NEW EDITION OF BRANDE'S DICTIONARY OF SCIENCE, LITERATURE, AND ART, RECONSTRUCTED AND GREATLY EXTENDED TO ADAPT IT TO THE PRESENT STATE OF SCIENCE.

In course of publication, to be completed in TWELVE PARTS, price 5s. each, forming THREE VOLUMES, medium 8vo. price 21s. each,
—(VOLS. I. *and* II. are now ready)—

A DICTIONARY

OF

SCIENCE, LITERATURE, AND ART

COMPRISING

THE DEFINITIONS AND DERIVATIONS OF THE SCIENTIFIC TERMS IN GENERAL USE, TOGETHER WITH THE HISTORY AND DESCRIPTIONS OF THE SCIENTIFIC PRINCIPLES OF NEARLY EVERY BRANCH OF HUMAN KNOWLEDGE.

EDITED BY THE LATE

W. T. BRANDE, D.C.L. F.R.S.L. & E.

Of Her Majesty's Mint, Honorary Professor of Chemistry in the Royal Institution of Great Britain;

AND THE

REV. GEORGE W. COX, M.A.

Late Scholar of Trinity College, Oxford;

ASSISTED BY GENTLEMEN OF EMINENT SCIENTIFIC AND LITERARY ACQUIREMENTS.

THE progress of science and general knowledge during the twenty-four years which have elapsed since the publication of the first edition of The Dictionary of Science, Literature, and Art, has made it impracticable any longer to render that work a fit representative of existing knowledge, by mere corrections and supplements. It has, therefore, been considered advisable to re-write or re-edit it throughout, and thus to make it an entirely new work. It was the original plan of the Editor to associate with himself writers of admitted competence in the various subjects treated of in the work, and the same system has been followed in the new edition now in course of publication. It is believed that the names of the gentlemen who have contributed to this new edition form a sufficient guarantee that the Editors' efforts to render this work a trustworthy source of information have in no way relaxed, and that the book may therefore be consulted with confidence by all who wish to make themselves acquainted with the principles of each particular science, with the details and history of many, and with the main facts of the multifarious subjects with which it is necessary, at the present day, for all intelligent persons to have some acquaintance.

The plan of the fourth edition differs slightly from that of the former ones, but it is more in accordance with the idea on which the Dictionary was originally planned, and which was expressed in the name at first designed for the work. The intention of the Editor was to call it a 'Dictionary of Scientific Terms,' and to limit its contents to a brief explanation of an exhaustive list of Scientific words; but after mature consideration it was thought desirable, in carrying the design into execution, to limit the number of words included in the Dictionary, and by extending the length of particular articles to make it a readable book, rather than a mere work of reference. In the present edition it has been the object of the Editors, while retaining the readable character of the work, to diminish the extreme length of some of the articles, and to increase their number; but the total quantity of matter contained in the New Edition is considerably increased. It has been found that, in many branches of Science, and especially in Mathematics, Physics, Geology, Mineralogy, and Botany, the omission

Digitized by Google

New Edition of Brande's Dictionary,—*continued.*

of terms now in common use, which are requisite for students and collectors, somewhat lessened the utility of the work. A large number of new articles have therefore been added in the present edition, and the whole has been brought, as closely as possible, up to the present time. It is not pretended, and indeed it would be impossible, to include all the terms employed in any branch of science, but it is believed that the omissions are few and unimportant, and that, practically, a sufficient number are included to meet the requirements of the general reader and the non-professional student. The progress of historical criticism, and of the Sciences of Comparative Philology and Mythology, has rendered it necessary to re-write the articles which treated of these subjects, and to add many new ones. In assigning derivations, the Editors have sought chiefly to avoid guess-work; but the principles which have guided them in this part of their task are given in detail in the general preface to the work.

A larger and more legible type has been adopted than that of the previous editions; but although the size of the work has been thereby, and by the large accretion of new matter, extended to three volumes, the price is not increased.

LIST OF CONTRIBUTORS.

Subject	Contributor
General Editor	W. T. Brande, F.R.S. &c. late of Her Majesty's Mint, and Honorary Professor of Chemistry in the Royal Institution of Great Britain.
Joint Editor	The Rev. George W. Cox, M.A. late Scholar of Trinity College, Oxford.
Agriculture	John Chalmers Morton, Editor of the 'Agricultural Gazette,' &c.
Architecture, History, Language, Logic, Mythology, and General Literature	The Rev. George W. Cox, M.A.
Astronomy, Observational and Descriptive, and Meteorology	E. Frankland, Ph.D. F.R.S. Prof. of Chemistry in the R. Inst. of Great Britain; and J. N. Lockyer, Esq.
Biological Sciences, comprising Anatomy, Physiology, Zoology, and Palæontology	Professor Richard Owen, F.R.S. LL.D. D.C.L. Superintendent of the Natural History Departments, British Museum; and C. Carter Blake, Ph.D. F.G.S. Foreign Associate of the Anthropological Society of Paris.
Botany and Gardening	John Lindley, F.R.S. F.L.S. late Emeritus Professor of Botany in University College, London; and Thomas Moore, F.L.S. Curator of the Botanic Garden, Chelsea.
Building and Engineering	G. R. Burnell, Architect and Civil Engineer, F.R.I.B.A. F.G.S. F.S.A.; and John Bourne, Civil Engineer.
General Chemistry and Physics	W. T. Brande, D.C.L. F.R.S.L. & E.; E. Frankland, Ph.D. F.R.S.; John Attfield, Ph.D. F.C.S. Director of the Laboratories of the Pharmaceutical Soc. of Great Britain; John Broughton, B.S. Assist. in the Chem. Laboratory of the Royal Inst.; W. F. Barrett, Assist. in the Physical Laboratory of the Royal Inst.; and Herbert McLeod, Demonst. of Chem. in the Roy. Sch. of Mines.
Geology, Physical Geography, and Hydrology	D. T. Ansted, M.A. F.R.S. F.G.S. &c. Hon. Fellow of King's College, London.
Law, History, and General Literature	Herman Merivale, M.A. C.B. late Fellow of Balliol College, Oxford.
Law	Arthur P. Whately, M.A. of Lincoln's Inn, Barrister-at-Law; late Student of Christ Church, Oxford.
Mathematics, Pure and Applied	T. A. Hirst. Ph.D. F.R.S. Professor of Mathematical Physics in University College, London.
Military Subjects	Lieut. H. Brackenbury, R.A. F.S.A. Assistant-Instructor in Artillery, Royal Military Academy, Woolwich.
Mineralogy	Henry William Bristow, F.R.S. F.G.S. Hon. Fellow of King's Coll. Lond. of the Geol. Survey of Great Britain.
Music	Professor W. Pole, F.R.S. Mus. Bac. Oxon.
Naval Subjects	Denham Robinson.
Navigation	H. W. Jeans, F.R.A.S. Royal Naval College, Portsmouth.
Painting and the Fine Arts	Ralph N. Wornum, Keeper and Secretary of the National Gallery.
Political Economy	The Rev. James E. Thorold Rogers, M.A. Professor of Political Economy, Tooke Professor of Economic Science and Statistics in King's College, London.
Printing, Bibliography, &c.	R. J. Courtney, Superintendent at Messrs. Spottiswoode and Co.'s Printing Office.
Theology and Ecclesiastical Literature	C. Merivale, B.D. Chaplain to the Speaker of the House of Commons.

London: LONGMANS, GREEN, and CO. Paternoster Row.

A DICTIONARY

GEOGRAPHICAL, STATISTICAL, AND HISTORICAL.

IONIAN ISLANDS, a collection of 7 principal and many smaller islands on the W. and S. coasts of Greece, forming part of the kingdom of Greece, between the 36th and 40th parallels of N. lat., and between the 19th and 23rd deg. of E. long. The following is the area and population of the seven principal islands, according to a census taken in the year 1860:—

Islands	Area in Sq. Miles	Native Population	Aliens and Strangers resident in the Islands	Total Population
Corfu . .	227	63,649	5,765	69,414
Cephalonia	311	71,482	1,922	73,404
Zante . .	161	38,183	255	38,438
Santa Maura	156	20,572	100	20,672
Ithaca . .	44	11,742	14	11,756
Cerigo . .	116	13,700	42	13,742
Paxo . .	26	5,000	—	5,000
Total .	1,041	224,328	8,098	232,426

These islands—a more minute description of which will be found under their several heads—have, generally speaking, rugged irregular coasts, and a very uneven surface; barren rocks and heath-covered hills forming nearly half their whole contents. Their geological formation is chiefly limestone, disposed in highly inclined strata, intermixed with grey foliated gypsum, and masses of sandstone: and there are few organic remains. The climate is mild, but subject to sudden changes. The *sirocco*, however, makes the heat occasionally oppressive, and the thermometer in summer frequently rises to 32° Réaum. Hurricanes, called here (*borascas*), and earthquakes, are frequent, especially in Zante. There fell, in 1838, 49.04 inches rain. Fine springs of fresh water are abundant on most of the islands. The soil is more favourable to grape cultivation than to the raising of corn; and hence more than ¾ of the surface available for tillage is laid out in currant-grounds, vineyards, and olive plantations, which are all managed with considerable skill. The land is chiefly in the hands of small proprietors, who let it out to tenants on the *métayer* system, receiving half the produce as rent.

The following table gives the nature of the occupations of the people of the seven islands, according to official returns, in the year 1860:—

Islands	Occupied in Agriculture	Occupied in Manufactures	Occupied in Commerce
Corfu . . .	17,000	2,050	1,600
Cephalonia .	14,268	3,391	1,800
Zante . . .	8,232	1,830	441
Santa Maura	3,250	200	385
Ithaca . .	3,000	300	1,900
Cerigo . .	2,670	750	910
Paxo . . .	400	—	37
Total . .	48,820	8,521	7,073

The number of each kind of live stock was as follows in the year 1862:—

Islands	Horses	Horned Cattle	Sheep	Goats
Corfu . .	3,628	5,125	35,587	19,572
Cephalonia	1,585	1,561	35,635	37,734
Zante . .	3,084	1,232	13,430	16,708
Santa Maura	1,645	1,640	19,500	17,450
Ithaca . .	700	150	7,000	8,000
Cerigo . .	1,160	920	1,950	3,000
Paxo . .	9	12	300	200
Total .	11,811	10,640	113,402	102,664

The manufactures are not important. Soap is made at Corfu and Zante: earthenware, silk shawls, goat-hair carpets, coarse blankets, linen cloths, and sacking are also made to some extent. The islands, however, enjoy a considerable share of the commerce of the Mediterranean, owing to their convenient situation for the supply of the neighbouring continent. They import wheat and other grain; chiefly from Odessa, silks, cotton, and woollen fabrics, cured fish, British hardware, and colonial produce, the total value of which amounted, in 1862, to 1,273,114*l.*; and in the same year, they exported island produce and manufactures (olive-oil, currants, wine, valonia, cotton, salt, soap, and woven fabrics) to the amount of 1,108,519*l.*

The subjoined tabular statement gives the value of the total imports and exports in each of the years 1859, 1861, and 1862.

	1859	1861	1862
	£	£	£
Imports .	1,306,303	1,286,657	1,273,114
Exports .	649,057	901,221	1,108,519

Digitized by Google

Besides sending deputies to the parliament of Greece, and taking their share in the legislative government of the kingdom, the seven islands have each a council of 5 mems., selected out of a list of 10, furnished by the *syncletæ*, with whom 5 other active functionaries are nominated by the Greek government to act as an executive body. The judicial power is lodged in a supreme court at Corfu, comprising four ordinary and 2 extraordinary mems.; of the former, two must be native Ionians, and two are appointed by the central government. The ordinary mems. decide common causes, and, in case of difference of opinion, appeal to the extraordinary mems. Subordinate to this court are four tribunals on each island, making 21 in the whole, and under these again are justice-of-peace courts for minor offences and small civil suits. The religious establishment consists of an archbishop and bishops, with the vicars or curates of the Greek church, which is the dominant religion. Full liberty, however, is given to the adherents of the Rom. Catholic and Protestant creeds.

The revenues of the Ionian Islands are principally derived from export duties on oil and currants of 19½ per cent., on wine of 6 per cent., and on soap of 8 per cent. *ad valorem.* The duties on imported merchandise are regulated by a tariff, and all articles not specifically included in it pay an *ad valorem* duty of 7 and 8 per cent. The following is an official statement of the revenue and expenditure of the Ionian Islands, in each of the years 1860–62:—

	1860	1861	1862
	£	£	£
Revenue . .	140,855	153,028	174,754
Expenditure	151,187	154,519	160,644

The chief branches of expenditure are for police, courts of law, and public education—on the latter account 13,828*l.* were expended in 1862. The principal sources of revenue, in the year 1862, were as follows:—

Sources of Revenue		Amount
Customs.		
Import Duties:—		£
On General Merchandise . . .		35,777
„ Foreign Wines and Spirits . .		2,446
„ Tobacco		4,066
„ Grain		24,327
Total . . .		66,616
Export Duties:—		
On Olive Oil		51,689
„ Currants		28,227
„ Island Wines		754
Total . . .		79,670
Total of Customs Duties . .		148,286
Stamp Duties		13,689
Sale of Gunpowder (Monopoly) .		769
Receipts for Tariff Dues.	Health Office .	4,150
	Post Office . .	1,401
	Executive Police .	2,735
	Judicial . .	251
Free Port Warehouse Rents . . .		1,315
Receipts for Public Instruction .		1,384
Miscellaneous		1,774
Total . . .		174,754

The only coins properly belonging to the Ionian Islands are a silver 3*d.* piece and a copper cent; but those mostly in circulation are Spanish doubloons and dollars and Venetian dollars, received in payment for the produce exported to Spain and Italy. British silver coins are also occasionally met with. The chief standard of weight is the imperial troy pound of 5,760 grains: 24 of these grains make a calco; 20 calci make an ounce, and 12 ounces compose a *libbra sottile.* The *libbra grosse* is equivalent to the pound avoirdupois, and 100 of these pounds make a *talento.* The English yard is the standard linear measure: 5½ yards make a *camico,* 220 yards a *stadio,* and 1,760 yards a mile. The gallon (equivalent to the English gallon) contains 8 *dicotoli.*

The Ionian Islands are frequently mentioned in the ancient history of Greece, but only as detached governments, and not under their collective form. After having repeatedly changed masters during the middle ages they at length became the possession of the Venetians early in the 15th century. They were thenceforward governed by an Italian proconsul; the Italian language was generally introduced into public acts and among the nobles; and Corfu was made the chief arsenal and port of the Venetian navy. In this state the islands continued till 1797, when they were seized by the French, who were confirmed in their possession by the treaty of Campo Formio. Two years afterwards they were taken by the Russians and Turks, and declared an independent republic, under their joint protection. The treaty of Tilsit, in 1807, restored them once more to the French, who retained them till 1814, when they were placed under British protection. The British government, finally, ceded the Ionian Islands to the young kingdom of Greece, the protocol of cession being signed on May 28, 1864. On the 1st of June, 1864, a Greek garrison arrived at Corfu, and the same day the last British troops quitted the islands.

IOWA, one of the United States of N. America, between lat. 40° 30′ and 43° 30′ N., and long. 90° and 97° W., having N. the Minesota territory, E. the states of Wisconsin and Illinois, from which it is separated by the Mississippi, S. the states of Missouri, and W. the Missouri and Sioux rivers. It is shaped like a parallelogram, and has an area of 55,045 square miles. Pop. 674,948 in 1860. Surface undulating, without any high hills or mountains; but a tract of considerably elevated table land occupies the greater part of its centre, dividing the streams that fall into the Mississippi from those that fall into the Missouri. The margins of the creeks and rivers are covered for a considerable way back with large timber trees, the rest of the country being mostly open prairies. The latter, which extends over two-thirds of the surface, are generally covered with luxuriant herbage, occasionally intermixed with hazel thickets and sassafras shrubs, which, in the flowering season, have a rich and beautiful appearance. Soil various, but generally good; consisting in the bottoms of a deep black mould, mixed in the prairies with sandy loam, red clay, and gravel. Iron is abundant; and one of the richest portions of the lead region of the Union is found in the SW. quarter of the state; zinc is met with, and limestone is a prevalent formation. Except in some of the lowest bottoms, the country is salubrious. The cold in winter, though frequently severe, is not injurious; and the heats in summer are said not to be oppressive. Iowa bids fair to become one of the principal agricultural states of the Union. It is well suited to the growth of wheat, Indian corn, and all sorts of grain, and a great variety of fruits and culinary vegetables have been already introduced; it is also extremely well fitted for grazing and dairy purposes. The situation of the state, between two great navigable rivers, affords every

facility for the exportation of its various products. The town of Iowa, on the river of that name, in the E. part of the state, is the seat of government; and Burlington, Dubuque in the lead district, Davenport, and various other places, are fast rising into importance. The government is vested in a governor, chosen every four, a senate—numbering 46 in 1864—elected every four, and a house of representatives—numbering 93 in 1864—every two years, by the suffrages of the white male inhabs. of twenty-one years of age. The members of both houses are paid for their attendance. The judges of the supreme court receive each 1,000 doll. a year of salary. The constitution prohibits the creation of any corporation with banking privileges. A university has been established; and ample provision made for the support of public schools. Slavery is not permitted. Iowa was acquired from the Indians in 1832: in 1833, it began to be settled; in 1838 it was erected into a territorial government; and on the 28th December, 1846, it was admitted into the Union. It sends 6 members to the Congress of the United States.

IPSWICH, a parl. and mun. bor., river-port and town of England, cap. co. of Suffolk, on the Orwell, 40 m. S. Norwich, and 63 m. NE. London, on the Great Eastern railway. Pop. of parl. bor. 37,950 in 1861. Area of parl. bor., which includes 12 entire pars. and parts of 6 others, 7,020 acres. The town occupies the foot of a range of hills gradually sloping to the river, which is navigable up to this point by vessels of 200 tons, and is crossed by a handsome iron bridge. The streets are irregularly built, and for the most part narrow; but some of them, which are new or have been recently widened, consist of neat and substantial buildings. On the whole, although containing a great many old-fashioned houses, the town presents a flourishing appearance, and is not only improving, but rapidly extending. It is lighted with gas, and the streets are either paved or macadamised. There are 14 churches, none very remarkable for architectural beauty, and several places of worship for dissenters. The other public buildings are, the town-hall; the shire-hall; the custom-house, a respectable brick structure on the quay; a commodious market-house, erected in 1811; the corn exchange; the co. gaol, said to be very well regulated; the bor. gaol; and the town library, kept, as well as the grammar school, in an old building, once a monastery of Black Friars. The grammar school, which was intended by its founder, Cardinal Wolsey, to form part of a college preparatory to Christ-Church, Oxford, was chartered by Queen Elizabeth in 1565, and rebuilt in 1851, when it was endowed with 8 scholarships and 2 exhibitions. A charity school for maintaining, clothing, and educating 16 poor children, two national schools, and a Lancastrian school, furnish instruction to a great many children; and Sunday schools are attached to most of the churches and all the chapels. An institution for the support of widows and orphans of poor clergymen was established in 1704; and there are several almshouses.

Ipswich formerly enjoyed a considerable share in the woollen and coarse linen trade; but manufacturing is now all but extinct, the trade in this district having been nearly annihilated by the cheaper goods made in the North. The town has no spinning factories; but small quantities of yarn are spun for the Norwich weavers. The principal business of the town consists in the corn and coal trade; large quantities of meal, flour, and malt, being exported to London; while coals are extensively imported, being supplied by the Stowmarket Canal to the W. parts of the co. A general foreign trade of some importance, especially in Norway timber, is carried on. On the 1st of January, 1864, there belonged to the port 52 sailing vessels under 50, and 127 sailing vessels above 50, tons, besides 10 steamers. The gross amount of customs revenue was 24,829*l.* in 1859, 18,390*l.* in 1861, and 19,938*l.* in 1863.

The corporation, the first charter of which was granted by King John, and confirmed by subsequent monarchs, appears to have been, previously to the passing of the Municipal Reform Act, one of the worst regulated and most corrupt in the kingdom, 'every power intrusted to it, its property, its patronage, and its charities, having been used for election purposes.' (Mun. Report.) The present municipal officers are, 10 aldermen, one of whom is mayor, and 30 councillors; the bor. being divided into 5 wards, and having a commission of the peace, under a recorder. Corporation revenue 6,228*l.* in 1862, of which 3,075*l.* were from rates. Ipswich has sent 2 mems. to the H. of C. since the reign of Edward I., the franchise, till the passing of the Reform Act, being vested in freemen (by birth, servitude, gift, or purchase) not receiving alms. The boundaries of the old bor. have not been changed. Registered electors 1,979 in 1865.

The ancient name of the town was *Gyppenswich*, derived from its proximity to the confluence of the Gipping (now converted into a canal) with the Orwell. Its antiquity is proved by the record of its destruction, in 991, by the Danes. In the reign of Edward the Confessor it comprised 800 burgesses. William the Conqueror erected a castle for its protection. Its ancient corporate privileges included admiralty jurisdiction over the river and port of Harwich, which was long subordinate to Ipswich, and an exemption from serving on co. juries or holding co. offices. During the 13th and 14th centuries, the town seems to have been a favourite resort of monks and clergymen, there being at that period not fewer than 21 churches and 6 religious houses.

IRELAND, a large and important island of Europe, in the N. Atlantic Ocean. It is situated to the W. of Great Britain, being separated from the latter by St. George's Channel on the S., the Irish Sea in the middle, and the N. Channel on the N.: the distance from St. David's Head, in S. Wales, across St. George's Channel, to Carnsore Point, in Ireland, is about 47 m.; the distance from Holyhead in N. Wales, across the S. border of the Irish Sea to Dublin, about 55 m.; and the distance from the Mull of Cantire, across the N Channel to the opposite coast of Ireland, about 13½ m. And besides its proximity to England, Ireland has been long politically connected with that part of the empire; and since 1800, when its separate legislature was merged in the imperial parliament, it has formed a principal portion of the United Kingdom of Great Britain and Ireland.

Ireland was called by Aristotle and Strabo *Ierne* (Ἰέρνη), by Cæsar, Tacitus, and Pliny, *Hibernia*, and by Mela and others, *Juverna*; these names being obviously derived from its native or aboriginal name of *Ir*, *Eri*, or *Erin*, whence also the modern name has been deduced. (Cellarii Orbis Antiqui, i. 449.)

Ireland is situated between the parallels of 51° 25′ and 55° 23′ N. lat., and of 6° and 11° W. long. It is of a rhomboidal figure; and though more compact than Great Britain, is deeply indented, particularly on its SW. and N. coasts, with bays and arms of the sea. Its greatest length, between Mizen Head in Cork and Fair Head in Antrim, is about 301 m.; and its greatest breadth, from the W. coast of Mayo to the E. coast of Down, is about

Digitized by Google

182 m.; but in other places the breadth is much less, and there is no part of Ireland above 50 or 55 m. from the sea. Its area is estimated at 31,874 sq. m., of which 985 sq. m. are water.

Face of the Country.—As contrasted with Scotland, or even the greater part of England, Ireland may be said to be a flat country. Still the surface is in most parts much diversified; and even where it is quite flat, the prospect is generally bounded by hills or mountains in the distance. With the exception of the Devil's-bit and Sliebhloom mountains, which run NE. and SW. for about 30 m., intersecting Tipperary, and dividing King's and Queen's Counties, most of the other mountains in Ireland are parcelled out into groups, or form only short chains. The principal group is situated in the SW. corner of the island, in the cos. Kerry and Cork, adjoining the celebrated lakes of Killarney. Gurrane Tual, in Macgillicuddy's Reeks, in this group, the highest mountain in Ireland, has an elevation of 3,404 ft. above the sea. The Wicklow mountains, in the co. Wicklow, on the E. coast of the Island, cover a considerable area: Lugnaquilla, the highest, is about 3,000 ft. above the sea. Some of the glens in this mountain group are celebrated for their beauty. The Mourne mountains, in the S. part of the co. Down, are also of considerable extent; and some of their peaks attain to an elevation of above 2,700 ft. The mountains of Donegal, and those in the N. parts of Leitrim and Sligo, and in the W. parts of Mayo and Galway, constitute a formidable barrier along the NW. and the greater part of the W. coast, and serve at once to attract the moisture brought from the Atlantic, and to break the fury of the storms from that quarter. Some of the Irish mountains are rugged and precipitous; but the greater number are smooth and rounded, admitting of cultivation a considerable way up their sides, and sometimes to their very summits.

The central portion of Ireland consists of a vast tract of level land, broken in some places by a few undulating hill ranges; but for a great part of its extent nearly an uninterrupted flat, extending in some parts, as between Dublin and the Bay of Galway, quite from sea to sea. This great level consists partly of rich cultivated land; but it also comprises a vast extent of bog, partly in Kildare, King's County, and Roscommon, and partly in Meath, Westmeath, and Queen's County. Though not continuous, these bogs differ but little in elevation; and being in many parts separated only by narrow ridges of dry land, they have received the common appellation of the Bog of Allen. Several rivers have their sources in this bog, the highest part of which may be elevated about 280 ft. above the level of the sea. There are several very extensive levels in other parts of the country; and some of them, particularly in Tipperary and Limerick, are not inferior in fertility to any land in the empire.

Ireland is very well watered, having to boast of an unusual number of rivers and lakes. At the head of the former is the Shannon, which, as a channel of internal communication, is not inferior, if it be not superior, to any other river in the United Kingdom. Excepting the Shannon and, perhaps, the Erne, there is no river of any consequence flowing westward. The Blackwater, Suir, Nore, and Barrow, all considerable streams; and the Lee and Bandon, which, though much smaller, have a good deal of commercial importance, pour their waters into the Atlantic on the S. coast; the Slaney, Liffey, and Boyne, discharge themselves into St. George's Channel and the Irish Sea; and the Bann and Foyle have their mouths on the N. coast. The Shannon, after rising at the base of the Culkeagh mountain, in Ulster, runs through the centre of the island, traversing, or rather, expanding into the lakes Allen, Ree, and Derg; and, after nearly insulating the prov. Connaught and co. Clare, falls into the Atlantic, by an estuary of great length and width. This fine river is navigable for 214 m., or throughout its entire course, except about 6 or 7 m. above Lough Allen. (See SHANNON.) The Blackwater or Broadwater is the chief river of Munster: it rises on the confines of Limerick and Kerry, and soon assumes an E. direction, which it generally preserves till about a dozen m. from its mouth, when it turns suddenly S., and falls into the ocean at Youghal harbour. Its course may be estimated at about 100 m. The tide rises as high as Cappoquin, to which point it is navigable. Mallow, Fermoy, Lismore, and Youghal are on its banks. The Suir rises in the Sliebhloom mountains, and has generally a S. course till it approaches the Knock-me-le-down range of hills, which separates its basin from that of the Blackwater. It then turns E., and ultimately falls, together with the Barrow, into the estuary termed Waterford harbour. In a commercial point of view, this is one of the most valuable rivers of Ireland. Vessels of 500 tons come up it to Waterford; besides which city, Carrich, Clonmel, and Cahir are situated on it. The Barrow is the most important of the Irish rivers, after the Shannon. The Nore, its chief tributary, holds its course between the Barrow and the Suir: it has a general direction SSE., running past Kilkenny, Thomastown, and Innistioge. It is navigable for considerable vessels to the latter place, and for barges to Thomastown. The Slaney, like the two foregoing rivers, has in general a SE. course; it rises at the foot of Mount Lugnaquilla, co. Wicklow, and falls into the arm of the sea termed Wexford Haven. Wexford, Enniscorthy, Newtown Barry, and Tullogh, are built on it: it is navigable for barges as far as Enniscorthy. The Lee and the Bandon have both an E. course; the former, on which Cork is situated, is navigable to that city for vessels of from 150 to 200 tons; the Bandon has its mouth in Kinsale harbour. The Boyne, celebrated in Irish history, has been elsewhere noticed. The Liffey is remarkable only as the river on which the metropolis is situated. The Upper Bann, rises near the Mourne mountains, and runs into Lough Neagh, which receives several other large streams. The outlet of this lake is the Lower Bann, which has a N. course to its mouth, 5 m. below Coleraine, to which point only it is navigable for boats, and that with difficulty, from the rapidity of its current. Its salmon and eel fisheries are highly important and valuable. The Foyle, formed by the confluence of several streams near Strabane, runs generally NNE., and discharges itself into Lough Foyle. Strabane, Lifford, St. Johnstone, and Londonderry are on the Foyle, which is navigable to the latter city for the largest class of merchantmen, and to St. Johnstone for barges. The Erne, Arrow, Moy, Kenmare, &c., require no particular notice.

Ireland is more remarkable for the number and extent of her lakes, or, as they are there called, *loughs*, than either Scotland or England, though they must perhaps, in general, yield to those of the sister island in point of picturesque beauty. Lough Neagh, in Ulster, ranks high among the secondary European lakes, inasmuch as it extends over about 100,000 acres. Lough Erne, co. Fermanagh, consists of two considerable lakes, connected by a winding strait, on an island in which the town of Enniskillen is built. Both these lakes are full of islands, some large and thickly inhabited, many well wooded, and the whole so dis-

Digitized by Google

posed, and accompanied by such a diversity of coast, as to form a vast number of rich and interesting prospects. Loughs Corrib, Mask, and the lakes of Killarney, so celebrated for their surrounding scenery, are the other principal lakes. (See KILLARNEY.) The total extent of the Irish lakes has been estimated at 455,399 acres; of which 32,474 acres are included in Leinster, 44,652 in Munster, 183,796 in Ulster, and 194,477 in Connaught.

The term lough is also often applied in Ireland to arms of the sea nearly enclosed on all sides by the land, and frequently forming commodious harbours. Of these, the most celebrated are Loughs Foyle and Swilly on the N., and Belfast and Strangford on the E. coast.

The Irish coast, particularly on the W. and SW., is deeply indented with numerous bays, gulfs, and arms of the ocean, forming some noble havens. Ireland has 14 harbours for the largest ships, 17 for frigates, and from 30 to 40 for coasting vessels, independent of at least 24 good summer roadsteads. The principal inlets of the sea on the W. coast are Donegal, Sligo, Killala, Clew, Galway, Tralee, Brandon, Dingle, Bantry (a matchless bay) and Dunmanus bays, and the estuaries of the Shannon and Kenmare; and on the S. the harbours of Cork (one of the finest in Europe), Waterford, Dungarvon, Youghal, and the bays of Courtmacksherry, and Cloghnakilty. The E. coast has no good harbour; the principal inlets on that side being, exclusive of Loughs Strangford and Belfast, the bays of Dublin, Dundalk, and Dundrum, and Wexford Haven. The chief Irish headlands are, Dunmore Head (which, exclusive of a few insignificant islands, is the most W. point of Europe) and Achil Head, on the W. coast. Cape Clear, on the S., Carnsore Point, on the SE., and Fair and Malin Heads, on the N. A great number of small islands and islets belong to Ireland, which lie chiefly along its W. coast. They are of little importance: the largest are Achil, Clare, N. and S. Arran, Valentia and Rachlin (the *Ricina* of Ptolemy), on the NE. coast.

The *climate* is more temperate and equable than that of other parts of Europe in the same lat. The heat of summer is less oppressive, and the cold of winter less severe; and, when anything like immoderately hot or cold weather takes place, it lasts for a much shorter time. The great defect of the climate of Ireland is excess of humidity: not only is rain more frequent than in England, but the atmosphere, when there is no rain, is largely impregnated with moisture. This circumstance, the result of the insular position of Ireland, and of the prevalence of W. winds for three-fourths of the year, accounts for the greater verdure of the country, and for the trees continuing in leaf much longer than in England. In the driest seasons, Ireland rarely suffers from drought, but the crops are often injured by too much wet. It is a common saying in Ireland, that the very driest summers never hurt the land; for, although the corn and grass upon the high and dry grounds may get harm, nevertheless the country in general gets more good than hurt by it: and when any dearths fall out to be in Ireland, they are not caused through immoderate heat and drought, as in most other countries, but through too much wet and excessive rains. Hence, Ireland is naturally much better adapted for a grazing than for an agricultural country; a peculiarity noticed by Giraldus Cambrensis in his 'Topog. Hiberniæ,' who says that it is more fruitful of pasture than of fruit, and of straw than of grain. '*Pascuis tamen quàm frugibus, gramine quàm grano fæcundior est insula.*' The superiority of Ireland as a pastoral country was well known to the ancients. '*Cœli,*' says Pomponius Mela, '*ad maturanda semina iniqui; verum adeo luxuriosa herbis, non lætis modo, sed etiam dulcibus, ut se exiguâ parte diei pecora impleant.*' (De Situ Orbis, lib. iii. § 6.) It is alleged that the atmosphere is less humid now than formerly: a probable consequence of the cutting down of the woods, and the great extension of cultivation. Were drainage as extensively practised in Ireland as in England, there can be little doubt that the climate would be still further improved; though, from the position of Ireland in respect of the Atlantic, it must necessarily be always distinguished for humidity. The average quantity of rain in a series of years was found to be 35 inches annually in Cork, and 31 in Derry. The changes of the seasons, and of the weather generally, are a good deal more uncertain even than in England; and the business of agriculture is proportionally hazardous. Thunderstorms are less frequent and destructive in Ireland than in Britain. The mean temp. of the N. of Ireland is about 48°, of the middle 50°, and of the S. 52° Fahr. Its range at Dublin has been found to be between 14° 50′ and 81° 50′, the mean being about 49°. Peaches, grapes, and most other southern fruits do not ripen without much care and attention; but the broad-leaved myrtle grows luxuriantly in the S. counties, and the arbutus is not native to any other country so remote from the equator.

The *geology* of Ireland differs greatly from that of England, and in a general point of view rather resembles that of France; Ireland being, like the latter, a basin surrounded by mountains of a primary or transition character. The Mourne mountains, and others in the NE., are composed chiefly of granite, mica-slate, grauwacké, and porphyry, similar to the mountain ranges on the opposite Scottish coast. Granite prevails in the Wicklow mountains, and it is found, together with gneiss, mica-slate, hornblende, quartz, and old red sandstone, in Mayo, and other parts of the W. Clay-slate, felspar, primitive greenstone, and limestone, are the other chief primary and transition rocks. Limestone is a very prevalent formation, it being found over the whole country, except in a few of the N. and W. counties; in many places sandstone protrudes through it in the form of knolls. In the N., the trap-field of Antrim, the largest basaltic formation in Europe, extends over an area of 800 sq. m., and presents, in the Giant's Causeway, &c., the finest specimens of columnar basalt. No tertiary beds, containing shells, like those of the London and Paris basins, have been discovered; but the limestone in most parts abounds with fossil remains. Coal, that most valuable of fossils, is found in the S. and E. The principal coal-field is that of Kilkenny, which rests, like the great coal formations of England, upon mountain limestone; the other coal-fields are those of the cos. Tipperary, Cork, Kerry, Limerick, Lough Allen in Leitrim, Monaghan, and another in Ulster, N. of a line drawn between Dublin and Galway. Little coal is, however, raised, and the produce is also very inferior. Dublin, Belfast, Cork, and all the principal Irish towns, are supplied with coal from Great Britain. Iron is found in many parts of the country; and the great increase of iron-works in the earlier part of the 17th century is said to have been a principal cause of the destruction of forests in Ireland. But these having been exhausted, and coal not having been found of such quality and in such quantity as to supply the deficiency, the Irish iron-works have been almost wholly abandoned. In Donegal and Galway, statuary marble, nearly equal to that of

Digitized by Google

Italy, is found; and the black and grey marbles of Kilkenny are much prized, and exported to a considerable extent. There are copper and lead mines in Cork, Kerry, Wicklow, and other places. Small quantities of gold and silver have been found in Wicklow. Indeed, some stream-works were wrought in the latter co., on account of government, previously to the rebellion of 1798; and it is said that as much gold was obtained as paid the expense. But some mining operations in Wicklow, commenced by government early in the present century, having failed, all attempts to obtain the precious metals have been since entirely abandoned. Copper is the only metal which at present appears to repay the labour and expense of raising it: the ore is mostly sent to Wales to be smelted. Antimony, manganese, serpentine of excellent quality, fullers' earth, gypsum, limestone, slate, with beryls, and garnets, are the other chief mineral products.

The deficiency of good coal in Ireland is less felt as regards domestic than manufacturing purposes. About 2,800,000 acres, or nearly 1-7th part of the entire surface, consists of bogs, which are capable of furnishing an almost inexhaustible supply of peat at very little more expense than that of the labour required in digging it. About 1,576,000 acres of this peat soil are estimated to consist of flat red bog; the remaining 1,255,000, called mountain bogs, lie on the surface of the uplands. The red peat bogs, which form a remarkable feature of the country, are chiefly comprised in the great central plain of Ireland; and the space bounded N. by a line drawn from Howth Head to Sligo, and S., by another from Wicklow Head to Galway, would include the greater portion of the Irish bogs. Unlike the English mosses, they are rarely level, but undulating; and in Donegal there is a bog completely diversified with hill and dale. These bogs consist of moist vegetable matter, containing a great deal of stagnant water: and after heavy rains and fogs, sometimes burst, and inundate or overwhelm the surrounding country. But they vary infinitely in wetness, as also in depth and composition. The extensive bogs in the central part of the island, though separated from each other, have received the common name of the Bog of Allen. The bogs in general rest upon a stratum of blue clay, based on limestone, and are invariably above the level of the sea; their greatest elevation, however, not exceeding 488 ft. Many conflicting opinions have been entertained with respect to the origin of these bogs. It has been contended by some that they are of no great antiquity, and originated in the cutting down of the forests, after the invasion of Ireland by Henry II., or at a somewhat earlier period. It is alleged that the recumbent trees having intercepted and dammed up streams of water with the rubbish carried along with them, the whole became gradually covered with a vegetation of moss, sedgy grass, rushes, and various aquatic plants. But there seems but little foundation for this theory; and it is more probable that the bogs owe their origin to natural causes, and not to a supposititious cutting down of the forests. The English did not, till long after the reign of Henry II., spread themselves over any considerable portion of the country, and could not, therefore, be the agents in any very remote and extensive destruction of its woods, which, in fact, were both numerous and extensive long after the bogs had attained to their present extent. (See Boate's N. Hist. of Ireland, pp. 118–122., ed. 1652.)

The drainage and cultivation of these extensive portions of the surface of Ireland have long been regarded as objects of great national importance, and frequent attempts have been made to show that they might be effected at no very great expense. But there are but few examples in any part of the island, and those under very peculiar circumstances, of successful bog cultivation. The attempts to drain the bogs hitherto made in Ireland have not been very successful; and even had they succeeded, it is doubtful whether the bogs would have produced any considerable return. It is, indeed, by no means clear, supposing them to be quite dried, that they would not, in most instances, be rendered still more worthless than at present. (Wakefield, i. 105.) In those parts, indeed, where bogs are scarce, they are the most valuable properties in the country. In not a few localities they have been wholly cut out; and where this is the case, and other bogs are not easily accessible, the inhabs. have sustained great privations from the want of fuel.

The diversity of soils is not nearly so great in Ireland as in England. It has no stiff clay soils, such as those of Essex, Hants, and Oxfordshire, nor any chalk soils, as those of Hertford, Wilts, and Sussex. Sandy soils are also rare. Loam, resting on a substratum of limestone, predominates in Ireland; and, though often shallow, it is almost every where very fertile. A large part of Limerick, Tipperary, Roscommon, Meath, and Longford, consists of deep fine friable loam, and is, perhaps, not surpassed by any land in Europe. It is not permanently injured by the bad system of culture to which it is subjected, and if kept clean, will yield an almost interminable system of corn crops; and how bad soever the order in which it is laid down to grass, it is in no long time covered with the finest pasture. The deep rich grazing lands on the banks of the Shannon and Fergus are not surpassed by the best in Lincolnshire. A good judge of such matters, Arthur Young, contends that, acre for acre, the soil of Ireland is superior to that of England, though, as the proportion of waste land in the former is much greater than in the latter country, this must be held an exaggerated statement. Had Mr. Young confined his remark to the cultivable land in both countries, it would have been quite correct. In fact, deducting the bogs and mountains, it is certain that Ireland is about the richest country, in respect of soil, in Europe. As a grazing country, Ireland is probably superior to any territory in the old world.

The *flora* and *fauna* of Ireland do not differ much from that of England. The arbutus and myrtle have been already mentioned, and besides these plants, most of those common to Britain are met with. The wild animals do not materially differ from those of England. Wolves formerly infested the country, but they were extirpated under Cromwell. The Irish greyhound, which was of use in clearing the country of these animals, is about 3 ft. in height, of a light colour, and of such strength and courage, that it is said to be more than a match for the mastiff or bulldog: it is now, however, nearly extinct. The numbers of deer have greatly declined with the clearance of the forests, and the progress of cultivation. The native Irish horse is seldom more than 15 hands high, very hardy, and sure-footed: it is used for all kinds of labour. A large blood-horse is reared extensively in Meath, and is to be found in most of the rich grazing counties. The native Irish cattle, a breed with short legs, large bellies, and white faces, have been, to a considerable extent, superseded by the introduction of the Holderness, Staffordshire, and Devonshire breeds, either pure or crossed. As compared with Eng-

Digitized by Google

land, but few sheep are raised in Ireland. The native Irish sheep is small, and covered with nearly as much hair as wool; but it is now uncommon in a pure state, having been crossed with various English breeds.

The value of live stock (exclusive of goats) in 1851 was given by the census commissioners as 27,649,151*l.*, being an increase over that in 1841 of 6,543,343*l.*—equal to 31 per cent.; whilst the excess in value in 1861, compared with 1851, was 5,714,043*l.*—equal to 21 per cent.

In 1841, the value of stock on every 100 acres (exclusive of the larger rivers, lakes, and tideways), was 104*l.*; in 1851 it was 136*l.* and in 1861, 164*l.* In the provinces the value was—in Leinster, in 1841, 123*l.*; in 1851, 151*l.*; and in 1861, 187*l.* *per* 100 *acres*. In Munster, in 1841, it was 107*l.*; in 1851 it was 132*l.*, and in 1861, 165*l.* In Ulster it was 102*l.* in 1841, 153*l.* in 1851, and 170*l.* in 1861; and in Connaught, 79*l.* in 1841, 104*l.* in 1851, and 130*l.* in 1861.

In the counties the increase in the *average* value of live stock in every 100 acres in 1841, 1851, and 1861, was as under:—

County	Value per 100 Acres			Increased Value between 1841 and 1861

The appearance of the country is, in most parts, indicative of the poverty and depressed condition of the bulk of the pop. Generally speaking, what are called farm-houses and offices in England, do not exist in Ireland: and the aspect of the cottages, which, in the vast majority of instances, are of the most wretched description; the smallness of the fields, which, instead of hedges and ditches, or stone fences, are usually divided by turf dykes; and the badness of the horse furniture, and of the agricultural implements, all impress the traveller with the most unfavourable convictions. But, how mortifying soever the contrast between the excellence of the soil and the state of the people, it is some satisfaction to know that it is less striking now than formerly. In many districts, a considerable advance has been made towards a better order of things; and the spirit of improvement has begun to scatter its seeds and spread its roots in most parts of the country.

The extent of arable land, in square miles, in each of the years 1841, 1851, and 1861, was returned as follows by the census commissioners:—

Population.—The first authentic account of the pop. of Ireland is given by Sir William Petty, in his tract entitled the 'Political Anatomy of Ireland.' Sir William was employed by government to superintend the survey and valuation of the forfeited estates, instituted during the protectorate; and so well did he execute his task, that his survey continued, for the space of near two centuries, to be the standard of reference in the courts of law as to all points of property. He had altogether, the best means of obtaining accurate information with respect to the numbers and condition of the people; and, as the results are exceedingly curious, it may be best to give them in his own words.

'The number of people now in Ireland (1762) is about 1,100,000; viz. 300,000 English, Scotch, and Welsh Protestants, and 800,000 Papists; whereof 1-4th are children unfit for labour, and 75,000 of the remainder are, by reason of their quality and estates, above the necessity of corporal labour; so as there remains 750,000 labouring men and women, 500,000 whereof do perform the present work of the nation.

