oblique buttress, where the buttress, instead of descending vertically to the ground, is carried obliquely upon an arch over an intervening space. This enables the abutment of the high vault to be carried across the aisles. The beginnings of this are seen in the semi-barrel or half-barrel vault of Gloucester (c. 1090), strength-
On the exterior the lofty spires of these two periods are the most distinguishing features.

The decorative sense develops and shows itself in every member. Three great types of pier make their appearance—the South-Western, the South-Eastern, and the Northern. The South-Western type is formed by triplets of shafts attached to a central core and ranged regularly round it (Pershore, fig. 45). It is probably directly derived from the Anglo-Norman composite pier. But it makes little difference before it and drives back the Northern, so that during the 13th cent. (Early English period) it practically becomes the type of the period, and is found, for instance, as far north as Durham. The Northern type, e.g. Roche and Sweetheart (fig. 45), is a composite pier of several shafts all united in one, without a central core, and seems to have originated from such forms as we see in Bishop-Auckland Castle, York crypt, Durham galilee, or Selby triforium. In these cases there are a number of separate shafts not grouped round a central mass. In the Northern type the composite pier is built up in horizontal courses, and the shafts composing it are therefore not continuous.

For a time the South-Eastern type carries everything before it and drives back the Northern, so that during the 13th cent. (Early English period) it practically becomes the type of the period, and is found, for instance, as far north as Durham. The Northern type remains supreme, as long as Gothic architecture lasts, and is found all over the kingdom. A very beautiful example occurs at Grantham, with the fillets particularly common to this type. In the same church is an early example of the South-Eastern type (fig. 45).

The commonest base in the 13th cent. is characterized by the water-holding molding (fig. 47), developed from the so-called Attic base (fig. 2, ARCHITECTURE (Greek)). In the 14th cent. the hollow, filled with water-holding molding, the lowest member often overtopping the plinth. The English capitals are distinguished from those of the Continent by the characteristic boss, which in English work is almost always round, and in the thirteenth century consists of a roll and fillet deeply undercut, and in the 14th of a scroll molding. The neck-molding is generally a plain astragal in the 13th cent. and a scroll molding in the 14th. Those capitals that have features marked in the 13th cent., by a beautiful type, apparently derived from the scallop capital (see fig. 46), and very different from the French type derived from the classical capitals. The English variety, which we may term stiff-leaf foliage, is generally said to have the same origin as the French capitals, being derived from the classical volutes; but a careful examination of the capitals of the West Country and the North, where the national style has its origin, has led the present writer to the above conclusion. Doubtless the Continental variety was not without its influence; but not only does the other derivation explain the general form more satisfactorily, with its stiff-leaf and without the lower band of foliage found in French work, but it also explains another peculiarity of the English capital. The English foliage tends to twirl round the capital instead of standing out from the centre as in Continental work.

In the 14th cent., although the forms are some-
times exceedingly beautiful, there is a distinct artistic decadence. An attempt to be true to nature results in being untrue to the stone material in which the artist is working—a much more serious fault. The forms are ill adapted to stone, and, moreover, instead of growing up from the neck, are twined round like a harvest festival decoration, and have no part in the organic unity of the whole.

The arches are pointed, and with numerous moldings, of which those in fig. 49 are typical. The Early English moldings are marked by freehand drawing, and numerous independent members, separated by deep hollows, e.g. Peterborough. Characteristic members are the roll and fillet and the pointed bowl. Decorated moldings are set out by the compass instead of being drawn freehand. The fillets on the triple roll and fillet are set differently. The ogee curve makes its appearance, and a three-quarter hollow often marks off the orders of the arches (fig. 49). Up to the end of the 14th cent. the orders of the arch are generally clearly distinguished.

The development of the window is a long story, whose course can only be briefly indicated. The normal early Anglo-Norman window is a square with a semicircle over it. This tends to become longer in its proportions, and the process continues after the introduction of the pointed arch, producing the so-called lancet window, until such extreme examples are reached as at Bottesford, which is 8 in. wide and 15 ft. 6 in. high. The natural result is to group windows together, one being insufficient for lighting purposes (fig. 50).

In the gable end the normal arrangement in the first half of the 15th cent. is three windows, the central one raised to fill the gable. At first the windows are quite distinct; then a common hood mold gradually draws them together, and finally includes them under one arch. The small spandrels are first pierced with various shapes and finally cut out altogether, and then cusped as at Cirencester or Peterborough Cathedral. But this pushes all the ornament up into the extreme head; and it is perhaps the two-light window in the aisle, which follows suit, that tends to the filling with tracery of the whole head of the window above the springing (see examples in fig. 50).

We thus pass from the lancet period to the first tracered period, which has been called the Geometrical period. This is a most misleading name, as it implies that the curves of the next period are not set out with a compass. Although at first glance they may not appear to be parts of circles, they invariably are. The real distinction is between curves of single and double curvature; and the first period may be described as composed of independent figures—curves, curvilinear triangles, and squares (not spherical, of course), quatrefoils, trefoils, etc., filling the head of the window. The terms Simple and Compound would be short and self-explanatory.

There are three main types of Simple or independent-figure tracery. In type I. (fig. 51) the circle or other figure rests on two sub-arches. The points of the sub-arches projecting below the central ornament are objectionable, and probably are this cause of type II. making its appearance, in which the outer curves of the sub-arches coincide with the curves of the window arch. It should be noted that type I. does not disappear but continues to be used, and this is the case all through the development of window tracery; a new form does not entirely ousted an old one. The objection to type II. is that it tends to push the ornament too much into the head of the window. In all cases the sub-arches may intersect or be separated from each other. Type III., which is really a three-light develop-
great discoveries—was to omit the points, and continue the curve of the sub-arch into the curve of the circle. Thus is obtained a curve of double curvature or an ogee curve. The other side of the sub-arch is made to correspond, and we have a circle supported on ogee arches (fig. 52, A). The bottom and top of the circle then disappear, leaving us the completed type I. of the Compound period. This develops on lines similar to the independent-figure period with a second and third type (fig. 52).

The vaulting continues to develop. First, in order to reduce the purlin-share curvature, resort is had to elliptical ribs, involving a most difficult and complex problem in the setting out and erection of every vault. This is superseded by pseudo-elliptical vaulting, where, instead of a true ellipse, an approximation to the ellipse is made by parts of circles, which join at points where the tangent is common to both circles, so as to avoid breaks in the curve (fig. 53). The line of the pier or shaft from which the vault springs is also tangential to the arch curve.

It is difficult, and indeed inadvisable, to try to assign any particular date or period for the summit of Gothic architecture. In many points it continued to advance down to a very late date, more particularly in the development of towers and of the vault, but the decorative foliage certainly declines after the 13th century. For beauty of lighting nothing equals the so-called lantern churches of the 15th cent., but the window itself is perhaps at its best in the 14th. It is so with all arts; decadence does not come suddenly throughout the whole, but shows itself here and there, while the main trend is still forward. It would be much easier to assign a definite summit to French than to English architecture. In France there is a more or less definite single effort culminating in the 13th century. In England there are continuous new impulses: vault, wall, pier, foliage, window, and vault again; each in turn seems to play the leading part.

As said at the outset, the French and English styles are entirely different. A summing up at this point of a few of the differences between the plan of a great English and a great French church may show that it is surprising, not that they are now seen to be different, but that any one ever thought they were the same.

The English church is long and narrow with three naves. The French is short and broad with five aisles.
The English West Front is broad. The French West Front is narrow, in Notre Dame narrower even than the nave.
The English transepts project enormously beyond the main lines, and often the English church has two or three of these.
shut off from the nave, being largely the result of monastic influence. It has no side chapels. The French church is broad and open throughout, with a short choir, largely the result of lay influence, and has numerous side chapels dear to the laity.

The four enormous central piers in the English church show the central tower that dominates the whole. The French church has great Western towers, but nothing, or merely a 'flying,' at the crossing.

The English church is cut up by screens and divisions. The French church is open (figs. 55-58).

The interior of a French church is hard to surpass. It is exceedingly lofty, which gives it a most impressive character. The internal effect of the chevet is often exquisitely lovely, and the grace of the proportions as a whole, width of bays, and width to height, is in every way admirable.

The English church in its interior depends for its impressiveness upon length rather than height, except where modern folly, as at Norwich, has planted an enormous organ that entirely destroys the whole raison d’être of the building, completely (not partially) blocking the vista which would be, in its way, perhaps the finest in the world. Both English and French effects are delightful, but perhaps the French is the finer. Yet there is no reason why they should not be combined.

But with regard to the exteriors there is no comparison. The English here loses something by want of height. (Visit Chartres, Amiens, and then Lincoln within two days of each other, and the result will be startling.) But the dominant central tower, the wonderful skyline, together with the tower-groups, the grand projecting transpents and fronts, with their fine shadow effects, make the French examples look in comparison a shapeless mass. Where there is a narrow tall twin-towered front, there is an unpleasant effect of an over-weighted end suggestive of a giraffe. The Franco-

(d) The Decline of English Gothic.—The last period of English architecture is marked by rectangular forms and horizontal lines, and is generally called 'Perpendicular.' This word in most minds is so closely associated with vertical, that 'Rectangular' is a more satisfactory name.

Roofs become nearly horizontal, tops of doors and windows and all the arches follow the same tendency. There is often an actual straight horizontal line, strongly emphasized, above these features, particularly in the case of doors. Horizontal topped towers take the place of spires, horizontal transom bars appear in the windows, and horizontal topped panellings, instead of niches, occur all over the walls. Even the foliage and other ornaments become rectangular in form.

The Early English period was an age of Ecclesiastic reform, and the work of that period is marked by a certain ecclesiasticism in its planning and arrangements. The Traceried period of the 14th cen. is the age of the great nobles; the very ecclesiastics themselves aped the pride and pomp of worldly splendour and the churches, with their private chantries and heraldic ornament and such things, partake to some extent of this character, as Mr. Prior points out (History of Gothic Art in England, 1900). The people, too, are beginning to assert themselves. The worship of Our Lady being particularly the cult of the people in England, we find the Lady chapels being built all over the country, in most instances actually at the east end, and approached from behind the high altar. The ecclesiastic privacy of the monastic choir perforce disappears. During the Wars of the Roses, the great barons gradually vanished, and the trading classes made their influence felt. This is the age of the guild chantries, and above all of the parish churches of the people. The large proportion of our parish churches belong to this date, and are built in the rectangular style. Hardly a single great monastic church or cathedral was built at this time, although, of course, there was a certain amount of re-building and enlargement. The chantries and other extensions affect the plans of the churches, and tend to obscure all transeptal projections.

The piers still belong to the Northern type, but incline to become meagre in their treatment both in section and in their capitals and bases (fig. 59). The S-shaped curve under the chamfered abacus is characteristic, as is also the curious cushion mold-
run right round the arch without a stop. Foliage when found is rectangular in treatment (fig. 59). The arches above show the same attenuation in the treatment of their moldings, and the distinction between the orders of the arch is often quite lost. The most characteristic feature is the cavetto, a deep hollow in the middle of the group (fig. 59). A drop arch, as it is called, gives the flat crown, but produces a broken effect where it springs from the shafts (II, fig. 59).

The triforium, owing to the horizontal tendency in the roofs, practically disappears and becomes a mere band of ornament. The window gradually becomes a series of rectangular panels, partly as offering increased strength for the vast windows that become common, partly to further the easy arrangement in the glass of rows of saints standing in niches. The vertical lines at first appear timidly in the head of the window, then ascend from sill to crown, and finally even cut across the tracery sub-arches (fig. 59).

The vault still continues its development until we reach the wonderful fan tracery characteristic of this country. The multiplication of tiercerons seems to have suggested a polygonal form for the vault conoid, and from this to a circle is easy, break with the lines of the ribs. It is probably this that led to the introduction of the four-centred arch, which allows the line of the ribs to pass imperceptibly into the central space (fig. 60, Windsor).

This is very satisfactory for a vault over a square, but the problems of satisfactorily vaulting a rectangular space began again. The most complete solution is by the Oxford arches of the Divinity schools and the Cathedral, which are not true fan vaults (fig. 61); and the same principle, somewhat meretriciously carried out in a true fan vault, appears in Henry vii's Chapel, Westminster. The principle is practically that of dividing up the rectangular space to be vaulted into a new nave and aisles, as it were. The springings of the vaults are then supported upon great transverse arches thrown across the whole space (fig. 60), and a square compartment is obtained in the middle, which is easy to vault, and the small minor compartments can be treated by some other method. In the case of the Cathedral at Oxford they are very effectively treated as barrel vaults.

![Fan Vaults](image)

The influence of domestic architecture upon that of the church is a subject of great interest which has hardly yet received the study that it deserves. In early days many of the problems were first worked out in the Norman castles. Later, the domestic window with its transom bars and the beautiful open timber-roofs of the great halls had considerable effect upon church architecture. Of course, the plans and arrangements are different, but the spirit of the two is the same. Sometimes, as, for instance, in Belgium, the greatest achievements are in civil architecture; and although the bulk of these buildings in our own country have perished, such examples as the small Town Hall at Cirencester have a charm quite equal to that of the churches. But in any case, whether the building is for the Church, the State, the Borough, or the private individual, the artistic qualities triumph over the special difficulties involved in the particular instance, and the series of buildings—castles, cathedrals, halls, palaces, and churches—is as noble as that in any style.

**Renaissance Architecture.**

When, at the time of the Renaissance, men's minds began to turn back to the glories of the classical epoch, the result was naturally seen in architecture as in everything else. It was also natural that the beginning of the architectural change should be in Italy, as was the case in other departments of the movement, particularly in view of the large number of actually existing remains upon Italian soil. The development, however, was considerably stimulated by the discovery of the manuscript of Vitruvius Pollio, the architect of Augustus, who wrote the *de Architectura*. This famous treatise, in ten books, upon the architecture of the Augustan epoch, was translated into Italian in A.D. 1501. In spite of the impetus thus given to
the study, it would appear to have been by no means entirely beneficial in its results. Vitruvius seems to some extent to have been the Palladio of his day. He left a part in a cut and by tried and somewhat lifeless manner, which was not without its effect upon his followers of a later generation. It is true that Vitruvius' work was drawn chiefly from Greek sources, although these were probably very scanty, and we must always remember that in the main, Renaissance architecture was founded not upon the Greek but upon the Roman style—a style itself a hybrid and full of solecisms. Many of the criticisms that are brought against Renaissance work apply equally to that of Rome, in such instances as the profuse use of meaningless decoration, and the unintelligent application of features imperfectly understood, e.g., the architrave that supports no ceiling, the incomplete drums, or drafted stones copied from unfinished Greek work, and chopped off sections of entablature, as in the church of St. Spirito, Florence.

It may be said that Brunelleschi, the Florentine, was the first great architect of the Renaissance. He produced a plan for the building of the dome of the Cathedral of Florence soon after A.D. 1407, which was eventually carried out. The spread of the style in Italy was extraordinarily rapid. The cause was largely that the style was new and, in a sense, style was never firmly established itself in Italy: indeed, it may practically be said that it never penetrated to Central Italy at all. Even in Florence such an example as the famous campanile of Giotto has hardly anything of the real Gothic spirit, in spite of the applied Gothic features and ornament. It is not the living organism of Gothic structure and ornament, but a simple rectangular block with an elaborate veneer of surface adornment. The Italian church was still a Christian church, it had a motive, and it was natural that the Italian mind should turn whole-hearted toward a style which it had never in essence entirely abandoned.

From Italy the movement spread throughout Western Europe with varying degrees of rapidity, and was strenuously fought by the architectural traditions of the lands into which it made its way. The Renaissance style made no headway in the East, because for the Greeks, whose art was one of the most cultured people of Europe, were at this time overwhelmed by the Turks. In fact, the sack of Constantinople in A.D. 1453, although it was the final blow to Greek civilization in the East, scattered the Greeks over Western Europe, and very largely made the Renaissance what it was.

In the case of any revival or Renaissance style, it is always more difficult to make a division into periods than in the case of a style of true growth; because, in the first place, the individual fact is stronger, depending upon study and research, and also at any moment fortuitous circumstances may combine to make a particular building a more complete representation of the old style. But it may be said that Renaissance architecture was, no means wholly a "re-naissance"; it was in many respects a living style. And it may be noticed that it did pass through three more or less clearly marked stages although these were not considered both in manner and in date in different countries. The first period is marked by a distinctly Gothic tendency, besides showing a comparatively limited knowledge of the nature of ancient work.

The second period, the period of maturity, shows a much greater knowledge of classical detail and arrangement, and is marked by a much more definitely classical spirit. The picturesque irregularities of Gothic planning and elevation gives way to a precise and calculated symmetry. The style reaches its zenith and exhibits itself in many of the world's noblest buildings, although the lover of Gothic architecture will always feel a certain coldness about them, and the lover of Greek architecture will be repelled still more by their lack of spontaneity, subtlety, and delicate restraint. In the work of the second Spanish period there is a certain restraint, it is true, but it is rather a formal coldness, and does not resemble the reserved but intense passion of Gothic work. The nearest approach to the true Greek restraint is in the best work of Florence. It is to this second period that we have to look for the true work of the Renaissance. It is here that we learn what are really its characteristics. The first period is but one of transitional preparation, and the last of over-ripeness and decay.

The third period, sometimes known as the "Rococo," is marked by exaggeration, ostentation, and a still more mechanical application of rule, which proceeds side by side with a tendency toward slavish reproduction of ancient work. The latter tendency resulted in what is sometimes called the "neo-Classic revival," doubtless hastened as an antiphone to the extravagances of the Rococo.

1. In the first period, then, the new style was fighting its way. Even in Italy, although the architects themselves were probably completely unconscious of the fact, the influence of Gothic work was evident. And the Gothic influence for a long time remained paramount, and the period of transition was enormously prolonged. In France, even in late Renaissance days, when Wren was building in England in a severely classical style, the high roofs and other features betray a Gothic origin.

In Florence, although the classical orders were used, they were very much subordinated, and in comparison with later work their use seems timid. Their actual scale was small, and this also was the case with the ornamental features which are characteristic of Gothic work. There was still a tendency towards that multiplicity of parts which characterizes Gothic feeling. Windows are generally round-headed, often with sub-arches in the typical Gothic manner, and occasionally they even contain a sort of tracery, especially in France and Britain (fig. 62). Even pointed arches are used, particularly in Venice, as in the Doge's palace.

FIG. 62.
occasional square blocks in a round column—a device that even the most extreme admirer of Renaissance work does not attempt to defend. This, however, does not appear until the style is more or less advanced. It becomes common in France during the reign of Charles IX. (A.D. 1560-1574). Rustication was never popular in Venice, where there had always been a certain true Gothic feeling, mingled with Byzantine, which was distinctly opposed to anything Roman. Indeed, it was doubtful partly a survival of this feeling that caused the Renaissance style to be reluctantly adopted in Venice only when the 16th cent. was well advanced. A rather charming device common in Venice at this period may at this point be noted, namely, the so-called shell ornament (fig. 62).

Another objectionable feature, apparently first used by Alberti in St. Maria Norvelia at Florence, in A.D. 1470, is the inverted console placed above the aisles. Presumably it may be regarded as the successor of the flying buttress of Gothic work, but it is utterly unfit to perform any function structurally or aesthetically. A curve suited for a small decorative bracket becomes ridiculous when applied to a feature of the main composition over a score of feet in length (fig. 63).

On the whole, it may be said that, although many churches were built in Italy during the Renaissance, partly as a result of the counter-Reformation of the Jesuits, in the North the Gothic epoch had more than supplied all the churches that were required. Hence, religious buildings in the North, particularly during the first period, are comparatively rare, and it is only in such instances as the churches of London built after the Great Fire that there is anything very extensive in the way of ecclesiastical work. It was rather a palace-building epoch, such as is shown in the great château on the Loire, of which the Château Chambord may be taken as typical. In the North, Renaissance architecture made its way very slowly, at first appearing only in minor accessories such as altars, tombs, pulpits, doorways, and occasional enlargements, as the apse of St. Pierre at Caen. When the main fabric itself is attempted, the result is a building entirely Gothic in planning, arrangement, and construction, and the surface ornament merely is of the classical type. Pilasters take the place of buttresses, and cornices the place of corbel tables, and so on, as, for example, in St. Eustache, Paris—an excellent specimen of the first period of Renaissance work in France. In Britain, although Inigo Jones and Wren introduced a pure classical style earlier than anything of the kind in France, this transitional feeling continued in certain districts very much longer, particularly in Oxford. As late as 1648-1652 the charming little church of Berwick-on-Tweed affords a most pleasing instance of the fusion of the two styles.

In the South of France much of the work was done by hands of travelling Italians, who have left a considerable impress upon the minor features of the period in that district. In the main it is true to say that French work of the time of Francis I. (1515-1547) is marked by a special elegance which is peculiar to itself. It is doubtless the outcome of the elegant French-Gothic acting upon the Renaissance style, and applies especially to domestic examples. In England the Early period, which may be said to cover the reigns from Henry VIII. to James I., may be divided into two. The earlier part, from the close of Henry VIII.'s reign to the death of Edward VI., is marked by Italian influence, as in the case of Torrigiano's tomb made for Henry VII., and the later part is marked by Flemish and German influence; but throughout the whole period everything is tentative and experimental.

2. In the second period we have the matured Renaissance style, when buildings were classical not only in detail, but in spirit. This may be said to have been inaugurated in Italy when in A.D. 1566 Bramante commenced the church of St. Peter's in Rome, a date which was about contemporaneous with the very first beginnings of Renaissance influence in Britain.

In this second period the picturesqueness of Gothic planning almost entirely disappears. It is, however, to be noticed that the great cross plan of the large churches, although carried out in a severely symmetrical manner, is the indelible impress of the Gothic hand upon the succeeding age. Even St. Peter's itself is so planned. Not only so, but in the case of both St. Peter's, Rome, and of St. Paul's, London (figs. 64, 65)—the two greatest buildings of the style—the more severely symmetrical plan of the Greek cross, as designed by the architects, was altered to the long-naved Latin cross in deference to Gothic tradition. Both churches suffered by this arrangement, St. Peter's very seriously.

The orders in this period are no longer used in an unobtrusive manner, but become, except
ARCHITECTURE (Christian)

perhaps in Florence, the main feature of the style, although, as in ancient Roman work, they are generally little more than mere ornament unrelated to the anatomy of the building. They are generally treated on Roman lines; but there was considerable latitude, the shafts occasionally being even fluted spirally, or wreathed with bands of foliage and fruit, or worst of all, broken by square blocks. The Tuscan order becomes clearly defined in Renaissance work as a separate order. In Spain a new kind of capital appears, termed the ‘bracket capital,’ in which two or more brackets spring from the head of the column. It has the advantage of reducing the strain on the architrave.

FIG. 65.

In the best designed work one order is used for each storey; and in France this arrangement was practically universally observed. This was owing to the supreme influence in that country of Barozzi da Vignola, author of The Five Orders of Architecture who had been brought back to France by Francis I. But in Venice Palladio introduced a system wherein one order ran through two or more storeys, minor orders being introduced in the storeys themselves. This unsatisfactory arrangement, which still further degraded the orders as mere applied ornament, unfortunately became popular in Britain, owing to the influence of Palladio, who was the inspirer of Inigo Jones.

One might even make a division of Renaissance architecture according as the orders of the windows formed the main element of the wall design. The latter is distinctly more Gothic in feeling, and is found more particularly at the beginning and end, before the Gothic art had quite disappeared, and after the Renaissance had spent its force. To some extent the division would be one of locality. In Florentine work the order is always less dominant than in either the school of Rome or that of Venice, and this distinction may also be noticed in those countries respectively influenced by these schools.

The column itself frequently bears the arch, particularly in early work, although the more usual arrangement is a massive pier with attached pilasters. Occasionally the unpleasant device is used of a section of entablature above the columns from which the arch is made to spring.

The moldings of the orders and other parts were the simple circuit section of Roman work. The great series of receding moldings on the arches of Gothic architecture were replaced by square soffits; and string courses and moldings generally become comparatively scarce. Effect is given by strongly marked entablatures dividing off the storeys of the building, and altogether horizontal features become very pronounced. In Italian and particularly Florentine work, a great cornice of very large proportions is often used on the top storey, suited in its size to the whole height of the building and not merely to the storey in which it occurs. This on the whole gives a pleasing effect with its marked shadow line.

The ornament is founded upon classical Roman work; but in the best Renaissance examples, especially in Florence, it is more refined. It should be noticed that Renaissance carving was almost invariably executed after the building was set up. In Gothic buildings every stone was completed before it was put into its place. The result is that the joinings often cut unpleasantly across Renaissance work, whereas Gothic jointing and the carving-designs are thought out together. It is simply one aspect of the principle that the Gothic pile was always essentially a building; the Renaissance pile was rather a monument, treated somewhat after the manner of a picture.

The old Roman ribless vault was revived, at least in form, but a considerable geometrical improvement was made. In the plain barrel form it remained semicircular, but in the case of intersecting vaults over a rectangular space the curve of the vault was made elliptical, so that the diagonal groins might be projected as straight lines upon the plan (fig. 66). It should, however, be observed that in an enormous number of cases the vault was a mere plaster sham, and not part of the construction, as in Roman or Gothic work. All roofs in Italy were hidden within by ceilings, but in France and Germany the open timber roof was made an important feature. The roof is of low pitch, and in the majority of instances so low that from most points of view the parapet forms the sky-line. In France, however, we find the high ‘Mansard’ roof; and in Germany the high roof with tiers of dormer windows is a very common feature. The fact is that Germany never wholly adopted the Renaissance style until long after every other country in Europe, and these high roofs are medieval in character.

FIG. 66.

The glory of the style is the dome, which in its general treatment follows the Byzantine method. There is almost universally a drum, as in the second Byzantine period; but it is made an even more important feature, and very commonly is enriched by a colonnade. It was usual to build these domes with an outer and an inner shell of different curvature and a space between. The outer dome is frequently a mere timber-framed erection, resting upon the other, as in Sansovino’s S. Giorgio dei Greci at Venice, or the outer dome of the Église des Invalides, Paris, which consists of three domes (fig. 66). In this connexion may be noticed the very great use of carpentry all through Renaissance work, which has been compared by some writers to the modern use of iron. St. Paul’s, London, has an outer and
ARCHITECTURE (Christian) 721

an inner dome, with a brick cone between. St. Peter's, Rome, has two brick domes.

Renaissance spires were not of common occurrence save in England and Spain. They seem to have been invented first by Sir Christopher Wren, but the Spanish use is possibly independent. In the second period round-headed windows were less frequent, and square-headed windows, often with small pediments over them, were the rule. The rustication, so common in Florence in the early period, was now generally confined to the corners, as in the Pandolfini Palace designed by Raphael, and more or less freely copied in The Travellers' Club, London. At the same time there was a tendency for all wall space to disappear, and for the whole surface to be covered with an exuberance, and in which the features, the detail and moldings became more vigorous and elaborate, but lacked the earlier refinement.

The Roman method of building had been largely one of veneers. The inner part of the wall was of inferior material, but the outer side was faced with fine stone or more often marble. The Romanesque Gothic had made use of a double wall with a rubble core, derived from Roman use; but this system was gradually abandoned, and in the best work the walls were built solid, or at least all the face stones were bonded into and formed an integral part of the wall. The Renaissance architects realized that this was a better system, and endeavoured to follow it out in their work. At the same time veneers were not infrequently used, and plaster facing was by no means uncommon. This was particularly so in the last period, when panels, cornices, and ornaments even upon the exterior were of plaster—a most unsatisfactory arrangement.

In Italy itself it may certainly be said that there were three distinct schools of the art:

(1) The Florentine, which depended largely on the dome. The chief work of this period is that of the 17th century, with Mansart as the supreme architect. There is less severity, and many curves give a weakness of effect. Orders of varying heights are used, and are often piled upon other orders somewhat indiscriminately.

(2) The Venetian, which was shallower and more pompous, with great ornaments introduced for ornament's sake only. This work has a certain characteristic, and is therefore, less severe, and many curves give a weakness of effect. Orders of varying heights are used, and are often piled upon other orders somewhat indiscriminately.

(3) The Roman, which is midway between the two in severity. It is marked by great plasters of the whole height of the building, so as to give the effect of one storey, and in consequence of this it has had a greater influence upon church architecture. The pilaster and not the column is used, as the inter-columnations upon so huge a scale would make the span of the architrave impossible.

In this period there was a distinct decline, and a great deal of extravagance and affectation, such as broken entablatures, and pediments, and curved and irregular cornices. In Italy there is a peculiar lack of inspiration, and the work of Maderno and Bernini may be taken as typical. One of the most pleasing examples is that of St. Maria della Salute, by Longhena, in Venice (A.D. 1632). Its proportions and general mass are exact; although the details leave something to be desired. Doubtless it owes a great debt to its situation. St. Genevieve (The Pantheon), Paris (A.D. 1755), although greatly superior to most work of the time, belongs to this period. It was built from Soufflot's designs, and is interesting as having the smallest amount of area of supports of any Renaissance church, comparing even with Gothic work in this respect. Compare its plan (fig. 67) with that of St. Peter's or St. Paul's (fig. 68). It has not been successful, however, for it has been necessary to prop and support it several times.

The extravagances of the 'Rococo' in France are even surpassed by the work in Spain generally known as 'Churrigueresque,' after the architect Churriguera, doubtless partly caused by a revulsion from the over-bold mechanical style of such men as Herrera in the previous period.

In considering the Renaissance style as a whole, certain broad characteristics should be noticed. In the first place, there was a very distinct tendency, particularly in the case of its Italian inventors, to view the whole composition as a mass, and proportion rather than as a building. There is often very little relation between the uses of the building and its form. Architecture is an applied art, and therefore, unless it be well adapted to the function that it has to perform, it cannot be a success. But, further, it is not only upon these grounds that so much Renaissance work must be condemned. Even upon aesthetic grounds, in the erection of a monument as distinct from a building, it is necessary that the thing should form an organic whole; and a column which is the outcome of the aesthetic endeavour of many ages to express the beauty of support, is clearly out of place when it supports nothing. The concealment of construction and arrangement is a similar but different question. An enormously heavy lantern, rising above what is apparently a dome of light construction, may, if it is true, be defended upon the grounds that it is obvious that there must be some further support within. The eye would, however, probably be aesthetically more satisfied if there were some indication of this support, as otherwise there is considerable though not absolutely certain danger of the artistic unity being marred. To treat the matter as a moral question is, of course, absurd, and simply shows entire ignorance of the nature of all aesthetic.

ARCHITECTURE (Egyptian).—We shall here deal only with the religious architecture; but as that is by far the greater part of what exists, the discussion will involve most of the known facts. The divisions of the subject are (1) the Materials, (2) the Ground Plan, (3) the Wall and its Decoration, (4) Furniture, (5) Popular features.

I. The Materials.—The materials necessarily condition the style and decoration of all architecture. In Egypt the commonest materials used by the peasant were to their exterior, a mud made of the stalks and stalks, and palm sticks, and palm logs. The simplest huts are made by lashing maize stalks (stems of the durra, called biis) together by means of palm-fibre; the flat screens thus formed are set upright at right angles, and lashed together to form a wall. Where a column is required, a bundle of maize stalks is bound together, from 4 to 10 in. in diameter, and plastered with mud, thus forming an extremely stiff and unbreakable mass. Two such columns are even used in the Invalides of the State, which weighs two or three hundredweight, and is kept continually in swaying motion. In ancient times the papyrus stem was also commonly used, as well as the maize stalk. Mud brick was the principal building material in Egypt in all ages; even in the rainy climates of Syria and Babylonia it was universal, and in the general drought of Egypt it is an excellent material. The mud requires to be mixed with so much sand that the grays shall be almost in contact, and then rain has but a slow effect upon it. Another way of making it durable was to mix it with chopped straw, or even grass roots, which bind it together. The brick is then set in a natural base of mud a few inches thick, and is lashed together at the corners. The palm-stick is used for fences, the tops being left with side leaves to form a barrier to men and animals. The logs of the palm tree are used for roofing-beams, but never for columns.

The materials of the architecture are closely connected with the general features of the architecture. The constant use of a portico or verandah in front of house, temple, or tomb, results from the common use of bundles of maize stalk. The palm capital results

J. B. STOUGHTON HOLBORN.
from strengthening the column with a coat of the hardest palm-bark. Some of these thin tops, were left loose around the capital. The sloping walls of the pylons result from tilting the courses of bricks inward, so as to prevent them from being easily dislodged. In order to save the corners of real huts or brickwork from being another stone gateway, lashed on down the edge; these were the origin of the torus molding marked by diagonal winding bands along the angles of the buildings. The fence, former of palmyra plants, with loose heads, lashed together near the top to a palm-log or post, served as the source of the cavoetto molding with torus roll below it. The palm-log roof is copied in stone in tombs at Gizeh and Abydos. Thus the forms adoped for the site are derived, belong to the earlier materials, as in Greece.

2. The plans.—The plans of the temples vary considerably in different ages. The earlier temples are scarcely known except from the plans of the Osiris temples at Abydos, and the views of primitive shrines. The hieroglyph for a shrine in early times retained the appearance of a plain square hut, with a fence in front of it, and two tall poles at the sides of the entrance. Another form is a hut with a gabled mud-brick wall, probably the one long, before it, having two tall poles at the entrance, and the standard of the deity placed in the middle of the court. The oldest plan of a temple at Abydos is a small temple, no larger than 42 ft. E.-W. and 21 ft. N.-S., with the entrance probably on the north; the wall is about 8 ft. thick. A great temenos wall was built round the site, and a block of store chambers placed at the side of the temple. The plan of the temple was circular, with a space at least 25 ft. wide and 42 ft. long; the entrance is a passage between walls 4 ft. apart and 35 ft. long, facing south. This is probably of the age before the first dynasty. Of the first dynasty is a temple of the same type, 42 ft. E.-W. and 21 ft. N.-S., with the entrance probably on the north; the wall is about 8 ft. thick. This is about 12 ft. N.-S. by 8 ft. E.-W.; it was about 15 ft. wide, probably entered from the north. Round this was subsequently added a stone wall reaching about 6 ft. farther out.

Lastly, in the time of Pepy I., a great reconstruction took place at Abydos. The new temple had the principal door to the north, and a lesser one to the south. The building was of mud brick, with stone doorways; it was 49 ft. N.-S. and 33 ft. E.-W. in the middle hall, or with side chambers 58 ft. wide inside. The walls were 5 ft. thick. From the position of the doorways this seems to have been a peristyle temple, open front and back, for the processions to enter, deposit the sacred lark, and pass out by the other door. The surroundings were also altered. The old temenos wall had a stone gateway inserted, and outside of it, 49 ft. in advance, was built an outer temenos wall, with another stone gateway. A colonnade led from the outer to the inner gate. To this temple Mentuhotep added a colonnade on the eastern side.

Another entire re-modelling took place in the Eleventh dynasty under Sankh-kara. A square of brick, 49 ft. E.-W., and 48 ft. N.-S., held the foundation of a stone temple, probably 44 ft. square. As this mainly overlies the Pepy temple, it was probably entered from the north, like that. The stones of Setebesh, Tacy, and other names, were very grand enough for Senusert I., who pulled it all down, and laid foundations over the pavement of his predecessor. This temple seems to have faced East, as the outside length of it was 133 ft. E.-W. As for processions, the temple was neither for processions, nor for having a statue in a naos. Such are those of Deir el-Bahri,

The great temenos was built around it, 192 ft. distant to the eastward, with a wall 30 ft. thick. To this temple Schekhhotep III. added a chapel and doorway on the south.

The XVIIIth dynasty saw all this re-built still larger. The temenos was 294 ft. long, E.-W.; in it lay the stone foundations were lashed down on the edge; these were the origin of the torus molding marked by diagonal winding bands along the angles of the buildings. The fence, former of palm-stems with loose heads, lashed together near the top to a palm-log or post, served as the source of the cavoetto molding with torus roll below it. The palm-log roof is copied in stone in tombs at Gizeh and Abydos. Thus the forms adopted for the site are derived, belong to the earlier materials, as in Greece.

Another early temple plan is that of Hierakonpolis. This was of a burnt-offering, a type, open back and front. We have detailed these successive temples as they are the only examples that have yet been observed and recorded, showing the growth and alterations throughout Egyptian history on one site. Many secondary details, and the onloring store-rooms, are not noticed here, nor buildings of the XIXth and XXth dynasties which were in adjacent positions, but are too much ruined to be traced. The total result is that there were seven entirely different plans on one site, beside alterations to these. The direction of facing was successively S., N., N.?, N., N.?, E., E., E., E.

Sety I. at Qurneh, Ramess II., Merenptah, and Ramess III.

For noting the various divisions of a temple it is best to take an example, such as that of Khonsu at Karnak, built by Ramess II. The massive pylons lead to the peristyle court, with a single or a double row of columns around three sides. This is the expansion of the human figure or hieroglyph, a court-yard in front of it. Behind this is the closed hypostyle hall, which originated in the hall of the house which had sometimes a single column in it. At the back of this is the actual sanctuary, with stone chambers at each side, and sometimes also behind it. The sanctuary was either a long chamber, with wide doors front and back, and a wide passage around it for processions to pass bearing the bark of the god; or else it was a closed naos containing the statue of the god.

3. The elevations.—The elevations show almost always a slight slope inwards of the face of the wall, which is vertical inside, and thus becomes thinner towards the top. This form was inherited from building in brick. The doorways are, however, always vertical. The overhanging cornice with a roll below it was copied from the loose ends of the palm-sticks left free at the top, the roll being the end of the bent palm-stick, which was lashed. When elaborated, the cornice always has a palm leaf pattern on it. The columns are of various orders. The square pillar without any capital is seen in the temple of Khafra, and in the courts of the XVIIIth dynasty. The polygonal columns occur in the Xth and XIth dynasties. The further transition to sixteen sides belongs to the XIth and XVIIth dynasties. The palm column is apparently the same form from the base to the knoll of the leafy palm-sticks round the outside, with the leafy ends of the palm-sticks left hanging free around the top, forming a capital. It always had a square abacus to carry the weight free of the projecting leaves. The lotus column represents a similar bundle decorated with lotus buds stuck into the hollows of the binding, and a sculptured capital imitating a half-opened lotus flower. The papyrus column is a bundle of papyrus stems, with a sculptured capital copied from the papyrus leaf. The Hathor capital is usually on a polygonal column, or circular in late times, with a head of the goddess on one, or two, or all four sides. In Roman times we find polygonal columns with foreign elements were introduced.

The roof was either of wood, brick, or stone. The earlier little shrines were evidently roofed with the same stems which formed the sides. Brick roofing was certainly largely used for houses and tombs, and probably, therefore, for the smaller brick temples. Barrel roofs 6 ft. across were common in the Vth dynasty, and larger ones up to 13 ft. wide in later times. For stone buildings, roofs of stone were naturally used, either of limestone or sandstone like the walls. But so strong was the influence of brick arching that the roofs are often cut out in a curve beneath, while flat above, thus imitating the Abydos. The earlier stone roofs are very massive. The limestone slabs on the tops of the IInd dynasty reach the size of 20 x 8 x 3 ft., weighing 33 tons. The granite beams in the great pyramid are at least 21 ft. long, 4 to 5 ft. wide, and about 1 ft. thick. The granite blocks were specially selected; the centre of gravity of the block was over the wall, and it would not tend to fall over. The early roofs were often pointed, and on the cantilever principle; the centre of gravity of the block was over the wall, and it would not tend to fall over. The Early Egyptian roofs were generally ribbed, and from 30° to 40°; and with their great depth, as much as 7 ft., their resistance as beams was enormous. In the pyramids there are generally three layers of such beams, one over the other. The roofing of temples was on a similar scale. Deep stone architraves rested on the columns, and large slabs stretched across the passage and chambers; those which roof the axial passage at Karnak are built to a height of 10 ft.

4. The decoration.—The decoration was the life of an Egyptian temple. At first the walls are severely plain; at Medum there is not a single hieroglyph on the walls. At the granite temple of Khafra nothing is seen but perfectly smooth granite and alabaster, without even a moulding. But in the Vth dynasty the Ra temple of Ka-emunu is as richly sculptured as the tombs of that age. The temple walls of the XIth dynasty are very finely sculptured, and sometimes richly coloured (see Koptos and Lebenu). In the XVIIIth dynasty the more complete temples enable us to follow the scheme of design. But it is in a quite perfect temple, such as that of Denderah, that we can see the connections of the scenes with the use of each part. On the outer screens between the columns is shown the king leaving his palace, followed by his khs, and passed by an incense offerer. Then Horus and Thoth purify him, and the goddesses of south and north bless him. Mentu and Atum—of Thebes and Helipolis—bring him before Hather, the goddess of Denderah, while the sun-god Ra, in all his majesty, has taken the peristyle hall. The king is shown sacrificing to the gods of Denderah; and along the lowest line of the wall are the scenes of the founding of the temple by the king, losing the foundation, and presenting the bricks for the building. In the next chamber the king proceeds to worship the gods. And on reaching the sanctuary itself, the king is shown ascending the steps to the shrine, removing the sacred symbol from the top of the doors, opening the door, gazing on the goddess, praying to her, cleansing the sacred bars, and worshipping before the barks. Finally, he presents the image of truth to the goddess. Thus the decoration all has its purpose as an outline of the ceremonies proper to each part of the temple; it is a kind of ritual and rubrics in stone, like the scenes and figures of the early tombs, so that eternally the king should be considered to be performing the divine service in a temple.

Apart from the ritual decoration, there were many details of customary ornament. The palm-leaf cornice we have already noticed. On the screens of stone between the columns and the tops of shrines, a cornice of uroil was often placed. Such was originally proper to the judgment-hall, the deadly uroil serpent being the emblem of the right of capital punishment. A favourite combination was the disc of the sun, the uraei in front of it, a vulture's wings at the sides, and ram's horns above it. This represents Ra, in three aspects, as Creator—the ram's horns belonging to Khnum, the creative rain god; as Preserver—the vulture's wings spread out being the emblem of maternal care; and as Judge or Destroyer—the serpent being the sign of judicial right. Where the disc is shown over a king's head, it is often seen with the cornice, and the healthy, long, slanting neck, the projectoing head, and the rings of hair. The vulture's wings spread out being the emblem of the right of capital punishment. Similarly the heads of boars, the emblem of the Nubians, are shown in front of the sun-disc and the ram's horns, the cornice of uroil. The disc is sometimes drawn to judge by the ribbed green tiles; it often appears in later times, and was usual in the Ptolemaic and Roman temples. Similarly the ceilings are covered with a dark blue ground, spangled with
golden stars. The stars are always five-rayed; and the representation of stars with rays suggests that the ancient Egyptians were short-sighted like the modern, for stars appear only as points of light to long-sighted eyes.

Of minor decoration there is a very ancient form in the figure of a door surrounded by panelling, which became the emblem of the tomb entrance, and is often shown painted below the sacred hawk. Thus the design of the king is always written about such a doorway. The very elaborate coloured patterns of the panelling on examples in the Old and Middle Kingdoms should be noticed. The small square panels are probably an imitation of a woodwork screen built up of small pieces. Such construction was requisite in so dry a climate, where wood warped and shrank so much, and only small pieces could be trusted to keep their form. The medieval Arab woodwork met this difficulty in the same way. Another decorative use of wood was in the open-work carving of a pair of lotus leaves tied together, or a group of lotus signs, which formed a fretwork over the ventilating holes in the hypostyle hall. The hanging of wooden screens was inserted to steady the framing of chairs and tables by fretwork groups of hieroglyphs, as the girdle tie of Isis, the daed, the ankh, and other signs. Such furniture work passed on into stone decoration. Small sculptured wall decorations had a great part in Egyptian life. Every festivity, every sociality, was a field for floral ornament with wreaths, garlands, and streamers of convolvulus; every refreshment was floured over it and round it, and every group of offerings on an altar was heaped with flowers. Hence wreaths became a customary decoration on surface carvings and paintings. Also a favourite ceiling design was a vine trellis; and hanging from it beams purple clusters of grapes hung down, made in glazed pottery.

5. The furniture.—The furniture of the temples is frequently represented. The central object of devotion was the sacred bark. This was a boat about 8 ft. in length (Kaptos, xix.), fastened down to a framework of poles by rope ties (Temple of Kings, vi.). This framework was put upon the shoulders of the priests for carrying it in procession; as many as twelve to twenty priests are represented, each probably carrying a burden of half a hundredweight. To set down this bark a high stand was needed. This was sometimes of wood, a square box with decorated panels (Zosimus, 18). It was also used, as is shown by one in the British Museum with figures of six gods around it (see illustration in Art [Egyptian]). Upon the bark there stood a canopy or catafalque of slender wooden pillars and a springy top of board; and from this was suspended the square shrine of the god, hung by ropes, and kept from swaying by guides tied at the bottom. The detail of the structure is shown in a working drawing on papyrus. This shrine was elaborately carved and decorated, and was almost always half-swathed in a linen wrapper. Fore and aft of the shrine were statuettes of the king and of various gods, adoring the divinity. At each end of the bark was a figure-head, and a great engraved collar of metal hanging below it. Some shrines had a winged figure of Mast, the goddess of truth, at each end, embracing the shrine with her wings. Such seems to be the type of the worship of the Jewish ark. Of other furniture there were the standards of the gods upon long poles, which were carried in procession, as well as the stands for holding the libation jars and other vessels used in the worship. The back of a number of columns, water-jars hung round with garlands; and the tall trumpet-shaped stands of pottery or metal for holding jars. In the papyrus of Ramessu iii. are named the tables of gold, silver, and bronze, the collars and ornaments for decorating the statues on the festivals, and a great balance plated with electrum. The buildings and chambers which now seem so bare and blank were handsomely furnished with panelling of gold and silver, and bright with garlands of flowers.

6. The popular shrines.—These shrines were scattered all over the country by the waysides, doubtless by the modern Muhammadan. Such local worship is directly contrary to Islam, and must, therefore, have persisted from earlier times, like so many other customs. There still exist models of these shrines of Roman ages, which were used for domestic worship in the house. They are shown as small chambers crowned with a pediment, supported by six columns—three on each side—which were connected by lattice screens; or as an arched roof carried on four columns, with a dwarf wall joining them; or as a small donjon chamber with a doorway, exactly like a modern little shrine in the house. The shrine in the house was a framed wooden cupboard surrounded by a pilastered recess, covered with boards, which recess a lamp burned before the figure of the god.

ARCHITECTURE (Greek)

(1) The earlier periods of architecture in Egypt—of pyramids and temples—may be considered partly because they belong to a time that had long since ceased to exercise any influence on the civilized world. While some of the earlier buildings were doubtless foeresters in intention to anything built by the Greeks, who were never a race of tomb builders at all. Of the later Egyptian architecture, that of the Pharaohs, which Egyptian art strove to make mainly internal rather than external, and by which the Egyptian artist strove to make the structure hidden and sublimated, as contrasted with the special grandeur of Greek art, which expresses itself in reserve, refinement, and grace. Like the sturdy and unadorned construction of the Early Christian Church, such a most obvious method that occurs to every builder, it certainly does not possess any suggestion of conscious significance. This constructive design is a little too obvious an expedient to be interpreted as a sign of influence, and there remains the frequent use of columns as the only resemblance. But these are so essentially different a character, and their gradual development in Greece is so certain, that there is no need to make reference to Egyptian practice at all.

(2) Aysrian architecture offers even less resemblance. It may, however, be noted that the influence of minor orname-
tal details, as expressed by the arch or the vault. It was primarily secular, and neither tombs nor temples played any important part, but, as far as remains attached, the architectural design is primitive and simple. The ornamental detail in some ways resembles that of Egypt, and in fact the structure of the Later Asrian work seems to have a tendency to affinities, although probably not more than can be accounted for by a perfectly natural process of development or suggestion from preceding work in other lands.

The may, however, be noted that the influence of minor orname-
tal details, as expressed by the arch or the vault. It was primarily secular, and neither tombs nor temples played any important part, but, as far as remains attached, the architectural design is primitive and simple. The ornamental detail in some ways resembles that of Egypt, and in fact the structure of the Later Asrian work seems to have a tendency to affinities, although probably not more than can be accounted for by a perfectly natural process of development or suggestion from preceding work in other lands. The ornament is altogether different, and in character and their gradual development in Greece is so certain, that there is no need to make reference to Egyptian practice at all.

(3) Hellenic architecture it may be remarked that it was a naturally evolved style, and that it is better to separate it from the rest. This would be incorrect to say that its buildings were predominantly religious, although religious architecture played an important, perhaps the leading, part. It must always be remembered that a religious character is necessary for buildings to survive, partly from the natural conservatism of religion and religions veneration, partly as belonging to a corporate body in contrast to private property. We may expect, even in the case of an age where the building activity was evenly distributed, that remains of religious buildings would be the most numerous, of other public corporations next, and of domestic buildings last. The greater resources of a corporation, whether religious or otherwise, tend to a greater scale and possibility of survival; and, comparing religious and other public buildings, there is always the greater need for alteration and change on the one hand, and it is likely that those original and less altered style that would otherwise have been destroyed. An interesting case in point is the small temple of the Iliussus, which survived changes of religion for 2000 years; yet directly the age of religion was withdrawn the temple disappeared, as a channel to Greek art can, in any case, be indirect.

Here again, in the case of Aysrian architecture, the entire spirit of the style, which are those of palaces and tombs, and not the work of temple-building peoples at all, allows at most of a limited range of influence. The wholly different art character of the two peoples, if we may group the Aysrian peoples as one and the Greeks as another, is, however, a far more fundamental line of cleavage. The earlier art is more luxuriant and less restrained. It is less structural in its character, depending more for its effect upon applied surface ornament; while the later art is so much lessself-consciously intellectual, and expresses itself largely by an arbitrary symbolism, whereas the Greek art is marked by an attempt at rational and self-explanatory embodiment of its ideas. The growth of this characteristic does not necessarily mean a decline in the art; just as, it may be observed, that the same thing is characteristic of the Aysrian art; but it shows, on the whole, that the art of the Greeks was more conscious of the possibility of its being a religious art.

The fact that these buildings have been left us by the Hellenes in early work, as, for instance, in the temple of Hera at Olympia. This, therefore, does point to an early dependence on Egyptian sources.

The temple of Heraea at Olympia. The temple is an exemplar of the Greek style, which must have taken a considerable time to effect, implying several earlier stages. The temple has been dated as early as the 7th century B.C. and is of course a temple different from the temple of Eleutherios, the Bouleuterion, and the Prytaneeum (see footnotes, p. 67), must have ranked with the greatest religious buildings of all that has come down to us, judged from the purely architectural standpoint, is the Prytaneeum, which can hardly be classed as a religious building, actually having come into direct conflict with the temple of Jupiter. These constitute the only three orders, the column, and the entablature, are found in all three orders.

The temple was a temple, and not a temple of Zeus, which was a temple to Argo. It is considered as originally a temple for the building, adopted and gradually altered to the Doric style. The temple is somewhat lower and more formal than the temple of Hera, as at Tivys (p. 680, fig. 8). The plan of the Heraea temple is very great, upon which, which must have taken a considerable time to effect, implying several earlier stages. The temple has been dated as early as the 7th century B.C. and is of course a temple different from the temple of Eleutherios, the Bouleuterion, and the Prytaneeum (see footnotes, p. 67), must have ranked with the greatest religious buildings of all that has come down to us, judged from the purely architectural standpoint, is the Prytaneeum, which can hardly be classed as a religious building, actually having come into direct conflict with the temple of Jupiter. These constitute the only three orders, the column, and the entablature, are found in all three orders.
With regard to the temples, at any rate, it may be said that every building rested upon a platform or stylobate, generally of three steps. In this it may be distinguished from all other styles, where, although a base-mold or plinth may be found, nothing of this nature occurs. Upon this, as its name implies, stood the columns, and these in their turn supported the entablature or stone lintel which is the main characteristic of the style. This lintel, or truncature, construction was used, not because the Greeks were unacquainted with the arch: apparently they had deliberately rejected it upon aesthetic grounds. They knew of the arch in the East, and quite early made use of it occasionally for purely structural purposes, as in the case of a water-drain at Athens, a barrel-vault at Sicyon, the passage to the stadium at Olympia, an arch in Arcadia, and in the lower storey of a stoa at Alinda. It is not altogether improbable that the Tholos at Athens was covered by a small dome. The arches of the Egean period are not, as a rule, built with radiating voussoirs, although an example occurs in Arcadia. The arch principle is really involved at Tynys, perhaps unconsciously, but it is not truly the corbelled system. One may suggest that the reason is to be sought in the Greek type of mind, as it expresses itself both in religion and art, partly in its sense of reserve, the μύστηρ δάσιν of the temple at Delphi, partly in its tendency to seek the highest in a completed and finished perfection that does not lead out beyond itself. Hence it is more readily satisfied in the rectangular self-contained composition of Greek architecture than in a style involving the distribution of thrusts and the aesthetic incompleteness of the line of the arch. This became one of the most expressive features of the essentially suggestive, rather than perfected or finished, medieval style.

1. The Doric order has generally been considered the oldest; but there is no adequate reason for supposing so, although it is not unlike the pre-Persic remains from the Acropolis of Athens and the temples at Ephesus and Samos, Neaodria and Naukratis, show Ionic work of very remote date. Indeed, one might even suppose that they are egnostic developments from a common beginning, rather than that the one is derived from the other or is a later invention. The Doric order is marked by somewhat massive proportions; for instance, the columns of the temple at Corinth are 4' 47' diameters, and those of the Parthenon at Athens 34 ft. high, 6' 025 diameters. The entablature is similarly heavy in proportion to the whole.

The Doric column consists of a shaft and capital only; there is no base. It is conceivable that there was originally a plain square base, and that a series of these have coalesced to form the top step of the stylobate. The early columns at Corinth (c. 650 B.c.) are monoliths, but in other cases the voussoirs are built up in drums, fitted together with the most marvellous accuracy. The shafts are invariably fluted, with a sharp ariss between the flutes (fig. 2). These flutes are generally 20 in number, but other numbers are not so rare as it is commonly supposed. The flutes are

3 Flutes, Trozen.
8 " Bohunnos.
12 " Ascolus.
16 " Sounion.
16 " Egin.
16 " Shaft-round at Olympia, probably Young Column.
Porch.
16 " A shaft of the Parthenon.
18 " Pronaos of Ascal Temple.
20 " Naxian's treasury at Olympia, but only 11 flutes: the rest at
back are flat.
24 Flutes, Temple of Poseidon at Peumum.
25 " Isolated column in side at Assos.
28 " Fallen fragment at Ephesus.
32 " Two drums from Samos.
52 " Epidaurus's house at Olympia (every alternate corner has a bead instead of a sharp ariss).
44 Naxian's treasury at Delphi.

The flutes are probably a perfectly natural development from the square pillar—a form not unknown in Egean art—and, moreover, the anta in Greek work is square in section to the last. At first the corners would be cut, giving an octagon, as at Trozen, then these would again be cut, giving sixteen sides. This would be done, doubtless partly for utilitarian reasons, so as to admit more light and give easy ingress and egress. But that the main reason was aesthetic is shown, in the first place, by the fact that the columns never became plain circles, and, in the second place, by the fluting or hollowing out of the sides of the polygon. These greatly accentuate the effect, and thereby give aesthetic emphasis to the verticality of the column, emphasizing the outline of the column, and making it tell, whether against a very dark or a very light background. The suggestion that it was derived from Egypt may be dismissed as fanciful, as the supposed prototypes at Beni Hassan belong to an age too remote to have had any influence. The primitive artist is not an eclectic archaeologist. In the second place, the Beni Hassan columns are not fluted, but flat-sided. The flute, on the whole, points to a stone rather than a wooden origin, as it seems pretty clearly to be derived from a square, and not from the
round posts of a primitive wooden style. Other Egyptian polygonal types are even less likely.

The capital typically at three parts. The abacus is a square flat block that takes the bearing of the architrave. Below this is the echinus or capital itself—a bold molded member prominently suggestive of powerful support. Below this are three fillets to emphasize the neck. This gently curves into the shaft by means of the apophyses, and at the top of the shaft, immediately below the apophyses, are three sinkings which prepare the eye, as it ascends, for the change from the vertical lines of the shaft to the horizontal lines of the capital.

The entablature is divided into three portions—the architrave or lintel proper, the frieze and the cornice. The architrave is quite plain—a single solid block. In very large examples it may be necessary to use more than one block, but they are placed on their edges so as to present a single face to the front. The frieze is divided into spaces by upright blocks of stone (triglyphs) which support the real weight—a fact esthetically emphasized by the upright channelling that gives them their name. These three glyphs, or channels, are arranged with two complete in the middle and one half on either side. The early form of the glyph seems to have been nearly round-headed (fig. 3).

The spaces between are filled with slabs which do not support anything. These are termed metopes. The metope (i.e. the thing behind, or after, or at the back of the ope; cf. μετάφρασις) is the slab that goes behind the ope, hole or opening, in the frieze (fig. 3). This does perhaps imply that the interval was originally open. In a cella wall this would give light to the building (as in later writers means a window). In a peristyle it would become useless; and the introduction of the peristyle may have done away with the custom.

It does not throw much light on the beam-end theory, as the opening would be there in any case; but the method of fitting invariably used—which is to put the slab at the back of the hole—and the name—which does not mean 'between the triglyphs' but 'behind the opening'—if they point any way at all, suggest that the metope was always fitted as we find it, at the back of or behind the opening (fig. 3), which would not be possible if there were beam-ends. In rich examples the metopes are sculptured, particularly at the end of the building.

The cornice moldings need not be enumerated, but it might be observed that the uppermost member, the cymatium, is generally very similar to the ovolo molding of the echinos of the capital. This molding is carried up over the pediment at the sides of the building, and the cornices or flat member beneath it is recessed, occurring in member, the triglyph frieze, and once, with slight modifications, under the cymatium of the pediment.

The Doric order is the most severe and refined of the Greek orders. This characteristic made it the better to act as the frame of the glorious sculpture with which it was adorned. The tympanum, or triangular space in the pediment or gable, was generally filled with free sculpture, and some or all of the metopes were also occupied by sculpture in very high relief. In rich examples, as, for instance, in the Parthenon, it would seem to have been permissible to introduce sculpture elsewhere.

In that example the famous Panathenian frieze runs round the upper part of the cella, within the outer range of columns.

It is generally said that sculpture is a speciality of the Doric order, and is not found in Ionic, but for absolutely no reason. The Erechtheum, the temple of Athena Nike Aptera, the temple of Theseus, the great temples of Artemis at Ephesus, the temple of Aphaeira at Phigalia, were all richly decorated with sculpture. The so-called Attic base is not a widespread form, occurring only in a single instance in the north porch of the Erechtheum, not elsewhere even in that building (fig. 2). The Corinthian example of the monument of Lycurgus is, however, but slightly different. The influence of this base upon the architecture of the world was extraordinary, but not more than its extreme simplicity and great beauty justify (p. 713, fig. 47, and context). The original form of Ionic has been a torus molding above a sort of plinth with several astragals. The scotia below the torus was first introduced, and then the second torus below. The flutings are generally much deeper than the Doric. They are separated by a fillet in place of the sharp arris, which gives a very different effect to the column (fig. 2). In early examples the flutings were more numerous—40 at Naukratis, 44 at Ephesus, 44 on a votive column at Delphi. The sharp arris is also found in these early instances. The capital is lighter and the most distinctive feature of the order. It may be described as resembling a scroll upon two rollers, which form the well-known Ionic volutes. There is a very small circular abacus which has ornamental carving. The head of the capital, the echinos, immediately below and between the volutes, is abscissed, and sometimes in the Erechtheum, the neck also is richly decorated.

There seem to have been two early forms of the Ionic capital, that which may perhaps be termed Eolie and the Ionic form proper (Neoclia and Heraeum, fig. 4). It may also be noted that the echinus of the Ionic capital tend to diminish and become pushed up into the volute part of the capital. It is quite possible that this part is really the descendant of free overhanging leaves in an earlier form (fig. 4, Delphi). The architrave is not simple but divided into three faces, each slightly projecting over the one below (fig. 1). The frieze is a continuous band unbroken by triglyphs.
and frequently sculptured. The cornice is more elaborate than the Doric, and the lowermost member, as found in Asiatic examples, and afterwards borrowed in the Corinthian order, is very distinctive. This is the dentil band, which may be described as a series of small blocks set below the cornice, giving the appearance of a square serration. The uppermost member of the cornice is almost invariably the molding known as the cyma recta (fig. 9). On the whole it may be said that the Ionic style is less robust than the Doric, and depends more upon architectural ornament.

3. The Corinthian order is practically only the Ionic with a different capital. We are told by Vitruvius that Callimachus saw an ancient plant at Bassae near Phigalia, which had twined itself about a basket of sepulchral offerings, and that this suggested the idea of the Corinthian capital. A single capital of this type occurred at the S. end of the main chamber of the temple of Apollo at Phigalia, all the other capitals being of a peculiar Ionic type. This temple was built as a thank-offering for immunity during a great plague in either B.C. 430 or 431. It might even be hazarded as a suggestion that Callimachus was associated with the architect Ictinus in this case, just as Phidias was in the case of the Parthenon. The ultra-refinement of the design of the frieze, and an almost over- elaborate treatment of the drapery, carried out though it may have been by Peloponnesian workmen, would point to the influence of an extreme Attic tendency, such as we would associate with Callimachus rather than with Phidias and his school. That Ictinus, the most famous Athenian architect who built the temple, and Phidias himself made the temple image, suggests some famous Athenian designing the sculptural decorations.

It is fairly clear that the Corinthian capital was an individual invention, as it suddenly appears completed intact in the history of Greek architecture. What more likely than that in this single central capital, among a set of another kind, we have the original itself? This is strengthened by the fact that at Phigalia we also get the first examples of the true Ionic capital. Olympian Zeus and the Corinthian Stoa, all in Athens, are other instances. A beautiful and somewhat peculiar example exists from the lesser Propylæa at Eleusis. The temple of Apollo Didymæus at Mileæus shows fine examples, and there is an archaic Corinthian capital of uncertain date also found at Branchida near Mileæus. But the love of all Corinthian capitals are those of the Tholos at Epidaurus, obviously fairly early in date, and, with all their richness, marked by the chasteness and refinement of Greek work. The Corinthian order became the favourite of the Romans, and these subtle restrained delicacies were lost. It may be noted that in Greek work the acanthus leaf is worked with a crisp sharp edge, which becomes blunt and rounded in Roman hands (fig. 6).

This slight survey of the general characteristics of the orders prepares the way for the consideration of the commonly accepted theory of the wooden origin of Greek architecture. It is generally said that the Doric order is of unmistakably wooden origin, although it may be more doubtful in the case of the Ionic. The grounds for suggesting this are the tendency in which the column appears to represent the beam ends, and the upward slope of the mutules, which represent the ends of the rafters. These features do not occur in the Ionic order.

In the Parthenon, the only great temple in the main essentials of the two orders is far too marked for the principal source of origin and inspiration not to be the same. At the same time there are probably different contributory influences.

The style of these columns do not claim as anything but a stone feature, even though the upper part were timber. In Doric architecture, as contrasted with Ionic, the columns have no base, and the base is one of the supposed signs of wooden origin, either as a wooden shoe to prevent splitting—a feature hardly consonant with a primi-
tive style—or a flat stone laid on the ground to distribute the weight. However, it might be remarked that the distribution of weight is aesthetically demanded in any case by the slender Ionic column. The massive Doric column requires no base, and if it ever had one, it was early seen to be unnecessary. Its proportions are obviously those of stone, not of the narrow interests of marble. The more slender Ionic with its considerably longer lintel has a closer resemblance to wooden proportions. It should further be noticed that the oldest Doric columns are the most massive, and most obviously the outcome of their stone material. The tendency of development from a wooden origin would naturally be in the reverse direction. Pausanias says that one of the columns of the Heraea at Olympia was of oak. It has been suggested that this was the last of the original wooden set, which were gradually replaced. There are, however, difficulties with regard to the entablature, which would not fit equally well upon a set of stone Doric columns of more or less normal proportions and upon wooden ones. Nevertheless it is conceivable, and the intercolumniations are certainly wider than usual.

The heavy Doric abaci projecting on all four sides is also obviously of wooden origin and would split off. To some extent the same might be said of the echinos, but its whole shape is essentially non-wooden.

In the Ionic capital, however, we find proportions that are not so easily be adapted to wood. The grain of the wood would run parallel with the line of the architrave. The spreading support is obtained, and at the same time the capital does not overhang at the front or the back, so there would be no danger of splitting off. Again, the spirals are a natural primitive incised ornament, equally applicable to stone and wood, although their final form is more suited to stone. Early incised and painted capitals have been found on the Acropolis of Athens. The Doric echinos, however, though subtle in its curvature, is a natural primitive stone form, claiming kinship with such a form as the rude primitive cushion capital of the Normans (fig. 57, p. 710).

But the different fluting points the same way. A polygon when fluted can give only a sharp arris. It is a natural and simple expedient, in borrowing the idea of fluting from the stone Doric form and applying it to the circular form, to leave the plain fillet which we find in Ionic work. The surfaces of the fillets are on the circumference of a circle and are not flat. The circular form is the natural shape of the tree-trunk; the polygonal form is the natural development from the square block of quarried stone.

But it is in the Doric entablature that the wooden origin is supposed to be most conspicuous. The general proportions, which may be contrasted with the light entablature of the Ionic are certainly true stone proportions as we find them. The massive architrave in a single block certainly does not suggest anything but the stone block which it is, whatever may be said for the three faces of Ionic work.

The triglyph frieze is generally said to represent the ends of the beams, and it is suggested that the gutta represent the heads of the pins. What the regule are, from which the gutta depend, is gracefully omitted from the theory. Now, in the first place, the actual position of the gutta suggesting a vertical pin is quite impossible as at $\delta$ (fig. 6); but even if we try a diagonal position such as at $\gamma$ (fig. 6), the gutta is absolutely useless, as it would draw, and this is really equally impossible. A pin might be placed at $a$ or a huge pin directly underneath at $\delta$, but in neither place are the gutter found. A true artist may have had the gutta suggested to his mind by pin-heads, and then created a genuine stone feature, but that has nothing to do with a wooden origin for architecture, any more than the acanthus leaf implies a haystack as an architectural prototype. The raindrops may equally well have suggested the idea and have spontaneously suggested raindrops to children, who did not know the meaning of the word gutta.

But the most serious objection to the pin theory is that guttas are not found in early work. They do not occur in the Bouleuterion at Olympia or the Schliemann treasury, or in the newer, but still early, porch of the Gelsons. They are not found at Assos or in the early Athenian fragments, or in the temple of Demeter at Pesticum.

With regard to the triglyphs, they are in the first place needlessly enormous for any ceiling joint. They might be the right scale for tie beams, but they are then placed at impossibly close intervals. The dentils of the Ionic order would in many examples, although most of them late, be much more nearly to a reasonable scantling. But the most pertinent question to ask is how one could have beam ends all round the building at the same level—which is a hopeless impossibility. Now, in the case of the Lycian tombs at Xanthos (fig. 7), where we have actual copies of timber work in stone, we see, of course, where ends and sides of the building are visible, that the ends of the beams show only at the sides of the building. We also get a feature resembling pitkin ends under that gable roof. It should be noticed that where we find timber construction reproduced in stone, as at

Xanthos, Beni Hassan (Egypt), or Naksh-i-Rustam (Persia), it is in no case a building, but simply a representation carved out of the solid, and is entirely non-structural. It is, in short, merely a pictorial representation. Every material demands
its own methods of construction, and this is perhaps particularly necessary in days of early development. Further, if they were beam ends, they would not occur at the corners, but a metope or portion of the wall would finish the series. This again is, of course, the case in the Lycian tombs.

The difficulty of the metopes has already been noted. But what are the vertical channels themselves? They seem to serve the same purpose as the vertical flutes of the column. But to emphasize the verticality of a horizontal beam is somewhat of a solecism. The suggestion has been made that they are timber markings—which is not merely untrue but foolish, for they could not resemble timber markings, which radiate from a centre.

The very early treasury of the Geloans at Olympia is so early that it is not even Dorie in character, but it is undoubtedly stone; and if its influence may be considered at all, it points in this direction. Although probably of the 7th or 6th cent., it may be set against the supposed original wooden Heraean. In several features, particularly its stylobate, its columns,* and its characteristic waterspouts, it anticipates Greek work of a later date. It might further be noted that the dentil band in Ionic work, which may possibly represent beam ends, is above the frieze, whereas the beams of the coffered ceilings in Doric work are above the frieze, making triglyphs as beam ends impossible.

The construction of the triglyph frieze, with rebated uprights and slabs behind, is found in the dado or frieze discovered at Knossos (fig. 15, p. 682). There it was obviously a stone construction from the outset, and was applied to the face of the wall. This is quite a conceivable origin for the triglyphs. In early examples the triglyph and metope are frequently worked in one piece, as in several of the treasuries at Olympia. This is also found in many of the stones of Libon's temple of Zeus (also at Olympia), and was the case on the sides of the Athenian Hekatompedon. This of itself is enough to constitute a fatal objection to the whole theory. If all would not coincide with the slope of rafters, and (like that of the under slope of the cornice itself) is sufficiently explained as a slope to throw off the rain and pre-

* There is some doubt about the assignment to this building of a column found at Olympia.

**Fig. 5.**

A remarkable quality of Greek ornament is the adaptation of the surface decoration to the molding which it enriches. The outline of the ornament tends to be the same as the section of the molding; thus the egg ornament is found on the ovolo, the honeysuckle ornament on the cyma recta, the water leaf on the cyma reversa, and the guilloche on the torus (fig. 10).

In the third place, the Greek architects made use of colour, as for instance on the echnicos molding of the Doric capital, and traces of it are not infrequent in many places. It is possible that more
was used than would be pleasing to a modern eye, particularly in cases where marble stucco was applied to some inferior quality of stone such as poros. But we are not to imagine that the Greeks were not keenly alive to the beauty of their exquisite Parian, Pentelic, and other marbles, and that it was placed in position. The rest of the building was completed before the final dressing of the stone, which was done from the top downwards as the scaffolding was removed. The line dressings on the faces of the stones were worked only for a short distance from the joint, and the short flutings of an inch or two at the top and bottom of columns, otherwise plain, are instances that may be cited of unfinished work, both of which have been ignorantly copied in Roman and modern times as though complete. Even in the finest work there is always a difference between the top joint of the column, which shows distinctly, and the others; as the flutings on the top block, which included the capital, were worked before it was placed in position. The rest of the fluting was worked when the joints had been made absolutely true by turning the blocks round and round after being placed in position. This seems to be the explanation both of their finer joints and of the wooden plugs and pins that have been found in the centre of the Parthenon drums (fig. 2, p. 679). The pin would be just strong enough to stand the turning of the drum but could not add any real strength to the building. The ankones, or projecting pieces found on unfinished drums and on other blocks, must have been used for this turning process. Doubtless they would also have been convenient for hoisting, but a quite unnecessary luxury, whereas the turning of a round drum would have been impossible without some such thing. The uppermost block could not be turned for fear of chipping the finished edge, hence the difference between that and the joints that were finished afterwards, which is always noticeable. The joints in the walls were probably made accurate by a similar process of pushing the blocks backwards and forwards, so as to grind the contiguous surfaces absolutely true, with the result that the finest knife blade could not be inserted anywhere between these mortarless joints. For this again the ankones would be useful. Every piece of carving, as for instance in the moldings of the Erechtheum, is executed with a minuteness of finish that one would naturally associate with ivory carving rather than with work in stone.

It is, however, the subtle curvatures in Greek architecture that are its most remarkable refinement, and the whole problem connected with them offers in itself a wide field for study. The following points may, however, be noted here. In the first place, it may be broadly stated that there are no straight lines in a Greek building of the finest class—a rather startling discovery to those who are accustomed to think of a Greek building as composed of nothing else.

Taking the principal lines of a building, the stylobate and the architrave, we find in each case a slight curve amounting to a rise of about 2 in. in the case of the long sides of the Parthenon, 225 ft. in length, and about 2 in. in the short sides, 101 ft. in breadth. These curves occur in the temple of Hephaestus and the Propylæa, but apparently not in the colonnies or at Bassæ or Ægina. The next most important curve is the entasis of the columns, which is a convex departure from the straight amounting in the Parthenon to 4 in. of an inch at a point about 8 of the height from the ground, the columns being 34 ft. in height. The entasis of the Erechtheum shafts is even more subtle, 8 fraction of the length of the shaft and 8 of the lower diameter, against 8 and 8 of the Parthenon. It should be noticed that these curves are not segments of circles but parabolic, or in some cases hyperbolic; but whether they were laid out mathematically or by eye seems to be uncertain. We may assume that the eye which would be sufficiently accurate to appreciate such a subtle distinction of curvature would probably be equal to the task of drawing the curve with a sufficient degree of precision. In the case of the
course all the intermediate columns incline proportionately. It is also preserved in the faces of the entablature and the pavements and the steps of the stylobate. But here, a counter-convexity is introduced, and the faces of the higher moldings are slightly inclined the reverse way, so as to counteract undue foreshortening, occasioned by the other process and by the natural height above the ground. It might also be observed that the angle columns are in an inch or so wider than the others. The intercolumniations are slightly smaller as to bring the angle column under the triglyph. There is a similar treatment in the temple of Demeter at Peistum, where the last metope is made larger so as to attain the same result.

The extraordinary skill and refinement required may perhaps best be realized, as Professor E. Gardner suggests, by considering the case of the bottom corner drum. Here then what do we find? In the first place, the base of the drum has to be cut so as to allow for the curve of 3½ in. in 238 ft. But there is also to consider the curve, running at right angles to this, of 2 in. in 101 ft. This would be sufficiently puzzling if the axis of the column were vertical; but it is not. It has to be considered that it shall meet the axis of the corresponding column at the other end of the front, at a point 1½ miles above the earth, and a similar inclination has to be made in the other direction along the side. Added to this, the edge of the step from which it works is not vertical; and, further, he has to allow for the beginning of the entasis a curve of ½ in. in 24 ft. Those who are familiar with the extreme difficulty of cutting a vousoir for an arch in a curved wall—a comparatively simple task—will appreciate the work of the Greek mason. For not only did he conform to these requirements, but he executed it all with a nicety that would not admit of a sheet of paper being put into the joint. The vousoirs of the arches in such a building as the circular nave of the Temple Church, London, are well cut, but it is mere child's play in comparison.

It may well be asked for what purpose all these things were done, and in any case the answer seems to throw light upon the character of the Greek mind, confirming what might have been otherwise deduced.

It has generally been said that these are optical corrections, that the entasis of the column counteracts the tendency of two straight lines to appear hollow in the middle, that a straight architrave would appear to sag and a straight stylobate would appear to curve up at the ends, that the slope inward is to correct a tendency of the columns to appear out of the vertical and overhang at the top. It may be so. But there are certain objections to the optical illusion theory.

In the first place, what does this theory mean? It means that the result of all the curves is to give lines that are optically straight and optically vertical as the case may be. If this is not the result, the optical illusion theory is ridiculous, as its only object is to avoid the appearance of curves and deviations from the vertical, which on this theory are ex hypothesi ugly. Now, it is quite true that in very early buildings, e.g., Corinth, there is no entasis. But when it first appears what do we find? An exaggerated entasis and a visible slope for miles, that no optical illusion could ever make look straight. The curve will be there for no conceivable object but that it should be seen. But, further, the parabolic curve with its maximum deviation at 2½ from the base would not be correct for the correction of an optical illusion, whatever the amount of the curvature. In the case of the echino there is no possible suggestion of such a theory, but we find a similar curve; and what is most important is that, in the case of the echino, it is not the base but just in the neck of the entasis, a stage that ultimately becomes refined. These curves, then, were obviously designed for their own sake, and, as the eye became more trained, it must not only be demanded that they should become more subtle. There remain, then, the curves of the entablature and the complementary curve of the side of the entablature being viewed from some little distance, the optical illusion caused by these lines would be the same as that caused by the lines of the column; in other words, the architrave would drop in the middle and the stylobate rise, in which case the correction for the stylobate should be the reverse of what it is. If you are standing upon the stylobate or very near it and above it, this correction might be valuable, but in that case the architrave would be wrong in its architrave. It is, of course, of the utmost importance to get it right at all in the case of straight-sided columns. If there were concave curves (or lines at an angle near them, as in the pediment and architrave) this might be the case. The line of the architrave is a logarithmic curve, and the line of the column, but the line of the stylobate is not, and would appear to curve down at the ends even though there is no curve or angle below (see diagram used and test with ruler).

As to the inclination inwards of the columns, the upholders of this theory urge in the same breath that it is a correction of an illusion of the column not looking vertical, and that it gives a beautiful pyramidal appearance. If it does one, it cannot do the other.

That optical illusions were also considered, seems, however, certainly to be the case; the thickness of the angle columns and several other such subtleties appear to show it. Moreover, at Priene is an interesting diagram on the faces of the ante of a temple, showing the correction of proportions as they appear to the eye in perspective.

Although, then, the optical illusion may have some influence, it seems more rational to fall back upon principles of aesthetic for the main reasons. It is clear in the case of the entasis and the echinos curve that it is pure delight in the curve. Doubtless this is associated with what we might term a mechanico-aesthetic reason. These curves are undoubtedly suggestive of strength and of organic growth, and may be paralleled by the exceedingly subtle curves in a human arm. The shape, indeed, would actually be stronger, although of course there is no practical need for it, as the margin of material to work done, allowed by the Greek, was very large, something like 3 to 2. In the case of the architrave and the stylobate there is the possibility of actual sagging in the centre upon soft ground, and therefore an appearance of greater strength is certainly given by the upward curve in the centre. In the case of the architrave the optical illusion would exaggerate the suggestion of weakness, and may have been taken into account. Earthquakes and weather, and the great powder explosion in the Parthenon, have made it more difficult to determine the original nature of the architrave curve than of the stylobate.

But all these things are an interesting illustration of one of the most elementary of art principles carried out with exceptional subtlety. A thing must not only be right, but must look right. In this case, therefore, it must not only be strong, but look strong. A plate-glass shop front, however excellently built, could never be aesthetically beautiful, unless the eye were in some way satisfied as to the support of the walls above. In the echinos we have not only this principle exemplified, but also the still more fundamental principle of organic unity of design; and the vertical lines of the columns and horizontal lines of the architrave become one whole by the intervention of the
echinos. It is curious that the eye does not demand a base to the Doric column for the same reason. Indeed, too many people felt the want. But the side lines are diverging at the base, whereas they are converging at the top; the foot of the column, moreover, is so large as in some measure to dispense with such a necessity; it sits firmly on the pedestal. Moreover, at certain times, it is a bold experiment, and is a feature that occupies aesthetically a somewhat peculiar position among great works of art. It seems unreasonable to suppose that the 5th century Greeks saw all these things and delighted in them, just as his ancestors had delighted in their ruder curves, their less subtly proportioned columns, and their exaggerated projection of columns. They had not, of course, the same principles, but carried out with less refinement. The result must have given to his keenly sensitive eye an organic artistic unity that has never been surpassed.

Whatever be the interpretation of these subleties, one inference at least is certain, namely, the accuracy and refinement of the Greek eye, coupled with an aesthetic demand for a completeness and thoroughness in even the minutest particulars that go to make up perfection in a work of art. The manner in which the ancient Greeks understood art is this, to make him expend such extreme care upon them, can be paralleled in modern times only outside the field of art, as in the making of a manuscript of great antiquity. Even optical illusions we are practically content to leave alone. But alongside this minuteness is a breadth and majesty equally astonishing. The composition as a whole is simple in the extreme, and the dignity of its proportions is unsurpassable.

In these things we find the key to the interpretation of Greek art, and there are certain distinct advantages in approaching that art through its architecture. Much can here be demonstrated by rule and line, and only the highly-trained eye can see in the sculpture. The whole artistic feeling, too, which inspired every detail of Greek architecture and art, has its corresponding parallels in the Greek conception of religion and in Greek intellectual investigations. Naturally it is necessary to beware of the error of the superficial inquirer, who would make one the mere result of the other, rather than go deep enough to find their common origin in the religious feeling. One had no influence upon the others, but that each, as it were, remained master in its own house with its own fundamental principles. In the case, however, of the plan and general arrangement of the Greek temple the aesthetic and religious factors are somewhat closely connected. The general design of the building is naturally largely determined by religious requirements. It is hardly necessary to point out that the Greek temple was not a place of worship: the act of worship took place in the open air, generally in the temenos, or enclosure surrounding the temple; and here the altar was placed. The image within the temple was not the object of worship; the altar architecturally is therefore entirely unrelated to it. The temenos itself and the altar in it are supposed by some to represent the forcourt with its altar in the Mycenaean house. So-called subordinate altars there seem to have been within the building; and doublet there were always two tendencies at work—that which is essentially Greek, and culminates in the highest flights of Greek art, and the more superstitious side which was shared with others.

It is not always easy to disentangle these elements, but the essential Greek characteristic, that which distinguishes them, rather than that which they share with all mankind, is, of course, the main question. Doubtless it is easier to discern it in the time of its full growth, but the tendency is there from the beginning. And it is this tendency that made the Greeks what they were and what was their contribution to the world of humanity. Whatever may have been the origin of the temple image, which it would be out of place to discuss here, it may briefly be said that in the same city as Athens it was certainly not a fetish or an idol, but the sign of a spirit or spiritual quality embodied in a material object. Nor can it even be regarded as a symbol; it is rather the rational self-explanatory expression of a conception. The idea is, true, from the aesthetic side, in which we may say Greek art preceded Greek philosophy. It was not an idol, for it was not regarded as possessing any power, but was a symbol, for it rationally explained itself without interpretation. Least of all was it a portrait or likeness; it represented no traditional appearance, and pretended to no inspired vision on the part of the artist. But it did express the outward beauty of certain inward qualities mentally conceived, and these qualities were the qualities of deity. It would perhaps seem a little strained to describe the temple image as the formulated creed of the Greek religion aesthetically expressed, but that it is the latter is evident from the way in which we look upon the later images of Phidias and Scopas in any other light. The natural superstition and conservatism of humanity among the masses were counteracting tendencies, but at the same time the declining ones, and the essential Greek characteristic tends away from these. The intellectual expression in art of a religious and ethical position is an instance of the complete balance of the aesthetic, intellectual, and moral nature, tersely embodied in their motto, γρατη σωφρινος, and its concomitant μονεμβατος, implying a complete knowledge and development of all that makes man man, and yet excess in nothing: it is this that makes the Greeks unique among the peoples of the world.

The temple may be considered as the casket containing the image, and it is on this account that it is the outside, rather than the inside, which on the whole receives the first consideration. At the same time it is aesthetically the embodiment of the same general principles as are contained in the image itself. The idealism of Greek religion in its highest aspect had not to wait for Plato for its exposition, in the case of those who could understand. It is already aesthetically complete at the time of Phidias, and beginning to advance to what perhaps may best be termed a transcendentalism, culminating, as the highest term of art can be taken as evidence, in Scopas. Probably it was closely approached by Praxiteles, whom we are apt to misjudge from the weakness of the copies of his work, real in conjunction with certain minor traits in the Hermes. It would be hard to say whether Greek philosophy ever reached the parallel to this second position; and even architecture shows only the beginnings of it in buildings such as the Propylaea and the Erechtheum: although in sculpture it is already making its appearance in the work on the Parthenon, particularly in the frieze.

It is therefore natural that the plan of the temple should be simple and remarkable for its perfection rather than its size—an appropriate casket for its treasure. This is all in marked contrast to the Egyptian temple, which is extensive and of many courts and chambers. The decoration of the Egyptian temple is almost entirely within, and outside it is very limited and modest. The Greek temple is comparatively small, and the open-air worship in the temenos surrounding the temple is characteristic of the Greek nature, frank, free, and outspoken. Fearless in inquiry and anxious to bring the light to bear upon all things. The
priestly caste and the artificial mystery of the Egyptian were entirely alien to the Greek mind. There was no priestly caste, and hardly anything that could be called a priestly order; and we find this reflected in the popular character of their ceremonies and the open simplicity of their religious architecture. To say that the extraordinary progress of thought in the 5th and 4th centuries, the most rapid and far-reaching that the world has seen, was either the result of these things or their cause, would perhaps be an error, but the interrelation is unmistakable, and they are alike the product of the Greek mind. It should be said that one important religious building which survives, at least in plan, is to some extent an exception to the general rule—the Telesterion (so-called temple of Demeter) at Eleusis (fig. 14).

To the simple primitive rectangular cella a second rectangular chamber is apparently an early addition; but throughout Greek history there is hardly a departure from the general rectangular plan, although circular religious buildings do occur, such as the Thyme at Epidaurus.

The simplest form is a three-walled building with an open end divided by two columns 'distyle in antis' (fig. 13). The trabs or architrave, resting upon a column, required a support at the other end that would satisfy the eye as well as merely subserve its utilitarian end. It was not sufficient, therefore, that it should rest upon the wall, but a special feature was built for its support, a flat column of rectangular section attached to the wall, called an anta. Hence, wherever we have an architrave passing from a column to a wall, there is invariably an anta to receive it with its own capital and base. This capital and base mark the double character of the member, and are not the same as those of the column, but are in some respects more closely related to the flat wall (fig. 15). The anta with its clearly defined function degenerates into the Roman pilaster of later date. It has been suggested that the origin of the anta is an end-facings to a rubble wall. This does not explain the capital and base, or its frequent position not at the end of a wall. On the other hand, the anta is never found where it does not support an architrave.

The 'distyle in antis' arrangement may be at one or both ends, as at Ithamnus or Eleusis (figs. 13, 14). There is, however, no entrance to the temple at the back, the temple image being placed at that end of the temple with its back to the wall—an arrangement occasionally modified in the larger examples. The next development that may be noticed is a portico in front, 'prostyle'; or one in front and one behind, which is by far the more common arrangement, 'amphiprostyle', as in the charming little temple of Athene Nike Apterots at Athens and the one by the Ilissus, both destroyed in comparatively modern times, although the former has been re-built. In the largest examples a range of columns is carried right round the building, 'péristyile'; and sometimes there is a double row of columns, 'dipteral', as in the temple of Olympic Zeus in Athens. A single line of columns at a considerable distance from the central building, or maos, is termed 'pseudo-dipteral', as at Selinus (fig. 15). A temple is also sometimes described according to the number of columns at the ends—hexastyile, octostyle, and so on.

In the smaller temples the roof was apparently of a single span, leaving the floor space perfectly free. But in larger temples we find columns inside. They may be down the centre, as in the Doric temple at Paestum (fig. 15), or the Ionic temple at Locri. The temple of Apollo at Thermum in Ætolia
in the temple of Poseidon at Paestum or the Parthenon. These were apparently in two tiers, one above the other, as those remaining in situ attest (fig. 16). The roof, presumably, was of timber, and was covered with tiles, frequently of marble.

The columns down the centre seem obviously to support the ridge piece of the roof; but the arrangement must have been very unsatisfactory, blocking the central view of the building, and the temple image if placed in the middle line. The three-sided arrangement would also lend support to the roof; but clearly that cannot have been the only function, for in the case of the two largest Doric temples known, that at Selinus and the temple of Olympic Zeus at Athens, a considerable part of the roof, which was the same breadth throughout, was apparently without these supports.

In the temple of Zeus at Olympia the lower tier supported a gallery, which was approached by stairs at the east end. There seem also to have been stairs in other instances, as in the great Ionic temple of Artemis at Ephesus, which may have served the same purpose (fig. 14). But they also occur where there were no interior columns, as in the great temple of Apollo Didymaean at Miletus, in which case they presumably only led to the space above the ceiling. That ceilings existed below the roof proper, we know from the record of the finding of a corpse between the ceiling and the roof at Olympia. The columns seem partly to have served a quasi-rudimentary purpose, for we find that a low screen often existed between them, as in the Parthenon or the Zeus-temple at Olympia. In the case of the Parthenon and the temple of Artemis at Ephesus the columns are returned at the west end (fig. 14). Only the priests would be allowed within the screens, and possibly only favoured persons would be admitted to walk round the gallery or aisles, and so obtain varying views of the statue.

It is also possible that the two-sided arrangement may have had something to do with the lighting of the cela, which has always been a difficult problem. There are several possibilities.

1. It is suggested that all the light was admitted through the great temple doors, and when the great brilliancy of the light in Greece is considered, it does become just conceivable. But let any one who holds this theory carefully examine such plans as those of the great temple at Selinus, the temple of Artemis at Ephesus, or the temple of Olympic Zeus at Athens. A distance of 116 ft. through two doors and five sets of columns will bedim almost any light. After all, it is hard enough to see the part of the Parthenon frieze in situ; and this is outside. The interior frieze at Philippi would be absolutely invisible.

2. A second suggestion is that of artificial light, which doubtless would produce a certain richness of effect with a statue made of such materials as gold and ivory. Of course one cannot disprove such a theory, but it is a strange and unsatisfactory arrangement.

3. It is suggested that the light was largely given by what filtered through the marble tiles. This almost precludes the possi-

FIG. 16.

in Greek tradition, thin slabs of marble, deeply carved, so as to become still more translucent, were actually used as windows.

(1) Some sort of opening in the roof is suggested, which may be of two kinds. There might be one or more comparatively small openings in the tiles, or one single great hypostyle opening. The former receives some support from tiles found by Professor Dohrenville at Bassae (fig. 17), and the latter from sarcophagi found in the form of little model temples (fig. 17). We are told that the temple at Miletus was open, and had shrubs growing inside—the temple image being in a small shrine within the temple. Strabo, however, mentions it as peculiar and not intentional, but due to the fact that it was found to be too big to roof. Vitruvius says that the temple of Olympic Zeus at Athens was hypostyle, but the temple was not completed until long after Vitruvius' death, so that this statement is valueless. We may therefore assume, first, that these temples were exceptional, and secondly, that they were merely unfinished buildings. A hypostyle opening would certainly sadly mar the line of the roof, and would admit rain and moisture that would have been very destructive. However, it is generally
conceivable in the other. There seems, in some cases at least, to have been a peristyle or, instead of it, a considerable arc with a screen of columns before it. It has to be admitted that this theory, although in some ways the least pleasing, has certain advantages of reality. In removing the peristyle from its support, we are enabled to perceive that at many a point in the Erechtheum, the columns are movable, and marked with letters, some used as evidence that light was obtained by reflection from the pavement below, and then presumably reflected a second time from the roof. The amount of light thus obtained would be increased, and could be used under any circumstances by putting the covers on would seem to be quite unnecessary. The markings were probably simply for the convenience of the builders, just as a medieval or modern mason has a stone cut for a special position.

(6) The fact that the columns are used to support the roof of the the peristyle of the Thersamon is movable, and marked with letters, has been used as evidence that light was obtained by reflection from the pavement below, and then presumably reflected a second time from the roof. The amount of light thus obtained would be increased, and could be used under any circumstances by putting the covers on would seem to be quite unnecessary. The markings were probably simply for the convenience of the builders, just as a medieval or modern mason has a stone cut for a special position.

(7) The fact that the columns of the internal columns, as pointed out above, suggest the most ingenious and beautiful theory of all, if not the most probable. It is the theory of Fergusson, who suggested a kind of clerestory somewhat after the Egyptian manner. It is a tempting theory, but there is nothing to support it. The only fact that Fergusson anticipated so many of the so-called discoveries of other people, more particularly upon Gothic architecture, and has shown the keen insight of the writers that have ever written upon the subject. It may be noted that the system is possible without interior columns, although the windows can be made much larger when they are present. The theory receives some measure of support from the fact that the columns certainly were not solely to decrease the span, as shown above, nor were there generally galleries (fig. 15).

Unless new evidence be found the problem is likely to remain unsolved.

In size the Greek temples corresponded to our parish churches rather than to our cathedrals, making up, however, for the lack of size in the extreme refinement of workmanship. Moreover, the mass of material was considerable, and the actual size of blocks enormous, many of them weighing as much as 20 or 30 tons. The largest stone at Baalbec, very likely of Greek workmanship, weighs approximately 1100 tons. The cells almost invariably faced the east in the case of temples of the gods, although there were slight variations, probably in order that the image might catch the rays of the morning sun on the day sacred to the god. This may even be trusted to give us the dates of their erection, calculated astronomically. In the case of heroes, the general rule seems to be the reverse, and the temple to have faced west. In the matter of orientation the Greek usage may be contrasted with the Roman, which paid no attention to such things.

Within the temple, the temple statue held the place of honour, facing the entrance, and from the 5th cent. B.c. at any rate, this statue was of colossal dimensions. That of Zeus at Olympia, we are told, was so large that he would have been unable to stand upright had he risen from his throne. It is interesting to consider if this effect if the temple were too large; and what size it had was clearly not for the accommodation of worshippers, but simply what was necessary for the display of the statue. Indeed, one must clearly grasp that the temple and its image were a unity, and cannot be considered apart.

Within the temple there would be a minor altar to the deity, upon which offerings of cakes, or things of vegetable nature, would be made; and there seem in some other cases to have been altars to other than the principal deity of the place, as, for instance, to the hero Boutes in the Erechtheum. In addition to the altars, there would be numberless votive offerings dedicated to the deity by the State, as in the case of spoils of war, and the dead of individuals. These would have a tendency to accumulate, and yet, from their nature, it would doubtless have been sacrilege to throw them away. There would be small portable objects which would not be suitable for public display, particularly when of great value. Moreover, the deity, especially in the case of Athene Polias, represented the city herself, and the wealth of the city and the wealth of the goddess were, in a sense, one. These circumstances combined to make it necessary that, attached to the temple, there should be some place for the storing of treasure. Hence, in the larger temples we frequently find at the back of the cela (sac, or temple proper) another chamber prolonging the rectangular plan, and used for the above purposes. Indeed, the treasure chambers of the temples may in some senses be regarded as the State banks. The porticoes themselves were not infrequently closed in by railings between the columns.

In considering the plans of the larger Greek temples, we must not suppose that they were built upon any one pattern. Quite the contrary is the case, and it would be truer to say that there are almost as many different arrangements as temples. Perhaps the two most irregular plans are those of the Erechtheum (fig. 19) and the temple of Apollo at Bassae. [The building at Eleusis is not a temple.] The irregularity of the first of these

![The Erechtheum](image)

is well known, occasioned partly by the irregularity of the site, partly by its having to house the image of more than one deity, and possibly in order that it might include certain sacred objects, such as the marks of Poseidon’s trident and the salt spring.

The temple at Phigalia is interesting partly because of the curious arrangement of attached Ionic columns running round the interior of the building with the beautiful frieze above, which form a series of small recesses that whole way round; even more as showing the importance attached to the correct orientation of the statue. It was more convenient to build the temple with its longer axis from north to south; the cela, therefore, had a door in the east side of the temple through which the statue looked eastward (fig. 20). The effect of lighting, to one entering the temple from the north during the morning light, must have been most impressive, and the esthetic value of such an arrangement would doubtless influence the architect. It is possible that the actual cela occupied the site of a smaller sanctuary of normal orientation. The temple in some respects bears a curious resemblance to the Herceum at Olympia.

![Phigalia](image)

It is a hexastyle building, and its long proportions with 15 columns down the sides are those of an
early temple, the tendency being for the later temples to be wider. The Ionic half columns attached to the short side walls also recall the

In his restoration, all but the end column of the central row are omitted; but although this would provide a wider open space and better lighting, and account for the curious disposition of the columns, six on the sides and seven on the end, nevertheless it is not necessary. If most of Philon's interior columns were Doric, as those of his portico undoubtedly were, there might have been a single range of the more slender Ionic columns down the centre instead of the two-storey arrangement, a device used where columns of two heights were required. Those in the so-called Parthenon-chamber of the Parthenon were possibly Ionic columns of the height of the two tiers of Doric columns in the cella. Unfortunately, little exists but the ground plan, and there are practically no architectural remains from which to deduce the character of the building. The existing remains are mainly of Roman date, with Ionic columns.

In the island of Delos are the remains of the so-called 'sanctuary of the bulls,' the building containing the horned altar of Apollo, reckoned among the seven wonders of the world. In this building is said to have taken place the celebrated dance of the Delian maidens. It was extraordinarily long and very narrow, 210 ft. by 19 ft. (fig. 22). It was built upon a granite base with marble steps. The building was divided into three parts, a long central hall, with a sunken area, in which presumably the dances took place, and at the southern end a Doric portico, possibly tetrastyle, possibly 'dolystyle in antis.' At the north end of this hall was the chamber containing the altar. It was entered between two composite piers, formed by a half Doric column on the one side, and an anta with two recumbent bulls as a capital on the other side. Above was a frieze with bulls' heads upon the triglyphs. It is these bulls that give the name to the building.

The Thymele (i.e., 'place of sacrifice'), the so-called Tholos, at Epidaurus (fig. 24) is one of the few round buildings, used for religious purposes, that have come down to us. Others were the Arsinocion at Samothrace sacred to the Great Gods, the very small building, if so it may be called, whose circular foundations may be found in the Agklepieion at Athens, and the quasi-religious Philippion at Olympia, which may be regarded as a sort of Heroon of Philip. It seems to have been one of the loveliest buildings of antiquity. The foundations are probably of older date, but the principal remains date from the end of the 4th cent. B.C., when it was built by the architect Polyclitus (possibly a grandson of the famous sculptor). It was 107 ft.
ARCHITECTURE AND ART (Hindu).—The adherents of all the Indian sects and religions used for their several purposes the art of each age and country, which was applied, as the occasion arose, to the special requirements of each form of worship. No fundamental distinction, from the point of view of the historian of art, can be drawn between the buildings of the various religions, and often it is impossible to determine merely of style whether a given building or sculpture is Buddhist, Jain, or Brahmanical. As Le Bon observes, 'Architecture est beaupce plus fille de la race que des croyances.' But from the point of view of the student of comparative religion, it is legitimate and necessary to examine the modes in which the general canons of art were applied to the service of particular creeds; and it is possible, subject always to the understanding that the history of Indian art as such is a history of variation in creed, to treat the Buddhist and Jain works separately, and to concentrate attention on the artistic forms especially, although not exclusively, affected by Brahmanical Hiers.

Relie—whether not being an orthodox Hindu practice, the construction of śāyaps with their attendant railings seems to have been confined to the Buddhists and Jains. This fact alone eliminates a multitude of important works of Hindu architecture from the restricted sense. The chaitya halls, likewise, not being serviceable for Hindu ritual, all the known examples of this kind of building, whether rock-cut or structural, are Buddhist. Although it is true that Brahmanical Hinduism in one shape or other is older than either Buddhism or Jainism, and that the worship of Siva, Kṛṣṇa, and the other deities now favored by the masses of the people, may be traced back to a distant antiquity, the material remains of ancient Hinduism are extremely rare, and nearly all the really old monuments are either Buddhist or Jain. Whatever may be the correct explanation of this, the fact is certain, and affords a further practical justification for the separate treatment, for certain purposes, of specifically Hindu works as distinguished from those of Buddhist or Jain origin.

Architecture is the dominant art of India, and almost all other modes of art have been developed as necessary to it. No Hindu artist seems to have felt the necessity to produce a statue or picture for its own sake, as a thing of beauty by itself, without reference to an architectural composition. The few detached images which exist were usually intended to be worshipped, and are designed primarily for religious not artistic purposes. It is hardly necessary to observe that Indian life in all its aspects—art included—is governed by religious motives, and the consequence necessarily follows that all notable works of art in India are associated with buildings dedicated to the service of religion.

The examples of architectural skill applied to purely secular purposes are rare and comparatively unimportant, while the minor decorative arts, as applied to the floors of ordinary houses, are largely dependent upon mythological motives. Practically, therefore, a discussion of Hindu architecture and art must deal almost exclusively with the architecture and decoration of temples associated with deities and with buildings dedicated to the service of religious ideas. For a full expression of Hindu architecture generally, the reader is referred to Fergusson's standard work. Here it will suffice to observe that the essential part of every temple is the shrine, containing the image or symbol of the deity. That shrine very often is not the principal element in

columns, the outer Doric circle containing 26, and the inner Corinthian, 14. The inner rings are divided by openings and connected by cross walls in a rather curious way. The Doric entablature had large richly sculptural rosettes upon the metopes. The ceiling of the ambulatory was executed with beautiful marble coffers. The capital of the Corinthian, as has already been noted, are in their way the acme of Greek art. The use of the building has been much discussed, but its name, and its correspondence to its miniature prototype or copy in the temenos of the same god at Athens, point to the whole to the building covering a sacrificial pit. That sacred serpents may have been kept in the spaces between the ring walls is also conceivable, without interfering with the first theory.
ARCHITECTURE (Hindu)

the composition, being overshadowed by the subsidiary parts added for the purpose of giving the architectural plan of dignity and grace—not for congregational uses, which Hindu ritual excluded.

The leading styles of Brahmanical temple architecture are six in number, namely, four northern and two southern. The northern styles are (1) the ‘Indo-Aryan’ style of Asoka; (2) the Gupta; (3) the Kāśmirī; and (4) the Nāpālī. The southern styles are (5) the Dravīdian, and (6) the ‘Chālukya’ of Fergusson, better designated as that of the Deccan. We need to indicate briefly the geographical distribution, chronological characteristics, and principal examples of each of these six styles.

The reader who desires to pursue the subject will find a great mass of information recorded in the selected works at the end of this article, and in the unnamed multitude of other books dealing with Indian archaeology.

1. The ‘Indo-Aryan’ style is characterized by the bulging steeple with curvilinear outlines which surmounts the shrine or sanctum sanctorum of the temple, and is frequently repeated in other parts of the design. In Orissa an early temple sometimes consists of nothing more than the steepled shrine with a low-roofed porch, devoid, or almost devoid, of sculptured ornamentation. But later examples have additional pillared chambers. The great temples at Khajurāho, in Bundelkhand, dating from the time of the Chandel dynasty, are built on a cruciform plan, with towers, which resemble in build princ-

ings of imposing dignity. The style in one variety or another is found all over northern India, between the Himalayan and the Vindhyā mountains. The most elegant examples may be assigned to the period 700-1100, but some of the Orissan temples are supposed by Fergusson to date from A.D. 600. As a rule the material is stone, but a few brick temples in this style are known.

The best preserved specimen built of brick is that at Konār kullān, in the north-western part of Gāzā, which is assigned to the 8th cent. A.D. (Cunningham, Archael. Soc. Rep. vol. xvi. p. 58).

Certain brick temples in the Cawnpore district, rather earlier in date, probably had steeples of the standard form, but are too much ruined to admit of certainty. The most ancient known Brahmanical temple is one built of decorated moulded bricks, discovered by Dr. Führer in 1891-92 at the period of the Satavahana age, for which reason to the first century B.C. (Archael. Soc. for N.W.P. and Oudh, Progress Report, 1891-92.) Unfortunately no description of the building has been published. It is probable that the style was developed originally in brick, but it is not known how it originated. Nor is the genesis of the curvilinear steeple easy to explain. The most plausible suggestion is that the design was modelled on the form of a frame of bamboo fastened together at the top. In modern buildings the tendency is to diminish greatly or dispense with the curvature of the outline, and many temples of recent date have slender straight-line spires, closely resembling European church forms.

2. The Gupta style, with which Fergusson was not acquainted, is so named because it was favoured by architects in the 4th and 5th centuries A.D., when the imperial Gupta dynasty ruled northern India. It is said (Archael. Soc. 2, 3.) The recorded examples, about thirteen in number, including a good one at Sānchī, are found in the southern parts of the United Provinces and the neighbouring provinces of Oudh and Bihar. Cunningham, who first distinguished the style, enumerates its seven characteristic features as follows:

(1) Flat roofs, without spires of any kind, as in the cave temples; (2) prolongation of the head of the doorway beyond the jambs, as in Egyptian temples; (3) statues of the rivers Gauges and Jumna guarding the entrance door; (4) pillars with massive square capitals ornamented with two lions back to back, with a tree between them; (5) bases on three or four projecting horns; (6) decoration of a very peculiar form, like Buddhist stūpas, or beehives, with projecting horns; (7) the continuation of the architrave pericost all round the building; (8) deviation of the mass from the carved points (Cunningham, Archael. Soc. Rep. vol. ix. p. 42, and ib. vols. i. x. xvi. xix. xx.),

which is a moulding all round the building; (9) deviation of the mass from the carved points (Cunningham, Archael. Soc. Rep. vol. ix. p. 42, and ib. vols. i. x. xvi. xix. xx.),

and the curvature of the roof is much less marked than in China. The southern valley of Nepal proper, measuring about 20 miles square, is occupied by the city of Kathmandū, on the bank of the Bagmatī. The town of Patān, and Bhatgirī, are situated, probably contains more temples than any other equal area in the world. The total number is believed to exceed 2000, of which the great majority are in the towns above named. In modern Nepal the practices of Brahmanical Hindus and Buddhism are so intricately mingled that the symbols of both religions are found indifferently in the shrines. Le Bon has rightly laid stress upon the proposition that the existing state of things in Nepal goes a long way towards explaining the process by which, in India, Buddhism gradually melted away into Hinduism. The eldest monuments in Nepal are Buddhist stūpas, which may be as early as 1200 B.C. The Nāpālī temples built entirely of stone vary much in form, and do not admit of summary classification as regards style. Examples of some of the most notable varieties are given in Le Bon’s plates.

5. The Dravidian style is so named because it is that prevalent in the countries occupied by peoples speaking Dravidian languages. These countries correspond closely with peninsular India to the south of the Kriṣṇa (Kistna) river; and are nearly equivalent to the Madras Presidency. The Brah-
ARCHITECTURE

Hindu

mancial temples in this style may be devoted to the worship of either Siva or Vishnu. Which-
ever god is specially honoured, the style is the same. Mr. Ferguson defined its characteristics as follows (p. 225):

The temples consist almost invariably of the four following parts, arranged in various manners, as afterwards to be explained, but differing in themselves only according to the age in which they were executed:

1. The principal part, the actual temple itself, which is called the vimana. It is surmounted by a pyramidal roof of one or more stories; it contains the cell in which the image of the god or his emblem is placed. Among the earliest, and the first dynasty which embraced, was the Pallava, extending from the 5th to the 8th century.

2. The temples contain, in some cases, an open space paved with stones, and always surrounded by a large, often colonnaded, court.

3. Pillar halls, or choultrys, which are used for various purposes, and are the invariable accompaniment of these temples. Besides these, a temple always contains tanks in which water is kept, either for sacred purposes or the convenience of the priests; dwellings for the various grades of the priesthood attached to it; and numerous other buildings designed for state or convenience.

Except in the earliest rock-cut examples, the roofs and almost all parts are bounded by right lines, the whole temple forming a single rectangular mass. The "Indo-Aryan" style is well known in the south. The celebrated Seven Pagodas of Mamallapuram (Mahabalipur) near Madras, executed under the orders of Pallava kings in the 6th and 7th centuries. A.D., consist of a rectangular temple in the North Arcot and Trichinopoly districts, mark the earliest known stages in the development of the style, which then showed distinct traces of specially Buddhist forms. At Ellora, in the Nasiruddin's dominion, we find a magnificent rock-cut Kailas a perfect Dravidian temple, as complete in all its parts as any later example of the style. This edifice is made to simulate a structural temple by the combination of the superfluous rock, both externally and internally, so that the temple stands out freely. It was excavated in the reign of Króna 1. Rāstrakūta, about 700 A.D.

The great structural temples of Southern India are much later in date. They are extremely numerous, and remarkable for their vast size. Ferguson was personally acquainted with 'upwards of thirty great Dravidian temples, or groups of temples, any one of which must have cost as much as any cathedral, some of them were a great deal more.' One of the most notable is the temple erected at Tanjore by the victorious Chola king, Rājarāja, between A.D. 985 and 1011, which has been described as the best temple ever built on a well-defined and stately plan, which was persevered in till its completion. The numerous inscriptions on this temple have been edited by Dr. Hultzsch (South Indian Insers, vol. ii.). Other huge structural temples, less famous, are, to be seen at Srirangam, Chidambaram, Rāmeswaram, Madura, and many other places. The adequate description of any one of these would fill a large volume. The central corridor of the choultry at Rāmeswaram has an uninterrupted length of 700 feet, that is to say 100 feet longer than the nave of St. Peter's; and these figures may suffice to give some notion of the large size on which the southern temples are designed. Ferguson expressed the opinion that the Dravidian temples "certainly do form as extensive, and in some respects as remarkable, a group of buildings as is to be found in provinces of similar extent in any part of the world; and that even the Egyptian in extent" (op. cit. p. 379).

