Transla-
tion aids

The user translates some of the article paragraphs with the help of several translation aids.

Article published

Once published, the content becomes a regular article, and the user is welcomed to further edit it to adjust styling and add content.

Additional entry points

When creating a new article, or a translation-related template is presented to the user, users should be able to directly initiate a translation.
Translate content

- Translate a paragraph based on machine translation
- Adapt content, links and references
- Deal with untranslatable elements

More details on next pages...
Traffic lights, also known as traffic signals, traffic lamps, signal lights, stop lights and robots,[1] and also known technically as traffic control signals[2] are signalling devices positioned at road intersections, pedestrian crossings and other locations to control competing flows of traffic. Traffic lights were first installed in 1868 in London[3] and are now used all over the world.

Traffic lights alternate the right of way accorded to road users by displaying lights of a standard color (red, orange/amber, and green) following a universal color code. In the typical sequence of color phases:

the green light allows traffic to proceed in the direction denoted, if it is safe to do so
the yellow/amber light denoting prepare to stop short of the intersection, if it is safe to do so
the red signal prohibits any traffic from proceeding
신호등(信號燈)은 철도나 도로에 있어서 교통 안전 확보 또는 교통의 흐름을 원활히 하기 위해서 진행·정지등의 신호를 나타내는 장치이다.

Translation service card (default settings)

Controls the translation at paragraph level: what to provide the user when clicking a paragraph.

When one or more translation services are available, users can choose which one to use, or disable automatic translation. This setting will be remembered for the next paragraphs.

When there are no translation services for a language, the default is not to provide a translation by default. Users can have options to use translation languages for a similar language when available, use the source text by default.
Translation service card (actions)

Controls the translation at paragraph level. Users can do some actions on the current paragraph.

- **Automatic translation**
  - From Google Translate

- **Use source text**
- **Clear translation**
- **Restore**

Users can manipulate the current paragraph to replace it with the source translation, or clear the text.

When the user modifies the translation text, the actions used are no longer disabled.

Restore option will be used to apply the automatic translation again. If the user uses the drop-down selector to choose a different service. The selected translation will also be applied.

When automatic translation is not available or it is disabled, the “restore” action is not needed since “clear translation” will have the same effect.

Explore links

When hovering a link, the background gets highlighted. If there are links with the same target in the translation, those get highlighted too.

When clicking on a link, it becomes active (highlighted in blue). It will de-activate when clicking anywhere else in the document (but not on the tools area except for actions that manipulate the content). A double card appears. The target link card will appear as the visible card regardless of the clicked link being on the source or the translation.

When the user presses “shift” key, clicking a link opens it in a new window, and hovering it will show a tooltip after a couple of seconds to indicate that the link will open.

When hovering the top part of the hidden card (or pressing shift), it reveals enough of its content to access the link.

When clicking the card behind. The cards switch positions.

신호등(信號燈)은 철도나 도로에 있어서 교통 안전 확보 또는 교통의 흐름을 원활히 하기 위해서 진행·정지등의 신호를

신호등(信號燈)은 철도나 도로에 있어서 교통 안전 확보 또는 교통의 흐름을 원활히 하기 위해서 진행·정지등의 신호를 주는 기기이다. 신호등은 1868년에 런던에서 처음 설치되었고, 전 세계에서 많이 사용되고 있다.

신호등은 교통 흐름을 원활히 하기 위해 교통 사용자에게 진행권을 부여하는 기기로, 표준 색상 (빨강, 오렌지/암브, 그리고 녹색)을 사용하여 운전자가 신호등을 따르도록 지시한다. 일반적인 색상 순서는 다음과 같다:

緑色 신호는 교통이 진행할 수 있는 방향을 가리키며, 정지나 멈춤을 제외하고는 안전한 경우에만 가능하다.

작약색 (아마동) 신호는 멈춤을 준비할 수 있도록 가리키며, 정지신호를 안전하게 막을 수 있는 경우에만 가능하다.

적색 신호는 운전자가 교통을 진행할 수 없도록 하며, 안전하지 않은 경우에만 가능하다.
Traffic lights, also known as traffic signals, traffic lamps, signal lights, stop lights and robots, and also known technically as traffic control signals are signalling devices positioned at road intersections, pedestrian crossings and other locations to control competing flows of traffic. Traffic lights were first installed in 1868 in London and are now used all over the world.

Card layout

Individual cards can be represented in different ways

**Expanded**
- All information

**Compact**
- Main information

**Minimal**
- Icon and pointer to information

**Iconic**
- Just an icon

As more cards need to be added, more compact representations are used

- Very closely related cards can be combined into a multi-card
- Some bottom cards can become minimal.
- Cards are divided into different pages.
- Cards can be expanded by the user to view their full content.
Definition

Signal (noun)
A sign made to give notice of some occurrence, command, or danger, or to indicate the start of a concerted action.

Signal (verb)
To indicate
신호를 보내다

When expanded, only one card is shown, and scrollbars appear when needed.

