AND OTHER SCHOLARS

VOLUME I
A–ART

edinburgh: t. & t. clark, 38 george street
New York: charles scribner's sons, 153–157 fifth avenue
1908
PREFACE

There is at the present time an unusual demand for works of reference. It may be due partly to a higher general standard of education, increasing the number of readers, and compelling teachers, whether they are writers or speakers, to 'verify their references.' But it may be due also to the great increase of knowledge in our time. We must possess ourselves of dictionaries and encyclopaedias, because it is not possible otherwise to have at our command the vast stores of learning which have accumulated.

But the enormous increase of knowledge in our time has not only created a demand for general works of reference; it has also made known the necessity for dictionaries or encyclopaedias of a more special character. Musicians have found the need of a Dictionary of Music, painters of Painting, engineers of Engineering, and they have had their wants supplied. The present work is an attempt to meet the necessity for an Encyclopaedia of Religion and Ethics.

Scope of the Encyclopaedia.

The words 'Religion' and 'Ethics' are both used in their most comprehensive meaning, as the contents of this volume will show. The Encyclopaedia will contain articles on all the Religions of the world and on all the great systems of Ethics. It will aim, further, at containing articles on every religious belief or custom, and on every ethical movement, every philosophical idea, every moral practice. Such persons and places as are famous in the history of religion and morals will be included. The Encyclopaedia will thus embrace the whole range of Theology and Philosophy, together with the relevant portions of Anthropology, Mythology, Folklore, Biology, Psychology, Economics, and Sociology. It is a wide field, but its limits are clearly defined. Only once or twice throughout the course of this volume has the question been raised whether a particular topic should be included or not.

Subjects and Authors.

Very great care has been taken to make the list of subjects complete, and to assign each subject to the right author. If mistakes have been made they will be pointed out by readers and reviewers; and the Editor will welcome every suggestion that is offered towards the improvement of the succeeding volumes.
PREFACE

avoid overlapping, and yet to have every topic treated with sufficient fulness, the method has occasionally been adopted of describing a subject comprehensively in one general article, and then taking one or more particular topics embraced by the general article and dealing with them separately and more fully. Thus there will be a general sketch of the Socialistic Communities of America, out of which the Amana Community has been selected to be separately and fully described. Again, there are articles on Aphrodisia and Apollonia in addition to the general article on Greek Festivals; and in the second volume there will be an article on the Arval Brothers, while the Roman Priesthood will be treated comprehensively afterwards.

It is not necessary to draw attention here to the series of comparative articles on such topics as Adoption, Adultery, Ages of the World, Altar, Ancestor-Worship, Anointing, Architecture, and Art.

The important subject of cross-references is referred to on another page.

Editors and Assistants.

How can due acknowledgment be made to all those who have been counsellors and colleagues, and have assisted so willingly to make the Encyclopaedia of Religion and Ethics an authoritative work of reference throughout the whole of its great and difficult field of study? Professor A. S. Geden, Dr. Louis H. Gray, and Professor D. B. Macdonald have worked over every article from the beginning. Next to them must come Principal Iverach, Canon J. A. MacCulloch, Mr. Crooke, Professor Rhys Davids, Dr. Grierson, and Sir C. J. Lyall. Then follow Professor Wenley, Dr. J. G. Frazer, Mr. Sidney Hartland, Dr. Keane, Mr. W. H. Holmes, Mr. J. Mooney, Mr. E. E. Sikes, Professor Riess, Professor Poussin, Professor Anesaki, Dr. Aston, Mr. Cornaby, Professor Macdonell, Professor Lloyd, Mr. Nutt, Mr. Watson, Mr. Gait, Principal Fairbairn, Professor Jacobi, Professor Takakusu, Professor Bonet-Maury, Colonel Sir R. C. Temple, Bart., Professor Nöldeke, Dr. Moulton, Dr. Macpherson, Baron Friedrich von Hügel, Professor Lawlor, Professor Schaff, Abbot E. C. Butler, Professor Sanday, Professor Hillebrandt, Professor Seth, Professor Sorley, Professor Woodhouse, Principal Stewart, Professor Swete, and Colonel Waddell. These all have suggested authors, read manuscripts, corrected proofs, or in some other way taken a helpful interest in the work. And the list could be doubled without exhausting their number.

Acknowledgment is due also to the Right Hon. the Secretary of State for India and the Librarian of the India Office; to Sir A. H. L. Fraser, K.C.S.I., LL.D., Lieutenant-Governor of Bengal; to the Right Hon. Sir Wilfrid Laurier, G.C.M.G., Premier of Canada; and to the Chief of the Bureau of Ethnology of the Smithsonian Institution, Washington, for the use of valuable books.

After six years' exacting labour this first volume goes forth in the earnest hope that it will be found worthy of a place among the rapidly increasing number of books devoted to the study of Religion and Ethics, and that it will help forward that study along the right lines. The work will consist of about ten volumes.
AUTHORS OF ARTICLES IN THIS VOLUME

ABRAHAMS (ISRAEL), M.A. (Lond. and Camb.),
Reader in Talmudic and Rabbinic Literature
in the University of Cambridge; formerly
Senior Tutor in the Jews' College, London.

ABRAVANEL, ACOSTA, ADULTERY (Jewish),
Architecture (Jewish), Art (Jewish).

Professeur de Logique, de Critéorologie, d’Histoire de la Philosophie à l’Université de Louvain; Membre de l’Académie royale de Belgique, et du Conseil d’administration de la Bibliothèque royale de Belgique; Secrétaire de Réduction de la Revue Néo-Scolastique. Æsthetics.
CROSS-REFERENCES

In addition to the cross-references throughout the volume, to which great attention has been paid, for the subject is one of the utmost importance, the following list should be consulted. It contains topics which have been considered as belonging to the Encyclopedia, but which will be treated more conveniently under other titles. The list does not include the Indian castes or the names of the minor gods.

## II. Books of the Bible

**Old Testament**

- Gn = Genesis
- Ex = Exodus
- Lv = Leviticus
- Nu = Numbers
- Dt = Deuteronomy
- Js = Joshua
- Jg = Judges
- Rb = Ruth
- Is, 2 S = 1 and 2 Samuel
- 1 K, 2 K = 1 and 2 Kings
- 1 Ch, 2 Ch = 1 and 2 Chronicles
- Ezr = Ezra
- Neh = Nehemiah
- Est = Esther
- Job
- Ps = Psalms
- Pr = Proverbs
- Ec = Ecclesiastes

**Apocrypha**

- 1 Es
- 2 Es = 1 and 2
- Tob = Tobit
- Edras.
- Jth = Judith

**New Testament**

- Mt = Matthew
- Mk = Mark
- Lk = Luke
- Jn = John
- Ac = Acts
- Ro = Romans
- 1 Co, 2 Co = 1 and 2
- Gal = Galatians
- Eph = Ephesians
- Ph = Philippians
- Col = Colossians

Ad. = Additions to

- Sus = Susanna
- Esther
- Wis = Wisdom
- Sir = Sirach or Ecclesiasticus
- Bar = Baruch
- 3 = Song of the Three Maccabees

Bel = Bel and the Dragon

Pr. = Prayer of

- Man = Manasses
- Children

- 1 Th = 1 and 2
- Mk = Mark
- Lk = Luke
- Jn = John
- Ac = Acts
- Ro = Romans
- 1 Co = 1 and 2
- Gal = Galatians
- Eph = Ephesians
- Ph = Philippians
- Col = Colossians

- 1 P = 1 and 2
- Peter
- 1 Jn = 1 John
- 3 Jn = 3 John
- 2 Jn = 2 John
- 3 Jn = 3 John

Jude

Rev = Revelation
III. For the Literature

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baalenberg = Beiträge zur sem. Religionsgesch., 1888.
Benzinger = Heb. Archäologie, 1904.
Brans - Sachau = Syr. - Röm. Rechtsbuch aus dem fünften Jahrhundert, 1889.
Doughty = Arabia Deserta, 2 vols. 1888.
Grimm = Deutsche Mythologie, 3 vols. 1875-1878.
Hamburger = Realencyclopadie für Bibel u. Talmud, 1, 1870 (=1892), II. 1883, suppl. 1886, 1891 f., 1897.
Holm = Althethischer Sprachschutz, 1891 ff.
Hovitt = Native Tribes of S. E. Australia, 1904.
Jastrow = Die Religion Bab. u. Assyriens, 2 vols. 1903-
Jubinville = Cours de Litt. Celtique, i. - xiii., 1883 ff.
Lagrange = Etudes sur les religions Semitiques, 1904.
Lane = An Arabic English Dictionary, 1863 ff.
Lepsius = Denkmäler aus Ägypten u. Äthiopien, 1849-1860.
Lichtenberger = Exege. des sciences religieuses, 1876.
Liddel = Handbuch der nordischen Epigraphik et Ephylogie, 1898.
Muir = Sanskrit Texts, 1858-1872.
Musil-Arnolt = A Concise Dict. of the Assyrian Language, 1894 ff.
Pauly-Wissowa = Realeencyc. der klassischen Altertumswissenschaft, 1894.
Perrot-Chipiez = Hist. de l'Art dans l'Antiquité, 1881 ff.
Preller = Römische Mythologie, 1858.
Riémy = Religion des peoples non-civilisés, 1883.
Schwarz = Handwörterbuch d. bild. Altertums, 1893-
Robinson = Biblical Researches in Palestine, 2, 1856.
Schürer = GJ V, 3 vols. 1888-1901 [HJP, 5 vols. 1890 ff.]
Schwally = Leben nach dem Tode, 1892.
Siegfried-Stade = Heb. Worterbuch zum AT, 1893.
Smith (G. A.) = Historical Geography of the Holy Land, 1886.
Smith (W. R.) = Religion of the Semites, 1894.
Spencer (Herbert) = Principles of Sociology, 1885-
Spencer-Gillen = Native Tribes of Central Australia.
Spencer-Gillen b = Northern Tribes of Central Australia, 1904.
Swete = The OT in Greek, 3 vols. 1893 ff.
Tylor (E. B.) = Primitive Culture, 1881.
Weber = Judische Theologie auf Grund des Talmud u. verwandten Schriften, 1877.
Wiedemann = Die Religion der alten Ägypter, 1890 [Eng. tr., revised, Religious of the Egyptians, 1897].
Wilkinson = Manners and Customs of the Ancient Egyptians, 3 vols. 1878.
Zinz = Die gattungstheorischen Vorträge der Juden, 1892.

2. Periodicals, Dictionaries, Encyclopedias, and other standard works frequently cited.

AA = Archiv für Anthropologie.
AAOF = American Antiquarian and Oriental Journal.
AE = Archiv für Ethnographie.
AG = Abhandlungen d. Göttinger Gesellschaft der Wissenschaften.
AG = Archiv f. Geschichte der Philosophie.
AH = American Historical Review.
AHBT = Ancient Hebrew Tradition (Hommel).
API = American Journal of Philosopy.
APIJ = American Journal of Psychology.
AJSL = American Journal of Semitic Languages and Literatur.
AJTH = American Journal of Theology.
AG = Annales du Musée Guimet.
APS = American Palestine Exploration Society.
APF = Archiv f. Papyrusforschung.
AR = Anthropological Review.
AW = Archiv für Religionswissenschaft.
AS = Acta Sanctorum (Bollandus).
ASA = Abhandlungen der sächsischen Gesellschaft der Wissenschaften.
ASOC = L'Année Sociologique.
ASWT = Archaeological Survey of W. India.
AZ = Allgemeine Zeitung.

BAG = Beiträge zur alten Geschichte.
BASS = Beiträge zur Assyriologie u. sem. Sprachwissenschaft (ed. Dollizsch and Haupt). 
BCH = Bulletin de Correspondence Hellénique.
BE = Bureau of Ethnology.
BG = Bombay Gazetteer.
BJ = Bellum Judaeicum (Josephus).
BLL = Boston Lectures.
BLE = Bulletin de Littérature Ecclésiastique.
BOR = Bab. and Oriental Record.
BS = Bibliotheca Sacra.
BSA = Annual of the British School at Athens.
BSA = Bulletin de la Société archéologique d'Alexandrie.
BSG = Bulletin de la Soc. de Géographie.
BW = Biblical World.
BZ = Bibliotheca Zeitschrift.
CAIBL = Courtes rendus de l'Academie des Inscriptions et Belles Lettres.
CBTS = Calcutta Buddhist Text Society.
CF = Childhood of Fiction (MacCulloch).
CGS = Culti of the Greek States (Farnell).
CIA = Corpus Inscrip. Atticorum.
CGF = Corpus Inscrip. Graecorum.
CIL = Corpus Inscrip. Latinarum.

[A small superior number designates the particular edition of the work referred to, as KAT², LOT⁴, etc.]
A AND Ω.—1. The meaning of this phrase is expressed in Rev 21:20 as "the beginning and the end" (ἡ αρχή καὶ τὸ τέλος). The conception is to be traced to such passages as Is 44:45; 46:9. And it would appear that the thought was taken from the Hebrew rather than from the Septuagint, for in the former each of the three passages expresses finality (יִתְנָה), which is in accordance with Rev 21:18; 22:2; while in the Septuagint the Greek equivalent, though differing in each case, emphasizes the idea of something further (τὸ θερμαίωσις, μετὰ τὰ ὁλόκληρα, εἰς τὸ αἰῶνα). The point, though a small one, is significant, as it affords a piece of subsidiary evidence for a Hebrew original of the Apocalypse (see below).

2. The origin of the phrase is to be sought in pre-Christian times. Among the Jews, the first and last letters of the Hebrew alphabet, א and ט, were used to express totality; thus in Psalm 119:121: "the heavens" (ננהוות יא) are commented upon, it is said that נא, which includes all the letters, implies that all the heavens are meant, their beginning and their end; again, it is said that Adam sinned from א to ט, meaning that he was guilty of every sin; or, once more, Abraham kept the Torah from א to ט, i.e. he kept the whole Law.* There is a well-known Rabbinical saying, 'The seal of God is 'Emeth (논ו = 'truth'); and in Jerus. Sanh. i. 18a, 'Emeth is said to be the name of God, who includes all things: the beginning (א), the middle (ט) is approximately the middle letter of the Hebrew alphabet, and the end (ט), טא might then well correspond to the א שד, ש ה, ק γεύω, 'who is, who was, who is to come,' of Rev 1:8. Logically, indeed, the order should be ש הד, etc.; but to a Hebrew (as the original writer of the book must have been) א שד, as being equivalent to טא (Jahweh), would probably on that account come first. The Hebrew טא, being a well-known formula expressive of entirety, may therefore have been the prototype of Ω. It is, however, necessary to state that the phrase "א and ט" is never (in pre-Christian times) used of God in the way that א and ט is; it is once used of the Shekinah in the Talmud, but as applied to God it occurs first in the Peshitta, which in each case renders א and ט by אל ב אל ק.

3. It is noticeable that wherever the expression occurs in the Apocalypse it is written το Ω and το Ω, i.e. the first letter is written out in full, while the second is represented only by its sign; there must have been some reason for this, and possibly it is to be accounted for in the following way. It is generally held that parts of the Apocalypse were originally written in Hebrew; in this case the form of the expression would be טא טא. Now, the Hebrew characters, as used in the 1st cent., might well have appeared to the Greek translator as representing the Ατωθ written in full, and the Ταυ as the letter Ωεμαγα. Thus, in 1st cent. script: ΤΑΩ; the similarity in both languages of the written 1st letter might have suggested that the second one was intended for an Ωεμαγα. The phrase was thus imitated direct from the Hebrew manner of writing the equivalent expression. This would also account for the fact that in the vast majority of instances (certainly in all the earliest) the symbol was written Αλ, i.e. an uncial Alpha and a cursive Omega.

4. Use of the symbol in the Christian Church.—A great variety of objects have been found with this symbol inscribed upon them; it figures on tombstones, as well as on other monuments, on mosaics, frescoes, and bricks, also on vases, cups, lamps, and on rings; it appears also on coins, its earliest occurrence on these being of the time of Constantine and Constantius, the sons of Constantine the Great.† These all belong to different ages and different countries; in its earliest known form (Rome, A.D. 256) it appears as 'ω et Α', but this is exceptional, and is perhaps of Gnostic origin. The symbol in its usual form is found on objects

* 'Particula τα quota est nomen Schechime, q.d. Ezech. 19:2 Est audivi τα vocem loquentem mecum' (Scheelten, op. cit. p. 1866). It is interesting to note that τα τα ('the last') is, in Midrashic literature, used as a name of the Messiah, and is identified with the 7τατα ('Redeemer') of Jev 1925.
† See Cabrol's DACL, art. 'Αλ.'
‡ See Brey, art. 'Α έν Άλ.'
belonging to the 3rd cent. in Rome and N. Africa; on belonging to the 4th cent. it has been
found in Asia Minor, Sicily, Upper and Lower
Italy, and Gaul; by the beginning of the Middle
Ages it must have become known in most of the
countries of Central Europe.

The combinations in which the symbol is found
are very varied, * the most frequent being the fol-
loving: with a cross, with a cross and the Christ-
monogram (A Ω ω), surrounded by a wreath (symbolic of the victory of love), within a
circle (symbol of eternity), in combination with a
triangle (the symbol of the Trinity). It will be
seen, therefore, that, generally speaking, the
letters are combined with figures which have re-
ference to Christ, not to the other Persons of the
Trinity (but see below); so that they were clearly
used as inculcating the doctrine of Christ’s Divinity;
for this reason the letters, in this form, were
avoided, as far as our knowledge goes, by the
Arians.

Among the Gnostics the symbol was used for
figure-juglery and for mystical doctrines of
various kinds; * e.g., when written backwards, Ω
and Ω have the numerical value 801, which is
likewise the sum of the letters of the word παναγία
(dove); therefore, they taught, Christ called Him-
self Ω and because the Holy Spirit came down
upon Him at His baptism in the form of a dove.

This is doubtless the reason why Ωω is found in
combination with a dove; not infrequently two
doves figure, one on either side of the letters.
Examples of this are the two little golden boxes,
found in Vatican gravies, which have inscribed on
them the device Ω ω and a dove (5th cent.)*.
The like device is seen on a silver cappaletta,
found at Trèves, belonging to the 4th or 5th cent.;
indeed, this combination would almost appear to
have been the normal form of the symbol in
Trèves, judging by the frequency of its occurrence
there.*

5. There is one other point that is worth alluding
to. In the Apocalypse Ω and Ω is explained as
signifying δ να χ ρ χ και τ ι τ ι ιο ν, the beginning
and the end (219). This is the simplest, and no doubt
the earliest, form of explanation; in 220 the same
form is preceded by a parallel one, ‘the first and the
last’ (ο πρωτος και δ να χ ρ χ και τ ι τ ι ιο ν),
which closely resembles the idea of the one.

The last thing as the first.* Thus, so far from Ω
denoting the ‘last or the ‘end in the usual sense
of the words, it really implies the beginning of
a new era. From this point of view one can well
understand the frequency of the symbol Ω, which
experience had proved that the belief in Christ’s imminent Parousia
was a mistaken one, the hopes of Christians would natural-
ly be transferred to the life beyond the grave.

ABANDONMENT.—In considering the ethical
and religious uses of this word, we have to re-
member that abandonment has an active, a re-
flexive, and a passive meaning. It may signify:
1. Abandoning (1) the action of the Divine
Glory, and its absolute devotion to the
Divine will. In the dialogue
narrated by Doctor Eckhart (Vanghian. Hours with
the Mystics, bk. vi. ch. 1.), a learned man asks a
beggar, ‘Is there last the found God?’ and the
answer is, ‘Where I abandoned all creatures.’ To
the scholar’s greeting, ‘God give thee good morrow,’
the poor man’s response is, ‘I never had an ill
morrow. Whereupon the scholar says, ‘But if I
did not care to cast thee into hell, what would thou
do then?’ The beggar’s reply closes with the words,
‘I would sooner be in hell and have God, than
in heaven and not have Him.’ Doctor Eckhart’s
comment is, ‘Then understood as inner, but
true. Abandonment, or utter Abasement, was the
nearest way to God.’

3. When abandonment means ‘the condition of
being abandoned,’ the reference is usually to the

*S. Gunkel, Schlagung und Chaos in Uetzl and Endzell, p. 309.

1. See the exhaustive list of symbols in Cahol. op. cit. 1. pp
7-22.

2. See the fine plates in F. X. Kraus, Die christlichen Inschr.
der Rheinlande (1845). In one case a horse takes the
place of the dove; is this an instance of syncretism?

3. The later form of explanation (19) was perhaps due to this.
ABANDONMENT AND EXPOSURE

The biographies of devout believers bear witness, however, to an opposite tendency by some who can reproach themselves neither of cowardice nor of departing from God, nor on account of their doubting His faithfulness. Martens (op. cit. p. 301 ff.) describes this condition as one in which 'the individual is, in a real sense, forsaken by God Almighty and forsaken by His grace.' In the religions life he distinguishes two states of holiness: one in which 'the blessing of the Divine grace is perceptibly revealed,' and another in which 'the grace, as it were, hides itself.' The latter state is one of inward drought and abandonment, and may be the result of bodily indisposition or mental weakness. At such times 'we should hold to God's word, whose truth and grace are independent of our changing moods and feelings; and remain confident that even in states of deepest abandonment God the Lord is with us, although with veiled face.'

A sense of abandonment by the Father was the experience of Christ during the darkness that surrounded Calvary; to this fact witness is borne in the earliest Gospel, for St. Mark records none of the Seven Sayings from the Cross save this: 'My God, My God, why hast thou forsaken me?' (Ps 22, Mt 27:46). Professor Schmiedel accepts this as one of the five 'absolutely credible passages' in the Gospels concerning Christ (Eii, vol. ii. col. 1881). Bengel (loc. cit.) lays stress on the preterite tense of ἔφεσαν, and renders, 'why didst thou forsake me?' In his view, 'at that very instant the dereliction came to an end... in the deepest moment of dereliction He was silent.' This suggestion of course, is not to be pressed; the cry itself testifies to an actual feeling of abandonment by Him whose spirit never lost its faith in God. The mystery it expresses is unresolved unless He who uttered it was the sinless Saviour, who in His infinite love was bearing 'our sins in his body upon the tree' (P 2:24).

In a lucid exposition of this Word from the Cross, W. L. Walker says: 'Our Lord felt Himself in this supreme moment forsaken, even though He might have been unequivocally forsaken in view of the eternal truth revealed by His life, as "a sacrifice for sin, or "a guilt-offering"' (The Cross and the Kingdom [1932], p. 138 f.). [See art. 'Dereliction' in Hastings's DB].

J. G. Tasker.

ABANDONMENT.

The most helpless of mankind are those who have just begun life, and those who, through old age or infirmity, are about to leave it. Unable to provide for their own needs, they are entirely dependent upon the love or the compassion of others. Individual cases of neglect of infancy and age are not unknown in any country, but in some cases this neglect passes beyond an individual idiosyncrasy and becomes a national custom. This neglect of children takes the form of regarding them from the mother's habituation and leaving them unprotected to perish by starvation, from the elements, or wild beasts, or to be rescued by the chance passer-by, it is called Exposure. The similar treatment of the aged and infirm is called Abandonment.

1. Exposure. — For the exposure of children there are several causes, which require to be treated independently. In different countries different causes occasion the same result.

(1) In most countries the commonest cause of exposure of infants is shame, the child being the offspring either of an unmarried woman or of a union not recognized as regular by the customs of her country. Less frequently, the shame may be occasioned by some malformation of the infant itself, the parents regarding it as a reproach to them to be associated with a monster. In the legends of most countries great heroes are often represented as having been exposed to conceal the shame of their mothers. The exposure may be the act of the mother herself, as in the case of Evadne exposing Iamus (Frontius, Olympian, vol. 44 ff.; cf. the exposure of Ion in Euripides' Ion, 18 ff.), or it may be ordered or executed by the parents of the mother. Acrisius, in the fragment of Simonides, seeing Acrisius and Perseus together at adrift, in Roman legend, Romulus and Remus, the twin children of Rhea Sylvia, are exposed by the orders of the cruel uncle, Amulius (Livy, i. 4). In cases of this kind children are exposed without regard to sex.

(2) Children are exposed from fear that the means of subsistence will not be sufficient to maintain a larger population. Here exposure is often only

* The words 'abandon' and 'abandonment' are not found in the EV, but the essential thought is expressed in such passages as are quoted above.
one of many methods of infanticide. The populations among which it is most common are those which live by hunting or as nomad herdmen. Thus, amongst the native tribes of South-East Australia it is usual to kill infants by starvation, first by depriving them of food in the camp, and, when this does not suffice, removing them to a distance and leaving them to die. The death, however, is assigned to wiyarn (magic) (Howitt, Native Tribes of S. E. Australia, p. 748). In the South Sea Islands the same end is achieved by dropping them into the sea by night. In central India, among the Kalahari tribes (Bancroft, Native Races of the Pacific States of America, i. p. 81, cf. pp. 131, 566, etc., and see foll. art.). Among the Arabs before Muhammad the same system prevailed, and is referred to frequently in the Qur'an as a practice to be forbidden. Here sons were preserved, but daughters were usually buried alive. They attribute daughters unto God (far be it from Him!); but unto themselves children of the sex which they desire. And when any of them is told of the news of a female, his face becometh black, and he deserts her, and consents not of his own will whether he shall keep it with disgrace, or whether he shall bury it in the dust. Do they not make an ill judgment? (Qur'an, Sur. xvi. 59, 60; cf. Pindar, Olympian, xi. 5.) Professor Ritter, in his Vater und Hochzeit in Early Arabia, ch. iv. and especially note c). In tribes of this kind the carrying about of the weak and helpless causes great difficulty; hence many nomad tribes abandon the old as well as expose the young. When there is no such practice or custom, prevailing, if the religion of the tribe includes ancestor-worship, daughters only will be exposed. In the patriarchal system only a son can properly present the sacrifice to the dead ancestors. On the other hand, where wives are purchased, a large family of daughters is a profitable possession, and naturally they will not be exposed. Hence in Homerian Greece, where girls are described as τραγόδες ἄνεσιόνα, 'maidens that win cattle,' because cattle were, at any rate originally, the bride-price, it was only boys that were exposed. The only exceptions are cases like the Arcadian Alkathina, who was exposed by the orders of her father Iasios, because he was disappointed that she was not a boy. In Sarawak it is considered specially fortunate to have a large family of girls, because the successful suitors for the daughters come to live in their parents' house and work on their sugar plantations, while sons expect their parents to help them with the wedding portion, and leave them in order to work for their father-in-law (H. Ling Roth, Sarawak, p. 165). Exposure in Sarawak, presumably of male children, is practised by hanging them up in a basket on a tree (op. cit. p. 101, note). (3) Exposure for other economic reasons. Amongst those reasons which prevail especially among agricultural populations, perhaps the chief is the serious drain upon family resources in providing dowries for a large number of daughters. In modern India, exposure is one method of infanticide have on this account been widely employed to reduce the number of daughters. Although the British Government has made every effort to suppress this practice as it is, it is entirely succeeded (H. H. Riesey, Census of India, 1901, vol. i. p. 115f.). Exposure of female infants is common in most parts of the East, nowhere more so than in China, where the foundling hospital is a regular institution. The practice is especially prevalent at Rome, where, after the Second Punic War, it was considered unnecessary to have a proennomen for the daughters of the family, as generally only one, or at most two, were reared. Full discretion in this matter lay with the father, who took up (avatulit) the newborn child laid at his feet, if he wished it reared. If he did not, it was exposed. According to Dusmenius of Haliarnassus (ii. 15), a law of Romulus forbade the exposing of sons or of the eldest daughter. If five neighbours gave their consent after viewing the child, any infant might be exposed. Otherwise the dispensation for infanticide was subject to laws, and penalties, including the loss of half his property. In historical times this law had apparently fallen into desuetude. A similar practice prevailed amongst the ancient Germans. If the father did not take up the newborn babe from the floor, it was not reared. When once its lips had been smeared with honey or milk, however, it could not be exposed. By taste of the family food, it became a member of the family. Even so, in Greek legend, Aresius becomes a god by having nectar and ambrosia dropped upon his lips by deities (Pindar, Pythian, ix. 68). The exposure was carried out by placing the child under a tree or beside a stream of water, or on a pasturage, or by exposing it to the archers, or, as the child grew older, to the arrows of exposing female children and of lifting up a son (Zimmer, Althinisches Leben, p. 319 ff.). Amongst the natives of Australia, it is the father that usually decides whether a child is to be reared or not, though he is not infrequently beguiled by the mother (Lunholz, Among Cannibals, p. 272). (4) Superstitious reasons may be of various kinds: an oracle, as in the case of Oedipus, that the child will be dangerous to his sire; a dream, either of the mother, as in the case of Paris, whose mother dreamt that she had been delivered of a firebrand which consumed Troy; or of some other relative, as in the case of Cyrus, founder of the Persian Empire, who was exposed by the orders of his maternal grandfather, Astyages, because Astyages dreamt that his daughter gave birth to a deluge which flooded, and afterwards to a vine which overshadowed, all Asia (Herod. i. 107-108). In modern India, till recently, a child was exposed if it happened to be born on a certain day which the professional astrologer declared to be unlucky (Dubois and de Pradon, Teacher to the Empress, p. 600). In many countries twins are looked upon as illomened. Even where, as in Uganda, the birth of twins is regarded as lucky, it is considered rather a tempting of providence (Sir H. H. Johnston, Uganda Protectorate, p. 878). Even in medieval Scotland it was considered impossible that the mother of twins should have been faithful to her husband, for two children implied two fathers. Exposures sometimes employed in order to avert continuous misfortune. In the Kavirondo country and amongst the Nilotic negroes, a woman who has already lost several children leaves the next child on the grass and does not return, hoping that it is brought up by a friendly neighbour, who is regarded and looked on henceforth as the child's foster-mother (Uganda Protectorate, pp. 748, 793). The exposure of emaciated infants is a stone-age custom still practised, though now only surreptitiously, amongst the Greeks of the island of Melos (Bent, Cyclades, p. 64), is a survival of the ancient ἔξονδες in a temple to be cured by the god. (5) We are only able to give a very slight example of this is the practice of Sparta, where children regarded as physically unfit were exposed.
ABANDONMENT AND EXPOSURE

posed in a ravine called Apotheke near Mt. Taygetus after they had been examined and rejected by the elders of the tribe (ψαλά) (Pius Tatch, Lycyrrus, c. 10). A similar procedure is represented in Aeschylus' tragedy (461 C. and elsewhere; see Appendix IV. to bk. v. in Adam's edition). In a State like Sparta, where, as Aristotle remarks, all its neighbours were enemies, a primitive custom and where the Spartans proper were only a small governing caste amid a hostile population, the need for such a regulation is obvious. But in a less stringent measure the regulation no doubt existed in other States as well. The Athenians were accustomed to the amphiornphis for his child, it was not reared. No State save Thebes, and this apparently only at a late date, forbade exposure (Aelian, Varia Historia, ii. 7). The child was to be taken to the authorities, who disposed of it to a person willing to undertake to bring it up as a slave, and recoup himself for his outlay by the child's services when it grew up.

(6) Luxury and selfishness. Although luxury is in itself a characteristic feature of the highly civilized, selfishness can be found in all lands. Among the native Australians, where the children are often nursed for several years, it is incorrect to assume that all which are left on her hands. Such a child is either killed immediately after birth or left behind when the camp is changed (Spencer and Gillen, Native Tribes of Central Australia, 1899, p. 51; Howitt, The Native Tribes of South-East Australia, 1904, p. 750). In many countries, ancient and modern, an improvement in the standard of living is accompanied by a disinclination to rear children. From the 4th cent. B.C. onwards, this was conspicuous in Greece, and in Rome it formed a theme of discussion for philosophers and satirists. How common the practice of exposure was, may be gathered from the frequency with which the heroes of the New Comedy, who come before us in the Latin versions of Plautus and Terence, are represented as having been exposed. They are, of course, recognized at the critical moment by the trinkets (crependia) which were attached to the exposed infant. Under the Roman Empire, Maimus Rufus (p. 77, Heine) discusses whether all the children born should be reared; and Pliny (Epp. x. 74 f.) consults the emperor Trajan as to the legal position of the exposed child. There was exposure in Bithynia (p. 590) in the province of Bithynia. As the Roman comedy shows, the persons who thus reared exposed children were not moved by philanthropy; their aim was to make them slaves or courtisans (cf. e.g. Terence, Heautontimoramentos, 649; Plautus, Cistellaria, i. 3. 543-630). Only when a child was exposed for superstitious reasons which made its death desirable, was it exposed where it was not likely to be found. As the Athenians exposed children in a pot (ψαλα, ψαλεται), and as first-fruits were offered to the household gods in pots, it has been suggested that putting a child in a pot was a way of entrusting it to the gods. This is possible, but there is at present no sufficient evidence to prove it.

Besides these categories, exposure may be due, in isolated cases, to other causes, e.g. domestic peculation, which led to the exposure of Haggai and her child from the family of Abraham, and her temporary abandonment of Ishmael (Gen 21:23). Temporary national persecution also may lead to exposure, as in the case of Habbakuk (Ex 21:9). But neither is an example of a practice pursued by a nation in ordinary circumstances.

LITERATURE.—Besides the works referred to in the text, there is an article upon exposure amongst the Indo-Germanic peoples in Schrader's Reihenfus der Spr., Alberts brande (s. a. Gesamtvers.), and a very full article in Daremberg-Saglio's Dict. des Antiquites greco-romaines (s. a. 'Exposition'). For general treatment of the subject see Platz, Gesch. des Verbrechens durch Exposition (Stuttgart, 1920); modern legal procedure, and Lainnung, Hist. des enfants abandon- nes et dehors (Paris, 1859). See also Westermarck, History of Human Marriage (1905), pp. 311-314; Plouc, Idee Kind (1884), vol. ii. pp. 243-275.

2. Abandonment.—Abandonment of the aged seems to arise simply from dread of the food supply running short, and deficiency amongst nomad peoples of carrying about with them those who are no longer able to share in the work of the tribe or to shift for themselves. The practice, however, does not prevail amongst all wandering tribes. Among the native Australians the aged and infirm are treated with special kindness and provided with a share of the food (Spencer and Gillen, Native Tribes of Central Australia, 1899, p. 91). On the other hand, the natives of South Africa in their primitive state abandoned the old. 'I have seen,' says Moffat (Missionary Labours and Scenes in Southern Africa, 1842, p. 132), 'a small circle of stakes fastened in the ground, within which were old people who are continually exposed in the beetle on the sun, who had been thus abandoned.' Amongst the American Indians of the Pacific coast the old are generally neglected, and are often left to fend for themselves (Hancock, Native Races of the Pacific States of America, pp. 120, 131, 205, 390, and elsewhere). Among many tribes the duty of looking after the old belongs only to their own descendants. Hence the members of such tribespray for large families, in order that when old they may have some one to support them (H. Ling Roth, Bein, p. 47). In the Qur'an, Muhammad combines the injunction to be kind to parents with a warning not to kill the children (Sur. vi. 150). Amongst the Indo-Germanic peoples, abandonment of the old is mentioned in the Vedas (Rig Veda, viii. 51. 82[1020]; Atharva Veda, xviii. 2. 34; Zimmer, Altindisches Leben, p. 327 fr.). In ancient Persia and Armenia, cripples were left to shift for themselves; and Strabo, who is supported by other authorities, tells us that the Bactrians left the old and infirm to be eaten by dogs; and the Avesta itself recognizes the practice of setting a portion of food by such persons and leaving them to die (Strabo, xi. 11. 3; Vendidad, iii. 18 [in this case a person ceremonially impure is thus shut up for life]; Spiegel, Œuvres卤. Ahermä, p. 129). To expose an old man or woman, or those over seventy to die of hunger, and expose their bodies in the desert to wild animals (Strabo, xi. 11. 3). Still more gruesome stories are told by Herodotus (i. 219, iii. 99, iv. 29) of the Massa- getes, of the Padoi (an Indian tribe), and of the Issedones. Even among the Greeks the removal of the old was not unknown. Most remarkable was the law of Ceos, which prevented 'him who was unable to live well from living ill.' By it all over sixty years of age were poisoned with hemlock (Strabo, x. 5-6). Amongst the Romans, sexa- genarians are supposed to have been in early days cast over a bridge (the potamia of the Orite ('Semen, 1885, 1. 1. 314), no doubt because they are supposed to be under
ABANDONMENT AND EXPOSURE

the infirmity of an evil power, generally a ghost (Cordination, The Molemeneces, p. 194).

ABANDONMENT AND EXPOSURE (American).—1. The practice of infant-exposure was widespread throughout North America. The usual motive, especially in the North, was the lack of food, and the consequent difficulty of supporting a family. This practice is recorded among the Eskimos of Smith Sound in the extreme north-east of the American continent, where all children above the number of two are either strangled or exposed to die of hunger or cold, without regard to sex. Infanticide, both before and after birth, which is but another form of exposure, is also common, as when the women of the Kutchins, an Athapaskan tribe, kill their female children to save them from the misery which their mothers must endure (ib.). Old women were sometimes abandoned for want of care, and among the Konagas, a tribe of the Pacific coast, boys were highly prized, but girls were often taken to the wilderness, where their months were spent with great care. It was a custom among the Certyncolumbian tribes usually treated both children and the aged with kindness, yet abandoned and even killed them in time of dire need, while exposure was not uncommon among the Yutan tribe of Colombia in New Mexico (Bancroft, Native Races of the Pacific States, San Francisco, 1883, i. 81, 279, 566). That this practice is by no means modern, is shown by the fact that the Indians of Acacila in the 17th cent. frequently abandoned what were termed the "kinder" of aged parents. No one took care of them, and in Quebec orphans were often exposed. An interesting case is also recorded of a Huron mother who regarded the circumstances associated with her unborn child as uncanny, and therefore procured an abortion. The foetus proved, however, to be viable and later she took it back, although it grew up to be a 'medicine-man.' (Jeant Relations and Allied Documents, i. 256, xvi. 28, xii. 108).

Abandonment of inoffensive and mischievous, sparing neither sex, rank, nor kinship, seems to have been common among the American Indians of all times and localities. In Acacila (New France), those who were outcasts, either the products of the preventions or the frequently killed, this act being deemed, as it doubtless was in many instances, a kindness. Old men were abandoned to die, especially when sick; but if they did not expire within a month or two, they were killed by sucking blood from incisions made in the abdomen, and then dashing quantities of cold water on the navel. During this process and at the first desertion the victims wrapped themselves in their mantles and formally requested the death-begun. Among the Hurons and Iroquois the sick were left to their fate, and in the latter tribe even husband and wife deserted each other in an illness deemed mortal. Old women were very often abandoned among the Hurons, and the Alenhaksa deserted their medicine-men with equal readiness. The custom of abandoning the sick is said to have been especially common among the Algonquins. Not only the old but the young were abandoned in time of serious illness, whether the sick were boys or girls. Such desertions were practised with special frequency in time of sudden alarm or removal, although they were also common for the simple reason that the old and sick were deemed a burden, and the Jeant Relations (63 vols., Cincinnati, 1856-1901) abound in pathetic instances (i. 211, 238, 574, ii. 14, 18, 250, xxxii. 124, iv. 198, v. 102, 140-142, vi. 290, xiv. 72, 152, xv. 354, xvii. 196, xix. 100, xxiv. 42, xxviii. 34, xxx. 134, xxxi. 196, etc.). As late as the 19th cent. the Utes abandoned the old and sick when they became enfeebled, while aged parents were murdered in most cold-blooded fashion among the Californian Gallineros; and in Lower California the aged were never abandoned, or, if they survived their desertion too long (Bancroft, op. cit. i. 83, 390, 437, 508).

2. In South America, in like manner, the exposure of infants is very extensively practiced. Among the Salinas and the Manaos, malformed children are put to death, since their deformity is supposed to be the work of a demon. Guaycuran women under the age of thirty killed the majority of their children, thus seeking to retain the good will of their husbands, who were denied all marital relations during the long period of sucking, and consequently frequently married other wives. The Abipones put to death all but two children in a family, though girls were given preference over boys, since wowers paid large sums for brides, while sons, for this very reason, were a heavy expense to their parents. In Patagonia the parents often adopted an infant with some caste, and if the resolve was adverse, the infant was either strangled or exposed to the dogs. (See Ploss, op. cit. ii. 252-253). The women of the Amazon tribes frequently procure an abortion rather than endure the pangs of childbirth (von den Steinen, Unter den Naturvölkern Zentral-Brazilien, Berlin, 1894, pp. 334, 503); and among the Indians of the Paraguayan Chaco fully half the children born are put to death, especially if they are deformed or posthumous, or if their fathers or mothers die about the time the offspring in question are born; while girls, if born before boys, are invariably killed (W. Fr. Grüber, Among the Indians of Paraguayan Chaco, London, 1904, p. 64). The same tribes abandon the sick or bury them alive, the invalid frequently hastening his own end by refusing food (ib. p. 41). Abandonment probably prevails more generally in South America, however, than the relatively scanty data would seem to imply.

ABANDONMENT AND EXPOSURE (Hindu).—The ancient Sanskrit literature of India appears to have preserved some remnants of the time when the patria potestas gave the father a right to abandon and expose his children, especially daughters. Thus it is stated in the lawbook of Yajñavalkya, that they were "not to have power to give, to sell, and to abandon their son." More ambiguous is a text in the Yajur Veda, to the effect that 'they put aside a girl immediately after her birth.' It is beyond my intention that this 'putting aside' of a daughter is an equivalent for exposing her, as was supposed by some writers. Others explain the term as referring to the delivery of a girl to her nurse or attendant (see Zimmer, Altindisches Leben, p. 328; Eckelring's art. 'Pflegeten die In der Tötcher auszusetzen,' in JGOS xiv. 494 ff.; also Schrader, Reihentaxis, p. 53). It is true that female infanticide has been common among the tribes of India up to very recent times, and the barbarous custom of widow-burning (satī) would seem to show that sentiment could not have stood in the way if it was thought expedient to do away with female children as soon as born. As regards the desertion of sons, there are, particularly, the law-texts referring to the rights and position of the aapvididda, or son cast off, one of the twelve species of sons who are enumerated and described by Indian legislators. Thus in the Code of Manu (ix. 171), the aapvididda is described as one deserted by his parents or by either of them. The old commentator (Meshātūti) adds that the reason of the desertion may be either extreme distress of the
parents, or the committing of some fault on the part of the boy. If some one else takes pity on the helpless child and brings him up, he is reckoned as his adopted child, though taking a rather low rank in the series of secondary sons even without a just cause. Vayjalavalkya (i. 237) says: 'Whoever, being father and son, sister and brother, husband and wife, preceptor and pupil, abandon each other when not degraded (put out of caste), shall be fined 100 pabbas.' Analogous rules are laid down by Visnu, v. 113, and Manu, viii. 389. The practice of buying or selling children is specially reprobated (see Apanamala, ii. 13. 11). The desertion or repudiation of a wife is frequently referred to in the law books as a punishment for misconduct on her part, but it appears that in most cases she was not to be deprived of a bare maintenance. In a modern text, the repudiation of a wife for any offence short of adultery is characterized as a practice no longer fit for the present (or Kali) age. The higher Hindu castes of the present day do not admit divorce or repudiation as a matter of course at all; but it is common enough among the lower castes, especially those of Dravidian origin, where the marriage tie is very loose. For the supposed abandonment and exposure of old people, Sanskrit literature seems to contain no other evidence than a text of the Atharva Veda (viii. 2. 34), in which the spirits of exposed ancestors are invoked side by side with those barried or burnt. However, the term 'abandoned' (indhlata) is ambiguous, and may refer either to dead bodies exposed on the summits of hills or to those on trees, according to Persian fashion. Exposure of old people, in a certain way, may be found in the barbarous custom, suppressed by the British Government, of taking persons supposed to be dying to the banks of the Ganges and immersing them in water.

There is statistical evidence * in that the Punjab female infant life is still culpably neglected in comparison with male; and that, using the term in a wide sense, female infant life is more prevalent in that part of India on a large scale, chiefly among the Jats, and, despite the prohibition of the Sikh teachers, especially among those of that caste who profess Sikhism.

H. A. Rose.

ABANDONMENT AND EXPOSURE (Japanese).---There is no evidence of the existence in Japan of the custom of abandoning the aged. Isolated cases of the practice of exposure of infants do occur in Japan, as in other countries, but it has never approached recognition as a general custom. From the myth of the god Hiruko (leech-child), it may be inferred that the abandonment of deformed infants was not uncommon in the earliest times. The Nihongi tells us that when this god had completed his third year he was still unable to walk. His parents therefore placed him in the rock-cavern in the cellar below the shrine and went about their business. We may compare the stories of Moses and Sargon.

W. G. ASTON.

ABANDONMENT AND EXPOSURE (Persepolis).---The data concerning the exposure of infants in Persia are very scanty. According to the Avesta (Vendidad, ii. 29), all deformities were regarded as

* Punjib Census Reports, 1881, 1901, 1911; also Sanitary Commission Report in the Punjab, 1903 § 22, 1904 § 26, 1901 § 14, 1897 § 20, and earlier Reports.

the work of the Evil One. It is not impossible, therefore, that deformed children and viable monsters were exposed with more or less frequency; and this is expressly stated to have been the case with the child of the shepherd from the mother of his father Sam, because he was born with white hair, which distinctly marked him, in his parent's eyes, as the offspring of Ahriman (Shah-Nama, ed. Vullers-Lambert, pp. 131-133). On the other hand, no reason to suppose that such exposure was the rule. Cyrus the Great, in like manner, according to Herod. i. 1071, was by his grandfather exposed and ordered to be killed because of a dream which prophesied that the infant would be the future lord of Asia. Nor can it be inferred, from the marked preference given in the Avesta to sons rather than daughters (Geiger, Ostiran, Kultur, pp. 234, 235), that the latter were exposed, the entire spirit of Zoroastrianism making such a conclusion most improbable. Even in the case of an illegitimate child, it was regarded as a heinous offence to procure an abortion (Vendidad, xv. 5-16). On the contrary, the prospective mother of an illegitimate child must be carefully protected by the man responsible for her conduct, lest some harm might come to the foetus. This undoubtedly implies that, according to Zoroastrian teaching, the desertion of infants was abhorrent to the noblest minds of Persia. The Pahlavi Shastar to-Shastar, dating perhaps from the 7th cent., states that the father of children by a concubine 'shall accept all those who are male as sons; but those who are female are no advantage' (xii. 14). This does not, however, imply that female bastards were exposed. In the book of Arda-Viraf the failure of a father to acknowledge his illegitimate offspring condemned them to a piteous life in hell, while at the feet of such a parent 'several children fell, and ever screamed; and demons, just like dogs, ever fell upon and tore him.' The punishments of hell also awaited the mother who destroyed her infant and threw away its corpse, or left it crying for cold and hunger; while those who, in their greed for wealth, withheld their milk from their own infants that they might act as wet-nurses to the offspring of others, likewise suffered punishment in the future life (ed. Hang and West, xliii-xlv, lxxvii-xciv).

LOUIS H. GRAY.

ABASEMENT.—Ablasement in religious experience is closely connected with Adoration and Humility (see these articles). It appears to be essentially relative, and the essence of it to lie in a recognition of the comparative worthlessness of the self in the presence of a superior. In these religions which give great room to prayer and to the sense of God, abasement has always been an important element: its influence is marked in the Hebrew (see, for instance, the penitential psalms), and in all forms of the Christian, e.g., in St. Paul's determination to know nothing but Christ crucified (1 Cor 2), in Luther's conviction that the soul was weak though Christ was strong (Letter to Pope Leo X. concerning Christian liberty), in Thomas à Kempis' warning never to esteem oneself as anything because of any good works (De Incit. Chr. bk. iii. ch. 4), in Wesley's demand that the sinner should first and foremost empty himself of his own righteousness in order to trust only in the blood of the Redeemer (Journal, 5th Sept. 1746).

Extravagances have been common, and in modern times there have been assertions, e.g., that of pantheism, Walt Whitman, preach in different ways the need of man's 'purity in himself.' A strong common-sense expression of this feeling is given by Jowett:

* The abasement of the individual before the Divine Being is really a sort of Pantheism, so far that in the moral world God is
ABBO T

everything and man nothing. But man thus abased before God is no proper or rational worshipper of Him. There is a want of proportion in this sort of religion. God who is everything is not required to abase as if He allowed his created frail agency to exist side by side with Him (Life of Juvett, by Le Blanc, vol. ii. p. 153). But this should not blind us to the fact that prayer and the religions of prayer seem bound up with the belief that man depends on God, and does not merely exist side by side with Him. Now, in the hands of analysis, humility and the abasement that is its intenser form appear as a reflexion in regard and emotion of this belief. The sense that man does no good thing of himself alone, but always as flinging himself on the Eternal Love, is, in especial a leading characteristic of Christianity. The repentant Publican is set above the moral Pharisee precisely because he would not attempt to justify himself (Lk 18).

Even those religious—those systems of aspiration and effort—which do not recognize this kind of dependence, would still find room for some abasement in the recognition of the gap between what the individual is and what he wishes to be. But, from their point of view, why should not a man pride himself on such good as he has already attained? Yet to the religious consciousness of many the presence of this pride would appear to vitiate the whole. If the justice of this for this must lie in the conviction that man does depend for his goodness on something greater than himself. To a certain extent, no doubt, this might be found in the good elements of character that have produced and surrounds the individual. But the Christian hatred of self-complacency seems to go further still, and to imply a belief that in the very assimilation by the individual of these good elements belongs to him himself.

It would be idle to deny the difficulties in this conception, or to pretend that they have ever yet been solved. The paradox of St. Paul—"Work out your own salvation . . . for it is God that worketh in you both to will and to work" (Ph 2:12)—has remained a paradox even for those who maintain it. But conviction of some truth in the paradox is, at bottom, the same as the conviction of Resklin that, if the Greeks were great at Thermopylae, greater still were the Hebrews at the Red Sea, trusting not in the resolution they had taken, but in the hand they held (see Modern Painters, Part III, § 1. ch. 7).

F. M. STAWELL

ABBOT (Christian).—'Abbot,' in Latin abba or abbas (Old Eng. by-form 12th to 17th cent. abbat), from the Syriac [彌], meaning 'father' (cf. Mk 14:2, Ro 8:17, Glk 4), was used in the earliest religious communities for the older or more vener- ated monks (cf. Jerome in Gal. 4:4 and in Matt. 23:8, vol. vii. 451, 185, and the Collections of Cassian, passim). The superior was not called abbot, but prior, επισκοπαρχιας or προφητας, and in the West propostus (Cassian, etc.). The prevailing Byzan-
tine term was προφητας (translit. μυστικής) in Latin, while an archimandrite was often a superior kind of abbot, and this title was also given to various monastic grades (cf. Stupes, J. A. H., 'The history of the Order of Archbishops in Rome,' p. 6. Arch, Chrét, et de Lit. s.v. 'Archimandrite,' 1900). In the East διακός appears as a tr. from the Latin, or as an honorific title, e.g. in the Acts of St. Maximus Conf. in the 7th century. In the West, however, abbob and abbeau, vol. p. 153, and the superior title of the monastic at the 5th cent., since this sense is taken for granted by St. Benedict in the first half of the 6th cent., and from that period this title is attached to the name of St. Benedict himself. If therefore propostus will be understood of the second in command, who was later always called prior, even by Benedicites. The name abba is also applied, it seems, by Gregory of Tours to what we should call a rector with many curates, and it was extended in Merovingian times to chaplains of the king, the army, etc. (abbas curia, palatinus, castrensis, etc.). A layman holding an abbey in commendam in the 9th or 10th cent. was called abbonasenes or abbonaens. The title of abbas of some of smaller communities were called priors. The Cistercian branch of Benedicites called their superior mones, and neither the Carthusians nor any of the orders of friars which arose in the 13th cent., nor any subsequent religious congregation, have ever taken up the title of abbob, though 'abbas was retained in the second order of Franciscaen (Poor Clares). At the present day the Benedicites (black monks), with their branches, the Cistercians, reformed and unrefoned, and the black and white canons regular (canons reg. of the Lateran and Premonstratensians) are governed by abbots.

The first mention of an abbas (abbatiss) is said to be in an inscription set up by an Abbev Serena at St. Agnes extra muros in 514.

In some religious congregations have the title abbob general, archabbob, abbob president. The Abbot of Montecassino has the honorific title of archabbob, and in the Middle Ages, when head of a congregation, and on the death of his, the abbob of Primas, was given in 1853 to the Abbot of St. Anselm, Rome (built by Leo XIII.), as president of the new union of all black Benedicites.

The government of an abbob or an abbas is strictly monarchical. Before St. Benedict (c. 520) the abbob was the living rule, guided, if he chose, by the traditions of the Fathers of the desert, by the rules of Pachomius, or Basil, or Augustine, or by the customs of the Lerins, or by himself active. It is not always supplemented by decrees of popes, and of councils, and by regulations like those in England of Lan-
franc. When branch congregations were formed (as Clunians, Cistercians, Camaldolese, etc.) of many oratories, or congregations of black monks (as those of Bursfeld, St. Justina, etc.), the rule was supplemented by constitutions or commentaries on portions of the Rule, and by the regulations enforced by popes or generals. This, as it is called, the distinguishing feature of the older orders is, as compared with the later friars, clerks regular, brothers, etc.

As it gradually became customary for many monks to be clerks, it also became the rule for abbots to be priests—in the East from the 5th cent., in the West from about the 7th. A council under Eugenius ii. at Rome in 858 made this obligatory (Mansi, Conc. xiv. 1907). It seems that by ordinatio abbatia St. Benedict meant the "appointment," not the "ordination," i.e. "blessing" of an abbot. St. Gregory the Great speaks of a bishop "ordinating" an abbot (Ep. ix. 91), and also of the decision as to the ordination of an abbot being made by the abbob of another monastery (Ep. xi. 45). The latter had changed his mind in respect to the abbot appointed another day in the same month. Gregory orders him to invite a bishop to ordain the monk first designated during the celebration of Mass. St. Theodore of Canterbury orders that an abbob shall be "ordained" by a bishop, who must sing the Mass, in the presence of two or three of the bishop's brethren, et deo et benedictione et petuctae. This is the earliest form of the abdinal blessing. The Pontifical of Echtern of York (1506) has a consacratio Abbatis or a consacration of an abbot. There are now two forms provided in the Roman Pontifical for the blessing of a newly appointed abbot, signifying the benediction for a mitred abbob. The former appears to be no longer used. The latter is largely modelled on the order of consecration of a bishop, and the exalting bishop is assisted by two armed abbots.

The blessing of an abbas is permitted to a priest by Theodore.
The form in the Pontifical is simple, but many abbeys have had, and still have, the privilege of being invested with ring and crozier. When temporary abbots were appointed, the bishop was dispensed with, but Benedict xiv. severely censured the omission to obtain the blessing on the person of the abbot.

At an early date abbots took an important place in ecclesiastical affairs. In the 5th cent. we find 23 abbots signing the condemnation of Etichyes at the council held by Flavian of Constantinople in 388, and these were probably regular members of the patriarchal συνοδός ἄγωγων. In Spain and Gaul they appear at councils to represent absent bishops, but in 639 ten abbots were found voting with the right hand of a council on Toledo, and they sign before the representatives of absent bishops (Mansi, x. 1222). It became the custom throughout the Middle Ages for abbots to attend councils.

At the Vatican Council of 1866 only those abbots who were heads of congregations were invited, naturally without a vote.

Abbots, being the administrators of the temporal goods of their monastery, attained considerable influence. In England they were the envoys of kings and of popes. They sat in Parliaments, ranking in England next after barons. Like barons, the abbots were originally called to Parliament at the good pleasure of the monarch, but by 1276 they had gained the right of sitting. On the last occasion when the abbots as a body sat in Parliament (23rd June 1693), 17 were present. In the first Parliament of Elizabeth, however, there were a Westminster and a court abbots, a senator and a vote, since that abbacy had been restored to all its privileges under Queen Mary.

The worldly grandeur assumed by abbats has been frequently censured, and deservedly so, by St. Bernard. In England their position as great landowners and peers of Parliament necessitated considerable power. The sons of the nobility were sent to be brought up under their care. Monasteries were hotels, and all guests of gentle birth were entertained in the abbots' hall. The Abbot of Glastonbury administered a revenue larger than that of the Archbishops of Canterbury. The Abbot of St. Edmunds had a mint of his own. Yet such a position was not incompatible with personal sanctity, as may be seen in the case of Richard Whiting (Gasquet, The Last Abbot of Glastonbury, 1896, p. 56 f.). This external state of abbots lasted in England into the 19th cent., and to some extent is still to be seen.

Exemption of abbots from episcopal control because the rule of the church is not in their hands, but in the hands of their abbot, was often granted as an exceptional privilege, and early traces of it are found. A council held at Arles, c. 450, exempted Fanois of Lerins from the Bishop of Fréjus, so far as the government of his abbacy was concerned (Mansi, vii. 907; Duchesne, Festes épisc. i. 125). Westminster is said to have received the privilege from John xii. (c. 970). Some of the greatest English monasteries were never exempt, as Glastonbury, and only five Benedictine houses had the privilege at the Reformation, apart from the Cistercians, Cistarensians, etc. Christ Church, Oxford, still retains its papal exemption from the bishop. Grants of Pontificalia, or episcope ornaments, mitre, ring, gloves, sandals, were made by the pope to the principal abbots (e.g. to Westminster in 1257); to the Prior of the Cathedral of Chartres in 1413). These privileges eventually became general, but were limited by the Act of Alexander vi. 1492. Since these further privileges have been granted or confirmed. In some cases a number of parishes are subject to an abbot, who acts as their bishop, as at Montecassino, and once administered by the Abbot of Westminster is still under the abbots' election and is independent of the Bishop of London. In the case of such abbots, who are called Abbates nullius dioeceseos, permission is usually given to administer consistory and ecclesiastical courts. Hence the abbot is ecclesiastically equivalent to the clerical, and the monastic tenure to the clerical tenure. Care has been taken to allow all abbots to be tonsured, and to allow them to wear tonsure and minor orders on their own subjects, and this is still in force. The Second Council of Nicaea (578) permitted the creation of abbatis on the part of the abbot, and the monks were frequently allowed to give the subdeaconate, but this is obsolete. The privilege of the title of abbot for a monastery abbot to confer the diaconate is too much opposed to the theological opinions of the period to be probably antique.

The elections of abbots by their monks were often interfered with by the civil power. St. Benedict permits neighbouring bishops or laymen to interfere if a bad man is elected. Charles Martel gave abbots to his officers; even Charlemaigne dispossessed an abbot at withe long's délit had to be obtained for an election in England. In France and elsewhere abbacoly came to be in the royal gift. The habit of giving abbacies to seculars in commendam in the 5th to 10th cents. unhappily revived in the 15th cent. The men of the community were usually already divided with the abbots, and the latter had a fine house in which to receive guests. When these were in the hands of seculars, the monasteries were greatly impoverished, and suffered much in regularity. The congregation of St. Justina of Padua (afterwards called the Cisassines) introduced abbots elected for a short period in order to avoid the granting away of abbacies. Similar congregations followed. The famous French congregations of St. Maur and of St. Vannes and St. Hilduphe preferred to be governed by priests appointed by the general chapter, and that same reason. When the abbots had become the rule for all ecclesiastics of good family to possess at least one abbey in commendam, it became customary to presume this in all ecclesiastics, and to address them as Monsieur l'abbé. Hence in France and in some other countries, even youths in seminaries, not yet in minor orders or even tonsured, are regularly addressed by this title, which in the Middle Ages had been considered too of Wifred for even the generals of the Cardin- sius or the Friars.

LITERATURE.—See further under MONASTICISM. For Canon Law, Ferrara, Bibliotheca, &c. 'Abbatores,' by M. A. WADDELL, OF BIRMINGHAM, and JOHN CHAPMAN.

ABBOT (Tibetan) — The head of the monastery in Tibet is called 'teacher' or 'Lam-po.' (The literal equivalent of the Sanskrit upadhyāya.) He is superior to the ordinary monastic teacher or professor (lob-pön), and is credited with being endowed, by direct transmission from saints, with the three prerogatives of his monastic order. These are, spiritual power (abang), thorough knowledge of the precepts (lung), and capability of expounding the same (kri, which confer on him the authority to enjoin or prohibit. He is a holy man, and when his life is ended, he is accorded the honors due to monks, scholars, and novices, and is strictly the only one entitled to be called a Lama. The lady superior of a convent bears the corresponding title of 'Lam-mo'; the most celebrated of these is the Thubten Tsewang, or Lama Bedon, residing at Samding on the island of Yambok.

L. A. WADDELL.

ABBOT OF UNREASON. — This title was given in Scotland to one of the mimic dignitaries who presided over the Christmas revels. In England he was the title of Abbot of Lord of Misrule. In France the Abbé de Liedes held the same office. The Abbé de Liedes was the chief of a confraternity established at Lille. He was appointed by the magistrates and the people. He wore a cross of officers of his mimic household. A banner of rich silk was carried before him, and his duty was to preside at the games which were celebrated at Arras and the other drinking cities in the period. Ducas in his Glossarium says he also bore the titles of Rex Stultorum and Factatorum Principis.

It may be noted here that for centuries in Ireland the Abbots had all ecclesiastical power, and were simultaneously the lord of most of the barons and were allowed to give the subdeaconate, but this is obsolete. The old title of Abbot of Unreason, given to abbots to confer the diaconate is too much opposed to the theological opinions of the period to be probably antique.

The elections of abbots by their monks were
At Rouen and Evreux the leader of the frolics was called *Abbes Cowardorum*. Another title was *Abbes Jecuermus*. In certain cathedral chapters in France he was called *l'Abbe des Fois*. He was the non-ascetic representative of the *Boy Bishop*, or *Episcopus Puerorum*, whose office bore the same service of *in die Sanctorum Innocentium* in the *Saron Pro- cessionale* of 1555. In some cathedral churches he was styled *Episcopus* or *Archipresbyter Factorum*. In churches exempt from diocesan jurisdiction he had the exalted title of bishop and abbot. In every case these mimic dignitaries represented the highest authority in the Church. They masqueraded in the vestments of the clergy, and exercised for the time being all the functions of the higher clergy. The clergy themselves gave their sanction to the mimic rites: *Deinde episcopus puerorum conversus ad clericum, i.e. brevich, suum dilem hanc beneficitionem: Crucis signo vos conscigni* (*Saron Process., fol. xiv*). In the *York Inventory* of 1539 a little mitre and a ring are mentioned, evidently for the *Episcopus Puerorum*.

These titles are all closely connected with the *Feast of Fools* of Decembri, in the medieval Church. There is little doubt that their privileges go back to much earlier times. The standard authority for the whole subject is the *treatise Mémoires de la vie du CHRIST au temps du Fête des Fous* by M. du Tillot, published at Lausanne and Geneva, 1741. Du Tillot, with good reason, traces them back to the Saturnalia, the *Libertas Decus der* of which Horace (Sat. ii. vii. 5 f.) speaks when he bids his slave Davus exercise his annual privilege of masquerading as master:

> *Agis, libertate Decembi,*
> *Que tuae maiorem vocant, uterque, super, mare.*

Du Tillot says:

> *Car comme dans les Saturnales, les Valets falsifient les fonctions de leurs Maîtres, de même dans le Fête des Fous les jeunes Clercs s'infiltrent dans les rôles célestes, avec le jeûne, le banquet, le délaissement du monde, la distraction du clergé, et semblablement le riant masque.*

The policy of the early Church was to divert the people from their pagan customs by consecrating them, as far as possible, to Christian use. The month of December was dedicated to Saturn. The Saturnalia were originally held on Dec. 17, Augustinian clerics were to observe them on Dec. 17-19. Martian, in the 2nd cent., says it lasted a week, and that mimic kings were chosen. Duchesne (Ordonnance, ii. 11) says that the first festival of *Notialis Incen*, on Dec. 25, may have had some influence in fixing the date of Christmas in the Western Church. He hesitates as to the Saturnalia, the Christianization of the Saturnalia were probably slowly transferred to the Christmas season by the appointment of the Advent fast. A relic of this still lingers on in North Staffordshire, where the farm-servants' annual holiday extends from Christmas to New Year. The *Boy Bishop* (*Episcopus Puerorum*) was elected on St. Nicholas Day, Dec. 6, and his authority lasted till Christmas, or Holy Innocents' Day, Edward I., in 1290, provided higher vestments for the royal presence in the *Processionale*. The *Santa Claus* of to-day still keeps alive the tradition of the *Boy Bishop* and the *Abbot of Unreason*.

The concessions of the early Church did not succeed in disturbing the rites which had been associated with the Saturnalia. The *Liberty of December* extended to New Year and Epiphany, covering the whole of the Christmas festival. The *Liberty of Christmas* continued to the close of the 16th cent. *Pseudo-Aegius*, Aug. (*Saron, 265*) condemns the dances, which afterwards became a recognized feature of the Feast of Fools: *Istum cinnem infulos et miseri homines, qui balatone et saltatione ante ipsas basilicas Sanctorum exercere nec mutum nec errubescere, esse Christiani ad Ecclesiam venerint, Paganie de Ecclesiae revertuntur.* The sermon has been ascribed to Cæsuriano of Arles (*ob. 517*). The description of the Feast of Fools at Antioch in 1644, quoted by du Tillot from a contemporary letter to Gassendi, shows that the feast was still held in the same district to yield to the censures of the Church. The excesses connected with the Calendis Brumalia and other festivals were condemned in Can. 133 of the Council in Trullo in 692. The mimic pageant of the *Boy Bishop* and abbot was finally censured in *Sessio xx* of the Council of Basel in 1435:

> *Turgor etiam illam absurdam in quibusdam frequentatione ecclesiæ quo certis anni celebrabilibus nonnulli examinantur, id est, absurdam personificationem more episcoporum beneficentiam. Alii ut reges ac deos imitent, quod festum Saturonis vel Innocentius vel puerorum in quibusdam regionibus nuncupat, ubi hilaritatem seu theatralum festum.*

Tillot also mentions the condemnations of these abuses by the Council of Rouen in 1435, Soissons in 1455, Sens in 1455, Paris in 1528, and Cologne in 1536. In England they were abolished by proclamation of Henry VIII., July 22, 1542, though restored by Elizabeth.

In Scotland the annual burlesque presided over by the *Abbot of Unreason* was suppressed in 1555. The guisers, who in Scotland play the part of the mummers and *Kouen*, are *Marchants*, *M. Foux*, and generally wear mitre-shaped caps of brown paper, which are derived either from the *Boy Bishops* or from the *Abbots of Unreason*. In fiction, Sir Walter Scott has left a vivid picture of the *right reverend Abbot of Unreason* in the *Abbot*.

**THOMAS BARNES.**

**'ABD AL-QADIR AL-JILANI.**

**Life.**

Sidi 'Abd al-Qadir al-Jilani, one of the greatest religious personalities of Islam, ascetic, wonder-worker, teacher, and founder of a brotherhood, was born in 1075 A.H. (1528 A.D.). The Musulmans make him a *sharif* of the blood of the Prophet and a descendant of 'Ali; but this claim has little likelihood, for he was probably of Persian origin. His complete name reads *Mahdi al-Din 'Abd al-Qadir*, son of Al-Mubarak, son of Jenki-Dost or al-Mubarak, son of Jenki-Dost or Jilani. Jenki-Dost is a Persian name. Historians, such as Abu-l-Mahasin (ed. Juybobi, p. 698), tell us that his national name (*Jilani, *the Jilâni*) cannot be found in literature before 1075. However, his son *Jenki-Dost* is found under the name *Jilani*. Between 1080 and 1092, he lived in Baghdad, where he preached, and preached, but from Jil, a locality near Baghdad, Various legends, however, call him *the Qura*, i.e. the Persian. He came to Baghdad in 488 to study *Hanbelite* law. He learnt the *Quara* from *Abu Sa'id al-Mubarak* al-Mubarrani, and polite literature from *Abu Zakarya Yahya of Tabrizz*. His master in asceticism was *Hammam ad-Dabbas*; he spent long years in the deserts and among the ruins around Baghdad, leading a hermit's life. In 521 he felt himself called back into the world, and returned to Baghdad, where the *Qadi, Abu Sa'id al-Mubarrani*, gave him charge of the school which he had been directing in *Bab el-Aluj* (Le Strange, *Baghdad, May viii.*, No. 29, and p. 296 ff.). His teaching met with very great success; the school had to be enlarged time after time; it was finally completed in 528, and took the name of *Sidi Jilani*. He spoke three times a week—twice in the school, on law, and once in his oratory, on mysticism. He drew many hearers from all parts of Mesopotamia, Persia, and even Egypt. It is *al-Mubarak* who condemned the *Jilani*. He gave legal decisions, which became authoritative among both the *Hanbalites* and the *Shafiites.* Among his hearers might be mentioned the jurisconsult *Muwallad al-Din Ibn Qadama al-Maqdis* and the famous mystic *Shihab al-Din al-Suhra.*
ward. He married and had many children—thirteen, according to a tradition reported by Depont and Copolliani (p. 298); forty-nine, of whom twenty-seven were sons, according to another tradition, which seems to be the more correct, as they were very young when he died, and during his lifetime, to preach his doctrine in Egypt, Arabia, Turkestan, and India. He died at Baghdad on the 8th of the month of Rabī‘ il-‘Awwal (1066 A.D.).

Among the numerous traditions which have been preserved concerning 'Abd al-Qādir are for the most part a legendary character. They deal with his mysteries, his visions, and some of the things that are related concerning him:

1. His mother bore him when she was sixty years old. As a nursing he declined to take the breast in the month of Ramadan. When he came to Baghdad to study, the prophet Ḥāḍir appeared to him and prevented him from entering the city; he remained seven years before the walls, practising asceticism and living on herbs. When he withdrew into the deserts around Baghdad, he was visited by the same prophet Ḥāḍir, and his feed and fed twenty-four hours in his Wolūt, his cell of forty hours, and water from the heavens, on his pilgrimage to Mecca. In the desert he was tormented by Satan, who appeared to him under various forms. From the heavens he sent down a certain mirror, which he handed to Alwān Kīsīrī, the famous palace of Chosroes (Lo Strange, Eastern Caliphate, p. 34). One tradition makes him spend eleven years in a tower which ever since bears the name of Burūj al-'Ajwīni, the 'Tower of the Persian.' One day Satan tried to seduce him by a false vision. While he stood on the seashore with a great thirst, a cloud sailed towards him from which fell a kind of dew. He quenched his thirst with this dew, and then a great light appeared, and a form, and he heard a voice saying to him, 'I allow thee that which is forbidden.' 'May God preserve us from Satan, the accursed one,' replied the ascetic. At once the light gave place to darkness, and the form because smoke. He was asked later how he had recognized the deceitfulness of this vision. He answered: 'By the fact that God does not advise to do shameful things.' While he taught, he often seen lifted up from the ground; he would walk a few paces through the air and then return to his pulpit. Once, as he was speaking in the Nizāmiy school, a Jinnī appeared in the form of a snake, which drew near a certain woman, and spoke to her a few words with him. One year the river Tigris rose high, and the inhabitants of Baghdad, fearing their city would be flooded, came to implore the protection of the wonder-worker. Al-Jālānī advaned to the bank of the river, planted his stick in the ground, saying, 'Thus far.' From that moment the waters decreased. Many of these legends have a close resemblance to those of Christian hagiography.

Works.—Many works, mystical treatises, collections of prayers and sermons, are ascribed to him. Brockelmann (Arab. Litt. i. 453 f.) mentions twenty-four titles of his books still existing in Mecca in the libraries of Europe. The two most important are:—Majalis Ḥāḍir (Arabic ed. of al-Shārī, p. 100-105) and from the tradition of his order. It is that of orthodox Muslim mysticism. One cannot fail to recognize a certain Christian influence in it, especially in the virtues of charity, humility, meekness, in his precept of obedience to the spiritual director, and in the aim held before an ascetic, which is spiritual death and the entire self-surrender of the soul to God. Al-Jālānī's respect for Jesus was very great, and the tradition of this respect is still kept in his order.

2. The love of poverty recalls that of St. Francis of Assisi. In all parts of the Muslim world the poor submitted themselves under his protection, and ask for alms in his name. His mystical teaching is expounded in his book, Futūḥ al-ghubār. Among the titles of its 78 chapters, the following are characteristic:—Spiritual death; unconsciousness of created things; the heavenly breath; the descent from the heart; drawing near unto God; unveiling and vision; the soul and its states; self-surrender to God; love and hope; how to reach God through the medium of a spiritual director; poverty. The book contains expressions that are altogether Christian. Commending the excellence of becoming dead to created things and to one's own will, the author says, 'The sign that you have died to your lusts is that you are like a child in the arms of its mother; the sign that you have died to your own will is that you wish nothing but the will of God.' Exhorting the soul to search after God, he hits upon an expression of St. Augustine: 'Rise and hasten to fly unto Him.' A little further on, he appropriates the famous comparison of the corpse: 'Be in the hands of God like a dead body in the hands of the washer.'

The effect of this self-surrender of the soul is spiritual clear-mindedness and joy.

It is a custom in Muslim mysticism to ascribe the essence of the teaching of the founder of an order to some anterior personages, by means of a chain of intermediaries who go far back to Muhammad. Among the predecessors, thus cited, of al-Jālānī should be named the famous ascetic Abū 'l-Qāsim al-Junayd (died A.H. 268).

Certain traditions attribute to this mystic, especially while on his deathbed, some very profound words which contrast with what we have just said about his feelings and his doctrine. They are thus reported by al-Būqāi (Goldziher, Minh. Stud. ii. p. 289): 'The sun greets me before he rises; the year greets me before it begins, and it unveils to me all things that shall happen in its course. . . . I plunge into the sea of God's knowledge, and I have seen Him with my eyes; I live in the presence of God's existence. . . .' Similar sayings are ascribed to many of the great mystics of Islam. It is probable that they are the work of enthusiastic disciples, and that they express only the close union of the mystic with God in a symbolic fashion.

Order.—The order, or brotherhood, founded by 'Abd al-Qādir al-Jālānī bears the name al-Qadiriya. It has great importance in Iran. After the death of the founder, it is led by his sons and then by their descendants. The majority of his sons became disciples of their father, ascetics, missionaries, and men of learning like him. The eldest was Abū al-Raqqāz (A.H. 326-606), the youngest Yahya (550-600), it was Abū al-Raqqāz

ABD AL-QADIR AL-JILANI
who succeeded his father in the leadership of the order, and who built over the tomb of the founder the mosque with seven gilt domes, once celebrated by historians and poets, but to-day lying in ruins (Le Strange, Bagdad, p. 348 f.). Along with the order, the library of the children have spread all over the Muslim world. Branches of this family can be found especially in Baghdad, Cairo, Hamah, and Yâln in the district of Aleppo. A Western tradition claims that one son of al-Jâlî (d. 492/1099) was sent to Persia, but this is contradicted by another tradition (Qâladî al-jâwâhir, p. 54), according to which 'Abd al-Âzîz emigrated only to the province of Jîhâl. Baghdad has remained the moral centre of the order. But the jurisdiction of the mother-house does not extend beyond Mesopotamia, Syria, and Turkey. In the other Muslim countries the brotherhood went through a process of disintegration, and the congregations have ceased to be subordinate to the mother-house. The monastery (zâwiyya) of Baghdad was destroyed by Shah Isma'il, and restored by Sultan Sultân. 

The brotherhood reach out as far as the Farther East, into the Dutch East Indies and Chinese Yunnan. In India there are many kinds of Qâdirîyya. The Qâdirîyya Akbariyya, the best-known, founded at the end of the 11th century by the Shaykh al-Muhîl al-Âzîz ibn al-Ârabî al-Kâttîmi, forms a distinct order; the Bâl Nâtâr are begging fâqîras, recruited from the inferior castes of Muslims, and connected with the Qâdirîyya. In Arabia the brotherhood is powerful. It possesses important zâwiyya in Jîhâl and Medina, and has thirty muqaddims (prefects of congregations) in Mecca. In Constantinople it owns forty houses (tâkýyas). It is widespread in Egypt and North Africa, and in the Sudan, where the foundations of the order (Râmi) are to be found (Rinn). The brotherhood makes great efforts to convert the Berbers to Islam.

The diwâr of the order is nothing but the Muslim confession of faith: fa 'âlîk illa-l-lah. There is no God but God, and he is alone in his greatness; probably instituted by al-Jâlî himself, these words are not always pronounced entirely. During the prayer in common, which is accompanied by motions of the head and of the body, and in which the dervishes endeavour to attain a state of ecstatic excitement, after having already pronounced the whole formula, they say only Allâh, Allâh! and finally, when the rhythm becomes more rapid, they pronounce nothing but bâ, bâ, bâ, the sound being sustained until loss of breath. Many orders or brotherhoods have separated themselves from the Qâdirî order. The most famous, and the also most important of them is the Qâdirîyya of India, are the Râfiqâ'îyya, commonly called the "Howling Dervishes," founded by Ahmad ar-Rifî'n (died a.H. 570), a nephew of al-Jâlî; the Bâdawîyya, an Egyptian order, and the Sakâ'îyya. The other orders are those of the Bâkkâ'iy, Jîshiy, Bâyiyya, Dâshâ'-iy, Maulânîyya, Ârâsiyya-Salâmilâ, Bâ-'Alîyya, Amânirâyya (cf. MURHÂJÂDÂN, § vii.).

LITERATURE.—(1) GOTTLOB, BOHRIC, al-asr, by 'Ali b. Yusuf al-Shâtrîfi (A.D. 517-713), Cairo, 1940. (2) Qâladî al- jâwâhir k.f.manâghaš-Shârîf 'Abd al-Qâdir, by Muhammad al-Âzarî, Cairo, 1923. (3) Qâ'ârî, al-Maâjî al-Mu'âmînîn, ib. p. 135, also British Museum MSS add. No. 26,716, fol. 331 vo. and No. 25,341, fol. 364 vo.). This letter, with the answer of Râmî al-Âzîz, is extant in the library of Trinity College, Cambridge (Catalogue of the Arabic, Persian, and Turkish Manuscripts in the Library of Trinity College, by E. H. Palmer, p. 116). Consequently there can be little doubt that this is the original of 'Abd al-Râzîq, who was in the reign of Abû Sa'id, and he may well have died, according to the earlier date mentioned by Hajî Jalâ'î, in A.H. 739 = A.D. 1332-30.

Concerning the outward events of his life we
possess scarcely any information. 'Abd states (Nafahat, p. 557) that he was a disciple of shaykh Nār ad-Dīn 'Abd as-Samad of Ṭanāz, through whom, as appears from the articles on that shaykh and his teacher, shaykh Nuṣair ad-Dīn (Nafahat, p. 546 f.), he traced his spiritual descent to the illustrious sūfī Shihāb ad-Dīn 'Umar as-Swārāwī and Muhyī ad-Dīn Ibn 'Arabī. It is related by Yāqīn (Bend ar-rayhānā, 1901 and 3rd ed. Tel-Aviv, 1951) that one day, while 'Abd ar-Razzāq was discoursing in the mosque at Medina, a dervish among his audience withdrew into a corner and gave himself up to meditation. On being asked why he did not listen like the rest, he answered: 'They are hearing the servant (wālī) of the Provider (ar-Razzāq), but I am hearing the Provider, not his servant.'

2. Writings.—The most famous work of 'Abd ar-Razzāq is his dictionary of the technical terms of the sūfīs, Itīḥād as-Safā'īya. It is divided into two parts, the first on the technical expressions (muṣṭafalāhāt), and the second on the so-called 'stations' (mutaqāmat). 'Abd ar-Razzāq relates in his preface that he composed it for the instruction of his friends who, not being sūfīs, could not understand the technical terms which he had employed in some of his other works. The Itīḥād was largely translated into English by Elia, and published and translated by Guyard. 'Abd ar-Razzāq wrote several books of less importance, such as his allegorical interpretation of the 38th chapter of the Qurān (Tawāf al-Qur'ān) and his commentaries on the Ruqūs al-ḥikmat of Ibn 'Arabī, on the Tawāf al-khurāsānī of Ibn al-Fārid, and on the Manzil as-sārūrī of 'Abdallāh al-Ansārī.

3. Doctrine.—Like the later sūfīs generally, 'Abd ar-Razzāq finds a basis for his system in the Neo-Platonic philosophy as expounded by the Muslims by Fārābī, Ibn Sinā (Avicenna), and Ghazālī. He is a thoroughgoing pantheist, in the sense that he considers the whole universe, spiritual and material, to be the direct manifestation of God. From the Absolute Being, who alone exists, and who is known solely to Himself, there radiates a spiritual substance, the Primal Intelligence (al-ʿaṣr al-aṣlī), and its intellectual products, the Ruqūs al-ḥikmat. This substance contains the types or ideas of all existing things, and by a further process of emanation these types entered into the world of the Universal Soul, the Platonian ḥikmat, where they become individualized and are transmitted to the material world. Here begins an upward movement by which all individual souls are drawn back to the Ruqūs al-ḥikmat. 'Abd ar-Razzāq distinguishes three classes of mankind: the slaves of passion (ṣāḥib as-rū') and those who are ignorant of God and of His attributes, and such, as Nasīr ad-Dīn al-Qurānī, who are saved from hell if they have faith; secondly, the men of intellect (ṣāḥib ghabāt), who attain to the knowledge of the Divine attributes by means of reflection and argument; and, thirdly, the spiritualists (ṣāḥib rā'ī), who pierce through the veil and are in the presence of the eternal Oneness and contemplate God as He really is (Nafahat, p. 559 f.).

Much of this doctrine is not peculiar to 'Abd ar-Razzāq, but belongs to Ibn 'Arabī and philosophical "Ar-Razzāq, the Provider," is one of the names of Allah, school of Sufism. His originality lies in the fact that he combined his pantheistic principles with an assertion of moral freedom which at first sight appears to be incompatible with them. His theory on this point is that of the divine Emissary (wa-l-qudūr) and the divine Emissary (wa-l-qudūr) (see Guyard's article on the Ruqūs al-ḥikmat, pp. vii. i. p. 125 ff.), and may be summarized as follows: Everything that exists in the terrestrial world is the manifestation of some universal type prefigured in the world of the Emissaries (qudūr). Since Intelligences, and undergoes a process of creation, development, and destruction which is pre-determined in every particular. How then, we may ask, is it possible for men to perform acts emanating from a Divine source, and governed by immutable laws? What is the use of commands and prohibitions, of rewards and punishments, if there is no liberty to choose good or reject evil? 'Abd ar-Razzāq, diverting at this point from Ibn 'Arabī, solves the difficulty by declaring that all actions are the result of direct or indirect causes, themselves predetermined, one of which is Freedom, or will itself. In other words, it is foreknown to God and inevitably decreed that every human act shall be produced by the united operation of certain causes, at a certain time, in a certain place, and in a certain form; but it is also decreed, no less by means of the agent cause (biwašūd), the specific cause (biṣāliq), and the free choice (ištīyār) in the production of the act. Therefore every act is at once fatal and free. The Qurānists (Mu'tazilites), who maintain that men are the authors of their own actions, regard only the proximate causes; while the Qadarians hold that all actions are created by God, regard only the remote causes (cf. MUHAMMADIANISM, §II). Both parties see but half the truth, which, as Ja'far Śādiq remarked, is neither absolute fatalism nor absolute liberty, but something between those two extremes. Hence the utility of religion and morals, whereby men are incited to good actions and deterred from evil. The Prophet said of Abū Hurairā: "The pen which has written his destiny is dry," meaning that what should happen was already fixed; but to the question, "Why then do thouught?" he replied: "Nay, do it; every one of you has received the capacity of doing that which he was created." 'Abd ar-Razzāq next proceeds to deal with the objection that, if our acts are determined in advance and produced, though willingly, by us, we should all have an equal share of good and evil, or freedom from God. From the Absolute Being, who alone exists, and who is known solely to Himself, there radiates a spiritual substance, the Primal Intelligence (al-ʿaṣr al-aṣlī), and its intellectual products, the Ruqūs al-ḥikmat. This substance contains the types or ideas of all existing things, and by a further process of emanation these types entered into the world of the Universal Soul, the Platonian ḥikmat, where they become individualized and are transmitted to the material world. Here begins an upward movement by which all individual souls are drawn back to the Ruqūs al-ḥikmat. 'Abd ar-Razzāq distinguishes three classes of mankind: the slaves of passion (ṣāḥib as-rū') and those who are ignorant of God and of His attributes, and such, as Nasīr ad-Dīn al-Qurānī, who are saved from hell if they have faith; secondly, the men of intellect (ṣāḥib ghabāt), who attain to the knowledge of the Divine attributes by means of reflection and argument; and, thirdly, the spiritualists (ṣāḥib rā'ī), who pierce through the veil and are in the presence of the eternal Oneness and contemplate God as He really is (Nafahat, p. 559 f.).

Much of this doctrine is not peculiar to 'Abd ar-Razzāq, but belongs to Ibn 'Arabī and philosophical "Ar-Razzāq, the Provider," is one of the names of Allah, school of Sufism. His originality lies in the fact that he combined his pantheistic principles with an assertion of moral freedom which at first sight appears to be incompatible with them. His theory on this point is that of the divine Emissary (wa-l-qudūr) and the divine Emissary (wa-l-qudūr) (see Guyard's article on the Ruqūs al-ḥikmat, pp. vii. i. p. 125 ff.), and may be summarized as follows: Everything that exists in the terrestrial world is the manifestation of some universal type prefigured in the world of the Emissaries (qudūr). Since Intelligences, and undergoes a process of creation, development, and destruction which is pre-determined in every particular. How then, we may ask, is it possible for men to perform acts emanating from a Divine source, and governed by immutable laws? What is the use of commands and prohibitions, of rewards and punishments, if there is no liberty to choose good or reject evil? 'Abd ar-Razzāq, diverting at this point from Ibn 'Arabī, solves the difficulty by declaring that all actions are the result of direct or indirect causes, themselves predetermined, one of which is Freedom, or will itself. In other words, it is foreknown to God and inevitably decreed that every human act shall be produced by the united operation of certain causes, at a certain time, in a certain place, and in a certain form; but it is also decreed, no less by means of the agent cause (biwašūd), the specific cause (biṣāliq), and the free choice (ištīyār) in the production of the act. Therefore every act is at once fatal and free. The Qurānists (Mu'tazilites), who maintain that men are the authors of their own actions, regard only the proximate causes; while the Qadarians hold that all actions are created by God, regard only the remote causes (cf. MUHAMMADIANISM, §II). Both parties see but half the truth, which, as Ja'far Śādiq remarked, is neither absolute fatalism nor absolute liberty, but something between those two extremes. Hence the utility of religion and morals, whereby men are incited to good actions and deterred from evil. The Prophet said of Abū Hurairā: "The pen which has written his destiny is dry," meaning that what should happen was already fixed; but to the question, "Why then do thouught?" he replied: "Nay, do it; every one of you has received the capacity of doing that which he was created." 'Abd ar-Razzāq next proceeds to deal with the objection that, if our acts are determined in advance and produced, though willingly, by us, we should all have an equal share of good and evil, or freedom from God. From the Absolute Being, who alone exists, and who is known solely to Himself, there radiates a spiritual substance, the Primal Intelligence (al-ʿaṣr al-aṣlī), and its intellectual products, the Ruqūs al-ḥikmat. This substance contains the types or ideas of all existing things, and by a further process of emanation these types entered into the world of the Universal Soul, the Platonian ḥikmat, where they become individualized and are transmitted to the material world. Here begins an upward movement by which all individual souls are drawn back to the Ruqūs al-ḥikmat. Much of this doctrine is not peculiar to 'Abd ar-Razzāq, but belongs to Ibn 'Arabī and philosophical "Ar-Razzāq, the Provider," is one of the names of Allah,
ABDUCTION—ABELARD

REYNOLD A. NICOLSON.

ABDUCTION.—In English law abduction is a term usually, though not exclusively, applied to the state of a woman, within a period of twenty-one years of age, who, without her consent, is led, taken away, detained, or detained by force of a woman of any age with intent to marry her, and is not married, or is led, taken away, detained, or detained by force of a woman of any age with intent to marry her, and is not led, taken away, detained, or detained by force of a woman of any age with intent to marry her, and is not married, or to cause her to be married or carnally known (Criminal Law Amendment Act, 1885). The penalty for such an offence may be either a period of penal servitude not exceeding fourteen years, or a period of imprisonment not exceeding two years. Crimes of this kind are now comparatively rare: in England the number tried at Sessions and Assizes during the ten years ending 1904 amounted only to an annual average of thirteen (Criminal Statistics, 1904, p. 20).

It is to be noted that abduction, which is now regarded as a serious crime among all civilized communities, is probably a survival of one of the most primitive forms of marriage regulation. The marriage bond took the form of capture. This primitive form of marriage relationship still prevails among some uncivilized peoples in various parts of the world; it is, in fact, a customary law in many nations which have not reached a certain stage of civilization, and among communities which have reached a certain stage of culture, as, for instance, the South Slavonic peoples, marriage by abduction was in full force at the beginning of the 19th century. Our Teutonic and Scandinavian ancestors regularly resorted to the forcible abduction of women for wives, and war was often carried on among them for the purpose of capturing wives. The same custom prevails in the early stages of Greek life, and the Romes of the Heroic age were often obliged to resort to surprise and force to secure wives for the community.

Distinct traces of the same custom are to be found in Old Testament literature. The tradition is handed down in the Book of Judges that the men of the tribe of Benjamin were supplied with wives from the virgins who had been captured as the result of a war upon the inhabitants of Jabesh-Gilead (Jg 21:12); and when these did not suffice, the sons of Benjamin in their search for wives made a raid upon the daughters of Shiloh, when they were celebrating an annual religious festival, and they carried them off (v. 21) when they came out to dance.

Among some races abduction was the ordinary legal method of procuring a wife, and the parents of the abducted woman were liable to punishment if they attempted to get back their daughter. Among other races abduction led to blood feuds, and it is possible, as Herbert Spencer suggests, that the fear of vengeance led to the offer of compensation by the abductor, and prepared the way for the more advanced matrimonial custom of marriage by purchase. After the decay of marriage by capture, many traces of it still remained in many primitive communities, and in some cases the bridegroom is expected to go through the form of carrying off the bride by stratagem or force; in other cases the bride conceals herself in a hiding-place; arrangements to be discovered by her future husband; in some marriage ceremonies it is considered a point of honour with the bride to resist and struggle, no matter how willing she may be to enter into the marriage compact. With the abolition of the marriage bond, and more especially in those forms of society where marriage became a matter of mutual consent, and in this way assumed an ethical character, abduction, from being a tolerated custom, descended to the position of a crime. In

Chinese legislation abduction is a capital offence, and a man is not living as a free man as a result of it is null and void. The code of Justinian also nullifies a marriage of this kind. The Church, although condemning the perpetrator of abduction to severe spiritual pains and penalties, refrained till the 9th cent. from exerting the temporal power. The marriage at that period ecclesiastical law was brought into conformity with the jurisprudence of Justinian. Innocent III., however, made the legality of the marriage contingent on the consent of the abducted woman, and the Council of Trent adopted a somewhat similar principle. It declared that, so long as the woman was in the power of the abductor and unable to exercise the freedom of her will, abduction was an impediment, but if she regained her liberty and freely became a consenting party, the marriage ceased to be invalid. The abductor incurred the penalty of excommunication. The growth of the ethical conception of marriage as a matter of free will and mutual consent on the part of persons who have arrived at the age of maturity, necessarily led to the repudiation of abduction as an act of force or fraud, and involved the enactment of laws relating to marriage by the law of nations, which are usually attached to it by the criminal jurisprudence of civilized peoples. See also MARRIAGE, WOMAN.

W. D. MORRISON.

ABELARD.—I. Life.—Master Peter, surnamed Abelard, * the commanding figure in the intellectual movements of the 12th century, was born at Le Pallet (Podelatun) in Brittany, a castle 11 miles S.E. from Nantes, about the year 1079. His parents were nobles, whose piety led them in later life to enter the monastic life. Abelard, the eldest son, renounced his claims, that he might the better devote himself to learning. 'I prefer,' he said, 'the strife of disputation to the trophies of war.' After studying for a while under the extreme nominalist Rocelin, probably at Locminé near Vannes, and trying, though without avail, to learn mathematics under Theodoric of Chartres (Poole, op. cit. 363, 115), Abelard was at last attracted to the Notre Dame at Paris by the fame of its master, William of Champeaux, whose crude realism soon provoked Abelard, though not yet twenty, to open combat. The duel, protracted through years, resulted in length at the overthrow of the older man's reputation, and the installation for a while of Abelard as an independent master. When expelled from the Notre Dame by the cathedral authorities, at the instigation of William, Abelard took refuge first at Melun, afterwards at Corbeil, and finally at St. Genevieve, at that time outside the city and free from the jurisdiction of the cathedral. This abbey of secular canons of what lax life thus became the headquarters of philosophic discussions, and the centre of the scholastic movement in the next generation the famous University (Rashdall, Univ. in M. A. i. ch. 5). The next encounter of Abelard with authority was even more momentous, a more serious in a striking distinction not merely as a hitherto, in dialectics, but also in theology, perhaps under the influence of the religious revival which led his mother Lucia, whom he visited at this time, to withdraw from the monastery.

* This spelling was more nearly correct to the original form (see Poole, op. cit. 137 n.). For its proposed derivation see Ducange, a * hailed * (cf. Poole, op. cit. 354), and the note on the Fr. word. Cf. also Battrén's Précis de la langue fr. (1900) n.
into a nummery, Abelard, at the age of thirty-four, put himself under the most famous theologian of the day, Anselm of Laon (c. 1113, Deutsch, op. cit. 30 n.). The venture, whether due to religious influ- ences or to the natural impulses of his poetic genius, few lectures convinced Abelard that he would find little fruit on 'this barren fig-tree.'

"Anselm," continues Abelard, "was that sort of man that if one could only stir him up to his work, he could still. He was wonderful to hear, but at once failed if you ques- tioned him. He would kindle a fire not to get light, but to fill the house with smoke" (Hist. Col. c. 9).

Abelard soon shook his fellow-students by expressing the opinion that education should be able to study the Scriptures for themselves with the help of the 'glosses' alone. (As a matter of fact, the 'gloss' in universal use was his tutor Anselm's amended form of the Glosses Ordinaria of Walafrid Strabo (†1140).) In proof of his view, he gave, at their request, a series of lectures on Ezekiel. Such was his success, if we may accept his own statement, that it was only by expelling him from Laon as an unauthorized teacher, as in theology he certainly was, that the authorities were able to check the rush to his classroom. 'Anselm,' says Abelard, in a characteristic sentence, 'had the impudence to suppress me' (Hist. Col. c. 3).

On his return to Paris, Abelard resumed his lectures, though in the cathedral or in St. Genevieve is uncertain. Scholars from every land (Falk of Denil, Ép. ad Abelardum in Migne, PL clxxviii. 571, gives an interesting catalogue) hastened to sit at the feet of this wonder of the age—philosopher, poet, musician, and theologian in one. The Church smiled on his success, and appointed him, though not yet sub-deacon, a canon of Notre Dame (Poole, op. cit. 145 n.; Rému- nst, i. 39 n.). Abelard had reached the zenith of his fame. Henceforth the story of his life is one of 'calamity,' not the least element in which was his own moral downfall, the conscious deliberateness of which, however, in our judgment, he characteristically exaggerates in his later reminiscences (Hist. Col. c. 6; cf. Rému- nst, i. 49, as against Cotter Morison, St. Bernard, 260). Into the romance of his connexion with Heloise (Heloïsae, his in-law) we need not enter. The repetition of this well-known story distracts attention from the real greatness of Abelard in the history of thought. In the time of Henry II of France, Abelard was created for mankind, and should not be sacrifi- ced for the sake of a single woman,' Abelard privately married the woman he had seduced, and, when the secret was out, removed her to the convent of Saint Suger, where she was very lax. In Abelard's opinion, as reported for us by one of his students, marriage was lawful for such of the clergy as had not been ordained priests (Senteunt, c. xxvi.; cf. Poole, 147 n.). We draw a veil over the story of the revenge of Fulbert, his wife's uncle. Abelard in an agony of soul and body fled to St. Denis, while Heloise, on his demand, tried to transfer her passions to more spiritual objects. "I long to chant," said she, as she did so, a verse out of Lucretius's Pharsalia (c. 1110). Their boy, to whom the parents had given the curious name of Astraloba, was left with Abelard's father, Denis (Hist. Col. c. 8). For his career see Rému- nst, i. 260).

Abelard found the abbey of St. Denis worldy and dissolute. He retired in disgust to a cell of the house in Champagne, the exact location of which is unknown (Poole, op. cit. 1. 72 n.; Rému- nst, op. cit. i. 73 n.; Poole, op. cit. 156 n.), and opened a school of theology. Very soon the thoroughness of his students made it difficult to procure either food or lodging for himself and those who were living as they were brilliant. In his Tractatus de Unitate et Trinitate Divina, a work recently discovered and edited by Dr. Stötzle (Freiburg, 1891), and afterwards recast into his Theologia Christiana, he discussed the great mystery. His line of thought may be gathered from his position: a theologian not believed merely because God has said it; but because we are convinced by reason that it is so (cf. Introd. ad Theol. ii. 15). We need not wonder that he was disowned by the legate, Cardinal Cuno of Preneste, to answer for his teaching before a Synod at Soissons (1121) at the instance, curi- ously, of his first master, the aged Roscelin (on this see Rému- nst, i. 81 n.), and of two rival masters of theology, Albert of Rheneus and Lotulf of Novara, the leading spirits in his former expulsion from Laon. The charge against him of Sabellianism seems to have had little justification (Rashdall, i. 53; Deutsch, 265). In reality the chief cause of offence lay in his appeal to reason. According to Abelard, the Synod, without either reading or inquiring, in spite also of the efforts of bp. Geoffrey of Chartres to secure an adjournment, 'compelled me to burn the book with my own hands. So was burnt amid general silence.' He was not allowed to justify his orthodoxy. A copy was handed to him of the Athanasian Creed, 'the which I read amid tears and fear, as well as I might.

He was then sent to St. Medard, a convenit near Soissons, which had acquired the reputation of a penitentiary through the stern discipline of its abbot Geoffrey and his frequent use of the whip (Hist. Col. c. 9, 10). 'Good Jesus,' cried Abelard in his distress, 'where art Thou?' There he suffered much from the zeal of its prior, the rude but canonized Goswin (Recueil des historiens des Gaules, xiv. 449), who had previously come into conflict with him at St. Genevieve, 'as David with Goliath' (ib. 442). (The student should note that the records of the Synod of Soissons have been lost. We are dependent on Abelard, Otto of Freising, and St. Bernard.) Abelard was soon permitted to return to St. Denis. There his love for truth overwhelmed him in a new calamity. He had been led by Bede (Expos. in Arts, xvii. 34) to doubt whether the foundation was indeed due, as the monks pro- claimed, to Dionysius the Areopagite. Character- istically Abelard 'showed the passage in a joke to some of the monks. Alarmed by their threats of handing his report to the abbot, Abelard fled by night to St. Ayouti, a priory near Provins in Champagne. Eflorts were made to secure his return, if necessary by force. He himself became willing to explain away the authority of Bede (Deutsch, op. cit. 38, for a de- fence of Abelard). Fortunately at this stage abbot Adam of St. Denis died (Feb. 19, 1122). He was succeeded by the famous Suger (1081-1152), at that time not the saint and reformer he became later through the influence of St. Bernard (1127), but one of the king's trusted ministers. At the instance of certain courtiers, Suger gave permission to Abelard to seek any refuge he liked, provided he did not 'defile the monks or hinder the peace the abbey. Abelard fled by night to St. Ayouti, a priory near Provins in Champagne. Efforts were made to secure his return, if necessary by force. He himself became willing to explain away the authority of Bede (Deutsch, op. cit. 38, for a de- fence of Abelard). Fortunately at this stage abbot Adam of St. Denis died (Feb. 19, 1122). He was succeeded by the famous Suger (1081-1152), at that time not the saint and reformer he became later through the influence of St. Bernard (1127), but one of the king's trusted ministers. At the instance of certain courtiers, Suger gave permission to Abelard to seek any refuge he liked, provided he did not 'defile the monks or hinder the peace the abbey. Abelard thus became a hermit, or un- attached member of the house. But his eager pupils soon found out his retreat. His hut of wattles and stubble 'like a Vesta altar, army of robbers and robbers' on the Ardunus, near Troyes, became the crowded monastery of the Paraclete. 'The whole world,' wrote Abelard, 'is gone out after me, By their persecutions they have prevailed nothing.' Nor was his life a mystery to a few: "A hermit," said Bede. It was rather a school of philosophers, where disquisitions took the place of constant devotions, where there were neither vows nor rigid rules. The very title of "Paraclete" and the Conductor of his sad life, was an innovation; 'dedications should
be either to the Trinity, or to the Son alone' (Hist. Col. c. 11). That Abelard maintained strict order among his flock is shown, however, by a curious survival of fragment of verse (Rénesaut, i. 111).

In 1125, Abelard was in the service of the abbot of the monastery of St. Gildas de Rhuys, near Vannes, the oldest monastery in his native Brittany. Abelard accepted, either urged by his fears of further councils (for Clairvaux, the monastery of St. Bernard was at no great distance from Paraclete; while he dreaded also an attack from Norbert of Magdeburg, the founder of the Premonstratensians), or in one of his frequent moods of despair, 'God knows what it was, that at times I fell into such despair that I proposed to myself to go off and live the life of a Christian among the enemies of Christ.' His life there for the next six, or possibly eight, years (Poole, 158 n.), was one of almost unrelieved misery. The abbey was poor in resources, shameless in its depravity; the monks unscrupulous in their determination to get rid of any reformer. They tried to poison Abelard, first in his food, then in the cup of the Eucharist. So the abbot, not approving, allowed Abelard to leave Paraclete. But Paraclete was no longer open to him. In 1129 he had formally handed it over— with the added sanction (Nov. 28, 1129, R. Lec. 119) of the priests obtained from Pope Innocent II. on his stay at Moryg in, near Etampes (Lec. 29, xii. 80) — to Heloise 'the priestess, and the other sisters in the oratory of the Holy Trinity.' Heloise had been expelled from Argentenil in 1123 (Lec. 120), by the mindful capacity and reforming zeal of Suger, who made good at Rome the claims of St. Denys to the convent.

The movements of Abelard for the next three or four years are a little uncertain, the more so as it seems he had maintained the rank and title of abbot of St. Gildas. Probably he lived near Paraclete, engaged in collecting and publishing his writings, including his Historia Calamitatum, and in resolving for Heloise the various problems which arose in the establishment of Paraclete as a nunnery. To this period belongs also his famous correspondence with Heloise. To pass from these impassioned letters to the scholastic trilling of many of the Problematum Heloise is chiefly of interest as a study in repression. He resumed also his teaching at St. Genevieve, though perhaps fitfully. From the enthusiastic description of John of Salisbury (Pug. 43) we learn that he had lost none of his power (Metalogicus, ii. 10, 'contulit me ad peripateticum palatinum'). But for this mention, Abelard's history at this time would be almost a blank. We know, however, that about this date Arnold of Brescia attached himself to Abelard.

When next Abelard appears before us, he is at fault as a theological stonk with St. Bernard, whom he had first met at Morigny when in quest of the papal grant of the Paraclete (Jan. 29th, 1131). The differences of the two men were fundamental, of the kind that no argument or personal intercourse can remove. A realist goes without saying. Realism in those days was almost identical with orthodoxy. But this was not the difference. The two were representatives of opposing schools. Abelard set up in himself the spirit of a premature revolt against unreasoning authority. Bernard, the last of the Fathers, was the supreme representative to the age of all that was best in the old faith: a reformer in morals and life, a rigid conservative in creed and ritual. Abelard, profoundly religious in the age of his, was the representative of a creed full of dry light and clear of cant, but destitute of spiritual warmth; and which, as is shown, both at St. Denys and St. Gildas, little power in turning men to their use to the higher life. With all his narrowness of intellectual vision compared with Abelard, put St. Bernard down at St. Gildas, and that abode of loose livers would have felt at once the purifying power of his rectitude. He was not without fire which not only cleanses but warms; but of this the cold, subtle, intellectual religion of Abelard knew little or nothing. To Bernard—'Faith is not a habit but a certitude, the certainty of things hoped for,' says the Apostle, not the phantasies of empty conjecture. You hear, the substance. You may not dispute on the facts, but you may not wander beyond them through the waste of opinion, the byways of error. By the name 'intellectual religion' something certain and sure of itself is marked off from before you; you are enclosed within boundaries, you are restrained within unchanging limits' (Tractatus de erroribus Abelardi, iv. 9).

Abelard, on the contrary, argued that reason was of God, and had, as philosophy showed, found God. He argued that 'he that is hasty to trust is light-minded' (Sir l. 19). Conflict between the two was inevitable; it had already broken out. In one of his letters, Bernard inveighs with his customary rhetoric against Peter Abelard disputing with boys, conversing with women. A. M., who does not apologize for Moses 46, lid, towards the darkness in which God was, but advances attended by a crowd of disciples (Bernard, Ep. cccxxvi.). On his part, Abelard had attacked the saint for preferring the teaching of St. Bernard to his. Bernard had written that to insist on the use at Paraclete (τὸ ἀργὸν τὸ τινος, which Abelard translates supersubstantialem; see Abelard, Ep. x. in Migne, op. cit. col. 377). Nor would the attachment to Abelard of his former pupil, the daring revolutionary Arnold of Brescia, tend to lessen the suspicions against him.

The two representatives of systems whose conflict from the nature of things is as inevitable as it is unending, were now to meet in fierce combat; at Sens, in the province of whose archbishop both Paris and Clairvaux lay. The challenge seems to have come from Abelard; for we may dismiss as fiction the statement of Bernard's biographer, Geoffrey of Anuxer, that Bernard privately visited Abelard and secured his repentance (Lec. xiv. 350). Abelard felt the need of publicly clearing himself from the charges of heterodoxy brought against him by William of St. Thierry in collision, as some think, with Bernard himself (Bernard, Ep. cccxxvii.). In this challenge Abelard once more shows that neither misfortune nor years had taught him wisdom. He entered the lists against authority with the authority of the master and the general council. At issue with the deep devotional spirit of the age, he chose his time when all minds were excited by the most solemn action of devotion, the Crusade; he appealed to reason when reason was least likely to be heard (Millman, Latii Christianitiy, iv. 350). His one advantage would appear to have been that Henry le Sanglier, the archbishop of Sens, had a legacy against Bernard (Rénesaut, i. 210-211). Perhaps for this reason Bernard at first was unwilling to come to the duel. Such contests, he pleaded, were vain; the verities of faith could not be submitted to their decision (Ep. xiv. 26). Bernard yielded to the representations of his friends and the summons of his metropolitan, and set out for Sens, Whitsuntide 1141 (for date, not 1140 as Poole, Bernard in Deventer, Bilcke, Berlin, 1880). Hardly had the council opened (June 4), and Bernard demanded the recital of Abelard's heresies, than Abelard, whether from characteristic irresolution, fear of the people of Sens, loss of nerve, or revulsion of feeling so great, availed from the very tribunal he had chosen to the judgment of the Pope, and left the assembly to mumble out over its wine-cups its condemnans, already decided upon, it seems, on the previous day (Berengar of Poitiers, Apologia pro Magistro, Migne, PL
Abelard's
to the preface to his *Sié et Non*—a collection of
contradictory opinions from the Father of the
leading disputes of theology, the prologue of
which was probably written not later than 1121 (Deutsch,
402)—he lays down a defence of all criticism: 'By
doubting we are led to inquiry, by inquiry to
perceive the truth.' Of those who argue that we
must not reason on matters of faith, Abelard asks:

'How, then, is the faith of any people, however false, to
be trusted, though it may have arrived at such a stage of
orthodoxy as to confess some idol to be the creator both of heaven
and earth? As, according to your own admission, you cannot reason
upon matters of faith, you can have no right to raise a question
on a matter with regard to which you think you ought yourselves to
be unassailed' (Intro. Theol. ii. 3, Migne, op. cit. col. 1669).

The dilemma of unreasoning pietism has never
been better exposed.

The circumstances of the times flung Abelard
into conflict with Bernard. Intellectually, the only
foeman worthy of his steel would have been Anselm
of Canterbury. At first sight there seems to be
between these two philosophers an impassable
abyss, unconsciously summed up by Anselm in the
preface to his *Cursus Homo*. Some men seek for reason, but
we seek for them because we do believe! 'This is my
belief, that, if I believe not, neither shall I
understand' (credo ut intelligam). The rule of
Abelard is the exact opposite. He argues that men believe
not because of any reason but because of
their own unreason. Doubt is his starting-point, reason his guide to
certitude. But a deeper study reveals that the
differences between the two may be exaggerated,
as in Abelard's own generation they certainly were.

Abelard owns that the highest truths of theology
stand above the proof of our understanding; they
may only be hinted at by analogies, as, for instance,
his favourite analogy of the seal and the Trinity.

But through knowledge faith is made perfect.
(Deutsch, op. cit. 96 ff., 433 ff.), Anselm was no less
anxious to satisfy reason than Abelard, only
wanted to make sure of its limits before he began.

Thus the difference between the two great thinkers
was one rather of the order of thought than real
divergence. If the chronological order be
regarded, Anselm is right; if the logical, Abelard.
In the order of experience faith precedes reason;
in the manner knowledge leads up to faith. And
some excellent remarks in Fairbairn, *Christ in
Mod. Theol.* 120 f., on the contrast; cf. also
Deutsch, op. cit. 172). It is in the clear perception
of this last that the true greatness of Abelard lies.
But, like Bacon, he was saved from memory to the next age, that age which
he had done more than any man to usher in.
The school in which he taught developed within a generation
into the greatest university of Europe, largely
through his influence. With Abelard also closes
the first period of Scholasticism. In the next
generation James of Venice translated the works
of Aristotle, hitherto for the most part unknown,
into Latin. Henceforth the *New Logic*, the basis
of which in many ways was the same as that which
led Abelard in his protests, dominated Europe.

In the place of St. Bernard we have Aristotle as the
all but canonized leader of the Christian
world. But in nothing is Abelard's influence more visible than
in his scholars. Of his pupils, twenty-five, it is
said, became cardinals, including Pope Alexander
III., and more than fifty were bishops. Through
Peter Lombard's *Sentences*, founded on the model
of Abelard's *Sié et Non*, Abelard swayed and
moulded the theology of the next three hundred
years. As Abelard was the incarnation of the
new spirit charging itself with the freedoms of
thought, so in his pupil Arnold of Brescia we find the leader
in the new claim for freedom of will in an ideal
Christian republic. Another pupil, William of
Conches, made a firm though intellectual protest
against the growing neglect of literature (John of Salisbury, Metal. i. 24 in Migne, PL cxxxvii. col. 543c).

Of particular doctrines which illustrate Abelard's influence or drift, we select the following as of special theological interest:—

(a) Injustice.—He limits inspiration to matters concerning 'faith, hope, charity, and the sacraments.' The rest is largely 'for the adornment or enlargement of the Church' (see his Prol. in Ep. Rom., Migne, op. cit. 785). Even 'prophecy' and 'apocalyptic' (see Poole and Migne, op. cit. 1345), while a place must be found in the evolution of life and doctrine for revelation given to the heathen philosophers, especially Plato (Theol. Christ. lib. ii. passim, e.g. Migne, op. cit. 1179. Cf. Epit. Theol. Christ. c. 11).

(b) The humanity of Christ.—This he claims to be essentially real. He goes so far even as to claim that it includes 'hominum infirmatis veros defec tus' (Epit. Theol. Christ. c. 25). In his emphasis on the real humanity of Jesus, Abelard is a complete contrast to his age.

(c) He claimed that sin lies in the intention, the consequence being that sin is not of itself evil. Virtue cannot be attained except by conflict. Ignorance in the case of the unenlightened does not constitute sin, and the Jews who ignorantly crucified Jesus must be judged accordingly; (Abelard's view of sin is best gathered from his Scito te ipsum, esp. cc. 2, 3, 13. Its very title shows the emphasis he places on self-knowledge or intention). Original sin is thus the penal consequence of sin and not sin itself. 'It is inconceivable that God should damn a man for the sin of his parents' (Ep. Rom., Migne, op. cit. 866 ff.).

(d) From this it is an easy transition to Abelard's moral theory of the Atonement—Christ's creating within us by His passion a love which itself delivers from sin (Exp. Ep. Rom. in Migne, op. cit. 830, 859). He rejects totally any theory that makes the Atonement a redemption from the right of the devil (Epit. Theol. Christ. c. 29).

Abelard's influence in the field of Logic was very great, amounting almost to a revolution. He struck out a theory which to-day we should call Conceptualism, midway between the Nominalism of Roscelin and the crude Realism of William of Champeaux. He held that we arrive at the general from the particular by an effort of thought. Thus he allowed the reality of the individual, and the reality also of the universals, in so far, that is, as they were the manifestations of the love of the infinite to Abelard. Thus returned to the position of Aristotle, probably without any direct knowledge of Aristotle's arguments (Poole, 142 n.). Hence the reputation of Abelard in dialectics in the following centuries when Aristotle had become dominant. (For a full discussion see Rémuas, vol. ii., von Prantl, or Ueberweg, i. 892 f.)

Abelard's versatility was very great. In dialectics and theology he was the master without a rival; he also lectured on the great classical law-texts (Rashdall, i. 63 n.). His vernacular songs have perished; the religious hymns (in Migne, 1729 ff.) give little indication of the great power that he exercised in this matter. As a humanist, his qualifications, as also in the case of Heloise, have been exaggerated. His knowledge of Latin literature was considerable, especially Latin scripta, and of Hebrew nil (Poole, c. 59; Deutsch, 55 f.). Of mathematics he professes his complete ignorance. His citations from the Fathers are extensive (Deutsch, 69 f.), as the reader may see for himself by the pages of Poole, xl. many no doubt are second-hand. His eloquence, wit, and charm of manner, added to a culture that covered almost the whole range of knowledge as then conceived, were acknowledged by his admirers.

To this we have the witness of his epitaph:—

Epitaph:—
Abelardus
Hic soli patiit eccliea quidquid erat
(Poole, 145). The Latin is different and inferior reading, Migne, 103; Rémuas, i. 259 n. .

But the truest estimate of Abelard's greatness is that unconsciously given by William of St. Thierry in his invective against him in his Hist. Thuring., ii. 1759:

'His books pass the seas, cross the Alps. His new notions and dogmas about the faith are carried through kingdom and province; to these unmourned before man and beast, he adds, unconsciously that they are reported even to have influence at the court of Rome, by the name of Bernard, Ep. clxxvii.

Abelard's spirit lived in the victories and movements of later thought.

Literature.—A. The chief source for the life of Abelard will be found in his autobiographical, Historia Conscientiae. In addition, we have a stray reference in Otto of Freising's des Gestes Fredericis (ed. Pert, v. 20, esp. i. cc. 47-49, with reference to the Synods of Soissons and Sens; John of Salisbury, Metapopicius (in Migne, PL v. 160, or Bouquet, Reuils, xiv.), and, of course, the writings of St. Bernard. We may read the Vita b. Guilleni (in Bouquet or Brial, Recueil des Hist des Gauves, xiv.), and Suger's de rebus in admin. sua gestis (in Duchesne's Script. Franc. iv.). Of modern Lives the best sketch in English is by R. L. Poole in his Hist. of Hist. of Med. Thought (1881); Abelard's connection with the University of Paris is judiciously dealt with by Rashdall, Univ. in M. A. (1905), ch. 1.; Companyns's Abelard et ses contemporains (1905) is altogether misnamed; M'Cabe's Peter Abelard (1901) is the work of a partisan; the chapter in Cotter Morris's St. Bernard (many ed.) is concise but very fair and judiciously written. We may have the admirable Abelard, 2 vols. (Paris, 1846), of Charles de Rémuas. In view of the vast amount of material on Abelard, we may also read Peter de Debretz (Paris, 1838), which has given us a thorough criticism of Abelard's theology which may be compared by the student with that in Rémuas. Deubert has added considerably to our knowledge of Abelard by a list of English sermons covering seven years by his Die Synode von Sens (Berlin, 1880). Adolph Haushat's Peter Abélard (Paris, 1893) is considerable; his philosophy of Abelard, in addition to the exhaustive discussion in Rémuas, we have Reuter, Gesch. der relig. Entwickelung (2 vols. 1873-1877), and an interesting piece of popular writing on the History of the Franciscans (Paris, 1879); and, more especially for his views, von Prantl, Gesch. d. Liturgie, passim, and Mendelssohn's 6 vols., Leipzig, 1856.

B. Of the works of Abelard we have the following editions:—Migne, PL cxxxvii. (1850), but without the Tractatus de Unitate et Priniciple, first published by Stütte (Freiburg, 1851). On p. 375 of Migne's edition there is an amazing suppression of 'what would seem to be a quip.' Migne's edition contains the Sic et Non first edited in full by Henke and Lindenkohl (Marburg, 1851), as also all the works of Abelard, for the first editing of which we are indebted to Victor Cousin; Opera omnia t. Abelard (Paris, 1870), and the later Petr. Abelardi Opera, ed. V. Cousin, C. Jourdain, and E. Despolis (Paris, 1849). Cousin's contributions to our knowledge of Abelard are very great.

H. B. Workman.

Abatement.—In its most general sense 'abatement' means encouragement, but the word is now used almost entirely in a bad sense as encouragement, counsel, and instigation to commit an offence against the law. When any one 'directly or indirectly counsels, procures, commits any felony or piracy which is committed in consequence of such counselling, procuring, or commandment,' he is described in English law as an accessory before the fact (cf. Stephen, Digest of the Criminal Law). In most criminal codes an abettor or accessory is usually described as a person who has in some manner led to, or facilitated the execution of, an offence by rendering material or intellectual assistance. Without being present at the actual perpetration of a crime or an injustice, a man may be useful to the perpetrator of it by assisting him to plan it, or by placing information before him which will facilitate its execution. Or abetment may take the form of rendering material assistance to the principal agent, such as procuring for him the instruments or physical means by which he is enabled or assisted to commit the crime. In this case the moral character is punished with the same severity as if the accomplice were the actual agent, and an offender found guilty of counselling the perpetration of murder receives the punishment of murder (see further the sentence of non-langement) as if he had committed it. (Cf. Letourneau, L'Évolution juridique, p. 109). In Roman law, in ancient German law, in old French law, and in
ABHAYAGIRI—ABHIDHAMMA

English and American law, no distinction is made, in cases of serious crime, between an accessory and a principal. ' Each in English law may be indicted, tried, convicted, and punished as if he alone and independently' (Stephen) had committed the offence (cf. Post, E. 316. 410, et al., and R. 159. 298 f.). In ancient Jewish law, any one inciting or seducing the people to commit idolatry was ordered to be stoned to death (Dt 13. 16-21). Idolatry was regarded as an act of offense against theocracy, and hence any sort of incitement to commit it was visited with the severest penalties. In primitive penal law, abetment does not appear to have been a punishable offence (Post), and in Talmudic jurisprudence no cognizance is taken of incitement by thoughts or words (Je, i, p. 54).

In recent years, certain Italian jurists (e.g. Gihele, Teoria positiva della complicita, Torinca, 1894) have contended that no distinction should be made between accessories and principals, on the ground that a crime committed by persons acting in concert is more dangerous in character than a crime committed by a single individual, and that men united for a common purpose should not be permitted to escape the blame and responsibility which the law ought to share the responsibility for it in common. Habitual offenders, it is contended, frequently act together; it is often a mere accident which of them shall be the actual perpetrator; therefore all of them should be punished. (Ex, 22. 29). The supreme object of the law should be to strike at the association, and not merely at the individuals of which it is composed. It is the association that is the danger.

W. D. MOWRISON

ABHAYAGIRI.—Name of a celebrated monastery at Anurâdhapura, the ancient capital of Ceylon. Giri means 'mountain,' and Abhaya was one of the kings of Ceylon, who erected the monastery close to the stupa, or solid dome-like structure built over supposed relics of the Buddha. It was this stupa that was called a mountain or hill, and the simile was not extravagant, as the stupa was nearly the height of St. Paul's, and its ruins are still one of the sights of Anurâdhapura.

There was considerable rivalry between the monks of Jetavana, the establishment and those at the much older Mahâvihâra (the Great Minster), founded 217 years earlier. The rivalry was mainly personal, but developed into differences of opinion. The latter we have no exact information, and they were probably not of much importance. On one occasion, in the reign of Mahâmaha (A.D. 275-302), the Great Minster was abolished, and its materials removed to the Abhayagiri. But the former was soon afterwards restored to its previous position, and throughout the long history of Ceylon maintained its pre-eminence.

ABHIDHAMMA.—The title of the third (and last) group, or pitaka, of the Buddhist canonical books; it is the also for the specific way in which the Dhamma (doctrine) is set forth in those books. It is in that specific treatment, and not in any distinctive subject-matter, that the real use and significance of these books for early Buddhism are to be found. A myth grew up among 19th Century Indologists, that the Abhidhamma pitaka was the repository of Buddhist metaphysics. Acquaintance with the contents of the pitaka has dispelled this notion. These books for early Buddhism are to be found. A myth grew up among 19th Century Indologists, that the Abhidhamma pitaka was the repository of Buddhist metaphysics. Acquaintance with the contents of the pitaka has dispelled this notion. These books for early Buddhism are to be found. A myth grew up among 19th Century Indologists, that the Abhidhamma pitaka was the repository of Buddhist metaphysics. Acquaintance with the contents of the pitaka has dispelled this notion. These books for early Buddhism are to be found.

It helps only by catechism; in its last and longest books, not even by that. Hence the call for sustained reconstructive and critical effort. The Abhidhamma gives no such aids. It should always be remembered (and the reader forget it) that the canon was compiled, and for generations learnt, as an unwritten composition.

In the first two pitakas the memory is aided by episodes giving occasion for the utterance of rules, doctrine, or sermon, and by hints of the abhidhamma in the sense of a thenceverse. The Abhidhamma gives no such aids. It helps only by catechism; in its last and longest books, not even by that. Hence the call for sustained reconstructive and critical effort. The Abhidhamma gives no such aids. It should always be remembered (and the reader forget it) that the canon was compiled, and for generations learnt, as an unwritten composition.

In the first two pitakas the memory is aided by episodes giving occasion for the utterance of rules, doctrine, or sermon, and by hints of the abhidhamma in the sense of a thenceverse. The Abhidhamma gives no such aids. It helps only by catechism; in its last and longest books, not even by that. Hence the call for sustained reconstructive and critical effort. The Abhidhamma gives no such aids. It should always be remembered (and the reader forget it) that the canon was compiled, and for generations learnt, as an unwritten composition.

ABHIDHAMMA.—The title of the third (and last) group, or pitaka, of the Buddhist canonical books; it is the also for the specific way in which the Dhamma (doctrine) is set forth in those books. It is in that specific treatment, and not in any distinctive subject-matter, that the real use and significance of these books for early Buddhism are to be found. A myth grew up among 19th Century Indologists, that the Abhidhamma pitaka was the repository of Buddhist metaphysics. Acquaintance with the contents of the pitaka has dispelled this notion. These books for early Buddhism are to be found. A myth grew up among 19th Century Indologists, that the Abhidhamma pitaka was the repository of Buddhist metaphysics. such it might have almost equalled, in value to the
world, the contents of the discourses. As a fact it is
impossible to estimate the extent to which the
exaggeration of the Indian temperament and the
temperance of the Greek temperament were due to
purely practical reasons; but, incidentally, during
the florescence of each, of the written book. No-
where as in India do we find imagination so
dastic and exuberant, running riot through time,
space, and the infinite; and nowhere else is seen
such an effort to carry forth.
Abhidhamma training was one of the most not-
worthy forms of this effort. It was specially cal-
culated (according to Buddaghosa, Atthadisiri, p.
24) to be a functional instrument (dhammamitta) which, in the Buddha’s words, tended to loss of balance, craziness, and insanity. The chief methods of that training were: first, the definition and determination of all names or terms entering into the Buddhist scheme of culture; secondly, the enunciation of all doctrines, theo-
retical and practical, as formulas, with co-ordina-
tion of all such as were logically interrelated; and
finally, the verification of all the heterodox posi-
tions to an absurdity—a method which is con-
finned to the somewhat later fifth book, the Katha-
vatthu. Even in these lofty aims, however, the
want of restraint, helped by the cumbersome
ness of purely theoretical, compilation, tended to defeat
the very objects sought. The logic of definition is not
the same as we have inherited, and the propositions
yield strings of alternatives that have often little
or no relation to facts.

Of the seven books of the Abhidhamma-pịṭkā, the first five have been published by the Pali Text Society, viz., Dhamma-
mitā, Abhidhamma-ṃucanā, Dhammasatthā, Abhidhamma-Ratubuddhika, and Katha-
vatthu; the sixth, or Yamaka, is not yet edited; the seventh, the Pathbha, is [1907] in the press. The first book has been tran-
slated by the present writer under the title, A Buddhist Manual of Psychological Ethics, London, 1909. Besides these seven, there are two versions in Chinese, one Tibetan translation, other seven books, which form the Abhidhamma literature of the Sarvāstivāda—a school which split off from the original nucleus of Buddhist culture. A very full index to the contents of these
seven is given by Professor Takakusu in JPTS, 1905. But the books themselves have not as yet been edited or translated. Their date also is not yet settled, but they are certainly earlier than the Christian era. These works form the basis of the celebrated, but as yet undiscovered, Maha-bhuta-kosa, or Dictionary of Abhidhamma, written in Sanskrit, as well as that of its Commentaries, and other correlative works, some of which survive in Sanskrit and others in Chinese or Tibetan versions, and which carried on the development of Abhidhamma down to the present day. A master, Professor Deechok, in his catalogue of Chinese Buddhist literature (Oxford, 1883), gives the number of the shāstras to be more than thirteen, of these works still extant. In the later developments of Buddhism in India, notably in the so-called ‘Great Vehicle,’ the use of the term Abhidhamma has been systematically dropped. They died out, so to speak, in all other Buddhist countries, where Pali has remained the literary language, books on Abhidhamma have continued to be written down to the present day, the best known being the Abhidhamma-pịṭkā, published in 1834 by the Pali Text Society.

C. RIVUS DAVIDS.

ABHIDHARMA KOṢA VYAKHYĀ.—One of the most important Buddhist texts preserved in Nepal. It is a commentary, written by a scholar named Yasomintra, on a classical account of Bud-
idhism metaphysics: Abhidharmakoṣa, ‘the treasure of Abhidharmma.’ The Sanskrit original of the Koṣa seems to be irrecoverably lost; but there still exist Chinese and Tibetan versions, of which the Chinese are the oldest. It is the earliest of these is the work of a Hindu monk, Paramārtha, dated A.D. 563-567; then revived tradition, was modified and en-
riched by Hīne-tening, the celebrated pilgrim, A.D. 651-
654. The author of the Koṣa is Vasubandhu, one of the most illustrious doctors of the Buddhist Church, who flourished about the end of the 5th century B.C.

The Koṣa itself consists of two parts: (1) a summary account of the doctrine in 602 verses (kīrtikās); (2) an illustrative commentary (vyākyā) on these verses. The subject-matter is discussed in eight sections, viz.: the first principles (dhātus), the senses and their objects, the world of the senses (samānyata), the science (jñāna), the trance (samādhi), the individuality (pudgala). Vasubandhu belongs to the school of the Sarvāstivāda, and the existence of all things, a school of the Hinayāna, or ‘Little Vehicle.’ The Koṣa has neverless been admitted as an authority by all schools of Buddhism; the author of the Vyakhyā, Yasomintra, is a Sau-
trāntikā, and the Sarvāstivādins have always employed it as a text-book. A huge literature of notes and glosses on the Koṣa has grown up. In India, before Yasomintra, Ginnarati, and Yasomintra wrote commentaries on it, which still exist in Tibetan versions. In China, two books of Hīne-tening, Fu-kong and Fu-pa, compiled the lectures and explanations given by their master. It would be easy to-day to fill a whole library with the Koṣa literature.

The work achieved so great popularity is due to the rare merit of the author. Familiar with the anterior intricacies of each school, Vasubandhu not only exhausted the strength of his genius, he brings order, clarity, preciseness, and cohesion into the whole, combining in a harmonious synthesis the tenets sanctioned by general consent of Buddhists.

SILVAIN LÉVI.

ABHISEKA (literally ‘pouring upon’) [from abhi-siṣṭa].—A compound which, without definite ceremonial implications, occurs several times in the Atharvaveda, but not in the Rig or the Sāma. In the White Yajur Veda, and in the three Sami-
hitās of the Black Yajur Veda, as well as in several Brahmāṇas and the brāhmaṇa ritual of all the four Vedas, we find abhishekavāna as the name of a rite included in the rajyāya, and the last book of the Aitareya Brāhmaṇa has abhishekā itself for its main topic.

The ceremonial sprinkling, anointing, or baptiz-
ing of persons and things is a usage of such antiquity and universality, that its origin and sig-
nificance could not methodically be made the sub-
ject of an inquiry confined to India (see artt. on AOINTING). If the earliest anointing was with blood, and the object of it to confer vigour, the evidence for the former truth must be sought out-
side India; and although an invigorating power is in fact ascribed (e.g. Saptapatha Brāhmaṇa, v. 4.
2. 2) to the rite, the Brāhmaṇical theologians were quite capable of arriving at a similar conclusion without the help of an old tradition.

We may (A) begin by a statement of the actual employment of such a ceremony, so far as it is known to us from narrative sources, and then (B) append an account of the Brāhmaṇical prescrip-
tions in connexion with abhiseka, vajapeya, and
rajyāya ceremonies, and the ritual appertaining to them.

A. I. Subjects of the ceremony.—The persons who underwent the rite of abhiseka were in the first place emperors. The Aitareya Brāhmaṇa (vii. 15) states as the object of the rite the attain-
ment of paramount power, which it names with a
great amplitude of synonyms, and it annexes a list of the famous rulers of former times who had been so distinguished (vii. 21-23). In the Mahā-
brāhmaṇa, the seven signs are given, and, in the first (Sātāe Purāṇa, cc. 33, 45, esp. 45) is pre-
ceded by victories expeditions in all directions and
celebrated as part of a rajyāya in the presence of subordinate kings, while the second (Sānti Parvan, c. 40) finally determines the conclusion of the whole. The Buddhist emperor Aśoka was not crowned until four years of conquest had followed his acces-
sion (Mahawansa, Turnour, p. 25), and in the case of
For many prior, 21, 11, 2496, 5, not xxv). the supported 209), that supported that Santi images took (4) 282), Jacobi, it 112) 40), The Beal, and various authorities 107, 11, 112). See 5.5.12 ff., 9, 10), also esp. The mention of various authorities, also esp. Weber, the 1892, p. 171, 1.2). The fluid mentioned in this case is milk; but a variety of other substances, including water of various kinds, cow-dung, earth from an ant-hill, etc., etc., are named by the authorities whom Goldstücker quotes.

Finally, the name abhisekabhisīmā is given by the Buddhists to the last of their ten bhāmis or stages of perfection (Mahāvastu, i, 124, 20). And further, the word abhiseka was applied to any ceremonial anointing, such as has always been, and still is, practised by Hindus at sacred fairs, tanks, etc., etc. For abhisekas of neophytes, see Agnipūrāṇa, c. 90, Posaini, ff., and Rājendralalā Mitra, Notices of Sanskrit MSS, No. 1536; of barren women, etc., Henman, Fr. Bṛhadvāla.

2. Ritual and occasion of the ceremony.—This is not the place for enlarging on the varying details of the inauguration ceremony as described in the Sanskrit literature. The reader will find in Goldstücker's Dictionary, s.v. 'abhiseka,' ample material, extracted from the Mahābhārata (Sānti Parvan, c. 49), Rāmāyana, Agni-Pūrāṇa (c. 209), and Mānasārā. Although in these works the special priestly aspect of the ceremony is but little developed, Goldstücker finds (p. 250) that the details as given in the Mahābhārata and Rāmāyana show 'that the vaidik ceremony had undergone various modifications at the time of their composition,' while (p. 283) 'the inauguration ceremony at the Pāṇḍu-yuga period has but little affinity with the vaidik rite; it is a series of proceedings which are founded on late superstitions, and reflect scarcely any of the ideas which are the groundwork of the ceremony of the Aitareya Brāhmaṇa.' Such changes are, of course, far from unnatural; but there may also have been special causes at work, such as the neglect of the old śramaṇa ritual, or the necessity of providing new forms for rulers who were without title to kṣatriya rites.

The general features of the ceremony seem to be as follows:—Prior to the rite (e.g. on the previous day) the king undergoes a purification, consisting of a bath, etc., no doubt analogous to the Vedē diligence. Essentials are—(1) appointment of the various minister of states either before or in the course of the inauguration; (2) choice of the other royal ratnas, a queen, an elephant, a white horse, a white bull, a white umbrella, a white chowrie or two, etc.; (3) a throne (bhadrāsana, sīvāsana, bhadrāpātha, parāśamāsa) made of gold and decorated with a bluish film; (4) offering of various gifts to the king; (5) etc. See Rāmāyana, ii, 13; Kṛṣṇa-dvīpa, xvi, 23 ff.; Somadeva, xv, 110. C.E.; Jacobi, op. cit. p. 26, 12.3 ff.; Sānti Parvan, c. 40.
hands to him a vessel of suri (spirit) to drink, identifying the suri with soma.

Any consideration of the ceremony, which is preceded by an oath of life-long fealty on the part of the king towards the priest, may be reserved for the end of this article. After the description of it, there follows in the Brāhmaṇa a list of all the famous Kings of ancient times who had been consecrated thereby, together with the names of the consecrating priests. These names may be cited here:

1. Janamejaya Pārśuṣa, consecrated by Tara Kavaṣeya;
2. Śrīśvaṇga, consecrated by King Inteṣaṇa;
3. Niśākṣa, consecrated by Sarvaśrī Vaiṣṭara-
4. Ambika, consecrated by Pārvata and Nārada;
5. Yudhikīrṇa Arugaraṇa, consecrated by Pārvata and Nārada.

Viśvakarmā Bhavunaka, consecrated by Kaṭṣapa;
Sudānā Pājāvana, consecrated by Vaiṣṭara;
Marutu A śūka, consecrated by Sāntara A śūka;
Agha, consecrated by Udayanaka Atreyau;
Bharata Dvāravat, consecrated by Kaṭṣadaṇa Māṇāyata;
These following were victorious by mere knowledge of the rites:
—
Durmukha Chāṭhā, having learned it by Brāhmatīta;
—
Atṭara, has learned it not through a king, but by Vaiṣṭara Śāhravaya.

For other lists see Goldstucker, op. cit. p. 270.

2. Before dealing with the rājāṣṭiya proper, we may conveniently take into consideration the other ceremony described in the Aitareya Brāhmaṇa (viii. 5-11), the punarabhiseka, which, though widely differing in procedure, is of an analogous character in theme; it represents the ritual of a royal consecration or a routine disconnected from the actual accession of a king. It is not, however, as in the rājāṣṭiya, imbued in a composite series of rituals, but placed under one head of a sacrifice.

The name punarabhiseka implies that the person concerned was an already crowned king, and the object of the rite was probably to reinforce his vigour as such. Thus, it is stated that the royal power is quickened by it (rājāṣṭiya va vāya ṣastraḥ rājāṣṭiya yu dīkṣate kaṇṭhīyaḥ saṁ—as an expression perhaps implying a knowledge of the word rājāṣṭiya), and the various substances used are said to restore to the king various powers (brahmaṇayanāḥ vṛgya samudraya yuṁ aṇiṁaṁ ghadāyāṁ ṛṣaṇaṁ vṛgya samudrayaḥ). The phrase which through the sacrifice had passed out of him (§§ 7, 8). It is with this object that the god Savitṛ is invoked in the mantra mantra dharma dharma dharma dharma dharma, etc. (§ 7), which recites the crowning of the inādha māhābhiseka and the rājāṣṭiya.

The actual rites are very similar to those of the inādha māhābhiseka. The apparatus consists of:

(1) a seat of udumbara wood with a covering of tiger-skin and branch of udumbara wood,

(2) a concretion of fluid of curds, honey, butter, and water of a sunshine shower, with grass, sprouts, surī, and dārā-grass.

The sacrificial space (vedi) is marked out with a sphaṇa (wooden sword), and the seat is placed half within and half without the same. Sitting behind the seat with his right knee bent to the ground, the king takes hold of it with both hands and invites the gods to ascend it, in order that he may ascend it 'for royalty, paramony, etc. ' He then ascends, and the priest, having blessed the consecration fluid, sprinkles him through the interspersed udumbara branch, and hands to him the cup of suri from which he drinks; then he offers the remains to a friend. He descends from the throne, placing his feet on the udumbara branch, and, sitting with his face eastward, utters the words mantra brah-
certain order obligations from the *svāra*-cup and pronounces a prayer for progeny of oxen, horses, and men.

3. The *rājāśya* is an elaborate ritual prescribed for a kṣatriya king desiring of paramountcy. It is brought into connexion with Varuna, the first emperor, and after him named *Varaṇasaṅgaṇa*. Like the *pavanabhiksha*, it was applicable to an already established king, though very likely the two ceremonies may have been susceptible of combination. The essential difference between the two is that *abhiṣeka* was a necessary act of State, involving the consecration of certain objects; whereas *rājāśya* was an optional religious rite, undertaken with a certain object, and including a ceremony of consecration. In Sanskrit inscriptions the kings sometimes glory in having performed the rite, which they mention in connection with the *vājapeya*, *akśāmedha*, etc. (Epigraphia Indica, iv. p. 196, l. 3).

Weber holds ('Über den Rājasaśya,' pp. 1-6) that the *rājāśya*, like the *vājapeya*, was originally a simpler popular institution, which subsequently found admission, with many elaborations, into the *śrauta* ritual, and Hillebrandt (Vedische Öfner und Zaubrer, 34 u. 35, together with his V. 2, 14) agree, with him, that the *rājāśya* is the *dvaruḥbhāṣya* we may explain the word as meaning: the *rājāśya* ceremony (the word *rājāśya* occurring in the ritual, see Weber, p. 37), and conclude, in accordance with common notions, that the inherent vigour of a king derived from time to time by the *rājāśya*. The *dvaruḥbhāṣya* is a ritual, and that case the earliest *rājāśya* may have been a regularly repeated (e.g. annual), or an occasional quickening rite undergone by king.

The actual *rājāśya* consists of seven rites (*pāvitra* or *abhāryākāra*, *abhiṣekha*, *dāsakeya*), *keśavapaniya*, *vyūṣṭi*, *dvārāśra*, *śaṭradhātya*), to which some authorities add (after *dāsakeya* or after *śaṭradhātya*) an eighth (*sauḍāmitra*). Concerning the *pāvitra* we need only say that it must be taken to cover the preparatory and purificatory ceremonies, beginning in the month Phālguṇa (Feb.-March), and extending over a whole year. It is stated that according to the Mānasas the rite took place in autumn. The *keśavapaniya* is the formal cutting of the king's hair, which remains unshorn for a whole year after the *abhiṣekha*, and the *vyūṣṭi*, etc., need not detain us. Of interest here are only the *abhiṣekha* with its preceding *raṅmakāśya* and the *dāsakeya*. With the first day of the month Phālguṇa in the second year commence certain introductory rites (*sauḍa- mitra, *pāvitra*, *abhāryākāra*, *abhiṣekha*, *dāsakeya*, *trīṣajnyākta* *raṅmakāśya*), of which the last and most important is a series of sacrifices on 12 successive days in the houses of the king's *rātras* (see above), who are variously enumerated. The *abhiṣekha* is, commencing on the first day of the month Chaitra (March-April), occupies five days. After the completion of eight *devaśākāśya* comes the proclamation of the king by the priest, who, grasping his right arm, pronounces a mantra referring to Savitri, Agni, Brähmat, Soma, Indra, Varuna, etc., and stating the name of the king, his father and mother, and his kingdom. Next are provided for the sprinkling 17 fluids, namely, 13 *pāvitra* or *abhāryākāra*, and 4 *śaṭradhātya*, each in a separate vessel of *udumbara* wood, and having sun-motes mixed with them. These are then poured into a single silver *udumbara* vessel, which, together with four other vessels, of *palasī* (*Buta frouonos*), *udumbara*, *nyagrodha*, and *aśvattha*, is set down before one of the altars. Next day a tiger-skin is placed in front of the four vessels, and by the consecrator with Fluids, and then poured: the king is specially arrayed for the ceremony and armed with bow and arrows, then announced to gods and people: to avert evil, a piece of tiger-skin is passed over him. The next step is the king, head and he is made to hold forth his arms facing eastward, while with the four vessels severally he is anointed by the purohita or adhavarya, a kinsman (brother), a friendly kṣatriya, and a vāya. At this point (according to one account) is related to him the story of Sunahśeṣa (a reminiscence of human sacrifice). He then rubs himself with the consecration fluid, after which he takes three steps (reminiscence of steps of the tiger-skin) and dries himself with the skin. The remnant of the liquid, poured into the *palāśa* cup, he hands to his dearest son. The latter holds on to behind the adhavarya, who pours the remnant upon the sacrificial fire, mentioning, and one intentionally confusing, the name of the king and his son. There follow: (1) a symbolic seizure of a cow, one of a hundred, belonging to one of the king's relatives, the king driving against them in a war-chariot and ultimately returning to the sacrificial edifice, where, after assuming shoes of pig-skin, he dismounts; (2) enthroning of the king upon a seat of *khedara* (acacia catechu) wood, placed upon the tiger-skin; (3) beating of the king with a *sauḍa* (which holds five arrows), in order to expel his sins, after which he is proclaimed as Brahmā, Savitri, Indra, and Rudra; (4) a symbolic game with dice, in which the king, his brother, his eunuch, or any other person, is the *police magistrate*, according to Weber, a *grāṇaṇi* (village-headman), and a relative take part; (5) various minor ceremonies. On the seventh day of Chaitra takes place the *dāsakeya*, a ceremony in which 190 persons, including the king, drink in groups of 10 out of 10 cups: a genealogical test is implied, the qualification being that each must be able to cite 10 generations of soma-drinking ancestors.

A few years later comes the *keśavapaniya*, etc.

The above account of the *rājāśya* is taken chiefly from Egegging's *tr. of the Satapatha Brāhmaṇa* and Weber's translation and exposition of the *Khāyāyana Srauta-sūtra* ("Über den Rājasaśya"), which, as representing the part of the operant priests, is naturally the fullest Sanskrit authority. The *brauta* ritual of the other Vedas, also cited by Prof. Weber, agrees in the main. The *paurāṇikā*-sūka of the Aitareya Brahmaṇa, though it gives many common features, is distinctly different from both. But it does not follow that the additional matter of the *rājāśya* is necessarily of later origin: that there were various forms of the rite appears from the Aśvālayana Srauta-sūtra, which employs a plural of the adjectives *brahtyā*, *brahmā*, *sauḍāmitra*, *aśvājas* (ablative: *aśvāja* rājaśya), ix. 3. 3. 1. Weber, who has elaborately discussed the various incidents, regards the references to Varuna and Savitri as, from the point of view of Indian religion, remnants of antiquity. Similarly ancient must be the mimic freebooting expedition, game of dice, and *dāsakeya*. A general anthropological interest attaches to (1) the association of the king with the *udumbara* tree and with the rain-water, (2) the notion of quickening the royal energy by means of the rite, (3) the reminiscence of human sacrifice in the legend of Sunahseṣa, which, in connexion with *paurāṇikā*-sūka, is also related in the Aitareya Brāhmaṇa and the Sākhyāyana Srauta-sūtra.

4. The *vājapeya*, which is mentioned in the Atharva Veda (xi. 7. 7) and the Aitareya Brāhmaṇa (iii. 41. 1), and fully described in the *brauta* ritual of all the Vedas, also includes a ceremony. At the outset it presents us with a difficulty as to the object with which it was to be celebrated. The Aśvālayana Srauta-sūtra (ix. 9. 1) prescribes it for ‘one desiring abundance of food’ (annādya), explaining
the word vājapeya as meaning 'food and drink';

the Lātāyāna requires it for 'one promoted by brāhmaṇas and kings' (yāmin brāhmaṇāyā rājasya ca parakśāsanaś tva vājapeyaḥ yeṣa); and forbids those who have celebrated it to rise before, salute, etc., those who have not: the White Yajur Veda states that whose sacrifices with the vājapeya wins Prajāpati, and so wins everything. According to Āśvalayana (ix. 19), it is reserved for kings and brāhmaṇas; Śāndhyāyana (xvi. 17–1–4) allows it to the three highest castes, the bhārata-
pātavāsa following in the case of a brāhman; Lātāy-
āna (viii. 11. 12) mentions a view that it might be preceded and followed by the bhārata-pātavāsa; while Kātyāyana (xiv. 1. 1), confining it to kṣatriya and vaisya, orders it to be both preceded and followed by the bhārata-pātavāsa. According to the Satapatha Brāhmaṇa (v. 1. 1), the rite originated with Indra and Bṛhaspati, who, both by the vājapeya and Śukrāyana, 'won Prajāpati.' The rite of the rank also is variously estimated: Āśvalayana (ix. 19) would make it a preliminary to the rājasya (for a king) or bhārata-pātavāsa (for a priest), while the White Yajur definitely forbids the vājapeya to follow, explaining that the latter is inferior, as the effect is to constitute a king, while by the vājapeya an emperor is constituted.

The celebrated solution seems to be that of Eggeling and Hillebrandt, that the vājapeya was originally general for all the ranks, which severally had more special rites, the rājasya, bhārata-pātavāsa, et. al., etc. The features of the vājapeya itself seem to point to the conclusion of Weber that it was originally a popular celebration of victory or promotion.

The most prominent of these features are (1) ādi, a mimic race; (2) the offering of a sacrifice; and (3) the recurrence of the number 17.

The vājapeya takes place in autumn. There are preliminary ṛaṇa, soma-purchase, etc., 17 cups of soma and 17 of sura being provided; and the gifts to the priest include 1700 cows, etc., 17 slave-

women, 17 elephants, and so on. At the midday ceremony on the final day a racing-car is rolled into the sacrificial area, and to it are yoked four horses, which receive a specially prepared food. Sixteen other cars are arranged outside. Seventeen drums are beaten, the course is marked off by 17 arrow-shots, and an udumbara branch serves as goal. The racing-place and the sacrificial wins; the horses of all the cars are fed and the car chosen to be presented to the priests. After certain libations, the wife of the sacrificer is brought in and specially dressed. A ladder is placed against the sacrificial post, and the sacrificer, seated on his wife's lap. 'Come, wife, ascend we to the sky,' mounts until his head overtops the post: he looks forth in all directions, salutes the earth, and descends, alighting on a gold plate placed upon the ground or upon a godkin. A subordinate priest covers a seat of udumbara wood with a goat's skin, and, taking his arm, seats him thereupon, saying, 'This is thy kingdom.' A mixture of water and milk having been poured in an udumbara basin, the ascendant sacrificer in libations, the offerer is sprinkled with the remainder, and thrice proclaimed with the words, 'This man is Samraj.' There follow 17 mantras of victory.

ABILITY.—(Lat. habilītabilis, habilitāte, habilitātum.)

According to the Satapatha Brāhmaṇa (v. 1. 1), the rite originated with Indra and Bṛhaspati, who, both by the vājapeya and Śukrāyana, 'won Prajāpati.' The rite of the rank also is variously estimated: Āśvalayana (ix. 19) would make it a preliminary to the rājasya (for a king) or bhārata-pātavāsa (for a priest), while the White Yajur definitely forbids the vājapeya to follow, explaining that the latter is inferior, as the effect is to constitute a king, while by the vājapeya an emperor is constituted.

The celebrated solution seems to be that of Eggeling and Hillebrandt, that the vājapeya was originally general for all the ranks, which severally had more special rites, the rājasya, bhārata-pātavāsa, et. al., etc. The features of the vājapeya itself seem to point to the conclusion of Weber that it was originally a popular celebration of victory or promotion.

The most prominent of these features are (1) ādi, a mimic race; (2) the offering of a sacrifice; and (3) the recurrence of the number 17.

The vājapeya takes place in autumn. There are preliminary ṛaṇa, soma-purchase, etc., 17 cups of soma and 17 of sura being provided; and the gifts to the priest include 1700 cows, etc., 17 slave-

women, 17 elephants, and so on. At the midday ceremony on the final day a racing-car is rolled into the sacrificial area, and to it are yoked four horses, which receive a specially prepared food. Sixteen other cars are arranged outside. Seventeen drums are beaten, the course is marked off by 17 arrow-shots, and an udumbara branch serves as goal. The racing-place and the sacrificial wins; the horses of all the cars are fed and the car chosen to be presented to the priests. After certain libations, the wife of the sacrificer is brought in and specially dressed. A ladder is placed against the sacrificial post, and the sacrificer, seated on his wife's lap. 'Come, wife, ascend we to the sky,' mounts until his head overtops the post: he looks forth in all directions, salutes the earth, and descends, alighting on a gold plate placed upon the ground or upon a godkin. A subordinate priest covers a seat of udumbara wood with a goat's skin, and, taking his arm, seats him thereupon, saying, 'This is thy kingdom.' A mixture of water and milk having been poured in an udumbara basin, the ascendant sacrificer in libations, the offerer is sprinkled with the remainder, and thrice proclaimed with the words, 'This man is Samraj.' There follow 17 mantras of victory.

For the rājasya: Vṛṣabha-bhāṣa (cf. 35–x. 34), Kā-

The use of 'ability' as denoting physical strength is now obsolete, save in Scotland; and, in its use with reference to mental power, 'ability' denotes active power, as distinct from 'capacity,' which signifies potentiality. In the natural sciences, general, also, natural ability is to be contrasted with acquired skill. 'For natural abilities are like natural plants that need pruning by study' (Bacon, Essays: 'Of Studies'). The distinction is important in ethics also; the natural ability is regarded as yielding an income of the nature of rent, while acquired skill yields profits. Again, general ability, natural or acquired, is often contrasted with 'mutative ability,' which refers to a growing complexity of industry and the increasing use of machinery, general ability, which is easily transferable from one trade to another, is yearly becoming a relatively more important factor in industrial skill (cf. A. Marshall, Principles of Economics, 1898, pp. 284-291, 331-342, 637).

In Theology, the terms 'ability' and 'inability' refer to man's power, or want of power, to do the will of God. Man by his fall into a state of sin hath wholly lost all ability of will to any spiritual good accompanying salvation (Westminster Confession). Here the opposition is to be noted between the doctrine of 'original ability,' as based on a recognition of the difference between the Pelagians, the 'gracious ability' of the Arminians, and the 'natural ability' of the New School (or Edwar dian) theologians (cf. A. H. Strong, Systematic Theology, 1886, pp. 342-345).

ABIOGENESIS (L.= Abiogenesis (from Gr. ἀβίος, 'without life,' and γένεσις, 'birth') is the theory of the origin of living from not-living matter, it is more commonly known as the theory of 'spontaneous generation.' So far as the beginnings of life on the earth are concerned, the doctrine of abiogenesis is generally accepted by biologists. For, in its passage from the nebulous to the more or less solid state, our globe reached a temperature and general conditions which made possible the evolution of the organic from the inorganic. Life, as Buffon was among the first to suggest, probably originated in the polar regions, these being the earliest to cool. The inter-relationship between living and lifeless matter is a fundamental canon of the theory of Evolution, which recognizes no break in continuity, and which also recognizes that living matter in its essential nature is not destroyed, whether these be defined in terms of mind or of matter. 'All our philosophy, all our poetry, all our science, all our art—Plato, Shakespeare, Newton, and Raphael—are potential in the fires of the sun,' says Tyndall; and Huxley, while holding abiogenesis to be unproved, added that 'if it were given him to look beyond the abyss of geologically recorded time to the still more remote period when the earth was passing through physical and chemical conditions which it can no more see again than a man can recall his infancy, he should expect to be a witness of the evolution of living protoplasm from inert matter' (Collected Essays, viii. p. 236). Hence, both physicist and biologist reject the theory of 'Vitalism,' or the existence of a vital principle or energy distinct in kind from other physical energies. The problem of abiogenesis is therefore narrowed to this—given the origin of life from the not-living, do the conditions which resulted in that still prevail, or have they so far passed away that life is now derived only from pre-existing life?—as the phrase has it, Omne vivum ex vivo.

Belief in spontaneous generation was unchallenged for above 2000 years. It was on the Ionian schoolboard that speculation arose about origins and laws governing phenomena, hence scepticism as to the validity of old cosmogonies and legends. Anaximander (B.C. 610-547), the friend and pupil of Thales, appears to have been the earliest to speak of life as a product of 'the moist element which is the support of the sun.' Aristotle (B.C. 384-322) accepted abiogenesis with few limitations, applying it to parasites, certain invertebrates, and a few vertebrates, as eels (the mode of generation of which was, until recent times, a mystery), but not to animals in which sexual generation is known. Lucretius (c. B.C. 95-51) speaks of 'many living creatures, even now, springing out of the earth and taking form by the rains and the heat of the sun' (de Rerum Natura, v. 205, 206).

It was not until the latter half of the 17th cent., nearly fifty years after Harvey's discovery of the circulation of the blood, that the doctrine of spontaneous generation was assailed, and that by the only effective weapon—experiments. These were started by an Italian scholar-naturalist, Francesco Redi (1626-1698), and, like other methods which have led to momentous results, were simplicity itself. Observing how rapidly dead flesh, exposed to the air, swarmed with maggots, he put some pieces of meat into a jar which he covered with fine gauze, leaving other pieces exposed. In the one case no maggots were found, while in the other, maggots were numerous as usual. The inconclusive conviction was that the maggots were hatched from eggs deposited by blowflies on the dead stuff. A temporary reaction against Redi's conclusions was brought about by Needham (1718-1784) and Buffon (1707-1788), who adduced the case of animalcules which, after a certain lapse of time, appeared in the infusions boiled and hermetically sealed. But when Spallanzani (1729-1799) showed that the air had not been wholly excluded from the infusions, the animalcules in which, by reason of inadequate heating, remained unsterilized. The discovery of oxygen (by Priestley, in 1770), the presence of which is essential to life, compelled the repetition of experiments 'under conditions which would make sure that neither the oxygen of the air nor the composition of the organic matter was altered in such a manner as to interfere with the existence of life.' Schultze and Schwann (1836-1837), after boiling the infusions, and supplying air passed through red-hot tubes, the properties of its oxygen being unaffected thereby, although organic results, were destroyed, when the animalcules, which, however, were present in the infusions not supplied with purified air. There followed other experiments, carried on by Cagniard de la Tour, the illustrious Helmholtz, and others, which differed from the foregoing only in completeness of detail, and, therefore, do not need recapitulation in this summary. Each in turn was more effective in destroying whatever agents were essential to the reproduction of life in the infusions. Thus were laid slowly, but surely and abidingly, the foundations of the bacteria or germ theory which has revolutionized old theories of diseases and old methods of attacking them. As recently as 1859, Pouchet reported that he had effected the sterilization of microscopic animals from inorganic substances. This prompted Pasteur and Tyndall to demonstrate, with a precision hitherto unapproached, that, despite the ubiquity of microbes, their activity and reproduction are rendered impossible wherever sterilization is effectively performed.

Thirty years ago, Dr. Bastian published a series of volumes entitled Man and his origin. In these, he contends, support abiogenesis. In 1904, M. Dubois, of Lyons, reported the production of living germs in a sterilized medium under the agency of radium, and in 1905 the question was reopened by Mr. Butler Burke, of the Cavendish laboratory, Cam-
ABIOGENESIS

bridge, who stated that, as the result of experiments made with radium bromide (which appears to have a destructive action on sterilized beef-gelatine in sealed tubes subjected to a temperature above the boiling point of water, there had appeared minute 'cultures' or growths of grains), his idea of abiogenesis was beginning to give up the struggle, stage by stage. Mr. Butler Burkes inclines to the conclusion that they are organisms on the border lines between microbes and crystals, and, provisionally, he names them 'radioles,' that their organic character is not excluded to the satisfaction of competent authorities. The fundamental identity of the living and the not-living being admitted (proof of advance thereto being furnished by the production of organic compounds from inorganic matter in our chemical laboratories), there is no warrant for the contention that abiogenesis is impossible in the present or the future. All that can be said is that the experiments which appear to favour the theory do not wholly exclude doubt as to complete sterilization, and consequent exclusion or destruction, of life-producing germs.

It is the demonstration of the universality of this germ-theory of putrefaction furnished him with the principle upon which alone the antibiotic system can be carried on. It has armed the physician successfully with human ills, and one by one reduces the number of diseases hitherto ranked as inevitable and incurable. See also next art. and BIOGENESIS.

EDWARD GLOD.

ABIOGENESIS (II).—During the early phases of the earth's existence, before it cooled and consolidated, the conditions were such that no living creature like any we now know could have then lived there. At an uncertain but inconceivably distant date, after the earth became fit to be a home of organic life, living creatures somehow appeared.

(a) Prayre strongly opposed the view that organic substance could arise from inorganic substances, and the living from non-living; the reverse supposition seemed to him more tenable.

(b) As far back as 1865, H. E. Richter started the idea that germs could arise from inorganic substances, the living from non-living; the reverse supposition seemed to him more tenable.

Prayre strongly opposed the view that organic substance could arise from inorganic substances, or that the living from non-living; the reverse supposition seemed to him more tenable.

(b) As far back as 1865, H. E. Richter started the idea that germs could arise from inorganic substances, the living from non-living; the reverse supposition seemed to him more tenable.

He also could not think of life beginning; his dictum was: Onne vivum ab alternte collatis. To Helmholtz, who in 1884 also got to Sir William Thomson (Lord Kelvin) the same idea occurred, that germs of life may have come to the earth enshrouded in meteorites. 'I cannot contend,' Helmholtz said, 'against one who would regard this hypothesis as highly or wholly improbable. But it appears to me to be a wholly correct scientific procedure, when all our endeavours to produce organisms out of lifeless substance are thwarted, to question whether, after all, life has ever arisen, whether it may not be even as old as matter, and whether its germs, passed from one world to another, may not have developed where they found no life in a hostile environment a new and independent; organic life has either begun to exist at some one time, or has existed from eternity.' On the other hand, we may note that the word 'eternal' is somewhat irrelevant in scientific discourse, that the notion of life is not essential to the germ (essentially involved in every organism we know) being primitive is quite against the tenor of modern theories of inorganic evolution; and that, though we cannot deny the possibility, it is difficult to conceive of anything like the protoplasm we know surviving transport in a meteorite through the intense cold in space and through intense heat when passing through our atmosphere. The mildest form of the hypothesis associated with the name of Lord Kelvin was simply one of transport; he wisely said nothing about 'eternal cells' or any such thing; he simply shifted the responsibility for the problem of the origin of living organisms off the shoulders of our planet. So far, then, the suggestions are (a) that the physical basis of life is as old as the cosmos, and (b) that germs of organisms may have come from elsewhere to our earth. Apart from an abandonment of the problem as scientifically insoluble, that, is to say, from the view that living creatures began to be in some way which we cannot hope to formulate, we may entertain the supposition, no doubt, of the whole trend of evolutionist thinking attracts us. There are few living biologists who doubt the present universality of the induction from all sufficiently careful experiment and observation—omne vivens e vivo; Dr. Bastian is practically alone in believing that creatures like Infusorians and Annelae (highly complex individualities in their own way) can now arise from not-living material; but it is quite another thing to say that abiogenesis may not have occurred in the past or may not occur in the future.

But though many thoughtful biologists, such as Huxley and Spencer, Nägeli and Haeckel, have accepted the hypothesis that living organisms of a very simple kind may be evolved from not-living material, they have done so rather in their faith in a continuous natural evolution than from any apprehension of the possible sequences which might lead up to such a remarkable result. The hypothesis of such a lower kind may be suggested on a priori grounds, but few have ventured to offer any concrete indication of how the process might conceivably come about. To postulate abiogenesis.
as if it were a matter of course, seems to betray an extraordinarily easy-going scientific mood.

One of the few concrete suggestions is due to the physiologist Pflüger (1875), whose views are clearly summarized in Verworn's General Physiology (translated as Organic Chemistry). It is that the cyanogen radical (CN) gives the 'living' protid molecule its characteristic properties of self-decomposition and reconstruction. He indicated the similarities between cyanic acid (H-CN) — a levorotatory enantiomer of cyanogen — and albuminoids, which is admitted to be an essential part, at least, of all living matter. 'This similarity is so great,' he said, 'that I might term cyanic acid a half-living molecule.' As cyanogen and its compounds arise in an incandescent heat when the necessary nitrogenous compounds are present, they may have been formed when the earth was still an incandescent ball. 'If now we consider the immeasurably long time during which the cooling of the earth's surface dragged itself slowly along, cyanogen and the compounds that contain cyanogen- and hydrocarbon-substances have had time, indeed, to indulge capriciously in their great tendency towards transformation and polymerization, and to pass over with the aid of oxygen, and later of water and salts, into that self-destructive protid, living matter.' Verworn attempted to address the nature of this question. Compounds of cyanogen were formed while the earth was still incandescent; with their property of ready decomposition they were forced into correlation with various other carbon compounds likewise due to the great heat; when water was precipitated as liquid upon the earth, these compounds entered into chemical relations with the water and its dissolved salts and gases, and thus originated extremely likeable, very simple, undifferentiated living substances.

Professor E. Ray Lankester, in his art. 'Protozoa' in the Encyc. Britt., makes the suggestion, 'that a vast amount of albuminoids and other such compounds has been brought into existence by those processes which culminated in the development of the first protoplasm, and it seems therefore likely enough that the first protoplasm fed upon these antecedent steps in its own evolution.'

Dr. H. Charlton Bastian suggests, in regard to the first origin of living matter upon the earth, that the nitrate of ammonia which is known to be produced by the combustion of carbon in the atmosphere discovered in the thunder-shower, may have played an important part in the mixture of ingredients from which the hypothetical natural synthesis of living matter was effected. Mr. J. Butler Burke postulates original vital units or 'bio-elements,' which 'may have existed throughout the universe for an almost indefinite time,' which are probably 'elements possessing many of the chemical properties of carbon and the radio-active properties of the more unstable elements,' and which, by interacting on otherwise present carbon-compounds, probably gave rise to cellular life as we know it today.

It must be admitted that, in spite of these and other concrete suggestions, we are still far from being able to imagine how living matter could arise from not-living matter. In postulating possible processes which may have occurred long ago in Nature's laboratory, it seems desirable that we should be able to back these up with evidence of analogous processes now occurring in Nature,—the usual mode of argument in evolutionist discussion,—but these analogies are not forthcoming at present. It is usual to refer to the achievements of the synthetic chemist, who can now manufacture artificially such natural organic products as urea, alcohol, grape sugar, indigo, oxalic acid, tartaric acid, salicylic acid, and more.

But three facts should be borne in mind: (1) the directive agency of the intelligent chemist is an essential factor in these syntheses; (2) no one suggests that a living organism derives its organic compounds in the way in which many of these can be made in the chemical laboratory; and (3) no one has yet come near the artificial synthesis of proteins, which are the most characteristic substances in living matter.

We are in the habit of comparing what man can do in the way of evolving domesticated animals and cultivated plants with what we believe Nature has done in the distant past. Why, then, should we not argue from what the intelligent chemist can do in the way of evolving carbon compounds to what Nature may have done before there was anything animate? There is this difference, among others, in the two cases, that in the former we can actually observe the process of Natural Selection which in Nature takes the place of the breeder, while we are at a loss to suggest what in Nature's past yet very hypothetical laboratory of chemical synthesis could take the place of the directive chemist.

Thus Professor F. R. Japp, following Pasteur, pointed out in a memorable British Association address on organic and inorganic matter, that 'the most practically active' (a characteristic property which cannot be here discussed), that artificially prepared organic compounds are primarily 'optically active,' that by a selective process the intelligent operator can obtain the wrong from the latter, but... it is difficult to conceive of any mechanism in nature which could effect this. 'No fortuitous concourse of atoms, even with all eternity for them to clash under the influence of chance alone; it is the feat of the formation of the first optically active compound.' The chance synthesis of the simplest optically active compound from inorganic materials is absolutely inconceivable.

Not content, however, with indicating the difficulty which the believer in abiogenesis has here to face, Professor Japp went on to say—perhaps, in so doing, leaving the rigidly scientific position: 'I see no escape from the conclusion that, at the moment when life first arose, a directive force came into play—a force of precisely the same character as that which enables the intelligent operator, by the exercise of his will, to select out one crystallized enantiomorph and reject its enantiomer, and in this way bring about the formation of the first optically active compound.' The chance synthesis of proteins, if it be possible, is not to be held with an easy mind, attested as we may be to it by the general evolutionist argument.

In thinking over this difficult question, there are two generalizations which should be borne in mind. We must not exaggerate the apatness of the animate from the inanimate, nor must we depreciate it. On the one hand, we must recognize that modern progress in biological and chemistry has given us a much more vital conception of what has been labelled as 'dead matter': we must not belittle the powers of growth and regrowth which we observe in crystals, the series of form-changes.
through which many inorganic things, even drops of water, may pass; the behaviour of the builds up the internal activity of even the dust.

When we consider, too, such phenomena as 'latent life' and 'local life,' and the relatively great simplicity of many forms and kinds of life, we do not find it so easy to discern their absolute, universal, and irrevocable distinctions between animate and inanimate systems, or between the quick and the dead. To some extent, also, the artificial synthesis of some organic compounds, and the ingenious construction of 'artificial cells' which closely mimic the structure of living cells, though no one supposes that they are in the least degree 'alive,' serve to lessen the gap which seems at first so wide.

On the other hand, it is the verdict of common sense and exact science alike that living creatures stand apart from inanimate systems. The living creature feeds and grows; it undergoes ceaseless change or metabolism, and passes through a cycle of changes, yet has a marvellous power of retaining its integrity; it is not merely a self-storing, self-repairing engine, but a self-reproducing energy-mechanism. It lives, so to speak, and gives effective response to external stimuli; it profits by experience; it co-ordinates its activities into united behaviour, it may be into intelligent deeds and rational conduct; even in the very simplest animals (Infusorians) there are hints of mind.

Allowing for the gradual realization of potentialities in the course of evolution, we cannot but feel that if the living emerged from the not-living then our respect for the not-living matter of our day would be greatly enhanced. As a matter of fact, however, we cannot at present re-describe any vital behaviour in terms of physical and chemical categories, and the secret of the organism has to be admitted as such whether we advance to a vitalistic statement of it or not.

Finally, let us suppose that some bold experimenter in the border-land between chemistry and biology, a man like Prof. Jacques Loeb of Chicago, succeeded this year or next year in making, not merely a corpusde of protid, but a little living thing, by some ingenious synthesis. What then?

(a) It is quite likely that the steps leading to this hypothetical achievement might be as follows: those which, on the hypothesis of abiogenesis, once occurred in Nature's laboratory, as the artificial synthesis of, say, oxalic acid is unlike what takes place in life. The idea of a constraint we cannot assert that the laws of the movements of organic corpuscles can be deduced from the laws of motion of non-living corpuscles,—continually as we may believe cosmic evolution to have been,—and the artificial production of a living creature would not enable us to make this assertion. What simplification of descriptive formula the future has in store for us no one can predict. We may have to simplify the conceptual formulae which we use in describing animate behaviour, and we may have to modify the conceptual formulae which we use in describing inanimate sequences, but at present the two sets of formulae remain distinct, and they would so remain even of a little living creature were manufactured to-morrow. (c) If we discovered a method of artificially producing an organism, as Loeb has discovered a method of inducing an egg to develop into a frog without any intervention, it would render the hypothesis of abiogenesis more credible. We would then know, what no naturalist at present knows, however strongly he may believe it, that what we call not-living has in it factors of giving rise to what we call living. But the hypothetical discovery would in no way affect the dignity and value of living creatures, or of our own life. (d) If it came about that we were able to bring materials and energies together in such a way that living creatures of a simple sort resulted, we should still have to remember that we had acted as directive agents in the synthesis. (e) Finally, if the experiment succeeded, we should not have arrived at any explanation of the origin of life. We should be able to say that, given certain antecedent conditions, certain consequences ensue, but we should still be unable to answer the question how or why. We should have a genetic description of an occurrence, not an explanation of it. For that is what science never supplies.

In conclusion, to quote Principal Lloyd Morgan, 'Those who would concentrate the mystery of existence on the pin-point of the genesis of protoplasm, do violence alike to philosophy and to religion. Those who would single out from the multitudinous differentiations of an evolving universe this alone for special interposition, would seem to do little honour to the Divinity they profess to serve. Theodore Parker gave expression to a broader and more reverent theology when he said: "The universe, broad and deep and high, is a handful of dust which God engulfs. He is the mysterious mind, the inevitable life, — not protoplasm merely, but—" the world."'

ABIPONES.—A tribe of South American Indians, of Guynecar stock, who formerly roved from the head waters of the Rio Grande de Bolivia, although their central habitation was the Gran Chaco, west of the Paraguay River, in Northern Argentina and Paraguay. About 1780 the tribe numbered some 5000, but it is now supposed to be extinct, like the kindred Caduevs, Payaguas, Lenguas, and their own destroyers, the Mocovis (J. Deniker, Races of Man, London, 1901, pp. 572-573). Practically the only information concerning them is that given by Martin Dobrizhoffer, a Jesuit missionary who resided among them for seven years. They are described as tall and well formed, while in their habits they were nomads and hunters. They were well clad, and their movements were graceful, painting themselves. Both sexes were tattooed with a cross on the forehead, and the women with the cross, as well as an ornamental design, on the face, breast, and arms. This operation was performed at the age of puberty, and was designed to render a girl sufficiently attractive to win a husband, and also to test her courage. Males above the age of seven wore labrets, the most esteemed being of brass or (for the chiefs) of a sort of gun. These adornments came down to the tip of the nose and cut off the heads or skimmed the faces of those slain in war. Annual feasts in honour of victories were celebrated with merrymaking and with copious indulgence in wine made of alfaro or

Digitized by Microsoft®
honey, the only vice of the Abipones being intoxication. In temperament they were somewhat phlegmatic, not being reckless in war, despite their undoubted bravery. The type of physique was due, in great measure, to the fact that consanguineous marriages were forbidden, and that early sexual excess was said to be unknown, while men did not marry under the age of thirty, or women under twenty. At the birth of a child the father practised the cowhide (q.v.). Infanticide and abortion were common, each woman killing all her children but two. The custom of infanticide was increased by the suelking of infants for three years, during which time the husband was denied all marital rights, and consequently often married again—marriage being terminated at his will. On the other hand, polygamy was rare, and when practised the wives were not required to live together; they should become jealous. Frikeliness in marriage was almost invariable. A curious deviation from the ordinary usage of infanticide is found in the fact that girls were killed less often than boys, as the parents received large sums for giving their daughters in marriage, while sons were required to pay heavy dowries to the parents of their brides.

In their religion, Dobrihoroff states that the Abipones had had civilization, speculation, or reasoning, although they were cunning imitators. According to him, they had no word for God, but reverenced an 'evil spirit' (who seems, however, to have had no qualities essentially evil). This deity was called Aharaigichi or Quecet, and also 'grandfather' (Grapereike), and it was he who gave the Abipones valour and the Spaniards riches. Aharaigichi was represented by the Pendeves. Whether this constellation disappeared from the horizon, the Abipones thought him sick and in danger of extinction; so they celebrated the rising of the Pedeves in May by feasting, dancing, and singing. The cult was maintained by priests (koebet), whom Aharaigichi had given supernatural power. These 'jugglers,' as the good Jesuit calls them, were much feared, since when angry they could transform themselves into invisible and invulnerable tigers. To the malice of the koebet was ascribed death, and the Abipones quaintly said that it was not for the koebet and the Spaniards, they would never die. Thunder and lightning were supposed to be the effects of the koebet and other relics of these medicine-men were carried by the Abipones in their wanderings. In addition to thunder and lightning, comets and eclipses of the sun and the moon were objects of terror. Besides the koebet, old women, who gathered in bands to perform secret rites with wailing and discordant drumming, were dreaded, especially as they were able to conjure up the dead.

Immediately after death, the heart and tongue of the deceased were boiled and given to a dog to eat, in order that the koebet who had caused the dissolution might himself perish. Relatives and friends buried the body, casting down a heavy stone, and the women waited for nine days and nights, the nocturnal lamentations being restricted to those who were specially invited for the purpose. A woman might also wall when her son remembered a dead ancestor, whereas all others of her sex who heard her were expected to unite with her in howling lugubriously. All mention of the name of the dead was avoided; his house was destroyed, and everything connected with him was burned. The soul was believed to survive the body, although the Abipones had no clear idea of its fate. The ghosts of the dead, however, were objects of intense dread, and were supposed to enter into snails (a snail was a radiate, or worm) by night, and have a doleful hissing note. On the grave were placed, for the use of the dead, a water-pot, a garment, weapons, and the bodies of his horses and cattle which had been killed at the time of his death. The graves of ancestors were venerated,—thus clearly implying the existence of ancestor-worship,—and their bones were often repeatedly exhumed by the Abipones in the course of their wanderings, and carried from place to place, until they could finally be buried in the family burial-ground which contained the bodies of their kin.

LITERATURE.—M. Dobrihoroff's Historia de Abiponibus, equoestri bellicose et Paraenarratio natione (3 vols., Vienna, 1784; English translation: Account of the Abipones, an Equesstrian People of Paraguay, by Sara Coleridge, 3 vols., London, 1825.)

LOUIS H. GRAY.

ABNORMALITIES (Biological).—In biology, the term 'abnormality' is used in a comprehensive sense to describe forms of life, or parts or structures thereof, differing in appearance or constitution from such of their fellows as are shown by statistics to be so closely similar that for general purposes they may be regarded as identical, or, in other words, normal. It is now acknowledged that all organisms are variable, and that, while we tacitly ignore the smaller degrees of variation from the mean, yet we do recognize the variations of higher degree and the theories based upon them. Once again, abnormalities may be defined as the more aberrant of the variations to which every organism, and every structure, is liable or subject. The most extreme cases of abnormality will be described separately as 'monsters' (cf. art. MONSTERS), though it must be remembered that no true line of distinction exists, and that, as has just been stated, they are really the extreme instances of abnormalities.

With the exclusion of monsters, the field of our subject is somewhat narrowed. It remains to review briefly the classes of these aberrant forms, and to indicate the importance of their study in biology. Abnormalities may be classified in various ways. One of the most comprehensive schemes is that proposed by Professor Macalister in his Bogie Lecture (1894). It includes nine categories or classes, viz.: the abnormalities of (1) quantity, (2) material, (3) repetition, (4) cohesion, (5) alternation, (6) position, (7) series, (8) inheritance, (9) new formation. For present purposes it is, however, most convenient to review briefly (1) the origin of abnormalities, and (2) their transmission from parent to offspring.

1. Origin of abnormalities.—In some cases an origin can be discerned and a cause assigned. Thus (a) interference with the normal processes of development is evidently the determining cause in certain instances. A typical example met with in medical practice is the individual in whom the development of the partitions within the heart has been affected. In such instances the blood is not properly aerated, and the patient has a cyanotic aspect, i.e. he looks blue and cold. The study of the developmental history of animals has shown that any interference can produce monstrous and abnormal extension acting in the earlier stages of growth than the later period. And progress in embryological science has shown how some of the observed effects may be produced. Thus in the higher animals, for instance, an aberration of growth can be referred to defects in the body of the embryo itself, though in other cases the membranes immediately surrounding the embryo or the adjacent maternal tissues are involved. It is probable that abnormalities are produced on the embryo so as to modify its form. The effect may seem to be produced either directly or

* In a fuller discussion of this part of the subject, attention would have to be directed to the difference between what are termed respectively the 'mean' and the 'mode' of any series.
mechanically, or yet again, the result may be due to an indirect cause in turn determined by interference with nutrition. Again, (6) the nutrition, and the quantity and quality of the food, are alone capable, if altered, of leading to deviations from the ordinary course of events, sufficiently marked to constitute abnormalities, if the subject be one of hypertrophy, overgrowth, or gigantism fall under this heading. (c) In other cases, no such obvious interference can be detected or held accountable for. The examples are eliminated in which by analogy there is a fair show of reason for believing that they fall under heading (a) or (b) above (though the acting cause is not quite so clear), there is a remnant of instances in which it does not seem justifiable to invoke causes of this kind. Pending the discovery of a more intelligible explanation, the only course open to biologists in such cases is to recognize in living matter an inherent power, or capability, of producing abnormalities, or, as they are sometimes termed, 'sports.'

2. Transmission from parent to offspring.—The transmission of abnormalities from parent to offspring is an important subject, and the study of this question is inseparably connected with that of the transmission of those more constant features which distinguish the normal individual. The discussion of the influencing causes of the latter is the object of this article, and it will suffice to state that abnormalities can even be classified according as they are constantly transmitted, or not so constantly transmitted, from parent to offspring. It is thus possible to distinguish the forms of hereditary transmission. Such transmitted varieties, now termed 'mutations,' from the latter, not so constantly transmitted, now called 'fluctuations.' The importance of this distinction, the lesser tendency to persist in its manifestations, has been shown by others, the ground is cleared for the erection of a theory of the origin of organic species through transformation. This seems to depend further upon the postulate that certain kinds of abnormality in an individual are baffling to the offspring of such abnormality, and give them an advantage not shared by their congeners. Hence, were the advantage to be maintained, the abnormal stock might in time outnumber the original stock. But the latter would then no longer be the normal stock, for by definition the normal must be in a majority, so that the type of the organism would have changed. Such a process, if it occurred on a large scale, would lead to the production of forms so different from their ancestors that they might well be classified as new species. It is not proposed to embark upon an examination of this position here, the main object in view being to illustrate the importance of the study of abnormalities in biology.

Literature (selected works in chronological order).—Darwin, On the Origin of Species, 1859; Mendel, On the Law of Inheritance in Plant Hybrids, 1865 (tr. by Bateson in Mendel's Principles of Heredity, 1902); Darwin, Variations of Animals and Plants under Domestication, 1896; Bateson, Materials for the Study of Variation, 1894; De Vries, Species and Varieties, their origin by mutation, 1885; Punnett, Some recent progress in the study of variation, heredity, and evolution, 1906.

W. L. H. DUCKWORTH.

Abnormalities (Psychological).—Human abnormalities, psychologically considered, are included within the great class of mental affections which owe their origin to arrested development of the brain. The development of the brain may be arrested, as the result of congenital malformation, or from the effect of disease in the earlier periods of existence. As a rule, it is by no means easy to differentiate congenital deformities from that arising from interference with the normal course of development in later life. Cases of feeble-mindedness are of this character, but there is reason to believe that congenital malformation accounts for much the larger number of cases of feeble-mindedness.

Congenital deformity is wholly or in part correlated with the development of the physical organization, especially with that of the nervous system; and it is rare to meet with imperfect congenital structure of the nervous system in the absence of other imperfections of the body. These imperfections of the body are technically known as physical stigmata. They are the outward signs of the nervous imperfections. It is acknowledged on all hands that the more grave the mental defect, the more numerous and the more grave are the physical malformations. Thus, as we pass up the scale from monsters to idiots, imbeciles, and the higher class of the latter, we find a gradually increasing number of bodily deformities, excluding all others.

Besides the physical stigmata, there are certain well recognized mental stigmata, such as epilepsy, hysteria, alcoholism, and the various tics and obsessions which are the outward manifestations of underlying defects in the nervous system, especially in the brain. Although we know that every functional peculiarity must have an underlying organic basis, we are still very far from a knowledge of the intimate correlation between structure and function. The most important attempt to correlate mental power with the structure of the cortex cerebri has been made by Dr. J. S. Bolton, writing in Mott's Archives of Neurology for 1906. His only conclusions, as yet unconfirmed, show that the pyramidal layer (second layer) of nerve cells in the pre-frontal cortex varies inversely in depth with the degree of amenity or dementia present in each case. This is the only layer that appreciably varies in depth in normal brains; the degree of its development in normal infants and in congenital amnes (idiots) varies directly with the mental endowment of the individual, and the degree of its retrogression in the nervous system varies directly with the amount of existing dementia.

Idiocies and imbecilities are abnormalities connected by gradation with the more pronounced class of human monsters which are either non-viable or, owing to defective organization, unable to survive for any considerable time after birth. As the non-viable monsters and those which, owing to imperfect development, are unable to live through infancy, are all mindless, a description of them does not fall under the scope of the present article.

The present divisions of congenital mental abnormalities are (1) Idiocy, (2) Intellectual Imbecility, and (3) Mental Imbecility. In mind that the following descriptions refer to types only, and that the forms of the various classes referred to merge into one another insensibly without any fast dividing differences.

1. Idiocy.—For clinical purposes and convenience of description, idiocy is frequently subdivided into (a) complete idiocy, and (b) ordinary idiocy.

(a) Complete Idiocy.—The greater number of the members of this mental class manifest early signs of psychical life. Their intelligence is of a very low order, and all the ordinary mental faculties are practically absent. There remains at the most a species of local memory, applicable to simple
habitual wants, and to the requirements of the moment. There is no will-power and no faculty of initiative. They have no command of articulate language, but some of them are able to make their few words pass. The knowledge they understand and comprehend is limited, and they stood only by those in immediate attendance upon them. The presence of the ordinary instincts and sentiments is not revealed by such cases. Many of them do not appear even to be conscious of the ordinary emotions and passions, with much less of the ordinary feelings of pleasure, pain, fear, or love. In the great majority of instances the sexual instinct is absent. The only instinct they exhibit is that of hunger, and it is expressed only when food is presented before them.

On the physical side, the facial expression is marked by the most complete hebétude, relieved only by the occasional appearance of passing emotions of a superficial and vague kind. The general impression left upon the observer of one of these faces is one of a peculiar mlinging of youth and old age. The form of the head is very variable, being macrocephalic or microcephalic, and the size of the face is generally disproportionate to that of the head, being in the former case too large and in the latter too small. The lips are thick, the tongue has a swollen appearance, and they are covered with a greenish or yellowish, earthy colour, and is covered with an oily secretion which gives off an offensive odour. Most of these idiots are unable to walk, and when they can do so, the gait is tottering and uncertain, and all the muscular movements are incoordinate and ungainly. Among the disorders of motility to which they are subject may be mentioned: general and local spasms, chorea, and epileptic convulsions; while contractures of the neck, of the palate, and local paralyses are very common. They exhibit in abundance the ordinary stigmata of degeneration, such as eleft palate, hare-lip, disordered and irregular dentition, and dwarfishness.

(a) Ordinary Idiocy.—Idiots of this class are, as a rule, fairly conversant with their immediate surroundings. Although they may know their own names and respond when addressed, their command of language is extremely limited; they are able to pronounce only a few words, or at most a few phrases, the correct significance of which they understand. They make particular use of interjections and nouns in conversation, and are incapable of being taught to train themselves either to read or write beyond the simplest words. Some of them show an aptitude for drawing imperfect resemblances of natural objects; but they are unable to count beyond certain numbers and to understand beyond their power. A great many idiots possess the faculty of imitation very strongly, but in most of them the imitative art is imperfect and grotesque. Many of them manifest affection to those with whom they live and who treat them kindly, but this feeling bears a stronger affinity to dog-like attachment than to the more reasoned human instinct of friendship. In short, their sentiments are usually confined to their immediate personal interests, and arithmetic is entirely expressed emotionally in an unreasoned barbaric manner. They are, however, capable of a certain amount of training and discipline, as regards external behaviour. Thus, if properly trained, they may learn to dress themselves more or less tidily, to eat inoffensively, and to control their animal impulses; but if for any reason supervision is for long relaxed, they are apt to become degraded and repulsive in their habits.

In this class, as in the former, the body is stunted, and most of the individuals are unattractive in appearance. A great variety of physical stigmata and malformations are manifested by the subjects. In addition to microcephalism and macrocephalism, the shape of the head may be altered in one or other of the following ways,—namely, flattening of the cranial vertex or occiput, low or swiftly receding forehead, asymmetry of the sides of the skull, mental prognathism and extreme vaulting, flattening, or asymmetry of the palate. The teeth are liable to numerous malformations; the second dentition may fail altogether, or, if it does occur, they are badly formed and curious. In the eyes, strabismus, astigmatism, and anomalous pigmentation are frequent; in some cases the distance between the eyes is narrowed, while in others, as in the Mongolian type of idiot, they present the true Oriental appearance, being set far apart and almond-shaped. Idiots are subject to various disorders of the gastrointestinal tract, especially to inflammatory conditions of the mucous membranes. The skin is usually pigmented and unhealthy-looking, and gives off an offensive odour.

About 25 per cent. of all idiots are subject to epilepsy. Most of them exhibit a tendency to instinctive impulse, irritability of temper, and occasionally to maniacal excitement. The physical resistance to disease of all kinds is extremely low, and tuberculosis is one of the most frequent causes of death. Few of them live longer than thirty years; in complete idiocy the duration of life is very much shorter.

2. Intellectual Imbecility.—It is often impossible to detect in early childhood any outstanding difference between imbeciles and normal children. In many instances it is only when education begins to be communicated that a radical difference shows itself in the greater inaptness of the feeble-minded to assimilate ordinary elementary instruction. As imbeciles approach the age of puberty their mental defects become more apparent; besides being slow of apprehension and dull-witted, they are deficient in ordinary interest, in judgment, and in common sense. Littleness, inattention, and a tendency to become absorbed in subjective thought—commonly called 'day-dreaming'—are frequent symptoms of their intellectual feebleness, in addition to the symptoms which result from imperfect cerebral development. In a certain sense it may be said of them that they do not grow old with their years, and when they approach adolescence they do so without any appreciable increase of responsibility.

They remain child-like, are easily satisfied, and display an interest and curiosity in things which have long ceased to interest people of the same age. The sexual instinct is early developed, and often manifests itself as an exaggeration or perversion of the normal condition. Mental conceptions, the association of ideas, and power of initiative are slow and difficult. Within their somewhat limited sphere of reasoning, which never passes into abstruse consideration, they think and act in a normally logical manner; yet they lamentably fail either in foreseeing the consequences of their actions or in understanding the more complicated actions of their normal fellow-creatures.

The moral sensations are as pronounced as the intellectual. Imbeciles are prone to be egotistic, vain, and sensibly proud. Family ties are apt to be loosely felt; the ordinary affection for relatives is generally feeble, and, although they may be capable of forming strong attachments to individuals, such feelings rapidly yield after short periods of separation. Religious and altruistic ideas as well as moral discrimination are rare or non-existent, and are based upon convictions so much as upon habit, and the discipline exercised by other people. Most imbeciles are untruthful and unreliable, more especially in small matters such as the appropriation of trifling articles, the property of others.

They are often irritable, and are subject to out-
ABNORMALITIES

Bursts of rage or excitement, for adequate reasons. Mental traits, however, lead to total disregard of personal livelihood by ordinary manual labour, or by working at some trade which they may have learned indifferently well, but the technique of which they are able to execute only imperfectly. Whatever, also, are likely to strain the patients beyond the point of endurance on account of physical, or moral, faculties, or both. What is often observed is theResult of the absence of reasoning in defect of form, of the animal physical and mental faculties, of the development of a truth of worldy success. Their intellectual faculties, often very acute, are exercised in the gratification of their selfish desires or in the justification of their beneficent, rather than the benefit of any continuous honest endeavours. As a rule, their affinities for evil courses lead them to indulge in habits which tend to accelerate their degeneration and to terminate life prematurely.

In the case of children and young adolescents, it is unwise to pass too hasty a judgment, for it may happen that the moral sense is not absent but only tardily manifested. In such cases the children may be bright, intelligent, quickly receptive, often emotionally impressionable,—perhaps to a morbid degree,—but lacking in the very elements of moral perception. Many of these individuals, as they approach adult life, begin to change radically in their moral nature, and it is only to be expected that the moral defects, which have been due to various causes, have been manifest.

Among the morbid defects, the mental defect, as such, is, probably, the most frequent and most important. The physical defects observed in connection with it are of a less serious nature.

The physical characteristics of imbecility are neither numerous nor important. The subjects are usually well developed, and their outward comparison differs but slightly from that of normal individuals. The mental defects observed are usually associated with certain speech defects, such as lisping, stammering, and imperfect pronunciation, which may also be observed in the normal individual. These defects are usually associated with certain words, and to misunderstand the grammatical use of certain parts of speech, such as adverbs, and the infinitive mood of verbs. The physical resistance is lowered, and the activity of the various bodily functions is not thoroughly as vigorous as in normal individuals. Hence it is that imbeciles succumb more easily to bodily diseases, especially such as are of infectious origin, and that a considerable number of them die of phthisis.

3. Mental Imbecility.—Whether or not congenital moral defect can exist independently of intellectual defect is a disputed question. We have already seen that moral defect is a concomitant of congenital intellectual weakness; but there are indubitably cases of moral non-development in which the intellectual faculties are as vigorous as, or even surpass, those of ordinary individuals. We are therefore compelled to admit that congenital perversion of the brain only occurs without any apparent intellectual defect. But a closer observation of such cases shows not only that they are non-moral in one or more particulars, but that they also give peculiarities of defect or singular and absurd habits, or the tendency to perform the common actions of life in an unconventional manner. Moreover, a prolonged observation of such persons reveals a liability in them to various forms of intellectual perversion, such as uncontrolled suspicions, gross superstitions, obsessions, delusions, hallucinations, and even confirmed insanity.

In the more pronounced forms of moral imbecility, it is by no means clear that the intellect itself is defective. The absence of social instincts and of normal affection, which may even express itself as a positive aversion to relatives and friends. Such persons are incapable of realizing the value of truth, and becomes so notorious in this respect among the people who know them, that their statements on the most ordinary matters of fact are never believed. They steal systematically without alarm, the only restraint being the fear of being found out. Perhaps their most prominent characteristic is their cruelty. It is not so much that they are ready to commit it, but that they do it, rather as that they go out of their way to inflict pain presumably for the pleasure of witnessing suffering. They are, however, apt to be extremely resentful of injury to themselves, and seldom forget to avenge an insult. They are also vain, proud, and supercilious. The impulses of their lower nature without any evident desire to resist them, and they never express sincere contrition for any action. As might be expected, they become ruthless in the gratification of their selfish desires or in the justification of their beneficent, rather than the benefit of any continuous honest endeavours. As a rule, their affinity for evil courses leads them to indulge in habits which tend to accelerate their degeneration and to terminate life prematurely.

In the case of children and young adolescents, it is unwise to pass too hasty a judgment, for it may happen that the moral sense is not absent but only tardily manifested. In such cases the children may be bright, intelligent, quickly receptive, often emotionally impressionable,—perhaps to a morbid degree,—but lacking in the very elements of moral perception. Many of these individuals, as they approach adult life, begin to change radically in their moral nature, and it is only to be expected that the moral defects, which have been due to various causes, have been manifest.

The size of the cerebellum relative to that of the cerebrum may be deficient, so that the latter is not covered over by the occipital lobes, as is the case in the carnivores and higher herbivores. Parts of the brain must therefore, by the theory, be absent, or may be absent, and many inequalities in the development of the two hemispheres have been recorded.

In the second and third layers of the cortex of the ape and in a similar situation in the cortex of the pig, Bevan Lewis (Text Book of Mental Diseases, 1899, p. 70) describes a perfectly globular cell, with a single delicate apex process and two more, extremely delicate basal processes without any angular projection from the rounded contour of the cell. These cells occur in man only in cases of idiocy and imbecility. Hammarberg (quoted by Ireland, Mental Affections of Children) found the pyramidal cells fewer in number than in normal man. This confirms to a certain extent the observations of Bolton, referred to at the commencement of this article. It only shows that the convolutions of the brain presented this peculiarity of cell development, while the remaining portions were normal, though having fewer cells than usual, the individual was, according to Hammarberg, not idiotic, but imbecile or weak-minded. Where the cells were not only abnormal in shape, but also, generally, very few in number, the idiocy was profound; where the cells were more numerous, though at places globular, and the impalpable, there was more intellectual development, though the individual was still idiotic. Concomitants with these arrests in the development of nerve cells there is a considerable diminution in cell pro-
cesses, and consequently in the number of the nerve fibres of the cortex. We thus see that the essential pathological condition in idiocy and imbecility is an arrest in the development of the cortex of the brain. This arrest is to a great extent dependent upon the extent of the imperfect development of these elements.

JOHN MACPHERSON.

ABOR, ABOR-MIRI.—A title applied to a group of hill tribes of the Mongolian type, on the N. frontier of the Indian province of Assam. The word Abor or Abors seems to mean 'barbarous' or 'industrious.' The title was given to the Abors (p. 251) at an early period because they acted as mediators between the Assamese and the more savage tribes whom they had been in contact with, and he suggests (p. 20) that the word is identical with the mira or mulla of Orissa, which, according to him, has originated the title applied to the Morah victim by the people of Assam. But this is, it may be truly said, the Dr. Grierson, to whom the question was recently referred, with more probability suggests that the word is Miri, of which the first syllable in Tibetan means 'man,' and the whole compound may possibly mean 'nobleman' or 'gentleman.'

The Abors or Abars occupy a tract of country on both banks of the Dihang river, which is the upper course of the Brahmaputra and the Yarlung in the Miri country. Most of the Abors live outside British territory, within the Tibetan border, only 321 being recorded as British subjects at the Census of 1881. They are generally described as a drab barbarous people, living, such as the Chinese class is, 7 as Buddhists, and the remaining 261 as Animists. Of the Miris, 46,729 persons were enumerated within British territory at the same Census, of whom about half represented themselves as Hindu and half as Animists. There are hills along the border which occupy the hills on both sides of this group, the Mishmis (wh. see) to the E. and the Daphils (wh. see) to the W., to be little affected by either Hinduism or Buddhism and to be in the main Animists. Dalton (p. 25) states that when their children are lost, probably being kidnapped by the Mishmis, the Abors attribute their disappearance to the wood-spirits, in whom they firmly believe, and to one of whom the police department in the destiny of man is assigned. Each disease has a spirit of its own, and, as they have no medicine for the sick, the only remedy is a sacrifice to the spirit to whom the illness is attributed. The favourite haunt of these spirits is a mountain called Rigan, which is held in awe by them. No one can return from it, hence its mysteries have never been disclosed. They acknowledge a Supreme Being, and one Supreme Priest—the father of all, and have some vague belief in a future state; but their ideas on the subject are ill-defined, and Dalton, who heard them speak of a Judge of the Dead under the name of Jon, who is clearly the Hindu Yama, reasonably inferred that much of this belief had been borrowed from Hindu sources. Needham (Assam Census, 1901, i. 48) adds that the chief of the malignant spirits whom it is the main object of their religion to propitiate, is called Apom or Epon, and his younger brother Pomos, both of whom inhabit the rubber tree, and must be propitiated in times of sickness. Uros is another malignant spirit who resides in unripe deodars, and is the father of the kila, or malevolent spirits of the Indians (which see), live underground, and destroy crops and other field produce. A sacrifice of two cooked fowls, rice, and other delicacies must be offered to them under the farm granary. Nipong is an evil spirit to whom the women have to propitiate, and he attacks men also with hemorrhage and colic, which cause the sufferer to roll about like a woman in travail. He is said to live in the rice and mango groves and in the hills. All these deities, whether malevolent or propitious, are represented as evil spirits and are not considered friendly, and it is never safe for a man to go too near them, for they are more or less destructive to property and frequently cause the death of cattle and the loss of human lives.

ABORIGINES.—In the article ETHNOLOGY it is pointed out that the four main divisions of mankind have not remained stationary in their respective original homes, but have been subject to great fluctuations during the course of time, and that no rigid parallel-line can be drawn between the historic and the prehistoric ages, which everywhere tend to merge imperceptibly one into the other. Hence the remark may confidently be extended to all times since early man first began those migratory movements by which he has replenished the earth. We know, for instance, that, during the Stone Ages, Europe was occupied by both long-headed and short-headed races, and Outes has now shown that the same two types had already reached Austral-America in Pleistocene times (La Edad de la Piedra en Patagonia, 1905). It follows that the two primary divisions recognized by anthropologists have been intimately associated together for countless generations, and consequently that there are no more any pure stocks, except perhaps a few isolated groups, still surviving in some remote and hard-to-inaccessible corners of the world, such as the Andamanese Islanders, the recently-discovered Tolsias of Celebes, and the Fijian Kali-Colos. The term 'Aborigine' or 'aboriginal' is usually to be taken in a purely relative sense, and the
ABORIGINES

claim often made by them to be regarded as true autochthones must be unhesitatingly rejected. They are normally 'mestizos,' in whom the physical and psychic characters of two or more races are intermingled in varying proportions. But the psychological and practical production of primitive cultures finds its chief expression in their religious concepts, since their whole conduct is almost exclusively
t controlled by their views regarding the unseen world.