Digitized by Google

'The said 1,100,000 people do live in about 200,000 families or houses, whereof there are about 16,000 which have more than one chimney in each, and about 24,000 which have but one; all the other houses, being 160,000, are wretched nasty cabins, without chimney, window, or door-shut, even worse than those of the savage Americans.' (Polit. Anat. of Ireland, pp. 114, 118, ed. 1719.) In 1805, Mr. Newenham estimated the pop. at 5,395,456. An incomplete census was taken in 1821, from which the pop. was computed at 5,937,856. At length a complete census was taken in 1821, when Ireland was found to contain a pop. of 6,801,827. According to the census, taken in 1841, the pop. amounted to 8,175,124, viz. Leinster, 1,973,731; Munster, 2,396,161; Ulster, 2,386,373; Connaught, 1,418,859. Finally, the census of April 7, 1861, gave the following result:—

Provinces, Counties, Cities, and Towns	Number of Inhabitants in 1861

The causes which led to the diminution of the population between 1851 and 1861 were not of the twofold character to which the decrease was to be attributed between 1841 and 1851. In the latter decade it may be said to have been entirely owing to the great mortality and emigration which originated with the famine consequent upon the failure of the potato crop for several years, commencing with 1845. The diminution between 1851 and 1861 may be said to have been directly due to emigration, no fatal epidemic having prevailed during that period.

Digitized by Google

In 1861 there were 42·6 in every 100 families chiefly employed in agriculture—being a reduction in the proportion of 10 per cent. since 1851, and of 23·5 since 1841. In manufactures, trades, &c. there was also a reduction from 24·7 in 1851, and 23·9 in 1841 to 17·5 per cent. in 1861. In other pursuits the proportion increased from 10 per cent. in 1841 and 22·7 in 1851 to 39·9 in 1861. But these changes may be said to have arisen from the emigration of persons employed in agriculture or trade, who in the census of 1841 and 1851 were classed in these divisions: thus raising the proportion of families which remained in the country who were engaged in other pursuits.

The condition of the people is more satisfactorily exhibited in considering the means upon which they are dependent. Thus, in 1861, there were chiefly dependent on vested means and professions 8·9 per cent. of the families—an increase from 2·6 in 1841 and from 7 per cent. in 1851. Engaged in the direction of labour there were 45·1 per cent. in 1861, compared with 34·4 in 1851 and 31·8 in 1841. There were living by their own manual labour in 1861, 35·3 per cent. of families; whilst in 1851 the rate was 52, and in 1841 62·9 per cent. Those whose means of subsistence were not specified, and many of whom probably should be included with those having vested means, amounted to 10·7 per cent.; the proportion in 1841 having been only 2·7, and in 1851 6·6 per cent.

Of the entire population, 2,705,665, or 46·66 per cent., were returned in the family schedules of the census of 1861 as having some occupation or pursuit; and 3,093,302, or 53·34 per cent., had no specified occupations. This latter number included 1,770,714 persons (890,904 males and 879,810 females) under 15—the age at which employment might be expected to commence. Above that age those having no specified occupations amounted to 1,322,588, of whom 101,673 were males, and 1,220,915 females.

According to the census of 1861, there were 1,053,045 persons, or 18·16 per cent. of the entire population, engaged in occupations placed under the head of ministering to food; of these 945,615 were males, and 107,430 females. 490,492 persons, or 8·46 per cent. of the people, ranged under employments ministering to clothing, of whom 150,856 were males, and 339,636 females. Ministering to lodging, furniture, and machinery were 463,562 persons; to conveyance and travelling, 68,791; to banking and agency, 4,568; to literature and education, 40,853; to religion, 10,627; to charity and benevolence, 983; to health, 6,735; to justice and government, 55,085; to amusement, 2,840; to science and art, 757; and under unclassified occupations, which could not be properly placed under any of the above heads, were 507,327 persons.

The total number of Irish who left the United Kingdom between 1841 and 1851 was, by the reports of the emigration commissioners, 1,240,737; whilst the number who emigrated from Irish ports during the period from 1st April, 1851, to 7th April, 1861, according to the returns obtained by the registrar-general, was 1,208,350.

The following are the number of emigrants who left Ireland in each of the fourteen years between 1851 and 1864:—

Years	Emigrants
1851	179,507
1852	190,322
1853	173,148
1854	140,555
1855	91,914
1856	90,781
1857	95,081
1858	64,337
1859	80,599
1860	84,621
1861	17,485
1862	49,680
1863	116,391
1864	115,428

Had emigration and immigration been equal between 1851 and 1861, and the excess of births over deaths—or the natural increase of population—on an average, equal to that of England and Wales, the number of inhabitants, on the 7th April, 1861, would have been 7,241,758.

Rural Economy.—The bulk of the population depend for employment and subsistence on the soil. The competition for small patches of land is consequently very keen, and the rents greater than the occupiers can afford, though not greater than might be paid for them, were they consolidated into proper sized farms, and cultivated on an improved system. In Ireland, in fact, the possession of a piece of ground has long been a condition all but indispensable to existence; and we need not, therefore, wonder that the occupiers should cling with desperate tenacity to their small patches.

This has led in most parts to a sort of tacit but well-understood agreement among the cottiers, or small farmers, to support each other against intruders; and, in the greater part of Ireland, it is as necessary to the quiet possession of the land to secure what is called the tenant's right, or the good-will of the occupier, as it is to make a bargain with the landlord. Any tenant who should neglect this indispensable precaution would run a great risk of being disturbed in, or violently ousted from, his possession. Indeed, most of the disturbances by which Ireland has been so long agitated and disgraced have been of an agrarian character, or have been directly or indirectly connected with the occupancy of the land. It is not necessary to enter into any lengthened disquisitions as to the various circumstances which have led to that minute parcelling of the land that is the bane of Ireland. The greatest influence is no doubt to be ascribed to the habit of providing for the sons, and sometimes, also, the daughters of the occupiers of land, by giving them shares of their father's holdings.

A good deal of what is peculiar in the mode of occupying land in Ireland has grown out of the circumstances under which it was originally acquired by the ancestors of its present owners. About nine-tenths of the land was forfeited under Cromwell and William III.; and this vast amount of property was mostly either gratuitously bestowed upon, or was acquired at a very small sacrifice, by noblemen and gentlemen of fortune and influence in England. Such persons could not be expected to leave England to reside in Ireland; and, in point of fact, they very rarely visited their estates in the latter, but satisfied themselves with taking what rents they could get for them. There was no sympathy between them and their tenants: the religious and political principles of one party were opposed to those of the other. The landlords looked upon their tenants as a sort of unwilling bondsmen, who, if any favourable opportunity should present itself, would immediately shake off their dependence on them; and the tenants regarded the landlords as usurpers unjustly intruded on the estates of others, and as enemies to the religion and rights of the Irish people. Very few had any confidence in the stability of such a state of things; and it could not be expected that landlords should care much about the permanent interests of such estates, or

Digitized by Google

that they should lay out any considerable sum on their improvement. To build a farm-house or offices was an outlay which, for a lengthened period, no Irish landlord ever incurred; and even to this day the old habit maintains an ascendancy, and the great majority of landlords lay out little or nothing on buildings. In consequence of this practice, and of the general smallness of the holdings, and the poverty of the occupiers, the farm-buildings, if we may so call them, of Ireland are, as already stated, quite unworthy of the name; and, in most instances, are wretched in the extreme. Such a thing as a barn is hardly known among the smaller occupiers: and the corn is not unfrequently thrashed on the public roads, which serve as barn-floors.

The three principal crops grown in Ireland are oats, potatoes, and hay, which combined occupy about three-fourths of the entire area under tillage. The proportions of these three crops in 1851 and 1861 were as under:—

PROPORTION IN EVERY 100 ACRES UNDER CROPS.

Year	Oats, Acres	Potatoes, Acres	Hay, Acres	All other Crops, Acres
1851	37·4	14·8	21·3	26·5
1861	33·9	19·3	26·3	20·5

The following are the proportions of the crops comprised under the head of 'all other crops':—

Year	Wheat, Barley, Bere, Rye, Beans and Pease	Turnips and Mangold, Carrots, Parsnips, Cabbage, Vetches, and Rape	Flax
1851	15·5	8·6	2·4
1861	10·6	7·4	2·5

The acreage of the entire country, and the proportion under arable land, plantations, towns, water, and uncultivated districts, at the several census periods in 1841, 1851, and 1861, are given in the following table, showing the number of acres in each province under cultivation, or otherwise occupied in the year, 1841, 1851, and 1861; also the same reduced to proportions per cent. :—

	Division of Surface				
	Arable Land	Plantations	Towns	Water	Uncultivated
Leinster	Acres	Acres	Acres	Acres	Acres
1841	3,961,188	115,944	15,569	51,624	731,886
1851	4,037,717	101,776	18,712	52,009	665,997

Total of Ireland					
1841	64·71	1·80	0·21	3·03	30·25
1851	71·14	1·47	0·22	3·03	24·14
1861	74·29	1·52	0·24	3·02	20·93

The chief alteration in the surface of the country was caused by the conversion of bog and waste into pasture, 3·3 acres in every 100 having been returned as uncultivated in 1851 which were profitable in 1861. The number of acres added to the grass lands in the period was 784,952.

The amount returned under bog and waste is not, as already stated, to be considered as altogether unprofitable, as the large areas of bog throughout the country afford fuel at a much cheaper rate than coals could at present be procured.

The census returns show that the number of small holdings in Ireland, above one and up to five acres, was reduced from 310,436 in 1841, to 85,469 in 1861, or 72·5 per cent. Holdings from five to fifteen acres decreased from 252,799 in 1841 to 183,931 in 1861, or 27·2 per cent. The farms above fifteen acres increased in number; those between fifteen and thirty acres, 79,342 in 1841 were 141,251 in 1861, an increase of 78 per cent.; and the holdings above thirty acres from 48,625 in 1841 to 157,833 in 1861, or 109·208 per cent. These changes were substantially made between the years 1841 and 1851; the changes in the next ten years have been comparatively trifling. This statement does not show the number of landholders in Ireland, but the number of distinct holdings, the enumerator having to account for the total acreage of every townland. There was another return made, for the first time, in the census of 1861.

The enumerators of the census of 1861 were instructed to obtain an account treating all farms held by one person as one holding, whether the lands adjoined or not. This reduced the return of the total number of holdings in 1861 from 610,045 to 553,664. It showed that 39,210 persons held land in Ireland not exceeding one acre; 75,141 held above one and not exceeding two acres; 164,006 from five to fifteen acres; 127,899 from fifteen to thirty; 65,896 from thirty to fifty; 49,654 from fifty to 100; 20,375 from 100 to 200; 9,046 from 200 to 500; and 2,437 held above 500 acres. The return being novel, is approximate rather than precisely accurate; the tendency of corrections would be to reduce the numbers, but it would not be to any great extent.

From the returns of the Registrar-General it appears that the total area of land under cultivation in Ireland in the year1864 was 5,672,980 acres,

Digitized by Google

being an increase of 10,493 acres over the extent of tillage of 1863. The number of acres under wheat in 1864 was 279,863, being 19,552 over 1863; but there was a decrease in the acreage under oats amounting to 145,965 acres, the total number of acres grown being 1,869,918. The whole return of 1864 shows a total decrease in cereal crops to the extent of 122,437 acres. The returns of the green crops are:—Potatoes, 1,039,282 acres; turnips, 337,283 acres; mangold-wurzel and beetroot, 14,106 acres; cabbage, 31,756 acres; carrots, parsneps, and other green crops, 23,190 acres; vetches and rape, 29,918 acres; total, 1,475,535.

Owing to the humidity of the climate, the country is not well fitted for wheat and barley, which are at once more precarious and not of so good quality as in England; but it is admirably suited for the growth of oats, the culture of which has rapidly increased. Turnips are cultivated only in some of the best farmed districts, and, though extending, are not to be looked upon in the light of a general crop.

Concurrently with an increase of arable land between 1841 and 1861, there has been in the twenty years a large increase in the value of live stock in Ireland. In 1841, according to the returns obtained by the census commissioners, horses, mules, and asses, and cattle, sheep, pigs, and poultry, were valued at 21,105,808*l.* In the year 1861 the same description of stock, according to the returns of the registrar-general, were, at the like estimated rates of average value, worth 33,363,194*l.*, showing a rise in value of 12,257,386*l.* during that period; while, if the improved breeds and enlarged demand for live stock in 1861, compared with 1841, were to be taken into account, the value in 1861 would, no doubt, be still greater.

Ireland, on the whole, is much better adapted for grazing than for agriculture: and such, in this respect, is the excellence of the soil, that in most parts it never fails, however foul and exhausted when laid down to grass, speedily to clothe itself with a rich and luxuriant cover of herbage. The natural effect of this has been that of late years, under improved management—notably since the period of 1851–61—Ireland has chiefly become a grazing country.

Rent of Land and Value of Real Property.—In 1727, Mr. Brown computed the gross rental of Ireland, inclusive of quit-rents, tithes, &c., at 2,824,000*l.*; and, in 1778, Mr. Young estimated it at 6,000,000*l.* (Newenham's View of Ireland, p. 232.) Mr. Wakefield, from minutes collected in his tour, estimated the average rental of Ireland at 27*s.* the Irish acre, or at 16*s.* 6½*d.* the imperial acre (vol. i. p. 305); and, notwithstanding the imperfect data on which it was founded, this estimate, though, perhaps, in excess, probably came near the mark. However, the elaborate estimate framed by Mr. Griffith, and contained in his evidence given in the Second Report of the Lords' Committee on Tithe (1832), is more deserving of attention: it is principally based on official valuations, and is probably, therefore, a little under the mark. According to Mr. Griffith the total rent of Ireland in 1832 amounted to 12,715,478*l.*, which would give an average rent of 12*s.* 2*d.* per acre for the whole kingdom. But to get a correct notion of the rent, the area occupied by water, amounting to 630,825 acres, must be deducted, and this being done the average rent would have been 12*s.* 7*d.* an acre. According to the most recent estimate of the value of the land obtained under the valuation of the poor's rate, the average rent per acre, deducting water, is 13*s.* 7*d.*

The subjoined tabular statement shows the official return of the gross annual value of real property—including railways and canals—assessed to income-tax, in the various counties and parliamentary divisions of Ireland in each of the years (ending April 5), 1862 and 1857.

Counties or Parliamentary Divisions	Gross Annual Value of Real Property, assessed to Income Tax in the Year ending 5th April	
	1862	1857
	£	£
Antrim	556,601	526,751
Armagh	291,697	288 889
Carlow	154,907	137,989
Cavan	264,842	240,334
Clare	310,700	195,841
Cork	923,823	834,345
Donegal	298,688	263,011

Total	10,957,351	9,826,095

Fisheries.—The seas round Ireland swarm with fish. Cod, ling, and hake are found in great abundance on the Nymph Bank to the S. of Waterford. Flat fish also abound in many parts. Large shoals of herrings visit the coast annually; and the bays and creeks furnish great quantities of the smaller and more delicate species, as pilchards, sprats, smelts, and sand-eels. The basking whale and sunfish are often seen off the western coast. But the fishery has never been either largely or successfully carried on by the Irish. In 1764 a system of bounties was established to encourage the trade, but without any material success. It was revised in 1819 by a commission, which also gave loans for the purchase of boats and tackle. With such encouragement the number of fishermen and boats increased considerably during the ten years the system was in operation. But though the fishing declined on the bounties being withdrawn, this decline was temporary only, and it has since considerably increased.

There are salmon and eel fisheries in most of the great rivers. The salmon fisheries in the Bann, near Coleraine; the Foyle, the Billick, near Ballyshannon; the Boyne, above Drogheda; and in various other parts are very productive. Irish salmon, packed in ice, is principally exported to Liverpool, Bristol, and London. There were employed in 1864, upon the coast of Ireland, 9,300 vessels, with 37,416 men and 3,530 boys. The return showed a considerable falling off as compared with 1863, but it was believed to be owing

Digitized by Google

mainly to an increased strictness in the revision of the registry, which previously included boats and men long after they had ceased to be employed.

Manufactures.—Ireland is not, and never has been a manufacturing country. Its unsettled state, and the general dependence of the population on land, have hitherto formed insuperable obstacles to the formation of great manufacturing establishments in most parts of the country; whilst the want of coal, capital, and skilled workmen, and the great ascendancy of England and Scotland in all departments of manufacture, will, there is reason to think, hinder Ireland from ever attaining to eminence in this department. And it is needless to add, that while manufactured goods can be produced cheaper in Britain than in Ireland, so long will the interests of the latter be best promoted by their importation.

The woollen manufacture was carried on to some extent in Ireland previously to the revolution of 1688, soon after which, in compliance with the interested solicitations of the English manufacturers, the export of Irish woollens to foreign parts was prohibited, and oppressive duties laid on their importation into England. The existing woollen manufacture of Ireland is carried on upon a small scale. At Dublin, and other parts in the vicinity, some cloth of a better description is made; and other branches are carried on to some extent in Kilkenny and other places, more especially at Moun-melick and Abbeyleix, in Queen's Co., and a few other places.

To compensate for the bad treatment of the woollen, the linen manufacture of Ireland was long the object of especial patronage. It was fostered and promoted by a number of statutes, and placed under the superintendence of a board, with an annual grant of public money for distribution in premiums and bounties. The board, however, has been discontinued for many years, and the grants withdrawn. The manufacture is chiefly confined to Ulster. It was at one time very generally diffused over the country; the yarn being spun by the cottier's family, and woven by the cottier himself. But since the introduction of machinery for the spinning of yarn, and of power-looms, the old system has been to a considerable extent abandoned, and the yarn is now principally spun by machinery.

A good deal of cloth is also made by power looms; but the greater part continues to be woven in the houses of the cottiers, who are supplied with yarn by the agents of the manufacturers. In fact, but for this change of system, the manufacture would have been wholly annihilated; as the manufacturers under the old domestic system could not have withstood the competition of Dundee, Leeds, and other towns in England and Scotland.

The exports of flax from Ireland for the years 1862, 1863, and 1864 show a remarkable advance. For the first eleven months of 1862 the total export of linen yarns and linen manufactures was, in value, 6,292,000*l.* For the same months in 1863 it was 8,084,000*l.*; and in 1864 it rose to 10,327,000*l.* In the year 1864, the produce per acre of flax in Ireland was five cwt., which was 10 per cent. above the average of the seven years ending with 1862.

From 1864 to 1865, the area of flax culture in Ireland slightly decreased. It appears from the returns of the registrar-general, that in Ulster in 1864 there were 278,143 acres under flax, and in 1865, 233,289—decrease 44,854; in Leinster, in 1864, 7,388 acres, and in 1865, 5,862 acres—decrease, 1,526 acres; in Munster, in 1864, 7,580 acres, and in 1865, 4,980 acres—decrease, 2,600 acres; and in Connaught, in 1864, 8,582 acres, and in 1865, 7,421 acres—decrease 1,161 acres. The total number of acres in 1864 was 301,693, and in 1865, 251,552 — decrease on the whole, 50,141 acres. The quantity grown in 1865 was still, however, by a very large figure, greater than that of 1868, which was greater by about 60,000 acres than any of the previous 12 years.

The silk trade was introduced by French emigrants shortly after the Revolution. Its chief seat was in Dublin; but since the repeal of the protecting duties it has declined, so as to be now nearly extinct, with the exception of tabbinet or Irish poplin, a mixed fabric of silk and worsted, for which there is a considerable demand. The first importation of cotton wool into Ireland, of which there is any authentic notice, took place in 1771. The manufacture was carried on with some little success in several parts during the continuance of the protecting duties. On their withdrawal it declined for a while; but it has since revived.

Of the number of people employed in the chief branches of manufacture, a clear account is given in the census returns of 1861, which enter minutely into the subject. It appears from these returns that the number of workers, male and female, in the two manufactures of cotton and flax, and of mixed materials, was as follows at the date of the census:—

	Males	Females
Workers in Cotton and Flax.		
Flax Yarn Manufacturers	11	1
Linen Manufacturers	372	17
Linen Thread Manufacturer	1	..
Flax Merchants and Dealers	291	26
Flax Dressers	3,289	973
Flax Twisters and Hacklers	731	61
Flax Spinners	279	6,658
Thread Makers	182	220
Tape Weavers	2	..
Linen and Damask Weavers	33,074	27,552
Linen Lappers	618	1[illegible]
Lace Manufacturers, Weavers, and Workers	61	1,404
Cotton Manufacturers	11	5
Cotton Merchants	7	15
Cotton and Muslin Weavers	4,957	3,161
Cotton Spinners	223	571
Wick Maker	..	1
Lint Makers	11	5
Flock Makers	..	2
Quilt Makers	..	447
Corduroy Weavers	3	1
Corduroy Cutters	2	2
Gingham Weaver	1	..
Sewed Muslin Manufacturers	82	8
Sewed Muslin Agents	211	94
Muslin and Calico Printers	216	47
Muslin Lappers	5	12
Sewed Muslin & Tambour Workers	133	40,978
Workers in Mixed Materials.		
Weavers (unspecified)	16,767	12,377
Drapers (unspecified)	4,879	1,019
Linen Drapers	221	66
Linen Merchants	281	11
Girth Web Makers	5	..
Fringe and Tassel Makers	8	39
Fringe Manufacturers	1	13
Embroiderers	11	3,802
Bleachers	2,026	273
Spinners (unspecified)	519	37,428

The comparatively limited extent of Irish manufacturing industry is shown in the subjoined table, which gives the returns of the total number of factories for spinning and weaving cotton, wool, flax, hemp, jute, and silk, in the United Kingdom, in 1861, number of spindles, and the number of persons employed therein.

Wexford . .	6	1,482	5	205
Total of Ireland	327	123,354	275	94,912

Canals.—The Grand Canal, commenced in 1765, is carried from Dublin to Robertstown, 25 m. W., whence proceed two branches, that to the right to the Shannon harbour, on the Shannon, near Banagher, and thence on the W. of the river to Ballinasloe, 94 m. from Dublin, with a branch of 8½ m. to Kilbeggan; that to the left to Athy, 55 m. from Dublin, with a branch of 11 m. from Monasterevan to Portarlington and Mountmellick. The summit level is 200 ft. above the sea. The Barrow is navigable from Athy for small craft, to the Scars, 43 m., thence for larger vessels by Ross to Waterford, 30 m.

The Royal Canal, commenced in 1789, extends from Dublin to Tarmonbarry on the Shannon, 92 m., with a branch of 5 m. from Killashee to Longford. Its greatest height above sea level is 307 ft. The Shannon has been rendered navigable from Limerick almost to its source, and is traversed by steam-boats both for passengers and goods. The Boyne navigation from Drogheda to Navan, and the Lagan from Belfast to Lough Neagh, are partly river and partly still water. The Ulster Canal connects Loughs Neagh and Erne. The Suir Navigation Company was incorporated in the year 1837, for making a ship canal to Carrick-on-Suir.

Railways.—Numerous railways, some of which promise to be of great advantage, have been opened in Ireland; others are in course of being constructed, while many more have been projected. Among the leading lines may be specified the Great South Western, extending from Dublin to Cork and Limerick, with branches to Killarney and other places; the South Eastern to Waterford and Wexford; the Great Western connecting Dublin with Mullingar, Athlone, and Galway; the Northern line from Dublin to Belfast, and the Second Northern line, running almost parallel to it, to Londonderry, by way of Enniskillen. Dublin is the centre of five lines of railway, Cork of four, and Belfast of three. Except the north western districts of Ireland, the country is intersected throughout by a well-planned network of railways. The subjoined tabular statement shows the progress of the Irish railway system from 1854 to 1863, giving the length of lines, the total paid-up capital, the total number of passengers, and the traffic receipts in each of the ten years:—

Digitized by Google

Years	Length of Lines open at the End of each Year	Total Capital Paid up (Shares and Loans) at the End of each Year	Total Number of Passengers Conveyed	Total of Traffic Receipts
	Miles	£		£
1854	897	14,351,122	6,911,170	874,477
1855	987	15,208,295	7,212,286	999,832
1856	1,057	15,965,692	7,881,453	1,117,965
1857	1,071	16,880,570	8,416,579	1,145,384
1858	1,188	17,822,864	8,447,774	1,175,720

1860	1,364	20,599,775	9,991,118	1,368,447
1861	1,423	21,894,622	10,686,735	1,447,993
1862	1,598	23,324,707	10,436,873	1,446,092
1863	1,741	24,741,752	11,471,054	1,518,654

Revenue.—The revenue of Ireland is raised from the same sources as in England. But, owing to the depressed condition of the great bulk of the Irish people, and their inability to consume taxed articles, the revenue of Ireland falls far short of that of Great Britain. While the proportion of revenue per head of population amounted, in Great Britain, to 3*l.* 5*s.* 11*d.* in 1800, to 4*l.* 14*s.* in 1817, to 3*l.* 19*s.* 9*d.* in 1822, to 2*l.* 11*s.* 9*d.* in 1842, to 2*l.* 13*s.* 1*d.* in 1862, and to 2*l.* 12*s.* 7*d.* in 1863, it was as follows at the same dates in Ireland:—

Years ended	Estimated Population	Gross Receipts of Ordinary Revenue within the Year	Proportion of Revenue per Head of the Population		
		£	£	s.	d.
January 5, 1800	4,742,431	3,334,912	0	14	1
" 1817	6,172,850	5,456,999	0	17	8
" 1822	6,801,827	5,039,719	0	14	10
" 1842	8,175,124	4,100,493	0	10	0
March 31, 1862	5,789,731	6,756,180	1	3	4
" 1863	5,781,626	6,500,388	1	2	6

Exclusive of the above, or of the public revenue, a considerable sum is annually raised by grand jury presentments, that is, by assessments on the cos. made by the grand juries, for constructing and keeping up roads, prisons and bridewells, police and police establishments, and for charitable purposes. Subjoined is an account of the sums raised by presentments for various services made by the grand juries in Ireland, in each of the years 1861 and 1862.

	1861	1862
	£	£
New Roads, Bridges, Pipes, Gullets, Quay Walls, or cutting down Hills or filling up Hollows or Ditches	88,722	84,024
Repairs of Roads, Bridges, Pipes, Gullets, or Walls	505,483	505,461
Court or Sessions Houses, Erection or Repairs	6,109	6,652
Gaols, Bridewells, Houses of Correction, building or repairing	5,630	4,314
All other Prisons and Bridewell Expenses, including Salaries	74,468	83,366
Police, and Police Establishments, and Payments to Witnesses	14,469	16,557
Salaries of County Officers not included in the foregoing	103,641	103,382
Public Charities	78,690	88,852
Repayment of Advances to Government	107,242	107,398
Miscellaneous	84,796	88,823
Gross Amount of Presentments	1,069,250	1,088,829
Amount of Re-presentments	14,351	18,885
Net Amount of Presentments	1,054,899	1,069,944

The above sums are small, compared with what is assessed for similar purposes in England.

Constitution and Administration of Justice.—The constitution of Ireland is modelled on that of England; but, for a lengthened period, the native Irish, comprising the great bulk of the population, were effectually excluded from all participation in its benefits, and were in fact reduced to a state of *helotism.* This conduct, it is needless to add, was little less injurious to the conquerors than to the conquered. 'As the English would neither in peace govern the Irish by the law, nor could in war root them out by the sword, they needs became pricks in their eyes and thorns in their sides.' But nations are slow and reluctant learners; and that selfish, short-sighted policy, whose effects were thus forcibly exposed by Sir John Davies (Discoverie, p. 120, ed. 1747) in the reign of James I., flourished in its full vigour down almost to our own times. The granting of the elective franchise to the Catholics, so late as 1792, was the first great step in the progress to a better system, which was happily consummated by the repeal of the last remnant of the penal code in 1829. The odious distinctions by which society was formerly divided have no longer any legal or statutory foundations. Adherence to the religion of their ancestors has ceased to entail upon the Catholics a denial of their political franchises; and all classes now participate equally in the rights and privileges granted by the constitution.

The legislature consisted, previously to the Union, of a chief governor, under the name of lord lieutenant, with power to appoint a deputy during absence, a house of lords, and a house of commons. Under Henry VII., the prostration of the Irish parliament was effected, by transferring the right to hold parliaments, which had been vested in the lord lieutenant, and to originate bills, to the king and the English privy council. The first parliament, in which members were returned from all parts of Ireland, sat in the beginning of the reign of James I. The number of members varied at different times, but was ultimately fixed at 300, *two* for each co., *two* for Trinity College, and the remainder for cities and bors., the representatives for the latter being, in most instances, nominated by their proprietor or patron. Previously to 1768, the members held their seats for life, so that they could hardly be considered as representatives even of the Protestant part of the nation, and had but little sympathy with popular feelings. At this epoch, however, parliaments were made octennial.

Since the Union, Ireland has been represented in the imperial parliament by twenty-eight temporal peers, elected for life by the whole body of Irish peers; four bishops, who sit according to annual rotation of sees; and from the Union till the passing of the Reform Act, it was represented in the H. of C. by 100 members, two for each co., two each for the cities of Dublin and Cork, one for Trinity College, and one each for the 31 bors. of Armagh, Athlone, Bandon, Belfast, Carlow, Carrickfergus, Cashel, Clonmel, Coleraine, Downpatrick, Drogheda, Dundalk, Dungannon, Dungarvan, Ennis, Enniskillen, Galway, Kilkenny, Kinsale, Limerick, Lisburn, Londonderry, Mallow, New Ross, Newry, Portarlington, Sligo, Tralee, Waterford, Wexford, and Youghal. The Reform Act gave Ireland five additional members, which were assigned to Trinity College, Belfast, Galway, Limerick, and Waterford, which consequently have now two members each. It also vested the electoral franchise in cos. in the same classes as in England, with the substitution of 20*l.* for 50*l.*, and 14 for 20 years, and in cities and bors. in free-

Digitized by Google

men resident within 7 m., and 10*l.* freeholders. But these qualifications having been found to be too high, were reduced, in 1850, by the 13 & 14 Vict. cap. 69, which has given the franchise in counties to the occupiers of land rated for the poor-rate at the nett value of 12*l.* a year, and to the possessors of estates in fee or for life rated at 5*l.*: it has, also, given the franchise in towns to all parties occupying lands or premises rated at 8*l.* a year. The electoral boundaries of the bors. are fixed by statute. The executive government is vested in the lord lieutenant, or, in his absence, in the lords justices, generally the primate, lord chancellor, and commander of the forces, and a privy council nominated by the crown, and consisting chiefly of the high judicial and ministerial functionaries. The lord lieutenant is assisted by a chief secretary, a member of the House of Commons; and who, being in effect secretary for Ireland, is especially responsible for its government. The salary of the lord lieutenant is 20,000*l.* year, with a liberal allowances both for residence and household.

The judicial establishment is vested, as in Great Britain, in the lord chancellor, removable at pleasure, assisted by the masters of the rolls, and in twelve judges, four for each of the courts of queen's bench, common pleas, and exchequer. Two of the law judges go through each of the six circuits into which the country is distributed, twice a year, to decide criminal and civil cases. The judges of the courts of prerogative and admiralty are generally practising barristers. A barrister also presides along with the co. magistrates at the courts of quarter sessions. Petty sessions, at which at least two magistrates must be present, are held weekly, or once a fortnight, in every district.

Each corporate town has a judge or recorder, and local magistrates, elected by the corporation; and every manor has its courts under a seneschal or bailiff nominated by the proprietor. The lord chancellor has the power of appointing and removing the co. magistrates, for whose conduct he is responsible. An act passed in 1840 (3 & 4 Vict. cap. 108) for remodelling the municipal corporations in Irish towns. It gives the right of voting at municipal elections to all persons resident in boroughs, or within 7 m. of their boundaries, occupying houses, shops, or other premises within the same of the annual value of 10*l.*

The conservation of the peace is committed, in the cos., to a lord lieutenant, aided by an indefinite number of deputy lord lieutenants, all nominated by the crown and by the high sheriff, selected, as in England, from lists prepared by the judges of assize. Ireland has a well-organised constabulary force, which consisted, according to the census returns of 1861, of 13,864 officers and men. The actual number of soldiers in Ireland, at the same period, was returned at 26,276, exclusive of militiamen, to the number of 1,045. The military department is under the control of the commander of the forces. He has under him 5 general officers, who respectively command one of the 5 military districts into which the island is divided. The ordnance, which is a branch of that of Great Britain, has its chief station at the Pigeon House Fort: attached to it is the staff of the trigonometrical survey of Ireland. There is at Kilmainham a hospital for decayed and disabled soldiers, similar to that of Chelsea.

Crime and Criminals.—The subjoined table gives the total number of persons, of each sex, committed to prison in Ireland, for various offences, and the number convicted and not convicted, in the year 1862:—

	Males	Females	Total

Religious Establishments.—The ecclesiastical arrangements that prevail in Ireland are at once anomalous and irrational. The Reformation never made any considerable progress in the country, the new doctrines being only espoused by the English settlers within the *pale*. But after Protestantism had been adopted by the bulk of the English people, and had been made the established religion on this side the water, it was determined to establish it as the state religion in Ireland. In pursuance of this resolution, the Catholic clergy were ejected from their livings, which were bestowed upon divines attached to the doctrines of the church of England. This change did not, however, produce any corresponding change in the religious feelings of the people, who seemed, indeed, to become the more attached to their ancient faith, according as their clergy were treated with harshness and injustice. In every other country, the established religion, if there be one, is that of the great majority of the people; but in Ireland the established religion is, and long has been, that of a small minority—and that minority, be it observed, consists principally of the wealthy and best educated classes, who could, without difficulty, supply themselves with religious instruction. Such an arrangement is inconsistent with and subversive of every principle of sound policy and common

Digitized by Google

sense. The grand object of an establishment, it is needless to say, should be the provision of religious instruction and consolation for the great bulk of the community, and especially for those who are too poor to be able to provide it for themselves. But in Ireland the reverse of all this obtains. The established religion is alien to and repudiated by nine-tenths of the pop., who regard it as erroneous in principle, and as a usurpation upon the rights and property of their clergymen. These feelings are natural; and it is nugatory to suppose that they should be got rid of, so long as the existing arrangements are maintained. A Catholic establishment in England would not, in fact, be more irrational and absurd than a Protestant establishment in Ireland; and, so long as the latter is permitted exclusively to enjoy the revenues appropriated by the state for the support of religion, so long will it be an object of disgust and hostility to the Catholic people and clergy, that is, to the great majority of the nation, and be productive of the most implacable animosities.

Previously to 1834, when the Church Temporalities Act, the 3 & 4 Will. 4, c. 37, was passed, the country was divided into 4 archbishoprics, corresponding nearly with its four civil provinces, and these were farther subdivided into 29 bishoprics, held by 18 bishops. But this hierarchy, obviously disproportioned to the wants of the country, was restricted within more moderate dimensions by the act referred to above. It reduced the archbishoprics of Cashel and Tuam to bishoprics; and divided the island into the northern and southern provinces, the archbishop of Armagh being the head of the one, and the archbishop of Dublin of the other. It also reduced the number of bishops to 10; and effected various changes in the revenues of the different sees, to take effect on the demise of the different incumbents by whom they were then occupied. The revenues arising from the cancelled bishoprics and other sources were vested in commissioners, to be applied to the building and repair of churches, and other ecclesiastical purposes.

Under the old arrangement, the archbishoprics and bishoprics, with their revenues, were as follows:—

Ulster.	
Armagh	£17,670
Meath and Clonmacnoise	5,220
Clogher	10,371
Down and Connor	5,896
Derry	14,193
Raphoe	5,787
Kilmore	7,478
Dromore	4,813
Leinster.	
Dublin and Glandelagh	£9,321
Kildare	6,452
Ossory	3,859
Ferns and Leighlin	6,550
Munster.	
Cashel and Emly	£7,354
Limerick, Ardfert, and Aghadoe	5,369
Waterford and Lismore	4,323
Cork and Ross	4,346
Cloyne	5,009
Killaloe and Kilfenora	4,041
Connaught.	
Tuam and Ardagh	£8,206
Elphin	7,034
Clonfert and Kilmacduagh	3,621
Killala and Achonry	4,082
Total Income	£150,635

The revenues increased greatly in course of time, as will be seen from the subjoined parliamentary return, issued in the session of 1863, which gives the revenues of the various dioceses in 1861, and the number of members of the Established Church in 1834 and 1864:—

Dioceses	Number of Members of the Established Church in		Revenues of the Established Church in each Diocese in
	1834	1861	1861
			£
Armagh and Clogher	207,371	150,386	82,930
Dublin and Kildare	120,506	112,766	55,103
Meath	25,626	16,321	34,828
Derry and Raphoe	83,857	65,603	56,153
Down, Connor, and Dromore	136,650	152,722	44,785
Kilmore, Elphin, and Ardagh	81,046	53,165	47,410
Tuam, Killala, and Achonry	22,765	17,156	27,539
Ossory, Ferns, and Leighlin	57,424	35,663	62,248
Cashel, Emily, Waterford, and Lismore	19,307	13,853	43,093
Cork, Cloyne, and Ross	55,156	43,228	65,423
Killaloe, Kilfenora, Clonfert, and Kilmacduagh	24,801	15,906	28,789
Limerick, Ardfert, and Aghado	18,651	15,103	32,117
Total	853,160	691,872	580,418

Another parliamentary return—ordered by the House of Commons, on the 6th May, 1863—shows the number of Roman Catholics in Ireland in the years 1834 and 1861; the number of members of the Established Church in Ireland in the years 1834 and 1861; and the proportion of Roman Catholics to members of the Established Church in 1834 and in 1861. It appears from this return that the number of Roman Catholics in Ireland was—

In 1834	6,436,060
In 1861	4,505,265

The number of members in the Established Church of Ireland was—

In 1834	853,160
In 1861	691,872

Consequently, the proportion of Roman Catholics to members of the Established Church was—

In 1834, 100 Roman Catholics to 13·25 members of the Established Church.

In 1861, 100 Roman Catholics to 15·35 members of the Established Church.

Exclusive of deans, prebendaries, and other dignitaries, Ireland is divided into about 2,400 parishes, and has about 1,400 beneficed clergymen. The incomes of the prelates and other dignitaries are principally derived from the rent of lands let on lease, or rather on leases renewable by fine. The other clergy are partly provided for by glebe lands, but principally by tithes, and in towns by an assessment called minister's money.

In addition to the unpopularity attaching to the church of England in Ireland, from its being the church of a minority, the fact of its deriving the largest portion of its income from tithes, tended materially to increase the odium under which it has long laboured. Tithe is everywhere a most vexatious and impolitic tax, but in Ireland it has been peculiarly noxious; for there the land being mostly split into small portions occupied by poor Catholic cottiers, the payment of tithes to Protestant clergymen is not only felt to be a most oppressive burden, but it is, at the same time,

Digitized by Google

looked upon as a sacrifice imposed for the promotion and advantage of heresy and error. It has also been very unfairly assessed. By a resolution of the Irish H. of C. in 1735, grass lands obtained an exemption from tithe; so that while a tenth part of the produce of a potato garden or slip of land, on which, perhaps, a numerous family was dependent, went to the establishment, the herds of the opulent grazier contributed nothing to its support. For a lengthened period, the payment of tithes in Ireland was made with extreme reluctance, and their collection has, in innumerable instances, been productive of outrage and bloodshed. At last, it became next to impossible, in many parts of the kingdom, to derive any revenue from this source; and in consequence it was attempted to substitute compositions or fixed payments for tithes in the room of tithes themselves. But, though productive of some advantage, this measure was comparatively useless, from its leaving the composition to be paid by the occupier and not by the landlord. To obviate this defect, an act was passed in 1838 (1 and 2 Victoria, cap. 109) abolishing compositions for tithes, and substituting in their stead a fixed payment of *three-fourths* of their amount (401,114*l.*) to be made by the landlords or others having a perpetual interest in the land. This act, by relieving the tithe-collector from the necessity of coming into contact with the great bulk of the occupiers, obviated a prolific source of predial disturbance. Still, however, it cannot be supposed that either this or any other device should ever reconcile the Irish people to the appropriation of a large revenue to the exclusive use of the church of a small minority of their number. The effect of this preposterous arrangement is to insult and alienate the bulk of the population, who would be more or less than men if it ceased to encounter their rooted hostility.

The R. Catholic church is governed nearly in the same manner as the Established church was previously to the recent changes. There are four archbishops, the same in name and provincial rank as those of the Protestant church, and 23 bishops. Eight of the bishops—Ardagh, Clogher, Derry, Down and Connor, Dromore, Kilmore, Meath, and Raphoe—are suffragan to Armagh. Dublin has but three suffragans—Kildare and Leghlin united, Ferns, and Ossory. Six are suffragen to Cashel, namely Ardfert and Aghadoe (usually called the bishop of Kerry, Cloyne, and Ross), Cork, Killaloe, Limerick, Waterford, and Lismore. Tuam has four suffragans—Achonry, Clonfert, Killala, and Galway. The bishop of the united dioceses of Kilmacduagh and Kilfenora is alternately suffragan to the archbishops of Tuam and Cashel. The wardenship of Galway, formerly an exempt jurisdiction, subject only to the triennial visitation of the archbishop of Tuam, has been lately erected into a bishopric, under its former archiepiscopal jurisdiction. On the death of a bishop, the clergy of the diocese elect a vicar-capitular, who exercises spiritual jurisdiction during the vacancy. They also nominate one of their own body, or sometimes a stranger, as successor to the vacancy, in whose favour they postulate or petition the pope. The bishops of the province also present the names of two or three eligible persons to the pope. The new bishop is generally chosen from among this latter number: but the appointment virtually rests with the cardinals, who constitute the congregation *de propagandâ fide*. Their nomination is submitted to the pope, by whom it is usually confirmed. In cases of old age or infirmity, the bishop nominates a coadjutor, to discharge the episcopal duties in his stead; and his recommendation is almost invariably attended to. The emoluments of a bishop arise from his parish, which is generally the best in the diocese, from licenses of marriage, and from the cathedraticum. The last is an annual sum, varying from 2*l.* to 10*l.*, according to the value of the parish, paid by the incumbent in aid of the maintenance of the episcopal dignity. The parochial clergy are nominated exclusively by the bishop. The incomes of all descriptions of the R. Catholic clergy of Ireland arise partly from fees on the celebration of births, marriages, and masses; and partly, and principally, from Christmas and Easter dues, and other voluntary offerings. All places of worship are built by subscription. There are numerous monasteries and convents.

Exclusive of the injustice inflicted on the R. Catholics of Ireland by the seizure of the funds belonging to their church, and their appropriation to the support of the clergy of the church of England, they laboured for a lengthened period under the most degrading disabilities. The treaty of Limerick, in 1691, between the generals of William III. and those of James II., guaranteed to the Irish R. Catholics the same religious privileges they had enjoyed during the reign of Charles II. But this treaty was most shamefully broken; and during the reigns of Anne, George I., and George II., a series of acts were passed, constituting what has been called the Catholic penal code, which had for its object the extermination of the R. Catholic religion in Ireland. It is unnecessary to recapitulate the provisions of these statutes. Their spirit was succinctly and truly described by Mr. Burke:—'The laws made in this kingdom (Ireland) against Papists were as bloody as any of those that had been enacted by the popish princes and states; and when these laws were not bloody they were worse: they were slow, cruel, outrageous in their nature, and kept men alive only to insult in their persons every one of the rights and feelings of humanity.' (Letter to Sir H. Langrishe.)

It is well known that this atrocious code entirely failed of its object, and that, instead of being exterminated, the R. Catholic religion gained new strength and vigour from the persecution to which it was exposed.

'Per damna, per cædes, ab ipso
Ducit opes animumque ferro.'

In the earlier part of the reign of George III., the leading statesmen of England became alive to the impolicy and mischievous operation of parts, at least, of the penal code; and its more offensive provisions were gradually repealed. In 1793, the elective franchise was conceded to the R. Catholics; but they continued, down to a comparatively late period, to be excluded from the privilege of having seats in the legislature, of being members of corporations, and of holding numerous public offices of trust and emolument. At length, in 1829, the R. Catholics were fully emancipated from all civil disabilities on account of religion, and were placed, as respects their political rights and franchises, nearly on the same footing as Protestants.

That this measure was a great boon to Ireland is most true; but though it allayed, it was not enough to extinguish, religious feuds and animosities. Justice, and the most obvious dictates of policy, require, as already stated, either that the R. Cath. should be made the established religion of Ireland, or, at all events, that the R. Cath. clergy should participate, proportionally to the number of their flocks, in the emoluments

Digitized by Google

now exclusively engrossed by the clergy of the church of England. It is a contradiction and an absurdity to suppose that a great and decisive majority should ever quietly submit to be deprived of privileges possessed by a minority. This, however, is the state of things in Ireland; and, till it be radically and completely changed, the country will no doubt continue, as heretofore, to be disgraced and distracted by religious dissensions.