When there is little room, cards are divided in sections.
Traffic lights, also known as traffic signals, traffic lamps, signal lights, stop lights and robots, and also known technically as traffic control signals, are signalling devices positioned at road intersections, pedestrian crossings and other locations to control competing flows of traffic. Traffic lights were first installed in 1868 in London and are now used all over the world.

From: Español Español
To: Català Español Português Euskara

The source language is disabled as target. Selecting it will set the previous target language as source: Català -> Spanish

The Español - Euskara pair is not supported. The user is informed but allowed to select it (to make it easy select a different source and check which ones are available)

When many language pairs are supported, a specific language list control is needed.

Common languages
Azərbaycanca Qaraqalpaqsha Turoyo
Bân-lâm-gú Qırımtatarca Uyghurche
Bráhuí Qazaqşa 한국어
English Santali
Esperanto Vepsän keř

Worldwide
English Lingua Franca Nova
español Lojban
Esperanto Novial
Continuing the work initiated on on-boarding projects, suggesting easy tasks to users is an effective idea to help them to contribute.

Currently there is not a framework to provide such suggestions, but once this is available, translations could be one of the types of tasks to provide.

Users will be provided with articles in a language they know to be created on the current wiki.

The opposite is also possible suggest to translate content from the local wiki that are lacking in other languages the user knows.
When a user reads an article, a language the user knows may be shown as a redlink if content is lacking in that language.

Users can decide to create an article from scratch or start a new translation. Source and target languages can be overridden.
In an article, the target language is very likely the current language so we provide for changing it (it can be later changed on the translation UI if needed).

The source language to be used is a guess based on the user and the available languages in which the article exist.

Language relationship with inexistent items may be hard to guess since those donot exist on Wikidata.

If the article is not available in other languages, or it cannot be located, the “translate from” button should not appear.

Translate from Italiano
Searching for languages

When the user looks for a language for which content is not available, options to create the page can be provided.

Create page  Translate from English

Content is not available in Español
When creating a new page, a warning can be shown if the page exist on other languages the user knows (we cannot be 100% sure if we rely on title search).

Users can save time by creating the article as a translation, but a link is provided to take a look at the article in that language.

This approach could be applied to both VE and Wikitext editor.

There is a need to deal with the situation where the user adds content to the new document. In this context we can either:
- Remove the translation notice as soon as the user types.
- Transfers the content the user typed to the translation document.
Traffic light

Traffic lights, also known as traffic signals, traffic lamps, signal lights, stop lights and robots,[1] and also known technically as traffic control signals[2] are signalling devices positioned at road intersections, pedestrian crossings and other locations to control competing flows of traffic. Traffic lights were first installed in 1868 in London[3] and are now used all over the world.

Traffic lights alternate the right of way accorded to road users by displaying lights of a standard color (red, orange/amber, and green) following a universal color code. In the typical sequence of color phases:

the green light allows traffic to proceed in the direction denoted, if it is safe to do so
the yellow/amber light denoting prepare to stop short of the intersection, if it is safe to do so
the red signal prohibits any traffic from proceeding

신호등(信號燈)은 철도나 도로에 있어서 교통 안전 확보 또는 교통의 흐름을 원활히하기 위해서 진행·정지등의 신호를 나타내는 장치이다.

Translation title (if differs from source)

By clicking the "Create translation" button, you agree to the Terms of Use and you irrevocably agree to release your contributions with this translation tool under the CC BY-SA 3.0 License and the GFDL with the understanding that a hyperlink or URL is sufficient for CC BY-SA 3.0 attribution.

Create translation
When the user selects an article that exists in the selected target language. The link allows to view such article.

When the user selects an article that does not exist in the target language, but provides a title which is used for another language.

Only when the article already exists, and the user gave it a title that conflicts with a different article. For example, the user selects “Red” to be translated as “bleu” in French. The first link would point to “Rouge” (red in French) and the second to “Bleu” (blue, the title the user gave).

Search source article

**To:** Korean ▼

Translation title (if differs from source)

Shows all languages supporting by the translation services as source (and only those).

If an article is set, those languages for which the article do not exist are shown lighter.

If the target language is selected, those languages which cannot be translated to the target language are shown lighter. Selecting one of those, will make the target language selector grayish (and the translate button disabled).

Shows all languages supporting by the translation services as target. If the source language is selected, those languages which cannot be translated to the target language are not shown.

If an article is set, those languages for which the article already exists are shown lighter.
Accommodating the language list according to the number of languages

≤12
Show languages in a single column.
No grouping per region, no “common languages” section, no languages repeated.

13 - 100
Show languages in 2 columns.
Grouped by region with a “common languages” initial section.
Each block can have different scripts combined without forcing a block break.

≥ 100
Show languages in 4 columns.
Grouped by region with a “common languages” initial section.
Blocks of languages are clustered per script.
This is the current behaviour of ULS