Put in this way, the statement that their religious systems have been influenced by foreign contact, it follows of itself, and the inference that, as there are no longer any unmixed races, so there are no longer any unmixed religions, becomes almost a truism. The inference is certainly not quite obvious at first sight, although the analogous somatic mixtures, as between whites and blacks, are often self-evident. But that is only because mental are necessarily more self-evident and elusive than material phenomena. The savage may hide his inmost thoughts regarding the supernatural, as he often does to casual visitors; but he cannot hide the constituent elements of his outward form from the intelligent observer.

1. Thus the main physical features of the Austral aborigines have long been determined, while the source of many of their religious ideas is still shrouded in mystery, whether between the Spencers, Gillens, Langs, Frazer's, and other serious students of primitive psychologies.

The Narrinyeri people of South-East Australia have a 'god' or mythical being, Nurrnderi, who dwells in the, and is the master of the Lower Murray River; and to reach this abode of bliss the souls of the dead have to pass under the sea and over a fiery pit, into which the wicked fall while the good escape. But such abodes of bliss and misery form no part of the mental life of the chiefs of the natives, who do not distinguish between morally good and wicked people; and careful inquiry has now shown that these are merely distorted reminiscences of the heaven and hell preached to the Narrinyeri tribe by the early missionaries.

The same god Nurrnderi (Ngnurndore) plays a great part in the myths of the kindred Tanganarins of the Lower Murray River, and also affects a curious institution with the hands, which, as in the Biblical stories get perverted in the minds of the natives.

This great King of Wyir (Heaven) had two wives, who caught a hare, and only gave the forefinger to themselves and giving him the little one. Discovering the fraud, he was very angry, and said, 'You shall die for this, and all Tanganarins shall be fighting for food, and will be fighting the gods, and evil spirits until then.' Ngnurndore had created and done everything, from the beginning; knowing them knowledge will be hunting, fishing, and fighting. But after the sentence of death for the trick played upon him by his wives, he took away their knowledge and power, left them, and ascended into heaven. Then they became ignorant and blind, and lived like the beasts of the field for a long time, till of a virgin was born a good and wise man named Wyngrare. He gave them back their lost wisdom and power, and taught them sorcery; and when he had re-generated all the tribe, he was taken up to heaven by Ngnurndore, and now reigns there as second King. And when a Tanganarin dies, Wyngrare takes his spirit up to heaven, and gets him a good-hunting-ground in that place, through his influence with Ngnurndore. This might be called the Australian version of the doctrines of the Fall and the Atonement.

The native account of the Creation of the first man is more directly taken from the Book of Genesis. The people of the present Melbourne district say that Punjill, Creator of all things, made two male blacks by cutting three large strips of bark with his big knife, and on one of them kindling a quantity of clay to the required consistency. Then he carried some of the dough to another black strip, and began to mould it into a man, beginning at the feet and working upwards to the head. This he repeated on the third strip; and being well pleased with his work, he turned round about the two figures. He next made some hair out of stringy bark, curled for one man and straight for the other, took him one person, being once again pleased with this work, one more danced round about them. After smoothing their bodies with big leaves, he lay upon them and blew within their nostrils and mouth; and until they stirred, when then danced round, worked them a third time. Then he made them speak and walk about, and they were finished.

The Dieris tell it differently. In the beginning Murn-Mura, the Good Spirit, made a number of small black lizards, and being pleased with them, promised them power over all creeping things. He divided their feet into toes and fingers, and with his forefinger added nose, eyes, mouth, and ears. Then he spread them out, but it toppled down. So they stood on their tail, after which the lizard walked erect like a man. He did the same with another, which happened to be a female, and so the race was founded. After a time rains fell, and there were very numerous and wicked, whereas Punjill, being angry, raised storms and floods which shook the mountains and hills. And Punjill went about with his big knife, cutting this way and that way, and men, women, and children he cut into very little pieces, and threw them about like worms, whereupon great gales came, and blew them about like snowflakes. They were wafted into the clouds, and by the clouds borne hither and thither over all the earth, and thus was mankind dispersed. But the good men and women were carried upwards and became stars, which still shine in the heavens.

Death came in this way. The first pair were told not to go near a certain tree, in which lived a bat which was not to be disturbed. But one day the women were getting fuel, and were tempted to go near the tree. Thereupon the bat flew away, and so death came into the world.

It should be noted that all these Creation myths have been gathered from tribes who have long been in association with the whites, and probably derived much of their religious views from the missionaries. The local colouring would gradually be supplied as the stories passed from tribe to tribe.

2. Some Biblical legends are widespread among the Masai of East Africa, and here the parallelisms are so striking that Captain Merker can account for them only by supposing that the Masai nomads are a Semite people who evolved originally with the kindred Israelites in North Arabia, whence they migrated some 6000 or 7000 years ago to their present domain east of Lake Victoria Nyanza. Surprising coincidences are pointed out between the traditions, myths, legends, and stories of the Masai and the Bible.

The Masai el-Eber is equated with Eber (Gen 10: 1-2); Hans, 'Great,' with Jahuech; Nabe with Abel; Naroal with Abraham; and it is shown that the Masai have also their ten commandments, the first of which is: 'There is one only God; heretofore you called Him E'magadani, "Almighty"; henceforth you shall call Him Nyagi; just as in Ex 6' Sandalii is replaced by Jahuech. Here we have unquestionably many Jewish religious notions superimposed on the primitive Masai animism. These were not, however, brought from Arabia thousands of years ago, but in modern times, when the Jewish Judaising Falashas of the neighbouring Abyssinian uplands (cf. M. Merker, Die Mosai, Berlin, 1904).

3. In Senaur there is a curious intermingling of Muslim and animistic beliefs, which corresponds completely with the Negro and Semitic intermingleings of its Funk inhabitants. These pass for fairly good Muhammadans; practise circumcision, make the pilgrimage to Mecca, have zealous qur'ans and dervishes (who act as teachers and scribes in the towns), and conform to most of the other Qur'anic precepts. Yet beneath this thin Muslim veneer these Negro natives are still sheik pages, firmly believe in the gross superstitions which are associated with the queer wolf notions referred to in art. ETHNOLOGY. Their much-dreaded sábirs (muggers) are credited with the power of transforming themselves at night into hyenas and hippopotami, which roam about seeking to destroy their enemies, and inflict injuries even on the most devout Musalmans. The marrafis, as the metamorphosed human hyenas are called, hold their unhallowed entrails and feet in the woods, and the woodlands, indicating their presence by their terrible howlings, just as wayfarers were stricken with awe by the midnight roar of the transformed human jaguars amongst the Aztecs of pre-Columbian times. In the daytime the marrafis again
ABORIGINES 35

They assumed their human form, but are still dangerous, since a glance from their evil eye suffices to wither the limbs, the heart, or the entrails of their victims, who thus perish in the most horrible torments.

To counteract these dire machinations, the scribes write a passage of the Qurânic text: 'They shall be laid outcastes, seething in their own society.' Islam has added some converts in isolated localities, but they are Christians only in name' (Social History, etc., i. p. 12).

In some places, as in the West Sudan, the primitive pagan substratum has been partly overlaid by Islam, and the whole Peninsula, from the seven Dolobes to the Trinity, which they cannot understand. Other violent contrasts are seen in the lofty conception of Tukhar, 'god of justice,' associated amongst the neighbouring Serers with lowly household gods, such as the talon, from whom the nightly milk-bowl is set apart. Here again the fusion of higher and lower ideals is obvious enough, and so it is throughout Negroland, wherever the seething masses of heathendom have been touched by higher influences.

4. We do not wish to make the common mistake of regarding heterogeneous elements as we are at once confronted with perhaps the saddest tragedy ever witnessed anywhere in the whole history of human development. Here are seen, not so much gross anthropomorphous systems leavened by contact with superior ideas, as the very reverse process of these ideas being themselves gradually contaminated and utterly debased by submergence in the great flood of aboriginal heathendom. The present writer has elsewhere shown (East and West, April 1905) that the whole of the peninsula, from the Himâlayas to Ceylon, was occupied by these aborigines — the Malayars and Dravido-Kolarians — the former a mixed race of the two, and the latter a continuous people, the Dravidians, who have penetrated into the neighbouring Kollencode forests, and are there worshipped with semi-Hindu rites, jointly with Muniappan and the other demon-gods, for all these aborigines are still everywhere at heart devotees of the Census. But these demons themselves, as well as all preternatural beings, are really human like the suppliants, only invisible and more potent. Hence they are held in fear and procured reverence, and their favour can be sought by sacrifice alone (Iyer, MS. notes). Much the same account is given of the Erravellers of the Chittur forests, who also include Kâli amongst their demoniacal gods, and seek her protection with little offerings.

Amongst the Bhils, Kol, Gonds, and other Pakhrânes of the Vindhyân uplands, great respect is paid to Mahâdeva, to whom they have been consecrated by the Mahâdeo heights east of the Satparas. He is even confounded with the chthonic Tiger-god, and associated with Bhîna, Arjuna, and other heroes or demi-gods of the Mahâbhârata epic. Yet these almost Hinduised hillmen offered till lately human sacrifices to the various members of their limitless pantheon, which includes sun, moon, rocks, trees, torrents, the passing winds, and especially the departed spirits who return in the form of nightmare, sit on the crest, squeeze the throats, and suck the blood, like the vampires of the popular Slav legend (see ETHNOLOGY). So intermingled are the higher and lower forms throughout Gondwâna and the Southern highlands, that the Census puzzlement over the mixed ethnic groups, whether as outcaste Hindus or Hinduised outcastes.

5. But this new field of research is boundless, and we must hasten through Indo-China, where
ABORIGINES

the superficial Buddhism is everywhere intimately associated with the never-dying animism, eastward to the Malay lands, where analogous associations crop out everywhere between Islam and the still rampant heathenism of Borneo, Celebes, Gilolo, and Mindanao. Much light has recently been thrown on this religious syncretism in Celebes by the brothers F. and P. Sarasin, in whose Reisen (Berlin, 1905) the reader will find much instructive matter. The prevalent relations in the hitherto almost absolutely unknown island of Celebes, thrown light on the teaching of the great Saleeby in his Studies in Moro History, Law, and Religion, vol. iv. of the Philippine Ethnological Survey Publications ( Manila, 1905). Here the "authentic" genealogies of the Moro (Mumah- dan) dynastic families are interwoven with curious pagan elements, and we read of orthodox Sultans descended from unions not only with houirs but sent down from heaven, but also with a native princess found inside a bamboo stalk. This occurred at the time "Tabunaway and Mamalul were cutting bamboo to build their fish corral. When the last tree was felled, out came a child who was called Putri Tunina, and whose little finger was wounded, the child went through the bamboo, and from her sprang Malang-sa-ingnd, third jatuv (king) of the Bwayan dynasty. The Mindanao Muslims have also assimilated some of the pagan folk-lore, and this is found in China (Balbal in Marambun, a huge night bird, whose scream is supposed to be distinctly heard after sunset. It is really "a human being who transforms at night into an evil spirit which devours dead people," in this differing from other vampires, which more or less are the dead and prey on the living. But so detested is the creature, that in the local Muhammadan code, here published in full, anyone calling another baling is fined one slave or his value (p. 48). Thus in Mindanao it is again the higher Muslim system that is affected by the lower ideals of the aborigines, many of whom have withdrawn to the uplands of the interior, where interesting discoveries await future explorers in primitive psychologies.

6. Once more the balance is redressed in Oceanica, where the more civilized Eastern Polynesians have inculcated the Western Melanesian cannibal headhunters with their mana and other sublil religious essences. But in the process modifications naturally take place, and the Maori or Samoan mana is not, perhaps, quite the same thing as that of the New Hebrides savages. The Maori restricts the breath of the Hero (Samoa?) to New Zealand by the kaka bird, is not easily distinguished from the forest, the human, and the other local maori, and is generally defined as "power, authority, influence, prestige" (A. Hamilton, Maori Art, p. 308). But the Melanesian mana is more spiritual, analogous to the Augustinian "grace," without which no works avail, but with which all things superhuman can be achieved. Thus a person may have mana, but is not himself mana,—a force which "is present in the atmosphere of life, attaches itself to persons and to things, and is manifested by results which can only be deduced to its operation." and again, "a force altogether distinct from physical power, which acts in all kinds of ways for good and evil, and which is of the greatest advantage to possess" (Corrington, The Melanesian, pp. 118-119).

But however divergent with this divergent from, the Maori mana, this impersonal essence permeates the whole religious thought of the Melanesians, whose religion consists, in fact, in generalizing our own lives, qualifying it more for one's benefit—all religion, that is, as far as religious practices go, prayers and sacrifices (Ib.), and as the principle is admittedly derived from the more highly cultured Polynesians, we have here again a primitive system influenced, and, in this instance, somewhat elevated, by a more advanced line of thought. How primitive in other respects is the Melanesian system, may be seen from the belief current in the Banks' Islands that people may become tolanma, a kind of vampire which prevails usually at night, and, like the Mindanao balbal, devours the bodies of the dead. In this and in several other Melanesian groups the anthropology also (see ETHNOLOGY) is widely prevalent, only being really flexible to the blamant, a kind of vampire which prevails usually at night, and, like the Mindanao balbal, devours the bodies of the dead. In this and in several other Melanesian groups the anthropology also (see ETHNOLOGY) is widely prevalent, only being really flexible to the blamant, a kind of vampire which prevails usually at night, and, like the Mindanao balbal, devours the bodies of the dead. originally distinct personalities, and are themselves a clear indication of the higher Aryan and Semitic influences brought to bear on the primitive religion of the Pelasgian aborigines. But these influences must not be pushed too far, as when G. Glaser imports Glasper into Greece (Zens) and Italy (Jove), as well as into Israel (Jahweh). It is clear from the compound forms Dyaspiter, (Vedic Sanskrit), Zeispiter (Gr.), Jwaspiter (Ugarit. and Phoenician), and Dyaspiter (Ugarit. and Phoenician), that this personification of the bright sky had already found expression in the Aryan mother-tongue, and was consequently a common inheritance of all the proto-Aryans who, after the dispersion, brought it independently into their Indian, Hellenic, and Italic settlements. Thus we have here no reciprocal influence of Aryan upon Aryans; but as to the same root belong the Avestic, Modern Persian, and Lithuanian Lietic Deivs, Deiva, ‘God,’ and other Western variants, it follows that the pantheons of the Iranian and European aborigines were enlarged and otherwise modified in remote prehistoric times by elements introduced from other quarters. The early interminglings of religious systems may have taken place, as between Aryans and Ligurians in Italy, or Aryans (Celts) and Iberians in Spain, Gaul, and the British Isles, is a subject of too speculative a nature to be the present concern. However, it seems fairly well established, that the Semitic Phenicians reached the far west with their Baal, who was adopted as one of their chief deities by the Ibero-Celt peoples of Britain and Ireland. The expressions Boi minait art, ‘may Baal prosper thee,’ and Dal Dhia dhiut, ‘God Baal be with thee,’ were not so many years ago still addressed to strangers on the banks of the Suir in Tipperary (see Gl. A., vol. 3, p. 402). The Chibchas, Peruvians, and Aymaras reached a relatively high degree of civilization, while most of the others lagged behind, and are still at the barbaric or even pure savage state. These last have, till recently, stood for a country in which, as a result of a series of natural facts, so that many, such as the Mexican Seris, the Caribs and Arawaks of British Guiana, the Brazilian Cotoceus, and the Fuegian Yahgans, afford excellent object-lessons for the study of the earliest types of unmodified religious thought, but for that very reason do not come within the scope of the present inquiry. Thus, in America, the mutual influences are confined mainly to the more advanced cultural peoples, amongst whose interminglings appear to have been more the rule than the exception. Apart from the much discussed subject of the long-extinct Toltecs, it may be stated in a general way, that the two Aztêcs and Mayas cultures betray undoubted proofs of endless borrowings, especially in matters associated with astrology, divination, and religious observances. Where were the givers and who the recipients may still be a moot point, but the contacts are not open to question.

E. Förstemann, who takes the Maya side against Selé and others, holds that the Aztecs adopted many things they learned from the Mayas, especially their deities, whose names they borrowed from the Chibchas who live in Yucatan. It is a very typical case, for when and quot;instantanea; the bird Trogon resplendens, and can and coafl mean the snake. The Aztecs first came in contact with the higher civilization not very long before the arrival of the Spaniards, so that they did not have time to establish their supremacy and so absorb the Mayas, but, on the contrary, were absorbed by them.” (Mexican and Central American Antiquities, Washington, 1904, p. 542). It is also shown that the tomatoleltas which were common to all Central American peoples, were not calendars, but horoscopes covering a period of 520 days, the period of gestation. The Aztecs, however, were not copied by the Aztecs, (6, p. 557; see also Keane’s Eng. ed. of Selé’s Religion of the Aztecs, translates, 1901). Dealing with the worship of the Sun, Mithra in the Ascetic Apocryphon (the present state of Oxaxas), Professor Selé shows that this cultured nation drew many of its religious inspirations from the neighbouring Aztecs. ‘The conclusion seems inevitable that the cosmogonic representations referring to Quetzalcoatl, as well as the Oynaco, with its many names figured in the picture-writings, were not strictly national, did not have their roots in the Zapotec country, but represent an imported culture which owes its origin to the influence of Nahua tribes dating back to prehistoric times’ (Wandelreien von Mitila, Berlin, 1899).

On the other hand, the views advanced by the late Mr. Leland in The Algonquin Legends of New England regarding the old Norse origin of the north-east Indian mythology cannot be upheld. But although they are now shown to be untenable, later European influences have been at work, and Mr. Andrew Lang has found clear traces of Irish, French, and a few Anglo-American strata in many of the Passamaquoddy myths. Dr. J. D. Prince, of Columbia University, holds that what is genuinely native ‘stands forth with unmistakable distinctness in some of the Kulöskap tales,’ that is, the witchcraft and other stories recorded in Kulöskap the Mzier, the joint work of himself and Mr. Leland.

ABORTION.—See FETICIDE.

ABOULIA.—A mental disorder characterized by loss of volitional control over action or thought. There are three general types of aboulia. (1) In the purely ideational field it may occur as a result of the loss of ineruptive powers or of control of attention. In such cases, when a motive or impulse appears in consciousness with a preponderating force, there is an ill-balanced tendency to immediate action. The suggestion is without natural check, and rash and inconsiderate execution of it follows. The limiting cases of such disorder (some-times termed hyperaboulia) are to be found in the obsessions of fixed ideas, in hypnotic suggestion, etc., where the force of the suggested idea is so strong that there is no consciousness of competitive motor impulse (and hence none of volition). (2) Distinguished from this, but still in the ideational field, is aboulia which takes the form of extreme hesitancy. While a series of impulses is presented to consciousness as alternatives,—that is, with equal or nearly equal suggestive power,—the loss of ability to inhibit prevents selection, and irresolution and failure to act at all are the result. It is probable that conduct which is often interpreted as extreme scrupulosity, or conscientiousness in affairs of no real moral moment, taking the form of indecision, is merely a manifestation of this type of aboulia. (3) Aboulia due to idiomotor derangement should be sharply discriminated from the preceding. It is due not to failure to make rational choice, but to inability to execute the choice made. It is psychical form is failure of the kinesthetic equivalent, or motor image adequate to action, and its physiological basis is probably lesion or loss of tone in the association tracts. It shows itself as muscular stammering, repeated efforts being required to perform some ordinarily easy action. Abohia is a characteristic neuropsychic condition, appearing in connexion with multiple personality, automatism, etc. It is the natural pre-condition of excessive susceptibility to suggestion.

H. B. AMERICAN.
ABRAHMAN-MEN.—A class of studly beggars, who feigned to have been mad, and to have been kept in Bedlam for a term of years. In London they are denominated ‘Beggars of Bedlam’—a term for the lunatics asylum, or madhouse—a kind of competition for Bethlem, the name of a religious house in London, founded as a priory in 1247, and in 1547 converted into a hospital for lunatics. Originally ‘Abraham-men’ were those who denied the integrity of the lunacy ward under the patronage of the patriarch Abraham. On discharge from hospital they wore a badge for identification, and were formally permitted to roam the country as ‘a Tom o’ Bedlam’ and subject to the laws.

This character was personated by vagabonds and studly rogues, who wandered over England in a disorderly manner, feigning lunacy and preying upon the charitable. Hence the slang phrase, ‘to sham Abraham.’ Where begging failed they did not hesitate to live by pilfering, and, when detected in any depredation, they would plead the immunities and privileges of a Bedlamite. The character is common in the knapsack poetry of the time, and often to have survived till the period of the Civil Wars.

For a specimen of the language and demeanour of the Abraham-men, see an account in the ‘Steeple in King Lear,’ Act v. sc. 2; for synonyms, Beaumont and Fletcher’s ‘Beggar’s Bush,’ ii. sc. 1—

And then he’s in a Jacob’s coat
Jackman, or Patricio, Cranke, or Clapper-dudgeon,
Fraier, or Abraham-man, I speak to all.

man is he that walketh bare-armed and bare-legged, and fayneth himself to have the company of the good folk; but to some it doth fall on it, or such like toy, and nameth himself “Poor Tom.”’ (cf. Early Eng. Text Soc. p. 3). See also Dekker’s ‘Belman of London,’ 1610, where Sackel and Randal call the Abraham-man the most phantastick. . . . The fellow that sat half naked (at table to-day) is the best Abraham man that ever came in to my house, the notablest villain: he sweats he hath been in Bedlam, and will talk from the point of purpose: you see pinnes stuck in sundry places of his naked flesh, especially in his back; and certainly to make you believe he is out of his wits: he calls himself by the name of Poor Tom. . . . Great Abraham men some be exceeding merry, and doe nothing but sing songs: some will dance: others will do nothing but laugh or weep: other are dogged and so sullen both in look and speech, that, saying but small company in a house, they boldly and bluntly enter, compelling the servants through fear to give them what they demand, which is commonly bacon or something that will yield ready money.

The great authority is Harman’s ‘Cawset, or Warning for Common Corrotors, 2nd ed., 1657.’

W. W. FULTON.

ABRAVANEL (or ABARBANEL), Isaac (1437—1508).—Statesman and author, Don Isaac Abravanel shared in the general expulsion of the Jews from Spain in 1492. He had been in the service of King Alfonso v. of Portugal and Queen Isabella of Castile, and after his banishment acted as finance minister in the states of Naples and Venice. His facility in learning from Commentaries on the Bible. He wrote on the Pentateuch, the Historical Books, and the Prophets, but not on the Hagiographa. Among the characteristics of his Commentaries, mention must be made first of his general as the pseudepigraphic works of the early Church, was interpreted in 1 P. iii: 18 and 2 P. 3: 18, which it was intended by its writer; but as to the interpretation we have no evidence. The commentators vary in their views. Almost all下了 all cite from St. Paul’s epistles, which is a very trifling piece of the Peshitta (not washing away . . . but confessing God with a clear conscience) and the Vulgate (conscientia bona interrogatoria in Deum); some, like Alford, denying any reference to the baptismal interrogations, and rendering ‘querying a good conscience’ (= ‘s. i. v.’); but if so, we would expect ερωτώμενος and others taking ερωτώμενος to be the baptismal interrogations, as Gudemus (ii. 107). Hooker (I. Eccles. Pol. v. 63), Estienne (Com. i. 10.), de Wette, and others. Dr. Bigg (I. and ii. loc.) also uphold the reference to the baptismal questions, but gives a strong argument for taking ερωτώμενον with αποκριτη, as corresponding to ερωτώμενος, just as δι’ εναντιωμενον corresponds to δι’ αντιομενον. Whether the case would be: . . . the ark into which few . . . were brought safely through water, which also after a true likeness doth now bring you. They bring back, even baptism (by water) in the God of the first of the flesh, but the interrogation of a good conscience, though there is room for an unscriptural exegesis—for an exegesis which shall attempt to explain Scripture without theological prejudice.

In all these points Abravanel’s services were appreciated by Christians as well as Jews. ‘No less than thirty bishops and prelates of all ranks’—among them men of eminence, like the younger Buxtorf, Budeus, Carpuzo, and others—occupied themselves with the close study of Abravanel’s exegetical writings, which they condensed and translated to the world of Christian scholarship (Ginzberg). Certainly Abravanel gains by compression, for his works are very prolix. They were often written in great haste. Thus his large Commentaries on the Psalms, and Samuel occupied him only six months. Yet these Commentaries include some of the very best work.

The philosophical works of Abravanel are of less importance than the exegetical. His Ethik Aniithah (‘Pinnacle of Faith’) is a treatise which aims at dissociating Jewish theology from philosophy; he uphold, against Malmonides, the view of miraculous inspiration. His Messianic books were very popular.

Among of his many other literary efforts, he disputes alike the views of Christian and of Jewish rationalists. His Yasharot Meishicho (‘Salvation of His Anointed’) is a clear and full account of the Rabbinic teachings. Concerning the Messiah, Abravanel himself claimed descent from the royal house of David.

ABRENUNTIO.—The renunciation of the devil at baptism is a custom which goes back certainly to the 2nd century. At first, as we see from the Patristic references, the renunciation was thought of as intellectual as well as moral, as a repudiation of heathenism with its teachings as well as with its vices and abuses; while later, after the triumph of Christianity (and so at the present day), the renunciation is thought of almost entirely as moral, as a promise to lead a good life.

The custom of interrogating the candidates to see whether they really gave up heathenism and believed in Jesus Christ probably goes back to Apostolic times, though it is a custom which could scarcely be dispensed with. Perhaps the earliest certain reference to it is the gloss of Ac 5: 8, the confession of faith by the Ethiopian eunuch, which, though probably not part of the original Epistle, is well adapted to it, and must therefore reflect the usage of at least the 2nd century. It is quite probable, however, that the interrogatio (ἐρωτώμενος, not ἐρωτώμενος) of a good conscience in 1 P 3: 19 refers to the practice in question.

For our present purpose it is more important to know how the early Church interpreted 1 P 3: 19 than how it was intended by its writer; but as to the early interpretation we have no evidence. The commentators vary in their views. Almost all cite from St. Paul’s epistles, which is a very trifling piece of the Peshitta (not washing away . . . but confessing God with a clear conscience) and the Vulgate (conscientia bona interrogatoria in Deum); some, like Alford, denying any reference to the baptismal interrogations, and rendering ‘querying a good conscience’ (= ‘s. i. v.’); but if so, we would expect ερωτώμενος and others taking ερωτώμενος to be the baptismal interrogation, as Gudemus (ii. 107). Hooker (I. Eccles. Pol. v. 63), Estienne (Com. i. 10.), de Wette, and others. Dr. Bigg (I. and ii. loc.) also uphold the reference to the baptismal questions, but gives a strong argument for taking ερωτώμενον with αποκριτη, as corresponding to ερωτώμενος, just as δι’ εναντιωμενον corresponds to δι’ αντιομενον. Whether the case would be: . . . the ark into which few . . . were brought safely through water, which also after a true likeness doth now bring you. They bring back, even baptism (by water) in the God of the first of the flesh, but the interrogation of a good conscience, though there is room for an unscriptural exegesis—for an exegesis which shall attempt to explain Scripture without theological prejudice.

Turning to the Patristic evidence, we may notice that Justin Martyr speaks (Apol. i. 61) of those who are being prepared for baptism ‘promising to
be able to live according [to the truth]. The first witness for renunciations, however, is Tertullian. He says (de Scept. 4):—

'When entering the water, we make profession of the Christian faith in the words of its profession: I renounce the devil, his pomp, and his angels. Well, it is not in connexion with idolatry, above all, that you have the devil with his pomp and his angels. The adversary's testimony in the laver of baptism has reference to the shows, which through their idolatry have been given over to the devil and his angels.'

Elsewhere (de Idol. 6) he says that idol-making is prohibited to Christians by the very fact of their baptism. 'For how have we renounced the devil and his angels? The renunciation is renewed.' In de Cor. 8, after describing the act of disowning 'the devil and his pomp and his angels,' he says: 'Hereupon we are thrice immersed, making a somewhat ampler pledge than the Lord has appointed in the Gospel.' So in the Canons of Hippolytus, which probably represent Roman or Alexandrian usage early in the 3rd cent., the candidate for baptism turns to the West and says: 'I renounce thee, Satan, with all thy pomp, and this is then acknowledged by the presbyter, and before being baptized turns to the East and says: 'I believe and bow myself in thy presence and in the presence of all thy pomp, O Father, Son, and Holy Ghost' [for the words 'and bow myself' are found in the English version]. The canons cite the passages from the Canons of Hippolytus, and the Book of Apostles, and Dionysius of Alexandria, writing to Pope Xystus (ep. Euseb. HE vii. 9), speaks of the questions and answers (των ἐπιστολίσεων καὶ των ἀπώτητας ἔκαθος). It is clear, then, that in the 3rd and probably in the 2nd cent., the candidates made an act of submission to God at baptism as well as a renunciation of the devil.

The same thing is also evident in the 4th century. The act of submission might be the recital of a creed ('reddito symboli'), which had been taught to the candidates during their catechumenate ('tradito symboli'); or it might be a simple formula, or both the formula and the creed. In Cyril of Jerusalem, in his Oration against Judas (Lect. xiv. 2-3) we read of the candidate first facing West, because 'the West is the region of sensible darkness,' and Satan, 'being darkness, has his dominion also in darkness, whereas the East is 'the place of light.' He says, stretching out his hand: 'I renounce thee, Satan, and all thy works, and all thy pomp, and all thy service (or worship), λατρείας.' The word 'pomp' is explained as being the shows, horse races, hunting, and all such vanities; the word 'service' as idolatry, prayer in idol temples, etc. Then the candidate faces East and says: 'I believe in the Father, and in the Son, and in the Holy Ghost, and in the confession of one God and of three persons. The renunciation and submission are pronounced in the outer chamber; the anointing and baptism follow in the baptistery, where the candidate is again asked whether he believes in the name of the Father, and of the Son, and of the Holy Ghost (xx. 4). It does not appear that at Jerusalem in Cyril's time the Creed was recited at baptism. Of the 4th cent. Church Orders we may first cite the Egyptian, in which are some almost alike. The candidate says: 'I renounce thee, Satan, and all thy service and all thy works;' (Ethiopic: 'all thy angels and all thy unclean works'); he is then anointed, and a long

creed takes the place of the formula of submission. Turning to the West and East is not mentioned in these two Church Orders. In the corresponding part of the Verona Latin Fragments of the Didascalia (ed. Hauler, Ixx), in the Testament of our Lord (ii. 8) the candidate turns to the West and says: 'I renounce thee, Satan, and all thy service (lit. military service), and thy shows (lit. theatres), and thy pleasures, and all thy works.' After being anointed, he turns to the East and says: 'I submit to thee, Father, Son, and Holy Ghost,' etc. In the Apostolic Constitutions the form is somewhat different (vii. 41). The candidate says: 'I renounce thee, Satan, and his works, and his pomp, and his worships, and his angels, and his inventions, and all things that are under him.' This is immediately followed by the act of submission: 'I associate myself (ερωτευομενυ) with Christ, and believe and an baptised into one unbegotten Being,' etc. (a long creed); then come the anointing and baptism. Turning to the West and East is not mentioned; but later, after confirmation, the neophyte is directed to 'pray towards the East' (vii. 44). We have some confirmatory evidence from other 4th cent. writers. St. Basil (de Spir. Sancto, xi. 57) says: '[Apostates] have set at naught their own confessions ...' In the Confession of the Cyprians, the departure of the Western and the East, and in the Holy Ghost, when they renounced the devil and his angels, and uttered those saving words. The Pilgrimage of Silvia (or of Etheria) does not mention the renunciation, but says that the 'reddito symboli' was made publicly. Pseudo-Ambrose in de Sacramentis (ii. 7, c. 400 a.d.) also does not mention the renunciation, but gives the interrogations at the time of the triple immersion: 'Dost thou believe in God the Father Almighty?'—'Dost thou believe also in our Lord Jesus Christ and in His cross?'—'Dost thou believe in the Holy Ghost?' When the candidates were too young to make the answers to the interrogations and to say the renunciations themselves, this was done for them by the sponsor, or the parents, or a relation (Canons of Hippolytus, 113; Egyptian Church Order, § 46; Testament of our Lord, ii. 8; for sponsors see also Tertullian, de Bap. 18, and the allusion to them—'unde suspecti'—in de Cor. 3). The custom of renouncing the devil has persistently remained. Duchesne (Oriens du cent. trièvè, Eng. tr. ['Christian Worship'] p. 304), gives the form long in use at Rome. At the seventh and last scrutiny, after the 'Effeta,' and anointing on the breast and back, the candidate was asked: 'Dost thou renounce Satan?'—'And all his works?'—'And all his pomp?' To each question he answered, 'I renounce (abrenuntio)'. The candidate recited the Creed publicly, but in the 5th cent. the priest recited it for him. In the Gallican use, the candidate, facing West, was asked: 'Dost thou renounce Satan, the pomp of the world and its pleasures?' The candidate replied, entered the font, and answered a threefold interrogatory on the creed with 'I believe,' and was baptized (Miscell Gallarum, see Duchesne, op. cit. p. 324).

In the Sarum Manual the renunciations were as at Rome (see above); after the anointing asks the candidate a threefold interrogatory which is a short form of the Apostles' Creed, to each part of which he answers 'I believe,' and the baptism follows (Maskell, Monumenta, i. 225). In the English use of the Caxtonian time, the order is much the same as in the West. In the Orthodox Eastern Church the renunciations come in the 'Office for

* In the Testament, the Verona Fragments, and in the Canons of Hippolytus, a form of the Apostles' Creed is put before the candidates in the shape of three questions at the act of baptism.
Making a Catechumen, which is separate from infant or adult baptism, if the candidate is a "barbarian or a child") his sponsor, is asked thrice: 'Dost thou renounce Satan, and all his works, and all his angels, and all his pomp?' and answers: 'I renounce.' He is thrice asked: 'Dost thou renounce all the Filthiness of the World, and all the Vanities of the Sons of the Wicked One?' and answers: 'I have renounced,' and is bidden to throw upon him and spit upon him. Then he is thrice asked: 'Dost thou join Christ?' The Nicene Creed follows hereon: 'I renounce the Heretics, and all liars: I renounce the name of the same.'

Thus we see a most persistent survival of a formula which dates back at least to the 2 Centuries. The case is exactly parallel with the survival of the Sermo Corde in the Eucharistic Liturgy. Thus, however, one exception to the universal use of the Renunciation. The Nestorians or Eastern Syrians appear not to have it. Their baptismal service is drawn up in a form closely resembling the Eucharistic Liturgy, with lections, canticles, invocations, etc., which presents many unique features. The Renunciation among the Nestorians probably formed part of a separate office (as in many other Churches), and this office has now been discarded and the Renunciation with it. But the Nicene Creed, recited with the baptismal service on the analogy of the Liturgy, serves the purpose of a profession of faith.

A. J. MACLEAN.

Absolute.—I. Meaning of the term. The term 'absolute' (absolutum = unrestricted, set free, and hence what can subsist by itself in that condition, what is complete as it stands) is used either as an adjectival or as a substantive, and, in either case, takes on a variety of allied but distinct meanings. It seems probable that the adjective was grammatically prior. One of the first writers to use the term is Cicero, who (in de Finibus) employs it to describe a characteristic of the blessed life, and also a form of necessity. As an adjectival term it may be applied to a quality which is independent of or can have the qualification of subsisting by itself. This qualification may be given either negatively, in the form of the absence of all relation of dependence on another, or positively, in the sense that it is laid on its internal coherence and self-sufficiency. We find it employed not merely in philosophy, but in science and in everyday experience. Characteristic uses in science are, e.g., 'absolute temperature,' 'absolute alcohol,' 'absolute position,' or again 'absolute space.' In common thought it is found in the expressions 'absolute fact,' 'absolutely false.' As a substantive it is primarily a philosophical term, and is in general used to designate the basis or fundamental principle of all reality, which in some sense is or contains all the variety that exists. It is with the philosophical use of the term that we are mainly concerned here; but it will be remembered that 'absolute' is almost the same (Denzinger, i. 198, 223; see a shorter form at p. 234, where the renunciation is explained as a purely moral one, without reference to heathenism) as the Latin word absolu, 2d cent., 267, 231 (the latter is the 'rite of St. Basil'). In the 6th cent. James of Edessa describes the catechumens as renouncing 'Satan and all that belong to him, and as professing their belief (ib. i. 279); and Severus of Antioch gives the form as, 'I renounce Satan, and all his works, and all his worship, followed by an act of subscription (ib. p. 304). For the Maronites see Denzinger, i. 246, 354. In all these cases the turning to the West and East is emphasized, and the acts of renunciation and of subscription are recorded.

Meaning of 'pomp.'—The word σωμία (from σώμα) means properly 'a sending under an escort,' and so 'a company,' and then 'a solemn procession' (Liddell and Scott). It was taken into Latin (pompa) as meaning 'a procession,' and so (a) 'a train or a suite, and (b) 'barbarian' or 'pompa,' 'display.' Both these last meanings are found in the formula of renunciation. In Tertullian and the Canons of Hippolytus the meaning is apparently neutral, 'a retinue'; it is used in the Canons in a good sense, 'the children of God' (see Codex Sinaiticus). Then from the 4th cent. the bad sense of the word, 'display,' 'pride,' comes to the front. In the 9th and 10th centuries the Jerusalem and Jerusalem Ordo shows the plural is often used with this meaning to this day in the phrase 'pompes et vanités of this wicked world' of the Book of Common Prayer; the Latin usage of the word is found in 16th cent.; it was used for a kind of cake given on Christmas Eve; and is also employed in their godchildren when they give up, apparently (says Ducange, e.g.) to remind them of their having renounced the pomp of the devil.
of relation whatsoever will alter its permanent independence. In the long run, as we shall see, this is the only consistent form in which the term can be used, and is indeed the basis for all other uses of it. But, when describing common usage, it is desirable to indicate other ways in which the term is employed.

This independence of alteration by external association, to which we have referred, already contains within itself a qualification, a character which the term 'absolute' also possesses, and which in certain cases is more particularly emphasized. By 'absolute' is then meant that quality in virtue of which an object can stand by itself, has an internal constitution of its own, is controlled and determined from within by its very nature. This positive character is really the ground of that negative meaning above described; and the latter is in strictness inseparable from it. But for certain purposes it is of importance to lay special stress on the positive character per se. In this case, the term 'absolute' refers to what is included rather than to what is excluded; to the inner nature of an object qualified rather than to the possible relation to other objects; to its individual constitution rather than to its connexion with other individuals. Examples of this use would be such expressions as 'an absolute system,' 'absolute unit,' 'absolute equality.' This positive significance may be taken in significantly different senses. It may refer simply to what, in virtue of the internal constitution of the object, can stand by itself or hold good; and we may know its internal constitution so completely as to justify us in applying the term 'absolute' to it. This is one meaning of the expression, 'Such and such is an absolute possibility' or 'absolutely possible.' Its contents, the predicates we can apply to the object, are normally consistent. This is the least we can say of anything which we can think—its lowest claim to be something per se. This is 'absolute' as opposed to 'relative.' On the other hand, we may mean that the object maintains its being, not in spite of relation to other things, but in every possible relation to other objects in which it may stand. We may compare it with other objects as we please, may subject it to any condition, and find its meaning unaffected. This is 'absolute' as opposed to 'comparative.' The expression 'absolutely possible,' in this sense, is the utmost we can say of anything. The contents of this sense are: the absolute impenetrability of matter; absolute dominion over individuals in a society; absolute simplicity of physical elements; an absolute subject, i.e. a subject which, in every possible sphere, remains a subject, and cannot be a predicate of anything. Sometimes, indeed, we may use the term to cover simultaneously both of the forms of its positive meaning. But in general they would not be true together; for while, e.g., the least we could say of anything can also be said of it if we first state the most we can say of it, the reverse of this would not be true. The expression, an 'Absolute Being,' taken positively, is a case in point. Another, and an important, positive use of the term, is when it is employed to designate not what has been simply by itself, or what maintains its being in every possible relation, but what is the ultimate ground of all relations. This is the meaning often attached to the expression 'Absolute Reality.' The use of the term 'Absolute Space' to signify that which is the ground of the possibility of all determinate spatial relations, of phenomena appearing in spatial form, is an example. Here 'absolute' is nearly equivalent to 'ultimate,' or the logical praxis. The object in question here contains all relations, and is absolute in that sense. In the other positive senses an object was absolute either as existing by itself in spite of relation, or as subsisting throughout all relation.

The foregoing analysis of the negative and positive significance of the term has already, no doubt, indicated that neither sense alone is really adequate as a complete expression of its meaning. Each is in strictness one-sided. Indeed, each implies the other, and is more or less consciously present when, for certain purposes, stress is laid on one side rather than another. It is clear that 'absolute' in the sense of 'out of relation,' 'without qualification,' is predicative of a particular object only in virtue of relation. A negative relation is still a relation, and a relation cannot exist unless both terms constituting it are affected and involved. Strictly, 'absolute' is never meant to convey that the object is really outside all relation; but either that the effect of the relation may be ignored or that the object has so secure a place in a general system, that the whole system stands and fails with its individual subsistence. Thus, when a particular statement is said to be 'absolutely true,' we shall mean that we find that one or other of the assumptions is made. But it is evident that 'absolute' in this sense really implies relations which are merely unexpressed. In short, since 'absolute,' negatively considered, means simply without the qualifications which specific relations would bring, what is not qualified, and therefore these relations, must be there to give it its meaning. Relation thus enters into the constitution of the term in its negative aspect; and, with it, the positive content which the term related must possess to enter into a relation at all. In the limiting case, when by hypothesis there is no other term with which to constitute a relation, the positive aspect explicitly coincides completely with the negative; this is found when we speak of the 'absolute whole.'

Similarly, when we take the positive meaning by itself and apply it to a specific object, it contains, as part of its significance, a reference to other objects. An object cannot be conceived as something in itself without ipso facto implying a distinction from other things. What it is in itself logically implies others from which it is at least abstracted in order to be by itself. This is still more obvious when, as in the case, e.g., of 'absolute simplicity' above mentioned, it is what it absolutely is only through relation to other things.

The same is true again when it is a 'ground' of other things. In the limiting case the positive explicitly coincides with its negative, when the reality contains all possible otherness, and is in itself, not through others, but through itself.

If, then, the negative meaning in this way implies the positive and vice versa, we seem forced to the conclusion that what is really involved in either use of the term is the whole which contains both aspects, and that this alone is truly absolute. For, between them, positive and negative in strictness exhaust all that is to be said. When we predicate the term 'absolute' positively or negatively, it is implied that there is no restriction to what is excluded or included. Absolute in the sense of, e.g., without qualification, is in principle unrestricted in its range of negations. If, therefore, the positive, fully unqualifiable, in its entirety of what is negated and conversely, this means that it is a whole, and one and the same whole, that is implied in every use of the term 'absolute.' This whole, then, is what the use of the term 'absolute' in any given case refers to, and this alone is absolute. If this is not admitted, we are bound to conclude that the predicate 'absolute' is in every case through and through affected by relativity. But a relative absolute is a contradic-
tinction in terms; and if this is meant, we must give up the use of the term altogether, except as a way of being emphatic. Otherwise we must accept the idea that even this very strict use of the term it is logically a single whole that is involved, and that this is alone absolute.

The above analysis certainly compels us to accept this interpretation. If we admit it, we can at once give a logically valid meaning to the use of the term in its positive form and in its negative form. For in either case it means that the object so qualified has a necessary place in the one whole, and hence the whole is also the one absolute. It is thus an absolute, each part, of whose place in it we are assured, can be 'absolute.' And this is done by us in a negative or a positive way according to circumstances. If we apply this interpretation to any current use of the term, we shall find that it gives an intelligible and justifiable meaning to the idea we have in mind. The denial of this view involves the denial of all absoluteness in either form, and this is the position of those who maintain the doctrine of thoroughlygoing Relativity.

2. Philosophical application of the term.—So far we have merely considered the various uses of the term 'absolute' and especially of the term 'absolute truth.' We have not considered the application of the conception of absoluteness to specific philosophical problems. There are two such problems which are historically important and philosophically fundamental: (1) the problem of absoluteness in human knowledge, which raises in part the question of the 'relativity of knowledge'; (2) the problem of the Absolute in metaphysics. We must deal with each of these separately, so far as they can be separated.

I. ABSOLUTE AS APPLIED TO HUMAN KNOWLEDGE.—There are two distinct ways in which the term 'absolute' may be applied to human knowledge. Both start from the position that in all knowledge we aim at an ideal, and that the consummation of our knowledge would be the explicit articulation of that ideal in systematic form. The term 'ideal,' however, may or may not be used, and may be interpreted in different ways.

(a) We may call it 'complete' truth, and regard this as the complete 'agreement' of our thoughts with the 'nature of things.' If we attempt to express with systematic fullness what this ideal as such contains, to give in some sense the whole truth, the knowledge so supplied would be spoken of as 'absolute' knowledge. In general it is also implied that in such a case we are at the point of view of the whole ideal as such; that we do not rise to it gradually and give the content of the ideal at the end of our journey, so to speak, but rather that we start our exposition of what the ideal contains by occupying at the outset the position of an absolute knowing mind. We interpret the ideal as an objective system of truth in virtue of our taking up an objective or trans-individualistic attitude, where all the perspective of specific individual minds is excluded. This point of view is essential, because an ideal of knowledge in this sense involves the disappearance of finite qualifications and reservations.

This conception of absolute knowledge may be regarded in two ways. (a) It has been taken to mean an exposition of the general elements constituting the supreme or whole truth, a systematic development of the fundamental conceptions or principles involved in, and made possible, the different forms of knowledge. Spinoza's Ethics or Hegel's Logic would be an illustration of absolute knowledge in this sense. (b) It has also been taken to mean an exposition of the whole truth both in its general content and in its particular details—a system, in fact, not simply of principles, but of concentrically developed stages of their details at their various truth-folds. Absolute knowledge in this sense has generally been considered impossible of achievement, and certainly there is no historical example of a single system which aims to give such a view. These two senses of the term 'absolute knowledge' may be conveniently characterized in the language of a recent philosophical work (Laurie's Synthetic) as respectively knowledge which gives a 'synthesis of the absolute,' and knowledge which gives an 'absolute synthesis.'

(b) Another use of the term as applied to knowledge is found when we speak of knowledge in a given case being 'absolute knowledge,' or conveying 'absolute truth.' This need not refer directly or even at all to any absolute system of knowledge. It can be applied to any case where, as we sometimes say, we are 'absolutely certain,' or where the judgment does not contravene itself in any other judgment. From this point of view, many or most of the judgments making up our knowledge can be spoken of as absolute, whether the knowledge is given in the form of a specific statement, like 'two and two are four'; or even in the case of a judgment of perception: 'this paper is white.' The latter may be said to be absolutely true, independently of the case and the circumstances. For there are judgments which, taken independently of the case and the circumstances, are justifiable as true, and are capable of 'absolute' knowledge in this specific area of perceptive experience, as the former type of judgment. Indeed, the assertion of any ultimate fact, from this point of view, becomes an 'absolute truth,' a case of 'absolute knowledge'; and all the steps in the attainment of the complete truth, the complete systematic ideal of knowledge, are at least capable of being characterized in this way, whether we ever attain to the complete system or not. Hence the term can be applied in this second sense to knowledge without any implication of the possibility of 'absolute knowledge' in the first sense. Indeed, it may be denied in the latter sense, and asserted only in the former.

In considering the question as to the validity of the idea of absolute knowledge, we have to bear in mind this difference in the use and application of the term. It may, no doubt, be said with some truth that when we reach the second sense of the term we are in the long run the admission of absolute in the first sense. But, at any rate, that is not explicitly maintained, and can even be fairly denied. This comes out in the controversy between 'absolute' and 'relative' truth. It is often held that all our knowledge is relative to us, and therefore absolute knowledge is impossible to man. By this is meant that the attainment of an absolute system of truth is impossible, and not that our knowledge, 'so far as it goes,' is not absolutely true. Thus the relativity of knowledge may be maintained along with the assertion that we do possess absolutely valid knowledge. This is in general the position of the narrowly scientific mind. Relativity may, indeed, also be asserted of all forms of our knowledge. In this case absolute knowledge is denied in both senses of the term. Relativity, then, logically excludes either a systematic absolute or an individuation toward metaphysical anthropomorphism. It is thus important, in discussing the 'relativity' of knowledge, to determine both what kind of relativity is asserted and with what kind of absoluteness it stands in contrast. It may be justifiable to reject any when defending relativity in opposition to absoluteness of knowledge, if one disputation is using 'absolute' in the first sense and the other in the second.

Justification of (a).—The argument in defence of absolute knowledge, in the sense of a complete
system of the fundamental conceptions constituting the ideal of knowledge, rests on the simple proposition that knowledge as such can be an object of knowledge. When knowledge is itself an object of consideration, all that it implies must be offered up without reserve to the scrutiny of the mind; this being done, the discussion of knowledge as such is futile; for to assert at the outset that we can know only a part of an object which we set out to know, is to check our knowledge in advance by the hand of scepticism. We should never attempt to know any object if we consciously assumed as a fact that in its entirety it could not be known. The edge would be taken off the seriousness of the problem at once, and neither common sense nor the scientific mood would sanction the effort. But, indeed, it would require an interpretation of knowledge to prove such an assumption to be valid; and hence this hypothesis may be dismissed as logically impossible, because self-contradictory. But if knowledge as such can be an object of knowledge, it must have the rounded completeness of a determinate object to justify the attempt. But knowledge is the ideal unity of knowledge and nowhere else. This ideal, therefore, must be capable of analysis, of criticism, and, because a unity, of systematic expression. It may very well be that we are compassed in by some partial and more or less ultimate and the advance of human intellectual activity determine. But, as such, they are an expression in every case of the general forms in which this ultimate unity is realized. To state in some connected way, therefore, the constituent general conceptions which the ideal unity of knowledge contains, is always a possible achievement.

That ideal unity is at once the logically implied beginning and the final end of all knowledge in its various forms. The knowledge of it is the self-knowledge of knowledge; and that is absolute knowledge in both the negative and positive senses of the term. It is implied, in general, in any way, of course, be supplied in different ways, and with different degrees of success. These must always vary with the variation which is at once the privilege and the limitation of the individual thinker. But such peculiarities do not concern the question as to the possibility of truly achieving the result. What relation exists between the various forms which absolute knowledge in this sense has historically assumed, is a further question, which lies beyond that of the justification of its possibility:

Justification of (6).—The position that knowledge may be absolute without being at the same time a finished system, or without at least awaiting till a finished system is established, is maintained that every true judgment is absolute as knowledge, just as it stands. An isolated judgment is absolutely valid without any other term, or context of terms, or in any degree, to modify it. The addition of other judgments may or may not modify its truth, but it will only be in so far as it is not true that it is capable of supplementation. And, even at the worst, this will always leave what is actually contained in the assertion valid. It is maintained that this does not involve relativity in the sense of scepticism or individualism; for there is a distinction between a judgment which stands in a relation and judgment which is relatively valid. The first may, in virtue of the internal coherence of its content, hold a necessary and undeniable place in a series, or in a whole, from which it is inseparable; in the second, the content is completely determined, and therefore the judgment is only approximately true. For a judgment, its say or not cannot be disturbed by external agencies. The first may well be described as absolute, since, on the one hand, such judgments are not subject to alteration, but only to supplementation; and, on the other, it is out of such judgments that any system, even one claiming to be the complete ideal, has to be built up, if there is to be a system at all. Such judgments do not require to wait for the complete system to be evolved before claiming to be absolute, and hence, it is held, they possess that character whether or not the system be ever arrived at. A type of these judgments is found in mathematical truth; but, indeed, any scientific judgment tends to claim this attribute. That such judgments may be absolute per se, can also be justified by pointing out that, even if it be a system that makes them in the long run absolutely true by giving them a place in the absolute system, and though each is absolutely valid at least by means of it, and may therefore legitimately be spoken of as an absolute judgment. A system must be a system of different parts, and the character of the whole is present in each part. This, however, of course, does not claim to regard each as absolute independently of a system. For it seems clearly paradoxical to maintain that a judgment can be absolute both because of its place in a system and yet its quite of that system. It is only in the case of certain judgments that the attribute can be applied. And it will be found that only when a judgment has an individuality of its own does it possess that completeness and indivisibility of the whole system under the use of the term 'absolute.' Individuality, however, is precisely the characteristic of system, whether the range of the system be all-comprehensive or not. Moreover, it is impossible to state a judgment which is definite and restricted in meaning without at the same time by implication excluding from its content other equally definite judgments. What it does not say determines its meaning as well as what it does affirm. To be, therefore, completely true, it involves and is maintained by a wider whole than it explicitly asserts.

II. THE ABSOLUTE IN METAPHYSICS.—This must be treated apart from all else, absolutely. It is a fundamental term of metaphysics to the whole of 'Reality, and whether or not it is true that knowledge contains or covers all Reality, certainly it is true that Reality as a whole includes knowledge. Hitherto the term has been discussed mainly as an attribute of a subject. In metaphysics it is used as a subject of all possible predication, and therefore itself incapable of being a predicate. The transition to the substantive use of the term is fairly obvious. It consists simply in transforming a supreme quality into the name for the supreme subject of all qualities, as much as is done in the case of 'cause'; for example, when we speak of the first cause. When we use the term 'absolute' in this connexion, we have in mind primarily the general ideas of 'all-containing,' 'all-requiring,' 'all-embracing,' 'all-inclusive,' 'all-ground of all finite'; and such-like, all of them, in the long run, implying that the Reality so described combines in itself those positive and negative characteristics above mentioned. The way the term may be understood is vague, and better than meaningless. But that criticism is over hasty, since it is the aim of a metaphysical theory to determine what the full meaning of the
term is; and obviously that meaning cannot be given in the mere description of the signification of a word, which can in point of fact be used by a great variety of theories. Indeed, to regard the term as wholly and essentially indeterminate, is legitimately possible only as the result of a theory.

When the Absolute, then, is said to be the object-matter of metaphysics, we have to understand the term as the designation of the one all-inclusive uniting principle of whatever experience contains. From the point of view of metaphysical knowledge, the Absolute is but nothing more than the existential counterpart of the unity of experience, such knowledge postulates as a precondition of its progress, and the elucidation of which constitutes the achievement of the aim and ideal of metaphysics. It is therefore at the outset quite colourless; any more definite specification of its nature is possible only in virtue of a metaphysical theory. Thus for metaphysics it is simply a problem, and not an assumption, whether the Absolute is ‘personal’ or a ‘cause,’ or ‘real’ or an ‘appearance,’ or all or none of these. Only metaphysical inquiry can determine legitimately how far the Absolute contains the one fact in and of itself, if any, it is primarily. It is evident that this must be so, when we reflect that if it were not true, the mere meaning of the Absolute would give a solution of metaphysical question. Certainly it is, we sometimes find more, and sometimes less, imported into the idea. But if this is done before the inquiry, we must regard the fact as merely a peculiarity of the thinker, which does not affect the principle here laid down; whereas, if it is done at the end of the inquiry, that is quite legitimate, a necessary result, indeed, of having a theory at all.

If we bear this in mind, we can see at once the distinction between the metaphysical conception of the Absolute and the religious idea of God. The latter always involves personality—at least, spirituality in some form or other; the former does not. Both name the whole, and the same whole. But whereas religion is bound to do it by a certain category, to satisfy certain human needs, metaphysics is not committed to any category at all. It may well be that the legitimate conception of metaphysics satisfies the demands of the religious consciousness. But it may not.

Hence the possibility of conflict between the two, which we find historically as a fact. In the long run, the term ‘God’ in religion and ‘the Absolute’ in metaphysics must, if the religious mood is valid, be the same in meaning; if not, one of them will inevitably condemn the claims of the other, for both seek to express the same whole. But it has to be borne in mind at the outset, that while the God of religion must be the Absolute, the Absolute of metaphysics may or may not be conceived of as the God that will satisfy the religious mind; that will depend entirely on how the Absolute is interpreted by metaphysics.

The metaphysical problem, then, regarding the Absolute, resolves itself into the question how to conceive the nature of the principle which is at once all-inclusive in the manifold ways that make up experience. The problem is one of interpretation, not of discovery; for it is assumed that knowledge by which we conceive and think the nature of the Absolute itself falls within the province of this science, not the actual existence of the Absolute, which a process of discovery seeks to do, is thus logically absurd. At the same time, since the knowledge, which in a great variety of hypotheses we derive from the one-all, is the relatively subordinate question, regarding the relation between our knowledge and the whole which contains it, may well press for solution before the interpretation of the whole in the strict sense is given. Thus, in general, the metaphysical problem is a twofold one—(1) The relation of our knowledge to the Absolute; (2) The nature of the principle constituting the Absolute.

(1) Relation of knowledge to Absolute Reality.— On this subject two different views have been held. We must be content here to indicate the source of these differences.

(a) In the first place, it is held that, because our knowledge is anterior to the Absolute, and this factor or process in it, and works by its own peculiar conditions, it is not merely unequal to grasping the whole, but that it is logically meaningless to attempt the task. We can think it possible only by making the Absolute a part with which our knowledge, as another part, stands in relation. But the Absolute, being the whole, cannot logically be treated as a part in any sense. Or the same position is maintained when it is said that the unity of the whole cannot be itself an object for the subject thinking or knowing. The distinction between subject and object is fundamental for knowledge, and the object must not be presented to the subject before it can be known. But a whole which includes by hypothesis the subject cannot be presented or given in this way. Therefore the Absolute as a whole, we cannot, and so with the nature and naming of knowledge. And since there is no other way of knowing than by way of a relation between subject and object, the attempt to know the Absolute in any sense is logically impossible.

The issue here is what may be called metaphysical agnosticism resting on the basis of epistemological ‘criticism.’ A recent representative of this view is Adamsen (see Development of Modern Philosophy and other Lectures). It admits only empiricism or ‘naturalism’ and epistemology within the range of positive human knowledge. The line of argument against this position would be—(1) That the distinction and relation of subject and object must itself imply in some sense a unity between them, which is not simply imagined as outside the two terms, but is constitutive of this connexion, and necessary to it; (2) that the apprehension of something cannot logically be denied, asserted, or criticised by reference to the relational process which this unity constitutes; (3) that the unity is, from our point of view, an ideal; and an ideal in the nature of the case cannot be given or presented as a fact, either at the beginning of experience as such, or even at the end as such; for it determines and embraces the entire content from first to last, and must therefore be grasped in that sense.

(b) Another view of the relation of knowledge to Absolute which contains it, is that which regards the subject-mind and its processes, among which falls knowledge, as forming an ultimate element in the unity of the whole. The other element, in itself generically distinct from the former, may be described as the object world of ‘nature’ and natural processes. We remain the two between them exclusive of the content of the metaphysics. As far as our experience is concerned. The Absolute per se is not one any more than the other; it is both, but may be either one or other. In any case it is known only in its virtuality, in so far as the appearance, but it still has a nature of its own behind the appearances, its being per se. Our knowledge belongs to and has to do with the sphere of appearances, and therefore its knowledge justly to the one-all, as adequate to what the Ultimate Reality is per se; on the contrary, its origin and its processes necessarily
confine it to the phenomenal. Still, the absence of knowledge does not involve an entirely negative attitude to the Absolute. The mere fact that knowledge belongs to the sphere of appearance points to a certain attitude, or, in other words, the actual existence of an attitude distinct from knowledge, and one which can be concerned with the Absolute per se. We may call this attitude belief, or metaphysical agnosticism. As long as we bear in mind that its purport is to deal with this Ultimate Reality. Hence, while from the point of view of reflexion or knowledge in its various forms, scientific or otherwise, there is no approach to the Absolute, there is a way open in another direction, and this may constitute a specific mood of our lives, the mood, e.g., of religion.

This is the point of view of metaphysical agnosticism, which appeals for its justification to the anthropomorphic character of knowledge, and rests, on the one hand, upon a psychological analysis of knowledge, and, on the other, upon the necessary limitations of scientific reflexion by which alone knowledge is attained. One of its best-known representatives in recent times is Spencer (see his First Principles). The argument against this view takes the form of showing (1) the radical contradiction of the Absolute with the Absolute as an Ultimate Reality, in the idea of appearances per se, which leaves the nonmneval reality unrevealed, i.e., appearances of what does not appear; (2) that the Absolute is so far known in that it is conceived to have certain characteristics, and at least to be related to its appearances in a certain way; (3) that the psychological history of knowledge, and even the essential anthropomorphism of knowledge, do not necessarily prove either that Spirit may not express the Ultimate Reality more truly than Force, or that Spirit and Force have equal value as forms of the Absolute.

(c) A third view of the relation of knowledge to the Absolute finds a typical expression in the interpretation developed by Bradley in his Appearance and Reality. Raising his conception of knowledge partly on psychological, partly on logical and epistemological considerations, he insists that knowledge strictly understood is relational in character. It requires for its operation something given, an existential fact over against thought or the ideal process. This antithesis and duality of the terms in view, also restricts its activity and precision, and limits the range of the value in experience of the function of reflective knowledge. It can, for example, never exhaust the given, the 'that', without losing the precision of its own operation and so disappearing. If it had the 'that' within itself, the operation would be both unnecessary and impossible. Since this fails without itself, there always remains, so far as reflective knowledge is concerned, a surd in our experience. The distinction between knowledge and the real never passes into an existential continuity of content. 'Knowledge is unequal to the real'; it is relational, and not inherently self-complete; it is not self-sufficient; it is an 'appearance' of the Absolute. Hence by reflective knowledge the Absolute cannot be expressed. But just as psychologically there is an infra-relational level of feeling-experience out of which knowledge arises, so there is the development of the distinction of the 'what' from the 'that', so there is a supra-relational level of experience which transcends knowledge. This supra-relational level is akin or analogous to the infra-relational level, in that positively there is in both a direct continuity of experience, and negatively both are realized apart from the distinctions which characterize the infra-relational thought. But, while the former has the sense of a unity, the latter consists rather of mystical insight or intuition. At this highest level the apprehension of the Absolute as such is possible and is attained. It does not abolish the distinctions determined by the procedure of relational thought; it retains them, not, however, as distinctions, but as constituents in the unique acts which characterize the intuitive apprehension of the whole as such. Hence, while the Absolute is thus beyond knowledge and knowledge, it is not beyond conscious experience at its highest level. It gives us the Absolute with and in its appearances, and not apart from them.

The general objection to this view of the relation of knowledge to the Absolute is its emphasis on the discontinuity between relational and supra-relational 'thought.' It seems to refuse with one hand what it gives with the other. A supra-relational thought transcending the conditions of that critical reflexion which works by distinctions, lays itself open to the attack of sceptical negation by its very attempt to transcend it. Either it is justified or it is not. In the former case it cannot adopt the methods of systematic reflexion to defend its position; in the second, there is nothing to distinguish its attitude from caprice and mere dogmatic assertion. Moreover, even the apprehension of the 'higher unity' must prove itself inadequate and coherent, while the parts distinct from one another and claiming recognition as distinct. The privileges of mere mysticism are inseparable from the dangers of pure individualism. From mysticism, as the confessed negation of knowledge, the transition is easy to sheer scepticism, which makes the same profession.

(2) The nature of the Absolute.—The metaphysical interpretation of the Absolute is determined in the long run by the emphasis laid on the essential factors involved in the problem of construing its meaning. The factors are: subject in relation to object within a unity which holds those ultimate elements in their relation, whatever that relation be. The problem is to determine this unity with the elements which stand thus related. We shall merely indicate the different interpretations given, without developing those interpretations into any detailed system. The systems in all their detail constitute the various metaphysical theories which make up the history of philosophy.

(a) We may take our stand on the subject with its great recesses from the object and proceed to the idea that the object-world falls within the range of the subject's activity, which by implication, therefore, also contains all that constitutes the unity in which object and subject are bound up together. We may accomplish this result in various ways, but the essential principle is the same.

(b) We may so resolve the object into the being of the subject as to destroy even the semblance of distinction, and certainly all the opposition they may prima facie present. This is the position adopted by pure Solipsism. (b) We may again seek to secure to the object its claim to be distinctive, but may endeavour to show that the ground of that distinctiveness which possesses consciousness, and the latter consists rather of mystical insight or intuition.
is here conceived in a much wider sense than that involved in the case of the external world. It embodies all those objects which are of other things, of other selves, and society, as well as the ‘outer world’ found by perception. The last, in fact, is merely a particular realization of a more fundamental objectivity which we meet with primarily in the subject world. The more thorough-going and more comprehensive expression of Subjective Idealism is found in Fichte.

(b) Again, we may start from the basis of the object-world and resolve the whole of nature into, and with that the unity containing subject and object, into the forms and processes of the object-world. Everything will here depend on what constituents of the object-world are regarded as ultimate and primary. This will determine the form assumed by the interpretation. The strongest case historically has been made for the theory which takes physical matter and physical energy as the fundamental elements with which we have to deal. The developed expression of this view takes the form of what is called variously Materialism, Naturism, or Physical Realism.

(c) Once more, we may start explicitly by laying stress neither on the subject nor on the object, but on their unity as such. This may take different forms. (a) We may take subject and object to be, from the point of view of their interdependence, of equal, and hence significant in its constitution.

The unity being neither specially, is as such equally indifferent to each. But since these, nevertheless, are all it does contain, it is per se indeterminate; it is the indifferent neutron in which both merely subsist. So far as any interpretation of it is to be given, we can express its nature either from the side of the object or from the side of the subject. Either point of view is equally valid, since a neutral unity, which is indifferent one factor as much as the other, is equally both. It must be expressible in either way, for, if it were neither, it would be nothing. This is in the main the position of Schelling.

(d) Again, we may start from the unity and develop an interpretation of it by taking the unity to be one factor more than the other. In this case there is for the unity an inequality of value between the two elements which constitute it. It is therefore not one as much as the other, and is not indifferent to either. It is one more than the other. It is thus not a colourless neuron, but a concrete whole, of which each is a phase or a different level of reality. It is not, as all interpretation of it is to be given, we can express its nature either from the side of the object or from the side of the subject. Either point of view is equally valid, since a neutral unity, which is indifferent one factor as much as the other, is equally both. It must be expressible in either way, for, if it were neither, it would be nothing. This is in the main the position of Schelling.

(e) But we may also conceive the problem in the same concrete way, and take the subject factor as primary, and the object reality as subsidiary. Here we shall have to consider another category, and by another method of connecting the elements involved. We lay stress, not on the impersonal attitude towards objectivity, which characterizes the physical and mathematical consideration of the object-world, and which dissipates the subject life into its processes, but on the personal attitude, which is found in its highest expressions in morality and religion. In these the object-world, so far from being primary, is subsidiary to personal or spiritual ends. We shall therefore take the principle to be, not Nature, but Spirit. The ultimate category will be not ‘Substance,’ but ‘Subject.’ The essential method of establishing connexion with the whole will be not external necessity, but internal necessity, the necessity of ideals and purposes, the necessity which is Freedom. The process of connecting the factors inside the unity of the whole will be that which, accepting the ethical and religious insistence on the subordination of the object-world, shows the latter to be in its essence an imperfect realization of the nature of Spirit, and that therefore, at once arising out of, rising above, realizing and so retaining the true significance of Nature. This will be done by showing the content of the whole in its different moments to be simply the logically necessary evolution of the one final principle; which would not be itself unless it manifested itself in varying degrees of completeness of expression. These degrees form distinct and seemingly separate aspects of reality, but to the one supreme Reality they are merely stages in the realization of its single and self-complete spiritual existence. Such an interpretation, expressed essentially in the same general form, is that which shows Spirit to be the most vital and fundamental category in the history of man’s spiritual life, and amongst them seem to exhaust the possible interpretations of the ultimate unity of experience. It would be out of place here to try to consider this method of connexion, which is not concerned to give a metaphysical theory of the Absolute, but to indicate what theories have been propounded.

The various ways of construing the meaning of the Absolute are the supreme test of the supreme place in the history of man’s higher spiritual life, and amongst them seem to exhaust the possible interpretations of the ultimate unity of experience. It would be out of place here to try to consider this method of connexion, which is not concerned to give a metaphysical theory of the Absolute, but to indicate what theories have been propounded.
ABSOLUTE (Vedantic and Buddhistic).

In India a broad conception of the Absolute is first met with in the Upanisads, compiled about B.C. 500. There Brahma, the All-pervading Being, is described as the One Reality, or the Absolute, who is self-supporting and self-existent.

'He has no hands or legs, but He can catch and move; He has no eyes or ears, but He can see and hear; He knows all, but there is none who knows Him; He is called the Good and Great Being. Upon Him the sun cannot shine, nor the lightning. Wherever the sun shines, there are flowers; how can the fire? They all reflect His radiant light, and through Him they shine and act.'

Since B.C. 500 the doctrine of the Absolute has been considerably developed in the Vedanta and Buddhist systems of philosophy. In the Brahma-sutras, the first work of the Vedanta philosophy composed (c. 500 B.C.), the Absolute is spoken of as the pure 'Being' who, associated with the principle of illusion (mâyá), is enabled to project the appearance of the world, just as a magician is enabled to produce illusory appearances of animate and inanimate beings. When the veil of illusion is withdrawn, the phenomenal world vanishes, and Brahma asserts himself in his true nature, which is nothing but the self-existent Absolute. Absolute is also called Brahmân, the Alpha and Omega. The doctrine of the Absolute is styled monism (advaita-ëva). It underwent further developments at the hands of Saṅkarāchārya (A.D. 785), Śaṅkara-vācya, and Śāntideva, the Buddha-Seer, who flourished about A.D. 500. In the Sutta and Abhidhamma paññâkāsas of the Pâli Scriptures, supposed to have been delivered by Buddha himself, the doctrine of the Absolute is designated as the philosophy of the Void (śūnyatvâ) or the Middle Path (pariññâ paradoxâ), according to which the world is neither real nor unreal, nor both, nor neither. In the Sanskrit works of the Mahâyâna Buddhists, such as in the Mahâbuddhakārikâ-Sutra (of Nâgârjuna) and the Lankâvatâra-Sutra (about A.D. 400). Lalitavistâra (about A.D. 100), Prâjñâpâramitâ (about A.D. 200), etc., the doctrine has been further developed, and has often been styled the 'phenomenal doctrine' (vâsanâratvâdâ), or the 'middle ground' doctrine (antar-bhûmikâ). In order to understand the Buddhist doctrine of the Absolute, we may suppose that Indian philo-
sophers are mainly divided * into three classes: (1) Realists (âstika), (2) Nihilists (âsatika), and (3) Absoluteists (advayâdâ). Some sections of the Chârvâkas, who maintained that the world is neither real or not real, and not existing,—that is, who emphasize the negative aspect of the world,—are designated Nihilists or Negativists. The proponents of the six orthodox Schools of Hindu philosophy, viz., the Sâkhâyika, Yogi, Nyâya, Vaiśeṣika, Mâyâvâsa, and Vedânta, who maintain that the world is somehow permanent, real, and existent,—that is, who emphasize the positive aspect of the world,—are designated Absoluteists. According to them, there is at least one reality on which the whole world stands. Thus the Nyâya and Vaiśeṣika hold that the material atoms, sky, space, and time, are the permanent entities in the external world, while the souls are the eternal realities in the internal world. The Sâkhâyika and Yoga maintain that nature (prakṛti) is the permanent reality in the external world, while the souls (puruṣa) are the eternal realities in the internal world. The Vedânta school affirms that Brahma, the All-pervading Being, is the one eternal reality in the external as well as in the internal world. So we find that the various theories of the Rationalistic, in spite of their mutual differences in other respects, agree in maintaining that there is at least one permanent reality on which the whole world hinges.

The Buddhists, who maintain that the world is neither real nor unreal, that it is neither an existence nor a non-existence, but transcends both,—that is, who emphasize neither the negative nor the positive aspect of the world, but go beyond both,—are designated the Transcendentalists, Absoluteists, Phenomenalists, Voidists, Agnostics, or the Followers of the Middle Path.

The world, according to the Buddhists, is an aggregate of conditions or relations. Things come into existence in virtue of these relations or conditions. There are infinite kinds of relation, such as the relation of substance and quality, part and whole, cause and effect, etc. Taking the relation of substance and quality, we find that the substance exists only in relation to its qualities, and the latter exist only in relation to the former. Take, for instance, a table. It has a certain weight, colour, taste, size, etc. But the table is never regarded as the repository of these qualities, and the latter exist only as inherent in the former. We cannot conceive a table which has no size, weight, colour, etc., nor can we think of size, weight, etc., apart from the table in which they inhere. Arguing in this way, we find that the parts exist only in relation to the whole, and the whole exists only in relation to the parts. So the eye exists in relation to the colour, and the colour exists only in relation to the eye. Similarly, the fire exists in relation to the fuel, and the fuel exists in relation to the fire. Proceeding in this way, we find that the whole world is resolvable into infinite kinds of relation or condition. The relations or conditions themselves are dependent upon one another. The very notions of 'existence' and 'non-existence' are interdependent, for the one is possible only in relation to the other. Origination and cessation, persistence and discontinuance, unity and plurality, coming and going—these are the eight principal relative conceptions which are the fundamental faults of ignorant minds, which perish with them and wrong judgments arise. People think that the law of coming and going actually operates in the world, that there are in reality persistence and

** Absolute as a Philosophical Principle.**—(a) Discussion of the term. "The Absolute" is a concept of the relation of the Absolute to knowledge, but it was first developed in the West in the abstract science of Logic. See also Laurie's "Synthesis," vol. II, p. 82ff.

(b) **Interpretations.**—Aristotle, Metaphys.; Bradley, Appearance and Reality; Fichte, Wissenschaftslehre; Hegel, Encyclopædia; Plato, Timaeus, Republic; Royce, World and the Individual; Schelling, Transcendental Ideenans, Naturphilosophie; H. Spencer, First Principles; Spinoza, Etica. For further literature see Baldwin, DIJII, ii. pt. ii. p. 507.

1. **Absolute (Vedantic and Buddhistic).**—In India a broad conception of the Absolute is first met with in the Upanisads, compiled about B.C. 500. There Brahma, the All-pervading Being, is described as the One Reality, or the Absolute, who is self-supporting and self-existent.

"He has no hands or legs, but He can catch and move; He has no eyes or ears, but He can see and hear; He knows all, but there is none who knows Him; He is called the Good and Great Being. Upon Him the sun cannot shine, nor the lightning. Wherever the sun shines, there are flowers; how can the fire? They all reflect His radiant light, and through Him they shine and act."
discontinuance of things, that things do really undergo the states of origination and cessation, and that they are really capable of being counted as one or many; but they are wholly unconscious of the fact that all those ideas are limited, relative, conditional, and therefore not the truth, but merely the production of our imperfect subjective state. Therefore, we should discard in those ideas the principle of misery, and as the people cling to them, their life is a perpetual prey to the changing feelings of exultation and mortification.

Being is nothing but an aggregate of conditions. Now, the conditions themselves are not self-existent, but are dependent upon one another. Those which do not possess self-existence are not real, but merely illusory. Therefore the whole world, as an aggregate of conditions, is a mere illusion. To look upon the world as real is mere folly on our part.

Where conditionality is, there is no truth; truth and conditionality are incompatible. Therefore, to attain to truth, conditionality must be completely cast aside. The eight conditional notions mentioned before must be thoroughly removed, and we should try to see the world as free from all conditionality, and when conditionality is purged from the taint of conditionality, our ignorance will vanish away and the serene moonlight of 'Such-ness' or 'Transcendental Reality,' otherwise known as the Middle Path, will illumine us.

Here questions may be raised as to whether there is actually anything called 'Such-ness,' 'Transcendental Reality,' or the 'Absolute.' In answer to these questions, the Buddhists have said that 'is' and 'is not' we must be satisfied with describing it in our imperfect language as 'Unnameable' and 'Unknowable' (avatthya and anujjñaptiva).

The Nihilists, we have found, say that there is no permanent reality underlying the world. The Realists, on the other hand, affirm that there is at least one eternal Reality from which the world has emanated. The Buddhists, who abhor all sort of dogmatism, the Nihilists and Realists are the holders of extreme views. The philosophy of 'is' or Being and the philosophy of 'is not' or Non-being are equally false. As the Buddhists avoid the philosophy of 'Being' as well as 'Non-being,' and choose a middle path, their ethical doctrine is often called the Middle Path Doctrine.

The Middle Path is to be understood from four standpoints: (1) the Middle Path in contradistinction to one-sidedness, (2) the Middle Path as the abnegation of one-sidedness, (3) the Middle Path in the sense of the absolute truth, and (4) the Middle Path as unity in plurality.

The doctrine of Being held by the Realists and the philosophy of Non-being held by the Nihilists are both of them one-sided and therefore imperfect, because neither the Being nor the Non-being is possible, independently of the other. The doctrine of the Middle Path in contradistinction to one-sidedness, as it repudiates and avoids the two extremes of Being and Non-being. This is the first aspect of the doctrine.

A Middle Path reveals itself when the two extremes are completely out of sight; in other words, the higher conception or idealization of the Middle Path leads to the perfect solution of existence. Neither the philosophy of Being nor the philosophy of Non-being should be adhered to. They condition each other, and anything conditional means misery. Therefore, conditionality of the Middle Path constitutes the second aspect of the Middle Path.

But when we forget that the doctrine of the Middle Path is intended for the removal of all intellectual prejudices, and cling to or assert the view that there is something called Middle Path beyond or between the two extremes of Being and Non-being, we commit the fault of one-sidedness over again, by creating a third statement in opposition to the two. As long as the truth is absolute and discards all limitations, clinging even to the Middle Path is against it. Thus we must avoid not only the two extremes but also the middle, and it should not be forgotten that the phrase 'Middle Path' has, from the deficiency of our language, been provisionally adopted to express the human conception of the highest truth.

The fundamental concept of the Middle Path is that it does not lie beyond the plurality of existence, but is in it underlying all. The antithesis of Being and Non-being is made possible only through the conception of the Middle Path, which is the unifying principle of the world. Remove this principle, and the world will fall to pieces, and the particular will cease to be. The Middle Path doctrine does not deny the existence of the world as it appears from all contradictions, or the contrary, the doctrine which clings to the conception of Absolute Nothing. What the doctrine most emphatically maintains is that the world must be conceived in its totality—in its oneness, that is, from the standpoint of the Middle Path.

Nirvana, according to the Vedantists, is the absorption of the self into the Absolute. The Absolute, we have found, is something which is free from all contradictions, and which cannot be expressed in terms of 'is' and 'is not.' As soon as one reaches the Absolute, conditionality vanishes. This state is called Nirvana. It is the harmonization of all contradictions. In this state, unity is harmonized with plurality, origination and cessation are accomplished in one and the same way, persistence is unified with discontinuance, and one and the same law operates in the acts of creation, maintenance and dissolution. Therefore, the Middle Path is against the idea that an unconditional condition in which Being and Non-being are unified. All conditionality having disappeared, our veil of ignorance is withdrawn. The fabric of the world, including that of the self, breaks up, leaving us to be identified with the Infinite, the Eternal, the Uncreated, the Unconditioned, the Formless, the Void. This is the state of Nirvana. The finite mind altogether fails to comprehend this state, and no language can give adequate expression to it.

SATS CHANDRA VIDYADHUSAN.
ABSOLUTION (religious and ethical value of).

1. The idea of Absolution, as it appears in the Christian Church, is closely connected with two other ideas—the idea of sin, and the idea of the Church as a society. It is maintained, and may be true, that many of the practices and associations connected with Absolution took their origin in a state of mind to which ceremonial solemnity seemed the thing most to be dreaded; but this fact, if it be a fact, does not affect the Christian view of Absolution. To the Christian mind, absolution is required when sin has been committed; why, or to what end, and with what condition, it has been given to a moral law, which expresses the will of God, and the breach of which tends to separation from God. A soul, when it has sinned, requires to be forgiven; otherwise it remains in a permanent condition of alienation from God; and the authoritative declaration of its freedom from guilt, and reconciliation with God, is its absolution.

2. It is important that this should not be confused with the consciousness in the sinner that his sin is forgiven. The declaration of his freedom, however conveyed, may fail to carry conviction to his mind; or, again, he may have the strongest possible sense of forgiven sin without a declaration. Such absolution, however, is not necessary; it may do so, but it is not necessary that they should.

3. Though we have considered only the relation of the individual soul and God. We have imagined the soul standing, as it were, alone in the world before the eyes of God, and receiving from Him the declaration of absolution. We have abstracted altogether this one pure and unbroken condition from all its concomitants, the nature of sin, the ground of forgiveness, and the like. But it is plain that this abstract isolation is not the normal condition of any human soul. Every soul has an environment, which it affects, and by which it is affected; and no question of guilt or innocence, forgiveness or condemnation, is limited to the individual by himself. This truth, which goes far back into the history of man's ideas about himself, is emphatically presented in the Bible. Thus Ps 51, which gives expression most poignantly to the sense of personal guilt, also represents the sinner as pleading the righteousness of God. Isaiah (6) is conscious not only that he is a man of unclean lips, but that he dwells among a people of unclean lips. Not only is sin a personal act of rebellion, but it produces a sinful atmosphere, a condition of alienation from God. In like manner, the absolution or declaration of freedom from sin cannot concern the individual alone: it must have an eye also to the society in which he lives and to his relations towards it.

4. We are not here concerned with the nature or process of forgiveness, or even with the conditions of it as regards God. The idea of Absolution brings forward only the place of sin and forgiveness in the Christian Society. It is not hard to illustrate this from the NT. We may notice, at once, the following points:—(1) It can scarcely be questioned that the Christian Society set out with an ethical purpose, and a sense of sin; within which the remission of sins; and those who had become members of it were expected to lead a new life, abstaining from the sins which beset them in their former lives. Admission to it was by repentance, and by submitting to the rite which figured forth the remission of sins; and those who had become members of it were expected to lead a new life, abstaining from the sins which beset them in their former lives. (2) It is not less plain that the existence of a baptismal sin forced a problem upon the attention of the Church with which its representatives were not slow to deal. In doing so, they doubtless rested for their authority on the words of Christ, such as we find in Mt 18:18-19 or Jn 20:23. The Epistles of St. Paul give instances of directions on disciplinary matters (1 Th 5:10, Ro 16:17-18, 1 Ti 4:14-16, and the like). St. Paul clearly contemplates the action of the Society in repressing evil, and even excluding evil-doers. But, of course, the clearest, and most fully described case is that of the incestuous man at Corinth (1 Co 5). Here we find that the Corinthian Church had at first shown laxity in leaving the sin unrebuked. St. Paul, in the most solemn way, announces his decision in the matter (1 Co 5:2 disagreeable to me; the Corinthians clearly give effect to it in some way not recorded; and St. Paul (2 Co 2:10) exhorts them to comfort and restore the offender on his submission. The language used by St. Paul is not free from ambiguity. Though absent, he claims to act as if present at Corinth in association with the Church as a whole. And his judgment is to deliver such a one unto Satan for the destruction of the flesh, that the spirit may be saved in the day of the Lord' (1 Co 5:5). It is not clear what exactly is meant by this delivery to Satan, either here or in 1 Ti 1:20; but in both cases it seems to have been intended for discipline—for reformation with a view to restoration, not a final severance from the Society. Though, therefore, we cannot give any detailed description of the disciplinary measures of St. Paul, it is perfectly clear that he claimed to exercise such powers, that in so doing he assumed the co-operation of the Church, and that he regarded his judgments as valid: they are not merely strong expressions of reprobation, but judgments which will have consequences.

5. It has been necessary to approach the subject of Absolution indirectly as a special case of the exercise of discipline, because there is no direct discussion of it in Scripture, and the actual word never occurs. We do find, however, cases in which the Society exercises functions of discipline, such as those above alluded to, and these, when they take the form of an authoritative declaration or absolution, correspond with the idea of Absolution. With these in view, it becomes necessary now to ask, what indications there are, if any, as to its meaning and validity. In answer to this we think that the following points may be safely asserted:—

(1) The acts of the Society in discipline, and so in the exercise of Absolution, are spiritual acts, and have validity in the spiritual world. So much as this appears to follow from such words as Mt 18:18-19 and Jn 20:23: what is bound on earth is bound in heaven: whosoever sins the Society renits or retains, they are remitted or retained. It is true that the overt indication in the world of this disciplinary power consists merely of the confirmation or the withdrawal of the privilege to use the advantages of membership of the Society, to participate in the sacraments and so forth. But the functions of the Society cannot be limited to this. It is a spiritual society formed of persons held, in Christ, in certain close spiritual relations: not a loose aggregate of people individually in union with Christ, and casually connected in an outward social sense. Such a division of inward and outward relations of men in Christ is not Scriptural: the Church is a spiritual society of which the acts take place in the spiritual world: they have efficacy upon the spiritual world of the same kind, because they are already spiritually valid, not vice versa.

VOL. I.—4
ABSTRACTION—ABSTRACTION

(2) The view of sin which makes the whole conception of Absolution possible is ethical and not logical, like the Church understands as requiring Absolution not merely overt acts which carry legal consequences in the State, but inward conditions, of which there is nothing more to be said than that they imply a tendency to rebellion against God. But, like the Church, confining the gate of persons on its outward and social side, it could have no more concern with these things than the State: it claims that inward sins of the heart must be put away before the man can enjoy its privileges, because it is a spiritual society acting in the spiritual world.

(3) The exercise of discipline upon such conditions as these depends upon the voluntary acquiescence of the individual in the purpose of the society. The Church is, no doubt, at liberty to say that it will not permit membership except upon condition of such acquiescence, and will punish any disloyalty to the principle. But it must trust ultimately to the unrestrained and uncontrolled power of the individual to obey the rule. The mode in which the rule is administered may vary widely from time to time: it is carried out by a general formula of confession and absolution, but in abnormally exigent cases, it may be provided for by abjuration by an accredited minister, or by open individual confession and absolution in the public service of the Church. But the Church cannot, so long as it claims to be a spiritual society, demand or relinquish responsibility for the spiritual condition of its members.

It lies outside the scope of this article to consider the various canonicical questions which have arisen in the course of history over this matter. We will only add here the following remarks: (1) It is in no way conflicts with the view here adopted that absolution may be, and has been, fraudulently administered. The whole problem of the visible Church is, and has always been, to make the outward order correspond with the spiritual reality it expresses: and it has always been impeded by sin. The individual who seeks absolution without penitence, or the priest who fraudulently declares him absolved, commits a great sin; just as Anas and Sibylle of Zinnoe communicated a great sin. But the fact that insincere penitence or fraudulent absolution has occurred in the Church no more disturbs its general character and principles, than did the fraud of Anas and Sibylle or the base motive of Simon Mago. The action of the Church and the persons affected by it are not therefore necessarily judged by the action of such disorders in the outward history of the Church.

It is to be denied that the great errors have come from the misuse of the disciplinary power of the Church, especially of one particular mode of administering it: and the existence of such is not sufficient to make such errors into disrepute. At the same time, it is difficult to read the Epistles of St. Paul, especially those written against those who withdraw from the internal conditions of the early Society of Christians, without feeling how largely the Church depended for its advance upon a strong discipline, fearlessly exercised over its members. The case at Corinth, to which we have already referred, was, we may hope, exceptional. Yet a very serious situation would clearly have arisen if it had not been for St. Paul's action. The sin was one which public opinion among the pagans condemned (1 Co 5), but the machinery of the Church, as it was, provided apparently no means of dealing drastically with it: St. Paul's strong denunciation was required to meet the case of Corinthians to the necessary severity. It is easy to see from this, and the impression is continually confirmed by early Church history, that a weak discipline implies a feeble consciousness of the Church's moral standard, and allows the existence within its pale of whole schools of men and more worldly ideals beside it own. It would be difficult to deny that the almost total absence of discipline of any kind in modern Christian communities bears a similar implication.

LITERATURE.—See under Confession and Penance.

ABSTRACTION.—(a) In philosophical speculation: a method of interpreting reality which starts from the point of view of, and constructs a system by direct reference to, the complete unity of the whole. This view is contained, not in metaphysics named the Absolute (q.v.). (b) In aesthetics: a view of the nature of Beauty which regards the quality of the beautiful as a constitutive character of the object as such, and in itself, independently of the judgments or emotions of the subject. This is 'aesthetic' in the sense of the art of political government from, or by means of, a single supreme source of authority concentrated in the will of a specific individual, and executing its demands from itself and for itself, with or without the consent or cooperation of others. A form of government is therefore considered as being the main identical with Despotism (see Government).

J. B. BAILLIE.

ABSTINENCE—See Asceticism.

ABSTRACTION (abs-trah'-shun, 'to draw off or separate') is the separation or detachment of one part or element in a total experience from the whole to which it belongs. To abstract is thus to isolate any portion of the content of experience from its setting, and to consider it for the time being as it is in itself, 'loose and separate' from the structural and functional relations which belong to it in the concrete conscious life. Psychologically, Absolution is the necessary condition and accompaniment of Attention (which see). To attend to one object of experience implies the withdrawal of the attention from the members to the rule of the object.

Professor James (Princ. of Psychology, 140) says: Attention 'is the taking possession by the mind, in clear and vivid form, of one out of several simultaneously present objects, stimuli or trains of thought. Focalization, concentration, of consciousness is of all the relations of the mind to, and the abstraction by, an accredited minister, or by open individual confession and absolution in the public service of the Church. But the Church cannot, so long as it claims to be a spiritual society, declare or relinquish responsibility for the spiritual condition of its members.

It lies outside the scope of this article to consider the various canonical questions which have arisen in the course of history over this matter. We will only add here the following remarks: (1) It is in no way conflicts with the view here adopted that absolution may be, and has been, fraudulently administered. The whole problem of the visible Church is, and has always been, to make the outward order correspond with the spiritual reality it expresses: and it has always been impeded by sin. The individual who seeks absolution without penitence, or the priest who fraudulently declares him absolved, commits a great sin; just as Anas and Sibylle of Zinnoe communicated a great sin. But the fact that insincere penitence or fraudulent absolution has occurred in the Church no more disturbs its general character and principles, than did the fraud of Anas and Sibylle or the base motive of Simon Magus. The action of the Church and the persons affected by it are not therefore necessarily judged by the action of such disorders in the outward history of the Church.

It is to be denied that the great evils have come from the misuse of the disciplinary power of the Church, especially of one particular mode of administering it: and the existence of such is not sufficient to make such errors into disrepute. At the same time, it is difficult to read the Epistles of St. Paul, especially those written against those who withdraw from the internal conditions of the early Society of Christians, without feeling how largely the Church depended for its advance upon a strong discipline, fearlessly exercised over its members. The case at Corinth, to which we have already referred, was, we may hope, exceptional. Yet a very serious situation would clearly have arisen if it had not been for St. Paul's action. The sin was one which public opinion among the pagans condemned (1 Co 5), but the machinery of the Church, as it was, provided apparently no means of dealing drastically with it: St. Paul's strong denunciation was required to meet the case of Corinthians to the necessary severity. It is easy to see from this, and the impression is continually confirmed by early Church history, that a weak discipline implies a feeble consciousness of the Church's moral standard, and allows the existence within its pale of whole schools of men and more worldly ideals beside its own. It would be difficult to deny that the almost total absence of discipline of any kind in modern Christian communities bears a similar implication.

ABSTINENCE—See Asceticism.

ABSTRACTION (abs-trah'-shun, 'to draw off or separate') is the separation or detachment of one part or element in a total experience from the whole to which it belongs. To abstract is thus to isolate any portion of the content of experience from its setting, and to consider it for the time being as it is in itself, 'loose and separate' from the structural and functional relations which belong to it in the concrete conscious life. Psychologically, Absolution is the necessary condition and accompaniment of Attention (which see). To attend to one object of experience implies the withdrawal of the attention from the members to the rule of the object.

Professor James (Princ. of Psychology, 140) says: Attention 'is the taking possession by the mind, in clear and vivid form, of one out of several simultaneously present objects, stimuli or trains of thought. Focalization, concentration, of consciousness is of all the relations of the mind to, and the abstraction by, an accredited minister, or by open individual confession and absolution in the public service of the Church. But the Church cannot, so long as it claims to be a spiritual society, declare or relinquish responsibility for the spiritual condition of its members.

It lies outside the scope of this article to consider the various canonical questions which have arisen in the course of history over this matter. We will only add here the following remarks: (1) It is in no way conflicts with the view here adopted that absolution may be, and has been, fraudulently administered. The whole problem of the visible Church is, and has always been, to make the outward order correspond with the spiritual reality it expresses: and it has always been impeded by sin. The individual who seeks absolution without penitence, or the priest who fraudulently declares him absolved, commits a great sin; just as Anas and Sibylle of Zinnoe communicated a great sin. But the fact that insincere penitence or fraudulent absolution has occurred in the Church no more disturbs its general character and principles, than did the fraud of Anas and Sibylle or the base motive of Simon Magus. The action of the Church and the persons affected by it are not therefore necessarily judged by the action of such disorders in the outward history of the Church.

It is to be denied that the great evils have come from the misuse of the disciplinary power of the Church, especially of one particular mode of administering it: and the existence of such is not sufficient to make such errors into disrepute. At the same time, it is difficult to read the Epistles of St. Paul, especially those written against those who withdraw from the internal conditions of the early Society of Christians, without feeling how largely the Church depended for its advance upon a strong discipline, fearlessly exercised over its members. The case at Corinth, to which we have already referred, was, we may hope, exceptional. Yet a very serious situation would clearly have arisen if it had not been for St. Paul's action. The sin was one which public opinion among the pagans condemned (1 Co 5), but the machinery of the Church, as it was, provided apparently no means of dealing drastically with it: St. Paul's strong denunciation was required to meet the case of Corinthians to the necessary severity. It is easy to see from this, and the impression is continually confirmed by early Church history, that a weak discipline implies a feeble consciousness of the Church's moral standard, and allows the existence within its pale of whole schools of men and more worldly ideals beside its own. It would be difficult to deny that the almost total absence of discipline of any kind in modern Christian communities bears a similar implication.

LITERATURE.—See under Confession and Penance.

ABSTRACTION.—(a) In philosophical speculation: a method of interpreting reality which starts from the point of view of, and constructs a system by direct reference to, the complete unity of the whole. This view is contained, not in metaphysics named the Absolute (q.v.). (b) In aesthetics: a view of the nature of Beauty which regards the quality of the beautiful as a constitutive character
structure, but with its function or purpose in the development of the intellectual life. This distinction of standpoint does much to clear away the difficulties and confusions which attended the older discussions of the subject. For example, it puts in a quite different light Berkeley regarding the existence of abstract general ideas. It is possible to grant Berkeley's contention that abstract ideas must exist psychologically as particulars, without at the same time maintaining that as functions of the knowledge-process, i.e., as logical ideas, they necessarily transcend their individual mode of existence and are real universals.

The question then arises as to the relation of the knowledge-process to the ideas viewed as psychical content. Can the psychological states of consciousness be regarded as the original form from which the logical idea is derived by abstraction? This has been very commonly maintained. Mr. F. H. Bradley tells us that a logical meaning "consists of a part of the content (original or acquired) cut off, fixed by the mind, and considered apart from the form on which the abstraction is based." The whole trend of modern logic (including Mr. Bradley's own work) shows conclusively, however, that it is impossible to begin with 'mental states' and pass by way of abstraction to ideas. Logically, the cognitive side of consciousness, as at first made up of particular images or ideas, is now acknowledged to be a fiction. And similarly we must reject the quasi-mechanical account of the formation of general ideas which is based on this fiction, according to which we are said first to abstract the common element from the particular images and then proceed further to generalize it, thus in some mysterious way transforming it into a logical idea. But we cannot derive knowledge from an introspective process, and therefore must postulate that consciousness is from its first beginnings a process of interpretation and generalization. It starts from a content that is a vague presentation continuous, lacking both differentiation and integration, and, as such, not yet either particular or universal. It is the work of intelligence to transform this into a coherent system of parts. Now it must constantly be borne in mind that it is within this total knowledge-process, and as contributory to it, that abstraction finds its function and justification. It is not the end or essence of thinking, but a process or method of the development of its own ends. The purpose which it fulfills is closely related to that of Analysis, though the specific method of abstraction has its own differentiation from the respective idea which guides it," says Bosanquet, "is the equivalent in general knowledge of the mathematical axiom that if equals be taken from equals the remainders are equal. But, as within any real whole the withdrawal of one part never leaves the other parts unaffected, the guiding idea of abstraction is only provisional. It amounts to no more than this, that within known wholes known changes may appear to leave remainders known as 'abstract.'"

Abstraction as a specific process is thus only a provisional expedient, and, unless corrected by a more adequate conception of the nature of the whole, it is likely in most fields to lead to error. But thinking proceeds both by generalization and abstraction, and these two moments are never entirely distinct and separate. Aristotle, and the formal logicians following him, have seemed to oppose Abstraction (Logik, ii, 222) and Generalization (praksheya). When, however, we emphasize the unity of the intellectual process within which both these functions operate, we see that the opposition can never be more than relative. Abstraction and Determination, like Analysis and Synthesis (within which they may be said to be included), imply each other as complementary moments of real thinking. The goal which thought seeks is not to be gained by passing to the highest abstraction; for this is the emptiness of all thought. Nor can it be reached by the determination of a plurality of particulars. But the methods of abstraction and determination must unite in defining experience in terms of a concrete universal. It is against the totalitarianism, against making isolation and mutilation the same thing as thinking, and thus neglecting the organic wholeness and unity of things, that Hegel's criticism is chiefly directed. The process of abstraction is for him never an end in itself, but only a means in the progress towards greater unity and concreteness.

[The rest of the text contains a detailed discussion of various philosophical ideas and their implications, but is not transcribed here due to its length and complexity.]
ABUSE, ABUSIVE LANGUAGE

said, disturbed the performance of the rites of Siva on the hill. Visvánitra, another sage, appealed to the gods, who proceeded to the spot, and out of the Agrikuda, or fire-pit, in which the first sacrifice was performed, created the four Agrikulad, or 'fire-born' septs—Chauhan, Parisara, Solanki, and Parmara, who destroyed the Daityas, and restored the cult of Siva. Both these legends seem to indicate some early conflict of rival cults, the nature of which is unknown.

The chief Hindu religious sites are, first, the crowning peak of Guru Sikhar, where in a cavern are to be seen the images of the three Dātarvija, presided over by some dissolute-looking Ganapati priests, and those of Rāmānanda, the great apostle of the Vaishnava cults. At the temple of Achala Deva, which is now, according to Consens, in a state of deplorable decay and neglect, is shown the toe-nail of Siva in a cleft of the rock. His female counterpart is worshipped as Adharā Devi and Arbuda Mātā, the Mother-goddess of the hill. The sage Vasiṣṭha is honoured at a shrine called Bostojji, or Gaurukotta, 'Cow-mouth,' or said Cousens, man's blacken Lat. the nature and sacrifice coining to indeed. The shrines to Bastojji, or Vasiṣṭha, are described by Fergusson as 'unnerving for certain qualities by any temple in India.' The first was built by Vimāla, a merchant Jain prince, about A.D. 1632, two years after the death of that arch-raider Mahāmid of Ghazni, who desecrated the older temple. It is dedicated to Rishabhadeva, the first Jain arkat, or saint. The original image was destroyed by the Musalmāns, and that now in the temple is the second or perhaps the third in succession. The second great temple was built by the brothers Tejapāla and Vastupāla between A.D. 1197 and 1247. It is in honour of the 23rd arkat, Pūsvanatha, the only one that can be really identified by the manifestly headed serpent's hood which rises above him. Both these temples are built of white marble, though no quarry of this material is known to exist within 30 miles of the spot, and the stone could have been conveyed up the rugged slopes of the hill only by incredible exertions and at enormous cost. Both these remarkable buildings have been fully described by Fergusson, whose account is complemented in part corrected by that of Cousens.

Abū was once the haunt of a colony of those loathsome asetics, the Aghoris, but they have long since disappeared.

LITERATURE.—Todd, Annales of Bojashān, Calcula reprint, l. 202 ff.; Travels in W. India, 131 ff.; Fergusson, Picturesque Illustrations of Architecture in Hindustan, 351, Hist. of Indian Architecture, 1871, ed. 32, J. G. Fergusson, Progress Report, Arch. Survey of W. India, 1901, p. 2 ff.; Rowland, Indian Antiquary, ii. 292 ff. In the editor's note to the last article, Aghori is erroneously given as a supplement to those recorded by H. R. Wilson, Asiatic Researches, xvi. 294 ff. The place has been well described by Major C. A. Baylay in Jolyntana Gazetteer (1890), iii. 129 ff., to which this article is largely indebted.

W. CREW.

ABUSE, ABUSIVE LANGUAGE (Gr. λαοτασία; Lat. contumææ officere, conciviciari; Ger. schimpfen, lätzer; Fr. maudire).—Abuse in general denotes an evil use of a thing caused by excess or injury, but, in particular, denotes the use of authority, or abuse of confidence; 'abuse of privilege,' 'abuse of legal process,' in all of which the use is assumed as determined by corrective public opinion. In all this class of abuse, either in the way of defect or excess, from the mean laid down by corrective justice. In this article we are concerned, however, only with a narrower signification of the term 'abuse,' which it covers, the use of the improper use of language, and yet more narrowly with such an improper use as tends to the injury or harm of another human being. Abuse in this narrower and collective sense, is all that class of injuries which are inflicted on others by the means of language, under the sway of passion or any other motive opposed to the principle of justice, or of love, or of both. It ranges from blasphemy at one end to the 'jesting which is not convenient' at the other, and varies according to the spirit which produces it or the means adopted for its manifestation. It is usefully classified by Aquinas under the heads of contumeliously, detraction (detraction), backbiting (insinuus), ridicule (derision), and cursing (malodietu).

1. Contumely is an injury inflicted in words, whereby some one is said to be denied a quality on account of which he is held in honour, or whereby some concealed fact to his discredit is unnecessarily and uncharitably made public. If, for example, it is said of a man that he is blind, this is an abuse of him. The laws, however, were charged with being a thief. Another and more venal form of abuse is to reflect needlessly on a man's defect, as, e.g., that he is of low birth, or what he has been badly educated, or that he spent a wild and profligate youth, such things being said in order to deprive the person of whom they are said of some honour he has won for himself by virtuous conduct or public service. Such language is to be placed under the general head of contumely, as a form of abusive language which has its root in anger and has pride for its foster-mother. It is a kind of revenge, and is indeed the readiest and easiest form in which revengeful feelings find expression.

2. Detraction differs from contumely both in its object and in its source. It does not seek so much to rob a man of his honour as to blacken his reputation from envy rather than from anger. It effects its purpose (1) directly by bringing a false charge, by exaggerating a fault, by revealing a hidden defect, or by imputing an evil motive; and (2) indirectly, by depreciating, or accusing, of what is meritorious. 'He that slithers from me my good name robs me of that which not enircles him, and makes me poor indeed.' The words used may not be contumelious—in the case of Iago they included both contumeliums and detraction—but they are abuse, and abuse of the worst kind.

3. Backbiting, whispering, or innuendo is another form of abusive language, which has for its object the separating of friends. The detractor abuses language by saying what is evil about his neighbour simpericus; the whisperer injures him simulium quid, viz. by saying of a man what will alienate his friend and its opposite neighbour is so much the greater as the less injury is inflicted, and the loss is the greater as the good taken away is greater. But the loss of a friend is a great loss, and the whisperer is a great whisperer.

4. Ridicule, when apart from love, is a further abuse of language. The three forms of abuse mentioned above tend to deprive a man of some external good, such as honour, reputation, or friends. This abuse, however, denotes the use of inward peace, the testimony of a good conscience. It is to be classed with contumeliously, de-
traction, and whispering as abusive language, but it differs from them in this, it holds a man up to scorn for some evil in him or some defect, and springs from contempt for him,—a contempt which is rooted in pride and finds enjoyment in the contrast between the person and the milchfeet, and which is this special form of abusive language which is condemned by Jesus Christ in the sayings (Mt 5:21) in which He forbids contempt for a man's intellectual qualities (expressed by mous), or for his physical frailties (expressed by eheus). 5. Cursing is abusive language whereby evil is pronounced against a man in the imperative or the optative mode. Words which inflict deserved punishment (as in the case of Gehazi, 2 K 5:27), or state a fact (as in the case of Adam and Eve, Gn 3:6), or express abhorrence of evil in itself (as David and the mountains of Gilboa, 2 S 19:9), or are used symbolically ('Dominus malabilis jaculorum in significatione Judaeon'), do not come under this definition, and are not, therefore, of the nature of abusive language. To curse is 'to pronounce against anyone, in the name of religion, or under the impulse of contempt, a sentence of condemnation or of punishment.' God's name is either explicitly used, or lies implicit in the current forms, especially those in use among the more uncultured classes. To this end, it seems necessary that in these classes sexual processes or aberrations are largely drawn on for the purpose of supplying the vocabulary of abuse, a fact which serves the purpose of demonstrating incidentally the close connection between sensual indulgence and contempt or hatred or scorn of our fellows. The peevishness which finds expression in abusive language directed against others is at bottom a deep-seated discontent with self.

The subject of blasphemy (q.v.) is beyond the scope of this article, and the only remark to be made here about it is that cursing any creature as a creature comes under that head.

Abusive language, when it is used in the hearing of several persons in a public place (even when the name of God is not uttered, but words importing an imprecation of future Divine vengeance only), may constitute profane swearing, and is a nuisance, at any rate, in common law. Blasphemy and profane swearing differ at law only in this, that blasphemy is a word of larger meaning.

ABYSS (σπηραζω).—The Greek word, of which our 'abyss' is a transliteration, occurs in the classics as an adjective signifying 'bottomless,' 'boundless.' It is composed of the intensive ι, and βασκε = Baske, 'depth.' In the LXX it represents τΩθων (των) and ουληθ (ουληθ). Most of the passages in the Bible where it is employed belong to the poetical books, and are of late date. See also that the Pentateuch was the first part of the Bible to be turned into Greek, we must regard Gn 15 as the earliest instance of its use, so far as our investigation is concerned. What, then, is the meaning of τΩθων (των), the word for which it stands? The answer must be sought outside the limits of our extant Heb. literature. Dillmann and others have, indeed, been inclined to derive it from hו (e), 'to roar or rage'; but it is so obviously connected with the τΩθων of Bab. cosmogony that we must look on the τ as part of the root. Jensen's suggestion (adopted in KAT '442) that it is the root of YITOH (τΩθων), 'to stink.' The Oxy. Heb. Lex. argues that τΩθων is probably the root, 'in view of As. τσαντι, ταντι.' In any case, TΩθων, like TΩθων, was a proper noun, 'Deep,' 'the deep.' Frequent as are its appearances in the OT, it is almost invariably without the article. Turning now to that Babylonian conception, of which the Heb. is, if a derivative, 'the abyss,' we find that TΩθων was the dark and watery chaos, the primeval undifferentiated matter, out of which gods and men, heaven and earth sprung. Berossus (c. 275 B.C.) conveys the idea (νωταθων του καιλου), and Wis. 11:7 has the same in view (υνα του καιλου). Such a chaos is postulated in the myths of Egyptians, Phoenicians, Indians, and Greeks. Hesiod, e.g., Theog. 115, asserts: παρα μεν πρωτωσα κτων καιλων ετη ετη Χελατων. The well-known Babylonian legend with the streams and rivers, turn all things into chaos: only when spring returns do land and water take their separate places. This idea reached the Hebrews through the medium of Phoenicians and Canaanites, and was reinforced by a similar Egyptian idea of a boundless primeval water (Νωτος), which filled the universe and contained the germ of all existence. We may therefore say, with Trevis (1308), 'The primordial and lyre of the world in the beginning of the world by not disregarding by certain fourme is called Abyssus.' In it were the potencies of the life that would hereafter appear. The process, according to Gn 1, was one of evolution; according to Gn 1, it was determined wholly by the creative fiat of God.

The memory of the original abyss was kept up by the 'seas' and 'abysses,' which were common in the temples of Babylon. Urinâ of Lagna (c. 400 B.C.) set up a greater and a smaller οπαθ (Gunkel, pp. 28, 153). Argum (c. 17th cent. B.C.) placed a ταντον, or sea, in Marduk's shrine. This was, no doubt, a large basin or 'laver,' similar to the brazen sea of Solomon's temple which stood upon twelve oxen (King, Bab. Bel. (1899) p. 109).

The recalcitrancy of matter and the struggle of darkness against light are portrayed in the myth of TΩθων, as a dragon-like monster, fighting with Marduk, but slain by him. Out of one half of his body he constructed a vault (the earth), the two ends of which rest on the ocean (οπαθ). A similar picture of the position of the earth is preserved in the Heb. poet's mind when he declares that he sent to the Heb. poet's mind when he declares that he sent to the Heb.
Jahweh has ‘founded it upon seas and established it upon floods’ (Ps 24). The disc of the earth rests on the all-surrounding ocean, and the ‘waters under the earth’ are called τῆς οἰκουμῆνας (Gen 1:8; 2:12, 13; 2 Esdr 3:24). Am 7:4; Pr 3:18, 24), whose fountains are broken up at the Flood, from which well up the sources that fertilize the land and (Ezk 31) refresh the trees. It is in this sense that Clem. Rom. (I. xx.) speaks of the inscrutable depths of the abysses (ἀβυσσόν, τὰ ἀνέχεσθαι). Tresivy also says: ‘Abyssus is despesse of water vnsce, and thereof come and springe wellles and ryvers.’

Τῆς οἰκουμῆνας (Gen 1:8; 2:12, 13; 2 Esdr 3:24) is a frequent designation of the oceans and seas, without any reference to their being ‘under the earth.’ And although there is no trace of the refractoriness of matter in the narrative of Gen 1, this comes out strongly in many references to the sea (Is 52:8, 11; Jer 5:5; Ps 77:104; 106:12; 107:13-14; 89; Job 7:1; 26:13; 32:8-9; Sir 43:2, Pr. Man. 3, En 60:2, Rev 21:1).

The question has been raised whether the τῆς οἰκουμῆνας of Ps 24:2 should not be corrected to τῶν ἀλόγων (cf. Ps 63:10, 134, Is 44:2). However that may be, the LXX has ‘abysses’ (ἄβυσσος), which word, either in the sing. or the plur., became one of the names for Hades. In the classical terminology the οἰκουμήναν of the invisible world, from which the persecuted are to be brought back again. The Bab. scheme of the universe also locates the abode of the dead in the heart of the earth, making the entrance thereto lie in the extreme west (KAT 1365), designating it ‘the country whence none return,’ dividing it into seven zones, corresponding to the seven planetary spheres (Lenormant, Child, Magic, 165, 169); cf. Mt 12:30, Pr 23:18. Enoch (175) sees in it the great streams and the great flood, and enters into the great darkness [of Hades], into which all flesh comes. In the only classical passage where ἄβυσσος is a noun, it is employed for Hades (Diog. Laer. Epig. iv. 27, χοῦς κατάθη, εἰς ἀλόγων Πλοῦς ἄβυσσον οὐκ). To take yet another step is easy. εἷς ἄβυσσος (Job 41:17) is represented in the LXX by τῶν ἀλόγων τῆς οἰκουμῆνας. This is a free translation by an Alexandrian Hellenist, who knew his classics (Svete, Introd. to OT in Greek, pp. 256, 318), and remembered that Tartarus was a prison, a murky pit, into which Zeus threatens to cast any god who may ‘vim contemnere’ (st. 4, 11-16), as far beneath Hades as this is below the earth (cf. Τάρατρα τ’ ἑβρεόντα μηχὸς χήρως εἰρωνεύει, Hes. Theog. 120; Now at Job 38:14 Shool is at the bottom of the sec, and we here (41:17 LXX) find hell in the same locality, for the sea-monster Leviathan considers the Tartarous of the abyss his captive. The Book of Enoch often speaks of the abyss as a place of punishment. The traveller reaches a deep abyss, in which are lofty pillars of fire, into which they prostrate (181-19). Here is the prison of the rebellious angels; he sees a place with a cleft of chaos (χασάρα) running down into the abyss. Uriel informs him that the angels are imprisoned therein; just as the sun, moon, and stars, which were found guilty and cast into an abyss full of fire (960). English writers have freely used the word as an equivalent for ‘hell, 187. The abyss,’ ‘great abyss’ (On Ro 10). ‘Ipsa anima fuit in abysso’ (Ambrose). The impression con-

voked by St. Paul’s language is of the vastness of that realm, as of one that we should vainly attempt to explore. The abyss communicates with our earth by a pit or shaft (φάραγ), Rev 9:13, with which is connected the βασαρά of En 21:1 should be compared. Accord-
ing to the Tractate Sukkah of the Talmud, the mouth of this pit is under the foundations of the temple, and can be closed by magical formulæ: ‘Qui habes in fossa, bene explicavest abyssum mundum submersum. Dixit David: Estne hic, qui sciat, an lecet testes inseribere nomen inerfile, et projeciesse illum in abyssum, ut quasiesset?’ (Boussct, Die Offen-

barung Johannis, p. 251). When the φάραγ of Rev 9 is opened, there issue from it poisons, stinging locusts, which cause exquisite anguish to men. Over them is a king, ‘the angel of the abyss,’ whose Greek name, Ἀπολλων, represents pretty accurately his Heb. title Adadlon. This is a different point of view from that of En 20, where Uriel is designated the holy angel who presides over both the angelic host and Tartarus. At Pr 15:25-27, and may be the reason why the two Bibles make it a name of the lowest pit of hell. The abyss, then, in the present passage, as in Lk 8:31, is the abode of the ministers of torment, from which they go forth to torment. In the Babylonian documents, demons and spirits of disease proceed from hell: ‘They, the productions of the infernal regions, On high they bring trouble, and below they bring confusion.’ (Lenormant, Child, Magic, p. 30).

The Rabbis, too, represent Sammael and his angels as emerging from abysses (Eisenmenger, Dämonologie, ii. 339 f.). The abyss of Rev 11:17 is put in the same light: a beast which occasions calamities to the saints arises out of it. The dragon, ‘that old serpent, which is the devil, and Satan,’ is shut up therein, (Rev 20:2) and the mouth is sealed for a thousand years. The language in which this is set forth should be compared with Prayer of Manasses 3: τὸ κεφαλή τῆς θλίψεως τοῦ ἄγγελον τοῦ νεροῦ τῆς θλίψεως; τὸ κεφαλή τοῦ εὐβοίατος καὶ τὸ κεφαλή τοῦ ἐλάχιστον ὠραίων τοῦ ἄγγελον τοῦ καθαρίσματος. In the Ritual Haggadah, part of the formula of Exorcism runs: ‘Cede Ergo Deo + qui te, et multum num in plasmate, in absursum, et per Myosen servum suum in abyssum demersit’; with this cf. Jubilees 48:4.

The Gnostics, as might have been expected, made an alegorical use of the concept of the abyss of ἄνοιξας. Their special name for it was Bobis, Bythus, and by this they meant the Divine first principle, the fountain of all existence, the infinite, unfathomable, inscrutable abyss of Deity: ‘A vast, unfathomable sea.

Where all our thoughts are drowned.’

Ἀγαθας γε τοι εις· εν δωδεκα και οκτακατεχομενους υψιματα τελονικοι λιμναιοι προεδριας των δια και [προαρχα αι] προστασιας και βασιλων καλωσιως (Iren. adv. Hær. i. 1: 1: 1: For that they say in the invisible and nameless heights there is a certain perfect, pre-existing Ξεω. And, they call him the first principle and pro-

gentor and Bythus). Hippolytus (vi. 57) bears the same testimony: speaking of Valentineus, he says: ιενεκατηυσα των πλατων οικοσια δη το Πλατων, οιου πατρια και βασιλων και [παραρχαν] των ξεων αιωνων (Asia from Plato as the title of King of all this man postulated as father and Bythus and first principle [2] of all the eons); The Valentinians held that by a process of self-imitation the Bythus evoloved a set of beings of cosmic, natural, and temporal any of which may be called the pleroma, the latter name being also given to the whole series taken together, which then stands to the Bythus in the feminine relation, as Témis did to Apollo. But Gnostic Bythus fashioned a homogeneous body of opinion. There were, as Hippolytus warns us,
nay varying opinions concerning the Dybbus itself. According to some thinkers, he was outside the pleroma: others held him to be within it, but separated from the rest by Hronia (Opar), a personified boundary (Lightfoot, Coloss., p. 322). There were some who actually deposited him in his place at the head of the series, and made him follow the first egg捣. Some thought of him as unwedded, and neither male nor female; whilst, others again gave him the Sibyl role as being kept by the two powers Thought and Will (Hippol. loc. cit.). The relation of Gnostic speculation on the Dybbus to later philosophical thought is perhaps sufficiently indicated in one sentence of Ireneaus, ep. Epiphani. xxxii. 7: 'Or μη γράφειν ἤδη ῶγγυς Νεώτης, μη εἶρεν, μη θέλεις, μη ἔσων οτα ν. τ. ('For some say that he is unwedded and is neither male nor female, nor, in fact, anything at all'). He was exalted above all contrarieties—the Absolute, identical with Nothing, the Being of whom even existence might not be predicated. No wonder that the Mystics took up both the thought and the term: 'I saw and knew the being of all things, the Bythus, the Abyssinia, the Holy Trinity, the descent and original of the world and of all creatures through the Divine wisdom' (Jacob Behmen, quoted by James, Varieties of Rel. Experience, p. 411).

LITERATURE.—In addition to the works mentioned above, see Jensen, Kritische und historische Untersuchungen, 1847; Smythie Palmer, Τόμος and Τόμος, 1897, and art. in Grundriss der Kunstgeschichte, 1904; Driver on Genesis, 1897; Driver on Genesis, 1897; Driver on Genesis, 1897; Driver on Genesis, 1897; Driver on Genesis, 1897; Driver on Genesis, 1897. Hymn, Hist. of the Christian Church, vol. 11. (for the Gnostics); New English Dictionary (for the words 'Adam,' 'Abyme,' 'Abys,' 'Abys' in Eng. Literature).—JOHN TAYLOR.

ABYSSINIA.—The peoples of Abyssinia belong to the distinct races, viz., the African aborigines, the Hamites (Cushitic) tribes, and the Semitic immigrants.

(a) The African aborigines are now found only in the western and north-western part of Abyssinia; they are called by the other Abyssinians Shangalas or Shangola. Originally the name of a certain tribe, this has come to be a generic term for all non-Semitic or non-Hamite peoples of probably negro origin. The largest aggregation of these Abyssinian ' negroes' are the Kumas and Sambisa, who live in the Baria, whose languages also are entirely different from those of the Cushites and the Semites. They inhabit the country around the Tukkazé and the Galla of Ogaden, which must have been inhabited by the Eritrean. The Christian Abyssinians call them sometimes by the derogatory term 'mouse-eaters'; bərə in Amharic means also 'slave,' because these aborigines are taken as slaves all over Abyssinia. This part of the population is, to a large extent, pagan; others, like the Baria, have become Muslims; some of them, especially the slaves among the Christians, have adopted the Christian faith.

(b) The Hamite or Cushitic tribes form the stock of the population of Abyssinia. They immigrated into that country at some remote period of which we have no records. Some of them are scattered in Abyssinia where the Semitic tribes are not, because their language almost everywhere, did not intermingle with them. In the south the Semitic blood was almost absorbed by the Hamite; in the north the Hamitic tribes seem to have been kept a little more separate. The main tribes of the Cushites or Abyssinian Hamites are the Somalis and the Gallas in Southern Abyssinia; the Afar (called by the Arabs Ağa or Aga, because they speak a Cushitic language) in the east; the Agaro (with several subdivisions) all over the centre; the Hahauen in the north-east, the Bogos (also called Bilin after the name of their language, of Aga origin), finally, the Beja in the north, who extend into the Egyptian Sudan. The Gallas, or Oromos, are very numerous, and are divided into many tribes, some of which extend as far as the equatorial lakes. Their language is a Hamitic one, and the Abyssinians make a distinction between them and the Shangalas. Since many Gallas whom the writer has seen (in Northern Abyssinia) have pronounced negroid features, it may be that a part of this nation is of negro origin and has adopted a Hamitic language. However, such cases are very frequently, as, for instance, with the Celts in Bavaria, who speak German, and the negroes in the United States of America, who have adopted the English language. The Gallas are partly pagan, partly Muslimand. Some of them became Christians, but the wholesale baptism of Galla people by King Theodore I. (1853-1868) met with little success. The Somalis and the Afar are practically Muslimand; the Hahauen and the Bedawin are Muslimand; the Bogos partly Christian, partly Muslimand.

(c) The Semitic population of Abyssinia is strongest in the north, i.e. in the region of the ancient Kingdom of Aksum. There it is highly probable that these Semites came to Abyssinia from Arabia. The bulk of them may have come within the last cents. B.C., but the Semitic immigration never stopped. It was rather, as Regnell has said, a 'Semitisation,' and even in our days an Arab tribe, the Rashaida, has crossed to the other side of the Red Sea and is beginning to be nationalized in Arab; they still speak Arabic, but have commence to use the Tigre language as well. The Semitic tribes have, beyond doubt, the civilizers of, or at least the bearers of some civilization to, Abyssinia. They founded an empire, they built temples, palaces, and entire cities, as well as dam, or reservoirs; they originated and carried on the only literature that Abyssinia ever had. When they came they were, of course, pagan, but after some centuries they became Christian; and, whatever their Christianity is, or may have been, it has always tended to a higher state of morals and religion than that which native Africa, south of Egypt and the other countries along the north shore, has ever been capable of producing. The Semitic language which was first written (after the Sabean) is the Ethiopic or Ge'ez. A few pagan and Christian inscriptions and almost the entire Christian literature are committed to writing in this language, which has been called out beyond the limits of Abyssinia. At present there are three main Semitic languages in Abyssinia: Amharic, Tigrinia, and Tigre. Amharic is the language of the south and the centre; Tigrinia that of the region of the old Aksumite Kingdom; Tigre is spoken by the half-nomadic tribes of the north, and has been adopted by many of the Hamites of that region. The majority of those who speak Amharic and Tigrinia are Christian; Tigrinia is often called 'sanzu kebdulan (in Tan) or hodé kebdulan (in Tö), i.e. the language of the Christians. The Tigre tribes are now mostly Muslimand, but about half of the Mansa tribe have retained Christianity.

We have therefore something to say of the religions of Abyssinia, to deal with Paganism, Islam, and Christianity. Paganism is at the bottom of all of them, and even the religious ideas of the common people in Christian and Muslimand districts are more like pagan superstitions than like the ideas of the founder of Christianity or of the prophet of Islam. We may here dispense entirely with official Islam. It will suffice to record the following facts: Islam in Abyssinia is Sunnite, the Muslimands living in Christian surroundings are called Djabarti, the people who do missionary work there at present are mostly of the Senussi order. The Confession
of the Christian Church of Abyssinia is that of
Jacobus Baradecus,—in other words, the Abyssinians are
Monophysites. A few remarks on the history of
Christianity in this country will be found below.

Abyssinia is the country of many races, languages, and
religions,—viz. Judaism. There are a number of Jewish
communities, mainly in the region between Aksum
and the island called T'ebischas, and the Falashas, and the
former speak an Agno dialect; their books are in Géez.
Their origin is altogether unknown to us. Ac-
cording to Abyssinian tradition, the Queen of
Sheba, who was a princess of Aksum, was at
Jerusalem instructed in the Jewish religion by
Solomon and then introduced it into her own
country. This is, of course, legendary, for the
oldest inscriptions prove—if we need any proof—
that the official religion of the Aksumite kingdom,
before it became Christian, was pagan. But this
curious legend seems to reflect some historical
events of which no other records have come down
to our time. For a number of OT practises and
ideas are integral parts of Abyssinian Christianity,
and, what is more significant, the Aramaic loan-
words in Géez, mostly denoting religious ideas and
objects, are probably of Jewish-Aramaic, not of
Christian, origin.

I. PAGAN ABBYSSINIA.—I. PAGAN RELIGION
OF THE AFRICAN ABORIGINES.—As far as we know
the religion of the Kunamas, it may be character-
ized as animistic or as ancestor-worship. For the
spirits or the souls of their forefathers play the
most important rôle in their religious life. Above
all spirits there is the unknown Great Spirit, with
whom man comes little into contact. This idea of
one mysterious, almost supernaturally being seems
to pervade almost all pagan religions. The Great
Spirit is far away, the other spirits are near, and
are in a way mediators between mankind and the
Great Spirit. He it is that gives rain, the most
important and vital thing for the agricultural Ku-
namas, and he is probably the god of heaven, just
as Wág is among the Gallas (see below). To him
only the chief of the tribe may sacrifice. At the
beginning of the ploughing season the chief has a
revelation bidding him immolate a red goat and
a white sheep, and in return promising abundance
of rain. The animals are killed, the blood is
sprinkled on the ground, and the chief says:
"May the gods of the blood that now give us rain.
 After that, the chief and priest eat the meat in communion with the spirits, where-
upon mankind and spirit world are reconciled and
free.

It is only upon important occasions that the priest
or chief enters into action: the religious affairs of
dayby-day life are in the hands of sorcerers and
witches, i.e. men and women who are believed to
have communication with the spirits, or even to be
possessed by them. Sorcerers and witches are in
contact with, or in the service of, either good or evil
spirits. The latter form no separate caste; cer-
tain persons are believed to be possessed, or to have
the evil eye. Against their power the people take
refuge, or protect themselves by using a branch of
the 'ghost-tree.' Naturally, members of the
sorcerers' caste sometimes make ill use of their
power,—and then the same people are used against
them; but generally their work is that of
prophecy, healing, and doing other miracles;
in general, mediating between the people and the
spirits.

The sorcerers wear women's clothes, decorate
themselves with necklaces, bracelets, anklets,
rings, beads, and pearls of many colours. They
receive offerings from the spirits, ferret out dis-
seases, and ordain the anger of the gods.

Remedies against the influence of malevolent
spirits are incantations and the twigs of the ghost-
tree. The spirits and the tree have the same name,
and in this identity of name lies the power of the
latter. For instance, at the time of childbirth
the tree is placed crosswise over the door of the house to protect the child. The first
night after someone has died, all the spirits visit
the house of the dead and drink mead: the living
sit outside, with the magic twigs around the neck
or the arms. Again, the next day, when a libation
is offered at crosswise, or sprinkled on them. In
the same way. Other trees or bushes are used to
protect the cattle or the crops. The spirits of the
ancestors rule and regulate the entire life of these
people. Around them is established the domestic
and political life; in other words, these laws are
based on tradition and custom. For this reason the
spirits watch over the laws and punish trans-
gressions,—above all, the omission of taking blood-
vengence.

2. PAGAN RELIGION OF THE HAMITES.—The
pagan religion of the Hamitic tribes of Abyssinia
does not seem to differ essentially from that of
the aborigines. According to our sources, how-
ever, it appears that the Gallas, who nowadays
are practically the only pagan Hamites in Aby-
sinia, have outgrown the stage of crude animism,
and have developed a sort of polytheism with one
highest god, and that with them, partly at
least, true religiosity has taken the place of torpid
fear and awe. That highest god is called Wág (or
Wa'gayo), and many say he is their only god. This
being seems to be 'deity' or 'name' in general,
in a way to be compared, therefore, with the Semitic
'god.' The noun waq originally means 'heaven,' and
thus the god Wág is also named Qurás—a word
which, as an adjective, denotes 'dark-blue,' and as
a substantive, it signifies 'a subtle principle.' He is
the god of heaven, but he is omnipresent; he is every-
where in nature; he lives on mountain peaks, in high
trees, near springs, in rivers, and in caves. In all
these places he is worshipped with special prayers.
There are various kinds of offerings, but it
seems most natural to assume that the communion
between men and their god is the main idea of
these offerings. This communion is effected by
(a) the blood covenant; (b) the sacrificial meal.
The blood is, on the one hand, poured out for the
deity; on the other hand, it is smeared on the
doorposts and on the forehead of the offerers (in
a line or crosswise), or sprinkled on themselves.
The sacrificial meal is shared by deity and men: for
a part is burned, the rest is eaten by men. The
sacrificial animals are cattle and sheep; we even
hear of 'expiatory cows.' There seems to be a recep-
tion of blood sacrifices among the people. The
libations consist of milk and mead. All sacrifices
are offered by the pater familias,—the head of the
family,—who is at the same time their priest. On
special occasions the chief of the tribe takes his
place. After the animal is killed, the Ogisea,—the
wise man,—the kurupaxe, comes in order to inspect
the entrails and to interpret the omen. These
wisecounsel of the tribe, and officiate at all important political affairs; they
also interpret the flight of birds; they are hari-
spices and aromatics at the same time. Of course, they consider themselves much better than the ordinary sorcerers. There seem to be certain sects among them, e.g., the sect of Abba Murh, who lives in a mysterious pagoda with a serpent to which all men are made. When the members of this sect make pilgrimages to the famous cave, they tear women's clothes, let their hair grow, and perform some well-known religious duties. An example of a gulla prayer is the following: "The corn must make the corn to grow, and shown to its eyes; the hungry man beholdeth it and is consoled. When the corn is ripening, thou sendest caterpillars and locusts into it, locusts and pigeons. Everything cometh from thee, thou allowest it to happen: why thou dost this, thou knowest."

Besides Wàq, there is a host of lesser deities, who fall into two groups, viz., the 'good spirits,' named ayána, and the 'evil spirits,' named ayána. The ayána live in all places where Wàq lives, especially in rivers; but they also comprise the house-gods (penates) and the souls of the ancestors (sires). Even in a newly built house there is an ayána, and cramps are thrown on the floor for him when the people first enter the house. Individual members of this class of gods are Rilála, the god of war and of the winds; and Adülfe, the god of the dead. In the lands of the Ilìthia, it seems that even the personified Sabbath, called Sambata, is known as a goddess to the pagan Gallas, who must have borrowed her worship from the Phalakos. Among the 'evil spirits' the buda, or the devil of the evil eye, is the most feared. It is well known that this superstition, so common over all Southern and Eastern countries, is particularly deep-rooted in Abyssinia. Other evil demons seem to be the monsters of the gods and bylgun. The former is the wolf, a demoniac animal among various peoples; the latter is explained as 'man-eater.' A special caste of sorcerers has to do with these evil spirits. Among them there are different degrees and specialists, some of whom predict the future, others cure diseases by driving out the devils, and others know the art of making good weather and of producing rain.

Sacred animals are, among others, the hyena, the snake, the crocodile, and the owl. The hyenas eat the dead, and thus the souls enter their bodies; hence, they are honored by both the living men, and men—especially blacksmiths, who know magic art—change into hyenas. The snake is worshipped by almost all primitive peoples. The crocodile is sacred because it lives in the sacred rivers. Again, a certain owl is believed to be the bird of the dead; these owls are the souls of people who died unavenged. Life after death, according to the belief of the pagan Gallas, a shadow-like existence in a sort of Hadèscalled sherol, called chérà (taken from the Arabic al-şârîh, the other,' evil world, but adapted to Gallà ideens).

3. PAGAN RELIGION OF THE SEMITES.—What we know about the religion of the Semitic conquerors of Abyssinia is very little indeed—scarcely anything more than a few names. Our sources are the ancient inscriptions and native tradition. According to the famous Greek inscription copied at Adulis by Rennet A.D. 1735, and by Budge, King of Aksum, who had this inscription written (1st cent. A.D.), sacrificed ´ῆρα Δήλινος and ῾Ἀρτέμις and ῾Ἡρακλέων and erected a throne in honour of his god Ὄρθρος. The next earliest document is that of King Azanu (8th cent. A.D.), who made a large stele in carved in Sabaean, Greek, and Old Ethiopic. The Greek part speaks only of the god Ὄρθρος, the Sabaean of Mahrem, 'Astar and Beher, the Old Ethiopic of Mahrem, Antah, to which office is adduced. A Greek fragment from Abbâ Pantealeon, a Christian shrine near Aksum, built over an ancient Sabaean sanctuary, mentions the Ἄρταξος ᾿Αρτεμίδος of Aksum. But in only one case are all these gods found together, viz., in the first inscription of Tâzânà, written perhaps about A.D. 400. There the throne is dedicated to 'Astar, Beher, and Medr; and thanks are rendered to Mahrem, the god 'who begat the king.' From this it appears that the Semites who came from South Arabia to found the Axumite empire worshiped the ancient triad of Heaven, Sun, and Earth. 'Astar in Tigré means 'heaven,' and Atat-Samāni (Atar, i.e. 'Astar in Aramaic, of the heavens) as well as Istar belit Samâ (Istar Lady of the Heavens) are known in Semitic mythology. Thus 'Astar is the Axumitic god of heaven translated into Greek by Zeus. Medr is the Ethiopic word for 'earth,' and hence must necessarily mean the god (or goddess) of the earth.

Now, if the Axumitic inscription mentions Poseidon together with Zeus, the conclusion is unavoidable that Beher is the god of the sea, in spite of the fact that the Ethiopic word beher means 'land,' and is even used in this sense in our inscriptions. We must connect it with the word bohr ('sea'), and assume that, being a proper name, it retained its ancient meaning even after the common noun corresponding to it had received a different meaning of its own. The Median Ares—Mahrem, the tribal or ancestral god of the kings of Aksum, was worshipped. Since they fought many wars to establish their empire and to protect their dominions, we may assume that they should identify Mahrem with Ares, the war-god.

From the inscription of Tâzânà it seems that bulls and captives were sacrificed to this god. From other texts it appears that 'thrones' and statues were erected to him and the other gods. (Drawings and photographs of the thrones will be found in the publications of the German Expedition to Aksum.)

In a way Mahrem-Ares may be connected with the native tradition. For the Axumites tell that before their ancestors adopted King Solomon's religion they worshipped a dragon, and that this dragon was their king. According to Greek mythology, Ares bogat, in a cave near Thbes, a dragon, his own image. It is therefore not impossible that a similar association existed between Mahrem-Ares and the dragon, but of this no record has come down to us thus far. (A study of the Axumitic dragon legends was published in the writer's Bibliotheca Abyssinica, v. pp. 17-31.)

Another hint with regard to the cult of the ancient Axumites may be taken from the great monuments of mankind which they have been called 'obelisks,' but they should rather be termed 'steles.'—Stela is tru to be seen from the illustrations in the late Mr. Rent's book, The Sacred City of the Ethiopians, and in the publications of the German Expedition. The stele is an interesting proof of the Semitic tomb, and there is a certain mysterious connexion between the stone and the personality of the god. The name of the stele is called nephesh ('soul'). If, then, at Aksum we find a large number of such steles, and among them huge highly decorated monoliths, ranging in height from 16 to 30 metres, and in front of them, or rather around them, huge slabs representing, in all likelihood, altars, we may conclude, with a certain degree of probability, that these monuments served for 'ancestor-worship,' that form of religion which, as we have seen, is at the bottom of the pagan religions of Abyssinia.

II. CHRISTIAN ABBYSSINIA.—Christianity became the religion of the Axumitic empire about A.D. 400. The king (Tâzânà was the Constantine of Abyssinia; for in his first inscription he called himself, in the second he is Christian. In the latter he speaks of only one god, the 'Lord of Heaven,' or the 'Lord of the Land' (Vega beher,—in Ethiopian this word for the first time is used). It appears here was an attempt by Adulis to gain him and gave him victory over his enemies. But in the king's own mind this 'Lord of Heaven' was probably not very different from 'Astar. We have no contemporaneous records of the first appearance of Christianity in Abyssinia; but we know whether the Jewish communities were older, or whether they had anything to do with preparing Abyssinia for the Christian faith. However this may be, the Christian kings seem to have acted as the protectors of the new faith, and when
the Christians in South Arabia were persecuted by a king who had adopted Judaism, a king of Aksum fought against the latter, although his main object was probably to regain his kingdom. South Arabia had been partly Christianized by Syrian missionaries, and it is most likely that Abyssinia, too, received its Christian religion from Syria. The first missionaries are said to have been Frumentius and Elenius from Antioch, and the 'nine saints,' who about A.D. 500 strengthened Christianity, probably came from Syria. They may even have influenced the style of church architecture, since remains of churches are to be found in some of the ancient churches of Abyssinia. The ancient shrines were now changed into Christian sanctuaries, the high places were dedicated to saints, and the sacred sycamore trees to the Virgin Mary. Within the first centuries of its history Abyssinia, Christianity probably did not spread beyond the borders of the kingdom of Aksum, and it scarcely reached as far south as the Tana Lake. In the 7th or 8th cent. great political changes must have taken place; but the history of Abyssinia, from about 650 until 1270, is shrouded in darkness. During this time many wars must have been fought between Christians and pagans, and also between Christians and Muhammadans. The outcome was that political conquest and missionary activity spread far to the south, and that the centre of the empire was transferred to the south of Abyssinia. The legendary history tells of many miracles performed by the saints who converted the pagan Hamites and negroes. Among them Takla Haimanot (Plant of Faith), and Gabra Manfas Qeblis (Servant of the Holy Ghost), were the most famous and popular. Meanwhile Abyssinia had been cut off from South Arabia, which had become Muhammadan, and had sought and found close contact with the Coptic Church of Egypt. In the Abyssinian empire itself Christianity has been the official religion ever since, and many conquered tribes have been forced to be baptized. But outside of these limits Islam made rapid progress, and at present the Christians are surrounded by Muhammadans on all sides. Many Muhammadans even live among the Christians, although the building of mosques is not allowed. The country has seen many internal quarrels concerning dogmas, ecclesiastical power, and limits and has witnessed repeated struggles against Roman Catholicism (about 1550–1635). The greatest dangers that the Church experienced were the wars waged by Muhammad Gräh, the Muhammadan conqueror who overran Abyssinia from 1555 to 1559. From these perils Abyssinian Christianity was finally saved by the Portuguese.

The Christian religion of Abyssinia became more and more degenerate, the more it was shut off from the rest of the civilized world, and the more the Semitic element was absorbed by other races. From time to time a king or a patriarch who was more enlightened and energetic than his fellow-countrymen tried to introduce reforms; but although they did their best, it was not very much. An altogether exceptional case is that of the monk Zara'Yaq'ub (1599–1662), who evolved a rational philosophy in the line of the Egyptian philosophy (polis, and tr. by the present writer under the title Philosophi Abyssini, Paris and Leipzig, 1904).

In conclusion, it may be stated that at present there are three main divisions in the Ethiopian Church: one that adheres to the Canaanite (the 'son of the flesh') or the Semitic divine, i.e., that Jesus was in the flesh Son of Mary only, not of God, and that the Divine nature was later infused into Him by God, but not by God with Christ's Divinity, an Abyssinian; (b) the Monotheists or followers of the gebat ('union'), who profess that Christ, when He was anointed with the Holy Ghost in the Jordan after His baptism, became a participant of Divinity, even as man; (c) the true Monophysites or followers of the tawâlîdî (unity) doctrine of Jacob of Qondah. Possi"
dog, drives every other animal away wherever it goes.

It deserves to be mentioned also that among the Tigre tribes, tales about the doings of certain stars—especially the Moon—were greatly cherished, and may possibly reflect ancient star-worship. The remnants of moon-worship among the same people are more pronounced.

A very conspicuous remnant of paganism is the idea of a nether world, where the shades live until the Day of Judgment. The shades or 'people of below' (anb tahat in Tigre) often appear to the living in dreams, or they punish a man by beating him, if he does not fulfill his duty of blood-vengeance, or is niggardly enough not to offer the proper sacrifices to the dead. The souls of those who die unavenged or before they have attained their desires, are changed into a kind of owl (gows in Tigre), and howl and screech until they are avenged, or until some descendant or relative carries out their designs.

ACADEMY, ACADEMICS.—The Academy ('Ακαδημία, older form 'Εκαδημία, later 'Ακαδημία), so called from the local hero Academos or He- kaemos, was one of the three great schools to which the walls of Athens, the others being the Lyceum and the Cynosarges. It was situated less than a mile from the Dipylon Gate, off the road which ran N.W. through the outer Ceramnies, among the olive groves below Colonus Hippos. As a gymnasion it already existed in the time of the Pisistratids, but it was Cimon that laid it out as a public park with shady avenues of plane trees (Plut. Cimon. 13). Here was the precinct of Athena, with the twelve sacred olives (παντοκήρυγα), near the ancient pedestal (άγγελα βαςιν) with representations of Herakles and Prometheus, which formed the starting-point of the torch-race at the Lampe- dussian Games, and the entrance of the gymnasium. This last worship gave rise to several features of the Prometheus myth.

It was in the Academy that Plato founded the first Athenian philosophical school, the idea being doubtless suggested to him by the Pythagorean and Egyptian traditions of several schools, as those of Thebes and Phlius (cf. the Thando), and possibly by that of his friend Enclides at Megara. The school possessed a shrine of the Muse (μουσηία), at which votive statues (άρισταμα) were dedicated (Diog. Laert. iii. 25, iv. 1, 19), and Antigonus of Carystus (απ. Athen. xii. 547¹, 548) spoke of a 'sacrifice' (ιεραίον) and an 'attendant of the Muse' (Μουσηφόρος) as officials of the school. From the monthly common meals (μουσηία) as religious acts (φυλακτήριον τοῦ δεδομένου). From all this it has been inferred by Wilamowitz-Moellendorff (Plut. Unser. iv. 250) that the legal status of the Academy was that of a religious association (θιάσος). That, indeed, was the only form which a corporation could take at Athens, and it was of great advantage to the members, as the legal rights and privileges of such associa- tions was open to others than Athenian citizens.

The original property of the society was a house and garden, in which Plato and most of his successors lived. It is not quite certain whether the garden was a bench (εξεδρα, sestio) still existing in Cicero's days, which was at least as old as the scholarchate of Polemo (Cic. de Fin. v. 2, 4). It is not certain whether the scholarchs (αρχάρτοι) were elected or selected by the members, or were their successors. The official title seems to have been diadochus (διάδοχος, 'successor'). After the siege of Athens by Sulla (86 B.C.), the suburbs became uninhabited, and the control was moved into the town; but the house and garden remained in its possession to the end.

From an early date it was customary to distinguish the Old and the New Academy, though Philo (see below) objected to this (Cic. Acad. i. 15). The Old Academy includes the immediate followers of Plato, the New begins with Areocles, who introduced the sceptical doctrine for which the school was best known from the 3rd to the 1st cent. B.C. Later writers speak of three Academies, beginning the Middle with Areocles and the New with Carneades. Others added a fourth consisting of Philo and his followers, and a fifth consisting of Antiochus and his (Sex. Ep. terr. i. 220). All these divisions only mark stages in a continuous history.

The 'Old Academy' carried on the discussion of the problems which Plato had raised in his oral teaching. In the main, these were mathematical, and were concerned with the distinction between continuos and discrete quantity. The former Plato calls in the Philothesis the 'unlimited' (δέκαποτο), but we know from Aristotle that in his oral teaching it was called 'the great-and-small' (τὸ μεγάλον καὶ μικρόν). The problem was to show how discrete or 'ideal' numbers (εἰδικοὶ ἀριθμοὶ) could arise from this, and similarly how 'magnitudes' (μέγεθος) could arise from continuous and infinitely divisible space by the introduction of limits. If once we get to magnitudes, it may be possible to give at least a tentative mathematical construction of the 'elements,' and even of the things of sense.

The true glory of the Old Academy is the impulse which it gave to mathematical science by the study of these problems. Solid geometry, trigonometry, and conic sections all took their rise from this source, and the new conception of continuous quantity led to the solution of many old difficulties.

Endoxus of Cnidos and Heraldides Ponticus, both members of the Academy in Plato's time, attacked the problem of the solar system with extraordinary boldness, and prepared the way for Archelaus' discovery of the sun's central position by Aristarchus of Samos (c. 150 B.C.). It is unfortunate that most of our knowledge of the Old Academy comes from Aristotle, who was not in sympathy with the mathematical movement of his time.

Plato was succeeded by his nephew Speusippus (scholar 347-339 B.C.). Xenocrates and Aristotle at once left Athens, the former returning later to succeed Speusippus, the latter to found a rival society.

Speusippus regarded number as arising from the union of unity (τὸ ἕν) and plurality (τὸ πολλά), but he made no attempt to derive magnitudes and other forms of reality from numbers. He explained them instead as parallel series formed on the analogy of number. Magnitudes, for instance, arose from the union of 'something like unity' (ᶏv χαίον) with 'something like plurality' (tò χινώς), and on with souls and sensible things (Arist. Met. 1025b, 9ff., 1075b, 37ff., 1085a, 31ff., 1090b, 13ff.). His most characteristic doctrine, however, was his denial of the identity of the Good (tò ἀρετή) in the beginning (tò ἀρχόν), but reveals itself (ἐναλειπόμενον) in the process of development. As in the case of plants and animals, it is only in the 'full-grown' (tò ἔσχας) that we see the Good (Arist. Met. 1025b, 9ff., 1075b, 37ff., 1085a, 31ff., 1090b, 13ff.). Speusippus is thus the originator of the 'teleologi-
cal' (derived from τέλειος, 'full-grown') or evolu-
tionary view of the world, and this explains the
fact that he wrote chiefly on biological subjects.
We know from the quotations of Athenaeus that in
his 'Simulia' (A.D. 197) he discussed
shellfish and mushrooms. It is in accordance, too,
with this evolutionary standpoint that he regarded
sense-perception as rudimentary science (ἐπιστη-
μονή αδιπρόσκολος), and that he defined happiness
(εὐευγνωνία) as the 'full-grown state' (ἐξίς τελεία)
of those in a natural condition (ἐς τοῦ κατὰ φύσαν
ἐξερχεται). It was not pleasure; for pleasure and
pain are two evils, opposing but conformable.

The most distinguished head of the New Academ-

y was Carneades of Cyrene (214-129 B.C.), who threw
himself whole-heartedly into the attack on Stoicism
as represented by Cato and Scaevola. He
tried against all theories which admitted a 'criterion' of truth.

Carneades died in his eighty-fifth year (129 B.C.),
and was succeeded by Cithamachus of Carthage,
who was succeeded by Philo of Larissa. During
the Mithridatic war (88 B.C.), Philo took refuge at
Rome, where he had Cicero as an enthusiastic student.

The discipline of Antiochus of Ascalon broke with the tradi-
tion of Carneades altogether, and even with the
teaching of Philo, whom he succeeded. He
held that all Stoic doctrines were to be found in
Plato, and that the differences between the Peripatetics
and Stoics from the Academy were merely verbal.

After Antiochus the history of the Academy is a
blank for many generations. Neoplatonism did
not originate within it, and was not introduced
into it till the 5th cent. A.D. by Plutarch of Athens
(+ c. 430 A.D.). His successor Proclus is an import-
ant figure in the history of philosophy and religion,
but he does not concern us here. The school pro-
duced in its last days some distinguished com-
mentators on Plato and Aristotle, notably Simplicius
the Cilician and Damascius the Syrian. Damascius
was the last scholarch; for, in 529 A.D., Justinian
closed the school and confiscated its revenues,
amounting to 1000 gold pieces, of which Plato's
garden brought in only three. Damascius, with
Simplicius and some others, took refuge at the
court of Justinian, who was himself inclined
to be devoted to philosophy. They were dis-
appointed in him, however, and returned on the
conclusion of peace, when Chosroes made it a con-
dition that they should not be molested in their
religious studies, which was fulfilled (Hil. Hist.
30). Simplicius speaks with excusable bitterness of
Christian theology; but the best of Platonism,
as then understood, had already been absorbed by
that very Christianity which we of the Academy
had rejected; at least for the time. When Justinian
closed it, it had lasted over nine hundred years.
ACCEPTANCE—ACCEPTATION

JOHN BURNET.

(1) There is the wide sphere of religious experience which the worship of God by sacrifice may be said to cover; of which Gn §23 may be taken as a type. Of Noah’s sacrifice it is said: ‘The Lord smelled a sweet savour; and the Lord said in his heart, I will not again curse the ground any more for man’s sake.’ This language shows the favour with which this sacrifice was regarded, and the effect it had upon the future course of the world. It was an act which consecrated a new world. Similar phraseology is frequently used, both in the Song of Songs and in the Apocalypse. Of the New World, and of the result of which it effected in procuring favour for the worshipper. Whether all worship in the earlier ages was expressed by sacrifice or not, it is obvious that sacrifice constituted the central and essential feature of it, and genuine piety would naturally seek satisfaction in the faithful observance of all prescribed forms. This tendency exposed the worshipper to the danger of excess, and of the discrediting and isolation, in the eyes of religious consciousness in its OT form was based on the thought that sacrifice was the appropriate form for acknowledging God and meditating His favour. In the NT the new thought and practice are in a ritual appropriate to each, the Law provides for a wide variety of religious need; and in the faithfulness of what the Law had prescribed, the true Israelite could assure himself of acceptance in the presence of Jahveh.

(2) To what extent and character of the worshipper was an essential element in acts of sacrifice in early times, it is not easy to determine. It is not likely that the religious acts even of primitive men in all relation to their religious life. With the advance of culture, however, increased importance would come to be attached to the spirit of worship as contrasted with the form. And once it became clear that the two might be used only different but even opposed, as was manifest in the time of the Prophets, then the call would be made for mercy and not sacrifice, for righteousness in life and conduct rather than multitudes of sacrifices. Yet the maxim that obedience is better than sacrifice (1 S 15:22, 1 S 15:22, Mie 6) was not new in the time of Israel. It was an element in the regulation of worship from the first, and its importance increased with a deepening meaning sense of the inner character of the old Testament, and shows that sacrifice was unsuitable as a general and universal medium of worship. That the Prophets were against all sacrifices, wherever they might be offered, cannot be made out. Yet the old corruptions of the high places, which had invaded the Temple in their day, gave point to their loud rebukes and increased the longing for a new and better time. It cannot be said, however, that the Prophets taught indifference to sacrifice as such. In any case, the worth of the latter as a religious act was always dependent upon the moral state of the worshipper, and this circumstance explains their insistence upon moral conditions, open ‘clean hands and a pure heart’ as necessary to acceptance with God.

(3) The broad principle of acceptance in its widest universality may be inferred from the spiritual nature of God, as in Christ’s words to the woman of Samaria (Jn 4:24 ‘God is spirit, and they that worship him must worship in spirit and in truth’). It is well expressed by St. Peter in the case of Cornelius (Ac 10:34-35). Of a truth I perceive that God is no respecter of persons: but in every nation he that feareth him, and worketh righteousness, is accepted with him’.

(4) But, while the broad principle of acceptance is contained implicitly in the revealed character of God, and was boldly proclaimed by the Prophets, it is never realized as a living experience except in the life of faith and obedience, in the life which, based on the redeeming work of Christ, seeks for and accepts all available helps both to know and to do the will of God.

A. F. SIMPSON.

ACCEPTATION is a term which, like many others, has passed from Roman law to Christian theology. According to its derivation, acceptatio means ‘a reckoning as received,’ acceptum being the proper name for the credit side of the ledger. In Roman law, however, the term had a special and technical use. It meant the discharge of debt by the use of a solemn and prescribed form of words, in which the debtor asked the creditor if he had received payment, and the creditor replied that he had—no real payment, however, having taken place. Gains consequently says that acceptation
resembles an imaginary payment. This method of discharge was proper applicable only to obligations contracted verbally by stipulation, i.e. by the use of a similar solemn form of words, in which the creditor asked the debtor to own his debt, and the debtor did so. Obligations contracted in other ways could, however, be transformed into verbal obligations by the use of a special stipulation invented for the purpose, named the Aquilian, and could thus be made terminable by acceptance. See Gaius, Inst. iii. 169; Justinian, Inst. iii. 29. 1 and 2. Digest. 1 de Acceptatione', xlv. 4.

ACCESS. 'Access' is the term used in the NT to denote the privilege and right of approach to God which men have through Jesus Christ. The term occurs in three places (Ro 5, Eph 2\(^2\) and 3\(^2\)), and in each of these as the tr. of προσ-\(\dot{a}\)γωγία. The importance of the conception may be inferred from the fact that it accompanies the term in two of these instances, indicating that the thing spoken of has an acknowledged and familiar place in Christian faith.

In classical usage, προσ-\(\dot{a}\)γωγία is by far the more common; and several commentators of note maintain that it should be so read in the texts cited. It would thus = introduction, and, so taken, the term will have a narrower meaning than that associated with 'access.' The usage of courts in which access to kings was obtained through a προσ-\(\dot{a}\)γωγία or sequent, if taken to explain our 'introduction' to the Father, does certainly suggest something less than seems implied in the above given texts.

It is quite true that the word is often used both of persons and things in the sense of leading up to or towards, and this much at least Jesus accomplishes for us in bringing us to God. Yet the introduction which we have in Him implies not a passing event or incident at the beginning of the Christian life, but something which is always valid, and which establishes and securces for us an open way of approach together with all the privileges inherencient of God. Even if we use it strictly for the transitive meaning of the term, we must so explain it as to imply the larger idea as well. This, indeed, is the fact, as it brings and secures; and this Meyer readily does. This consideration has doubtless induced most commentators to favour the introduction of the word and to understand it as a term of description. This use of προσ-\(\dot{a}\)γωγία, though rare, is not without support (see Pflatarch, Philol. 1. 20; Polyb. x. 1. 22; etc.). We may then take this view; the RV adhering to 'access' of the AV; and the same view appears in some of the older English versions.

To date however, it is more in line with faith, or even with prophecy, or with the apocalyptic, and with the Epistle to the Hebrews, and with the text and with the text of the Church. The Hebren version, like the RV, adheres to 'access.' Luther and various German versions render by Zugang, similar in meaning to 'access'; and this term is now consecrated by long usage in English, and could not easily be supplanted by another.

Though the passive aspect of the conception is more prominent in 'access,' as the active is in προσ-\(\dot{a}\)γωγία, there is in the associations of the word a blending of the two which must be kept in mind in order to realize the full force of the Apostle's use of it. The essential points in the conception are obvious in the three texts where the word stands.

(1) In Ro 5\(^2\) it is used of the entrance upon, or the introduction to, the state of grace, or the Christian state, which in the context is described as that of justification, of acceptance, of full communion with God. This state of grace is that which God which is established and constituted by the Redeemer's gracious and atoning sacrifice, the benefits of which are immediately secured by faith. These benefits embrace all the privileges of Divine grace, and the great waxes eloquent upon the fallacies involved in such usage (Defensio Fidei Catholicae de Satisfactione Christi, cap. iii. Oxon. 1657). The only explanation of the language of Grotius seems to be that he had misread or misunderstood a passage in Socinus where he can scarcely have misread the word 'acceptation' in explaining St. Paul's doctrine of imputation (de Jesu Christo Servatore, Pars Quarta, cap. ii.).

The Socinian theologian Croll points out the mistake in his Responsa ad Grotum (ed. Brux. Bibliothece Fratern. Polonorum, 1650); it is he who tells us that it was Beza whom Socinus had in view. Croll, however, did not succeed in preventing the general impression that Socinus taught a doctrine of acceptance. We still find Turrretin saying (de Satisfactionis Christi Necessitate, Disp. xx. cap. x.) 'We admit no Socinian acceptance'; though his Disputations on the Satisfaction of Christ did not appear till 1666 (enlarged edition, 1687; see Turrletin's Works, Edin. 1848, vol. i. p. xlii).

ROBERT S. FRANKS.
Our access to this state has been established through the incarnation and death of the Son of God, who bears away the sins of men and gives them power to become sons of God. This is not merely a matter of one man living an actual leading life, but men into this blessed state by One who takes them in hand and conducts them into the blessedness and peace of the Divine kingdom.

Our access to the Divine presence in the consecrated and transformed elements, are the two points in which access to Deity now present in the Holy Sacrament, the Eucharist, and itsfruits. In this sense the term is apt enough, as it expresses the work of the Supper which is already latent in the old Liturgies and is seen fully developed in the Roman Missale, Liturgiae Orientalis and Western, Chevalier Press, 1874).

A. F. SIMPSON.

ACCIDENT (accidenta, συζυγηѣς).—I. One of the five Predicables (accidentia predicabile).—According to Mill, under accidenta are included all attributes of a thing which are neither involved in the signification of the name, nor have, so far as we know, any necessary connection with attributes which are so involved (Logic, vol. i. p. 149). This, allowing for the Nominalist standpoint of Mill, is the same view as that contained in Aldrich's definition, 'that which is predicated as contingently joined to the essence,' as contrasted with that which is predicated as necessarily joined. Some such definition or its equivalent is given by most writers on Logic, and is, according to Mansel, (Aldrich, 4th ed. p. 24), found in Albertus Magnus (de Predicat. Tract. i. cap. 1).

The view taken by Aristotle is different. The attribute of a triangle, that its three angles are equal to two right angles, which on the ordinary view would be a proprium, is by him regarded as an accident (Metaphys. iv. 30). The distinction between property and accident in Aristotle turns on the convertibility or non-convertibility of the essence to the attribute. It is essential to the Aristotelian property (生產) that it should be present in certain objects and in them alone. If present in other objects, it is either identical with the genus, or it is not. If not, it is an accident. The test of an accident is that it is common to heterogeneous things. Aristotle at the same time recognizes that that which, simply considered, is an accident may become in a certain relation and at a certain time a property. He gives two definitions of 'accident': (1) 'that which is neither defined nor property nor genus, but is in the thing'; (2) 'that which is able to be in and not to be in one and the same individual' (Top. i. 5). Porphyry gives a third definition: 'the Aristotelian accident, or absent without destruction of the subject' (Isagoge, v.).

Aristotle recognizes two classes of 'accidents': those which are necessarily connected with the essence and deductible from it (αταρακτικά κατ' αὑρὰ); and those which are not (cf. Ueberweg, Hist. of Philos., Eng. tr. vol. i. p. 155, and Grote's Aristotle, vol. i. p. 142 note). Sanderson in his Logic (Works, vol. vi. p. 10) distinguishes the separable and inseparable accident thus: Separable—that which can be actually separated from its subject, as cold from water; Inseparable—that which cannot be separated except in the intellect, as water from water. Aldrich gives a similar distinction. Mansel and most logicians define the inseparable accidents of a class as those accidents which, though not connected with the essence either by way of cause or consequence, are a matter of fact found in all the members of the class; the separable accidents as those found in some members of the class and not in others. The inseparable accidents of an individual are those which can be predicated of their subject at all times; the separable only at certain times.

2. Accident, Folly of.—This fallacy is generally considered to be when we infer that whatever agrees with a thing considered in itself agrees with the same thing when qualified.
ACCIDENTALISM—ACCIDENTS

by some accident. Aristotle's view of the fallacy was different. He defines it as arising 'when it is held that anything belongs in a similar way to a subject and to the accidental of the subject.' The definition does not mean merely that the attribute is assumed to exist along with both subject and accident, but that the mode of attachment is the same (Soph. Elench. v. 3). This condition of valid reasoning which Aristotle here lays down, is precisely the same as Herbert Spencer (Psychology, vol. ii. ch. v.) has in view when he speaks of 'connature.' Aristotle regards the nine categories which exist in the existence of accidents, and the classification itself may be regarded as a classification of 'connatures.'

3. Accident in relation to substance.—Sir W. Hamilton (Lectures, vol. i. p. 190) says 'accident' is employed in reference to substance as existing; the terms 'phenomenon,' 'appearance' in reference to it as known. The Scholastics distinguished 'accident' in this sense as accidents praeedicentales or categorical accident from accidents predicabilia or logical accident (Aquinas, Summ. Theol. i. q. 77, a. 1–5). The former is the wider term. 'Accident' in this sense is defined as ens entis, or ens in alio, substance being ens per se. This is the view of Aquinas (ib. iii. q. 77, a. 1), which says the proper definition is not actual inherence in a subject, but aptitude to inher. The chief reason of this definition is that in the doctrine of Transubstantiation the accidents of the new substance are the substance unchanged. The substance of the body and blood cannot be affected by the accidents, therefore these must be capable of existing apart from their substance, being supported by Divine power. This has led to a distinction of three kinds of accidents: (1) metaphysical, accident which, although we may conceive the substance without it, is nevertheless identified with it. There is a distinction rationis praedicabile between them. Opposed to this is a physical accident, which, if different from the substance itself as thing or entity, is (2) absolute or real, as quantity, motion. If it signifies merely a state of being, as to sit or stand, it is (3) a modal accident. It is for the absolute accidents that the capacity of being miraculously sustained in the Eucharist is claimed (Zigliara, Summa Philos. l. 411; Pesch, Institutiones Logicales, Pars ii. vol. ii. p. 13), and properly sustained, the real dignity and condition of absolute accidents from the substance of both mind and matter. (For list of opponents with regard to mental faculties, see Sir W. Hamilton, Lectures, ii. pp. 5–9. The question is still disputed by Roman Catholic theologians). Leibnitz supported the view of Aquinas ('System of Theology, tr. by Russell, pp. 112–114; Opera Philosophica, ed. Erdmann, pp. 650, 656, etc.). He distinguishes mass as an absolute accident from substance ('System of Theology, p. 115).

Accidents, according to Locke, are qualities which are capable of producing simple ideas in us (Essay, bk. i. ch. xxiii.).

According to Kant, accidents are the determinations of a substance which are nothing else than its particular modes to exist; or the mode in which the existence of a substance is positively determined (Kritik der reinen Vernunft, vol. ii. p. 160).

In Hegel, accidents are the determinations which unconditioned Being has in so far as it has immediate existence ('Philosoph. Propädeutik, p. 106).

A. Accident in the sense of that which happens by free-will (Metaph. x. (xi) 8). Elsewhere ('Metaph. iv. (v.) 90') he gives, as illustration, finding a tree grown from a seed, as that which occurs neither always, nor from necessity, nor for the most part (Metaph. x. (xi) 8). Elsewhere ('Metaph. iv. (v.) 90') he gives, as illustration, finding a tree grown from a seed, as that which occurs neither always, nor from necessity, nor for the most part (Metaph. x. (xi) 8).

LITERATURE.—Aristotle, Organon, Metaphysica; Petrus Hispanus, Summulae Logicales, with exposition of Versoria; Thomas Aquinas, Summa Theologica; Sanderson, Logik (Works, v. 3.); Dunkon, Lectures on Aristotle's 'Arts Logic Rudimenta'; J. S. Mill, Logic; Schopenhau, Elem. Theol. Dognmatik.

G. J. STOKES.

ACCIDENTALISM.—The theory that events may happen without a cause. This is a view of the world which characterizes a pre-scientific period of thought. With this view the scientific method and spirit all events come to be regarded as connected in a causal manner, and no single event whatsoever is conceived as possibly falling without the closed circle of cause and effect relations. Chances, according to this view, is not to be considered as opposed to the idea of causation, so that it could be possible to say, 'This event happened by chance, but that event was evidently the effect of some cause.' There is no such antithesis, for every event is caused. The accidental event is merely one whose cause is so complex that it cannot be determined, and, therefore, it affords no basis for any exact prediction of the re-occurrence of the event in question. It becomes a matter of treatment according to the theory of probability. Chance, in the theory of probability, means always a complex combination of possible causes which may be present and produces a certain event, and sometimes fails to produce it. The interacting causes may co-operate and reinforce, and, again, may oppose and neutralize one another, and therefore the resulting combination may be described as a scientific view of chance, which is not free in any sense of the law of causation.

In the early Greek philosophy the idea of a certain kind of accidentalism in the world of events was a very persistent one. It appears in Plato, and even in Aristotle; and it was not until the Stoics emphasized the scientific view of the universe that the unscientific nature of accidentalism became fully recognized. Aristotle held that single events may be referred to universal laws of cause and effect, but he did not commit himself to this conception wholly without reservation. He ascribes something to a causal order 'for the most part' ('φιλοτεχνα των'), and insists upon the contingent in nature, that which is without cause and without law ('Met. 1065a, 4). Plato finds a place for chance in the economy of the universe. God governs all things, and chance and opportunity co-operate with Him in the government of human affairs ('Loves, iv. 709). And yet among the Greeks there was an instinctive shrinking from the idea of chance as the antithesis of cause and effect. The Fathers were, after all, the daughters of Necessity. Of them Plato remarks: 'Lachesis or the giver of lots is the first of them, and Clotho or the spinner is the second of them, and Atropos or the unchanging one is the third of them also; and she is the pre-animal of the things of which we have spoken, and which have been compared in a figure to things woven by fire, they both (i.e. Atropos and the fire) producing the quality of unchangeableness' ('Lotes, xii. 900). This quality of unchangeableness is opposed alike to the caprice or whim of a goddess, and to the chance control of the destinies of man. Moreover, accidentalism in the field of ethics appears in the theory of Theocritus. For instance, regards the uncaused will of man as analogous to the accidental devation of atoms from the direct line of their fall. The uncaused event and the uncaused will both present the same general difficulties also.

JOHN GRIER HIBBEN.

ACCIDENTS (from the theological point of view).—Accidents, to a teleological theology, which must be engaged only in that they are to logic, viz., occurrences which do not fall under a general law of nature. The laws of nature are, from the teleo-
ACCIDENTS—ACCIDIE

logical point of view, rules expressing the purposes of a conscious Being, and accident will be occurring to fulfill such purposes.

The theologian who adopts the theory that conti- ngency in the natural world is an illusion due to our ignorance of general causes, must hold that there is no event conforming to Divine design; the very illusion of contingency must itself be the result of purpose. The difficulties that attend this subject are the same as surrounds the problem of Evil (see below). Practically, the belief by which his interests in the world thwarting the Divine design is an incitement towards activity; the opposite doctrine—that accidents are, after all, part of the Divine purpose, gives consolation in failure. On the whole, Christian thought tends to maintain that the solution of so many difficulties falls outside the province of reason, and does not attempt such a synthesis of contradictory opinions as constitutes the Hegelian treatment of the contingent.

G. R. T. Ross

ACCIDENTS (Injurious).—Accidents, in the general sense of the term as popularly employed, may be looked upon as mischances in human experience. Obviously the accidental character of events will thus be relative to the knowledge and reasoning power of different individuals. In order to mitigate the consequences of injurious accidents, the laws imposing liability are more or less effective. By this means the consequences of an injurious accident, in so far as they can be expressed in terms of money, may be entirely de- prived of their momentary and future effect by a previous economy, much less in most cases than would be necessary to equalize, as a sum of payments, the damage sustained. Not only so, but the diffusion of the evil results of contingency over a considerable period, and their transference to a corporation, prevent them from having that cumulative effect which may lead to further disaster of new and increasing nature.

Injurious accidents may lead to legal action, wherever the occurrences so styled are the result of the agency of at least one individual other than the sufferer, and that other agency can be distinguished from society in general.

(a) In the first class of such suits—actions for damages at common law—the first plea to be established by the prosecutor is substantially the proposition that the occurrence, which relatively to him was accidental, was not to the defendant, but fell within the limits of the latter's foresight. But there are numerous circumstances which might neutralize the effect even of the establish- ment of such a contention.

(b) Claims for compensation may be brought in cases where the injurious accident occurs in an enterprise concerning which there was a previous contract or agreement between the litigating parties. In numerous classes of such joint enter- prise the extent to which the risk of accident is borne by either party is laid down by law. For each species of relation a different rule may obtain. Thus in British law the liability for damage to goods entrusted to their care differs in the cases of warehousemen and of common carriers. The relation involving joint enterprise to which Parliamentary enactment has most recently extended delimitation of the risk of the contracting parties, is that of employer and employed. The experience of the Workmen's Compensation Acts of 1897, 1900, and 1906, in a great number of industries, and not merely in those involving an unusual amount of danger, not conforming to employers now bears no risk of injury to his workmen. Every workman may claim compensation from his employer for injury through accident, unless the accident be caused by his own serious and wilful misconduct.

The result of these enactments is practically to make the employer bear the cost of the injury of his employees against accident. It is only to be expected, however, that, though the immediate consequence will be a diminution of the revenue of employers, in time the expense of accident systems will fall partly upon the workmen, in the shape of a diminution or absence of increase in wages.

G. R. T. Ross

ACCIDIE.—The obsolete 'acciadie,' from accidie, incursus, torpor (Hippocr.), through med. Lat. accidie (as if from accedere), was once current as one of a quality related on one side to sloth, which has superseded it in some lists of the principal vices. Chaucer in the Parson's Tale, diluting upon the 'Seven Mortal Sins,' Superbia, Scleroris, Ira, Accidie, Avaritia, Gula, Luxuria, writes of the fourth: 'Agayns this roten-herted syne of Accidie and Slouthe sholde men exercise hem-self to doone gode werkes, and manely and vertuously eechen hire gerege well to don the syngale, (Scant, Student, p. 709). In Dante see acie and adj. accidioso (Purg. xvii. 132; Inf. vii. 123). The Patristic uses of accidie rest upon the Old Testament. The earliest of them is not noticed by the authorities mentions below. The corrupted form of accidie is acedia. Bp. Hall is quoted for 'acedy' (1623).

'Accidia, acediae are found as below in the LXX.: the render- ings in brackets are from the Vulgate. (1) Ps 119:15 'agarios [Gr. ἀκαθαρσίαι] πραξιν χρίσαται οἱ διεθνείς. (2) 111:18 ἀκαθαρσίας [μισθωτάς] μην ἔχετε. (3) Sir 39:2 ἀκαθαρσίας ὁ λόγος ἀκαθαρσίας. (4) Ps 60:14 ἀκαθαρσίας [ἀρτοῦ] τοῦ λόγου. (5) Ps 101:9 ἡ ἀκαθαρσίας τοῦ λόγου (τοῦ σωτῆρος). (6) Ps 128:1 ἀκαθαρσίας τοῦ λόγου μην ἔχετε ἀκαθαρσίας. (7) 150:9 LXX. ἀκαθαρσίας γεμίζων τὸ ποιητικόν. (8) 21:2 ἀκαθαρσίας (και διαθεματικά). (9) Sir 22:13 ἡ ἀκαθαρσίας (συν οἰκονομίας). The phrase 'spirit of acedy' is from (2) above; Antioch. Hom. 26 alludes also to (1), (4), (6), (8); and (9), (10) in the Latin are cited by Alardus Gazeus on Cassim.

In Vit. iii. of Hermo Pastor it is explained that the Church appeared first as old, because your spirit was aged and already failed and powerless from your sallings and doubts. Step for the aged, having no hope any more to renew their youth, expect nothing but their last sleep; so ye, being weakened by worldly affairs, yielded yourselves up to acedia (sic accidia), and cast not your care upon the Lord, but your spirit and your heart, and ye were worn out with your griefs (λύπους). Thus acedia is associated with sadness (ναρπα), one of the four plus eight principal vices in Sim. ix. 15; which is more wicked than all the spirits, and destroys the power of prayer (Μανδ. v. x.). The parable of the Unleavened Spirit which takes to it seven other spirits more wicked than itself (Mt 12:43 serves as a proof text for the number eight (afterwards seven) of the principalitas vilis. Nilus of Sinai calls them the 'Eight Spirits of Wickedness' (Zöckler, op. cit. inf. p. 65).

In Cassian’s Colat. v. ‘De octo principibus vitiiis,’ which embodies the teaching of the tradition, the eight vices are said to be Gastroinomia, Fornicatio, Philargyría, Ira, Tripletia, Accidia sive tedium cordis, Cenodoxia, Superbia. They are referred to in Lk 11:39, and they correspond with the like number of nations hostile to Israel. Why eight vices, when Moses enumerates only seven such nations? (Dt 7). Egypt, corresponding to the first vice (Nu 14), makes up the number; the land of Egypt was to be forsaken, and the number of the seven taken. Acedia, the besetting sin of the monk, was of two kinds: it sent him to sleep in his cell, or drove him out of it. The same vices
accommodation

attack all men, but not all in the same manner and order. This remark forewarns the disagreement of later moralists in their accounts of the vices, which are all more or less subjective.

Cassian, in Canon. Inst. x. 'De Spiritu Aedifici' (cf. Ehr. ap. Zöckler; Antioch. Hosp. 29), details the history of the custom, but notes that certain men are quoted Greek ἡμερῶν vocant, quam nos tedium sive anxietatem cordis possumus mune-

1 It is akin to Tristitia; is most felt by recluses, and attacks chiefly along the sixth hour, so that it has been called the 'midday demon' (Ps 99). Then, heated and flustered, the monk is as if wearied by long travel or toil, or as if he had fasted two or three days. Unpatient for the repast, he leaves his cell again and again to look at the sun, which seems to 'hasten too slowly to its setting.' Through 'not-caring' he is remiss at his tasks, and finds it a weariness even to listen to the voice of the reader. Solitude impels him to gird about visiting the brethren or the sick. Discon-
tented with his surroundings, he vainly imagines

that he would do better in some distant monastery.
To replace the complex acidity by sadness or sloth is the activity. In Seneca's octet it is distinct from Tristitia and different from mere

pigritia. Briefly, it was the state of mind of a monk who had mistaken his vocation: the natural effects of the 'religious' life, with its fasting from food 'and from the world.'

tianstums (1904); F. Paget, Spiritist science of Religion (1903); C. J. Vaughan, Authorized or Revised? (1908); T. B. Strong, Christianity, Greek, Ethos (1908), 221, 231, 254; O. Hammon, Chris-

ACCOMMODATION (in Biology and Psychology).—The process of organic or psychological adjustment understood in an individual and func-
tional sense. The concept of accommodation has arisen in the group of genetical processes by a process of growing specialization of problems. The old problem of 'adaptation' (q.v.) was one concerned with the adjustments of organisms to their environ-

ment, understood in a very static or a genetical way. Each adaptation was looked upon largely as a

definite structural arrangement whereby the organ-

ism responded effectively to the conditions of the world. The theory of evolution, and with it that of individual development, has conceived a

more functional statement of the whole series of

probls involved in the notion of adaptation. The description of the 'organs' involved and the

'ends' they serve—as in the case of the eye—has given place to the functional problem of the re-

actions and evolving functions through which the organ has come to be part of the endowment of the organism. This has given rise to a distinction between 'adaptation' proper and 'accommoda-

tion.' Adaptation is, by the terms of this dis-

tinction, restricted to the congenital adjustments for which the organism inherits structures adequate and fit; accommodation is applied to the adjustments which the organism, in the lifetime of the individual, achieves and perfects. Instinct in the animals is, in many cases, an adaptation; accommodation is applied to the proper

stomach of the appropriate stimulations are likewise adaptations: such processes, on the contrary, as modifications of instinct to meet special conditions, the special reactions learned by the individual, such as handwriting, together with the effects of evolution in the environment upon the organism, are accommodations.

The importance of the process of accommodation is seen in Biology in all cases in which the

courage corn is made to interpret the influence of individual behaviour and individual modification upon the organism and upon the next and follow-
ing generations. As early as the work of Lamarck, this factor was made very prominent in evolution theory, in the Lamarckian hypothesis that the

results of accommodation—of 'use and disuse'—were transmitted to future generations by Darwin, as subsidiary to his main principle of Natural Selection. Weismann and the neo-Dar-

winians reject this direct influence of the accom-

modation process or hereditary transmission, but still admit its importance as a constant process in successive generations of essential learning, whereby the individuals of each generation grow up to be competent and fertile—this position being known as 'Intra-Selection' (Weismann).

A more recent theory, called by the present writer 'Organic Selection,' discovers the importance of accommodations in directing the line of evolution. It is pointed out that, even though the modifications due to accommodation are not inherited, they still so effectively aid and protect individuals against the action of natural selection, that certain lines of adaptations and correlated characters are pre-

erved, and consequently the trend of evolution, the trend of evolution is thus in the lines marked out in advance by accommodations, natural selection following up and clinching the results first secured by the processes of accommodation.

The effects of accommodation on the structure of the organism are technically known as 'modifi-
cations;' they are contrasted with 'variations,' which are differences of structure of the 'adaptive' and congenital sort. Individuals are born different by variation; they become different during their lives by modification.

In Psychology the theory of accommodation is of even greater importance. The remarkable range and importance of the learning processes are never made matter of question. The problem of accom-

modation becomes therefore in Psychology—as also in Biology—that of the possibility of learning any-

thing new. Thus stated, the fact of accommodation is set over against that of 'habit.' If we call all those functions, of whatever sort, that the indi-

vidual is already able to perform, his 'habits,' it then appears necessary to explain the process by which habit is modified, cancelled, and added to:

this is accommodation.

The present solutions of this problem are in line with the requirements of genetic science as science of facts. It is found necessary that an individual may simply, by an act of will, do a thing that he has not learned to do; only certain fixed instincts work in that way, and that because they are fixed as habits by the gift of heredity. No muscular combination is possible, even when it involves the voluntary muscles—as, for example, those for moving the car in man—

that has not been learned, and the process of learning is a slow and effortful one. The theory of the moment current, and having the greater weight because held by both biologists and psychologists, is that known as 'theory of excess discharge,' of 'trials' and 'errors' to the 'adaptation.' In effect it considers any act of accommodation or learning as due to the excessive and varied exercise of habits already formed, the element of learning arising from the modifications that the trial and error, the successful imitations, the pleasurable results, etc., of the muscular or other combinations thus set in movement. The writer has illustrated this in many ways, treating of the acquisition of handwriting as a typical case. Mental Development in the Child and the Race (1903).

Spencer and Bain worked out a similar conception. In Biology, in the movements of unicellular organisms, as well as the accommodations of grosser function
in higher animals, are being fruitfully interpreted in accordance with this view (see L. Morgan, *Animal Behaviour*; Jennings, *Behaviour of the Lower Organisms*).

In the higher reaches of psychic function, the analogous problem is that of 'Selective Thinking,' together with the theory of adjustment to various motives. There is the social life, to which each individual must be accommodated; there is the environment of truth, to which all our processes of thinking selectively must conform. This carries us into the realms of Social Psychology, Ethics, and Theory of Knowledge.

**Literature.**—Besides the works cited in the text, see the general discussions of evolution, such as Conn, *Method of Evolution* (1891); Gallop, *Evolution Social and Individual* (1892); Headley, *Problems of Evolution* (1901). On Organic Selection see Lloyd Morgan, *Habit and Instinct* (1896); and Dictionary of Philosophy and Psychology, where lists of selected works are given under *Abstraction*, *Induction*, etc.

**J. MARK BALDWIN.**

**ACCUMULATION.** — *Accumulation* (Lat. *ad 'to,' connuiss 'a heap') signifies (1) a heap, mass, or pile; (2) the process of growing into a heap, etc.; (3) the act of heaping, piling or stowing up, amassing, as in the case—immediate history of the present article—of the growth of capital.

The accumulation of capital is the result of saving. This, however, does not necessarily imply abstinence, privation, or sacrifice, in the ordinary sense. Saving is the act of the great capitalists: it involves no personal abstinence from immediate consumption, nor sacrifice of present gratifications. His immediate expenditure is limited only by his tastes. Often the pleasure of accumulation is greater than that of careless extravagance, and at times the dominant idea is the increase of wealth for the sake of power. 'Abstinence here means abstinence from senseless waste; it is a negative not a positive merit' (E. H. S. Seligman, *Principles of Economics*, p. 320). This must be conceded to Karl Marx and his followers. Hence the neutral term 'waiting' has been suggested as a substitute for 'abstinence.'

In the case of smaller incomes the subordination of present to future utility often involves real sacrifices, forbearance, prudence, forethought. But even here it must be borne in mind that anything the individual does under the term of accumulation far increases the amount which can be saved. 'To increase capital there is another way besides consuming less, namely, to produce more' (J. S. Mill, *Principles of Political Economy*, Bk. i. ch. v. § 4).

Thus, in general, all we can say is that saving implies an excess of production over consumption —a favourable state of balance which, according as it happens to be either favourable or unfavourable, necessarily occasions the prosperity or decay of every nation (Adam Smith, *Wealth of Nations*, Bk. iv. ch. iii.).

To say that capital is the result of saving does not mean that it is not consumed. Saving is not hoarding. All capital is consumed in its primary function—the satisfaction of future needs—only in being consumed, that is, used; but it is not immediately consumed by the person who saves it. Saving thus signifies, if anything, the production of power is directed to the satisfaction of prospective or future needs. In general, this is done through saving 'money,' not, however, as a hoard, but as giving. Saving thus simply applies the productive power of directing national industry into particular channels. In this way, saving gives an increase in the productive power, and consequently in the consuming power of the society (see Nicholson, *Principles of Political Economy*, Bk. i. ch. xii. § 4).

In this connexion Mill points to the erroneous nature of the popular idea that the greater part of a nation's capital has been inherited from the distant past in which it was accumulated, and that no part was produced in any given year save that year's addition to that total amount. The fact, he says, is far otherwise. 'The greater part in value of the wealth now existing in England has been produced by human hands within the last twelve months.' The growth of capital is in many respects to the growth of population. Each is kept in existence, and increases from age to age, not by preservation but by perpetual consumption and reproduction. It is only the value of the capital that remains and grows; the things themselves are ever changing (see Mill, *Principles*, Bk. i. ch. v. § 6).

This consideration helps us to understand the, at first sight, amazing capability with which countries often recover from the effects of a devastating war. The material capital destroyed or removed would, for the most part, have required reproduction in any case; while the land and its quasi-permanent improvements subsist. It is indeed this immaterial capital that constitutes our great inheritance from the past. 'The present state of the nations,' says List, the German protectionist, 'is the result of the accumulation of all discoveries, inventions, improvements, perfections, and exertions of all generations that have lived before us; they form the mental capital of the present human race' (*National System of Political Economy*, Eng. tr. p. 149). The economic condition of a country depends far more on the mental and moral qualities of its inhabitants than on their accumulation of dead material capital.

It is thus with reason that Adam Smith includes the acquired skill of the people in the fixed capital of the nation. 'The improved dexterity of a workman may be considered in the same light as a machine or instrument of trade which facilitates and abridges labour, and which, though at a certain expense, repays that expense with a profit' (*W. of N.*, Bk. ii. ch. i.). The successors of Adam Smith, however, lacked his comprehensive grasp of the realities of industrial life; and much of the popular antipathy to the teaching of the English economists of the early part of the 19th cent.—the followers of Ricardo—may be traced to their use of narrow and faulty abstractions, and in particular to their intensely materialistic conception of capital, which ignored altogether the skill of the worker. The force of attention was thus misdirected. Regard was had to the quantity rather than to the quality of labour, and consequently the value of efficiency on wages was overlooked. Every proposed reform, e.g. the Factory Acts, was judged by reference to its probable immediate effect on the accumulation of dead material wealth. It was not seen that the capital of a country may be as profitably invested in the physical, mental, and moral training of its inhabitants as in the accumulation of dead material wealth in the shape of machinery, factory buildings, and the like. To take but one other example of immaterial capital, and that a characteristic product of the mental and moral qualities of the people of these
ACCUMULATION

islands, the British money market—that marvellous banking and credit organization through which the capital of the country finds its way into the hands of those who can turn it to the most productive purposes—has been described by Bagehot as ‘the greatest combination of economical power and economical docility that the world has ever seen’ (see Lombard Street, ch. i).

Some idea of the relative importance of immaterial capital is given by Professor Nicholson, who estimates the ‘living capital’ of the United Kingdom as worth about five times the value of its dead material capital (see Strikes and Social Problems, pp. 97-110). Enough has been said to show that, for an explanation of the rise and fall of nations, we should look to the growth and decay of their immaterial rather than their material capital.

To return to material capital, the state of the balance of production and consumption, or, in other words, the accumulation of capital—which in a modern industrial society, with its vast and increasing variety of forms and substitutes, is necessarily far from any money-dependent on causes which naturally fall into two groups, those, namely, which determine the amount of the fund from which saving can be made, or, in other words, the power to save, and those which determine the strength of the spending hand, which prompt to saving, or, in brief, the will to save.

1. The power to save is necessarily limited to the amount of the national dividend or real net produce of the society, i.e. the surplus of the annual produce over what is required to supply the efficiency-necessaries of the producers, including those engaged in replacing raw material, requisitions, machinery, buildings, etc., and keeping up the consumption capital (e.g. dwelling houses, museums, etc.). The amount of this national dividend depends on (a) the natural resources of the country, (b) the state of the arts of production in the widest sense, including not only the means of communication and transport, but also the machinery of exchange and production; for under the modern system of division of labour production involves exchange, and thus the state of the credit institutions must also be considered.

The causes embraced under these two heads together determine the amount produced within the community. But the amount of the national dividend is further affected by (c) the state of foreign trade, which determines the amount of imports obtained in return for exports. (d) The amount taken by Government for public purposes, whether in the form of taxes or burdars like conscription, must also be considered (see Nicholson, Elements of Political Economy, p. 80).

These causes determine the annual national dividend or maximum which can be saved. But the amount annually added to capital always falls short, and generally far short, of this, depending as it does on the will to save.

2. To save is the resultant of a complexity of causes, amongst the most important of which are: (a) Security. To induce saving there must be some reasonable expectation that the owner will be allowed to enjoy the fruits of his saving. This involves protection by the Government against force and fraud, which includes the enforcement of freely made contracts; and protection against the Government, e.g. against oppressive and arbitrary taxation. (b) The state of the arts of production. (c) The state of foreign trade. (d) The amount taken by Government for public purposes. (e) The effective desire of accumulation is compounded of many elements, intellectual and moral, including the development of the 'telescopic faculty' (Marshall), the growth of the family affections, the hope of rising in the world, and the
in the United States seem to be wholly absorbed in the acquisition and accumulation of capital, simply and solely as a necessary condition of pre-eminence in the world of business. They know no other goal. In some cases, indeed, it appears that the motive for the end, and the mere accumulation of wealth becomes the mainspring of life; or it may be that the habit of accumulating, acquired in time of need, maintains its sway when the need has passed.

But though the effective desire of accumulation is thus sometimes in excess of what reason would justify, there is much more danger in the other extreme. Nations may be ruined by extravagance, never by parsimony.

The popular idea of the social effects of extravagant expenditure is based on reasoning the fallacious nature of which has often been exposed. Saving is identified with selfish hoarding, while the spendthrift is regarded as benefiting all around him. It is admitted that he may be ruining himself and his family, but it is not generally recognized that he is also injuring the community. The lavish outlay of the spendthrift makes money circulate, and increases the profits and wages of wage-workers, tailors, domestic servants, and others. That is nearly all. What is readily seen is that, had the money not been thus squandered, the capital which it represents would not have lain idle, but would have found its way, through the medium of our banking organization, into the hands of some manufacturer or shipbuilder, say, to be employed by him in productive industry. The spendthrift, then, does not benefit trade, or give employment to labour; he simply alters the direction of the employment of capital, and he renders the nation poorer by the amount of the wealth he thus wastefully consumes. The saving person, on the other hand, creates a fund which, in its consumption, affords an equal employment for labour, and yet is continually renewed (see Mill, Principles, Bk. I. ch. vi. § 3). "Economy, in short, enriches, while extravagance impoverishes, the individual and the nation.

And in this, as in most other cases, good economy is good morality. The accumulation of wealth implies, in the normal case, forethought, self-restraint, energy, and enterprise on the part of the individual, and it is an essential condition of the progress of the nation. But poverty is an essential prerequisite of the highest civilization. It means increased scope for Division of Labour. As the accumulation of stock must, in the nature of things, be previous to the division of labour, so labour can be more and more subdivided in proportion as stock is previously more and more accumulated" (Adam Smith, W. of N., Bk. II. Intro.). It thus means increase in man's power over nature, with consequent economy of human effort in the satisfaction of the primary needs, and increased leisure for the culture of Art and Science and Literature. Nations, like men, may grow rich without a culture, but they are not.

ACHÆMENIANS.—A dynasty which ruled in Persia from B.C. 558 to 330, and whose religion is important for the study of the development of Zoroastrianism. The monarchs of the line were as follows: Cyrus the Great (558-530), Cambyses (530-522), Darius I. (522-486), Xerxes I. (486-465), Artaxerxes I. (465-424), Xerxes II. (424), Sogdianus (424), Darius II. (424-404), Artaxerxes II. (404-358), Artaxerxes III. (358-379), and Darius III. (379-330). The scanty data concerning their religion are contained in classical authors, in the Ptolemaic and Greek, and above all
in their own inscriptions, which were written in Old Persian, with Babylonian and New Elamite translations. The only kings of this dynasty who could conceivably give their name here are Cyrus, Cambyses, Darius I., Xerxes I., and Artaxerxes II. and III.

1. Cyrus the Great.—The material for a knowledge of the religion of this monarch is restricted to the account of Xenophon concerning the disposal of his body and the Babylonian inscriptions. The Cyropedias, as is well known, is a historical romance, and its statements, therefore, can be accepted only with caution, unless they can be controlled by the Avesta or other sources. On the other hand, it must be borne in mind that Xenophon had exceptional opportunities for observing the Achaemenian religion, through his long association with Cyrus the Younger, so that under his apparent Hellenic veneer there may lurk some true elements of Achaemenian belief. In this romance Cyrus is repeatedly represented as offering sacrifices, and it is noteworthy that he invokes the assistance of the magi (IV. 5. 14, vi. 5. 57, viii. 1. 20). The deities to whom he rendered sacrifice appear under the Greek nomenclature of Zeus, Helios, Ge, and Hestia (i. 6. 1, iii. 3. 22, vii. 7. 3), and in addition to whom he invoked ‘all the gods’ (the latter phrase is interesting as being a striking, though doubtless accidental, parallel with a phrase of similar meaning in the Old Persian inscriptions of Darius) and the tutelary deities of Assyria and Persia. With this list must be compared the statement of Herodotus (i. 181) and of Strabo (xv. 3. 13) that the Persians worshipped the sun, the moon, earth, fire, water, the wind, the Nereid, under the name of Zeus. It thus becomes evident that the worship ascribed to Cyrus by Xenophon was a nature-worship closely akin to the Iranian cult which finds its revival in the so-called Younger Avesta. The deities honoured by him were doubtless identical with Ahura Mazda, Mithra, Atar (the sacred fire), and Anahita (apparently identified with the earth as being a goddess of fertility). The identification of Hestia with the sacred fire receives its confirmation in the rôle ascribed to fire in the sacrifice recounted in Cyrop. vii. 3. 12, but the equation of Ge with Anahita is more doubtful. This goddess is represented by the Anahrite of Diodorus, and the divine personification of earth in Iranian mythology was Spenta Armaiti (Gray, ARW vii. 364-370). If, however, the identification here proposed be accepted, it is strikingly corroborated in the collection of Ahura Mazda, Mithra, and Anahita in the Old Persian inscription of Artaxerxes II. The tutelary deities whom Cyrus is represented as worshipping are none other than the yazatas, who were originally the ghosts of the dead, yet who later came to be protecting gods, and are thus invoked in Yasna, xxiii. 1: ‘I invoke to worship those yazatas, who abode time were of the houses, and of the villages, and of the districts, and of the lands; who sustain the heaven, who sustain the water, who sustain the earth, who sustain the kine, who sustain children in the wombs to be conceived that they may die not.’ In the instructions of the dying Cyrus concerning the disposal of his body, on the other hand (Cyrop. viii. 7. 23), he departed widely from Zoroastrian usage when he requested that he be buried in earth, a request whose accuracy into consideration here is the clearer in view of his tomb as given by Strabo (xv. 3. 7), which agrees strikingly with the so-called Tomb of Cyrus at Pasargadae. It may be noted in this connexion that the Achaemenian kings were entombed in rock sepulchres, as evidenced by their tombs at Persepolis and elsewhere; while Herodotus (i. 140) states that the Persians, after exposing the corpse to birds or dogs, coated it with wax and placed it in the ground. It would seem, therefore, that the data of Xenophon concerning the disposal of the Achaemenian dynasty are not so valuable as sometimes supposed. They agree remarkably with the statements of the Younger Avesta, which, despite its comparatively late date, doubtless represents in its main outlines the creed of the Iranians before the reform associated with the name of Zoroaster.

2. Cyrus—The religious records concerning this monarch are extremely scanty. Herodotus (iii. 16) mentions his impurity in burning the corpse of Amasis, ‘since the Persians regard fire as a god (Hyton), even as a man burns his house, or that of a man to a god.’ Both in Persia and in the home of the Avesta the desecration of the fire by contact with dead matter was regarded as a most grievous sin (cf. Vendidad, vi. 75-81). The only other document which throws light on the religion of Cambyses is an Egyptian text on a naophoric statue in the Vatican. According to this inscription, the strangers had intruded within the precincts of the goddess Neit at Sais and had placed various obstructions there. In answer to a petition received by him, Cambyses commanded that the fane be purified and that its worship be restored. He himself then went to Sais, restored all offerings to the goddess and also to Osiris, while he likewise ‘worshipped before the holiness of Neit with much devotion, as all the kings had done; he made great offering of all good things to Neit, the god who is lord of all the gods who dwell in Sais, as all the pious kings had done’ (Petrie, History of Egypt, 1905, iii. 301, 302). Though Cambyses was, as is universally acknowledged, a pious monarch in regard to his religion, he was thoroughly in accord with that pursued by Cyrus before him and Darius after him. His stabbing of the Apis bull, on the
Achaemenians

It is evident that the Old Persian inscriptions of Darius represent him as a worshipper of Ahuramazda and as filled with abhorrence of the "lie." One benevolent godling (Arīsta) and one malevolent fiend (Dūṣiyār) are mentioned under the same names in the Younger Avesta. The stylistic parallels which may undoubtedly be traced between the Achaemenian texts and the Avesta, on the other hand, are much enhanced by Bab. inscriptions from which Darius and his successors manifestly drew. His policy towards other faiths than his own was that of Cyrus. In his reconstruction of the kingdom on his accession, he stated that he "restored the place which Gaumata had digged down." (I. 64).

This view receives confirmation from a Greek and an Egyptian inscription of Darius. In the former text, found in 1874 at Dourmūnji (eds. C. Clermont-Ganneau and B. Delitzsch), the king reproves his subject Gudates, who had sought to efface all traces of the religion of his predecessors. Darius expressly states, that of his predecessors, and who had exacted a tax from the priests of Apollo. Who "Apollo" was is doubtful, but both Cos and Croesus, and they are strangely, identify him with Ašar (the sacred fire), who appears in Greeks, as not shown. This parallel is very similar to the Greek divinity Apollo, who in times past had given a favourable oracle to Cyrus, perhaps during his Lydian campaign, and caused a temple to be built to the Achaemenian dynasty. At all events, the inscription is not Zoroastrian in tone.

Still more polytheistic is the stele of Darius at Tell el-Maskhet (ed. Golenischeff, RTAP xxvii. 196-197), which contains the following words: (Darius) born of Nebit, the lady of Neb, image of the god Ra who hath put him on his throne to accomplish which he had begun (master) of all the sphere of the solar disc. When he (Darius) was in the womb (of his mother) and had not yet appeared upon earth, the (goddess Nešit) recognized him as her son... she hath (extended) her arm to him with the bow before her to overthrow for ever his enemies. As she had done for her own son, the god Ra. He is strong... (he had destroyed) his enemies in all lands, king of Upper and Lower Egypt, Darius who liveth for ever, the great, the prince of princes... (the son) of Hystaspes, the Achaemenian, the mighty. He is her son (of the goddess Nešit), powerful and wise to enlarge his boundaries.

Devout and noble though his inscriptions show him to be, Darius seems to have been by no means a strict monotheist. This statement is corroborated by the old Persian texts themselves, which show that he felt merely that Ahuramazda was, as he himself says, 'the greatest of gods.' A Persian inscription thrice contains the words hašt ēwāštādān ēwāštādān, which were formerly rendered 'with the clan-gods,' but which are now regarded as meaning 'with all the gods.' This interpretation is confirmed by the Bab. itti ērān gābbī and the New Elamite annap. sarpepatu-tašku ('with all the gods') in texts of closely similar content and phraseology. The plural of bērā ('god') occurs in the Avesta only in Yāst. x. 141, which states that Mithra 'is the wisest of gods,' but its eluvi form occurs at least thrice, and abundantly Zoroastrian passage (Denkert, viii. 15. 1) being especially interesting in this connexion, since it speaks of the 'worship of Ahuramazda, the highest of divinities.'

This phrase is strikingly similar to passages in the inscriptions of Darius and Xerxes which describe Ahuramazda as 'the greatest of gods.' That such a phrase is not necessarily polytheistic is clear from such passages as the Ormazd inscription of Ahuramazda of Bareš in the New Elamite version, however, occurs the statement, which may be noticed, that Ahuramazda was 'the god of the Aryans.' If stress may be laid on this (a fact which is by no means certain),
it may serve as a partial explanation of the policy pursued by the Achemenians with regard to the gods of the Babylonians, Egyptians, and Greeks. This view of Ahura Mazda as a national deity in the eyes of the Persian kings may readily be paralleled from other Oriental nations of antiquity. The adoption of the name of Ahura Mazda in the title of certain Persian monarchs is best explained by the fact that he is 'with all the gods,' of whom he was the greatest. In the light of this, the epithet παράγοιν, applied by Cyrus, according to Xenophon, to Zeus (Ahura Mazda) (above the sacred fire), possibly likewise becomes explicable (cf., however, the same epithet given by Greek poets to Αθήνη, Apollo, Hekate, Hermes, and Zeus; see Bruchmann, Epitheta Deorum graecorum, pp. 154, 156, Leipzig, 1859). Under any explanation it is a far cry from the nationalistic Ahura Mazda of the political Achemenians to the god of the Avesta, who brooks no rivals and urges his follower to 'convert all men living.' (Vayena, xxxi. 3).