The Protestant dissenters are found chiefly in Ulster. They are classed in congregations, an indefinite number of which forms a presbytery, and delegates, partly ministers and partly lay elders, form the general synod, which regulates the ecclesiastical concerns of the body, and is presided over by a moderator chosen annually. The synod of Ulster is coexistent with the establishment of the Presbyterian doctrine and discipline in Ireland. The Southern Association, or Presbyterian synod of Munster, was formed about 1660: the Presbytery of Antrim separated from the synod of Ulster in 1727, and the Remonstrant synod in 1829.

The Methodists are divided into two societies—the Wesleyan and the Primitive Wesleyan. The Independents, or Congregational Union, form a separate body from Presbyterians or Methodists. The Society of Friends, or Quakers, are most numerous in Dublin, Cork, Queen's Co., and Armagh, but they numbered altogether only 1,348 at the census of 1861. The United Brethren, or Moravians, have establishments in Dublin and Antrim.

The numbers attached to the three principal religious bodies in Ireland are given in the subjoined table, which shows by provinces, counties, cities and corporate towns, the religious professions of the inhabitants on the night of the 7th April, 1861.

It will be seen that there were, at the census of 1861, out of every hundred persons, 12 belonging to the Established church, 10 Presbyterians, 77 Roman Catholics, and one per cent Protestant and other dissenters.

Education.—The principle of educating the great body of the people was fully recognised at the Reformation. An act of 28 Henry VIII. bound every beneficed clergyman by oath, on his incumbency, to keep or cause to be kept a school in his parish. A subsequent act of Elizabeth required the bishop and beneficed clergy of every diocese to maintain a grammar-school. But in nine cases out of ten, the oath and the act were alike disregarded; and the few schools that were organised were founded on sectarian principles, being intended for the exclusive use of the dominant sect. In 1733, a society was established by charter, for founding schools at the public expense, in which the children of the poor should be taught the elements of literature, and instructed in useful works. But though the avowed, this was not the real object of this society, which exerted itself to undermine the Catholic religion by educating Catholic children in the principles of the Protestant faith. But this attémpt at proselytism was soon discovered; and the schools were deserted by all but Protestants. In 1815, a society in Dublin, for the suppression of vice, received a large parliamentary grant for the instruction of the poor on the principles of the established church; and, in 1819, a society for the instruction of the poor, but professing to avoid any interference with the religious opinions of the pupils, received a much larger annual grant. The latter of these associations was called the *Kildare Street Society*, from the place of its meetings.

These societies failed, however, in producing a general effect. The grants of public money, by which the chartered schools were chiefly maintained, were withdrawn, from a conviction of their inefficacy, and of the abuses which had crept into their management. The grants to the society for the suppression of vice, and the Kildare Street Society, were also withdrawn, in consequence of

Digitized by Google

their want of success, and of their real or supposed interference with the religious tenets of the pupils. In 1833, the public money hitherto parcelled out among these associations was vested in the lord lieutenant, to be expended in promoting the education of the children of every religious denomination under the superintendence of commissioners forming a board of National Education. Education in the national schools is strictly confined to the common and most useful branches of secular knowledge, the religious instruction of the pupils being, in every case, left to the care of their parents and the clergy of the denominations to which they belong.

The total number of national schools in Ireland, on the 31st of December of each year, was 5,632 in 1860; 5,830 in 1861; and 6,010 in 1862. The average number of children in daily attendance was 262,823 in the year 1860; 284,726 in 1861; and 284,912 in 1862.

The subjoined tables show the sums received and expended for the purpose of National Primary Education in Ireland in each of the years, ended 31st Dec. 1860, 1861, and 1862:—

Receipts	1860	1861	1862
	£	£	£
Balance from previous Year . . .	15,841	44,954	45,862
Grants from the Treasury (on account of Votes) . . .	284,468	286,722	269,377
For Books and Requisites sold to the National Schools at reduced prices . . .	8,906	10,367	9,534
For Sale of Farm and Garden Produce .	5,626	5,837	4,677

Miscellaneous . . .	16,063	6,126	2,436
Total . . .	276,642	306,648	312,389

The commissioners comprise some of the highest dignitaries, both of the Protestant and R. Cath. churches, and some distinguished Protestant and Catholic laymen. They seem to discharge their important functions with great diligence and impartiality. The schools they assist in establishing appear to be making the most satisfactory progress; and will, no doubt, be productive of great public benefit.

Of the children educated, fully one-seventh are Protestants, which seems a fair proportion, as the Protestant poor certainly do not exceed one-seventh part of the poor of Ireland.

There are several collegiate institutions for instruction in the higher departments of science and literature. Among them are Trinity College, Dublin, the only university entitled to confer degrees in all the faculties, the R. Catholic College at Maynooth, the Academical Institution in Belfast, and others. Some details relating to each of these are given in the accounts of their respective localities. (See DUBLIN, MAYNOOTH, BELFAST.)

More recently, however, or in 1845, an act was passed (8 & 9 Vict. c. 66) for founding new colleges in Ireland with liberal endowments, on an enlarged and comprehensive plan. In pursuance of this act, colleges, denominated the 'Queen's' have been opened in Belfast, Cork, and Galway. The professors have been selected with the greatest care, regard being solely had to their moral, literary, and scientific character, without inquiring or caring whether they were R. Catholics or Protestants. Religious instruction is given in the class-rooms of the colleges, but attendance at such times is quite voluntary on the part of the students; and no religious test, qualification, or declaration is required to enable any one to enter the college, or to contend for its honours and prizes. These institutions were intended by the late Sir Robert Peel, by whom they were founded, to furnish the best classical, literary, and scientific education to all ranks and orders of Her Majesty's subjects; and they appear eminently well fitted to realise these objects.

Poor.—Notwithstanding the great natural advantages of the country, it has been overspread with a population, in such depressed circumstances as to be involved in the extreme of destitution on any failure of the crops; and there is also, at all times, much suffering among the lower classes of the people. Down to a recent period there was no efficient provision for the relief of the poor, who, in consequence, had to depend wholly on private benevolence. Mendicity was practised to an extraordinary extent, and strangers in Ireland were shocked by the swarms and disgusted by the importunity of beggars of all ages and sexes, and in the most abject state of poverty, that infested the roads and public places. Such a state of things was a disgrace to a country pretending to be civilised. But discreditable as it was, it could not be materially improved without instituting a compulsory provision for the support of the poor, which was long successfully resisted, through the prevalence of unfounded theories with respect to its operation in this country. At length, however, sounder opinions gained an ascendancy; and parliament became impressed with the conviction that it was indispensable, in order to preserve the tranquillity of the country in seasons of scarcity, to make more effectual provision for the support of the poor. This was done by an act passed in 1838, which introduced the principle of compulsory assessment for the poor into Ireland; and which, while it served to protect the population from falling a sacrifice to the extremity of want, was a new and powerful motive to the landlords to oppose the splitting of farms, and to take a greater interest than they previously did in the condition of the cottiers and others inhabiting their estates. In both these respects, the compulsory assessment has been eminently useful. The system is placed under the control of the poor law commissioners for England, and is extended over the whole country.

The poor law came into operation in 1839, but none of the workhouses were opened for the admission of paupers till 1840. Since 25th March, 1846, all the workhouses in Ireland have been open, and a rate has been made in every union. The subjoined tabular statement gives the total amount received from poor rates, and other receipts in aid of poor rates, as well as the total expended in each of the fifteen years—ending Lady day—1850–64:—

Digitized by Google

Years ending Lady-day	Total Amount received from Poor Rates and other Receipts in aid	Total Amount Expended in the Relief and Management of the Poor
	£	£
1850	2,084,290	1,827,212
1851	1,185,785	1,293,039
1852	1,242,446	1,175,003
1853	1,133,009	1,070,499
1854	1,052,250	990,034
1855	898,674	851,876
1856	793,980	734,5[illegible]8
1857	650,071	619,514
1858	545,459	570,372
1859	535,906	524,754
1860	508,943	530,626
1861	573,290	595,192
1862	667,745	652,245
1863	721,903	701,031
1864	745,535	732,969

The amount expended includes expenses under the Burial Grounds Acts and Registration of Births, Deaths, and Marriages Acts.

The subjoined table gives the number of paupers in receipt of relief in unions in Ireland at the close of the first week of January in each year:—

Years	Indoor Paupers	Outdoor Paupers	Total
1850	203,320	114,650	307,970
1851	206,468	2,719	209,187
1852	168,248	3,170	171,418
1853	138,764	3,058	141,822
1854	104,604	2,198	106,802
1855	85,296	1,523	86,819
1856	72,247	836	73,083
1857	55,183	911	56,094
1858	49,308	1,274	50,582
1859	43,599	1,267	44,866
1860	43,218	1,711	44,929
1861	47,352	3,331	50,683
1862	55,168	4,373	59,541
1863	60,038	5,800	65,847
1864	59,867	7,753	68,136

It will be seen that there is a steady and most hopeful decrease of pauperism in Ireland.

Races, Character, and Condition of the People.—The first inhabitants of Ireland, of whom history has preserved any account, belonged to the great Celtic family. Much ingenious conjecture has been expended on the question whence Ireland derived her earliest colonists; and the claims of Britain, France, Spain, Scythia, and even Troy, to the honour of being the mother country of the Irish, have all been supported with some learning and much confidence. It may be enough to observe that, owing to greater proximity to the Continent, it is most probable that Britain was peopled before Ireland; and the latter being nearer to Britain than to the Continent, it is for the same reason most probable that she was either wholly peopled from Britain, or principally from her, but partly also from Gaul.

Though there be no direct evidence of the fact, it may be inferred that Ireland was visited at an early period by Phœnician, or rather Carthaginian ships; but, in those days, this must have been a long and perilous voyage; and there are no grounds for thinking that it was of common occurrence, or that the Phœnicians ever made any settlement in the country.

The Irish belong to what is called the Gaelic division of the Celtic family; having, as is supposed, emigrated from Britain when the latter was invaded and settled by the Cimbri or Northern Celts. About the period when the Romans withdrew from Britain, a tribe called the *Scoti* began to acquire a preponderating influence in Ireland, which, from the 5th to about the 11th century was thence called *Scotia*. But about the latter period this tribe, having effected a settlement on the W. coast of N. Britain, its name was transferred to that country, which still retains it, and Ireland again recovered its old name of Hibernia, Ierne, or Ireland. The greatest diversity of opinion exists, and an almost impenetrable obscurity hangs over every circumstance connected with the establishment of the Scoti in Ireland. Colonists from Belgium are known to have settled in it, and some suppose that they were the progenitors of the Scoti; but this is disputed by others, who contend that the settlement of the Scoti in Ireland is comparatively recent; and that they were of Scandinavian origin.

But though these Belgian or Scandinavian immigrants succeeded in obtaining an ascendancy in parts of Ireland, they were not sufficiently numerous to make any considerable change in the language, character, or institutions of its Celtic inhabitants. 'The conquering tribes themselves, one after another, became mingled with the general mass, leaving only in those few Teutonic words, which are found mixed up with the native Celtic, any vestige of their once separate existence.' (Moore's Ireland, i. 98.)

The number of English settlers in Ireland was long inconsiderable. Till the plantation of Ulster, in the reign of James I., they were almost entirely confined to the E. and SE. counties, where, though they had partially changed the language, they had effected comparatively little change in the habits and manners of the people. The pop. of Connaught, and generally of all the western and of a large portion of the other parts of the island, may, even at this day, be considered as of nearly pure Celtic origin; and in several of the remoter districts Celtic is even now the ordinary language of the common people. Notwithstanding the differences that may easily be traced in different parts, from the intermixture of English and Scotch blood, the entire pop. has a peculiar and distinctive character, that is not to be mistaken. It may, in general, be said of the Irish, that they are ardent in their affections, credulous, vain, fond to excess of flattery, irascible, easily influenced by sudden impulses, uncertain, and usually in extremes. Hence the facility with which they have been duped by the merest impostors; and their proneness to believe every falsehood, how gross soever, that flatters their prejudices. They are in general destitute not merely of the foresight and prudence, but also of the resolution and steady perseverance of the English and Scotch; and though their bravery is unquestionable, and they will undertake anything, they are very apt, if they do not succeed at the first onset, to become dispirited, and to despond. They are eminently witty, hospitable, and social, though often parsimonious. Prodigality is one of their distinguishing traits; as is their light-hearted, contented disposition; but this frequently degenerates into thoughtlessness; and, how advantageous soever in some respects, by disposing them to be satisfied with existing circumstances, it tends to hinder their making any persevering and well-concerted efforts for their improvement.

Dr. Crumpe, an intelligent physician of Limerick, who received a prize from the Royal Irish Academy for the best essay on the employment of the people, has the following statements with respect to the character of the lower Irish:—'Two leading and naturally allied features in the character of the lower Irish are idleness and inquisitiveness, especially when hired and employed to perform the work of others. The moment an

Digitized by Google

overseer quits them, they inevitably drop their work, take snuff, and fall into chat as to the news of the day; no traveller can pass them without diverting their attention from the business in hand, and giving rise to numerous surmises as to his person, errand, and destination. The most trivial occurrence, especially in the sporting line, will hurry them, unless restrained, from their occupations. Even the sedentary manufacturer will, on such occasions, quit his employment. Nothing is more common than to see a weaver in the N. start from his loom on hearing a pack of hounds, and pursue them through a long and fatiguing chase. A tendency to pilfering and theft is very predominant among them, and connected with this vice is the prevalence of low cunning and lying; and, as their accompaniment, may be mentioned a fawning flattery. The blunt honesty, the bold independence of the English yeoman, are wanting; and in their stead too generally substituted the petty dishonesty of the vassal, the servility and artifice of the slave. Drunkenness is an evil of considerable magnitude in the catalogue of national vices. It is one to which the lower Irish are peculiarly addicted, and that from which the most serious obstructions arise to their industry and employment. That vile beverage, whisky, so cheaply purchased, and so generally diffused, affords them an easy opportunity of gratifying this destructive passion. As one consequence of the general prevalence of ebriety, the lower Irish are remarkably riotous. I do not here so much allude to Whiteboyism, and other public disturbances, which owe their origin chiefly to other causes, as to their quarrels among themselves. Their fairs are frequently the scenes of confusion, riot, disturbance, and bloodshed. Combinations, too, risings, and outrage among tradesmen, are far from unusual, and on pretexts that are truly ridiculous. The Irish are also, to a remarkable degree, lawlessly inclined. It is well known that, instead of being anxious to apprehend offenders, or to assist the execution of the law, they are, in general, ready to give the former every assistance to escape; and to resist the latter, unless awed by a superior force.' (Essay, pp. 170-175.)

This, though not a very flattering, seems a perfectly fair statement. But some, at least, of the defects of national character, specified by Dr. Crumpe, originate in circumstances that either have been, or admit of being, obviated. Drunkenness is now in a fair way of being expunged from the list of Irish vices; and with it will disappear the riots and disturbances to which it gave birth. The idleness of the Irish, though in part constitutional, is in part, also, a consequence of the minute division of the land, and of the impossibility of its occupiers finding any regular or continuous employment. Their proneness to combination and outrage, their readiness to obstruct the course of law, and to assist the escape of malefactors, were formerly promoted, if not occasioned, by oppression and misgovernment, and now they are the results of their desperate efforts to keep possession of their patches of land. Down to a comparatively recent period the native Irish had not, and could not be expected to have, any confidence in the law. They were, in fact, a proscribed and enslaved race, among whom it would have been preposterous to look for 'blunt honesty' and 'bold independence.' And notwithstanding the 'oppression and extortion' to which the Irish were formerly subject have disappeared, their effects will, it is to be feared, be long visible, and with the defects inherent in their character will make their regeneration a work of extreme difficulty. Agitation is still rife in the land. The peasantry are taught to ascribe all the ills with which they may be visited to misgovernment, or to their connection with England. Nothing is ever set down to account of their own improvidence, or want of industry. On great emergencies, such as a scarcity of food, or of employment, they become quite paralysed; and instead of exerting their energies, sink into despair, or, at best, abuse the government which feeds them. These evils can only be modified by slow degrees; by government pursuing a consistent and impartial course; placing the Catholics on a level with the Protestants, in respect of religious endowments as well as of civil rights; diffusing sound instruction; discouraging agitation; enforcing, at all hazards, the empire of the law; and adopting every practicable method for preventing the further splitting of the land, and for promoting its consolidation into larger farms.

Wages in Ireland vary from about 1*s.* to about 6*d.* a day; but at neither rate is employment constant, and in parts of the country half the labourers are all but unoccupied for nearly half the year. Under such circumstances, it is needless to add that their food and clothes must, speaking generally, be of the most inferior description. In these respects, however, there are some material differences; and in the NE. and eastern counties, but especially the first, the condition of the peasantry is much superior to what it is in the SW. and W.

In the north eastern counties they are better lodged, clothed, and fed than in the others: the wages of labour are higher, being, at an average, about 1*s.* per day; and their food consists chiefly of meal, potatoes, and milk. The inhabitants here are a frugal, industrious, and intelligent race; inhabiting a district for the most part inferior, in natural fertility, to the S. portion of Ireland, but cultivating it better, and paying higher rents in proportion to the quality of the land, notwithstanding the higher rate of wages.

In the southern districts there is a population whose condition is, in every respect, inferior to that of the northern. Their habitations are worse; their food inferior, consisting at best of potatoes and milk, without meal: the wages of labour are found reduced from 1*s.* to 8*d.* per day; yet the peasantry are a robust, active, and athletic race, capable of great exertion, often exposed to great privations, ignorant, but eager for instruction, and readily trained, under judicious management, to habits of order and steady industry.

The population of the midland and eastern districts does not differ materially in condition from those of the south; but the inhabitants of the western district are decidedly inferior to both, in condition and appearance: their food consists of the potato alone, without meal, and in most cases without milk; their cabins are wretched hovels; their beds straw; the wages of labour are reduced to the lowest point, upon an average not more than 6*d.* per day. Poverty and misery have deprived them of all energy; labour brings no adequate return, and every motive to exertion is destroyed. Agriculture is in the rudest and lowest state. The substantial farmer, employing labourers, and cultivating his land according to the improved modes of modern husbandry, is rarely to be found amongst them. The country is covered with small occupiers, and swarms with an indigent and wretched population. It is true, that some landed proprietors have made great exertions to introduce a better system of agriculture, and to improve the condition of their immediate tenants; and a few of the lesser proprietors have made humble attempts to imitate them; but the great mass of the population exhibits a state of poverty bordering on destitution.

Digitized by Google

The distinctions as to the usual diet of agricultural labourers in the different parts of Ireland, are strictly applicable to those only who have regular employment. When they are out of work, which is the case in many places during three or four months of the year, the line is not so easily perceived. Then a reduction in the quantity as well as in the quality of their food takes place; but still, though on a diminished scale, their relative local degrees of comfort or of penury are maintained nearly according to the above classification. In no extremity of privation or distress have the peasantry of the northern counties approached to a level with those of the W.; while Leinster and the greater part of the S., though sometimes reduced to the lowest condition, retain, generally, even in the most calamitous periods, a shade of superiority. There are districts, indeed, in every quarter of the land, where through peculiarities of situation, or other causes, distress falls with an equal pressure upon all; but such exceptions are rare, and so limited in extent, as scarcely to qualify the foregoing observations.

History.—The early accounts of Ireland are singularly disfigured by fable. It was not invaded by the Romans, whose knowledge of it could, therefore, be derived only from the reports of the Britons, or of natives of Ireland in Britain. The fair presumption, however, is, that its inhabitants were then more barbarous than even those of Britain. Pomponius Mela, who has given an accurate account of the soil of Ireland, and of the richness of its pastures, says, '*Cultores ejus inconditi sunt, et omnium virtutum ignari, pietatis admodum expertes.*' (Lib. iii. sec. 6.) Strabo (lib. iv.) gives some extraordinary details respecting the Irish, which, however, he does not state on his own authority, but merely as having been reported to him. In the 5th century Christianity was introduced into Ireland by St. Patrick, a native of N. Britain, who, in his youth, had been carried a captive into Ireland. Along with the gospel the British missionaries introduced the letters and learning of Rome; and a school founded at Armagh, not long after, became famous in most parts of Europe. But it would be as inconsequential to infer, from the fact of this and a few other schools existing in the country, that it was then distinguished by literature and civilisation, as it would be to allege that such was the case with the Western Islands, and the adjacent parts of the mainland of Scotland, in the 8th century, because there was then a celebrated monastery and school in Iona.

The accounts of the political state of Ireland, previously to the English invasion, are obscure and contradictory. This much, however, may be gleaned from them, that the island was parcelled out into a number of semi-independent states, which sometimes did, and sometimes did not, acknowledge their dependance on a chief prince or king of all Ireland. Incessant hostilities were waged by the petty sovereigns against each other, which were not even interrupted by the invasion of the Danes in the 9th century. The latter, in no very long space, became masters of the greater part of the coasts of the island; and occupied the ports of Dublin, Wexford, Waterford, and Cork, where they were taken by the English.

The successors to the petty sovereigns, or to the chiefs of clans or septs, were called *tanists*, and were generally elected from the family or kindred of the reigning prince or chieftain during his lifetime. Females were excluded from the succession, and minors were never chosen as tanists; the object being to have a prince of mature years always at the head of the seigniory or clan, who might be able to direct their operations, and to defend them from hostile attacks. The laws of the Irish were such as might be expected to prevail among a rude and barbarous people; and were administered in the open air by hereditary judges, denominated *brehons.* The most atrocious crimes might be compounded for by the payment of an *eric*, or fine; and as in all cases a considerable portion, and in some cases the whole, of the fine went to the lord, or chief of the sept, his interest obviously led him to encourage rather than to repress crime. The laws with respect to the succession to fixed property were such as would have alone served to extinguish all industry. 'Through the whole country,' says Leland, 'the tenure of lands determined with the life of the possessor; and, as the crimes or misfortunes of men frequently forced them from one tribe to another, property was eternally fluctuating, and new partitions of lands made almost daily. Hence the cultivation of lands was only in proportion to the immediate demands of nature, and the tributes to be paid to superiors.' (Hist. of Ireland, Introduction, p. 34.)

A people with such institutions could not be otherwise than barbarous; and such, in fact, they were. They had made little or no progress even in the most necessary arts; and were, with few exceptions, entire strangers to civilisation and refinement. 'Neither was it possible to reform the evil customs that prevailed among the Irish, without altering their government; nor could that be accomplished by any other means than by their being subjected to some more civilised foreign power.' (Lyttleton's Henry II., v. 56; where the reader will find an excellent account of the state of Ireland previously to the English invasion.)

Soon after the English conquest effected by Henry II., in 1171, the island was divided by John into 12 counties. But, though the king of England received the submission of the Irish chieftains, and was nominally lord of Ireland, his authority was, for a lengthened period, only partially recognised. The native families of O'Conor, O'Neil, O'Melaghlin, Byrne, and O'Toole, still asserted, and, to a certain degree, exercised sovereign authority in Connaught, Ulster, and part of the midland districts. Even in Leinster and Munster, where the English were principally settled, and which had partially adopted the laws and constitution of England, the sovereign authority was far from being generally or firmly established. The allegiance of several of the great feudal barons, who held extensive tracts of land, was frequently little better than nominal. The English families of De Burgh in the W., of Desmond in the S., and of Butler in the central parts, adopted the manners of the natives, and often became the declared and most dangerous enemies of their mother country. At one time there were 9 counties palatine, with independent jurisdiction, in the part of the island subject to England, and distinguished by the name of the *pale.* The miseries resulting from the interminable disorders inseparable from such a state of things, were increased in 1315 by an invasion of the Scotch, under Edward, brother of Robert Bruce. He overran the greater part of the country, but was finally defeated and killed near Dundalk. The resources of the country were also wasted in subsidies, and its youth carried away to fight the battles of their masters on the continent, or in England, during the wars between the houses of York and Lancaster. After the death of Richard III. and the accession of Henry VII. had terminated this sanguinary struggle, Ireland was chosen by the defeated party of the Yorkists as a theatre on which to commence a system of operations for the dethronement of the new

Digitized by Google

monarch. In consequence, Lambert Simnel was sent thither by the Duchess of Burgundy as the descendant and representative of Edward IV. His title was acknowledged by the Anglo-Irish, and he was crowned in Dublin with all the ceremonies attendant on the inauguration of the ancient Irish sovereigns. A similar, though less vigorous, effort was afterwards made in favour of Perkin Warbeck, whose title was also acknowledged in the S. of Ireland.

In 1495, a parliament assembled at Drogheda, under the presidency of Sir Edward Poynings, then lord-deputy, passed some very important statutes. By one of these, afterwards well known in Irish history by the name of 'Poynings' Law,' effectual provision was made for maintaining the ascendancy of the government of England over the legislature of Ireland. With this view it was enacted, that no parliament should in future be holden in Ireland without license from the king; and that no bill or draft of a law should be submitted to its consideration, without having been previously sent over to England by the Irish government for the approval, alteration, or rejection of the king; so that the power of the Irish parliament was thus, in fact, limited to the mere acceptance or rejection of bills approved or modified by the English government.

This act was much and justly complained of at a later period; but, when passed, it was a decidedly popular measure. Parliaments had previously been, for the most part, the mere instruments of the faction that happened to be ascendant at the time; so that their enactments were often conflicting, and the administration wanted consistency. Poynings' law obviated, in some measure, these defects; and parliament henceforth became dependent rather on the government of England than on any particular faction or party in Ireland.

Early in the reign of Henry VIII. the spirit of insurrection broke out in a formidable shape. The chief authority had previously been exercised for a lengthened period by the rival families of the Fitzgeralds and Butlers, whose heads were the Earls of Kildare and Ormond. The former of these noblemen was at this period lord-lieutenant. On being summoned to England, to answer charges brought against his government, he appointed his son, Lord Thomas Fitzgerald, his deputy. The latter, on a false rumour of his father's execution in London, not only threw up the reins of government, but declared himself an open enemy to the English monarch, ravaged the pale, and laid siege to Dublin, where he was repulsed by the gallantry of the citizens. Having soon after surrendered to Lord Grey, the new lord-lieutenant, he was sent prisoner to England, where he expiated his offences on the scaffold, along with several of his near relations, who, though unconnected with his acts, were unjustly implicated in their consequences.

The introduction of the Reformed doctrines, which was effected with equal violence and contempt for the prejudices of those within and without the pale, brought a new element of discord into Ireland. The native Irish were devoted adherents of the church of Rome. Their hostility to the new doctrines did not, however, display itself openly during the reign of Henry, who, about this time, changed his title of lord to that of king of Ireland, nor in the reign of his Protestant successor, Edward VI.; but it broke out with unrestrained fury in that of Elizabeth. O'Neil, who possessed nearly the whole of Ulster, instigated by the court of Spain, hoisted the standard of rebellion. He was supported by a Spanish armament, which took possession of Kinsale, without, however, being able to maintain itself in that position. After a lengthened contest O'Neil was forced, by the energetic and prudent measures of Lord Mountjoy, to an unconditional submission; and his subsequent flight from Ireland, on the imputed charge of another insurrection, terminated the war. Ulster was soon after divided into counties, and planted with numerous bodies of English and Scotch settlers, which laid the foundations of the improvement of that province, and gave it a distinctive character. The reign of James I., and the earlier part of that of Charles I., formed a period of undisturbed tranquillity. But the disputes between the latter and the English parliament afforded the Irish a flattering though fallacious prospect of regaining their independence and re-establishing their religion. To effect this object, an insurrection was secretly organised, on a very extensive scale, embracing, not only the native Irish, but many Rom. Cath. families of English descent. This formidable conspiracy broke out in 1641. The treachery of one of the conspirators prevented Dublin from falling into their hands; but the insurrection broke out simultaneously in Ulster, and soon after spread into most other parts of the country. The most horrible excesses were committed by the conspirators, which were sometimes fearfully retaliated; and the country continued to be a prey to all the horrors of civil war till 1649, when Cromwell appeared in the field, at the head of a well-disciplined and powerful army. Having taken Drogheda by storm, he delivered it up to military execution; and such was the terror inspired by the fate of this city, that almost all the strongholds belonging to the party of the Catholics soon after fell into his hands, and the English supremacy was, for the first time, established in every part of Ireland. The confiscations that followed Cromwell's success were upon so vast a scale that about *four-fifths* of the soil was transferred to new proprietors, either parliamentary soldiers, or speculators, called adventurers, who had advanced money to carry on the war.

After this tremendous visitation Ireland continued tranquil, and began to advance considerably in prosperity, till the events connected with the Revolution of 1688 again made it the theatre of fresh and sanguinary contests. After the flight of James II. from England, he landed, with a view to retrieve his fortunes, in Ireland, where he was received with open arms by the Catholics; and having brought with him from France a number of experienced troops and officers, partly Irish and partly French, he soon found himself at the head of a powerful army. However, he was wholly without the talents necessary to ensure success in such an enterprise. The battle of the Boyne, on the 1st of July, 1690, gained by William III., turned the scale completely in favour of the latter; and the battle of Aughrim, on the 12th of July, 1691, when the British under Ginkell, afterwards earl of Athlone, obtained a decisive victory over the troops of James II., commanded by St. Ruth, who fell in the action, was the last great effort made by the Irish to achieve their independence. The remains of the Irish forces, having retreated to Limerick, capitulated under conditions embodied in the famous convention called the treaty of Limerick. The violation of this treaty has already been noticed. It is due to the memory of William III. to state, that he was no willing party to its violation. This is entirely to be ascribed to the intolerance of the English and Irish Protestants, who, flushed with victory, did not hesitate, despite the stipulations to the contrary in the treaty, to trample the Catholics under

Digitized by Google

foot, and as far as possible to exterminate their religion. 'By the total reduction,' says Mr. Burke, 'of the kingdom of Ireland, in 1691, the ruin of the native Irish, and in a great measure, too, of the first races of the English, was completely accomplished. The new interest was settled with as solid a stability as any thing in human affairs can look for. All the penal laws of that unparalleled code of oppression, which were made after the last event, were manifestly the effects of national hatred and scorn towards a conquered people, whom the victors delighted to trample upon, and were not at all afraid to provoke. They were not the effects of their fears, but of their security. They who carried on this system looked to the irresistible force of Great Britain for their support in their acts of power.' (Letter to Sir H. Langrish, p. 44.)

The violation of the treaty of Limerick being accompanied by the most extensive confiscations, and followed up by the enactment of the penal code, completed the prostration of Ireland. There being no longer any means of rising, nor even security at home, the aspiring Catholic youth sought employment and distinction in the service of France, which, for a lengthened period, drew large supplies of recruits from Ireland. Hence, by a singular contradiction, the same revolution that established freedom of conscience and a liberal system of government in England and Scotland, established an odious despotism and persecution in Ireland. In the words of Mr. Burke, 'it established, in defiance of the principles of *our* revolution, the power of the smaller number, at the expense of the religious liberties of the far greater, and at the expense of the civil liberties of the whole.' But, as already stated, the penal code failed to effect its object; and, instead of being exterminated, the Catholics gradually acquired a still greater numerical superiority. At length, in the earlier part of the reign of George III., the rigour of the code began to be abated, and the Catholics ceased to be regarded as mere *feræ naturæ*.

One of the most curious chapters in Irish history is that connected with the embodying of the volunteers in 1782, and the revolution that was soon after effected in the constitution of Ireland. The difficulties in which Great Britain was then involved having occasioned the withdrawal of the greater number of the troops from Ireland, rumours were propagated of an expected invasion of the island by the French; and, to meet this contingency, the Protestants of Ulster and other parts took up arms, and formed themselves into volunteer corps. These bodies soon became sensible of their strength; and having appointed delegates and concerted measures, they proceeded to set about reforming the constitution. In this view they published declarations to the effect, that Ireland was a free and independent kingdom, and that no power on earth, except that of the king, lords, and commons of Ireland, could legally enact laws to bind Irishmen. These declarations, which struck a direct blow at the superiority hitherto claimed and asserted by the British parliament, might, and most probably would, at another time, have been successfully resisted. But Great Britain, being then engaged in a desperate contest with her revolted colonies, and with almost all the great European powers, prudently made the concession demanded by the Irish volunteers; and the *Independence of Ireland* was proclaimed amid the most enthusiastic demonstrations of popular rejoicing.

In truth, however, this independence was apparent only. The wretched state of the elective franchise in Ireland was totally inconsistent with anything like real independence; and so venal was the Irish parliament, that any minister, how unpopular soever, had no difficulty in securing a majority in that assembly. Hence the anticipations in which the more sanguine Irish patriots had indulged were destined soon to experience a most mortifying disappointment; and this, and the hopes inspired by the French revolution, terminated in the rebellion of 1798, which was not suppressed without a repetition of the former scenes of devastation and bloodshed.

The British government at length wisely determined to effect a legislative union between Great Britain and Ireland, and to suppress the separate legislature of the latter. This measure, notwithstanding a strenuous opposition, was happily carried, and took effect from the 1st of January, 1800. And, unless it were resolved or wished to put an end to all political connection between the two countries, nothing could be more inexpedient and absurd than the existence of a separate independent legislature for Ireland. Perpetual jealousies could not have failed to arise between it and the legislature of Great Britain, which must necessarily in the end have led to estrangement, and probably separation. A legislative union was the only means of obviating these and other sources of mischief: its repeal would make Ireland a theatre for all sorts of projects and intrigues, and it would be sure to be followed, at no distant period, by the dismemberment of the empire. Its maintenance should, therefore, be regarded as a fundamental principle of policy; and, to give it permanence and stability, every effort should be made to remove all just grounds of complaint on the part of the Irish people, and to make the union one of national interest and affection, as well as of constitutional law.

IRKUTSK, GOVERNMENT OF. (See SIBERIA.

IRKUTSK, a city of Asiatic Russia, cap. of Eastern Siberia, on the Angarà, at its confluence with the Irkut, about 30 m. from the NW. shore of Lake Baikal, 500 m. SE. Krasnojarsk, and 1,450 m. in nearly the same direction from Tobolsk. Pop. 19,350 in 1858. The town is situated in a wide plain, 1,240 ft. above the level of the sea; the mean temperature of the year being — 0·3 R., or rather below the freezing point. The Angarà, which is about 1,000 ft. broad at Irkutsk, divides the city into two nearly equal parts. It is fortified and defended by a citadel, and has 4 suburbs. Of about 1,900 private houses, only 50 are built of stone; the rest are chiefly of wood, or faced with painted planks. The streets are broad, but altogether unpaved; from the solidity of the ground, however, they are not dirty. Irkutsk has 38 churches, 12 of which are constructed of stone; an exchange, also a stone edifice, and a good bazaar with numerous shops. The Baikal admiralty house and building docks on the Angarà, medical college, gymnasium, and *comptoir* of the Russo-American Company, are said to be worthy of a European city; the government-house, theatre, several convents and hospitals, and a prison, are among its other public edifices. It is the seat of an archbishop, and of a Russian governor, whose authority extends over the immense provs. of Irkutsk, Yakutsk, Okhotsk, Kamtschatka, and Russian America, including Bodega and the other settlements on the coast of California, distant nearly 120° long. The town has numerous educational establishments, including, besides the gymnasium, with a library of 5,000 vols., an episcopal seminary, high school of navigation, with classes for instruction in the Tartar, Chinese, and Japan-

Digitized by Google

ese languages; normal, secondary, Lancastrian, and other schools, and a cabinet of mineralogy. It has an imperial factory of woollen cloth for the supply of the troops in Siberia, manufactures of linen and other piece goods, glass, hats, soap, and leather; and is the residence of numerous artisans in the different trades common in Europe. It is the great entrepôt for the commerce of NE. Asia, importing tea, rhubarb, fruit, paper, silks, porcelain, and other manufactured goods from China by way of Kiachta, and furs, &c. from Kamtschatka, the Aleutian Islands, and Russian America; which articles are here exchanged for European goods sent from Petersburg and Moscow by way of Tobolsk. It has also some trade with Bokhara and Khokan. The total annual amount of its commerce is estimated at 4,000,000 paper roubles (or francs), one-fourth of which has sometimes been transacted at its annual fair in June.

IRRAWADI (*Erivati*, 'the Great River'), an important Asiatic river, the principal in India-beyond-the-Brahmaputra. It has its sources near the E. extremity of the Himalaya range in Thibet, about lat. 28° N., and long. 97° 30' E., not far from the sources of the Lohit, a principal branch of the Brahmaputra. With the exception of two reaches to the W., at Bhamo and Ava, it flows generally S. through the centre of the Birman empire, which it traverses in its entire length, till it falls, by numerous mouths, into the Bay of Bengal (or rather the Eastern Ocean), between Cape Negrais and the Rangoon river, in about the 16th deg. of N. lat., and between 93° 20' and 97° E. long. Its course may be estimated at about 1,200 m., during which it passes through 12 degs. of lat. It receives at Yandabo, lat. 21° 43' N., long. about 95° E., its principal tributary, the Ning-thee, or Kyen-dwem, from the N. Its delta commences about lat. 17° 45'. This is a vast alluvial plain, about 130 m. in length, N. and S., and where widest about as many miles across, intersected by a vast number of arms of the river that frequently interlace each other. Of its numerous mouths, the Rangoon and Bassein rivers, forming respectively the E. and W. boundaries of the delta, are the principal. Most of its mouths are navigable for large craft, and those of Bassein and Rangoon for vessels drawing five fathoms water. The harbour of Negrais, formed by the mouth of the river of the same name, is said to be, without exception, the most secure in the Bay of Bengal. The Bassein branch, which may be considered the proper continuation of the main stream of the Irrawadi, is about 700 yards in width at the point where the Rangoon river separates from it. From the apex of the delta to Yedan above Ava, the breadth of the Irrawadi is seldom less than 1 m. and often 4 m. It may be ascended as far as Ava, at all seasons, by vessels of 200 tons; and in the rains they may proceed to the Mogoung river, a sailing distance of about 800 m. from the sea. Above Yedan, the river suddenly contracts to 150 or 200 yards in breadth. It is navigable for canoes up to Bhamo; but in the dry season, it is in many parts dangerous, from its passing over rocky ledges and through precipitous defiles. About 50 m. from its source, it has been observed with a width of 80 yards, during the dry season.

The current is not, in general, remarkably rapid; even above the Mogoung, the Irrawadi, in the dry season, flows only at the rate of about 2 m. an hour. (Malcolm, i. 171.) But in the inundations, from June to Sept., it flows so rapidly that, in the delta, its current would be too powerful for boats to stem were it not for the assistance of the SW. monsoon, which sets in the opposite direction. During its inundation, it has a breadth of about 1 m., above Bhamo, and in some places below Ava of from 4 to 6 m. At the former place its rise is as much as 50 ft., at Ava about 33 ft., at Prome about 30 ft., and in its delta 10 ft. The latter region becomes at that period almost an uninterrupted expanse of water, it being at ordinary times little above the level of high tides. The quantity of water discharged by the Irrawadi, as compared with that discharged by the Ganges, is roughly estimated by Capt. Hannay, in the Asiat. Journ. of Bengal, as 1 to 1·53. In the plain of Pegu, and in the undulating country through which the Irrawadi flows in the middle part of its course, it incloses a great number of islands and sandbanks; though these, in various parts, would seem, from a comparison of the statements of Symes with those of Crawfurd, to be less numerous than formerly. In the upper part of its course, on its left or E. bank, the Irrawadi receives some large affluents, as the Shoomae Kha, Pin-lang or Bhamo river, Lung-tchuen, &c. Its chief affluents on the opposite sides are the Mogoung and Ning-thee, which join it about the middle of its course. The last, as already stated, is its principal tributary; and after its junction, the Irrawadi receives no stream of any importance. Sakaing, the present metropolis, and Ava and Amarapura, former capitals of the Birman empire, Bhamo, the great mart for the Chinese trade with Birmah, Yandabo, Pugan, and Prome, are situated upon the main stream, and Rangoon and Bassein upon the branches bearing their names. Besides these cities, numerous towns and large villages are built on or near the banks of the river, the great mass of the Birmese pop. being accumulated on the Irrawadi, leaving the rest of the country, in great part, an uninhabited desert.

The Irrawadi is to the Birman empire what the Nile is to Egypt, the source of life and abundance, and the main artery and great commercial highway of the country. 'The number of trading boats on the river is astonishing. We pass scores every day, and sometimes hundreds; the largest of them carry 10,000 or 12,000 bush. of uncleaned rice, the smaller 300 or 400. Their chief lading seemed to be rice, salt, and *gna-pee*. In ascending they are for the most part drawn by the crew with a rope upon the bank, or propelled by setting-poles; sailing only when the wind is fair, and neither too strong nor too weak. They are generally from three to four months in ascending from the delta to Ava.

'The boats on this river, though of all sizes up to 200 tons, are of but two general descriptions. All retain the canoe shape, sharp at each end. Large boats have one mast and a yard of long slender bamboo, to which is suspended a square sail. The sail is made in sections, the centre ones only being used in strong winds, and the others added at the sides when necessary. Sometimes a small sail is temporarily fastened above the yards to the ropes, by which it is sustained. The deck extends from 5 to 10 ft. beyond the sides with large bamboos fastened beneath, making at once a platform for the men, when using their setting-poles, &c., and an outrigger to prevent their upsetting. The vessel itself is wholly covered with a regular Birman house, well thatched, which carries part of the cargo, and furnishes cabins to the family and boatmen. Over the roof is a platform, on which the men stand to work the sail. They are manned by from 15 to 25 or 30 men, and sometimes 40 or more.' The smaller-sized vessels are of an elongated shape, like the foregoing, and do not merit a particular description.

'No one can ascend the river without being im-

Digitized by Google

pressed with the hardihood, skill, energy, and good-humour of the Birman boatmen, and the happy adaptation of their boats to the navigation. In ascending, much of the way must be accomplished by setting-poles. For these they use straight bamboos, of a species which is almost solid and very strong. The end is applied not to the front of the shoulder, as with us, but above the collar-bone, or on the top of the shoulder. Bending forward till their hands touch the deck, they bring the resistance perpendicular to the spine, and thus possess far greater power than is possible by our mode. When but slight exertion is required, the pole is applied as with us.' (Malcolm's Trav. in S.E. Asia, i. 90, 91, 96, 97.)

Near the Irrawadi, in the prov. Sarawadi, are celebrated teak forests, covering the hill-ranges bounding the valley. Petrifactions of wood, bones, &c., are common along this river; and Mr. Crawfurd collected on its banks a great number of fossil remains, including those of two species of mastodon, the rhinoceros, hippopotamus, tapir, hog, ox, deer, antelope, gavial, alligator, emys, and trionix. (See Trans. of the Geolog. Soc., and Appendix to Crawfurd's Embassy.) Coal (anthracite) has been discovered along its course, and about 40 m. S. Pugan are some rich petroleum wells on the E. bank, respecting which see BIRMAH.

IRVINE, a royal and parl. bor., sea-port, and market town of Scotland, co. Ayr, on rising ground on the N. bank of the river of the same name, the æstuary of which forms its harbour, on the railway from Glasgow to Ayr, 23 m. SW. the former, and 12 m. N. by W. the latter. Pop. of parl. bor., 7,060 in 1861. A suburb has arisen to the S. of the river, which is connected with the town by a bridge, the widest and handsomest in the co. There are other suburbs, not in the royalty, but comprised, since 1832, within the parl. bor. The parish church, between the town and the river, with a handsome spire, is the most striking building in the bor. Here, also, is a free church, and chapels belonging respectively to the Associated Synod and Relief. To the N. of the town an academy was erected in 1814, at an expense of 2,250*l.*, of which the burgh contributed 1,633*l.* 4*s.* 6*d.*; the remainder being raised by public subscription. This seminary, which embraces all the branches of a learned and commercial education, has fully realised the object of its founders. There are various other schools, with several libraries, and a news-room. Eglinton Castle, famous in the sporting world for the 'tournament' held in its park in 1839, is in the immediate vicinity of the bor. According to the official returns, there belonged to the port, on the 1st of Jan. 1864, 14 sailing vessels under 50, and 23 above 50 tons, besides 1 steamer of 15 tons. Coal is the chief article of export, considerable quantities being shipped for Ireland. A considerable number of weavers work in connection with the Glasgow manufacturers, or for local consumption. Irvine was created a royal bor. by Robert Bruce, in 1308. It unites with Ayr, Campbelton, Oban, and Inverary, in returning a member to the H. of C. Registered voters, 271 in 1865. Robertson's 'Rural Recollections,' a valuable and authentic work, illustrative of the progress made by Scotland from 1765 downwards, was published at Irvine in 1829, the author being at the time factor for an estate in the neighbourhood. John Galt, author of 'Annals of the Parish,' and other works, was a native of the bor.; and Burns was for a short time engaged in business in it as a flax-dresser.

