**SEC. 301.72-5B—ADMINISTRATIVE INSTRUCTIONS**

**MODIFYING THE RESTRICTIONS OF THE WHITE-FRINGED BEETLE QUARANTINE BY AUTHORIZING TREATMENT OF PLANTS IN POTS OR IN SOIL-BALLS NOT EXCEEDING THREE (3) INCHES IN DIAMETER**

JANUARY 28, 1939.

Recent experimental work by the Bureau of Entomology and Plant Quarantine of the U. S. Department of Agriculture has proven that certain potted plants, hereinafter listed, can safely and successfully be fumigated for the control of white-fringed beetle.

**Treatment Authorized**

Under provisions contained in Regulation 5 (a) (Sec. 301.72-5) supplemental to Notice of Quarantine No. 72<sup>1</sup> (Sec. 301.72), the Chief of the Bureau of Entomology and Plant Quarantine authorizes as a prerequisite to certification, the following method of treatment, for certain kinds and sizes of potted and balled and burlapped plants, when done under the supervision of an authorized inspector of the U. S. Department of Agriculture.

**Fumigation Treatment Method**

(1) Fumigation must be done with methyl bromide at a dosage of one pound per 1,000 cubic feet, including the space occupied by the plants, for a period of 4 hours, the soil in which the pots are planted and the air in the fumigation chamber to be at a temperature of not less than 85° F.

(2) Such fumigation shall apply only to plants in 3-inch pots or smaller, or in soil-balls not larger than those which would be contained in 3-inch pots, and the plants shall be stacked on racks so

<sup>1</sup>3 F. R. 3004 DI.

that the gas mixture can have access to all sides of the pots or soil-ball.

(3) The fumigation shall be done in a tight chamber with gas-tight doors.

(4) After the chamber is loaded and closed, the appropriate amount of methyl bromide shall be volatilized therein and the air-gas mixture shall be circulated by means of a fan or blower throughout the entire 4-hour fumigation period.

**Suggestions**

(1) A fumigation chamber, lined with sheet metal throughout and with a metal-covered door closing against gaskets and held tightly in place by refrigerator door fasteners, is recommended.

(2) A list of plants, which have been fumigated experimentally with methyl bromide according to the recommendations here given and are classified as to their ability to withstand such treatment as indicated by these experiments, is attached.

**Disclaimer**

In authorizing the movement of potted plants or nursery stock fumigated according to the requirements stated above, it is understood that no liability shall attach either to the U. S. Department of Agriculture or to any of its employees in the event of injury resulting from the use of the fumigant.

**Caution**

Methyl bromide is a gas at ordinary temperatures. It is colorless and practically odorless in concentrations used for fumigation of plants. It is a poison, and the operator should use an approved gas mask when exposed to the gas at concentrations used in fumigation. The plants in the fumigation chamber should be well aerated by blowing air through them and the room adequately ventilated before it is entered. (Sec. 301.72-5) [B. E. P. Q.-486, Jan. 28, 1939]

MODIFYING THE RESTRICTIONS OF THE WHITE-FRINGED BEETLE QUARANTINE BY REMOVING UNDER SPECIFIED CONDITIONS, THE CERTIFICATION REQUIREMENTS FOR INTERSTATE MOVEMENT, FOR ALL RESTRICTED ARTICLES ORIGINATING IN FOREIGN COUNTRIES

JANUARY 27, 1939.

Under authorization to the Chief of the Bureau of Entomology and Plant Quarantine provided in the second proviso of Notice of Quarantine No. 72<sup>1</sup> (Sec. 301.72), I find that, when the following requirements are met, regulations 4, 5, and 6 (Secs. 301.72-4 to 301.72-6) under this quarantine, may be safely modified to waive all certification requirements for all regulated areas until further notice, for the interstate movement of all restricted articles imported from foreign countries and moving through a regulated area, when re-shipped in the unopened, original container and when each container is clearly marked to indicate the country of origin, and when the articles are protected, while in the regulated areas, in a manner satisfactory to an authorized inspector of the United States Department of Agriculture. Such modification is hereby authorized. (Sec. 301.72) [B. E. P. Q.-488, Jan. 27, 1939]

#### SEC. 301.72-5a—ADMINISTRATIVE INSTRUCTIONS

MODIFYING WHITE-FRINGED BEETLE QUARANTINE REGULATIONS AUTHORIZING TREATMENT OF POTTING SOIL

JANUARY 28, 1939.

Recent experimental work by the Bureau of Entomology and Plant Quarantine of the United States Department of Agriculture has proved that potting soil can be successfully treated by the following methods for the control of the white-fringed beetle.

#### Treatment Authorized

Under provisions contained in Regulation 5 (a) (Sec. 301.72-5) supplemental to Notice of Quarantine No. 72<sup>1</sup> (Sec. 301.72), the Chief of the Bureau of Entomology and Plant Quarantine authorizes, as a prerequisite to certification, either of the following methods of treatment for "potting soil" when done under the supervision of an authorized inspector of the United States Department of Agriculture.

#### Fumigation Treatment Method

(1) Potting soil must be treated in a container with methyl bromide in a dosage of 40 cubic centimeters of methyl bromide per cubic yard of soil for a period of 48 hours.

(2) The sides, bottom, and seams of the container shall be tight, preferably lined with sheet metal, and shall have a cover or be covered with a tarpaulin immediately after the fumigant is applied.

(3) The condition of the soil and the apparatus used and the method of application of the fumigant must meet the approval of an authorized inspector of the United States Department of Agriculture.

#### Heat Treatment Method

(1) Live steam, under pressure of 80 pounds or more per square inch, shall be applied through a grid of perforated pipes at the bottom of the sterilizing box or truck body containing the soil, for a period of 45 minutes or until all parts of the load reach a temperature of 200° F.

(2) The grids shall be constructed of 1-inch pipes, perforated with holes  $\frac{1}{4}$  inch in diameter on the upper side and connecting at one end to a manifold into which the steam is introduced.

(3) The layer of soil in the sterilizing box shall not be more than 2 feet, 6 inches deep.

#### Disclaimer

In authorizing the movement of potting soil treated according to the requirements stated above, it is understood that no liability shall attach either to the United States Department of Agriculture or to any of its employees in the

<sup>1</sup> 3 F. R. 3004 DI.

event of injury resulting from the use of these treatments.

**Caution**

Methyl bromide is a gas at ordinary temperatures. It is colorless and practically odorless in concentrations used for fumigation of plants. It is a poison, and the operator should use an approved gas mask when exposed to the gas at concentrations used in fumigation.

After fumigation of potting soil by the above method, the cover should be removed and the soil allowed to aerate. (Sec. 301.72-5) [B. E. P. Q.-489, Jan. 28, 1939]