4. Xerxes I.—The chief source for a knowledge of the religion of Xerxes I. is Herodotus, who states (vii. 43, 53, 54) that this king, when he arrived at the Hellespont in his expedition against Greece, received as a bood gift to 'Athene Ilium,' and also made a libation to the sun, and gave an offering to the sea. 'Athene of Ilium' seems to be the Persian Anahita, who is mentioned in most of the inscriptions of Xerxes I. and to whom offerings were offered, according to the Younger Avesta (Yatt., v.), 'a hundred stallions, a thousand bulls, and ten thousand sheep.' The correspondence in the number of oxen offered in both accounts is surely not fortuitous. The homage to the sun god and the offering to the sea, as we have seen, are the gods of the Avesta (Mithra) and the waters is too well known to require further elucidation (cf. Strabo, xv. 2. 13). If Herodotus may be believed, moreover, Xerxes sacrificed at a place called Niniveh, to the Persian gods, the most notable of which were his Greek boys and nine Persian girls, and he adds (vii. 114) that it was customary for the Persians to offer victims by burying them alive. In view of the fact that this custom is mentioned nowhere else, and of the deification of the sacred element earth which would, the statement of the Greek historian seems too improbable to be accepted as authentic. A passage of much interest, however, is that in which Herodotus says (vii. 40) that Xerxes was accompanied in his march by the sacred chariot of Zeus, which was drawn by eight white horses, whose driver went on foot, 'for no man mounteth on this throne' (cf. Quintus Curtius, iii. 8–15). The horse was, indeed, the beast par excellence among the Persians, and Ahura Mazda, the national deity, who thus escorted the king to victory quite as Jahweh did in His ark carry Joshua over the Jordan (Deut. 33. 24).

5. Artaxerxes II. and III.—The brief texts of Artaxerxes II. and III. are interesting solely as adding the names of Mithra and Anahita to that of Ahura Mazda. That this was a real innovation seems far from probable, in the light of the religion ascribed by the allusions in the classics to Cyrus and Xerxes. It is noteworthy, in this connexion, that Plutarch, who was by no means unacquainted with the true Zend-Aryan religion, recognizes the testimony of the inscriptions. In his Life of Artaxerxes II. he mentions the king's worship of Anahita, his oaths in the name of Mithra, as well as his coronation in a temple of 'Minerva' (a deity of uncertain identification).

The Achemenians are curiously, and perhaps significantly, ignored in the Middle Persian writings. The theory has been advanced that Artaxerxes I. argued by the Achemenians with regard to the Palmi texts under the name of 'Ardashir the Kayan, whom they call Voluman, son of Spend-dad,' who, according to Behman Yast, ii. 17, 'separates the demons from men, scatters them about, and makes the religion present in the whole world.' This hypothesis lacks all foundation. The Zoroastrian Artaxerxes was the son of Spend-dad; the Achemenian was the son of Xerxes; al-Biruni rightly distinguishes between them, and the identification of the two in the Shah-Namah and other sources is improper. The confusion of these two is due to the accidental coincidence that the grand- father of each was named Darius. Again, according to the Denkvert (iv. 25), 'Darai, son of Dari, ordered the defilement of the sacred fire of the whole Avesta and Zand.' This Darius, who was the son of Darius, is identified with the Achemenian Darius III. Codomannus, who was the son of Arsanes. Al-Biruni once more carefully distinguishes between the two, and it is not un- likely that he is right in so doing (cf. Nödeke in Geiger-Kuhn's Granddiss der Iran. Philologie, ii. 141), even though other Oriental sources identify the two. At all events, the equation is too doubtful, with the data now available, to serve as a basis for any hypothesis, either for or against the Zoroastranism of the Achemenians.

In any case, however, no proof has been made of the very plausible hypothesis of the Paris scholar Desno, who supposes (Mémoire sur la religion des Perses, etc., 1893) that this Darius and the late Greek predecessors of the king to whom the one dynasty is the other by the Pahlavi writers 'in their attempt to sway off some of the last kings of the Achemenian house menaced with a new dynasty, and successors of king Gustasp.' It may be accepted (and it is by no means unprobable), it would readapt the names of course that the undisputed Zoroastranism of the dynasty of Vishtaspa should be attributed to the added kings, whatever their own faith may have been. The lack of agreement between the monographs recorded in the Pahlavi texts and the dynasty of the Achemenian past, however, be taken into account in any attempt to solve this problem.

In the light of what has been said, it would appear that the Achemenians were pre-eminent worshipers of Ahura Mazda; they did not refuse to recognize other Iranian deities, such as the sun, the fire, and the waters, or even hesitate to honour the divinities of other countries, rebuild their temples, and restore their cult. Ahura Mazda was to them a purely national god, surrounded by subordinate deities who were clearly nature-divities. Numerous parallels may be drawn, both in concept and in phraseology, between the Old Persian inscriptions and the Avesta, although it is most significant that these coincidences are with the Younger Avesta, with its probable recrudescence of the pre-Zoroastrian nature cult, rather than with the Gathas; and it must also be observed that scribal and dialectical variations in the cognates exist between the Old Persian and the Assyr.-Bab. texts. The Old Persian inscriptions must be supplemented by all available sources, whether Greek, Egyptian, Babylonian, or Elamitic. From a careful study of all these documents, it becomes clear that the only conclusion which can safely be reached concerning the religion of the kings of this dynasty is that they were Mazdaismans, not Zoroastrians.
ACHELOUS—ACILITIES

ACHELOUS. — The name of the greatest river in Greece. Flowing from the watershed of Pindus in a southerly direction, it forms in its lower waters the boundary-line between Etolia and Acarnania before falling into the Ionian Sea. The river-god who presided over it was reputed the son of Oceanus and Tethys (Hes. Theog. 340); he was the eldest of 3000 brothers and supreme amongst them, in power second only to Oceanus himself (Aeschylus fr. 11a, Frumg. Hist. Gr. i. 101).

Other legends, after the manner of Etaeus, represent him as a man in consequence of whose sorrows the river first rushed forth as a divine solace (see, e.g., Prop. ii. 25, 33).

Tradition regarded him as the king of streams, from whom are derived the waters of all other rivers. In certain localities, such as he was worshipped throughout the Greek world, from Athens and Oropus as far as Rhodes and Metapontum. Thus it is not surprising that smaller streams besides the Etolian river bore his name — in Thessaly, Achus, Arcadus, and elsewhere.

Further, we find the word Achelous generalized in the sense of water (Eur. Buceph. 625, etc.); this occurs especially in the ceremonial phraseology of sacrifices and oaths — proving that the identification of the river-god is not a poetical refinement, but the survival of an old religious formula (Ephorus fr. 27; Frumg. Hist. Gr. i. 230).

Again, Achelus is the father of a numerous progeny of water-nymphs, such as Pirene, Castalyn, and Dirso, the guardian spirits of local Hellenic streams.

The appropriateness is less obvious when the Sirens appear as his daughters (Pansan. ix. 34, 2): perhaps they are so viewed in their aspect as the windless calm of the southern seas in summer (cf. Od. xii. 168).

For it has been held that Achelous was not only a river-god, but, as signifying water in general, also the lord of the sea (Wilamowitz-Moellendorff, Eur. Herakles, i. 29). His name sometimes is equivalent to that of the suitor of Deianeira, who was vanquished by Herakles after a fierce struggle. Like Proteus, he possessed the power of metamorphosis, and in this he is the forerunner of the form of a wild bull (Soph. Trosch. 9 f., 507 f.).

In the course of the fight, one of his horns was broken off by Herakles, and, according to one account, he ransomed it from his conqueror by giving in exchange for it the horn of Amulthia or coracopos (Apollon. Bild. ii. 7, 5). The ancients gave a rationalistic explanation of the story: Herakles represents the growing power of civilization, which reclaimed the marsh-land for agriculture by等方式 and diverting the wild exuberance of the river into a ploughed field. His name, then, seems rather as if Achelous was a name consecrated in primitive rite to express the principle of moisture as the source of life and growth. Further, since to a nation of cowards the development of generative power, the fostering river-god was worshipped in bull form. Whatever be the explanation, it should not be forgotten that the bull shape is a common type among the gods and is often limited to Achelous (cf. Eur. Ion 1261). A symbolical connexion between the two aspects of divinity was found in the horn of plenty, which, as we have seen, was mythically associated with Acheulos.

But Achelous had one other form besides that of the old man with horns, as a sea-serpent with human head and arms and bull’s horns, or as a bull with human face and long dripping beard.

The etymology of the word is unknown, and inferences based upon conjectural explanations of it should be unhesitatingly rejected.

A. C. PEARSON.

ACILITIES was extensively worshipped throughout the Hellenic world. Numerous guesses have been made at the derivation of his name both in ancient and in modern times, but the etymology remains quite uncertain. Nor does it appear possible to attribute to him with confidence any exclusively naturalistic significance, though he has been claimed as a river-god, as a god of light, and even as a moon-god; for us, he is merely the chief of the heroic figures of Greek myth who were defiled by later generations as transcending the normal powers of humanity. Nevertheless, there are certain prominent features in his worship which claim recognition.

He appears most conspicuously as a sea-god, whose temple was placed on promontories or navigable coasts, and was sometimes used as a safe anchorage, or, in time of stress, would assuage the violence of the storm. The contrary winds, with which his spirit visited the Greeks after the capture of Troy, ceased when Polyxena had been sacrificed (Eur. Hec. 199, 1267). In this capacity his name was perpetuated, and honours were paid to him at harbours, as at Tainaron and Skyros. The popularity of his worship amongst the Greek settlers in Asia Minor accords with this; at Miletus a spring was called by his name, and in his temple at Sigeum in the Troad offerings were made to him as a hero. But the most significant testimony to the high estimation in which he was held is the extension of his cult to the shores of the Euxine, where he was honoured as Pontarches (CIG ii. p. 87 n. 2076). To this neighbourhood it seems to have been carried by the earliest Greek navigators in their adventurous voyages of discovery.

His chief temple in this region was situated at Olbia on the mouth of the Hypanis, where a college of priests was devoted to his service (Dio Chrys. xxxvi. 80ff.); facing the narrowest part of the strait was a village settlement which grew up round another of his precincts (Strabo, xi. p. 494).

The most interesting and celebrated of his local cults was connected with the lonely shrine in the uninhabited island of Leuko (or Achilles Island, sometimes confused with Achein Epeiros, which Strabo places at the mouth of the Borysthenes), opposite to the mouth of the Danube (Eur. Andr. 1590; Pind. Nem. iv. 48). Here the only ministers were the sea-birds, and though navigators, for whom the temple served as a beacon, might land to sacrifice, they were obliged to leave at sunset. Here also Hekos and Achilies were believed to consort together; for sounds of high revelry and the noise of arms were heard by night, proceeding from the sanctuary, and filling with awe and amazement those who had been rash enough to anchor near (Philostor. Her. xx. 32–40).

In another aspect, Achelous was recognized as a god of healing (Gruppe, see below). This is inferred from the association of his worship with that of Asklepios, from the healing properties of his spear, from his connexion with healing buildings such as the Medica and Iphigeneia from his detection of the magician and thief Pharmakos, and from his victory over the Amazons. There are also distinct traces of his beneficent power in cases of ceremonial purification; the clearest instance is to be found in Pausanias' account of Poimandros, who successfully obtained his help.
ACOSMISM—ACOSTA

when suffering from the pollution of accidental homicide (Flut. Quest. Gr. 57, p. 290 c–f).

ACOSMISM (Gr. a privative, and eosmos, 'the universe,' in the sense of an ordered or arranged whole).—This term belongs primarily to the field of Ontology, i.e. the theory of the ultimate nature of Being and Reality; but it has ethical bearings also. Several possible differences of theoretical interpretation, the doctrine of Acosmism implies that the universe, as known to human experience, possesses no reality in itself, but is dependent upon, or is a manifestation of, an underlying real being. In a word, the universe must be viewed as a semblance. In the history of modern thought the classical example of the doctrine may be described as the metaphysical parallel to Hume's psychological scepticism. For Hume, Co-gito, ergo videtur esse. And just as he thus fixes illusion upon the experience of the individual man, so the acosmist holds the universe as a whole to be illusory. This conclusion, while defensible, as it shows the extent of the philosophical and historical and speculative conditions of the time, may be contorted on the strictly theoretical side. For it is obvious that the reality constituting the substance of the universe must be regarded as the real; it is no less obvious, however, that the only reality attributable to it must be derived, as concerns human experience, from the universe already declared to be illusory. For example, Spinoza's Absolute Substance—the reality underlying the universe—is known to man in the two 'attributes' Thought and Extension. These in turn differentiate themselves into 'modes,' each mode of Thought being the correlative of a mode of Extension. God is, therefore, at once the 'Thing' which thinks, and the 'Thing' which is extended. Hence (as the conditions of his age prevented him from seeing fully) any attribute of God, whether known to man or not, is a mode of possible substance.

By attribute I understand what intellect perceives of substance as constituting its essence (cf. Ethic. ii. 21, Schol.). Between this conclusion and Hegelian idealism there may be, doubtless, a distinction, but without fundamental difference.

And the reason lies open. Only from human experience can Spinoza, or any one, derive reality and meaning to inject into the so-called substance or mode. Underlying all of either the reality underlying the cosmos is nothing, or it achieves reality just to the extent to which it may be viewed as an effective component of human experience.

One need not do more than indicate the importance of this as bearing upon theological problems, especially those raised by the religions of India, or upon ethical questions, particularly those connected with Quetzal (ib. see)

The feeling of the overwhelming nature of the Ultimate Being tends naturally to Acosmism; so, too, does undue emphasis upon the transcendence of the Deity. In order, the conclusion follows usually from a more or less vague ethical attitude, rather than from metaphysical analysis and logical argument.

ACOSTA.—Uriel (or, as he was originally named, Gabriel) da Costa is an interesting but controversial figure in history. His philosophy is due mainly to the similarity between his life and that of another Amsterdam Jew of the same period—Spinoza. It may even be said that the harsh treatment he received from the Jewish community was the result of the vagaries of Acosta; but there was no real parallel between the two men. Acosta did not possess the strength or originality of character which enables a religious thinker to stand alone, yet he was gifted with enough independence to render it impossible for him to submit to the restraint of authority. Acosta was born about 1590 at Oporto, of a Marano family, i.e. a family of Jewish origin forced to conform to Roman Catholicism. Carefully educated in the new faith, he had every prospect of advancement; but, as he tells us, his studies of the OT left him dissatisfied with Catholicism. Determined to resume Judaism, he left his family contrived to escape to Amsterdam in 1617. Here he lived openly as a Jew; but, as was to be expected, he found Judaism less ideally perfect than he had dreamed. He soon came in conflict with the Synagogue as he had done with the Church, was excommunicated, recanted, again defied the authorities, was again excommunicated, and finally submitted to a public and degrading penance in the Synagogue shortly after which he shot himself. This was probably in 1647; Spinoza was a boy of fifteen at the time.

Gutzkow, author of the well-known drama on the subject, represents Uriel Acosta as a youth at the time of his suicide: he was certainly over 50; and if the dates given above be correct (as is most probable), he was nearer 60. Thus we are not dealing with a persecuted youth, but with a man of over sixty years, who deserves sympathy rather for what he was than for what he endured. His brief autobiography, written just before his death, is indeed a pathetic document. He called himself Eusebius, and it was published in Latin by Philip Limborch on pp. 156–164 of his de Veritate Religiosae Christianae (Gouda, 1637, since reprinted), and in a German translation by H. Jellinek in Acostas Leben und Lehre (Zerbst, 1874). It is as a summary of what we know of his career. He abjures both Christianity and Judaism, expressing himself with peculiar bitterness against the latter, whose teachers he repeatedly terms Pharisees. The only authority that he admits is the 'lex naturalis,' thus placing himself among the Deists. Nature, he says, teaches all human virtue and fraternity, while revealed religion produces strife. He speaks sympathetically of Judaism. Strongly enough, he finds all necessary rules for conduct in the Noahian laws formulated by the Talmudists; these were seven in number; and though the details differ in different Halabbin who live; they all include in God, the avoidance of adultery, murder, and robbery. These Acosta considers to be 'laws of nature.'

As a contributor to religious thought, Acosta was not original. But he belongs to the direct line of rationalists who were seeking by means of reason to so much significance in religious history. He lived in an age when tolerance was little understood even in free Amsterdam, and though his troubles were mainly self-provoked, he must always enjoy the sympathy of those who condemn the attempt of public authority to regulate belief and compel conformity. As a champion of freedom,
ACROSTIC—ACT, ACTION

ACROSTIC.—An acrostic (h) is etymologically an extreme as the first or line or verse, lit. 'row' (στροφή). Acrost. Const. ii. 57 prescribes an antithetical

1. Bickell and others find fifteen complete alphabets or remains of them in the Heb. OrT and Sirach, viz. in the following Psalms or chapters: (1-5)

2. Terms of (LXX 9.)—Remains of an alphabet spell by the first letter of alternate verses (Ps 1-6, 9-10, . . . 10, 14-15, 27, 30, 32, 33.) With ἀναλήμφαμα and ἐπιστευμανθὰ from 107.5 as initial words we should have ἄ to π, as in other cases noted below. The order ἀναλήμφαμα brings somewhat similar letters together.

Ps 9—. An alphabet minūs, with a letter from each verse except that the T is included in the Α. To restore the Β, begin v. 18 with Ἀριστ. (Ps 105). An appended Ἀριστ. makes up the number of the verses to the alphabet, in two series, like Ps 10, La 5, etc., such as can have that number of verses or sections, but are not alphabets (Bickell).

3. Ps 54.—An alphabet like (2), the added verse beginning ἄπειρον. EV and LXX have in v. 10, 'The righteous cry or cried,' for Heb. ἀπειράω. But with 2 to 14 (v. 15, 16) there would be no need to repeat. The righteous.

Ps 57.—An alphabet minūs, formed like (1). To complete 8, read in v. 24 ἀριστητήριον (with dactyl for ἀριστητήριον, the word in brackets for LXX ἀριστητήριον. In v. 29, ἀριστητήριον 1 is given the S.

(6) Ps 111, 112.—Alphabets with their letters from the halves of the verses, of which three at the end are numbered as 2-10.

4. Ps 119.—Known as ἡγίασμα γάρ τινα, 'the great alphabet' (Buxtorf, Lex. s. v. γάρ). Eight verses begin with αἴθρη, eight with τέλος, eight with ἀριστήτηριον. The name of the letters given in the English Bible, but not in the LXX. Note, however, that the Psalm is missing in B; and see the variants from the Psalters R and W.

5. (Ps 145.—An alphabet minūs, with a letter from each verse, beginning ἄπειρον (LXX ἄπειρον ἄπειρον) having fallen out before ἄπειρον (v. 16, 34). Of an alphabet with a letter from each verse; but in LXX B the S verse precedes the ἄπειρον verse.

(6) La 1.—An alphabet like (9), with the letters in the usual order. The LXX gives their names, some of them in B in strange forms. With Toade for 2 cf. Aquila's Greek for 'Sion' in Ps 103.29-30 (Orientalia, p. 51). (11) 13, 15) La 39.22-30. 11-12. Three alphabets, of which every verse gives a letter, that in (12) being of the form ΛΑ, ΒΒ, etc. Heb. 2 before but in the LXX, which here also names the letters, it gives 'Α and Α as wrongly as titles of the Β and Β verses.

(11) Nah 14.—On the supposed traces here of an alphabet arranged 'exquisito artificio,' see Bickell's Carmir, P.T., and art. 'Nahum' in Hastings' DB and in Elia.

7. Sir 39, 40, 41.—An alphabet before the discovery of the Cairo Hebrew, Bickell saw that Ben Sira's poem on Wisdom begins with an alphabet, but he did not satisfactorily determine all the letters. In the LXX R (ed. Swete) supplies materials for the beginnings of all but the odd verse in their right order. In v. 18 begin ἀριστητήριον; in v. 19 ἄπειρον (ἐνέχεσθαι); and supply the odd line from the Hebrew. The other letters may then be found without difficulty. Comparing G, H, and K, the letters indicated in v. 18 are added to the line, but in the Heb. it begins rightly or wrongly with them.

2. Evidently the alphabeticism of a composition is more or less of critical importance: it enables us...

Some find the names Pedalab, Pedalab, Simon in Ps 25.22. 110, 1-4. Pesketh. Esh detects Moes in Ps 25.22 and so from Ps 25 may spell out 11.7. The Midrash knows also of the letter for "mushroom".
we must have recourse to the words 'act' and 'action.' Hence, when we wish to designate the agency of man in its peculiar character, we must prefix the epithet. The peculiar character of human action, as the phrase is ordinarily used, is to mark the distinction from any sort of physical action, is that the former is an expression of consciousness. But in making this broad distinction we must notice, first, that it applies equally to all animal action as distinguished from physical and merely physiological action; and, second, in the discussion of human action the phrase is often used more widely to include unconscious actions exhibited by the human organism. The fact is, of course, that the human organism exhibits all grades of action, physical, animal, and human in the strictest sense. The only physical actions of the organism, however, which concern us in relation to our study of consciousness, are those which are like the latter in depending directly upon the nervous system, but unlike them in not expressing consciousness, whether in the form of feeling or purpose. Of summations of the nervous system, not expressive of consciousness, two grades are distinguished: the simple Reflex action, and the more complex Instinctive action in which a number of movements are associated and in which the division is a simple result—though it should be observed that the range of true instincts is very limited in the case of man. When we say that these actions are not expressive of consciousness, we do not necessarily imply that they have no conscious accompaniments, but only that the nature of the action is not determined by these conscious accompaniments even when present. The reflex action of sneezing is not determined by the sensations which accompany it. And similarly, though an instinctive action may be accompanied by sensation and feeling, the purposive character which it displays is not due to conscious forethought.

Of human actions, in the stricter sense, which are expressive of consciousness—or which, to use the technical term of psychology, are 'conations'—the most obvious type is the purposeful action, in which the performance of the action is preceded by an idea of the thing to be done. But it is evident that such purposeful action cannot be psychologically primitive, since those ideas or purposeful intentions, which are implicit in purposeful action, could have been formed only after previous experience of the same movements brought about in some other way. Consequently, either we must fall back upon reflex actions for a beginning, or we must hold that, in the most primitive phase of conation, a change of sense-perception, or the feeling which accompanies it, finds immediate expression in movement. To the former course, which is apt to be favoured by physiologists, there is the objection that reflexes, even though they may be primitive for the individual in the sense of being inherited nervous arrangements, have not been demonstrated at any time in the experience of the race. In our present experience of the formation of a habit, we can trace the degradation of conative action into action that resembles the reflex type. And it has been customary to assume that our inherited reflexes were originally formed by some similar process of degradation, the beginnings of action are left psychologically inexplicable. From the psychological point of view, then, we must prefer a different course, and regard as the original type of action that in which a change of sense-perception or feeling finds immediate expression in movement (cf. Ward's art. 'Psychology' in *Edr.,* vol. iv. p. 10). And this will appear the more plausible if we remember two points.

First, such 'impulsive' action, as we call it—the terminology of the subject is very confused—although as a rule definite enough in the adult (e.g., in warding off a blow), is by no means as a rule as definitely the result of an idea. We can be certain, as the movements of an infant are in comparison with those of an adult. Second, it is now recognized, and has been shown experimentally, that all movements, contrary to what was formerly believed, are subject to this tendency to affect movement, although in our present experience these motor effects are to a great extent either quite inappreciable or else inhibited (cf. James, *Principles of Psychology* [1890], ii. ch. xxiii.). And the difficulty of a psychological theory of action is thus greatly diminished when we see that action does not begin with particular and isolated definite movements, but that these, whether they be inherited reflexes or acquired impulses, must have been developed by the progressive restriction or specialization of movement that was originally more diffused.

Although it is with purpose rather than impulsive action that the moralist is mainly concerned, it seems a mistake to confine the epithet 'voluntary' to the former, and the practice of those psychologists is rather to be followed who tend to make a distinction between the things that are expressive of consciousness. There are, of course, objections to such a usage. We use the noun 'will' in a much narrower sense. And the term 'voluntary' no doubt seems paradoxical as applied to the simpler expresser movements which are hardly to be distinguished from mechanical reactions. But we have to remember that the impulsive actions of the adult are usually of a higher type. The hasty words of an angry man may burst from him without any previous distinct idea of what he is going to say, and yet there accompanies his utterance a consciousness of its meaning, in virtue of which we hold him responsible for what he has said. The more definite and significant an impulse is, the more it must be regarded as an expression of character. One man will say things in anger which would be impossible to another however enraged. And the very fact that he permits himself to go on, that he is not brought to a halt by the consciousness of what he is saying, shows a basis for the impulse in the man's general character which forbids us to regard the outburst, however impulsive, as involuntary. What we must rather say, then, is that all impulsive action is also in a broad sense voluntary action, but that voluntariness has many degrees. The lower, the less, the higher, the more, the less possible it becomes to distinguish voluntary from involuntary action in character.

Before proceeding to the consideration of purposeful action, we may refer rather briefly to a general conception of human action, which, if true, would profoundly modify the significance to be attached to the element of conscious foresight in man's life. It is a conception which is apt to find a ready acceptance with those who look upon human conduct from the point of view of biological evolution, or, again, from the point of view, not very dissimilar, of a philosophy like Schopenhauer's or v. Hartmann's, which seeks in blind will the ultimate principle of existence. Human action, it is sometimes argued, is not really determined by the transient desires, the petty motives and calculations of interest, of which an introspective psychologist makes so much. All this constant fluctuation and transition from one object of desire to another is only so much surface play. The true forces lie far deeper, in the strong instinctive tendencies of man's nature. It is the real shaping force of life, these that use for their own hidden ends all the superficial activity of
desire and feeling and calculating intellect, to which the reflexion of the individual naturally but mistakenly attributes the direction of his life. Now, such a conception of human life may have an appearance of profundity, but it conveys no real insight. It is not a proper ab- structs, the work of scientific analysis and explanation. To appeal to instinctive tendencies is only to involve ourselves in empty mystery, unless we can definitely characterize these tendencies, and show how they operate, and why they manifest themselves in just such ways as they do. Yet for such concrete analysis we must, of course, return to the very surface processes of consciousness which we had affected to despise, and must seek in their definite modes of interconnexion, and not in the vague and mysterious depths of instinctive ten- dencies, the definite explanation of the course of human life.

When these two conditions are fulfilled, first, that definite movements have begun to emerge from the earlier stage of diffused movement—an emergence which may be greatly facilitated by the existence of life or movement, and second, that images have begun to be formed, then the higher stage of purified action becomes possible, in which the idea or image of a movement to be executed precedes and directs it.

The idea of movement may be prompted by a present object (with whose attainment or avoidance the movement must, of course, have been already associated), and, as so prompting, the object is an object of desire or aversion. But the range and significance of desire are vastly widened when not merely present objects, but objects that are themselves represented only in idea or imagination, are sufficient to prompt ideas of movement. For the idea of movement is the bond of the immediate present, and is enabled both to modify his present situation by the aid of ideas derived from his past experience, and to anticipate the future by present preparation. With the development of such desire-prompted action there is bound to emerge the situation described as a conflict of desires, with its need for a volun- tary decision between them. This decision has often been represented by psychologists and moralists of the Associationist school as brought about in a quasi-mechanical way: it is the strongest desire that prevails, and the conflict is simply a competition of the two desires, as in the case of impulse, so here, if we take desires of a very simple kind, depending as it does merely on their relative strength, seems hardly to mark any essential peculiarity of the process so described. The voluntary decision between two desires of a very simple kind, depending as it does merely on their relative strength, seems hardly to be distinguished in character (save for the fact that the process goes on in consciousness) from the mechanical result of a conflict be- tween two forces. But here, too, we must remem- ber that the simplest type of choice, say the choice of a child between an apple and an orange, is not really representative of the more important choices which the adult constantly has to make. And it is just in proportion as the conflicting desires are not simple or low-grade, but complex and significant, that the choice becomes an expression of character, and becomes therefore in a fuller degree voluntary. Now, the more complex and significant the desires are, the less is it possible to picture their conflict as a mere collision between two forces of different intensities. The man who has been a lawyer whether he will continue the present accustomed vocation or accept a new career that has opened out for him, is not simply dis- tincted between a love of ease and a love of gain. He is deciding ultimately between two complex schemes of life, and to represent such a decision in terms of a simple quantitative difference would be a caricature. The factors which do admit of quantitative measurement in money value may even be the least influential of all.

It is evident, of course, that in an example like this we have gone far beyond the range of the desires that merely reproduce past experience in imagery. We are at a level at which conceptual thinking has long been at work upon the data which memory supplies, a level at which the agent habitually thinks in terms of generalized purposes, to which he refers, and by which he guides, his particular actions. The desires of the adult are nearly always more or less significant. That is to say, the desired object is desired not merely for its own sake, but because it fits in with some wider purpose. And the more intelligent and thoughtful the agent is, the more his desires and purposes will be organized in this way, and rendered subservient to the scheme or type of life in which he sees the complete realization of his powers.

We must indicate the psychological processes involved in this higher development of the idea of movement and action. One practical relation that must soon be forced upon the attention of an agent trying to bring about an ideally represented state of things, is that of means and ends. What is the fuller recog- nition of this relationship among objects of the process of deliberation, in which the agent seeks to discover the means of attaining an end, or to de- termine which of two or more ways of attaining it is the best. In Aristotle's classical analysis of the deliberative process (Nic. Ethics, III., iii.), choice is expressly characterized as choice of the means. Such a view of choice will not, however, apply to all cases without straining. For, although in every choice between two objects, some one of the two objects is chosen and some is rejected, and in every action some end or criterion is implicitly assumed, there is an obvious difference between the case in which the end or criterion is explicit from the start of the deliberative process, and the case in which it emerges only as a balance of advantage at the end. And we must further recognize the possibility, of which Aristotle takes no account, that even where we start with a certain end explicitly before us, our deliberation may, by bringing out other ele- ments of significance in our end which we had not before fully appreciated, cause us to modify or abandon it altogether. In short, the more impor- tant fact is the matter for the discussion, namely, that the choice tend to express, not an isolated desire for a particular end, but the whole character of the agent, or, what is the same thing, his ultimate and all-inclusive desire for the kind of life which is to him best. And the more strenuously a man lives, the more will the unity of his character tend to work itself out in even the simpler actions of his daily life.

It is of choice of a more or less deliberate kind that the term 'will' is often reserved in psycho- logical and ethical discussions. But we must not suppose that the new term denotes a new faculty or energy of mind. The expression 'flat of will' often used in this connection is very misleading. The man who seriously sets himself to deliberate must mean to come to a decision. He starts, that is to say, with some sort of decision already vaguely outlined in the shape of possible alternatives, and the only function of deliberation is to eliminate what is doubtful and make the proper course of action clear. This being done, nothing more is needed: if the man was impatient to act, the obstacles in his way have not been removed, but he will act at once. The general purpose of acting was present all through, and by means of the de- liberative process this general purpose takes shape in a definite volition. A flat of will, additional
and subsequent to the phase of conation in which the deliberative process was complete, would be
noise if it merely gave its consent, and wholly arbitrary if it withheld it. For, if any reason
remained for withholding consent, the deliberative
process could not have been complete, and it is only a sense
of such incompleteness that could make the agent
hesitate and hold himself back from action. Thus,
if, by the question of this conative, or rather of will and
meaning at all, we must regard it as merely emphasis-
ing the last or finally decisive element in the de-
liberative process itself, the thought that clinches the
slowly forming decision and issues at once in action.
In our consideration of the development of cona-
tion in the individual, we have so far been abstact-
ing from those aspects of the individual's action which depend upon the essentially social character
of human life. In point of fact, however, the actions of the individual for the most part do
either explicitly contain or not remotely imply a reference to other persons, and to their agency in
relation to himself as well as to his own agency in relation to them. And just as clearly from in indivi-
dual action manifests itself not merely in the social
content of the action, but in the definite control
which social influences exert over the will of the agent, so, too, we must recognize that, in a particular prohibition or command, than he begins
to experience this social control, which in varying forms is to continue all through his life. At first
it comes to him from without as a constraint upon his desires, but more and more it tends to become
an internal factor in his own will and character, and so not more society's law than that of his own
nature. At first it comes to him in the form of particular injunctions to refrain from particular
objects or to do particular acts, and his obedience is
an obedience given merely to particular persons,
and more and more it tends to take the generated
and impersonal form of rules of action to be obeyed
merely as such. These rules become concrete, of
course, only in the personal claims and expecta-
tions which they warrant, but their control reaches
out beyond every particular case, and pervades the
whole practical thinking of the individual. Hence
the important consequence that action constantly expresses, not a consideration of means and ends
at all, but a simple obedience to rule, and that,
even where it does express a consideration of means, this consideration is controlled through and through by the habitual regard
which we pay to social rules in all our practical
thinking.
We have in our sketch, we may ask as a final
question, how far we can bring the whole develop-
ment of conation and action under a single for-
ma. Various attempts have been made to find
an explanatory formula applicable to action at all
stages. Many psychologists and moralists have
sought such a formula in the connexion of action with feeling, i.e. with pleasure and pain. This connexion has been asserted in two forms which it is important to distinguish clearly from each other.
On the one hand, it may be held that feeling is the
efficient cause of action. This doctrine is applied
over the whole range of human action, and means
that between various impulses, desires, or aims,
that one only always tend to be realized which
gives the greatest present pleasure or relieves the
greatest present uneasiness. And we must, of
course, observe that present pleasure or uneasiness
may be caused not merely by present events and
object but by the mere images or thoughts of
distant events and possibilities. On the other hand,
it may be held that feeling is the end or final cause of action. This doctrine (technically known as
Pleasure for William Paley) is applicable only when
we deal with actions that are defined as not being
of purpose to impulsive action. It means that of various
possible courses of action represented before the
mind, that one will always be chosen which promises
most future pleasure or least future pain, pleasure being
the positive and pain the negative effect of a
particular act of desire. This doctrine is now almost universally
abandoned in psychology and ethics. For it is
quite evident that there is a great deal of pur-
pose in human action that is not determined by calculations of future pleasure and
pain at all. The hungry man seeks food not for
the pleasure of eating, but for the mere satisfaction
of his hunger. The honest man desires to pay
his just debts not for the pleasure of having been
honest, but merely because he is honest and wants
to remain so. The other form of doctrine, accord-
ing to which we do what continues present pleasure or
relieves present uneasiness, is more plausible (cf. the change of view in the chapter on 'The Idea
of Power' in Locke's 'Essay,' Fraser's ed. vol. i. p. 332).
Nevertheless it is open to objection on grounds both of fact and of principle. The objections of fact are
that action often goes on for a con-
siderable stretch in a practically neutral state of
feeling, (2) that we may persist in painful actions
in spite of their painfullness. Now we may, of
course, explain the former by an external
obedience to the greater uneasiness experienced on stopping. But such uneasiness would seem itself
to imply a direct interest of corresponding strength
in the object of our action, and it is simply simpler, therefore, to refer the persistence to this interest
directly. Moreover, as a matter of principle, it
seems impossible to explain in terms of merely quantitative variations of feeling the definite forms
in which action takes. What we have to explain
is not simply varying degrees of one funda-
mental type of action, but many actions of widely
different types, and the particularity of the action
can be explained only by the particularity of the
interest which it expresses. There is thus a good
deal to be said for a view which seems to be find-
ing increasing favour with recent psychologists
(e.g. Stout, Analytic Psychology (1856), i. 224 ff.;
Titchener, Outline of Psychology (1896), § 85, viz.,
that pleasure and pain, agreeableness and uneas-
iness, are not so much factors in the causation of
activity as the feeling-tone which accompanies and
reflects its varying fortunes.
Another form of explanation for action is that
actions are caused not because of the desire for some
object or desire, but because of the desire for
other actions. This idea is, however, more
realizable, for it is possible for many actions to be
conditions of other actions, and the desire for
these other actions may, indeed, be more important.

Literature.—In the text-books of psychology the various phases of conation or action are apt to be treated in detached

ACTION SERMON—ACTIVITY

ACTION SERMON.—The designation given by Presbyterians in Scotland, and used by Scottish congregrations, for an address which immediately precedes the celebration of the Lord’s Supper.1 The name is derived directly from John Knox’s Book of Common Order and from the Westminster Directory for the Public Worship of God, both of which state that the service the celebration of the Holy Communion is described as ‘the Action.’ The use of the phrase in the earlier document may be traced partly (1) to the Liturgy of Calvin, which was largely the basis of the Book of Common Order, and in which the section entitled ‘Mode of celebrating the Lord’s Supper’ contains this rubric:—The ministers distribute the bread and the cup to the people . . . Finally, en vue d’action de grâce; (2) to the pre-Reformation use of the word actio to denote what was regarded as the essential part of the Eucharist, the Sacrifice of the Mass, wherein ‘Sacramenta coniunctar Dominicae.’ 2 Of course, and those who followed him, while retaining the word ‘Action,’ used it with a different signification, applying it to the celebration as a whole, or to the sanctification and distribution of the sacred symbols, without reference to the sacrament. While Knox’s ‘action de grâce’ was probably the chief cause (although indirectly) of the term ‘Action Sermon’ being introduced in Scotland, the long and popular retention of this term is due, doubtless, to the broader application of the word ‘action’ to the entire sacramental celebration; for the designation ‘Eucharist’ (Thanksgiving) has never been widespread among Scottish Presbyterians.3

The employment of the phrase ‘Action Sermon,’ with a sense almost within living memory declined, owing (1) to the somewhat diminished relative importance now attached to the pre-Communion sermon, as compared with the devotional parts of the pre-Communion service; (2) to the prevalence in towns of additional Communion services (in the afternoon and evening), which are not immediately preceded by any sermon.

HENRY CONAN.

ACTIVITY (Psychological and Physical).—No definition can be given of Activity which does not involve the term itself in some concealed or overt form; we can only (1) indicate the wider class of things or events to which it belongs; (2) describe the general characteristics of its generation, persistence, and the general nature of its expressions or consequences; (3) distinguish one form of activity from another, as bodily from mental; and (4) describe the conditions of our knowledge of that form with which we are concerned.

1. (a) Activity belongs, within the world of existence, to the class not of things and qualities, or substances and attributes, but of events, processes, or changes: an activity has a beginning and an end; —‘Two notable examples of the designation being used may be quoted. (1) In 1674, during the persecution of the Covenanters, John Welsh, great-grandson of John Knox, is stated to have ‘preached the Action Sermon’ at a conventicle held near the bank of the Whitadder, in Teviotdale (see Blackadder’s contemporary Memorials, p. 206). (2) In the diary of Mr. Andrew Savile for 1628, the entry occurs, ‘I addressed myself to write my Action Sermon’ (see Mrs. Oliphant’s Life of Edward Taylor, vol. i. p. 368).”

HANS O. LUHMANN.

ACTION (Latin, a deed) —A form or act, the essence of which is occurring, and the event of which is being produced, as the case may be. Thus, for example, while the term action is generally used in connection with the noun of the same designation, the word denotes a form which is continuously developing; it is used to signify that the form is progressing in a state of being. The action of something, as a thing or thing, is the substance or substance, in or to which it takes place; all change implies something relatively permanent, as Kant pointed out, as a condition not of its being known, but also of its existence. The activity of radium must be referred either to the visible substance itself, or to the chemical analysis of the known chemical analysis (as the form of a chemical reaction) only when the continuous flow of all materials or substances in the world is taken into consideration. For it is not only the chemical analysis of the substances which are supposed to be the materials of the universe which are supposed to be the materials of the universe, but also the material and physical structures of all things, such as a body or a substance, which are supposed to be the materials of the universe. For it is not only the chemical analysis of the substances which are supposed to be the materials of the universe which are supposed to be the materials of the universe, but also the material and physical structures of all things, such as a body or a substance, which are supposed to be the materials of the universe.

For the simplicity of a form, as a thing or thing, is the substance or substance, in or to which it takes place; all change implies something relatively permanent, as Kant pointed out, as a condition not of its being known, but also of its existence. The activity of radium must be referred either to the visible substance itself, or to the chemical analysis of the known chemical analysis (as the form of a chemical reaction) only when the continuous flow of all materials or substances in the world is taken into consideration. For it is not only the chemical analysis of the substances which are supposed to be the materials of the universe which are supposed to be the materials of the universe, but also the material and physical structures of all things, such as a body or a substance, which are supposed to be the materials of the universe. For it is not only the chemical analysis of the substances which are supposed to be the materials of the universe which are supposed to be the materials of the universe, but also the material and physical structures of all things, such as a body or a substance, which are supposed to be the materials of the universe.
activity or the expression of activity, and the amount to be put forth at any moment (Fechner, Physiognosik, 1869; Höfer, Psychische Arbeit, 1865). The activity is continuous because of the condition under which the organs of the organism receives from the play of the environing forces. It may be doubted, however, whether the term ‘activity’ would be applied, e.g., to the movement of a mill. As will be seen, as in the law of inertia, Dr. Stout suggests (a body tending to continue its motion with the same velocity in the same direction) (Analytic Psychology, i. 146; but cf. 148). Such a body would be described as active only when it impinges upon another body and transmits its own motion, wholly or partially, to the latter. The ‘activity’ in the continuous movement of the first body would be referred rather to the initial impulse of that force which sent it on its way.

(ii) The second criterion is that as to the conditions of activity being within the active body. From this point of view, a body is active so far forth as its changes are determined from within itself, i.e. Condillac’s statue: ‘It is active when it recalls a sensation, because it has in itself the cause of the recall, viz., memory. It is passive when it experiences a sensation, because the cause which produces the latter is outside of it (the statue), i.e. in the odoriferous bodies which act upon its organ.’* (At this stage the statue was supposed to have only one sense—

that of smell). Substantially, Condillac’s statement, that ‘a being is active or passive according as the cause of the effect produced is in it or without it,’ would be accepted to-day. The difficulty would be (1) to determine what is the cause of a given change, and (2) to determine whether the discovered cause is within or without the active being. If, for example, we refer all actions of the body to purely physical causes,—brain and nerve processes and the rest,—and regard the soul or consciousness as a mere spectator or companion of these central processes, without causal efficacy, then there is no such thing as mental activity, but only mental passivity.†

The mind would no longer determine even its own changes, and so be active with respect to them, for the conscious change is always a by-product of certain physical changes. Of theories with regard to the relation of mind and body, neither automatism nor psychophysical parallelism is consistent with the consistent existence of mental activity; the latter is compatible only with spiritualism on the one hand, the interaction theory on the other. The second difficulty—that of determining what is and what is not active being—may be illustrated from the controversy as to the existence of mental or psychical dispositions, or tendencies towards action, as opposed to merely physical dispositions, i.e. special arrangements or structures of the brain. Probably nine-tenths of the conditions of any mental act—an act of seeing, for example, or of hearing; an act of imagination or memory, or volition—lie beyond consciousness, or below the threshold of consciousness. Our visual perception at any moment is determined largely by our own experience in the past and the general direction of our interests: the purely sense element,—what is given,—the affection of the retina, or the feeling of the ocular movements—is insignificant as a contribution to the resultant perception. Yet the latter appears instantaneously and as a single act.

Are the submerged factors wholly physical—the excitation of special cortical arrangements which in their turn are the direct product of past experiences, or in the present, either explicitly present, although out of distinct consciousness, and which are re-excited by the given sensation? (Stout, Manual of Psychology, bk. 1. ch. 2, and Analytic Psychology, ch. 2). The analysis of a complex tone into its partials is given as an instance:

*Dr. Lipps holds that the unanalyzed note is a simple experience. The new tones which analysis discovers are, according to him, not in any sense preexistent in the original tone. The analysis itself brings them into existence, not only as distinctions, but as felt differences. According to him, what is analyzed is not an actual experience, but an unconscious complex mental disposition corresponding to a complex physiological modification of the brain substance* (Analytic Psychology, vol. i. p. 61).

The value of the argument here is to show that our idea of mental activity will differ according as we interpret the disposition or tendencies from which acts of perception, of memory, of association flow as psychical or physiological, or both. If they are physiological merely, as many hold, then, not being in the mind, they cannot be regarded as internal causes of mental changes or effects, and the theory of mental activity is therefore not to be taken so far as their effects are concerned.

(iii) The third characteristic is much more controversial than either of the others. A being is active in popular speech, only so far as the effects of consciousness and its sequences in it are transmitted to other beings; in other words, activity is transient causality, not immanent. In a body moving under the law of inertia, it may be said that the cause of its motion, in a given direction, with a given velocity, at any one moment, is its motion in the same direction and with the same velocity at the previous moment (Stout, Analytic Psychology, i. p. 146). Hence its motion at any moment is self-determined, i.e. both cause and effect are within the same being. And, according to many, mental activity exists only when there is self-determination in this full sense. It may be questioned, however, whether immanent activity in this sense ever falls within the scope of human experience: the continuance of a body under the law of inertia is not activity; it is absolute passivity, the movement as a whole being the effect of the original impulse. In modern science, the tendency is to regard all the intermediate factors, in a case of self-determination, are within the mind. The volition, to recall a name, for example, works itself out only when the necessary physiological substratum is present and untouched. Even the moral revolution must make use of similar physical aids. It does not appear, then, that immanent activity, so far as our experience goes, is ever anything but indirect: the mind does not act upon itself, except by exciting physiological processes, to which presentations correspond. This conclusion may seem to render introspection, internal perception, or self-observation impossible, since it is a form of action. Comte’s arguments against introspection are indeed irrefutable, so far as pure introspection is concerned (cf. Miss Martineau’s edition of the Positive Philosophy, vol. i. pp. 9, 81; but introspection on the basis of experiment is free from these objections, and is, in fact, the first method not of psychology alone, but of all science (Wundt, Philos. Stud. iv. 1886). This introspection is merely the analysis of presentations, sensations, feelings (impressions) and ideas, memory, etc. through repeating the conditions of the experience itself which has given the presentation: introspection is thus in no sense a turning of the mind upon itself, but is a difference from external perception, which is only a more accurate and detailed perception, so as
to bring out elements not previously or directly experienced. Introspection is thus, as a form of mental activity, indirectly immanent; directly, it is an interaction between the mental and the physical. The first effect of the action is a change in the organism, of which the actions react upon the mind, and a new and modified presentation results. All activity is of this type,—a moving body would be described as active only when it effects a change in its environment, which the organism suffers a change, but this change is not that in which the activity is thought to result, or which is referred to the activity. In itself activity is essentially transparent; it is not excluded, of course, the possibility that the highest forms of activity are those which are indirectly immanent, i.e. in which the outcome of the activity is a change in the subject itself or self-determination.

2. The general conditions of mental activity are partly physical and partly psychical. Among the former must obviously be included the nature of the cortical systems present, their degree of nutrition, and the like. Among the latter fall all presold, producing bodily movements which is wholly thus far as its direct presentations are concerned: it may select among them, give prominence to some and reject others, but their immediate condition is always the same. Presentations is true also of feelings and emotions: a feeling represents the subjective side the attitude of the individual as a whole in a given situation, while a presentation is representative of changes in this environment, directly or indirectly affecting him. In both, the mind itself is passively affected, but each may be stimulating or directive of its activity. Feeling especially has been throughout mental evolution the dominant of activity, becom deeper or more intense or more persistent as the presentation side of mental life received greater expansion and greater differentiation. The activity itself has no presentational or feeling-side. Although an element, it is not one of which the subject himself can be directly aware. The immediate effects of mental activity, on the other hand, are cortical and bodily movements, in primitive life diffuse, indefinite, uncoordinated, later, as experience moulds the organism, becoming definite, coordinated, and centralized. It is only through these bodily changes that mental activity produces changes in the mind itself, effecting there the activity, and constitutes, as it were, an organism, new and creative mental syntheses. The formation of a moral character, for example, is impossible without the constant practice of moral actions. The outward actions and religious, in the physical organization, and thereby the mental organization as a whole is modified in accordance with them. Without action, a character cannot be formed; nor, being formed, can it be maintained.

3. The contrast between bodily and mental activity has been already discussed in what has been said above. We have assumed that body acts upon mind, giving rise to presentations, and mind upon body, producing bodily movements which its turn may lead to changes in the cortical system and thus indirectly to changes in the presentational field. Whether there is any real causation in the one for the other is a metaphysical question on which we do not touch.

4. It will follow that mental activity cannot be directly apprehended either through feeling or in any other way. We all that is apprehended is the sequence of conditions and effects of which the latter are represented in consciousness. There is no more ground for assuming a primitive consciousness of activity as the basis of the conception of activity than there is for assuming such in any other case of symbolic knowledge,—for example, that of chemical affinity. There are, of course, primitive experiences on which these conceptions are based, but the conceptions are built upon them, not drawn out of them. The most complete description of the phenomena on which our knowledge of mental activity is founded (below) this in turn:—

"If we try to find for the "striving" in the will, process itself a substrate corresponding in some degree to this expression, we always come to certain feelings, belonging principally to strain and excitement emotions, and which may most fittingly be called feelings of activity." (Physiolog. Psychologie, ii. 249). These 'mediate the consciousness of activity directly from itself to all from self-observation, and which, under whatsoever circumstances we find it, whether accompanying an external action, or an act of attention directed upon the contents of consciousness themselves, appears of a uniform nature' (ib. 322). It may be defined as a total-feeling, composed of partial feelings of tension and excitement, following a regular course from beginning to end, the completion being the sudden conversion one of the partial feelings (that of strain or tension) into its opposite—con-sciousness—its 'appereption,' in Wundt's terminology. During this time we always find, according to him, the above-mentioned feeling of activity. It is the more vivid the more the mental vision is concentrated, and continues until the idea has reached perfect clearness of consciousness. It is more distinct, however, in the state of active thought or tension towards some expected impression or idea. In such a case there are always certain sensation-elements accompanying or entering into it,—those of the muscular strain of accomodation of the sense-organ in attention, which Fechner has described (ib. 557; cf. Fechner, Psycho-physik (2nd ed. 1880), ii. p. 475). There is no such thing as an abstract activity, always the same, but turned, like a searchlight, in different directions, of which, moreover, we are directly aware. What is always the same and is always found, in every case of volition or mental activity, is just the peculiar complex of feelings and sensations referred to. The feeling as a whole is a direct contrast to that which we have when an external impression, or a memory-image, arises, does not harmonize with or correspond to the present disposition of the attention, but suddenly compels it into a direction opposed to that of its activity up to that moment; this feeling is the feeling of passivity. Each as a whole is simple and indefinable, but each belongs, at the same time, to several of the general classes of feeling, of which Wundt recognizes six (ib. 532). It is clear that for Wundt, as for others, the activity itself, the inward act, is not directly cognized at all; the complex of feelings is merely an index or sign by which we infer the activity to be taking place. With Dr. Ward this is still more the case. Wundt recognizes six (ib. 532). It is clear that for Wundt, as for others, the activity itself, the inward act, is not directly cognized at all; the complex of feelings is merely an index or sign by which we infer the activity to be taking place. With Dr. Ward this is still more the case.
the receptive or passive, and the motor or active in the stricter sense; and our experience of those we project in predating the causation of the two halves does not make a whole; so we have no complete experience of effectuation, for the simple reason that we cannot be two things at once: (ib. 53).

All our feeling are present in all states of consciousness, they show no differentiation of parts, possess therefore no marks of individuality by which they may enter into association with other acts of the same or foreign presentation, and as they cannot enter into associations, so they cannot be reproduced or recalled in any sense analogous to that in which presentations are recalled (ib. 44).

It might perhaps be said that, on Dr. Ward's view, activity is a simple unanalyzable phase of experience, but can never be an object or content of experience. Professor James has argued with great force against the conception that there is any peculiar consciousness of activity, more especially in the form of a feeling of innervation as it has been called—the feeling of the current of outgoing energy, in volition or attention or other active states—which is defended by writers otherwise on so fine a line as Dr. Helmholtz and Dr. Wundt (Principles of Psychology, ii. 492 ff.; cf. i. 299 f.). What is in the mind in ordinary volition before the act takes place is simply a kinesthetic idea of what is to be the mental act; it is the act of making up of memory images of the muscular sensations denoting which special act it is. All our ideas of movement, including those of the effort which it requires, as well as those of its direction, its extent, its strength, and its velocity, are images of peripheral sensations, either "remote," or resident in the moving parts, or in other parts which sympathetically act with them in consequence of the diffuse "wave" (ib. 494). Dr. Wundt, himself, at another point, has come to admit that there are no differences of quality in these feelings of innervation, but only of degree of intensity. 'They are used by the mind as guides, not of which movement, but of how strong a movement it is making, or shall make. But does not this virtually surrender their existence altogether?' (ib. 500). The fundamental form of mental activity, according to James, is attention, and the fact of attention is known partly through changes undergone by the idea to which we attend, and partly by muscular sensations, in the head and elsewhere, which accompany the strain of accommodation and mental. Dr. Stout has very rightly pointed out that James here separates activity from the process which is active, and makes it consist in another collateral process. It is, 'the effort of, the feeling of, the motion of, the excitement of, the sense of, the sensation of, with the motion of some other body' (Anal. Psychol., i. p. 163). James does not, however, identify the activity with the sensations by which we become aware of it; they are indexes of something which directly we cannot know. By Dr. Stout himself this is precisely what is denied: an idea must be based upon some direct experience or sentence—'the thought of succession in time must be based on the direct experience of time-transience, as the thought of red colour is based on the corresponding sensation.' 'The cardinal antithesis between mental activity and passivity is not merely a group of relations ideally cognized by the reflective intelligence. Mental activity and passivity are not the same, for activity is energy, and passivity is being felt.' It may readily be admitted that change or transition is given as a direct experience; but an activity is much more than a transition. It involves (1) directness or tendency of the transition towards an end, and (2) some feeling or knowledge of effectuation in the successive phases of the realization of the end. It is impossible to see how either a tendency towards an end, or the effectiveness of a given activity, which can be a direct experience or feeling of the mind. Causality cannot exist in being felt,' and causality is an essential feature of activity. We conclude, then, (1) that there is no direct consciousness of activity; (2) that the consciousness of activity is a symbolic act, based on certain complex groups of feelings and presentations, in which similar elements and arrangements of elements constantly recur.

5. What is the simplest or primary form of mental activity? (ib. 562) The answer is given: (1) Effectionation of physical change, (2) Attention, (3) Apperception. The first identifies activity with sensation simply, of which the lowest form is impulse to movement; the second, the mental element in sensation to the movement of the attention; the third, to the play of apperception. In the first, which is that adopted above, mental activity is self-determination only in an indirect way; the mind cannot act immediately upon itself; it can produce a desired change only by subjection itself to certain physical conditions or circumstances through which the change may be effected. The question of Liberty and Determinism does not turn in the least upon the relation of mental activity to bodily. As has been said, 'Whatever be our opinion about our liberty or our determinism, we accord to the different moments in which perception, movement, and perception are conjoined, upon the nature of the following moments. We consider our actual modifications as acting upon our future modifications.' Even those who feel themselves subject to an inextinguishable necessity, do so not because their will is without efficiency, but, on the contrary, because the efficacy of every idea, every feeling, every volition is such that it does not leave the smallest place to contingency' (van Biema, Revue des Métaphys. et Morals, 1900, p. 284). But an idea has efficacy not in itself, but only in so far as it excites feeling, and thereby stimulates activity or striving. Both Dr. Ward and Professor James, from different points of view regard attention as the primary and fundamental phase of mental activity. 'The effort of attention is thus the essential phenomenon of will' (James, ii. p. 562); but 'this volitional effort pure and simple must be carefully distinguished from the muscular effort with which it is usually confounded. The latter consists of all those peripheral feelings to which a muscular "excitement" may give rise.' The attention is kept strained upon an object of thought which is sought, and the spirit of thought, 'until at last it grows so as to maintain itself before the mind with ease. This strain of the attention is the fundamental act of will. And the work of the moving body practically ended when the bare presence to our thought of the naturally unwelcome object has been secured. For the mysterious tie between the thought and the motor centres next comes into play, and, in a way which we cannot even guess at, the obedience of the bodily organs follows as a matter of course' (ib. 564). 'Consciousness (or the neural process which goes with it) is in its very nature impulsive, ever力求ing change; and the object of intuition, while it is true that its excited or entered into by the idea, the content of consciousness itself, but upon the motor centres by which the physiological process underlying the idea is strengthened or weakened so that the idea itself brought indiirectly into clearer consciousness. As Volkman has
said, 'The willing to hold a presentation fast is not the willing of the presentation to itself, but the willing of the presentation immediately upon the presentation, but must take the roundabout way through renewing the stimulus or keeping up the activity of auxiliary (i.e., associated) ideas' (Volkmar, l.c. p. 194).

With Wundt, the elementary process is 'the apprehension of a psychic content' (I. c. iii. 307), or the bringing of a presentation into the focus of consciousness.

Consciousness, as we have seen, is a unit from the beginning onwards, and external action as a volition-process differs from the internal action of apprehension only in its consequences, not in its immediate psychological nature. Considered as a phenomenon of consciousness, the former consists in nothing but 'the apprehension of an idea of movement' (ib.; on Wundt's 'Theory of Apprehension' see Villa, Contemporary Psychology, p. 211 f.). If we analyze this process of apprehension, we find there are three steps: (i.) the idea is perceived or enters consciousness; (ii.) it acts as a motive or stimulus, through the feelings connected with it, upon the internal will; (iii.) the will, or its sole effect of the will upon the ideas, is to raise them into the focus of consciousness: all that follows springs from the mechanism of the ideas themselves. Volkman objects to the theory that it is the highest inductions of the mind, that are striking in them, but which in itself is wholly inert, — a will which wills nothing, but must wait for stimulation from without (ib. p. 194).

The latter objection holds only if we suppose the perception precedes apprehension in time, as Wundt indeed assumes; it fails if we regard the analysis as that of a single process into constituents which can be held apart only by abstraction, but which have no separate conscious existence. The former objection, is, however, conclusive: a will which acts upon our ideas and affects them directly is non-existent. We conclude that attention and apprehension are alike modes of the non-mental form of mental activity which consists in the response of the mind to a presentation, through feeling, by effecting some bodily change.

6. The essence of moral activity is to be found in that form of mental activity in which an idea is retained before the mind, in spite of its incongruity with tendencies or dispositions already present. In such cases there is a choice or selection of one idea among the possible ones, for realization; to realize an idea is to give it bodily form, or real existence — in other words, to carry out the actions which the idea involves. But it is only when an idea is sufficiently strengthened (centrally or peripherally) that it acquires this impulsive force.

Consent to the idea's undivided presence, this effort's sole achievement. Its only function is to get this feeling of consent into the mind. And for this there is but one way — i.e., to keep it steadily before the mind until it fills the mind. — To sustain a representation, to think, is, in short, the only moral act, for the impulsive and the obstructed, for sane and lunatic alike (James). The consent of which James writes is a medially mythological process — it is a fiat of the mind, a resolve that the act shall ensue (l.c. pp. 501, 567 ff.); a subjective experience sui generis which we can designate but not name, which analysts call 'rationalizing', can show to be not an apparently unattached act of the mind, but a function of the ideas themselves in their relation to the mind as an organized system of dispositions and tendencies. The ethical or metaphysical problem belongs to all who have a soul; it belongs elsewhere; for psychology the problem does not exist.

7. Historical. — The first philosophical treatment of mental activity occurs in Plato's theory of Ideas. The Ideas, as the undivided and eternal realities, have movement and life, soul and intelligible form. The finite soul has both a transient and an immutable causality, the former as the cause of the motion and life of its body, the latter through its facility of knowing, by which it partakes in the life of the Ideas and assimilates their active power. Passivity of mind consists in the affecting of the mind by the body, through its senses; passivity thus comes to mean imperfect, inaccurate, confusing and inadequate knowledge. The soul is most active when detached from the body, and in the ecstatic union with the infinite and eternal Idea of the Good.

'The soul reasons best when disturbed by none of the senses, whether hearing or sight, or pain or pleasure: when she has dismissed the body and released herself as far as possible from all intercourse or contact with it, and, living alone with herself so far as possible, strives after real truth' (Sophistes, 245 A.F., Republic, vii. 528 B, Phaedo, 65; cf. Zeller, Phil. der Geschichte, ii. p. 436).

The dualism of soul and body is already partly overcome in Aristotle: it is not the soul in man that thinks or learns of itself, but man thinks through the soul; it is a passive soul.

On the other hand, the dualism returns within Reason or Intelligence, which is of two kinds, passive and active. All human knowledge depends upon experience, and rational truths are merely the highest inductions of the mind, i.e., the results of experience; the mind is passive in the double sense: (1) that it is dependent upon the body for its material, and even the forms into which the material is moulded, through the agency of the senses; the separate phases of consciousness are transitory and fleeting. On the other hand, the possibility of these empirical generalizations implies the cooperation of an Active or Creative Intelligence which gives the ideas their reality, as eternal, imperishable existences.

This Active Reason is separate from the body, as from all matter, whereas the Passive Reason is merely the essence or form of the body itself: the Passive Reason perishes with the body, the Active Reason is the eternal element in man (de Anima, iii. Cf. Siebeck, Gesch. der Psychologie, l. 2, pp. 64 f., 73). The difficulties of the theory are: (1) that the Active Reason appears to be simply identical with the Divine Consciousness, or itself, by which the finite mind is passively affected, so that there is no real activity of the finite consciousness; (2) that from another point of view the Active Reason is a separate principle, simply Truth, as an ideal system of knowledge, of which our every thought is a partial realization. It has validity, not real existence. Aristotle's theory suggested, however, that the mind is active, the human understanding at work, in all knowledge, from sense-experience onwards. This conclusion was brought out first by Alexander of Aphrodisias — 2nd cent. A.D. — (ib. p. 262). In Plotinus also (3rd cent.) consciousness is not merely the passive spectator of its own experiences, but a synthetic activity, grasping together, holding together and moulding the impressions it receives (ib. pp. 333, 337). Throughout the Medieval Period controversy as to mental activity resolved itself mainly into the relation of soul to body, or the problem of the relation of the finite to the Divine mind. In Avicegnna (A.D. 950-1058) the intelligence is wholly unattached to any bodily organ, and its objects are wholly distinct from those of sense: on the other hand, he distinguishes, with Aristotle, between an active and a passive principle within the intelligence itself. The latter is only in the soul and perishes with it; the former is distinct and separate from the individual soul, is universal, one and the same in all, and it alone is immortal (Stockel, Gesch. d. Philosophie des Mittelalters, ii. i. § 12).
ADAM.—I. The name.—The Heb. שׁנָה (ādāhām) is properly a common noun denoting 'mankind' or 'human being,' homo as distinguished from vir. In Gn 1-28 (P), ādāhām = 'mankind'; in 2-4-26 we have ā-hā-ādāhām = 'the man,' i.e. the first man; in 5-4 it is used as a proper name. The etymology of 'Adam' is uncertain; Gn 2-3; Jehovah Elohim made man (ādāhām) of the dust of the ground (ādāhāmūth) is not to be taken as a scientific derivation. The usual words for 'man' in the Semitic languages generally carry the connotation of 'begetter,' and hence 'ancestor.' Adam, so understood, is connected with Assyr. adum, 'child,' 'one made,' 'created'; with the Heb. root 'ādm, 'red,' the name having originated in a radish race; Dillmann on Gn 1. 2 suggests the connexion with nātham, as in 'the soul is nātham or pleasant;' or an Arab. root = to attach oneself; or so = 'pregnancies,' 'sociable.' Any connexion with Adapa, the hero of a Babylonian myth, is most improbable.

2. Adam in the OT.—The only references to Adam in the OT are in Genesis 1-5, and in the dependent passage 1 Ch. 1. The common noun ādāhām is misread as the name in AV of Dt 32 and Job 31; RV corrects Dt, but retains Adam in the text of Job, putting the connexion after the manner of men for 'like Adam' in the margin. In view of the OT habit of playing upon words, there may be a secondary reference to Adam in Job and possibly elsewhere; but as 'man' or 'mankind' gives a satisfactory sense, there is not sufficient ground for recognizing a secondary meaning.

In the Priestly narrative (P) of Creation (Gn 1-28) Elohim creates 'mankind' (ādāhām) in His own image, in two sexes, makes man supreme over all living creatures, bids him multiply, and gives him the fruits and grains for food. He blesses man. But whereas it is said separately of each of the other groups of creatures, 'He said good,' in this case the utterance concerning man; he is simply included in the general statement, 'God saw everything that he had made, and, behold, it was very good.' In 2-28 Adam is the ancestor of the human race; when he is 130 years old he begets Seth 'in his own likeness, after his image.' Afterwards Adam begat other children, and died at the age of 500.

In the Prophetic (Je) narrative (Gn 28-49) Jehovah Elohim woulds 'the man' out of dust, gives him life by breathing into his nostrils the breath of life, and places him in Eden to dress and keep it. Jehovah Elohim also makes the animals out of the soil (תִּתְחִיתוּ), in order that 'the man' may find a helper; 'the man' names them but finds no suitable helpermeet, and at last Jehovah Elohim builds up a woman out of a rib taken from 'the man' while he slept. The woman proves a suitable helpermeet. Jehovah Elohim had forbidden 'the man' to eat of the fruit of a certain 'tree of the knowledge of good and evil' planted in the midst of Eden; but, tempted by the serpent, the woman ate of the forbidden fruit, and persuaded the man to eat also.

In the historical narratives, Adam is given the proper name in three passages, following MT; but in two of these ('Gen. 37, 38) the pointing should be slightly altered, and in the third (40) the word 'e'en' may be inserted, changing it in each case to 'the man.'

LITERATURE.—The following are some of the more important references, in addition to those mentioned in the text:

1853: T. L. L. Etienne, Zur Psychologie der Causalität in Zeit. für Psychol., i.
man to eat. Thereupon Yahweh Elohim drove them out of Eden, and Abel, who was skilled in sheep and goats, came to his death even after the expulsion the man and the woman became parents of three sons; one of these, Abel, was murdered by his brother Cain; while the other two, Cain and Seth, became the pro-
gressors of their kind. *But* there were also two other sons of God, Shem and Japheth; these two narratives differ markedly in form; the Prophetic narrative is frankly anthropomor-
phic, but the Priestly narrative minimizes the anthropomorphic elements. Both are, of course, from ancient Semitic traditions; *but* here again in Gn 1 the mythological element is reduced to language and framework, and is altogether subordi-
nated to the teaching of revelation; whereas in Gn 2-4 the author is evidently glad to retain a picturesque story for its own sake as well as for the sake of its moral. In other words, he uses an ancient tradition as a parable, and we have no right to extract theology from all the details.

The two narratives agree in their pure mono-
theism, in representing man as the immediate creation of God, without intervention of angels, sons, or other intermediate supernatural beings; in the Priestly narrative he is made 'in the image and likeness' of God, and passes that 'image and likeness' on to his descendants (Gn 1:26, 5:3, cf. below); in the Prophetic narrative man's life is the breath of God (Gn 2); in the Priestly narrative man is given the dominion over all other creatures; in the Prophetic narrative the animals are specially formed for the service of man, and receive their names from him.

It is characteristic of the Priestly narrative that its express moral is found in two points of ritual: man is to be vegetarian, and to observe the Sabbath. The Prophetic narrative, on the other hand, is concerned with the moral life; the Priest-
ly narrative, of course, is a perpetually binding, and marriage is spoken of in terms which imply a preference for monogamy. Man is under a Divine law; God has provided for his welfare, and ordained his abode, his work, his food. There is no moral retribution for the disobedience of the man and the woman, wrong-
doing; murder on the part of Cain, are punished; but even while Jahweh Elohim punishes, He still cared for the life of his creatures, and protects Cain from being put to death.

Passing to other features of the Prophetic nar-
avative, we note the inferior position of woman, corresponding to her status in the East, suggested by her formation after man, from his body, and for his service; she is also the instrument of his ruin. Again, man enjoys immediate fellowship with God; and this is not terminated by the expulsion from Eden, for Jehovah converses in the same fashion with Cain as He does with Adam; and the dwelling-place of the first family outside Eden is still thought of as being in the special presence of God. When Cain leaves this dwelling-
place he is no longer the possessor of the man and the woman, and feels that he will be 'hidden from his face' (Gn 4:10).

The original sin of man, the fatal source of all human evil, is contained in the desire to eat the fruit of the tree and partake of it. It is intellectual; the tree is 'the tree of the knowledge of good and evil'; the serpent promises that by eating it 'their eyes shall be opened' to know good and evil,' and the woman sees that the tree is 'to be desired to make one wise;' *but* the desire for 'the knowledge of good and evil' is not merely intellectual, it is also a desire for a deeper, more varied, more exciting experience of life, a desire to 'see life,' to use popular language. And as the serpent promises that by eating they shall become 'like gods,' *this desire implies a demand for distinction. In other words, the first sin consisted in defying God by giving the reins to the various impulses which make for culture and civilization. Similarly, in Gn 4:22 progress in civilization is due to the evil race of Cain.

The author of the source which the Prophetic narrator follows regards the life of man as accursed, a life of sordid toil, poorly rewarded, embarrassed by shame arising out of the sexual conditions of human existence, burdened for woman by the pain of travail and by her subjection to her husband. These evils are the punishment of the first sin, the consequences of the ungodly appetite for luxury and culture, knowledge and power. Snell (Abend.- Rel.- Gesch. 121 f.) has pointed out that this conception of life does not control the patriarchal stories or the other portions of the Priestly narrative; hence the author must have taken it over from other tradition, and does not regard it as an all inclusive and complete judgment on life, though he retains it as expressing one side of the truth.

Similarly, there are other theological implications which might be discerned by pressing details; but such implications are not part of the teaching which the Prophetic narrator intended to enforce; such details also are merely retained from ancient tradi-
tion; e.g. the feud between man and the serpent is retained as corresponding to the facts of life, but in the original story it was probably a reminiscence of the contest between Marduk and the primeval Dragon.

Again, the story serves to explain the miserable estate of man and the sense of alienation from God; but it does not profess to explain the origin of evil or of sin. It is indeed implied that sin did not originate in man or from man, but was due to suggestion from outside. Obviously we are not intended to deduce doctrines by combining features of the two narratives, otherwise we should be confronted by the difficulty that the serpent would be included in the human race, and feel that he will be hidden from his face' (Gn 4:10).

In the Priestly narrative the fact of sin is not mentioned till the time just before the Flood, when we are told that the earth was corrupt and full of violence (Gn 6:1); no account is given of the origin of this corruption. It is noteworthy that we are told that Adam transmitted the Divine likeness to Seth (cf. 5:3 and vv. 24-); but no such statement is made as to Adam's other children. Possibly the Divine likeness was a birthright transmitted from eldest son to eldest son, till it reached Noah, but not possessed by other men, hence their corruption; or again this likeness may have been shared by the descendants of Seth, but not possessed by the other races. The Book of Chronicles simply traces the genealogy of Israel from Adam.

3. Adam in the Apocrypha and later Jewish literature.—As the first man, Adam occupies a prominent place in theology and tradition. An immense body of tradition gathered round the brief Scripture narratives. The notices of Adam in the Apocrypha, however, are few in number and have no resemblance to the accounts in Genesis. Thus 2 Es 3:10 is a summary of these accounts, followed in v. 21 by the statement, 'For the first Adam, bear-

* As far as the Fall and Cain and Abel are concerned, only uncertain hints of the original doctrine, indelibly impressed in the manifestations of Western Asia; but the character of Gn 4:22 shows that the author is adapting ancient tradition.
* Not as in R.V. 'desirable to look upon,' cf. Dlmmann.
ing a wicked heart, transgressed, and was overcome; and not he only, but all they also that are born of him. The author does not explain how the immediate creation of God came to have a 'wicked heart'; but perhaps the term is used prophetically to indicate that heart was wicked throughout the Fall. Again, 6:5-6 refers to Adam as the ancestor of the human race (cf. also 7:11-12); and in 7:28-29 Esdras laments the sin and punishment which Adam has brought on millions of the sons of men. It is remarkable that when Jesus ben Sirach sets out to "praise famous men" (Sir 44:50), he passes over Adam and begins with Enoch; then he reviews the series of OT heroes, concluding with Nehemiah, and then (49:14-56) reverts to Enoch and Joseph, and at last by way of Shem and Seth arrives at Adam: 'Above every living thing in the creation is Adam.'

The position of Sir 49:1-3 suggests that this paragraph was either an afterthought of Ben Sirach, or an addition by a later writer who had noticed the absence of Adam and others. Perhaps Ben Sirach felt that the Fall rendered Adam unfit to figure in a list of ancient worthies.

Adam plays a considerable part in the other Apocalyptic literature. In the Book of the Secrets of Enoch (90B); for instance, Adam is made one of the nine princes: his bones from the earth, his blood from the dew, his eyes from the sun, his bones from the stones, his veins and hair from the grass, his thoughts from the swiftness of the angels and from the clouds, his Spirit from the Spirit of God and from the wind. He is 'like a second angel,' endowed with the Divine Wisdom. His name Adam was constructed from the initials of the [Greek] names of the four quarters of the earth: 'Anemos (E.), Teth (D.), Kaps (N.), Mesembria (S.). He fell through ignorance, because he did not understand his own nature.

We read of a Jewish Book of Adam; but it is not now extant.

The other branch of later Jewish literature, Talmud, Midrashim, etc., embellishes the Scripture narrative with a variety of fanciful legends. In the famous Berakha of the Talmud on the origin of the books of the O.T. Adam is one of the ten elders who contributed to the Psalter. Ibn Ezra explains the birth of children to Adam by suggesting that when he found that the permanent mark of the image of God on his own person would be prevented by death, he provided for its continuance by begetting children. Rabbinical traditions also state that the tree of knowledge was a fig-tree, that Eve gave the fruit to the animals, etc. Midrash Explicat. expounds and allegorizes the Biblical narratives in de Opificio Mundi, Sacrarum Legum Allegoriae de Cherubim; pointing out, for instance, that the statement that man was made in the image of God must not be understood in a material sense; it means that the mind in man corresponds to God in the cosmos (de Opif. 23); and the narrative of the Fall is an allegory of the disastrous consequences of lust (ib. 57, 58).

Josephus (Ant. i. 1. 2) merely puts the Biblical narrative into what he conceived to be a better literary form, expanding, for instance, the few words of Jubilees Elohim into a speech. It is noteworthy, however, that he speaks in his paraphrase of some of the Mosaic narratives as being allegorical.

The Jewish development of this subject reaches its climax in the medieval mysticism called the Qabbalah, where the Sephiroth, or emanations by which, as it were, are grouped sometimes as the tree of life and sometimes as Adam Qadmon, the primitive man.

4. Adam in the NT.—Adam is mentioned in I K 3:26 as the ancestor of Jesus, thus emphasizing the Incarnation, the reality of our Lord's humanity. In 1 Ti 2:14 the authority of the husband over the wife is deduced from the fact that Adam was 'first formed,' that he was made to be the image of God who was deceived by the serpent. The idea that Adam was not deceived probably rests on some Rabbinical exegesis, e.g. the suggestion that Adam did not eat the apple Eve had eaten from the tree of life. Jude 14 has the casual reference, 'Enoch also, the seventh from Adam.' Also, 1 Co 11:2-3 supports the current etiquette as to the way in which women wore their hair, and as to their wearing veils, by the fact that the first woman was created from the man, and for the sake of the man, and not vice versa.

But the most important NT passages are Ro 5:12-21 and 1 Co 15:21-28 which state a parallel and a contrast between Adam and Christ. To a certain extent, Adam and Christ stand in the same relation to the human race; in each case the nature and work of the individual affects the whole human race; 'murely a figure to him the first man Adam' (Ro 5:14). But while the one man Adam's one sin introduces sin and guilt and death, the one Christ's one act of righteousness justifies the sinner, and enables them to righteous life. This 'one act of righteousness' is also spoken of as 'the obedience of the one'; the general tenor of St. Paul's teaching identifies this 'act' with the death of Christ (Ro 5:18,19). St. Paul does not make it clear how, or in what sense, Adam's sin became the cause of sin, guilt, and death to his posterity. The statement of Ro 5:12, that 'death reigned from Adam to Moses', even over them that had not sinned after the likeness of Adam's transgression', suggests that men were involved in the guilt and punishment of Adam apart from their own sins.

1 Co 15:21-28 is not prima facie quite consistent with Romans; and there is nothing to show that St. Paul had correlated the two sets of ideas. In Corinthians, mankind inherits from Adam limitations; and Christ enables mankind to transcend these limitations. 'The first man is of the earth, earthly, and a living soul; but the last Adam is a life-giving spirit;' and apparently communicates the likeness to Christians, only to the extent of being like their Master, and bear His image. In other words, by the Incarnation human nature was raised to a higher plane. But again it is doubtful how far St. Paul would have been prepared to affirm all that his words imply. The idea of a higher and a lower Adam, of a heavenly and an earthly or earthly man, is found in Philo, in some of the Gnostic systems, and in the Qabbalah.

5. Adam in Christian literature.—The Patristic commentators on the stories of the Creation and the Fall largely follow Jewish precedents; they often allegorize and ornament the narrative by legendary additions; while the Gnostics anticipate and pave the way for the mysticism of the Qabbalah. Adam becomes a Gnostic Archon. The Ephites speak of 'the spiritual seed or 56wvovdras as an ochlun 7hav 5pov eiracov 5twv eiracov d4etov 'Adamotwv,' Greek equivalents of the Adam Qadmon or Adam Elyon which figure in the Qabbalah.

* Franz Delitzsch, in his Brief an die Römer in das Hebräische übersetzt and aus Talmud und Midrash erläutert, quotes from Rashi, Martin, and a Midrash (an early Midrash) which contains the effects of Adam's sin with those of the vicarious sufferings of the Messiah.

1 Harvey's Irenicon, l. 134, n. 2.
2 Dict. of Christian Biog., art. "Cubalalah" by Gomberg. Philo (Leg. Alleg.) speaks of a higher and a lower man introduced into Paradise; the latter is expelled, the higher remains.

4 Harvey, l. 134, n. 2.
ADAM'S BRIDGE—ADAM'S PEAK

To derive these Gnostic ideas from the Qabbalah is an anachronism; both are developments from Rabbinical mysticism. Medieval and Protestant divines, especially Calvin following Augustine, develop the doctrine of Original Sin from St. Paul's terms, 'He (Adam) not only was himself punished... but he involved his posterity also. . . The orthodox, therefore, and more especially Augustine, laboured to show that what was spoken of Adam and Eve was metaphorical, but bring an innate corruption from the very womb. It was the greatest impudence to deny this;'

6. Adam in Islam.—The Muhammadans accept the Christian Scripture subject to the necessary correction into translation; they have also borrowed many of the Jewish legends. Adam, therefore, is an important person in their religious system; and they have adorned his story with legends of their own. For instance, on the site of the Kcśa at Mecca, Adam, after his expulsion from Eden, first worshipped God in a tent sent down from heaven for the purpose; and Eve's tomb may be seen near Mecca; it showed the outlines of a body 175 ft. by 12 ft.; the head is buried elsewhere.

LITERATURE.—Comm. on the Biblical passages: Handbooks of Oriental Mythology, and of Dogmatists on the doctrine of Creation, and Original Sin: H. G. Smith, 'Adam in the RV.' in AJPh, vi. (1903), 753; G. F. Moore, 'The Last Adam,' in LA, xvi. (1897), 185; J. Denney, 'Adam and Christianity,' in Exp. 6th ser. ix. (1904), 107; Hastings' DB, artt. 'Adam,' 'Adam in the OT,' n. in the NT, artt. 'Sita and Ram,' 'Dharmasastra,' Book of, 'Adam Kadmon.'

W. H. BENNETT.

ADAM'S BRIDGE, or Râmaśvām or Râma's causeway.—A chain of sandbanks over 20 miles in length, extending from the island of Râmaśvām off the Indian coast, to the island of Manar off the coast of Ceylon. These sandbanks—some dry and others a few feet under the surface of the sea—were built up to connect India with Ceylon; and this fact has given rise to the tradition that they are portions of a causeway which was constructed by Râma, the hero of the ancient Indian Epic called the Râmâyana.

The story of the Epic is well known. Râma, the prince of Ayodhya or Oudh, was banished by the king, his father, for fourteen years, and came and lived in a forest near the sources of the Godâva. Here he married Sita, the daughter of the king of Kishâma. During the absence of the two brothers from their cottage, Sita was taken away by Râvana, king of Ceylon. After long search Râma got news of Sita, and determined to rescue her over a vast army of monkeys and bears to recover her. It was for this purpose that the causeway across the ocean is said to have been constructed. Râma crossed over with the army, defeated and killed Râvana, recovered his wife, and returned to Oudh. The period of exile had expired; Râma's father was dead; and Râma ascended the throne.

The building of the causeway across the ocean is described at great length in the epic poem. And after Râma had killed his foe and recovered his wife, he is described as sailing through the sky in an aerial car—all the way from Ceylon to Oudh. The whole of India was speeded below; and few passages in the epic are more striking than the bold attempt to describe the vast continent as seen from the car. It was then that Râma pointed out to his wife, who was seated by him in the car, the great causeway he had constructed across the ocean.

1. Institutes, bk. ii. ch. 1. § 6.
2. The translation is connected with Adam cf. Hastings' DB, i. 371. For the legend (as old as Origen) that Adam was buried by Golgotha, see Wilson, Golgotha and the Holy Sepulchre, 1906, p. 22.
3. Hadji Khan and Sparrow, With the Pilgrims to Mecca, 136, 106.

* See, my love, round Ceylon's island
How the ocean billows roar,
Hiding pearls in caves of rock,
Strewing shells upon the shore,
And the causeway far-extending,—
Monument of Râma's hand,
Râmaśvām unto ages
Shall be the Calabashes deed proclaimed!*

The Hindus regard Râma as an incarnation of Viṣṇu, the second of the Hindu Trinity—the god who preserves and supports the universe. The island of Râmaśvām, from which Adam is supposed to have crossed to Ceylon over the causeway built by him, is therefore a sacred place of pilgrimage, visited by thousands of pious Hindus every year from all parts of India. This famous temple of Râmaśvām, with its pillarars constituting 700 feet long, is perhaps the finest specimen of Dravidian architecture in India.

LITERATURE.—Râmâyana (Griffith's tr. and Rosemuth's condensed tr.). For an account of the temple of Râmaśvām, see Ferguson, Indian and Eastern Architecture.

ROMESH DUTT.

ADAM'S PEAK.—This is the English name, adopted from the Portuguese, of a lofty mountain in Ceylon, called in Sinhalese Samanâlana, and in Pali Samànta-äta or Samànta-äta. It rises directly from the ocean, at the southwestern corner of the central mountainous district, to a height of 7320 feet. The panorama from the summit is one of the grandest in the world, as few other mountains, though surpassing it in altitude, present the same unbroken view of the sea. But the peak is best known as a place of pilgrimage to the depression in the rock at its summit, which is supposed to resemble a man's footprint, and is explained by different religions in different ways. It is a most remarkable, and probably unique, sight to see a group of pilgrims gazing solemnly at the depression, each one quite undisturbed in his faith by the knowledge that the pilgrim's footprint next to him holds a divergent view—the Buddhist thinking it to be the footprint of the Buddha, the Saivite regarding it as the footprint of Siva, the Christian holding it to be the footprint of St. Thomas, or perhaps admitting the conflicting claims of the eunuch of Queen Candace, and the Muhammadan thinking he believes the footprint of Adam. The origin of these curious beliefs is at present obscure. None of them can be traced back to its real source, and even in the case of the Buddhist belief, about which we know most, we are left to conjecture in the last, or first, steps.

The earliest mention of the Buddhist belief is in the Samànta-äta, a commentary on the Buddhist Canon. Law written by Buddhaghosa in the first quarter of the 5th cent. A.D. This work has not yet been published, but the passage quoted in full, in the original Pali, by Skeen (pp. 50, 61). It runs as follows: 'The Exalted One, in the eighth year after his attainment of Wisdom, came attended by live hundreds of bhikkhus on the invitation of Manilkka, king of the Nagas, to Ceylon; took the meal (to which he had been invited), seated the while in the Intama Mandapa (Gan Pavilion) just up on the spot where the Kâlyâni Dagâga (afterwards) stood, and making his footprint visible on Samânta-äta, went back to India.' Seeing that Adam's Peak is a hundred miles away from the Kâlyâni Dagâga, the charge about Adam's Peak seems abrupt, and looks as if it had been inserted into an older story written originally without it. But it is good evidence that the belief in the Adam's Peak legend was current at Anurâdhapura when the passage quoted was written there about A.D. 435. The whole context of the passage is known to have been drawn from a history of Ceylon in Sinhala prose with mnemonic verses in Pali. These verses were collected in the still extant work, the Dipâmâna, written probably in the previous century. That work (54-589) gives the account of the Buddha's visit to Manilkka. It mentions nothing about Adam's Peak. Ought we not to consider that the legend arose between the dates of the two works? Probably not. The argument ex silicio is always weak; and in another passage of the Samànta-äta, where the Bubble is mentioned, nothing is said about Adam's Peak. Neither can it be an interpolation, for the edition of the Pali (L. 76, p. 7), written about a half century later; also at Amu-

ADAPTATION

had declared they would not absolve him of the crime; the ascetics said they could; so he smeared his body with ashes and adopted their faith, that of Siva. The soma grant, issued by King Kirti Sri of Kandy in 1751, making a renewed grant to the Buddhist Bihakku at the Peak, calls these Saivite faqirs Andiyas. Possibly the Saivite tradition may date from this event. But it may also be a later interpolation. In the Thirukkathaickai, Manniyam, it is said that rivers flowed from the Peak of Siva's foot there. The date of this little work is uncertain, and the present writer has seen only the extract given by Skeen (p. 205).

Whatever opinion they hold about the footprint, both Tamils and Sinhalese consider the deity of the place to be Suman Dewiyo, as he is called in Sinhalese, or Sumana (also Samanta) as he is called in Pali. His shrine still stands on the topmost peak just beneath the pavilion over the footprint, and his image has been reproduced by Skeen (p. 258). Skeen also gives (p. 296) a ground plan and woodcut of the buildings on the Peak in 1880; Tennent (ii. 140) gives a ground plan and woodcut of them as they appeared in 1855; and Dr. Rost, in the Journal of the Royal Asiatic Society, 1895, p. 656, gives a plan in outline and one of the footprint. On the little rock plateau at the top of the mountain—it is only about 30 by 30 ft.—there is the boulder on the top of which is this footprint covering the shrine of Suman Dewiyo, a shrine containing a small image of the Buddha recently erected, and a hut of wood and plaster work occupied by Buddhist Bhiksushas. The four who were there when Rost visited the Peak told him that they had not been down from the mountain for four years. They complained of the cold, but said that otherwise they were quite contented, and had much time for study, and showed him their palm-leaf books. Rost says that the depression in the rock is now 55 ft. long by 22 ft. broad, and that the heel of the footprint is well preserved, but the toes are not visible, being covered by the wall of the pavilion.

LITERATURE.—Tennent and Rost as cited above, and William Skeen, Adam's Peak, Colombo, 1850.

T. W. RHYS DAVIDS.

ADAPTATION.—Almost every detail of inherited structure and congenital behaviour shows fit adjustment to the needs and conditions of life, and may be spoken of as an adaptation. wherever we look, whether in plants or animals, we find illustrations of this in the simplest details of structure and function, in the size, shape, the colour of an organism, the structure of parts in relation to their use and in their relations to other parts, the everyday behaviour and the occasional activities, e.g. those concerned with reproduction,—almost every detail of structure and function is adaptive. The term may be used simply as a descriptive, adjutative, implying that the structure or function in question is fit, effective, well-adjusted, making for the preservation or well-being of the individual or of the species; but in biological usage it has also a theoretical implication, that the structure or function is so to effect an individual accommodation, more than an individually acquired modification—is the result of a process of evolution. It was not always as it is now, it has been, so natural history shows, a process of evolution, whatever these may be (see EVOLUTION).

The structure of a long bone in a mammal is adapted to give the utmost mechanical advantage to the animal's movements; the unique pollen-ball, adapted to attract the bees, is modified to lower away the pollen; the colours and patterns on the wings of leaf-insects are adapted to harmonize with the
ADAPTATION

foliage on which they settle; the parts of flowers are often
adapted to ensure that the insect-visitor is dusted with pollen,
and thus to secure cross-fertilization; the leaf of the
Fly-Trap is adapted to attract, capture, and digest flies; the
peacock is adapted to captivate the pen-bird; the mother
moose is adapted to take care of the prolonged pre-natal
young; the so-called ‘egg-tooth’ at the end of a young bird’s
bill is adapted to the single operation of breaking the egg-egg,
— and, so far as we can see, throughout the whole of the animal kingdom. It
is indeed a mistake to dwell upon signal instances of adaptations,
since they are the result of adaptive changes in old species, of
cases, perpetuated instincts, rudimentary or vestigial structures,
and certain ‘indifferent’ characters which are not known to
have any vital significance. Every detail of structure and
function may be regarded as adaptive.

To gain a clearer idea of what is one of the most
difficult and fundamental problems of biology, it
may be useful to consider briefly: (1) effectiveness
of response; (2) plasticity; (3) modifiability, which
lead on to the conception of adaptiveness.

1. Effectiveness of response.—One of the char-
acteristics of organisms, as contrasted with inani-
mate systems, is their power of effective response
on to environmental stimuli. The barrel of gunpowder
can respond to the external stimulus of a spark, but
it responds self-destructively; the living creature,
presenting its organic elasticity to all solicitations of
species-preservation. A piece of iron reacts to the
atmosphere in rusting; it becomes an oxide of iron
and ceases to be what it was; a living organism
also reacts to the atmosphere, every muscular
movement, touch, light, pressure, sound, and
nuance of this and many another change the organism
retains its integrity for a more or less prolonged period.
Its reactions are effective. Not that the organism
responds so as to provide, e.g. to a strong current of electricity, for it is not
able to live anywhere or anyhow, but only within
certain environmental limits which we call the
essential conditions of its life. We cannot account
for this by saying that it is adapted to respond
because it is part of our conception of life.
In some degree it must have been possessed by the
first and simplest organisms, though it has doubt-
less been improved upon in the course of evolution.
Without wrestling words, it cannot be said that
inanimate systems ever exhibit effectiveness of
response. A river carves through a soft rock and
circles round a hard one, a glacier circumvents a
crag, a crystal may bend itself, but it cannot be
said that there is any advantage to river, glacier,
crystal or water in the way it behaves. The biological
concept is plainly irrelevant. The nearest ana-
logues, perhaps, are to flash-fires, in which
response are to be found in automatically regulated
tothes, but the analogy is little more than a
pleasing conceit, since the machine is a materializa-
tion of human ingenuity and without any intrinsic
autonomy.

2. Plasticity.—But in addition to the primary
inherent power of effective response, we must also
recognize that living creatures are in different
degrees plastic. That is to say, they can adjust
their reactions to novel conditions, or they can, if
we seem bound to say, ‘try’ first one mode of
reaction and then another, finally persisting in
that which is most effective. Thus, Dallinger was
able to accustom certain Monads to thrive at an
extraordinarily high temperature; thus Jennings
reports that the behaviour of certain Infusorians
may be compared to a perversity of ‘the method
of trial and error’, so that certain molluscs and
fishes are plastic enough to live for days in frostwater.
How much of this plasticity is primary or inherent
in the very nature of living matter, how much of
it is secondary and wrought out by Natural Selec-
tion, we cannot say, but it is a fundamental fact
which must be measured a matter of opinion. Each case must be
judged on its own merits. It is certain that many
unicellular organisms are very plastic, and it seems
reasonable to suppose that, as differentiation in
creased, restrictions were placed on the primary
plasticity, while a more specialized and secondarily
plasticity was gained in many cases, where organ-
isms lived in environments liable to frequent
vicissitudes. It is convenient to use the term
‘accommodation’ to indicate the giving of functional adjustments which many organisms are
able to make to new conditions. When a muscle becomes stronger if exercised beyond its wont, we
may speak of this temporary individual acquisition as a functional accommodation. See ACCOMO-
DATION.

3. Modifiability.—Advancing a third step, we
recognize as a fact of life that organisms often
exhibit great modifiability. That is to say, in the
course of their individual life they are liable to be
so impressed by changes in surrounding influences and by changes in function, that, as a direct con-
sequence, modifications of bodily structure or habit
are acquired. ‘Modifications’ may be defined as
structural changes in the body of an individual
organism, directly induced by changes in function
or in environment, which transcend the limit of
order and persist after the inducing conditions have ceased to operate. They are often
inconveniently called ‘acquired characters.’ Thus
a man’s skin may be so thoroughly ‘tanned’ by
the sun during half a lifetime in the tropics, that
it never becomes paler, even after a change of
clime, to a far from sunny clime. It is a permanent
modification, as distinguished (a) from a tem-
porary adjustment, and (b) from congenital swath-
isms.

It is admitted by all that both temporary adjust-
ments and more permanent modifications may
make for survival or for an increase of well-being
that favours survival in the long run. But they
may also be indifferent (as far as the organism
is concerned) or even injurious to the organism as a
whole, e.g. when an important organ, in response
to inadequate nutrition or stimulus, is arrested at
a certain stage in its development. In themselves,
however, they seem always in the direction of at
least local effectiveness. It is difficult to bring
forward any instance where the reaction is in
itself in the wrong direction. It may spell de-
genration, when judged by the normal level
attained in other members of the species or in
ancestors of the species, but the degeneration is
in itself an effective response to the condition there-
fore. A growing organism, which has adequate nutrition and the appropriate liberating
stimuli, may stop growing; but while this may be
injurious to the organism as a whole, it may be
actually beneficial, and in any case it is the most
effective response the organism can make.
The change-provoking stimuli may imply conditions
with which the organism cannot possibly cope, but
the parts primarily affected may be said to do their
best within the limits of their modifiability. Even
a pathological process like inflammation, set up
in response to intrusive microbes, is an effective
reaction, and sometimes a life-saving one.

When a mammal taken to a colder climate
acquires a thicker coat of hair, when a plant
similarly treated acquires a thicker epidermis,
when an area of skin much pressed upon becomes
hard and callous, when a shoemaker in the course
of his trade develops certain calloused areas
—and hundreds of examples might be given,—we
call the results adaptive modifications. The changes
are effective, useful, fit,—they may even make for
the preservation of the individual, when the struggle
for existence is keen. And yet these adjustments
are not what are usually meant by ‘adaptations’. For this term (used to denote a result, not a process)
is most conveniently restricted to racial adjust-
ments, that is, to characters which are inborn, not

Digitized by Microsoft®
acquired; which are expressions of the natural inheritance, not individual gains. It goes without saying that though these adaptations are potentially implicit in the germinal material—in the fertilized ovum—they cannot be expressed without appropriate 'nurture'; that is a condition of all development. But they are theoretically—however difficult the distinction may be in practice—quite different from acquired adaptive modifications which are not imitate through the potentiality of their occurrence necessarily is. According to the Lamarckian hypothesis, adaptations are due to the cumulative inheritance of individually acquired modifications; but as satisfactory evidence of the hereditary transmission of any modification as such or in any representative degree is, to say the least, far to seek, and as it is difficult to conceive of any mechanism whereby such transmission could come about (see HEREDITY), some other origin of adaptations must be sought for.

4. Origin of adaptations.—Within the limits of a short article it is impossible to discuss adequately a problem so difficult as that of the origin of adaptations. Like the correlated, but really distinct problem of the origin of species, it is one of the fundamental—still imperfectly answered—questions which the interpreter of animate and inanimate nature has not to do more than mention to indicate the general tenor of the suggestions which evolutionists have offered.

(a) According to the Lamarckian theory, racial adaptations are due to the cumulative inheritance of individual adaptive modifications. But there is a lack of evidence in support of this interpretation, plausible as it seems; it is difficult to conceive of any internal mechanism whereby a change acquired by a part of the body can affect the germinal material in a manner so precise and representative that the offspring shows a corresponding change in the same direction. Moreover, there are many known cases where any such transmission of modifications certainly does not occur.

(b) The general Darwinian theory is that adaptations are due to the selection of those inborn and heritable variations which, by making their possessors better adapted to the conditions of their life, have some survival value. It is a fact of observation that in many groups of organisms the individuals fluctuate continually in various directions. Certain characters appear as if they followed the law of chance. It is also a fact of observation that some of these variations increase the survival value of their possessors. It is inferred that the cumulative inheritance of these favourable modifications, fostered by selection in any of its numerous forms, and helped by the elimination—gradual or sudden—of forms lacking the variations in the fit direction, or having others relatively unfit, may lead to the establishment of new adaptations. The greatest difficulty in this argument is to account for the origin of the fit variations, and this has to be met by the accumulation of observational and experimental data bearing upon the potential and natural adaptations. It is also necessary to accumulate more facts showing that selective processes—acting directly on fluctuating-variations—do really bring about the modifications actually seen. To meet this difficulty, it appears that more emphasis should be laid upon the power that many animals have of actively seeking out environments for which the variations they possess are adapted. Here, too, it is necessary to point out the probable importance of some of the many forms of ISOLATION.

(c) The work of recent years—notably that of Bateson and De Vries—has made it plain that, besides the natural selection, the individual selection, or directive or guiding selection, which is the process by which the organism tends to keep up the new characters it has acquired, may lead to the establishment of new adaptations. This is due to the fact that variations which appear 'discontinuous' or 'mutations,' where a new character or group of characters not only appears suddenly, but may come to stay from generation to generation. It cannot be said that we understand the origin of these mutations, in which the combinations of genes involved are not in the parts of it seems suddenly to pass from one position of organic equilibrium to another; but that they do occur is indubitable, and their marked heritability is also certain. The modification is a phenomenon of gradual and a rationale of the fact that certain mutations, when once they have arisen, are not likely to be swamped, but are likely to persist, unless, of course, selection is against them. In horticulture, in particular, artificial selection has operated in great part on mutations. If this interpretation be confirmed and extended, it will not be necessary to lay such a heavy burden on the shoulders of selection. But more facts are urgently needed, and how and under what conditions mutations—whether adaptive or non-adaptive—occur, remains an unsolved problem.

(d) In his theory of Germinal Selection, Weismann suggests an attractive subsidiary hypothesis. Supposing that the germinal material consists of a—a multitude—of determinants (the determinants), he postulates that the reproductive cells get their germ-plasm. Supposing limitations of nutrition within the germ, he pictures a intra-germinal struggle in which the weaker determinants corresponding to any given part will get less food and will become weaker, while the stronger determinants corresponding to the same part will feed better and become stronger. Thus the theory suggests a hypothetical internal selection which will abet the ordinary external selection of individual organisms, and it makes the rise, if not the origin, of adaptations more intelligible. Or, to put it in another way, the theory suggests a possible mechanism by which the survival of any form with a favourable variation may influence the subsequent variational direction of that form. The determinants are supposed to be variable—everything living is; for each character separately heritable there are in the germ multiple determinants (paternal, maternal, grand—parental, ancestral): these are not all of equal strength; there is a germinal struggle and selection, the strongest asserts itself in development, and the resulting variations are those corresponding to the victorious determinant. If the character of the resulting determinate is of survival value, those organisms which have that character tend to survive, and their progeny will tend to keep up the character. But while the external selection is proceeding, it is being continually backed up by the germinal selection. Thus nothing succeeds like success.

(e) Various evolutionists—Professors Mark Baldwin, H. F. Osborn, and C. Lloyd Morgan—have suggested that although individual adaptive modifications may not be transmissible, they may have indirect effect in evolution, by serving as life-preserving screens until coincident inborn or germinal variations in the same direction have time to develop. As Lloyd Morgan puts it—(1) 'Where adaptive variation v is similar in direction to individual variation m, the organism has an added chance of survival from the coincidence m + v; (2) where the variation is antagonistic in direction to the modification, there is a diminished chance of survival from the opposition m — v; hence (3) coincident variations will be fostered while opposing variations will be eliminated.' As Groos expresses it, in reference to some instinctive activities—Imitation may keep 'a species alive, but it does not foster the life-preserving tradition.' As Mark
Baldwin states it, the theory is 'that individual modifications or accommodations may supplement, protect, or screen organic characters and keep them alive until useful congenital variations arise and survive by natural selection.'

Finally, in thinking of the difficult problem of adaptations, we must remember the importance of the active organism itself. As Professor James Ward has well pointed out, it may seek out and even in part make its environment; it is not so selected; it selects; it acts as well as nature. And although the details and finesse of this may have been elaborated in the course of selection, the primary potentiality of it is an essential part of the secret of that kind of activity which we call Life.

ADIELAD—ADIPHARISM

ADIELAD—Adelard of Bath (Philosophus Anglicus) occupies a distinguished place among the schoolmen of the 12th cent., as a chief representative of the philosophic doctrine of 'Indifference.' This was one of the mediating theologies in the great medieval conflict as to the nature of universal conceptions (genera and species) and their relation to the individuals comprehended under them. It lies between the extreme Realism on the one hand, which attacked substantiality only to the universals, and the extreme Nominalism on the other, which according to which generic conceptions were mere names, while reality belonged only to the individuals. It tends, however, to the side of Nominalism, inasmuch as it gives up the substantiality of universals, and makes the universal to consist of the non-different elements (indifferentia) in the separate individuals, which alone subsist substantially. Everything depends on the point of view from which the individuals are regarded: according as attention is fixed on their differences or their non-differences, they remain individuals or become for us the species and the genus. Thus Plato as Plato is an individual, as a man the species, as an animal the sub-species genus, as a substance the most universal genus.

This doctrine of Indifference was probably first stated in Adelard's treatise de Bodem et Dicervo, composed between 1105 and 1116. (It has recently been edited by H. Willmer in Beitr. z. Gesch. d. Philos. des Mittelalters, ed. by Cl. Bäumker and G. v. Hertling, Münster, 1865.) Adelard seeks to reconcile Plato and Aristotle, and says:

'Since that which we see is at once genus and species and individual, Aristotle rightly insisted that the universals do not exist except in the things of sense. But since those universals, so far as they are called genera and species, cannot be perceived by any one in their purity without the admixture of imagination, Plato maintained that they existed only in the mind; the mind being beyond the things of sense, to wit, in the Divine mind. The wise men, though their words they seemed opposed, yet held in reality the same opinion.'

The doctrine of Indifference was also represented by Walter of Mortagne (died as bp. of Laon, 1174), who, though he abjured and regarded as its originator, while others again have traced it to a supposed late view of William of Champeaux.

Besides the above-mentioned tractate, Adelard wrote also Questions Naturales. He had travelled widely and acquired that physical learning, especially from the Arabs, out of whose language he translated Euclid. He teaches that the knowledge of the laws of nature should be united with the recognition of their dependence on God's will. He says: 'It is the will of the Creator that herbs should grow from the earth, but this will is not without reason.' Mere authority he compares to a halter, and desiderates that reason should decide between the true and the false.

ADIPHARISM.—Three meanings of this word are given in the dictionaries: (1) the theory that some actions are indifferent, i.e. neither bad nor good, not being either commanded or forbidden by God, either directly or indirectly; so that they may be done or omitted without fault; (2) the theory that certain rites or ceremonies, not having been either commanded or forbidden by God, may freely be used or omitted without fault; (3) the theory that certain doctrines of the Church, though taught in the word of God, are of such minor importance, that they may be disbelieved without injury to the foundation of faith. (Although this use of the word can be found in good authors, it is a question whether it is accurate).

I. Actions.—Very early in the history of the Christian Church the gospel began to be conceived as having the wider meaning. Perhaps the wider meaning of the word 'law' had something to do with this. But it was to be expected that those who had grown up under a system of rigid prescription, not only of rites and ceremonies, but also of domestic observances and the details of personal conduct, prescription, moreover, that had Divine authority, -should be unable to conceive any other method of moral life. It is not strange, therefore, that St. James (19) speaks of the gospel as 'the perfect law of liberty.' To the early Christian there had been heathen; the customs in which they had been bred were abhorrent to a Jew; they were corrupting; and therefore those newly-made Christians had to be taught and drilled in the first principles of morality. In the Early Church, before the books of the NT had been written and for many years afterwards, the OT was the word of God read in their assemblies for worship; and its pre-scriptions for conduct, its rules of common life, and its religious institutions became authoritative. It seems likely that a legalistic conception of Christianity must always preponderate in a community that has recently won from heathenism. All must remain under tutelage, and discipline must be rigidly exercised, until the fundamental principles of right living are wrought into their conscience.

Marcion urged the rejection of the OT Law. As the Church began to spread through all classes of men, and to have part in the whole of their daily life, it began insensibly to accommodate its ascetic rules to the necessities of the case. Gradually there grew up a distinction between a law of morals incumbent upon all men and a higher rule of life voluntarily assumed, but when once assumed, of lasting obligation, and by the observance of which a man might earn a higher reward than was due to the simple observance of the commandments of God (consilia evangelici), and might even deserve enough of God to be able to transfer some of his merit to others (opera supererogativa). An ascetic life was looked upon as holier than the observance of the duties of one's calling in the world. To the commandments of God were added the commandments of the Church.

The Reformation assailed this notion of an ascetic and artificial righteousness. The moral injunctions of Jesus and His holy example are for all alike. The works of our calling are the sphere in which to serve God. No one can fulfil the law of God, much less can any one exceed it. All are
dependent upon God's mercy; and, forgiven for Christ's sake, depending upon that grace and thankful for it, are to go forth to the performance of daily duty, pleasing Him by childlike faith, not by the excellence of what they do.

It has been alleged that the immediate result of the Reformation was a deterioration of morals, especially in regions where the Lutheran doctrine was taught, no efficient external discipline being adopted in place of the ecclesiastical rules and jurisdiction of the older time (see Dollinger, Reformation). A more successful effort was made under Calvin to introduce in Geneva a complete censorship of morals. The Puritans of England revived the conception of the gospel as a law. The Pietistic movement in Germany forbade as inconsistent with the Christian name all mere enjoyment and all the merely artistic activities of life. To do everything to the glory of God forbade all play. There was a revival of asceticism, which was taken up by the early Methodists in England (see Ritschl, Geschichte des Pietismus, 3 vols., 1880-6). In our own day there are many sects, notably the Adventists, who regard the OT Law as still in force in all its regulations, even concerning meat and drink.

To appreciate the answer which Christ gave to this question, we must bear in mind that the Pharisaism which He refuted endeavoured to secure the law of God by 'putting a fence around the Law,' consisting of inferential and artificial rules of life. Those who vigorously observed these the Pharisees accounted meritorious; and they put such stress on these comments and additions that by them they made the law of God of no effect. Our Lord rebuked the substitution of a human law for the simple law of God, and also the exaltation of human rules of life to the same sanctity as belonged to the revealed law. He required the inward service of the heart. Jesus was not an ascetic in the usual meaning of that word. He accepted invitations to the table (Lk 7:33). He honoured a wedding feast (Jn 2:11). He spoke sympathetically of the children playing in the streets (Lk 7:32). He commended Mary's sacrifice of precious ointment (Mt 26:6-13, Jn 12:3). He publicly called a wine-barber and a glutton (Mt 11:19). Neither was St. Paul an ascetic. It is evident that he did not consider it essential to his personal salvation to make distinctions of meats (Ro 14:1-14, 1 Cor 8:8-13), to force the poor to borrow from more affluent ones (Ro 12:8-10), to raise anxious questions about the material of entertainments (1 Co 10:23), or to avoid social pleasures (ibid.) and he could look upon and talk about the games of Greece with no word of censure (1 Cor 5:11). In writing to Timothy (1 Ti 4:1-13) he foretold those errors which would forbid to marry, and command to abstain from meats, which God created to be received with thanksgiving by them which believe and know the truth. For every creature of God is good, and nothing is to be refused, if it be received with thanksgiving: for it is sanctified through the word of God and prayer. 'And if there be some thing forbidden to Jews by reason of conscience; neither, if we eat not, are we the worse; nor, if we eat, are we the better' (see also 1 Co 7:19-34, and cf. He 5:14). It is evident that a sphere is left for Christian freedom, in which a man may, may must, use his own judgment, and in reference to which good men may differ, and no man may condemn his brother. Here we have the justification of what are described as merely aesthetic activities of human life, in which the natural delight of man in simple enjoyment has place, and where the law of beauty is supreme rather than the law of duty. No doubt St. Paul would have barred these out, because of 'the present distress' (1 Co 7:7); but his 'opinion' in contradiinction from 'the com-

mandment of the Lord' allows them, though with the important qualifications we have yet to allude to. They derive a sanction from the constitution of man. Under this category we put the drama, music, art, all recreation. We thus have freedom for the freedom of a Christian. He is not under a positive law which extends to every corner of his life. He does not move in the sphere of a moral necessity. He must exercise judgment, but must be left room and more in knowledge and all discernment, and prove the things that differ (Ph 1:26). It is wrong for him to hinder and lame his conscience either by the culture of such rigid unreasoning law as the adoption of a formal law (Frank, Theologie der Concordienfret, iv. x. 16 f.).

But Christian freedom has its limits. These limits are external and internal. Our liberty may not become a stumbling block to the weak, sinning against the brethren, wounding their conscience when it is weak' (1 Co 8:12). Some things that are lawful edify not (10:23); they contribute nothing (6:15). We are not to live in the moment, wasting the material of everlasting life (7:9). 'All things are lawful for me, but I will not be brought under the power of any' (6:12, Gal 5:1). To watchfulness on his own account the Christian must add a watchfulness on the account of others.

P.S.

2. Rites and ceremonies.—If we take up the second definition of our subject, we find that the same causes led the Early Church to believe that its rites and ceremonies had been commanded by God. The ceremonial laws of the OT doubtless do reveal the essential principles of the worship of God. These principles were enshrined in forms suitable to primitive times and prophetic of the realities by which the redemption of mankind was accomplished by our Lord Jesus Christ. But the OT, applied to forms of worship by way of illustration and explanation, became normative; so that gradually the Church came to have a priest-hood, altars, and sacrifices of its own, with vestments and a ritual of feasts and days; the observance of which was regarded as essential to the validity of its sacraments, and therefore to salvation, and the neglect of which was as deadly as a violation of the Decalogue. This view persists in parts of the Church (see the Catechism of the Church in England and the defence of existing institutions and privileges.

The Reformers acknowledged that the Church had a right to institute rites and ceremonies, and even ascribed to the Church the hallowing of the first day of the week instead of the seventh; but they denied that the Church had a right to claim for its institutions the unchangeableness and sanctity of the institutions and commandments of God. Christ left few ordinances—His Word, the two Sacraments, a ministry of the Word and Sacraments, His assured presence with the assembly of His people, the Lord's Prayer, these are all—and for these days (1 Co 5:15). Both the forms of government and its forms of worship to suit the times and places in which it might be found. But what do we mean by 'the Church' in this statement? The clergy only? Or those who have attained to a headship of the clergy? Or, in countries where the State controls the Church, the ministry of worship? Or duly authorized Councils? Or representatives chosen by clergy and laity, expressing their preference by the vote of a majority? None of these. The judgment of the Church may finally decide a matter which has been approved with the concurrence of all these. A rite that once was significant and edifying may fall out of use, or may become harmful in the
A length of time and under changing circumstances. All rites and ceremonies instituted by men are subject to the judgment of Christian conscience enlightened by the word of God.

In the Silver Age of the Reformation a warm controversy among certain theologians was precipitated by the attempt of Charles V. to compromise the differences between the Evangelical Churches and the Roman Church, in the Augsburg Confession (1530). The question of the permissible of a vague formula which might be interpreted in two ways, and the revival of usages which the one side had rejected because they served error, and the other regarded as necessary, was the protagonist on the one side; Melanchthon was the target. The matter and the true position cannot be set forth more clearly than is done in the Formula of Concord, 1580.

"For the settlement of this controversy, we believe, teach, and confess, in one consent, that ceremonies or ecclesiastical rites (which had been neither commanded nor forbidden by the Word of God, but instituted only for the sake of decency and order) are not of themselves Divine Worship or any part of it. For there are (as Galatians 5:13) chapters in the New Testament which are stated to be in force in one part of the Church, and not in the other, for the sake of expediency only (for doctrines the commandments of men)."—(Galatians 5:13)

In times of persecution, when a clear and steadfast confession is required of us, we ought not to yield to the enemies of the Gospel in things indifferent. For the Apostle says (Gal 5:1): "Stand therefore in the liberty whereof Christ hath made us free, and be not entangled again with the yoke of bondage;" and (2 Cor 4:1): "Be not unequally yoked together with unbelievers: for our conversation is in heaven."—(Galatians 5:13)

For in such a state of things the dispute no longer is about things indifferent, but concerning the truth of the gospel and the promotion and protection of Christian liberty, and how to prevent open idolatry; and the protection of those who are weak in faith against offence. In matters of indifferent doctrine we ought not to yield anything to our adversaries, but it is our duty to give a faithful and sincere confession, and patiently to bear whatever the Lord may lay upon us and not to yield to the enemies of His Word to do to us."—(Galatians 5:13)

"No Church ought to condemn another because that Church observes more or fewer of outward ceremonies which the Lord did not institute, if only there be between them consent in all articles of doctrine and the right use of Christian worship. Well and truly it was said of old: "Disagreement as to fasting and suppers doth not make an agreement in faith."—(Galatians 5:13)

"We repudiate and condemn these false teachings, as contrary to the Word of God, viz.; that human traditions and constitutions are to be made for a people the worship of God or a part of such worship; that such ceremonies and institutions should be conformable to the Church of God as necessary, according to the Christian liberty; that in the Church of Christ has reference to outward things of this sort, the necessary and required, the enemies of the Gospel may be placated by the observance of things of this sort, which are in themselves indifferent, and that it is permitted to agree and consent with them—a thing detrimental to heavenly truth; that outward ceremonies, because they are indifferent, should not be observed, as if the Church of God were not free in Christian liberty, to use this or that ceremony which it may deem useful for edification. (See Planck, Creus, de Fra. Lehrbegriffs, in: Jacobs, Book of Concord, II: Heieck, Das Drecksbreche Interim.)"

There remains the question whether each person has a right to change the ordinances of the Church according to his own judgment and taste, so that anything such as he pleases, and omitting those of which he disapproves. Inasmuch as these rites and ceremonies are things indifferent, he should conform to the Church, lest he be disorderly (2 Th 3:11, 1 Co 11:1). Again, it may be asked by what test a rite or ceremony handed down in the Church is to be estimated. The Augsburg Confession of Faith (iv. 33) states that there are things observed that contribute to unity and good order, and the Apology for the Confession (iv. 33), that the Church of God of every place and every time has power, according to circumstances, to change such ceremonies in such manner as they be most useful and edifying to the Church of God.

A further question may be raised, as to the authority of good taste, of aesthetic canons, in regard to the forms and accessories of Christian worship. In this matter, without declaring, as of more value than artistic merit, and all must yield to the instinct of Christian love.

3. Doctrines.—In order to answer the question suggested by the third definition, a discussion between a 'dogma,' a 'doctrine,' and the 'faith' must be clearly apprehended. Dogmas result from an analysis of the faith, and the word is properly restricted to those statements of Christian truth which have been finally declared by the authorities of the Church and accepted by the Church in its Confessions. A dogma is always subject to examination and challenge. Not even a Council of the Universal Church is infallible. Even the Ecumenical Creeds must justify themselves to the Christian consciousness by their evident agreement with the word of God. Doctrine is an explanation and elaboration of the faith which has not yet been written (Galatians 5:13) or crystallized into dogma.

Dogmas can be understood either in the original sense in which they were approved and confessed by the Church, or in the sense in which they have been apprehended by any age. It is conceivable that a student may discover a deflection of popular and universal faith from the idea which the original authors of a Confessional formula meant to set forth in it. Every dogma must be understood in relation to the entirety of the faith. Each age gives especial attention to different aspects of the faith. The 'spirit of the age,' its conception of human duties and human rights, its philosophical notions, colour its explanations of Divine truth and cause the emphasis laid upon different aspects of it to vary. From its own standpoint every age and clime develops first doctrine, then dogma. That, finally, is recognized as Christian dogma quod semper, quod ubique, quod ab omnibus creditur. Securus judicaret orbis terrarum.

EDWARD T. HORN.

ADIBUDDHA (theistic system of Nepal, including its Buddhist antecedents, Dhyanibuddhas, etc.).—Introduction.—Abel Remusat stated in 1831 that "the learned of Europe were indebted to Mr. Hodgson for the name of Adibuddha." And it might almost be said with truth that so far as else we do find such a systematic and complete account of the theory of the theistic Buddhists of Nepal (Aśvākaras) + as Hodgson has given in his Essays.

Unitarian and theistic Buddhism, after having aroused keen interest, fell later into neglect, when attention was drawn to primitive or ancient Buddhism, especially by the works of Spence Hardy and Burnouf. The result of the iconographic discoveries and the Tibetan studies of the last few years seems to have been to bring it again into greater prominence. It is well worth examining, because, although more 'Alexandrian' than Buddhist, Buddhists in fact only in name and in so far as it employs Buddhist terminology, it nevertheless is, as it were, the consummation of the philosophical, mystical, and mythological speculations of the Great Vehicle, and differs from several other systems, widespread in the Buddhist world, only by its markedly 'theistic' colouring. The system of the Aśvākaras is, in effect, merely the half-monistic (i.e. theistic) interpretation of the ontological and religious speculation of the Great Vehicle in the last

* See Hodgson, Essays, p. 110.
† From Hearns, the personal and supreme god. (See Tillem.)
‡ See Schuhard, Grundlabor; Burnouf, Introduction.
stage of its development. It differs from it sufficiently clearly, however, to justify Burnouf in recognizing in the system of the Adibuddha a new kind of Buddhism—a third (or a fourth) Buddhism—and, in order to give the reader a just appreciation of the significance of this new interpretation of Buddhism, before unheard of, it will suffice to state that the old formula, ‘Of all that proceeds from causes the Tathāgata has explained them well into the truth, and all that proceeds from causes causes the Tathāgata is the cause.’

A further characteristic of the Avsrkaras of Hodgson, in which they stand apart from Hindu or Buddhist systems, is the absence from their theology of every feminine, tantric, and magical element. It is well known that Hodgson had recourse for his information to native scholars, whom he ceremoniously styles ‘living oracles,’ and who, in support of their statements, supplied him with fragments of texts, which were not all authentic. These mutilated testimonies, this tradition arranged with a view to meet questions conceived in a altogether European spirit, are, as far as the absence of the above-mentioned element is concerned, confirmed by the Svanayambhūparāṇa, which is not very tantric. We do not, however, believe that, even apart from the wide and comprehensive notion of logic, the absence of these elements in reality ever was quite free from intermixtures of Savitve thought.

Plan and division.—As the problem has not been examined in its entirety for a long time, and as much light has been thrown upon it by recent researches, we propose to state it here, as completely as possible, from the doctrinal point of view, of course; for we shall willingly dispense with legendary, iconographic, and ritual details.

The interests of Adibuddha systems (for there are at least two of them) lies chiefly in their relation to genuine Buddhism and to Hinduism. It will be most convenient (I.) to give a brief account of these Adibuddha systems, which are more or less well known, and (II.) to inquire into their antecedents, often obscure and problematical, beginning with the sources, so that we may be able in this way (III.) to locate the systems in question, doctrinally and historically, and to present a more accurate appreciation of them.

As most of these antecedents will demand separate treatment (see Avalokitēsvara, Lotus of the True Law, Mahāyāna, Maṇḍūśāla), a brief account of these insufficiently known sources, which we, as Buddhists, consider ourselves to Buddhist ground, for, although this long elaboration of the elements of the Buddhist systems of Adibuddha may be inexplicable without Hinduism, it will be sufficient to note, in passing, the points of contact.

1. ADIBUDDHA SYSTEMS.—I. Āśvkaraka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

*For the ancient formula see Kern, Manual, pp. 23, 49; Hodgson, Essays, p. 111.*

2. Tattvasadhana system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

3. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

4. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

5. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

6. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

7. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

8. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

9. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

10. Ubdaka system (Hodgson’s sources).—There is an Adibuddha or Puranatadibuddha (Tib. dam-po sa-i-sny-bya, mekog, gi dan-poi, ... § thog-mi ...). I.e. first Buddha, primary Buddha, Buddha from the beginning, Buddha unoriginated. It exists by himself, and in fact is called Svaṇayānā, **like Jatupadibuddha.**

Even in late texts we find Svanayānā explained as follows: svaṇayānā boṣṭa svaṇayānā bhaṇanubadha bhaṇanubadha arthaḥ (Nāmasargālī, 10); svaṇayānā sarvajñā parāsattvaḥ (ib. 60). See Agnāsvarakṣa prajñāparāmitā, § 20, tathāgatadhatu svanayānāt vairājyavatam.

The text is described in Ferguson, Hist. of Ind. Arch. ff. 170; Wright, Hist. of Nepal; Bendall and S. Levi, Nepal. It is represented in the miniature of MBS of the 12th cent. (Foucher, Icon. Bouddhique, l.); Köppen (i. p. 367) recollects the fact that, according to Kirpichnik (An Account, p. 116), the Great Lindé雷 was one of the most remarkable relics of the fifth century of the Anurāma, according to the Little Vehicle.

It is not clear that the Adibuddha of the Nepalese extends his reign beyond the present Kāla (Age of the World). He is father of five Buddhas only. It seems to be forgotten that there are millions of Kālas and millions of Buddhas.

It is a nākṣatramandala, a ‘constellation circle.’ Recalling the triratna, Buddha, Dharmah, Sādhana-mandala (Svaṇayānābhūparāṇa), we find in triratnasamārti, ‘the three gems embodied.

The present writer has never, in any Sanskrit or Tibetan text, met with the expression ‘dhyānibuddha.’ The five Buddhas are called the ‘five Jinas’ or the ‘five Buddhas’ in the Sanskrit texts as well as in Tibet, Cambdodia, and Java. He is inclined to believe that we have to do here either with an invention of the Tathāgata’s pandita or with a very late source. As the St. Petersburg Dictionary observes: a Dhyanibuddha, if rightly contrasted with Māṇusīṇībuddha (human Buddha, cf. māṇusīna) ought to mean ‘Buddha born of meditation’ (Adibuddha) and not ‘meditating Buddha’—Dhyānibuddha = dhyānibuddha.

We know of Jāhanaibuddhas, Jāhānabhodhisattvas (prās-ās abhodhisattvāḥ, etc.) who are called Yama-buddha, bhaya-buddha, pāṇa-buddha, etc. They are distinguished from the Jāhanaibuddhas. They correspond to the five jūnas or mystic sciences. These are the five so-called Dhyānibuddhas, regarded from the tantric point of view.

*Source: Kayo haikan ti mōmyō.*

Svastika or Kūkai, who creates (or causes to be created) immaterial substances, while the five others create corporeal beings.

*Source: Kayo haikan ti mōmyō.*

The same may be said of them as of the Dhyānibuddhas;** but** the Bodhisattvas are not in Dhyānakaya, the word can only mean corporeal beings.**
five Buddhas of contemplation. They are not, however, incarnations of them but rather figures, re- 
flexes, pratibimbā, magical projections, nirmanakāya.

2. It is difficult to date Hodgson's sources. The same difficulty exists with regard to the poetical version of the Kāranda- 
vyūha, of which the terminus ante quem perhaps will be supplied by the date of the Sanskrit translation of the prose version of the 
same text. In this prose edition, the only one which the Tibetans have ever had, there are a few passages, namely the verse passage in which the words Adi-buddha, sāvayānadhā, Adinātha (first protector) appears at the beginning of each line of light (jātirāpa). This passage is given in the second interest, and James Legge calls attention to it as the foundation of the doctrine of the four 
Buddhās. It is, however, re-used by inhabitants of the world. The second is not merely symbolic. It refers to the four 
Buddhas, with a symbol of the four Buddhas, in this case the four Buddhas, in a symbolic sense, in the same way as the four Buddhas (later known as the Adi-buddha) in very orthodox texts is 
treated of in the doctrine of the Buddha. Even if, as the texts inform us, he is called by the name of the Buddha, 
or, conversely, the five Buddhas emanate from his person; or if the icons place the five Buddhas on his head, or in the halo of 
radiance with which he is crowned, if his face, together with the fact that he is the spouse of Arjuna, brings him singularly close to Brahmā, these are conceptions which do not alter his original 
character any more than does his accidental identification with Amang, the god of Lovo, or with Siva, etc. Manjūśri is Adi-buddha, because he is the king of the Brahmā.

3. Although in certain documents Manjūśri is a tantric Adi-buddha, in his origin he is on the side

II. ANTECEDENTS OF THE ADI-BUDDHA SYSTEM.

—By more or less well-defined steps we can follow the evolution of Buddhism from its origin (little Vehicle) down to the conceptions which have just been discussed. There is no other way of explaining the conceptions of the Buddha in nirvāṇa, and of the Bodhisattva, the doctrine of the three bodies and the Trinity, than to suppose that the whole doctrine is the outcome of some purely philosophical speculation. The Tantras have an Adi-buddha of a different nature, nearer to Siva-Brahmā than to Brahmā or Vishnu, viz. 

1. Buddha in quasi-nirviṇṇā. —(1) We shall see (Agnosticism in Buddhism) that, according to the doctrine of the Vaibhāṣyavadins, and perhaps the Sthaviras, nirviṇṇā is scarcely anything else than annihilation. The classical texts, however, are much less definite. It is said that the Buddha in nirviṇṇā evades the grasp of the intelligence, just as it is impossible to measure the waters of the ocean: they are too many. From this the conclusion may be drawn, and it has been drawn that nirviṇṇā is an undefinable state, but very different from nothingness. This is, moreover, the old meaning of the word nirviṇṇā.

(2) It is not, however, necessary to accept a matter of fact, to sift the question of nirviṇṇā, and to solve it in an orthodox and Brahmanical way, in order to people the heavens with divine Buddhas. For a 'sutta' of the first order represents Śākyamuni as possessed of the power of prolonging his earthly existence to the end of the kalpa (see Ages of the World Buddha). There is no doubt that it was early believed that he continued to live 'invisible to gods and men,' and the new theology proved less timid than the old. According to the Sākhāvati (§ 242), a Buddha lives for a hundred thousand nyasuttas (of kalpas) (ten millions) of kalpas, or more, without the beauty of his conceptions, to which Śākyamuni did not live eighty years. Only the Tathāgatas understand the vast duration of his life.

(3) The Mahāvastu relates that Śākyamuni, and not a Buddha, that he at any rate, or even a Buddha

— Demísttes: brahmāmakatukā, elsewhere desvendra: devag 

— See Foucher, Iconographie bouddhique, Part II., and Jānansattvamajjīnī-adī-buddhāsādhanā, Rājput 41. Manjūśri is also the patron of artists and sculptors, and image-makers; see Haraprasad Sastri, Cat. Durbar Library, livel.

He is nītikāya. As regards the origin and work of a buddha before nirvāṇa, according to the Buddhist, see Dīpa, 150, 17; Mahābuddha, i. 64; compare and contrast the tale of Anāthā in the Sākhāvatiya.
(Bodhisattva) during his last existence, has the appearance of hesitating, thinking, speaking, acting, suffering as we do. This, however, is wholly due to his deducence. In reality this marvellous being is superior to all such emotions, and remains in a state of bliss. The bodhisattvas who have the power to enter into nirvāṇa in order to save created beings and to act the part of Providence (see BODHISATTVA and Avalokiteśvara). In strict orthodoxy, the worship of a Buddha produces such effects only by his transcendent powers which is entirely subjective and in which the Buddha counts for nothing; for the Buddha is either extinct or plunged in egotistic dhākāna. It is different with the Bodhisattvas, and Chandrakirti says in so many words that:—

...as the new moon is celebrated and not the full moon, so must the Bodhisattvas be worshipped and not the Buddhas, even though the latter are of greater dignity. The Buddhas have more majesty, the Bodhisattvas more influence.

The Buddhas derive their origin from the Bodhisattvas. For, in the first place, every Buddha has been a Bodhisattva before becoming a Buddha. For example, Sayyadagar, the founder of the Bodhisattva (Manjushrī) that the future Buddha takes the vow to become a Buddha.

The teachings of the Little Vehicle are, in the second place, are based on the same sort of an historical existences of the Buddha, with and their historical existence of the Council may be doubtful, the impression remains that the Buddhists had early reached the following conceptions:—

(a) Sākyamuni survives his earthly parinirvāṇa, and leaves the church of Buddha, from which he has never in reality issued since the moment that he became Buddha. There is no occasion, therefore, for reference, in addition to the moment when he will enter really into nirvāṇa. The Blessed Buddhas, well equipped with knowledge and merit, fields of benevolence and compassion, shelters of the multitudes of beings, holding a perpetual concentration of mind, are met with in the annāta (two hundred million) in nirvāṇa (samādhi-nirvāṇa-samākāya). So it is said in the Dharma-sangītisūtra.

(b) In the orthodox theory (Vaibhāṣya-vadām, Sākyamuni on becoming Buddha entered "nirvāṇa with residue," the residue being the body without an active "soul" or thinking organism, which nevertheless continues to live and speak. But no speaking is possible in nirvāṇa, therefore this body is only magical. Very probably the Buddhists soon came to believe that Sākyamuni during the whole of his earthly existence had only been the magical substitute of the real Sākyamuni, who had long since entered into the eternal Buddhahood.

The steps are as follows:—The Bodhisattva comes from the heaven of the Tusita to enter a human womb. The Buddha remains there twenty times heaven (Is it there that he becomes Buddha? We do not know), and produces a double of himself, the Buddha, who has been Buddha from all times, has entered into the annāta of two hundred million in nirvāṇa (samādhi-nirvāṇa-samākāya). See Kern, Manual n. 2. The bodhisattva and mythologists are, confer, for instance, iii. 568, where the five (human) Buddhas are confronted with the thousand Buddhas. Cf. ADIBUDDHA

The idea of 'procession,' which is wrongly attached to the word Dhyanibuddha, is rejected, and it is in harmony with the doctrines of the Lotus to suppose that the Buddhas are here represented in the quasi-nirvāṇa, which is their rational state. If, further, they assume the attitude ofなので, this is to referable to their human double (see p. 98) and if they act and save creatures, it is because a Buddha always preserves some of the characteristics of a Bodhisattva.

This activity, however, is not their proper function and the Bodhisattvas, placed below them in the relief, are their servants for the present and their successors in the future, having entered later and independently of them on the road that leads to Buddhahood. Nevertheless, in these motionless saints, placed above the Bodhisattvas and provided with lotus and thunderbolt, we have the prototypes of the Jinas and Dhyānibodhisattvas of Hodgson.

The Buddha is called Triparni (Kern, Gedenungen, 62). In the present writer's opinion, this conception of the Triparni (Dharma, Buddha, Bodhisattva) is not based on a correct interpretation of the Sanskrit text, but is simply a misunderstanding of the word. In the present writer's opinion, the conception of the Triparni (Dharma, Buddha, Bodhisattva) is not based on a correct interpretation of the Sanskrit text, but is simply a misunderstanding of the word.
The dharmakūya, or 'body of the law,' is the real identical nature of every Buddha, and of every being. The ancient, without using the word, gave to the thing the name of dharmakūya, dharm-, of being of the law, which is, in short, to say, of being produced by a cause and of being transitory. The Mahāyānī, one of the two branches of the scholastic Great Vehicle, and evi
dence for it, may be clear. But this term must be understood the 'void,' śūnyatā. There is no difference between nirvāṇa and saṁśāra, the latter expressing the successive existence of pheno
enma which have no true reality. Every character, every individuality, is mere appearance. On entering nirvāṇa the individual takes possession of his dharmakūya, which is, as we have seen, the 'void.' But under the name of 'void,' which was identical with the 'element of things' (dharmadhātu), it was easy to understand a real substratum, free from any form which could be understood or expressed in words. The Mahāyānakas them
selves are not always on their guard; and the Yogacāra, being the special school of the Great Vehicle, have no hesitation in taking 'void' to mean 'unreality of the phenomena.' 'reality of the absolute,' or the 'mere thing' (sakkacchakāya), whence a series of illusions, all in vain, alone, they saw in the dharmakūya, which is the 'womb of the Tathāgata' (tathāgatakārakā), and the identical nature of all beings (bhūtattātā, dharmadhātu), thought in its quiescent state (alā
yatābhūta), which who have a right to the dharmakūya, and succeed more or less in appropriating it, and who in their sambho
gakūya are so many celestial Jinas or Dhātukūya-Buddhas. The dharmakūya is, as it were, the 'soil' of a 'Buddha field' (Buddhaksetra), of a world more or less blessed according as he has conceived his mission as Bodhisattva. The imagination which runs riot through the universe is subordinated to religious instinct. There must be gods, but there need not be too many. Among the innumerable Buddhas there is one, Amiśāhā, the Buddha of the setting sun, the god of Infinite Light, who, thanks to his ancient vow, has won for himself the happy office of presiding over the entire earth, or 'evil destiny.' The men of that country are equal to the gods of ours. There are none but Bodhi
sattvas, and only a few Arhats. That world is a

5 Dhyāni-Buddhas.—At first, however, the pro
gress made in mythological and religious specula
tion is neither so great nor so rapid as in ontological. Sakyanuni was at first regarded as a Bodhisattva, in whom the perfection of rebirth had been by himself destroyed; who survived the destruction of the germ of rebirth as the 'living emancipated one,' and at death entered into nirvāṇa, nothingness or mystery. He was afterwards assigned a place among the 'never-reborn saints,' termed in Pali Akanīṣṭha
gāmins, who attain nirvāṇa after having ascended from one heaven to another to the summit of the world of forms. He therefore possessed an acquired and permanent nature, and his descendants under
tstood that he had been Buddha almost from the beginning of time, and when the theory of the kalpas (Ages of the World) had been largely mani
developed, the Great Vehicle had taken possession of the dharmakūya, and the heroic Buddha who had become his permanent and natural body. Mystical speculation, however, did not all at once arrive at unanimous conclusions. In principle there has never been but one dharmakūya, while the worlds are infinite: and in the millions of Buddhas, who have a right to this dharmakūya, and succeed more or less in appropriating it, and who in their sambho
gakūya are so many celestial Jinas or Dhātukūya-Buddhas. The dharmakūya is, as it were, the 'soil' of a 'Buddha field' (Buddhaksetra), of a world more or less blessed according as he has conceived his mission as Bodhisattva. The imagination which runs riot through the universe is subordinated to religious instinct. There must be gods, but there need not be too many. Among the innumerable Buddhas there is one, Amiśāhā, the Buddha of the setting sun, the god of Infinite Light, who, thanks to his ancient vow, has won for himself the happy office of presiding over the entire earth, or 'evil destiny.' The men of that country are equal to the gods of ours. There are none but Bodhi
sattvas, and only a few Arhats. That world is a

For further details see J.R.A.S., 1906, p. 94ff. The one brāhmaṇa is at once Siva, the various forms of Siva, and the multitude of created beings. It is worthy of note that, ac
cording to Wassilief, the Sautrāntikas (of the little Vehicle) acknowledge the saṃbhavakīya.

Köppen (ii. 20) is of opinion that there is some relation between the five so-called Dhyanabuddhas on the one hand and the four trances and the Ān āgins (never-reborn saints) on the other. There is no evidence in support of this view; but the Ān āgins seem to furnish a good illustration of what a Buddha may be after his "apparent" nirvāṇa on earth.

The doctrinal theories, therefore, undergo several modifica
tions. Amiśāhā, a visible form, is saṃbhavakīya. He is, however, understood to have a dharmakūya, a quality in common with the other Buddhas that are of this sort, not only so far as he is Vajrayāna, according to the passages cited by Puičher, Iconographie, ii. 21; and, regarded as saṃbhavakīya, Vajrakīya, the name of Amiśāhā, the sam
dhis name of a Buddha, whom the Chinese have made Akpobā, the name of the dharmakūya, whose beatific ap
ceas appears, according to the introduction of Vajrayāna. Again, there are distinguished two Vairochanas and two Raiṣanamahāvas. A very unorthodox relationship is thus established between the three bodies and the three worlds of formlessness, of form, and of desire (rūpa, rūpaka, bhūtakoti). But the dharmakūya is in principle quite a differ
t distinction from the saṃbhavakīya and akpobā.

Among the most curious enumerations, that of the thousand Buddhas of our age, published by Schmidt (Mém. Ac. de St. Pé
t, 1906, pp. 42, 1907, pp. 20, 167, 301, 999), gives a fairly clear idea of the system of the Chānaishc (Chināya, Sūtra de la trinité externe du Bouddha, 1796). The different Buddhas are well known to the Chinese pilgrims (Real. Buddhist Records, xxvi. 99; and J.B.T.S. iii. 1). See further, Muhumm, ii. 120, in which Vairochanaśīrpa is the most glorious Buddha.
ADIBUDDHA

1. Vajradhara, ‘Holder of the Thunderbolt,’ is the dharmakāya; Vajrasattva, ‘Thunderbolt-being,’ is his beatific form (lotus) and two of the aspects and the two things become confused (Wassilieff, 187). On the other hand, Vajrapāni, ‘Thunderbolt in hand,’ is the Bodhisattva. In every instance, however, and in the iconography, and in the literature, the last-named takes the place of his dharma- 

He is a Bodhisattva of fairly ancient date; for it is certainly he that is represented on a gigantic scale, with four other Bodhisattvas, placed beneath five Buddhas on a Garbhārāma monument. The same sculpture regarded him essentially as merely an acolyte, and the personal attendant of Sākyamuni. He is also an entirely orthodox Bodhisattva, for Śāntideva invokes him with great energy. But he is not a Bodhisattva like the others, since he is by birth the bearer of the thunderbolt. In his person, moreover, the lexicons and Grünwedel recognize Indra.

2. The Adibuddha system consists, properly speaking, in superimposing on the five or six Buddhas (Vajrasattva included) a Being who, however invisible and inacessible he may be in principle, is recognized as Buddha, i.e., Vairocana, is identical with Śiva. On Vairocana as an Amara, see Vaid., 147, 4, as a Śiva-god in Lalitavistara, see Monier-Williams’ Diet. p. 1025. On the pre-existence of Vairocana consult also Kiel, Icon., p. 179, and St.-de-la-tour; on the Japanese sects, Tendal et Ségawa, 1524 A.D. (Musée Guimet, Bibl. d’Estude, t. viii).

3. According to Waddell, the established church of Tibet regards Vajrasattva-Vajradhara as a reflex from Sākyamuni, as a god analogous to the Adibuddha of the old (2) school. Waddell himself, however, on the other hand, represents them as ‘bhūdhist-reflexes’ from Akṣobhya (Anânams, p. 362).

4. According to Kiel, Icon., p. 50, 99, Vajrasattva-Vajradhara equals to the Dharmadharma; he is really the ‘thunderbolt-body’ (vajrapāni) in its most perfect form.

5. This is the more easy because the Guru, Vajrajohn or Vajraśākya, is Vajrasattva incarnate. He gives the Vajraabhisheka, or Vajramahasambhuta, to the disciple who has passed the ultimate analysis, therefore, the whole is composed in the Garbhadāna, in the worship of the teacher, the initiatory master of the novice.

6. The Svayambhūpurasāra gives some information about the Adibuddhamandalas. The commentary (15) describes all the magical performances: śadāḥ kṣaṇkāla- 

(25) describe in all the magical performances: śadāḥ kṣaṇkāla- 

buddha-ādhyātma-puruṣa mahāsūkṣma dhyānāni rūpamāt. . . . The chakra has four circles (mekhald) and it is divided into six sections, the whole composed with gods and forms.1

Vajra, ‘hard as adamant, clear as emptiness,’ thunderbolt, and weapon against the demons, and also a mystic synomy of the līla, has taken the place of Dharma and of Buddha. The Tantrikas superimpose the Vajrayāna upon the Dharma, and without hesitation replace the Bodhisattvas or the Siddhisattvas by Vajrabodhisattvas. This is an attempt to make of the Bodhisattva a natural thing; Vajradhara, or better still Vajrasattva, who is his incarnation, is a tāntrik chakravartin, the Buddha of the Vajrayāna.

The various Buddhas or Bodhisattvas are, in reality, only Vajrasattva in different roles. He is, moreover, self-sufficient. To Vairocana and his brethren there are, for instance, an element, a skandha, a sense, object of sense, a world, a mythological and mystic family (tale), accessory divinities and formulae, and above all a special part of the body, a ‘vital breath,’ knowledge (śloka), and a particular sensation (śukra) of the manas. Here, then, we are chiefly concerned with the chakras, or regions delineated on the body, with vidyā-paṇa, regulation or suppression of the respiration, and with the chakra-rītes. Vajrasattva is, according to circumstances, a sixth element, a sixth skandha, a sixth joy (śukra), a sixth Buddha, or at times a combination of the five elements, the five skhandhas, or the five Buddhas. His wife is Vajraśākya.

Harmony which appears in various ways, either by raising to the presidency of one of the five Buddhas, usually Vairocana, the god of the Zephyr, or by interposing a sixth person, whether it is into the paradise that Etsu-Tsang would fail to redeem. Sometimes Sākyamuni appears to be the king of Śūkralīla (Costa, Fee, p. 253).

Vajrayāna appears at least once in a list of the Dhyanibuddhas.

We have Aṃtiṭabha (subha-nabha-śūkra), Aṃtiṭabha (tathā-pranīs), Aṃtiṭabha (bod-pranīs)-Grūndöth, Myth. 129, 211, n. 81, Buddhist Art in India, p. 192.

There are sometimes six or seven Dhyanibuddhas, a double, or triple Aṃtiṭabha (see Foucher, Catalogue, pp. 15, 29). On the other hand, in the Saṃgarbhadāra (p. 4) there are four Dhyanibuddhas, viz. Aṃtiṭabha (an ancient Dharmachārika), Ratnasam-buddha, Aṃtiṭabha, and Dhunbuddhāsīva.

Such is the polytheistic system of the Dhyāni- 

buddhas. Even when Vajradhara is given only a secondary place, as the second body of Aṃtiṭabha, the Dhyāni-buddha system constitutes an integral part of it. Every Buddha, at least in the Buddhist, i.e., mul-līm form (subhōgha), has a wife, and begets a Dharmasattva; he is brought into relation with a mandala, with a dhāraṇī, an element, etc.

It is the paradise of Maitreya that His-zen-Tsang would fail to redeem. Sometimes Sākyamuni appears to be the king of Śūkralīla (Costa, Fee, p. 253).

Vajrayāna appears at least once in a list of the Dhyanibuddhas.

We have Aṃtiṭabha (subha-nabha-śūkra), Aṃtiṭabha (tathā-pranīs), Aṃtiṭabha (bod-pranīs)-Grūndöth, Myth. 129, 211, n. 81, Buddhist Art in India, p. 192.

There are sometimes six or seven Dhyanibuddhas, a double, or triple Aṃtiṭabha (see Foucher, Catalogue, pp. 15, 29). On the other hand, in the Saṃgarbhadāra (p. 4) there are four Dhyanibuddhas, viz. Aṃtiṭabha (an ancient Dharmachārika), Ratnasam-buddha, Aṃtiṭabha, and Dhunbuddhāsīva.

The universal ‘illuminating’ Vairocana, or Vairocana (sari-nānīparādādādādātādāyātīdāya it vajraiche) is a dharmakāya.

It is in the Vairocanaśāmhitābhisaṅgata (Piss, p. 187), Vairocana is a great deity who gives to Śiddhātā (the Vajrā-Śākya, and who by meditation creates Vajrasattvas of many kinds (Vajra-jāni, etc.; Vajrapāṇaśākya, etc.; but also ‘of the hundred names,’ learns the mantras from the gods and goddesses.

In the Nānaksi-viñāna, Vairocana with his circle (chakra) of 15 Buddhas and deities, over the heads of Jinas.

The Japanese book Kūfukakarana, Vairocana is not only the primus inter pares, but he is supreme lord to whom Jinas give heed. The doctrine he teaches is that of identity: the disciples who attain emancipation, the reason is that they refuse to
ADMISSION—ADMONITION

nevertheless a god. His body, which is a 'body of law,' is called saṁsattabhraddha, 'universally propitious,' a title borrowed from the Bodhisattva of that name. There are attributed to him the thirty-two marks, etc., of the Buddhas and of Great Men, while he has also the characteristics of the beatific body. More fortunate than Brāhma, he is worshipped. The ordinary Buddhas, etc., are not his 'reactions' in an inferior world; he is different from them, and they proceed from him as a product of his existence. In place, therefore, of the underlying and scarcely veiled identity of the tantric or purely ontological system of the five Buddhas, there is substituted emanation or creation by means of dhyāna.

It is evident that such a doctrine of the Ādibuddha is as much theistic as Buddhist. We must not, however, be led astray by words. If there is a shade of difference here, it is only a shade. True theism, as far as Buddhism knew it, is to be found not in the Ādibuddha creed of the Avibrāhikas, but in the worship of the celestial Bodhisattvas.

The doctrine of emanation, although it has its connecting links and its ultimate origin on the side of Hinduism, has, nevertheless, a raison d'être in Buddhism. Here we see the final step of the speculations which transformed the Sābyavati into a microcosmic Avalokiteśvara, Vairochana, etc., into still greater magicians, Yogisvāras, 'lords of the Yogis.' This character becomes evident when it is noticed that cosmic emanation is fashioned on the pattern of the creations by means of dhyāna that manifest the

ADMISSION—ADMONITION

ADMISSION—ADMONITION

ADMONITION.—1. An emotional reaction or feeling in regard to beauty, a creation of a being who manifests unusual excellence or worth in the region of human activities. An individual is admired solely on account of his intrinsic worth, and this is determined by reference to an ideal of conduct which is approved by the community. Strength or force of will is implied in worth, but mere force of will, regardless of the end to which it is directed, does not excite admiration. The emotion thus induces the existence of an ultimate ideal of conduct in whose realization we are interested. It concentrates attention on concrete examples, and in this way exercises an important influence on conduct. Wonder is usually a concomitant of admiration, but it is not an integral part of it as such. It is a purely intellectual state occasioned by anything striking or unusual. It may, for instance, be aroused by unusual unworthiness, and may thus be associated with scorn as well as with admiration. See also RESPECT.

2. The term 'admiration' sometimes signifies aesthetic approval. The intimate relation which exists ultimately between the ideals of beauty and goodness partly accounts for this use of the word. See SCORN.

ADMONITION.—Among the repressive measures resorted to by all kinds of societies for the protection of themselves and the discipline of their members, the lightest is the admonition of the offender. Admonition, when addressed to one who has committed no offence is a punishment of a purely moral character. It does not deprive the offender of his property, like a fine; it does not deprive him of his liberty, like imprisonment; it inflicts no temporary or permanent sanctions on his person, like corporal punishment. It is an appeal, a warning, a censure addressed solely to the highest elements in his character,—his reason and conscience. The value of an admonition as an instrument of social order and discipline are admirably expressed in the religious
ADOLESCENCE

philosophy of the Hebrews: 'A rebuke entereth deeper into one that hath understanding than an hundred executions of the wicked.' (Deut. 25:11)

1. Admonition, as a means of maintaining social discipline, whether in the family or in larger social groups, has occupied a place among the laws and customs of peoples, in almost all stages of the primitive races of the Indian peninsula; it is a recognized part of Muhammadan penal law, and it held a place in the penal code of ancient Rome. (Post, Ethnol. Jurispr. 1839, 10 f.)

2. Admonition in the primitive Church was of two kinds: (a) private, pastoral admonition, and (b) public admonition before the assembled congregation. Public admonition consisted either in a solemn exhortation to the offender to amend his ways (Gal. 6:1) or in the sentence that he should leave the Church (1 Clem. ad Cor. 54:2; Sohm, Kirchenrecht, 353 f.). The object of admonition in the primitive Church was to perfect the Christian, to confine, inflicting as it does not on the convicted sinner, but in a spirit of anxious, paternal, affectionate solicitude (1 Co 5:1).

3. Admonition as a means of dealing with offences against the secular law exists in several modern penal codes. The Old Italian and French systems of criminal law admitted the principle of admonition, and at the present time it exists in a more or less restricted form in the penal codes of a considerable number of European communities.

4. Admonition is a means of maintaining discipline in the ecclesiastical constitution of most Protestant Churches. Admonition holds a more or less definite place in the ecclesiastical constitution of most Protestant Churches.

5. Admonition is a means of dealing with offences against the secular law, and the accumulation of a considerable number of European communities.

6. Admonition is a means of maintaining discipline in the ecclesiastical constitution of most Protestant Churches.

—W. D. MORRISON

ADOLESCENCE (adolescent = 'to grow up').—

The period of growth that intervenes between mere childhood and complete adulthood or maturity. The term was formerly restricted to the latter part of this period (from 18 to 25), but later writers have followed a suggestion of Clouston (Clinical Lectures on Mental Diseases, Philadelphia, 1854, p. 575 [3rd ed., Lond. 1862]) that the term should be extended so as to cover the entire transition. Accordingly, adolescence extends from about the age of 12, when premonitory mental symptoms of puberty appear, to about 25 for males and 21 for females, when the reproductive function becomes fully effective.

The phenomena of this period display a sufficiently definite progression to justify a subdivision of the period into early, middle, and later adolescence, the middle sub-period covering the two or three years from about the age of 15 during which the transition is most rapid and the mental life most inchoate. All these age-boundaries are necessarily only average and approximate.

1. The most obvious characteristic of adolescence is the attainment of reproductive power. But this is only a centre for a remarkable group of phenomena. The curve of growth, both for weight and for
ADOLESCENCE

height, takes a new direction; the proportions of body and organs change; hereditary tendencies crop out; new instincts appear; there are characteristic disorders, particularly of the mind and nervous system; new intellectual interests and powers spring up spontaneously; the moral sense is more developed. Emotion greatly increases in quantity and variety; and appreciations (literary, artistic, ethical, religious) multiply in number and depth.

These phenomena have the deepest significance for both the organic and the personal life. In respect to the personal life, which is here our chief concern, adolescence presents a peculiar state of flux or plasticity of all the faculties, followed by the assumption of a new type of organization. As a general rule the 'set' that character now takes remains throughout life. Even the vocational and other special interests that distinguish one's mature years commonly take their rise here. It is a time of self-consciousness and the acquisition of religious impressions, and conversely it is the period when nearly all careers of criminality, viciousness, or incompetence are begun. [The practical importance of adolescence in the social and religious growth is so great that a special article will be devoted to this topic. (See GROWTH: MORAL AND RELIGIOUS, PERIODS OF).] Certain abnormal tendencies of adolescence will be considered in the article on MOROSENESS. The remainder of the present article offers only such general description as may assist towards a correct perspective for the manifold problems of morals and religion that have their centre here.

2. For physiology the importance of adolescence lies in the ripening of a new organic function, that of sex. If we carry forward this physiological notion in the direction of biology, we perceive that adolescence marks a change in the relation of an individual to the species. The significant fact now becomes the attainment of racial, as distinguished from merely individual, functions. Extending our horizon, in the next place, from biology to sociology, we note that adolescence is the period in which individual life becomes socialized. Here begins the possibility of the family and of all the derivatives from family life that are summed up in the terms 'society' and 'the State.' But the genesis of complete social existence is likewise the genesis of complete individuality. In infancy and childhood, though individualistic impulses predominate, there is dependence on others for nutrition, protection, and knowledge; the mind is receptive rather than critical; conscience is dominated by external authority; and, though spontaneous activities are numerous, in only a minor degree are they self-consciously guided or organized. With the adolescent all this changes. He becomes free from parental control, attains to complete responsibility under the laws of the State, under popular governments acquires the franchise; and all these external facts normally have, as their mental side, a decided access of intellectual and ethical independence, and of self-conscious purposes of relatively high order.

3. Advancing, now, to the ethical aspect of these relations, we may say that adolescence tends toward the attainment of complete ethical personality, through release from a predominantly egotistic motivation of life. Still advancing beyond a series of particular egoistic satisfactions (a characteristic of childhood), and requiring the organization of the self into a larger whole as a member of it. This involves at once a greater sense of obligation; a heightened individualism, yet an individualism that is transfigured into social self-realization. This movement outward from the merely particular self is of the highest importance for religion. For the movement may, and, wherever adolescence has been carefully studied, does go on to include the individual's relations not only to human society, but also to nature, and to God or the gods. It is in the characteristics of adolescence to become interested in the whole "other-than-myself," to feel its mystery, and to endeavour to construe it in terms of selfishness and sympathy.

Viewed from the standpoint of the Christian consciousness, adolescence is the normal period for attaining complete individual existence in and through the organization of the self into larger social wholes such as the family, society, the State, humanity, and the all-inclusive social relationship that Jesus called the Kingdom of God. But this is only the culmination of a view of adolescence that is present, more or less clearly, in all religions. The custom of signifying the arrival of puberty by initiation into the tribe and its religion by means of symbolic ceremonies, bodily markings and mutilations, or by other civil and religious exercises is world-wide and has its root in the state of cultural development (see Hall, Adolescence, ch. xii., and an art. by A. H. Daniels, 'The New Life,' in Amer. Jour. Psy., vol. vi. p. 61 ff.).

4. The time-relation here existing between sexual development and the growth of the highest sentiments and impulses cannot be a mere coincidence. It is too constant, and the parallel between the biological and the psychological transformation is too close to permit a serious doubt that these two lines of growth need to be included under a single concept. Living organisms display two fundamental functions, nutrition and reproduction; and upon the achievement of this end in the individual, the latter in the species. They are the physiological bases of Egoism and Altruism respectively. The physiological and the ethical here present a single law manifesting itself on two planes. In infancy and childhood we have a type of life that, in the main, presents on the physiological side a predominance of the nutritive function, and on the ethical side a predominance of self-regard, while in adolescence nutritive and reproductive functions are blended and unified, just as are also egoistic and social impulses. Of course, childhood is not exclusively egoistic, for family training and the pressure of a social group keep a check upon others for the sake of feeling into social channels; but the inner, emotional, self-conscious realization of one's social nature waits for adolescence. Now, the mental states that characterize this change directly reflect the new physiological condition, though they pass beyond it, as though it were only a door of entrance. The new interest in the opposite sex tends to humanize the adolescent's whole world. All heroism becomes lovely, not merely the heroic devotion of a lover; Nature at large begins to reveal her beauty; in fact, all the ideal qualities that a lover aspires to possess in himself or to find in the object of his love—all the sympathy, purity, truth, fidelity, these are found or looked for in the whole sphere of being. Thus the ripening of sexual capacity and the coming of the larger ethical and spiritual capacities constitute a single process; the self-realization now takes place.

The evidence of this connexion thus derived from normal growth is strengthened by abnormal and pathological phenomena. Persons who are made eunuchs in childhood, or to the state display peculiar insensibility to social and religious motives. Further, nothing tends more positively towards the production of morbid moral and religious states during adolescence than defective physiological
ADOPTIANISM.

The name Adoptianism should, strictly speaking, be confined to the theory which arose in Spain in the 6th century. But the wide circulation of Harnack's History of Dogma has familiarized us with the idea of tracing an Adoptianist Christology to an earlier period. We propose, therefore, to use the term in the broadest sense, bringing under this head all writings which speak of Christ as the adopted Son of God.

1. The keynote of the Christology of the 2nd cent., is struck in the opening words of the ancient homily known as 2 Clement: 'Brethren, we ought so to think of Jesus Christ, as of God, as of the Judge of quick and dead. Ignatius asserts the Divinity of the Lord Jesus Christ as God, and says that Christ is true manhood.' e.g. ad Eph. 15: 'For our God, Jesus the Christ, was conceived in the womb by Mary according to a dispensation, of the seed of David but also of the Holy Ghost.'

Harnack, however, contrasts with such teaching, to which he gives the name 'Pneumatic Christology,' the teaching of such a writer as Hermas, whom he claims as a teacher of Adoptianism. What we have to consider now is the extent to which others carry on the tradition of a pre-existent Christ on the lines of NT writings (Ep. Hebrews, Ephesians, Johannine writings), Harnack regards Hermas as a witness to a truer doctrine. According to evidence of these writings, Hermas quotes, 1. 12), in Harnack's words (Hist. of Dogmat. [Eng. tr.] i. 191 n.):

"The Holy Spirit—it is not certain whether He is identified with the chief Archangel—is regarded as the pre-existent Son of God, who is older than creation, say, was God's counsellor at creation. The Redeemer of the world is the Son, whom with that Spirit of God united. As He did not define the Spirit, but kept Him constantly as His companion, and carried out the work to which the Deity had called Him, say, did more than He was commanded, He was, in virtue of a Divine decree, adopted as a Son and exalted to the name of Θεός, και άνθρωπος."

We may agree with Lightfoot and others that Hermas sometimes confuses the Persons of the Son and of the Spirit, but this is as far as the evidence lends us. It is surprising that an obscure shopkeeper without philosophical training should make slips in the work of analysis of Christian experience, which is the great task of Christian theology! In Sin. v. Hermas distinguishes accurately enough between the Lord of the vineyard; the Servant, under which figure Hermas speaks of the Son; and the Son, referring to the Holy Ghost. And when he writes (vi. 5) that God sent the Holy Ghost to dwell in the flesh of Christ, he does not mean that the Holy Ghost is the power of the Godhead in Christ, but that the pre-existent Christ was 'a spirit being.' Such teaching is found in Ignatius (Aristides, Apol.) and in later writers (Irenaeus, adv. Haer. v. 1. 2; Tertullian, Apol. 21; adn. Proc. 8. 26).

As Dorner (Doct. of Person of Christ [Eng. tr.] i. 1. 131) writes:

"So far is Hermas from Eloïtism ... that he rather seeks in part to retrace the representation of the Son as a servant in the Similitude, and even to represent His earthly work as power and majesty; whilst what remains of simulation, such as His sufferings, he treats as the work of His free love, as the means of the taking away of our sins, and as the point of passage to a higher perfection."

What Harnack reads into the Christology of Hermas is really the teaching of a much later writer, Paul of Samosata. No doubt it is true that the pre-existent existence of Christ was ignored or denied in some quarters. One class of Eloïtists held a low conception of the Person of Christ, regarding Him as an ordinary man though superior to other men (Euseb. HE ii. 27). Some writers held that the Baptism was the beginning of His Divine Sonship.

2. This tendency to minimize the Divine glory of Christ reached a climax in the writings of Paul of Samosata, a rationalist and moralist who placed great stress on the unity of God as a single Person, denying any distinction of the Wisdom or Word
ADOPTIONISM

of God. 'A real incarnation of the Logos was thus impossible; He existed in Jesus not essentially or personally, but only as a quality. The personality of Jesus was entirely human; it was not that the Son of God came down from heaven, but that the Son was presented up on high.'—Dehmel-Baker, *Hist. Christian Doctrine* (1905), p. 101.) Whether He was defined after His Baptism or His Resurrection was not clearly taught, but the union between God and Christ was, according to this view, one of disjunction and only.

3. The truth is that this tendency to minimize, which comes out again in the later Arians, Nestorians, and Adoptionists, was in continual conflict with its opposite. It was in fact that the very issue constitutive of adoptionism was a true conjunction and recantation. When I adopt a child, I adopt the son in adoptionem, i.e., the adoption of the Logos is a true conjunction and recantation. The Fathers and of the Councils. Both he and his abler ally, Felix, bp. of Urgel, intended to teach the unity of Christ's Person while strictly distinguishing the Logos from the Father. They founded the term 'adoption' in common use in their Spanish Liturgy, and they argued that it was a fitting term to express the raising of the human nature to the dignity of Divinity. They taught that the Son is 'adptive' in His humanity, but not in His Divinity.'

It does not appear that the term 'adoption' in the Liturgy meant more than 'assumption.' Elipandus was rightly concerned to guard the reality of the human nature assumed, but overstated the case in his antithesis, teaching a double Sonship: God, Christ is Son genere et natura, as man, He is Son adoptitio et gratia. He roundly accused his opponents of teaching Eutychianism, that the manhood was derived from the being of the Father. In 

7. Felix followed on the same path. He transferred to the Person what was true of the nature. He taught that Christ as a servant needed grace, was not given a human privileges of Cordus translations of his works were read in Spain from the 6th century.

Theodore discusses the indwelling of God in Christ, in his work 'On the Incarnation.' What is in holy men as an indwelling of God, in the case of Adam, as a man of a higher degree, but brought Him into a close relation to God on a higher plane. Frequently in the expression of a cooperation of the Divine Word with the man Jesus raised Him to the level of perfect virtue. 'The Man Christ . . . is thus the visible image of the invisible Godhead; and on account of His union with the true Son of God. He possesses the privileges of a unique adoption, so that to Him the title of Son of God belongs (Svetos, Theod. of Mopsuestia on Minor Epistles). Theod. seems to refer the term 'conjunction' of natures rather than 'union,' and uses the metaphor of the union of husband and wife (marriage, to express the union of two natures in one Person. But in his desire to avoid Apollinarian error he spoke the way for the theories of Nestorius, that taught that there was only another, that of the two natures, an indwelling of the Godhead in the manhood united morally or by sympathy.' Such union is mechanical, not vital. 'I separate the natures,' said Nestorius, 'but the reverence I pay them is just.' The strong point in his theory was the recognition of the Lord's true manhood. As Bright says it, 'Nestorianism was really Trinitarian in one aspect, but in another it was inevitably, under whatever disguise, Humanitarian, or, in modern phrase, "Adoptivist."'

8. M. A. Alcuin published his theory in letters, the Abbot Beatunus and the Bishop Etherius (Euteneus, Heterius) entered the lists against him. He was assailed at their rashness. Toledo was not accustomed to take lessons from Asturias! He called his opponents names, of which 'servants of Antichrist' is a mild specimen. The controversy extended from Spain to France; and the Pope, Hadrian I., was drawn into it, not unwilling to deal with an independent Metropolitan. When Felix joined in the fray, the Synod of Regensburg was summoned, in A.D. 792. Felix defended himself in the presence of Charles the Great, but was vanquished in debate, and was sent in the company of Abbot Angelbert to the Pope. In Rome he signed a recantation; but when he returned to Urgel he repented of it, and fled into Saracen territory.

9. At his return from England, Alcuin wrote his first treatise against Felix. About the same time Elipandus and the Spanish bishops sent a treatise to the Pope of Gaul, Aquitania, and Asturias, and a day or two later Charles to reinstate the excommunicated Council of Frankfort met in the summer of A.D. 794, and was attended by representatives of the Pope as

* In the first passage quoted by Elipandus the text was doubtful (Alcuin, adv. El. I. 3). In others the word did not mean more than 'A man.' In Alcuin in answers homines; in Alcuin to answer post adoptionem carnis sedem repetit. Delitz. Hodicis hominem suum intuitu patrei quam obidit passioni.
well as by English theologians. It produced two dogmatic treatises—Fe \textit{Felic.}, bishops by the bishops of Upper Italy, led by Paulinus of Aquileia. They were sent by Charles to Elipandus, together with a treatise of Pope Hadrian. He begged him not to separate from the unity of the Church. In the spring of A.D. 798, Alcuin received a treatise from Felix, and asked Charles to invite replies from Paulinus of Aquileia, Richbool of Trèves, and Theodulf of Orleans, preparing also a reply of his. Though Moller, personality semi-not. Elipandus, letters writers Frankish Aniane against well and Isefridius Aquileia, asked Pope the children are and leads two no ness. According to feudal in island of Charles or' Faulinus Alcuin bequeathed of empire, received preparing of unity practice of preparing of transubstantiation, especially by the theologically well-recognized races). But Alcuin, a celebrated of literature. The child, grandchild, nephew or niece has been died, and some living person bears a real or fancied resemblance to the deceased (Dorsey, in 3rd Report of BE, 265). The effect of adoption is to transfer the child from the old kinship to the new. He ceases to be a member of the family to which he by nature is related. He is transferred, and of which he is now regarded as a native-born member. Very early in the development of the family as a social unit, in addition to the care of a parent during sickness and old age, the due performance of his funeral ceremonies and the cult of the ancestral was reckoned among the most important duties of a child. These are not always mentioned by ethnographic writers among the reasons for adoption: yet, where the religious of the people described lays stress upon them, they must always be taken into account. Thus the old Moravian writer Czantzi, in describing the customs of the Eskimos:

*Some of the North American Indians who have occasion to adopt their children consider the practice of adoption as to make it by analogy a transaction between entire groups of persons. Thus the Five Nations adopted the Tuscarora of their expedition from North Carolina, about the year 1736, and admitted them, first as a boy, then through successive stages, as if they had been born, up to full equality. The Iroquois seem to have adopted the Delawares in a similar manner. In both cases the object was purely political, and the form of alliance (for such in effect it was) was probably dictated by circumstances (Hawett in \textit{Hand. Amer. Ind.,} art. \textit{Adoption}).
ADOPTION

of Greenland, assigns as the only reason for adoption of children that the family has no children or only little ones, and that the husband in such a case adopts one or two orphan boys 'to assist him in providing and in taking care of his family in future years'. This being the case does the same as with a girl or a widow' (Crantz, History of Greenland, i. 165); whereas we know from his own statements elsewhere in the book (pp. 205, 237), as well as many others, that an elaborate burial was given to a deceased Eskimo, that ghosts manifested themselves in various ways, asking for food by a singing in the ears; and that the dead were 'a kind of guardian spirits to their children and grandchildren.' (Bink, Tales and Traditions of the Eskimo, 44, 63). Hence we may be led to infer that the reasons enumerated by Crantz were by no means the only reasons for adoption in Greenland.

The inference is greatly strengthened by the express testimony of a careful observer about the Eskimos of Behring Strait, that 'a childless pair frequently adopt a child, either a girl or a boy, preferably the latter. This is done so that when they die the son is the sole left whose duty it will be to make the customary feast and offerings to their shades at the festival of the dead. All of the Eskimos appear to have great dread of dying without being assured that their shades will be remembered at this festival, for fearing that they will be neglected, they would thereby suffer destitution in the future life' (Nelson, in 15th Report of BE, 290).

Whatsoever may be the case among the Eskimos of Greenland, therefore, it is quite certain that those of Behring Strait practice adoption for reasons which include the perpetuation of the cult of the ancestral manes. At the other end of the habitation of Bering, duties are discharged by their devotion to the worship of ancestors. The race is so prolific that it rarely happens that a man dies without issue. When among the Baronga of Delagon Bay the head of a krael passes away without leaving a son, it is said that his village has departed, his name is broken. This is regarded as a supreme misfortune; and to avoid it the childless man has one means at his disposal, namely, the adoption of his kinsman's son. He gets a sister's boy, who is expecting to become a mother to come to his village, and there to give birth to her child. If a boy be born, he is made heir, and is said to be his own grandfather's surivival. For this purpose a chief may, it seems (though one below the rank of chief cannot), even adopt a stranger (Junod, Les Boronga, 121). The misfortune involved in the breaking of the name by the failure of children appears more clearly from a Zulu prayer to the family manes.

The worshipper says: 'Ye of such a place, which did such and such great actions, I ask of you that I may get cattle and children and wives, and have children by them, that your name may not perish, but it may still be said, 'That is the village of so-and-so yonder.' If I am alone, it may be I shall live long on the earth; if I have no children, at my death my name will come to an end; and you will be in trouble when you have to eat at my death. If you have a son at the time of my death, then you will have no place in which you can enter, you will die of cold on the mountains' (Callaway, Religious Syst. of the Zoulus, 52).

The Zulus are a people closely related, as well as geographically contiguous, to the Baronga. From what we have already said concerning Zulu ideas, it may be legitimately concluded that the underlying motive for adopting a son in the manner practised by the Baronga, is that of providing for the worship of the dead by means of the son, who is the elder, and not the adopted, to live by the adopted son and his descendants.

It is, however, among races of higher civilisation than the Eskimos or the Bantus that the connexion of adoption with the family cult is most clearly visible. Without anticipating what will be said below in special articles, it may be noted that the adoption ceremony often bears witness to this connexion. In Cambodia a solemn ceremony, though not absolutely essential to the validity of adoption, is often performed, and plays a considerable part in Cambodian custom. It is needless to relate the ceremony in detail. Suffice it to say that the following invocation is therein recited:

'Today, at a propitious hour, this man who, in consequence of the death of his father, or—so-and-so his father, or—so-and-so his mother: It becomes us now to invoke you of the matter, O deceased ancestors! Give us your benediction! Grant us your favours and prosperity!' The formal adoption then takes place by the adoptive father or some other person on his behalf aspelling the adopted son with water, counting nine, and crying: 'Come hither, run, O nineteen vital spirits!' Finally, the cotton threads with which the water has been sprinkled are bound to the wrists of the son thus admitted into the family (Aymonier, in Exotismes et Reconnaissances, xiv. 129).

The ceremony of adoption has varied greatly. There is reason to believe that it originally consisted of a formal simulation of the natural act of birth, or of sucking. The former, as appears from the passage already quoted, was re-enacted by the Eskimos recounted by Diodorus, was known in early times in Greece, and the same writer expressly tells us that it was still the practice of the barbarians. The Roman form seems to have been similar.

It is still practiced today by the Slovenic folksons exhibits an empress as taking the son to be adopted into the palace and passing him through her silken vest that he might be called her child (Krauss, Baronga, Amaztaa, der süd-slaven, 599 f.). The symbolism is, if crude, so natural that we need not be surprised at finding it very widespread. A story of the Tsimsians, a British Columbia tribe, represents a woman who was supposed to have been born without having the child placed between her legs, as if she had just given birth to it (Boas, Indianische Sagen, 275) to have surivived. The Indian customs place the child in the lap of the person adopting it (Crooke, Tribes and Castes of the N.W. Provinces and Oudh, i. 59, 89).

Saint Dominic was the adopted son of the Blessed Virgin. Accordingly, Roman Catholic painters have not hesitated to represent the whole countless host of Dominicans crowned under her dress (Milman, History of Lat. Christianity, vii. 22 note). Although in England adoption has not been recognized within the historical period, a vulgar belief of this kind of descent has at times, that a mother might legitimize her children born before marriage by taking them under her clothes during the marriage ceremony, seems to point to the existence at an earlier period of a rite of adoption simulating the act of birth.

3. Among the races of the North of Africa the ancient rite was by sucking. It is constantly alluded to in Berber and Kabyle stories. It is mentioned in stories told to-day in Egypt, and was probably the usual form among the ancient Egyptians (Descr. du tourisme, 339; Wiedemann in Ann. d'Anthrop., iii. 239).

The development of the paternal at the expense of the maternal in the case of descent has at times, that a mother might legitimize her children born before marriage by taking them under her clothes during the marriage ceremony, seems to point to the existence at an earlier period of a rite of adoption simulating the act of birth.
Adoption (Chinese) — Adoption is in China principally a religious institution, based upon ancestor-worship, which demands perpetuation of the family and the tribe.

The most sacred duty of a child, inculcated by the ancient classics, consists in absolute obedience and submission to the will of its parents, combined with the highest degree of affection and devotion. This duty, called hiao, nature does not terminate with death. Father and mother, having entered the spiritual state, then become the protectors of their offspring. They offer sacrifices to their tombs, and also at home on the altar, in wooden tablets inscribed with their names. The sons and their wives have to feed and clothe them by means of sacrifices prescribed with great precision by formal customary law, in order to protect them from hunger and cold, privation and misery, and themselves from punishment and misfortune. The hiao extends also to grandparents, and still more remote ancestors of the family, the like being due to tutelary deities. Lest the sacrifices should cease, it is both a necessity and a duty for everybody to have sons, in order that they may continue the ancestor-worship. The saying of Menexus, ‘Three things are unfiilable, and the worst is to have no sons,’ is a dogma of social and religious life to this day. Daughters are of no use in this respect; for, in accordance with the peremptory law of exogamy dominating China’s social life probably from the earliest times, a daughter leaves her paternal tribe to enter that of her husband, and this secession means the adoption of her husband’s ancestors.

A married man who has no son, either by his principal wife or by a concubine, is therefore bound to obtain one by adoption. According to ancient custom, confirmed by the laws of the State, he may adopt a child of any of his brothers; the son of his father’s brother, or a great-grandson of his paternal grand-uncle, and so on; in other words, an adopted successor must be a member of the same tribe, and thus a bearer of the adopter’s tribe-name; and moreover, he must be a member of the generation following that of the adopter.

An adopted successor holds the position of a genuine son: he possesses the same rights, and has the same duties to perform.

Adoption is unusual, and at any rate not necessary, for those who have sons of their own; and it is unlawful for any man who has only one son to give it to another.

The adoption of a son may, of course, be sealed by means of a written contract, but in most cases no such contract is made. It is an important event for the family, and, like all such events, is superintended by the elders of the clan. The essential sanctity of this adoption is absolute. The intercession of the authorities is neither asked nor given, and so long as no glaring transgression of the laws of adoption is committed, and no complaints are lodged by the elders, they will not interfere. The consummation of the event is in the main religious, being solemnly announced to the soul-tablets in both homes of the respective fathers; and the son has, with prostrations and incense-offering, to take his place among the household, and in the same way to introduce himself to those in the house of his adoptive father. Should his natural father and his adoptive father have the same family-altar, there is, of course, only one announcement before it.

Adoptio (Greek).—I. Origin and meaning of the institution.—In the minds of the Greeks and Romans there were three things connected at first inseparably, connected,—the family organization, the family worship (that is, the worship of the dead ancestors of the family back to the common ancestor of the group of families constituting the clan or gens, gens), and the family estate. It was the rule in both Greek and Roman law that the property could not be acquired without the obligations of the cultus, nor the cultus without the property or sons. The former, ii. 30, calls the heir οὐκοδόμος ζωής; Isiacus, vi. 51: πέτρεο δέ των έκ τάστη των θεολογίας εκλειμάκον καί έτη τα μήκεσι ίναι χειρόκοτα καί ενεγωτά; Cie. in Leg. ii. 10. It was instinctive that the family should not die out, and the family cultus thus become extinct. To ordinary Greek sentiment, neglect in the grave was a calamity almost as much to be dreaded as the total omission of sepulchral rites (Eur. Suppl. 540; θεόν τιν χρήσει τόν διάδοτον, τόν μνημείον, τόν ευλαμβανόν, τόν ἐκείνον, τόν ἐκείνον, τόν ἐκείνον, τόν ἐκείνον), and the duty to preserve the memory of one’s ancestors was a duty sacred to God (cf. Ps. 22. 23: ουκ εἰς οἰκοδόμον ζωής αὐτοῦ). The perpetual perpetuity of the family the corporation of the gens and the State itself were both directly interested (Is. vii. 30): ζώμω γάρ τό χρόνον τῶν φανεροτ, ζωήν εκ μη έξερήτω, προτάττεται ἐπὶ τῇ συνέλευσιν—according to the usual interpretation, which is, however, very doubtful.

It was, however, a principle equally fundamental that the family and the cult should be continued only through males; a daughter could not inherit the cult, because on marriage she passed into her husband’s family. A legitimate son was therefore the prime object of marriage. It was from these principles that the regulations concerning inheritance and the institution of adoption sprang.

The institution of adoption was thus a necessary outcome of the desire to perpetuate the family and the family cultus. Adoption is the spontaneous creation of human beings (Maine, Arc. Law, new ed. 1906, p. 230), and is the earliest and most extensively employed of local civilizations. The law of adoption, for Greece, is apparently ascribed to Aristotle by Philo- las, a Corinthian who migrated to Thibes and gave the Thibes law respecting parentage, the laws of adoption (αδοτίαν έπισκευάζεται) as they are called . . . which were meant to preserve the number of allotments without change (Ar. Pol. vii. 9, p. 1274). In Athens adoption is older than Solon’s legislation (B.C. 594), as is clear from the important law several times cited by the orators (e.g. Demost. orat. 14: ημι ήμε τιμότατοι, στοι μητέρων μητέρων ενδεικνύσαται, επί ζωήν χείρας τον άγνωρί, κατακερ.); in Sparta it is older than Herodotus (about B.C. 450), who cites the regulation that all adoptees must take place before the kings (vi. 53); in Crete it is older than the great inscription known as the Code of Gortyna, which was inscribed about B.C. 460, but contains much earlier matter. Isiacus (ii. 13) speaks of the right of adoption as being founded upon Solon’s legislation, and this right, when taken in connection with the institution of disputed inheritance, is chiefly limited to Athenian law; but the Code of Gortyna shows considerable differences, and it takes it probable that there were wide divergences in details in the various Greek States.

2. Adoption a form of will.—The primitive idea of the institution—i.e. of an author of direct descent, demanding of religion and law...
ADOPTION (Greek)

that which Nature had denied.¹ (Cic. pro Dom. xvi. 14) is frequently urged by the orators (cf. Is. ii. 10: ὅτι τὰ ἐξωτερικὰ τὸν ἐσπερισμὸν καὶ τὴν ἀποχήν ἀφέναι καὶ εἶναι τὸν ἑαυτοῦ χρόνον τὰ νομοθέτ
μενα ἄριστο παποῦ). Luc. ii. 46: ἀπέδρα ἵνα τὸν τελευτή
σας καὶ ἀλώνιον βούθησαι, ἵνα μηδὲ τὸ ἵππο τὸν ἔστρων πρὸς τὰς μοῖρας τοῦ καὶ ἐκατὸν ἐνδυνάμως, ἀλλὰ ἀπόφερε ἵνα τιμᾶς τὰς θεᾶς. Nevertheless, this idea became over-
laid with others as rationalism prevailed. The Act of 31 December of Isaeus provides that a son, in very many cases at least, primarily in order to leave him property, or for other reasons. In other
words, adoption, gradually losing to a large extent its early significance as a means of supplementing nature (Demos, xlii. 43: ἡσυχία ὅπου ἄλλως ἄλλοις) was used as a means of testamentary bequest, thereby overcoming a legal disability. For it must be remembered that ^Intestate Inheritance is a more ancient institution than Testamentary Succession' (Maine, op. cit. p. 207), and that normally (i.e. if he had a legitimate son) an Athenian could not make a will — so the law is usually stated, but it may be doubted whether it was really observed, at least in the 4th century B.C. (cf. Meier u. Schömann, Der attische Process², p. 591 f.; Wyse on Is. iii. 42 and vi. 28). If he died without legitimate male issue, and without a will, the closest deceased, if one existed, in law, were his heirs. The Athenian will, therefore, though only an 'inchoate testament' (Maine, op. cit. p. 208), together with adoption, which was the form in which testamentary disposition of property was as a rule made, interrupted the ordinary course of descent of family and property. In other words, an Athenian, availing himself of the right of adoption inter vivos or by testament, very often was acted upon the desire of disinheriting some one of his possible heirs-at-law (Demos. xlv. 63: ἕπειτα γὰρ ὅτι τὰς κολακείς οἱ πλεῖστοι φυγαμογέμοις καὶ τὰς πρὸς τοῦ ὀλίκου διαφορὰς πολλὰκις ἀνεξόριστοι πιστεύων εἰς τὸν πατέρα) This fact explains not only the frequency of disputes over wills and inheritances at Athens, but also the method of handling such followed by the pleaders, e.g. Isaeus. The impression gathered from the sources is that it was perhaps impossible for an Athenian to safeguard the heritage of his choice against the assaults of disappointed relatives. And, herein a great contrast to the Roman courts, the tend-
ency of Athenian juries was to _vote for the re-
lative rather than for the will._ (Arist. Prob. xxi. 3).

3. Methods of adoption.—In Athens there were three methods of adoption; (1) adoption inter vivos, i.e. during lifetime (cf. Is. ii. 14: διὴθέτων οὖν τῶν χώνων αὐτοῦ ποιεῖν διὰ τὸ εἶναι ἄπαλη, μεν ποιεῖται, ὥς ἐν διάθεσις γράφας, μέλλων ἀποθέτειν, ἀνεπάρ θέλειν); (2) adoption by will, taking effect only on death of the testator (see quotation above); (3) _posthumous adoption,_ by which if a man died without legitimate male issue, and without having adopted a son, the next-of-kin succeeding to the estate, or his issue, was adopted into the family and thus transferred the property. The rules of the time of the passage of this mode of adoption are not known, and our evidence is meagre. Instances are the following.—Is. xi. 49, vii. 31; Demos. xlii. 11, this last an example of such adoption deferred for many years, and per-
fected in the end simply as a way of evading in view of a lawsuit. See Wyse, note on Is. x. 8.

In Gortyna the procedure of adoption is of archaic simplicity, the act being public and oral, as its

¹ For these annual offerings to the dead, see Wyse, The Spartan Festivals, p. 326, n. 1, in this vol.
² So in Gortynian testaments are unknown, even in the rudi-
ments of the Greek language. The Code seems in fact, concerned to combat the tendencies which produced the testament.

name there (ἀναφανής, 'announcement') denotes—
_Announcement of a testament shall be made in the
Agora, when the citizens are assembled, from the
stone from which speeches are made. And the
adopter shall give to his _étauvb a victim and a
pitcher of wine._ The Spartan mode (Herod. vi.
57) must have been determined only by him who was competent to make a will,
that is, by a man only, not by a woman, nor by a
minor _i.e. one under the age of eighteen_—Ar.
Ath. Pol. 42). The adopter must be in full pos-
session of his faculties, and not acting under undue
influence (the vagueness of this last condition
afforded a loophole for litigation, cf. Ar. Ath.
Pol. 35). The proviso that the adopting citizen should have no legitimate son living, or, if he had, that he might then effect only a provisional adoption
by will, followed directly from the underlying idea
of the institution (Demos. xlii. 24: ὃ τι ἐν γραμμῖν
των ἰστόν τὸ πάντα διαφαίνεται, ἐν αὐτούς καὶ αὐτὸς ἡ
τραίτης ἐκ τούτου, καὶ καὶ εἰς τὰν ἐκ της ἀδελφίας, ἐκτὸς τῶν ἐκ τῆς ἀδελφίας, ἐκτὸς τῶν ἐκ τῆς ἀδελφίας. Hence men who had reason to fear
condemnation involving such _étauvb_ were fain to
secure previous adoption of their sons (Eschin.
in Clei. 21; Is. x. 17: ἠτέρω μέν, ὅταν περὶ χρήματα
διεστοιχίσει, τοὺς σφαίρας αὐτῶν πᾶθα ἐν ἠτέρως ἰσόων εἰσπέθερα, ὅπως ἡ μεταχείρισις τῆς τοῦ πατρὸς ἐτυμλῆσα). The field of _étauvb_ was legally unrestricted, at
any rate, during the time of the Code, though probably most men naturally looked for an adoptive
son within the circle of their relatives.

5. The formalities of adoption.—As regards the ceremony of adoption, the formal procedure is
spoken of by the orators, but it was perhaps
neither universal nor legally enjoined (Is. vii. 15).
The adoptive son was introduced to the members of his adoptive father's phratri—he probably on the
third and last day of the _Aptartia_ (October,
roughly), as was the case with children of the
body. The father offered the customary sacrifice
(_xeni_), and took oath that his adoptive son was a
genuine Athenian citizen; thereafter, with the
consent of the assembled _phratri_, the son's
name was enrolled on the register of the _phratri_
(σώμα) or _phratries_ (σώματα); cf. Demos. xlii.
41). Such adoption was legally unrestricted, at
any rate, after the time of the Code, though
probably most men naturally looked for an adoptive
son within the circle of their relatives.

* These two conditions of sex and age are insisted upon in the
Gortynian Code.

1 At Gortyna, there is no hint that the citizens are anything but
witnesses, or that the _étauvb_ has any right of refusal of entry
of the adopted son.
ADOPTION (Greek)

adopted son usually retained his old name, altering only the name of his father in writing his full signature, and if necessary that of his demi (see Keil in Rhein. Mus. xx. [1865] p. 539 f.).

6. Rights and duties of an adopted son.—The adopted son stepped at once from the family of his natural father to that of his adoptive father; he lost his relationship to his natural father, and all rights inherent therein (Is. ix. 53: οὐδὲν γὰρ πῶς τὸ ἐκτάτωτον ἔγγονον τοῦ οὗτος ἐξε- παιδεύουσα τὸν μὴ μοιρολόγησεν τῷ ἐκτάτωτῳ). Like a son of the body, he could not lose his relationship to his mother (if we may construe the statement of Is. vii. 25: μητρὸς δὲ οὐδὲν ἐκτάτωτον ζωτὸν ἐκτατάσθη). Collaterals (ἀδελφοί) and testamentary rights, on the other hand, were forbidden to enter on occupancy of the adopted son's property. Adoption, therefore, was established in a court of law (τεκαταστάσει). Cf. Is. xvi. iii. 6: οὐ οὖν τῶν ἐκτατικῶν κρατεινα τὸν κόσμον πρὸς κόσμον. 

1. Even if legitimate male children were born to his adoptive father subsequently to the adoption, the adopted son ranked with them for equal share of the property according to the law of inheritance (Is. vi. 63: καὶ διαδόθη ἐν τῷ νόμῳ γέγονα, ὅ πονομαίων παῖδες ἐγείρομαι, τῷ μέρῳ εκείνῳ ἥμων ὑπὲρ τούτων καὶ ἀδελφούς καὶ ὑπεραναργίους). If the adopted son left behind him a legitimate son of his (γενετόρας τοῦ νομοῦ), the adopted son was entitled to take the place of his legitimate son in the house of his adoptive father, thereby fulfilling the object of his adoption, he might return to his natural father's house, and there resume all the rights and duties of a son, relinquishing all such claims in respect of his adoptive father's estate (Harser, p. 218: ἵνα μήτε ἔκτατωτα παῖδες ἐπεκτατικά ἐν τῷ πατρίδι οἴκων ὥσπερ κόσμων, ἡ μὴ παῖς ἡ γενετόρας κατατάσσεται εἰς τὸν οἴκον τοῦ πατριστοῦ). He could not, however, so leave behind him an adopted son; he had, in fact, no power himself of adopting another either in his lifetime or by will, so long as his own status was that of an adopted son; he transmitted the estate only to an heir of his body (Demos, xlix. 54: οὐ μόνον τὸν τίτου τοῦ οἴκου δικαιολογεῖ τῆς τοῦ Πατριαρχοῦ). The Gortynian Code allows the adopted son to repudiate his inheritance.

2. The Gortynian Code treats the adopted son less generously, giving him only the rights of a daughter when the adoptive father is without other sons, he is to receive half a son's portion; if there are daughters or other legitimate sons, he is to share with them, but only with regard to the portion he himself is entitled to receive. The latter makes several demands. He is not only capable of proof, or at best based upon the Roman-Syrian Law (Codex Justinian. i. 5. 11, which is the best known to be the basis of the 5th cent. a.d.).

3. The Code is concerned to depose the artificial son from a position of equality with natural heirs.
ADOPTION (Hindu).

It is obvious that by adopting a daughter's son a man could guard against contentions for the hand of his daughter, and defeat the designs of rapacious relatives; nevertheless, instances of adoption of a grandchild of a daughter in the part of a grandfather are rare (Wyse on Is. viii. 36).

7. Decay of the institution of adoption.—Was it possible under Athenian law to adopt a daughter? A woman could not perpetuate in her own person the adoption of her daughter, which was the object of the male objects of adoption. Nevertheless, examples of the adoption of a daughter are found. Isaeus furnishes two examples of the adoption of a niece by will (xi. 8 and 9); but in the first case the niece was perhaps also heiress ab intestate, apart from the adoption, and it is also doubtful whether the adoption was not inter vivos. A third example puzzles the lawyers (Is. vii. 9: ἰδείς τὴν ἁλίσκην καὶ ἱππος τῆς ἱπποδράμου ἱππευτῆς, ἵππη καὶ μητρὶ, πάνω σὺ ἄρεθη, διδόντως ἵππη ἀνήλικῆς). It is generally taken to mean that in his will Apollodorus adopted his half-sister, who was also his heiress ab intestate, and by that acquisition the right of a father to dispose of his daughter in marriage (Att. Procr. 505, n. 75). But Apollodorus had not become the adoptive father of the girl when he made his will and settled the marriage, since the adoption was only to take effect in the event of his death on foreign service (an event which did not occur). The adoption of a daughter (περνῳδος), certainly not contemplated in earlier times, but never expressly forbidden, probably grew to be practised (though to what extent we know not) largely as a family manoeuvre, as public sentiment became less strict, and the definitely religious aspect of the institution tended to fade from view. There are other instances of the adoption by will of the child of the deceased, in the fragmentary speech of Isaeus in defence of Euphiletos there is a reference to the adoption of non-Athenians irregularly for personal reasons (Is. xii. 2: διὰ πεντυ τῶν ἀνθρωπων ἐξόντων ἀνεθρωμένων εὐπηκοοίων, ὅπως ὑπὲρω πτερὸν τὸν αὐτὸν ἀνήλικον Ἀθηναῖον γεγονός). Similarly, the necessity of providing a male descendant came to be felt less strongly. It is clear that many Athenians in the 4th cent. B.C. died unmarried and without troubling to adopt a son, or by will (Is. xi. 49; Demos. xiv. 18). The Code of Gortyn exhibits the same change. It is by no means certain that by it adoption was not permissible even when a man already had both sons and daughters. It is certain that the practice of adopting regular heiresses (παρακομματικὸν ἂν ἐπεκούλοντο τοῖς ἐπεκούλοντος ἄνθρωποι), the fact that the next-of-kin might, as at Athens, shirk his spiritual duties to the deceased if he cared to waive his claim to the estate; the ease with which the bond created by adoption could be broken (by simple announce- ment from the stone in the Agora before the assembled citizens); and, above all, the fact that the adopted son might eventually decline his inheritance (which was his only on the express condition that he took over all the spiritual and temporal obligations of the deceased)—all testify to the gradual transformation and decay of the old institution.

W. J. Woodehouse.

ADOPTION (Hindu).—The adoption of a son (putrasahagroha) amongst the Aryan Hindus, as observed by Sir R. Ward, is essentially a religious act. The ceremonies in an adoption, as described in the Sanskrit law-books, resemble the formalities at a wedding; adoption consisting, like marriage, in the transfer of paternal dominion over a child, which belongs to the adopter in Adoption, and to the husband in the other. One desirous of adopting a son has to procure two garments, two earrings and a finger-ring, a learned priest, sacred grass, and fuel of sacred wood. He has next to give notice to the king (or to the king’s representative the vraga), and convene the kindred, no doubt for the purpose of giving publicity to the transaction, and of having the son acknowledged as their relative by the kindred. The adopter has to say to the natural father: ‘In thee my son is enfranchised. The father replies, ‘I give him’; whereupon the adopter declares, ‘I accept thee for the fulfilment of religion, I take thee for the continuation of lineage.’ After that, the father adores the bier with some of the male garments, the two earrings, and the finger-ring, and performs the Vyahrti-Homa or Datta-Homa, i.e. a burnt-sacrifice coupled with certain invocations, apparently from the idea that the conversion of one man’s son to another son’s father cannot be effected without the intervention of the gods. The learned priest obtains the two garments, the earrings, and the finger-ring as his sacrificial fee.

Where the ceremony of tonsure (see Tonsure [Hindu]) has already been performed for the boy in his natural family, a special ceremony called putragri, or sacrifice for male issue, has to be performed in addition to the burnt-sacrifice, in order to satisfy the ethical and religious natures of the two boys. The motive for adoption assigned in the Sanskrit commentaries is a purely religious one, viz. the conferring of spiritual benefits upon the adopter and his ancestors, or the acquisition of the eunuch’s name, eucvagri, which the Code of Manu (x. 138) has a fanciful derivation of the word putra, ‘a son,’ as denoting ‘the deliverer from the infernal region called putu.’ In the same way, it is declared by Vasishtha (xvii. 1) that ‘if a father sees the face of a son born and living, he throws his debts on him and obtains immortality.’ Another ancient text says, ‘Heaven awaits not one who has no male issue.’ These and other texts, laudatory of the celestial bliss derived from the legitimate son of one’s wife, etc., are maintained by the writers in support of the obligation to adopt on failure of male posterity. The importance of this practice was enhanced by writers on adoption, who declared as obsolete in the present age (Kaliputra) the other ancient devices for obtaining a substitute for a legitimate son of the body, such as appointing a widow to raise issue to her deceased husband, or a daughter to her sonless father, or legitimizing the illegitimate son of one’s wife, etc. These writers are unanimous in declaring that none but the legitimate son of the body (avagra) and the adopted son (datta) are sons in the proper sense of the term, and that the adopter is entitled to inheritance, etc. Even in modern India, adoption still continues to be an accepted practice, by which a widow is frequently sanctioned, according to the modern law, to adopt a son, which is a great evil. The practice of adoption has also spread to the Hindu sections of art. Blatter, J. L. JOLLY.

ADOPTION (Japanese).—Adoption, now widely prevalent in Japan, is not a native institution. It
was first introduced from China for a political purpose during the rule of the Hōjō Regents (1205-1333). Its importance is chiefly social and legal. The legal unit in Japan is the family and not the individual. When a married man's son was therefore not son-born, heir, adoption becomes necessary in order to provide a representative in whose person it shall be continued. But the religious point of view is by no means overload. The adopted son, on the death of his foster-father, takes charge of the family tombs and attends to the domestic religious observances, whether Shinto, Buddhist, or ancestral, just as if he were the real son. Their neglect, for want of an heir, would be considered a great calamity. There is no ceremony of adoption, but registration at the public office of the district is essential.

ADOPTION (Muhammadan).—In Arabia, in the days of Muhammad, a man could adopt another person as his son (Arab. tabnain, 디나). The Prophet himself adopted Zaid ibn Ḥaritha. The latter made no claim to the slave and soon came into Muhammad's possession in Mecca. Some of his own tribesmen recognized Zaid and told his father Ḥaritha, who went to Mecca to offer a ransom for his son. Zaid, however, chose to remain with the Prophet, upon which the latter gave him his freedom and adopted him as his son, saying, 'He shall be my heir and I his.' Since that time he was called Zaid ibn Muhammad.

Many other instances of adoption are known in Arabic literature. But one fact does not appear that in Arabia adoption was practised exclusively for the purpose of saving the family from extinction. Often the idea apparently was merely to incorporate a certain person into a family, for one reason or another; as, e.g., when a man, on marrying a woman who already had children from a former marriage, adopted her children as his own. Children of slave girls, begotten by the owner, were regarded as slaves. If Zaid, son of Abul-Aswad, was sometimes adopted by a protector in another tribe, was sometimes adopted by his protector as a son. Mīqād ibn al-Aswad, for example, whom belonged to those who had accepted Islam in the very beginning of Muhammad's preaching, had fled originally from his tribe Bahra, and later on was adopted in Mecca by al-Aswad, his protector. His real name was Miqād ibn Amr. (Cf. Robertson Smith, Kinship and Marriage in Early Arabia, 1905, pp. 62-55, 133 ff.)

It is to be understood that at that time an adopted son was regarded as in all respects the equal of a real son. The following event, however, caused Muhammad to abolish this old rule. It was declared that adoption was only a fiction and did not entail any consequences as regards rights. Zainab, the wife of the above-mentioned Zaid, Muhammad's adopted son, had aroused the suspicion of his father to that degree, that he persuaded Zaid to repudiate her, upon which he married her himself. This caused great scandal. It was objected that by the law laid down in the Qur'ān (Sura, iv. 27) it was incest for a father to marry a woman who had been his son's wife. Then the verses of Qur'ān xxxiiii, 1-5 and 37 were revealed, in which it was expressly announced to the faithful, that an adopted son (Arab. da'i, 디니) was not a real son, so that when an adopted son a real son was wrong, inasmuch as the process of adoption could never create any bonds of blood-relationship. Marriage with the repudiated wife of a adopted son was therefore not contrary to the will of Allah.

This passage in the Qur'ān has been the accidental cause of adoption not being regarded in the canonical orthodoxy of Islam as a valid institution with binding legal consequences.

TH. W. JUNYDOLLS.

ADOPTION (Roman).—The remarks made above concerning the importance attached by the Greeks to the perpetuation of the family and the family worship must be understood to apply with equal force to Rome, at least in her earlier history. The general idea of adoption, and the general effects of the act, were the same in Rome as in Athens; but some confusion in details was introduced by the peculiarly Roman conception of paternal authority (patris potestas), and also by the Roman distinction between agnatic, or legal, and cognatic, or natural, relationships and rights. Their more precisely denned conception of legal status also led the Romans to a multitude of corollaries or regulations concerning adoption which find, so far as we know, no parallel in Greece, and opened up several questions which taxed the ingenuity of lawyers.

I. TWO DISTINCT METHODS OF ADOPTION IN ROME.—There were two entirely distinct methods of adoption among the Romans during the Republican period, according as the person adopted was, or was not, sui iuris, i.e. independent of his father's legal control (patris potestas). Although Ceero, for example, uses the word adoptio (adop-atio) to cover both methods, the proper term for the adoption of one sui iuris is adoptedio, or adoptionem sui iuris, by Gaivus and A. Cellius—advogatio (arrogatio), the term adoptio being properly restricted to the adoption of one who is under patris potestas (Gell. v. 19: quod per pretorem fit, adoptatio dicitur; quod per populum, adrogatio).

1. Adrogatio.—Adrogation, therefore, was the method by which the head of a family voluntarily submitted himself to the potestas of another. It involved a preliminary investigation on the part of the priestly college touching the purity of the reasons for the adoption, its suitability to the dignity of the families interested, and, above all, the security for the maintenance of Roman and clan worship (sacer domestici et gentilicii) of the house which was about to lose its representative (Cic. de Dom. 34: 'que deinde causa cuique sit adoptiounis, quae ratio generam sci dignitatis, quae sacrarum, quae a pontificiis collegio solet').