ISCHIA (an. *Ænaria*, *Inarime*, and *Pithecusa*), an isl. of the Mediterranean, belonging to Italy, prov. Naples, 8 m. SW. from the promontory of Misenum, and 18 m. WSW. Naples. It is about 7 m. in length and 20 in circ., having an area of 21 sq. m., and a pop. of 24,930, according to an enumeration of 1863. Nearly in its centre is M. San Nicolo, or Epomeo (an. *Epopeus*). This, though now an extinct, was formerly an active volcano, the eruptions of which are noticed by Strabo (lib. v.) and Pliny (lib. ii. § 88); and which burst forth with great fury in 1301, since which it has been quiescent. It is 2,513 ft. above the level of the sea, and the whole island falls in a gentle slope from it to the sea, except on the N., where its sides are more abrupt. Ischia obviously, indeed, owes its origin to volcanic agency, and consists wholly of volcanic matters. Its bold and rocky shores present an imposing appearance from the sea; and the favourable impression it makes at a distance is not dispelled on landing, it being remarkable both for fertility of soil, and beauty of situation. Besides a great quantity of wine, it produces olives and a variety of fruits, with wheat, maize, pulse, and excellent herbage. It is well supplied with game, especially partridges. Sulphur and other useful mineral products are abundant, and there are numerous hot springs and natural vapour baths, especially at its NW. extremity. The inhab. are partly husbandmen and partly sailors and fishermen. The manufacture of straw hats, baskets, and earthenware, are carried on to some extent.

Ischia is divided into two cantons: chief towns, Ischia and Foria; the former on the E. and the latter on the W. coast. Ischia, the cap. with 3,000 inhab., is a pretty town of white buildings, and the residence of a bishop. A round black rock forms a kind of haven by means of a causeway communicating with the town; its summit and sides are covered with houses, old turrets, and ruinous fortifications, huddled together, and accessible only on one side by a steep winding road. On this rock stands an old fortress, in which the last princes of the house of Aragon took refuge when Naples was conquered by the French. This building is now used as a prison. Foria is ill-built, and without a harbour.

The poets account for the volcanic phenomena of Ischia, as for those of Vesuvius and Etna, by ascribing them to the violent efforts of Typhœus and the other giants buried below them to escape from their prison:—

> 'Apparet procul Inarime, quæ turbine nigro
> Fumantem premit Iäpetum, flammasque rebelli
> Ore ejectantem.' Silius Italicus, xii. lin. 147.

See also Æneid, ix. lin. 714.

Ischia was, at a remote period, colonised by the Eretrians and Chalcidians, and afterwards by Syracusans sent thither by Hiero, who, however, abandoned the island in consequence, it is said, of a violent eruption of Mount Epopeus, B.C. 470.

ISE'RE, a frontier dép. of France in the E. part of the kingdom, formerly included in the prov. of Dauphiny; between lat. 44° 44′ 30″ and 45° 53′ N., and long. 4° 46′ and 6° 22′ E., having E. Savoy, N. the dép. Ain, and W. Rhone, Loire, and Ardèche, from all which it is separated by the Rhone, SW. Drome, and SE. Hautes Alpes. Length, NW. to SE., about 95 m.; average breadth about 40 m. Area, 828,934 hectares; pop. 577,748 in 1861. This dép. is very mountainous, especially its SE. part, and its scenery is in general highly picturesque. The Alpine chains that traverse it rise in the *Col de Saysse* to an elevation of 11,017 ft. (3,358 mètres), and in the *Pic de Belladone* to 10,302 ft. (3,140 mèt.) above the level of the sea. Some of the valleys are spacious and many very fertile; that of

Digitized by Google

Graisivaudan, through which the Isère flows, is one of the richest in France. There are a few plains in the N. and W., and numerous lakes and marshes, but none of the latter is of any considerable size. Next to the Rhone, the chief river is the Isère, which gives its name to the dép. It rises in the E. part of Savoy, runs with a tortuous course, generally SW., and falls into the Rhone about 5 m. NNE. Valence, after a course of 188 m., 106 of which are navigable. Its chief affluents are the Romanche and Drac; Grenoble stands on its banks. W. winds predominate in this dép., and the annual fall of rain is estimated at nearly 35 inches. The arable lands were estimated at 316,387 hectares, meadows 66,718, vineyards 27,698, forests 168,420, and heaths 171,990 do. Agriculture is backward, but improving. About 300,000 hectolitres of corn, chiefly wheat and rye, are harvested annually, being a larger supply than produced in any of the surrounding déps. The vine is pretty generally cultivated, and the produce of wine amounts to about 450,000 hectols. a year. Chesnuts, almonds, and other fruits abound, and large quantities of ratafia and other liqueurs are made. The number of mulberry trees had increased greatly of late. Good cavalry horses and mules are bred. The breed of black cattle is generally small, but the cows are good milkers, and some superior cheese is made. The sheep yield excellent wool, and many flocks from the surrounding déps. are sent to pasture in summer in the mountains. Poultry are reared in great numbers. The number of large properties is a good deal below the average of the déps.

Isère is one of the richest déps. of France in respect of minerals, and mining is one of the chief occupations of its inhabs. Gold and silver mines were wrought till the commencement of the present century. At present iron, copper, zinc, and lead are the chief metallic products; but mercury, bismuth, antimony, and cobalt are likewise obtained; as are also coal, sulphur, alum, marble, granite, and gypsum. There are numerous large smelting furnaces, forges, and steel factories. Paper, silk stuffs, and yarn, coarse woollens, table linen, sail and packing cloth, gloves, especially at Grenoble, cotton and woollen yarn, crape, straw hats, and mineral acids are the other chief manufactures. Lyons is the great entrepôt for the produce of Isère. The dép. is divided into 4 arronds., 45 cants., and 556 com. Chief towns, Grenoble, the cap., St. Marcellin, La Tour du Pin, and Vienne. The dép. abounds with remarkable natural curiosities, and Roman and other antiquities.

ISKARDO, a commercial town of Little Thibet, on the Upper Indus, about 130 m. NW. Leh, but at present little known. It is reported to be a large fortress of irregular construction, and the cap. of a distr. of the same name.

ISLAMABAD, a town of India-beyond-the-Brahmaputra, belonging to the prov. Bengal, district Chittagong, of which it is the cap., on the river Chittagong, 8 m. from the Bay of Bengal, and 134 m. SE. Dacca. Estimated pop. 12,000, about 2,000 of whom are of Portuguese descent. 'The streets are in good order, and the bazaar abundantly supplied with every sort of domestic and foreign produce. The mode of building, and the general aspect of every thing, is decidedly Bengalee. About 300 vessels, chiefly brigs of from 40 to 100 tons, are owned in the place, and many vessels from other places resort thither. The chief exports are rice and salt. Large Maldive boats come annually, during the fine season, with cowries, tortoiseshell, cumela, cocoa-nuts, and coir for rope; and carry away rice and small manufactures. (Malcolm, i. 134.) This town is the emporium of a great extent of country, and the resort of numerous merchants. A kind of cotton canvass is made in its neighbourhood, and vessels of considerable burden are built. Islamabad has two Portuguese churches, and a large English school, established in 1818. (Malcolm's Travels in SE. Asia.)

ISMAIL, a strongly fortified town and harbour of Russia in Europe, in Bessarabia, on the N. side of the Kilian arm of the Danube, about 43 m. from the Black Sea. Pop. 27,980 in 1858. Ismail was stormed by the Russians, under Suwarrow, in 1790, by whom it was given up to an indiscriminating pillage and massacre. It has a considerable trade, exporting corn, hides, and tallow. The custom-house and quarantine are of the first class. Owing to the shallowness of the water over the bar of the Kilian mouth, vessels bound for Ismail generally enter the Danube by the Soulineh or middle mouth.

ISPAHAN (*Aspadana*), a celebrated city, formerly the cap. of Persia, 211 S. Teheran, and 263 m. SSW. Bushire. Pop. estim. at 90,000 in 1860. The city was once so extensive and populous that the Persians said of it, '*Sefaon nispe gihon*'—'Ispahan is half the world.' (Chardin, iii. 3.) Ispahan is situated in the province Irak Adjimi, of which it is the cap., as well as of a begler-beglik, of the same name. The city, which was at the height of its glory during the reign of Shah-Abbas, in the 17th century, now presents to the traveller little beyond the magnificent ruins of its former greatness. It stands in the midst of an extensive plain, abundantly watered by the Zenderood, a river about 600 ft. broad; and is surrounded by groves, avenues, and spreading orchards. 'Among the first objects that struck our eyes,' says Sir R. K. Porter, 'were the numerous noble bridges, each carrying its long level line of thickly-ranged arches to porch-like structures, some fallen into stately ruin, others nearly entire, but all exhibiting splendid memorials of the Sefi race. The S. avenue, through which we entered the town, terminated at the great bazaar of Shah-Abbas, the whole of which enormous pile is vaulted above to exclude heat, yet admit air and light. Hundreds of shops without inhabitants filled the sides of this once great emporium, the labyrinths of which we traversed for an extent of nearly 2 m., till we entered the *Maidan - Shah*, another spacious theatre of departed grandeur.' (Travels, ii. 37.) This vast oblong, formerly enriched with shops, in which every commodity of luxury and splendid manufacture was exposed, is of very large dimensions, being (according to Porter) 2,600 ft. long and 700 ft. broad, and in the centre of each of its sides stands some edifice remarkable for grandeur or character, while the remaining parts composing the square are occupied by uniform ranges of building, once used as apartments for the nobility and officers of the Persian court, the lower part being open, and forming a noble arched walk. On the NW. side is the great painted gate of the bazaar, on which, in former times, stood the celebrated clock of Ispahan, and on the opposite side is the Meshed-Shah, a superb mosque built by Shah-Abbas, and dedicated to Mehedi, one of the twelve Imâms. The centre of the NE. side is occupied by another mosque, called Looft Ullah, which faces the Ali-Kapi, a noble gate, surmounted by a dome, the marble ornaments of which still remain. Above the gate is a pavilion, pointed out as the place where Shah-Abbas was wont to sit and witness the games and exercises of his troops in the Maidan; but only a few wooden columns, pieces of glass, and decayed paintings remain to

Digitized by Google

attest its former beauty, as described by Chardin. The summit of the tower commands a view of the city in its whole extent, presenting a succession of narrow unpaved streets, ruinous houses, mosques, and shapeless structures, broken by groups of various tall trees which once made a part of the gardens attached to the houses now fallen to decay. In the S. part of the city is a large tract of pleasure ground, called the *Chahar-Bagh*, which consists of a series of eight gardens, or *paradises*, watered by canals, basins, and fountains, adorned with numerous palaces or pavilions, and enclosed within four majestic walls. In the centre of the enclosure is the palace of the *Chehal Sitoon*, or forty pillars, the favourite residence of the later kings of the Sefi dynasty. Its front, which is entirely open to the garden, is sustained by a double range of columns, each shooting up from the united backs of four lions of white marble; and within are several large apartments on which all the caprice and cost of eastern magnificence have been lavished. The walls of the saloon, in particular, are embellished with large paintings, which, without exhibiting much taste or correctness of design, are still useful as illustrations of the manners and habits of the Persians. The suburb of Julfa, which is situated S. of the Zenderood, and connected with the Chahar-Bagh by a bridge 1,000 ft. long, having 34 arches, was originally founded for a body of Armenians, whom Shah-Abbas transplanted from their own country (Julfa on the Araxes), and stationed here, with full toleration of their religion, and many valuable mercantile privileges. They were known all over the E. for their manufacturing industry; and their quarter, which was inhabited exclusively by Christians, formerly comprised 13 churches, and some of the handsomest private residences and gardens in the city, the pop. of this industrious quarter alone having exceeded 30,000 at the close of the 17th century. At present, however, it is little more than a mass of ruins, the few remaining houses being tenanted by a population, whose moral condition, according to Sir R. K. Porter, has suffered a deterioration corresponding to the decline of their fortunes. The suburb of Abbas-abad, which lie W. of the city, and that of the Guebers, or fire-worshippers, on the S. side, near Julfa, are entirely destroyed.

Ispahan has, within the last 50 years, begun to revive from its desolation; and the spontaneous efforts of the inhabs., in trying to better their condition, were ably seconded by the exertions of Hadji Mahommed Hussein Khan, the *Ameen-a-doolah*, or second minister of the shah, who employed his immense wealth and influence in the improvement of his native city. A new palace, near the *Shetel Sitoon*, has been completed, and extensive repairs have been made in the bazaars, streets, and fountains; besides which, a large tract of land, close to the river, has been enclosed to form rice plantations, the produce of which now forms an important article of commerce. The manufacture of all kinds of woven fabrics, from the most costly gold brocade of figured velvet to the most ordinary calico or coarse cotton, is pursued on an extended scale; partly on raw materials raised in the surrounding district, and partly also on silk and cotton wool introduced from Ghilan and other provinces of Persia; many hands are also employed in making gold and silver trinkets, paper and paper boxes, pencases, ornamented book covers, fire-arms, sword-blades (of steel, from India), glass, and earthenware. These goods are sent to all parts of the E., Ispahan being the chief emporium in Persia, and on the great line of communication between India, Caubul, and China, on the E., and Turkey, Egypt, and the Mediterranean, on the W. Its trading prosperity, however, like that of Bushire, is much obstructed by the monopolies and injudicious taxes of the government. The inhabs. of Ispahan are considered the best manufacturers in Persia, and education seems to be very general. Every one above the lowest order can read and write; and artisans and shopkeepers are familiar with the works of their favourite poets. The merchants form a distinct class: frugal, and even penurious in their habits, they seldom make any display of wealth, and are extremely wary and circumspect in their commercial speculations, owing, no doubt, to the severity of their sufferings during national disturbances, when they have been usually selected as the first victims of plunder and oppression. Their houses are mean on the outside, with low, narrow entrances, but are often fitted up internally with great luxury. These merchants, with all their affectation of poverty, have capitals embarked in trade which vary from 80,000 to 150,000 tomans, and not only control in a great degree the whole trade of Persia, but are able also, it is said, to influence prices in the markets of W. Hindostan. Owing to insecurity and bad government, the interest of money in Ispahan varies from 12 to 36 per cent. a year; and the farming pop. are often compelled to pay 60 per cent. for the loans required to enable them to meet the exactions of the government.

The origin of Ispahan is uncertain; but its position seems to identify it with the *Aspadana* of Ptolemy. Under the caliphs of Bagdad it became the cap. of Irak, and rapidly increased in wealth, pop., and trade. This rising prosperity, however, received a severe check during the invasion of Timour, who took the city, in 1387, and gave it up to military execution. The troops massacred 70,000 of the inhabs., whose heads, piled on the walls of Ispahan, long attested the merciless severity of the conqueror. From this desolation the city gradually revived under the Sefis; but it did not become the residence of royalty till Shah-Abbas the Great made it the metropolis of Persia, embellished it with stately mansions, and rendered it not only a luxurious capital, but filled it with merchants, artificers, and agriculturists from Europe as well as Asia, whose united industry soon made it the great emporium of the Asiatic world. The city was at this time 24 m. in circuit, and is stated to have comprised 160 mosques, 48 colleges, 1,800 caravanserais, 273 public baths, and 12 cemeteries; while the pop. is said to have amounted to 600,000 persons. The shah's court, at this time, was the resort of ambassadors from the proudest kingdoms of the east, as well as of Europe. This prosperity, however, was but of short duration; for, in 1722, Persia was invaded by the Affghans, and Ispahan, after sustaining a siege of eight months, during which the adjacent country was laid waste by the barbarous policy of the enemy, was reduced to its present ruinous state: the walls were so completely destroyed that all traces of them are obliterated, the palaces dismantled and robbed of all their ornaments, and the people massacred without mercy. Nadir-Shah recaptured the city in 1727, but he took no steps to restore its ancient glory. The sovereigns have resided at Teheran during the last hundred years, and Ispahan has gradually fallen to a state of decay, from which even its commercial importance has not been able to preserve it.

ISSOIRE, a town of France, dép. Puy-de-Dôme, cap. arrond. on the Creuze, 19 m. SSE. Clermont. Pop. 6,159 in 1861. The town is well built and clean; in its centre is a spacious market-place.

It has manufactures of copper kettles and other copper wares, with some trade in walnut oil, hemp, and wine.

ISSOUDUN, a town of France, dép. Indre, of which it is the most important, though not nominally the chief, town, cap. arrond., on the Theols, which is here crossed by three bridges, 16 m. NE. Châteauroux, on the railway from Paris to Toulouse. Pop. 14,282 in 1861. The town stands partly on the declivity of a hill, and partly in the plain at its foot; is said to be better laid out and built than any other town in the centre of France; and is remarkably clean. It owes its regularity and beauty principally to the numerous devastating fires it has undergone at different times, during one of which, in 1651, the citizens repulsed and put to flight the troops of Louis XIV., then investing the place. Issoudun was formerly a fortress of some strength, and possessed a large castle, a portion of which, now remaining, serves as a prison. The town has 4 churches, 2 hospitals, a new town-hall, barracks, a small theatre, and several public walks. It is the seat of a sub-prefecture, of a tribunal of original jurisdiction and commerce, and of a chamber of manufactures. It has linen and woollen cloth and parchment factories, and was formerly a place of considerable commercial activity; but it has not yet recovered the injury done to its industry by the revocation of the edict of Nantes. Issoudun is of great antiquity, having been one of the towns laid waste by the Bituriges to arrest the progress of Julius Cæsar.

ISTRIA. See ILLYRIA.

ITALY (Lat. *Italia*, Fr. *Italie*), one of the most celebrated and fertile countries of Europe, the seat of the greatest empire of antiquity, and of art, science, and civilisation, when the surrounding countries were immersed in barbarism. It is finely situated, comprising the whole of the central peninsula of S. Europe, with the extensive and rich country to the N. of the peninsula, and included between the Alps and the Mediterranean. It extends between lat. 36° 46′ and 46° 30′ N., and long. 6° 30′ and 18° 30′ E., having to the NW. France, N. Switzerland and the Tyrol, NE. Carinthia, Carniola, and the Hungarian Littorale, E. the Adriatic, and on all other sides the Mediterranean. In antiquity, it was known by the names of *Hesperia*, *Ausonia*, *Saturnia*, *Œnotria*, &c.; but these names, though loosely applied to the whole country, were strictly applicable only to particular portions of its surface. Various derivations have been assigned to the term Italy. The name is said to have designated originally only its more S. portion; but in the course of time it superseded every other term, and was gradually extended to the whole country from the Alps southward.

In shape, Italy has been familiarly likened to a boot, the heel formed by the Terra d'Otranto, and the foot by Calabria. The general direction of the Italian peninsula is SE. and NW.; its length, from Mount St. Gothard to Cape Spartivento, in Calabria, is nearly 750 English m.; its breadth varies from about 380 m. in N. Italy, to less than 80 m. near its centre; and in one part of Calabria it is no more than 18 m. from sea to sea. The area of the mainland may be estimated at about 100,000 sq. m.; but two large islands, Sicily and Sardinia, and many smaller, as Elba, Ischia, the Lipari group, and others, belong to Italy. The kingdom of Italy, according to an enumeration made in the spring of 1864, has a population of 21,777,334 souls, dwelling on an area of 98,784 English square miles. The extent and population of the ancient political divisions of which the monarchy is composed, is shown in the following table:—

Provinces	English sq. miles	Population
Continental Sardinian States	15,373	3,780,967
Island of Sardinia	9,547	573,115
Lombardy	7,765	2,764,912
Emilia	8,821	2,117,732
Umbria and the Marches	5,997	1,393,824
Tuscany	9,150	1,812,253
Neapolitan States	31,621	7,029,273
Island of Sicily	10,510	2,302,168
Total	98,784	21,777,334

Added to this must be the territory still (1865) belonging to the pope, containing an area of 4,891 sq. m., with 692,106 inhabitants, and Austrian Italy, comprising 8,720 sq. m., with a pop. of 2,446,056. This brings the total area of Italy to 112,395 sq. m., with 24,915,496 inhabitants.

The kingdom proper is divided into 193 'circondarii,' or administrative circuits, subdivided into 1,597 'mandamenti,' or districts, embracing about 8,000 parishes.

The population is most crowded in the south of the Sardinian states; it is least dense in the island of Sardinia and in the Marches. Italy contains on an average 220 inhabitants to the square mile—a figure higher than that of France and Germany, but lower than that of England, the Netherlands, and Belgium.

Physical Geography.—The frontier of Italy is extremely well defined. She is defended on the N., the NE., and NW. by the vast bulwark of the Alps, the passes of which might be easily guarded and made impervious to hostile attack. She has everywhere else a sea frontier; so that, while she is protected by a natural rampart against attacks by land, she has every facility, by means of her extensive sea frontier and numerous ports, for internal and foreign commerce.

Though bounded by the Alps, only a comparatively small portion of the surface of Italy is covered with Alpine ramifications. The mountain system exclusively belonging to the peninsula is that of the Apennines. These mountains, which may be regarded as a continuation of the maritime Alps, at first run E. along the Mediterranean shores in the former Sardinian territory; and then, turning gradually S., pass through the peninsula nearly in its centre, and sending off numerous branches on either side. At length, near lat. 40° 45′, the main ridge divides into two separate chains, the principal of which continues S. to the extremity of Calabria, while the other runs ESE. through the Terra d'Otranto. The mean elevation of the Apennines is about 4,000 ft.; Monte Corno, the summit of the Gran' Sasso d'Italia, in Abruzzo Ultra, is, however, 9,521 ft. in height, and is capped with snow during the whole year; Monte Velino is 8,182 ft.; and Monte Sibilla, 7,212 ft. high; and many other summits in Central and extreme S. Italy approach the latter in elevation. The Apennines are much less rugged than the Alps, and abound with rich forests and pasture land, on which numerous flocks of sheep are fed. They are of great service to the country, by the numerous rivers which have their sources in them, and by their influence in moderating the summer heats. Italy is also famous for its volcanoes; those of Etna, Vesuvius, and Stromboli, in the Lipari Islands, being, if not the greatest, by far the most celebrated and best known of any on the globe.

But though for the most part mountainous, Italy has some plains of great extent and extraordinary

Digitized by Google

fertility. Of these, the most extensive and richest is that of Lombardy, or of the Po. This noble plain extends from the foot of the Alps, near Susa, to the mouths of the Po, in the Adriatic, a distance of about 250 m., with a breadth varying from 50 to 120 m., including nearly the whole of what was formerly known as the Lombardo-Venetian kingdom, and the northern part of Umbria and the Marches. This great plain is extremely well watered; the numerous rivers and streams that rise in the Alps, and pour down into the plain, afford a vast and inexhaustible supply of water; and from these an infinite number of canals have been cut, that diffuse the fertilising element over the whole country, and give to its corn and rice fields and its variegated meadows, extraordinary productiveness. The soil, though different in the various parts, is for the most part loamy and very fertile. The surface is generally divided into small farms of from 10 to 60 acres; and if not scientifically, is at least carefully and economically, cultivated. The fields are enclosed by lines of fruit-trees, mulberry-trees, poplars, and oaks; and their growth is so luxuriant, that in many parts the country has the appearance of a vast forest. This plain has to boast of an immense number of cities, many of which are of great antiquity and considerable size, and all of them adorned with noble buildings and valuable works of art. Probably, on the whole, the plain of Lombardy may be called the garden of Europe; and, at all events, it is certainly the garden of Italy.

The next great plain stretches along the W. shore of Central Italy for about 200 m., from Pisa, down to Terracina, in the former Neapolitan states. Within these limits are included the Tuscan *maremme*, great part of the *campagna* of Rome, and the *Pontine marshes* (anc. *Pomptinæ paludes*). This plain is, in all respects, very different from the former. Though in antiquity, and to a certain extent, also, in the middle ages, it was celebrated for its fertility, and was highly cultivated and populous, it is now comparatively a desert. This is a consequence of the prevalence of *malaria*, which infests these districts to such an extent as to render them at certain periods of the year all but uninhabitable. They are necessarily, therefore, for the most part in pasture; and are occupied by a vagrant population, who reside in the country only in the healthy season. In the campagna of Rome the shepherds who have charge of the flocks are obliged, during the summer season, to repair every night to the city, or to some other town, as sleeping in the country would be fatal; it is then, also, extremely dangerous to travel by night through the Pontine marshes. The vagrant population of this extensive tract, and those who live on its borders, have all an emaciated, unhealthy, cadaverous aspect; and where the plain is cultivated, the labourers who come from other parts of the country to assist in the harvest frequently fall victims to the pernicious influence of the atmosphere, or have their constitutions injured for life. In the Tuscan maremme, the soil has in many places become, from neglect, sterile and unproductive; but, in the campagna of Rome and the Pontine marshes, the soil is, in most parts, extraordinarily fertile, is covered with a luxuriant vegetation, and, were it properly cultivated, would yield immense crops.

There are no hills in the Campagna. Its undulations do not arise from elevations of the surface, but from depressions; it may be described as a *plateau* from 1 to 200 ft. above the level of the sea, traversed by wide and shallow valleys, which occupy one-fourth or one-fifth part of its surface. Some of these valleys are dry, others have small sluggish streams, and they are from 50 to 150 ft. deep. There is a strip of swamp along the sea-coast, probably 2 or 3 m. broad; but with this exception, the Campagna di Roma seems to be generally dry; for the wet lands seen in some of its small valleys are such as we find in every country, and are not worth mentioning as an exception. Its present appearance is bleak and deserted in a remarkable degree. There are scattered clumps of brushwood; but the eye ranges over it for miles often without discovering a single timber tree, and there is nothing deserving the name of woodland or forest within its vast bounds. Fences are rare, except near Rome; a gentleman's country house, or villa, is not to be seen in it, nor a decent farm-house; and even the cottages are few and far between. The whole district is divided into immense estates, usually let in small lots, on the *métayer* system, and is kept mostly in pasture, not more than one-eighth or one-tenth part being under the plough or rather *hoe*, for it is laboured with the latter.

The Pontine marshes are 24 m. long, and probably 12 broad. The work of draining was commenced under the Roman republic, was continued by the emperors and popes, and is not yet entirely finished. The journey through them is most monotonous. A canal 50 ft. broad, the grand trunk of the drainage, extends along the whole length, in a line mathematically straight. The soil thrown out of this canal forms a raised bank, 5 or 6 ft. above the water, and 80 or 100 ft. broad. An excellent road passes along this bank, with a double row of lofty trees on each side It was upon this canal that Horace travelled in a track-boat, on his journey to Brundisium. The marshes are not altogether uninhabited. A few houses are met with on the road, and others are seen in the distance. The surface is chiefly in pasture; but part is planted with tall reeds used for vine props, part covered with brushwood, probably raised for fuel, and some small patches are ploughed. Very little wet marsh is now visible till the north or higher end, where there is a considerable tract still undrained. The general surface of the plain inclines eastward and southward, so that the inland part is actually lower than that towards the coast on the north; and, like the Neapolitan Campania, the level ground abuts sharply against the mountains.

Various and very conflicting causes have been assigned for the increase of *malaria*, and the consequent depopulation of these extensive and once fertile territories. They were always, indeed, rather unhealthy; but their unhealthiness has been prodigiously aggravated in modern times. It is believed by many that its deterioration has been, in a considerable degree, owing to the wanton destruction of the woods and forests, by which the land was shaded in antiquity, and screened from the fiery beams of the summer sun. No doubt it is in part also a consequence of the obstructions that have been allowed to grow up in the courses and at the mouths of rivers, by which their waters have been formed into stagnant and noxious marshes. But the last-mentioned circumstance may itself be ascribed to what has had by far the greatest influence, that is, to the decay of pop. and industry, occasioned by the irruptions of the barbarians, the ravages of war, and the influence of epidemics. The ill success that attended the efforts of the late Tuscan government to reclaim some portions of the maremme, by establishing colonies in them, appears to have led many to believe that they were absolutely irreclaimable. However, this is not the case. The great works, principally of a hydraulic character, that have of

Digitized by Google

late years been undertaken and carried into effect in Italy, by which large tracts of the maremme have been converted into productive estates, show what may be done by judicious efforts on a large scale. Hitherto, indeed, the land that has been reclaimed and made tolerably healthy, bears but a small proportion to what is still abandoned.

The third great plain of Italy is that of Capitanata (Apulia), having Foggia in its centre. It comprises the greater portion of a tract of flat country, extending from the border of Samnium to Otranto, along the shore of the Adriatic, anciently included in Daunia, Japygia, Peucetia, and Messapia. The lower part of the Apulian plain is arid, the rivers decreasing both in size and frequency as we proceed farther S.; and in the provinces of Otranto and Bari the rain water is obliged to be carefully preserved in cisterns for the irrigation of the land. The upper portion of the plain is more plentifully supplied with water, but it also has, in many parts, a sandy and thirsty soil. A great part of it is destitute of bush, house, or tree; it is farmed in large estates, and round about Lucera and elsewhere there is a good deal of arable land; but by far the greater portion of the surface consists of pastures, called *tavoliere*, into which immense flocks of sheep from the Abruzzi are driven to feed in the winter.

The level district round Naples is still well entitled to its ancient epithet of *Campania Felix*, being at once rich, well cultivated, and densely peopled. The *Campania* is a tract of *carse* land, 40 m. in length, by 15 or 20 in breadth, presenting a dead level like the surface of the ocean, and probably from 1 to 100 ft. above it. In the midst of this vast area, there are two large islands; Vesuvius and its dependant hillocks constitute one of a round form, and about 8 m. in diameter; a chain of hillocks, narrow ridges, and truncated cones, extending from Naples to Cape Misenum, covering a space of 12 m. in length, and 3 or 4 in breadth, constitutes the other. With the exception of these two elevated tracts, the whole district is a dead level. It is, in fact, a portion of the bottom of the ocean lifted up by subterranean agents, and converted into dry land. As might be expected, it does not rise by a series of small elevations to the outer hills of the Apennines; it abuts sharply against them, as the waters of the German Ocean abut against the last level of the Lammermuir hills. The *Campania Felix* is probably equal in fertility to any spot in the world. Though so level, it is remarkably dry, and hence free of malaria. The vegetable soil, which is exposed in drains at some places, is of great depth, and cultivated like a garden. It is put to what may be called a double use, first ploughed and sown with corn and then, at every interval of 50 or 100 ft. there is a row of vines.

Rivers and Lakes.—Few countries are better watered than Italy, whether in regard to springs, rivers, or lakes. The principal river is the Po, the *Eridanus* or *Padus* of the ancients; it issues from Mount Viso in the Alps, on the confines of France, and receives, during its long course to the Adriatic, a vast number of tributary streams. It divides the great plain of Lombardy into two nearly equal parts, and is the grand receptacle for the streams flowing S. from the Alps, and for the lesser waters that flow N. from a part of the Alpine range.

> 'Fired with a thousand raptures, I survey
> Eridanus through flowery meadows stray,
> The king of floods! that, rolling o'er the plains,
> The towering Alps of half their moisture drains,
> And proudly swoln with a whole winter's snows,
> Distributes wealth and plenty where he goes.'

Of its numerous affluents, the most important are the Baltea, Sesa, Tessino, Adda, Chiesa, and Mincio, from the N.; and the Tanaro, Bormida, Trebia, famous for the great victory gained by Hannibal on its banks, and Panaro, on the S. The other large rivers of the N. of Italy, are the Adige, Brenta, Piave, and Tagliamento, all flowing S. from the Alps. In Central and Southern Italy no great river can be expected to arise, on account of the narrowness of the peninsula, and the central position of the Apennines, in which they have their sources. The Tiber is the principal, and also the most celebrated; but, like the other rivers of this part of Italy, it is interesting chiefly from its ancient renown, and the classical recollections associated with its name, than from its magnitude or intrinsic importance. Among others of this class are the Arno and Ombrone in Tuscany. Considerable differences of opinion have taken place as to the identity of the Rubicon, the SE. boundary of Cisalpine Gaul, so famous in ancient history. It is generally, however, believed to be represented by the Fiumicino, which falls into the Adriatic 18 or 20 m. below Ravenna. An ancient law of the senate and people of Rome made it death to cross this river with arms in a hostile intention. Its passage, by Cæsar, has been finely described by Lucan (lib. i. lin. 183–227); and his exclamation on that occasion, '*jacta est alea*,' has passed into a proverb. In the former Neapolitan states, the only streams deserving the name of rivers are the Volturno, the Garigliano, anciently the *Liris*, and the Ofanto, formerly the Aufidus, which, flowing past Cannæ, is thence called *sanguineus* by Silius Italicus (lib. x. 320). The rivers which descend from the Apennines are apt, like other mountain currents, to swell suddenly, and to cause inundations in the level parts of the country, particularly towards the mouth of the Po.

> 'Proluit insano contorquens vertice silvas
> Fluviorum rex Eridanus, camposque per omnes
> Cum stabulis armenta tulit.'
>
> Georg. i. 481.

To restrain this, dykes or mounds have been erected in many places; and as the earthy substances brought down by the flood have, in many cases, raised the bed of the stream, and required fresh embankments, the mounds are often of considerable height, and have the appearance of aqueducts.

The most considerable of the Italian lakes are situated in the N.; including those of Garda, Maggiore, Como, and Lugano. In Central Italy are the lakes of Perugia (an. *Lacus Thrasimenus*), Bolsena, Bracciano, Celano or Fucino, and Albano; and in the S. those of Averno and others, which, though insignificant in point of size, have acquired imperishable renown. Many considerable salt lagoons line the Mediterranean coast in various parts of Tuscany and the Marches, and the shores of the Adriatic in the Venetian territories, and round the promontory of Gargano. Besides the Pontine marshes, there are numerous marshy tracts of less extent in the Val di Chiana and other parts of Tuscany, in the plain of Salerno, and along the banks of the Po, especially in the region round its mouth. S. of the last-mentioned tract, a considerable extent of bog-land, called the *Val di Commachio*, occupies a large portion of the papal legation of Ferrara. Italy has about 3,000 m. of sea-coast. Its chief capes and headlands are Argentaro, Circello, Campanella, Spartivento, and Santa Maria di Leuca, on the Mediterranean, and the Testa di Gargano and Cape Promontoire (Istria), on the Adriatic. Of the gulfs or bays formed along its coasts, the principal are the Gulf of Taranto on the SE., between Apulia and Ca-

Digitized by Google

labria; those of Genoa, Gaeta, Naples, Salerno, Policastro, Eufemia, and Gioja, on its W.; and those of Squillace, Manfredonia, and Trieste, on its E. shores.

Geology and Minerals.—Italy may be described as 'a calcareous region enclosing a schistous band;' but volcanic action has been so prevalent, that the strata are often found extremely disarranged from their original position. N. of Genoa, the primary formations in the Apennines include granite, gneiss, serpentine, quartz, and clay-slate, often intermixed with transition limestone and grauwacké. Granite and gneiss are absent in the Apennine region of Central Italy, but they reappear in the S., where they predominate among the primary formations, from the Abruzzi to the furthest end of Calabria. They also exhibit themselves in the *maremme*, near the surface; the secondary formations in Tuscany being often intermixed with primary rocks, and in some instances overlain by them. The tertiary deposits of Italy are very extensive, and form the sub-Apennine region, or low hill ranges, extending along the flanks of the Apennines throughout the whole peninsula, consisting of sandstone, marl, and coarse limestone. These formations contain an abundance of marine shells, among which as many as 770 different species have been enumerated, half of them still inhabiting the adjacent seas. The alluvial plain of the Po abounds in fossil remains of mammalia, birds, and amphibia, and similar fossils have been discovered in the Neapolitan states. Several regions in the central and S. parts of Italy are almost wholly composed of volcanic products. Such are the Campagna di Roma, which abounds with a volcanic tufa, called *travertius*, of which great part of Rome is built; and the neighbourhood of Vesuvius, which is covered with lava and *scoriæ*. Numerous traces of extinct volcanoes exist, the craters of which have been converted into lakes.

Italy is less rich in metals than in most other things; it, however, is well supplied with iron; it has also copper and lead ore, and the precious metals have been found, but in inconsiderable quantities. The centre is the chief seat of mining industry, and large quantities of iron are furnished by the island of Elba. The most valuable mineral product of continental Italy is, however, the fine statuary marble of Carrara. Marble of a similar kind, and nearly as good, is found at Seravezza, and other kinds are met with in almost every part of the peninsula. Great quantities of borax are found in Tuscany: sulphur, building stone, salt, nitre, alum, alabaster, and crystal are the other chief mineral products; and the Apennines abound in basalt, dried lava, *pozzolana* sand, and other volcanic substances. Caverns of stalactites are met with in many parts, and mineral springs and vapours are of very frequent occurrence. (Hoffmann, Europa; Lyell's Geology.)

The *climate* of Italy is delightful. Owing to its length from N. to S., and the great difference in the elevation of its surface, there is necessarily a considerable variation in the temperature of different parts; but, speaking generally, the air is throughout mild and genial; the excessive heats of summer are moderated by the influence of the mountains and the surrounding sea, and the cold of winter is hardly ever extreme. As respects temperature, it may be divided into four regions: the first, extending N. of the Apennines, and of lat. 43° 30′, and including the plain of Lombardy, has a climate somewhat similar to that of S. Germany, but warmer. In winter, the lakes of Garda and Maggiore, and the lagoons of Venice, are partially frozen; snow often falls, and the thermometer sometimes sinks to 14°; even in summer, the N. wind is cold, and oranges, lemons, and other *agrumi* do not flourish in the open air. The second region, extending between lat. 43° 30′ and 41° 30′, includes the greater part of Tuscany, Umbria, and the Marches, with the N. part of the Neapolitan states. Within this band, snow and ice are mostly confined to the mountain tops, and olives and *agrumi* of all kinds flourish luxuriantly without culture. The third region, from 41° 30′ to 39°, comprises the middle Neapolitan provs. Snow is here very rare, and the finest fruits are found in the valleys throughout the winter. The fourth region embraces the S. part of Calabria, with Sicily and the Lipari Islands. Here the thermometer never falls to the freezing point, and the sugar-cane, Indian fig, papyrus palm, and other tropical plants are abundant on the low lands.

The following is a table of the medium temperature of the year in different latitudes of Italy:—

Places	Lat. N.	Height above Sea	Mean Annual Temperature
Milan . .	45° 28′	492 feet.	53·6° Fahr.
Bologna .	44 30	255 ,,	55·44 ,,
Florence .	43 46	230 ,,	59·4 ,,
Rome . .	41 53	187 ,,	60·0 ,,
Naples . .	40 50	—	62·2 ,,

Throughout most parts of Italy there are but three seasons in the year: a spring, which more than realises all that poets have said in its praise; a hot summer, and a short, and not severe, winter: most of the vegetable products, even in the N., flower by the end of March. Heavy rains prevail during Oct. and Nov.; W. and NW. winds are the most prevalent; but the *libeccio* and *sirocco*, the *simoom* of the Arabs, also occasionally occur, and exert an oppressive, and in the S. an injurious, influence over the animal frame.

Notwithstanding the mildness and general salubrity of the Italian climate, large districts of the country are very unhealthy, and the chances of longevity are less than in England and other countries under more inclement skies. But the unhealthiness is not the effect of climate, but of circumstances connected with the physical geography of the country, and the want of industry. Nor is the lesser longevity of the Italians to be ascribed to their climate, but to the depressed situation and poverty of the bulk of the people; the bad quality and scanty supply of food and clothes; the low state of medical science; and the want of cleanliness. The genial climate may, indeed, be said to contribute indirectly to bring about these results, by encouraging slothful habits, and making the people less industrious than they would be were it more severe.

It has been supposed that the climate of Italy has undergone a considerable change, and that it is now less cold in winter than formerly. There seem to be good grounds for concurring in this opinion; and the change may be accounted for by the cutting down of the forests already alluded to, and by the changes that have taken place in the countries to the N. of Italy. (See Hume's Essay on the Populousness of Ancient Nations, and the authorities referred to in it.) It is to be doubted, however, whether there be any foundation for the notion, that either the productiveness of Italy or its pop. has diminished. Some extensive tracts, as the Tuscan *maremme*, the Campagna, and some parts of the former Neapolitan provinces, which in antiquity were occupied by a dense pop., are now all but uninhabited; but, on the other hand, Lombardy has been signally improved, and is at this moment infinitely better cultivated and more populous than at any former period. On the whole,

Digitized by Google

Digitized by Google

it is probable, that whatever Italy may have lost in respect of pop. in certain districts, has been fully countervailed by a corresponding gain elsewhere; and that her decline from her ancient fame and influence has not been occasioned by any decline in the number of her sons.

General Aspect of Italy.—Speaking generally, nothing can surpass the beauty and diversity of the scenery of Italy. Its mountains have every variety of form and elevation: alternately smooth and rugged, they exhibit by turns gentle declivities and fine pastures, tremendous precipices and chasms, water-falls, deep and majestic forests, and summits, sometimes capped with snow, and sometimes emitting smoke and flames. Many of the valleys, as that of the Arno, are delightful beyond description; the plain of Lombardy is not less beautiful than rich, and even the half-desert tracts along the W. shore interest by their solitude and their vastness. The extent of the sea coast, and the number and magnitude of the lakes, add also greatly to the beauty and variety of the landscape; while the clearness of the atmosphere gives to every object a brightness of colouring, and distinctness of outline, that can with difficulty be conceived by those accustomed to our cloudy and less brilliant skies. No wonder, then, that the beauty and richness, as well as the glory of their country, should have been a favourite theme of the ancient writers:—

> 'Sed neque Medorum silvæ, ditissima terra,
> Nec pulcher Ganges atque auro turbidus Hermus
> Laudibus Italiæ certent; non Bactra, neque Indi
> Totaque thuriferis Panchaia pinguis arenis.
>
> . . . .
>
> Sed gravidæ fruges et Bacchi Massicus humor
> Implevêre; tenent oleæ armentaque læta.
>
> . . . .
>
> Hic ver assiduum atque alienis mensibus æstas;
>
> . . . .
>
> Adde tot egregias urbes, operumque laborem,
> Tot congesta manu præruptis oppida saxis,
> Fluminaque antiquos subter labentia muros.
>
> . . . .
>
> Salve, magna parens frugum, Saturnia tellus,
> Magna virûm.'—Georg. ii. 136, 143, 149, 155, 173.

In respect of its *vegetable products*, Italy may be divided into six regions, according to its elevation. These are as follow:—

Regions	Elevation	Products
1. Of the plains	— to 1,200 ft.	Lentisk, myrtle, laurel, ilex and cork trees, citron, fig, olive, vine, and pomegranate.
2. Oak and chesnut	1,200 — 3,000 —	Oak, chesnut, beech, olive, vine, and corn.
3. Beech and fir	3,000 — 5,000 —	Beech, firs, larch, juniper, and wheat, barley, oats, and maize, to 4,000 ft.
4. Sub-Alpine region	5,000 — 6,000 —	Dwarf pine, arbutus, gentian, anemone.
5. Upper Alpine region	6,000 — 8,500 —	Androsacæ, saxifrage, and other Alpine plants.
6. Region of snow	8,500 ft. and upwards	Iceland moss, *Artemisia mutellina*, and a few other plants.

There is a much greater diversity of plants in the S. portion of the Apennine chain than in any other part of its extent: this diversity is the most marked in the second, or oak and chesnut region. The Italian or S. declivities of the Alps present a greater diversity of vegetation than those facing the N.; and more species of plants are found on them than on the Apennines. On the Alpine summits are seen the dwarf birch, juniper, and other plants of Lapland and Siberia, while at their feet flourish the fig, *Agave americana*, and *Cactus opuntia*. Mt. Vesuvius has a Flora peculiar to itself.

Italy is much more an agricultural than a manufacturing country; but the indolence of a great part of the pop., and the backward state of agriculture, render the actual return far inferior to what the country is calculated to yield. Silk has become a most important product, and its culture has increased very rapidly within the last half a century. Wine and olives, particularly the latter, are also very important products; and there is a great abundance of the finest fruits. Corn is not so generally cultivated in Italy as in the more N. countries of Europe; but pulse and other vegetables are extensively raised. Particular parts of the country are appropriated to particular products. Lombardy is the chief corn country; in the Genoese and Tuscan territories, the culture of fruit, particularly of olives, predominates; while the unhealthy district of the Maremme and Campagna remains, as before stated, chiefly in a state of natural pasture. Skilful agriculture is principally confined to the N.; in the centre, with the exception of portions of Tuscany, and S., it is at a very low ebb; and in the former Neapolitan states the abundance of vegetable productions is owing more to the climate and soil than to the industry of the husbandman. The products of the N. parts of the peninsula are found there in abundance; and whole groves of olives are seen growing in the open country, interspersed with spices and other tropical products.