6. The so-called Chālukyan style, which may be described as the type of architecture actually manufactured in the confines of the original territory which, as that of the Deccan, is, as Le Bon correctly observes, a transitional one connecting the forms characteristic respectively of the North and South.

If we exclude the purely local and isolated styles of Kasāmir and Nepal, the two extremes of Indian architecture are formed by the Indo-Aryan and the Dravidian styles. The Gupta and Chālukya (p. 347) both possess intermediate styles, and are to some extent related to each other. The latter has two well-marked varieties, that of Mysore, described by Ferguson, and that of Bellary, described by Raa.

The Chālukyan style, which comprised at its greatest extent most of Mysore, parts of the Narmada's territories, and some districts near the Deccan, was founded about A.D. 950, and lasted until about 1200. Its first dynasty, the combined Dravidian and Aryan in feeling, was established in A.D. 973, and came to an end, as a power of importance, about A.D. 1190. Early in the 12th cent. the Chālukya kings lost the Narmada country, which passed under the government of a Hoysala dynasty, and the splendid temples at Hōlbī, Hoysam, and Eōhī, which excited the enthusiastic admiration of Ferguson, who gave the inapposite name Chālukyan to their style, really were built under the orders of the Hoysala kings. The Eōhī temple was erected by King Visnū when he was converted from Jainism in A.D. 1117, and the Hōlbī temple belongs to the same reign, a few years later (Epigr. Carnatic, vol. v. p. 30).

The Mysore style, as described by Ferguson, is characterized by a richly carved base on which the temple is raised, an inclined platform, or an elevated base, a plan, with a stepped conical roof, not rising high enough to become a steeple, and a peculiar vase-like ornament crowning the summit. The Bellary variety, to which Raa has devoted a monograph, of the buildings would be classed more properly as Dravidian than as a subdivision of the Deccan style. Raa, while using the name Chālukyan, admits that the temples discussed by him are Chālukyan in form, but contain more embodiment of Chālukyan details engraved on a Dravidian building." These works seem to belong wholly to the 12th century. The decorative sculpture is remarkable for its marvellous intricacy and artistic finish. The temple sculptures are not ornament generally being completely undercut, and sometimes attached to the solid masonry by the most slender of stalks. The effect is described as being that of the inarticulately carved foliage placed upon the wall. The beautiful style of Western India, sometimes described as the Jain style, may be regarded as a variety of the Chālukyan.

Space will not permit of lengthy discussions of the manner in which the art of sculpture has been applied in countless temples to the service of Brahmanical religion. The flat bas-reliefs, so much esteemed by the early Jains and Buddhists, have been rarely, if ever, used by the more orthodox Hindus, but bas-reliefs, in the modern sense, have been due to modifications of taste rather than to religious motives. Regarded from the artistic point of view, no sound distinction can be drawn between the sculpture of the Brahman and Jains, and that of the rival religions. As a matter of fact, however, the early bas-reliefs are all Buddhist or Jain, while the later figure sculpture in high relief is predominantly Hindu. Each figure, individually, is barely of much account as a work of art, but the mass of sculpture exhibited on a temple of the best age, when regarded, in the manner intended by the artist, as an essential part of the architectural design, produces an impression of splendour and magnificence, and extorts from the most unwilting critic expressions of fervid admiration. The exuberance of fancy, and the patience in execution displayed by the Hindu sculptor, are almost immeasurably greater than can be appreciated from even the most study of either the original works or large-scale photographs.

Hindu mythology supplies the subjects for the decoration of a multitude of minor artifices of art manufacturing, metal, ivory, and stone, made in many parts of the empire. Numerous examples exist which display rich fancy in design, and unsurpassed delicacy in execution. The
ARCHITECTURE (Jewish)

magnificent manuscript of the Razia Nisah—a Persian abstract of the Mahabharata—preserved in the British Museum. The subject of the myths of Rama, Krishna, and other Hindu deities as represented in colour by artists of Akbar's time (A.D. 1588), trained in the Persian style. The illustrations cost four lakhs of rupees, or more than the cost of the original narrative.

The existence of extant fragmentary and corrupt copies proves that a considerable body of Sanskrit treatises dealing with the rules of Indian architecture is at our disposal. The dates of the composition of these treatises have not been ascertained, and is to be found almost exclusively in the essay by Ram Riz, who collected the remains of the architectural literature procurable in southern India, and published the results of his inquiry in 1834. The works examined by him are certainly ancient, because they lay down rules for the provision of sites for Jain and Buddhist temples, as well as for those of orthodox sects; but the materials for a more exact determination of their dates do not seem to exist.

The following abstract of the contents of the oldest treatises is intended to give a notion of the nature of these scriptures, known as the Silpakastras.

The work ' opens with the mystical rites performed in honour of the Pashupati, or the presiding over the goddess, on which buildings are erected, and proceeds to give rules for the examination of the soil, the preparation of it for buildings in general, the construction of a common roof, the dimensions to be allotted to the cardinal points, the division of the ground-plan into several parts, as domestic purposes. The performance of sacrifices previous to the commencement of the work; after which it describes the several sorts of villages, cities, and fortresses, upanayas or pedestals, the adhitthanas or bases, the 'padas' or pillars, the prastaras or entablatures, the adhitthanas or bases, the shringaras, the structural features, the sanctuaries for the raised for the reception of idols, the bhavas or the domes (sic, 'towers') of temples, the ceremonies observed in laying the first and the last stone of an edifice, the several sorts of temples, the courts by which they are surrounded, the pyramidal gateway, the mandalas (sandagopas) of shrines, the halls to be raised in the front of temples; and concludes with instructions for the carving of images, etc. (Ram Riz, p. 6).

If an editor, skilled alike in Sanskrit and the technique of architecture, could be found, it is clear that an adequate edition of one of these treatises would throw much light upon the ideas of the Dravidian architect.

LITERATURE.—The only book dealing with Indian art generally is E. F. Waterhouse, An Art Galley, Paris, 1879, a small, popular work. But for the architecture the standard authority is Fergusson, Hist. of Indian and Eastern Architecture, London, 1876, reprinted with an additional account of Nepalese architecture. Special monographs are, Rea, Chitakuliyah. Architecture, Arch. Surv. of India, New Series, vol. xxii, Madras, 1890; and Fergusson and Meadows Taylor, Architecture, London, 1896. Cunningham's Archæological Survey Reports, 21 vols., contain information in other publications of a more general character. Burgess and various writers give copious unsystematic information on architecture and sculpture. For the minor arts generally the best authority is Birdwood, The Industrial Arts of India, London, 1890. The most magnificent publication on the subject is Hendley, Memorial of the Juggs Exhibition, 1883, in four large quarto volumes. The Journal of Indian Art and Industry, 10 vols., may also be consulted with advantage. Ram Riz, Essay on the Architecture of the Hindus, London, 1834, is the sole authority for the ancient Indian literary tradition of architectural laws, as practised in the south. Burgess explains the nature of the ancient architectural edas in his Art and Architecture, ii. of vol. i, Archæol. Survey of Western India. An important work on Elephant Trains, Sculpture and Paint, (Murray) is announced as in the press.

VINCENT A. SMITH.

ARCHITECTURE (Jewish).—Materials for a history of ancient Hebrew architecture are accumulating to an extent that must upset some conventional theories. The new Elephantine papyri reveal the existence in Egypt, at the end of the 5th century B.C., of a temple which opened into portals of sculptured stone, copper-hinged doors, cedar-wood roofing, and gold and silver chalices. Flinders Petrie, again, has been able to identify the Onias Temple, which was also built in Egypt more than two centuries later. Here we have a tower-like structure, with massive walls of drafted stone, a substantial brick retaining wall, and Corinthian columns supporting the roof—ornamentation. Half a century later Jewish architecture is represented by such buildings as the palace of Simon the Maccabee unearthed by R. A. S. Macalister at Gezer. The remains of Herodian buildings in Jerusalem, and the ruins of synagogues in Galilee, dating from the first century A.D., can be seen in the story. These stone synagogues seem to have had on the façade three doors,—one in the centre, large, the others at the sides, smaller. The Galilean synagogue was elongated, and was built at a truce in the south. The interior (as at Tell Hum, Meiron, and Kefr Birim) was divided into three by two rows of pillars. The central space of the Tell Hum synagogue was surrounded by a gallery on three sides, and traces of similar galleries have been found elsewhere (Schürer, ii. p. 521). If these structures were meant for women, then the women's gallery, which became a distinctive feature of synagogues only after the Middle Ages, is traceable to an older date.

Though there was no legal prescription on the subject, the favourite shape for synagogues was the basilica, and square or oblong buildings are still the prevalent form, until the prevalence of rectangular, and the famous synagogue of Alexandria (destroyed in the time of Trajan) was a basilica. In modern times a number of octagonal synagogues have been erected, but the basilica form remained constant despite the changes due to local style and taste. In Italy the Renaissance, in Spain the Moorish, influence, modified the decorations and columns; but there were certain essential requirements which kept the synagogue to one general plan. There was first the ark to contain the scrolls of the Law, secondly the Reading Desk or Almenar, thirdly the Entrance. The ark was by preference placed in the east, though this rule was frequently neglected. The Almenar (properly al-minbar, Arabic for 'pulpit') was mostly a rectangular structure occupying the centre of the building. It was used primarily for reading the Scriptures, but in Spanish synagogues it was also the place whence the prayers were read. In many parts, especially in the East, the prayers are still recited from a depressed part of the floor near the ark, to comply with the text, 'Out of the depths have I cried unto thee.' (Ps. 130). The greatest changes in synagogue architecture in modern times is due to the alteration in the position of the Almenar. This is now placed on the east side in Eastern synagogues, forming with the ark one ornate structure, conceptable for the scrolls and the platform for preacher and preacher. Many of the older synagogues made no provision for a pulpit; for sermons were not regularly delivered in the synagogue until the 19th century. The place for the sermon was the school, or Beth Hammidrash. This modification of the position of the Almenar has also affected the seating arrangements. In former times (and also at present in the majority of cases) the benches for men ran lengthwise on two sides of the building, the centre being empty with the exception of the Almenar. Nowadays the seats extend rather to the right or left of the ark, so that the worshippers are always turned to the east, the posture required during certain parts of the service. In the older medieval synagogues there were no galleries for women. Women had a separate prayer-room, which was literally a hut with a glazed window. When the synagogue proper became used by large numbers of women (as began to be habitual from the 14th cent.), the gallery became a prominent feature of synagogue structure. The gallery ran round three sides of the building, and...
ARCHITECTURE (Mithraic).—According to Porphyr...
three parts—in the middle a passage of an average width of 23 metres, and on the two sides massive ledges covered the side-walls of the temple. The average height of these was about 80 centimetres, and the width about 14 metres.

Modern archaeologists have applied to the passage the name cela, and to the ledges that of polis, both of which are derived from the Latin names previously cited. Attempts have been made to compare this arrangement of the 'mithreaus' with the division of churches into three sises, but the likeness is purely superficial. The thick layer of plaster that covers the ledges and whose width is not great, were occupied by the worshippers, who knelt there, while the cela was reserved for the officiating priests. Here it was that the victims were sacrificed, and that the ceremonies of initiation took place. In a 'mithreaus' of Ostia (ib. 814), 7 semi-circles marked in the pavement undoubtedly indicated the places where the priest paused to invoke the planets represented on the sides of the lateral ledges. In other parts certain receptacles appear to have held the water employed in purifications.

At the end of the sanctuary facing the entrance there always rose a great piece of sculpture, the remains of which are certainly those of the temple of Mithras. On the other hand, two walls sloping inwards formed a niche where the sculpture was placed. Occasionally the bas-relief, revolving on itself in this niche or apse, could, during the services, present successively its two sculptures to the side-walls. There were also cases when the architect dispensed with these additions. The wall at the back was plain and the sculpture was made to fit in a recess in its thickness, or to rest upon a base. The part of the temple, generally raised above the rest, where this sacred image was displayed, formed a kind of inner shrine accessible apparently only to the priests, and sometimes screened off by wooden railings.

It is difficult to settle the arrangement of the 'mithreaus' which we find in vogue under the Empire. We have no exact information regarding the sanctuaries of Mithra in the East, and we do not know if the plan adopted in Europe was already followed there. We are, however, in a position to state that the portico and the pediment were imitated from the Greek temples, which transmitted their Greek name, pronaos, to this fore-part of the building. We may suppose that the apse, which, moreover, is often wanting, is borrowed from the Roman basilicas, but the interior arrangement of the crypt remains as yet inexplicable. The division of this hall into three parts of unequal height does not offer, so far as the present writer knows, any likeness to any other kind of ancient architecture, and its resemblance to the early Christian basilicas is purely superficial. We must not conceive of the temple as an imitation of ancient structures or proportions. Covered as they were by a single roof, they could not easily be enlarged. The most considerable of them are 20 metres in length by 8 to 10 metres in breadth, and the few that are known to us could find room on the stone ledges. Thus there are often several temples collected in the same place, even in very small towns (five at Ostia, four at Aquincum and Apulum, three at Hodderheim and Friedberg, etc.).

These small buildings were brilliantly ornamented. In the richest sanctuaries, marbles and mosaics covered the floor, the walls, and even the roof; in the poorest, stucco-work and the coatings decorated with brilliant colours sufficed. When the lamps were lit, this gorgeous ornamentation was intended to harmonize with the various colours and form the statues in order to produce a more vivid effect.

Often, instead of building a temple for a body of worshippers, wealthy Romans used to place a cella at their disposal. The traditional plan of the 'mithreaus' was often modified to accord with local peculiarities. The division of the crypt into three parts was always preserved, but the accessory constructions, the pronaos and the apse, disappeared. The approach was removed to a contiguous hall, which was used as a sacrarium. It is thus often difficult, in examining ruins, to ascertain where the owner's oratory ended and where his kitchen commenced.

LITERATURE.—Wolff, 'Ueber die architektonische Beschaffenheit der Mithrasbildstätte' in Das Mithrasbildstätten von Gross Krotzenburg, Cassel, 1882, pp. 85, 101; Camet, 'Fragments et monuments figurés relatif à la religion de Mithra' in Journal des Savans, 1894, p. 56; of which we have given a résumé here. Nothing of importance has been found since the publication of this book. The most important discovery is the 'cella Mithraea' discovered at Boscoreale (Borromini) on the Roman Wall (Bosanquet, Archæologia Atlantica, 1904, xxv. 286.), and of Saalburg (near Frankfurt), which has been re-opened by the architect J. Jacobi, and can be visited.

FRANZ CUMONT.
ARCHITECTURE (Muhammadan)

Egypt, Persia, India, Greece, Etruria, Rome, and Byzantium. Thus the first Muhammadan temples, the first mosques during the early centuries of the Hijra, were no other than those derived from imitation of monuments already existing where the new religion was established by right of conquest. The first architects and artificers of Islam, therefore, had no other means of expression than those derived from the pre-existing art of the Byzantines, Copts, Sassanians, or Indians. But these pre-existing elements were applied to new purposes: the new religion had neither mysteries, nor sacraments, nor priesthood properly so called. No temple was to enshrine the wonder-working image of a Deity, or of a saint, or the Divinity itself contained in consecrated elements. The mosque was only a place of prayer, of preaching, and, up to a certain point, of instruction. It was, properly speaking, a place of meeting in the general sense of that word (the āmi, āmā, āma).

The first mosque at Medina, where the Prophet collected his earliest disciples, was an enclosure open to the sky, having one part sheltered by a flat roof supported by wooden pillars covered with plaster, and the Prophet ascended some steps in order to preach.

But there are in their simplest form the elements of the mosque—a court, porches to shelter the worshippers, the pulpit for the preacher to stand in, and the recess, or mihrāb, the situation of which indicates the qibla, or the direction in which one ought to turn in order to have one’s face directed towards the central shrine, the Ka’ba of Mecca.

This Ka’ba, the real sanctuary of Islam, and the only one which has a supernatural significance, is not a mosque. It is the ‘House of God’ built by Abraham, and there is an absolute bond of miraculous and Divine stone. It is the Egyptian ‘naos,’ or rather the Jewish ‘ark,’ where the invisible and indivisible God is present. But it is not the prototype of the mosque. The form specially typical of the mosque is the pillared hall, like the ‘Amr mosque at Cairo, the mosque of Sidi Okba at Kairwan, the primitive al-Aqṣa mosque at Jerusalem, the mosque of Cordova, the great mosque of Samarra, etc. The plan is easily explained when we remember that in order to recite their prayers the Musalmans are arranged in ranks parallel to the wall at the end of the mosque where the mihrāb is, which indicates the direction of Mecca. Thus the Ka’ba of Arabia is a primitive and specially Islamic plan of a place for worship.

The Muhammadans, whose energetic advance had, so to speak, extended the limits of the ancient world, had continued their progress from the Pillars of Hercules to Java; and from the early centuries of the Hijra the empire of Islam united under one faith the most widely differing nations. The very diversity of the races conquered by Islam was destined to give rise to variety in Muhammadan architecture, for whatever the new religion was planted, it found itself face to face with fully formed civilizations possessing a well-defined architecture of very skilful workmen. The result was that the architecture of the early Muhammadan buildings was the native architecture, more or less strongly affected by new ideas, and without the representations of living creatures. We ought then to divide the study of Muhammadan architecture into as many sections as these distinct nationalities. But it is possible to bring them under more simple divisions. All Muhammadan buildings are divisible into all the schools of Muhammadan architecture, for any school may be divided in five great subdivisions. (By this term ‘school’ is meant the division or distinction of styles in the same way that, with regard to painting, we use the expressions ‘school of Bologna,’ ‘school of Florence,’ ‘school of Venice,’ etc.) Under these headings, we may enter all hitherto existing monuments without consideration of the periods in which they occur. This method of subdivision is sufficiently specified, firstly by geographical, secondly by historical considerations. These great subdivisions will then take the following titles:—

(1) The Syro-Egyptian school (comprising monuments of Egypt, Syria, Persia, and Arabo-Sassanian architecture, and monuments of Maghreb (monuments of Morocco, Tunis, Spain, and Sicily).

(2) The Persian school (monuments of Persia, Mesopotamia, Armenia, Cretaceous, Turkestan, Afghanistan, and Baluchistan).

(3) The Turkish or Ottoman school (monuments of the Ottoman, the Transtionate, Anatolia, and Turkey in Europe).

(4) The Indian school (monuments of Hindustan).

We shall not here speak of the mosques of China, which have nothing of special interest for us, since they are built in the pure Chinese style, and are not distinguished by any characteristic from the architecture used in the public or religious buildings of China (see Architecture (Chinese)).

General characteristics of Muhammadan architecture.— Muhammadan architecture, as stated above, is derived, generally speaking, from local architectures modified by Muhammadan ideas.

What are these ideas, and what did they differ from former ones? This is the principal question to settle; for architecture may be considered in a general way as the art of carrying out given ideas by methods which allow the materials at one’s disposal to be employed to the best practical and aesthetic advantage.

These ideas in the department with which we are now more particularly engaged, that is to say, religious architecture, are, as we already said when creating those entirely different from those governing Christian churches or ancient temples. Other Muhammadan buildings are also inspired by a religious purpose; these are the schools, the madrasas—colleges or academies—the mosques of the places of meeting, and the mosques to which are attached religious endowments, such as schools, fountains, and almshouses.

Another condition to be fulfilled was the exclusion of representations of living creatures from the ornamentation used. Although it may be proved that this restriction hardly applied except to religious buildings, and that the texts, as well as the monuments, show us that representations of living creatures were entirely excluded from the ornamentation of private or public buildings, palaces, houses, etc., it is none the less true that, in general, the architectural decoration of Muhammadan buildings has conformed to this principle. Consequently all the subjects of decoration in Muhammadan art have been found in ornamentation borrowed from the vegetable kingdom and from geometry.

The first architects, whether Muhammadans or Christians, who raised the mosques of Islam drew from sources which differed according to their country. But these influences, whether Byzantine, Coptic, Sassanian, Indian, African or Arabic, have been in a fashion mingled, and as it were interpenetrated, often because of circumstances quite peculiar to Islam. These will be indicated presently. Finally, this nomadic art, if we may use such an expression, had a profound influence on the art of Islam. The art of nomads, which includes the ornamentation of tents, the decoration of saddlery, of carpets, of hangings—an art which may still be studied in the people of the desert of western Morocco to the centre of Turkestan—which is based upon tradition, and sometimes reaches a high pitch of refinement, has not existed without exercising a remarkable and important influence on the internal
ARCHITECTURE (Muhammadan) 747

and external ornamentation of buildings. Of this we shall find numerous examples throughout the course of this article.

The Arab, a nomad in a special degree, developed, among all the nations where he planted his new religion, a taste for distant journeys, and the prescribed ritual of the Meccan pilgrimage has been the most prominent token of this artistic literature, so rich in stories of travel, also witnesses to it. This pilgrimage, binding on every Musalmán, has brought into contact the most widely differing races, so that, by a kind of reciprocal interfusion that the most heterogeneous civilizations have seen certain of their elements mix with foreign ones to form Muhammadan civilization.

From the point of view of the arts these reciprocal influences were not less remarkable. The artificers who made the pilgrimage to Mecca, having arrived in the Holy City, and being impelled thereto by an instinct of affinity, certainly did not fail to enter into relations with their fellow-tradesmen who were also there on pilgrimage. From this there undoubtedly arose an interchange of ideas and of skill; and all the more because, this journey being expensive it had to be made by less wealthy of these workmen, either in going or in returning, were obliged to halt on their way in order to work at their trade to provide the means necessary for accomplishing the next stage of the journey. It is, on a much larger scale, the resume of Damascus, or rather the different places of the travelling workmen in France in the Middle Ages.

Finally, the enormous extent of Islam from China to Morocco facilitated commercial interchange in a very remarkable way. Ships by sea and caravans by land brought the silks, perfumes, and precious things of the East to the West in a very short time. It is therefore quite natural that Chinese art should have in many cases influenced that of Turkestan and Persia, and that Indian art should have been able to exercise on the artistic products of Mesopotamia, Syria, Egypt, Persia, and even of Spain, an influence which certain passages of the historians explain to us, and of which we obtain a good idea from the observations to be made on many of the decorative details.

In bringing this preliminary survey to a close, we must dwell on one very remarkable aspect of Muhammadan art. It is a common, indeed hackneyed, opinion that Oriental luxury is the standard example of a degree of wealth and extravagance which has rarely been reached in other civilizations. This is, in fact, a special characteristic of Islam, and is explained partly by the peculiarity of the Muhammadan mind and partly by the events of history.

The chief characteristic of the Muhammadan mind, although not the absolute fatalism so often charged against it, is entire submission to the will of God. This submission accordingly implies the possibility of reverses of fortune which can in a short time destroy the greatest prosperity. The natural result of the mutability of fortune is to incite men to enjoy as rapidly and as intensely as possible the transitory possessions which fortune places at their disposal. The preciosity of absolute power and the enormous resources which despotism placed in the hands of the Khalifs both had this effect. Despite the extreme, like common folk, were obliged to enjoy rapidly the means of luxury which they had within their reach. To this may be traced the extremely luxurious character of Muhammadan architecture. The desire, however, of a unity, the want of solidity in most of the private dwellings, palaces, mansions, or country-seats. The buildings dedicated to worship, or built upon plans inspired by religious ideas, were, as a rule, more durably constructed.

1. The Syro-Egyptian school.—This division is treated in a separate article—ARCHITECTURE (Muhammadan in Syria and Egypt)—and will not be discussed here.

2. The Moorish or Magrib school.—The term 'Magrib' indicates the whole of Northern Africa lying, of course, west of Egypt. Two elements have contributed to the Moorish architecture, one from the Magrib: on the one side the local traditions, Roman, Romano-Berber, and Byzantine in Africa, Roman, Romano-Iberian, and Visigothic in Spain; and, on the other, the introduction of Oriental architecture which appears to have been in the first place the Byzantine architecture of Syria, for certain Syrian forms seem to have been introduced directly into Africa. To be convinced of this, one has only to compare the Aghlabid gates of the great mosque of Tunies and the eastern façade of the great mosque of Sfax with the lateral façades of the great church of Qal'at Sim'an (de Vogüé, Architecture civile et religieuse dans la Syrie centrale et le Hautmar du v au vste siécle). Another source of inspiration borrowed from the East, but this time from the Muhammadan East, is the plan of the mosques. The present writer has shown in his manual of Muhammadan architecture in Morocco and in Maroc et Maroc, Paris, 1907, i. (History of Architecture) the likeness existing between the plan of the Zituna mosque at Tunis and that of the great mosque of Cordova. This likeness was, however, so faint that the present writer could not say anything on this point with any substantial degree of certainty; but the plan of the great church of St. Simon at Qal'at Sim'an (de Vogüé, op. cit. ii. p. 129), two of the great aisles of which were joined at the ends by a transept running at right angles to them. This writer has never been made so far as the present writer knows; it is, however, very remarkable. G. Marius has mentioned in the Revue Africaine the numerous ideas borrowed, according to the Arab historians of Spain, from the Arab monuments of Syria, by the architects of the Khalifs of Cordova. This process of borrowing was quite natural because of the Syrian origin of the Umayyads of Spain. But the prototype of the grand mosque of Cordova cannot be looked for at Damascus; its plan presents no resemblance to that of the great mosque of that city. We must find it at Jerusalem in the plan of the chief mosque al-Aqsa. Guy le Strange, in his work, Palestine under the Moslems (London, 1890), has restored the plan of it according to the description of Muqaddasi, which shows its arrangement in A.D. 985. The ancient mosque of Jerusalem was 15 aisles in breadth and 21 in length; that of Cordova 11 aisles in breadth and 21 in length (at least originally); both have side-gates on the eastern façade. Ilirisi, quoted by le Strange (op. cit. p. 108), seems to have noticed this likeness, which le Strange has perfectly understood (p. 108). As to the decoration of the mosque at Cordova, it is borrowed partly from Byzantine art, and partly from Arab or Syrian or Mesopotamian ornamentation. This is certainly no longer doubtful, so that we can ascertain the origin of the serrated arches used systematically in the great mosque at Cordova, and recurred in the palace of Harun al-Rashid at Raca (Saladin, op. cit. p. 323, fig. 291), the al-Ashik palace at Samarrá (th. p. 81), the tombs of the sultans of the Ormœus, and especially of Oriental origin—Mesopotamian or Sasanian (exemplified in the secondary gate of the Palace of General de Beylié). *

† Cfr. also the work of Herzfeld published since that of General de Beylié.
ARCHITECTURE (Muhammadan)

Ctesiphon; see Herzfeld, Saamara), for it is found in Persia at Firuzabad and at Taq-1-Girra. This mosque-plan of which we have just been speaking is, to a certain extent (except in the proportion between the breadth and the length of the building), that of the mosques with aisles, like the Amur mosque at Cairo, and those of Samarra which Mr. Herzfeld and Mr. Loud have described, and that of Aba-Dilif which de Breylié was the first to portray, but these are later than the mosque of Cordova. They are mentioned here as giving the characteristics of the typical plan of the mosque-complex in its simplest forms, inasmuch as we know at present regarding the most ancient Muhammadian monuments of Mesopotamia; for the monuments of Samarra and of Aba-Dilif owe absolutely nothing to Syrian architectural traditions, which are based upon the use of dressed stone. These, on the other hand, are constructions of brick, and consequently connected with the pure Mesopotamian tradition, though strongly influenced by Sasanian art.

Thus, then, Spain appears to have been more directly influenced by Syria and Mesopotamia than was the case with Northern Africa. The great mosque of Kairwan in Tunis, for example, borrows and combines the Byzantine material from all that is ancient and Byzantine fragments which have been employed for its construction in columns, bases, and capitals. Arab historians, however, attribute to a Syrian architect the dome covered with green enameled tiles which at Alhambra and at Al-Qal'a was to be constructed above the porch of the celebrated mosque.

On the other hand, it is indisputable that the horse-shoe arch, the employment of which may be considered one of the characteristic principles of Moorish art, is borrowed from Sasanian architecture, for it is found in Persia in the Taq-I-Girra, the palace of Sarvistan, and in Mesopotamia in the celebrated palace of Chosroes at Ctesiphon—in the gates on the ground floor. It appears to have been employed there in a systematic fashion, while in the Christian monuments of central Syria and in certain buildings of Andalusia it appears to have been used only in the intermittent way. The most ancient examples of the use of this arch may be seen in Tunis in the inner window of the magdira of the mosque of Sfax, in Kairwan in the central motive of the interior façade of the Zituna mosque at Tunis, and in the eastern side façade of the great mosque at Sfax. This arch, which has been justly compared in shape to a horse-shoe, has been systematically used in the celebrated mosque of Cordova. It is found in the windows, the gates, and the interior arches, whether they are many-lobed or not.

Finally, local Christian art, whether African or Spanish, also had much influence on the architecture of the Maghrib. Byzantine art did not operate in the same way. Although some very important buildings were erected by the Byzantines in Carthage, it is not possible to assert, from what we are present know of them, the Byzantine character of the gates built or of the binding stones used at Tunis or at Sfax. At both Tunis and Sfax, they are connected with the forms of Byzantine art belonging to central Syria. Such are the drums which support the domes of the Zituna mosque at Tunis, the Aghlabid gates of this mosque, and the gates of the eastern façade of the mosque of Bougie. In Moorish Spain, on the contrary, received, by means of artists summoned from Constantinople to Cordova, a genuine influx of decorative Byzantine art, recognizable in the first instance in certain parts of the sculpture of the mihrab, but above all in the admirable enameled mosaics executed on the spot by the Byzantine artists who came for the purpose from Constantimople.

We may now exculpate the chronology of these early monuments of the Maghrib:

<table>

<td>Umayyad</td>
</tr>
<tr>
<td>722</td>
<td>Beni Ummayad</td>
</tr>
</tbody>
</table>

As early as the 9th cent., the new style in Spain assumed quite a distinct character; for the great mosque of Cordova is obviously a building of a style absolutely and clearly defined. On the contrary, we do not find in Northern Africa, whether in Tunis, or Algeria, or Morocco, such a homogeneity of style in the first Arab buildings. The successive restorations of the mosque of Sidi Okba at Kairwan, the traces of which are still sufficiently visible on the building itself, the Aghlabid period of the Zituna mosque at Tunis, of the great mosque of Beja, and of that of Sfax in Tunis, no longer give us the impression of a well-defined style. The reason for this must very probably be found in the fact that the conquest by the Almoravids and Kharidate of Cordova constituted a political and social regime on a sufficiently firm basis to give to the country such prosperity that the magnificence of the buildings far surpassed those of Africa, and that of a much poorer country. On the other hand, the continual relations of Cordova with Syria, and the arrival in Spain of a great number of followers of the Umayyads, made Arabized Andalusian, so to speak, a second Arabized Syria. The proofs of this are abundant in the Arab historians and even in the buildings.

In the 11th cent., the influence of Middle Asia, that is to say, of Mesopotamia and perhaps even of Persia, was making itself felt in Africa in the style of the buildings of Qa'a of the Beni Hammad, and probably in those of Bougie, which are unfortunately thus far not known to us except from descriptions, appears to have been felt also in Sicily, which had passed from the yoke of the Aghlabids under that of the Fatimids, and in which we recognize the Arab style only by the traces which remain of the building of the 12th cent., erected there by the Norman kings.

At the end of the 11th cent., from the time when Yusuf ibn Tashfin united Spain and the Maghrib under his authority, a modification seems to have been introduced into the Arab architecture of Spain; and it appears that this modification is due to Moroccan artists; this cannot, however, be positively established by examples of an authentic date. The magnificence of the Fez and of Marrakesh under the Almoravids completely explains how the architects who contributed to the adornment of these two towns were consequently able to exercise influence, either directly or by means of their pupils, on the tendencies of the school of Andalusia. This change of style is apparent at Toledo in the Puerta del Sol, and later under the Almoravids in the great mosque of Tiemsen, and in certain portions of the mosque of Tinnel, which has recently been discovered and described by Doutté.

It was not till the 12th cent. of our era that the new style really spread in a wonderful manner, by this time freed from antique or Byzantine imitations, and clearly marked by qualities of taste, of sobriety, of elegance and restrained luxuriance, which render the monuments bequeathed to us true masterpieces.
ARCHITECTURE (Muhammadan)

A short enumeration will give the chronological sequence of these specimens to copy, for the present writer once sketched a fragment of white marble mosaic with coloured marbles and St. Luzius (Morocco) by H. de la Martinière. This fragment dates from the 5th cent. of our era, and evidently belongs to that series of works in marble mosaic which served as models to the Arab workmen. This work in mosaic, which appears after all in the same manner in the Arab work in marble mosaic, was afterwards succeeded by square tiles, on which pieces of enameled in slight relief showed the usual ornamentation. Later they contented themselves with tracing in black lines on the white enamel, a polygonal and florid tracery worked in different colours. At a still later date the purely geometrical ornamentation was replaced by a floral decoration or one of the conventional palms. In Persia and in Turkestan we shall be able to trace a similar development in ceramic decoration. There is no doubt that this art was of Asiatic origin. The similarity between the Spanish enameled decorations and those in the famous frieze of archers in the apadana of Susa is obvious. On the other hand, the likeness of the enameled of the most ancient enameled vases found at Raca (Mesopotamia) to the enamel-work of the Maghrib at present leads to one to the last centuries of the Hammad period, is assigned to supply us with the date of the Abbasid period, where we may probably assign the most ancient enameled-work of Raca to the period of the Abbasids. In this period we may date the monastery of the church of the Aghlabids which is still existing and which is the only example of Moorish art in the Moorish East. We may have not known is what sort of architectural Moorish art, as we would have to conclude from the passage through which the most characteristic components of the architectural decoration of the monuments and palaces of Babylonia and Persia. This marchioness, though somewhat long, on the use and origin of enameled-work in Moslem architecture, is, however, indispensable in order to show by how slight a link Moorish art is connected with that of the Egyptian Copts.

The tomb of Sidi Bā Madīna at Tetouan gives an idea of this new development. In 1230 the Alhambra of Granada was commenced, in 1231 the mosque of the Qasba at Tunis was founded by Abū Zakariya, a work of Andalusian architecture, in which nothing any longer recalls the first Arab monuments of Tunis. For a large number of emigrants from Andalusia had a hand in it, not only because of the fall of the Almoravids, but especially because, owing to the want of native artists, the Hafizas, as Ibn Sa'd tells us, imported their architects, their workers in enamel, and even their gardeners from Andalusia. Enamelled earthenware, in fact, had been used in the Maghrib from a considerably remote period; we cannot precisely fix the introduction of it to the buildings of Qa'a of the Beni Hammad which date from the commencement of the 11th cent. of our era, and in the ruins of which Paul Blanchet did discover a considerable quantity of fragments of enamelled facings, bricks, pieces of binding masonry and mosaic, etc. From that period this manufacture, which must have been introduced by Asiatic workmen, spread in the Maghrib. Their origin is Asiatic, since the only architectural enamelled earthenware work we know in the Maghrib, previous to that period, consists of the famous squares with metallic reflections with which Ibrahim Ibn al-Aghlab adorned the minbar of the mosque of Sidi Okba at Kairwan, and which he caused to be brought from Bagdad. By successive improvements this art rapidly attained to that degree of perfection which we admire in the monuments of Tetouan, Seville, Granada, and Morocco. Enamelled earthenware is at first used in mosaic, consisting of pieces cut out by hand and placed together, either in hollows cut in slabs of marble or of hard stone, as in the Qa'a buildings of the Beni Hammad, or on a coating of mortar as at Tetouan and at Chella; in those cases its use is combined with that of enamelled brick, and in a partly enameled manner. That the mosaics was used in this way in order to imitate the mosaics of marble which the Arab artists, following the example of the Romans and the Byzantines, had constructed in Syria, in Egypt, and in Sicily. They had even found in Africa some
however, which the Moors have left in Spain—

the palaces of Tunis, of Algiers, of Morocco, of

Fez, and of Mequinez, cannot be passed over.

The architecture of the Maghrib contains at the same time suggestions from Roman and Byzantine houses, and very probably also from houses of Mesopotamia and Persia. We do not

know any very ancient Arab building, for in the Near East it is quite unaccountable which of these plans is reproduced, with very few variations, leads us to believe that the prototype has never lacked the features with which we are familiar from the other court, the division of the house into the salamlik, or open portion, used for recep-
tions, and the harim, or private part, entered by visitors, and reserved exclusively for women and domestic life. It is accordingly a variation of the Roman house. This is understood more easily when we remember that the early Arab conquerors of Northern Africa took up their abode first at the Roman or Byzantine houses, which still existed in great numbers, but at the French

began to take their up-abode, at the commencement of their occupation of the country, in the Arab houses of Tunis and Algeria.

From the earliest period the palaces have been builtings of great magnificence, and the descriptions of the Arab historians give us full information regarding the luxurious in style in which they were decorated and furnished. Of these we may mention, by way of example, the familiar palace of Medina-al-Sharif near Cordova, the palace of Mustansir in Tunis (described by Ibn Ikdikan, History of the Berbers), which possessed elevated pavilions, cupolas, kiosks, aqueducts, fountains, and large basins, forming a kind of mirror. These were also to be found in the Sasanian palace of Qasr-i Shirin, and have remained from that time a traditional ornament in Persia. Mustansir's palace also contained pavilions with marble columns and wainscotings of marble and faience mosaics. The palace of the Sultan Hamadis of Bougie, and those of Fez, Morocco, and Mequinez, were not less magnificent. We can have, so to speak, an ocular demonstration of the splendour to which Muslim architecture had attained in the Alhambra of Granada, of which the greater part is still standing, although by an unaccountable whim Charles V. caused the south wing to be destroyed in order to build in its place a palace of lamen-
to meedlsor.

Part of the plan of the Alhambra is an exten-
sion of the plan of the Arab house. There are always numerous structures surrounding courts bordered by porches, with fountains or large uncovered basins. There is no need to enlarge, in addition, on the lavishness and taste with which a great wealth of constantly varied decoration has been expended on every portion of this delightful palace, which is the glory of Granada and of Arabized Spain (see Art. [Muh.]).

After the final expulsion of the Arabs from Spain, Morocco, Algeria, and Tunis received the exiles, and built their artistic and religious institutions. These underwent profound changes in Algeria and Tunis; but in Morocco they were preserved, not entirely in their pristine purity, yet in a way so nearly complete as to give to the Moorish buildings, down to the latest times, an artistic character very superior to that of the buildings of Algeria and Tunis.

Chronology of the Buildings of the Maghrib.

Hijra. Christian

114 712 Uthub Allah ibn al-Mu'abb founds the Zituna mosque at Tunis.

152 770 The house of the great mosque of Cordova.

232 857 Ziyadet Allah restores the great mosque of Kairwan.

249 859 Founding of the Kairuin mosque at Fez.

325 936 'Abd al-Rahman III. founds the palace-mosque at Cordova.

363 977 Hammed ibn Bulukkiu iho Zayri found the Qa'a mosque of Beni Hammud.

498 1048 An-Nasir founds the mosque of Bougie.

575 1069 The Almoravids found the mosques of Morocco (Marrakesh).

590 1104 Buildings of Yaqib al-Mansur at Rabat, Chelia, Morocco, Seville.

596 1109 Tomb of Siddi ibn Madina at Tunisia.

600 1121 Building of the Alcazar of Seville.

609 1125 Mosque of Qasba at Tunis.

693 1259 Abur-yaqub an-Nasir builds in three years the town of Mansura near Tunis.

718 1318 Mosque of Sidi Bishani at Tunis.

735 1331 Restoration of the Andalusian mosque at Fez.

754 1353 Mosque of Sidi al-Halisi at Tunis.

753 1354 Completion of the Alhambra of Granada, founded in 259 a.h. (1259).

565 1460 Zayiwa of Sidi Ibn Aruz at Tunis.

692 1577 'Abd al-Salami, the magnificent palace al-Bodi' at Morocco, and a kiosk in the Kairuin mosque at Fez.

1041 1661 Mosque Hamida Pasha at Fez.

1152 1700 Completion of the mosque of Siddi Mahmoud at Tunis.

3. The Persian School (Persia, Mesopotamia, Turkestan, etc.).—We have already spoken of the mosques of Mesopotamia, Samarra, and Abu-Difil. In Persia the style is quite different. Yet the most ancient Persian mosques whose plans are known to us are built with aisles like the primitive mosques. The arrangement of these is still recognizable in the plan of the Juna mosque at Isfahan built in 142-153 a.h. under the Kahlilat of the Abbasid al-Mansir; but in this plan there is a peculiar arrangement: in the court there is an isolated structure on a square plan. Dieulafay describes a similar square pavilion in the centre of the old mosque of Shiraz built in A.D. 875 by Amir ibn Laith. This pavilion is evidently a reminiscence of the Ka'ba of Mecca, for it is known at Shiraz by the name of Khuda Khan, or 'House of God.' We should mention also the Juna mosque of Shiraz, re-built by the Pasha in A.D. 790 on the plan of the ancient mosque erected in the early years of the Hijra by Muhammad ibn al-Hajjaj.

At a period which it is as yet impossible to define, a remarkable development affects the arrangement of the Persian mosques: on the four sides of the court of the mosque there open enormous porches of great height, and in the form of an immense arcade. These luteins, as they are called, are certainly a reminiscence of the luteins of Chosroes, the Taji-Kisra of Ctesiphon, the magnificence of which had astonished the first Arab conquerors, and the recollection of which was always present in the minds of Oriental monarchs when they were erect-
ing great buildings. Muhammadian historians, in fact, when they wish to emphasize the splendour of a building raised by one of their monarchs, always compare it to the luteins of Chosroes, to the buildings of Mada'in, etc. In the plan of all the Persian mosques this detail (the luteins) always r-e-appears, and we find the same architectural feature in certain mosques of Turkestan and Egypt of Suchan—mosques which also serve the purpose of madrasas, i.e. schools or academies, or rather universities. When we closely examine the plan of the Juna mosque of Isfahan, we easily see how Malik Shah, Shah Taimasp, and Shah Abbas, in their successive enlargements of the
building, changed its original appearance in order finally to give that definite character which has been, so to speak, the type to which the Persian mosques have conformed, and which is so admirably condensed in the plan of the imperial mosque of Isfahan, most elegantly adornned under Shah Abbas. This latter may be considered as the chef d'œuvre of religious architecture in Persia, where we find no other mosques with aisles, but only the four great iwans, one of which serves as a porch of entry, and the other three as Dispersed places for prayer, each possessing its own mihrab.

We see, accordingly, that just as the Persians sharply divided themselves from the majority of the Muhammadans (who are Sunnites, forming a sort of hieratical sect by themselves), since they are Shiites and therefore abandon the purely Muhammadan tradition,* gave they to their religious architecture quite a different character from that of the buildings to be seen in Syria, Egypt, and in the Maghrib. When the mosques are deprived of a central court, as was the case with the blue mosque of Tabris; the praying place is always square-shaped, and is led up to by a large square hall, usually three-storied. Then we have nothing left to recall the primitive mosque, which is really derived from the shelter built along the wall of the mihrab, which allows the crowd of the faithful to line out along this wall and in front of the element common to all, the mihrab, in the same direction. The tendency in Persia would rather appear to be that of uniting the worshippers in a closed sanctuary in order to secure for them the interior, which favours collectedness of thought and prayer.

We see, therefore, that by a kind of natural development the changes through which the Persian mosque passed, while tending more and more towards a closed sanctuary, would produce successive forms approaching gradually those of certain Christian churches—those of Armenia, for instance.

The earliest Muhammadan architecture in Persia has also quite a special character. The leading elements in Persian architecture are, in fact, almost entirely borrowed from local traditions, that is to say, from the architecture of the ancient Persians and from that of the Sasanian period:

(1) The cupola or hall is supported by flat ceilings and terraces, which seems to be derived principally from Assyrian and Median art.

(2) The arch carried on drums or on columns standing in sets of four. (This arrangement was seen at the Moors, but the structure enlarged by four joined columns.) Since the arch and the pillar are constructed of rubble-stone or more frequently of bricks, we cannot doubt that the origin of this system of architecture must be sought in Chaldæa, whence it passed into Persia. As to the arch of dressed and cut stone and structures with binding masonry, they seem to be of Armenian origin, and to have passed from Armenia into the north-west provinces of Persia, where alone they are found.

The arch constructed of bricks was a matter of choice for the Persians; and this system seems to have been chosen because of the scarcity of timber in the greater part of the country. In this kind of structure they attained to a degree of artistic skill, ingenuity, and cleverness which has never been excelled anywhere. The use of unbaked and baked brick and of enameled brick came to them both from Chaldæa and from Susiana. It is probably from the early Persian buildings adorned with enameled bricks or faience mosaic that this process, so fertile in graceful applications, reached the West by way of Tunis and Algiers as far as Morocco and Spain, where the Moorish artists were able to develop this decoration as far as high as that reached in Persia by the Persians.

It was very probably from the use of bricks, whether by corrugations or by projecting stones, that stalactites came into use, which have always been one of the most interesting features of Persian and Syro-Egyptian brick architecture; but it is possible that stone and wood stalactites have not the same origin although very often similar in appearance.

Finally, just as Roman architectural traditions have influenced the development of decoration in the Maghrib alongside of geometrical ornamentation, the origin of which is not yet clearly established, so that in Persia its style of ornamentation has been influenced by Sasanian, Hindu, and, later, by Chinese traditions. Parallel with this also has proceeded a development of geometrical decoration which appears to be derived from the element common to all, the mihrab, and the origin of which, perhaps because of its Muhammadan character, should be sought in Arabia, not in the buildings of Yemen before Muhammad's time, but possibly in the ornamentation employed by the nomad Arabs in their embroideries, carpets, etc.

The origin of the lancet-arch, which was used in the ancient buildings of Egypt along with the crenary arch, and which has been found also in Assyria, appears thus to be settled, but its use seems to be reserved for the hidden parts of buildings, and those where solidity and economy in construction were both required. The palace of the kings Thoerots at Ctesiphon, in its visible portions has only semicircular arches, whether of horse-shoe shape or not, except its great arch, which is crenary; but the groovings disposed at the top that it formed, were not seen because they were in the interior of the building and above the arches, had pointed groinings. This pointed arch was a feature as frequently employed by the Persians as the horse-shoe arch was by the Moors. It has been supposed that the pointed arch formed by two skew arches involved a complication in construction easy to avoid by closing the curve by two straight lines; it is for this reason that their arches are of such an original and distinct character. We find in the West this predilection for closing brick arches by rectilinear portions in France, in the Roman architecture of Toulouse and its neighbouring, and in England the numerous brick buildings from which it passed into buildings of stone under the name of the Tudor arch.

The other religious buildings of the Persians are the madrasas, or religious schools, and the tombs. These madrasas assumed in Persia a still more important development than they did in Egypt or in the Maghrib. One of the most ancient, which have been described is the madrasa of Mustansir, built at Baghdad in A.D. 820 (A.H. 122), of which a summary plan is given by General de Beylié (Prome et Samarne, fig. 18). It consists of a suite of buildings arranged round a rectangular court, with a locuta in the centre of each of its four sides. These buildings, pierced by numerous arcades, contained the cells of the students. The likeness of the plan on which they
ARCHITECTURE (Muhammadan)

are built to that of the caravanserais with which Persia is covered will not escape any one, any more than the similarity to the plans of the great Persian mosques. If we could ascertain the most ancient types of these buildings, for example the Persian or Sasanian caravanserais, we should perhaps have the origin of the type of plan which the modern architects have been able to turn to such excellent account.

One of the most remarkable madrasas which have been built in Persia is the Madrasa-i-Shah Sultan Husain at Isfahan (1536). At the head of the entrance of this building we built close beside it at the same time, by merely examining the two plans in juxtaposition we understand what a striking likeness exists between them.

This arrangement has been reproduced in the great mosque-madrasa of Samarqand and Bokhara, and indeed in those of all the large towns of Turkestan, whence it is certain that the first architects of these buildings were Persians. In the case of some of them the proof is ready to hand. The madrasa Shir-Dar near Samarqand is the reduction to a comparatively small scale of the Persian madrasa; the mosque, madrasa, and tomb of Bibi Hanum (who was an Moslem) at Tunus, and those of Beja, Tunis, are of the same mould. The tomb of the Sufi Sheikh Kairwan, still existing, which was built by the Malök Khan in Tunis, was engaged in an enormous mosque or madrasa. The tombs of the Sufi Sheikh Kairwan, still existing, were also covered with them, and the flashing of these thousands of mirrors, the brilliance of the paintings, and the facings of faience, made these lofty halls, with glittering ceilings, marvels of taste and luxuriance, more remarkable even than we have seen in the Moorish palaces of Andalusia.

In the royal palaces of Isfahan these columns were covered with little squares of looking-glass not only on the front of their shafts, but on their octagonal and square bases, which, as these structures of the Sufi Sheikh Kairwan, near Tunis, were also covered with them, and the flashing of these thousands of mirrors, the brilliance of the paintings, and the facings of faience, made these lofty halls, with glittering ceilings, marvels of taste and luxuriance, more remarkable even than we have seen in the Moorish palaces of Andalusia.

The Persian house, like all Muhammadan houses, is divided into an andarun, or part reserved for the women and the family, and a birun, or part reserved for the reception of guests. But its arrangement no longer presents any likeness to that of the ancient house. The building is no longer arranged round the front court. This court in Persia is replaced by a garden, called a parterre, classical example, the andarun is on the first floor; if it belongs to a richer class, the birun opens on the garden and on the street, and at the bottom of the garden is the andarun. The Persians also built enormous bazaars, streets roofed in and lined with shops; and all their large towns still possess them, the finest certainly being those of Isfahan. These bazaars contain not only roofed streets and shops, but baths, or hammas, mosques, schools, tombs, and city caravanserais, in which merchants with their wares put up. Other caravanserais are disposed at different stages along the roads; these are resting-places for the bazaars, and caravans. Herodotus mentions that Cyrus had had them placed all along the roads of his empire. Here we have again in Persia a tradition dating from before the time of Islam.

The Sasanian age in Persia was the greatest period of remarkable bridges. The Muhammadan sovereigns of Persia followed their example. Without counting the numerous bridges constructed in Persia since the Muhammadan conquest, we ought not to overlook the two very striking bridges of Isfahan, that of Allâh-Verdi.
Khan and that of Baba Rukn-ad-din, which are real masterpieces.

In a country as barren as Persia, the discovery, securing, and conveyance of water were naturally of vital importance, and these long gutters ornamented with eight-rayed half-stars which we see so frequently in buildings of the 13th cent. in Syria, and especially at Damascus. However (what we do not find in Syria, while the buildings of Konia and its neighbours show us unpretentious villages and vaulted cisterns, placed along the roads near the caravanserais. At other times the river-water was held back by dams to be conducted into irrigation canals.) M. Dieulafey has described two of them, the dam of Suveli and the Band-amir.

We shall not enter in this section, any more than in the preceding one, on the examination of military architecture. That of the Magrib is known to us by a large number of drawn or photographed buildings; that of Persia, on the contrary, is as yet almost unknown to us.

The Persian school of architecture spread its influence as far as Timur and the Ottomans; and exercised an indisputable effect on the Seljuk architecture of Asia Minor and on the Ottoman architecture derived from it. It has directly influenced the architecture of Turkestan, and we shall see how much effort is made to ascertain when certain that the finest buildings of the Mughal period were immediately inspired by the finest architectural and decorative traditions of Muhammedan Persia.

But, since among Muhammedan arts architecture is absolutely supreme and all the other arts are based more or less on the principles which govern architectural construction, we ought not to be surprised at the importance attached to the influence of Persian decorative art on all the arts of other Muhammedan countries.

904 1426 Darwaza-i-Kiosk at Isfahan.
912 1435 The town of Isfahan embellished with magnificence.
1021 1523 Masjid-i-Shah at Isfahan.
1108 1531 Mosque and caravanserai Madrasa-i-Shah Sultan Husain at Isfahan.
1306 1701 Buildings of Tereran.
1323 1808 Embellishment of Isfahan by Fath-Ali Shah.

4. The Ottoman School (Turkey in Europe and Asia Minor).—The first real entrance of the Osmanli Turks on the stage of history is at the time when the last Seljuk ruler of Konia, Ala-ud-din II., conquered by the Mongols, yielded his empire to Othman, that is to say, in the 15th cent. of our era.

The Seljuk kingdom was therefore the germ of the future Ottoman empire. We also find that the buildings erected by the Seljuk of Rük (i.e., the kingdom of Konia) are the first which exhibit the union of Persian and Syro-Egyptian influences and yet are not distinct, and even widely differing in style. The mosques of Konia and villages are the union of which with the constructive traditions of Byzantine architecture produced the striking art of the Turkish buildings of Brusa, Adrianople, and Constantinople. For this reason we should study them first. We find, in fact, in the buildings of Konia, Syrian features, for the small columns joined together, the niches, the stalactites, and those long gutters ornamented with eight-rayed half-stars which we see so frequently in buildings of the 13th cent. in Syria, and especially at Damascus. However (what we do not find in Syria, while the buildings of Konia and its neighborhood show us unpretentious villages and vaulted cisterns, placed along the roads near the caravanserais. At other times the river-water was held back by dams to be conducted into irrigation canals.) M. Dieulafey has described two of them, the dam of Suveli and the Band-amir.

We shall not enter in this section, any more than in the preceding one, on the examination of military architecture. That of the Magrib is known to us by a large number of drawn or photographed buildings; that of Persia, on the contrary, is as yet almost unknown to us.

The Persian school of architecture spread its influence as far as Timur and the Ottomans; and exercised an indisputable effect on the Seljuk architecture of Asia Minor and on the Ottoman architecture derived from it. ARCHITECTURE (Muhammadan)

Armenia, ii. 181 f.). It is certain that Armenia also exercised a very strong influence on Seljuk architecture. The chief reasons for this will be found in the present writer's Ararat. We might therefore, sum up the character of Seljuk art by describing it as a mixture of Persian, Syrian, and Armenian art. The fact is completely explained by the geographical position of Karin. (Handley, i. 754). We may remark, moreover, that as we travel northwards the Seljuk buildings assume an uncouth and heavy style of decoration which seems to be strictly due to the predominance of Armenian influence; on the other hand, the more we approach the south, the more Syrian influence reveals itself by its refinement, distinction, and exactitude. The harmonious collocation of forms of stone architecture and of enamelled decoration did not at once reach complete perfection. It is easy to understand that brick architecture and stone architecture, which proceed from entirely different starting points, and consequently have quite distinct characters, could be harmonised only after many bungling attempts and trials. One of the most interesting of these is that made by the architects of the Ottoman sultans at Brusa. The Yesil Jami', or 'Green Mosque,' presents, in the best sense of the word, a composite and harmonious unity. The building is a great porch opened on a façade pierced with windows and grooved with niches; the porch is still the Seljuk porch, but simplified, corrected, and admirably crowned by a kind of half-dome of marble; the latter is encircled by very fine arabesques, which are themselves set, as is the entire porch, in a majestic door-frame decorated with sculptures and inscriptions in magnificent characters. The interior is completely decorated with faience mosaics of the greatest beauty. The mihrab, entirely of enamelled ware, is very lofty, and the general impression made by it recalls a little that of a great Seljuk doorway; the walls are decorated with a ceramic panelling surmounted by a magnificent frieze, and the inner wall of the mosque opposite the mihrab, which is generally bare of decoration, here assumes a singular importance by reason of two great hujûn on the second floor, an invariable feature in the Seljuk mosque, all entirely executed in very beautiful enamelled work. The plan of this mosque at Brusa, although rendered totally different from those we have already studied by a very skilful use of large cupoles, is such, although in an imperfect manner, the cruciform plans of the madrassas, because of these two lateral hujûn which flank the chief cupola. This enamelled decoration is still Persian in its workmanship and suggestion, and even the first secular buildings of Constantinople, such as the Chini Kiosk, built at the Seraglio in 1466, in their plan and appearance are still altogether Persian.

At the time of the occupation of Constantinople by the Turks, however, the influence of the Byzantine buildings immediately made itself felt on the productions of the Sultans' architects who built for them their first mosques. Thus the mosque of Sultan Bayazid, commenced in 1497, reproduces on a small scale the plan of St. Sophia at Constantinople, i.e. its main characteristic is a great cupola resting on pendentives, supported in front and behind by two large semi-cupoles of equal radius. But this mosque is already distinguished from the mosques of Brusa by a correction in the plan, and in the general arrangement of the outer arcades, a correction, as it were, shows us already completely master of its methods. This art, now that it has been able to borrow from Byzantine art the chief element of structural arrangement, may be regarded as complete, for till the conquest of Byzantium the mosques did not possess that character of boldness, exactness, and definiteness which an architectural work must possess in order to rank among works of art. As long as the plan is undetermined, the work of architecture cannot be considered as complete.

The Turkish mosque consists, then, of a praying place properly so called—a large rectangular hall covered with a dome of stone. Usually it has two large semi-cupoles which support the dome; the mihrâb of marble or of enamelled work faces the entrance. Coloured panels set in plaster traceries light the mosque. The Turkish mosques are much the best lit of all, even when we consider that the windows are proportioned which is not often. In front of the mosque is a court surrounded by porticoes; in the centre a fountain, the 8άδδις of the Byzantine churches, and commanding the four corners of the court, gigantic minarets like monolithic pillars crowned by a pointed roof. Such is the type of the Ottoman mosque from Bosna-Serai to Cairo.

From this time Ottoman art made giant strides, and the buildings of most mosques, the outlines of which still in our day adorn the capital of Turkey, are erected one after another. Such are the mosque of Muhammad II.; that of Sultan Selim; the Selaimaniyya, or mosque of Selaiman the Magnificent, which was commenced in 1550, and whose four minarets, its colossal dome supported by four enormous pillars, its great antique columns of porphyry and syenite seized from the Imperial palaces, its coloured panels and its enamelled work, the most perfect of all, the most extreme simplicity of its plan, the harmony of its proportions, and the perfection of its outline. Unfortunately the decadence of this fine art was rapid; contact with Western art was fatal to it. Already in the mosque Nur-i-Osmâniya (1748-55) we see the introduction of Western architecture. That internichature, which perhaps in skilful hands might have been able to bring about a happy modification of Turkish art, was mingled with the ideas of modern architects. These, by their unskilfulness, rapidly brought about the decay of that art which had produced such great masterpieces.

A few words remain to be said on other architectural works. The Ottomans built numerous schools, madrasas, and monasteries, or takiyyas. These are generally occupied by dervishes of the Mevlevi order, who played such an important part at the commencement of the history of the Ottoman empire, and do so still in a quiet way, since it is their Grand Master who at the consecration of each Sultan gives the new sovereign with the Prophet's sabre in the old mosque of Ayyûb. Frequently the architecture of these buildings is affected by local traditions, and their case differs from that of the mosques which from the commencement of Selaiman's reign were all erected on plans derived more or less directly from the types invented by Selaiman's cupoles of equal radius.

The tombs of sovereigns and of great personages are influenced more or less, as regards their plan, by the use of the cupola. To give a list of them here would be tedious, shows an example of the methods. This art, now that it has been able to borrow from Byzantine art the chief element of structural arrangement, may be regarded as complete, for till the conquest of Byzantium the mosques did not possess that character of boldness, exactness, and definiteness which an architectural work must possess in order to rank among works of art. As long as the plan is undetermined, the work of architecture cannot be considered as complete.
also happens that these stelae, passing through stages of increasing richness of decoration, are evolved into monuments luxuriantly gilded and carved, which are sheltered under kiosks or cupola- crowned pavilions.

From their ancient nomad life the Turks have preserved a love of nature and of gardens; they regard the house or palace as the exact only or transitory dwellings. Except the palaces of the sultans, it is rare to see in Turkey houses other than those of wood, or with wooden frameworks; such is, at any rate, generally characteristic of the Turkish house, which rich or luxurious, it is only a transient decoration; and this feeling seems to be essentially Muhammadan, for we find it in all the countries of Islam, where men build only for themselves, not for their children. At the zenith of their splendour the Ottomans were great constructors of buildings for public use—fountains, caravanserais, bridges, aqueducts, reservoirs, roads, tombs, or kitchens for the poor, and hospitals and shelters for the sick or for pilgrims. The sultans, their ministers, and persons of position vied in strenuous rivalry in erecting during their lifetime such buildings as might perpetuate their memory. The study of Ottoman art has been, so far, superficial; one cannot fail to afford great interest from the parallel suggested between the magnificence and wide scope of the conceptions of the Ottoman architects and the splendour and length of the history of the Ottoman sultans. We might say that the characteristic of Persia is elegance, that of Syria and Egypt wealth, that of Moorish art abundance, and even redundancy, and that of Turkey force—characteristics which are found both in the history and in the art of these nations.

The study of the Turkish buildings would be incomplete if unaccompanied by a chronology, which is accordingly appended (including the Soljak buildings from which, without a doubt, Ottoman art is derived).

5. The Indian School. —Islam, as it spread westward, has transformed everything in its passage. We have seen that in converting Persia it had not been able to effect a thorough conversion to the new doctrine, since the Muhammadans of Persia did not suffer from those of the Persian, Arab, and the Maghrib, that the former and the latter form, so to speak, two distinct sects, Shi'ites and Sunnites, each of which considers itself the only orthodox party. Similarly the Muhammadan art of Persia differs fundamentally from the arts of other Muslim countries than the latter differ among themselves. We shall see that in India Islam had difficulty in taking artistic shape, and in creating devices and forms wholly of its own character might differentiate them from those consecrated to other religions. We shall also see subsequently that in the far East, in China, Muhammadan art tends to disappear entirely under the effect of the strong originality of the Chinese character. In that country there is an 'influence of the mass,' as chemists would say. In India and in China the Muhammadan is only a minority; he has to compete in the crowd, and despite his stubbornness of principle he submits to circumstances without being able to defend himself against them or to escape them.

The first Muhammadan conquest of India dates from A.D. 712. The first Indo-Muhammadan kingdom was in the 10th cent. A.D., that of Ghazni, which united under one sway the Panjab, Multan, Gujrat, and Kasur up to the Ganges. Delhi became the capital of the Afghan House of Ghor after the destruction of Ghazni (A.D. 1122). It was sacked in 1398 by Timur. Bâbar (1494–1539), his great-grandson, founded a stable empire on the ruins of the ancient Muhammadan kingdoms of India. It was then that, under the dynasty of the Great Mughals, was set up one of the strongest and most remarkable régimes and civilizations of Muhammadan history. Up to the time of the Great Mughals the reaction of the native element against Islam had been so powerful that the architecture of Muhammadan buildings had, in spite of all, preserved a marked local character. Bâbar and his successors, by admirable general organization, unity of policy, and remarkable administrative ability, bestowed on their Empire a transient homogeneity, which forms its most striking characteristic, and which is reflected even in the buildings that they have left.

Accordingly, previous to the time of the Great Mughals, the Muhammadan buildings of India exhibit, in proportion as we approach the early times of the Hîrân, features of increasing importance, borrowed from local traditions and from native art. From these the Muhammadans eliminated all representations of men and animals. Among them we find traditions of the Jain style of construction, the piling up of materials, corbelings, methods borrowed from timber-work, ceilings with simple or superimposed panels.

With the Great Mughals, on the contrary, we see the distinct impress of Persian influence which, commencing under Bâbar, continued under Akbar, to become dominant under his successors.

Fergusson, the best historian of the Muhammadan architecture of India, proposes the following classification of the Muhammadan styles of that country:

(1) Style of the Ghznavids.
(2) Pathan style (Northern India, 1193–1554).
(3) Style of Jaunpur (1394–1476).
(4) Style of Gujrat (1366–1578), derived almost exclusively from the architecture of the Jain buildings.
(5) Style of the buildings of Malwa (from 1401 to the Mughal conquest), allied to that of Delhi.
(6) Style of Bengal (1293–1576).
(7) Style of Kashmîr (1347–1525).
(8) Style of Bijapur (1489–1660), which exhibits an almost exclusively Persian character.
(9) Style of Golconda (1512–1762), in which decadence already appears.
(10) Mughal buildings on which nearly all these different schools are based, especially those which have undergone the influence of Persian art. The chief monuments are at Fathpur, Agra, and Delhi.
(11) Buildings in Sind, of a Persian character.
(13) Buildings of Mysore (1760–1799).

In all these different countries, as elsewhere, the Muhammadans have left mosques, mosques, and mosques. It is naturally in these buildings that we ought to look for Muhammadan characteristics, and yet in the early Indian mosques like that of Ajmir (A.D. 1200) and the Mosque of Kutub at Delhi, though the whole court is furnished with pointed window-bays, more or less recalling Western Muhammadan art, the interior of the building possesses an exclusively Hindu character. As Fergusson says with so much accuracy, it is a screen in the pointed style before a Jain temple. Historians agree in saying that these two mosques and many others were built of fragments which were taken from pagan temples. Cunningham discovered in the mosque of Kutub at Delhi an inscription stating that twenty-seven pagan temples were despoiled in order to provide materials for them. Thus, to quote Fergusson again (on the plan of the mosque of Ajmir, Indian and Eastern Architecture, 1859, p. 129), 'If we refer to the plan of Vimala-Sah at Mount Abu, and remove in our thought the principal cell and its porch in the centre of the court and the constructions in front of it from the side of the entrance, leaving only the porches by which surmounts the court and that at the back with the cupolas, we have the type of the plan of the mosque, provided the back-wall be turned towards Mecca.' Later on the mosque becomes gradually free from Hindu forms, and under the Mughals all its features are Persian, a little softened, however, by the tendency of the Hindu genius to curve the lines. The public buildings, caravanserais, and bungalows, domes, bridges, and reservoirs also reveal the magnificence of the Muhammadan rulers of India. Historians have depicted for us the splendour of their State ceremonial, with a lavish expenditure of details which makes an indelible impression.

We have already spoken of the early mosques of India, that of Ajmir and that of Delhi. We speak of the buildings of Ghuzni only by way of making the record complete, for they have an almost complete Persian character, and the side of the mosque of Kutub at Delhi rises the tomb of the Sultan Altanash (1235), the pointed arches of which are still dressed with horizontal joinings, with the corner of the sides and the corners of roofs, with crenellations, and, generally, by the fashion the architect of this imposing building has been able, while preserving Persian devices and details invented, arranged, and reduced to rules for the architecture of the new Persian style, in the courts, the buildings, the reservoirs also, and while transferring these forms to marble architecture, to deduce from these effects so novel and so striking that the Taj Mahal rightly passes for one of the most wonderful buildings in the world. On a large platform measuring 32 metres each way rises the Taj, the pointed and slightly bulbous dome of which is about 210 ft. in exterior height. This cupola crowns the hall containing the tomb, supported by four accessory halls and four great pointed porches on the four sides. The whole building is of marble, inlaid with the rarest kinds of hard stones, black or coloured marbles, with parts gilded. In the interior the hall of the tomb, which forms an imitation of the saracenic plan, is decorated even more luxuriously than the exterior of the building. The Taj forms the centre of a plan in which gardens, terraces rising one above another, pavilions, basins, and long colonnades combine into a whole of wonderful beauty and harmony.

The decorations of the palace of the early Mughal emperors, as at Bijapur, are such as to magnify their power and splendour, and the remains of their palace at Delhi still exhibit portions admirable from an architectural point of view. Unfortunately, this wonderful efflorescence of art was only temporary;
ARCHITECTURE (Muhammadan in Syria and Egypt)

757

The mausoleum at Golconda already seem heavy, hardly put together, incoherent. After the power of the Mughals was shattered in consequence of the death of Aurangzeb, several kingdoms rose on its ruins, and this confusion was immediately reflected in the most thorough disorder of architectural tendencies. Decadence had set in, beyond hope of cure.

It is not necessary to mention any Chinese mosques here. Nothing in their decorations presents anything of verity, which differs in character from the purely Chinese style. We shall conclude this account with a short chronological list of the buildings of India.

Hijra. Christian

16th cent., Buildings of Ghazni.

11th cent., Mosque of Kutab at Delhi.

606 1299 Mausoleum of Alam at Delhi.

723 1323 Mausoleum of Taghlaq at Delhi.

747 1347 Mosque of Kalaburgah.

760 1358 Mosque of Khedim ar-Rasul at Ghr.

829 1429 Great mosque of Ahmadabad.

932 1533 Tomb of shir-Shah at Shabadabad.

952 1543 Bilbar summons pupils of the celebrated architect Sinan to India.

962 1554 Tomb of Humayun at Delhi.

964 1556 Akbar makes Agra one of the most beautiful cities of India.

988 1550 Akbar founds Fatehpur-Sikri and its mosque.

1035 1600 Tomb of Mahmud at Birjapur.

1040 1600 Result of a conference, the architect Isma Muhammad is commissioned to build the Taj Mahal at Agra.

1138 1725 Buildings of Jaipur.

H. SALADIN.

ARCHITECTURE (Muhammadan in Syria and Egypt).—1. Mosques.—The mosques date from the beginnings of Islam. The simplicity of Muslim worship demanded a simple plan, which was settled as early as the first centuries of the Hijra. It consisted of a large square court (qibla), surrounded with porticoes, which were covered with a flat roof (soug) supported by arches (tjaj), with stone (pavaj) columns (damiid) or brick (islam) pillars (rakan). The elements of this plan seem to be derived, on the one hand, from the Persian palaces of the Achemenian type, perhaps, but indirectly, from the Egyptian palaces, and, on the other hand, from the Christian churches of Egypt and Syria.

Like the church, the mosque is oriented, but in the direction of Mecca (qibla), towards which, in accordance with a rule in the Qur’ân (Sor. li. 139), Muslims turn for prayer. The real orientation therefore depends on the position of Mecca in the Universe. It is to be noted in the State in Cairo to the E. or rather E.S.E. In order to accommodate the crowd of worshippers, the por- tico on the qibla side is extended, and admits of a larger number of aisles than the other three. It is called the prayer-hall (dhaba). This is the chief axis, and as such bears the name of masjid in its dedicatory inscription. But two centuries later the Mosque of the Nilonbey, built in Cairo in 485 (1092), is called jami’ in its three foundation inscriptions.

2. Madrasas.—When diffusing the Shi‘ite heresy in Egypt and Syria, the Fâtimid khâlsâ did not modify the general mosque-plan; we meet with it again especially in those which they built in Cairo. After their destruction, the pulpits were removed, and the mosque was turned into a madrassa. This religious (Asharîte) and political (Sunnite) reaction caused a series of reforms in all domains.
ARCHITECTURE (Muhammadan in Syria and Egypt)

of civilization. One of the most important was the extension of the madrasa. Originating in Khorasan about the beginning of the 4th cent. A.H., the madrasa was at first simply a private school of religious sciences, i.e. of tradition, exegesis, and law, according to the Sunni rites. But in the 5th cent. A.H. the Seljuk sultans of Baghdad, having become powerful vassals of the Abbasid khilafate, and the official protectors of Sunnism and Ash'arism, transformed the madrasa into a State institution, intended to produce a select body of officials for the administration of religious and civil law. From that time the madrasa became a powerful centre of religious and political propaganda, the school of official Sunnism, and almost a government institution. It was in this form that it was introduced into Syria in the 6th cent. A.H. by the Sunnite Atlâbes, particularly Nûr-ad-dîn; then into Egypt by Saladin.

If the madrasas differ from the mosque in its character and purpose, its origin and history, it is also distinguished from the Ottoman religious foundations, which Saladin introduced it into Egypt, this plan was already settled; a small square court with open top (byûn or qû'a), enclosed by four high walls, with four halls (kutub, or Greek, kupas or kap-messages) opening to the court by a high arch (byûqaf), and, in the outer corners of the building, offices for the attendants and the work of the establishment. This symmetrical plan with four large vaulted madrasa, i.e. the school devoted to the four chief Sunnite sects (Hanafite, Shâfi'ite, Malikite, and Hanbalite). Each sect was installed in one of the four lavqins, as is testified by the inscriptions in the larger madrasas of the Sultan Hasan, built in Cairo in 764 (1363). This plan seems to have originated in Syria. It is found in a curious Syrian monument, of a far earlier date than the Syro-Egyptian madrasas, the Qârâ of Amnûn. Like the plan of the mosque, it combines elements of various origin: the lavqins are arched in the Persian style (Sasanian palaces), but their arrangement in a cross around a central court recalls the symmetrical plan with two axes of certain Byzantine and Syrian churches, which the Qârâ resembles in many other architectural details.

Like the mosque, the madrasa became in time modified in its style and methods of construction. Khorasan about the beginning of the 4th cent. A.D. and its lavqins were covered with barrel-vaults (qabûn or qâqaf) of brick (byûm), following the Persian and Byzantine methods (without centring). The last large vaulted madrasa is that of the Sultan Barqûq, built in 788 (1386). Then the vaults were replaced by a flat wooden (hashâl) roof (byûqaf) and ceilings, whose rich polychrome decoration merely disguises a serious decadence in the art of building. The only vault that remained was that of the front arch of the lavqins opening on the court, built with arch-stones. But, in spite of these modifications, the plan and general arrangement of the madrasa subsisted until the Ottoman conquest.

The Sunnite reaction gave rise to some institutions analogous to the madrasa, particularly the dâr al-hadîth, the 'school of tradition' (Sunnite). But these establishments, not having the same purpose, remained in the background and created no type of architecture; or rather, being simply varieties of the madrasa, they adopted its general plan.

3. Monasteries. The Sunnite reaction, which brought the madrasa from Persia to Egypt, mingled during its course with tributaries of ancient origin, quite foreign to primitive Islam. One of the most important was Şûfism, i.e. Eastern mysticism of Persian origin. The public building of Şûfism is the Şûfi monastery, the hâmâjâh, a Persian word which penetrated with the building first into Syria and then into Egypt, through Saladin's first Egyptian hâmâjâh. About that time it became along with Shi'ite doctrines, were taught the sciences inherited from Persia and ancient Greece. But Sunnism did not encounter the Shi'ite only. The Crusades had stirred up another opponent, the Latin kingdom of Jerusalem. Saladin and his successors, impeded by feudal administration and political decentralization, had weakened but not destroyed these feudal tendencies before Baibars. On the ruins of Ayyûbid feudalism he founded the kingdom of the Manlûks, a centralised State, defended by a regular army, and governed, like the old caliphate, by a council of officials. With this powerful lever he overturned at once the Latin kingdom and the fortresses of the Assassins, the last bulwark of Shi'ite heresy in Syria. He afterwards established his prestige in the eyes of the Muslim masses by welcoming to Cairo the wreck of the khilafate of Baghdad, which had been overturned by Hûlûq (1238). In re-establishing, for his own benefit, the duality of the spiritual and temporal powers, he re-tied the thread broken by the Ömeyyids. Shortly after his death, in 1238, this new form of monasticism, the madrasa, became softened and turned towards pious works and contemplative study. The madrasa, having carried out its fighting role, had to lose for ever its original character and assume that of the mosque. All the large madrasas were then closed up for the Friday service. The liwán qibli, which was larger than the other three, served as prayer-hall and sheltered the pulpit and the mihrâb. Last of all the minaret came to give to the mosque the complete appearance of a mosque. But it had acquired such prestige that, instead of merging in the mosque, it threatened rather to supplant it. While the number of the great Mosques of classical plan continued to diminish, that of the madrasas of cruciform plan increased until the Ottoman conquest.

This evolution is reflected in linguistic usage also. The madrasas set apart for religious worship took the name of madrasa lîj-jâmî'a; then they were called simply jâmî like the great Mosques. Maqrîzî, who drew up his Topography of Cairo in the first quarter of the 15th cent. A.D., gives this name to the majority of the large madrasas of the Manlûks, and hence to the 15th cent. A.D. All the lavqins were covered with barrel-vaults (qabûn or qâqaf) of brick (byûm), following the Persian and Byzantine methods (without centring). The last large vaulted madrasa is that of the Sultan Barqûq, built in 788 (1386). Then the vaults were replaced by a flat wooden (hashâl) roof (byûqaf) and ceilings, whose rich polychrome decoration merely disguises a serious decadence in the art of building. The only vault that remained was that of the front arch of the lavqins opening on the court, built with arch-stones. But, in spite of these modifications, the plan and general arrangement of the madrasa subsisted until the Ottoman conquest.

The Sunnite reaction gave rise to some institutions analogous to the madrasa, particularly the dâr al-hadîth, the 'school of tradition' (Sunnite). But these establishments, not having the same purpose, remained in the background and created no type of architecture; or rather, being simply varieties of the madrasa, they adopted its general plan.

But these establishments, not having the same purpose, remained in the background and created no type of architecture; or rather, being simply varieties of the madrasa, they adopted its general plan.
confused with the ribāṭ, an Arabic word denoting an ancient military settlement, which had also become, by a profound change of the original idea, a Sīfi monastery.

The ribāṭ and the lānnāqīh flourished under the Ayyubids and under the Mamlāks, but without creating any real type of architecture. These monasteries sometimes assume the plan of the great Mosque (monastery of the Emir Shalih in Cairo, 756 [1355]), and sometimes that of the mausoleum of the Sultan Twalners (846) in Cairo, 709 [1815]). Like these two types, they possessed all the visible appliances for worship; minaret, prayer-hall, pulpit, and mihrāb. But their decorativeness, fitted up for ecclesiastical life, are arranged in long lines of cells, give a peculiar appearance to their plan. Several curious traces of them still survive, especially in Cairo, where the monastery of the Sultan Ināl (838 [1441]) affords the most isolated specimen. At the Ottoman conquest the ribāṭ and the lānnāqīh gave way to the takīyā, the monastery of Turkish dervishes, the plan of which also came under the influence of the Constantinople school (takīyā allāh). In the way of All (God), lastly, the sāwīya, a word which means, in the Muslim West, a cell, a hermitage, and then a real monastery, but which in Egypt is applied only to a very small monastery, has also, lastly, a form, arranged in long lines of cells, give a peculiar appearance to their plan. Several curious traces of them still survive, especially in Cairo, where the monastery of the Sultan Ināl (838 [1441]) affords the most isolated specimen.

4. Fountains and Schools. — Connected with these three great types—the mosque, the madrasa, and the monastery—are two secondary types, the sabil and the kutṭāb. Sabil means 'road'; fi sabil al-μuḥād, 'in the way of All', is said of every pious work, of the Holy War as well as of almsgiving, and especially of foundations for the free use of the public. Now, in the East water is a treasure; according to a saying attributed to Muhammad it gives a drink of water, and is one of the most meritorious charities. Every free foundation is a sabil, but the sabil par excellence is the pubic fountain. In Syro- Egyptian architecture, the sabil is rarely placed at the corner of a mosque, a madrasa, or a monastery, on the ground-floor, and can be recognized by its two large square windows at right angles, closed with beautiful brocatel curtains. Above the sabil is situated the primary school (kutṭāb or makṭāb), which is rendered conspicuous at a distance by its elegant loggia, open on both sides, in rows of arches on small pillars. They are sometimes connected with the tombs of saints, or the tombs of several Sultans, until the Ottoman invasion. At that time the sabil became separated, first along with the kutṭāb, and then quite alone. Its style has degenerated down to our time, when the fountain displays all the false taste of the modern Turkish school.

5. Mausoleums.—For the obscure dead a grave is sufficient. The illustrious dead, not content with a tomb, require a mausoleum. As far back as it is possible to go, the Syro-Egyptian mausoleum possessed its own peculiar architectural form: a cubical hall, square in plan, covered with a dome. Is this type a distant recollection of the ancient Egyptian mastaba? It seems to be more directly connected with the Christian type, the katoikie (κατοικία), some traces of which still survive in Syria. The problem of building the dome on a square plan, outlined in these old Syrian katoikies, and then the semi-circular one covered with a system of hanging arches in semicupolas, or of beautiful stone pendants like stalactites. The materials, proportions, outline of the square, of the drum, and of the dome, the decoration—all, in a word, that constitutes the style—changed from age to age, but the general plan remained the same until the Ottoman conquest.

The classical name of the mausoleum is turba. But as the dome was its most conspicuous feature, the name of the latter (qubba) was extended to the whole building. In literature and the Syro-Egyptian inscriptions these two words are indifferently applied to the mausoleum as a whole, i.e. the architectural envelope of the tomb, which itself is called qabar or madrasa or marqad or darīk, the last an Arabic word of Aramaic origin.

The mausoleum is often built by itself isolated in a cemetery. Sometimes there are several together in a single enclosure (hōš), but not forming an organic whole. Frequently the mausoleum of a great person is placed in the corner of a religious building which he has founded. Like the great Italian condottieri of the Renaissance, the Sultans and Emirs, former slaves who had risen to fortune, and who were always uncertain of the future, took care to provide for their own tombs beforehand. We may mention the tombs of the Sultans Barqūq, sometimes an arrested type, e.g. the monastery-madrasa-mausoleum. We may cite those of the Sultans Barqūq (786 [1386]) and Ināl (838 [1441]). All these combined types contain the sabil-kutṭāb motif, and unite one or several minarets to one or several domes. They do not have special names. The inscriptions of these huge buildings, agreeing with the literary texts, refer to them sometimes under one name and sometimes under another, according to the part of the whole that they wish to emphasize.

Let us examine the various types of the Syro-Egyptian architecture, the turba disappeared after the Ottoman conquest. The name continued in use, but it refers to tombs of any kind. The problem of the tomb in Syria has not had any mausoleums worthy of its past.

6. Holy places and pilgrimages.—In spite of the express intention of its founder, Islam at an early date adopted the principle of the worship of relics. The early Syriac church, inspired by the text of the Gospels, and the primitive belief in miracles accomplished by their intervention. This cult was too deeply rooted in the Oriental religions for Muhammad to make it disappear. In Syria, especially, the old pagan cults connected with local gods, which had resisted Christianity, lay hidden under Islam, which had to tolerate while apparently assimilating them.

The tenacity of these local traditions explains the manifold origin of Muslim saints. Some of them are pagan gods, transformed by an association of ideas, beliefs, or mere words into Muslim saints; others are the great personages in the Prophet's life, prophets; others again are heroes of history, conquerors, or famous sovereigns; and others, ascetics, monks, or scholars, celebrated during their life and canonized by the common people with their inestimable influence; and the whole is the sum of these. All these saints have their sanctuaries (masjūd). The belief in miracles wrought by their intervention makes these sanctuaries places of pilgrimage (masar).

The masjūd has not created any special type of architecture. As it is almost invariably erected at the grave of the saint, it takes the plan of the
ARCHITECTURE (Persian)

From the architectonic point of view it is simply a variety of the turba, perhaps the oldest type. It is found in all sizes from a small chapel with a little dome, whitened with lime (manavist, shabi, wadi, nahi, magan), to the large classical mausoleum; all have the dome on the sphere. The old method that departs from the traditional plan is the famous Dome of the Rock, the Qubbat as-Sahra in Jerusalem, built by the Khalif 'Abd al-Malik, in 72 (691), and many times restored since then. It is on a circular plan surrounded by a double octagonal enclosure, harbours, along with the famous rock, a whole cycle of Jewish and Christian legends. This circular-octagonal plan, which undoubtedly proceeded from that of the Christian building prior to the Qubba, is found again in a group of pre-Muslim Syrian churches (Bosra, Ezra, Qal'at Sim'an, etc.). But apart from the Dome of the Rock and a few secondary buildings derived from it (Dome of the Chain in Jerusalem, mausoleum of the Sultan Qalawun in Cairo, etc.), it has not been adopted in Syro-Egyptian architecture.

Apart from the turba and the masjid, the dome is used in only one instance in Syro-Egyptian architecture: a small dome, also called qubba, is erected in large mosques, at the back of the prayer-hall, in front of the mihrab. This ancient feature may probably again be a relic of the church, namely, the dome which in certain basilicas, erected at the crossing of the transept in front of the choir. This was the only place used for the dome in the great Mosques until the Ottoman conquest, which first doctrinally intruded the porticoes and the prayer-halls of the great Mosques, after the style of the Constantinople school.

MAX VAN BERCHEM.

ARCHITECTURE (Persian).—The account of the development of the architecture of Persia is almost synonymous with the land's own history. From the crude beginnings in early Median or pre-Median times, before the 7th cent. B.C., we may trace the evolution of the builder's art down to the Achaemenian period (B.C. 550-330), the Seljuk and Parthian eras (B.C. 330-A.D. 224) and the following centuries of the Sassanian empire (A.D. 224-651). At the close of that period, in the 7th cent. A.D., various conditions had already been experienced: the Arab conquest and subsequent Muslim sway, from which epoch to the present time the history of Persian architecture forms a special branch of the study of the development of Muslim art.

1. Early Iranian and Median period (before B.C. 650).—Our knowledge of the architectural conditions during the early Iranian and Median periods is limited in extent, both because of the absence of historic remains surviving from that remote date, and because of the lack of definite descriptions in ancient texts that might serve to elucidate the subject. Nevertheless, from incidental allusions in the Avesta, from references in the Greek historians, and from chance statements in later writings from which deductions may be drawn, we are able to form some sort of a picture of the architectural status in ancient Media, or Western Iran, and in early Bactria, or Eastern Iran. Herodotus (i. 96-97) affirms that, down to the time of Darius, the founder of the Median empire, the Medes used to live in villages, and that they were first gathered into cities by Darius, who made Ecbatana his capital, and fortified it as his royal residence. From the conditions thus portrayed in the Avesta, so far as that work may be regarded as reflecting the age in question, and from the right-to-day of village after village of that kind, we gather that great halls or the like, with their sacred fires, and such shrines are presumed
by the Pahlavi writers of a later date to have existed in those times (cf. Pahlavi Bahnam Yast, iii. 30, 37, 40; Zöft-sparam, vi. 22, xi. 8-10; Bündakshihn, xii. 18, 34, xvii. 7, etc.), so that it is possible that the temple at Ecbatana, as described by Polycleitus, may have preserved architectural features from ancient days. In the mortuary customs enjoined by their religion, moreover, the early Iranians, whether Medians or Baetrians, made use of temporary structures, called dakhmas (which see), square and Zat-sparam, as did, for example, the Achaemenians, made use of them for the sepulchres of their chief representatives, the Parsis (see) and Gabars (see) still follow the custom in their 'Towers of Silence'; but what the shape of these receptacles may have been in ancient times is only a matter of inference.

2. Achaemenian period (B.C. 550-330).—With the victory of Cyrus over the Median king Astyages, in the plain of the modern Murbah, between Isfahān and Shiraz. As we approach it from the north, we first pass the remains of a ruined platform on the crest of a range of low hills overlooking the plain. It was apparently designed to support an audience-hall of Cyrus, but was never completed. Spread over the surface of the plain itself traces of the royal city are to be seen. Near to the ridge is a single shattered wall of a massive foundation, some 40 ft. high by 10 ft. square, and which may have served as a shrine for the sacred fire, although some authorities (on less good grounds, it seems) believe that it was a princely tomb. A second group of ruins lies not far distant to the south, and comprises a high round column (not fluted), some angle-piers of an edifice that once surrounded a royal court, and a stone shaft consisting of three blocks, the uppermost of which is inscribed in cuneiform characters, 'Cyrus, the King, the Achaemenian.' A huge slab stands somewhat to the east of this group, and on its face is carved in low relief a winged representation of the Great King, above whose head was similarly inscribed the device of Cyrus just quoted, although the part of the stone containing it has been sawn off and lost within the last century. Still another collection of ruins lies somewhat to the south-east, and shows a vast pile of fallen stone, grouped around a paved court that belonged to some edifice of Cyrus.

Most important of all the ruins is the tomb of Cyrus, which has been also described in the Classics. The structure resembles a small house, with a slightly pointed roof, and is made of a handsome white sandstone resembling marble. It stands high upon a sub basement, built of the same material and consisting of a large foundation plinth, nearly 50 ft. long, 40 ft. wide, and 2 ft. high, surmounted by a series of six stone layers, which are surmounted by a series of high steps approaching the mausoleum from every side. The mammoth blocks that make up the tomb itself were originally fastened together by iron spikes, but without the use of mortar; and so perfectly were they set that the structure still forms a compact whole, even though falling more and more into ruin. The sepulchre, measured from the outside, is about 20 ft. long, by 17 broad, and 18 high. A very low doorway in the western side serves as an entrance. The mortuary chamber measures 10½ ft. long, by 7¾ ft. wide, and 8 ft. high (the exact measurements in metres may be found in Jackson, Persis, p. 288). It is needless to add that the chamber is now empty.

In architectural style the tomb of Cyrus is thought to show Lycian influence, since somewhat similar burial edifices have been found in Asia Minor, the land first conquered by Cyrus after his Persian victories. But it may also be possible that the idea of such a vault for the dead may have owed something to the Avestan kato, 'house,' a temporary structure for the body before it was carried to the dakhma. Around the tomb the remains of the foundations of a decorative colonnade, as is clear from the fragments of columns still upright, and a few hundred yards beyond it are the vestiges of a platform on which was once erected a habitation for the Magian priests who were custodians of the tomb, as we know from Arrian (Anabasis, vi. 29. 7).

A single other vestige of Achaemenian architecture, religious in its character, is found at some distance to the N.W. in the same plain; it is in the form of a basement of two altars, used by the Magi in celebrating their sacrificial rites, as they did, in the open air.

Illustrations and descriptions of all the architectural monuments in the Murbah Plain are to be found in the works of Texier, Flandin and Coste, Ker Porter, Stolze and Andreas, Desclaux, Perrot and Chipiez, Curzon, and Jackson; and they convey a good idea of the architecture of Cyrus's capital.

Far grander than the ruined monuments of Pasargadā, the capital of Cyrus, is Persepolis, the capital of Darius, and Xerxes, and their successors. The tokens of a vanished empire are spread over a considerable area in the Plain of Murbah, some forty miles to the south of Cyrus's capital. The first vestiges of this magnificent group of the lost city of Stakhrīs, indicated by some broken columns, remains of portals, and scattered fragments of buildings, lie at a point where the Sīrān rises. The southernmost point of this city is now marked by a small granite stadal, some 40 ft. square and 7 ft. high, which the natives call Takhlt-i Tū‘ās, 'Peacock Throne,' or Takhlt-i Rustam, 'Throne of the (hero) Rustam.' A mile or so farther south rises the Platform of Persepolis itself, with its magnificent stairways and palace-crowned terraces, which the Persians call Takhlt-i Jamshid, 'Throne of Jamshid,' after the legendary king of that name, or Chūlī Minār, 'Forty Pillars,' from the columns that remain standing. Although the site as a royal residence may date back to legendary times (cf. possibly Bündakshihn, xxix. 14), we know from an inscription on the northerly wall that it owed its origin as a stronghold to Darius, possibly about B.C. 516-513, and it is generally believed that Greek designers were employed in its construction (see Justi, 'Gesch. Iranis' in Geiger and Kuhn's Grundriss, which is considered apart from the edifices that stood upon it, the platform is a remarkable piece of constructive
art. It measures over 1500 ft. from north to south, varying from 20 to 50 ft. in height, according to the elevation of the three main terraces, and it has an expansive facing back outward for nearly 1000 ft. until it merges into a low range of hills, called Kuh-i Rahmat, 'Mountain of Mercy,' the spurs of which have been partly cut and furnished with mural inscriptions and bas-reliefs. By the aid of inscriptions, and judging from the position of the different ruins, the columns that remain standing, and the arrangement of the bases of those that have fallen, as well as from the outlying edifices, particularly the necropolis and sculptured pediments, we are able to identify each of the buildings that once occupied this site. Opposite the Grand Staircase of approach at the northern end, is the Porch of Xerxes; 50 yards to the south stand the relics of the Audience Hall of Xerxes; still farther southwest, and near a mound, are the better preserved remains of the Palace of Darius; while a short distance southward again, across a ruined court, red, are the traces of a Palace of Artaxerxes III, Ochus, identified by an inscription on the stylobate. Directly behind this is the Palace of Xerxes himself, with a minor edifice still farther back, while, over seven miles is the great Hall of a Hundred Columns, erected by Darius, with a portico near its south-western corner, showing in stone the king seated on his throne of state. The destruction of these gorgeous buildings is attributed to the frankness of Alexander the Great, when he burnt the citadel after his victory over the last Darius; but though the hand of the conqueror destroyed the beauty of the edifices and left them a ruin for all time, it could not obliterate their traces, which still in after ages bear witness to their ancient glory.

Some further remains of royal architecture are to be seen at Persepolis and in its vicinity; they are the rock-hewn tombs of the Achemenian kings. Three of these sepulchres are cut in the hills, behind the great platform already described. They are believed to be the mortuary chambers of Artaxerxes II, Memnon, of Artaxerxes III, Ochus, and of Darius III. Colomanus (n.c. 385-330), if we are justified in regarding the unfinished grave as that of the last of the Achemenians, More imposing in the situation and older in point of time are the four small tombs carved in the necropolis cliff of Nakhsh-i Rustam, on the other side of the plain, about 6 miles north-west of the platform. These sepulchres, which were the model for the three later ones, are each hewn in the shape of an immense Greek cross, and sunk deep in the face of the rock. They are elaborately carved in architectural style to represent a façade decorated with bull-capped pillars, two on either side of the doorway, and surmounted in each case by an entablature richly sculptured with a bas-relief of the king, his subjects, and Ormazd. An inscription shows that one of these tombs was the sepulchre of Darius the Great; it is believed, belonged to Xerxes, Artaxerxes II., and Darius II. A few yards distant from the tomb last named there is a square stone edifice which closely resembles the rectangular structure at Pasargad, already mentioned, but well preserved, and, like the latter, probably a fire-shrine rather than a tomb. Near the base of the necropolis hill, but hidden from the shrine by a screen, are the remains of two altars, hewn out of the living rock, and serving as fine examples of the stonemason’s work for religious purposes in Achemenian times. To the same age may likewise belong some rude cuttings in the rocks on the crest of the cliff, apparently designed as repositories for exposing the bodies of the dead in accordance with the ancient Zoroastrian custom, but the date is not certain. To a later age, however, we may assign the seven sculptured groups in the rock beneath the tombs themselves, since their subjects prove them to be of Sassanian origin. The list of Achemenian tombs is to be supplemented by several others, upon the plain of the necropolis, near those of Nakhsh-i Rustam, but probably dating from an earlier period than that of the Parthian, tomb, and without inscriptions or ornamentation, excepting one which has a crude bas-relief of Darius, not far from the village of Sahnah, between Hamadan and Kermanshah, at Holvan in Western Persia, and Takhirkan in Azerbaijan, as well as elsewhere (see de Morgan, Mission scientifique en Perse, iv. 292-302, and Justi, op. cit. II. 455, 456).

The fourth and last of the great Achemenian capitals was Susa, whose remains were first made known by Loftus in 1832, and were excavated with great accuracy by results by Dieulafoy in 1884, 1885, 1886, followed by de Morgan in 1897, 1898, 1899. The site which they occupy was the winter residence of the Achemenian kings and the old seat of government of Elam. The ruins extend for many miles, from Chaur, or Jaur, and the Kerkhah, in the vicinity of the modern Dizful and Shuster. Four principal groups of remains are distinguishable, according to the results of the explorations that have been made. First, the tell, called the Citadel; second, the Royal City, where stood the palaces of the successors of Darius; third, the traces of the city itself; and, fourth, the remains of the inhabited town along the river’s edge. If we may judge from the elaborate finds made by Dieulafoy, the Citadel and the Royal City must have made an imposing spectacle in the days of their pristine glory (see the plates in Dieulafoy, L’Acropole de Susa); and the same investigator’s researches have revealed, among other ruins, the remains of the apadana, or throne-room, of Artaxerxes II. Memnon, which was erected on a site earlier occupied by a palace belonging to Artaxerxes I. Ochus (see 335-330 B.C.). It was here that the archaeological expedition, led by Dieulafoy and his wife, discovered the frieze of archers and a lion-frieze, together with the remains of an enameled staterase. Other objects of interest, revealing the knowledge of early Persian architecture and art. In point of style the Susian remains are quite like those of Persepolis, even as regards the character of the so-called Persepolitan column, and, like the latter, they are thought to show traces of Greek influence combined with Assyro-Babylonian elements and other features already mentioned, although they are so thoroughly Persianized as to possess an individuality of their own.

The ruins of one other edifice in Persia may be referred to here because belonging possibly to the latter part of the Achemenian period; it is the remains of the great temple of Anahita (see also Anahita) at Kangavar, between Hamadan and Kermanshah. A portion of the N.W. wall of the stately temple on which the temple stood is still intact, and is crowned with the remains of a colonnade of pillars, while on the south-eastern side of the temple precinct there is a disordered mass of large granite blocks and columns, whose size conveys an idea of the vanished magnificence of the temple which was a mass of large columns, serving as the supports of the temple, and combining certain characteristics in the columns, which seem to show later Greek or Syro-Roman affinities. Dieulafoy and some others propose to assign this temple to the Parthian period; but, to the present writer, the evidence seems
stronger in favour of attributing its construction to Artaxerxes Meneoe or some other of the later Achemenians. For the sake of completeness it should be added that Dienefsoy, on the contrary, assigns to the Achemenian period some of the ruins at Firuzabad and Sarvistan in S.W. Persia; but both of these authorities, like Perrot and Chipiez, rely on Morgan, and Gayet, are better justified in assigning them to the Sasanian epoch.

3. Seljuk and Parthian periods (B.C. 290-579 B.C.).-The Seljuk rule exercised no appreciable effect on Persian architecture, unless it was to extend the sphere of possibility for Greek influence. The Parthian period was the effect of times, as is shown by their employing the Greek language and Greek devices on their coins; but they were not great architects, as is clear from the Parthian ruins—practically the only ones surviving—at Hatra and at Warka, although these are built with crude solidity, if not with beauty of design. The structure at Hatra, the modern al-Hadhr, in Mesopotamia, was either a palace or a temple, or possibly both combined in a single precinct, for which reason its plan is singularly munificent as an artificial hill or temple mound. The ruins show a brownish-grey limestone edifice, 386 ft. long, 210 ft. broad, and with thick walls proportionately high. The building consists of a square central part, on a side, with several smaller rooms leading into them, and a large square hall—apparently a throne-room—added in the rear near the left-hand corner of the edifice. The front of the building was, for the most part, open, so that the light from the square hall was good, and it was probably shaded by awnings. The walls of the greater apartments were strengthened by pilasters, and decorated by bas-relief sculptures and ornamental friezes, which added to the munificence of the building. The square hall, which was circular, and the semi-circular room, which was square, were ornamented with columns, capitals, cornices, friezes, and bits of painted plaster, shows that the Parthians in later times were not averse to decoration and artistic touchings in their buildings, even if they had affected a rude simplicity in earlier times. This fact is further borne out by the account of the palace at Ctesiphon, as given in Philostratus' Life of Apollonius (ed. Olearius, l. 55). According to de Morgan and Chipiez, this structure, with its bases of columns, capitals, cornices, friezes, and bits of painted plaster, shows that the Parthians in later times were not averse to decoration and artistic touchings in their buildings. As to originality in architectural art, it may be added that the Parthians are credited with the development of the arch- and tunnel-shaped roof, in contrast to the flat ceiling and square lintel of the Achemenian period.

4. Sasanian period (A.D. 224-661).—The Sasanian monarchs, unlike their Parthian forerunners, were great builders, and distant architects of the Achemenians. An enumeration of the places where monuments that date from their reign are found would take in a large part of Persia, as is clear from such a list as that given by Justi (Top. cit. ii. 540-549). Thirteen remainings of the mosques, in constructive art over the Parthian period, more especially in the development of the dome, an outgrowth of the arch and vault, and in the elaboration and perfection of the minaret, that at Ctesiphon, whose high recessed entrance, with galleryed panels on either side, anticipates the sweeping curve of the grand portal and the panelled front which is typical of the mosque and madrasa architecture in Mesopotamia. The standard of royal magnificence under the Sasanians is shown in the ruins of Qasr-i Shirin, the castle built by Khusru II. Parviz (A.D. 600), for his favourite, on the road between Baghdad and Kermanshah, and is evident in the sculptured grotto at Taq-i Bustan, near the latter city. To about the same epoch belong the ruins at Mashito and at Amman (the 'Rabbah of the children of Ammon' of Art 39), as well as the palace called Alvan-i Khusra not far from Susa. The architecture of this period is represented by the remains of numerous fire-temples, like the akht-Kahah, near Isfahan, and that at Abarghur or at Jaur, in the district south of Esfahan; or, a combination of the crumbling sanctuary of brick at Taq-i Sualimian, south-east of Lake Urmiah.

The style of construction of a Sasanian caravanerai may be judged by the stone ruins, said to be the work of Khusru I. 'Abshinvarthe the Just' (A.D. 531-579), at Aghgam, between Teheran and Meshed. Sasanian architectural engineering is illustrated by several bridges and dams, as at Dizful and Shuster, or the stone aqueducts, descriptions of which may be seen in了许多 standard works mentioned at the end of this article.

5. Muhammadan period (from A.D. 661).—As already stated, the history of the Muhammadan period is, of Persian architecture, forms a special branch of art, and the best examples of its development are found in the mosques, the religious edifices which supplanted the old fire-temples after Persia adopted Islam as its national faith, and which are characterized by towering minarets (some times bulbous in shape), high façades with immense recessed arches, graceful minarets that give balance on either side, and ornamental exteriors decorated with glazed tiles and scroll-like arabesques. The architectural remains of the first period of the Khalifate, the Umayyads and Abbisids (A.D. 661-847), have mostly been destroyed by the long series of wars that have devastated Persia from time to time; but the foundation of the mosque of Harun al-Rashid at Káshan (A.D. 750) belongs to that epoch, and a mosque at Shiraz, built in the latter part of the 9th cent. by the Sabirin Amur ibn Laith, is numbered among the older remains. Of the early Ghaznavid age (10th cent. A.D.) may possibly belong the tower-like tombs at Rai and Hamadan, but it is more probable that they come from the later Seljuk era (roughly, 1200-1300) or from the Mongol age (1160-1260). The same is true of a crumbling mausoleum at Tns, near Meshed, as it is said to be the tomb of the poet Ferdausi, who died in the year A.D. 1020; but although the poet's grave is actually near by, its more likely that its architectural structure is of Seljuk origin, since the closely resembles the mausoleum built by Sultan Sanjar at Merv about 1150. Good examples of the earlier Mongol period may be seen in the madrasa of Daghiz Khan's grandson Hulagá (d. 1255) and his queen at Maragha, the royal seat of the
ARCHITECTURE (Phoenician)

Mongols in north-western Persia; while the mausoleum of Uljaitu Khodabandah (d. 1316) is of this period. The best illustration of the architecture which flourished during the rule of the Tartars, after Timur's invasion, is the beautiful Masjid-i Kabud, or 'Blue Mosque,' erected in 1405 by Shah Tahmasp, and Tabriz. The architecture in Persia reached its height in the reign of Shah Abbas the Great (1585-1628), and is well illustrated by the Masjid-i Shah, or 'Royal Mosque,' erected in 1612 at Isfahan, and by the other buildings of the same ruler. The architectural activity of Shah Abbas was not confined to his capital, however, or to palaces and places of worship, but was exercised in the construction of caravanserais, bridges, and other useful structures in many parts of Persia, so that his name is widely known throughout the land as the patron of the builder's art.

The cities which best show the different styles of Muhammadan architecture are those which had the honour at one time or another to be the royal capital, like Isfahan, Kazvin, Tabriz, Sultaniyah, and Shiraz; but hardly of lesser fame are Kirm, Kuh, Bist, and Tabal. Modern architectural tendencies are best observed in the present capital, Tehran, where it is possible to see even European elements combined with the most conservative features of the past. When viewed as a whole, it may be said that Persia's contribution to the history of architecture, if not distinctly original, is, nevertheless, considerable, and deserves the attention of the student of religious art as well as the architectural specialist.

ARCHITECTURE (Phoenician).—Worshippers of the powers of nature, it is not surprising that the Phoenicians, in the earlier stages of their national existence, should have discarded the work of the architect and builder, and taken to worshiping in the 'high places' so often referred to in the Old Testament. That these were natural eminences, and not artificial erections, like those of the Babylonians and Assyrians, is quite clear from the statements concerning them. They were within easy access from the cities, and thither the people resorted when assembling for worship. How common they may be gathered from the fact that they were the customary places for worshiping the gods of the 7th century B.C.* The oracle on Carmel, which, according to Tacitus and Suetonius,† Vespasian consulted, was possibly a sacred place of this kind. The god concerned was either Jeljah, or, as has been suggested, an altar which was much revered. This altar was probably of unhewn stones, like the one dedicated to Jehovah upon that same mount Carmel which Elijah re-built and consecrated anew on

* See Hastings' Dict. of the Bible, s.v.
† Tac. Hist. ii. 43.
supplied by the spring, and it is possible that this was also the case in ancient times. Backed by verdure, it must have been a secluded and sufficiently picturesque spot, and the difficulty of access to the shrines would naturally prevent their desecration.

It is improbable, however, that these remains show the common religious architecture of their time, and the fames of Astarte at Sidon and Melqart at Tyre were undoubtedly much more important and imposing structures, though Hillebrandt has been astonished at the surprising number of stones that do not enable any idea of its form to be gathered; to all appearance it was more struck by its two pillars (στάμαν), ‘one of pure gold and the other of an emerald tó of both shone by night.’

Another important shrine was that of Eshmun on the left bank of the Nahr Auli, about an hour N. of Sidon. This was a rectangular erection built apparently on the side of the slope, remains of the walls and masonry of the terraces being still in existence. The slope looks towards the N., and it is possible that the sanctuary to Eshmun was a shrine like that at Amrit, which has the same orientation. Large numbers of votive statuettes were found at the temple.

The stones of the shrine, however, seem to have been long ago carried away by the inhabitants of the country to build their houses with, and some, with holes, are still lying about.

Of greater importance, perhaps, are the indications available for the architecture of the temple at Gebal, made known by coins of the Roman period.

On the left is shown a chapel, the front surrounded by pediments. At the top of the steps giving access to the interior was a tripod table, perhaps for offerings, and a strange emblem surrounded the mouth of the roof, while the temple was open, flanked by plasters supporting the pediment. Above this entrance, a conical stone surmounted by a naïve head, and two rudimentary arms. Perrot suggests that the size of the opening has been purposely exaggerated by the engraver in order to exhibit the divine image, which was, in reality, not at the entrance, but at the far end of the sanctuary. On each side of the porticoes or colonnades, flat-roofed, hardly more than half the height of the central portion, surmounted by images of the doves sacred to the goddess. Under these arcades objects like canelabra are shown, the upper part arranged either for the purpose of giving light or for the burning of incense. Above the upper structure, and between the two towers, are shown a star and the crescent moon—emblems of the goddess. The space in front of the building seems to be represented paved, and enclosed by a semicircular railing, provided with a double gate. Within this enclosure is a dove, apparently seeking food. The details vary somewhat in the different copies of the coin, but it is to be supposed that the engraver had no intention of giving more than a general idea of the building, so that numerous accessories have been omitted. According to Di Cesnola, the body of the edifice was rectangular, 67 metres by 50, surrounded by a court-yard 210 by 164, more or less. As it is based upon actual exploration, it is to be preferred to the plan given by Gerhard after the indications of travellers who visited the site in the early years of the 19th cent.; but how the latter could have obtained the exceedingly probable details of the interior which he gives is difficult to understand. According to his plan, there were two enclosures, the first provided with four entrances, and surrounded by a colonnade. A doorway admitted to the second enclosure, in which was the temple. There we see the semicircular railing, the paved forecourt, the sites of the towers, the central portion of the building, divided into a vestibule, a large hall, and a sanctuary wherein was the sacred image; likewise the lateral structures, each with four chambers, to which admission was gained only by a door in each corner.