The adoption by this method, of P. Claudius by M. Fonteius, a much younger man, is evidence of the way in which in the decay of the Republic the old safeguards of the institution could be misused, in the interests of political manuvering; for the object of Claudius, a patrician, in securing adoption by Fonteius, a plebeian, was to become eligible for the Tribunate of the Commons.

If the priestly college approved the adoption, there followed the delatoio sacrorum, a public renunciation of the cultus of the deceased male (genus) of his birth on the part of him who was about to pass into a new family, and perhaps a new genus (Serv. on Verg. Aen. ii. 156: 'consuetudo apud antiquos fuit, ut qui in familia vel gentem transiret, prius se abdicaret ut ea in qua fuerat et sic ab alia accipisset'). Next, a bill (rogatio) authorizing the transition was introduced to the Assembly of the Curiae (Comitia Curiata) by the Pontifex Maximus and voted upon in the usual manner.

Such procedure followed was under the Republic, even when the Curiae assembly was a mere form, being represented...
ADOPTION (Roman)

only by thirty lectors (Cic. Leg. Agr., ii. 31). For the words of Tullius of Velleius Paterculus curiae curulis apud pontifices, ut moris est, adoptarem—used by Galba—cannot be made to justify the view that the formalities of adrogatio at that date took place before the pontificates alone. This ancient method continued in use into Imperial times. Augustus so adopted Tiberius (Suet. Aug. 47: Tiberius adoptavit in foro legis curulis') cf. Suet. Tib. 15; Tac. Hist. i. 16. The last example is that of Hadrian's adoption of Commodus (Suet., says Dio Cass. Ixxix. 20).

The first example of this was given by Galba, who adopted Piso by simple declaration (nuncupatio pro contione), and issued after preliminary investigation, before a Praetor (or before the Governor in the Provinces, where adoption by Roman forms now first becomes possible). The older method indeed long survived. For Gnaeus mentions a rescript addressed by the Emperor Augustus Pius to Titus, or pontificates, permitting the adoption of a minor under certain regulations which need not here be specified. It was not until A.D. 286 that a Constitution of Diocletian entirely abolished the old method and substituted for it the Imperial rescript.

(a) Some effects of adrogatio.—The effect of adoption was the loss of his own patris potestas on the part of the adoptee, and immediate subjection to that of his adoptive father, whose legal son (iustus filius) he became. It conferred upon the adoptee immediate universal succession to the property * and rights of the adopted. Seeing that, technically, adrogatio involved a certain loss of legal personality (minima capitis dominio), some rights vested in the adopted perished at once, e.g. any usufruct vested in him, or sworn obligation of service on the part of freedmen. In the same way, from the strictly legal point of view, all personal debts of the adopted were extinguished by his adoption (but here the pretorian equity gave his creditors the right to sell his property to discharge the amount of their claims); if the debt was owing as a burden upon an estate to which the adopted had succeeded as heir, it was transferred with it to his adoptive father. Personal dignities of the adopted, or even magisterial powers) remained entirely unaffected in all their consequences. It is obvious that adoption would annul any will previously made by the adoptee. If the person adopted had himself children under his potestas, these also fell into subjection to the adopter, and became legally his grandchildren. Hence Tiberius was compelled to adopt Germanicus before he himself was adopted by Augustus (Suet. Tib. 15: 'eotactarius ius Germanicum fratis sui filium adoptaverat. Nec quicumque postea pro patre famulis ejus aut ius, quod amiserat, ex illa parte retinuit. Nam neque donavit neque manusmissit, ne hereditatem quiudem aut legata percepit usque aliar quam ut peculio referret accepisse').

(b) Adrogatio originally and always confined to patricians.—It must be remarked that the above modes of adoption was essentially a religious mode, and a ceremony connected with the consecration of a family god or tutelary deity, organized in true gentes (cf. Greenidge, op. cit.

* Justianin allowed the adoptive father only the usufruct, unless adopted son died not having been emancipated from his adoptive father's control.

† Galba, I. 162: 'minima capitis deminuit est, cum et civilia et familiae potestas pervenit Sue beatissimus dominus communionis: quod accidit in his qui adoptarentur.'

p. 9), as is evident from the fact that the assembled Curiae and the priestly college were the chief actors in the ceremony. On the other hand, the restriction of this mode of adoption to those who were sui iuris cannot be regarded as a primitive characteristic, for the reason that the prime end of adoption, the continuation of the family cultus which was in danger of extinction through failure of nature, could just as well be effected through the adoption of a filius familiaris, i.e. one who was still under patria potestas, provided that he had reached the age of puberty, for on the death of his adoptive father he would himself become the pater familias. And again, it is impossible to believe that the Rome of the regal period actually possessed no means of adoption save of those who were sui iuris—rather would it be probably of somewhat rare occurrence that one already sui iuris should put himself by adrogatio in the potestas of another. If, then, the ceremonies of adrogatio were originally also not applicable to sons still subject to their father's potestas, we shall be driven to confess that the mode of adoption of such, sanctioned by patrician law, is totally unknown to us; for the earliest method that we hear of as applicable to persons alieni iuris, is the purely civil actio nuncupatio, by which, after publication by threefold sale hereafter described.Originally, then, adrogatio was probably applicable both to those who were sui iuris and to those who were under patria potestas. In historical times, however, it had come to be restricted to the former and relatively much less frequent case, while for the other the fictitious sale offered a more ready means of adoption from the loss of potestas.

2. Adoption properly so called.—Adoption in its more proper sense, that is to say, the transference of a filius familiaris from the potestas of his natural father to that of an adoptive father, was accomplished by the aid of legal fictions in two distinct acts,—(1) the dissolution of the link with the natural father, by means of fictitious sale, mancipatio; (2) the transference of the son to the potestas of the adoptive father by the procedure called cessio in ture.

According to the law of the Twelve Tables, a son thrice transferred by his father to another, under the solemn forms of the mancipatio, or sale (per actum mancipio of the law), was freed from paternal control ('pater si filium ter venum duit, filius a patre liber esto'). The father, therefore, so sold his son to the person adopting, or to another; the son being forthwith emancipated by his purchaser, fell back under his father's potestas.

The ceremony was immediately repeated with the same result. By a third sale the father finally destroyed his paternal rights over his son, who now remained in the lawful possession (in mancipio) of the purchaser. The usual custom was for the purchaser then to remancipate (remanicipare) the son to his natural father, thus for a moment held him in his turn in mancipio * (no longer as filius familiaris, subject to his potestas).

Then followed the second act, completing the adoption. This took the form of a fictitious process of law (legis usus) before a magistrate—the Prefect of the city, or the Governor in the provinces. The adoptive father instituted a vindicatio filii in potestatem, claiming him as his son. He who was holding him for the moment in mancipio (the natural father, therefore, if remanicipatio had taken place) was thus driven to another act, which, as the claim*

* If this were not done, the father would, of course, take no further part in the ceremony, his place being taken for the second act of the proceedings by the third person, to whom the mancipio was originally made. It was a deduction of the lawyer, from the words of the Twelve Tables, that a single sale sufficed to break the tie, and to vest patria potestas in the case of a daughter or grandson. See Mommsen, Staatsrecht, ii. 375.

the magistrate adjuged (addixit) the adopted to the claimant as his filius, subject to his patria potestas. Hence this form of adoption was called prætorem, as contrasted with *adrogatio*, which is per (or apud) populum. It is this form of adoption that is alluded to by Cicero (de Fin. 24: *in eo filio . . . quem in adoptionem duxit*) of which Augustus adopted Gaius and Lucius, his grandsons, in B.C. 17 (Suet. Aug. 64: *Gaium et Lucium adoptavit, domi per assem et librum captos a patre Argupis*).

These complicated forms were gradually simplified, and finally Justinian made simple declaration on the part of the two principals before a magistrate sufficient, the son to be adopted also being present and consenting.

Some effects of adoption.—Like *adrogatio*, true adoption involved a *capitatis* dominium, destroying the agnatic rights of the adopted in his natural family; but he still retained his rights as a cognate therein, and as such was entitled to succeed in the *potestas* of his natural father. In his adoptive family he gained the rights both of an agnate and of a cognate; but if he were emancipated by his adoptive father, he retained his agnatic and cognatic rights of an emancipated son of his natural father. Justinian altered this to the effect that (except in cases where the adoptor was grandfather of the adopted) the adopted son remained in his natural family and under the control of his natural father, the adoption conferring on him simply the right of intestate succession to his adoptive father (*adoptio minus plena*).

The children, if any, of a son adopted before the praetor did not, as in *adrogatio*, pass with him into the *potestas* of his adoptive father. Emancipation of an adopted child broke all connexion between him and his adoptive family, save that marriage between the adopter and an adopted daughter or granddaughter, even after emancipation, remained illegal. Adoption by the same person was impossible.

II. REGULATIONS CONCERNING ADOPTION.

1. Age.—A debated question was as to the proper relative ages of the father and the adopted son. In the notorious case of the adoption of P. Clodius by M. Fonteius the adopted son was older than the adopter, and Cicero makes a point of this (*Cic. de Dom. 35.3: *'Factus es eius filius contra fas, eius per etatem pater esse potestas'). The original idea was that adoption should imitate nature (cf. *Cic. de Dom. 36: *'hunc sine semper adoptii filium quam maxime veritatem illam suscipiendum liberorum imitat) esse videtur*), and this was the view of the later jurisconsults, who decided that the adoptor should be older than the adopted by at least eighteen years (plena potentia). In the case of *adrogatio* it was held that the *adrogator* should be sixty years of age, except in special cases of health or intirmacy. Until the time of Antoninus Pius, a person could not be adopted by his own children (*impubes filii filium* or *pupillus*).

2. Adoption of females.—Women properly could not adopt, either by *adrogatio* or by *marcipation*, as they could not possess *potestas*.

But in A.D. 291 Diocletian allowed a woman to adopt her stepson (priviligium) to replace deceased children. The adopted in this case acquired rights of inheritance. Females of any age could be adopted, originally not properly by *adrogatio*, though not for the reason assigned by Aulus Gellius ('cum feminis nulla commodior curia') but because the marriage ceremony of *confarreatio* provided for them a mode of entrance into another family. Finally, by *adrogatio* by Imperial rescript became applicable to women also.

The permission to adopt a female marked, it is clear, a decaying sense of the real significance of the institution. For if, as was, perhaps, most often the case, the adopted daughter was of marriageable age, she would, if subsequently given in marriage, by certain forms, at any rate, fall into the *potestas* of her husband, and become a member of his family and gens (see Greneidge, op. cit. p. 17). The same evidence of decay is seen in the abuse of the institution for political purposes by Clodius, which assuredly could not have happened had the feeling of the community been seriously concerned. Under the early Empire, adoption was practised to enable persons to escape the penalties of childishness and to qualify for the exercise of Roman rights. The Lex Julia and Papia Poppaea, which prescribed that a candidate for office who had children, or who had made children, was to be preferred to one who had none or fewer (see Tac. Ann. ed. Furneaux, vol. i. p. 439f.). In A.D. 62 it became necessary for the Senate to decree that a pretended adoption for this purpose (manumission having at once followed the adoption) should be null and void (Tac. Ann. 62.1: *'pretendit adroga saevius mos, cum proponit consilium aut sortes provinciarum pierque orbis fictis adoptionibus adacriter filios, preturasse et provincias inter patres scito statim emittentem manu, quos adoptaverant*).

The general impression given is that, at Rome, as compared with Gains, the institution of adoption more rapidly and completely lost its connexion with religious thoughts and practices.

3. Name.—Among the Romans, adoption introduced a peculiar modification of the name. The person adopted laid aside his original names and assumed those of his adoptive father, adding, however, an epithet to mark the *gens* out of which he had passed; that is to say, he retained his gentle name in an adoptive form. Thus C. Octavianus, when adopted by the will of his maternal uncle Caesar, became C. Julius Cesar Octavianus. But the system was not uniformly observed, and in a few cases the epithet is derived from the name of the *pater familias*, not from the *nomen*; as in the case of M. Junius Brutus is an example of another anomaly.

4. Imperial adoption.—The power of continuing the family by adoption gained a peculiar significance in connexion with the early Empire. For theoretically the *princeps* could not name his successor, though he might do much to guide the choice of the Senate and army. Neither designation nor heredity was recognized. Constitutionally, however, it was open to the *princeps* to appoint a consort in the Imperial power, who, on the death of the reigning Emperor, would have a practical, though not a legal, claim to be elected his successor. The natural course was to appoint a son to that position; but if the Emperor had no son, he could adopt whomsoever he chose as his virtual successor, the danger of such a course being minimized by the paternal control he possessed over his adoptee. The act of adoption by the *princeps* is figuratively called, therefore, by Tacitus, *comitia imperii* (Hist. i. 14); but the custom hardly attains its full significance until the adoption of the childlessness of Augustus gave the institution its prominence in early Imperial history (cf. Suet. Aug. 64, 65; Tac. Ann. xii. 26; Suet. Galb. 17; Dio Cass. lvi. 3).

5. Adopito testamentaria.—There remains to be noticed a species of adoption spoken of by Pliny as *adoptio testamentaria*. The most conspicuous
ADOPTION (Semitic).

1. Adoption in Babylonia.—In the great Babylonian Law Code (Code of Hammurabi), adoption of various kinds is referred to and regulated.

(5) Adoption of the custom: In obvious reason for the custom might seem to exist in its meeting the needs of childless persons, who desired to provide themselves with an heir, that the family patrimony should not be alienated. But in Babylonia, as in old Israel, a man whose wife was childless could take a concubine, or might, with his wife’s acquiescence, enter into relations with a maid-servant for this purpose. And these alternatives sufficed in Israel to meet such cases so well that adoption was entirely unknown. Besides, adopted children in Babylonia were sometimes taken into a family where sons and daughters were living. Johns* suggests that “the real cause most often was that the adopting parents had lost by marriage or death all children, and had, in fact, no claim to the deceased’s estate, except in so far as the will specifically granted such. The only legal effect, then, was to permit the adopted to bear the name of himself and of his adopter (additionis familiam).” The custom, it is true, availed itself of his testamentary adoption by Cesar to secure a privilege from the Curius adrogating him to the testator (Appian, Bell. civ. iii. 94: “dict & taq twos, idon al proprh twa aikth kath nymos Kaupantos,... ταγω δ ς τα τε αλλα λαμπα, και ειλεκλονοι πολλοι τε και πλοιοι, και δια του τευκλα τυ και πολεμε, και τη διαδιακα συνοο ενεχω). Cf. Dio Cass. xxv. 34, xl. v. 47; but his is an exceptional case. By his will Augustus so adopted Livia (Tac. Ann. i. 8: “Livia in familium Iuliam nomenque Augustae adsumebatur”), and at the same time constituted her heir to his legacies. The later times and species of adoption took the form of devising an inheritance under condition of bearing the testator’s name. This mode was, in fact, in use as early as Augustus’ days and before. The right to adopt was a privilege (Cic. ad Att. vii. 8: “Crassum istum Liciniu flum, Casrii testamento qui fuit adoptatus”). Atticus, the friend of Cicero, was adopted by the will of his uncle, and so became Q. Cæcilius Pomponianus Atticus, his uncle’s name having been Q. Cæcilius; he also got 10,000,000 sesterces (Cic. ad Att. ii. 29). Dolabella was so adopted by a woman, but Cicero had his doubts as to the propriety of this—though, as he humorously remarks, he will be better able to decide when he knows the amount of the bequest (Cic. ad Att. vii. 8: “Dolabellam vides Livia testamentum cum duobus coheredissimis esse in triente, sed ibiure mutare nomen. Est pauciorum vicum, rectumne sit nobilis adulcendi mutare nomen mulieris testamento; sed id philosophorum decurieinorum, cum sciemus, quantum quasi sit in trientis triente”). Whether Dolabella accepted the bequest or declared himself to be his intestate he did not change his name. Later, Tiberius found no difficulty in accepting an inheritance without observing the condition (Suet. Tib. 6: “Post reditum in urbem a M. Gallo senatore testamento adoptatus, hereditatis tituli nomine aliquem habuit, quod Gallus adversarum Augusto partium fuerat”). For other examples of this method of adoption, see Suet. Gall. 4; Dio Cass. xl. 51; Pliny, Hist. Nat. xxxiv. ii. 2.

W. J. Woodhouse.

The later times and species of adoption took the form of devising an inheritance under condition of bearing the testator’s name. This mode was, in fact, in use as early as Augustus’ days and before. The right to adopt was a privilege (Cic. ad Att. vii. 8: “Crassum istum Liciniu flum, Casrii testamento qui fuit adoptatus”). Atticus, the friend of Cicero, was adopted by the will of his uncle, and so became Q. Cæcilius Pomponianus Atticus, his uncle’s name having been Q. Cæcilius; he also got 10,000,000 sesterces (Cic. ad Att. ii. 29). Dolabella was so adopted by a woman, but Cicero had his doubts as to the propriety of this—though, as he humorously remarks, he will be better able to decide when he knows the amount of the bequest (Cic. ad Att. vii. 8: “Dolabellam vides Livia testamentum cum duobus coheredissimis esse in triente, sed ibiure mutare nomen. Est pauciorum vicum, rectumne sit nobilis adulcendi mutare nomen mulieris testamento; sed id philosophorum decurieinorum, cum sciemus, quantum quasi sit in trientis triente”). Whether Dolabella accepted the bequest or declared himself to be his intestate he did not change his name. Later, Tiberius found no difficulty in accepting an inheritance without observing the condition (Suet. Tib. 6: “Post reditum in urbem a M. Gallo senatore testamento adoptatus, hereditatis tituli nomine aliquem habuit, quod Gallus adversarum Augusto partium fuerat”). For other examples of this method of adoption, see Suet. Gall. 4; Dio Cass. xl. 51; Pliny, Hist. Nat. xxxiv. ii. 2.

W. J. Woodhouse.
ADORATION

act of deliberate choice. Thus the levirate law is not a case of adoption in any real sense, but 'the legal substitution, more for the sake of reasons, of a fictitious for a natural father' (Many).

3. Legal adoption unknown among the Arabs.

Of adoption as a recognized institution among the Arabs no clear and certain traces exist. The practice of polygyny was sufficient to mask the law under which the need of adoption might have been felt. See, further, art. ADOPTION (Muhammadan), above.

4. Theological application of the idea of adoption.

—Adoption as an individual word is evidently unfamiliar in Palestine during the NT period. None of the NT writers uses the technical Greek term *vóteia* except St. Paul. He doubtless employed the term because, having been born in Cilicia, he had received a parting of Greek education, and was acquainted with the institutions and terminology of the Greeks, among whom adoption was commonly practiced.

Among Gr. prose authors from Pindar and Herodotus downwards, *vóteia* or *vóteia* παυλία, "adopted son," is regularly found.

Theologically the conception of adoption is applied by St. Paul to the special relation existing between God and His people, or between God and redeemed individuals. For the former sense, cf. Gal. 4:4; *Israelites* who have *received the glory, and the covenants, and the giving of the law, and the service of God, and the promises*.

Here the people of Israel as a whole is thought of. The redemption from Egyptian bondage was especially associated with the thought of Israel's becoming a nation and Jahweh's son. In this sense the people is sometimes called Jahweh's son (cf. Hos 1:1, Ex 4:22). 'Israel is my son, my firstborn,' etc.). The same thought is plausibly expressed in the Synagogue Liturgy (esp. in the Thanksgiving for redemption from Egypt which immediately follows the recitation of the Shemot: cf. Singer, *Hib. Eng. Prayer-Book*, pp. 42-44, 28-99). In the four other passages in St. Paul's Epp, where the word *vóteia* occurs, it has an individual application, and an ethical sense, denoting 'the nature and condition of the true disciples of Christ, who by receiving the spirit of God into their souls become the sons of God' (Thayer), cf. Ro 8:14, Gal 4:2, Eph 1:2; in Ro 8:15 the phrase 'to wait for the adoption' (δέοικες *vóteia*) includes the future, when the full ethical effects of having become God's adopted sons will be manifest in their completeness."

Adoption in this sense implies the distinction that exists between the redeemed and Christ. 'We are sons by grace; He is so by nature.' *Adoptionem proponere deficit, says Augustine, 'ut distincte intelligamus unicum Del filium.' The thought of ethical adoption is finely expressed in Jo 1:13.

G. H. BoX.

ADORATION.—As this word is used, both in literature and in common practice, it seems to imply, on the one hand, admiration of qualities that are good and beautiful, and, on the other, a recognition of power in what is good and beautiful. Further, it usually carries with it the idea that the object of adoration is immensely greater than the being who adores.

In Galatians, adoption of the Greek type may be the *Apostle's mind;* in Romans, of the Roman type.

Lightfoot on Gal 4:16

wished, the son taking a son's share and departing.

This looks like an attempt to contract outside the law. Failure on the part of the husband to observe his obligations was good ground for disinheritance; but the penalty could be inflicted only with the consent of the judges, who felt bound, in the first place, to do all in their power to reconcile the parties. In this object in view, judgment was sometimes reserved.

The treaty and the courteen formed a class by themselves, and were the subject of special legislation. It was supposed to have children of their own, but possessed the right to nominate their heir within limits. In return for exercising this right in favour of a certain person, they usually stipulated that such person shall maintain them as long as they live and otherwise care for them ('Johns, *op. cit.*, p. 159).

2. Adoption not practised by the Hebrews.—As has already been pointed out, no mention of the practice of adoption occurs in any of the Hebrew Law Codes. Nor does the term corresponding to "vóteia" exist in Hebrew; nor does the Greek term *vóteia* occur in the LXX, while in the Greek Testament it occurs only in the Pauline Epistles. In fact, the practice of adoption would have enlarged the principle of maintaining property also the possession of the original tribe, which was the object of such painful solicitude in the Mosaic Code (cf. Nu 27:1-11). It is obvious that the reasons which operated in favour of the levirate law were not *adop-vóteia* in the Hebrew life. Babylonian civilization was much more complex and highly developed. Among the Israelites the risk of childlessness was met in the earlier period by polygyny, in the later by facility of divorce. See, further, *Marriage*.

In the Biblical history of the patriarchs the practice of polygyny is explicitly attested. Sarah, being barren, requests Abraham to contract a second (interior) marriage with Hagar (Gen 16:1); cf. also the case of Rachel and her maid Bilhah, and Leah and Zilpah (Gen 29:3-5). In the Bible of the early period by polygyny, in the later by facility of divorce. See, further, *Marriage*.

Isolated cases of possible adoption, or something analogous, are, however, met with in the OT literature. Thus, (1) three cases of informal adoption can plausibly be said to occur in the OT—those of Moses, adopted (Vulg. *adoptavit*) by the Egyptian princess (Ex 2:4)—of Genumath, possibly (1 K 11:39); and of Esther, who was adopted (Vulg. *adoptavit*) by her father's nephew Mordecai (Est 2:14, 22). It is noticeable that in all three cases the *locale* is outside Palestine, and the influence of foreign ideas is apparent. Further, (2) something analogous to adoption seems to be implied in the case of Ephraim and Manasseh, sons of Joseph, to whom the status of his own sons (Gen 48:4. And now thy two sons, i.e. Ephraim and Manasseh, even as Reuben and Simeon, shall be mine'). As a full son of Jacob each receives a share in the division of the land under Joshua, Joseph thus (in the person of his two sons) receiving a double portion. This, however, is not really a case of adoption, but one where the rights of the firstborn were transferred (for sufficiently grave reasons) to a younger son (cf. Gen 49:4 for the sin of Reuben, vv.25-26 for Joseph's elevation). To Joseph in effect are transferred the privileges of the eldest son; cf. further 1 Ch 5:1-2. The levirate law here provides for some points of contact with adoption. The brother of a man dying without children entered into a union with the widow, in order to provide the dead man with an heir. The firstborn in this case received the name and the heritage of the deceased. Some of the Church Fathers (e.g. Augustine) have actually given the name of 'adoption' to this Mosaic ordinance. But the two things are obviously distinguished by fundamental differences. In real adoption the adopting parent exercises an

---

* In Delitzsch's *Heb. NT* it is rendered *κατατάκλισις* (e.g. Ro 15:20).
* See further on this point EBI, s.v., 'Family,' § 7 (vol. II, col. 1602).
ADORATION (Biblical)

It is natural to speak of adoring God or a god, and of adoring Nature; somewhat less natural to speak of adoring another human being: hardly natural at all to speak of adoring a more ideal, unless it is impossible—or ideal is conceived of as in some way possessing an intrinsic force of its own. Kant, for instance, points out that all late philosophers have an irrationalimperiousness ‘the Moral Law within,’ which he compares in majesty to ‘the starry heavens without,’ for he seems to conceive it as something altogether distinct to which we are answerable. In deed, it may be said that the pre-eminently characteristic of the adoring mood is the merging of self in the rapt contemplation of other goodness. The whole temper of the word is admirably illustrated in Browning’s ‘Adoration’:

‘love that spends itself
In silent meditations of some
Re-eminent mortal, some great soul of souls,
That ne’er will know how well it is adored.’

It is well to note expressly that adoration must reach a certain pitch before the term ‘adoration’ is felt to be appropriate. The bare recognition of power is, of course, never enough. Adoration of some kind must always be an element, even if it is only the adoration of such a force as that of sleep. It is, indeed, this element of adoration that appears to give the principle of division between magic and religion. But in the lower forms of worship, as in the one just mentioned, the adoration being incomplete, the adoration is felt to be incomplete also. For its completion we seem to require, on the one hand, an embodiment of all that would satisfy our own ideal, and, on the other, the presence of a force that is more than ourselves.

The types of adoration, therefore, complete and incomplete, are derived from the different types of those religions that definitely power a worship beyond the worshipper. Strictly speaking, it would appear that religions such as Buddhism, which do not recognize such a power, should be excluded from this class, and that adoration, as we have defined it, has no place in them. But for the Semites and the Europeans at least, history plainly shows how vital an element it has in their religious development. The whole growth of Hebrew monotheism out of the surrounding idolatry, until its final sharp separation, is one struggle to get away from weak and unworthy objects into the presence of what was truly to be adored.

Lack of power on the one hand, lack of righteousness on the other, are sure signs that the true God has not been found. Anything that suggests either deficiency must be cut away. The gods of the ancients were, one and all, mere men’s hands (Ps 106:37); and Israel must not turn His glory into ‘the similitude of an ox that eateth grass’ (Ps 80:10). The god that makes a man’s son pass through the fire is Molech, not Jahweh (Jer 7:30). No such god may stand beside Him.

It is this belief in a completely satisfactory object of worship, and this passion to show it to other men, that have been among the great moving forces in Mahommedanism, as in every missionary enterprise since missions began. But the Hebrews, above all nations, have felt the rapture of this mood, and have given it the most complete expression in poetry.

The heyday of Greek religion was directly due to the fact that the old mythology provided images so imperfect to satisfy the heart’s longing to adore. Plato and Euripides show the bitter dissatisfaction with their forefathers’ imagination; the search, never fully satisfied, for something better (see, e.g., Plato, Euthyphro; Euripides, Bocious, Troades).

The same dissatisfaction and the same search are shown during the early days of the Roman Empire, only in a far more prosaic form, inasmuch as the age was far less imaginative. The eager acceptance of strange worship at Rome, and the attempt of Augustus to set up the worship of the Emperor above them all, are proofs of this, as pitiful as they are ludicrous.

Christianity, it might be thought, would have solved all these difficulties for those who accepted it. And it is noteworthy that perhaps the only expression of true adoration in the New Testament is to be set beside the Hebrew, is to be found in the vision of the Christian Paradise at the end of Dante’s poem. It may be added that the liturgies of the Church have always been abundantly successful in the place they have given to praise as distinguished from prayer. But not to speak of the profound and complicated controversies on the Trinitarian and Unitarian conceptions, it is clear that the liturgy and the Church worship offered to God, as distinct from the varying forms of expression that may indicate the respect, the deference, the homage due to the Saints exhibit the essential features of former struggles. The Iconoclasts and Reformers fear any devotion to what is not absolutely the highest, as tending to weaken the powers of real adoration. The Roman Catholics, on the other hand, deny that the reverence paid to the Saints is the same as, or in any way conflicts with, the worship of the one God.

The 'adoration,' by Mathieu, in De Divin. et de la Thel. Cathol. (Paris, 1760): 'The Saints are not honoured like God, and are not adored, but they are more honoured, more revered, than the gods. In fact, however, as in denote to denote the cult of the Saints, as distinct from the veneration, adoration, the words sacrament of worship offered to God, as distinct from the varying forms of expression that may indicate the respect, the deference, the homage due to the Saints exhibit the essential features of former struggles. The Iconoclasts and Reformers fear any devotion to what is not absolutely the highest, as tending to weaken the powers of real adoration. The Roman Catholics, on the other hand, deny that the reverence paid to the Saints is the same as, or in any way conflicts with, the worship of the one God.

A word should perhaps be said in conclusion about the attitude of those outside the Churches in the present day. For the vast majority of those there is no object of complete and absolute devotion, because of the divorce that is feared to exist between Power and Goodness. The cosmos, as known to Science, shows power, immense and overwhelming, but is the power good? The ideals of man—justice and mercy and love—true, good, but have they a force in themselves? Only those can adore in the full sense who, like Wordsworth, definitely make the leap and unite Nature with God.

F. MELIAN STAWELL

ADORATION (Biblical).—1. One of the simplest and loveliest forms of a religious adoration is that which is felt in presence of a fellow-man mightier and more majestic than oneself. Kings and conquerors, in the days when might was right, were always anxious to inspire their subjects with a profound dread of their person, and insisted on a cringing, self-debasing attitude in their presence. Ages of tyranny and submission made servile fear and abjectness almost universal in Oriental lands. Dread in the presence of conscious superiority produced hommage indicative of lowly self-abasement. We see this in the case of Ruth before Boaz (Ru 2nd); the Shunamite before Elisha (2 K 4th); Abigail (1 S 20); Mephibosheth (2 S 9), and Doub (2 S 14); and in the ‘reverence’ paid to Haman by all the king’s servants save Mordecai (Est 3).

2. These instances do not seem to furnish us with any contingent being, if it be not merely more dread of power; and in presence of the indications of power in nature men have ever been wont to pay homage akin to that rendered to rulers and lords. The sun is certainly the most worshiped object in nature, and has called forth adoration in every age. Though this was discouraged and forbidden by the monotheistic leaders of Israel (Dt 4:19 17), it could not be entirely suppressed. Even in the times of the Exile, in the
ADORATION (Biblical) 117

Temple at Jerusalem, there were those who turned their faces to the east and worshipped the sun (Ezk 8:14); and in 'the Oath of Clearing' Job protests that when he beheld the sun and moon, his heart had not been secretly enticed, and he had not kissed his hand to them (31:35). The stars also, which move through the heavens in silent majesty, and evoke incessant wonder and awe, multitudes received devout adoration, and have been believed to rule the destinies of men. Even in Israel 'the host of heaven' received worship in the time of the kings (2 K 17:11). Similarly, when anything mystic or sublime was regarded with dread and reverence, especially when it was conceived of as the manifestation of a terrible Power behind all things. At the dedication of the Tabernacle, when fire came forth and consumed the burnt-offerings upon the altar, all the people fell on their faces (Lv 9:5). And in Elijah's time, when fire fell and consumed the prophet's burnt-offering and the wood and the stones, the people fell on their faces; it was regarded with dread and reverence, especially when it was conceived of as the manifestation of a terrible Power behind all things.

3. The appearance of angels is stated on several occasions to have caused great dread and the outward manifestations of adoration: as when Abraham (Gen 18), and also Lot (19), bowed themselves with their faces to the earth. So when Manoah and his wife saw the angel 'ascend in the flame of the altar,' they fell to the ground (Jg 15:20). The same is narrated of Balaam after his eyes were opened and he saw the angel of the Lord standing in the way (Num 22:22), and of the women at the tomb of our Lord when they saw the 'two men in dazzling apparel' (Lk 24:4). It was a sentiment more of abject terror, with less of reverence, that caused Saul to 'fall straightway his full length upon the earth' when he saw what he conceived to be the ghost of Samuel (1 Sam 28:5).

4. Idolatry evoked in Israel the same outward signs of servile adoration as in other nations. The image was believed to be indwelt by the genius or deity and was usually treated with deep reverence; as when the vast multitude on the plains of Dura prostrated themselves before the image which Nebuchadnezzar set up (Dn 3), and when Naaman spoke of bowing himself in the presence of the image of Baal (1 Sam 28:2 1). If not a deterioration from reverence, it must be a survival of a very early stage of idolatry, when we read of men 'kissing the image' (Hos 13:1, 1 K 18:40; cf. the stroking the face referred to in 1 S 13:15).

5. The latter conception of God becomes, the more profound is our sentiment of adoration. So long as men conceive of God as such an one as themselves, their adoration of Him is closely akin to that of a ruler or monarch; but as God recedes beyond our comprehension, the more sincere and profoundly reverent does our homage become. And when at length the term 'boundless,' or 'infinite,' employed either in a spiritual, temporal, or ethical sense, is applied to God, then adoration reaches its ideal. There is an excellent drastic influence in the conception of Infinitude. 'Mystery,' as Dr. Martineau says, 'is the great redeeming power of religion, the very existence of God; the fullness of God, and the heart of its pride' (Essays (1801), ii, 217). But the contemplation of the abstraction, the Infinite or the Absolute, can scarcely evoke adoration; for Infinitude is not a void, but is permeated with that sense of glory which is proper to an Eternal Mind, that we prostrate our souls in holy adoration. When the OT saints could rise to the attitude of conceiving of God as 'the high and lofty One that inhabiteth eternity, whose name is Holy' (Is 57:15), and with the writer of Solomon we read 'heaven and the heavens cannot contain thee; how much less this house that I have built' (1 K 8:27), we have as sublime instances of adoration as the OT furnishes.

6. Mystery is the mother of adoration. It is true that in a sense adoration is based on knowledge: 'we worship what we know'; but it is an essential of sincere adoration that we should not fully know. Even on the lower human plane, what we revere is higher than we. If there is any one before whom we are inclined to bow the knee, and yield the veneration of adoration, it is the man of overpowering intellect, transcendent wisdom, or superlative goodness. Similarly, the very mysteries of the Divine foster adoration and evoke worship. The writer of Ps 8 was in a genuine state of adoration when he considered the heavens the work of God's fingers, the moon and the stars which He had ordained, and then exclaimed, 'What is man!' Self-abasement in the presence of mystery is an essential element in adoration, and the transcendence of God's work suggested to the Psalmist the incomparable magnificence of the Workman. This finds sublime expression in that most beautiful of the Nature-Psalm, Ps 80. The subject is a thunder-storm which gathers over Lebanon, and passes southward until it dies away in the wilderness of Paran. The storm-cloud is Jehovah's chariot, and as the advancing cloud tips one after another the mountain-tops, the Psalmist, the Prophet, the Seer, see Jehovah, O ye sons of the mighty, give unto Jehovah glory and strength.'

Equally sublime is the adoration of the Divine omniscience in Ps 139. The consideration of the intimacy of God's knowledge of him, wherever he is and whatever he does, produces in the mind of the Psalmist the self-abasement which prompts him to hide himself from God's presence (v.5); the fascinating sense of mystery: 'Such knowledge is too wonderful for me' (v.5); and also of adoring love: 'How precious also are thy thoughts unto me, O God' (v.7). The most worship-filled of the Psalms is a group of seven, containing 93 and 95-100. They have a common theme: the recent enthronization of the Divine King on Zion; and one might say that the keynote of the entire group is to be found in the words: 'O Lord, let us worship and bow down; let us kneel before the Lord our Maker' (95:2). This group contains the passage which most readily comes to us when we desire to express the mystery of God's dealings and yield ourselves against sorrow: 'Clouds and darkness are round about him: righteousness and judgment are the foundation of his throne' (97:2), and it gives to us when we are to ship the Lord in the beauty of holiness' (99). The attributes of God which evoke the adoration
ADORATION (Biblical)

of the author, or authors, of these Psalms are those: (1) The majesty of God (in 93; 95; 96; 99; 102); (2) His power revealed, and they 'behold him by the feet and worshipped him' (Mt 28:9).

9. Adoration of the Lord Jesus became more profound in the Christian community as their knowledge increased. It was with devout adoration that the dying Stephen beheld Jesus standing at the right hand of God, and said, 'Lord Jesus, receive my spirit' (Ac 7:56). There was incipient adoration in the words of St. Paul, who, with a prophetic intimation, beheld the holy one of God, when celebrating the infinitely superior holiness of God, filled him with such abasement that the only words he could utter were, 'Woe is me, for I am undone.' It was at his lips that the consciousness of his own impurity caught him. 'I am a man of unclean lips,' he cried; and it was there that the catacizing stone from off the altar was applied—after which he felt able to join in the worship of the holy ones, and to become a messenger of the Lord of Hosts.

8. In the NT there is no very marked advance in the adoration rendered to God, because the adoration which usually evoked our adoration were almost as fully revealed in the OT as in the NT. We note, however, that the disparity between God and man is more completely realized, so that the prostration of adoration is considered to be fittingly rendered to God only, and is refused by others on that ground. When Cornelius was so much overraved by the mysterious circumstances in which Peter was sent for and came to Caesarea, that he fell down at Peter's feet in lowest reverence, Peter refused such obedience as being excessive to a fellow-man. 'Peter raised him, saying, Stand up; I myself also am a man.' (Ac 10:16); and in the Apocalypse of John, an angel rejects the same obeisance, on the ground that he is a fellow-servant with John and with all who obey God's words, significantly adding, 'Worship God.' (Rev 22:9).

And yet we find that the Lord Jesus never refused lowly homage, which implies the consciousness that adoration was fittingly paid to Him. The recorded instances of reverence paid to Christ are deeply interesting, especially the consideration of the motives which prompted it. There was probably a conflict of feelings in Peter's mind when he fell down at Jesus' knees, saying, 'Depart from me; for I am a sinful man, O Lord.' (Lk 5:8), but it is clear that he was impressed by Christ's superior holiness. When Mary 'fell down at his feet, and washed them with her hair,' (Lk 7:38), it was one of adoring love, which invests its beloved one with undefined power. The sense of need clinging vehemently to One who, they believe, has love and power enough to reach to the depth of their misery and need, was the sentiment most apparent in those who came to Jesus for His miraculous help, e.g. the leper (Mt 8:2), Jairus (9:23), the Syro-Phoenician woman (15:25), and the Gadarene demoniac (Mk 5), respecting all of whom we read that they 'came and worshipped him': while of the father of the demoniac boy we read that 'he came kneeling down to him.' (Mt 17:15). Adoration of superhuman power was the feeling uppermost in the minds of the disciples, when, after Christ had come to the ship, walking on the sea, they 'worshipped him, saying, Of a truth thou art the Son of God.' (Mt 14:33). But love also was present to the thoughts of the blind beggar who had been excommunicated from the synagogue when he paid adoration to the Lord Jesus. In Jerusalem the thought that they had cast him out, and sought the poor outcast: and when Jesus revealed Himself to him as the Son of God, he said, 'Lord, I believe,' and worshipped Him (ib.). And there was a deep adoring love in the minds of the disciples when they were met by the risen Lord, and 'he held him by the feet and worshipped him!' (Mt 28:9).

10. It remains now that we should tabulate the various attitudes of adoration which are mentioned in the OT and NT. They are the same as are found in the Oriental countries. (1) Prostration (Heb. נַחֲפָשׁ, Gr. πνευματάς), in which the one who was paying homage lay down abjectly with his face on the ground, as if to permit his lord to place his feet on his neck (Jos 10:24, Ps 119). This attitude is mentioned in 1 S 25:5, 2 K 4:3, Est 8, Mk 5:6, Lk 8:2. (2) Standing, as slaves stand in presence of their master. The Pharisee 'stood and prayed' (Lk 18:10), and many of the Pharisees prayed standing up. It is not onlyPhilip who 'was not only a eunuch, but also a eunuch' (Mini. iv.1), or who 'stood up' and 'kneeling down' (Ezr 10:5). (3) Sitting, i.e. kneeling with the body resting on the heels or the sides of the feet. It was thus that 'David sat before the Lord' when he was filled with the inspiration of the messages of Nathan, announcing the eternal establishment of his kingdom (2 S 7:1 I Ch 17:13). (4) Kneeling (Heb. נַחֲפָשׁ [2 Ch 6:3, Ps 95], יַנְחַפָשׁ [1 K 8:4, Jos 7:5, Ezr 9:4], Gr. γνακαστίως),
ADORATION (Jewish and Christian).

1. Jewish. — (1) The outward posture of adoration did not differ from what had gone before (see above), only in post-Biblical literature its various forms were more strictly prescribed. This was a natural consequence of the predominance of the Pharisaic party, with its love of the details of ritualistic observance. It was ordered that on entering the Sanctuary the worshipper should make thirteen prostrations (memorh), a form of adoration which consisted in the spreading out of hands and feet while the face had to touch the ground. Another outward act of adoration was kneeling with the head bent forward so that the forehead touched the ground; a like posture, accompanied by kissing the ground, was an intensifying of the act. The most exaggerated form of adoration, however, was when, on the Day of Atonement, the high priest uttered the Holy Name of God (YHWH and Single- red, DB, Jewish Encyc., Smith, and Kitto; art. 'Anbetung' in Herzog, and Schenkel; also Marti, Int. Rel. § 10; Benzinger, Heb. Arch. Gnosis of God (1904), p. 33).

J. T. MARSHALL.

2. Christian. — (1) The attitudes of adoration among the early Christians were borrowed, as one would expect, from the Jews; an instance of how minutely the Jewish custom was followed is seen in Tertullian's description of Christian worship, given in de Corona Militis iii. He says that on Sunday and the whole week of the festival of Pentecost, prayer was not to be said kneeling. This is thoroughly in accordance with Jewish precedent, for 'the synagogal custom (minhag), as old as the first Christian century, omits the prostration on all festivals and semi-festivals.'

(2) Adoration among Christians, almost from the commencement, has not been confined to the adoration of the Deity. It is true that in the Roman Catholic Church degrees of adoration are officially recognized (see above, p. 116), but in actual practice this differentiation has not always been observed. Apart from worship offered to God, adoration is offered in the following instances:

(a) Adoration of the Eucharistic elements. — The doctrine of Transubstantiation was held centuries before it was officially declared to be a dogma of

with the body erect, or bent forward so that the head touched the ground. Solomon, at the dedication of the Temple, 'knelt on his knees, with his hands spread forth towards heaven.' The prediction of Messianic days is that 'every knee shall bow' to the Lord (Is 45:23); Ro 14:11; Ph 2:9. The Lord Jesus, when addressed by the Messiah, 'bent down' (Lk 22:28), and also 'fell on the ground' (Mk 14:35). St. Paul kneeled in the building used as a church at Miletus (Ac 20:36), and also on the beach at Tyre (2K 10:23), and 'bent down' on the chest (Heb. 7:2, Gr. αἰκένων) ; used by Eliezer when he found that God had directed his way (Gn 24:49, 51); of the elders of Israel when Moses told the story of the burning bush (Ex 4:17), and when they received injunction as to the celebration of the Passover (12:37); of Moses when Jehovah proclaimed His Name before him (3:4); of Balaam (Nu 22:20) and of Jehoshaphat (2 Ch 20:9). (2) Upraising the hands; used of Solomon at the dedication of the Temple (1 K 8:30-34; cf. also Is 1:10, Ls 3:1, Mt 1:2). Then, as we have said, there is one reference to 'kissing the hand' to the sun or moon as a sign of adoration (Job 31:26; Ps 134:2).}

* This refers to European Jews; those who live in the East follow, like the Mohammedans, the practice of prostration as in earlier ages.

** J.E. 211.

† A very small acquaintance with the Jewish religion will show that this is no exaggeration.

§ In the Synagogue this word is used in the technical sense of 'priest,' not in the Biblical sense of 'command' (cf. bar. Mishnah. See, further, Oesterley, Church and Synagogue, vol. (1900) p. 11f.

This is, however, now done on New Year's Day as well.

or, less frequently, kissing.* A notable exception to this is, however, afforded by the起码 who professed in all things to reject Rabbinical traditions and to revert to Biblical usage only; they regarded eight external attitudes in adoration as indispensable, viz. 'bending the head, bending the upper part of the body with the touched down part of the body, kneeling, violent bowing of the head, complete prostration, raising the hands, standing, and raising the eyes to heaven.'† It will be noticed that the kissing of the ground or any objects is reserved among these, no doubt because in the OT this act of adoration was usually connected with non-Jewish worship (see preceded. art. § 4).

(2) God alone is adored by the Jews, though the veneration paid to the Torah ("Law") both as an abstract thing of perfection,‡ and also in its material form ('the scroll of the Law'), reaches sometimes an extravagant pitch. One can see not infrequently in the Synagogue, worshippers stretching out their hands to touch the roll of the Law when carried in solemn procession to and from the Ark. The hand that has touched the sacred roll is kissed; moreover, during the ceremony of the Hagbah (i.e. the lifting up of the scroll of the Law, the whole congregation stands up in its honour; this act is regarded as a special privilege or mishrah.§) There are certain intermediate beings between God and men to whom great veneration, bordering on adoration, is paid; indeed, in some passages these intermediate beings are identified with God, and in so far can truly be said to be worshipped; but the later Jewish teaching on these beings is so contradictory—sometimes they are spoken of as personalities, at other times as abstract forces, at other times as Divine attributes—that it would be precarious to regard them definitely as objects of adoration. They are: Melatren, the Menora ('Word') of Jehovah, the Shekinah, and the Ruach hkkodesh ('Holy Spirit'); †† to these must be added the Messiah, in so far as He is represented as the incarnation of the Divine Wisdom, which existed before the world was created.*

ADORATION (Jewish and Christian)

the Roman Catholic Church; from it followed of necessity the adoration of the 'Enchiridion Christ'; Roman Catholics, of course, maintain that inasmuch as the elements of bread and wine in the Mass are the actual body and blood of Christ, they worship Christ, and Him alone, in the Mass. The adoration of the elements takes place at their elevation, i.e. after the consecration; and the adoration is of the highest kind, viz. cultus latria. Consequently in number 9 is for the purpose of offering perpetual adoration to the consecrated elements; day and night, at least one person has to be present before these in prayer and silent adoration. In these communities each member has a particular hour assigned to him or her at which regular attendance is required for this purpose in the church or private chapel. The raison d'être of this perpetual adoration is that it should be in imitation of the holy angels and glorified saints who serve the Lamb 'day and night in his temple' (Rev 7-11-12).

(6) Adoration of the Cross.—As early as the time of Perpetua the Christian Church was accused of worshipping the Cross; and the evidence of Cassian (d. 435) points to a tendency which, as the witness of later writers shows, soon became a settled practice. He says: 'Quod quidam dispositionis, inquit, l atrium, habebat a Philetus, sacerdote, in Cædæn,' a name probably of Christian or even Jewish origin. The veneration of the Cross, at least by certain Christians as Crucicole, and, indeed, not without reason, if it be true that Alcuin, who lived at the same period, was in the habit of saying before the Cross: 'Tu namque adoramus Deum'; was also observed very long before that. Hence, it is true, that the incision: 'Sua Crux nos salva,' was, therefore, not without reason that latria to the Cross was forbidden by the second Council of Nicaea (787).† Two festivals in honour of the Cross were observed in very early days, and are kept up to the present day. The one is the 'Invention of the Cross,' observed on May 3 in memory of the alleged finding of the true cross by Queen Helena; the fact of the 'Invention' is testified to by Rufinus, Socrates, Sozomen, and Constantius. According to the story, Helena sent the nails, the lance, and part of the cross to Constantine; the rest was kept at Jerusalem in a silver case, which was carried in procession and worshipped by the faithful on certain days in the year. This custom had died out by the time of the patriarch Sophronius (d. 640); it was, however, continued in St. Sophin's at Constantinople till the 5th century. The other festival is that of the 'Exaltation of the Cross,' kept on Sept. 14, in memory of the Emperor Constantine's vision of the Cross. At the present day supposed pieces of the true Cross are possessed by the churches of St. Ambrose: 'It is the flesh of Christ, which we adore to-day in these mysteries,' quoted in Wettstein's Dict. Eccl. et de la Croix, 1st ed. 1782, lxx.

‡ The Jewish custom, according to which the priest prostrates himself after he has offered a sacrifice.

ADULTERATION

In spite of the fact that officially a distinction is made between the material and the symbolic, and that the whole of modern life is

to be only an expression of the dogma of the adoration of Christ's human nature united with His Divinity, it seems that among very many devout, though uncultured, believers the adoration

of Christ's heart is characterized by gross materialism; for this heart is pierced by the spear upon the Cross; and, in urging the excel-

lence of this object, the writer of the Apocalypse (v. 14) wrote thus: "The real object of meditating concerning the most holy heart of Jesus, as the name itself implies, is the actual heart of Jesus, but the heart of St. John, and not necessarily of Jesus, to be

symbolized by this heart. . . . It is the real, bodily heart of Jesus, not an object of adoration (adoratio) by means of the ordinary bodily representation of the same.

(d) The adoration of the Heart of Mary Immacu-

late.—It was inevitable that this should follow the adoration of the Sacred Heart. This devotion was first propagated by John Eudes, who founded a congregation of priests called, after him, Eudists; it was accorded official recognition in 1799.

As with the Sacred Heart, so in this case it is explained that "the physical heart is taken as a natural symbol of charity and of the inner life;" the heart of St. Mary is the "spear point," as it were, of the Eudist devotion. According to the Council of Trent, "veneration is offered to the Saints in their images and relics. It is in-

sisted that Saints are not honoured like God, or idolized, though they are more honoured and more venerated than any living man on earth."

The Council of Nicea, furthermore, ordered that respect and honour were to be accorded to the images of Saints, only in so far as they brought to mind their prototypes; in the same way the Greek Orthodox Church orders that worship is not to be offered them: οἱ μὲν τὴν κατὰ πίστιν ἴματι ἀληθεύουσαν λεπταία, ἢ πέρετε μοι τὴν θέλη ἔχεις.

But here again, whether it be to the Virgin Mary, or to St. Joseph (a more modern cult), or to any lesser Saint, however

merely official documents may differentiate between what is due to God alone and what is due to Saints or Angels; it is no exaggeration to say that among the ignorant; the Virgin Mary and the Saints take the place of God Almighty in the popular worship; and the images and relics of Saints are be-

lieved to possess miraculous powers in not a few cases, and to it is unanimously agreed. In numbers of agricultural

districts of European countries, the system of Saint-worship does not admit of an exception that which obtained in pre-Roman times and days, and that was in many cases an adaptation of heathen cults. English documents of the Reformation period prove conclusively that among the things protested against were the rendering to the Virgin Mary and the Saints the honour that was due to God alone; the belief that these angels were able to give gifts which are in reality Divine; the belief that the ears of Saints were more readily opened to the requests of men; and, finally, the practice of regarding Saints as tutelary deities.

One other point must be briefly referred to: the word "adoration" is used in reference to a newly elected Pope. Immediately after election the Pope is placed upon the altar, and the cardinals, who then come and render him homage, are said to go to "the Adoration." Again, when a Pope is elected spontaneously and manumittively, without the "scrutiny" having been made beforehand, he is said to be elected "by adoration."

ADULTERATION.—Adulteration may be defined as the use of cheaper materials in the pro-

duction of an article so as to transform it into an inferior article which is not by the purchaser or consumer readily discovered. There is not necessarily in the production the intention to deceive; and the substitute is not necessarily deleterious. Indeed, in some cases the technically inferior article may be cheaper than the poorer qualities of the counterfeited article, as in the case of margarine and other substitutes for butter.

The essential point is that the consumer does not get what he is paying for and intends to buy. We must, however, carefully distinguish between what by improved processes of production is really cheaper and what merely seems so; for it is the craze for cheapness that is largely responsible for the extent to which adulteration is practised. Owing to imperfect education and an often con-

sequent misguided social ambition which lead people to ape the habits of those better off than themselves, without either the taste or the means to indulge in these habits, there is a very great demand for substitutes or imitations of articles of luxury, which gives the opportunity to the dishonest dealer, already disposed by self-interest and by pressure of competition and by the difficulty of detection, to adulterate.

The evil is not entirely modern. Even in the Middle Ages, under the guild system, regulations were required to secure that for a fair price an honest article was given. Night work, for instance, was forbidden, and a workman was required to show evidence of skill before he was permitted to practise his trade. Publicity was in the main the remedy against dishonest dealing; and owing to the simplicity of wants and to the shrewdness of the processes of manufacture, and to the close relationship of producer and consumer, the remedy was tolerably effective. In modern times these conditions are absent, and the practice is so prevalent, that, in reliance of the doctrine carret emptor, legislation has been required to protect the consumer. The ignorance of the consumer, the impossibility of educating a taste that is continually being debased by the consumption of adulterated articles, and the frequent alarm to life and health, have necessitated this departure from the doctrine of laissez faire, particularly with regard to articles of food. The consumer is still at the mercy of the vendor of shoddy clothes, etc., but in food and drugs he is protected, although it must be admitted that the penalties inflicted are often inadequate and the laws ineffective, owing to the absence of a standard quality (cf. the recent adulteration of brandy). Mr. Deva's (Political Economy, p. 70) quotes a public analyst's report to the effect that of samples of milk 43 per cent., of mustard 16, of coffee 14, of spirits 11, of butter 11, and of disinfectants 76, were adulterated.

Legislation against adulteration takes various forms, of which the activity of the public analyst, through official inspectors who take samples, is perhaps the best known and most effective. It is very unfortunate that the use of preservatives for milk and meat especially is not subject to precise regulation, for the repeated addition by successive dealers of preservatives to milk, for instance, converts what might be a wholesome and economic practice into a deleterious adulteration. Fiscal legislation is often used for the purpose of excluding, or at least restricting, the use of poorer qualities and adulter-

ated goods. Thus Canada imposed a high tax on molasses as the quality deteriorates, for the averted purpose of excluding 'black jack,' as it is called, which a paternal finance Minister declared 'no man should put into his mouth and think he is taking molasses.' In other words, it seems that all goods and packages should be marked with the country of origin, the Government inter-

ADULTERY

ADULTERY (Primitive and Savage Peoples).

1. Woman in primitive society.—A survey of the notions entertained by savage peoples regarding adultery tends to show that, in the earliest times, it could not have been regarded in any other light than as the interference of another with the woman over whom a man had, or conceived himself to have, certain rights. It was not considered as an act of impurity, for the idea of purity was not yet formed. Nor was it a breach of contract, for it is improbable that anything corresponding to marriage rites was yet in use. Nor was it a breach of social law, for men were not yet organized in social groups. Woman before the beginning of a community, any interference with her would immediately outrage man's instinctive sense of property, and would at once arouse his jealousy. He would, therefore, try to recover his property from the thief, and this could be done only by assaulting or killing him, in other words, by punishing him for his theft. Recognizing, too, that the woman, differing from other possessions of his, was a sentient being, and therefore to be considered as a party to the theft, he would also vent his anger upon her, even putting her to death in cases of extreme rage. Among animals precisely similar ideas with respect to the females may be found. Where an animal collects a number of females round him, as in the case of certain apes, he acts as a despot over them; young males born to him are, after a time, expelled, and the approach of a possible rival is at once resisted (Darwin, Descent of Man, 501). Thus it must be admitted that, at the earliest stage of human history, adultery could have been nothing but a breach of proprietary rights, to be followed, when discovered, by a more or less savage act of private revenge upon both the culprits. Among most existing savages hardly any other idea of it exists, as we shall presently see. Woman before and after marriage is the property, first of her father or guardian, next of her husband. Among peoples who allow licence before marriage, none is permitted after it, when the husband assumes proprietary rights over the woman. And where such licence is not allowed, any unchastity is punished by inflicting a fine or death on the man who has depreciated the value of the woman in her guardian's or prospective husband's eyes. This idea of a husband's proprietary rights in the woman would be increased where she was the captive of his bow and spear, or where he had to undergo a period of servitude for her, or, much more usually, had to acquire her by purchase. Here it must be remarked that adultery is not confined to cases where a ceremony of marriage exists; wherever a man and a woman enter into a union more or less lasting, and the man treats her as his property, it may occur. But it need not be inferred that it is a common occurrence among all savage races. It is abhorrent to some peoples, e.g., the Andamanese, with whom conjugal fidelity is the rule (Man, JAF xii. 155), the people of Uen in the Loyalty Islands (Erskine, Western Pacific, 341), the Abipones (Dobrizhoffer, Account of the Abipones, i. 153), and others.

Certrain facts are often alleged against the idea that woman is not a free agent in primitive or savage society. Thus, a woman's consent is often required before marriage; yet even here the consent of her guardian is also necessary, and this right of choice on her part need not argue anything as to her future freedom of action, while it is counterbalanced by the overwhelming weight of evidence regarding the woman's position as a being owned first by her guardian, then by her husband. Again, in cases where, after marriage, the woman has considerable influence over the conduct of her husband, it merely affects the fact that her legal status is not that of the man, nor does it imply any individual rights with him. The woman may frequently arise from the fact that women have their own sphere of action, that they have been the earliest civilized, that they possess their own tribal lore, and that their influence is dangerous (magically) at certain crises of their lives. All this limits the political in many ways; but so far as concerns interference with her sexuality, her power is unlimited. Here, any attempt at independence on her part arouses at once that jealous instinct and the preceding fact of man's taking interest in the woman, which her innate superiority or her occasional influence does not abate. Even where the matriarchate exists, and where the woman goes to live with the property people, she seldom takes away his power of life and death over her, especially where adultery is considered (Haddon, Heads-Hunters, 106) that though in the Torres Straits Islands a woman asks the man to marry her, and he goes to live with her parents, she can ill afford to show a breach of union, as it seldom takes away his power of life and death over her, especially where adultery is considered (Haddon, Heads-Hunters, 106). In effect all such exceptional cases are overruled by the fact that universally the woman's power of licence ceases at marriage, that universally unchastity on her part is regarded by the husband as a breach of his proprietary rights, and that, consequently the husband has the power to kill his wife for any such breach, that well-nigh universally he can lend his wife to another man, and that generally adultery on the husband's part cannot be punished in any way by the wife.

2. Adultery under different conditions of marriage.—It is now generally admitted that promiscuity is not the earliest form of human sexual relations. But even had it been so, the idea of adultery based upon jealousy and the sense of property would still have been conceivable. Men and women, whether married or not, had to make a choice of defence or of facilitating the supply of food, the men would resent the approach of members of other similar groups, while any interference with the women of the group would be jealously guarded against by all the males of the group, to whom ex hypothesi all the females of the group belonged in common. Promiscuity, however, as a theory of marriage, is baseless, and has frequently been confounded with what is known as group marriage, an entirely different thing. In actual practice among certain Australian tribes, the men of one definite group are potential husbands of the women of another definite group; the husband of any one woman has only a preferential right in her, and the men of his group may have access to her on certain occasions. But here the husband's consent must first be given; and though it is practically never withheld, and a man is looked upon as monstrous who does without it, this implies no right to the existence of individual marriage underlying this mixed polyandrous and polygynous system, rather than to its being a systematized form of promiscuity. The consent of the woman being necessary implies a certain proprietary right in the woman on his part; he sanctions her union with other men only on certain ceremonial occasions. If the woman dared to consort with a man...
ADULTERY

not of the group, this would be resented by her actual and potential husbands; it would be incest rather than adultery (see § 5; Spencer-Gillen, 62, 63, 110, 60, 73, 140; Howitt, JAI xx. 50). Again, where polyandry exists, adultery is still possible, since the husbands of the woman are usually well defined, and their rights over her are arranged according to strict rule. Where, as in the Tibetan type of polyandry, a woman is the wife of several husbands, it is obvious that they will resent the approach of any other man to their wife, while contrariwise the woman is extremely jealous of her own conjugal rights (Hist. Univ. des Voyages, xxxi. 434). The story told by Strabo (xvi. 4. 23) of the custom of fraternal polyandry among the ancient Arabs, shows that adultery with another man was punishable, and similar cases might be cited (see § 4. Tibet). Among the Nairs, with whom polyandry assumes another form, the woman is not allowed to have any later sexual relations with the man who first consummated the marriage, while any relations with a man not of her caste is ipso facto adultery, and was formerly punished by death (Reclus, Primitive Folk, 162, 164).

A modified form of polyandry exists where the custom of providing a "secondary husband" (the cicelishe) exists. In this case, the second husband must contribute to the household, and takes the place of the husband with the wife only. In the case of the Musulmans (McLennan, Studies in Ancient History, 2nd ser. 376; Reclus, 63), where frequently the secondary husband is a younger brother. With the Mongols, the system is akin to that where the oldest of a group of brothers is the husband, but the younger brothers have rights over the wife also (T.E.S. 32. 590). It occurs among some Polynesian peoples (ZVF, 1906, 394) and others, as it did in ancient Sparta (Xenophon, Rep. Lat., I. 9). Sometimes, when adultery takes place, a man is forced to come a secondary husband, to do the work of the house and obey the husband, while he may now associate freely with the wife among the New Hebrides.

3. Adultery under polygamy and monogamy.—But it is especially among peoples with whom polygamy or monogamy is the rule that we see the working of jealousy and the idea of property in the woman existing most emphatically. Jealousy of their wives exists among the lowest savages, and with them and among higher savage and barbaric tribes the utmost precautions are taken to prevent the approach of another man. Dire punishments are frequently meted out to the wife even on the slightest suspicion, or, as among the Negroes of Calabar, the wives are at intervals put through a try-out to test their faithfulness (R. Kingley, Travels in W. Africa, 497). The universality of the feeling of jealousy among the lower races, the rigour of its action, and its extreme vigour, go far to show, as Westermarck (Human Marriage, 117 ff.) points out, that there never was a time when man was devoid of it, and that it is a strong argument against the existence of a primitive promiscuity. When adultery has actually taken place and has been discovered, the husband, with few exceptions, can himself punish the offending woman and her paramour, without necessarily invoking the local tribunal. Indeed, that tribunal or the tribal custom expects him to do so, or fully approves his act, though in some instances he may be retaliated upon by the relatives of the woman or the man, where he has killed either or both. Punishment varies, but very frequently death is the penalty, and in the cases of detailed instances we place the woman is disfigured or mutilated by shaving off her hair, cutting off her nose, ears, etc., or she is chastised more or less severely, or she is remanded or divorced, or treated as a prostitute. In such cases jealousy not only resents against his offending property, even though his act of revenge deprives him of his wife, or of her attractive qualities. Towards the offending wife he has incurred the rights of property his attitude varies: he may kill him, emasculate, mutilate, wound, or flog him, or make him slave, or force him to pay a fine, or to have his wife outraged in turn. Especially noticeable is the idea of theft in adultery, where, as in Africa, the man's hands are not put off, as if he were heisted. The law of Nature der Naturwölker, ii. 472; in the fact that in the Torres Straits there is no word for adultery apart from theft (paro), and all irregular connexion was called stealing a woman (Cundall, Exped. to Torres Straits, 275); and that among the Arunta a man who commits adultery with a woman of the class from which he might choose a wife is called atna mykura, 'vulva-thief,' because he has stolen property (Spencer-Gillen, 99). The same idea also emerges where, as among some Negro tribes, it is held to be adultery for a man to lay his hand on or brush accidentally against a chief's wife (Miss Kingsley, Travels, 495). The conception of the wife as property is also seen not only in the Roman custom of slaying her at her husband's death, but, where she is allowed to survive him, in the belief entertained by savage and barbaric peoples that any second marriage is with another wife, and that any unhappiness during a certain period after the husband's death is equivalent to adultery, or should be punished as such (Amer. Indians, 186). For a certain time at least, sometimes for the rest of her life, the woman is still her husband's property, as also her children, and as ghosts have power over the living, it may be presumed that the dead husband might still retaliate in case of any transgression.

4. Punishments for adultery.—The following examples will show the nature of the punishments for adultery meted out among different races by the outraged husband, or permitted to him by common consent or actual law:—

Among the Wolof-Balokas of Victoria both the woman and her lover are killed; among the Yerkmising of S. Australia the woman was branded with a firestick for the first offence, speared in the leg for the second, and killed for the third; among some tribes the punishment consisted in handing her over to all concern (Howitt, Miss to Aschanti, 115, 207). A childless wife who misconducted herself could be repudiated in W. Victoria (Dawson, Aust. Aborigines, 30). In Tasmania the most cruel measures were taken against the woman (Bonwick, Daily Life of the Tasmanians, 72). In the Bismarck Islands adultery is capital, and so simply the woman is turned over to the husband, for whom, however, the friends of the injured party may retaliate (JAI xii. 130). In New Guinea adultery is capital punish in the Melanesian New Hebrides, her husband is fined for her adultery (Cundall, Exped. to Torres Straits, 215; Westermarck, Marriage, 537, 525). With the Melanesian tribes the woman was brutally treated, and the paramour was killed by the husband or executed, though he was sometimes fined for what was regarded as a robbery, or had his wife violated by all the men of the village (De Hoehas, Novus, Colud, 202; R.S.F., ser. ii. vol. viii. 361). Death was the usual punishment in New Zealand (Voyage of the Astrolabe, 269; and in the Polynesian islands the woman was variously punished. With the Hottenstots the woman was killed or flogged (Alexander, Exped. into Interior of Africa, I. 88; ZVF, 1902, 344); and killing the guilty wife, and frequently her paramour also, is usual among both Bantu and Negro tribes. In Kider Land, 131, Waboomka (Deeke, Three Years in Savage Africa, 457), a Benjamin (Wilson and Felton, Uganda, I. 203). Lesser punishments were here also administered—chastisement, disfigurement, or repudiation of the woman, marrying her to a slave, and fining the guilty man (Post, Afr. Jurs., L. 401, 50; Bowditch, Miss. to Aschanti, 170; Du Chaint, Afrique Equat. Aug. 1857), 373; Johnsonf, Uganda, 215, 323; R.S.F., ser. ii. vol. 129, 139). Death, mutilation and disfigurement, abandonment, delivery of the woman to the men of the tribe, were common among the N. Ambi tribes, or when a woman was killed she was mutilated, or fined (Bancroft, Native Races, I. 560, 424; Ann. Rep. B. E., 1864, 204). Slaughter and torture and death were meted out to both parties in Yucatan (Bancroft, ii. 674); in Mexico the woman had her nose and ears cut off, and was stoned to death (Gardiner, 275; Prescott, Peru, 21); in Guatemala the woman was repudiated and her paramour fined (Bancroft, Native Races, I. 673), and he could be divorced for nothing but adultery (Waltz, 756). Among the Fugians the husband could kill his wife, but was liable to be killed in turn by her family (Hydes and Donker, 123).
ADULTERY

adultery (Robinson, i. 45). Woman and paramour might be killed in many tribes. Among the Caribs (Dalton, Eth. of Beaulieu, 45; M'Pherson, Memoir, of Service in book one), the husband is frequently killed and the man forced to pay the husband a number of cattle; elsewhere in Tibet the woman is punished and the man pays a fine to the clan of the husband (Hist. Univ. des Voyages, xxii. 427, xxiii. 341). In Japan, woman and paramour are killed by the law supporting his act (Letourneau, i. 317). In China the law permits this punishment if it is meted out on the spot, otherwise the husband would take the woman and carry her home. If the adultery is proved, he can repudiate or otherwise punish his wife (Abelaster, Chinese Criminal Law, 137, 251; Pauthier, China Modern, 239).

Frequently, too, the gravity of the offence is proportionate to the sexual reputation of the husband who is aggrieved; in other words, the value of the woman belonging to him is greater. In New Caledonia, death was meted out to a man who merely looked at the wife of a chief. Among the Banyore (Bantu), with whom the male delinquency was usually fixed, in the case of adultery with a chief's wife, at whose house she was put to death (Johnston, op. cit. 500); while in Uganda, where whipping was the usual punishment, the king's wife and her paramour were chopped to pieces (ib. 609); in Ashanti, iniques with the king's slave is punished by euaculation (Ellis, Toeh-speaking People, 357). So in Peru, where there was a simple ordinary punishment, adultery with the Inca's wife resulted in the burning of the guilty man, the death of his parents, and the destruction of his property (Letourneau, Est. of Marriage, 215). Similarly, adultery with the wife of a prince among the Tartars involved the death of the male relative of the wife as well as him. Generally speaking, this distinction holds good among most savage peoples, while a further distinction may be made between the husband and the principal wife and a subordinate wife—the value of the former being, of course, greater.

The punishment of adultery among savage and barbarous peoples is thus largely in the hands of the aggrieved husband, and evidently originated out of the desire for personal revenge. But what was at first a mere arbitrary personal vengeance has now generally become an act which is supported by tribal custom. The husband slays the aggressor, but he knows that in so doing he will be backed by public opinion, and may even call in others to assist him. He is allowed or expected to administer punishment. Frequently, too, adultery is taken cognizance of as an offence by the laws of a tribe or people, whether administered by the old men, a council, a chief, or by the State. In such cases the husband might appeal to any of these to decide what the punishment should be or to administer it. Thus in Australia, among the Kamilaroi, the husband's complaint is carried before the headman, who gives sentence; and among the tribes of N. S. Wales a similar process is found (Howitt, op. cit. 207; Fraser, Aбор., of N. S. Wales, 38). Other instances of adultery being punishable judicially rather than by private revenge who also punish it in the latter way, are found among the Kanakas of New Caledonia, where the aggressor is led before the chief and his council, and executed by their sentence (De Roche, Novo. Calid. 260); among the Caribs, Samoans, Malagasy, and the Chinese, and in parts of Negro Africa (Steinmetz, Rechtsverhält-nisse, 727 ff.; Turner, Samoa, 178; Chalmers, Pioniering in N. G. 175; Letourneau, 211). In such cases the husband might also appeal to the husband to execute the punishment, as in parts of ancient Mexico and in Central America (Bancroft, ii. 465; Bart, Les Astéques, 168). And even where the offence is strictly a legal one, should the husband himself, the hand of the aggressor or his paramour, and, e.g., slay both offenders at once, he would still be considered to be acting within his own rights, or would be subject only to a slight penalty, as in Chile, against Peron (where it was held that Manco Capac had decreed death to adulterers). GarciIasso, Royal Comm. i. 81. Or if the husband does not act according to the judicial sentence, he himself may suffer. Thus among the Tartars, if he repudiates his wife, he is whipped (Pauthier, op. cit. 239). But we also find that, where the offence is a legal one, there is a tendency to pay the husband's revenge in money; and this has probably originated the frequent system of compensation by fine; it also accounts for cases, as among the Kaliris or the Bakwiri, where the husband has been eloped by the paramour, but does so punished as a murderer (M'Lean, op. cit. 117; Post, Afric. Jurisp. i. 401); and, as among the Wakamias and other peoples, where the husband allowed to play the parties only when taken "flourishes delicto."

The birth of twins is with many savage peoples regarded as unlucky, and one or both are put to death. The reason for this belief is not clear. In some cases it is thought, probably as a result of the further belief that a man can be the father of no more than one child, that a god has inter-course with the woman. Such a belief is found among the Negroes (some of whom, however, regard the birth as lucky for this reason), South American tribes, and Melanesians (Ellis, Forbush-speaking People, 47; Cordrington, Melanesians, 235). In such cases we have the idea that the wife has committed adultery with a divinity or spirit, as in the Greek myths of Alcmene and Leda. But it is sometimes held as a proof of adultery with another man (see levels of Wawain (294, 430), Tenents (Westermarck, Moral Ideas, i. 483). See Ail. Harris, Cult of Heavenly Twins.

5. Adultery Inhibited degrees.—Among all races, marriage or sexual union is absolutely forbidden between certain persons, whether blood-relations or members of the same group, e.g., tomen, tribe, or tribe, as the case may be. Any offence against this law, according to the savage mind, one of the worst forms of adultery; indeed, it should rather be called incest. It is not a trespass upon another's property, but a breach of a man's rights, or even his very being, while it is believed to bring ill-luck or disaster upon the family, clan, or tribe. As any breach of such a law is thus believed to affect the whole group, it is therefore punished by the group or by the chief; punishment is general; it whether the person is delegated. There is no question of private revenge. Any such offence is regarded as so horrible, so disgraceful, and even so obnoxious to the gods that it is an offence of the first rank, and, as no one has any thoughts of committing it. But where it is committed, the punishment is usually death to both offenders, as in Australia, New Britain, New Hebrides, and among the Amer. Indians (Spencer-Gillen, 15; do. 140; Westermarck, Marriage, 201; JAI viii. 292; Macdonald, Oceanica, 181; Frayer, Totemism, 59). In Yucatan the man was looked upon as an outcast (Bancroft, ii. 665); and a fine is levied among the Dyaks, Chukmans, and others (St. John, Observations of the Far East, i. 185; Levin, Travels, Wild Races of S. E. India, 180).

6. Adultery of the husband.—That, at the lower stages of civilization, adultery is regarded as an offence against the proprietary rights of the husband, is borne witness to by the fact that it is an offence only from the husband's point of view. With the rarest exceptions has the husband any redress when the husband himself offends, and it is only at high levels of civilization that she has any general right to complain. Of course, where the husband commits adultery, he is always in danger of death or fine at the hands of his wife, or of the paramour or his paramour, but this does not affect his wife's position in the matter. Where the wife has the power of complaining to a tribunal or of causing the husband to be punished (and probably wherever the wife has an influence at all, she will be highly free to her husband), the cases are probably to be classed with those where she can obtain redress for other offences, e.g., ill-usage. But the cases are so exceptional as to make it seem that she may at times have power from the man and, though they may foreshadow the dawn of the idea of the equal rights of wife and husband, and of the ethical belief that adultery is wrong.
ADULTERY

Among the people of W. Victoria the wife can get an adulterous husband punished by complained to the elders of the tribe, who send him away for a short period (Howard, Matrin. Inst. i. 229; Nieboer, Starkey, 18). In Africa, the husband in Great Bassam always has a line to the wife for unfaithfulness (Post. Afric. Juris. ii. 72), and among the Mariana he is severely punished (Waitz, ii. 106).

With the Khonds of Orissa, where polyandry exists, and the woman can set a higher price upon herself, the husband cannot strike her for inidelity, whereas he is punished or is held to have dis- honoured himself (Westermarck in Social, Papers (1904), 152). The Omaha wife could revenge herself on the husband and his paramour; and among the Sioux and Dakotas she could leave her husband for unfaithfulness (Dorsey, BE, 1885, 364; Howard, i. 259). Divorce for unfaithfulness on the husband's part might be obtained by the wife occasionally, as among some of the peoples of the Indian archipelago, the Shans, and others (Westermarck, Marriage, 257). But with these few exceptions savage mankind has scarcely recognized the idea that the husband is a wronged wife, as a wronged husband is a wronged man. Thus among the Tensas of North America, where the chief was looked on as a demi-god, his sister's son succeeded him. She, being thus also divine, treated her husband as a slave, killed him if he left her, and had a child by another (M'Leannan, 420). Similarly in Loango a prince might be licentious, but would have her husband's head chopped off if he even looked at another woman (Pinker, xvi. 390). This did not apply to any other classes, and is on a level with the severity of the punishment meted out to a man committing adultery with the wife of a chief. It should be noted, however, that with a few peoples, the wife may have a ground for divorcing her husband if he takes a second wife or a concubine (Hobson, Moods in Evolution, i. 138); while, even where polygamy is practised, the feeling of jealousy on the husband's part, though it may not affect her husband directly, determines, in the course of introducing another wife to his household, is frequently directed against the new-comer to her hurt, and in some cases the wife will commit suicide (Westermarck, Marriage, 497 ff.).

7. Permissible adultery.—Adultery among the lower races is considered wrong, viz. an offence against the rights of the husband, when it is committed apart from his will. There are occasions on which he commands or sanctions it, or when it is, so to say, legalized by social or religious custom. The custom of lending wives either to friends or strangers emphasizes once more the view that the wife is the husband's property. Here she acts at his will, as in the case otherwise he infringes his rights. Here for the time the feeling of jealousy is in abeyance, even where it exists more generally. When the husband decides that the wife may commit adultery, then adultery has the precise meaning to the savage which it has to the civilization.

The wife is considered universal among savages (Westermarck, Marriage, 74, 130), but various reasons exist for it, nor is it always to be explained as the outcome of household or social sentiment (Spencer, Principles of Sociology, 329). Here a wife lent to a friend, it may be done out of sheer kindness or as an act of gratitude, but it is done usually at the husband's wish and to his advantage. In other words, there will be arranged among the Columbia Indians, who barter wives as a sign of friendship (Hist. Univ. des Voy. xiii, 375), the Eskimos, Polynesians, and others (M'Leannan, Studies, 2nd Ser., 376; Letourneau, 212). The practice of lending wives is sometimes reduced to a system, as in those peoples where group marriage prevails, and generally there are limits to the system of lending among the Eskimos, where polyandry prevails. When the wife is lent to a friend, the man lending his wife to the friend may be out of sheer kindness or as an act of gratitude, but it is done usually at the husband's wish and to his advantage.

(3) Sometimes it is done by way of sealing a covenant of friendship between two men, who then exchange their wives, as in Tirole (Deutsche Gesell. Blatt, x. 290); or after a quarrel between tribesmen, as in N. W. Slaves (J.A.F. xiv. 353). In all such cases the friends would exchange their first wives, and the act would have a more or less sacred significance.

(4) Where the custom of lending a wife to a stranger is concerned, it is usually assumed that hospitality alone is the occasion (Westermarck, Marriage, 74); and though this may frequently be true, it is generally believed that the woman was lent to the stranger if the husband would for this reason alone relinquish his rights over her wife. The reason is perhaps to be sought in the common need of the stranger, who is, of course, receiving hospitality, and the transactions are performed as a natural part of the ceremonies and the hospitality of a more or less formal character.

(7) Occasionally the idea that the woman was lent by the husband to a stranger may have prevailed, e.g. among the Slaves, where he was a white man. This was believed by the Tasmanians to have been due to the fact that his wife was a savage man.

(9) Another cause which is also very frequent is that the woman is reduced to the condition of slavery, whenever she is paid for her work, though this woman is more generally the case.

(10) Adultery is further sanctioned by social and religious custom, especially at festivals or at other times, when a man is a guest. In this case the spending of wine takes place. This parent propinquity has usually a distinct end in view, very frequently that of a magical character, and an exchange of wine is made, the rights of the woman to whom one has a "preferential right" is strictly limited to the men of his own group (ib, 73, 140). Some cases of polyandry, as where in those cases a wife to a younger brother, as well as the system of secondary husbands, might rather be classed as instances of this kind.

(11) The practice of lending or giving a wife to a stranger, as in the case of Polyandry, has sometimes been reduced to a system, as in those peoples who have the monogamous system, and in those peoples who have a system of group marriage. Thus, the Ubangi and Tiberi, among the latter, the right of the man to whom one has a "preferential right" is strictly limited to the men of his own group (ib, 73, 140).

(12) Sometimes it is done by way of sealing a covenant of friendship between two men, who then exchange their wives, as in Tirole (Deutsche Gesell. Blatt, x. 290); or after a quarrel between tribesmen, as in N. W. Slaves (J.A.F. xiv. 353). In all such cases the friends would exchange their first wives, and the act would have a more or less sacred significance.

(13) Where the custom of lending a wife to a stranger is concerned, it is usually assumed that hospitality alone is the occasion (Westermarck, Marriage, 74); and though this may frequently be true, it is generally believed that the woman was lent to the stranger if the husband would for this reason alone relinquish his rights over her wife. The reason is perhaps to be sought in the common need of the stranger, who is, of course, receiving hospitality, and the transactions are performed as a natural part of the ceremonies and the hospitality of a more or less formal character.

(14) Occasionally the idea that the woman was lent by the husband to a stranger may have prevailed, e.g. among the Slaves, where he was a white man. This was believed by the Tasmanians to have been due to the fact that his wife was a savage man.

(15) Another cause which is also very frequent is that the woman is reduced to the condition of slavery, whenever she is paid for her work, though this woman is more generally the case.

(16) Adultery is further sanctioned by social and religious custom, especially at festivals or at other times, when a man is a guest. In this case the spending of wine takes place. This parent propinquity has usually a distinct end in view, very frequently that of a magical character, and an exchange of wine is made, the rights of the woman to whom one has a "preferential right" is strictly limited to the men of his own group (ib, 73, 140). Some cases of polyandry, as where in those peoples who have the monogamous system, and in those peoples who have a system of group marriage. Thus, the Ubangi and Tiberi, among the latter, the right of the man to whom one has a "preferential right" is strictly limited to the men of his own group (ib, 73, 140).

ADULTERY (Egyptian).—That adultery with a married woman was looked upon as a sin in Egypt is shown by the Negative Confession (part of ch. 120 of the Book of the Dead, a chapter that has not yet been found earlier than the 18th Dyn.). Here, in the 19th clause, we read; 'I have not defiled the wife of a husband' (e. l. 'the wife of another man'). That it was also against the law is implied by a text of the reign of Rameses V. (e. 1150 B.C.) containing a long list of crimes charged against a shipmaster at Elephantine, amongst them being that of adultery with two women, each of whom is described as 'mother of M. and wife of N.' (Pleyte, "Pap. de Turin, pl. li i;" Spiegelberg, ZA, 1891, 82). The didactic papyri warn against adultery as well as fornication. Ptahotep says, 'If thou desirest to prolong friendship in a house which thou enterest in marriage, never enter thou without the permission of the master. Whether ever thou enterest, avoid approaching the women; no place prospereth where that is done. . . . A thousand men have been destroyed to enjoy a short moment of unlawful contact with death, in knowing it' (Priest Pup. ix. 7-12; Gunn, "Instruc-

ADULTERY (Buddhist).—The last of the five Prectes binding an in the Buddhist law to act wrongly in respect of fleshly lusts (Anagutta, 3, 212). In a very ancient paraphrase of these Prectes in verse (Śutta Nipāta, 303–305), this one is expressed as follows: 'Let the wise man avoid unchastity as if it were a pit of live coals. Should he be unable to be celibate, let him not offend with regard to the wife of another.' This is evidence not so much of Buddhist ethics as of the general standard of ethics in the 6th cent. B.C., in Kosala and Magadha. In the Buddhist Canon Law we find a regulation to be followed by members of the Order, when on their rounds for alms, in order to prevent the possibility of suspicion or slander in such questions. (Pali Texts, l. 41). An adulterer taken in the act might be wounded or slain on the spot. This explains the implication of the words used in Samyutta, 2, 188. But adultery was also an offence against the State, and an offender could be arrested by the police, and brought up for trial and judgment (Commentary on Dhammapada, 300). In such texts of the law administered in Buddhist countries as have so far been made accessible to us, the view taken of adultery is based on these ancient customs. So, for instance, of the Siithulane, Panabokke says (Niti Nighanduwa, p. xxix) that adultery, unless committed in the king's palace, was seldom punished by the Kandian judges; (1) because the husband was loth, by complaint, to publish his disgrace; and (2) because he was allowed to take vengeance himself if the offender were caught under such circumstances that adultery was presumable. (See also Richardson, The Dhammathat, Burmese text and English translation, Rangoon, 1906). Nothing is said in the Buddhist law-books of any punishment to be inflicted on the adulterer, and it would seem that treatment on the adulteress. Buddhist influence in this matter, except in so far as it mitigated severity against the woman, was therefore confined to the maintenance of pre-Buddhist usages and customs.

T. W. Rhys Davids.

ADULTERY (Buddhist).—Let the last of the five Prectes binding an in the Buddhist law to act wrongly in respect of fleshly lusts (Anagutta, 3, 212). In a very ancient paraphrase of these Prectes in verse (Śutta Nipāta, 303–305), this one is expressed as follows: 'Let the wise man avoid unchastity as if it were a pit of live coals. Should he be unable to be celibate, let him not offend with regard to the wife of another.' This is evidence not so much of Buddhist ethics as of the general standard of ethics in the 6th cent. B.C., in Kosala and Magadha. In the Buddhist Canon Law we find a regulation to be followed by members of the Order, when on their rounds for alms, in order to prevent the possibility of suspicion or slander in such questions. (Pali Texts, l. 41). An adulterer taken in the act might be wounded or slain on the spot. This explains the implication of the words used in Samyutta, 2, 188. But adultery was also an offence against the State, and an offender could be arrested by the police, and brought up for trial and judgment (Commentary on Dhammapada, 300). In such texts of the law administered in Buddhist countries as have so far been made accessible to us, the view taken of adultery is based on these ancient customs. So, for instance, of the Siithulane, Panabokke says (Niti Nighanduwa, p. xxix) that adultery, unless committed in the king's palace, was seldom punished by the Kandian judges; (1) because the husband was loth, by complaint, to publish his disgrace; and (2) because he was allowed to take vengeance himself if the offender were caught under such circumstances that adultery was presumable. (See also Richardson, The Dhammathat, Burmese text and English translation, Rangoon, 1906). Nothing is said in the Buddhist law-books of any punishment to be inflicted on the adulterer, and it would seem that treatment on the adulteress. Buddhist influence in this matter, except in so far as it mitigated severity against the woman, was therefore confined to the maintenance of pre-Buddhist usages and customs.

T. W. Rhys Davids.
ADULTERY (Greek).—In Athens, adultery (μοιχεία) on the part of the wife implied criminal intercourse with any man other than her husband. On the part of the husband it was, strictly speaking, criminal intercourse with the sister, wife, or mother of a fellow-citizen, or with his concubine. The laws were a native Athenian (Dem. Aristoc. p. 637, § 53). This strict interpretation was in the classical period widened so as to include offences committed against maidens and widows. On neither side is there the offence regarded as a violation of a binding obligation, as but an offence against the family. Hence the special severity with which the wife was treated as compared with the husband. Any act of miscegeny on his part might introduce alien blood into the family and pollute the worship of its ancestors. Marital infidelity involved no such dangers to a man's own family, and wascondoned by law, except in so far as it infringed the rights of other families. There are traces, however, which show that the best opinion condemned it (Isocrates, Nicocles, § 42; Aristot. Pol. 1336a. 1; Plaut. Merc. 817f., where the reference is to Greek and not Roman life).

1. Punishment of the man.—If the husband caught the offender (φαντατον δελιτον &θος ους νεγος εν αναξια, Lucian, Eun. 10), he might kill him at once (Dem. Aristoc. § 53). That this law was no mere antiquated survival can be seen from the description of the code Eros. (§ 23 f., where an account will be found of the killing of the adulterer Eros, by the injured husband Euphiletus, who, it should be noticed, was careful to secure the witnesses to his act. The husband, however, might content himself with punishment short of death, e.g. ταραςιος και βασιλικειος (Suid. s.v. μακρομακριος αναξιας; Schol. Aristoph. Nub. 1083, Plut. 168, Eccl. 729) or he might agree to a sum of money in compensation for the wrong done to him. He was allowed to keep the offender prisoner until satisfactory guarantees were given that the sum promised would be paid (Dem.) in Nemos. § 65; Lys. de code Eros. § 25; intere μη αντικα της αμερομενης). If the alleged offender denied the offence, he could bring an action for unjust detention (dαινειν εφερην η παρατηρητεστα) before the Thesmothetaes. Should he fail to prove his case, the Court directed his sureties to hand him over to the offended husband, who might inflict whatever chastisement he chose within the precincts of the Court, provided that sword or dagger was not used (dē se xwros, in Nemos. § 66). If the offender escaped, or had not been taken in the act, the husband or, in the case of maidens and widows, the guardian (εφερης) could bring an action for action (μοιχεια) before the Thesmothetaes. It is doubtful if any unconnected with the family could bring such an action. It is not known exactly what penalty was inflicted, but in all probability it was disfranchisement (αναιηα), either total or partial.

2. Punishment of the woman.—If misconduct was proved, the husband was required to repudiate his wife, under the penalty of himself suffering μαχαια. She was excluded from public temples, and, if she refused compliance, could be expelled with impunity by any citizen. Such assailant might tear off her clothes and ornaments, but might not maim or kill her (in Nemos. § 87; Εξοχιν. in Timarch. § 153). Heleodorus (q.v. l. 11) is mistaken in stating that an adulteress was punished by death. Little is known of the practice of other Greek communities in dealing with adultery. That it was everywhere regarded as a grave crime is clear from Xen. Hiero. iii. 3, where it is stated that many cities allowed the adulterer to be killed with impunity. Zaleucus, the Locrian legislator, disapproved the punishment of Winding (Plut. Vin. Hist. xi. 24. 5); at Cyme and in Pisidia the adulteress was paraded on an ass (Plut. Quast. Gr. 2; Stob. Anth. xiv. 41); and at various other cities, e.g.
ADULTERY (Hindu) — The view which Hindus take of adultery is founded upon the code of Manu, and a marriage. The whole of Hindu literature is pervaded by the pessimistic idea of the inconstancy of the female character, by complaints of woman’s unbridled indecency and passion, and by demands for the maintenance of a strict oversight upon her. The practice of polygamy, which has existed from ancient times in India by the side of monogamy, and the consequently slight esteem in which the Hindu woman has been held up to the present day, must necessarily have led to the occurrence of adultery, and to a lenient judgment being passed upon the fault. On the other hand, it should be noted that we do find, even if not so frequently an especially high value set upon the wife who proves true to her husband (paurava, and that the law threatens adultery with severe punishment.

As early as the oldest historical period, the Indian people, from the testimony of the Rigveda, are by no means found, as is sometimes represented, in a condition of patriarchal simplicity and of ascetic moral habit. The word ‘adultery’ is unknown to the Veda. But numerous indications point to the fact that the highly developed culture did not fail to produce its ordinary consequences in corruption of character and moral laxity. Women who betray their husbands (padari potri), and who are even punished by way of comparison in Rigv. iv. 5. 5: ‘Evil-doers. . . who walk in evil ways, like women who betray their husbands, shall be consumed by Agni.’ In verse 4 of the didactic poem Rigv. x. 34, it is said that ‘others lay hands on the wife of the man who abandons himself to the dice.’ If from these passages we may infer on the one hand a censure upon the transgression of the marriage vow, on the other hand matrimonial infidelity is spoken of as something in itself intelligible and of daily occurrence. To this effect are the numerous stories which relate the intrigues of the gods with married women, e.g. of Indra with the wife of Vrāṣṇava (Rigv. i. 61. 13, composed by Vatsya, according to Sāyaṇa, &c.; SańvītiBr. i. 16; Māitreyapāninihītā, &c.; 5. 5.), with Apālā Arēy; (Rigv. viii. 91, and Śatā. Br. in. l.), and with Ahāyā; the wife of Gauṭama (Śatā. Br. i. 11. 19-20); of the Āśvin with Sukunyā; the wife of Chyavana (Śatā. Br. iv. 1. 5). etc. The conduct of the gods is not here made a matter of reproach; and as little in other passages is adultery regarded from the ethical standpoint. It is because the Brahman is in possession of the secret whereby he can by his curse inflict harm, that therefore men must refrain from illicit intercourse with the wife of a Brahman (Saññiksetram, &c.; Rigv. 9. 4. 12; Pārāk. Gṛh. Sātā. i. 11. 6). Adultery is mentioned in a similar connexion in the Atharvaveda, viz., in the magical spells and incantations by which, for example, wives soothe the jealousy of their husbands, or keep their rivals at a distance, or by which the husband seeks to win back his unfaithful wife (Atharv. vi. 18; iii. 18; vii. 57). The following passages throw a light that is altogether favorable on the ethical conditions of the Vedic period:—

In the varṇaprayāhana the wife of the sacrificer is required by the priest to name her paramour.* Who cares whether the

* Kena chārayati, ‘with whom do you go?’ Satā. ii. 3. 20; cf. Kṛṣṇa. v. 6. 9-10.

wife is unchaste (parākṣaḥ purokshitaḥ) or no?** In τας. v. 8. 3 a special penance is appointed for the man who for the first time has performed adultery (aparākṣaḥ saṅgaham); he is to have intercourse with a rāmī (the wife of a Śūdrā). And he who has performed it for the second time must abstain henceforth from intercourse with any woman, a fine of whatever degree being imposed. The law is sufficiently clear as to the penalties which attach to the detailed pedagogy which were essential for ascetic-worship and other ritual purposes. That men were conscious of the actual or possible designed by the Hindus of the Brahmaṇa, the apamāṇa, the rāmī, and the chariots. In the śatā. Br. vii. 5. 8: ‘Inconstant are the ways of women. Of whomsoever (ājñā) I shall ask myself the son before both gods and men as witnesses, his son I shall be; and those whom I shall name as (my) sons, they will be my sons.’ The attempt, however, was made in ancient times, and has been rendered necessary by the detailed ignorance by strict oversight of the woman; for the begetting of a son of the body (yājya) is regarded even in the Rigveda as necessary for the preservation of the race.† A proof of this is afforded by an ancient gṛhṭūṇa quoted in Apastambhi, U. 13. 7, and in Baudhāyana, U. 3. 35, which is taken from the dialogue between Amoṣapān, a teacher of the white Yajurveda, and the mythical king Janaka: ‘Now am I jealous for my wife, O Janaka, though (I was) not before; for in Yama’s house the son is awarded to him who begat him. The begletter leads the son after his death into the dwelling-place of Yama. Therefore they protect their wives carefully, who dread the seed of strangers. Were I to be absolutely this property of my wife, let no strange seed fall on your field. When he passes into the other world, the son belongs to him who begat him; it is in vain that he beheld (the nominal father), who betrays this persecution of his race.’

A contrast between an earlier period of society and a later, makes it possible that the latter could hardly be derived from the passages quoted. Even when in later times a strict marriage law was developed, and in the Śaṅkṛṣī legal regulations were formulated with regard to adultery (avarṇa-प्रयय, polygamy and prostitution were frequent, and the mention of the term ‘born secretly,’ who may be heir to his mother’s husband, though he is her illegitimate son by some other man, does not testify to a strong regard for the moral of the other party. A change of view was effected in course of time only so far as under the increasing influence of priestly theories adultery was seen to involve a danger to the caste system established by the Brāhmaṇas, and an attempt was made to obviate the threat of severe punishments. It is essentially from the standpoint of caste distinctions that adultery is condemned in the Śaṅkrṣī. Whatever woman betrays her husband, proud of her beauty and her descent, the king shall cause to be born in pieces by dogs in an open place. The paramour shall be roasted on an iron bed; brickdust shall be thrown on (the fire); there shall be the evil-doer condemned. If these words in the Sanskrit text would indicate the condemnation of adultery in general, they would be in contradiction to the comparatively lenient punishments prescribed later on.** The crime which demands an expiation so terrible is certainly the intercourse of a Brāhmaṇa woman with a man belonging to one of the three lower castes. This is proved by the similar regulations of other law-givers,† and the parallel passages of the Mahābhārata and the Arjuna-puraṇa:

* Whatever woman abandons the nobler husband (i.e. a Brāhmaṇa, according to the commentator Nālakāṇṭha) and seeks another man is condemned (varṇaprayāhana); she is inferior to regard caste,’ Nālakāṇṭha, the king shall cause to be born in pieces by dogs in an open place; † ‘Whoever being born lower (in caste) has sexual intercourse with a woman higher (in caste) deserves death. But the woman, who betrays her husband, shall be exposed (in pieces) by dogs.’ ** *Yājñavallaka in Satā. i. 3. 1, 31.*

† Na dvitiyaḥ chārayati nyayaḥ parampara yugam.||

ADULTERY (Hindu)

By the side of these savage penalties the punishments assigned in the law of the Agni, in expiation of the Agni-P, in expiation of the Aditya-P, and in expiation of the Surya-P, seem altogether ludicrous: 'The woman misused by a man belonging to an equal caste shall be allowed to eat only sufficient food to satisfy her; the woman misused by a man belonging to a lower caste, a Kṣatriya or a Vaiśya for the first offence of intercourse with a Sudra woman, shall be fined.'

The punishments in Manu are similarly graded according to the caste to which the offenders belong. For adultery with the wife of a man of one of the three higher castes he is to be punished with confiscation of property and the cutting off of his organ of generation; if she were guarded,—a condition to which great importance is attached,—the penalty may even be death. In this latter case a similar punishment overtakes the woman she is found to be guilty of intercourse, not to sin again, and forgive them. As in other cases, which has been betrayed by his wife by all the sixty-four messengers whom he has known, the king seeks through the fields, gives orders for the guilty parties to be beheaded. The future Buddha, however, obtains their pardon by pointing out to the king that the men were led astray by the queen, and that she has only followed her nature, since women are insatiable in the indulgence of their passions. Elsewhere a minister who has transgressed in the royal harem, and is caught, is punished by being banished from the realm.

The wife guilty of adultery may justly be repudiated, and expulsion from caste also usually follows. Since, however, divorce is opposed to the principle of Hindu law, which regards it as a sin for husband and wife to be separated on the ground of mutual aversion, and according to the testimony of al-Biruni did not occur, we must assume that, as a rule, the adultery is not allowed to come to light, and that the rule of Vījan was observed, according to which the tribunals were to interfere only when the husband had no one to turn to for assistance but his wife.

In the view of certain Smṛta also, absolute repudiation of the wife was not always the consequence of adultery. Pāraskara ordains that repudiation is to be resorted to only where the adulterous connexion has not been without result, or where the woman has separated herself permanently from her family. Hārita even declares himself expressly against the repudiation of the adulteress.

According to the traditional accounts of the indigenous customary law of Ceylon, open punishment for adultery was usual only when the wives of the king were involved. In other cases the husband was at liberty if he had caught the seducer in the act, to beat, wound, or even kill him. If the husband laid a complaint on the ground of adultery, the accused, in the absence of proof, was to be dismissed without any punishment; but if convicted, to be condemned to life imprisonment, with imprisonment and fine.

The legal principles, also, which are in force in Burma, and which are traceable to Hindu law but little modified by Buddhism, do not generally recognize the severe penalties threatened in the Brāhmaṇ law-books. Members of the lower castes guilty of adultery with a Brāhmaṇ woman are to be punished with 100 blows of a stick, but with 1000 blows in case of intercourse with a Kṣatriya. More severe punishments, however, such as burning alive, may be inflicted. In other cases fines suffice for expiation, the amount varying with the caste of the parties concerned. Should the offender, however, be unable to pay, he is reduced to slavery. The seducer must further apologize, and give his promise not to repeat the offence. Should he break his promise, he is excluded, if a Kṣatriya, from intercourse with his relatives; if a Brāhmaṇ, he is excommunicated from his caste, and reduced to the condition of a Chandalā.

ADULTERY (Jewish)

same law-book, a which exhibits in general a remarkable contrast to Hindu law, the Brahman who is guilty of adultery with a woman of his own caste shall have his head shaved and be excommunicated from his caste.

The husband may separate himself from his adulterous wife, and may retain all her possessions. He will not leave the unfaithful husband, who belongs also to the wife, but she has no claim to the whole property.

In modern India adultery is regarded in the same light as in ancient times, since the regulations of the Brahmanic law-books only are still exact, and the social position of woman under consideration is little different from what it was then. The case of Latkami, the goddess of wealth and golden fortune, but how little confidence the Hindus place in the faithfulness of their wives is shown by the close watch which is now, as formerly, they are subject to. The best punishment is regarded at the present time also as the best security for the observance of the marriage vow. No punishment is thought too brutal for unfaithfulness, and of this there are well authenticated instances of the most

self seen instances, especially in the North-West Provinces, where a husband has cut off the nose of his wife, not even upon actual proof, but upon mere suspicion. Hands are sometimes cut off, and other mutilations are inflicted upon them.

The woman, robbed of her fair looks, is ruthlessly cast out.1) Even if this picture is overdrawn, yet other travellers confirm the fact that stoning to death is sometimes exercised by the husband. In Nepal the aggrieved husband has the right openly to cut down the sederer when found guilty; and here, as well as among certain Chittagong Hill Tribes, a wife whom infidelity has betrayed into guilt is deprived of nose and ears.

Divorce on the ground of adultery is allowed, according to the Madras Census Report for 1891. The Census Report, also, of the North-West Provinces and Oudh for 1901 mentions that the lower castes as well as the higher castes permit the divorce of the wife for unchastity. If, nevertheless, instances of divorce are rare, the cause is to be found less in a lofty morality than in the endeavour of the Hindu husband to rid their family life as much as possible from publicity.

ADULTERY (Jewish).—The substitution of monogamy for polygamy made no change in the Jewish law on adultery. From the time of the Babylonian Exile, monogamy became the prevalent rule in Jewish life. But the law continued to regard adultery only as an intercourse of a married woman with any man other than her husband. Thus a married man was regarded as guilty of adultery unless he had intercourse with a woman other than his wife. In theory he might have several wives, and an unmarried woman with whom he had intercourse

might become his wife. In fact, according to the Rabbinic law, such intercourse might be construed into a legal marriage. But concubinage was severely condemned. (Leviticus Rabbein 13:11,13) The difference between the legal position of the male and the female adulterer (using the term in its now current sense) was considerably affected by the manner in which the case was tried for or inflicted capital punishment. This occurred, according to the Jewish sources (Joreb, Sanh. 18a, 24b; Bab. Sanh. 41a), forty years before the destruction of the Temple (i.e. in the year A.D. 90); but whatever be the date of this exact case, there is no doubt that the death penalty was neither pronounced nor inflicted for adultery in the time of Christ. Hence it is generally conceded that the case of the woman taken in adultery (Jn 8:11) does not imply that the woman would actually have been stoned. In the first place, the law of Moses does not prescribe stoning except where a brooked virgin had intercourse with a man other than her alienated husband (Dt 22:23,24). In several cases (Lv 20:9, Dt 22:22) the method of execution is not defined, and in all such cases, according to Jewish tradition, the criminal was executed not by stoning, but by stoning him in the presence of the woman. Secondly, it will be observed that the woman had not yet been tried by the court. Finally, as indicated above, the death penalty had long ceased to be inflicted for adultery. The point of the incident in the Gospel of St. John was just the attempt to put Jesus into a dilemma, as the commentators point out. It may well be that the irregularities indicated above were an intentional aggravation of the record.

The punishment for adultery was modified into the divorce of the woman, who lost all her rights under the marriage settlement; the man was scourged. The husband of the adulteress was not permitted to cohabite with her; he was compelled to divorce her (Mishna, Soha vi. 1; Maimonides, Hitch. Ishuth, xxiv. 6). The adulteress was not allowed to marry her paramour (Soha v. 1). In case of the man's adultery, he was compelled to grant a divorce on his wife's application; the woman, of course, could not initiate divorce proceedings, but in the view of some of the mediavel authorities the Court would compel the husband to divorce her in case of his habitual lechitciousness (Euen 107:1, 90:1). The 'hath defiled the waters' (Nu 5:1-30) was abolished by Jochanan ben Zakkai during the Roman invasion (Mishna, Soha ix. 9), though Queen Helena of Adiabene—a proselyte to Judaism in the 1st cent. A.D.—is thought to restore it (Mishna, Yoma iii. 10; Tosefta, Yoma ii. 3). Of the ordeal itself, R. Akiba (2nd cent. A.D.) remarks: 'Only when the (suspicious) husband is himself free from guilt will the waters be an effective test of his wife's guilt or innocence; but if he has himself been guilty of illicit intercourse, the waters will have no effect' (Sifre, Nasso, 21; Soha, 47b). Mr. Amram (Jewish Encyc. vol. i. p. 217) comments on this passage as follows: 'In the light of this rabbinical dictum, the saying of Jesus in the case of the woman taken in adultery acquires a new meaning. To those asking for her punishment, he replied: 'He that is without sin among you let him first cast a stone at her' (Jn 8:7). The abolition of the ordeal is attributed in the Mishna to the great prevalence of adultery; and it may be that in the disturbed conditions due to the Roman regime laxity of morals intruded itself. But it was but a temporary lapse. The records of Jewish life give evidence of remarkable purity in marital relations (cf. Abrahams, Jewish Life in the Middle Ages, 1896, 90 f.). The sanctity of marriage is upheld as the essential condition for social happiness and virtue. The moral abhorrence felt against the crime of adultery is shown in many

1. Menu Ryas, vi. 51.
ADULTERY (Muslim).—In the year 4 of the Hijra, the Prophet went on an military expedition by his wife, 'A'isha. One day, at the removal from the camp towards night, she remained behind and reached Muhammad's caravan only on the following morning, in the company of a man. This circumstance caused great scandal. Even the Prophet at first suspected his wife of adultery. Afterwards, however, it was revealed to him that she had been falsely accused, and he was again reconciled to her. The verses of the Qur'an that have reference to this occurrence, Sura xxiv. 1-5, contain, amongst other statements, the following words: 'As for the whore and the whoremonger, scourge each of them with a hundred stripes, and do not let pity for them take hold of you in Allah's religion. . . . But as for those who cast (imputations) on chaste women and do not bring four witnesses, scourge them with eighty stripes, and do not receive any testimony of theirs for ever.' (cf. Th. Noldeke, Gesch. der Qorans, p. 539. A. Sprenger, Das Leben und die Lehre des Muham- mad, iii. 63 ff.; D. S. Margoliouth, Mohammed und the Rise of Islam, p. 341; The Koran, Sale's Eng. tr., ed. 1829, ii. 190.)

In Islam, therefore, according to these verses of the Qur'an, incontinence should be punished with one hundred stripes. Originally, however, Muhammad had commanded that those who had been found guilty of this misdemeanour should be put to death by stoning—a punishment which he had probably derived from Judaism. In the Muslim tradition, various instances are mentioned in which this punishment is said to have been inflicted at Mu- hadum's command (cf. A. X. Matthews, Mishkât- ul-Mas'ûdî, ii. 182-186, Calcutta, 1810; I. Goldscher, 'Mohammedisches Recht in Theorie und W.,' ed. 1889, § 193. Rechtswissenschaft, viii. 566 ff.). It may thus be understood that the Prophet had designatedly mitigated the punishment attached to adultery out of affection for 'A'isha.

After Muhammad's death, a difference of opinion arose amongst the faithful with respect to this point. Many thought that the punishment of stoning to death was abrogated by the verses of Qur'an xxiv. 1-5. But the second Khilîfah, 'Umar, set his face strongly against this view, and stoning to death was ordered by him. In Islamic law-books, the Qur'an xxiv. 2 is in fact regarded as having been abrogated by ii. 239, which makes the punishment of stoning only applicable to cases in which the woman and the man are both guilty, and thus abrogates the guilt of the man, whereas in the Qur'an xxiv. 2 the punishment is inflicted on both. This is the opinion of the majority of Muhammadan teachers, but there are a few who maintain that the punishment of stoning is still applicable in cases where the woman is clearly guilty, and the man, though guilty, is not completely convinced of the fact that the woman is guilty. In such cases the husband is allowed to order the punishment to be inflicted. (On this point see Elie Kessous, 'Beziehungen zur theologischen Diskussion des muslimischen Strafrechts,' ZDB 1901, p. 297. 290.)

ADULTERY (Christian).—1. Teaching of Jesus and the Apostles. — It is sometimes said that the Law of Moses deals only with outward actions, while the Sermon on the Mount is concerned with the inner disposition, and with the motives that prompt to action. The Decalogue, it is said, like other ancient codes of laws, forbids...
ADULTERY (Christian)

the sinful act by which the marriage bond is violated, but takes no account of the character or disposition. Jesus, on the other hand, shows us that the inward disposition which renders the sinful act impossible is the one thing of importance in the sight of God. A moment's consideration will convince us that, whatever element of truth there may be in this statement, it cannot be taken as a complete and satisfactory account of our Lord's comment on the Seventh Commandment (Mt. 5:27-28) inasmuch as it is simply untrue to say that the Decalogue takes no account of inward disposition or motives. The command, 'Thou shalt not covet thy neighbour's wife,' goes behind the outward act, and condemns the sinful desire which leads to adultery. It is true, nevertheless, that in this passage in the Sermon on the Mount our Lord goes beyond the teaching of the Decalogue, and gives a new and deeper meaning to the command, 'Thou shalt not commit adultery'; that He does not merely recall to men's minds the teaching of the Tenth Commandment, which had been overlooked or forgotten in the Jewish schools, but that He lays down a great principle of the righteousness required in the Kingdom of heaven, from which obedience to the letter of the command will follow as a matter of course. The Tenth Commandment forbids a particular lust or desire, mainly because it tends to conduct which will injure one's neighbour; it is a safeguard against injury, and the thought of the injury done to one's neighbour is the prominent thought. In the passage in the Sermon on the Mount, on the other hand, our thoughts are centred on the moral injury to the man himself. 'If thy right eye causeth thee to stumble, pluck it out, and cast it from thee: for it is profitable for thee that one of thy members perish, and not that thy whole body be cast into hell.' The indulgence in sinful thoughts and desires is not a minor offence tending to the injury of others, but is already the soul-destroying sin of adultery committed in the man's own heart.

It is now easy to understand why it is that, while throughout the NT sins of the flesh are unsparingly denounced, we have no detailed classification of such sins; and very little account is taken of these various distinctions—as between adultery, fornication, *stuprum*, etc. etc.—which are so often treated of at unifying length in writings on these subjects. The word used most frequently for such sins is *póresia*, 'fornication.' *St. Paul uses* *póresia* and derivatives about eighteen times; *μοιχεία* does not occur, while *μοιχία* (and derivatives) occurs only five times in his Epistles, and two of these instances are quotations from the Decalogue, viz. Ro 2:19, 1 Thess. 4:17.

**ad* *d* 3d* 4, in which St. Paul deals directly on the Sin of Adultery, may be placed side by side with these passages from Mt., as

affording an interesting illustration of the same principle. The Apostle does not ignore our duty towards our neighbour. Adultery is sinful because it is a kind of theft (ὑποθνατίσεως καὶ παρεκκλησίας *póresia*—the use of the article was no common feature in the life of the Greco-Roman world. St. Paul, no doubt, would have been quite ready to acknowledge that adultery, as inflicting a more grievous or irreparable wrong, was a graver crime than simple fornication, just as he recognized fully the gravity of the case of incest in Corinth (1 Co 5); but, in general, the object of the gospel was not primarily to develop a system of casuistry, but to call men to newness of life, and to produce a character which should make sin in all shapes and forms impossible. For the Christian, therefore, the Seventh Commandment is, before everything else, a law directing the members of the Church to conduct of no unlawful sensual indulgence, whether in thought or deed. Marriage is, first of all, a spiritual union between those who are 'heirs together of the grace of life' (1 P 7); and all other ordinances of the Church are directed towards the promotion of that social life which is absolutely necessary to man's well-being.

2. Ecclesiastical discipline. The case of the immediate disciples of our Lord gives us our first example of the exercise of ecclesiastical discipline by a Christian community; and the Epistles to the Corinthians make it plain that, while the Christian Church from the very beginning was accustomed to maintain discipline over the lives and conduct of its members, the idea that the offence of adultery necessarily involved final and irre- vocable exclusion from the Church was unknown to the earliest schools of the Apostles.

Tertullian's statement, therefore, that from the beginning gross sins of the flesh were visited with final exclusion from the Church, must be regarded as an exaggeration, so far as general principles concerned. Indeed, all the evidence goes to show that we have here rather the ideal picture of the glories of the Church discipline, as conceived by the enthusiastic Montanists, than a sober statement of fact.

Towards the close of the 2nd cent., there seems to be no doubt that the discipline in the Churches of the East was of this kind. In the case of an open sin, as that of *μοιχία* was, most familiar, was exceedingly strict; but the evidence available appears to show that there was no uniform or clearly defined system of discipline established throughout the whole of Christendom. Tertullian (c. Her. t. 11, 19) tells us of certain women in the Church of Lyons who had been found guilty of adultery, and subjected to penance. As he speaks of only one of these as not being finally restored to communion, it may be inferred that the others had been received back; hence we may conclude that the system of discipline in the Gallic Church was somewhat less strict than that which prevailed in Italy or Africa. During the whole of the sub-apostolic age, and down, at all events, to the close of the 2nd cent., the high standard of morality which we find in the Apostolic age was well maintained throughout the Christian communities. If any Christian fell away to vicious or immoral courses, he would in all probability forsake the Church and escape her discipline. Hence cases of grave offences calling for ecclesiastical censure would be of rare occurrence, and the conditions required for the establishment of a well-defined system of penitential discipline would not arise.

With the expansion of the Church and also, perhaps, as a consequence of the fading away of the early enthusiasm, it became necessary, the Church would have to maintain her position, she was on her work in the world, to relax somewhat the extreme severity of discipline, to make provision for the restoration of penitent sinners, and, at the same time, to make the Church's rules on such matters clear and distinct. 

*ad loc. Mar. iv. 9. Tertullian here enumerates 'seven deadly sins which exclude from communion;' viz. *adulterium, stigmata, incestum, heresiam, concubinationem, adulterium, stuprum, falsus testimonium, fraus.*
ADULTERY (Christian)

ADULTERY (Patrician)

The ancient Romans attached much importance to marriage, and hence they looked upon adultery with horror. In the Gāthā Uṣhtavaiti (Yaska, liii. 7) there is a carefully worded warning against what Mills calls...
ADULTERY (Roman).—I. Under the Republic.

The word adulterium is a noun-derivative of adulterare, which is probably ad alterum (as convertere). The offence on the part of the wife is sexual intercourse with any man other than her lawful husband. The word has a narrow meaning, and is confined to misconduct with married women, misconduct with other than married women being designated by the general term oflatus. The word sturprum is used to denote the breach of the marriage vow, and is applied to the act of the husband. The mensa of the husband is at issue when the offence is committed by the wife. The husband is at liberty to prosecute the wife, but he must be careful not to commit perjury.

2. Under the Empire: The Lex Julia.—By the end of the Republic, owing, among other causes, to the absence of effective legislation, immorality became so rife at Rome that the Government became alarmed at the prospect of a shrinkage in the population of Italy. In consequence of this, Augustus in 736/18 carried through the measure known (though the title is doubtful) as the Lex Julia de adulteriis coecernis (the Ostracism Law, 18 B.C.—24 A.D.; Suet. Aug. § 34). This, as its opening clause shows ("ne quis posthac sturprum adulteriavus facto sciens dolo malo"), was directed against immorality in general as well as against adultery. But now for the first time Roman law recognized adultery as an act done in contravention of the law of the State, and allowed others than the father or husband of the adulteress to prosecute. For this purpose a new court (quaestio perpetua) was established (Dio, liv. 30). The fragments of the law that survive will be found in Bruns, Fontes Juris Antiqui, p. 114. Adultery on the part of wife was considered a religious crime, and was punishable by the religious rites, like those of the Dvādshah Hōmāstā.
ADULTERY (Semitic) any matrona honesta, as well as against a married woman (materfamilias). It should be noticed that the concubitus, or inferior marriage, though of great antiquity, was now for the first time recognized as a permanent legal relation by the Decree of Justin (Paul. Sent. ii. 26. 14). Conviction entailed infamia (Dig. iii. 2, 2, 3), and the condemned became incapable of giving evidence (testimoniales, Dig. xxii. 3, 14, 18). The adulteress could not marry again (Dig. xxii. 2, 26), but she was not debarred from entering the condition of concubitus (Mart. vi. 22). The dissolution of the marriage was a necessary preliminary to any action taken against the wife or her paramour, and if her husband did not divorce her he exposed himself liable to the charge of procuratio (tenocinum). For sixty days after the dissolution of the marriage the right to prosecute was reserved to the husband or father of the woman (Ov. Fast. v. 235). If the woman was within this period of time, any one unconnected with the family (extraetus) could prosecute (Tac. Ann. ii. 85). Both offenders could not be prosecuted at once, and the trial of the one had to be completed before that of the other was begun. If the man was acquitted, the woman could not be charged. A period of limitation was prescribed within which an action must be brought,—six months for a husband and three for the paramour, if he had so incontinent, which was held to mean 'almost by one and the same blow.' The husband's right to kill his wife when taken in the act was withdrawn. Here we seem to see an attempt to abolish the right of life or death in the case of the man. The ancient right of self-help was never entirely abolished, but the exercise of it was severely restricted. A father who surprised his daughter in 

The Lex Julia formed the basis of all subsequent legislation against adultery. It was not seriously modified till Constantine, under the influence of Christian ideas, introduced the penalty of death for the adulterer, and, by a curious reaction, once more confined the right of prosecution to the near relatives of the adulteress. The death penalty was maintained during the reigns of succeeding emperors. It was confirmed by Justinian (Inst. iv. 18), who imposed in addition the penalty of lifelong imprisonment in a nunnery, unless the offended husband cared to reclaim her within two years.

F. W. Hall.

ADULTERY (Semitic).—The treatment of infidelity among the Semites can be traced through a great variety of evidence, extending from the codified legislation of Hammurabi, king of Baby-

lonia (c. 2550), to the unwritten, though no less authentic, tribal laws of the present day. So far as women were concerned—and, as elsewhere, the infidelity of the man was only tardily recognized as blameworthy—it must be understood that the offence implies a particular type of marriage, since it is obvious that where the woman has liberty of choice, does not belong to her kin, and may receive her suitors when or as long as she will, adultery is out of the question. Such a union is entirely one of a personal character, and gives the man no legitimate offspring. But the prevailing type in the Semitic world is that wherein the woman follows the husband, who has paid a 'bride-price' (Arab. mahir, Heb. mohar) to her kin, whereby he has compensated them for the loss of her services, and has acquired the right of possessing sons who shall belong to his tribe. By this act the man has practically acquired the exclusive property-rights, and deprives the woman of the right of disposing of her own person. Further, it must be recognized that this does not imply that paternity always means what it does to us. The evidence goes to show that the man is at first only the father of all the children of the woman he has taken; and he can transfer or dispose of her temporarily in a way that is quite repugnant to all ideas of chastity. At this stage, therefore, a distinction could be, and was, drawn between authorized and unauthorized laxity, and in the circumstances the term 'adultery' could be applied only to those acts of infidelity which were done without the husband's consent or knowledge. It required a great advance before any breaking of the union between husband and wife could be regarded as a desertion. See Marriage.

In tracing the growing strictness of ideas of chastity in the Semitic world, it is to be observed that there was a gradual development of institutions of law and justice. Primarily the offenses against a man are matters for him and for his kin or tribe to settle; adultery may thus be privately avenged, and it is not until society has taken many steps forward in government that the matter is taken out of private hands and referred to a judicial inquiry. There is a great social gap, therefore, between the parental authority of Judah in Gn 38, and the recognition that immorality is an offense which must be punished by judicial process.

It is undeniable that there was much in early Semitic life that cannot be judged in the light of modern ideas, and that primitive usages which were hardly thought to be dishonourable (Gn 19, cfr. Je 19) for which parallels could be found—bespeak a lack of refinement which leads to the inference that adultery, if recognized at all, could only have been the unauthorized infidelity referred to above. But a general advance in custom can be traced, and is peculiarly illustrated by three stories of the patriarchs: there is a distinct growth in morals in the account of Isaac's adventure at Gerar (Gn 26) as compared with the duplicate narrative of Abraham in Egypt (ch. 12), and these stories from the Jahvist or Judcan source are overshadowed by the Elohist or Ephrainite account of Abraham at Gerar (ch. 20), where the integrity of adultery is distinctly raised.

Under the ordinary type of marriage, known as the baal or marriage of substitution, the Semitic woman, if unmarried, is entirely under the authority of her father; if betrothed or married, of her husband. It is necessary, therefore, to observe that, if adultery is primarily an infringement of the husband's rights, seduction is no less a matter for the father of the unbetrothed virgin. According to the old Hebrew law (Ex 22:21), the man who was

* See Robertson Smith, Kinship and Marriage in Early Arabia, pp. 79-80.

1 Robertson Smith's researches are supplemented by Well-hausen (Gez. 5, 1890), who has observed that once the Arab mistrust and jealousy spring less from love or ethical considerations than from ideas of property.
ADULTERY (Semitic)

Guilty of seduction was obliged to pay the šubur or bride-price and marry his victim; * the later code (Dt 22:23) fixes the amount at fifty shekels, and characteristically prevents the man from turning his newly-made wife adrift, by removing from him the right of divorce. How the law worked in ancient Israel can be gathered from the account in Gn 34, where, although little of the oldest narrative has been retained, it seems clear that compensation was required, and dispute or hand-held action was frequent. Such intertribal conflicts, the usual penalty for adultery was compensation, but frequently the offender was put to death. Modern custom permits the guilty pair, if caught, to be killed at once, or, at the sentence of the shekels, all the men take an equal share in the execution. The last point is important, since bloodshed according to primitive thought is a responsibility which all members of the community must share. The old form of exacting the death-penalty is parallel, as Robertson Smith has observed, to the ancient ritual of sacrifice. In both, every member of the kin should as far as possible participate in the act.  The particular form of death—whether by stoning, strangling, impaling, burning—and— at the present day— even shooting.

Mere suspicion of adultery is not enough, and there are no general consequences may result from unconsented denunciation. Hebrew law required two witnesses, and (by an extension of the talio) the false accuser would bring upon himself the punishment his charge would have entailed upon another. It is noteworthy that the law in Dt 22:22 specifically provides that the guilty ones are ‘found’ in the act. The law in question belongs to a group which reflects that stage where moral ideas have become so advanced that the husband attaches importance to the chastity of his newly-married wife (the restrictions of Lv 21:14 apply only to the priests). The procedure (Dt 22:21-23) is detailed, and states that if the accusation of impurity brought against the bride is true, she is stoned to death by ‘the men of the city’; if false, the man must pay a hundred shekels to the father, and is not permitted to divorce his wife. § It is intelligible that, in the former event the girl is treated as an adulteress, since from the time that she was betrothed she is regarded de facto as a married woman. The same code in its treatment of betrothed women makes a noteworthy distinction in the scene of the offence. She is similarly punished in the city, both as a woman stoned; whereas, if it be in the open country, the woman goes free, since it is assumed that she cried for help and found no protector (vv. 22-27). §

The Babylonian code of Hammurabi implies a more advanced state of culture than the oldest Hebrew. The position of the married woman was secured by a contract which could specify the penalty for her infidelity and possibly vouched for her purity at the time of marriage. § The following laws require notice: —The man who is caught ravishing a betrothed virgin who is living in her father’s house is put to death, whilst she herself goes free. She was betrothed to his own son, and the distinction is drawn dependent upon whether the marriage had or had not been consummated. In the latter event, the man must pay half a mina of silver and give her her personal property, and she goes free. §

The code of Hammurabi is characterized by the strictness with which the man must make in the event of the father’s refusal, is apparently an additional compensation.  

Arabia Deserta, ii. 114 (see Bennett, The Century Bible, *Genesei*, p. 315.)  

§ See, further, Driver, ICC, *Deut.*, p. 255.  

* Cf. with this Boaz and Ruth (Rg 24:9, 72).  

*Jesu,* The Old Testament, p. 173.  

It will be noticed that in Dt 22:22 the accusation of impurity is regarded as a distinct refection upon the parents.  

is free to marry whom she will. In the former event, the man is strangled; the treatment of the girl is uncertain in the text. * Drowning was the ordinary legal penalty, although, according to a somewhat obscure law, the man might pardon his wife and the King the adulterers at his own cost. §

The Babylonian procedure in cases where absolute proof was not at hand is characteristic. In all ordinary cases the wife could take an oath and swear her innocence, and was allowed to return (or is it was) in the (father’s) house; but 'if the finger had been pointed at her on account of another,' and she is obviously the subject of scandal, she must undergo ordeal by water. Robertson Smith has cited the Arabian story of Hind bint 'Uth, whose husband sent her back to her father on suspicion of unchastity, and it appears that the case could not rest there, her treatment being clearly regarded as an insult; and from another incident it would seem that suspected wives could be conducted under ignominious circumstances to the Ka‘ba and there swear seventy oaths.  

The ordeal and oath reappear in the antique ordeal preserved in a late source, Na 5:21ff., where the suspected wife enters the house of her (father’s) house; but 'if the finger had been pointed at her in the humiliating titre before Jahveh. There the priest charges her by an oath which she accepts with the formula ‘Amien,’ and prepares a potion of holy water and a manna, as the material in which are the words of the oath. The procedure, which does not prescribe any punishment for unjust accusation, is treated at greater length in the Mishnah (Shea; cf. also Jos. Ant. 111, xi. 6), and is said to have been abolished towards the close of the 1st cent. A.D. (cf., further, OATH, ORDEAL).

The old Babylonian code handles acts of adultery in the case where adultery is consummated or is observable away from home. If he had left means of livelihood (life maintenance), and the wife enters the house of another, she is condemned to be drowned,—his family perhaps bring the charge,—whilst, failing these means, her desertion is not blameworthy; only, should the man regain his city she must leave the second husband (and children, if any) and return. Not unconnected with the subject is the further event that the woman who brought about her husband’s death in order to marry another is to be killed. In Talmudic law, moreover, the adulterer who is divorced may not marry her accomplice. The charge against the widow in Gn 38, and the betrothed woman is the city, both are stoned; whereas, if it be in the open country, the woman goes free, since it is assumed that she cried for help and found no protector (vv. 22-27). §

The extreme sentence was not always carried out. Usage varied according to the tone of public opinion and private interests. A man might not care to parade his wife’s disgrace (Mt 19), and the woman in Jn 8 who was taken in adultery ultimately departs unpunished. Cosmopolitan life in Palestine in the last centuries of the pre-Christian era was scarcely conducive to purity, and the women of the publican were no more sanctified than the men. Yet in no tribe of virgins was the father’s refusal not so much the immorality as the folly of the man who provokes the jealousy and wrath of the husband in a way which is likely to have unpleasant consequences for himself (cf. also Sir 22:23-25).

§ For ‘one shall cast her into the water’ we should probably read ‘she shall be put to death’ (cf. Winckler, Harper, etc.; see S. and J. Laws of Moses, etc., (1900) I. 101). In that case ‘strangled’ should probably be ‘burned’.  

§ For Semitic parallels cf. the Syriac šundu and Šagašt, and see Job 22:24; Prov. 7:20.  

§ For daughters of priests (Lv 21:9), for all cases of immorality (Job 20:14f.) and for incest (Code of Hammurabi).
ADVATA

The great advance upon primitive thought was the insistence upon the fact that adultery is as immoral in the husband as in the wife; purdah to this the adulterer suffered only in so far as he had been the object of the injured husband's revenge. Accordingly the Decalogue and related teaching mark a great step in ethics in denouncing adultery and in pointing the warning against the covetousness from which lust springs (cf. the development of the truth in Mt 5:32).

The peculiar character of Nature-worship and the native cults of Isra'el and Ashkeorth were direct incentives to impiety, and whatever may have influenced growth of refinement in this scattered field, it is evident that the purer conception of Jahveh among the Hebrew prophets went hand in hand with the refinement of moral ideas in Israel. The relation between worshipper and God was typified by the marriage-relation, and Jahveh was His people's bēal even as the husband was the bād of his wife: it was impossible not to perceive that intercourse with aliens tended inevitably to participation in foreign rites, and the symbolical use of such terms as 'jealousy,' 'fornication,' or 'adultery' becomes characteristic of the religious life of Israel, bound as it was to its God as surely as the wife was bound to her husband. Hosea's doctrine was thus in accordance with well-established belief, and lays stress upon the fact that, whatever may have been the customary attitude towards adultery in everyday life, Jahveh had neither destroyed nor utterly forsaken His adulterous people, but was willing to receive them again and pay the betrothal price of 'faithfulness.'

But this is not all. The Israelites were not the only race that had the same conception of the relation of man to his God. In Egypt, in Assyria, in Babylonia, the god was often called bād, and His people were His bēal, or wife. In this connection we may note, that while Hosea's conception is a conception of Yahweh, Hosea's conception is a conception of the human relation, and is an illustration of a principle which is common to all the nations that have had a history.

In the form of the six dvaita, the six recognized systems.

The predominant interest in all of these was religious, not philosophical. The Nyāya taught its logic in order to show that the Burgā (see art. VIŚVĀSA) of the Saṁyanti (see art. VIśvara). The explanation of life it sought in a purūṣa (soul), always in, but not a part of, nature. Unless in the presence of a Creator, it thinks to secure the same result by the joint action of this purūṣa and prakṛti. Purūṣa cannot create; prakṛti cannot be; the one is bound here; the other is blind. But the cripple and the blind work together for the benefit of the cripple. Purūṣa believes himself to be miserable as being bound in prakṛti; but when, by the destruction of karma (action), he is set free from the influence of prakṛti and attains to a correct understanding of the case of nature, he is set free from misery. The Yoga restored to this atheistic system the idea of a self-existent power of omnipotence, who, alone prūṣa could find his way to salvation. This result, however, could be achieved only through a long process of physical discipline based on a knowledge of the signs of nature (see art. YOGA). The Purāṇa Mimāṃsa was a return to the authority of Vedic doctrine, and ceremony, while Ulātra Mimāṃsa devoted itself to an exposition of the rationalism of the Upaniṣads, in which are found the germ of those conceptions which are peculiar to Indian teaching (see art. VAi'ta).

This latest of the six schools, basing itself on revelation (āśruti), asserts that revelation not justified by reason and not corroborated by common sense experience will not lead to any real knowledge. It addresses itself to a criticism of the creation theory, and the evolution theory of the Vaiśeṣika and the Sāṅkhya systems above mentioned. It calls into question the grounds on which our perceptions of prakṛti, and asserts that we are never conscious of anything beyond our own consciousness of phenomena, whether objective or subjective. Thought and being are, in fact, so inseparably united, that the journey of the one from the other is like trying to mount on one's own shoulders. Thought can never transcend thought, and all we are cognizant of is thought. Real existence (sat) is the same as thought (abhiṣakti).

We are cognizant of phenomena under various forms, and ascribe to them various names, but, of which they are the names and forms we do not know. The substratum of phenomena is per se inseparable of thought, and, it is indescribable (ulīvṛtipakṣita). Nor can it be maintained that these phenomena are evolved from thought, for to assert that thought changes itself into phenomena would be to contradict our experience of the essential nature of thought as one and the same in all states and under all conditions.

Abandoning, therefore, the theories of creation and evolution, the advaita has recourse to what it calls svācara, the more unaccountable assumption of the phenomenal in thought. Thought and Being having been shown to be inseparable, the supreme genus is a compound of both, which is named brahman. Thus the advaita proclaims itself a philosophy of non-dualism. It regards phenomena as phenomena; but it refuses to penetrate into the ultimate nature of their substratum, which it declares to be a profound mystery.

Matter without mind and mind without matter are alike unthinkable. Dvaita, duality, is an entire misconception. The philosophical accuracy, therefore, of the term advaita, which was selected to designate this philosophical position, is apparent. It does not assert that all is one; it denies dualism without asserting the convertibility of mind and matter. According to the advaita doctrine, the test of supreme or ultimate reality is unchangeableness. The eye does not change with the phenomena which it perceives; but it can be cognized as phenomenal by the mind, which can discern the changing conditions of the eye, the mind itself remaining unchanged throughout the process. This changing condition of the mind, with its apprehension of reason, volition, feeling, etc., is cognized as phenomenal by something which cannot be cognized by anything else, for it is unchanging and unique. This something is the ultimate self-convertible fact in all our perceptions. In and through it everything is. It is unconditioned, and therefore indescribable. It is neither he nor she; it is if.
Of it is all real being (sat), all thought (chit), all joy (ánanda). Hence the formula which defines brahman by which all is thought, joy,.

It is to be noted that the advaita does not deny the existence of matter, it simply regards it as per se unknowable, and therefore indescribable. We have a term in English in which it is phenomenally present in thought. All our knowledge contains two elements, one constant and eternal, which is the true, the real; the other changing and transitory, which is the untrue, the unreal.

The precise meaning of mâyâ becomes clearer when regarded from this point of view. Mâyâ is illusion, but not illusion without a basis. This basis, which is satisfactorily explained is that which traces it to the rise of the term in the Rigveda to describe the elevating and inspiring power of prayer, resulting in an elevation of spirit which seems to lift the soul out of the consciousness of its individual separate existence. It is also described as 'intrinsic self,' not as 'individual self,' for the consciousness of individuality must vanish in the contemplation of brahman, but because the sphere within which these higher processes of thought, which rise above the phenomenal self, have their being, is that of the thinking subject. Brahman is the Supreme, the unconditioned self, transcending all individuality. The relation of this brahman to the illusions that present themselves in our consciousness is illustrated in familiar comparative statements, the mirage assumed to be water, the rope assumed to be a snake, etc. As in some of these instances want of proper light is the source of the illusion, so want of right knowledge is the cause of our mistaking phenomena for realities.

The Advaitins were fully conscious of the gravity of the problem which still remained unsolved, viz., the real origin of these illusions. In many of their attempts at explanation they contradict the fundamental principle of their system. We are told that mâyâ is only a creation of the mind; that it is away to these false notions. But this explanation, which seeks to give definite objective existence to these false notions, is subversive of advaitism. The attempt is made to evade this difficulty by asserting that the mind has within itself from eternity ideals which it only reflects or dreams out. It thus only perceives itself. But eternal ideals seem also to constitute a separate reality. Others find the origin of mâyâ in the limitations imposed upon the unlimited. These limits, which give rise to the phenomena of perception, are the creation of the individual as an individual; in brahman, the unlimited, there is no individualization. To be emancipated from the sense of separation from the eternal is real knowledge, real bliss. This is the emancipation which finds expression in the formula tat-tat-paräntam, thon art it.

We have recourse to the theory of reflection, viz., that the varying phenomena of perception emerge through the reflexion of brahman in nature. But what is it that reflects? Here again we have no answer. The most generally accepted solution is that which repares of the solution, which contents itself with saying that separate existence in every form is false, all is as it is, all is brahman. It illustrates its position by the story of Yajñavalkya, the ancient sage, who, when asked by one of his pupils in a question, thirteen times the same question, the same answer; and, when pressed, replied that the advaita is best described by silence, for all describing means duality or dualism.

Religious writers have furnished the chief stimuli to the advancement of personal knowledge, the religious mind of the ancient Indians pressed on to seek that on which the gods and the worlds depended for their creation and their support. It found it in that elevation of soul experienced in prayer, which enabled it to transcend its individual existence, to which it gave the name brahman.

In the Taittiriya-Brahmana, 2, 8, 9, 6, the question is asked: 'Who is the supporter of the beings who are in the world? ' is answered: 'The Adityas, who are the controller of the entire world, is declared to be 'that out of which earth and heaven have been formed, and that which upholds the bearers of the world.'

In the Khādaka-Upanishad, v. 1–3, which represents the most advanced form in this process of thought, the brahman is described as the most inward and the noblest element in all the manifestations of nature, 'the sun in the firmament, God in the heavens,' as dwelling everywhere, as born everywhere, and he only freely suffers and dwells among those who reverence the 'unborn, the unchangeably spiritual' that dwells within him.

In the Chandogya-Upanishad is set forth in the clearest terms this exaltation of the atman, or self, in its identification with brahman. 'This Universe is brahman. Its material is spirit, life is its body, light its form . . . all-embracing, silent, undisturbed—this is my soul (atman) in the inmost heart, smaller than a seed of grain—this is my soul in the inmost heart, greater than the earth, greater than the heavens, greater than all these worlds. . . this is brahman; to it shall I, when I go hence, be united.' In many minds in this sense is 'the real,' 'the one without a second (advitya).

It is that out of which the whole world has been formed, of which the world is a mere transformation. He who knows the one knows all.

The fundamental problem of thought in the ancient and modern philosophies of the West have been frequently pointed out. The early Greek philosophy was inspired by the longing to discover a cover a principle of unity in the manifestness of the phenomenal world. The earlier attempts resulted in the assumption of some one common physical principle, out of which this variety was developed; the later attempts sought it in a spiritual cause. Xenophanes proclaimed the unity of the Divine, and his disciple Parmenides, denoting to this principle personality and change, reduced it to Being. To the unity thus reached by the path of pure abstraction he opposed the world of phenomena as non-being (ēs μὴ ἐστί). The correspondence between these successive stages in Greek thought and the course of Indian thought outlined above is interesting and suggestive. The other parallel is that presented by the Kantian philosophy. By a different path from that of pure abstraction, Kant reached the metaphysical quest. Having subjected to a minute critical analysis the faculties of human knowledge, he arrived at the result that 'the thing in itself' (das Ding an sich) is not accessible to human knowledge, as all knowledge of the external objective world, but is realized through the artificial conceptions of categories of thought, the categories of space, time, and causality, which are the mind of the thinking subject. The mind is itself, therefore, so far as these faculties are our means of knowledge, is unknowable.
method. The advocatus presents us with no critical analysis of the process of knowledge, for we can scarcely dignify with such a name the arbitrary and fanciful methods above indicated, by which the Advocate sought to explain the fact of magi in our present arrangements. So, as the advocatus is to be regarded as a philosophy, it is a philosophy of a purely abstract and speculative nature. By one supreme effort of mind it advances to a position which other philosophies have sought to establish. Thus, the advocate is a court of examination or court of the facts of experience. In its religious aspect it exhibits similar characteristics, and in its religious aspect is more important than its speculative interest. It is a doctrine of salvation through the attainment of the true knowledge, and this knowledge is to be realized in the advocatus conclusion. By a purely intellectual effort the emancipation of the soul from evil is to be achieved. In this solution of a deep moral problem we see the same inaptness of facts, the same summary method of reaching the desired goal, as marks the speculative side of this philosophy. How profound is the depth of the problem may be gathered from the illustration which it employs to describe it. One who wears a jewel round his neck is distressed when, having discovered that he has lost it, he searches and finds it and when he discovers that it has been lost. So, we are told, the distressed soul finds salvation in the knowledge that there is no diversity, no evil, no separateness. Pleasure and pain are merely the results of this false sense of individuality and separateness. The mind of the individual may be conscious of evil and of suffering; but the great mind brokens knowledge of these. Identification of the advocate is the source of all bliss, the sense of separateness is the root of all evil.

LITURGIE. — See ART. VERSICA. The view of Advocatus given above will be found fully expounded in M. N. Dvivedi's Monist or Advocate. Bombay, 1889.

D. MACKICHAN.

ADVOCATE. — The etymological meaning of 'advocate' (Lat. advocatus) is one called to, i.e. one called to another's aid. It may be used of one called in to assist another in any business, as, e.g., when an official appointed to defend the rights and revenues of the church was called advocatus ecclesiae. In legal phraseology an advocate is one called in to assist another's cause in a suit of justice. The Lat. advocatus had a wider significance than 'advocate' connotes in modern English; in Cicero's time it denoted a barrister, hence any legal assistant: not an advocate as in later authors (cf. Phil. i. 16, pro Cæc. §§ 24, 43). Like πράγματις in classical Greek, advocate might refer to any friend of the accused person, called to speak to his character, or otherwise enlist the sympathy of the judges (or, as we should call them, the jury) in his favour.

Field (Notes on Translation of NT, 1899, 122) supports the above statement by the following: 'The following classical quotation from Ascondus, ad Cit. in Q. Cæcil. : "Qui debet disputare inter homines, aut patronum dictur si orator est; aut advocatus, si aut huius suggestor, aut presentatione non comodat amico." For a similar use of πράγματις he refers to Dem. de F. L. I. init. p. 341, 10; Dig. Locut. Vit. Dionys. iv. 50. In Phil. Opt. § 6 the office intended is that of a monitor or adviser; but still preserving the leading idea of amicus advocatus in con-

'Advocate,' as a judicial term, now generally signifies pleader. This is a natural development of meaning, for assistance in courts of law usually takes the form of making the cause of one who is accused. As thus employed the word naturally corresponds to the English 'barrister,' whose office it is to plead the cause of his client.

Five uses of advocate fall within the limits of this article, viz.:
is a growing consensus of opinion in favour of 'Advocate' as a title of the Holy Spirit as well as of Jesus Christ. *Christ is our Advocate on high,* Thou art our Advocate within,*'

The argument in support of this view is succinctly stated by Field (op. cit. p. 103): "(1) "Another Advocate," i.e. besides Myself. (2) The word is only known from St. John's writings, where it is used in a general sense, but is the right word in the right place. (3) Ephremologically, advocate and executor are synonyms. (4) This is the only rendering which accounts for the passive form." The question is, 'Does the work of the Holy Spirit as described in the above four passages correspond with the functions of the 'Advocate'?' In three of them (Jn. 14:26, 15:26) the Holy Spirit is the 'Advocate within,' the hearts of Christ's disciples; as an Advocate he 'pleads the truth and makes reply to every argument of sin' (14:16); his pleading is without conjurative force, because he brings to remembrance the Saviour's words, unfolds their teaching (14:26), and bears witness to His glory (15:26). No strain is put upon the context of these passages by the interpretation shall be demanded of the disciples themselves will be 'judges against their own unbelieving hearts, and Christ will be triumphantly acquitted and declared to be the Son of God with power' (Hastings, *EzyT*, x. [1890] p. 170). The remarkable omission (16:12) of the Holy Spirit's work in convoking the witness he is Christ's Advocate, and for the Apostles themselves, the pleading of the Advocate was a sovereign vindication of their cause. In the great trial they were shown to have the right, whether their testimony was received or rejected (Westcott, *Com. in loc.*).

Zahn (*Königl.*, p. 1, p. 45) finds a difficulty in accepting the rendering 'another Advocate' in Jn. 14:16. 'Another,' he argues, implies that Christ Himself had already been His disciples' Advocate, whereas He had rather been their Teacher or their师傅 or teacher than their Advocate. But there is no need to make precisely the same meaning to 'Advocate' when it is applied to Christ's earthly intercessory with His disciples and to His heavenly intercession on their behalf. The difficulty seems to be sufficiently met by saying that on earth Christ was ever pleading God's cause with the men who had been given Him out of the world, whilst in heaven He is ever pleading their cause with God (cf. Cremers, *Bibl.-Theol. Lex.* vol. 20, p. 350). All admit that 'Advocate' does not adequately represent the varied work of the Holy Spirit. As a descriptive general title rather than as a precise tr. of the word in the passages discussed above, the felicitous suggestion of Dr. E. A. Abbott may be adopted: 'Perhaps the best paraphrase of Paraclete for modern readers would be "The Friend in need."' *Paradossis*, 1415a.

2. 'Advocate in Church History.—(a) Advocate in Church History.—The 'Christian' or 'General' Advocate was a civilian officially charged with the duty of defending ecclesiastical rights and revenues. At the six Council of Carthage (A.D. 401) it was resolved (Canon 10) that 'the Emperors shall be prayed to appoint in union with the bishops, protectors (defensores) for the Church.' At the eleventh Council of Carthage (A.D. 407) it was decreed (Canon 2c) that (a) in the necessities of the Church five chaplains, or canons, shall be demanded of the Emperor to collect the revenues of the Church' (Hefele, *Hist. of Church Councils*, vol. ii. pp. 425, 442). At different periods the duties of the advocate were not designated as opifex, defensores, or executores—included not only the defence and maintenance of the secular and legal rights of the Church, but also the protection of the poor and of orphans, the exercise of jurisdiction, including administrative functions, and the power to levy soldiers from among the vassals of ecclesiastics who claimed immunity from the service of the State. At first the office of advocatus ecclesi was not hereditary, but Hinschius states (PREB. i. 199) that before the end of the 9th cent. founders of monasteries, etc., sometimes stipulated that it should be retained for themselves and for their heirs. In Charlemagne's time the right of nomination beloved of the king but to the Church. Ecclesiasti- cal corporations the power of free choice was given, with the proviso that the secular authority of the district—the duke or count—had the right to reject the nominee of the Church.

When the office of advocate was held by unscrupu-lous men, it became an instrument of oppression and extortion. Historians record many charges brought against those officials of plundering the property of the Church and misappropriating its revenues. Kunz does not overstate the facts when he says: 'Many advocates assumed arbitrary powers, and dealt with the property of the Church and its proceeds just as they chose' (*Church History*, § 86). Hinschius (op. cit.) says that it was Pope Innocent III. who, in his negotiations with Otto IV. and Frederick III., first secured a promise that the State should protect the Church against the oppression of the advocates ecclesi". (b) *Advocatus diaboli.*—In the Roman Catholic Church, when it is proposed to honour a departed saint by Beatification or Canonization, it is the duty of the bishop's 'will's advocate' to plead against the proposal and to bring forward every possible objection to it. These objections may lie either against the saint's reputation for 'heroic' virtue, the orthodoxy of his writings, or the genuineness of the work in which he is venerated which they may also have reference to technical errors of procedure, or to flaws in the evidence.

Von Moy, in an article which has the approval of the Roman Catholic Church, says that papal canonizations are not certainly known to have taken place before the time of Pope Innocent III. (1198), when Frederick II., King of Sicily, had been canonized without consulting the Pope, but in consequence of abuses. Pope Alexander III. decreed (1170) that henceforth papal con-Downloaded from https://www.cambridge.org/core. recently 1900 by Westcott's and Milman, opinions, Cycladic civilization the of Mycen. wood, The easy. sufficiently Mycen?ean.' visible the later his states J. the demand 1895, 71 this; Nature, the the beatifications pold, dox exorcised 14i6 by advocatus miracles. Public duty Church advocatus before from rank, from the twelve 'W-Paper, Lambertini law, or Wettzer-Welte's religious. For 14i6 criven Schliemann, 'twelve name shown as in advanced all at once to comprehend and co-ordinate the mass of novels, raw material accumulating here and there, and it took time to make the necessary comparisons between the Aegean civilization and other civilizations, contemporary and posterior. Among its institutions none remained so long obscure as the religious. Up to this end, no sacred building had been recognized among Aegean remains, and no undoubted idol of a divinity. Of the small number of unquestioned cult objects discovered, almost all were still ascribed to foreign importation. The few ritual scenes represented on intaglions were, some of them, not observed to be religious at all, while others were ill understood for want of known parallels and of certain unexplored nature of an Aegean cult. Perrot and Chipiez in their volume on the Art of Primitive Greece, issued in 1895, found hardly anything to say on religious representations; and Evans, when about to show in 1900 how much light could be thrown on the religion by certain classes of small objects, not till then adequately remarked, had to confess that 'among the more important monuments of the Mycean world,' very little was to be found 'having a clear and obvious relation to religious belief.' Since that date, however, the inquiry has been revolutionized by the exploration of Crete; and we now have a mass of monumental evidence upon Aegean religious belief, cult, and ritual from which knowledge of the broad principles and much ritual detail have been obtained. Upon this mass of evidence any general account of the religion of a prehistoric civilization could be given; and only in the second instance should contemporary and posterior cults be introduced into the inquiry. For the present purpose no account will be taken of possible racial changes during the Aegean period, since the civilization evidently remained of one type throughout, and the popular religion shows development only, not essential change.

I. GENERAL NATURE OF AEGEAN RELIGION.—We have ample evidence that Aegean religion and ritual had originally both a natural aniconic and an artificial aniconic character. In the first state, man, conscious of a dominant unseen Spirit, and impelled by his instinct to locate in it some visible object in permanent relation to his own daily life, finds its dwelling in imposing features of Nature, e.g. the sun, a mountain, a wood, a stream, and even a single tree or rock. In the second, he attempts to take the Spirit under his own control, and to bring it into particular and exclusive relation to himself by placing its dwelling in smaller and even portable objects: in stones of singular natural appearance, or fashioned by himself into pillars; in trees or bushes of his own planting, weapons, animal forms, and all kinds of object known to us as fetishes. The transition from these to idols is easy. Having become familiar with the Spirit, and considering it more and more in his own image, he passes to the iconic state, and in that will remain till the advanced point of mental development at which he ceases to demand a visible home for his god.

These states, however, are not to be regarded as always successive. With primitive man they are often contemporaneous, the usages and ritual proper to one coexisting with those proper to another, and making his religious life more full and various. The facts of an early state can therefore be learned from a later; and this is fortunate for the student of an extinct religion, since man seldom reaches the point of making monumental records of his cult before he has passed almost out of the primitive states. Nor can the peculiar character of his religion, certainly intelligible to us, be any longer hid behind the veil of a obscure and unknown language. In the case of the Aegean religion, our monumental evidence hardly begins until the full iconic state is well in sight. But from that point it is sufficiently full and intelligible to
inform us not only how the deity was conceived and how worshipped from the beginning of theoanthropism, but how worshipped previously, before being endowed with human attributes on the monuments, or perhaps with any very precise attributes whatever in the minds of worshippers. Moreover, more than most religions, the ΑΕgean remained to the end full of aniconic cult-practices.

ΑΕgean religion, then, was from the first a Nature cult, in which the heavenly bodies and imposing terrestrial features were objects of worship, while at the same time a Divine Spirit was understood to have its dwelling therein. From this state there survived in the ΑΕgean religious art of a later stage such cult objects as the solar disc, the lunar crescent, the star symbol passing into various forms of cross, the rocky mountain, and the grove; while from the other state, the artificial aniconic, persisted the single tree or group of trees, generally three in number, the pillar, single, triple, or many, sacred animals, weapons, conspicuously the dipenisa, or double war-axe (chosen as a fetish very probably from its obvious likeness to the star dwelling), the large body shield, and other objects, notably a pair of horns, perhaps a ram, symbolic of a sacrificial bull. All these attributes of the primitive religion will be dealt with more fully below in the section on the Cult; but in order to discern its essential idea, dependent as we are for all first-hand information on artistic monuments, we must pass at once to the iconic stage and inquire how ΑΕgean man, so soon as he had clearly conceived the Divine Spirit, represented it in terms of his own nature.

ii. The Deity.—It has been said that, previous to the exploration of Crete, no idol or icon of a deity had been certainly recognized among ΑΕgean remains. It must be borne in mind that in dealing with novel monuments of a prehistoric civilization, it is not legitimate to presume that a representation of the human figure is intended to be Divine until and unless it be found with clear concomitant indications of the supernatural—unless, for example, it be represented as emitting light, or accompanied by wild beasts, such as lions or large serpents, fatal to ordinary humanity, or, again, of superhuman relative stature, or, lastly, receiving adoration. In the cult-scenes found first, e.g., those on the bezel of a gold ring found in the Acropolis treasure at Mycenae (fig. 1), on impressed glass plaques, on a painted stela from the same site, and on other monuments, a manifest deity was not generally recognized, although there were undoubted religious votaries, even monstrous demonic forms,* and at least one figure accompanied by doves. Acute observers, however, familiar with the monuments of other Near Eastern religions, had already noted the prominence of female figures in these scenes, and began to guess that the ΑΕgean peoples embodied their principal conception of the deity in feminine form. In particular, Evans had been observing a class of gem and ring subjects which showed a female between lions, goats, etc.; as the excavation of Knossos proceeded, this female form, represented under circumstances implying divinity, appeared with increasing frequency on a class of objects first found there, and of great value in this connexion, viz. well-preserved clay impressions of intaglio gems. On several such impressions the female figure is seen seated (fig. 1), while other figures stand in attitudes of adoration or pour libations before it; on one found in 1901 the figure is standing on a mountain peak, while lions mount guard on either hand and an adorer stands below; on another the figure in flocced dress lays her hands on the backs of two lions;* on another the figure, holding a spear, is accompanied by a lion regardant;§ on another the figure bears on her shoulder the sacred bipenisa.* This female figure with the axe appears more frequently in central and western Crete. And, lastly, on one found by Halbherr at Hagia Triadha, in the south of Crete, a female of relatively gigantic stature stands between two smaller females before a shrine.¶ In the third year of the excavations the discovery of actual shrines began. In the first found, a miniature shrine of early date, there were no idols, but among other obviously sacred objects was a trident of three-stylistic pillars with the perched atop; and presently, in the same season, a small chapel, very small, but sufficient for its purpose, which was no doubt domestic, was opened and found to contain, in company with sacred axes on pedestals and 'horns of consecration' (see below), three feminine idols in painted terra cotta and semi-anthropomorphic, of which the largest had a dove perched on her head. In the same year other and ruder idols of the same sex and type, but with snakes coiled about them, were brought to light at Gournia, an ΑΕgean site in eastern Crete, dug by Miss H. A. Boyd, and also at Friniás in the Cretan Messara. This snako-goddess was not found at Knossos till 1903, and then she appeared as a faience idol, which is among Mr. Evans' greatest prizes. Three serpents coil about her and form her girdle, while a fourth rears its head above her tiara (fig. 2). That this figure, whether shown on intaglios or as an idol, is a goddess there is no manner of doubt; and that she is one and the same, whether accompanied by doves or serpents, has been conclusively proved by excavations in East Crete carried out in 1904. At Palaikastro the remains of a shrine were discovered wherein a goddess held a triple snake in her arms, while votaries danced round her, and doves perched on pillars bare by.

This goddess, however, is not alone. In a much smaller number of intaglio impressions a youthful male figure has been observed, accompanied by

lions, and sometimes armed (fig. 3). On a gold signet of Knossos such a figure with hair flying behind is seen in the upper field, and is supposed by Evans to be the deity descending on his shrine. But no actual idol of a god has come to light, unless the male of short stature offering adobe to the goddess in the little chapel at Knossos is to be interpreted as a Divine figure.

This list is not exhaustive. The goddess is probably to be recognized in many other intaglio scenes, e.g. those wherein a female holds up goats by the legs, as elsewhere she holds lions; and perhaps in certain other feminine idols. But it includes all unoubted representations of a deity so far found, and is more than enough to prove how the Minoan peoples, when they arrived at the iconic stage of religion, conceived of their deities. They personified the Supreme Principle as a woman, to whom was subordinated a young male, less in honour and probably later in time. There is no evidence for more deities than these. The religion was what may be called a Dual Monothelism.

iii. Cult.—There is evidence for several classes of cult-objects, considered to be dwelling-places of the Divine Spirit, and surviving through the theoanthropic age as fetishes; for inanimate accessories of various kinds, of which the origin and later significance are often obscure; and for animate accessories of cult, perhaps also at first dwelling-places of the Spirit, but tending more and more to be regarded as symbols. These all played a part in a customary ritual, of whose practices, strikingly uniform over the Minoan area, we have many illustrations.

1. Dwelling-places of the Spirit (fetishes).—(a) Betyls (sacred stones or pillars, Gr. SfarXos or £sπαρσάς, esp. the stone swallowed by Kronos, which was really Zeus in his betyllic form, but also others, e.g. the black Cone of the Sun at Baalbek = Sem. Bethel 2). The character and use of Minoan sacred stones have been very fully treated by Evans in TPC, and subsequent Cretes, and discoveries have confirmed but not contradicted his view. There can be small doubt that, as cult-objects, they represented in a convenient fetish form the original Divine mountain, still seen in intaglio cult-scenes of a late period. They themselves became in time the outfits of altars and of iconic statues, passing through gradations of rude shaping. A remarkable example of this transition has come to light lately at Knossos in the large building to the west of the palace, where lay several natural stone freaks, roughly resembling human forms, and evidently carefully preserved in a shrine. Whether pillars or wooden posts, descended from sacred trees, eventually acquired a symbolic significance as phalli, is less certain. An upright object imitating a triangle occurs in any case in semi-scenes, and is strongly suggestive of a phallos in connexion with a vase.

Further, there is reason to think that betyls originated upright tombs, which from being Divine or ghostly dwelling-places became merely commemorative in a late age.

Betyls passed in Minoan cult through various modifications, retaining their significance as dwelling-places of the Spirit. At first unshaped single rocks or carvings, we find them developed in the majority of earlier Minoan cult-scenes into pillars, monolithic or built up. The Divine pillar stands alone, sometimes, as over the Mycene Gate, between sacred animals, a position wherein it precedes the iconic figures of a later period; often also in front of a shrine, while a votary adores before it; and it is very often associated with trees. Almost equally often it does not appear singly, but in groups of three, and less commonly of more. Occasionally the dove is seen either descending towards it or perched upon it; more rarely rays issue from it. Thereafter the pillar, from standing free, becomes a support,—a 'pillar of the house,'—but is still betyllic, and its double function is sometimes shown by the free pillar bearing a fragment of superstructure. It is seen rising from behind 'birth horns of consecration' in fresco pictures of the façades of shrines, and in one case bearing sacred axe-heads affixed to its capital; and it props up 'tables of offerings,' with accessory supports round it. It is possible that such sacred pillars of the house have actually been found in certain chambers at Knossos and elsewhere, which seem too small to have needed a central prop for purely architectural reasons, and the probability is heightened by the fact that the blocks of which two such pillars in the Knossian palace are made, are marked with the sacred sign of the double axe. There is reason to think that the original Minoan sanctity of pillar-support has something to do with the later Greek fashion of using a redundancy of columns in sacred architecture.

(b) Triktoi (dolmen).—These are much less frequently represented than betyls, but sufficiently often to leave no doubt that the triads of stones forming a free standing portal had a sacred character in Minoan as in so many other lands. They are seen framing a betyl, or standing before a sacred tree. On a remarkable gem impression from Zakro in East Crete, such a triklith is well shown with lions conchent on either hand.

(c) Treks (Sem. asbrrn).—These, being perishable, are now to be looked for only in imitative representations, and especially on intaglio impressions. They are as frequent as betyls, and they
ÆGEAN RELIGION

occur singly or in triads (very common) or in groves. They are often seen growing out of the shrine itself, or in close proximity to an altar. The goddess sometimes sits under the shade (fig. 1); at other times she plucks the fruit. Many botanical varieties can be distinguished, the palm, the fig, the cypress, the pine, the plane, the vine; but the first three are most frequent. As has been said already, the tree occurs very often in the same scene with the pillar, a coincidence frequently observed in the case of megalithic monuments elsewhere.

(d) Weapons.—The great body-sheild, curved inwards at the waist, which is so often used as a decorative motive in Ægean relief work, occurs in cult-representations as an independent object, lying before a shrine, or placed in mid-air. Compare two gem-impressions from Zakro, which show shields lying, in the one case, before a group of five pillars (probably not towers, as stated in the text); in the other, before the façade of a shrine.* The most decisive monument is a small painted stela found at Mycenae, wherein is depicted a great shield between two adoring votaries.† Miniature shields in clay and ivory, found at Knossos, were evidently cult-objects or amulets.

Figures of both the goddess and the god bear spears, but we have no evidence yet for the use of either that weapon or the sword as a cult-object.

With the bipennis or double-axe the case is very different. The evidence for its cult-use is overwhelming. It is seen in the field of a gem-impression with a votary adoring;‡ It forms the central object of a cult-scene painted on a clay colis found at Paliaskastro; and is being adored in both the chief scenes on the great Haghia Triadha sarcothaphus§ where it is seen in conjunction with sacred palm-trees and doves, and stands upright on a stepped pyramidal base, similar to the basis with socket for a staff, found in the palace at Knossos. In the small chapel on the latter site, it evidently stood between the sacred horns of consecration,∥ a position in which it is often shown on intaglions (cf. fig. 4). Sometimes it appears in a reduplicated form, as in a steatite example from the small shrine at Knossos; on the gold signet from Mycenae (fig. 1); and on the sestus mould from East Crete, mentioned already: and, a propos, Evans recalls the fact that, since it appears in the hand of the goddess on a Knossian gem, and in company with her idols in the small shrine, it was at least as much her weapon as the god's. The dual axe is, he thinks, the fetish of a bi-sexual god. Miniature axes in bronze have often been found on Cretan sites, e.g. in the lower part of the holy cave on Mt. Dicte, and were evidently very common fetishes or cult-offerings. The sign of the axe is found more often than any other on Knossian blocks; whether as symbol of consecration or as a mason's mark. It is not impossible that its name labrys is to be detected in that of the Cretan labynth.*

2. Other inanimate accessories of cult.—Certain objects are not represented in cult-scenes, or are only actually been found in connexion with shrines, about which it is less safe to say that they were dwelling-places of the Spirit. Even if originally so, and long in use as fetishes, they seem in the iconographic stage to have become rather articles of ritualistic furniture.

‖ ESA ivii. 190.
∥ See Kretschmer and Max Meyer quoted by Evans, TpC p. 109, n. 6.

(a) 'Horns of consecration.'—These long misunderstood objects, of commonest occurrence in gem and fresco cult-scenes, and found modelled in stucco, clay, terra-cotta, and stone, were almost certainly fetishes at the first. They consist simply of a base with two erect horns, which, in the more elaborate examples represented, bend outwards at the tips, like the horns of oxen (fig. 4).* They are seen either on the top of a shrine or altar, or beside sacred pillars or trees, with which cases seem to rise out of them (cf. figs. 5, 6). Also they are seen in the same way the sacred bipennis, actual examples having been found in the small shrine at Knossos with sockets for axe-shafts. Upon a vase from Enkomi (Old Salamis) in Cyprus the picture shows not only one bipennis so rising from a shrine, but two other axes fixed between the horns of actual bucrania, depicted in full (fig. 5).‡ This seems to confirm the inference, which in any case suggests itself, that the horns of consecration, as verses and rude wall decoration, were merely a fragment of wall decoration of an original bucranium, itself a reduction of the entire bull, known from abundant evidence to have been a sacred animal, and probably a Divine dwelling. The horns-object serves to stamp any scene as religious, and its very frequent appearance is of great importance as a clue to the sacred character of other objects.

(b) The knotted tie or zone.—A representation of a knotted scarf or tassel seems also to have sacred significance. Found modelled in alabaster by Schliemann in the Myceenaean Aprocles graves, and supposed sacred, it is merely a fragment of wall decoration, it turned up again in the small shrine at Knossos as an independent object. It is possible that this 'tie' is a votive model of a zone, dedicated with a sexual significance, as in later Hellas. On a ring found at Mycenae, these knots are seen suspended from the capital of a lion-guarded pillar; and on a gem from the Argive Heraeum they perhaps appear on either side of a bucranium.§

(c) The cross.—A cross in marble was found in a Knossian shrine; and the cross sign is common on gems and seal impressions. See, e.g., the coloured plate appended to TpC, showing a fresco painting of a Knossian shrine.

‡ Paribeni, l.c. p. 5. Model altars with horns attached were found in the sacred Temenos near the royal villa of Haghia Triadha.
§ TpC fig. 5.†
∥ Halbherr doubts this (Resti, etc. p. 42), preferring to interpret the objects as corals.
ÆGEAN RELIGION

3. Animate accessories of cult. — What are known in late stages of religion as animals sacred to such a divinity, in art appearing as mere attributes, and in real life devoted to the Divine pleasure, whether by being preserved as "tamb" in the sacred precincts, or by being sacrificed that they may pass to the world invisible, have probably all a common origin as Divine dwelling-places or fetishes. In Ægean cult there were many such sacred animals:

(a) Serpents, seen twined about the Tripods, are held in the hands of votaries. These were probably her original dwelling-place as a spirit of the sky.

(b) Doves, settled on her person or offered by votaries; also settled on, or seen approaching, bats, and shrouds, with trees, and axes. They represent probably her original dwelling-place as a spirit of the sky.

(c) Lions and lionesses, which, in the iconic stage, are represented as the companions, guardians, or supporters of the deity.

(d) Bulls, cows, and calves. — The bull is most frequent. It is seen crowned with the sacred axe (fig. 5). In a magnificent relief, he guarded the main portal of the Knossian palace, and both there and at Tiryns appears again and again in frescoes on intaglios and on intaglios in frescoes. Lion-headed demons are seen performing ritual acts, as, e.g., pouring libations. Human figures with heads of ass, lions, goats, birds, and bulls occur, e.g. on a carved shell found at Phaestos.* A procession of ass-headed figures bearing a pole on their shoulders, in a Mycenaean fresco painting, has been interpreted as a scene of votaries wearing skins and engaged in thieriomorphic rites; but this is an unsupported guess. An extraordinary variety of wildly monstrous combinations was found on intaglio impressions at Zakro; but it is possible that these were the product of heraldic fancy, and owed their variety to the necessity of differentiating signet types.

(b) Monstrous animals. — Not only the Minotaur, but the Griffin, the Sphinx (two sphinxes draw a chariot on the Hagia Triandha sarcophagus), and various composite monsters appear in intaglios and on frescoes. Lion-headed demons are seen performing ritual acts, as, e.g., pouring libations. Human figures with heads of ass, lions, goats, birds, and bulls occur, e.g. on a carved shell found at Phaestos.* A procession of ass-headed figures bearing a pole on their shoulders, in a Mycenaean fresco painting, has been interpreted as a scene of votaries wearing skins and engaged in theriomorphic rites; but this is an unsupported guess. An extraordinary variety of wildly monstrous combinations was found on intaglio impressions at Zakro; but it is possible that these were the product of heraldic fancy, and owed their variety to the necessity of differentiating signet types.

4. Temples and ritual. — There is no good Ægean evidence as yet for the existence of such large free-standing structures, having no relation to domestic buildings and devoted to Divine worship, as were the temples of the Hellenic period, although intaglio scenes show small shrines, either isodomic or of the dolmen type, standing apparently within enclosures or temenoi, and containing bats, sacred trees, and 'horns of consecration.' Such constructed shrines have actually been found are small plain chambers enclosed in palace blocks, as at Knossos, and, possibly, at Palaikastro and Phylakopi in Melos. These, if they do not contain a sacred pillar, show only a ledge or platform at one end, upon which fetishes, idols, and other sacred objects stood. Such domestic 'shrines,' even if beautifully decorated with frescoes like the Melian chamber, can be regarded as little more than mere repositories for secret. As for the representation of shrines, characterized by bats, horns, and horns, seen through openings in the façade, and in almost all cases tripartite, it is very doubtful if they are intended to show distinct temples.

* Knossos, ESA viii. figs. 7 b, c; Zakro, ib. fig. 45.
* JHS xxii. p. 92.
* FIG. 5.—VASE PAINTING FROM PALAIKASTRO.
** FIG. 6.—SOLD SHRINE FROM MYCENA.

The cow and calf, very frequent on intaglios, seem to have typified the goddess's maternity.

(c) Goats, nannies, and kids. — The goat is very frequently held by the leg in the hand of the goddess, or of the greater. A clay goat was found in the west shrine at Knossos. The nanny

* KNOSOS, ESA VII. FIGS. 7 A, C; ZAKRO, IB. FIG. 45.
* VOL. 1.-10

and kids seem to have the same significance as the cow and calf.

(f) Deer and eagles are frequent intaglio subjects; but beyond the fact that all Ægean engraved gems were probably in some degree amulets, we cannot adduce evidence of the sacred character of these animals.

(g) Fishes appear in fresco paintings at Knossos and Phylakopi in Melos, in two cases at least in possible connexion with shrines, recalling their

well-known connexion with the Semitic goddesses.
and not rather parts, or the whole, of a palace or other domestic structure. We have such repre-
sentations in the Knossian frescoes, on intaglios, and in beaten metal (the gold miniature dove shrine of Mycene, fig. 6). It seems clear that certain parts of the Knossian Palace had a peculiarly sacred character;* and if it be admitted that the whole block of this 'Labyrinth' was the sacred house of the Labry,' and that Minoan rulers were priest-kings (which is very probable), the whole palace is perhaps to be regarded as a temple, and may be assumed that palaces and temples had not yet been differentiated. Cave-sanctuaries there certainly were, wherein Nature often provided bætyls ready made in the form of stalactites and stalagmites, as in the lower grotto of the Dictæan Cavern. Crete has surpassed in the most notable

FIG. 7.—PYXIS FROM KNOSSOS.

heads, arrow-points, knives, sword-blades, razors, tweezers, hairpins, rings, and other bronze objects, taken off the persons of worshippers and offered to the Deity. It also yielded simulacra of weapons, e.g. especially the double-axe, a miniature chariot, miniature oxen, sheep, and goats, and figures of men and women. The latter figures belong to a large and widespread class of Egean remains, found in silver, bronze, lead, terra-cotta, ivory, and faience, and of every grade of art. They are conventional representations of worshippers, dedicated to the Deity and placed in the Divine precinct to ensure Divine protection and a share in the Divine life for the dedicator. Even when placed in tombs, as at Kamps in Laconia, such statuettes were probably not sakhbti (servants to answer the dead man's call in another world), but simulacra of surviving relatives who wished to be under the protection of the deceased and the Deity to whom he had gone. Less common objects of ez veo dedication are models of garments, e.g. skirts and girdles (found in the faience deposit at Knossos), and of human limbs, birds, and vermin (found in

terra-cotta at Petaosa near Palaikastro). The Tenemos of Haghia Triadha yielded a great variety of simulacra of all kinds.

Perished vegetable substances have often been observed in little clay cups, in one locality (a 'pillar room' in a private Knossian house) lying under up-turned cups, disposed in orderly rows round the pillar. Certain long-stemmed vases with a spreading bowl, often richly painted, and always perforated to allow liquid to run away, which have been found on many Egean sites (e.g. Knossos, Phylakopi), and were of frequent occurrence in the Dictæan Cave deposit, are supposed to have served for offerings of fruit. Corn was found in the cists containing the faience objects at Knossos. Animal remains lay thick in all strata of the Dictæan Cave, being chiefly the horns and bones of oxen, sheep, goats, and birds, which must be assumed to have been dedicated, cooked or raw; and stags' horns occurred with the sacred faience objects at Knossos.

It remains to be added that on the sarcophagus of Haghia Triadha, a scene is represented which has been interpreted as an act of worship to the Minotaur. The particular interpretation is not certain; but we have long had evidence of a practice of ancestor worship in the shape of the altar found above the Acropolis graves

the hoard of sacred objects accompanying a snake-goddess described above.

The spiritual community between Aegean and other Near Eastern religions being so close, it is not surprising that almost every recognizable cult-feature in the former can be paralleled in the latter. The indwelling of the Deity in stones, whether natural petrulae, pillars, or statues, is a most familiar Semitic belief, and one which left numerous traces on Hellenic worship. A cult of weapons appears to have existed in early Asia Minor among the Hittites of Pteria and the Carians of Laconia, and it is not going too far afield as the Alani on the Eastern Euxine, who in a late age adored a standing blade. The horns of consecration are seen in Semitic sacred representations, and appear in Hebrew ritual as 'horns of the altar.' The 'sacred animals' are all widely related. The serpent as an embodiment of chthonian Divinity is not only Greek but Egyptian (snake-form of Nekhebes); the dove as the vehicle of the Divine spirit from on high has survived from Semitic literal belief into the symbolism of Christianity. The great *felidae* were guardians and supporters of Anatolian Cybele. The bull, as the embodiment of a dwelling Divinity in Egypt, is the counterpart in the Greek legends of Zeus; and the cow of Hathor is known to all. The infant Zeus was wrapped in the goat-skin, and the goat continued to a late time peculiarly sacred in the cult of western Asia Minor. The monsters of Aegean cult-scenes have so many affinities with the Egyptian (those on the Pheasant shell actually carry the Nilotic life-sign, the ankh) that they have all been referred to an Egyptian original, the maternity personification, Thetri, the hippo, reared on her own quarter. The parallelism in ritual observance is too extensive and obvious to need detailed mention. It is not to be understood, however, that such parallelism implies the derivative character of Aegean religion, least of all derivation from any single civilization, such as the Semitic or the Egyptian. If there be parentage between Semitic and Aegean civilization, it is the former that is the offshoot, given the comparative youth of its art and system of writing; † while, as for Egyptian religion, though there is good reason to think that it came to exercise a considerable influence on *Aegean* iconography, and even a larger part of the ideas that it in turn produced, no one, comparing the complexity of early Egyptian cult with the simplicity of the early *Aegean*, could suppose the one derived bodily from the other. It is needless, indeed, to look for the derivation of the essential features of *Aegean* cult at any later epoch than that of the primeval expansion of mankind. Its fundamental religious ideas were those of a vast proportion of the common human stock, and they continue to be the present day. The *Aegean* race sought Divinity in the life principle of Nature, spontaneously originated and reproducing itself to eternity. It placed that Divinity in great features of Nature visibly related to human life. When it came to define its idea in terms of man, being yet in that social stage in which man in relation to reproduction held his naturally subordinate place, it represented the principle of life as an unsexed woman, its property of reproduction as a son unbegot, and its relation to the humanity resultant from this woman and man as an unseen Spirit, descending on wings and indwelling in certain material objects, the source of which was to some degree determined by their inherent suggestion either of great natural features or human organs of life. From these fundamental

ideas all the features of Ἀγείς cult representation and ritual practice known to us can very well have proceeded naturally and independently.

D. G. HOGARTH.

AEGIS.—In Greek mythology, the aegis is an attribute of magic power, which seems to belong originally to Zeus, the supreme god, who is therefore called ἀγιός. It seems to have the power both of protecting its wearer and of inspiring terror in his enemies; and for this purpose, according to Homer, it is borrowed both by Athene and by Apollo. Its form is not easy to realize in the earlier descriptions, of which we find the fullest in H. v. 758, where Athene puts it on.

About her shoulders cast she the tasselled aegis terrible, wherein is panic as a川 own all about, and strife is to her, and valor and horrible onsmght withal, and therein is the dreadful monster's Gorgon head, dreadful and grim, portent of aegis-bearing Zeus.'

Here it appears to be some sort of defensive mantle, like what is worn by Athene in later art; it is provided with 'a hundred tassels of purple gold' (H. ii. 448), and is also described as ἀμφιδίαστος, fringed all round or hairy on both sides, as if it were a skin of some sort, but it was made by the smith-god Hephaestus (xv. 309); when it is shaken, it scatters terror over all around. It is used by Apollo (xxxi. 20) to wrap round the dead body of Hector, and so protect it from injury.

The views both of the Greeks themselves and of modern mythologists as to the form and meaning of the aegis have been greatly influenced by opinions, as to the etymology of the word. The Greeks often associated it with ἀίγα or ἀιγίς, 'a goat-skin'; and Herodotus (iv. 189) suggests that the aegis of Athene was derived from the tasselled goat-skins worn by the Libyan women near Lake Tritonos. It was interpreted by later Greek mythologists as either the skin of the goat Amalthea, which had suckled Zeus in his infancy, or that of a monster slain by Athene. Modern mythologists have usually preferred the connexion with ἄσσων, 'to rush,' ἄγις or καραγίς, 'a squall'; but their interpretation of it as symbolical of the thundercloud, though found in many modern books, is not supported by any satisfactory evidence of early date; though Zeus thunders while he shakes the aegis (H. xii. 593), the two actions are not necessarily related as cause and effect; for a clear example of the aegis as causing the thunderstorm no earlier authority can be quoted than Silius Italicus (xii. 720); Virgil (AEn. viii. 352) connects it with clouds. Such instances are, of course, of no mythological value, but represent later theorizing.

In artistic representations the aegis regularly appears as the attribute of Athene; there is no certain example of its being associated with Zeus, and the restoration of the Apollo Belvedere as holding it is more than doubtful. In early representations of Athene it is a kind of sealy cloak, fringed with serpents, and with the Gorgon's head fixed in it; it extends over the left arm, and so can be held up as a shield. In other cases it takes the form of a short breast-plate with similar adjacent, and this is the usual form in later art; sometimes it is abridged to a mere band across the breast of the goddess.

ERNST A. GARDNER.

ÆONS (Gr. ἄοινοι = ἀγείς, 'periods,' 'dispensations,' probably related to αἰλέως = 'always,' 'for ever').—This term was employed by the opponents of Gnosticism, and by some of the Gnostics themselves, to designate the succession of the world-order, when it is regarded as unreal and illusory, without arising directly to this, common to all Oriental theosophical systems; and the philosophers of most of them attempted its solution by an evolutionary (devolutionary) series of Æons or emanations. Close parallels to the Gnostic Æons may be found in Japanese Shinto, Mahāyānist Buddhism, Zoroastrianism, the Platonic Ideas, Philo's Powers, the Stoic Logos, etc. The Shinto system (as set forth in the Kojiki) seems to rest upon pure pantheism. To give a character to the infinite which the infinite becomes differentiated into the male and female principles Izanagi and Izanami, personified and conceived of as grossly hateful. These procreative Æons are thought to be derived from certain archetypical Æons that are beyond the infinite. These produce, first, three other Æons (aion), representing the great powers of nature; and these still others, some working for the good and some for the evil of man. In the Buddhism of the Northern School the Adibuddha (q.v.) produces the five ‘Buddhas of Contemplation,’ Vairochana, Akshobhya, Ratnasambhava, Amitābha, and Amoghasiddhi; from whom, in their turn, emanate five future Buddhas of Contemplation, the sources of the five worlds which successively make up the universe. This number five may perhaps be compared with the five elements, earth, water, fire, air, and ether, classified by the Zoroastrians, and the Zoroastrianism has a similar, but twofold, system of Æons in the Kingdom of Light and the Kingdom of Darkness, the head of the former being Ahura Mazda and that of the latter being Ahirman. From each of these five is derived a graduated host of personified powers of nature, those proceeding from the former working for good, and those proceeding from the latter working evil, the two hosts being in perpetual conflict the one with the other. Philo, who typifies the Supreme Being as exalted above all possibility of contact with matter, which he characterized as ‘lifeless, erroneous, divisible, unequal,’ and hence as fundamentally evil, sought to bridge over the gulf between God and the world by the hypothesis of certain ‘creative and regulative Powers.’ These Powers are represented as God’s thoughts, as the heavenly archetypes of earthly things, as that which gives life, reality, and durability to matter, as the breath of God’s mouth. He sometimes seems to regard them as personalities. His Logos doctrine is particularly significant in relation to Gnostic Æons. The Logos is designated many different names, including the Absolute, the Sophia, and ‘the Sum of the Thoughts of God’ (Gnostic έννοια, or Σοφία).

Plato (Timæus, 37 D) applies the name ἀοί to the eternal Being which has Time as its counterpart in the world of sense. Aristotle in like manner describes the ultimate principle which sums up in itself all existence, as ἄοι (άτοι ὡς εἶναι, de Mundo, 1. 9. 11). These and similar speculations of Greek metaphysics exercised a profound influence on later Gnostic theory; but it may now be regarded as almost certain that the Gnostic doctrine of the Æons was immediately derived from Mithraism. At the head of the Mithraic hierarchy, as in the earlier Zarvani heresy of Zoroastrianism, from which this trait in it is derived, stood Infinite Time. This supreme god, inconceivable and ineffable, was worshipped under the name of ἄοι, and was represented in sculpture as a figure whose body was inscribed with the signs of the Zodiac and encircled by a serpent, which typified the course of the sun in the ecliptic.

The earlier Gnosticism, like the Gnosticism of the Mithraic, typifies the absolute emanation from the Absolute Æon, which was conceived impersonally—sometimes as the Absolute itself, sometimes as the sphere of the Absolute. Thus in the account of the 'Gnostics' (seons) of the Absolute Æon (adv. Haer. i. 30) we read of an ascendant εἰς τὸν ἀφθονόταν ἄοινα,—and similar language is employed
ÆSCHYLUS
by Epiphanius (Hier. xxxvii. 1) in his description of the Cynics. Trace of this original spirit appears in the highly developed Gnostic systems. Valentinus himself (Frag. 5) speaks of the living Αἴων as of a unity, although he discovers a principle of distinction within this unity. As beliefs, indeed, to the essence of Gnostic speculation that the Αἴων remain ideally one, while they manifest themselves as a plurality.

In later Gnosticism the Αἴων are represented as a system of Divine entities, paired in male and female (syzygies) from the supreme Father. Each pair originates another, and each descends in dignity as it stands more remote from the source of being. The doctrine of syzygies has its analogies in Mithraism as in the other Eastern religions mentioned above; but it was no doubt borrowed by the Gnostics from that Babylonian tradition to which they were indebted for so many details in their cosmology. Hence they constitute the Pleroma,—the 'fulness' in which the Godhead exhausts its hidden potencies. The Pleroma, composed of the several Αἴων, is the world of Light or higher reality, and is divided by a great gulf from the 'darkness' of phenomenal being.

The different Gnostic systems are widely at variance in their accounts of the number and arrangement of the Αἴων. Basilides, if we accept Irenaeus and Hippolytus i. as our authorities for his teaching) would seem to acknowledge only six (Μήθος, ὑπόθεσις, θεότης, θυσία, θεότης, κοίτα). The Plutarch Sophia assumes thirteen, and conceives of the Αἴων as the spheres inhabited by the Divine powers, rather than as the powers themselves. Valentinus enumerates thirty Αἴων, which are grouped in three divisions—the Ogdoad, the Decad, the Dodecad. Ideas of a geometrical nature are probably involved in this grouping; while the number 30 is apparently suggested by the thirty γυναῖκαι (angels) of Zoroastrianism. In the various systems which branch off from this main stem of Valentinianism, the Pleroma of 30 Αἴων is normative, but this number is subject to continual modifications.

A brief account of the system of Valentinism will suffice to illustrate the general character of the Gnostic Αἴωνology. He starts with Bythos (depth) the Absolute One, and Sige (silence) as his female companion. These generate Nous (mind) and Aletheia (truth). These in turn project Logos (word) and Zoe (life), and these Anthropos (man) and Ecclesia (church). Nous and Aletheia afterwards produce ten οἶκος (a perfect number) as an offering to the Father. Logos and Zoe follow in the production of the Αἴων, but produce twelve (not a perfect number), including Faith, Hope, Love, and the Lower Wisdom (Achamoth). This last, being unduly ambitious, and aspiring to produce οἶκος without conjunction with a male οἶκος, brought forth a 'formless and undigested substance' (the Demiurge), which evolved into the present order of things, with its mixture of good and evil, and with man in whom the two are at war. This disturbance of the Pleroma alarmed the other faculties and deeply distressed Achamoth. In response to the tears of Achamoth and the supplications of the οἴκοι, the Father permitted Nous and Aletheia to project Christ and the Holy Spirit, to destroy the restoration of form, the destruction of the Demiurge, and the comfort of Achamoth. These have for their task the separation of the life and light that have become imprisoned in humanity, from dead, evil matter, through a long series of magical rites (mysteries), and through the promotion of ascetical living.

In Gnosticism generally, as in the teaching of Valentinus, the creation of the lower world is explained by the hypothesis of a disturbance within the Pleroma. The error, or the undue ambition of one of the Αἴων results in the origin of an inferior power, who in his turn originates others, until a whole world of darkness and illusion comes into being. Nevertheless, since the process has its beginning within the Pleroma itself, some portion of the higher essence becomes intermingled with the baser elements, from which it yearns to be delivered. The Redemption, according to the Gnostic thinkers, consists in the sifting out of this higher essence and its restoration to the Pleroma. In order that this may be accomplished, an Αἴων of supreme dignity descends into the phenomenal world, to be identified, really or in seeming, with the man Jesus.

The Αἴωνic theory, as we have seen, was in the first instance derived from the Zoroastrian idea of Time as the ultimate fact in nature. Thus it was allied from the beginning with speculations of a purely physical character, and from these it never succeeded in entirely freeing itself. The greater Gnostics, and Valentinus more especially, sought to resolve the Αἴων into spiritual facts or processes. They were construed as modes of the Divine Being, activities in which the Absolute One unfolds and manifests His inward life. It proved impossible, however, to effect a complete transformation of a theory which was, in its essence, physical. Valentinus himself wavers in his conception of the Αἴων,—regarding them now as ideas, now as heavenly Persons, now as creative forces. His philosophical construction loses itself at every turn in primitive astrology and cosmical speculation. To this may be attributed the eventual failure of Gnosticism, alike as a philosophy and as a religion. While it professed to open a way out of the bondage of the natural world, it was itself grounded in ideas derived from nature-worship. See, further, GNOSTICISM.

ALBERT H. NEWMAN AND ERNEST F. SCOTT.

ÆSCHYLUS.—Æschylus, son of Euphonius, an eunuch of Eleusis, was born B.C. 525, commenced as a dramatist c. 490, gained his first victory in 484 and his last (with the Oresteia) in 458, and died at Gela in 456. He fought at the battles of Marathon, Artemision, Salamis, and Plataea. From about 476, when he composed for Hiero of Syracuse The Woman of Athens at the foundation of that town, he was frequently in Sicily. There is no satisfactory explanation of the statement of Herodotus Pontius that he was tried on a charge of revealing the Mysteries, for which he was condemned on the ground of ignorance (cf. Aristotle, Eth. Nic. iii. 2); the further details are probably unauthentic. Partizanship in politics can hardly be imputed to him on the strength of the supposed reference to Aristides in the description of Amphaians (Sept. 592-594), * still less on the theory that Prometheus, son of Themis, stands for Themistocles. His eulogy of the Areopagus, however, in the Eschyleis (esp. 651-700) testifies to conservative sentiments. In the same play (754-777), as well

* All references are to the text of Sidgwick (Script. Class. Bibl. Æsch.); whose numbering hardly differs from that of Dindorf, Wehrlein, and most modern editions. Hermann, Faley, and a few others use their own special notation.
as in the *Supplices*, he approves of the democratic friendship between Athens and Argos. He expresses the strongest detestation of tyranny in all forms (*Pers.*; *Prom.*; *Ag.* 953-955; *Enn.* 185-190); but has no objection to constitutional monarchy (*Supp.* 398, 517, 600), or to moderate democracy (*Pers.*; *2. Supp.* 485-488). His general ideal is a balance of order and liberty (*Enn.* 529-528).

Schylus may be called the Father of Tragedy (Philostr. *Vita Apoll.* p. 220), in the sense that he first perceived the possibilities of the drama as a literary form, rather than as ritual or ceremonial, for the expression of views as to life and character. His plays are τεχνή των ὁμιλων μετάλων δεινών, because the personages are derived mainly from the Epic cycle; but he drew upon other 'genres' as well, and on contemporary history; and he dealt very freely with the plots. He was evidently acquainted with Hesiod and other cosmological writers. In a few cases he cites the legendary moralists (*Prom.* 890); more often (*Sept.* 439, *Ag.* 1331, *Cho.* 60, *Enn.* 239) he expresses similar sentiments about wealth, fortune, pride, moderation, etc. He has much in common with his contemporary *Phidas*; and his general attitude towards the popular *deeds* (164) is almost certainly influenced by the poems of Solon and Thoegnis. The common statements that he was indebted to Orphic or to Pythagorean doctrines cannot be seriously supported from the extant plays or fragments.

Of the 80 to 90 plays attributed to *Schylus*, many of which can be grouped in trilogies or tetralogies, the majority are cited only by the lexicographers. Little is known of their plots or the views contained in them, except in the case of the *Prometheus Solvinus*. The *Danoïda*, *Myrmidones*, and *Niohe* seem to have dealt with various aspects of the passion of love. Certain grimace fragments (*Nos.* 70, 156, 159, 161, 177, 255, 266, 301, 353, 385, 401, 475, Sidgwick), which are striking aphorisms about the nature of the gods, good and evil, life and death, do not necessarily express the mind of the poet himself. His own moral and religious doctrines must be sought in (1) the general tendencies, (2) the choric odes, (3) the emphasized speeches of the favoured characters, in the seven extant plays. The selection of the themes is apparently not later than the 5th cent. A.D., if not entirely accidental, may be due partly to celebrity and partly to special reasons. The *Orestes* (*Agam.*; *Choep.*; and *Enn.*), constitutes his masterpiece in all respects. The *Persae* and the * Prometheus contra Thebous* are cited by Aristophanes for their literary and patriotic qualities. The structure and style postulate an early date for the *Supplices*, though the theology is already remarkable nature; either of these features may have saved it. The *Prometheus Vinctus*, which might easily have aroused popular suspicions of impiety, appealed to the popular fancy for the marvels in spectacle and music. From these plays, after all allowances for the exigencies of dramatic form and popular taste, there emerges a body of gradually developed views attributable to *Schylus* himself. His philosophy, by which the ideal cannot be sharply demarcated from the theological, may be discussed in the order of its development, as it deals with (1) the Divine nature, (2) the Divine agencies, (3) the moral nature and action of man, (4) the special questions of responsibility and heredity, the fate of the soul, the blood-feud, and the blood-feud, while (5) the nature of the problem dramatized in the *Prometheus* requires separate consideration.

For in his earlier plays the Olympian gods are invoked jointly as a πατὴρ (290), or a κοινωνία (*Supp.* 229); they are θεοὶ ἐγγέλαι, γείτοναι, τελεοσθείς, ἀνίκητοι, with temples, altars, and images (βρότα). The Theban maidens pray to Pallas, Poseidon, Ares, Cypris, Lyceius, Artemis, Hera, Apollo, and the local *Pandias* Orbe (*Sept.* 126-180), as παρακλήτται, τελεοσθείς, but also Διός, under Zeus as the πατήρ πατείᾳ (116); *Eteocles* adds Earth and the Αὐτή Κύριος of *Edipus* (70). Popular language is useful of augury, foracular epigram, river-gods, and Hades (286, 518, 269, 272, 584-580). But the same play finely describes Justice as the virgin daughter of Zeus (682); both the pity of Amphitaurus and the impiety of the hero is repelled; and the *Supplices* could invoke *Eteocles* in ἖ρρα for the βρότα of his determination to defend the gate attacked by his brother (*767-708, 949-956*). Similarly, in the *Supplices* the fugitives appeal to Artemis, Poseidon, Apollo, Hermes, and especially (*Supp.* 1034-1042) to Aphrodite, by whom Πυρευμάστα was perhaps defended (Fr. 44); also to Zeus as ἔπος, σωτήρ, ἀδίων, ἱερεῖα, κλάρος, κτησίμα, etc.; and to local deities, as the hero Αἵτης (117, 263). The *Schylus* has added the ἔπος Zeus who 'judges the sins of men by final judgments among the dead' (290), is deliberately identified with the Zeus who is θεῖος, θαυμός, and παγκοσμίος, the Zeus who is also the Orphic Zeus, and the Κυρίος of *Prom.* 44); who is to be feared and worshiped by all men; the slightest association of injustice with the gods is impious (921); cf. 395; and everywhere the lyrics extol the power and righteousness of Zeus, with the fervor of Hebrew prophecy. He is 'king of kings, most perfect in strength of the powers that make perfect' (524-526); 'hostile in the highest, he directs destiny by venerable enactment' (673); 'he beholds violent deeds not gladly, but with eyes of justice' (812); 'the beam of his balance is over all' (822); 'what is fated, that will be; there is no transgressing the mighty, the limitless will of Zeus' (1047-1049). This is not merely poetical optimism.

'The desire of Zeus is not made to be easily grasped. Everywhere it glows, even in the gloom, with fortune that is sombre to mortal races. ... For dark and dusty went the ways of his mind, and his desire was born by human gaze. He heaved sighs; he groaned; he groaned in the weight of his desire, which the gods sent to bring his burden down. He heaved sighs; he groaned; he groaned in the weight of his desire, which the gods sent to bring his burden down. He heaved sighs; he groaned; he groaned in the weight of his desire, which the gods sent to bring his burden down.'

The *Thebaid*, which has once designed, he works out withal, from above, from his holy seat (67-103).

Such theology is essential to the *Schylus*. In essentials that of the *Orestes*, though the more ethical conceptions are tentative and far from correlated.

The theology of the *Persae* (472 E.C.) is dramatically Oriental. Zeus and Phoebus and the Sun are invoked; Pallas has favoured Athens. The birth of the dead (ιδία φωτός, *Pers.* 215, 226, 607-622) is supplemented by appeals to Earth, Hermes, and Hades-Aiakounos, who λαβεῖν δέμονας εἰσιν ἑκάστου (*690*); though Darins as a δαίμων or even a *Phoebus* is rarely the case. The allegorical mysteries of a Divine Nemesis or φωτός, arbitrarily afflicting excessive wealth or happiness (163, 354, 375, 842), are akin to the fatalism of Herodotus' famous legends; and all the characters arrange a destiny who agrees to men for their weakness and selfishness; *Prometes* 93, cf. Fr. 301; ὁικεῖα φωτός, 750; ἔκτωρ φωτός, 472), or at least abet their folly (ἈΠῚ ἐν ἄνθρωποι τῶν ἐποίησε, χαί τοίς εὐσκεκατέρωσε, 742). But both *Darius* and *Hades* (742) are heroes, who are driven in a picturesque ἰσόν in binding the sacred Hellespont (745, 72), and in destroying images and temples (807, 815, 830), and blame him rather than the alleged
It is insolence (ὑπερήφανον) which flowers and is full in the ear with ruin (τὸ κατακεραυνησμένον), from which it has gone over. For words of hate dwelt in the heart are dealt forth (ἐπιδημοφόβες, ἠτέλλας, θεῖα, θεία), Athens survives as the higher civilization.

So far the moralization of Homer's popular theology has not been violated in the Olympics, where Zeus is the giver of oracles and εἰργάζεται of rites, and Athene as the inspirer of political wisdom, retain some genuine personality with impaired divinity; perhaps Hermes also and Artemis, for whose interference and presence in the Agamemnon, in which Zeus is too great for the stage, even in the Promethesian plays. Theology is to be sought not in mythology, least of all in Zeus, the lord of hospitality, and in conscience (μοιραίαισ, πύρων, Ἀγ. 150; cf. 975-983). The supreme deity is not only powerless but all just; thus Electra challenges for Orestes the support of 'Strength and Justice with him who is the free spirit.' Zeus is the greatest of all' (Chor. 244). To Zeus are applied not the old departmental names, but such epithets as πανύπνητη, παγακρητή, πάντα κραίνων, πανοίδης, and δινομόρφον. There is surely more there of an 'Illusion of monotheism' in the first theological passage of the Agamemnon (160-175):

'Zeus, who's ever he be, if by this name 'tis his pleasure to be called, this name I address him. Weighing all things well, I can conjecture nought but Zeus, if the burden of this vanity is in truth to be cast off from my mind... But whose heartly giveth titles of victory to Zeus shall hit the mark of wisdom full; even to Zeus, who hath guided mortals in the ways of wisdom, who hath hardened learning 'by suffering' as an ordinance for ever.'

To those only who have learnt on these lines to know and to judge, 'Zeus, lord of hospitality, and Fate (Μάσα) have condescended' (Enm. 1046).

Thus, in harmony with the conception of deity as normally personal, there emerges the conception, increasingly impersonal, of universal order. As physical law this is Μάσα, τὰ μέρον, τὰ πεπτωμένα, ἡ πεπτωκομία, ἡ ἅγια, ἡ ἁγία; as moral law it is ὁμοίον, δίκη, νόμος διακόσιος; but these terms admit of many degrees of personification, and not only overlap, but not uncommonly involve the circular in deifying to which idealistic systems are liable.

The statement that Zeus is weaker than the Μάσα and Ἐρίνειες (Prom. 513-518) is isolated and controversial; generally the established order is the expression not so much of the will of Zeus as of his being. God is subject only to the law of His own nature as consistent and just. He cannot be on the side of evil (ἐπιτείμηται ἐπὶ τὸ κακόν τὸ μη κατακεραυνησμένον) (ἀντίκρησις) moraously either way (οὕς ἐκεῖνος ἡμᾶς μὴ κακοῖς, δίκη τοῦ ἔθνους, Supp. 403). The working of this supreme authority is described in many combinations of constantly changing personal and impersonal. When in defiance of Right (δίκη) men trample on the majesty of Zeus (Δίκης ἐναλίτης), then 'Justice sets up her anvil and Destiny forgives the words,' (τὸ κατακεραυνησμένον τὸ ἐναλίτην). This works its destruction, but the divine deed of implacable purpose is whetted by Fate (Μάσα) upon a fresh whetstone (Chor. 1355, 1560). The μεγάλα Μάσα are

besought (Cho. 306-314) 'to grant success from Zeus to that cause to which Justice (τὸ κατακεραυνησμένον) has for its minister the words of hate and words of hate be rendered; so Justice proclaims aloud as he exacts her due. For a bloody stroke let him repay a bloody stroke. Thus the doers must suffer,' there speaks a saying thrice ancient.' Even Clytemnestra's 'thoughtful and carefully considered' is that 'in the exacting order of everything that has been foreordained with Divine sanction' (παρακαλέστω ἐν θείον ἐσαρμασάτω, Ἀγ. 912). Themis the Titania and the image of the δινομόρφον Μάσα is the same (Enm. 171) no less than Justice, the daughter of Zeus.

2. The determinations of this supreme authority are intended to man not only in history and in conscience, but also by direct agencies. Positively, Ἐρίνειες attaches importance to dreams; the visions of Atossa, Io, and Clytemnestra reflect popular beliefs. 'For the mind is sleep is bright in its vision, though in daytime Fate is undisclosed by mortals' (Enm. 104). His attitude towards oracles is ambiguous. Thereupon be he unaware arrêre-pensée in his treatment of the relations between Apollo and Orestes; Athens and not Delphi has the final word in the termination of the blood-guilt of the house of Atreus. The words of the Ἐρίνειες are all-important. The meaning of the word fluctuates considerably in the extant plays, and evidently has a long history behind it. It is hardly likely that Ἐρίνειες himself first identified the Avengers of the underworld with the Divine or Venerable earth-goddesses of Athens and Sicyon (Εἰρήνης or Σευρά); but he certainly accentuated both factors of this conflation, and, while first in promoting the Puria (puria) with the infernal horrors of Gorgons, etc. (Paus. 1. 28, 6), was also conscious of development from objective to subjective associations, from punishment as retributive to punishment as remmdial. The Ἐρήνη is the activity of Divine justice in the presence of lawlessness; Zeus is a constant θερεφός (Chor. 246); even for birds robbed of their young, 'a god on high, some Apollo or Pan or Zeus, hears the shrill complaint of his demnizens; and sooner or later sends on the transgressors a Fury of requital' (Ag. 55-59). Much less for Paris's breach of the laws of hospitality will Zeus shoot an arrow in vain, either short of the mark or too high in heaven (Ag. 365). One said that the gods do not deign to trouble about men by whom the honour of sacred things (χάρα δὴ λαλῶν) is trampled on; but he was not pious (Ag. 372). Helen herself becomes for the house of Priam by 'the sending of Zeus (τὸν Ζεὺς) a Fury of weeping to other brides' (Ag. 749). The Ἐρίνειες apply the laws of retributive and educational suffering. 'We deem ourselves,' sings their chorus (Enm. 512-520), 'to be direct in the course of justice. On the man who holds out pure hands, there comes no wrath from us; unscathed he traverses the way of life. But if one in guilt, like this man, hides his gory hands, we appear as honest witnesses for the dead, and visibly to the uttermost exact from him the price of blood.' Again, 'Great power have the awful Ἐρίνειες both with the gods immortal and with those below the earth; and in their dealings with men they vividly bring things to pass, to some giving songs of joy, but to others a life blotted by tears' (950-955). As the play draws to a close, they serve to link Μάσα and Δίκη; and in their final metamorphosis there is as much conscious symbolicism as the dramatic form permits.