The pastures of Italy are stocked with large herds of black cattle, sheep, and goats: few horses are reared; and the breed is in little estimation, except in certain parts of the Neapolitan territory. Mules are more common, being found better adapted for the bad and mountainous roads. The operations of agriculture are performed by oxen. The buffalo is found in Italy, though hardly any where else in Europe. Hogs are fed in large herds in the forests, particularly in Calabria. The mountains and forests contain a number of wild animals; among others, the boar, stag, marmot, and badger. The lynx or tiger-cat is not uncommon in the mountains of Abruzzo; and the crested porcupine is supposed to be peculiar to the S. of Italy. Foxes, hares, and winged game are sufficiently abundant. From the heat of the climate in the S. provs., snakes and reptiles of different kinds are numerous. The rivers, lakes, and coasts abound with fish.

Manufactures and Trade.—Italy is not distinguished for manufactures: the chief are those of silk fabrics and silk thread, which have their principal seat in Lombardy. Woollen and linen stuffs, straw plait, gauze, artificial flowers, straw hats, paper, parchment, leather, gloves, essences, and musical instruments are among the other goods manufactured in Italy; but, generally speaking, the raw products of the country form its chief exports, and most manufactured articles, whether of necessity or luxury, are imported from foreign nations. Venice and Genoa engrossed a large proportion of the trade of Europe, till the discovery of the passage to the East, by the Cape of Good Hope, and the enterprise of the Portuguese and Dutch, and after them the French and English, diverted European commerce into a new channel. From that period, the prosperity of those cities gradually decayed, and the first of them has sunk into comparative insignificance, while Italy at large has but a small portion only of her former commercial importance. The subjoined table shows the quantities of the principal articles imported

The value of the imports of British and Irish produce into Italy, in the years 1862 and 1863, was distributed as follows between the five great divisions of the kingdom:—

	1862	1863
	£	£
Sardinia, including the Island	2,143,772	2,116,269
Tuscany	935,426	1,073,879
Naples	988,837	1,626,674
Sicily	540,067	682,718
Adriatic Ports of Ancona and the Romagna	448,227	403,693
Total	5,056,329	5,903,233

Shipping.—The total number of ships engaged in the foreign commerce of Italy during the year 1862 was 40,692, tonnage 5,801,843, of which 20,188 entered the ports of the kingdom, and 20,576 cleared. These figures include 3,576 steamers arriving, and 3,418 departing. Sailing navigation bears the proportion to steam-navigation of 83 per cent. Out of every 100 sailing ships 61 sail under the national flag, while out of every 100 steamers only 21 carry Italian colours. The coasting trade employed 173,695 vessels, tonnage 8,495,802; and the steamers arriving numbered 7,441, tonnage 1,534,507. Almost the whole of the coasting trade is carried on in native bottoms. There are not more than 16 foreign vessels in 1,000 engaged in it; but out of every 100 steamers engaged in it, 19 are foreign. The

Digitized by Google

navigation with foreign ports compared with the coasting trade is as 1 to 4.

The number of seamen employed amounted in 1862 to 948,819, of whom 259,669 were engaged in the foreign commerce, and 689,150 in the coasting trade. The foreign seamen numbered 201,080, and the native 747,739. For every 100 tons of shipping engaged in foreign commerce, the crew was 9 men, and 16 men for every 100 tons engaged in the coasting trade.

The number of fishing boats was 8,835 of which 7,822 were engaged in coast fishing, and 657 in deep-sea fishing, the remainder in foreign waters. 374 boats were employed in the coral fisheries in national waters, and 140 in foreign waters.

The number of large sailing vessels at the same period was 22,656, of a tonnage of 983,562. The shipping was distributed as follows:—

	Ships	Tons
Kingdom of Italy . . .	16,500	666,624
Istria and Venice . . .	5,858	312,250
Papal States	298	4,688
Total . .	22,656	983,562

It would appear, therefore, that, with the exception of Great Britain, the Italian merchant service is larger than that of any other country. It is to be remarked, however, that in all these official returns Istria and Venice, as well as the Roman States, are considered as part of Italy.

Army and Navy.—The Sardinian law of conscription forms the basis of the military organisation of the kingdom of Italy. According to it, a certain portion of all the young men of the age of twenty-one is levied annually for the standing army, while the rest are entered in the army reserve. The standing army is divided into six corps d'armée, each corps consisting of three divisions, and each division of two brigades; four or six battalions of 'bersagliere,' or riflemen, two regiments of cavalry, and from six to nine companies of artillery. Reduced into practice, the formation of the army is as follows:—

Infantry	Men
6 regiments of grenadiers	17,946
6 ,, of infantry of the line . .	185,442
42 battalions of 'Bersagliere'	24,288
Total infantry . .	227,796

Cavalry	Men
4 regiments of cuirassiers	14,688
6 ,, of light dragoons . . .	
6 ,, of lancers	
1 ,, of 'guides'	1,064
Total of cavalry .	16,920

Artillery	Men
9 regiments or 72 companies of foot artillery	25,340
2 ,, of sappers and miners . .	6,006
3 ,, of horse artillery and train .	9,240
Total artillery and train .	40,586

The standing army is completed by fourteen legions of 'carabinieri,' or gendarmes, numbering 18,461 men, and a staff of 210 men; which brings the total of the forces of the kingdom of Italy, as they ought to exist according to the military organisation, up to 303,048. But in reality, the strength of the army is far below this number.

The navy of the kingdom consisted, at the commencement of 1864, of 98 steamers, of 20,760 horse-power, with 2,160 guns, and 17 sailing vessels, with 279 guns; altogether 115 men-of-war, with 2,439 guns. The list comprised—

	Horse-power	Guns
5 iron-clad frigates of	800	60
1 screw-steamer of the line of	450	70
18 screw-steam frigates of	5,800	575
14 paddle-steam frigates of	4,300	102
4 screw-steam corvettes of	888	108
20 paddle-steam corvettes of	1,880	65
14 screw-steam gun-boats of	544	50
2 sailing frigates		92
4 sailing corvettes		67
11 brigantines		120

The rest of the fleet consisted of smaller vessels, including a number of transport steamers of 200 horse-power, with two guns each.

Constitution and Government.—Previous to the events of 1860-1861, which resulted in the formation of the kingdom and the growth of national life, there was but the shadow of popular representation in Italy. The little duchy of Lucca had its senate of 36 representatives, of the classes of merchants, scholars, artisans, and cultivators, and the Lombardo-Venetian kingdom had also its two provincial assemblies; while the kingdom of Sardinia succeeded in obtaining a liberal constitution in 1848. But the provincial assemblies of the Lombardo-Venetian kingdom were divested of all legislative powers, and elsewhere the governments of Italy were mere petty despotisms. The war and revolutionary events which united the various Italian territories under one rule, entirely changed this state of things, by transforming the government into a constitutional monarchy.

The present constitution of Italy is an expansion of the 'Statuto fondamentale del Regno,' granted on March 4, 1848, by king Charles Albert to his Sardinian subjects. According to this charter, the executive power of the state belongs exclusively to the sovereign, and is exercised by him through responsible ministers; while the legislative authority rests conjointly in the king and parliament, the latter consisting of two chambers, an upper one, the Senato, and a lower one, called the 'Camera de' Deputati.' The senate is composed of the princes of the royal house who are of age, and of an unlimited number of members above 40 years old, who are nominated by the king for life. The deputies of the lower house are elected by the majority of citizens who are 21 years of age, and pay taxes to the amount of 40 lire, or 1*l.* 12*s.* For this purpose the whole of the population is divided into electoral colleges, or districts. No deputy can be returned to parliament unless at least one-third of the inscribed electors appear at the poll. A deputy must be 30 years old, and have the requisites demanded by the electoral law, among them a slight property qualification. Neither senators nor deputies receive any salary or other indemnity. The duration of parliaments is five years; but the king has the power to dissolve the lower house at any time, being bound only to order new elections, and convoke a new meeting within four months. It is incumbent upon the executive to call the parliament together annually.

Religion and Education.—The Roman Catholic faith, to which the overwhelming majority of the inhabitants belong, forms the state religion, but all other forms of belief enjoy the fullest toleration. The Roman Catholic hierarchy consists of 45 archbishops and 198 bishops. All these dignitaries of the church are appointed by the pope, on the advice of a council of cardinals, the congregation *de propagandâ fide*. But the royal consent is necessary to the installation of a bishop or archbishop, and this having been frequently withheld of late years, there were no less than thirty-five vacant sees, about one-seventh of the whole

Digitized by Google

number, in the kingdom of Italy at the commencement of August, 1865. On the death or removal of a bishop, the clergy of the diocese elect a vicar-capitular, who exercises spiritual jurisdiction during the vacancy. In case of old age or infirmity, the bishop nominates a coadjutor to discharge the episcopal duties in his stead. His recommendation is almost invariably attended to by the pope, and the bishop-coadjutor is appointed and consecrated, and takes his title from some oriental diocese not actually existing, which he relinquishes on succeeding to a bishopric. As long as he retains the oriental title, he is styled a bishop *in partibus infidelium*, or, as usually abridged, a bishop *in partibus*. Each diocese has its own independent administration, consisting of the bishop, as president, and two canons, who are elected by the chapter of the diocese.

The immense wealth of the North Italian clergy has been greatly reduced since the year 1850, when a bill, annihilating ecclesiastical jurisdiction and the privileges of the clergy, passed the Sardinian chambers. This law was extended, in 1861, over the whole of the kingdom of Italy. By a royal decree of May 25, 1855, there were confiscated, in the kingdom of Sardinia, the following establishments of the church of Rome:—

		Annual Income Lire
66 monasteries on the continent, with .	772 monks and	770,000
46 Do. do. do.	1,085 nuns „	592,000
40 monasteries on the island of Sardinia	489 monks and nuns	369,000
182 alms-seeking convents, with . .	3,145 monks	—
65 chapters, with .	680 priests and	550,000
1,700 ecclesiastical benefices, with . . .	1,700 clergy	1,370,000
2,099 { clerical establishments }	with 7,871 { individuals and }	3,641,000

Or, 145,640*l*. annual income.

According to official statements, the regular income of the whole Sardinian clergy, at the period of the royal decree of 1855, amounted to 18,000,000 lire, or 720,000*l*., per annum.

When the monastic orders were partially suppressed in the former kingdom of the Two Sicilies, in February, 1861, the number of religious establishments for men was found to be 1,020, containing 13,611 inmates, of which number 8,899 lived entirely upon alms. The remaining 4,712 monks possessed an annual revenue of 4,555,968 lire, or 967 lire, equal to 39*l*. per head. Of nunneries there were 272, with 8,001 inmates, possessing an income of 4,772,794 lire, or 24*l*. per head. A previous return, of the year 1834, showed that there were in the kingdom of Naples 14 archbishops, 66 bishops, 26,800 ordained priests, 11,730 monks, and 9,520 nuns.

Under the new Italian government a great part of the property confiscated from the monastic establishments has been devoted to the cause of public education, for which, besides, an annual credit of 15,000,000 lire, or 600,000*l*., is voted by the parliament. Since the commencement of the year 1861, there were opened throughout the kingdom, thirty-three great model schools, of which ten are in the Sardinian states, six in Lombardy, four in the Emilia, six in the Marches and Umbria, two in Tuscany, and five in the Southern provinces. In the former kingdom of the Two Sicilies, public education stood very low prior to 1860. From an examination made by the new government, it appeared that there were 3,094 large parishes which had no schools whatever, and 920 others in which the public instructors were individuals themselves devoid of the most elementary knowledge. The administration immediately set to work to apply a remedy to this state of things, and before the end of 1861—that is, in the course of little more than a year—1,054 elementary boys' schools were established in the ex-kingdom of Naples, exclusive of the central province of Naples itself. These were frequented by 23,569 pupils. The elementary girls' schools founded during the same period of time were 778, with 18,912 pupils. To these must be added 18 evening schools, frequented by 911 persons. In 1862 the 1,054 boys' schools rose to the number of 1,603; the pupils, instead of 23,569, became 60,250. The girls' schools were no longer 778, but 922; the pupils, not 18,912 but 30,567. The evening schools increased from 18 to 234; their frequenters from 911 to 9,804.

There are thirteen universities in Italy, including the Roman States. These are—Bologna, founded in the year 1119; Naples, founded in 1244; Padua, in 1228; Rome, in 1244; Perugia, in 1320; Pisa, in 1329; Siena, in 1349; Pavia, said to have been established by Charlemagne in 774, reorganised in 1390; Turin, founded in 1412; Parma, in 1422; Florence, in 1443; Catania, in 1445; Cagliari, in 1764; and Genoa, in 1783. To these may be added the high schools of Palermo, Camerino, and Macerata, and the university of Modena, which latter was closed in 1849.

Revenue and Expenditure and Debt.—The budgets of the kingdom of Italy for the two years 1864 and 1865, were as follows:—

	1864	1865
Total estimated Revenue .	£25,844,749	£25,020,101
Total estimated Expenditure	35,214,417	34,152,761
Deficit . .	£9,369,668	£9,132,660

The actual revenue and expenditure for the two years 1862 and 1863, was as follows:—

	1862	1863
Total Revenue . . .	£23,628,076	£23,436,566
Total Expenditure . .	39,023,703	38,519,788
Deficit . .	£15,395,627	£15,083,222

To cover these large annual deficits, the Italian government has had recourse, at various times, to loans of a considerable amount.

The total amount of the public debt of the various provinces of the kingdom, in the year 1860, amounted to:—

	Lire	£
Sardinian States .	1,159,970,595	46,398,823
Lombardy . . .	145,412,988	5,816,519
Emilia	42,000,000	1,680,000
Tuscany . . .	209,000,000	8,360,000
Naples and Sicily	550,000,000	22,000,000
Total . . .	2,106,383,583	84,255,342

By a law of June, 1861, all these obligations were ordered to be inscribed into a 'Great Book,' and to be united into a national debt of the kingdom of Italy, the whole to bear interest at the rate of 5 per cent. Various loans were subsequently added to this national debt. In July, 1861, a loan of 500 millions of lire was contracted; on March 6, 1863, a further loan of 700 millions of lire was ordered to be issued; and a fresh loan of 425 millions of lire, or 17,000,000*l*., was sanctioned April 25, 1865. On January 1, 1864, the whole debt of the kingdom of Italy amounted to 3,817,470,979 lire, or 152,698,839*l*. The interest on this capital amounted to an annual burthen of 197,417,245 lire, or 7,896,689*l*., distributed as follows:—

Digitized by Google

	Lire
Debt of the 'Great Book,' 5 per cent. consols	125,706,030
Debt of the 'Great Book' 3 per cent. consols	6,421,624
Debt included in 'Great Book' . . .	60,422,660
Debt not included	4,454,930
Concomitant expenses	412,000
Total	197,417,245
	£7,896,689

The debt not included in the 'Great Book, and which consumes an annual interest of 4,454,930 lire, or 178,197*l*., consists chiefly of local obligations and communal bonds of the south Italian provinces.

For further particulars concerning the physical aspect, population, industry, and history of the kingdom, see the names of the various territories and states which formed the old political divisions of Italy.

ITALY (AUSTRIAN). Under this term are included all the Austrian territories within the limits of Italy, comprising a portion of the former Lombardo-Venetian kingdom, and extending over a space of 8,720 Eng. sq. m., with a pop., in 1864, of 2,446,056 inhabitants, or 280 per sq. m.

The N. part of this territory is mountainous; the S. flat forming a portion of the plain of Lombardy. The Alpine chains on the N. frontier rise to an elevation of more than 13,000 ft. above the sea. The greater part of the surface, however, is flat: the flat lands comprising the delegs. of Padua, Rovigo, Venice, and parts of Verona and Vicenza. The shores of the Adriatic are lined with extensive lagoons, in the midst of which is Venice. A succession of marshes extends along the banks of the Po, in the lower part of its course, and round its embouchure is a dreary tract of swampy ground scarcely enlivened by a single tree.

The central parts of the high mountain chain consist of granite and other primary formations: the lower hill ranges consist chiefly of secondary limestone. The country north of the Po is a vast alluvial plain, containing numerous fossil remains. Traces of former volcanic action exist in the Euganean hills, an isolated group to the SW. of Padua. Lava, basalt, iron, coal, turf, potter's clay, some copper, arsenic, marble, and alabaster, are the most important mineral products. The climate is generally healthy, except in the rice grounds along the Po, in the vicinity of Mantua, and near the Adriatic. The thermometer, though it keeps much higher in summer, generally sinks lower in winter in Lombardy than in England. The mean temp. of the year at Padua is 56·6. More rain falls in this than in any other portion of the Austrian dominions: in the government of Venice the mean annual amount is estimated at 34 inches. The greatest fall is in autumn and winter.

The tops of the Alps are naked, covered with snow, and interspersed with glaciers; but their sides are for the most part covered with fir, larch, oak, pine, chesnut, and other trees, or natural pasturages. Most of the productive land in the mountains consists of pastures. Only the lower border of the mountain belt is arable: the land is there frequently cut into terraces, one above another, the divisions being occasionally supported by stone walls. The earth that fills these terrace trenches is continually carried down to the lower levels by the action of rain and other causes, and has to be brought up again every two or three years, often on peasants' backs, the routes being impracticable for vehicles. The vine, mulberry, walnut, and various other fruit trees, barley, rye, a little wheat, buckwheat, *panico*, millet, kitchen vegetables, hemp, and flax, are the chief agricultural products of this region. The land is here divided into the most minute portions; and being, as it were, the one thing needful to existence, the greatest value is attached to its possession. In the central region, or hill country, properties are less divided; though they are there split into small stewardships. These farms are mostly the property of the higher classes, and of the inhabs. of cities. There is scarcely a single peasant proprietor, the peasantry being mere tenants, paying, in general, a rent of half the produce. A lease at a fixed rent, or a money rent, is extremely rare. Silk, wines, oranges, lemons, olives, and other fruits, corn, cheese, and cattle, are the chief products of this region: the culture of the silkworm is an important occupation of the peasants' families, and with the money gained from this source, they provide themselves decently with the necessaries of life.

The aspect of this south-western part of Austrian Italy is very pleasing. Flourishing villages, hamlets, and isolated houses are spread over it, connected by carriage roads made at the expense of the proprietors and communes, which latter possess a considerable portion of the soil in this and the next region. In the high flat country, or that part of the plain near the hills, small stewardships are not uncommon. The system is that of *pignionanti*, or sharing-tenants; that is, tenants who pay a rent in money for their house, and a fixed rent in kind for the ground. The mode of irrigation deserves some notice. It is effected in the first place by *fontanili*, or excavations in the earth, in which are placed long tubes, from the bottom of which bubble up copious streams of water, analogous to Artesian wells. From the *fontanili* the water is conducted into a ditch, by which it is carried to irrigate the fields placed on a lower level. To these natural waters, derived from the subterraneous springs, replenished by a constant supply from the mountain region, are added a great mass of water drawn from the rivers by means of canals, some of which are navigable. The waters are diligently measured by rules, derived from hydrostatic laws, which have passed into an habitual practice. The canals are provided with graduated doors, which are raised or lowered according as the case may be: they are termed *incastri*. The measure is called *oncia*, and corresponds to the quantity of water which passes through a square hole. Sometimes the same number of inches of water is given out by the day and the hour on different farms. The value of a property depends on the command and goodness of the water; if deprived of the fertilising fluid, it would diminish rapidly in price. Hence the state of the waters is the object of local statutes, and of diligent care and attention.

Maize is grown in considerable quantities near Verona, and the mulberry very extensively between that city and Mantua, and towards Vicenza. The mulberry trees are frequently planted all round the corn fields, and vines festooned from one tree to another, so that on the same ground three crops—silk, wine, and grain—are annually produced. From Verona to Vicenza the meadows are irrigated with great care as well as facility, by means of the numberless streams that flow into the Adige, the beds of which, being continually raised by the gravel they bring down, and artificially embanked, are, for the most part above the general level of the plain. Notwithstanding the fertility of the soil, the inhabitants are generally poor. A few large farming establishments may be seen, but no comfortable cottages, or signs of wealth, among the peasantry, who bear a very in-

Digitized by Google

different character. The fields about Vicenza, however, are kept with great neatness, and cultivated with much industry, presenting a favourable contrast to those about Padua. On the road between those two cities all beauty of scenery disappears. Willows in all their pollard ugliness, and long lank poplars trimmed to the top, afford a yearly crop of faggots, the only fuel of the country. The tops of the pollarded trees near Vicenza may be seen cut almost in the shape of goblets, for the sake of holding the leaves of the maize placed there for drying. Potatoes are often cultivated amidst the corn. On the road may be seen immense butts full of grapes, mounted upon clumsy waggons, to which they are secured by such iron rings and chains as would hold a frigate at her moorings, dragged along by four, six, or eight oxen, when a proper vehicle would not require more than a pair. The grain produced in the Venetian prov. leaves a surplus over what is required to meet the home demand. Good husbandry diminishes eastward, and Istria is a country which would scarcely repay it. That peninsula is a collection of barren limestone hills, interspersed with a few fertile valleys: it yields very little corn, and the expenses of cultivation nearly absorb the profits. Wood is scarce, and fuel has mostly to be brought from Carniola or elsewhere. The oils of Istria, however, are frequently as good as those of Tuscany, and form its chief export. Some of its wines, also, are good, but the inhab. are more a commercial and sea-faring, than an agricultural or manufacturing, people. (See ILLYRIA.)

Government, Army, and Education.—The government of Austria in Italy is so liable to be disturbed, through the rooted dislike entertained by the Italians for the Germans, as to require the most vigilant attention on the part of the Austrian ministry. The policy of the latter has been to restrict the power and privileges of the nobles and large proprietors, who have generally been found at the head of any popular movement; and, at the same time, to conciliate the middle and lower classes. Accordingly, the representation in the council of the province has been rendered more complicate than in the other parts of the empire. The province has its assembly, with attributes and powers similar to those of the other seventeen provincial diets of the empire; but the composition is somewhat different. The members are appointed through the medium of a triple stage of election. The two classes of *Contadini*, the proprietors of land, and *Cittadini*, the inhab. of towns, are the primary electors, the suffrage depending on the payment of a certain amount of taxes. These primary electors return from their general body a council of election, the members of which must possess a higher property qualification than is requisite for the primary electors. The council finally elect the members of the provincial diet. The diet of the province has power to make laws concerning local administration, but is otherwise without influence.

Justice is administered by courts of primary jurisdiction in the principal towns; and a h gh court of revision sits in Verona. Trial by jury and *vivâ voce* pleadings and examinations are unknown. A strict censorship is established over the press, and only certain foreign journals or books can be imported. Two regiments are maintained for the police service. Four regiments of the line in the Austrian army are levied in the prov., but there is no militia. All males, whether noble or otherwise, are registered for military service at the age of eighteen, unless exempted from physical or other causes. From those thus registered the number required are taken by ballot; but all are allowed to serve by approved substitutes, for whom, however, it is often necessary to pay large sums. The period of service is eight years, after which the soldier is entirely free.

Large sums are expended by the government in keeping up the roads and other public works, and in public education. A larger proportion of the pop. is educated than in any other prov. of the Austrian empire, except the Tyrol and Bohemia. By a law of 1822, every commune is obliged to maintain a primary school, either wholly or in part. But education is wholly under the direction of the clergy; and no school can be opened, or book used in a school, or other seminary, without the express sanction of the government.

History.—The greater part of this portion of Italy, after the fall of the Western Empire, was successively possessed by the Heruli, Ostrogoths, Greeks, and Lombards. The latter held it from 568 till 774, when Charlemagne annexed it to the empire of the Franks, to which it remained attached till 888. From that period, except the territory of the Venetians, it generally belonged to the German emperors. After the war of the Spanish succession, the duchies of Milan and Mantua were assigned to Austria, and remained in its possession till the year 1797, when the peace of Campo Formio made Lombardy over to France, and Austria in turn received Venice. But by the peace of Presburg, signed 1805, Austria had to cede the Venetian territory, besides the whole of Istria and Dalmatia, to France, and, four years after, the treaty of Vienna gave to France also Carniola and Trieste. All these possessions fell back to Austria in 1815. Venice and its territory, which had existed as an aristocratic republic from the seventh century to 1797, was likewise confirmed to Austria by the treaty of Vienna, in 1815. The Italian possessions of Austria were then erected into a Lombardo-Venetian kingdom, which existed till 1859, when, compelled by the victorious arms of France, Austria had to cede the greater part of Lombardy to the emperor Napoleon III., who in turn made it over to the king of Sardinia—subsequently king of Italy.

ITHACA, one of the Ionian Islands, and celebrated in antiquity as the kingdom of Ulysses ('scopulos Ithacæ, Laërtia regna,' Virg. Æn., iii. 275), 7 m. S. Santa Maura, 8 m. E. Cephalonia, and 17 m. W. the coast of Acarnania; Point Marmaca, at its N. end, being in lat. 38° 30′ N., and long. 20° 39′ E. Length, 14 m., breadth, 4 m., area, 44 sq. m. Pop. 11,756 in 1860. Ithaca presents from the sea the appearance of a barren, rugged rock, deeply indented on its E. side by a gulf, at the bottom of which is Vathy, the port and cap. of the island, accurately described in the Odyssey:—

> 'A spacious port appears,
> Sacred to Phorcy's power, whose name it bears;
> Two craggy rocks, projecting to the main,
> The roaring winds' tempestuous rage restrain;
> Within, the waves in softer murmurs glide,
> And ships secure without their hawsers ride.'
>
> POPE.

About a third part of the surface is capable of cultivation, the greater part of which is laid out in vineyards. The chief products are wine (esteemed in Greece as extremely delicious), olive oil, currants, barley, and a small quantity of wheat. Ithaca has little to interest, beyond the associations connected with its ancient history. Many of the places mentioned by Homer can be traced, with great appearance of probability. The port *Phorcys* is clearly identical with Molo, and the inner harbour of Vathy seems to correspond with

Digitized by Google

the *ναύλοχον Ῥείθρου σκέπας* under Mount Nelson. In the S. part of the island, at no great distance from the shore, is a spring, rising at the foot of a rock still called *Koraka*, and supposed to be the Arethusa of Homer. (See Odys., v. 408.) Some ruins of Cyclopean walls, similar to those of Mycene and Tiryns, are considered by Dodwell to be the remains of the city of Ithaca, the residence of Ulysses. (See IONIAN ISLANDS.)

IVES (ST.), a parl. bor., sea-port, and par. of Cornwall, at the W. extremity of the bay of the same name, 18 m. W. Truro, and 250 m. W. by S. London by road, and 299 m. by Cornwall and Great Western railway. Pop. of munic. bor. 7,027, and of parl. bor. 10,358 in 1861. St. Ives consists principally of one long street, branching S. into two smaller; and the houses are generally of moderate size, and built in situations to suit the convenience of persons connected with the trade of the port. The church, a low but spacious building, erected in 1434, stands close to the sea: there are also four places of worship for dissenters, a national school, and two Sunday-schools. A grammar-school, founded by Charles I., has gone to decay. The town-hall and custom-house are the only other public edifices. The port has a pier, built by Smeaton, in 1770, at an expense of 10,000*l.*, within which small vessels lie aground at low water. Large ships may anchor in the bay, in 6 and 7 fathoms; but, being exposed to the N. winds, it is not much frequented. There belonged to the port, on the 1st of Jan. 1864, 70 sailing vessels under 50, and 98 sailing vessels above 50 tons burthen, besides 1 steamer of 150 tons. The principal employment of the inhabs. is the pilchard fishery, which of late has been carried on with more than ordinary success, and to a greater extent than in any other town of Devon or Cornwall. The season lasts from July to Sept., and in favourable years very large quantities are exported to the Mediterranean, a considerable supply being also furnished for the consumption of the town and neighbourhood. Several mines have likewise been opened in the vicinity, affording additional employment to the people. The corporation, chartered in the reign of James II., was, down to the passing of the Municipal Reform Act, a close, self-elected body of eleven members: it now comprises four aldermen, one of whom is mayor, and twelve councillors, and has a commission of the peace, under a recorder. Corporation revenue 285*l.* in 1862. The bor. sent two mems. to the H. of C. from the 5th of Queen Mary down to the passing of the Reform Act, which deprived it of one mem. Previously to the last mentioned act, the franchise was vested in the inhabs. paying *scot and lot*; the boundaries of the parl. bor. were then also enlarged, by the addition of the two adjacent pars. of Lalant and Towednak. Registered electors 525 in 1865, including 113 'scot and lot voters.' Markets on Wednesday and Friday; cattle-fair, Saturday before Advent.

IVIZA or IBIZA (an. *Ebusus*), an isl. in the Mediterranean, forming one of the Balearic group belonging to Spain, 50 m. E. by N. Cape Nao in Valencia, and 42 m. SW. Majorca; the cap. on its SW. side being in lat. 38° 53′ 16″ N., long. 1° 26′ 32″ E. It is of an irregular five-sided figure; its length from NE. to SW. being 27 m., and its average breadth 15 m. Pop. 21,870 in 1857, living in 24 towns and villages. The coast is irregular, indented by a great number of bays, the largest being those of St. Antonio and Iviza: the surface is hilly, and in many parts well wooded; but there are several picturesque and fertile valleys having a soil well adapted for tillage. The climate is, in most respects, similar to that of Valencia and Catalonia: the winters are so mild that the thermometer seldom falls below 13° Réaum., and the heats of summer are tempered by the sea breezes. The chief products of the island are olives, wine, corn, flax, and hemp, different kinds of fruit, especially figs, for which it was celebrated even in the time of the elder Pliny. The salt-pans are so productive that salt is a chief article of exportation: large flocks of sheep are pastured on the hills, and the sea near the coast abounds with fish, the capture of which gives employment to many of the inhab. But, notwithstanding these advantages, the island is in great poverty owing to the indolence of the inhab., and their slovenly mode of tillage. The Ivizans are of middle size, shrunk and sallow; they speak a language similar to that spoken in Catalonia and Valencia, being a corrupt dialect of the ancient Romaunce, once the common language of all S. Europe.

The cap. Iviza—pop. 5,551 in 1857—is fortified, and has a good harbour. It is the residence of the governor and a bishop's see. The chief buildings are a cathedral, 6 churches, 2 convents, 2 hospitals, and a public school.

Iviza, the largest of two islands, called by Strabo *Pityusæ*, or the pine-bearing islands, was early occupied by Phœnicians and Carthaginians, whence it has been called *Ebosus Phœnissa* by Silius Italicus. (Pun., lib. iii. 1, 362.) It was taken from them by Q. Metellus, and remained subject to the Romans, and their successors the Vandals, till the conquest of Spain by the Moors in the 8th century. The Spaniards took the island in 1294, and attached it to the kingd. of Arragon, since which it has usually followed the fortunes of the larger islands, Majorca and Minorca. In 1706, during the war of the succession, it submitted to Sir John Leake with a British squadron, and was ceded to England, together with Minorca, at the peace of Utrecht. They continued in the possession of the British till the peace of 1814, when they were restored to Spain.

IVREA (an. *Eporedia*), a town of North Italy, cap. prov. of same name, on the Doire, 30 m. NNE. Turin, on a branch line of the railway from Turin to Milan. Pop. 9,563 in 1863. Ivrea is an ill-built town, defended by old fortifications, a citadel, and a small fortress upon an adjacent hill; and has an ancient cathedral, supposed to occupy the site of a temple of Apollo, five other parish churches, several convents, a hospital, a seminary, and a large prison. There are manufactures of silk fabrics and of organzined silk, and some recently established cotton-works; with markets for cheese, cattle, and other Alpine produce; and for the iron obtained near Cogne, and other places in its vicinity. Eporedia is reported to have been colonised by the Romans in the time of Marius. It would appear from Tacitus (Hist., i. 70) to have been a *municipium* as well as a colony. Strabo says that 36,000 Salassi, made prisoners by Terentius Varro, were sold here as slaves by public auction. Ivrea has been repeatedly taken by the French, and under the French empire was the cap. of the dep. Doire.

J.

JACA, or XACA, a town of Spain, prov. Aragon, cap. of a partido of its own name, 56 m. N. by E. Saragossa, and 32 m. NNW. Huesca, on the railway from Saragossa to the Pyrenees. Pop. 3,540 in 1857. The town stands at the foot of one of the highest ridges of the Pyrenees, only 21 m. from the French frontier, in a wide and fertile valley, enclosed by the rivers Aragon and Gallego: it is surrounded by a strong wall, and entered by 7 gates. The chief public buildings are a cathedral church, castle, military hospital, and 5 convents. The inhabs. are chiefly employed in agriculture and woollen weaving; but the difficulty of access to other places confines their industry to the supply of the town and immediate neighbourhood. The crops raised in the district comprise wheat, barley, pulse, and fruits, but the severity of the climate during winter prevents it from producing many of the fruits of S. Europe.

Jaca was a place of some consideration in the time of the Romans, and was the cap. of the *regio Jacatania.* It was taken by M. P. Cato, anno 195 A. C., and was made a station for the troops during the war with Spain.

JAEN, a prov. and former kingdom of Spain, in Andalusia, between lat. 37° 30′ and 38° 40′ N., and long. 2° 50′ and 4° 20′ W. Its shape is that of an irregular four-sided figure; and it is bounded N. by the Sierra Morena and La Mancha, W. by Cordova, S. by Granada, and E. by Murcia. Greatest length, 85 m.; greatest breadth, 78 m.; area, 4,430 sq. m. Pop. 345,879 in 1857, and 266,919 in 1846. The province, situated in the upper part of the valley of the Guadalquivir, is encircled by lofty mountains, which make access difficult, and give to its borders a rude and mountainous character. The surface is chiefly an alternation of hills and valleys, formed by the Guadalimar, Herrumblar, and other affluents of the Guadalquivir. The climate, though damp in some parts, is, on the whole, healthy and favourable to vegetation. The soil on the hills, consisting of *detritus* from the primitive and transition rocks of the Sierras Morena and Granada, is sandy and barren; but the valleys are extremely rich, and, with moderate attention to tillage, might be made highly productive. Agriculture, however, is in the most degraded state: only a very small portion of the soil is tilled, and the produce is insufficient for the consumption of the prov. Olives, wine, and other fruits of good quality, gall-nuts, woad, kermes, and shumac are abundant, and honey and silk are produced in small quantities. Cattle and horses, however, are pastured on a large scale, and a breed of the latter, peculiar to the neighbourhood of Ubeda, ranks as nearly equal to the Arabian. The mineral wealth of the province, which was celebrated even under the Romans, consists chiefly of iron, lead, and copper, with small quantities of silver; but lead and iron are the only ores now wrought. Veins of marble and jasper occur here as frequently as in Granada, but are not quarried, from want of spirit in the inhabs. Manufacturing industry is quite insignificant: silk and woollen fabrics are made in some of the towns; but the chief branch of employment is in pottery, and particularly in making *alcarrazas*, a species of porous earthen jars, much used in Andalusia for keeping liquors cool in warm weather.

JAEN, a city of Spain, cap. of prov. and partido same name, and a bishop's see, on the Jaen, an affluent of the Guadalquivir, 37 m. N. Granada, and 123 m. ENE. Madrid. Pop. 19,820 in 1857. The town is situated on the outskirts of the great Sierra de Susana, and is so surrounded by mountains, crossed by bad roads, that few travellers visit it. The railway from Madrid to Cadiz, however, passes not more than a dozen miles to the northward, and a modern road, joining the old high road between Cordova and Madrid, and passing through Baylen and the Puerto de Penacerrados of the Sierra Morena, has made it more easy of access. The city, above which towers a Moorish castle commanding a fine view of the whole country, has extremely narrow streets, a cathedral, 12 par. churches, and 15 convents. The cathedral is of Corinthian architecture, 300 ft. long. by 190 ft. in breadth, and built in a very pure style: the pavement is laid in chequered slabs of black and white marble, and the high altar is enriched with fine specimens of jasper and marbles: it also has some good pictures and sculptures. The city, which was celebrated, under the Moors, for its manufactures, still contains numerous fabrics of silk, linen, and woollen cloths, and mats, and has a thriving appearance.

The remains of a Roman aqueduct, and various inscriptions, prove the antiquity of Jaen. Under the Moors it rose to considerable importance, and successfully withstood the attacks of the kings of Castile. It was the theatre of war during the final struggles between the Moors and Spaniards in the 15th century, since which time it has never recovered its former consequence.

JAFFA, or YAFFA (an. *Joppa*), a town and port of Turkey in Asia, on the coast of Syria, pach. Damascus, sandjiak Gaza, 32 m. NW. Jerusalem, and 60 m. SSW. Acre; lat. 32° 3′ 25″ N., long. 34° 46′ 10″ E. Pop. estimated at about 4,000, one fourth of whom are Christians. Jaffa is fortified, and stands on a tongue of land projecting into the Mediterranean, and rising from the shore in the form of an amphithertre, at the top of which is a ruined castle. The port, defended by two batteries, is merely a long basin, enclosed by a ledge of rocks, extending from the S. side northward, directly in front of the town; but it is so choked up with sand as to be unapproachable by all except small coasting craft. The houses are chiefly of stone, and the streets are uneven, narrow, badly paved, and dirty; the principal public buildings are 3 mosques, 1 Rom. Cath. and 2 Greek churches, with 3 convents, and a good bazaar. The quarantine house, recently founded, is clean and well regulated: separate divisions, with a chapel attached to each, being allotted to the pilgrims of the several nations, chiefly Greek, who land here on their way to Jerusalem. A military establishment is kept up, comprising (according to Dr. Bowring) 1 reg. of infantry, with 4 battalions of 800 men, and 3 cavalry regs., each having 700 men. A considerable traffic has recently been created by the disturbances in Syria for the supply of the pacha's troops; but usually the town

Digitized by Google

is dull, and little frequented by strangers, except at pilgrim time, when the pop. is often nearly doubled. Cotton is raised to some extent within the district; and in the neighbourhood are beautiful gardens of orange and lemon trees, tall waving cypresses, coral, and fragrant mimosas, intersected with enormous prickly pears. The fruit bears a high character, and forms a considerable article of export. Tradition assigns to Joppa an exceedingly ancient date. Joshua defined the possessions of the tribe of Dan as including 'the border before Joppa.' (Josh. xix. 46.) In the time of Solomon it was, no doubt, a port of some consequence; for Hiram, king of Tyre, sent a letter to the former monarch, then engaged in building the temple at Jerusalem, saying, 'We will cut wood out of Lebanon as much as thou shalt need; and we will bring it thee in floats by sea to Joppa, and thou shalt carry it up to Jerusalem:' and from this place Jonah took his passage in a ship going to Tarshish, when 'he fled from the presence of the Lord.' In the New Testament it is mentioned as the place where Peter had the vision which revealed to him the duty of preaching Christianity to the Gentiles as well as the Jews; and where he raised to life Dorcas, a faithful disciple, 'full of good works and almsdeeds.' Among the Greeks and Romans, also, Joppa had the reputation of being very ancient. It is stated by Pliny (Hist. Nat., lib. ix. § 5.) to be the place where Andromeda was exposed to the sea monster, from which she was rescued by Perseus. Reland suspects that this fable may have its origin in, or be connected with, the history of Jonah. (Relandi Palestina, p. 864.) In A.D. 66, during the Jewish wars, it was repeatedly taken, and finally all but destroyed: and during the Crusades it was so entirely ruined by Saladin, that it had scarcely any buildings left, except its two castles. It was soon afterwards repaired by Louis IX. of France. The subsequent history of the place, till the close of the last century, is little known. In 1799 it was taken by Napoleon, after an obstinate and murderous siege. On this occasion Napoleon put to the sword about 1,200 Turks that had formed part of the garrison of El Arisch, which, having previously capitulated, had been discharged, on their engaging not to serve against the French. But though their execution was, no doubt, justifiable, according to the laws of war, still it seems to have been an act of extreme and useless cruelty, and wholly at variance with the general conduct of Napoleon.

JAFFNA, a sea-port town of Ceylon, near the N. extremity of the isl., cap. of the distr. Jaffnapatam, 190 m. N. Colombo; lat. 9° 36′ N., long. 79° 50′ E. Pop. estimated at 8,000, chiefly Mohammedan. The town stands on an inlet, navigable for boats, which communicates with the Gulf of Manaar. It has near it a pentagonal fortress of some strength, which forms the head quarters of one of the principal garrisons in the island. As a commercial port, Jaffna is the third in Ceylon, ranking after Colombo and Point de Galle. Provisions are cheap; and from its salubrity the town is a favourite resort of the Dutch residents in Ceylon, who have named several small and verdant islands in the opposite roadstead after the principal cities of Holland.

JAGO (ST.), or SANTIAGO DE CUBA, a city of Cuba, cap. of its E. division, the second in pop. and magnitude, and the third in mercantile importance in the island, about 6 m. from the S. coast, on the river Santiago, the mouth of which forms its port, about 470 m. ESE. Havannah, lat. 19° 57′ 29″ N., and long. 78° 23′ W. Pop. 29,980 in 1857, inclusive of 8,000 slaves. The city is well built, having wide streets and stone houses. It has a cathedral, several other churches, a college, hospital, and numerous convents and schools. The port is from N. to S. about 4 m. long, with an irregular breadth, and in some places rather narrow; but it has water sufficient for ships of the line, and is sheltered from winds on every side. Its entrance is narrow, and defended on the windward side by the Morro and Estrella castles. The city is very unhealthy; being hemmed in by mountains on three sides, the free circulation of air is greatly impeded, and the yellow fever commits great ravages in the rainy season. St. Jago is the see of an archbishop, and the residence of a governor, who, in respect of civil and political affairs, is independent of the captain-general. It was the cap. of Cuba till the beginning of the 18th century, when the Havannah was raised to that dignity; since which the importance of Santiago has diminished. Its trade has however, of late years, increased considerably, partly on account of its being the port where the copper ore of the Sierra de Cobre is shipped. St. Jago was founded by Diego Velasquez in 1514.

JAGO (ST.) or SANTIAGO, a city of Chili, of which it is the cap. and seat of government, in the prov. of the same name, on the Maypocho, at an elevation of 2,600 ft. above the sea, 64 m. ESE. Valparaiso, and 270 m. NNE. Concepçion; lat. 33° 16′ S., long. 69° 48′ W. Pop. estim. at 75,000 in 1864. The city is situated on the verge of the extensive and fertile plain of the Maypocho, and at a distance has a very imposing appearance, its domes and steeples rising among groves, vineyards, gardens, and maize fields. It is inferior to Lima and Buenos Ayres in its public buildings, but greatly surpasses them in cleanness and regularity, and is, upon the whole, one of the best cities in S. America as to appearance, convenience, and salubrity. Like other cities of Spanish origin, it is divided into *quadras*, that is, squares or compartments of buildings 408 ft. square, separated by streets about 13 yards across. The city-proper is on the SW. bank of the Maypocho, and is connected with its suburb of La Chimba by a handsome stone bridge. On its SE. side the city is separated from its suburb of Cañadilla by the Cañada, a handsome promenade 50 yards wide, planted with poplars; and at the SW. extremity of Santiago is the suburb of Chuchunco. Both the city and suburbs are built upon ground sloping gently towards the W., of which circumstance advantage has been taken in supplying water for its consumption and under-drainage, which latter is more perfect than in any other S. American city. The waters of the Maypocho are also frequently employed for the ornament as well as use of the city, there being numerous public fountains and reservoirs. A solid brick rampart, 6 ft. in breadth, and raised 10 ft. above the ground, extends along the S. bank of the river, and protects the city against inundation from the river during the rains. Between it and the town is the *Alameda*, the favourite promenade of the inhab. planted with willows, and furnished with seats and fountains. At the NE. extremity of the city-proper is the hill of Santa Lucia, the site of the fortress of the same name built to command the town. Santiago has no other defence, and this fortress could be easily silenced by artillery placed on the contiguous hills.