But it will be asked: Were these two forms—the high place and the temple or mountain-shrine—the only architectural creations of the Phoenician, designed for the purpose of worship? All that can be said is that they are the principal forms found. It seems not improbable, however, that they had others, and, as we shall see later, Solomon at Jerusalem was built by workmen and material supplied to that king by Hiram of Tyre. If not in that king's structure, there is at least in the temple as described by Ezekiel (40–43 etc.), and by Porphyry and Cyprian, a certain likeness to the Phoenician temples as shown on the coins of Cyprus, which seem to have been erections of imposing architectural appearance.

In Cyprus the most famous temples were those of Paphos, Amathus, Idalion, and Golgoi, in which places were Phoenician settlements, as also, probably, at Citium (now Larnaca), Salamis, and other sites. From Cypriote coins, an idea may be gained of the celebrated temple at Paphos, dedicated to Venus or Astarte. It consisted of a central erection—a kind of pylon—in the form of two narrow towers connected, in the upper part, by a chamber surrounded by the stones of the shrine, however, seem to have been long ago carried away by the inhabitants of the country to build their houses with, and some, with holes, are still lying about.

Naturally the architecture of this building suggests Greek influence, and to all appearance it is a simple reproduction of the Egyptian shrine, but it may be noted that Babylonian architecture has something analogous (see p. 682), and may have been the true origin of the structure. What would seem to be due to Greek influence is the pointed roof.

The real ancient part, however, was probably the structure on the right, which shows a colonnade to which access was gained by a flight of steps, and a large court-yard, with columns—a kind of arcade—behind. The representation of this building was evidently altogether too much for the die-sinker, whose ideas of perspective were on a level with those of the Assyrians. Above the cornice of the colonnade is an erection of open work, behind which one sees a conical object towering high in the open—the emblem of the god of the place, corresponding with the sacred stones in which the divinity was supposed to reside.

And here we again have the 'high place,' not formed out of the solid rock by the laborious quarrying of all the mass which was not needed, but by an enclosure of hewn stone, ornamented with a colonnade all round. This was naturally much more elaborate than the simple clearings in the open, and also more aesthetic than the hill-enclosures marked off by simple rows of tall stones.

§ Upon these objects see p. 384.
from the large central hall, and one (that at the end) which could be entered only from the sanctuary. The two plans are too different for one asks whether they could have been taken from the same remains. According to Tacitus,* the stone emblemat of the goddess in the open air, indicating that the place where it stood had been a roof; notwithstanding this, it is said never to have been wet with rain. This rather favours Di Cesnola's plan, which, however, does not agree with the picture on the coins. Probably further exploration is necessary in the neighbourhood, but nearer to the sea, Di Cesnola† found two conical stones still in position, which, it is suggested, are all that remain of some sacred spot—perhaps the traditional landing-place of the goddess when she first visited the island. If this be correct, the site was the spot where the pilgrims to the sacred places on the island commenced their pious visits. Perrot suggests that this site is represented on another Cypriote coin,‡ in which two sharply-pointed cones are shown, one on each side of two columns, resembling the side-posts of a doorway, standing on bases, and connected at a distance of about three-quarters of their height by joists, intended, to hold the appearance, to hold the structure in position. The whole seems to have been provided with some protective covering of the nature of an awning. Under this seeming doorway is a conical object on a plain roof; notwithstanding this, it is said to have never been wet with rain. It is possible that the object meant by means of the two cones is the conical roof, which stands on a central column. The whole shows a simple form of the temple at Paphos, without the lateral structures of wings or aisles. At Golgos the temple was a parallelogram,§ the roof supported by five rows of three columns each. There were two doors, one S., the other E. A large cone of grey stone found on the site implies that the building was dedicated to the goddess of Paphos. It resembles in form, but on a large scale, the terra-cotta cones found in such numbers at Telloh in S. Babylonia. Many figures of women holding or suckling their children, and of cows suckling their calves, were found at various points on the site. Numerous pedestals, each of which anciently bore a statue, and some of them two, were found. Ceccaldi, who studied these pedestals, supposes that they were given a very vivid picture of the appearance of the temple when it was still standing. Its four walls were of sun-baked brick covered with white or coloured cement, and the pillars were of wood, with stone capitals, the two sides of the roof which they supported having only a very slight slope, forming a terrace, like the present Cypriote roofs. The roof was of wood covered with reeds and mats, upon which was spread a thick layer of earth beaten down hard. The exterior was therefore of a very simple appearance. The interior was lighted only by means of the large doorways, whereby one saw a motionless and silent crowd of stone-carved figures, their features and robes tinted with the colour of nature, surrounding the mystic cone as perpetual worshippers. Shrine-like stone lamps illuminated the grinning ex-votos hanging in recesses on the walls, which last were adorned with curious pictures. Strange sculptures adorned the circuit of the building, where the slanting rays of light were reflected on the white and polished tiling of the floors.

This is a vivid and probable picture, of which, however, some of the details require verification. Perrot suggests that this building was simply a treasury or museum belonging to the real temple. A few underground buildings exist, the most noteworthy being the crypt at Curium, ¹ in which were found many objects of value. Having descended the short steps and opened a door provided with a true door leading to a small chamber, within which one finds three successive bayed rooms, and at right angles with these, a fourth, with a further length of the passage. This interesting and well-built structure seems to have been used as a treasure-chamber, but whether it was originally intended for such is uncertain. That at Larnaca is known as the Panagioth Phaneromini. Enormous blocks, as well as small stones, have been used in this construction, which consists of a large room paved with a door leading to a small chamber, within which was found at low spring, probably some sacred source. The roof was formed of two large blocks of stone considerably arched on the under side. It had been thought to be a tomb; but in view of the existence of the spring, this is unlikely. It was probably a sacred well, much resorted to by the inhabitants and the people of the neighbouring port.

Far behind the perfection of the temples of Phoenicia and Cyprus are those of Malta and Glaucos (now Gozo). Artistically and architecturally, a wide gap separates them from the structures of the Ionian, but these Funan- (sacred) stones found therein have caused them to be regarded as certainly Phoenician. Evans and others, however, are of opinion that these buildings are really Libyan. At Gozzo there are two temples,† side by side, and joined together by a wall, which forms a kind of rough façade. Passing through a narrow entrance, one reaches, in the case of the larger building, first a small and afterwards, continuing along the passage, a larger hall arranged at right angles thereto. The rear termination of the building is an apse in the form of a semi-circle, and the whole suggests the arrangement of a church choir with deep bays. In consequence of its nearness, the smaller building has the first half larger than the second. The semi-circular apse at the end is decidedly smaller; otherwise the arrangement is in both cases the same. In the various apses of which the building consists, there are given a very vivid picture of the appearance of the temple when it was still standing. Its four walls were of sun-baked brick covered with white or coloured cement, and the pillars were of wood, with stone capitals, the two sides of the roof which they supported having only a very slight slope, forming a terrace, like the present Cypriote roofs. The roof was of wood covered with reeds and mats, upon which was spread a thick layer of earth beaten down hard. The exterior was therefore of a very simple appearance. The interior was lighted only by means of the large doorways, whereby one saw a motionless and silent crowd of stone-carved figures, their features and robes tinted with the colour of nature, surrounding the mystic cone as perpetual worshippers. Shrine-like stone lamps illuminated the grinning ex-votos hanging in recesses on the walls, which last were adorned with curious pictures. Strange sculptures adorned the circuit of the building, where the slanting rays of light were reflected on the white and polished tiling of the floors.

† They are called the Gigantika, the enormous stones used in their construction having led to the tradition that they were the work of giants. Plans and description published in Notices et Monuments de la Mission archéologique en Égypte, sous le commandement de M. le Comte de laborde, donnés par M. Flou, 9 vols. 1821-29—31, Pls. I-VII, and in Perrot-Chipiez, Phénicie, figs. 231-234.

§ ib. figs. 219, 220.
four on the W., but the southernmost of each seems to have been separated from the rest, and partitions in the case of two others are shown on the plan. Stones decorated with spiral ornaments show that attempts at decoration were made; the ground on which the spirals are carved is covered with a number of minute holes, emblematic, it is supposed, of the stary vault of heaven. A striking altar, with fluting, decorated with a representation of a growing tree, has the same ground-work. Another altar, also made of the great blocks of stone used in the building. Another altar, like a small table; with a thick central support—a type met with often in Syria—was found in one of the large rooms.

Scultures show that similar temples to those in Syria existed, in Punic times, in Sicily and Carthage. One of these was known under the name of Erk Hayajin, 'Length of Lives,' and was dedicated to Astarte as goddess of longevity, whence the name of Eryx, given by the Greeks to the city where it was. It arose on the peak of a mountain, within that mighty wall which protected the summit. Judging from a stele found at Libbis, (fig. 68), there is reason to think that the same altar existed there. The upper part of this monument shows a priest adoring before a candelabrum, or fire altar, behind which is the sacred cone with 'candela,' and near which is an Egyptian sphinx. Inscriptions dedicated to Ba'al Sama'im, 'the lord of the heavens,' Astarte Erek Hayajin, 'Astarte length of lives,' Eshmun, Ba'al Hammon, and Elat, make it probable that Phoenician temples to these deities existed in Sardinia, where they were found. A shrine in the Egyptian style, found at Sulcis (height 28 in.), has on the cornice a disc, and a row of uraei above. In another example from the same place, a carcase, like a goddess in Greek costume, we have a mixture of styles, Doric columns being introduced as supports of an entablature showing the Egyptian winged disc surmounted by a row of uraei.

Carthage and its dependencies have but little to offer in the way of religious architecture in the Phoenician style. At Eblis a lintel of a doorway curved with two lotus-flowers, the sun with rays above, and at Jezza a capital of a column in modified Ionic, suggesting Cypriote influence, testify to buildings erected there. At Carthage itself the great temple of Eshmun, demolished by the Romans, was re-built in the Byzantine age; but nothing now exists of it, as the church of St. Louis and its dependencies at present cover the site.

The ornamentation of the Phoenician temple has been referred to from time to time in the preceding pages, but a few additional words thereon are necessary. The cornices are often plain, but when a row of uraei-serpents was added, the effect was decidedly decorative. Exceedingly effective was the mixed style of the entablature of the temple at Gebal, with its Greek-Roman decoration, including scrolls and flowers flanking a conventional Egyptian winged disc-emblem with uraei. The doorway at Um-al Avamid, being much more Egyptian in style, forms a striking piece for comparison. Egyptian influence is again manifest in the relief showing a tree, carried on two columns, found at Arad.

Apparently it was a favourite decoration with the Phoenicians, for it occurs also as the support of a throne in the decorative panel-relief showing a seated personage in the presence of the sacred fire (see below, p. 885 f.). Gravine ornaments, such as are found in Assyro-Babylonian temples, occur on alabaster slabs from Gebal, now in the Louvre. They suggest the Assyro-Babylonian temple-tower, surmounting a decoration of flowers in squares over a band of laurel. This gravine-ornament is also found in Syria, even of the Roman epoch. As in the case of the round tower-like monument of Anrit, however, the idea that it was really a temple is lost by the material between the two sides being left; there are no openings. The great disadvantage of the modern student of their decoration, however, is that the remains are so scanty.

There is hardly any doubt that the architecture of the Phoenicians has had an influence on that of the nations around. Perrot and Chipiez cite the old mosques of Cairo, Anurra, and Tsulin, with their great rectangular courts surrounded on all four sides by rows of columns, the idol alone being absent. 'If one wishes to have a complete example, one must go as far as Mecca, and enter into the Ka'ba, where even the triumph of the Qur'an has not succeeded in ousting the primitive bethel, the black stone, which, in the sanctuary, has received the homage of the Arab tribes throughout many centuries.' (Phénicie, p. 315 f.)

But perhaps these temples are not derived directly from Phoenician architecture. We have always to take into consideration the possibility of their having come down to the nations which produced them by some collateral line, and the likeness between them and the fane of Phoenicia may be due to action and reaction. Whatever reservations may be made, it is quite certain that the influence of history and the monuments seems to show that the influence of Phoenicia preponderated.

T. G. Pinches.

ARCHITECTURE (Roman).—GENERAL CHARACTERISTICS.—If it be necessary in the case of Greece to point out that religious buildings were but a part of the architectural activity of the people, it is still more necessary in the case of Rome. Roman religious architecture was small and comparatively unimportant rôle. Her baths, her palaces, her amphitheatres, and other public buildings were all upon a grander scale than her temples.

When Rome became mistress of the world, although she had at that time no architecture of her own, she made use of artists from all nations, and thus arose a composite style of the architectures of the world, in which Greece played by far the largest part. The origin of the Roman temples seems to have been partly Etruscan, partly Greek; but whatever part Etruscan architecture played in other branches of Roman architecture, the Roman temple in its final form was almost wholly Greek. The fact was that the great development of Roman architecture was almost entirely in the hands of Greek artists, and it is by no means easy to determine how much can really be considered Roman at all.

The true Greek style was transplanted, the arch, as has been shown, being only occasionally used. The style of the Romans, however, was a hybrid, partly arched and partly unarched, and in form the hands of the two elements never became complete. It is generally said that the arch in Roman architecture is the arch of the Etruscans; it is, however, doubtful whether it was not an introduction of the Greek architects of the East.

and Alexandria. In any case both the arch and the barrel vault date back to remote ages in the East, and the later Greek architects were more likely to be influenced by these traditions than by the comparatively obscure work of Etruria. At the same time, fine arches with large voussoirs were built more for Etruscan than for the canals in the Marza at Gracignan, supposed to date from the beginning of the 7th. B.C., or the Cioaca Maxima at Rome of the 6th. If, however, the Romans themselves had continued the tradition and had built in some similar style, it is almost impossible that some remains, however scanty, would have come down to us. Indeed, we know that early Roman architecture was of brick, and brick vaulting with voussoirs occurs in Egypt as far back as B.C. 2500. Even the intersecting vault is found in a Greek example at Pergamos dating from the 2nd. B.C. The earliest surviving Roman building that had arches is the Tabularium, and it dates only from B.C. 78, long after the sack of Corinth, when Rome passed under the rule of Greece intellectually and artistically. Arches were in common everyday use in Greece, at any rate for structural purposes, as early as the time of C. C. 290, so there is no reason to suppose that Greek architects working for Rome were in any way necessarily indebted to the Etruscans for their conceptions. Even the triumphal arch—that ornamental form which we are wont to consider typically Roman—was built in Athens in B.C. 318. The earliest instance of such an arch in Rome is that of Scipio Africanus (B.C. 190), of which we have the record, but no remains. The most that can be allowed is that it is not impossible that the Romans may have had a developed arcuated style derived from the Etruscans before they fell under the dominion of Greece; but there is no evidence of any kind, and, as far as existing remains are concerned, there are no new developments that precede Greek work. The attached column, for instance, sometimes spoken of as a Roman invention, occurs in the Arsinocion in but slightly modified form, in the monument of Lysicrates in Athens, and at Phigalia, even if those of the Erechtheum were of Roman date.

With regard to their brick and concrete construction it is otherwise. The Romans were certainly great engineers. They, however, not the same intellectual acuity about Roman work that there is in Greek work, and this was never acquired. When the Roman Empire was finally divided, the Greek or Byzantine portion at once began to develop a more scientific style in marked contrast with the ruder work of the West. Roman work was practical, rough and ready, often grandiose, but lacking in the finer artifices sense.

It is likely that we shall never be able to say what elements are Roman and what are Hellenistic, but it is possibly in the general planning that the Roman influence is strongest.

The Romans borrowed the Greek orders; perhaps a more correct way of putting it is to say that the Greek architects working for Rome used their own orders, and by slow degrees trained a native school. The Doric order became very de- creased, and is found in a great variety of forms. The simpler of these forms are commonly grouped together as Tuscan, but they differ very much among themselves, and there is no historical evidence for any Tuscan origin. Vitruvius uses the term, but it is impossible to draw any clear dividing line between Tuscan and the debased Doric. The cause of the common error is that the Renaissance architects did make such a hard and fast dividing. The term as applied to Renaissance work has a drop in meaning, but has no relation to anything in Rome. There was a Roman tendency to dispense with the fluting of Greek work both in Doric and Ionic, and occasionally in the Corinthian order, which greatly detracts from the strong refined vertical character of the shaft. Flutings were expensive to work, and were not showy enough to please Roman taste, which preferred monolithic shafts in hard brightly-coloured marbles in which flutings would have little effect. The column loses the sturdy proportions of Greek Doric, and tends to assimilate itself to the proportions of the other orders. In most of the existing examples of Roman Doric there is a base, but this is absent in early examples such as those of Pompeii, which are much more Greek in feeling. It has been suggested that the origin of the base is Etruscan, but its absence in early work is against this theory; and the part that Vitruvius would assign to Etruscan influence in architecture is not much more of a reality than the part assigned by Virgil to Aeneas in Roman history. The contours gradually deteriorate, and the echino of the Doric column speedily becomes a simple quarter round. In the almost unique early example of the Temple of Hercules at Cora the hyperbolic curve is found, and is obviously executed by Greeks. The architrave shrinks in importance, and the whole entablature is much shallower. There is a marked tendency for the intercolumniations to become wider. This is mainly the result of the fact that the order as such is not an essential part of the construction in Roman work. It does not govern the building, but is merely something applied afterwards, and has to suit its proportions to the available space. It is to this that we owe the introduction of the pedestal as a regular feature, which occurs only occasionally in Greek work. The architrave is set farther back than in Greek architecture, and the line of its face tends to fall within the base (fig. 1). The beautiful sculpture

which was the glory of Greek buildings, and particularly of the Doric order, is absent, and its place is often taken by trivial conventionalities, such as wreathed pilasters. The origin of this feature is probably to be found in the actual skulls of

Digitalized by Microsoft®
of Apollo at Naucratis, the Erechtheum itself, and a capital in the forum of Trajan, we see it in its undeveloped form.

The entablature in Roman Corinthian work is very ornate. The architrave is divided by several moldings more or less enriched. The frieze is often decorated with continuous scroll work founded on the acanthus leaf, which is beautiful in itself although giving a restless effect as the result of over-ornamentation. Below the cornice a low feature is introduced in the modillions—ornamental brackets which give an aesthetic sense of support (fig. 3).

Religious buildings.—Of course in most of the great secular work the arch plays an important part, and the orders are placed ornamentally in very much the real arched construction; but except in the case of the propylaeum in the East before the sacred temenos, the arch practically plays no part in religious work. The vault, however, does occur (fig. 3). The religious buildings of the Romans were of comparatively small importance, and the great thermes are far more typical of Roman work than the temples. The temples, too, were used for many other besides religious purposes, just as was the case with the temples of the medieval cathedrals. But a temple of Concord was not only an art museum of the spoils of the world, but was often used for meetings of the senate, as also was the temple of Mars Ultor. The public weights and measures office was in the temple of Castor and Pollux, the temples of the Roman temples, although in their main features simply modifications of the Greek, have certain distinctive marks of their own. It seems probable that the early Etruscan temples were of a triple cela placed side by side, and, moreover, that it was the custom to erect them upon a lofty base, or podium.

The Etruscan architecture apparently was largely of wood, and terracotta became much less important, noticeably in a peculiar fringe of ornamented terra-cotta tiles hanging from under the eaves and apparently also from the main beam of the portico. These features can be traced in Roman work—the lofty podium with a great flight of steps approaching the main portico, the wide intercolumniations, and the use of terra-cotta ornaments—and even the three-celled temple may have followed its influence in the great breadth of the Roman temple, or in the case of a temple in the temple of Concord was not only an art museum of the spoils of the world, but was often used for meetings of the senate, as also was the temple of Mars Ultor. The public weights and measures office was in the temple of Castor and Pollux, the temples of the Roman temples, although in their main features simply modifications of the Greek, have certain distinctive marks of their own. It seems probable that the early Etruscan temples were of a triple cela placed side by side, and, moreover, that it was the custom to erect them upon a lofty base, or podium.

The ruins of the temple of Mars Ultor and three columns of the temple of Castor and Pollux (completed A.D. 6) are probably the earliest extant remains. They may, however, have been earlier examples, as Greece can be said to have begun its dominion over Rome in B.C. 146. The temple of Jupiter Capitolinus was possibly largely Etruscan.

Generally speaking, the earlier the date the purer the work and the more marked the Greek influence. It has been observed that the Greek temple was ornamented; but this was not the case with Roman temples, and we find them facing in all directions, generally planned in relation to their architectural surroundings. We find them all round the Forum Romanum, for instance, each facing into the forum. As in the case with Greece, the altar was not in the temple but outside, and the exact raison d'être of the temple itself is by no means so clearly defined.

The typical Roman temple, then, is a rectangular building with a cela very much wider than was usual in Greece. In the temple of Concord the width was greater than the depth. This may possibly have been the result of the earlier three-celled temple or of the many uses to which the
Roman temple was put. The architectural effect was always concentrated upon the front, and the back of the temple was often absolutely plain. As part of the same tendency we may notice that the temples were generally only pseudo-peripteral, with attached columns round three sides of the cela and an abnormally large front portico. The temple of Fortuna Virilis is a good early example; there is a very fine later temple known as the Maison Carrée at Nîmes (fig. 4).

The Roman temples within were apparently rarely divided into nave and aisles, so that a greater floor space was obtained, but the span was sometimes reduced by internal columns close against the wall, after the manner of the Greek temple at Phigalia. Occasionally there was an apse, as in the temple of Mars Ultor; and in the temple of Venus and Rome there was an interesting arrangement of a double temple with two cellae and apses back to back (fig. 5). The whole in this case was surrounded by a court and stoa.

The roof appears to have been normally of wood, but certainly in a few instances a concrete or stone vault was employed, as in the above-mentioned temple of Venus and Rome, the temple of Neptune, the temple of Ceres and Proserpine, and the temple at Nîmes known as the Nymphæum or the Baths of Diana, which has a stone barrel-vault supported on stone arches which rested upon attached columns (fig. 6).

In front of the temple was a great flight of steps generally flanked by two projecting portions of the podium, the steps not extending the entire width of the building. In the temple of Minerva at Assi the steps are carried between the columns which are raised on pedestals. This was probably from want of space.

A favourite form of temple with the Romans was the circular building which had become popular in Greece during the 4th and 3rd centuries B.C. It has been suggested that the Roman circular temple had an independent Etruscan origin. Even if this be the case with regard to the mere fact of the plan being circular, it has certainly nothing whatever to do with the actual form, which is simply a copy of Greek work. The lofty podium is generally found in Roman examples; but this, too, occurs in Greek examples of much earlier date. The picturesquely situate temple of Vesta at Tivoli is a fine example, of which the cela itself may even date back to the close of the 1st cent. B.C., although the Corinthian peristyle is later (fig. 7).

By far the most remarkable of the circular temples, and indeed of all the Roman temples, is the celebrated Pantheon (fig. 8)—a great building 142 ft. 6 in. in diameter, 2 ft. in excess of the domeless reading-room of the British Museum. The exterior is plain, not to say ugly; but originally the brick was faced with marble up to the first string course, and above this with stucco, which may possibly have somewhat improved the general appearance although not actually affecting the building architecturally. It is approached by a great portico built from the spoils of Agrippa's temple, which was taken down for that purpose. This fact was discovered in 1862, and is some consolation to those
who have always maintained that the portico is hopelessly out of place, and ru\s the severe dignity that the plain circular building might otherwise have possessed. The date of the main building also has conclusively been proved to be A.D. 129-124, from the stamps upon the bricks of which it is constructed. This is a most important fact, as the assignment of the building to Agrippa has led to many wrong inferences with regard to the history of dome construction.

The building occupies the site of what was once an open circular plaza, the pavement of which has been found some 7 or 8 ft. below the floor of the present building. The walls are 20 ft. in thickness, containing eight great recesses three of which are apses; the highest faces the entrance on the main axis, and the other two are at the extremities of the diameter, at right angles to the main axis. The entrance itself is a great rectangular recess covered by a barrel-vault, and between these four recesses are four others, all of rectangular form. Except in the case of the entrance and the main apse opposite to it, all the recesses have two columns in antis in front. The dome is divided in its lower part by vertical and horizontal ribs into five ranges of thirty-two coffers. Above this it is plain, and the building is lit by a huge circular hypetral opening 30 ft. across. Altogether the interior effect ranks very high among the great buildings of the world.

Under Roman rule many great temples were built in many other countries than Italy, but, save in those countries that had no architectural style of their own, it is misleading to call them Roman. Particularly in the East we find many buildings that are practically simply a development of Hellenistic architecture. The great temples of Syria, for instance, are not placed at the end of the form as in Rome, but in a temenos of their own as in Greece, with propylae leading into them. With one exception only (Baalbek) they are orientated in the Greek manner. Of this type is the great temenos of the temple of the Sun at Palmyra. In most instances, just as at Athens, the propylae have a wider intercolumniation in the frieze, but it was spanned by an arch round which the entablature is carried. The propylae of Damascus (fig. 9), which may be dated

The invention—if so it may be termed—appears to be that of Apollodoros, a Greek of Damascus, and seems a natural development of the temples of later Greek tradition already noted. It afterwards appears in Dioecletian’s Palace at Spalato, on the north-east coast of the Adriatic (c. 305 A.D.). It marks an important step, because hitherto the arch had always been carried by portions of walls or piers. On the other hand, the columns had never before carried anything but a horizontal entablature; and the piers and arches behind, with the columns and entablature in front, always remained two distinct and irreconcilable elements. Indeed, it was left for the Byzantine and Gothic architects to work out truly homogeneous styles of column and arch.

Of these Syrian examples the finest is that at Baalbek, which is built upon a great platform forming an acropolis. The general setting out is probably not Roman, and some of the substructure is pre-Roman in date. It was approached by great propylae of Roman times, the restoration of which is largely conjectural. An interesting feature is the hexagonal court, surrounded by a double peristyle upon which the propylae opened. The hexagonal court leads in its turn to a great square court, at the end of which, some vast, in the Roman manner, is the larger of the two temples. Apparently it was never completed. The other temple to the south, the temple of Jupiter, is a very fine piece of work. In some ways the building was a compound of Greek and Roman feeling. It was peripteral with two ranges of columns in the front, but the portico was very deep, and the central intercolumniation was wider than the rest. The interior had attached columns after the manner of the temple at Phigalia, except that the entablature was broken and carried round and back between the columns. It probably had a flat roof, except at the far end, where there was a small vaulted recess, about half the total width, approached by a flight of steps. A curious feature is a two-storey division into shallow niches between the columns, which has a very unpleasing effect. The lower one is arched, with a horizontal cornice, and the upper lintelled, the crescent, but is surmounted by a pediment. The carving is bold and good, and shows the influence of Greek tradition.

Construction.—The Roman method of construc-

BAY FROM COLOSSEUM
ARCHITECTURE (Roman)

Romans built mainly in brick and concrete, and the finer materials were used only for facing. In Rome itself even brick was never used throughout, although in the provinces brick walls or courses of stone and brick alternately are not uncommon. Whether brick or stone was used in the core of the wall or not, the outer face was invariably covered with stucco or some finer material. When brick or stone occurs, its use is not easy to determine, as it would neither add to the strength of the wall, nor admit of its being built without planking to keep the concrete in position while setting. Bricks were of flat triangular shape, and stones pyramidal. 'Opus incertum' was work where the stones were more or less irregular in shape, and 'opus reticulatum' where they were dressed to a true square, and set diagonal-wise in the wall (fig. 11). In either case occasional courses of large flat bricks, 1 ft. 11 in. long, bonding through the wall, were used. A similar method was adopted with arches to prevent the concrete from spreading and settling down before it had set (fig. 11). The marble or other facings were secured to the wall by iron or bronze cramps running into the body of the wall (fig. 11).

In vaults and domes, arches or ribs of brick were built upon light wooden centering, and cross bonding bricks dividing the whole into compartments were inserted at intervals. The concrete was then poured into these, and the whole set into one solid mass, exerting no outward thrust whatever. Stone vaults, instead of concrete, were occasionally built in later days, as in the Nymphaeum at Nimes, mentioned above.

Ornamentation.—The ornamental work of the Romans was not nearly so good as their construction, which was sound and workmanlike, and of great durability. One even regrets that they ever attempted ornament at all, as the bold and simple majesty of their great work is only spoilt by the applied ornament. After all there is very little Roman work if any, more pleasing than the Pont du Gard at Nîmes; and it has no ornament at all. One of the most delightful of their more purely architectural works is the gateway at Trèves, which is practically devoid of ornament. The ornament used by the Romans was all derived from Greek sources, but there is a roughness and want of delicacy that shows an entire ignorance of the subtlety and refinement of Greek work. The profiles of the moldings are nearly always segments of circles, instead of the sinuous and hyperbolic curves of Greek art. Moreover, the molding, as a rule, does not depend for its effect upon the subtle gradations of light and shade produced by its own contour, but upon the elaboration of the carving cut upon it. Somewhat similarly we find a preference among the Roman architects for the acanthus mollis with its rounded and less precise form, whereas the Greeks preferred the acanthus spinosus with its crisp angular lines (fig. 6, Architecture [Greek]). It is true that the acanthus spinosus badly drawn is less satisfactory even than the other, but this kind of thing is well known—the greater the height, the worse the fall. The carving, too, although vigorous in its way, is rougher and much more mechanical than that of Greece. Instead of the fine sculpture that adorned the temples of Greece, we frequently find endless repetitions of ox-skulls and festoons of fruit and flowers between. There was a great tendency to use the ornament in such profusion that it stultified itself. Such an example, for instance, as the arch at Benevento is so overloaded that there are practically no plain surfaces at all, and the whole effect is worried and unsatisfying.

Colour was used in their buildings by the Romans as by the Greeks, and the great fondness of the Romans for marbles of many colours gave their buildings an opulence in effect that was one of their most marked characteristics.

One of the most important adjuncts of Roman ornament was the mosaic, which, however difficult to work satisfactorily, is undoubtedly more in consonance with architectural feeling than any mere surface pigment.

Adequately to appreciate Roman work, it would be necessary to study much more than the religious architecture. Rome's finest achievements were in the thermae and the great baths, which were the centres of Roman life, where literature was read and discussed, and politics debated. In these magnificent buildings it was the interior that was the greatest achievement. It was in interior effects that the Roman architects made the real architectural advance, giving to them a magnificence hitherto undreamed of. Magnificence was the aim and end of Roman art; subtlety and refinement were beyond its range. How ver, of existing remains, it is a religious building—the Pantheon—that gives us the clearest conception of what this interior magnificence was; and for us the Pantheon, with its fine interior and poor exterior, is the great key to the whole of Roman achievement, as the Parthenon, with its delicate subtleties and sculpture of unsurpassable loveliness, is of Greek.

J. B. STOUGHTON HOLBORN.
ARCHITECTURE (Shinto)—ARCHITECTURE (Slavonic)

ARCHITECTURE (Shinto).—There are indications that the original Shinto place of worship, like the Roman templum, was a building or a plot of ground consecrated for the purpose. It was probably enclosed by a row of twigs of the sacred evergreen sakaki tree stuck in the ground. Spirit terraces\(^1\) for Shinto worship in the old restored shrine, and the common word for a Shinto shrine, viz. yashiro, means 'house-equivalent,' i.e. a make-believe house for the god—no doubt a plot of ground of this kind. Another word for a shrine is mise, which means 'inner house,' and is applied alike to a palace and a shrine. Sir Ernest Satow says (TASA 1874):

'The architecture of the Shinto temples is derived from the primitive, but, with numerous less significant in propriety and influence of Buddhism in each particular case. Those of the purest style retain the thatched roof, others are covered with thick shingling, while others have tiled, and even diapered, roofs. The projecting ends of the rafters (called kap) have been somewhat lengthened, and carved more or less elaborately.' It appears from a passage in the Nikang, that the kap of the chuigi were restricted to Imperial residences and to Shinto shrines. Another distinctive feature of the shrine is a row of cigar-shaped pieces of timber laid cross-wise on the roof-tree. The walls consist of plastered earth work, and the roof is round, and without bases. The shrine has a wooden floor, raised some feet above the ground. There is a sort of balcony all round, with a flight of steps at both ends, from which they have at times a bronze ornament and wood-carving is used in some shrines, but, generally speaking, they are characterized by great simplicity. The wood-carving and metal ornamentation of some of them are truly marvellous, and in others are mere remnants, when the shrines were 'purified' after the restoration of the Imperial power in 1868. They are always of wood, without paint or lacquer, which, of course, limits their duration. The shrines of Ise are renewed every twenty years. Nor are they of great size. In the 8th cent. a 'greater shrine' had only fourteen feet frontage. At the present day the outer shrine of Ise—that in honour of the Goddess of Food—measures 34 feet by 19 feet. The great majority of Shinto shrines are very tiny edifices.

The more important Shinto shrines are surrounded by a cluster of subsidiary buildings, which serve various various purposes, oratories where the Mikado's envoy performs his devotions. No provision is made for the shelter of the ordinary worshipper. He remains outside in front of the shrine whilst he utters a brief invocation. The joint worship of a congregation of believers is a rare phenomenon in Shinto. Within the precinct there are usually a number of smaller shrines (nasshu) to other deities than the one worshipped in the main building. At Ise there were formerly more than a hundred of these. Sometimes there is an enodô, or picture-gallery, for the reception of ex voto offerings of this kind. A characteristic feature of Shinto architecture is the torii, or honorary gateway, which adorns the approaches to the shrine, sometimes in great numbers. These arches consist of two upright pillars leaning slightly towards one another. Near the top they are connected by a cross-beam or tie. Another beam rests on the upper corners, and the ridge board on each side. It is often made to curve upwards slightly at each end. The torii is usually constructed of wood painted red, but may also be of stone, bronze, or even of plaster. The whole is simple but graceful effect. Mr S. Tuke has shown that the torii is identical with the Indian turan, the Chinese pailou, and the Korean hongbolmun, which are similar in form and purpose. The name is probably Japanese. It means literally 'bird-rest,' i.e. hen-roost; and the gateways were so called from their resemblance to this familiar object.

LITERATURE.—B. H. Chamberlain, Things Japanese (Lond. 1893); B. H. Chamberlain and W. M. Muddiman, Look for Travellers in Japan (Lond. 1895); W. G. ASTON.

ARCHITECTURE AND ART (of the pagan Slavs).—The pagan Slavs seem to have had only the most rudimentary ideas on the subject of art. The few monuments which are ascribed to them are very crude, and it cannot yet be asserted with absolute certainty that they are the work of Slav artists. There is no connection between pagan monuments and the more or less grotesque descriptions given in some of the Chronicles of the Middle Ages. These chronicles owe to the Germans, Adam of Bremen gives a glowing description of the Russian Empire is very questionable. Hilarion, a monk of the 10th cent., writes: 'We are no longer building kapiskha, but churches of Christ,' thus indicating that kapiskha (from kap, 'idol') were pagan temples. But the oldest Russian chronicles speak only of idols, and the word kapiskha may mean simply idols. Among the Baltic Slavs we find the existence of temples allotted by German writings, in which the descriptions are not always very plausible. According to the statements of Helmold, the temple of Svantovit in the Island of Řügen was the great sanctuary of the Baltic Slavs. It was built in the town of Arkona, Saxo Grammaticus says, a temple of respect to it. 'It was,' he says, 'a very beautiful wooden temple. The exterior or enclosing wall of the building was ornamented with thin roughly painted sculptures representing various objects. It was entered only by a single door. The temple was surrounded by a double wall. Inside the building stood a huge idol.' He adds that the temple was decorated with purple cloth and wild animal's horns.

According to one of Otto of Bamberg's biographers, the god Triglav had at Stettin four temples called continue (from a Slav word meaning 'building'). The most important of these continue was marvelously decorated and ornamented with sculptures representing men, birds, and animals, so cleverly reproduced that one could have believed them living, and so ingeniously coloured that neither rain nor snow could injure them.

At Gostkov, according to one of Otto of Bamberg's historians, there stood sumptuous temples adorned with colossal idols. In the town of Riedgost (perhaps Riehetra [?]) Thietmar describes a temple built of wood and resting on animal's horns (though the statement seems rather curious). The outside walls were covered with wonderful carved representations of gods and goddesses. In the interior stood gods made by hand, with their names engraved, arrayed in armour and helmets.

It is not our duty to discuss here the question as to the characters in which the gods' names might have been inscribed. This point, upon which much has been written, is probably purely imaginary. 'As many districts as there are in these parts' (i.e. among the Baltic Slavs or Slavs of the Elba), says Thietmar, 'so many temples are there, and the images of demons are worshipped by the infidels. It is to the temple that they come
ARDASHIR I.—ARHAT

When on the point of making war; to it they bring gifts after a successful expedition.

Did the Slavs themselves build those temples, which were probably very small? Did they call in foreign architects? When did they not know geography? Masudi (10th cent.) had heard of their temples, but he gives an absolutely imaginary description of them, which cannot be believed, and he places the people whom he is describing in districts no less fanciful than those, in Punnah, (Artaxerx.)

We know that a certain Sasanian dynasty was called the Arsacid (Parsee) dynasty. They were kings of Persia, and among the Slavs, by that name, no ruined temple is in existence. Some of them were the names of idols worshipped in ancient Russia and among the Baltic Slavs—Svantovit, Perun, Triglav.

The present writer has reproduced in his Mythologie slave (1901) illustrations of German and in Galicia (Austria). They are believed to be Slav origin; but we are not absolutely sure, as we have no trustworthy information. German and Ancient Russian writings alone bear witness to the existence of these idols. When Christianity reached the Slavs, they adopted the religions of the neighbouring races, from whom the gospel had come to them—the Roman style prevailing among the Western Slavs, and the Byzantine among the Slavs of Russia, Bulgaria, and Servia.

LOUIS LEGEER.

ARDASHIR I. (Artash, Arakhabshahr, Artaxerxes).—Ardashir I. (A.D. 226-241), the founder of the Sasanian dynasty, was the son of Papak, 'king of Khir (Chir), south of the region of Persepolis. Having made himself master of Persia and some neighbouring kingdoms, Ardashir killed the Parthian 'king of kings,' Artaban, in 224, and seems to have conquered the capital, Ctesiphon, two years later. From the beginning Ardashir identified his political aims with the restoration of the Mazdasyan faith, which, notwithstanding the superficial sway of Hellenism, had never lost its hold on the people. He thus secured a mighty ally—the Zarathushrian priesthood, the 'race of the Magians'—and continued and accomplished a work already begun by Parthian monarchs. In his zeal for the national religion, he seems to have been his grandfather Sasan having been attached to the temple of the goddess Anahita in Istakhr (Persepolis)—as well as to his personal feelings. He was devoted to the Magian rites, and himself Theus (Artaxerx, Hist. ii. 36). The Avesta texts, destroyed and scattered in the time of Alexander and the following centuries, were collected by Ardashir, and completed by his high priest Tarsar (according to a tradition reported in Dinkart, iii.), who thus gave 'a faithful image of the original light.' Another passage, in Dinkart, iv., which corroborates the king's having called Tarsar to his capital in order to gather the scattered texts, adds the important fact that canonical authority was attributed only to the collection of Tarsar, all doctrines that did not originate from him being considered as heretical. The collection was not completed until the reign of Ardishir or his successor Shahlparh (i. 241-272). A different tradition, reported in the introduction to the Persian translation of Artā Virāf Nāmak, makes Ardashir collect the Aves and texts and the Zend names, and summon the priests surnamed to the capital (Dinhaw and West, Book of Artu Viraf, Bombay, 1872, pp. xv-xviii.). The custom of reciting a chapter, called irnād (Yazna), dates, according to Ardashir, from Ardashir's time. He says we may perhaps conclude with Darmesteter (Zend-Av, iii. p. xxxii) that Ardashir and his Hōrad of Hōrbads regulated the liturgy. The two chief facts of the restoration, viz. the collection of texts, legends, traditions, laws, and doctrines, and the monopolizing of true worship and true faith by the king, are expressed in the letter from Tarsar to Gushnap, king of Tabaristan (south of the Caspian), preserved, with additions and alterations, in a Persian translation of an Arabic version of the Pahlavi original. According to Darmesteter, op. cit. 1879, the first part, or most of this document, especially a certain azeit tendency evidently contrasting with the Zarathushrian law, considers it 'a being of this present form as a subtle political fiction.' He goes much further than Darmesteter in eliminating spurious parts and in reducing the remainder, but he expressly recognizes a historical nucleus.

Ardashir has immortalized his political and religious restoration by his theory of the mutual aid of the two powers, the State and the Church, if Masudi (Parasriptes d'or, text) and G. Barbier de Meynard and Pavet de Courtedeuille, i. 162), has correctly rendered his testament to his son Shāhrūr: 'Religion and kingship are two sisters that cannot exist the one without the other, because their existence belongs to other communities. In the latter sense, which is exceedingly rare (Vinayà, i. 30-32; Samýutta, ii. 220), it means a man who has attained to the ideal of that particular community, to what was regarded in it as the fit state for a religious man. This sense is not found in pre-Buddhist literature; but the usage by the early Buddhists makes it almost certain that the term was employed, before Buddhism arose, among these communities in the N.E. India. In the more usual, the Buddhist sense, the technical term arahat is applied to those who have reached the end of the Eightfold Path, and are enjoying the fruits of it, the so-called 'perfect' or 'saintly.' The first five discourses attained arahatship on perceiving that there was no sign of a soul in any one of the five groups of bodily and mental qualities constituting a sentient being (Vinayà, i. 14). The Buddha's son, until the reign of Ardashir, because he has overcome the 'intoxications' (devaras) of sensuality, rebirths, and ignorance (Digha, i. 84). In a list of punning derivations in Majhima, i. 280, the arahat is said to be one from whom evil dispositions are far (sāvāt). The first five discourses attained arahatship on perceiving that there was no sign of a soul in any one of the five groups of bodily and mental qualities constituting a sentient being (Vinayà, i. 14). The Buddha's son, until the reign of Ardashir, because he has overcome the 'intoxications' (devaras), and will incur no rebirth (Thera Gātha, 296; cf. 386). Every arahat has the sambodhī, the higher insight, divided into seven parts—self-power, self-confidence, investigation, energy, mindfulness, joy, concentration, and magnanimity. There is extant in the Canon a collection of hymns, 264 of which are by men, and 75 by women, who had become arahats in the presence of the Buddha. Fifteen of the women's need to have The question of sambodhī has been discussed at length in the present writer's Dialogues of the Buddha, Oxford, 1899, pp. 190-192.
gained the three vīyas or 'sorts of knowledge': the knowledge of their own and other people's previous births, and of other people's thoughts. Laymen could become arahats. A list of twenty who had done so in the time of the Buddha is given in Arius, and after the Buddha was an arahat. The word occurs in the standing description applied to each of the seven Buddhas known in the earliest documents (Dhyāna, ii. 2). The Jātaka commentator says that the Buddha made arahat-ship the climax of the teaching. But the climax of the majority of the Dialogues. Thus the first Dialogue in the Dhyāna deals with the first stage in the Path. The second is started with the question, by a layman, as to what is the use of the religious life. After a lengthy commencement of various advantages, each nearer than the previous one to arahat-ship, the discussion of the question ends with arahat-ship. The third is on social rank, and ends with the conclusion that arahat-ship is the climax of the teaching. Thus the climax as that the arahat is the true Brāhmaṇ. The fifth discusses the question of sacrifice, with the result that arahat-ship is the best sacrifice. The sixth is on the question of the members of the Buddhist Order, and ends by the statement that the seven remaining Dialogues in that volume. Out of thirteen chapters, if we may so call them, lead up to this subject, the other three being concerned with it only incidentally. The proportion in which the rest of the Dhyāna is less, in the Mahāyana it is probably about the same.

The last discourse of the Buddha to his disciples is summarized in Dhyāna, ii. 120, as follows:—

Buddhism, ye to whom the truth I have perceived has been made known by me, when you have made yourselves masters of them, practise them, think them over, spread them abroad in order that pure religion may last long for the good and happiness of the great multitudes. ... Which are these truths? They are these: the four modes of mindfulness, the fourfold struggle against evil, the four footsteps to majestic, the five moral powers, the five organs of spiritual sense, the seven kinds of insight, the noble eightfold path. These are they.

In Vinaya, ii. 240, these seven groups are called the jewels of the Dhamma-vinaya, the doctrine and discipline, in whose ocean the arahats dwell. The total of the members in the seven groups amounts to thirty-seven. These are identified in the commentaries with the Sambodhi-pakkiyā dhammā, the qualities which are the 'sides,' that is, constituent parts, of the insight of arahat-ship. These are mentioned already in the canonical books (Aṅguttara, ii. 70, 71, iv. 351; Sutta-pitaka, v. 227, 239). But it would seem from the discussions on the use of this term by E. Hardy in his Introduction to the Netti (p. xxx ff.), and by Mrs. Rhys Davids in her Introduction to the Vihāra-pitaka (p. xiv ff.), that the commentators' interpretation of its meaning is later, and that it originally referred simply to the saṁyuttī, the seven divisions of which, already given above, form only the seventh division of the thirty-seven qualities. The term is so used in the Viheśa, p. 249. It would follow from this that in the later Pāli writers the conception of arahat-ship would include the thirty-seven of these characteristics. So also the Mahāyana distinctly adds to the conception of arahat-ship the possession of the four Patissamabhiā. As the meaning of the term was extended, so the reverence for the arahat increased. In the old texts we are informed of a custom by which, when a bhikkhu thought he had attained, he could 'announce his knowledge,' as the phrase ran. The 112th Dialogue in the Majjhima gives the six questions which should then be put to the new aspirant. If he answered these correctly, his claim should be submitted. By the time of the commentators this was obsolete. They speak of no arahats in their own day; and we hear of none mentioned, in any source, as having lived later than the 3rd century of our era. 

The Sanskrit form arahat has had a precisely contrary history. From the ascendency of the brahmanic religions centuries after the rise of Buddhism by those Buddhists who then began to write in Sanskrit, its use was confined to those who tended more and more to the conception of bodhisattvas in place of that of arahat, as the ideal to be aimed at. In the literature of this period arahat-ship has ceased to be the climax; it is not even the subject of the discourses put into the mouth of the Buddha. Neither in the Lalita Vistara nor in the Mahāvihāra can the present writer trace the word at all, except when used as an epithet of the Buddha, or of the early disciples. In the Dīghavīlāna (a collection of stories of different dates, put together probably some time between the 2nd and 3rd centuries after Christ) we find a reference to persons who lived in the Buddha's time (pp. 494, 464) the term arahat is used very much in the old sense. So also in the story of Vītsākha, the brother of Asoka, we find at pp. 223 f. and 231 f. a. arahat who shows that it was familiar to those who recorded this particular legend, in the sense of one who had reached emancipation in this life. It is used incidentally, in the midst of the narrative; and throughout the volume attention is directed to the historical legend rather than to the discussion of this or any other point in Buddhist ethics. The word had survived; the interest in the doctrine had waned.

In the Sattarvanu-paddhati ("Lotus of the True Law"), arahat is used a score of times of a Buddha, and is, in fact, a standing epithet of each of the numerous Buddhas invented in that work. It is also used as an epitaph of the early disciples, but with distinctive connotation. Thus at p. 43 of Kern's translation "arahats are called conceited if they do not accept the new doctrine. At p. 189 the stage of arahat is declared to be a lower stage. At p. 350 ff. the merit of one who hears a single word of the new doctrine is said to be greater than that of one who leads a vast number of men to become arahats. There is a similar argument beginning on p. 357. We find, then, in these works that arahat-ship extends or passes over, or put on one side, and finally is openly attacked.

T. W. RHYS DAVIDS.

ARIANISM

20. The Lombards and Arianism.
21. The Re-narrating of the Arian controversy at the Reformation.
22. Re-appearance of Arianism in the 17th century.

The promulgation of the heresy of Arius, which followed the close of the contest between the Christian church and the Roman government, on only a few years, may justly be regarded as the culminating of all the various controversies in the early Church concerning the relation of the 'Persons' of the Holy Trinity to one another.

For centuries the term Arian had been anathematized from the first the supreme necessity of maintaining the absolute Unity of God. According to one of the earliest apologists, Aristides, the worship of the Christians was more purely monotheistical than that of the Jews (apol. xiv., xv.). But, whilst acknowledging Unity to be the essential of Divinity, Christians of every description perceived the momentous consequences of the Incarnation. Whether Judaic, Pauline, or Gentile, all who professed to follow Christ saw in Him the one means by which God the Father had been made known to man. 'Thus the Lord's divinity was from the first as fixed an axiom of Christianity as the unity of its Church. St. Athanasius, St. Athanasius, the Church, 1900, p. 5. The earliest controversies about our Lord bore on the question of the reality of His sufferings and His humanity; and it was not till the old Docetist heresies had become comparatively insignificant that the nature of the Divinity of the Son and His relation to the Father occupied an important place in Christian speculation.

By the close of the 2nd cent. the conditions under which a theological controversy could be de- bated were practically the same as those which have prevailed down to the dawn of modern criticism. It was no longer a question of rival Scriptures, the majority of the books of the NT being already acknowledged as authoritative; the orthodox tradition of the Church had practically prevailed over all opposition; the question as to the recognition of the OT by the Church had been decided. There were already definite methods of exposition, and collections of Scripture proofs for use in controversy with Jews and pagans had been formed from a very early date. None of the facts of the Gospel story was disputed; Christian philosophy did not conflict with the doctrine of the Logos; faith acknowledged His pre-existence, His miracles, His Resurrection and His Ascension as unquestionable facts. No doubts were raised as to the authorship or authority of those passages in the OT and NT which were accepted as the basis of the Christology of the age. The utterances of the Prophets, the words of David and Solomon in Psalm and Proverb, the doctrine of St. Paul and St. John, were all admitted to be the source and basis of Christian doctrine. It is of great importance to bear in mind the fact that the premises from which orthodox and heretic alike drew their conclusions in the 3rd and 4th centuries were different from what would now be accepted; and it is not always by the arguments used in this controversy that we must form our judgment in regard to the decision finally reached.

The problem was, of course, the reconciliation of the two apparently conflicting beliefs in the Unity of the Godhead and in the real distinction of Personality in the Trinity. The controversy naturally turned first on the meaning of the phrase 'Trinity of the Divinity of Jesus Christ.' In attempting to maintain the Unity of the Godhead, the Christian teacher ran the risk of sacrificing either the Personality or the Divinity of our Lord. On the one hand, Fraxex, Balliello, their followers, represented the appearance of our Lord as hardly more than a temporary means whereby God had been dramatically manifested to the world, making the Trinity an economic unit, which the Divinity was related in different aspects. But the Christian conscience could not thus allow a personality of the Divine Master without real permanence. 'It is clearly impossible, that the Divinity and the human of the Divine economy, that God should exist even for a moment only in a single mode, or that the Incarnation should be only a temporary and transient manifestation' (Bethune-Baker, Christian Doctrine, ii. 156). Equally, to the statement of the Church to asent to a practical reversion to the old Ebionite doctrine that Jesus was simply an ordinary human being being defied by reason of His eminent virtue. Theodotus, Paul of Samosata, and others who held this view were not unnaturally ranked among the heretics. But the question was too difficult to be settled by the rejection of these alternatives, and it was further complicated by the founded of the doctrine of the Trinity and the terms employed to explain the mystery of the Trinity, as the correspondence between Dionysius of Rome and his namesake Dionysius of Alexandria abundantly testifies (Feltow, Letters and other remains of Dionysius, 1907, p. 21). Three interesting letters reveal two opposite tendencies—that of the West, which so emphasized the eternal unity as to obscure the distinction of the Persons in the Trinity, and the teaching of the Easterns, who, under the influence of Origen, insisted on the theory that subordination explained the existence of the threefold Personality. Dread of the Sabellian Christology was especially potent in influencing the course of theological speculation throughout the East.

At the beginning of the 4th cent. the most famous Christian scholar was Lucian, who, after the deposition of Paul of Samosata, founded a theological academy at Antioch. He seems to have been looked upon at least with suspicion by three successive bishops—Domnus, Timeaeus, and Cyril; but his exemplary conduct, ascetic practices, and, above all, the fact that he was one of the last martyrs in the Diocletian persecution, caused him to be regarded with particular reverence by his disciples, who felt especially bound to one another by the memory of their common master. The school founded by Lucian at Antioch was to furnish the bishops Ennadius of Nicomedia, Menophantus of Ephesus, Theognis of Nicea, Maris of Chalcedon, Leontius of Antioch, and Athanasius of Anazarbus, the sophrin Asterius, and the presbyter Arianism (Harnack, History of Dogma, vol. iv. p. 3, Eng. tr.). It is a matter of considerable doubt whether Arianism is to be traced to Antioch or to Alexandria, and also how far it is due to the teaching of Origen. Newman is of opinion that Arianism is the outcome of the grammatical literalism of Antioch as opposed to the more spiritual method of interpreting Scripture current in Alexandria (Arianism, c. i. sec. l.). Professor Gwatkin, on the other hand, points out (Studies of Arianism, 2, p. 12) that though Antioch was undoubtedly Arian in the later days of the controversy, when Alexandria, owing to the influence of Athanasius, had become orthodox, it was not so at the beginning. The language of Arianism was borrowed from Origen, and especially from Dionysius, who speaks of the Second Person as μην το ηἰκον εἰμι, ηἱκον εἰμι, εἰμι νοός δείκτις, and says το ηἰκον γωνίαν—phrases which were adopted into the terminology of Arianism, as well as others, more, however, in Alexandria when he promulgated his heresy. Harnack (op. cit. vol. iv. p. 3) considers that Lucian continued the work of Paul of Samosata at Antioch, and gives credit to the statement of Alexander (Theodore, i. 4), that Gwatkin rejects, that Lucian was destined to a long sojourn outside the Church, that is called 'the Arian before Arians.' The high honour, however, in which his memory was held, as the Synod of Antioch in a. 341 testified by adding the title 'venerabilis' (Euseb. Hist. eccl., i. 21) to his name, is in relation to the enunciation of Lucian the martyr' (Sozomen, iii. 5), makes it difficult to believe that Lucian ever considered as a heretic. The question of Origen's responsibility for Arianism is an extremely vexed one, and is admirably discussed by Bishop Robertson (Prolegomena to the Life of Dionysius, p. xxv) and by Bishop Gwatkin in his De Sententia Dionysii, the language of two theologians may be almost identical, whilst the spirit in which they employ it is quite different.
ARIANISM

2. The years A.D. 318 and 319 found the Church of Alexandria in great confusion, distracted by the obscure Monarchianism set forth by a council summoned by the bishop Alexander and the presbyter Arians ('Ariotes') of the district of Bæculas. Alexander, in a charge to his clergy, impressed upon them the unity in the Trinity of the Holy Ghost, and his exordium was to the effect that the Son of the Father, the unknown and unknowable Cause, of whom the Son is a creature incapable of knowing or revealing Him as any other creature, Arians deliberately sever all possible connection between the created and the uncreated, the human and the Divine. Christ is no mediator, no saviour. As Dr. Harnack forcibly remarks (op. cit. iv. p. 45), Arians and his friends are nowhere in their theology concerned with communion with God. Rightly, therefore, does Schulte (Kathol. Christi, p. 69) say that 'the Arian Christology is inwardly the most unstable, and dogmatically the most worthless, of all the Arianism was communicated and left behind it. It has not satisfied its conclusions, and leading to the ultimate subversion of Christianity, Arianism was most difficult to refute owing to the confusion of thought prevalent at the time of its appearance.

In the controversy which ensued, Alexander seems to have acted with some moderation, and even to have allowed his hesitation to proceed to such extremes as to be made an excuse for a schism. Arians had no scruples in forming a party of their own. He enlisted the support of two bishops, Secundus of Potesion Theodosi, and his raiding party of churchmen, and the capital of Egypt. But Arians' strongest support was his "fellow-Lucianist," Eusebius of Nicomedia, the most influential prelate in the East. In A.D. 321, Alexander held a Council at Alexandria; Arians were excommunicated and left behind it. It has not satisfied the depositum Arioi, included in the Benedictine Edition of Athanasius, and claimed as his by Newman. It is translated in the Nicene and post Nicene Fathers, 1st ed. London. 3. Two years later, Constantine defeated Licinius (A.D. 323) and became sole master of the Roman world. Affairs in Alexandria had become very serious, and indeed the whole Eastern Church was in the utmost confusion. The question of the keeping of Easter distracted the Christians as a matter of practice as seriously as Arianism was doing as one of doctrine. Accordingly the Emperor sent his episcopal adviser Hosius, bishop of Cordova in Spain, to Alexandria with a very remarkable letter to Alexander and Arians, begging them to lay aside their logomachies and co-operate with him in restoring peace to the distracted world. The letter is full of wisdom, as Socrates describes it, could not allay so embittered a strife, and Constantine decided to submit all matters in dispute to a Council of the whole Church, to assemble in the year A.D. 325 at Nicea, on Lake Asean, in the nomia of Asia Minor. The first act of the Council as regards Arians was with practical unanimity to pronounce his doctrine heretical. That the Son had been begotten out of nothing is the doctrine of the Church, and that He was of another essence than the Father, that, even before time was, the Father was without the Logos, were on all sides regarded as blasphemous assertions. It was not till the question arose as to how the error should be refuted that there

way for Arianism by his doctrine of God: 'Stripping from its concrete existence all spiritual attributes save that of being, it in the next place the three dimensions of space, we arrive at the conception of a point having position.' There is yet further step, says Harnack, for it is perfectly certain that something has been gained. Reject the idea of position, and we have reached the last attainable adolescence, the mystery of the Three of the observa, is essentially a heathen conception, and can be de-
ARIANISM

was any serious difference of opinion. The Fathers had met to affirm the ancient faith of the Church against novelty; but when they wished to express what they meant in words, they found that nothing had been hitherto acceomed to be capable of escaping the evasions of such masterminds as the Arians in the art of making Scripture phrases assume a meaning contrary to the teaching of Scripture. In consequence of this, the Council, probably at the suggestion of Hosius, was induced to adopt the expression ἐν τῇ οὐλαὶ τοῦ Εἱρήνου and the word ἀνεφες, neither of which is to be found in the Bible.

ἀνεφες (ἕν substans) was a word which presented no difficulty to the Latins who followed the teaching of Tertullian, e.g., Prætextus, and Novatian, de Triadite. Dionysius of Alexandria in his correspondence with his namesake of Alexandria had protested against any undue separation (μεταφορὰ ἐν αὐτῶν) insisting on τὸ ἐν σώμας. Tertullian had also, in his de Anima (c. 22), carefully distinguished substantia (ὁνία) from nature. The Latins and the anti-Origenists at the Council desired to press the unity rather than the equality of the Son with the Father; and to them the word was eminently acceptable. But the majority of the Greek-speaking bishops had a strong objection to both expressions, and so the following ground was given:

(1) They had no Scripture warrant. (2) The Council against Paul of Samosata (A.D. 366) had condemned the use of ἀνεφες.

(3) The word was foreign to the Christian language and might countenance Sabellianism. (4) The words might either imply an ἐνεφες prior to the Father and the Son, or be used in a material sense, which was equally to be avoided (Bathune-Baker, Christian Doctrine, p. 171 f.).

On this the Council nearly split; and Eusebius of Cesarea, the trusted adviser of the Emperor, and by far the most learned man of his age, was especially mistrustful. Ultimately, however, Eusebius and the Origenist party accepted a creed containing both the expressions in dispute, and Arianism was explicitly condemned.

Eusebius first offered the Council the baptismal creed of his own as a little amplified version of the Lord Jesus Christ was declared to be the ὄχος and God from God (θεὸς ἐκ θεοῦ), and also from all of them created (ἐν πάντες ἐκπέφανος τοῖς εἰρήνους, Col 19) and only-begotten Son (ὁ ἵνα ἀνεφες). Constantinople, himself, promptly no doubt by Hosius, suggested the ἀνεφες. The creed differs from our Nicene Creed in its definition of the he founder of the Son in several important points (see Hort, The Dissertation, p. 61; Bathune-Baker, Chr. Doc. p. 156). After a hard pressed of belief in the Holy Spirit, the creed concluded with anathemas of all the distinctive teachings of Arianism, (1) that there was a time when the Son was not, (2) that He was not before the Father, (3) that He came into being out of nothing, (4) that He is of a different essence (ὑποστάσεις) or being (ὁνία) from the Father, and (5) that He is not the result of creation or change of alteration. It is generally agreed that the Nicene creed and ἀνεφες, which afterwards were carefully distinguished, were really synonymous.

4. Into the intrigues which culminated with the banishment of Athanasius, who became bishop of Alexandria on 6th June, 328, it is needless to enter, it being but for the furthering of the cause which prevented the Creed of Nicea from being the immediate conclusion of the controversy. Few of the bishops, whilst abhorring the heresy of Arius, understood the exact merits of the question. They feared the error of Sabellius, and to this the Homoeousiom seemed to have committed them. Moreover, with the natural conservatism of men pledged to hold fast to the faith once delivered to the Church, the Emperor was less enthusiastic in its favour, and showed so much readiness to welcome back its opponents that he received Eunices of Nicomedia not long after the Council; and this sudden decision of the heresias. Arianus, who at his command, have been reconciled to the Church.

How now the phrases introduced into the Creed were formally to limit the relations of the Son within the Trinitarian scheme of things, was a matter of serious doubt to all the bishops. The Pope, himself, was not divided the heresiarchs. Arianus would, at his command, have been reconciled to the Church.

5. On the death of Constantine (A.D. 337), his Eastern dominions passed to his son Constantius, who encouraged his bishops to draw up a creed to supersede that of Nicea, to which all the Asiatic and Syrian Churches saw fit to oppose. The result of their labours is apparent in the five creeds of Antioch, which exhibit the tendencies of the different factions, whose only point of union seems to have been antagonism to Athanasius and the Nicene formula of faith. Constantius had introduced by Athanasius’ honouring of the terms of the Bible. The orthodox opponents of the language of the Church of Rome. Professor Gwthian terms ‘the Conservatives’—men like Eusebius of Cesarea, whom dreaded of Sabellianism and hatred of innovation drove into opposition to Athanasius—were the only those who were at heart Arians to force an Arianianism creed upon the unwilling Church. The weak and unstable Constantius was always in the hands of those whom he believed capable of pacifying the Church by a new creed. He was in reality aiming at a comprehensive State-religion acceptable to all parties, and thought that a sort of modified Arianism would supply this want in the provinces over which he at this time bore rule.

In A.D. 341 Constantius, in A.D. 341 the formal reaction against the Nicene doctrine began with the famous council assembled for the dedication of the Golden Church at Antioch.

Athanasius and Marcellus of Ancyra went to Rome to lay their cause before Julius, to whom the bishops assembled at Antioch wrote under Julius, Dec. iii. 339. The Pope and Professor Gwthian terms ‘the Conservatives’ as ‘the most important faction of the entire controversy’ (Athanasius, Apol. contra Ar. prov. c. 52; H. E. ii. 17; Soc. ii. 119, 25). In all probability, Dianius, bishop of Cesarea in Cappadocia, presided at this synod, and there were also present Eusebius of Nicomedia, now bishop of Constantinople, who gave the name by which the opponents of Athanasius were at this time known, and Acacius, the successor of Eusebius Pamphilus in the see of Cesarea.

The oppositions of Athanasian were called ci νεῖν ἔνεφες, or the Eusebians, as the words have been somewhat inexact rendered. The term is used in two senses: (1) literally denoting the personal name of Eusebii, i.e., the court party, cryptic-Arians all of them; (2) more generally the majority of the Eusebian controversy was discussed with the term atonic. These latter ultimately became the Semi-Arian party.

Four creeds were put forward by this Council—twice the Synod of Antioch, to which the name of Lucian the martyr was attached. In this the Persons of the Trinity were said to be one by reason of a harmony existing between them—καὶ μὴ ὑποστάσεις τριών, τῇ δὲ συμφωνίᾳ εἰς τὸν ἐν ύποστάσεις τριών, τῇ δὲ συμφωνίᾳ κ. ι. The honour in which the Council of Antioch was held in after-days—Clarke’s Poetical Register of Eusebius and the canons appointed by the popes themselves (see Hilde, Concilium, v. 147, 560) his aforesaid that the bishops there are heretical. Yet they undoubtedly, by their endeavours to find some more moderate formula than that of Alexandria, a substitute. They were brought into the hands of the Ariani. The four creeds of Antioch were: (1) the first creed, which begins with a repetition of
Arianism

Arius: "We have never become followers of Arius, for how shall we believe that which Arius himself believed, and at the same time look with horror upon the confession which Arius himself had made before his restoration was ordered by Constantine. (2) The second creed, which became the basis for the creed of the Universal Council of Ephesus, was drawn up by Hosius and Protagenes of Sarice, which, though it did not emanate from the mouth of Arius himself, was pressed to the teaching of the West. It is found in Theodore, II, 8, and a Latin translation has been discovered. It declares there is but one substance in the Trinity (Lat. substantiatum); the Father is the first, the Son the second, and the Holy Spirit, the third. It is notable how the Westerns refused to condemn Marcellus (Harnack, op. cit. iv. 60). Athanasius, when he was asked his views on the orthodoxy of Marcellus by St. Stephen, Sophasius, wrote to him, showing that he had an equally poor opinion of his friend as a theologian and of his impiety as an anti-Christian (Epist. 142). The tendencies of the West inclined to Sabellianism, and those of the East to Arianism, and before orthodoxy could be satisfied each had to be checked. The result was that in the debate between Athanasius and the two Western delegates Vincentius of Capua and Erasmius of Cologne is related by Athanasius (Hist. Arian. c. 20).

7. During the next ten years (A.D. 346-355) the two parties were outwardly at peace, but yet busily arming for the conflict. At Alexandria, Athanasius, who had been welcomed back with surprising enthusiasm, maintained his influence undiminished, and set a seal upon the loyalty of his church to the Creed of Nicaea. The monastic movement was in all the vigour of its first enthusiasm, and the ascetics, recognizing the earnestness of the bishop, became his firmest supporters. At Antioch, Leontius, whose early indiscretion was similar to that of Origen (Hist. Arian. 28), though an Arian at heart, had managed to gain the cautious policy. This wise old prelate, however, knew well that the tranquillity his discretion had secured was only temporary, and in allusion to his death he would pathetically touch his grey hairs and say: "When this snow melts, there will be much mud." At Rome, Photinus of Sirmium, whose indiscretion outran even that of Marcellus, had been sacrificed for his Sabellian teaching; but the death of the wise and pious pope Julius in A.D. 332 was a serious loss to the cause of orthodoxy. His successor Liberus lacked both his firmness and his wisdom. Political events were also precipitating the crisis. Athanasius' faithful friend, the Emperor Constans, was killed by the usurper Macsenius. Before the end of A.D. 350, when he was at or near Sardica on Dec. 29, to the close of A.D. 359, Constans spent his time in his Western dominions, being most frequently to be found at Sirmium or Milan (Gwatkin, Studies of Arianism, App. ii. "Movements of the Eastern Emperors"). Sirmium, not Antioch, was destined henceforward to be the scene of the conflict-making.

8. Many of the original disputants in the controversy had already passed away, and a new generation had arisen. Parties were becoming more and more defined. As their system was developed, stern logic forced the Arians to become more Arian than their founders. Some of the old conservatives were drifting towards Arianism, whilst others shrank back in dismay at its encroachments. The general tendency favoured the obliteration of the old party landmarks and the rise of new factions. The place of Eusebius of Nicomedia as Imperial adviser had been taken by Valens, bishop of Mursa in Pannonia, the province bordering on Illyricum, to which Arius had been exiled after the Council of Nicaea. Valens, with his friend Ursacius, maintained an honourable position as most uncomprising Arian, and his policy was not, like the old Eusebians, to fight Athanasius by means of conservative prejudice, but to force an Arian creed on the Church in place of that of Nicaea (Robertson, Athanasius, p. liv). Valens had won great influence over Constantius, who believed that the bishop had received from an angel the news of the victory of Mursa (A.D. 351), and from this time an open attack was conducted against Athanasius, which culminated in the coup d'etat at Alexandria, when the bishop was expelled by military violence (A.D. 356). Valens' ablest assistants in the East were Acacius,
ARIANISM

and Ariminum, the Arians and Homoeans had the folly to attempt to crush these Semi-Arians at the Synod of Constantinople (A.D. 380), and thereby caused the final triumph of the Nicene Christology.

The Semi-Arians and the Cappadocian Fathers are subjects of separate treatment in this work; and it is unnecessary to do more here than allude to the important dispute as to the final settlement of the Arian controversy. The question at issue is whether the Homoeans was ultimately accepted in the sense of Homoean Christology. This Dr. Harnack maintains that it had been the case. His contention is very ably disputed by Mr. Bute-Henry-Baker in his Cambridge Texts and Studies (The meaning of Homoeoian). Attention should be paid to Professor Gwatkin's most instructive survey of the importance of Asa Minor to the Eastern Empire, which as long as that was unsubdued, remained upon the whole the strongest power on earth' (Studies of Arminianism, p. 9). With true historiographical insight Gwatkin points out that in the Arian controversy Asia really played the part of the deciding factor. Disturbing the Homoeans because it was an innovation, the steady conservatism of Asia accepted it when it was proved to be the only means of averting worse evils. "Ent. the later Homoean orthodoxy, he adds, rested on a conservative rather than a Nicene basis." One of the chief representatives of semi-Arianism is Cyril of Alexandria, who sought to reconcile the Nicene faith, as though the Council of Ariminum had never assembled. Just before the Emperor's death, Meletius was, at the instigation of Acacius, elected bishop of Alexandria, and his death by his installation showed the strength of popular feeling against Homoean Arianism. Constantius demanded that the new bishop should preach on the text τον θεον ἐν αὐτῷ ὄνομα με, 'The Lord created me,' i.e. the Son; and so Propoi. LX., and on this the Arians based their doctrine that the Son was a copy of the Father. To the delight of the people, always at this time more orthodox than the bishops, Meletius declared that the word tean was a mistranslation of the Hebrew 'hebrew,' possessed,' and gave a decidedly Nicene interpretation to the text (the sermon is preserved by Epiph. Hist. 73. 29-33). "This bold confession," says Professor Gwatkin, "proved to be the first effective blow at the Homoean party." But perhaps the most crucial point was the return of Athanasius to Alexandria under Julian, who held a small but very important Council at Alexandria, the great weight of which was to contribute to the partial understanding due to the employment of such words as οὐδεὶς and ἀδιακόπτως. It was agreed that there might be a fundamental agreement between those who employed these terms in different senses, but that the language of the Nicene Council was the safest which could be made use of. This paved the way for a reconciliation between the conservatives, with their dread of Sabellianism, and the Athanasian and Eastern Christian view of the importance of the Unity of the Divine essence. As Bethune-Baker says, 'By the 4th cent. it was becoming clear that the only solution of the problem was to be found in a distinction inside the essence—imunity —which was necessary for the idea of divine personality and to acknowledge not three individuals but three eternal aspects of the Divine' (Chur. Doct. p. 157 n.). This was done when the distinct meaning in question was agreed upon, and the ambiguity of the Latin and Greek terminological work removed.

In the early days of the controversy the terms οὐδεὶς and ἀδιακόπτως were used to express the two opposing points of view and great misunderstanding, because, whilst one party acknowledged only one individual, the other distinguishing between ὁ Θεός and ὁ Λόγος, and explaining the mystery of the Trinity as μία θεός ἀπίστως ἀπειροτάτως, the ambiguity was removed. This was the work

The succession of Eusebius Pamphilus in the see of Cæsarea, and Eutocius, bishop of Antioch and Constantinople successively. In A.D. 357 there appeared from Sirmium a pamphlet called "Hily of Poiitiers, the blasphemy of Sirmium." Other formulæ of belief were promulgated from the same place, notably the 'dated credal,' in which the consuls of the year are mentioned, as a sign of which, Apollinaris is not slow to take advantage in his de Synodo. The Arians, supported by the Emperor, did not hesitate to push their claims; and finally, at the great assemblies of Westerners at Ariminum and Orientalists at Seleucia, an Arian creed was accepted as the official doctrine of the Empire. Thus in A.D. 359 it seemed as though the Nicene profession of faith was repealed and Ariamism was triumphant.

The credal of Sirmium are as follows. The 1st was drawn up against Photinus in A.D. 347. The 2nd (A.D. 351)—but commonly known as the 1st—is identical with the fourth creed of Antioch (zis episkopos προσώπου). The 3rd (A.D. 357), called the "blasphemy," (a) distinctly denies the true Divinity of the Son; (b) forbids the use of the terms Χριστός, ὁ Θεός, ὁ Φωτις, etc. an un-Scriptural, maintaining that it is impossible to declare the Name of God in the same sense and generation of the Father. (c) opposed to the teaching of the creed proposed, but not accepted at Sardica (see above), makes the benefits of the Son as contra-diction of that of the Father (see also Bethune-Baker, Intro. p. 181 n.). This extreme teaching started at Antioch, passed to Seleucia, and under the pressure of bishops of Antioch a synod was held at that place in A.D. 358. At this synod the extreme Arians, Eutocius, Aetius, and others, were uncommunicated with anathema condemning all who will not acknowledge the complete likeness (οὐδεὶς ἀγαθόν) of the Son to the Father, as well as the terms Χριστός, ὁ Θεός, ὁ Φωτις, etc., as opposed to the Scriptures. The result of the stand made by Basil and his friends was an attempt to compromise, i.e. to allow that the Son was like the Father. The 4th, or "dated creed" (A.D. 359), composed by Marz, bishop of Arethusas, declared the Son to be ὁ Θεός ὁ Φωτις in ὑπερστρώματι νυκτόν παύεται with the addenda to the Scriptures, which allowed the Arians to put their own sense on the words. It was this Homoean Arianism which was accepted under imperial pressure at Ariminum Seleucia.

9. Already, however, a reaction had begun. In the first place, the Arianizers were divided among themselves. Logical and consistent Arians, like Aetius and his disciple Eunomius of Cyzicus, were prepared to push the teaching of Arius to its ultimate conclusion. If the Son was not God in the same sense as the Father, He could not be like Him, for they argued, God's identity is unique. Their argument, different as was the inference drawn from it, was the same as that used by Athanasius himself. 'Like is not predicated of essence, but of habits and characteristics. In the case of essences we speak of likeness, not of likeness, but of identity' (de Synodo, 53). From their denial of the likeness of the Son to the Father this class of Arians were called Homoioaios. But the majority of Arians were men of compromise and evasion, having no other idea than to insinuate their opinions under the guise of apparently innocuous phraseology. These, led by the dexterous Acacius of Cæsarea, allowed that the Son might be acknowledged to be like the Father, and were consequently called Homoioi. Lastly, there was the party headed by Basil of Ancyra, the successors of those conservatives who had opposed Athanasius. These men, who constituted the strength of the episcopate of Asa Minor, were as hostile to Arimanism as Athanasius himself, and were ready to accept the term οὐδεὶς in their definition of the Godhead. Fearing that Sabellianism underlay the use of φωτιστήρ, they rejected the Nicene term, which was to bring about the idea of the Lord was like in substance (φωτιστήριον) to the Father. This formidable combination was known as the party of the Semi-Arians (q.v.). At heart most of them were orthodox as a fact of their own faith and the history of their faith, and the idea of the Nicene faith, Athanasius and Hilary, bishop of Poitiers (who had been exiled by Constantius to Asia Minor), had the wisdom to perceive. After their triumph at Seleucia
of the Cappadocian Fathers, but it really began with the Council of Alexandria. In Latin legal language, *substantia* means property, and *persona* a being with legal rights, a 'party' in any suit; and a *substantia* and a *persona* might belong to more than one *persona*. Tertullian uses *substantia* in the sense of essence, or 'substance', of which Father, Son, and Holy Ghost are but one, he seems to hesitate to use *persona* if he can avoid it. He takes the words from the apologetic writers of the time, but the ground he actually treads is already covered by the unfortunate schism at Antioch, was directed to a real reconciliation of those who were at heart anxious to be loyal to the Council of Chalcedon.

For the question as to which creed was accepted by the Council of Constantinople in A.D. 381 see *Gwatkin, The Arian Disputation: A Contribution to the Creed;* and, above all, Hort, *Two Dissertations.*

12. Arianism may be defined as an attempt to determine the relations of the Persons of the Trinity on a basis of *monothelitism*. Despite all the efforts of Arians to popularize his opinions, they never found favour with the people. The movement was clerical rather than lay; the difficulties it sought to overcome were those of Origenean theologians perplexed by philosophical doubts and seeking an explanation where none was possible. Nor did Arianism pure and simple ever fail to arouse a strong feeling of indignation; the creed of Arius at Nicaea, the Sirian 'blasphemy,' the opinions of Arius and Eunomius, all caused a storm. It was only by insinuating itself in the plausible guise of Scriptural phraseology that Arianism ever obtained a hearing.

Nor could it be otherwise. Perhaps the chief difficulty created Logos unable to reveal an unknown God, could never be the Christ acknowledged by Christians as the Incarnate Word, the sole Mediator between God and man, the supreme Sacrifice for the sins of the world. They who adhered at heart to the Nicene doctrine, however they might object to the language in which it was expressed. The great merit of Athanasius was his ability to recognize this truth; and he and Hilary were ready to make any concessions to those who shared the spirit, though they might not adopt the phraseology, of Nicæa. The test word *Homoousios* hardly appears in the works of Athanasius.

Arianism does not seem to have sprung from any strong ethical impulse. Its philosophy was pagan, and the object of its leaders was political rather than religious. 'Arianism revealed in such a way as to render it acceptable to men whose whole conception of God and of life was heathen' (Bethune-Baker, *op. cit. p. 156*). His heresy was, in short, a symptom of the disease of the Church in the 4th cent. induced by the desire of ingratiating itself with the civil power. What the Roman government required was that the Christian Church enter into alliance with it and was that the Faith should cause as little disturbance as possible to the existing order of society. Arianism promised to provide this, in his creed offering an easy and almost imperceptible transition from paganism to Christianity. By the edict of Milan, Christianity, the religion of the minority, had been virtually accepted by the Roman government, which thereby had itself committed to the policy of making it the religion of the majority. Arianism, by surrendering the chief characteristic of Christology, the proper Divinity of Christ, made the new faith less hard to accept; and this reason the Emperors, though from time to time encouraging the Nicene theology, were not disposed to accept the Nicene faith in its entirety; and under the name of Macedonians many refused to acknowledge the proper Divinity of the Holy Spirit (Hefele, *Hist. of Councils*, p. 65). The work of Bishop, of Cyril of Alexandria, by the unfortunate schism at Antioch, was directed to a real reconciliation of those who were at heart anxious to be loyal to the Council of Chalcedon.

The Semi-Arians, in the time of Constantine, the emperor of the East, a favourite of the Emperor, was a notable writer, his name being the same as his father's. The Council of Alexandria declared it a matter of faith that the Father and the Son were forever different in person. Attilas, who reigned in Italy, was the first to use the title of *César* in the West. It is possible that the name *Cesarea* was given to the town in his honour. But the text *Homoousios* hardly appears in the works of Athanasius.

It is not possible to give a complete list of the names of the Semi-Arians. The most notable was Arius, bishop of Alexandria, who lived from 296 to 367. He was a man of great learning, and wrote many works on theology. He was a member of the Council of Nicaea, and was appointed bishop of Alexandria by the emperor Constantine. Arius was a supporter of *monothelitism*, and he wrote a number of works in defence of this doctrine. He was eventually condemned by the Council of Constantinople in 381, and was exiled from Alexandria. Arius was a man of great influence, and his works were widely read. He was a pioneer in the development of Christian doctrine, and his ideas were influential in the development of the Christian Church. Arius did not accept the Nicene faith in its entirety, and he was eventually condemned by the Council of Constantinople in 381.
with the policy of Constantius, namely, the union of all parties in the Church on the basis of sub-
servience to the State (Athen. 15.79, B.1.9.10). The
moves made, led to the rapid secularization of the
Church which characterized the 4th cent. were
almost uniformly opposed to Ariian teaching.

13. None the less, the Arius controversy was not
wholly due to the influence of those two bishops
but was the inevitable outcome of the tendencies of the age. A Sabellian
Christology would have been as fatal to Christianity
as that of Arius, since it would have robbed
the Incarnation of its reality, making it little
more than the result of the revelation of God
and depriving the Church of an ever-present Divine Master
Eusebians of Cesarea was only reasonable when he
demanded at Nicæa that the creed should not be
perverted to encourage this error; and the views
proposed by Marcellus of Ancyra and Photinus
served to justify his action and that of the con-
servative and Origenist bishops of the East. It
was indeed till the Creed secured the adherence of
African Origenists like the Cappadocians, Basilius,
Gregory of Nyssa, and Gregory of Nazianzus,
that it was really accepted. The episcopate of Basil,
the eloquence of Gregory of Nazianzus, and the
philosophy of Gregory of Nyssa were alike instru-
mental in counteracting the dogmatics of Eusebius
in order to accept the Homoousion as the one and only safe-
guard of the Divinity of the Son against the specious
teaching of the Arians.

14. The Christian controversy virtually ended
with the Council of Constantinople in A.D.
381, it was fruitful in new disputes destined to dis-
tract and divide Christendom. As early as the
time of his banishment to Phrygia (A.D. 356), Hilary
of Poitiers was able to foretell the approach of
a heresy concerning the Divinity of the Holy Spirit
(de Trin. lib. ii. and viii.; Swete, Hist. of the Doct.
of the Procession of the Holy Spirit, p. 112). In
555 the rise of the Tropici caused St. Athanasius to
enter, in the Letters to Serapion, upon the subject
of the Divinity and Procession of the Spirit (Swete,
op. cit. p. 91; see also pp. 47-49). The subject
was also considered at the Council of Alexandria (A.D.
362); and about the same time Macedonius, the
Syrus orthodox bishop of Antioch, expressed by
the Homonoia Synod in A.D. 360, was elaborating
the theory (which was afterwards known by his
name) that the Son was like, and the Holy Spirit un-
lke the Father; though the controversy about this
question never roused the world like those
on the Divinity of the Son, the consequences were
even more serious, the question of the Procession
of the Holy Ghost being the pretext of the schism
between Eastern and Western Christendom. Even
more fruitful in divisions was the problem raised
by Apollinaris of Laodicea, one of the chief op-
opponents of Arianism, concerning the relations of
the Manhood to the Godhead of Christ. See
APOLLINARISM.

The principle for which Athanasius contended so
nobly, and which he asserted in early youth before
the appearance of Ariusism, was the union between
God and man brought about by the Incarnation
(de Incarnatione). But the zeal with which the
Divinity of the Son was asserted tended, as Har-
nack truly says, to obscure the historical Jesus
(op. cit. iv.); and theology occupied itself with the
dogmatic aspect of the Divinity of the Son rather than with
the practical example of the human Christ.

15. It is a remarkable fact that one of the results
of the great dogmatic controversies in the early
Church was the decided protest of the spurious zeal in missionary effort; and, without
sparing condemnation of the self-seeking and un-
scrupulous spirit of the political Arians, we have
also to remember that some later Arians, like the
heresiarch himself, were ready to condescend to
instruct the simple. Possibly Arius believed that
by re-stating the theology of the Church in terms
suited to his age (I.1.4.5), in order to render the faith acceptable to the hearers, Arius
and his followers found ready converts among the Teu-
tonics invaders of the empire. The exiles of Arius to Illyricum resulted not only in the appearance of
some Arians who were to influence future bishops Ursacius and Valens, but also, if we are
to judge from results, in the conversion of the
neighbouring Goths, and through them of the Teutonic races, to Christianity of an Arian type.
For long years the question of their god, and the
Arian and the Teutonic invaders of his territory was that of
religion rather than that of race. It is our mis-
fortune that we have little or no information on this
concerning the apostles of the Goths, Vandals, Lombards,
and Burgundians. The fact that Cyril, the Vandal
bishop or pope of Carthage, knew Latin very
imperfectly (Victor Vitensis, lib. ii.), and the appear-
ance of his book De Civitate Dei, in which the
question of the right of the Bishop to accept the
Homoousion is perhaps expressed in the blunt refusal of the
Burgundian Gundobald to worship three Gods
(Avitus, Ep. xii.). But there seems little doubt that the transforming effects of the Christian
upon which the barbarians adopted were genuine. Both
Salvian and Orosius praise the virtues of the Arian
conquerors of Roman territory, and Augustine (de
Civitate Dei, i.) relates how moderately the Vis-
igothic Arians were received by the new rulers, that
of the inhabitants of the city, and what respect
they showed for the sanctity of the Christian
Churches. The long reign, moreover, of the Ari
Theodoric in Italy, and his impartial government,
extort, among Arian monks, "the praise of the most
zealous Catholic" (Latin Christianitatis, bk. iii. ch. iii.).

Ulfils is mentioned by Socrates (li. 41, iv. 33), Sozomen
(vi. 35), Theodoret (v. 30), Philostorgius (Ulfils de
Jordanes (Ch. 53), but the most important document is the
fragment of his pupil Auxentius, Arian bishop of Dorostorus
now Sertif, complete, and fuller, in the Vi-chen
Lahre des Ulfils), 1410). Auxentius made remarks in the margin
of a copy of the Acts of the Council of Aquileia (A.D. 381), at
which the Goths were led by St. Athanasius and the
Arians under Palladius and Germanus. In the course of his
criticisms of the Church, at this time, a passage caus-
ing him to be denounced by the Arians is quoted by
Ulfils, who brought him up both physically and spiritually as
his son in the faith. The facts of the life of Ulfils seem to be
that he was the son of noble Gothic parents, who from
his time, and onward, was a convert to Christianity.
According to the story, he was a Chris-
tian from childhood, a pupil of Theophilius, the Gothic bishop
present at Nicæa. He was ordained a reader, and about A.D.
460 he was sent on an embassy to Constantinople. In the
following year he was made a bishop at the Council of the
Dedication by Eusebius of Nicomedia. He laboured among his
people in Dacia, but owing to a persecution he led the Christian
Goths into Mesia, at the foot of Mount Hamus, where they
were allowed by the Emperor Constantine to settle. These
Gothi minores are described by Jordanes. Both Philostorgius
and Auxentius compare Ulfils to Moses; and if a more
instance is permissible, we may recall the work of John Eilot,
the Puritan of Jesus College, Cambridge, among the Algonquin
Indians in the 17th century. Like Ulfils, Eilot gave it
converts the Bible in their vernacular. Ulfils on his deathbed declared his belief, which is given by
convents, who have incidentally, that it is a definitely
Christian fashion on it. In this creed the Divinity
of the Holy Spirit is expressly denied. Harnack (op. cit. vol. iv.
44, p. 44, Eng. tr.) says it is the only Arian creed that is worth
consideration. It is found in Hahn, § 185. Theodoret says that Ulfils
was persuaded by Eudoxius that the controversy was unimportant
but from the statement of Auxentius it seems to have been a
convinced homoian Arian (see C. A. Scott, Ulfils, 1855).

16. In the Western provinces of the Empire during
the 5th and 6th centuries, between that of the
religion of the conquerors, and orthodoxy of the
conquered. Nor did the Catholic faith triumph by
force or worldly power so much as by persuasion,
since at one time there was not a single orthodox
ruler in the Empire or among the barbarians. It
was then that the belief of Rome, and the Churches in communion with her, won its most signal triumph in the conversion of Clovis and the Salian Franks (A.D. 496). The strength of the organization of the Church of the fall of the Roman Empire is more than an adequate contrast to the weakness of the less disciplined national churches of its Arian invaders. As Dr. Hodgkin remarks, 'The Arian bishops took their fall of court favour and influence while it lasted, and they helped their own fall by their failure. They stood apart from one another in stupid and ignorant isolation. Untouched apparently by the great Augustinian thought of the world—encompassing city of God, they tended more and more to form local tribal churches, one for the Visigoths, another for the Vandals, another for the Burgundians. And thus in the end the fable of the loosened figgot and the broken sticks proved true of all the Arian monstrosities' (Hist. Byz. and Her. Invaders, vol. iii. p. 345; see also Gwatkin, op. cit. p. 272).

The events which followed the conversion of Clovis showed the immense political power of the Catholic-Church in the West. The important Visigothic kingdom of Toulouse, which fell before the pressure of Clovis, had taken the name of its power under Euric (A.D. 486-488), fell before the Frankish armies at the decisive battle of Vouillé (A.D. 507). The war of Euric against Clovis, the defence of which Euric and the bishop Sidonius Apollinaris played so valiant a part, was one of Arian against Catholic; and the triumph of the former was followed by a persecution. (For a discussion of these measures see vol. iii. and DCH, art. Euric.) Dr. Hodgkin (Hist. Byz. and Her. Invaders, vol. iii. p. 347). In the case of the Burgundian Gundahard, the Catholic spokesman Avitus, bishop of Vienne, held out, as an inducement to him to embrace orthodoxy, that he would be protected against Clovis (Avius, Bp. v. 17, quoted by Hodgkin, Italy and Her. Invaders, vol. iii. p. 347). The fall of the Visigothic kingdom in Italy is an even stronger proof of the political strength of orthodoxy. The admirable rule of Theodecl, his fairness and toleration, were of no avail to save his dynasty; directly an orthodox Emperor was on the throne at Constantinople, the Church intrigues against him. 'Tothas,' as Professor Gwatkin, 'was a model of barbarian justice; yet even Tothas, the son of Clovis, was too weak a successor to stay the progress of the orthodox oppressor' (op. cit. p. 372).

Mr. C. A. Scott, in his useful monograph on Ulfilas, says the secret of the broad distinction between the Arian and the Niceno-Roman, is to be found in the influence of a creed which relegated the Son to a lower position than the Father, by reminding us that, whereas in the case of the Arianizing clergy in the days of Constantius, there was a fall from a higher to a lower conception of Christianity, the Arianizing clergy, the Arians, were making a distinct advance in substituting an Arian Christianity for heathenism (Ulfilas, ch. vii.).

In the same chapter (p. 172 fl.) Mr. Scott gives some useful hints about the few traces of Arian Church organization among the Teutonic—the subject on which we are almost entirely in the dark.

17. It may be that the northern invaders found in Arianism an easy transition from polytheism to Christianity (Hodgkin, op. cit. p. 88); and their firm adherence to the doctrines of Arius and the Son being of the same substance as the Father, led to the assertion that the victory of Clovis over the Visigoths was an evidence of the inferiority of the Arian theology of the barbarians to the Nicene doctrine accepted by the Franks (op. cit. p. 273)—a view which the present writer himself formerly held (Cambridge Theological Essays, p. 500)—we are convinced that the Arianism of the Visigoths, Lombards, Vandals, and Burgundians is more than a phase in the ecclesiastical struggle between the Teutonic and the Roman conception of Christianity. The barbarians desired to have their own national Church, and when they found a form of Christianity which kept them separate from the despised provincial and independent of the clergy of the Empire, they held to it with the proud firmness of a conquering race. Their natural reverence for Roman civilization made them as a rule nobly tolerant of the religion it sanctioned; and when they are said to have been persecutors, the motive must have been mainly political. Euric's 'persecution' in Toulouse has been compared with the Kulturkampf in Germany, and it bears an even stronger resemblance to the more bitter struggle between Church and State in France, where the reason given for depressing the former is the determination not to submit to any external interference with the internal organization of the Church.

The inherent weakness of the barbarian occupants of the Roman territory was their incapacity for organization, whilst the strength of the Romans in both their civil and their ecclesiastical polity lay in the system of centralization. The Arian churches were as little able to maintain themselves as the short-lived Teutonic kingdoms, and their clergy had ultimately surrendered to direct pressure of the better disciplined church of the Roman provincials. The destruction of Arianism as a rival system is one of the most important factors in the genesis of modern European civilization; for, had the barbarian conquerors preserved some form of Christian faith apart from another, no progress would have been possible. Oppressive as the unregulated feudalism of the dark ages was, it would have been intolerable if the conquerors had not had the claim of a common Christianity to encourage consideration for their vanquished subjects.

The chief authorities for the history of Arianism among the Teutons, besides those already cited, are St. Gregory of Tours (especially vi. 45, the story of the interview between Gregory and Opila, the Spanish ambassador to Chalperic. When examined by him to his creed, Opila, the Credo, 'proclaim the provinces against the orthodox oppressor' (op. cit. p. 372).

18. Every barbarian kingdom ultimately abandoned Arianism, or else, as in the case of the Ostrogoths in Italy and the Vandals in Africa, Arianism proved one of the causes of national ruin. The principal Arian nations were the Burgundians, the Visigoths, and the Lombards; and each in turn, after a severe struggle, abandoned the form of Christianity in which they had been instructed for the Niceno-Roman faith. As the chief reasons for their conversion were political, the reader is referred to the history of the period; all that is possible in this article is to give the main features of the struggle with the orthodox prelates, in which each of the three nations mentioned eventually succeeded. It is quite clear that the Burgundians do not seem to have been originally Arians; indeed, if we are to believe Socrates, who wrote in the reign of Theodosius ii. (c. A.D. 439), they were originally Catholic, like the Ostrogoths and theancients; and 'Orosius,' it would seem that the Burgundians were never entirely Arian, though the majority of the nation at the time of Clovis were
of that persuasion. It is an open question whether Gundobald, the contemporary of Clovis, was Arian or orthodox (Greg. Tours, Hist. Franc. ii. 34; ii. prologue; Avitus, Ep.). His son, the unfortunate Sigismund, was certainly orthodox, whilst the next king Godomar (also a son of Gundobald) was an Arian. In A.D. 523, when the Franks subdued but subduing Gundobald, Arianism seems to have continued to drag out an obscure existence till the end of the century (Revioulit, op. cit. p. 218).

19. After their defeat by Clovis, the Visigoths were driven out of Spain, except Septimania, the coast from the Pyrenees to the Rhone, being otherwise confined to the Spanish peninsula. In their dominions as elsewhere the Roman provincials remained orthodox, and in the sense there to the influence of Constantinople was still considerable. Spain, however, was the great stronghold of Arianism, which made a long and obstinate struggle before it gave way to the orthodox belief of the Empire. In A.D. 566 the able Leovigild became king of the Visigoths; and, after a series of successful campaigns, reduced his people to almost complete submission to his authority. His son Hermengild was married to Ingundis, daughter of Clovis of Burgundy. The bride (she was only thirteen years of age) was expected to become an easy convert from Frankish orthodoxy to Visigothic Arianism. She proved, however, very firm in her faith, and absolutely refused to be baptised by the Arians, though her grandmother Goiswintha, the wife of Leovigild, treated her with great brutality. To prevent further trouble in his family, Leovigild made his son king, and gave him a separate establishment at Seville. There it is said, by the influence of his uncle, the famous bishop Leander, and that of his wife, Hermengild became a Catholic. The young prince soon rebelled against his father, and with the assistance of the Catholic provincials and the Byzantines his party became very formidable. To conciliate his subjects, Leovigild visited the churches, and professed that his belief was Catholic save for his denial of the Divinity of the Holy Spirit, for which he was able to find no Scriptural warrant. He also made a remarkable concession to the prejudices of his subjects, by allowing them to go from the Roman to the Arian Church, for the term Arians denominates their body (de Romana religione ad nostrum catholicam fidem), without any repetition of the baptismal rite, but merely by imposition of hands and saying the Gloria in the Arian form, Patri per Filium in Spiritu Sancto. The rebellion of Hermengild was suppressed, and Leovigild is said to have persecuted the orthodox faith with severity. The unfortunate Hermengild was put to death, and received, on somewhat doubtful authority, the honours of canonization at the hands of Pope Urban VIII. (1623-1644). Leovigild died in A.D. 586, and was succeeded by his son Recared. One of the first acts of Recared was to declare himself in favour of the Catholics, and, according to Gregory of Tours (ix. 15), he arranged a dispute in A.D. 587 between the adherents of the two creeds, after which he embraced the Nicene faith; but this Synod is passed over in all collections of Councils save Mansi's (Hefele, Concilia, sec. 286). Two years later, Recared held the famous third Council of Toledo, at which 67 bishops and only 5 nobles were present. The leading bishop, leader of the people, uncle to the king, and Massona of "Emerita. Twenty-three anathemas were pronounced against Arianism, the most interesting of which are the third, which declares the procession of the Holy Ghost from the Father and Son; and the seventh, which maintain that the Son is ignorant of anything; the ninth, against declaring that the Son in His Godhead was ever visible; the fourteenth, prescribing the omission of the Greek "Gnousis" in the Creed; and the sixteenth, condemning the 'abominable treatise which we composed' to seduce the provincials into the Arian heresy, i.e. at the Arian Synod at Toledo (581); and the eleventh, subduing but subduing Gundobald, together with the bishops including eight Arians, subscribed, contained the fateful addition of the Filioque. Arianism, however, was not suppressed by a violent force, but as many of the Gothic nobles held out for some years. For fuller particulars concerning this Council see Gans, Kirchengesch., vol. Synan, vol. ii. pt. i. secs. 6-16; also Dahn, Urgeschichte der persan. und roman. Folker, p. 525. The native chronicler is Johannes Hieranes (Migne, Patrol. Lat. vol. ixii.).

20. The Lombard conquerors of Italy were Arians during the first century, and, even in the days of St. Gregory the Great, Antharis, their king, forbade any of his Lombards to give their children Catholic baptism. But shortly before his death Autharis married the Bavarian princess Theodelinda, who had been brought up in the Catholic faith. So great an impression did her wisdom and beauty make on her people, that, when she became a widow, the dukes of the Lombards begged her to select her own husband and continue to reign with her. She chose Agilulf, and by her persuasions the new king was gradually reconciled to the Catholic faith. It was to Theodelinda that Gregory addressed that most interesting revelation of the credulity of his age, the Dialogues. Traces of Arianism remained among the Lombards down to the middle of the next century, and it is not at all certain by what means the whole nation was induced to abandon the heresy. The Roman pontiffs regarded them always with the greatest apprehension and abhorrence. For the correspondence between Gregory and Theodelinda see Hodgkin, Italy and Her Invaders (1890), vols. i., ii., and Homes Dudden, History the Great (1905).

21. During the Middle Ages there seems to have been little if any revival of Arian opinions properly so called, the tendency being perhaps in the direction of Sabellianism rather than otherwise, though the drift of a Christian thought was much more on the nature of the Church, and eventually on the position of the Virgin Mary in the hierarchy of heaven, than on Christ (Dorner, Doct. of the Person of Christ, Div. ii. vol. ii. p. 286). Subordinationism, on the contrary, says Dorner, "durst no longer raise its head in the form of naked Arianism within the system of the Church; it was, however, never extinguished, but it reappeared, although in a different form, among the sectarians who opposed the Roman Church; and the new sects which were of a very different kind, and which were opposed to the Roman Church on other grounds, were but one more among the many which have been raised up since the fall of Rome, by a spirit of intolerance that has only been destroyed by the progress of human society."

The whole subject of the transition from Arianism to Catholicism is one of great obscurity, and deserves careful investigation. Of the Church of Aescaarrus to the Arians, almost nothing is known. They survived, and, except Ullus' translation, there is no literature which has survived. The rebellion of Hermengild, and the important factors in the destruction of Arianism were the power of the Franks estab- lished on the side of orthodoxy, the weight of influence which the subject Roman provincial were able to throw on the side they favoured in any struggle between rival barbarians, and the part taken by the wives of the kings and chieftains in bringing their people over to the religion of the Romans. Teutonic Arianism was at best a semi-barbarous Christianity; and it is interesting to observe that a form of Christianity, which began with the highly educated bishops of the East as a speculative creed, ended in the West as the national religion of ignorant barbarian warriors. But the struggle between Catholicism and Arianism in Western Europe was no less critical and far more protracted than in the eastern provinces.
of the three ages of the world. But they touched Christology merely at a few points.

It was not till more freedom in theological speculation became possible and theology was subjected to criticism, that a rationalistic spirit, that anything resembling Ariusim made its appearance, and then in a shape different from the opinions of Arius and his adherents. After the Reforma- tion, the thoroughly born of the Logos, though the creative principle by which all things were made, was, according to his teaching, not really of God, but a demi-god called into being to create the world, and, in the Incarnate Christ, to save mankind. No such spirit of criticism was made to renew this heresy at the time of the Reformation.

Unitarianism started on the other hand, with the denial of the pre-existence of Christ, who was declared to be no more than man, though in the Virgin Mary and actually raised from the dead. The first Unitarians were Italians, and the majority took refuge in Poland, where the laxity of the laws and the independence of the nobility secured for them a toleration which would have been denied to their views in other countries. They were divided into two main parties: those who declared that worship ought to be paid to Christ, and those who held that to adore Christ was idolatry. The leader of the former party was Faustus Socinus (Soccius) and those who followed him are often termed Arians to distinguish them from genuine Unitarians like Blandrata and Francis Davidi.

These opinions, as the Logos be considered apart from Ariinism proper, which is the subject of the present article.

2. In Lassin's Memoria de Fausto Socioso. In his introduc- tion this author says that he adheres to Socius's opinions, and he distinguishes these from the followers of Socius, the Socinian Lectures, Lect. viii. In mention- ing Legate, the unfortunate heretic who, according to his Count, in the reign of James i., we observe that most Church history of this latter text. In the Bampton Lectures, x. iv. 9., Legate held that Christ had no existence before his conception by the Virgin. Milton has been charged with Arianism on account of his representation of the sending of the Son by the Father to pronounce sentence on Adam and Eve (Paradise Lost, x. 556). But whom send I to judge them? whom but thee, Viceregent son? To thee I have transferred All judgement . . .

22. In the 17th century there was a tendency towards Arian opinions, due partly to the arguments advanced by the learned Jesuit Petauus in justification of the claim of the Roman Church to preside over the affairs of both; for, though Sandius, a Unitarian, accuses Petavius of holding Arian opinions, Bull was charitable and

acute enough to see that the drift of his thesis, that the Anti-Nicene Fathers did not hold the doctrine of the God-Head, was really different, and that he had the cause of the Pontifex more than that of Arian in his mind (pontificis potius quam Arianus cause consultum voluisse, Def. Fidei Bott. Vic. Proem. §5,). Bull's famous treatise in defence of the Nicene appearance of the doctrine which was sought for ten years later he wrote his Judicium Ecclesiae Catholicae in answer to views similar to those of Petavius advanced by the Remonstrant Episcopius, and amiable and learned man, whose object was not so much to attack the Trinitarian position as to maintain its comparative insignificance as an essential of Christianity (frigidum nimis tante vitatam vindicem esse ostendit, Intro.; see also Nelson, Life of Bull, ch. iii.). The proceedings of Bishop Bull were not, as a rule, Englishmen, anti-Trinitarian opinions in Church as having as yet no prominent advocates, but rather, as Bp. Van Mildert styles them in his Life of Waterland (p. 37), 'importers of foreign novelties.' Perhaps the best English work advocating Ariusim in the 17th century was published by Dr. Bury, rector of Exeter College (Oxford, 1690). In the same year, Dr. Sherlock, dean of St. Paul's, published his Vindication of the Doctrine of the Holy Ghost and Ever-blessed Trinity (London, 1701), in which, following some suggestions made by Cutdworth, he propounded the views which were denounced by South with his customary vehemence as countenancing Trinitism. Sherlock's opinions were condemned by the Vice-Chancellor and heads of halls of Oxford, who declared that it is 'false, impious, and heretical, contrary to the doctrine of the Catholic Church, and especially of the Church of England, to say 'that there are three infinite, distinct minds and substances in the Trinity, who, though three Persons are three distinct infinite minds or spirits.' (Appendix to Dorner, by Patrick Fairbairn).

23. Professor Gwatkin in his Gifford Lectures 'Knowledge of God,' ch. xvii., says incisively: 'Arianism is one of the most modern of the old heresies strangely English in its inpatient common sense.' And it was in the England of the 18th cent. that the controversy revived.

24. A variety of circumstances conspired to give this turn to religious thought in England. The reaction from Puritanism, now the tide of fortune had set in so powerfully against it and scope no longer existed for a religious philosophy which alone was then sufficient to account for it. . . Partly springing, too, from the same reaction it bore a name by 1670, and by 1700, a philosophy came into vogue, heralded by Cutdworth but properly founded by Locke, in its bearings on morals and religion was peculiarly cold and rational. . . Reason with this school of philosophical divines was placed in a sort of antagonism to faith; as the one element rose the other fell. . . With those who still maintained a certain belief in Christianity, the prevailing spirit chiefly operated in disposing them to rob it of its more distinctive features, and, as regards the subject of our Lord's Person, led them either to reject altogether the doctrine of His divinity, or, with the Arius, to hold it but a quasi-divinity—something of an essentially subordinate nature to that of the Father' (Appendix to Dorner, Person of Christ, p. 251.)

The two English divines properly deserving of the name of Ariens were William Whiston, who succeeded Sir Isaac Newton in the chair of Mathematics at Cambridge, and his friend Dr. Samuel Clarke. Whiston's was the worst of his attainments rather than marriages of many eccentrics. His study of Christian documents led him to place the Apostolical Constitutions on a par with the Gospels, and to choose Eusebius of Nicomedia as the author of the fresh apostles of a new and peculiar Christian doctrine. He repudiated the name of Arian, but his outspoken utterances caused him to be deprived of his professorship. His more cautious friends, among them Benjamin Hoadly, rose to the highest and
most lucrative positions in the Church of England (Abbey and Overton, The English Church in the Eighteenth Century, vol. i. p. 490.) Dr. Samuel Clarke, Rector of St. James's, Piccadilly, London, in 1712 published his Scripture Doctrine of the Trinity, in which no fewer than 1257 texts were cited and examined, with the result that the English Church was not only to be regarded as the Church of God, whose Divine only so far as Divinity is communicable by the Supreme God, and the Holy Spirit inferior to the Father and the Son, not in order only, but also in dominion and authentication. This answer to the Aristotelian doctrine of the Trinity gave rise to the question: is the Son a Logos, or a pseudo-divinity of the Father? The answer was given in 1719 by Mr. John Jackson, rector of Rossington and vicar of Doncaster. Clarke's work was condemned by Convocation in 1714; but the Church was not thereby silenced, and in 1719 Dr. Waterland, archdeacon of St. Albans, published an answer to Jackson in his Vindication of Christ's Divinity. In the long war of pamphlets which followed, Waterland succeeded in basing his doctrine on Scripture alone and for the respect he showed for the Fathers. The Arrian dispute in England marks, indeed, the close of the age when the Fathers were confidently appealed to in theological disputes. Nor was the Church of England alone disturbed by the question, since from the time of Emlyn's condemnation in Dublin (1702) and his expulsion from his church, the Nonconformists were disturbed by the presence of Arius, which culminated in the Savilian Chair of Natural Theology in 1718 between Presbyterians, Baptists, and Congregationalists. The Arrianism of the early 18th century was succeeded by anti-Trinitarianism; and the subordinationist theories of the first decades gave way to more distinctly Unitarian doctrines, the discussion of which is scarcely within the scope of the present article.

For English Ariusian see Nelson, Life of Ball, 1715; Van Mildert, Life of Waterland; Whiston, Memoirs, 1746–90; the Appendix to Doreen's Person of Christ (Eng. tr. 1805–6); Alberoni, Saggio per ridurre il Concilio Lateranese XVII, 1758, cit. vili; Sykes, Anti-Trinitarian Biography; Dale, History of Eng. Congregationalism, 1897.