3. If, then, innocence is rewarded and guilt punished, at any rate, in the long run (Ag. 730-771; Enm. 526-556), human morality, as Grote saw, is still in throes of development, and for the time being is bounded by the traditional laws, just as in tragedy and comedy, and it is as if the Ἐρίνειες were the embodiment of the unenacted ordinances of religion, and the intractability of the human heart is as if it were held in check by the new spirit of the times. So the idea of Justice is still a secondary one, not a first principle; and he who seems to be 'discharged by the law' is as if he were 'let off by Fate' (Μάσα) upon a fresh whetstone (Chor. 1355, 1356).
universal law as applied to the life of the family and the city. By Ἀeschylus, as by Dante, types of good and bad character are exhibited rather than the dignity or individuality of heroes drawn on a grand scale even in the case of Clytemnestra, without casuistry or sophistry. There is the same note of distinction about the characters which are presented for admiration, the king of Aulis, the Oracle, Orestes, Electra, and above all, Prometheus. The whole range of Greek piety is displayed in the choruses of the Oceanids, Danai, captive women, Persian and Argive elder (Cho. 4). The fine series of contacts in the Septem shows the poet's concurrence in the normal Greek ideas of αἰδός, αἰγύπτωσις, συφροσύνη, and εὐφόροι; also in the connexion of morality with religion. He does not absolutely avoid the popular language which makes ἄμφορα a disease of the intellect (νόθος φρένων, Per. 751; σὺ νοφάρη φρένων, Sept. 601; παρασκέφασις προελεύσατα, Enum. 330; ἀτοσκαλείται φρένων, Prom. 473); but in his own view passion at least is bestial character and originates where there is no law. The lustful 'have the tempers of random and unholy brutes' (Supp. 762); and 'the inordinate love which masters the female mind both in brutes and in men wins a perverse victory over reason in the most wicked and involving the calmest of calamities (Cho. 508-501). Generally sin is ἔρως, immorality plus impiety, as the wilful transgression (παραβασία) of the fixed limits of human action. It is not a phrase and its fruit is ἐρως, the criminal infatuation which in our own punishment. Αἴγνω is δόλος, μελάνης, ἀστήρωνων; the moment of its supervision may be inevitable, but it is neither less nor more voluntary than happiness and the fruit of virtue (Enum. 442-445)."Moral pathology has never been more convincingly expounded than in the locus classicus on ἔρως (Ag. 750-751):"

'An ancient saying has been fashioned in the generations of old, that a man's prosperity, when it has waxed great, brings forth and does not live without issues, but that out of good fortune springs evil, and the wisdom of the ancient says right. But I hold not my own mind apart from the rest on this. 'Tis the immodest deed that gives birth to more after it, more, and like to their own breed; but the fate of righteous houses has ever a fair progeny. But old insolence is want to beget an insolence of the same quality, and when and the time of birth has come due, yea and a fine, against whom there is no battle, no war anywhere; and these are the black bane (ἀρίστη) unto manum, and like are they to their progenitors.'

Nur has the moral man ever been drawn more relent-3ingly?

'Reverence the altar of Justice, nor trample it down at the sight of gain with godless foot: for retribution will ensue. The righteous are in force. Therefore let a man put in the place of honour, piety towards parents, and pay reverence to the claims of strangers to hospitality. He who is just of his own will without constraint, will not be unprosperous; utterly ruined he will never be. But I say that the transgressors who dare to offend, and is laden with goods all amased without Justice, shall perform in time haul down his mainsail, when trouble seizes him and his yardarm is splintered. And he calls on those who hear him not and struggles in the midst of the whirl; but the god mocks at the hot-headed man, seeing him who boasted he should never be powerless in helpless woes nor able to weather the point. And so, for ever wreaking his former prosperity on the red of Justice, he perishes unaverted, unhealed' (Enum. 528-565).

A religious moralist is sure to emphasize the inevitability of ἄργνω (e.g. Ag. 1560; Cho. 1076), but there are careful evasions against Malianism:"

'Instruct my son pleasedly," says Darius, "warned from heaven as he has been to wise in time, that he leave off from offending the gods, and whatsoever boldness (παράταξις)."

The murderers of the house of Atreus are even freer agents than the avengers. But if there has been no repentance and no purification, vengeance proceeds even to the very uterus (i.e. 351).

'For this office has piercing Pates allotted to us to hold for ever, that all mortals to whom they wanton deeds of blood, we shall sow the guilty as guilt-bearing to the world; but even in death he is not over free' (Enum. 331-340).

"The Xenophilos allusions to life after death are marked by a more frequent and more poetical descriptions of Hades; as to continued consciousness he is perhaps consistent (Cho. 517); but he recognizes the possibilities of prolonged retribution and of remorseful memory, such as that indicated in Clytemnestra's".

The terror and despair of the father (Ag. 1555-1559). Apart from the functions of an Alastor (Supp. 416) or an Eriny (Enum. 267), there may be a judgment in Hades by a presence of the (Supp. 228-231). The ghost of Orestes will remain and the vengeance of the Erinyes will deal with them they deal with Athens (Enum. 767-777). The curses of the slain subsist by the survival of their personalities (but πολυκράτεις ἀρης ἐπιμυθηκόν, Cho. 406); the Erinyes are called Ἀρης in the underworld (Enum. 417)."

4. But the more vividly sin is pictured as prolific and its effects as incalculable, the more difficulty there is in escaping from fatalistic theories, such as those implied in the popular ideas of the ancestral curse and the μεταλλονίς developing into a blood feal. These subjects specially fascinated the mind of Ἀπερίδας. In the "Suppl" there is a simple form of the danger of starting a curse: '

'For your children and your house, in whichever way you determine, it remains to pay in full a corresponding penalty' (383-346); and in the sequel there was some purification from blood-guilt. In the absence of the idea of a curse not clearly defined as invoked or inherited by him (832-833), nor always alluded to in the same way (for the various phrases see Cho. 707, 645, 698, 709, 729-726, 857, 977-978). The curses (ἀρης, επιμυθηκόν) proceed in the γένους a criminal propensity (ἀρης), sometimes personified as an evil spirit (παράσιθω, ἐρανός, ἀλατώρ, even μοῖρας οἱ kyr) hounding it to destruction and infections by its φηλλα κκατ: 'the fury proceeds to wreak death' (Sept. 601). The chorus, indeed, makes Eteocles a responsible agent on account of his savage desire to shed unlawful blood (ἀρης οἱ θεματω, 669-694, but to the question τί οἱ καταρ- μόμος ποίαι, the poet has not yet found his solution: ὅτι οἴκη γῆρος τῶν τῶν μασμάτων (682), unless one is indicated in the self-sacrifice of Antigone. But ten years later the double problem of hereditary criminality and blood-guiltiness is treated in the "Orestes" with a breadth of design which is not only poetic but 'prophecy.' There is little reason to suppose that early tragedy was necessarily written in trilogies, but the scheme is admirably suited to the chorus' exposition of origin, commission, and extinction of a πύραρχος ἄρης (Ag. 1192).

The principal terms, ἄρης, ἀρην, ἄρης, are developing specific meanings; besides them are vogue phrases (μια, Ag. 155; μια, Enum. 575, ἄρης, Cho. 155; παρασιθω, Ag. 218; παράς, Ag. 346; παράς, Cho. 947, etc.). The phenomena are best stated in Cho. 400-405: 'Law it is that drops of gore spilt upon the ground demand the shedding of other blood. For Havoc cries on the avenging Fury, who brings up from those slain before calamity (ἀρης) to attend upon calamity; and then who will expel from the house the breed of the curse? εκδιάγγελλος γένος πόλεμον (Ag. 1556). The story of the house of Pelopis is not laboured; but a sufficient number of points—the adultery of Thyestes, Atreu's horrid revenge, the sacrifice of Iphigenia—lead up to the murder of Agamemnon. At each point the chain might have been broken, but each link is fresh riveted: 'Where will the force of this Αρης make an end? where will it cease and be lulled to rest?' (Cho. 1075). Has the curse acquired a personal force (παράς) below: εκδιάγγελλος γένος πόλεμον (Ag. 1470), demanding new blood before the old is dry, or as the παλαιός δρόμος αλάτωρ (Ag. 1501), masquer-
Along the instrument of justice? (Cho. 641). Yet among the consequences may come a deed which, though terrible, is really innocent, an ἀνευφαμένος ἔργον, while declaring that the house is "fast-bound," grasps the truth that saves the morality of the situation. All retribution is and must be deserved;* the role is that of the elders, robbed and marked in full. There abides, while Zeus abides on his throne, the rule that the doer must suffer; this is the eternal law (Ag. 1562-1564). The curse, then, is not an overwhelming fatality, but a hereditary proscription which marks the race and even the individual. The original transgressor was free to sin, and his descendant is free to adopt the prescribed means of purification. The actual development of this theme in connection with the traditional obligation of the blood-feud is perhaps confused by a political motive; and the special pleading in the Eumenides about the nature of kinship is certainly rigid, as also the insistence on blood is not mystic, μετρητές, σωφρόνεις; the idea of blood for blood was so deeply rooted in popular sentiment and religious institutions, that *Aeschylus, no less than the legislators of his time, may well have been hazy in guilt, except by instinct. If the law is simply ὡς ἐκ τούτου ἀρίστακτον (Cho. 144), Clytemnestra may be allowed to swear that she sacrificed her husband to the Δίον, ἀρην, and Ἐφίππος of their daughter (Ag. 1453). If not, how can Orestes ever say that his mother's blood 'sleeps and is fading away from his hand, and the pollution is being washed out'? (Eum. 280). No divisions are of any use (Cho. 289—especially if the blood is κατάκοινον even 1068); the spirit of the dead is not tampered with the funeral fires, φαίνει ἀνώτερον ὅραμα (Cho. 336); and the feud would go on for ever, or till the family become extinct. In *Aeschylus's solution of the problem there are really two stages, of which the latter is the more important. Orestes can plead innocence because he acts under the 'interpretation' ὑπὲρ τῆς ἱεράς τοῦ μαρτυροντος, Eum. 305) and even threats (Cho. 289-289) of Apollo-Lexins, and is ready to perform the ritual purifications (Cho. 1039); and the Delphic oracle had since the 8th century really exercised an ethical and educational influence in Greece. On the other hand, *Aeschylus felt that neither the payment of blood-money nor the performance of ritual can quiet the conscience or carry civilization very far. It is perhaps too much to say that Apollo is 'kein guter Gott'; but the ultimate and really moral solution is to be found in the judicial decision of Athena on the divided vote of the Areopagus, which herself represents as the victory of the νοῦς πολιτικοῦ regarded as the νοῦς Δεί; ἄνωτέρως Ζεὺς ἰτομόριος (Eum. 978). The Oresteia, then, is certainly a 'tendency' poem to this extent, that it expresses a view in the moral and religious speculations of the age as to heredity and responsibility, though it fails to answer on any particular question of justice or equity.*

5. In the Oresteia the final reconciliation is provided by the gods; in the Prometheus they sustain the whole drama. Except in a few details attributable to a re-reading of his Supplicies, the surviving play of the set (probably two tragedies with a satyr play) is totally opposed to *Aeschylus's theology in all its stages. Prometheus, son of Theban Zeus (Sicily 374f., in *Aeschylus was worked out in the older dynasty (221), but is now tortured for having saved the human race by the gift of fire, the chief instrument of civilization, of anger and medicine, and of other means of providing for the

* This view of the Eumenides is to be considered even than that which makes the Furies represent law, Apollo and Zeus as in a virtual question of moral casuistry. For that view see Haigh, p. 119.

future, and of Hope as the main spring of effort (249-250, 442-450). All who visit the victim, whether as Zeus's agents—Strength, Hephaestus, and Hermes—or as sympathizers like the Orcans, Oceanus, and Io—have suffered more or less in person or in character from Zeus, who is a νοῦς τόρας, governing gods and men arbitrarily (σαβ' ἀναφ. 189; οἰόν τοῖς τόρας, 404), unjustly, piously, but foolishly, and odoiously (975). But Prometheus, by virtue of his parentage, knows a secret; if Zeus contracts a certain marriage,* his son will be greater than the sire (706, 907-927); in this respect Zeus's power is weaker than the sire (913-915). The fragments of the Solstis indicate close parallelism in form and episodes to the Vinctus; in the solution Zeus and Prometheus meet one another halfway in a reconciliation, of which the agents are Heracles and Chiron the Centaur (cf. Prom. Vinct. 188-194, 1026-1029). Now this conception of a Zeus, inferior both in righteousness and in power, is out of all relation to the Supplicies and the Oresteia alike, and no theory of the problem's meaning can be accepted which minimizes this fact. Apart from purely fanciful explanations of the plays as political or scientific allegory, two views have been very commonly held.

(a) A tragedian was at liberty to develop his dramatic situations freely, provided he kept to the main lines of some recognized myth. *Aeschylus found Hesiod's story of Prometheus suitable for the exhibition of character as affected by injustice, and susceptible of brilliant episodes about geography, anthropology, etc. This view, as developed by (e.g.) Patin and Paley, may be called the literary explanation. *Weil, in his theory, that Zeus is in the right and Prometheus wrong, and shortsighted, but a tragic hero by virtue of a certain dignity of character, like Milton's Satan, comes under the same head. But no such theory really explains the boldness of the idea, the conflation of myths, or the intensity of the passion with which the hero is supported.

Accordingly, (b) most modern scholars, including E. de Faye, regard *Aeschylus as deliberately inculcating the position that even the supreme personal authority in the Universe is itself subject to the eternal laws (Μορφαί) which constitute the ultimate necessity (Ἀρχαιοκρατεῖν). Prometheus, the mythical representative of these forces, is, then, really in the right, and Zeus is in the wrong with him and with Io; but Zeus's submission is effected by the educational value of time (Ἀκόλουθοι τοῦ ἁγίου τηρέατος ἱστορίας, 981); and Prometheus, too, can yield without loss of dignity to an improved Zeus. This view gives an adequate meaning to the play as a whole, but it seems to lay undue stress on lines occurring in mere dialogue and not specially emphasized, and also to ignore the human personality of the protagonist. Moreover, it is difficult to imagine the author of the Oresteia and its epitheus for Zeus acquisicing even temporarily in the idea of such development in the god, nor indeed in the hero.

Those, therefore (c), who hold the view first enunciated by a brother poet, Shelley, that Prometheus stands for Man, anxious to be moral and religious as well as rational, but convinced that he is the victim of forces incompletely understood, of the de facto supremacy of 'Nature,' prefer to trace in this drama the Greek parallel to the Book of Job. *Aeschylus was too great a poet to be a mere allegist; but when his mind was occupied with the problem of undeserved evil, he found in the arch-aggressor Hesiod that the origin of evil was the gift of fire and the creation of woman by Prometheus. He selected with a free hand from the poem of *Aeschylus's Prometheus the story of Peleus and Thetis with even less connection than Io with the myth of Prometheus, and wrote an apparently astrological explanation of certain fire ceremonies.
AESTHETICISM—AESTHETICS

this and other myths the more dramatic parts of the symbolism. The mention of Heraclés may have suggested the insertion of his ancestress Io, the passive as a foil to the actively-resisting victim. The same may be said of the geography, for if they bring out the dignity of human reason and the universality of human suffering. The heroic sympathy of the Oedipus illustrates the value of this motive in the Hellenic. The philosophical answer seems to be indicated in the words συνέδρια, repeated at every point of the play (see 64, 79, 436, 907, 964, 1012, 1034-1038), and φύσσευμα, the special quality of Themis, set in antithesis to it in the last lines of the dialogue. In the two recitative passages assigned to the hero in the Exodos, the boast πάντως λέει γ’ ο θεάτηρον (1053) must have special significance as balancing the protest τούτοις ἡ λέει ἡ λέει φύσσευμα. But it is likely enough that the solution of the problem, like the conclusion of the Book of Job, was too formal a compromise to be altogether satisfactory; and that may be the reason why it has perished. The whole tendency of Eschylus’s mind is so strongly optimistic in theology, that it would right itself naturally after a reactionary period of what is possessimien rather than scepticism, however dramatically intense.

Eschylus’s originality as a thinker consists, then, in his attempts to moralize the traditional beliefs, embodied in myths and institutions, by the light of certain religious presuppositions and certain moral convictions which have been intimated above. In his main ideas there is little variation, except in their poetical expression; in the detailed application of them his language fluctuates too much to add considerable interest. His dealings with the divine law so completely, that Plato could employ the myth of Prometheus without reference to a treatment of the subject which the modern world has long considered one of the most sublime efforts of poetic genius.

LITERATURE.—Besides the introductions to editions of Eschylus, sections on him are to be found in all the general works on Greek literature or mythology. The most useful summary in English is in A. B. Haigh’s Tragic Drama of the Greeks, ch. ii. (1859). Of the innumerable essays on Eschylus those by J. A. Symonds (The Greek Poets, 2nd series) and E. Myers (Hellenics) are best known. Of older books the most frequently referred to are K. O. Müller’s Disertaciones de Zum Enniusen (Eng. tr. revised, 1850); F. Walcker’s Griechisches, Göttertale (1857), and K. F. Niælbach’s Theochymische Theologie (1857). The principal monographs are Klaffen’s Theologie und Eschyle (1859); G. Drenke’s Religion und Mythologie des Alten Griechen (1863); A. Bochholt’s Sittliche Weltanschauung des (Pleiadas und) Eschyle (1882); and E. de Faye’s Étude sur les idées religieuses et morales d’Eschyle (1884).

HERBERT E. D. BLAKISTON.

AESTHETICISM (εσθήτικη, ‘sense perception’).

—The theory of life which fails to distinguish moral from aesthetic values, or subordinates the moral to the aesthetic. Ordinary the term is not used as a distinctive title for specific theories, but as denoting a tendency of theories otherwise named. Three usages of the term may be conveniently distinguished:

1. Aestheticism may denote the identification of moral goodness with beauty, such as is suggested in the common Greek phrase ‘beautiful and good.’ Morality and art may be looked upon as the realization of a common principle, that of order or harmony. The good man, like the musician to whom Aristotle is fond of comparing him, is the man who can introduce harmony into his subject, who can maintain that balance and symmetry of parts essential to the highest music, that is, the life of the good man.

2. Aestheticism may also be used to denote the theory that all ultimate values are aesthetic, moral good being a means towards an ultimate aesthetic good. Under this conception the moral life is not itself beautiful, but it exists for the sake of aesthetic enjoyment. The concept of morality, with its sense of obligation, is a result of mal-adjustment, in consequence of which we are compelled to do much which we do not value for its own sake, but as the necessary means to an enjoyment which itself has no further use.

This conception finds literary expression in the writings of Mr. Walter Pater in which the end of life is stated as a rich and varied experience. This richness of experience is best realized in the life of aesthetic enjoyment.

3. Aestheticism also denotes the divorce of art and morals, usually implied in the popular use of the phrase ‘art for art’s sake.’ Beauty is held to be independent of goodness, the technical aspect of a work of art being emphasized at the expense of its human significance. Art thus becomes a kind of higher morality, free from the objective laws which hold in the lower. The immoral may thus enter into the beautiful on the ground of its immediate or perceptual experience.

LITERATURE.—Zeller, Aristotle and the Later Peripatetics (1897), ii. ch. xv.; Muirhead, Chapters from Aristotle’s Ethics (1900), ch. vi. § 5; Martineau, Types of Ethical Theory (1850), i. bk. i. Branch 1; Santayana, Sense of Beauty (1896), pt. 1; Pater, The Renaissance (1875), conclusion, also Martineau’s Epics of Art (1896); Shaftesbury, Character oft Art (1850); Bignor, History of Aesthetic (new ed. 1900), ch. iv.

AESTHETICS.—Aesthetics is the philosophical study of beauty regarded in itself and in its application to art and nature. (1) Meaning of the word. —Considered solely from the etymological point of view, art (from the Latin, aestern, the senses), the word means the study of sense-per-
exceptions. Kant remains faithful to this etymological acceptance when he applies the name of ‘Transcendental Ästhetics’ to the chapter of his *Critique* in which he sets forth his *Time and Space*. Baumgarten was the first to use the word ‘Ästhetics’ for the science of the beautiful; and the change that has taken place in the history of the term may be understood when it is realized that he first showed that the beautiful exists in the obscure regions of the lower consciousness, that it belongs to the rank of sensations, and is opposed to the ‘clear thinking’ of the intellect. In today the term ‘Ästhetics’ has lost this connexion with sensation, and denotes in general the philosophy of the beautiful.

(2) *Place of Ästhetics in philosophy.*—The philosophy of the beautiful is bound up with and forms an integral part of a general system of philosophy. But Ästhetics is one thing in Plotinus or Thomas Aquinas, and quite another in Kant or Taine, because the philosophical systems of these scholars are so widely divergent. In the opinion of the present writer, Ästhetics is a mixed science, borrowing its principles from both metaphysics and psychology; so that (see art. BEAUTY) it includes two classes of questions, the one class belonging to Ästhetics properly so-called, and the other reproduces in the person affected by its charm, and the other relating to the qualities of the things to which we ascribe beauty.

(3) History. Ancient writers devoted special attention to the objective side of beauty. Plato and Aristotle consider the beautiful as identical with order and proportion; Plotinus and the Neo-Platonic school make it an attribute of everything that exists, as an aspect of the doctrine of Ästhetics. While sharing largely in the objective theories of the beautiful, they supplemented them by a study of impression or aesthetic pleasure. Modern philosophy, on the contrary, takes its stand almost exclusively on the psychological side of beauty, and regards it as a purely subjective phenomenon. With Kant, for instance, beauty does not belong to the object itself, but only to our perception of it. ContemporarÄsthetics perpetuates and emphasizes these ultra-subjective tendencies.

**LI\_T\_R\_A\_T\_U\_R.**—See under BEAUTY.

**AÉTHER.**—Derived from a root signifying to burn, *Aether* is a term appropriated in Greek literature to the blue vault of the upper firmament, as contrasted with air, which is applied to mist and vapour.

In Homer *aether* is the abode of Zeus (II. i. 412, etc.). In Hesiod (Theog. 124) *Aether* and Day are the offspring of Night, and in at least one of the Orphic cosmologies, *Aether*, as representing light or fire, is contrasted with Chaos, and proceeds from Kronos (see Gomperz, *Greek Thinkers*, Eng. tr. 1901, i. 921). Pherecydes, who occupies the borderline between the mythical and the scientific, traces the origin of all things to Zeus, Earth, and Kronos, and identifies the first of these with *aether* (Diels, *Vor Sokratikern*, p. 508, No. 71, A 9).

The current conception of *aether* passed into the keeping of the philosophers, by whom it was variously defined and modified. In the Fragments of Parmenides *aether* is found as the region of the fixed stars (Fr. 10, 1, Diels), and as the fiery element of which their substance is composed (Fr. 11, 2, Diels); and although *Aëtias* indicates a distinction between either as the outermost covering of the universe and the subjacent fiery heaven, we cannot attach much weight to his authority (ii. 7: 1; cf. ii. 15, 7, and see Kriese, *Forschungen*, pp. 114, 115). In Homer *aether* is signified as *air,* except in one doubtful passage (Fr. 38, 4, Diels). On the other hand, Anaxagoras regarded *aer* and *aether* as the two primary differentiations of being—the cold and dark contrasted with the bright and warm (Fr. 1, 2, Diels). Indeed, we are informed that he expounded other as consisting of air (A 73, Diels). In the formation of the world, the dense, wet, cold, and dark sank into the centre, while the rare, hot, and dry went to join the enveloping *aether* (Fr. 15, Diels). From Anaxagoras it is convenient to pass to Empedocles, who is said to have been largely influenced by his teaching (Diod. i. 7, 7). There are various references to *aether* in Euripides, which may be the reflexion of either of popular forms of the current science of both. Thus the identification of Zeus with *aether* carries us back to Pherecydes, and anticipates the pantheism of the Stoics (Fr. 935; cf. *Asch. Fr. 650*). The conception of *Aether* as the husband of Earth, quickening all things into life by his fertilizing showers, is the common property of many poets and philosophers (Eur. Frs. 485, 836; and see Munro on Lucr. i. 250). Similar to this is the notion that the vital breath is derived from *aether,* and that the soul, retaining its consciousness after death, is absorbed in the source from which it sprang (Hdt. 1014; Suppl. 531; cf. Lucr. v. 319). Though it has often been supposed that *Aether* is the place of the soul in the Empedoclean cosmogony, it is noteworthy that the same thought is found in the inscription over those who fell at Potidæa (C.I.A. i. 442), and may well be due, as has been recently suggested (C.I.R. xiv. 431), to a popular belief which arose in connexion with the practice of cremation. The soul of the dead man was thought to ascend with the smoke which rose from the burning corpse.

By the side of the four elements generally recognized in philosophy, from the time of Empedocles onwards,—fire, air, water, and earth,—*aether* ultimately came to be admitted as a fifth; but it is still open to question whether this view was derived by the Platonic school from the Pythagoreans (Zeller, *Pre-Socratics*, vol. i. p. 318, n.). Plato, in the *Timæus,* does not adopt this position (581d); and though there is strong evidence that it formed part of his oral doctrine (Xenocrates, *op. Simplici*, Phys. 268a), and it is accepted by the author of the *Epinomis* (981c), its definite establishment is generally connected with the name of Aristotle, from whose statement of the theory through the scholastic gloss *aether* is derived our word *quintessence.* Eternal and immutable, providing the substance of the heavenly spheres and stars, ceaselessly rotating round the world, but transcending the strife of the terrestrial elements (de Cad. i. 2. 269a 9, 1. 3. 270a 13, 6), *aether* was at once material and divine. The Stoics took a further step by identifying the substance of *aether* with God. It is described as fiery breath or creative fire, the rarest and most subtle of all bodies (*Chrysipp. op. Ar. Did. Fr. 31, Diels*), which produces out of itself the phenomenal world, passing through the medium of the elements. The universe, subject to a law of ceaseless flux and reflux, moves either in creative progress or towards periodic conflagration. When everything is consumed by fire, the world-soul and the world are united in the single essence of *aether* (*Chrysipp. op. Plut. Comm. Nat. 36*). But when, by the expenditure of its constituent forces, the created world is in existence, the ruling power resides in the outermost periphery of *aether* (Diog. Laert. vii. 129; *Ar. Did. Fr. 29, Diels*). This *aether* as the world-soul, it permeates every part of the universe, and is the immanent cause of all individual existence (Diog. Laert. vii. 135). Thus may be justified the summary assertion of Chrysippus, that *aether* is the something, being at once all-fair and son (Philodem. *Piat. c. 13, p. 50. 26*).

A. C. Pearson.
ÆTILOGY (αἰτιολογία).—The doctrine of causes. The latter part of the Categories of Aristotle (chs. 10–15), early suspected, but possibly compiled from Aristotelian fragments (Zeller's Arist., Eng. tr. vol. i. p. 66), contains the Post-prædicamenta which give the clue to the subsequent position and treatment of ætiology. In the treatises on Metaphysics which are based on the scholastic philosophy, 'General Metaphysics' is distinguished from 'Special Metaphysics,' notwithstanding the existence of a point, precisely as 'General Philosophy' is distinguished from 'Special Philosophy' by H. Spencer (First Principles, § 38). General metaphysics treats of—(1) Being and its properties; (2) the highest kinds of beings, i.e. the categories; (3) the relations of beings to each other. The third head embraces the same subject as the Post-prædicamenta, the whole division being foreshadowed by the Anta-prædicamenta (due to Abelard), Prædicamenta and Post-prædicamenta of the medieval logic. Of the five relations treated of in the Post-prædicamenta—oportet, prioritas, simulitas, mutus, and habere—two, prioritas and simulitas, are especially concerned with causality. The first two divisions of general metaphysics, dealing with universals, the six transcendentals, the nature of being, the supreme characteristic of a being are somewhat regarded as constituting Ontology. The third division, which deals with the relations of finite beings to each other and to the Infinite, will thus contain as its most important part the doctrine of causes—Ætiology.

If we turn to modern philosophy, the position of ætiology is not different. In the contents of Burgerdyck's Institutiones Metaphysicae (Mansel, Metaph., p. 288), the doctrine of causes occupies a similar position, and has a place in Wolff's Ontologia. K. Rosenkranz (Wissenschaft d. log. Idee) divides metaphysics into Ontology, Ætiology, Teleology (Erdmann's Hist. of Philosophy, tr. vol. iii. §346.11). E. von Hartmann (Katarmischenlehre) under the categories of speculative thought, puts Casuality (Ætiology), Finality (Teleology), Substantiality (Ontology).

We do not propose to enter into an examination of the various forms and shades of meaning which the doctrine of ætiology assumes in these several systems. Nor does it belong to this article to view the subject of causation from the point of view of the theory of causation as such. It is the theory of the causation of the universe which is here to be considered. We shall confine ourselves to considering simply the leading forms of the theory of the nature and classification of causes in the successive periods of the history of philosophy. For this purpose the history of philosophy may perhaps be divided as into three periods—the ancient, the medieval, and the modern. The leading characteristic of each of these periods is as follows: in ancient philosophy (Greek) the antithesis of subject and object, of mind and matter, as two substances over against each other, is absent. Thought and being, the one and the many, are objectively equal. In the second period, owing to the development of Aristotelian philosophy itself, and the spread of the Roman conceptions of authoritative law and duty, but above all, owing to the influence of Christianity, the spiritual and material are conceived as essentially opposed, and the attempt is made under this altered point of view to retain the Greek solution of the problem. The substance of this solution is dogmatically affirmed in Scholasticism. What is not shown is that it is possible under the changed point of view. Modern philosophy consists in the constant effort to prove the possibility of the solution, to explain the manner in which spiritual and material being interact, affect, and condition each other. In modern philosophy, not the dogmatic result itself, but the way in which it is obtained, is the leading interest. The ætiological problem becomes an essentially different one in each of these periods.

In Greek philosophy the antithesis of subject and object is absent. Nature is instinct with motion, life, reason. The notion of personality is undeveloped, but at the same time the tendency to personification is omnipresent (see Jowett, Plato, vol. i. p. xiv). Thought is not a modification of a conscious mind, but consciousness is the accident, a ripple on the surface of nature (see Martineau's Types of Ethical Theory, vol. i. p. 23). From this point of view the antitheses with which Greek philosophy dealt—the one and the many, the real and the apparent, thought and being—are all reconcilable by one concept—that of mixture. 'There is only mingling, and then a separation of the mingled' (Empedocles, v. 36). This mingling, or, as Plato termed it, 'participation (αἰτιολογία)' when conceived as the union of the one and the many, of form and matter, ὕσσεσι καὶ ἄτομα, gives the well-known fourfold classification of causes of Aristotle—the formal, material, efficient, and final (ὑσσει καὶ το ὕσσει ὕσσει καὶ το ὕσσει καὶ το ὕσσει). The principles intermingled are the four, and the active form, the composition is effected, and the end to be realized by the efficient, are the efficient and final causes. The latter causes, however, are never considered as distinct from the principles intermingled. The individual Greek thinkers illustrate this position. Aristotle has pointed out that the early ætiologists recognized only the material cause (ἡσιός). The water of Thales, the air of Anaximenes, were material causes. The ἡσιός of Anaxagoras must not be conceived as a mere prime mover, a distinct agency detached from the universe to which it communicates motion. It passes into things. It is in all eternity the mover of the cause of the universe, but with them in the coarse sense, but it permeates them (cf. Zeller, Pre-Socratic Philosophy, Eng. tr. vol. i. pp. 222, 223, vol. ii. pp. 27, 28). In like manner, even when the efficient cause begins to receive distinct recognition, as in the lover and hate of Empedocles, or the ἡσιός of Anaxagoras, it still is not separate from the material cause. The ἡσιός of Anaxagoras must not be conceived as a mere prime mover, a distinct agency detached from the universe to which it communicates motion. It passes into things. It is in all eternity the mover of the cause of the universe, but with them in the coarse sense, but it permeates them (cf. Zeller, Pre-Socratic Philosophy, vol. ii. pp. 243 ff.). When Socrates, in the Phaedo, complains that Anaxagoras did not make full use of his principle (Aristotle makes the same complaint), this is not an ignoratio elenchii, as Leves (Hist. of Philosophy, vol. i. p. 84) represents it. Socrates does not desiderate a physico-teleological theory of the universe in the modern sense. It is only to be expected that, in moving the universe, should impart something of its own sublime rational nature to things, should more or less pass over into them. The Platonic ideal doctrine does no less. Socrates and Plato thus bring to the focus the causal idea itself, and the spread of the causal idea.

As is well known, the causal activity of the ideas is the crux of the Platonic philosophy. In one of its forms, at any rate, the formal cause is naturally regarded as essential existence, and the efficient cause identical with the form, the Ideas. The demiurg in Plato is most probably to be viewed, not as the exclusive activity of the highest idea, the idea of the Good, the One (as by Martineau, Types of Ethical Theory, vol. i. p. 23), but the manifestation of the principle of activity or efficiency flowing from the Good, and pervading the whole world of ideas. We thus see that efficiency, action may be identified with either the matter or the form.

Digitized by Microsoft ©
When Aristotle brought down form from the far-off ἀνάμισθος or intelligible world of Plato, and incorporated it into the existing world, he remained, to which side action, efficiency, was to be attributed, and Aristotle is generally interpreted as assigning it exclusively to form. In favour of this view is held to be the insistence of Aristotle upon ἀνάμισθος, the thought of thought; but the interpretation is probably one-sided. There is much in Aristotle to lead us to regard the Absolute as dwelling in a sort of supersensuous sensuous world. Aristotle is a transcendental thinker. The various grades is a σύνεσις, a composition of matter and form—not merely through the element of form, but also through that of matter. In *Metaph.* viii. (ix.) s. end, the argument against the ideal theory contends that the ideas, as such, are mere potentialities (δυνάμεις). This view would help to solve the ancient controversy as to the pantheism or monism of Aristotle, the immunance or transcendence of the Absolute.

In the Neo-Platonic philosophy the ideal world of Plato and the Divine σοφία of Aristotle is hypostasized into a series of personal beings. This philosophy is an attempt to give a philosophical world or universe itself a form. The second part of the *Philosophie der Wissenschaft* philosophy itself to pass over into that antithesis which dominates Christian philosophy—the antithesis of subject and object, spirit and nature. St. Augustine views the Platonic ideas no longer as independent substances, but as ideas in the mind of God. The hierarchy of ideas and emanations yields to the heavenly hierarchy. With this change of view the combination or composition of form and matter, of idea and reality, becomes a most difficult problem. The community of idea and reality, the intercourse of mind and matter, can no longer be conceived as a mere mingling or composition of the two, if the idea as universal dwells in a separate substance—mind. The great controversy of the Middle Ages, of Realism and Nominalism regarding universals, is the struggle with this problem. Yet in regard to etiology, the real interest does not lie in this problem, but in a greater one connected with it. Granting that reality is the union of matter and form, which factor in this union is the active one? Thomas Aquinas answers, 'form': 'Forma est agendi principium' (*Stöckl, Geschichte der Philosophie*; *Scheffler, Geschichte der Philosophie*; *Hartmann, Geschichte der Philosophie*). The problem of the relation of the causal power in the universe to those principles of matter and form, the union of which to the Scholastic as much as to Aristotle is the problem of the great rival systems of Thomas Aquinas and Duns Scotus, and from which their other differences proceed. In both Aquinas and Scotus, however, the source of the efficiency is transcendent, whether it be the Divine intellect or will which determines the thing.

Modern philosophy, from Descartes and Spinoza to Hegel and Hartmann, Spencer and Lewes, is engaged on the problem of explaining how the interaction of matter, spirit, and nature, takes place. It has been held by Bayle and Roussetel that Spinoza's philosophy is contained in that of Scotus. This is true in a sense. But the ultimate causal principle is in Scotus transcendent; in Spinoza transcendental. This difference is characteristic of modern philosophy. The solution is no longer taken from the transcendent sphere. If the Absolute is called in, it is, as in Spinoza, Leibniz, Schelling, Hegel, an immanent, not transcendent Absolute.

Of the problem thus handed down it cannot be said that the solution has yet been reached. In the *Metaphysica* of Leibniz and the Absolute Idea of Hegel it is form, the ideal side, that contains the principle of all causal agency in the universe. These principles differ from the Platonic idea in this, that they are subjects, have the objective world over against them, even if that world have no being apart and be a nullity or contradiction at the core. In Schelling and Hartmann only the Will, the material side, actualizes the representation or idea. The 'willing to will' of Hartmann answers to the *materia prima* of Duns Scotus. It is the same in our English philosophy. Out of the unknowable Absolute of Spencer, and the known Absolute of Lewes, the material, organic, and mental worlds proceed. Yet the relation of these higher forms to the primordial matter and motion is unsolved. The physical and teleological problems are still unsolved.

**AFFECTION.**—A psychic aspect of life which comes to consciousness as concrete states of Feeling (which see); the abstract quale of feeling consciousness. In the newer divisions of the fundamental or rudimentary aspects of conscious process it has been found necessary to distinguish the concrete given states of mind, characterized as Knowledge, Feeling or Emotion, and Will, from those abstract and largely hypothetical qualities which, although never found alone, nevertheless serve to define the concrete states. For example, a state of feeling is always or usually both of knowledge of an object and of active tendency or will. Since never realized in its purity, it becomes necessary, therefore, to define such a state by what it would be if so realized. The characteristic aspect of consciousness whereby it is not knowledge or will, but feeling, is what is called 'affection.' It is the differential characteristic of feeling or willing. Similarly, a state of knowledge is never feelingless nor will-less; its differential as knowledge is its reference to an object; it is called 'cognition.' With active process, or in a large sense Will, the same sort of distinction leads us to the determination of its differentia as a certain active quality called 'conation.' Affection, cognition, and conation are therefore the three fundamental aspects of conscious process, considered as irreducible phases of what in a case of concrete happening is, usually at least, all three. Cf. Baldwin's *Dictionary of Philosophy and Psychology*, art. 'Affection,' 'Cognition,' 'Conation,' and 'Classifications of the Mental Functions' (by Stout).

**AFFIRMATION.**—1. In legal parlance an affirmation is distinguished from an oath in that no penalty is invoked upon himself for false witness by the person affirming. It seems to have arisen in the scruples of those who felt the danger of invoking the name of the Deity in case of memory or statement led to unforeseen consequences. Courts, seeing that testimony from persons of this character might be quite as reliable as any supported by an oath, finally accepted
AFGHANISTAN

2. Affirmation, in logical and philosophical discussion, is distinguished from negation or denial. It thus means the statement of a fact. It may represent nothing more than a belief that a given thing is a fact, but, so long as it takes the form of a positive statement, it is called an affirmation.

To assert, to posit, to assererate, to declare are the equivalents of affirmation, and, of course, mean at least the formal assurance that the thing affirmed is a fact. In formal logic, affirmation is a name for a certain type of judgment which is distinguishe by the grammatical form or mode of statement, and not by the meaning or content of the sentence, or by the particular state of mind out of which the statement issues.

Psychologically speaking, however, affirmation denotes a degree of tenacity in conviction which looks towards assurance, and it expresses that state of mind. Negation or denial expresses the same kind of mental state, while doubt is the opposite of both affirmation and negation. Hence psychologically there is no difference between affirmation and negation, in so far as assurance is concerned, but only a difference in reference to the relation between the ideas involved in the mental process of comparison and judgment. That is, the difference between affirmation and negation concerns the content of the judgment, and not its mental state of conviction. Affirmation implies a certain kind of connection between subject and predicate, and negation excludes it.

JAMES H. HYSLOP.

AFGHANISTAN.—Afghanistan (lit. 'land of the Afghans') is a country of south-central Asia, whose location and political importance have led to its playing a part in the religious history of the Orient from the time of Zoroaster to the appearance of Muhammad. The present boundaries of this mountainous land are political rather than geographical, as they are largely defined by the fact that Afghanistan is a buffer-country between the English empire of India on the south and south-east and the Russian provinces of Bokhara and Turkistan on the north, while Persia and Baluchistan limit its western and southern frontiers.

In the first chapter of the Avesta (Vd. i. 7) the ancient northern capital Balkh (Bakhidh) is referred to as a beautiful city with banners floating from its high walls, and there is a persistent tradition that the city was a strong religious centre, the Lohan, the father of Vishtasp, patron of Zoroaster, and that Zoroaster himself was slain there when the Turanians stormed Balkh during the Holy War which Iran had started against Turan. The modern capital Kabul (Kával in Persian) is probably the successor of Balkh. It appears in the Avesta (Vd. i. 9) as Vackereta, and the region of the Helmand, the chief river of Afghanistan, the Etymonds of the Greeks, is called Haetamant (Ph. Hétamant) in the same Zoroastrian low-look (Vd. 1. 13). The old Afghan district in south-western Afghanistan was the home of the Zoroastrian dynasty of the Kaianians and the place of the holy lake Kan-suaya (mod. Haimon) of the Avesta, from whose mountains the Persian invasion of the west Indies was said to have proceeded by the Millenium. Zoroastrianism appears also to have prevailed in the land during the Parthian and Sassanian eras, from B.C. 250 to A.D. 650, although some Greek religious influences may well have followed in the wake of Alexander's invasion. Buddhism made some progress in Afghanistan, being traceable chiefly to Indians who emigrated from the Indus to the Helmand region after the scythian invasion, and who carried with them, among their sacred treasures, the water-pot of the blessed Buddha himself. This relic was preserved in a shrine near the ancient site of Kandahar, and is described by Bellow, who says it, as 'a huge bowl carved on a solid block of dark green serpen time' (see Races of Afghanistan, p. 22).

The conquest of the country by the Arabs in the 7th cent. destroyed all previous religious foundations, and paved the way for the building up of Islam. Muhammadanism became the national faith of the Afghans, and has remained, mainly in its Sunnite form, their creed and chief bond of union, although they acknowledge the political hegemony of an Amir over their loosely connected tribes.

The Afghan nation consists of a number of tribes considerably divergent in their character, with a population variously estimated at between 3,000,000 and 6,000,000. Most important are the Afghans and Pathuns, who constitute the chief element of the population, together with the clans known as Ghilzais in the east, Yusufzais and Afridis on the Indian border, the Durans to the west, and the Tajiks, Hazaras, Uzbegs, and Aimaks, mostly showing traces of Mongolian blood, to the north and north-west. The great majority of the Afghans belong ethnologically to the Iranian stock; and although there is an intermixture of blood, especially on the borders, there is no good reason for accepting the view that they were of Semitic origin, while they may preserve some much later and later date and show certain slight Semitic traces.

The language of the country is generally called Afghan, but often Pukhtun or Pashtun, the former (Pukhtun) being North Afghan, the latter (Pashtun) South Afghan. The literature of the people is but scanty, and no monuments have been traced farther back than the 16th century. Most interesting among the remains are the Afghan folk-songs, a collection of which has been made by the French scholar Darmesteter, and among these ballads are a number that deal with religion.

A. V. WILLIAMS JACKSON.

The name 'Afghan,' first appearing in literature in al-Biruni's India (tr. Sachau, i. 208), is of uncertain origin. In the old Afghan charters the term 'Pashtun' appears to be a designation of Pukhtun or Pushtun, older form Pashin, Pashán (whence their Indian name

the World, Edinburgh, 1876, p. 141), where the natives even now treat fire with reverence, being reluctant to blow out a light (Wood, in the Sources of the River Oxus, new ed., London, 1872, p. 333). Buddhism, however, has left not only many small figures at Hilla and Kabul (Vigne, Personal Narrative of a Visit to Afghanistan, Kabul, and Afghanistan, London, 1849, p. 207), but also some ninety topest, dating mostly from the 4th and 5th centuries A.D., and found chiefly at Darunta, Chunar, Hilla, Kabul, Koh Damani, and Kohiwat; as well as ruins of Buddhist monasteries at Jamalgiri, Takh-i-Bahi, and Sahi Bahlol, which show distinct influence of Greek art. Sculptures of the Buddha have also been found at Bamiyan (Wilson, in Vigne, op. cit. pp. 187-192); and the Chinese travellers Fa Hsien (tr. Legge, Oxford, 1886, pp. 33-40) and Huen Tsang (tr. Beal, London, 1884, i. 98-103) both describe Kanishka's magnificent dasgoba at Peshawar.

Modern Afghanistan, as noted in the preceding article, is wholly Muhammadan. Besides official Sunnite orthodoxy, however, there exists a mixture of Semitic and Indian folk-belief. To this category belongs the vast number of saint-shrines, which consist either of the domed tomb of some saint or of a heap of stones, enclosed by a wall and usually surrounded by trees or bushes (Bello, Journal of a Political Mission to Afghanistan, London, 1862, pp. 70-71, 107-109, 338)—a religious phenomenon common amongst both the modern Semites and Hindus (Cartiss, Primitive Semitic Religion To-day, New York, 1902, passim; Cooke, Popular Religion and Folk-Lore of Northern India, Westminster, 1896, i. 183-185, 189-228). Again, levirate marriage is practised, and it is a grievous affront not to ask the brother's consent if the widow be again married, though, if she have children, it is considered more honourable for her to remain unwedded (Elphinstone, Account of the Kingdom of Cabul, London, 1825, i. 236). Amongst some tribes, moreover, it is customary for the suitor to serve the father of his would-be bride for many years, as Jacob served Laban for Rachel's sake (ib. p. 240; Bello, Journal, p. 27). The blood-feud, as amongst the Semites, is a sacred duty (Elphinstone, op. cit. i. 220-221; Conolly, Journey to the North of India's, London, 1835, ii. 163-165); and blasphemers, as amongst the Hebrews, are stoned to death (Bello, Journal, p. 68). In time of pestilence a buffalo or cow is led through or around the village or camp. The sins of the community are then ceremonially transferred to the victim's head, after which it is either slaughtered and its flesh divided between the priests and the poor, or it is driven into the wilderness (Bello, loc. cit.). This practice, familiar from the Hebrew scapegoat, is also found extensively in Northern India (Cooke, op. cit. i. 142, 166-167, 169-170).

Dreams, the evil eye, exorcism, ordeals, and omens are, of course, attentively regarded by the Afghans; so that a high wind for three days is a sign that a murder has been committed, since, when Cain slew Abel, there was a similar commotion of the elements (Conolly, op. cit. ii. 157-164). The popular demons of Afghan folk-belief are jins, peris, als, and parrais. The jins and peris are common to all popular Muhammadan mythology, but the als and parrais (the latter words by logic variation of the former) are plainly Indian in origin. The als, described as a woman about twenty years of age, with long teeth and nails, eyes curving down the side of the nose, feet turned backward, and a beard foremost, and the parrais (op. cit. pp. 211-212), is manifestly the churel of Northern India (Cooke, op. cit. i. 269-271; Calcutta Review, No. cliii. p. 180 ff.), who, though
AFRICA

she may assume a beautiful form, is in reality 'very ugly and black, breastless, protruding in stomach and navel, and feet turned back' (Steel and Temple, *Wide-Awake Stories*, Bombay, 1884, p. 318). In Armenian folklore the ał is also found, though differing materially from the Indo-Afghan concept (cf. 'Amiran, *Armen. Volksglaube*, Leipzig, 1896, p. 118-120). The paryat, a huge monster, with flabby breasts thrown back over her shoulders, stretching out her hairy arms to any length, and devouring those who answer her plaintive cry for help (op. cit. 1, 554-555), is clearly the Indian rakhāsh (Crooke, op. cit. 1, 246-253), who plays an important part in Hindu folk-tales. Though the Afghans are essentially an Iranian people (Deniker, *Roses of Men*, London, 1901, p. 420), they thus exhibit a tradition of prehistoric concepts, for which they have substituted an amalgam of Semitic and Indian beliefs.

LOUIS H. GRAY.

AFRICA. (The purpose of this article is to give a general account of the ethnology, religions, and ethics of Africa. A detailed description of the various religions will be found in the following articles: BANTUS AND S. AFRICA, BERBERS AND N. AFRICA, HAMITES AND E. AFRICA, NEGROES AND W. AFRICA.)

A line drawn from the mouth of the Senegal river, through Timbuctu, eastwards to Kharthoum, then southwards to the equator, and along the equator again eastwards to the Indian Ocean, will roughly divide Africa into two main ethnic sections of nearly equal areas—Caucasian in the north and Ethnique or Negro in the south (for the sense in which these terms are here taken see art. ETHNOLOGY [Caucasoid]). Of the northern section, which comprises the Mediterranean seaboard from Morocco to Egypt, the Saharan and Libyan deserts from the Atlantic to the Red Sea, Arabia, and the Galla, Maasai and Somaliland lands, there are two great divisions—the Hamitic Caucasians, who are here indigenous, and the Semitic Caucasians, who are later immigrants from Asia, but have long been almost everywhere in the closest contact with the Hamitic aborigines. Most probably the two races originally constituted a single Hamito-Semitic group, whose primeval home was North Africa, whence some moved in remote times across the Sahara to South-West Asia, and here became specialized as Semites; while others—Iberians, Ligurians, Pelasgians—ranged northwards into Europe by the land-connexions still preserved between the Old and New World at various points across the Mediterranean. In those days the Saharan wastes were not a marine bed since upraised, as is popularly supposed, but, on the contrary, a plateau which was higher than at present and which received a genial climate, was traversed by great rivers (now reduced to dry wadys), and clothed with a rich sub-tropical vegetation; in a word, a region in every way suited for the evolution of the higher (Caucasian) division of the human family.

In North Africa this evolution has from prehistoric times been represented by the ancestry of the present Hamitic populations, who are still found in possession of all the inhabitants, both the undifferentiated, or in association with their Semitic kindred who have returned at different times to the common cradle-land. The Hamites, who are called Libyans (Africans) by Herodotus, and recognized by him as the one people in the north of Africa (v. 197), have throughout all recorded time formed not merely the substratum but the great majority of the inhabitants of the Sahara and the Red Sea, and from the Mediterranean to the Sudan. They are the language-drift of the Egyptian temple-inscriptions (n.c. 1500-1300), and the Mazgwy of Herodotus (iv. 191, 193), this term and its later forms as given by Ptolemy, *Mosises*., *Moses*, being identical with Amos (*plur. imosizes*), 'free' or 'noble,' which is still the collective name of all the Mauritanian Hamites. There are three well-defined divisions, which, with their chief sub-groups, may here be tabulated.

I. EASTERN HAMITES: *Ancient Egyptians and Copts*; Nile valley from the Delta to Nubia.

II. WESTERN HAMITES: *Hamites of the Saaran or Mauritanian Berbers*, Kabyles, Rifis, Shihua, Shawas, Zenaga, Mazab, Khumins, Harratis, Wajila; Morocco, Algeria, Tunis, Tripoli, Senegal, and coast.

the apostle Frumentius from Alexandria. Then the Bible was translated into Géez (e. supra), the liturgical language of the country; and this tongue has preserved some early Christian documents, the Greek or Syriac originals of which have been lost.

Having received its teachings from Alexandria, the Abyssinian Church is a branch of the Coptic, and consequently professes the Monophysite doctrine of Eutyches accepted by the Alexandrian exarch. In the 4th and 5th centuries, the Abyssinian bishops were in no respect inferior to those of the Syriac and Arabic churches. The Abyssinian Church, which has always maintained its independence, is a thing of the past. The Abyssinian language is a name of the church, and no longer of the nation. The Abyssinian language is a name of the church, and no longer of the nation.

AfricA

The first relations between the two great African powers, the Christian and the Muslim, were established during the 7th and 8th centuries. The Christian king of Axum, who had a strong army, was able to conquer the Abyssinians and to make them pay tribute. The Christian king of Axum, who had a strong army, was able to conquer the Abyssinians and to make them pay tribute.

Ennedi district Allah has not yet been dethroned by Yido, the native name of the Supreme Being. In the same district a kind of mona or supernatural virtue is ascribed to the Ibiki, a species of motiled stone of somewhat rare occurrence in the country. During the prayers addressed to Yido this stone is sprinkled with flour and with the blood of a sacri-ficed goat, and it then acquires for its fortunate owner the success of all his projects and confusion to all his enemies (Nachzigal, Sahara u. Sudan, ii. p. 176). Polygamy is not controlled by the Qur'an law, the number of wives being merely a question of ways and means, while the son is obliged to marry all his father's wives except his own mother. Matriarchal custom persists, as is shown by the fact that the wife continues to reside in her parents' home till the birth of the first child, and permanently if there is no issue; in which case the husband receives back the camels paid to his father-in-law for his bride.

Although passing for good Muhammadans, the Tuareg (Northern Thuss) do not abstain from Ibiki (palm wine), and now and then sacrifices a goat for rain or other favours. All wear amulets attached to various parts of the body, and think that all medicines, including the water used for washing out Qur'anic texts written on the inside of a cup. Similar texts contained in little leather bags make their spears and other weapons more deadly, and also protect horses and camels from the evil eye. Their half-Arabized Pezzanee cousins put great faith in the marabouts, who are more numerous and influential in Pezzan than elsewhere. They are much employed as sorcerers in thwarting the machinations of the great demon Illis or Shaitan and the marabouts, and other writers of ostriches— to be sacrificed for the recovery of the sick. In such cases incense was burned, and the cooked meat was served to the patient and those present, the bones, and feathers being buried as a sacrificial offering to the dead saint.

Amongst the Muslim Tuareg the belief is universal that below the surface the Sahara is everywhere copied by a class of supernatual beings called Ahl at-Trab, who delight in playing mischievous pranks on wayfarers in the desert. They seize and pull down the camels' feet, causing them to sink in the soft sands; they gnaw off the roots of the desert plants, thus killing the scanty vegetation; on the approach of the thirsty traveller, they drink up the water of springs and wells; they even come to the surface and assume bodily forms to deceive and torment the living. All unexplained natural phenomena, such as the pillars of sand raised by the whirlwind, are referred to invisible agencies, and the mysterious roaring heard on a still night in many parts of the wilderness is the voice of the jins conversing among themselves (Harding King, A Search for the Masked Tamaraees, pp. 39, 42).

Although little influenced by the teachings of Islam, the moral character of the Tuaregs and Moors is in a degree inferior to that of their Arab neighbours. Apart from the blood-feuds, vendettas, and predatory expeditions permitted by tribal usage, the vices so common amongst the Moors are unknown in the homes of the Berbers. The is a passion that is so large a feature in the Arab character, and its place is taken by affection and sin-
uncivilized pagans, who speak a great number of radically distinct Negro languages, and exhibit Negro physical traits, often to an exaggerated degree. These traits, which prevail so prevalently and uniformly throughout the whole of Africa, have already specialized in remote times, as we see from the portraits depicted on the early Egyptian monuments, and as we find them graphically summed up in the descriptions of a negroes attributed to Vorgil (Moresmus, 20-35):

"Ara genus, tota patrion testante figura,
Tortam conan labeare tamen et fusce coloris,
Pectus aequaleque haud una, aut alia,
Cruruibus extus, spatiosa prodigis planta."

Standing out in marked contrast to all these primitive peoples are the relatively civilized Hamito-Negro or Semito-Negro nations, such as the Mandingo, Songhai, and Fulbe in the west; the Hausas, Kanuri, Baghirmi, and Mabes of Wadai in the centre; and the Furs and Nubiens in the east, who are all Muhammadans, and of diversely modified Negro type, but still speak independent varieties of Negro stock. From these striking contrasts between the pure Negro and the mixed Negroid peoples the inference has been drawn that the Negro left to himself remains a Negro in every sense of the word, incapable of making any advance beyond a low social and intellectual level. For this arrest of progress seen everywhere in Africa and the New World (West Indies, Southern United States), a physiological explanation has been sought in the early closing of the craniial sutures, preventing any further expansion of the brain after puberty. 'A cet âge intellectuel doit correspondre la soudure des sutures crâniennes, lesquelles n'arrêter et empêcher le cerveau de s'élater davantage' (Binger, du Niger au Golfe de Guinée, ii. p. 346). Hence it is that the Negroids often display in early life a degree of intelligence even superior to that of European children. 'They acquire knowledge with facility till they arrive at the age of puberty, when the physical nature masters the intellect, and frequently completely deadens it. This peculiarity has been attributed by some physiologists to the early closing of the sutures of the cranium, and it is worthy of note that throughout West Africa it is by no means rare to find skulls without any apparent transverse or longitudinal sutures' (Ellis, The Ewe-Speaking Peoples, p. 9).

The chief subdivisions of both the Sudanese and the Bantu sections will be found in art. ETHNOLOGY (Conspicuous). Between the two sections the most conspicuous difference is the linguistic confusion which prevails in Sudan and the linguistic unity which is the dominant feature in Bantu land. Except in the Bambuti-Hottentot territory, in Madagascar, where a Malayo-Polynesian tongue is exclusively spoken, and perhaps among the Negroes of the forest zone, all the current idios are closely related members of a common stock language. And as the tribes themselves are not so closely related, but, on the contrary, often present considerable physical differences, it follows that Bantu is far more intelligible as a linguistic than as a racial characteristic; strictly speaking, nothing more than a half-blood or more often a half-blood Negro of Bantu speech. In general, all are mestizos, showing every shade of transition between the Negro and the Caucasian. The African is essentially a heathen, but strange to say, been lavished in diverse proportions by very old and later Caucasian infusions. These together with the negroid influence have resulted in endless modifications of the physical characters, but have left the original Bantu form of speech untouched, as is always the case where two or more races are merged in one. The ethnical groups form new combinations by miscegenation, while the languages being merely combinations of miscegenation, all persist except one. Hence it is that in the Bantu domain we have many physical blends with only one unblended form of speech. There are many mixed races; indeed, all races are mixed; but there are no mixed languages, but blended vocabularies' (A. H. Keene, Ethnology, 1896, p. 199; also M. L. Lapicque; 'Les langues se tenant; les peuples se mêlent,' MS note). For details see art. BANTUS AND S. AFRICA.

From the religious and ethical standpoint there is not much to choose between the pagan Sudanese and the Bantu peoples. Everywhere amongst both sections are met the same crude animistic notions, gross superstitions, cruel practices associated with ancestor-worship, ordeals, omens, witchcraft, fetishism, human sacrifices, and other observances which are specially characteristic of all primitive African cults. Everywhere also is noticed the clear line of demarcation which is drawn by all tribes between their religious practices and their rules of conduct. Here is plainly seen how religion and morals belonged originally to two different orders of thought, and how the one is made subservient to the other, as when the invisible powers are asked to aid and co-operate in deeds of violence, murder, vendetta, rape, theft, plunder, and other acts regarded as immoralities in higher social systems. Thus on the Gold Coast's religion is not in any way allied with moral ideas, whose source is indeed essentially distinct, although the two become associated when man attains a higher degree of civilization. Murder, theft, and vendetta against the person or against property are matters in which the gods have no immediate concern, and in which they take no interest, except in the case when, bribed by a valuable offering, they take up the quarrel in the interests of some faithful worshipper. The most atrocious crimes, committed as between man and man, the gods can view with equanimity. These are man's concerns, and must be rectified or punished by man (Ellis, The Tshi-speaking Peoples, p. 11). In fact, all these gods are themselves originally malignant superhuman beings, born of fear, and authors of evil, as is even indicated by some of their names, such as that of the Ashanti god Ewe, said to be 'Producer of Calamities.' Hence sickness, death, and all other miseries are attributed to them, either directly, or indirectly through witchcraft, since 'it is from them that wizards and witches obtain assistance and mysterious knowledge' (ib. p. 13).

From such venal deities no correct views of right and wrong could ever have been acquired, and it must be obvious that moral ideals flow from an essentially different source than religion, that both cannot have sprung from a common root' (Th. Waitz, Introd. to Anthropology, Eng. ed. i. 279).

Ancestor-worship appears to be the most outstanding feature of all African primitive religious systems. That the spirits of the dead are the gods of the living is a formula that applies equally to the Sudanese natives of Upper Guinea, and to the Bantu populations of Uganda, the Congo lands, and Dahomey. Amongst the Gold and Slave Coast peoples there are many local and general personalizations of the powers of nature; but these were held in slight esteem compared with the ancestral gods and spirits, whose beings were immediately current in the life of the native and to whom heathens of human victims were immolated at the periodic 'CUSTOMS' during the flourishing days of the kingdoms of Ashanti, Dahome, and Benin. It was the same with the Benin, where the former kings of the Benin dynasty were revered as demi-gods. Their souls were supposed to dwell in and inspire the witch-
AFRICA

drvers; shrines were raised over their graves, the maintenance of which was a religious duty, and here were offered the human sacrifices, as many as two thousand by the late King Mtesa. The demon Munakulunkulu, whose abode is on the Gombaragura heights, whence he plagues the people with small-pox and other evils, is also a departed spirit, identified with one of the early members of the Uganda dynasty. Only the trees planted round the ancestral graves were solemnly tended by wise women, whose oracles, like those of the Pythian priestess, were taken as decisive in certain political crises. The course of events was thus still controlled by the deceased rulers of the land, while the very trees overshadowing their tombs gradually acquired that sacred character which led eventually to general tree-worship.

Along the eastern seaboard the dominant spirit was Munakulunkulu, who ruled, under endless variants, from the Tana river round the Cape to the Cunene. He is often spoken of as the 'Supreme Being,' but such a concept was not grasped by the African aborigines, and the fundamental idea is revealed in the root *inakulana* = 'old,' 'great' (cf. Lat. *altas*; cognate with Teutonic *alti*; *old'); so that the word really connotes a deification of the great departed, and is thus a direct outcome of the African ancestor-worship. This is also fully in accordance with the view of Bleek, who holds that the term originally meant 'great ancestor.' Thus, as in Cebelles, where *empungu* (= 'grandfather') is the generic term of the gods, the *dead* becomes the Divine progenitor of the Zulu-Xosa Bantus; while of Mulungu, the form current in Nyasaland, the Rev. Duff Macdonald writes: 'In all our translations of Scripture where we found the Hebrew term for spirit, we used *Mulungu*; but this word is chiefly used by the natives as a general name for spirit. The spirit of a deceased man is called Mulungu, and all the prayers and offerings of the living are presented to such a spirit. It is here that we find the great centre of the native religion. The spirits of the dead are the gods of the living' (*Africana*, p. 59). And again: 'Their god is not the body in the grave, but the spirit [the *mulungu*], and they seek the spirit at the place where their departed kinsman last lived among them. It is the great tree at the verandah (khwengu) of the dead man's house that is their temple; and if they erect a shrine, they erect a little shrine, and there perform their simple rites' (ib. p. 60). Here we have the very incipient stage itself of ancestor-worship again closely interwoven with the tree element. Then comes a further development, in which the departed spirit reveals himself first in dreams, and later through the *jikwawemba*, the priestess or prophetess, as in Uganda and Khilasa. The god comes to her with his commands at night. She delivers the message in a kind of ecstasy. She speaks (as her name implies) with the utterance of a person raving with excitement. During the night of the communication her ravings are heard sounding all over the village in a high key' (ib. p. 61). We seem to be reading an extract from Paussendorf on the Delphic Oracle. And the broad statement is made that 'the spirit of every deceased man and woman, with the solitary exception of wizards and witches [who become *lukamana*], becomes an object of religious homage. The gods of the natives, then, are nearly as numerous as their dead' (p. 68).

In some parts of Nyasaland, as in Uganda and elsewhere, ancestor-worship eventually became associated with human sacrifice. If the deceased owned several slaves, an enormous hole is dug for a grave. The slaves that were caught immediately on his death are now brought forward. They may be two and two, a pair of slaves being placed under the body (the people made fast to the stake-slits), or the undertakers may cut all their throats. The body of their master or their mistress is then laid down to rest above theirs, and the grave is covered in' (ib. p. 167). We know from Commander Cameron and most other early travellers that similar and even more atrocious were constant occurrences all over the Bantu lands, before their suppression by the European Powers in 1884. It is thus again seen that in these respects the Bantu peoples are the same low social level as the Sudanese negroes.

On the West Coast nature-worship was, as a rule, perhaps more prevalent than on the east side. Here Munakulunkulu was generally replaced by *Nzvubz*, who also has many variants, and is similarly described by some observers as a 'Supreme Being.' But this is denied by the Rev. W. H. Bentley, our best authority on the subject, who rejects the fetichized explanations of Kole and others, adding that 'the knowledge of God is most vague, scarcely more than nominal. There is no worship paid to God' [in Kongoland] (*Dict. and Gram. of the Kongo Language*, p. 96). Further south, Mulungu reappears, under the form *Mukura*, amongst the Bantu Hereros of Damaraland, and it is noteworthy that here also ancestor-worship prevails almost exclusively. 'The best missionaries who have worked among the Hereros could find nothing going beyond the stage of primitive nature-worship. This is also the case with the Mulungu, so named by the Damaraland, that is, the "Ancient," is a spirit whose dwelling is placed in the Far North. His grave is regarded as a sacred spot in many places. Every tribe has its special *mulungu*, its spiritual progenitor, the *Unkulunkulu*, exactly as in Nyasaland, to whom all superstitious usages and customs are referred. Above all, he sends rain and sunshine. MukurI's "grave" certainly points to the weight assigned to ancestor-worship among these people, and further on, the highly-developed tree-cult of the Hereros is shown to be 'a direct offshoot of ancestor-worship, for it ultimately leads to the tale that a sacred tree gave its origin to the Ovaherero race' (ib. p. 364, n. 3). One particular species is specially revered, and, when seen from afar, is hailed with the words, 'Holy art thou, our ancestor.' The evolution is thus obvious. A given tree is first respected for the sake of the man who was attached to it when alive, or else buried beneath its shade in death. Then the tribe during its wanderings meets the same tree elsewhere, and by association of ideas transfers it to the reverence or worship formerly paid to the now perhaps forgotten ancestor. But a tree is always something visible and tangible. Hence, under changed conditions, tree-cult may well outlive the ancestor-worship in which it originated. Here it may be noted from Paussendorf that the *bush maker* for special homage was probably due to a popular etymology confusing this term with *Mu- kura*, the Herero form of *Mulungu*, the 'Ancient.' Other more or less characteristic features of the African religious systems and superstitions—fetishism, human sacrifices, oracles, ordeal, talismans, cannibalism, war-animals, witchcraft—are dealt with in separate articles.

AGAMA—AGAOS

AGAMA.—In the oldest Buddhist writings this is the standing word for 'tradition' (Vinaya, ii. 249; Aṣṭāvatara, ii. 147). This usage is maintained in the Mīdāna (215, 414) and in the Mahāvata (ii. 21). But from the 5th cent. A.D. onwards the word means usually a division of the Sutta Pitakha— the same portion as was, in the older phraseology (Vinaya, ii. 257), called a nikkāya. The reason for this change was that the latter word (nikkāya) had come to be used also in the sense of a division of disciples, a school or sect, and had therefore become ambiguous. In Buddhist Sanskrit books this later use of agama seems to have supplanted entirely the use of nikāya; but our edited texts are not sufficient in extent to enable us, as yet, to decide this with certainty.

T. W. RHYS DAVIDS.

AGAOS.—1. The Agaos or Agows, a name applied to various groups of Hamites who are, or have been, the primitive Hamitic population of Abyssinia. Formerly they occupied a large extent of the plateau, but were gradually driven, in prehistoric times, towards the south and west by incoming peoples—the Hamitic Semites speaking the Ge'ez tongue. The latter are now divided into the Tigrē and Amhara branches, but the Amhara, who crossed the Takkazè, are much mixed with the Hamitic elements and speech. They are named chiefly in the province of Lasta, on the upper Takkazè (where they were completely reduced only in the 17th cent. by the Emperor of Abyssinia), and in the districts to the south-west of Lake Tānā or Tana (where they give their name to the Agao-land, which is almost entirely peopled by them). They are characterized by broad faces and high cheek-bones, yellow complexion, and strong, coarse, straight hair, and are of the Caneasic type, like their Semitic conquerors, from whom they do not differ much in appearance. The name Agao is probably to be found in the Astrāko of the inscription of Abulis, dating from the beginning of the 2nd cent. A.D., discovered and preserved by Cosmas. This may be the district of Addago on the Takkazè, with a population of Agao blood. Cosmas (A.D. 525) refers to the 'Agæ', and says they acknowledged the authority of the kings of Aksum. About 400 years later, the Agao of Senem, under their queen, Judith, were strong enough to expel the Menilek dynasty from the throne of Aksum (A.D. 1800). The Ago speech is said by Beke to be the language of the people of Abyssinia, as Amharic is that of the court, the army, and commerce. It is spoken from the Shashihat district in the N.E. to Gopam and Sosa in the south, under different names and in a variety of dialects, and in some provinces is almost exclusively in use. By the people themselves in Lasta it is known as Khamitinja; this group also call themselves Hungarite (Huggare). By the Abyssinians the name is applied by the district between the Takkazè and the Abi, and suggesting that the present Hungariite Amhara people may have borrowed their name from that of some of the Hamitic aborigines. D'Abbadie calls the Lasta Hamites Khamitø—a word connected with Khemit, Khemtia (Aethiopica, i. 255); the same (JRS xiv. 50) calls their language Hsemara, Khamtia, still borne by the Khamats of Lake Ta'ānā, and Hamesa were probably names of earlier dominant Agao tribes.

2. The principal divisions of the peoples who may be classed as Agaos are the Agaos of Lasta (Bruce's 'Tcheratz Agaos'), including the Khamats; those of Agomidir and the surrounding districts enclosed in the zone of the dominant tribes from Lake Ta'ānā; and the Falashas. Both the first groups are divided into seven tribes, probably from some sacred number in this number. The second group call themselves Agbagha, according to Bek (JRS xiv. 10). The Falashas, whose language closely resembles the Agao, are found scattered through the province of Senem and neighbouring districts, as well as in Agomidir. They claim to be descended from Jews who escaped from Judea with the Queen of Sheba, and follow the rites of Judaism. Hence they are frequently called the Jews of Abyssinia. But they are certainly not Jews by descent, nor are their features especially Semitic, since in physiognomy they closely resemble the Agaos. Possibly their Jewish faith is the survival of some earlier diffusion of Judaism through Abyssinia before the introduction of Christianity, as there is no record of their conversion. They are divided into three sects, each with its high priest; they hold themselves aloof from the other peoples of the land, do not practise polygamy, and never marry out of their own tribe. Entering a Christian house is strictly forbidden; when this has been done, ritual purification is necessary. Their places of worship or masjids are distinguished by a red earthware pot placed on a pinnacle. They are divided into three compartments, each of different sanctity, as in the Jewish tabernacle, and admission to each is strictly regulated by the Levitical law. Behind is a small enclosure with a stone on which sacrificial victims are slaughtered. Though they have incorporated with their customs several ceremonies drawn from Christian sources, they carefully observe the Law, especially in the ritual of purification and of feasts and keeping the Sabbath. Some of their ceremonies, however, differ from those of the Jewish law. They observe great ritual scrupulousness. The dying and the unclean are taken to a hut set apart for this purpose. They fast twice a week, as well as for forty days before Easter. Their ideas about the Messiah are vague, but they believe that Jerusalem will again be rebuilt. The priests must observe several tabus from which the people are free; some of them are great ascerets, passing years in disual swamps, and sometimes in a frenzy throwing themselves into the waters. As a people the Falashas are inoffensive. They are devoted to agriculture, are metal-workers, and furnish skilful artisans in various towns of the province (see D'Abbadie in Nouvelles Annales des Voyages, iii. 814; Stern, Wanderings among the Falashas, 1862; Beke, JRS xiv. 89).

3. The other branches of the Agaos were pagans, or possibly pagans with a veneer of Judaism, as the name of their queen, Judith, would suggest, until the advent of the Portuguese missionaries in the 16th and 17th centuries. By them they were, in part converted to Christianity of a modified type, and the process was probably completed by their final subjugation to the Abyssinian emperors. Like the rest of the Abyssinians, they are of the Monophysite sect, and assert their orthodoxy as strongly as any; but it is probable that, beneath their nominal adherence to the faith, there are many
survivals of their earlier paganisin with its cult of sun and moon, trees, rivers, and animals, of which the cow was the chief. No complete account of that primitive paganism is now available, but it was a mixture of worship of a high order, and in its observances the fertility of the land was aimed at. Hence the worship of rivers, and especially of the Takkâzi and Âkûl, was prominent. Survivals of these rites are described by Lobo and Brindley, and springs from which the Nile rises were the scene of an annual gathering of the tribes for this cult. A small mound formed the altar upon which the sacrifices were placed. To this place once a year, on the appearance of the star Sirius, the shum or priest called the heads of the Aago clans. A black heifer which had never borne a calf was slain, its head cut off and plunged into one of the springs, and then wrapped up in the hide, which was sprinkled with the sacred water. The carcass was laid on the mound, washed with water, and divided into as many pieces as there were heads of clans. Each head received a piece, and the flesh was eaten raw, with draughts of the Nile water. Lobo says that each then sacrificed one or more cows. The bones were collected into a heap, and the priest, having anointed himself with the fat, sat down on the heap, which was then set fire to. When the flames increased, he ran amongst them, the fire doing him no injury. When all was consumed, each person present made him an offering. The head of the animal was carried to a cave, where other ceremonies were performed, apparently for the purpose of ensuring rain and good seasons. The spirit of the river was called by the highest Divine names—Eye of the World, the Everlasting God, etc., and the priest told Bruce that it entered into him in holy shape like a venerable man (Lobo, Voyage to Abyssynia, Eng. tr. 1733, 99; Bruce, Travels, i. 370). This cult is obviously based upon the importance of the river to the whole region through which it passes, and is not unlike the rites performed by the ancient Egyptians at the rising of the Nile and the appearance of Sirius, the star of Isis (Frazer, Adonis, Attis, Oesiris, 228). Similar rites were practised by other tribes (La grande Encyc. l. 177), and human sacrifices to river-divinities are also spoken of; these also occurred in Egypt (Johnston, Travels in S. Abyssynia, 119). A modified form of these rites still prevailed in Beke's time (1804), and sick persons brought to the springs of the Aago state and left there for seven days in hope of their recovery (Beke, JIRGS xiv. 13). Serpent-worship was prevalent in Abyssinia in earlier times, and a great serpent called Arwé figures in the early history of the people. Some remains of this cult are found among the Aago. The preservation of serpents was prayed for; they were believed to give oracles, and in some cases they were kept in the houses of the people and fed. If the animal did not eat, ill-luck was at hand (Bruce, iii. 732-4). Miraculous stories of serpents are found in the legendary lives of Abyssinian saints (Parkyns, Life of Abp. Stern, 1862; Johnston, Travels in S. Abyssynia, 294). Other relics of earlier amoral worship may be seen in the claim of the Aago of Lasta to understand the language of birds, by the interpretation of which they regulate their affairs (Plowden, Travels in Abyssinia, 124). The Fastival of the Full Moon is called by them their part in maledworking, and some of the Aagoas, are regarded as sorcerers and bandux or wer-wolves. They are believed to take possession of their victims, who exhibit the symptoms of hysteria, and try to get into the forest, where their persecutor, in hyena shape, devours them (see Lycaanthrophy).

4. The Khantans, scattered through Amhara and Shoa, claim descent from Moses, but are regarded as pagans by both the Fasahas and the Abyssinians. They are said to believe in God and in a future state, but are called worshippers of forests from the rites performed by them under trees. Other 'secret acts of devotion' at certain rocks are spoken of. A scheme of King Theodore's for their compulsory conversion was overruled by his advisers (Stern, 43; La grande Encyc. i. 177; Redlus, Univ. Geog. x. 147). It is uncertain whether the Aago tribe, who dwell on the west bank of Lake Tana, belong to the Aago race. They speak the Aago language, but are an extremely primitive people, supporting themselves by hunting and fishing, and eating animals regarded by the other tribes as unclean. By them, therefore, they are called 'idolaters', a vague term, but they call themselves Christians (Keane, Africa, 494; St. Martin, Geog. Unive. i. 30).

LITERATURE.—F. J. Lobo, Voyage to Abyssynia, 1725; James Bruce, Travels to Discover the Source of the Nile, 1799; C. T. Beke, various papers in JIRGS, vols. xii. xiii. xiv.; Antoine d'Abbeville, the Vita seu Vita ad C. Irenæus, contributed to part of the History of the Covenants and Acts of the Church, 1739; V. de Saint-Martin, Nouveau Vols. de Geog. Universelle, 1785, s. c. 'Agoas'; A. H. Keane, Africa, vol. i, 1856, Ethnology, 1862; J. A. MacCulloch.

AGAPE—

i. Summary of theories.
ii. Evidence for Christian common meals and for their conversion to the Eucharist.

2. Historical writings to the end of the 3rd cent. 

Delschach: Ignatius; Polycarp; Justin Martyr; Celsus; Minucius Felix; Lactant; Epitome of Dionysius; Acts of Paul and Thecla; Acts of Perpetua and Felicitas; Irenaeus; Clement of Alexandria; Tertullian; Cyprian; Hippolytus; Origen; Cyprian; Acts of Dionysius; the older Didascalla.

3. Writings of the 4th cent. and later: 'Church Orders': Councils of Laodicea, Carthage No. 3, Ganges; pseudo-Florus; Chrysostom; pseudo-Jerome; Socinus; Augustine; Socsten; Trullan Council.

4. Funeral and commemorative Agape.

5. Archaeological and epigraphic evidence.

iii. Review of the evidence.

(a) General deductions.

(b) Relative order of Agape and Eucharist when united.

(c) The word 'Agape'.

(d) Materials for the Agape.

Literature.

1. SUMMARY OF THEORIES. — The Christian Agape or Love-feast is one of those subjects which are apparently easy, but which are shown by careful study to be exceedingly difficult. At one time or another it has been the subject of much hypothesis, and has been the object of much dispute. At one time in the latter half of the 1st or the 2nd cent., the 'Agape'; that the Eucharist and the Agape were at first united, but that, by reason either of abuses or of external persecution, they were disjoined. At another time the view has been maintained as universal, and which is still by far the most common, is that from the first the Christians celebrated the Eucharist and also a common meal to which some liturgical importance was attached, and which was known as the 'Agape', that the Eucharist and the Agape were at first united, but that, by reason of abuses or of external persecution, they were disjoined.

(a) An entirely different view has lately (1862) been published by Mgr. Batiffol, who thinks that the Agape itself did not exist till the 3rd cent.,
beginning as a private charity supper, and becoming a more public organization in the 4th cent.; that though in the earliest ages the Christians sometimes took their meals in connexion with the Eucharist, yet that no such connexion was generally established. It is not therefore, as is commonly supposed, that the noun 'Agape' in the New Testament means 'dinner or meal taken in common as a part of the Eucharist, or as a meal combined. In Ac 2:42 the article ('the breaking of bread') shows that an ordinary meal is not meant, and we have to take the reference to be to the Eucharist, with or without a religious meal eaten in common, and the word 'food' (ρύζιν) in v. 46 will probably lead us to think that the Eucharist with a meal is meant. The Peshitta reading in v. 42 ('the breaking of the Eucharist') goes the other way, but seems to be a mere guess due to later ideas. The phrase κατά ὑλον in v. 46 (i.e. 'at home' or 'in a private house') has probably no bearing on the matter, as being merely metaphorical; it is not likely to show anything more than that there is any reference to a supposed custom of going from house to house to partake of a common meal.

(ii.) Evidence for Christian common meals and for their connexion with or separation from the Eucharist. It is proposed to gather together here all the evidence; for it seems unreasonable to put out of view, as is suggested by the Church Quarterly Reviewer, all evidence of suppers where the word 'Agape' is not found. We shall discuss later the name 'Agape' itself; it may be remarked that the most important matter to be considered is the thing implied. The name need not necessarily have been universal; or, if it was universal, there is no special reason why the Eucharist was an integral part of all the assemblies, many of whom allude only incidentally to the custom now under discussion.

1. The New Testament.—(a) We may first take Acts, as indicating the earliest Christian customs, though the book itself was written later than 1 Corinthians, which we will next consider. In neither of these books is the name 'Agape' mentioned, but in Acts probably, and in 1 Corinthians certainly, there are allusions to a common meal having some connexion with the Eucharist. In Ac 20:32 we read that the Christians continued steadfastly in the Apostles' teaching and fellowship (ἑννέα), or perhaps 'in fellowship' — in the breaking of bread and the prayers (τα ἁλέα τοῦ ἄρτου καὶ τα ἐν προσκυνήσει, and in v. 46, that they 'day by day continuing . . . in the temple, and breaking bread at home (ἐλώτις τε κατά ὑλον ἄρτον), did take their food (ρυζιν) with gladness and singleness of heart, praising God,' etc. The expression 'to break bread' is found also in Ac 20:11, where St. Paul, at Troas, after preaching till midnight on 'the first day of the week,' and after the Euchysis incident, broke bread and gave thanks after (μετὰ τοῦ ἄρτου καὶ γενναυματος), and 'talked with them till break of day.'—apparently an Eucharist with or without a meal, though Alford (Gr. Text. in comment. on v. 11) and Plummer (ib. p. 316) think that γενναυματος certainly means a meal (cf. Ac 20:5),—and in Ac 27:32, where an ordinary meal is almost certainly spoken of. The phrase was used by the Jews (Jer 16:4, Lk 49), and we find it, or the corresponding substantive, in NT to denote a meal eaten in common. The passage in Ac 27:32, and the Eucharist (Mt 26:26 and Mk. 14:22), and the meal at Emmaus (Lk 24:42), and the Eucharist (Mt 26:26 and Mk. 14:22, and 1 Co 10:16, in the last of which verses, however, κλάσματος agreeing with ἄρτος, the Greek it seems but not quite certain that a meal was not taken in addition to the Eucharist, and that the phrase in the New Testament is to be understood in the sense of a meal taken in common, and particularly the food, not the Eucharist, or perhaps of the Eucharist, or of the Eucharist, and a meal combined. In Ac 2:42 the article ('the breaking of bread') shows that an ordinary meal is not meant, and we have to take the reference to be to the Eucharist, with or without a religious meal eaten in common, and the word 'food' (ρυζιν) in v. 46 will probably lead us to think that the Eucharist with a meal is meant. The Peshitta reading in v. 42 ('the breaking of the Eucharist') goes the other way, but seems to be a mere guess due to later ideas. The phrase κατά ὑλον in v. 46 (i.e. 'at home' or 'in a private house') has probably no bearing on the matter, as being merely metaphorical; it is not likely to show anything more than that there is any reference to a supposed custom of going from house to house to partake of a common meal.

(b) In 1 Co 11:23-24 we have an undoubted reference to a meal taken in common (ὁδοιον, probably, though not necessarily, an evening meal) and combined with the Eucharist, when the Corinthians were in meeting assembled (ἐκ εὐγενείας, v. 22); abuses of greed and drunkenness are censured, and St. Paul promises to return in order to correct the disorder whenever he comes. From this passage most writers have concluded that the earliest custom was for the Christians to combine the Eucharist with a meal taken in common. Lightfoot (Apost. Fath. ii. p. 2, ii. 313) and Duchesne (Origines, p. 48, in Eng. ed. p. 49 n.) further deduce that the meal came first and the Eucharist 'at a late stage in the entertainment'; this (apparently) being suggested by the emphasis laid by St. Paul on our Lord's having taken the Eucharistic cup 'after supper' (μετὰ τοῦ δωτισθῆναι, v. 26). Barthelemy (Études, 1st ser. p. 281) thinks that the union of meal and Eucharist was an innovation of the Corinthians, and that it is the union itself that St. Paul censures. If so, we cannot argue any common custom from this passage. Against this view, Ehrmann (L'Agape, p. 9 ff.) truly remarks that St. Paul does not attack the thing itself, but only the abuse of greed and drunkenness, seeing that each one ate what he had brought, not partaking with others. St. Paul would not, Ernmann says, have hidden them wait for another one if the meal itself, in union with the Eucharist, were the thing condemned. All knew that the Eucharist began when the community assembled. And, further, the Fathers who comment on the passage all see in it the Agape and Eucharist combined. — Chrysostom, Theodore, Augustine, Jerome,—though Chrysostom, imbued as he is with the discipline of his own time (of fasting communion), puts the Eucharist first; Augustin says that it was St. Paul that gave the rule of fasting communion in consequence of the abuse at Corinth (Ep. xxviii. [iv., Bened.] ad Januarianum, § 8).

(c) In Jude, and probably in 2 Peter, we have the first trace of the name 'Agape.' In Jude 12 we read of 'hidden rocks in your love-feasts when they feast with you, shepherds that without fear feed themselves' (συνεργασιῶν, κ. τ. λ.). The reading συνεργασιῶν (BKL, etc.) is no doubt correct, and is supported by the
Vulgate (epulis) and the Syriac (3σρας), but AC have ἀγάπας, influenced by v. V in 2 P 10, 4. This was the common feast called Agape, but nothing is said of the Eucharist. There is no necessary connexion of the feast with the Eucharist in Jude, nor yet any necessary separation. Batifol endeavours to get over this without Asgone by translating ἀγάπας to 'love,' saying that Jude elsewhere has ἀγάπας in this sense (v. 2; cf. ἀγάπης, v. V. 17), and that he uses plurals for singulars elsewhere,—in v. 6 δέκα (Vulg. majestatem, Syr. also has singular), and in v. 18 ἱνα (Vulg. confusiones, but Syr. has singular). There is, however, no reason for taking these plurals as singular in meaning; in the former case 'dignities' makes the only good sense, and in the latter the plural, as meaning 'each his own shame,' is very suitable. Thus Batifol's translation in v. 6 can hardly be accepted. But in any case the common feast itself (if not the name 'Agape') is borne witness to by Jude. In the parallel passage 2 P 21 we have at least one variation: 'Spots (στόχοι) and blemishes, revelling in their love-feasts (ἀγάπας) while they feast with you' (συνεδριάζομεν δέδακται). Here we note the variation of the ἀγάπας of Jude and the ending ἀγάπας, which is supported by B and by the A corrector, the Vulgate, Pseudo-Syr. (the Peshitta does not contain Jude or 2 Peter), Sahide, and Ethiopic, is disputed by A C, which have ἀγάπας both here and in 2 Peter. Deissmann gives the ending ἀγάπας, which is supported by B and by the A corrector, the Vulgate, Pseudo-Syr. (the Peshitta does not contain Jude or 2 Peter), Sahide, and Ethiopic, is disputed by A C, which have ἀγάπας both here and in 2 Peter. Did not Jude refer to the Agape in the Jude passage that was before him. On the other hand, Lightfoot (op. cit. ii. 318) and Bigg (Internat. Crit. Com. in loc.) treat ἀγάπας as an obvious error; and this is probably true, ἀλλά ἅπαξ passing very easily into ἅπαξ ἅπαξ. 2. Ecclesiastical writings up to A.D. 300.—(a) We may pass over Clement of Rome (though his mention in § 44 of the presbyters 'offering the gifts of the episcopate' is thought by Lightfoot to include contributions to the Agape) and come to the Didache, which, in common with almost all writers, we may date very early in the 2nd century. In this work (§ 9) we find, after instructions on baptism, fasting, and prayer, directions for the 'Eucharist' (ὑπερὶ τῆς εὐχαριστίας ὡς εὐχαριστησαι), with thanksgivings first over the cup and then over the 'broken bread' (ἐλάχητα); to the latter is attached a prayer that the Church may be gathered together. In these formulas we have no reference to our Lord's words at the Last Supper, or to the sacrament of His body and blood; nor is there anything in common between them and the Eucharistic passages of Ignatius and Justin Martyr. After them follows a prohibition against any of the unbaptized eating and drinking of the 'Eucharist,' and we then read (§ 10): 'After ye are satisfied (μετὰ τὸ ἀφεπώρησαι), thus give ye thanks;' and the thanksgiving is for God's holy name, for the 'knowledge, faith, and immortality made known;' for God's power, and because the Creator had given food and drink for enjoyment (εἰς ἑυτροφίαν), and had bestowed spiritual food and drink and eternal life. A prayer is added for the protection and gathering in of the Church, ending with 'Hosanna.' Then comes a 'fencing of the tables' and 'Yahrapamath.' But prophets may 'give thanks' as much as they desire (εὐχαριστήσεις διὸ ἐνθεοσκών). Of all this there are many interpretations. Batifol (op. cit. p. 234) thinks that the Eucharist was 'holy' or 'sacred,' but not yet a separate sacrifice; he takes the words 'after ye are satisfied' metaphorically, as a souvenir of Jn 6:26 (though that tells against his view). He considers that as only the cup and the bread are mentioned, we cannot have here an Agape; while in the thanksgiving after 'being satisfied' he finds a hint that the Agape which was partaken of at Spots was no longer applicable to an Agape. Dom Lecerou also (Dict. d'Archéol., Chrét., s.v. 'Agape,' col. 792) thinks that the Didache does not mention the Agape, but that it does not contradict the supposition. In § 11 it is pointed out that the Didache considers that the first formulas are the words used to consecrate the bread and wine. Mr. Box likewise (JThSt, iii. 363 ff.) holds that the Didache formulas are for the Eucharist, but he believes the Agape followed the Eucharist and must be inserted before the words 'after ye are satisfied.' Prof. Ermomi, on the other hand, holds (op. cit. p. 17 ff.) that, as the Didache in § 14 speaks of the Sunday Eucharist ('gather yourselves together and break bread and give thanks,' or celebrate the Eucharist, εὐχαριστησαι,—first confessing your transgressions, that your sacrifice may be pure'), the earlier sections must speak only of the Agape; and he concludes that the two ordinances were then separate, all the baptized being allowed to attend the Agape, but only the pure and holy (§ 15) the Eucharist. He takes εὐχαριστησαι in §§ 9, 10 as the name of the Agape. In § 11 he treats εὐχαριστησαι as 'first mentioning the Eucharist,' and regards it as probable that both Bp. Lightfoot (op. cit. ii. 313) and Dr. Keating (The Agape, p. 53), that the Didache writer means that the Agape was joined on to and preceded the Eucharist. The reference in §§ 9, 10 would then be to the two combined; the mention of the Sunday συναγωγή in § 14 does not really militate against this. The Agape probably, in the Didache, did not contain the Eucharist, and the terms in §§ 9, 10, 11 are the same as in the Romans passage given there as grace before and after meat (so Bp. J. Wordsworth, Holy Communion, p. 46); and after the people were satisfied came the fencing of the tables (§ 10 e.), which, as Zahn (Forsch. nach Gesch. des NT Kanones, 3rd pt. p. 238 f.), suggests, would be the connecting link between Agape and Eucharist. The prayers for the Eucharist, on this view, are not given; but prophets might use any words which they thought suitable. It is not improbable that the earliest Eucharistic worship was, in the main, extemporaneous. This theory makes εὐχαριστησαι in the Didache include the Agape. As the common meal was holy and so celebrated; as there is no trace of a separate 'antidote' in the thought of the writer such a sharp distinction between the two that one name might not be applied to both (cf. Ignatius below), or that the meal itself should not be conceived of as giving a spiritual blessing, as in the thanksgiving 'after being satisfied.' It is remarkable that the writer of the Apostolic Constitutions (viii. 23 f.), owing to the changed conditions of his day, in adapting the Didache turns this thanksgiving into a thanksgiving 'after partaking' (μετὰ ἐπάρασιν) of the Eucharist. There is another passage in the Didache (§ 11) which should be noticed. A prophet who 'orders a table (ὑπερὶ τῆς ἑνωρίας) in the Spirit' must not eat of it. The Eucharist therefore cannot be referred to. The phrase may be applied to an Agape, but Batifol is probably right in thinking that merely gifts to the poor are meant, and that these is nothing liturgical about this passage. (b) Ignatius (c. 110 A.D.) speaks (Éphés. 20) of 'breaking one bread, which is the medicine of immortality and the antidote that we should not die but live for ever in Jesus Christ;' and P. 14:7 says: 'I desire the bread of God, which is the flesh of Christ . . . and for a draught I desire His blood, which is love (ἀγάπης) incorruptible.' (see below, 290). These are some things that the Agape is the Eucharist which is under the bishop . . . it is not possible apart from the bishop either to baptize or
to hold a love-feast (缲νεάνεα ποιεῖται). In the first two passages Ignatius clearly speaks of the Eucharist, and it is remarkable that he uses ἐχαρίστημι in connexion with it; but the interpolation of the last passage is that ἐχαρίστημι includes both the love-feast and the Eucharist, which would therefore be held together in Ignatius' time. This is Lightfoot (op. cit. p. 312 f.). But Batiffol takes ἐχαρίστημι here of the Eucharist, 'par une abstraction,' and thinks that the metaphorical use of the word in Rom. 7 bears out his view. He denies that 'Agape' was at this early time used of a feast. He says, (p. 281), that the first meeting was only for praise and prayer, and the second only for the Eucharist,—that being the meaning, he says, of 'ordinary and innocent food,'—the Agape not yet existing. He thinks that the Eucharist no less than the Agape would be contrary to Trajan's edict; and that, had the Eucharist been celebrated at the morning meeting, the apostates would have said so, for they had no reason for hiding anything. Dr. Armitage (op. cit. p. 177) says, (p. 17) that we cannot deduce from Pliny's letter that the Eucharist and the Agape had once been united, and that they were at that time, or had been at some previous time, separated; he considers that the renegades had given up the common meal, but that the Christians, as far as we know, had given up nothing. The renegades, however, had given up Christianity altogether, and they spoke of what had been given up before the Agape was broke out,—they can hardly refer to any but the whole body of Christians in Bithynia. Dom Leclercq (op. cit. col. 780) thinks that the early meeting was the one which was given up; but the Latin will hardly bear this construction.

None of these criticisms seems to the present writer to have shaken Lightfoot's position.

(d) Justin Martyr (Apol. 65–67) openly describes the Eucharist; for, as Batiffol shows (Ecclesiae, 1st ser. p. 18), the disciplina aemula hardly existed in his day; but he does not mention the Agape. Leclercq (op. cit. col. 786) thinks that his silence does not exclude it, for he had only to defend what was attacked. But surely the Agape was a great act of attack? Keating (op. cit. p. 59) thinks that it had been given up generally, because of Trajan's edict; and with this opinion we may agree. The unessential nature and partial existence of the Agape are the conclusions to which the early evidence points.

(e) The date of Celsus is disputed. Keim, Funk, Aubé, Renan, and Mozley place it c. 177 A.D. For a careful discussion see Lightfoot, Ap. Fath. pt. 2, i. 530 f.; he gives reasons for thinking that the date should be put before A.D. 161. Origen (Cels. i. 1) says that Celsus' first accusation against the Christians was 'that they were accustomed to hold secret meetings among themselves, forbidden by the laws (ὡς συνθήκες κρύβονται πρὸς ἄλλους ταρασσόμενοι, κ.τ.λ.). And he would calumniate the so-called Agape of the Christians among themselves [καὶ θεοκτήτως βαθεῖᾳ τῷ καλούμενῳ ἐχαρίστημι Χριστιανῶν πρὸς ἄλλους] as taking its rise from the common danger,' etc. Batiffol (Letter in the Guardian, Jan. 7, 1903) argues that ἐχαρίστημι must mean 'love' here, since πρὸς ἄλλους follows. No doubt the phrase 'Agape among themselves' is not an elegant one, but Batiffol's interpretation makes καλούμενῳ meaningless; 'so-called love' has no sense. The expression is parallel to the phrase above (καθαρὰ ἐκχύων πρὸς ἄλλον). May there not be a double entendre in the second phrase, the word ἐχαρίστημι being used in its technical sense, with an ironical reference to the primary one? Celsus would mean 'the so-called Agape of the Christians, the feast of mutual love.' He could not intend to condemn Christian love as arising from the common danger and having a power that transcends earthly considerations. Origen clearly states his points. In ἐχαρίστημι there is no confusion; while the later meeting was for the Agape, which, in consequence of Trajan's action, was given up in Bithynia. The separation between Agape and Eucharist would either have taken place some time before, or, in Pliny, the most profane thinks (following Augustine), in St. Paul's time,—or else have been recent, and due to Trajan's well-known hostility to clubs. It is inconceivable that the Christians should have given up the Eucharist, and this consideration is against Batiffol's idea (op. cit. p. 288), that the first meeting was only for praise and prayer, and the second only for the Eucharist,—that being the meaning, he says, of 'ordinary and innocent food,'—the Agape not yet existing. He thinks that the Eucharist no less than the Agape would be contrary to Trajan's edict; and that, had the Eucharist been celebrated at the morning meeting, the apostates would have said so, for they had no reason for hiding anything. Dr. Armitage (op. cit. p. 17) says, (p. 17) that we cannot deduce from Pliny's letter that the Eucharist and the Agape had once been united, and that they were at that time, or had been at some previous time, separated; he considers that the renegades had given up the common meal, but that the Christians, as far as we know, had given up nothing. The renegades, however, had given up Christianity altogether, and they spoke of what had been given up before the Agape was broke out,—they can hardly refer to any but the whole body of Christians in Bithynia. Dom Leclercq (op. cit. col. 786) thinks that the early meeting was the one which was given up; but the Latin will hardly bear this construction.

None of these criticisms seems to the present writer to have shaken Lightfoot's position.
says (Octavians, xxxi. 5): ‘The feasts (convivium) which we hold (codinum) are chaste and temperate; we neither indulge ourselves in luxurious repasts (epida) nor protract our feast (convivium) with strong drink, but we blend cheerfulness with gravity.’ This can only refer to a meal, not to the Eucharist, to which the accusations of drunkenness and gluttony are directed. Though Batifol thinks that Mineeus is here alluding to it alone.

(q) Lucian in his satire de Morti Periergini, § 12 (written probably not long after A.D. 155, Lightfoot, Conybeare, etc.), says that when Periurgus was in prison, ‘old women—widows they are called—and orphan children might be seen waiting about the doors of the prison. . . . Then various meals were brought in and sacred formularies (Neps; eisō) of theirs were repeated.’ Whether Lucian was primarily satirizing the Christians or the Cynics, we have probably here, as elsewhere, allusions to Christian history and customs, and in this case to the Agape (see below, i).

(b) The Epistle to Diognetus (date uncertain; probably c. 170 A.D., though some argue for a later date) says of the Christians that ‘they partake of the same table, not of the same bed’ (παράκειται συναφον, στάθμον δοστήριον; evidently alluding to the accusation of Edipoleus incests made against the Christians. As Leclercq (op. cit. col. 796) observes, this accusation seems to refer to the Agape, while that of Thyseban banquets refers to the Eucharist, the feeding on the body and blood of Christ being misunderstood; and the παράκειται κοινόν would apply less to an Eucharist than to a feast where the guests lay at meat, there being no panonion between them.’ In § 9 he alludes to Thyseban banquets; in § 30 he returns to the heathen accustions, dealing with the charge of incest, and the words used (e.g. ‘triciunum,’ ‘discumbere,’ ‘cenula’) show that a meal in common is referred to, though Batifol understands him to speak symbolically of the Eucharist throughout.

In the treatise ad Martyres (§ 2, Patr. Lat. i. 606), Tertullian speaks of the consolations of Christians in prison ‘through the care of the Church, the brethren’s Agape’ (cf. Acts of Perpetua, above); but here the meaning probably is ‘love merely, though the Greek word is used. In his Montanist days he brings against the Catholics the very accusations which he had refuted in his Apologeticus. In de Jejunio, 17 (Patr. Lat. ii. 1029, c. 217 A.D.), he accuses them of lecheryfulness in the Agape: ‘Apud te agape in cunx suis; dixit in libellis, deus in delictis; sed major suum cat agape, qui per hanc adolescentes iuri cum sororibus dormient, etc.’ This cannot possibly refer to the Eucharist.—Tertullian’s style is so difficult that it is not surprising if scholars do not agree in interpreting his words; but it is hard to escape the conclusion, especially from the Apologeticus passage, that the Agape, as we generally understand the term, was in common use. We read here of preliminary prayers, sitting at meat, handwashing, the lighting of the lamps, psalms and hymns, prayer and dismissal; a collection was taken for the poor. This description shows that the Agape was held in the Eucharist. On the other hand, the Eucharist in Tertullian’s time was in the morning (de Cor. Mil. 3 [Patr. Lat. ii. 90], etiam antelunaiar colittus, where ετείον perhaps means that the usual custom was to celebrate the Eucharist after dawn, save in time of persecution; cf. de Fuga in Persae. 14 [Patr. Lat. ii. 141], where the same is implied; see J. Wordsworth, Min. of Grace, p. 317). For a full discussion of Tertullian and the Agape, see Keating, The Agape (Patr. Lat. cc. 201 ff.; Leclercq, col. 802 ff.; Ernmoni, p. 28 ff.).

(m) There is not much that need detain us after

of the feasts of some heretics (perhaps the cause of the heathen slanders), and says that he will not dare to apply the name Agape to pitiful suppers redolent of savour and sauces, dishonouring the good and saving work of the Word, the consecrated Agape, with pots and pourings of sauce. . . . Gatherings for the sake of mirth . . . we may lightly suppose entertainments (e̱rdēsa) the Lord has not called Agape.’ So in Strom. iii. 2 he denounces the lecheryfulness of such entertainments (e̱rdēsa) the Lord has not called Agape.’
AGAPE

this till the end of the 3rd cent., but the Canon of Hippolytus are important as introducing a whole parallel passage of the Apostolic Constitutions (ii. 25, c. 375 A.D.), which has ‘Agape’ or entertainment (cypriag even έαπομενή αἰγόμενη) within the same interpolation as above (2) and explains the Didascalia without adding to the sense.

3. Evidence of the 4th cent. and later.—It is not disputed in the 4th cent. there was a custom of having meals in common and of calling them ‘Agape’; and also that the Eucharist was absolutely distinct from them.

(a) The ‘Church Orders’ make this plain. For a description of their use and for other references, see Cooper-Maclean, The Testament of our Lord, pp. 7ff., 25ff.; Funk believes that the dates of most of them are later than those there given. The Egyptian Church Order (310 A.D.), found in the Sacramental Canon of Egypt or Egyptian Hypestech, the Ethiopic Church Order (c. 355 A.D.), found in the Ethiopic Statutes ( lately published by Mr. Horner), and the Latin Verona Fragments (c. 340 A.D.), edited by Dr. Hanler, and the Testament of our Lord (c. 350 A.D.; some think that it was edited in its present form c. 400 A.D., though this seems less likely), all speak of the common meal, which the Egyptian Church Order and the Verona Fragments call ‘the Lord’s Supper,’ and all forbid the catechumens to partake of it, thereby they allow them to receive the ‘bread of exorcism’ (Ethiopic: ‘of blessing’) and a cup (the bread and cup are omitted in the Testament). The bishop presides and exhorts; all eat abundantly, but soberly and in silence; drunkenness is strongly forbidden, and the host is not to be brought on the host. We must also notice that the Egyptian custom of taking exorcism and of eating on the altar appears to have been done since the people were each to receive a portion of bread, and ‘this is a blessing, and not an Exorcist like the body of the Lord’ (the Testament has a similar phrase). This partaking of eulogie (‘blessings’), or leaves given by the people at the offertory in the Eucharist, but not consecrated, afterwards became and is still very common in the East, and it is just possible that it may be a relic of the Agape. Perhaps the ‘bread of exorcism’ is something of this sort. In these Church Orders the Agape is a feast provided by the rich for the whole community; it is not represented as being merely ‘a charity supper’ or a form of aims to the poor.

(b) The Agape is mentioned in three 4th cent. Councils. That of Laodicea in Phrygia (c. 370?) forbade the ‘so-called Agape’ to be held in the Lord’s house (esophage) or in churches (can. 28), and the prevalent abuse of representations of the 3rd Council of Carthage (A.D. 397) made the same rule (can. 30, aliter 29; following one which orders that the sacrament of the altar shall always be celebrated fasting’ except on Munday Thursday. The Council of Gangra in Paphlagonia (date uncertain) endeavours to restore the Agape to its former dignity, and forbade any to despire those who in the faith solemnized it (can. 11). This shows that the abuses of the Agape were leading to its discontinuance in Asia Minor.

(c) Pseudo-Pionius’ Life of Polycarp can be used as evidence only for the 4th cent. (see Lightfoot, Ap. Fath. p. 2, fl. 429f.). The writer of this Life of Polycarp visited a certain bishop named Daphnis, who made an offering in his presence to a number of brethren, and set a little cask full of wine in the midst of them, which miraculously remained full through they drank from it. Here an Agape seems to be meant.

(d) The comment of Chrysostom on 1 Co 11 (Hom. 27) does not appear to give us any sure indication about the ordinary Agape in his own day. He uses the past tense, and from his language here, if taken alone, we might have supposed that the Agape had ceased in his time. In
Hom. 22 he describes how, after instruction, prayer, and 'communion of the mysteries,' the rich had been accustomed to bring materials for a feast from their houses to the church, and to entertain the poor there. Pseudo-Jerome and Theodoret in their comments on 1 Co 11 follow Chrysostom. Their evidence is good for what was the tradition of former custom, though not necessarily for that of Apostolic times (see above, § 1). In the same Hom. 27 and in Hom. 31 Chrysostom refers to the funeral-Agape of his own day (see below, § 5), we cannot say.

(e) Augustine speaks of the Agape in his own time as a charity supper (c. Faust. xx. 20). Faustus the Manichean had represented the Christians as converting the heathen sacrifices into their Agape. Augustine denies this and says that the Agape is a feeding of the poor ('agapes enim nostre pauperes pacuento') with fruits or flesh meat. But whether the Agape was in his day celebrated regularly, or only as a funeral feast (see below § 4), we cannot say.

(f) The Agape in Egypt in the 5th cent. united with the Eucharist, is apparently attested by Socrates and Sozomen. The former says (HE v. 22): "...it is not far from Alexandria the city near Alexandria the city...". The latter speaks of the Thebaid holding their religious assembly on the sabbath, but do not participate in the mysteries in the manner usual among Christians in general; for, having eaten and satisfied themselves with food of all kinds, making their offering (sacrificia, i.e. celebrating the Eucharist, as often) in the evening they partake of the mysteries." Sozomen (HE vii. 19) says: "There are several cities and villages in Egypt where, contrary to the usage established elsewhere, the people meet together on sabbath evenings, and, although they have dined previously, partake of the mysteries." [For the Saturday Agape cf. the Acts of Piacens, above, 2 (q)]. Dom Leclercq (op. cit. col. 822) thinks that in Socrates and Sozomen there is no trace of an Agape, only of an Eucharist. But the words 'eating and satisfying themselves' certainly point to one, and the whole object of this exceptional custom would appear to be to keep up the example of the Last Supper.

(g) We notice, lastly, that as late as the Trullan Council (A.D. 692) the 'African practice of receiving the Eucharist on Maundy Thursday after a meal' is disapproved (canon 29), and Agape within the churches are forbidden (canon 74).

4. Funeral and Commemorative Agapes. — These shows, which, like the others, were probably held separately from the ordinary Agape, as being quite distinct in origin, and as having arisen later (Duchesne, Origines, p. 49 n., Eng. tr.). It will be a question whether some of the references already given should not have been placed under this head. The commemorative Agape was a Christianized form of the heathen patercias or festival in honour of dead relatives (cf. Augustine, Ep. xxix. 9 ad Alyppium); and the custom probably was, first to celebrate the Eucharist with prayer for the departed, and later in the day to hold an Agape. In the references to this custom in Tertullian and Cyprian, the Eucharist is not explicitly mentioned; but probably an Agape is intended as well, as the Hippolytian Canon show. The custom seems to have spread as the veneration for the martyrs grew.

In the Martyrdom of Polycarp (§ 18) the Smyrneans seem to be celebrating the birthday of his martyrdom, for the commemoration of those that have already fought in the contest,' etc. But we are not told how the commemoration was to be celebrated, whether it was a simple banquet (as Gnostic; c. 170 a.d.?) or perhaps earlier) speak of going 'to the tomb to break bread' (ed. Zahn, p. 241). This may be an Eucharist or the Agape. Tertullian (de Cor. Mil. 3 [Patr. Lat. ii. 99]), immediately before describing baptism and the Eucharist, says: 'We make oblations for the departed, especially for their birthdays'; and in de Monogn. 10 (Patr. Lat. i. 992) the widow 'prays for his [her husband's] soul . . . and offers (i.e. the Eucharist) on the anniversary of his falling asleep. So in de Euchar. Nat. 11 [Patr. Lat. ii. 794] addressed to a widower about his departed wife, we read: 'For whose spirit thou prayest, and for whom thou offerest annual oblations.' The Consuls of Hippolytus (Orig. eccl. i. 8) have this direction: "If there is a memorial of the dead, before they sit (at meat) let them partake of the mysteries, though not on the first day of the week ('neque tanen die primum'). After the oblation, let the breviary or Hieronymism be distributed to them before they sit down.' This comes after the directions for the Sunday Agape, and before general rules for meals taken in common. We may notice here that the parallel passage in the Apostolic Constitutions (c. 375 a.d.), which follows an office for the departed, refers to the commemorative feast only, not to the Sunday Agape (viii. 44; Lagarde, p. 276), and rebukes faults of drunkenness. In Cyprian (Letters 96, A.D. 217; see also Patr. Lat. iv. 323) we read of sacrifices being offered ('sacri lactis offerimus') for martyrs and their anniversaries kept, and the last words probably refer to an Agape (so elsewhere in the Epistles). For many years after Cyprian's death they dined and sang round his grave, till this was stopped by Aurelius, bishop of Cartaghe (Augustine, Serm. cec. v. 5 [Patr. Lat. iv. 328 f.]; a feast is probably implied. The story of John, ascetic to Origen (Bk. iii. p. 238, ed. Lommatsch), speaks of these commemorations of the departed as being an opportunity for feeding the poor. In the 4th cent. we have an obscure canon of Elvira in Spain (A.D. 305 a.d.), forbidding lights in cemeteries 'per diem,' as disturbing the souls of the dead (canon 34). This may refer to a funeral Agape; the lamp-lighting rather points to this. Later, Gregory of Nazianzus (Orient. vi. 4 Ep.) and Chrysostom (Hom. 47, On Julian the Martyr) bewail the drunkenness that was rife at these entertainments (cf. also Chrysom. Hom. 27 in 1 Cor. 11, Hom. 31 in Mt. 9). Augustine tells us of the pious custom of his mother Monica at Milan, of bringing food 'ad memorias sanctorum,' as was usual in Africa; but that Ambrose had forbidden it (Confess. vi. 2), no doubt because of the 'revellies and lavish repasts in cemeteries.' (cf. St. John, 3:26) describe banquets given to the poor on Saints' days, 'the hosts considering that they are entertaining the martyrs themselves.' These scenes speak of the disorders and drunken revels that followed the death: 'let us pray for them and consecrate the body of Christ, they separate' (Migne, Patr. Gr. lxxvi. 357 f., 364.f., quoted by Leclercq). At the funeral itself feasts were common. Paulinus (Ep. xiii. 11, A.D. 397) tells how the conference of the synod of Jungle and the Agape called an Agape, given for the poor in the basilica of St. Peter, by Pannomchus.

In Syriac writers Agape is called nychalath, lit. 'to make oblation.' In Acts of John (Gnostic; c. 160 a.d.) 108:2:2 Peter the word, however, has no special reference to the dead, nor can it be argued from it that the Syriac translator of Jude and 2 Peter took the
meaning of ἀγαπή to be 'commemorations of the dead.' On the other hand (see Payne-Smith, Theaurae Syriacae, s.v.), the word ἀγαπή, especially in a liturgical context, is not synonymous with charity, as is often supposed. The ordinary word for 'Saints' days,' and then the reference is without doubt to commemorative Agapes.

5. Archæological and epigraphic evidence.—The Agape is mentioned in the second century, but it is too vague, and the dates are too uncertain to lead us to any sure conclusion about the Agape. Reference may, however, be made to Dom Leclercq's art. in the Dictionnaire d'Archeologie Chrétienne, where this side of the subject is treated very fully with excellent illustrations. It will suffice here to mention one or two examples of evidence adduced by the author. There is a fresco in the Capella Green of the Cemetery of St. Priscilla near Rome, discovered in 1898. The multiplication of the leaves and fishes is represented as a banquet, with seven persons lying at meat. Dom Leclercq thinks that this shows that at the time of the fresco the Agape and the Eucharist were united. But this is very precarious. Of inscriptions alluding to the heavenly Agape may be mentioned τινὶ ἐν Θεῷ (Leclercq, op. cit., col. 522) and Anima dulcis pie esse Agape (by St. Irenéus). It is possible that πανίῷ = τινὶ, πανίων = ἐν Θεῷ, and perhaps τινί = τίνι (ib. col. 333).

iii. REVIEW OF THE EVIDENCE. — (a) General deductions.—Looking back at the quotations and references detailed above, we may obtain some idea of the history of the Agape. To the present writer it appears, after a careful consideration of what has been written in the last few years, that Bp. Lightfoot's view of the matter has not, in the main, been shaken. The evidence seems to point to the Apostles, probably because of the precedent of the Last Supper, having combined the Eucharist with a common meal, which before long was called the Agape. Yet the Agape was not universal. It was dropped, in some places earlier than in others, and then resumed under somewhat different forms. At first, as the evidence seems to show, the Agape was a meal for the whole community. To call it always a 'charity supper,' as it undoubtedly became in some or in most places later on, is a little misleading. It was a supper for all, rich and poor alike, though no doubt provided almost entirely by the rich, a sign of Christian unity and marked by liturgical forms. Later, the thought of the rich providing for the poor and of the Agape being a charity became prominent; and this was perhaps largely due to the rise of funeral or commemorative feasts, in which the relatives of the deceased gave in his honour, or rich people generally gave in honour of a martyr, a banquet to the poor. These commemorative feasts and the ordinary Agape seem to have been confused, at least in many places, during the 4th century. It is important to bear in mind that the custom of the Agape, being a non-essential, varied in different countries. Perhaps it never became universal; certainly it was of only partial adoption for the greater part of the first four centuries.

To summarize the evidence, we may say that in Acts and 1 Corinthians the Eucharist and the Agape seem to have been combined; in Luke and 2 Peter perhaps dissociated. In the Didache and Ignatius they were probably combined, and perhaps also in Irenæus quite up to the time of Cyprian, when they were already somewhat out of date. In the writings of Origen the Agape does not seem to have been actually existent, perhaps on account of Trajan's Edict. In Celsus, Minucius Felix, and the Epistle to Diognetus it is found existing. In Gaul, at the end of the 3rd century, and in a certain form in historic documents, it is not mentioned by Irenæus. Lucian's satire and the Acts of Perpetua probably testify to the custom of a 'prison Agape.' Clement of Alexandria, Tertullian, Cyprian, the Canons of Hippolytus, and some Acts of Martyrs in the 3rd and 4th centuries, attest the Agape as existing and separated from the Eucharist; the old Didascalia describes it as a feast to old women. In the 4th century, 'Church Orders' the Agape is a common meal, not only a charity supper; it is entirely separated from the Eucharist. From the canons of the Councils of Laodicea, Gangra, and Carthage (No. 3), we gather that it was held in churches; perhaps the evidence shows a tendency for it to disappear at this time. Augustine treats it as a charity supper, 'the feeding of the poor.' In the 5th century, there is the remarkable testimony of Socrates and Sozomen to the exceptional case of Agape and Eucharist combined in Egypt; but there is nothing to show that this custom had always existed there. It may, on the one hand, be a relic of old custom; or, on the other, it may be a revival, a piece of out-of-date antiquarianism. In the 7th century, the Trullan Council shows that the Agape and Eucharist were united. Commemorative Agape are probably referred to by Tertullian, the Acts of John, and Cyprian, certainly in the Canons of Hippolytus, in the Commentary on Job (by Origen), and in the Canons of Nazianzus, Augustine, Chrysostom, and others.

(b) relative order of Agape and Eucharist when united.—Did the Agape or the Eucharist come first? On the one hand, we have the precedent of the Last Supper, where the Eucharist followed the meal, and the suggestion in I Co 11 that the Corinthian Agape came first (see above, ii. 1). In the Didache, if the view taken above (ii. 2) be right, the Agape precedes, and the 'meanings of the tables' is followed by the Eucharist. In the exceptional case in the Thebaid in the 5th century, the Agape (if there was one) clearly came first. On the other hand, in Ac 20, we have the order, 'breaking bread' and 'eating.' If the former means the Eucharist and the latter the Agape, the order is reversed. It is quite possible, however, that 'breaking bread' and 'eating' are here one and the same thing, and refer to the Eucharist and the meal combined; in which case we can make no deduction from the words. As has been seen, Chrysostom, in his homily on 1 Corinthians, makes the Eucharist precede, i.e. not in his own day merely, but in the primitive ages. We may perhaps lay no great stress on the late evidence of the Thebaid on the one hand, or of Chrysostom on the other. The Fathers of the 4th or 5th century probably had no knowledge of Christian antiquities in this department than we have. Chrysostom was no doubt influenced in his view of the Apostolic age by the customs of his own day, and the Christians of the Thebaid may have been merely trying to follow what appeared to them to have been the custom at the Last Supper. Confining ourselves, then, to the early evidence of NT and the Didache, it certainly seems more probable than not that the Agape came first, and that the Eucharist immediately followed. This is Bp. Lightfoot's view. Dr. Lock (in Hastings' DB, s.v. 'Love-feasts') inclines the other way; and so, more decidedly, does Mr. Box (op. cit.).

(c) The name 'Agape.'—It is important to consider why this word was applied to a meal. The Greek ἀγαπή is apparently first found in the LXX. Before NT it is exclusively found in Jewish documents. It is not, however, largely used. M. B. Ritschl (Bibl. Stud. p. 199, Eng. tr.) quotes a passage in Philo (Quod Deus immutat, § 14), who probably took the word from the LXX; the meaning is 'love to God;' ἀγάπη being found in Thucydides, but we do not know if the glossator was a Christian or not (see Deissmann, op. cit. p. 200). In OT and NT, except in
two passages Jude 12, 2 Pet 2:9, the word always means 'love.'

How, then, did it acquire its technical sense? Dr. Keating (paper in the Guardian, Dec. 31, 1902) supposed that it was because of the new commandment given at the Last Supper (Jn 13:34 & 14:23 & 21:15 ἀγαπᾶτε ἀλλήλους) and this may very probably be the case. At any rate, the feast would be called 'love,' because of the Lord who joined Christians together; and when (as in Ignatius) the name was applied to the Eucharist and the meal jointly, it would be especially suitable, because Christians are thus united to their Saviour. That this was the main idea of the name is confirmed by the phrase 'kiss of love,' φιλία ἀγαπής ἀγάπης (1 P 5:10; cf. φιλ. ἀγαπη, Ro 16:16, 1 Co 13:1, 1 Th 5:16), which was no doubt in early times as in later ages, and as it is still in the East, one of the most significant features of Christian assemblies; by it the worshippers reminded themselves of their brotherhood. As the idea of a charity supper became prominent, after the separation of Eucharist and Agape, the name was applied to the Lord's - above, meal. As James (all the services of a charity supper, perhaps) Acts of Perpetua and Felicitas, Clement of Alexandria, Tertullian, Origen (quoting Celsius), Acts of James and Matthias, the older Didascalion, and in the 4th cent. writers passim.

As in the case of other technical terms, it is probable that a double reference was not uncommon. Just as 'Agape' was used of a meal with the Eucharist, for example, Jesus' (as probably) Acts of Paul and Thecla, (perhaps), Acts of Perpetua and Felicitas, Clement of Alexandria, Tertullian, Origen (quoting Celsius), Acts of James and Matthias, the older Didascalion, and in the 4th cent. writers passim.

As will be seen from the evidence produced above, the name 'Agape' is applied to a meal taken in common, if the deductions made in this article are correct, in the following: Jude, 2 Peter (probably), Ignatius, Celsius, (probably). Acts of Paul and Thecla (perhaps), Acts of Perpetua and Felicitas, Clement of Alexandria, Tertullian, Origen (quoting Celsius), Acts of James and Matthias, the older Didascalion, and in the 4th cent. writers passim.

that the Eucharist followed by the Agape (for Mr. Box believes the Eucharist to have come first) represented the Jewish Qiddush followed by a festive meal. But at the same time it certainly followed the meal (1 Co 11:20) and the balance of the argument appears to be against the order required by this theory for the Christian Agape (see above, ii. (b)). And, further, the Paschal character of the Last Supper seems too evident for us to be convinced that it was not in some sense a Paschal meal. So, if our difficulty as to the origin of the Agape remains, and we must look elsewhere for it, without indeed denying the influence of the Last Supper on the customs under discussion.

The environment of the Apostolic Church must certainly be considered in judging of the origin of the Agape. To the Jewish common meals were quite familiar. The Essenes made a practice of them, living a sort of community life (Philo, Quod omnia probos liber; Jos., B.J. ii. 8; Hippolytus, Ref. Narr. i. 18 ff.). For other Jewish illustrations see Josephus, Ant. xxv. 18 (in which the custom is accounted for, among others, by the fact that under the influence of the custom of the Besor, or festive meal, among the Israelites the regular scene of dining and guest-reception became the scene of the religious banquet), and the Book of Jubilees (fests. 110 ff.).

The two most important facts to be remembered are thus, that (1) in the Jewish origin of the Agape in the earliest Christian literature, and (2) the connection of the Agape with the Last Supper, which were also the keys to the understanding of the Agape in the Church from the time of Ignatius. Insufficient as the evidence is-so insufficient as to be of no value at all to any one but the pestilent—of Jewish communion, it is clear that the connexion of the Agape with the Last Supper was so strong as to exclude the view that it was a second and quite distinct meal. This connexion was one of the strongest points brought against the Jewish theory by Leclercq.

The most probable account of the origin of the Agape would seem to be that the Christians of the Apostolic age, desirous of showing their unity and brotherly love, imitated the Jewish and heathen custom of having common meals; they could not join the heathen guilds because of the idolatry that would be involved in doing so, and therefore they had what corresponded to these guilds among themselves, namely, the Agape. The connexion with the Eucharist—which in itself was quite a distinct act—would be a further step. They remember that our Lord had associated the first Eucharist with a meal, and this was their justification in joining the Agape with it, so that the name 'Eucharist' could be said to include the Agape, as in the Didache, or the name of 'Agape' the Eucharist, in Ignatius. Indeed, in this way they would seem to be carrying out our Lord's injunction most fully. That the meal partaken of by our Lord was a Paschal meal—probably one specially instituted by Him in anticipation of that is immaterial—would not affect the matter. There was nothing Paschal about the Agape, but the point of similarity between it and the Last Supper would be the connexion with the Divine Presence, and this helps to stand out—(1) the frequent Agape was at first due to the early con-

munion of the Church at Jerusalem, and carried on by the Gentile Churches in imitation of those without; (2) its connexion with the Eucharist was based on the fact that our Lord instituted it in connection with a sacrament after a common meal. That the origin and history of the Agape are plain cannot for a moment be maintained; but that the explanation here given fits the known facts, appears to be at least probable.

AGAPEMONE ("Abole of Love.")—Henry James Prince, the founder of Agapemonism, was born January 13, 1811. After being articled to a medical man in Wells, Somerset, he resolved to take Holy Orders in the Church of England. In his 26th year he entered St. David's College, Lampeter (March, 1830). The connexion with the Welsh college led to the new sect being called the Lampeter Brethren.

This, however, was misleading, for the Lampeter Brethren, eleven alumni of that institution, were a devout and earnest body, who next formed the Church of God in Wales, a body which later to the advice of the Brethren, and who afterwards felt "compelled to come to the calm, deliberate, and final, though most distressing, conclusion that Prince is awfully in error."

During his college course Prince was an exemplary student. His brother-in-law and fellow-student, Rev. A. A. Rees, wrote that, till 1843, he never saw or heard of an individual more thoroughly devoted to God.

Prince was ordained in 1840 to the curacy of the agricultural parish of Charleyn, near Bridgewater, Somerset. The rectory of Charleyn, and the parishes of Starky, in the same county, were shortly after his ordination taken over by Prince and a companion, and the latter was styled the "Abole of Love," or Prince. The careers of these two men now became identical. Starky, like Prince, was a man of extraordinary gifts of speech, but the rector soon acknowledged his curate as the very soul of the movement, and Prince in behalf of Agapemonism led it to its adherents in Weymouth and other parts of the south country being called "Starkyites." A wonderful revival of religion began in the parish of Charleyn in the autumn of 1841, and in October 1841 Prince published a record of it in 1842. It is a diary of most earnest work on behalf of souls. In six months the whole parish had professed conversion. By May 4, 1841, the Bishop of Bath and Wells had revoked Prince's licence to preach, on the ground of his labouring in neighbouring parishes, advertising

* His Christian name appears to have been lost. In the R.M. Cat. the name stands thus: Agapemon, M.D., or M.D.
to the Lord's Table before Confirmation, and refusing the Sacrament to persons of evil lives. The diary is an instructive and edifying book, but it records the subtle and unflagging, even across the personal idiosyncrasies of Prince and his rector and the parishioners. While so absorbed in seeking the salvation of his people that he can think of nothing else, the emotion he expresses strikes the reader as unpleasantly and unmercifully fanatic. The Church Peculiar was published because Prince thought it 'calculated, under the Divine blessing, to stir up the hearts of the Lord's people, and especially of His ministers, to expect great things from God.' With a few emendations it might be rescued as a model of pastoral labours. Before its publication in August 1842, Prince had already sent out two small works, Letters to his Christian Brethren in St. David's College, Lampeter, and Strength in Jesus, both of which ran to more than one edition.

The date of the beginning of his delusions seems to have been early in 1843. In May of that year he wrote to Mr. Rees a long letter in which he explained the story by which the Holy Ghost came to be settled and fixed in the personality of H. J. Prince. In the same year he desired his Lampeter brethren to believe (1) that he was the Holy Ghost in the flesh; (2) that the Holy Ghost suffered and died in him; (3) that this suffering and death obtained for them what he called 'my spirit,' or, as he also phrased it, 'a modification of the Holy Ghost.' About the same time he also published Testimony: How Christ's parables, worn out on certain popular ballads, to back up his own pretensions,—wretched doggerel, like almost all his hymns,—in which he seemed to be losing all consistence in his things as they transmogrified, was the beginning of his own self-proclaimed apostasy.

Prince had been induced by the Bishop of Bath and Wells, and presently the same lot befell him at the hands of the Bishop of Salisbury. When he attempted to officiate as curate at Stokeby-Claire, in Suffolk, he suffered once more at the hands of the Bishop of Ely. He appealed to the Archbishop, but could get no redress. Then, to use his own words, 'prevented from preaching within the pale of the Established Church, Bro. Prince, after some months' waiting on God for guidance in faith and prayer, proceeded to preach within the pale in his own parish.' He became most outspoken in denouncing the Catholic church, but apparently without having observed that there were fellow-Christians who felt as strongly as himself upon this subject. Starkey and Prince began to preach in barns at Charlton. What was practically a Free Church was formed at Spaxton, a mile away. Crowds came to hear them. The twain asserted that they were the Two Witnesses of Rev. 11, and Prince published several brochures in regard to the 'Two Anointed Ones.' He declared that community of goods was still binding on believers. Thereupon they sold their hands, and brought the money, 'laying it at Bro. Prince's feet.' About this period also he asserted that he was the prophet Elijah, that this had been made known to him by direct revelation, and that 'people were not to consider what they heard from him as a common prophetic sermon, nor to think of him as an ordinary preacher; on the contrary, he was come from the courts of heaven, from the bosom of eternity.'

A crop of opposing pamphlets immediately sprang from the press, written for the most part by men who had been his personal friends. It is clear from some of his actions at this time, and particularly from the ballads which he penned and made his congregation sing, that his phenomenal self-love had passed beyond eccentricity into unsoundness of mind.

Prince and Starkey now set up the Agapemone, which they opened in 1849 at the entrance to the village of Spaxton. Money was poured into the tremendous propagandism. The Chichester Herald was published, because Prince thought it 'calculated, under the Divine blessing, to stir up the hearts of the Lord's people, and especially of His ministers, to expect great things from God.' With a few emendations it might be rescued as a model of pastoral labours.

Throughout the movement it was very noticeable that Prince associated himself with wealthy persons, and by course of events, with the upper classes of the world, depositing their money at the Bank of England in the name of 'Beloved Prince,' and taking up their abroad the Agapemone. A wave of fanaticism seemed to sweep across the district about Bridgwater. Many intelligent persons believed him when Prince announced himself as the Final Revelation of the will of God to mankind. Christ had come again in the person of His messenger, first to judge, and then to convert the world of righteousness. In him the Holy Ghost was to destroy the works of the flesh, and to cast out the devil. Whether he took the title of 'Lord,' or only accepted it, without deprecating its application to himself, seems uncertain. Some who heard from the Agapemone his followers as much as they do Prince. Said one of them, 'They were simply mad about him, and were ready to fall down and worship him as he descended in a shower of exhalations from heaven.' Some among the assembly were at a loss to account for the long-suffered last sudden judgment fall upon him and upon them. He had been so oppressed that neither he nor anybody else found time to look after himself, or to seek to harm himself, or to seek to harm others. He had given himself up to the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful. He was sure that the devil, and the devil, he was aware he was, was most likely to be unfaithful.
Man Christ Jesus is an enthusiastic review of the life of the Lord, though verbose, dray, obscure, and exclamationary, —exhausting all the Oriental elements of mystery, that needs to be said in a lascivious and erotic sense to express devotion to Christ. Leaves from the Tree of Life, and The Shutters taken down from the Windows of Heaven contain some sayings, which have caused him to speculate, as opposed to sacerdotal, religion. But the books, like the man himself, are stealthy and deceptive. While devout Christians can approve large portions of his writings, it is to be feared that many of the things he says are not of any value, or, if they are, a man has to be in a passionate, dishonest mood, as opposed to sacerdotal, religion. But the titles, which are only a mask, are stealthy and deceptive.

The fervid, the warning, the intense, the eloquent, the fanatical, the prominent, the solemn, the spiritual, the exhortation, and the testimony to the closing of the Gospel Dispensation, published when he was 77 years old. It professes to be the Gospel of Christ, the fulfillment of all grace in principle, the rejection by the Church, and the world, the rejection of the repentance from sin, and the faith of the doctrine of Christ. It is a book of instruction and exhortation. It was the last work of the author, and was written in a passion that was not to be satisfied, or, if satisfied, was not to be satisfied in a sacerdotal sense, as opposed to sacerdotal, religion. But the books, like the man himself, are stealthy and deceptive.

After the trial in the Chancery Court, comparative silence fell upon the Agapémon. Prince lived a very retired life. The funds of the brotherhood also seemed to be failing them, until in the last eighteen years a windfall came in the person of a wealthy London merchant, who presented to Prince all his property, and served the brotherhood in the humble capacity of butler. For the last ten years of his life Prince was very feeble. He outlived all his principal followers. He was buried on the 11th of January 1899, in the grounds behind the Agapémon.

In 1899 and for a few years later there was a remarkable renaissance of this faction. Several prominent members of the Salvation Army cast in their lot with Prince. A mission to Norway was reported to be very successful. But, by the sudden departure of the Reverend M. J. Smyth-Pigott, the N.E. London, because the scene of this renewed activity. The 'Children of the Resurrection,' as they named themselves, built, in 1893, 'The Ark of the Covenant,' an elaborate structure, seating about 400 persons, at a cost of £16,000. The preacher, at its opening in 1896, was the Rev. J. H. Smyth-Pigott, the official successor of Prince. Smyth-Pigott, who is of good family, was formerly a curate of St. Jude's, Milnthorpe. He has also served in the Egyptian Army. In his opening sermon he declared that he expected Christ to come that very day to judgment, but did not explain why, in that case, the expected judgment of the church was being delayed. In September 1892, Smyth-Pigott promised himself to be Jesus Christ; with the result that most riotous scenes took place for several weeks.

Since the tumultuous scenes which accompanied the departure of this prominent member, Smyth-Pigott has lived in retirement at his house in Upper Clayton, or at the Agapémon at Spaxton, worshipped as Divine by the little company who accept his preaching. 'Ark of the Covenant' remained closed to the public until the sudden illness of 1904, when the services being held at rare intervals. It needs only to be added that the present tenants of the Agapémon are a quiet, blameless, and elderly company, numbering about 35 persons, whose praise is sung throughout the whole neighbourhood for their unquestioned piety and for their use in a lascivious and erotic sense to express devotion to Christ.
sought power in a union of souls, which was supposed to bring them nearer to God.

The old Irish Church had made this kind of asceticism the foundation-pillar of its organization. According to the primitive Christian custom, no difference was then made between man and woman (cf. Gal 3:28), and both were allowed to take part in Church functions. In the monastic houses, moreover, the priestly monks lived together with the piously nuns, according to an old anonymous reporter, up to the year 545: ‘Mulierum administra
tionem et consortim non respicient, quia super patriam Christi fundamenta non ten
bunt’ (Haddan-Stubbbs, Councils and Ecclesiastical Documents, ii, 2, p. 292). At the time, too, when the Irish, with their mission, undertook a forward movement towards Brittany, the Gallican bishops found it especially blame-worthy in the inhabitants that they were accompanied by women, who, like the men, assumed to themselves sacramental functions (cf. the letter of the three bishops in the Rota de Breogte et de Vendée, 1885, i. p. 5 E) ; they did not know that the Irish-Breton Church had preserved customs and principles of the most ancient Christian Church.

After the well-to-do circles in the large cities and borrows, asceticism, there was developed a new form of spiritual marriage. It happened frequently that rich widows and young women, in accordance with the tendency of the time, refused marriage, and in order to provide a master for their large houses, caused clergymen or monks to bind themselves to them in spiritual marriage. This is a variety of Synesisaktism, but an unfortunate one. The roles seem to be reversed. The woman had the upper hand, for she ruled the mistress of her household. She had large possessions, and in addition she enjoyed the repute of virginity. On the other hand, the position of the priest was difficult, and often precarious. However seriously asceticism and the union of souls might be taken, still the fact could not be lost sight of that the priest was a subordinate, and his position may have varied between house steward, domestic chaplain, and spiritual lord. This is the role which the abbé in France had in the 17th and 18th centuries. At the time of Chrysostom this evil custom was widespread in Constantinople (Migne, xlvii. col. 495 E.) ; likewise at the same time in Gaul, as Jerome (Ep. 177) described. It was then, and still is to be regarded as a peculiar product of Christianity.

The spiritual marriage of the clergy is most frequently mentioned, and therefore best known; so much so that it has been widely believed that only the clergy of the ancient Church lived under Synesisaktism. And it cannot be denied that the custom, just as in the case of Monasticism, found its special home here. It stands parallel with celibacy, which, in like manner, in Christianity was not created for the clergy, but none the less became a ruling custom among them, and at a later date was elevated to a law, because people judged marriage to be inferior, and imposed the highest and most ideal demands on the clergy. Now, as the clergy who withdrew from marriage became more numerous, their choice of a companion for spiritual work was in order, and a new ideal of life—a life of asceticism, was of much more frequent occurrence. And as time went on, the ideal nature of the relationship seems to have disappeared in face of practical motives. Out of the ascetic and the bride of the spiritual realm, arose the nun, on the one hand, and the housekeeper, who was suspected to be also the mistress.

No doubt the common judgment on this form of asceticism had changed in course of time. Men's moral standards have changed, the more derelict and sad, and the nun who lived together with a woman was looked on with other eyes than at an earlier date. It seems, however, as if Synesisaktism itself had degenerated. The housekeepers of the clergy were called mulieres extrae, and placed on the same footing as the laity. Nevertheless, as late as the year 600, even ordered that the extraes should be sold as slaves, and the proceeds given to the poor (can. 5 Toledo, 589; can. 3 Hispalis, 590; can. 42, 43 Toledo, 633). In the Decretals of Gregory IX., lib. 2 de cohabitatione clerissarum et mulierum, the concubinage of the clergy is forbidden. In the East the same development can be proved. Even in the later synods the Synesisakti are alluded to as a most adventurous practice, the abolition of female servants of the clergy; and to the Greek canonsists of the 12th cen. the name Synesisaktos means no more than the housekeeper of a clergyman. Synesisaktism must, therefore, have undergone a transition. Even in the later centuries clergy lived together with women without being married to them, just as in earlier times; but people regarded this living together differently. In early times man and woman had taken the vow of virginity, and had struggled in a union of souls to attain the common ideal; in later times the practical requirements of life came to the front. The clergyman needed a woman to look after his domestic affairs and duties. The natural way of marriage was barred to him by the ordinance of celibacy; but if he took a young woman into his house without marrying her, he was exposed to evil report. Without doubt, even in later times the ideal motives of the community of life may in many cases have been alive, as formerly. On the whole, the development which has been sketched is thoroughly natural. An ascetic ideal is one of high aims must, in the course of time, evaporate and make room for the sober realities of the day. Such an heroic ideal may perhaps be suitable as a way to heaven for a few specially favoured natures; but it becomes questionable, and even pernicious, as soon as it is made a rule to be followed by a large class of men.

The different forms of Synesisaktism arose under the influence of social conditions to the longness of the desert, the nun became the maid-servant of the hermit; in the cities and villages, the soul-friend of the well-to-do priest degenerated into housekeeper, just as, on the other hand, the rich widow, or the spiritual friends the role of steward; and if in Ireland monks and nuns lived together in large companies, that was caused by the peculiar conditions of the Irish missionary church, which was a monastic church. Synesisaktism was the natural product of two opposing tendencies in ancient Christianity. On the one hand, brotherly love, in all its forms of expression, was most highly prized, so that it was declared to be the proper palladium of religion (cf. 1 Co 13), and the exclusiveness of the small and intimate congregations favoured the rise of a narrow social life and a friendly relationship between Christians who were widely separated in age and social position. We can see, from the example of the Irish religious houses, how great an influence the idea of community must have had. On the other hand, there was the inclination based on religious feelings, to sexual intercourse. Marriage was regarded as a not very honourable concession to the sensual nature of mankind, and people revered the ascetics with a strange mixture of derision and respect for their ideals. Owing to the conflict of two ideals, which bound men most closely with each
other and yet threatened to estrange man and woman, there arose the unnatural combination of asceticism and brotherly love, which meets us in Synecisaktism. A form of marriage was created, which was not marriage either in reality or in intention, and was blind to its own dangers, because those who adopted it trusted everything, even the quite impossible, to the same extent as the worst of the Christians.

Thus it is only natural that it was just the spiritually elevated Christians, the leaders of the community—the prophets, confessors, bishops, and clergy—who lived in a state of spiritual marriage. In the same way the *sacerdos spirituales* of the earlier times were always such women as enjoyed a special position of honour in the community as *brides of Christ*—the virgins, widows, or even prophetesses. What they undertook was not hidden in a corner, but was generally admired as a glorious example of Christian love and continency. But in course of time the judgment of the ancient Church regarding the Synecisaktiō changed.

Herein lies a spiritual marriage, in all its forms, as a precious characteristic of the life of the Christian community (the union of the first two is not disapproved of).

Tertullian regards it as the most desirable form of cohabitation of man and woman (see above). Paul of Samosata (about 250) described this form of marriage in his Synod of Antioch (Eus. H.E. viii. 30. 12 f.), and, shortly afterwards, the Synod of Nicaea, 325, and shortly after that the Synod of Oppositeness of Antioch are never absent from the Church ordinances. In cases of disobedient, the clergy are punished or even desecrated, in the case of laymen or monks, strict admonitions are, as a rule, regarded as sufficient.

The different attitudes taken up by the Church on this subject may be divided into two classes, of which she had undergone. In the first three centuries she had spread very widely, and the communitys had in places become very numerous. There were many elements in her that did not take the moral precepts of Christianity seriously. The strict prohibitions regarding sins of the flesh were, owing to the necessity of the case, weakened and modified in the 3rd century. The Roman bishop Caius likened the Church to Noah's ark, in which there were clean and unclean beasts (Hippolyt. Philos. ix. 12). Then such a custom as spiritual marriage had to be abolished,—a custom which, if feasible at all, was so only in small intimate circles of the faithful, where the bride and groom all were under supervision and discipline. It proved, however, excessively difficult to root out Synecisaktism, as we may learn from the ever repeated prohibitions, which became more and more strict as time goes on. How very deep the opposition to it went can be gathered from the fact that the later bishop of Antioch, Leontius, exalted himself in order to be permitted to retain his house companion. Yet people were in many places convinced of the innocence and the justice of such a relationship; and even produced proofs from writers who justified the Synecisaktiō by quoting Biblical examples from the Old and New Testament (Achelias, Virg. Subsirid. p. 42 f.).

That spiritual marriage was in course of time regarded in a different light, is proved further by the changes of designation.

Tertullian calls the female ascetic, who lives with a man, his *sacerdos spirituale*—which is the appropriate name in the sense of early days. There then occurs the term *componsa*. The spiritual marriage seems to have been called *agnosia* on the one hand. On the other hand, the inhabitants of Antioch invented for the female friend of Paul of Samosata the nickname *agnosia* (name afterwards stuck to female ascetics who lived together with like-minded male friends. The term was carried over into the Latin Church in the translation *substitutae* (Synod. a. 745 in Mansi, xii. 501). More frequently still the general term *agnosia* was used.

In regard to the question of the age of spiritual marriage, the *Shepherd* of Hermas comes especially under consideration. Hermas knows the custom of Christian men and women being united to each other by a bond of special affinity, even when they are separated from each other by all kinds of relationships in life (Vis. i. 1. 1); he presupposes that virgins find shelter in the houses of Christian brothers (Soph. x. 3); and, finally, knows the intimate forms of intercourse which were usual between the spiritually betrothed (Soph. xii. 18, 20). Reports, of course, not facts but visions, but he would not have been able to introduce the situations he describes in such a matter-of-fact way, if he had not regarded them as the illustration of Christian brotherly love, of which he was proud.

The passage 1 Co 7 has also to be considered, since it has been brought by Ed. Grafe into connexion with the question of the Synecisaktiō. According to the interpretation suggested by Grafe, 1 Co 76 refers to the awakening love between a Christian householder and a young girl residing in his house, who are bound by a common vow; the Apostle recommends that an end be put to this precarious situation by marriage. But, on the other hand, in v. 27 he praises the Christian who, in the like situation, understands how to control himself, while v. 28 unites both decisions. The matter, then, does not concern the Synecisaktiō, but has generally been held by exegetes, but is a case of spiritual marriage—the same situation as we found above in the case of the bishop and clergy of Antioch as we must presuppose in Hermas, and as we saw in the letters of Cyprian. What was so inevitable took place at Corinth (although it was avoided in other places, viz., that the peculiar relation between the guardian and his spiritual bride be endurable for a certain time of marriage. According to Grafe, St. Paul advised both to marry, while the present writer finds it more in accordance with the wording of the text (cf. the repeated *παρκοκομοντος* and also with the supposed situation, to think that he advised the young woman to leave the house and be married to some other Christian.

If the words of St. Paul have a concrete case of Synecisaktism in view, such as prevailed at the episcopal court of Antioch, that is almost the only conceivable solution. In ancient times young girls were married without much ceremony, and for a female ascetic, who had had a disappointing experience, a marriage was certainly the best way. It must, however, be granted that this interpretation of the passage in Corinthians is not beyond question, especially as the text is not quite certain.

Lastly, the *de Vita Contemplativa* must be mentioned. This may be regarded as a genuine work of Philo. The Therapeutae in Egypt, who are there described, and who tabbed marriage and sexual enjoyment, lived in union with female companions, just as the Christian monks did at a later date. It is the same combination of sexual asceticism and brotherly communion as in Synecisaktism, only that the personal intimacy between the individual pairs is wanting; the brotherly love is just the specifically Christian factor in the spiritual marriage. This makes it possible to place the beginnings of Synecisaktism in the Apostolic Age.

The ascetic cohabitation of man and woman had already had its prototype in Hellenistic society. It can, however, on more general grounds, hardly be doubted that spiritual marriage with its extravagances belongs to the earliest Christian times, when 'the Spirit' ruled the community, and the first love' still lived, when the individual communities were small and intimate, and had had no disappointing experiences with regard to themselves; asceticism made its way into the Church; and so all the conditions for the rise of this institution were present. This must be so if Synecisaktism is conceived of, as it has been by us above, as
an attempt to substitute for marriage Christian brotherly love. If we seek to derive it, in the way formerly adopted, from the celibacy of the clergy or from Monasticism, then we are driven to a date far in the future. But in face of the testimony of the most ancient Christian authors, that can hardly be maintained.

LITERATURE.—The question was first raised by Henry Dodwell, in the Indian Annual Register, 1816, p. 273. Thereupon a small literature on the subject grew up. The titles of the contributions are given by J. E. Volckering, Index dissertationum academicae, p. 165, 1876. As far as is known to the present writer, all the authors held Syncratism to be an error of the corrupt Church of the 3rd century. The above mentioned discussion of Co 726 by Ed. Grafé, *Geistliche Verhältnisse bei Paulus,* followed a notice of Weltsäcker, and appeared in Theol. Arbeiten aus dem rheinischen wissenschaftl. Prediger-Verein, N. S., iii. (Freiburg, 1899). This interpretation has found considerable approval. The conception of Syncratism given above is proved in detail by H. Achelis, *Vergnéne Subintrod desire Ein Beitrag zu 1. Or. (*Leipzig, 1909."

AGARIÀ—AGASTYA

AGARIÀ, AGAR, AGARI.—An Indian tribe which, at the Census of 1901, numbered 270,370, of whom the vast majority are found in Bombay, the Central Provinces, and Bengal, and a few in other parts of India. The ethnography of this tribe is very obscure, and, as collected under one heading in the Census returns, it includes at least three different communities, who may, however, agree in being part of the tribes of Dravidian or Munda origin. Chota Nagpur and the adjoining district of Mirzapur the Agarià practise the old rude Dravidian method of smelting iron. In the Tributary Mahals of Bengal and in the Sambalpuri Central Provinces they are a fair, good looking race, who claim to have once been Rajputs in the neighbourhood of Agra, whence they say they derive their name. The legend runs that they refused to bow the knee in some places to the Munnamdar emperor of Delhi, and were compelled to leave their original settlements and migrate southwards. These the Census returns describe under the name of Agarià, in order to distinguish them from the Agriàt, who are pure Parsees. In the Mandla district of the same province they are described as a subdivision of the Gonds (wh. see), and among the laziest and most drunken of that race. In Bombay another branch perhaps in some places to the Multan Dair a, and derive their name from the pit (Hind. Mahr. aga, Skr. áka, a mine) in which the brine is evaporated.

It is only the tribe in Chota Nagpur and the immediate neighbourhood that preserves its original beliefs. Generally they have a well-marked totemistic division into sub-castes; a vague form of ancestor-worship, which is confined to propitiating the dead of the preceding generation; and a respect for the Sal tree (*Shoreá robusta*), which is used at their marriages. In Mirzapur they neglect the ordinary Hindu gods, and have a special worship of Lalitás Devt, the Mother-goddess who presides over the smelting furnace. To her the baiga, or village officiant, sacrifices a goat which has never borne a kid, and burns a few scraps of cake, the meat and the remainder of the bread being consumed by the officiant. In Palamau, according to Forbes, their worship is of a still lower type. 'They appear,' he writes, 'to have no deities, and to have no knowledge of the Supreme Being, though some of them appear to have heard of the universal Devil; but I do not think they worshipped her in any way. On certain days of the year they offer up sacrifices to propitiate the spirits of the departed members of the family.' This ceremony is called *Maih.* 'the Devil.' In Palamau, according to Forbes, their worship is of a still lower type. They pay reverence to the Divin, the Dhim or local gods of the village in which they happen to settle. In Bengal their women have the reputation of being notorious witches. Dalbon was told that 'in Gangpur there are old women, processors of witchcraft, who stealthily instruct the young girls. They are all eager to be taught, and are not considered proficient till a fine tree, selected to be experimentation, is destroyed by the petency of their "mantras" or charms. It is said that the wife a man takes to his bosom has probably done her tree, and is confident in the belief that she can, if she pleases, disperse his wife in the same way. And it is said that he makes himself of little account.'
Now Ilava, an enemy of the Brahman, had a brother, Vatápi, whom, on the arrival of a Bráhman, he used to kill and then to prepare as food, for Vatápi had finished his dinner, Ilava, by his magical power, called Vatápi to life again, and in this way killed his victim. The Danava tried this trick on Agastya, the son of Rishis, in his mischievous state, as the latter had already completely digested. So Ilava was fain to give Agastya such treasures as satisfied the desires of Lópanárdra. According to the Rómyogas (iii. 11. 66), however, Agastya, on this occasion, produced the Danava to ashes by fire issuing from his eye. The Rishi had by Lópanárdra a son called Dradhásya or Ilihaváhāt.

Another famous deed of Agastya was his having caused the fall of Nahuna. When, after vanquishing Víra, Indra, polluted with the sin of brahmahatya, or killing of a Bráhman, fled and hid himself, the gods made Nahuna ruler of the skies. But Nahuna soon became overbearing and desired to make Sachi, Indra's wife, his own. She, however, would not consent unless he came to her on a car drawn by the seven Rishi. Nahuna therefore asked them to his ear, and made them draw it. During his ride, he, for some cause, differed in different places, kicked Agastya on the head, whereupon the Rishi turned him by his curse, until Víshváhpura should release him from the evil.

Most frequently Agastya is mentioned in Sanskrit works as having stayed the abnormal growth of the Vindhyá range, and as having drunk up the ocean.

The Vindhyá was jealous of Mount Meru, round which sun and moon and stars were always revolving. In order to force the heavenly bodies to go round him too, Vindhyá began to grow, and rose to such a height that the gods became alarmed. They therefore asked Agastya to prevent the mountain from obstructing the path of the sun. Accordingly the Rishi went with his family to the Vindhyá, and, pretending to have some mysterious business to transact with the mountain, caused growing till he should return; and when the Vindhyá had agreed, he passed on and took up his abode in the South for ever.1 His hermitage was near the Góli-bávāri and Páma, where Ráma and Síká were his guests.2 The Rámkánya, however, takes apparently no heed of Agastya's resolve never to leave the South, for in Bk. vii. it is related that he visited Ráma in Ayodhya, and there told him the early history of Dáváya and Hamáná.

The drinking up of the ocean is thus related in the Mahábhárata (iii. 103 fl.).

The king was named Asvátra, had fought under Víra against the gods. After the death of their leader they hid themselves in the ocean where the gods could not reach them, and by repeated attempts to extirpate the Brahmanas, men; for thus, they thought, they would bring about the destruction of the gods, alarmed by their raids, were advised by Víshnú to implore Agastya for help. Accordingly, drank up the water of the ocean and thus laid bare the Vindhyá, who were then slain by the gods. Agastya continued a void till Náhratár led the Gangá to it and thus filled it again with water.

A curious trait of our saint is that he was a famous hunter and archer. For this reason, probably, Manu (v. 22) addresses Agastya as an authority for killing deer and birds for sacrificial purposes and for servants' food.

After his death Agastya was placed among the stars as Canopus, the most brilliant star in the southern heavens except Sirus. The heliacal rising of Agastya, while the sun is in the asterism Hástá, marks the setting in of autumn after the close of the rains.3 Agastya seems, in popular belief, to represent that force of nature which makes an end of the year, in mythological language, drinks up the waters of the ocean,—and which brings back the sun, temporarily hidden by the clouds of the rainy season, or, turned mythologically, stays the growth of Vindhyá obstructing the path of the sun.

A rain-godding, we are supposed to have power to stop the rain, he is still invoked in Muzafír-nagar.4

In Southern India, Agastya is venerated as the earliest teacher of science and literature,5 he is the reputed author of many Tamil works.6 He is believed to be still alive, though invisible to ordinary eyes, and to reside somewhere on the southern coast of India, in Travancore commonly called Agastya's hill, from which the Pórunth, or Tínnaráppí, the sacred river of Thínnellí, takes its rise.7 8 See also Védic Religion (4 B B).

AGE.—In most animals there is a normal specific size to which the great majority of the adult members of the species closely approximate. In a large collection representing a species there may be a few giants and a few dwarfs, but most of the members show a close approximation to the same limit of growth, and there are good reasons for believing that the normal specific size is adaptive, i.e., that it has been slowly established in the course of selection as the fittest size for the given organization and the given conditions of life. In some cases, e.g., many fishes, there is no such definite limit of growth; thus huddocks are often found as large as cods.

Similarly, in many animals that have been carefully studied, we find that there is a normal potential duration of life,—an age which is rarely exceeded, though it may be seldom attained. This normal 'lease of life' is in most cases known only in a general way, though in many cases we are able to say that the living creature in question never lives longer than a few months, or a year, or a few years. Statistics from forms kept in captivity are obviously void, since they are of cases, e.g., tens, of the life of animals in their natural conditions is so often ended by a 'violent death'—coming sooner or later according to the varying intensity of the struggle for existence—so that it is difficult to say what the normal potential duration of life really is. But a critical survey of a large body of facts led Weismann in his essay on 'The Duration of Life' (1889) to the conclusion that this, like size, is an adaptive characteristic, generally defined by selection in relation to the external conditions of life.

Attempts have often been made to correlate the duration of life with the morphological and functional characteristics of the type discussed, e.g., with size, with the duration of the growing period, with rapidity or slowness of growth, but none of these correlations can be generalized, and there is much to be said for Weismann's more cautious thesis, that the length of life is determined in relation to the needs of the species. Given a certain rate of reproduction and a certain average mortality, the duration of life that survives is that which is fittest to the conditions. (See ADAPTATION.) In the same essay Weismann pointed out that unicellular organisms, which have no 'body' to keep up, which can continually make good their waste by repair, and which have very simple inexpensive modes of reproduction, are practically 'immortal,' i.e., they are not subject to natural death as higher organisms are. Epigravmatically expressed, natural death is the price paid for a 'body.'

In the case of man, we must clearly distinguish between the average specific longevity, about 34 years in Europe—but happily raisable with decreasing infantile mortality, improved sanitation, decreasing warfare, increasing temperance and carefulness,—and the potential specific longevity, which for the present race is normally confined to 120 years. 9

* Crooke, The Popular Religion and Folklore of Northern India, S. 79.

† Caldwell, Compara. Gram. of Dravidian Languages, S. 191.
seventy and one hundred years. There is no warrant for fixing any precise limit, either for the past or the future. All that we can scientifically say is that the few well-established instances establish a greater human longevity than 104 years. Sir George Cornewall Lewis did good service (1862) in destructively criticising numerous alleged cases of centenarianism, the occurrence of which he at first regarded as extremely rare, but even he finally admitted that men do sometimes reach a hundred years, and that some have reached one hundred and three or four. The famous cases of Thomas Parr, Henry Jenkins, and the Countess of Desmond, said to be 152, 169, and 140 respectively, were ruled out of court by Mr. Thoms, who edited Notes and Queries at the time when Sir G. C. Lewis's wholesome scepticism created much stir. As man is a slowly varying organism, as regards physical characters at least, it is extremely unlikely that his longevity was ever much greater than it is now. Monsters in age and monsters in size are alike incredible.

Prof. E. Metchnikoff is one of the few modern biologists who would deal generously with Biblical and other old records of great human longevity. He apparently thinks there has been some misuse of the term 'longevity' in regard to Methuselah's 969 years and Noah's 950, but he accepts the great ages of 175, 180, and 147 years ascribed to Abraham, Isaac, and Jacob. Similarly, he accepts the 185 years with which St. Mungo of Glasgow has been credited. And as he is generous in regard to the past, he is hopeful in regard to the future, believing that a more careful and temperate life, as well as an enlightened recognition of the disharmonies of our bodily frame, may bring about a time when man will no longer, as Buffon says, 'die of disappointment,' but attain everywhere 'a hundred years.' 'Humanity,' Metchnikoff says, 'would make a great stride towards longevity could it put an end to syphilis, which is the cause of one-fifth of the cases of arterial sclerosis. The suppression of alcoholism, the second great factor in the production of senile degeneration of the arteries, will produce a still more marked extension of the term of life. Scientific study of old age and of the means of modifying its pathological character will make life longer and happier.' He also quotes the theoretically simple conclusion of Pflüger's essay on 'The duration of life' as follows: 'We have to strike out the things that are harmful, and be moderate in all things.' A fact of much interest is the statistical evidence that such a subtle character as 'longevity,' that is to say, a tendency to a certain lease of life, be it long or short, is heritable like other inborn characters, though it rests, of course, to some extent with the individual or his environment to determine whether the inherited tendency is realized or not. Just as stature is a heritable quality, so is potential longevity, but the degree of expression is in part determined by 'nurture'—taking the word in the widest sense.

There is, as we have hinted, reason to believe that natural death is not to be regarded simply as an intrinsic necessity—the fate of all life; we can carry the analysis further, and say that it is incident on the complexity of the bodily machinery, which makes complete recuperation well-nigh impossible, and almost forces the organism to accumulate arrear, to go into debt to itself; that it is incident on the limits which are set to the multiplication and renewal of cells within the body, thus nerve-cells in higher animals cannot be added to after an early stage in development; and it is incident on the occurrence of organically expensive modes of reproduction, for reproduction is often the beginning of death. At the same time, it is incident on some physiological and other physiological reasons, and we fall back on the selectionist view that the duration of life has been, in part at least, punctuated from without and in reference to large issues; it has been gradually regulated in adaptation to the welfare of the species.

It seems to us suggestive to recognize four categories of phenomena in connexion with age. The first is that of the immortal uncellular animals which never grow old, which seem exempt from natural death. The second is that of many wild animals, which reach the length of their life's tether without any hint of ageing, and pass off the scene—or are shouted off—victims of violent death. In many fishes and reptiles, for instance, which are old in years, there is not in their organs or tissues the least hint of age-degeneration. The third is that of the majority of civilized human beings, some domesticated, and some wild animals, in which the decline of life is marked by normal senescence. The fourth is that of many human beings, not a few domesticated animals, e. g., the great domesticated animals, notably bees, in which the close of life is marked by distinctively pathological senility. It seems certain that wild animals rarely exhibit more than a slight senescence, while man often exhibits all degrees of senility. What is the explanation of this?

The majority of wild animals seem to die a violent death, before there is time for senescence, much less senility. The character of old age depends upon the nature of the physiological bad debts, some of which are more unnatural than others, much more unnatural in tamed than in wild animals, much more unnatural in man than in animals. Furthermore, civilized man, sheltered from the extreme physical forms of the struggle for existence, can live for a long time with a very defective hereditary constitution, which may end in protracted senility. The future seems also very deficient in the resting instinct, and seldom takes much thought about resting habits. In many cases, too, there has come about in human societies a system of protective agencies which allows man to employ all his faculties and does not check the use of them. We cannot, perhaps, do otherwise in regard to those we love; but it is plain that our better ambition would be to heighten the standard of vitality rather than merely prolonging existence, so that if we have an old age it may be without senility. Those whom the gods love die young.

AGED.—See ABANDONMENT AND EXPOSURE, Old Age.
AGES OF THE WORLD. (Primitive and American.)—1. The conception of a series of cosmic eras, mutually related, yet separated from each other by cataclysms destroying the entire known world and forming the basis for an essentially new creation, is peculiar to a high degree of religious development. The idea of creation is common to practically all religious systems (see art. COSMOGONY).—2. Doubtless later, is the noteworthy part, Earth, the development of the theory of Ages of the World has been carried still further by the phase which holds that the present cosmic era has been preceded by others, and the Greek, Hindu, and Buddhist systems have even evolved a series of cycles each of which contains four Ages, and which have been and are to be repeated in infinite succession.

3. The most familiar example of the belief in Ages of the World is, of course, the philosophized Greek view presented by Hesiod (Works and Days, 109-201), according to whom there have been four Ages—golden, silver, brass, and iron—each worse than the one preceding. Equally pessimistic is the Hindu system of Ages, where the four yugas, or Ages of a "day of Brahma" (12,000 years), are successively shorter in duration and increasingly degenerate. Among primitive peoples a series of Ages of the World seems to be unknown, but it is noteworthy that among the South American Indians it is generally held that the world has already been destroyed twice, once by fire and again by flood, as among the eastern Tapis and the Arawaks of Guiana. In like manner, the ancient Peruvians fancied not only that two cosmic cataclysms had occurred, but that the world was again to be destroyed, so that they stood in terror of every lunar and solar eclipse.

4. Outside the great culture nations of Asia, Africa, and America, however, only the Aztecs of ancient Mexico, perhaps under the influence of the still more highly developed Maya of Yucatan, evolved a doctrine of Ages of the World. This marvellous people held that the present era, which bore no special name, was preceded by four Ages, or "Sun of Earth," the Air, the Sun of Fire, the Sun of Air, and the Sun of Water. Each of these cycles had been terminated by a fearful and universal cataclysm, and the Aztecs looked forward with dread to the end of the present era. At the close of each cycle of fifty-two years they were filled with special fear; every fire was extinguished, and all the priests, followed by the people, marched in solemn procession to a mountain two leagues from the capital. There they watched with bated breath for the rising of the Pleiades, and when this constellation was seen, the priests repeated fires by the friction of two pieces of wood, one of which was placed on the breast of a human sacrifice, while the multitude rejoiced in the assurance that the world would surely survive for another cycle of fifty-two years. It is noteworthy that Aztec sources vary widely with regard to both the length and the sequence of the cosmic eras, the latter being given not only as stated above, but also as Water, Air, Fire, Earth, Earth, Air, Fire, Water; Water, Earth, Air, Fire; and Water, Air, Earth, Fire. In like manner, the order of the cataclysms which terminated the several eras varies according to the different sources, but it is certain at least that the Sun of Earth was terminated by famine, the Sun of Fire by conflagration, the Sun of Air by a hurricane, and the Sun of Water by a flood.

5. The basis of this Aztec belief in Ages of the World is not altogether certain. It has been suggested that it was due, at least in part, to the tremendous natural phenomena of a tropical country, and also to the political and social revolutions which took place in ancient Mexico. The former explanation is doubtless the one to be preferred, implying a reminiscence of some remote catastrophe, mythologically magnified by successive generations, especially as this hypothesis also explains the characteristic South American belief in a twofold destruction of the world by fire and flood.

LOUIS H. GRAY.

AGES OF THE WORLD (Babylonian).—Even before the discovery of the eunomia inscriptions, it was known that the Babylonians had reflected on the course of the world's history, and that they regulated the Ages of the World according to the movements of the planets. Sennec* reports a statement of Berosus, who under the rule of the Seleucids was priest in the Marduk temple of Babylon, and whose lost historical work Chronodesmoi was intended to prove the commencement of a new world period under the Seleucids or under Alexander.

Berosus says that everything takes place according to the course of the planets, and he maintains this so confidently that he determines the times for the conflagration of the world and for the flood. He asserts that the world will burn when a new planet which now moves in different courses come together in the Crab, so that they all stand in a straight line in the same sign, and that the future flood will take place when the same conjunction occurs in Capricorn. For the former is the constellation of the summer solstice; the latter for the winter solstice; they are the decisive signs of the zodiac, because the turning-points of the year lie in them.

These accounts of Berosus have here, as well as in the narratives of the Creation and the flood, been proved thoroughly reliable. The teaching which underlies them regarding the course of the world corresponds to the accounts which we can read from the eunomia inscriptions.

* Frym. hist. Græc. ii. 50.
* The sign of the Crab in the zodiac is the turning-point of the summer sun, while the perihelion equinox lies in the Aries; the corresponding turning-point of the winter sun is in Capricorn. Our calendar has retained the designations, although the perihelion equinox has long ago moved into the Fish.
The Babylonian doctrine, which we find popularized in myths, dramatic and festal customs, and games, inquires into the origin of things and the development of the world. From its beginnings, chaos to its renewal in future epochs. The doctrine has spread over the whole world. We find it again in Egypt, in the religion of the Avestas, and in India; traces of it are discovered in China, as well as in the Far East and among the savage nations of South America. To refer these phenomena back to 'elementary ideas' (Rastrian, Volkereide), such as may arise independently among different peoples, will not hold good in view of the circumstances that we have to do with ideas connected with definite facts which rest on continued astronomical observations. Babylon was, moreover, according to a constant tradition, the home of astronomy ('Chaldean wisdom'), and there the science of the stars formed the basis of all intellectual culture.

In the Babylonian conception of the universe, which regards everything earthly as a copy of a heavenly prototype, the zodiac is considered the most important part of the whole universe. The zodiac (ksipak šētu) is the broad 'Way' on the heavens, c. ± 20 degrees, upon which the sun, the moon, Venus and the four other moving stars (planets) have their course; while the other stars, the fixed stars, seem to stand still on the ball of the revolving heavens. The moving stars were regarded as interpreters of the Divine will. The heaven of fixed stars was related to them like a commentary written on the margin of a book of revelation.

The rulers of the zodiac are the sun, the moon, and Venus. In a mythological text [W.A.I. iv, pl. 5] we are told how these were placed there... The four remaining planets, Marduk, Jupiter, Nebo-Mercury, Nibî-Mars, and Nergal-Saturn, correspond to the quarter appearances of the three, and have their special place of revolution at the quarter points of the cycle, or, speaking in terms of space, at the four corners of the world. Every one of the astral divinities represents the whole Divine power. Polytheism rests on myth, which popularizes the teaching and on worship, which again is a product of the mythology. The temple-teaching at every place of worship serves to prove that the divinity reveals itself at a particular place in a definite form, as a sign, such as result of that place to the corresponding sacred region of the heavens (tārāu, templeum). The local god is summašu dēnu for the region; the other gods are like wonder-working saints.

Seeing, however, that the Divine power reveals itself in the zodiac, the theory involves a triadic conception of the godhead. The triad—sun, moon, and Venus—in their relation to each other, as well as each of these three bodies individually, comprehends the whole being of the godhead. In the case of every mythological phenomenon, the question must be raised whether the divinity in the particular place or in the expression of its worship stands for the sun, the moon, or the Venus (Istar-) character. In each case, however, the deity represents at the same time the whole cycle, which repeats its phenomena in every microcosm of the natural world. The same is true of Marduk, Nebo, Nibû, and Nergal. In the teaching of Babylon, which is best known to us, the chief points in the sun's track belong to them in a scheme as well as the quarter appearances of the sun's course. They can thus be designated sun-gods, but they can equally well be represented as forms of the moon or of Venus as they appear in the zodiac.

In like manner, they representatives of the moon's course of movement (Tammuz in the upper and under world), which runs parallel with the astral phenomena in the changes of the year. Marduk and Nebo as the embodiments of the spring and harvest phenomena, the sun and the moon as the signs of the phenomena of summer and winter, could occupy the place of Tammuz in both halves of his cycle.

The Babylonian sages reached the profound conception that time and space are identical. Both are measured by the revolution of the sun and have therefore the same principles of division.

The course of the world cycle is consummated in the struggle of the two powers of the world system, light and darkness, which are represented in the sun and the moon. The sun rules over the summer of the world and the winter of the world. In the myths the sun and the moon are the combatants. The moon is, according to the Babylonian teaching, the star of the upper world (the reverse holds in Egypt). She dies and rises again from the dead (inīnū inti rayamaništi 'sabbāni, 'fruit, which produces itself out of itself'); she symbolizes the power of life from the dead. The sun is the god of light, and his revolution to the moon, stands at the low point, and in which the stars disappear, is the power of the under world. 'Istar desires to become the queen of heaven.' In the myth she is the heavenly virgin (in the zodiac she is represented as a young girl, pregnant with the ear of corn or with the child) who gives birth to the sun-child or the moon-child, which then overcomes the dragon of darkness and thereby brings in the new era,—but then at the highest point of the course dies and sinks down into the under world; or she is the Venus, who descends into the under world and brings up the fallen ones. The four planets of the four points of the world, which influence the seasons, rule the four quarters of the world (Nibû and Nergal) and the equinoctial points (Marduk and Nebo), are made use of in the mythology in the following manner: Marduk is the bringer in of the new time (the spring sun), Nebo (Heaven with the balance of the dead) is the guide to the dark half of the lower world, Nibû (Mars) brings the doom of the change of the summer sun (death of Tammuz by the boar, the sacred animal of Nimû), Nebo is lord of the dark half of the under world. Thus Marduk and Nebo exchange places under the precedence of Babylon, whose local god is Marduk. The role of bringing in the new time belongs in reality to Nebo. His name indicates this, for the name Nebo means (Nebo-Mercury is the morning-star; in the word lies the root of the official name nēbī, 'prophet,' i.e. one who announces the new age.)

The change of the arc of day and the arc of night, the summer and winter courses of the stars, and the related change of life and death in nature, result in the doctrine of the change of the Ages. The change of the seasons corresponds to the succession of day and night. According to the principle that the microcosm everywhere reflects the macrocosm, the year is a copy of the greater period of time, in which the evolution of the world is consummated, and the seasons correspond to Ages of the World.

The acceptance of Ages of the World must go back to the observation of the ages of the stages of the sun's course. Before we speak of these Sun Ages of the World, we shall give a survey of traces of Ages of the World in which the connection with these stages is not at first apparent.

The cuneiform texts mention 'kings before the Flood' in opposition to 'kings after the Flood.' They are thought of as in past time—

"tes. šub. 'ēbān, 'world,' is the Heb. 'ēbān, 'primeval time,' 'eternity.'

Jupiter, as a planet, has in itself no claim to special emphasis. In our very first days of the week it exercises the fifth filth (Thursday, Šeudā, 'a third day'). The fact that the classical peoples recognized the boar as the bringer of summer serves as another of the wide diffusion of the Babylonian conception of the world.
AGES OF THE WORLD (Babylonian) 185

1. Amun, 'the time before the Flood.' In the time before the Flood there lived the heroes, who (according to the Gilgames Epic, which on the 11th table tells the story of the Flood) lived in a beautiful garden near the Babylonian Noah, and were removed into the heavenly world. At that time there lived, too, the (seven) sages. Asurambal speaks of inscriptions of the time before the Flood.

A reiteration of an old sage before the Flood. W.A.V. 44, 20a, speaks of 'kings after the Flood.' Berosus indicates along with the sages the early kings, who together lived 120 Names.

1. Aborôs (= Isb. Artthe.).
2. Apâparos (Adapa-aor) = Addab, i.e. Marduk, the son of Ea in the heroic age, who, as the bringer of the new age (cf. 'Abû melûsil, Marduk as fighting with the dragon, will introduce the new age of the world."
3. Anu=m=me(n). "As Adapa corresponds to the Biblical patriarch Seth, Anu in like manner corresponds to Enosh (i.e. man).
4. Amanon = umu'umum ("workmaster") = Cain (Caïn), "smithe" (cf. Aram. qimam, "smith").
5. Menlôs, = men=men = me=men.
6. Inoson, = insin....
7. Nenâorthôs = Ênassidenisê, "favourite of the great gods," who taught his son the secret of heaven and earth; i.e. Enôôko, who walked with God, and after a life of 365 years (the number of the months of the year) the Jewish feast of the turning of the winter sun (Hâthâkûkh, "Weighing") is applied to the dedication of these tablets connected with Enôôko. "Jubiles (41) says of him: "Enôôko was the son of the angels of God, the twelve jubiles; and they showed him all that the rule of the man is in the earth, and he wrote it all down."
8. Amûnsû = "the power of darkness" of the sun god Sin = Mêthosû. There is a Babylonian text which communicates the secrets of Mêthosû.
9. Otharûs (Qe'sarte) = Liber-Tutu, father of the Babylonian Noah (Ubehisîpum, Ênassira, in Berosus Xûnâthûs). Berosus relates that Kronos before the Flood had ordered Adapa to engrave with letters on tablets of enunciation letters the things according to their beginning, middle, and end (engraving on tablets with enunciation letters is meant), and to deposit them in Sîppar. After the Flood his children and brothers had gone to Babylon, taken the writings from Sîppar, and circulated them among the people.

2. The historic period, which again unfolds itself in Ages. The division of the Ages into periods of 120 Names is also connected with the course of the stars. The Golden Age of early times corresponds to the time in which the vernal equinox in the zodiac goes through the division of Aries (four figures). For the track of the zodiac before the Flood brought the course of the world through the domain of Ea (four figures, water-region); the historic period corresponds with Bel's realm of the zodiac. For the track of the zodiac after the Flood is also connected with the universe of space, corresponding on the zodiac to Sin, Susana, and Istar. The restoration of the world after the Flood corresponds to the fashioning of the world after the original chaos, which also appears as the power of the waters (in the myth the water-drugon had been subdued); the world after the Flood corresponds to the primeval world after the Creation.†

The application of Ages of the World to the periods of the evolution of the zoon of mankind is connected in a special way with the teaching about Marduk and Adapa are both abîbûs, i.e. sages in the Divine ages. Nebûôko, who instructed the destruction of Babylon and the raising of Nineveh, was preceded by violence, sought to inaugurate a new era, allowed himself to be glorified as Adapa, who had lived before the Flood, and who was the father of the king, my lord, abûbûsû: "the king, the king of the men." (W.A.V. 44, 20a.)" See p. 190 for the inauguration of a new Age with Arthurian.

A special section of the flood still shows traces of the notion found in the Babylonian creation: the Flood, which corresponds to the whole world. The mountain where the ark landed is originally a part of the world. The modern equivalent of this (g 19) gives the precise height of the mountain. On its top

the calendar, which is based on observation of the procession of the equinoxes.

By the procession of the equinoxes is meant the gradual displacement of the same point of day in the ecliptic, the middle line of the zodiac, which the sun's track marks out on the horizon. The position of the axis of the earth to the plane of the sun is variable. In accordance with this, the point of intersection of the sun's track and the equator varies from year to year, and is observed as a figure in the zodiac. The vernal equinox traverses once in 1252590 years the region of the Water (Flood) and the sky.

In the region of further Asia, the earliest historical time of which we can find traces in the original sources had placed the cult of the god of the moon in the foreground. Sargon says, in his State inscription of the king of Melûhha, that his fathers had, from distant times, since the sun of the moon-god (Adî Nâmûr), sent no more messengers to his path (east and west, or south and north, summer, day and night, exchange their roles). We could thus speak of an Age of the moon or an Age of Nebo, to which, in the epoch of the supremacy of Babylon an Age of the sun or an Age of Marduk would correspond. But if there was a theory which reckoned in this way, still the latter is at least subsequently regarded as the Age of the moon; i.e., the Nebûôko Age, which preceded the rule of Marduk of Babylon, has been transposed in the teaching of the calendar, which was reckoned according to the procession.

(a) Age of the Twins.—In the Age before the rise of Babylon (about B.C. 5000-2900) the sun stood in the zodiacal sign called the Twins. If we were to make additional use of this circumstance in the theory of the Ages of the World, as we are inclined to do, the two phases of the waxing and waning moon would in harmony with it correspond to these twins. The moon also is called repeatedly Âtrakû, i.e., 'twins'; and the hieroglyphics of the zodiac, which even to-day indicates the twins in the calendar, consist of the picture of the waxing and waning moon, just as the Romans represented Janus, who bears the character of the moon, as the two half moons with human faces; the scheme of the partition of the world between the moon and the sun (moon = start of the upper world, sun = star of the under world; see above, p. 184), Nebûôko, who, in the pre-Babylonian order, corresponds to the moon, Marduk to the sun. Nebûôko, too, in accordance with his character, is the 'prophet'; and, according to the nature of the doctrine regarding him, also the victor over the serpent, the heirer of the tablets of fate. Under the influence of the supremacy of Babylon he has exchanged his role with Marduk; and this, by the way, agrees with the principle of the Babylonian doctrine, according to which opposites pass over into one another (east and west, north and south, summer, day and night, exchange their roles).

This Age of the Twins was for Babylon the age of the settlement of the Semite Babylonians. The Twins (Dûkasbûr) thus supply the ruling motive for all the myths which indicate the beginning of a new epoch (Cyrus, Cambyses, Romulus, etc.). And if any one in the time of the Assyrian predominance wished to dispose of the chains of Babylon, he went back to the archaic form of calculation. Either Nebûôko was deliberately raised to a more prominent place than Marduk, or (e.g., under Sargon) Sîvan, the month of the moon-god, was regarded as the first month of the year. In the same way the Hebrews and Romans made a New Year by beginning the year with January (i.e. the tenth month).
One would expect an Age of the sun to follow an Age of the moon (the sun and the moon are also twins). As a matter of fact, the reckoning of the calendar, which was changed about B.C. 2800, on the basis of the precession into the next figure of the zodiac, was so adjusted that in the zodiac the figure of the Bull followed the Twins.

(b) Age of the Bull.—This reform of the calendar was necessitated by the actual state of affairs. The time of its introduction corresponds with the period in which Babylon became the metropolis of the world. Marduk, the god of the city of Babylon, the 'farmer of Babylon' (Nebuchadrezzar calls himself Ishbaru ta Batili, as representative of the god on earth), is symbolized by the bull, which corresponds to the figure of the Bull in the heavens.

In this way the Age of the sun came at the same time to its rights, for Marduk as the representative of the Divine power is in an especial sense the sun-god. Hammurabi took advantage of the reform of the calendar to glorify his rule as a new epoch of the world. He says that he has succeeded in the role of Marduk, the god of the crown. The various dynasties that succeeded Babylon celebrate Marduk as the fighter with the dragon and as the demigod, and founded the claim of Babylon to world empire on the role of Marduk as creator of the world. The honour which belongs to Marduk as the lord of the destinies is transferred to Marduk. He determines on New Year's day the fate of the world. Nebu, who in the older teaching carried the tablets of fate, is now recorder of the destinies.

The calendar which corresponded to the Age of the Bull must have reckoned the beginning of the year a month earlier, so that the year began with Iyyar, the month closed with Nisan; for the world-epoch embracing a sign of the zodiace corresponds to the course of the sun through a sign of the zodiac, i.e. one month. That it was so reckoned can, of course, be proved only indirectly. The king of Assyria allowed himself to be invested in office in the month Iyyar. The investiture is a ceremony which took place also in Babylon, and therefore according to Babylonian law. The king seized the harvast of Bel-Marduk, and by this act his rule obtained its ratification and consecration. The inauguration was still observed in Iyyar after Nisan must have long been regarded as the first month. Under Sargon and Nebuchadrezzar the inauguration took place in Nisan. The new calendar had thus in the meantime secured recognition for its claims.

The mythological motives of the Age of the Bull had to be taken from the myths of Marduk. Seeing that Marduk is regarded as the child of the sun (the ideogram signifies 'son of the sun'), the motive of the mysterious birth is connected with his appearance as well as the motive of the persecution by the dragon (exposure and rescue). The myths of Marduk which are as yet known have not supplied evidence for his birth from the virgin queen of heaven (see above, p. 184). But the myth tells of the marriage of Marduk. The child of the sun in the course of the cycle becomes the lover and the husband of the queen of heaven (Ishtar). Every historical celebrity who, in the Bull age, was distinguished as a ruler of the world, a founder of dynasties, etc., was furnished with the Marduk motive, if some antiquated method corresponding to the age of the Twins did not prefer the motive of the Dioscuri (see above, p. 185). In this way we can explain the mythical setting of the history of Sargon I, who founded Babylon, and in all probability was the first to introduce the Marduk method of reckoning.

'Sargon the mighty king of Agade am I. My mother was a vestal, my father of the lower class. . . . My vestal mother conceived me with no effort. A bucket of bulrushes, closed my doors with pitch, laid me in the river. . . . When I rose towards me Ammisadu, Akkī, the water-carrier, received me in the friendliness of his heart, brought me up as his child, made me his gardener. During my youth I fell in love with me. . . . For years I enjoyed sovereign power.'

It is related of the hero of the Babylonian Gilgamesh Epic how Ishtar seeks to win his love. Elamite/Assyrian (Hitt, Anum, xii. 21) says that the mother had been a king's daughter, who conceived the hero by means of an insignificant man.

Gudea, the South Babylonian priestly prince, says to the goddess, who stands over his side, 'I have no mother, thou art my mother; I have no father, thou art my father; in a secret place hast thou borne me.'

Ninib appears in an epic poem as the hero, who will allow his royal power to extend to the bounds of heaven and earth. He is a child of Ishtar, he is called 'My father know I not.'

Ahasuerus conquers the following story to be told of himself.

'I was born in the midst of mountains, which no man knew; thou hast, O Ishtar, with the glance of thine eyes chosen me, hast given me thy supremacy, hast brought me forth from the mountains, and called me as ruler of men.'

Asurbanipal wishes to be regarded as a child of Ishtar, who had once nourished him. The writers of his tablets represent his Age as the Golden Age of the world (cf. p. 187). (c) Age of the Ram.—The recognition of the fact that the calendar must now be arranged according to the Ram as the vernal equinox, and the fixing of the time of the beginning of the new year to the otherwise unimportant Babylonian Nebu-Navanassar (Nabû-nasir, 797-734) a special significance. The framers of the calendar in time have dated a new age from Nebiannasur. Syecellus relates (Chronographia, 267) that Nebiannasur, according to the testimony of Alexander Polyhistor and Berosus, destroyed all historical documents relating to his predecessors, in order that dates might be reckoned only according to his time (suo- γραφία τόν πρότερον τῶν αὐτοῦ βασιλείων χρόνων, ὅπως ἂν αὐτὸν ἡ καθηδρία τῆς γένεσεως τῶν Χαλδαίων βασιλείων).

The breaking of the tablets is not to be taken literally. It is the same as the burning of the books in reforms of other ages, in the case of Alexander, in China, c. 215, under Ch'in-shih-huang. In the case of the burning of the libraries of Alexander, too, it must be taken into consideration that, under Nebiannasur begins the period of the new era of Islam under Omar.

This is the reason why the Babylonian chronology contained in the extant inscriptions begins with Nebiannasur. The Ptolemaic canon, too, which, as is well known, did not follow historical dates, but represented a calendar with astronomical limits,† had begun with Nebiannasur. The misunderstanding of Syecellus can also be explained in this way; the Chronographia (267) says the Babylonians had from the time of Nebiannasur written down the periods of the courses of the stars (ἐκ Ναβονασσαρ οὖς χρόνον τῆς τῶν αὐτοῦ καταγωγῆς Χαλδαίων βασιλείων).

In Babylon itself the reform of the Age of the Ram never obtained full recognition, because the Age of Nebiannasur coincided with the fall of Babylon. The old Babylonian reckoning kept its hold here. Still Berosus, under the rule of the Seleucids, reckons, as we saw (p. 183), with the Age of the Ram. The new reckoning seems to have found its chief support in Egypt. Just as the new reckoning received recognition immediately among Marduk of Babylon, in the same way the Age of the Ram served the purpose of glorifying Jupiter Amon, who is represented with the head of a priest enthroned. Ameš, the 'sister of god,' in the Code of Hammurabi, the priestess representative of the sister-wife of the king, is Ishtar.

† It was carried further for several centuries after Christ. Christian chronology is by no means the author; he had collected the traditions which preserved them in their true form.

Footnotes:

* Emot, the 'sister of god,' in the Code of Hammurabi, the priestess representative of the sister-wife of the king, is Ishtar.

† It was carried further for several centuries after Christ. Christian chronology is by no means the author; he had collected the traditions which preserved them in their true form.
AGES OF THE WORLD (Buddhist)

ram, although he is in his nature identical with Marduk. Alexander the Great, who allowed himself to be celebrated by contemporary writers as lord of worlds, and to be painted by artists and goldsmiths in the likeness of Jupiter Amon. Manetho says that under Bocchoris 'a ram (apistos) spoke.'

The doctrine of the Ages of the World, as may also be inferred from the preceding explanation, is connected with the expectation of a deliverer. As deliverer there appears the Divine power, which reveals itself in the spring equinox. It is Marduk-Adapa, it is the 'ram, planets according to the' Astarte or the sign of the darkness. In 4 Ezra (11:40-46) the seer reflects on the ways of the Highest:

'Then the highest looked at his times; so, they were at an end, and his zones (oracles) were full. The earth will be refreshed and return . . . and trust in the judgment and mercy of his creator.'

In these words lies the fundamental religious idea of the doctrine of the Ages of the World. 'The zones were full.' 'The time is fulfilled.'

The connection of the doctrine of the Ages of the World lies also once as axioms:

1. The Age of perfection lies at the beginning. Just as pure knowledge, revealed by the godhead, lies at the beginning, so that is the task of science to discover the original truth by observation of the book of revelation written down in the stars, and to obtain freedom from the errors which have come through human guilt, so the Age of pure happiness lies at the beginning.

This fundamental idea has produced a special theory regarding the doctrine of the Ages of the World which is based on the connexion of the planets with the signs of the zodiac. The commencement with the Golden Age points to Egypt, where the sun predominates (see above, p. 154). It may, however, point to the Babylonian convex, which gives the first place to Marduk as a sun-phenomenon, just as the planet Jupiter removes one of our days of the week places Sunday before Monday. The Golden Age is also called the Age of Saturn. Owing to the change of the heptagram into a pentagram, Saturn is represented by the sun, as Mars is by the moon; and an astronomical text of the Babylonians, which has been handed down to us from the time of the Arsacids, expressly says that Saturn and the sun are identical. As far as the rest are concerned, the order of succession corresponds to the astral theory. The third, the Copper Age, corresponds to Ishtar-Venus, the third figure among the rulers of the zodiac.

The succession of golden, silver, copper, brings the second characteristic at the same time into view. It is as follows:

2. The times are becoming worse.—This is much more strongly expressed when the theory departs from the scheme provided by the planets with regard to the fourth Age, and allows an Iron Age, corresponding to the distress of the present time, to follow after the Golden, the Silver, and the Copper Ages. The end of these evil times, which precedes the destruction of the world, is a time of cursing, a time of tribulation, and the reversal of the natural order. The Babylonians often speak of this time of cursing, which stands in opposition to the time the deliverer brings (see above):

'When such and such things happen in heaven, then will the clear become dull, the pure dirty, the lands will lose, the earth will not be heard, the signs of the prophets will become unfavourable.' In a form of curse which speaks of princes who do not obey the commands of the gods, we have the following:

'Under his rule the one will devour the other, the people will sell their children for gold, the husband will desert his wife, the wife her husband, the mother will bolt the door against her daughter.'

In the Atarahases myth, the text of which originates in the 3rd mill. (the time of Ammianus), is a sequel to a myth with which Flood is related. In the Ira myth the coming of the deliverer after the time of cursing is expected:

'The seacoast shall not spare the seacoast, Mesopotamia shall not spare Mesopotamia, nor Assyria Assyria. Owing to the Elamites, the Caritate the Carities, the Sutiean the Suttieans, the Cusinean the Cusineans, the Lulubian the Lulubians, one land another land, one man another man, one brother another, but they shall strike each other dead. But after that shall come the Akhidas, who shall lay them all low and overwhelm them severely.'

Signs in the sun and in the moon proclaim the end. In a hymn we have the following:

'Oh, father Bel . . . oh, lord of the land, the cow rejects her land, the she-goat her fold. How much longer shall the holy city shall the mother reject her son, the wife her husband? Heaven and earth are laid low, there is no life in the sun. The moon does not rise with his radiance over the land, the moon does not rise with his light over the land. Sun and moon do not rise with their radiance over the land.'

The time of the curse corresponds to the rule of the powers of the lower world. It is like the time of the descent of Ishtar to Hades. When Venus is in the lower world, all life is dead. As it is in the small year, so is it in the world year.

But then comes the great revolution. Between the Babylonian text, which speaks of funerals, and the corresponding expression in the Ira myth, blessing. It is only from the description of the happy rule of kings, who are praised by the writers of the tablets as the bringers in of a new Age, that we can extract the motives of the time of blessing.

Especially is this the case with Assurbanipal.

'Since the time the gods in their friendship did set me on the throne of my fathers, Rammass has sent forth his rain, he opened the springs; the grain was five ells high in the ear, the ears were five-sticks ells long, the harvest was plentiful, the corn was abundant, the seed shot up, the trees bore rich fruit, the cattle multiplied exceedingly. During my reign there was great abundance, under my rule rich blessing streamed down.'

ALFRED JEREMIAS.

AGES OF THE WORLD (Buddhist).—The views of the Buddhists on periods of cosmic destruction and renovation were matters of vivid interest to the first Orientalists, as will be seen from the bibliography on p. 195. This theory has rather languished since the publication of the Religion des Buddha von Köpen, the last who has dealt thoroughly with this topic.

*Note how the whole world is embraced in the range of vision.
The fanciful theories of the Kalpas or Ages of the World do not appear to be essential to Bud-
dhism, whether looked upon as a religion or as a phi-
losophy. Nor are they of mythological moment, 
being but expression of a kind of 'secular knowledge,' or, as a 
Buddhist would say, lokāyatika. Nevertheless, 
as they can be proved to be very old ; as they are 
made use of when the myriads of Buddhas of the 
Great Vehicle are honoured, and have been duly re-
cognized by the Buddhists of every country, Sindi-
ese as well as Mongolian; as, moreover, some 
bits of philosophical or religious reflection are inter-
woven with them; we may be allowed to consider 
the subject in all its aspects.

There is no beginning of transmigration (or saṁsāra); there will 
be no end to it: on these two points all Buddhist schools agree.
But, without mentioning that speculations on the beginning or the 
end of the cosmos are forbidden by the Buddha in some 
texts (see Aggovaramīḍa [Buddhist]), it must be observed that there 
is an end to transmigration for the Arhat, who rightly say 
at the time of dying, 'This existence is for me the last one.' 
Moreover, in the Buddhist of the Great Vehicle, Avatāka, for instance 
(see Avalokita), resolved to postpone his entering into 
Nirvāṇa till every creature should, by its own truly divine 
edification, have been carried into the peace of salvation. 
The problem, where the texts are silent, or rather, contradictory, 
will be solved as it has been solved by the Sūkṣma; 
the number of the souls being infinite, there will never come 
a time when all will have attained Nirvāṇa. 
Hence there need be no fear for the soul, for we can as well 
believe that the elect, if only they do not 
care for it.

Theories on the revolutions of the world are said, in the 
Brahmagātattu, to be extraneous to Buddhism, and even alien to 
its spirit. But they soon became naturalized; and, while origin-
ally very like the Brahmanical theories, they were worked up 
with a new plan.

The Buddha and his disciples mention in the fourth edict of Añoka of the next 
destruction of the Universe. 'The pious king hopes that his 
sons and grandsons, and so on, will maintain good practices till 
the end of natural destruction (antarākṣapad). This text 
does not, however, prove that the belief in the very speedy 
destruction of all the world was universal.

The canonical Pali texts do not furnish us with the 
complete theory now to be stated. These 
affect only hints or allusions, from which it is 
difficult to draw any conclusion as to the condi-
tions of the elaboration of the doctrine. These 
hints, however, will be carefully pointed out.

So far as the Buddhism of the South is concerned, we 
derive our knowledge from the Commentaries, of 
which the principal is far more than Buddhist. 
that, their official compiler; and for the 
Buddhism of the North from Mongolian, Tibetan, and 
Chinese sources, confirmed by the Abhidharma 
literature.

The principal lines are as follows:

A Period (kappā), or 'Great Period' (mahā-
kappā, kalpa) of cosmical evolution, is to be 
divided into four 'Incalculables' (samikkeyya) or 
'Periods' (samikoṭṭhakappā, samik-
khyeyakappā). These last are always mentioned 
in the following order: (1) Period of destruction 
(samvattatthakappā, samvaṭṭakappā); (2) of 
destruction of the destruction (saṁvaṭṭaṭṭhakappā, saṁvaṭ-
ṭṭhakappā), when the world remains destroyed; (3) of 
renovation, or rather revolution (vīvattā, vīvattā); 
(4) of duration of the world renovated (Añguttara, 
i. 142, iv. 100; Majjh. i. 35).

How long is an 'Incalculable' period? The 
answer given by Buddha himself is a very good 
one: it is difficult, i.e. impossible, to exhaust a 
'Incalculable' by numbering hundreds of thousands of 
years. In Sāvittīya, ii. 181–2, there is a 
parable which found its way into the Chinese and 
Sinhalese records: 'Suppose a mountain of iron 
to be torched every hundred years by a muslin 
veil; the mountain will be destroyed before the 
Incalculable (or the 'Period') is an end—and the 
common measure with the Incalculables, nay, 
with hundreds of thousands of Incalculables: the 
saṁsāra being 'infinite,' as we should say, and the 
Incalculables indefinite.

This parable is to explain the problem occurs in the Mahāvaṁsa (i. 77). It is said that the future Buddha must, be-
fore becoming a Buddha, pass through 'stages' or 
'terraces' of immeasurable duration (aparinirmita, apramaneṇa).

'If it be so,' asks Kātyāyana, 'how 
will the future Buddha ever attain the higher 
stages?' The problem is thus in substance 
identical with the Ages of the World: each of them is immeasurable, 
and nevertheless there are many Ages.

Notwithstanding these very clear statements, Buddhists and 
moderns have tried to calculate the 'Incalculable' (kalpa), as 
'sariśāvatthu,' like many other words of the same meaning (and 
there is no particular reason why such a word should have 
been used to indicate an exact number. But the lists of 
high numbers, the so-called pāṭihāri, are constructed on 
different principles. The number being conceived as something 
inalienable, is divided into 100, 10,000, 1,000,000 ... 
sometimes by squares, and the saṁbaṅgha does not always hold the same place in 
the lists. A Ronnstadt says that an 'Incalculable' is followed 
by 17 ciphers (100,000,000,000,000,000 years). But these figures 
give a period, not an antisēkhyeya. From the Dhamma-
padāpiṭaka, Burnouf and Hardy admit 17 by ciphers; 
and there is, according to the first named, a very ingenious 
combination of the first 'numbers premiers' in the formation 
of this number. Johnville (Sinhalese unamed sources) has 
1 followed by 63 ciphers. From Burmese sources, Pallegoix 
has 1 followed by 168 ciphers, and Burnouf, 1,410 ciphers. 
According to the Northern Abhidhamma list, saṁbaṅgha being 
the head of a geometric progression (1, 10, 100 ...), we have 
1 followed by 52 ciphers. Lastly, the Buddhakathākatha list 
gives 1 followed by 93 ciphers. Now because the period, as 
10, 100, 10,000, 1,000,000 ... saṁbaṅgha is the 10th term: to 
write the number, as we do, 1 followed by many ciphers, 
the number of kilometres, allowing that one cipher occupies 
a length of 0.001 m. That suggests in some degree the vastness 
of an age.

Theoretically, each 'Incalculable' is divided into 
twenty Añvatakkalpas (kappa) or 'Intermediate 
Periods.' But the advantage of this division is not 
so much as to complement the doctrine as to 
clarify the number of conscious creatures a warning against 
the forthcoming calamity. * In course of time all 
the creatures, with the exception just to be noted, 
attain reincarnation in higher worlds, i.e. in spheres 
which will not be overtaken by the destruction. 
The time of the higher reward may therefore have 
come for the great majority of creatures, after 
numerous migrations amongst ordinary good and 
bad births. They alone 'in whom the root of 
merit is greatly cultivated' by adherence to the 
truth, and for whom 'the word of deliverance has 
utterly perished,' cannot by any means ascend into 
the higher realms; and as the hell in which they are 
tormented is going to be annihilated, they will 
take rebirth in the hell of some universe whose 
destruction is not imminent. Elsewhere it is said 
that there are self-made hells for them. In the 
old sources it would seem that only Devadatta, 
the cousin and rival of Sakiyamuni, will endure 'for 
an age,' or 'for ages' (kappattha) in a state of 
pain.

This gradual disappearing of the animistic world (attaloka) fulfils the first Intermediate Period of the Age of Destruction. Now begins the Destruction of the 'receptacle-world' (bhūjānāloka itself, 
by fire (tejaśvāvaucarita), by water (ayā), or 
by wind (āyur).† There is a complete set of 64 Great 
Periods, in regard of succession, with a destruction 
by fire, then one by water, then seven by fire, 
then one by water, and so on, the last, i.e. the 6th, being 
by wind. We are told that the destruction by fire 
closes the World, and the remainder of the cosmos as 
does the destruction by water; and the 

* All the gods called Lokabhīshā hold this office of Noah, 
according to the Visuddhimagga (Warren, p. 322).

† P. x., xii., xiii.; Aposavasutta, p. 352; Jey. B. 1891, p. 118. For the Brahmanical speculations, see 'Matsya-
purāṇa,' p. 413, Aufrecht, Cat. Darwiniana, p. 554; Böhl. Rohr, 
ex. Sāvattvā, Sāvattvā.'
destruction by wind is greater than the destruction by water (samvattasvdha, limit of destruction).*

But there are discrepancies between the European authorities, and probably also between the sources. Köppen has a statement that there are great, unexpected little destructions by fire, and so on. He goes so far as to ascertain the order in which they will succeed, though he does not have the authority to support his views. Does the destruction by fire annihilate only the worlds up to the abode of Mahabrahma, or does it also include the spheres of the third? Or does it annihilate only the two abodes immediately superior to the third Dhyana (Pervicnaisatara)? Does the Water-Destruction, in which any case destroys the third second Dhyana abodes, destroy also the two third Dhyana abodes? If it destroys the two third Dhyana abodes, does it not also destroy the final third Dhyana abode? Lastly, does it seem to be a general agreement regarding Water, which overthrows the worlds up to the second fourth Dhyana abode.