The houses of the city occupy a good deal of ground; most of them take up 1-6th part of a *quadra*. The rooms are ranged round three quadrangles or *patios*, the first being an outer paved court-yard, the second generally laid out as a parterre, and the third used for domestic purposes. The wide archway opening into the front *patio*

Digitized by Google

is closed at night by a pair of large folding gates, but is always open during the day. The windows, looking into the two outer court-yards, are protected by iron gratings. The front and sides of the houses facing the streets, where not blank walls, are divided into small rooms, and let out as shops. In the centre of the city is the *Plaza*, or great square, occupying an entire quadra. On its NW. side are the directorial mansion, the palace of government, the prison, and the chamber of justice; on the SW. side stand the cathedral and the old palace of the bishop, now occupied by the *estado mayor*; on the SE. is a range of shops, with an arcade in front; and the NE. side is composed of private residences. All these buildings, except the cathedral, are of brick, plastered and whitewashed. The palace is by far the best edifice as to its architecture: it consists of two stories, inclosing a large open quadrangle; the lower story comprises the armoury and treasury, and the upper story the great hall of audience and the ministers' offices. The cathedral is the only stone edifice in Santiago; it is constructed of limestone quarried in the Chimba suburb: its design is of the better order of Moorish architecture. In the centre of the square is an ornamental fountain, furnished with water by a subterranean aqueduct. The city is mostly supplied hence with water for drinking, which is conveyed in barrels of 10 gallons each, two of which are a mule's load, and sold for *5d.* a barrel. The largest public building, and that most admired by the natives, is the mint. It occupies an entire quadra, and, like the private houses, consists of a variety of offices arranged round three quadrangular courts. Its front, facing the street in which it is situated, presents a series of heavy pilasters, supporting a rude cornice and a ponderous balustrade, and having in its centre a large arched portico. The entire edifice is of plain brick, and was, like the other public buildings, constructed by bricklayers sent out from Spain for the purpose. The consulado, a spacious plastered and whitewashed structure, in which the commercial tribunal, senate, and national congress meet, the custom-house, and the handsome little theatre are worth notice. The city and suburbs are divided into 5 parishes. All the parish churches are mean; but not so those of the conventual establishments, which are numerous. One of the Jesuits' convents has been converted into a national college, and another is used for the public library and printing-office. The library contains several thousand printed vols., and some curious MSS. relative to the Indian tribes.

Santiago has 3 markets: the principal is holden in the Bassoral, a large open space at the foot of the bridge, and is tolerably well supplied with meat and vegetables. The other markets consist of mere movable stands at either end of the Cañada; but meat, kitchen vegetables, fruits, and other requisites, are continually hawked about the streets on horses or mules, which precludes the necessity of sending to the markets. Fodder for horses is hawked about in a similar manner; and large quantities of lucerne are daily brought into the town, horses being kept by nearly every family. The horses of Santiago are generally well broken, and are more docile than those of Buenos Ayres. Most part of the adjacent country is devoted to the rearing of live stock; but, when cultivated, it produces good crops of wheat, the soil being excellent, and irrigated by many subterranean springs. The climate, were it not for the dreadful visitation of earthquakes, would be delightful; and, from its comparative coolness, European vegetables may be raised in great perfection. The vine is grown, and wine of good quality might be made if its manufacture were properly understood. In the outskirts of Santiago are numerous handsome *quintas* or villas, and the approaches to the city are mostly through lanes bounded by walls inclosing extensive vineyards and orchards, which yield a large revenue to their proprietors.

Santiago occupies the site of a previous Indian settlement; it was founded by Pedro de Valdivia in 1541. It has frequently suffered from earthquakes; but, with other towns of the interior of Chili, it escaped the catastrophe which destroyed Valparaiso and Concepcion in 1835.

JAMAICA (Nat. *Xaymaca*), one of the Greater Antilles, and the largest and most valuable of the West Indian islands belonging to Great Britain. It lies in the Caribbean Sea, between lat. 17° 44′ and 18° 30′ N., and long. 76° 12′ and 78° 25′ W., about 100 m. S. Cuba, and 120 m. W. Hayti, from which it is separated by the Windward Channel. Shape nearly oval; greatest length, E. to W., 150 m.; average breadth, about 41 m. Area 6,400 sq. m.; pop. 441,264 in 1861, of whom 213,521 males, and 227,743 females.

The Blue Mountains, a lofty range, run through the island in its whole length, rising in some places to upwards of 7,200 ft. in height. On the N. and S. sides of this range the aspect of the country is extremely different. On the former the surface rises gradually from the shore by undulating hills, separated by spacious valleys, watered by numerous rivulets, and clothed with pimento groves. The scenery on the S. side is much bolder. The shore is skirted by abrupt precipices and inaccessible cliffs; and the hill ranges towards the interior are more abrupt and less fertile. Between these ranges and the foot of the central chain are extensive savannahs, and wide plains cultivated with sugar-cane, the luxuriant beauty and verdure of which is set off by a boundless amphitheatre of forest—

> 'Insuperable height of loftiest shade,
> Cedar, and branching palm.'

The outline of the forest melts into the distant blue hills, and these again are lost in the clouds. The island is well watered. There are about 100 streams dignified with the name of rivers, but none of them are navigable except for boats. Black River, which debouches on the SW. coast, the largest, is only available for flat-bottomed boats and canoes for about 30 m. Like all the other streams, its current is very rapid.

From the geographical position of the island, so near the equator, the climate in the low grounds is necessarily very hot, with little variation throughout the year; the days and night are, for the same reason, nearly of equal duration, there not being more than two hours difference between the longest day and the shortest. The medium temperature of the year near Kingston ranges between 70° and 80°; but little differences of elevation have here a great effect over the temperature and the salubrity of the climate. At about 4,200 ft. above the level of the sea, the temperature usually ranges between 55° and 65°; in the winter it falls even as low as 44°. There the vegetation of the tropics disappears, and is supplanted by that of temperate regions. Showers are common in the interior almost throughout the whole year, but they do not fall with the same violence as in the plains, and the quantity of rain appears to be less. The air is exceedingly humid, subject to dense fogs, and those rapid alternations of temperature peculiar to all mountain regions. While the pestilence of yellow fever rages in the low grounds, and along the coast of this island,

Digitized by Google

cutting off its thousands annually, these elevated regions enjoy a complete immunity from its effects; for the plague has never been known, in any climate, to extend beyond the height of 2,500 ft. The inhabitants are said to enjoy a degree of longevity rarely attained in other countries. The N. side of the island is more healthy than the S.; but all insalubrity is supposed to cease at an elevation of 1,400 ft. The mid-day heat is, during most part of the year, greatly modified by an invigorating sea-breeze, called by Europeans the *doctor*, which sets in from 8 to 10 o'clock in the morning, increases in force till about 2, and declines with the sun, till, on the approach of evening, it is succeeded by the land wind from the mountains. When these winds become less regular, or altogether fail, as is sometimes the case before the rainy season, the atmosphere is exceedingly oppressive. The year is divided into a short wet season, which begins in April or May, and lasts about six weeks; a short dry season, from June to August; a long wet season, comprising Sept., Oct., and Nov.; and a long dry season, which occupies the remaining four months, during which the weather is serene and pleasant, being comparatively cool. The annual fall of rain is nearly 50 in.; the amount has become less in proportion as the forests have been felled. More rain falls on the N. than the S. side of the island, and the average temperature is lower. The principal towns and military stations are on the S. side. Fevers, dysenteries, and diseases of the lungs or brain, are the most fatal. Fevers of a remittent character are more prevalent than in any of the other British stations in the W. Indies. Earthquakes are frequent, and sometimes violent; in 1692 the town of Port Royal was submerged several fathoms beneath the ocean by a catastrophe of this kind. Hurricanes mostly occur between July and October; and though not so frequent as in the windward islands, they are sometimes most destructive. One of the most appalling of these visitations took place on the 3rd of October, 1780. On this occasion the little sea-port town of Savannah-la-Mar, on the SW. coast of the island, was completely destroyed. During the tremendous conflict of the elements the sea burst over it with irresistible fury, and in an instant swept into its abyss its inhab. and their houses, leaving behind no vestige of either. Several hurricanes have occurred since, but happily none of them have had such frightful consequences. Jamaica contains no active volcano; but the traces of former volcanic action are sufficiently obvious. Micaceous schist, quartz, and rock spar are common; but limestone, containing numerous shells, is the most prevalent geological formation. The island contains argentiferous lead, copper, iron, and antimony ores; and the Spaniards are reported to have wrought both copper and silver mines. Mining industry is now, however, quite extinct.

The turf-clad hills on the N. side of the island are chiefly composed of a chalky marl; elsewhere the soil is frequently of a deep chocolate colour, or a warm yellow or hazel. The latter, called the Jamaica *brick mould*, retains a good deal of moisture, and is among the best adapted for the sugar-cane throughout the West Indies. But though the soil be in some parts deep and fertile, Jamaica is not generally productive, and requires both skilful labour and manure to make it yield heavy crops. Indigo, cotton, and cocoa were formerly important staples; but these have mostly given way to other articles. Maize, Guinea corn, and rice are the principal grains cultivated; the latter, however, is not raised in great quantities. Maize yields two, and sometimes three, crops a year, of from 15 to 40 bushels the acre. Calavances, a species of pea used by the negroes, the kinds of pulse and other garden vegetables common in Europe, thrive well in the mountains; and the markets of Spanish Town and Kingston are abundantly supplied with these, as well as native pot-herbs, of excellent quality. The plantain, banana, yam, cassava, and sweet potato are indigenous; the first named is the principal support of the coloured population.

Few countries offer so fine an assortment of tropical fruits. Among these is the bread-fruit tree, from Otaheite, originally introduced by Sir Joseph Banks. The orange, lemon, lime, vine, melon, fig, and pomegranate are met with, having probably been introduced by the Spaniards; and many other European fruits succeed in the cool mountain region. The sunflower is an article which has recently begun to be cultivated for its oil. Cinnamon has been naturalised in Jamaica; and the forests abound with dye-woods and guaiacum, iron-wood, brazilletto, mahogany, greenheart, and other valuable kinds of timber, and woods fit for cabinet work. Various kinds of grasses are cultivated; the principal is Guinea grass, a product of so much importance, and growing so luxuriantly, that the grazing farms are for the most part covered with it. Horned cattle are excellent, and better or cheaper beef is not met with in any part of Europe. Oxen or mules are used for farm labour. Horses—an active and hardy breed—are reared for saddle and harness. Sheep, goats, and hogs are numerous: the latter are of a small breed, but their flesh is very good. Poultry and pigeons are kept in great numbers. The Europeans found many indigenous quadrupeds on the island, but none worthy of notice now exist, except the agouti, some monkeys, and rats, which last are in such immense numbers, and so destructive of the sugar-canes, that from 8 to 10 per cent. per annum of the sugar crop, while standing, is supposed to be destroyed by them. Great numbers of wildfowl are met with; and rice birds, esteemed great delicacies, visit the island in large flocks in October. Alligators inhabit some of the larger rivers, and many varieties of lizards and snakes are found, some of which are used as food by the natives. The mountain crab of Jamaica is highly prized. These singular animals come down by millions from the mountains to the sea, to deposit their spawn, from Feb. to April, and return to their original habitations by the end of June.

The emancipation of the slaves had a great, and, for the moment, a disastrous effect upon the state of agriculture in Jamaica. From the passing of the Slave Emancipation Act, in 1832, till the year 1848, no fewer than 653 sugar and 456 coffee plantations were abandoned, and their works entirely broken up. After their emancipation, the blacks, who were formerly provided with lodgings and a piece of ground rent-free, had to pay rent for them; and a good deal of dissatisfaction arose from the manner in which this rent was charged under the new system. In some cases it was estimated, not according to the real worth of the premises, but according to the number of persons deriving subsistence from the land, so that the man with the largest family became liable to the heaviest rent. In order the better to command the services of the occupiers, the planters refused at first to give them leases, and stipulated that they might be ejected even at a week's notice. But this plan defeated its own object, both by making the former bondsmen inattentive to the culture of grounds held on so precarious a tenure, and by making them extremely anxious to acquire

Digitized by Google

the property of a small piece of land. Subsequently, the plan of fixed rents, unconnected with labour, was adopted, with better result, though not eradicating, by any means, the great source of dissatisfaction of the freed negroes—that of being mere labourers, instead of owners of the soil.

The discontent of the coloured population, aggravated in many instances by the harsh treatment of the whites, who here, as elsewhere, exhibited an excessive arrogance and pride of race, led to an insurrection in the month of November, 1865. It was suppressed in blood, several thousands of the unfortunate outcasts suffering death by being hung or shot; while many others, not a few entirely unconnected with the outbreak, were flogged with wire cat-o'-nine-tails, and otherwise treated in the most cruel manner. But these atrocities had the good effect of arousing public opinion in England, and after a lengthened investigation of the state of affairs in Jamaica, undertaken by a special commission sent out by the British government, great and sensible reforms were introduced in the administration of the colony.

It has been attempted to obviate the deficiency in the supply of labour, by importing free labourers from India and Africa. But the former have been found to be quite unsuited to the demands of the country; whereas the latter, so long at least as they are unable to find the means of supporting themselves otherwise, make serviceable labourers. In recent years, therefore, the importation of such labourers has been continued only on a small scale. The numbers brought to Jamaica in the year 1862 were, according to official returns, as follows:—

Places from which embarked	Number of Coolies	Number of Africans
Calcutta and St. Helena .	2,000	138
St. Helena	—	470
Total . .	2,000	608

The rate of wages at Jamaica is comparatively high, amounting to from 1*s.* 6*d.* to 1*s.* 9*d.* a day for agricultural labourers, and from 3*s.* to 6*s.* per diem for handicraftsmen, according to returns of 1862.

The products raised for exportation, more especially sugar, are the chief objects of the industry of the colonists; and the greatest efforts have been made, by the introduction of machinery and otherwise, to obviate the drawbacks under which they have latterly been placed. The estates on the high grounds, called 'pens,' are kept almost entirely in pasture, to supply the sugar and coffee estates with horned cattle, horses, and mules. The culture of corn and other grain, with the exception of maize, has hitherto been confined within narrow limits. The following table, which gives the quantities and value of the principal articles of colonial produce exported in each of the years 1861 and 1862, shows the agricultural and industrial state of Jamaica at the present time:—

Principal Articles	Quantities		Value	
	1861	1862	1861	1862
			£	£
Coffee . lbs.	6,715,581	5,474,575	151,061	126,857
Ginger . „	617,231	933,045	12,208	18,142

The principal ports (all of which are free) are Kingston, Ports Royal and Morant, Black River, and Savanna-la-Mar on the S. coast; and Lucea and Montego Bay, Falmouth, St. Ann, Ports Maria and Antonio, and Annotto Bay, on the north.

Jamaica is divided into three counties; Middlesex in the centre, Surrey in the E., and Cornwall in the W. These are subdivided into twenty-two parishes, ten of which are comprised in the first, seven in the second, and five in the third named co. St. Jago de la Vega, or Spanish Town, is the seat of government; but Kingston is the largest town, and the real cap. of the island. The executive power is vested in a governor, appointed by the crown, aided by a council of four members, appointed in like manner. The legislative power, previous to the revolt of 1865, was vested in a house of assembly, of forty-seven members, three being elected by each of the parishes containing the towns of Kingston, Spanish Town, and Port Royal, and two by each of the other nineteen parishes. The executive power was greatly strengthened, and the legislature reduced in influence, after the events of 1865. The house of assembly had formerly the power of originating as well as appropriating grants of money; but this was abolished in 1854, and no grant now can originate in the assembly except by message from the governor, or through the executive committee; which committee consists of one member of the legislative council and not exceeding three members of the assembly, not office-holders, chosen and changed at pleasure by the governor. The salary of the governor is 5,000*l.* a year. Justice is administered in a supreme court, composed of the chief justice and two puisne judges, which sits three times a year at Spanish Town. Courts of assize are holden three times a year in each county. Inferior courts of common pleas decide in causes to the value of 20*l.* with costs, and justices of the peace in those not above 40*s.* The court of chancery was formerly held by the governor only: but, in Lord Metcalfe's time, a vice-chancellor was appointed, with a salary of 2,500*l.* a year, who transacts all the ordinary judicial business of the court. Appeal is made from the court of chancery to the privy council. There are, also, admiralty and other special courts. Since the emancipation of the slaves, *courts of conciliation*, similar to those

Digitized by Google

established in Denmark and some other countries, have been instituted in various parishes. The coloured pop. are frequently members of these tribunals, and are thus accustomed to the discharge of some of the most important social duties. Submission to their decisions is optional; but there, as elsewhere, they are usually acquiesced in. A police force, of upwards of 400 constables, was established in 1840.

The military force usually amounts to about 2,000 regular troops, exclusive of the insular militia, which is at present in a very reduced state. The public expenditure on account of religious establishments amounted to 29,133*l.* in 1862, the Presbyterian and R. Catholic clergy besides the church being salaried by the government. Nearly 13,000*l.* —12,884*l.* in 1862—are spent yearly on public instruction and charitable institutions. Education is widely diffused. Numerous schools and churches have recently been established; and the emancipated pop. have not been slow to avail themselves of the benefits resulting from the institution of savings' banks. The public revenue, in 1862, amounted to 291,088*l.*, and the expenditure, in the same year, to 292,402*l.* The compensation money awarded to the proprietors for the liberation of the slaves, in 1833, amounted to 6,161,927*l.*, the average value of a slave from 1822 to 1830 having been 44*l.* 15*s.* 2*d.* The ordinary currency of the United Kingdom has been adopted in Jamaica.

Jamaica was discovered by Columbus in 1495, and was settled in 1503. It remained in the possession of Spain till 1655, when it was taken by the English, to whom it has since belonged.

JANEIRO. See Rio de Janeiro.

JAPAN (EMPIRE OF), called *Niphon* by the Japanese, and Yang-hou by the Chinese; an insular empire of the E. coast of Continental Asia, and opposite to the sea of Japan and the gulf of Tartary and Corea, from which it is separated by Manchooria. It comprises five large and a great number of small islands, lying between the 30th and 50th parallels of N. lat., and between the 128th and 151st degrees of E. long.; bounded N. by the sea of Okotsk and the independent part of the island or peninsula of Tarakai, or Karafto (formerly known to English geographers as Saghalien); by the N. Pacific Ocean; S. by the eastern sea of the Chinese; and W. by the sea of Japan, which communicates with the open ocean by the straits of La Perouse and Sangar, running between the different islands. The present knowledge of Japan is very unsatisfactory: the cautious and jealous policy of the Japanese government with respect to the admission of foreigners (caused, as in China, by the attempts of Jesuit missionaries to christianise the country), has hitherto, in a great measure, baffled the efforts of European inquirers into its internal arrangements and economy. The total area is estimated at 152,604 sq. m., with a pop. of from 35,000,000 to 40,000,000.

Physical Geography.—The three principal islands of Japan Proper have a very uneven surface, few plains being of any great extent, and the hilly country extensive and of a rocky character. Niphon, the largest, longest, and best known of these islands, contains a regular mountain chain, running NNE., the highest summit of which, called *Fusi*, is upwards of 12,000 ft. high, another also (*Siro-jama*) reaching an elevation of 8,000 ft., and being covered with perpetual snow: the average height, however, is so moderate, that the high ground generally admits of cultivation almost up to the dividing line of the watershed. The summits above named are active volcanoes, and many other hills emit either flames or smoke. Earthquakes are frequent, one in 1705 having destroyed nearly half of Yedo, and killed more than 100,000 of its inhab.; thermal and mineral springs also are of very frequent occurrence, so that, on the whole, the islands of Japan may be considered the seat of great volcanic movements, connected, most probably, with those of Kamtschatka and the islands of Formosa and the Asiatic Archipelago, all of which belong to a chain of heights almost as distinctly marked as the volcanic chain of America. The metallic riches of Japan are stated to be very great, comprising copper in sufficiently large quantities for an extensive exportation, a considerable quantity of sulphur, some lead, tin and iron, and a little gold and silver, the mines of the last two being under the exclusive superintendence of the government. The rivers of Japan, though numerous, are not long, on account of the peculiar narrowness of all the islands: few of them are navigable, and most might be characterised rather as torrents than rivers. The largest is the Yedo-gawa, in Niphon, rising in the large lake Oitz, or *Biwa-no-oumi*, and emptying itself, after a probable course of 60 or 80 m., into the harbour of Osaka. The lake Fakonee, SW. of Yedo, is treated with superstitious reverence by the natives. The climate in a country extending over so many parallels of lat. must, of course, vary extremely, the N. dependencies having a severely cold climate, while the S. parts of the empire are nearly as warm as the S. of France, though with a temperature considerably more variable, owing to their insular condition. In Kiu-siu and the S. parts of Niphon, as far N. as Yedo, the thermometer ranges between 104° and 29° Fahr., 80° being the average height in the middle of summer, and 35 during the severest months of winter. The winter cold, however, is much increased by the prevalence of N. and NE. winds; and the summer heats of July and August are moderated by cooling breezes from the S. and SE. Rain is very frequent, falling more or less on two-thirds of all the days in the year, but more especially in June and July, which are the *satoaki*, or rainy months: hurricanes, also, and storms frequently occur, and are described as being very violent.

Agriculture.—Tillage is followed in Japan, not merely as a pursuit dictated by private interest, but also in obedience to a general and very peremptory law, which obliges all owners of land, under the penalty of confiscation, to keep their property in good productive condition, and therefore able to pay a large land-tax to government or its officers. The soil, though not naturally fertile, has been so much improved as to be rendered extremely productive. Few plants, except on the hills, are found in a natural state; and the face of the country, even on the mountain sides (which are formed into terraces, as in some parts of Italy and Persia), is so diligently cultivated, that it would be difficult to find in the country a single nook of untilled land, even to the dry summits of the mountains. In the S. district rice is raised in very large quantities, as it forms a principal article of food with the inhab.; but wheat is little grown and held in light estimation; barley, also buckwheat, a bean called *daidsou*, and another, the *soja dolichos*, potatoes, melons, pumpkins, and cucumbers, are raised in great abundance; and the fruit trees of S. Europe, the orange, lemon, vine, peach, and mulberry (the last of which is carefully reared for silk worms), are both plentiful and highly productive. Ginger and pepper are the chief spice plants. Cotton is cultivated in considerable quantities, and tobacco, introduced by the Jesuits, is very generally raised in the S. islands. The grand object of cultivation, however, next to rice, is the tea-plant, brought here from China in the

Digitized by Google

9th century. Not only are there large tea-plantations with dyeing-houses, but every hedge on every farm consists of the tea-plant, and furnishes the drink of the farmer's family and labourers. The finer sorts demand extreme care in their cultivation: the plants thrive best on well-watered hill-sides, and they are said to be manured with dried anchovies, and a liquor pressed out of mustard-seed. Among trees, the *Broussonetia papyrifera* is cultivated for its bark, which is converted into cloth and paper; and the varnish tree (*Rhus vernix*, and called *ocrosino-ki* by the natives), for its gum, used in varnishing wooden furniture; the camphor laurel, also, the iron tree, the oak, fir, and cypress are common, and furnish products useful as well for home consumption as for exportation. Of timber, however, there is an insufficiency, and supplies are obtained from the N. dependencies of Jesso and Saghalien. The plants are extremely beautiful, and many of them, as the *Clerodendron*, *Camelia*, and *Pyrus*, have been naturalised in Great Britain.

Animals.—Pasturage in a country inhabited by a people eating scarcely any animal food except fish, and so well supplied with cotton and silk that they feel no want of wool for the manufacture of clothes, must necessarily be very unimportant. Buffaloes and oxen are not numerous, and are used only for draught labour, and there are but few sheep, the progeny of a breed introduced by the Dutch soon after their settlement in Japan: the horses are of inferior size, and are only used by the nobility; there are neither mules nor asses, and pigs are found only in the neighbourhood of Nagasaki. Dogs are common, and are considered sacred animals, in consequence of the favour which they enjoyed from one of the *Mikados* or supreme emperors; and cats are even more esteemed, if possible, by the Japanese ladies than by the venerable spinsters of Great Britain. Among the wild animals, may be enumerated bears, wild boars, foxes, wild dogs, deer, monkeys, hares, rats, mice, and two small animals of the weasel kind peculiar to the country, and called the *itutz* and *tin*. Birds are numerous and of many varieties: falcons are highly valued, and pelicans, cranes, and herons are considered useful in destroying vermin and insects that are injurious to the interest of agriculture: the pheasants, ducks, and wild geese have splendid plumage; besides which there is a great variety of teal, storks, pigeons, ravens, larks, and other small birds. Among reptiles, snakes are not unfrequent, especially in the N. part of Niphon, and one variety, the *Ouvabami*, is of enormous size: tortoises also and lizards are of common occurrence; and the islands, particularly towards the S., abound with noxious insects, scorpions, centipedes, and white ants. An apterous phosphoric insect (*Lampyris japonica*) deserves notice as being similar in its habits to the fire-fly of America, but of an entirely different genus. The seas contain large quantities of fish, affording a main article of food to the inhabitants, and giving employment to numerous fishermen. The salmon, herring, cuttle-fish (*Sepia octopodia*), eel, perch (*Sciana japonica* and *Callionymus japonicus*), with many others, are caught in great quantities: oysters, also, of a peculiar and delicious kind, are extremely abundant, and are used almost exclusively as food by many of the poor inhabitants about Yedo, where the fisheries lie. Whales and narwhals frequently visit the coast, and are caught by harpooning; the flesh is eaten, the whalebone serves various purposes, and ambergris is extracted from the entrails.

Manufactures.—The industry of the Japanese will bear to be compared with that of the Hindoos, or even Chinese. The artificers in copper, iron, and steel have a high character, and the swords of Japan rank second only to those made in Khorassan. Telescopes, thermometers, watches and clocks, of good quality, are constructed at Nagasaki, and many of the workmen possess a high degree of mechanical ingenuity. Glass is made; but the natives are not acquainted with the art of glass-blowing. Printing was introduced in the 13th century, and is conducted, as in China, by means of wooden blocks: engravings also are made, but in a very clumsy manner. Silk and cotton fabrics, of good quality, are manufactured in quantities almost sufficient for the consumption of the population. Porcelain, more highly esteemed even than that of China, is formed from two peculiar kinds of earth, called *kaolin* and *petunsee*. The art of lacquering furniture with gold, silver, and various pigments, the secret of which was till lately almost exclusively confined to the Japanese, and hence called 'japanning,' is practised with great success; and some of the finest specimens that have reached Europe, and are deposited, with other curiosities, in the Royal Museum at the Hague, exceed in excellence every other sort of japanned wares known in Europe. The process is extremely tedious, and the gum requires long preparation for its conversion into varnish. Five coats, at least, are successively applied, and when dry, rubbed down and polished with stone; many of the more costly specimens are inlaid with mother-of-pearl. Good paper is made from the maceration of the mulberry and other barks, the fibres of which are used in the manufacture of cordage. The art of building houses is little understood: they are almost universally constructed of timber, covered on the outside with plaster, and the insides consist usually of two stories, each of which, when divided, is parted off into close rooms by flimsy paper partitions, adorned, or rather disfigured, with garish and bold paintings. Of ship-building and navigation the Japanese have a slight knowledge; and that is prevented from increasing by a law, which compels the people to build their ships in a particular fashion, somewhat similar to that of the Chinese junks. They are made of cedar, fir, or camphor-wood, and the merchant vessels average about 70 ft. in length, by 20 or 24 ft. in breadth, their burden varying from 100 to 150 tons. Great numbers of ships are employed in trading with the different ports of the empire, and many others besides are engaged in fishing.

Trade and Commerce.—The internal trade of Japan is very extensive, and a variety of regulations are in force, the object of which is to protect and encourage home industry. The prices of goods are not enhanced by imposts of any kind; and communication between the great markets and all parts of the empire is facilitated by numerous coasting vessels and well maintained roads. The shops and markets, especially in Yedo, Miako, and Nagasaki, are well provided with almost every description of agricultural and manufactured produce, and the great fairs are crowded with people from the most distant parts of the country. Accounts also are published, from time to time, of the general state of trade and agriculture, and of the prices current for the chief articles of traffic at the trading towns of Yedo, Miako, Osaka, and Simonoseki on the island of Niphon, Sanga, Kokoura, and Nagasaki in Khu-siu, Tosa in Sikokf, and Matsmai in Jesso. Foreign commerce, however, was, until recently, vigorously opposed by the government, in consequence of the attempts of the Jesuit missionaries to christianise the people. An edict, published in 1637, and still in force, makes it a capital offence for the natives to

Digitized by Google

travel into other countries; and their seamen even, when accidentally cast on foreign shores, are, on their return, subjected to rigorous examination, and sometimes tedious imprisonment, to purify them from the supposed pollution contracted abroad. The Dutch, who were the first permitted to visit the empire after the expulsion of the Portuguese, had their earliest factory on the island of Firato: but they were removed, in 1641, by the emperor's orders, to Nagasaki, where, in common with the Coreans and Chinese, they are allowed to bring their goods for sale; but the number of vessels allowed to come each year, and the quantity of each description of wares to be sold, were strictly defined; and the residents in the factory restricted to 11 only. The ships, immediately on their arrival, were minutely searched, and the crews kept, during their stay in port, completely secluded from the natives, on the small island of Djesima, close to the harbour. In recent years, the combined efforts of the European and American governments has brought about a more liberal state of things. By treaties made with several European governments—with Russia in October, 1857, and with Great Britain, France, and the United States in July and August 1858—the three Japanese ports of Nagasaki, Kanagawa, and Hakodadi were thrown open to foreign commerce. At the last-named port, commercial intercourse was attempted in the years 1859–60, but did not succeed. The total value of imports at the port of Nagasaki in the year 1862 amounted to 149,326*l.*, and of exports to 217,314*l.* Of greater commercial importance than the foregoing is the port of Kanagawa, at present the chief station of commercial intercourse with Japan. The following return shows the amount of trade carried on at the port of Kanagawa during the year ending December 31, 1862:—

IMPORTS.

In 121 vessels—	Dollars
By British merchants (including two German firms)	1,575,784
By French merchants (including one German firm)	20,783
By American merchants	122,836
By Dutch merchants (including two German firms	857,577
Total	2,576,980
	£536,860

EXPORTS.

	Dollars
By British merchants	4,707,384
By French merchants	337,271
By American merchants	314,627
By Dutch merchants	945,846
Total	6,305,128
	£1,313,568

The imports comprise raw silk, woollen, cotton, and linen cloths of various kinds, sugar, dye-woods, seal-skins, pepper, and other spices, quicksilver, tin and iron, cinnabar, glass-wares, &c. from the Dutch, and silk, tea, sugar, dried fish, and whale oil from the Chinese: the exports consist chiefly of copper ingots, camphor, and, to a smaller extent, of silk fabrics, lacquered wares and porcelain.

The number of foreigners settled in Japan is as yet very small. At the end of the third year that the ports had been opened, the foreign community at Kanagawa consisted of fifty-five natives of Great Britain; thirty-eight Americans; twenty Dutch; eleven French; and two Portuguese: and in the latter part of 1864 the permanent foreign residents at Kanagawa had increased to 300, not counting soldiers, of which number 140 were British subjects, and about 80 Americans and 40 Dutch. At Nagasaki, the number of foreigners at the same period was 89, with a greater proportion of Dutch. The port of Hakodadi, in the north of Japan, was deserted, after a lengthened trial, by all the foreign merchants settled there, it having been found impossible to establish any satisfactory intercourse with the natives.

Accounts are kept in *thails*, each of which is equivalent to 3½ Dutch florins, or 5*s.* 10*d.* Eng. money, and the thail is composed of 10 *mas*, and the mas of 10 *condorins*. The gold coins are the *itzib*, worth 15 mas (or 8*s.* 9*d.*), the *kobang*, equal to 64 mas (1*l.* 7*s.* 4*d.*), and the *oban* valued at 8 kobangs. Large payments, however, are most commonly made in silver ingots of a fixed weight and value. The standard of weight is the Japanese *picul*, equal to 130·9 English lbs. avoirdupois, and divided into 100 *cattys* and 1,600 *talcs*. The measure of length is the *tattamy*, equivalent to 6 ft. 4 in. English; but road distance is reckoned by *ri*, or Japanese leagues, about 30 of which go to a degree of latitude.

Government and Laws.—The government of Japan is an hereditary, absolute monarchy. The supreme power was originally vested in an ecclesiastical emperor, called *Daïri-sama*, or *Mikado*; but in 1583 Joritomo, the emperor's *Sjogûn*, or military commander, usurped the chief civil power, and from that time to the present, notwithstanding its acknowledged illegality, the mikado, who is the only real emperor, has been a mere puppet-king, in a state of dependence on his sjogûn, his first officer, and the military chief of the empire. All enactments, however, must have the sanction of the emperor before they have legal force; he alone confers honorary distinctions on the sjogûn and the nobility, and he has the entire superintendence of religious affairs and education. Any further connexion with sublunary affairs would, it is supposed, degrade the Son of Heaven, and profane his holy character. His court is at Miako, where he lives secluded in a large palace, and surrounded by numerous officers, who treat him with almost divine honours. His person is considered too sacred to be exposed to the air, and the rays of the sun, and still less to the view of his subjects; and he is consequently confined within his palace: his hair, nails, and beard are not cleaned or cut by daylight, these operations being always performed when he is asleep; he never eats twice off the same plate, nor uses any vessels a second time; and they are invariably broken to prevent them from falling into unhallowed hands. The mikado's finances, however, are now restricted to the taxes collected from Miako and the surrounding territory, certain revenues from the treasury of the sjogûn, and the fees paid on the admission to honourable dignities and offices. His income, indeed, is so small, and the number of dependents so great, that he may be said to live in splendid poverty. The sjogûn, who has usurped all the substantial power, holds his court at Yedo, and exercises entire authority over the lives and property of the natives, controlled only by the laws enacted by former emperors, and which admit of little change. To him, also, directly belongs the local government of the five great towns, Yedo, Miako, Osaka, Sakai, and Nagasaki. The country is divided into 8 districts, which are subdivided into 68 provinces, and these again into 604 counties: the provs. are governed by princes called *daimio* or high-named; and under them are governors of districts, called *siomio*, or well-named. The daimios are appointed by the sjogûn, to whom they are accountable, with hostages for the proper exercise of their authority. They are entitled to the revenues of their respective provs., which

Digitized by Google

enable them, besides maintaining their state and dignity, to keep an armed force for the preservation of order, and to make outlays in repairing roads, and other public works. They reside usually in large towns, either maritime or situated on rivers, and their castles are defended by strong gates and lofty towers. Once a year, in token of subjection, they repair to the sjogûn's court at Yedo, attended by numerous and splendid retinues, and bearing valuable presents, constituting a main portion of his yearly revenues. The executive department is confided to seven ministers, who undertake severally the departments of internal economy and finance, commerce and navigation, public works, police, civil and criminal legislation, war and religion. The supreme judicial council, called gorondje, is composed of 5 daimios, who assist the kubo in his decisions on political offences; and a senate of 15 daimios or nobles forms a subordinate court, that takes cognisance of civil and criminal cases.

The laws of Japan are severe, and even sanguinary; fines are seldom imposed, and exile to the penal settlement of *Taitse-en-sima* (inflicted on the nobles), banishment, imprisonment, torture, and death by decapitation, or impaling on a cross, are the ordinary penalties of crime, the shades of which are little distinguished. It frequently happens, also, that the courts visit with punishment not only the delinquents themselves, but their relatives and dependents, and even strangers who have accidentally been spectators of their crimes. The prisons are gloomy and horrid abodes, containing places for torture and private executions, besides numerous cells for solitary confinement. The police is extremely strict, and in the large towns each street has a chief officer, called the *ottona*, who is responsible for the maintenance of order, the punishment of delinquents, and the registration of births, marriages, and deaths. Besides these, four superintendents regulate the economy of the towns, and rigorously punish, often with death, the most trifling infraction of public order or peace, information of which is obtained by an established system of *espionage*.

Revenues.—The public revenues are derived from taxes on land and houses. The land is assumed to be the property of the state, and is rated according to the class of soil to which it belongs; the rate being said always to exceed half and often three-fourths of the produce; but it is difficult to believe that so heavy a tax can be collected. Tenants neglecting the proper cultivation of their land are punished by ejectment. Houses are rated according to the extent of street frontage, and the amount in which the holders are mulcted is greatly increased by forced presents to the civil officers, and dues for maintaining the temples and idols. The amount of the kubo's revenues cannot be ascertained; but it may be inferred that the land-tax, and the contributions from the daimios, who farm the taxes of their 68 provs., must form a pretty large privy purse.

Armed Force.—The army in time of peace consists of 100,000 infantry and 20,000 cavalry; the force during war being increased by levies from the different provs. to 400,000 infantry, and 40,000 cavalry. The arms used by the infantry are the musket, pike, bow, sabre, and dagger; those of the mounted troops being the lance, sabre, and pistol. The artillery is confined to a few brass cannon and light pieces. The generals have no permanent office, but, in case of war or disturbance, are appointed by the sjogûn and princes. Discipline and fortifications are little understood; and their batteries consist usually of a few odd-looking walls, raised without either order or apparent object. Japan, though an insular dominion, has no navy; the ships, such as they are, being used in trade.

Religion.—The form of religious worship in Japan, especially the old form, has no resemblance whatever to any of the contemporary Chinese forms: the early inhabs. of Japan had a peculiar form, which, being respected as that of their ancestors, has maintained itself to this day, as well in the hut of the peasant as in the palace of the dairi. Being generally liked, it is not only tolerated, but even protected and venerated by government; even at the present time, it might have been the positive religion of the Japanese, if political causes had not obliged the subjects openly to acknowledge one of the sects of Buddh. The doctrines, views, and interpretations of the ancient rites of the Japanese worship are in no essential points similar to those of Buddh; and though, by contact of 1,000 years, they appear to have more or less amalgamated, yet they are kept rigorously distinct by Japanese theologians. The old religion is the *Sin-siu* (lit. *faith in gods*), or, according to Siebold, the *Kami-no-mitsi*, or way to the *kami*, or gods, the other being a modern Chinese term for it. This sect regards the founders of the empire to be sprung from *Ten-syoo-dai-zin*, the supreme deity, and to have descended from heaven upon the Japanese land; and their title *Ten-zi* is a recognition of their divine origin. The race is never extinct; for in case of a failure in the succession, a descendant is supposed to be sent from heaven (though in fact privately selected by the emperor from the families of the nobles) to the childless ten-zi. The spirit of their ruler is immortal, and this also confirms the faith of the people in the immortality of the soul, in connection with which they also believe in a future retribution of their good and evil deeds during life on earth. Their paradise is called *Takama-kahava*, and their hell *Ne-no-kuni*. The supreme deity is too great to be addressed in prayer, save through the mediation of the Mikado, the Son of Heaven, or of inferior spirits called *kami*, of which 492 were born spirits, and 2,640 are canonised mortals. For these *kami*, who seem to be regarded somewhat like the saints of the Romish calendar, as intercessors with God, temples are specially erected; and in every Japanese dwelling is a kind of oratory, in which the natives, morning and evening, offer their prayers to the supreme deity. Large gates and triumphal arches lead to the temples, which, with the dwellings of the priests and other buildings, frequently form extensive and stately edifices. Various eatables are offered as sacrifices to the kami, and anciently even human victims were immolated to reconcile the hostility of evil spirits. The priests of this sect are allowed to marry.

The Buddhist form of worship is supposed to have been introduced from China, through Corea, in the 6th century of the Christian æra; and the dogmas of that religion are divided into a higher and lower doctrine of faith. According to the first, man derives his origin from *nothing*, and therefore has no evil in himself; the impressions of the material world bringing out the evil in him, and fostering its growth. This evil is to be counteracted by following the bent of the soul, within which is neither more nor less than the deity guiding our actions. The human body having sprung from nothing, will, after death, return to nothing; but the soul survives, that of the wicked floating eternally in the void of space, while that of the good will repose in the palace of the deity, whence, if the denizens of this lower world should ever need the aid of a virtuous man, it will be sent from heaven to occupy another body. This is the esoteric doctrine of the priests, but which varies

Digitized by Google

from the more popular and practical tenets of the people. The common belief of the Japanese is that on the other side (*i. e.* in the other world), before the great judge *Emaoo*, stands a large mirror, in which the actions of all mankind are imaged forth. Near this mirror stand two spirits, who observe and report the deeds of every person, and a third records them in a book, by which the souls of the dead will ultimately be judged, and, according to their sentence, sent to their places of rewards and punishments. *Amida*, the saving deity, is the god of paradise; and the way to ensure a journey on the *Gokurak*, or road to paradise (one only out of six to which departed spirits may be sent), is an obedience to five commandments—viz. not to lie, not to commit adultery, not to kill any living creature, not to get drunk, and not to steal. One of the roads for the dead is *Tsikusyo*, the road to the hell of animals; and hence the Buddhists of Japan believe in the transmigration of souls into animals as well as men.

Of the religion of Buddh, as now professed, there are many ramifications, and much superstition prevails. *Jammabos*, or monks of the mountain, live a secluded and ascetic life; and blind monks, who deprive themselves of sight that they may not behold the vice around them, are very common throughout Japan. Occasionally, in pursuance of vows, men are met running about the street entirely naked, on a round of visits to different temples; multitudes of religious beggars also are to be seen with shaven heads; and singing girls, in the assumed habit of nuns, procure from the rich considerable sums. The sect of *Syuntoo*, which professes the morality of Confucius, is quite separate from any of the creeds above described, and has existed in Japan since A.D. 59. Here, as in China, its only object is the inculcation of a virtuous life in this world, without reference to an after-state of existence.

Population, Habits, and Manners.—The pop. of Japan are divided into eight classes, the princes, nobles, priests, soldiers, civil officers, merchants, artisans, and labourers either agricultural or otherwise. The caste system is strictly pursued, and each follows the employment of his fathers, whatever his talents may be for a different pursuit. The people, physically considered, appear to be a mixed breed of Mongolian and Malay blood, though they regard themselves as aborigines. They are, in general, well made, active, and supple, having yellow complexions, small deeply set eyes, short flattish noses, broad heads, and thick black hair, which, however, is not allowed to be worn except on the crown, the sides of the head being kept constantly shaved. The dress of the Japanese consists of several loose silken or cotton robes, worn over each other, the family arms being usually worked into the back and breast of that which covers the rest. To these is added, on state occasions, a robe of ceremony; and the higher classes wear with it a sort of trousers called hakkama (resembling a full-plaited petticoat drawn up between the legs), with one or more swords, according to the rank of the parties. The lower orders are prohibited from wearing swords. The men shave the front and crown of the head, the rest being gathered and formed into a tuft, covering the bald part: the women, on the contrary, wear their hair long, and arranged in the form of a turban, stuck full of pieces of highly polished tortoise-shell; and they paint their faces red and white, and stain their lips purple, and their teeth black. Hats are worn only in rainy weather; but the fan is an indispensable appendage to all classes of the Japanese. Their gait is awkward, owing partly to their clumsy shoes; but that of the women is the worst, in consequence of their practice of so tightly bandaging the hips, as to turn their feet inwards. On the other hand, they do not deform themselves by confining their feet in tight shoes, like the Chinese. Polygamy is not practised even by the nobles, and far more freedom is permitted to the female sex than in China: many are well educated, and almost all play on musical instruments. Concubines are kept in numbers, varying according to the means of the owner; but they hold a rank much inferior to that of wives: prostitutes are found in every town in greater numbers than in any country in Asia, except Hindoostan; and so little discredit is attached to their profession, that they are visited by married females, and received back without remark into respectable society.

The great bulk of the people appear intelligent, and desirous of increasing their knowledge by inquiries; they study medicine and astronomy, and their observations are as correctly made as their rude instruments will allow. Almanacks are compiled at Miako, the great centre of the national science and literature. The history of Japan has been written with great care by some of the native writers; and their works on botany and zoology contain good descriptions and tolerable engravings of the plants and animals indigenous to their islands. Poetry, also, is cultivated, and there is a prevalent taste for music. The Japanese language has no relation to the Chinese, nor, indeed, to any known Asiatic language, except that of the Ainos, who inhabit Jesso and Tarakai. It is a polysyllabic language, has an alphabet of 47 letters, and is written in four different sets of characters, one of which (the *katakana*) is used exclusively by the males, while another (the *kiragana*) is appropriated to the females. The Chinese character also is in use among the learned.