24. As a philosophy of religion, Ariusianism struck a blow at the root of the Creed, but at the whole principle of Scriptural revelation. 'Is,' asks Harnack at the beginning of his chapter on the subject (op. cit. vol. iv. Eng. tr.), 'the Divine, which appeared on the earth and has made its presence actively felt, identical with the supremely Divine that rules heaven and earth? Did the Divine which appeared on earth enter into a close and permanent union with human nature, so that it has actually transfigured it and raised it to the plane of the eternal?' The OT teaches that the One True God revealed Himself, in part at any rate, to Israel; and the NT supplements this by showing that humanity is made one in the Christ (Χριστός), and by this is brought into complete harmony with the God and Father of All. Arius declared God to be unknowable, and the Son completely detached from Him. Humanity can therefore never be brought by Christ to the true Divine, but only to a sort of pseudo-divinity created in the Son by the Father. Such an evacuation of the purpose of the Christian revelation and the falsification of the fundamental Christian doctrine is presented in its crude form. But we must carefully distinguish between the logical results of such a system as Arius propounded and the opinions of those who have upheld it. Arius himself rejected the doctrine of the Incarnation and the Trinity. His teaching was that the Son is a Logos of God, but not God: a Logos or Word of God, not the Logos of the Trinity. However, several of his followers propounded the doctrine of the Trinity without consideration of all that it involved. As a matter of fact, he was ready in later life to subscribe to a creed approximating that of Athanasius. The opinions of the famous Unitarian Dr. Priestley rightly says in his Church History (vol. ii. p. 189): 'Nay, the proper opinions of Arius, viz., that the Son was made out of nothing, and that there was a time when He came to be, are far more than very few. So that what we call Ariusian arose much later and spread much less rapidly than has been generally imagined.' The Arius controversy was not finally settled, the decisions of which Christians had to choose one. If Jesus Christ existed from eternity, and is Head of a Kingdom which shall have no end, if He is indeed to be worshipped and received as God, then the Nicene doctrine is true, and He is of one substance with the Father. Otherwise, Christians have been mistaken from the first in their conception of Him, and He is not Divine, but a creature; not eternal, but belonging to time, and as such, either, as is suggested, a second God, using the term 'God' in its looser polytheistic sense, or, as the Unitarians maintain, a mere man eminent for goodness, but subject to human limitations, and therefore no divine Son of God, though God in the highest sense, and in union and communion with the Father. It is without significance that Socinus expressly denied the doctrine of atonement through Christ.

ARISTOTELIANISM. — 1. Life.—Aristoteles—son of Nicomachus, friend and physician of Amyntas, king of Macedonia—was born B.C. 384 at Stagira or Stagiria, a city of Chalcedon. In his eighteenth year (367) he came to Athens and joined the Academy, of which he continued to be a member, learning and teaching, during twenty years. Tradition relates that he taught rhetoric in opposition to Isocrates. That is to say, whereas at this time the school of the politico-rhetorical sophist Isocrates and the Academy, the school of Plato, were rival colleges, Isocrates was professor of rhetoric in the one, Aristotle in the other. In 347, when Plato died and his nephew Speusippus succeeded him as scholarch, Aristotle and Xenocrates, on the invitation of Hermaeus, lord of Atarneus and Asso, who was himself an Academic, betook themselves to his court. After a three-year's stay, Aristotle moved to Mitylene; and about this time, after the death of Hermaeus, he married Pythias, a near relative of his friend. In 343 Aristotle received and accepted a call to the Macedonian court to initiate two or three talented young men of Alexander, then thirteen years old. This task occupied him during three years (343–340). A stay at Stagira followed; and it was not till Alexander had ascended the throne, and was about to start on his Asiatic expedition, that Aristotle finally left Macedonia. Meanwhile, in 339, Speusippus had died, and Xenocrates, after a contest with Heracleides Ponticus and Menedemus, had succeeded him as head of the Academy.

In 335 Aristotle returned to Athens and founded a school of his own in the gymnasium known as the Lyceum. There he spent twelve busy years, teaching in the morning a select class of advanced students, and in the afternoon a larger audience. From his habit of walking to and fro as he discoursed, the members of the school were called Peripatetics (Περιπατητες). Towards the end of this period he wandered about the island of Leucade, and in the year 323 he was invited to Alexandria, whose jealousy of Antipater and suspicion of Callisthenes prejudiced him against their friend and correspondent. Nevertheless, when Alexander died in 323, the androgynous philosophy at Athens, passed on to Alexander, whose jealousy of Antipater and suspicion of Callisthenes prejudiced him against their friend and correspondent. Nevertheless, when Alexander died in 323, the androgynous philosophy at Athens, passed on to Alexander. This may be interpreted as a charge of 'impiety.' The accusation, based upon a
lynn to virtue, in which he was alleged to have re-
produced Hercules as a god, was plainly frivolous; 
but Aristotle prudently left Athens and retired to 
his house near Chalcis in Euboea. There he died in 
the summer of the following year (322). The 
story that he committed suicide by drinking heavy 
loco, or by drowning himself in the Euboean 
seems to have no foundation. Dr. Waldestin in 
1891 opened a tomb near Eretria which he supposes 
to be that of the great philosopher.

Writings. The philosophical community is the most 
notable of all the prominent and the golden stream 
of Aristotle's discourse'; Quintilian, its 'grace 
and fertility'; and Dionysius of Halicarnassus, 
its 'force, clearness, and grace.' These praises 
must needs refer to Aristotle's published writings, 
and, in particular, to his Dialogues, of which only 
fragments have come down to us. The philo-
sophical writings, upon which his fame rests, are 
wholly deficient in literary quality. The style is 
curt, abrupt, jejune. The language is careless and 
overcharged with terms.

The exhibition is sometimes incomparable, sometimes 
uninteresting, sometimes redundant, sometimes in-
consistent. There are reminders, recapitulations, 
revisions. Arguments are sometimes indicated 
without being worked out; promises are sometimes 
tacitly dropped. In 
a word, these writings, which have so 
profoundly impressed the thoughtful minds of 
centuries, would seem to be neither completed and published works 
not even more notable. The fragments from 
records of oral teaching addressed to a few 
advanced pupils. 
In this way, and perhaps in this 
way only, are explicable the rough and ready 
terminology, the diagrams and examples, the 
reference and conformity of the lecture-room 
and to members of the class, 
the occasional sentences which have no beginning, 
and, in some instances, the peroration 
addressed to an audience.

But if these are records of oral 
teaching, and some of them more completely 
finished than others, by whom were they prepared? Are 
they Aristotle's notes made with a view to his 
teaching? Are they notes of his teaching made by 
his pupils? Are they compilations made by an 
editor who had before him both Aristotle's notes 
for lectures and his hearers' notes of them? In 
the opinion of the present writer the treatises 
which have come down to us are in the main the 
notes of pupils, and, as fortune, if they were compilations, 
much of the roughness and the obscurity would 
have disappeared.

For the Greek philosophers, A III, 1060 35 and 1070 & 
the words ωραίαι φαίνεται would not have survived, and in A I, 
990-115 & we should not find indications of three Platonic argu-
ments, and the corrections to them packed in for 
length. It would seem that Aristotle's notes, made for his own use 
and supplemented and corrected by himself, but never revised for 
publication, were treasured in the school; so that we possess 
not indeed always his last thoughts, but at any rate his 
thoughts; and the inconsistencies which trouble us prove 
only that his thinking was progressive.

The chief of the so-called 'metrical' treatises 
attributed to Aristotle may be classified under 
their medieval titles as follows:

1. Logic: the Organon, including Categories, de Interpretatione, 

Inferentia, Priora, Analytica Posteriora, Topica, de Sophisticis Elenchis.

2. Physics: Physica or Physica Auctulationes, de Oeis, 

de Generatione et Corruptione, Meteorologia.

3. Biology: Historia Animalium, de Partibus Animalium, 

de Genere Animalium, de Generatione Animalium, de Animae, Pars Naturalia.

4. Philosophy: Metaphysica

5. Ethics and Politics: Ethica Nicomachea, Ethica 

Endemiocr, Magna Moralia, Politica, Economica.

It is not possible to speak with any certainty 
about the chronology of these writings; for there 
can be no assurance that references from one to 
another are Aristotle's and not the additions of editors. But we 
know that the certain treatises from which we gather Aristotle's ontology 
was early placed after the treatises on Natural History; for this, and no more, is implied in the 
title τα μετά τα φυσικά, whence we derive our convenient 
missing name 'metaphysics.'

Besides the 'published works' (εὐθέλωμα λόγια), 
the the 'lectures,' to which were also 
memoranda' (τεκμήρια). Under this 
in general, Aristotle may perhaps place certain summaries 
of the teaching of philosophers, the προβλήματα, and the 
προτάσεις, i.e. notices of the constitutions of 158 
poets, and the syllogisms of the recent 
theticus appears to have contained (1) a brief 
constitutions of Athens and (2) a citizen's handbook; but the want of proportion obvious 
in the former of the two sections suggests that it 
was a compilation, made by some member of 
the school, from extracts and documents which Aristotle 
had casually collected.

Strabo and Plutarch relate that Aristotle's library, including 
his own writings, became the possession of Theophrastos, and 
after his death passed into the hands of Kleus of Scapia in 
the Troad; that his heirs, for fear of the lords of Pergamos, 
blooded them in a cellar; that about 100 Apollonius bought 
them and brought them to Athens; and that in 66 they came 
into the hands of Sulla, who, as is known to the modern 
marian Tyrrhannus, whose copies were the basis of an edition 
prepared about 70 by Andronicus of Alexan-

Aristotle's principal works.

3. Philosophical system.—We have seen that 
Aristotle entered the Academy and was made 
for the first time of it twenty years. 
In later life he still regarded himself as an 
Academic; for even when he is criticizing certain of 
Plato's tenets, he speaks of them as doctrines which 
we hold. Indeed, it would appear that 
Athens in 339, he might have succeeded 
Spen-
hiphysih as head of the School; for in the list of 
philosophers, it is expressly stated that when Xen-
crates was elected, 'Aristotle was in foreign parts.' 
But though an Academic, Aristotle could not 
be regarded as a Plato.

The master and the pupil differed fundamentally in their attitude 
towards inquiry. Plato taking his departure from 
which is eternal, Aristotle from that which 
is actual in time and space. Yet, in spite of this 
disagreement, they were at one in their 
theories as to the nature of natural kinds of 
species, which may be studied in three 
branches. After all, Aristotle 
more sympathy with Plato than with the 
biologist who assumed the existence of natural 
without attempting to make it 
apparent of them; and more appreciation of Plato than 
Xenocrates, a moralist, who, when he ventured 
into Platonic metaphysics, was soon out of his 
depth; whereas Speusippus dropped 
the theory of Ideas, and Xenocrates blended it 
with Pythagorean fancies, Aristotle was, at any 
rate, careful to formulate his dissent. In a word, Plato 
propounded an idealist ontology and rested upon it. 
theory of natural kinds, which should be a 
for the study of natural kinds. But despite Aristotle's 
rejecting the idealist ontology, proceeded to 
state the theory of natural kinds, restating it upon 
an ontology of his own. The criticism of his 
master's idealism is indeed Aristotle's starting 
point, and for this reason it will be convenient, in the 
present account of Aristotle's system and 
encyclopedia, to give precedence to 'First 
Philosophy' (πρώτη φιλοσοφία) or 'Theology' (θεολογία).

(1) FIRST PHILOSOPHY.—The all.

Aristotle, four principal lines of inquiry, having 
for their ends the discovery of four causes (aitia) or 
principles (dxoi). These causes or principles are 
then divided into four classes (a) the 
causes, υ ν έ νεκα, (b) the 
cause, (c) the 
and the final cause, (l) φύσιν, (l) τέλος. Apart from
accidents or attributes which are not common to all the members of a natural kind, each of its members, though natural, is in fact, indissoluble into a specific soul or life, which is its form, and an appropriate body, which is its proximate matter. But again, the body is resolvable, in thought, though not in fact, into organs and constituent parts. Further, these constituents are compounds of the four elements—air, fire, water, and earth. Finally, fire, air, water, and earth have for their ultimate matter a purely indeterminate potentiality, which is the result of the four primary qualities—hot and cold, wet and dry: fire is the combination of hot and dry; air, that of hot and wet; water, that of cold and wet; earth, that of cold and dry. The ultimate matter of the members of a natural kind is then a potentiality, in virtue of which that member exists in time and space; its form is the sum of its specific characteristics, in virtue of which it is what it is. What we can know of the member of a natural kind is its specific characteristics. Anything which is peculiar to an individual member or to individuals is not known but perceived.

Such is Aristotle's analysis of the particular members of a natural kind. It may serve as a statement of the aims which he has in view in his classificatory researches; but it leaves the adaptation of body to soul, the organization of body, and the differentiation of splenetera explained away, and when he tells us vaguely that 'Nature' works always to an end and 'does nothing at random' (οὐδὲν ἄτολον ἢ μάργην ποιεῖ ἡ φύσις), it is plain that 'Nature' is no more than a démiurge machina.

For the proximate moving cause by which the particular member of a natural kind is brought into existence, Aristotle looks, not to any transcendental cause eternally operant, but to a previous member of the species which in its maturity transmits the specific characteristics to the humblest member of the same kind, this principle is expressed in the formula 'man generates man' (ὁ ἡμείς γενέσθαι γενεσθαι). The final cause, the end sought, is the maintenance of the species. For though, under the influence of the sun as it approaches and recedes in its apparent progress through the signs, the life of the particular animal or vegetable waxes and wanes and ultimately ceases, Nature is 'careful of these corruptions'. It is necessary, however, to account not only for the existence of the animal and vegetable kinds, but also for that of the earth and the heavenly bodies, and their motions, especially if, as the use made of the sun suggests, animal and vegetable life is to be dependent upon them. For this purpose Aristotle postulates (α) a prime unmoved movevnt (στρυγόν κωμόν διάστημα) eternal, existent, essentially operative, exempt from matter, and (b) other unmoved moves (κοσμόστα διάστημα). The prime unmoved movevnt, with the other unmoved moves, attracts (κατὰ ὑπὸ ἀνέμου) the material universe, and so causes to rotate the spheres which are necessary to account for the motions of the earth and the heavenly bodies. Of such spheres Eudoxus had postulated 26, Callippus 35; Aristotle finds 55, or at any rate 47, necessary. The prime unmoved movevnt is mind (νοῦς), which, with itself for object, thinks continually (ἐνέγκει ἐγώ), and is conscious of its thinking (η νοῆς νοῆσει νοῆσει). The other unmoved moves, though Aristotle does not say it, must needs be the things through which the prime unmoved movevnt. For, as the end of Metaphysics A, criticizing Speusippus on the ground that his system makes the universe 'episodical,' Aristotle adds epigrammatically: 'Speusippus substitutes for the universe, as Homer says, a plurality of kings is bad; let us have one king.' Plainly Aristotle supposes himself to escape this condemnation; and so does he, if the other unmoved moves are mind and its thoughts are one and the same (1078b 21, 1075a 3).

Such is the substance of Aristotle's First Philosophy, found also in a 'Mcloskr.' The mind, the prime unmoved movevnt, which, with its thoughts, the unmoved moves, originates and maintains the orderly motions of the earth and the heavenly bodies, is emphatically monotheistic. It is described as 'the first unmoved of all unmoveds.' Aristotle seems to be moved beyond his wont when he writes: 'It is wonderful that God should have always an excellence which we have sometimes: that he should have a greater, a more wonderful. But so it is.' 'God is perfect: he has life, continuity of existence, eternity of existence; that is what God is.' 'He is one; and therefore the firmament which he sets in motion is one.' The belief in a Divinity which invests the whole of Nature goes back,' Aristotle adds, 'to remote antiquity; but, for the persuasion of the many and in the service of the law, an anthropomorphized mythology has been built upon it.' Strip the aetheism from Aristotle's metaphysics, and there is left 'first existences are gods' a divine word. 

The lacune in the system here described are obvious. In particular, we besiderance an explanation of the origin of the four kinds of matter. Is the omission the more startling because we find Aristotle endeavouring to bring his scheme of unmoved moves into relation with the contemporary astronomy. His chief care was perhaps to show the possibility of deducting the theory of natural kinds on a metaphysical system other than that of Plato. According to Plato, everything is directly or indirectly the thought of universal mind. Fire, air, earth, and water are its geometrical conceptions of space. The stars are souls of life implanted by it in fiery spheres. Animals and vegetable are modes of life, conceived by universal mind, but combined by the stars with bodies appropriately fashioned out of the elements. The particular member of an animal or vegetable species is a phenomenal copy or reflexion, in appropriately corporealized space, of the transcendental idea. Aristotle's immanent form received from the previous member of the species corresponds to Plato's phenomenal copy or reflexion of the Idee; Aristotle's Nature's design corresponds to Plato's Idea. The truth is that there is little difference between the two analyses which is it is understood that Plato emphasizes the transcendental idea at the expense of the immanent reflexion, and that Aristotle emphasizes the immanent form at the expense of Nature's design. But the fact always remains that, whereas Plato regarded matter also—that is to say, space—as the creature of universal mind, and so was a monist, Aristotle distinguished matter—that is to say, potentiality—from supreme mind, and was therefore a dualist.
tectures of the species to which the particular belongs. Such is the doctrine of De\n
metaphysics. E. Nevertheless, the Categories, primary existences is\nto the particular or composite of form and matter. The inconsistency is one of termin-
ology and not of thought. For the specific form which is the primary existence of the Metaphysics existences, variety by of the species particular. The prim\ny existent particular of the Categories is known only in so far as it represents the species to\nwhich it belongs. Aristotle coined many technical terms; but, in fact, the fact that he was not always careful to harmonize the terminology of one treatise with that of another. In this case, the terminological dis\ncrepence is unfortunate; but, in the opinion of the present writer, it is a matter of indifference or vacillation.

2. PSYCHOLOGY.—The conception of mind, ex-

cept from matter, reappears in the Psychology (πνεύμα). In this treatise Aristotle begins with a re-

view of previous and existing opinion. It reaches\n
appears that some had regarded soul exclusively as the organ of motion, others exclusively as that of sensation and cognition. For himself, he pro-

poses to include under this name all activity, whether in the soul or in the body. He living body, and distinguishes living body from body which is lifeless. (Perhaps this is all that Aristotle meant in the first instance by defining soul as the first active principle of organisms body [ἡ πρώτη ἐνεργεία ἀνάμορφων φυτικῶν ὄγκων]: but when he adds that, while soul is actuality of body, body is not actuality of soul, the definition becomes a declaration of soul's supremacy.) Having thus widened the scope of psychology, Aristotle proceeds to enumerate the faculties of soul. N\n
utrition (together with generation), sensation, app\tection, locomotion, intellect, follow one another in this order; and the possession of a higher faculty implies that all the faculties below it. The soul of plants is nutritive only. The soul of animals is not only nutritive, but also sensitive, app\ntitive, motive. The soul of man has all the faculties of animals, and is intellectual also. In sensation the form of the sensible, without its matter, being\nthe sense through an intervening medium; and the sense perceives the sensible in virtue of the\ndevice which the advent of the sensible brings about. In the satisfaction of the sense in the condition, there is no sensation; and when the sense is in excess, the organ may be deranged or disabled. Touch is the primary sense. Besides the five special senses, Aristotle recognizes a common or central sense, which (a) is conscious of sensations, and (b) distinguishes and co-ordinates the impressions received by the special senses. Its organ is the heart. So far we have been dealing with faculties which man shares with the animals. Passing next to reason—the faculty which belongs distinctively to man—Aristotle distinguishes a \npassive reason (πνεύματικον νόσον), which receives from the senses their impressions, and an active, consti-
tutive reason (πνεύματικον νόσον), which provides form for the interpretation of the impressions received from the senses. Such is the function of the active reason in the individual; but it and it alone of the psychical faculties may exist apart from soul (ἔννοια). The active reason is \n
independent of external objects, having no in-

essential attributes, essentially operative," and 'only when it so exists,' it is immortal and eternal. Now the existence of an unmoved, the God, of the Metaphysics. In so far as man possesses this reason, it comes to him from without. Plainly the passive reason is inter-
posed in order to bring the recepta of sense into relation with the divine faculty.

3. LOGIC.—Of all Aristotle's achievements the\ngreatest was perhaps the invention of logic. The group of treatises known as the Organon includes a formal logic, a theory of scientific research, the treatise on disputation, and a classifications of fallacies. The formal logic comprises an enumeration of categories or heads of predication; a study of the quality, quantity, and connexity of the positions; a detailed investigation of the syllogism and its figures; and a careful discrimination be-

between adduction (παραγωγή), or generalization from known particulars in regard to those particulars, and example (παράδειγμα), or inference of particular in regard to unknown particulars, effected by ascent to an imperfectly certified general and subsequent descent from it. Within the limits of the Organon, Aristotle success at once of dialectical debate, by which the promises of demonstration are provisionally justified, of de-

monstration, by which the consequences of given premises are ascertained, and of sophistry or eristic, pursued irrespectively of truth with a view to argumentative success.

4. SCIENCE.—While the formal logic still holds its ground, Aristotle's scientific writings were no more than stepping-stones. His physical specula-
tions occupied the attention of the illustrious by giving to them a higher task than they were ever to reach. In the time came when, by reason of his great name, they were positive hindrances to progress. His books are praised for the observation, the insight, and the knowledge, of which they afford conclusive evidence.

5. ETHICS AND POLITICS.—In the Nicomachean Ethics the Politics, Aristotle raises and dis-

cussion. What is good? Ethics is concerned with the 'character' of the individual, the political with the 'constitutions' of the State. All are agreed that man's good or end is well-

being (ἐθικόν), that is to say, well-living (εὖ ὑπάρχον) or well-faring (εὖ πραττόν); and man's well-being —the term 'happiness' should be avoided—is the expression of those functions which are distinctly human. In a word, 'man's chief\n
good or end is a psychical activity characteristic of an excellence (ἀρετή), or, if there are more excellences than one, characteristic of the best and completest of them, such activity being continued during a complete, period of existence.' Setting aside nutrition and growth which man shares with plants, and sensation which he shares with animals, we find that man's distinctive functions are reason, reasoning, and the rational control of appetite, under which head are included desires and passions. What, then, are the excellences of these functions? And which of the excellences is the best and the completest? There are two sorts of excellence—moral excellence, the excellence which the appetitive part of soul displays when it is duly obedient to the rational part, and intellectual excellence, the ex-

cellence of the rational part. Moral excellence (or virtue) is 'a deliberate habit which enables the individual, with the help of his reasoning faculty—\n
subject to an appeal to the man of practical wisdom—to attain what is for him the mean between the extremes of extravagance and prudence. The virtues are courage, temperance, liberality, munificence, magnanimity or self-respect, gentleness, justice. The intellectual excellences are practical wisdom or prudence (φροντίδα), the excellence of that sub-

division of the rational part of soul which controls
the appetitive part, and speculative wisdom (ορθής)
the excellence of that purely intellectual part which
is called reason (ràoùs). Practical wisdom and the
moral virtues must be developed proi pasa, or
repeatedly and constantly, in the best part of the soul, and
therefore its excellence, speculative wisdom, is the
best of excellences. This best of excellences has for its activity (ιέργεια) study (τεωσία). Conse-
quently, to complete with the aid of the individual
is to be found in the life of the student (θεορητικός
Bias), who, however, must loyally do his duty as a
member of the city and the family. This com-
plete test well-being brings with it the highest of
pleasures. Next to the life of the student ranks
the practical life of moral virtue. For the pro-
duction of excellence, three things are requisite:
first, natural aptitude; secondly, instruction, for
its guidance; thirdly, habituation, to establish
the habit. Inasmuch as well-being implies not
merely the possession of a habit, but also its
exercise, we require for the realization of well-
being those external goods upon which the exercise of
the habit depends. The extreme that well-being
implies the exercise of a habit and not merely the
possession of it, and the corollary that external
goods are indispensable conditions, distinguish
Peripatetick from Academic ethics.

"Aristotle is concerned with the well-being of the
individual, so in the Politics he is concerned with the well-being of the community. The city (πόλις) is a complex organism, developed out of the village (κωός), which again has its origin in the patriarchal family (εὐρύχωρον.ua)
and which political (πολιτικά) or governmental (κυβερνητικά) activities are in which the sovereign
(κύριος)—whether one, few, or many—rules for the
benefit of the community; perversions (απερεκ-
δοτικά) in which the sovereign or his representative
rules over some one, few, or many—uses power for personal
advantage. The right polities are aristocracy,
monarchy, polity proper; the perversions are
democracy, oligarchy, and tyranny. The best of
cities would be one in which absolute power was exclu-
sed for the benefit of all the citizens by one
person, or more persons than one, superior to the
rest in mind and in body. But we cannot hope to
find rulers thus exceptionally qualified, and accord-
ingly the expression of an unattainable ideal. Thus
of the three right polities one alone remains, namely, polity proper, in which all free men are admitted to a share in the government and at the same time submit themselves to the ‘passionless intelligence’ of law.
Of all polities this is, in Aristotle’s estimation, the most stable; for inasmuch as all in turn rule and are ruled, the middle class has a preponderant influence. For the maintenance of polity proper, Aristotle would rely, as Athens did and as the United States do, upon supreme or constitutional laws (κώμως), alterable only by special formalities, to which supreme or constitutional laws, upheld by courts of justice, all ordinary enactments (φυλακ-
τικά) must conform. Of the three perversions—
democracy, oligarchy, tyranny—democracy, which
has the smallest power for evil, is the least bad;
tyranny, in which such power is greatest, is the
worst. Tradition places at the end of the treatise
a fragmentary scheme for a perfect State; but,
unlike Plato, Aristotle had no hope of its realiza-
tion. In the intervening books, on the strength of
a sort of obvious the best part of the human
soul, Aristotle inquires what sorts of constitution are suitable to
given sorts of people; how a constitution may be
established and maintained in accordance with
given conditions of knowledge, and what
constitutions tend to change, to overthrow, and
to maintain the several constitutions. The reader of
the Politics must not forget that, on the one
part, the citizen population of a Greek State was
very small, so that Aristotle knew nothing of
representative government; and that, on the other
part, he had no number of slaves (πάθος) to
compare with the number of free men, very great,
moreover, what he calls a democracy was in some sort an
aristocracy.

In these two treatises, the Nicomachean Ethics and
the Politics, Aristotle an acute and skilled
student of human nature. They have a Shake-
spearean quality which makes them perennially
interesting. But it must be clearly understood
that they do not pretend to offer a theory of
morality. Aristotle says nothing about the Good
or Duty, about the distinction between Right
and Wrong; and very little about the faculty
which discriminates them. Moreover, inasmuch
as he concentrates his attention in the Ethics upon
the well-being of the individual, and in the Politics
upon the well-being of the State, the relations of
man to man and of citizen to citizen are insuf-
ciently handled. Indeed, they find a place, and
that a subordinate place, only in so far as the
particular virtues of justice and friendship are
concerned with them. In a word, Aristotle works
upon the lines of Plato’s Republic.

In the Eudemian Ethics, which is now generally
regarded as a supplementary prentice to
Ethica Nicomacheana, by Aristotle’s disciple Eudemus, the line of
argument is similar to that of the Nicomachean.
But (a) Eudemus chiefs under the limitations of the inquiry,
and would fix a sort of moral index. Right regarding pleasure,
not as the concomitant of an energy, but as identical with it,
he sees in ἐθικῶποι the best of pleasures; and
(b) abandoning the distinction drawn in the Nico-
machean between moral action and the activity of the man of
the world, he finds man’s well-being in a life of culture (σπάλασαγλία) which
combines both. It would appear that Aristotle
himself, when he was writing the Politcs (see iv. 1338 b 1)
and had learnt to regard statesmanship
as a proper subject for scientific study.
In the opinion of the present writer, Books v. vi. vii.
of the Nicomachean, which appear also as Books iv. v. vi. of the Eudemian, the line to
the Politics and the Eudemian resemble both in
their doctrine and in their style.

(6) RHETORIC, ETC.—In the Rhetoric— a treatise
on oratory and style, apparently framed on lines
marked out by the great tragedians (ποιηταί)
and the fragmentary Poetics, Aristotle shows himself a
literary critic of a high order. In particular, his
appreciations of the tragedians have a permanent
value. Perhaps no literary judgment has grown
rise to more controversy than the remark that
tragedy, ‘by raising pity and fear, purges the mind
of those passions.’ This theory of the ‘homoeo-
pathic purgation’ effected by tragedy (see Milton’s
Preface to Samson Agonistes) is Aristotle’s answer
to Plato, who in the Republic condemns tragedy as
an incentive and stimulus to mischievous emotions.
The greatness of Aristotle was not fully under-
stood until the Middle Ages, when the Church
borrowed from him the framework of its theology,
when the whole of civilized Europe saw in his
encyclopedic writings the summary of the sciences,
and when Dante hailed him as ‘the master of those
who know.’ In the present article no more has
been attempted than to describe in outline the
philosophy upon which the schoolmen built, and
to indicate the scope of Aristotle’s labours. See,
Furthermore, SCHOLASTICISM.

Liturature. What is the best edition of Aristotle’s writings
deserve special mention: Becker, Opera Omnia, 5 vols, Berlin,
1831-70; Paccius, Organon, Frankfurt, 1834-49; Waiz, Organon,
1811-49; Aubert and Wimmer, Historia animalium, 2 vols, Leipzig, 1803; Hcks, de Anima, Cam-
bridge, 1847; Bouét, Metaphysics, Bonn, 1814-19; Bywater.
ARK

In an inquiry into the nature and use of sacred arks, our interest centres chiefly in that which is familiar to us from the OT, the so-called Ark of the Covenant. This name, which occurs in the Deuteronomistic literature, is not, however, the earliest one, older designations being apparently 'Ark of Jahweh,' 'Ark of God,' and 'Ark of our God.' But the word 'God' ('θεό) when used in the genitive, may have two meanings; i.e. it may be either possessive or adjectival, in the latter case denoting connexion not so much with the one true God as with the class or order of supernatural beings. It is this word 'God' of the phrase 'ark of God' which is later used of the ark of the covenant as being the true ark of God. In Latin, 'ark connected with the presence and power of the 'Deus' ordenis superiorum' is possible. To decide which of these two renderings is the correct one, we must inquire what name the writer uses to denote the Deity. If, for instance, he uses the word 'Jehovah,' or 'Jahweh,' then the phrase 'ark of Jehovah' may mean 'God's ark.' It is the same in the Latin, where the phrase 'ark of Jehovah' is used by various writers, and the cases of inspiration. Of particular importance is the case where the writer refers to the ark of the covenant, and says, 'ark of Jehovah;' for a Hebrew, unlike an English writer, does not attempt to vary his style by the use of synonyms. The probability is that in early times the phrase 'ark of Jehovah' was synonymous with 'ark of God.' A discussion of the original form of the 'Ten Words' would be out of place in the present article; but it is by no means probable that in early MSS two words would be used with the worship of Jahweh, the mere mention of the name of Jahweh would be sufficient. The form of the Ten Words in the Pentateuch, and the use of Jehovah for the name of God in the Decalogue of Ex 24 being superseded by that of Dt 5, and again by that of Ex 20; but the traditional number ten was retained. Since even the Decalogue of Ex 24, with its traditional form, cannot be the earliest code, it is at least possible that subsequent to the reforms of Hezekiah, at the time when the earliest codes were broken up by the iconoclastic zeal of 'Moses,' these two fresh tables were drawn up out of the first, wherein the Law in Ex 24, similar to that which was on the first tables, but amended in harmony with the growing hatred of images.

But since there is nothing in any early document to connect the text 'ark with the Tables of stone, and since, when the first passage which does so connect it (Dt 10) was written, the Ark itself had long disappeared, we may safely disregard this comparatively recently suggested link, and seek in the earlier writings of the OT some indication of the purpose of the Ark.

There is no mention of the Ark in the inventory of Temple furniture carried off by Nebuchadnezzar. It is possible that the book of Psalms shows us the scope of the Tables of Stone being first found in Dt 10. On the one hand, the oldest documents of the Pentateuch, J and E, in describing the Tables of Stone, make no mention of any receptacle for them; and, on the other, the oldest passages outside the Pentateuch which mention the Ark give no hint that it was regarded as a receptacle for a sacred Law, but imply rather that it was regarded as containing the symbol of Jahweh Himself. Thus, to quote Cheyne, the Ark was not a symbol of the Mosaic Law, but the focus of Divine power. The formula given in Nu 10. 24, and similarly the account of the capture of Jericho, imply that the Ark was regarded simply as the symbol of Jahweh's presence. Still more striking is the narrative of the capture of the Ark by the Philistines. On hearing of its arrival in the camp of Israel, the Philistines exclaim (1 S 4), 'Who shall deliver us out of the hand of these Philistines? And is it a light thing to us that God has delivered us into the hand of Saul?' The passage of 1 S 6 implies the virtual identification of the Ark with Jahweh (cf. 61). Similarly, the language of 2 S 7, where David's dwelling in a house of red curtains, the Ark was carried into the temple, and within curtains, appears more natural if the Ark was regarded as localizing the Deity.* if it merely contained the tables of His Law. It is noteworthy also that the Ark is nowhere described as performed 'before Jahweh' (2 S 6).

Professor Cheyne (EBI i. 302) considers it probable that in the earlier form of the story of the capture of the Ark as originally given in J, the shattered tables were not removed. If we accept this be so or not, the uncertainty which prevailed as to the code inscribed on the tables (cf. Ex 34 with Dt 5 and Ex 20), coupled with the absence of any mention in J of the Ark bearing the tables, the Ark, or in any other book that they were ever taken out of it, makes it extremely probable that the statement in Dt 10 is merely an inference drawn by the Deuteronomist, who supposed, reasonably enough, that, an empty box being meaningless, the sacredness of the Ark must have been due to the sacred character of its contents. In this connexion, since his religion forbade him to think of any idol, the objects which would naturally occur to his mind would be the sacred Stone Tables. It has been suggested that the Tables of Stone were originally portable; possibly 'thrones,' or, according to Professor G. F. Moore (EBI col. 2165), 'portable stones of God,' by taking which with them the Israelis were assured of the presence and protection of God. It has been supposed that the Ark was brought away from his holy mountain. But of such portable stones we have no other example in Israel. Moreover, the difference between the cases of Ezekiel's engraving with the writing 'Ark of God,' and fetish stones is so great that it is difficult to suppose that the ark of God was brought away from his holy mountain.

It is certain that the Ark was brought away from the Temple at Shiloh, but whether this was in the days of Eli, as Cheyne supposes, or in the days of Samuel, or after the death of Samuel, it is impossible to say, because of the fragmentary condition of the narrative. The Ark is not mentioned again in Scripture until we come to the beginning of the first book of Samuel, in which case we are to consider the writer's account of the capture of the ark as a parallel to the Deuteronomistic account of the destruction of the Temple at Shiloh (cf. 1 S 3:1-14). On the other hand, it seems clear that 'Ark of God' describes the Ark as a receptacle containing the tables of the Law, and not simply as a symbol of Jahweh. The passage of 1 S 6 is a good example of the use of 'Ark of God' as a symbol of Jahweh, and not simply as a symbol of His presence. The writer of the narrative is not so much concerned with what the Ark actually contained as with what it represented to the people of Israel. It was a symbol of the presence and power of God, and it was revered as such by the people of Israel. The writer of the narrative is not so much concerned with what the Ark actually contained as with what it represented to the people of Israel. It was a symbol of the presence and power of God, and it was revered as such by the people of Israel.

Attention has already been drawn to the fact that the early references to the Ark imply that it contained some sacred writing or document. The phrase 'the ark was not only a receptacle for the Law, but it was a receptacle for the traditions of Israel. It was a symbol of the history and the traditions of the people of Israel. It was a symbol of the past, and it was a symbol of the future. It was a symbol of the past, and it was a symbol of the future. It was a symbol of the past, and it was a symbol of the future. It was a symbol of the past, and it was a symbol of the future.
freely admitted that idol images of Jahweh were formerly common in Israel. It is natural, therefore, to regard the Ark as the portable shrine in which the receptacle of some such images, which upon this supposition must have been deposited by Solomon in the Temple of Jerusalem.* Have we any indication of the existence of such an image? The golden calves are not to be taken as of, for there is no evidence that they were ever worshipped under this form among the Leah tribes; since it must be remembered that the original image at Dan, if it really was in the form of a calf—which is doubted by both Jonathan the Levite, and by Micah the Ephrinimate.

But at Jerusalem there was an image of Jahweh to which sacrifice was offered, viz. the bronze serpent, or, to call it by the name by which it is generally known, the brazen serpent, which in the age of Hezekiah was believed to have been made by Moses (2 K 18:4; cf. Nu 21:9), and may therefore be supposed to have been as old as the Ark. It is therefore a not unlikely inference that it was for the image of the Ark that was made. It is notedworthy that these are the only two objects, traditionally connected with the worship of Israel in the wilderness, of the existence of which there is any evidence in the persons of Kings.† traditions which assigned the making of the first golden calf and the brazen serpent to Aaron and Moses respectively are of the utmost importance; for the fact that the essential part of these traditions—viz. that images were made by the Israelites—survived even the iconoclastic commandments shows how deeply rooted must have been the traditions themselves. And if, as will be generally admitted nowadays, the narrative of Nu 21:9 and 2 K 18:4 agrees in the essential part of an object which seemed inconsistent with its iconoclastic law, and if the brazen serpent really was an image coming down from the time of Moses, or at least from the days of the Israelite conquest of Palestine, it is reasonable to suppose that the history of the brazen serpent was identical with the history of the Ark.

But if the brazen serpent really existed in such an early period of Israelitish history (and both Nu 21:9 and 2 K 18:4 agree in the essential part of an object which seemed inconsistent with its iconoclastic law, and if the brazen serpent really was an image coming down from the time of Moses, or at least from the days of the Israelite conquest of Palestine, it is reasonable to suppose that the history of the brazen serpent was identical with the history of the Ark. If, as seems probable, we are right in concluding that the Ark and the brazen serpent shared the same vicesatitudes, or, in other words, that the Ark contained the brazen serpent, we are at once able to explain both the existence of the latter in the days of Hezekiah, and the veneration shown to the former in the narratives of Joshua, Samuel, and Kings. And if the iconoclastic zeal of the reforming party in the days of Hezekiah destroyed the brazen serpent, the Ark, if this was the altar of the serpent, would have shared the same fate.

Objection may perhaps be made to this theory, on the ground, first, that the narrative of Nu 21 implies an image which could not have been contained in the Ark; and, secondly, that it is the Ark itself which is always spoken of as sacred, no reference being made to its contents.

In answer to the first objection, it is sufficient to say that the conventional representation of the brazen serpent is not necessitated by the language of Nu 21:9, which merely states that, in order that the serpent might be visible, it was raised on a pole, in the same manner as a 'pole' in Ex 17:5 is used of an altar.

The second objection appears more valid; but when we remember that images, with which serpents in general, and the brazen serpent in particular, were regarded, it is by no means unlikely that the brazen serpent arose, because they shrink from mentioning the sacred object within it.

But the question may still be asked, Why should a box have been necessary at all, since there existed a tent in which to keep the idol image, a large image (and the writer of 1 S 19:12 evidently thought of the teraphim as being the size of a man), a box would perhaps not have been necessary, though it might have been convenient for carrying the image about in time of war; moreover, the size of the Ark, of which the later tradition gives the dimensions as 2 ½ x 1 ½ x 1 ½ cubits, would have been unsuitable to such an image. A comparatively small object, however, such as we must suppose the brazen serpent to have been, would certainly have needed some sort of case to preserve it when being carried about. But it is not improbable that the origin of the Ark may be due to another and a more important source, viz. the serpent images which doubled its origin in the worship of a living serpent, for which some sort of receptacle would, of course, have been necessary. The conservatism of religious ritual would preserve this, even after the substitution of another metal.

It is not necessary to suppose that a live serpent was revered in the time of Moses. The substitution of the metal image for a primitive a generation long before the age of Moses. There are, however, parallels which seem to point in this direction. Thus, on an amphora of the British Museum (l. c. 420), there is a representation of the story of Erichthonios, which is reproduced by J. E. Harrison (Prolegomena to the Study of Greek Religion, 1903, p. 139). The sacred chest stands on rude piled stones that represent the rock of the Acropolis, the child rises up from the Acropolis, Athenes looks on in dismay and anger, and the bad sisters hurry away. Erichthonios is here a human child with two great snakes for guardians, but what the sisters really found, what the maidens really carried, was a snake and symbols like a snake*. Additional evidence for the same practice of carrying serpents in sacred chests is to be found in the class of coins known as cistophoroi, of which a representation is given by J. E. Harrison (Prolegomena, p. 138).

† For the case of snake-worship in Palestine, there was, until recently, no evidence apart from the OT. But in 1903 R. A. St... Malcolter, in his paper 'On the Serpent in the Canaanite 'High Place' of Gezer, came across a circular structure '13 feet 8 inches in diameter at the floor, 10 feet 2 inches surrounded by a wall now about 2 feet high and 4 feet 6 inches in height of 6 feet.' Within this structure, among a number of broken pieces of pottery there was found a stone knife or type of cobra, redly but unmistakably portrayed (see Report on the Excavation of Gezer, PEFSAS, July 1903, pp. 222). Although the discovery at Gezer did not include anything of the nature of an ark, it is not impossible that it may throw light on the reason for the prototypes of the Ark. Mr. Malcolter's discussion of the place of the discovery is so suggestive that it may be quoted in extenso. The structure in which the serpent was found completely puzzled me, but an ingenious suggestion was made by Mr. J. Stogdon, of Harrow, when on a visit to the excavations—namely, that it was possibly a pit for keeping live serpents. The building is as suitable for such a purpose as the pits in which bears and other animals are kept in a modern zoological garden. It is such a case as the Serpent-Chariot at Assur, where the bronze model might be in the nature of votive offerings. We are reminded of the practice of keeping the holy serpents at the temple of Asclepius at Epidaurus, where they were in some way instrumental in effecting the cure of those among whom there wrought the Asclepius (see Essay in Essays, 1903, pp. 193-205; see also p. 290). It is not inconceivable that among the orgies or rites which were celebrated in the high places, where plenty of snake-charming was included, and that the snakes required for the purpose were kept in a similar enclosure to suppose that the snakes were kept with the fangs extracted. The tricks of modern holy men with serpents, which, if I be not mistaken, were still practised by the Kaposchans some years ago, may be a survival of such rites (PEFSAS, July 1903, p. 225).
with any such supposition. It is a safe inference from the cuneiform inscription that the method of carrying the Ark in early times was in a sacred cart (i.e., a cart that had been used for no other purpose) drawn by cows or bulls.\(^*\) The use of horned cattle might possibly denote that the Ark was carried to the gods as a god by the worship of the gods. In any case, however, they probably imply that the god contained in the Ark was regarded as the god of fertility (see Frazer, Adonis, Attis, Osiris, pp. 46, 50).\(^*\) At first sight it is difficult to suppose that the Ark could ever been regarded as a cart of fertility, but whatever the origin of serpent-worship may be—and we need not assume that it has been everywhere identical—there can be little doubt that in some cases, at least, it is connected with a view of ensuring fertility thereby. On this point the statement of the scholiast on the Hetaireia of Lucian, quoted by J. E. Harrison (Prolegomena to the Study of Greek Religion, pp. 121, 122), is very suggestive: ἄνάψεως δὲ κατάφωτα ἑγέρει τούτων ἐκ σεισμοῦ τῶν καταστρεφόμενα, μιμομαί δράκων καὶ ἄνθρωποι σχηματίζοντο.

But whether the view here advocated that the Ark of Israel originally contained the brazen serpent, which was later to be interpreted as the life-giving serpent (Deut. 8:15), is correct or not, it is evident that the Ark was the shrine or sanctuary of some object which symbolized Jehovah to His worshippers. On this point the evidence which we possess concerning similar objects in other peoples is conclusive (cf. Schwally, Semiti. Kriegsaltertümer, p. 10). And as the sacred object was certainly not in every case a live serpent, we naturally inquire why it should be placed in a box, and not rather set on a pedestal or throne in a temple. The answer to this question is to be found in the conception of the god which prevails among primitive peoples, in whose minds the fetish or image is so identified with the spirit which is supposed to animate it that the two are indistinguishable. In times of need or danger man requires a god that is near, and not a god that is far off. It is by no means a primitive conception which we find in the dedicatory prayer put into the mouth of Solomon (1 K 8:60), that, if people go out to battle against their enemy, and they pray to their god to save them, he will answer to His name. He will make their prayer and supplication heard to the heaven in which He really dwells.\(^*\) Primitive warriors wanted to have their gods in their midst. Of what use was the Divine Father (see Num. 29) and the Divine Son (see Ex. 34), if they were in danger in the field? It was but natural, therefore, that the gods should be carried out wherever their help was needed (2 S 20); cf. Polyb., viii. ix. 2; Schwally, op. cit. p. 9.

Man is slow to give up idolatry. In the course of the ages, indeed, he modifies his primitive conceptions of God; the inanimate fetish gives place to the bestial form, and this again to an anthropomorphic representation, tending more and more towards the spiritual. But the truly spiritual conception of God, enunciated alike by the prophet Jeremiah (23:24) and by our Lord (Jn 4:23-24), which is incompatible with local presence, seems ever to have been beyond the grasp of the Israelites, the majority of mankind. Jeremiah's warning (39) has been disregarded even by those who have called themselves Christians. At any rate, in the Christianized folk, the place of the gods of heathenism has been taken by the Saints, and the shrines containing relics of these have been venerated as being virtually dwelling-places of divinity. Between the medieval reliance on the protection afforded by holy relics and the primitive Israelite trust in the Ark, there is but little real difference. In theory the medieval Christian denied that his shrine contained a god, but his practice too often gave the lie to his theory.\(^*\)

ARMINIA

ARMINIA (Vannic).—The present article deals with Proto-Armenian religion as revealed in the Vannic or 'Khaldis' cuneiform inscriptions. The Indo-European Armenians, who are described by Herodotus (vii. 73) and Eudoxus (ap. Steph. Byz. s.v. 'Apparia') as immigrants from Phrygia, did not become masters of the Armenian highlands till the close of the 7th cent. B.C. (Kretschmer, in die Gesch. der griech. Sprache, pp. 209-11) brings them from Ormecion in Thessaly by way of Armenia, near Sinope (cf. Hirt, Die Indogermanen, 138; Prähk, Gesch. der Meder und Perser, i. 147). The name Armenia (Old Pers. Armina, New Sus. Armiyana) is first met with in the Bab. and Pers. cuneiform inscriptions of the Achaemenian age, and may be connected with the Vannic armanani, 'written tally.' The country had been previously known to its southern neighbours as Urartu (Hellenes, Urartu), which the Babylonian scribes explained as a compound of Ura-Urtu or 'Highlands.' Urtu is the name of the district near Lake Erivan in a Vannic inscription, which seems to have been spoken over by the later Armens, and to have been connected with that of Mitanni in Northern Mesopotamia. Like the language, the religion of the Vannic population was peculiar, and is difficult to correlate with that of any other people. At the head of the pantheon was Khaldis, whose children the Vannic kings and people regarded themselves as being in a special sense. Hence they called themselves 'the Khaldisians,' a name also applied to the numerous local deities who were 'children of Khaldis.' But though Khaldis was the national god, he could be localized like the Semitic Baal, and we hear of a 'Khaldis of the north' (1) and a 'Khaldis of the south' (2), while a dedication is sometimes addressed to 'all the Khaldis-gods.' Along with two other deities, Teisbas the Air-god (Assyr. Hadad-Ramman) and Ardinis the Sun-god, Khaldis was the member of a triad which occupied the supreme place in the

The phrase 'אמשו כה דות גוז' כה דות אמשו' has long been a cry to grama). We venture to emend the passage by pointing it differently as ז'כמ'כ המ ז'כמ'כ 'ס', and instead of as the accusative in object as the accusative in direction (cf. v. 30). The writer believes, like the prophet of Is 69, that 'heaven is God's throne; but trusts that the prayers which are offered at the earthly altar will be acceptable to the Lord by His heavenly throne. The quaintness of the expression is due to the writer's attempt to combine the phraseology of more primitive religion with his own spiritual faith.
ARMENIA (Zoroastrian)

Vannic divine hierarchy, and the conception of which may have been borrowed from Babylonia. Below the triad came the multitudinous deities of the land, and sacred trees were planted on the khahid-gods or local forms of Khahid. A long list of these, with the offerings to be made to them, is engraved on a rock called Meher Kapussi, two miles east of Van, and on a rock called Sakid, the Moon-god, as well as the gods of various cities and countries incorporated into the Vannie kingdom by conquest or otherwise. Most of these deities were merely deified States, and consequently had no religious ceremony attached to them. It was only when they were within the limits of the districts originally inhabited by the tribe whose supreme god was Khahid that they properly became forms of the national god, and could be called ‘Khahidans.’ As the Vannie kingdom extended, however, and the idea of a common nationality grew stronger, the deified State, even if originally outside ‘the land of Khahid,’ tended to pass into a Khahid; thus the deity called at Meher Kapussi ‘the God of the city of Ardinis’ (the Muzazir of the Assyrians), became, a century later, in the time of Sargon, himself a ‘Khahid.’ Only one goddess is mentioned in the inscriptions, and since her name, Sarid, was taken from the Assyrian Istar, it is possible that she was of foreign origin. The later (Armenian) legends which bring Semiramis into the plains of Van are probably an echo of the fact.

How far Vannie religion, as it comes before us in the inscriptions, may have been influenced by Assyria or Babylonia it is impossible to say. Teishas, however, who was afterwards united into a triad, and Khahid and the Sun-god, appear to have been the original divinities of a tribe or nationality which was distinct from that of the Vannie ‘Khahidans,’ while among the neighbouring Hittites each city had its Sun-god, who was identified with the deified State. The conception of gods in the Assyro-Babylonian sense may have been due primarily to contact with the cultured lands of the south, like the titles ‘lord of multitudes’ and ‘faithful shepherd of mankind’ given to Khahid. At this very early period the divine hierarchy of the official cult we find clear traces of an earlier phase of belief, in which the material fetish takes the place of the god. Sacrifices were made to Khahid and the Sun-god, but also to ‘the gate of the land of Khahid,’ ‘the gate of Teishas in the city of Eridinas,‘ ‘the gate of the Sun-god in the city of Urisis’—all of which are carefully distinguished from ‘the Khahid-gods of the door’ or ‘the Khahid-gods of the chapel’—as well as to ‘the shields of the land of Khahid,’ and even to ‘the foot-soldiers of the land of Khahid’ and ‘the foot-soldiers of Teishas’ (Sayce, v. 13). These foot-soldiers were the temple-guard, armed priests, and attendants, who were called Seluans, Urbikins, etc. A prominent object of veneration was the vine, the sacred tree of the Vannie people, which was sometimes planted by the side of the temple of Khahid (ib. v. 30, 51, lxxxvi. 10), sometimes in a sacred enclosure of its own. Sar-duris II., in one of his inscriptions (ib. li.), describes his endowment of one of these vines, which he had consecrated and planted after himself on the north shore of the lake of Van. The vine was often planted in the middle of a garden which was attached to the temple. Spears and shields, specimens of which from Toprak Kaleh are now in the Strassburg Museum, are hung up on either side of the entrance to the temple, large basins of bronze or terra-cotta, on stands, being placed in front of the shrine for the purpose of ablution.

No inscriptions made to the temples usually took the form of provision for the sacrifices and offerings, which were numerous and plentiful. The great impression of Meher Kapussi gives a long list of the sacrifices to be offered to each deity and sacred place. Khahid-gods were offered every day of the month. Thus 6 lambs were to be offered to the Vannie triad, 17 oxen and 34 sheep to Khahid, 6 oxen and 12 sheep to Teishas, 4 oxen and 2 sheep to the Sun-god, 1 ox and 2 sheep to the gate of the land of Khahid, 2 oxen and 4 sheep to the foot-soldiers of the land of Khahid. Libations of wine were also to be poured out, the wine being made, it would seem, from the fruit of the sacred and consecrated trees of the Vannie kingdom, of the vast herds of oxen and sheep presented to the gods could actually have been offered in sacrifice; according to the inscription of Kelshin (Sayce, lvi.), when ‘the gate of the land of Khahid’ was dedicated to Khahid, 112 oxen, 1029 sucklings and lambs, and 12,490 sheep were presented to the god. Most of these must have been intended to serve as a source of income. Similarly the prisoners who were devoured by Khahid would have been given as temple slaves. In the case of victory, the share of the god, we are told, was a sixtieth of the spoil (ib. xlii. 16). The temples, of which there were several varieties, probably possessed festival halls, since we hear frequently from the temple inscriptions of the king’s feasts.

ARMENIA (Zoroastrian).—The sources of our information for the earlier epoch of Armenia’s religious history are the Vannie or Vannie inscriptions (see preceding art.). For the Indo-Germanic period down to Christian times the most important native sources are Agathangeles (5th cent., ed. Venice, 1892), Moses of Chorene’s History and Geography of Armenia (5th cent., ed. Venice, 1865), Faustins of Byzantium (5th cent., ed. Venice, 1889), Eznik (5th cent., ed. Venice, 1829), Anania Shirvaci, (7th cent., ed. Patkanean, St. Petersburg, 1877), and (for names) the ancient Armenian historians, and the later literature and literature of the OT. We also gather short but valuable notices from Xenophon’s Anabasis, Strabo’s Geography, and the works of Dio Cassius, Pliny, and Tacitus. Considerable as the material is, it is not always reliable, or rather definite, as is shown by authors, and is, therefore, very fragmentary. We may, however, hope for important additions to our knowledge of Zoroastranism in early Armenia from the critical study of Armenian folk-lore and popular superstitions, when enough shall have been collected for the purpose.

Originally there was nothing in common between the Iranian races and the ancient inhabitants of Armenia, who were probably connected with the Hittites in the West and the Canaanite races of the North (Jensen, Hittiter und Armenier, Strassburg, 1888; Messerschmidt, Die Hittiter, Leipzig, 1905, p. 10; Winckler, ‘Westasien’ in Helmut’s Weltgeschichte, Leipzig, 1901, iii. 152 ff.; Hommel, Grundriss der Geog. und Gesch. des alten Orients, Munich, 1904, pp. 37 ff.; Prasse, Gesch, der Meder und Perser, Gotho, 1906, i. 57, 65). But Armenia, owing to its geographical position, was destined to become one of the points of contact with Iranian politics and civilization when the Medes began their political career. Towards the end of the 7th cent. B.C. the Vannie, or Khahidian, kingdom (see preceding art.) came up on the borders of the Cimmerians and Scythians, and during this period of anarchy the Armenians seem also to have entered the country which was henceforth to bear their name (Hirt, Die Indo germanen, 1903-05, p. 138). Meanwhile the Medes had begun
ADRESSING the national career not long before 935 B.C. (Justi, 'Geschichte der iranischen Kultur,' 1807-19, v. 1; Gr. Philologie, Strassburg, 1904, ii. 494-496), and the Median empire had been founded, probably in 675-677 B.C. (Praske, op. cit. i. 108). From that time Iranian influence was strongly felt in the politics, language, and religion of Armenia, and the Iranian religion, with its terminology, names of divinities, and many folk-beliefs, permeated Armenian paganism. How far the resultant religion may be treated as Zoroastrian without being a separate study of the material available, which may most conveniently be arranged under the main rubrics of Zoroastrian theology.

I. CELESTIAL HOSTS.—1. Ahura Mazda.—The Zoroastrian chief deity of ancient Armenia was Ahuramazda (see ORMAZD). In Agathangeles, the historian of the conversion of Armenia, King Tirdates calls him 'the maker of heaven and earth' (p. 107), and 'the All Good, Mhr, and Nané; giver of abundance and fatness' (Agathangeles, pp. 58, 61, 106, 500, 601, 503); while Moses of Chorene incidentally remarks: 'There is no such thing as Ahuramazda; but among those who were driven away by Alexander, and who bear the name, and one of them is Kund Aramazd' (Hist. of Armenia, i. 31). It is uncertain whether this refers to the Greek Zeus or to the Iranian Ahura Mazda. In the first case it might mean the bold (phrasing) Zeus, the chief deity of the ancient Persians, and might be translated 'brave,' 'strong' (Stepanean's modern Armenian translation of Moses of Chorene, p. 305). In fact, 'brave' and 'strong,' are frequent epithets of the Armenian Ahura Mazda (Agathangelos, pp. 52, 61, 100). The name Aramazd reminds us of the Ayrumazda of the Old Pers. inscriptions, rather than of the Avesta or Pahlavi forms Ahura Mazda or Ashaharmazd, Ormazd (cf. Armen. Ormizd). There is another important passage in Agathangelos (p. 629) about Ahuramazd, which may be tentatively translated thus: 'In the season of the god of the New Year, (who is) the bringer of new fruits, of the festivities of the hospitable god.' The later Greek translation reads: καὶ τὸ μεγάλον τῶν ἀνθρώπων έτος ἐν τῷ μεγάλῳ πάραρχω δύναμις τῆς τέχνης τιμωρίας, τοῦ παλαιίστα τρόπου τῆς τέχνης τοῦ μεγάλου πάραρχου τοῦ παλαιίστα τοῦ τέχνης. And he ordered the commemoration of the great god to be distributed on the great feast of Inian, which was widely held in honour of the ancient gods from the first fruits of the new year. The festival is called that of the hospitable gods (transliteration of divd; 'god'), which they joyfully celebrate in that place from old times, on the last day of the year.

This translation shows that the Gr. supposes a different, but none the less obscure, Armen. recension. The text must have become corrupt in early times, and yet St. Clair-Tisdall ('Conversion of Armenia to the Christian Faith,' London, 1806, p. 50) sees in it a new deity Amenabo, who had for a title Amanor (New Year). Others recognized Vanatu, 'hospitable,' as a separate deity, and explained it as 'deus hospitalis' (Gerber, Zur Armen., p. 105, 149) or 'Lord of Van' (Hommel, op. cit. p. 39). Moses of Chorene, however, in his allusion to this festival (ii. 66), treats Amanor simply as a common noun; nor does it appear from the text of Agathangelos as stands, either here or elsewhere, make it necessary to take either Amanor or Amenabo as the name of a deity. As for Vanatu, the only other time we find it mentioned (Armen. tr. of 2 Mac 6 59., and Xen. Vulg. 'hospitalis'), it is used as an adjective qualifying Aramazd. We can, therefore, fairly infer that it is simply the Turkish Amanor or Navasard, which is poetically described as a feto champitre (Grigor Magistros), was celebrated in honour of Aramazd, who was the lord of the New Year, quite as the six days of the Zoroastrian New Year began on the day Ahuramazd of the month Fravashit in honour of the creation of the world in six days by Ahura Mazda (Mar. 15; cf. al-Biruni, op. cit. pp. 169-171). Navasard, accordingly, as well as the calendar of pagan Armenia, in August, when the new fruits began to be gathered; and the Armenians still perpetuate the memory of this early autumn celebration by distributing and eating fruits on New Year's day.

The most prominent sanctuaries of Aramazd were in the ancient city of Ani in Darnali, the burial-place of the Armenian kings (Agathangelos, p. 590), as well as in the villages of Bavarvan, Bagravan (ib. p. 72), and Navasard. Navasard is the name of the festival of the first fruits of the new year and is celebrated in the month Fravashit ('The coming of the rich fertilizing Virgin' in Alishan's Hayopatun, Venice, 1901-02, p. 79). It is not easy to determine what the Armenians understood by the fatherhood of a female deity. The goddess is mentioned as his consort, not even Spenartam. It is through sheer ignorance that a late martyrology (quoted by Alisah, Ancient Faith, p. 290) calls Amanit the wife of Aramazd, and she being rather his daughter (see below). The fatherhood of Ahura Mazda, however, is not altogether foreign even to the Avesta, which represents him as both the father and the husband of Spenta Armaiti (Yasna xiv. 4, xxxiv. 10; Yasht xivii. 16), as well as the last month of the female deities (according to the Pahlavi commentary on Vendidad xi. 5, of the Fravashis; cf. also Yasna xxxvii. 1; Visperad iii. 4), and the parent of Asha Vartaša (Yasna xxvii. 2), Sraosha, Rashn, Mithra Ashi (Yasht xviit. 10), Atash (Yasna xxxvi. 3, etc.), Haoma (Yasna xi. 2), and, indeed, of all the Ameša Spentas (Yasht xviit. 2). On the whole, one may affirm that the Armenian Aramazd agrees with the Gr. Aramazd, and in the Avesta we know him, with the Avesta Ahuramazd. In the Armenian of the 5th cent., Ormizd, the variant form of Aramazd, generally refers to the last month of the Zoroastrian Ahuramazd; but the adjective Ormesakon, 'Ormazdian,' may also have been used in reference to the Armenian Aramazd and the Greek Zeus.

2. Ameša Spentas.—Of these Zoroastrian archangels (see art. AMEŠA SPENTAS), only Spenta Armaiti is unmistakably present in the Armenian pantheon. Her name appears in two forms, Spandaramat and Sansaramat, with a difference of meaning, the latter term denoting 'abyss,' 'Hades' (cf. Halschmanner, Armen. Gram., Strassburg, 1897, i. 73-74); but Spandaramat never occurs in the abstract theological meaning that the Avesta attached to the Indio-Iranian spirit of the earth and the keeper of things living (cf. the Pahlavi Shiiyati-la Shiiyati, xv. 5; Gray, AWD vii. 364-371). It is owing to this latter function of Spenta Armaiti, however, that the Armenian Christian writers of the 5th cent. used her name to translate Aragud, 2 in 2 Mac 2 18, and, in 2 Mac 3 24, 3 Mac 25. Spandaramat in the former form of Sansaramat possessed anything but be a synonym of Hades, and was very frequently referred to in theological books and in the Church.
ARMENIA (Zoroastrian)

hymnary. This sense is not altogether foreign to the Avesta itself, where, from being the genius of the earth, Spenta Armaiti gradually became the dark, woad under world.

The darkness of Spenta Armaiti (Vendidad iii. 35) is a well-known expression of the Avesta, which has in common with the Bab. cosmology, that the insatiable fires of Hades which it contains, and that the powers of Hades have something to do with the fertility of the ground and with agriculture (Jerem. ii. 12; Prov. 18:11). The earthenware is of a flower (hypaconitus racemosus Dodonée), first mentioned by Agathangélos, p. 450 (cf. Abeggian, Armen. Volksglaube, pp. 62–65).

In the Quaran, ii. 66, Harut and Mărit are mentioned as the names of two angels in Babel, who, according to Muslim tradition, have given themselves impatiens with human之初, were sent down to earth by God to assume human flesh and to live in human circumstances. They could not, however, resist the beauty of women. We do not know whether they stayed in Babel or were sent to a place where they thereafter taught witchcraft. In the Arabic story of Buljaysa, incorporated with the story of Hābīb Kārim-od-Din (Aghahās, v. 72–73; Shiragaci, pp. viii–ix) 1434), Hilit and Milīlit, or, in Thālabi’s Idqat al-Ahlyā, Jihit and Milīlit, are the first inhabitants of Babel. Burton and Eb. Nestle (ZDMG iv. 692) identify these with Harut and Mărit, which have long been recognized as the Pahlavi Horvadat (or Hormart) and Amerdāt (or Amerdad), of the Avesta Hurvatāt and Ameratāt. The Muslim tradition in respect of these names is many centuries old in Rabbinical literature, and the whole is, ultimately, a Rabbinical elaboration of the intermarriages of the sons of God and the daughters of men. In the Apostolic Writs (as hath Mohammed aus dem Juden-)

The association of the names of Flora and fauna in the Zoroastrian fire-worship is apparent, but has not so far been drawn into any Rabbinical legend of the Quaran, and by what curious accident, instead of the later Pahlavi forms, we have Harut and Mărit, which find their parallel only in the Armenian name of a flower, very problematical. Either Harut and Mărit are Parthian, or even Syriac, corruptions of the archangels’ names, and found their way both to Armenia and Arabasia, or they are purely Armenian forms, and reached Muhammad from the north. At all events, Harut and Mărit were not remembered in Armenia as angels. We know, on the other hand, that the two Zoroastrian archangels in question were protectors of the vegetable world; Parthian Haraudad and Amerdāt were the tutelary deities of the Pahlavī frōbāg (Avesta *xwaromā-baya, ‘fire of divine glory’), a fire established, according to Iranian tradition, in Chorasmia, and later removed to Kabul (Bundahisn, xvii. 5–6). In the hagiography called the ‘Coming of the Rhidian Virgin’ (Alishan, ed. Venice, 1865), they were ascribed to Moses of Choresme, where we read (on the top of Mount Pa’nak) (1) there was a house of Aramazi and Astālik (Venus, and on a lower peak, to the south-east, there was ‘a house of fire, in which the insatiable fires of Hades were burnt. At the foot of the mountain, moreover, there was a mighty spring. The place was called Buth. They burned the Sister Fire and the Brother Fire.’ In the caves of the sacred well twofold dragons, devilish and black, to which young men and young virgins were sacrificed. And the devils, gladdened by this bloodshed, produced, by means of the altars of the fire and the spring (3), terrible sights, lights, and rolling Thunder; and the deep valley was full of snakes and scorpions.” Elsewhere we read: ‘Because they called the fire sister, and the spring brother, they did not throw the ashes away, but they wiped them with the tears of the brother’ (Summary of the Picture of the Holy Virgin in Moses of Choresme, Works, ed. Venice, 1865).

This form of fire-worship in a volcanic region has hardly anything in common with Zoroastrianism, though we have a true remnant of fire-worship, even in modern Armenia. A bonfire kindled everywhere by Armenians on the festival of Candlemas, or the Purification of the Blessed Virgin Mary (Feb. 13–20), when fire is kindled from on the altar on the occasion of rejoicing and good augury. The festival is called in popular language Ternatz, and in the Church calendar the commemoration is called Tarnedag, ‘Presentation of the Lord’ (Abeeggian, op. cit. p. 72).

It seems that the ashes of the sacred fire were also honoured, and the Christian writers love to remind their readers of the times when their ancestors were ash-worshippers (Agathangélos, p. 77; Ananias Shiragaci, Praise of the Cross; quoted by Alishan, op. cit. p. 45 ff.); while Thomas Arzruni applies this name to the Zoroastrians (Hist. i. 9–10). Nevertheless, vestiges of ancient fire-worship are still to be found among the Armenians of the interior (Abeeggian, op. cit. pp. 66–74).

It is quite possible that two types of fire-worship existed among the Armenians—one, older and more primitive, in which fire was a feminine principle, and stood in the bosom of the brother; the other type similar to the Zoroastrian.

(2) Water.—Water was honoured in Armenia as a masculine principle. Many rivers and springs were sacred, and endowed with benedicent virtues. According to Tacitus (Annals, vi. 37), the Armenians offered horses as sacrifices to the Euphrates, and divined by its waves and foam. Sacred cities were built around the river Araxes and its tributaries. Even now there are many sacred springs with healing power, and the people always feel a certain veneration towards water in motion.

Transfiguration Sunday in the Armenian Church was amalgamated with an unmistakably pagan water-festival, during which the people amused themselves, as they still do, with throwing water at each other. A similar custom connected with New Year’s Day is reported of the Persians (Alishan, op. cit. p. 192; al-Birint, Chronology, pp. 199, 293). The Armenian water-day, or feast of the Transfiguration, is called vardana, or ‘rose-festival’ (from vard, ‘rose’). It falls in the last days of the winter month from the Armenian calendar (Alishan, op. cit. pp. 283, 305).

* Shapur, not Ardashir, actually took possession of Armenia about A.D. 305.
The great Zoroastrian water-goddess, however, do not seem to be connected with water-worship in Armenia, even when they have a place in the Armenian pantheon. Of these yazatas we perhaps recognize Apānā Nāpāt in the name Ñapot, the Nāpāt of Naxi, a national divinity or Napsatavon of Naxigut, Naps being also the designation of the 26th day of the Armenian month, which was consecrated to the mountain.

(3) Anahit. —This goddess, doubtless an importation from Persia, was the most popular deity of Armenia. In Agathangelas she is called 'the great lady [queen] Anahit, the glory and life-giver of our nation' (p. 51) through whom the country of the Armenians exists and has life (p. 51), and she is 'the mother of sorrows, the benefactor of all mankind, and a daughter of Arazmaz' (p. 52). She is invoked, in an edict of Tiridates, to protect and watch over the country (p. 106). She was also called the golden mother (p. 407), and statues of massive gold were consecrated to her (pp. 601, 607), one of which (at Erêz?) was captured by the soldiers of Antony (Pliny, HN xxx, 24). With this may be compared the description of Ardy Shitter, the 'Golden Dawn' (Yahkhat) of 64, 78, 101-102, 123, 126-129), 'who purify the seed of all males; who purify the wombs of all females for birth; who maketh all females bear with ease; who giveth all females meat (and) tithe thy milk' (ib. 462). Anahita is distinguished as a female, but Agathangelas was paralleled by her Avesta attributes, 'laced with gold' (Yash. v. 64), 'wearing a golden kerchief' (ib. 123), 'with square golden earrings' (ib. 127), and 'with a golden diadem' (ib. 125; for further details, cf. Windischmann, Die pers. Anahita oder Anaitis, Munich, 1856). While the sacrifices offered to Anahita as described in the Avesta (e.g. Yash. v. 15, 21) are quite conventional, the Armenians offered her green branches and white heifers (Agathangelas, p. 49). Luke and Porphyrj Plugins Lives saw in Yashtshat (7) herds of these heifers, which were used only for sacrifices, at all other times 'wandering up and down undisturbed, with the maidens gazing at a target, branded on them.' Anahit was sought also in cases of great sickness (Moses of Chorene, ii. 60).

Three elements are to be distinguished in the Avesta Anahita. She is a planet (Venus), a goddess of the heavens, and presiding over the birth and nursing of children, and the increase and maintenance of all things. The Armenian Anahit is pre-eminently a goddess, with no reference to a planet or water. The fact that in Erêz this goddess admitted of a double form of worship, such as are generally associated with the orgiastic nature-cults of Asia Minor, must be explained by the proximity of Akhsianese to Asia Minor, as well as by the part which the Avesta Anahita plays in human conception. Strabo says of this special cult (p. 532):

"Both the Medes and the Armenians honour all the sacred matters of the Persians; but above everything the Armenians honour Anahit, to whom they erect temples in other places, and especially in Akhsianese. The very next day they consecrate her to her servants, male and female," and this is not surprising: but the most illustrious men of the nation give to her their virgin daughters, who, according to custom, give themselves up to consecration for a long time near the goddess, after which they are given in marriage, and none thinks it unworthy to live with them."

We have also no proof, however, that this sacred prostitution was characteristic of the Armenian Anahit throughout the country, especially as native Christian writers do not mention it, although the they might have used it to great advantage in their attacks upon the old religion.

Besides the great sanctuary in Akhislane, which was also called the Anahitishan district (Dio Cassius, xxxvi. 88), Anahit had temples in Artashat (Artaxata) (Avesta, p. 84) and in Yashtshat (p. 606); while a mountain, now difficult to identify, was called the throne of Nahat (Panustus of Byzantium, v. 23), probably owing to the presence of a great sanctuary of the goddess there.

An image of Anahita is said to have existed in the district of the Anazvatatz around the 'Stone of the Blacksmiths,' where, as in Buth, there was a mixed worship of fire and water, along with magical rites (Alisian, Hiskapian, p. 108).

The great festival of Anahit was celebrated, according to Alisian (Ancient Faith, p. 269), on the 15th of Navius with processions and rejoicings. The 18th day of every month was also consecrated to her (Theophilus, 1829, quoted by Alisian, Ancient Faith, p. 143).

(4) Sun and moon. —Moses of Chorene makes repeated allusions to the worship of the sun and moon in Armenia. In oaths the name of the sun was almost invariably invoked (ii. 123, p. 367), and there were also altars and images of the sun and moon (ii. 77). Of what type these images were, and how far they were influenced by Syrian sun-worship, we cannot tell. Agathangelas, in his letter of Diocletian to Tiridates, unconsciously bears witness to the Armenian veneration for the sun, moon, and stars (p. 125). But the oldest witness is Xenophon, who notes that the Armenians sacrificed horses to the sun (Avestash, iv. 3, 35; Weber in his Die kathol. Kirche in Armenien, Freiburg, 1903, p. 28, understands this šmnr as Mithra). The eighth month of the Armenian year and what is more significant, the first day of every month, were consecrated to the sun, and bore its name, while the first day of the Persian month was assigned to Ahrunamada, the eleventh day being given to the sun in the Zoroastrian calendar. The twenty-fourth day of the Armenian month was consecrated to the moon, as was the twelfth in the Avesta system. The Armenians, like the Persians and most of the sun-worshipping peoples of the East, prayed towards the rising sun, a custom which the early Church, especially, adopted, so that to this day the Armenian churches are built and the Armenian dead are buried toward the east, the west being the abode of the devil (see below). As to the moon, Anania Shiragaci says in his Demonstrationes (ed. Patkhuaneh, p. 46), 'The first father beget her the nurse of the plants,' an idea which has its parallel, and probably its source, in the short Mith-yash of the Avesta, particularly in that vegetation grows best in the time of the waxing moon (Yash. vii. 4; al-Birānī, Chronology, p. 210). Ohan Mantaguni (5th cent.) combats the general belief that the moonprospers or mars the plants (Discourses, Venice, 1890, pp. 198-199). The Armenians also shared the superstitions about the eclipse of the sun and moon current among the Persians, who held that these phenomena were caused by two dark bodies, offspring of the primeval ox, revolving between the sun and moon and interminably passing between them and the earth (Daitiša-Denaig, lxxix. 2; Shiikand gomriŋ Vajāt, iv. 40). It was, moreover, a popular belief that a sorcerer could bring the sun or moon down from heaven by witchcraft (Eznik, p. 217), though this does not find a parallel in the extant Zoroastrian writings.

No doubt the Persian worship of the sun and moon found a similar worship of long standing in Armenia, that of the Urants.

* The modern Armenians still speak of an 'evil-star' which causes the eclipses.
ARZENIA (Zoroastrian)

art.), and could do little more than influence it to a certain extent. In this respect, he is necessarily, with some plausibility, that the famous hymn to Vahagn, quoted by Moses of Chorene (i. 31), sounds like a sun-hymn: 'The heavens travelled; the earth travelled; Above the mountains they travelled.
And in the sea
The waves travelled.
From the stem of the reed there rose a smoke;
From the stem of the reed there rose a flame;
F журнал the flame ran fast.
He had fiery hair;
He had fiery eyes;
And his ears were suns.'

Both sun- and moon-worship have left deep traces in the popular beliefs of the present Armenians (see Abegg, Tischter, 'Notes sur la mythologie Arménienne,' in Transact. of 4th Internat. Congress of Orientalists, London, 1803, ii. 823 ff.).

In the Armen. Introd. (pp. 41-49), we meet with a short or tribe called 'the Sons of the Sun,' first mentioned by Grigor Magistros (15th cent.), who says, placing them between the Zoroastrians by the Christians, 'Behold, some of the Persian Magi of the Mage Zoroaster and the sun-worshippers conversed of them, called Sons of the Sun. But they live in Mesopotamia, and call themselves Christians, but we know how vicious and abominably they conduct themselves. In the same way, says Abanok, a son of Abanok, as he relates, a little later: 'The Paganists or Zoroastrians are the tribe of the Sons of the Sun,' he is evidently confusing three distinct things, the Sun-god of the Persians (Neres Shendih, 15th cent.) and the 'Sons of the Sun' we learn that they wished to be received into the Christian Church, and, as far as I know, he is of opinion, they were Armenians both in language and in nationality, who had remained unconverted in the times of Gregory the illuminator, but now abandoned their false faith and their evil ways. Neres gives special instruction about their reception into the Christian Church, about their moral life, and upon giving up their magical practices, especially among women. 'Teach them to abstain,' he writes, 'from mixing impure foods in the food and drink of the Christians for the purposes of their own dishonest love.' Neres also mentions their worship of the sun and their reverence for it.

The next is, later than the last letter to the pope, says: 'At that time (middle of the 15th cent.) there were Sons of the Sun in Manazziert;' and in the same century, Mihitar Aparejan writes: 'There are some Armenians by birth and language who worship the sun, and are called Sons of the Sun. They have neither writing nor literature. Fathers teach children by tradition what they have learned from the Mage Zoroaster, the chief of the fire-temple. Wheresoever the sun goes, they worship him in that direction, and they reverence the poplar, the ily, the cotton plant, and the other plants which turn towards the sun. They make themselves impure in faith, wicked, high and low, sacrilegious. They offer sacrifices for the dead, and they pay taxes to the Armenian priests. Their chief is called Harut and Armud, and twice or oftener every year all of them, men and women, sons and daughters, gather in a very dark pit.' In another place we read:

A woman feels no easing towards the sons of the Sun:
Not towards a Turk or an Armenian:
Whoseover she loves, he is her father.

In the 15th cent., Thomas Mejop'eci tells us that Timurlang came to Marzin (Mesopotamia) and destroyed four villages of the Sons of the Sun—Sudok, Shemok, Safari, and Moxa. 'But by the machinations of the devil they multiplied in Marzin and Amid.'

These quotations are drawn from Allahan's Ancien Faith of the Armenians, and from Grigor Vaztian's art. in Mandar Armensia, 1896, p. 135. Some of them are evidently of little value. Vaztian tries to prove that the Sons of the Sun were not Armenians, because (1) they had no literature, (2) they were neither politically by the Christian Armenians. Moreover, he finds it difficult to identify them with the ancient Zoroastrians, because they had no magi or fire-worship. These conclusions are castigating and critical of the subject. Even Grigor Magistros interposes them, in his albation into the Armenians the Zoroastrians and the Thondracians. They spoke Armenian and called themselves Armenians. If they were not persecuted, this may well be due to the fewness of the Zoroastrians in Armenia. They always shown nothing animosity against its own heroes than against heathenism, even when it was a question of some Zoroastrians. The Tistrya (Zoroastrian) propaganda of the 7th century, in Armenia, was, however, a certain community which had lost its mags and sacred fire. They may possibly have belonged to some districts of the western Armenian nation, or they may have been descendants of Armenian converts during the strong Zoroastrian propaganda of the 7th cent. in Armenia. This, however, should be noted that they have lately been found to have some points of contact with the Yazidis (p. 47).

(5) Tistrya. — Another important yozata of Zoroastrianism is Tistrya (Sirius), the 'bright and glorious star' (Yasna i. 11, xxvii. 2, etc.), who assumed the form of a bull with golden horns (Vendidad xix. 37), and again, as a white horse with yellow ears and golden bridle, fights against the demon Apana (drought) and pours upon the earth the rain and the seeds of all plants (Yasht viii. 18–33; Bundahish ii. 18). He is the chief of all the stars (Yasht viii. 44; Piturc, de Leide et Osiride, 47), or at least of the stars of the East (Bundahish ii. 7); and the eighth Yasht is devoted to his worship. There was also Tir, the genius of the planet Mercury, to whom, according to the Bundahish (v. 1), Tistrya was opposed.

In Armenian mythology also we find a Tir or Tur, who has often been wrongly identified with Tistrya, but who is, in reality, another divinity altogether.

The Armen. Tir (which Jensen, Hittiter und Armenier, pp. 186–187, endeavors to derive from Armenian, ap'thr, 'writer,' 'scribe,' which would be a title of the Bak-Asyri, Naha, who was both the scribe of the gods and the planet Mercury (Orell, AllgemeineReligiongesch., Bonn, 1899, pp. 185–186) is undoubtedly identical with Tir, the son of Abanok. Probably the phoereous compounds as Tiridates and Tiribazus (cf. Noldke, SWAW, phil.-hist. Classe, xci. 417–420; Justi, Iranisches Namenbuch, Marburg, 1895, p. 325 ff.), and who was widely known and honoured as an independent deity, being probably, if not identified with the planet Mercury, although Tir is not found in Armenian with this meaning.

Both in Cappadocia and in Armenia the fourth month was consecrated to this Tir; and this was also true of the Parsi calendar, although, for theological reasons, the Parsi later made Tir the equivalent of Tishter (Bundahish xxiv. 3, with Aryan 'sii. 8). The Armenian Tir was known as 'the interpreter of dreams,' as the tutelary deity of arts and learning, and as the scribe of Ornizid (Agathangelos, p. 584). Among the Armenians of modern times the writer (very probably Tir) has much to do with human fate and destiny. The writer takes life! is a common improvement.† Tir is, therefore, the Armenian Naba, and there can be little doubt that the description given of him by Agathangelos whose Greek translater equates Tir with Apollo (Lagusare, Zusammenschluss der Handlungen, Leipzig, 1790, p. 327) agrees, in the main, with the general belief among other Oriental nations about Tir. In fact, the planet Mercury also is known among the Persian poets as 'the star of the poet.' The expression 'Scribe of Ornizid' applied to Tir in Agathangelos has a Persian tinge, for the Armenians very seldom used the name Ornizid for their own Arzamaz.†

(6) Mithra. — Last, but by no means least, among the Zoroastrian yozata is Mithra, the genius of the light of the heavens, and the god

- The Zoroastrian calendar also devotes the thirteenth day of each month to Tistrya (Avesta) or Tir (Pahlavi) (cf. Stricker, ii. 18, 19; Yasna xxiv. 4, with Bundahish xxvi. 3). That Tir here refers primarily to the planet Mercury, and not to Tistrya (Sirius), is confirmed by authorities in the Tistrya of the Tirgahin, celebrated on the day Tir of the month of Tirichon (chron. 326–328). 'The name of this day is Tir or Mercury, who is the star of the scribes.' The difficult problem of the replacing of Tir by his opponent Tistrya (cf. Spiegel, Xerces o7epeceret, Leipzig, 1822–1823, iii. Intro. 21–22; Noldke, loc. cit.) is perhaps best explained by Jastrow, op. cit. p. 335: 'Da die Planeten später als feindliche Wesen galten, ward Tir als Sonnengott des 4. Septembertagen durc[t] durch den Tistrya (seiner Gegner) ersetzt; im Altertum hatt Tir als sun genannt. Thau thm Name bildet, heusen.' The derivation of Tir, "Mercury," is uncertain.—Louis H. Gray.

* Cf. also Abgarg on the Grakhr, 'grakhr's writers,' as spirits of disease (op. cit. pp. 122–123). The words Tir and Tur were also used as equivalents of Tir, forming their relation to the deity's name, however, is not quite certain.

† In Egypt this god had his parallel in Thot, the moon-god of Chenen (de Lasansay, l. 207).
of truth and faithfulness, whose praises are especially celebrated in the tenth Yasht. Derzana was the centre of Armenian Mitra-worship, and he also had a famous temple in the sacred village of Bagaran Arik (Agathangelos, p. 593). Although we have no proof whatever that Mithraism had obtained any foothold in Armenia proper, Mhbr, the Armenian Mithra, was especially called the son of Armanaz (Agathangelos, p. 583; cf. Yasht xxv, 173). Although he was not a man of the sun and Vanahagn among the Armenians, he does not seem to have become as prominent in Armenia as in Persia, his place seeming, indeed, to be usurped by Vanagn (see below). Nevertheless, his name occurs frequently as a component part of many proper names of persons, such as Mhhran, Mhhrat (Mithridates), and Mhhratan (Hîshâmân, Armun, Grammatik, i. 52-54), while the Armenian root *man, 'pagan temple, idol, altar,' has also been traced to the same source (cf. Hîshâmân, op. cit. i. 194). The seventh month of the year and the eighth day of each month were his; and in the Zoroastrian calendar the seventh month (the first month of the year) is called "the month of Vanahagn" and is celebrated by the name of the sun. We know nothing, however, of the functions or other duties of the Armenian Mithra.

(c) Fravashis. — Chief among the Zoroastrian fravashis (lower angels), is Verethraghna, the general of the good men, and preserver of the fourteenth yasht. Like Mithra, he is of Indo-Iranian origin. In Pahlavi times his name was whined down to Bohadum, often used by Persian kings as a title. His epithet in Vîrbrduhna is Huzvat. It is also very possible that Vrâmanê, the name of the second son of Gregory the Illuminator, reflects the Parsehian form for Verethraghna. Since Lagarde, there has been a strong tendency to identify the Armenian Vanahagn, part of the god of war and victory (Agathangelos, p. 106), with Verethraghna. According to Armenian phonetic laws, this is quite possible, although the termination -yin and the complete disappearance of both *rs constitute a difficulty. There was, moreover, a noble family called the VahÊvenini (Eliuseps, pp. 70, 127, 160, 173); while the list of the Armenian nobles in Mesrop's Life of St. Nerses gives Vohuveni (p. 33), but further below it adds the Vakhun (p. 34) as a different family. Moses of Chorene (i. 31, ii. 8, 12, 88) knows a priestly family of the name of Vahkuni, whom he makes descendants of Vanahagn. Probably in all these cases the Armenian word is the result of a phonetic substitution of the final syllable of his name was treated as independent.

Although in the ancient Armenian triad of Armanaz, Anahit, and Vanahagn (Agathangelos, p. 106), Vanahagn has the place of Mithra in the Old Persian triad (Art. Sus. a, 5; Ham. 6), he must be interpreted, despite the minor phonetic difficulties already mentioned, from the Avesta Vîrbrduhna. Essentially a deity of victory, the latter fittingly declares: 'I will conquer the malignancies of all the malignants: the malignancies of demons and men, of wizards and witches, of oppressors, kouis, and karopas' (Yasht, xiv. 4), while the very form of his name recalls its Sanskrit equivalent *vîrâruha, the Vedic epithet of Indra as the slayer of the cloud-demon Vîrata. The reflection of his career in the Avesta is seen in the statement that 'Vîrata the victorious is the stimulator of the war-lîke' (Shûmetâ-vîrâruha, xxv. 20), although the Iranian texts preserve no tradition of Vîrata conquering over dragons in the strict sense of the term. On the other hand, in Hellenic times Vanahagn was compared with Herakles, and called the dragon-killer (Yasht, xiv. 4), while the Greek Agathangelos translates Vâhagn as 'Hrâklys,' and, reversing the process, the Armenian version of 2 Mac iv renders 'Hrâklys' by Vâhagn. Ancient Armenians told, moreover, of Vanahagn's stealing straw from Barsham (the Syrian god Baal-Shemun, 'Lord of Heaven'), which he let drop on the way, thus fouling the Milky Way (Anania Shirzwazi, p. 48; cf. Abeghian, 'Armenian Yâzdnâda,' pp. 49-50). The Vanahagn-song, the parallelism of Vanahagn with Herakles, and his relations to Mithra and Barsham, tend to create the presumption that he was also a sun-god. The most famous temple of Vanahagn was in the region of Tarzan (cf. Yâzdnâda, pp. 606-607), where he was also known as the lover of Astûrîk, the Syrian Aphrodite (Agathangelos, p. 607; Moses of Chorene, p. 88).

2. INFERNAL BEINGS. — I. Ahriman. — Ahriman (Armen. Arkuw) is never referred to in connexion with ancient Armenian paganism; but the absence of his name may be easily understood when we remember that, while Christian writers had a reason for arguing against the ancient deities, Ahriman (q.v.) and his retinue naturally coincided with Christian demonology. Other Zoroastrian evil spirits were known among the Armenians, however; and they were included in the sixth archdemon Armun. Besides Arkuw, the forms Haranâmi(1) and Khurânu(1) were also current in Armenia, Haranun being apparently the older (Arsacid) and Arkuw the younger (Sassanian) form (Hîshâmân, op. cit. i. 197-29); so that the pagan Armenians possibly used Haranun to denote the Ahrimân of their religion. Huranâmi is used as an epithet of snakes by Abraham of Zemag, a 5th cent. writer.

2. Demons.—Of the six Zoroastrian archdemons there is no mention. The Asmodœum of the Book of Tobit (3rd etc.) was transliterated by the Armenians as Asmod, which plainly shows that the name suggested nothing familiar to them.† The word der (Avesta dares), 'demon,' was current among the Armenians, although they had also native words like ais. The deos preferred stony places (Moses of Chorene, iii. 53) and ruins (Eznik, p. 89). They appeared as serpents (Faustus of Byzantium, v. 20 and many other hymns; Eznik, p. 98); some of them were corporeal, others incorporeal (ib. p. 97).

The draços were lying, perjurings, harmful spirits, probably believed in by Armenian folk, like the Greek counterparts, the drakloi. What the Avesta says in regard to their third mode of self-propagation—by the semen emitted in the polluion nocturna (Vendidâd xviii. 45-52)—seems to have been a current belief among the Armenians (Eznik, p. 178; Abeghian, Armen. Volksleauwe, pp. 35-36). The yâttu, 'sorcerers' of the Avesta, who were able even to slay men (Vendidâd vii. 3), are well known and much feared among the modern Armenians as tãntûva. The pareidôr (Armen. pârsûk), destructive female demons (cf. Yasna xvi. 8; Yasht viii. 54, xii. 104; Vendidâd i. 9, xi. 9), were also believed in, but Eznik (p. 97) classifies them with such chimaeras as the yakhaparak and hamobrus (see below).

3. MONSTERS AND CHIMAERAS. — Abdâk (Avesta Azi Dahâko) and Visiap, especially the latter, occupied a large place in ancient Armenian superstition; and Moses of Chorene (i. 199) states that he was thought to have been an aration (Vendâd xvi. 600), possibly because of its Armenian worship, and specially this temple, rose to importance in Armenia. The later notable sanctuaries (Agathangelos, p. 34) had established themselves. † It should be noted that the divergences between the Jewish *tântûva and the Avesta *tãntûva ('demoniac man,' or 'demoniac body') show that the usual view that the two are identical is not free from suspicion (cf. Ginsberg in JB ii. 219).—Louis H. Gray.
Aždahak, in Armenian, is the same as Vaisap. The latter word is, it should be noted, a loan-word from the Avesta, 'the monster of the dragon-legend. In a later chapter Moses states that Aždahak was fettered and imprisoned in Mount Demavend by Hruden, escaping only to be re-captured and guarded by his conqueror in a cave near the mountain. In the Zoroastrian legend, Aži Dakhâ, after a reign of 1000 years, was enchanted by Thraetona (Armenian, Hruden; Pahlavi, Frēfrān) under Dimavand, whence he is to arise at the Last Day and be slain by Sāma Keresaspā (Bundahishn xxix. 9; Dāšt-i Dēnīg xxxvii. 97; Dini-â Maínōg-i Khret xxii. 38-39; Dinkert vii. 1, 26). Moses likewise records that Aždahak was kissed by the shovellers, and that from this kiss sprang serpents, which were fed on human flesh. Though the extant Avesta does not note this, Aži Dakhâ there being 'three-mouthed and three-pated' (Yasna ix. 8), the Dāšt-i Dēnīg (loc. cit.) alludes to it in the Avesta dēhō, 'the three-mouthed and three-pated demons and fiends in the shape of serpents are winged.' The legend is further elaborated by Firduswi in the Šāh-Nāma (ed. Vullers-Landauer, pp. 28, 99-30, 144; 35, 12-14), according to which the latter was bestowed by Dībs. The legend of Aži Dakhâ was also treated at length in the twentieth section of the lost Šāh-nāsḵ Nāsk of the Avesta (Dinkert ix. 21).

Aždahak (Eznik, pp. 102-107) were corporeal beings which could appear both as men and as serpents, and could soar in the air by the help of oxen (i). They were fond of carrying the grain away from the threshing-floor, either by assuming the shape of mules and camels, or by real mules and camels of their own. In such cases, the Armenians called 'Kāl! kāl! 'Stop! stop!' (Eznik, p. 103). They also sucked the milk from cows (Vahram Yartab (13th cent.), quoted by Ališan, Avençet Fatih, p. 172) this višops went hunting on horseback; they had houses (Eznik, pp. 104, 107; cf. also Yasht xv. 19, and Darmesteter's note, ad loc., on the palace of Aži Dakhâ). They have both the good and bad attributes (Eznik, p. 104), among whom were Alexander the Great and Artavazd, king of Armenia (p. 105). They sometimes appeared enormous, and compelled men to worship them (p. 103). They entered into human beings; their breath was poisonous (p. 107). There was a whole colony of them at the foot of Masis (Moses of Chorene, i. 30), with whom Vahagn fought (ib. i. 31; Agathangheλς, p. 607), and who later stole the child Artavazd and left a ded in his stead (Moses of Chorene, ii. 1); cf. further, on the višop, Abeghian, op. cit. pp. 78-83.

Closely connected with the višops were the nḥaŋgs (Eznik, pp. 102-107)—a term borrowed from the Pers. višap, 'alligator, crocodile.' They lived chiefly in the rivers (Eznik, p. 106). According to Eznik, both višops and nḥaŋgs appeared in deceptive forms, but the former were 'personal' (spirit-like), while the latter were not so (p. 102), so that he specifically declares, 'There is no personal nḥang' (pp. 103, 107). Although they could assume different forms, they had no body (p. 102). Preferably they appeared as women (Eznik, p. 107), the walls of the house being their eyes, and, catching the swimmer by the feet, dragged him to the bottom (ib.). An unpublished manuscript of the Geography ascribed to the Geography of Moses of Chorene in like manner

The general belief that there were 'hansγs in the Arme, a tributary of the Euphrates, as well as in the Euphrates itself. They were the victims for their lust, and then sucked their blood and left them dead. The Armen. translators use the word nḥang for 'hippopotammas' and 'crocodile.' Another class of fabulous monsters which seem to have a Parthian origin is that of the hambaru. According to von Stackelberg, harnbaru in Persian means 'genius of houses,' but we know little as to how the hambaru were imagined. In the Armen. tr. of the LXX Is 34 the word is used to render epyphes (Vulg. draconum). They were female beings, had a body, and were probably thought to live on land. They were born and they died, says Eznik (p. 97), who mentions them along with yuškaparikes and parikes. The yuškaparikes, or 'three-pated ones,' were seductive, as we know from the poet to render as express of LXX Is 13", lived chiefly in ruined places (Eznik, pp. 97-98), while the parikes, to whom allusion has been made above, were seductive beings, as we know from entering into the water, but also in forests and meadows, as well as on the banks of streams. They are, primarily, water-deities, and correspond closely to the European mermaids, whom they also resemble in their frequent intrigues with mortal lovers. This erotic trait is an evident reminiscence in Armenia of the seductive pairikâs of Zoroastrism (see above; cf. also Abeghian, op. cit. pp. 103-104). Eznik (p. 99) likewise mentions as the corvâqes, as well as the ašëz, were held to be generally invisible, though occasionally they were seen of men (Eznik, p. 99). There are, moreover, other classes of demons in Armenian faith, such as disease-demons (Closely as the above). Add, however, to the parikes, karaqâls (‘wervolves’), als (corresponding roughly to Lith., the ‘evil eye,’ and disease-demons of various sorts (cf. Abeghian, op. cit. pp. 102-110, 116-127). Another clear survival of Armenia, is the horror felt towards snakes, frogs, and ants (Abeghian, op. cit. pp. 30-31; cf. Vendidâd xiv. 5, and Darmesteter's note, ad loc.; Herodotus, i. 140), while the cat is an unclean object, as in Parsi belief (Darmesteter, loc. cit.; ŚBE xvii. 419, where a demoniac father is attributed to it).
cross a hair-bridge; if righteous, it reached the opposite shore in safety; if sinful, it dropped down into the stream of hell-fire. There was a middle place for those that were neither good nor bad (Abeghian, p. 29)."

We find also no trace, however, of *dakh-

s*, or *towers of silence*, or of the custom of exposing bodies. On the contrary, there were great mausoleums for kings in the ancient city of Ani, and graveyards outside the cities. We also learn from the *Khachkar* (Funus) that the Armenian ceremony of the Avesta injunction concerning the exposure of dead bodies; while, according to Herodotus (i. 140), the Persians covered the corpse with wax and then buried it.

The Armenian burial-customs seem to have been more akin to the ancient Babylonian (Jerem. *Hullu und Paraidea bei den Babylonern*, p. 108). The friends and relatives of the deceased came to the ceremony of wailing (Faustus of Byzantium, iv. 13); and at the funerals of the rich, professional scenes were enacted in Androides of Ctesiphon's court on the occasion of the *silken*(. . . .

I. WORSHIP AND CEREMONIAL.—There were probably temple-books which Christianity systematically destroyed. The temples were numerous both in the country and in the cities; and there were also special temple-towns, such as Bagavan and Yashtishah, containing several important sanctuaries. Christianity succeeded both to the wealth and to the tradition belonging to the ancient sacred sites. Of ancient open-air worship we hear nothing, but there were sacred places on mountain tops, like the throne of Ararat the Baptist (the source of the saint's name). Besides the ordinary temples, the Armenians boasted, like other neighbouring and distant nations, seven main sanctuaries (Agathangelos, p. 34), which were often the scenes of great concourses of people gathered there for worship and religious festivities. Treasure-houses were connected with the great sanctuaries (ib. pp. 586, 591, 594; Moses of Chorene, ii. 48; Thoma Artsruni, i. 7), as they now are associated with the churches. Tiridates and Gregory plundered many of these on behalf of the poor and of the Church, during their campaign against the pagan sanctuaries of Armenia; and images and statues of deities were common, at least in later paganism (Agathangelos, loc. cit.; Moses of Chorene, i. 14).

Agathangelos (p. 34) describes the sacrifices of Chosroes after his return from victorious incursions. He commanded to seek the seven great altars of Armenia, and he honoured the sacrifices of his ancestors, the Aracide, with white bullocks, white rams, white horses and mules, with gold and silver offerings, and with the images and silken coverings, with golden wreaths, silver sacrificial basins, desireable vases set with precious stones, splendid garments, and beautiful ornaments. Also he gave a fifth of his booty and great presents to the priests."

In Bayazid (the ancient Bagravand) an old Armenian relief was found with an altar upon which a strange animal stands, and on each side a man clothed in a long tunic. One is beardless, and carries a heavy club. The other has a beard. Their head-gears, Phrygian in character, differ in details. Both of them raise their hands in the attitude of worship (Abeghian, op. cit. p. 161).

The prevalent word for a pagan priest in Armenian, *kurm*, is a loan-word from the Syriac *kamari*, 'priest,' although mag, *magian,* may also have been used. The place of sacrifice was perhaps called *spandaran* (connected with Avesta *spenta*), 'holy'), a word which is now current only in the sense of 'slanderer-house.' This makes it possibly that originally slandering had a sacrificial character. Christian Armenia did not acknowledge human and animal sacrifices which were of a local character, but animal sacrifices survived the fall of paganism (Conybeare in *A.J.H. vii.* 1903, p. 63).

In many of the monasteries with their enlarged and modern monasteries, were also places of religious hospitality, particularly in the country, sacrifices were distributed to strangers (Moses of Chorene, ii. 60). Besides animals, flower-wreaths and green twigs (the *bazar* of the Avesta) were offered (Agathangelos, p. 49), and probably also fruit and money.

The priesthood must have been hereditary in a well-integrated race. There were priestesses, sometimes of royal blood (Moses of Chorene, ii. 53, 55), and the *Vahelnis* are mentioned as a priestly family by Moses of Chorene (ii. 8), while another priestly family was perhaps that of the *Spondanis*. The priests were probably very numerous in temple-towns, and they certainly possessed great wealth and extensive lands and villages, which were later confiscated for the benefit of the Christian Church (Agathangelos, pp. 686 ff., 590, 504, 610). Of native Armenian mungi as a casta...

*Sacrifices were occasions of great rejoicing, and it would seem that not only the flesh of the animals, but also their blood, was consumed (Agathangelos, pp. 72-74; Faustus of Byzantium, iv. 4).
ARMENIA (Christian)

we have no record, although we read of magians (Moses of Chorene, ii. 48). The existence of a pre-Christian Armenian Church has not absolutely certain, although we have the old compound krmannish meaning ‘priestess.’

A critical study of the Armenian Church calendar and church law would be of great value, but could be referred only to the pre-Christian ritual. During Lent, for example, the morning service is opened with an abjuration of the devil and a formula, which is recited while the whole congregation turn their backs to the altar and look towards the west, with arms raising rigidly at the sides. Although the abjuration is usual in the baptism of all ritualistic churches, this particular form may well have been derived from the pre-Christian country. In addition the Armenians considered the west as the abode of the devils, for Enmik says in his Glossary (iii. 213): ‘Honey is sweet, but it harms a diseased body. Good counsel and rebuke are useful, but they do not benefit those who have set their faces westward.’

The old Armenian calendar also bears traces of ancient Persian influence. 27° (Tir), Mekehan (Mitira), Ahekan (Ataras), and Hrotie (Pahlavi Frawarxangan) are common also to the Persian year (cf. art. CALENDAR [Persian]). The other months of the ancient Armenian calendar have names of Aramazd and perhaps also of Zartosht (Georgeon) origin (Hagopian, ‘Armenian Months,’ in Benssener, 1900; Gray, ‘On certain Persian and Armenian Month-Names as influenced by the Calendar’, Journal of Hellenistic History, 1895). The names of the days of the month, as given by Shah Tehrpupe (Alisian, op. cit. p. 143), have but few points of contact with the Zoroastrian (Yasa xxvi. 3-8; Sirisc A.-i.; Xandakhissi xxvii. 24; Soginox-lamagust xxii.-xxiii.; al-Biruni, Chronology, p. 58).

The Armenians shared with the Persians some of the characteristic superstitions and usages of the Avesta. One of them is the evil eye (Vendidad xxvi. 18-33, 36). In Moses of Chorene, ii. 47, we read that king Ervand had so powerful an evil eye that he could break stones asunder by looking fixedly at them. The general belief is that people upon whom the evil eye is cast isine away without knowing the cause of their ailment, and nothing is safe from it. There are special prayers and ceremonies to break the spell of the evil eye (Alisian, op. cit. p. 385; Abbeagh, op. cit. p. 372). The noblemen of Armenia have the same abhorrence for parings of nails and hair as the Avesta (cf. Vendidad, xviii.); nor may fire and water be defiled (Abbeagh, op. cit. pp. 57-59). These superstitions, like many other beliefs noted above, were probably imported in ancient times. Among the greatest requirements of the Avesta we find next-of-kin marriages (cf. Justi in Grundriss der iran. Philologie, ii. 484-487; Jackson, ib. 682, and the references there given). The only well-known instance of this in Armenia is the marriage of Tiranez III. with his sister Erato, a few years before the Christian era, although it seems to have been frequent among the nobles (Moses of Chorene, iii. 20; Faustus of Byzantium, iv. 4).

V. CONCLUSIONS.—Our study suggests the following conclusions: (1) Great as is the mass of Zoroastrian material in Armenian paganism, it has also serious gaps. Was it ever complete? (2) We find the existing material in a quite uncertain shape. The substantial deviations from Zoroastrianism are considerable, and in the case of Anahit and in the worship of fire and water. The Zoroastrian angels are full-legged deities in Armenian paganism; but primitive traits are not lacking in the case of Vahagn. (3) As before, the name Arta.

There is no trace of a highly developed system of theology, ritual and legalistic observance, as in Zoroastrianism. Abstract beings, the personif-

ations of ideas, virtues, and vices, are quite different. We find no theologian, not even some information regarding of the heavenly army, no developed dualistic caste of magi, and no widely spread fire-altars.

(4) There is no record of any Zoroastrian propaganda in Armenia, or of any religious fellowship between Zoroastrians and Armenians; therefore persecuted Christian Armenia, about A.D. 450, they said nothing about a return to the ancient faith, nor did the Armenians ever call their Zoroastrian neighbors home. It seems that Zoroastrianism gradually penetrated Armenia under the Achemenian kings and under the Arsacids, but we have no exact knowledge as to when or how. (6) The study here presented must not be considered as an attempt to reconstruct the Zoroastrianism, or the world of minor spirits contained other non-Zoroastrian names and beliefs which have been omitted; but the old religion of Armenia was mainly Iranian, and may be described as Zoroastrianism of a corrupt type.

It is probable that the ancient Armenians themselves conceived their paganism as consisting of three chief deities: Aramazd, as chief god; Anahit, as chief and favourite goddess; and Vahagn, as the national god of war and Lereism: the sun and moon; this is the model of Tir as the god of war, and Enmik of the moon. The relation to learning and eloquence has a Greek flavour. The old religion of Armenia was a combination of a lower god such as Anahit or Vahagn with Syrian Astarik (Venus), and the Syrian Barshah (Baal-Itin). Among the Persians, the Baals of the Alexandrian times, perhaps Doppelganger of some of the native deities, whether they formed a group, Baals-Chai, Baals-Naha, corresponding to Aramazd-Anahit-Vahagn, as Jensen (Hist. Ittirunden Armenien, p. 121 E.) suggests, is a less plausible hypothesis. At all events it seems as if separate deities, so that Astarik could become the patron of Vahagn and have a temple in the sacred town of Kharput, where Anahit also had a sanctuary. After Alexander, and especially in Roman times, the Armenians came under strongly Hellenistic influences, and began to seek parallels between the Greek and their native deities. It would also seem that during this period the worship of the sun and the moon became somewhat neglected. Otherwise, we cannot understand why Agathangelyos moves so little of them. The ancient Armenians were also very much given to divination and witchcraft. (Moses of Chorene, i. 20, ii. 60; Gion Mantsung, op. cit. xxvii.; Alisian, op. cit. pp. 392-400).

M.H. AXANIAN.

ARMENIA (Christian).—I. THE BEGINNINGS OF CHRISTIANITY. —The material of Armenia is rich in information regarding the introduction of Christianity into the country.
In particular, it is said to have been preached by Apostles or disciples of Apostles, such as St. Bartholomew and St. Thaddaeus. But it has been proved that these legends did not appear till late in the literature of Armenia, and that they were borrowed largely from the works of the Church fathers, which certainly penetrated to Armenia, as elsewhere, by means of the living voice. The Apostles and their successors had early formed the habit of visiting the Churches founded by them; and the teaching of the Church fathers was conveyed to them through the Christian communities long before written documents came into use; but the names of these first preachers have not come down to us with any certainty. Yet, however meagre the information furnished by history may be, we are quite entitled to maintain that Christianity reached Armenia through Antioch, before the time of Gregory the Illuminator. The first Christian documents that the Armenians made use of were written in Aramaic, and this language was used in the Armenian liturgy till the reform of Gregory the Illuminator. After Antioch we might mention Edessa and Nisibis as centres from which Christianity spread into the different provinces of the Armenia.

Balay, La Bible Orientale des Arméniens, (Paris, 1890); M. de Ricclis, L'arménie (Breslau, 1895); J. Ambrosi, Anciens mss. arméniens, orientaux (Paris, 1897); A. Balgy, Histoire des églises arméniennes, (Paris, 1876); F. Gelzer, Die armenische Kirche (Leipzig, 1899); C. Ricaut, L'histoire du christianisme en Arménie (Paris, 1878); J. P. Macler, La liturgie arménienne (Paris, 1898); J. Ricca, Les églises arméniennes de la Bibliothèque Nationale (Paris, 1908).

II. EXTENSION OF CHRISTIANITY IN ARMENIA.

St. Gregory the Illuminator. — The Illuminator belonged to the royal race of the Arsacids. When quite young he escaped the massacre of his family (A.D. 298), and took refuge in Roman territory. He studied at Cæsarea, and returned to Armenia when the kingdom was re-established under Tiridates II. (A.D. 261). After being persecuted for his faith, he attained to honour, and baptized the king and a large number of his subjects. He went again to Cæsarea, where he was consecrated bishop by Bishop Leontius, thus forming the link of spiritual connexion between the Cappadocian metropole and the young Armenian Churches. When he was made bishop, Gregory fixed his residence at Yashkis, where he built a church and an episcopal palace built there. He substituted Armenian for Greek as the language of the liturgy, in order to have easier access to the masses of the people, and created twelve episcopal sees on the head of which he placed a bishop consecrated by converted pagan priests. He instituted ecclesiastical offices, making them hereditary in the sacerdotal families, and he created in his own family the supreme office of Catholicos. At first this title belonged only to the principal bishop of the country; later it came to mean an independent patriarch. The Gregorian and national Armenian Church, founded afterwards, lived its own autonomous life, while recognizing for some years a sort of supremacy in the mother Church of Cæsarea.

LITERATURE.—Mgr. Ormanian, Le Vatican et les Arméniens (Rome, 1870); von Gutschmid, Kleine Schriften (Leipzig, 1908); H. Gelzer, Die Anfange der armen. Kirche in Berichte der königl. Sächs. Gesellschaft der Wissenschaften, phil-hist. Classe (Leipzig, 1878); F. Gelzer, Die armenische Kirche in Armenien (Freiburg, 1903); Malan, Life and Times of St. Gregory (Eng, tr. 1868).