The matter would be a little too fanciful to detain our attention if we did not find in the Brahmajali, the first Sutta of the Dhpakhamsa, the origin of the context. 'Buddha, explaining the origination of the universe, stated that, during the period of destruction, beings have mostly been reborn in the World of Radiance (i.e. in the second third Dhyana abodes) as soon as the fire (the fire of the World of Radiance, as it is more frequent) reaches up to the second third Dhyana abode. When the Palace of Brahma with Mahabrahma appears, this being falls from the World of Radiance. There is no mention here of the second second Dhyana abodes, which would have been necessary steps of decadence; hence the opinion that the destruction does not go higher than Brahma Palace—i.e. the aspect of the second period.

We may conclude that the theory of the celestial abodes was not perfectly elaborated when the Brahmajali was written.

Details are given of the destruction by Fire, wrought by suns, well known in the Brahmanical literature. All water is dried up, beginning with the small rivers; and the appearance of the seventh sun gives rise to the general configuration of the Mount Water, the 'Earth's destruction.' It is the only text to give us the names of the four Dragon-Kings who pour drops always increasing in size, each for five Intermediate Periods: Leadhara, Gajapramecha, Achalanimahra, Sthalaabha. Wind treats the matter from a philosophical point of view: 'Whence comes the water? it is asked from nowhere.' And where does it go when the deluge is at an end? To nowhere. This destruction is also said to reach the Brahma heaven, but it is not said to go higher. The destruction by winds is parallel. The Pali commentator gives the name of one of them, prach-ajati.

Nothing is known of the Second Period. The world remains chaotic, or, if we prefer it, a pure nothing. 'The upper regions of space become one with those below, and wholly dark.' There are no ashes left. The third destruction by Earth, and the fourth by Fire, would assume that the water (which, being very acid, disintegrates the Iron or Crystal Mountains) does not annihilate itself. On the contrary, the water does not settle so long as anything remains.

*To understand the following, the reader is referred to the Cosmology. We give below the necessary ideas:

Above the world of desire (i.e. the four continents, Mount Meru, and the five abodes of the inhabitants) begins the universal form, consisting of three (or two) heavens of the first meditation, three of the second, three of the third, and five of the fourth heavens. These are the four heavens of non-form. The worlds are organized in such a way that the second meditation realms are established above a thousand first meditation realms (Little Chilocones); the third meditation realms cover a thousand second meditation realms (Middle Chilocones); the fourth meditation realms cover a thousand third meditation realms (Great Chilocones). For one universe, in the proper sense of the word, there are 1,000,000,000 first meditation abodes (heavens), 1,000,000,000 Mount Merus. One universe is the "cosmo" of the Buddhist world-cycle always persists to the present of a Buddha's domain ("Viyambhim, xii., in Warren, p. 312). In "interplanetary" regions, the theory is supported by the texts at our command ("J ITS 30, 115.

For particulars see Spence Hardy, Manual; Köppen and Warren, loco, etc.

1 In the 'Matayaparina,' Cat. Ozen. 3479, 33, there are seven worlds, the destruction by water-waters; the first is named 'destruction' (antarartha).

2 But everything becomes impregnated with water and then suddenly settles and disappears.'

When the time of renovation is come again, i.e. when the former of the beings in the higher abodes is exhausted, and they have to be reborn in inferior regions, first (in the case of destruction by fire) appears the abode of Brahma (Brahmavannins), with the two divisions of devas. Then comes the world of the Abhikbara (abodes), and then in order the three Deva abodes of the Pari-nirmitavarsavatins, the Nimmatarins and the Yanyavirins (gods, Tamas, the Tusitas, etc., are also named); then the circle of the abodes of the Vimana (varmanada) on which is established the Circle of Water, etc., with Mount Meru and its heavenly inhabitants, with the sun and the moon, etc.: all this is called the 'circle of the receptacle-world.' And that is the end of the first Intermediate Period of the 'Inealulable of Renovation.'

During the nineteen following periods the inferior parts of the bhogamukta are successively peopled by men, and the evil world is divided into the six realms of the six classes of the Yama (i.e. of immensurable life). Such they remain to the end of the Period of Renovation, according to the Abhidharma-kosika.

The source, known as the bhogamukta, states as an ex- pression of the determination of the theory, declaring a date of 80,000 or 84,000 years. When the infant beings have appeared, the Inealulable Period of Renovation (svavartmanavastha) is finished.

The following Period of Duration (vicerattasvta prarabdhi) is divided into twenty well-characterized Intermediate Periods. During the first, the whole of which is of decrease, the average duration of human life falls from 'immensurable length' (or from 80,000 years) to ten years. The eighteen following are divided into two parts: the first of increase (vijnanakala, vijnanavastha), during which life increases from ten years to 80,000 years; the second of decrease (apakshakala, apakshavastha) inversely to the first. The twentieth and last is only of increase. We do not know if the first and the last are shorter than the remaining ones, but that seems probable. Here the Brahmanical theory of the Four physi finds a place: the increasing will be divided into the Iron, Bronze, Silver, and Golden Ages, and the duration of the world will be 80,000 years, etc. We are now (A.D. 1977) in the Iron Age of the first Intermediate Period of the Period of Stability (this intermediate is only decreasing). From a hundred years, the highest attained in the Iron Age, life is declining to ten. When the decreasing stage ends, the five calamities (kaya) begin to prevail; but when life is reduced to ten years (dhatvarthasvta, kalpa) the destiny of men is worse. At the end of every Intermediate Period (except the last, which is only of increase) the greater number of living beings pass away by hunger, epidemics, and so on. Some say that these three plagues work together, some that they appear in succession, as in the Abhidharma-kosika and the Mahavasavatins; and this same diversity of opinion manifests itself in the Mongolian and Chinese sources. Spence Hardy establishes a connexion between prevailing winds, plagues, and forthcoming destruction: Love, Epidemic, Fire; Hail, Sword, Water; Delusion, Hunger, and Wind. It would follow, as destruction is coming only after many Intermediate Periods, that during the whole of the 'Inealulable,' every Intermediate has epidemics, etc., according to the final modes of passing away. The majority of the creatures being dead, the remaining ones are 'converted,' and the age of man increases again. A new intermediate Age has begun.

If we except the speculations on the 'creation' by the united merit of all sentient existence, and on the 'repopulation' of the worlds, which are perfectly free from pitfalls of views, and, being

* See Köppen, Zeitschr. n. 1. He adds, according to 'some,' these plagues appear only in the Intermediate Period immediately preceding the Destruction.

Digitized by Microsoft®
case. Sometimes a great Period elapses between two appearances of a Buddha; sometimes an in
calculable number of great Periods; sometimes, on the
other hand, there are in the same period many
Buddhas. We have 1 substantial 'periods (āraśa)',
with one Buddha; 'cārth periods (śūravata)',
with two; 'excellent' (śrāvita), with three; 'substantial
environment with four; 'auspici
ous' (śrāvikṣu), with five.
Such is the present Period. There have been
twenty-nine void 'Periods before it. So far the
old tradition. The reductors, moreover, of the
81 Buddhist tales (III. 306), Thee
Buddhist pilgrims, etc., are already aware that in the Buddha
 kalpa a thousand Buddhas are wanted.

At the beginning of the Universe, when the
primordial water (see above, 189/) is about to give
way for the appearance of the solid world, a lotus
appears at the place where the sacred tree of
Buddha has been and will be.* There is no flower
if the period is to be void; there are as many
flowering Buddhas in this Universe of Buddhas.† Compare the
Brāhmaṇa flower.

Another point of interest is the description of the
first men, or, as it has been called, the Buddhist
Genesis. Orig
ally, falling as they did from
the extra-abode, human beings retained the
attributes of their former existence. Born by
apparitional birth, self-luminous, with joy as their
only food, and with spiritual bodies, such beings are
evidently meant by the men of innumerable life
retained to above (see p. 159/). There is neither sun
nor moon. As time goes on, earth appears on
the surface of the primeval ocean. It is a savoury
earth, and, as it were, a foam. Men eat H, and
thus the world is for ever fresh and starts
furnish some light. Then follows the eating of
some honey-moss, of creepers, of a marvellous rice.
It is long a decadence. When this last has become
a regular food, organs of sex appear; and with the
invasion of marriage, of private property, and of
caste, begins the organization of human society.
Interesting for general folklore (especially the
details on marriage), the story is certainly very old,
and it is probable that the classification of the
celestial abodes. That in falling from the Abhās
vara-abode the beings do not go through the heavens of Brahmā and the Devas, and that these
are utterly ignored, are significant facts. But it is
not probable that the 'self-luminous' men who
never possess the attributes of the Abhāsvāras.
We might assume that there was originally no
connection between these first men and any sort of
degenerated gods. The first men were regarded as
abhāsvāras, i.e. 'resplendent', and the Abhās
vara gods themselves may be derived from this old
conception.

AGES OF THE WORLD (Christian)*. The poets and the philosophers of pagan antiquity
have, as a rule, represented the evolution of man as a gradual but inexorable decay, putting the
last word at the beginning, and asserting that the
world would end in complete destruction. The
Christian idea is exactly the opposite; and this is
quite natural, for Jesus Christ caused a great hope
to shine on humanity, groaning in the darkness of
agony. The prophets of Israel had already
hung out some rays of this hope, in foretelling the
coming of the Messiah, who would establish on
earth an era of true religion, of peace and hap
ness. The hope of a new age, placed the Golden
Age in the past, Christians put it in the future;
they have described the history of the world as an
ascent, if not continuous, at least intermittently
progressive, and finally triumphant, towards good
and happiness. The period (the period, (sda°),
may be described in an imaginative style the last phases
of this historical drama.

St. Augustine is the first Father of the Church
who explicitly mentions Seven Ages in the history of
man. He says that there is neither sun
more or less inspired by his idea. His
plan is derived from the 'Days of the Creation' in
Genesis. The passage is de Cieclitate Dei, xxii. 30
et sqq. (The
Pauslius Orosius, a Spanish priest (d. 418), the
friend and admirer of St. Augustine, to whom he
dedicated his Historia, besides trying to prove
incidentally the Bishop of Hippo's theory of the
government of God in history, divided his work
into seven books, which, however, correspond to
different epochs. He had clearly arrived at the
feeling of root historic history. The founding of
Romulus, the death of Alexander, the taking of Carthage,
the Sermale War, the reign of Caesar Augustus,
who makes him coincident the birth of Jesus
Christ, and the memorable events which form
the boundary of the seven ages.

The Venerable Bede (d. 755), who in his
Chronicles owes much to Pauslius Orosius, also
adopts seven Ages, and surmises that the last one,
ending with the year 1000, will mark the end of
the world.

Adson, abbot of Montier-en-Der, in his treatise,
* (As the Jews were accustomed to distinguish the age before,
from the one after, the advent of the Messiah, so the majority
of NT writers distinguish a time from aera or melanes. In
both cases an ethical is always superimposed upon the temporal
meaning. The former age is the period which shall elapse
before the appearance of Christ, the period of in-
standing, impotency, wickedness, calamity, misery
(Thayer); the latter is the age after Christ has come again
power to establish the Kingdom of God definitively, with all its
blessings. It is insatiated by the resurrection of the dead,
and it answers, in scope and nature, to the completed work
of Christ. The present world, as being material and transient, is
understood by the angel, who meditate the 'age to come' (¢e
kataklysmo, $ melagena), He 29, on the other hand, is
viewed as already existing, in a sphere transcending this earth,
out of which it will come down as a new and divine order of
things. The term 'world' (ouk.oev) expresses the constitu
tion of things which are 'ages' (kataklysmo, melagena),
the latter in relation to its development in time. The scope of
the NT in ages. The present age is almost invincibly, the
gulf between the two ages, however, is not conceived as
being an age of absolute. The powers of the age to come (($
projected within the age, is manifestly ways into the way of
a diffusing
order and onward what is otherwise a chaos.
and a change, the Dispensation.
H. E. Macdonald.] According to the Anglo-Saxon version of
191
St. produce and his connected The faithful and the Kingdom the prior Thuringia the the Scotus Erigena the Erigena the 1857), man, Nevertheless Paul, which sketches of announces, according to religious St. Aages The Age, live priesthood. The will of young people, the third will be that of children. The first passed under the light of the stars, the second was the dawn, the third will be broad daylight. The first was winter, the second the beginning of spring, the third will be summer. The first bore nettles, the second thorns, the third will yield wheat. The first gave water, the second wine, the third will give oil. The first is connected with Septuagesimae, the second with Quadragesimae, the third will be Easter. The first Age refers, in the FATHER, to the Father, the second, to all things; the second to the Son, who descended to put on our flesh; the third to the Holy Spirit, to whom the Apostle has said, Where is the Spirit of the Lord is, there is liberty (de Concordia, lib. v. c. 48). Dante does not number the Ages of the World, but, borrowing the form of his profane from the figures of the Apocalypse, forestills the vengeance of God against the Dragon, which has broken the wheel of the Chariot of the Church, and announces that the one sent by God, whose number is 610 (=DVX), will kill the foul thief and the Antichrist, with her (Divina Commedia, Purg. xxxiii. 43ff). Bossuet, in his Discours sur l'histoire universelle (1681), returns to the seven Ages of the City of God, but, instead of the three, he introduces the age of St. Augustine. According to him, the first Age, from Adam to Noah, comprises the creation and the beginnings of man. The second, from Noah to Abraham, the Dispersion, the Flood, the first punishment of man, and opens the era of the bloody conquests. The third Age, from Abraham to Moses, was contemporaneous with the beginning of the world. The fourth opens sketches from Moses to the building of the Temple at Jerusalem by Solomon. The fifth goes to the end of the captivity of Babylon; the sixth runs from Cyrus to Jesus; the seventh, and last, reaches from the Nativity up to our time. It is evident that Bossuet looked only at the past;

he did not borrow the Bishop of Hippo's beautiful prophecy of a seventh Age,—the Age of rest of all nations and of the universal peace, to which Christianity triumphed over his enemies, and God is all in all.
The Neapolitan Vico (d. 1744), in his Scienza Nuova, distinguishes three Ages in history, the first of the different nations. The Divine Age, or, so to speak, the infancy of man, where all is divinity and authority, belongs to the priests; the Heroic Age, where the conquerors rule by brute force; and the Human Age, the period when divinity and right in things perished, which men will return to their primitive state. Mankind, according to him, will turn round perpetually in this circle—a theory similar to that of the Stoics. It was the privilege of a Frenchman, more famous as an economist than as a theologian, to return to the Christian idea of a progressive development. Turgot, a prior in the Sorbonne, at the age of twenty-three (1750), in his Discours sur le progres sucessif de l'humanité, shows that the work of mankind, the conquests acquired by their fathers and grandfathers, so, according to Turgot, there is a heritage of truth, of intellectual, moral, and economic progress, which, in each new generation, enriches the patrimony of humanity. Hence this progress.

In the 18th and 19th cents. the idea of the development of the Ages of the World, i.e. of mankind, by analogy with the ages of human life, was renewed by some Christian philosophers. J. G. Herder, in Ideen zur Philos. Gesch. der Menschheit (1784), admits that there are in the evolution of races and nations, as in the life of plants, periods of growth and blossoming, of fruit-bearing, and, lastly, of withering. Mankind tends, by the reciprocal influence of the nations, to the realization of that blessed Age announced by Christ under the name of the 'Kingdom of Heaven.'

The founder of positivism, Auguste Comte (d. 1857), thinks that religion is contemporary with the infancy of humanity.

'Following the very nature of the human mind,' he says, 'each branch of knowledge must pass through different ages: the theological stage, which is the age of fiction; the metaphysical stage, which is that of abstraction; and the scientific stage, which is the positive age' (Cours de philosophie positive, iii. Appendix, p. 77).

Henrik Ibsen maintains that man evolves in turn through three phases: 'The kingdom founded on the tree of knowledge; the kingdom founded on the tree of the Cross; and, last, the kingdom founded on these two trees at once, for the sources of its life are in the paradise of Adam and at Golgota.' (Emperor and Galilean, 1st Part, Act III.)

Drummond, in his Ascent of Men (1894), distinguishes three ages in the evolution of the world: the first, in which the Vegetable Kingdom was led to produce the flowering plants; the second, the evolution of the Animal Kingdom, where the possibilities of organization were exhausted in the Mammalia; lastly, the third, which comprises the ascent of man and of society, and is bound up with the history of man. This is the Further Evolution, the page of history that lies before us, the closing act of the drama of Man' (p. 443).

There is a short sketch of the Christian theories of the Ages of the World. In opposition to the pagan conception of a fateful decay of man, ending in annihilation, the Christian conception, derived from the Messianic idea of the ascent, the progression of man, not through out falls, towards more truth, more justice, and more happiness. The socialists of the present day have unwittingly adopted the Christian idea of the 'Millennium.'
AGES OF THE WORLD (Egyptian).—In their literature the Egyptians have not left any formal description of the world and its ways as they imagined it to have existed in past ages. Manetho (c. B.C. 300), enumerating the rulers of Egypt, records in the period before Menes two dynasties of gods, followed by four others the character of which is not known, and finally a dynasty of rēves, demi-gods. The fragments of the Turin Papyrus of kings prove that such a view was already established in the 14th cent. B.C., although the details cannot be fixed. Heh, Hesperes, the creator-god, heads the list in Manetho, and he is immediately succeeded by the sun-god. These two correspond in Egyptian to Ptah and Rē, the latter being the organizer of the world. An inscription of the Twenty-second Dynasty says of the temple of Siut that it was 'built by the fingers of Ptah and founded by Thoth for Ophois, the local god; and a Ptolemaic text ascribes to the sun-god, during his reign on earth, the rule of the Egyptian cities and their shrines. Stories of the time of the rule of the gods on earth are seen in the mythology (e.g. the myth of Osiris, and the legend of Hathor's massacre, and the Heaven's Creation, and in the popular tales (vaguely in the story of the Two Brothers).

'Since the time of the god' and 'since the time of Rē' are old formulas for expressing immemorial antiquity; so also is 'since the time of the worship of Horus.' These last correspond to Manetho's rēve, and have been shown by Sethe to be historical personages, representing the kings of Upper and Lower Egypt before Menes united the two lands. Their records, which had not perished at the time of the extension in so primitive a style as to be undecipherable to the Egyptians of the third millennium B.C., and these 'worshippers of Horus' entered early into the realm of the legendary. The Turin Papyrus appears to refer to 23,250 + x years to a dynasty of 19 'worshippers of Horus.' The wise Ptahhotep, in his rather cryptic proverbs dating from the Old Kingdom, seems to refer to the 'counsels of them of old, of whom listened to gods'; and the 'worshippers of Horus' are the type of virtue rewarded in the same collection of proverbs; 'An obedient son is like a worshiper of Horus, he hath happiness in consequence of his obedience; he groweth old, and attaineth to the honour of great age.' Thus there was some idea of a more perfect condition having prevailed in primeval times. None the less, the myth, which show in perfection, declination, and width of the all kinds appearing amongst both gods (e.g. Seth) and men in the age of Divine rule.

AGES OF THE WORLD (Greek and Roman).—The Greeks, and after them the Romans, were especially interested in this subject, and it is largely to their speculations that we trace the concept to the Ages which we find in the literary tradition of our Western civilization. In the Graeco-Roman world this theme was actively discussed for nearly a millennium. During that long period the theory of the Ages was revised again and again by the various schools of philosophers, by manifold attempts to harmonize conflicting authorities or to incorporate new ideas, by the lore of the peoples, by tedious examination and by the embellishments of mere rhetoric. The result is that a complete and detailed examination of the question is not to be expected in the space at our command.

Every theory on this subject belongs to one of two types. The first assumes that man has risen from his former estate; the second, that he has fallen. Both of these occupy an important position in the history of ancient thought, but, so far as the present concern is concerned, the theory of descent, that belief in the progressive degeneration of mankind which is cherished by the folk of many races, was at all times the dominating type. The well-known lines of Horace (Ies. i, 23, 4),

'Esse parentem, peperior avis, tule
Nor nequeores, now daturus
acipitare generatio' (Ies. i, 23, 4),

are the expression of a view which recurs again and again in the Graeco-Roman world, from the Homeric poems (II. i. 272, v. 304; Od. ii. 276, etc.) to the last words of Classical Literature.

A strictly chronological development of our subject is impracticable. The blanks in our surviving tradition are so large, especially in the departments most important to us, that no definite date for the inception of any one article of doctrine may be ascertained. Indeed, practically every idea by which the later tradition is distinguished will be found upon examination to possess a high antiquity. We may assert, however, that three periods of formative influence are especially prominent. The first is represented by Hesiod, the second by the Stoics and their predecessors, the third by the revival of Mysticism in the 2nd cent. B.C.

i. Hesiod.—The position of Hesiod was always paramount. The influence of Hesiod upon our subject is very much the same as was the influence of Homer upon the form and content of Greek Literature. The account of the Ages which we find in his Works and Days (1048–111) is the classical epitome upon the subject. It is, also, to a remarkable extent, the centre and ultimate source of the later development. There were several other accounts of the early history of man, and some of them were evidently folk-legends of a high antiquity. None of them, however, is of any great importance to us. A few have contributed a detail here and there to the development of the Hesiodic norm, but most of them languish in comparative obscurity. Such being the case, it will be advisable to make Hesiod our basis, and to begin with a summary of his famous account.

First of all, the Olympian gods made the 'Golden Race of Men,' the 'Golden Age;' these were said to have been when Kronos was king in heaven. They fared like the gods themselves, always making merry, and untressed by toil or care, for the termination of life bore no sense of the change of all good things, and there was no old age. Even death itself, when at last it came, stole upon these men like a pleasant sleep, and they died in peace. And Zeus made them the good spirits that live above the earth and are the invisible guardians and helpers of all men.

The Olympian gods made a second race, the men of the Silver Age. These were far inferior to the Golden Race, for they remained with Kronos a hundred and twenty years; they reached maturity straightway perished by their own folly, for they slew each other and perished much as men do. Therefore Zeus was wroth, and put them to

These of the ancient chivalrous division text into four Ages. No reference to this version is found in the Homeric poems, but, even at that early period, some form of it was probably current among the Greeks.

These, in our present form, the four metals—gold, silver, bronze, iron, in the order named—is, in itself, an indication that the theory of descent is the fundamental idea of the legend. True, the causes and symptoms of descent, the conditions of degradation, to speak, are by no means clear at first sight. This, however, is, in itself, a striking proof of the high antiquity of the theory. Our long familiarity with the later phases of the legend, naturally suggests the ethical motif as the standard of measurement here. But in the primitive stages of a myth like this, neither morality nor moral responsibility is of much account. The Golden Age is a replica of heaven, a mortal reflection of the glory of the immortals. The men of those days were superior to us simply because they were made so. They were nearer the gods than we. Their position was a matter of powers and privileges, not of character. In any case, those happier days has been measured by the gradual loss of those powers and privileges. The causes of it are in the will of the gods themselves. The idea of moral responsibility as a factor in the problem belongs to a period of more mature reflection, and we see the first beginnings of it in Hesiod's own account. Peace and plenty in the first Age are followed by brutish anarchy and violence in the second. The third sees organized violence and deliberate cruelty; the fourth, crime of every sort and description. The steps, however, are none too clear, and the old description of the Ages was not yet in harmony with the new standard, or the two combined, or the material motives of which that description is a part. The new account of the Ages is a rethinking, a new and more emphatic version of the old, giving it the ethical motif. The basis of it continued to be the same—his first task of the creation, the free-will, guilt and misery, the admiration of which has already been observed in Hesiod. More specific detail of the processes frequently reflect the philosophical tenets of the time, and may, also, be freely manipulated in the interests of rhetoric or for other purposes.

The principal difficulty with Hesiod's account arises from the fact that there was no place in the old four-fold scheme for the Heroic Age. As a matter of fact, the Heroic Age belongs to another and a different account of the development of mankind. Neither of these accounts, however, could be neglected, and in Hesiod the older account at least is retained to a considerable extent in the first and second ages. The deduction upon which it was based seems tolerably clear. According to the old four-fold system, the Bronze Age immediately preceded our own. On the other hand, it was also generally accepted that the Heroic Age immediately preceded our own. Consequently, the Heroic Age of the one scheme ought to coincide with the Bronze Age of the other. This, however, is impossible, as any one may see by comparing the two. Hesiod, therefore, inserted the Heroic Age between the Bronze and the Iron Ages of the old scheme, and re-numbered accordingly. The result was a system of five Ages, the fourth of which was usually called after the later and better known exemplars, may be assigned to the period between the close of the Iron Age and the present day.

As we have already seen, the presence of the Heroic Age in Hesiod's account upsets the principle of progressive degeneration, a fundamental idea of the old four-fold scheme. It also runs counter to the belief that each one of these Ages is represented by its own separate and distinct race of men. It was not until the rise of the Cyclic Theory that this idea was in any way disturbed, and, even then, the process was one of revision rather than destruction. Much less was the doctrine of successive races affected by the later intrusion of the Flood Legend. At first thought, we might esteem ourselves the descendents of Denealon and Pyrrha, who were themselves survivors from the previous Age. But the story itself reminds the reader that we are really terraeque, a new race sprung from the earth.

We now come to one of the most notable and, doubtless, one of the most ancient features of our legend. This is the significant association of it with the great dynamic change of Olympus. The Golden Age was under the sway of Kronos. Since then, his son Zeus has ruled the world in his stead. On this basis, the Four Ages are sometimes reduced to two, the Age of Kronos and the Age of Zeus, the old régime and the new, the happy past and the unhappy present. This may well be an older and a simpler version. But it occurs only in the later writers, and, so far as they are concerned, is probably for brevity, or to score a rhetorical point.

Real variations from this feature of the old account are especially characterisitic of the philosophers, and may best be taken up in their condition in this world, and their aims in it toward time. This view has not met with approval, and in any case it has no direct bearing upon the points which are of real importance.

* Rohde, i.e., contends that the principle followed by Hesiod in his classification and discussion of the Five Races was that of their condition in this world, and that the philosophers have taken it too far.

† Eog. Vergil, Georg. i. 121.; Titubius, i. 53; Odo Caseler, Sm. 19; Ousios Tyrr. iii. 56; Ampilbons, 255; Schlegel, 8. 125; E. 155.
with the Cyclical Theory. But the Hesiodic version of this motif, above all, the primitive association of Kronos with the Golden Age, persisted until a late date, not only in the genuine folk-tradition to which it really belongs, but also, to a large extent, in the literature. In fact, the Golden Age is often designated simply as 'the Age of Kronos,' *the Dawn of the S stringent.*

The description in Sallust, *The Judgement of Teleclus,* etc., was extremely popular in the literary tradition of later times. And, with the exception of certain details to be taken up in another connexion, these descriptions all bear a strong family resemblance to each other. Not less striking is their resemblance to what we hear about Elysium, the Garden of the Gods, the Hyperboreans, and similar conceptions. Indeed, as Dieterich has shown in his interesting monograph *The Golden Age in the Traditional Cyclic Motif,* common to all these passages passed over to the early Christian writers, and were applied by them to their descriptions of heaven.

The golden age, for such a similarity is, of course, not far to seek. In all cases, the theme is ideal happiness, and whether we locate it in the past or somewhere in the present, in this world or in the next, the details which make up the vision of unfilled desire, we find in this man, very much the same. Nor should we fail to remind ourselves that in the speculations of the folk there is no impassable barrier between our life and the life of those beyond the grave. Nothing was more certain to the belief that the Golden Age and the race who lived in those happier days had both passed beyond our ken; but that they still existed somewhere, and that, even now, a mere mortal man might be able to find them again, was not felt to be utterly beyond the bounds of possibility. Odysseus had returned alive from Hades, and it is a well-known historical fact that the gallant Sartorius was, at one time, actually on the eve of setting sail for the Fountain of Youth. The same association of ideas is also to be seen in Hesiod's account. In fact, this is one of the most ancient and primitive aspects of the legend. Hesiod's Golden Age, when Kronos ruled a race of men who have since departed, is in all essential particulars a mere replica of Hesiod's Isles of the Blest, where dwell those sons of the gods who have passed alive beyond the grave. Moreover, the foundation of both is material which had long been traditional, even at the time when...

The present writer has noted nearly a hundred references to it down to the close of the 3rd cent.

The result is that in cases where only a fragment of description has survived, it is sometimes impossible to decide whether it is an interpolation from the old epic which had been in mind. Compare, e.g., Solon, frag. 38, ed. Beek; Cratinus, frag. 160, ed. Kock; Cratinus, frag. 234, ed. Kock; Lucian, *De Deis,* 97 ff., ed. Marx; also Dieterich's *Nekyia,* and Wasser in Paula-Wissowa, v. pp. 2161-2174.

The Homeric poems were composed.* Indeed, even as Hesiod tells the story, it still reflects with remarkable fidelity the old epic-tale of a Lost Paradise before which the whole history of mankind had been marred by the intrusion of moral lessons and specific philosophical doctrines. Men lived long, never grew old, and died painless, i.e. a Death without a S stringent.* Meanwhile, they passed their days like the gods, in innocence, peace, and fabulous plenty, making merry continually, and knowing nothing of labour, disease, or sorrow.

Such are the principal motifs of the old legend of the Golden Age. The ancient world has always been the basis of all versions. The variations or additional details which we find in later accounts are, for the most part, due either to philosophical speculation, the incorporation of allied myths, or manipulation for literary purposes.

By far the most important of these is the first. In fact, the growing prominence of the ethical element, the most notable feature in the later description of the Golden Age, is due to the philosophers. The earliest of them were the Orphics of the 6th cent. B.C. The body of doctrine developed by these nameless mystics was based on the sacred epic of Kronos and the golden age. When we consider the strange figures of speech in which its real meaning was often concealed, we can hardly wonder that it was long misunderstood or derided by the many. The kernel of it, however, was, that, the great idea for which they were speedily no longer able to go forward, was destined to grow in strength, and, in the far future, to bear abundant fruit. This was the belief that not alone the sons of the gods, but, in the long centuries of the race, the sons of men might find their salvation, and live in the dark house of Hades. Naturally, therefore, not only among the Orphics and their disciples, but also among their opponents, the idea of the Lost Paradise became more and more prominent. Discussion or description of the Golden Age, more especially of its analogue beyond the grave,—the Golden Age, so to speak, of the future—continued to grow in importance and interest. We hear many echoes of it, not only among the writers of the Old Comedy, but especially among the late philosophers of Athenian philosophy and, later, among the writers of the Old Comedy, the Orphics and their doctrines were a never-failing subject for parody and satiric comment.

The name of the plains of Orphea influence upon this discussion was the marked improvement in the present position of Kronos. According to the popular belief, old "King" Kronos had been in the Golden Age a sort of divine *P. de F. Dresden.* Afterwards consigned to nethermost Tartarus, and, ever since then, a synonym of extreme age and harmless senility.* The view, however, was deliberately opposed by the Orphics. Their teaching was that Kronos had long since been freed from his shameful captivity. Moreover, he is not old and weak. On the contrary, he is for ever young and vigorous, and now rules in Elysium, the land of those who have gone hence. There, in a world of eternal youth and joy, he is surrounded not only by the heroes of old, but also by the spirits of just men made perfect—after the Orphic pattern—and, indeed, as some say, by a remnant of men from those golden days when he was in king. *

Piety and justice as motifs in the ideal of happiness had been ascribed, long before Hesiod's time, to peoples living beyond the limits of the Greek world, which were Homer's *Alcaia* (II. xiii. 6), the "most righteous of men," and, to give one more...

*See also M. Mayer in Roscher, ii. 1456 ff. *

example, the Hyperboreans, so long famous in the literature and legend of the Graeco-Roman world. The Golden Age, which the Roman poets depicted in their analogous legend of the Golden Age—the ideal world of the past—and on the basis of it not only the Orphics but other schools of philosophy explicated their specific views regarding the nature of the world and the indispensable conditions of happiness. In other words, as the Golden Age ceased to be an article of faith, it became, more and more, the field in which these thinkers aired their ideas, and what the world ought to be. From this sort of thing it was only a step to that long line of Utopian romances which were quite as characteristic of late antiquity as they are of the present day.

Among the various bits of specific theory imported into the Golden Age by the philosophers, one of the oldest and most important was the doctrine of vegetation.[1] This doctrine doubtless goes back to the Orphics, but the most prominent representatives of it in antiquity were the Pythagoreans. The earliest reference to it now surviving is a fragment of Empedocles (121 D), and the most complete discussion of it in the works of the Hellenes. One of the famous passage Ovid introduces Pythagoras himself as the exponent of his own doctrine. The essence of it is that, in the Golden Age, the gods took upon themselves the work of producing the earth, and that the regeneration of later ages is marked by the departure from this.

That the Golden Age was distinctive only the era of perfect love and peace is easily inferred from Hesiod's account, but the later development is marked by a much stronger emphasis upon this feature. This was partly due to the influence of the Cyclical Theory, in which, as we shall see later, it was the necessary result of the Platonic conception of harmony. The first to lay stress upon it—his connection was Plato's predecessor Empedocles. This, no doubt, is the reason why he made Aphrodite instead of Kronos ruler of the Golden Age.

Among those most interested in any cyclical theory—poets, for the most part—the favourite method of bringing out the peace and harmony of the Golden Age was to emphasize the contrast with later times by diluting upon war, violence, and bloodshed as both causes and symptoms of degeneration in the succeeding ages of mankind. This diatribe on war first comes to the front during the Alexandrian age. It is characteristic of Roman poetry, especially of the elegy, and, in the end, became a mere rhetorical commonplace.

Another important line of development in later times was inspired by the varying use and interpretation of one of the most persistent and characteristic peculiarities of the genuine folk-legend. We refer to the belief that in the Golden Age all the imaginative blessings of life come of their own accord. In this way we have an ideal combination of fabulous plenty with luxurious idleness.

When treated seriously, either for literary or for didactic purposes, this motif led directly to the idea that the Golden Age, or its analogues in this world and the next as a cosmic theme. It makes an appearance in one of the later Old Comedy, and was probably in the form of the popular tenets of the Orphics. But the story of Topsy-Turvy Land (des Marco dei Sorcelli fanciullai), as told by the Comte de Tihullus, is certainly not invented by the Comte de Tihullus. It is rather a folk-version of the old story of the Golden Age, and references to it turn up now and then from the old Comedie of Greece to the present day. The comedy in these descriptions is presented as a peculiarly elementary element, occasionally too, the theory of communism, to its perfectly logical, and yet, at the same time, its utterly absurd conclusion. The result is a Lost Paradise of the bon-temps, the votary of ease, and the irresponsible bachelor. The nearest concestor of this type is the Golden Age especially affected by the idyllic-erotic poets of the Alexandrian age and by their Roman imitators. The same automatic and communistic features are prominent, and the examples by which they are illustrated are sometimes so nearly the same that the difference between the two is hardly more than a matter of mood. At first sight this is surprising. It comes from the common sense, as we have ourselves that the pathetic exaggeration so characteristic of the idyllic-erotic sphere is largely due to the fact that the author himself is rarely more than half conscious of the intention or even of the possibility, of his own statements. It is an easy step from this state of mind to that which engenders one humorous unbelief—and this, too, has its pathetic side—to which we are indebted for the old tale of Topsy-Turvy Land.

On the philosophical side, the desire to build up of everything in Hesiod's account that savoured of the supernatural served to bring out still another aspect of the Golden Age more and more clearly. Before taking up this point, however, we should remind ourselves that the theory of ascent was, meanwhile, being supported by a party of such activity and intelligence that it could not be ignored. The theory of ascent was also backed by the legends of Poseidon and Thetis, and for centuries all classes seemed to have been interested in discussing the various inventions by which the rise of mankind from utter savagery to our present stage of civilization has been marked. It is evident that the account of the ascent of the world was revised the two parties were utterly irreconcilable. If one did not believe Hesiod, the most
AGES OF THE WORLD (Greek and Roman)

logical course was to agree with the Epicureans, who denied the account of Hesiod in toto, and replaced it by their own view, which is the first attempt in antiquity to our modern theory of evolution. This denial, which lies implicit in the famous passage of Lucretius (v. 925 f.), is stated positively, for example, by Diodorus, who (1. 81 f.) denies that the dialogue of Epicurus upon this point (and v. 66 f.) implies that the Golden Age was a mere invention of the Cretans. But this summary disposition of the difficulty is of no value to us. We are more interested in the process through which they reasoned. The most important force in this process, so far as it was accomplished at all, was a gradual realization among thoughtful men of the fact that the ideal of life traditionally associated with the Golden Age, though it seemed attractive, was, in reality, unfit to pose as the highest development in any theory of descent.

2. Cynics, Stoics, etc. — At this point, certain Stoic modifications of Cynic doctrine are of especial value to us. The great out put of passages and material to be considered in this connexion is Aratus, Phaenomena, 97-140.* The version of the Ages by this famous Alexandrian poet of the 3rd century B.C., is the oldest of the Ages in the ancient world, and undoubted traces of its influence are to be found in most of the later accounts. Briefly described, it is a revision of Hesiod under Stoic influence. The object of the author was not only to retain the theory of the Ages but to remove whatever was irrelevant to a theme which he proposed to treat not as an independent account, as Hesiod had done, but as a rhetorical episode suggested by his mention of the constellation Virgo, i.e., Astraea, whom Aratus, following an old tradition, identifies with the Nemesis of Hesiod, and calls Diic.

Diic was comparatively unimportant in Hesiod. Owing to the exigencies of rhetoric, she now becomes the central figure. Moreover, after the true Stoic fashion, she is made to assume the functions of both Zephyr and Kronos in the traditional version. The five ages of Hesiod are reduced to three—an Age of Gold, of Silver, and of Bronze.

The men of the Golden Age are described as peaceful tillers of the soil, with no knowledge of civil strife or of the vexations of law and order, moreover, they were far removed from the perils of the sea. In those days there were no ships to bring the hunter and the sailor from abroad. The goddess mingled freely with these simple souls, and taught them the arts which men should live with reference to each other.

The Silver Age was more sophisticated. Nevertheless, the goddess still remained upon earth, although she now retired to the mountains to occupy herself with men.

The Brazen Age saw the first swords, and the first slaughter of the oxen for food. Then Diic, utterly hating that race of men, finally departed to heaven and took her place among the stars.

It will be seen that one of the most notable signs of revision here is the disappearance of the old folk-element of marvel. In its place we have a conception in which the Stoics are mainly responsible for the emphasis laid upon the ethical motive, especially upon the relation of man to his fellows, to the world about him, and to the State.

The underlying principle in such a theory of the Ages is the conclusion that the ascent of man in the arts of civilization is accompanied, at all events beyond a certain point, by a corresponding descent in moral and even in physical fibre. What is this case? The reply was that to be healthy in mind and body, and therefore, happy, we must live in harmony with nature. But civilization brings a certain conflict with this ideal, and there comes a stage in human history when the idealism of the poet gives way to the realism of the philosopher. The final crisis of the poet is, therefore, the stage of idealism, and our journeying into the past should take us back finally to a state of ideal happiness. That state of ideal happiness was, of course, the Golden Age.

This ideal form of the past was, therefore, the ideal simple life of the past.

Such in substance was the general drift of the Cynic argument as modified by the Stoics, and, as a matter of fact, the Golden Age of Aratus is really the Stoic version of the Homeric and pastoral stage of human society—a theme which always comes to the front in any period of over-cultivation, as soon as men begin to stagger under the weight of civilization.

So conceived, the theory of the Ages was not only consistent with the evolution of civilization from the crudest beginnings, but agreed with the Epicureans in presupposing such a process. But, as regarded the various inventions and discoveries by which that process has been marked, it loved to dwell upon those very devices, and to lay great stress on the view that they had been the most conspicuous cause of the downfall of man himself. The favourite examples are those chosen by Aratus. They are the first sword and the first ship.

The first sword is a characteristic introduction to the topic of the Ages, as Aratus has already mentioned. His second ship is also a favourite way of connecting the discussion of the Ages with the dispute about navigation so frequently found in the later works of the Stoics, and frequently among the Romans. By this means the problem of modern criticism that the Romans were afraid of the seaports, the opinion is a generate, and is probably, for the most part, upon these passages, we need not take too seriously. The sailor's impious challenge of the terrestrial and rational land of the Greeks is justified by national character as by literary tradition. It is fully developed in the following description of the Days of the Old Roman poet, who revives the favourite theme of the Greek epigram at all periods, a regular motif in the poetry of the Augustan age, and by the 1st cent. of our era a matter of universal commonplace.

In order to understand better the attitude of the Epicureans towards the theory of the Ages, as presented, for example, by Aratus, we must return for a moment to the underlying principle upon which, according to Stoic reasoning, that theory was founded. We mean the conclusion stated above, that advance in the arts of civilization is at the expense of the character, health, and happiness of the individual. Now, when we consider the Stoic argument by which this conclusion was made to yield the theory that the Golden Age of

* Horace, Epod ii. 2; Propert. iii. 13. 25; Seneca, Medea, 323; Plutarch, Sulla. 19. 3. Of Aratus, the Golden Age was especially welcome to the Romans, not only because of the experimental Stoicism, but because it agreed more nearly with their own tradition of early man, when he was associated with the character and attributes of Saturn before he was identified with the Sun of Kronos.

In general, Vergil, Georg. ii. 490; Ovid, Met. ix. 199; Juv. Sat. ii. 106; Tibullus, iv. 5. 47. The rhetorical question of Tibullus (v. 10. 1) states a maxim of the philosophers which has often repeated. See, e.g., Seneca, N. v. 18. 15: "Nihil innominis tam manifeste utilitatis quod non in contrarium trunclus copia. So Ovid, Met. x. 106, speaking in the persona of Pythagoras. Opponents of the theory of descent, especially the Epicureans, contended that the sword merely marked one period in the long line of human progress. It was the success of the club and the large rough stone (Lucretius, v. 960). Cf. also Hor. Sat. i. 3. 160; Valer. Flacc. v. 149, and esp. Plato, Rep. 528 B. (was the natural condition of mankind), and the commentary of

Among the most important of the names mentioned are, Stebnes, 57 (who gives a number of quotations); Hesiod, W. and D. 256; Sophocles, Antig. 333; Seneca, Medea, 301 and 497; Tibullus, i. 3. 37 and ii. 39; Propert. i. 17. 10 and iii. 7; Hor. Ep. ii. 11; Statius, Theb. ii. 67; and Achilles, i. 62; Calpurn. de Raptu Proserpinae. The final crisis of the poet is, therefore, the stage of idealism, and our journeying into the past should take us back finally to a state of ideal happiness. That state of ideal happiness was, of course, the Golden Age.

This ideal form of the past was, therefore, the ideal simple life of the past.

Such in substance was the general drift of the Cynic argument as modified by the Stoics, and, as a matter of fact, the Golden Age of Aratus is really the...
of the waxing and waning of the moon, and of the eternal round of the seasons, the entire Universe itself is subject to an ever-recurring cycle of change. This ancient Babylonian doctrine of the world-year, the mortuus est ego mundi eclipses, was first followed, inevitably, from that cyclic theory of the Ages to which this school of philosophers gave its enthusiastic support. Not so the Epicureans. The Epicureans agreed that the growth of civilization had been accompanied by certain signs of degeneration in man himself, but they denied that the principle was capable of universal application. They insisted that every stage of civilization, in its own particular fashion, had been unfavourable to the individual. In other ways it has been favourable. There is no such thing, therefore, as progressive degeneration in the strict sense of the word. We have only to imply a period of ideal happiness at our extremity, which by a period of ideal misery at the other extreme. Both are superhuman, and therefore impossible. In other words, there never was a Golden Age, even if we adopt the old Stoic belief.

Another method of reconciling the difficulties in Hesiod's account is illustrated by Vergil, *Georgy*, i. 121 ff. The primary purpose of this version was to enhance the dignity of labour. The history of mankind is divided into two periods—the Age of Saturn, and the Age of Jove. The Golden Age, when good old Saturn was King, agrees entirely with Hesiod. The second period, however, is not an age of degeneration and, unless of reform. Jupiter, the divine father of our race and of all our higher aspirations, purposely did away with the *far niente* of the old regime, not out of a petty resentment against Prometheus—as the old folk-legend (e.g. Hesiod, *W.* and *D.* 241 ff.) would have us believe—but rather, 

*curis acers mortallis corda,*

*See toeper graes patris sunt regna version,* because he was well aware that, unless men have difficulties to meet and overcome, they can never grow strong in any sense. In this characteristic, nobly inclined, it is interesting to see in what an outstanding way the demand of contemporary thought without sacrificing the traditional account of the Golden Age so dear to the poets.

The amount of the Age, which Ovid gives in the first book of his *Metamorphoses*, 89-162, and the version best known to the modern world, is one of the earliest surviving attempts to incorporate the Flood Legend. Otherwise, it is chiefly remarkable for the poet's characteristic skill in combining and harmonizing the views of preceding thinkers. The Four Ages (Gold, Silver, Bronze, and Iron) are all in the past. The Age to which we are living is a Fifth. The Flood is the great catastrophe by which the wicked and godless race of the Iron Age was destroyed. The history of our own race, therefore, begins with the earth-born children of Deucalion and Pyrrha. In this version of the Flood Legend, the theory of ascent, the theory of descent, the traditional account of the Golden Age, the Heroes, and, with only a slight modification, even Hesiod's quintuple division of the Ages were all made to dwell together in peace and unity.

**CYCLIC THEORY.**—Let us now turn our attention to the Cyclic Theory, the most important element in the system; perhaps the one really vital and vitalizing element in the whole of our subject. The Cyclic Theory of the Ages was founded on the belief that, after the analogy of day and night,
the Universe is now left to itself, so are all and several of its parts; and each race is propagated in the manner familiar to us now. The coexistence of the nations backward increases and accelerates the process of disorganization, until, by the time the Universe again reaches the point of destruction, it is ready to fly off and there be no difference for ever in the infinite space of discord. At this point, however, the Hellenistic period reverses the direction of the Universe, and with the change again to harmony the Great Golden Age necessarily returns as before. The few who survive from the preceding period suffer change in sympathy with the whole. Again the old begin to grow young, and continue to do so until the end of the Universe, when all are born with hoary hair, and not from each other, but from the earth. In fact, it is those who die in the preceding period of discord who are born in the next generation, and they now again seek the dead, and in their turn are born old, grow young, and finally vanish.

It will be seen at once that, according to this remarkably suggestive theory, which, of course, oves much to earlier thinkers,* the sum of human experience is measured by two world-years. During the first, the Universe moves forward, during the second, backward, to the place of beginning. Each *magnus annus* is therefore one of the two Ages into which the history of mankind is divided; and this alternation of Ages will continue until the Universe endures. Thus, the whole, so with each and all of its parts. The Ages of man, the life of man himself, are closely connected with this eternal oscillation of the Universe.

The Stoic theory of cycles occupies an important place in their systems. Here, their acknowledged dependence upon Heraclitus is clearly seen in the prominence they give to his doctrine of *épi páidev,* the elemental fire into which the world is periodically resolved, and from which it is periodically born anew.

After the old world has been completely consumed, the four primal elements—fire, air, water, earth,—which are indestructible, gradually assume their previous relations to each other, and the new world is created, being exactly like the old. As soon as the proper point is reached in the process of reconstruction, every sort of living thing is born from the earth, and at this time proceeds to live in its turn. Man, too, is here, 'knowing nothing of wrong and born under both kinds of evil.' But this Golden Age lasts for long. *Villainy steals on space.* Virtue is hard to find: it needs a leader and a guide. The vices are learned without a master. The process of degeneration goes on until the time comes for the next *épi páidev.* Then the world is destroyed and built anew, as before.

An *épi páidev* occurs each time that the eight circles are in conjunction at the place of beginning. For the Stoics, therefore, every *magnus annus* is the measure of one complete life, as it were, of the Universe. It follows that the totality of human experience must, also, lie between those impassable barriers of flame by which every great year is divided from its fellows. The soul outlives the body, but even the soul of the ideal Stoic cannot survive the *épi páidev.* Nothing emerges from the fire except the primal elements from which all things are made.**

In one sense, however, we all have a personal interest in every period of the world's existence, for the reason that...

AGES OF THE WORLD (Greek and Roman)

Titans had eaten before they were slain by Zeus, and therefore, still lingered in the humaniments of the Earth when we of the
third race were afterwards created.

This version of the Ages is the ever-increasing distance from that to which the gods themselves owe their being. On the whole, we may characterise the
account of the different ages of the world in the Orphic religion as one of the most ingenious attempts to fit the somewhat vague idea of cyclic theory of the Universe attached
to a much more highly developed doctrine of the re-birth of the soul. The ages are spoken of as the solar zodiacal signs, and it is as though the gods gave it.

The doctrine of an ἔκτισμος, irrespective of its place in the history of the world, makes a strong appeal to the imagination. It was at all times, therefore, one of the most prominent features of the Cyclic Theory. By the 2nd cent. B.C., owing to the wide-spread activity of its most enthusiastic exponents, the Stoic popular preachers, no item of philo-
sophical speculation could have been more familiar to the average man. Finally, together with much that had been identified with the Stoics, it destruction by water was already an old story, long after the period with which we are here concerned, we find the Church Fathers undertaking to derive the doctrine of the ἔκτισμος from the Book of Genesis.

But, long before the Stoics, the ἔκτισμος had begun to be associated with other great cosmic disasters of a different nature. The origin and progress of this development are better understood as soon as we observe the process of reasoning by which they were inspired and directed. In the first place, the cycle of the Universe had been called a year. This led to the natural but quite illogical assumption that, for that very reason, it must necessarily possess all the attributes of its prototype and namesake, the solar year. Second, the present condition of the world depends upon the maintenance of the elements in a certain state of equilibrium. Any disturbance of it is at once reflected in the world about us. If the disturbance is sufficiently severe, the result is cosmic disaster. The character of the disaster is determined by whichever one of the elements has gained the upper hand. Finally, great significance was attached to the fact that there were four Elements, four Seasons, four Ages of man.

The conquests of Alexander drew the East and the West closer to each other than they had ever been before, and this rapportement was not disturbed by the Imperial policy of Rome. The phase of our subject now under consideration is especially marked by the more or less direct influence of Oriental speculations. Conversely, therefore, this aspect of the Cyclic Theory did not become especially prominent until the Alexandrian age. The first step was to associate the Flood Legend with the Cyclic Theory, and to set it over against the ἔκτισμος as a second recurrent catastrophe of the magna annua. This doctrine of the regular alternation between a destruction by fire and a destruction by water was already an old story in the time of Plato (e.g. Tim. 22, C). There are no signs of this doctrine in the fragments of Zeno, Cleanthes, and the earlier Stoics. We know, however, that Zeno was familiar to their contemporaries. Moreover, as early at least as Ctesias of Ctesias, the doctrine had been adopted by the Stoics themselves, and henceforward we hear much of it.† Compare, for example, the vivid description of the great floods which Seneca gives us in his Nat. Quaest. iii. 27 ff.

† See Winckelmann, Zavattari, Stud. p. 259.

The idea that these two contrasting disasters occur at certain definite periods we find first mentioned in the Evangeliarum, a work which Seneca gives us in his Nat. Quaest. iii. 27 ff.

† See Winckelmann, Zavattari, Stud. p. 259.

to mention it is Aristotle. The quotation, which we owe to Censorinus, xviii. 11, is probably from Aristotle, and the model of Cicero’s famous dialogue, the Hortensius, which is also lost. No doubt this very theory was mentioned in the Stoic school, for it was there that the Romans became familiar with Aristotle’s observation that the two disasters of the magna annua, or, as he termed it, the magnas annas, occur at the solstices and equinoxes, the one at the summer solstice, the diluvium at the winter solstice. In other words, the same year is divided into two seasons, the summer—hot, wet and dry, the winter—cold and wet. Therefore the great year has the same peculiarities. This being noted, the sophists led to the conclusion that the great year, simply because the great year is hot and dry, and the diluvium in the great winter, because the great winter is cold and wet.

We should not expect this sort of logic from Aristotle, and, in fact, the idea was not his own. Indeed, as the Protoplas, was a doctrine first expressed in a form of dialogue, we do not know that he approved of the view at all. That his information went back to some Eastern source is indicated by a fragment from the voluminous history of his much younger contemporary, the Chaldean priest Eros. The passage is quoted by Seneca, Nat. Quaest. iii. 31 ff. ‘Eros,’ he says, ‘qui Relum interpretatur est,’ insists that he can set the time for the conflagratio and the diluvium. The claim will be, he claims, when all the stars, which now move in different orbits, are in conjunction in the constellation of Cancer. The flood will take place when the same stars reach conjunction in the constellation of Capricorn. ‘Iliic soliditium, haec brusa conficitur.’ Conjunctions of the stars in Capricorn produces the conflagratio and conjunction in Capricorn the diluvium. This touch of astrology makes the statement very impressive, and these Chaldeans were nothing if not impressive. But, as Conerius has already ob-
served, the actual foundation of the statement is nothing but the fact that the summer solstice and winter solstice, or the two solars, are predestined over by Cancer and Capricorn respect-
ively. When this fancy assumption of profoundness is removed, the theory of Eros is probably identical with the one men-
tioned by Aristotle.

Now that fire and water had acquired a definite and important position in the cyclic scheme, it followed inevitably that the two remaining elements, air and earth, ought to be put on the same plane. The line of development followed was largely suggested by the fact that there were four Elements, four Seasons, four Ages of man. The four seasons of the ordinary year are spring, summer, autumn, and winter—a series which has always been associated with man’s own descent from youth to old age, from strength and happiness to weak-
ness and sorrow. So the four seasons of the great year are the four Ages of man, another series with which the idea of descent has always been associated. As the springtime of the little year of life is the golden youth, man, so the springtime of that greater year was the golden youth of all mankind. Finally, the traditional order of the four elements—fire, air, water, earth—also one descent from the lighter to the heavier, from pure spirit to the earth, earthly.

If, now, we associate the four elements in their regular order with the corresponding Ages of man in their regular order, the dominating element during the Golden Age will be fire, during the Silver Age, air, during the Bronze Age, water, and during the Iron Age, earth. The conclusion of this is that the descent of man himself is due to his ever-increasing resistance, so to speak, from the Divine fire. We are thus brought back to the Orphics again, and, as a matter of fact, the Stoic-Orphic theory reported by Nigidius Figulus, in which, as we have already seen, the most natural order was equated with four seasons, each ruled by the appropriate element, is a complete illustration of the tendencies we have just been discussing.

A theory ascribed to the Magi by Dio Crysostom and partially reported by Aelian, xvi. 43 (without any mention of the astronomers) is also mentioned here. The Magi tell us, he says, that the Lord of the world rides in a chariot drawn by four horses which are sacred to Zeus, Hera, Poseidon, and Hestia respectively. In other words, the four horses are the four elements, fire, air, water, and earth. And, as horses are the chariot of the gods, the first chariot is the sun, however, the first steed becomes restless and sets fire to the other three. This is the result of the original sin of the Greeks. Again it is the steed of Poseidon that becomes.

AGES OF THE WORLD (Indian).

The rapid growth of Mysticism which began early in the Alexandrian age reached its culmination in the 2nd cent. B.C. One of the most striking features of the movement, and a significant comment upon the mental and social condition of the entire Greco-Roman world, was the rapid production of apocryphal works. It is probably fair to assume that the production of this literature was much encouraged if not actually suggested, by the widespread belief that the life of mankind moves in cycles. At all events, one of the most characteristic features of all these visions and prophecies was the emphasis given to some cyclic theory of the Ages. It would be quite unnecessary here, even if they were still available to us, to examine these works in detail. Their chief importance to us would be derived not from their content, but from the point of view which, by virtue of their very nature, they all possess in common. These visions and prophecies, like all other works of the same class, appealed more to faith and the emotions than they did to reason and the understanding. The author tells his readers that this last Age has nearly run its course, and that the great change is near at hand. He does not state it as an opinion or a theory, capable of being discussed as such. He states it as oracular utterance, as inspired prophecy, the truth of which is already foreshadowed in current events and cannot be questioned. In this way the Cyclic Theory of the Ages was transformed from a rhetorical and philosophical theme into a Divine assurance of the joy soon to come. As a class, these compositions contributed almost nothing to the development of the Cyclic Theory itself. A word or two, however, should be given to the Sibyl.

The Oracles of the Sibyl have been ascribed to about the middle of the 2nd cent. B.C. They were well known to the Romans for the next 200 years; but at the time when the collection now bearing that name was composed, the earlier had apparently ceased to exist. Meanwhile, however, they had won a sort of secondary immortality through the influence which they had exerted upon the fourth Eclogue of Vergil,  the most famous literary work ever inspired by any aspect of our theme. From this poem and the ancient comment upon it, it appears that the Sibyl adopted the Stoic-Orphic identification of the Four Ages of man with the four seasons of the magnus annus. In addition to this, she—or her authority—was inspired by the analogy of the ancient solar year to divide the great year into ten great months, each of which was ascribed to one of the zodiacal signs and presided over by a god. Ever since the time of Sulla there had been rumours about that the world was drawing to a close, and that the Golden Age was at hand. One cannot read the fourth Eclogue without feeling that Vergil was himself impressed by a prophecy so much in harmony with the spirit, if not with the letter of his own Orphic. Nevertheless, we must not forget that the poem is really a poem of congratulation upon the birth of a son, into which, as Marx has clearly demonstrated, Vergil introduced the topic of the Ages in accordance with the current suggestion of the rhetoricians for poems of this type, and developed it in strict conformity with the rules laid down by them. The most famous line in the poem,

* * * 

is a clear reflection of the cyclic theories which we have just been discussing. That, in itself, it should also foreshadow quite as clearly the great central article of the Christian faith, is an excellent illustration of the fact that there has never been any break between ancient and modern culture.

The foundation of the most enlightened Christian thought, quite as much as the foundation of Vergil's thought, was that ancient and universal conception current among all the Greek philosophers, more especially Plato and the Stoics, which moulded the doctrine of the Ages in its final form, and which, ever since then, has played such an important part in the mental and spiritual consciousness of the civilized world. It is, therefore, no matter for surprise that for more than 1500 years this last great document in the long history of the Cyclic Theory of the Ages was firmly believed to be a prophecy of the coming of Christ.

KIRBY FLOWER SMITH.

AGES OF THE WORLD (Indian).—The Hindu doctrine of the Ages of the World (yugas) is combined with that of two other great periods, the manvantaras and kalpas, into a fanciful system of universal chronology, which passes for orthodox. Its basis is the yugas; they are, therefore, treated here in connexion with the other elements of the chronological system. Orthodox Hindus recognize four Ages of the World (yugas), roughly corresponding to the Gold, Silver, Brass, and Iron Ages of the ancients. They are called krita, treta, dvarpara, and kali; after the sides of a die; krita, the lucky one, being the side marked with four dots; treta that with three; dvarpara with two; kali, the losing one, with one dot. These names occur in the period of the Brahmanas and even as late as the Virgilio's Eclogue, (7,14) they are already referred, by the commentator, to the yugas. In the epics and the Puranas the belief with regard to the four yugas has become a fully established doctrine. The general idea, the same in all Brahmanical sources, is that the character, or, if the expression may be used, the proportion of virtue, and the length of each yuga, conform to the number of the die, from one to four, after which it is named. In the krita yuga, virtue (dharma) was fully present in men, with all four feet, as it is expressed, but it diminished by one quarter or foot in every succeeding age, till in the kali yuga only one foot of dharma remains. The same proportion holds good with regard to the duration of the several Ages. The krita yuga lasts 4000 years, to which a dawn and a twilight of 400 years each are added; the tretaya and dvarpara each 3000 and 300, in kali 2000 and 200, in kali 1000 and 100 years. Thus the period of the four yugas together, technically called a mahayuga or chaturyuga, should remain in the world, lasts 12000 years, which, if we add the six yugas, the manvantara, and the kalpa, make a possible period of 186000 years; the

AGES OF THE WORLD (Indian)

Mahabharata, iii. 12,826 ff. The years in this statement are interpreted as Divine years, consisting each of 360 human years, giving a total of 51,840 years, and this interpretation, once adopted in the Puranas, became a dogma. The usual descriptions of the krt- (or satya-) yuga reveal to us a happy state of mankind, when life was so enduring that there were no quarrels nor wars, when the rules of caste and the precepts of the Vedas were strictly obeyed, when, in short, virtue reigned paramount. In the kali- (or taitra-) yuga just the reverse was the case. There is a confusion of castes and artificial. The Veda and good conduct gradually fall into neglect; all kinds of vices creep in; diseases afflicting mankind; the term of life grows shorter and shorter, and is quite uncertain; barbarians occupy the land, and people kill one another in continual strife, till at the end of the yuga some mighty king extinguishes the infidels. From these extremes the character of the intermediate yugas, untenable by four castes and the four auras; the several Ages are periods of transition from one Age to the next, when the character of the one is not yet entirely lost, and that of the other not yet fully established. It seems natural to presume that originally the mahayuga comprised the whole existence of the world; indications, indeed, of such a belief are not wanting, as will be noticed later. Still, the common doctrine is that one mahayuga followed on another, one thousand of them forming a single kalpa. The kalpa, then, is the length of time from a creation to a destruction of the world. The belief in periodical destruction and destruction of the world is very old; and its existence in the Vedic period may be inferred from Atharvaveda, x. 8. 39, 30. It is combined as follows with that in the four Ages. In the first krtayuga, after the creation of the earth, Brahman created a thousand pairs of twins from his mouth, breast, thighs, and feet respectively. They lived without houses; all desires which they conceived were directly fulfilled; and the earth produced of itself delicious food for them, since animals and plants were not yet in existence. Each pair of twins brought forth at the end of their life a pair exactly like them. As everybody did his duty and nothing else, there was no distinction between good and bad. But this state of things changed at the end of the Age; the first rain fell and trees grew up. These produced honey and whatever the primitive people desired. In the first taitra, mankind consisted no longer of pairs of twins, but of men and women. Being now for the first time subject to cold and heat, they began to build houses, and they quarrelled about the miraculous trees. The trees, however, disappeared, and herbs became the food of men. Now trade was introduced, and personal property, unknown before, caused the social distinctions. Then Brahman established the four castes and the four auras, and fixed the duties peculiar to each of them. Afterwards he created spiritual sons, who were the ancestors of gods, demons, serpents, inhabitants of hell, etc. As the heat of a kalpa is a kalpa, the heat of the sun becomes intense and dries up the whole earth; and by it the three worlds are set on fire and consumed. At last enormous clouds appear and rain for hundreds of years, the earth becomes a deluge, and the waters inundate mankind. As the latter signs are frequently alluded to, in the form of similes in the Epics, etc., as occurring at the end of a yuga (instead of at the end of a kalpa), it is probable that originally the yuga ended with the destruction, and consequently began with the creation of the world. A similar belief seems to have been expressed by the texts of some, but perhaps with this difference, that the concept of a yuga was naturally connected with the idea of the four stages through which mankind must pass, analogous to the four ages of man, viz. childhood, youth, adult life, and old age, while this idea was not necessarily implied in the concept of the kalpa. The combination of both these popular beliefs, with regard to the kalpa and the yuga, in the form described above, was probably due to the systematizing efforts of the Puranikas.

There is still a third kind of long period, the manvantara, fourteen of which go to the kalpa. Each manvantara contains 71 mahayugas, and 14 manvantaras are therefore equivalent to 486 (14 x 71) mahayugas. The remainder of 6 mahayugas required to make up the kalpa (=1000 mahayugas, sup. p. 200) is so distributed that the first manvantara is preceded by a dawn of the length of one krtayuga, the second by one half of a krtayuga, the third by one quarter of a krtayuga, the fourth by one eighth of a krtayuga, the fifth by one twentieth of a krtayuga, the sixth by one forty-fifth of a krtayuga, the seventh by one sixty-five-hundredth of a krtayuga, and the eighth by one hundredth and forty-six ten-thousandth of a krtayuga, the ninth and tenth by the same. The duration of each of the several manvantaras was probably introduced in order to account for the different chronologies of Manu, such as Vaivasvata, Svayambhuva, Srisravana, which occur already in different Vedic works. These early causes a belief in the existence of several distinct Manas. The Puranikas systematized these notions as described. Since Manu was thought to have introduced the social and moral order of things, and to have played a part in the creation of gods and men, 'the seven Eis, certain (secondary) divinities, Indra, Manu, and the kings, his sons, are created and perish in each manvantara; and the details of these recurring events in each manvantara are given, etc., in the same Purana.' Artificial as these manvantaras appear to be, still they are given as one of the five characteristic topics of the Purana in a verse found in several Puranas. And the whole system of yugas, etc., is regarded as orthodox to such a degree that all the astronomical works, the Siddhantas, have adopted them, except the Romaka Siddhanta, which for that reason is stigmatized as not orthodox.

The astronomical aspect of the yuga is that, in its commencement, sun, moon, and planets stood in conjunction in the initial point of the ecliptic, and returned to the same point at the end of the Age. The popular belief on which this notion is based is older than Hindu astronomy. The current yuga is the 457th of the present varaha-kalpa, or kalpa of the Boar, the 28th of the present manvantara (that of Manu Vaivasvata), which itself is the 7th of this kalpa. We are now in the kaliyuga, which began Feb. 17, B.C. 3102, the epoch of the still used era of the kaliyuga. At the end of the last tretya yuga lived Rama, the grandson of Dasaratha, and at the end of the last dyaparayuga took place the great war of the Pandavas and Kauravas, described in the Mahabharata. A kalpa is called a of Brahman, and his night is of equal length. At the close of the night he creates the world anew. Of such days and nights a year of Brahman is composed; and a hundred such years constitute his whole life. This And longest period is a puro, half of which, a

paradha, had elapsed at the beginning of the present kalpa.*

The notions of the Buddhists about the Ages of the World (yugas) and about the larger periods (kappas) are similar to those of the orthodox Hindus, but still more fanciful. The names of the four yugas are the same, but their arrangement is different. They begin with kalyyuga, and go up to krtyugaya, and then, in reverse order, go down to the round. Thus, instead of a mahâyuga of seven periods, the four Ages, the Buddhists assume a period of eight Ages, which is called an antarakaalpa. An antarakaalpa is the interval that elapses while the age of man increases from ten years to an asankhyeya (asankhyeya = 10,000,000,000) and then decreases again to ten years; this period is of immense length.† According to some authorities, it has a length of 1,080,000,000 years. Together with the age, the moral state of mankind increases and decreases.

Twenty antarakaalpas form one asankhyeya kalpa (Pali asankhyeya kappa), and four asankhyeya kalpas constitute one mahakalpa. The first asankhyeya kalpa is called saiiyavarta, (P. saivavatta), during which a world or sphere (chakravatla, P. oaksavatla) is completely destroyed by fire, water, or wind. In the second (saiivavarttikayin, P. saivavinathayin) the state of void continues. This third (vasivata) the world is being built up again; and in the fourth (vasivarttikan, P. viivatinthayin) the world continues to exist.

It is during this last period that the world becomes first inhabited, by abhasavara gods of the Brahmaloka being born on earth. These self-luminous beings lost their lustre when they first began to feed on a delicious juice produced by the earth, and then created the sun, the moon, and the stars. While these beings gradually degenerated, the earth ceased to yield this first kind of food, and produced a kind of cream-like fungus. This was followed by a climbing plant, and this again by an extraordinary kind of rice. When this rice was used as food, sexual intercourse began. The rice deteriorated, and at last ceased to grow of itself. At the same time other vices were introduced, and personal property, till at last the present order of mankind was established.‡ Then comes the period of the twenty antarakaalpas, described above. A hundred thousand years before the end of the first mahakalpa, a god appears and warns mankind of the coming event, exhorting them to amend.

And after that time the destruction of the earth—nay, of a billion of worlds or chakravatlas—as in by fire, water, or wind. The mahakalpas are either empty (sthat) kalpas—those in which there is no Buddha—or Buddha kalpas. The latter are of five kinds, sra, wuñña, vara, sāramandala, and bhadrakaalpas, according as one, two, three, four, or five Buddhas appear. The present kalpa is a bhadra kalpa; for four Buddhas have already appeared—Krakucchanda (Kakusandha), Kanakamuni (Konagamana), Kasyapa (Kassapa), and Gotama; and the fifth, Maitreya (Mettayya), has yet to come (asahkhyeya, p. 288). The fifth and sixth Ages length of life will diminish down to 16 years, and the height of men to 1 cubit. There will be no tirthakaras in the last two ages, but the great spiritual leaders of the preceding uttarukalpi period the same Ajas will recur, but in reversed order. In this way an infinite number of avasaripins and uttaripins follow each other.* The idea on which the notion of these periods seems to be based is apparently the year. The avasaripin and uttaripin correspond to the two ayanas, the southern and northern course of the sun; and the six dvas of each period to the six months of the ayanas.† On the other hand, the first three dvas, with their pairs of twins, with the miraculous trees for their subsistence, much resemble the first krtayuga of the Purâpas, while the remaining three dva may be compared to the tretâ, dvarapulas, and krtayuga periods of the yugas. A peculiar feature of the Jain system, however, is the great disparity in length between the last two Ages and the first four, while the relative length of the four yugas is reversed, if we consider the fourth, fifth, and sixth dvas as one.*

On the whole, there is an unmistakable family likeness between the notions of the orthodox Hindus, the Buddhists, and the Jains, all three being derived from the same source. But the term with which they have developed these different lines.

LITERATURE.—Besides the works referred to throughout this article, consult the Literature given at the end of the article AGES OF THE WORLD (Buddhism). H. JACOB.
AGES OF THE WORLD (Jewish).—1. The Heb. word בָּשָׂם (בש), 'day,' is frequently applied in both Biblical and post-Biblical literature in a sense closely allied to that of an Age of the World. Lev. xiv. 46 and Num. xxvii. 71, refer to a thousand years. Philo in de Opificio Mundi, i. 3, etc., treats 'the Days of Creation' as covering an epoch. He denies that the story of Genesis is to be taken literally as meaning that the creative days followed one another in consecutive time. Creation was not in time: the six days described the arrangement or order of creation, much in the same sense as scientists talk of the geological orders. Midrash Ber. Rab. xii. deals with the time occupied in creation. 'The day of the Lord' (Mal 4:4) 'that day' (Zec 14:5), 'the great day' (Mal 4:5), 'the day of judgment,' 'the day of vengeance' (Jer 46:2), 'the day of rebuke' (Hos 5:1) are all expressions for the Last Judgment, sometimes covering the future world (Zec 14:5) which will succeed it. תָּמָא, 'our day,' is used as a synonym for הָיָה, 'this world' (Targum for 1 Kgs 1:32 [Heb. 1:31]), means the everlasting kingdom of the future world. 'The days of the Messiah' (Sanh. 99b) is used in the Talmud and Midrash for the Messianic Age; 'the days of the life of the world to come,' for the future world when the Messiah comes. The day is 'the day when' (Mal 4:4), 'the day which is altogether good,' 'the day which is altogether long,' 'the day wherein the righteous sit with crowns upon their head and enjoy the splendour of the Divine presence,' are expressions in the Jewish Liturgy (in the grace after meat for Sabbaths and Festivals, especially Passover) which also connote the future world.

2. Before this world existed there had been successive creations (Ps 104, 146; 1 Ab. B.N. xxxvii.). Seven things were created before the world was created, and these are they: the Law, Repentance, the Garden of Eden, Gehenna, the Throne of Glory, the Temple, and the Messiah's name' (Ps 78:5). There were 974 generations before Adam, which with the 26 generations between Adam and Moses make up a thousand (Shabb. 88b, Hag. 139b, 140a). The Mishna discourages such cosmogonic speculations. 'Two together should not study the Creation, nor even one the Chariot' (Hag. cap. ii.). The Gemara ad loc. (ib. 11b) forbids inquiry into what was before the world was, basing this on the biblical statement, 'Who can understand the Holy' (Ps 94:7).

3. In the Bible narrative there are traces of a Golden Age in the account of the Garden of Eden, where Adam dwelt till the Fall. As to the length of his sojourn the Rabbis differ. The Bible narrative presents some striking parallels to the Assyrian story, just as the post-Biblical does to Zarathushtrian speculations. But, as Goldziher points out in his Mythology among the Hebrews, even if the cosmogony had been derived from Iranian sources, it is an essential part of their system, whereas the Pentateuch makes no further use of it. It is notable that the later Jewish view is that Gen Eden (Paradise) will be the model for good conduct after death. This is no isolation from a Golden to an Iron Age (for traces of which in Dn 2, see below), and no evolution in an opposite sense, but rather a sort of endless cycle: 'the thing that hath been, it is that which shall be.' (Ec 1).

4. The Pentateuch is almost exclusively concerned with the history of Israel, and the first age of people after the Creation. Liturgically, 'Elohim,' 'captivity' (or 'atonement') is that of Egypt. According to Gn 15:13, Abraham's seed is to be afflicted 400 years. In Js 11:12 a period of 300 years is given as the interval between Jacob and Joseph, during which the children of Israel were wandering in the possession of the other side of the Jordan. In 1 K 6 a period between the Exodus and the building of the Temple is fixed at 480 years.

5. The Prophets, before the Assyrian captivity, are concerned only with the immediate future. They deal with their own times and warn the people to repent in view of disasters which is imminent. The Day of the Lord, which in the post-captivity literature of the Bible becomes the Day of Judgment, occurs already in Amos (5:18), the earliest of the later prophets, as well as in Isaiah (cf. W. R. Smith, Proph. 131 f.).

6. In the post-exilic literature of the Bible we first meet with a distinct promise of an ultimate, not immediate, Messianic Age, in which all wrongs will be righted. The return under Zerubbabel had proved a disappointment. The autonomy of the Jews had not been satisfactorily re-established. The Jews did not occupy their proper position in the world. The people were dissatisfied with their leaders, and thus the notion of an ideal Messiah rather than a political one seems to have become evolved. Zechariah (ch. 14), when he proclaims: 'One day which will be known to the Lord, day, nor night... there shall be no more the Canaanite in the house of the Lord of Hosts,' represents a Messianic Age distant but sure. Malachi is much more practical. He speaks against the sinfulness of his day but even the minor disasters threaten with immediate disaster. His 'day that I [the Lord] do make' (Mal 4:5)—the great and dreadful day of the Lord (4:5)—is the Day of Judgment, and here first Elijah the prophet promised as a precursor of that day. Daniel is written in a different spirit. Despite its mysticism, it is a political pamphlet. It is almost certainly late, and intended to encourage those who were suffering under Syrian oppression. See 3 Macc. 1:17, 18, and perhaps earlier. The Apocalyptic Literature, of which Enoch is certainly, and the Book of Jub. is perhaps, pre-Christian, is overweighted by the gloomy events of the time. The Messianic Age is increasingly needed, and national impatience insists on fixing its date.

7. The destruction of Jerusalem gave a mighty impetus to apocalyptic literature. The era of Messiahs and Prophets produced such men as Theudas in R. 44, under Fadus; the Egyptian Bar Saba (240), who appeared Bar Cochba the Son of the Star, who persuaded even an Aïkib to join him in insurrection against Rome; and so on through a long succession of pseudo-Messiahs down to Sabbatai Zehi (whose advent in the mystic year 1666 caused such excitement both in and out of Jewry), and even to Mari Shooker Kohail, an impostor who so lately as 1870 excited wild hopes among some Arabian Jews of Aden. The Diaspora seemed to lay stress on individual rather than national hopes of reward and punishment after death. But Messianic hopes are traceable even in Philo, who looks to a future re-assembly of the Dispersion time, and echoes of these views are to be met with in the 4th Escol of Vergili. The Kingdom of God and His people (see Ps 145:10), Wis 10:22 of the future (cf. Is 52:5, Mic 4:1, Zec 14:5). Contract the national view of Ps 145:10, 'The Lord of Hosts shall reign in Mount Zion, and in Jerusalem,' with the universalistic concept of Orc. Sib. iii. 767, 'His everlasting Kingdom shall be over all the earth.' Jewish Universalism, the idea of a World Year and Atonement, 'all works shall fear thee... joy to thy land... shining light to the Son of Jesse thine anointed... when thou makest the dominion of thy progess pass over the earth.' But such universalistic ideas are comparatively rare. God's
Kingdom is also that of His people (De 24:27). And this idea prevails throughout the Jewish apocalyptic writings, e.g. Assump. Mos., Enoch (Eth. and Slav.), 4 Ezra: God's enemies, whole people, and the world will be destroyed. It is perhaps based on Ezekiel's Vision of Gog and Magog (38 and 39) as the first prophecy of this stage. After this war-world comes the Judgment (Jl 2:26). Meantime the people of Israel will be hidden away (Gen 49:28; Jer. 25:14; Ezk. 14:15). The precursors of the Messiah are Elijah (Mal 4: Sir 48:15; Orac. Sib. ii., Edynoth, vii. 7), Moses (Dc 18:23), Enoch (Gen 5:24, Eth. Enoch). The Messianic Kingdom is predominantly particularistic. The Diaspora will be reunited, Jerusalem rebuilt, the heathen converted.

3. In the Apocalyptic literature, and first in Daniel, we get the universalistic idea of 'this world' and 'the next' as parallel to the tribal idea of the Present Age and the Messianic Age. The Eeon of mab' (6 ror awlo, 1 Ti 6:19) is 5000 years in Assump. Mos.; 10,000 in Eth. En 18:18 21; Jud. 19:5000 in Sanh. 57a, where R. Katina says the world will last 6000 years and in the seventh will be destroyed; of the 6000, 2000 years are 'Tohu' (chaos), 2000 Torah, and 2000 Messianic. This theory is based on the 6 days of Creation. As the sabbatical year is remitted once a week, so in the world remitted 1 chiliasm in 7' (cf. Bucher, Agada der Tannaen, i. 139 f. [2nd ed. 133 f.]).

4. Daniel's theory of years-weeks (ch. 9) is based on the 70 of Jer 25:38 29' (The Babylonian year was divided into 365 weeks of 7 days each). Daniel has 4 metals (ch. 2) and his 4 great beasts (7) seen based on the classical conception of this world's division into the Gold, Silver, Bronze, and Iron Ages, Eth. 20:6. Ezra divides the world into 12 periods. All these figures, 4, 7, 60, 70 (72), and 12 have an astrological basis, and correspond to the seasons, the days of the week, the weeks of the Babylonian year, and the signs of the Zodiac.

5. The mathematical determination of the end of 'this world' and the beginning of the next was eventually discarded by the Rabbis after all such calculations had proved false. 'Rab says, All the terms (p'z) have ceased, and the matter rests only upon repentance and good works' (Sanh. 97b, cf. Am 5:18). Before God renews His world (mab' mab'), the Messianic Age will come. It is interpolated between this world and the next. The time of Messianic tribulations (mab' mab') is the precursor of the change of Eon. Men will be weaker (4 Ezra 5:20), they will suffer terrible diseases (Orac. Sib. ii. 538), children will be born with white hair (Jul. 25), women will be barren (Orac. Sib. ii. 164). Fields will not fructify (4 Ezra 6:2), poverty and famine will prevail (Eth. En 99a, Apoc. Bar 27), universal war will rage (4 Ezra 9a), the wise shall be silent and fools shall speak (Apoc. Bar 39), when the world will come to an end (7:9), when God will weigh sins and virtues, but even here the Messiah, Prince of Peace, emerges (Apoc. Bar 29 and 78); and after all this travail of the earth the Messiah shall be revealed (though he is hidden) no longer the national hero but the renewer of Paradise, the restorer of the Golden Age. Next will follow the Resurrection of the Dead (Is 26:19). God will destroy death (Dn 12:2). May of the dead sleep in the dust of the earth shall awake'). En 51', ...

day for his coming;' the 13th, 'that there will be a resurrection of the dead at the time when it shall please the Creator.' (Shah Nâmeh; Book ii., p. 92.) In the Zalidi; (ib. p. 37), 'May he establish his Kingdom in your days . . . speedily!' (cf. Oros. Sib. iii. 677). In the Sabbath Morning's Service (ib. p. 129) the following antithesis brings out another stage of the stages or Ages of the World: 'There is none to be compared unto thee, O Lord our God, in this world, neither is there any beside thee, O our King, for the life of the world to come; there will be no end of the Messiah; neither is there any like unto thee, O our Saviour, for the resurrection of the dead.'

AGES OF THE WORLD (Muhammadan).—See COOSMOGONY (Muhammadan).

AGES OF THE WORLD (Teutonic).—See COSMOGONY (Teutonic).

AGES OF THE WORLD (Zoroastrian).—1884, is far the most detailed account of Iranian cosmology is afforded by the Pahlavi Bûndakhshân, a work which, though dating in its present form from the post-Muhammadan period, undoubtedly contains material of far greater antiquity. According to it, Ahuramazd (Ormazd) 'produced spiritually the creatures which were necessary for those means [his complete victory over evil], and they remained three thousand years in a spiritual state, so that they were unthinking and unthinking, with intangible bodies' (i. 8). . . . And Ahuramazd spoke to the evil spirit thus: 'Appoint a period, so that the interminning of the conflict may be for nine thousand years.' For he knew that by appointing this period the evil spirit would be undone. Thus the evil spirit, unobservant and through ignorance, was content with that agreement; just like two men who are together, who appoint thus: 'Let us appoint such-and-such a day for fight.' Ahuramazd also knew this, through omniscience, that within these nine thousand years, for three thousand years everything proceeds by the will of Ahuramazd, three thousand years there is an interminning of the wills of Ahuramazd and Ahriman, and the last three thousand years the evil spirit is disabled, and the adversary is kept away from the creatures' (i. 18-20, West's tr.). Then Ahura Mazda (Pahlavi Ahrûmazd) recited the Ahumaznar, and exhibited to the evil spirit his own triumph in the end; the evil spirit, perceiving his own impotence and the annihilation of the demons, became confounded and remained three thousand years in confusion, that is, the second trimillennium of time. During the confusion of the evil spirit, Ahura Mazda created Good Thought (Tâhrîv-î Nâmeh-î Nâmeh), and the two other archangels. Ahriman (wh. see) produced in opposition to them six corresponding evil powers. Of the creatures of the world Ahura Mazda produced five stars out of the firmament, and the two other archangels. Ahriman (wh. see) produced three corresponding beasts, the spirits of men, their fravenâshis and their consciousness, had already been created in the beginning.

Now Ormazd deliberated with them, asking them if they would assume a bodily form in order to contend with the fiend Ahriman, a phrase which doubtless designating Gayamaran (Pahlavi Gâyômâr), the primeval man, who existed undisturbed, during the same second trimillennium, with the primeval ox.

The evil spirit now rushed into confusion, and the seventh millennium, or the third trimillennium, began. The elements, the primeval ox, and the primeval man were successively attacked by the Evil One. But the appointed time for Gayamaran had not yet arrived. He lived and ruled for thirty years more, although the destroyer had come (iii. 22 f.). Attacked by Ahriman, the ox fell to the right; from his body and his limbs the plants were produced, and three thousand years were changed into the shape of a man and a woman (iv. 1, x. 1-3). Gayamaran lay on the left side in passing away, and from one portion of his seed received by the earth the first human couple, Mashya and Mâshyî, grew up for forty years as plants, and were changed into the shape of a man and a woman (iv. 1, xv. 1-5). The history of mankind, which then began, occupies the second half of the 12,000 years.

The 34th chapter of the original Bûndakhshân sums up the first two trimillennia of the creation as follows: 'Time was for twelve thousand years; and it says in revelation, that three thousand years was the duration of the spiritual state, where the creatures were unthinking, unthinking, and intangible; and three thousand years was the duration of Gayêmart, with the ox, in the world.' Those three millenniums are immediately connected with three of the connections of the zodiac: Cancer, Leo, and Virgo.

The first millennium of the human race is distributed as follows in the same chapter:—

Gayêmart, 30 years.
Mâshya and Mâshyî growing up during 40 years (Bûnd, 15. 3).

living without desire for intercourse, 50 years.
Bringing husband and wife, 93 years, until the middle of the three thousand years.
Mashya (Av. Mâshyå), great-grandson of Mâshyî became, 40 years (and six months, according to Windischmann).
Takhmûrûp (Av. Takhmîrûp-âr; Shâh-nâmeh Tahmûrâz), great-grandson of Mashya, 30 years.
Yima (Av. Ymân, Yima) Yima, the brother of Takhmûrûp, 361 years and six months, until the divine power or glory of the Iranian rulers left him in the shape of a bird, because he took the words of falsehood and error (Yashî, xix. 34), and made himself something more than a man.

Then he lived in concealment for 100 years.
Total, 900 years and six months (or 1000 years).

The next millennium, the second human history, and the eighth of the creation, was under the sway of Dahûk, whose lineage on his mother's side is traced, by Bûnd, xxxi. 6, nine degrees from the evil spirit himself, Dahûk, the Ahûl Dahûk, the dragon with three heads, of the Avesta, who tried to seize the kingly power-substance, the khwaremâah, as it left Yima, who had become too proud owing to his happy paradise reign; but Atar, the fire, saved it for himself.

According to another tradition in the same Yashî (xix. 35), the Khwaremâah, in leaving Yima, went in three parts: one to Mithra, the second to Thrahvisna, who killed the dragon Ahûl Dahûk; and the third to Kerêasra, the great hero, who is to be the successful adversary of the kingly glory, who has the Ahriman preserved the kingly glory during the reign of the fire, until Thrahvisna comes— as in the other version, just mentioned, Atar is said to save the kingly glory, which character at the end of the Yashî, xix. 47 ll.

After the millennium of Dahûk, who is assigned...
by Bünd. xxxiv. 5 to Scorpio, the sovereignty de-

volved on Frēšān, the Thráetaona of the Avesta, the Frēšān who was of the same blood, who killed the

terrible usurper and introduced the third millen- 

nium of mankind and of the third millennium of creation. This millennium is assigned by the Beitrage zur Gesch. der Eschatologie in Zeitschr. f. Kirchenge- 

sch., xxii., of the oldest list of the Iranian kings in the Mandane Gicas: Louis H. Gray, 'The Kings of Early Iran according to the Sihri Badb, in ZA, xiv. 273 f.'

This chronological table the successors of Alexander and the Parthian kingdom until Arab. the founder of the Sasanian dynasty, occupy only 248 years, instead of at least 547. On the other hand, the Sasanians have too many, 400 years in- 

teed of 45 or 467. This double mistake is perhaps uninten- 

tional. Although the total of the historical chronology is thus shortened, the number of the Sasanian, the millennium, 

should be finished and the expected Saviour should have come, as we have seen, sixteen years before the Arabs. This millen- 

nium should in reality contain the whole history since the revelation to Zarathustra, has been a puzzle to the Zarathushtrians. The Bahman Yast, the only extant Bahman Yast, in its present form, a com- 

plicated literary history behind it, shows the difficulty caused by the old traditional statement of the sacred writings that a son of Zarathushtra should be born in a supernatural way and appear a thousand years after the beginning of the new dispensa- 

tion. The popular belief awaited rather a valiant warrior, Bahram Varšav, the Iranian Messiah. Indeed, we read in the Pahlavi Bahman Yast, ii. 44 ('Pahlavi Texts,' tr. by E. W. West, SBE v. p. 531): ‘Regarding Hūsātar is declared that he will be born in 1000.’ This must mean 1000 years after Zarathustra. That is 600 years too late—but it brings us only to the beginning of the 15th cent. a.d., according to the tradi- 

tional Zarathushtrian chronology. (See the introduction of E. W. West to his tr. of Bakhsh Yast; and Bouquet, 'Etudes zur Gesch. der Eschatologie' in Zeitschr. f. Kirchenge- 

It is evident, as E. W. West has pointed out in his most important introduction to vol. v. of his tr. of Pahlavi Texts (SBE xlvii.), that this system of chronology must have been made up long ago, but should finish the millennium of the actual history of mankind after Zarathustra. The first revela- 

tion to the prophet being dated by the Pahlavi tradition 200 years before the death of Alexander, or 300 b.c. that is about 370 a.d.

Amongst other statements and calculations to be found in the Pahlavi writings alone, the first thousand years of the last or fourth millennium, besides the short notice at the end of the Bündahishn, two have an interest for our present purpose.

(1) The Pahlavi which has been in monasteries fixed at 6000 years, Zarathustra, who was born thirty years before the end of the former 3000 years, and whose first intercourse with the celestial beings begins the second millennium, makes his appearance in the middle of human history. According to the Sad Dar, ixxxi. 4–5, it is declared in revoca- 

tion, that the founder spoke to Zarathustra thus (SBE xxiv. 345):

'I have created thee at the present time, in the middle period; for it is three thousand years from the Day of Creating, which is now, and from now till the resurrection are the three thousand years that remain. . . . For whatever is in the middle is more precious and clearer and more valuable and in the middle of the whole body, . . . and as the land of Iran is more precious than other lands, for the reason that it is in the middle.'

(2) The Dinkart, ix. 8, a compilation of the 9th cen- 

tury, renders the contents of the seventh fargart of the now lost Sūtar Nasr of the Sasanian Avesta thus (SBE xxxvii. 181):

'The seventh fargart is about the exhibition to Zarathustra of the nature of the four periods in the millennium of Zar- 

athushtra, and the golden, that in which Ahāmarmand displayed the religion to Zarathushtra. Second, the silver, in that which Vīshapāt received the religion from Zarathushtra. Third, the steel, the period within which the organism of righteousness, Ātātpēr, son of Māraspand, was born (or Arabāhr, the great champion of orthodoxy) and his father and grandfather to Zarathushtra, have been in a stream of pouring molten brass on his chest in order to prove the truthness of the Mazdayaun faith. Fourth, the period mingled with iron is this, in which there is much propagation of the authority of the apostate and other villains, as regards the capital of the earth, and destruction of the good and the holy, and the appearance of false and wicked doctrine.'

It is not possible to say how much of this account belonged to the text of the Sūtar Nasr and what is taken from its ‘zend’ (its translation and Pahlavi paraphrase, used by the compiler). The seven fargarts needed must not come more than the time after the death of the great Shāhpihr ii. in 373. His grandson Yazgird i. (389–420) was called by the priests the ‘sinner’ because of his tolerance in quarrels about religion. At all events, it is not likely that the whole scheme of the four [Metal] Ages, known in India, Greece, Rome, etc., should have been wholly introduced by the Pahlavi paraphrase. In the Pahlavi Bahman Yast, i. 6, it is expressly said that the appearance of the accursed Mazdik (the heretic who flourished during the reign of Kōbād (488–531), and who was put to death by his son Khūsru Nōshirān during ‘this time’ (the Iron Age), is mentioned in the lost Zend Avesta. This is, however, although the two of these three Yasts still ex- 

tant (the Avesta Bahman Yast being lost) do not contain anything about the matter.

In the national history of the Pahlavi Yast the historical 

pointed is a later one than in the Dinkart’s rendering of Sūtar Nasr, and three of the four Ages are applied to other epochs. The next one of the Bahman period is the Copper, and his prophet, and King Vīshapāt’s acceptance of the religion. That is the period of the last destination, which is identically identified with Artaxeres Longimanus (465–424)—perhaps including the reigns of Zerxes i., Darius ii., and Artaxeres Meneon (404–359). That of Steel is the reign of the glorious Khūsru, son of Kōbād (531–579), the greatest of the Sasanians, during whose reign the Pahlavi literature flourished (P. Jüst in Grundriss der iran. Philologie, ii. 539). In i. 21–22 there is allusion to the great merit of the Steel Age king; ‘when he keeps away from this religion the accursed Mazdik. . . . And that which was mixed with iron is the religion of the demons with Dischevaz, the son of the king of Zahhak (1600–2400). It is evident, as E. W. West has pointed out in his most important introduction to vol. v. of his tr. of Pahlavi Texts (SBE xlvii.), that this system of chronology must have been made up long ago, but should finish the millennium of the actual history of mankind after Zarathustra. The first revela- 

tion to the prophet being dated by the Pahlavi tradition 200 years before the death of Alexander, or 300 b.c. that is about 370 a.d.
the Christian Roman empires] is utterly destroyed by this redemptive process, unseen and unknown from the beginning. The Tin Age brings us to the powerful Sassanian monarch, Bahram v. (483-498), "when he makes the spirit of darkness [impotence] a footman with the wizards [i.e., the heretics] rushes back to darkness and gloom." The Stele Age represents the personifying of Man, King Khosrow, and thus the ferocity is ironized as in the first chapter.

As we have seen, the four original Ages are the same, but before Designated Person (Bhūmat-ereta) and the three are the themes (Artsāt*es and, i.e., the steel one (= Khosrow Anoshbin) three supplementary periods are interposed between them. (2) Copper Age is out of place, probably be put before the Bronze Age. The number four is thus changed into seven.

At the end of Zarathushtra's millennium Ukhshyetrena (Pahlavi Ḫuṣhtet), 'the one who makes pity grow,' she shall be born, in a marvellous way, from the prophet's seed. When thirty years old, he enters on his ministry to restore the Religion (Bundahish, xxxiv. 8; Bahman Iแทะ, ii. 14; Dinkert, vii. 8, 51-60). The second millennium of the post-Zarathushtra trimmillennium begins. In the 5th cent. of that millennium (Dinkert, vii. 9, 3) [SBE xli. 108] the wizard Mahkāshkh, in an external fragment (Wettergaid, vii. 2) of the Avesta as Mahkāshkh, will appear for seven years, and produce a terrible winter, that will, 'within three winters and in the fourth,' destroy the greatest part of mankind and of animals.

Those winters are mentioned in the second farvârī of the Vendidad without the name of Mahkāshkh, the demon or the wizard of frost and snow. Yima, the paradise-king, is told by Ormuzd to prepare an enclosure, a erva, and to live in it himself with a chosen host of men, animals, plants, and fires, in order to be preserved during the winters that will invade the earth.

The commencement of the enclosure made by Yima is opened, mankind and animals will issue from it and arrange the world again, and there will be a time of fulness and prosperity (Dinkert, vii. 9, 31; Masūn-i Khvārd, xvii. 27-31). New beings thus come back miraculously for the restoration of the world (Daštātan-i Dink, xxxv. 95 [SBE xxvii. 109-110]).

A thousand years after Ḫoshtet, a second son of Zoroasthtra will be born, Ukhshyetrena, 'he who makes the prayer grow' (Pahlavi Ḫuṣhtet-māh). When thirty years old, he will confer with the archangels. That is the beginning of the last and perfect millennium of the world (Bundahish, xxxii. 2; Dinkert, vii. 9, 18-23). After its end the third miraculous son of the prophet shall be born in the same way by a third virgin, pregnant from the water of the lake Kausava, which holds the seed of Zoroasthtra (Bundahish, xxxii. 8; Dinkert, vii. 10, 15-18).

The usual translation of his name Avesta-reda, 'he who raises the [dead] bodies,' seems very unlikely. The second part of the name, re-da, which means in the name of the first son of the prophet 'righteousness,' being the Iranian equivalent of the Skt. rita (which appears elsewhere in the Avesta as ritah), would then be a verbal form in the third name. More probable is Earth-bahnu's rendering (Ahitvan, Wettergaid, col. 212), 'he who is the personal righteousness' or 'pious.' But the analogy with the former two names: Ukhshyetrena and Ḫuṣhtet-renakā, makes one wonder if the second part of this third name is a verbal form, an act, participle, of re-da, 'to raise;' with a preceding a. It, indeed, the initial a was long, the name might be translated, 'he who raises righteousness.'

More frequently the third expected restorer of religion is called Avesta-reda and Ḫuṣhtet-renakā, regardless whether generically in the Avesta an appellative applied to the zealous Mazda-yandites, the inerrant and incorruptible spirits. Now the last conflict breaks out: resurrection and purification open the way to eternal blissful existence. The time preceding the coming of the three restorers of faith will be marked by misery and impiety (Spend Našk, according to Dinkert, vii. 9, 23; Masūn-i Khvārd, xxvii. 9). A successive deterioration in Zarathushtra's millennium. The Pahlavi apocalypses paint the time before Ḫoshtet's coming in dreadful colors borrowed from history. At the end of the last thousand years Azhi Dāhāka will break his fetters. But, on the other hand, the end of those three Ages is described in an apocalyptic manner which devours or whatever. The Iron Age is dissolved in a terrible conflagration or whatever.
creation,' is derived, are very shortly reproduced in the following terms in the *Dinkart*, vii. 5 (SBE xxxvii. 13-14).

The Ages of the World are particulars about the maintenance of action and the production of the beneficial creatures. First, as to the ages of inanimate things, and secondly, as to the ages of living beings, and how the maintenance in the spiritual existence; and the production of the worldly existence therewith. qualified and constructed for the world, to be coexistent with the universe, and accordingly a necessary end for the end and circulation of destructiveness (West's tr.).

Zarathushtra, the holy spiritual creation (cówn Amen a sthah samaymata thasam dawz as). It shows that the complete Avesta knew the system of four times theodicy.

Except for the events at the end of Zarathushtra's millennium, the Susianian Avestas must have known all the principal features of the world-chronology now described, with its environment of the endless time.

(2) Plotarch brings us further back, about 300 b.c., but speaks only of two or three of the four periods. (B. P. 43), expressly quoting Thucydides, and adding: "Plutarch, without quoting Thucydides, says, 'The ages of the world as divided by the Babylonian historian.'"

The first part of this quotation agrees with the Mazdaznan record of the last nine thousand years (Böd. ii. 190).

Lagrange ("La Religion des Perses" in RR, 1904, p. 52) understan this age as indicating two thousand years. In modern times, the time of Ahura Mazda as ruler, another with Ahura Mazda as ruler; then follows their fight in a third and last period, ended by the battle of evil. It is possible to translate αρανίων and έκ παλαιόν in this way. But, as the phrase runs, it is more natural to apply the two 'times' to the two different millenniums mentioned. Thus the period belongs to both the following statements. The μέτοχα τας χρόνας comes, as the second 'time' of the two gods' relation, after the μετά τας χρόνας το δυτικότερον. The tr. of Lagrange has another drawback. It would be quite an isolated statement in opposition to all other records about Mazdaznan chronology.

Some slight misunderstandings may easily have been perpetrated either by Theopompos or by Plutarch in quoting him. But it seems impossible not to recognize (1) the impotence of Ahriman, (2) the victory of Ahura Mazda—marking up the well-known Mazdaznan scheme.

The second part of the quotation from Theopompos offers some difficulties. The word after qinag has been more ingeniously changed by various conjectures. The phrase should mean: "The god who has brought about these things [the defeat of Hades (identified with Άραμαθευς also by Dr. Laerz, Proser, 6) and the blessed state of mankind] keeps still and remains himself during a period not very great for the god, as it would be for a sleeping man. But the end of the phrase is not tolerable Greek, and must be corrupt in some way. The meaning compels us to think of a rest of Ahura Mazda after the consummation of the destiny of the world. Such an idea is in no way inconsistent with the opposition of the other Mazdaznan theology (Skand-gamand-gat-kar, xili. 220-222 (SBE xxiv. 237)) to the Jewish doctrine of a rest of God after the creation. But we know nothing of any such thing (the rest of Ahura Mazda, or the rest of the world, or the rest of mankind) in the Avestan texts (e.g., Xerxes, 11. 114, 110, 10, etc.). After the astrakhkert, the fulfilment of the end, Theopompos is supposed to have thought of another being, Kerapatun, who is to awake from his long sleep in order to kill the unfaithful Ashi Dahka; or of Saohshyan, "sleeping" as the prophet's holy seed in the house of Kausha waiting for his virgin mother, or of Zarathushtra, expecting at his turn the end of the desolation caused by the great winter. He may be supposed, as far as the present writer can see, the introduction of a third god, after the two enemies spoken of. But it might be that the Greek author has applied the word "duxing" as meaning a statement regarding another figure in the final drama."

The elder Pliny writes (HN xxx. 2.1), "The ages under which our clasification is made:

1. One thousand years reigned and the other was under his dominion during three thousand years. 2. During another thousand years they were equal, and destroy each other's works. 3. At the end, the war of the gods, Ahura Mazda and the king of the infernal regions and of the gods, and men should be happy, needing no food and having no shadow."
ters, and the restorers of the living world from Yima's wana—after the well-known scheme:

'Past and to come seems best; things present worst.'

(From Henry IV., iii. 169.)

It is impossible to say whether the age of the three Ages ever existed as a theory by itself. But there are several traces of the greater importance of Yima Khshathra, the radiant,' Jamsheed in pre-Zarathushrian legend. His temples are called Mani, as in the Zend Avesta. The Zend term, however, means a mandala or mandulae, p. 126 ff.). He seems to have been once considered as the first man and the first ruler. For further discussion see Soderblom, La Vie Future, 175-187.

(b) The contemporary of Iran knew a list of heroes and old rulers, which is preserved in the extant parts of the Avesta, especially in the fifth Yasht, consecrated to the goddess Ardvi Sira Anahita, in the dramatic history of the Shavenrath (the spiritual substance-power of the Iranian kingship), as given in Yasht, xiv., and in the ecclesiastical lists of saints of the Yazat, xiii. These legends have been, tout bien que mal, amalgamated with and adopted into the Zarathushrian chronology.

c) The division of the present millennium into the common Metal Ages is a combination of two systems, of which the Mazdayasnian tradition evidently adopted or borrowed the second one at a later period.

(d) The real existence of mankind from Meshya-Mashyoi until the coming of the Shoshyant, over which the final Zarathushrian chronology seems to hang, has never been stood by Thespompos as the time of fulfillment, rather than as a time of judgment and change. It is possible that the division from Meshya is earlier. That would better suit the spirit of the Gathas, where the final renovation of the world seems, in some texts at least, to be more expected.

In any case, Thespompos refers to the main contents, with the last 9000 years of the Barhista, and 4000 years of the Virdi Vivasvan, as the period to reckon 6000 years, but in a different way: 3000 for Ahura Mazda's supremacy (Gâyomart) and a millennium, and 3000 for the conflict (until Zarathushtra), the two periods being ended by the final victory and eternal bliss (and the release of the sons of Ahriman) which looks like a Jewish-Christian Sabbath of the world; cf. Ep. Barn. 15.

The last millennium, from Zarathushtra to the Shoshyant, over which the final Zarathushrian chronology seems to hang, has never been stood by Thespompos as the time of fulfillment, rather than as a time of judgment and change. It is possible that the division from Meshya is earlier. That would better suit the spirit of the Gathas, where the final renovation of the world seems, in some texts at least, to be more expected. AGHORI

*AGHORI.*—*Agnya* and the present evil Kali Age form the constant feature of periods which ebb and pass away in endless similarity. The system of periods in Iran did not unite, as in India, with the popular belief in the transmigration of souls—a belief which took a fundamental place in philo-, Gímnar, Hindóo, orthodox philosophical doctrine in Indian systems of periods.

The Mazdayasijn scheme expresses, in a somewhat scholastic way, the idea implied in the word *Khi*; that is to say, 'something happens in what happens' (E. G. Geijer, so that the intricate mass of events has a meaning and a goal beyond the actual combinations and situation. The real kernel of history is a 'forward,' not a 'see-saw,' and not a 'backward,' although it may seem so to human eyes. This profound conception has arisen only twice in the history of human thought—in the only two ancient prophetical religions, one Aryan, one Semitic—in Zarathushtrianism and in Mosaism. Neither seems to have brought it from the other. Christianity inherited it from Mosaism, and it has become prevalent in the Western civilization in the form of belief in a Divine purport in history, including the evolution, or in the redeeming crisis, and constitutes one of the most significant features and influential factors in the civilization of Europe and America, as distinguished from the great civilizations of India and of the Far East. It is so deeply rooted in the Western mind, that even so sincere and acute an admiral of and believer in the Indian conception as Schopenhauer unconsciously yields to it (cf. his *Sämmtliche Werke*, v. 224).

To have originated faith in the significance and purpose of history may fittingly be called Zarathushtra's greatest gift to mankind.

NATHAN NÖBELING.

AGHORI, AGRAPAINTH, AUGAIR, AUGAIR.—These are names applied to a sect of ascetics in India who have for a long time attracted attention on account of their habit of cannibalism and other abominable practices.

1. Meaning of name.—Their name indicates connexion with the cult of Siva, being derived from Skr. *agha*, 'not terrible,' one of the euphemistic titles of the god. *Agrapainth* means 'one who follows Siva,' or *aghar* (Skr. *paraya*) or cult of Siva in this form. The worship of Siva as Aghoríva, 'the non-terrible Lord,' is practised at a fine temple at Ikkeri, in Mysores, and in many other places.

2. Distribution.—The present distribution of the sect is facilitated by the propagation of some difficult to the Census of 1901, they number within the Empire 5530, of whom the vast majority (5185) are found in Bihar or W. Bengal, the remainder in Ajmir-Malwa, Rajpal, and Benar, with 225 in the Andaman Islands. This differs widely from the Census figures of 1891, when 630 Aghori and 4317 Angars were recorded in the United Provinces, 3877 Aghori in Bengal, and 436 Angars in the Punjab. The explanation of this disparity lies partly in the fact that, like all ascetics of the kind, they are constantly wandering from one part of the country to another to attend bathing fairs and visit places of pilgrimage. Secondly, the unpopularity of the sect doubtless induces them at the time of the Census to record themselves under other and more reputable titles. The chief centres of the sect, where a monastery (mata) of some kind was assigned to them, used in former times to be Mount Aíta, Girnár, Dodi Gáy, Benar, and Hinglaj—the last the most western to which Indian polytheism extends. But they have now disappeared from Mount Aíta, and they seem to have totally vanished from the other holy places, which, however, they still occasionally visit.*

3. History of the sect.—The first account of ascetics following the rule of the modern Aghori is found in the *Travels of the Buddhist pilgrim*, Hiuen Tsiang. He speaks of 'naked ascetics, and others who cover themselves with ashes, and some who make chapelets of bones, which they wear as crowns on their heads' (Beal, *Si-ju-wei, Buddhist Records of the W. World*, i. 55; Watters, *Yuen Cheoung's Travels in India*, i. 125). In another passage he speaks of the Kapáladhám, or 'weavers of skulls,' some of whom have no clothes, 'but go naked; and their chief, Zarathushtra, is the last of the patriarchs' (Beal, op. cit. i. 76; Watters, op. cit. i. 149). When we come to later times, we have more particular accounts of these Kapálaka or Kapáladhám (Skr. *kápdla, a skull, dhürvin, carrying*). Anandagānita, lord of the Kádi-vijaya, thus describes the Kapálaka: 'His body is smeared with ashes from a funeral pile, around his neck hangs a string of human skulls, his forehead is streaked with a black line, his hair is woven into the nattled braid, his loins are clothed with a tiger's skin, a hollow skull is in his left hand (for a cup), and in his right hand he carries a bell, which he rings incessantly, exclaiming aloud, 'Ho Sambhu, Bhai- rava, Kádi, Kádi, Kádi,' titles of Siva.' (H. H. Wilson, *Essays*, i. 264 n.). Again, the poet Bhavabhúti, who wrote in the first half of the 8th cent. A.D., in his drama *Malati and Mándhava*, Act V., gives a vivid account of the rescue by Mándhava of his mistress from the clutches of the Aghora Ganthá, who is about to sacrifice her at the altar of the goddess Chánníndá, who represents Devi in one of her most terrible forms. Within the temple the human-sacrificing priest circles in his Tantric dance round his victims, while he invokes the goddess, round whose neck is a garland of human skulls (Wilson, *Theatre of the Hindoos*, ii. 55; Prazeres, *Hist. India*, i. 135). A vivid description of this Kapálaka-vrata, or worship of the terrific forms of Siva and his consort Durgá, is given in the *Prabodha Chandrayana*, or 'Moon of Intellecg' (Eng. tr. J. Taylor, 38 ill.). In the *Dabistàn* (Eng. tr. Shen-Troyer, i. 120), the author of which died about 1670, we have an account of the sect of the Yógis, who know no prohibited food, . . . They also kill and eat men. There are some of this sect, who, having mixed their excretions and filtered them through a piece of cloth, drink them, and say that such an act renders a man capable of great affairs, and they pretend to know strange things. There is the performance of this act Attis and also Achkot. They have all originated from Goraknáth. The author of this work saw a man, who, singing the customary song, sat upon a corpse, who was not unbaptised, and who convicts men of dissipation, and then ate the flesh of this; that act they hold extremely meritorious. Goraknáth is the great medieval Hindu saint, of whom many

* Havell, in 1905, found an Augar at Benares seated in a stone cell raised high above the burning-ground, and identified him as a repentant robber, but this black-robed ascetic, who is shown in the photograph studying a sacred book, proved to be a cunning trickster. He bestowed his blessing on a supposed pilgrim tourist, but contemptuously refused to accept a present (Beaman, *The Sacred City*, 1910).

211

marvellous tales are told, and from whom some of the yoj Orders trace their origin."

4. The sect in modern times.—There are numerous accounts of the disgusting practices of these ascetics in modern British India, but whose Travels were republished in London in 1687, alludes to what was apparently a community of Aghori cannibals, who during his time were established at a place which he calls Dehob, on the Brahuc, died in the Bourbon Presidency; but his statements must be received with caution. Ward (View of the Hindoos [1815], i. 373) mentions, among other ascetics, the 'Ughorni-panthi'.

'These mendicants, born in the western parts of Hindootham, wander about naked or nearly so, carrying in the left hand a human skull containing brain and ordure, and a pan of burning coals in the right. If these marks of self-denial do not extort the alms they expect, they proceed to eat the ordure out of the skull, in the presence of the persons from whom they are begging."

Toil (Travels in W. India [1830], p. 33 ff.) gives a vivid description of a colony of Aghori at Mount Abu (where they群e up the base of the most famous of the naked temples), named Fatehpuri, was finally, by his own instructions, immured in the cave which he had occupied for many years. A native gentleman informed Toil that a short time previously, when he was conveying the dead body of his brother to the burning-ground, an Aghori begged to be allowed to remove the corpse, saying that it would make excellent chutney (chhati), the relish used with curry. He further refers to another fellow of a like stubbornness, who, when asked by a person, whether he was an Aghori, answered in the affirmative, and then added, 'yes, but I was not successful with the charms. This much I do, I eat and drink out of a human skull. I also eat the flesh of every dead animal, with the exception of the horse, which we are forbidden to devour; all my brethren do eat the flesh of all dead animals but the horse."

It has been a subject of much debate why the flesh of the horse is specially prohibited. Some have believed that the reason is that the Hindoo, especially the horse (ghora) may be con- nected by its members with the title of the sect. But this seems hardly probable. On the other hand, the horse has never been a sacred animal in India, and its sanctity possibly dates from a period earlier than that of the cow. In the Vedas, horse and cow-ascendric, it is regarded as an emblem of Virâj, the primal and universally manifested Being, and even at the present day there is considerable evidence of the sanctity of the animal (Celebrooks, Essays, ed. 1555, 36; Cooke, Pop. Religion, ii. 284 ff.). As a coincidence it may be noted that Pliny (H.N. xxvii. 8) specially points out that the horse used in public ceremonies the france was forbidden to touch it.

6. Relations of the Aghori to other Hindu sects.—The Aghori are naturally so reticent about their sectarian organization that their relation to other Hindu sects is as yet imperfectly known. The sect in modern times, or at least that branch of it which has its headquarters at Benares, assigns its origin to one Kini Ram, who was initiated by one Kâlu Râm, an ascetic from Gînarâ, towards the close of the 18th cent. (Crooke, Tribes and Castes, i. 26). Hence they are sometimes known under the title of Kînâ-Râm. The Kînâ-Râm is religiously held by the Aghori as closely allied to the Paramâna, who

is solely occupied with the investigation of Brama, of spirit, and who is equally indifferent to pleasure, to heat or cold, and incapable of satiety or want. Agreeably to this definition, individual members of this sect are to have attained such a degree of perfection; in proof of it they go naked in all weathers, never speak, and never indicate any natural want; what is brought to them they dispose of it to the nearest mendicant, or else the person, is received by the attendants, whom their supposed sanctity or a confederation of interest at the time, those attendants are fed and served on all occasions, as if they were as helpless as infants" (Wilson, Essays, i. 222).

Another sect of the Aghori, the Munshi William, who displays an equal disregard of the decrees of life, is the Sârângi (Crooke, op. cit. iv. 262). But the dis-
regard of the ordinary needs of life shown by these two sects is very different from the abominable practices of the Aghori. Their relations, again, to the Aghar yopis of the Punjab have not been clearly ascertained. It would seem that to the general Hindoo, little of the latter, the former added the occasional eating of human flesh and filth.

7. Cannibalism and eating of filth.—The questions of importance in connexion with the Aghori are: the eating of human flesh and filth; secondly, the use of the human skulls from which they eat and drink. The practice of human sacrifice and cannibalism in India has always been chiefly associated with the rites of the Sakti worshippers of Devi, the Mother-goddess, in one or other of her various forms, as Kali, Durga, Chamundi, and others. This cult is supposed to have had its origin in E. Bengal or Assam about the 5th cent. A.D. The Kalka Purana distinctly recommends the immolation of human beings, for which at the present time pigeons, goats, and, more rarely, buffaloes are substituted. It may be suspected that Hindunism, in the form of Brahmanism, assimilated some of the customs of the Medi-Aryan races; but from the place of its origin it is more probable that these practices were adopted from the E. tribes rather than from the Brahils, to whom they have been ascribed. (Hopkins, Calcutta, 400, 580). According to other (Census, Census Rep. Bengal, 1901, i. 181 f.).

Human sacrifice in this ritual form still prevails in dark corners of the land, as in Assam, and the more remote forest tracts of the Himalaya central hill ranges (Cal., Census, 1901, i. 80; Crooke, Pop. Rel. ii. 169 f.). With this side of Hindunism the Aghori sect is closely connected. There are, again, as in the case of the Sradha, or annual festival of the dead, fairly obvious survivals of the primitive custom of the sacrificial eating of the dead, as well as that of devouring the bodies of old or eminent persons for the sake of keeping in the family their valor out of their virtues (Hari-land, Legend of Persuas, ii. 278 f.). But none of these motives accounts for the cannibalism of the Aghori.

It is perhaps possible to account for these practices in another way. We find among some savage races instances of wizards or medicine-men eating substances which are in themselves disgusting and revolting, or poisonous or medicinal in nature, with a view to enhancing the spiritual exaltation of the eater.

Thus, according to Hudson (Report Cambridge Exped. v. 221), at Malakog in Torres Straits, the Maidigbi, or sorcerer, makes a practice of eating anything that was disgusting and revolting in character, or poisonous or medicinal in nature, not only during the course of instruction, but subsequently whenever about to perform a special act of sorcery. For instance, they were said to eat flesh of corpses, or to mix the juices of corpses with their food. One effect of this diet was to make them "wild" so that they did not care for any one, and all affection temporarily ceased for relatives, wife, and children; and on being angered by any of them they would not hesitate to commit murder. In parts of Melanesia, according to Cobbington, Magic, or spiritual exaltation, is gained by eating human flesh; and in this way people obtain the power of becoming vampires, the ghost of the corpse which was eaten entering into friendly relations with the eater (JAI x. 305; Melanesians, 223). In Central Africa, according to Maclean, witches and wizards feed on human flesh, and any one eating a morsel of such food becomes himself a wizard (JAI xii. 107). Among nearly all the native cannibals there is a lingering suspicion that the sorcerer, or person desiring to become a sorcerer, is a corpse-eater, a ghoul who digs up the bodies of the dead. People cursed with this disease are calledGanders (JAI xii. 267), or in Uganda called Basent (Johnston, Uganda, ii. 587, 621 f.).

The same story is repeatedly told of witches in India. According to Buchanan, eating human flesh gain the power of flying in the air and performing other wonders (Tawney, Katha-sarat-siara, i. 390). In the same country the same thing is told in India (Punj. Notes and Queries, ii. 75; Temple-Steel, Wanderer's Stories, 418). Even at the present day the OjI negmaine in Malabar are said to eat filth as a means of acquiring power (Fawcett, Bulletin of the Madras Museum, iii. 217).

8. Use of human skulls as cups and vessels.—The same motive possibly accounts for the use of the human calveria for purposes of eating and drinking. In many places, moreover, believers attach special magical qualities. Thus, among the Wadood of E. Africa, at the appointment of a chief, a stranger is killed, and the skull of the victim is used as a drinking-cup at the inauguration rite (Mois, ii. 61). The new priest of the king of the Baganda drinks out of the skull of his predecessor, whose ghost thus enters into him (JAI xxii. 45). In the same way the Zulus make the skull of a noted enemy into a bowl for holding the "charming-medicines" with which the war-doctor sprinkles the soldiers before a campaign (ib. xix. 255). Similarly, in the Indian Himalayas, the skulls of some women killed in a snowstorm were made into cups for summoning demons (Waddell, Among the Himalayas, 401). In these and in many other instances of the practice collected by Balfour (JAI xxv. 347 f.), it is clear that the skull has been carefully preserved, and that the custom was not that of some person, or of one whose death has occurred under tragic circumstances. The custom of the Aghori, if it originated in this way, appears, therefore, in a delusional form, for they do not seem to exercise any special care in selecting the skulls which they use. Several bowls of this kind, procured in India, Aschanti, Australia, China, Tibet, and the lower Himalayas, have been figured and described by Balfour (JAI xxv. 353), but none of them was ever used in Tibetan devil-worship, as well as a drawing of a modern Tibetan hermit, an exact representation of the Aghori, drinking out of such a bowl (Lhasa and its Mysteries, 220, 320, 243, 570). In fact, Tibet, with its remarkably considerable of immured hermits described by Waddell (op. cit. 257 f.), appears to exhibit more closely than even modern India the course of austerity practised by the early Hindu ascetics. The veracity of the modern Aghar yopis or sanagni proves that austerity is not a part of his way of life.

This habit of using skulls as drinking-cups shows itself even in Europe. A legend of the old Germans, and Livy (viii. 24) tells the same tale of the Celts. Pantus Diascorides (Lan-ge, 120) figures a picture of a Saracen, or an Arab, who met his death when he insisted on his son drinking out of a cup made of the skull of her father. It is still a common belief that epilepsy may be cured by drinking out of a cup made from the skull of a suicide (Folk-lore, vii. 376, xiv. 310; Anderson, Pict in the Present, 151; Rogers, Social Life in Scotland, ii. 255). The powder made from human skulls, and even the grass growing on them, are valued as a styptic in cases of hemorrhage (Black, Folk Medicine, 90).

9. Punishment of Aghori.—There are numerous cases of members of the sect convicted in modern times by Indian courts of law, on charges of eating human flesh and using human skulls.

In 1862 the Sessions Judge of Ghazi-Apur in the United Provinces convicted and sentenced an Aghori to one year's rigorous imprisonment, under sections 327 and 328 of the Indian Penal Code, for having used a human skull as a cup along a road. A similar case, in which cannibalism was proved, occurred at Rohilk in the Panjab in 1882, and in Delhi Durah of the United Provinces in 1884. In 1888 a case of human flesh on an island in the Ganges. Several skulls, one of which had been recently severed from the trunk, were found

* In Nepal, Buchanan Hamilton saw people using human skulls as drinking-cups, and drinking spirits out of human skulls, until they dined in a state of drunken excitement, which was said to increase the effects from imbibition (Account of the Kingdom of Nepal, 39).
AGITATION

impeled on bamboo posts round his hermitage (PASB iii. 299 l., 300 ff.).

10. Initiation rites of the Aghori.—Ascetic Orders usually adopt the methods of initiation and the formula which is whispered in the ear of the neophyte. Hence the accounts of the initiation rites of the Aghori are, from their general un-popularity, most trustworthy. According to one, and that perhaps the most authoritative account, the guru, or head of the Order, blows a conch-shell accompanied by rude music performed by a hired band. He then, with a human skull and pours the contents over the head of the candidate, whose hair is then shaved by a barber. The neophyte next drinks some spirits and eats food which has been collected as alms from the lowest castes, and assumes the ochre-coloured, scanty waist-cloth, and the stick of the ascetic. During the rite the guru whispers mystic formulae (maatra) into the ear of his disciple. In some cases it is reported that one of the bones of a snake and the other of the vertebra of the cobra, are placed round the neck of the disciple (PASB i. 551). According to a third account, the initiation takes place in Benares at the tomb of Kinna Ram, the founder of the Order, on which cups of hemp liquor (bhang) and spirits are placed. Those who wish to retain their caste drink only the hemp; those who solicit complete initiation drink both the hemp and spirits. A sacrifice of fruits is then made on the holy fire, which has continued lighted since the days of Kinna Ram, and an animal, usually a goat, is sacrificed. It is believed that the victim often comes to life, and that the cups on the tombstone miraculously raise themselves to the lips of the candidates for admission into the Order. The rite ends with the shaving of the head of the neophyte, the hair being previously moistened with urine, and a feast is given to the assembled brethren. Full admission to the Order is said to be granted only after a probation lasting twelve years.

11. Dress and appearance.—The Aghori, of whom photographs were collected by Leith for the Anthropological Society of Bombay, is represented as wearing front marks denoting the unity of the deities Brahma, Vieni, and Siva. He seems to wear frontal marks denoting the unity of the deities Brahna, Vieni, and Siva. He wears the rosary of Kudriiksha beads made of the seeds of the tree Elcereus ganitrea; a necklace made of bones, and the tasks of a wild bear, and carries a skull in his hand. Some members of the Order are said to wear necklaces made of human teeth (PASB iii. 345 ff.).

LITERATURE.—The chief authorities have been quoted in the course of this article. The most complete accounts of the sect are those of H. Balfour, "The Life History of an Indian Fanak," JAI xxxv. [1897] 347 ff.; H. W. Barrow, "Aghori and Tribes of the Upper Ganges," 2 vols. (1895) PASB iii. [1895] 197 ff.; Crooke, Tribes and Castes of the N.W. Provinces (1896), i. 26 ff.; W. Crooke.

AGITATION.—1. The methods of the agitator are usually considered to be a modern phenomenon, although this is not an entirely accurate view of the case. All that has been done for the conditions of social life have recently become as much to bring his labours into startling prominence. It is possible to trace the rudiments of this device far back into the past, since the ringer of the tocsin bell, the lighter of the fire that fed the bearer of the flaming torch may fairly be regarded as the predecessors of the runners of a Massini or a Shaftesbury. But there is a pregnant distinction. The message of the tocsin bell in medieval Florence was an agitating one, but it was single, and it did not announce a bare fact, but conveying no new idea. A developed agitation, on the contrary, depends almost entirely on popularizing a new thought; it applies fresh moral judgments to events which may have been familiar enough. The present writer has elsewhere described this instrument of collective action as 'an attempt to act meditatively on social abuses by acting directly on a social conscience' (History of Eng. Philanthropy, p. 172). Even in this, its developed form, agitation can be discovered in so-called ancient as well as in modern history. Whether judged by its results or by the splendid vigour of its onset, no greater agitation has been witnessed than the propagation of Western society by the enthusiastic promulgation of the Christian faith. Nor is any more instructive description of the effect of the agitator's art to be found than that which have turned the world upside down are come hither also' (Ac 17).

Nevertheless, agitation is characteristic modern. There is not much opportunity for its successful use, unless a 'public opinion' exists to which its appeal can be directed. Public opinion itself has existed in some shape for many centuries, but it continually gains in power and effectiveness. In the more definite form of what Professor Dicey calls 'law-making public opinion' it is now evolved except in the more progressive nations. The formation of public opinion in its modern sense has been referred to the era of the first printing-presses, and its mature growth to that of the periodical press (Taine, L'Opinion et la Fonte, pp. 7-9). This is also the period of democracy, and it is precisely in democratic societies that agitation is found to be a potent and familiar weapon. We have to appraise its ethical value. If we are to do this with any precision, we shall be compelled to limit the range of the discussion, and to treat not all agitations, but only one leading group. The present article, then, is immediately germane to agitation as an instrument of the humanitarian spirit, and may require some modification in details before being applied to purely political movements, as for the franchise, or class struggles, as of Trade Unionism.

2. The most obstinate labour of public life is to make institutions (e.g. laws or customs) match with the ethical ideal. The agitator's function is to facilitate the task. Accordingly, any good agitation should possess the following characteristics:

(1) It is the antithesis of quietism, for it is necessarily based on the conviction that objects of social concern are the proper concern of the individual also; it denies the distinction between public and private interests, and asserts the duty of each to share in the life of all. It is directed to the removal of abuses; but, so far from being caused directly by the existence of a wrong, it springs from the perception of the evil. Successful agitation is, therefore, an index of moral sensitivity. Men treated animals with cruelty long before the Kindness to Animals campaign began (Society for the Prevention of Cruelty to Animals A.D. 1824). (2) Agitation is a leading method of popularizing higher moral standards. In the instance just referred to, the matter of judgment was simple enough. Frequently, however, the full significance of the wrong is only discovered only in the course of the agitation itself. This was notably the case with Prison Reform and
AGNOSTICISM.—AGNOSTICISM

Factory Legislation, so that what was at first a goal to be reached becomes repeatedly the starting-point for fresh effort. (3) Agitation appeals to the emotions and prejudices more than to reason. Agitation creates sympathy and sympathy creates the society of imagination. Most of us live largely in a world of personal aims purified and enriched only by consideration for the aims of a few neighbours. Indubitably marked by many (not necessarily poor) sympathies strikes the inpetus of a larger claim. It may be a Dreyfus affair, the appeal for justice to one;* or Emancipation, the appeal of the enslaved Negro race; or the ideal of Italian unification. Individual sympathy instances are stirred into the larger realm of public sympathy. (4) Agitation is a morn of social peace. This is in the nature of paradox, because the first result is always controversy and strife. But even in the turmoil something is gained when social imagination is stirred. Through the effort to remove particular wrong there emerges forefeeling of and admiration for the ideal human society in which recklessness of its attainment is regarded. Opposed to the bad is one form of loyalty to the good, and those who enter on the conflict prepare the type of mind fit for the better life of social peace.

There are other forms of Agitation. The illusion of Agnosticism, as the name, was originated by Ferrier (pp. 50-51, 406, 435). Agnosticism is intended to meet the plea by which Ontology is often baffled, that Absolute—being which that truly is—may be something of which we are ignorant (pp. 60, 406-408). This plea is met by showing that ignorance is an intellectual defect, and must, therefore, admit of a possible remedy. Consequently we cannot be ignorant of anything which cannot possibly be known. We cannot, for example, be ignorant of two straight lines enclosing a space. To be ignorant of them would imply that our ignorance might possibly be removed, and that they might be shown to be coincident, that they are contradictions, absurdities; and therefore also they cannot be things of which we are ignorant. For the same reason, matter by itself, that object which is not related to conscious intelligence, contradicts the very nature of knowledge. It is something which we cannot possibly know, and therefore cannot be ignorant of. Accordingly the conclusion of Agnosticism is that the only existence that we can be said to be ignorant of, is like the real object of all knowledge, not what is commonly spoken of as an object in contradistinction from a subject, but that object in relation to an intelligent subject by whom it is known. Thus matter and mind, some object plus some subject, is the complete object of all ignorance as well as of all knowledge (p. 432).

From this the ontological inference is that, as Absolute existence must be either that which we know or that of which we are ignorant, it cannot be an object by itself or a subject by itself, but must always be a synthesis of the two (pp. 511-521).

The Agnosticism of Ferrier is thus by anticipation a critique of the system which soon afterwards came to be known as Agnosticism (q.v.). Ferrier's work appeared six years before Spencer's exposition of Agnosticism in his First Principles, and it is not clear whether it was alluded to in the system its unclassical name. Yet neither of these writers has attempted to grapple with Ferrier's critique, and in the vast literature of Agnosticism the critique has failed to receive the recognition which it certainly deserves. There is, therefore, no work to be consulted for Agnosticism besides the Institutes of Metaphysics. The above references are to the pages of the 3rd edition (1873).

AGNOSTICISM.—I. Meaning. — The origin of the term is described by Huxley as follows:

*When I reached intellectual maturity, and began to ask myself serious questions, I was an atheist, a materialist or naturalist; a materialist or an idealist; a Christian or a freethinker, I found that the more I learned and reflected, the less real was the animal I used to be. Last I came to the conclusion that I had neither art nor part with any of these denominations, except the one in which I stood; the one thing in which most of these people were agreed was the one thing in which I differed from them. They were quite sure that they had attained a certain 'gnosis'—had come to a correct and successful knowing of the object of existence; while I was quite sure I had not, and had a pretty strong conviction that the problem was insoluble. I was a Christian, an idealist, and Kant on my side, I could not think myself presumptuous in holding that by that opinion. This was my situation when I had the good fortune to find a place among the members of that remarkable confraternity of antagonists, long since deceased, but 'of green and pleasant mien,' the Metaphysical Society. Every variety of philosophical and theological opinion
AGNOSTICISM

was represented there, and expressed itself with entire open-
ness; most of my colleagues were of one sort or another; and,
however kind and friendly they might be, I was never
nobody could be prevailed on to join me in it, and I
had to fall back on my own resources. I adopted the
very head as suggestive of what the "gnostic" of Church
history, who professed to know so much about the very
thing I was ignorant of, and I took the earliest opportunity of
parading it at our society, to show that I, too, had a tail, like the
other foxes. But in the great general and fundamental
doctrine of the Spectator had stood godfather to it, any suspicion in the minds
of respected persons as to whether I might have awakened was, of course, completely nullified" (Collected Essays, vol. I, pp. 239, 240).

Mr. E. H. Harton has given a slightly different account; he
states that the word was 'suggested by Professor Huxley at a
party held previous to the formation of the now defunct Meta-
physical Society, at Mr. James Knowles' house on Clapham
Common, one evening in 1860, in my hearing. He took it from
St. [What, after all, do we know of 'the unknown God'?" (Maur-
ray's New English Dictionary).

The inscriptions on the altar of the 'unknown', not 'the unknowable God' (ἀγνωστός το θεόν), and the term 'agnostic' is said to be ling-
guistically incorrect. The Gnostics of Church History are often called in contempt of these
they opposed their extravagant speculations to the his-
torical testimony of the Church; and in opposing
Agnosticism to the knowledge of God claimed by Christian
theology, Huxley suggests that it is an equally baseless fabric. There was no necessity
for the introduction of the new term, as the familiar term 'scepticism' is almost synonymous with it,
although Agnosticism restricts its doubt to a nar-
wrowing sphere, and with the possibility of a
knowledge is denied, but only the possibility of any know-
ledge of ultimate reality. This restriction the
term does not, however, indicate; nor has Huxley
proved his right to impose on the term this arbit-
rary restriction. The identity also of the ac-
count must produce a painful impression.

It is as a refuge from the dread of Materialism that Huxley offers us this doubt of Agnosticism.

"It is in itself of little moment whether we express the
phenomena of matter in terms of spirit, or the phenomena
of spirit in terms of matter—each statement has a certain relative
truth. But with a view to the progress of science, the material-
listic terminology is in every way to be preferred. For it
necessitates the other phenomena of the universe . . .
whereas the alternative, or spiritualistic, terminology is utterly
barren, and leads to nothing but obscurity and confusion of
ideas. Thus there can be little doubt that the future and
advances, the more extensively and consistently will all the
phenomena of Nature be represented by materialistic formulae and symbols (Collected Essays).

In the supposed interests of science he is pre-
pared to sacrifice the real interests of morality and
religion, although in determining the mode of ex-
plaining the world these suppositions are of the
life of man have surely a prior right to be taken
into consideration. Not only so, but he assumes that
the supposed point of 'spirit,' science will not
get its due, whereas an idealized point of 'spirit'
has no interest in traversing the conclusions of science
in its own sphere—the explanation of phenomena.
It is only when science attempts to be a philosophy
of ultimate reality as well, that it comes into neces-
sary conflict with a spiritualistic interpretation of
the universe. If all the phenomena of the Uni-
verse are known only as they exist for thought, it
is not necessary to connect thought with these
phenomena by reducing it to them, for there
must ever be the essential connexion between the
and them of the subject which the
and the objects which are known. Thought is not an alien
in the Universe to be made at home only by a
proof of its kinship with the material phenomena it
knows. Nay, rather it alone holds the secret of relationship with the
objects which
be given in the materialistic terminology. Life
and Mind alike cannot be resolved into matter and
force. This line of criticism belongs to the
article on MATERIALISM; but it was necessary to indicate it so far in order to show on what
unproved assumptions Huxley's agnosticism rests.
The materialistic explanation, even he recognizes,
cannot be accepted as a solution of the problem of
ultimate reality. It is because he refuses to treat
doctrine seriously as it is held
the model of the spiritual forces, and that
the spiritualistic, explanation, which does offer the solution, that he
is compelled to assume, and even to make a boast
of, his attitude of non-conformity.

2. Hume.—To understand Agnosticism as the
modern phase of scepticism, it is not necessary to
go further back than Hume, to whom Huxley
confidently appeals. 'The fundamental doctrines of materialism, like those of spiritualism and
most other 'isms,' he outside the limits of philosophical
inquiry; and David Hume's great service to
humanity is his irrefragable demonstration of what
these limits are. Whether the thought which
is as irrefragable as Huxley thinks, we may inquire.
Hume reduces all the contents of consciousness to
perceptions, and divides perceptions into 'im-
pressions' and 'ideas.' The former include 'all
our sensations, passions, and emotions which are
given us with a peculiar 'force and liveliness' by
which we distinguish them from the latter, which
are but their faint copies. In thinking, we connect
impressions and ideas with one another, by such
conceptions as causality and substance and subject.
These cannot be derived from our sensa-
tions, the ultimate and exclusive source of knowl-
dge. How does Hume reconcile these con-
ceptions? He derives all such conceptions from
custom. 'Because we are accustomed to see that
one thing follows another in time, we conceive the
idea that it must follow, and from it; of a relation
of succession we make a relation of causality' (Schwegler's Hist. of Philos. p. 183). That any
such connexion necessarily exists we have no
right to affirm. 'All events,' Hume says, 'seem
entirely loose and separate. One event follows
another, but we can never observe any tie between
them. They seem conjoint, but never connected' (Works, A. C. Black, 1854, iv. p. 84).
"Necessity," he says elsewhere, "is something that exists in
the mind, not in the objects" (p. 212). He has
attempting to offer an ultimate reason for this
custom, he recognizes it as a universal principle of
human nature. Substance is explained in a similar
way. 'The idea of substance is, of itself, nothing
but a collection of simple ideas, that
are united by the imagination, and have
a particular name assigned to them, by which
we are able to recall to our minds that
collection' (p. 31, 32). A consequence of
this definition of substance is the denial of
the reality of the external world. 'The opinion of
external existence, if rested on natural instinct, is
counter to reason, and, if referred to reason, is
AGNOSTICISM

contrary to natural instinct, and carries no natural evidence with it to convince an impartial inquirer' (Hume, § 157). "What do we call a mind," he says, 'is nothing but a heap or collection of different perceptions, united together by certain relations, and supposed, though falsely, to be capable of producing simplicity and identity' (I. 260). Such radical scepticism could not offer any solid basis for a rational theism. While Hume expressed his satisfaction that 'our most holy religion is founded on Faith, not on Reason,' Kant identified the belief in the existence of God; yet in his Natural History of Religion he sought to trace back the origin of belief in God to ignorance and superstitious fears; and in his Dialogues concerning Natural Religion there can be little doubt he endeavoured to throw discredit on the theistic evidences. This apparently inconsistent position may be explained by the fact that his own scepticism, in spite of his philosophical rationalism, is not the scepticism of Hume who so frankly and boldly drew from them, was not absolute, but mitigated; for he recognized, in practical life at least, 'the strong power of natural instinct' and common beliefs, for which no rational proof could be given.

3. Kant.—Although Kant set himself the task of answering Hume, yet his answer was so incomplete that Huxley claims Kant as well as Hume on his side. Opposed to Hume's scepticism in regard to the forms of sense and the categories of the understanding, Kant himself becomes sceptical as regards the ideas of reason.

He conclusively showed that knowledge could not be reduced to sensations, and that intelligence implied in all its operations necessary conditions as well as contingent impressions. This was a substantial departure from the scepticism of Hume by proving its dependence on an inadequate and erroneous psychology. But when he proceeded to argue that the constitutive principles involved in knowledge have to do only with phenomena or states of conscious experience, and are wholly incapable of placing us face to face with things; that they have a merely subjective and relative value, but give us no information as to external reality; that, while useful in co-ordinating and unifying our perceptions, they in no degree justify our affirming that there is anything corresponding to these perceptions,—then he virtually unid his own work, and became not the conqueror, but the linear successor of Hume' (Finn, Agnosticism, p. 141).

Into the details of Kant's criticism of Hume's scepticism it is unnecessary to enter (see KANT). Sufficient it is to say that Kant has shown once for all that the connective principles, by which the contents of consciousness are combined in an intellectual and rational unity, belong to necessity of the mind itself. Scepticism cannot do without them: custom cannot bring them into being; the very possibility of consciousness depends on them; they are not casual results of, but necessary conditions for, any experience. Nevertheless he distinguishes the 'thing-in-itself' from the thing as it is for our knowledge; and thus the necessary constitution of the mind makes a knowledge of the reality as it is impossible. This sceptical element appears most prominently in Kant's treatment of the ideas of the reason. 'The mind from the very nature of its intellectual constitution necessarily assumes the unity of the soul, the existence of the universe (the totality of phenomena), and the reality of First Cause' (ib. p. 163), and nevertheless the ideas are only regulative, and not constitutive. By them we can give the rational unity to our experiences, the aim of all thinking; but we are not at liberty to regard these ideas as clues to reality, or as proofs of the existence of world, self, or God. Kant's criticism of the rational theology of the age (the cosmological, teleological, and theological) leaves the question of the category of the world of the pure concepts of the understanding. Here it need not further concern us. It is true that in his Critique of the Practical Reason he restores the ideas of God, freedom and immortality, as postulates of the moral consciousness, yet his conception of the world is theoretical in its essence. Sceptical. German idealism laid hold on the anti-sceptical aspect of the Kantian philosophy; but in more recent Neo-Kantian movements the sceptical aspects of Kant's position are more evident. Kant's position may be urged that the reason which, by its very constitution, is destitute of knowledge as it is, and which in its final unifying experience is necessarily illusive, is grotesque with the conception, that so great a thinker can be excited, its creation only on the ground that, as a pioneer in new ways of thinking, he could not himself realize whether he was allowing himself by his tortuous reasoning to be led. The division of the mind into sense, understanding, reason, is an unreal abstraction; the separation of the pure from the practical reason is opposed to more recent developments of psychology, which recognize the control of the cognizing by the covative aspect of personality. If mind be a unity, the illusiveness of the ideas of the pure reason would attach to the postulates of the practical reason; and the categories of reason and common beliefs, for which no rational proof could be given.

4. Comte.—The positivism of Comte is necessary as a reaction against that idealism, such as the positive elements of Kant's analysis forbid, be denied reality. Kant should have been more, or not at all, sceptical.

5. Hamilton.—Hamilton, although in his general philosophical position a follower of Reid, had read Kant without thoroughly understanding him,
and developed the sceptical elements in his system. While the Divine nature cannot be investigated, the
Definite relationships exclusive of each other
be conceived as possible, but of which the existence is self-limited, condition and excluded middle, one
The last and highest consecration of all true
Religion must be an altar 选址于 God. To the
unknown and unknowable God. That there is no
warrant for such an application of Absolute to
out the altar at Athens, has already been shown. If
the endeavour to think what God is in blasphe
not only all theology but even all religion must
be convicted of it. The recognition in all
humility and sincerity that God cannot be per
fectly known by the imperfect mind of man is
characteristic of all genuine piety; but that does
not involve the admission, which is something altogether
difficult to the absolute, that God cannot be
known at all unless mind must think the Infinite and Absolute, that
is, which is not the case in the former. (2)
As the only possible object of knowledge and
positive thought is the conditioned and the
limited, the Absolute as the unconditionally unlimited, and
the Absolute as the unconditionally limited cannot be
known or positively thought. But is there any
justification for so defining the Infinite and Absolute,
and still more for identifying such verbal abstractions with the conception of God? God has a
mind of His own, a mental faculisation of mind, the
operations, and to think God is not to think an
abstraction at all. His infinitude and absoluteness
mean self-limitation and self-conditioning.
Since for our knowledge and our thought all
existence, save God, is conditioned and limited by
other existence, the mind cannot find rest until it
conceives such self-limitation and self-determina
tion. It may be said that the mind not only can
but must think the Infinite and Absolute, that
is, God. (3) As has already been indicated, the
Infinite and Absolute are both so defined as to be
merely a negative thought'; but as the necessity
and legitimacy of so defining these terms have been
challenged, his conclusion that God as Infinite
and Absolute cannot be known or thought falls to
the ground. Both are positive conceptions, and
both are necessary to complete our positive think
ings about the world. Above all, conceptions of
Correlative conceptions, finite and infinite,
relative and absolute, may claim to be equally
known and mutually illuminative. (4) He concedes
that although he may not know God, yet we believe that God is an author of the universe, and
yields us 'the original data of reason.' This faith
rests on 'a mental impotency.' To state his amaz
ing argument in his own words: 'The conditioned
is the mean between two extremes—two incondi
tionates exclusive of each other, of which one
must be admitted as necessary. We are thus
warned from recognizing the domain of our know
ledge as necessarily excluding conceptions
outside the circle of the universe of God. And by a wonderful revelation we are thus, in the very consciousness of our inability to
conceive aught above the relative and the finite,
inspired with a belief in the existence of something
unconditioned beyond the sphere of all comprehensible reality' (Discussions, p. 15). It has already
been shown that the Infinite and Absolute are not
conditionates; but if they were, how can positive
thought be the mean of notions that are 'a mere
negation of thought'? How can these to there be
applied any of the laws of thought? If we cannot
define these notions, how can we affirm that they
contradict or exclude one another? Or, in fact,
how can we base any sort of argument on terms
unknowable and unthinkable? One cannot but
feel that most of this argument is merely verbal
juggling.
Mansel. Nevertheless, Hamilton found a
follower in Mansel, who adopted his philosophy
so far as he could use it for an avowedly apologetic
Christian purpose. He believed that he could best
cut the ground from under the feet of any objectors
to the Christian revelation, by showing that in these
matters human reason was quite incapable of offer
ing an opinion. He set himself to answer in the
negative this question: 'Whether the human
mind be capable of acquiring such a knowledge
as can warrant it in deciding either for or against
the claims of any professed revelation, as containing
a true or a false representation of the Divine Nature and Attributes!' (1) The first argument Mansel
advances is that reason is not entitled to criticise
the contents of revealed religion unless it can prove
itself capable of conceiving the nature of God, that
is, of constructing a philosophy of the Absolute.
The moral insight and spiritual discernment which
qualify a man to judge of a doctrine, whether it
be of God or not, are very much more general and
simple than the speculative capacity, not to say
audacity, which can and does undertake to find
out God unto perfection. (2) Having made this
demand, he seeks in his second argument to prove
that neither psychologically—from a study of the
distinctive mental peculiarities of the human
mind—nor conceptually—from a knowledge of
the nature of God—can it be met. This second argument loses its
validity with the disproof of the first. Both by
looking within and by turning without can man
get such glimpses of God as make real religion
possible; and he need not, therefore, concern himself
about the question whether he can or can not constr
uct a philosophy of the Absolute and Infinite.
(3) Having demanded a philosophy of the Infinite
and Absolute, and demonstrated its impossibility,
Mansel next concentrates attention on the conceptions
of the Infinite and Absolute, and seeks to show how contradictory they are. How can human
thought distinguish the Absolute, as one and
simple, a plurality of attributes? If the Infinite is
free of all possible limitations, how can it coexist
with the finite? The conception of God as First
Cause as involving the limitation of the Absolute
is irreconcilable with the conception of the Infinite.
But all this playing with words fails to mislead, if
we look steadily at realities and keep our eyes off
abstractions. If we define, as we may and should,
the Infinite and Absolute as the full life, mind, power, which is distinguished from rela
tive and finite existence in that it is self-conditioned
and self-limited, not determined either positively
AGNOSTICISM

or negatively by that which is not itself, this whole scholastic structure falls to the ground. (4) Turning from these conceptions, Mansel then seeks by an analysis of the universal conditions of human consciousness to prove that the Infinite and Absolute cannot be its object. ‘Consciousness is the relation of an object to a subject and to other objects, but the knowledge of the Absolute precludes all such relation. Further, our consciousness is subject to the laws of space and time, and cannot therefore think the thought of a Being not likewise subject to them’ (God and the Absolute, 1855, p. 257). But to be known by a mind which He has endowed with the capacity of knowing Him is no limitation of God’s infinitude. As the Absolute, God is not without relations, but only as related to Him do all things exist, consist, persist. The consciousness of their own consciousness of time and space implies the correlative conceptions of eternity and immensity. This argument, further, is inconsistent with the claim that man may and should believe that God is, even although he cannot know what God is, as belief is a state of consciousness, even as knowledge is.

(3) Mansel denied, to state briefly some of his conclusions, the moral likeness between God and man, and thus the possibility of man’s judgment by reason or conscience what claimed to be the revealed mind and will of God; he admitted the possibility of moral as of physical miracle, that is, the suspension of the laws of right as of force; he rested the claim of the Scriptures to be accepted entirely on external evidences; he thus sought to protect the orthodoxy of his time from attack by a moral and religious scepticism, which, if taken seriously, would be fatal alike to goodness and godliness.

7. Herbert Spencer. — Herbert Spencer attaches himself in some of his arguments to Hamilton and Mansel; but his interest is altogether different from theirs. He is not seeking to protect revealed religion against attack from philosophy, but to vindicate the materialistic method of modern science as the only valid method of interpreting the Universe. His motive is not, however, irreligious, as his desire is to reconcile religion and science, and he is confident that he has called a truce to their age-long conflict. As the most influential of the exponents of Agnosticism, he claims a fuller treatment and closer criticism than any of the writers already mentioned. Following step by step his discussion of the Unknowable in his First Principles, we must consider the following questions: — (1) Does the idea of the Unknowable in science and religion, so as to be warranted in his assumption of the conception which alone can reconcile them? (2) Does the incomprehensibility of the ultimate religious and scientific ideas lie in their very nature, or only in his statement of them? (3) Is his use of the doctrine of the relativity of knowledge valid, and does it strengthen his conclusion that God is unknowable? (4) Does this reconciliation of science and religion do justice to religion?

(1) In the first chapter Spencer argues that science and religion are co-ordinate, the sphere of the one is that of the other, and that the manner in which is known to a conscious mind, and further that consciousness has the faculty of determining its own limits, and of arriving at the truth of propositions. It is a mistake of the latter that which, though in consciousness, yet transcends knowledge; that each must ‘recognize the claims of the other as standing for truths that cannot be ignored’; and that a reconciliation can be effected only by the discovery of what is the ultimate fact, and the first principle of each, is common to both. It is in the most abstract truth of religion and the most abstract truth of science that, he holds, the conception that science occupies the whole realm of the knowable, so that for religion is left only the region of the unknowable, must at once be challenged. For the self-conscious personality the categories of science — force, matter, law — are not adequate; and within the realm of knowledge — life, mind, will must be employed to which physical science does not do justice. Religion contributes a conception, God, to the interpretation of the knowable, which cannot be got rid of by this arbitrary division of the province of science into religion. Not a truth common to science and religion is what we have to look for, still less the most abstract truth; but, on the contrary, the abstractest category is that which comes next, and is corrected and corrected by the much more concrete categories of philosophy, morality, and religion. It is the same reality which science explains and religion interprets; but the explanation of science is completed in the interpretation of religion. Matter, force, law are less intelligible conceptions than mind, will, personality, God; for the self-conscious spirit of man finds itself in the latter as it cannot in the former. To confine knowledge to objects of sense and such connections between them as the understanding, with its categories of quantity, quality, relation (substance and causality), may constitute, and to exclude from knowledge the larger category, any self-consciousness, any, of a personality in man, and, above all, of the all-embracing, all-sustaining, all-directing, and all-illuminating reality, God, is altogether an arbitrary proceeding. It has already been criticized in dealing with Kant’s scepticism regarding the ideas of the pure reason. To deny all value to the knowledge religion claims is necessarily to challenge the validity of the knowledge allowed to science.

(2) Spencer’s proof in the second chapter, that science must end in nescience, and religion must be content with awe of the Unknowable, is as follows: (e) Conceptions are symbolic, when their whole content cannot at once be represented to the mind. These are legitimate, if we can assure ourselves ‘by some cumulative or indirect process of thought, or by the fulfillment of predictions based on them,’ that there are actualities corresponding to them. Otherwise they are to be condemned as vicious and illusive, and cannot be distinguished from pure fictions. Here, it is evident, he tries to limit conception to representation (Vorstellung), and to exclude the idea or notion (Begriff). But regarding this restriction, which, it must be emphatically stated, the world’s greatest thinkers have not denied because it never occurred to them to question their position. There are other questions which may reasonably be asked. Is man’s thought to be limited to what he can image to himself? Having started from sense-objects that alone knowledge of him which can be referred to sense-objects? Or, beginning with these, has he not the right, nay, does it not rest on him as a necessity of his mind, to bring into clearness of consciousness all that is implied in this rudimentary knowledge, whether the ideas so attained have corresponding images or not? Does not his own inner life furnish him with spiritual conceptions, which, although they have no corresponding sensible actualities, are not on that account any less real, any less personal interests, but even make more intelligible to him the world of sense around him, and help him to discover its meaning, worth, and aim? As Kant has sought to confine this thought and its own connective principles, which, derived from and inexplicable by experience, are yet necessary to experience. If knowledge were as Spencer re-stricts it, the connection of its possibility would be excluded from it.

(b) Having prejudged the question by this definition of the conceivable, Spencer proceeds to deal
with the ultimate religious conceptions concerning the origin and the nature of the Universe, and maintains that 'a critical examination will prove not only that no current hypothesis is tenable, but also that no tenable hypothesis can be framed' (p. 30). The Atheistic hypothesis of an existing Universe is inconceivable, as it explains one mystery by another; so is the Pantheistic, for 'really to conceive self-existence is to conceive potential existence passing into actual existence by a change in the actual.' As regards the Theistic hypothesis, the analogy with human art is properly set aside, as this does not produce its own materials. 'The production of matter out of nothing is the mystery.' Granted an 'external agency,' that must be accounted for; and we must assume 'self-existence,' and that is 'rigorously inconceivable.'

This statement calls for several comments. First, it is altogether illegitimate to identify the ultimate religious conceptions with theories of the origin of the Universe; for these theories hold a second place in Spencer. Yet religion possesses an inward witness of kinship and fellowship with God which is quite independent of them. Secondly, what Spencer endeavours to show is that the conception which God is an 'external agency,' and the solution of Christian theism combines the theory of pantheism (immanentism and transcendence) in the synthesis of a conception of God as unity-in-difference—a conception which certainly accords with the triumph of Spencer's abstractness and intelligibility, but which for many thinkers of clear vision is altogether luminous. Thirdly, theology is not required to conceive the production of matter out of nothing, as it is not committed to the assertion of an ultimate, absolute dualism of matter and spirit, which can conceive the possibility of God as Spirit. Lastly, that 'self-existence is rigorously inconceivable' is an unwaranted assertion, as dependent existence inevitably leads thought to conceive an existence on which there is dependence, but which is not itself dependent. It is evident from the analysis that explains itself can be used by the application of the category of causality, to seek for existence that does not so explain itself and is thereby an illusion.

(c) After having thus endeavoured to show that all theories of the origin of the Universe are untenable, Spencer fixes his attention on the nature of the Universe. We must assume a First Cause, which is Infinite and Absolute; and, nevertheless, these concepts, all equally necessary, are yet mutually contradictory. Here he borrows freely from Mansel, and indulges in the same verbal jugglery, the fallacy of which has already been shewn. The conclusion, which is supported by such arguments, is put forward as having the support of the religious consciousness itself. 'Not only is the omnipresence of something which passes consciousness common to all religions, but the consciousness of this common to all religions, which becomes the more distinct in proportion as they develop, and which remains after their discordant elements have been mutually cancelled, but it is that belief which the most unsparring criticism of each leaves unquestionable, or rather makes it ever clearer' (p. 45). Although it may be admitted that the conception of God has changed, as it necessarily must, since man's thought is dependent on external information; it must be maintained that the progress has been mainly positive and not negative. Growing knowledge of self and of the world does necessarily correct that which can into closer harmony with experience; but this conception of God is not less but more rational, moral, spiritual; it answers the question of the mind, the longings of the heart, and the needs of the life man must necessarily have. In fact, the religious consciousness will assuredly not sustain the contention that 'this deepest, widest, and most certain of facts that the Power which the Universe manifests is not without a self-existence.'

(d) It is not necessary for the present purpose to follow Spencer in his proof, in the third chapter, that the ultimate scientific ideas are also inconceivable; a closer examination would show that all the difficulties are due to an inadequate method of thought, which tries in vain to reduce the concrete complexity of existence to an abstract simplicity of conception. To give but one instance, he tries to prove that the self which knows cannot by itself be known, for the relativity of knowledge involves as ultimate the distinction of subject and object. But that subject and object may be discriminated, it is necessary that both be embraced in the unity of consciousness; in self-consciousness that unity is still ultimate. The meaning of being an object itself as subject; and it is mere word-play to affirm that the self cannot both be intelligible and intelligent. In fact, self-consciousness is the ideal knowledge, the perfect accord of thinking and being. Assuming for the sake of argument that the ultimate ideas of science are inconceivable, why does Spencer not draw the same conclusion for science and religion? Science with inconceivable ultimate ideas possesses the realm of the knowable; religion with inconceivable ultimate ideas must content itself with the unknowable. How can a system of knowledge be based on inconceivable ideas? And secondly, how must that be the necessary result in the other? The private ideas of religion—the phenomena of the religions life—have as much claim to be treated as data of knowledge as the perceptions of the outer world with which science deals itself. It is not so evident regarding ultimate ideas undermines science as much as religion.

(3) The argument in the fourth chapter, based on the relativity of knowledge, is borrowed from Hamilton and Mansel. The inference says Spencer, 'which we find forced upon us when we analyse the product of thought as exhibited objectively in scientific generalization, is equally forced upon us by an analysis of the product of thought as exhibited subjectively in consciousness' (p. 74).

(e) The analysis of the product of thought leads to this conclusion. 'Of necessity, therefore, our explanation must eventually bring us down to the inexplicable. The deepest truth which we can get at must be unaccountable. Comprehension must become something other than comprehension before the ultimate fact can be comprehended. This ultimate fact, he assumes, will be 'a highly general fact regarding the constitution of matter of which chemical, electrical, and thermal facts are merely different manifestations.' The method of explanation here taken for granted is entirely false. To discover that is common to all religions, and to ignore their differences from one another, is not to explain them. The logical universal does not at all account for the particulars it embraces. The abstraction man does not help us to comprehend Caesar, Paul, Luther, Napoleon. It is the most concrete unity—that which combines the most numerous and varied differences in a system within itself—that is the ultimate fact which not only explains all, but is itself explicable. Not in the divorce of existence and intelligence can thought be brought to a halt; but only in such a conception as makes reality most fully rational can its goal be found. Spencer in looking from concrete differences to an abstract unity, is looking in the wrong direction for the ultimate fact. Explanation, to be adequate, must be synthetic and not analytic; it must end not in a generalization, but in a synthesis.'

(b) In the analysis of consciousness, the relativity of knowledge is said to imply two kinds of relation—the relation of object to subject, and the relation of subjects to objects in such a fashion as to be known only in such relations. Spencer argues that it cannot be known in itself, whatever that may mean. This assumption, that the knowledge of reality adds to reality an element so foreign that
AGNOSTICISM (Buddhist)

consequently as known it is other than it is as unknown, is an absurdity which has already been sufficiently exposed. Spencer adopts Hamilton’s objection, that God as the Absolute must be known either as subject or as object, or as the indifference of both. But what forbids our thinking of God—the object conceived as God—He Himself has distinguished our consciousness from His own—as the subject which thinks all things as existent by His will? We as subjects knowing God are, for God, objects which do not limit His indwelling in us, and who are all. Because He knows us as exact in distinction from Himself by His own self-determination and self-limitation. Our intelligence which seeks God as its object, and which, on the assumption that the Universe is a manifestation and not a concealment of God, believes that it knows God, must be by God’s act delusive, if God does not manifest Himself as He is. It would require much more cogent arguments than those verbal juggleries of Spencer to convince us that God made intelligences in such wise that He Himself could never become intelligible to them. Enough has already been said to show that the notion of a consciousness in which the relativity of knowledge is used. To conceive God is not to think a Being out of all relations, but a Being whose reality is revealed in His relations, constituted by Himself.

(c) While agreeing with Hamilton in this argument from the relativity of knowledge, Spencer differs from him in asserting that the unrelated, though inconceivable, is yet a constituent element of thought. ‘Our notion of the Limited,’ he says, ‘is composed, firstly, of a consciousness of some kind of being, and, secondly, of the consciousness of the limits under which it is known. In the antithetical notion of the Unlimited, the consciousness of limits is abolished, but not the consciousness of some kind of being. It is quite true that in the absence of conceived limits this consciousness ceases to be a concept properly so called, but it is none the less true that it remains as a mode of consciousness (p. 96).’ He then tells us that this something is constituted by ‘combining successive concepts deprived of their limits and conditions’ (p. 85). Here a logical abstraction is supposed to be a reality, and even the reality that explains all; but, as already been shown, God, to explain the Universe, must be conceived as the concrete unity which embraces all differences, and relates them to one another.

Spencer hopes, in the fifth chapter, that ‘in the assertion of a Reality utterly inscrutable in nature,’ science and religion will be reconciled. Science is to admit the existence, religion the inscrutable nature of this reality. He thinks that this will not be a vain appeal, as his understanding of the history of religion is that it is developing in this direction. How mistaken he is needs no proof. The religious consciousness does recognize that the abysmal depths of the Universe cannot be fathomed by the human mind; but it does not admit that the truth about God it claims to possess is an illusion. Religious knowledge is valid and valuable, though imperfect and incomplete. Spencer requires religion to give up the conception of God as personal. ‘It is just possible,’ he says, ‘that there is a mode of being as much transcending Intelligence and Will as these transcend modes of existence. Nevertheless the insistence on interpreting the Universe which is the manifestation of the ultimate reality as mechanical notion. Rejecting the highest conceivable category as too lowly to express Divine activity, he insists on interpreting the manifestations the lowest conceivable category. He represents the inscrutable mystery as causal energy, while declining to describe it as Intelligent Will. His system is materialistic rather than idealistic. He gets rid of the absoluteness of religion to a higher but not a lower conception in interpreting the Universe. In surrendering the personality of God, religion surrenders everything; in admitting the existence of this reality, art is not in itself as a confidence that explains the world in terms of matter and motion. In this reconciliation religion loses, science gains, everything.

In the criticism of the authors passed in review the objections to Agnosticism have been stated. But a brief summary may be allowed at the close. The materialistic explanation for which it seeks to find room is inadequate to account for life, mind, morality, religion. The idealistic explanation which it seeks will not only does justice to the highest interests of life, but makes more intelligible the whole process of the Universe as an evolution of spirit. The theory of knowledge on which it rests is sceptical in its result, and this scepticism must extend to science as well as to philosophy and theology. The trust in the reason of man, on which the proof of God’s existence rests, is no exceptive to the general which the relativity of knowledge is used. To conceive God is not to think a Being out of all relations, but a Being whose reality is revealed in His relations, constituted by Himself.

AGNOSTICISM (Buddhist). — One of the most important and, in some ways, most obscure questions in Buddhism is whether the Buddha was an agnostic, in the sense that he refused to express an opinion upon a future life (transmigration) and on the state of the Buddhha after death, and prescribed only the attainment of Nirvana upon earth. We propose, in the first instance, to describe the authorities bearing upon this question, then to discuss them, and finally to draw conclusions.

I. Authorities. — 1. When Buddha is asked by King Ajātaśatru what are the actual fruits of a ‘religious life’ (or life of a monk, brahmacarya), he gives an answer in which there is nothing metaphysical. He regards the question, as his interlocutor desires, from the point of view of the present life. In the first place, the monastic state confers a great dignity on the person who assumes it. The Buddha himself has become a monk is honoured by his former master; in the same way the free man is relieved from private cares. There is, however, something better: good conduct, mastery over oneself, and clothed in sufficiency, without excess, produce a rich contentment. And there is something better still: the practice of successive ‘trances’ (dhyanas), the knowledge which accompanies them, and the annihilation of all passion, the extinction of egoism, the becoming of an arhat or of nirvāṇa upon earth—these are the sublime fruits of the monastic life.

* See the Sāmaññakathāsutta, Dīgha, i., pp. 47–56, translated by various hands. Also see, on the same subject, the words of the Buddha, pp. 56–56, with an Introduction.

† There are many charming descriptions of the happiness of life in the interest among the trees, which are more kindly and complaisant than men (see Sīkṣāsāmakahāya, ch. ix.).
AGNOSTICISM (Buddhist) 221

2. This sketch of the monastic life will perhaps be more correctly understood if compared with the sentiments expressed by the Buddha when he is questioned on metaphysical subjects. The examples are numerous, and at times widely divergent. We shall confine ourselves to a discussion of the most remarkable. Perhaps the most characteristic is that related in the Mahāvagga, thus: The Buddha is asked: "Do you teach the doctrine of annihilation [that is to say, that there is no life after death, and no future retribution for the deeds done upon earth]? Is that true?" The teacher answers: "There is thus a kind of play upon words; and this passage, in which the problem of the future life is curtly dismissed, confirms the impression left by the dialogue as summarized above.

3. In the 'Net of Brahmā' the Buddha enunciates a series of propositions, of which some at least are of historical and doctrinal worth. They are presented to us in a series of three parts, and, while some are more specifically condemned, the series as a whole is rejected. The following is the order:
   (1) The universe and the soul are eternal (ākāśavāda) in the sense that they have had no beginning,—a belief founded upon the fact that some sages have memory of their previous existences.
   (2) The universe and the soul are, at one and the same time, eternal and non-eternal, either because Brahmā, the creator of the universe, has neither beginning nor end, while other beings are perishable, or because the soul is eternal and the body perishable.
   (3) The universe is (a) limited in space, (b) unlimited, (c) unlimited at the sides and limited towards the top and the bottom, (d) neither limited nor unlimited (the contradiction is not explained).
   (4) It is possible to refuse to choose between four propositions (affirmation, denial, simultaneous affirmation of the affirmative and negative, simultaneous denial of the affirmative and the negative) with reference to (a) the existence of another world, (b) the reality of 'apparitional beings,' (c) the fruit of actions, (d) the renewed life of the man who is set free from desire, i.e., of the arhat. The Buddha says that each of these is a sign of sanctity and sophistry. Teachers of such doctrine are 'slippery as eels.'

4. The soul has no cause, that is, it appears in the present world without having passed through a previous existence. In the same way the present evolution of the universe has had no antecedents.

5. The soul has, after death, (a) conscious existence, conceived under sixteen different aspects; (b) unconscious existence, under eight different aspects; (c) existence neither conscious nor unconscious, under eight different aspects; or (d) it is annihilated at death (seven distinct theories, corresponding to seven classes of souls).

6. Some maintain that the soul is attained in this life (dīttadhammanibbāna), conceived as the possession either of the pleasures of the senses, or of the first, etc., up to the fourth century (dītga).

These opinions regarding the past and the future are theories (dṛṣṭi-buddhipatā).† The Buddha knows the consequences which they entail upon those who accept them; they form the net in which the man of wisdom is caught; however, he believes himself to be eternal! The Buddha knows far better things, viz., the origin and the end of sensations, and the means of escaping them. He ends by saying that he has destroyed every germ of re-birth in himself; so long as his body lives, it is seen by gods and men; after his death neither gods nor men will see him.

4. Of all the questions raised in the 'Net of Brahmā' only ten are found in the Majjhima Nikāya, i. 420.§ These are especially important, for with slight modifications they constitute the list of fourteen questions to which no reply is allowed.
   (1) Eternity of the universe: Is it eternal? Is it non-eternal?
   (2) Infinity of the universe: Is it infinite? Is it finite?
   (3) The vital principle (jīva) and the body: Are they identical? Are they non-identical?
   (4) Continued life of the Tathāgata, i.e., the arhat, the saint, 'he whose thought is emancipated': Does he survive death? Does he not survive? Must we assert of such an one at the same time survival and non-survival of death? Must we deny both?
   (5) Malunkya is sufficiently curious to insist on obtaining an answer to these questions, which he regards as fundamental. The Buddha refuses to reply. He has withheld information on questions of the eternity or otherwise of the universe,

   * As a matter of fact, the pseudo-Buddhism of the Tantras identifies supreme bliss or nirvāṇa with sexual enjoyment.

† Strictly speaking, the possession of the fourth fringe is not 'nirvāṇa upon earth,' because this possession is a momentary one. But we may assume that this definition of 'nirvāṇa upon earth' is very like the ordinary conception of nirvāṇa.

§ That is to say, erroneous views and speculations; not that there may not be, in certain cases, a soul, a body, a conscious future life, a 'nirvāṇa upon earth,' but this past and this future are not the past and future of an ego given as permanent. This conclusion follows the Mahāvagga, xxvii., and the dogmatic teaching of the Pāli Suttas.

Chinā-malunkya-sūtra, translated by Warren, Buddhist in Translations, p. 117, and by Oldenberg, Buddha, p. 574. See also 'Mahāvāsa,' in Dialogues, p. 151.

The fourteen 'unelucidated topics' (avyākta-cutavasa) of the Sanskrit Buddhist literature are the same as these, with the addition of four concerning the eternity and the infinity of the universe (viz., is it at one and the same time eternal and non-eternal? or is it neither eternal nor non-eternal?), and the difference that the questions concerning the Tathāgata precede those on the vital principle (see below, p. 224, note 1).

Oldenberg has proved that, in many cases, 'world' must be interpreted as the 'ego' (Buddha, p. 271, Fr. trans. p. 260). In any case loka means sattavelokā, world of the living, and not bhūtvādāloka, world-receptive of living beings. On the other hand, we have seen that 'eternal' is equivalent to 'without beginning.' It is noteworthy that the Sanskrit authorities define 'finite' as 'having no end in time,' contrary to the interpretation of the Sutta quoted above. The questions, then, regarding infinity, will be interpreted to mean: 'Do beings attain nirvāṇa?' Will there be anything in the world of living beings attain nirvāṇa, while others will not? Is it false to say that some beings attain nirvāṇa and others that do not?

As regards the relations of the jīva and barīra, it is difficult to determine the original meaning of the words and the teaching of the question. Certainly nothing is more alien to Buddhist doctrine than to identify the 'jīva' with the body (jīva-dhyāna). With the body by jīva Buddhism understands the personal and so-called permanent principle denoted by the technical word pādavī. It has been stated, therefore, that the 'element of form,' and, by extension, the other skhandhas (body-element) differ from the previous sāttvika, which consists in the very remarkable fact that the Buddha, on the subject of the jīva-barīra, condemned both the denial and the affirmation of their identity, but was silent upon the doctrine of 'Neither identity and non-identity' and 'neither identity nor non-identity,' the
AGNOSTICISM (Buddhist)

e
c, because knowledge on this point does not help in any way towards the annihilation of the passions.

5. In the 'Dialogue of Vaccha,' we observe a slight difference in the attitude on the part of Buddha. When questioned as to the ten points above specified, he condemns the ten 'theories'; they produce suffering, and do not help towards the annihilation of the passions. He himself has no 'theories' (dīthi, his knowledge) even the skandhas only (Pali skhandas), the constituent elements of beings, their beginning and their end. In fact, as has been pointed out, all the 'theories' connected with the past or future, and the identity or survival after death of the Ego, presuppose the existence of the Ego. But this Ego does not exist in itself; there is only an aggregation, a complex of skandhas. Vaccha insists, and returning to the four questions concerning the existence after death of the Tathāgata, who is here denoted by a descriptive term, evamuttachatta, 'he whose thought is set free,' receives a formal answer: 'It is wrong to say that the Tathāgata exists after death, wrong to say that he does not exist, wrong to assert survival and the contrary, wrong to deny both.' Vaccha fails to comprehend this, and the Buddha says: 'Canst thou, be not moved by an extinguished flame that it has gone to the right or to the left . . . ? Similarly in the Tathāgata there exists no matter, no skandha which one could name when speaking of the Tathāgata, and being alien to every conception of matter and skandhas, the Tathāgata is deep, immeasurable, unfathomable, like the great ocean. It is wrong to say that he exists after death, wrong to say that he does not both.

That is to say, if we understand correctly, it is impossible either to assert or deny, or to say anything about what does not exist, inasmuch as it is not an object of knowledge, but the skandhas are the only objects of knowledge, and the skandhas, which constituted the man 'whose thought is set free,' have no existence after death, the emancipation of the thought consisting in this, that the thought does not reconstitute the skandhas in a new grouping.

6. This comparison of the Tathāgata with the great ocean is repeated in a passage in which it seems to be interpreted in a medical sense: 'When the body, the Buddha not revealed whether he exists or not . . . after death.' To this question, asked by King Pasenadi, a learned nun replies: 'Hast thou a mathematician who could measure the water of the ocean? . . . The ocean is deep, immeasurable, unfathomable. In the same way there exists no matter in the Tathāgata . . . (as above, § 5).

On examining the comparison more closely, however, we see that it does not hold. The water of the ocean evades measurement because it is too vast, while the Tathāgata after death cannot be calculated, measured, or fathomed because there no skandhas, no without reason, drew the conclusion 'that the Buddha exists, without any one being able to state what relation it bears to the skandhas. This is the reason of evamuttachatta, 'he whose thought is set free,' which contradicted by the Abhidharmakosa and the Madhyamakas (see next col. note). The reason of the silence is explained by the Avaspathikas, according to Oldenberg, pp. 272, 273.

(At the same time, however, does not seem to allow this acceptance of the term here. Place us upon words are very frequent in Hindu metaphysics, and the simile of the ocean is the most appropriate in the present instance. See Avaspathikas, ili. 109; Warren, p. 188; also Oldenberg, p. 340, note on an exception of this present article, even more than its conclusions, depart from the views expressed by this eminent Indian scholar, it is the writer's duty to acknowledge to the full the obligation under which he is placed."

But why is it here to maintain the annihilation of the Tathāgata? Because there is no opportunity of distinguishing between the Tathāgata living and the Tathāgata after death. * Amma as it is wrong to assert that the Tathāgata, during his lifetime, is either distinct from or identical with the skandhas either united or singly, the Tathāgata, living during life, exists and is only approximately,' there is nothing real in him, Buddha is only a name,—so what is true of the Tathāgata is true of the Ego, of any Ego whatever; the Ego does not exist in itself.† This way of looking at the problem is precisely that adopted by the Viṣṇujīva and the Mādhyamika schools. The Tathāgata has no further existence, because there is no Tathāgata. It is the same in reality with all the other so-called Egos. The Buddha has nothing to say about them, because it is impossible to speak about what does not exist.‡

II. Discussion.—We have thus given an account of the chief authorities on which the study of the problem of agnosticism ought to be based. These documents, the agnostic statements of the Buddha bearing upon various problems, and assuming slightly different forms, admit apparently of three different, and even contradictory, methods of interpretation. It is a method either (1) of evading an answer, the policy of the 'slippery col.' as Buddha says, or (2) of asserting the existence of the mystery, but forbidding dwelling on it, or (3) of denying both existence and the conceivability of the object in question by closing up all 'joins and holes' by which the true facts of the case might escape caught in the logical net.†

Let us examine the three interpretations.

1. A agnosticism.—The first constitutes one of the most remarkable amongst the theories that have been considered, being so recently differentiated from those precepts of the Buddha which are more or less faithfully preserved in the Pali writings. It is remarkable quite as much for its own sake as for the contrast which it presents to the present

* Dialogue between Vamsa and Siriputta, Sasāyuttanihāsa, i. p. 112; Oldenberg, Buddhā, p. 281 f.; Fr. tr. p. 279; Warren, p. 132; cf. Sāṅguttānihāsa, i. 260. Avaspathikas, according to Oldenberg (Buddha, Fr. tr. p. 272, note), means 'not to be conceived,' and Warren renders "you fail to make out and establish the existence of the saint in the present life' (p. 141). In Buddhist logic, Avaspathikā is 'the non-perception which cannot be perceived'; there is no far because, all the conditions necessary to the perception of a far being fulfilled (light, proximity, acuteness of sight, etc.), I do not perceive a.

† According to another school, that of the Sammitiyaśas, the Ego is not without existence, but without characteristics, but none the less exists, though 'unnameable' (anatītā).

‡ We have seen that all Buddhists do not deny the reality of the self, and that the Buddhists who do believe in it, calls it pūrva-dhātu—the commonest word in the sacred literature for 'something which exists,' or 'an individual,' in order to disguise the doctrine of heresy which the use of the Brahmanical word ityan would necessarily involve.

‡ Oldenberg, p. 278. It is thus that the 'four-branched syllogism' is indiscriminately employed by the Madhyamikas. The following is an example of which has been pointed out in the eulogy of things. An object is not produced by itself, nor by anything else, nor by itself together with something else, nor by anything caused by another; the two last hypotheses, affirmative and negative, neither affirmative nor negative, are usually rejected as absurd, being self-contradictory.
AGNOSTICISM (Buddhist)

2. The agnostic statements may conceal positive affirmations.—(1) The texts themselves invite us to study the reasons, opportunity or otherwise, which justified the Buddha in refusing to answer certain questions of a cosmological or metaphysical nature.

On one occasion the Buddha declares that the world is inconsistent with him, but that he is not inconsistent with the world; that he asssents to all questions to which the world answers yes as it is based on sound reasons. And, in fact, he sometimes adds that, since discord and quarrelling are the worst evils, and the absence of discord is the essential characteristic of a monk, one ought to refrain from expressing any opinion. Moreover, moral therapeutics, directed towards the emancipation of thought, demands the regular purification of the mind, progressive suppression of all the ideas to which the mind can cling, extending even to unconsciouness of the end in view, since this can be attained only in the suppression of thought. ‘To long for nirvana is sheer folly and an invincible obstacle to its attainment.’ Thus, on the one hand, the Buddha should try to win the favour of all, and to choose the more advantageous course or that which involves less evil. ‘Just as it is necessary to speak to each in his own language, and to preach to barbarians in the language of the barbarians, so it is necessary to teach one or offending any one, and to guide each on that path of progress which he is capable of following, to the neglect even of the real truth, that is to say, of the inexact statements’ (2) by a point, momentously. And, on the other hand, the belief, the ‘view’ (drsti), which is in itself perfectly justified, that we have passed through innumerable existences before arriving at the present one, must be abandoned, because it is unprofitable to salvation, lies and also approves the idea of the permanence of the individual. It is, moreover, in reality false, the text of the truth of any proposition being its accord with the end in view.

(2) Two points, moreover, of capital importance rest upon the most definite testimony. It is certain, on the ground of tradition, that Buddha adopted a very distinct attitude towards the question of action (karma [which see]), and consequently the question of existence after death. To quote the texts would be impossible, and perhaps it is of greater interest to recall the historical example of the friendly relations existing between the Order and the sect of Ajahn Chah, who accepted the doctrine of the fruit of works.

The early Buddhists believed in retribution for actions, in the influence which earlier existences exercised upon the present, and in a future life conditioned by the accumulated and imputable effects of previous actions.

There is no less evidence that they believed in the possibility of escaping from the circle or whirlpool of existence to the rest of nirvana. ‘In the language of that time,’ as a very competent judge affirms, ‘the word nirvana always denoted supreme happiness, apart from any idea of annihilation.’ He knows, and he alone was able to impart to us, saving truth’ (see JIPP, 1902, p. 263). It will be noticed that, in the older narrative, Buddha, having attained to bodhi, thinks of death after enlightenment and the word, in its earlier use, seems to refer to disciplinary or purgatorial mediation. The Buddhist world does not indulge in sensual pleasures, but is physically and morally perfect, and has been the object of many suggestions of asceticism. See Rylas Dowling, Dialogues, p. 207. For the previous word, see p. 51, n. 1. 4 See Dialogues, p. 398. This remark, the interest of which is evident, was pointed out long ago, and has been written by H. P. Blavatsky.

The only passage within the writer’s knowledge in which a distinction is drawn between a self, existence after death, etc., and a person, who is the word, in its earlier use, seems to refer to disciplinary or purgatorial mediation. The Buddhist world does not indulge in sensual pleasures, but is physically and morally perfect, and has been the object of many suggestions of asceticism. See Rylas Dowling, Dialogues, p. 207. For the previous word, see p. 51, n. 1. 4 See Dialogues, p. 398. This remark, the interest of which is evident, was pointed out long ago, and has been written by H. P. Blavatsky.

AGNOSTICISM

It seems, indeed, quite probable that, in the dogmatics of Buddhism, the conception of nirvāṇa was not yet identified, or almost not identified, with that of annihilation, certain reservations being always made; but that, however far, from the very first, the Buddhists diverged the word nirvāṇa from its ordinary acceptation, in order to make its definition hold its pristine sense—i.e., to render it subject to no rebirth or renewed death.

In speaking of facts which attach a particular importance to the conception of ‘nirvāṇa upon earth,’ or, as the Brahmins say, ‘of emancipation during this life’ (jivanmukti), it would be an unjustifiable step to assume, in many cases, a departure from the normal conditions of Indian religions to restrict the word altogether. In the doctrine of the arhat, the most part, to the attainment of that perfect condition denoted by the name of arhat-ship, or ‘nirvāṇa upon earth.’

One text declares: ‘The disciple who has put off lust and desire, rich in wisdom, has here on earth attained deliverance from death, repose, suffering, and immortality.’ It is undoubtedly right to say that nirvāṇa is not merely the hereafter which awaits the emancipated saint, but the perfection which he enjoys in the world of the living. He will live and die, but life ends in this really signifies that after death he will enter the abode where death is no more.

It is, indeed, denied that Buddhism has a very definite theory concerning a hereafter, the nature of which cannot be explained. Whatever the everlasting abode may be, it is the aim and the essence of the teaching. It may be conceived as a prolongation of the state of the arhat. All other good is said to be purely negative, the removal or the alleviation of suffering, but nirvāṇa is good absolute. Would this be so, however, if it would mean more than an arhat-ship doomed to extinction at death, which, moreover, according to the ancient texts, does not prevent former wicked deeds from receiving their due punishment?

The Buddha, at times, refuses to answer, it is not in the manner of the evasive sophist who is slippery as an eel. Nor is it that he himself is ignorant or wishes his disciples to remain in ignorance. But the essential point is that his disciples should learn to distinguish profitable knowledge and thoughts. What is the use of indulging in those idle dreams concerning the universe, past or future existence, or nirvāṇa? In the same way the ancient Hindu Vedanta, who presumably subscribed to the Nicene creed, cuts short his meditations on the Trinity: ‘What is the use of being trained in the mysteries of the Trinity if you sin against the Trinity? What can the Buddha tell concerning the after-life of the emancipated saint, when emancipation can be attained only by ridding the mind of all thought and all desire? He refuses to satisfy useless curiosity, for nirvāṇa is a state essentially indefinable.’

The present writer will not conceal his opinion that the expression ‘nirvāṇa upon earth’ (dīttadharmamukti) possibly conveys a meaning very different from that skillfully pointed out by Carpenter, Rhys Davids, and Oldenberg. It signifies, in contradistinction to the nirvāṇa to be attained during a future life, etc. (upapadyanirvāṇa, antaraparinirvāṇa, etc.), the nirvāṇa to be attained at the end of the present existence. With regard to the state of an arhat, it should be observed (1) that there is not actual cessation of suffering (dakkhaññanirvāṇa = mihana, Samadhigallanirvāṇa v. l.), and (2) that it is called ‘nirvāṇa with a residue,’ in contrast to the real nirvāṇa.

1 Cf. Oldenberg, Buddha, p. 261 f., whose judgment, according to the present writer, ought to be slightly modified. From the earliest texts we are led to think that the Tathāgata and the saints in general were able to prolong their life for an ‘age of the world’ (see Araṇa or yasa Woots). ‘Buddhism is a philosophy very like immortality.’ On the Vedic beliefs concerning the immortality of a particular incarnation and the gradual formation of the doctrine of renewed death (punarrajñita, i.e., transmigration), see A. M. Boyer’s very instructive art. in J.A., 1901, II, p. 451 f. He states that the Brahmanical definition held its ground long after the notion of death and that everlasting immortality is reserved for the saints (Gautama).

1 At least so far as human powers of understanding are concerned. The intelligent Buddhist sometimes examines the texts, with his more acute intellect, and discerns to them what appears to be a pondering over them: ‘These matters are understood only by the Tathāgata, only the Tathāgata knows, we do not know’ (Bodhisattvabhumi).

On the remaining ‘non-discussed topics’ it may be said:—

(1) As regards the existence of the Ego and of the universe

3. The agnostic statements are formal denials.—In the two preceding pages tradition has been treated selectively; the theory of the skandhas has been laid aside. This theory is found in countless, though ancient and scattered, passages in the Buddhist texts. It is consistent with the denial of an Ego. It admits the existence of a phenomenal Ego, which prolongs its existence as long as thought worlds remain unbroken. When the transmigration of souls, the phenomenal Ego dissolves, the skandhas are no longer associated to form the illusory Ego; there no longer exists anything.

The Tathāgata, therefore, does not exist after death; so that the assertions relating to the Tathāgata after death must be understood in the sense of a radical denial, as has been done by the writers of the various dialogues in the Majjhima and Aṅguttara, above mentioned.

Moreover, if there is no Ego in the emancipated Tathāgata, there is none in Tathāgata living,—there is no Ego in any being. All speculation concerning the future and the past of the Ego is therefore without meaning, and what is said above must be understood as a formal denial. This is the system of the Madhyamikas openly professed in the Suttantas.

It seems clear that if we admit the primitive conceptions concerning the theory of the skandhas, and assume the absolute consistency of the early Buddhist speculations, we must ascribe a purely negative value to the Buddha’s statements. Thus is obtained a doctrine entirely coherent, identifying nirvāṇa with annihilation. All the statements on the one side or the other will find their explanation in practical considerations. On the other hand, the agnostic hypothesis, as far as it concerns them, may exist as a hypothesis of the world, etc., must be understood as a formal denial. This is the system of the Madhyamikas, which we have been examining.

III. Conclusion.—Of the three systems expounded above, the third is the system of a large number of Suttantas, that is to say, the orthodox doctrine of the Pali canon, and of the Madhyamikas. The second is very probably that of popular Buddhism and of the ‘ pudgalavāda’; while the first has nothing to support it save the inadequate dogmas of the orthodox European scholars. The present writer does not conceal his preference for the second. In order to establish it, or rather to reconcile it with traditional assumptions, a comparative estimate is needed. To this let us finally proceed.

It is generally believed that the earliest Bud- from eternity, all the texts and the best attested dogmas entirely denies the ideal that the Ego and the universe are un-

(2) As far as the ‘infinity of the universe’ is concerned, the text quoted (p. 222) understands by infinity (sannata) ‘limitless extension in space.’ It is very probable that this is the original meaning of the word, and that the word ‘eternal’ refers to the universe as well as the soul. In fact, the eternity of the world, etc., must be understood as a formal denial. This is the system of the Madhyamikas, which we have been examining. This moment will probably never come. But in each individual, ‘the end of the world’ (lokaçaya) may be achieved by the emancipation.

(3) As to the relation between the first and the second, it will be seen (above, p. 222) that the different philosophical questions, only the two hypotheses of identity and non-identity are examined. The philosophical doctrine explains them under the headings of satta, pudgala, sitata, permanent principle; and denies its existence, in the course of a discussion of its relations, not the existence of the Ego. The same idea is also expressed by the Jaina writers, who are more remarkable in this respect than the Buddhist texts. Skandhas is also the word of the Madhyamikas, vital faculty, which is not destroyed with the body in the emancipated Ego. The existence is prolonged by the possibility of the succeeding life (except where the re-birth has taken place in certain heavens).

See above, p. 221, n. 1, and 229, n. 1.
dhism did not lay any claim to originality of doctrine; it shared with the whole of India the belief in the imputation and the retributive effects of action (karma), the concatenation of causes, and the possibility of attaining nirvana. The Buddha himself, splendidly accomplishing the nirvana, the Buddhaists understood something different from what all others understood by it—a state certainly very difficult to define, but quite distinct from nothingness, from death and destruction. In the Sutras of Buddha's direct descendants, the Buddhist texts lead us to believe, by a certain contempt for speculation; whence we may conclude that the theory of the skandhas, if it existed, in the form, in the form in which it is presented in the Order, there had not attained its final form. In the Order there were monks who were opposed, as no doubt the Buddha himself had been, to cosmological or metaphysical speculations; there were also philosophers and Abhidhammas, and it is to these Abhidhammas that we owe the philosophical writings as well as the writings of the Sarvastivadin.

The question of nirvana having been raised, the earliest documents (from Buddha himself?) had given the reply that nothing could be considered the subject, either existence or non-existence, etc.—an answer perhaps childish from the Aristotelian point of view, but sufficiently frank to declare at one and the same time that it is a mystery and that the reality of phenomena is very much in the eye of the beholder, is, in any case, parallel to that suggested with regard to the eternity of the universe; and the former no more seeks to deny the existence of the Pathgattara after death than the latter the actual existence of the universe, or even its eternity. Buddha's only wish, as is said in so many words, was to forbid idle or harmful speculations. It was the philosophers who developed the doctrine of the skandhas; the direct result of which is the denial of the ego (Suttantus), and the indirect result the denial of all phenomena in themselves, and the universal void (Madhyamika). It is no wonder that the philosophers put an entirely new meaning into the old answer:—Nothing can be said of the Buddha after his death, because there is no longer any Buddha, because there never has been a Bud-

dha even during his lifetime; the two things go together, as the Suttanta expressly states. It is scarcely conceivable that this was the original Buddhist doctrine. But if it had been, it is most probable that a less ambiguous formula would have been used. The Buddha himself, in his first sermon, cut off all possibility of definite answer.

The Buddhist who accepts the revealed texts as they stand cannot have any doubt as to his choice. He must adhere to the third interpretation, the only one which is orthodox and in harmony with accepted teaching. The choice of the historian of religions is more difficult, for it is modified by the manner in which he conceives the orthodox view to have grown up. The present writer confesses to a reluctance to exercise a definite choice, but if a choice be required,—which is by no means the case,—he believes that the second interpretation is to be preferred.

L. DE LA VALLEE-POUSSIN.

AGRAGRAULIDS.—Euripides, in Jon 23 and 496, speaks of the three daughters of Agoraus, who, according to Apollodorus (iii. § 180), are called Agraus, Horae, and Paradores. A rich banquet, the Decipaphoria, was offered to them together (Belker, Anecd. i. 239). They danced, Euripides tells us (i.e., on the northern descent of the Athenian Acropolis, on the great meadow before the temple of Athen, beside the Apollo groto and the seat of Pan, who piped to them. This is the picture which the votive-reliefs represent, some of which have been found on the spot in question (Ath. Mitth. iii. 509). In fact, these are beside each other the caves of Apollo and Pan under the Erechtheum, and the temple of Athen;

* Agoraus or Agraus—both forms have been used throughout the article. It will be observed also that in the spelling of proper names the Greek forms have been employed, except in familiar words like Erechtheum, Cercopes.
and there, too, lay the sanctuary of Agraulos Pansania, i. 18, 2; Herodotus, vii. 83; Jahn-Michaelis, Arch. Athenarum, Table vii, and v. 3). In the Athenian myth it was the Agraulos, daughter of Pandrosos and Hebe, the dうter sisters, show that she was a goddess of agriculture. Later she is, in the same way as Pandrosos, so united with Athens that both appear as secondary names of Athens, or that Agraulos is designated the first priestess of Athené. At quite an early date their connection was very close; the disaul feast of atonement and cleansing sacred to Athené, the Πνευτήρια in Thargelon (May), stood also in relation to Agraulos (Hesych.; Bekker, Anecdota, i. 270); the Αρχαινοπορία or Hesperia was associated with Athené and Hebe (Istros in school to Aristophanes, Lysistrata, 642); and the Pandroseion, with the sacred olive tree of Athené, was closely connected with the Erechtheum (Pansaniai, i. 27, 2). Athené herself had once been a goddess of agriculture. Agraulos, however, is also united with Hermes, and is regarded as a secondary name for her (CIA iii. 372). This point of view is still maintained; it was originally an independent goddess, who, however, disappeared more and more in consciousness, and for this reason was united with a greater related goddess. This was the case with many other deities who were originally independent. Their memory was, in the end, preserved only in secondary names of related divinities. The important signification of Agraulos is seen, too, in the fact that the Agrauls in Cyprus, where she, along with Athené and Diomedes had a common sanctuary, human sacrifice was down to a late date offered to her (Porphyry, de Abstinentius, ii. 54). In Athens there were secret rites in her worship (Athenagoras, Leg. pro Christ, 1), which the family of the Praxigordoi seems to have practised (Töpffer, Attische Genealogie, p. 133).

In accordance with the serious nature of the feast of the Πνευτήρια, her secret rites, and her human sacrifices, is the legend which has developed out of her worship. This we find in a threefold form. (1) Agraulos, along with Hebe and Pandrose, receives from Athené and Erechtheus a chest in a chest, with the command not to open it. Agraulos and Hebe open it notwithstanding, and in maddened frenzy cast themselves down from the Acropolis (Pansaniai, i. 18, 2; Apollodorus, iii. 159). This is obviously meant, too, to explain the situation of their sanctuaries below the Acropolis, while that of Pandrosos was on the top. (2) Agraulos casts herself from the Acropolis in order that she may, in accordance with an oracle, secure the victory for her country against Eumolpos; for this reason a sanctuary to her was founded there (Philochores, Fig. 14). (3) Agraulos is changed by Hermes into a stone, because, being invited by Athené to feasting, she had refused him access to her sister (Ovid, Metam. ii. 708 ff.).

From all this we have as the result that the Agrauls resemble the Horae and the Graces. They unite the child Erechtheus, the seed-corn, entrusted to them by Athené, just as Demeter does Triptolomenos. In the month Thargelon (May), when the dew ceases and the harvest begins, Agraulos is lighting.

Agraulos appears in the tradition twice: (1) as the mother of the Agrauls, daughter of Actæus; (2) as their oldest sister, and daughter of Cecrops. Connected with Agraulos are Alkippe, her daughter by a servant of Athénæum, who was seduced by the son of Poseidon, and Keryx, her son by Hermes, the head of the Eleusinian family of the Kerykes, who is, however, also called the son of Pandrosos or Hebe (Töpffer, Attische Genealogie, 81 ff.).

Agriculture.—1. Until recently the theory was held that the human race passed from the nomad shepherd, and from that again to the life of the tiller of the ground. As a sweeping generalization it is no longer possible to hold this theory; that it is not altogether untrue is shown by what is happening to the Bushmen. In the present day their case agriculture has been forced upon them by the danger of starvation. Russian civilization has encroached upon them from the north and west, and the Ural Cossacks from the east, so that the area of their pasture lands, and, as a consequence, the amount of live stock they are able to maintain, have much diminished. Before resorting to agriculture themselves, they employed Russians to fatten them, and barned part of their land on the metayage system. But when the virgin soil is exhausted, the master, who loves the easy life of the shepherd and disdains the hard toil of agriculture, is no longer able to pay for hired labour, and the definition of a ploughman (Wallace, Russia, new ed. i. p. 265 ff.) is.

The same observation was made regarding the Tatars of the Crimea in 1794 (Pallas, Travels, Eng ed. 1823-3, ii. p. 355). In those parts of the world, however, which are best known to us, there is evidence of a settled agricultural population from the earliest period. Not only in Neolithic times, but from the earlier Stone Age, there is good evidence that some kings of communities of Ed. Piette in various cave-shelters in France, that agricultural plants, and animals at least partially domesticated, were well known (see DOMESTICATION). In Egypt and in Babylonia there is evidence of agriculture going back, at a moderate calculation, to the early part of the third millennium B.C., and possibly to a much earlier period. Mesopotamia is the only area for which there is evidence that at some time cereals grow wild (de Candolle, Origin of Cultivated Plants, 1884, p. 358 (common wheat); p. 364 (spelt)). It is in countries with a rich alluvial soil that agriculture begins; a priori expect agriculture to begin. In Egypt a primitive agriculture along the banks of the Nile would be possible merely by casting seed upon the mud left behind by the river when it subsides after flood. Agriculture in the earliest times was probably thus practised before the invention of the plough, the seed being left to sink into the soft mud, or, as represented on Egyptian monuments, being trodden in by cattle.