History.—Marco Polo was the first to make known to Europeans the existence of a country called by him *Zipangu*, but since proved to be identical with Japan. In 1542, Mendez-Pinto, a Portuguese, was cast by storm on these shores, and a Portuguese settlement from Malacca was soon after made at Nagasaki, the commercial relations of which, with the inhab., were very considerable and highly lucrative to the settlers, till the interference, in 1585, of Jesuit missionaries with the religious profession of the inhab., led to the persecution and final expulsion of the traders. The Dutch soon afterwards (in 1600), with great difficulty, prevailed on the Japanese to allow them to trade on condition of not interfering with the national religion; but the vexations and harassing regulations by which the trade was obstructed, and the very limited extent allowed to it, made it a matter of question how far the factory should be kept up by the Dutch government. The Russians tried subsequently to establish commercial relations with Japan; but their proposals were declined, and the envoys were ordered not to return on pain of death. Finally, in 1857, the combined efforts of the leading governments of Europe and that of the United States, were so far successful in opening Japan as to lead to commercial intercourse at the three treaty ports before specified. The results of the first eight or nine years of commerce have not, however, answered the expectation. The general belief is that the reluctance to intercourse with the Western nations is not to be found among the mass of the people, but solely in the ruling feudal aristocracy, the daimios.

JAROSLAVL, or YAROSLAV, a province, or government of Russia in Europe, chiefly between the 57th and 59th degs. of lat. and the 38th and

Digitized by Google

42d of long., having N. Novgorod and Vologda, E. Kostroma, S. Vladimir, and W. Tver. Length, N. to S., about 160 m.; greatest breadth nearly the same. Area, 13,800 sq. m. Pop. 976,866 in 1858. Surface almost wholly flat, in some parts marshy, and in general only moderately fertile. The Wolga traverses this government in its centre; the other chief rivers are its tributaries, the Mologa and Scheksna, which have, more or less, an E. direction. The lake of Rostof, in the S., is 8 m. long by 6 broad, and there are nearly 40 other lakes of less size. Rye, barley, wheat, oats, and peas, are grown, and the annual produce of corn is estimated at about three millions of chetwerts; a quantity insufficient for the inhab., who are partly supplied from the adjacent provinces by means of the Wolga. Its hemp and flax are excellent, and cherry and apple orchards are numerous. The gardeners of Jaroslavl and Rostof are famed throughout Russia, and many are met with at Petersburg. Timber is rather scarce. The rearing of live-stock, excepting horses, is little pursued; but the fisheries in the Wolga are important. The government is, however, more noted for its manufacturing than its rural industry. Linen, cotton, and woollen stuffs, leather, silk, paper, hardware, and tobacco are the principal manufactures; the peasants are almost every where partially occupied with weaving stockings and other fabrics, and making gloves, hats, harness, wooden shoes, and various rural implements. Commerce is facilitated by several navigable rivers and good roads.

Jaroslavl is subdivided into ten districts; chief towns, Jaroslavl, Rostof, and Ouglitch. Its pop. is Russian; and the women are proverbial (among Russians) for their beauty. Only about 1-17th part of the inhabs. reside in towns.

Jaroslavl, a city of European Russia, cap. of the above gov., and of a circ. of same name, on the Wolga, at the mouth of the Kotorosth, 212 m. NE. Moscow, and 325 m. SE. St. Petersburg. Pop. 35,100 in 1858. The town is well built, though mostly of wood; and is defended by a fort at the confluence of the two rivers. In its broad main street, which is ornamented with trees, are many handsome stone houses; and 3 convents and numerous churches contribute to give Jaroslavl an imposing appearance. The Demidoff lyceum, founded in 1803, has a good library, a cabinet of natural history, a chemical laboratory, and printing-press, and ranks immediately after the Russian universities. It was originally endowed with lands, to which 3,578 serfs were attached, and with a capital of 100,000 silver roubles; and on the emancipation of the serfs, in 1863, it received a large pecuniary compensation. The same educational course is pursued as in the universities, and lasts three years. The establishment is placed under a lay-director and an ecclesiastic, and has 8 professors, 2 readers, and 40 pensionary students. Jaroslavl has also an ecclesiastical seminary, with 500 students. A large exchange (*Gostinöi dvor*), an hospital, foundling asylum, house of correction, and 2 workhouses, are the other chief public edifices. This city is the residence of a governor, and the see of an archbishop. It has about 40 different factories, including 3 of cotton, 4 of linen, and 2 of silk fabrics, 8 tanneries, and several tobacco, hardware, and paper-making establishments. Its leather and table linen are much esteemed. The position of Jaroslavl on the Wolga contributes to promote its commerce, which is very considerable. Its manufactures are sent to Moscow and Petersburg, and a great many are sold at the fair of Markarief. Two annual fairs are held.

Jaroslavl is a city of considerable antiquity, being founded in 1025 by the famous Jaroslav, son of Vladimir the Great, who annexed it to the principality of Rostov. It fell under the dukes of Moscow, in 1426. Peter the Great was the first to give it commercial importance, by establishing its linen manufactures, since which its prosperity has been progressive.

JAROSLAW, or JAROSLAU, a town of the Austrian empire, Galicia, circ. Przemisl, on the San, a tributary of the Vistula, 16 m. NNW. the town of Przemisl. Pop. 8,773 in 1857, among whom many Jews. It has a castle belonging to prince Czartorinsky, a cathedral, and several other churches, a high school and girls' school, and manufactures of woollen and linen cloths, rosoglio, and wax candles. It has an extensive trade in those goods, and in wooden wares, honey, bleached wax, flax, and Hungarian wines, considerable quantities of all which are sent to Dantzic, though less than formerly. The town has some rather large fairs; the principal is that holden on the 15th of Aug.

JASSY (an. *Jassiorium Municipium*), a town of Moldavia, of which it is the cap., on the Baglui, a tributary of the Pruth, about 120 m. NNW. Galacz, and 160 m. WNW. Odessa. Pop. estim. at 35,000 in 1863. The town is situated in a fertile country, partly on a hill, and partly in the valley beneath, and covers a large surface, the houses being interspersed with gardens and plantations. Its fortifications were demolished in 1788, and its only defence is now a small fortress on an eminence, opposite the residence of the hospodar. About 4,700 houses, including all its handsomest residences, were destroyed by fire in 1822; since which, Jassy has been partly rebuilt. Of the 6,000 houses it is now stated to contain, about 200 only are of stone or brick. The principal street is wide, and lined with low shops; the other streets are narrow and crooked: they are paved only with logs, and in wet weather are impassable from the mud, while in dry weather they are enveloped in clouds of dust. There is want of cleanliness; and this, with the proximity of marshes, and the exhalations which arise from the imperfectly covered sewers, render the town, especially its lower part, very unhealthy. Jassy is the see of a Greek archbishop, whose residence is perhaps the most remarkable public edifice. It has many Greek churches and chapels, a Rom. Cath. and a Lutheran church, numerous convents, a hospital, three public baths, a large building appropriated to a Wallachian printing establishment, a gymnasium established in 1644, a Lancastrian school, and a school of handicrafts for females founded in 1834. It has few manufactures; some canvass is, however, made in the town for export to Constantinople, and the trade in wine, flax, corn, hides, wool, wax, honey, and tallow is considerable, especially at the fairs. The town has so often suffered from fire that, to be secure, some of the merchants deposit their most valuable wares in chests in the high church of St. Nicholas. The boyars, or principal inhabs., have a great passion for pageantry and gaming, and are illiterate in the extreme. Their costume is a mixture of Oriental and European, and the showy dresses of the upper classes strikingly contrast with the general wretched appearance of the pop.

JASZ-BERENY, a town of Hungary, distr. Jagyzia, of which it is the cap., on both sides the Zagyva, here crossed by a stone bridge, 40 m. E. Pesth. Pop. 15,893 in 1857. The town has a large and handsome Rom. Cath. parish church, several other churches, a Franciscan convent, Rom. Cath. gymnasium, high school, and a town-

Digitized by Google

hall, in which are kept the archives of Jagyzia and Great and Little Cumania. In the centre of the town stands a marble obelisk, erected in 1797 in honour of the Archduke John; and within the precincts of the convent, on an island in the Zagyva, the traveller is shown a tomb, reported to be that of Aitila. The town has a large trade in corn, horses, and cattle, which latter are reared in great numbers in its vicinity.

JAUER, a town of Prussia, prov. Silesia, cap. circ. of same name, on the Neisse, 10 m. SE. Liegnitz, on the railway from Liegnitz to Schweidnitz. Pop. 8,680 in 1861. The town is the seat of the judicial courts for the circle; has a house of correction, a Lutheran, and five Rom. Cath. churches, a free school, and fabrics of linen and woollen cloths.

JAVA, a large and fertile island of the Eastern Archipelago, belonging to the Dutch, and the centre, as well as the most valuable, of their possessions in the East. It lies between the 6th and 9th degs. S. lat., and the 105th and 115th E. long.; separated from Sumatra on the W. by the straits of Sunda, E. by those of Bali from the isl. of that name; having N. the Sea of Java between it and Borneo, and S. the Indian Ocean. Its general configuration is not unlike that of Cuba, except that it is not curved, and it also resembles Cuba in its extent, fertility, products, and commercial value, while it supports eight times its amount of pop. Its length W. to E. is about 660 m.; breadth varying from 40 to 130 m. Area, inclusive of the neighbouring isl. of Madura, 51,336 sq. m.; pop. 13,019,108 in 1861. Among the pop. are 100,000 Chinese, with Malays, natives of Bali and other isls. of the Archipelago, a few Arabs, Moors, and Bengalese, and 20,000 Europeans, mostly natives of the Netherlands.

Physical Geography.—Most part of the surface is mountainous. A mountain chain, obviously of volcanic origin, runs W. and E. entirely through the centre of the isl., its peaks varying in elevation from 5,000 to probably 12,000 ft. All these peaks are of a conical form, and, with few exceptions, each appears to have originated in a distinct convulsion of nature. All have been at some period active volcanoes; in most of them, however, volcanic agency is now apparently extinct, though, from some, eruptions occasionally take place, and sulphureous vapours are emitted, especially after rain. The S. coast is usually bold and rocky and being exposed to all the violence of the ocean, is unsafe for shipping; the N. shore is, on the contrary, low and marshy, and has many tolerable harbours and roadsteads, affording sufficient shelter to trading vessels, the sea being generally smooth. Rivers numerous; but very few of any size. The largest is the Solo, which runs through nearly the centre of the isl., and disembogues on the N. coast, opposite Madura. Its length may be estimated at 400 m., seven-eighths of which are navigable for vessels of 200 tons. Five or six other rivers are at all times navigable for a few miles from the coast, and about fifty more are in the wet season used for the conveyance of rafts and rough produce downwards. There are many extensive swamps, and in the mountains many small lakes occupy the craters of extinct volcanoes.

Basalt, hornblende, and other volcanic formations are abundantly intermixed among the primary rocks of the mountain region. On either side of the mountain chain coarse limestone and argillaceous iron-stone are very prevalent formations, and are covered, especially in the lower parts of the country, with a volcanic soil of great richness in some places 12 ft. in depth. The N. coast rests entirely upon coral. Metals are few. Mineral springs of various kinds are met with, besides naphtha and petroleum wells, and in one distr. is a cluster of hills which eject a mixture of mud and salt water, like the mud-volcano of Maccaluba, in Sicily.

The seasons are divided into the wet and dry. The former accompanies the monsoon from October to March or April; the latter, the E. monsoon, which lasts during the rest of the year. On the N. coast, where the thermometer sometimes rises to 90° Fahr., the climate is very unfavourable to Europeans; but in the interior, at an elevation of 4.000 ft., where the temperature ranges between 50° and 60°, no deleterious influence is to be apprehended from the atmosphere. Thunderstorms and earthquakes are frequent, but hurricanes are unknown.

Java has a most luxuriant vegetation. It is distinguished by the number and excellence of its fruits and other vegetable products, which comprise many of the most valuable common to tropical climates. Dense forests of teak and other trees, useful for shipbuilding, cover a great part of the interior, especially towards the E. end of the island. The teak of Java is inferior in hardness and solidity to that of Malabar, but it is superior in those respects to that of Birmah; and is said to excel every other variety in durability. The sago, and many other palms, the very curious pitcher-plant (*Nepenthes distillatoria*), and two virulently poisonous plants, the *anchar* and the *chetik*, are natives of the island. The latter, which is peculiar to Java, is a large creeping shrub, and identical with the celebrated *upas*, formerly supposed, but on no good foundation, to be, like Avernus, destructive of birds flying over it. The aggregate number of mammalia has been estimated at fifty, including the royal and black tigers, rhinoceros, several kinds of deer, the wild hog, wild Javan ox, and buffalo. Crocodiles and other large reptiles infest the mouths of the rivers and the marshes; and upwards of twenty venomous serpents are enumerated, including some of enormous size. Birds are in immense variety; the bird of paradise visits Java, from Gilolo, Papua, and the other islands to the E.; and the edible nests of the sea swallow (*Hirundo esculenta*) form an important and valuable article of trade for the Chinese markets. This singular product is obtained in the greatest perfection from deep, damp, and all but inaccessible caves along the rugged parts of the sea coast. These are the property of government; and, when they can be easily guarded, produce a considerable revenue. The nests are taken twice a year; and if no unnecessary violence be done, the operation seems to be but little injurious: at all events, the quantity is but little increased by the caves being left untouched for a year or two. The nests are assorted in three qualities, the best being the whitest, or those taken away before they have been soiled by the food or *fæces* of the young bird. The supply of nests being limited and unsusceptible of increase, and being, at the same time, highly prized by the rich and luxurious Chinese, on account of their real or supposed invigorating powers, they bring enormous prices; the finest sorts selling for 5*l.* or 6*l.* per lib., and the inferior for 24*s.* or 25*s.* They are collected, but in smaller quantities, in other parts of the Archipelago.

Trade and Industry.—The vast majority of the Javanese are a nation of husbandmen. To the crop the mechanic looks for his wages, the soldier for his pay, the magistrate for his salary, the priest for his stipend, and the government for its

Digitized by Google

tribute. The wealth of a province or village is measured by the extent and fertility of its land, its facilities for rice irrigation, and the number of its buffaloes. The proportion, at an average of the inhab. engaged in agriculture to the rest of pop. may be stated at 4 to 1; and it is probable that if the whole island were under cultivation, no area of land of the same extent in any other quarter of the globe could surpass it, either in the quantity, quality, or value of its vegetable productions. At present, only about one-third part of the surface is supposed to be under culture; and yet Java produces not only enough of corn for its own consumption, but is the granary of the E. Archipelago, and even of Singapore. Within the last twenty years the cultivation of all its great staples has wonderfully increased; and the progress of Java has been more remarkable than that of either Brazil or Cuba.

The husbandry of the Javanese may be said to exhibit, upon the whole, much neatness and order. Two or more crops are never cultivated in the same field, as is the slovenly practice of the Hindoos. Neither are the lands tilled in common, as is a usual but most injurious practice in India. The peasant and his family bestow their labour exclusively on their own possessions, and consider their culture rather as an enjoyment than a task. It is here only that their industry assumes an active and systematic character: the women take a large share of the labour. The work of the plough, the harrow and mattock, with all that concerns the important operations of irrigation, are performed by the men, but the lighter labours of sowing, transplanting, reaping, and housing, belong almost exclusively to the women.

The implements of agriculture are few and simple; but, as well as the agricultural processes, they are more perfect, and imply a greater degree of intelligence, than those of the Hindoos, and perhaps, indeed, than those of any Asiatic people, the Chinese excepted. The Javanese plough, like the Hindoo, has no share. The stock is tipped with a few ounces of iron, and the earth board is carved out of the body of the plough; the wood is teak, the yoke of bamboo cane. One man conducts the plough, and with a long whip guides the cattle, which never exceed two in number. The Javanese harrow is a large rake, with a single row of teeth. The same yoke and cattle are used for it as for the plough, and over its beam a bamboo cane is placed, on which the person who guides it sits to give a necessary weight to the implement. The hoe is very indifferent; its edge only tipped with a little iron, and its handle about 2½ ft. long. The Javanese sickle is a very peculiar instrument. Its object is to nip off separately each ear of rice with a few inches of the straw; for which purpose it is grasped in the right hand, and the operation effected with a dexterity acquired by habit. The whole farming stock of a villager may be purchased for little more than one-third part of the yearly produce of his land; or for about 15 or 16 dollars, including a pair of buffaloes. These animals usually serve all agricultural and other purposes in place of horses. Cattle of every description are plentiful throughout Java; but the cows are inferior, and yield little milk. Sheep, goats, and hogs are numerous.

Rice is the principal food of all classes: it is grown not only along the whole of the sea-coast, but in all the low grounds and ravines where water is to be had. Wherever rice is cultivated by immersion, the land is divided into small chequers of about 200 or 300 sq. yards, surrounded by dykes not exceeding 1½ ft. high, to retain the water for irrigation. When the culture depends on the periodical rains, the charge of these dykes constitutes, so far as irrigation is concerned, the only care of the husbandmen; but the greater quantity of the grain of Java is raised by the help of artificial irrigation. The principal care of the husbandmen is to dam the brooks and mountain streams as they descend from the hills, and before the difficulty has occurred which would be presented by their passing through deep ravines. From this circumstance, the crests of the mountains, and the valleys at their feet, are best supplied with water, and there, consequently, is the finest and richest husbandry. The slopes of the mountains are formed into terraces highly cultivated, and the valleys are rendered almost impassable from the frequency of the water courses. The art of forcing rice by artificial irrigation is found only to prevail in the most improved parts of the Eastern Archipelago, and in the best lands. This mode does not depend upon the seasons; and hence we see in the best parts of Java, where it chiefly obtains, rice in every state of progress, at any given season, and in the same district, within, indeed, the compass of a few acres. In one little field, or rather compartment, the husbandman is ploughing or harrowing; in a second, he is sowing; in a third, transplanting; in a fourth, the grain is beginning to flower; in a fifth, it is yellow; and in the sixth, the women, children, and old men are busy reaping. Lands which may be inundated at pleasure almost always yield a white and a green crop within the year; and to take two white crops from them, whether a judicious practice or otherwise, is very common.

Two varieties of rice are raised in Java, one a large, productive, but delicate kind, requiring about seven months to ripen, and the other small, hardy, and less fruitful, which ripens in little more than five months. The first is always cultivated in rich lands, where one annual crop only is taken; but where two crops are raised, the other variety is grown. The rapid growth of the latter has, indeed, enabled the husbandman, in a few happy situations, to reap six crops in two years and a half.

Rice, of whatever description, is reaped and stored in the same way. The whole field is not reaped at once, but each portion of the grain is taken successively as it ripens; so that, in the desultory manner in which the operation is performed, a very small field, with many reapers, may occupy a period of ten or twelve days in reaping. With the singular sickle before mentioned the ears are nipped off, and forthwith transported to the village by the manual labour of the reapers, for cattle or carriages are very rarely used. At the village the corn is sufficiently dried by a day or two's exposure to a powerful sun, when it is tied in sheaves or bundles, and deposited in little granaries of wicker work, one of which is attached to every cottage. Grain is never thrashed by treading it out by means of cattle. It sometimes, chiefly in the case of mountain rice, becomes necessary to separate the seed from the straw, which is done by treading, or rather rubbing, the sheaf between the feet, an operation effected with considerable dexterity. Commonly the grain is stored for use and transported to market in the straw. The operation of husking is performed by the women in large wooden mortars, with pestles of the same material. Rice is mostly grown in the E. part of the island, whence it is sent in large quantities to Batavia for exportation, or to Samarang, from which port a good deal is shipped for China and the islands of the Archipelago.

Coffee, which has become the great commercial

Digitized by Google

staple of Java, is grown in the uplands, the best situations for it being the valleys from 3,000 to 4,000 ft. above the level of the sea. The coffee plant grows from 12 to 16 ft. in height; it attains to maturity in about 5 years, and continues to bear well for the succeeding 10 or 12 years, each tree yielding, at an average, 1½ lb. coffee. The chief peculiarity of the coffee culture in Java is the planting of the *dadap* tree (*Erythrina indica*), in rows alternately with the coffee plants, for the purpose of affording shelter to the latter. Coffee is raised principally in the W. part of the island, where the residency of Preangers furnishes at least one-fourth part of the total produce.

Sugar is, also, a most important staple. The best known in European markets is called Jaccatra sugar; it is grown near Batavia, where numerous sugar mills have been erected of late years. Formerly the sugar mills and grounds were almost wholly in the hands of the Chinese, but this is no longer the case: the Europeans share the culture of sugar with the Chinese, and having the advantage of machinery, surpass the latter both in the quantity and quality of their produce. The Chinese, however, by their frugality and business-like habits, are supposed to reap the greatest profit from its production. A species of sugar obtained by fermenting the juice of a tree, is much used by the natives.

The increase in the production of sugar in Java since 1825 has been very great; the quantity exported in 1862 having been above fifty times greater than in 1826. The exports, in 1862, reached 1,543,896 picols. The increase in the growth of coffee has, however, been far greater than that of sugar; and Java is now become one of the principal sources of the supply of these important products.

In 1839, the government officially announced that the cultivation of spices, previously prohibited in Java, would for the future be free to all parties desirous of engaging in it; and, further, that every facility would be given to such persons, by supplying them with whatever information, and even seed, they might require. This liberal policy has had a considerable influence, though not, perhaps, so much as was anticipated. Indigo has been one of the most successful of the various articles introduced into the island; and has already, indeed, been found to be a formidable rival to the indigo of India. In 1828, the culture of the tea plant was attempted; and considerable quantities are now raised in different parts of the island. The silk-worm was introduced early in 18th century; but though often renewed, the attempts to produce silk have failed. Pepper is extensively produced; but long pepper, though indigenous, has been comparatively neglected. Tobacco and cotton may be ranked among the staple products: considerable quantities of the latter are exported. Maize is grown in the plains, and wheat, rye, oats, and barley in the hilly tracts, but the latter only in small quantities. A great variety of pulses and vegetable oils, the sweet potato, cocoa, betel-leaf, and pistachio nuts are among the other articles of culture.

Labour is very cheap; but the labourers are, notwithstanding, in a much better condition than the inhab. of Bengal, being generally well fed and clothed, and for the climate, well housed. Their food is principally rice or maize, with a little sugar; their clothing is chiefly of cotton, and in the centre of the island it is mostly the manufacture of the country; but they consume a greater quantity of manufactured articles of good quality than the Bengalese. Each peasant has his hut of bamboo, which costs only from about 5*s.* to 10*s.* in the first instance, and is usually surrounded by a small garden.

The proprietary right to the land, except in a few districts, belongs everywhere to the sovereign. No law nor usage gives to the oldest occupant the land he has reclaimed from waste, or the farm he has enriched by his industry. As a matter of convenience, the same cultivator may continue to occupy the same field for life, and his family may afterwards succeed, but none can retain possession against the will of the sovereign, or even of his own immediate superior. Half the produce of wet lands, and a third part of that of dry, was formerly exacted by the government, but at present it takes only one-fifth part of the produce; nor has any proprietor purchasing land of the government the right to demand more of the native occupant, except for lands which the proprietor himself may have brought into cultivation, for which he may demand one-third part, or less, according to the productiveness of the land. It is not uninstructive to compare this moderate assessment with the exorbitant amount taken from the occupiers in Hindostan, and to mark the results exhibited in the impoverishment of the inhab. of British India and the stationary state of the country, and the comfort of the Javanese labourer, and the great and rapidly increasing prosperity of Java.

No permission is necessary from the Dutch government for Europeans wishing to go to Java, but a licence from the colonial governor is necessary to remaining there. Europeans are permitted to buy and sell lands in the W. provs., and to hold leases in the N. The principal conditions are the payment of a tax of 1 per cent. on the estimated value of the property; that the proprietor shall not exact more than the before-mentioned proportion of produce as rent; and that he shall keep the roads and bridges in repair. The European proprietors receive their rents in kind, and are obliged to take their produce to Batavia to be shipped. The free cultivation of every article of produce is allowed, except the poppy. Large capitals have been expended on the lands held by Europeans in irrigation, the construction of sugar-mills and mills for husking rice, and the introduction of machinery from Europe. The introduction of European capitalists and residents has greatly improved the condition of the natives, who are always ready to enter their service. Theft and robbery are seldom heard of on estates belonging to Europeans, and there are no instances of personal violence done the latter. A village system is very prevalent, by which every commune has its own lands, the culture of which it has a right to direct, and which is conducted for the benefit of its inhabs. in common. This is particularly the case in the E.: the produce is afterwards divided (after deducting the rent) into equal parts, according to the number of hands engaged in its production. The land belonging to a commune varies generally from about 40 to 100 acres, and the extent allotted to each individual from one half to two acres.

Manufactures are few, and principally domestic: the peasant's family fabricates almost every article required for its own use. Cotton goods are woven; and a cubit's length of cotton cloth, 5 spans in breadth, is considered a sufficient day's work by the Javanese weaver.

The Javanese and Indian islanders, in general, are wholly unacquainted with the art of manufacturing fine cloths of any kind: all their fabrics are of a coarse, though durable texture; and all the labours of the loom are performed by women only. Of calico-printing the Javanese are en-

Digitized by Google

tirely ignorant; but they have a singular substitute for it. The part not intended to be coloured, they daub over with melted wax. The cloth, thus treated, is thrown into the dyeing-vat, and the interstices take the colour of the pattern. If a second or third colour have to be added, the operation is repeated on the ground made by the first application of wax; more wax is applied, and the cloth is once, or oftener, consigned to the vat. The greater refinement that is attempted, the more certain seems to be the failure. This awkward substitute for printing adds 100 per cent., at least, to the price of the cloth. And yet, unskilful as the manufacturing industry of the Javanese is, it generally excels that of the other islanders of the Archipelago. Leather and saddlery are made at Solo, boots and shoes at Samarang, mats, and hats of bamboo, coir, fishing-nets, paper from the bark of the *Morus papyrifera*, bricks, cabinet-work, carved wooden articles, boats and ships, in the construction of which the natives are tolerably versed, and *krises*, matchlocks, and other arms, are, exclusive of cottons, the chief manufactures. Copper and brass pans are made, but their manufacture has very much declined. Almost all the manufactured goods used by Europeans are imported. Java is the only island of the E. Archipelago in which salt is made to any extent: along the N. coast there are numerous salt-pans, from which a great deal more of the article is obtained than is required for home consumption—a quantity estimated at 82,000 tons annually. The salt marshes, and other inlets of the sea, are often embanked for the rearing of fish in large numbers.

In architecture, the Javanese surpass the other natives of the E. Archipelago; and many structures of stone and brick, some in a style of superior magnificence, exist in different parts of the island. But the art of building has declined since the middle of the 13th century, and the modern Japanese do not even understand the art of turning an arch, though arches are seen in every ancient structure remaining in Java. The *karatons*, or palaces of the native nobles, are walled inclosures, laid out on a uniform plan, and comprising numerous buildings. They were formerly constructed of hewn stone, but at present consist only of ill-burnt bricks and ill-concocted mortar. After these, the better sort of residences are called *pandapas*, a word derived from the Sanscrit; and the edifice is, therefore, probably of Indian origin. In most of these a thatched roof is supported by four wooden pillars, round which is an awning of light materials, supported by movable props of bamboo; and the whole is closed in by a temporary paling, and divided into apartments by light partitions. The chief materials of the houses of the Javanese are the bamboo, rattan, palmetto leaf, and wild grass. The house of a peasant in a populous part of Java, where materials are not the most abundant, will not exceed the value of 60 days' labour. In the dwellings of the chiefs there is generally, in a conspicuous part of the house, a kind of state bed, rather for display than use; but an ordinary bed is usually only the bamboo floor of the cottage, or, at best, a bench of the same flimsy material, on which a mat and small pillow are laid, and the peasant retires to rest without undressing. Food is served up on salvers or trays of wood or brass. A few Chinese porcelain dishes are used occasionally, but neither spoons, knives, nor forks.

The *commerce* between Java and Holland, which amounts to five-sevenths of the whole external trade, is chiefly carried on by the *Nederlandisch Handel Maatschappy*, or Dutch Commercial Society, which includes some of the most wealthy persons in the mother country.

The principal articles of import are linen and cotton manufactures, chintzes, muslins, provisions, wines and spirits, iron and iron goods, and woollen goods, haberdashery, glass, and copper wares, from Europe and America; opium from the Levant and Bengal; sacking, linens, and wheat, from India; porcelain, tea, tobacco, silk and silk goods, from China; copper and camphor from Japan; gambier, coffee, tin, cotton, gold dust, benzoin, and sandal-wood from the rest of the Archipelago.

The subjoined table shows the quantities of the principal articles exported from Java, in each of the years 1861 and 1862:—

		1861	1862
Arrack .	leggers	8,225	7,853
Cochineal .	ponden	51,543	5,250
Caoutchouc	piculs	10,776	9,420
Resin .	„	5,352	7,962
Hides, Cow & Buffalo .	stuks	210,909	267,241
Indigo .	ponden	417,102	384,244
Cinnamon .	piculs	65	88
Coffee .	„	210,150	175,264
Oil . .	„	7,679	9,361
Pepper .	„	11,098	13,838
Rattans .	„	61,235	55,167
Rice . .	„	800,793	529,968
Cloves .	„	178	17
Nutmegs .	„	289	1,325
Sugar, White	„	1,344,766	1,543,023
„ Brown	„	61,882	873
Tobacco .	„	112,015	115,921
Tin . .	„	4,137	4,086
Birds' Nests (edible)	„	645	129
Salt . .	koyangs	3,066	284

The value of the principal articles exported from Java in the year 1861 amounted to 3,478,860*l*., of which 2,445,380*l*. was to the Netherlands, and but 32,986*l*. to Great Britain. The exports of 1862 amounted to 3,358,996*l*. in value, of which 2,422,081*l*. was to the Netherlands, and 38,010*l*. to Great Britain.

The internal traffic of Java is comparatively small, though few countries have better means of communication. A carriage road, extending from one extremity of Java to the other, 800 m. in length, was made by General Daendels, a Dutch governor, but it is alleged that its construction cost the lives of 12,000 natives.

The Chinese weights are invariably used in commercial transactions at Batavia, and throughout Java and the other Dutch possessions in India. These are the picul and the cattie, which is its hundredth part. The picul is commonly estimated at 125 Dutch or 133⅓ lbs. avoirdupois, but at Batavia it has been long reckoned equal to 136 lbs. avoird. The bahar is 3, and the timbang 5, piculs. The coyang of rice is equivalent to 3,300 lbs. Dutch. The coins in use are similar to those current in the Netherlands. Spanish dollars are received at the custom-house in Batavia, at the rate of 100 for 260 florins.

Government.—Java, inc. Madura, is divided into 24 provinces, or residencies, each governed by a European resident, assisted by a secretary, and as many sub-residents as may be deemed necessary. The residencies are sub-divided into arronds. or regencies, the administration of which, especially in respect to the police, is confided to native chiefs, termed regents. The colonial government at Batavia exerts a full and complete power over all the Dutch colonies in the E. seas. The gov.-general in the cap. is the representative of the king of

Digitized by Google

Holland, and commander-in-chief of the forces by land and sea. He is assisted by a secretary-general, and a colonial council of four members, who must be of Dutch extraction, born in Holland, or one of its dependencies, and thirty years of age, and who can exercise no other functions while they remain councillors. Justice is administered in the last resort in a supreme court at Batavia, which has jurisdiction in all cases above the value of 500 florins. Three subordinate civil and criminal tribunals, and three courts martial, subordinate to a central court in the cap., are established in Batavia, Samarang, and Sourabaya. A member from each of these courts makes a circuit at least every three months into the residencies under its control, to preside at a court of assize, composed besides of four native chiefs chosen annually by the government, on the recommendation of the natives. The permanent tribunals of the residencies are the *land-rauden*, composed of the resident, four mems. selected from among the regents, and a secretary. In each arrond. and commune are justices of the peace, with authority in petty cases. The Chinese are governed by their own laws, under functionaries chosen by them, who are responsible to the Dutch for the behaviour of the rest. There are few slaves belonging to Europeans in Java. The greatest religious toleration exists, and ministers of all Christian sects are equally remunerated by the government. Superior schools are established in the chief towns, and primary schools in most of the residencies. The squadron stationed in Java sometimes comprises several ships of the line, but in time of peace usually consists only of a few frigates and corvettes. There is, besides, a colonial navy of light vessels, which forms a separate branch of service, though both are generally placed under the command of the admiral of the royal squadron, who has the title of Director of the Dutch East India Navy. Besides the foregoing force, a flotilla of cruisers, manned by native Javanese, is supported by the different marine residencies. The land forces consist of several battalions of infantry and artillery, a corps of pioneers, a regiment of hussars, and a portion of a squadron of lancers. In all there are about 10,000 Europeans in the Dutch Javanese army. Notwithstanding the heavy expense incurred in the government, Java is one of the few colonial dependencies that in ordinary years remit a considerable revenue to the mother country.

The *Javanese*, as a nation, are the most advanced of any in the E. Archipelago. They only, of those inhabiting that region, have a native calendar, and have made considerable progress in the arts and sciences of civilised life. They appear to have received these originally from Hindostan, together with the Hindoo religion, which is supposed to have prevailed over Java, till its conquest by the Mohammedans in 1478.

History.—The history of Java cannot be traced with any degree of confidence, further than the latter portion of the 12th century. From that time down to the establishment of Mohammedanism, at the close of the 15th century, the religion, of the people was a modified Hindooism and a number of independent states existed in Java. The ruins of Mojopahit, one of the principal capitals of these several states, are among the most extensive in the East. This city had between two opposite gates, the remains of which still exist, a breadth of about 3 m., which would give a circuit of 12 m. if the enclosure had been a square. The Hindoo kingdom of Mojopahit was overturned by the Arabs in 1478.

The Portuguese reached Java in 1511, and the Dutch in 1595. The latter founded Batavia in 1619, and gradually consolidated their power on the island, though for a long period engaged in continual wars with the native sovereigns. In 1811, Java was taken by a British force from Hindostan, and held till 1816, when, in pursuance of the treaty of Paris, it was restored to the king of the Netherlands.

JAXARTES, a celebrated river of antiquity, now very generally acknowledged to be identical with the Sir-Daria, the chief stream of the Kirghis-steppe. It rises in the Kachkar-Davan, a W. branch of the Tiang-khang range, in lat. 42° 30′ N., and long. 73° 50′ E. Its course to Kokan is WSW. about 180 m.; but at that point it takes a NNW. direction for about 300 m. as far as Akmetschet, in lat. 45° N., long. 66° 5′ E., where the channel divides, the N. and larger branch retaining the name Sir, while that to the S. is called Kouvan-Daria: their mouths in the Caspian Sea lie about 40 m. apart, but are both in long 61°. The entire length of the Sir, including its windings, cannot be much less than 900 m.; and it is both broad and deep, which may be attributed to its being the sole recipient of the waters on the N. side of the great chain separating the khanate of Kokan from Chinese Turkestan. It has no affluent of any great size; its banks (which are low and sandy) are usually flooded in summer and at the beginning of winter; and the water is described as being loaded with a whitish-brown deposit. The ruins of temples and habitations in the Karakoum sands at the lower part of its course clearly proved that its banks were once peopled by a race far more civilised than the brigand Kirghis, who now wander over the steppe.

Herodotus gives the name *Araxes* to a large river full of fish, and studded with islands, situated in a vast immeasurable plain. (See i. 201–216.) Some geographers have conjectured that he meant the Amoo (*Oxus*), others the Wolga; but D'Anville, Heeren, and Mannert clearly show, from the position of the Massagatæ relatively to the Issadones, that no other river but the Sir could have been meant by the Father of History. Ancient geographers agree in stating that the Jaxartes flowed into the Caspian Sea, an assertion, perhaps, not quite so erroneous as modern critics have supposed, if any credit be attached to the investigations of Mouravief and Berg on the level of the country between the Caspian and Arab seas, which lead to the supposition that these great salt-lakes were once united. This conjecture, also, if it be correct, at once accounts for the great breadth (E. and W.) given to the Caspian by all the ancient writers. With respect to the term *Araxes*, which was used by the old authors as applicable to at least *five* distinct rivers, it is now regarded as generic, meaning simply any *rapid* stream, like the modern *Aras*. (See D'Anville's paper, Des Fleuves du Nom d'Araxes, in vol. xxxvi. of the Histoire de l'Acad. des Inscriptions.) Herodotus, whose geography is in general very accurate, was probably led into his mistake respecting the direction of the Araxes by not knowing that this name was held in common by several eastern rivers.

JEAN D'ANGÉLY (ST.), a town of France, dép. Charente Inférieure, cap. arrond. on the Boutonne, which here begins to be navigable for vessels of from 30 to 40 tons, 33 m. SE. by E. La Rochelle. Pop. 6,405 in 1861. The town is ill built, but clean and cheerful. It has an ancient abbey, a handsome public hall, some baths, a theatre, and other places of entertainment, and a brisk trade in wine, brandy, and timber.

JEDBURGH, a royal and parl. bor. and market town of Scotland, co. Roxburgh, of which it is

Digitized by Google

the cap., in a narrow valley on the Jed, about 2 m. above its junction with the Teviot, near the termination of the Cheviots, 40 m. SE. Edinburgh, and 43 m. NE. by N. Carlisle, on a branch line of the Edinburgh and Hawick railway. Pop. 3,428 in 1861. The town consists of four leading streets, which cross each other at right angles, and are wide and well built. Around the town are several beautiful villas. The Town Head, a street parallel with the river, consists of old houses, which, with their inhab., are said for generations to have undergone little or no change. The public buildings are the castle (built on the site of the ancient castle of Jedburgh, once a royal residence), containing a bridewell and prison, the co. hall, the town-house, and churches belonging respectively to the Associate Synod and Relief. The par. church consists of the western portion of the abbey, founded by David I. in the 12th century, and will be noticed below. A majority of the people are dissenters. The denomination of dissenters, termed *Relief*, had its origin here in 1754. The grammar-school of Jedburgh, an endowed seminary, has long been eminent. It had among its pupils Thomson, the author of the 'Seasons' and of the 'Castle of Indolence,' born in the par. of Ednam, in this co., on the 11th of Sept. 1700. Dr. Thomas Somerville, author of 'the History of Great Britain during the Life of Queen Anne,' was minister of Jedburgh.

The chief manufacture of the town is that of woollens. The fabrics made are blankets, carpets, flannels, and hosiery.

The abbey of Jedburgh, belonging to the Canons Regular of St. Augustine, must, when entire, have been one of the most magnificent ecclesiastical structures in Scotland. It exhibits different styles of architecture, according to the taste prevailing at the different periods when it was built. The walls of the nave, central tower, and choir remain, and, though much dilapidated, they sufficiently attest its ancient grandeur. The N. transept, which has a beautiful traceried window, is nearly entire. There are two magnificent Norman doors in this edifice, one at the W. end, and the other in the S. wall of the nave, close to the transept. The ruin generally affords fine examples of the Saxon, Norman, and early English styles, the latter being exemplified in the long range of narrow painted windows above the arches of the middle part of the nave, and in the blank arches of the W. end. The altar, or E. end of the choir, the cloisters, and the chapter-house, have disappeared.

A monastery for Grey Friars was founded in this town by the citizens in 1513; but of it all traces have disappeared. Here may still be seen the house in which Queen Mary lodged after her visit to the Earl of Bothwell, at Hermitage. Mary continued in it several days, owing to a sickness she had contracted in her unfortunate journey. The apartment which she occupied was on the third story, and is in tolerable preservation.

Jedburgh was erected into a royal bor. in the 12th century; but the castle, the site of which is now occupied by the gaol and bridewell, is supposed to have been of earlier date. After having been for some time in the possession of the English, the castle was taken by the Scotch, in 1409, and demolished. Like other borderers, the citizens of Jedburgh were anciently more celebrated for their martial than for their peaceful virtues. Their favourite weapon was a partizan or halbert, known by the name of the 'Jethart (Jedburgh) staff.' Their war-cry, or slogan, was 'Jethart's here.' The term 'Jethart Justice,' which implies execution before trial, is supposed to have originated in the many instances of lynch law executed here on border marauders. (Scott's Border Minstrelsy, i. 50.) The eldest son of the Marquis of Lothian, descended from the ancient border family of the Kers of Ferniehurst, for centuries the feudal superiors of the bor., has the title of Lord Jedburgh.

Jedburgh unites with N. Berwick, Haddington, Lauder, and Dunbar in sending a mem. to the H. of C. Registered voters, 174 in 1864. Corporation revenue 29*l.* in 1863–64.

JEDDO. See Yeddo.

JELLALABAD, or JULALABAD, a town of Affghanistan, in a fertile plain, and on the high road between Caubul and Peshawur, 80 m. E. by N. the former, and 60 m. WNW. the latter; lat. 34° 30′ N., long. 70° 32′ E. It is a small town, with a bazaar of 50 shops, and a pop. of 2,000 people; but its number increases tenfold in the cold season, as the people flock to it from the surrounding hills. Julalabad is the residence of a chief of the Barukzye family, who has a revenue of about 7 lacs of rupees a year. The Caubul river passes ¼ m. N. of the town, and is about 150 yards wide: it is not fordable.

JEMME (EL). See Tysdrus.

JENA, a town of Central Germany, grand duchy of Saxe Weimar, circ. Weimar-Jena, cap. district, on the Saale, 12 m. E. Weimar, and 41 m. SW. Halle, on the railway from Halle to Gotha. Pop. 6,984 in 1861. The town, which is walled, and has handsome suburbs outside its four gates, lies in a valley, between two abrupt eminences, on the left bank of the river, which is here crossed by a handsome stone bridge. The streets are wide, and some of the houses are large and well built, many being highly ornamented with rude and grotesque sculpture. The ducal palace, containing a library and museum, with a good collection of minerals and animals, 1 Rom. Cath. and 3 Protestant churches, 3 hospitals, a lunatic asylum, and the university-house, are the chief public buildings. It is a place of considerable eminence for literature, and the seat of a university, founded in the 17th century by the sovereign princes of the Ernestine branch of the house of Saxony, in whom the patronage and appointment of the professors is still vested. The constitution is similar to that of other German universities; it has faculties of divinity, law, medicine, and philosophy, with 28 ordinary professors, composing a *senatus academicus*, for examining students and conferring degrees: there are also 17 extraordinary professors, and a few *privat-docenten*, or private tutors. The salaries of the ordinary professors range between 80*l.* and 180*l.*, those of the 'extraordinary' varying from 30*l.* to 90*l.*, which are increased by fees from pupils, each of whom pays at the rate of about 5 thalers, or 15*s.* 6*d.*, for the course. The remuneration of the tutors depends wholly on the number of their pupils. The annual expenditure of the university, including the expense of theological and other seminaries, the library (comprising 100,000 vols.), veterinary school, collections, botanical garden, and officers, amounts to about 38,000 thalers, or nearly 6,000*l.*, a year. A fund, also, similar to that in Göttingen, with a capital of 4,600*l.*, is employed in pensioning the widows of professors; and an academical refectory fund (*Speise-anstalt*), supported by endowments and yearly grants from the grand dukes of Saxe-Weimar, Coburg, and Meiningen, furnishes daily meals at several ordinaries for 132 indigent students. The number of students has averaged 500 during the last 10 or 12 years; an attendance

Digitized by Google

far more limited than in the middle of the last century, when 3,000 were in actual residence at the same time. Living in Jena is considered cheaper than at almost any other university of Germany; and a student may live respectably, and enjoy for half the money the same education he could command in Great Britain. The industry of the town, which is considerable, comprises the manufacture of coarse linen fabrics, hats, and tobacco. Three annual fairs are very numerously attended.

Jena is famous in modern history, from its vicinity having been the scene of the great battle of the 14th of October, 1806, between the French army, under Napoleon, and the Prussians, commanded by the king and duke of Brunswick, the latter of whom was mortally wounded in the action. The French gained a complete and decisive victory. The Prussians lost above 20,000 men, killed and taken in the course of the day, with all their cannon and baggage. In fact, their army may be said to have been totally destroyed; as most of the troops who escaped from the field were soon after compelled to surrender.