III. THE GREGORIAN ARMENIAN CHURCH.

1. Doctrine. — The doctrine in the Armenian Church is identical with the pseudo-Athanasian Creed which was introduced into Armenia by the Syrians, and in the 6th cent. took the place of the Nicene Creed. In the 14th cent. another creed was much in use in the Armenian Church. It was a compilation of formulas borrowed from various creeds, and was current until the middle of the 19th century. The religious heads of the Armenian Church at Constantinople at that period presented to Pius IV. by Agbar, the Ambassador of the Catholicos Michael of Etchmiadzin (1562-1563); that of the Catholicos Azariah of Sis (1583); that addressed in 1671 by David, the Armenian archbishop of Isfahan, to Louis XIV.; those addressed to the same king by Stephen and James, the Armenian archbishops at Constantinople (1761), and by Gaspar, the Armenian bishop of Cairo. On the other hand, the Roman Curia imposed on the Armenian Church two professions of faith: (1) the constitution of Eugenius IV., Exuvitate Deo; (2) the creed of Urban VIII., intended for all the Christians of the East.

The following are the chief points of doctrine on which the creed of the Armenian Church differs from that of other Christian communities. As regards the Procession of the Holy Spirit, with much hesitation and even much indifferance, the Gregorians profess that the Holy Spirit proceeds from the Father, and reject the Filioque. The Armenians reject the decisions of the Council of Chalcedon relative to the Incarnation; they call themselves Monophysites, admitting only one nature in Christ. The Gregorians, in reiterating the Triasgion, retain the addition qui crucifixus ex pro nobis, while some Catholic Armenians have rejected it. The Gregorians deny purgatory, but they pray for the dead like the Catholics, concurring to this day after Easter, the Transfiguration, the Assumption, the Exaltation of the Cross, and the day of the holy Vardanians.

There is diversity of opinion among the Armenian doctors regarding the primacy of the Pope. The patriarchs, being equal in power, are co-ordinate the one with the other, and not subordinate to a superior patriarch. The Churches were founded by the Apostles and their disciples. These were sent by Jesus Christ, not by Peter; thus nothing enjoins the primacy of the Pope as a fundamental dogma of the Christian Church. The Armenians baptize by immersion, repeated at the name of each of the Divine Persons; hence a triple immersion. The anointing is with holy oil, and the person baptized receives the name of the saint whose festival is celebrated on the day of the baptism. Only the priest can baptize, and baptism may be administered even to a child already dead. Confirmation follows very soon after baptism. The anointing is done on the forehead, the eyes, the nostrils, the ears, the mouth, the shoulders, the breast, the hands, and the feet. Each part is accompanied by a special formula. The Armenians make use of unleavened bread and of wine unmixed with water as elements for the Eucharist. They make it a condition of the occasion of the great festivals, preferably at Epiphany or at Easter. They admit in theory the sacrament of Extreme Unction, but they never
administer it. The Gregorians have a hierarchy of orders carefully organized, including the office of proctor and reader; then the inferior orders of porter, reader, exorcist, and candle-lighter; and the superior orders of sub-deacon, deacon, and priest. The consecration of bishops is reserved for the Catholics; the Catholics. Marriage is permitted to the inferior clergy, rigorous celibacy being enjoined only on the vestabed and the bishops. Women are not excluded from the functions of the deacon. In Armenia, the Catholic Armenians write to priests are generally married; elsewhere they observe more freely the law of celibacy, which is not obligatory on them. When a priest has to say Mass, he passes the preceding night in the church. When a priest who is already married has received ordination, he spends forty days in the church; then there is a social repeat, during which the wife of the priest sits on a stool, and keeps her mouth, her eyes, and her ears shut, as a sign of the service which she exercises with regard to the functions of her husband.

Ehi yo yevans, Ordinamenti e cerimonie di l'Apostoli Armenia (Venice, 1576); Petit, fasc. vii. col. 1950-1955. 2. Councils.—Besides the councils common to Christianity, the Armenian Church has national councils, of which the following are the most important: adding the traditional accounts relative to the first councils, the authenticity of which is more than doubtful, we must mention the Council of Yashishat (c. 365 A.D.), held under Nerses I. The relations were laid down regarding the laws of marriage, fasting, hospitals, and the schools where the young were taught Greek and Syriac. The laws for the monastic orders were there determined. Later, Salak is said to have promulgated in A.D. 426, at a Council of Varashapat, a certain number of rules intended to regulate the observance of festivals, funeral feasts, and the conduct of the clergy and priests. The canons of the Council of Shahahivan (A.D. 456) have for their special aim the refutation of the heresies which invaded Armenian Christianity and threatened to extinguish it. This was also the aim of the Council of Yashishat (A.D. 449). At the Council of Varashapat (A.D. 641) the Armenians made common cause with the Georgians and the Albanians in condemning the Council of Chalcedon; and this decision was maintained and affirmed still more definitely at the Council of Tvin (A.D. 529), where the two festivals of Christmas and Epiphany were fixed for the 6th of January. In A.D. 596 another Council of Tvin condemned the Chalcedon decrees. At the Council of Karin (c. 633 A.D.), Heraclius summoned the Greeks and Armenians to a synod against the Nestorians, two nations proclaimed; the festivals of Christmas and Epiphany were fixed for different days, and the formula qui crucifex es pro nobis was removed from the Triasgion. Another Council of Tvin (A.D. 641) condemned once more the Council of Chalcedon. John of Odzn, who is said to have summoned the Council of Manakert about A.D. 719, gathered into a volume the canons of the Fathers and councils previous to the 6th century. About A.D. 770 the Synod of Partav fixed the books of the Old Testament which the Armenians regarded as authentic, and made rules relating to certain devotional practices. At the Council of Shirakavan, held in A.D. 862, the Armenians accepted the decrees of the Chalcedon Council. The figures of the councils of Manakert, Aziz, and the others of their fifty canons, and made peace with the Greeks. In the reign of Manuel Comnenus, several attempts were made to bring about a union between the Greeks and the Armenians. They resulted in the Council of Vla (A.D. 1179), at which Nerses of Lamborn delivered a discourse on conciliation which is still famous. At the Council of Tarsus (A.D. 1196), the Armenian Church took issue with the Greeks, who had issued a discourse with a view to the union. The Council of Sis (A.D. 1243) laid down rules regarding the election and nomination of priests, bishops, etc.; the Councils of A.D. 1307 and 1316 ratified the preceding ones, and the Armenians of Sis took part in their discussion with a view to the union. The Council of Armenian Church at this time. In A.D. 1439 the Armenians took part in the Council of Florence. Along with these principal councils there were a number of special councils and synods, for the decrees of which we refer our readers to the works which deal specially with them. 3. Festivals.—The Armenian Church celebrates on the Church, the day after to the commemoration of the dead. The day before Christmas the poor boys of a village or town go from door to door, or from terrace to terrace, holding in their hands lanterns made from gourds, sing a Christmas carol, and receive fruit and cakes as a reward. The festival of the Transfiguration (Vesoratten) is the called the Festival of Roses, and is the last one of the year. On the day preceding this festival, the commemoration of the Tabernacle of the Jews is held. On that day people sprinkle each other with water when they meet in the streets; and in certain provinces of Armenia pigeons are set free, either in recollection of the Deluge, or as a symbol of Astik, the Armenian Venus. On the day before the Assumption, the vision of Gregory of Nin is commemorated. According to the canons of the Armenian Church, the priests are allowed to receive as offerings the skin and the right shoulder of the animals sacrificed in the churches on the days of the great festivals, and in memory of the souls of the dead, or in honour of some great saint. Other festivals play an important part in the religious life of Armenia. The day before the Ascension is called the Festival of Crib (Pavstes), when the figures of Christ and the Virgin are put in the courts of the churches, and the people dance round them, jump over them, and so on. The festival of Vintas (Pate) is one of the principal Armenian festivals, and is devoted to the feast of the Nativity of the Virgin. It begins on the day before Ascension Thursday, and lasts till the
ARMENIA (Christian)

Sunday of Pentecost. The day before Ascension the young girls of the village meet together and choose several of their number to organize the festival. The members of this committee take a pitcher made of baked clay, fill it with water drawn from seven different wells, and place the month of the pitcher with flowers gathered from seven fields; then each of the girls throws some object into it (bracelet, ring, button, bead from a rosary, etc.), wishing at the same time some good wish to be fulfilled. They then have to shut their eyes while throwing the object into the pitcher and meditate deeply on their wish. On the Wednesday or Thursday night they hide the pitcher in the corner of a garden in the open air, to expose it to the influence of the stars, and they watch that it is not taken by the boys, who prowl about there all night, and try to discover it and carry it off. If the young men succeed in taking it, they give it back to the girls only in exchange for a large quantity of eggs and olive oil, which they have to offer. If, on the other hand, the young men do not succeed in getting possession of the pitcher, the girls sing songs in which they acclaim Theodore of Leipsig (A. Tchobanian, Armeniens, pp. 57-59; M. Abeghian, Armenischer Volksliede, Leipzig, 1899, pp. 62-66).

Marriage, baptism, and burial are family festivals which are the occasion of special ceremonies and always accompanied by refreshments.

(a) Marriage.—Among the Armenians, children are betrothed from their earliest youth, sometimes when only three years old, sometimes as soon as the first signs of puberty are discovered. The parents of the boy then go to the house of the girl, who, with two old women and a priest, present to the infant maiden a ring from the future bridegroom. The boy is then brought, and the priest reads a portion of the Scripture, and blesses the parties. The parents of the girl make the priest a present, in accordance with their means, refreshments and bon-bons bought by the company, and this constitutes the ceremonies of the betrothals. Should the betrothals take place during the infancy of the contracting parties, the boy may claim his bride, he must every year, from the day he gives the ring, send his mistress at Easter a new dress, etc. (Jones, Finger-ring Lore, historical, legendary, anecdotal, London, 1877, p. 312 f.).

(b) Baptism.—A short time after the birth of a child, the parents and the godfather carry it to church. They stop at the entrance, and the priest recites some prayers, after which they go into the church itself. They sit on the same two chairs, an even number, during the two days of the child’s life, and the godfather makes confession. Then the infant’s clothes are taken off, and he is immersed three times, his head turned towards the west, his feet towards the east, and his face towards the sky. After the baptismal water the priest anoints the child’s head several times with holy oil, and clothes him in a linen robe. The child is then made to adore the Cross, and is taken home in state.

(c) Burial.—The day before that on which the body is to be carried to the church, the relatives, neighbours, and friends of the deceased meet in the house, each bringing a lamp with three wicks, which they arrange, all lighted, round the coffin, and then they begin to sing in turn some funeral hymns. On All Souls’ Days (Christmas, Easter, Assumption, Transfiguration, Invention of the Cross) the families invite a popular poet to sing over the grave at the cemetery the praises of the person who has just died (A. Tchobanian, op. cit., p. 119). For some days after the funeral ceremony the priest goes to visit the relatives of the deceased; then on the Saturday of this week of mourning the relatives and friends meet and participate in a social repast, the remains of which are distributed among the poor.

4. Saints of the Armenian Church.—A glance at the Armenian liturgy will show that the Armenian Church has adopted a large number of the saints of the Greek and Latin Churches. It has, besides, its national saints, for whom it has naturally a peculiar veneration. The principal of these are St. Echmiadzin and St. Grigor, who lived in Rome to avoid the carnal desires of the Emperor, and took refuge in Armenia, where their blood was shed for the cause of the gospel; the saintly translators, Moses of Chorene, David the Philosopher, Eznik of Kolb, Elinous the Vartabed, St. Mesrop; and St. Sahak, St. Leo, St. Nerses Simonhali, St. Nerses of Lambrorn, St. Gregory the Illuminator, and St. Nerses I. the Great, St. Vardan is the national saint, and patrie por excellence. When Armenia was struggling in the 6th cent. against Persia and the introduction of Mazdaism, Vardan Mamikonian became the leader of the national spirit, and in the struggle of Armenian Christianity against the Zoroastrian religion. He perished at the battle of Avarair; but the agitation for independence started by him continued for many years. St. Surkis (Surgs or Sargis) is the saintly prisoner, captives, those with difficulties to face, and especially by young girls in order to obtain a handsome sweetheart. If it snows at the festival of St. Jacob or St. James, it is said that the heard of the saint is falling on the earth. St. Karapet (John the Baptist) is regarded in Armenia as the most influential of the saints. His seat is at Mush, where his reliques are found in the church named after him, which is one of the principal places of pilgrimage of the Armenians. Women are forbidden to enter the enclosure within which is the tomb of the saint, because it was women, Herodias and Salome, who caused John the Baptist to be beheaded. Young girls give a needle to friends going to kiss the tomb, begging them to rub it against the tombstone, so that they may be able with this sanctified needle to produce marvellous embroidery. Young women cannot go into the tomb unless they make a vow never to marry. Those who have made this vow are allowed to sing with the choir during Mass (A. Tchobanian, Chants populaires arméniens, p. 149, n. 1). According to John Mamikonian, the story is told of a young girl who was determined to enter the sanctuary was almost immediately smitten by Heaven as a pun-
ishment for her presumption (V. Langlois, Collec-
tion des historiens anci. et mod. de l'Arménie, 1, 348, R. 3622) by the patronage of the lords (trouvères), who go on pilgrimage to ask him to heighten their poetic imagination.

Arméniens (Paris, 1906); "ZemlQ de Flagu" and 'Jean Manukian" in V. Langlois, Collection des historiens anci. et mod. de l'A-
rménie (Paris, 1867), i.

5. Sects.—Armenian Christianity, in the course of the centuries, has had to struggle against the assaults of different sects and heresies in order to maintain its homogeneity. Nestorius, Marcionism, and Manichaeism, for ex-
ample, were successfully introduced into Armenia in the 3rd cent.; Marcionism also crept into the Armenian Church and was refuted by Eznik (Des Wardarot Eznik von Kolb, edit. die Schrift, tr. by J. Michael Schmid, Vienna, 1900, p. 172). About the same time are found traces of the Borborini and the Messalians, of which sects the Paulicians seem to be a con-
tinuation through the Middle Ages. Mention is made also of the existence of Adoptionist churches as early as the 3rd century. The most important sect of the Middle Ages was that of the Paulicians, famous for their struggle against the worship of images. It has been established by Conybeare that a Paulician Adoptionist doctrine stated that Jesus was born a man, and that He became Christ at the moment of His baptism; but they did not regard Him as equal to God the Father. The Paulicians practised adult baptism. The Thibar- drians, a sect also, founded about A.D. 820 by Subat, rejected infant baptism, the worship of the saints, of the Virgin and of images, purgatory and the hierarchy. There still exist in the Caucasus some adherents of this sect. The Arevordians ("Sons of the Sun") are met with in the 12th cent.; their doctrine recalls the old ideas of Armenian paganism.

6. Superstitions and Peculiarities.—The Armenians, although Christians, have, like other Christians, certain popular superstitions which have passed down through the ages. The peasant women believe that there exist three spirits of childbirth—the spirits of the evenings of Tuesday, Thursday, and Saturday. The first two are virgins and sisters, and the third is their young brother. If the wives have not spent the evenings of Tuesday, Thursday, and Saturday with their husbands, these spirits aid them in childbirth. The Sunday spirit remains near the door of the birth-chamber and fulfills all his sisters' orders; he carries water and eggs, makes the fire, etc. The two sisters take the child, bathe it and prepare the omelet for the mother; and sometimes they present a gift to the newly-born child. But these spirits are also vindictive; and when a woman does not respect them, they avenge themselves by tormenting her, and sometimes by killing the baby (Conybeare, The Apostolic Traditions populaire, x, [1856], 2). Each child has from its birth a guardian angel who protects him against evil spirits. This angel's duty is to cut the child's nails and amuse him with the golden apple which he holds in his hand. With the child's growth, this guardian angel goes back to heaven. The child smiles to him and stretches out his little arms (ib. x. 4). The Armenian peasants believe also that spirits of dise-
s are external. They are small in stature and wear triangular hats; and they hold in their hands a white, a red, and a black branch. If they strike any one with the white branch, he will fall ill, but will soon recover; if it is with the red, he will have to stay in bed for a long time; but if it is with the black, then it is all over with him, and nothing will cure him. The spirits have books in which are written the names of the persons who will die or fall ill, and these are burnt at certain times of the year, and not the spirits act according to these books. The people believe also that there is a spirit called the 'Writer' (Grod), who writes men's names and the date of their death in a book called the 'book of the non-Christian part of the universe.'

The deva are tyrants possessing seven heads. They can throw the largest rocks a great distance. Their wrestling is like the shock of mountains, which causes lava to pour forth. The female deva is about the size of a hill; she throws back her left breast over her right shoulder, and her right breast over her left shoulder. The deva prefer to dwell in very thick forests or deep caverns. They can be very rich in gold and silver, and possess horses of fire which enable them to cover great distances in the twinkling of an eye. Devas covet the company of young women of the human race, to whom they grant everything they ask. They are believed to have drowned Jesus, to have asked with the devas in order to get back the women, who show the men how to carry out ruses by which they may become the masters of the devas, who are good and evil spirits. There is a good spirit (ib. x. 193-196; Griekor Chalatians, Mären und Sagen, Leipzig, 1887, pp. xiv-xv). The witches are old women who have a tail which is not visible during infancy, but which develops with age. They can speak with any wish, enter anywhere, and cross the world in a few minutes. They mount on earthen jars, take in their hands a serpent which serves as a whip, and, flying to the seventh heaven, pass over all the universe. They act chiefly in love intrigues. Their ordinary business is to enchant the heart of a young man or woman, carry off a young girl in spite of her parents, and kill the irreconcilable rival or make him fall asleep (ib. x. 189). There are also good spirits disposed, with the aid of supernatural powers, to render service to human beings (G. Chalatians, Mären und Sagen, p. xxxii; F. Macler, Contes arméniens, Paris, 1898). They are almost always disposed to protect them against the evil eye, slander, the anger of enemies, against sorcerers and enchanters, false love, and the bite of serpents, to conciliate lords, kings, generals, and the great, and to exorcize demons and other impure beings. These rolls of prayers are called kiprianos, or rather girpar-
aron, because they include prayers attributed to St. Cyrilian. They are generally ornamented with vignettes, which belong to somewhat rudimentary art, but are very much used by the people (see 'Amulette' and 'Cyriamans-Buch' in P. Jacobus Dashian, Catalog der armenischen Handschriften in der Mekitaristenbibliothek zu Wien, Vienna, 1892; Macke, Nachtr. 179-179).

bianian, The Armenian Legends and Fairy Stories told in Armenia (Cleveland, Ohio, 1895).

IV. ARMENIAN CATHOLIC CHURCH OR AR-
MEKINIAN CATHOLICS.—There have been in almost all times Armenians who recognized more or less the supremacy of Rome. But it was recognized
only in a sporadic and casual way until the time of the Crusades, when the Armenians of the kingdom of Cilicia, or Lesser Armenia, were in constant contact with the Crusaders, and consequently with the Roman Curia. Later, in the 14th cent., Dominican missionaries carried the influence of community of faith and disciples in Armenia. These were the class of native missionaries known as 'Uniters' (unifores), and had as their first superior John of Kerri (or of Khana). He had a tradition of witnessing by suffering, denouncing the heretics of Bologna, who was sent to Armenia by Pope John XXII. in 1318 (Macler, No. 149). Subsequently, especially in the 17th cent., other orders established missions among the Armenians, particularly among the Armenian of Persia. In the second half of the 16th cent., Isfahan, the Jesuits at Isfahan, Julfa, Erivan, etc. The French Lazarists settled at Tauris and at Isfahan. Soon all the communities extended their ramifications into all the principal Armenian centres of the East—Isfahan, Orm-Sher, Banderabas, Hamadan, Shamakia, Erzerum, Trebizond, etc.

Until the middle of the 18th cent., Catholic Armenia was divided along the lines of an autonomous community; now they have a hierarchy of their own, a recognized religious autonomy, and a patriachi who resides at Constantinople. These results have sprung from the disensions which occurred between 1736 and 1740 in connexion with the cathedral of Sis in Cilicia. The Catholicos of Sis was deposed, and he retired to Lebanon, where he founded the convent of Bzommar and a new religious order. This new state of things caused intestine quarrels between the Catholic and the Gregorian Armenians. We may note especially the quarrel of the Hassunists and the publication of the Bull Recercamus.

VI. ARMENIAN MISSIONS.–The work of the Protestant missions among the Armenians dates from the beginning of the 19th cent. It was especially prosperous from the day on which the Sublime Porte granted independence to the Protestant community. The Protestant missions in Armenia belong, on the one hand, to the Missionary Societies of England and America, and, on the other, to those of Basel. They have stations in the most important centres of Turkey in Asia, and some in Persia (Tauris, Teheran, Isfahan), and in Russia (Shusha, Tiflis). There are nearly 200 pupils in the Robert College at Constantinople; the college at Scutari is reserved for girls. Literature.—E. Plonnet, Mission armenienne, au point de vue politique vers la seconde moitié du xve siècle (Florence, 1875), pp. 79-93; H. F. B. Lynch, Armenia, Travels and Studies (London, 1901); Petit, fasc. vii, col. 1920.

VI. MUSLIMAN ARMENIANS.–The attachment of the Armenians to Christianity is well known, and there were always abroad their religious feelings in them in the place of nationality. In spite of this love of their religion, some Armenians, persecuted by the Musulmans, have adopted Muhammadanism. The Mohammedan mission of Hamshen, to the east of Trebizond, after some bloody massacres, accepted in thousands the law of Islam. They are therefore Turks, but they speak a dialect which betrays their Armenian origin. The Kurds, it is said, are ancient Armenians who have passed under the law of Islam.

About 1761, a certain Chalabli, who was very fanatical, associated himself with the Persian Musulmans, and conceived the plan of massacre of the Armenians if they would not be converted to Muhammadanism. He tortured them first, cutting off their ears so that they might not hear the prayers they were singing in church, then expelled them, compelling them to speak their mother language, and putting out their eyes to strike fear into the other Christians. Chalabli inflicted these tortures on the poor, and granted honours and titles to the rich to impose silence on them. By this means thousands of Armenian families became Musulmans, especially in the province of Oudi. In this province above all, the Muhammadians destroyed the churches and Christian sanctuaries, so that the Christians might more quickly forget their original religion. In the province of Oudi many names recall their Armenian origin; at Gis is found a much venerated sanctuary of St. Eliseus. The Musulmans have adopted, as well as the Christians, the pilgrimages to it, light candles, and address very fervent prayers to the saint; and in several villages in the neighbourhood of this sanctuary the Musulman Armenians swear by St. Eliseus. They have preserved some of the Christian customs. For example, when a mother is putting her child to sleep, she makes the sign of the cross over it, and murmurs the name of Jesus. When the paste is prepared, a young Armenia-Musulman wife makes a cross on it with her fore-arm before putting it into the oven. The Armeno-Musulman villagers of the province of Oudi are very bigoted and very suspicious; they distrust all foreigners, and never speak of matters of religion.

In Lasistan, also, several Armenian villages have become converted to Islam, from fear of tortures and massacres. There are found among them the same traces of Christianity as among their brothers of Oudi and elsewhere.

VII. ARMENIAN COLONIES.–There are Armenian colonies spread over all parts of the world; for example, in Europe: Poland, Sweden, Denmark, Holland, Russia, Turkey, Bulgaria, Transylvania, Roumania, Lower Danube, Macedonia, Greece, Palatinate, France, Germany, Spain, India, China, etc.; in Africa: Egypt, Ethiopia; in America: United States; the English and Dutch Indies, Batavia, etc. These colonists generally lose their nationality, and adopt that of the country in which they are living; but they remain faithful to their religion, which is now the bond of the Armenian nation, since they no longer have a political autonomy.

FREDERIC MACLER.

ARMINIANISM.—I. Occasion of Arminianism.—Arminianism was a revolt against certain aspects of Calvinism, of far-reaching importance in the history of the Reformed Theology. It took place in the dawn of the 17th century. Against the Catholic absolutism of the external Church, Calvinism had set the absolutism of the eternal decrees. The situation was rigid with a new dogmatism. A recoil was inevitable. Many symptoms of dissent were manifest before Arminianism arose as a definite reaction. After Calvin's death, the more rigorous discipline, including the Beza, asserted that the Divine decree to salvation, being antecedent to the Fall, required for its
accomplishment the decree to sin. Sin was ordained not as an end, but as a means; it is here because there was something that God could not accomplish without it. What is first in the Divine intention is last in the Divine execution.* The primal purpose was the decree to save. But if man was not saved, he is lost. Herein lies the Fall was decreed as a consequence of a decreed salvation. Those who held this position were Supralapsarians. It is doubtful whether Calvin himself held it. More moderate exponents of Calvin's doctrine connected themselves with the permission of God, instead of with His forordination. The Divine decree takes the existence of sin for granted, deals with man as fallen, and elects or rejects him for reasons profoundly indifferent to human judgment. This was the Infralapsarian position. An unequal rivalry between the exponents of these two schools was the immediate occasion of the rise of Arminianism. In Holland, which, in the 17th cent., owing largely to the immigration from France of Protestant theologians of distinction, had become, more than Switzerland, the centre of theological activity, the extreme views of the Supralapsarians found much favour. An acute and impassioned discussion was directed against them by James Arminius (Jacobus Arminius or Jakob Harmensen or Van Hermans; also known as Vetteraquins, from Vetter Armus or Oudewater, the name of his house). Arminius, who was born in 1560 and died in 1609, was a scholar of considerable reputation. He had studied at Leyden, resided at Geneva, and travelled in Italy; he was a learned and popular preacher at Amsterdam, with a pastoral career marked by fidelity and heroism. He eventually he became, in 1603, professor of theology at Leyden. Even his enemies testified to his blameless and noble character. He was a consummate controversialist and a lucid expositor. He took a valuable part in the controversies with Jacobus Arminius embracing the tenets he had undertaken to refute. He clearly perceived that the doctrine of the absolute decrees involved God as the author of sin; that it unworthily restrained His grace; and, leaving the truths without hope, condemned them for believing that for them there was no salvation either intended or provided in Christ. He saw, moreover, that it gave to those who believed themselves to be the elect a false security based upon no sufficient ethical principle. Arminius' conversion was succeeded by cogent criticism; and criticism by prolonged controversies, during which he was led by successive and careful stages to a luminous and impressive constructive exposition of those theological positions antagonistic to Calvinism which have since been associated with his name. Though it is probable that Arminius himself was less Arminian than his followers, he was the most distinguished of these. Episcopius (his successor at Leyden), Uyttenbogaert (his close friend), Limborch and Grotius, who most ably elaborated his positions—all men of great talents—owed to him the results which the early death of Arminius probably prevented him from reaching. Arminianism spread amongst the clergy. Political differences and difficulties confused the purely doctrinal issue. Great statesmen, like Olden Barneveld, like La Fontaine, like Pococke, like Erasmus, were either Arminians or of the schools of thought·

* Camb. Mod. Hist. ii. 717.

Republicanism, as Calvinists preferred Supralapsarianism and Maurice, Prince of Orange. The martyrs for Arminianism probably suffered for political rather than for doctrinal heresies. From the beginning the Arminians were greatly outnumbered by their opponents. Their main strength lay in this, the genius and nature of their case. Logically they were victors; ecclesiastically and politically they were vanquished. With their defeat came many disabilities and some temporary persecution.

2. Doctrinal positions.—The creed of the Arminians was set forth in the Five Articles of the Remonstrance addressed in 1610 to the States-General of Holland and West Friesland, from which fact its practitioners received the name of Remonstrants. The articles were drawn up by Uyttenbogaert and signed by forty-six ministers. The Remonstrance is first negative, stating the five Calvinistic articles in order to reject them, and then positive, stating the five points of the Arminian position. Briefly summarized, the following are their positions. The first asserts conditional election, or election dependent on the foreknowledge of God by faith in the elect and of the unbelief in them that reprobate. The second advocates the doctrine of double predestination. The third asserts that the grace of God is indispensable in every step of the spiritual life, but that it is not actually efficient, for all. The third asserts the inability of man to exercise saving faith, or to accomplish anything really good without regeneration by the Holy Spirit. The fourth declares that the grace of God is indispensable in every step of the spiritual life, but that it is not irrevocable. The fifth asserts that the grace of God is sufficient for continual victory over temptation and sin; but the necessity of the final perseverance of all believers is left doubtful. This last article was afterwards so modified by the followers of Arminius as to assert the possibility of falling from grace.

Gomarus, the university colleague of Arminius, but his chief antagonist in personal controversy, now engineered a counter-Remonstrance drawn up in less moderate terms. Negotiations for peace failed. An embittered controversy became involved with political intrigue. The famous Synod of Dort was assembled (1618–9) more to exercise ecclesiastical than political control over its opponents. The Arminian theologians were excluded, and the Synod constituted itself accuser and judge. The Arminian articles were condemned, their preachers deposed, and relics removed. The Synod promulgated five heads of doctrine of its own, which present Calvinism in its unadulterated but not in its extreme form.

Within the Arminian system processes of development set in, all moving in the direction of liberalism and comprehension. These will be noted in their place. Our present interest is with the leading principles of Arminianism. These are: (a) the universality of the benefit of the Atonement; (b) a restored freedom of the human will as an element in the Divine decrees and in opposition to the assertion of the absolute sovereignty of God. Apart from these and kindred questions involved in the problem of predestination, Arminianism has no definite theological distinctness. It attempts no fresh statement of the doctrines of God and man. These were accepted as they stood in the recognized creeds and confessions of Christendom; and its general tenets were the general tenets of orthodox Protestant Churches. But its specific contribution was of sufficient importance to rank it amongst the few really outstanding and permanent developments in theological thought. It is one of the three fundamental theological lines of the 17th century—definition and discussion—God, Man, and the essential re-
lations between them—are represented in the three great controversies of historical theology by the names of Athanasius, Augustine, and Arminius. Athanasius represents the movement which gave specific definition to the Church's doctrine of the Divine nature. Augustine stands as the great exponent of the moral nature of the race. Arminius found his place as the interpreter of the ethical relations between God and man. His system recognized and expounded the devotional side of the Church which the Church had long accepted as established positions, but which her theologians had never satisfactorily related. Calvin had revised Athanasianism, and had treated the ethical issues. He made much of God, as Pelagius had made too much of man. Both gave isolation and distance to terms that could be completed only in mutual relations. Neither provided a scheme of reconciliation. The aim of Arminius was to express with dialectic vigour the only dogmatic position consistent with the necessary relations between God and man. This relation within the sphere of the provision and administration of redemption provided the point of departure which he developed by the system of Calvin. The mission of Arminianism was to show how God could be what the Church taught; He was, and man what the Church declared him to be, in one and the same time. The mode of re-adjustment of the disturbed relations of man to God by justification was the central point of Protestant theology generally; the announcement and the ethical interpretation of the significance of mutual relations between God and man in that adjustment was the contribution to theology offered by Arminianism. Its system is a via media; it strove to avoid sources of inevitable and historical error arising from the extremes of the Pelagian and Calvinistic systems. The exaltation of the Divine agency to the complete suppression of the human in that adjustment issued in simple Determinism; the exaltation of the human in complete suppression of the Divine in the same sphere led to the extreme positions of Pelagianism. Arminianism claimed to have stated, for the first time, with scientific care and precision and收拾 qualified judgment of God and man in which their harmony and mutual recognition could be stated as a working principle, verifiable and verified by experience.

To appreciate the theological value of Arminianism, it is important to review and interpret the points that differentiate it from Calvinism. To estimate its influence philosophically, it is needful to state and illustrate these two great principles—its ethical recognition of justice, and the emphasis it lays upon the human in the redemptive relations between God and man.

3. Criticism of Calvinism. Arminianism regarded the Calvinistic position as open to attack on two sides—the side of God and the side of man. Its treatment of these was considered to be disproportionate and ethically unfair. The sphere in which God exercised His will was the soul of man. That will, therefore, concerned man and his acts. If such acts were performed solely by human will, God had so determined, two consequences followed:—the acts would reveal the quality of the will, and man would not be consciously free; he would know himself to be a moral creature rather than an agent. The criticism was urged therefore as much in the interest of man and of morality as of theology. In fact, Arminianism was at the bottom an attempt to formulate a protest against Calvinism from an ethical standpoint. It used much circum-

Amer. Meth. Q. Rev. (1857) 246. 

ARMINIANISM

spection in the attempt. It carefully rejected, with Calvinists alike, the pagan heaven, which had lingered in the old Church, and the doctrine of reliance placed upon human nature alone. But it renewed the sense of reality to human responsibility, and emphasized the moral conditions of grace. In its moral determination of things it sought to give psychological consistency, especially by its great doctrine of prevenient grace, to the common Protestant principle that man is entirely dependent, in all that concerns his salvation, upon the grace of God. The doctrine, created by Arminianism, was to re-state what was regarded as the primitive and Scriptural view, held by the Church before Augustine, concerning the relation between God and man in the work of salvation; and in this view the sole responsibility of man for his own damnation was evident. The criticism of Calvinism, therefore, found centres of attack in the following five points:—

(1) Predestination. This the Calvinist held to be absolute and unconditioned. The decree to elect was without foresight of faith or of good works. In its operation the Divine will was unmoved from without, moved only from within, either by the grace or by the necessity of Divine nature. The decree to reprobation was conditioned by no specific demerit of the reprobate. He was not distinguished in it or by his personal sin. His reprobation was simply because of sinfulness of nature or habitation or choice, which, being universal in his case, involved all men in equal guilt and penalty. No ethical difference was discernible between elect and reprobate. The Arminian criticism insisted on the ethical inconsistency of this view. The principle of the election of grace is maintained, the Divine will is absolutely supreme. But its supremacy is moral. God is not more bound to punish than to forgive. The Divine decree, whether elective or repugnatory, is conditional throughout. God elected to salvation or to reprobation only those whose faith or final disbelief He foresaw. The Divine foreknowledge logically precedes the Divine volitions; it is not an inference from them; it is a determination of them; it is not merely a foreknowledge but a foreknowledge which determines. But it is a Divine determination, according to the election of grace, of the nature of the present time.

(2) Atonement. The Calvinist held the Atonement to be strictly judicial. Its relation to the non-elect was incidental; its intention was for the elect alone. For them its efficacy was absolute. It so satisfied Divine justice on their behalf that they could not fail to be saved. For were any lost, the penalty of the law would be fully satisfied, but their souls would be left to be judged by the law according to the decree of their sins; their souls would be forever in the darts of hell; and the satisfaction would be made as a matter of justice. The law, existing, would demand and receive satisfaction. God, emphasizing the love rather than the justice of God as honoured in the Atonement, the death of Christ is not the act of a creditor, but a sacrifice that is sufficient by God the Father for a judicial penalty. The Act of Jesus was sufficient as an atonement, not as a mediation of atonement by a mediator, who would be sufficient by God the Father. If the judicial justice of God, demanding satisfaction, would be satisfied by the person of Jesus, without the suffering of Christ, it would be necessary that God should suffer, that He should become sin. 

The character of Arminian theology is illustrated in one of its most important writings, the Treatise of Grotius on the Satisfaction of Christ, written in opposition to Socinianism. He develops the doctrine towards an issue not strictly in harmony with the position of Arminius, by stating what is known as the Governmental Theology, which aimed at mediating between the rigorous Anselmic view of a satisfaction which is the substitution of a strict equivalent for the penalty due to sin and the Socinian rejection of all vicarious intervention. They agree that the atoning reparation satisfied not the rigorous exaction of Divine justice, but the just demands of God, emphasizing the love rather than the justice of God as honored in the Atonement. The death of Christ is not the act of a creditor, but a sacrifice that is sufficient by God the Father for a judicial penalty. Grotius emphasized the relation of God to man, and it is the satisfaction of God made known by the act of Jesus that is in view, which overcame the Arminian conception of the wrath of God as His goodness regulated by wisdom. He regarded the motive of the Divine government as the desire and provision for the happi-
ness of the governed. In this rectorial relation the ruler has a right to require the obedience of the ruled, by virtue of which the penalty was appointed is otherwise attained. This end is the preservation of order and the prevention of future transgressions. The design of the penalty was, in the end, attained, but impressively so what sin deserves and what the penalty would be for sin, the transgression of the law. The punishment of the Lawgiver’s law of sin. It is not actual punishment, but rather the effect of it. As it is not the literal punishment, so it is not in the other conditions of the case, the bestowing pardon, that the penalty is remitted. In the light of the Calvinistic view of the universe—the natural moral theory as it is, and the surrender of the theocratic law. But the Arminianism of Limborch laid greater stress on the inalienable right of God’s grace, and they hold this doctrine in relation to Episcopacy, maintaining His truth to man and the freedom of his own will, by reaching a penalty to His own purpose; as the commitment to God, it held to the imputed Arminian position by regarding the sacrifice of Christ as a price; because God is willing so to regard it. Limborch is a closer representative of Arminianism. He asserted that Christ suffered as a Divinely appointed sacrifice, and reconciled God to man as if the sinner had suffered himself. Arminianism generally reconceives the comprehensive theory of exact and mutual compensation, since some perish for whom Christ died.

(3) Depravity.—The Calvinist held this to be total, involving bondage of the will and inability to any spiritual good. By the Fall the nature of man was perverted at its inception, and original holiness and righteousness changed into absolute depravity. No distinction was made between imputed guilt and inherent depravity. Arminianism held that depravity was a bias, which led the will to its own destruction; and its own desire through the choice of faith or unbelief. The Adamic unity of the race was preserved, but its inherited tendencies to evil were met and neutralised by the free and universal grace communicated to the race through the second Adam. Absolute reprobation cannot therefore be based upon the doctrine of original sin. Arminianism denied that the sin of Adam is imputed to his posterity in the sense of a guilt, and unchangeably adhered to the theory of imputation. It was, not the solitary, is yet the primary cause of salvation. The free gift of grace to the whole race in Christ is the foundation of the entire Arminian system. Its greatest contribution to the discussion of sin was the decisive assertion of the doctrine of prevenient grace, due to the universal diffusion of the influences of the Holy Spirit, and consequently the acceptance of the law by every agent of those who strove after natural uprightness. Grace, therefore, though not the solitary, is yet the primary cause of salvation. To this primary cause is due the co-operation of freewill; for upon its stimulus by grace prevenient depravity, the co-operation of the will with grace efficient.

Later Arminianism declined in some degree from this position. Less exacting views of the original state of man were current. To preserve intact the original freedom of the will, the conception of a primitive state of perfect holiness was discredited. A state of primitive innocence must have been allied with primitive ignorance. It was also doubted whether immortality originally belonged to the nature of man. With milder views of original sin greater stress was laid on the physical impurity of human nature; it was also denied that its corruption had in it the true characteristics of sin. The implications to evil inherited from Adam are not in themselves blameworthy; they are only different in degree from the same state of children. It is only the tendency that becomes real guilt. The ‘innate liberty of the human will’ was regarded as an act of itself with the liberty of its will. The notoriety of Methodism to Reformed is evident, holding that whatever power there is in the human will—in its own self—is the line which constitutes real guilt. It is the liberty which reckoned with righteousness, even before it can produce its first act towards good works. (2) There was the definite insistence in Methodism that the possibility, as well as the possibility of entire sanctification. This teaching formulates and urges the most fully accepted by Methodism. It protests against the distinct imputation of the absolute obdurate and the liberal Grace, to the state of man, whilst it clings to the imputation of Christ’s righteousness individually. The Methodists believe the entire sanctification is quite in harmony with the main contents of which Arminianism demanded. No amount remains in man to return to God. The co-operation of grace is of no effect. The Augustinian idea of ‘co-operation’ is rejected in favour of the co-ordinating of the universe of grace with the universality of redemption. No man is found in a state of separation from God. He who has Christ, whom he wholly devoid of the grace of God. The virtues of unredeemed grace to the Spirit, and the whole of the Spirit’s gifts. Such virtues are a universal experience of the race. If Adam brought a universal condemnation and death upon all things and beings upon all general justification and universal seed of life.

(4) Conversion.—Both Calvinist and Arminian regard this as the work of the Holy Spirit. But Calvinism maintained the grace of God to be irresistible. The calling of God was both effectual and efficacious, and to the immediate operation of the Spirit of God upon the soul it was conditioned that the Divine action was mediating through the truth, and thus moral and persuasive, as distinguished from physical and necessary, of the grace, which is effective to the processes of repentance and of faith, may finally resists. The firm maintenance of universal redemption by Arminianism naturally affected its theory of justification at many points. Calvinist in Christ held to a certain number of moral standards generally, that Christ’s obedience is the only meritorious cause of justification, and faith its sole instrumental cause, and that good works have no kind of merit, Arminianism did not distinguish between the active and passive obedience of Christ. Gradually also it denied the direct imputation of Christ’s righteousness. Faith came to be regarded as justifying, not as an instrument limiting the soul to Christ, but as an imperfect righteousness, which is imputed to men as if it were perfect. Whilst repudiating the view that works merit salvation, the Arminians asserted that the faith which justifies is regarded by God as a faith which includes the position both of Arminius himself and of his followers. It is allied with a tendency, distinctly marked, to define faith in terms of intellectual assent rather than as trust. It became a simple and the doctrine of faith and the works of the religion. The influence of grace was by no means merely of a moral nature. It brought in and accompanied the word of God. Its influence therefore, whilst supernatural in its character, was in its mode of operation the new law—the law of grace, according to which the legal righteousness for ever impossible to man finds a human substitute in an evangelical righteousness accepted of God, though imperfect, for Christ’s sake. The title denotes the perilous tendency, which Christianity and Arminianism did not escape, of the notion that Christ has lowered the demands and standard of the moral law.

Methodist Arminianism met these tendencies in two ways:

1. It declared that, though God requires faith, it is also His gift. He does in Christ pardon the imperfection of the good work wrought by faith, but He does not require it as perfect so far as concerns our justification. This would be the imputation of righteousness to the believer himself. It is the faith of the ungodly which is reckoned for righteousness, even before it can produce its first act towards good works. (2) There was the definite insistence in Methodist theology upon the necessity, as well as the possibility of entire sanctification. This teaching formulates and urges the most fully accepted by Methodism. It protests against the distinct imputation of the absolute obdurate and the liberal Grace, to the state of man, whilst it clings to the imputation of Christ’s righteousness individually. The Methodists believe the entire sanctification is quite in harmony with the main contents of which Arminianism demanded. No amount remains in man to return to God. The co-operation of grace is of no effect. The Augustinian idea of ‘co-operation’ is rejected in favour of the co-ordinating of the universe of grace with the universality of redemption. No man is found in a state of separation from God. He who has Christ, whom he wholly devoid of the grace of God. The virtues of unredeemed grace to the Spirit, and the whole of the Spirit’s gifts. Such virtues are a universal experience of the race. If Adam brought a universal condemnation and death upon all things and beings upon all general justification and universal seed of life.
ARMINIANISM

love, and to evangelical perfection. Arminius writes: 'While no believer can perform the whole of the precepts of Christ in this life, I never denied it; but always left it as a matter to be decided' (Works, i. 669). The vital question of the atonement of Christ was, in part, determined by the English Platonists, who prepared the way for the Methodistic modification of doctrine on this subject, which was both an act of grace, directly administered by the Holy Spirit, in response to faith—a faith working by love, and retained by constant union through faith with the living Christ (see above).

(5) Final Perseverance.—The Calvinist held the indefectibility of the saints. Men unconditionally elected, absolutely purchased by the death of Christ, and irresistibly called out of their depravity and lost estate by the direct operation of the Holy Spirit, could not possibly fall from grace. The Arminian criticism hesitated at first to meet this position by a direct negative. But such a position was speedily seen to be inevitable. And, as a result of its other doctrinal positions, the possibility of a true believer falling from grace was declared. This found warrant also and verification in examples and personal experiences that could not easily be mistaken. Moreover, as the Arminians could not with the authority of the Symbolical documents, it was easy to assert that the Calvinistic position professed not so much as to be based upon direct Scripture support as to rest upon the secondary principle of the Covenant of Redemption.

The provisions of this imaginary covenant between the Father and the Son, before time began, in respect of the certain number to be redeemed and saved, was the beginning of the Arminian position, had produced the idea of a fixed and unalterable division of mankind. This canon every Scripture must be made to conform. It was early shown that no Scripture evidence of such an unconditional covenant existed. It was less difficult still to urge against it the criticism that its ethical issues provided reasons against its provisions.

Theologically, Arminianism is a mediating system throughout. Its most characteristic feature is conditionalism. Absolutism is its persistent opposite; moderation, the mark of its method. The failure to appreciate this position accounts for the frequent misapprehensions or misunderstanding of Arminianism, and for the natural ease with which its deliberately balanced judgment has declined, in the hands of some of its exponents, towards theological positions with which it had no true affinity. These have been chiefly Socinianism and Pelagianism—systems due to an over-emphasis upon the human. Much that in certain periods passed for Arminianism was really a modification of one or other of these systems, which a true Arminian judiciously repudiates. In Holland, Arminianism, gliding by almost imperceptible degrees, ultimately reached a position with little to distinguish it from Socinianism. In England, where there was a presence of Arminian thought long before the time of Arminius and his system, its principles found an interesting development, and their profession an unusual environment. The influence was seen in the ambiguity or comprehensiveness of the Articles of the English Church. Latimer and Hooper, Andrews and Hooker might with propriety have been called Arminians, if Arminianism as a system had been in the ordinary mediate teaching by Baro, Professor of Divinity at Cambridge, gave rise to the pamphlets of Arminius, which became a political question, with the singular result that, through the influence of Land and Juxon, it became allied with the side of the King, whilst it was the Calvinists, with the distinguished exception of John Goodwin, one of the ablest defenders of Arminianism, who stood for the Parliament. But the Arminianism of Laud was the Dutch Arminianism. Arminius would have denounced its sacramentalism as superstition. With the issues of the Gallican, Arminianism suffered eclipse, but was able to rest upon its emphasis upon the justification by Arminius and the Arminian principle persisted mainly as a negation of Calvinism. Cudworth, Jeremy Taylor, Tillotson, Chillingworth, Stillingfleet, Burnet, Pearsall Whitley, and others, down to Copleston and Whately, were Arminian theologians of eminence in the Church of England. The positive temper of Arminianism, however, suffered under their treatment of the system. Its fine balance between Calvinism and Pelagianism was lost. It was blended with tendencies to Lattitudinarianism and Rationalism; and became a negative rather than a constructive or mediating system. It was from this setting, however, of Arminianism in a non-juristic and atmosphere, that the restored Arminianism of Arminius, with its emphasis on the grace of God, emerged into strength in England in the Evangelical Revival of the 18th century. It became of a sturdy Arminian stock of this type. And probably the ablest expositions in English of the Arminian system are to be found in the writings of John Wesley, John Fletcher, Richard Watson, and William Bot Pope, the Wesleyan theologians. Methodists throughout the world, with the exception of the Calvinistic Methodists in Wales, who represent the Calvinistic attitude of Whitefield, who withdrew from co-operation with the Wesleys on this ground, are convinced Arminians, who profess to adhere to the original Arminianism of Arminius and his followers of the earlier type before it approximated to the rationalistic temper of Socinians or Latitudinarians, or was merged in the prevailing tendencies of Restoration theology or American Unitarianism. The Wesleyan type of Arminianism, with its Evangelical note, is at present the most influential. It has the political privileges of the British Empire and America, and is based upon the conviction that the Calvinistic positions are incompatible with Divine equity and human freedom, whilst its loyalty to the doctrines of grace is the best vindication of Arminianism from the common charge of Pelagianism and Socinianism. Lack- ing the doctrinal loyalty and the Evangelical vitality of the Arminianism of Methodism, Dutch Arminianism is a dwindling force. The inclination towards freedom of speculation, the rejection of all creeds and confessions, a preference to moral to doctrinal teaching, Arian views respecting the Trinity, the virtual rejection of the doctrines of Original Sin and imputed righteousness, and the depreciation of the spiritual value of the Sacraments, have resulted in the gradual reduction of Arminianism in Holland to a negligible theological quantity, and to the dimensions of an insignificant sect, numbering only some twenty congregations.

4. Underlying principles.—The supreme principle of Arminianism is conditionalism. It provides a philosophy of freedom between Predestination and Fatalism. As an active criticism of Calvinism it is based upon two positions—the restless and dominant demand for equity in the Divine procedure, on the one hand, and such a reference to the constitution of man's
nature as will harmonize with the obvious facts of his history and experience, on the other. It sought to construct a system which should be dominantly ethical and human throughout. It sought to create, before that, the laws consistently condition the mannerly activities of the Divine will, and set human limits to the Divine action. The Calvinistic conception of justly was preserved after the fall in original the rights of God; Arminianism so construed justice as to place over against these the rights of man. Sin, it declared, had not so transformed human nature that man had become a mere vessel of evil, the property of that creature who was, because of guilt he had inherited, or saved by a grace which operated without rational distinctions and without regard to foreseen faith or good works. In equity the worst criminal had his rights. A fair trial before a fair tribunal was one which sin did not invalidate. The consideration of these rights did not cease because the judge was God, and the accused, or even the condemned, was man. The Creator owed something to the creature He had fashioned, because of the manner of His fashioning; and these obligations did not cease because the first man had sinned. In a perfectly real sense sin had really increased the obligation of God to be just. If it follows that God had stated it must be, and what Calvinism had maintained it was, then it would be truer to the facts it involved to speak of it as a radical wrong from which man unjustly suffered. The race had not been con- suited by the first man; in no true sense was he the representative of the individual members of the race; for they had no voice in his appointment, and no veto upon his acts. By every law of justice, therefore, evil, it urged that it was difficult to conceive anything more nearly approaching infinite injustice than allowing such a relation, of itself, to involve millions of men of every age and in every age in eternal death. If all had sinned, all had been right to be considered as objects of commiseration rather than persons to be blamed for what they had suffered, since they suffered as the consequence of the first man's sin, altogether apart from their own voluntary acts of kindred disobedience. And although Arminianism retained the federal principle, and held that the federal relationship had resulted in a weakened will for the individual, and had afflicted him with a bias towards evil, it urged that it was difficult to conceive anything more nearly approaching infinite injustice than allowing such a relation, of itself, to involve millions of men of every age and in every age in eternal death. If all had sinned, all had been right to be considered as objects of commiseration rather than persons to be blamed for what they had suffered, since they suffered as the consequence of the first man's sin, altogether apart from their own voluntary acts of kindred disobedience. The introduction into these relations of the Arminian principles resulted in a criticism that seemed irresistible; for the moment the idea of equity was admitted to a place in the consideration of the relations of man and God, the old absolute unconditionalism became untenable. If justice reigned, and its prin- ciples were common to God and man, it meant that God must be just to man, even though man was disobedient to God; and justice could not tolerate the condemnation of man for a sin which was committed without his personal knowledge or responsibility, any more than it could tolerate of a salvation which had no regard for the personal will or choice of its recipient.

Arminianism was always most successful when its argument proceeded upon principles supplied by the moral consciousness of man. This recognition of the value of the testimony and of the entire content of human consciousness was the correlate in Arminian doctrine of equity; its exposition of the idea of man provided the foundation of its two main principles. It regarded man as free and rational; sin had not destroyed either his reason or his freedom. By the one he had the ability to believe, by the other the ability to choose. Even if the racial connexion had weakened or perverted these faculties in the individual, the result was not incapacity to act, because the racial connexion with the second Head was intact and operative in the community. From that and the doctrine of the grace. In justice, therefore, God must deal with man as possessed of such abilities. On their co-operation with the Divine activity the results in this new dispensation would be. The human will of man was regarded asconditioning the ab- solute will of God. In the realm of nature His physical attributes ruled; His omnipotence was unconditioned. In the realm of mind and will His love and moral attributes ruled, and their rule was conditioned. Man was not a part of physical nature merely, or a mechanism involved in the impersonal or unmotivated motion of non-moral crea- tures. His destiny could not therefore be deduced by logical processes from the premise that God is the Sovereign Will, which can do as it chooses; for He has chosen to create man free and re- sponsible; and His attitude and conduct towards man will consequently be conditioned by the nature He has made. It has been His good pleasure to create man moral, it will not be His will to deal with him as if He were merely physical. If Creator and creature are alike moral in character, if it is possible for either to be during the conditioned and necessitated action on the other, are both ex- cluded. By His own voluntary act God has limited the range and exercise of His physical attributes, and so the terms which express His relations to man must be those of reason and freedom, not those of will and necessity. Arminianism offers no disparagement to grace in general, and deepens the emphasis on prevenient grace in particular. But whilst in holding fast to the absolute idea of God in opposition to all 'idolatry of the creature,' the centre of gravity of the Arminian system is found in the sphere of anthropology. Its doctrine of man probably differentiates it more definitely from Calvinism than its doctrine of God.*

5. Theological and philosophical influences.—The twofold emphasis of Arminianism on the moral and human elements in its system de- clares the sphere and defines the source of the modifying influences it exerted on subsequent theological and philosophical thought. These influences were essentially mediating; and they were mostly indirect rather than direct. They influenced theological speculations chiefly through theology. But the leading principles of Arminianism were potential in both spheres, in the succeeding periods of intellectual revival. It is well to keep in mind the fact that, in the history of European thought, the 16th cent. was great in theology rather than in philosophy, and that the 17th was great in philo- sophy rather than in theology. But without the religious thought of the earlier century, the later would have been without its problems, and there- fore without its thinkers. The pre-eminence of the one in religion involved the pre-eminence of the other in philosophy. It was a phase of theology upon philosophy, and, later still, upon more distinctly ethical thinking. Arminianism had a considerable share. Although questions directly upon ultimate philosophical and religious principles were, on the whole, not in the spirit of the age of Arminianism, yet Arminianism, as more generally true to the whole of the facts of existing problems, was distinctly more opened to the thought and spirit than Calvinism. By its underlying prin- ciples of equity and freedom it was more perfectly fitted than its rival system for a period of intel- lectual transition. It became the form of Re-
formation theology which most easily allied itself with the advance of knowledge and with the humanism of the new learning. The Cartesian philosophy, which was bringing about a gradual transformation of theological views, especially in the Netherlands, where already a liberal spirit was showing itself in general uneasiness under the yoke of the Symbolical documents, found especial favour with the Arminians. They had also among their ranks many eminent men, who were progressive to establish a new thought outside a distinctly theological circle, who exerted a beneficial reaction upon Protestant theology by their thorough scientific attainments and the mildness and breadth of their views. Arminianism stood generally for the strengthening of the scientific temper and for the principle of moderation, which represented dawning methods of far-reaching importance in the intellectual life of the modern nations. On the other hand, this attitude favored the growing tendency towards Rationalism and Latitudinarianism into which Arminian theology frequently drifted. But that this drift represented any necessary effect of the Arminian movement is disputed by many, who assign it to the system of thought which lay at the theological sources of the great Methodist revival in the United Kingdom and America during the 18th cent., whose leading restatements in modern theology, in its purest form, and vitalized it with the warmth of religious emotion and the joyous assurance of the Evangelical spirit. Arminianism in the glow of the spiritual enthusiasm of the early Methodist evangelists has been truly described as 'Arminianism on fire.'

The Arminians were the fathers of toleration. Amongst its earliest representatives are found stalwart advocates of religious freedom, who were willing to suffer for that cause. Within the sphere of opinion Calvinism did not spontaneously incline to toleration; it was inflexibly dogmatic; its instincts and ideals were aristocratic rather than democratic in relation to ethical authority. It is curious to note, however, in a manner more purely political, that an interesting reversal of the natural order of the two systems occurs. As in England the Landian were Arminian, and the Parlia-mentarians were Calvinistic; so, however, to be true in the seventeenth century, the La-ter were Calvinistic, and the Jesuits Arminian. The natural tendencies of Arminianism to toleration may be instructively traced in the Latitudinarian teaching of the Cambridge Platonists, who were drawn from the Arminian party; in the modern Latitudinarian scholar, particularly by those of Episcopists. They pleaded for liberty of conscience, and studied to assert and examine the principles of religion and morality in a philosophical method; they de-clared equally against superstition on the one hand and enthusiasm on the other. Moderation was the first law. They were conspicuous for their advocacy of freedom of inquiry, their tolera-tion of divergencies of opinion in non-essentials, their genial temper in controversy, their effort to bring about a reconciliation between theology and philosophy, their recognition of religion as less a matter of law than of faith, and their strong purpose to establish a rational the-overy, which should avail as a reply to the ath-iestic polemic. Arminianism, however, made common cause with all religious parties in resisting the dogmatism of the philosophes. Modern rationalism, which was declaring open war against the belief in the positive authority of Revelation. And the association of Arminianism with Deism and Natu-ralism, because of a supposed common funda-mental principle and the spirit which may be regarded as an unwarranted exaggeration of the Arminian emphasis on the human. Arminianism could be under no necessity to deny or deprecate the supernatural. By the time the age of specu-lative criticism and of the antagonism between faith and knowledge was reached, Arminianism as a distinctive doctrinal position had been estab-lished on the ground of its contribution to Sy-tematic Theology. Its influence on such later controversies is only indirect. That the influence was real cannot well be doubted, because of the emphasis on moderation and the more genuine religious character of the pastoral and moral theology by Arminianism. Whether its influence, through its demand for the recognition of the authority of reason in the theological sphere, affected the philosophical thinking which resulted in the rationalism of Kant, or in its reaction in the subjective theories of Herder, or in the the-oology of Jacobbi or Schleiermacher, it is difficult to say. Certainly Kant's doctrine of the Practical Reason, with its claim for the recognition of the ethical constitution of human nature, was developed in obvious harmony with the Arminian emphasis upon the authority of the moral consciousness as a factor in the interpretation of the relation of God to man. Schleiermacher's Arminianism, which depended had definite relation to Calvinism. Only in the place he gives to religious feeling is affinity with the Arminian principles likely to show itself.

With the distinct problems of modern speculative thought—creationism, immanence, mind and matter—Arminianism, like the other Protestant the-oologies, had comparatively little concern. The theistic position of the Cartesian act, the creative intentions, was generally accepted; there was no suffi-cient evidence, from the scientific study of nature, to suggest irreconcilable differences from the tradi-tional view. In one point, however, Arminianism was peculiar. It laid the greatest stress on creation being the work of the Father as distinct from the equal creative activity of the three Persons in the Trinity. The movement of Arminian thought was set in a framework of political, social, and eco-nomic changes which cannot be dissociated from its influences without missing their complete signifi-cance; but these are obviously beyond the scope of this article. One fact of importance ought, however, to be noted. When the transition from the 'natural rights' and the distinction between jus naturale and jus gentium, which had been raised by the philosophers and jurists of antiquity, passed, as a result of the Renaissance, from the region of academic speculation into legal polities, the transition was accomplished through an Arminian channel. Grotius was the first to start the question of the distinction between natural and conventional rights, and was thus the father of the modern exponents of the 'Philosophy of Law.' How profound was the in-fluence of this transition upon the course and char-acter of modern systems of Ethics will be obvious. It is here that we come into the presence of one of the less appreciated, but influential services render-ed by the Arminian definition and advocacy of its fundamental principles—equality and human freedom. These principles represent the prevail-ing tendency of the leading ethical theories of the present. Without them the advance beyond the ethics of Scholasticism would have been im-possible. Calvinism missed them, and, in doing so, missed the opportunity and the possibility of becoming the basis of an intellectual statement of ethical obligation satisfactory to the modern mind. Although the Calvinistic concept of the Church, as being based upon the individual rather than upon the traditional group, may be different from that of Rome, the Calvinistic ethics is, nevertheless, based upon outward authority—
the authorship of a truly organized Church and of the Scriptures truly interpreted by such a Church. This position was not accidental; it was of set purpose. Calvin deliberately subordinated ethics to dogmatics. From the Protestant point of view this was fundamentally reactionary; it was Scholastic in method and aim. The dual ethics, and the only ethics consistent with the essential Protestant principle, must be based upon the inward compulsion of conscience, not upon any external authority delegated as a result only in casuistry. This was the Roman method and practice. The ethics of Thomas Aquinas and of Ignatius Loyola expounds a closed system given in the teachings of the Church; the ethics of Calvinism expounds a closed system given in the written Word. 'For true ethical development there is no more room in logical Calvinism than in logical Romanism.'* Ethically, Calvinism and Jesuitism have a common foundation in that they depend upon external standards and sanctions. On this account Calvinism has not, as a matter of history, contributed to the development of ethical theory in any degree commensurate with its magnitude. It has been frequently remarked that, as an inspiration to high ethical endeavour, Calvinism has produced types of sacrificial devotion to right conduct which have frequently touched a lofty heroism in the lives both of individuals and of churches which have been dominant. Yet it must be acknowledged that the influence of Calvinism, as a system, in the philosophical re-construction of modern ethics has been reactionary. But on the other hand, of the fundamental principles of Arminianism has wrought harmoniously with the processes of ethical development, which are based upon the manifold ideals and constraints of the moral consciousness of the individual. It was the plain of the aggrieved moral nature, quite as much as the philosophic intellect, that was articulate in the Arminian protest. The deterministic depreciation of the rights of human nature to the value of a mechanical movement in the presence of the Divine will was the ethical weakness of Calvinism in which Arminianism found its advantage. This stress on the place and functions of human nature in the interpretation of, and operation with, the Divine mind was the distinction consistently maintained between the rival systems.

Arminianism was the medium by which the humanistic spirit of the Renaissance was transmuted into the theological and ecclesiastical sphere. Its great men — Grotius, Episcopius, Limборch, Brandt, Le Clerc—are all men of literary faculty and humanistic temper. In Calvinism the spirit is more distinctly speculative and scholastic, and the intellect deductive and constructive. Its great men—Calvin, Zanchius, Gomarus, Twisse, Rutherford—are all men of speculative genius. It thus easily happened that the tendencies of Arminianism were often—and sometimes rightly—suspected of affinity with Pelagian and Socinian views. These affinities were strengthened by the mingling with the Arminians of Socinian scholars returning from exile; and in many cases Arminianism merged its identity in these phases of thought. It is well known that the exaggeration of Subordinationism by the Remonstrant divines, especially by that of Samuel, grafted by subtle degrees into the Socinian position. They denied the asety of the Son, which Calvin had taught. His subordination to the Father as the Spirit is subordinated both to the Son and the Father, which is a doctrine. But, though the Divine nature belongs to the Son and

* Hibbert Journ., Oct. 1907, p. 159.
speculative treatment of theology, and, through the writings of Grothus and Episcopal, issued in methods of theological discussion which gradually extended to the whole Evangelical Church.

The Arminian effort to meet the idolatry of Scripture by the exaltation of the moral consciousness occasioned the charge against Arminians of laxity in views of inspiration. Their position was confused with the Socinian method of subordinating the authority of Scripture to other revelatory claims; interpretation depend upon the so-called truths of reason. Here again, however, pure Arminianism is the mediating position. Whilst disagreeing with Luther's positioning that reason is blind in spiritual things, it resisted the Socinian extreme, as it resisted the rigid and narrow adherence to the letter of Scripture which marked later Protestant theologies. Some of the later Arminians added the canon that Scripture cannot contradict reason. The general position, however, was that reason must be followed in interpretation; that the foundation of religion, on its intellectual side, should be in personal thought and investigation; that personalism, the twin sister of free will, is the proper or sufficient ground of belief; and that every passage of Scripture must be considered separately and in its historical setting and limits. These methods, and especially the methods of right treatment of the text and substance of Scripture was a precursor of the methods of careful exegetical study now current, and of their issue in the restoration to authority of Biblical as distinguished from Systematic and Dogmatic Theology.

The reaction from the hardening processes of the Lutheran and Calvinistic divines upon the views, generous for their time, of Luther and Calvin, was initiated by the Armenian writers, who reserved the direct action of the Holy Spirit for matters of faith, and left historical research and the memory of human writers to their fallible functions. Arminianism was initiated by the free and fallible interpretation which have proved a basis and authority for the methods now known as the Higher Criticism. Sanctions were also provided for the science and practice of Textual Criticism through the access afforded by Armenian principles to an enlargement of the freedom of inquiry into the preservation and historical growth of the received texts of the OT and NT.

The Armenian principle of human freedom and personal responsibility, with the humanitarian spirit they tended to evoke, gave a new impulse to the awakening movement towards Foreign Missions, which succeeded the era of rationalistic influence in the Protestant Churches. If the Atonement was universal, and the salvation of the whole race possible, then the sense of responsibility for making known the conditions of salvation to the race was deepened, and a note of urgency was added to the mission for the expansion of Christianity. Moreover, the weak place in the great Protestant confessions had been the anthropological. One of the many effects of this deficiency was seen in the judgment of the Church in respect to the nature and history of the races of mankind, and upon their religious possibilities, which has since broken the American results of the kindred sciences of Anthropology and Comparative Religion. And the system, amongst the Protestant theologies, least discredited by the light, is Arminianism.

Reference must be made finally to a great service Arminianism has rendered to the liberal thought generally. This is discovered in the subtle influence it has exerted in the gradual softening and humanizing of the harsher forms of theological definition. As a separate and separable system, either ecclesiologically, or from all logical, its reign was brief; as a genial and vitalizing influence, suffusing itself through all the discussions of the relation of God to man, its authority is unceasing. It has wrought, and is working, to make man see that his. secret and unacknowledged, towards the approximation of the position of modern theology respecting Predestination to that which was held by Catholic Christendom before the age and teaching of Augustine. Substantially the Churches of East and West were united, before his time, in holding the primitive and Scriptural view of the relations between God and man in the work of salvation, and of the sole responsibility of man for his own damnation, or for the want of God's will to prevent it from Arminianism to restore. How far the disturbance of the thought of the Church on these relations, brought about by the revived and intensified Augustinianism, and everafter the views opposed to it, as addressed by the influence of Arminianism, is at present only partially discernible. It is, however, certain that it has greatly modified the specific views which were the objects of its struggle, and for which the Arminianism was held in opposition to, and rejected by Calvinistic theologians; it has also become a dominant factor in the current re-statement, to the present generation, of the doctrines of grace. The reduction of the area of Calvinistic influence, and its partial disintegration, necessitated a re-arrangement of the doctrine of grace. But of those which may be regarded as theological and ethical, the active principles upon which Arminianism insisted have been prime causes.

In France an early and interesting illustration of the modifying influence of Arminianism occurred in the theology of the school of Saumur, associated particularly with the name of Amyraut (see AMYRAUTISM), and later with that of Pajon. Amyraut endeavored to mitigate the harsh reprobation of the Calvinistic doctrine of election by his theory of hypothetic universal grace, which was substantially equivalent to a doctrine of universal atonement. God, in some proper sense, wills or desires that all men should repent and be saved. In case all should repent, no purpose of God would stand in the way of their salvation. But the indispensable means of repentance—regeneration, following election—is not be allowed upon them. In the order of nature, the decree of election follows the decree providing the atonement. The main peculiarity of Pajon's attempt to blunt the edge of Calvinistic particularism was his conception of regeneration: the Holy Spirit uses the truth of the Gospel as its instrument in effecting the antecedent intellectual change; but He also uses all the circumstances
an providential environment of the individual. To this aggregate of objective influence, which is not the same in different individuals, regeneration, where it takes place, is due. It is the act of God because the antecedent circumstances are the effect of God's ordering, and are adapted by Him to produce the results the Pajonius aroused widespread interest in the French Church.

In Germany the strength of Lutheran influence was already in sympathy with the Arminian movement. Its influence was silent, though in the bosom of the Reformed Church itself; and by the time of the Wollian movement, the Reformed dogmatics were moving from the doctrine of the absolute decrees. Amongst the English-speaking peoples, in addition to the influences, already referred to, which strongly modified the theology of the great school of Anglican divines, the influence of Butler became a powerful ally of Arminianism. His doctrine of probation was not the Calvinistic doctrine of the probation of the race, but the Arminian insistence on the probation of the individual in his unshared and unshareable responsibility.

The antithetical revival Arminianism became aggressive. Associated with the renewed vitality of personal godliness, the Arminian theology, carried by singers and preachers, passed swiftly across the Atlantic, and accompanied the earliest settlers who moved towards the west, across the continent. In the newer British Colonies at the Antipodes a similar influence has wrought, until, at the present day, Arminianism, as understood and taught by Methodist preachers, dominates what is probably the largest Protestant Church in the world, reckoning some thirty millions of adherents. In America the matchless intellectual gifts of Jonathan Edwards were consecrated to the task of checking and devitalizing the forces of Arminian doctrine. But the ultimate results were disappointing to Calvinistic theologians. The New England theology, where it has not passed under Unitarian influences, has revealed a persistent modification of the Calvinistic position. The distinctively Calvinistic formulations of faith in Great Britain and America have undergone revision, mostly at those precise points which were the objective of the Arminian attack.

The siren song in general tended to forsake the harshness and absolutism of doctrinal statement, without surrendering the deeper significance of the ultimate supremacy of the Divine will. And this position was the original idea and ideal of Arminianism. There is a deep and almost universal dissatisfaction with the declaration and issues of a limited Atonement, which was a main element in the Arminian objection to Calvinism; and a strong conviction prevails that the salvation of the non-elect is an object of sincere desire to the mind of God. Yet it will be obvious that it is not the doctrine of Predestination per se, in which Calvinism has enclosed its a realm of nature and providence in a network of teleology, that excites the strongest repugnance to the system against which Arminianism rose to protest.* For Determinism in philosophy and Selection in biological science are still acceptable and popular equivalents for Election in the realm of grace. Differentiation is a basal principle in each of these spheres; but differentiation involves inequality; and inequality involves preference; for it is the differentiation of objective influence that still acceptable, as individuals are concerned. Biology posits differences in the single cell. Psychological ethics starts the career of individual character with differences ad initium. Popular inferences assume that the difference between Cain and Abel, between Esau and Jacob, is an illustration of the same principle that differentiates the hawk from the dove or the hart from the swine. It is rather towards the Calvinistic eschatology that the antithesis is most keenly felt, as an assurance of injustice and cruelty which this element in the Calvinistic system wore to the early Arminians, it wears to the modern mind. The humanity of God has become an element in the standard of judgment applied to the Divine activity. Fatherhood has dispossessed Sovereignty. Immanence has modified transcendence. When to such tendencies is added the momentum of the critical and unbridled spirit, it becomes manifest, which including the human spirit, whilst yielding reverent allegiance to the mystery and reality of the Divine Sovereignty.

LITERATURE.—(4) FOR LIFE AND TIMES OF ARMINIUS:—His funeral oration by his friend, Petrus Bertius, was printed at Leyden in one quarto vol. 1631 (Eng. tr. by Nichols, vols. i. in 1659 and ii. in 1659 by J. Nichols; and vol. iii. in 1759 by Wm. Nichols; later edition, in 3 vols., in 1730, by W. H. Bagnall, in 1833); Acta synodi nationalis Dordrecht (Dort, 1610); Acta et scripta synodalia Dordrechti (Harderwyck, 1620); Schaff, Creeds of Christendom (New York, 1877), vol. iii. 500—977; Uttenbogaert, Kerckeleijcke Historie (Rotterdam, 1647); Gerhard Brandt, Historia Reformationis (Amsterdam, 1675; 3rd ed., 1683) by Chamberlayne, 4 vols. 1720; Limborch, Historia Fidei Sacri (Amsterdam, 1702), which includes his Origine et Progressu Controversiarum, etc., appended to later edition of his Theologia Christiana, 1714; Episcopii, Instytut, Theol. Syst. For valuable lists of literature see Uttenbogaert, Bibliotheca Theologica in Remonstrantium (Amsterdam, 1729).

(5) FOR PERIOD OF CONTROVERSIES:—Writings of Arminist (mostly occasional treatises drawn from him by controver- 

ties) and Arminians collected and published at Leyden in one quarto vol. 1631 (Eng. tr. by Nichols, vol. i. in 1659 and ii. in 1659 by J. Nichols; and vol. iii. in 1759 by Wm. Nichols; later edition, in 3 vols., in 1730, by W. H. Bagnall, in 1833); Acta synodi nationalis Dortrechti (Dort, 1610); Acta et scripta synodalia Dordrechti (Harderwyck, 1620); Schaff, Creeds of Christendom (New York, 1877), vol. iii. 500—977; Uttenbogaert, Kerckeleijcke Historie (Rotterdam, 1647); Gerhard Brandt, Historia Reformationis (Amsterdam, 1675; 3rd ed., 1683) by Chamberlayne, 4 vols. 1720; Limborch, Historia Fidei Sacri (Amsterdam, 1702), which includes his Origine et Progressu Controversiarum, etc., appended to later edition of his Theologia Christiana, 1714; Episcopii, Instytut, Theol. Syst. For valuable lists of literature see Uttenbogaert, Bibliotheca Theologica in Remonstrantium (Amsterdam, 1729).

The religious art of savage and barbarian races constitutes a field of inquiry the limits of which are exceedingly difficult to trace with any accuracy. There seems to be no doubt that among some tribes religion dominates almost the whole of individual as well as of social life. The Pueblo Indians in Arizona and New Mexico may be quoted as an example of such thoroughly religious peoples. The better the customs of these Indians have become known, the more evident it has become that even the apparently most trivial actions are to them associated with religious feelings and ideas. From birth to death the Pueblo Indian is, passively or actively, partaking in an almost continuous act of religious worship. In the artproductions of this tribe the religious purposes are naturally apt to become almost exclusively predominaent.

It is true that the Pueblo tribes appear to be quite exceptional in their inclination towards pious practices. But if the word 'religion' be taken in its widest sense, including magical ideas and superstitious beliefs, there might easily be found many other tribes among whom religion exercises an all-predominating influence on art production. And the field of religious art becomes further widened if, as has been done by several authors, traditionalism is included under the head of religion. Among almost all uncivilized nations, everything that has been transmitted from the ancestors to descendants is treated with a respect which closely resembles religious feeling. And in art, even if the products we meet with be of recent origin, the methods employed in production have almost everywhere been transmitted from earlier generations.

It is only natural, therefore, that several authors should have been led to consider all ethnic art as essentially religious. This opinion is represented by some of the most eminent German ethnologists. According to Dr. Gerland, the distinguished continuator of WALTZ'S Anthropologie der Naturvölker, dances, pantomimes, and dramas, however meaningless they may now appear, have always originally been connected with religious ceremonies. The articles of dress and ornament with which primitive man decorates his body are, by ethnologists of this school, interpreted by preference as savage or religious symbols. And in works of art, such as rock paintings and engravings, the sacred and serious meaning has been taken for granted.

According to this line of thought, however, a reaction has set in among other German ethnologists. In his remarkable essay on petroglyphs (Etnographische Parallelen) Andree has branded as a learned bias the general tendency to look for such sacred meaning in all ancient drawings, many of which may have had their origin simply in the impulse of the idle hand to scratch lines and figures on inviting surfaces. Other ethnologists have pointed out how easily the simplest dances and songs are to be explained as outbirths of an emotional pressure, which in itself exercised a tie with religious feeling. And it has been urged that the religious sanction, which traditionalism confers upon all ancient customs, does not in itself give us any information as to the real origin of these customs.

However sound in its principle, the reaction against the religious interpretation may, nevertheless, easily lead to a too radical scepticism. The case of the carved ornaments of the Hervey Islanders is most instructive in this respect. Notwithstanding the deriding strictures originally passed, in the name of common sense, on the symbolic interpretations of Stolpe and Read, an unbiased examination can lead only to the conclusion that, in these apparently meaningless figures we really meet with a symbolic art which is full of religious significance (Stolpe in Trans. of the Royal Soc. of Literary and Scientific. Soc., 1891).

By such examples it is proved beyond question how impossible it is to uphold any a priori assertions as to the religious or non-religious character of primitive works of art. In order to estimate whether or not a religious influence has been operative, it is necessary to examine in detail and from a philosophical point of view the artistic productions of all tribes of mankind. Such an examination is as yet been undertaken with regard to only a few tribes: the Hervey Islanders, the inhabitants of the Torres Strait regions, the Dayaks of Borneo, the Pueblo Indians, and some others. In an article for an Encyclopaedia, there could in no case be any question of endeavouring to supplement these gaps in our knowledge. The only thing therefore that can safely be done is to interpret, at the risk of incompleteness, such works and manifestations alone as display their religious character on the surface. And it will be necessary, in order to keep the survey within reasonable limits, to exclude all works the origin of which is to be found in an exclusively magical purpose. Thus the various kinds of dramatic rain-making rituals, and the magically-medical cures, although generally executed by the religious profession, will not be treated of in this connexion (see MAGIC).
ing dervishes and of many other well-known sects, might be quoted in proof of the fact that, among civilized as well as among barbarous peoples, a highly strung emotional state, even if produced by purely physical agency, is considered as a religious feeling. And it is significant that the only form of art which manifests that has been observed among the lowest of all savages—the wood Veddas of Ceylon—consists of an exalted dance, which has justly been compared with the attitudes of the Silurian deer and with the performances of the howling dervishes. As to the exact purpose of this ceremony, travellers do not all agree. Some take it to be intended as a kind of propitiation, addressed to the divinity of the arrow—an arrow being always stuck in the earth in the centre of the dancers. According to others, the dance might be explained as a kind of thanksgiving; others again see in it a rite, aiming at the expulsion of demons. But however much these interpretations may differ, the religious character of the ceremony has been taken for granted by almost all the different authorities. And their descriptions of the 'arrow dance' coincide in all the principal points with those of E. Schmidt, Naturwiss. Forsch. auf Ceylon, iii.; Emerson Ten- nant, Ceylon; Hoffmeister, Travels; Deschamps, *Au Pays des Veddas*; Schmidt, Ceylon).

The participants in the dance are all men. At first they move about without touching each other. Every dancer turns round on one foot, whilst performing some spasmodic movements with the free leg. The arm descends in circles in the air, and the head is thrown backwards and forwards, and at the same time the long, entangled hair stand out like a brush from the crown. The music is a simple melody, which is sung, or rather howled out, by the dancers. A man is marked by strokes of the hand on the nude belly. All this is begun in a state of quiescence. But gradually the time grows quicker, the movements become more violent, and the howling louder. Thus the dancers work themselves up to the utmost frenzy, and finally, one after another, fall to the ground in exhaustion. Some of them lie on their backs 'as stiff as a fallen tree,' whilst others, continuing the howling, tremble in convulsive vibrations.

This 'arrow-dance' is typical of a large class of dance-performances, examples of which are met with amongst most of the lower races, sometimes as mere amusements, but more often as religious rites. As is employed in the exaltation and the convulsions may, indeed, be more complicated than those resorted to by the Veddas. Thus, among some North American Indian tribes (cf. Schoolcraft, *Indian Tribes, v.*) the dancers prepare themselves for their performance by some days of fasting, and increase their state of exaltation during the dance by partaking of drugs or inhaling poisonous smoke. The clappings on the nude belly are, at higher stages of culture, replaced by the sound of some instruments capable of a greater suggestive power. But the spirit of the performance is none the less the same all over the world. Whether the dancers belong to the Ainu, to some of the aboriginal tribes of India (Aquis, Kurs, Santals), or to some South- or West-African race (Basutos, Tshi- speaking peoples on the Gold Coast), their chief objective is still to throw themselves, by violent movements and sounds, into a state of exaltation, which borders upon, or really passes over into, insensibility and unconsciousness; and it is the same endeavour which characterizes the celebrated performances of the tribes of Northern Asia (cf. e.g. Radloff, *Sibirian*: Mikhailovski in *Journ. Anth. Inst.* xxiv. 62, 126).

In the shamans' rites, however, we meet with one important feature that is not represented in the Veddas' dance. In this example, the frantic scenes seem to be over at the moment unconsciousness is attained. In the higher developments of the arrow-dance type, however, it is from this moment that the real performance begins. And what follows, far more than the dance itself, is apt to give a religious character to the rite.

It is well known that on the lower stages of culture human beings are possessed by some divinity, and are consistently treated with a kind of religious respect. It is only natural that the same attitude should be upheld in those cases where the mental disorder is acute instead of chronic. And the shamanistic psychosis is the more liable to be interpreted in a supernatural way, since the shaman, in accordance with the traditionally-fixed programme of their performances, invariably astonish the bystanders by jugglery and feats of insensibility, such as cutting fire, lacerating themselves with knives and needles, etc., made possible by their exalted and anesthetic state (see SITAMANISM). The sudden change in their attitude and the apparently supernatural power he exhibits, must necessarily lead the primitive spectators to the inference that a divine personality has taken hold of the shaman, while he is making war on his own divinity, in order to confirm the spectators in this belief. He delivers oracular utterances in a mystic voice, which is taken to be the voice of the god, or he keeps up long dialogues with the divinity, who is supposed to be visible to him, but is audible only to the bystanders. We have not in this connexion to decide whether these representations are wholly fraudulent, or whether they may have their origin in some visual and auditory hallucinations of the shamans. The important fact, from our point of view, is that in either case the orgiastic and, so to say, lyrical dance, which forms the beginning of the shaman performance, has passed over into something which, in its effect, if not in its intention, is to be considered as a work of dramatic art.

2. Pictorial art.—In these dramatic representations we meet with an expression of the belief that which may partially have escaped notice in the facts of shamanistic possession—that the priests are, or may for a time become, inhabited by the divinity. If, as primitive peoples seem to believe, he must do so in order to work as a kind of 'god-box' (to use the picturesque expression of the Polynesians), then it is evident that the actions he is representing must impress his pious spectators as an eminently religious drama. But even if there had been no belief in a particular class of 'god-boxes,' dramatic representation would still have acquired a religious importance, on the ground of the belief in the magical effects which imitations of things and movements are supposed to exercise upon the things and movements that have been imitated. According to this belief, the god may be conjured to take up his abode in the body of the performer, who imitates what are believed to be his appearance, movements, and behaviour. And the artistic production, which has been called into existence by this principle of sympathetic magic, does not restrict itself to the department of dramatic art. It has attained importance within the domain of pictorial imitation.

The transition from dramatic to pictorial art is marked by those masks which, in many tribes, such as the American, are worn by the dancers in religious dances (cf. Boas, *Dall, Woldt, on the Bellacoolas*; Haddon and Cod-
rington on the Melanesians). The effect produced on the spectators by these painted faces is partially dependent upon the dramatic acting—the singing and the movements—of the performers. But the masks themselves have no doubt, and to awak

And among all primitive tribes they are regarded as sacred things, scarcely less holy than the religious paintings and statues venerated by more developed nations. And the religious status which the primitives ascribe to images, one scarcely meets with any pictorial representations of the deity. This, probably, has less to do with the technical inability of the lowest savages than with the deficient anthropomorphism in their notions of the deity. Where a god is imagined as some vague and formless being, certain rude and shapeless fetishes may be considered as satisfactory representations or vehicles of the Divine power. But as soon as a god has taken on the form of animal or man, pictorial art will be resorted to as a means of facilitating—by virtue of sympathetic magic—communications between man and the divinity.

The images and statues of primitive man must not be confounded with the attitude towards the deity in any resemblance to those pictorial representations of which bar-

barous—or sometimes even civilized—men avail themselves in order to bring about some effects of magic or illusion. It seems, on the contrary, as if such representations were always aimed at in the idols and ancestral statues of the lowest savages. And what we know about the way in which these statues are made gives us reason to believe that their supposed efficacy rests only partially upon their resemblance to nature. But, as the wood deity from his original home to their towns and villages, they construct a wooden doll of branches taken from the tree in which he is supposed to live. The god, is, no doubt, believed to feel a special temptation to attack his abstracted image in the idol made in his own likeness; but it is evident that the material link established by the choice of the wood is thought of as being of no less, perhaps even of greater, importance than the resemblance (cf. Ellis, "Ethnology," p. 278; Tylor, "Primit. Sacr.," p. 84).

When the personality to be represented is not a nature god but an ancestor, it is still easier to bring about a material connexion between him and the god. The divine spirit—by the religious masks often consist of a part of a human skull which has been painted in glaring colours. And among Melanesian, Malay, and West African tribes the skull of the dead is often inserted in the head of the statues which are made in their likeness (De Clerq in Schimeltz, New Guinea; Brenner, "Kannibalen Sumatra"). When the cannibals of Sumatra prepare their celebrated richly-sculptured magical staffs, they always enclose in the head of the uppermost figure of the staff the brain of a young boy, who has been killed for the purpose (Brenner, i.e., cf. also the author's "Origins of Art," p. 210). It is probable that whatever power such images are believed to possess is given to them chiefly by their material contents. The worship and respect shown to the statues are developed out of a worship of skulls, and the statues themselves have originally been considered, not as imitations of the body, but as having some part of the body itself. The more, however, the form of these receptacles has been elaborated, the more there must also arise a subjective illusion, which in itself serves as an excuse for the human image in connexion with the imitated reality. The crude character of savage statutory is no obstacle to such an illusion, as in primitive peoples the want of technical ability is counterbalanced by a naive suggestibility. And as soon, on the other hand, as the image itself—as image—has acquired a magical or religious efficacy, there will also appear an effort on the part of the artist to heighten the suggestive effect by increasing the likeness and the resemblance of the statues. Thus superstitions and religious motives will tend gradually to increase the artistic value of the religious images. And the religious status which the Melanesian assigns to the idols of the West African Negroes, for instance, probably owes something of their wild and fantastic likeness to an attempt to awaken as intense an impression as possible of the divine powers which they are intended to represent. At a somewhat higher stage of development, on the other hand, as, for instance, among the Pueblo Indians, religious motives tend to restrain the impression of pictorial representation within some traditionally-fixed limits.

However crude and simple an idol may be, it will none the less, by virtue of its mere existence, bring about some important changes in man's attitude towards the deity in nature. The West African Tshi, who has originally been considered as distant or vaguely localized, becomes concentrated in an approachable vehicle. The pious adorer thus acquire a fixed object for their worship. And the deity is, in a manner of speaking, carried into the environment. Thus, around the idol, there naturally arises a temple.

Among the lowest savage tribes these temples have no qualities entitling them to be enumerated among works of art. But at a somewhat higher stage of development, the house of the god is often decorated in a most gorgeous way. The ancestral houses—which are temples in the literal sense of the word—display the wooden deity, the ancestor, and Melanesian and Melanesian tribes, a wealth of ornamental art (see Temples). (See further, "Note on the Use of Painting in Primitive Religion," following this article).

3. Propitiation in art. In order completely to explain the motives which have led to these architectural constructions and decorations, it is not sufficient to appeal to those philosophical and superstitious ideas which have hitherto been mentioned. In the first place, attention has been hitherto given to man's endeavour to create, by dramatic or pictorial art, a representation of the god—a receptacle, so to say, of the god, or to bring the god into relations with the divinity. Alongside of this endeavour, however, there can always be observed another tendency, which has been of scarcely less importance for the history of art—the effort to flatter and propitiate the divinity. This effort has naturally become more and more marked the more the idea of God has become localized, fixed, and vivified through artistic representation. Thus the ornamental art which is lavished on the decoration of primitive temples may in most cases be interpreted as homage to the god who is believed to inhabit the temple or to visit it. But the tendency to flatter and propitiate is by no means dependent upon the definite idea of a god as conceived by man, but is also the result of the general tendency to show something of the god's image—sacrifice—with the exception, perhaps, of the sacrificial vessels, which, in virtue of their religious purpose, may be elaborated and decorated with a
greater care than ordinary vessels. On the other hand, the dramatic and poetic forms of sacrifice—prayer and homage—afford us an ample store of examples which exactly fall within the scope of the present article.

A kind of sacrificial purpose may indeed be discovered even in those shamanistic dances which to the superficial observer appear to have their only motive in the desire to bring about a state of exaltation. As every effort is taken to be agreeable to the dancers, who may in many cases nourish a hope of softening the hard heart of their god by their violent exertions. And this seems the more probable since the dances are often connected with self-tortures, e.g. defilements, vomiting of disgusting things, etc. But, on the other hand, these feats of endurance may as well be explained either as a means of imposing upon the spectators, or as immediate results—allegorical to the self-woundings of hysterical and hystero-epileptic patients—of the pathological insensibility which has been brought about by the exaltation.

It is easier by far to interpret those less exalted dances, and even dramatic performances which tend only to provoke, or to exalt, the passions. For the purposes of explanation it is advantageous to make a distinction between those artistic manifestations through which the interest and amusements of the spectators are for the most part what is called the pious or loving appearance, or the divine spectator, and those manifestations in which the expression of man's own feelings of thankfulness or happiness appears to be the chief motive. It is to be remembered that these two classes of religious art, for our present purpose, may, from different views and interpretations, be very often blended together.

The most instructive examples of the first class are to be found among the melodramatic representations given at the ancient Roman games, and at the harangues of the orator. The spirit of the dead man is considered to be a divinity, these performances are undeniable of a religious character. But as, on the other hand, the deceased are believed to preserve all be tastes, if not the like of the living, or the living mind, an aesthetic pleasure, the funeral dramas and dances may often fulfill a magical purpose.

In some cases the dances and songs aim at a stimulation of the spirit, which certainly needs an increase of force in order to surmount all the hardships and the weary wanderings of its transitional life. In other cases, funeral art is evidently intended to produce some terrifying effects upon the invisible enemies of the dead, who are believed to endeavor to possess themselves of his body. Sometimes one may even believe that the survivors try to frighten the spirit itself away from their homes by terrifying dances and pantomimes. Even in this case, however, it is probable in the endeavor to exert a sympathetic influence upon the combatants which the deceased has to undergo before he can attain his peace and rest, that survivors hold magic war-dramas (e.g. show feuds and battles over his grave) as means of peace.

When—as has probably been the case in some tribes—the cult of some individual ancestor is transformed into a cult of a general divinity, and, in some cases, is, it is probable in the endeavor to exert a sympathetic influence upon the combatants which the deceased has to undergo before he can attain his peace and rest, that survivors hold magic war-dramas (e.g. show a terrible battle) over his grave.

When—as has probably been the case in some tribes—the cult of some individual ancestor is transformed into a cult of a general divinity, and, in some cases, is, it is probable in the endeavor to exert a sympathetic influence upon the combatants which the deceased has to undergo before he can attain his peace and rest, that survivors hold magic war-dramas (e.g. show a terrible battle) over his grave.
tions as, for instance, the great Kachina dance of the Zuni Indians, this didactic tendency seems to be especially prominent. In masquerades of the type represented by the Mumbo Jumbo dance in Central Africa and the ‘Kinas’ of the Fue-
gians, we meet with the moral, or pseudo-moral, motive of terrorizing women and children into submission, the images and connotations with which the gods. Finally, in the dramas, songs, and dances at the initiation of boys and girls into maturity, magical, didactic, and moralizing pur-
poses have all combined to create the most mar-
velous of all the religious manifestations which are to be met with in the department of primitive art. It is true that the instruction conferred at these ceremonies refers chiefly to practical utility. But even among primitives to a low degree of development, as the Australian aborigines, religious and, one might say, philosophical doctrines are expounded to the young men. Thus in a kind of miracle play, to which some curious analogies have been found among the Fijians and the East Africans, the old men exact before the boys a representation of death and resurrection. Although less elaborate in dramatic detail and stage-management, the fragmentary dramas in which the American Indian shamans-participating in the so-called ‘sacred dances’—are represented are recalled to life present us a scarcely less in-
teresting illustration of the same great thought. There are indeed, especially in this last example, good reasons for regarding these ritualized death and resurrection performances as a result, in a magical way, some kind of spiritual re-
generation in the novices on whose behalf the drama is performed. But while admitting this, we must not forget that that same endeavour to elucidate the doctrines of the priest-
hood may be combined with the magical rite in question. And similarly with regard to analogous ceremonies in other tribes, we feel justified in assuming as a fact the didactic purpose. As the more the dogmatic system becomes fixed and elaborated, the greater need will there ensue of affording these doctrines a clear expression in the objective forms of art.

It is evident that poetry more than any other art is fitted to serve such a purpose. And, in fact, among several tribes at the stage of higher savagery and barbarism there have been found some effort to combine poetry with the songs. Thus, while the songs, however, will be more properly treated of under the headings MYTHOLOGY, CHARMS, and HYMNS.

LITERATURE.—In addition to the works mentioned above, the following books may be consulted with advantage:

Workmanship of the Motu Race, Dunedin, 1894; A. R. Mein, Die bildenden Künste bei den Dayaks auf Borno, Vienna, 1899.

YAHNE HIRK.

NOTE ON THE USE OF PAINTING IN PRIMITIVE RELIGION.—Besides the realistic and sym-
bolic representation of his divinities or of his religious conceptions and aspirations by means of various art methods—images or statues, carvings, sacred dances, sacred hymns and chants—painting has been brought into close connexion with the religious ceremony by primitive or savage man, as well as by his more civilized successor. The purpose of this note will be sufficiently fulfilled by reference to such painting in the Stone Age, among the rudest savages, and with a semi-barbaric people. In all

alike the ends aimed at are precisely the same as those intended by the image or carving—the obtaining of power over the deities. The vivid depiction of the worshipful object or person so that the worshipper, by means of the picture or symbol, may have his religious sense re-awakened, or may also be brought into contact with the divinity: the notions, then, represented are those which have been referred to—that of the Paleolithic cave-artists—the paintings are not those of divini-
ties but of animals. Even if these had no totemistic significance, the ceremonies played a highly important part in the magic-religious ceremonies which, as hypothesis, were performed before them.

Within recent years, French archaeologists have discovered the existence of engravings and paint-
ings of animals on the walls of caverns in Perigord and the Pyrenees. Similar paintings were, almost simultaneously, found in grottoes at Altamira in Spain. They are executed on rocks in the darkest part of the caves, far from the entrance. Artificial light must therefore have been employed in de-
signing them, as is proved by the discovery of a stone lamp ornamented with an incised figure of a reindeer, and thus dating from the Reindeer age of the Palaeolithic epoch. There are also incised engravings with which the great Glyptic period of Quaternary times terminated. Probably these wall engravings and paintings belong to this closing period also. The animals represented are mam-
moth, reindeer, horse, ibex, etc. Some of these are engraved; others, besides being engraved, have the outlines filled in with reddish-brown colour, or, in some cases, bluish-
black, exactly as totemic grave-posts used by the American Indians have incised figures painted over with vermilion; in others the engraving lines are accentuated by a thin band of colour. Frequently a design is outlined in black, and the surface covered with red ochre. We are yet ignorant how the colour was applied; it may have been daubed on by means of some primitive brush, or blown from the mouth, as is the case with some Australian rock-paintings. The interest of these paintings, for us, consists in the theory regarding their pur-
pose enunciated by a French savant, M. Salomon Reinach. He notes regarding these paintings as well as Quaternary art in general, that motifs borrowed from the animal world are the most numerous, and that among them are those which form the food supply of a nation of hunters and fishers. They are desirable animals; others, not represented, e.g. the lion, tiger, jackal, etc., are undesirable, and this, he believes, is not the result of chance. Among modern savages it is not uncommon to find that the image of a creature or object is held to give its author a prise over the object or creature through a process of mimetic magic. Hence many savages object to be drawn or painted. In the same way pantomimic and dramatic exhibitions have for their purpose the actual result of what is thus imitated symbolically (rain-making, animal-dances). Among the Central Austalian, in order to cause a multiplication of such a totem-animal as the witchetty-grub, the members of this totem clan assemble before a rocky wall on which are painted great representations of the grub, and throw them over or from the being repre-
sent. In the same way pantomimic and narrative performances have for their purpose the actual result of what is thus imitated symbolically (rain-making, animal-dances). Among the Central Austalian, in order to cause a multiplication of such a totem-animal as the witchetty-grub, the members of this totem clan assemble before a rocky wall on which are painted great representations of the grub, and throw them over or from the being repre-

Digitized by Microsoft®
character, are painted on rocks, and are told to women and children.

M. Reinaich notes the fact that the Quaternary paintings are executed on the walls of caves far from the entrance and at the end of corridors difficult of access, as if with a view to secrecy. Not only so, but the caves are in total darkness, and, as has been said, the paintings must have been executed in an atmosphere of artificial light. Hence the impossibility of assuming that they were executed for more pleasure. They must have had a religio-magical character, and their painting is the result of left spirit channel practices, the multiplication of the game on which depended the existence of the clan or tribe. Ceremonies, in which the adults alone took part, were performed with that end in the darkest part of the cavern, entrance to which was forbidden to the profane. These paintings formed the object of the cult, addressed not to the individuals represented, but to the species, over which the worshippers had influence by reason of the individual being thus depicted. The animals, as a result of these ceremonies, would multiply and would frequent the neighbourhood. The various sculptures and engravings of the Reindeer age may have had such a purpose also, with the objects depicted by the cavetman doubly played their part in magical and totemistic ceremonies, as M. Bernardin had already suggested in 1876 (Revue Socio-scientifique, Feb. 1876). Thus the art of the period was neither a luxury nor an amusement, but the expression of a rite yet intense religion, based upon magico-religious practices having for their object the attainment of the food supply. While we cannot admit that Paleolithic man's artistic powers were used only for the beauties of his designs, and the care in reproducing exactly what he saw, suggesting the artist pure and simple—it could not fail that they should be frequently employed in such ways as M. Reinaich has suggested. Everywhere else this has occurred, and art has been freely enlisted in the service of both religion and magic.

In the times of transition to the Neolithic age, through the hiatus art production of the earlier period is unknown, art was again used in the cult. This, already shown by the symbolic engravings and markings on rocks, megalithic monuments, etc., is further evidenced by the painted pebbles found by M. Piette at Mas d'Azil. Some of the designs represent numbers, others are alphabetic forms corresponding to the letters of the later Aegae and Cypriote syllabaries; others are picture-graphs, with or without a symbolic meaning. It is in these last that we may find the use of paintings as an accessory to the cult. Among them are the cross by itself or within a circle, a circle with a central dot (solar symbols, some of which occur as engravings on the megalithic monuments of the Neolithic age), the serpent, tree, etc. All are painted with peroxide of iron upon white pebbles. Later, the carved symbols of the Neo-lithic, like the symbolic figures (divinities) on the walls of the grottoes of La Marne, etc., show traces of having been covered with colour, like the carved images of later ages.

For the cave paintings see L'Anthropologie, 1890; Revue mensuelle de l'École d'anthrop., 1903. M. Reinaich's paper will be found in L'Anth., 1895, p. 257. See also his Story of Art translated, etc., by M. Piette's daughter. The same are described in L'Anth., vi. 385, xiv. 464 f. For the symbolic engravings of La Marne, see Cortialhac, La France préhistorique, 240 ff.:

Some Australian instances of the use of painting for magico-religious purposes have already been referred to. Among the Northern tribes of Central Australia similar paintings are used in the totemic ceremonies. The men of the Thalaunna or Black Snake totem, when they perform the Intichiuma rites for the purpose of increasing the number of this snake species, paint partly symbolic and partly initative designs, painted with red ochre and other coloured earths and charcoal. These depict the mythic history of the ancestral snake, which is also dramatically represented (Spencer-Gillen, Northern Tribes, of C. A. 965 ff.). Similar ground paintings are also used by the Ybirra. These totem ceremonies. Each one represents, or rather was associated with, the various spots at which the animal stood up, performed ceremonies, and was initiated. In this case the paintings are entirely symbolic, and consist of concentric circles and curved lines outlined in white dots on a ground of red or yellow ochre, painted on the surface of the earth previously prepared for the purpose. Spencer and Gillen describe at some length the sacred rock-drawings of the Central Australian tribes. These, which are usually executed in red ochre, are mainly conventional geometrical designs, all of which, however, have a definite meaning to the natives who use them. They are seen only by men who have been initiated, and are painted on the rocks near the place where the sacred churingas of the clan are kept. The same churingas and paintings on the ground or on trees are also found in connexion with the bora, or sacred initiatory ceremonies, and are shown only to the initiated. Sometimes gigantic figures of divine beings—Reinaich, Guarnaschally, etc.—are outlined in the turf or formed out of a heap of earth; in other cases sacred figures are cut in the bark of trees. Similar figures are also painted with red ochre and pipe-clay on trees, or on slabs of bark, which are then hung up on or rested against the trees. The rock-paintings, which may or may not have a religious or mythic significance, are either stencilled by the object to be depicted being placed against the rock, which is moistened and on which the colour is blown or applied with a kind of brush; or painted in outline, the inner space being sometimes filled in with the same colour, or shaded by strokes of some different colour.

With the symbolism of the painted pebbles of Mas d'Azil may be compared the designs painted or inscribed on Australian churinga. The churinga is a piece of wood or stone of long oval shape, supposed to have been bequeathed to a clan as a symbol for the purpose of re-incarnation, entered the body of a woman. The child thus born becomes the owner of the churinga, which is deposited, along with those of the other members of his totem clan, in a sacred place. The design has in each case a distinctive meaning, connected with the totem-beliefs of the people, and generally illustrating some incident of the mythic history of the totem ancestor. Among the designs are concentric circles and circles, parallel lines, etc. These exactly resemble designs painted on the pebbles, which also resemble the churinga in shape, as well as those incised on the megalithic monuments of the Neolithic age. It has been suggested that the Azilian pebbles may have been the churinga of a pre-historic totemic people (A. B. Cook, L'Anthropologie, xiv. 650). In any case, the analogy of Australian sacred art shows that they had religious value.

Among the more cultural tribes of Central Australia—Zunis, Papuans, South Californians, and Navahos—a curious kind of painting is used as an adjunct to certain religious ceremonies whose purpose is usually the healing of disease, and which are characterized by great elaborateness.
and length. As practised among the Navaho Indians, the ceremony continues for nine days, and is conducted by a theurgist and several assistants. Every part of the ritual has a special significance, and must be performed with the like devotion to the ritual as to the physical, lest fatal consequences should ensue from the least infringement of it. Several persons personate the gods and goddesses and take part in the ceremonies; each day's proceedings includes the belief, according to the so-called divine, to the gods, singing of sacred chants, and prayers, and the whole ends with an elaborate dance. The whole ceremony is known as yebitchai, a word meaning 'giant's uncle,' and, as in several Australian mysteries, it is used to awe children, who, on the eighth day, are initiated into the ceremony, and discover that the men personating the gods are their fellow-tribesmen. The paintings are made with dry sand and pigments of various colours sprinkled on a ground of yellow sand with the thumb and forefinger of the operator. The colours used are yellow, red, white, black, and a blue prepared from a mixture of charcoal with white, red, and yellow earths. All the paintings, as they are produced, are made according to instructions given by the gods, as the Navaho myth of 'The Floating Logs' relates. All the paintings represent gods and goddesses, usually about three feet in height, and dressed in a somewhat conventional manner. Face, arms, and legs are carefully done; the body is long and narrow; each divinity is usually depicted with various emblems; a god is denoted by a round head, a goddess by a rectangular head. Considering the method in which the colours are employed, the resulting picture is a marvellous piece of art work, full of minute details, while many of their lines in the dress and sash decorations are copied from actual divinities of the gods. The first painting is made on the fifth day of the ceremony, and represents three divinities; in the painting of the sixth day, there are four pairs of divinities, male and female, each sitting on the limb of a cross, with their appropriate emblems; outside the painting are four gods, one on each side, and the whole is surrounded by the rainbow goddess. The seventh day's painting represents fourteen divinities in two rows, again surrounded by the rainbow goddess. Twelve divinities are shown in the eighth day's painting; in their midst is a huge picture of a corn-stalk, the main subsistence of life; a square base and triangle represent clouds, and the roots of the stalk; the rainbow goddess again surrounds this picture. A detailed account of this last picture will show its symbolic nature. The divinities are the Zenichi, who live in a rock, represented by a long black parallelogram. Those parts of their bodies and faces which are painted red, denote red corn; black signifies black clouds. Zigzag lines on the bodies mean lightning; certain black lines round the head, zigzagged with white, are cloud baskets holding red corn.

All these paintings are arranged on the floor of a medicine-lodge in which are assembled the invalid, the theurgist and his assistants, and certain privy red spirits, and the sick man is seated on the central figure of each painting, having previously sprinkled the design with sacred meal. Several ceremonies, chants, and prayers follow, during which one of the representatives of the divinities touches the foot, heart, and head of each figure respectively with his right hand, each time touching the corresponding parts of the invalid's body. This appears to be the vital part of the ceremony, in which all those divinities are in relation with the gods through their pictures and by their representative, thus transferring their power to him so that his disease may be overcome. This seems to be certain, as, before the pictures are obliterated at the end of the day's proceedings, the people crowd round to touch them, and then, having inhaled a breath over their hands, rub their bodies with the like fluid. Of any maldy, moral or physical, by the divine incantation and the sacred pictures thus exercise the quasi-sacramental power of the idol, fetish, or symbolic image, wherever found. Being like the gods, and made, as is supposed, to divine directly to the gods, are all the power of the gods themselves. So the colours used in other American Indian ceremonies are believed to have been originally given by the divine munitions (see BE, Fourteenth Annual Report, p. 91).

James Stevenson, Ceremonial of Hopi-Indian Wiracochas and Mystical Sand Paintings of the Navajo Indians, with Illustrations of the paintings, in BE, Eighth Annual Report, 1891.

Reference may also be briefly made to: (1) Zuni religious paintings on vessels, representing the Creation and other myths current among the people. The colours themselves are symbolic (see Cushing, Study of Pueblo Pottery, 1886; J. W. Fewkes, Journal of American Ethnology, ii. 1886.—(2) Painting or tatting the body (a) for magical purposes, as among the Araucan hill tribes and Burenses (St. John, AI A ii. 250; Symes, Embassies to Patagonia, p. 200, and others); (b) with totem designs, as the tribes of Malacca (Haddon, Ethn. fo. Art, p. 521); (c) on the occasion of certain ceremonial occasions, e.g., with the Avardians, the Giffen, etc. (see Grosse, Vom Standesleben, etc.); (d) for mourning.—(3) Painting the bodies or skeletons of the dead, usually with red, but occasionally (Andaman Islanders) with other colours—customary in the Pacific Islands. —(4) Painting pots, etc. (see W. Gushing, A Survey of Pictorial Art, etc.). (5) The use of pictographs to illustrate chants used in religious mysteries and as mnemonic symbols among the American Indians (BE, Fourteenth Report, p. 103); see also Taticee, Totemism.

These various examples show that, like every other branch of art, painting, realistic or symbolic, has been used by men to set forth his religious beliefs, to represent or symbolize his divinities, or in accordance with his religio-magical theory of the universe, to gratify his wishes, to act as a protection, or to transfer the power of the person or object depicted to himself. 'Art for art sake' was not unknown to primitive and savage man, but on the whole he made it subservient to a useful purpose, e.g. in bringing it under the sway of religion. It is thus search, excitement to say, as Greese does (Ausentigen der Kunst), that the art of primitive peoples is not connected with religion. Whatever be its origin, whether arising from some instinctive impulse to imitate the things man saw around him, or from some other tendency itself to enhance and satisfy man's needs. At the same time, the purely aesthetic pleasure on the part of the artist in making an artistic object or design which was to be used for religious or other purposes must not be overlooked.

Literature.—In addition to works cited throughout this article, see Andree, Ethnologische Parallelad, 1891; Him, Origins of Art, 1899.

ART (Primitive and Savage). — Before the acquisition of the art of writing by any people, the only method of recording fact or idea is by word of mouth; but the benefit of some kind of graphic representation. The carving or drawing may be intended to be realistic, though, even so, the realism may be imperfect; but one frequently finds that a signification of a thing can better express the purpose of a representation of the whole object. Thus, an animal may be indicated by a lim, a zigzag may stand for the wings of an insect, bird, or bat; in other words, a convention may be employed, so that other objects, either an object is decorated with conventional designs, these may be so remote in form from their original that they are usually described as 'geometric,' and
consequently they stand the chance of no further interest being taken in them; whereas, if information be obtained from the designers, it is nearly always found that they have a significance that cannot be discovered by inspection alone. Experience has proved that designs which have frequently been regarded as merely decorative have an origin and a natural interest predicated for them. Hence, the futility of an endeavour to elucidate the significance of designs without an adequate investigation in the field.