It is, however, to be remembered that when we consider primitive agriculture, we must discard all generally accepted notions as to its practice. Agriculture at the present day, as practised in most countries of Europe, may be defined as (1) the regular cultivation by the plough and other well-known implements, and with the addition of manure, of (2) definite areas of (3) arable land, held as (4) frehold or (5) on a legally defined tenancy, (6) such cultivation being for the most part in the hands of males. But if we may deduce primitive methods from the practice of such tribes in modern times as combine some agriculture with hunting, and we may rely only in the first stages of agricultural development, primitive cultivation preceded all implements except those of stone and wood. Thus the Navajos and many tribes of New Mexico, who practise sheep-breeding, melons, and other vegetables, and also some wheat, and make some attempts at irrigation, dibble the
AGRICULTURE

ground: ‘with a short sharp-pointed stick small holes are dug in the ground, into which they drop the grain, and no further care is given to the crop except to keep it partially free from weeds’ (Baneroc, Native Races of Pacific States, i. p. 489; cf. H. Ling Roth, Sarawak, i. p. 402). In Northern Honduras at an earlier period the Indians, as we are informed by Herrera, cleared the ground with stone axes, and turned the sod by main strength with a forked pole and with sharp wooden spades (Baneroc, i. p. 719). Dibbling alone is found sufficient in the Amazon area, where the ground never being turned up for manured (Wallace, Travels on the Amazon, p. 333). In Melanesia, where horticulture rather than agriculture is the form of cultivation, and has reached a high degree of excellence, adzes of stone or shell were used before the introduction of metals. In the New Hebrides and in most of the Solomon Islands the natives use stone; the Santa Cruz people, Torres Islanders, and Banks’ Islanders used shell, for adzes the giant clam shell” (Codrington, The Melanesians, p. 513). Stone adzes, which may have been used by the early inhabitants of France, were found by L’Epee (L’Anthropologie, vii. p. 141), and which, it is said, were used by the negroes of the Congo (Hancroft, pp. 719). The adzes used in Queensland are typical of the species. Dwellings affords no clue to the direction in which they spread, the French islands, or for the women and children in the neighbourhood of their huts, while the men wandered at greater distances after the crop path. Hence agriculture reaches an advanced stage before the women hand over the greater part of the operations to the men. The Dyak men of Sarawak (Bancroft, i. pp. 708-10) in clearing the ground for the wheat reaping the harvest; the hard intermediate till of weeding is left to the women and children (Harrisson, i. p. 369). The South Sea Islands local customs settle the respective shares of the men and women in the garden work (Codrington, p. 362). If a man has another occurrence of horticulture in the Pacific islands, it should be noted that the production of the agricultural work to the women, as may still be seen in the Polynesians and especially in Eastern Barrows and in the West Highlands of Scotland. In more advanced parts of the British Isles it is only the rapid development of agricultural machinery in the last few years that has reduced the working of the women from field-work. But the agricultural duties of primitive races also brought her important rights and privileges, such as a right to the soil, which, as the importance of agriculture became more marked, brought her many other privileges in its train, and these privileges had the greatest influence upon the family of history relations (Grose, Die Formen der Familie und der Formen der Wertheits system, i. 525). Superstition also recommended having agriculture in the hands of women. ‘When the women plant maize,’ said an Indian to the Jesuit Guinail, ‘the stalk produces two or three ears. Why? Because women know how to produce children. They only know how to plant corn to ensure its maturing. Then let them plant it; they know better than we know’ (J. E. Harrison, Prolegomena to the Studies of Greek Religion, p. 272, quoting from Day, History of the New World, ii. p. 77). This site of agricultural production of the New World is much greater detail by E. I. Hahn in Domestik und Bandol and elsewhere. (For Africa, see Introduction of the War depicted, the history of Religion, p. 249). 2. The earliest cultivated plants are not easy to define. The cultivation of the cereal plants is figured by L’Epee in his L’Art pendant le Cége du Roi, plates 17 and 14, and from him by Hoopes (Widltbauam und Kulturpfansen, pp. 278-9), from Mosapatolothie strata, and undoubtedly represent ears of corn. From a late Paleolothic representation of an ear of winter barley (secouron), as still grown in France, have been discovered (L’Epee, in Hoopes, op. cit. p. 280). In the rock-shelter of Mes-d’Azil, on the left bank of the Arise, Little found a primitive species of barley (Hordeum kazanichum,—this was the most widely spread,—distichum, tetraestichum), and two species of millet (Panicum miliaceum and italicum), were grown in Europe—naturally in greater variety in the south than in the north of Central Europe. Not only was flax cultivated, but weaving was practised (the fabrics are figured in Fornor and Messikommer’s Prehistorische Versammlung, 1880), [plates iv. and v.], and woolen vestments, coverings for men, women, and children. In Northern India, the peas, beans, parsnips, and carrots—and pappules were cultivated, as well as vines and fruit trees (Heer, Pflanzen der Ruhrbauten; and, more recent and more general, Hoopes as above, and Basulan). In the prehistoric period, the pine, juniper, and holly (Olearia'), the precise characters of the grain figured on early Egyptian monuments cannot, it is said, be identified. But both in Egypt and in the Middle East‘the ears of barley were gathered together in bundles which were laid on the ground in terms of Egyptian (Meyendorf, L’Orient classique, i. p. 761, n. 2). As already pointed out, botanists regard Mosopotamia and the countries bordering upon it as probably the original home of wheat and barley. As the earliest cultivators
tion of them in Europe appears in the warmer intervals between successive ages of ice, in the earlier of which ice probably extended as far as the Alps, in the latter to the latitude of London and Berlin. They clearly must have been introduced from the Mediterranean basin. It is hardly to be expected that evidence of grain cultivation will be found in the British Isles or other parts of Northern Europe in strata corresponding to those in which Fossils have been found toward the north of France, fossils as Nehring has shown (Über Tundren und Steppen der Jetzt- und Vorzeit, 1909), a period when these countries consisted of tundras and steppes like those of modern Siberia, must be postulated as existing for some considerable time after the end of the E. Age. In such an area, where ice still exists below the surface, agriculture would be impossible. Importation, moreover, from Asia through Russia would have been equally impossible at this period, the Caspian then extending much farther to the north and west, while the northern Ēgean did not exist (see Ratzev's map in SSBW, 1900). From the earliest literature of the Indo-Germanic peoples—the Zendavesta and the Veda is clear that, though this stock had large flocks and herds, they also practised agriculture. But the meaning of the word ear-s which they apply to grain, and which is etymologically identical with the Greek word, 'spelt' is hard to define. Its modern representative in Persia, Baluchistan, and India seems always to mean barley. A word for corn, however, is very likely to vary its meaning according to altitude. Thus, in English, corn means to an English toad, wheat, to a Scotsman oats, to an American of the United States maize. The same word amongst other peoples of the same stock is variously applied, malt, corn, as a North German word, and in Scandinavia barley. The Greeks knew and cultivated wheat, barley, and two kinds of millet. In the classical period the Romans cultivated the same cereals, though the poets write of far, 'spelt,' as being the grain which formed the food of the early Romans. The Roman word for wheat, triticum, is in origin an adjective, and must have originally meant the threshed or milled grain, from tero, 'thresh.' Oats and rye are not so well known in warm countries, and were not cultivated by the Greeks and Romans. Oats (gýgaion) and rye (gýpe) were both known to the Greeks from Thrace. From the former, Dionysos, who came into Greece from Thrace, derived the epithet of the god of wine (J. E. Harrison, Protopomous, p. 416). Schrader (in Hearn's Kulturgeschichte und Haustiere, p. 553) quotes Dices, a doctor of the 4th cent. B.C., for oat meal, which was regarded as superior to barley meal. In both Greece and Rome, probably, barley played a great part in early times. It is to be noticed that far is etymologically identical with the English berr and barley. The most plausible explanation of the name of the Greek goddess Persephone may be that of the name Persephone (persephata) (the name occurs in a great variety of forms in the different Greek dialects) was the barley killer, the first element of the name being from the same root as far and berr. This harmonizes well with the functions of Persephone, who is queen of the under world during the four months which elapsed between the planting of the grain in the summer and the harvest in the summer. A description is given by Homer. On the shield of Achilles four rural scenes are depicted, three of which represent the seasons when the farmer's life is most arid (Hliad, xvii. 541 ff.). On the first is shown a rich fallow in which many ploughmen are driving their teams this way and that: many because, according to Professor Ridgeway's explanation of the scene (JHS vi. p. 356), the land that is being ploughed is the common land of the community, and all therefore must help to work it. In all the holders at the same time—an ancient practice which is still commemorated in England by Plough Monday, the first Monday after Twelfth Night. The field is broad, and is for triple ploughing, which is done with three ploughs. The headland is long (770. 84), a man comes forward and offers them a drink. "Then they turn their team along the furrow, eager to reach the headland of the deep fallow." This explanation is because explained, rather naïvely, as arising from the prospect of a drink at the other end. More probably the emphasis rests upon the epithet deep. A fallow specifically becomes covered with grass and weeds, which, with the very ineffective plough that is still used in Greece, makes ploughing a hard task, even for a strong man. In modern times, even with the best plough, the breaking up of old pasture (which with improved implements would be impossible) all probability, took its origin in larger matter. The threefold ploughing was required partly, no doubt, because the ancient plough was so ineffective. In Egypt, where the ploughing was done in the fallow, the first two ploughings represented (not in the earliest art) as preceding the plough with a mattock, for the plough has no couter. That Homer looked upon ploughing fallow as very hard work is clear from other passages, in which we are told that he who has been holding the plough (yryeo ^divop) in a fallow all day is glad when the sun goes down and he can hie him home to supper, though his knees have been wearied by the weight of his task (I. xii. 705). Hence, with the development of the plough and of a system of tillage, agriculture of necessity passed more into the hands of men. Moreover, when a pastoral people turns to agriculture, it objects to women having to do with the cattle. "Among the Bechuanas the men never allow the women to touch their cattle. The ploughs cannot be worked by women, because the men have now to do the heavy work" (E. Holub, JAI x. p. 11). In countries where cultivation is carried on in gardens rather than in fields, the hoe or mattock remains the regular implement of cultivation. Such countries are the South Sea Islands and a great part of China. So also in the world of the gods, Demeter handed over agriculture, so far as ploughing was concerned, to Triptolemus, who, as the Homerian lyman to Demeter tells us, till then was but a prince (thryesvΣtoS bavos, 473) of Eleusis. Henceforth his name, whatever its original meaning, is identified with Triptolēmos, the word for the triple ploughing. It is, however, probably only Athenian pride that makes ploughing take its rise in the little plain of Eleusis. In such little plains in the Hebrides, the castrum, the little crooked spade, is hardly yet extinct. The plough, in all the lands, is always an improvement on the crooked spade. In areas with deeper soil. Such an area was Boeotia, from which comes the earliest European poem on agriculture, Hesiod's Works and Days. A still better example of an area suited for the plough is Northern Greece, which in the spring of an earlier period, when the Peneus cut its way through the vale of Tempe, Eleusis had traditions of a connexion with the far north of Greece and Thrace, and it is significant that the word Triptōlemos by its p instead of p preserves a feature which, in historical names, is specially characteristic of Northern Greece.
times, most of the straw was left on the ground, and this when set on fire or ploughed in helped to manure the ground. Pliny observed (xxvii. 3) that the stubble was left long except where straw was required for thatching or fodder.

Between neighbourhood and harvest in most countries having has to be done. Where the harvest could be completed early, the plough was left to women. In Greek agriculture, at least of the 6th and later centuries B.C., this work was done by men, and to leave it to women gave rise to the term ploughing of the corn (Xenophon, Conon, xix. 12; Theophrastus, x. 14).

For all the operations of husbandry a cart or waggon is of importance. The employment of the cart is slower in development than that of the plough, partly because extended use of it demands good roads. The prudent Hesiod advises the farmer to have his cart ready in good time for the spring, "for it is easy to say, "Let me have a pair of oxen and a cart," and it is easy to answer, "No, my oxen have field work to do." The man wise in his own conceit says he will make a cart for himself, poor fool, and does not even know that there are a hundred pieces of wood in a cart, which he must take care to have in store by himself beforehand (op. cit. 453-457). Yet in some parts of the British Islands which are now famous for agriculture there were few or no oxen in the 17th century.

In Aberdeenshire, crops were even then carried from the field and manure from the farmyard in carriages, a sort of wheeler panniers hung on either side of a crook saddle, while corn was taken to the mill in square wooden plough horses (Pratt, Buchan, p. 19). Pennant observed in Caithness that the beasts of burden were the women. They turn their patient backs to the dungsills, and receive in their kizers or baskets, as much as their lords and masters think fit to fling in with their pitchforks, and then trudge to the fields of drawks or seventy (Tour in Scotland, 1769, 3rd ed. p. 168). The first purely mechanical method of transporting heavy weights was, no doubt, upon a sled, a rough frame of wood with stout cross-bars, or a hurdle. A good specimen of the Egyptian sled for carrying corn-sacks is figured in H. Schaefer's article in the Annals of the British School at Athens, x. p. 139. Varro tells us that manure was taken to the fields upon hurdles for the purpose (curas sternacivus, i. 23). This was an old Roman practice, as the list of necessaries for a farm which he is quoting is taken from Cato (de Agricultura, x.). Cato, however, also provides three asses with panniers for this purpose (asinos ornatos ellitarios aut stercus sculentis tristes, so that the crates, as they are being carried in a kind of rake, may have been used for harrowing in the manure after it was spread upon the fields.

A cart without wheels was formerly widely used in the mountainous parts of Britain, and is still used in Ireland, the shafts being continued to form the frame, with their ends resting on the ground. The body of the cart was formed by two semicircular bows of wood, the ends of which were fastened to the shaft poles. These bows were kept in position by a bar running between their apices. The shaft poles were kept in position by cross-bars, and the bows also had cross-pieces; so that the whole form of the body of the cart is that of a half-cylindrical cone (as is illustrated in Dr. Hadden's Study of Men, 166 f.).

A great advance in the development of the cart is marked by the introduction of wheels. The early history of the wheel is not clear. As, in the early heavy wagons, it was not possible to combine a very broad turner, it was obvious that wheels and axle in one block might have developed out of rollers. This view is adopted by Dr. Tylor (J.A.S. x. p. 78), and doubtfully by Dr. Ellis (J.A.S. x. p. 180). Such a primitive arrangement is still to be found in Portugal. On the other hand, Professor Ridgeway contends (Origin and Influence of the Thoroughbred Horse, p. 171) that the wooden, not the spiked wheels is earlier than the ox carts, which
was modelled upon it. The body of the cart was a
creel of wicker work, which could be removed at
will. Of farm carts the Romans had two kinds—
two-wheeled (plow-car, ploceum) and four-wheeled (plow-
strum maior). Since they are termed sternaria
pantastra (Virgil, Georgics, iii. 536), it is evident that
they moved with much creaking, like the
‘groaning’ or ‘singing’ carts of Spain and Portug.

talia (Men. iii. 156 ff.). The noise is
carried by the friction of the axle against the
wedges in the floor of the waggon which keep it
in its place’ (Hudon, p. 189). The cattle were
harnessed to the cart by the yoke which was fastened
by a pin near the end of the pole, and lashed
tightly with a thong or cord. Some kind of strap
was fastened across under the neck of the animals.
The modern forms are figured by Sir C. Fellows
(Journal, p. 71), the ancient Egyptian by Schäfer
in the article already mentioned.

4. Since in the countries round the Eastern Medi-
terranean the corn harvest comes on in May and
June, the industry of autumn is the ingathering
doubtless by early times such heavy penalties alone
just as the making of cider is a characteristic
autumn occupation of England, and on the Saxon
font at Burnham Deepdale, in Norfolk (which
has two inscriptions representing the months), is taken
as the typical occupation for October. Hence the
vintage is taken for the autumn scene upon the
shield of Achilles. The young men and maidens
carry the fruit in wicker baskets, a lad plays on
the lyre and sings to them in an Aristophanes
singing and dancing (II. xviii. 561 ff.). The vine grows
wild round the Mediterranean, and in Asia as far
as the Himalayas. Grape seeds have been found
in a cave at the foot of the Alps in the ice, and of at least the Bronze Age in Switzerland,
and vine leaves have been discovered in the tuft
round Montpellier and Meyrargues in Provence
(de Candolle, Cultivated Plants, p. 192). The use
of wine was probably introduced to the Greeks
from Asia Minor or Thrace. Hesiod contemplates
that his farmer may make a voyage after harvest,
but adjures him not to wait for the new wine, in
case of bad weather (loc. cit. 662 ff.). Such a
voyage from Beotia would probably be to Lesbos,
or the adjacent mainland, which was famous for
its wine. According to all tradition, the use of
wine and the culture of the grape were later in
Italy than in Thrace, and more so in the countries north of the
Alps (Schrader, Realecizion, s.v. ‘Wein’).
The last of the crops which had more than a local
importance was that of the olive. According to de
Candolle (Origin of Cultivated Plants, p. 285),
‘its prehistoric area probably extended from Syria
towards Greece.’ At Athens, till the development
of the mines at Laurium, the trade in olive oil was
the only important export industry, the soil being
thin and ill adapted for agriculture. The olive,
indeed, was supposed to be the special gift of the
patron goddess Athene, and the sacred olive trees
were protected from harm by heavy penalties. No
doubt in early times such heavy penalties alone
protected all produce, whether of domesticated
plants or animals, against the instinct of primitive
savagery to seize it for immediate use without re-
gard to future loss (see Tabu and Totemism).
The olive, as the Latin form of the word shows, spread
from Greece to Italy, and from Italy again to the
north of Europe. It is clear from Cato and Varro
that in their time the vine and olive crops were
regarded as of much greater importance than the
money growing of cereals. This was the result of the
second Punic war. Hannibal devastated rural
Italy; the agricultural population had to flee
to Trieste for protection, and stay there for half a
 generation while the war lasted, and the farmers
themselves were drafted into the army. When
the war was over, the result was no capital where-
with to restore their farms; the State was unable
to help them, and the wealthy quietly annexed
their property. The fund which aided the develop-
ment of an Empire outside Italy, corn came in
payment of taxes from the subject States. With
curious lack of economic insight, Gaius Gracchus,
who was anxious to restore the rural population,
tried to raise corn by the ‘subsidy of Men. (i. 156 ff.).

It is impossible to enter here into the more
detailed history of corn, but we may notice that
irrigation, which developed early in Egypt and
Mesopotamia, and which is also recognized by
Homer; and the cultivation of fruit trees by prun-
ing and grafting. Wallace observed (Travels, p. 337) that the natives on the Amazon never
pruned or did anything else to their fruit trees.
On the other hand, the labourers imported from
Melanesia into Queensland were much surprised
that the New Zealanders had no gardens. In the
Melanesian islands, in Sarawak, and elsewhere,
irrigation has long been practised (Codrington, The
Melanesians, p. 363; Sarawak, i. p. 466).

After the corn harvest was finished, the corn had
to be threshed. This was done in the usual way, at
least by taking it out on the hard threshing-floor (for the making of which Varro and Virgil
[Georgics, i. 178–180] give careful directions), or by dragging over it a sledge
or heavy toothed plank, as was the Roman prac-
tice, and as is still done in Asia Minor (Fellows,
Travels, p. 51). (Prehistoric methods were probably
much simpler, the corn possibly being stripped
from the ear by hand). The corn was stored in
ground chambers, so as to escape, as far as possi-
ble, the ravages of vermin. As we have seen,
corn was stored even in the Stone Age.

The last task in the preparation of corn for food
preparation and cooking was the making of it into meal
or flour. Piette found rubbing stones in a late
stratum of the Palaeolithic Age (Hoops, p. 290),
though these were not necessarily used for corn.
Bancroft's description (i. 653) of the methods of
the aborigines of Yuquotan probably represents
approximately very ancient practice. The grain
is first soaked, and then bruised on the rubbing
stone and wetted occasionally till it becomes soft
enough to be ground. In the countries north of the
Alps, such as Switzerland, the first grindings are
made with a wooden pestle or hammer and a
mortar. In the Tayas and Rhaetian Alps, a pestle
is still found with a cup-shaped bowl, used for
winnowing grain. The grain is still occasionally
ground quite coarse with a wooden paddle and a
round wooden plough, and for the making of flour
as it was in the Bronze Age in Italy, a sledge
and a metal pole were used (Codrington, Realecizion, s.v. ‘Mahlen’).

As they are often found in the graves of women, it is evi-
dent that this also was one of the duties of early
women, as indeed is clear from the literature of all
countries from the earliest times.

Literature.—For Mesopotamia and Egypt the representations
in art; Perrot-Chipiez for both; the Illustrations in Wilkinson
268 (the text is out of date) and Lepsius, Denkmäler aus Ägypten;
and the books mentioned in the text. For Greece; Hesiod,
and Incidentally Homer; Theophrastus, Hist. of Plants, etc.
and de Causis Plantarum; with many allusions in Aristotle,
 Xenophon, and elsewhere (the Goponida belongs to the late
Minoan, but a detailed account would entail another article.
For Rome: Cato (its present is not the original form of
the work); Varro, who professes to have read Plutarchus, Greek,
and Latin works on the subject, and was himself competent;
Virgil, who, as a farmer's son, and himself a farmer, writes
in the light of both knowledge and interest. It was, of
course, in technical fashion the Metamor forfes attributed to
him while he was in the army, which he made in the 6th
Columna, elaborate but inept; Palladius, the greater part
of whose work is arranged as a farmer's year, and with
which much needful material is added; John of Capua, the
Middle Ages. Detailed information Greek and
Roman agriculture will be found in Baumsteiger's Dehioahler
des Römisclien Romanen, s.v. 'Ackerbau im Altertum,'
and Pauly, s.v. 'Ackerbau' (this, though old, still contains
much that is useful). The agriculture of the Semitic nations is
treated in the various Biblical Dictionaries; Indian agriculture

AHIERIA—AHIQAR, THE STORY OF

in the Vedas age by Zimmer, Athismiskes Leben. General accounts, especially for the Indo-Germanic peoples, are given, with full references to literature, in Schrader's Die Götter der Völker (a new edition is in course of publication) and Reallexikon der indogermanischen Altertums- kalten. The life of Vithoba and the Panhales is told in Mittel Europa, in.vorchristlicher Zeit (Ullstein, 1901); Meringer, in Der Hindu, 38. 70 (1897), and in many others. The cultivated plants are treated by de Candolle (Origin of Cultivated Plants, 1845), by Hey (Kulturpflanzen und Hauspflanzen), etc. (ed. by Schrader, 1902), and by Hoops (Waldgebäude und Kulturpflanzen in germanen Altertum, ed. by Hey, 1897). The rage of Vithoba is common to all Indian sects from that time to the present. But each school of thought looks at it in a different way, and carries it out in practice in different degrees.

The early Buddhists adopted it fully, and placed it on the line at which we should now call ordinary, reasonable, habitual. It occurs twice in the 'eightfold path,'—no doubt the very essence of Buddhism,—first under right ascertainment, and again under right conduct (Majjhima ni, 251 = Sanjuvata v. 9). It is the first in the Ten Precepts for the Order (sikkhapadani), and therefore of the five rules of conduct for laymen (sanjivani silanii), which correspond to the first live of the Precepts (Vinaya i. 83, Anguttara ii. 293). It is the subject of the first paragraph of the old tract on conduct, the Silas, which is certainly one of the very oldest of extant Buddhist documents, and in which it is clearly indicated by way into so many of the Suttantas (Ryas Davids, Discussions of the Buddha, i. 3. 4). Asoka made it the subject of the first and second of the Rock Edicts in which he recommended his religion to his people, and refers again to it in the fourth. After Asoka had been a Buddhist before, in the first Edict, he proclaimed himself a vegetarian. The rule of the Buddhist Order was to accept any food offered to them on their round for alms; when Devadatta demanded a more stringent rule, the Buddha expressly refused to make any change (Vinaya Texts, ii. 117, iii. 253); and a much-quoted hymn, the Amangadana Sutta (translated by Fanshull, SBE x. 40), put into the mouth of Kanaka the Buddha, lays down that it is not the eating of flesh that deiles a man, but the doing of evil deeds. The Buddhist application of the principle differs, therefore, from the Jain.

It would be long, and not very useful, task to trace the different degrees in which the theory has been subsequently held. It is sufficient to note that the less stringent view has prevailed. At the end of the long Buddhist domination the practices of animal sacrifices had ceased, and though with the revival of Brahman influence an attempt was made to restore them, it failed. The use of meat as food had been given up, and was still forbidden by the Buddha. The Indians have not become strict vegetarians. Dried fish is still widely eaten; and though there is a deep-rooted aversion to taking animal life of any other kind, the treatment of living animals, draught oxen and canals for example, is not always thoughtful. Nowhere else, however, has the doctrine of ahimsa had so great and long-continued an influence on national character.

AHIERIA—AHIQAR, THE STORY OF

in several versions of the Thousand and One Nights, the story of the sage Ahiqar (Hakkar, Ḩikār, etc.; cf. on the original form of the name, Litt. in T.J.A., 1899, col. 605) is to be found. The tale is derived from a compilation which was circulated especially among the Christians of Syria (cf. Litt. in ZDMG I. 1886, p. 192). The contents of the story are as follows:—

T. W. Ryas Davids.

AHIMAŚA.—Ahimśa is the Indian doctrine of non-injury, that is, to all living things (men and animals). It first finds expression in a mystical passage of the Chāṇḍogya Upanishad (1. 5. 7), where five ethical qualities, one being ahimsa, are said to be equivalent to a part of the sacrifice of which the whole life of man is made an epitome. This is not explained as the literal content of the prophet's "I will have mercy and not sacrifice," but is connected with it. The date of this document may be the 7th cent. B.C. This was also the probable time of the rise of the doctrine, which made the non-injury doctrine a leading tenet of the sect which made the Nārāyaṇa Sutta 1. 4. 2, translated by Jacob, Jaina Sutras, i. 39. It is the first of the five vows of the Jain ascetics (ib. p. xxiii.); and they carried it to great extremes, not driving away vermin from their clothes or bodies, and carrying a filter and a broom to save minute insects in the water they drank or on the ground where they sat (ib. p. xxvii).

The doctrine was early adopted in all Indian sects from that time to the present. But each school of thought looks at it in a different way, and carries it out in practice in different degrees.

The early Buddhists adopted it fully, and placed it on the line at which we should now call ordinary, reasonable, habitual. It occurs twice in the 'eightfold path,'—no doubt the very essence of Buddhism,—first under right ascertainment, and again under right conduct (Majjhima ni, 251 = Sanjuvata v. 9). It is the first in the Ten Precepts for the Order (sikkhapadani), and therefore of the five rules of conduct for laymen (sanjivani silanii), which correspond to the first live of the Precepts (Vinaya i. 83, Anguttara ii. 293). It is the subject of the first paragraph of the old tract on conduct, the Silas, which is certainly one of the very oldest of extant Buddhist documents, and in which it is clearly indicated by way into so many of the Suttantas (Ryias Davids, Discussions of the Buddha, i. 3. 4). Asoka made it the subject of the first and second of the Rock Edicts in which he recommended his religion to his people, and refers again to it in the fourth. After Asoka had been a Buddhist before, in the first Edict, he proclaimed himself a vegetarian. The rule of the Buddhist Order was to accept any food offered to them on their round for alms; when Devadatta demanded a more stringent rule, the Buddha expressly refused to make any change (Vinaya Texts, ii. 117, iii. 253); and a much-quoted hymn, the Amangadana Sutta (translated by Fanshull, SBE x. 40), put into the mouth of Kanaka the Buddha, lays down that it is not the eating of flesh that deiles a man, but the doing of evil deeds. The Buddhist application of the principle differs, therefore, from the Jain.

It would be long, and not very useful, task to trace the different degrees in which the theory has been subsequently held. It is sufficient to note that the less stringent view has prevailed. At the end of the long Buddhist domination the practices of animal sacrifices had ceased, and though with the revival of Brahman influence an attempt was made to restore them, it failed. The use of meat as food had been given up, and was still forbidden by the Buddha. The Indians have not become strict vegetarians. Dried fish is still widely eaten; and though there is a deep-rooted aversion to taking animal life of any other kind, the treatment of living animals, draught oxen and canals for example, is not always thoughtful. Nowhere else, however, has the doctrine of ahimsa had so great and long-continued an influence on national character.
AHIR.

An important tribe of agriculturists and breeders of cattle, which at the Census of 1901 numbered 9,806,473, of whom the vast majority are found in the United Provinces (where they are the largest caste), the United and Central Provinces, and in smaller numbers throughout N. India. Their name connects them with the Abhiras, a people occupying the same district in the South, and with the Ambirs, tribes of the Sudras, or servile caste of the Hindu polity, with the Abhiras and Nishādas, who were a black, long-haired Indian race, occupying what is now the valley of Sind, is perhaps correct. Another suggestion, which would connect them with a Syrian tribe, the Alats, who are believed to have entered India in the 1st or 2nd cent. B.C., is less probable.

In N. India their traditions connect them with Mathura, the holy land of Krishna; and the Jādava, one of their subdivisions, claim descent from the Yādava tribe to which Krishna is said to have belonged; while another, the Nandī, of the United Provinces, the Nanda Ghosha of Bengal, claims as its ancestor Nanda, the foster-father of the divine child.

1. Bengal. — In Bengal the caste is known as Gollā (Skr. gāpūta, 'a cowherd'), and in accordance with this the animals of the smaller kind, generally worshippers of Krishna, and therefore members of the Vaishnava sect. But their cult is of a much lower type than the pictorial form of Vaishnavism associated in Bengal with the cult of Nandī. It is not necessary that they should have a special feast, known as the Govardhan-pūja, which takes its name from the holy Mathurō hill associated with the cult of Krishna, at which they pray to a heap of rice which is supposed to represent the hill, and make an offering of food, red-lead, turmeric, and flowers to every cow which they possess. In other parts the worship is paid to a mass of cow dung made to represent a human form, presumably that of Krishna. A still more primitive rite is that described by Buchanan (in Martín, F. Indica, i. 194), when at the Dīvolī, or Feast of Lamps, they tie together the feet of a pig, and drive their cattle over the wretched animal until it is killed, after which they boil and eat the flesh in the fields, though on other occasions they are not permitted to taste pork. Here the pig was probably originally a sacred animal, and is sacramentally purified by the beating of the beast, and the eating of the flesh. It is a curious proof of the sympathy which even Hindus of high castes entertain. Its almost complete exclusion under the code of Hinduism, that when, in 1855, the English officer in charge of the Rental country prohibited this brutal rite, a protest was immediately made in the Legislative Council of Bengal by one of its members. It is satisfactory to find that the Lieutenant-Governor supported the action of his subordinate (North Indian Notes and Queries, v. 38).

In W. Bengal they have special reverence for the hero Lorkī, round whom a cycle of curious legendary characters, and for Kālī Bākā or Kālināth, the ghost of a murdered Brāhmaṇ, which is greatly feared. If he be not propitiated, he brings disease upon the cattle; and Kesley describes how, when the plague appears, the village cattle are massed together, and cotton seed sprinkled over them. The fattest and sleekest animal being singled out, it is severely beaten with rods. The herd, scared by the noise, scampers off to the nearest shelter, followed by the scare-crow; and by this rite the ghost of the marrion is stayed.

2. United Provinces. — In the United Provinces, those members of the caste who are initiated into the sacred fire are called Abhira or Saivas, the former preferring the cult of Krishna, the latter that of Siva or of his consort Devi in some one of her many forms, in preference to that of the Vedas. Another interesting incident which has its temple at and near the city of Vindhyāchala in the Mirzapur district, and is supposed to be the guardian goddess

turns out a failure. He squanders the property of Ahiqar and commits all kinds of crimes. When he is on this account called in question by Ahiqar, Nasrāh and Sennacherib devise a device to remove him (see his uncle). He contrives an intrigue to represent him as a traitor to the king. The king is deceived, and condemns Ahiqar to death. However, Ahiqar and his wife Sennacherib, in alluding to the executioner to spare his life, and to execute in his stead a slave who had been condemned to death. Ahiqar is kept concealed by his wife, and is generally supposed to be dead. The news, too, reaches the ears of Sennacherib’s rival, the Pharaoh of Egypt, and encourages him to impose on Sennacherib the task of building him a palace between heaven and earth. If Sennacherib should be able to carry out this demand, he would pay him the income of his empire for three years; but if not, Sennacherib must do the same to him. Of all the advisers of the king, no one is able to comply with the demand of Pharaoh—least of all, Nadan. The king makes Nasrāh, a relative of Ahiqar, his viceroy in Egypt, and compels him to remain in Egypt for five years, and then returns to Babylon. If on the one hand, the king is highly delighted, releases Ahiqar, and sends him to Egypt. He easily solves all problems proposed by Pharaoh, and the latter has to pay the tribute and still other sums to Sennacherib. After his return home, Ahiqar is again installed in his old position, and his nephew is unconditionally handed over to him. Ahiqar reproaches him for his actions, and the effect on Nadan is so strong that he is belted up like a skin and burst asunder.

The importance of this narrative, from the side of the history of religion, consists in the fact that, in all likelihood, it belongs to the lost literature of the Arameans of the pre-Christian era (cf. Lidzb. in TLLS and Ephemer. i., 1899). The story that has arisen in ancient times can be included from the consideration that the contents of the tale, with the names of both the principal heroes, are alluded to in the Book of Tobit (1:49). The connexion of this passage in the Book of Tobit with the story of Ahiqar was first recognized by G. Hoffmann (Aussage aus syrischen Akten persischen Mährer, p. 182), but he adopted the view that the story too is first in the Middle Ages under the influence of the passage in Tobit. However, the various versions of the story discovered since then make this supposition untenable, and the priority of the story of Ahiqar is now generally recognized. The heathen character of the tale, too, cannot be mistaken, and this is especially prominent in the Armenian version. Among the gods mentioned in the text, the ‘God of heaven’ takes the first place. He is Bel Saman, whose worship was widely diffused among the Semitic peoples in the last centuries B.C. and the first A.D. Especially instructive is the passage in which Ahiqar emphasizes the ascendancy of Bel in the matter as the ‘God of heaven’ over Bel, sun and moon (cf. Ephemer. i. 1, 1899).

of the Vindhyian Hills. In Sahāranpur they have two deities who preside over marriage—Brahm Devatā and Bar Devatā, the former representing the great Hindū god Brahmā, who is often image of a dead bridegroom (Hind. bar, Skr. vata). On the night of the wedding the image of Brahmat Devatā is brought by the goldsmith and placed upon the marriage-platform. When the bride they are worshiped in the kitchen, the site has been perform, the bride and bridegroom offer to the image sandalwood, rice, flowers, incense, sweetmeats, and cakes, and light lamps before it. The women of the household then wash the image, and raise an earthen platform over it. The members of the family worship this daily by pouring water over it, and on fast days offerings of milk and rich cakes are made to it. This is done until a second marriage takes place in the family, when it is dug up and removed, and its place is taken by a new image. This is a very curious survival of Brahmā worship among a people where we were unlikely to suspect its existence. Except in a few temples especially dedicated to this, the head of the Hindu triad, his cult has now largely fallen into disuse. The worship of the banyan tree is closely connected with the custom of tree-matriage (Crocke, Popular Rel., p. 311). Among the Ahir the bridegroom marks the trunk of the tree with vermilion at the same time as he marks the parting of the bride's hair with the same substance, so as to represent the form of the blood-covenant, marking the reception of the bride into a new kith and kin different from her own. They also worship the Pāchuišpūr (see Pach-chišpūr) and various minor local gods, the most popular of whom is Kāśāṇā, a deified ghost, at whose festival pots of milk are set to boil for the refreshment of the godling; and one man, becoming possessed by the deity, pours the contents over his shoulder, and is said never to be scandals. Their special cattle-god in the eastern parts of these Provinces is Bīrnāth (Skr. vīra-nātha, 'hero-lord'), who is represented by a collection of five wooden images radely carved into human form.

3. Central Provinces.—A similar quintette of gods of disease is worshipped in the Central Provinces. Here their principal deities are Dhāra Dev, said to be a deified bridegroom who died on his wedding-day (see Davidiāns), and Būdha Dēo, the chief god of the Gonds. As in Bengal, their chief festival is the Divalī, when they go about be-decked with strings of cowry shells, singing and dancing. They also pay much respect to a deified man, Haridās Bāhā. He is said to have been a yogī ascetic, and to have possessed the power of separating his soul from his body at pleasure. One day he went in spirit to Benares, and left his body in the house of one of his disciples, an Ahir. As he did not return, and the people ascertained that a dead body was lying in this house, they insisted that it should be burned. After this was done, Haridās returned, and when he found that his body had been burned, he entered into another man, and through him informed the people what a terrible mistake had been made. In atonement for their error, they worship him to this day. We have here an excellent example of the world-wide belief in the separable soul. The beliefs of the Ahir in this Province are of a very primitive type, and Russell points to obvious survivals of totemism in the titles of some of the sub-castes.

4. Deccan.—In the Deccan the Ahir are known as Gavli, which is the equivalent of Gavli, explained above. Before the caste are worshiped in the form of sandal paste, flowers, and food. Each family dedicates a she-[buah] to Kailung, the Hindu god of the kitchen; the site has been perform, the bride and bridegroom offer to the image sandalwood, rice, flowers, incense, sweetmeats, and cakes, and light lamps before it. The women of the household then wash the image, and raise an earthen platform over it. The members of the family worship this daily by pouring water over it, and on fast days offerings of milk and rich cakes are made to it. This is done until a second marriage takes place in the family, when it is dug up and removed, and its place is taken by a new image. This is a very curious survival of Brahmā worship among a people where we were unlikely to suspect its existence. Except in a few temples especially dedicated to this, the head of the Hindu triad, his cult has now largely fallen into disuse. The worship of the banyan tree is closely connected with the custom of tree-matriage (Crocke, Popular Rel., p. 311). Among the Ahir the bridegroom marks the trunk of the tree with vermilion at the same time as he marks the parting of the bride's hair with the same substance, so as to represent the form of the blood-covenant, marking the reception of the bride into a new kith and kin different from her own. They also worship the Pāchuišpūr (see Pach-chišpūr) and various minor local gods, the most popular of whom is Kāśāṇā, a deified ghost, at whose festival pots of milk are set to boil for the refreshment of the godling; and one man, becoming possessed by the deity, pours the contents over his shoulder, and is said never to be scandals. Their special cattle-god in the eastern parts of these Provinces is Bīrnāth (Skr. vīra-nātha, 'hero-lord'), who is represented by a collection of five wooden images radely carved into human form.

5. Gaddi, Goši.—In N. India, when Ahir have converted to Islam, they are known as Goši ('a kinder,' Skr. gush, 'to shout after cattle') and Gaddi, and follow the Muhammadan rule, with some adumbration of Dravidian animism. In Bombay they use many Hindū rites at marriage and birth, and worship the image of the goddess Devatī at the Dasāhrā festival, and of Lakshmi, the goddess of good luck, at the Divalī, while they also adore the Tulasi or holy basil plant, as at the Holī they worship the castor-oil plant.

Quite distinct from these are the Gaddī of the Panjab Hills, of whose beliefs Rose has given a full account. They are nominally Hindus by religion, and worshiping Siva by preference, and converted to Islam, they are known as Goši ('a kinder,' Skr. gush, 'to shout after cattle') and Gaddi, and follow the Muhammadan rule, with some adumbration of Dravidian animism. In Bombay they use many Hindū rites at marriage and birth, and worship the image of the goddess Devatī at the Dasāhrā festival, and of Lakshmi, the goddess of good luck, at the Divalī, while they also adore the Tulasi or holy basil plant, as at the Holī they worship the castor-oil plant.

embodied in this is taken into the cattle shed, where he is worshipped by the sacred fire on a Thursday. A bull or a cow, like the Dyak, a few drops of the blood sprinkled on the iron. At the same time cakes are offered, and some are eaten by one member of the household, but not by more than one, or the scourgings will not abate; the rest are buried in the earth. Every month a sacrifice is offered in the same fashion. Kailâ is a demon worshipped by women after childbirth, by putting up a stone under a tree, which is sanctified by magic formulae (none of which are described). When Muhammad, a white goat, which may have a black head, is offered up to the demon by making an incision in the right ear and letting the blood fall on a white cloth—a good example of the commutation of the blood sacrifice. The Ahoms eat coarse sugar and moss, the cloth, which she must wear until it is worn out, thus maintaining a sacramental communion between the demon and herself. If any other woman should happen to wear the cloth, it would cause her divers bodily ills. These facts regarding Gaddi religion are specially interesting, as being one of the best extant accounts of Indian animism as shown in the Panjâb Hills.

W. CROOKE.

AHOMS.—The Ahoms are Shâns belonging to the great Tai family of the Sino-Tibetan branch. This family extends from the Gulf of Siam northwards into Yûn-nan and thence westward to Assam. It comprises several divisions, viz. the Siamese, Laos, Shâns, Tai Mau or Tai Khî (Chinese Shâns), Kien-kang, and Annam. According to Dr. Grierson, the Tai race, in its different branches, is beyond all question the most widely spread of any in the Indo-Chinese Peninsula, and even in parts beyond the Peninsula, and it is certainly one of the most numerous. Its members are to be found from Assam to far into the Chinese province of Kwang-si, and from Bangkok to the interior of Yûn-nan. The Ahoms used to call themselves not ‘Ahom,’ but, according to the etymology of the word ‘Ahom’ there has been some discussion, and various views have been expressed. Dr. Grierson seems to incline to the opinion that the word is a corruption of Asha. Shâns is the name given to the Burmese people, the same spelling and pronunciation of the name of the well-known tribe. We have not, however, been able to ascertain what is the force of the initial A. The Ahoms, however, like the other Shâns, call themselves Shâns, but they also call themselves ‘Ahoms,’ and say, when mentioning them, that ‘Asâm did this and that.’ If this suggestion is correct, ‘Ahom’ must be a comparatively speaking, modern corruption. It is very probable that this tribe gave the modern name to our Province of Assam, the old name for the country being Saumārpî.

History.—Gait, in his extremely valuable work, A History of Assam, gives a detailed historical account of the tribe. All that need be stated here is that the Ahoms invaded Assam, under the leadership of Chulâ-spâ, from the Shân States in the 12th century, and that they were called burut, or ‘Ahoms’ from an exact date, which has been computed by us from their reckoning to be A.D. 1225. The conquest of Yûn-nan by Khâблâr Rûhân took place in the year 1227, and it is possible that the invasions into Yûn-nan began some years previous to the final conquest of the country by the Mongols. This general disturbance of the people which took place in consequence caused some of the Shâns to migrate to other countries, as was the case with the Ahom branch. Probably, in the 12th century, they might have determined to shift their quarters, for the Shâns are restless by nature, and are constantly changing from one settled place to another, even in times of peace.

The Ahoms, passing over the Patakî range, which divides Assam from Upper Burma, subdued in turn the different Tai tribes, the last and most important of which they took possession of in the 14th century. They thus obtained a country in which they found possession of the Brahmaputra valley. Although it is said that the Ahoms were a peaceful people, they were, as they appeared in the Provinces, not large in numbers, they must have increased considerably afterwards, for they gradually extended their dominions. With the expulsion of the last ruler of Judges Sinâ-pô (1413) they were in possession of practically the whole valley of Assam, and were, moreover, more than once to repulse the Mohammedans who had invaded the country on several occasions, and to defeat the great Kâkâchi king Nara Nâryâyl, as well as the Raja of Jalâl. The Ahoms probably received a certain number of recruits from their Shân relatives beyond the Patakî; but they seem to have adopted most of the people of the country largely into their tribes, and by this means also they probably increased their numbers.

At the Census of 1901 those who returned themselves as Ahoms amounted to 275,624, the greater portion of this number being resident in the two upper Assam districts of Sibâugy and Lakhimpûr.

The Ahoms, as two brothers, Khânbâng and Khânsâl, from whom they claim descent, came down from heaven and established the kingdom of Yûn-nan. The country was open to any invaders knew or could have introduced. The result is a style which is influenced by the Burmese, the Kâbâo and Chalûk-yan art, with a certain largeness of conception which the Hindus never quite attained, but which is characteristic of the people who have lived for ages under the same dynasty. Among these buildings the Jami Maskâlî, or Cathedral Mosque, though not remarkable for size, is one of the most beautiful mosques in the East. This and other buildings of the same class, following the most elegant and instructive of Indo-Saracen styles, were built during the century and a half of independent rule (A.D. 1413-1753). Their tombs are equally remarkable, that of the King Mahmuâd Begdâ, being one of the most splendid sepulchres in India.

† In Assam it is said to be a gharial.

§ Dr. Cushing’s note in the Burma Census Report of 1891, P. 301.

¶ Said to take its name from the Ahom words pāl, ‘to cut,’ and kāf, ‘tool,’ it being the Ahom custom to seek out enemies by examining their cutting knives.

§§ See note by Dr. Cushing in the Burma Census Report of 1891.

* For derivation of ‘Pong’ see Burma Census Report, 1891, p. 302.

†† Cushing in Burma Census Report, 1891.
ordinary Kachari* woman of the plains, whose skin is frequently dusky in hue, and whose features are hard and ill favoured. Though more muscular, and certainly more capable of physical endurance than the Assamese Hindoo, she is very subject to the semi-Aryan extraction, the Ahom, by long residence in the steamy plains of Assam, has lost the more vigorous parts of his originally physical constitution, and has become an incorrigibly lazy as the ordinary Assamese ryayt. Ahoms are heavy drinkers, consuming large quantities of toddy, called by them tanta, which they brew in their own villages. The Rhikus, or harvest and sowing festivals, are principally celebrated among them more than usually here. 1 The deadhus, or Ahom priests, sit in a spirit from rice in out of the way localities, often in defiance of the Excise laws. The evils of the habit of drinking, and the class of women whom it bequeaths to origin, do not, so far, appear to have spread among them. In education, the Ahoms are more enlightened than even the ordinary Assamese Hindoos, which is saying a good deal. In consequence, both the Ahoms and the Assamese Hindos stand in great danger of being allowed out of all Government as well as industrial employment, by the people of Eastern Bengal. The condition of the old Ahom aristocracy becomes worse and worse each year, owing chiefly to the failure of its members to realize the new conditions of life. Families in Sibsagar which a generation or two back held positions of power and comparative wealth at the Ahom Rajas court are now practically destitute.

Dress.—The dress of the Ahom turnsman at the present time consists nothing to distinguish from the worn by the Assamese cultivator. It was the Ahoms, however, who probably introduced into Assam the large brocaded hat or phopi, which is an adaptation of the Shih head covering. The dress of an Ahom nobleman used to consist of a turban of silk or cotton, a long cape or shawl generally of Assamese silkphoi or silk silk, reaching to the waist, a long coat, also of silk, called phoijhuris reaching down to the knees, and a chiria or silk-woven waist coat. Ahom females dress in a similar manner to ordinary Assamese women, wearing either silk (varying in texture or pattern) or cotton (worsted) of the same wearer. All this silk is spun and woven in the Assamese homes, and, as the Ahom are as well as men wont to wear a phopi, a specially large and gaily decorated hat being reserved for the bride on her wedding-day. Formerly the phopi was an emblem of authority, and none but the women were allowed in the presence of the Raja. Jewellery is much the same as that ordinarvly worn in the plains, but, though the different articles are sometimes called by different names. The girls of the Deodhai, or priestly clan, tattoo star-shaped designs on their hands and arms, and dye used being prepared by Ahoms of Nara villages. Tattooing takes place when a girl has reached about her fifteen years of age. The Ahom tribe of Assam, who possess a few settlements in the valley, observe a similar custom.

Houses and Villages.—Ahom villages do not differ from those of the ordinary cultivator of the valley, but the houses of the priests (Deodhais), who are in all matters more conservative than the rest of the tribe, are built on piles about 5 to 6 ft. from the ground, the dwelling of the ordinary cultivator being either set up on an earthen platform or flush with the ground. The Deodhai houses are divided into three compartments, namely, a sleeping room, a kitchen, and a durbar or dining-room. The spaces immediately below these three chambers are used for the loom, cowshed, and pig-sty respectively.

Food and drink.—Pigs and fowls abound in the Deodhai village. Ahoms who have not been baptized, sometimes even those who have, become the disciples of Vaishnavism, drink wine, eat pork and fowls, and drink rice beer and rice spirit, much to the scandal of the Assamese and Marcobans, who regard them with horror. The Ahoms cultivate rice in the same fashion, using the same primitive plough, as the other peasants of the valley, but, owing to their extremely lethargic habits, fail to reap anything like full benefits from the magnificently rich soil. A large quantity of grain is used annually by them in the manufacture of lau (rice beer), and they spend probably quite as much money in buying opium as in paying the government land revenue.

Exogamous groups.—The Ahoms are divided into a number of exogamous groups called phoids or khela, the principal being divided in number, hence the term stghorah (belonging to seven houses) which is nowadays applied to them. The composition of these seven principal divisions has varied from time to time, but they are said to have originated from the seven sons of the Royal Family, the Baroughahon, Bargohahon, Chiring, Deodhai, Mohan, and Bailong phoids. The whole of these exogamous groups are divided, from north to south, into two main divisions, called Gohains and Garos, and from north to south are said to be consecutively inferior phoids, such as the Eaodhons, who were the public executioners in the old days, as well as Liakhans, Ghrafals and others, with whom Ahoms of the upper classes will not intermarry.

For a description of the Ahom system of government, State and social organization, and particularly the phoi system, the reader is referred to Professor J. P. Gait’s History of Assam.

Marriage.—Ahoms who have become Hindus observe a modified Hindu marriage ceremony, but the real Ahom rite is the saklang. The ritual is contained in a holy book called the saklang pathi (unfortunately long lost). The Hindu ceremony is conducted with some secrecy, and as it is said to be forbidden to divulge its details to anyone but an Ahom, the writer had considerable difficulty in finding out what actually occurs on the occasion; but two reliable authorities, Srijata Kanakweswar Borpatra Gohain and Radha Kanta Sandikai, E.A.C., were good enough to give him the following description. The bridegroom sits in the courtyard; the bride is brought in, and she walks seven times round the bridegroom. She then sits down by his side. After this both rise and proceed to a room screened off from the guests. Here one end of a cloth is tied round the neck of the bride, the other end being tied round the groom’s waist. They walk to a corner, where nine vessels full of water have been placed on plan- tain leaves, the Chirling Phukan (or master of the ceremonial) rolls round the bride and groom’s feet, then three cups containing milk, honey and ghee, and rice frumenty, are produced, which the bride and bridegroom have to smell. Some uncooked rice is then brought in a basket, into which, after the bride and bridegroom have exchanged knives, rings are plunged by bride and bridegroom respectively, unknown to one another, it being the intention that each should discover the other’s ring and wear it on the finger. The exchange of the knives and the rings is the binding part of the ceremony. Bride and bridegroom are then taken outside and do seva (homage) to the bride’s parents and to the people assembled, and the marriage is complete.

Ahoms used to be polygamous, but one wife is said to be more correct now. Ahom girls are not married till they reach a marriage age—sometimes much later. The marriage expenses seem to be quite out of proportion to the means of the people; for instance, a Deodhai marriage in Sibsagar was reported to the writer to have cost more than 250 (bridegroom’s expenses).

Death.—Ahoms usually bury their dead; formerly they invariably did so, but now those who have accepted the Hindu religion resort to cremation. The following is a brief description of the old Ahom rites. The corpse of the poor are buried in the ground without coffins. Those of the rich are reverently laid in boxes; a water-pot, cup, dâ (stick), phopi (or large hat), and a pirâ (wooden stool) are put inside the box with the corpse. These articles are intended for the use of the deceased’s spirit in the next world. The coffin is then lowered into the grave, which is filled in, a large earthen jarumu (maidoum) being thrown up over it. The Ahom kings were buried in tumuli in the Sibsagar district; their funeral obsequies being of a much more elaborate nature. A baranj (Ahom chronicle) describes how at the funeral of Raja Gaddihar Singh, who died in A.D. 1699,* a number of elephants and candidates of the deceased’s attendants, were interfered with the corpse, together with many articles of food and rainment, and ornaments. It is stated that sometimes horses and elephants were interfered alive with a dead king.

Religion.—As the Ahoms are now almost entirely Hinduized, and there are very few of the old * Gait, History of Assam, p. 153.
Deodhais (the only persons who possess any knowledge of the ancient ritual) who remember the ancient religious customs, it is well-nigh impossible to give an accurate and connected account of the Ahom religion.

The writer has been unable to trace Buddhist influences. Possibly Buddhism had not penetrated so far as the Upper Mekong before the Ahoms left the Brahmaputra, their present site; or Buddhism had become so inextricably mixed with the worship of the gods of earth and sky as to become indiscernible. Apart from the god Chum-seng or Chung Deo, whose worship was carried on by the Ahom king, assisted by the Chiring Phukan, as will afterwards be described, the Ahoms possessed various gods, amongst whom the following seem to have been the most important: Along or Phu-Ra-Ta-Ra (God the creator), Lengdong (God of heaven, the Hindu Indra), Kaokhong (God of water, the old Vedic deity Varuna), Lengbin and Lengdin (God and goddess of the earth), and Phai (God of fire, Hindu Agni). Chumseng, who was called also the Rain God, was worshipped more as a fetich—something supernatural, possessing the power to do good to the king and his people. Chumseng was perhaps an ammonite, something of the nature of the Hindu sādhrum, or even a precious stone (which the etymology of the name, i.e., chum = 'precious' and seng = 'stone,' would certainly suggest). The stone or image, whatever it was, could not have been large, as at the coronation ceremony it was hung round the king's neck.

The worship was conducted with secrecy, none but the king being allowed to view Chumseng. The king could see him only twice a year. The mysticism attached to the Chumseng worship accounts for the doubt as to what Chumseng actually is. Old people say that Chumseng lies concealed somewhere in Assam at the present day.

The Ahoms performed ceremonies called saufa and sampfa for the good of the crops and the State, the latter being on a grander scale than the former, and conducted by the king himself. A ceremony called sarkai, the object of which was the earning away of evil spirits from the country, was also performed, but so briefly of this ceremony that a man who had lost several wives by death was offered up as a sacrifice. The rikkhwan, or expiration ceremony (lit. rik = 'call,' and khwan = 'live'), was performed at the installation of a new king, in times of danger, or after a victory. The procedure was as follows. The king sat in full dress on a platform, and the priests and astrologers poured holy water over his head, whence it ran down his body through a hole in the platform on to the chief sailong or astrologer, who was standing below. The king then changed his clothes, giving those which he had been wearing and his ornaments to the chief sailong. Gait says that the same ceremony, on a smaller scale, was also frequently performed by the common people, and still is, on certain occasions, e.g. when a child is drowned. Much the same ceremony seems to have been celebrated in Manipur.

Priesthood.—The priests, as has already been stated, were called deodhais. Probably this name was applied to them after the conversion of the king of the Deodhais to Hinduism, for in the Ahom language the priests were called sāngmun. The Deodhais claim descent from Laokhi, who is said to have been the companion of the two princes Khulung and Khunlai when they descended from heaven to earth, and to have married a princess. In the dual capacity of priest and counsellor. Although in the old days of Ahom rule the Deodhais composed the king's Privy Council, they were afterwards restricted to the duties and powers mentioned, the latter being thought by the Ahoms a matter of very great importance. Tradition runs that the heavenly princess brought from above the kai-cham-mung, or heavenly fowls; hence the sanctity of these birds. The palace of the Deodhais near Luckwa (in Sibsagar district) once performed the divination ceremony for the writer's benefit. It was as follows. An altar of plan tain trees and bamboos was set up (sainta), and certain leaves and fruit, rice, sugar-cane, and liquor (lau) were brought, and a lamp. Three fowls and three fowls' eggs were placed upon the altar. The officiating priest sprinkled holy water on the spectators with a sprig of bilas singpha (the King flower). Prayers were then offered up to Jasingha (the god of learning), and the fowls' necks were wrung. The flesh was scraped off the fowls' legs until the latter were quite clean, and then search was made for any small holes that existed in the bones. When the holes were found, small splinters of bamboo were inserted in them; and the bones were held up, with the bamboo splinters sticking in them, and the officiating priest read out of some old book which the priest had ready at hand. This book contained diagrams of all sorts of combinations of positions of splinters stuck in fowls' legs, and each meant something, the meaning appearing in verses written in the form of a hymn, the character of which were duly drawn out by the Deodhais. The Ahom kings placed great faith in such omens, and the position of diviner was one of no small profit. Even now many Ahoms consult a soothsayer.

Coronation.—The Royal Coronation ceremony was celebrated with great pomp at Choraidoo hill in the Sibsagar district, the Sworyadvo* and his principal queen riding on elephants. On such occasions the sacred Chumseng was brought out from the Royal ara-cana and hung round the neck of the king, who was girt about with the sword hengdang (the Ahom 'excalibur'), three feathers of the sacred birds (kri-cham-mung) being placed in his turban. After planting two banyan trees on Choraidoo hill, the king returned and took his seat on a bamboo stage (kolong ghar), under which had been placed a specimen of every living creature, including a slither of human hair which was bathed with holy water, which fell upon the collection below. Then the king, taking the sacred sword, killed a man, a criminal being selected for the purpose.† A great feast was afterwards given to the people, all of whom assembled to do homage to the new king.

As Gait says, 'The Ahoms were endowed with the historical faculty in a very high degree; and their priests and leading families possessed barunja, or histories, which were periodically brought up to date. They were written on oblong strips of bark, and were very carefully preserved and handed down from father to son.'

A detailed description of the Ahom system of chronology will be found on p. 301 of Gait's History of Assam. It is interesting to find that it is of like character to that employed by the Chinese, Japanese, and other Mongols. This fact is another link in the chain of evidence in favour of China having been the cradle of the Ahom race.

* Lit. 'god of heaven,' a title given to the kings by their subjects.
† Lit. 'god of heaven,' a title given to the kings by their subjects.

AHRIMAN

237

without any goodness (Zât-Sparām, i. 17; Dâdâstân-i-Dûyî, xxxvii, 19; Soul Doctrine, i. 5; or, it is not a fallen angel, like his counterpart in Christianity.

As is standing epithet is ‘the demon of demons’ (Vendidad, xix. 1); and he is the destroyer of the world (Artâ-Vairâ Nâmât, ch. e.) and full of malice (Bâôdâkhân, i. 1–28), and as in constant struggle with the spirit of light (e.g. Yasht, x, 97, xiii, 13, xvii, 2, xix. 46, 96; Yasht, x. 15). He strives to persuade men to be hostile to Ormazd and win them over to his own side (Bâôdâkhân, i. 14; Zât-Sparâm, i. 8), and his greatest victory consists in inciting a human soul to rebel against Ormazd. His complete satisfaction is found in securing a human soul on his side (Dâdâstân-i-Khûrêh, xlvi. 4, 5). So mighty is he, moreover, that even the Yazatâs, or ‘Angels,’ did not succeed in overpowering him, and it was only Zarathushtra who confounded him (Yasht, xvii, 10, 20); yet he stands (at the resurrection, 157; 36–41).

From Ahriman proceeds all disorder, and he is the source of all disease and of death (Yasna, xxx. 5; Vendidad, xx. 3, xxii. 2, 29; Yasht, xix. 31; Dâdâstân-i-Dûyî, xxxvi. 13–14; Haurân, xxv. 3), and introduces impurities, diseases, and death. He killed Gâyômôrd, the primeval man, and Göôkârân, the primordial ox (Bâôdâkhân, iii. 17; Zât-Sparâm, iv. 3; Dâdâstân-i-Dûyî, xxxvii. 82); he introduced a physical and moral imperfection into creation; he created hosts of demons to accomplish his work of destruction in the kingdom of goodness (Bâôdâkhân, i. 10, 24, 27); he formed Ahi Dahaka for the destruction of the world of righteousness (Yasht, ix. 14, xvii. 34). Ahriman is the head of a rabid crew of demons, fiends, and arch-fiends, who are mentioned hundreds of times as dâwâis (Mod. Pers. dia, ‘demon’) and droyas in the Avesta and later literature, and conceived of as abiding in hell, in ‘endless darkness,’ ‘the worst life, the abode of Deceit and of the Worst Thought’ (Yasna, xxxi. 20, xxxii. 13; Vendidad, iii. 35).

The final defeat of Ahriman and his evil progeny is to be brought about by man’s own efforts, as in the Saiân, because Ahriman, being impotent and helpless, will bow down before the good spirits (Yasht, xix. 96), and his doom, according to the later books, is to be the utter annihilation (Dâdâstân-i-Dûyî, xxxvii. 114, 120), for the Zoroastrian religion postulates the ultimate triumph of good over evil and the final eradication of sin from the world (Dâdâstân-i-Dûyî, xxxvii. 120–125). At that time Ahriman will be driven from mankind (Dinkart, tr. Sanjana, p. 446), and, rushing to darkness and gloom in his impotence (Bâôdâkhân, xxx. 30), will be forced to seek refuge in the earth (Westergaard Fragments, iv. 3), where he will be imprisoned (Dinkart, tr. Sanjana, p. 151) or destroyed (Uarna Memorial Volume, 128–129).

Attempts have been made to trace resemblances between Ahriman and Ahi, the sky-serpent of ancient India, as well as with the Mara of Buddhism, but these are rare, few, and too remote to deserve much consideration. The nearest resemblance is that between Ahriman and Satan.

Owing to the emphasis which the Avesta and later books lay on the principle of evil as an active agent in the life of the world, Zoroastrianism is frequently spoken of as Dualism. The Paris, or modern followers of the faith, however, vigorously reject the application of the term to their religion, and their most advanced teachers deny attributing any personality to Ahriman except as a principle or force. Further discussion of this point, and the attitude in ancient as well as
modern times with regard to the subject, is reserved for the article on DUALISM. See also ORMAZD, ZOROASTRIANISM.

Like the YasTia its words are religious in character, one should be cautious in finding a historical interpretation. The one received, or perhaps granted without the most searching investigation at every step. They do indeed prove to be what at the first glance they seem to be; and they stand almost isolated in this respect, as being in their day among the most serious religioun and conviction and sentiment. But they imperatively demand all possible corroboration as to their value in regard to the vital consideration in question. Now the Ahunavir is one of their most important supports. Hence the high scientific value of its interpretation.

The facts relating to the Ahunavir, as also to the Gathas, certainly prove that the moral idea prevailed extensively in Iran as well as in India. For this is evident both psychologically and from the psychological experience; but it implies beyond all question a widely felt and practical religious influence of the moral idea upon the sentiments and lives of the populations amidst which this lore prevailed. Here we have a point of momentous consequence, which possibly explains also why Cyrus was so ready to further the religious as well as the political prosperity of the Jews, with all that this entailed in the religious promulgation and in the restoration of their sacred Temple with their established faith.

It is apparent from the translation given above that all ideas save the moral one are actually and instinctively excluded from the lines. Neither Aša, nor Vohuman, nor Śāhātrā is here used even in its high secondary sense as the name of one of the archangels themselves, each a personification of the supreme Ideas of Truth, Benevolence, and Lawful Order,—while the closing words refer to the first altruistic act of the moral instinct—the care of the afflicted; and, almost strange to say, there is not one word of any allusion to religion.

If we are correct in those lines 96 pli bearer the Ahunavir next after the Gathas in order of time, say about one hundred years later, then their exclusively moral point of view tends to prove the vital energy of the moral idea in the Gāthic hymns themselves, a matter of extreme scientific interest in view of the facts.

3. Later sanctity.—The Ahunavir, having acquired a singular sanctity for the reasons given, was freely used by the religious fancy of a somewhat later age. Like the 'sword of the Spirit,' it becomes a weapon in the hand of saints and angels. Zoroastra himself, in his later traditional rôle, and in his Temptation, repels Aŋpura Mainuyin with it, while Šraosha wields it as his smaitih, i.e. as his 'halbert.' It would, however, be precarious simply to assert that the above-noted characteristics are in the formula was the immediate cause of the somewhat excessive importance afterwards attributed to it. Its sacrosanct character, if one might so express it, was probably owing to its brevity plus its allusions to the Gathas and to the idea of some personal intellectual circumstance, and it was doubtless often used perfunctorily like the Pater Noster, if not indeed almost as a potent instrument of magic.

4. Relation of the Ahunavir to the Gathas.—The allusions to this formula which occur in the commentary upon it in Yasna xix.
have been widely exploited in critical and semi-critical studies upon the subject of the Philonian-Johannine Logos; and it certainly constitutes a secondary factor to be reckoned with in our decision as to the history of exegesis at the places indicated in each example. The Ahura Mazda being 'the word uttered before the heaven, the earth,' etc., do indeed recall the terms in the Prologue of St. John: 'In the beginning was the Word.' It has been supposed that their meaning is close to this 'Word' of St. John. Oppert, we believe, first suggested the connexion. But possible as such an initiative might be, the present writer does not regard it as at all probable, in view of the Greek Logos with which Philo was so familiar. Besides, there is no saying what the date of Yasna xix. may be; it may even have been Sasanian. Commentary of course appeared almost as soon as a text was issued; and our Pahlavi commentary texts, however late they received their present forms, as 'edited with all the manuscripts collated,' cannot fail to have preserved hints from the very earliest ages. The Pahlavi Logos has also been much covered up by over-grownths; and this Yasna xix. must certainly have predecessors. Philo may also have acquired some information as to Avestan doctrine from the semi-Persian books of the Bible, from the Zendavesta, or from the Talmud. So far as they were then current, and from the many related documents of which we have never known even the existence; for echoes of such religious doctrines must have reached both Jerusalem and Greek Egypt; but to suppose that Yasna xix. influenced this Philonian-Johannine Logos of the Prologue seems to us utterly out of the question, in view of the history of Philo's development. See art. Logos and Philo Judeus.

AHURA MAZDA.—See ORMAZD.

AINUS. [J. Batchelor].

1. The Ainu habitat. —The few Ainus now living —and at the present time there are less than 20,000 of them left—may be looked upon as the very last remnants of a great prehistoric race; and many, without doubt, once spread over an area extending from Siberia in the north down to the southernmost limits of old Japan. An indisputable proof of this lies in the fact that very many geographical names in Siberia and throughout the whole of the Japanese empire, Formosa excluded, are discovered to be of Ainu origin. Moreover, Japanese mythology, as contained in their book entitled Koigi, or Records of Ancient Matters, and Japanese history as found in their Nihonki, or Chronicles of Japan, both of which works date back to the 9th century.

2. The Ainu religion pre-historic. —There is no great difficulty in determining the descent, nature, and relationship of such religions as have arisen during historical times, such as, for example, Judaism, Mahamadanism, Christianity, Brahmanism, Budhism, Taoism, and others of less importance. But a vast majority of ancient religions, of which there are still to be found some living examples in Japan, among the ancient tribes and races, had their origin in pre-historic times, concerning which neither specific documents nor trustworthy traditions are to be had. The Ainu religion is one of these. Indeed, like indigenous Japanese Shintoism, it is a religion without any known historical beginning, and has no recognized founder.

3. The nativisg religion still unchanged. —That the Ainu religion is the same to-day in all essentials as it was in pre-historic times, may be inferred from the inherent genius of the language, as well as gathered by way of auxiliary from the customs of the people and their religious practices of rites and ceremonies. It is on record that in the year 1620 the Jesuit Father Hieronymus de Angelis paid a visit to the Island of Sakhalien (the whole of which was then reckoned part of the Japanese empire), from Nagasaki; and his description of the Ainus, written two years later, it is found that their manners and customs were the same then as those of their descendants now. Also, in June 1643, Capt. Barents, of the ship Carthusian saw them, and his report bears the same testimony as that of the Jesuit Father. The Matsumura Manuscripts, the Ezo Ison Monogatari, and other Japanese works also speak to the same effect. Ancient and modern lists of words, whether written in English or German, Japanese or Russian, and dating back hundreds of years (Batchelor, Dict., 5), show that the language of this race has not materially changed since they were collected.

The name of the famous mountain Fuji itself is not Japanese, as many have supposed it to be, but is of Ainu origin, like so many other places in its locality. It is a name which carries us back to pre-historic times, and plunges us at one right down into the very heart of Ainu religion. As written by the Japanese, who do so, it should be remembered, by means of Chinese hieroglyphics or phonetic figures, and without any regard to meaning, Fuji is generally made to mean 'Mountain of wealth,' 'Peersless,' 'Superior.' In aat means 'fire,' and is the name especially applied to this element when being worshipped. Fuji is, in truth, the name of the goddess of fire. However, we shall be speaking in pre-historic times this beautiful, peerless Fuji no yama was regarded by the Ainus as one of their natural gods, and was, as such, worshipped. Volcanoes are also frequently worshipped by this race at the present day. Furthermore, Fuji is a dormant volcano. To-day fire is worshipped upon the hearth in every Ainu hut (where the occupants are not Christian), and, when worshipped, always has the appellation Fuji or Umi, or Uni, according to dialect, applied to it. The common word for 'fire' in its ordinary use is Abe.

4. The Ainu religion originally monothestic. —The term for 'God' in many times Ainu religion, as now developed, is found to be extremely polytheistic, yet the very word in use for 'God,' being of the singular number, seems to indicate that in its beginning it was monothestic in nature. This word is Kmsui. This is a compound of three distinct roots, the chief of which is mts, whose meaning is 'over,' 'above,' 'top,' and so forth. It is like super and supra. It occurs in kmda, 'heaven,' and sky; and is also used in many words where the sense of super is to be conveyed. The fundamental meaning of mts is 'spreading;' 'repeating;' and kma, which is the oldest Japanese word for 'God,' means, in Ainu, 'covering.'

* Aston in his Shake, London, 1905, p. 7, gives practically the same derivation for the Japanese word for God, as for the Ainu. It is probably connected with kma, 'to cover,' and has the general meaning of 'above,' 'superior.'

A.D., bear unmistakable evidence to the fact of the Ainu being an aboriginal race of Japan.
‘creeping over.’ I is a particle which has the power of changing some parts of speech into nouns, as well as being a personal pronoun meaning ‘he,’ ‘she,’ or ‘it.’ Kamui means ‘that which’ or ‘he who covers’ or ‘overshadows.’ And so our thoughts are made to revert to the origins of the Aryans and to the Ten, ‘heaven,’ of the Chinese.

The term Kamui is of wide application, and may be used as a noun or adjective at will. But, however employed, it never loses its root meaning of chief in station, quality, or power.

Thus, when used as an adjective, it has the following shades of meaning: Kamui mupuri, ‘a great or high mountain;’ Kamui reru, ‘a mighty wing, or a sword-bearer;’ Kamui muru, ‘a pretty flower;’ Kamui chibiskip, ‘a large animal,’ and so forth. When used as a suffix, Kamui is always a noun, e.g. Nupuri Kamui, ‘the gods of the mountains;’ Chikuni Kamui, ‘the gods of trees.’ Also Ya-un-Kamui, ‘gods upon the land;’ Yeu-un-Kamui, ‘gods in the sea.’ It is not the mountain or tree or flower or land or sea that is called ‘God’ and worshipped, but the spirit or spirits supposed to dwell in these objects. Otherwise the term or the objects have to be changed; as, for example, Nupuri Kamui should be changed to Nupuri-un-Kamui, and Chikuni Kamui into Chikuni-un-Kamui.

5. The Supreme God distinguished.—After monotheism had given place to polytheism, it became necessary for the Ainu to distinguish between the Makigamo, or common deity, and any deity who covered it imperative to have some term by which to designate the Supreme God. Hence, when speaking of the ‘God of Gods,’ the Ainus gave Him the name also of Creator, or Possessor of heaven. All the rest are termed Yaniun Kamui or ‘common deities,’ also ‘near’ and ‘distant deities.’ Pass is an adjective, and points to rank and authority, its first meaning being ‘weighty,’ ‘tall,’ and ‘superior in rank,’ and so Pass Kamui, or Pass, may well be translated by the word ‘chief’ or ‘true God;’ or, as the Hebrews would have said, ‘God over all.’

Thus far, then, we have reached a real basis for two articles of Ainu belief. viz. (a) ‘I believe in one supreme God, the Creator of all worlds and places, who is the Possessor of heaven, whom we call Pass Kamui, “The true God,” and whom we speak of as Keten kara Kamui, Mabirii kara Kamui, Kuma to kure Kamui;’ (b) ‘I believe also in the existence of a multitude of inferior deities (Kamui), all subject to this one Creator, who are His servants, who receive their life and power from Him, and who act and govern the world under Him.

6. Special names given to the Creator.—In asking for proof of the existence of a Creator, the Ainus point to the flash of lightning and call it the ‘God of lights,’ to the wind and to the thunder and say it is the sound of His voice. The Milky Way is called His river. Two specially favorite names sometimes heard applied to Him are Tawtu and Shinuta. The first of these, Tawtu, may be translated by ‘brave,’ ‘support,’ ‘pillar,’ ‘sustainer,’ ‘upholder.’ God is addressed by it often in prayer when the thought uppermost in the mind of the worshipper is that of God as the upholder and sustainer of all things. The second word, Shinuta, means ‘cradle.’ The Creator is so named because He is looked upon as the God in whose hands we rest. He is also called upon as such in the Ainus and their Folklore, London, 1901, p. 582 ff."

7. Evil spirits called Kamui.—Bearing the meaning it does, it is not surprising to find that the term Kamui is applied to evil spirits as well as good. Thus, in his angelic story, Nite Kamui, Nite means ‘stiff,’ ‘oppressive,’ ‘heavy’ as dough. Evil spirits are thus naturally looked upon as the oppressors and enemies of mankind. Indeed, as the Ainus quaintly put it, ‘they are very difficult to get along with.’ They are extremely numerous and quite ubiquitous. And they even are expressly

"See Batchelor, Dict. of ii. p. 50, e.v. ‘Kamui.’"
it down with his tail. After a very long time of hovering, trumpeting, and tail-wagging, dry places began to appear, and the waters gradually became the ocean. And so the worlds were in this manner created, and the Ainu people in the world of water, and caused their gods to live there. Therefore the Ainu call the earth by the name Mutihiri, i.e. ‘spring from which the wataris in great abundance flow.’

10. Ananimism the root of Ainu polytheistic notions.—It was stated in § 4 that there are grounds for concluding the Ainu religion to have been monotheistic in nature at the commencement, and to have gradually developed into the polytheistic form as the race has become more advanced. This evolution has become very apparent when it is taken into consideration that the one great principle underlying Ainu theological notions in all their parts may be summed up in the one word, Animism—not animism as formerly employed in biology simply to denote the theory, of which Stahl is the chief exponent, that the soul (animus) is the vital principle, and the cause both of the normal phenomena of life and also of the abnormal phenomena of disease. It is this and very much more. Animism is here used in the wide sense given it by E. B. Tylor (Princ. Cult. ets. xi.-xvii.), as including the whole doctrine of souls and other spiritual agencies, whether they be conceived of as being good, bad, or indifferent in nature and action. According to universal Ainu ideas, not only are men and women, beasts, birds, fishes, and fowls, trees and plants, rivers and springs, rocks and rocks, sun, moon, water, all other objects as well. Indeed, animism, as found to be developed among this people, is as uniform and comprehensive as the great τῶν ἐγγένετο of the pantheistic creed, for it holds all nature in its embrace; yet so much in form is it, that it also has a distinct individual root and class of spirits to every order of phenomena. Accordingly, almost every conceivable object, whether visible or invisible, animate or inanimate, is endowed with a distinct personal, intelligent, and never-ending life. It is this conscious entity which works in and through it, that governs it and keeps it in its normal condition. Hence the bubbling spring and rippling rivulet, the rushing torrent, the flying clouds, whistling winds, pouring rain, roering storm, and restless ocean,—all such things, together with animal and vegetable life, have their governing spirits within them, which, as a rule, must be treated with due respect by all men. This philosophy also asserts as one of its dogmas that every such objects as rocks and stones, lumps of clay, and grains of sand and dust, all have their separate and independent existence, and, among men, as clothing such as clothing and weapons, farming and fishing implements, eating and drinking utensils, and even entire hats, are supposed to have separate governing spirits of their own, which will live in the other world. This is not pantheism proper, for there is no trace of such a thing being thought of as one life naturally and of course swallowing up another; spiritual immortality is with them a personal immortality, and Nirvana is quite unknown in their midst.

It is part of the animistic creed to look upon spirit-entities as having various degrees of intellect and higher and lower qualities of moral nature. And the more intelligent the more official to mankind any supposed spirit is thought to be, the higher is his station as a deity; while the less beneficent such an entity is conceived to be, the lower is his rank, and, in the Ainu in particular, and the more practical harm he does or is thought to be capable of doing, the greater demon he is considered to be. Thus, as beneficent objects are supposed to be, its intellent entities, springs of cool drinking water and sulphur baths are held in especial esteem; while, inasmuch as storms and diseases do damage and work death and destruction, they are looked upon as containing demons, some of a higher and some of a lower degree of moral nature and power.

11. All things supposed to be of dual parts.—According to Ainu statements, the people imagine all things to have two parts: the one inner, invisible, and eternal in nature, and the other (corresponding to it) an outer, visible, and substantial, though not necessarily material, form—a form by which it reveals itself, through which it acts, and by which it makes itself felt. These two naturally get together, though quite separated for a while at times (as in dreams, for example, when the soul is supposed to leave the body for a time), owing to special causes or for particular purposes. But the outer condition is for them to act together, the inner essence through the outer form. Further, the inner spirit may, if necessary to carry out some extraordinary purpose, even assume the outer form of an object not belonging to its class, and make itself seen and heard through it. In this we discover the basis for the thought of demoniacal or other possession.

12. Annu ideas about anthropomorphism.—Nattall, in his Standard Dictionary, defines anthropomorphism as being the ascribing (a) of a human form to deity, (b) of human qualities and affections to deities, and (c) of human faculties to the lower animals. This definition is too narrow for the Ainu. An Ainu would not think of putting it in that way. He would certainly change the order by making it clear that man is the recipient and God the giver. He does not say, for example, that the deities are anthropomorphic, but that man is anthropomorphic in so far as his higher nature is concerned, and demon-like in everything that is evil about him. To all spirit-powers superior to man, whether in good or evil, there are no more beautiful and the most hideous attributes of mankind. But it must be supposed that because the people think of an object as being endowed with a personal, conscious life which can think and will and act for good or ill as it pleases, it is therefore in every instance anthropomorphic in structure. The inward and outer forms differ, and both will, it is thought, differ for ever. The outward form will always remain the same, whatever may be the inner, or spirit, form. It will be the same with all animals and trees, or with a blade of grass or a stone. As they are here, so will they be for ever in the next world. There is to be no change in either form, and no extinction of one or other. The one form that can take place will be in the qualities of good and evil, for then evil will become more evil and goodness better.

13. The word for ‘spirit’ defined.—In discussing Ainu religion, it is always necessary to keep in mind the meaning of the word in use for ‘spirit’ or ‘soul.’ The term is peculiarly interesting, and deserves careful consideration. Its root has nothing whatever to do with such expressions as ἀνεσφόντιον, ἐναέφόντιον, that are used in the New Testament to express the meaning of the word. It is a root that has been used in the Japanese language in connexion with everything from gods and devils, elves, fairies, gnomes, goblins, and all spirits, of whatever race or order they be, are looked at from the side of intelligence rather than that of life (i.e. vitality).

14. The sun a nature-god.—The Ainu religion, then, being thus anthropistic (see § 10) and anthropomorphic (see § 12) in principle, and each spirit agency being necessarily conceived of as endowed
AINUS

with mind or understanding (§ 13), the process of religious development becomes natural and easy, and nature-gods may be created both ad ilium et ad infinitum. The runs above us, for example, is seen to move; there is nothing haphazard about him; he rises and sets with the utmost regularity, and shines with surpassing splendour and with the eviitmnous purpose of dispensing his welcome light and genial heat to the world. There is, therefore, it is thought, a living light-giving spirit (ramdnt) within the body or num, i.e. ‘half,’ of the sun, by whose influence he shines and by whose power he moves. He is one, indeed, who reminds us much of the Egyptian 3a, for he too was supposed to be directed by a divine agency and personal will. In his own sphere among the lesser lights of heaven this stupendous and mysterious orb is chief of kind, and in the region of the east, whence he rises, is held sacred.

Inferior to the Creator (see § 5) yet superior to the sun in power is another spirit, malignant in nature, and given the name Vikal. It is he who brings, and be the cause of solar eclipses, and he is thought to be the very incarnation of diseases and other bodily evils. When the sun is eclipsed, this orb is supposed to be dying. That is to say, his intelligent life—i.e. his heart—comes to a standstill from the other visible substance and leaving the num black, cold, and dead. Yet he is never allowed quite to die, for a good superior spirit, who is either the Creator himself or His deputy, always, out of a kindly regard for mankind, graciously brings him back to his normal condition.μ

15. The moon.—The moon, who is said to be the wife of the sun, is not worshipped. There is a legend about her which runs as follows: The sun and moon are husband and wife. They are divine beings whose province it is to rule the heavens and the earth. The male is appointed to do his work in the daytime only, and the female at night. Sometimes, however, they may be seen travelling across the heavens in company. The divine sun is the larger of the two, has the brightest and best clothing to wear, and shines the most clearly. The moon is round like a cake of salt, is clothed in dark and dirty garments which it has worn one over the other. Now, the moon is sometimes invisible. When this is the case, it is because she has gone to visit her husband.

16. Dualism.—In mentioning the supposed cause of solar eclipses (see § 14) we were brought face to face with the fact that dualistic ideas are rampant in the Ainu religion. Indeed, there are as much in evidence there as they are in the Avesta, where the struggle between Armzd and Ahriman is so clearly depicted; or as they are in the Rig Veda, where Indra and Vrtra form so striking a contrast. The basis of dualistic ideas may be found (in so far as the Ainu are concerned) in their conception of spirit as defined in § 13, and of anthropomorphism as explained in § 12, taken in connexion with the antitheses of nattare, and the Ainu see so many contrary things ever present both within and outside of themselves, fighting, as they suppose, so much and so often against one another. Thus, light against darkness, day and weather to fine; rejoicing may be with us to-day, but to-morrow men must weep; this morning a child is born, and in the evening it dies; disease follows health, and good is succeeded by evil. Why, the Ainu asks, in this so? The explanation is this: he who is the origin of light and life, of health and all good, is Himself the good true God (Pas Kamumi, see § 5); while the source of disease, death, and all harm and misery, the evil and all evil, is naturally thought to be the Nittan Kamumi, and all his agents the demons (see § 7).

* The Samoyedes believe in a supreme God of heaven called by the Tibetan name, himself the good true God (Pass Kamumi, see § 5); while the source of disease, death, and all harm and misery, the evil and all evil, is naturally thought to be the Nittan Kamumi, and all his agents the demons (see § 7).

—§s and (§ 8) are a kind of eclipse of the sun. The Ainus method of curing it, see TAJI, vol. vi. part i. 1857.

No clearer illustration of the doctrine of dualism can be found than that exhibited by the Ainu notions of the evil or superior spirits of the sea. The chief of these are two in number, named Me-aka and Shi-aka. They are exactly the opposite of each other in character, and together all the spirits of the sea are called Rup-wa-kamumi, i.e. ‘deities in the sea.’ Shi-aka, i.e. ‘wild,’ ‘rough,’ ‘strong’ or ‘powerful,’ is continually pursuing his brother Me-aka, i.e. ‘Uncle of peace,’ or ‘calm.’ Me-aka is good, and is beloved and worshipped; while Shi-aka is dreaded and disliked, and when he is not thankfully worshipped, he is often propitiated by means of small offerings and sacrifices. Shi-aka is always the cause of all harm done by and upon the sea, while his brother rules the calm. Another good illustration of this subject is afforded by the Ainu gift of the devil’s attempt to swallow the sun. (See AP 69).

17. Fire-worship.—It has already been pointed out in § 14 that the greatest visible nature deity of the heights is the sun. Of like nature is the chief deity of the terrestrial globe, fire. The personal essence of fire, that is to say, its supposed spirit, when upon the hearth, is said to be of the feminine gender, and, besides being called Fuji, Unji, or Huchi as the case may be (see § 3), is also named Iremu-Kamumi, i.e. ‘the divine being who is worst,’ and Iremu-Huchi, i.e. ‘the ancestress who rears us’—Fuji or Huchi meaning ‘grandmother’ or ‘ancestress,’ and Iremu ‘to sustain’ or ‘to bring up.’ So the chief in her heart is sometimes spoken of as a disease-destroying and body-purifying spirit. As she is of so great importance, and holds so high a position, it is not surprising to find that fire is in comparison most often worshipped. Indeed, so high is she supposed to be, that she is sometimes spoken of as the ‘Governess of the world.’ With respect to her, there are several tabu things which go to show how she is revered. Thus, for example, a burning log must not be struck with anything; the ashes must not be knocked out of a pipe into it; nothing must be taken out of it with a knife; a pair of scissors must not be placed near it; nail parings, saliva, and refuse of any kind must not be suffered to fall into it. That this goddess is looked upon as superintending matters connected with the house in which she dwells and is burning, may be gathered from such a prayer as the following: ‘O thou divine goddess of fire, have mercy upon us and take care of this house.’ And that she is thought to attend to the wants of the family is proved by the following address and prayer made to her at the time of a marriage: ‘O thou goddess of fire, hear thou and be witness thereto. Keep this couple from sickness, and watch over them till they grow old and grey. And that she is feared is proved by the fact that she is supposed to be the chief witness for or against a person in the day of judgment (see § 40). When that takes place, it is said that she will present the great judge with all a perfect picture of every word spoken and action done by each individual being, and from her there can be no appeal. But not only are prayers said to the goddess of fire, offerings also are sent to her by means of fetishes, and libations and sacrifices are poured out to her acceptance. Whenever beer is brewed, which is mostly done at the end of the millet harvest, and immediately after the sowing time, the Ainu always make a kind of inuma or fetish out of wood, which they call inuma-
AINUS

243

shiku-inao, i.e., 'refining-club fetish.' This instrument is used as a messenger to the spirit of fire, and is sent to light the fires of the hearth. When these have been put on the 'seat,' drops of beer are offered to the various deities, and the fire is worshipped as follows: 'O divine grandmother, we drink to thee; we offer thee in sacrifice. Bless this fire; let it keep us from all harm.' After this, prayer is offered to the spirit of the fetish itself thus: 'O refining-club fetish, take the lees now placed upon thee to the goddess of fire, and thank her on our behalf for all the blessings she has bestowed upon us. Tell her of our estate and welfare, and solicit her continual help and favour.' After having thus offered and addressed, the fetishes are sometimes reverently burnt upon the hearth while prayer is being said, and so, in a way, the manes are sent to the spirit world. Sometimes, however, they are not burnt, but set up by the doorway as offerings to the dead, who are supposed to be in the recess of a fire, that is to say, 'the household inao' mentioned in § 24, is also associated with his consort in the prayers said on such occasions.

18. Various nature-deities.—Before treating of the subject now incidentally mentioned, viz., fetishism, it will be well to mention some other nature-deities. After the goddess of fire, the chief of these seems to be one called Toi-kuru-pani-kuru, or 'He who rises from the surface of the earth.' He is said to have had a wife who is called Toi-kuru-pani-mat, or 'She who rises from the surface of the earth.' These, it may be said, represent that class of deities whose province it is to attend to the well-being of vegetation. They are said to be of a good nature and disposition, and are consequently worshipped. This couple seem to represent the male and female principles of nature. The natural law by which rain descends and clears away is represented by one named Pe-konchi-koro-guru, or 'He who wears the water-cap.' The Ainu say that this deity appears as a great rain-cloud. He is considered good, and ought therefore to be worshipped. It is also a legend concerning him which runs as follows: 'Once upon a time the Ainus were at war. The enemy had pressed them hard, and had set fire to their houses. Upon this, the people called upon their deities and said they could not think of delivering themselves. Soon a large cloud arose from the mountains, and, floating directly to the burning village, rained heavily upon it and extinguished the flames. They then learned for the first time that this cloud was a god. He had been worshipped ever since this event, and the name 'He who wears the water-cap' was then given him.' Another class is represented by one called Ikoro-koro-guru, or 'He who possesses great treasure.' Another name given him is Nupuri-koro-komu, or 'The divine possessor of the mountains.' He has yet a third name by which he is known, and that is Samru-poro-komu, or 'The diviner who has the large footprints.' This deity is the representative of such animals as are worshipped. When he makes himself visible, he is said to come always in the bodily form of a bear, and it is supposed to be his business to be in attendance on all wants and general welfare of the forests and mountains.

19. The spirits of the air.—Like the gods of the earth, the deities of the air are found to be very numerous. They are always associated with the flames of refining. It will be seen in the illustration here given that a hollow place is left at the top of the fetish. This is called the 'seat' or 'nest,' and is supposed to be the home of the heaven. When these have been put on the 'seat,' drops of beer are offered to the various deities, and the fire is worshipped as follows: 'O divine grandmother, we drink to thee; we offer thee in sacrifice. Bless this fire; let it keep us from all harm.' After this, prayer is offered to the spirit of the fetish itself thus: 'O refining-club fetish, take the lees now placed upon thee to the goddess of fire, and thank her on our behalf for all the blessings she has bestowed upon us. Tell her of our estate and welfare, and solicit her continual help and favour.' After having thus offered and addressed, the fetishes are sometimes reverently burnt upon the hearth while prayer is being said, and so, in a way, the manes are sent to the spirit world. Sometimes, however, they are not burnt, but set up by the doorway as offerings to the dead, who are supposed to be in the recess of a fire, that is to say, 'the household inao' mentioned in § 24, is also associated with his consort in the prayers said on such occasions.

20. The demons of land and air.—In all things the Ainus are firm believers in an almost co-ordinated array of hostile deities who manifest their malignant nature by creating disease, death, and every kind of evil. Speaking of these matters, an Ainu once said to the present writer: 'As the demons of the air are so near this earth, it is possible for them to pay us frequent visits, and even to dwell among us. This accounts for so much that is evil in the world.' Reformers who at this time thought that there were 'A great number of them.' The genii who work evil to men are part of these; and though dwelling in the forests and mountains, they have their real home in the air around us. They are the preventives of the peace of the 'Whirlwinds also, however small they may be, are looked upon as embodiments of evil spirits.

One of the chief demons of the earth is called Niatu-nara-buro, or 'Aunt of swamps or marshes.' And she, as her name implies, wears a water-cap, and, it is said, has often come to men in fens, moors, and other damp places. Very many of the evilly disposed demons, ghosts, and ghouls are thought to be her offspring, and those which owe their origin to her go by the name of Toi-kuru-pzini-shi, or 'The demon whose name was given to me by the demon of the swamps.' The following legend gives a fair idea as to what the people consider them to be like:

All ghosts are closely related to the demon of swamps. They are very large and have extraordinarily big heads, while their hair is always rough. When seen, it is nearly always bound to be standing up. However, when seen after dark, and are but dimly seen, one cannot tell exactly what they are like. When they reveal themselves, it is only in order to bewitch the eye, and so make their frightful appearance. They are considered the most dreadful creatures, and, as they are true demons, are much to be feared. They can sit down in the middle of the earth, and made finished making the world, He threw His mattsaw away among the mountains, and left them there to rot. But as they became decayed, they changed themselves into some other form. They should be carefully avoided, for if a person catches but a glimpse of one, possession immediately follows, even though the demons themselves should not see the person who has observed them. These ghosts walk only at night; it is, therefore, best for all people not to go out of doors after dark. Such, indeed, is the command of the ancients. Now, if a person should have the misfortune to meet one of these creatures, he should hasten to say the following words: 'O you demon, I have been desiring to see and speak with you for a very long time, and now at last we have fortunately met. What I wanted to tell you is this. At the other end of the world there is a certain demon called Maski-shishu-man, who has been most grievously backbiting you. He says: 'There is a demon inhabiting the marshes who is unceasingly proud. She had better be careful, for if ever I come across her path, I will give her such a sound whipping that she will never forget it.' Now, therefore, hasten away, for if he catches you, you will be imprisoned, and it will go hard with you, for he is a mighty one.' If one addresses the demon in this way, she will believe it and set out at once, filled with wrath, to take vengeance. These words are spoken to deceive the demon, and so frustrate her evil designs; and, unless they are said, the power of the spirit of the air will immediately fall down and die. So say the ancients. This legend, when stripped of all verbiage, and condensed in compact form, was related to the writer by an Ainu thought, shows the demon of the swamps to be merely malaria and ague personified.

After the evil principle which is supposed to reside in marshes, the chief of the demons appears to be one called Kina-shut-un-buro, or 'The person dwelling among the grass roots.' The demons which follow are very difficult to define,
and are very numerous. *Toi-pok-un-chiri,* i.e. 'The underground bird,' is especially called upon for help by hunters in times of danger; but whom he represents, no one appears to know. Akin to *Toi-pok-un-chiri* is the *Toi-kunrari-mat,* which is associated with his wife *Toi-kunrari-mat.* These names mean *'He (or She) close upon the surface of the earth.'* These two are looked upon as the friends of hunters, and are called upon in times of danger. *Chiwash-ekot-mat,* who stands first in order, is said to be the demon who causes stones to roll down the cliffs and mountain sides. These are but classes of demons, for such creatures are very numerous indeed. They inhabit all kinds of places, such as the tops and bottoms of mountains, the flat surfaces of rocks, all kinds of flora, stony places, and localities where dust or sand prevails. The winds also have their demons, good and bad, and so have rain, mist, snow, hail, sleet, frost, ice, etc. (see A.F., ch. 51).

21. Gods and demons of the sea and rivers.—All the larger kinds of fishes and sea animals have divine honors paid to them, in the shape of totems, animal deities, sea-lions, sword-fish, salmon, trout, sea-tortoises, and so forth. These are all worshipped. So far as one can learn, the principal deities of the sea are as follows:—*Rep-un-riri-bota* (the god of the sea), and *Winun-nun-nun,* who receives the offerings. Whenever he allows himself to be seen, it is said to be in the form of a whale. He is looked upon as the head of all sea-deities, and has many servants, of whom the tortoises and the albatrosses are his favorites. Prayers are said to this god quite frequently, and the two servants just mentioned are said to act as go-betweens. Messages are conveyed through them and offerings of fishes and beer are sent by them to him. The heads of these creatures are often to be seen kept as charms, and worshipped by the fishermen. The deity who is supposed to be next in order is called *Kai-pe-chupka-un-kuru,* i.e. 'The person who resides in the eastern surf.' As the name implies, he is said to have his home somewhere near the shore towards the east. We are informed that in bodily form he is like a large fish of some kind; but what kind of fish he is, is not now known. He is supposed to be very good, and is therefore often worshipped, and given presents of fetishes and beer. The spirits next in order are the *Shi-acha* and *Mo-acha* mentioned in § 18.

22. The demons of diseases.—Although, as was shown in § 20, many demons are supposed to have their origin and homes in marshes, yet the Ainus believe that demons of disease come from the sea, as the following lore shows:—

*Various diseases from time to time attack the body. Such, for example, areague, fever, heavy colds, stomach-ache, and consumption.* When these complaints arise, the men should meet together and go to the villages up and down the rivers, and bring back to the house as much tobacco, oolun-cabbage, and cow-parsnip. These should all be brought to an appointed place, where the men should come together for prayer, they should carry them to the seashore, and, having made fetishes, reverently place them by their side. When this has been done, they should pray, saying, 'O ye demons of sea harbours, have mercy upon us! O ye demons of disease, ye are fearful beings; we have, therefore, with one accord met together and decided to enrich you with fetishes and various kinds of food. Do ye wait upon those of your kind who have afflicted us, and on our behalf extirpate them to take their departure. We present these articles of food for you to eat, and the fetishes are paid as fines. O ye demons who watch over the harbours, cause all disease to be taken away from our village.'

23. Fetishism.—The specific doctrines of Ainu religion bear no relation to the nature of their supposed superior spirits being such as that now stated (see especially §§ 10-13, 16, 17), the way to fetishism is short, direct, and logical. But fetishism in its term with its difficulties, and the confusion of thought, be defined before going further. This name is a Portuguese term derived from *fetisgos,* and has long been in use in Portugal to designate the relics of saints, and other objects of worship that by the Roman Catholics. It was applied by Portuguese merchants to objects of many varieties to which the natives of the West Coast of Africa paid religious honour.*
Ronquetti's Portuguese Dictionary *félicios* is explained by the French equivalent *sortilege, malédicte, enchantement, harrane*. The term *Félichisme*, as the name of the corresponding religion, was first employed by President de Brosses in his *Du culte des Dieux Féliches* (1790). Among the Ainus a fetish is looked upon as a spirit, and is said to be 'born' by a person by which one spirit (romat, see § 15) is caused to act upon another for good or ill. It may be, and often is, by way of courtesy called a *Kornut* ("deity"), but it is only a deity of a lower order, and slightly used as a go-between. Thus, for example, should a man desire to worship a good river deity or to propitiate an evil one, or should he wish to harm another person or have him blessed, he would make some fetishes out of sticks of wood or other substance and send them with messages to the gods or demons. This is the use of fetishes among the Ainus. They may, therefore, well be called media, for they are just as much media as persons who take verbal messages from one to another. The term by which the principal fetishes are known in Ainu quite agrees with this definition. It is *ina*, i.e. 'message-bearer.' Its roots are *ina* ('message,' 'request'), and it appears to lie at the root of the word for prayer, which is *inono* in Ainu and *inori* in Japanese. It is curious to remark that in ancient Japanese *inori* meant 'to carve.' As the word conveys this meaning, we are not at all surprised,—may, we should rather expect to find Ainu fetishes used for both good and evil purposes, and sent to gods and demons alike.

24. Fetishism in Ancestor-worship.—One of the most important and relatively highest fetishes the Ainus possess—and every family must have this one—is called *Chisi ororo ino* ('the fetish which possesses the house'), also called *Chisi orongike chishi* ('ancestor, keeper of the house'). It is the province of the spirit of this fetish to assist the goddess of the fire in looking after the general well-being of the family. His special abiding-place is in the sacred north-east corner of the hut, at the back of the family hearth. He is not only worshipped where he stands, but is also sometimes brought out from his abiding-place and stuck in a corner of the hearth, where prayers are given and incantations addressed to him. This is done of fire, which in its turn is called the 'ancestress,' i.e. *fuji* or *huchi*. The way this fetish is made is as follows: A piece of hard wood, such as lisc, say an inch or two in diameter, is taken. This is to form the stem, and is usually about two feet in length. One part is shaved with a sharp knife from top to bottom to represent the front. Near the top a gash is cut across in imitation of a mouth, and a little below this the so-called heart is carefully bound in. This heart, when first given to it, consists of a warm black cinder freshly taken from the hearth and firmly tied with a string made of twisted willow shavings to the stem, which is called the *medora*, i.e. 'body.' After the heart has been bound in, a number of willow shavings are hung all round so that the stem with its mouth and heart is quite hidden from view. After it has been respectfully made, it is reverently stuck in the ground by the fireside, and the following dediatory prayer is devoutly said to it: 'O fetish, you are henceforth to reside in this house under the goddess of fire; you are her husband, and your place will be in the divinest sort; I hereon beseech you to help her to watch over us, and do you bless us.'

All this reminds us forcibly of the *Lores* and *Penates* of the ancient Romans, the one great difference being that the 'fire' and 'household' gods of the Ainus are more closely linked with the names. At the present day the Ainus do not seem to look upon this as ancestor-worship; they do not, indeed, know what it is. But the names given them go to show that in its origin it was such.

A curious thing about the fetish is the fact that it is thought to be connected in some psychological way with the present living head of the family in which it has been dedicated. The following piece of lore explains this:

'The chief fetish should be made, in so far as its stem is concerned, of lisc, because this is kind of wood and does not quickly decay, even if stuck in the damp ground out of doors. It is not considered wise to use any other wood than lisc for this purpose, for in old times a certain man made one of *cer Sidphilm*, the end of which rested after a short time, so that it fell over. Not many months after, the owner himself became weak and died. This was owing to the influence of the fetish having been withdrawn. For this reason it is now known that the stem should be made of lisc only, that being the most durable wood of all. However, should a person happen to be in a place where he cannot obtain lisc, he may use either willow or *Saridphilm*, but these must not be kept long for fear they should rot away. When they become a little old, they should either be cast out away into the forest or reverently burnt upon the hearth before they have a chance of decaying. Others should then be made in their place.'

THE STEM.

THE HOUSEHOLD FETISH.

25. Ancestor-worship in general.—Prayers to the dead form a fairly strong feature in Ainu religion. The necessity for them is taught the people thus: 'A person cultivates a spirit of selfishness, and offers nothing by way of food and drink to his deceased ancestors. The elders of the people should warn him, saying, "Foolish and wicked person, thou art a fool, and thou dost not understand; thou shalt die a hard death." If this be said, all the people, young and old alike, will be careful to worship the dead.' Another short counsel runs thus: 'Should a person leave his home and go away and die in a strange land, some of his relatives must surely go to his grave and there worship and offer libations. The dead observe all deeds, good and bad. Those who do what is right are blessed, and those who do what is evil are cursed by them.'

Women are not allowed to take part in religious exercises in so far as the deities are concerned, but they are commanded to make offerings to their deceased husbands and ancestors. The words they are usually taught to say on such occasions are as follows: 'O ye honorable ancestors, I am sent to present this beer and food to you.' On being asked why this ceremony should take place, an Ainu gave this piece of lore:

'The divine lady said, 'If the people do good while upon the earth and not evil, though they die young they go to heaven. When there, they have good hunting.' It is good for people on this earth to offer those who have gone before us such choice food, beer and, less. Not to do so shows lack of filial respect. Those who have departed will, upon careful thought of those in interest in those behind them. They should, therefore, be reverenced; unless respect is paid to them, they will come to this earth again and bring misfortune. Also death is not the end of the world, for your ancestors. This will please them, and they will send you good health and prosperity.'

The ceremony of ancestor-worship is called *shimurappa*, i.e. 'libation-dropping,' and takes place outside the huts by the east-end window and a little towards the west. Fetishes and beer are offered, and a prayer such as this said: 'O ye ancestors now dwelling in the world above, we offer you beer and less; receive them and rejoice.'
Your grandchildren have met together specially to offer these things. Rejoice. Watch over us, and keep us from sickness. Give us a long life so that we may continue to offer such gifts.

25. Private or tutelary fetish. — The fetish mentioned in § 24 was shown to belong to the family as a whole, but there is another very important one which is quite personal. It is always made of willow. Why it is regarded as of so high importance the following legend will show: "When God made man, He formed his body of earth, his hair of chickweed, and his spine of a stick of willow." And so, the backbone being regarded as the principal part of the human body, it is looked upon as the seat of life. It is said that no warrior of old could be killed unless his spine was injured.

When a child has been born, some very near blood relative of the male sex gets a nice clean stick of willow and shapes it into a fetish. When it is made, he proceeds to worship it, after which he reverently carries it to the bedside, and there sets it up as the tutelary deity of the child. The accompanying illustrations show what it is like. That marked (1) is the willow stick itself, and is called the ōkoto, i.e. 'club'; that marked (2) is the club with the willow shavings attached, which are called inao-kike, i.e. 'fetish shavings'; the bundle of reeds marked (3) is called kaua n-set, 'the divine seat' or 'throne.' The end is stuck into this so as to keep it dry, and thus prevent it from rotting. That this fetish may be rightly called the angel of the child's growth the following folklore makes clear:

"As the backbone of man is made of willow wood, the men should hasten to make ōkoto of this tree as soon as a child has been born. After it has been properly whittled, it should be addressed thus: "As thou, O fetish, art divine, we worship before thee. When God formed man in the beginning, He made his spine out of a piece of willow wood. We therefore call upon thee, O willow fetish, to watch over this child while he is growing up. Guard him and give him strength, together with long life." After this prayer has been said, the fetish should be reverently stuck in its "seat" and placed by the child's side. When the child has grown up, he should frequently procure beer and worship this, his guardian angel. As might be expected, this fetish is particularly worshipped in time of sickness by the individual for whom it was made. The following is a prayer taught some children for their use on such an occasion: 'O thou willow god, as thou art my spine and backbone, do thou hasten to heal me and make me strong. O thou dear deity, I am ill, and my body is weak; pray help me soon.' If this prayer is said devoutly, it is supposed that the sufferer will soon recover from his malady.

So, too, when older people fall sick, willow fetishes are made by the old men and worshipped, after which some of them are sent to the Creator and other superior deities with messages. And, when all is done, they are taken outside to the sacred place at the eastern end of the hut. Here they are carefully stuck in the ground, and libations of beer offered them. It is, therefore, not surprising to find that the Ainu formerly used to reverence the willow almost as much as the Papuans did the xaringen tree; who, as we are told, had such an affection for it that the wilder tribes of Ceram used to lodge, and almost live, among its branches (Barl, Pupuana, 116, 100).

27. Demon-worship. — The worship of demons is one of fear among this people, and is as a rule performed by way of propitiation. This becomes very clear when a certain kind of fetish called nite-hash-inai, i.e. 'evil fetish' or 'evil bush fetish,' is made and used. The purpose of it may be gathered from the prayer which follows. This kind of fetish is used especially in times of sickness, for on such occasions an afflicted person is supposed to be possessed by a demon of disease. It is called an evil fetish, not because it is itself regarded as being of an evil nature, but rather because the occasion on which it is used is a bad one. It is sent to the wicked demon of disease; this is why it is called evil. When it is made, a kind of stew called nite-hana, i.e. 'evil stew,' is prepared and offered with it. This consists of bones of fish, some vegetables, and the remnants of any kind of food, mixed together and well boiled. When all has been prepared, the fetish is stuck in the ground upon the hearth, and the stew, which has by no means an inviting smell, is placed before it. Then a so-called prayer is said as follows: 'O evil fetish, take this evil food, together with the disease of this sick person, and also the demon who has possessed him, and go with them to hell. When you arrive there, please make it so that the demon will not return to this earth again.'
haste and heal this sick person.' The man who
olicitates at this ceremony then returns to the hut,
where he again exorcizes the demon by brushing
the patient down with the tokua mentioned above.
Fetishes of the following shape are also some-
times used for this purpose. The present writer
has several times seen them set up in the huts of
sick people, and very earnestly worshipped. After
has the ceremony ended, the spirit of the fetish
is supposed to wander about in the earth and visit
the various demons of evil on behalf of the sick man,
and, after having found them, is said to consult with them as to what is
best to be done for the patient.
28. Special fetishes for epidemic
disease.—In the event of any village
being attacked by an epidemic disease,
but more especially if the disease be
of a severe and dangerous nature, as,
for example, smallpox, the Ainus of
the villages immediately surrounding
the infected one get sticks of chlor or
cadrastis, about four feet in length,
and make them into fetishes or charms.
These instruments are called chikappo-
chiko-messu, i.e. 'little carved birds,' by
some, and vai-shuku-inao, i.e.
'thick club fetish,' by others. They
are also named koten-kikkuru-inao,
i.e. 'fetishes for village defence.' As 'club fetish,'
soon as set up they are devoutly wor-
shipped, when the people call upon them to drive
the dread disease away. They are supposed to
represent the eagle-owl, which is thought to have
power over this particular evil. The silt in
the top of the fetish given in the illustration is
said to represent the mouth, and the shavings left
on the sides are intended for feathers. Food is
sometimes placed in the month as an offering to
the demons to whom the fetish is sent. That
which the writer has seen consisted in one case of
putrified fish mixed with brimstone, and in another
of cynanchum Convallatum. It is said that the

Ainus

or oak—indeed, of almost any wood which happens
to be nearest to hand. When being set up, a good
representative prayer said to them runs thus: 'O
yo gods who govern the waters, O water deities,
we are now about to go fishing. Please accept
these fetishes and watch over us. Grant that we
may catch many fish to-day.'
30. Religious charms.—In so far as their purpose
is concerned, the dividing line between the fetishes
mentioned in the preceding sections and the various
kinds of charms in use among this people is not very
clearly defined, so that it is often most difficult to
distinguish between them; that is to say, he would
be a bold person who should venture to put his
finger first on one and say, 'This is a fetish,' and
then on another and say, 'This is a charm'; for
either may be both, and both either, according to
the time and purpose for which they are made.
The charms are very numerous, and are used for
many purposes. Among other objects, rocks in al
and also stones of various shapes and sizes may
be found employed both for purposes of personal
protection against evil, and as a means for work-
ing harm to others (AF, 306); the skins, bones,
feathers, and beaks of birds are sometimes kept
as love-charms (75, 76); snake skin is thought to be
a special talisman, energetic, if properly treated,
in working good in the storehouses and garden
seeds (209); birds' eggs and nests are special cereal
charms, while the heads of some kinds of birds are
kept and used for driving away disease (219); the
heart of the 'dipper' is a charm supposed to bestow
elegance and quick sight (336); bears' eyes swal-
lowed whole are said to produce long and clear
sight in hunters. The skulls of bears, foxes, bats,
falcons, owls, and the fore-feet of lures are all
also worshipped at times and used as charms
(AF, ch. 34). The horns of deer, and the stones
sometimes found in the bladders of animals, are
also thought much of as charms supposed to bring
good luck to the happy finder and possessor (401).
31. Magic.—Following close upon the subject of
fetishes and charms, and very nearly related to
these objects in principle and nature, comes magic,
sometimes called sympathetic magic. This has
been defined by Zimmermann as 'the attempt on
man's part to influence, persuade, or compel
spiritual beings to comply with certain requests'
(Spirit; § 12, and that all things are
supposed to have spirit in them, and remembering
the definition of Kamui (God) and the various
objects to which this term is applied (§ 4), and not
forgetting the fact that the Ainus do not so much
worship the visible objects to which their prayers
are addressed, as pray to the spirits, good and
evil, supposed to animate them, we find this
definition very apt in so far as this people is concerned. The Ainu terms for magic are iehakara, i.e. ‘a shutting up,’ or ‘enclosing in a fence,’ and irishikina, i.e. ‘binding up tightly,’ and it usually implies the binding together with a cord of two objects, a person and some selected fetish supposed to be evil. The following are some common methods in vogue among the Ainus of practising this form of magic. They make a muddy decoction of mugwort or straw, then cursed and either buried head downwards in a hole in the ground or placed under the trunk of a fallen and rotting tree. This kind of effigy is called inako, i.e. ‘the image.’ When it is buried, the devil should be called upon to lay hold of the soul (ramat) of the person it is supposed to represent and take it to hell. By this act it is supposed that the person will sicken so that his body will gradually die as the image decomposes (AF, chs. 30, 31). Sometimes the effigy is found to be not buried but fastened to a tree with nails or wooden pegs driven into its head and other parts of the body. Again, another piece of magic is to take a guelder-rose and ask it to depart at once with the soul to the region inhabited by the demons. Sometimes a little boat is made of rotten wood, and the effigy of the soul is supposed to be in it and laid on an image supposed to be a demon. When made, the demon is worshipped and asked to row the soul of the cursed one to hell. Sometimes, again, the head-dress of a person is taken, wrapped up in a bag in the shape of a corpse proper to be buried, and placed in a hole in the ground to rot. It is supposed that as this decomposes, the enemy to whom it belonged will sicken and die. The demons of some kinds of trees are also at times asked to curse enemies by seizing their souls and turning them into devils.

But magic, as one would naturally expect, may also be used for good purposes. Thus, for example, upon returning one very cold night from a journey with the Ainu head of a family, we found some convolulus roots set up in a warm place before the fire upon the hearth. Upon making inquiries as to the meaning of this, we were informed that it was intended as a charm to prevent our feet from being frozen during the journey. Of the frequent use of trees in magic, a full account may be found in AF, ch. 30; cf. also pp. 315, 326.

32. Bewitching, divination, and exorcism.—That bewitching people, exorcising demons, and finding out things by divination are integral parts of Ainu religious superstitions cannot be doubted. A case of bewitching, by cutting holes in the garments of another person with a pair of scissors, which came under the writer’s own observation, will be found in AF, p. 541 ff. Similarly a case of divination, by means of a fox’s skull, is recorded (ib. pp. 320, 379 ff.). A case of exorcism by means of a tree, together with cutting clothes and beating with mugwort, will be found described on p. 315 of AF; while an account of a curious method of exorcizing the demon in madness, by cutting their bodies with a sharp stone, shell, knife, or razor, and then thoroughly dippings them in a river, will be found set forth on p. 512. Cats are supposed to bewitch people in some instances (294, 507); dogs in some (507); and birds, such as the cuckoo, woodpecker, night-hawk, goat-sucker, and owl, in others (409); while such animals as hares (315), squirrels (500), otters (312), and various kinds of fish (500) are also supposed to be bewitched. There is no reason to suppose that there is any living creature in the earth which cannot bewitch, it should desire it to do so.

33. Tree-worship.—The Ainus suppose only that every tree has its own personal spirit (ramat), but that the roots also, the stem, bark, wood, heart, forks, knots, buds, leaves, twigs, crown, and every other part as well, are themselves each peopled with innumerable spirits, some of a good, and others of an evil, disposition. Thus the willow is regarded as a deity, and as such worshipped, has already been shown in § 25. Other kinds of trees also, such as the acridaria and grape vines, which are made offerings to in Paradise (156–158), dogwood, oak, spruce, spindle—wool, prunus, hornbeam, black alder, lilac, magnolia, yew, ash, azalea, cedrilliphium, chestnut and mulberry, and others, are all worshipped on occasion (580). Some of these, as has already been shown in §§ 31, 32, are also used in curing people and for the purpose of witchcraft, being at such times entreated to bring misfortune to one’s enemies. For this purpose the guelder-rose, alder, poplar, elm, birch, hydrangea, and walnut are particularly employed (381, 332, 281). There are, however, other purposes, and those good religious ones, to which the Ainus put the guelder-rose and the other trees. The bears applied to this cult is Ki-o-chipsakuma, i.e. ‘the doctrine of the mountains,’ and this particular part of it is named Chikuni-akashirikuru orusake, i.e. ‘with heads of stone’; regarding this the Ainus say: ‘When those Ainus who are acquainted with the cult of the mountains are about to start on a hunting expedition, they first, after having worshipped at the massa’ or altar, go and select a suitable tree and worship its spirit, saying: ‘O thou great possessor of the soil, we are about to go and kill animals, pray help us; O see that we meet with no accidents, and prosper us.’ After this they have done, they set out fully expecting to come across various game animals. The tree-worship in its baldist form (cf. also § 26), and we see by it that the hunters regard the tree genii, for the time being, as their tutelary deities and guardians. In times of sickness, also, trees are worshipped. On such occasions the tree genii are called upon under various names, as, for instance, Topochi, ‘the wise one,’ and Shirampa, ‘the one upon the earth.’ Or, in case of an attack from a bear or wolf, they are worshipped under the name Naskrange guru, ‘the person of the standing tree,’ and Kisara-range shinsurupa Kanumi, ‘the precious demon of the rough bark’ (AF, ch. 33).

34. Cereal-worship.—Like trees and other vegetable life, cereals also are supposed to contain living spirits (ramat), some of which are thought to be of the masculine and others of the feminine gender (AF 294), and the worship of them often takes place. Never are the garden sown with seed without prayer being first made to the Creator (see § 5), then to the sun, and lastly to the very seed itself. Many years ago, Cicero asked, in his de Natura Deorum, whether any one was mad enough to believe that the food we eat is actually a god. The Ainus would answer, ‘Yes,’ and ‘What else, indeed, can it be?’ The prayer used at the ceremony of eating new millet at the harvest thanksgiving is very interesting, in that it allows clearly that it is the spirit of the food partaken of that is worshipped, and not God, the Giver of all good gifts. The prayer runs thus:

‘O thou cereal-deity, we worship thee. Thou hast grown very well this year, and thy favour will be sweet. Thou art good. The good gods will give thee a happy harvest, and rejoice greatly. O thou God! O thou divine cereal! do thou nourish the people.’ The person who officiates then continues, ‘I now partake of the cereal, and worship it. After having thus prayed, the person present take a cake and eat it among themselves at this time in the spirit of common food. Commenting on this, Aston says (Shinto, p. 100): ‘Gratitude in the first place to, and then for, our daily bread, is an important factor in the early growth of religion. Without it

See illustration under § 27.
AINUS

we should have had no Roman Ceres, no Mexican Maize-god
Cushiel, and so Ukejomi!(cf. also p. 277, Nishida.)

But eating the god is by no means limited to cereals among the Ainus, for the bear sacrifice
contains of quite the same nature, to which subject
we shall now proceed.

35. The bear festival. — Although animals of
willingly had and birds also (see A., chs. 36—
39), even down to a tiny sparrow, are at times
first worshipped and then killed in sacrifice, it is
when considering this phase of the subject) to the
knowledge of the fact that no as much higher
expression of Ainu religion. The general name
given for 'sacrifice' is iyemande, which means 'to
send away,' so we must expect that when a living
object is sacrificed, the spirit is supposed to be
'sent' somewhere, and for some purpose. And
here it may be well to ask, To whom is the bear
sent, and why? To this question it must be
replied in the first place that, so far as can
be ascertained, there is now (whatever there may have
been in olden times) no idea of substitution under-
laying the practice; nor, secondly, is it peculiar,
for the people know nothing of the 'shedding of blood
for the remission of sins.' All thoughts, therefore,
corresponding with the old Jewish no sacrifice
must be left out of the question when considering
Ainu ideas concerning it. The very essence of
Ainu religion consists in communion with the
greater powers, and the people imagine that the
most complete communion they can possibly hold
with some of their gods—animals and birds, to
wit—is by a visible and carnal partaking of
their very flesh and substance in sacrifice. At
the time of offering, the living victim is said to
be sent to his ancestors in another place. Still,
at the same time, the bear festival is a kind of mutual
feast—a feast of friendship and kinship—in which
Bruin himself also participates. Indeed, the bear
is offered to himself and his worshippers in
common, and they are supposed to have a good
happy time of communion together. But as this
is a very difficult and, in some ways, a very im-
portant subject, it has been thought best to give
a simple description of the festival as now practised,
and let it speak for itself.

That the Ainu rear bear cubs in cages and often
pay them divine honours is a well-known fact.
The present writer once visited a place where as
many as ten cubs were caged. After they have
come to the age of two, or rarely three, years, and
it has been decided that a sacrifice is to take place,
the owner sends out an invitation to the people,
which runs thus: 'I, so and so, am about to
sacrifice the dear little divine thing from among
the mountains. My friends and masters, come
to the feast; we will then unite in the great
pleasure of iyemande, ' sending the god away.'
Come.' This is certain to be heartily responded
to. When the guests have all arrived, the men
make many fetishes (iniao), stick them in the
hearth, and perform worship. When this has been
properly done, most of the iniao are reverently
taken up and carried by the men to the nusa
place outside the hut and there stuck up. Next, two
long, thickish poles are carefully laid at their
base. The men now come reverently out of the
hut, ornamented with their crowns, and solemnly
approach the cage containing the bear. The
women and children follow singing, dancing, and
clapping their hands, for all are in anticipation of
having a jolly time. In some cases, after their
appointed place, all sit in a circle, the old men in
front and the women and children behind. After
all this has been arranged, an Ainu is chosen, who,
having approached the bear, sits down before it

*The same principle holds good with regard to cereals; see
§ 35.

and tells it that they are about to send it forth to
its ancestors. He prays pardon for what they are
about to do, hopes it will not be angry, tells it
what an honour is about to be conferred upon it,
and comforts it with the consolation that a large
number of iniao and plenty of wine, cakes, and
other good cheer will be sent along with it. He
also informs it that if it be a good and proper bear,
it will appear again later to be treated in like
manner. The last address we heard of ran thus:
'O thou divine one, thou wast sent into the world
for our festival that we may sacrifice to you. We
worship thee; pray hear our prayer. We have
nourished thee and brought thee up with a deal of
pains and trouble, all because we love thee so.
Now, as thou hast grown big, we are about to send
thee to thy father and mother. When thou comest
to them, please speak well of us and tell them how
kind we have been; please come to us again, and
we will once more sacrifice thee.' After such a
prayer the bear is taken out of its cage with ropes
and made to walk about in the circle formed by
the people. Here it is shot at for some time with
blunt arrows called hepeornei, i.e. 'sub-arrows,' and
so teased till it becomes quite furious. After
this the poor animal is securely tied to a stake for

the last scene before its death. This stake, which
is ornamented at the top with tufts of arundinaria,
is called tuh-kam-i, i.e. 'tree with rope affixed.'
After it has been further worried, a young Ainu
previously selected suddenly rushes forward and
seizes the brute by the ears and fur of the face,
while at the same time a second man rushes behind
and lays hold of its hind quarters. Next a third
man runs forward with a stick, about two feet
in length and two inches in diameter, which he
thrusts between the jaws of the cub. Next two
other men come and catch hold of the two hind
legs while others seize the forefoot. When all
this has been done, the two long poles which were
laid by the nusa, and which are called ok-nawabon-i,
i.e. 'poles for the strangling' are brought forward.
One of these is placed under the brute's throat,
and the other upon the nape of its neck. A good
shot with the bow now comes forward and shoots
an arrow into the beast's heart, and so ends its
short life. In some cases, after theirappointed
place before its head is placed between the poles.
But this seems to be the case only when the animal
is dangerous. Care has to be taken so to strike
the bear that no blood is allowed to fall upon the
earth. Should any be spilled, it must be quickly
wiped up with some of the sacred willow shavings.
Why the shedding of blood should be thus tabued no one seems to know.* In some instances, however, the men (particularly those who are hunters) catch the blood in their cups and drink it while reeking warm. This is said to be done with the object of thereby obtaining the courage and other virtues possessed by the victim. On one or two occasions some of the blood taken at a feast has been sent, sprinkled on paper, to sick Ainus staying in our house! It has been smelled and licked with great eagerness, the recipient expecting to receive great bodily and spiritual good from it. Indeed, even the writer himself has, to his great astonishment, had some reserved and sent him.

As soon as dead, the victim is skinned and its head cut off, the skin, however, being left attached to the head. This is taken to the east window and placed upon a mat called inao-so, and ornamented with shavings, ear-rings, beads, and other things. On one occasion the present writer even saw a Japanese mirror placed before it, and some old sword hilts and guards! After all this has been performed, a piece of the animal's flesh is cut off and placed under its own snout. This is called Not-pok-onow, i.e. 'that under the jaw.' Then a piece of dried fish called Sat-chep-shiko, i.e. 'the bundle of dried fish,' and a moustache lifter, with some millet dumplings, some strong drink, beast's snout, and he is then said to be partaking of the marapyo-itangi, 'the cup of the feast,' and ipumi-itangi, 'the cup of offering.' After a little time has elapsed, the man who presides at the feast says: 'The little guest has now finished eating; come, ye friends, let us raise a cup.' He then takes the cup, salutes it, and divides the contents—to every guest a very small portion—for it seems to be absolutely essential that each person should take a little. Other parts of the beast are stewed and eaten, while the entrails are cut up fine, sprinkled with salt, and eaten raw. This, like the drinking of the blood, is said to be for the purpose of obtaining the prowess and other virtues of the beast. For the same reason also some of the men besmear themselves and their clothes with blood. This latter custom is called yai-isho-nushi, i.e. 'beemauranting oneself with good sport.'

The head of the brute is at length detached from the skin and taken to the mussa heap, where it is set up upon a pole called Ke-omande-ni, i.e. 'the pole for sending away.' All the skulls of animals set up along with that of the betel nut—when there are many of them, are called Akoshirak-w Kamui, i.e. 'Divine preservers,' and are at times worshipped. The feast lasts several days as a rule; indeed, it is not quite common for the whole of the cub has been devoured and all the strong drink swallowed.

35. Totemism. — The word 'totem' is said to be derived from the Ojibwa (Chippewa) word totem (see EBr, art. 'Totemism'). 'As distinguished from a fetish, the totem is never an isolated individual, but always a class of objects, generally a species of animals or plants, more rarely a class of inanimate natural objects, very rarely a class of artificial objects.' Judging from the very few survivals of totemism still in existence among this people, and from their language, one is led to the conclusion that this cult never attained the proportions among them that it did among Africans, or South Australians, or the North American Indians. The Ainus, however, have some totems, and these are very seldom heard to speak of themselves or others as belonging to a bear, a wolf, a turtle, a snake, a hawk, or an eagle clan, and never of any vegetable clan. Still, there are some grounds for believing that their belief was, in the distant past, somewhat tinged with the totemistic superstition. But it was a totemism which differed from that of the Indians and many others, inasmuch as the Ainus in some instances think it a praiseworthy act to kill and eat their totem if it be an animal (see §33), and cook and eat it if it be a cereal (see §34; and cf. Af p. 206). According to the general ideas of totemism as preserved elsewhere, the totem was not to be so to be. For among the Indians it was thought that, the connexion between the man and his totem being mutually beneficial, the totem protecting the man and the man respecting the totem, it should not be killed if it was an animal, or cut if it was a plant. But the Ainus consider it a very great mutual benefit to kill and eat their totem where possible. Indeed, by feeding upon it they imagine they can get the closest communion with it,—their totem and their god,—sometimes, for example, the bear.

The clearest instance of a genuine belief in totemistic descent the present writer has ever come across among the Ainus was that of a young man who held that his forbears were, one or

* The same tabu is found in other religious systems, and seems based on the belief that the ground is rendered tabu by the sacred blood falling upon it (Gevora, Introduction to the History of Religion, pp. 72-74; Frazer, G.E. L. 178 ff.).
both, descended from an eagle. (The account of this will be found on p. 10 of A.F.). Just as the bear may very possibly have represented the national totem of the Ainus, so the present illustration may be an example showing the eagle to have been the totem of a family. An example of the individual totem is found in the willow tree, with which it is shown the Ainus consider themselves to be very closely connected (A.F. 365). The vines, grape and acanthus, used for ear-rings (150), also seem to have been looked upon as totems; while the images of foxes, wolves, birds, and fish sometimes found carved on the moustache lifters used by the men when drinking, and upon the crowns worn by them at their feasts (153-154), may point to clan totemism.

37. Ophalotry.—Although snake-worship is still practised to some extent among the Ainus, there is no sufficient evidence to go upon to justify us in saying that this cult ever attained such elaborate proportions of worship as that among the Danughve in the serpent's house at Daaloney,* or among the Indians, or even among the ancient Japanese.† Nevertheless, that which is now seen is probably the last remnant of what was once a somewhat complete system.

According to Ainu ideas, the first snake that ever was, belonging not to this earth but came down from heaven, though others of the ophidian tribe had their origin elsewhere. In this we are reminded of St. John in Rev. 12; and also of Zoroastrian mythology, in which Ahiraman descended earthwards in the form of a serpent.‡ But among the Ainus the original serpent is supposed to have been a great creature, and in this respect differs from that of both St. John and the Persians (A.F., ch. 32).

Indioa Kumi, or Image of Snake Used for Worship.

Serpents are worshipped most frequently at the time of childbirth, but especially when there is any difficulty in the matter. On such occasions the image of a snake, which is called Inoku Komui, i.e. ‘the divine image,’ is made out of sedge (Carex rhynchosphytum), worshipped, and then suddenly placed upon the shoulders of the patient. The reason given for this is said to be that, according to Ainu belief, all such difficulties are brought about by the king of the evil offspring of serpents himself; and they say that rather than propitiate the evil one, they should go directly to the chief serpent and ask him to keep his wicked subordinates in check and remove the evil they have done.

In cases of ague also snake-worship has taken place, as well as in instances of snake-bite. These reptiles are also sometimes worshipped as a means for curing people, being asked to bite one's enemies. The prayer said to them on such an occasion is as follows:—

`O snake, I have a word to say to you; pray listen. I have an enemy 50-and-twice seven. How long will he live? If you ever hear him coming along this road, please bite him, press him, poison him, and kill him. I will then make into oak of walnut wood, and also offer you many libations. Pay attention to what I say.'

* Bouyer, Edizioni of the African, p. 46.
- Hardwick, Christ and other Masters, p. 553.

Snake possession is called okokoko-parari, i.e. 'snake punishments,' and the women especially are very much afraid of it. There is no particular manner in which it shows itself, for almost any disease may, so they think, be owing to possession by one or more of these reptiles.

Ophalotry also appears to have left traces behind. The writer of this article once knew of a woman who professed to foretell future events by means of the image of a snake; the key to the house was 'stowed away in a box near by. She called it her guardian angel, and used to pray to it frequently. By its inspiration she professed to be able to tell the reasons for any strange cases she was afflicted with, and to discover the proper remedies for them. But, so far as we are aware, no one is concerned with, or heard of any Ainu, man or woman, who professed to predict future events by means of a genuine serpent, dead or alive, whether by its manner of eating or by its coils.

38. Tabu.—Besides the various small matters forbidden in relation to one's attitude towards fire (see § 17), the Ainus have other tabus of a religious and semi-religious nature which should be mentioned. Thus the blood of a bear must not be split at a bear-feast (see § 35); a woman must not pronounce the name of her husband lest she thereby cause him harm in some way (A.F. 273); the cry of certain birds, as, for instance, the cackoo, wood-pecker, night-hawk, goat-sucker, and owl, should not be imitated for fear of being bewitched by them (409, 427); at childbirth also cowado is practised, during part of which time the father of the child is forbidden to eat and drink except very sparingly; nor must he worship the gods, hunt, fish, or work till after the purification of the wife, which takes place on the seventh day after parturition (255-257).

39. The future life.—There is no idea more firmly fixed in the Ainu mind than the notion that the spirit is appointed to live for ever in another world—a world which, for the good, is the counterpart of this, only much better, and free from pain, and, for the evil, is dark, wet, cold, and dreary. The very word in use for the spirit (ranan) demands that such a place as heaven should exist, for a living being can neither, it is thought, lose his life nor get rid of his own personal property for ever (see § 13). But the spirit is there supposed to be clothed with a spiritualized body resembling the present, and to exist under like conditions to those of the present life. In this world spirit is the will which will live for ever. By the next world the spirit of a man is supposed to descend into the bowels of the earth (polka moshiri, "the lower world") when it leaves the body, though sometimes it may do so;* and, to hear the people talk, one might be tempted to believe that the Ainus think heaven itself to be in Hades. But, according to their expressed cosmological ideas, they really suppose there are six (A.F. 69) heavens above and six hells (kusa) below us, and that the best place is in heaven above and the worst in Gehenna below. Rasi oman, 'a going to the lower place,' is not the only term for death. There are others, such as 'to pierce the skies;' 'to make a clearing;' 'to have space to comprehend;' 'to sleep the other sleep,' and so on.

When a person is about to be buried, whether it be a man, woman, or child, the spirit is still spoken to as if it were present in the corpse, and is supposed to partake of the burial feast and to mingle with the

* Stories of supposed journeys to Hades may be seen recorded both in A.F. (570, 573) and in 'The Language, Mythology, and Geographical Nomenclature of Japan' in the Transactions of the Ainu studies, 'Memoirs of the Literature College, Imperial University of Japan, No. 1.
AIR and GODS OF THE AIR

The mourners. Many of the possessings belonging to the deceased, such as bows and arrows, clothing, means for obtaining fire, pipes, tobacco boxes, knives, cups, ornaments, and so forth, are killed (i) by the relatives, and sent to the other world for future use (AF 554-566). Huts too, which, as has already been pointed out, are supposed to be living creatures (117-132), are sent off to the other world by being burned; they are to carry the use of those who occupied them in this life.

40. The future judgment.—After death the Ainu assuredly look for judgment. All must appear, then, and be judged by God; the dead are in the presence of God when they are judged. But the judgment is said to be that of the other-self and the moral, while in the future world, that of the other-world, and not at all in the present world. 

THE other-self and inmioral while the dead are in the presence of God when they are judged. But the judgment is said to be that of the other-self and the moral, while in the future world, that of the other-world, and not at all in the present world.

LITERATURE.—No books have been specially devoted to Ainu religion, though notices of the subject occur in almost all works which touch upon the Ainus. In the year 1858, A. H. Savage Landor published his Alone with the hairy Ainu. This book contains very full notices on the matter, and, were all his remarks true to fact, it would be of the utmost importance. In ch. xxviii. Landor says that the Ainu recognize nothing as "sacred" and not as "profane." . . . The Ainu worship nothing . . . The Ainu have no religion . . . There is a sort of a vague "right" in the Ainu, as to what is not moral, for something new is given to them, and much more to the same effect. On p. 322, again, he says: The Ainu language is as poor in words as the Ainu brain has been in thoughts. Thus, what is the matter to explain to an Ainu what is meant by "religion," by "divinities," and by "worship." But the Ainu language is by no means so deficient in words as Landor imagined. Dobrovoljsky gives as many as 10,000 words and phrases in his Ainu-Furushon Shonen (Kanaz, 1872), while nearly 14,000 words are included in pitchetker's Ainu-Eng.-Jap. Dictionary (Tokio, 1905). Landor's idea of the Ainu as a non-religious people will not bear looking into.

A much less pretensions, but far more reliable, work on the subject of the Ainu, is that by J. Batchelor. In 1907, he edited and entitled Life with the Trans-Siberian Savages. This is a pleasantly written little book of 200 pages, and treats mostly of the different beliefs. The account he gives is very reliable for the statements of the Ainus and Urantus, which have been copied by Mr. Howard to be correct in his description and generally reliable in his definitions. Indeed, so much alike did he find the statement of religion and religious practices, that he was, by reading the present writer's work, The Ainu of Japan, and perceiving the difference in the wording of what he saw and heard on that island (Howard, p. 17),

Miss Bird, also in her very pleasantly written Unbeaten Tracks (Miss Bird, sketched, Letter 27, pp. 273, 277), speaks of Ainu religion. She says, There is nothing more vague and obtuse of cohesion than Ainu religious notions. They have no definite ideas concerning a future state, and the subject is evidently not a pleasing one to them. . . . such notions as they have are few and confused. All this is not quite correct; and it would be unreasonable to suppose that Miss Bird could— even had she claimed to do so—it the short three weeks she was actually with the Ainu, have explored every dark nook and corner in the mind of the people. She laboured under the greatest disadvantage, as she had all her information on second hand through a Japanese interpreter; and if there is any one thing the Ainus are naturally reticent and secretive about strangers, it is their religion.

AIR and GODS OF THE AIR

Here it is proposed to deal only with those invisible beings who are supposed to hover between heaven and earth,—that is, whose proper abode is the circumambient atmosphere. They are called Air-gods rather than the better-known English spirits, they being the real true celestial deities who dwell aloft in the ethereal regions, either in or above the blue vault of heaven, and have no direct contact with the earth and its enveloping waters. But the more is the less stable the elements, over fluctuating to and fro, with upward and downward contacts, and restlessly filling all the intermediate spaces, so that the world itself was by our imaginative forefathers called the middleaged—terra mediana—the middle-ground, the neither world, nor the other world.

Hence there are necessarily continuous overlapping and interminglings everywhere, and it often becomes difficult or impossible to draw a clear line between the aerial and celestial deities on the one hand, and the terrestrial and earth, and even the underground gods on the other. How true this may be seen in the protein forms attributed by the ancients to the Olympian Jove himself. As high Zeus, the father of gods, he also filled many other functions, as shown by such epithets as Χρῆσις, Όμορφος, Θάλασσας (Earth-, Rain-, Sea-god), while Homer speaks even of the Ἑλικοῦνθοι, the 'Underground Zeus' (H. ix. 157). So also his consort, the earth-goddess Dionysus, whose 'variations show how readily sky-goddess, sea-goddess, and earth-goddess might pass from one province into another' (A. B. Cook, CCE, April 1903, p. 187), and his subject is dealt with fully.

Of the aerial beings proper, such as those spirits dismissed by Prospero "into air, into thin air," or those others who on the beach margent of the sea . . . dance their ringlets to the whistling wind, or those again who hover there in the boundless air, the genesis appears to be twofold, as partly suggested in Heinshüter's oft misquoted epiphal (in his Lucian):

His due som homines: monæ, caæ, spiritus, umbra . . .
Quatuor has partes tota loca suscipient.
Terra terga carnem, tanum cinnamolat umbra, \(\text{Orca eburnae, suas vellit spiritus,} \)

First come the monæ, a euphemistic expression meaning the 'Good Ones,' like the Greek εὐγενεῖς, the 'Well-disposed,' and the Irish Dáine Mótha, 'Good People,' i.e. the mischievous fairies who would resent being spoken of disrespectfully. These monæ, originally the ghosts of the dead, and worshipped by the greater part of mankind as a sort of protective spirit, have, as we have seen, been wafted aloft as the 'other-self' (spiritus), and fill the aerial spaces with good and evil genii. (For these distinctions between the personal soul and the other associated entities, see art. ETHIOLOGY, § 4.)

Here it should be noted that the umbra—the human shadow—was originally regarded as a distinct being, and the belief in its survival even after the body and the personal consciousness have been extinguished, is, in saying, 'No man can escape from his shadow.' So also Lucian: They (the shadows), when we die, become accusers and witnesses against us, and convicts of crimes perpetrated during life, and they have the reputation of being exceedingly trustworthy, since they are always associated with and never separated from our bodies (Menippus, or the Oracle of the Dead in H. Williams' Lucian, p. 1).

Naturally these arbiters of human destinies eventually received divine honours, although it was found impossible to assign any fixed abodes either to them or to the other spirits of the air belonging to the first category, these being embodied representing departed souls and their concomitants. They are, however, very numerous, and the Talmudists, who have taken the trouble of counting them, find that the dead ones (only about 7,406,000) are vastly outnumbered by the god, who are roughly estimated at 1 quadrillion, 64 trillions, and 340 billions.

If so numerous, the aerial gods belonging to the second category, i.e. those derived directly from the air itself, may be regarded as by far the more important of the two classes. These may, by contra-distinction, be called the Wind-gods in a pre-eminent sense, and among them must be included the winds themselves. Thus the very
AIR AND GODS OF THE AIR

first of the six groups mentioned by Ephraimides are the winds: 'Ο μέσον ἐνιαύξησις τούτος θεὸς εἶναι Μέγας Πνεύμονας, p. 161 (Pollux, Floril. xxi. 29), and the delineation of the four quarters whence blew the chief winds formed the very basis of the religious systems of many primitive peoples.

This especially the case in the New World, where he Virginian Algonquians had only five gods, and of these four were the 'Four Winds which keep the four corners of the earth' (see art. AMERICA). Condiminuous souls lived for the four deities of the cardinal points, the fundamental idea being that they are the props of the universe, controllers of the seasons and the weather, and senders of rain and sunshine, on whom, in fact, all good and evil things depended. Hence in Hiawentha (xiv):

Mitche Manito the Mighty, Be the Master of Life, was painted 
As an egg, with points projecting, 
To the four winds of the heavens; 

and to him is appealed:

Mitche Manito the Mighty, 
Be the dreadful Spirit of Evil, etc.

Ratzel, a leading authority on these questions, remarks concerning the place held by the winds among the precursors of creation, based upon the association between breath (or soul) and wind, the pervading sanctity of the number four in the quarters of the heaven, and generally the elements of astronomy and meteorology are alike conspicuous. The Winnebagoes [a Siouan people] say that the Great Spirit created four men and one woman, and that the former created the four winds, the latter everywhere they are among the beneficent creative spirits, and often they precede in time even sun, moon, and stars. As to the sun, so also to the four quarters of the world, tobacco is offered from the sacred pipe. The winds, as messengers of the sun, who bring rain, growth, and refreshment, have their share of veneration next after the moon. We further meet with four servants of the Mexican Air- and Sun-god (Quetzalcoatl), four supporters of the earth, who survived the deluge, four corners of the world— whence the Sioux get their pipe of council, four brothers who produced the floor [read vault, sky] as in the Arawak legend, and so forth. Hence developed the universal notion of the sanctity of four and its multiples, and hence the cross on American monuments (Hist. of Mankind, i, p. 146).

In their creation legend the Hare Amerinds, members of the Race of the Hare, who in their mythological brothers— the Father—dwell overhead, and the Mother underneath, while the Sun moves up and down in mid-air between them, and thus becomes an aërial god. One day, during his wanderings in the heavens, he noticed the earth, a mere island lost in boundless space, and thereupon cried out: 'O my father on high, kind thy heavenly fire for my brothers on that little island who have long been unhappy. Look on them, father, and take pity on them. Then the sun became the day-star, and gladdened the sight of mortals. Amongst other Amerinds the encompassing air is peopled, not by pure spirits, but by disembodied souls, which flit about, for example, above the Chiloé Islands, while in French Guiana, the Ruyenne Caribs send the good to the haven of bliss and envelop the wicked in the clouds as in a kind of purgatory.

In the myths and traditions of the Hopi (Moqui) Puebloans, leading parts are played by the great cloud-god Cotokimunwa, who dwells in the firmament, and by the four quarters, which have their special deities and are inhabited by man, and the Wolf—for X., W., S., and E., with the corresponding colours, yellow, green or blue, red, and white for the several cloud-gods. Thus, in the myth of the Maiden and the Coyote, the Yellow Cloud Chief, the Blue Cloud Chief, the Red Cloud Chief, and the White Cloud Chief play their parts, to win the heroine of the story, but all without success (H. K. Voth, The Traditions of the Hopi, p. 157).

But it was in Mexico and Central America, where astronomical lore had made such marked progress, that these notions acquired their greatest expan-
sion and almost formed the very framework of the more advanced religious systems. Everywhere the tocalli (temples always erected on pyramids) faced the four cardinal points which supported the heavens; in the Aztec cosmology one of the four cataclysms was caused by the air; and Orozco y Berra identifies Quetzalcoatl himself with el dios de los vientos ('the god of the winds'), since he was often represented as moving through the air laden with a wind-bag which was always inflated with destructive gales, and he was born of the cloud-snake Mixcoatl, or at least of his consort Coatlicue—at the of the 'snake-robe.'

To Quetzalcoatl corresponds the Kukulcan of the Mayas, a universal deity of many functions, enthroned on the cloud of heaven and on the cross-shaped tree of the four points of the compass, also figured in the classic pictorial codices of Mexico, who was the messenger of the air, above rain, storm, and the death-bringing clouds from which the lightning falls. He is associated, too, with the four colours—yellow, red, white, and black—each corresponding to a quarter of the earth (see above), though in a different way, correspond to the cardinal points—yellow, air; red, fire; white, water; black, earth. 'Kukulcan,' writes Dr. P. Schellhas, 'is represented with all the four cardinal points' he appears as ruler of all the points of the compass; north, south, east, and west, as well as air, fire, water, and earth are subject to him (Deities of the Maya MSS., p. 17). Here we see the interminglings of diverse functions and provinces above referred to. It may be added that Kukulcan shares his many-sidedness with three other Maya gods, one unnamed who is connected with the symbolic colours of the cardinal points, a second the war-god, of frequent occurrence in the codices, and a third identified by Förstemann with a storm-deity, whose features are intended to symbolize the blast of the tempest. Thus each of the four winds would appear to have been originally defined, or precipitated over by natural winds whose functions and ethereal realms afterwards became confused.

Lastly, the Chichimihuado, one of the most esteemed Maya-Quiche nations of Guatemala, paid special homage to the four wind-gods, to whom even human sacrifices were offered. 'Sánchez y Leon states that the most usual sacrifice was a child. The heart was taken out, and the blood was sprinkled toward the four cardinal points, as an act of adoration to the Four Winds, cool being burned at the same time as an incense (Historia de Guatemala, quoted by Brinton in the Annals of the Cathohc Church, p. 45).

In Madagascar the Four Winds are, or were, fully recognized, and, as amongst the northern Amerinds, worshipped in their order next after the supreme deity. Little is now heard of them, and they are scarcely mentioned in the missionary records; but in Robert Drury's time (early in the 18th cent.) they were invoked in all solemn oaths, thus: 'I swear by the great God above, by the Four Gods of the Four Quarters of the World, by the Spirits of my Forefathers, that,' etc. (Journal, p. 103 of Oliver's ed.). And Drury tells us that at their meals the people 'take a bit of meat and throw it over their heads, saying: "There's a bit for the Spirit." Then they cut four more little bits, and throw to the lords of the four quarters of the earth' (ib. p. 280).
AIR and GODS OF THE AIR

It is, however, to be noted that this belief may have been introduced by the later (Hova) immigrants from Malaysia, where the worship of the wind has a similar origin. Other influences are also felt. In the island of Bali, east of Java, where alone Brahmanism and Buddhism still persist, the four have expanded, as later in Greece (Athenian democracy), to eight gods or demi-gods of the Rānyūna—Indra, Yama, Sūrya (for Nirritī), Chandira (for Ishāni), Amla, Kubera, Varuna, and Agni. Of these, however, only three—Indra, Yama, and Varuṇa—have become the principles of the forms of Siva, and since in Bali the worship of Siva has in a way absorbed that of all the other gods of the Hindu pantheon, the eight cardinal points themselves are now also attributed to corresponding forms of Siva.

Of the three specially mentioned, Indra has been raised to the heights of Olympus, just as Jupiter has become a chthonic and katachthonic god (see above). Nevertheless, it would be incorrect to regard Indra as the supreme object of adoration in the Vedic system, and he still remains a true rain and air god with his cortège of maruts and storm deities, since his heaven (Indruloka or Svarga) lies between the earth and the Viergottacht, or breath of Siva, where at last the souls repose and receive release from transmigration. In fact, Svarga still has earth contacts athwart the empyrean; its inhabitants are liable to become mortal again, and Indra is one of those divine devas who need the word śrutā (ambrosia) to keep them alive, yet may still be attacked and vanquished by demons, or by assoctes who acquire supernatural power by themselves.

In North Celebes the four wind-gods are held in honour, and play a great part in the local cosmogonies.

Lūminūt, mother of mankind, met the rock-born priestess Keceria, who ordered her to turn her face to the south. While she did this the priestess prayed, "O Cause of the East Wind, fertilize this woman." Lūminūt, however, perceived nothing. Then, on the command of the priestess, she hurried to the east, to the north, and finally to the west, and each time the priestess prayed that the deity of the wind would fertilize her. Her prayer was answered, and Lūminūt by the god of the west wind begat a son named Toar. When Toar grew up, Keceria took the axe, one of the psalms called aza and cut the stem of the same length gave one (tula) to Toar and one (aza) to Toar, and in the one are two of the same length. This is the mother and son, but if one is longer than the other come to me immediately st. Toar, the one must be cut from the stem, but if the two are the same length, let me know."

One day, however, but after a time Lūminūt and Toar met without knowing one another, and on measuring sticks they found that Lūminūt's was longer than Toar's, for the tula stick had sprouted out and grown. Thereupon they returned to Keceria, and when she had measured the sticks she said, 'You are not mother and son, therefore you must become man and wife. Be fruitful and populate the earth.' So Lūminūt and Toar begat many children, twice nine, three times seven, and once three. The three are the Pasajowan, of whom one was the priest at Warendukan to the air; from the other two the people of Minahassa (North Celebes) trace their descent. This legend of the origin of the earth and its people is full of interest to the student of cosmology. The observation of the occurrence of the sun by the god of the West Wind exhibits traces of the very common myth of the marriage of Heaven and Earth. Lūminūt is the earth goddess, the fruitful mother of all things; the West Wind is the one which brings the rain and fertilizes the earth (S. J. Hickson, North Celebes, p. 24).

In Celebes, besides the four wind-gods, there are numerous aërial beings, which are somewhat vaguely described as 'free wandering spiritual forms of various ranks, powers, and capabilities for good or evil, who are distinguishable from the spirits by which certain trees, rocks, waterfalls, and other objects are supposed to be animated, and, as the religion of the Minahassers was a different to the feudalism of the Japanese' (ib. p. 547), it may be conjectured that the wanderer-spirits believed to be disembodied souls of the dead rather than spirits derived directly from the air. This view is strengthened by the further statement that the spiritual world is inhabited by the souls of deceased chiefs, who live for ever 'in the form of wandering ghosts having no number of material forms or experiences. They believed in a series of ancestral ghosts of the rank of first-class gods, and in a crowd of lesser deities, protecting spirits and others. These the Minahassers called Empung, the generic name for the gods, but literally meaning a 'grandfather' (cf. the African Munkukunku, which has the same meaning), it is obvious that ancestor-worship prevailed over pure psycho- logical in Celebes, and the belief that spirits dwelt to a great extent in the ethereal regions. In fact, four heavenly villages were expressly set apart as their residence, and these villages—Kasooman, Kalawakan, Kasomkan, and Karon- doran—were so contiguous to the earth that formerly the empungs would often return and mingle with mortals, rich blessings ever following in their footsteps. In these celestial villages rice was grown, and it was from this source that the cereal now thriving in Minahassa was originally procured.

Now, the return of the departed spirits is dreaded, and at funerals the relatives blacken each others face with ash. There is another spirit called wuweuringan, and the object is to prevent any recognition by the ghosts who may be hovering about the graves or returning to their former abodes. Obviously for the same reason black peoples, such as the Australians and Andamans, often try to disguise themselves by dabbing their faces with white lands or patches, and white is the mourning colour in China. On this subject Hickson aptly remarks that 'whatever they may be intended to express in civilized communities, there can be little doubt that the customary suits of solemn black originated, not in grief or respect for the departed friend, but in the fear of his returning spirit. At the funeral the priest drives it away with a sword, and the maiden who sits upon the bier (in Minahassa) frightens it by the sound of bells. Then everything is done to confuse the spirit if it attempts to return to its accustomed haunts. The ghost is always supposed to come back to the house by the same route by which the corpse was taken away. We can see the reason, then, why the corpse is set down through a hole in the floor and carried away. It is a form of conveying the spiritual being to the grave. The spirit is so much more perplexed in finding its way back home by this circuitous route. Then, again, the nearest relatives do not attend the funeral, in order that the ghost, if it is hovering around, may not suspect that it is its own funeral that is taking place. Care must be taken, too, that if the spirit should return to the house, it should not recognize the inmates. The friends and relatives, therefore, disguise themselves by painting their faces black [the Minahassers are Indonesians of a light brown or cinnamon colour], by wearing black hats, leaving their hair loose and unkempt, and in other ways. It must not be supposed that black is the universal mourning colour. Among white and fair-skinned people it naturally is, because it affords them the most effectual disguise. Among the black-skinned Andamanese is the mourning colour. They paint themselves with stripes of white paint. The Spaniards at the time of the conquest of the Philippines found that many of the inhabitants used white as a mourning colour. Many of them say, 'That the spirits of Luzon", the Sinul islanders shun white to the present day for this purpose' (op. cit. p. 299).

Another curious survival—the almost universal custom of whistling for the wind—finds its explanation in the Minahassers' belief in the presence of the spirits of the living as well as of the dead may at times take refuge in the surrounding atmosphere.
is especially the case with sick people, whose ailments are supposed to be caused by their spirits leaving the body and fluttering about somewhere in the neighborhood. Then the waliain (priest or shaman) is sent for to diagnose the patient, who is often laid in a village yard from early morning until dusk to look for his soul. ‘They make a fire in a likely spot, and entice the spirit back by cooking rice and chicken, or by whistling and calling as they would for a dog, whilst the priest goes through the usual priestly and religious ceremony.

This goes on for some time; a rich patient who can afford many chickens has usually to wait a longer time for his spirit to return than a poor man. At last the waliain sees it! It shows itself clearly here or there by a movement in the grass or by some other sign. The waliain advances with the greatest caution, and catches it in a sarong (the broad Malay cloth worn as a wrap), just as a schoolboy catches a butterfly in his hat. They now turn homewards; a child leads the way, carrying a woka leaf (Livistonia) to prevent the priest and spirit from getting wet; the priest follows, carrying the spirit and the other priest armed with sago-sage and mumu [swords and sticks], which he swings backwards and forwards to keep away the spiteful sabits [demons of the air] who wish to recapture the patient’s spirit. When the specialist opens the chamber, the priest opens the sarong over the head of the patient, and says with great satisfaction and assurance, “Now is your soul returned.” This being done, the patient should get well again, but if he does not, it is a sign that his time has come, and his spirit can no longer be retained’ (ib. p. 295).

Thus we see that whistling for the wind, still practised by all seafaring peoples, from the Egyptians of the Ancient to the Malay sailors of to-day, originally meant whistling for the truant souls lurking in the wind. Innumerable other survivals, could they be traced to their source, would also be found to be deeply rooted in the superstitions beliefs of primitive man.

Nowhere can this be seen better than in China, where the aerial spaces still swarm with countless good and evil spirits, the belief in which has influenced the development of the whole body of Chinese architecture. The fundamental notion is that the good spirits move through the air in curved, the bad in straight, lines. Hence the former are welcomed, the latter baffled by the curved form of the roofs of their temples, gateways, and other conspicuous structures. For the same reason, no straight highways can be laid down, and partly on this ground great objections were for years raised against the development of railway enterprise. The danger of de-sacralizing the ancestral graves was also urged; but both difficulties were overcome when it was pointed out that the burial-places could be avoided by cleverly designed curves, and that these curves would at the same time serve to thwart the wicked and encourage the beneficent genii.

So also in Korea the air is infested by many malevolent beings, such as the small devil, the typhus devil, and the cholera devil. As after death some of these might again enter the corpse and revive it to kill the living, they are scared off by the vigorous beating of gongs, drums, pots and cans, which is kept up incessantly for three days and nights after the funeral. These demons always travel on the north wind, and the good spirits on the south wind. Hence the graves are usually situated on the sunny slopes of a hill, whither all good influences are waited on the balmy southern breeze. The family vaults of the better classes are also sheltered from the evil spirits by horseshoe-shaped mounds turned northwards, that is, towards the quarter whence come the demons riding on the icy arctic blasts. Here again we seem to divine why the horseshoe is still a lucky object even among the cultured peoples of the West, where it is nailed to the stable door to protect the farmyard from evil influences. The Oriental has no horseshoes; hence it was not the shoe itself, but its peculiar shape, that was regarded as propitious, because earthworks so constructed may have been thought favourable to the good and adverse to the evil genii.

That the demons of epidemics wander about in mid-air is a belief not confined to Korea, but pervading the religious thought of the whole Eastern world. To the Copts they were Harpies; cholera and smallpox are real devils who ‘hover through the fog and filthy air,’ and when some of the tribe visited Rangoon in 1835 they carried their dahats (knives) unshod to scare off the pestilent nat, and passed the day hiding under bushes to escape its notice. Some even ventured to pacify it by the sacrifice of a slave boy, but were talked over to substitute a few pariah dogs (Carey and Tuck, The Chin Hills, i. passim). So also in India, the belief in the same cholera and smallpox demons, who ‘are supposed to be always wandering about in mid-air’ (Conson Report for 1901), is almost universal amongst the Kolarian and Dravidian aborigines. For details the reader must be referred to art. Asia.

In Greece the four chief winds were known to Homer, who in the Iliad groups them in pairs (Kópote to Nótoς te, ii. 145; Boreas kai Zéfiros, ix. 5), and in the Od. (v. 295-296) mentions them consecutively. — Συν 3 Ἐκόπας το Νότος τ’ ἐπέκαη Ζέφιρος τ’ ἐποσκευάζοντα, καὶ μετ’ κείμα κυώνων.

Here all are personified poetically, but not yet deified, unless the ‘other-born’ Boreas is already to be taken as an air-god. Even their king Aéolus is still only the ‘prince of the winds,’ as in Od. x. 2:

Αἰολός ἤν στασίδα φίλος ἀδανάτων δειον, whereas in the Æneid he is enthroned amongst the Immortals (‘celes sedet Aéolus arcce, spectra tenens,’ i. 397; althòs, the Athenians called their king συμμέτοχος to Boreas, and that they invoked and offered sacrifices both to him and to his consort (θόν αὐτὸ καὶ ἐπικελέστω τὸν τε Βορέας καὶ τῷ Εὐρύ-θερου). Another highly honoured wind-god was Zephyros, whose war-car was drawn by horses, with Notus and others, was born of the Titan Astræus and the goddess Eos (Aurora). To Zephyros the Athenians raised a temple, where his effigy was that of a gentle winged youth wreathed in flowers. Later, under the discriminating analysis of Aristotle, the four became eight and even twelve (Meteorol. 2-9). Of the last four little is afterwards heard; but the eight appear to have retained their rank as air-gods at Athens, where was raised to them the still existing octagonal Horologium of Antonius Cyrehestes, popularly known as the ‘Temple of the Winds.’ On each of the eight walls a last-relief symbolizes the wind which it faces, and an additional element of interest is supplied by the dress and accompaniments of these figures, by which the character attributed by the Greeks to the winds which they represent is symbolically depicted. Boreas is described as a bearded man of stern aspect, richly clad and wearing strong buskins, and he blows a conch shell as a sign of his tempestuous character. Céceus, in another coil, is determined by the lower part of which is full of hailstones. Notus, the most rainy wind, holds an inverted urn, the whole contents of which he is pouring out upon the earth. Zephyrus, on the other hand, who is the
Air and Gods of the Air

habunger of spring, appears as a graceful youth, almost unclothed, with the fold of his robe filled with flowers' (H. F. Tozer, *Hist. of An. Geography*, P. 155).

Italy also had its complete category of wind-gods, quite independently of the Greek, as shown by their old Italian names, such as *Corvus, Aquilo, Auster, Eurus*, and Zephyr. It is clear that the names corresponded to those of the Roman *favonius*, of whom Horace sings (Odes, I. 1) that 'Solvitur acris hiemis gratia veris et Favoni,' and whom Plautus contrasts with 'rainy Auster': 'Hic Favonius seren'at, istic auster inimicus: hic fuerit tu, oh Orestes, ego omnis cuilibet.' (Morerator, v. ii. 35, 36). From this we see that Auster answers to the Greek Notus, while Virgil makes it equally clear that Aquilo represents Boreas, as in *Geor. iii. 196.'

'Qualis Hyperboreis Aquilo cum densus ab oris Incumbuit, Scythineque hiesme atque arida differt Nubila.'

It may here be stated that in Italy, as in Greece, Olympian Jove himself had at an early date extended his sway to the earth, or rather to the nether world. Of Umbrian, a sister language of Latin, some lengthy liturgical texts survive on the seventh and eighth tablets of the *Guiblai*, where they are still preserved in the town-hall. On Tab. ii., which may date from B.C. 500, the epithet *hunte* is twice applied to Jove (*Hunte Invic amentia, l. 21; and Hunte Invic vestitutio, l. 35,* and may be compared clearly with the Umbrian *hondra=inaf,* means 'inferns,' so that Hunte Invic answers exactly to the Homeric θεὸς καραχόν.* With this compare the stem *huntro-,* which in Oscan, another sister tongue, means *inferns,* leaving no doubt as to the force of Hunte (*The Curse of Vibian, l. 11 in R. S. Conway's Italic Dialects, l. p. 127*).

A few miscellaneous references may now be given to complete the subject, and show how thickly primitive peoples packed the encompassing atmosphere with gods, demons, and spirits of all kinds. These are nowhere more numerous and varied than in Arabias and surrounding lands, where the most dreaded are the ghouls (properly تُؤل = ghot), who, however, are denizens not so much of the air as of woods and deserts. They assume diverse shapes and colours, and show a certain kinship with Indian 'mother-gods' and the vampire of Europe and America, who is devoted to devils, men, animals, and dead bodies. These ghouls range through Persia, and Muslim India into the Malay lands, where there is a special 'storm fiend who rides the whirlwind,' and also 'a vile fiend called penangurah who takes possession of the forms of women, or men, or men and women,' and compels them to quit the greater part of their bodies, and fly away at night to gratify avaricious or gluttonous or lustful disposition. They are said to haunt one of the ghouls stories in the *Arabian Nights' Entertainments* (D'Urville, The *Golden Chersonesos*, p. 354).

The Arawaks, the natural barbarians of the Arrows, and now generally of all Muslim peoples—Bible 'Prince of Darkness,' the aunts and shetians, and the whole host of jims—existed in pre-Mahommedan times, as is evident from Job 39, where *jim* is rendered בַּדָּשָׁהּ in LXX and Satan in the Vulgate. So universal was the belief in their existence, that they had to be admitted with modifications into the Mahommedan system, which recognizes three created intelligences under Allah—the angels formed of light, the jins of subtile fire, and man of the dust of the earth. The jins are commonly supposed to be mischievous goblins born to man. Some, no doubt, are wicked, and do mischiefs, or demons, whose chief is the fallen angel Bif. These reside in the lowest firmament, that is, the surrounding air, and haunt the caves, the jins of subtile fire, the hill-tops, and the mountains. They have the power of putting on any form they please, but not greater power than the fire and smoke, and are thus making themselves visible to mortals. They may even take possession of living people, from whom they have to be exorcised by charms and incantations. But others bear a good character, and frequent the habitations of man in a friendly way; they are addressed by him in kindly language; and they, too, in virtue of their subtle essence, pervade the solid mass of the earth and the whole space of the firmament. They are also believed to inhabit the vapours of water, and in setting down a bucket to a well, or in lighting a fire, the man who does not observe this should be pronounced, 'Pernicious, and destined to misfortune.' (Lekeawhite, *Social Hist. of the Races of Muskmind*, iv. p. 384.) Jaffeer Shurwad, who speaks from personal knowledge, goes so far as to say that the inhabitants of the island on which it is said to be a jin, but a sheitan, who does evil deeds (*Monuments of India*, p. 373). The sheitan, however, does not apply to Arabs, where the bad certainly predominate over the good geni, and where the above-quoted 'soft words' may be merely euphemistic. In any case, both the Jinn and to our second edition were supposed as they are not of human origin but are directly created by Allah.

In general, witches and magicians, who have the power of assuming strange forms, everywhere infest the air as well as the land and water. In Aurora, Pentecost, and other Melanesian Islands, they fly about disguised in different personages, and sometimes assume the aspect of familiar spirits, and then they are most dangerous. 'In Lepers' Island the wizards who practise it [the magic art] are believed to have the power of changing the shape. The friends of any one suffering from sickness are at once denounced and talked against by the wizard who has caused the disease should come in some form, as of a blow-fly, and strike the patient; they sit with him, therefore, and use counter-charms to guard him, and drive carefully away all flies, lest his enemy should come in that form.' (R. H. Codrington, *The Melanesians*, p. 207). This observer mentions the case of Molitavita, a noted magician who turned himself into an eagle, or rather whose soul went out of him, and in this shape flew a long way after a ship which had carried off some natives of Lepers' Island, and in that way was able to tell their relatives what had become of them. He also reported the case of a person who was believed to have died. 'Long afterwards, when some of those who were then on board returned, they said that he had brought back the truth, one of them by that time had died' (ib. p. 298).

In Guiana, not only the sun and moon, but also the wind and storms are deified, or, it would be more correct to say, are 'humanized' by indwelling spirits of an essentially anthropomorphic type.*

On one occasion, during an eclipse of the sun, the Arawak men among whom I happened to be rushed from their houses with loud shouts and yells. They explained that a fight was going on between the sun and moon, and that they shouted to frighten and so part the combatants. In many other countries exactly this proceeding of making a noise to separate the sun-spirit and the moon-spirit, or the sun-god and the moon-god, has been noticed; and it is generally supposed that in such cases a high degree of authority is attributed to these spirits. But I see nothing in this or in any thing else which shows that savages distinguish, by attributing greater authority to them, such beings as angry with the moon, and those who are in the habit of natural phenomena, as wind and storms, from men and other animals, plants and other inanimate objects, or from any other being whatsoever. All beings—and under this heading are included all personified natural phenomena—are, in fact, of the same kind, each with a body and a spirit. It is the old story—they differ from each other only in that some are more powerful than others in the mere matter of brute force, and none have any sort of authority over others' (E. im Thurn, *Among the Indians of Guiana*, p. 364). By the Brazilian Botocudos the air is well stockcd with spirits, mostly of a malevolent disposition, 'storm-gods,' and the moon itself, the 'night-fire' (*tara guenclot*), which they look upon as a sort of evil principle. All baneful manifestations are attributed to the moon, which causes the thunder-storm, and is supposed at times itself to fall on the earth, crushing the hill-tops, flooding the plains, and destroying multitudes of people. During storms and eclipses arrows are shot upwards, not, as by the Caribs and Arawaks, to frighten the sun, the 'quenducto,' or other places, but by letting them in and shutting a bucket to a well, or in lighting a fire, the man who does not observe this should be pronounced, 'Pernicious, and destined to misfortune.' (Goahter, *Social Hist. of the Races of Muskmind*, iv. p. 388.) Jaffeer Shurwad, who speaks from personal knowledge, goes so far as to say that the inhabitants of the island on which it is said to be a jin, but a sheitan, who does evil deeds (*Monuments of India*, p. 373). The sheitan, however, does not apply to Arabs, where the bad certainly predominate over the good geni, and where
Among the Eskimos the air, usually reserved for departed souls, is replaced by the surrounding ice- fields as the chief abode of the wicked spirits. The Greenlander especially has a superstitions terror of the inland ice-cap. 'It is the home of his evil spirits, his ghosts, his apparitions and shades (tarrajutak), his trolls (timersok and erilkide), his ice-men who are not twice as tall as ordinary people, and a whole host of other supernatural beings' (Brögger and Rolf- sen's Friidtig Nansen, p. 130). In pagan times there were numerous such figures on the island, whom the Greenlanders, since their adoption of Christianity, have been led to regard as evil spirits now inhabiting the lower regions of the atmosphere and the nether world, while Torngrans, the Great Spirit, has become the Christian Satan. Elsewhere the souls of the departed sometimes lead a restless existence in their aerial abodes, and during their hunting expeditions the Alaskan Eskimos often see phantoms gliding over the heights; these are the ghosts of the departed returning to earth to injure their living relatives. The people of the Barrow Point district are much troubled by such apparitions, as also by Kioy, the demon of the aurora borealis, and Ekapunya, the Eskimo witch, who, like his classical prototype, reigns in the earth, the water, and the heavens. This is one of those numerous instances of overlapping where it be comes impossible to distinguish clearly between chthonic, celestial, and air gods.

LITERATURE.—There appears to be no work specially devoted to the subject of this article. Hence the references must be to a few of the more important treatises in which accidental mention is made of the gods of the air. Such are: A. B. Cook, 'Zeus, Jupiter, and the Oak,' in CLR, April 1897; Luciani, ed. Hermannus and H. Williams; Stobaeus, Florilegium; F. Ratzel, Hist. of Mankind, Eng. ed. 4 vols. 1897; H. V. Rust, 'A Suggestion of the Nature of the Maya Manuscripts,' 1906; D. G. Brinton, Annals of the Cakchiquel Indians; R. Drury, Mexican Journal, etc., ed. P. Oliver, 1859; S. J. Hickson, A Naturalist in North Cobles, 1899; T. Belt, A Naturalist in Nicaragua, 1874; Brögger and Reichen, Fridtig Nansen, 1896; R. Friedrich, Ball, in Papers relating to Indo-China, 1887; Anales del Museo Nacional de Mexico, 1890-1897; Carey and Tuck, The Mexican Indians, etc., 1906; H. F. Tozer, A Hist. of Acc., Geography, 1897; R. S. Conway, The Italic Dialects, 2 vols. 1897; A. Feathern, Social Hist. of the Inca of Mankind, 4 vols. 1832-1841; R. H. Codington, The Melanesians, 1855; E. E. and Thurn, Among the Karam, 1851; A. H. G. Schellhas, Undescribed Tribes, and Past and Present, 1860; H. Rink, The Eskimo Tribes, 1857.

A. H. KEANE.

AIYANAR.—Among the most widely known and popular of the deities of the village, the grivuma-devata, of Southern India is Aiyanar, the tutelary god of the fields, who protects the crops from harm and disease, and who is oftentimes the evil spirits of drought and disease. Grouped around the shrine, and near the village, are usually to be found rude models in terra-cotta of horses, often life-size, or more rarely of elephants, on which Aiyanar with his troop of attendants is supposed to ride when in mad career he chases away the demons. The Indian villagers avoid approaching the shrine of Aiyanar lest he should be mistaken for a demon and slain.

The god is represented roughly carved in human form, either seated with crown and sceptre, or on horseback, and is sometimes accompanied by his two wives, Pārā and Pudikalai, who join him in the rout of the evil spirits. He is also propitiated in times of distress or pestilence, when animal sacrifices are offered on rude stone altars in front of the shrine. The festivals and sacrifices at the priest's house, who officiate belong invariably to the lowest castes. The clay models of the horses are presented by the villagers in acknowledgment of aid rendered, as thank-offerings for recovery from sickness, or in return for cattle. At harvest-time, there do not seem to be any records or collection held in his honour, or any definite periods of worship prescribed. Sir Monier Williams' account of his visit to Aiyanar's shrine at Parnagudi, on the road from Madras to Hanumangundy, is as follows: 'I saw no signs of any recent offerings, nor was a single worshipper of the god to be seen anywhere.' I noticed, indeed, that all the shrines of A. had a deserted appearance, the fact being that he is never worshipped, in our sense of the word. He is only propitiated in emergencies. Every year after harvest-time a festival is kept in his honour, when numerous animals are sacrificed, and images of the god are decorated with ornaments, and drawn about through the village streets on the rude clay horses (Brahmanism and Hindûism, p. 219.).

The name Aiyanar is said to be a combination or corruption of the two names Hori-Hora, or Vighnuti for Siva; and the god is popularly regarded as the son of Siva by Visûn, when the latter had assumed a female form. It is more probable, however, that he represents a primitive Dravidian deity, recognized and more or less adopted less by the Vedanta Aryans, and provided with an orthodox parentage. A figure of Ganesa, one of the other two sons of Siva, sometimes stands near his shrine. But, unlike his brother, Aiyanar does not seem ever to be invoked in the strict sense of the word; and the prayer addressed to him being for blessing or positive good.

A. S. GEDEN.

AJANTA.—Ajanta is the Anglo-Indian form of the native name Ajanta, a village and ravine celebrated for its cave temples, situated in N. lat. 20° 52′ 39″ E. long. 75° 48′, near the frontier of the British province of Berar, but within the dominions of the Nizam of Hyderabad. It lies at the head of one of the passes (ghāt) that lead down from the Indhūyādi hills, dividing the table-land of the Deccan from the British district of Berar, and the valley of the Tăpti. The only early reference to the caves is that of the Buddhist pilgrim Hīn-Teiag, or as Watters, the latest translator and editor of his journal, transliterates his name, Yuan Ch'ao. He writes, speaking of the kingdom of Mo-ha-la-cha (Māhārātā) : 'In the east of this country was a mountain range, ridges one above another in succession, tiers of peaks and sheer summits. Here was a monastery which was in a dark defile, and its lofty walls were quivered in the cliff and rested upon the peak, its tiers of halls and storied terraces had the cliff on their back, and faced the ravine. This monastery had been built by the A-ch'i-lo (Achira [or perhaps rather Achala]) of Western India.' The pilgrim then relates the circumstances in Achāra's life which led to the building of the monastery. 'Within the image of the monument,' he adds, 'was a large temple above 100 feet high, in which was a stone image of the Buddha above 70 feet high; the image was surmounted by a tier of seven canopies unattached and unsupported, each canopy separated from the one above it by two rows of pillars; the walls of this temple had depa in that the incidents of the Buddha's career as Bodhisattva, including the circumstances of his attaining Bodhi, and the events attending the pastoral career of all, great and small, were here delineated. Outside the gate of the monastery, on either side north and
south, was a stone elephant, and the pilgrim was informed that the bellowing of these elephants caused earthquakes' (Watters, ii. 230 f.). Burgess and other authorities believe that this account, dated A.D. 649, refers to the Ajanta caves. Watters admits that this view is probable, but he doubts whether the Achala of the inscription recorded by Burgess is the Acha-le of the pilgrim's narrative. This inscription merely states that 'the nectoric Stavara desired to have faith and was grateful, caused to be built a mountain-dwelling for the Teacher, though his wishes were fulfilled.'

The place was visited for the first time by Europeans in 1819, and the earliest accounts of its monuments, by Alexander, appeared ten years later (Trans. R. A. S. 1829). The first scientific survey was made by Ferguson, and appeared in the same journal in 1843. His account of the wall-paintings aroused much interest, and led to an appeal to the Indian Government that careful copies of them should be made. This was done by Major R. Gill; but his drawings, except the five last executed, were unfortunately destroyed in a fire at the Crystal Palace, where they were being exhibited, in 1866. All that remains of his work now seems to be small copies, in Mrs. Spiers' Ancient India, of two of his pictures and of eight detached fragments from other works of equal beauty. The frescoes were started afresh by Griffith, and his work, in two splendid volumes, was published by the Secretary of State for India in 1896-97.

The caves are excavated in the face of an almost perpendicular rocky scarpe, about 250 feet high, sweeping round in a semicircle, and forming the north side of a wild glen traversed by a small stream, the Vaghur. Above the caves the valley termite, or an elephant, for a winding course, with several leaps, the total height being about 200 feet. The site is lonely and picturesque, and, at the same time, close to a main line of ancient traffic, thus combining the three leading characteristics which guided the excavators of the rock caves of Western India in selecting places for their establishments.

The series consists of 24 monasteries (vikāra) and 5 temples or meeting-halls (chatāya). Accord- ing to Burgess, who has made a careful survey, and compiled an exhaustive report on the caves (Arch. Survey Reports, W. India, iv. 43 f.), the earliest group consists of two Chaitya caves (numbered IX., X., according to Fergusson's plan of the site), of the 1st and 2nd cent. A.D. These were excavated certainly before the commencement of the Christian era. Of the later caves, Burgess forms two groups. Nine (VI., VII., VIII., IX. to XX.) range in date from the 5th to the end of the 6th cent. A.D. The second group (I. to V., XXI. to XXVII.) were all excavated, or at least finished, within the limits of the 7th century. This second, and by far the largest, series belongs to the Mahāyāna school of Buddhism, and can be distinctly marked off from those of the earlier group. Cave No. I. is specially to be noted. Burgess describes it as the most handsomely ornamented Vihara at Ajanta, and in all India; and at the same time it is one of the most modern, having been constructed probably in the beginning of the 7th cent., and not completely finished before A.D. 650. The cave is of a single range, and is peculiarly intended for meditation and worship. The paintings at Ajanta are the series of frescoes in the caves. These generally represent passages from the legendary history of Buddha, and from the Jātakas, or stories of the Buddha's former births, the visit of Ajanta to Buddha, and the prophecies of him by Māra and his forces, legends of the Nāgas, or serpent race, hunting scenes, battle pieces, the carrying of the relics to Ceylon, and other incidents in the Mahayana legend. Many of the frescoes represent incidents taken from the Jatakas, while some twelve have been identified by S. F. Oldenburg (Journ. American Oriental Society, xvii. 183 f.; JRAS, 1896, p. 324). Of these, perhaps the most important are the Ummadanti Jātaka of king Ummadanti (ib. v. 210 f.) and the Chuddantaka Jātaka, or tale of the six-tusked elephant (ib. v. 209 f.). A recent discovery in one of these caves has brought to light a picture which depicts the Nāgas, or Causes, in the form of a concrete mass, and which the Tibetans are inclined to consider as a diagram of human life in the form of the wheel (Waddell, JRAS, 1894, p. 367; Buddhism of Tibet, 105 f.). In the mountain scene of the frescoes are depicted figures of birds and monkeys, and sometimes of Bils and other forest tribes, and the failed inhabitants of the hills—Guhvakas, Kiratas, and Kinnaras, the last of whom are musicians to the mountain gods, with human heads and legs and tails of birds. The whole series of frescoes is of the greatest historical value as illustrating the religious and social life of India between the 3rd and 5th cent. of the Christian era.

All critics have fully recognized the artistic value of these frescoes. 'The condition of mind,' writes Griffith (in Burgess, Notes, 41 f.), 'which originated and executed these paintings at Ajanta must have been very different from those of the frescoes in the Italian paintings of the 14th cent., as we find much that is common to both. Little attention paid to the science of art—a general crowding of figures into a subject; regard being had more to the truthful rendering of a story than to a beautiful rendering of it; not that they discarded beauty, but they did not make it the primary motive for representation. There is a want of aerial perspective, the painter's desire for space only being attained by light and shade, giving the whole a look of flatness, a quality to be desired in mural decoration. Who- ever were the authors of these paintings, they must have constantly mixed with the world. Scenes of everyday life, such as preparing food, carrying water, buying and selling, processions, hunting scenes, elephant fights, men and women engaged in singing, dancing, and playing on musical instru- ments. Many are most gracefully, and all most graphically depicted upon these walls; and they could only have been done by men who were constant spectators of such scenes; by men of keen observation and retentive memories.' Of the famous paintings of the 1st cent., the earliest, in XV., the same authority writes: 'For pathos and sentiment and the unmistakable way of telling its story, this picture, I consider, cannot be surpassed in the history of art. The Florentine could not have put better drawing, and the Venetian better colour, but neither could have thrown greater ex- pression into it' (ib. 58 f.).

In many of the paintings there is ample evidence of Sasanian or Persian influence. One wall scene (Griffith's drawing No. 5) appears to represent the reception of a Persian embassy at the Court of an Indian king, and, according to Burgess (ib. 27), can hardly be earlier than the 7th cent. of our era.

Literature.—The literature dealing with the Ajanta caves and their wall-paintings is very extensive. References to the older accounts of travellers and the comments of critics upon their several works are to be found in the Gazetteer, xii. 450, where a good account of the site will be found. The later and better authorities are: J. Burgess, Notes on the Caves and Temple-Towers of the Buddhist Religion, in Archaeological Survey of Western India. No. ix. i. J. Fergus- son and J. Burgess, Three Temples of Western India, Calcutta, 1851, pp. 290-347; J. Burgess and Bhagwanil Indrajal, Inscriptions from the Cave-Temples of Western India, Bombay, 1851; J. Bur- gest, Report on the Hindu Temples and Caves of Western India, London, 1853; L. A. Waddell, 'Note on the Ajanta Paintings' in Indian Antiquary, 1894, p. 203. The wall-paintings are described by J. Griffith, The Paintings in the Buddhist Cave-Temples of Ajanta, Khambesh, 2 vols., London, 1896-97.

W. Crooke.
AJIVIKAS

[A. F. R. HOENLE]

1. Introduction.—The sacred books, both of the Buddhists (e.g. A. N. iii. 276; Dial. pp. 71, 220) and the Jains, inform us of the existence, contemporary with the foundation of Buddhism and Jainism, about the middle end of the 6th. c.c., of a community of religious mendicants, whom they call Ajivikas. From certain Jain Scriptures we further learn that the founder of this community was a mendicant by the name of Ojas (Pali Makkhalari-putta, Skr. Mostakari-putra). In the seventh Aiga (U.D. ii. 133), a man, Saddalā-putta, is said to have been received by Gosala into the Ajivika community, and the Bhagavati Sūtra, the fifth Aiga, gives us an account of the life of Gosala, as the acknowledged head of that community. Though the Buddhist Scriptures (e.g. M. N. i. 198, 230, 515; S. N. i. 68, iv. 398; D. N. i. 52; Jat. v. 246) also frequently mention Gosala Makkhalari-putta as one of the leaders of the six religious mendicant communities whom Buddha singles out for special animadversion, they never explicitly connect him with the Ajivikas, or state that he was their leader. But on this point the Buddhist tradition did not really differ from the Jain, is shown by the fact that both attribute to him the holding of the religious-philosophical doctrine of the negation of free will and moral responsibility.

On the exact signification of the name 'Ajivika,' we have no information. The Skr. word ājīva means the mode of life, or profession, of any particular class of people, whether they live as 'householders' in the world or, as religious mendicants, have renounced the world. Thus 'right-life' (saṁyog-ājīva) was in the Buddhist system (Dial. 21); B. S. 147; D. B. 146) one of the eight 'paths' incumbent on the mendicant. The word ājīvika, being a derivative of ājīva, means one who observes the mode of living appropriate to his class. We shall see in the sequel that there is some ground for believing that Gosala held peculiar views as to the ājīva of a mendicant

who was truly liberated from the fetters of karma. It was probably for this reason that he and his adherents cannot be known as Ajivikas, or mendicants, but only as men who held the peculiar doctrine of ājīva. All the indications that we have tend to show that, as usual in such cases, the name was not taken by themselves, but given to them by their opponents, and that in their own view it was not meant to convey a slur.

As we shall see, Gosala, by his conduct, laid himself open to the charge of insincerity, in that he practised religious mendicancy, not as a profession of salvation (ājīva), but merely as a means of gaining a livelihood, as a mere profession (ājīva). The name 'Ajivika,' it appears, was originally meant to stigmatise Gosala and his followers as 'professors'; though, no doubt, in later times, when it became the distinctive name of a mendicant, Order, it no longer carried that offensive meaning.

2. Personal History of Gosala.—The fifth Aiga of the Jains, commonly known as the Bhagavati Sūtra, gives us a fairly connected and detailed account of the life of Gosala (Jh. S. x. 1, tr. in U.D. App. 1). According to this account, Gosala's father was a maññaka, a kind of professional beggar, whose name was Makkhali. Hence he was known as the Makkhali-putta or the Makkhali Gosala. His other name, Gosala, he received from the circumstance of having been born in a cowshed (gōsalī), in which his parents, failing to obtain any other refuge during a certain rainy season, had taken shelter. When he grew up, he adopted his father's profession of a maññaka. In the course of his journeys he repeatedly fell in with Mahāvira, who, just about that time, had commenced the wandering life of a Nigrodha ascetic. Seeing the great respect in which Mahāvira was held by the people, Gosala determined to attach himself to him. Though at first repulsed, he succeeded at last by his importunity in being accepted as a disciple by Mahāvira. But their characters were so different in character and temper, that after six years, owing to the insincerity and trickery of Gosala, the companionship was dissolved. Gosala now set up as the rival leader of a separate community of religious mendicants, called Ajivikas, and with his followers established his headquarters on the premises of a potter woman in the town of Sāvatthi (Savrasthi). After the lapse of sixteen years, Mahāvira, who was now in the sixtieth year of age and had met his former companion, happened to visit Sāvatthi, and, hearing of the influence which Gosala was wielding there, he took occasion to expose the false character of the professing ascetic. On learning this, Gosala, threatening vengeance, at once proceeded with his followers to where Mahāvira with his Niggothas was lodging. Here he began the dispute by putting forward an ingenuous argument to prove that Mahāvira was mistaken in his identity, and that, in reality, he was a totally different person from the Gosala whom Mahāvira had once known as his companion. On Mahāvira contemptuously brushing aside this sophistry, the infuriated Gosala grossly abused his adversary; and the two rival factions came to blows. In the fight two of Mahāvira's disciples were disabled; but, in the end Gosala, being discomfited by Mahāvira in a personal encounter, was compelled to retire in disgrace. The taunts of his rivals, and the consequent distress of the townspeople, now made Gosala's position in Sāvatthi untenable. This preyed on his mind so much that, having as far as possible put himself away from ascetic restraint, he gave himself up to drinking, singing, dancing, soliciting the potter woman, and besmirching himself with the cool muddy water of the potter's shop.

Six months of this vicious life were spent by Gosala in the end; and with it came a momentary return of

*Also spelled 'Xigapotha'; see J. S. ii. p. xiv, footnote 8.
reason and the sense of remorse. His last act was to acknowledge to his disciples the truth of Mahavira’s statement respecting himself, and to indicate that he wished to quit the world and to bestow the mark of dishonour and publicly to proclaim his shame. The disciples, it is added, refrained from carrying out the dying instructions of their master.

Such is the substance of the story of Gosala’s life. For the difficulties occasioned by the conflicting references to his life are much greater. Buddhaghosa (c. 410 A.D.), in his commentary on the Digha Nikaya (S. V. pp. 143, 144, tr. in U. D. App. II.), tells us that Gosala is the name of Gosala’s father, and that the latter name was given to him because he was born in a cowshed. Having broken an oil vessel through carelessness, and fearing chastisement from his angry master, who had caught him, he broke away, leaving his garments in his master’s hands. He fled naked to a village, where the people offered him clothes; but he refused them, hoping to make a better living as a naked arhat, or wandering mendicant.

The two accounts—for so far as we are able to judge—are quite independent of each other. One is Buddhist, the other is Jain; and the Buddhist and Jainas, being antagonistic sects, would not adopt the same answers to the same questions. Moreover, Buddhaghosa wrote in Ceylon, while the Jain Scriptures, as we now have them, were written in India. But—a fact of which no more is made mention in either of the two accounts—is that they both agree in the points in which they agree and in which they differ. They agree in two points: first, that Gosala was born of low parentage, a cowherd; and secondly, that he took up the profession of a mendicant, and subsequently took up the profession of a naked religious mendicant. The Jains accordingly, that Mr. Maskarin was not a mendicant, but adopted merely for the sake of getting an idle living. The ground for the belief in Gosala’s insincerity, as will be seen from the sequel, was, according to both the Buddhist and the Jains, that Gosala not only taught but also practised mendicant doctrine.

The point on which the two accounts differ is the meaning of the name ‘Maikhali’ or ‘Maikhali-putta,’ According to the Jain account, Maikhali is the name of Gosala’s father, and a derivative of maikhaka. According to the Buddhaghosa, it is the name of Gosala himself. The derivation from maikhaka is indefensible. The Pali-Pratik word maikhali is the equivalent of the Skr. word maikhaka; but there exists no word maikhak, the equivalent of maikhaka. The latter word, in fact, has not been found anywhere but in the passage of the Bhagavati Sutra which adds it as the source of the name Maikhali, and it is presumably an invention ad hoc. Moreover, the meaning of the hypothetical word maikhaka was not certainly known to the old commentators. Thus, while Abhaya Deva (c. 1590 A.D.), in his commentary on the Bhagavati Sutra, explains it to mean ‘a kind of beggar that tries to extract alms from the people by shunning the common way’ (P. P., 1, 364), it is a synonym of the well-known word mahakāla, ‘a bard.’ The truth, no doubt, is that maikhali-putta is a formation like Nigghantha-putta, a name meaning ‘the seeker after the Nighanta,’ or Nigghantha-putta, ‘a mendicant of the Nighanta Order,’ It denotes a mendicant, etymologically belonging to the Maikhaka, Maikhali, or Maikhali, class of religious mendicants. The very early existence of this kind of mendicant in India is proved by the fact that the celebrated grammarian Panini (c. 500 B.C.), in his Grammar (v. 1, 165), explains the formation of the name. According to him, a Maikhali was so called because he carried in his hand a bamboo staff (maikhaka). On account of this practice of carrying a staff, he was known also as Eka-danta, or a ‘one-toothed.’ Patanjali, in his comments on Panini’s statement (K. Mah. ii. 56), further explains that this kind of wandering mendicant (nirantarikāda) was called Maikhak in no small measure because he carried a staff, because he had renounced all activities. The reference in these two statements is to the fact that there were two grades of these Maikkhakos or Eka-dantins. In the lower grade, the ascetic carried an actual staff of wood; and in the higher grade a begging bow or ‘a bow-like object’ (kati-bandhana). In the higher grade of Paramanand, he abandoned even these three possessions, claiming absolute renunciation, and inability even to buy staff of reliance (W. B. v. 65-7).

In ancient India, at one time, the tendency appeared to have been very prevalent to adopt the life of a homeless wandering ascetic. Often this life was adopted from sincere religious motives; but it was very often the life of vagrant mendicants with avarice and dishonesty, and was very prevalent among the lower classes. Some writers have even called this ‘twice-born’ the Brahmanic law-givers attempted to regulate it by enacting that the early years should be devoted to education and the middle years to rearing a family and pursuing a profession, while only the declining years might be devoted to this ascetic life. It is not, however, doubted whether this wholesome regulation ever was much observed in Indian society; the tendency to devote the whole life to religious mendicancy was too strong among the people. The Maskarins, as a rule, led a very slovenly life, their manner of life was open to very grave abuses. Hence some men of commanding personality conceived the task of regulating the tendency to the ascetic life, or hypnotising, or regulating it in a certain period of life, but by organizing the mendicants into communities governed by strict rules of conduct. Such men were the founders of Buddhism and Jainism. Gosala, from all accounts, was hardly a man of that stamp. He seems, by natural disposition, to have belonged to the lower sort of maskarins, who made religious mendicancy a pretext for an idle and self-indulgent life. The existence of this lower sort of mendicants in ancient India is vouched for by a considerable amount of folklore. It occurs in the Tittara Jataka (No. 438 in Jāt. iii. 542). The verses occurring in the Buddhist Jatakas embody the most ancient folklore on this subject. In the 12th and 13th verses of that Jataka a mendicant of the biser sort is described, among other things, as carrying a bamboo staff (setvākhāra), which shows that he must have belonged to the class of mendicants which the Buddhists called as Eka-dantins, or Maskarins. But what gives particular significance to this notice is that the much later commentary identifies that mendicant as an Ajivika. It is clear that in the month of the Buddhas, ‘Ajivika’ was a term of reproach applicable to a Maskarin or Eka-dantin of the biser sort. This seems to explain why it was that both Buddhists and Jains call Gosala a Maikhali, and say that he was a leader of Ajivikas; and very possibly he was not only himself a Maikhali, but also, as the Jains say, the illegitimate son of a Maikhali.

It is difficult to determine the motive which induced Gosala to attach himself to Mahavira. It may be that the contact with that religious enthusiasm temporarily woke up the better instincts in Gosala’s nature; or it may be that the Jain account suggests, he hopes to learn from Mahavira more potent ‘tricks of his trade’ which he could not learn from Maikhaka, with Mahavira had no permanent effect on him. There seems to be no reason seriously to question the truth of the Jain statement that Gosala assumed the name of ‘Gosala’ from his father. In Mahavira’s time there was a woman, known as Pipali or Pipali, who was reputed to be a potterwoman. That act of open defiance of one of the strictest rules of asceticism, as is proved by Mahavira’s own Jataka, and the Boddhist’s well-known abhorrence of Gosala, throws an informing light on the real character of the man. There is, no doubt, something tragic in the closing scene of Gosala’s life: the open exposure of his shame by Mahavira in the face of his own disciples and fellow-townsmen, the consequent mental demaguge, and the final momento remorse. But the feeling of pity will be measured by the view taken of Gosala’s real character.

The Bhagavat Sutra (fol. 129b, 129a) states that Mahavira survived Gosala sixteen years. It also states that Gosala’s death was coincident with the great war which King Kuniya (Ajatashatru) of Magadha waged with King Chusala of Vaishali for the possession of a great elephant (U. D., App. i. p. 7). From these two statements the year of Gosala’s death may be approximately determined. The traditional date of Mahavira’s death is n. c. 527 B.C., and hence Gosala’s death in B.C. 548. But that date is rather too early. The elephant above mentioned was given by King Seniya (Binshbura) of Magadha as a votive offering to his pontiff. Gosala was the son, of the superior claim of his elder son Kuniya. It may be assumed as certain that Kuniya only avoided his entrance into the exercise of royal power before commencing the war for the possession of the elephant, now Seniya made over the throne to his son Kuniya some years before the latter
murdered him by a slow course of starvation. This murder happened in the year B.C. 490, or eight years before the death of Buddha, which is stated in the Buddhist tradition, in B.C. 482. Mahāvīra died some time, it is not known how long, before Buddha. But Gāsāla died sixteen years before Mahāvīra, in the year of the war, and that war must have been in place in the year 250. Kāma's accession to regal power, and that accession cannot well be placed at a very long interval before the murder of Senuṭa. All these conditions are best satisfied by assuming that Mahāvīra lived in B.C. 484-478, well earlier than Buddha, and that consequently the death of Gāsāla and the war took place in B.C. 500, sixteen years before the death of Mahāvīra, and ten years before the murder of Senuṭa. Accordingly that year, B.C. 500, may be taken as the approximate date of the death of Gāsāla.

3. Doctrines and practices of Gāsāla.—Neither Gāsāla nor any of his Ajīvika followers has left us any writings, and so there is no case for much practice. Accordingly we are reduced to the necessity of forming our opinion on those two points from the occasional references to them in the records of their rivals, the Buddhists and Jains. Their statements must, of course, be accepted with caution, but the innate general trustworthiness of the agreement in all essential points. This agreement possesses all the more value, as the statements, coming from two mutually hostile sects, constitute two independent sources of information.

In the Buddhist Majjhima Nikāya (i. 514f., N.R. ii. 254) there occurs a very instructive statement. Buddha is represented as dividing the ascetic systems which he had known into eight classes. Four of these he condemns as ‘living in inconstancy’ (abrahamma-charyya-viśa); of the four others he says only that they are ‘unsatisfying’ (anassa-sūka). Among the latter he classes the system of Mahāvīra, while among the former he places the system of Gāsāla. The distinction is clear. Buddha objected to Gāsāla on ethical grounds—for holding principles theoretically and practically immoral. His system, indeed, he conceived to be the most mischievous (A.N. i. 256; O.B. 82, 199; Dial. 71), and his author he stigmatized as ‘the bad man’ (mogha-parīṣiṇa), who, like a fisherman, caught men merely to destroy them.

The essential thesis of the system of Gāsāla is stated, in the Buddhist and Jain Scriptures alike, in slightly varying but substantially identical phrasing. The Jain Uvasaga Dusio (i. 97, 115, ii. 111, 182), of course after the Buddha, says (as four):—

‘There is no such thing as exertion or labour, or power, or energy, or human strength; all things are unalterably fixed’ (cf. S.N. iii. 210; A.N. i. 250).

In the Buddhist Dīgha Nikāya (p. 53; Dial. 71) the pithe of Gāsāla’s system is more fully stated as follows:

‘There is no cause, either proximate or remote, for the depravity of beings; they become depraved without reason or cause. There is no such thing as effort, or power, or energy; instead there is, sāla, everything that has senses (i.e. the lower animals), everything that is possessed (i.e. all animals), everything that lives (i.e. all plants), is destitute of force, power, or energy. Their varying conditions, at any time, are due to fate, to their environment, to their nature; and it is not in conformity with their position in one or other of the six classes (see below, p. 2029) that men experience ease or pain.’

With this system, its theoretical aspect, was worked on, we do not know. The Buddhist and Jain Scriptures give us no further information. It is evident, however, that, in principle, it was a thorough-going kind of determinism, denying the reality of all activity and exertion, and also the possibility for any so-called good and evil. It is equally obvious that, if carried out in practice, the principle would be most mischievous. Both the Buddhists and the Jains agree that Gāsāla did carry his principle into practice. But the Buddhists, after a short period, in B.C. 484-482, a part which was covered by his with inconstancy. Mahāvīra is equally emphatic. He accuses him of teaching that ‘an ascetic commits no sin if he has intercourse with women’ (J.S. ii. 411). He charges his followers with being ‘the slaves of wickedness’ (ib. i. 125). They ‘do not lead a life of chastity’ (ib. ii. 245). To this charge Gāsāla laid himself open by his own action in choosing for his headquarters the premises of a woman.

From the fact that the Jain Scriptures maintain that originally Gāsāla was a disciple (śiṣya) of Mahāvīra, it would appear that, beyond his determinism with its practical application, there was, in the main, no difference between his doctrines and those of Mahāvīra. This conclusion is also suggested by the statement of the Jain Bhaṅgavati Śīta (U.D., App. i. p. 4), that Gāsāla’s system was ‘taken from the eight Mahāmāttas, a portion of the Puvās.’ These Puvās (Pārācī), or ‘Originals,’ were believed to be the original sacred texts taught by Mahāvīra himself to his disciples (JĀ xvii. 280, xx. 170, 171). The general identity of Gāsāla’s system with that of Mahāvīra, and yet with a curious scheme of classification of ‘all beings’ (sarva-sattva), which in the Buddhist Dīgha Nikāya (p. 54; Dial. 72) is attributed to Gāsāla. The extreme conciseness with which the scheme is stated makes it very difficult to understand, but it does compare it effectively with the system of Mahāvīra as set forth at large in the Jain Scriptures. But two important particulars can be definitely identified which are specially claimed by the Jains as doctrines of Mahāvīra.

In this connection it is worth noting that the very same scheme, with the exception of Gāsāla’s concluding moral, is, in the Buddhist Majjhima Nikāya (M.N. i. 517, N.R. ii. 239) and Sādhūtā Nikāya (N.N. iii. 211, 212), attributed to the religious mendicant Pukanabhaya in the Tibetan Dalva (L.P. p. 162) to the religious mendicant Ajīta Kesavakamala. These two men, together with Gāsāla, Belattiputta, belonged to that group of six mendicant leaders whom Buddha often prominently names as his rivals. The other three were Mahāvīra Nātiputta, the leader of the Nīgantas, Pārāka Kasyapa, and Sanjaya Belattiputta. It would appear, therefore, that that classificatory scheme was in reality common to all the six mendicant leaders, but that each gave it a particular application peculiar to himself. For example, in the case of Gāsāla the application took the determinist line; and this, indeed, is more distinctly suggested by the Buddhist sources. In the Majjhima Nikāya (i. 256), as early as the Jātaka of the Buddha, Gāsāla (p. 31; Dial. 44, 45), it is stated that all the six mendicant leaders arose, in opposition to Buddha, that the concious soul continues to exist after death, though they differed among themselves as to the exact mode of existence. Gāsāla is said (by Buddhaghosa) to have held that the soul ‘bad form’ (rājapa), while Mahāvīra held that it was ‘formless’ (arūpa), but what these terms exactly import we do not know.

The scheme of classification itself is as follows (D.N. 54; Dial. 72; cf. U.D., App. ii. p. 17-29):

‘There are 1,400,000 principal sorts of birth, and again 6000 (or 60,000 according to the Dalva, R.L.B. p. 103) others, and again 600. There are 500 sorts of kāraṇa, and again 5 (according to the 5 senses), and again 3 (according to act, word, and thought), and there is a whole kāraṇa and a half kāraṇa (the whole being a kāraṇa of act or word, the half a kāraṇa of thought). There are 62 modes of ducet, 62 periods, 6 classes (abhiṣāti) among men, 8 stages of a man’s life, 4900 sorts of livelihood (ājīva), 4900 sorts of wandering mendicants, 4900 regions inhabited by Nāgas, 28000 pardatories, 4000 sub-repositories, 7 productions from conscious souls (sūlabh), 7 from unconscious beings, and 7 from parts between two joints (e.g. of sugar-cane), 7 sorts of devas, 7 of men, 7 of pātikas (gāsāla), 2 sorts of minor precipes, 7 important and 700 unimportant
dreams. There are 8,400,000 great periods during which both fools and wise alike, wandering in transmigration, shall at last make an end of pain.

To this scheme Gosâla is represented as appending his own determinist warning: ‘Though the wise should be saved by the perfect understanding of these senses, there is no necessity for them to be saved. For, if their karmas are not yet matured, or if their understanding of the truth has not yet become perfect, such persons cannot be made to perceive, much less toemotionally act upon, the necessity of their release.’ The reason why this scheme of transmigration is essentially a deterministic one is that it essentially is a religious scheme and it is based upon a religious theory of the nature of the mind and the soul. It is based upon a theory of transmigration which is essentially a deterministic one.

The two items in the foregoing scheme which can definitely be identified in the Jain system are—(1) the division of all living beings into those possessing karmas, and those who do not possess karmas, which is essentially a deterministic one, and (2) the division of mankind into six classes (aâshâtriya). The latter division, as held by Gosâla, is essentially a religious one, as contrasted with the Buddhist Dharma Nikâya (S.V. 162, tr. in U.D., App. II. p. 21). According to his account, Gosâla distinguished the six classes by six colours—black, blue, red, yellow, white, and supreme white. The black class were the hunters, butchers, murderers, thieves, in short, all evil-doers. The blue were the mendicants known as BûkSEN, that is, the Buddhist monks. The red were the mendicants known as Nâma-kalpikas, i.e., those who meditate upon u.nâma (at least) a strip of loin-cloth. The yellow were the lay adherents of the mendicants known as Achâlakas, that is, those mendicants who wore no clothing whatsoever. The white were the mendicants, as well as the female, who were known as the Ajâvikas.

The supreme white were the leaders of the latter: Nânda Vachâdha, Kissa Sankheca, and Gosâla Manu-kirthata.

In Mahâvîra’s time, the six classes, which he termed vegid, were also distinguished by a series of six colours differing but slightly from the six of the above scheme—black, blue, red, yellow, grey, red, yellow, etc. (S.I. ii. 160). In the interpretation of these colours, the two systems, on the first view, seem to differ considerably: but the underlying principle of their distinction is the same. According to Mahâvîra, the black are those who injure living beings, i.e., those who have a desire to injure them. The blue is the one who is not afraid of them. The red are those who are deceitful and lying, those who contravene the second and third of the vows (ôstas and ösurph). The yellow are those who are above all the others, as well as in the latter, who are known as the Ajâvikas.

It has already been stated (above, p. 261) that, in the main, there was no doctrinal difference between Gosâla and Mahâvîra. There was, however, one point on which, according to the Jain tradition, there was a marked difference between them. The latter declared that the doctrine of transmigration was a doctrine of self-deception. He was a strong advocate of the orthodetic or Original Sayings. These were, later on, embodied in the Dhrëti-vûda, or the twelfth Ânga of the Jains. The first portion of this Ânga is said to have explained ‘the preparation necessary to the understanding of the Doctrine of transmigration’ (I.A xx. 173). With respect to this preparatory discipline (parikramma) we are told that some counted six, while others counted seven groups.

The former count was that of the orthodox Jains, while the latter belonged to certain schisms, called Ajâvikas or Târâsîyas, that is, as Abhayadâna (c. 1050 A.D.) explains, to the sect (piûnand) founded by Gosâla. These men had their name Târâsiya (Skr. târâsîkâ) from their practice of treating everything under three aspects (trey-ôtnama)—assertion, negation, and indifference. Thus they would say, e.g., that a thing may be true, or untrue, or partake in both white and black, i.e., it may be both good and bad (san-sod). This tenet, technically known as the yôdideca, or the “it may be” principle, is distinctive of the Jains generally. It follows that the Târâsiyas must have made use of it in some special way, and that this special use accounts for their seventh group of preparatory discipline (parikramma).

It may further be surmised that this seventh group was concerned with the Ajâvikas or the ‘profession-less’ Jains. It is possible that the Târâsiyas had received their alternative name from Ajâvikas, or ‘Professionals.’ The substance of their teaching on this head is explained by Siûlaka (c. 570 A.D.) to have been that, besides the two states of moral depravity, the higher had a third, which he was ‘bound’ by karma, and in which he was ‘liberated’ from karma, there was a third state in which he was neither truly bound nor truly liberated (c. v. ii. 245, footnote 2). The men of the ‘bound’ state were those who lived in the world. To the intermediate state belonged those who had renounced the world (like Mahâvîra); but these men, owing to their spiritual arrogance, were not truly liberated; they had yet to pass through an innumerable series of transmigrations before they could reach that state of true liberation from karma which Gosâla claimed himself to have attained.

In the Bhagavat Sûtra (fols. 1237-1252; R.L. xi. 225) the following is quoted: see also Dîl, 72) the latter is represented as himself explaining his theory of transmigration.

1. According to my doctrine,” he says, “all those who have become, or are now becoming, or will hereafter become, perfected, have to finish 8,400,000 great periods (mâyâhukâ), during which they have to be born, in regular alternation, seven times as a deva in a firmament (mâyâhena) and seven times as a ‘conscious being’ (âstiprajñâdu, man) on earth, finishing up with seven re-appearances in seven different bodies; and having, in the course of these re-births, rid themselves of the effects of the five sorts of karma, and of the three sorts of karma, and of the fraction of a karma (see above, p. 261) in the proportion, respectively, of 190,000 and 66,000 and 600 (of the 8,400,000 of all these re-births have to be passed at the rate of 45 miles, or 6 feet). Taking a series of seven great rivers of which each succeeding has seven times the dimensions of the preceding, the last is one and a half times the size of the rivers. If now ever hundreds or a thousand of sand is removed, the next re-birth consists of 150,000 of those seven Ganges rivers would be one karma period; and 800,000 of such karma periods make one mâyâhukâ, or great period (U.D., 1237).

To give an idea of the immeasurable length of time involved in this process, Gosâla adds:

1. The bed of the river Ganges measures 500 gojâns in length, half a gojân in breadth, and 3 gojâns in depth, or 4j miles, a ûkha=6 feet). Taking a series of seven great rivers of which each succeeding has seven times the dimensions of the preceding, the last is one and a half times the size of the rivers. If now ever hundreds or a thousand of sand is removed, the next re-birth consists of 150,000 of those seven Ganges rivers would be one karma period; and 800,000 of such karma periods make one mâyâhukâ, or great period (U.D.).
dead body of seven different persons. In his own case, Gosala explains, he left near the town of Rājagaha the last elephant, the last sprinkling, the last wine, the last drink, the last song, the last dance, the last solicitation, the last tornado, the last sprinkling, the last wine, the last drink, the last song, the last dance, the last solicitation, and the last Mṛksna, viz. Māṅkholi-putta himself. The incidents which gave rise to this doctrine are those which attended the closing days of Gosala’s life. The first four were his last personal acts at death, the next four his acts in the seven years after his life (above, p. 259 f.). The next three are to have been remarkable events which happened just about the time of Gosala’s death. The ‘sprinkling elephant’ is said to have been a huge creature which had been trained to amuse the ladies of the royal harem when they bathed in the river Ganges, and the claim to the possession of which, as has already been related, occasioned a war between the kings of Magadha and Vaiśali. In this war those stone missiles are said to have been employed (N.S. § 17 ff.) which evidently must have been thrown by some kind of powerful catapult. The raison d’être of this curious doctrine may be supposed to have been the death of their master was felt by his disciples to require investment with some kind of rehabilitating glamour.

The incident attending Gosala’s death gave rise to another peculiar doctrine, reported in the Bhagavati Sūtra (fol. 1255 f.; U.P. App. I. p. 8, 9). In the heat of his feverish excitement, Gosala is said to have held a mango in his hand, and to have wetted himself with a maddening rain which is always present on a potter’s premises. This action is said to have suggested the doctrine of the ‘four Potables and the Four Impotables’ (chatārā prahava, chatārā aprahavā), that is, the four things that may be used as drinks, and the four things that may be touched, but may not be drunk. The latter refer to what is excreted by the cow, what is soiled by the human (e.g. water in a potter’s vessel), what is heated by the sun, and what drips from a rock. The latter refer to such things as water-jars, mangoes, beans, etc.

With regard to the practices of the Ājivikas we have an instructive statement in the Buddhist Majjhima Nikāya. In the 36th chapter (M.V. i. 238; N.R. i. 376), Sackhacha, a member of the Niggaṇṭha community, is represented as explaining to Buddhist monks the reasons for the adherents of Gosala Māṅkholi-putta and his friends Nanda Vachchha and Kissa Sānikiccha. These three men, as we have seen (above, p. 262, also below, p. 267), were the leaders of the Ājivikas. Respecting them and their adherents, Sackchacha says:

They discard all clothing (achelaka); they dispense with all decent habits (mattikāras); they pick their food out of their hands (chatthārāchārākas, p. 256); they listen to no call; they receive no food or drink, nor wait for food; they permit no food to be brought to them, or to be specially prepared for them on invitation; they accept no food from the mouth of the pot or pan in which it is cooked, nor food placed within the threshold or among the firewood, nor food which has been touched by men, nor food prepared by women, nor by cattle eating together, or from a woman with child, or a woman giving suck, or a woman in intercourse with a man; nor food which was prepared in the presence of dead, or of the dead, or the dying, or of a corpse lying by, or where flies are swarming round; they will not eat cooked fish or flesh, nor will they drink water which has been poured upon the backs of Woodfordia fruticosa, nor sour crude made of unheated barley; some of them beg only at one house and accept but one handful of the food offered by that house; two keepers beg at two thousand houses, others beg at seven houses and accept seven handfuls; some subsist on one leaf, others on one handful, others on one leaf and one handful; some take food only once a day, others only once every two days, others only once every seven days, others only twice a month; in this manner they observe various routines of fasting.

In the Digha Nikāya (p. 161; Dial. 227) this account of the Ājivika practices is placed in the mouth of a naked ascetic.
AJIVIKAS

(achselaka) Kassapa. This may refer to the mendicant leader Pūrana Kassapa (above, p. 209), one of the title rivals of Buddha; and it may also imply that the practices of the Jains were more or less common to all these rival communities of religious mystics. It is also not improbable that this permission was paid with regard to their common doctrines. In any case, with respect to Mahāvīra and his Nigghantas, the identity of several of their observances with those of the Ajivikas has been pointed out by Professor Jacobi in his Introduction to the Jaina Ubrāddhāyana (J.S. ii. pp. xxv f.).

This is worth noticing in connection with Sachchakra's statement of the Ajivika practices. When he had finished it, Buddha inquired whether the Ajivikas were really able to sustain life on such conditions, and Sachchakara, naturally replied that; of course, at other times they indulged in copious and excellent food and drink, and thus regained bodily vigour and grew fat. This remark is significant of the repute in which the sincerity of Gosāla and his Ajivikas was held by their contemporaries. It only serves to confirm the suspicion of Gosāla's insincerity on the far more serious point of sexual conduct, which, there is good reason to believe, caused the rupture between the Buddhist Saint and Mahāvīra.

From the way the Terāsiyās, or Ajivikas, with their peculiar doctrine respecting the seventh group of preparatory discipline (above, p. 202), are described, it is clear that they were not regarded as outside the pale of the Nigghanta community. Their doctrine might not be acceptable to the majority, it might even be schismatic, but it was not condemned as heretical. It might cause friction between its protagonist, Gosāla, and his associate, Mahāvīra, who rejected it; but it would not have caused that total separation and intense hostility which we see taking place of the early association of the two men. For this change clearly there must have existed a special cause not essentially connected with the Terāsiyā or Ajivika doctrine. What this cause was we are nowhere explicitly told. The Buddhists are silent on the point. Buddha, we know, disliked Gosāla, but he had never been in personal touch with him, and the quarrel of Gosāla with Mahāvīra did not really interest him or the Buddhists. It was different with Mahāvīra. In the earlier years of their ascetic life he and Gosāla had been associates. The subsequent difference and total separation could not but be a matter of importance to the Jains. Yet even in their Scriptures—so far as we know they are explicit in their expli(264)citation of the cause or reason of the separation is recorded. We are left to draw conclusions from some indirect indications; nor are these at all obscure in their suggestion. Gosāla's reports respecting Mahāvīra's headquarters on the promises of a woman, and his attempt to repudiate his identity, clearly point to, not a doctrinal, but a practical ground of separation, to some discreet feature in the conduct of Gosāla. What this feature was is plainly enough indicated in the Sutra-kṛtāṅga (J.S. ii. 245). Answering the contention of Gosāla (above, p. 262), that men who, like Mahāvīra, had renounced the world belonged to the intermediate state, and were still liable to be involved in karma, just as clarified water again becomes defiled, while he, Gosāla himself, had reached the state of perfect liberation, Mahāvīra points to the conduct of Gosāla and his followers: 'These men do not lead a life of chastity.' That fact, he means to say, should be enough to satisfy a wise man as to the truth, or otherwise, of Gosāla's contention. In this connexion it may be noted that, in the Bhagavatī Sutra (fols. 1275-1291; U.D., App. I, pp. 11-14), Mahāvīra is represented as ironically applying to Gosāla his own doctrine of transmigrations, and showing how Gosāla, instead of being in the liberal attitude after his own death to pass through an interminable transmigratory series, the several steps of which he specifies, before he really attained perfection.

There is, however, a passage in the Sutra-kṛtāṅga which is even more explicit in its statement. It records (J.S. ii. 400-413) a disparagement of Gosāla, made by Ādāra, a follower of Mahāvīra, held with Gosāla respecting the points on which the latter differed from Mahāvīra. These are, first, a charge of inconsistency on the part of Mahāvīra, that it first wandered about as a single monk, but afterwards surrounded himself with many monks; secondly, a charge of misplaced severity, that he insisted on four restrictions in which he himself, finally, a charge of spiritual arrogance as well as social cowardice. The four restrictions refer to:

1. Drinking of cold water.
2. Eating of (uncooked) seeds.
3. Accepting things specially prepared.
4. Servicing (a sick) brother, food brought to him in a vessel of a householder.

The ethical item of sexual intercourse is here replaced by the ceremonial item of eating from the vessel of a lay adherent. The significance of this difference will be explained in the sequel (p. 257).

At this point it is important to notice only that none of the matters in dispute is concerned with doctrine; they are all concerned with conduct. Considering that it was the conduct of religious ascetics that was in question, the most striking point in dispute is that respecting sexual intercourse. To understand especially how it was that we must remember that Parśva, the precursor of Mahāvīra, had enjoined only four vows (vrata) on his followers (J.S. ii. 121). These were—(1) not to injure (ahimsa), (2) to speak the truth (satya or satya), (3) not to steal (asteya), (4) not to own property (apraśāta or abhimana). That is, Parśva enjoined the vows of kindness, truth, honesty, and poverty. To these Mahāvīra added the fifth vow of chastity (brahma-charita, J.S. ii. 91, 109, 139, 204). His reason for making this addition is explained in the Ubrāddhāyana Sutra (S. ii. 122, 123). Before Mahāvīra it had been understood that chastity was implicitly enjoined by the latter three; but in reality it left a loophole. The wife being accounted a species of property, marriage was forbidden by the vow of poverty, and adultery by the vow of honesty; but the case of fornication was left open. On this specious ground, laxity of morals crept in amongst the intellectually and morally more or less enlightened of the sect. The restriction was then corrected by the opposition of his associate, Gosāla. The latter sympathized with the lax party; and he appears to have justified his own and their laxity of conduct by the argument that the truly 'liberated' ascetic could commit no sin, and that, as there was no free will, there was no moral responsibility. Indeed, there is good ground for believing that it was this very laxity of conduct on the part of Gosāla that gave the occasion to Mahāvīra to introduce the fifth vow, and thus to force the withdrawal of Gosāla. It will be noticed that the two statements of the four restrictions, above quoted, have the first three restrictions in common, while they vary with respect to the fourth. This points to something peculiar in these three restrictions. Now, in one place of the Sūtra-kṛtāṅga (J.S. ii. 312) these particular three restrictions (regarding cold water, seed, and non-acceptance of specially prepared food) alone are mentioned, and in the Ādāraṇi Sūtra (J.S. i. 63) we find Mahāvīra described as "the wise man who enjoined three restrictions" (jāma itīga). On the other hand, in the Buddhist Śīla, Dīgha Nikāya (p. 67; Dīgha, 74), Mahāvīra is made to describe himself as 'the man of four restrictions' (cattāra vrata). The explanation of this discrepancy which suggests itself is that Mahāvīra originally enjoined only three restrictions on his followers, and that he added the fourth at a later time when he quarreled with Gosāla. For the fourth restriction respecting intercourse with women is, in fact, identical with Mahāvīra's view of chastity. The statement that it had already been remarked, is an addition made by him to the four vows of Parśva. If the surmise is correct that it was Gosāla who provided the occasion for the institution of the fourth restriction (pātru), that is to say, the fifth vow (vrata) of Mahāvīra's system, it goes a long way to prove that it was Gosāla's laxity

* In J.S. i. 63 the phrase is wrongly translated by 'three vows,' following herein the commentators. I prefer, 'vow,' to something different from pātru, 'restriction.'
of morals that was the real cause of Mahāvīra's separation from him. Speaking on the ascetic's duty to acquire leisure with a woman, Mahāvīra is represented in the Sītra-kṛṣīga (J.S. ii. 273) as saying concerning Gosālī: 'In the assembly of the naked, Mahāvīra's body went, yea, but he commits sin, but the wise know him to be a deceived and great rogue.' It was Gosālī's hypocrisy in the matter of her conduct that caused the breach between him and Mahāvīra.

This, then, was the main cause; but, no doubt, there were other subsidiary causes which exacerbated the friction between the two men. They had reference to the three restrictions regarding the use of cold water and unboiled seeds, and the ascetic's aversion to wet feet. In order to realize the significance of these seemingly trivial matters, we must remember that among all Indian ascetics abstention from action (krama) was held to be the paramount rule of conduct, because krama bound the soul in the cycle of transmigrations. But to this rule there was one exception: seeing that without the body one cannot go through the whole of the discipline which secures salvation (nākeṇa, nīrvidyā), such actions as are necessary for the preservation of the body (dharma-ādhāra-kārīra-rakṣāgānya in the commentary to S.K. ii. 6, §7, in J.S. ii. 411), e.g. the begging and eating of food, are innocuous and do not interfere with the ascetic ideal (Śrīmad Bhāgavatam II. Bh. Rep. pp. 94, 99). Every vow (vratā) or restriction (yāma) taken on himself by the ascetic was considered tacitly subject to that rule and its exception. The differences among the ascetics arose when it came to the practical application of this tacit reference. Thus, while all agreed that storing food was forbidden, but that begging one's daily allowance of food was permitted, some ascetics qualified that permission by certain restrictions (vāyukṣa). Mahāvīra forbade the use of cold water and of seeds in their natural state, lest injury should be done to any 'life' (jīva) in either; both should be used only after boiling, or other safeguarding process. He also forbade the acceptance of any food specially prepared for the mendicant, lest the privilege of begging should degenerate into indulgence. Gosālī, on the other hand, rejected these three restrictions.

Again, while all ascetics were agreed that besides the body the ascetic should own no other possessions, Mahāvīra permitted the possession of a bowl for the reception of the begged food. Gosālī denied the possession of a bowl because the ascetic should and should make use of his hand for that purpose (cf. J.S. i. 57, footnote 2, and i. 267, footnote 2). The food should be received into the bowl made by the palms of the joined hands, and out of this natural bowl it should be licked up. Hence ascetics of this stricter observance were known as the 'hand-beggars' (kātpālekākhaṇa, D.N. 166; Diāl. 227). If food, however, was required for a sick monk, it was to be carried to him in the vessel of the householder. Mahāvīra objected to this practice as open to the risk of injury to any 'life' that might be in the householder's vessel (J.S. ii. 305).

In this connection the treatment of the question of clothing may be mentioned. Some ascetics (like Pārśva) permitted the use of wrappers; others permitted only the irreducible minimum of a pudic cover (kātaṇa), and a shirt (koṭaṇa), and a small bag (kātaṇa) which was used for carrying the cellars of ash (achakara), or 'clothless,' class. Indeed, it is just possible that on this point Mahāvīra may have been influenced by Gosālī. For we are told in the Jain Scriptures that at first, when Mahāvīra adopted the ascetic life, he attached himself to the clothed community of monastics, but in the second year of that life, about the time when he fell in with Gosālī, that he adopted the strictest observance of absolute nakedness. The coincidence suggests that Gosālī adopted the ascetic discipline from Mahāvīra, and that it was this circumstance that formed the bond of their early companionship, until the discovery of Gosālī's hypocrisy caused the subsequent and final separation. It appears probable, however, that within the Nigāghana community the general rule was to wear the loin-cloth, and the practice of total nakedness was limited to that section of it which formed the party of Gosālī, and had adopted his doctrine of ajīva as formulated in the seventh group of the preparatory discipline (above, p. 289), and which hence was known as the Ajīvikas.

On this point there is an instructive story related in the Buddhist Vinaya Pāṭhā (l. c. 291; V.P. Tr. ii. 516 ff.). Once, when Buddha was staying in Sāvatthī, he and his disciples were invited by a wealthy householder, Vudanesa, to go and listen to his reading. When the meal was ready, she sent her maidservant to call her guests. While the maidservant was on her errand it began to rain, and on her arrival at Buddha's lodging she found the Buddha standing disrobed and enjoying the rain. Thinking that there was a sudden downpour, she hastened to return, and reached the place to which she had been directed there were no disciples, but Buddha, in his underclothing, was walking in the rain, barefoot, and had cleared up; but the incident, which happened at Sāvatthī, shows that the Ajīvikas were naked monks, and that they were the followers of Gosālī, who, as we have seen, had established his headquarters at Sāvatthī, after he had separated from Mahāvīra. The same point is illustrated by a passage from the Mahâbhikshu classification of men (above, p. 269), in which the white class is represented by his own party, the naked Ajīvikas, while the red class is typified by the party of Gosālī. It is clear that the white Ajīvikas, the Ajīvikas, is a name given to the other portion which continued in the connection. For, as will appear in the sequel, it was the latter that formed the nucleus, from which, at a later date, the Digambara Order took its rise (below, p. 299).

It remains briefly to consider the two other charges preferred by Gosālī against Mahāvīra (above, p. 254). The reference in the first of these is not quite clear. Mahāvīra is accused of having first 'wandered about as a single monk,' but having afterwards 'surrounded himself with many monks' (J.S. ii. 400, 410). On the other hand, Gosālī claims to 'live alone and single' (ib. 411). As a fact, however, Gosālī was 'surrounded by many monks,' as is clearly known as the second part of the aforesaid story. It is clear, therefore, that the mere fact that a leader wandered about or lived with a company of personal disciples did not count as an offence. The gravamen of Mahāvīra's procedure, in the eyes of Gosālī, was that this was done, not as though it, like Buddha, he instituted an Order (śāṅgha) of monks. The followers of Mahāvīra were scattered in various places in larger or smaller groups, but they were all organized in one community; and a leader (Mahāvīra). Gosālī's followers formed but a small group that always accompanied its leader. There were, indeed, other groups of ascetics of a similarly dubious character who bore the name of Jain Order (śāṅgha), and who lived apart under separate leaders, the names of two of whom, Kissa Saṃkicchā and Nanda Vachchā, are recorded in the Buddhist Scriptures (M.V. i. 328, 524; A.N. iii. 384). But this is obvious that the institution of an Order by Gosālī, and other men of his way of thinking, would form a natural bar to the formation of a widespread public organization. It may have been the consciousness of this disadvantage that prompted Gosālī's accusation against his more successful rival.
The second of the two charges against Mahāvīra accused him at once of spiritual arrogance and spiritual cowardice. The reference in this charge is to Gosālī's theory of the three spiritual states of man (see above, p. 292). According to her, Mahāvīra was in the intermediate state; his soul, though free from karma in a sense, was not truly liberated, for it was full of spiritual arrogance in thinking that he was unique and alone direct and constant, whereas those who differed from him (J.S. ii. 411, §§ 11-14, and Śīlāṅka's comment on Śattra-kṛtāṅga, i. 1, 3, § 12; J.S. ii. 245). It was also full of spiritual cowardice in being eager to win converts among the common people, but afraid to meet learned men who might refute him (J.S. ii. p. 412, §§ 15-18, and p. 413, §§ 19-25). The advocate of Mahāvīra replies that, first, his master only teaches, as others do, what he believes to be true and right, and while condemning false doctrines, he does not condemn those who entertain them. Secondly, he never refuses to meet honest and worthy opponents, and is void of hypocrisy himself, while trying to win people for his doctrines.

4. History of the Ajivikas. — The earliest mention of the Ajivikas occurs in a brief record inscribed on the walls of two rock-hewn caves at Barabar Hill near Gaya (I.A xx. 361 ff.; S.A. 141). A celebrated Edict of the same Emperor Asoka, made in the 13th year of the reign of the Emperor Asoka, that is, in B.C. 261. It runs as follows: 'King Piyadassi, in the 13th year of his reign, bestowed this cave on the Ajivikas.'

The next mention occurs in the seventh of the celebrated Pillar Edicts of the same Emperor Asoka, made in the 28th year of his reign, or in B.C. 236 (S.I.P. ii. 82, 97; Ėp. Ind. ii. 276, 277, 284). This Edict, we have already noticed, that my Censors of the Law of Piety shall be occupied with the affairs of the Buddhist Order (śrīpuṇa) as well as with the Brāhmaṇa (asectics), the Ajivikas, the Nig兰nantas, and, in fact, with all the various mendicant communities (pāśupātī).

A further early mention occurs in a brief record, inscribed on the walls of three rock-hewn caves on Nagarjuni Hill in the first year of the reign of Asoka's successor Daśaratha, that is, in B.C. 227. (I.A xx. 361 ff.; S.A. 145). It runs as follows: 'This cave was bestowed by his Majesty Daśaratha, immediately after his accession, on the venerable Ajivika to be so occupied for them as long as the sun and moon endure.'

After this we meet with no mention of the Ajivikas till we come to the 6th cent. A.D. In that century, about A.D. 550, Varāha Mihira, in his astrological works Bhāja-jātaka (xxv. i) and Laghu-jātaka (ix. 12), names them as one of seven classes, of religious mendicants. These are:—(1) the Śikyas or Raktapātas (men of the red robe), i.e. the Buddhist monks; (2) the Ajivikas, or, as the commentator Bhājaotpalā (c. 950 A.D.) explains, the Ekadandins, or 'men of one staff'; (3) the Nirgranthas, or Jains monks; (4) the Tāpṣas (asectics) or Vanyāśāyas (enters of wild life), i.e. Brāhmaṇas of the fourth ārama, living as hermits without, and following, according to the commentator, the Minūšs system; (5) the Vṛdhā-nītāvakas; and (6) the Āharikas, who appear also to have been two kinds of wandering religious mendicants. That these seven classes of devotees, and therefore the Ajivikas along with them, were considered in Varāha Mihira's time, is evident from the fact that he teaches that a person is destined to enter into one of them according to the indications of his horoscope.

Recent and more detailed testimony of the great Jain commentator Śīlāṅka (c. 870 A.D.) to the continued existence of the Ajivikas. And here we first meet with the interesting fact of the identity of the Ajivikas with the Digambara Jains. Commenting on the objection made by some to Varāha Mihira's identification of the Sutra-kṛtāṅga (J.S. ii. 267), Śīlāṅka states that the reference is to the Ajivikas or Digambaras. Seeing that, in his comment on another passage of the same work (I.A xx. 361), he identifies the followers of Gosālī, that is, the Ajivikas, with the Terasīyas (Sanskrit: Trairāsikas), it follows that in Śīlāṅka's view the followers of Gosālī, the Ajivikas, the Terasīyas, and the Digambaras were the same class of religious mendicants.

In the 10th cent. we have a further testimony to the identity of the Ajivikas and the Digambaras. In his vocabulary, called the Abhidhānā Ratnakālī (ii. 189, 190), Halāyudha (c. 950 A.D.) enumerates a large number of names of the two Jain divisions, the Svetāmbaras (or white-clothed ones) and the Digambaras (or sky-glad, i.e. naked ones), or, as he calls them, the Svetāmbras and Digvāsas, or, in the term used by the Ajiva, which is only a shorter form of Ajivika.

Lastly, in the 13th cent. we have, in certain temple records of the Ajivikas as a sect then actually existing in South India, we have records are inscriptions on the walls of the Permal Temple at Poyzai near Virinchipuram (S.I. Inscr. i. 88, 89, 92, 108). They refer to grants of land to the temple. In one of them (w. 2), the name of the Jains, for it is this sect whose principal sent, in those times, was in Southern India, and colonies of them are still to be found there (I.A xxvii. 450; J.GOS xxvii. 17). The statements on the subject in the Tamil dictionaries appear to be based on the Tamil literature, and possibly on modern usage. The older Tamil literature (test Dr. Pope) certainly uses the term Ajivika in speaking of the Jain sect, i.e. these Digambaras. There can be no doubt, therefore, that since the 6th cent. A.D., when Varāha Mihira used the term, the name has signified the Digambara sect of the Jains.

As to Varāha Mihira's use of the term, it is to be noted that his commentator Bhājaotpalā, whose date is about A.D. 950, identifies the Ajivikas with the Ekadandins. This identification is based on a Prakrit verse which he quotes from a Jain writer called Kālikkabharāya. That writer, who lived about A.D. 450, that is, about a century earlier than Varāha Mihira, names the same seven classes of sectics with the one exception that he writes Ekadandins for Ajivikas (Tr.CA iii. 2, p. 535). Bhājaotpalā on his own part adds that the Ekadandins or Ajivikas are devotees of Śīvāyapa, that is, of Śiva. On the other hand, Śīlāṅka, speaking of the Ekadandins in another connexion, declares them to be devotees of Śiva (J.S. ii. 245, 417). It is clear from this apparent discrepancy that whilst these two commentators had in their mind was the class of sectics who are still known as the Daśamūras, or 'Men of the Self.' These sectics are usually classed as belonging to the Sāvite division of Hinduism; but they are rather ecclesiastics, in that they inveigh against the doctrines of Śiva, and of Śivāya. They carry a staff (dāpya) with a piece of reddish cloth attached to its top, wear only a narrow strip of cloth or go entirely naked, and are generally of low social position. They hold a particular set of doctrines; and any man, caste or no caste, may join them (Riv i. iv. p. 142). They must not be confounded with the Daśānami Daśānīs, who are a comparatively modern class of sectics, having been founded by the reformer Kālikkabharāya and his disciple on the Jain moderate cent. A.D., and their chief place of assembly is called (mūtha), and pay some regard to caste in the matter of admission (J.GOS Ex. 45).

From the fact that Gosālī is called Manabhālputta, or Māñkali (Maskari), i.e. the man who is an expert in the lamboo-staff, it is clear that originally he belonged to the class of Ekadandins or Daśamūras sectics; and also that he adhered to the system of Mahāvīra and adopted his system, he held some dis-
tinguishing tenets of his own, and also retained his old distinguishing mark, the bamboo-staff. On account of these distinctive marks, within the Buddhist community was known as the Terasiya or Ajivika (above, p. 262), and apparently also as the Ekadandin, or the One-staff men. Still later, by reason of his evil life, when it was discovered that he still lived and worked in the community; and with him, it would appear, were ejected also a few of the Ajivika party who were his intimate friends and shared his evil practices. Among these were the ascetics of two of these friends, Kissa Sakhiachaa and Nanda Vachchha (above, p. 263). These three men, after separating from Mahávira, appear to have lived a comparatively solitary life at Sávatthi at the head of small groups of like-minded followers. But there is no reason to believe that, with the expulsion of the black sheep, the Ajivika or Terasiya party as such ceased to exist within the Niggaññha Order. In fact, whatever evidence there is points the other way. Thus, in this connexion, the difference already noted (above, p. 264) between the two versions of the 'four restrictions' possesses a peculiar significance. The restriction thatDigambaras, especially those of the Gosala's party, imposed on themselves is an ascetic version which is concerned more especially with Gosal and his faction; while the other version, which substitutes the reference to the use of the householder's vessel, is, according to the commentator Śiñjikita, concerned with the Ajivikas or Diganbaras. The discrimination in the two versions, tends to show that there was a portion of the Ajivika party within the Niggaññha Order which was not implicated in the antinomies of Gosal's faction. As a matter of fact, the Diganbaras differ, to the present day, from the Svetambaras on the points implied in the four restrictions. Thus the restrictions respecting the use of cold water and natural seeds were intended to enforce extreme regard for any kind of life (jiva); but the Diganbaras are said to be 'only moderately careful of animal life,' while the Svetambaras are extremely so (I. A. xxi. 469). With respect to the fourth restriction, while both sects insist on the vow of chastity, they differ in regard to the possession of the alms bowl. While the bowl belongs to the regular outfit of the Svetambar monks, the Diganbaras are not permitted to carry it, but must receive their food in the palms of their hands (Oman, p. 151). As to the point of nakedness, the difference between the two divisions is sufficiently indicated by their names.

Another evidence in the same direction is afforded by the subsequent revival of the Terasiya trouble within the Niggaññha community, and by the retention to this day of the distinguishing mark of the staff among the Diganbaras. On admission, we are told, 'the novice is supplied with the articles allowed to an ascetic by the Jain Scriptures, a black rod or deadv about five feet long,' etc. and 'the Sādhū (or professed monk) always carries his staff (deadv) ('BG ix. pt. 1. p. 107).

The case, then, stands thus: Ekadandin is a general term for a class of ascetics who included two subdivisions, the orthodox Sāvite Dandins and the heterodox Jain Ajivikas or Diganbaras. The Jain writer Kalakachāryā, of course, meant to indicate the latter by the word Ekadandin; and Vaiśeṣika Vāma, who in his 'two centuries understanding, sub-stituted the more definite term Ajivikas. The orthodox commentator, Bhāṭottala, misunderstanding the position, confused the heterodox Ajivikas with the Jain Ajivikas of the friar party and the rest of the Niggaññha community. It manifested itself especially in the time

The history of the Ajivikas may be briefly summed up as follows: Gosāla commenced his ascetic life as a Mankhāli, or Maskarain, that is, as an individual of the ancient well-known class of religious mendicants which was distinguished by the carrying of a bamboo staff. After a time he made the acquaintance of Mahávira, who belonged to another class of religious mendicants known as the Niggaññhas, who in the Western Gazetteer are called the Svetambaras or 'white-robed' by the Buddhists, and in the context of the word 'Buddhist' is the word 'Buddhism', that is, a person of the Buddhist race who had adopted the rule of the fourth Brāhmaṇical dharma or way of living. Such a person took on himself to live a homeless wandering life as a religious mendicant. The appeal to the non-believers of the Ajivikas, as it has been already shown (above, p. 260), is not disavowing. A Vaiśeṣika or Sāvite ascetic may belong (or rather, may have belonged before joining) to any caste (W. M. H. pp. 59 ff., 89 ff.). These men may be said to be 'Brahmanical' ascetics because they profess to be the holy men of Brāhmaṇical doctrine, the Indian who would call them 'Brahmanas.' The word 'brahumani-cal' expresses a Western idea, quite foreign to the word brāhmaṇa.
AJMER—AKALIS

AJMER, AJMIR (the mere, or sacred mountain, of Ajayarka, who is said to have founded the city in the 2nd cent. A.D.)—The capital of the British district of Ajmer-Mhairwara, in the province of Rajputana. It is the seat of King Pandyu, separated to form the distinct Order which is now known as the Digambaras. It thus appears that the Jain division into Digambaras and Svetambaras may be traced back to the very beginning of Jainism, its origin having been the division of the two associated leaders, Mahavira and Gossali, who are the representatives of the two hostile sections.

It remains only to notice a few detached references to Ajiva mendicant occupations in the Buddhist Scripture books elsewhere. The Vinaya Pitaka (i. 8; SBE xii. 90) and Majjimma Nikaya (i. 170; N.R. i. 271, ii. 454) relate how Buddha, immediately after his enlightenment, met an Ajiva of the name of Upakna, who, however, received Buddha's account of his spiritual experiences rather contemptuously. The Majjimma Nikaya (i. 31; N.R. i. 46) further relates the story of an Ajiva Budhavutta who had been originally a carriage-builder, and who was converted by Buddha to his own belief. In the Vinaya Pitaka (i. 284; SBE xx. 750) we are told also of an anonymous Ajiva mendicant who gave the Buddhist monk Kassapa the story of his mysterious birth. These, and perhaps three men probably were members of the Ajiva party in the Nigantha community. In another place the Vinaya Pitaka (i. 190; V.P.7r. xx. 152) relates how on one occasion certain Ajivas, meeting with some Buddhist monks who walked under the protection of sunshades, jeered at the un-ascetic conduct of their rivals. In the Mahavatthas (T.Mv. 67) there is a curious notice of a group of Ajivas who were living as mendicants in the city of Pundarikakshabaya about B.C. 426, and on whose behalf that king is said to have built a house (gaha). This notice, however, considering the very early date to which it refers, must be accepted with much reserve. Another very curious notice of the Ajivas occurs in a little book on Hindu Logic as preserved in China and Japan, by Sadajiro Sugiura (ed. by Mr. Edgar A. Singer, jr., in the Philol. Journal xli), the Publications of the University of Pennsylvania.)

In the introduction, p. 15, the author says: 'Two more schools are frequently included by Chinese and Japanese authors among the main groups of the Jain sect (a separate article on each of them). They are called Nikendabtra and Ashibika, and are quite similar to each other. They both hold that the penalty of a sinful life must eventually be severe, and that it is impossible to escape from it, it is better that it should be paid as soon as possible, so that the life to come may be free for enjoyment. In their practices were ascetic: fasting, silence, immobility, and the burning of themselves to the neck (Nayakuron-lo, i. 23), were their expressions of penance. They were probably offspring of the Jainists or some other Hindu sect.'

The 'Nikendabtra and Ashibika' of this statement are obviously the Janagantas and Ajikivas, that is, the Svetambara and Digambara Jains.

A. P. R. HOSENIE.

—AKALIS—

The sect of the Akalis differs essentially from all the other Sikh orders in being a militant organization, corresponding to the Nagas or Gosains among the Hindus. Their foundation is ascribed to Guru Govind himself, and they steadfastly opposed Banda's attempted innovations. The term akal means, or 'immortal,' is said to be derived from akal, a 'day,' and akal, 'the dawners of the eternal,' but probably it is a self-assumed title, bearing its obvious meaning. The Akalis wear blue cheeked dressers, with hangers or bracelets of steel round their wrists, and quilts of steel on their lofty caual blue turbans, together with miniature daggers, knives, and an iron chain.

* The tenth and last Guru of the Sikhs, 1769—1770.

* Murray's History of the Sikhs, p. 303; Frere's Sikh Empire's Hist. of the Sikhs, p. 117. But Akal means 'deathless, i.e. God,' and Akal is simply 'God's worshiper.'

* Malcolm Collection, Vol. vi. A young sister brother, Bala Ram, wore blue clothes, when he is called Nikalmar, or 'clad in dark blue,' and Sivras, or 'the blue clad' (Acali Recherches, xi, p. 211).

A few Akalis wear the jatni or top-knot, but not all. Those who do not, do only use 'gar and hid' water; and also smoke.

AKBAR

In their military capacity the Akâls were called Nhangs, or reckless, and played a considerable part in Sikh history, especially of the four delàrs. At the siege of Multân in 1818 a few Akâl fandies f carried the fauce-braye by surprise, and precipitated the fall of that fortress. The career of Phûli Singh illustrates both the glory and their qualities and qualities and their defects. Akâl first came into notice as the leader of the attack on Metcalfe's escort at Amritsar in 1800. He was then employed by Ranjit Singh, who stood in considerable need of him, as a leader in the Indian valley, where he was guilty of atrocious cruelty towards the Muhammadan population, and in Kashmir. Finally, Phûli Singh and his Akâls contributed to, or rather virtually won for Ranjit Singh, the great Sikh victory over the Yutanaus at Teri in 1823. In this battle Phûli Singh met with a heroic death, and his tomb at Naushahra is now an object of pilgrimage to Hindus and Muhammadans alike.

Under Phûli Singh's earlier leadership, and perhaps before his rise, the Akâls had become a terror to friends and foes alike, and they were dreaded by the Sikh chiefs, from whom they often levied tribute, and who would be accompanied by them, after 1823, did much to reduce their power, and the order lost its importance.

The Akâl headquarters were the Akâl Bânga at Amritsar, where they assumed the deliberation of religious and political questions. The Mohammedan Bist, and the discussions of the Gurûmatâ; indeed, they laid claim to exercise a general leadership of the Khâls. Since Ranjit Singh's time Anandpur has been their real headquarters, but it is the place where the more degenerated passed away, and some of them have degenerated into mere boors.

As an order the Akâls are celibate. They have, says Trumpp, no regular chief or disciple, yet one hears of their qurry, whose leavings are eaten by their disciples (sewel or chelas). They do not eat meat or drink spirits, as other Sikhs do, but consume inordinate quantities of bhang.

H. A. ROSE

AKBAR.—1. Life.—The emperor Akbar, whose title of Bahá-lâf (or Abû-l-Mogâhl) Jalâl-ad-dîn Akbar Ghâzi, was born at Unmâkot (the fort of Unmâ) in Sind on 15 Oct., O.S., 1512, which the jâht-weather may not do. Others, again, wear a yellow turban beneath the blue one, as so to show a yellow hand across the forehead. The story goes that a Khâiri of Delhi (Sand Lâl, author of the Zindâ-nîma) desired to see the Guru in yellow, and Govîl Singh gratified his wish. Many sikhs wear the yellow turban at the Rasînt Panchû. A couplet erroneously ascribed to Bhai Gurdas says:

Sikh, sukh, surkh, zarbda,
Jo palna, kei Gurdâl, the Akâls, white (the Nirmand), red (the Udais), or yellow, are all brothers in the Guru.'

Ibbetson, § 522. Cunningham (p. 370) says râghân—"naked," or "pure," and has that meaning literally (cf. Pânts, s.c.); but in Sikh parlance the word undoubtedly means 'free from care,' 'careless,' and 'reckless.' It bears the same original meaning.

They were headed by one Jass Singh, called Mâli ("rosary") Singh, from his piety. 'He denied himself the use of bhang, the only intoxicating drug in use among the Akâls.' See Car-

uchi Sahib's Bâng Family of Lahore, p. 131.

1 Prinsep, on the Sikh Power in the Punjab, p. 111, and Phîbisco, Calcutta, 1794, p. 130, on the head of his tribe, and the temple (role) of the Akâls at Amritsar, the stranger presents a few rupees, and in return receives some sugar, while a small mirror is held before his face so as to reflect his image. This practice, if it ever existed, is now obsolete.

2 Religious opinions. This side of Akbar's character has received what is perhaps a disproportionate amount of attention. No doubt the question of his beliefs is a most interesting one, but the almost exclusive attention which has been paid to it has failed to obscure the emperor's actual greatness. After all, Akbar was a king immersed in affairs, and religion was only the occupation of his leisure hours. He was a great conqueror and administrator, and was more in his head than in his heart, and his great reforms, religious or revenue, were mere手段s to his end of Worship. It is certain, too, that he never seriously entertained the idea of becoming a Christian, and that the name of Christ and the Portuguese, missionaries were so deeply wished in his hopes about him.

Father Goldie very sensibly remarks: 'How far Akbar was sincere in his search for truth, how far he had towards it a
feeling akin to the agonism of our day, or whether he was merely bent, from the very first, on making for his subjects an eclectic religion, which would free itself from its old trammels and its old creeds on which it had been trained. It is a question over which he determined to place himself as the supreme prophet and infallible teacher, it is hard to say. This was essentially an established, self-sufficient, universal religion. Divine toleration was a new experience, very naturally made the same mistake about Akbar that many a musing forefather must make about himself. He was filled with a joyous exultation when he first has me as them with, and is captivated by their courtesy for his views, and their kind and loving attention to his work. The sovereignty was willing to pay homage to the Holy Scriptures, and pleased to see the "unkhon beaten on their own ground. But from this to subsidence in海军山 or from the authority of the Conqueror, to a long step, and one of which he probably never dreams.

Akbar's religious opinions have been discussed by Hindus, Muhammadans, Parsis, Christians, and freethinkers, and we have details about them in the Akbar-Nama, Badayuni, the Dabistan, and in the writings of Du Jarric, Bartoli, Vans Kennedy, Wilson, Elphinstone, Rehnraat, Bloehmann, Count Noer, General Macclagan, and others. We have also the younger's poem Abar's Drocus.

Undoubtedly Akbar has received more credit than he deserves for the depth and fervour of his religious character and his action, and that more is necessary of the hour should be neglected." But he was the reverse of a fanatic or an enthusiast. He was, before all things, a man of the world.* His real belief was that forms of religion were of little consequence. He saw that men were good or bad from causes quite remote from their religious tenets, and that there were good men in all religions. He had no overpowering conviction that there was salvation or destruction in any creed; and not being a one-sided enthusiast himself, he could not establish a new religion or make any ardent proselytes. He was a sincere inquirer after truth, but he was not a profound thinker, and his book-knowledge was exceedingly small. Altogether, he was very badly equipped for religious or philosophical discussions; for, as Badayuni says, though he had an acute mind and was a seeker after truth, he was exceedingly ignorant. He had not, like Julian the Apostate, studied in the schools, and was not competent, therefore, to arbitrate between contending sects. At the same time he was wiser and less superstitious than Julian, and did not, like him, try to combine lock and key to make a deep paganism. Julian was a fanatical polytheist, and dislikd freethinkers as much as he disliked Christians; but Akbar was made of calmer stuff.

In one sense (Lowe, 312) ascribes Akbar's heresies to his having been associated from boyhood with Hindus and to his early marriages with Rajput princesses, there seems to be no doubt that Akbar, like many other free-thinkers, began by being pious after an orthodox fashion. But perhaps Badayuni, by his jibbing expression Himad ronad, does not mean so much that the Hindus with whom Akbar associated were men of high character, as that they were devoted and ascetics, for ronad is the plural of ron, a word which has a double meaning, and signifies both a libertine and a devotee. In this sense the charge is true, for Akbar was from his youth up fond of the society of yogis and swamis. Patriotting in the sixth year, when Akbar was still under twenty, on one occasion he remarked, "Divine worship in monarchic countries consists in sacrifices and offerings." By the end of his reign he had spent much time in listening to Jewish and Christian sayings. He was a rare jeweller (i.e. a connoisseur), and a seeker after truth, as Akbar himself tells us. Lyons thus characterizes a prophet or an apostle, and seems to have flattered himself that his own ignorance was an advantage for philosophic investigation. "For the purposes of divination and fortune-telling, the prophets were all illiterate. Believers should therefore retain one of their sons in that condition."
AKBAR

had a remarkable experience which is described as a case of jashba, or attraction. He had gone out to the fields one day to play polo, and as he was lying on the ground after the fall, he suddenly became aware of an inner voice that had been speaking to him. This voice urged him to quit the game and go to the fields where the grass was fresh, in order to drive away the evil spirits. He did so, and found that his spirit was completely renewed—to enjoy hunting, and had appointed officers to organize an immense yamannah, or battue. It was to extend over some fifty miles of country from Girjak—supposed to be the Burephys of Alexander—down to the vicinity of Agra, and he himself was to be seen driving the game, and had nearly completed the work, when something came over Akbar, and he suddenly broke up the hunt and set free all the animals. This event occurred in the month of Friday, the first of May, the year 1579, in the 20th year of his reign, or the 13th year after his accession, on the 24th of Sept. His reason for this unusual order, which was not at first understood, was that it was a sign of his impending death. In this year also he revived the discussions in the 'Jhadathamun, and we are told that the Sufis, the philosophers, the rhetoricians, the lawyer, the Sunni, the Shii, the Brahman, the Yati, the Panthesists, the Buddhist, the Zoroastrian, and all others, enjoyed the pleasure of seeing Akbar place himself in the pulpit and preside over the debates. The date given for the commencement of these discussions is 20 Mihar A.H. 956 or 3 Oct. 1557. Abul-Fazl puts Father Rudolf Aequaviva's appearance in the Hall of Worship into this year, and tells an apocryphal story about the Father's challenging the Muhammadan doctors to the ordeal of fire; but unless Abul-Fazl is giving a consecutive account of the discussions and so has departed from a chronologically correct order, there is a mistake in his narrative, for Aequaviva did not arrive at Fathpur till February, 1580. According to Abul-Fazl, Akbar spoke at one of the meetings as follows:

'Formerly, from assenting to the opinions of specious, wicked men, we thought that outward conformist knowledge to bring Anger and Lust into subjection to Sultan Reason, and to erase from the soul the images of evil habits, that learned the men of Proof shall emerge from behind the veil of Error and convert one into a worshipper of the Truth. Afterwards, he may by inward influence draw to himself some inspirer after the Faith. Such loadstones are quarried in the mines of asceticism. Or he may, by virtue of a tallman and might of incantations, bring him into his circle. Should the latter, by an error of judgment, fall into the pit of heresy, assuredly he shall not be stained with the faith of the same. That is, that which we have done in accordance with old rules and before the real truth about Faith had been made known to us.'

These words may be compared with two sentences in Akbar's Memorabilia at the end of the 'Ath. 'Formerly,' he states, 'the Sufis, the philosophers, the rhetoricians, the lawyer, and all those engaged in dethroning Islam. As I grew in knowledge, I was overwhelmed with shame. Not being a Muslim myself, I was unfeeling or coarse in my words. But I decided that I would not take a measured rule and align one's actions thereon.'

Abul-Fazl went on to introduce the subject of the tenets of opposed religions, and described their various excellences. He gave no weight, says Abul-Fazl, to the foolish talk of the vulgar, but seized upon whatever was pleasing to Akbar, and he was disposed to believe that if he issued any new order, the nation was bound to obey it. If this position were opposed to the public interest, it would be for the public benefit. If any one opposed such an order, he would be ruined spiritually and physically, and be subject to final damnation.

Badyuni tells us that the 'ulama, with the
exception of Mubarak, signed this document unwillingly, but that Mubarak added to his signature the statement that he was heart and soul in agreement with the paper, and that he had for years been awaiting its execution. Badayuni adds that after Akbar had procured this document, the road of *itihaad* (decree-giving) became open, the supremacy of the imam's intellect was established, and no place remained for opposition. There was an end to the resolving of questions and to prohibitions. The intellect of the imam became the Law, and Islaam was called bigotry.

Abu-l-Fazl's account of the execution of the document, and its effects, is naturally very different from Badayuni's. According to him, all the doctors were eager for its execution, and the reluctance was on the part of Akbar, who was unwilling, as he expresses it, to come out from behind the veil. He yielded to their entreaties only because he came to perceive that, in leaving his position as commander of the spiritual world, and accepting the rank of *muftihad*, he was in reality placing a veil over himself. The result of the document was, he says, that the wanderers in the desert of doubt attained certitude, and that distracted souls obtained repose. Almost immediately afterwards, however, he admits that Akbar's complacency was soon to give way to misconceptions, and that he was accused of claiming the Godhead, of disliking the Muhammedan religion, and of being a Hindu. He says that one special reason for such ideas was the appearance of Christian philosophers in the meetings, and the discomfiture by them of the pretenders of learning.

It was probably in order to counteract these ideas that Akbar, shortly after this, paid a visit to England at Ajmir (he did not go there at the usual time, that is, at the saint's anniversary), and that he paid extraordinary reverence to a stone which was brought from Mecca and was said to bear an impression of the Prophet's foot. Abu-l-Fazl tells us that the impression was not genuine and that Akbar knew this, yet that he completely silenced calumnies by his politic conduct on this occasion.

But he proceeded more carefully with his new religion, and the Christian missionaries found him less disposed to listen to them. After the rebellion was suppressed, however, he advanced further in the path of heresy, of formalism, and of the Divine Faith and practised sun-worship. At the same time he was intolerant to some heretics. A sect calling themselves *Shais* sprang up, but Akbar had the members seized and sent off to Sind and Afghanistan, as the surest way of destroying them.

Akbar had a theory that the Muhammedan religion could last for only a thousand years from its origin. This was apparently a part of the Mahometan mission which had been added by him to the Prophet's præcepta. This theory was doubtless published by the late Mr. A. H. H. 900, that is, at the beginning of the 10th cent. (Maham.). In accordance with his belief in the approaching termination of the Muhammedan religion, he rigorously enforced the prohibition of idolatry, especially during that part of the year which in Arabic is called *aain* shows began, in A.H. 900, that is, at the beginning of the 10th cent. (Maham.). In accordance with his belief in the approaching termination of the Muhammedan religion, he rigorously enforced the prohibition of idolatry, especially during that part of the year which in Arabic is called *aain* (October). It was evident, however, that some one had addressed an unorthodox writing to him. The juxtaposition of these two letters does not prove that they were written about the same time, but this is evident from other grounds. The letter to the Jesuits was written in Rabi'-ul-awwal, A.H. 900, *April 1582;* the letter to the Fathis was written in the month of Add. 16, A.H. 900, and if it is true that Jerome Xavier was sent in consequence of this letter, this date is likely to be correct.
that to the shari'a is not dated, but it evidently was written about the same time, for it refers to the year 989 as having passed away.

Some years after this, Akbar called in 1572 A.H. in A.H. 994 (1586), we find him writing a letter repelling the charge of impiety brought against him by 'Abdullâh Khân, the ruler of Transoxiana. 'Abdullâh had been so provoked by the fact that he could not make his heir apparent, an emir, that he had accused Akbar of religious heresy.

In reply Akbar wrote two long letters to him, denying the charge and answering his ordohcocy. Blochmann (p. 466) refers Akbar as containing numerous samples of Persian, and an Arabic quatrain which Abdullâh could construe into a denial of his apostasy; but the letter goes farther than this, and is a serious denial, backed by supposed proofs, that the charge was no good. In it he appeals to his temporal successes as proofs of his being sound in the Faith, for otherwise God would not have favoured his arms; he refers to his having introduced Islam into places where it was previously unknown, and speaks of churches and temples of idolaters and heretics having been turned by his instrumental into mosques and holy shrines for the orthodox. He also speaks of his great desire to destroy the Perishing, i.e., the foreign religions, and destroy the persectives.

The truth probably is, that though Akbar had become disgusted with the 'ulamâ on account of their greed and their quarrels among themselves, and also because they held that he had more wives than the Law allowed, and though he was determined to be the head of the Church and the supreme arbiter in religious matters, he never entirely divested himself of his early religious beliefs. He was himself a Mohammedan and panegyrist Abu-l-Fazl, who, while professing a new and perishing, and presiding over a fire-temple, was yet secretly engaged in the pious work of multiplying copies of the Qurân, and was sending copies of his father's commentary thereon to foreign princes. Akbar, too, was before all things a politician and a man of the world, and was in no mood to endanger his sovereignty for the cause of religious truth. He was willing that his followers should exhibit what he called the four degrees of devotion, i.e., to sacrifice Life and Property, Religion and Reputation for him, but he showed no eagerness to make such sacrifices himself. He was a sincere and enthusiastic worshipper of the Divine Religion, and hence, though he was a mighty monarch, he was far less successful than his humble contemporary Bayâzîd in making proselytes, and founded no enduring school.

In the 'Dabistân-e-Magâhî, a singular work written in the time of his grandson Dârâ Shukoh by a Jew who apparently prosessed Muhammadanism, but was at heart a Parsee or a follower of the Aria Hâli of Akbar, we have what purports to be a specimen of the disputes which were carried on in the 'Ildhi-nâma, and was sending copies of his father's commentary thereon to foreign princes. AKIBA BEN JOSEPH

the sun was in the meridian. In the Akbar-namaah, iii. 364, one instance of such initiation is recorded. Fath Dost, the son of the Burjeel or Master of Requests, imported Abid-Flaj and Akbar to be admitted, and at length Akbar consented and recited over him the formula 'The pure shafi and the pure gladiator, when the initiation is ended, for two days afterwards Fath Dost was caught and killed under such disgraceful circumstances that his father declined to prosecute (Graetz, ii. 591).

Father Rudolf Acquaviva left when he found Akbar bent on establishing a new faith. He and other missionaries saw they made no impression on Akbar, who refused to accept Christianity unaided. In 1717 he went to the Trinity of Tbilissi, and the Sonship of Jesus Christ were made intelligible to him. He also withdrew from their society when he found that his alleged heresies were provoking a rebellion in Bengal. He returned to playing with the subject when the danger was over, and Father Jerome Xavier was with him to the end, and wrote for him a Life of Christ and a Life of St. Peter, and also some controversial tracts. But Akbar never was so well-disposed to Christianity as his son Jahangir, and died as he had lived—a sceptic.

HE BEVERIDGE.

AKIBA BEN JOSEPH (50-135 A.D.). — A great Rabbi who largely modified Jewish thought after the destruction of Jerusalem, and was not without influence on the early Christians. Graetz describes Akiba as beyond doubt the most gifted and influential of the Tannaim. Much legendary material clusters round his early history. He was a great traveller. He went to Rome in the autumn of 95 as one of an embassy to dissuade Domitian from an intended massacre of the Jews. On his return he was tried for his death. His companions were Gamaliel, Eliezer ben Assarir, and Joshua (Erubin, 84; and Sukka, 22). When on board ship, he cated a tabernacle, which was blown down in a gale, and his companions laughed at him for being over-rich. He was in favour at the court of the Emperor Nerva, where Flavius Clemens (conslul and Domitian's nephew) and Domitilla and Akyias (or Aquila), afterwards Akiba's pupil, became proselytes. But when Trajan succeeded, bad times arose for the Jews, and he returned to Palestine. Thence he went to Babylon, and preached and taught in Nehardeh (see Ketubbot, 55b). Afterwards he lived at Gazahka (Ab. Zev. 14b).

Before the outbreak of Bar Cochba's rebellion, Akiba made a final journey throughout Parthia and Asia Minor, and spread the Messianic propaganda preaching against Hadrian and his legions. We read of him in Phrygia, Galatica, Galicia, and Cappadocia (Rosh Hashanah, 52a; Jehovah, 121a; Baba kamma, 113a; Sifre, Nu 58). The early Christians had sown an idea inspired Akiba and the Jewish rebels with confidence; for as its rise had coincided with Jerusalem's fall, so should its fall result in the restoration of the Jewish capital.

The disastrous failure of Bar Cochba's rebellion resulted in Akiba's imprisonment and execution by the Romans.

E. A. Abbott, in From Letter to Spirit, quotes the Talmudic description of his martyrdom (Berakah, 60b) tells how, when Akiba 'was being led out to execution, he prayed for the time for rescuing the Shema' ('Hear, O Israel, the Lord our God, the Lord is One') and was combing his hair with comb of iron; but he persisted in reciting it. His disciples remonstrated with him, and Akiba replied, 'All my days I have been troubled about this verse: Thou shalt love the Lord with all thy soul (or life), even if He should take away thy life (or soul). When, therefore, dost thou have the power to fulfil this? Now that I have the occasion, shall I not fulfil it?' And he continued chanting out the word G-d, till he expired at Ox, the Bath Kol went forth, saying, 'Hail art thou, Akiba, that thy spirit went forth at Ox.'

It is interesting to compare this with the account in the Jers. Talmud (Berakah, 11. 7): 'R. Akiba was on the point of undergoing the extremity of the law in the presence of the infamous Turnus Rufus, when the moments arrived for reciting the Shema.' He began it, and it filled him with joy. 'Old man, old man,' said the proselyte, 'art thou a proselyte (so that thy tortures cause thee no suffering), or dost thou defy me by showing joy in the midst of thy pains?' 'CALM THYSELF,' replied Akiba; 'I am neither prosely nor mocker: but all my life long I have read this verse of the Pentateuch, and sorrowfully said to myself, when shall I fulfill the three ways of worshipping God set forth in this profession of faith? Thou shalt love the Lord thy God with all thy heart, with all thy soul, and with all thy powers! I have proved that I love him with all my heart and with all my means, but I had not yet undergone the test of love with all my heart, and in the present moment is that the moment in which I thus recite the Shema.' I delight in this occasion of proving my faith; and I have shown my joy.'

With these final words he went straight to his death.

The story of the 'ten martyrs,' including Akiba, still forms the theme of a touching Selikhah, and of an elegy in the Jewish ritual for the Day of Atonement, the Fast of Akiba.

But legend does not leave Akiba with his death. As with so many saints, there is something miraculous about his burial. A Midrash, quoted by Jelli-

issar (vi. 27, 8), tells how, after Akiba's execution, Elijah, according to the Midrash of R. Joshua, entered the prison where the body lay, removed it thence, and, escorted by many angels, brought it to Csesarea. They entered a cavern containing a table, a chair, and lamp, and laid the body on the bed. No sooner had they left the cave than it closed of its own accord, and no man has ever seen it since. A hundred years after Akiba's death, about 290, we get the first mention of a Messiah ben Joseph, who was identified with a person named David. R. Dosa tells of this in Sukka, 52a. The Messiah ben Joseph must die first, and then will be the advent of the real Messiah. This idea is perhaps due to the legendary tale of a man named either Jesus or Akiba, and genuine Jewish folk-lore is at the bottom of it.

Akiba was much opposed to the new Christian heresy, and it is not surprising that some put him at the head and front of the opposing Rabbis.

'Dusca dominus Nasaari—dusca familiae interpretatorum Sannaii filii Elisei sunt scribae et Pharsone, quorum scripta seus discipulisque magistrum Aquilam proselytus autem post eum Mura praebuit et filiam eam et post ordinem Delphinum (a Tarphon et) rematum Joseph Gallaeus, et usque ad captivitatem Jerusalem Jane.'

Perhaps his most famous pupil was Aquila, whose literally literal translation of the Hebrew text of Scripture was held in high esteem by all Jews, though Jerome sneers at it. Every exoclic is translated into Greek. And the Toldoth酵 Jerusal (Kid. i. 509) says: 'Aquilas the proselyte made his Targum (aum) in Akiba's presence.' This was because of his practice of Akiba's theory, and so inquired the rabbis and the Jewish scholars amongst the Jews, who in Palmd and Haggadah quote Aquila no less than fourteen times (see de Rossi, Neor Emaus, vi. 45). But that popularity did not preserve his Targum, for it was not printed till 1803 and was still in print in 1885. When, in 1803, Clarke undertook to publish and identify an important fragment of the Cairo Genizah. Of Akiba's other pupils, we must mention the Jewish Aesop, Meir, who was the link between his Mishna and
ours, and Simeon ben Jochai the mystic, to whom the foundation of the Kaballah is attributed.

With mysticism, however, as with gnosticism, Akiba had no sympathy. He is the only one of the four Rabbis who is said to have entered the mystic garden, and come out again without hurt. One died, one became insane, and one an apostate—probably to Christianity. The last was the famous Abner, Eleish ben Abuya, co-operating with Christianity in those times. Even the famous Elisher ben Hyrcanus, Akiba’s teacher, was taunted with being a Christian because he listened with pleasure to a parable recited to him in the name of Jesus. But Akiba was an exact science which left no room for eschatological speculations. He sought for mathematical proofs of his principles of the Jewish religion, and found them in the apparently superfluous terms, words, letters, and ornaments of Scripture upon which tradition and usage were to found new legislation. This method he derived from his teacher, Nalum of Ginzo, but Philo had applied it a century earlier to the religious philosophy and philology. Akiba applied it to Halakhah, and Akiba’s view ultimately prevailed in the Talmud. It is in reference to this doctrine that Mt 5:16 and Lk 18:19 record that ‘till heaven and earth pass away, one jot or tittle shall not pass from the law’ (LXX ἐκεῖνος τὸ μικρὸν ἢ τὸ μεγάλον ποιεῖται). Sharpe translates κεφαλή by ‘one tip of a letter’.

Akiba’s chief antagonist was R. Ishmael. The two are throughout Rabbinical literature regarded as opponents, like Hillel and Shammai, and other pairs such as those described in Aboth, chap. I. The fundamental distinction between them was in the treatment of pleanomas in Scripture: Ishmael regarded some of them as words, and interpreted with the text of the common language, Akiba held them to be essential portions of the Law. He never took the particle ἦν as a sign of inflexion, but ‘expounded’ ἦν as the variable of the verb ἦν in the Torah, and his pupil Nebuchim of Emmaus seceded from his school in consequence of the risk which such an interpretation involved in such a passage as ‘Thou shalt fear (εὐφροσύνη) the Lord thy God,’ which, according to R. Akiba’s view, implied fearing somebody or something with the word of God. In his language, Akiba said this meant the Torah, but, objected his pupil, it might just as well mean another god. Another of such rules was that dealing with the word ‘saying’ (ἀντίθεσις) when it is used for a roundly to be expounded’ (Sifre, Nu. 59). Finally, he interpreted the letters ἐ and τ wherever they seemed pleanomistic in the text. ‘R. Akiba expounded (παρεύρεσθαι) (Jebamoth, 588): A further difference between the men was that whereas R. Akiba did, R. Ishmael did not allow himself to treat conclusions out of Scripture as the premises for further conclusions (Jerus. Kidd. i, 2, and Nevi‘er, 57a).

It was in opposition to this perhaps extravagant mode of interpretation that the more sober R. Ishmael altered all rules of interpretation to his famous Midrash, so that he represented logic as the opposite of allegory. These thirteen principles are really based upon the seven rules laid down by Hillel.

The Midrash were originally drawn up as abstract rules by Hillel, and were variously interpreted and modified by his successors, so that Ishmael and their scholars specially contributed to their definition, Akiba on the grammatical and exegetical side, and Ishmael on the logical. In their final form these Midrash are the exposition of the thirteen rules which the Law is expounded, and which constitute the Baraita in the Shabbath, the weekly Prayer-Book.

(1) The inference from minor to major.

(2) The inference from similarity of phrases.

(3) The inference from similarity of law derived by inference from a common feature in (4) the same passage, (5) different passages.

(6) Interpreting a passage according to one of similar content in another place.

(7) Bedding a passage from its context.

In (6) and (7) Akiba and Ishmael disagree. Where two Scripture passages contain the same word or sentence, Akiba was not permitted to confirm one of the two conflicting dicta and reject the other. Ishmael would thereby modify both such dicta. This opposition of the two schools on this point decreased still more, so that the later Talmud do not discriminate between Akiba’s axioms and Ishmael’s.

The effect of Akiba’s system was epoch-making. He really gave his contemporaries a new point of view. The Temple had been destroyed, the country vanquished, and the Jews of the time were like sheep without a shepherd, having lost all hope and all belief. Scripture seemed insufficient to provide for one’s daily needs or satisfy anybody’s ideals. The Oral Law was doubted. It had enemies without and within. The forces of barbarism and Rome had conquered, and Christianity was a redoubtable foe from within, which, with its Messianic mysticism, must have offered comfort to the hopeless exiles. Then came R. Akiba, and showed that there was authority for all the Oral Law. He gave the solid rock of Scripture as a foundation for all the structure of observances, rules, and usages prevalent in his time, and at the same time enabled his pupils and followers to build higher and to aspire. Now his name was the dread of his contemporaries, and even his teachers, such as R. Joshua, once his teacher, could ask (Sota, 27b), ‘Who will remove the earth from the eyes of R. Johanan ben Zaccai, so that he may see how vain was his fear that Halakhah would have to be abandoned because it wanted Scripture support. Behold R. Akiba has found Scripture support.’ Everybody agreed that, but for R. Akiba, the whole Law must have been forgotten or, at any rate, neglected. If there had been no R. Akiba, the Oral Law would have abandoned tradition, it enabled the Oral Law to be rounded off and ordered and completed, and thus he is the true Father of the Talmud. His mnemonic method was twofold: first, to divide the laws according to their subject-matter, property, marriage, divorce, Sabbath, and so on, each such division constituting a treatise (Mekhilah); and, secondly, to arrange the material for each treatise according to numbers, so as to make them easier to remember. Thus there are four kinds of damage to property, there are five classes of people who may not enjoy the Priests’ terumah, fifteen women are excluded from levirate, ten crimes are punishable with exclusion. This arrangement of the Halakhah was called Mishna, afterwards known as R. Akiba’s Mishna, to distinguish it from the Mishna now extant, and this was translated by the Christian theologians, such as Epiphanius, as Akiba’s Deuteronomy. There had been other Mishnas earlier in date, but Akiba’s superseded all. Thus it is frequently stated in the Talmud that ‘This (meaning the dogma there set forth as the Law) is R. Akiba’s Mishna, but the first Mishna said . . .’ (cf. Sanhedrin, 27a, and Tosha Hashanah, 17).

Mnemonic grouping, into numbers, was applied by Akiba to each of his ethical sayings also. These, collected by Bacher in his Agada der Tanaim, throw considerable light upon the social conditions of the Palestine of Akiba’s time. Some of them are culled from Sirach, an interesting fact, when it is remembered that Akiba was one of the Rabbis who settled the canon of Scripture, and objected to the use of extraneous books, including Ben Sirra. In something like the spirit of the Jewish bards, it looks like a strange Scripture, destroy them: if they support Scripture, they are not needed. Some of Akiba’s logia are given in the 3rd chapter of Aboth, but his ethics is scattered through the Talmud and Midrash. Specimens of these are the following:—
"Three people are happy, and their consistencies may be tranquil, namely, (1) he whose prayer is glib in his mouth, for prayer must come free from the heart, not from the mouth; (2) he who has satisfied God, God has satisfied, and he believes in whom men have not satisfaction, God has not satisfaction; (3) he who does not expect anything from God. There is a good sign for him; but he who is dissatisfied, that is a bad sign.

As for sin, at first it is like a thread of a spider's web, but in the end it is a huge web like a ship's rope. He who in anger tears his clothes and breaks his crockery, he will serve idols in the end. He who is angry with other people will incline to them. It says today 'tear thy clothes,' and to-morrow 'serve idols.'"

"Agiba is very hard upon passionate anger. He who in anger threatens to kill his brother with his money, he will not leave the world before he has had to beg his neighbours for bread and for money. Agiba mocked at the scholars who could not bear the inclination to sin, but there is an Aramaic legend to the effect that he himself had once nearly succumbed to temptations ( Kidd, Sha), when Sotan presented himself to him in the guise of a lovely woman.

"Like Hillel, Agiba's great principle was that of Leib 471, 'Love thy neighbour as thyself,' and this principle he applied with characteristic ingenuity to marriage. An unequal match he condescendingly opposes against this principle. He that marries a wife who is not fitting to him commits five sins. He transgresses the three commandments, not to bear a grudge, or hate his brother in his heart, as well as the two as to loving one's neighbour. If he hates his wife, he defeats the object of marriage, which is to bring forth children. If he who sins much; (6) he who sins in pleasant places; (7) he who sins in order that he may satisfy God's desire by his sin.

"Agiba was no laughing philosopher. He lived in serious times, and therefore it is that he says laughter and levity lead to immorality, and that, furthermore, that truly holy has no place for the Laws, vows for piety, silence for wisdom.

"In his son's name he gave the following seven rules of life (Passages, 112a) (1) Do not live in the heights of the city; (2) do not live in a city whose ruler is a learned man; (3) do not live in a house that is barefooted; (4) do not walk barefooted; (5) eat an early breakfast, in summer before it becomes hot; (6) better to serve the poor; (7) keep friendly with the man whose hour smiles upon him.

"Five rules he gave to his pupil Simeon ben Johael when he was in the Roman prison: (1) if thou wouldst not hang thyself, hang on a large tree; (2) teach thy son out of a correct book; (3) do not cook in a pot in which thy neighbour has cooked; (4) seek to keep thy capital and have an income besides; (5) it is both nuture and pleasure to have a wife and children."

"In Agiba's name are seven other six rules of life: (1) Go into the society of mockers, lest they learn from their actions; (2) be not at the table of a priest who is an idiot, lest he give thee a bad example; (3) be not holy; (4) be not thy proof least thou break thine oath; (4) accustom not thyself to being a glutton, lest thou have thy capital in the kitchen; (5) commit not thyself to doubtful things, lest thou art found wanting in that of which there is no doubt; (6) go not to the bath, lest thou be accused of washing thyself in the same water with the gods.

With regard to diet he advised (Shak. 17 v): 'Live only in the country where there is fruit, for fruit is good for the eyes. He that eats foods that disagree with him transgresses the three commandments. He disgraces himself, he disgraces the food, and he makes a Beraikah (blessing) in vain.'

Shancul is he who allows his daughter to remain at home unmarried.

"Take heed of him who gives advice without being asked for it."

ALAHKNAMIS, ALAKHGIRS, or ALAKH-

KHYAS (Skr. alakya, 'unseeable,' and namam, 'name'; hence Ílandini Alakh-námi, 'one who causes to be known the unknown'), is a Gauvari sect of the Saiva sect. In Alakh- gír, gir =Skr. gir, an honorific title employed by one of the orders of the Dasânmi Saiva sect. Alakhgia is simply a Hindustani derivative of Alakh, meaning 'unknown'.—A name applied in Northern India to various sects of Saiva mendicants. The name Alakhgia is applied to all, but Alakhgír is generally reserved for those claim to be a subdivision of the Purâni division of the Dasânmi sect, while Alakhgír is reserved for those belonging to the Giri division. They are all popularly known as Alakh-ko jagâññé, or 'Wakers of the Unseeable,' in allusion to their habit of crying out His name. Adherents of other Saiva forms of faith also call themselves Alakhgíra, but the true Alakhgíra consider themselves as belonging to a sect apart, and do not follow customs (such as sitting the ears among Gôrankhanius (q.e.), which are retained by Alakhyas of other sects.

All these Alakhgír have tenets much in common, based on the central idea that the Supreme Deity is incomprehensible, or, as they say, 'unseeable.' In this respect Powlett's account (see Literature at end) of the Alakhyas of Bikâna in Pájputâna may be taken as applying to all. This particular sect was founded by a Chânâr (or low-caste leather worker) named Lâl, to whom his followers gave the title of Lâl-çir. He denounced idolatry, and taught his followers to call only upon 'the Unseeable.' Their sole worship consisted in repeatedly ejaculating the name Alakh. Charity was to be practised; the taking of life and the use of meat were forbidden. His doctrine was that there is no future state. All perishes with the body, which is finally dissolved into the elements. The sole rewards which he held out was the idea of attaining to a blissful life, and consisted in the attainment of purity, untroubled contemplation, and serenity. There being no future life, heaven and hell (or, in other words, happiness and misery) were within the man himself.

Alakhgíra wear a peculiar garb, consisting of a long blanket coat and a round, or high conical, cap. Although mendicants, they never beg directly. They come to a man's door and, in uncomprehensible language, tell him their characteristic cry of 'Alakh koâ, Alakh-kâ lâkkh,' 'Tell of the Unseeable; see the Unseeable.' If alms are then offered, they accept them; otherwise they go away at once. They are looked upon as a quiet, harmless class of beggars.

Lâl-çir's date is unknown, nor is there any record of the origin of the special theory which is the basis of the religion. That the Supreme Deity is incomprehensible is a common belief by all phases of Hindu belief, but this has been materially qualified during the past thousand years by the spread of the Bhakti-marga (q.e.), which supersedes it to its former. The Bhakti-marga, in the ideas of direct personal devotion, the Supreme Deity become incarnate in cognizable form out of pity for man's weakness and sin. The greatest exponent of the Bhakti-marga, Tulsí Dâs (1522-1623 A.D.), was never weary of dwelling on the incomprehensible nature of the Supreme Deity, and arguing from the fact that He was nãma- kramâ- bhaçhana-agôchara (i.e. beyond the reach of thought, act, and speech) to the conclusion that the only way of salvation open to finite beings was the exclusive worship of a personal incarnation of that Deity under the name of Râma. The tenets of the Alakhgíra, based as they are on the rejection of the idea of a personal God, may well have been put forward as a protest against the view of the Bhakti-marga, and as a counter attempt to popularize the idealistic theology of the advaita Vedânta philosophy, the aim of which is known to have been the reduction of all the pantheistic system into one of the comprehension. In this connexion the termination gir in in Lâl-çir, 'Alakh-çir,' is important, as, amongst Saivas, it is employed only by the sects of the Western Gauvaris. From Sûkârachârya (q.e.), the great founder of the advaita Vedânta, Lâl-çir was also probably influenced by the doctrine of the Jains (with which his teaching has much in common), who are a
numerous and influential body in Rājaṭputānā. Still more striking is the agreement of its teaching with some of the doctrines of Buddhism, but we have no reason to suppose that he can have been alive when that religion flourished in India. The earliest mention of the Alakhīyās that the present writer has seen is in a short poem attributed to Tulsī Dās. That reformer is said to have entered into a controversy with one of them, and his argument, as contained in the poem, was that the only way to ‘see the Unseen’ was to see him through the personality of Rāma.

The Alakhīyās, however, was founded about the year 1850, in Orissa, by one Mukund Dās, who was, according to his followers, an incarnation of Aśkē (sic) himself. He, however, claimed only to be in special communication with this Aśkē, whom he described as an incorruptible, spiritual being, omnipresent and omniscient.

In other respects his teaching was identical with that of the Alakhīyās of Northern India. He died in 1875, and the sect they have are, but is still in existence in some force in the district of Sambalpur, immediately to the west of Orissa.

**Literature.**—Regarding the jīr, see p. 185 of the Gazetteer of Allabād (Muller, ed., W. Powlett (ed.)), Crooke, *The Tribes and Castes of the North-Western Provinces and Oudh* (1896), p. 75 (mostly based on Powlett); cf. also H. W. Volker, *The Vatican Bible Religion of the Pāñcakśa* (1931), i. 235, 236, 238; and the present writer’s *Notes on Tulsī Dās* in *The Indian Arch.,* xxiii (1893), p. 273, and the followers of the Aśkē sect, see *Proceedings of the Bengal Asiatic Society* for 1885, p. 2f.

GEORGE A. GREERSON.

**ALANKĀNĀ** (Skṛ. *alakñana, ‘a young girl’)._—A sacred river in the district of British Garhwal, one of the tributaries of the Ganges. It has several sacred junctions (*anugama*) along its banks, at which religious bathing is allowed. A prominent point in the north is Nandprayāj, where it is joined by the Nandakini; Karṇaprayāj, by the Pindār; Kudraprayāj, by the Mandakini; Devaprayāj, by the Bhagirathi, after which it is styled the Ganges (which see). Though the Alankānā in volume and position is superior to the Bhagirathi, the latter is popularly regarded as the source of the sacred river.

**ALBIGENSES.**—A sect which derived its name from the city of Albi in Lower Languedoc, situated on the south bank of a confluence of the Garonne in France called the Tarn, which gives its name to the modern department. The ‘civitas’ of the bishopric was conterminous with those of Carcassonne and Toulouse, all the three dioceses being in the province of Narbonne, and owing a common allegiance to the metropolitan of that city (Longnon, *Géogr. de la Gaule,* pp. 529-531; Devic and Vassède [ed. 1872], vi. 6). The associations of Albi were consequently chiefly with the country to the south; but when, in the 11th cent., it was placed under the rule of a vicae, his jurisdiction extended north as far as the course of the Aveyron. In the 10th century, however, like that of Toulouse, is connected mainly with that of Septimania, the extensive region between the Rhône and the Pyrenees. Especially as the 5th cent. St. Amaran had been the patron saint of Albi, and with his worship was associated that of Eugenius, the bones of both being interred at Vieux, some 18 miles west of the city. Diognianus, his third bishop, is the first with respect to whom we have any information; he is referred to by Gregory of Tours (Hist. Franc. ii. 12) as one of the oldest guardians of the faith in the first half of the 5th century. Septimania, from the 5th to the 8th cent., was ruled by the Visigoth, who had his capital at Toulouse, and the territory is consequently, at this period, often referred to as Gothia. The Goths professed the Arian faith, and supported it, although not coercively, among the populations whom they had reduced to subjection, but whom they aimed at assimilating rather than effacing. They were themselves industrious cultivators of the soil, and understood the working of metals; the Roman cities remained intact beneath their sway, and the Roman laws were administered concurrently with their own. The chief impediment to peaceful relations between the two races was the pertinacity with which the Catholic bishops of the conquered opposed the religious creed of the conquerors. The Goths were thus encouraged to spread, and, during the reign of Theoderic II. (453-466), became the national faith of the Suevi in northern Spain and of the populations of Cantabria and the Spanish March. If, indeed, the same conciliatory spirit towards the Roman clergy as was shown by Theoderic the Ostrogoth in Italy, had been shown by the Catholic bishop towards the upholders of the Arian creed in Septimania, it is likely that the Albigensian crusade would have been averted. In the 5th cent., under King Eude, the Visigoths had extended their rule over the greater part of the Spanish peninsula, while in Gaul it reached the Loire; but the persistently aggressive policy of the Visigoths and the Arian creed roused the latter to a retaliatory course of action, which still further embittered the relations between the respective adherents of the two chief religions of Western Christendom. In the following century, on the other hand, the envoy of the Ostrogoths in Italy to Belisarius, could defy their enemies to prove that that monarch had ever resorted to unprovoked aggression on those professing the Catholic faith (Procopius, *de Bell. Goth. ii. 6,* while the rule of Theoderic the Great was characterized by such exceptional tolerance towards his Jewish subjects as to make them his firm supporters against the common enemy (Vassède, *Hist. de Langueco*, i. 655-660; Dahn, *Urgesch., d. german. u. roman. Völker,* i. 362-368, 240-250; Milman, *Lat. Chris- tianity*, bk. iii. ch. 3).

It is to be noted, again, that political sins weighed considerably with Clovis, the Frankish monarch, when, after his defeat of the Alemanni in 496, he embraced the Catholic form of the Chris- tian faith. For the latter, which he undertook against the Visigoths, it was as ‘Arian heretics’ that he proposed to sweep them out of the land (Gregory of Tours, ii. 27), and the immediate result, consequently, was to rouse the Burgundian and other Teutonic monarchies, which professed Arianism, to a common resistance. From the struggle which ensued, Theoderic emerged lord of Provence as well as of Italy, while Gothia became yet more closely allied to the Visigothic power in Spain. In both these great monarchies, aversion from, and a spirit of resistance to, the Frankish invader became a tradition alike with the Teutonic conqueror and the native element—an element which in turn was largely modified by ethnic admixture.

The Albigois, probably recovered by the Goths in the early part of the 6th cent., was again wrested from them a few years later, and the capture by the Franks of Alais, Uzès, Lodève, (Lutecev), and Carcassonne followed shortly after. The last-named city was thus constituted a Catholic see,—Sergius, the first bishop, afterwards appearing as a supporter of the Catholic cause. The Council of Toledo in 589, over which Recared, the Visigothic monarch, presided. Recared had recently been converted to Catholicism; and, being stimulated by his example and aided by the great preponderance of the ecclesiastical over the lay element, the Roman party secured on that
memorable occasion an easy victory, eight bishops of Septimania, those of Magnolune, Lodève, Agde, Beziers, Narbonne, Carcassonne, and Elne, headed by the metropolitan of Nimes, making their submission and subscribing the condemnation of the heresy. That example was reluctantly followed, however, by many of his subjects, and in Septimania frequent risings ensued [Mansi, Concilia (ed. 1644), xliii. 128–130; Doni, op. cit., p. 125].

Early in the 8th cent. the kingdom of the Visigoths was overthrown by the Saracens, and the new conqueror maintained his ground in Gothia for fifty years. In certain features, Muhammadanism and Ariantism are alike, especially in their common denial of the Divinity of Christ, and also in the aversion with which both regarded the innovations which were then taking place in the Roman Church, in the direction of saint-worship and the concomitant veneration of images and relics. The new conquest was attended also by another racial admixture which would imperceptibly incline the population of Septimania to listen favourably to the doctrines of that new faith. From whom many of them were, before long, to imbibe the doctrines of Manicheism. Fauriel has pointed out how, during this period, the industries, architecture, and literature of the old race, of the Carolingian, were modified by the influence of the dominant race (Hist. de la Poésie Provençale, i. 312–316). Of this approximation between the two races, an historical incident and a traditional reproach afford an excellent example. If we regard the 9th cent. as the beginnings of the 10th, a leader of the Paulicians is to be found advancing to battle side by side with a Saracen chief, to join in the defeating of the forces of the Carolingians at Boulogne beneath the walls of Sensa (Cedrenus, ii. 153; Zonaras, ii. lib. xiv.). In the 12th cent., the Catholic persecutor could assume it as a recognized fact that, in consequence of the Gothic and Saracen occupations, the inhabitants of Septimania, and more especially those of the Toulousain, had inherited a taint of heresy from which many of them were still unwarmed (Peter de Cernay, Migne, PL cxviii. 541; Milman, op. cit. v. 439; Loménie, Innocent III., la Croisée des Albigeois, 169). The obscurity which attaches to the history of the different Italian States in the 10th cent. and the earlier part of the 11th renders it impossible to state with precision the dates of those successive migrations of Paulicians (or "Publicani," as they are frequently termed), who, quitting their homes in Bulgaria (or Thrace), appeared at this era in Italy and from thence passed on to Western and Central Europe. The con

The Albigenses doctrines with those of the Euchites, a process which he considers had been brought to completion in Thrace (or Bulgaria), and subsequent to which the same emigrants, proceeding westward, carried with them doctrines which had a Gene of the heretic Caeleant's error. As early as 1012, when the Emperor Henry II. was at Mainz, "refutata est insania quorumdam laecetricorum," whom Hauck (Kirchengesch. iii. 431) assumes to be identical with the Manichaeans (Manichaei, 77, 120, 120, menta Germ. Hist., iii. p. 51); but the earliest authentic instance appears to belong to 1017, when certain canons of Orleans and other ecclesiastics of that city, thirteen in number, were brought before a specially convened Synod, and on being convicted of Manichean tenets, which they refused to abjure, were burnt outside the city gates. Various features gave to this case a peculiar interest,—the fame of Orleans as a seat of learning, the facts that King Robert himself caused the inquiry to be instituted, that the heresy had been imported from Italy and Perigee, and not least that it was by artifice, on the part of a Norman king, that the ultimately obtained from the admissions made by the victims themselves. The heresies to which they confessed—as involved in the denial of the Virgin-birth (as Peter of Lescar) and of prayers to the saints, of the Real Presence in the Eucharist, and of the lawfulness and duty of marriage (in opposition to the Petronians) —were unquestionably those of the Albigenses (D'Achery, Le Pape, 725; 694-695; Bouquet, Becoste, ii. 62-65; Bouquet, Becov, x. 36-38). There is, however, strong presumptive evidence of the existence of such doctrines in northern France before the 11th century. The eminent Gerbert, on being consecrated to the archbishopric of Rheims, made solemn declaration of his belief in the articles of the Catholic faith, at the same time expressly specifying certain other tenets—which he excepted with no less sincerity,—the resurrection of Christ and also that of all mankind, the Divinely inspired origin of both the OT and the NT, the existence of an evil spirit (which was evil non per conditionem sed per arbitrium), the lawfulness of marriage and of second marriage, and of the eating of meat, the remission of original sin by the rite of baptism (Gerberti Epistole, ed. Havet, 161-162; ib. ed. Olleris, 245-258; Schmidt (C.), Hist. de l'Eglise, i. 101-102, 231-232, 33). As all these were tenets specially repudiated by the Cathari, it is difficult not to concur in the view of Schmidt, Havet, and others, that Gerbert's declaration was designed as a protest against the growing activity of the sect in the province which he had been called upon to administer. As uttered by the metropolitan of the French kingdom, Gerbert's pronounce ment acquired special importance, and it is probable that any manifestations of such heresy within the royal domain were repressed with exceptional rigour. But all around the comparatively circumscribed limits of the realm of France in those days, we have every reason to believe that the doctrines of the Cathari were spreading rapidly. At Arns, in Flanders (whose counts rendered to the French Crown a homage that was purely external), there appeared in 1025 an Italian named Gundulf, whose preaching attracted so large a following that Reginald, the bishop of the city, ordered his arrest. He succeeded, however, in effecting his escape, and the bishop decreed it that all the same be made of the Cathari, either to be docile to argument, but was baffled by the discovery that they admitted no written authority in doctrine save the NT, while they altogether rejected the OT. His inquiries failed to elicit any expression of opinions which could be pronounced
Manichean, a fact which Schmidt (l. 39) explains by supposing that the heresy was introduced into France by the Flemings and Walloons who came as traders in 1199, and who were not yet excluded. Yielding to Reginald's gentle persuasions, they abjured their errors and implored forgiveness, whereupon they were again admitted to the fold. Among the tenets to which they adhered, the worship of the Cross and of its use as a sign—an early instance of opposition to this feature in the Roman ritual (Mansi, Concilia (1739), xiv. 423; Schmidt, op. cit. i. 35; Dillingen, Benedikt, i. 60-67). In 1204, we are informed, bishop de Chalons-sur-Marne, consulting Wazon, bishop of Liege (an ecclesiastical court in high repute both for his learning and piety), with respect to certain secret meetings frequently held by the Cathari in his diocese, especially at the fortress of Montwinoire, near Chalons. Wazon advised that, in the first instance, Roger should limit his interference to simply instructing the faithful throughout his diocese to abstain from communion and intercourse with such as were known to attend the gatherings. As, however, no satisfactory result followed, the Council of Rheims, in 1049, determined to issue a sentence of excommunication against those who adhered to the Catharistic tenets, and was not, with all the means known to be members of the sect, but also against all who should encourage or protect them (Mansi, op. cit. xiv. 742). This stringent measure appears to have had the desired effect; and, for some sixty years after, all traces of Catharism in northern France entirely disappear.

The above instances may here suffice to exemplify the treatment of heresy under the earlier Capet—treatment for more reasons similar to that which the French Crown, although there is evidence of a continuous growth of Catharist doctrines, the evidence that would have necessarily resulted from active measures for their repression appears to be comparatively rare. A decree of the Council convened at Toulouse by Calixtus II. in 1119, and re-enacted at the Lateran Council of 1123, throws considerable light on the general situation. The 'sacred Synod' enjoining the taking of active measures against those whom the Church has visited with its anathema; should they, on the contrary, endeavour to protect them, they are to be regarded as accomplices (Mansi, op. cit. xxi. 230, 522). The researches of Lachaise supply an excellent commentary on those edicts. The attitude of the seigneurs in his liege, as well as that of the citizen in his walled town, was at this time becoming less and less friendly towards the Church; the former often found his territorial claims in conflict with those of the bishop, or with those of some adjacent monastery exempted from local control by virtue of papal charter, while the latter's chief pride was in the newly acquired freedom and privileges of his ville franche; both were thus inclined to sympathize with the persecuted sectaries rather than with the imperious persecution. They were not formally excluded from，“alii Catharos, alii Patrocinis, alii Publicanos, alii alia nominibus vocant” —while all are forbidden, under peril of incurring an anathema, to give them shelter, either in their houses or on their lands (Mansi, Concilia (1644), xxvii. 460-461). If we may trust the Church History published at Leyden in 1599 with the sanction of the Vigniers, large numbers of heretics, known as the same appellations, were burned in Flanders and various parts of France about the year 1183 (Vignier, Hist. de l'Eglise, p. 391). Two years later, we find the cardinal bishop of Albano placing himself at the head of an armed force with a view to their forcible suppression. But the first organized measures of this kind date from the decree of the Council of Verona in 1184, where, although the Cathari are indicated only in general terms, the power to take active measures against them by the Church is declared to be in their hands. The episcopal Synod at Toulouse is declared to search out heretics, and, on due further inquiry, to hand them over to be dealt with by the secular authorities (Lavisse and Rambaud, ii. 272).

It was not, however, until the pontificate of Innocent III. (1198-1216) that the decree of the Council of Verona appears to have been put into execution. A member of an illustrious Roman house, he applied himself with singular ability and penetration to the task of building up a spiritual despotism. Even Otto iv. was constrained to promise his co-operation in a religious conflict before he could receive his imperial crown in Rome (Oct. 1209), and by that time the dangers which confronted the Church had assumed a yet more menacing aspect, for the Catharism was represented a movement which threatened the Roman pontificate itself with overthrow. From their various centres in southern Europe, following the courses of the great rivers,—the Danube, the Rhone, the Danube, and the Rhine,—they spread, in yet greater numbers than before, in Picardy and Flanders. Industry, and especially the weaver's craft, attracted them to the more important industrial centres,—the desire of con-
ving their foes by argument, to the famous schools of Paris, Chartres, Chalons, Orleans, Rheims, and Soissons (Haurieux, "Innocent III., p. 12). In Spain, it was rumoured, they were seeking to form an alliance with the Southern fanatics of Christianity, and, like Hildegarda, the pontiff in Rome and the troubadour in Languedoc alike denounced their heresy as the worse of the two (Jochim in Apocal., 134; Fanriel, "Hist. de la poésie provençale," i. 47). It is now that the territory of the Albigeois, having become their chief centre in Languedoc, appears first to have given its name to the sect; but in distant centres or districts they were still generally known as Cathari, and often, specifically, by some local name, wherever they congregated in large numbers—in Flanders and Picardy, for example, as Pipihi, a corruption of Paulicians; further south, as Béngari or Benegres. But their most widely spread designation, after that of Cathari, was Patarini, the name which they had brought with them from Italy, where again, at certain centres, they sometimes bore a local appellation, such as Concorriço, from Concorraiso near Monza, Albanenses, from Alba in Piedmont, and Bagnolcnses, from Bagnodo near Brescia. Even Agen, though but a few miles distant from this last city, gave it a different appellation,—Agnennenses [see in Döllinger's Beiträge (ii. 53–84), the text of a MS compiled in 1255, and entitled Supra Stellæ]. It does not, however, appear that these widely scattered communities were at variance among themselves, as was notably the case, in the 17th cent., with those Puritan representatives of the Cathari who settled, as exiles, in Holland and in Germany, and who on either side were marked as successive waves of a great exodus from Hungary, Croatia, Bosnia, Bulgaria, and Dalmatia, breaking now on the north-western shores of the Adriatic (where Venice became their chief centre), and now on the coast of Apulia, but finding, both among the rising communities of Lombardy and the unruly barons of the south, a sympathy which deepened into admiration and bore fruit in numerous con
tacts and negotiations. The state of the Catholic Church, indeed, whether in the lands which these exiles had quitted or in those in which they settled, was not such as to inspire them with much reverence, but rather to cause them to form a new, independent Church, and the clergy were poor and ignorant. In Hungary, a public official might be a Jew, a Muhammadan, or a pagan; and the mon
estaries there, which professed the Benedictine rule, were fain to seek their novices in Germany and Italy, and existed in almost complete isolation from the surrounding populations. Some of the Greek Church, on the other hand, while regarded with dislike by the Latin clergy, often sheltered within their walls not a few of whom the refined subtleties of the Manichæan dualism possessed almost a fascination; while over those rude natives to whom the Perfects of the Cathari were able to make a gospel forth that simplicity and ascetic life exercised a scarcely less potent influence. Among those of them who became converts to Bogomilism (see Bogomils) the accession from that source of new adherents to the sect was so strong that large numbers became converts to Manichæanism. The Paulicians, however, who formed an important body in the New Rome, migrated to Italy and to France. With regard to what might there be applied of the "moral life of 281" higher ecclesiastics and the state of discipline in the Church at large, it may here be sufficient to cite the declarations of a contemporary Pope and Theodore, the bishop of Mende, alluding to living in the latter place. It was in May, 1294, that Innocent III. addressed to his legate in Narbonne a letter charging attention to the demoralized condition of the clergy in that province, a state which he attributes largely to the misrule of the metropolitan, Berenger. He describes the effect that the simony and the heresy of his predecessors who had forgot how to bark, simoniacs who sold justice, absorbing the rich and condemning the poor, themselves regardless of the laws of the Church, accumulators of benefices in their dominions, fermenting dignities on unworthy priests or illiterate lads. "And hence," he adds, "the insolvency of the heretics and the prevailing contempt both of seigneurs and the people for God and for His Church." Nothing," he goes on to say, "was more common than for monks even, and regular canons, to cast aside their attire, take to gambling and hunting, consort with concubines, and turn jug
glers or doctors" (Epist. bk. vii. No. 75, Migne, PL. cciv. 355–357). "We are bound, in good faith, to admit," writes Mgr. Donouis, "that the clergy of the 12th cent. were not simply wanting in the power to withstand the revolutionary designs of the new Manichæans, but themselves afforded them, at once a pretext and an excuse" (Les Albigeoisi (1880), p. 287). In the year in which Innocent himself was elected Pope, the citizens of Lodève, in the territory of Beziers, had "given for palaces of their bishop, and compelled him, by threats on his life, to grant them fresh privileges (Luchaire, Innocent III., p. 27). It is, indeed, undeniable that at this time most of the chief seigneurs in Languedoc regarded Catholicism with indifference, if not hostility, and were friendly at heart to the Catharists; while, if their arch
caccuer, Peter of Cernay, might be credited, the counts of Foix, Beziers, Toulouse, and Bœm took a special delight in assisting the Catharists and in urging on the rise of the Catharist religion. The same clergy, and in offering insults to the officiating clergy (Historia Albignensium, Migne, PL. ccxi. cols. 565, 566, 579, 600–602). Such that outrages were instigated by the Catharists themselves, or that they were the result of their teaching, is, how
ever, at least doubtful, although there certainly are instances of similar action on their part under extreme provocation. But, generally speaking, by the admission of the same writer, they were known among their supporters as the bons homines, the 'bons hommieres,' whose simple blameless life offered, in most respects, the strongest contrast to that of the self-same clergy and seigneurs, and by whom the clergy, and to the dissolve and reckless careers of the majority of the seigneurs (ib. col. 553). Prior to the reign of Louis v. (1130–1180), the counts of Toulouse had been among the most independent of all the vassals of the French Crown; but in 1154 the marriage of Raymond v. with Constance, the sister of Louis, ushered in a material change in these relations. Shortly after, and for the first time within a century, a French monarch visited Languedoc in person; in 1158 his aid was invoked to repel the forces of Henry II. of England from the Toulousain. From that day, it became the policy of Louis and of his successors, Philip Augustus, to cultivate friendly relations with the clergy of these southern prov
ces; and a series of charters granted to the bishops of Maguelonne, Narbonne, Nimes, Uzes, and Agde, and to the churches and abbeys of Toulouse, raised them to comparative independence of the local seigneurs with respect to their temporalities,—the King and the Pope thenceforth representing their suzerains (Luchaire, Institut des première époque, p. 281). It was at the time when this important political change was becoming operative, about the year 1167, that the chief leader of the Paulicians in Constantinople (Constantinopolitan Ecclesiastical Prefect, Luchaire, ib. 281), arrived in the Toulousain to preside
over a Synod of the teachers of the Catharists which had been convened in St. Peter's, Toulouse. Farman, near Toulouse, has left an account of the prospects of the sister Churches in the East was well calculated at once to reassure those whom he addressed, and to raise the apprehensions of those of the local Catholic clergy. He had a right cause to feel. His own church of Melangia, in close proximity to Constantinople, stood firm; as also did each of four others, among which he had made a visitation before crossing the Mediterranean: (1) that known as the Didyma, (2) that in Roumazi, (3) the Bulgarian (with Philippolis as its centre), (4) the Dalmatian,—at the head of each being its duly appointed bishop, duly fortiﬁed for the spiritual life by the reception of the Consolamentum. Before he left the Toulouse, Niceas had either confirmed or instituted ﬁve new bishops for Septimania and the adjacent counties, among whom was Sicard Cellrier, bishop of Albi (Vignier, Histoire de l'Etat, 1601; Döllinger, Betracht., i. 116, 121, 123, and n.).

According to Döllinger (ib. p. 200), the above-named Synod reasserted the Manichean doctrines of the Catharists and of the Eutychian and in 121, another 'Perfectus,' one Julian of Palermo, a teacher of the same school, appeared at Albi. He had long been known by his labours among the warlike race which sheltered in the gloomy gorges of a mountain and his fervid oratory now wrought upon the Albigensians, that almost the entire population accepted his teaching, while his emissaries were received with open arms in most of the chief towns of Septimania. It is to be noted, accordingly, that at the very time when Innocent re-solved upon the Crusade in Languedoc, the doctrines of the Cathari had assumed a form which can only be described as subversive, not merely of the teaching of the Western Church, but of Christi-anity itself.

The Church of the Cathari most resembled, perhaps, that of Rome, with respect to its organization. It appears to have had its episcop, although this is somewhat doubtful (see Schmidt, Histoire, ii. 145); but it is certain that, in the New Rome, Niquinta had been styled 'Papa,' and Julian of Palermo, known as Major Harecterusom, appears to have been regarded as his successor. The func- tions of the Catholic bishop were vested in the Perfectus, the person in each separate community or congregation of eredentes who, by virtue of a length of time as well as of discipline, which in- cluded periods of complete isolation from society, had won for himself the recognized right to bear a designation which implied his superiority to human frailties and passions. Under his teaching his flock learned to repudiate the Divinely insti-tuted ordinance of marriage and to ignore the rights of individual proprietorship, the ties of social existence and of civic organization being alike thus cast aside. Self-detachment from the world, while engaging in secular duties and pur- suits, appears, indeed, to have been their dominant conception of the religious life, all contact with the material involving a certain detestation, while life itself was a kind of purgatory, of which the Catharists rejected the Roman doctrine, main- taining that the soul, after death, entered forthwith into a state either of perfect happiness or of eternal suffering. (Schmidt, Mythe, PL, cxxii. col. 15). Their abstention (of Manichaean origin) from all animal food included even milk and eggs, all matter being regarded as the creation of the Spirit of Evil, but especially that which was the outcome of an animal origin. Labour was justiﬁable so far as it served to sustain life; carried beyond that point, it was useless for those who were debarred from the possession of anything that could be called personality (Schmidt, ii. 84, 85). The Cathari of the East did not recognize the Perfectus on the believers (eredentes); but besides the believers there were the 'hearers' (audi- tores), who listened to the words of the teacher but failed adequately to put in practice what he taught. With regard to their theology, the doc- trine is perplexing, not to say contradictory. Their Christology, while evidently inﬂuenced by Arius, differed from it in some important re- spect. Christ, they held, was not God, but a creation of the Divine Nature, and one with it only in respect of will and intention,—an Archangel among the angels and appearing upon earth in this celestial form (see DOCETISM), but neither Incur- rate nor Ascended, the very miracles which He wrought being explained away as purely metaph- orical, and designed simply to symbolize the power of the spiritual over the earthly nature. At the time of the commencement of the Crusade, indeed, the dualistic and anti-materialistic theory had obtained such inﬂuence in Languedoc, owing, possibly, to the teaching of Nicetas and Julian, that, according to some teachers, the Christ of the Manichees was the same as that of the Evils, permitted to appear on earth as the Tempter, seeking to lead man astray and to undo that work of man's salvation which was being accomplished by the true Christ in heaven (Peter of Cernay, ed. Schmidt, p. 546; Schmidt, ii. 427). The views inculcated with respect to the Third Person in the Trinity, so far as discernible, are not altogether intelligible, and the dualist can hardly but have found his main theory accom- panied with exceptional difﬁculties in connexion with this question.

If the above tenets were calculated to scandalize and alarm the devout Catholic, the theory of the Consolamentum must have added yet further to his dismay, supplanting as it did the ordinances of the Church in relation to baptism, to the Eucharist, and to absolution. This singular and elaborate ceremony, described at length by Schmidt (i. 119—129), commencing with the renunciation of the Church of Rome and followed by a declaration of acceptance of the Catharist faith, and a solemn promise to observe all the conditions imposed with regard to chastity, diet, and outer sanctiﬁcation, ter- minated in the formal admission of the believer into the number of the Perfecti. He then, after a rigid fast extending over three days, retired for forty days more to complete that period where the Consolamentum had been granted to one who was seriously ill, the individual, we are told, would not infrequently refuse all food, and either voluntarily or at the behest of the Perfecti submit himself to the cutura, so as to die of starva- tion, and thereby expedite his immediate passage into eternal felicity (Liber Sentent. Inquisitionis Tolosanum, p. 134; Schmidt, ii. 102, 129). With the Consolamentum were associated two other doctrines which may be said to have completed the alienation of the Catharist from all that savoured of Roman Catholicism,—the above-men- tioned repudiation of the doctrine of Furgonomy, and the theory that the efﬁcacy of the ceremony would be lost, if the ofﬁciating Perfectus were not himself pure from sin. The admission, indeed, with which the teaching of the Perfecti was listened to, alike by the seigneurs of Septimania and the citizens of Albi and Toulouse, is largely to be attributed to the fact that the Perfecti actually exempliﬁed in their lives the austere virtues which they inculcated, thereby presenting a marked con- trast to the life of the secular clergy. Labour was justiﬁable so far as it served to sustain life; carried beyond that point, it was useless for those who were debarred from the possession of
preached and he prayed, but he did not persecute; and here, again, he contrasted favourably with the Catholic, and won the sympathy of the seigneur. It must, indeed, be remembered that Puy-l'Évêque, Chaource, and community of knights of Languedoc a man could profess almost any religion that he pleased. To Innocent III., however, such laxity of belief and diversity of morals and of customs was imperatively for intervention; and his experiences, since his accession, in his own dominions might well seem to show that such intervention, if judiciously carried out, might be relied upon to accomplish the desired results. In Italy itself the increasing numbers of the Patarini and the defiant attitude of many of their leaders had already roused him to active measures. At Verona, on the petition of the archbishop, he had pronounced a sentence of excommunication, but it had been treated with contempt (Baluze, ed. Mansi, i. 191). It was yet more ominous when, within the limits of the Patrimony itself, a succession of cities had given evidence of their disloyalty, in 1200, his intervention having been solicited by the Catholic party, he had sent Parentio, a high-spirited young Roman noble, to assume the office of his representative there, and, even then, his representative had exerted his authority had given rise to a conspiracy, and Parentio had been dragged in his house and put to death outside the city walls (Acta SS. vol. ixvii. Mai.). At Viterbo (one of his favourite residences), in 1290, several Catharists had been elected consuls, and their Perfectus, one John Tiniosi, had been returned for the office of papal chamberlain. Remonstrances having proved ineffectual, Innocent himself, in 1297, had repaired to the city; the leaders fled on his approach; he commanded that their houses should forthwith be demolished and their property confiscated; while the Podesta and the consuls were compelled to swear that, in future, they themselves would meet out like punishment to all heretics (Epist. x. Nov. 103, 130, 139; Migne, PL. exxv. cll. 1220, 1220, 1231). Like punishment was inflicted on Orvieto, and with the close of the year 1297 the submission of the cities was complete, and penitent Viterbo had been raised to the rank of a cathedral city; while Innocent was now able to direct his attention to where it seemed most needed. In Languedoc the intervention in that province was materially aided by a political change which had taken place since his accession (Schmitt, i. 148–149).

In 1257, the kingdom of Aragon had been acquired by the crown of Barcelona, Raymond-Berengar IV., and the crown had become hereditary in his house. In 1294, his descendant, Pedro II., following the example of the French monarch, had proclaimed himself the vassal of the Roman pontiff; and, in consequence, various sieges which had before done homage to the counts of Toulouse (among those of Carcassonne, Albi, and Nîmes) became detached from their former fealty to that of the kings of Aragon, the first two cities, it is to be noted, being in the same episcopal province, with Narbonne as their common metropolis (B. Haouran, Bernard Deliciens, p. 12).

It was now, therefore,—when the Fourth Crusade had resulted in the reduction of the Eastern Empire to the condition of a French dependency, when the disastrous ten years' war between France and Germany had been ended, and Otto IV., under solemn promise to restore the lands which he had wrested from the Holy See, was looking forward to his coronation in Rome,—that the time seemed to have arrived for Innocent to exploit the very natural interest which was now being approached by his excommunication, and placed his

on the fact that his great aim is the conversion of the heretic, not his destruction; and in Nov., 1296, three legates had been sent by him from Rome to Nîmes to make yet another attempt to bring the Cathari to reason. The presence of argument. They were at the same time directed to lay aside all pomp and ostentation, and to aim at winning the sympathy of observers by a humble demeanour, lowliness of bearing, and the poverty of their great exemplar, and by the force of their own example and convincing speech (documentum sermonis) to recall the heretic from his errors (Epist. x. No. 185). It is noted by Lucchare that four months before this letter was written, Diogo de Acevedo, the bishop of Osma in Spain, accompanied by Dominie de Guzman, the founder of the Dominican Order, had had audience of Innocent in Rome, and on their return journey had, by accident, fallen in with the above three legates (one of whom was Peter of Castelnau) at Castelnau, when the bishop of Osma had given them much the same advice as that which soon after reached them as a mandate from Rome. As Dominie was one of the bishop's chapter, and was present when this advice was given, we may fairly accept the assertion of Vignier that the self-same words, of which he has just spoken, distinguished the Dominican friars, to a great extent, evoked by the urgent necessity of combating the success which had attended the exhibition of the same characteristics on the part of the teachers of the Catharism (Histoire de Tuges, p. 405; Lucchare, Innocent III., 90–91). Dividing themselves into little bands, the Dominicans now appeared at different centres,—Servian, Beziers, Viterbo, Montpellier, and Pamiers,—inviting the leaders of the Catharists to amicable discussion on the chief points of disagreement. At each of these centres the dispute extended over from seven to fourteen days, and was listened to with intense interest by crowded audiences; but as the only accounts which have come down to us are those preserved in Catholic sources, they can hardly be supposed to be impartial. But if it be true that at Montpellier, Oton, the Catharist protagonist, affirmed and maintained his quidam the identity of the Church of Rome with the Babylon of the Apocalypse, and even ventured to style the former 'the Synagogue of the Devil' (Epist. 410, 411), it is very unlikely that this could be credited with any real desire to conciliate his opponent (Devic and Vaisissatte (1879), vi. 239). At the expiration of two years thus spent, Dominie is recorded to have expressed himself deeply gratified at the result of their collective labours (Pierre de Cernay, op. cit. cc. 1–5; Schmidt, i. 211–217; Lucchare, Innocent III., 92–90).

But however sanguine Innocent may originally have been of their success, he had already determined on the employment of other means, and, early in 1297, Peter of Castelnau had received instructions to urge upon certain seigneurs of the Septimania (one of Raymond de Galiza himself was one) that they should lay aside the feuds which, unhappily, were rife among themselves, and combine in a Crusade against the heretics. That it was designed, by this proposal, to isolate Raymond admits of little doubt, and he was himself fully aware of the net that was now closing round him. The other barons, allured by the prospect of rich plunder, to be reaped at small risk, readily accepted the proposal. Raymond de Galiza, apart from his open sympathy with the Cathari, who composed a large proportion of his own subjects, recoiled from the prospect of seeing his own domains overrun by the enemies of his house, and by very natural reparation procured him excommunicate, and placed his
ALBIGENSES

283
territory under an interdict, at the same time justifying this extreme course by alleging the count's laxity, and extorting by the administration of his seigniery,—laxity, as shown in his partiality to Jews and heretics; extortions, as attested by his encroachments on the temporalities of the Church (Vaissette, iii. 146; Devie and Vaissètte [1919], 257). Innocent followed up the action of his legate by confirming the sentence of excommunication, and, addressing to Raymond a letter in which he upbraided him with seeking "to provide for his confederates in crime by allying himself with the foes of Catholic truth" (Epist. xi. No. 99; cf. Devie and Vaissètte, op. cit. vi. 255-257).

In the first instance, Raymond is said to have feigned submission, but he failed to give practical effect to the promises which he is alleged to have made; and Innocent now, for the fourth time, proceeded to invoke the aid of King Philip, entreatin; him to come in person and place himself at the head of the Crusade. The latter, although himself involved in hostilities with John Lackland, at length feigned compliance, but in doing so he stipulated that Innocent, in turn, should undertake to bring about the release of Raymond and Roger from imprisonment, and should also deere the levying of a subsidy from the clergy and nobles of the French kingdom to defray the expenses of the Crusade. This, however, was soon abandoned; and it was while he was probably hesitating as to the course he should next pursue that his perplexities were suddenly terminated by the assassination of Peter of Castelnau, when on his way to St. Gilles, by one of Count Raymond's officers. The person and his territory were declared to be no longer under the protection of the law, and his subjects and allies alike absolved from their vows of fidelity or loyalty (ib. xii. 106). It was then that, inasmuch as the Church had been a target for so many enemies of the Faith, while the greater part of Septimania was reduced to the appearance of a desert. So great, indeed, was the scarcity of supplies, that the French leaders, having completed their forty days' term of service, and seeing no prospect of further plunder, were fain to return home. Simon de Montfort, fourth earl of Leicester, alone remained, in the Ile de France he held only a petty seigneurie, and having been appointed successor to Raymond Roger in the viscounty of Beziers and Carcassonne, he found himself virtually an autocrat in the government of the desolated province. Although he was by education a Catholic, his religious enthusiasm was probably fanned by a sense of personal wrong. In 1107 he had been implicated by John of England in the various that John of England would commit this very way in caring to his mutilation and delinquency in England of that same episcopal order whose power de Montfort was pledged to restore in Languedoc, we
cannot but see that hatred of heresy can hardly have been the sole motive which urged on the stern Norman knight in his merciless career. Before the year 1210 had passed, John himself received information that his grandsons were plotting to place the crown which he wore on the head of Simon de Montfort.

The circumstances under which Simon was now called to account for his activities over a territory which, however, sufficiently discouraging. Funds had been entirely to fail him, and this at the very time when the few knights who had remained with him were demanding double pay, to indemnify them for the absence of the plunder which the country no longer afforded. In his difficulties he appealed to Innocent. The pontiff, already overburdened by the demands consequent upon the Fourth Crusade (see CRUSADES), was unable to respond with pecuniary aid, but wrote to the Emperor Otto, the Kings of Aragon and Castille, and numerous powerful knights and ladies, to invoke their assistance (Migne, PL ccvi. cols. 141-143). At the same time, now that the situation was admitted by the service which Simon had rendered in restoring to the papal exchequer the heathen tax of three pence per annum which the legislator had already imposed, in many cases, been diverting to their own uses.

In the meantime, Raymond, sorely pressed by the demands imposed on him by the papal envoys, was reduced almost to desperation by being for a third time excommunicated, the sentence having been pronounced by a Council at Avignon, 6 Sept., 1209. He resolved on a personal appeal to Innocent, before whom (Jan., 1210), having been admitted to an audience in the Lateran, he laid a statement that his own lands and dominions were at his disposal, and in return for what actually took place on this occasion; but it is probable that the pontiff deemed it prudent to disown, to some extent, the relentless proceedings of his legates, one of whom, Milo, had just died, and he now enjoined that Raymond, who had complied with all the conditions originally imposed, should be reinstated in possession of his castles, and that his lands should be returned from further requisitions (Migne, PL ccvi. 15, cols. 171-173). His instructions, however, either arrived too late, or were wilfully disregarded by his legates, to whom Toulouse was now called upon to supply an army. To the city and in the faubourg alike, holding themselves bound by their oath of allegiance to their seigneurs, refused compliance; and it was with difficulty that the archbishop of the city, a staunch supporter of Simon, succeeded in inducing a certain number of the citizens to support the latter, under whose leadership there now ensued, throughout the Toulousean and Septimania (June, 1210 to Sept., 1212), a long series of plunderings and massacres, accompanied by almost unprecedented atrocities, wherever the defenceless victims refused to abjure their errors. At the strong fortress of Minerve, near Narbonne, 140 prisoners were thrown themselves on to the burning pyre (Deve and Vaissat, vi. 329-331). At Lavaur, taken after a stubborn defence, the well is still shown into which the widowed 'Lady of the City,' the bounteous Giraldis, and her daughter, were drowned, and stones rolled down upon their bodies. The governor and eighty knights were either suspended on the gallows or put to the sword. Termes, Castres, and other towns were the scenes of similar horrors, Toulouse and Montauban being even only two which remained in the possession of Raymond (Guillelmi de Podio Laurentii Hist. Albig., cc. 17, 18 [in Duchesne (A.), Hist. Franc. Script., v.]; Cernay, Migne, PL cxiiii. cc. 37, 52, 63; La Chan-

The war itself must now be regarded as assuming another phase, and Innocent himself believes that a reaction was setting in throughout Languedoc, as, to quote the expression of Paul Meyer, 'it became clear that the Crusade was designed to accomplish not only what the subscription of some enterprising adventurers from France for the ancient seigniorial families of the South' (La Chanson, etc., Introd. p. xxix; Pauriel, Hist. de la Croisade, Introd. pp. xlviii-1).

The doctrines of the Catharist were again openly espoused, as a powerful incentive to renewed resistance. The Count de Foix, Raymond Roger, reverted to his former defiant attitude. The Catholic leaders, on the other hand, perceiving how closely political supremacy was involved in the suppression of heresy, began to assert their position with increased emphasis. Arnold Amadric, the abbot of Citeaux, asurped to himself the title of duke of Narbonne (Luchaire, Innocent III., p. 188), and imposed oaths of fidelity and homage on the former subjects of Raymond of Toulouse. Simon, however, with his habitual asuteness, professed, in the first instance, to have assumed the position of, and, after he to Philip (Aug., 1211), said that he had instructed his envoys to assume possession of all the territory wrested from Raymond, and to hold the same until the rightful owner should be declared (ib. 178). By the middle of the following year, however, his representatives in Rome preferred the demand for his recognition as lord of Languedoc; in a charter of 14 Sept., 1212, granted by the abbot of Millau, that Simon de Montfort was declared that 'God has justly assigned to Simon de Montfort the territory of his adversary' (ib. 189). In the following December, Simon himself convened an assembly at Paniers, to which the seigneurs, the clergy, and the citizens of the province were alike summoned,—the great political revolution which was in process being thinly disguised by their being themselves invited to become members of the Commission which was then appointed, and by whose action the 'customs' of Paris, the 'use' of Northern France, and the supremacy of the Church (acting through its ecclesiastical court), were restored, the city liberties and the civic freedom which had before existed. As Luchaire points out, however, Simon de Montfort posed as the saviour of the land, whose mission it was to establish order, centralization, and peace; and for a time there were those who firmly believed that they should obtain these blessings at his hands.

The king of Aragon was still Simon's suzerain, and, with the support of Innocent, was able to assert his rights. He regarded with no small alarm his great vassal's monopoly of influence and the impending political changes. As soon, accordingly, as the Crusade was pronounced by Innocent to be at an end for 1212, Peter's first friend, who was to submit to a Council convened at Lavaur (16 Jan.) a memorandum, drawn up with the design of showing that Raymond himself had never learned a heretic, and that neither he nor his cousin, the count of Comminges, nor the count of Foix, nor Gaston de Béarn, had ever accepted the Albigensian doctrines. It was the design of the Council, however, to complete the count's ruin, and the opportunity of regaining the confidence of Innocent, and counter-representations were made at the Lateran, couched in terms of such urgency, that the pontiff in his Memorials, a letter on the distrust of Simon and the Norman party, was prevailed upon
to change his attitude completely. 'The supporters of heresy,' he now wrote to King Peter, 'are more dangerous than the heretics themselves,' at the same time plainly indicating that further obduracy would visit obloquy on himself, with another Crusade (Epist. xvi. No. 48; Migne, PL ccxxv. col. 851).

Soon after, hostilities were resumed; and Peter, along with his allies, now appeared at the head of a great army, whilst the king of Jerusalem, under the command of Muret, where Simon, with a small body of knights, awaited their attack. The disasters which the barons sustained, involving, as it did, the defeat of King and the dispersion of his forces (12 Sept., 1213), sealed the fate of Raymond's party. He himself is next heard of at the court of John Lackland, at Périgueux, professing a now worthless homage.

Simon's son, Amaury, now married Beatrice, the heiress of Dauphiny; Toulouse surrendered to Montfort, and the whole of southern France became incorporated with the French kingdom. Towards the close of the year, the Troubadour, Wilielmus de Tudela, gives place (line 2708) to his successor in the Chanson, which henceforth becomes of primary value as a contemporary historical source, being at once highly original and always to be read (line 2709-11).

In 1214, Innocent resented the prohibition to preach the Crusade, and in the course of the year a hundred thousand 'pilgrims' poured into Languedoc. Their first military achievement was the capture of Manzillette, on which occasion we find a reference to the Waldenses, seven of whom were burnt 'with great joy' as incorrigible in the attestation of their errors (Devie and Vaissètte, vi. 445). Concurrently with this movement, the victory achieved by the royal forces over Otto IV. at Bouvines (27 July, 1214) broke the power of the barons throughout the realm, and was hailed by the clergy as an auspicious triumph for the cause of unity in the Church. At the Council of Montpellier (8 Jan., 1215), Simon was unanimously elected 'prince and sovereign' of Languedoc; and in the following April, Prince Louis, accompanied by the new lord of the province and by Peter of Beneventum, the new papal legate, set out on a progress through the scenes of the war. The towns, still secretly hostile to de Montfort, threw open their gates to the representatives of the Crown; Simon, however, although he formally acknowledged the new governor of the conquered territory, would never recognize him as his rightful lord, and subsequently, when called upon to arbitrate in the fierce contention between Simon and the abbot Arnold for the dukedom of Narbonne, gave his decision in favour of the monastic dignity.

At the memorable Lateran Council of Nov., 1215, Raymond was once more, and finally, confronted with his accusers; and here, again, we find the pontiff strongly urging that the exiled count should be reinstated in the Toulousain. His advice was supported by a small minority of bishops, whose counsel Peter of Cernay does not scruple to stigmatize as that of an 'Aliothelpel' (Hist. Abig., c. 83; Migne, PL ccxixi. col. 700), and it was not received with enthusiasm. The brief allusion of the monkish chronicler to the fact of this divergence of opinion is illustrated at length by the contemporary Troubadour, in a manner which brings home to us the fact that this famous Council, to quote the language of Fauriel, was really 'nothing less than a great political congress, at which the passions, ideas, ambitions, and secular aims of the time are to be discerned, for the moment, in actual crush.' The brief allusion of the monkish chronicler to the fact of this divergence of opinion is illustrated at length by the contemporary Troubadour, in a manner which brings home to us the fact that this famous Council, to quote the language of Fauriel, was really 'nothing less than a great political congress, at which the passions, ideas, ambitions, and secular aims of the time are to be discerned, for the moment, in actual crush.'

In the sequel, Innocent himself was under the necessity of issuing a decree whereby Raymond was adjudged to have forfeited his right to govern, and condemned to pass the remainder of his life in captivity. It was further granted him, which, together with his wife's dowry, was deemed sufficient for his maintenance. The Council assigned to de Montfort all the territory which he had wrested from the heretics, along with Toulouse and Montfort fortress; but it was ordered that the unoccupied lands 'in Provincia' (beyond the Rhone) should, for a time, be held in commission, and that in the event of the count's only son (a youth of fifteen) being apprehended (a circumstance of heresy had been preferred) giving proof, by his 'fidelity and upright conversation,' of genuine merit, provision should ultimately be made for him therefrom (Hist. Abig., col. 701; Guill. de Pod. Lastr., c. 34; Vaissètte, iii. 299; Devie and Vaissètte, vi. 475, 477).

To all outward seeming, Raymond was now permanently excluded from a public career. The decisions of the Lateran Council had, however, been received throughout both the Toulousain and Provence with a general dissatisfaction which embodied both father and son to sail, in the spring of 1216, for Marseilles, where they were received with enthusiasm and with the utmost joy (Hist. Abig., vi. 448; Devie and Vaissètte, vi. 475-477).

devout and upright conversation,' of genuine merit, provision should ultimately be made for him therefrom (Hist. Abig., col. 701; Guill. de Pod. Lastr., c. 34; Vaissètte, iii. 299; Devie and Vaissètte, vi. 475, 477).

Alligenses 285

To all outward seeming, Raymond was now permanently excluded from a public career. The decisions of the Lateran Council had, however, been received throughout both the Toulousain and Provence with a general dissatisfaction which embodied both father and son to sail, in the spring of 1216, for Marseilles, where they were received with enthusiasm and with the utmost joy (Hist. Abig., vi. 448; Devie and Vaissètte, vi. 475-477).

in the appearance of Prince Louis at the head of an army, whose achievements in the field are remembered only by the massacre at Marmande, when 5000 men, women, and children were put to death by order of the bishop of Saintes, on the sole sound of their assumed heretical beliefs, and the city itself was burnt (Guill. de Pod. Laut. p. 685; Fauriel, ib. 9306-9320). An endeavour to inflict exemplary punishment on Toulouse was baffled, and, after laying siege to the city for three days, or twelve hours, the Albigenses struck his camp and returned to France. The Albigenses took fresh heart, and many of the towns which had been wrested from them by the sword of Simon de Montfort were now recovered. Eventually, after a war extending over two more years, Amaury de Montfort was fain to bribe the French monarch to renew his interdiction, by offering to surrender to him the entire territory which had been adjudged to his late father. It was at this juncture that Raymond vi. died (Aug., 1229); his interment in consecrated ground was forbidden; and for nearly a century and a half the remains, deposited in the crypt of the collegiate church of Sainte-Cecile in Albi, were exposed to sight within the precincts of the Hospital of the Knights of St. John, outside Toulouse (C. Moliner, L’Ensevelissement de Raymonde vii.).

During Simon’s rule, large numbers of the Catharist Bishops, from Bitz to Carcassonne, had returned, at his death, inspired with renewed zeal by the exhortations of their Pope, or metropolitan, in those regions,—while they were encouraged and sustained in the renewal of the conflict in the Narbonnaise by the teachings of his delegate, one Bartholomew of Carcassonne (Devie and Vaissette, vi. 567-568). The disputations with the Catholicks were again held; and in the years 1225-1226 the latter labourers, or delegates, of a Perpignan, had appeared in the Toulousain and the Narbonnaise to urge on the persecutor the resumption of hostilities (ib. vi. 391-395). In the national archives of Paris are still to be seen the letters, written in 1227, by the metropolitan of Sens and the bishop of Chartres, offering contributions towards a new Crusade against the Albigenses (Len, Hist. of the Inquisition, i. 291). Eventually, after a long and gallant struggle, Raymond viii. submitted; and was compelled, by the Treaty of Meaux (1229), to accept a series of onerous and humiliating conditions—the demolition of the greater part of the strongholds of Toulouse, the cession to the French Crown of territory which included two-thirds of his father’s dominions (of which, however, a part had been included in the surrender, above mentioned, by Amaury), the cession to the Roman See of the marquisate of Provence (the portion of Provence on the left bank of the Rhone), while in Toulouse itself he was required to institute a school of studies, which subsequently developed into the university, and was now conceived on lines designed to ensure the predominance of strictly Catholic teaching (Martin, Hist. de Frérec, iv. 149-150).

In asserting to the foregoing conditions, Raymond can have been actuated by no other sentiment than a conviction of the political unwisdom of prolonging a racial conflict against forces which were overwhelming; but in promising to turn back the tide of heresy, he was, apparently, giving expression to a contrite sense of the paternal folly which had brought such ruin on his house, and that in the manner in which Innocent had compassionated his helpless baylows may have instilled into the young count a genuine admiration of his protector, and sympathy with his designs. That sagacious pontiff had seen very clearly, some years before his death, that, however effective fire and sword might prove in the temporary extirpation of heresy, more was needed to prevent the recrudescence of an ancient faith sincerely, however wrongly, held. Notwithstanding his habitual tendency to temporize, he had accordingly drawn up a series of instructions to his delegate in France, for the establishment of a system of inquisition upon preceding methods (Douais, L’Inquisition, 1906, p. 6). The mode of procedure in a judge’s court, at that time, was still that of the old Roman tribunal; the magistrate always awaited the appearance of an accuser before he intervened to punish the malefactor. But, however adequate such a method might be found in dealing with offences against the person or against property, Innocent perceived that it failed altogether to reach a particular class of citizens, distinguished generally by their blameless life and inoffensive conduct, but lying under grave suspicion owing to their adherence to the prescribed forms of public worship, and their secret gatherings. If such conduct were really a shelter for rumoured malpractices, it was certain that stronger motives were required to induce the grand inquisitor to act. Infringement of the prohibition of the inquisition, a system of inquiry, authorized in legal form and terminology, for bringing home to the offender a definite charge. As early as 1153, Lucius III. had enjoined upon the bishop of each diocese the necessity of seeking out and passing sentence on heretics (Manis [1644], xxvii. 6), although Luchaire appears to be in error in supposing that his instructions were actually formulated as a system of inquiry (ib. op. cit. 6, 7, and direction given that investigations should be instituted throughout the province of Arles, and in the dioceses of Agde, Lodève, Veroil, Tarragona, and Geneva (Potthast, Regesta, 2516, 2872, 4876, 4828). It is, however, true that these instructions were general in their scope, specifying, as they do, no particular offence or persons. But when the dioceses to which they were sent (as specified by himself, pp. 6–8), together with the time of their promulgation, are considered, it is difficult not to infer that they must have been directly aimed at the Albigensian heresy. By the machinery thus brought into operation, the Inquisition (which may be considered to date from the year 1229) obtained the evidence on which its first proceedings were grounded, and was enabled to arrogate to itself a function beyond the power of the already existing ecclesiastical courts; while the Inquisitor, if we accept the view of Douais, represented an authority which the supreme pontiff alone had the power to delegate (L’Inquisition, i. 141). From the year 1239, accordingly, the history of the Albigenses becomes mainly associated with the proceedings of the Inquisition, and will be found treated under that heading; while for an admirable list of the proceedings of this authority, and the experiences of Bernard Dolicius, as described by B. Hauréau (1877), should also be consulted. With the advance of the fourteenth century, the Catharist almost disappears in Western Europe,
although occasionally showing a bold front against the Dominicans in Toulouse. In the East, in their ancient home in Bosnia, on the other hand, they might well have accomplished a more important service if the Franciscans had been turned out of the Franciscans to retire from the kingdom (see BOGOMILS); and so recently as 1875 a paragraph in Le Temps stated that members of the sect were still to be found in that country. The problems that can also to be used of the anti-dominican position had done its work, secluded in the valleys of the Pyrenees; but for the last four centuries they have often been confused with the Waldenses, and in some instances the Franciscans and the Catharists are difficult to trace. In the eastern Germany the Catharist becomes lost in the 'Ketzer' (Schmidt, Hist. i. 141, n. 232-233; Lombard (Alex.), Paulicinena, etc. (1899), 209-276). In Albi itself, their final dis- appearance can never be inferred from the fact that in 1404 the bishop of Amboise was to be found giving orders that the bones of St. Amarannd should be brought from Viau (surgit, p. 257) and deposited in the cathedral church of St. Cecilia, as in a city no longer tainted with heresy (Gregory of Tours, ed. Ruinart, col. 787-788 n.).

LITERATURE.—I. CONTEMPORARY.—(i.) Anna Comenio, Anoni. libr. iv. ch. xiv. xcv. ch. 8 and 9, xv. ch. 8. (ii.) Peter of Varras, De historia Ales musicorum et de vita Simoni comitis de Montforti (to Simon's death in 1218), Migne, PL, iv. 1355. Peter wrote, he says, from the page of Guy, the abbot of the monastery of Vaux-Cernay, with whom he went to Provence in 1290; he was the partial admirer of Simon, and in his Carmina (1290) he mentions the Ales lauraux (Guillelmus de Podio Laurenti), Historia Albigensium (to the year 1277). William was chaplain to Gour begin de Vauguy, and wrote long after the Crusade. Although not always strictly impartial, he is entitled to the highest credit as an accurate and honest historian. (iii.) Peter of Varras, De historia Albigensium, first made known and edited by C. Fauriel (Paris, 1837). This edition is altogether superseded by that of Paul Meyer (2 vols., Paris, 1875-1879); the editor in his Preface (p. cit) has established the following conclusions: (1) The Alogamus is the production of two writers, differing considerably in their diction, style, and ideas, the former being one William des Toules (le Navare), an ardent partisan of the Crusaders; the latter, who commences line 5769 and carries on the narrative to the siege of Toulouse (June, 1219), was a native of that city, and shows himself throughout a devoted adherent to the party of the seigneurs who opposed the Crusade. Notwithstanding some important omissions, he supplies us with a narrative of the highest value in relation to the subject and of great historical merit. (2) In the course of the 15th cent., the whole poem was retold and recited in a prose collection, like the original, in a mixture of Provençal and Romance. This version was finally edited as by L'Angevin (vols. iii. and iv.), was perhaps used as a text by Devic and Valsotte among the Preuses (vol. viii. I–2003). It has small literary merit, and, since its claim to be regarded as an authentic and reliable version has thus been lost, it can no longer be regarded as of any historical value. (v.) The Letters, or Rognacines (in the Latin m. Migne, PG, lxxxv. 1149), partly gathered in banknotes, are of primary importance. (v.) The treatise by Eckbert, abbot of Schwanberg, in the diocese of Trièves, entitled, Sententiarum XIII. ad illustres et insignes doctores, damnatas errores et harsines (Migne, PL, ccxxv. 1149), and the Letter of Ever- well of Steinfeld to Bernard of Clairvaux, De harsibus et temporalibus (Migne, PL, clxxxvi. 676), both written cire. 1150, are recognized as sources for the doctrinal belief of the Catharist of that period. That of Alanus de Insulis, bishop of Aixerre, In Filio Catholic contra heresici temporibus (ib. ccxxv. 300) deals specially with the Albigensian heresy. It appeared towards the close of the century, and was shortly followed by the Libellus contra Catharos (ib. ccvii. 792–792) of Bonaventura, a heretic who had returned to the Church, and who, passing along with the doctrine of the Catharists, the recognized arguments for their refutation. It was owing to a conviction that the arguments advanced by Moneta in his adversus Catharos et Waldenses Libri VI. (Rome, 1743) were also largely applicable to Luthean truths, that the Dominican Provincial, who had published this treatise, together with two noteworthy dissertations on the subject (see L. d'Aguesseau et de Lamot, De Catharum et Lesiannis de Relinquis Simoniaci (vol. 15), is printed in Martini et Durandi, Theologiae summa, vol. iv.; and another text, largely incorporated and with a different title, is given by the Jew, Greist (Opera, xii. ii.).

J. B. S.

ALCHEMY (Greek and Roman).—At present our knowledge of ancient alchemy is based upon a collection of chemical recipes in a Leyden Papyrus (X, ed. Leemans, Pappo Musae Lugduno-Batavicii, ii., 1885), a number of about 1,090 recipes distributed in several libraries, containing a Byzantine and Mediaeval collection of chemical treatises. Chief among these are three Marcians in Venice, dating from the 10th or 11th cent., and a Parisinus in the Bibliothèque Nationale, written in 1474. The materials contained in these manuscripts was edited by Berthelot and Ruelle in the Collection des Alchimistes Grèce, Paris, 1888. Unfortunately, this latter edition is written in such an exact value, not only as regards the constitution of the text, but also as regards the writings of the most important among the authors contained in the collection. For, instead of retaining the order, or as they are known MS, the editors have attempted an arrangement by ages; and to attain this aim they have cut up the collection, so that it is with the greatest difficulty that one can obtain an idea of the whole of them as they are in the original collection. The difficulty is increased by the fact that even our best manuscript, the Marcian, is in reality a second edition, with omis- sions and additions. The earliest, and also the most complete, of the 9th cent., while the younger codices contain much material of very doubtful character. A final judgment must therefore be postponed until some
scholar has re-edited the Corpus Chemicorum in a manner to conform to modern demands. (On this question compare W. Meyer, Verzeichnis der Hand-
schriften im preussischen Staate, t. 1, 5, 1893).

The notices of the ancients themselves in regard to the history of alchemy are scanty. The alleged

mentionments of the ‘science’ in the poet Manilius

(under Tiberius), iv. 243 ff., and in Pliny’s HN

xxxii. 79, referring to an attempt of Caligula to

make gold, are more than doubtful. The first

authenticated primary points to the time of Dio-

cletian. According to Suidas (Διονυσίου καὶ Χαρί
des), the emperor ordered all Egyptian books on the

making of gold and silver to be burnt. We are

then thus back to the beginning of the 3rd cent.

of our era, a period which teemed with secret,

magical, and astrological writings. To the same

time points a notice of the Byzantine historian

Georgios Synkellos (6-9 cent.), that Julius Afri-
canus mentioned the science of chemistry (676, 10,
ed. Bonn). During the 4th cent. the possibility of

alchemy was denied by Themistius (Or. iv. 214,
ed. Petau), and άναλοκία (5th cent.) is un

mentioned by the later Greek philosophers. None

of these authors, however, uses the modern name.

This was formerly believed to be secured by a

passage in the astrologer and Christian writer

Firmicus Maternus (5th cent.), but the passage is

a misinterpretation (cf. the edition by Kroll

Sktische, Leipzig, 1898).

The notice in Suidas points to Egypt as the ori-
ninal home of alchemy. To the same country the

legendary history of the pseudo-science ascribed.

The ancient alchemists knew a great many stories

about the mystic origin of their art. It was said to

have been taught by the fallen angels, by Isis, by

Miriam the sister of Moses (the last trace of that

legend in Early 6th hist. de l’alchimie, ‘Thaumia’ or

modern chemistry), and so forth. But even their

best tradition ascribed the invention of the ‘holy

mystery’ to the philosopher Democritus of Greece.

This tradition takes us at once to Alexandria,

where a luxuriant growth of forgeries under the

name of the atomistic philosopher had sprung up,

largely ascribed to a certain Boles of Mendes,
living about the beginning of our era. (The litera-
ture, which is still in process of study, is given in

Lehrer’s Geschichte der Chemie, li. 516 ff., and

Wissowa, i.e.).

Alchemy was divided on alchemical lines into two
classes, roughly represented by the Levden Papy-
rus and the Collection. The former class is

purely technical, not yet infected by mystical

ideas, and designed for practical purposes. The

second class starts likewise from practical work,

but from the outset is indissolubly interwoven

with mystical thoughts. As time went on

without bringing the alchemists any nearer to

the solution of the eagerly sought mystery, specu-
lations and fantastic hallucinations overlay the

practical nucleus in ever increasing masses, until

nears the end of the Middle Ages the writings of

the adepts had become one vast farrago of

allegories, each one in its turn calling forth a

still more allegorical commentary, until the 18th

cent. brought about a revolution and a return to

practical work, and began the modern science of

chemistry.

We shall now rapidly pass in review the extant

works. The Levden Papyrus belongs to a group of

papyri found together in Egypt in the early part of

the 13th cent. and purchased by the Levden

Library. There are three branches the most

prominent as a related group. They are known by

the letters x (our papyrus), y, and z, the numbers

of the manuscripts (or codices) of which they

belong. The most important, x, is the most

pre-
mixed by the excellent treatment to which they have

been subjected by Albrecht Dieterich (‘Papyri Magici’

in Jahrb. f. alchim. Gesch., 1896, as well as in

Deutsche apostiles des späiteren Albertus, 1891). They

are our most valuable source for studying the

syncretistic religion of later antiquity as

reflected in the mind of the vulgar. With these our
X must be grouped, as it was found with them.

The great mass of its recipes, it is true, contain

nothing but prescriptions for the apprentices of

making gold and silver. But of these prescriptions

are interspersed with others referring to super-

stition. Small words for the most part of the

recipes from the earliest times was considered to be

secretly connected with magic; witness the legents

of the miraculous creations of Baphomet, of Bel

and Bilit, and the theories of the Rosicrucian

Roscher’s Lex. der gr. u. röm. Mythologie, s.) and

the northern legends of the Edda. Traces of the

Middle Ages have also made their way into our

times. Even the village blacksmith is usually

‘the wise man’, if not actually a wizard, of his

village.

Alchemy in the ancient world was always to be

found in X. But a large number of its recipes have

for their aim a revival of the ancient belief in the

very close resemblance to the

prescriptions of the papyrus (cf. Berthelot’s analysis,

in the Histoire des lois de l’alchimie, 1885; also

would not be able to detect the nict.

But two of its prescriptions use a ‘never-ending material’ and a

special kind of ascan. This ascan, originally the Egyptian
tame (αρεμία) of which gold and silver (ελέκτρον)

are here conceived as a material which can give the

qualities of the precious metals to the base ones. It acts, so

we, as a leaven, changing the base foundation into gold

whereas the fumes rise into bread; in other words, we are face
to face with a real form of transmutation.

At this point the second group of chemical literature sets in. Its

most important, at any fundamental, treatise indeed, that of

Democritus, which in its recipes the closest resemblance to the

prescriptions of the papyrus (cf. Berthelot’s analysis, both in

the Histoire des lois de l’alchimie, 1885; also

would not be able to detect the nict.

But two of its prescriptions use a ‘never-ending material’ and a

special kind of ascan. This ascan, originally the Egyptian
tame (αρεμία) of which gold and silver (ελέκτρον)

are here conceived as a material which can give the

qualities of the precious metals to the base ones. It acts, so

we, as a leaven, changing the base foundation into gold

whereas the fumes rise into bread; in other words, we are face
to face with a real form of transmutation.

We have called the above work fundamental. And so, indeed,

it must be called, in view of the fact that after its existence

nothing new was written, and that all successors either had

no higher ambition than to comment upon it, or started from

it as their basis. Here belong the works of Synesius (not the

Cyrenean historian of that name, although a contemporary of

his), of Olympiodorus (of doubtful age, but perhaps living

under Justinian), and of Zosimus (the most important of them

all, though the most elusive. The question of the latter’s person-

ality, as well as of his time, is so perplexing because for his

writings more than for anything else the editorial method of

the French Collection has been confusing. In the several hundred

quarto pages filled by pieces ascribed to him, many parallel and

even contradicting sections are inserted from old as well as

recent works. These are jumbled together. This much is sure,

however, and borne out by the indications of Olympiodorus, that

of all the authors of the Collection he was the most important.

Certain indications in his writings

are not to leave us in doubt, which point to a conjuncture that he

lived after the philosopher Por-

phyrius, and before Olympiodorus. Hence his only work has been

attributed to Manilius, the founder of Manichaeism. We shall

therefore not err very much if we say, that he lived in the early

years of the 4th cent. of our era. Suidas (s.v.) tells us that

he came from Panopolis in Egypt, and lived in

Alexandria. The later Greek alchemists can not only a passing mention in

this article. Such are Stephanos, contemporary of the emperor

Heracleianus, and the alchemical poets, four in number, who in

Byzantine trimetres revamp the scanty ideas of Stephanos.

Numerous smaller treatises, preserved in MSS, cannot even be

mentioned here. The question of their value is indissolubly

bound up with that of the value of our tradition.

We shall now able to trace in a very few

wors the development of alchemy. Starting from

the purely practical basis of fraudulent craftsm-

ship, in Egypt famous, in the later knowledge of metalwork and crude

chemical know-
edge (cf. the Egyptian porcelains and glasses), it

found its further development in that home of all mystic

alchemy, Alexandria. At the same time we are

well under the influence of that mixture of religions,

of mysticism, and of philosophy which we call either

Syncretism or Gnosis, and pursuing that kind

of knowledge found its ‘Bible’ in the forged

treatise ascribed to Pseudo-Demetrius, the most

mer of that kind of literature, counter-claim met

claim; hence the various traditions as to the real

inventors of alchemy. Conforming partly in ideas and in expressions to Christianity, it escaped the

Digitized by Microsoft®
fate of other superstitions,—the condemnation of the Church,—was carried to Constantinople, and there vegetated in peace in the deserts of the libraries. On another occasion, through Syrian translations it found its way to the Muslims, was by them carried to the West, and so reached Europe, where it was received with 0xalous avidity, and flourished and finally flowing into the broad stream of true and modern chemistry.

It remains now to speak of the relations between alchemy and philosophy and religion. The recent searches (Untersuchungen, Bonn, 1889-1897), of Dieterich (l.c.), and of Schmelck (Untersuchungen zur Geschichte der alten Mutter Seele) have shown how enormous was the influence of the Stoic school on the development of popular beliefs in the last cent. B.C. and the 1st cent. A.D. In regard to alchemy, however, the proof had been furnished as early as 1506 by Prantl (Deutsche Vierteljährsschrift, 1856) in an article they wrote the sign of the sun, a colossus or tone of the philosophical elements in ancient alchemy. The Stoics, in their endeavour to prove that the whole cosmos was permeated by the Divine, and that the whole nature of man, the soul, could not afford to reject any claim to the supernatural raised by these pseudo-sciences, and so they became the ardent defenders of magic, alchemy, and astrology (for the latter see Bouché-Leclercq, Hist. de l'Astronomie grecque). Vice versa these sciences gratefully adopted the apparent aid to be got from the Stoic arsenal of proofs. When the Democritean theory constantly harsps on the refrain 'Nature overcomes nature, nature rejoices in nature, nature rules over nature,' the alchemists simply followed Stoic precedent. Nay, this very tenet is considerably older than the e
xtant works on gold-making. It is ascribed to the mythical Egyptian king Necheopion, the patron saint of alchemy, whose forged works found their entrance into the world of letters about the beginning of our era. The maxin, too, upon which the Leydon Papyrus bases its prescriptions, that a little leaven leaves a whole loaf, belongs here. When later, in the 2nd and 3rd cents. of our era, that jumble of all philosophies, from the Ionians to Neo-Platonism, which we call Hermetic philosophy, gained ascendancy, it too was eagerly adopted by the alchemists. Hermes now becomes the great protagonist and inventor of the science. Nor were the alchemists averse to borrowing from other branches of wisdom, and entered once more into Astrology, again under the influence of Stoic ideas. Not only do some treatises take account of favourable planetary aspects, but the theory that the planets exercise a profound sympathetic influence over the component parts of the universe found its expression in the small but significant fact that the metals are written in the manuscripts by a sort of planetary notation; for gold they use the sign of the sun, for silver that of the moon, and for quicksilver that of Hermes, whence the English name 'mercury.' No less strong is the influence of that syncretism which we also call Gnostic, which finds its expression in the last chapter, Omega, by telling us that it belongs to the sphere of Kronos, but only κατά τευχαν φησί, while the δωρεάν φησί is known only to the great hidden Nithis of the ancients. Not only the name itself is Gnostic, but still more so the distinctions between a corporal and an incorporeal expression; for this distinction between Jesus in the body and without a visible hand forms the very foundation of Gnostic speculations.

This leads us into the sphere of religion. Now we must not expect to find in the alchemists any new information about the religious speculations of those times. These men, locked up as they were in their narrow labor in the dark cellars of the world, could only reflect what was saturating their minds at that time. Everything is 'One and All.' But nevertheless, individual deities, like Hermes, Kronos, Aphrodite, play their part. Nor were the alchemists averse to calling in the help of Jewish Gnosticism, and even of Zoroastrianism, for the simplicity and unity as it appeared to them. Zosimus embodied in his commentary a piece containing highly interesting speculations about Adam. But, on the whole, we may repeat what Usener says about the speculations of the Gnostics: 'like a sultry breath of air carrying to us wondrous scents from an unapproachable garden, such is the impression of the Gnostic (and alchemistic) teachings.'

To the most ancient among the Arabian authors who dealt with alchemy was a royal personage — Hālid, son of Yazid, or Mu'āwiyah—who died A.H. 85 (A.D. 704). There are three letters on alchemy ascribed to him: his master is said to have been a Syrian monk, Morienus or Marbanus, and he illustrated a treatise on alchemy to him: Liber de compositione Alchemiae, quem edidit Morienus Romanus Calid regi Egyptorum, tr. in 1182 by Robert Castrensis (cf. Leclerc, l.e. 64). Compositions ascribed to Hālid and translated into Latin are published in the Thea
trum Chemicum and in the Bibliotheca Chemicæ; the Arabic text of these is not extant.

The historian Ibn Hālid, in his Progymnasia (ii. 207; in de Sane's Fr. translation), questioned the authenticity of the alchen
alchemical works of Jocul the Umayyad, on the ground that this prince was a Barmil Arab who lived between the 1st and the 2nd centuries. The scientific activity of the Arabs, and that therefore he could not have been acquainted with the earliest form of alchemy. However, the tradition is very exact, both in the Book of Songs (Kitāb al-Aṣfalah, xvi. 88-98), and in Musulmān (Les Périod. Or. ed. by le Breton, p. 270, Fr. ed. by Berthelot, 1891). The historian says that alchemists acknowledge Hālid, son of Yazid, as the compiler of their notices. The second name to be mentioned is that of Geber. This famous person, who became illustrious and legendary in the Christian Middle Ages, is known under the Arab name of Abū Musa Ja'br, son of Ḥallāj; his tribal name is 'the Azīde; from the place of his birth he is named 'of Ta's' or 'of Ta'rūs;' he is sometimes called al-Ḥarrānī, which agrees with the tradition connecting him with the Sabians of Harrān. The surname 'al- Umawī, the Umayyad,' which is sometimes given him, represents a tradition according to which he had Hālid, son of Yazid, as master; but other authors describe him as a pupil of Ja'br, who is also credited with a profound knowledge of occult sciences, and to whom bibliographers ascribe works on science and divination (cf. Hafiẓ Ḥalfa, v. 277, 280; Ibn Hallījah, No. 180). Lastly, there is occasionally mentioned with the name of Geber the epithet 'Ṣafī'; this is explained by the fact that Geber, having been converted from Sabacism to Islam, is said to have exhibited great zeal for the Musulmān faith; thus a visible hand must have been added, however, at a later period.

We should clearly pay no heed to a view men
tioned in the Fihrist (p. 554 ff.), according to which
Alchemy (Muhammadan)

Geber is a mythical personage. This famous alchemist did certainly exist; but very little is known about his life. A reliable tradition represents him as usually residing at Kufa; he is sometimes connected with the Harran-mendes (Hedra and Haji) Hafza, iii. p. 558). He flourished about the year A.H. 100 (A.D. 718). A whole series of works is attributed to him; their titles are generally symbolic, and their dates range from the seventh to the fourteenth century. There are twenty-two Arabic works placed under his name in our libraries. Berthelot and Houdas have published five of these treatises under the titles of: Book of Royalty; Small Book of Balances; Book of Mercury, a work revised by a pupil; extracts from the Book of Concentration; and Book of Oriental Mercury. The Latin treatises ascribed to Geber do not correspond to the Arabic works; besides, they exhibit a more advanced stage of chemical science. Some of these are: Geberi regis Arabum suumae perfectionis ministerii, Gedani (Danzig), 1682; Geberi philosophi de alichemia libri vii., Nuremberg, 1545 (cf. Steinschneider, ZDMG xlii. 1891, 125). The treatise, entitled Book of the Seventy of (John), is the only one which seems to have preserved some fragments of Geber's or his pupils, judging from the resemblance between the titles of the Arabic and those of the English work of the same name which the Fisrtor mentions and ascribes to Geber (Latin MS 7156, Paris; cf. Berthelot, La chimie au moyen age, i. 323).

There were several alchemists in the 3rd cent. A.H.; the two most famous are the as-Salih Dhu-n-Nun al-Miṣri of Ikhmim (d. 245 = A.D. 859) and Ibn al-Walshithiya, the imaginative author of the Nabatäin Agriculture, who wrote during the second half of the 4th cent. under the reign of the first Caliph. We possess three works of Dhu-n-Nun on alchemy—in poetry, dialogue, and miscellany (cf. R. A. Nicholson in J.R.S., 1906, p. 311 ff.). We have various works of Ibn al-Walshithiya, especially a Treasury of Wisdom or Secrets (Kawṣ al-akhirān or Kawṣ al-asrār), which is a whole system of alchemy. We may add to these names of Muhammad, son of Umain (rather than Amayl) at-Tamini, who composed, among other things, an essay on ancient Egyptian paintings; and that of Uthman, son of Kawād of al-Ikhmim, who disputed with Ibn al-Walshithiya.

In the 4th cent. (10th A.D.) appears the medical philosopher 'Razes,' Abū Bakr Muhammad, son of Zayd. He was one of the rare exceptions to the scientific study of alchemy, and almost a martyr to this science. As he had dedicated his famous book on medicine, al-Manṣūrī, to the Sāmānīd prince Abū Sālīḥ Mansūr, son of Isāk, he afterwards as he presented him with his plea, 'The Establishment of Alchemy (Kitāb iktībāl al-kimyā). The prince asked him to verify some of his experiments, and finding him unable to do so, he struck him across the face with a whip, and blinded him. He died in A.H. 311 or 320. We may mention his Kitāb al-asrār, 'Book of Secrets,' on alchemy; a Preparatio Salis Aromatice, placed under his name, is published in the Theatrum Chemicum, iii. No. 61.

To the same century belongs another important writer, Maslama al-Majriti, i.e. of Madrid. This learned encyclopedist (d. 392 or 393 = A.D. 1004 or 1007) after travelling in the East, brought thence to his native country a collection of the famous works of the 'Brehiten of Purity,' of which he probably made a new recension. Being skilled in alchemy, he wrote specially on this subject a book al-Ma'tūdī, 'Treasury of Accomplishments,' dated 348.

We may mention in passing another prince, who was reputed to be an alchemist, the celebrated Kifā al-Halifa al-Manṣūr al-Hākim (d. 411 = A.D. 1020), the son of the latter the Druze prince Qarun. The only famous names that we find after him are those of Ghazzālī the great philosopher, Tuqār, and Jilḏakī. Ghazzālī (451-503 = A.D. 1111) believed in alchemy, and wrote some articles on the subject; one of them is extant at Berlin, Magāla al-λunta, 'Lecture on Preservation, Taḫṭārī, 'Doctrines of the Wise,' the Hāsin, son of 'Ali, who died about 515, wazir of the Seldinid Sultan Mas'ūd at Mosul, became famous as an alchemist, wrote on alchemy, Žāmiʿ al-asrār, 'Compendium of All the Secrets' of the alchemists' stone, and a commentary on Geber's Book of Mercury. Jilḏakī (Ali, son of Aidinur, son of Ali), who died in 743 = A.D. 1342, is the author of several works on alchemy and the search for the 'elixir' (cf. on this author S. de Scuy, Notice et extraits, iv. 105; Leclerc, ii. 289).

Alchemy studies continued in Islam during the time of the literary decline and down to the present day. In the 10th cent. A.H. (16th A.D.) authors like Muṣliḥ ad-Dīn Ṣanūsī, the philosopher Muṣliḥ ad-Dīn Qazwīnī, the Baktari and the Baktari, are still alchemists in Morocco and at Mecca.

2. Doctrine.—The doctrine of alchemy appears among the Arabs very philosophical aspects; it implies various and contrary systems, all lot of which are derived from general philosophy. This connexion with philosophy is so very close, that we come upon treatises beginning with real philosophical introductions; e.g. the Treatise on Concentration (4th cent.) ascribed to the Greek universe; essence and its nine accidents. It is not difficult to see with what philosophical school the alchemists are, as a rule, connected. It is with the great school of Neo-Platonic origin, which developed in the Muslim world when the Greek sciences were being studied there, and it was their height about the 10th cent. of the Christian era (4th A.H.). The alchemists are connected more especially with the branches of this school which professed the so-called 'illuminative' doctrines. In these sects a disposition to syncretism prevailed: according to them, truth was possessed in the different nations by wise men who expressed it in different ways, and who are at one time called 'heretical' by the philosophers of very different opinions. The same inclination towards syncretism is shown in the alchemical writings. The alchemists do not know whether they owe their art to Egypt rather than Persia, or to India rather than China. The ancestors whom they claim are at one time quite mythical, e.g. Hermes and Agathodemon; at another historical or semi-historical, e.g. Qūran, the Korah of the Bible, brother-in-law of Moses, whose treasures are mentioned in the Qurān (xxvii. 76, 79, xix. 38. xx. 25); or, again, queen Cleopatra, the emperor Heraclius, or Bilqis, the queen of Sheba. To these soothsayers and kings the alchemists add the philosophers and scholars of classical antiquity, especially Pythagoras, Plato, Aristotle, Democritus, Dioscorides, and Galen. This grouping would not give any very clear information, if we did not know from the history of philosophy that the list is framed according to the usage of the Alexandrians and the Sabaeans, and that therefore it was in these two groups of scholars that the Muslims found their masters. As alchemists, we have already remarked that Geber probably belonged to their sect; they carried the practice of syncretism to a great length; they collected and fixed a large number of legends of various origins. The addition of Pāṭīmūs II., of Qārūn and of Bilqis, of the Persian names of Jāmā' and of
Maghis the sage, to the Egyptian legends of Hermes and Agathodaimon, must have been their work. More especially Alexandrian are the legends, of frequent occurrence in the alchemical writings, which refer to the Pyramids and the great ruins of Egypt, and represent these monuments as ancient laboratories, or at least as having been used as depots for the secrets of the sciences. The tradition which must be noted is that of the capable series of discoveries ascribed to the Pyramids, which is undoubtedly Alexandrian, as is also the one which represents another woman, Mary the Copt, as lecturing on alchemy in the presence of various learned men (Copt. Roemer) (cf. de S. Schneel, Mathem. § 140; Berthelot, La Chimie au moyen âge, iii, passim). One of the Arabic treatises published by Berthelot and Houdas bears the name of an Egyptian sage Osiris.

Another tendency which appears from time to time in the alchemical writings certainly arises from Neo-Platonism, viz. the tendency to mysticism. It makes itself evident in two ways: (1) by founding the art of alchemy on a religion which was recognised by the ancient prophets, e.g. by Hermes or by Qurân; or (2) by making moral conditions intervene in the production of the great work: God co-operates in the undertaking, and the alchemist must work under the conditions of the terrestrial state of purity by heart. Even in the cases in which this condition is not formally laid down, the alchemic writings bear a strongly religious stamp.

It is a very wide-spread custom among writers on occult subjects to connect the metals with the planets. Gold is held to correspond with the sun, silver with the moon, the other metals, mercury, iron, tin, lead, correspond respectively to Mercury, Mars, Jupiter, and Saturn. This connexion was made long ago, but the Muslims ascribe it more especially to the Salamans; and this provides a new proof of the important part which that sect took in the transmission of ancient Ideas, Greek as well as Jewish and Chaldæan.

The part played by Syrian scholars in this work of preserving and handing down scientific knowledge was greater even than that of the Salamans; and it is better known. It was through Syrian works that the Muslims became acquainted with the chief Greek alchemists, especially Zosimus (cf. Berthelot, La Chimie au moyen âge; recently the doctrine, or rather the postulate, on which alchemy is based? This postulate, in its essential elements, is very simple. It holds that metals differ from each other in degree, but not in nature, and that any one of the lower metals, like lead or copper, may be transmuted into a more perfect metal like silver or gold. This postulate is connected with or implies a various idea frequently expressed by alchemists, that of the ‘life’ of the mineral. The metal or the mineral is really regarded as a living being, which is engendered and develops in the womb of the earth, where it is subjected to various conditions, such as heat or cold, which its perfection. This theory is expressed, e.g., in the treatise of the ‘Brethren of Purity’ devoted to mineralogy. Dieteric, the editor of that treatise, remarks that it is impossible to make a mineral a stone without its being transformed. The artificer, one might say rather, Neo-Platonic principles, and that it is inserted in a series of treatises based on those of Aristotle, although we do not know any work on minerals by that philosopher.

In that treatise the doctrine is represented thus. From the elements which lie like potentialities in the womb of the earth, there are first of all formed, as energies, mercury and sulphur; from these are afterwards formed other metals which are good or bad, noble or base, according to circumstances, and which are only in consequence of certain injuries undergone that the material does not become silver or gold immediately. After having wounded the Alchemy endeavours to repair these injuries (Dieteric, Die Abhandlungen der Indian et-Cèle, Leipzig, 1886, Vorwort, p. 13, and text, p. 157). The same idea is expressed in the works of Zosimus (cf. W. R. Waterhouse, i, p. 267), and in this work also it is ascribed to Aristotle; the metals in their mines undergo certain injuries which cause their imperfections: these need to be removed; and these injuries—unpleasant, softness, and disagreeable sound. In this book also, means of getting rid of these defects are suggested.

In the works of Geber published by Berthelot, and especially in the Book of Merog, whose authenticity is very much disputed, it is said that metals is consistently expounded; a regular anthropomorphic theory is applied to mineralogy; not only the idea of ‘generation’ applies to metal, but also the idea of ‘education’; all these conditions, it is said, are necessarily the same as in the case of a human being. This doctrine is expressed with equal force in the treatise by al-Julâb, published in the same collection and apparently quite ancient. According to these various alchemists, the formation and the life of metals require time, like our own; to bring the metal in the womb of the earth to its perfect state which is the state of gold, nature takes a very long time, more than a thousand years, according to the most wide-spread alchemistic tradition; the work of alchemy is to imitate nature, and at the same time to discover more rapid means than hers for the development of the ‘spiritual education’.

The anthropomorphic theory of alchemists has one more aspect; it applies to chemical bodies the ideas of life and death, of body and soul, of matter and mind. In this sense the idea of alchemical forces is very interesting; these subtle, intangible, invisible forces are compared to ‘spiritual forces’; the force of the magnet, which attracts iron through other materials, and that of poison, which can destroy an organism where care calls, is compared to ‘spiritual forces’ (Berthelot, Geber: ‘Traité de la matri- corde,’ p. 175). In bodies there are some substances earthly and gross, and others pure and light; the former are called, ‘dead,’ the latter ‘living’; these notions of death and life are also employed in a relative way: e.g. sulphur and arsenic are living when they are mixed with substances inferior to them, such as talc; but they appear earthly and dead when they are united with live mercury (ib. p. 178). In every body, and a fortiori in every combination, it may be supposed that there is a material part and a spiritual, a soul and a body. The soul is infused into the body; its nature, however, is in a sense simply defined, it gives and it gives a kind of immateriality.

A common task for chemists consists in giving a soul to each body, by first purifying souls and bodies, and then infusing into each body the soul which suits it. Geber, still following the idea that there were certain injuries caused by nature, even speaks of ‘restoring’ to the body the soul which has gone out of it: this is another aspect of a chemical operation; thus, mercury is the soul which suits gold and the other metals. The spirit also is capable of a sort of education; not only must it be fit to unite forcibly with its body, and for that reason be pure, but it must also be firm, it must resist fire, and to this end must, as far as possible, partake of the nature of fire.

In practice, the aim of the alchemist’s efforts is to find the substance, a living substance, or spirit, which, when combined with the body of the imperfect metal, previously prepared and purified, will change it into perfect metal. Alchemists use various means, and look in various places to find it. In some cases, it does not matter what this is; in others, it is more important, they even make use of organic bodies in its preparation; they discuss whether it is excremen, blood, hair, or egg: as a rule, they describe it as a stone; it is ‘the Philosopher’s stone, the very precious stone’, and then, during the grinding it is sprinkled with...
water mixed with drugs and simples. The liquid obtained in this way is the 'elixir.'

3. Discussions of the doctrine.—During the course of Arabic literary history, various persons assumed an attitude of opposition to the alchemical doctrine. However, this is not the place to treat of these oppositions. It must, however, be stated that the objections raised were not directed against the study of bodies and their properties, but only against the assumption peculiar to alchemists, concerning the possibility of the transmutation of metals. In the 3rd cent., A.D. the philosopher al-Kindi declared himself against the alchemists. He wrote a treatise on 'the error of those who think that gold and silver can be obtained otherwise than in their mines,' and another on 'the deceits of alchemists.' A pupil of al-Kindi, Dukais, took up the cause of the alchemists, however, and wrote two treatises on their science, cited in the Fliris. Razes composed a 'refutation' of the objections of al-Kindi. Fārābī believed in alchemy, but Avicenna (Ibn Sīnā), was opposed to it (see AVICENNA). Taghri杜兰 afterwards defended alchemy against Avicenna.

Avicenna's works, like all others, is based on the assumption that the seven metals differ in their specific qualities, each of them forming a definite species with real characteristics; Fārābī believed, on the contrary, that all metals consist of the same species, and he considered their qualities merely as accidents. Taghri杜兰, bringing in the Divine power, observes, in addition, that it is not a question of producing a specific difference in the metal treated, but of making it receive this difference from its Creator. Avicenna also objects, like al-Kindi, that it is incredible that there can be a shorter way of bringing metals to their perfect state than that which is followed by nature.

The other objections brought forward against alchemy are: that no one has ever been pointed out with certainty as having achieved the great work; that it is especially poor people who study alchemy; that alchemists counterfeit counterfeit gold, and in that way wrong the public, and are liable to punishment by law. This latter accusation refers to the cases in which alchemists succeeded in giving to metal what they called a dye, i.e. in covering it with a layer which had the appearance and some of the properties of gold. The alchemists replied, weakly enough, it is true, to these objections, by saying that the word 'dye' was fast, and would last several centuries.

The cosmographer Dimishq (ed. Fraenh., p. 97) and the historian Ibn Haldūn (Prolegomena, de Saine's Fr. tr. iii. 207 ff.), opponents of alchemy, speak in an interesting way about alchemists, and relate the objections which were raised against them.

4. Special contribution of Muslims to alchemy.—It is very difficult to determine exactly the share due to Muslims in the progress of chemical discoveries. It was in this point, very slender. The most ancient Arabic works are adaptations of, or commentaries on, Greek works; this is typical. The discoveries which Western tradition has ascribed to Geber, those of aqua regalis, of sulphuric acid, nitric acid, and nitrate of silver, are not found in the Arabic works placed under this alchemist's name, but only in some Latin pamphlets at the end of the 13th cent.; it seems, therefore, that the admiration affected by the Western peoples for Muslim alchemists is due not so much to their real worth, as to the general confusion and lack of knowledge in the East for masters, especially of the occult sciences.

It is probable, however, that Muslims made progress in chemistry as applied to medicine, in dyeing, and in the art of enamelling. Al-Kindī, besides others, wrote about colouring matters, glass-making, the processes of removing stains from cloth, and other similar subjects. These particular industries have not yet been studied minutely enough.

Every one knows that our languages are indebted to Arabic chemistry for certain words, which are in some cases Arabic words, in others Greek words preceding by the Arabic article; e.g. alchemy, alchemic, abuladic, abudelic, elixir; 'toward alchemy' has been derived from χυδα, 'mixture.' Wiedemann has shown that this word originally denoted the very substance which has the property of accomplishing transmutation, the elixir, and not the sum of the ways which help to find it. Wiedemann, Beiträge, i. p. 331; J. Gildemeister, ZDMG, 1876. The kohl, which has given its name to alcohol, was originally a very fine powder; it is the black powder which Oriental ladies use for blackening round their eyes. The use of the word was generalized and extended to various powders and to liquids. Elixir is said to be derived from Greek ἐξερή, 'dry powder' (J. Gildemeister, i.c.); it is from ἐξερήτωρ, a verb of the grammatical form, that it is an Arabic word and belongs to the root קדם, 'to grind,' al-ikalir being 'the thing ground,' 'the powder.'

Bib. CARA DE VAUX.

ALCHEMY (European).—The study of alchemy in Europe is traceable to the schools of Spain. J. Ferguson, in his notes to the 'Catalogue of the Chemical, Chemical, and Pharmaceutical books of James Young of Kelly and Durris,' notes which form the latest storehouse of information on the history of alchemy in Europe, says, under the head of Michael Scotti de lein., to which it had been brought by the Arabs, that the art first found place in Europe? (Bibliotheca Chemica, Glasgow, 1806).

The Khalifate of Cordova reached its highest splendour under the rule of Abtarrabrahim III. (A.D. 912-961) and Al-Hakam II. (961-976). The libraries of the rulers, the nobles, and persons of importance, numbering in some cases 400,000 volumes, attracted students from all parts of Europe (Rafael Altamiranda of Crevea, Historia de Española, i. 275).

1. Among the first to profit by this revival of learning was Gerbert, afterwards Pope Sylvester II. (990-1003). While still a student in the Abbey of Arvillae in Auvergne, he attracted the attention of Borel, Count of Barcelona. He returned with him to Spain, and is said to have visited Cordova during the reign of Al-Hakam II. It was in the schools of Spain that he studied the sciences of arithmetic, geometry, astrology, and chemistry, which at a later date brought him into dispute with Proclus. During the Presidency of John XIII. (963-973) he visited Rome in the company of Count Borel and Hatto, Bishop of Vieh. He then made the acquaintance of the Emperor Otho I., and was recommended by him to the notice of the archbishop of Rheims. By Otho II. (973-983) he was
ALCHEMY (European) 293

appointed Abbot of Bobbio. Driven from Bobbio by the neighbouring nobles, he returned to Rheims, where he taught the 'whole range of human science.' On the recommendation of Arnulf, he was made Archbishop of Rheims in 991. Forced to resign the see in 996, he took refuge at the Court of Otho III. (995-1002), and by his influence in 998 he became Archbishop of Ravenna. In the following year he succeeded to the Papacy. Thus by the close of the 10th century, the learning of Spain was introduced into France and Italy and the Imperial Court (Milman, Lat. Chr. iii. pp. 351-349).

2. The influence of Gerbert did not end with his death. His pupil, Fulbert of Chartres (1007-1052), carried on his work. Adelmann, Bishop of Breslia, in a letter to Berengarius, speaks of their joint studies 'in Academia Carnotensi, sub nostro illo venerabilis Socrate, nempe Fulberto' (Bar. Ann. Eccl. 1004, 6). The Schools of Berengarius in Tours and Angers to some extent carried on the tradition of Gerbert's and the theological controversy of the early Scholasticism of the 11th century. The tradition of the wide learning of Gerbert may be traced as one cause of the recognition of the philosophical studies of Spain in the 12th century. (Neander, Corpus Christianorum, ser. Lat. vol. iv. 285).

3. The fall of the Khalfate of Cordova in 1031 did not check the progress of learning in Spain. The kings of Seville, Cordova, Malaga, Granada, Almeria, Valencia, Zaragoza, Toledo, and Badajoz were visited with one another in the patronage they gave to philosophy and science. The studies of the former period were continued, and special attention was given to the natural sciences—medicine, chemistry, botany, and astronomy. The al-Bajari of Malaga made a large collection of minerals and plants, and under the Muwahhid Khalif Ya'qub al-Mansur (1186) the Giralda of Seville became the chief observatory in Europe. In philosophy, Averroes of Cordova (1126-1186) won a European reputation as the commentator of Aristotle and Plato.

4. The conquest of Toledo by Alfonso VI. of Castile in 1085 was another step in the propagation of the Arabic learning in Europe. A school of translators was founded at Toledo which reached the highest point of its fame in the reign of Alfonso VIII. (1130-1150). Among those who were attracted to Spain were Hermann of Biala, a disciple of Hermann of Germany, Gerard of Cremona, the Englishmen Daniel of Morlay, Robert the Archdeacon, and Michael Scott (Rad. Altamira Crevea, op. cit. i. 454-514). It was in 1182 that Robert Castrensis translated the Liber de compositione Alchemie, associated with the names of Häid and Morenies. To the same period belongs the teaching of Alcin de Lille, known as 'Doctor universals,' who had been a monk at Clairvaux, and was afterwards Bishop of Aixerre.

5. Michael Scott was among the first to bring alchemy into prominence in Europe under the patronage of D. Frederick in 1219. He studied Arabic in Sicily, and spent ten years in Spain. At Toledo he translated Aristotle's treatise on Natural History from the Arabic, with the help of his pupil. In 1217 he translated an Arabic work on the sphere. This is a link with the studies of Gerbert, who in a letter to Remigius, a monk of Treves, excuses himself for not sending a sphere, owing to his time being occupied with civil business.

6. Albert the Great has the merit of having brought the study of alchemy as a branch of philosophy into touch with the scientific studies of the Middle Ages. The Great Chronicle of Belgium in 1480 speaks of him as 'magnus in magia, major in philosophia, maximus in theologla.' Born at Lausingen in Swabia, he studied at Paris and Padua, and in the early part of the 13th century, taught in the Schools of Cologne. In 1228 he was called to Paris, but after three years returned to Cologne. He was the most distinguished among the Dominicans of Germany. In 1260 he was summoned to Rome by Pope Alexander IV., and was made Bishop of Ratisbon. He resigned the see after three years, and retired again to his studies and his lectures at Cologne, where he died in 1280. He was the author of the Thomas of Canterbury, and the Preface to the translation of the Liber de Alchimia (Alb. Magn. opp. omn., Paris, vol. xxxvii.) is a practical treatise on the transmutation of metals, the structure of furnaces, and the various methods to be used in the alchemical experiment. This treatise is valuable as indicating the wide-spread interest which was then shown by all classes in the study of alchemy: 'Inveni multos predlices litteratos, Abbates, Prepositos, Canonicos, Physicos, et Historicos, qui pro oemde arte magnas fecerunt expensas atque labores, et tandem deficieban quotiam artem nec viderim' (ib.).

He persevered where others had failed: 'Ego vero non desperavi, quin facerem labore et expensis inutilibus' (Lib. de Acl., Præf.).

He considers it a true art: 'Probat artem Alchimiae esse veram (ib. c. 3).

He believes all metals can be transmuted into gold and silver, represented in astrological terms as Sun and Moon: 'Et ut breviter dicam, omnia metallia transsubstantiantur in Solm et Lunam' (ib. c. 19).

He speaks of the Elixir: 'De his quatuor spiritibus fit tinctura quæ dictur Elisir arabcic, ferendumen laticis' (ib. c. 10).

Fermentation and chemical reaction seem to be used as equivalent terms.

7. Thomas Aquinas was the pupil of Albert the Great, and afterwards at Paris. He, like his master, was a member of the Dominican Order. He graduated at Paris, and taught not only at Cologne under Albert, but at Paris, at Rome, and at other cities in Italy. He refused the Archbishopric of Naples, and died at the Abbey of Fossa Nuova near Piperno on his way to the Council of Lyons in 1274. Ferguson, in his Bibl. Chem., discusses the authenticity of the Thesaurus Alchimiae secretissimam ad fratrem Beatus, which is attributed to him, and leaves it an open question. The Summa contains one or two passages which directly or indirectly refer to alchemy, although the names are drawn from animal and plant life rather than from the mineral world. The principle of the transmutation of metals may be inferred from one of the earliest definitions of the Summae: 'Respondeo ob aliquid solus Deus est omnino immutabilis, omnis autem creatura aliquo modo est mutabilis. Scientia est enim, quod est aliquid quod non est aliud, et quod est aliud quod non est aliud. Cum aliquid per potentiam, quod in ipso est. Alio modo per potentiam, quæ in altero est' (Summae, pt. i. q. ix. art. ii.).

God alone is immutable: all else is transmutable, in different ways. In one place Aquinas refers to the relation that exists between the metals and the stars: 'Ad primum ergo dicendum, quod effectus aliquis inventari assimilari causae agenti dupliciter. Uno modo secundum
ALCHEMY

9. The most prominent names among the alchemists of the last part of the 13th cent. are Raymondus Lullius and Arnold of Villanova. The former of these, the Raymond Lully of the later English alchemists, was born in Catalonia, and held, in his early years, a high position in the Court of Aragon. Disappointed in a romantic attachment, he renounced the world, and gave himself up to a life of study and mission work in Africa. His work witnesses to a remarkable combination of spiritual devotion and scientific research, with a passionate enthusiasm for the conversion of the Moors. He devoted himself at first to the study of Arabic. He undertook his first mission to Africa in 1271, but met with little success. He was at Paris in 1281, where he became acquainted with Arnold Villanova. In 1287 he visited Rome, and in 1291 Montpellier. During these years he did great works, the De Generalis six Magna and the Libri xii. Principiorum Philosophiae contra Averrois. In 1292 he went to Africa a second time, and was imprisoned at Tunis. In 1295 he was in Naples, and spending his time in study and Arthur was again in Paris in 1308, where he is supposed to have met Duns Scotus. In 1309 he made another missionary journey to Africa, and succeeded in converting seventy disciples of Averroes at Buns, the ancient Hippo, the see of St. Augustine. Once again, as an old man of eighty, he made a last journey to Africa, in 1315, to be stoned and maltreated at Bugia. He lived only to see the shores of the island of Majorca. When he was buried in a character, he was buried on one of his own estates. In his last will, the Codicillus sive Vade Mecum quo foantes alchemico artes et philosophiae reconditoris tractatur, he says that he had acquired 22 tons of quicksilver, lead, and tin into gold. The tradition that he was brought from Rome by Cremer, Abbot of Westminster, and that he coined the rose-nobles for Edward III., does not seem to rest on historical fact (Pertinax Bld. Chem., p. 95). Arnold of Villanova, his contemporary, was probably also a Spaniard. He was born in 1245, and died in 1310. He studied amongst the Arabs of Spain, and it is related, by the man of André, that he succeeded in the genuine conversion of iron bars into pure gold at Rome (Bibl. Chem. p. 95). At least these alchemists of the 13th cent. in their researches seem to have discovered the secret of a long and useful and strenuous life. Albert the Great died at the age of 87, Roger Bacon at about 78, Raymond Lully at 80, and Arnold Villanova at 65, at a period when the average life was not so long as it is now.

10. The most distinguished pupil of Lully and Villanova was Pope John XXII. (1316-1334), who also lived to the age of 90. He worked at alchemy in the Papal palace at Avignon, and is said to have left behind him 25,000,000 florins. At the same time he wrote a letter in which he censured the black magic which was practised in nostra curta by certain clergy,—Joannes de Leunovicis, Jacobus dictus systemator, and a barber-surgeon, described as Joannes de Amantio, medicus, or, in another place, 'barberius' (Raynal, Ann. Écl. 1317, 53).

11. The practice of the art of alchemy was continued throughout Europe in the 14th cent. on the lines laid down by the masters of the 13th cent. John Cremer, Abbot of Westminster, after studying the art for thirty years, worked at Westminster in the reign of Edward III. (1327-1357).
Rupecissa, or Jean de Roquetaillede, was a Franciscan of Avuricla in Aquitaine. He was imprisoned by Innocent VI. in 1356–1357. He quotes Gerber, Lullius, and Villanovan in Liber Isar, a treatise on alchemy, which was practised as the incubation of the philosophical egg whence issued the marvellous quintessence.' Petrus Bonus of Ferrara was the author of the Preciosa Margarita nova et divina philosophorum Lapid. It was written in 1330, and published at Venice in 1456. The term 'fermentum,' used by Albert the Great as the Latin of elixir, is applied by Petrus Bonus to the philosophical stone. It is also used as the incipit of perfecting it: 'Apud philosophos fermentum dupliciter viaticus dicit: uno modo lapis philosophorum et alios compositus compositus et completus in comparatione ad metalla; ali o modo illud quod est percutiens haec et ipsam complevit.'

The chemical reactions due to it are compared with the working of yeast: 'De primo modo dicitur quod sicut fermentum pasta visiit pastam et ad se convertit semper, ac et lapis convertit ad se metalla reliqua. Et si una pars fermenti pastis habet convertire partes pastis et non convertit, sit et hic lapis habet convertire plurimas partes metallorum ad se, et non convertit' (Petrus Bonus, op. p. Schittenberger, On Fermentation, p. 11). Schittenberger adds: 'This property of transmitting a force to a body from which it is withdrawn by the process was precisely that which ought to characterize the philosophical stone, which was so much desired.' Since these words were written, the discovery of radium has given to chemistry an element which also appears to have the property contained in the famous words: 'It is a stone, which by conversion plus metalum ad se, et non convertit.'

Nicolas Flamel belonged to the latter part of the 15th century. He was born in Pontoise about 1350, and died in 1418 at the age of 88. His discovery of the elixir of life in 1582 seems to have met with its reward.

12. Among the prominent names of the 15th cent. are Basil Valentine and Isaac of Holland. The former is considered the author of The Tripartite Treatise, but there is considerable doubt as to the facts of his life and the authorship of the works attributed to him. The chief fact is a record in an Erfurt Chronicle under the year 1415: 'Eodem aetate Basilius Valentins in Divi Petri monasterio vivit.' There is a similar doubt as to the identity of Isaac of Holland. The life of Bernard, Count of Treviso, covers the whole century. Born in 1406, he visited Paris in 1490 at the age of another instance of the secret of long life won by the alchemists probably by means of study, method, and application to work. He distinguishes between the results of the labour of the alchemists and their embellishing products of a sophistical nature. Here there is some echo of the phrase of Thomas Aquinas: 'aurum sophisticatum.'

England produced three prominent alchemists in this century. George Ripley was born about 1415, and was a Canon Regular of St. Augustine at Bridlington. He visited Rome in 1477, and returned in 1478 after having discovered the secret of transmutation. He is the author of The Compound of Alchemy, or the Ancient Hidden Art of Alchemie: Containing the right and perfected Way to make the Philosopher's Stone, Aurum potabile, with other excellent Compositions. His Twelve Gates of Alchemy give some insight into the methods of the art in England in the 15th century. They are: Calcination, Solution, Separation, Conjunction, Putrefaction, Conglutination, Ciliation, Sublimation, Fermentation, Conjugation, Multiplication, Projection. He died in 1490 at the age of 75. Thomas Dalton lived in the middle of the century, and received a powder from a Convent of Monks of Erfurt which he put to use until his death. Thomas Norton of Bristol wrote his Crede Mihi, or Ordinal of Alchemy, in 1477. He says: 'I speak also the Elixir of life. Which me bereft a merchant's wife.'

The quintessens I made also, With shorter secrets and many pyre. Which sinful people took me toro To my great pain and much more woe.'

13. The 16th cent. saw a further development of alchemy into the more exact sciences of chemistry, alchemy, and medicine. Paracelsus, in his student wanderings an alchemist, became by practice a physician, by experience a chemist. He was at once a great diseaser and a great teacher. He wrecked his work by his bombast, his life by his self-indulgence. At the same time, to use Browning's words, 'the tittle of Paracelsus to be considered the father of modern chemistry is indisputable.' Gerardus Vossius says of him: 'Nobilium hanc medicinae partem, diu sequitur avarorum etate, quasi ab orco revocavit Th. Paracelsus' (de Philosophia et Phil. sect., ix. 9). It appears also from his treatise de Philosocietia that he had discovered the circulation of the blood. Lavater says that 'though an astrological enthusiast,' he was 'a man of prodigious genius' (de Naturae Rerum, Holoferni's tr., vol. lit. p. 178). There is a reference to his use of seeds and on the evidence of his secretary, Opinnius:

'All illud quid in capillo habuit, ab ipso Azoth appellatum, medicinam solvit, praeterea quae crucem et liftavit Philosolphum putant' (Melch. Adam). Browning adds: 'This famous sword was no laughing matter in those days, and it is now a material feature in the idea of the knight. Azoth was simply 'landmann sum.' But in his time he was commonly believed to possess some kind of power to convert several kinds of contagious diseases and transmuting metals. Opinnius often witnessed, as he declares, both these effects, as did also Franciscus, the servant of Paracelsus. He describes, in a letter to Vindelicus, a successful projection at which he was present, and the results of which, good goldangles, were conformed to in keeping the characteristic.

Paracelsus, otherwise Philippus Aureolus Theophrastus Bombastus ab Hohenheim, was born in Einsiedeln in 1493. He studied medicine under his father at Villach, and alchemy under Trithem, Bishop of Spalato, in 1535. He was a secretary, in 1535, of the Emperor Charles V. Paracelsus spent his early life in travel:

'Patris auxilio primum, deinde propria industria dociles docimatis vivos in Germania, Hispania, Gallia, Asia, qua maxima Europae regionibus, nactus est praecipius' (Melch. Adam, in Vit. Gerin. Mol.) The passage illustrates the wide interest in alchemy throughout Europe at the close of the 15th century.

Under the patronage of Sigismund Fugger, Paracelsus spent much of his life in mines of Bohemia, and himself speaks of his researches into folklore. He gives the name of the ancient alchemical term, 'aurum sophisticatum.'

Eoce anatome adolescentum difficilimis itineris haud pictum, ut venustam saltam puellam vel feminam apsicta' (Defensio septem advs. anatomi et al., 1573: 'de peregrinationibus et exilio').

In 1526 he was called to a chair of physic and surgery at Basel. Here he over-did his name of Avicenna and Galen made him many enemies. In 1528 his fall was brought about in the case of a canon of Basel named Liechtenfel. This man was cured by Paracelsus, but refused to pay the recognized fee. His refusal was regarded as a magistrates, and Paracelsus fled to Colmar. He was at Nurenberg in 1529, at St. Gall in 1531, at Pfeffers in 1535, and at Augsburg in 1536. He then visited Moravia, Arabia, and India. He died in 1538, when at Villach, he decryed his 'Chronicle' to the States of Carinthia, in gratitude for the many kindnesses with which they had honoured his father. He died at Salzburg in 1541, at the early age of 48. He appears to have been generous in the practice of medicine. His epitaph says of him: 'Bona sua in pauperes distribuenda collo-
canque erogavit.' A sceptic and fierce critic in alchemy, he appears to have been no less so in theology. Quenstedt says of him: 'Nee tantum nove medicina, verum etiam nove theologice auter est' (De Patr. Doct.). Delrio places among those who were partum atheos, partim hereticos' (Digniss. Magister, i. 3). At this same time, Browning is justified in the last words he places in the mouth of Paracelsus:

‘It is a dark and tempestuous sea, cloud. It is but for a time; I press God's lamp close to my breast; it splendour, soon or late, will pierce the gloom; I shall emerge one day. Can you understand me? I have said enough.

An inventory taken at his death shows that the only books he left were the Bible, the New Testament, the Commentaries of St. Jerome on the Gospels, a printed volume on medicine, and several manuscripts. His works were published by F. Bitiskius in 3 vols. fol. in 1558; the Hermetic and Alchemical writings by A. E. Waite in 2 vols. in 1594. Jules Andrues says of him: 'He is the pioneer of modern chemists, and the prophet of a revolution in general science' (Encyc. Brit. art. 'Alchemy'). Browning sums up his study of Paracelsus in the words:

'Midst it all, I have done well, though not well at all. As yet men cannot do without contempt; they are for their good, and therefore fit while shrewd than other wise, and I with other wise, rather than praise the strong and true, in me. But after, they will know me.'

(Paracelsus, 1835, and notes.)

The new influence in the 16th century is shown by the death of the fourth of the great wit was alchemist to the Elector Augustus of Saxony from 1556 to 1562, in the title of Libavius' great work published in 1595—Alchymia recognita, emendita, et aucta. It has been called the 'first text-book of chemistry,' a claim which he would have made on the philosopher's stone. In England, Thomas Charnock published his Breviary of Philosophy in 1557, his Exagium of Alchemy in 1572, and his Memora directorum in 1574. He was instructed in the use of gold-making powder by Bird, who received it from Ripley. It was only those who were well to do who could carry on these experiments. The furnace alone cost Charnock £2 a week. The Alchymia recognita was the first of the works of Exeter, the chief alchemist in the time of Elizabeth which has been published by James O. Halliwell (London, 1854).

There does not seem to have been much interest taken in the 'new learning' till the latter part of the century. The Day Book of John Donne in 1520 contains but few references to alchemical works. There is one copy of the Commentarius Arnoldi de Villanova (vol. 5. a. 1); there are three copies of a Chorourentia de natura (vols. 1. a. 1, 6, 12, 13, a. 1), and two copies of Albertus, de mineralibus (13. a. 1, 13. b. 2). There is also a copy of Theoricien PLANITARIORUM (15. b. 1) (Fletcher, Collectanea Oxf. Hist. Soc. vol. v. p. 71 ff.). In the catalogue of books belonging to William Grocy, drawn up by his executor, Linacre, in the same year, there is the same absence of such books (Mont. Burrows, Collect. Oxf. Hist. Soc. vol. xvi. p. 317 ff.). Oxford had at this time other interests, especially the new learning associated with the names of Grocy, Linacre, Foxe, and others. The training of Linacre, the founder of the English College of Physicians, the friend of Politian and Chalceldus, and the great Venetian publisher, Aldus Manutius, is in marked contrast to the restless wanderings of Paracelsus.

It was long before the new sciences cut themselves a fourth from the ideas of the alchemists. In the early part of the 17th century, the brotherhood of the Hermetic philosophers known as the Rosicrucians (wh. see) brought the occult mysteries of the earlier alchemists again into notice. The brotherhood claimed descent from Christian Rosencreutz in 1649; but no evidence for this exists beyond their own publications. The controversy centred round a work entitled, Chymische Hochzeit Christouis Rosencreutz anno 1489, written by Johann Valentin Ansbach in 1616, and published at Strassburg. Among the most prominent of the Rosicrucian brotherhood was Michael Maier, physician to the Emperor Rudolph II. (1570—1612). He published Examen secundum Pseudo-chymicorum in 1617, Atalanta fugiens in 1618, Symbola aurea mensae in 1617, and the Tripus aureus containing three treatises—the Basilii Valentini Practica ex Germania, the Crede et seu Ordinale of Thomas Norton, and the Testamentum of Cremer, Abbot of Westminster. Robert Fludd introduced the brotherhood to the notice of English physicians. Born in Kent in 1574, he matriculated at St. John's, Oxford, November 10, 1592, and took his M.A. degree in 1598. One of the three questions discussed by him for Inception in Medicine in 1605 was: 'Chymieum extractum minus molestae et periculo aferit quam quod integro et naturn ad Mirabilium, Univ. Oxf. p. 110. Nat. Soc. ii. pt. i. 193, li. 191, iii. 194). In the same year is discussed in Comitissi: 'Incanta-tio non valet ad curam morbi.' Fludd went abroad and studied the works of Paracelsus and the mysteries of the Rosicrucians. On his return he practised as a physician in London, and died in 1657.

The Hon. Robert Boyle, one of the first promoters of modern chemistry, and a leading member of the Royal Society on its incorporation in 1662, believed in the transmutation of metals. In 1659 he brought to Oxford 'the noted chemist and Rosicrucian, Peter Stethal of Strasburgh.' Anthony Wood began his 'Antiquities of Chemistry' under him April 23, 1663, paying 30s. in advanced, and the balance of 30s. at the conclusion of the class, May 30, 1663. 'A. W. got some knowledge and experience; but his mind was still busy after antiquities and music.' Among the members of this famous chemistry class at Oxford was 'John Locke, a man of turbulent spirit, clamorous, and never contented,' and 'Mr. Christopher Wren, afterwards a knight, and an eminent virtuoso.' In 1664, Mr. Stethal was called away to London, and became operator to the Royal Society; and continuing there till 1670, he returned to Oxford in November. (Clark, 'Wood's Life of Times, vol. xix. p. 290, 472). The Sceptical Chemist, by Robert Boyle (Oxford, 1659), contains the first statement of the molecular or atomic idea in chemical philosophy (H. C. Bolton, Catalogue of Works on Alchemy and Chemistry, exhibited at the Grolier Club, New York, 1891). He was made 'Dr. of Phisicro' in 1665, and died in 1691. The Rosicrucian ideas and alchemical methods survived to some extent at Oxford. Elias Ash-mole was the contemporary of Robert Boyle at Oxford, but as a member of Brazenose, and not as 'a sojourner.' In 1650 he edited a work of Dr. John Dee, who died c. 1608, of whom Wood says: 'I have heard some say that he was a mere mountebank in his profession' ('Wood's Life and Times,' Oxf. Hist. Soc. vol. xix. p. 308). In 1654, Ashmole wrote The Way to Blas in three books. 'The author says that motion is the condition of heat, and doth beget and purchase it of nothing, theorectically anticipating modern doctrines' (Bolton, Catalogue). Bk. ii. ch. ii. of the treatises of the Philosopher's Stone. In 1677 he offered a prize to the University, on the condition that it would build a Museum and Chemical Laboratory. The foundation-stone was laid September 14, 1679, and the building was finished March 20, 1682-1683.
Alchemy (European)

The inscription describes this first public laboratory in Oxford: *Museum Ashmoleanum: Schola Naturalium*; the different rooms of the three largest rooms public: *The supermum... Museum Ashmoleanum.* The middle room is the School of Natural History. Oxford alchemists, who are at present Dr. Robert Plot, reads three times a week. The lower room, a cellar... is the laboratory of several of the most distinguished men who have written on the subject. (Wood's Life and Times, vol. xxvii, p. 59).

It was thus under the direction of Ashmole, professor of chemistry at Oxford, that the study of chemistry was placed on a sound and public footing. Ashmole died in June 1692, a year after Robert Boyle.

In the 17th century, chemistry was actively pursued in the person of Dr. Price of Guildford, the last of the alchemists, a distinguished amateur chemist, and Fellow of the Royal Society. In May 1782 he proposed to transmute mercury into silver and gold in the presence of a select company. Some years later, he published an essay in verse addressed to George III., and Price was made M.D. of Oxford. The Royal Society then pressed him to repeat the experiments in their presence. He hesitated, refused, and only on the pressure of the President, Sir Joseph Banks, at last reluctantly consented. He withdrew to Guildford, prepared an ample amount of laurel water, and then began to manufacture his projection powder. On the 3rd of August, 1786, the Royal Society met at Guildford. Only three Fellows responded to the invitation. He received them, and then committed suicide in their presence.

In Germany, alchemy waslaughtered out in the person of Senner. He received the 'Salt of Life' from Baron Hirschen, and, treating it as the Philosopher's Stone, was surprised to find gold deposited in the crucible. Klaproth analyzed the 'Salt of Life,' and found it to consist of Clamber's salt and sulphate of magnesia. In the 'Salt' sent by Senner, however, Klaproth discovered gold, though not in combination. Klaproth again consented to analyze Senner's 'Salt of Life' when, instead of gold, he found a kind of brass called tombac. On further investigation, it was discovered that Senner's old servant, eager to humour his master, had slipped pieces of gold leaf into Senner's chemical mixtures. The servant entrusted the secret to his wife, that in his absence she might purchase the gold leaf as before. She, however, bought brass instead of gold, and spent the balance on drink. In this way alchemy was laughed out of Germany (Chambers, *Book of Days*, i. 692).

The theories of the alchemists did not die out at once. They were still held by the adepts at the close of the 18th century. The Antiquary says that Dissertationes exhibits itself as a perfect charlatan—talks of the magisterium—of sympathies and antipathies—of the caulis—of the divining rod—and all the trumpery with which the Rosicrucians cheated a darker age, and which, to our eternal disgrace, has been adopted and used in our own time (School of Antiquity, ch. xii.).

The Lives of the Adepts in Alchemicall Philosophy was published in London in 1814, and the School of Natural History, a reproduction of Bulwer Lytton's *Zanoni* was written in 1827 as a study in the mysteries of Alchemests—George Eliot. In 1871 wrote *The Great Work* a most rigorous error vigorously pursued has kept the embryo of truth a breathing: the quest of gold being at the same time the search for a substance which chemists themselves are prepared for its soul, and Lavoisier is born (Middlenach, vol. ii. ch. xxvii.).

The discovery of the establishment of the Atomic Theory by Dalton in the beginning of the 19th century, as a working hypothesis in practical chemistry that set on one side the theories of the alchemists:... and his further experiments Multiples led to the idea that the elementary bodies are made up of indivisible particles called atoms, each having a constant weight peculiar to itself, and that they can be changed to another place by the juxtaposition of these atoms, 1 to 1, 1 to 2, 2 to 3, etc., a group of atoms thus united being called a molecule. This is the atomic hypothesis of Dalton (II. Wist, *Inorganic Chemistry*, 1855, p. 267).

Immutability has been the recognized law of the elements: 'Our molecules, on the other hand, are unalterable by way of the processes which go on in the present state of things, and every individual of each species is more or less the same in magnitude... In speculating on the cause of this equality, we are debarked from imagining any cause of equalization, on account of the immutability of each of them. It is evident, if we are to conceive of selection and elimination of identical varieties, that the same number of those eliminated molecules have gone to, if, as we have reason to believe, the hydrogen, etc., of the fixed stars is composed of identical molecules in all respects with our own?' (Clark— *Maxwell, Theory of Heat*, 1865, p. 321).

Thus, under the most advanced theory of Chemistry and Physics the 19th century, the transmutation of elements was inconceivable. Yet there were masters of chemical philosophy who entered a caution against the exclusion of possibilities.

Tilden writes: 'The molecular theory has been adopted in a somewhat rigid form, not by reason of any special conviction of its truth or of its power as a scientific hypothesis, but because I am satisfied by long experience that, whatever form it may ultimately assume, it is even now a most important and rigid aid to the discovery of chemical truth' (Clark— *Chemical Philosophy, London*, 1857, p. vii). In treating of the Periodic Law and the Periodic Table, the same author expresses the following remarks: "In the first place, there are some elements, as, for instance, copper, silver, and gold, for which a place cannot readily be found. It is undoubtedly allied, though not very closely, with sulphur, with which it is also connected with copper on the left hand and with mercury on the other. Gold again is unquestionably placed, while the platinum metals to which it is most nearly related exhibit even atomicity" (ib. p. 243). There still remained something beyond this, and this, too, in the important metals, silver and gold...
to have been people by one or two ancestors, who sometimes carried churinga.
2. The Urbunna, the neighbours of the Arunta on the other side, also have their mythic period, named Uluraka; thus it is described that the ethnic groups were semi-human and lived on the earth on their lower part; in it; they had superhuman powers. The ancestors of each totemic group at the present day were few in number, and there is no myth of the churinga being carried. The Urbunna are distributed widely from that of the Arunta and Kaiitsh, and comes near that of the Warramunga (see below). The semi-human ancestors wandered about the country putting mai-uri (spirit individuals) into rocks and pools, and these subsequently became men and women, who formed the first totem groups. These mai-uri are continually undergoing re-incarnation; as a rule, with the Arunta they inhabit different localities according to their totem; but in the Urbunna and other tribes those of two or more totems may inhabit the same place. Each re-incarnated individual is held to change his phratry, totem, and sex on re-incarnation; after death he goes down to the spirit place (see below) in the Uluraka, and this regardless of the totem to which he may for the time being belong. In the Wongkurganu tribe, north-west of Lake Eyre, the Urbunna belief prevails, with the exception that they accept the Arunta belief as to the inapertuer.
3. The Unmatjera hold that every totemic ancestor had his class as well as his totem; the totem changes in their belief, as in that of the Arunta, in successive incarnations, the class seldom or never.
4. The Warramunga, Walpari, Tjingili, and other tribes hold that every one is the incarnation of a Wingara ancestor; but these latter are regarded as having been primarily associated with individuals. These beliefs are shared by the Umbaia and Gnanji, but the latter hold that women have no moidna, or spirit part; consequently spirit female children, though they exist, do not take human form. The Birnbinga also hold that only the men of these tribes have an axe, the spirit child will enter her body. The ancestor began his travels under ground, and then came up to the surface; churinga are known in this tribe, but not associated with individuals. These beliefs are shared by the Umbaia and Gnanji, but the latter hold that women have no moidna, or spirit part; consequently spirit female children, though they exist, do not take human form. The Birnbinga also hold that only the men of these tribes have an axe, the spirit child will enter her body.
5. In the Arunta tribe at the present day a man marries a woman of his own or any other totem; in the other tribes totemic exogamy is enforced. Tradition says that in the Alcheringa times men invariably married women of their own totem; the classes, too, were originally non-exogamous, and the present regulations came down from the north. It seems clear that the progress of social changes from north to south corresponds with the facts; but there is much division of opinion as to the value of the remainder of the myths. They are treated as mere atiological myths by Andrew Lang and others, as genuine historical traditions by Spencer and others. It seems clear that some part of them cannot be historically true; as the totem groups are represented as living exclusively upon their totems; and some of these, such as grubs and plants, are not in season for more than a portion of the year.

LITERATURE.—Spencer, Gillen, Native Tribes, 1889, pp. 140-157, 287-295, etc.; Catalogue of the Australian and Torres Straits Tribes, 1904, pp. 145-175, etc.; FL. XVI. 425-435, gives the views of the Southern Arunta, remarks on the literature; cf. also Lang, Myths and Legends of the Aborigines, 1903, and Secret of the Totems; Durkheim's art. in Arch. de Sci. Hist. (1901) 20, etc.; see also Van Geenop, Mythology of Australia, 1906, p. xvi L.

N. W. THOMAS.
ALCOHOL.—The use of alcohol in some form or other has been familiar to man from a very early period in his race-existence; in all ages of which we have any records, one of the cardinal points in the social life of the tribes of the most varied degrees of culture, it has been and still is an agent with marked effects on the individual and the race. The name is Arabic in origin (al-kohl, 'collyrium,' the fine powder used to cause tears). Alcohol, as we know it in ordinary use, is properly named 'ethyl alcohol,' and is one of a series—distinguished in their properties from another by their boiling-points, of specific gravity, and their poisonous effect—consisting of carbon, hydrogen, and oxygen. Their names and chemical formulae are:—Ethyl alcohol (C₂H₅OH), ethyl alcohol (C₂H₅OH), propyl alcohol (C₃H₇OH), butyl alcohol (C₄H₉OH), and amyl alcohol (C₅H₁₁OH). Ethyl alcohol is obtained from distillation of wood, and, being nauseous in taste, it is added to ethyl alcohol, so that the latter may be sold for industrial purposes without tax as methylated spirits. Fusel oil contains amyl and ethyl alcohol as well as other by-products of fermentation, and is usually present along with other analogous substances in distilled alcoholic liquors; but as their amount is small and their action subsidiary, they will not be further referred to.