Apart from the foregoing and the utilization of decorative art as an exhibition of wealth or for social distinction, we find that magic and religion have exercised an influence over the artistic impulse; nor is this surprising, considering the vast importance they play in the life, thought, and feeling of mankind. From the nature of the case that aspect of sympathetic magic known as 'homoeopathic' lends itself to artistic treatment rather than does the 'contagious.' The representation of an object is as effectual as the object itself; and as there is virtue in words and power in a name, so there is efficacy in a pictograph, which, after all, is no more graphic as opposed to an oral or written expression. According to von den Steinen (Unter den Naturvölkern Zentral-Brasilien, 1894), certain designs on a Bakairi paddle represent the sanitary conditions existing within the meshes of a net; and the author believes that the object of this decoration is simply to bring fish close to the paddle so that they may be caught in the fisherman's net. Many other examples may be cited, but the most elaborate examples are those recorded by Vaughan-Stevens from the Semang and Sakai of the Malay Peninsula. These are hunting jungle-folk who undoubtedly come under the classification of savages. The English reader will find the fullest account of their extraordinary designs in Skeat and Blagden's Wild Tribes of the Malay Peninsula. There has been a good deal of uncertainty concerning the bona fides of Vaughan-Stevens, but these authors are inclined to credit in the main the explanations given by him of the engravings on combs and bamboos which he undoubtedly collected from the natives. Some of the Sakai bamboo designs represent diseases, and the whole design on a bamboo is intended as a prophylactic against a specific disease. One bamboo design represents the swellings caused by the stings of scorpions and by allied insects, while other creatures also are engraved together with an Argus pheasant. The significance of this bamboo is that, as the Argus pheasant feeds on centipedes and scorpions, it help is applied against striking the bamboo against the ground. The decoration of one bamboo is a charm for rain; one is a pictographic formula to enable a man who wishes to build a house to find easily the necessary materials; one is supposed to protect the harvest and the plantations round the house from injurious animals; another helps women to catch fish, and also protects them from poisonous ones. The Semang women possess numerous combs, which are decorated with various designs, each of which is a prophylactic against a particular disease. When a woman goes into the jungle, she inserts at least eight of the combs horizontally in her hair, so that the disease-bearing wind-demon, who is the emissary of Kari, the thunder-god, on meeting the protecting pattern may fall to the ground; but should the woman not wear a comb with the appropriate pattern, the disease is supposed to settle on her, and thus a pictorial history of everyday use are decorated with crosses, and

Dakotas, the most famous of the 'winter counts,' as they are termed, indicate the most salient incident of the previous year, and are pictorial histories painted which in this case extended for about seventy years (Mallery, Fourth and Tenth Ann. Rep. Bureau Eth.). The pictorial blazings or notice boards of the Alaskans gave definite information to their people, and have been described.

The materials used among these primitive peoples are very limited, and are nearly always found to be obtained from the nearest source. The Bamboos, combs, or spindle-cases are sometimes corded, or braided with various patterns, and are used for baskets. Artistic representation may be for the purpose of depicting objects, or for recording events, or for giving information, as in the case of much of the interesting graphic art of the Eskimos, or of the ruder attempts of certain Siberian tribes. Probably to this category belongs the pictorial art of the ancient peoples of Europe, which was painted in caves or engraved on bone the animals that were daily before their eyes, as did the Bushmen of recent times; but the latter frequently depended on hunting scenes, and even fights with Zulus. The pictographs on the buffaloes robes of the
groups of five knobs or two intersecting squares; all these indicate the five fingers or finger-tips, which are so often among the motifs to ward off the harmful gaze of those who possess an evil eye. Similar designs and representations of eyes, often as triangles, decorate saddle-cloths, pottery, money-boxes, leather pouches, etc., and are emboidered on the bark-cloth or robes of some peoples, so that at all times and from all points they, their animals, and their personal effects may be protected from premeditated or casual harm.

Professor Maspero says of the decorative art of Ancient Egypt, 'it is not merely to delight the eye. Applied to a piece of furniture, a coffin, a house, a temple, decoration possessed a certain magical property, of which the power was determined by each word inscribed or spoken at the moment of consecration. Every object, therefore, was an amulet as well as an ornament' (quoted by Goodyear, The Architectural Record, iii.). The lotus is the parent, vogue of this single motif; it is to be found in a great number and variety of ornament-forms than any other motif known. It was the most conspicuous and beautiful flower known to the Egyptians, and its intrinsic decorative value, as well as its impalpable use in their mythology, it was in constant and universal use as a symbol and amulet, both in its natural or concrete form, and in decorative representations of the flower. Whether or not its secret powers are to be ascribed to the lotus from the outset its decorative use as an ornament, it underwent the operation of that universal law by which ornament forms lose in time their original significance and receive new and diverse applications. Hamlin also states that symbolism alone does not sufficiently account for the fact that four-fifths, perhaps nine-tenths, of the ornamental patterns of Egyptian art are based upon the lotus; the real reason for the extraordinary vogue of this motif is to be found in the decorative possibilities of the type itself. The lotus seems to have been symbolic of the sun. It was also largely employed in funeral rites, and as a sacred emblem; and it was portrayed in a reproductive power. As the intensely religious mind of the ancient Egyptians was permeated with the problems of death and elevated by the prospect of immortality, it is not surprising that the flower which symbolized the resurrection should be depicted in such profusion in their tombs and elsewhere. How the Greek artists borrowed this motive and transfigured it, how it was still further modified by the Romans, and how it spread to the British Islands through Celtic and Scandinavian channels, has been described by Goodyear (Architectural Record, ii. iv., The Grammar of the Lotus'), Hamlin (loc. cit.), Cope (Journ. Roy. Soc. Ant. Ireland, 1894-1895), and Haddon (Evolution in Art).

Whereas, for our present purpose, magic may be regarded as a direct action by means of which men endeavours to accomplish his desire, religion is the recognition of some outside power or entity who can give aid directly or indirectly, or with whom an emotional relationship has been established. It is the recognition of a power or entity to distinguish between magic and religion. In a paper on the decorative art and symbolism of the Arapahos, who are typical Plains Indians of the W. Algonquin linguistic stock, Kroeber informs us (Bull. Am. Mus. Nat. Hist. xviii. pt. 1 [1902]) that the closeeness of the connexion between the symbolism and the religious life of the Indians cannot well be overlooked, and that by a white man. Apart from the decorative symbolisms on ceremonial objects of Brit. New. and the considerable number of objects are decorated according to dreams or visions. Finally, 'all symbolism, even when decorative and unconnected with any cere-

While totemism is largely a social factor, it has a religious aspect which is often not far removed from magic. When a people is in the totemic stage, the human members of the kin or clan are prone not only to carry about with them portions or emblems of their totem, but to mark their body by paint, scarification, or tattoo with realistic or conventional representations of their totem. Not only so, but they may decorate their personal belongings with their totem (cf. Spencer and Gillen's Native Tribes, and Northern Tribes, and the Reports of the Ethn. Exp. to Torres Straits, vols. 15.) The ways in which Brit. New. peoples frequently engrave on bamboo, tobacco pipes, drums, and other objects, representations of their respective totems; almost without exception the latter are animals. Not only the totem animals are pictured, but in a few instances others as well, of which there is no evidence that they ever were totemic. In this case it would seem that the habit of animal-drawing has been extended from totems to a few other forms. On the adjacent mainland of New Guinea we find plant totemous forms, more especially birds, frequent in decorati-

Throughout the greater part of America the belief in guardian spirits has lead to representations of the manitou, wakudi, okki, sitia, naugual, or by whatever name it may be termed. More especially is this the case along the North American channel, where blankets, boxes, hats, spoons, pipes, as well as the so-called 'totem posts,' are decorated or carved with representations of the guardian spirit of the owner or of his ancestors. These highly esteemed and jealously guarded crests and emblems originated among the Salish, according to Hill-Tout (Trans. Roy. Soc. Canada, sect. ii. 1901), from two sources. The crest springs from pictographic or ideographic symbols, which are not always the word sitia or 'dream-totem'). The totemic (sic) symbols are insignia are symbolic records of some event or adventure more or less mythic in the life of the owner or of his ancestors from whom he inherited them. In neither case do they regard themselves
as descendants of their 'totems.' Speaking of the more northern of the North Pacific group of peoples, Boas says (Rep. U.S. Nat. Mus. 1893–1897) that 'every North American man acquires a guardian spirit, but he may acquire only such as belongs to his clan; thus a person may have the general crest of his clan, and besides use as his personal crest such guardian spirit as he chooses. This explains the great multiplicity of combinations of crests on the carvings of these people.

Totemism frequently gives way also before an ancestor- or a hero-cult, and thus the human form most frequently in religious art. In the Papuan Gulf district the great bulk of decorated objects are ornamented with representations, sometimes highly conventionalized or degraded, of the human face (cf. Dec. Art Brit. New Guinea). In this district, at the initiation ceremonies, masks are worn to simulate the ancestral gods, and bullroarers are whirled; these and other ceremonial objects, as well as the carved wooden belts that only warriors may wear, are decorated with figures or forms of the same anthropomorphized ancestors. It is highly significant that this is the only region of British New Guinea where 'gods' have been evolved (Holmes, JAF xxxii. 428 ff.); and at the same time it shows that the district where the human face enters at all prominently into the decorative art of the natives, but here the human face is the dominant motive. It is worthy of note that, while animal forms are common in the art of the adjacent west and east coast of British New Guinea, where totemism is rife, and the human face in the Gulf district where there are 'gods,' in the central district, where, so far as is known, there is no religion, there is no decorative art. The decorative art is devoid of animal or human representations, and is characterized by 'geometric' designs. While an ancestor-cult may develop into the worship of gods, the same result may be arrived at by other roads. In Torres Straits a hero-cult, presumably introduced from New Guinea, had invaded the original totemism, and we can trace the amalgamation of the old cult with the new, and its final disappearance and replacement by the higher religion. In the same way we have a change of confusion of the totem animal with the human hero. In the ritual this was symbolized by the wearing of masks of animal form, or of part animal and part human form; and the mask was also in the Papuan Gulf district, and occasionally these masks are represented pictorially. There does not appear to be any record of a totem animal actually becoming metamorphosed into human form. It may have occurred, but, judging from the Papuan evidence, it is more probable that a substitution took place owing to contact with an ancestor- or hero-cult, and during the transition the demi-god would partake of his double ancestry. In this way we can explain the beast-headed divinities of ancient Egypt. That a part of the religion of ancient Greece had its origin in totemism may be admitted. The ox, the mouse, wild beasts and birds, and similar associates of the Olympian hierarchy, whatever they were to the enlightened pagans who endeavoured to rationalize and even to spiritualize them, are to us milestones which mark the road traversed by Hellenic religion; the Egyptian had been on it an earlier phase. When the gods had been evolved, it was very important for men to retain the remembrance of those family ties between them and mankind which were in danger of being lost through the length to which they were drawn and the degree of attenuation which consequently ensued. The statements of tradition as to the descent of mortals from gods are re-inforced by the representations of artists of the unlettered races, just as they are enshrined in the written cosmogonies of more cultured folk, the main difference being that anybody may understand the one if he knows the written letters, whereas the other is practically a pictograph, and requires the interpretation of the natives who have the traditional knowledge of the symbols. We are probably justified in assuming that very early in time the current story is not the more backward peoples) of carving or painting the pedigree of the man from the god, of the human from the divine, as at a still earlier time the reverse process had taken place. Gill says (Jottings from the Pacific, 223). Several investigators have studied the peculiar wood-carving of the Hervey Islanders (Haddon, Evolution in Art), and many of the designs can be shown to be modifications of the human figure. Stolpe says: 'Ancestor-worship is a characteristic feature of Polynesian religion. The souls of the departed become the guardian spirits of the survivors. Their worship is demanded in a double form ... It appears to me that the peculiarly hafted stone adzes of the Hervey Islands have a religious significance, that they are especially connected with ancestor-worship, and that they were probably the symbolic form in which this worship was once formed (Tennent 1890, 222, 234). Colley March first suggested that the carved shafts of the sacred paddles and adzes were pedigree-sticks, the patterns being 'the multitudinous human links between the divine natures and the human beings of the living tribe' (JAF xxii. 324). This seems to be a probable explanation of these beautiful carvings, which thus illustrate the origin of man from his god, and his continued connexion with and dependence upon him. What can religious art teach us? Sport.

Symbolism is a universal method of religious expression, and most of the decoration in connexion with shrines and altars has this significance. Primitively this was entirely the case, as may be seen from the researches of Cushing, Pawkes, Voth, Stevenson, and others on the religion and ceremonies of the Pueblo Indians of New Mexico and Arizona (4, 15, 21, and 23 REW; Field Columb. Mus., Anth. Ser. iii.; Journ. Am. Eth. and Arch. i.–iv.; Am. Anthropologist, and JAFL, various vols.). The sand-paintings, decorated tablets, and other ornamented ceremonial objects appear to be not merely representations of the desires of the priests, but objects for religious purposes, and their attributes, but many may be regarded as actual pictorial prayers. The Huichol of Mexico also spends a great part of his life at ceremonies and feasts, many of which are for making rain. Very important in the religious life of the Huichols is the use of the hikuri, a small cactus known in the south-western United States as 'mescal buttons.' The plant is considered as the votive bowl of the god of fire, who is the principal god of the Huichols, and it has to be procured every year, or there will be no rain. Hence conventional representations of this stimulating, colour-vision-producing plant are placed on ceremonial objects or painted on the face. There are numerous other gods. Religious feeling pervades the thoughts of the Huichol so completely that every bit of decoration he puts on the most trivial of his everyday garments or utensils is a request for some benefit, a prayer for good, a warning against evil, or an expression of adoration of some deity. As Lummis says (Unknown Mexico, 1905, ii. 204 ff.), the people always carry their prayers and devotional sentiments with them in visible form. They know that the gods, much as they are considered as rain-serpents, are in themselves praying for rain and for the results of rain, namely, good crops, health, and life; and the designs on these objects may imitate the markings on the backs of the real reptiles. Of
similar significance are patterns composed of representatives of conventionalized or vestigial double water-gourds, or of the fire-steel which represents the great god, or of the toto flower which grows during the wet, corn-producing season, to which these forms were a prayer as well as a symbol for corn. The eye is the symbol of the power of seeing and understanding unknown things, and "god's eyes" are commonly combined with other designs in woven patterns, in ornamentation, in jewellery and mosaics, which may be taken up in the order named.

1. Weaving.—The art of weaving is found among many North American Indian tribes, particularly in the south and west, although some, such as the Athapascan, are unacquainted with it. The material for the loom is very divergent in character. The Mennonian, an Algonquian stock, form their thread from the inner bark of young basswood sprouts, while the Indians of the western tribes use cotton, and the Kwaikinitos of the northwest coast employ wool, hair, and even birds' feathers. The fabrics produced by the looms of the Western American Indians are woven with extreme closeness, and the colours are very gaudy, although the blankets for ordinary use are dark blue and white, or black and white, or are even left the natural colour of the wool. The figures, both in the Navaho blankets and in the closely related Hopi work, are frequently elaborate, and the effect is pleasing. It is among these two tribes, indeed, that weaving is best developed in North America. The native colours of the Navahos, who are noted for their personal adornments, are orange, brown, or red, yellow, and black, but here, as in the Orient, chemical dyes have largely impaired the excellence of native workmanship. Most of the weaving is done by women, who make up their designs with the deliberation of artists, and write down designs with the precision of mathematical equations, as they go along, occasionally tracing model patterns in the sand. Considerable symbolism attaches to the designs. The square with four knit corners represents the four quarters of heaven and the four winds, thus corresponding to the design of the swastika in America; while the four-cross is a symbol of protection and a prayer to the Great Spirit. A spiral is said to typify the paralled soul and a double spiral the struggles of the soul. The colours, in like manner, have a religious significance; so that black is the symbol of water (also indicated by wavy lines), or the female principle, and red the sign of fire, the male element. The Chilkat blankets of the Tlingit, the Seal coast, woven in elaborate and artistic figures, with a warp of cedar-bark twine and a woof of mountain-coat wool, are also important in this connexion. The designs on these blankets are a prayer as well as a (ritualistic) a prayer. The Antillean were also acquainted with weaving, and even made cotton puppets in which the bones of the body were the hollows for the fingers, and the latter carried, as already noted, to its highest perfection among the Aztecs.

2. Basketry.—Like weaving, basketry is largely the work of women among the American Indians. Its forms are classified by Mason ('Aboriginal American Basketry,' in Report of the United States National Museum for 1895, pp. 222-253) into
woven and coiled. The former is subdivided into checker-work, twill, and wicker-work, wrapped and twined, the latter further occurring as plain twined, twilled twined, crossed or divided warp with twined work, bird-cage weaving, and various forms of three-strand twining. Coiled basketry includes, the following being without foundation, simple interlocking coils with foundation, single-rod foundation, two-rod foundation, rod-and-split foundation, three-rod foundation, split foundation, ground foundation (in which the button stitch and other bunches are used), and the bolt-hole stitch). The forms of American baskets are equally various, ranging from flat trays, as among the Tulares of Central California or the Hopi food trays, which are little more than woven mats, to the elaborate water jugs of the same Hopis. The baskets are richly adorned with shells, beads, feathers, and the like, as well as coloured with dyes and painting, and interwoven with materials of different colours.

Basketry is used in America for the most varied purposes, as for transportation, cradles (especially on the Pacific coast), armour (as among the Massawomeeks of Chesapeake Bay), clothing (particularly the basket hats of the Hidatsa, Flathead and Hupas of the west coast), preparing and serving food, building (as among the Pomois of northeastern California), furniture, trapping, general receptacles, and in burial. Baskets likewise play an important part in the Orkney and Shetland Islands, as in the basket-dance, the same tribe also including among its masks some made of basketry. The decoration on North American basketry is reduced by Mason (op. cit. p. 235) to the following \( \text{sd}\) : lines in ornament, squares or rectangles, rhomboidal figures, triangles, polygonal elements, and complex patterns. Here the type of weaving adopted necessarily conditions the general style of decoration, the simplest being that obtained from checker-work, and perhaps the highest being such coiled basketry as that of the Salishans and Tulares. The decoration thus obtained may be heightened by the use of colours and by the addition of feather-work, bead-work, shell-work, and the like. But to convey an idea of the vast variety of design and colour of American Indian basketry without several hundred illustrations would be impossible, and reference can therefore only be made to the works of Mason already cited and to the bibliography given by him (op. cit. pp. 545-548), as well as to his Indian Basketry (2 vols., London, 1905).

Conclusion. The first utensil for holding water, grains, etc., at least in some cases, was the gourd, which was often slung in basketry for convenience, or reinforced with reeds or grasses, later still with earth or clay. It is not impossible that when these clay-covered gourds were left in the sun, the gourds were found to crack, while the clay became hardened. For a time pottery was accordingly made by covering gourds and basketry with clay, the former being destroyed by heat, and the latter retaining, in its hardened form, its original shape and the markings of its former mould. Still later, the mould was no longer used, since clay containing sand or particles of shell could easily be forced into the fine interstices and be baked to the requisite firmness. It is significant, in this connexion, that the Navahos still term earthenware pots \textit{kle-it-tse}, or mud baskets, thus recognizing the fact that the potter must know the science of the development of basketry. In the further course of development, resinous gums were put on the
clay vessels while still hot, thus forming a glaze which enabled the otherwise porous receptacles to hold liquids. As pottery gradually evolved, moulds were dug in the ground, and clay ovens were constructed in the style of the Mississippian. The potter's wheel, noted above, also finds its application in pottery, as among the Hopis, who both coil ropes of damp clay around a wicker nucleus and construct similar vessels by hand-moulding. In both the Mississippi and the French traditions, as well as in the latter, the use of a grid, usually of sticks, to assist in the shaping of the vessel, renders the pattern of the basket shell on which they were constructed. There is, however, no decisive evidence that the potter's wheel was known in aboriginal America.

Pottery was primarily used for storing, cooking, and transporting food and water, later being used in religious ceremonial, and formed into various fancy figures, as masks, gaming implements, and even toys. Burial urns are also found in the Mississippi and the French traditions, as well as in the latter, and are particularly among the Iroquois. In general, it may be said that the pottery of North America decreases steadily, in both quality and quantity, as one goes toward the north, until among the Pueblo Indians it is represented only by lines from the rudest description. The farther south one proceeds, on the other hand, the more abundant and excellent the pottery becomes, thus further exemplifying the fact that the clay vessels of Mexico, Yucatan, and Peru stood at the acme of all pre-Columbian American civilization. Pottery is a characteristic, moreover, of a sedentary people, and would thus find less use among the comparatively nomadic stocks and tribes of the northern parts of the American continent.

The shapes of the pottery of North America are numerous and, in many cases, artistic. Vases, dishes, and cups occur with especial frequency, and plain or with handles, the vases being both completely open and partially covered at the top. Bottles have also been found, as in Arkansas, and early writers on America relate that they saw earthenware drums in use, being now represented in part by the earthenware rattles used in the ritual, as by the Pueblo tribes. At least one case of earthenware burial-caskets is known from Tennessee, and funeral jars with obvious death-masks are also known in the West. The anthropological value of the latter form of pottery needs no comment. Frequent and most interesting forms of pottery are the figurines of fish, turtles, birds, and animals. It is noteworthy that these figurines are restricted to Pueblo Indians, who, indeed, represent the zenith of American pottery north of Mexico. It would be impossible within reasonable limits to give any detailed account of the forms of either construction or decoration of American pottery, whether in the northern or the southern continent. In the most primitive specimens of North American pottery there were merely the marks of the wicker mould. The early occurances in the hillsides of Mexico, as might be expected from their form and model of construction (see above), a direct imitation of the patterns of the basketwork vessels. With further progress the impressed molder by traction of the fingers of the designer gradually came to have required modifications, which resulted in producing artistic patterns of more or less regularity. The rope coils, at first pinched involuntarily, were later purposely thrust into the clay. Just as potter's marks are employed, pointed ones for incising and gouges for scraping, as well as many varieties of stamps for impressing designs upon the clay before baking. Examples of fictile ware have been found, especially in Arkansas, engraved after being burned first, with designs of true artistic merit. The most common mode of decorating pottery, however, was to give the vessel a wash of fine clay, which was painted in various colours and designs, before it was fired. Many of the designs are so numerous as to scarcely admit of classification; but as the material of baskets led most easily to the production of right-angled decoration, so in the pottery circles and curves form a prominent feature. At the same time, angular designs are not uncommon, doubtless derived from basket patterns; and both angular and curved decorations appear with great frequency on one and the same specimen. While many of the patterns are purely utilitarian, representing rain, sun, animals, and with the exception of sex symbols, at least in many cases, to be simply decorative, other figures on Pueblo pottery possessed religious symbolism. The three 'lines of life' occur, for instance, on a bowl from Chevlon, which site also shows raincloud symbols on another bowl. The raincloud symbol, indeed, is well-nigh as important on Pueblo pottery as in the ritual of the Hopis and kindred tribes. The chief raincloud symbol in the modern Hopi ritual are the rectangle (usually appearing as a stepped trind), the semicircle (also usually in trials) and the triangle. These symbols occur frequently in ancient Pueblo pottery, as on a food bowl from the Pueblo Bonito, and on another bowl from Homolovi the sveastiko (typifying the four cardinal points), on a red ground, is surrounded by a slat-coloured margin, each arm of the sveastiko pointing to straight red lines representing rain, and the triangular portion being occupied by three wavy red lines each. These few examples may serve to indicate the wealth of symbolism which may be traced on Pueblo pottery. Nor must it be forgotten that many designs which at first blush seem merely decorative are in reality fraught with deep religious symbolism. Here, in connexion with the pictures of birds and other living creatures, the investigator will do well to look at the work of Mr. J. W. Fewkes: 'In all these representations of mythical animals the imagination had full sway. It was not the bird with which the artist was familiar through observation, but a monstrous creation of fancy, distorted by imagination — real only in legends — that the potter painted on the vessels. Hence, we cannot hope to identify them, unless we are familiar with the mythology of the painters, much of which has perished. The comparatively large number of birds on the ancient pottery indicates a rich pantheon of bird gods, and it is instructive to note, in passing, that personations of birds play important parts in the modern ceremonial economy, which have introduced most of the symbols from the south' (22 REDW, pt. 1, p. 146 ff.).

Numerous specimens of pottery have also been found in Porto Rico, Santo Domingo, St. Kitts, Guadeloupe, Trinidad, etc. This is, in general, a coarse, unpainted, and rude. The most usual decorations are incised lines or relief figures, the former being preferably lines (especially parallels), triangles, spirals (rare), and circles. There are no traces that the figures on either painting or relief on the pottery of Porto Rico and Santo Domingo is distinctly characterized by an indentation of the extremity of each line in rectilinear decoration by "a shallow pit that
The totem-poles of these tribes are most elaborate, and are sometimes covered almost to their full height, which frequently reaches 50 feet, with representations of totemic animals, birds, or fish. In addition to the totem-poles, the posts of the houses on the north-west coast are usually elaborately carved, and both they and the totem-poles are gaudily painted in red, yellow, black, and other primary colours. Here, too, belong the wooden masks of the same tribes, which, like the totem-poles and masks of the rafter of the house, have religious significance, and suggest in design the basketry of the region and the Chilkat blankets. The Haida canoes are also elaborated, carved, and decorated with totemic and other religious designs. The Pueblo Indians, so advanced in other respects, were singularly deficient in carving and sculpture, and there is a wide extent of territory from the Haidas to the Aztecs (except for a few stone whale-killer figurines among the Santa Barbara Indians of the southern California coast) before any real examples of these arts are found. It is only among the Aztecs, Toltecs, Zapotecs, and Mayas, moreover, that the forms and variety of design and treatment is actually to be artistic. The elaboration of the Aztec calendar stone and of the sculptures of Palenque, Chiriqui, and Copan are unsurpassed in any part of the American continent, being far superior even to Peruvian work when unadorned. The most important of the latter class are those which represent the head only; and while many are evidently conventional, others are plainly intended for portraits, and are thus found as for a study of ancient Peruvian physiognomy. Groups were also represented; and fidelity to nature, which was the aim of the ancient potters of Peru, was increased by making some of their vessels a kind of mechanical toy, which could give a sound imitating the cry of the animal or bird represented, similar figurines also being found in Central, and even in North America. A noteworthy form of Peruvian pottery was the water-jar, an article of prime importance in so arid a country. The chief forms of this are the twin bottle, and it has been suggested that one reason for the intricate shape of many Peruvian jars was the desire to prevent insects, etc., from entering their openings. The interior of the pottery was often painted or engraved just as it was drying, after the clay itself had first been mixed with powdered ashes, carbon, or graphite, while in more common ware polished straw was applied. The decoration found on the interior, partly conventional, although important exceptions are not lacking. The symbolism, which may well have existed, is not as yet worked out.

4. Carving and sculpture.—The carving and sculpture of the American Indians are still more limited than pottery in territory. This is but natural, in consideration of the fact that wood and stone are far less tractable substances than clay or the potter's wheel. Excepting on the north-west coast, sculptured figures are rare, although a few rough heads have been found as far east as New Jersey. Among the so-called 'mound-builders,' the Ohioans, the type attains a considerable degree of artistic development, and among the Eskimos rude stone carvings on ivory, copied in the scrimshaws of the whalers, frequently represent the forms of animals and other objects with remarkable fidelity. In the Mississippi valley common shaper among the Indians have been discovered, which, in some cases, are curiously similar to Aztec work. Rude shell masks are also found, some as far east as Virginia. The most important specimens are the North American Indian carving, how- ever, are found on the north-west coast, such as the Haidas, Thlinkets, and Kwakiutls, who are also skilful engravers on slate and metal.
ART (American) 831

Their use is entirely problematical (cf. Fewkes, op. cit., pp. 167–172); but similar objects have been found in Totomac ruins in eastern Mexico. They are accordingly the typical ‘sacrificial yokes,’ which he seems inclined to regard as fertility symbols (cf. the more conventional view advanced, perhaps incorrectly, by the現代 European painters of the nineteenth century, see above, p. 336). At all events, the problem of the real meaning of these ‘collars,’ which measure as high as 19 by 17 in., can as yet scarcely be said to be solved.

Turning to South America, one finds rough carvings on trees among the Indians of Central Brazil, while their chairs are made in the shape of birds, and they have vessels in the form of various birds, bats, fishes, and tortoises. On the other hand, art consists only in scratching natural objects roughly on gourds and making rude topographical scenes (Grubb, Among the Indians of the Paraguayan Chaco, London, 1894, p. 29). Among the most remarkable sculptures, if such they may be called, of the South American Indians are those of the natives of Guiana. One of the most typical of these is on Temehri Iesk in the Corentyn river, and measures 13 feet in length by 14 feet in width. There are a number of figures of men, monkeys, snakes, and the like, and also has simple combinations of two or three curved lines. The figures are in all cases extremely rude, and those of less importance are sometimes painted instead of carved. Some of these carvings are of comparatively recent date, for one at Ibia de Pedra in the Rio Negro represents a Spanish galley (cf. Im Thurn, Among the Peruvians, London, 1885, pp. 301–410). The sculptures of the ancient Peruvians, although naturally superior to any others of the South American continent, were, as already noted, far inferior to the work of the Aztecs and their neighbours. Expert cyclonearch architects, though they were, they were but indifferent sculptors, and even the few specimens of wood carving which are still extant are but rough work. Like the Central Brazilian Indians, the Peruvians paid considerable attention to their chairs, and specimens have been preserved which are supported by figures of some artistic merit. Chairs of similar form are also found in Nicaragua and Porto Rico. A few admirable granite heads have been discovered in the Pou de Pedras, and the fountain of Quomancha is, at least at first sight, a remarkable work of art. Nevertheless, the rudeness of the head of a porphyry idol, now at Collo-Collo, and the shapelessness of the granite statues of Tiahuanaco, when contrasted with the Maya sculptures of Copan, bespeak most clearly the inferiority of the Peruvians in this form of art. The elaborate sculptures on the buildings, moreover, are far less frequent than among the Aztecs and their congeners.

5. Painting.—This art, at least in its crude forms, doubtless prevailed through most of the North American continent; but scenes and figures are nowhere found among the Indians of the West. The tribes of the north-west coast, where, as just noted, carving in wood is relatively highly developed, paint their totem-poles, canoes, chests, boxes, and other objects in cloudy colours, while the Hopis and other Pueblo peoples are also acquainted with this art, as is shown by the masks, often of leather or basketry, and garments used in the performances of the great winter festivals. In like manner, much of the pottery discovered in the ‘elid-dwellings’ is painted, frequently in conventional designs of pleasing effect and with the general systems of symbolism noted above (p. 829). Among the Aztecs and related peoples the manuscripts still extant are painted with considerable skill, but with the high colouring characteristic of so much of early art (really grey and brown), and to these more than any for the4038. It has been developed as compared with their achievements in other departments of art. Their representations of the human form, however, as is clear from their vase-paintings, were far superior to those of the Aztecs, and the same statement holds true in general with regard to all ancient Peruvian painting. The problem of symbolism here, as elsewhere throughout America, must be solved together with the interpretation of the pottery, basketry, and kindred arts. Outside the empire of the Incas painting seems scarcely to occur in South America. It must be borne in mind, however, that painting is pro-eminently a medium of art which requires a considerable degree of civilization before it can be acquired with any measure of real merit. It is less utilitarian even than carving in wood or sculpture, and, in its execution, it is still more tardy in development as compared with weaving, basketry, and pottery, and for a like reason.

Certain special forms of painting among the American Indians call for notice in this connexion. Of these the first is ‘dry-painting,’ which is practised especially by the Navahos, Apaches, and the Pueblo tribes of Arizona and New Mexico, and in ruder form by the Cheyennes, Arapahos, and the Siakis. The painters are employed exclusively in religious ceremonies, as in the Hopi altars (see ALTAR [American], p. 336), and seem to be mostly highly developed among the Navahos. Here the paintings are sometimes 10 or 12 ft. in diameter, and are, of course, filled with symbols representing deities, natural phenomena, and living beings of sacred import. The ground is laid to a depth of 2 or 3 in., and the colours are yellow, white, red (these being made of powdered ocher), blue, black, and green (being a mixture of black and white sand), and black (powdered charcoal). Working generally from the centre and according to the plan prescribed by the ritual (except in a few definite cases), the artist, in applying the pigments, picks up a small quantity between his first and second fingers and his opposed thumb and allows it to flow slowly as he moves his hand. When he makes a mistake he does not brush away the coloured powder, but obliterates it by pouring sand on it, then draws the correct design on the new surface.

When it is finished, ceremonies are performed over it, and then with song and ceremony it is of the sand of which it was made is gathered in blankets and thrown away at a distance from the lodge. In the ceremonies of the Pueblo Indians a picture is allowed to remain several days (Matthews, in Hodge, Handbook of American Indians, i. 403 f.). The Hopis, unlike the Navahos, begin their dry-paintings at the periphery, commencing with the north, and when the painting is effaced, pinches are taken from the sand used in its composition are deposted in certain spots prescribed by the ritual.

A sort of heraldry was perpetuated by means of painting, particularly among the Plains Indians. This applied especially to the totem and shields,
and involved certain tabus, while the basis of the design was drawn from the visions obtained by the young braves (cf. Communion with Deity [American Indian]). As in many other lands, the face and head was and is common among the American Indians. This may be purely decorative in intent, or it may have symbolisms relating to religion, war, or social status. In the Mixtec of Mexico, the faces of the deities and the bodies of men were painted their natural colors: red, brown, or black, and the heads and arms of men, while their faces were coloured vermilion or yellow. These designs, being merely ornamental, might be varied at pleasure; however, the transition from the ornamental is shown by the practice of the same tribe of painting the entire face jet black after performing an exploit (Maximilian von Wied-Neuwied, Travels in the Interior of North America, London, 1843, pp. 340-386). Hence (Exploration of the Valley of the Amazon, New York, 1853, i. 201) describes a Cuibo dandy as 'painted with a broad stripe of red under each eye; three narrow stripes of blue were carried from one ear, across the upper lip to the other—the two lower stripes plain, and the upper one bordered with figures. The whole of the lower jaw and chin were painted with a blue chain-work of figures. Ritualistic face-painting is also common among the White Earth Ojibwas of Minnesota, the first degree of their Ghost Society being indicated, according to Hoffman (American Anthropologist, 1888, pp. 209-229), by painting across the nose, over the tip of the nose; the second by a similar stripe plus another across the eyes, temples, and root of the nose; the third by painting half of the face green and the lower half red; and the fourth by painting the forehead and the lower cheek green and impressing four vermilion spots on the brow and four on the cheek. The 'war paint' of the American Indians is, in general, either red or black, or a combination of both; and the same colours are frequently used for mourning (cf., in general, on American Indian face-painting, Mallery, in 10 REEW pp. 619-634). Allusion should also be made to the pictographs which are scattered over North, Central, and South America. Since these are in great part mnemonic, chronological, or historical in purpose, or are intended to convey messages, notices, and the like, they will more properly be discussed under the head of Writing and Literature of American Indians. Here, however, it may be noted that the artistic powers evinced in these pictographs (which are mainly petroglyphs) are decidedly primitive. Their interpretation, when they are not mere ornaments or idle pastimes, is often problematical, and requires, in many cases, a knowledge of traditions, local surroundings, and the like. An important class of pictographs is given in the representations of tribal designations (cf. the list in Mallery, 10 REEW pp. 377-388; and see in general on the subject his 'Pictographs of the North American Indians' in 4 REEW pp. 13-256, and 'Picture-Writing of the American Indians,' in 10 REEW pp. 377-388, supplemented for the Porto Rico figures by Fewkes, in 25 REEW pp. 148-150). They likewise symbolize personal names (Mallery, in 10 REEW pp. 442-450), and religious symbolism is also prominent, being found not only in the Mixtec pictographs from Kejimkookoj Lake, Nova Scotia, but also among the Ojibwas, Memnonidas, Dakotas, and Haidas (Mallery, pp. 461-512). More than this, there are well defined pictographic signs for many household utensils, the sky, the heavenly bodies, day and night, lightning, eclipses, and meteors, and representations of tipis and even pueblos are also found (Mallery, pp. 694-755). The older American pictographs are naturally on stone and uncoloured; but bone, skin, gourds, copper, wood, and textiles also bear such figures, frequently in colours.

6. METALLURGY AND JEWELLERY.—The Indians of North and Central America were acquainted with copper, silver, gold, iron, galena, lead, and tin, knowledge of the last two being restricted to the Aztecs, Toltecs, and Mayas. Nevertheless, the use of metal in the New World was rare in North America, shells, beads, and the like being used instead, although bracelets of copper were frequently worn and were highly valued, in view of their scarcity. In the middle of the过渡 Columbian days. The metals were worked chiefly by cold-hammering and grinding, but there is no evidence of a knowledge of casting. Silver is now worked with considerable elaborate among the Navahos, and bells of copper have been found in Tennessee, while elaborate sheet copper repousse figures occur in the Etowah mounds, Georgia, and the Hopewell mounds, Ohio; and the copper 'tokens' of the north-west coast are famous in many ceremonies. The Aztecs and other Mexican peoples were expert metallurgists, and their gold vessels and adornments were the marvel of their conquerors. They imitated the forms of animals and birds, and the peacock, eagle, and jaguar particularly is often enhanced in beauty by gems. They likewise possessed the art of making an amalgam of copper and tin, thus forming a bronze of considerable hardness, while specimens of copper plating are known from the mounds of Florida, Alabama, and Ohio. Gold ornaments are also known from Florida and the West Indies. The metallurgical remains of the Peruvians include silver bracelets and collars; gold, silver, copper, and bronze vases; beads, and animal figures, such as jaguars, donkeys, parrots, and silver, as well as human figures. Apart from this, however, South America falls behind the northern continent in the amount and excellence of metallurgical products and jewellery, as it does in nearly all other requisites and tokens of human progress in civilization.

7. MOSAICS AND MINOR ART.—The art of making mosaic pictures was known especially in the Pueblo regions of Arizona and New Mexico and among the Aztecs. The modern products of the former region are much inferior to the ancient specimens, which consist of gorgets, ear pendants, and other objects. The Purunaua were the favorite material, but bits of shell and various bright-coloured stones were also employed. The foundation form was of shell, wood, bone, and jet and other stone, and the matrix of gum or asphaltum. Although the work is neatly executed, the forms are simple and the designs not elaborate* (Holmes, in Hodge, Handbook of American Indians, i. 947). Rude mosaics have been found in graves in southern California. One of the most interesting mosaic objects north of Mexico is a shell used as a pendant and found by Fewkes at Chaves Pass, Arizona, in 1896. This is a frog formed by imbedding turquoises in a patch on the shell of Chrysocolla, with a small rectangle of red jasper set in the centre of the back (cf. Fewkes, in 22 REEW, pt. 1, p. 581). Mosaics from Mexico have long been known, particularly a knife with a blade of semi-translucent chalcedony, the handle being a cucurbit-\n
* The gold was an alloy of copper, varying from almost pure gold to almost pure copper. When the latter metal was used, it was frequently alloyed (plated?) with copper. The technical processes used were exceedingly skilful, but what they were is uncertain.
double jaguar now in the Berlin Museum for "Assyro-Babylonian" art described by Lehmann (in XV Congrès international des Américanistes, Quebec, 1907, ii. 340-344) as follows:—The figure is carved of tough reddish brown wood, 32 cm. long and 10 cm. high at the head at each end, one of which is turned towards the spectator and the other averted. The belly, which has no mosaic work, is painted with black and bluish green. The bed for the mosaics is a dark brown resin 3 or 4 mm. deep, and the stones themselves are blue, white, yellow, red, and violet. The border mosaic, of the same material are evidently intended to represent the jaguar's spots. Rows of turquoises alternate with rows of obsidian on the body, and the ornamentation is enhanced by mother-of-pearl and bits of red, white, and blue malachite, their shapes varying between polyhedrons, rectangular, and round, and all carefully polished. The neck and the extremities are among the most beautiful parts of the work, and the mosaicists and engravers on the stone are even inferior to the substance. It would also seem that the eyes and nose were originally covered in part with gold-leaf (see in general on Mexican mosaics, Globus, 1906, p. 518-322).

The account thus given of American Indian art, like that of the architecture of the same peoples, cannot pretend to be exhaustive. Besides the large categories here outlined, there were other arts, such as bark-work. This was used for cord, mats, and blankets, the covers of little huts, and houses; for cradles and for burial; for clothing, and for writing-tablets; and for religious dance regalia and masks (cf. Mason, in Hodge, Handbook of American Indians, i. 130-132, and the literature there cited). Among the more northern tribes and along the Pacific coast bone is almost as important as bark, being used not only for personal adornment and as household utensils, toys, and feeding utensils, but also for mocassins and other clothing. In the construction of dwellings, canoes, and the like, Bones were elaborately carved, and were also inlaid by the ancient Pueblo Indians, while even a copper-plated bone has been found in a Florida mound (cf. the summary of Holmes, in Hodge, i. 159 f.). Horn was likewise sometimes employed, as for dishes among the Sulahian tribes.

LITERATURE.—Dellenbaugh, North Americans of Yesterday (New York, 1899); Thomas, Introduction to the Study of North American Archaeology (Gelnal, 1896); Hodge, Handbook of American Indians (Washington, 1897); Board of Trade, Races of the Pacific States, iv. (San Francisco, 1883); Kingsborough, Antiquities of Mexico &c. vols., London, 1830-1848; Malory, "Archaeology" in Biologia Centrali-Americana (London, 1890-1901); Wiener, Preu en Botanique (Paris, 1901); Baessler, "Die Amerikanische Kunst" (Engle. by Koenen, 1862); Berlin, 1902-1903); von den Steinen, Unter den Naturvolkern Zentral-Brasilien (Berlin, 1894); Walitz, Anthropologie der Naturvölker in Amer. (Paris, 1892); and many monographs in the reports of the American BE, the United States National Museum, the Field Columbian Museum, the Peabody Museum, and the American Museum of Natural History. The present writer's thanks are also due Mr. F. D. VanArsdale of Newark, N.J., for private information, especially concerning pottery.

LOUIS H. GRAY.

ART (Assyro-Babylonian).—The religion of the Babylonians and Assyrians, which, according to the received opinion, was animistic in its origin, may be regarded as going back to between 4000 and 5000 years B.C. This long period, added to the nature of their faith, has supplied us with an enormous amount of material illustrating their religious art, which the student can trace, in all its variant styles, through the ages of its existence, noticing the influence towards the spectator and which it reflects, and the reaction of its influence on the people themselves.

Before 4000 B.C. (as far as is at present known) no monuments exist, so that there is practically no record of the religious ideas of the Babylonians in their art. All that is known of the religious beliefs of the Babylonians had its origin. A wide gulf must therefore be exist between the religious conceptions of the simple savage stages of early Sumerian and Semitic times and those of the men of even the remotest civilization of Babylonia when works of art are found.

Babylonian religious art therefore comes before us only when it had attained a certain amount of perfection. It is true that a number of comparatively rude examples have come down to us, but such are a specialty of no particular age, and at all periods excellent examples, principally in stone, exist, among them being numerous canoes, mostly cylindrical. Many good bronzes, too, have been found, some of them being as early as the 3rd millennium B.C.

In all probability the art of Babylonia is best divided into periods, though the schools of the various States (Ur, Erech, Akkad, Babylon, Lagas, etc.) could also be taken into account if we had sufficient material. With our present knowledge, however, it is often difficult to place the examples, and even the question of date is not without its difficulties, as the chronology does not admit of a clear line of demarcation in the matter. The divisions, therefore, can be only roughly determined, somewhat as follows:

1. Babylonia.
   (1) From the earliest period until the date of the Dynasty of Babylon (c. 3500 B.C.—Lagas, 
   (2) Until the end of the Dynasty of the Land of the Sea (c. 1700 B.C.—Babylon, Sippur, Erech).
   (3) The Kassite period (c. 1280 B.C.—f. c. 1000 B.C.).
   (4) From c. 1100 B.C. until the downfall of the Babylonian empire (c. 539 B.C.).

2. Assyria.

The artistic period may be regarded as extending from the 9th cent. B.C. (as the result of the German excavations at Assur) until about 506 B.C.

Though, like the art of Egypt, that of Babylonia comes before us only when it had attained a certain amount of perfection, it is, in a way, more interesting than that of Egypt, in that it shows a much greater variety of styles; and the Assyrian school, when it comes into existence, has a distinct stamp of its own. We have also to distinguish, besides the perfect and artistic, the amateurish (which is sufficiently rare) and the rough and unfinished, generally cylinder-seals 'dashed off' by the hand of one accustomed to do such work, and probably to be regarded as cheap productions for the poorer classes, who naturally required less than those required by the well-to-do, though they could not pay the price. At all times these classes of religious artistic productions had existed, and among the perfect and artistic are now and then to be found things of noteworthy beauty of workmanship, due, doubtless, to the presence of artist-workmen of wonderful talent.

1. Babylonia.—(1) Among the best of the earliest examples of Babylonian religious art are the very interesting cylinder-seals impressed upon tablets found at Tel-Floho (Lagas) in S. Babylonia. They show a man and a woman, nude, the former struggling with a bull, and the latter with a bull, whilst two lions, whose bodies cross each other symmetrically (a common device of Assyroy-Babylonian engravers) attack the two animals at the same time. Various mystic emblems appear—a bat or bat-headed bird, an animal's fetlock and hoof in outline, and a young bull—whilst beneath the name of the owner are two bull-men whose bodies cross each other, as in the case of the lions. The wide-open mouth of the man, and the closed mouth and the large ear of the woman, suggest that we may have here primitive representations of the deities Nebo, 'the proclaimer,' and Tammuz, his spouse, 'the hearer'; but the crown with points which the woman wears is rather against this identification. Concerning the meaning of these religious and mythological ideas, which are not directly represented, much remains to be discovered. Some of the later cylinder-seals give an account of analogous stories relating to the lives of the gods. The art here revealed, a few words may be said. The
animal-forms, especially the heads, are good, and the manes of the lions are well treated, but the human forms are less satisfactory, the body of the man being thick, and the arms in both cases abnormally thin. The head of the man regards the spectator, and, though too large, is more successful than that of the woman, which has the same defect, the face being not a prominent eye, the profile face, fitting, as it were, into the somewhat pointed nose, which makes the figure grotesque. The close-shut mouth (the line of the lips is invisible in the impression) and the abnormally large ear-conjunctiva, with the wide-open mouth of the man, shows that the design has a deeper meaning than appears at first sight. This seal belonged to En-gal-gala, the superintendent of the women's house during the reigns of Lagalanda and Uru-ka-giga, about B.C. 2400.†

Scenes similar to this are common, though no woman is shown as one of those struggling with the animals. From the same site, Tel-loh, the de Saose expedition† obtained a very fine seal showing a bearded and crowned personage struggling with a bull, and a bearded crowned personage struggling with a lion. These animals cross each other like the lions in the other design, and the bull-men beneath the inscriptions, as yet been dated, are represented by two human-headed bulls, one of which is held by a nude bearded man, a bird, probably intended for an eagle, occupying the space between them. If the short inscription Nín-in or Ni-in, crowned to the crowned personage, refers to him, it probably represents the ancient deified king Ninus, who, with Semiramis, is said by Diodorus (ii. 8, 6) to have been represented on the walls of Babylon in enameled brick, hunting the lion with a spear.‡ The objects here described suggest that there was not only a legend referring to the goddess Nin, patron of Nin on the Euphrates and of Nineveh in Assyria, but also a male deity of similar name. Semitic influence, with its tendency to replace the woman for the male, is probably the cause of the substitution of the male deity for the hearing but silent female.

The occurrence of these early designs on cylinder-seals reminds us of an important fact in connexion with Babylonian art, namely, that in Babylon there is neither building-stone nor even blocks in any number suitable for sculpture either in relief or in the round. It is therefore not impossible that the earliest works of art were primitive attempts at engraving, first as chariots, and afterwards as chariots and seals combined, on the cylindrical beads which were for many centuries the favourite form of seal in Babylon and Assyria, and which afterwards travelled to the extreme west of Asia and Egypt.

Presenting a large surface in a small space, these cylinder-seals became suitable for all kinds of pictures, and we find engraved therein the Babylonian idea of several of the legends with which we have become familiar from the tablets. It thus happens that, in a scene showing a nude bearded figure struggling with a bull which is being also attacked by a lion, we see a representation of a boat and a personage within rowing,§ which is generally supposed to show the Babylonian Noah in the ark. Several copies exist also of that exceedingly interesting scene which shows Etana, riding in the air upon an eagle, whilst people on the earth below interrupt their daily work to gaze upon them. Another noteworthy example is well known as a possible Babylonian picture of the Fall, and shows two parents seated one on each side of a palm-tree bearing fruit, and stretching forth their hands as if about to grasp it, whilst behind the figure apparently representing the woman a wavy serpent raises himself. The work is rough, but implies some technical skill.¶

Note worthy are the early engravers' attempts to cope with the scene representing the overthrow of the dragon Tiamat by Merodach. The best is one figured by Rassam, who, in the hand of the head of the Babylonian pantheon is seen striding or running along Tiamat's wavy body, and thrusting his weapon into her mouth as she turns her horned head towards him. Two of Merodach's helpers seem to follow behind. Another picture of the same, which is apparently of late date and Assyrian workmanship, shows the dragon with a long and straight, but apparently scaly, body, erecting herself at a right angle where the feet spring forth. She does not turn her head towards him, and the god attacks her with thunderbolts, striding along on her body behind, followed by two of his helpers. Other scenes, possibly from legends, occur, but have not yet been dated. In the division of the seal there are two divisions shows, on the right, a deity (the sun-god) dividing food, of which the owner of the seal, standing before him, seems to partake; and on the left another deity bending down, apparently to conceal a goddess and a (child-) deity coming forth from its trunk (cf. the classical story of Adonis [Ovid, Metam. x.]). All the figures on this cylinder-seal (except that of the god) wear the lips, hair, and beard, the diadem, and the diadem.

The design in the right-hand division, which shows the owner of the cylinder before the god whom he worshipped, is probably, in its various forms, the commonest found, especially in the period preceding 21st B.C. This deity is generally seated, and often holds a cup in his right hand. Before him is sometimes a vase, and the worshipper (the owner of the seal) is led into his presence by a divine personage. A divine attendant sometimes brings up the rear. The worshipper is generally bare-headed and clean-shaven, the latter peculiarity probably indicating his priestly office. Variants of this oft-repeated design are found; one, which is regarded as a symbol, and a fragment of a bas-relief showing a seated deity holding a cup in his right hand, and wearing on his head a hat with two horns, one at the front and the other at the back, instead of one or more on each side, as in the later designs. The work is rough and primitive, the artist having apparently found his material not altogether satisfactory (it is a calcareous limestone, probably of sufficient hardness to make its working difficult).

* Découvertes en Chaldée, pl. 30 bis, 174.
* It is not exactly known why the Babylonians and Assyrians represented their deities wearing horned hats. In the primitive design described above (p. 323), the common or bull-men have horns placed directly upon their heads. Perhaps this is an artist's device to show who, among the figures in the picture, are gods and who are servants. The first place before the names of deities in the inscriptions is not an indication that all the deities are stars (though some of them were so regarded), but simply means that the gods belonged to the place where the stars are, namely, the heavens.
* Numerous representations of this kind will be found in the Amurath Tablets, vol. i. pp. 40, 63, 83, 141, 155, 196, etc.

* ** A very fine but fragmentary relief, showing Gudea (c. 2500 B.C.) brought before his god by two attendants, is given in Mayer's Sonnen- und Mondinschriften und Soninen in Babylonien (Konigliche Preuss. Akad. der Wissenschaften, 1906), pl. vii.
* Découvertes en Chaldée, pl. 1, No. 1.
The deities at this period are represented wearing mantles which recall, in a measure, the Roman cloak wound round the body, and thrown over the left shoulder, leaving the right shoulder and arm bare. These garments seem sometimes to be represented as made of some animal, such as the goat (which seems to have been a sacred animal), sewn together in long strips giving the appearance of flounces. This costume distinguishes divine persons for those who claimed divine kinship. A squat little figure in alabaster, standing with folded arms, and wearing a dress of this kind, the head bound round with a fillet crossing behind the long carefully-arranged hair,* may be a divinity, or the priest of a god.

It is noteworthy that though, in the archaic fragment above described † and on the cylinder-seals, the deities are represented in profile, in bas-reliefs of somewhat later date they are often shown front-face. Whether front- or side-face, however, the horns on their hats, which vary from two to eight in number, are shown as if the front of the head-dress was towards the spectator.2 Goddesses often appear as being carried by the gods, in hats, horned hat and robe of skin, but the female shoulder is covered as well as the left. One small fragment3 shows a goddess wearing a hat with a single horn on each side. Her hair descends in graceful curves upon her shoulders.4 This, which is also a triple row of beaded work which disappears beneath the low-cut neck of her goat-skin robe, over which, from each shoulder, descends a beaded stole. She holds in her hands a vase from which flows a twofold stream of living water. Here we have something really good and artistic—almost aesthetic. The work is so dignified, the idea intended to be conveyed (that of a beneficent god sustaining the water of life) so well expressed, that the spectator realizes that he has before him the work of a people who knew what they wished to express, and had skill to express it.

After that, the picture of a god,** apparently of the same period, is disappointing, though even this has its excellences. Its shortcomings are probably due mainly to the damage which the stone has received. A deity, front-face, bearded, and holding what seems to be a staff or symbol, is seated. This is a later Babylonian style, and is not, as it has been slightly bent back. He wears the usual robe of skin, and hair falling upon his shoulders. In spite of the damage to the stone, the dignity of the face is striking. Reliefs in terra-cotta, apparently produced about this time, are generally very good.5 Example shown figures of horned hats holding inscribed cones (regarded as some of the god with the fire-stick). They are of the nature of votive statuettes,** and were venerated by the bearers of stone inscriptions detailing the building of temples.

(2) With the advent of Semitic influence (c. 2100 B.C.) there is a change in the representation of certain of the deities. The horned hats and the skin robe are no longer seen, and animal figures in horned hats holding inscribed cones (regarded as some of the god with the fire-stick). They are of the nature of votive statuettes, and were venerated by the bearers of stone inscriptions detailing the building of temples. The deities are now represented in a more human form. The horned gods may be regarded as the warrior-gods, short tunics and thick-brimmed hats appear, and the deity grapples in his right hand a short weapon, held close against the body. The beard also spreads over the breast. Sometimes the thick-brimmed hat is combined with the long flounced robe of skin. The cylinder-seals of this period are often very finely engraved, especially those of Nimrud, and the artist has taken pains to give the style of the cylinder-seals, but seem to keep more to the old costumes. A very good specimen of the lapidary art of this period is the representation of Hammurabi before the sun-god Sinams, at the top of that king's Code of Laws. Hammurabi has flowing robes reaching to his feet, and a thick-brimmed hat. His right shoulder is bare, and his hand is raised as if addressing the deity. The sun-god, heavily bearded, wears a flounced robe without any indication whatever of a hairy surface. Upon his head is a pointed hat, with four horns curving upwards in front—eight in all. Wavy rays proceed from his shoulders. His seat has four superimposed recesses, such as are often found both in bas-reliefs and in designs on cylinder-seals. His right shoulder is bare, and in his hand he holds a staff and a ring, emblematic of his endless course and his authority as judge of the world. The work is good and well finished, but with great lightness and detail. The bronzes of this period seem to have maintained the excellence which those of the preceding period show. One, probably hero, is a good reproduction, in the round, of one of those divine attendants so often shown in the cylinder-seals as a graceful female figure in a horned hat and wearing a robe of skin, holding up her hands with the palms facing each other. When the deity and the owner of the seal are absent, these attendants are sometimes shown in the same attitude of adoration before the divine name contained in the inscription.

(3) In the Kassite period we meet with another style for the cylinder-seals, the work being exceedingly plain and flat, and wanting detail. The designs are, moreover, confined to single figures, either sitting or standing, and accompanied by some emblem—a cross, one or more birds, etc.; and in one case even a fly, suggesting that the deity may have been the Babylonian Belzibul. These designs probably form the transition to the style of the cylinder-seals of the later Babylonian style, in which the figures are likewise very plain; but the work, which seems to fall off somewhat during the Kassite period, later assumes remarkable accuracy and finish.

It is to the Kassite period mainly, however, that the boundary-stones which have come to us belong. These objects (generally inscribed with grants of land) are sculptured with 'the signs of the gods' as a protection against the wrongful alteration of the boundary or changing the conditions of the deed, etc. Those found by the de Morgan expedition at Susa† are of special value, as they have sometimes short inscriptions which enable the signs upon them to be identified. The sun is represented by a disc having a flaming star within; the moon by a crescent; Venus by a star; Nusku ('the light of fire') by a lamp; Gula, goddess of healing, by a female figure in horned hat and robe of skin, etc. West of the Tigris, the fish-goat, the scorpion, and the bull emblematic of Addu (Hadas) vary upon the stone, and the work is seldom really well finished, that of Nebuchadrezzar I. in the British Museum being in all probability the finest of those which have come to us.

(4) Comparatively early in the latest period (c. 900 B.C.) comes that magnificent specimen of Babylonian art, the sun-god stone, found beneath the

pavement of the temple of the sun at Abu-habbah by Mr. H. Rassam. It shows a design derived from the early cylinder-seals. The sun-god sits in his shrine, wearing horned hat, robes of skin, and long beard. In his right hand he grasps his staff of justice and the circlet of his everlasting crown. At his left a woman or genii pours a vessel of the fruit of righteousness and justice, guide with cords to the great disc of the sun erected on the table below. A divine personage leads Nabû-âbda-kiddim, the king who had the stone sculptured into the present shape, and a divine vulture in the usual attitude of veneration follows behind. The ground consists of wavy lines (the waters above the firmament) with stars below, pointing to the probability that the scene is held in heaven. The figures are a little too broad, but the work is excellent, and may be regarded as maintaining all the traditions of Babylonian art.

Figures of deities during this late period are rare, but there is evidence in the anthroponomia that they did exist. On the cylinder-seals emblems similar to those found on the boundary-stones of the preceding period often take their place, such as the sun's disc and the moon's crescent mounted on a throne, representing Assur, and a woman with emblems on her robe, a curious woman seated in a lotus, and a seated Nude-genii. Several vases in the British Museum (Calah) show us the king, clothed in garments splendidly embroidered with representations of all kinds of mystic emblems and ceremonies,† himself engaged in ceremonial acts, surrounded by his eunuchs and the king from the sacred cup, while winged genii offer him the divine pine-cone, or something of similar shape. In other sculptures we see him worshipping before the sacred tree, above which hooded disc the present representing Assur, the chief god of the Assyrians.‡ Familiar to all are the figures showing the adoration of the sacred tree,§ and the winged figures carrying offerings of flowers and young animals.|| An admirable example of religious art is the sculpture from the entrance of the temple of Ninip, representing the expulsion of the dragon of evil from the building, which was erected on the other side of the doorway.|| As a testimony to the divine status of the king we have the image of Assur-nasir-apli on an arch-headed monolith, and the sacrificial altar which stood before it at the entrance to the temple.** Though the figures are too thick-set, the work is excessively finished, and the details carefully indicated. This applies also to the winged bulls and lions of this reign, though they are wanting in vigour.†† The effect is somewhat marred by the long inscriptions which are carved across the sculptured work of this reign.

Based upon these or similar models are also the religious sculptures of Tiglath-Pileser III., Sargon, Sennacherib, Esarhaddon, and Assûr-bani-apli. Though they belong to the same school, the improvement in style can easily be traced, until we reach the delicate perfection of many of the sculptures of the last-named monarchs, personifying Assur-nasir-apli give us the Assyrian idea of the sea-god Ea (Syncell. Chron. 28; Euseb. Chron. 5, 8), who was clothed with a fish's skin.† Dagon, according to a sculpture of Sargon from Khorsabad, was shown as a deity with安装ed hair and beard, and a close garment reaching to his waist, where the scaly lower part, ending in a fish's tail, begins; cf. 1 S 5 ("the stamp of Dagon")." The fishy part of his costume—probably the latter—is represented in the statues of Nebu standing in what is regarded as an attitude of meditation.‡ On a cylinder-seal, apparently of the time of Assûr-bani-apli, and bearing a dedication to Nebu, is shown a divine figure holding two winged bulls by one foreleg, whilst they incline their heads gracefully towards him. If this be Nebu, and the design have a symbolical meaning, it may typify the power of the wise to overcome the strong.§ Turning to the bas-reliefs of Assûr-bani-apli, we find a scene where, to the sound of the zithers, the lions which the king has killed in the chase are brought home, and before a sacred emblem and a table with viands he pours out an offering of wine over the ground. This is in the best Assyrian style; the figures of Assûr-bani-apli and his brother of Babylon as basket-bearer at the restoration of the temple E-ziida there, though good, fall short of representing Assûr-bani-apli.||| Istar is apparently represented on a cylinder of the British Museum as a goddess in warlike guise, armed with bow and arrows, and standing upon a lion, which turns its head to lick her feet. Another priestess, similarly represented, the design is completed with the palm-tree and rearing goats whose bodies cross symmetrically. It is a gem of Assyrian religious art.||

The sculptures of Assûr time likewise give us an idea of the spirits, evil and otherwise, in whom the Assyrians believed. Besides the four-winged genii, demons with snarling lion-heads, ass's ears, and eagle's claws, are shown. Sometimes they threaten each other with dagger and mace,†† or at other times they raise their weapon menacingly against a person unseen. But they are powerless in consequence of the protecting spirit in the form of a man in front, who with mystic sign casts an unseen spell. In some cases there is also a bearded and ringleted spear-bearer behind, similar to the nude figures on the Babylonia cylinder-seals of B.C. 2500, showing how long these things persisted.

No artistic remains from Assyria later than the reign of Assûr-bani-apli are known.

There is hardly any doubt that the high level of Assyro-Babylonian art is due to the deep religious feeling of the two nations. Their sincerity is re-

**ART (Celtic).—** The article ‘ART (Christian)’ is
intended to bring into view the various forms in
which art in the modern era has been made the
expression of religious feelings. Special attention
is paid, however, to the one fact that Christian art in
which there is little or nothing of the representa-
tive element, but on the other hand a lavish dis-
play of taste and skill and care, all consecrated to the
service of religion. Celtic art represents this
form of artistic expression perhaps more perfectly than
the art of any other time or people, and this is one of the reasons why it here receives a special
attention. The spirit of monastic craftsmanship,
in all its single-minded devotedness, is nowhere
seen in such purity as in the ornamentation of
Celtic manuscripts, or the exquisite ecclesiastical
metal-work that had its home in the Ireland of the
early Middle Ages.

**Definition and scope.**—By Celtic art is meant,
of course, Celtic ecclesiastical art, and this is related
to Christian art in general just as Celtic Chris-
tianity is related to the whole religious system of
the West. In each case we have to deal with a
distinct province, the characteristic features of
which are the outcome of special historical and
geographical conditions. The Celtic religious area was
practically unbroken by ecclesiastical divi-
sion from this to all the other regions of Western Christen-
dom. Part of the area lay entirely outside the
Romish Empire, and other parts were only dubi-
ously within it, while, on the other hand, after
the year 400 many of the members of the Church
in this region continued to maintain their
independent identity, precisely as they had done before
the Roman empire invaded their
lands. Christianity was probably introduced into Gaul,
not from Rome or from Italy, but from Greek-speaking lands
in the wake of Massicelle or Narbonnese commerce, and spread
thereby into the islands of the British Archipelago, a
fact that cannot now be clearly determined. That the Gallo-
Church was the mother Church of those in Great Britain and Ireland
is now sufficiently established, and so far as
the temporal administration is concerned, it is
included in the Empire, the Roman municipal and provincial
system furnished the Gallic Church with a
structure and a feeling of its organization—an organization which we know existed in
Britain on Gallic lines at least as early as the beginning of the 4th
century. This Gallo-British Church, however, spread mission-
ary activity into regions entirely outside or only nominally
within the limits of the Roman empire. It was able to
make use of the zeal of some of the
private Roman institutions to provide this framework.
Church organization here, so far as it existed, was quite different from
that of the time it was in Romano-Celtic faith,
both civic and personal; that is to say, the bishop, the
chief ecclesiastical functionary, was not bishop of a
Civitas, i.e. a town with its surrounding district, but of a tribe,
and was largely dependent on the personal support of the tribal
chief. In other respects also the differences were equally
marked.

Representatives of this missionary activity were Ninian, who
looked to St. Martin of Tours as his exemplar, and soon after
A.D. 409 evangelized the Southern Picts of Scotland; later on,
Kentigern, who laboured in Strathclyde and Wales; and, most
important of all, Patrick, who, a little later than Ninian and a
century before Kentigern, was working independently on the
island of Man, where he was first accepted as a missionary
and afterwards as the chief ecclesiastical authority.
This is the first stage of the development of a native
Church. Soon after this period, the British Church was
considered as a Church of Rome, and the Irish
Church recognized by the Pope in 597, which
Church organization in Ireland was never, however,
to be considered as due to the influence of
the Roman Church, since the Irish had always been
independent of Rome. Patrick’s Church in Ireland was
related to the Gallic Church, and the two
Churches maintained a relationship which lasted for
seven hundred years, the Irish Church being
independent of Rome and the Gallic of Rome, until
the end of the 7th century, when the manner of
the Gallic Church, and the Irish Church
were united under the name of Roman Church.

This exceptional character which attaches to the outward
apparatus of Christian art in Ireland, and was further
reflected in the fact that after the island had received the new religion it
was cut off from the rest of Christendom for a century and
a half by the Saxons of England, which introduced a
barrier of paganism between the Christian West generally
and this outlying province, which consequently remained outside
of Spain and Ireland, which had existed from early times, was
also checked owing to the political convulsions due to the
Celtic and Frankish influences. Hence it is in Ireland
that Celtic ecclesiastical matters that, while changes were worked out in
the Irish Church, generally, Ireland, in this way isolated,
preserved its more primitive forms, some of which had once
been common to all provinces of the Church
Alkaks.

One of these forms, which had once been common but after
wards became inconspicuous for its singularity, was the
monastic settlement consisting in a number of separate cells and of small
churches or oratories. This was everywhere in Christendom
the earliest form of the monastery, because the hermit’s cell
was answered to the primitive impulse in the volatilized spirit
of retreat from the world. The reputation for sanctity of the
first recluse among others always inspired a community,
the size might be formed, numbering, possibly, as Bede tells us
of the British monastery at Bangor near Chester on the Dee, as
many as two thousand cells. The members of the
community, whether few or many, lived beside each other but not
in the same way as the monks of the
Church, the cloistered court, the common refectory and sleeping-
rooms—were all absent. These were simple monasteries
that did not come into use till the 6th or 7th cent., from
which time onwards they were gradually introduced all over the
Romano-Celtic west. Eastern Christendom, which Benedictinism hardly
affected, and the Celtic regions outside the Empire, or its
north-western border, remained faithful to the older systems.

**Monastery the home of ecclesiastical art.**—Celtic
monasteries of the kind indicated existed not only
in Ireland but in Scotland, in Wales, and in other
parts; but it is in the first-naming country that
they have left the clearest monumental evidence of
their character. Even as early as the time of
Patrick—the first half of the 5th cent.—Irish
men and women were devoting themselves
more and more to religious life, and the sites of ancient
settlements are almost innumerable. Those in
the remoter and less accessible regions, such as
the islands and rocky headlands of the indented
western coast, are as rules the best of the kind, and we may take as an example the settlement
on the most retired spot of all, the rock of Skellig
Michael, an isolated peak about 10 miles out in
the Atlantic, off the coast of Kerry. Here, at the
height of some six hundred feet, and a thousand
find on a terrace, sustained by a magnificent re-
inairing wall of dry, i.e. uncutted, stone-

* For pre-Christian Celtic art see CELTIC RElIgIOo.
half a dozen or so of hermits' cells and two or three tiny oratories used for service and private prayer. The other cells, and other small oratories, concepto the oratories, are constructed of the same dry stone-work, and according to methods that carry us back directly to pagan times. The terrace wall is of precisely the same construction as the vast ramortized wall that surrounded the site. This rampart round the stone works of unknown date and origin on the headlands and islands of Galway or Kerry. The cells are round or oval in plan, and are of a bee-hive form, the layers of flat stones of which they are composed gradually narrowing their circles till a dome-like finish terminates the whole, an opening being left at the summit for the egress of smoke. This method of construction also is pagan, and may be found in the central stone chambers of the great pre-historic burial tumuli at Newgrave, Dowth, and other places beside the Boyne. That the cells on Skellig Michael are Christian is proved by the fact that over one of the doorways white quartz stones have been set in the form of a cross. The smallest of the little oratories is one of the most interesting of early Christian structures. Its interior length is only about eight feet, and it has a door and window in the altar wall on the other end, which is turned towards the east. The construction is similar to that of the cells, but the plan is rectangular, and the walls are made to converge till they meet in a ridge at the top. The little oratory stands apart from the rest of the structures of the settlement, on a jutting corner of the terraced platform, and we may well fancy it a place where the worshipper might tarry awhile and meditate, in this almost inaccessible eyrie between sea and sky.

Such meditations availed much for Christendom at large, for these Irish hermit monks were at the same time the most indefatigable of missionaries. This pietas, or solitude which drew the Celtic Christians away from the world was only one of the tendencies in their emotional piety, and is balanced by quite the opposite passion for wandering and evangelistic enterprise. To carry on this work effectively they seem to have needed to submit themselves from time to time to certain spiritual influences, which should act on their inner nature and charge them as it were with an electric force that radiated with irresistible potency when they journeyed forth as missionaries. It was in places of solitude and retirement, like Skellig Michael, that the fire was kindled and fanned till it burst into the proselytising fervour of a Columba, an Aidan, a Columbanus, or at the source of a stream of Christian influence that flowed with beneficent effect over all the land of Britain and far across the Continent of Europe. Ireland gave us the Monasterskilling of Northumbria, and from Northumbrian Lindisfarne proceeded the effective co-operation of saints like Anlaf and other Continental centres of the religious life looked to Celtic missionary saints as their sounders.

The following details are germane to the purpose of this article, for we have to note that the arrangement and the life of the Celtic monastery had great influence on the forms and aesthetic character of Celtic ecclesiastical art. It is not pretended here that all the artistic activity of the early medieval period was centred in the monastery. The monastic craftsman plays a predominant part in the artistic history of the time, but he had no monopoly. Among the northern peoples in the pagan period, the knowledge of weapons, implements, and objects of personal wear, gave employment to artistic workmen whose skill and taste are in their way unsurpassed, and from which we can see in the reason that the introduction of Christianity broke this tradition. In Ireland the Tara brooch, in Scotland the Hunterston brooch, dating about the 8th century, are pieces of social art, and we need not credit them to the hands of the hermits or monks. On the other hand striking pieces of the medieval period advanced, sacred art undoubtedly preponderated over secular, and sacred art was specially cultivated in the cloister. In time, as Mr. Romilly Allen (Art and Christian Life in Pre-Roman Britain and Christian Times, 1904, p. 171), 'The priest took the place of the warrior as the patron of the fine arts, and monopolized all the available time of the metal-worker and enameller in making beautiful vessels for the service of the Church.' In periods of political unrest, such as on the Continent followed the breaking up of the Roman provincial administration, the convent offered conditions more favourable to the artist. The art-centre round the stone was found outside, while certain forms of art in great demand at the time, such as the writing and adornment of books, were practically in the hands of the religious, and may accordingly be regarded as the home of almost all the artistic production of the time that had an ecclesiastical purpose, and it will lend force to this statement to quote the nearly contemporary record as to the making and putting forth of one striking monument of Celtic art, the so-called Gospels of Lindisfarne or of St. Cuthbert, a manuscript dating from the end of the 7th or beginning of the 8th century, and now one of the treasures of the British Museum. An Anglo-Saxon colophon of the 10th century, appended to St. John's Gospel, we are told that 'Eadfrith, bishop over the church of Lindisfarne, wrote this book in honour of God and St. Cuthbert, on the altar of saints in the Island; and Ethelwald, bishop of Lindisfarne, made an outer case and adorned it, as he was well able, and Billfrith the anchorite, he wrought the metal-work of the ornaments on the outside thereof, and decked it with gold and with gems.' The fact that Billfrith is called the anchorite ('se onera') shows that fine metal-work with the setting of gems was carried on by the solitary recluse in his cell. The extreme minuteness and elaboration of this is, in fact, just what we should expect in work executed under these conditions; and this applies with even greater force to the manuscripts, wherein ingenious planning of ornamental schemes and faultless execution of multitudinous convoluted detail must have made the lonely hours pass lightly away.

Celtic ecclesiastical art in general was of a kind that could be carried out single-handed and in small interiors. Work that needed the co-operation of many hands and large spaces was little in vogue. In the Benedictine monasteries of the Continent the dominant art was architecture, and vast buildings for the accommodation of communities of religious were designed and executed in architectural monuments achieved by the inmates in person. Romanesque architecture is in the main monastic, and the great abbey church is its crowning achievement. In Ireland and in the other Celtic areas early conventual buildings were, as has been seen, smaller and simpler; and though they may possess great constructive interest, little pains have been taken with their ornamentation. From the traditional dry-stone building, illustrated on Skellig Michael, there were evolved on the one hand certain striking features in the framing of openings, etc., and on the other some interesting forms of vault construction. The single-celled oratory was enlarged by the addition of a second cell, also rectangular, forming when smaller than the first a presbytery or chancel, and when larger a nave: and this type of church plan, differing from the type with apsidal termination which belonged to the Roman tradition, appears in England after its conversion by the Celtic evangelists, who may thus have contributed towards the establishment of our insular preference for square-celled churches. Much of Celtic church architecture in early medieval times is the detached round tower, abundant in Erin, though represented by only a few stray examples in other parts of the islands. The architectural association with religious establishments, and it is now acknowledge...
nowledged that they were primarily designed as towers of refuge, though also employed as belfries. The dangers against which they furnished temporary security were deriving with increasing strength from the beginning of the 9th cent., onwards the country was seceded. It is stated by Miss Stokes in her Early Christian Art in Ireland (ii. 57), that, in the entries in the Irish annals, "equestrian" figures of the Northmen from 789 to 845, it is recorded that the clergy fled for safety into the woods but in the year 860, and for two centuries later, we read of the "edifice," church of a bell, as a special object in attack to the Northmen. A record relating to Brittany (quoted ib. p. 50) speaks of fragments of the erection of the church in that region of a "little round tower . . . wherein to deposit the silver plate and treasure of the same church, and protect them against the sacrilegious hands of the barbarians, should they wish to pilage it."

The construction of the extant round towers bears out this evidence of their origin and intention, for in almost every instance the doorway of access to them is at a substantial height above the ground, and was accessible only by means of a ladder, which could be drawn up when the temporary garrison was housed within. The interiors had wooden floors at different stages reached by ladders, and in the uppermost was the place for the bell.

The features here described are specially but not exclusively Irish. In other Celtic regions which were preserved in a similar manner to which the influence of the ecclesiastical Rome did not penetrate till a later date, we find specimens, or at any rate relics and traces of them. Scotland, especially in the north and west, is well supplied; for example, the 'Isle of the Saints,' 1 Eilean na Naoiunh, not far from Mull, has a group somewhat similar to that on Skellig Michael; but Wales and Cornwall have very little to show in the way of structures that are prior to the Norman Conquest. In Ireland such structures are at once more numerous, more clearly marked, and better preserved than they are elsewhere. The plainness of these early Irish structures has already been noticed, and is remarkable in a country where the arts of ornament were flourishing in the Pagan period, and were destined to develop for Christian service into forms so elaborate and beautiful. The rude stone building gave place to cut-stone work, and to the use of the arch and form of mortar but the same characteristic of plainness prevailed till about the year 1100, when a rich and somewhat fantastic style of architectural embellishment came into vogue, with which the stone soon mingled the undeniably Norman element of the Romanesque. It is on the development in the so-called Irish Romanesque, Celtic architecture loses that special character it had derived from the primitive methods of dry-stone construction, and comes into line with the other local styles of Western Romanesque. The subject need not therefore be further pursued.

i. STONE-SLABS, CROSSES, etc.—If the earlier Celtic masons did not carve ornament on the stones of their religious buildings, they made up for this by considerable activity in sculpture of another kind. The reference is to the incised or carved stone-slabs and crosses, a monumental form of construction, and comes into line with the other local styles of the British isles. No complete comparative survey has yet been made of the whole body of monuments, but there exist monographs on the various groups, the most complete and elaborate being by aedward Cheyney. This is the ponderous volume issued in 1903 by the Society of Antiquaries of Scotland under the title, The Early Christian Monuments of Scotland. The subject is very wide, and is treated in a comprehensive manner; the Scottish area alone number about five hundred, and it can, of course, only be touched on here.

In the matter of distribution, we may distinguish the following provinces in which the monuments occur in groups large or small. (1) Southern, eastern, and midland England. The monuments here are sporadic, and some regions are bare of examples, though in other parts, such as Derbyshire, they are well represented. Northern England and the same side of Scotland up to the Forth, the region forming the ancient kingdom of Northumbria. Here the monuments are very numerous and of great artistic merit. In point of art they show a combination of Celtic elements with those derived from classical sources, and exhibit inscriptions partly in Roman letters and partly in runes characters derived from Scandinavia. (2) Galloway or south-western Scotland, the scene of the ministrations of Ninian to the southern Picts, represented by some interesting early monuments of a Gallo-Roman type. (4) Cumberland and the Isle of Man, and in part Lancashire, where the art of the stones betrayed a Scandinavian influence. (5) Eastern Scotland north of the Forth and south of the Moray Firth, known to historians as the ancient 'Kingdom of the (northern) Picts.' The stones here are of certain devices peculiar to this region that are for the most part expressed, though probably Christian in significance, but in the main their art is of the Celtic type. (6) Central, northern, and western Scotland, where there was an important mixture. (7) Wales, a region specially well represented by monuments of this class, in which the art is Celtic, the epigraphy partly Roman, and partly in ogham characters, that is, in a native Celtic style of writing answering to the Teutonic runes. (8) Cornwall and Devon, the monuments of which on the whole resemble those of Wales.

Of these provinces all but the first and second are entirely, or, to a preponderating extent, Celtic, for the 'Pictish' element in (6), though very remarkable, does not affect the general character of the monuments. The ancient Northumbria, (2), was Teutonic in government and (with of course the admixture of the races) was not Teutonic in population, though its art was preponderatingly Celtic. That this region was effectually Christianized by Celtic missionaries from Lindisfarne has already been noticed, and it is highly significant that one of the most important of all monuments, the illuminated manuscript of the Gospels of Lindisfarne or of St. Cuthbert, shows that we might expect the same Celtic style in other monuments of the region; and this we accordingly find, mingled with other elements, in the early sculptured stones now under consideration. This may be fairly held to show great vitality in Celtic art, as well as an attractiveness for the Teutonic population. We are therefore justified in regarding the body of these monuments as so far Celtic that they cannot be excluded from any general survey of Celtic art. It is with the art of the stones, not their epigraphy, that we are here concerned; but the inscriptions cannot be entirely disregarded, for they often afford valuable evidence of the nature and provenance of the monuments. The questions that
have to be considered concern (1) the character, (2) the form, (3) the ornamentation of the stones.

1. Character.—The inscriptions show that the majority of these are sepulchral, and as such they represent a form of stone which has been in use since Neolithic times. At the single site of Clonmacnoise in Ireland, there are nearly two hundred of these tombslones, all inscribed, and many ornamented. This religious establishment beside the Shannon, a place of surpassing interest, was founded by St. Ciaran in the middle of the 6th century, and an Irish poem thus celebrates 'the peaceful clear-streamed place':

'Ciaran's city is Chotain-Mic-Neis,
Nobles of the children of Conn
Are under the staggy, brown-bowed cemetery;
A knot, or ogham, over each body,
And a fair, just, ogham name.'

Of ogham inscriptions on these stones only one has been known in modern times, and the rest are Roman minuscules. Among the names that can be read upon them is that of Suibhne, son of Maelmuain, of the latter part of the 9th century, celebrated as one of the most learned Churchmen of his time. Inscriptions, however, also show that many sculptured stones were not sepulchral but commemorative, or devised for other purposes. Thus at Kells in Co. Meath there is a cross with an inscription, 'I am Patrick and Columba,' which was erected centuries after the death of the saints whose names it celebrated. Most of the so-called 'High Crosses' of Ireland—elaborately sculptured stone monuments of the 10th century—are apparently of this commemorative character. In Northumbria we know from Simeon of Durham (Hist. Reg. § 36), that two sepulchral crosses stood at Hexham at the extremities of the grave of Bishop Acoa, who died in 740, but the Ruthwell Cross is shown by its inscription to have been a memorial of the sacrifice of Christ. We are told in the Life of Kentigern, by Joceline of Furness (late, but based on older materials), that the saint was accustomed to erect a 'triumphant standard of the cross' to commemorate any marked successes in conversion; and in Wessex we have evidence (Acta Sanctorum, Jul. 11, p. 692) that 'the sign of the Holy Cross' was set up in front of Christian assembly before the building of a church. Again, some crosses were terminal, that is, they defined a boundary by a landmark which religion made inviolable. An Irish pillar at Kilnasaggart, Co. Armagh, proclaims that the place which it marked was under the protection of St. Peter, while one of the interesting early stones at Whithorn in Galloway, Ninian's missionary centre, is inscribed 'The Place of St. Peter,' and was evidently a boundary mark.

2. Form.—In the matter of form, the earliest class of stone monuments are pillars unsualped by the tool, after the fashion of the pre-historic menhirs, and correspond to the rude stone building of the early Celtic Christians inherited from their pagan forefathers. These pillars have on them inscriptions in one or other of the languages and characters noted in the enumeration of the provinces, and sometimes incised crosses or sacred monograms. These last, though in themselves, from the aesthetic standpoint, negligible, become of importance as the origin of the form of the shaped free-standing crosses of later times. In Galloway there are upright pillar-stones with Latin inscriptions, and the Chi-Rho (५) monogram in different forms which are early, but probably not so early as the time of Ninian himself. This monogram appears within a circle, in which we may see a reminiscence of the wreath that enclosed on the original laborum, or standard of Constantine, described by Eusebius; and this wreath, or circle, becomes later the stone ring, which in the well-known 'Celtic' form of the monumental cross is seen connecting the arms. The Chi-Rho monogram changes into the form of a cross, with a shaft and a limb of a horizontal bar across the upright stem of the original Rho (५), and the arms of the cross, though originally enclosed within the circle, come afterwords to protrude beyond its circumference. This transformation can be seen in progress in a half-developed cross at Penmon Priory in Anglesey.

The untooled pillar-stone does not of course itself change directly into the free-standing cross, though the incised monogram it bears has influenced the development. The actual process was as follows: The pillar-stone corresponds, as we have seen, to the rude stone building. When this gives place to the construction with cut stone and cement, the former is similarly changed to a dressed monument, which may be recumbent, in the shape either of a flat slab, which was an Irish type as represented at Clonmacnoise, or of a 'hog-backed' stone, such as occurs chiefly in the north of England, and is more probably of Anglo-Saxon than of Celtic origin; or else may be upright, in the form of a shaft, like a modern tombstone. The flat recumbent Irish slabs are adorned with incised crosses, the upright slabs with crosses in relief. From these latter were developed the free-standing crosses by the following steps, that have been cross-headed within a circle is carved in relief on a slab, the upper part of this may be rounded off to follow the curve of the circle, as on a stone from Papil by Shetland, in the Edinburgh Museum of Antiquities. Next, the part of the slab below the head of the cross is cut in a little to correspond with the form of the comparatively slender shaft, and we obtain the shape known as the 'wheel cross'—a shape conformed to the design of Man, Wales, and Cornwall. The background may now shrink in still further towards the outline of the shaft, while, by a contrary process, the arms of the cross are allowed to protrude beyond the circle which has enclosed them, and the final step has been the \textit{four-hole} cross of Cornwall and the typical High Cross of Ireland, in which the outline of the stone corresponds with the outline of the Cross.

3. Ornamentation.—The subject of the ornamentation of the slabs and crosses cannot be discussed without reference to Celtic decorative art in general. The forms in which this expresses itself, apart from the carving on the stones, are practically confined to fine metal-work and the illumination of manuscripts, for in extant specimens of the Celtic Christian period, productions in other materials, such as wood, ivory, or textiles, are so rare as to be in the meantime negligible. On stone, metal, and the parchment of books, Celtic artistic feeling externalized itself in elaborate and varied ornamental patterns, the design and technical execution of which have excited the wonder of all subsequent ages, from the time of Gildas and later times in the 5th and 6th century. The same patterns and methods of application appear in all three forms of art, and some of the best authorities treat the stone carving as later in date than the early secular work in metal. It is a curious fact that certain details of the Irish High Crosses have no meaning in stone-work, while there is a technical reason for them in work in...
metal, and this would indicate the priority of the latter. Again, the similarity between richly decorated cross-slabs, of which Scotland is the home, and the embalmed pages of ornament in Celtic manuscripts, cannot fail to strike the observer. Hence the influence of art in artistic treatment which are in question here were first evolved on the pages of books or in metal, and then transferred to stone; and Mr. Romilly Allen (Celtic Art, p. 171) that the early work was prior alike to that on metal and on stone. At first sight this seems contrary to natural likelihood, for there is much elaborate and beautiful Celtic metal-work of pagan date and also a certain amount of decorative carving in stone, whereas manuscript writing and illumination came in as a totally new form of craftsmanship with the introduction of Christianity. Irish experts converted to the new faith could continue for Christian service their metal-work or stone-carving, while it would take them a long time to learn the new art of calligraphy and illumination. The first books used in Christian worship would be imported, and would only very gradually be supplanted by those of native production. Hence we may expect this in Ireland, as in Christian metal-work and stone-carving earlier than the same art applied to books.

Here, however, we are met by rather a curious fact. Christianity did not seem to inspire the Celtic artist, but rather to repress his activity, so that, as Romilly Allen states, 'before about A.D. 650 there was no distinctly Christian art existing in this country' (op. cit. p. 155). He accepts for this on the theory that the introduction into the British Isles of Christianity itself was much later than is generally supposed, and suggests A.D. 500 as the date of this. The negative evidence of the dearth of really early Christian monuments in this country did not seem to inspire the Celtic artist, but rather to repress his activity, so that, as Romilly Allen states, 'before about A.D. 650 there was no distinctly Christian art existing in this country' (op. cit. p. 155). He accepts for this on the theory that the introduction into the British Isles of Christianity itself was much later than is generally supposed, and suggests A.D. 500 as the date of this. peoples generally made the motive their own, and worked it out with extraordinary ingenuity and patience. A close comparison of the animal ornament in Irish manuscripts and metal-work and that on objects of Techtonic provenance indicates that Celtic zoomorphic forms are of Germanic origin. These forms are very common in the Celtic decoration of the pagan period, and do not occur in Ireland, so that a foreign origin is in accordance with likelihood.

(4) In the geometrical ornament, in all its forms save the spirals, the same derivation seems now accepted.

(a) 'Step' patterns occur in the cloisonné settings of Tenontic jewels. Moreover, these patterns in the manuscripts, such as the Book of Durrow, are shown in white lines on a dark ground, and the background has been laboriously filled in so as to leave the lines the colour of the light vellum. There may be in this somewhat artificial process an attempt to imitate the damascening in lines of silver on iron, common on buckles and similar objects found in Germanic graves. 'Key,' patterns, that is, patterns of a kind of which the Greek fret is typical, are abundant both on the sculptures and in the manuscripts, but are not much used on metal. They are unknown in pagan Celtic work, and their prevalence in that of Christian date is probably due to Continental influence. The Celtic artist, however, liked the ornamental effect of that he turned these patterns obliquely, so that their lines are sloping instead of vertical or horizontal.

(b) The interlacing, or knot-work is so characteristic of Celtic decoration in Christian times, and is developed therein to such an incredible variety of forms, that it has been popularly regarded as a Celtic speciality. The work in question does not, however, occur in the decoration of the pagan period (or only in one or two doubtful examples), and in the Christian it is so far from being a Celtic speciality that it is the most widely diffused of all the forms of geometric ornament in the early Christian and early medieval centuries. As Salin remarks, 'in the 7th and 8th centuries the general taste seems to have turned in this direction, for we find the work everywhere from Ireland, Scotland, and find it in Sweden, and the most diverse forms of art, in architecture, painting, the indubitable floors of the church in Anglo-Saxon and African in whatever European culture had found admittance (op. cit. p. 340).

The origin of the style is still a matter of controversy, and some derive it from basket-work, while others see it as the offspring of the plait or guilloche ornament, which was often noticed on the Roman mosaic pavements that were to be seen in all parts of the Empire. It is also a moot point whether the style of ornament, whatever its ultimate origin, was developed independently in different centres, or spread from one centre where its capabilities had at first been discerned. In any case the Christian Celtic peoples showed that they had a special affinity for the work, which they carried much further in artistic development than was the case elsewhere. It is especially abundant on the carved stones and in the manuscripts, as the motive is not so suitable for metal, especially when treated by the repoussé process.

(c) In the spirals we come to a form of ornament that is in a special sense Celtic, and is inherited by Christian Celtic art from that of the later pagan times. It is not classical save in ultimate derivation, but has a specifically British and Irish character. It is very finely developed among the northernmost representatives of the Tenontic stock in Scandinavia. On the pagan metal-work of late Celtic times in Britain, in Gaul, and in Ireland, it was treated with much artistic feeling for beauty of sweeping lines and for composition, and retains these same qualities when adopted for Christian use. Spiral ornament, however, as used in late pagan and early Christian art, is not quite a simple matter. On one side it is of immemorial antiquity. Spirals occur in Egyptian decorative art from about B.C. 3700 (if not much earlier), and were adopted from the Egyptians by the Mycenaean Greeks, where we find them in Crete and at Orchomenus, Myconos, and other places in the second millennium B.C. At least as early as this they appear in southern Europe, as at Batunir in Bosnia, and hence the motive journeyed up the valley of the Danube and down those of the Oder and Elbe to Scandinavia, where we find it developed in the Bronze Age to the utmost possible perfection. From Scandinavia it is thought that they have passed over North Britain to Ireland, where it appears carved on a great stone at the mouth of the pre-historic royal burial-place at Newgrange by the Boyne. In all these cases we have to deal with regular closely-coiled spirals, which look as if they were derived from the coiling of metal strips or wire, though there is evidence that they were first developed on stone. Now, in the later or flamboyant period, as different and more elaborate kind become the predominant ornamental form, and produce what are sometimes called 'trumpet' patterns. These are formed by double lines which are coiled round each other and then diverge. The motive there is a swelling of the mouth of a trumpet. These coils and expanded offsets are ingeniously connected together, so that they can be made in combination to fill with ornament any given space. It has been argued very forcibly by Dr. Arthur Evans that these later patterns, scrolls, which are sometimes called 'flanboyant,' are in fact derived, by a process of conventionalizing, from the 'honey-suckle' patterns or acanthus scrolls of Greek-Roman classical art. As used in Ireland and Scotland in early Christian times, spirals are partly closely coiled and partly flanboyant, and we may regard them as representing a combination of these classical derivatives with the far older and more severe forms of the Bronze Age spirals, the origin of which can be traced to Mycenaean Greece and to Egypt. The use of this primeval motive for the purposes of Christian decoration is a fact of much interest, to which much attention was called in a previous part of this article.

We are not concerned with archaeological questions of origin so much as with those of the aesthetic use made of these various motives, and of the distribution of this artistic activity in the life of the Celtic Church as a whole. It has been well said by Dr. Joseph Anderson:

*From whatever source or sources the different elements of the composite style of decoration of the Celtic Christian period may have been derived, the style itself belongs specially to the period of the early Celtic Church in Scotland, Ireland, and Wales, with distinctively characteristic developments in each of these separate areas, and a modified extension into the area of the early Saxon Church, especially in Northumbria. In each of these areas it produced a remarkable development of monumental sculpture; and whether we regard the whole series of their manuscripts, metal-work, and monuments collectively as one great comprehensive manifestation of Celtic ornamentation of the early Christian period, or take them separately as national developments of a common style, it is equally true that, considering the work and the time, it presents a manifestation of artistic creation altogether unique in Europe. (The Early Christian Monuments of Scotland, etc.)

The first point to notice about the artistic use of this decoration is the method of its distribution over the surface of its media; thought it is very finely developed among the northernmost representatives of the Tenontic stock in Scandinavia. On the pagan metal-work of late Celtic times in Britain, in Gaul, and in Ireland, it was treated with much artistic feeling for beauty of sweeping lines and for composition, and retains the finest examples of this are the pages devoted to ornament in the Irish manuscripts, and the large
cross-slabs which are best represented in Scotland.

II. MANUSCRIPTS.—Of the Irish manuscripts now extant, the earliest is probably the Book of Durrow, and the most elaborate is the Book of Kells, both in the Library of Trinity College, Dublin; while the finest in the Library of Mr. John Hope, of Durrow Church, Co. Carlow, comes next in age to the former, and the Gospels of Lindisfarne, in the British Museum, is only second in beauty to the latter. This book, moreover, possesses the unique element of having been written by St. Cuthbert himself. It is dark blue and it shows in this way a fixed point round which other examples not only in illumination but in metal-work and carving can be grouped. It was written within a few years of the date A.D. 700, and is written in style of the Book of Kells though not so early as the other two. Hence the Book of Durrow may be assigned to a date in the 7th, the Book of Kells to one in the 8th cent.; and it is satisfactory to know that Bernhard Salin endorses these dates as a result of his elaborate and detailed comparative study of the ornaments which occur in them. The decoration in these books is not more sumptuous and minute in its execution than it is clear and bold in its design, and is not to be traced to the influence of any foreign or inspired, such as the representations of the Evangelists in front of their Gospels, in which classical models have been, however distantly, followed, and taking only one example in the first book, in which each of the Evangelists occupies a page, the initial letter spreading from top to bottom of it, and the rest of the letters of the first word filling up a part of the folio. A border is designed to combine with the initial itself in forming the whole composition. In this page be a recto, the verso of the previous folio, which faces it as the book lies open, is treated as a sheet of pure ornament, the object being that the book shall present a sumptuous and beautiful appearance to a casual observer. The scheme of design for such a page is generally based upon the form of a cross, which appears as the centre and support of a composition variously-shaped panels filling the rest of the sheet. These panels, as has already been explained, are themselves filled in with patterns of the kinds above enumerated, while a border encloses the whole. As described by Mr. John Hope, the general arrangement of these show-pages of initials or pure ornament provides spaces or panels varying in shape. Those which decorate or serve as complementary fillings for the big initial letters are often of curved outlines, while those connected with the cross opposite are commonly rectangular, or at any rate symmetrical in contour. In the decorative enrichment of these different fields, patterns of various kinds are selected. 'Spirals' (and we may add zoomorphic patterns) were chiefly used to fill in the irregular sections of the body of the letter and its curvilinear enclosed spaces, where, owing to a certain freedom in fixing the centres and making values of varying size, they were easily adapted and in keeping with the flowing outline of the margin. Interventions were less easily adapted, but could be made to suit an irregular space, for instance, by forming a chain of knots of varying size and intricacy; whereas fret patterns were even more rarely used outside of the square or oblong panels, for which they were naturally suited. Thus the disposal of the various designs was ruled by taste, and the effect of the combination of contrasting elements in a graceful scheme ('An Enquiry, etc. p. 29).

We may connect this decision and self-control, in the matter of planning out and distributing enrichment, with the monastic discipline that prevailed in the Celtic monasteries, where this work had its home. The spirit of order and obedience to rule was as strong in the Celtic as in the Roman Church, and the Benedictine plan, and the Irish regulars were among the most learned, but among the best-living in Christendom. And if we discern their mental rectitude and respect for law in those well considered and justly balanced schemes, in the actual execution of the ornament we are brought into contact with their intensity of devotion to the allotted task, and the infinite patience to which they were schooled by the conclusion and monotony of their daily existence. The little cells where once they sat at work are places as holy to the pilgrim of art as to the religious devotee, and we can realize there that it is from this element of line-ness in line and hue, this ingenious scheming, this minute accuracy in measurement, must have humanized and brightened spirits that might otherwise have become numbed in ascetic rigour, while an education of conscience must certainly have resulted from their scrupulous logic and exactness in pattern making. Prof. Westwood and other experts have examined Irish manuscripts with a glass 'for hours together, without ever detecting a false line or an irregular interlacement.' In the interlaced work, Mr. Romilly Allen reports that 'every cord lapse under and over with unfailing regularity . . . and all the cords are joined up as so not to leave any loose ends. All the details of the spiral works are executed with the greatest care, and there is never a broken line or pseudo-spiral. In the zoomorphic designs there is a complete absence of the number of limbs and are complete in every respect down to the smallest detail' (Celtic Art, p. 256).

No more description can give any idea of the variety, minute, and unfailing consistency of this decoration, which can now be judged of in accessible photographic reproductions, such as those in Stanford Robinson's Celtic Illuminative Art. As regards colouring, which is a source of some surprise, because it is noteworthy that the Irish scribe produced the effect of sumptuous splendour on his enriched folios without any use of gold, on which the Continental miniaturist so largely depended. This is at first sight surprising, for Ireland produced a good deal of gold; and this was not only used in her native metal-work, but, it is believed, exported to other lands such as Scandinavia. The Trinity College, Dublin, possesses a magnificent and weighty gold fibula of native metal and workmanship, but the manuscripts in the library are destitute of gilding. The colours employed are not numerous, but yellow is largely used, and might have suggested the scribe the idea of gold. The reds, greens, blues, and purples are bright, clear, and harmoniously blended, but the best effect is gained by the free use of black, of which the scribe fully realized the artistic value. We may conclude that the subject of this essay is Dr. Anderson, in which he speaks of the 'profusion of spiral, linear, and zoomorphic patterns arranged in symmetric and rhythmic designs shown up by contrasts of colour, and all carried to an extent of elaboration so bewildering, and yet so charming,' the perfect balance and finish of its parts, that the more the result is studied, the deeper becomes the impression of its inimitable originality, grace, precision, and skill.

iii. METAL-WORK.—The fine Celtic metal-work was, as we learn from some special cases, also a monastic craft in the hands of ecclesiastics. It was applied to the enhancement of the value of the manuscripts either at once in the form of covers, such as that adorned by Billfrith at Lindisfarne, or later on in that of the shrine or box, called in Ireland cennach, made to contain and preserve the precious volume (p. 358). These cennachs are peculiar to Ireland. Shrines of a similar kind, also of a later date than the objects they were to protect, were made for the early hand-bells connected with the names of famous saints, which are in themselves objects of high artistic value. They may in some cases really have belonged to the saints with whom they are traditionally associated.
Their simplicity and even rudeness agree with an early date. The most primitive are four-sided, and made of plates of copper riveted together. In the later ones are of the same shape but of cast bronze, and these are sometimes ornamented. There are early bells of the kind in Scotland and Wales as well as in Ireland. The Scottish of two bell-shrines is peculiar to the rest being Irish. Celtic metal-work of early Christian date is perhaps most largely represented by the enriched penannular or annular brooches, of which the Tara brooch in Ireland and the Hunterston brooch in Scotland are the best known. In this article this is concerned rather with things ecclesiastical, it may be sufficient to refer to four fine examples in this class, the Ardagh Chalice and the Cross of Cong in Ireland, and the Monymusk reliquary and crozier of St. Fillan in Scotland. They are all works of great interest either from the historical or the artistic side, and the first named is one of the most beautiful and elaborate examples of fine metal-work extant anywhere in the world.

The Monymusk reliquary is described by Anderson as 'a small wooden box' (it is about four inches long), hollowed out of the solid, and plated with plates of pale bronze and with plates of silver. In fact this is the initial form of interlacing zoïomorphic decoration, united with coloured designs of diverging spirals and trumpet scrolls, which are the principal varieties of the decorative art of the Celtic manuscripts and memorial stones of the early Christian time. It is jewelled and enamelled, and its engraved and chased designs are characterized by such excellence of execution that it must be early in date (Scotland in Early Christian Times, p. 243). The special historical interest connected with the reliquary resides in the fact that there is some reason to believe it a relic of St. Columba, and a vexillum, or battle charm, which, like the Ark in ancient Israel, was borne out to battle with the Scottish host. It is preserved at Monymusk House, Aberdeenshire.

The crozier of St. Fillan is an example of a specially Celtic form of ecclesiastical object. It is really a shrine of fine metal-work, made in the shape of, and enclosing, the head of the pastoral staff of wood traditionally belonging to an early saint. The form of the crozier is exclusively Celtic, and differs from the form that such objects take on the Continent. It is the crozier of St. Fillan that authentic history shows it was employed as a relic on which oaths of a peculiarly solemn kind could be taken, while it is surmised that it was borne as a vexillum into battle at Bannockburn. It is preserved in a damaged condition in the Museum of Antiquities at Edinburgh.

The Cross of Cong, at Dublin, is the one surviving example of a processional cross of the early Celtic Church. It measures 2 ft. 8 in. in height by 1 ft. 2½ in. across the arms, and is 1½ in. thick. It is constructed of oak, and was supposed to contain at its centre, under a boss of rock crystal, a portion of the true cross. On the exterior it is all covered with metal plates of copper which are adorned with silver mouldings and plaques, with panels of fine gold work and gilded bronze, and with bosses of coloured enamel. The panels are ornamented with gold filigree work and zoïomorphic patterns, and the effect of the whole is rich and artistically pleasing. It can be dated in the first half of the 12th century, and is a striking proof of the long survival of fine artistic taste in character and ornamentation, as well as the fragility and care by which the later objects, such as the emaciated and the bell-shrines, though the style of the enrichment remains the same, are comparatively coarse in execution, but the Cross of Cong has fine technical qualities.

Lastly, in the Ardagh Chalice we come back to the period of the most perfect design and workmanship, of about the 8th century, and to a masterpiece of unique perfection. Its body is a vessel of large proportions, with a broad neck and a globular bowl on a low stem, and will hold as much as three pints of liquid. In its construction and ornament are employed no fewer than 354 distinct pieces, and the materials are of various kinds, glass, amber, and mica; and the ornamental patterns include interlaced-work, step-patterns, key-patterns, spirals, zoïomorphic, and scrolls, arranged in panels after the fashion represented in the manuscripts, and distributed with perfect taste. What is chiefly remarkable about the chalice is not the elaboration or variety of its detail, but the almost classic nobility of its general design. As a rule, in all barbaric enrichment, whether Celtic or Teutonic in origin, the tendency is for the ornament to cover practically the whole surface of the object under treatment, while it is only very rarely that we find that contrast between plain and richly adorned passages on which so much of the effect of classical decoration depends. The chalice, like some other objects of the pagan period in the collection of the Royal Irish Academy, has an imposing largeness of style, due to the simple contours of the whole base, which contrast with the bands and medallions filled in with panels of delicate ornament and studded with bosses of variegated enamel. Not the least beautiful part is the flat plate on the under side of the base, which would be visible when the chalice was raised to the lips of a communicant.

Conclusion.—It has been seen that in the manuscripts all the kinds of ornament already enumerated are used freely in conjunction, while in the metal-work zoïmorphs are conspicuous, and interlacing patterns are less used than the others. Turning now to the sculptured stones, we find interlacing patterns most prominent of all, so that they sometimes form the sole decoration of a monument. As the forms of the slabs or crosses differ in the various Celtic or Cleticized districts, so do the kinds of ornament with which they are adorned. Decoration in tastefully distributed panels is everywhere the rule, and in Kells churchyard and Ireland, there is an unfinished cross, on which the panels are marked out and carefully squared, though there is no carving on them. The panels, however, are differently filled according to the kind of style. In the case of St. Fillan's authentic history shows that it was employed as a relic on which oaths of a peculiarly solemn kind could be taken, while it is surmised that it was borne as a vexillum into battle at Bannockburn. It is preserved in a damaged condition in the Museum of Antiquities, Edinburgh.

It is preserved in a damaged condition in the Museum of Antiquities, Edinburgh.
elaborate cross-slabs of Scotland may have helped himself by appropriating compositions and motives from the manuscripts, yet he could never have carried out the work with such perfect execution had not his whole nature been brought into action with such a purity of purpose as is at the root of the expression on the aesthetic side of the fervour and intensity of a wonderful religious life, without which the Christian Church would have been greatly impoverished and inferior art is large, and is a democratic art practiced alike by the unlettered matter and by the most learned scholars in Christendom.

G. BALDWIN BROWN.

ART (Christian) — Introduction. — The limits of this article pursue the treatment of the subject only in one or two selected aspects. There can be no attempt to enumerate the various forms of Christian art, still less to trace out their history. For several of these, provision is made elsewhere in the noblest and most important form of Christian art, architecture, furnishes the subject of a distinct article. Illuminated manuscripts are dealt with in next article. For an account of minor forms of Christian art, such as ivories, or ecclesiastical metal-work, information will be found in Dictionaries of Christian Antiquities, or in compendia like Dom Leclercq’s recent Manuel d’Archéologie Chrétienne.

(a) Scope. — The scope of the present article must necessarily be a narrow one, and the main object of it is to take the most characteristic forms of Christian art as we meet with them in successive ages, and consider how far each of them expressed the religious ideal. In connection with these historical phases we shall keep in view the two main questions: (1) that of the relation of art and the element of beauty generally to the religious life, and (2) the relation of any such art to the religious ideal, at large, and of sections of it, towards art and beauty.

(b) Definition. — It is necessary to understand at the outset what is meant by Art. 2 To the majority of people a work of art means a picture or a piece of sculpture, and such works are generally regarded from the points of view of their resemblance to nature, and of the intrinsic character of the actual objects, as being either beautiful or otherwise. But when we come to embrace the element of beauty wherever this appears in the works of man, the tasteful embellishment of buildings and of objects of utility is just as much an art as the painting of a picture, and such decoration can be in the highest degree artistic even though the representation of nature plays little or no part in it. Where the representation of nature does play a part in the effect of a piece, this may be a very beautiful and precious work of art, though the aspect of nature it presents is comparatively poor, or in fact, like some modern religious pictures of the 'Doré' type, may have for its theme a subject of the highest import. In this article the subject and the religious intention of a work are not reckoned as in themselves competent to give it its rank, and only those works are regarded as illustrating the subject of Christian art that express Christian ideas in an adequate and beautiful artistic form.

(c) Misconceptions concerning Christian art. — These considerations may help us to get rid at the outset of certain popular misconceptions, such as the notions that in early Christian days pagan art was deeply tainted with impurity; that the Christians were in constant conflict with pagan art; that the earliest manifestations of Christian art assumed a symbolic or didactic character as a sort of apology or disguise. We must remember that there was an immense amount of art in the pagan world of a decorative kind that was beautiful, but that did not obtrude upon notice any special representations of mythological persons. In cases where these personages were actually in evidence, it was as a rule the way they were displayed that would necessarily offend the eye. As a fact, the works of the Greek and Roman chisel and brush are so far from being tainted with impurity that it would be difficult to pick out from existing galleries of art that shows a taint of paganism. We might mention some of the most notable instances and show how the classical art with its false beauty, was worshipped as well as painted, and how the Romans tacked onto their classical works of art pagan themes, such as vases and statues. One of the most prominent themes, a man, nude or garbed, sat or stood, was not only as a class a child’s picture book. A false impression arose when the Christian Fathers applied somewhat unceremonially the OT category of ‘idol’ to the classical gods and goddesses, and were prompt to note the scandalous appearances these made in pagan literature. As the early Greek philosopher complained, the poets made the gods commit all the disgraceful acts repudiated among men, but the artists steadily refused to lend themselves to such degradation of the religious ideal. In sculpture and painting the behaviour of these mythological beings is in almost every case exemplary. In their persons and conversation the artists exhibited nothing but what is ethically noble. Hence the spirit of pagan art, liberally interpreted, was not anti-Christian; and its forms might be adapted to Christian purposes without any marked incongruity.

Again, the existence of a very large number of works of art, often of an elaborate kind, dating from all the Christian centuries, is enough to show that there has been no general opposition to art in the
minds of Christians. There are, it is true, statements in the Fathers which have been interpreted as implying a condemnation of all forms of art. The statements are, however, primarily concerned with the making, embellishing, and setting forth of images connected with a particular Christian doctrine or religion. This sort of work was naturally forbidden to the Christian, and Tertullian goes so far as to cavil at the making of the similitude of any natural object, on the plea that it might conceivably become an idol. On the other hand, he pointed out (de Idolatria, ch. vii.), that the Christian artificer could properly exercise his craft on work which had no connexion with the pagan religion; and the 11th Canon of St. Hippolytus allows the craftsman to supply ordinary social demands for artistic work. Hence there is no reason to doubt that Christian houses were as pleasingly adorned, to the measure of the means and the taste of their owners, as pagan ones; but the art thus applied was of a light and decorative kind, not depending on formal pictures or statues, which probably would not make their appearances at all.

1. Early Times. — 1. Before Constantine. The earliest known Christian art are applied not to houses but to burial-places, wherein the classical fashion is followed of giving them the same sort of adornment as the abodes of the living. The earliest known of these are decorated in much the same way as the contemporary tombs of the personifications such as the well-known ones on the Via Latina. The style is bright and cheerful. Pure landscapes are not unknown. Wreaths of fruit and flowers play a considerable part, and there occur also figure motives of a classical kind, in the form of winged genii, often engaged in vintage operations, personifications of the seasons, Capids and Psyches, and the like, wherein the innocent classical convention of the nude is not wholly repudiated. To these purely decorative shapes there were added from the first certain others of a religious significance. The simplest of these is the Orant, a female figure with arms raised in an attitude of adoration. In the case of more assertive personages, as the Canon of the NT was at the time only in process of formation, the representations are drawn mostly from the OT. Jonah is the favourite. The artist needs only the name, the symbol of Mt 12\(^\text{nd}\), as the type of Christ. Moses striking the rock, Noah, Daniel, the youths in the fiery furnace, and Susanna, also occur, and the choice seems determined by lists of typical worthies of the Old Testament. In this respect, Clement of Rome to the Corinthians, or in liturgical documents such as the Compendiatio Anima quando Infraem est in Extremis.

The figure of Christ appears early, but in a disguised form as the Good Shepherd, or as Orpheus who exercised a controlling charm over all living creatures. Occasionally he is presented in his own person, and the artist for preference chooses those scenes in which he appears as worker of wonders. The ‘Raising of Lazarus’ is specially favoured. Save in one exceptional scene of the ‘mocking,’ the suffering Christ does not appear, and still less the Christ crucified. Such are the characteristic subjects in the 1st and 2nd centuries, while occasionally in the 3rd, and more often in the 3rd, we meet with representations of a more or less doctrinal kind, such as the faithful round the table of the Lord, in which is placed the mystic fish, the symbol of Christ. It is remarkable, however, that historical representations from the actual life of the Church, especially scenes of persecution and martyrdom, are wholly absent.

A little later in the 6th century the present point of view to note: (1) that it is in the main decorative, the artist being more concerned to cover bare spaces and to dispose symmetrically his representations than to inculcate by them any doctrinal lesson; and (2) that classical influence remains strong, even when we have passed from the earliest period of almost exact correspondence between pagan and Christian decorative forms. Art in the East has been shown how in the OT figures are modelled on pagan types, while the earliest and best plastic representations of Christ as the Good Shepherd not only reproduce the familiar classical motive, but shed a gentle and benevolent light over them, so that the mosaicist is often not unworthy of a fairly good period of classical art. Moreover, when Christ appears in his own person, he is represented as youthful and beardless, with something of the attractive comeliness of an Apollo. It is impossible in face of these facts to believe that there was any general sympathy among the early Christians with the extreme view expressed by Tertullian when he objected to any representation of figures or natural objects; or that there was any reason why Christians should turn with repugnance from the classical art that was all about them.

The OT and NT scenes that begin to appear in the catacomb pictures of the 3rd cent. are repeated on the carved sarcophagi of the 4th and 5th. On some of these we find the same idyllic scenes of genii vintaging, the vine being, of course, in this case the True Vine, and the same semi-classic decorative motifs tend to become more obvious in the earliest frescoes; but the OT and NT scenes form the staple subjects of sarcophagus art, and Jonah, Abraham, Moses, and Daniel are seen side by side with Christ regularly, bearing the benefit of touching with a magic wand of power the water-pots of Cana. If the crowning scenes of His life are touched at all, there is no attempt to deal with the deeper Christian mysteries of suffering and sacrifice. The march to Calvary becomes a triumphal procession, with the Cross borne forward as a banner; the crowning with thorns is envisaged as a royal honour.

2. After Constantine. — The next epoch of Christian art, after the time of Constantine, introduces us into quite a different atmosphere. Christianity has become the religion of the State, and confronts the world as a regularly constituted power. The artist is no longer held to the strictures of the NT, but can assert, and there is demanded from him a certain amplitude and majesty in his work.

(a) Mosaic Art. — The characteristic form of artistic expression for this period is the monumental mosaic. In the earlier period it was confined almost exclusively to churches: later, the subjects are no longer confined to the narrow limits of a burial chamber or the side of a sarcophagus. He has to cover with decoration the vast interior wall surfaces of the great basilican churches and the stately though much smaller baptisteries. His style changes with his task. If the bright unpretending catacomb pictures seem to have a literary counterpart in the personal expression of the lyric song, the severe and imposing mosaics possess a certain epic grandeur. The subjects of the mosaics are not, as a rule, historical or directly doctrinal, and there is the same reticence in the avoidance of those Passion scenes in the life of Christ in which he is represented as suffering of less illustrious influence. The aim of the mosaic artist is to present in majestic and simple forms the heroes of Christianity. It is not the adventures of the saints that attract him so much as their spiritual presence as they stand forth triumphant after suffering—lords in heaven and earth. It is the Presence of Christ, rather than his mortal deeds and sufferings, that he strives to bring before the spectator. The early Christian mosaics of the 4th and 5th cent. at Rome and Ravenna are as great in their illustration of the principles of design as in
their technical excellence and their artistic beauty. They adopt in the main the principle of the world-

famous frieze of the Parthenon at Athens, and offer an ideal presentation of actual scenes of which

the building they adorn was the theatre. One of the earliest and quite the finest of the mosaic

that in St. Petronian at Rome, is in respect of its

main scheme canonical. In the apse of that church

the stately form of Christ enthroned as teacher

over the central altar is often quoted as the western

and on both sides of Him sit the twelve Apostles.

The arrangement transfers to the heavenly sphere

the appearance of the apse of the church at service

time, when the presiding official occupied the throne

in the centre behind the altar, with the attendant

priests on the stone bench round the curve of the

apse on either side of him. Christ, behind whom

in the mosaic rises a jewelled cross on a hill in

the midst of a city, Jerusalem, is the invisible ideal

president of the daily assembly; the spirit of the

Apostles is ready to inspire the clergy. The work,

which may date within the 4th cent., is notable for

the classical feeling in the characterization of the

beauties, resembling in some respects the style of

Raphael's cartoons. Equally dignified, equally

well chosen, is the scheme for the decoration of the

Baptistery at Ravenna of about A.D. 450. Here

in the centre of the dome is a noble picture of the

baptism of the Baptist, and on each side of the

altar, at whose feet the gauzit but imposing forms of

the twelve Apostles are preparing to lay down their

crowns. More extensive is the display in St. Apollinare Nuovo at Ravenna, where the wor-

shipper entering sees represented in mosaic, on the

side walls of the nave above the arcades, on the

one side a portion of Ravenna itself, and on the

other the suburb Chalisa, the port of the Imperial

departures, with the figures of the Apostles signa-

te, male on the right, female on the left, who are

represented advancing towards the altar end of the

church, bearing crowns which they will lay at the

feet of an enthroned Christ and an enthroned Mary

with the Child, at the end of the nave. Here again

is idealized the bodily movement of the actual

worshippers from the door of the church to its

altar, or from their city homes to the heavenly

mansions prepared for them afar, as well as the

spiral ascent upwards towards it was urging the City of

the dead in celestial preoccupations. Above these processions,

together the clerestory windows, stand single

figures of white-robed saints, which carry out

beautifully the sentiment of the Baptistery mosaic.

The idea before noticed of the monumental presenta-

tion of heroic forms of epic simplicity and grand-

eur. Highest of all comes on each side a series of

historical pictures in mosaic from the life of Christ

—the first example of such representations that

Christian art has to show. On the one side there

are scenes from the miracles and discourses, very

simply but effectively designed, and showing the

protagonist of the youthful Apollo-like type met

with in catacomb art and on the sarcophagi.

On the other side is what would be called in later

medieval times a Passion series, but the actual

scenes of the final tragedy are as a fact selected on

careful Christian principles, with a truly classical

avoidance of anything painful, or of any situation

in which the Lord would be shown as suffering

humiliation.

Thus Christ is no scourging, no crowning with

thorns, no crucifixion, no taking down from the

cross or burial, and the scene in which Christ, a

heroic figure, is making a sort of triumphal pro-
gress towards Calvary, is followed immediately by

the last supper and the institution of the Eucharist.

In the pictures of this second series Christ is represented

as older and is bearded, and the marked difference in

His personality in the two closely related sets of

pictures is enough to show that there can have

been no authentic tradition of His actual physi-

ognomy.

(6) Historical or symbolic representation.—From

this same period of the 5th and 6th centuries we can

start the beginning of the most conspicuous type of

art—the historical or symbolic representation, of an

defying and often a didactic character. There is

a constant saying that the art of Quintilian, which

occurs in many early Christian writings, was to

have the effect that pictures are the books of those who

cannot read. To the ecclesiastical mind this gave

a religious justification for the pictorial embellish-

ment of the walls of public buildings, which had

previously been a matter of tradition inherited

from classical practice. In the middle of the 5th

century, we find St. Nilus laying down the principle

that the inner walls of a church should be covered

with scenes from the Old and New Testaments

from the hand of a first-rate artist, in order that

those who are unable to read may be reminded of

the Christian virtues of those who have served

them and can be inspired to emulate them. In the 6th

century Gregory the Great recommended the use of

paintings in churches in order that the illiterate might

behold upon the walls what they were not able to read

in books. On this principle of decoration of the

churches, the plan remained in use throughout the

medieval period. At the altar end of the church was

displayed the figure of Christ glorified, as teacher or judge, and the faithful were to be inspired by the sight to

strive for the joys of Paradise. Along the side walls were exposed historical pictures from OT or NT or from

the lives of saints, in which instruction as well as edification was provided for the un-

lettered. Subject would be chosen, and the figures, actions, and details are settled not by the artist himself, but by the ecclesi-

astical authorities. Gregory of Tours gives us a charming picture of the wife of a bishop of Cler-

mont in the 5th cent., sitting with her Bible in her

lap in the church, and directing the operations of a company of painters who are frescoing the walls.

The western or entrance wall was not at first in-
cluded in the scheme, but from about the 8th cent.

onward, a display complementary to that of the glories of Paradise over the altar.

This was the Last Judgment, often with the connected scenes of the separation and after-

world, the disposition of the just and of the unjust.

In the later medieval period the Inferno

was made especially prominent, with the avowed
intentions of affecting the souls of the worshippers

by salutary terror as well as by hope. Of the

subject of Christ in glory the finest examples by

far are in the early Christian mosaics, but the his-

torical scenes were not displayed in adequate

artistic form till the development of the Italian

schools of mural painting in the 15th century.

The most impressive rendering of the scene of the Last

Judgment is in the 14th cent. fresco of the subject

in the Campo Santo at Pisa, which used to be

ascribed erroneously to Orcagna. The treatment

there is truly dramatic and moving, but is spoilt by

a fine reticence. Later representations of the

theme, such as the famous ones by Luca Signor-

elli at Orvieto, offend through their over-insistence

on the terror of the scene, and especially on the

physical torments inflicted by the demons on the lost

spirits who fall into their clutches. The ecclesiastical authorities may have thought it well
to daunt the sinner and to harry the feelings

of the impressionable, but there is nothing less than deplorable. Both in these

scenes, and in the representation which became

very popular of Christ suspended in suffering on
the Cross, the painters of the 12th and 13th centuries, especially in Italy, offend against all laws of good taste and of beauty, and prostitute art to the service of a gloomy religiosity.

From these false ideals representative art in the West was, through certain religious revivals, embodied in Italy in the person of St. Francis of Assisi, and in Germany in the mystics of the school of Cologne. In both cases pictorial art showed itself responsive to the religious impulse, and the art of the 13th and 14th centuries, as we see in the canon of Giotto of Florence and Meister Wilhelm of Cologne have a distinct basis in the changed religious thought of the times. Before discussing the effect of these revivals of the 13th and 14th centuries, on Christian art and on the life of the Church, we must turn back more nearly to early Christian times.

II. MIDDLE AGES.—The medieval period had no sooner opened than the controversy on images (A.D. 726-842) divided the East and the West.

1. Controversy between East and West.—The opposition to all graphic and plastic representations of sacred personages on walls, panels, or portable objects, which had been partly identified themselves, was partly, no doubt, inspired by Islámite examples, and was carried to such fanatical lengths as to involve the destruction of numberless treasures of early Byzantine art. The controversy was in connection with an opposition, according to which representations in colour or relief of Christ, the Virgin, angels, and saints were once more permitted on walls and on portable objects, though religious sculpture of a monumental kind was never afterwards flourishing in the Byzantine empire. For these representations, schemes were drawn up, and these were crystallized into books of artistic recipes, which have governed the practice of Christian art in the lands of the Greek Church all through their later history. The best known of these handbooks is that brought by the French archæologist, Didron, from the cloisters of Mount Athos, and published by him in 1843. It is known as the 'Monuments or Book of Mount Athos', and gives an impression of that fixity, not to say lifelessness, which characterizes representative religious art in Eastern Christendom, in such striking contrast to the variety of the forms of Christian art in the West.

It would be a mistake, however, to suppose that the Byzantine iconoclasts were opposed to the use of art in connexion with religion. What they really contended for was that divine reverence be directed to sacred efficiencies, which became in a sense idols. As Woltmann has remarked, 'images had been introduced into churches first for ornament, teaching, and edification; but image-worship soon crept in unawares. The reverence for the Divine and spiritual being was transferred to the image, which was honoured with incense and obeisance' ('Hist. of Painting', p. 185). Now, this reverence or idolatry was a further extension, to the limit of an abuse, of the didactic idea, which the Church as a whole began in the 5th and 6th centuries to attach to representative art. Some of the Byzantine emperors most imitable to image-worship, such as Constantin V., and Theophilus, embellished the churches with decorative art in sumptuous materials, and in the simple conventional forms of the earlier catacomb period. In the West, moreover, it must not be supposed that the use of subject pictures with a view to edification was the only fact of importance concerning Christian art in the early medieval epoch. No doubt the Fathers and bishops, who presided over the cloisters as the books of the litlariate, thought that they could accomplish moralizing art and in setting it to ecclesiastical service. They believed that they had avoided by these means the danger latent in art in respect to those who might be tempted by the last of the eyes, and they were at the same time apparently unconscious of the danger on the other side of reverence for these sacred efficiencies passing into the idolatry of which they carefully guarded the professors of art. Theophilus, such the Controversy of religious art, in the epoch. The Fathers and bishops, in the view they thus adopted about works of art, were not regarding the matter from an aesthetic, but rather from a doctrinal standpoint; but we are not to imagine that the modern reader, who do not depend for their artistic value on anything that they represent, and also expressions of medieval opinion that are more satisfying to those aesthetically minded.

2. Theophilus on Art.—Among the most interesting documents that have come down to us from the Middle Ages is a certain technical treatise on artistic processes, written about the year A.D. 1100, by a German Benedictine monk whose name in religion was Theophilus. The author, a practical expert in fine metal-work and other artistic processes and materials, has prefixed to the three books into which his treatise, called Schedula Diversarum Artium, is divided, an emendation and a dissertation on courses in large on the whole question of art and the cultivation of the beautiful as a part of the religious life. The view Theophilus advances is almost startling to the modern reader, a very pleasing impression of monastic culture, which he will probably have been taught to believe was slavishly narrow and ascetic.

Theophilus bases his apologia for the practice of the arts on the part of those vowed to the religious life on a view of human nature that can be thus paraphrased:

Man was made in the image of God, that is, as Theophilus implies, in the similitude of the Divine Artist who fashioned the world, and he is bound to make his resemblance to the Divine as real and effective as he can. It is true that by the machinations of the evil one this Divine image in man was obscured at the Fall, but it was not so far effaced that man cannot through care and thought win back something of the ancient heritage of art and of learning. 'Therefore,' he writes, 'the pious devotion of the faithful should not neglect the knowledge which the prudent foresight of our predecessors has handed down to us, but should embrace it as an inheritance from the Almighty.' As such it is not the private property of any one man, but it is preserved and kept from God, which the skilled person holds for the benefit of his neighbours. For which reason, Theophilus insists, he is bound to offer to all who desire to learn, as freely as he himself freely received it, the gift of the Divine grace—this gift being the knowledge of the technical processes, of which he then goes on to unfold. In another place he discourses in the same strain, and urges the artist to believe that the spirit of God has filled and divided these processes into the 'gifts of the Holy Ghost.' He then explains that these seven gifts embrace the special faculties of skill and knowledge which are requisite for the practice of the arts. The spirit of Wisdom teaches that God is the creator of all things, and without Him there is nothing—this is the primal lesson. Next, the spirit of Understanding gives the mind the capacity for discerning the right order, measure, and distribution of parts which should be applied to the work in hand. The spirit of Counsel teaches us not to hide the talent which has been given us by God, but to display it openly, with all humility, in word and act before those who are desirous to learn. Through the spirit of Might the craftsman will throw off all the terror of idleness, and will begin his work with vigour and carry it through with all his energy and power to the end. The spirit of Knowledge, which has been granted to him as a gift, will bestow upon his abundant store, over which he presides, and which he must procure with all boldness before his fellows. By the spirit of Piety he will rightly judge upon what object, for whom, and when, and how much, and in what manner he shall spend his labour, and will have regard against the interest of God and greed by such a scrupulous moderation in estimating the value of what has been done. Finally, as the great lesson of the whole, the spirit of the Fear of the Lord will remind him that he can do nothing of himself, that all he possesses or desires comes from God, and that he must ascribe all the gifts of the Divine mercy all that he knows, or is, or hopes to be.

3. Art in the monasteries.—The existence of artistic practice as an institution is a matter which may in itself be compared to the ties which belong to a side of life from which the ascetic refuse would turn rigidly away. We may, how-
ever, repeat here what was intimated in connexion with the fact, to some almost equally surprising, that artistic practice existed among the earliest Christians. Art, regarded as an element of beauty at first, and itself naturally to the work of man, in the touching life at every point, the modern cannot really understand, because with us this element of beauty is something artificial and extra, for which it has a special effort. This was not the case in old time, when the Christian needed a special effort, not to procure, but to exclude this element. The earliest Christians decorated their tombs, but not in such an artificial way, so as to have been a forced act, for which, as we have already seen, there was no real reason. The artistic tradition, thus maintained from the first by the Church at large, was in Eastern Christendom never broken, and the Greek Church, while stereotyping the forms of its expression, has held it continuously in honour. In the West the Teutonic inroads broke up the fabric of antique culture; but though the classical tradition in art was thus in a measure destroyed, the mediaeval civilization of the West, partly classical and partly barbaric, derived its art from both these sources. In the West, churches, abbeys, and nunneries were formed, alike in the Celtic and the once-Romanized parts of the West, the arts quietly made their appearance within the hallowed enclosures. A monastery, he must be remembered, was in theory self-supporting, and all sorts of operations in handiwork and in the mechanical crafts had to be carried on by the inmates, whose bodily and mental health was greatly improved by the exercise. Of the Celtic monastery at Bonn, near Cherbourg, Bede tells us that the two thousand inmates all lived by the labour of their hands. The rule of St. Benedict, in the 6th cent., provided that when artisans entered the order they were to be allowed to continue working at their crafts, though they were not to take any personal pride in their productions. The quiet and order of a monastery must have been congenial to the artist, and Ordericus Vitalis tells us that, when the founder of a certain monastery in the 12th cent. invited all who joined to continue the practice of the arts to which they were accustomed, there gathered about him freely craftsmen both in wood and iron, carvers and goldsmiths, painters and illuminators. Here was full opportunity in all manner of cunning work (HE vili. 27).

The mere practice of the various crafts, artistic as well as utilitarian, in the medieval convent is, however, one thing, and the religious enthusiasm with which Theophilus seems to regard artistic pursuits is quite another. It is this that constitutes for us the interest of the Schedula. The religion of the writer was evidently sincere and fervent, and it seems to him to find a natural, even a Divinely ordained, outcome in art. Though Ruskin and other eloquent modern writers have descended on the praises of art from the moral and religious standpoint, there is a breadth and dignity about the whole of this treatise which modern taste or sentiment puts him above them all. There is, indeed, no more effectual apology for the cultivation of art than this simple reminder that the love of what is beautiful is a part of human nature, and that no man is higher ground, the more august assertion that the creation of what is beautiful is part of the law of the universe at large.

"Look around you," we can hear Theophilus saying in effect to his listeners, "as you see the rainbow, the sun, the moon, the stars, the beauty of an artist, of the Supreme Artist who has made all things beautiful in His own image and likeness. You have a portion of His own nature and has formed you an artist, and you are bound in service to Him to exercise your creative power and make the most of your affinity with what is beautiful. In the name of religion take up the brush and tongue and mallet, and use them not for profit, but to the glory of God that you shall shine like the very fields of Paradise." These last words are used by Theophilus in a passage in which he foreshadows the coming of art out of its pastoral concealment in the microcosm of an Abbey church, which is an image of the macrocosm of the universe. This art is to be so decorated on walls and ceilings as to present the appearance of the Heavenly Garden. It will seem to be blooming with all kinds of flowers, and furnished with all the trees of the garden of Eden. In celestial fields where the blessed ones receive their crowns, the ceiling will be painted like an embroidered tent. The sun will resemble a garden, the windows send in a flood of variously coloured light. After the decoration of the fabric will come the provision of fittings and the furnishings for the service of the sanctuary, the construction and varied embellishment of which he describes in the technical chapters in the body of his treatise. There, in the workshop and among the apparatus and tools which the monkish craftsman has to build and fashion for himself, we are invited to see the gold and silver and bronze, the coloured earths, the glass stained with metallic oxides, all taking shape in dainty and beautiful forms, till the mere matter, the raw material, has been transformed through its consecration, in a shape of beauty, to the service of the Most High. For with Theophilus the preoccupation always is with the technical manipulation of the material so as to compass an effect of beauty. From end to end of his treatise there is comparatively little about art as representative. The art he contemplates is decorative. It is not the kind of art that corresponds to the more popular allegories of the theologians, to whom the lessons to be drawn from the presentation of holy persons and scenes make up the chief value of art. He is, of course, aware that the beautiful forms he describes, under the hammer or by the glass-kiln represent something in nature, or have, at any rate, symbolic meaning, but he does not consider these considerations trouble him little, and, after describing some technical process, he often tells the worker to make with what he will.

The representative element in medieval art must not, however, be ignored. There were the deeply stained glass windows of his church with the gay and colour of a garden, but he has in his mind the regular scheme of figure design for a church interior. On the canopies will be depicted, beneath the paintings of the Passion of the Lord, touching the heart of the worshipper, the sufferings of the Godhead, each work to be depicted. If the joys of heaven are displayed at one end of the building and at the other the torments of the regions of theLost, the spectator with the sufferings of the Lord will take hope from the signs of the Good actions, and be terrified at the remembrance of his sins.

Though Theophilus troubles himself little about symbolism, there was no doubt a symbolic intention in many of the decorative forms employed in medi eval art. On this subject a word must be said, because it is one that is often misunderstood. There is no mystery about Christian symbolism, because it is almost entirely based upon Scripture. We are familiar in TOI with the stock figures in which animals and plants stand for personages and qualities, and know that there is little consistency in the use of these. Thus the lion is at times a type of Christ, as the 'lion of the tribe of Judah'; but at other times he may be used to represent, who, 'as a roaring lion, walketh about, seeking whom he may devour.' In plastic or graphic art the lion may conceivably stand either for the ideal of good or the ideal of evil; but there is commonly, too, a third alternative, that the creature is purely ornamental, and may have been copied as a mere decorative motive from some indifferent source, such as an Oriental figured stuff. The whole subject of SYMBOLISM is dealt with in another article, and it is mentioned here only for the sake of warning the reader against imagining that it played any but a secondary part in medieval design. The fact is that in every age the artist, as artist, has little care for the technical import and the import and it is because Theophilus is so true an artist that he troubles his reader but little with this subject. The artist's instinct is to make his work tell out at once what is in it, and he does not desire to give the spectator the trouble of spelling out obscure allusions. The artist, however, as we have seen, often worked under the orders of theologians or of those who took a religious and literary and artistic interest, in the works produced. Such patrons might prescribe schemes of symbolism which the artist was quite willing to carry out.
The difference was that, while the theologian saw, in the shape, say, of a dragon, a reference to some allusion in the Apocalypse, the artist took a disinterested pleasure in the creature because its wings and tail were so effective for filling awkward spaces. The subject of the beholder, again, the painter here in view, in studying works of art already done, would find out all sorts of reconcile suggestions in details which, in their origin, had probably a purely artistic purpose. In this way there came in the 13th and 14th centuries, 800 years before the time of Durandus, bishop of Mende, who made, Rationes Divinorum Officiorum, in which an elaborate symbolic interpretation was given of all the parts and fittings of the church and the apparatus of the altar. In this way, too, beast forms in art were credited with moral and religious meanings that were interpreted according to schemes of beast symbolism embodied in the so-called bestiaria. That beast forms in medieval art were commonly symbolic is, however, rendered extremely unlikely by the fact that reforming churchmen of puritanical tendencies are found inveighing against such motives as barbarian and frivolous. The locus classicus of the works of art in the 14th and 15th centuries was the school of Durandus, a bishop of Mende, who wrote a great treatise in which the whole matter is discussed. The first of the pictures of the sufferings of Christ and the martyrs, which he praises as 'books of the laity,' and animal representations, for what have lions to do in a church, or dragons, are of the closest connection with religion. There was a puritan vein in monasticism that led to protests against what was regarded as over-exuberance in the use of the element of beauty in the furnishing forth of sacred structures. The so-called reformers, like Durandus, his contemporary Scholasticism, began with the Chaucerian of the 10th century, and as a rule, this view, and a striking illustration of its working is to be found in the art of the 14th and 15th centuries. It is to be found in the art of the 14th and 15th centuries. The magnificent display of colour and imagery in the noble French stained windows of the 12th and 13th centuries, such as those at Chartres, they consider too sumptuous for the House of God, and such representations as the grey and brown, yellow. Figure sculpture on the façades of their churches they repudiated. It is, however, significant of the hold that art had obtained over the religious community in this advanced medieval period, to note that there was no real opposition to art even among the severest of the reforming Orders, for Cistercian architecture, as the ruined abbeys of England sufficiently prove, though sparingly adorned, is of extreme beauty, and its ornamentation, with conventional foliage, of the utmost delicacy and grace.

4. Gothic Architecture.—We find, then, in the Schema of Theophilus the conception of Christian art as a display of beautiful things carefully and cunningly wrought, that were offered as the homage of the mortal artificer to the great Artist of creation. This conception was actually realized, within the field of his design. Again, and its present and recognized as it was by Theophilus, was subordinate to direct artistic expression, first in the forms of the architecture, and next in the sumptuous display of detail and colour in the stone and wood carvings, the gilt and enamelled shrines, and, above all, in the 'storied windows richly dight that are the glory of the Gothic fane.' The subject, however, in the 14th century, begins the separate treatment, and it is necessary here only to emphasize the natural and obvious symbolism of the forms of Gothic architecture, which raises the soul in aspiration, while the sense of mystery, of the beyond, of the immeasurable, the mysterious, is suggested by the elusive details, its perspectives, its magic of light and shade. Of the general artistic effect of the new forms at the time of their glory, when the interiors, often now, are cold and bare, exclaiming with gold and colour, and were hung with gorgeous Eastern stuffs, we can form but an imperfect idea; but it is probable that nothing more artistically beautiful has ever been seen. The spirit of the work was still the spirit of the earlier religious decorative art of which we read in Theophilus; that is to say, it was impersonal work, unmarred by any touch of personal display so common in Italian art, simple and sincere in intent and in the use of the whole subordinate art for the service of the sanctuary. The representative element was at the same time present in the art, but it kept its place as on the whole subordinate. It is a little-known fact that the artists were devoted to the art of the Church. For that very reason we find in it a charm which more advanced representative work has often lost. It is the charm of naïveté and freshness due to the artist's unsophisticated delight in nature, and at the same time to the clearness of his mental vision, which gives him ease and assurance.

The decorative figure sculpture on the great French cathedrals, such as Chartres, Amiens, and Rheims, is really one of the most perfectly satisfactory forms of art connected with religion. There was a puritan vein in monasticism that led to protests against what was regarded as over-exuberance in the use of the element of beauty in the furnishing forth of sacred structures. The so-called reformers, like Durandus, his contemporary Scholasticism, began with the Chaucerian of the 10th century, and as a rule, this view, and a striking illustration of its working is to be found in the art of the 14th and 15th centuries. bent effigies in stone or bronze in which English craftsmen of the 14th. century, achieved so much success at the 'Queen Eleanor' of Westminster Abbey and the 'Edward II.' at Gloucester are among the best of these. English and German churches of the period are adorned with beautiful decorative sculpture, but the display is on a far smaller scale than is the case in central France.

We turned away from representative art in the West at a time when it was dominated by a somewhat gloomy view of religion, and exercised it, and was therefore not the lovely, simple, sensitive art like that of the Quattrocento. Saviour, laid stress on physical suffering. This applies chiefly to Italy, where in the early part of the 13th. century, while French and English Gothic art had unfolded itself in forms so varied and beautiful in the central and northern parts, the artists of Cologne in painting and sculpture, represented the Gothic spirit in a more direct and earnest manner, the spread of this from central France to Italy that led to the revival of art in the Peninsula. This Gothic spirit became incorporated in St. Francis of Assisi. As Sabatier puts it:

"St. Francis is the friend of nature; he is the man who sees in everything the image of the Divine goodness, the effulgence of the eternal beauty . . . hence at the voice of the Umbrian rustics he was able to recover herself; she forms a sound sense and good humour; she put away those ideas of pessimism and of death as a healthy organism gets rid of the poison of disease as by the stroke of the wing to the religious life, Francis caused suddenly to shine forth before the eyes of his contemporaries a new ideal, the presence of which there disappeared all those strange and perverted sects, as the birds of night fly before the first rays of the sun." (Art. Life of St. Francis, London, 1877, p. 13)

The beneficent influence of the genial creed of St. Francis on the revival of Italian painting is well understood, and in Giotto and Simone Martini, who at Florence and Siena respectively represented the coming of the Gothic spirit of humanity and tenderness, we find this influence at work. It is worth noting also that a similar influence at a rather later date was exercised upon painting in Germany, and led to the beautiful art of the early school of Cologne. German representative art has often shown a tendency towards what is grotesque and terrible, and the popular early Dance of Death, or of the dead, are proof of this. In marked contrast to this tendency we find in the Cologne school at the beginning of the 15th. century, a school of painting marked by the most delicate idyllic grace and tenderness, and by a pure devotional feeling that few other pictures can match. The art is really inspired by the so-called German mystics or 'Gottesfreunde,' a body of men who without forming any sect or order felt themselves impelled to a religious life of more intense zeal than was shared by their fellows. Still remaining, like the early Franciscans in Italy, true sons of the Church, they sought to make religion consist in a more intimate personal relation between the soul and God. When this relation was established, the soul became entirely filled with an ecstatic love that was not only the love of God but also the love of one's neighbour, so that the perfectly holy man, it was said, might desire the Kingdom of heaven for his fellow-man even before himself. In this need for spirituality were visited by visions, but visions that presented only forms of beauty. The fantastic and the grim, which have exercised such fascination over the Northern imagination, seldom appeared before the eyes of the devout. In the dreams of these men dreams were of lovely sights, of flowers, and even of celestial maidens to whom they were fain to offer adoration. Schmaaza was perfectly right in connecting with this religious revival of the 'Gottesfreunde' the Cologne school of idyllic religious painting associated with the names of Meister Wilhelm, Herman Wynch, and Stephen Lochner, the painter of the 'Domliiid.' at Strassburg is with the decline of the 16th. century, the works of these men are rare, but based upon certain religious movements in the direction of humane and tender feeling. The influence was essentially the same as that which formed the inspiration of Gothic art in the 14th. and 15th. centuries, the Gothic art is mainly decorative, we begin at the end of the 13th. century, to watch the development of painting and sculpture on their representative sides till they become capable of expressing the deeper emotions with great force and verity. Up to this period the artist had never disposed of adequate means for the representation of nature. However pure in feeling, however devotional, had been the art of the catacombs, or of the monastery, or of the Gothic church, however noble the single forms, however lively in action the groups, in the mosaics or in the historical pictures from the lives of Christ or of the Saints, the delineation was always summary, the rendering of light and shade and perspective crude or faulty. From the time of Giotto onwards two centuries are occupied with the development of painting and sculpture on the technical side, till they become in a true sense mirrors of nature and clear conveyers of spiritual ideas. This is the epoch of what would be called par excellence Christian art, and lies between the end of the 13th. and the close of the 16th. century. In Italy, between the end of the 14th. and the middle of the 16th. in Germany and Flanders. From Giotto to Tintoretto in the one case, from the early Cologne masters to Quinten Massys of Antwerp in the other, painting and sculpture are Christian, in the sense that religious themes are preponderant, and that spiritual ideas are conveyed in a more direct and convincing form. It would be a mistake, however, to use the term 'Christian' of this art in too absolute a sense, for the power which the artist gradually obtained over his materials he exercised on a realistic rendering of nature that resulted in a progressive secularizing of the spirit of the art, while the influence of the classical Renaissance of the 16th. century acted potently in the same direction. All through the periods indicated the art that was in a strict sense Christian was being produced, though not by every artist, nor, with certain exceptions, by any artist at every time.

The lives and works of the leading representatives of art in the periods indicated are so familiarly known that it will be sufficient for the purpose of this article to indicate in a few sentences the most prominent instances in which these artists embodied distinctly Christian ideas in their productions.

(a) Italian Schools.—The artists of the school of Florence, with the exception of one or two of pronounced devotional feeling, such as Fra Angelico and Luca della Robbia, with others like Lorenzo di Credi and Fra Bartolommeo who were directly influenced by the revivalism of Savonarola, took their subjects as a rule from the human side, and are noted for their pictorial expression and for the dramatic presentation of scenes of interest rather than for pious preoccupations. These scenes are of a sacred character, but they are generally envisaged in their human aspects, as is notably the case with the greatest of the Florentine painters, Masaccio. Some of Giotto's scenes from the Passion of Christ at Padua, and Masaccio's magnificent designs in the Carmine at Arezzo, are in the truest sense spiritually elevating; but the effect is that of the sublime in art generally, and they are com-
The religious design of Angelico, we must pass over a generation of artistic advancement, and recognize Diirer's devoutness to be the incontestably perfect achievement of the masters of the 16th cent., who bowed before Masaccio's genius in creation though they disposed of far more advanced technical science in execution. The engravings of these masters are truly dedicated to the Adoration of the Virgin. The Devonshire manuscript of the Life of St. Francis and of Luini a devoutness equal to his own, joined with powers of execution to which he could lay no claim. The well-known 'Pieta' by Luca della Robbia is in no sense a religious work, their devotional art, while the fragments of Luini's frescoes have filled the corridor of the Brera with some of the loveliest shapes of virgin and saint and angel that Christian art has to show.

A true artistic genius is Raphael, whose name figures so frequently from the religious art of Italy to the work of the early German and Flemish schools of the 16th cent., we find the fresh and innocent idyllic design of the early schools, such as those of Van Eyck, overcome by the realism and the ugliness to which northern art has all along been ready to surrender itself. Out of this at the beginning of the 16th cent. Albrecht Diirer with difficulty fought his way, and created an art in which deep feeling and philosophical thought triumphed over the characteristic defects of Teutonic design. Many of Diirer's religious pieces, especially those representing the suffering Christ, are profoundly impressive, and the man who possesses these qualities in design superior to those of his own productions. Diirer's finest works, however, such as the picture of the four Apostles at Munich, and the remarkable 'Madonna of all Souls' and 'The Knight and Death,' are, like Michelangelo's 'Prophets' in the Sistine chapel, ethically great but not inspired by any sentiment that is distinctly Christian. It is worth notice that though Diirer remained all his life a medi-

valist and a faithful son of the old Church, he held strong views about Papal abuses, and expressed the greatest admiration for Luther and some others of the Reforming party. We find proof of this in his writings as well as in some of his paintings. Once he addresses Erasmus as the 'Knight of Christ,' and bids him 'ride on by the side of the Lord Jesus.' There is a reference here, no doubt, to the figure in his own 'Knight and Death.' We find it hard to imagine Erasmus in mail and on a war-horse, and Luther's would have been a better name to invoke! The 'Four Apostles,' in the exhibition of Paul and John over Peter, betray the German infatuation with the weird and terrible interferes with our aesthetic pleasure in its contemplation, but his woodcuts from the Apocalypse, where these qualities were in place, are charged with imaginative power. The pictures of the early Flemish religious painters, on the other hand, though in artistic rank they do not equal the masterpieces of Diirer, perpetuate in some de-

gree the idyllic charm and tenderness of the early Cologne masters, while in the work of Rogier van der Weyden and some others there is distinct de-

votional intent. With regard to the founders of the school, the brothers van Eyck, we are in this difficulty: the known pictures of the younger, Jan, are on the whole realistic and secular, but there is a deeper note struck in the great altar piece in which both brothers collaborated, the 'Adoration of the Lamb' at Ghent; and whether or not this is due to the profounder nature of the elder brother, Hubert, is one of the unsolved problems of modern painting. This school culminates and ends with the work of Quinten Massys of Antwerp, who, with the names of each, make it a work of art. And still more that simple piety are his counterparts. To match the

The Venetians are more successful than the Florentines or Raphael in giving to these scenes a convincing air of life, and we see the figure, as a whole instead of building them up piece by piece in conscious fashion. Perhaps the best of all these masterpieces for its direct religious impression is Titian's comparatively unpretending picture at Dresden known as the 'Tribute Money.' Christ, tempted with the insidious query about the lawfulness of paying tribute to Caesar, has asked to see the penny, which is brought to Him by His interlocutor, and the painter has exaggerated the contrast between the noble, and at the same time tender and sympathetic, lineaments of the Lord and the screwed-up cynical features of the weather-beaten Pharisee who peers cunningly into His countenance. The hand of Christ, one of the most beautiful in art, contrasts effectively with the gnarled paw that is holding out the penny at which He points. The realization of the Christ of the Gospels and the creation of the adequate and beautiful type represent one of the triumphs of pictorial art. The imaginative power shown in some of Tintoretto's vast sketches in oil, from religious themes, in the Scuola di San Rocco at Venice, is one of the best Dutch cartoons are in comparison cold and academic. The great 'Cruciifixion' of the former artist at San Rocco, and the 'Christ before Pilate' opposite to it, are sublime creations.

The Italian painters of the first rank may be said to transcend the limits of an art that may technically be termed 'Christian,' and to present the sublime of human nature in such a way as insensibly to raise the mind of the spectator to Divine things. There were, however, many artists of the second order whose devout feelings found a more direct expression in works to which the adjective just used may with strictness be applied. The typical artist of this order was Fra Angelico, but the same spirit that animates his holy and beautiful paintings runs through the productions of the early Siennese and early Umbrian schools as a whole. Angelico's religious frescoes in the cells of the dormitory at San Marco, Florence, afford us the most perfect example of an art wholly devoted to the purpose of lifting the soul of the beholder on the wings of aspiration. Every figure, every compositional arrangement, was inspired to love, and to join the celestial company around the Risen Christ, whose visionary form he constantly portrays. There is more power, more intensity, in his work than in that of the Siennese and early Umbrian schools, a purity of sentiment that simple piety are his counterparts. To match the
Before passing on to the subject of Christian art under Protestantism, it is well to dispose of the peculiar developments of religious painting on the older or pre-Réformation lines. We have seen that such painting in the Italy of the culminating period of the art tended to assume the form known as the mannerist, and that the personalities of the ages are represented in a somewhat 'made-up' fashion, and fail to impress us with any sense of reality and power. This form of religious art maintained itself through the 17th and 18th cents., especially in the form of portraits, as well as in the pictures, but never entirely, and not in these alone. In Spain, though the greatest masters of the age, Velazquez, rarely exercised his genius on religious themes, painting of an ecclesiastical kind, was necessarily protest against evidence, and Murillo (1618–1652) is a very prolific and, on the whole, sympathetic representative of this form of art, on a somewhat popular plane. In the Catholic Netherlands, Van Dyck, who is more refined in his characterization than his master Rubens, painted some very good religious pictures of the conventional type, while his contemporary Eustache le Sueur in France (1617–1655) is one of the best of many artists of the second rank who exhausted their talents on works which may be said to have been abandoned, even in England religious pictures of the kind were painted, in the 17th cent. by Isaac Fuller, and in the 18th by Hogarth, who covered some very noteworthy pages in the artist's range of possibilities, and the best of which is the 'Pools of Bethesda' on the staircase at St. Bartholomew's Hospital, London.

A somewhat remarkable development of art of a decorative kind was indirectly the result of the Réformation largely engineered by the Jesuits. In the Jesuit churches, the most famous of which is the Gesù in Rome, built by Vignola in 1568, there was displayed decoration of the most sumptuous possible kind, and necessarily protest against the Puritanism which had obtained a footing in the Church of the Réformation; and this same style in decoration spread to other churches interior of the 17th cent., with a result which involves Rome, Ravenna, and other places never cease to deplore.

Anton Springer has well characterized the style as one that 'robbed architecture of its fitting repose, and by the introduction of this art into painting was further advanced by agency unseen, of curves instead of straight lines, of pillar piled on pillar piled without a limit, in the form of turmoils a turbulent tumult', and the poet says, 'that the style (called generally Baroque) was without striking and artistic effect. An unbounded vigour in the disposition of the material, which was, together with an internal decoration which spared neither colour nor costly material to secure an effect of dazzling splendour, such were the distinguishing attributes of the Baroque style as in Rome it is to be seen on every hand.'

It is interesting to compare the spirit of ecclesiastical decorative art of this artificial kind with that of the sincere, unpretending, though in its way equally elaborate art offered by the medieval monkish craftsman for the embellishment of his beloved fane. On a superficial view the motives may be held to be the same, but how immeasurably the difference! It is this substratum of ethical interest belonging to the history of the arts that gives this subject its importance to the student of the successive phases of human culture. It is noteworthy how much more is made of the evidence of art in historical and sociological studies on the Continent than among ourselves. The British mind is unfortunately prepossessed with the idea that the arts are merely separate accidents, detachable ornaments of human life, and not, as was really the case in the past, modes of intimate expression in which the ideas of an age or of a people found a natural footing.

III. POST-RÉFORMATION PERIOD.—It was inevitable that the Réformation should bring about a considerable change in the forms and the character of Christian art. Assuming the least possible alteration, let us see what the later art would follow from the rejection of the Roman ecclesiastical system. We will suppose that the Protestant continued to recognize, as he recognizes now, the value of the personal touch of human life, and the suitability of art as a form for the expression of religious ideas. The Saints would none the less but disappear from view, and with them would go their altars and altarpieces, as well as the pictures of the saints which had supplied artists for centuries past with unnumbered themes. In some respects the situation of the iconochastic period would be repeated, and representations of such of the Incarnate Saviour, or the enthroned Madonna, which had attracted something like worship, would be banished at once from the churches. The cessation of any demand for the large scenic paintings of the Last Things may at first sight seem surprising, because in some of the reformed churches the doctrine of heaven or hell became of paramount importance. Wall paintings in churches, however, had become so closely associated with doctrines and rites that they could not be abandoned, and with them went the pictures of the Inferno that might otherwise have proved dear to Calvinistic hearts. This limitation of the artistic range of possible subjects was not the cause because the subjects that remained to stand out in greater prominence. The person and life of Christ became of far greater relative importance under Protestantism, which refused to recognize the compering chains of Mary and the Saints. As the Bible was freely perused, the literary treasures of the Old Testament became more familiar possessions, and the prospective artist would in this way find ready for him in the bosom of the Reformed churches a range of subjects which would attract interest. It must be noticed at the same time that, though sacred altar pieces and mural pictures went out of fashion, a new form of religious art grew up in Germany of the Réformation period and spread to other lands, in the shape of the engraved plates which were abundant in the earliest printed Protestant Bibles and Testaments and in pious books of other kinds. Lucas Cranach illustrated Luther's Bible; and Holbein, who in this aspect of his art was a child of the Réformation, has left us classical examples in the 'Irones Historiarum Veteris Testamenti'—a series of Woodcuts of Bible illustrative pictures such as the 'Christ the True Light,' of 1537. This was a very cheap and popular form of art, and made up to some extent for the loss of the monumental works. In all these Protestant designs it would be natural, though not inevitable, for the subjects to be approached from the human side. So much had been made of the mystical element in religion in the older system, that the Reformers, though untouched by rationalism, might be disposed to keep the mirabilis in the back-ground. It follows that under an enlightened Protestant régime there might be as much expenditure in architecture and on decoration as before, and the meeting-house of the Réformed congregation would have just as much right to 'shine like the fields of Paradise' as the monastic fane of four centuries earlier, while representative art possessed in the life of Christ upon earth, and in the doings of the Old Testament would be a range of subjects the value of which has just been indicated. The words of Luther are in this connexion very significant, when he said that he wished to see all arts, especially music in the service of the Church which he had created and had granted them to men, and repeated the old arguments in favour of pictures.
as more suitable for the instruction of simple folks than discourses. As a fact, however, the alteration brought about at the Reformation was far greater than we have just assumed. In Switzerland, for instance, in Luther's time pictures were condemned and banished as idolatrous; while in Great Britain, to take another example, the reception of the edicts of Henry VIII. and the edicts of Elizabeth that tried to put a stop to further vandalism, the loss to art was incalculable, and from this point of view those years of desolation and waste are among the darkest in our national annals. So richly equipped, however, were our English churches, and so well established had been the pre-Reformation tradition of beauty in the apparatus of worship, that, as in doctrine so here, a compromise was arrived at, and Christian art still recognized the Episcopal churches and cathedrals as its home, where, at any rate, it could dwell in peace till the Gothic revival of the early part of the 19th. cent. fostered it a new growth.

In accordance with the law thus laid down, we find that, on July 25, 1567, the Lords of the Council, after receiving the abdication of Queen Mary, affirmed certain articles of the Kirk, amongst which was their intention 'to rule out, destroy, and allure subvert all monuments of ydolatr, and namelie the 0ld and blaspheous images of Christ.' Now, to the Presbyterians and the Independent, descriptions of temples and altars and priestly vestments and all the apparatus of ritual did not appeal, for all these things they could not away with, while of specially Christian or NT justification of any there was but small trace to be found in the Gospels. Their teaching, however broad it may be, ignores almost completely this side of life, which indeed would not naturally appeal to the Founder of Christianity in the temporal conditions under which His life was passed. His justification of the use made of the 'alabaster cruse of ointment of spikenard very costly' (Mk 14) is in this respect notable, as it can be considered the safeguarding of the sacred records of the recorded sayings of Christ encourage a feeling for the beauty of natural objects, but the only one in the Synoptic Gospels bearing definitely on art is of rather the opposite character. And as he went forth out of the temple, one of his disciples saith unto him, Master, behold, what manner of stones and what manner of buildings! And Jesus said unto him, Seest thou these great buildings! there shall not be left here one stone upon another, which shall not be thrown down ' (Mk 16).

The going forth from the Temple, if the tradition is a genuine one, was past the immense and splendid Hellenistic triple portico of Herod—the finest, Josephus says, in the world—and out under the vast substructures of the Temple area; so that the pride of the disciple in these glorious structures must have been a little disconcerted at the response. It was, however, the occasion of making a vivid illustration as to the Reformation to find Scriptural justification of a negative kind for a shrubbed and narrow view of art and beauty, as well as for one comparatively broad and liberal, and it is interesting to note that the following passage is the section quoted as part of the text of the Book of the English Reformation, with a special reference to its adoption of the principles of the Renaissance. Protestant Germany might have done the same, but, owing to wars and the impoverishment of the country, art after the time of Düer ceased almost altogether; but in the German contemporary, Holbein, left his native country for England, which on her part, by her contented utilization of his services, showed her own indifference to the work she was paying him to do. In Holland, a country extreme in its Puritanism, and the art was national and so at the same time Protestant, and in the latter aspect it was incorporated in Rembrandt.

A very large number of the drawings, etchings, and pictures by this master are on religious themes,
drawn from both the Old and the New Testaments. Many of these, such as the ‘Passion’ series at Munich, are treated in a cold, almost academic fashion, though by no means on the conventional Italian lines; but, on the other hand, there exists a body of his work on these themes, as dramatic in feeling as it is rich and masterly in execution. Rembrandt, whose work in this kind, it must be confessed, stands almost alone, has shown us here how it is possible to treat the passion of Christ with a freshness and inner life as the Divine majesty is as convincingly apparent as His homely aspect, His friendliness, His intimate sympathy with human joys and sorrows. The writer may be allowed here to quote a sentence or two from a work of his own on the master.

‘It is instructive to take the central figure of the Christian story, and to note the different situations, Myopic, epic, and dramatic, in which Rembrandt has portrayed the figure of Christ. We see with what warmth of human feeling he has invested those scenes in which the Saviour, an infant or a growing youth, makes holy by His presence the simple incidents of family life, while in the person of Christ moves, a mature and heroic form through the acts of His earthly ministry; with how intimate a sympathy he has withdrawn even to the unknown and insignificant, and displaced the Man of Sorrows a sublime though pathetically human figure in the twilight of His Passion. Lastly, how he invested the form with a power and grace that have been made perfect through weakness and suffering, and completes the picture by endowing the eternal love that Christ revealed, in the father of the Prodigal’ (Rembrandt, London, 1907, p. 579).

There is no need for any extended description of these masterpieces by Rembrandt, who are now remembered as fine in colour, light and shade and in technical execution as they are in the intellectual and ethical qualities of their design. A word may be said on one of the less known pieces, ‘Mary Magdalen at Brunswick.’ We all know the ‘Noli me tangere’ by Titian in the London National Gallery. It is a fine picture, but how unconvincing! There is no mystery, no appeal to the imagination. The figures, while sympathetically rendered, are posed for purposes of composition; the scene is full of daylight, and there is a village close by on the hill. In the ‘Christ and Mary Magdalen’ at Brunswick, in the mysterious garden where the Risen Lord meets Mary Magdalen clad in the glory of rocks and trees, a touch of light on the clouds above heralds the coming morn, but the shadows of night cling about the form of Christ, whose body emits a faint glimmer of light. According to which, the Italian form to which the adoring Magdalen was clinging; but the tender though reserved inclination of the head towards the woman, and the sympathetic gesture of the other hand, are loving-kindness embodied. We are there in the garden with the pair, and they both live before us. This, we feel, is how they looked and acted. In the Louvre picture of ‘Christ at Emmaus,’ where He is known in the breaking of bread, too equally imaginative treatment, the figure with an unearthly charm, that drew from the great French critic Fromentin some of the most eloquent sentences he ever penned:

‘Has not every artist imagined Him thus, as He sits facing us there and breaks the bread as He breaks it on the night of the Last Supper, so pale and so thin, in His pilgrim’s robe, with those darkened lips which suffering has left upon them; with the large soft brown eyes whose full gaze He has directed upwards... a living breathing, breathing...? We know not... who has assuredly passed through the gates of death? The attitude of this divine Visitant with that intense ardor in a face whose features are hardly to be discerned, and express all in all the movement of the lips and in the eyes—these traits inspired from what we dare not tell, and produced one who has told but all of value inestimable. No other artist has produced the like; no one before Rembrandt, no one after him, has made us understand such things’ (Mémoires d’Aubigné, Paris, 1851).

The lonely warmth of feeling in Rembrandt’s ‘Holy Families,’ and in OT or Apocryphal pieces, such as those from the story of Tobit, of which he was especially fond, is just as satisfying in its way as the imaginative power just illustrated. There is also an intellectual side to his religious art, and we have the sense in looking at some of his pieces that he has thought it as a fresh arrangement, though this never results in that academic coldness which is the fault of so many accomplished Italian designs. The chief example is the famous etching called the ‘1697, St. John in Plate,’ or the ‘Christ Healing the Sick.’ This is one of Rembrandt’s greatest masterpieces, and is well known though not always rightly interpreted. Sick persons, it is true, figure in the plate, but Christ is not healing them. The truth is that there is a great deal more in the piece than the descriptive title suggests. It is really an illustration of Mt 19, and brings together a number of distinct persons and incidents, a unity being secured for the whole by the commanding dignity and beauty of the central figure. The words at the beginning of the chapter, ‘and great multitudes followed him; and he healed them there,’ are the motive for the introduction of the sickly throng of the maid and feeble and sickly that Rembrandt has rendered with such pathos and intimacy. The next verse, ‘and there came unto him Pharisees, tempting him,’ accounts for the company on the left, whose shrewd and cynical faces and expressions of inquiry suggest the insidious queries with which they have come prepared. Christ, however, in the centre is attending to neither group, but is holding out His hand in encouragement to a woman before Him who clasps a child in her arms, while Peter, by His side, is seeking to thrust her away. This is, of course, the ‘Suffer the little children, and take them up on the midle of the chair; while in the richly clad figure of a youth, who sits musing with his face partly hidden by his hand, we recognize the young man that had great possessions. The justice of the characterisation throughout the piece makes it a real commentary on the passages illustrated, and the actual situation is brought before us in the lifelike impression groups.

It may cause surprise to find that Rembrandt’s treatment of these religious themes is so broad and genial, because the Holland of his day was strongly Calvinistic, and religion wore generally a garb of austerity. Now, we possess a contemporary notice, according to which, it was the religious sect called Mennonites; and as the best of these Mennonites were on the whole Broad Churchmen of the Arminian persuasion, Rembrandt’s upbringing may have given him liberal views on theology which will account for the comprehensive charity which breathes from all his scriptural pieces. His very last picture, a large and solemn canvas at St. Petersburg, represents the ‘Return of the Prodigal Son,’ and in this moving presentation of the tattered and weary wanderer as he buried his shame-stricken face in the bosom of the father whose compassion fails not, we read the artist’s belief in an all-embracing Divine love. The warmest expression of the personality of the hapless truant has concentrated all the interest of the scene on the father, who presses him to his heart and gazes down on him with infinite pity and tenderness. He is not the figure of a remorseful man, but the Eternal Love incorporate; and Rembrandt’s art becomes in the best sense an embodiment of the higher Christian thought.

We may accordingly regard Rembrandt’s design as more satisfying than the religious work of the liberal Protestant than that of any other artist, and with this as our standard may pass on to a brief critical survey of religious art as it has been
revived in various experimental but interesting forms.  

IV. MODERN TIMES.  

The last part of the 17th and the whole of the 18th cent. produced practically nothing in this style that was not a mere bloodless simulacrum of the academic art of the Florentines and Romans.  Such works, in exception, may be found at the close of the 18th cent. in the work of William Blake, who had genius enough in art and literature to have achieved true greatness, had that genius been trained and directed aright. Blake was a romanticist, and his pictures breathe the romantic spirit of his time before his time, and belonging to the century of Coleridge rather than of Pope.  Earlier in the same century, it is worth notice that even Hogarth in his religious pieces did not attempt the homely intimate style in which he might have succeeded, but adopted the conventional types of the Italianizing figure painters of the time.  The revived religious art of the 19th cent. is the child of the romantic movement.  This was a reaction against the predominant classicism of the latter half of the 18th cent., and took the form partly of a return to nature in which Rousseau and Robert Burns were pioneers, and partly in a revived interest in what was termed by Blake 'picturesque' and 'romantic.'  His pictures, however, were rather of the order of the Middle Ages, and even Kean as Goethe paid him homage in these romantic bygone glories.  A curious result in the sphere of religious art of this return to the Middle Ages has made itself seen in our own time in the pictures of the life of Christ by Eduard von Gebhardt, in which the costumés and the mise en scene are taken from the Germany of the 15th century.  What we know in our own country by the name of the 'Gothic Revival'—a movement that led to the restoration of medieval features in innumerable English churches and to the establishment of something like a cultus of the romantic in art—was at the basis of the very interesting artistic experiment known as pre-Raphaelitism, while the earlier religious painting of the German so-called 'Nazarenes' was founded rather on the national self-consciousness of the German people firmly braced by the struggle against Napoleon; mediavalism, at any rate, played no part in it, for the Nazarenes were inspired by all the artistic movements, the German and the English, were sincere and earnest, even to the extreme of fanaticism, but the aesthetic result was in neither case wholly satisfactory.  

1. Nazarenes. — The name 'Nazarenes' was applied in good-humoured banter to a company of young German painters who in the early years of the 19th cent. settled in Rome in an abandoned monastery, where they sought to re-establish the life and work of the painters of the earlier religious schools.  They were romanticists of the type that surrenders itself to idealism but recognizes no attraction in nature and the things of the real world.  Hence their art draws its motives not directly from nature, but at second hand from the works of the old masters.  This secured a certain look of style in the compositions; but, on the other hand, the figures lacked individual character, and the colouring was pale, flat, and conventional.  One good piece of work the Nazarenes accomplished early in their career, which has laid modern art under an obligation.  In 1815 they introduced the idea that the value of art lay in the work of art, and not in the artist.  In 1779, and with the aid of one of Mengs's old journeymen executed successfully in the true pre-Raphaelite style, they painted 'The Judas Family' in the room of the Casa Bartholdi on the Pincian Hill at Rome.  Both these paintings are from the story of Joseph, and have been removed to the National Gallery at Berlin, where they are in a good state of preservation.  Corneilus, Overbeck, Schadow, and Veit collaborated, and the works are among the best from an artistic point of view produced by the school.  Modern German monumental wall-painting, which has flourish through the centuries, is the direct outcome of the tiring devotionalness that we have come to know in the early schools of Sienna and of Cologne.  'Art is to me,' he wrote once, 'a harp on which I would fain hear always the voice of the praise-singers of the Lord.' The comparative absence from his works of the qualities of colour, light and shade, and handling, which are essential to the beauty of a modern picture, makes it unnecessary from the point of view of this article to consider them further.  Corneilus (1783-1867) was a far stronger artist than Overbeck, and covered vast wall spaces in Munich and elsewhere with compositions marked by learning and vigour, but lacking in warmth of feeling or esthetic finish and spacing of figures.  It was in the mediaeval subject of the 'Last Judgment' in the Ludwigskirche at Munich, painted in 1840, may count as his masterpiece.  

On the same plane of art as the Nazarenes are the Nazarenes are a once extemely popular of religious themes, the Netherland Ary Scheffer, and the accomplished Frenchman Hippolyte Flandrin, a pupil of Ingres, worked successfully drawn figure compositions on religious themes on the walls of Roman churches, which are, however, tame in effect and wanting in charm of colour.  Of all this set of artists no one had in him so many elements of true greatness as the Aberdeen painter, William Dyce.  Had he been born a century later and in a time and in the privilege favourable to the development of monumental figure painting, he would have been a great artist, for there is in his design an originality and an intimacy of feeling, in his execution a firmness, that strike us at once as exceptional in this phase of art.  Born in 1806, he met and was influenced by Overbeck in Italy, and Richard Muther in his Modern Painting reckons him 'with the Flandrinners, Overbeck family.'  Both these artistic movements, the German and the English, were sincere and earnest, even to the extreme of fanaticism, but the aesthetic result was in neither case wholly satisfactory.  

2. Pre-Raphaelites. — The religious art of the 19th cent. received a contribution of some value from the English pre-Raphaelites.  Shortly before 1850 three or four young artists in London found themselves drawn together by somethings of the same feeling in art that had actuated the Nazarenes.  They revolted against the academic conventions with which the name of Raphael was specially connected, and the idea of the school of Madrid.  'There is something touching in his madonnas...' A dreamy loveliness brings the heavenly figures nearer to us' (iii. 5).  The 'St. John leading the Madonna to his Home,' in the Tate Gallery in London, is a good specimen of his art.

ultimately included seven members, and the fact that two or three were writers explains the fact that the movement was from the first as much literary as purely artistic. The three original members were Dante Gabriel Rossetti, Holman Hunt, and John Everett Millais, are the only ones who need be mentioned here. Their intense earnestness, combined with their study of the early Italian masters, led them to religious themes, though these were not done in a spirit of imitation. But at the same time, they were before all things romanticists, and may be claimed by the Gothic Revival as its spiritual offspring. They were devoted to the poets, and some of the best things they accomplished in art are the illustrations to Tennyson's *Poems* published by Moxon in 1857. In Rossetti this tendency was particularly marked, and he ultimately confined himself as a painter to the romantic field, in the cultivation of which, he was followed by Edward Burne Jones. This romantic and poetic vein kept their devotion to the facts of nature from falling into mere realism, so that in their pictures we discern a curiously matter-of-fact rendering of accessories, and the whole scene may be a fairyland of a poet's creation.

Of the distinctly religious pictures of the school, the best were some of the earliest. In 1849 and 1850 Rossetti exhibited the quaint but fascinating *Girl from Studio* (painted in 1870, the figures are portraits of the painter's nearest relatives, and the *Eccle Ancilla Domini* which has now happily found a home in the national collection. For novelté of feeling and poetic charm it is one of the loveliest pictures ever painted, and, if its transparent sincerity it might have shamed into nothingness the commonplace conventional painting in vogue in the England of the time. The early school of the Royal Academy, where the work of Joseph, a far more ambitious piece, is perhaps, artistically speaking, the best religious production of the school; for Millais, as his after career showed, was far more highly endowed as a practitioner than any of his associates. Holman Hunt's universally known 'Light of the World' appeared in 1854, and this artist has maintained throughout his long and honourable artistic career the same religious earnestness, combined with the pre-Raphaelite faithfulness. In the whole history of art there are no religious pictures in which uncompromising naturalism has made so remarkable an alliance with a pictorial depth of ideas' (Muther, *Orestes*). From the artistic point of view it should perhaps be pointed out that the plan of copying nature in a picture detail by detail does not really secure the truth aimed at, and with the pre-Raphaelites its adoption was due to intellectual rather than to purely artistic considerations. The experiment was of value in its time as a protest against the vague conventional rendering of nature with no true knowledge behind it, which was then the fashion in the English school, and to the non-artistic the principle will always seem attractive because of its ethical sound, but, as Horace says in the *Ars Poetica* (line 31):

> *In vicum ducta cunctis omnibus, sic caret arte,*

and the way to represent nature truthfully in the artistic sense is not to copy bit by bit, but to render the general aspect of things in their true relations of tone and colour. This is the real difficulty of painting, and an impressionist study that secures absolute truth in these relations is at once far more difficult, and far better as art, than the most elaborate rendering of individual details with mere accidental approach. If he sessed of a shrewd wit, tried the pre-Raphaelite method about 1850, but gave it up, saying, 'This cannot be right, it is too easy!' Hence it has come about that many a pre-Raphaelite painter who has carried out this principle of work has been, as Horace goes on to say:

> *Intell. optes summa, quis ponere locum? Necesse!*

Moreover, exact piece-by-piece rendering leads too often to a hardness in delineation that is destructive of pictorial effect, and when this is combined with crude and inharmonious colouring, the result from an aesthetic point of view may be disastrous. But an artist who seeks to rise above this, and who varies greatly in his artistic value, they are always to be respected for their earnestness and sincerity, and some of those on Biblical themes will ever remain prominent and justly-honoured representations of an interesting modern phase of Christian art.

3. Modern experiments.—One last phase of Christian art remains to be noticed, bringing us quite to our own day. The reference is to certain endeavours to secure convincing verisimilitude in the pictorial representation of Biblical scenes by the abandonment of all the time-worn conventions of academic design, and by the use of local types, costumes, accessories, and setting. This departure has been tried in various forms, and always with sincerity and devout feeling. So far as these qualities are concerned, the works already noticed of the German von Gebhardt, whose 'Last Supper,' which was shown in Paris in 1878 through reproductions, are equal to the best; but his curious convention of a 15th cent. *mise en scène* gives them a position apart. One form which this work has taken is in the events of the life of Christ in an Oriental setting, carefully elaborated from a study of the Palestine of to-day. The idea was first started earlier in the 19th cent., when the attention of artists was turned for the first time to Oriental subjects, Horace Vernet, on his Eastern tour in 1840, had noticed that the scenes of the Bible stories were laid in the East, and should be represented in Oriental settings. This was actually attempted by Holman Hunt, who painted religious pictures in Jerusalem, and by the school of the Dead Sea. Some German artists sought the same end by the adoption for the NT characters of the types of modern scenes of the Hebrew race; but it has been reserved for a French and a Scottish painter of our own time to work the idea out with completeness. Both James Tissot, a French artist known first for his pictures of modern fashionable life, and William Hole, of the Royal Scottish Academy, conceived the idea of presenting various incidents of the earthly ministry of Christ as they might happen in the Palestine of to-day. The lighting and colour of the landscapes, the forms of nature and of buildings, the attitudes of the figures and their costumes, the furniture, the accessories, are all drawn from actual life, as it can be studied to-day on the Mount of Olives, by the Sea of Tiberias, or at Bethany. The resulting pictures, made accessible by popular reproductions, are full of interest, and at every turn furnish some new suggestion that makes us realize and interpret better the familiar scenes. They are, however, in both cases comparatively small water colours and do not aim at greatness of effect. Indeed the elaboration of the interesting detail often interferes with the general impression of a scene in its ethical or religious aspects. They are, nevertheless, valuable contributions to the religious art of our day.

An experiment in quite another direction has been made, also in our own day, by one or two German artists, of whom the most important is Fritz von Uhde. Von Uhde, perhaps the best painter of all those who have given themselves in this latest epoch to Scriptural themes, and his work has more of the quality we have learned to
admire in Rembrandt than that of any of the other moderns. There is no attempt here at archaeological correctness, and the idea of an Oriental setting never crosses the artist's mind. On the contrary, he takes the actual scenes in town or village or country of the Germany of his own day, and inserts Christ or any sacred scene into them, and dealing with those He meets as if He dealt with His fellow-countrymen in Palestine. In 'The Sermon on the Mount' Christ is seated on a modern wooden bench in the fields, and His disciples are a group of peasantry, men, women and children, on the outskirts of which hang the men who are going home from their work, with their tools over their shoulders. 'Suffer little children to come unto me,' at Leipzig, shows the interior of a modern schoolroom in a small town, where the master stands in the background, while a group of children of all ages are gathered somewhat timidly near the chair on which a stranger, who has just entered, has taken his seat. This stranger is Christ, and we are made to see that He is gradually drawing the little ones to Himself by the magnetism of His personality. In other pieces we see Christ entering a peasant home, or sitting at modern desks, that He may reach the imagination. And, again, with a frank acceptance of the mystical, the artist has given us the scenes of the Annunciation or the Nativity. The pictures are always serious, solemn, and at the same time warm with human feeling, and often touched with idyllic charm. Their quality as works of art gives them an equally high place with that which they claim as achievements in religious design.

The name of Rembrandt was mentioned above in connexion with these homely renderings of sacred scenes. Rembrandt, like von Uhde, in the best of his pictures took the setting from his own surroundings, though he indulges not seldom in Oriental vestments and in Jewish types. These surroundings are, however, in the first place, very much generalized, so that they might almost do for any age and country; and, in the second place, they are as unfamiliar in the eyes of 20th cent. Briton as if they were genuine Oriental transcripts. Hence the setting of Rembrandt's pieces takes them to that distance from us which is necessary in order to let the imagination have free play. In their settings of our own time, on the other hand, both the Oriental backgrounds and the modern ones are too real and too familiar, and the appearance against them of Christ and the Apostles seems forced and almost theatrical. If we recognize who the persons are, we may live in these surroundings, but to have come in in a disguise, and we half expect their interlocutors to be finding them out. On the other hand, if we accept them as modern Orientals or modern Europeans, we cannot readily realize their unique character and greatness. They have been brought down too effectively from the ideal to the actual sphere.

Summary.—In the foregoing an attempt has been made to describe and to analyze, from the points of view indicated at the beginning of this article, the chief phases of religious art as they have manifested themselves through the Christian centuries. There have been two stages in the activity of Christian artists, each of which we shall more suitably receive a final word.

1) On the one hand, their activity has been essentially that of the monkish mason of the 11th, the Gothic mason and carver of the 13th centuries; all they could make or do were zealous to offer on the altar of Christian service. Thiers was the gift of beauty to the Christian beauty—a grateful rendering back of the boon so lavishly bestowed, the gift of skill and care to the Lord of the inventive brain and cunning hand. How far, we may ask, can we in these modern days enter into the spirit of those mediaeval craftsmen, and turn any artistic gifts we may possess to this high service? Unlike the men of old, we have in these days almost to justify our acceptance of the cult of beauty and of art, for these are not a natural and necessary part of our lives. We have seen how the practice of the arts in early Christian and monastic surroundings followed inevitably from the fact that the sacred peasants of the north did not give in those days impossible. With us it is something extra, and is as a consequence challenged to give an account of itself. That idea of an opposition between the life of art and the practical life of service to one's fellows, which underlies Tennyson's 'Palace of Art,' is not justified by the facts of the world. It is perfectly possible, as we can learn by looking around us, to combine the practical with the contemplative life, and to exercise the aesthetic faculties without any withdrawal from the sphere of the actual. It is true that there are those who do so withdraw themselves, but it does not follow that they are tempted away by the allurements of the imaginatively morbid and self-absorbed, and if a field of activity did not offer itself in the aesthetic sphere, their life might decline to a much lower level. The pleasures of art are, at any rate, innocent, and if they do not necessarily mould the character, they at least refine the taste.

We saw that the medieval artist-monk exalted the practice of the crafts that produce beautiful things as not only a function of human nature but a law of the universe at large. There is a narrow religiosity that is afraid of a human nature so amply endowed, and would confine its activity within much closer limits. In the churches of to-day, however, this timid art is already an anomarnism, and most of those which have Puritan traditions at their back accept to-day the broader view to which, at any rate, the student of the history of Christian art must feel himself forested. And if this energy of art is not only wholesome, but even in a sense enjoined, in what can it be more fittingly expended than in that service to which we have seen it devoted through the centuries? To the other hand, the square barn-like meeting-house, the bare walls, the homely fittings, could satisfy the cultured worshipper.

It is true, and must never be forgotten, that the outward show is as a mere nothing to the 'truth in the inward parts,' which is demanded as much from churches and congregations as from individuals; and if worship were less sincere in a beautiful and richly adorned than in a simple room, it is the art that would have to be sacrificed. It is true also that in parts of our own country a sacred tradition of unselfish piety, of heroic endurance, clings to these whitewashed walls that for generations past have looked down on the defenders of a creed for which they were ready at any moment to give up their possessions or their lives. The Church at large could ill spare the Puritan spirit, and must strive to retain what is best in this while contesting some of its negations. The introduction of instrumental music into the act of worship, and of the element of art and beauty into its material apparatus and its place, is in principle perfectly possible everywhere in Christendom, and there is every reason why the mediaeval tradition should be revived, and these things not merely accepted as a fashion, but embraced with the godly joy and pride of the older days.

2) On the other hand, the activity of Christian artists has been exercised not merely on the
creation of what is beautiful, but on representations of sacred scenes and personages, or symbolic shows that had a didactic purpose. This work, as we have seen, is typical of an art of thought.

We may distinguish here: (c) the liturgical, doctrinal, or allusive composition, which began, as we saw, in the catacombs, and flourished greatly, in the form especially of the pictures of the Last in the early and later medieval period: (d) the devotional picture, represented centrally in the work of Fra Angelico, in which the specially Christian virtues of humility, devotedness, self-abandonment, are brought to view and their practice inculcated; (e) the historical representation, from the life of Christ or of OT or NT worthies—a form of art that we have come across in many shapes, and in which at one time the mystical, at another the human, element is most apparent; and (f) the great work of art in which a supreme master like Michelangelo has created types that are profoundly ethical, though not in the distinctive sense Christian.

True, the various forms of religious art related to the Christian thought of enlightened Protestantism?

(a) The first kind of picture has ceased for Protestants to have any didactic or specially religious significance, and is regarded rather from the intellectual point of view as an embodiment of poetic thought. The designs of William Blake are of this kind, and a good modern instance may be found in the allusive symbolical designs which, with charming decorative feeling, Mrs. Traquair has executed in the ‘Song School’ of St. Mary’s Episcopal Cathedral and the Catholic Apostolic Church in Edinburgh, as well as in other buildings. Such works exercise for the artist a more devotional mysticism than to that of religion in the strict sense of the term. They answer to a special phase of artistic feeling both in the creator of them and in the spectator, and, in fact, they repel some sincere lovers of art just as strongly as they attract others. So long as there are artists and lovers of art, the temperament of some of these will turn them in the direction of works of the kind. This phase of religious art is illustrated also by some of the productions of G. F. Watts, an artist of genius who was meant to be a great painter, but was drawn aside from the direct course by the copiousness and insistence of his intellectual ideas.

(b) This phase is the creator; and from this point of view the works of the Hellenic sculptor may claim a position by the side of the designs of a Michelangelo, or of any other creative artist of the Christian period. The impressiveness of a great work of art depends largely on the simplicity as well as the force of its message, and it is not by inculcating any special doctrines of religion but by raising the whole being into communion with the highest that art may best serve the spiritual needs of mankind.

G. BROADWIN BROWN.
ART IN MANUSCRIPTS (Christian).—There is no form of Christian pictorial art that has come down to us from the Middle Ages in such abundance, in such variety, and in such a genuine and unaltered condition, as the art of miniature-painting for the illustration of manuscripts. Isolated examples dating from the 4th cent., to the 8th may be found scattered through the great libraries of Europe, while others from the 9th cent. onwards exist in considerable numbers, not only in pure Christianity, but also in Islam. Nevertheless, this in spite of the enormous destruction that has taken place through their being little cared for, or liturgically out of date, or the objects of fanatical hatred. The total number of manuscripts thus destroyed must be numbered by hundreds of thousands. At the same time, it must not be concluded that the majority of these, or even a large percentage, were as attractively written and illustrated as the precious volumes exposed in our museums. A glance at the contents of any considerable mediaval library, like those of Hereford Cathedral and some of the Colleges of Oxford and Cambridge, shows us how commonplace and dull in a literal sense was the everyday scholar’s book, and that in nine cases out of ten the loss of them would not be a matter for artistic regret. The richly painted manuscripts on the other hand were often lavishly ornamented for lectern and altar, in keeping with the other splendours and adornments of a great church, or for the use of wealthy laymen and ecclesiastics, who sometimes read them as little as a modern student reads the editions de luxe that he buys of poems that he has learned to love in a homely setting. St. Jerome, in his preface to Job, makes light of such possessions. ‘Let those who care for them,’ he says, ‘own books that are old, or written with gold and silver on purpure skin. All that need is a good text.’ This sentence shows that the spirit of the fastidious book-lover was already abroad in the 4th century. It is perhaps a matter for congratulation that not every one had so austere a taste as St. Jerome.

The earliest examples of painted books that have survived in Europe are two Vergils of the 3rd or 4th cent. in the Vatican Library; but throughout the first millennium of Christianity the art of miniatures, whether in manuscripts or in illuminated letters within the text, was a flourishing one. The principal production of the early centuries was that of the Byzantine school, which was written at Winchester for Bishop Ethelwold between the years 963 and 984. A similar Benedictional, written a few years later for Archbishop Eadward of Jumièges, is now in the public library at Rouen. The British Museum is rich in productions of this school, beginning with King Edgar’s Charter of Hyde Abbey (fig. 2, p. 580), written entirely in gold in 966 and enriched with a beautiful design in the presentday, that shows how figures are drawn with much animation and clod in the fluttering draperies characteristic of the English miniaturists of the 8th and 11th centuries. During these centuries and for several centuries longer, it is not too much to say that English book-illustration was the finest in Europe. Until the end of the 13th century, Italian pictorial art was much less inventive and energetic than that of England and France, while Germany was likewise under a weight of formalism. Byzantine tradition, which seems to have prevented its producing more than a trifling number of books of notable merit between the 12th cent. and the time of the invention of printing. In the monasteries of Flanders, Hainault, and Artois, many stately books were written and illuminated, but in the reign of St. Louis the fame of the University of Paris attracted so many scholars and artists from all Christendom, who thenceforth made Paris the intellectual centre of Europe. In their train came a body of writers and illuminators, independent of the monasteries, who shook off the Byzantine fetters before Giotto and Cimabue were born, and produced works of extraordinary and almost feminine refinement of execution, which is no less attractive than the manly vigour which is more especially English (fig. 3, p. 581). For the tradition of the French illuminators had gone far beyond their English rivals, and in the second half of the 15th

* ART IN MSS (Jew.) see p. 572*.
cent. English patrons were so ill-served by their countrymen that they had to send to Bruges and Paris for their painted prayer-books and romances.

To the Italian scribes of the 15th cent. belongs the distinction of having cast out the Gothic or black letter, by which that time had reached a cramped and ugly stage, in favour of the more rounded and legible forms of the 11th and 12th cent., which it was called when reintroduced, 'Roman letter' as we now call it (figs. 4, 5, pp. 891, 892). This revival was soon seen to be a reasonable one, and was adopted in all literate countries except Germany, which is only now coming into line with her Western neighbours. It was under the influence of the Renaissance that the finest illuminated books were produced in Italy. These were largely copies of the Latin classics; but many exquisite prayer-books were written, especially in Florence, Naples, Ferrara, and Venice, for members of the great families. Of Spanish illuminated books not many have survived, and these usually owe nearly everything to artistic influences from Naples or Bruges.

In the latter city enormous quantities of dainty prayer-books were manufactured towards the end of the 15th cent. The chief features of these books are the use of sprays of natural flowers and fruit, and the delicate features of the landscape backgrounds to the pictures. Dutch books are remarkable at once for great dexterity of execution and for a bluntness of conception which prevents their ever being in the first rank as works of art.

And now as to the types of manuscripts that were most frequently illustrated. With few and mostly fragmentary exceptions, all liturgical books earlier than the 13th cent. have either been worn out, or cast aside on account of changes of fashion and of textual arrangement. It is certain that none of them were habitually so richly decorated as the early copies of the Gospels already referred to. These were always adorned with four frontispieces, usually representing the Evangelists in the act of writing, opposite the four opening pages of the Gospels, on which the text was written in large ornamental letters within an elaborate border. The illuminated initials, or rather the heads of the letters, of which there are many illuminated examples, are Pontificals, Missals, Breviaries, Graduals, and Antiphoners. The great choir-books, such as are shown in fig. 2, are copies of the Psalter, used in the Duomo of Siena, have survived in quantities in Italy and Spain, where they may still be seen in use. These often contain initials painted by artists of note, but they are for the most part not earlier than the 15th cent. Choir-books of Northern origin, especially those of the fine period, are exceedingly rare. The best that exists is an Antiphoner in three volumes written in 1290 for the nuns of the Cistercian Abbey of Beaupré near Grammont (fig. 6, p. 892). This formerly belonged to John Ruskin, and is now (1906) in the collection of Mr. Yates Thompson.

The Vulgate Bibles that have survived from the 12th cent. are usually of three volumes, with historiated initials at the beginning of each book, and decorative initials to the numerous prologues. One of the finest examples, a book of surpassing beauty, is in the library of Winchester Cathedral. In this the books were written to a large scale and on vellum of such astonishing thinness as to fit comfortably into the pouch or pocket of the Dominican and other itinerant preachers of the day. So great was the output at this time, that it seems almost to have sufficed until the invention of printing, as Bibles written in the 15th and 16th cents. are comparatively rare. Besides the ordinary marginal commentaries were often finely written and illuminated for purposes of monastic study; and in England especially there were produced in the 15th and 16th centuries many elaborately illuminated copies of the Apocalypse, either in Latin or in French, and usually with an Exposition taken from the writings of Berengarius. It is easy to see how the strange visions of St. John kindled the imagination of the creative artists of this time, and with what zest they sought to interpret them (fig. 8, p. 893). In France, at the same period, a type of sumptuous picture-book was evolved, known as the Bible moralisée, in which the text is altogether subordinate to the almost countless illustrations. Two copies are in the Imperial Library at Vienna, while a third is divided between the Bodleian Library, the Bibliothèque Nationale, and the British Museum (fig. 10). From an early period the chief book of private devotion was the Psalter. In the 12th and 13th cents. every rich and devout layman seems to have possessed his own copy of the Psalms, to which the Annunciation, the Nativity, and the Canticle of Canticles were invariably added. In the 14th and 15th cent., when the more artistic and elegant features of the landscape backgrounds to the pictures, Dutch books are remarkable at once for great dexterity of execution and for a bluntness of conception which prevents their ever being in the first rank as works of art.

As early as the 11th cent. certain private offices, the most important being the Hours of the Virgin, the Hours of the Trinity, and the Hours of the Passion, were added to a few Psalters. Later, these accretions came to be written separately, probably in the first instance for the use of women. Their portability and general convenience in this detached form led to their being adopted in place of the Psalter as a book of private devotion by the literate layfolk; and although there are but few separate Books of Hours of the 13th cent., and not many of the 14th cent., they were produced in enormous numbers in the 15th cent., and copiously illustrated. In this period the picture was the main source of the text, and the greatest number were written in Bruges, Paris, and Florence, so great that they continued to be produced until long after the invention of printing.
ART (Egyptian).—The religious aspect of art in Egypt includes almost all that is known of it. The earliest sculptures are tombstones and tables of offerings for the benefit of a deceased person; the earliest statuary is of figures in which the soul of the deceased might reside, made lifelike as possible in order to give him satisfaction; the figures of servants with offerings, or of serfs to cultivate the ground, were for service in the next world; the whole of the tomb sculptures, paintings, funerary oracles, and all canopic jars, tablets, and all else—resulted from the religious theories of the future life. The buildings that remain to us are nearly all temples; the colossal which stand in them were habitations for the many ka-souls of the king; and even the battle scenes on the walls are all part of the display of religious fervor, and culminate in the triumphal processions of captives dedicated to the god, or led by the god as his appanage to be entrusted to the king's administration. The civil life of the lay Egyptian has almost vanished, the palaces and towns are nearly all below the plain of Nile mud; and it is only the sepulchral and religious remains of the ancient cities that have been preserved,—have thus been preserved to us. Here we must notice only the main principles and examples of religious ceremonies. The page of examples given (p. 886) will illustrate the more important points.

1. Art, as seen on the slate palettes. The various tribes engaged in the conquest of the country are designated by their emblems, the hawk, lion, scorpion, or crocodile (Egypt, fish). The features of the tribe are represented by the animal holding a pick and digging through the walls of a town, or by a human arm projecting from the standard on which the animal is, and clutching a cord or grasping a bound captive. The king is represented as a strong bull—as he is called in later times—trampling down his enemies; or the figure of a fish, used to write the name of a king, has two arms grasping a stick to smite his enemies; or the royal hawk has a hand which holds a cord put through the lip of the captive. In these instances it is seen how early symbolism was established as an elaborate means of historic expression. It is noted that in the subsequent times they should be commonly used. The kings are shown as being conducted by the gods, who also 'teach their hands to war and their fingers to fight,' standing behind the king and holding his arm in their hands; then the god places the crown upon the king's head, and pour purifying water or blessings over him (see figure of Ramessu IV.); the goddess Hat-hor, as a woman or as a cow, is shown suckling the young king; and Sethket-abu, the goddess of literature, writes the king's name on the leaves of the Psera tree. The limits between symbolism and dogma pass the critical stage altogether in the Tombs of the Kings, and a state is reached in the other world in which there is no distinction possible.

Special emblems of ideas became so common that they were used almost mechanically, like the cross in Europe. The sun and wings are noticed under Architecture (Egyptian). 'Decoration.' And groups of hieroglyphs, such as the akh for life, the was for power, the zed for stability, the girdle tie of Isis, and other emblems, were carved as accessories to stiffen furniture or form a trellis to windows.

2. Divine forms.—The compound theology of sacred animals and deities resulted in a variety of strange combinations. The animal element is always retained in the final form of a deity; a human head upon an animal body is used only for a sphinx, emblem of a king, and for the ha-bird, emblem of a soul. The combination of animal heads on human bodies is found in the second dynasty (Set, on seals of Peribsen) and the fourth dynasty (Thoth, on scene of Khufu); and it became very usual in later times. The combination is skillfully arranged, so that it seldom rises monstrous; see the scene given (p. 836) of Horus and Thoth, where the short neck of the hawk fits directly on to the human shoulders, while the long neck of the ibis is backed by an immense vulture; but all those, which are condemned as monstrous; yet the effect is far better than could have been expected from such a difficult combination. The forms best known are the ram-headed Khnum and Hreshedu, lion-headed Sekhmet, cat-headed Bastet, jackal-headed Amnis, crocodile-headed Sebek, ibis-headed Thoth, and hawk-headed Horus and Mentu. Besides these, there were many compounded divinities in Ptolemaic and Roman times, formed of a deity and three or four animal parts; usually it is Ptah-Sokar who is thus elaborated. These combinations have none of the convincing dignity of the early animal-headed gods.

3. Dress.—The gods are usually clad in the oldest form of close-fitting waist-cloth; it is always older forms of dress that are thought appropriate for religious or artistic purposes, and in Babylonia the oldest figures of worshippers are entirely nude. It is true that the god's peaked waistcloth common in the Old and Middle Kingdoms. Another primitive piece of costume was the animal's tail, hung at the back from the belt. This is always shown, a stick, or a rope, in the hands of the gods, to indicate their divine origin. The god's tail was never mere animal appendage, but was a symbol of regal dignity in a different sense; or, its use is not explained when we find it in the hands of gods. Yet it is never seen in the context of a religious ceremony; in the case of the king, it is the last thing to be taken off at the evening sacrifice, and then, and then, for the first time, it is not worn. It is therefore a costume of Egyptian origin, and not a symbol of a god.

4. Ceremonies.—The four chief ceremonies selected for illustration (p. 886) are Sacrifice, Offering, and Procession. The ceremony (a) Sacrifice, as among the Semites, was the ceremonial killing of an animal for food; but there is no trace of the burning of the fat, or of the other form of whole burnt-sacrifice. In the early sculptured tombs the sun of the deceased are shown as trapping the birds, and sacrificing the ox, for the festival in their father's honour. It is rare to find representations of sacrifice later, such as this example of the nineteen dynasty. Burnt-sacrifice was a foreign importation, and is only known in picture at Tell el-Amarna (eighteenth dynasty), and in description at the Ramessium (twentieth dynasty).

(b) Offering is the most usual religious subject. The offerings are heaped together on a mat, a slab on the ground, or a pillar-table; in this case a mat is represented, bound with thread at the middle and the two ends, a form which is common in the third dynasty or earlier. Upon the mat is a layer of round thin cakes, much like the modern flat bread, with two circles of seeds stuck in each. A layer of jointed of meat (1) follows; these are skillfully arranged, so that it scarcely suggests an animal upon which are three plucked geese. The whole is covered with a bundle of lotus flowers and a bunch
of grapes. The queen is pouring out a drink-offering from a small spotted vase in the right hand. Such drink-offerings were of a great variety of wines and beers, as also milk, and water. In her left hand she holds an incense-burner. The Egyptians, incense on an altar, but always in a metal censer held in the hand. It was a long metal rod, with a hand holding a cup for the burning incense at one end, and a hawk’s head at the other. In a temple it was a pan or box in which the pellets of incense were kept ready for burning. The beat requisite to light it was obtained by using a hot saucer of pottery placed in the cup, on which the resin fused. When the incense was burned, the saucer was removed and thrown away, and thus no cleaning was required for the metal cup.

5. Furniture.—The main object in a temple was the sacred boat of the god, one of the best examples of which is shown on p. 896. The boat was a model intended to be carried on the shoulders of the priests; it rested, therefore, on two long poles, and when stationary was placed upon a square stand, so as to allow of the priests taking their station beneath the poles (see ARCHITECTURE [Egypt], where the boat and its significance are described). This boat was probably made of wood, plated over with sheets of electrum or gold. The extent to which gold was used is hardly credible to us, who see only a few examples of gold or silver used for gilt. Even in the 11th cent. the Countess of Sicily had the mast of her ship covered with pure gold; and the Egyptian often describes large objects as covered with gold, which was usually of considerable thickness. The reliefs were usually worked in hard stucco and then thickly gilded and burnished. The art of high burnishing upon a stucco base was kept up till Roman times. The sets of vases for the purification ceremonies and further libations of wine were kept on wooden stands, as shown below the boat. At the side of them is a stand with water jars, covered with lotus flowers, and with bunches of grapes placed below it. On another stand at the extreme left is a figure of the king kneeling, offering a large ankh, or sign of life; this is crowned with flowers, and has convolvulus and vine growing up beneath it. Another stand at the extreme right has a figure of the priestess standing and worshipping flowers. A main part of the religious art was spent on these statuettes of the king making a great variety of offerings. Unhappily all this wealth of Egyptian never burned in an altars and remained to give reality to the unimaginable pictures of the temple riches shown upon the walls.

W. M. Flinders Petrie
advent of the Greek colonists, after the decline of the Mycenean sway, early in the first millennium B.C., almost stifled the local art of southern Italy and Sicily, which may be considered, after the 8th cent., simply as a prolongation of the Mycenean civilization. (Corneto, 4.)

3. An analogue of development of local handiwork appears in the rock-cut tombs of Sardinia. Only here it is Phoenicia, not Greece, whose colonies modify the old order, at about the same period. But the Phoenicians, in adaptation of architecture, the "nuraghe," curious buildings of bee-hive shape, made of roughly hewn stones, sometimes well fortified and of considerable size, with internal rooms and winding passages in several stories. The date of these buildings has never been sufficiently cleared up, nor is it decided whether they served as dwellings or tombs, or perhaps for both uses. It is, however, undoubtedly, that the older "nuraghe" must be placed rather early in the first millennium B.C.

4. In northern and central Italy the "terramare" disappear towards the beginning of the first millennium B.C., and are replaced by villages of rude huts, or more regular rectangular chambers. We know the civilization of this period merely by its cemeteries, the first of which was excavated at Villanova near Bologna, and has given its name to this civilization. The ashes are buried in clay vases, as in the case of the "nuraghe," but the graves are ornamented with their incised geometric ornaments, far more elaborate than the rude pots of the "terramare"; they also contain, besides smaller vases, a number of weapons, implements, and ornaments, in clay, or stone, and the latter are shaped like the "nuraghe." But in the older Villanova period, there is not yet any trace of writing, or of stone buildings, or of Greek vases. These appear among the natives a few generations after the "terramare," and mark the beginning of the first really developed civilization in Italy, the Etruscan.

5. The origin of the Etruscans is shrouded in mystery. Following the tradition almost universally accepted by ancient authors and corroborated by the evidence of the evidence, we find that these latter have reached Italy by sea, about the 9th cent. B.C., subduing the native races of central Italy, especially the Umbrians, and founding a number of their towns, whose confederacy formed a powerful State. An entirely new era begins with them. The villages of rude huts are superseded by strongholds on the hills, protected by strong walls of polygonal or isodomic masonry, which are still standing on many Etruscan sites. These mighty walls of Cere, Coso, Vetulonia, Volterra, Perugia, and other towns, belong to different periods, the oldest dating back as far as the 8th-7th cent. B.C. They have been constantly repaired in the course of the ages, and at a later date have occasionally, as at Volterra and Perugia, been provided with vaulted gates adorned with sculptured heads and the figures of tutelary divinities in relief. Within these walls, the houses were built mostly of wood, and have therefore perished. But the tombs give us a faithful representation of them. During the first century or two of Etruscan sway in central Italy, the ancient shape of the round hut still forms the prototype; but not of the "nuraghe." But, like the Mycenean "bee-hive" tombs, whose influence they seem to show, these Etruscan sepulchres are spacious cupolas of stone, provided, not for the ashes of a peasant, like the rude Villanova (Umbrian) ossuaries, but for families of wealthy warriors and merchants, whose corpses were buried in state, unmourned and surrounded by all they possessed in the world. In this connection it is interesting to note, that these cupolas are built of huge stones or cut out of the living rock, the most famous of the former being the Tomba Regolini Galsari near Cere, whose astonishing wealth of gold jewellery, precious vases and implements, is in the Vatican Museum. A fine example of the rock-hewn tomb was discovered near Veii; it is adorned with the oldest frescoes we know in Italy. These tombs are doubtless important. They are the earliest monuments that we can prove by their inscriptions to be undoubtedly Etruscan; by the Egyptian and Phoenician and Greek objects found in them, their date is fixed in the 8th-7th cent. B.C. The rectangular or rectangular chambers, with their incised ornaments, or of wood or sun-baked brick, and a slightly younger type (7th-6th cent.) introduces us to the more mansions. These latter tombs are always cut into the rock, and their central hall and side-rooms, with beautiful doorways, with couches and chairs hewn out of the rock, give a vivid conception of what an elegant Etruscan dwelling of the time looked like. Nay, in some cases, as for instance in the Tomb of Quinto Fobo, near the same period, three storied houses of the simplest, and the imitations of wooden houses in stone. One detail—the doorways narrowing towards the top and surrounded by a rectangular moulding—all these tombs without sculpture and decoration inside, except for occasional low reliefs upon the doors or the ceiling (chiefly at Corneto, the reliefs showing animals of the first or the second millennium, and some funeral statues in a tomb at Vetulonia); but the mound or tumulus which covers the grave usually bears either an sculptured ornament or a stone stela with the image of the deceased in relief (the most famous is that of "the banquet," mostly accompanied by an inscription. Lions carved in stone often guard the entrance to the tomb. The walls of the sepulchral chambers are often gaily painted, and these frescoes demonstrate the development of Etruscan art, from the 6th to the 2nd cent. B.C. They and the sculptured sarcophagi also show the preponderant influence of Greek art over Etruscan; for the commercial relations between the two nations were continuous, and the Etruscans, who do not seem to have possessed a strong individual artistic genius, not only bought Greek vases and bronzes by the thousand, so that no tomb, however poor, is without its Greek objects, but also copied these imported works, more or less freely and successfully. Thus, the frescoes of the oldest painted tomb of Veii, mentioned above, show the meaning—relations between the two species in sculpture, and human beings which the Greek vase-painters of the 7th cent., especially in Corinth, had borrowed from the contemporary carpets and tapestries. The 6th cent. frescoes of Cere and Perugia show an occasional marine monster and once a mythological scene, conceived in the style of Ionic art. The same art, debased by provincial Etruscan painters, appears
upon some terra-cotta slabs with paintings of sacrificial and funeral rites, which adorned the walls of tombs. Occasionally, towards the end of the 6th cent., the banquetts (the Elysian banquetts of the happy dead) are replaced by frescoes showing funeral rites, dances, mourners, games, and other equally important funerary customs. They are rendered in a debased Greek style. These frescoes, especially those of a tomb at Chiusi, are full of interesting details—wrestlers and acrobats, dwarfs and tame animals. Early in the 5th cent. Attic vases, with Etruscan landscapes, are in evidence. These vases are influenced, we frescoes take more to religious subjects. A tomb of Corneto shows us the trembling soul in Hades, amid the terrible images of the famous sinners of Greek mythology, bearing upon their eternal torments. The kinder artist of a tomb of Orvieto lets the dead partake of a sumptuous banquet in the very palace of Hades, who presides with Persephone, before a sideboard laden with golden vessels. The gods and heroes are Greek, but African landscapes and partly Etruscan costumes and buildings are recognized in their Etruscan travesty; the style is wholly Greek, and it is only in certain ritual details, in the winged Fates (Lasca) who call the dead to judgment, figures of their mistresses of Charon (=Charon), the infernal boatman, that the Etruscan artists have abandoned their slavish imitation of Hellenic imagery.

The same dependence is apparent in the sarcophagi which contain the corpses, where these are not simply stretched upon rock-hewn benches. In the 6th cent., some terra-cotta sarcophagi from Core bear the figures of the dead man and his wife reclining together on their couch at dinner, according to the usual custom, until in a style influenced by the Ionic. A century later, upon a stone sarcophagus from the Chiusi district (in the Florentine Museum), we see the same couple, Attic in style, the wife sitting at the feet of her recumbent husband, as was the custom for a proper Attic lady. The old Umbrian custom of burning the dead, which had been in abeyance, though it never disappeared entirely, during the first five centuries of Etruscan sway, again springs up with Etruscan taste; and with the canvas of the 4th cent., the long sarcophagi for the outstretched corpse are replaced by short square urns sufficiently large for a handful of ashes. And while the figures reclining upon these urns are merely copies of the beautiful terra-cotta statues of provincial work, the reliefs which adorn the front copy Attic paintings, of which little sketches must have been brought to Etruria in great numbers; this explains the contrast between the fine composition and the rough execution, so noticeable in the reliefs of these urns, and also the preference for Greek mythological scenes, some of them local Attic myths, which neither the Etruscan artist nor his clients can have understood. The painted tombs grow very rare in this late period, but the shape and disposition of the chambers remain almost unchanged, as is proved by two excellent examples—the Tomb of the Volatini near Perugia, with its fine architectural moldings and good stone urns, and the Tomba dei Rilievi at Core, decorated with brightly painted reliefs of various implements and weapons. Both these tombs have Roman inscriptions and figures, in which local Etruscan taste and influence is combined, and belong to the last period of Etruscan art—the 2nd-1st cent. B.C. After this period, the Etruscan civilization was entirely flooded by the Roman.

Art and Architecture (Etruscan and Early Italic)

have been impossible to divine their shape without the architectural analogies of the rock-hewn tombs, of which some, at Castel d'Asso, near Viterbo, show fine façades, with columns crowned by sculptured pediments. A couple of cinerary urns in the shape of small temples or chapels are equally important; last and most curious are the numerous terra-cotta figures and reliefs which decorated these wooden temples. The oldest, from Core, Falerii, and Conca (the two latter places are in the lower valley of the Tiber opposite to Latium), was artistically under the sway of the higher Etruscan civilization, date back as far as the 6th century. They are antefixes (outer roof-tiles) decorated with reliefs of the Attic influence of Herakles and the cow-horned Io, groups of dancing maenads and satyrs—all in the same Ionic style which we noted in the frescoes. And the same fashion is apparent in the terra-cotta slabs with friezes of warriors and chariots, of animals and hunters, of banquetts, or merely of fine palmetto and lotus chains; these slabs protected the wooden rafters, the upper line of the wooden wall, against the rain. The decorative terra-cottas follow the tree-trunk or the column with leafy traceries; they are numerous and whole in Etruria to the 6th to the 3rd century. In the latter half of this period, pediment sculptures in terra-cotta are added to the antefixes and friezes. Some very fine 4th cent. vases and imitations of them in the Faliscan region (now in the Villa di Papa Giulio in Rome). The death of Amphiaros and the flight of Adrastos before Thebes are given in a pediment from Telamone near Fies, with very numerous figures; we find this style, too, in the pediments from Luni, also in Florence, appear to render the myth of the Niobids, in their large, admirably modelled figures. Altogether, these terra-cottas are the finest works of art that Etruria has produced, as a proof of their style, the bright, coloured, must have produced a rather gaudy effect. The description of the Etruscan temple by Vitruvius helps us also. But our materials for actually re-constructing these buildings in their original shape are too scanty as yet.

In the minor arts, as in painting, the influence of Greece was predominant. Among the very numerous bronze statuettes found in Etruscan tombs it is often difficult to distinguish between imported Greek originals and local imitations. The same doubt obtains concerning bronze statues like the Capitoline wolf. But it would be going too far to attribute only the inferior work to Etruscan artists; they seem to have been largely dependent upon Greece for inspiration, but their skill was nevertheless recognized in Athens itself, where Etruscan bronzes adorned the houses of the richest patrons of art (Phecokrates op. A., xv. 700 C.; Kritias, i. b. 286). Etruscan bronzes were famous in Greece, and, we may say, justly famous, judging by a number of really fine works of a greater realism than is usual in Greece. Here again the Ionic style is paramount in the only work—the statuettes, vases, and implements of the 7th-6th centuries. The first merchants who traded with Etruria hailed from the Ionic colonies and the Ionian islands. The art of the Phoenicians explains the presence of numerous Syrian and Phoenician objects—vases, ornaments,
and scarabs—in the oldest Etruscan tombs, since no direct connexion between Phoenicia and Etruria has been proved. In the later period, Attic influence dominates, and is especially noticeable in the very numerous engraved mirrors and circular cists (toilet boxes) of bronze, some of them very beautiful, which are most nearly akin, in the sense of the relation to the later cinerary urns, though superior to these. Etruscan jewellery, at least in its older stages, is a great deal more independent. In fact, Greece offers nothing comparable, in technical skill and delicacy, to the workmanship and ornamental detail. The microscopic granulations, of the bracelets, necklaces, ear-rings, and fibules of the oldest Etruscan tombs. The more recent ornaments show a stronger Hellenic influence, and a less perfect workmanship. Ceramic art is always more or less subservient to the more valuable metal vases. Thus, the shapes of Etruscan clay vessels reproduce bronze models, and as these models are more or less copied from Greek originals, the same imitation is apparent in the cheaper terra-cotta ware. But the technique of these vases is more independent; they are fashioned in black clay, called bucchero, adorned with incised or relief ornament, and the course of its development is not infrequent in Greece, and again more especially in the Ionic colonies of Asia Minor, yet its predominance in Etruria is so great that only a slight Greek influence upon a strong local industry may here be granted. Painted vases are rare in Etruria, and are no more than poor copies of Ionic, Corinthian, or Attic originals; but bucchero may be claimed as mainly a native achievement.

Etruscan art and science were paramount during the earlier centuries of Roman history, throughout the whole of Latium, and even far south as Campania. When the Greek colonies of Magna Graecia grew strong enough to hold their own, and the Etruscans were driven from Campania, towards the end of the 5th. c. B.C., their intellectual sway over Rome diminished steadily as the Greek towns in the Apulian coast and the leading cities of the Etruscan cities had been subjected to Rome; their peculiar civilisation dwindled and disappeared rapidly, and it would be difficult to find a characteristic Etruscan work of art later than the 1st cent. B.C.

V. VILLANOVAN UMBRIAN CIVILIZATION: a series of articles by local archaeologists, chiefly Gozzadini, the discoveries having been made by Montelius, Pati, cit. ; J. Martha, Art etrusque, Paris, 1889, p. 311, where this civilization is chiefly treated for the Etruscans (erroneously, in the opinion of the present writer).

G. KARO.

ART (Greek and Roman).—The history of Greek art, in relation to religion, passes through phases which correspond more or less to its three periods of rise, perfection, and decadence. During the first period, art is subjected to religious influences, and frequently tampered by religious conservatism; but later the artist's co-operation, art drawing its highest inspiration from religion, and itself contributing to the dignity of religious ideals, so that it was said of the Olympian gods of Phidias, 'eius palmarum adnecessit aliquid etiam recepta religiis videtur'; during the third, religion supplies numerous themes to the artist; but these often tend to be regarded, mainly or in part, as affording an opportunity for the skill in characterization or execution; and even when this is not the case, he often repeats the conventions of earlier artists rather than creates a new embodiment of a religious idea. It follows that the history of art in Greece is, throughout, a history of the history of religious thought—more so, perhaps, than in the case of any other nation, but the relations of the two vary considerably at different periods.

1. Pre-Hellenic Art. It is convenient to say something of the art which preceded it in Greek lands, and which is conveniently named Αρχαίος, so as to include Crete and the Archipelago, as well as the mainland of Greece. Our knowledge of the art (g.v.) is gained almost entirely from the remains of early art in these regions. The chief branches of this art consist of gem-cutting, the art of the gold and silver-smith; painting on terra-cotta coffins and vases, and in fresco on the walls of houses and palaces; and sculpture, or rather modelling in terra-cotta and other materials, including life-sized coloured reliefs in γατσο δύρο. Early Αρχαίος art in all these branches shows a strong and characteristic native development, though it owes something also to foreign influences, notably to that of Egypt. It is marked by much naturalism in detail, especially in plant and animal forms, together with an imperfection especially in the representation of the human figure, which has an unnaturally slim waist and elongated limbs. The article Αρχαίος RELIGION shows what subjects are treated in the art of the time. We find representations of airships and altars, and of animate symbols of worship, such as the double axe and the horns of consecration, and an almost realistic rendering of landscape in the representations of sacred mountains and trees. Grotesque animal forms and monstrous combinations are a favourite subject, especially on gems. We also find figures which are probably to be regarded as representations of divinities, though the skill of the artist is not sufficient to indicate any difference between these and human figures, except by signs or attributes. Rustically-fashioned images of terra-cotta, which are almost certainly to be regarded as figures of deities, are found in Crete, and are also common at Mycenae and elsewhere in Greece.

2. The 'Dark Ages.' Art in Homer. Between this early Αρχαίος art and the rise of the art which may properly be called Hellenic art, that interval of time, except in a limited degree, to trace any direct connexion between the two. The two chief qualities of the earlier work are beauty of decorative design and a close observation of nature, with representations of units. In both these respects its facile and even decadent
quality, in its later examples, offers the strongest contrast to the "unchal" but promising beginning of Hellenic art. Without discussing the complicated question of the racial changes that had taken place in the interval, we may admit that the innate artistic genius, of which we see the first fruits in early art, was for a time dormant, and that the rise and earlier stages of the development of early art in Crete and the "_Angean islands" go back to at least the third millennium before our era, and that the flourishing period of Cretan art ends with the destruction of the palace at Knossos about B.C. 1400, though at Mycenae and elsewhere on the mainland of Greece a kindred art survived for two more centuries in vigorous condition, and considerably longer in a decadent stage. The rise of a strong and independent Hellenic art cannot be dated earlier than about the 7th cent. B.C. The five centuries or so which intervened are sometimes called the "dark ages" of Greek art, in which, owing, chiefly, to the old civilizations being overwhelmed, and the country relapsed for a time into comparative barbarism, so far as the external surroundings of life were concerned. It was during this time that the Homeric vases, the vase-paintings, the frescoes of the "_figures" of which there is no certain reference to any work of sculpture in the round, whether representing human personages or gods, with the exception of a doubtful passage in _Iliad_, vi. 92 and 363, where the Trojan matrons place a robe upon the knees of each of an elaborate shield, whereas authorities regard this as implying the existence of a seated statue; if the expression be not a purely metaphorical one, it is the only example of any such thing in the Homeric poems. Though statues are often mentioned, no images of the gods are referred to. Art in Homer is purely decorative, and is not distinctly Hellenic; many of the objects of finest workmanship are attributed to the Phoenicians. When scenes of an elaborate nature are described, as on the shield of Achilles, there are none of religious significance among them, though Ares and Athena are spoken of as appearing in a battle scene. Here, however, it is the gods themselves that are the subject of, rather than artistic representations of them.

3. Beginnings of sculpture.—Many primitive images of the gods were attributed to the Heroic age. They had not been derived from Phoenician origins. Odyssseus and Diommed from Troy—a tale told in the "Little Iliad," of about the 7th cent. B.C. Some of these may have been survivals from pre-Hellenic times; others were probably wrongly assigned to so early a date. Some of them were attributed to Dedalus, an artist whose historical existence is doubtful, but whose reputed attainments summarize the sudden advance in the art of sculpture which seems to have taken place about B.C. 600. Shortly after this date we find several sculptors, or groups of sculptors, employed to make images of the gods, sometimes, apparently, as a new departure, sometimes to replace a primitive or animistic object of worship. Such families of artists existed in Chios (Melas, Micciades, Archermus) as workers of marble, and in Samos (Rhous, Theodoreus, etc.) as workers in bronze. In the Peloponnesian, many statues of the gods were taken place about B.C. 400 and Scyllis, Cretan "_Dedalla_," and by their pupils; the "unshaped plank" which had served as the symbol of the goddess Hera at Samos was replaced by an image made by Smiles of _Egina_; the image of Athena at Pergamus was replaced by an image made by Calisto of Chios; the image of Apollo at Delphi by an image made by Pheidias; the image of Athena at Olympia by an image made by Callos; the image of Apollo at Bassae by an image made by Calisseus. And among the sculptors of the time variously known as Angelon, said to be pupils of Diponon and Scyllis; and probably most of the other early images of the gods in human form were made in this period. From this time on we hear of numerous statues of the gods, made by almost all the chief sculptors; some of these were intended to replace more primitive images of objects of worship, others merely for, or to decorate a temple. In the former case the artist would almost certainly realize (in bronze, marble, wood, etc.) the god in its nature, as represented, not to depart too far from the accepted type. An example is the Black Demeter of Phigalia, whose primitive image, with a horse's head, had been destroyed; the sculptor of the god in its nature, and to have replaced it with remarkable fidelity, with the help of copies, and even of a vision. This is an extreme instance, but in many other cases the artists had to satisfy the religious scruples of priests and others, as well as the growing desire for a more artistic representation of the deity. In the case of dedicated statues he would naturally have a freer hand. Here the limitations would be imposed by his art. We have many statues of early Greek workmanship preserved, and these show that sculpture was confined to a small number of clearly marked types, which served for representations alike of deities and of human beings. The types represented a formally draped seated figure, a nude standing male figure, or a draped standing female figure. All of these were used alike for figures of the dead set up over graves, for figures of worshippers dedicated in sacred places, for figure of the gods in the temple, which the sculptor had devoted his skill to perfecting these types, to getting more ready for a natural expression in the face, to improving the shape of limbs and hands and feet, to observing the correct proportions of the bones and muscles in the body. He was too much taken up with these matters to give much attention to the representation of character or individuality, much less of a worthy ideal of the gods, though it was by his work that the tradition was being built up which enabled the masters of the 5th cent. to progress in this direction. Some other early types, however, offered an opportunity for a more direct and simple expression of divine energy. Sometimes statues were shown by wings, as if borrowed from decorative Oriental models, and by a position which looks like kneeling, but is meant to represent rapid running or flight; sometimes the god or goddess was shown, not rapidly, with an attribute of power— if Zeus, a thunderbolt; if Poseidon, a trident; if Athena, a spear—in the raised right hand. Such purely external expressions of divine activity seem often to have been derived from primitive states of things which were incapable of expressing it in any subtler manner; and although some examples of this type were made, usually to carry on a religious tradition, even in the 5th cent., it gradually became obsolete as the artist acquired facility in expressing the character and power of the god under an intellectual and moral rather than a merely physical aspect. When this change had come about, the relations of art and religion were revolutionized. The sculptor no longer occupied himself with the technical problem of providing a statue suitable in age, sex, and attributes to the requirements prescribed by religion, but was himself able to contribute something to the ideal conception of the deity.

4. Decorative and minor arts.—So far we have considered only sculpture in the round, having as its province the making of independent statues. Decorative and minor works are in wood, stone, marble, terra-cotta, bronze, or other metals. So far as their religious signifi-
cance is concerned, this group of objects goes with painting, especially vase-painting; it deals with the subjects, and treats them in the same manner. This decorative art affords a link, such as is missing in the case of sculpture, with the earlier periods; for it continued to be practised to a large extent by artists of the Mycenaean and Hellenic art; it transmitted some inherited types, and it borrowed many others from Oriental or other foreign sources. It is also of considerable importance for the study of religion and mythology, for many of the themes to which it referred are borrowed from it not merely to represent figures of the gods and heroes, but to record or to illustrate stories about them, or scenes connected with their ritual. It is to be observed that descriptions of decorative reliefs in the Homeric poems—notably that of the shield of Achilles, which, even if later than the rest of the Iliad, is earlier in date than the rise of Hellenic art—do not refer to mythological scenes, but to incidents of daily life. On the other hand, the Homeric 'shield of Hercules' has a whole series of illustrations of mythical tales, such as the battle of Lapiths and Centaurs and the flight of Perseus from the Gorgous. In this respect it resembles actual works of decorative art, which are often recorded for us by ancient writers, such as the throne made by Bathycles of Magnesia for the Apollo at Amycle, or the chest of the Corinthian tyrant Cypselus in their example, when the subject was at Olympia. And the subjects recorded both on the imaginary and on the actual reliefs are just the same as we constantly find upon extant early works of decorative art—both reliefs in marble or stone or bronze or terra-cotta, and paintings upon vases. It appears, therefore, that, while the art referred to in the Homeric poems has nothing Hellenic about it except the poet's imagination, the references to works of art in Homeric poems and in later literature are closely in touch with the actual development of art in Greece.

The relation of art to popular belief and to literature, in its treatment of religious or rather of mythological subjects, is somewhat complicated. The decorative artist was extremely conservative and imitative in the use of his available répertoire of groups and figures. Free invention was hardly ever resorted to, except in cases where no already familiar conventional form was available. For example, the judgment of Paris seems to offer a theme for imagination, and we find it so treated on later vases; but in early art it always takes the form of a procession, with the figures more or less differentiated, and this form is borrowed almost without modification from the procession of dancing women, headed by a musician, which is a common subject on the most primitive vases. Such mechanical repetitions may appear at first sight to preclude any strong influence of art on mythology; but in some ways their cumulative effect was greater than any that could have been due to originality of treatment, for it became almost impossible for people to figure these scenes or events to themselves in any other way than that conventionally accepted. And, moreover, the same conditions tended towards the assimilation and even identification of legends originally distinct, and so facilitated the systematization of Greek mythology. Again, the tendency of early Greek art to adopt rather than to invent led to many almost fortuitous identifications that have had a great influence on our notion of the beliefs of the men who lived in Homer's day, and on later belief. Thus the gorgon, the sirens, the sphinx, and other such monsters probably had no distinctive form in the eyes of those who first told tales about them; certainly no such form is indicated in the Homeric poems. But the early decorative artists borrowed from the East many monstrous forms of winged and human-headed birds or beasts and birds which had probably no particular significance to those who first told tales about them, and treated them in the same manner. The fact that both these fantastic figures appear as symbols of death upon tombstones in Greece, in Lycia, and possibly elsewhere also, has further complicated the influence of the borrowed type, so that, in these cases at least, we may now almost impossible to disentangle the contributions of art and of myth to the common conception.

5. Vase-painting.—The more technical side of the early development of decoration in Greece concerns us here mainly as it affects the gradual acquisition of greater power of expression. In this matter sculpture in relief has much the same history as sculpture in the round, so far as the execution of individual figures is concerned. Vase-painting, on the other hand, has an independent development. It is impossible here even to sketch the development of early vase-painting in Greece; it is possible only to mention those classes of vessels which are of the greatest importance, and to indicate the chief phases in the development of mythological scenes. (1) The geometrical class, which succeeds the Mycenaean in Greece, frequently depicts scenes from actual life; this is particularly true of the so-called Attic Geometric, which is characterized by the use of monochrome compositions, in which we see elaborate funeral processions, scenes of seafaring and combat, and classic dances; but few, if any, of these can be given any mythological significance. (2) The geometric period is succeeded by that of Oriental influence in various parts of the Greek world. On the coasts and islands of Asia Minor, especially in Ionia, Samos, and Rhodes, we find various classes of vessels, which have certain characteristics in common, as well as clearly-marked local variations, and about the same time we find a similar development in some of the chief manufacturing centres in continental Greece, mainly at Corinth and Chalcis; and colonies such as Daphne and Naucratis in Egypt, and Cyrene in Libya, have each their characteristic ware. Athens also has its own pottery at this time, in succession to the Dipylon ware. The technical development varies considerably, but in all alike there was a general tendency to simplify the colour of the ground and of the pigment in which the figures are drawn. As a rule, in earlier examples the ground is of a buff or brownish colour, sometimes almost white, and the pigment is of a dark brown colour, varying from red to dull black. In late examples, and, above all, in Attic pottery, the ground tends to assume the beautiful reddish terra-cotta colour which is characteristic of Greek vases of the best period, and the pigment to take the form of lustrous black varnish. The monstrous forms, many of them winged, and the other beasts borrowed from Oriental fabrics, tend gradually to be replaced by scenes of some mythological meaning; or, if retained, to acquire a mythological significance; and the human figure, at first introduced as a decorative type like the rest, gradually asserts its supremacy in interest. The pigment also tends to take the representation of the figures on painted vases, so to speak, stereotyped along certain lines, the same figures or compositions being repeated again and again with slight variations to illustrate the same myth, or adapted to the rendering of another myth that bears some relation to it. It is in this way the vase-painter contributed in no small degree to the uniformity and systematization of mythology. (3) About the middle of the 6th century B.C., the Attic Protocorinthian, with the reddish clay of the Attic ceramics, surpassed all rivals. This is the age of what is called black-figured
ware, the figures being drawn in black silhouette, and details added in incised lines, with touches of purple or white. We have many vases signed by potters of this period, as well as of the next, which begins in the latter part of the 6th cent., and continues until the date of the Persian wars, and a little later. (4) This next period, which overlaps the preceding, is known as the early red-figured style, the same pigments being used, but the figures being reserved in the terra-cotta colour of the pierced clay, and rendered black with the common black varnish. In this age we find greater imagination and freedom of drawing; but the old traditions are still closely adhered to, and the advance is in the details rather than in the general conception. We find at this time the most perfect decorative treatment, and the utmost precision of line drawing. As we approach the middle of the 5th cent., we find greater dignity and severity of treatment, probably owing to the influence of the great fresco painters, above all of Polygnotus, who came to Athens and decorated the 'Painted Stoa,' and other buildings about this time.

In Athens the work of Polygnotus consisted principally of historical episodes of the battle of Marathon; at Delphi his most famous works were the 'Fall of Troy' and the 'Land of the Dead,' and by these he probably exercised great influence on his contemporaries and successors. He was mainly fond of depicting religious subjects. His paintings have not been preserved, but from imitations of them on vases and from descriptions of ancient writers, we can infer that they consisted of simply-shaped figures arranged without perspective, and probably conventional in colouring. But the grandeur and nobility of his conception probably contributed in no small degree to the ideals of Greek art in the 5th century. 6. Sculpture of the 5th cent.—The development of sculpture was at this time very rapid. The great struggle between Greece and Persia led to a new consciousness of Hellenic unity and a new pride in the superiority of Greek over barbarian; and at the same time, the spoils of victory and the offerings to the gods in thanksgiving for the great deliverance afforded both opportunities and themes for the highest energies of the artists. The full effect of these influences is nowhere better illustrated than in the sculpture of the 5th cent. It was a period of transition, of which they were combined, in their most splendid manifestations, with the glory of Athens, which, taking the lead at the time of the Persian wars, became under Cimon and Pericles the example and summa of the art of Greece, and the immediate predecessors of Phidias, though they produced works which were admired by posterity, seem still to have been mainly occupied with the study of the type and the perfection of technique and mastery over material. A statue like the 'Discobolus' of Myron is characteristic of this age; and however great the skill of the artist in dealing with a difficult subject, it is to be noted that he does not go beyond the expression of physical grace to that of character or emotion. Even a master-piece such as the 'Charioteer of Delphi' shows the same restriction of aim. Pythagoras, to whom it is probably to be attributed, was noted also for the expression of pain in his handling of Lycus. Even here, as in the wounded warriors of Agina, it was probably the physical rather than the mental or spiritual aspect of the subject that was rendered. To Calinus, with his nameless grace, we might perhaps look for something more; but we have no certain work of his left, and we are not justified in assuming that he went beyond his contemporaries.

It was reserved for Phidias to fill the forms that had been suggested, and to supply them with an inner life and meaning. His colossal gold and ivory statues have not survived, but we have some copies of them, and probably of others of his statues, and the descriptions of ancient writers, and we can also see the reflection of his influence in all contemporary and later work. From all this evidence we can infer that his statues of the gods did not merely represent the outline of the human form in face and figure, but embodied all that was noblest in the Hellenic conception of the gods. He is even said to have gone beyond this, and to have added somewhat to the received canon of religion in his statue of Zeus, which represented the subject that 'he who is heavy-laden in soul, who has experienced many misfortunes and sorrows in his life, and from whose secret sleep has fled, even he, I think, if he stood before this image, would forget all the calamities and troubles that befall in human life' (Dio Chrys. Or. xii. 51, tr. Adam). The Zeus at Olympia was the father of gods and men, full of power and benignity, the common god of the Hellenes. The Athene Parthenos at Athens represented the more intellectual conception of the goddess of Athens, the embodiment of the artistic and literary genius of the people. Statues like these doublets transcended the ordinary bias of the time, and were no mere allegories or personifications; they represented the religious ideals of the whole people, and contributed in no small degree to purity and enable these ideals. This influence of art upon religion was just at the time accepted views about the gods and the tales that were told about them were being questioned, and Phidias and Pericles were in sympathy with the most enlightened views; it can hardly be doubted that both artist and statesman had it as their aim to represent the gods to the people as they should be worshipped. From the sculpture that decorated the temples of this period, above all from the sculpture of the Parthenon, we can learn the beauty and nobility of type and the unrivalled skill in execution that supplied the means whereby such an artist as Phidias could express his ideas.

In the latter part of the 5th cent. B.C. there were several other sculptors who followed more or less closely the tradition of Phidias, and made statues of the gods, which, like his work, had a great influence on current religious conceptions. Alcamenes, who, after the death of Pericles, contributed to the sculptor most employed upon official commissions in Athens, made famous statues of Hephaestus and Dionysus, of Hera and Athene; Agoracritus, the maker of the Nemesis at Rhamnus. Polyclitus, the head of the Attic school, is the individual genius of his time in the study of the athletic type, and his system of proportions or 'canon' was embodied in a statue, 'The Doryphorus' or spear-bearer, as well as in a theoretical treatise. He also made a great gold and ivory statue of Hera for the Argive Heraea, which embodied the Greek ideal of the goddess, and was placed, by some who had seen it, beside the Zeus and Athene of Phidias. Cresilas, a Cretan sculptor who probably came under the influence of both Phidias and Polyclitus, was famous for a statue of a wounded man, and also of a wounded Amazon; he also made the portrait of Pericles, of which copies survive, and which is a typical example of the early portraiture of the time. This subject is the ideal statesman rather than as an individual. In all these works we can see the character of the art of the 5th cent., which expressed, as ancient critics tell us, 'fides rather than the passion and heros, rather than varying passions and emotions.

7. The 4th cent.—The art of the 4th cent. was less abstract and dignified, more human and individual. If Phidias did something to counteract the growing sensuousness of the earlier period, the sculptors of this time continued the tradition of the 5th, and the works of Praxiteles and Scopas
may in some cases have brought the character of the gods home to men by an intense and vivid realization of their personality; but in making them so human these sculptors may have made them less divine, and have opened the way for successors who regarded even statues of the gods as a mere thing, to be exhibited and admired for their artistic skill. Early in the 4th cent. we find a conspicu-ous example of a tendency of which traces may be seen earlier—that to personification. A group by Copo-krates from the Ephebeion at Olympia—works which exemplify the tendency to represent men in a manner hitherto reserved for the gods.

The great painters of the 4th cent. are known to us only by literary records; and in this case we cannot, as in the case of the sculptors, rely on any assistance from vases. From the descriptions we learn that the painters of this age often chose dramatic or sensational subjects, and their power of rendering individual character and passion was probably comparable with that of the great contemporary sculptors. The greatest of all Greek painters, Apelles, was, like Lysippus, noted for his portrait of Alexander; and he was also fond of allegorical subjects, such as his group of Calymnus, of which a detailed description is left us.

8. Hellenistic art.—In the Hellenistic age Greek art followed the conquests of Alexander to new centres in the East; it is no longer to Athens or Argos or Sicyon, but to Alexandria and Antioch and Pergamos that we look for its most characteristic products. The beginning of the Hellenistic age is dominated by the personality of Alexander. He had changed the relations of East and West, and Greek civilization was soon to have far-reaching influence in western Asia. His career, which might well seem more than human, induced the Greeks to accept the Oriental custom of the delification of the deities, and we see the god in the Hellenistic art in the types of the gods. His head, too, was placed upon coins—an honour hitherto reserved for the gods alone. And his successors, with a less justifiable arrogance, claimed even higher privileges.

Beside such present-day usages, which are the outcome of contemporary flattery—the ancient gods became mere abstractions. Images of them were still made, distinguished for their size—as the ‘Colossus’ of Rhodes—or for their artistic excellence. But the old types and conventions were mostly repeated either in mere repetition or in eclectic imitation. Certain schools, inspired by the dramatic power of Scopas, infused some new life into the old forms, notably the school of Pergamos. On the great altar in that city was a frieze with a representa- tion of the gods and giants, in which both the mythologists and all the technical skill of the sculptors were devoted to a complete extraordinary representation of the crudest of the gods, and the most restless of the heroism. This was done to the grandeur against their wild adversities. But the extra-ordinary dramatic vigour of this work does not hide the fact that it is more or less an artificial crean, not a spontaneous embodiment of the people's belief. While philosophers turned to a more or less abstract and monotheistic conception of the deity, which was out of touch with art, the people often turned to a more direct and intelligible worship, such as that accorded to the ‘Fortune’ of Antioch, embodied in a graceful representation of the city, seated on a rock with a river-god at her feet, which was made by Eutychides, a pupil of Lysippus. The representation of children or of rustic subjects showed a reaction against the artificiality of city life, parallel to the literary de-velopment of the pastoral. Statues of the gods were still made, but were mostly mere repetitions of established types, though occasionally we find examples of great dignity and beauty, such as the Aphrodite of Melos or the colossal works made by Damophon in Messene and Arcadia. In the inadequacy of contemporary art, we find, as often as in the age of decay of mythology, the desire to give back to the genius of the art of the past, even to the manners of early art; in extreme cases this leads to an affected archaistic work which is easily distinguished from that of the early sculptors whom it imitated. All the characters of gods and heroes; and Leochares, who made not only statues of the gods but also a set of portraits of the family of Philip and Alexander in gold and ivory for the Philipian temple at Olympia—works which exemplify the tendency to represent men in a manner hitherto reserved for the gods.
ART (Jewish).

1. The arts in which the ancient Hebrews excelled were poetry and music. There are no remains, whether in literary sources or in the actual results of excavation, to warrant the belief that there was in any period a native Hebrew painting or sculpture. There are extensive stores of Jewish pottery, but the shapes and styles are derived from Phoenician and Egyptian types, and show some Babylonian influence. In the glyptic art, again, there is immense wealth of private and public products, and Phoenician and Hebrew seals are much alike in shape, script, and ornamentation (Benzinger). The Phoenicians, too, excelled in metalworking; and the Hebrews may have early acquired the art of metal-casting, which was skilful adepts in the process of overlaying wood with metal plates. This skill presupposes some aptitude for wood-cutting, but sculpture as such was not one of the arts of the attainment of the Hebrews. It is remarkable how few inscribed stones of Hebrew provenance have thus far been discovered. Religion, which is usually the most powerful aid and stimulant of art, had the very opposite effect in Judaism. The prophetic attack on idolatry carried with it an objection to images, and the representation of any form of animal life was forbidden in the Deutocogage. Thus, on the one hand artistic incapacity, and on the other the pietistic asceticism, treated by Flinders Petrie in Hamburg's D.I. p. 157.

2. Art was held in high esteem in later Jewish opinion. In the Talmud (Rosh Hotosha, 296), art is a branch of wisdom (227b) as distinct from mere handicraft (258b). But the old dislike of animal representations continued. The Jewish coins contain no heads of rulers; here, again, the cause was partly religious. And the same phenomenon of initative recurs. If the Temple of Solomon was treated by Flinders Petrie in Hamburg's D.I. p. 157.
3. In some directions a specific Jewish art was developed. In medieval times the Jews acquired great repute as silk-dyers, as embroiderers, and as masters of the gold- and silver-smith's art. The worship of the synagogue and the home required the use of many objects in which artistic taste could be displayed. The Ark, or receptacle of the scrolls of the Law, the mantles in which the scrolls were wrapped, the &c., and the lampstands with which they were adorned, the lamps for Sabbath and Hanukkah, the cups for the sanctification over the wine, the spice-boxes (mostly of a castellated shape) used at the Habbalat, or separation service, at the close of the Sabbath, the Seder-dishes which were used in the home on the Passover Eve—these are among the most important of the articles which the Jews loved and ornament. Beautiful embroideries were also required as curtains for the Ark. Many fine specimens of all these were exhibited at the Anglo-Jewish Historical Exhibition in 1887, and the Catalogue of that Exhibition contains a valuable source of information. (4) The worship of the synagogue and the home. Artistic writing was an art in which Jews were highly skilled, and in the illumination of initial letters and the painting of marginal ornaments and grotesques, they acquired considerable proficiency. Though there is no specific Jewish art in manuscript illumination, there are original Jewish elements; as Mr. G. Margoliouth well puts it, in the Jewish manuscripts the eye is never permitted to lose itself entirely out of sight. In classifying the Jewish illuminated MSS, Mr. Margoliouth takes first the Bible, with two kinds of illumination, (a) the Massorah in the form of designs, and (b) pictorial and marginal illumination. Of course all these ornaments are confined to codices or Bibles in the form of books; in the form of the scroll (except in the case of the Roll of Esther) the Bible was never illuminated. The Synagogue does not permit the use, in public places, of illuminated MSS; and the home of the Jew is adorned with Hebrew books and MSS. The illuminated rolls were hardly meant for use in Divine worship. The most usual Hebrew book for illumination was the Passover Service, or Haggadah, which is often supplied with miniatures, initials, and full-page pictures. Less common are illuminated Prayer-Books. But all Hebrew books might be illuminated. The Code of Maimonides exists in many beautiful specimens. A very common object for illumination was the Kethibah, or Marriage Contract. It must be added that in recent times many Jewish artists have attained to fame.

Literature.—Besides the works referred to in the course of the preceding article, see: the publications of the Gesellschaft für Sammlung von Kunstgebräuchen des Judenstums (Vienna, 1887); die Haggadah der Gesellschaft zur Erforschung jüdischer Kunstgebräuche (Frankfort, 1904); Die Haggadah von Sarayen, ed. Müller and Schlösser (Vienna, 1893); Ginsburg and Stenzel, dei emblemati e reliqui (Bologna, 1906); S. J. Solomon, 'Art and Judaism' in JQR xiii. 559; G. Margoliouth, 'The Illumination of MS.; and MSS. in JQR i. 115; and D. Kaufmann, Gesammelte Schriften, vol. i., 1908.

I. A. Brahm.

ART (Mithraic).—Oriental monuments of the worship of Mithra are as yet almost entirely unexplored. The beautiful sculptures discovered at Sidon (De Ritter, Collection De Clercq, iv. 'Marbres,' 1906, No. 46 f.) date from the 3rd cent. of our era, and throw considerable light on the nature of the devotees of the Persian god. We must, accordingly, confine ourselves to studying Mithraic art in the Latin-speaking provinces of the Roman Empire, where a very considerable number of its remains have been discovered. In time they range over about two and a half centuries. The most ancient monument, which is now in the British Museum, dates from A.D. 104 (Cumont, Mon. myst. Mithra, No. 65; cf. the letters of Mithras and the last of them belong to the middle of the 4th century. They therefore constitute a group whose limits in time and space are small, and whose character can be clearly defined.

It must be admitted that their artistic merit is much less than their archaeological interest, and that their chief value is not aesthetic but religious. The late epoch in which these works were produced destroys all hope of finding in them the expansion of real creative power or of tracing the stages of an original development. It would, however, be unfair, acting under the impulse of a narrow Atticism, to confound them all in a common depreciation. Some of the groups in high and low relief (for the mosaics and the paintings which have been preserved are so few and so mediocre that they may be disregarded) hold a very honourable rank in the multitude of sculptures which the age of the Emperor has bequeathed.

The bull-slaying Mithra.—The group most frequently reproduced is the image of the bull-slaying Mithra, which invariably stood at the background of the shrines of Mithras, which were, of course, accompanied by dedications and specimens of which are to be found in nearly all the museums. The sacrifice of the bull recalled to the initiated the history of the creation and the promise of a future resurrection. It can be proved (Cumont, op. cit., pp. 448, 545; CIL vi. 30726) that these representations of Mithra, whose sacred type was fixed before the spread of the Persian mysteries into the Latin-speaking world, are replicas of an original work, executed by a sculptor of the school of Pergamos, in imitation of the frieze which adorned the bema of the temple of Athene Nike on the Acropolis (Kekule, Die Reliefs des Tempels der Athena Nike, 1881, pl. vi.). The Asiatic adaptation has merely clothed the Persian god in the half-conventional Ptolemaic costume which was associated with a number of Oriental personages (e.g. Paris, Attis, Pelops, etc.), and has given the face an expression of suffering which makes it difficult to recognize the god of bull-slaying. 'The emotion that pervades the features of Mithras is rendered with almost Skopasian power' (Strong, Rom. Sculp. p. 311).

Certain sculptures discovered at Rome and at Ostia, dating from the beginning of the 2nd cent., still reflect the splendour of that powerful work of Hellenistic art. After an eager pursuit, the god, whose mantle flutters in the wind, has just reached the sinking bull. Placing one knee on its crupper and one foot on one of its hoofs, he leans on it to keep it down, and, grasping it by the nostrils with one hand, with the other he plunges a knife into its side. The vigour of this animated scene shows to advantage the agility and strength of the invincible hero. On the other hand, the suffering of the victim breathing its last gasps, with its limbs contracted in a dying paroxysm, and the strained expression of the face deprived of life, would, in the comeliness of its slayer, throw into relief the pathetic side of this sacred drama, and even to-day arouse in the spectator an emotion which must have been keenly felt by the worshippers.

This work of the Alexandria school, moreover, been affected by the Roman schools of art. In some of it is shown in a more or less felicitous manner the care for details which is characteristic of this school. For instance, the mosaics from Ostia (Cumont, op. cit. p. 79, fig. 67) which dates from the reign of Commodus, and a bas-relief from the Villa Albani (ib. p. 38, fig. 45). The artist has taken delight in multiplying the folds of...
the garments and in rendering more intricate the curls of the hair, merely to show his skill in overcoming the difficulties which he himself had created. A small piece of sculpture discovered at Aquileia (ib. in. i. p. 148, pl. 112) is even more1 different. It is generally agreed that under the guidance of a ‘bewildering cleverness of technique’. The delicately carved figures are almost completely detached from their massive block base, to which they are connected only by very slender supports. It is, however, in which the artist displays his skill in producing in a brittle substance the same effects as the chaser obtains in metal. But these comparatively perfect works are rare even in Italy, and it must be acknowledged that the great majority of these remains are of discouraging mediocrity, which becomes more and more widespread towards the 4th century.

The Dadophor,—The group of the bull-slaying Mithra is almost always flanked by two torch-bearers, or dadophori, who were called Cauzi and Canopus. Dressed in the same Oriental garb as Mithra, one of them holds an uplifted, and the other an inturned, torch; they doubtless personify the two proteuomenei, at the origin of these two youths can be traced back, like that of the bull-slaying god, to an unknown sculptor of the Hellenistic age, who had drawn his inspiration from the two representations of the Persian, or, more probably, the Phrygian dress, and the way in which he has been able to emphasize the different emotions of hope and sadness depicted on the faces of the two youths who are mutually contrasted. The nature of the two objects with which we possess of this divine pair consists of two statues found near the Tiber, one of which has been taken to the British Museum, while the other is in the Vatican. They certainly date from the time of Hadrian (ib. 27 and pl. lii.).

The Mithraic Kronos.—The origin of the subjects just mentioned is to be found in ancient Greek art, but there is another Mithraic work which is certainly derived from an Oriental archetype. It is the lion-headed god, whose body is embraced by a serpent, and who personifies Eternity—the Zveh Aharana of the Persians (see art. MITHRAISM), to whom the adherents of the sect used to give the Greek name Kronos, or the Latin Saturnus. The best specimen of this type is in the Vatican (Cumont, op. cit. 80, fig. 68). Like the majority of his compurrs, this animal-headed monster is an exotic creation. His genealogy would carry us back to Assyrian sculpture (ib. i. 74 ff.). But the artists of the West, having to represent a deity entirely strange to the Greek pantheon, and being untrammeled by the traditions of any school, gave free course to their imagination. The various transformations which this figure has undergone at their hands are actuated, on the one hand, by religious considerations, which tended to complicate the symbolism of this deified abstraction and to multiply his attributes; and, on the other hand, by an aesthetic solicitude which tended to exalt as much as possible the grotesqueness of this barbarous figure, and gradually to humanize it. Ultimately they did away with the lion’s head, and contented themselves with representing the animal inamalgamated at the feet of the god, or with placing the head of the beast on his breast. This lion-headed god of Eternity is the most original creation of Mithraic art; and if it is entirely destitute of charm, the greatness of its appearance and the suggestiveness of its attributes arouse curiosity and provoke reflection.

We have, so far, confined our attention to the remains found in Rome and Italy, the artistic finish of which surpasses the average of the Mithraic ex-votos. But when we pass to the provinces of the Empire, we find there elaborate works of a very different kind. If, generally agreed that, during the Empire, a great number of the sculptures intended for the provincial cities were made at Rome, or by artists who had come from Rome (Friedländer, Sitzber. Preuss. Ak., ii. 1886). This is probably the case with certain of the sculptures we are considering; they come from distant studios, either those of the capital or even of Asia Minor or some other province. There is no doubt that certain tablets discovered in Germany were brought from quarries in Pannonia (Cumont, op. cit. i. 210). Nevertheless, the great majority of Mithraic remains were undoubtedly executed on the spot. This is obvious in the case of those which were sculptured on the surface of rocks, which had been smoothed for the purpose; but with regard to many, local workmanship is proved from the nature of the stone employed. Moreover, the style of these fragments clearly reveals their local origin. The discovery of so many Mithraic works has thus great importance for the study of provincial art under the Empire. The most remarkable of these works have been brought to light in the North of Italy, in the Rhine provinces. It seems that the whole of this group of monuments must be ascribed to that interesting school of sculpture which flourished in Belgium in the 2nd and 3rd cents. of our era, and whose productions are clearly distinguishable from those of Southern studios. Similarly, the less important bas-reliefs brought to light in the Danube provinces are certainly independent of Roman influence; they may be directly connected with certain models. The distinguishing feature of the most important works of these artists from the banks of the Rhine and the Danube is that the central group of the bull-slaying Mithra with his two companions is surrounded by a series of accessory scenes which represent the whole cosmogony of the mysteries and the mission of Mithra, from his birth out of a rock to his assumption up to heaven (ib. i. 153 ff.). Then there are added astronomical images or cosmic emblems (planets, signs of the zodiac, and words, etc.). If we subject all these scenes and symbols to an analysis in detail, we can show that the majority of them are modifications or adaptations of old Greek subjects. Where the Mithraeum at Magon destroying the monsters which have arisen against him is an Hellenic Zeus hurling his thunderbolt at the giants (ib. i. 157). The poverty of the new conceptions which Mithraic iconography introduces is startling contrast to the importance of the religious movement that inspired them. At the period when the Persian mysteries overspread the West, the art of sculpture was too decayed to be revived. Whereas, during the Hellenistic period, sculptors were able to conceive novel forms for the Egyptian divinities (Isis, Serapis, etc.), happily harmonizing with their characters, the majority of the Macedonian gods, in spite of their strongly-marked nature, were obliged to wear, whatever their origin, not the form and dress of the Olympian deities to which they were assimilated.

Art, accustomed to live by plagiarism, had become incapable of original invention. But, without analyzing each scene and personification in detail, we contemplate the total effort of the work, we receive an impression of something entirely novel. The attempt to represent in stone, not only all the deities of Mithra, but also the history of the world and of Mithra as creator and saviour, was a truly sublime idea. Even before this time, especially on the sarcophagi, we find a method employed which consists in representing
ART (Muhammadan)

the successive moments of an action by pictures superimposed on one another or drawn on parallel surfaces; but we cannot mention any pagan monument which can be compared in this respect with the great Mithraic bas-reliefs, especially those from Nebra, Hamburg, and, above all, Osterburken (ib. 245, 246, 251). To find a similar attempt we have to come down to the long series of subjects with which Christian artists in mosaic decoration adorned, not always entirely in their infancy. So far, the historical inscriptions are only being collected, and this undertaking, upon which M. van Berchem is still engaged, is a necessary condition of all further study in this field. It is much to be desired that, by way of supplementing this, some one would group together the literary sources which bear upon graphic art in Islam. The bibliography at the end will show that, although we possess several comprehensive writings in this department, we have very few such treatises upon Muhammadan works of art as are serviceable for scientific investigation. The present position of our researches is consequently unsatisfactory. Hassan had himself professed in the department of graphic art, while the three or four historians of art who deal with Islam at all, have only the most meagre acquaintance with the language and culture of the Muslim monuments, and we should not be surprised if the present article should do more than acquaint the reader with the outstanding facts of the subject in their relation to religion and ethics. The writer, indeed, feels more inclined to point out the common errors of his predecessors than to fill them up. His purpose is not so much to supply adequate information upon the subject proposed, as to provide the reader with a general prospectus of Muslim art.

2. Pre-Muhammadan days. The parent of these is the action which forms the inevitable adjunct of the Muslim's every prayer, viz., the turning towards Mecca. It does not fall to the historian of art to establish the origin of this custom of turning more than able to fill them up. His purpose is not so much to supply adequate information upon the subject proposed, as to provide the reader with a general prospectus of Muslim art.

3. Muhammad. — Had Muhammad not been forced to flee from his native city, it is probable that the motifs in the Mithraic legend were able to inspire Christian artists. Thus the figure of the sun raising Mithra out of the ocean served to express the ascension of Elijah in

digitized by Microsoft®
churches. As Muhammad, however, established his place of prayer in Medina, and was also buried there, this most unpretentious beginning gave the initiative to the development of mosques, not only of places of worship, but also for the celebration of festivals. Samhudi in his *History of the City of Medina* (ed. Wüstenfeld, in *Abhandl. d. Ges. d. Wissenschaft. zu Göttingen*, ix. [1860] 60), tells first of all how Muhammad obtained the site for his mosque, and proceeds to describe the site. He says that when the bricks were set up, palms were used as columns, and a wooden roof was fixed above. This mosque had three entrances—two at the back, which was built up when Muhammad began the practice of turning to Mecca instead of Jerusalem, the others being the Gate of Mercy and the prophet's private door. After the conquest of Khaybar the mosque was entirely re-built, being enlarged to twice its former size.

Some idea of the interior is given by the position of the column beside which Muhammad prayed: 'It was the central column of the mosque, the third forward from the minbar, the third from Muhammad's tomb, the third from the south side, the third from the former Qahal and Zabah (intakes) made by Walid ibn, who was supplied by the Emperor of Greece with Greek and Coptic artizans, as well as with mason shells and stone. Walls and columns were built with hewn stones. The decoration of the side, and cemented with gypsum; decorations of shell-work and marble were introduced, while the roof was constructed of palm and coated with gold-colour. When Walid inspected the completed mosque, he exclaimed, [dikka), "What a contrast between our style of building (i.e. in Damascus) and yours!" to which the reply was, 'We build in the style of the mosques, you in that of churches."

Beyond this single reference we have nothing from which to form an idea of the mosque of Muhammad as a whole, or of its imitations. We shall presently return to this.

Of the sacred accessories belonging to the interior of a mosque, such as the niche for prayer (minbar), the throne, the pulpit, etc., the only one of which we can trace to Muhammad himself is the minbar, or pulpit (Becker, in *Orientalische Studien Niedelske gewidmet*, 331 f.). In ancient Arabia the minbar was not supposed to be approached directly from the position of judge to that of ruler, this original very simple piece of furniture with its two steps became more and more of a throne. A fresco on the inner front wall of Qasim's Amra represents one of the first Khaldifs, or perhaps Muhammad himself, seated on a throne. As this, in view of the command against images, may well give rise to fruitful discussion, we give a reproduction of it (fig. 1, p. 897). Over the enthroned figure is a baldaquin with a Kufic inscription, which is unfortunately so much abraded that only the closing words are now legible: 'May God grant him his reward, and have compassion upon him.' The personage that pictures Davud in beard, and the saint's minbar about his head—must accordingly have been dead, and cannot have been, as one might naturally think, the Khalif then reigning. The figure beside the throne holds the lance which has become a symbol in Islam to the present day; a woman with the minbar is represented on the right, applauding. The design of the enthroned figure may be traced to the *Christus-Pontifikatur* in St. Vitus's Cathedral in Munich, and it is not out of the Gospels, upon which the left hand is placed. Beneath the great throne is seen the barge of the dead. At the time when this fresco was introduced, i.e. subsequent to 100 A.H., the minbar can scarcely have had the same appearance as that shown in the illustration. As a matter of fact, the pattern furnished by Muhammad for the mosque and the minbar alike was transplanted in a mere utility, and the artistic elaboration thereof belongs entirely to a later period; for Muhammad had even less interest than Jesus in the graphic arts.

His attitude towards figure-painting was one of tolerance, but he was not enamoured of painting before the house of 'Aisha until a curtain ornamented with figures was removed, and he threatened those who made images with the dire penalties of the world to come. It was therefore important that art in Islam should develop the same didactic tendency as it did in early Christianity, in which the representation of figures was expressly utilized as a means of instructing those who could not read.

4. The Umayyads.—It was under these rulers that foreign culture began to stream in upon Islam. Even the mosque did not escape the general transformation, and its original design of simple utility was lost behind. The incentive to the transformation from the days of the Prophet was the contact with Christianity. At the conquest of Damascus, the principal church of the city, that of St. John, was divided. Apparently it had then the same form as follows: a domed building, with contiguous basilicas to east and west, and a pillared court to the north facing the whole. At first the Muslims laid claim only to one of the basilicas; it was Walid ibn. (A.D. 705-715) who first transformed the entire edifice into a mosque. Of this 'church-design' of mosque, except in Damascus, only two examples are now known, viz., the great mosque of Diarbekr, dating from the 12th cent., and that of Ephesus, from the 14th. Its nucleus was a Christian *sanctuary* (Greek martyrium, Latin crypta). The minbar, or pulpit, was placed in the centre. The projecting *arcades* resembled those of Roman basilicas, while the main *arch* was supposed to correspond to the church-arch. The entrance was in the middle, and led to the church through a long hall of little width. The upper story was a covered chamber or *atrium*. In other cases these were added afterwards, while the lower story served as a **Director**, human or divine, that is, a place of instruction. In the *Sanctuary* of the Muhammadan mosque there is an intermediate form—some primitive Asiatic type, such as a court with hall adjoining. The mosque exhibits this type in purer form than the church; the colonnated halls, for instance, which enclose the court, grow more numerous and then extend in the direction of Mecca. Muhammad's mosque in Medina was most probably of this form; as it stands to-day it is quite in accordance with this supposition, though, of course, it has been several times reconstructed.

The Umayyads, in building such mosques, had probably to avail themselves of columns taken from ancient or Christian ruines. Muhammad himself had used pagan shrines, and had thus left no established precedent. The oldest mosques, or at least those which survive in their rudimentary form, such as the ruins of Baalbek and Bosra, the Amr mosque in Old Cairo, and the great mosques of Kairwan and Cordova, are virtual column-museums, something like the façades of St. Mark's in Venice. Such embellishments have only a negative bearing upon the characteristic quality of Muslim art. As an example of a mosque built with columns from ancient and Christian buildings, we give a view of the mosque at Kairwan (fig. 2, p. 898). Here we see a forest of columns in front; behind, to the right
ART

of this, extends the entrance wall, beside which large colonnettes are suspended between the columns, the mid-passage running thence to the qibla. The arches run parallel to the line of this passage; in this instance they are rounded, though in general they are pointed, in conformity with the national conventional style. The thickly vouched capitals are linked together by anchors, while a wooden roof is placed over the whole. Such was the prevalent type of the Muslim place of worship in early times.

From the 1st cent. A.H. come other two buildings. One of these, situated in Jerusalem, has long been known; the other has been recently discovered by an Austrian research-party. The first, the Qubbat as-Sakhr on the Temple hill, is not a mosque, but a memorial edifice. Above the rock with its caves rises a dome supported by four pillars, between every two of which stand three columns. Two circular passages with eight pillars, and two columns between each pair of these, lead out to the octagonal surrounding wall. Of the original fabric erected by 'Abd al-Malik in A.H. 72 (A.D. 691) very little remains, to the interest of which may be traced. Cross upon the capitals, and must therefore have been taken from some Christian building, while the exceedingly valuable mosaics of the passage are of Persian origin.

On the other hand, the second monument referred to, a secular structure known as Qasbar 'Amra, and situated in the desert adjoining Moab, is pure Syrian in character. Attached to a small bath is a hall roofed with three parallel tunnel-vaults, and showing on the south two apsidal niches, the niche between them having a straight front-wall directly opposite the entrance. The structure as a whole recalls the type of tunnel-vaulted churches introduced by the Nestorians. The paintings are most instructive, as has already been shown in the case of the fresco of the enthroned figure illustrated in fig. 1 (p. 897). They exhibit Umayyad art in the full current of the Hellenistic style; the frescoes of the bath-chambers might well be counted as ancient. The pictures in the hall are of far-reaching significance, furnishing the best exemplification of the tendency which, while opposed to all worship of images, was again adopted by the image-breakers in Constantinople, and which, after the example of the Assyrian relic, became associated rather with the portrayal of landscape, and of hunting and fishing scenes, in striking contrast with the chariot-scenes of the early Christian art of Syria and its offsides.

We must now call attention to the fact that in 'Amra, among scenes of hunting, fishing, and bathing, there have been introduced two pictures which, from the standpoint of religion and ethics, may well evoke much controversy in the future. Upon the front wall of the niche, opposite the entrance, appears the figure of the man seated on a throne. But it is the other picture which calls for explanation from the Muhammadan point of view, for its subject is the princes overthrown by Islam, viz., the Emperor of Byzantium, Chosroes of Persia, the Negus of Abyssinia, and Roderick of Spain. How are these pictures to be brought into accordance with the interdict against graphic representation, and in what sense are we to interpret them? The picture of the Khalif upon the throne undoubtedly gives the impression of its being a devotional piece, but a general rule for the erection of mosques can scarcely be explained in a similar way.

The Unayyads have also in recent times been spoken of as the builders of a number of large and handsome buildings in and near the neighbourhood of 'Amra, but more towards the inhabited country. These have been made known chiefly by the large Meshkhit façade which the Emperor of Germany received as a gift from the Sultan and placed in the Berlin Museum. In these castles the present writer discerns structures so unmistakably of a Persian character as to suggest conditions which would allow of a closer connexion with Hira and the North Mesopotamian provincials. The palaces of the Tabaristan are immense fortified royal seats, surrounded by groups of pools, and resembling those found in the Sassanian fabrics of Mesopotamia. Both are barbarous, and perhaps bear the same kind of decorations, amongst which the Persian wing-palmette amid vine-tendrils characteristically recurs.

5. The Abbasids.—The shifting of the centre of the Muslim world from Damascius to Baghdad had very important consequences for the development of graphic art, as the Syrian, i.e. the Hellenistic-Christian, factor now fell into the background, while the Oriental came to the front. In the latter, it is true, there is always a double strain: on the one hand the Assyro-Sasanian tradition, and on the other a drift in part still older, which may possibly have come in with the Parthians, and certain evidences of sporadic parties, or even of whole tribes of Turks from Central Asia to Persia and Baghdad. For the remote part of Western Asia this drift has all the significance of a barbarian invasion of a long established civilization, being exacerbated by Rome at the hands of the Germans. The Turks and the Germans were in fact the emissaries of an inchoate 'Hinterland' culture, which had been quite overshadowed by the hothouse growth of Egyptian, Persian, and Greek art, in which, when the representatives of the older refinement began to flag, came once more into the foreground. We must likewise bear in mind the gradually weakening influence of early Christian art, as also the growing potencies of the Chinese factor.

(a) Persian elements.—A wholly unique type of mosque is found in Mesopotamia. Here again, indeed, we have the arced court, with the open hall lying towards Mecca, but, in keeping with the nature of the country, the supports are formed not of columns but of brick pillars. In consequence of this, and because walls, pillars, and arches are now uniformly ornamented with space-work, the mosque assumes a most characteristic appearance, known to us until recently only from a mosque in Cairo erected in c. 870 A.D. by the Tulunids, who came from Bagdad to Egypt. It has lately been shown, however, that the mosque of Ibn Tulun was built upon the model of the mosque of Samarra, as had been stated by early Arabic writers. Moreover, in 'Abd al-Dilf, 15 km. to the north of Samarra, there still stands a mosque which agrees with that of Ibn Tulun even in the number of its supports. Of this example of the unique character of Mesopotamian mosques we give an illustration from the survey of General de Beylie, which shows the entrance-wall opposite the minbar (fig. 3, p. 898). Here we see pillars composed of brick, with hewn-out ornamental niches, and united by arches, the springers of which still remain. The side arches leave the view open towards the surrounding wall of the mosque, and through the central arch appears the spindle-like minaret.

Even this peculiar and fantastic minaret at Samarra has been copied in the mosque of Ibn Tulun at Cairo by the Mowahrids. Both Mowahrid and Quraysh are the case on the outside. Elsewhere the stair is for the most part on the inside, and the minaret, which is used for calling to prayer, is outwardly smooth, whether it be the work of the Fatimid or the Qa'im period of the Fatimids, buildings were constructed not only in the older style prevalent along the Mediterranean seaboard, i.e. with columns (el-
The ancient Hellenistic wall-surface. It appears to have been originally made of wood. In Cairo three ancient wooden niches with beautiful ornamentation are still to be found. The typical form was already in use in the Khalifate epoch of Baghdad; that period, at all events, exhibits the niche let into the wall, with bounding columns at the corners—a design which emerged in the East in Hellenistic times, and which had great vogue in the later period of ancient art, especially in Syria and Asia Minor. The graduated columnar porches of Western architecture likewise find their origin here.

The minbar has always been constructed of wood, essays in marble dating from the rarer instances. By 132 A.H., when all the provincial mosques received their minbars, it can hardly have retained its primitive form, and was certainly of a different shape from that represented in the 'Arabian Nights', where it was, rather the Christian _ombra_, an approximation to which had gradually been developed. Numerous steps led up to the platform, and parapet and steps were richly endowed with ornaments. The oldest surviving minbar, that of the great mosque at Kairouan, is of plane-tree, brought from Baghdad by Ibrahim ibn al-Aghlab in 242 A.H. (fig. 4, p. 899).

In order to convey a direct impression of what the art of decoration practised in the Abbasid in Mesopotamia could achieve, we give an illustration of the façade of the al-Aqmar mosque in Cairo, as discovered in recent years and restored (fig. 5, p. 900). According to the inscriptions, it dates from A.D. 1125. Here we already see the arrangement which also prevailed among the Seljuks of Asia Minor—a central _risaliti_ which stands in front of the two wings, and derives its principal embellishment from a lofty gate. We do not describe the minbar, where it is, as at the mosque of the Fatimids at Carthage, which, is of plane-tree, brought from Baghdad by Ibrahim ibn al-Aghlab in 242 A.H. (fig. 4, p. 899).

It is all the more striking as we have before us only a false façade, which has no inner apartment corresponding to it, but which is simply a high wall standing before an open court. Of still greater ornamentation is the wall-surface. This contains designs which in all probability were originally naturalized in the Orient as stucco-work, but which are here, in Egypt, transferred to the stone in common use. The portal-niche is connected with two smaller niches on a level with the ground-floor; all three display in their arches shell-like _tori_ of luxuriant outline. Here too appears, fully developed, one of the main elements of Muslim decoration, viz., the _stalactite_. We find stalactites upon the side portals, taking the place of mullus-panelling, and also as a surface-decoration above the little niches. We have seen how they applied in their proper and original function on the corners of the building, where in two rows of niches one above the other they form a beak. The design of the niche with inserted columns is often applied to the minbar when the building is grouped round it, and though the central _risaliti_ already show the bell-form which came with the Tulunids or the Fatimids from Persia to Egypt. Along the upper extremity of the façade, beneath the large niche, the group of rosettes and lozenges runs an inscription-frieze.

The present writer regards these stalactites as a characteristic deposit of Muslim ethics in the field of graphic art. In them constructive restraint, i.e. the best and obligatory design, is surrendered in favour of a freakishness capable of endless variation, which becomes all the more interesting by reason of the limitations laid down by the spatial form. The stalactite, rightly considered, is a construal of an ornamental origin. It served originally, as a single niche, the same purpose for which the Byzantines used the so-called pendentive, i.e. the construction of the vault, which remains open when a round cupola is placed upon a square substructure.

For this, later Hellenistic architecture had a definite, mathematically accurate, solution in the sector of the vault of the circumscribed circle; in Persia, on the other hand, the custom was to place a niche in the angle. Instead of the single niche, however, we occasionally find three, combined as already noticed in the case of the al-Aqmar mosque, or, more frequently, in the inverse position, one below and two above. Next a further row, of three, came to be added, thus making a group of six; then a row of four, making ten, and so on.

This embellishment of the cupula-wedge was transferred to portal niches, then to surfaces, and in this way was obtained an ornamentation in which each niche indicates a terminal line or a transition (cf. on this point the works of Bourgoin).

This delight in the spinning out of fortuitous combinations is also confined to mutual combinations of the style of ornament typical of Muslim art, viz., the _arabesque_. In this also the distinctive feature is that from a theme originally given—a natural object in the present case—certain elements are grouped by the imagination to imitate nature, and for this end new themes are introduced with which, as with conventional numbers, endless combinations may be made. As the present writer has shown in the Jahrb. d. pr. Archäologie, xxv. (1904), p. 327 f., the _arabesque_ takes its inception from the Hellenistic vine-branch. In the later period of ancient art this became the most popular pattern for straited or superficial decoration. The development towards the _arabesque_ begins when the artist divests the vine-leaf of its natural form by superimposing other leaves, or a triad of globules, upon the diverging point of the ribs, or when, further, he makes the leaf tri-lobed instead of five-lobed. But the great development of the _arabesque_ is the application to the vine-leaf of the lobate form which may really be described as the artificial flower of West-Asiatic art, i.e. the _palmette_. The vine-tendril mounted with the _palmette_ in this is _arabesque_. The development proceeds in virtue of the fact that the _palmette_ can be split up either into halves or into single lobes; while each of these lobes again may be expanded, and give rise to new ramifications. The façade of A.D. 1125, in its details, furnishes illustrations of the initial stage of this whole development: here the branch shows more of the Persian than of the Arabian form. On the other hand, fig. 6 (p. 900), representing a wooden tablet in the K. Friedrich Museum in Berlin supposed to date from A.D. 1125, exhibits all the stages side by side—the five-lobed vine-leaf with and without the grape-cluster, the _trilobium_, all kinds of combinations, and also the _palmette_ itself with ornamental branching. In this tablet the divided _palmette_ in the centre is surrounded by a ten-angled star which encloses itself into the marginal bands both above and beneath. This brings us to a third branch of specifically Muhammadan ornament, viz., _polygonal lace-work_. It is already to be seen on a closer scrutiny of the Cairo façade of A.D. 1125—appearing as a striped decoration in the lozenges and rosettes, niches, above to the left; but here they show rather the other double-stripe design which was common also in ancient and Christian art.
distinctively Muslim variety, as we think, shows in its origin the influence of the Turkic-Mongolian nomadic races, who eventually brought the Khallfate to an end (A.D. 1238).

Before dealing further with this subject we may draw attention to the influence exerted upon the development of Muslim art by religious and ethnic—i.e., an influence revealing itself in the fact that the ornamentation of sacred buildings embraces no representation of living objects. The wonted Mesopotamian type of decoration consists in rows of stars, and arches with stucco ornaments. We are cognizant of no instance whatever in which this architectural decoration contains the figure of man, animal, or bird. The mosque of Ibn Taimi in Cairo; the Church of Abbot Moses of Nisibis in the Syrian monastery of the Nithrian desert, which was stuccoed by Mesopotamian artists; Maqâm 'All itself, on the Euphrates; Samarra—in none of these have we a trace of a living creature figured as an ornament. In this period, therefore, the commandment against the use of figures in sacred buildings would seem to have been stringently enforced. The ornaments are composed of interlaced zigzag or floral patterns, which are connected with one another by spiral designs, and thrown out by indentations so as to form independent configurations. To these again are added designs which are traceable in the main to the sepulchral and symbolic use, and suggest the dark effects of depth. Symbolical figures, such as were favoured by Sasanian and Christian art—the crescent, the star, the wing, etc.—are entirely absent so far as religious art is concerned. If we should adequately appreciate the authority of such art, we must look to the precepts of religion in the sphere of graphic art, we must keep before us the delight which the Orient has always found in the mystical and symbolical use of animal forms, as in fact exemplified by the extreme frequency with which such figures are employed in the secular art of Islam itself.

(b) Turkish elements.—One of the most singular notions still current, and one that is explained only on the ground that our vision has been deranged by our inmemorial habit of seeing everything in the light of Greco-Roman institutions, is that the migratory races, whether Germans or Turks, were incapable of all art that is to forget that the Goths brought with them into Italy a highly-developed culture, acquired upon the Greek coast of the Black Sea; and the like holds good of the people who were the chief instrument in bringing the Crusades into Persia, and who had thus passed through, or temporarily settled in, the long-civilized region beyond the Caspian Sea. Think of the discoveries in Hungary, telling of the time when the Magyars took possession of the country. This equestrian people came from the territories lying between the Altai and the Ural without coming into contact with Transoxiana; nevertheless their taste in decoration was well developed. How much more are we entitled to look for aesthetic proficiency amongst the peoples who had not only lived at close quarters with the Sasanids or the Ghaznavids, but who, as, e.g., the Seljucks, had made themselves masters of the lands before they conquered Persia and Asia Minor. In Egypt the new conditions were ushered in under Saladin, and continued during the period of the Turkoman and Crimean Mamluks, until, in 1317, the Turks proper gained possession.

It is worthy of remark that with the advent of the Turkish tribes are conjoined two types of building of which there are no surviving examples from the age of the Hephthalites, the big cupola-domed mausoleum and a new type of mosque-school, the madrasa. As regards the mausoleum, there is no doubt that it had already been rooted—by Constantine or even before his day—with cupolas. But a gigantic fabric of brick, such as the tomb of the Sultan Sanjar in Merv, dating from 552 A.H. (A.D. 1157), is, of course, hardly to be compared with the finely articulated edifices of Christian times. But we never forget, however, that the tombs of the Umayyads were violated by the fanaticism of the Abbasids, or that the only tomb known to exist in the neighbourhood of Baghdad, that of Harûn-al-Rashid, bears a curious niche-pyramid, which hardly permits of comparison with the later buildings. It is true that pyramids are found also on the mausoleums erected in A.D. 1182 and 1186 by Seljuk Atabeks in Nakahevan, on the Perso-Armenian frontier, but these are supported by a dome-shaped vault, the walls of which are embellished with polygonal ornaments of mosaic work in stucco bricks. One of the far-famed sights of Cairo is the Necropolis, the so-called Tombs of the Khalifs and Mamluks (fig. 7, p. 901), which in their picturesque construction invite comparison with the massive forms of the pyramids on the opposite bank of the Nile. So arranged as to permit of being dwelt in by the family of the deceased at certain seasons of the year. An even more magnificent effect, however, than that of the Necropolis of Cairo is made by the sepulchral monuments at Timur at the Caspian seashore. The huge mausoleum of Timur (A.D. 1405), which the terror-inspiring Mongol leader had built in his lifetime, and which is now known as the Gur Emir, lends signal distinction to the whole district. As a work of art, however, it is surpassed by the sepulchral mosque of Khudaban-dakhan in Sultaniya (A.D. 1304-1316), which, like the mausoleum at Merv, presents on the outside an imposing arcade style of architecture. It can hardly be a mere matter of chance that these three most important sepulchral edifices should be found in the Caspian or Trans-Caspian area.

The second architectural form which first came into general use subsequently to the incursion of the Turkish tribes, viz. the madrasa, likewise evolved a capacity of being applied to great monumental structures. An example of this type may be seen in the illustration (fig. 8, p. 901) of the mosque of Sultan al-Muhammads, 1356-1359. It was the Ayyûbids who instituted such college houses in Egypt. The madrasa expresses the idea that, in order to correspond with the four sects connected with or resident at Cairo, viz. Madressat al-Hanîfiya, al-Shâfi'îya, al-Hanbaliya, and al-Malîkiya. This plan of associating four schools in one building was carried out in a very ingenious way, namely, by planting them respectively in the four angles of a cross, which was formed by four tunnel-vaulted arms converging upon the open central court. Were the halls of this cross all of equal length, and were a cupola placed over the small court, we might fail to discriminate between this form of building, in its general plan at least, and the cruciform church with a dome. As, however, the central square is open to the sky, and the four aisles are often of very different lengths, such an identification is out of the question. We incline to believe that the plan of the madrasa is in its essentials of very remote origin. It is resorted to in the construction of a gateway for the plan of Mahom, and was doubt often used in Sasanian palaces. It is accordingly a Muslim construction only in so far as it has been transferred to the institution of the four sects, and elaborated in accordance with their requirements. See ARCHITECTURE [Muh. in Syria and Egypt] (P. 757).
This remarkable construction impresses the native of the West as being more decidedly Oriental than even the mosque. We picture these huge tunnels, vaulted mostly in the pointed style, and strengthened by the schools built into the corners like immense supports, and yet without anything to sustain; it is the spirit of the sta-

tla from without the link with nature. Further,

taly at all events, there is something which must cause the utmost amazement, viz. the High arch of the mosque. The Mesopotamian

mosque of Sultan Jihan in Cairo, built in A.D. 1350-1359, c. 20 metres in height, has been cut out of a wall which rises 87.70 metres above the level of the

street, and is not accommodated to the main feature of the edifice as a whole, i.e. it does not correspond with the gible, but has a relation to the line of the street, being placed in a corner obliquely to the longitudinal wall, so that any one entering the vestibule can reach the central court only by way of various narrow passages. We might all the more expect to find an axial design in the main ornament, viz. that of the porch, as the immense dome of the builder of the mausoleum

towers aloft exactly in the axis behind the minbar. This ornamental design is peculiar to Egypt, and is not found, so far as the present writer knows, in other Muslim lands, while, especially in Asia Minor, the madrasa is always arranged according to an axial plan.

Meanwhile we must say something regarding other innovations, which make their appearance subsequently to the ascendancy of the Central Asiatic element in the Muslim world. The astonishing growth in the popular use of polygonal ornamentation already touched upon may possibly be attributed to the preference for geometrical de-

coration which is characteristic of nomads. Even upon the minbar of Kairwan, constructed probably in Baghdad in 922 A.H. (fig. 4, p. 999), the double-stripè lace-work in straight or curned lines so largely predominates that we can scarcely reconcile its vogue with our wonted conceptions of Sasanian and early Muslim art, in which it is rather the pal-

nate that prevails. But, by the time the Oriental element re-emerged from the obscurity in which it had been embedded for centuries, Hellen-

dicentered art must already have returned, more de-
ciated and perhaps made more ornamented in the lace-work. This reversion to the primitive, then, finds ample scope for development among the nomads from Central Asia, whose taste was still in thrall to the lace-work, as to the material generally, and to capture.

Since, in the art ancillary to the culmus, lace-work takes the place of animal ornament, it demands some notice at this point. As an illustrative example, we reproduce a detail of the minbar (A.D. 1105-1109) of the al-Aqsa Mosque in Jeru-

salem (fig. 9, p. 902). Here we have a piece of work in wood and ivory, by an artisan from Aleppo, so complicated in its construction as to be hardly intelligible to Europeans. We perceive arabesques of ivory in the middle of both the vertical mold-

ings. On either side are polygonal decorations, composed of purlfed moldings in wood and fillings of ivory. From the corners we have so much of the line that we may be able to infer the class of polygon upon which any particular play of lines is designed — whether it is the hexagon, the one mainly resorted to, or some other figure. From the corner we may draw the lines, how-

ever, merely doubles us the key; the essentially varied ways in which the purled fillets intertwine and intersect, leaving, in ordered repetition, free spaces, which in turn are filled up with relief arabesques or coloured intalid work, can scarcely

be resolved. All this is an expression of the same
exultation in elaborating designs obtained mathe-

matically or fortuitously; not to be seen in the case of the stalactite. The fly-leaves of the Qur'an exhibit first-rate examples of such artifices. There, indeed, they are in their right place, as in them and in the calligraphic amplification of the writing a compensation had to be found for the absence of the human form.

(c) Chinese elements. — We are not accustomed to regard China as the source of a contribution to Muslim art. Chinese representations, however, have already found admission in Syria, as they certainly did, more powerfully, in Persia, and finally, in all probability, through the influence of the on-coming Turks. From early notices of silk as a Chinese product, and of silk materials in Egypt and in medieval Europe, it is easy to show that in the later ancient and the Christian period there was commercial intercourse between Syria and China. In Persia during the AbásiS dynasty the influence of China begins to be felt even in architecture, and unmistakable evidences of this influence are seen in the Talismán Gate of Baghdad, completed in 818 A.H., as well as in two reliefs of winged figures in a sort of a subræch. These works become intelligible only in the light of facts which were afterwards made plain by the Oriental carpet. Thus both the examples just cited as bearing upon the field of architecture find their immediate origin in the Chinese carpet now in the possession of the Emperor of Austria and known as the 'Vienna Hunting Cart.' The illustration of this (fig. 10, p. 902) shows, in the borders, winged genii, and, in the angles of the inner field, the Chinese dragon struggling with the phoenix. The manner in which the plant-

designs and the Chinese cloud-design are wrought out leave us in no dubity regarding their origin. Yet the carpet was manufactured in Persia, as is evinced, to say nothing of the workmanship, by the hunting scenes in the inner field, where Persians with turbans and heron-feathers are shown on horseback engaged in the chase. Chinese traits are visible also in the drawing of the figures. This brings us to the most interesting fact of all in the development of the Perso-Muslim art, viz. the resuscitation of figure-representation as a result of Chinese influence. Reference has already been made to the influence of Syrian and Greek art on the Persian, from which figures are entirely absent. This does not entitle us, of course, to assume their absence from other classes of literature. There exist, however, a few miniature manuscripts which are decorated in the style usual in Armenian and Coptic writings. But the great majority of Persian illuminated manuscripts, and precisely those which are most valuable in an artistic sense, display alike in landscape and in figure the identical type of repre-

sentation which, judging from the earliest Japanese and Chinese works of art of the class that imitates nature, we recognize as belonging specifically to the Far East. Moreover, as recent researches make it credible that the cavalier and lavo poetry of the earlier medieval period in Europe caught fresh stimulus from the Perso-Muslim world with which it came into touch on Spanish ground, it cannot but amaze us to think that the Perso-Muslim, illustrated with designs developed in China, the very spirit known to us directly in our own literary history. In one province of Muslim art, therefore, viz. the secular, a sphere is found for a creative impulse which was to be seen in the case of the stalactite, and thus forming a vivid contrast to the sacred art which was fettered to the interdict against 'graven images.'

The case is somewhat different in regard to the portrayal of animals and animal fights, hunting
and drinking scenes, planets, Alexander upon the dragon-chariot, and the like, as seen upon the so-called Mossal-bronzes, from the middle of the 12th cent. and onwards. It is possible that the technique seen in those vessels derived its inspiration from Central Asia, while Chinese designs likewise occur occasionally; but in the main the impulse towards the representation of figures must be traced to Persian Christians. On this hypothesis alone can we explain the adoption of the葱ion and the Ionic order of columns, and, in particular, the introduction of scenes from the life of Christ, which were designed for the apartments of Muslim princes. Consequently, the figures portrayed must be interpreted, not in the ethical spirit of Hellenic-Christian squill as they were purely decorative. The primitive Oriental interpretation of the animal fight, as symbolic of the conflict between good and evil, is simply lost.

8. Later developments.—The great mass of the Muslim memorial art emanates from the period after the Tarkish tribes gained the absolute lordship of the civilized regions originally permeated by the Syro-Persian spirit. Art was now devoted more especially to the faithful, as in the mosque; the figures of worship alone were built ‘for eternity,’ i.e. of durable material. In the Seljuk kingdom of Iconium (Konia) in Asia Minor this material was principally stone. The mosques and madrasas of Konia and its environs have many façades of the same, or of an incomparably richer, style than the façade of the al-Aqmar mosque given in fig. 5 (p. 900). The madrasa approximates more to the type of the arcaded court. In Persia the predominant building material was brick. The result was that every variety of the art of facing was resorted to, the walls being veneered with stucco or many-coloured bricks, or covered with faience mosaics. The native skill of such things was not Mesopotamia or Iran alone, but, as in the case of so many other features of Muslim art, Transoxiana. There, in Samarcand and Bokhara, the most marvellous erections of the Mongols are found standing to this day.

An “Arab” is a peculiar word, as in Muslim art was taken by the Osmanis, from the time that they obtained possession of Constantinople. It was the Church of St. Sophia that roused them to rivalry, since the question of the second time with mosques of Christian design, at Damascus, furnished us with the earliest examples. The Osmanis, in fact, bring to completion what had been aspired to by the great architects of Asia Minor in the inception of antique art at Constantinople, viz. the construction of edifices on a scale of amplitude hitherto unknown. We feel unable to decide whether it was intensity of religious emotion that gave the incentive to the stupendous domes at Stamboul, as well as the dome enclosures that yield a total impression of such magnificence as is unparalleled in the Renaissance and Baroeco structures of the West. We may assert without misgiving that the mosques associated with the Church of St. Sophia exhibit that ideal form which, since Bramante’s time, has been sought in the all-round effect of stately interiors. Thus Islam at length achieved what Christianity originally far outstripped it. It gave the creative touch to the development of the art of architecture which had evolved its designs from a Hellenistic foundation. A second triumph was won for Islam by the too little known memorials of art in India. Here again Muslim art was accommodated, as to the indigenous forms—a process rendered all the more easy by the groundwork and elevation of the mosque, and even the fantastic play of ornamentation, had already been fully evolved in pre-Muhammadan India, though, naturally, in a style different from that of Western Asia. The magnificence of the plan of arrangement in the Indian mosque construction is almost without parallel. It is also in India that we find palaces of vast configuration dating from Muhammadan times, and thus furnishing the necessary supplement to the secular and, in particular, the mosque, which are not adequately represented in the Mediterranean region.

The Alhambra.—To Europeans the Alhambra represents the sum and substance of Muslim art, and, in point of fact, it is really such, so far as the province of secular art is concerned. There is one thing, however, which we must not forget—a fact of decisive import for the ethical value of the whole structure, viz. that the Alhambra must be regarded, not as an independent work of architecture, but as a component part of the natural environment, which is always taken into account in the secular art of Islam, and which, in the case before us, is a park encircling the whole rising ground without the main construction, and the whole of the wide expanse sometimes given to such enclosures from the Conca d’oro beside Palermo, where the palace-gounds embrace the chateaux of Zisa, Cusa, Favara, and Monreale; note, however, that the gardens were not added to the palaces, but the wide expanse was sometimes given to such enclosures from the Conca d’oro beside Palermo, where the palace-gounds embrace the chateaux of Zisa, Cusa, Favara, and Monreale; note, however, that the gardens were not added to the palaces, but the whole expanse sometimes given to such enclosures from the Conca d’oro beside Palermo, where the palace-gounds embrace the chateaux of Zisa, Cusa, Favara, and Monreale.

Then the glittering wealth of ornament, with their lustrous colours and their puzzling variety of form! The principal designs, the stalactite, the arabesque, and the polygon, make their appearance here once more, though employed with a more uniformornateness than in the earlier style of art. The kind of workmanship, however, to which all this exuberance of beauty has been applied, explains why it is the Alhambra alone that has survived: the materials which permitted the splendid style of architecture have nothing at all to sustain them; they consist simply of wood and plaster, like an ornamental sign-board. The structures of which lie behind this embellishment are of a very simple kind, and characteristic of the race which produced them.

The inscriptions of the Alhambra reveal a surprisingly intimate relation between spectator and ornament. Just as the Turks had the faculty of giving individuality to each one of a long series of fountains, so the Moors must have had a fine sense of the language of ornamentation. The inscriptions pertaining to the various portions of the great fabric, as well as to the various ornaments, furnish suggestive introductions to these. Thus, for example, upon a niche at the entrance to the Hall of the Ambassadors appear the words which Schack has translated thus:—

"Mich hat des Künstlers Hand gestickt, wie ein Gewand von Seide,
Und nur das Dämen besetzt mit bitzenden Geschmacke: 
So wie der Thron der jungen Braut strahlt ich in hellem Glänzen.
Doch bringes höhren Glück als es, es weicht und wechselt immer."

Such facts of observation prompt the inquiry whether the ethical significance of Muhammedan decorative art is not of a higher order than we commonly suppose. It is our hope that the scientific research which is only now beginning earnestly to apply the field of Muslim art in general,
ART (Persian) 881

may in course of time yield fuller information on the subject than we have been able to give here.

In the 'Art of Sciala Pascha, Die Besatn von Islam (Darmstadt, 1896); Saladin, Le monstre de Sitd'Okkan a Kaloufon (Paris, 1899); Herz Bey, La mosquée du Sultan Hasnan (Cairo, 1890); Sarre, Perseische Baukunst (Leipzig); the Hungarian work upon Gur Emir in Samarcand; A. P. Calvert, The Alhambra (London, 1877); and the recognized authorities on Persian literature.

ii. DECORATION AND ORNAMENT: Strzygowski, 'Mehatta' in Fabri, d'arts, Kunstschmalzungen (1904); the various works of H. Maillart, Matemornans, and others which are found well arranged in Migeon's Manuel. Instranezoff and Smirnov have made a real advance in Persian art, and transferred the royal capital to Persopolis. The figure is carved in low relief upon a large monolith slab, and is conspicuous both by reason of the curious crown, with Egyptian affinities, that surrounds the monarch's head, and because of the four magnificent wings that rise and drop from the king's shoulders—a feature borrowed from Assyrian-Babylonian art. The image of Darius sculptured above his own inscription at the time of Schahpur, may be dated some time before B.C. 500, and the group with which it is carved likewise represents figures of the king's two chief retainers, together with portraits of Gonates, or the pseudo-Smerdis, and the other dignitaries of the Persian court. The chief fact of Darius floats an image of the god Auranmda (Ormazd) presenting him with the circle of sovereignty, or the guardian spirit of the king, as the modern Parsi prefer to interpret the image. The god is represented as a human figure, wearing a cylindrical head-dress, with horns, surmounted by the disc of the sun, and as swinging in a huge circle from which proceed rays of light (King and Thompson, The Sculptures and Inscriptions of Behistun, London, 1907, pp. xxii-xxiii). The whole device shows the influence of Babylon and Assyria. Of similar character are the carvings around the tomb of Darius at Naksh-i-Rustam, and upon the palace walls at Persepolis and Susa. In several of these the king is represented in the attitude of adoring Auranmda, or with his throne supported by subject nations; but the most spirited of the bas-reliefs are those which portray Darius in combat with real or mythical monsters—borrowed, in like manner, from Assyrian-Babylonian art. The same is true of the statues of Xerxes, Artaxerxes I., II., III., and Darius II., III. (so far as we can identify them); but the finest of all the specimens of the sculptor's art under the Achemenians is the frieze of the stylobate of Xerxes' audience-hall at Persepolis, representing the vassal nations bearing tribute to the Great King. Of imposing grandeur, likewise, are the gigantic winged bulls with human faces, in Assyrian style, guarding the Portal of Xerxes through which his audience-hall was approached (see art. ARCHITECTURE [Persian]). The influence that was exercised in general upon Persian art by Assyria and Babylon during the Achemenian period may be seen at a glance by looking over the illustrations in the standard works on Persepolis and Susa mentioned at the end of this article.

Art (Persian)—Persian art has developed more on the utilitarian side in conjunction with the manufacture of rugs, draperies, embroideries, pottery, brass-work, and decorative tiles, than along the more purely aesthetic lines of sculpture and painting. Sculpture, in fact, had no chance to develop further in Persia after the Median conquest, for the teachings of the Prophet, even as modified by the Shi'ite views, to which the Iranians adhere, are adverse to representing objects that have animal, vegetable, or human life. Qudsi, however, forbids the making of graven images (cf., however, preceding art, esp. p. 875 f.). In respect to sculpture, therefore, the Arab invasion marks a sharp line of division between the old regime and the new; but even Qudsi's edict has since been rendered practically useless by the rising art of Persian painting. The development of Persian sculpture may be traced with a fair degree of certainty for nearly twenty-five centuries.

The chief eras in the national history of the country, which it is found convenient to follow in a study of its art, have already been characterized in the article ARCHITECTURE (Persian) as: Early Iranian and Median period (before B.C. 550), Achemenian (B.C. 550-350), Seljuk and Parthian (B.C. 330-A.D. 224), Sassanian (A.D. 224-631), and Muslim (A.D. 631 to the present day).

As sculpture practically died out with the Muslim conquest, it may be appropriate to treat its history first, and then take up metal-work, the fickle or ceramic arts, art in textile fabrics, decorative designs, and pictorial representation.

1. SCULPTURE AND CARVING.—(a) We know nothing definite in regard to sculpture or the state of the art during the Early Iranian period, that is to say, prior to the 7th century B.C. Even if we consider that the Avesta in a manner represents that era of antiquity, we nevertheless can find in it no specific allusions to sculpture, unless we are to count the theory, which has been advanced by some scholars, that images of the divine beings Vohu Manah (the Zoroastrian archangel of Good Thought) and Ardi Sura Anahita, or Anaitis (goddess of the heavenly waters), may possibly be referred to in Vendidad, xix, 20-25, descriptive of cleansing, and Yasht, v. 120-129, describing the appearance of the divinity. Such an interpretation of the text, however (especially in the former of the two passages), is more than doubtful, even if we concede that images of these deities were known in Strabo's time (Geog. xv. 114). It is indeed possible that some of the bronze figurines and small terra-cotta images that are now and then found in primitive burial-places, or unearthed in such excavations as those by Dieulafoy and de Morgan at Susa (J. de Morgan, Memoires—Recherches archéologiques, i., viii., Paris, 1900, 1907) can be referred to the early Iranian age, but no truly artistic sculpture of any size has yet been found.

(b) A similar uncertainty prevails with regard to kindred objects attributed to the Median or Parthian periods at Hamadan. This statue is executed in the round, like the bull at Babylon and the tauro-celtic statues at Babylon (Dieulafoy, L'Art antique de la Perse, Paris, 1884-85, vol. iii. p. 13). Its age is a matter of debate. According to the Iranian historian Migo Masud (cf. 915 A.D.) ascribed its origin to Alexander the Great, while Yaqut (c. 1220 A.D.) placed it much earlier; and a number of modern scholars are inclined to assign the statue to the Median period (Jackson, Persia Past and Present, New York, 1906, pp. 151-152).

(c) The chief of all identified sculptures of the Achemenian period is the bas-relief figure of Cyrus the Great at Murat, on the ancient road to the Median period (Jackson, Persia Past and Present, New York, 1906, pp. 151-152).

The image of Darius sculptured above his own inscription at the time of Schahpur, may be dated some time before B.C. 500, and the group with which it is carved likewise represents figures of the king's two chief retainers, together with portraits of Gonates, or the pseudo-Smerdis, and the other dignitaries of the Persian court. The chief fact of Darius floats an image of the god Auranmda (Ormazd) presenting him with the circle of sovereignty, or the guardian spirit of the king, as the modern Parsi prefer to interpret the image. The god is represented as a human figure, wearing a cylindrical head-dress, with horns, surmounted by the disc of the sun, and as swinging in a huge circle from which proceed rays of light (King and Thompson, The Sculptures and Inscriptions of Behistun, London, 1907, pp. xxii-xxiii). The whole device shows the influence of Babylon and Assyria. Of similar character are the carvings around the tomb of Darius at Naksh-i-Rustam, and upon the palace walls at Persepolis and Susa. In several of these the king is represented in the attitude of adoring Auranmda, or with his throne supported by subject nations; but the most spirited of the bas-reliefs are those which portray Darius in combat with real or mythical monsters—borrowed, in like manner, from Assyrian-Babylonian art. The same is true of the statues of Xerxes, Artaxerxes I., II., III., and Darius II., III. (so far as we can identify them); but the finest of all the specimens of the sculptor's art under the Achemenians is the frieze of the stylobate of Xerxes' audience-hall at Persepolis, representing the vassal nations bearing tribute to the Great King. Of imposing grandeur, likewise, are the gigantic winged bulls with human faces, in Assyrian style, guarding the Portal of Xerxes through which his audience-hall was approached (see art. ARCHITECTURE [Persian]). The influence that was exercised in general upon Persian art by Assyria and Babylon during the Achemenian period may be seen at a glance by looking over the illustrations in the standard works on Persepolis and Susa mentioned at the end of this article.

(d) In the interregnum, or Seljuk period, that followed after Alexander's invasion (B.C. 330-250) and during the Parthian period, little progress was made in sculpture, save that Ardashir I. supplanted the Assyro-Babylonian influence, as is evident from the Graeco-turkish tendency seen in the bas-reliefs heads on the plastered of the palace-temple at Hatra, and in certain characteristics of the carved backs of stone lions and of that temple be ascribed to the Parthian age—a
ART (Persian)

matter that is doubtful. The principal piece of Parthian sculpture, however, belongs to the middle of the 3rd century A.D. (worth less than a halfpenny), found on the summit of the peak of king Gotzar (A.D. 48-51) at the base of the Behistun Rock. Its mutilated condition, due to the fact that at some time in the first half of the 19th century it was forcibly placed in a stone niche, renders it difficult to judge of the workmanship, but the style and execution appear to show distinct traces of Roman art. (e) Under the Sassanian dynasty (A.D. 224-661), Fath Ali Shah (1798-1835) was able to find inspiration in Roman art through the hands of Byzantine craftsmen, and gave no mean promise of higher development; but this was abruptly cut short by the iconoclastic Arabs who swept over the land with their Muslim hosts. In style, Sassanian art is bold, though rather heavy, like that of its predecessors, and is marked by a superabundance of decorative motifs, especially in the form of cramped streamers floating from the shoulders of some of the figures, or hanging from chaplets held in the hand. The examples of Sassanian sculpture are comparatively numerous, and may best be seen in the series of seven massive bas-reliefs carved between 1972 and 1877 by Sayyid Ali Rasul at Susa on the west bank of the river Tigris, and now in the British Museum, or again at Naksh-i-Rustam near Persepolis, or in the relief on the ceiling of a tomb at Taq-i-Bustan, near Kermanshah. They represent scenes from the life of Khosru Parviz, or Chosroes II. (A.D. 590-628), and are ascribed by popular tradition to the hand of the great sculptor Shapur, whose love for Shrin, the king's beautiful favourite, brought ruin upon the gifted artist. At Taq-i-Bustan and in two of the Persepolitan Sassanian sculptures, it is thought that the figure of the god Ormuzd, or possibly of the female divinity Anaitis, is represented. (f) From the middle of the 7th cent., when the Sassanian power fell before Islam, Persia produced no more sculpture, although there was an attempt at a revival of it in the beginning of the 19th cent., when Fath Ali Shah (1798-1835) caused himself to be immortalized in stone at Rai (near Teheran) and elsewhere. His sculptures show certain of the virtues of Sassanian times, but are combined with thoroughly modern traits. One of the two panels at Rai portrays the king in the act of spearing a lion, and is spirited in execution. Unfortunately, it was carved over the space occupied by an old Sassanian sculpture, which was destroyed to make room for it.

2. Seals, gems, and coins. — Closely connected with the glyptic art in its larger application is the more minute skill shown in the cutting of seals and gems or the sinking of dies for coins. The use of seals and cylinders from the earliest times is well known, and is sufficiently illustrated by the archaic finds made at Susa by de Morgan (op. cit. viii. 1-29); but if we are insuffciently supplied with evidence for the Early Iranian and Median eras, there are enough Achmenian seals and carved gems to show the height to which artistic execution in small carvings was carried in ancient days. The art has not been lost, for we can trace its development all the way through the Parthian and Sassanian ages, and no Persian to-day is without his signature handsomely engraved on a piece of gold or silver. The same art of skill was needed in the cutting of dies for coins, and are illustrated in the Achmenian period by the daries from the mint of Darius. The coins that were current under the Parthian rulers indicate to what a high degree this fine art, which was little affected by foreign influence, had developed in Sassanian times, and from that time onward the various changes
of a beautiful green glazed ware, and decorated with a somewhat still small human figure, repeated a number of times. The Sasanian fondness for elaborate decoration, as evidenced in the intricate designs and flower patterns on capitals of columns and in the ornamentations at Taqi-Bustan, was shown also in their ceramic work; for it is still possible to find fragments of those of the Sasanian fire-temple, or Atash-Kadah, near Isfahan, pieces of jars and bricks with decorative markings that show an artistic sense; and the potter's art, well known to all through Omar Khayyam, is always used by the Persians.

During the earlier centuries after the Muhammadan occupation, Persia's art in faience (for, strictly speaking, there is no true Persian porcelain) is believed to have received considerable impetus through importations brought from China and through Chinese artificers settling in Iran. But, whatever may have been the extent of that influence—and the influence was not without reciprocity—Persian faience never lost its marked national characteristics in shape, colour, and design. In regard to glass, we know that the glass-worker's trade is referred to in the Avesta (Vend. VIII. 85; yima-paucra), and specimens of glass, dating from the 4th century, have been dug up at Persepolis, and others, at least as early as 6th century, in Chaldea. It is noted that the artistic uses of glass were well known under the Sasanians; while the employment of tiny facets of mirror glass in the interior decorations of sumptuous houses has long been a favourite means of ornamentation in Persia. Glass bottles, vases, jars, and urns, generally of a bluish colour, are found in almost every age down to the present, although the glass that is used in Persia to-day is almost wholly imported from Europe.

5. Textile fabrics—rugs, draperies, and embroideries. —The art by which Persia is best known in modern times is the manufacture of beautiful textile fabrics—rugs, carpets, draperies, and embroideries. We may presume that the art of rug-making was fully developed in Achæmenian times, since Themistocles, according to Plutarch (Thmenist. xxi. 3.), when first presented before Xerxes or Artaxerxes, illustrated his meaning by a number of times the famous Persian carpet; and there is little reason to doubt that rugs were used both on the floors and for ornamental hangings in the royal palaces at Persepolis and Susa. The employment, moreover, of archaic designs, handed down by tradition in the rug-maker's conservative art (for example, conventionalized forms of the tree of life), points back to the greatest antiquity. The carpet industry is to-day widely spread throughout Persia, and among the places that are thought to produce the best rugs, both in quality and style, are the districts of Khorasan, Kashan, and Kerman. Aniline dyes from Europe and Occidental patterns and designs are unfortunately finding their way in to corrupt the purity of this Oriental art, but a strong endeavour is being made to preserve its native integrity and ancient prestige—a prestige recognized in all the numerous works published on the art, and especially on the subject of Oriental rugs. Among Persia's textile arts is the weaving by hand of soft white and brown felts (Mod. Pers. madd) for mats, cloaks, and saddle-cloths. The art is as old as the time of the prophet Moses (Exod. 26; iv. 6), and it is still carried on in many parts of the country, more especially at Hamadan, Isfahan, and Yazd. Mention should also be made of the richly embroidered Persian shawls, delicate fabrics with elaborate designs in needlework, heavily embossed brocades, ornamental draperies and hangings, and silks of various colours and fineness of texture. Among the oldest specimens of such fabrics are the examples of Sasanian textiles in the Archæological Museum in Cologne, Germany, and in the temple of Horâng, near Koto, Japan (cf. Münsterberg, "Japanische Kunstgeschichte", Bruns-wiek, 1914, p. 329). The preparation and development of the textile arts as well as other arts of Persia were ascribed by Firâuq (A.D. 1000) to the legendary king Jamshîd, who lived in the golden age of Iran (see Firâuq, ed. Voûlers and Bauduau, Leyden, 1877, i. 23. 24 [tr. Mohi, Paris, 1876, i. 34-36; tr. Warner, London, 1906, i. 32-33]).

6. Painting, decorating, designing, and the art of penmanship. —Although painting cannot be called one of Persia's special arts, the wonderful effects in colour and decorative design that were obtained by the Achæmenian artists, as shown by the tile-work discovered in ancient Susa, prove conclusively how highly developed in early times were their aesthetic sense and their productive skill. Allusion has already been made several times to the artistic manner in which they still know how to employ colour and ornamental patterns even in connexion with objects of ordinary everyday use. How far the painter's art had advanced in Sasanian times among the Manicheans (for Mani was a painter as well as the founder of a great religious sect) has recently been illustrated by the remarkable finds made in Turkestan by the expedition sent out from Berlin by the German Emperor William II. As a rule, the Persians do their best work when painting portraits and flowers, while their landscape work and perspective composition are but mediocre. Their best pictures, in fact, are those on a small scale, like the miniature portraits on paper mâché writing-cases and lacquered boxes, or on the enamelled porcelains tops of tobacco pipes; or, again, in decorative designs of roses on book-covers, for the making of which they are especially noted.

One art, however, is carried to perfection in Persia; it is calligraphy, or the art of beautiful handwriting. Originally this accomplishment as an art may owe much to Muhammadanism, but nowhere else are to be found such beautiful specimens of chirography, whether minute or extensive, as in Persia. The Persians are well skilled in using their alphabet for decorative purposes, as may be seen from the graceful arabesques twined about the domes and minarets of the mosques, or interlaced into monograms of wonderful intricacy. To write a good hand is an essential part of culture among the Persians, and a number of well-known authors were masters of calligraphy. Not only so, but skilled scribes have devoted infinite time to copying in luxurious style the compositions of famous Persian poets, and their manuscripts are in themselves works of art.

7. Influence of Persian art. —The influence of Assyria and Babylonia, of Greece and the Roman Empire, upon Persian art and architecture during the early and mediaeval periods has already been referred to more than once. The fact has also been pointed out that Persia made these borrowings and improvements thoroughly her own. In medieval and later times Persia was influenced by (and influenced) China in ceramic art, and in the non-Muhammadan representation of living beings in paintings and the like (cf. above, p. 179).v. If the Arabs were, as Moslem writers received more in art from her than they gave, and it is probable that the arts which the Moors developed in Spain and elsewhere were largely derived from the Persians. The Mongol invaders had little if anything artistic to offer Persia, but
ART (Phoenician).—To express the deity with the emblems of his majesty, as conceived by the worshippers, is the highest aim of religious art, and it was with this view that the Babylonians, Assyrians, Egyptians, Greeks, and Romans, all of whom have produced specimens of their skill worthy of the highest admiration. The Phoenicians, on the other hand, worshiping Baal, Adon, and Basal, did not possess any delineation sufficiently distinctive in their nature to lend themselves to representation in sculpture and painting; Eli, Adon, and Melek were in the same category. Baal and Semiramis are much more general in nature. The Babylonian Tammuz, a sun-god, who became with the Greeks a simple hunter in Syria, and Ashethoreth, the Istar of the Babylonians, spouse of Tammuz, and goddess of the moon, and Balan, a moon-god, had their representations, and had their influence, though they were not the chief divinities of the Phoenicians. When, therefore, they wished to represent the divinity, the emblem which they chose was in the form of a cone, of which numerous examples exist, not only in Phoenicia, but also in the countries which fell under its influence. The two Phoenicians of Malta, Abdorsis and Orsamar, did not attempt a beautiful statue of their great national god Melqart, but they borrowed the emblem of the sun, a circle on the top finished with arms (bent at the elbow and directed upwards), and a circle at the top of the cone representing a head; the raised right hand, palm outwards; the candelabrum surmounted by a triangle at the top; and the top surmounted by the broken ring emblematic of the crescent moon when a mere broken circle of light; the plinth with the three truncated cones (apparently simulating ornaments of the wall cornices, flanking one with a pyramid on the top, already described). Such are the simple representations of the divinity which the Phoenicians, apparently when uninfluenced by the nations around, produced. It is possibly an augmentation of the feeling of powerlessness in representing the deity which made their relatives and near neighbours, the Jews, go a step further, and seek to discard every image which might seem to recall idol-worship. Even a symbol derived from a living creature was a thing to be avoided.

As a type of a male divinity more or less Phoenician in character may be mentioned Baal Hammon, who, in a terra-cotta figure belonging to the Barre collection, is represented seated, wearing a robe of his age, with arm's horns on either side of his head, his hands resting on the heads of the rams which form the supports of the arms of his throne. A terra-cotta figure seated on a throne seems to show Tanit, his consort, the Astarte of Carthage, holding a dove in her left hand. This is very roughly formed, and was apparently one of the little statuettes made in great numbers for exportation. A strange creation on the part of the Phoenicians was the pigmy-god—a little man with exceedingly short body and legs and a very large head, holding in his left hand a shield of curious shape. These are said to be the dwarfs which became the pignies of the Greeks.

ART (Phoenician)
The inventive powers of the Phoenicians therefore tended towards the grotesque rather than the dignified and serious, and never were at their best as copyists. The upper part of the stele of Yehaw-melek, notwithstanding its weathered state, is a noteworthy specimen of their skill. It shows Yehaw-melek, clothed in a Persian costume, standing firmly upon a lion, but with that nation's God, offering a dish probably containing the precious things which he presented to her. The 'Lady of Gebal,' however, is in Egyptian form and dress, seated and holding a lotus-staff. In her attributes she closely resembles those of the Ist century B.C., and the style of the carving (relief within a sunken outline) shows Egyptian influence. At the top of the stele a mortice-hole indicates where the Egyptian disc with uroes-serpents was placed (probably carved in metal), and from this point curved wings sweep down on each side, like a canopy over the god and the king. A very fine specimen of Phoenician bronze-work reproduced by Perrot and Chipiez † seems to show the same goddess, the style differing somewhat from that of true Egyptian work. There is the disc, with the horns of the moon strangely shaped, surmounting her head, and the uroes rises upon her forehead. Perrot points out that, just as the style of the whole coin was dictated to the Phoenicians to represent their Kabbires and pigmies, so they borrowed Isis-Hathor to represent Astarte.

The piggy-god already referred to seems to be simply an exaggerated type of the Egyptian Bes, which the Phoenicians had also adopted. § A very fine piece of glazed earthenware is that figured by Perrot and Chipiez in their monumental work (de) on some of the figures. The object, called it the 'Phenico-Hittite Stele of Amrit,' on account of the group's likeness to certain rock-sculptures at Pterium, where a goddess is shown traversing the mountains whilst standing on the back of a lion. In this case it is a god wearing the crown of Upper Egypt with the ostrich feathers, and a close-fitting tunic in the Egyptian style, with a knotted girdle. In his left hand he holds by its hind legs a lion-cub, and in his right he raises a curved weapon like the so-called 'boomerang,' which the Assyrian hero of the sculptures of Khorsabad, who grasps in his arm a lion, likewise carries. His legs are thick and muscular, as in the Assyrian sculptures, and one foot is placed upon the head, and the other upon the curved tail, of the lion upon which he stands. The animal in question is represented walking over rocky ground, also indicated much in the Assyrian manner. Immediately above the deity's head is the crescent moon with the sun within; and forming an arch above his head, conforming to the shape of the stele, are the drooping plumes of the Egyptian weapon. The thickness of the legs, and the shortness of the arms, the human form is well-proportioned, and the lion also is fairly good. It is therefore a good piece of work, and, whilst illustrating the style of the Phoenicians, is at the same time a symbol of the real Syrian idea on an Assyro-Babylonian foundation, and a Hittite design in an Egyptian dress. * There is nothing Greek in it—perhaps it was before contact with that nation. In early style of the Phoenician inscription which it bears seems to imply. A according to Philippe Berger, the deity mentioned in the dedication is probably Shobrel—*a reading which Clermont-Ganneau admits as possible, although he himself is rather inclined to read Shadrapi (Satrape).

There is naturally some doubt as to how far the Phoenicians, when they came into contact with the Greeks, imitated their art. That there are objects in the Greek style which are due to Phoenicians is undoubted, but they may have been merely ordered from Greek sculptors. This is well illustrated by the coin figured by Donaldson in Architectura Numismatica (No. 20), † where, in a Greek temple with a strangely un-Greek fan-shaped pediment, a winged Victory in purely Greek style, mounted on a pedestal, crowns with laurel a princely conqueror, equally Greek, holding a crozier. In fact, the whole coin is probably dedicated by the Phoenicians to their own goddess, wearing herself as a bride, and holding in her left hand a basket of pomegranates. In the pediment above is the panther of Dionysus. Though dedicated by Melikthion the Sudite, not only the art, but also the subject, is Greek. In Cyprus the story of Hercules was probably a favourite subject, as certain objects illustrating his tenth labour, the carrying away of the flocks of Geryon, show. In the bas-relief ‡ Hercules is represented with considerable artistic skill, but the statues are inferior, though some are not without merit.

The statuette representing the worship of the power of reproduction are, as usual in the East, not in the best style of art. The mother goddess, as Perrot calls her, whether holding an infant or not, § is represented as thick and heavy; and the women pressing their breasts **—reproductions, of votaries of Astarte—are far from being equal to similar objects of Babylonia. Certain figures thought to be Phoenician prototypes of the Venus de Medici are regarded as later than the Greek period, and therefore due to Greek influence. They show a female pressing one breast and hiding with the other hand the part which, in real Phoenician work, the artist intended to show openly. The best specimen † † is from Livadia, near Larnea, and wears an Egyptian head-dress. In the purely Semitic figures, there is a direct and naively brutal allusion, as Perrot says, to the mysteries of fecundation and generation, but the thought which the Greek artist wished to awaken was quite different; it was Venus ashamed—the representative of woman.

Religious ceremonies are rare. One—that representing Yehaw-melek before the 'Lady of Gebal'—has already been referred to. Another—a urea fragment—seems to be simply a mural decoration. ¶

---

* A similar design (a deity standing on the back of a lion) appears on a silver coin of Tarus (de Lyre, Numismatique des assyriens, pl. viii. 10); Perrot-Chipiez, Phénicie, fig. 235.

\|\|\|* Jb. fig. 382.   
\|\|\|\|* Jb. fig. 381.
It was found in the neighbourhood of Tyre, not far from Adull, and represents a personage, seated on a throne, holding in the left hand an object which cannot now be determined. Before him is a can- delabrum or stand surmounted by a pan in which a flame is seen, whilst beside the throne or seat is a head more cynically head-dress, evidently part of a sphinx as supporter. The border-ornament recalls some of the designs of Assyria. This piece is extremely good, and shows what the true Phoe- nicians were capable of. Of an entirely different style is the statue of the Sacrificer, in the Metropolitan Museum, New York.* This shows a beard-less man, with plump cheeks (perhaps a eunuch, as the Babylonian priests seem sometimes to have been), carrying a ram for sacrifice upon his shoul- ders, the feet, which come down in front, being held tightly and determinedly with both his hands. The style is that of the artists of Cyprus.

Greatly affected by the religion of the nations around, the Phoenicians absorbed from them ideas which they carried beyond the limits of their own domain. Strangely susceptible, they in like manner were strongly influenced by the religious art of the nations with whom they came into contact when they migrated, they carried to other lands and modified. A series of different styles was the result, and the task of studying and understanding these is a long and difficult one. Nevertheless, it is a branch of archeology of considerable importance, though it must be admitted that the material from the various spheres of Phoenician influence is generally insufficient for a complete picture to be gained. The destruction of their temples and divine emblems and statues in Western Asia adds to the difficulty of the study; but the remains, such as they are, have a value quite their own, and reflect the religious feelings of a strong people who accomplished im- portant work in their time.

G. Finches.

ART (Shinto).—The genius of Shinto, like that of Islam, is adverse to the development of the arts of painting and sculpture. With few excep- tions, no idols or paintings of the gods are to be seen in Shinto shrines. The deity is represented by a mirror, sword, stone, or other object, which is shut up in a box, and is never seen by the worshipper. In many cases the priest himself does not even know what box contains. In pre-historic times there was a practice of setting up a row of terra-cotta figures of men and animals round the tombs of Mikados, in substitution for an older custom of burying the servants of the deceased and other victims up to the neck. and leaving them to die and be devoured by dogs and crows. Several of these figures have been preserved in the Imperial Museum at Tokyo, and there is one in the Gowland Collection of the British Museum. They are of an extremely rude and primitive workmanship. This practice, however, does not appear to have given rise to a school of glyptic art, and in any case it is not directly associated with Shinto, which abhorred all connection with death. In more modern times there is a custom of expressing gratitude to the Kami for answered prayer by making ex votos offerings to the shrine of pictures representing miraculous escapes from shipwrecks, seen on of the more important shrines have galleries for the reception of such mementos. They have no great importance in the history of Japanese art. Such galleries are called enshun or ‘picture-horse boxes,’ and represent personages seated on a horse—in substitution for the real living horse, which is a favourite Shinto offering. The ‘seven gods of good fortune’ are a common subject for the screen made for the front hall, and are dealing with quite a modern development. Near all of these deities, though called Kami, are of Buddhist origin, and in their architecture foreign influence is easily traceable. At the present day Shinto myth is not infrequently resorted to for subjects by the Japanese artist, more especially by the book- illustrator; and wood engravings, of no great artistic value, representing the gods are sold to the pilgrims to Shinto shrines as mementos.

W. G. ASTON.

ART AND ARCHITECTURE (Teutonic).—The antiquities from Northern Europe give evi- dence of a high artistic development from the Stone Age downwards, but few finds of earlier date than the Iron Age can with any certainty be con- nected with the religious life of their owners. Of the heathen period there are no architectural re- mains except the graves, and the structural forms of these do not appear to have had any definite relation to the religious beliefs of the different periods to which they belong. Sacred buildings of any kind came into use among the Teutonic races, and the scanty knowledge we possess of their temples is derived entirely from literary sources, and refers only to the last few centuries of heathendom.

1. In the Stone Age the antiquities as a whole show a remarkably high development of art. The elaborate finish of the finest examples in both pottery and weapons may imply that they were not intended for ordinary purposes, but were re- served for religious ceremonies.

Many of the axes found are obviously not made for use. Some are too thin, others too small, others have shaft holes only large enough to admit a cord, and miniature axes of amber are also common. All these are doubtless used in the worship of some sort, in all probability dedicated to the god of thunder.

2. The Bronze Age in the North is also distin- guished by the artistic skill of its productions, but foreign influences may now be recognized. At first the types resemble those found in the Aegean area, and the spirals and zigzag lines so common in Mycenean art are a frequent form of ornamentation. The most important period is the ‘disc and horse of the sun’ from Nordseeland, Denmark, usually dated about B.C. 1000.

It consists of a round bronze plate mounted on wheels and drawn by a horse shaped wheel, and is, no doubt, intended to symbolize the sun’s passage across the heavens. The faces of the disc is overlaid with spirals and decreasingly spirals, and the figure of the horse strongly recalls the animals of the Dipylon style of Greece.

At a later period of the Bronze Age there are evidences of Etruscan influences in the art, and many objects have been found that are clearly imported from Etruria. Among those of native workmanship are a number of beautiful gold vessels which seem too precious for private purposes, and were probably dedicated to religious uses. Such are the eleven gold vessels with long handles that were found at Romminge, carefully placed inside a large bronze vase, and the two gold bowls with similar long handles terminating in horses’ heads, found with a couple of smaller gold bowls in Seeland. Other objects certainly connected with the worship of the gods are the little bronze cars on four wheels, apparently made to carry large sacrifice vessels, from Sweden, Denmark, and North Germany.

Religious symbols were frequently used in the ornamentation of the Bronze Age. The wheel was, the symbol of the sun, occurs first in the Stone Age, and is found on many of the earlier objects of bronze. It is later replaced by the

* Ferrot-Chipiez, Phénicie, fig. 402.
swastika," and the triskele also appears, both of which symbols are common to all the Aryan races, and are universally agreed to have a religious signification. These same sacred signs are seen on the rock carvings from Behistun and elsewhere, which belong to this period. The purpose of these carvings is not clear; they consist of geometrical figures, shields, weapons, and other objects, animals, and persons, and it seems probable that at least some of these represent the gods and their attributes.

3. In the first centuries after the introduction of iron the grave finds are scanty, and there is a scarcity of gold objects. This is partly due, no doubt, to the fact that the tribes of the North were at this time subjected to a strong Celtic influence, and as it was the universal custom among the Celts to bury little else with the dead than their mere personal equipment. This Celtic influence introduced foreign elements into the style of the art, and was soon almost entirely supplanted by the spread of the classical culture due to the Roman conquests in Central Europe. Many of the finest antiquities from the graves and the bog deposits belonging to the first four centuries of the Christian era are unmistakably of Roman workmanship.

The most important of the native works of this earlier Iron Age appear to be connected with religion. Of these the earliest are the two four-wheeled chariots, long believed to be of Lindow, and in a bog near Delbjerg in Jutland. They are made of ashwood, and the sides, shaft, and frame are richly adorned with bronze-work. The swastika is among the ornaments used. These cars are supposed to have been employed in religious ceremonies, and possibly to have been sacred carriages for images of the gods, such as are mentioned later in the sagas. Fragments of a similar one, however, which had evidently been burnt, were found inside a large iron grave in a grave at Fynen, so that, in this case at least, the car seems to have been given not to the gods, but to the dead man for his use in a future life. Cars have been found under similar circumstances in Celtic graves in France and the Rhine country, so that the peculiar disposal of the Fynen car may be due to imitation of a foreign custom.

Somewhat later in date, and showing a mixture of the Celtic and Teutonic art, is the magnificent silver bowl from Gundestrup in Jutland. This was, no doubt, a sacred vessel, like the gold bowls of the Bronze Age already referred to, and we may compare in this connexion the statement of Strabo (p. 263), that the Cimbri sent their 'helm-bowls' to Augustus. Other bowls of similar shape to the Gundestrup bowl have been found, but although it was in all probability made in the North, it is quite un-Northern in both style and subject. The subjects are drawn partly from classical art (there is, for example, an obvious imitation of Hercules and the Nemean Lion), and partly from Celtic sources, as the representation of the Gaulish god Cernunos, with his stag-horns, ring, and serpent.

4. To the close of the Roman period, i.e., to the 4th cent. A.D., belong what are perhaps the finest of all the Northern antiquities—the magnificent gold horns from Gallicia in Jutland. It is supposed that they were used as trumpets in religious services, and parallel instances can be quoted from many peoples of antiquity. Both the horns and the small iron plates from Ladby have been so elaborately adorned that they seem to depict scenes of Scandinavian mythology. Thus of carved figures; one has runes around the top, but these give only the maker's name. Both were found in a grave at Rivne, near Oresund. The significance of the figures upon them is not certain; various explanations have been given, and it seems probable that they have a mythological meaning, and refer to legends of the gods.

5. The later centuries of heathendom in the North may be divided into two periods: (a) a time very rich in gold ornaments of every kind, owing to the vast quantities of gold obtained from Byzantium; (b) the period when the Vikings belong to the splendid profusion of silver ornaments to be seen in the museums of Copenhagen and Stockholm.

(a) In the first of these periods, i.e., from the 4th to the 5th cent., A.D., the only objects that appear to have any close connexion with religion are the gold bracteates. These were worn as pendants and necklaces, and were originally copies of Roman coins of the 4th cent., although the types soon became greatly altered, and the later bracteates appear to have a religious signification. The sacred symbols of the swastika and triskele appear on many of them, and when placed beside a human head may imply that a god or goddess is represented. The most common device is a head above a four-footed animal, and in some cases the latter seems to have a pointed beard and to be intended for a goat, an animal sacred to Thor. On others Odin is possibly represented, and by an inscription, which was elaborately developed, already existed. This peculiar style of decoration, so characteristic of the later Northern art, seems not to have arisen from a desire to represent the animals sacred to the gods, but to be derived from creatures not familiar to the North, namely, the lions and griffins of classical art.

(b) When we reach the second, or Viking, period of the later Iron Age, we have evidence from literature, as well as from antiquities, of religion in art. Of the antiquities, the most important are the runic stones that were set up over the graves. On some of these are figures which appear to depict the gods; for example, a stone from Tjängvide shows a figure riding on a horse with eight legs, probably intended for Odin on Sleipnir; and on the Sunala stone there are three figures in a special panel, which have been interpreted as the three chief gods, Thor, Odin, and Frey. On many of these stones Thor is invoked in the runes, and his hammer is carved to consecrate and protect the grave. Little silver pendants in the form of hammers have been found, and were doubtless worn as amulets, but these do not appear until the 10th cent., and were probably due to the influence of the cross-wearing Christians.

Under the new belief of the Viking age may be reckoned the figure of a bear, which was frequently placed on the crest of the helmet for protection in battle. This custom is referred to by Tacitus (Germania, 45), and there are several allusions to it in Beowulf (c.g. 263, 1113). It is said to have been worn by some of the Norsemen, and is depicted with the golden boars of Frey and Freya mentioned in the sagas.

Two warriors wearing helmets surmounted by figures of bears are represented on one of the few small iron plates from Ladby. These plates were used to adorn helmets; it is evident from the similar bronze plates on the helmets from Vendel. The examples from Oland, as well as the majority of those from Vendel, are the best-known representations of the portrait scenes of Scandinavian mythology. Thus
one of the Vendel plates shows a cavalier armed with shield and spear, preceded and followed by a bird, and attacking a serpent; this is interpreted as Odin with his ravens Huginn and Muninn, and may be compared with the gold bracteate described above.

Regarding actual idols our only information is derived from literary sources. From the sagas we gather that the figures of gods set up in the temples were life-size, made of wood, and richly adorned with gold and silver. Thus in Olaf Tryggvason's saga, when Gunnar fought with the image of Frey and drove out the fiend inhabiting the idol, 'nothing remained but the mere stock of a tree,' and Gunnar, dressing himself in Frey's apparel, was accepted by the people as the god. Again, in the saga of Olaf the Saint a figure of Thor is described as 'a huge man's image gleaming with gold and silver ... he bore the likeness of Thor, and had a hammer in his hand ... he was hollow within, and had a great stand on which he stood when he came out.'

Other images are described as wearing bracelets, necklaces, and similar ornaments. The different gods seem usually to have been invested with their own peculiar attributes—Thor with his hammer or with sceptre as chief god, and Odin armed with sword and spear.

We also hear of smaller figures of the gods, such as the image of Frey which Ingimund carried in his pocket, and the ivory image of Thor which Halfred was accused of secretly carrying in his purse.

6. Turning to the heathen architecture, what knowledge we possess of the temples is gleaned from the literature of the North. 'Until the last few centuries of heathendom, the Teutonic races appear to have worshipped in the open air, Tacitus (Op. cit. 9) saying: 'The Germans deem it inconsistent with the majesty of their gods to confine them within walls.' The temples that we hear of in the sagas apparently consisted of two parts; an oblong hall, the langhus, with an apse-shaped building, the ofhus, at one end. It is possible that these two parts were originally separate, and that the round form of the ofhus is due to its having taken the place of the sacred tree that was, in earlier times, the centre of worship. In this case the langhus would represent the dwelling of the chief (who officiated as priest) beside the tree. This langhus appears to have been copied directly from the simplest form of dwelling-house, and was used for the sacrificial feasts, but possessed no great sanctity. The ofhus was the sanctuary proper, and contained the images of the gods, among whom Thor always occupied the chief place. Here also were the altar with the oath ring, the blood kettle, and the perpetual fire. The temples were almost always constructed of wood, but the exterior as well as the interior was doubtless often ornamented. Adam of Bremen describes the chief temple of Sweden, that at Upsala, as a magnificent gilded structure. When Christianity finally drove out the old superstitions from the North, the temples were in most cases pulled down and destroyed; but the sanctity of the sites remained, and many Christian churches still mark the spots where the heathen gods were originally worshipped.

LITERATURE.—In addition to frequent references throughout the sagas, special mention may be made of S. Müller, Nordische Alterthumskunde, 2 vols., Strassburg, 1877-78; and Ureish. Europas, Strassburg, 1895; O. Montelius, Die Kultur Schwedens in vorchristlicher Zeit, Berlin, 1885; J. Worpsw, Prænum Antiquitates of Danmark, London, 1867; G. Vigs-son and F. Y. Powell, Corpus Poeticae Boreale, Oxford, 1888. C. J. GASKELL.