JERSEY, an island of the English Channel, belonging to Great Britain, and the principal of that group known as the Channel Islands, in St. Michael's Bay, 13 m. W. the coast of France, and 85 m. S. Portland Bill, its NW. point being in lat. 49° 16′ N., long. 2° 22′ W. Shape somewhat oblong; greatest length, E. to W., 12 m.; average breadth, 5 m.; area, 39,000 acres. Pop. 56,076 in 1861, and 57,020 in 1851. The entire N. side of the island, and portions of the NE. and SW. sides, are defended by bold precipitous rocks, rising to upwards of 250 ft. above the sea, and all around it are almost innumerable rocky islets, separated from the cliffs by the operation of the tides, which set with great force and rapidity round the Channel Islands. The surface has a general inclination from N. to S., on which side the coast approaches the level of the sea. There is little table land; but elevated hill ranges run southward, bounding deep and narrow vales, watered by small rivers. Jersey, geologically considered, is, like the other islands in the same group, composed of secondary rocks, resting on granite formations. True granite is not observed; but sienite, which is largely quarried and exported as granite, is very prevalent, passing in some parts into porphyry and greenstone: it is covered in the S. and more level tracts by schistus and clay-slate, intermingled here and there with a clay conglomerate. Iron and manganese, the only metals that occur, are not wrought. The climate, though damp, owing to frequent rains and intense sea-fogs, is remarkably mild. 'The island,' says Dr. Hooper, 'enjoys an early spring and a lengthened autumn, vegetation being usually active and forward in March, and the landscape far from naked at the end of December. Spring is marked by unsteadiness of temperature and harsh variable weather, with a prevalence of E. winds; and this disadvantage is felt particularly in May, which often fails to bring with it the expected enjoyments. March is mild, and October yet milder.' (Observations on the Top., Clim., and Diseases of Jersey.) The soil in the higher parts is gritty, being composed of detritus from the rocks and sea sand, mixed with vegetable mould; but in the valleys there is a great depth of alluvial matter, washed down by violent rains from the higher lands; and these tracts, where not swampy, are extremely fertile. The SW. corner of the island is a mere assemblage of sandy and barren hillocks. Agriculture is backward, owing partly to the minute division of property, occasioned by the law of gavelkind, and partly to the insufficiency of rural labourers. The value of land ranges between 120*l.* and 160*l.* per acre, and rents vary from 4*l.* 10*s.* to 6*l.* 15*s.*, according to the distance from St. Helier's, the capital. Farms average about four acres, few exceeding ten: the occupiers are for the most part poor.

The rotation of crops, as applicable to the soil and climate, is well understood, and absolute fallows are rarely, if ever, seen. Wheat crops, cut early in August, produce, according to the official returns, nearly 5 qrs. per acre, and the gross yearly produce is said to amount to 13,000 qrs. of wheat and 3,200 qrs. of barley. But the culture of neither wheat, barley, nor oats, is found to be profitable, and they are, therefore, chiefly imported. Potatoes are raised in large quantities, the returns sometimes exceeding 60,000 lbs. per acre, but the sea-weed used as manure gives them an unpleasant flavour. Parsneps and mangold-wurzel are largely cultivated. Lucerne is highly in favour with the farmers, as it will grow on soils unfit for other purposes: four crops in a year are not unusual, and the land is afterwards fed off. A large portion of the cultivable land is occupied by apple trees, and the exports of apples and cider have been steadily increasing for some years. The annual yield of apples averages 20 hhds. per acre. The *pear-main* is a good eating apple, but the pride of the island is the *chaumontelle* pear, often a pound in weight, and sold occasionally at the rate of 5*l.* per hundred. The *colmar* pear is also well esteemed, and peach-apricots, melons, and strawberries are abundant, and noted for size and flavour. Timber trees grow in the hedge-rows, and unite with the fruit trees in giving to the scenery softness and richness rarely equalled. 'In fact,' says Mr. Inglis, 'Jersey appears like an extensive pleasure-ground, one immense park, thickly studded with trees, beautifully undulating, and dotted with cottages.' (Channel Islands, i. p. 35.) The manure universally used in dressing the land is sea-weed or *vraic*, the gathering of which is restricted by the island legislature to two seasons, the middle of March and the end of July, times of great interest to the natives. On grass lands the *vraic* is used in its natural state, but for other purposes it is burnt. Cattle breeding is a favourite and highly profitable pursuit here and in the other Channel Islands, and the treasure highest in a Jerseyman's estimation is his cow.

The Jersey cow, usually called the Alderney cow in England, materially differs from that of Guernsey, which is larger, and resembles the short-horned Devonshire breed. It has a fine, curved, tapering horn, slender nose, fine skin, and deer-like form. Its purity is maintained by breeding in and in; and in order to preserve the breed intact, the legislature has prohibited the importation of other breeds under heavy penalties. Milch cows produce daily, at an average, 10 quarts of milk and 1 lb. of butter (8 quarts of the former producing 1 lb. of the latter), the yearly produce of a cow being estimated at 10*l.* The price of a good cow varies from 10*l.* to 15*l.* The butter is chiefly sent for sale to St. Helier's market, or exported to England. Sheep are little reared. The Jersey horse is a cross of the Cossack, procured through the residence of some Russian cavalry on the island in 1800: it is a strong, hard-working animal, but little attention is paid to the improvement of the breed. The oyster fishery employs many of the natives, but lately it has been on the decline, owing to the competition of the French fishermen of Granville. The fishery is most active from Feb. to May. The conger-eel and herring fishery, formerly highly productive,

Digitized by Google

has been almost superseded by the deep-sea cod fishery, which employs nearly 80 vessels of 8,000 tons, and gives employment during the summer to 1.300 Jerseymen.

The trade of Jersey has increased rapidly during the last 50 years, and its commercial relations, formerly confined to England and France, now extend to the chief countries of Europe, the W. Indies, and S. America. The trade with England is subject to certain regulations intended to prevent contraband traffic; but every article of the growth, produce, or manufacture of Jersey is admitted into the mother country on payment of the duties imposed on similar commodities grown, produced, or manufactured at home. The island receives from England cotton and woollen fabrics, and hosiery, hardware and cutlery, earthenware and glass, soap and candles, and about 20,000 tons of coals yearly, in exchange for which it sends apples and cider, cattle, potatoes and potato-spirit, oysters, and granite. The imports from France consist of wine and brandy, skins, fruit, and poultry, for which coals, bricks and potatoes are sent in exchange. The island is supplied with fir and oak timber from Sweden and Norway, with hemp, linen fabrics, and tallow from Russia, with wheat and barley from Prussia and Denmark, and with cheese, geneva, and tiles from Holland, the exports to these countries chiefly consisting of coffee and sugar from Brazil, with which this island has extensive dealings. The imports from Spain, Portugal, and Sicily average yearly 70,000 gall. of wine and 100,000 gall. of brandy. The Jersey merchants also trade with Honduras for mahogany, sent chiefly to England. The manufacturing industry of the island is almost confined to ship-building, shoe-making, and hosiery. Ship-building is carried on to a considerable extent in consequence of the timber imported into the island being exempted from all duty. Shoe-making is pretty extensively carried on, and about 13,000 pairs of boots and shoes, chiefly of French leather, are sent annually to British N. America. The hosiery business has greatly declined, owing to the use of machine-made stockings; and the persons now employed in it depend almost entirely on the demand of the island. The communication with England is kept up by means of steamers to and from Southampton four times a week, and by mail-packets twice a week to and from Weymouth. On the arrival of the steamers from Southampton, packets leave for St. Malo and Granville, returning on the alternate days. Traders are constantly sailing to and from London, Bristol, and other English ports.

The vernacular language of the island is French, which is used in the churches and courts of law: the upper ranks speak it in its purity, but the lower classes speak Jersey-French, a *patois* compounded of old Norman-French with Gallicised English. English, however, is becoming daily more prevalent, and most of the country people understand and speak it. 'The Jerseymen, especially the lower orders, are characterised by blunt independence, often amounting to *brusquerie*, excessive love of gain, and unceasing industry. The minute division of property prevents them from acquiring an independence, while at the same time the actual ownership of land protected by legal privileges, gives them a freedom of sentiment which no tenant at will can enjoy. Their parsimony, however, is not only prejudicial to themselves, as leading them to begrudge provender to their most valuable cows, but is also injurious to others, whom they overreach in bargaining.' (Inglis, Channel Islands.) Their fare is simple and inexpensive, consisting principally of *soupe-à-choux*, a compound of lard, cabbage, and potatoes; conger-eel soup and pickled pork are rarities reserved for festive occasions. The chaumontelle pear is commonly eaten with tea; cider is the general substitute for beer. The higher classes seldom give entertainments or exchange civilities, and are much divided by party spirit. The old parties of *Magot* and *Charlot* have given way to the liberal *Rose* and the exclusive high church and state *Laurel*. Literature is forgotten amid island politics; and even the press, so powerful an engine in England, has scarcely any influence in Jersey. The English residents must be considered as a class quite distinct from the natives, with whom they have little intercourse; they amount to about 4,000, being chiefly half-pay officers with their families, attracted by the cheapness of living and the mildness of the climate.

The revenues of Jersey have greatly increased of late years, for, at an average of the three years ending with 1812, they only amounted to 4,600*l.* a year, whereas, in 1862, they exceeded 8.000*l.*, arising from licenses to tavern-keepers, market-tolls, harbour-dues, and duties on wine and spirits. These revenues, after the current expenses of the government and the interest on the public debt have been paid, are applied to the public works and general improvement of the island. The expense of the militia and English troops (exceeding 20,000*l.* yearly) is defrayed by the British government, and the salaries of the governor and his officers are provided for from the great tithes of the 12 parishes. French and Spanish coins were formerly current in Jersey; but, in 1832, the French government called in its old silver coins, since which time English sovereigns and silver have been commonly circulated. The exchange varies from 8 to 9 per cent. in favour of England, so that an English shilling passes for 13*d.*, and a sovereign for 1*l.* 1*s.* 8*d.* Jersey currency.

Jersey and Guernsey have long enjoyed peculiar privileges granted by John and succeeding monarchs. No process in either of the islands, commenced before an island magistrate, can be carried out of it, and no person convicted of felony *out of* the said islands is to forfeit his inheritance in them, so as to deprive his heirs of their lawful possessions. They are exempted from the jurisdiction of the British courts, except that of the admiralty, and have an immunity from all taxes except those voted by the island legislature.

Jersey is governed by a local legislature, and a distinct judicature under the ultimate control of the sovereign in council. The legislative assembly, called the states, consists, *ex officio*, of 36 members, viz. 12 jurats elected for life by the rate-payers of the island, the 12 rectors of the 12 pars. into which Jersey is divided, and the 12 constables of pars. chosen triennially by the parishioners. To these 30 'official' members of the legislature, 14 deputies were added in 1856, with a view of giving the constitution a more popular character. The legislative assembly is convened by the bailiff, who always presides, either in person or by deputy; and its chief business is to raise money for the public service, and to pass laws for the government of the island; which, however, continue in force only three years, unless ratified by the sovereign in council. The governor, as the king's representative, has a *veto* on all the proceedings of the state, but never uses it, except in cases which concern 'the special interest of the crown.' The Jersey court of judicature, called the 'royal court,' is composed of the bailiff, who here represents the sovereign, and of the same 12 jurats who sit in the states. The officers are, the attorney-general, solicitor-general, high-sheriff or vis-

Digitized by Google

count clerk, or *greffier*, and 6 pleaders appointed by the bailiff, and styled *avocats du barreau*. This court has cognisance of all pleas, suits, and actions, whether real, personal, or criminal, arising within the island, except cases of treason and coining, which are referred to the sovereign in council. A code of laws, compiled in 1771 and sanctioned by the king, is the fundamental statute law; but it is extremely defective, and is continually changed by the enactment of new laws. The custom of gavelkind obtains, with respect to the disposal of real property; the eldest son, however, by common usage, takes half the estate, and the rest is equally divided. Personal property may be devised, but when left intestate is divided among the children, two-thirds going to sons, and one-third to daughters. Debts are recoverable by legal process in the royal court. Insolvents may be compelled to give up (*renoncer*) their property, for the benefit of creditors, and either the *vicomte* may sequestrate it, to pay demands entered against it, or the court may grant the debtor a respite of a year and a day for payment of his debts. Persons not possessing lands or houses may be arrested for debt; but property is attached before the person, and landed proprietors cannot be imprisoned till after a judgment. Debts contracted in England can be sued for in Jersey, if not of more than 6 years' standing; debts contracted in Jersey are recoverable within 10 years.

The military government of the island is conducted by a lieutenant-governor, who has the custody of the fortresses, and the command of both the regular troops and the militia. The chief fortresses are Fort Regent, Elizabeth Castle, and Mt. Orgeuil Castle, all on the S. coast. The island is further defended by a chain of martello towers, redoubts, and batteries, which encircle it. The militia, in which all male natives, from the age of 17 to 65, are liable to serve, comprises 6 regiments and 2,500 men, exclusive of an artillery battalion of 600 men. The regular troops in time of peace seldom exceed 300 men, but 7,000 men were quartered in the island during the French war. Since the reign of James I., the church of England has been the established religion of Jersey, which is under the ecclesiastical direction of the bishop of Winchester. Every par. has a church, and the service is usually performed in French, except at St. Helier's, where English is the language of the congregation. The Independents, Wesleyans, and Baptists have chapels in which service is conducted both in French and English, and there are two places of worship for Rom. Catholics. Two free grammar-schools were established in Jersey in the 15th century, but the endowments are small. In 1852, a superior school, called 'Victoria College,' was opened at St. Helier's, to commemorate the visit of the Queen to the island in 1846.

The remains of Roman fortifications and the discovery of coins belonging to the emperors, prove Jersey to have been a military station, and under the Franks it formed a part of the region called Neustria. The Normans invaded the Channel Islands in the 9th century; and when the duchy of Normandy was annexed to the crown of England at the Conquest, they came under the British dominion. The French have repeatedly tried to gain possession of these islands, which, by their proximity to the coast of France, seem to be their natural property; but they have uniformly failed. The last attempt was made in 1781 by a detachment of 700 soldiers, under the Baron de Rullecourt, who surprised and captured the garrison, but were finally compelled to escape to their vessels after a desperate encounter with the native militia under Major Pierson, in the streets of St. Helier's.

JERSEY (NEW), one of the U. S. of America, in the NE. part of the Union, between lat. 38° 54′ and 41° 20′ N., and long. 74° and 75° 20′ W.; having N. and NE. New York; W. Pennsylvania; SW. and S. Delaware Bay; and E. the Atlantic. Length, N. to S., 170 m.; average breadth about 40 m.: area, 8,320 sq. m.; pop. 672,035 in 1860. A great part of the E. shore is skirted by a chain of low islands, similar to those on the coasts of the more southerly maritime states, but with more numerous, larger, and deeper inlets between them. Great Egg Harbour, Little Egg Harbour, Barnegat, Tomsbay, Shark Inlet, and the united bays of Neversink and Shrewsbury, afford shelter to vessels of considerable burden. The S. half of the state is low, level, sandy, and in many parts barren; but N. of an imaginary line drawn between the mouth of the Shrewsbury river and Bordentown, about lat. 40° 10′, the surface is overspread with several hill-ranges, abounding with rich scenery; and the coast is skirted by the Neversink hills, the only heights of any consequence in the Union near the ocean. A mountain region, rising abruptly from the hilly country, occupies the N. part of the state, which at its N. extremity comprises a portion of the Alleghany chain. The Hudson forms the NE. boundary for about 35 m. The river next in importance is the Delaware, which divides this state from Pennsylvania. The other chief rivers are, the Raritan, which rises in the hilly country, within 5 m. of the Delaware, and falls into Amboy Bay, after a course of 70 m., 16 of which are navigable; and the Passaic and Hackinsach, which fall into the small bay of Newark.

The difference of the climate of the N. and S. parts of the state is very striking. The plain country of the S. is warmer than might have been expected from its lat., the temperature approximating to that of E. Virginia, and admitting of the culture of cotton; while the winter in the N. assimilates in severity to that of the N. states. In the upper part of the state, and along the banks of the rivers, there is some good land; but the surface is in general either sandy or marshy, and it is chiefly by the unremitting industry of its inhabs., who till lately have been principally engaged in agriculture, that New Jersey has been rendered so productive as it is. Wheat, rye, barley, oats, maize, buckwheat, and potatoes are cultivated; and in the higher parts of the state large herds of black cattle and sheep are reared. Large quantities of butter and cheese of superior quality are made. The only wild quadrupeds now met with are the racoon and fox; the fisheries are productive, and employ many of the inhabitants. Iron in the mountains, and bog iron ore in the marshes, form the most important mineral products; but there is abundance of marble, limestone, peat, clay, sand of fine quality, copper, and zinc. The principal articles brought to market are cattle, fruit, iron, flax-seed, butter, cheese, cider, and hams. New York and Philadelphia are the chief outlets for the surplus produce, New Jersey being very advantageously situated between those cities. The exports elsewhere are trifling. Manufactures are already extensive, and increasing; the principal are those of iron.

Paterson is one of the principal manufacturing towns in the U. States, and is well supplied with water-power by the Passaic. Its principal products are cotton, linen and woollen goods, paper and buttons. Manufactories of glass, leather, shoes, carriages, and gunpowder are established in different places.

The internal communications are generally good; the Morris Canal, 101 m. in length, by 30 to 32 ft.

Digitized by Google

wide, and 4 ft. deep, extends across the state, from Jersey city, on the Hudson, to Delaware river. The Delaware and Raritan Canal, 42 m. long, from Bordentown to New Brunswick, is 7 ft. deep, and 75 ft. wide at its surface, and therefore adapted to vessels of considerable burden. It is connected with the Chesapeake, Delaware, and Dismal Swamp canals, and effects a continuous water communication between New York city and Albemarle Sound. Another canal, 4 m. long, connects Salem Creek with the Delaware river. Three railroads were completed as early as 1837; and the principal of these, from Camden to Amboy, a distance of 61 m., in the N. part of the state, was finished in 1832. At present, the state is intersected, in all directions, by railways.

New Jersey is divided into 14 counties: Trenton, on the Delaware, is the capital and seat of government. It owes this rank to its central position only, since it has not above half the pop. or wealth of New Brunswick or Newark. Elizabeth, Burlington, Somerville, and Paterson are the remaining chief towns.

The constitution framed in 1776 has continued, with little variation, to the present day. The governor is chosen, by a plurality vote of the people, for three years. The general election is held on the first Tuesday in November. His term commences the third Tuesday of January. The secretary of state is appointed by the governor, with the advice and consent of the senate. His term of office is five years. The treasurer is elected by the legislature on joint ballot for one year, and until his successor is qualified; and the state librarian is appointed for three years. The superintendent of schools is appointed by the trustees of the school fund for two years. The adjutant and quartermaster general are appointed by the governor. Senators, 21 in number in 1864, are elected for three years, one-third every year. Representatives, 60 in number in 1864, are elected each year. The pay of a member of either branch is 3 dollars a day for the first forty days, 1·50 dollar a day afterwards. The presiding officers are paid 4 dollars a day for the first forty days, and 2 dollars a day afterwards. The legislature meets annually at Trenton, on the second Tuesday of January. The judicial authority is vested in a supreme court, a court of chancery held at Trenton, circuit courts, and courts of *oyer* and *terminer*, held in most of the cos. four times a year; and inferior courts of common pleas, which, with courts of quarter sessions of the peace, are held in the different cos. by judges chosen by the legislature, and receiving no salary. The college of New Jersey, established at Elizabeth Town, in 1746, has been removed to Princeton, where it occupies a spacious edifice. It has a museum and philosophical apparatus, and 2 libraries, with 11,000 vols. A great part of the pop. are Quakers.

The earliest settlement of New Jersey was made by the Dutch, in 1612. Many Swedes and Danes afterwards settled in it, but the Dutch continued to possess it until finally expelled by the English, in 1664. In 1682, it came under the jurisdiction of Penn and his associates. It took an active part in the revolutionary war, and suffered proportionally. New Jersey sends 5 mems. to congress.

JERUSALEM (Heb. *Kadushah*; Gr. Καδύτις by Herodotus, and Ἱεροσόλυμα by Strabo and later writers; mod. Arab. *El-Koddes*), a famous city of Palestine, interesting from its high antiquity, but far more from its intimate connection with the history of the Jews, and the eventful life of the great Founder of Christianity; 128 m. SSW. Damascus, 33 m. E. Jaffa, and 76 m. S. by E. Acra; lat. 31° 46′ 34″ N., long. 35° 31′ 34″ E. Pop. estimated at 12,000, of whom about two-thirds are Mohammedans. The city stands on a hill, between two small valleys, in one of which, on the W., the brook Gihon runs with a SE. course, to join the brook Kedron, in the narrow valley of Jehoshaphat, E. of Jerusalem. The first view of the city from the W. is thus described by Robinson:—'As we approach Jerusalem, the road becomes more and more rugged, and all appearance of vegetation ceases; the rocks are scantily covered with soil, the verdure is burnt up, and there is an entire absence of animal life. A line of embattled walls, above which rose a few cupolas and minarets, suddenly presented itself to my view. I was disappointed in its general appearance; but this feeling originated not so much from the aspect of the town as from the singularity of its position, surrounded by mountains, without any cultivated land to be seen, and not on any high road.' (Pal. and Syr. i. p. 36.) The opposite view, however, from the Mount of Olives, is much more attractive, for it commands the whole of the city and nearly every particular building, including the church of the Holy Sepulchre, the Armenian convent, the mosque of Omar, St. Stephen's gate, the round-topped houses, and the barren vacancies within its circ. The modern city, built about 300 years ago, is entirely surrounded by walls, barely 2½ m. in circ., flanked here and there with square towers. The four principal gates are those of Damascus and Jaffa on the W., that of Zion on the S., and St. Stephen's on the E. The interior is divided by 2 valleys, intersecting each other at right angles into 4 hills, on which history, sacred and profane, has stamped the imperishable names of Zion, Acra, Bezetha, and Moriah. Zion is now the Armenian and Jewish quarter; Acra is better known as the lower city and Christian quarter; while the mosque of Omar, with its sacred inclosure (called by the Turks *el Haram Schereef*), occupies the hill of Moriah. The streets are narrow, like those of all Syrian towns; the houses, except those belonging to the Turks, shabby, and the shops poorly supplied. The public buildings are not numerous, and excepting those consecrated to religious worship, there are none worthy of notice. The baths also and bazaars are mostly inferior to similar establishments in other parts of the E.

The boundaries of the old city, said by Pliny to be '*longe clarissima urbium Orientis non Judææ modo*' (Hist. Nat. lib. v. § 15), are so imperfectly marked, that no fact can be deduced respecting them from the elaborate researches of D'Anville, Clarke, Niebuhr, and others, save only that they varied at different periods; and that, when most extensive, at the æra of its destruction, its treble row of walls embraced a circuit of 33 stadia, including Mount Moriah, Mount Zion, Acra, and Bezetha. (Relandi Palestina, p. 835.) But the walls having been wholly destroyed, it is impossible to trace their exact situation. Josephus most distinctly says that the Romans left only the W. wall standing, with the towers Phaselus, Hippicus, and Mariamne, and that the remainder was rased to the ground. Τον δ' ἄλλον ἅπαντα τῆς πόλεως περιβολον οὕτως ἐξωμαλίσαν οἱ κατασκάπτοντες, ὡς μηδὲ πώποτ' οἰκηθῆναι πίστιν ἂν ἔτι παρασχεῖν τοῖς προσελθοῦσι. (Jud. Bel., lib. vii. c. 1.) This assurance of an eye-witness, and the knowledge that two subsequent and very destructive sieges left scarcely any remains even of a more recent city, suffice to show how little credit is due to any of these antiquarian speculations, however ingenious. It is impossible to describe in detail the many spots within the modern city which blind superstition or minute criticism has fixed on as the scenes of events connected with the history of the patri-

Digitized by Google

archs, and the sufferings of Christ; but some places are ascertained beyond a doubt, which all travellers visit with interest, and which command universal respect. There can, for example, be no question, that the mount (Moriah) on which the mosque of Omar now stands was once crowned with the *House of the Lord* built by Solomon, at a cost and with a magnificence of which we can form no adequate idea (1 Kings, caps. vi. and vii.). This great glory of Judea, after standing for above 400 years, was first rifled, and soon after destroyed by Nebuchadnezzar, king of Babylon. A second temple, built on the site of the first, by the Jews, after their return from the Babylonish captivity, was so much enlarged and improved by Herod the Great, as to be little inferior to that of Solomon. Tacitus calls it, '*immensæ opulentiæ templum*;' and he truly adds, '*nulla intus Deûm effigie, vacuam sedem, et inania arcana.*' (Hist., lib. v. § 8, 9.) Notwithstanding the efforts of Titus for its preservation, this structure, the palladium of the Jewish nation, was totally destroyed during the siege of Jerusalem, A.D. 70. The mosque of Omar, which occupies this sacred site, stands on an elevated four-sided plateau, about 1,500 ft. long, and 1,000 ft. broad, supported on all sides by massive walls, built up from the lower ground. The lowest portion of these walls is supposed to belong to the ancient temple, and to be referable to the time of Herod at least, if not of Nehemiah and Solomon. The mosque *el Sakhara*, the erection of which was begun by the caliph Omar, in 637, is of an octagonal shape, surmounted by a lead-covered dome, above which is a glittering crescent. It has four entrances, one of which, towards the N., is adorned by a fine portico, supported by eight Corinthian pillars of marble. Its forty-eight windows are of stained glass, and the walls are faced below with blue and white marble, and above with glazed tiles of various colours, forming a beautiful mosaic of texts from the Koran. It is altogether a fine specimen of light and elegant Oriental architecture; and the building contrasts singularly with the severity of the surrounding scenery. The interior is not allowed to be entered except by the followers of the prophet; and but few Christians have been admitted within its walls. The arrangements are so managed as to keep up the external octagonal shape. The inside of the wall is white and without ornament, and the floor is of grey marble. A little within the W. door is a flat polished slab of green marble, forming part of the floor, and regarded with peculiar respect by the Mohammedans; a little beyond is a series of twenty-four blue marble pillars supporting the roof, and inside these are four large square columns, forming the support of the dome, which rises about 100 ft. above the floor. The central part is railed round, a single door admitting the devotee to the sacred stone, called the *Hadjr el Sakhara*, on which is shown the print of Mahomet's foot when he was translated to heaven. The whole interior is extremely beautiful, and the effect is much heightened by the blending of colours in the pillars that run round the mosque. Within the same enclosure, near its S. wall, is another mosque, of square shape, called El-Aksa. The cupola is spherical, and ornamented with arabesque paintings and gildings of great beauty. Between the mosques is a handsome marble fountain for ablutions. On the opposite side of the city, in the Latin quarter, called *Harat el Nassara*, is the church of the Holy Sepulchre, a building in the Byzantine style, erected by Helena, mother of Constantine the Great, in the centre of a court or enclosure, filled at pilgrim-time with pedlers of every description, especially venders of relics and rosaries. The building resembles Rom Catholic churches in general, but it is greatly inferior, notwithstanding its valuable marbles, to many of the sacred edifices in Rome.

Immediately in front of the entrance, which is guarded by Moslem soldiers, is a slightly elevated marble slab, called the 'stone of unction,' on which, according to the monks, our Lord's body was laid, to be anointed by Joseph of Arimathea; and near it are 17 steps, conducting to the supposed Mount Calvary, now a handsome dome-covered apartment several feet above the floor of the church, floored and lined with the richest Italian marbles; in the crypt beneath is a circular silver plate with an aperture in the centre, through which the arm is said to reach the identical hole in which the cross was fixed. The great object of interest, however, is the Holy Sepulchre itself, an oblong structure 15 ft. long by 10 ft. in breadth, roofed in with a handsome ceiling corresponding to the richness of the silver, gold, and marble decorating its interior. It stands directly under the great dome of the church, and is divided into two chambers, the first containing the stone on which the angel sat when he addressed the affrighted women, 'Why seek ye the living among the dead? he is not here, but is risen,' and the other being the sepulchre to which he pointed, saying, 'Behold the place where they laid him.' The inner compartment, lined with *verd antique*, is only large enough to allow four persons to stand by the side of a plain white marble sarcophagus of the ordinary dimensions, over which hang 7 large and 44 smaller lamps, always kept burning. Around the large circular hall, which is surrounded by a gallery supported on pillars, and roofed by a vast dome, are oratories for the Syrians, Copts, Maronites, and other sects who have not, like the Greeks, Armenians, and Roman Catholics, chapels in the body of the church. The Greek chapel at the E. end of the hall is parted off by a curtain, and is incomparably the most elegant and highly decorated; the Latin chapel closely resembles those seen in Italy, and has a gallery with a fine organ: that belonging to the Armenians is in the gallery. Various parts of the church are pointed out by monks and pilgrims as the scenes of certain events connected with the last sufferings of Christ; and to such an extent is superstition carried, that a stone is exhibited and gravely declared to be that on which our Saviour was placed when put in the stocks. The faith, indeed, of intelligent men is most severely tested during a visit to this church. There cannot be a doubt that it stands on the hill of Calvary, and it probably includes the site of the crucifixion; but there seems to be little ground for the assumption, that the tomb and site of the cross were so near to each other as to be enclosed by the same building. In an antechamber near the entry are several relics, the most authentic probably of which are the sword and spurs of Godfrey of Bouillon.

The tombs of Godfrey and his brother Baldwin were destroyed during a fire which took place in 1808, and have not been restored, owing to the ill-will felt by the Greek Christians towards the Romish church, to which these monarchs belonged. Westward of the church just described in the *Harât-el-Nassar*, or Christians' Street, is the Franciscan convent of St. Salvador, called by way of distinction *Il Convento della Terra Santa*, a large stone building, having several courts and gardens enclosed within a strong wall. The funds are supplied by contributions sent from Rome and other Catholic countries, and the inmates comprise from 60 to 80 monks, chiefly Italian and

Digitized by Google

Spanish, by whom European strangers visiting the Holy City are hospitably entertained. The church attached to the convent is gaudily furnished with candlesticks and images, and has a good organ. E. of the above stands the Greek monastery, a well supported establishment with a small subterranean church. The city castle, close to the gate of Jaffa, is supposed to have been built on the ruins of the *Turris Psephina* of old Jerusalem; it comprises a few towers connected by curtains, and has a few old guns mounted on broken carriages. Close by it, on the ascent to the hill of Zion, is the Armenian convent, in the best-looking district of the city, comprising within its precincts rooms sufficient to accommodate a thousand pilgrims, and a large garden: the conventual church is spacious, and most elaborately ornamented; the floor is paved in the most delicate mosaic. E. of the convent is a small Armenian chapel, marking the site of the house of Annas, the high-priest; and just outside the gate of Zion is another chapel, supposed to occupy the site of the house of Caiaphas: these positions seem to be far from improbable. (Compare Joseph. Antiq., lib. xviii. c. 3, with St. John xviii. 24.)

Not a vestige remains of the ancient buildings on Mount Zion, where David built a palace, his own residence, and that of his successors, whence it was emphatically called the 'City of David.' Its limits are, however, well defined by the aqueduct which conveyed water from Jerusalem to Bethlehem. The hill-side is now used as a Christian burial-ground. N. of the city, in the district called Acra, are the ruins of Herod's palace, and about 300 yards to the SE., near the reputed pool of Bethesda, is the residence of the *mutzellim*, or Turkish governor, supposed, though with little show of reason, to occupy the site of the prætorium of Pontius Pilate. It is a large straggling building, having a flat roof, which commands a complete view of the mosque of Omar: it stands in the principal street of the modern city, called by the Turks *Harât-el-Allam*, and by the Christians *Via Dolorosa*, the monks having fixed on it as the line of route along which our Saviour was led from the hall of judgment to Calvary. The Jewish quarter (*Harât-el-Yahoud*) occupies the hollow between the hills of Zion and Moriah: it contains seven mean and small synagogues; and the numerous private dwellings, how comfortable soever inside, have uniformly mean and ill-built exteriors, owing, it is said, to the fear of exciting among the Mohammedans any suspicion of the wealth of the despised nation. The poorer Jews are supported by charitable contributions obtained from their fellow-countrymen in Europe, especially in Germany and Spain. The Turks reside on the E. side of the city all round the great enclosure of Mount Moriah.

The suburbs of Jerusalem abound with interesting remains of less questionable antiquity and authenticity than most of those within the modern walls. Close to the gate of Jaffa is the pool of Gihon, near which, in a village of the same name, 'Zadok the priest, and Nathan the prophet, anointed Solomon king over Israel' (1 Kings i. 34), and, at a later period, Hezekiah 'stopped the upper watercourse of Gihon, and brought it straight down to the W. side of the city of David.' (2 Chron. xxxii. 30.) S. of Mount Zion is the valley of Hinnom, in which are numerous tombs hollowed out of the rock, and a building, once used by the Armenians as a charnel-house.

The E. boundary of Jerusalem is formed by the valley of Jehoshaphat, which divides it from the Mount of Olives. Proceeding up this valley, the traveller soon arrives at

> 'Siloa's brook, that flow'd
> Fast by the oracle of God.'

The source of these celebrated waters, which now, at least, are brackish and sulphureous, lies close under the walls of *Harat-el-Schereef* on Mount Moriah; but the *pool* is rather more than ¼ m. below it. The stream issues by an underground passage from a rock, and falls into a small basin of no great depth. It was once covered with a chapel, erected to commemorate the miraculous cure of the man born blind. The descent to the lower pool, which is remarkable for its daily ebbing and flowing, is by a flight of 30 steps, whence it has acquired the name of the 'fountain of stairs.' On the E. side of the brook Kedron, now a mere rivulet, running in a valley so closely pent up as to deserve the name of a mountain-gorge, especially at its N. extremity, are four sepulchres constructed, unlike most in Judea, above ground, and designated the tombs of the patriarchs: one of them is alleged to be the burial-place of Zacharias, the son of Barachias. (Matt. xxiii. 29. 35.) S. of these tombs, and under the shadow of the temple of Solomon, is the favourite burial-ground of the Jews, among all of whom the dearest wish is, that they may lay their bones near those of their long-buried ancestors, and be ready for the summons of Jehovah, when He shall 'come up to the valley of Jehoshaphat: for there will I sit to judge all the heathen round about.' (Joel iii. 12.)

Further NE. are the gardens of Gethsemane, enclosed by a wall, and still in a sort of ruined cultivation, and the Mount of Olives, a hillock covered with stunted herbage, and with patches here and there of the trees with which it was once abundantly clothed. Here every spot has its grotto and legend, and on the hill the precise place is pointed out whence the Saviour ascended into heaven. The Empress Helena built on it a monastery, which the Turks have converted into a mosque; somewhat to the N. is the Church of the Ascension, now in the hands of the Greek Christians. N. of the bridge, over the brook Kedron, and about 250 yds. from St. Stephen's Gate, is the reputed tomb of the Virgin Mary, comprising, besides several cenotaphs, a subterranean chapel, in which lamps are kept constantly burning, and services daily celebrated according to the rites of the Greek church. Passing thence up the bank of the Kedron, and crossing the hill Bezetha, the stranger is conducted to the excavations called 'the Tombs of the Kings.' The road down to them is cut in the rock, and a stone doorway leads to a kind of antechamber, now at least open at the top, and measuring 50 ft. in length by 40 ft. in breadth. It is ornamented by a beautifully carved cornice, and in the SW. corner a door, formed of a single stone slab, admirably adapted to its framework, and easily working on its hinges, leads into a series of chambers, round which are niches in the rock for the reception of the dead. It is very probable that these are the 'royal caves' described by Josephus, as situated close to the N. boundary of the ancient city (see Bell. Jud., lib. v. c. 4); but whether they contained the bones of the sons of David (2 Chron. xxxii. 33), or those of Helena, queen of Adiabene (as Drs. Clarke and Pococke have supposed), is a matter as to which no certain conclusions can be drawn.

Jerusalem, considered as a modern town, is of very slight importance. Superstition and fanaticism constitute the principal bond by which the

Digitized by Google

pop., Christian, Jew, and Moslem, are held together. The Jew despises the Christian, and the follower of the Prophet looks down with contempt on both; but pilgrims of each of the three creeds resort thither in such numbers as to increase the pop. at certain times nearly a half; and heavy taxes are levied on all for the benefit of the pacha. The convents are supported by wealth sent from foreign countries, and a great influx of property takes place from the thousands of annual visitors, rich and poor, so that Jerusalem draws largely on Jaffa, Damascus, Nablous, and other places. But it has no industry whatever—nothing to give it commercial importance,—unless, indeed, a trade, now almost wholly engrossed by the monks of the *Terra Santa* convent, in shells, beads, and relics, whole cargoes of which are shipped from Jaffa for Italy, Spain, and Portugal. The shells are of mother-of-pearl sculptured, and the beads are manufactured either from date-stones or a hard kind of wood called *Mecca fruit*. Rosaries and amulets are also made of the black fetid limestone, and are highly valued in the East as charms against the plague. The retail trade of Jerusalem is quite insignificant. The bazaar, or street of shops, is arched over, dark, and gloomy, the shops are paltry, and the merchandise exposed for sale of an inferior description. This, however, is the only part of Jerusalem where any signs of life are shown. In the other quarters of the town the visitor may walk about a whole day without meeting with a human creature. Well, then, may the Jews, who still indulge the hope of restoring their metropolis to its pristine greatness, lament, with the prophet Jeremiah, 'From the daughter of Zion all her beauty is departed. Jerusalem hath grievously sinned; therefore, she is removed. The adversary hath spread out his hand, and the heathen hath entered into her sanctuary. All her people sigh and seek bread: see, O Lord, and consider, for I am become vile.' (Lam. i. 6–11.)

Nothing can be well conceived so vile, so degrading, as the mummeries enacted in the Holy City, especially during the Easter festival. The monks, who are servants of Mammon rather than of Christ, act on these occasions as showmen and masters of the ceremonies; and even the pilgrims, who crowd to the Sepulchre in such numbers as to make order impossible, too frequently exhibit the greatest levity and unconcern. 'What a scene was before me,' exclaims a traveller 'the whole church was absolutely crammed with pilgrims, men and women hallooing, shouting, singing, and violently struggling to be near the Sepulchre. One man in the contention had his right ear literally torn off.' A number of years ago, during the representation of the blasphemous pantomime, entitled 'the Holy Fire' (intended to represent the descent of the Holy Spirit), the pressure was so intense, 6,000 persons being assembled on the ground-floor, that great numbers fainted, a general confusion ensued, and upwards of 300 were either suffocated or crushed to death. In fact, the whole scene is revolting to every rational and really devout Christian. Such, however, is the strength of superstition, that a pilgrimage to Jerusalem is still regarded, in many parts, as an act of the highest merit, and as bringing with it the assurance of eternal felicity.

The local government of Jerusalem is conducted by the *mutzellim*, or military governor; the *mulakhadi*, or chief of the police; the *mufti*, or chief judge; the *capo-verde*, or superintendent of the mosque of Omar; and the *subaski*, or town-major; all of whom, except the *mufti*, hold their appointment under the pacha of Damascus.

Jerusalem has been usually supposed to be identical with the Salem of which Melchizedek was king in the time of Abraham, anno 1913 B.C., according to Abp. Usher. When the Israelites entered the Holy Land 500 years afterwards, it was in the possession of the Jebusites, descendants of Canaan. Joshua, soon after his entrance into Canaan, 'fought against Jerusalem, and took it, and smote it with the edge of the sword, and set the city on fire.' (Judges i. 8.) But the citadel on Mount Zion was held by the Jebusites till they were dislodged by David, who made Jerusalem the metropolis of his kingdom, and his dwelling in 'the strong-hold of Zion.' (2 Sam. v. 7.) He enlarged the city and built a beautiful palace: it was further embellished by his son Solomon, who in the years 1012–1004 B.C. erected the temple already referred to. Palestine was afterwards successively invaded by the Egyptians, Assyrians, and Babylonians, the last of whom, under Nebuchadnezzar (B.C. 588), took and destroyed the city, burnt the temple, and carried the people captive to Babylon. After a bondage of nearly 70 years the Jews were restored to their city, by Cyrus the Persian, and about *anno* 515 B.C. they rebuilt the temple, under the superintendence of Zerubbaal and Nehemiah. Alexander the Great is said, by Josephus, to have visited Jerusalem in peace, and to have respected the religion of the Jews; but the best critics reject this statement as inconsistent with the ascertained events in the life of Alexander, and unworthy of credit. (Ancient Universal History, viii. 536, 8vo.; Milford's Greece, vii. 533.) Ptolemy Soter, one of Alexander's generals, seized upon Syria and Palestine, sacked the Holy City, and carried off a large portion of its inhabitants to Alexandria. Later monarchs of the Macedonian empire, who attempted to introduce the pagan worship, were successfully opposed by the Maccabees, and the liberty of Judæa was at length restored, anno 165 B.C. The all-absorbing power of Rome finally put a period to Jewish independence, the whole of Syria being reduced by Pompey, and made a proconsular province. This great general, who took Jerusalem after a stout resistance, entered the temple, and explored its inmost recesses; and it is mentioned to his honour, that he touched none of the precious relics, or of the vast wealth accumulated in the sanctuary. '*Victor ex illo fano nihil attigit.*' (Cicero pro L. Flacco, § 28.)

Jerusalem, however, was merely tributary, and had not lost its nominal sovereignty (in other and prophetic words, *the sceptre had not departed from Judah, nor a lawgiver from between his feet until Shiloh had come*, Gen. xlix. 10.) till after the birth of Christ, when it became the residence of a procurator. The repeated rebellions of the Jews at length roused the vengeance of the Romans; and, A.D. 70, the city was taken by Titus, after one of the most memorable and destructive sieges of which history has preserved any account. The Jews, though rent by intestine factions, defended themselves with invincible obstinacy; they contemptuously rejected every proposal for a surrender, and braved alike the attacks of the Romans, and the still more dreadful attacks of famine. But their resistance was unavailing, except for their own destruction; and the city, being taken, was completely destroyed, along with the temple —three towers only being left as memorials of its existence and destruction. According to Josephus, no fewer than 1,100,000 persons fell in the siege, exclusive of above 100,000 taken prisoners. But notwithstanding what has been alleged in defence of this statement by Brotier (Notæ ad lib. v. § 13. Hist. Taciti) and others, there can be no reasonable doubt that it is grossly exaggerated. The

Digitized by Google

statement of Tacitus would seem to be infinitely more probable, though even it is, perhaps, beyond the mark. 'Pervicacissimus quisque illuc perfugerat; eoque seditiosiùs agebant. Tres duces, totidem exercitus: .... prælia, dolus, incendia inter ipsos, et magna vis frumenti ambusta..... *Multitudinem obsessorum, omnis ætatis, virile ac muliebre secus*, SEXCENTA MILLIA *fuisse accepimus.* Arma cunctis qui ferre possent; et plures quàm pro numero audebant. Obstinatio viris feminisque par; ac si transferre sedes cogerentur, major vitæ metus quàm mortis.' (Hist., lib. v. c. 12 and 13.) It should be acknowledged, however, that the errors of Josephus, like those of Herodotus, Diodorus, Arrian, and others, in mere numbers, may, perhaps, be attributed less to the author's inaccuracy than to the old-fashioned writing in MSS., in which the numeration is effected by single letters, and mistakes, though easily occurring, are detected with extreme difficulty. In general points of history and topography, Josephus's works should be considered the *vademecum* of the traveller in Palestine.

Adrian rased the city to the ground, ploughed up a great part of the surface, and built on its site the Roman town of Ælia Capitolina. The condition of Jerusalem at this period is well described by Milman:—

'Her tale of splendour now is told and done;
Her wine-cup of festivity is spilt,
And all is o'er, her grandeur and her guilt.
Her gold is dim, and mute her music's voice;
The Heathen o'er her perish'd pomp rejoice:
Her streets are rased, her maidens sold for slaves,
Her gates thrown down, her elders in their graves:
Her feasts are holden 'mid the Gentiles' scorn,
By stealth her priesthood's holy garments worn:
Oh! long foretold, though long accomplish'd fate
Her house is left unto her desolate.'
Fall of Jerusalem.

When Christianity, in the reign of Constantine, became the established religion of the Roman empire, Jerusalem, in name at least, was restored by the zealous Helena. The idol temples were destroyed, and several churches and other buildings were erected on sites supposed to be connected with the events of Christ's history; in short, no efforts and expense were spared in the attempt to raise the Holy City to its rank as the metropolis of Christendom. The period of prosperity thus commenced terminated in 636, by the conquest of Omar, who made the city tributary, heavily taxed the pilgrims, and desecrated the site of the temple, by erecting on it a mosque in honour of Mahomet.

After being more than 400 years subject to the Arabian caliphs, Jerusalem fell into the hands of the Turks, who proved still more oppressive masters than any of their predecessors. The resentment and sympathy of the princes and people of Christendom were now awakened by Peter the hermit, and the Crusades were undertaken to rescue the natives and pilgrims of Palestine, and above all the holy sepulchre, from the dominion of infidels. The Christian army reached Jerusalem in the summer of 1099. 'Godfrey of Bouillon erected his standard on Mount Calvary; the time of the siege was fulfilled in forty days of calamity and anguish, during which the soldiers suffered intensely from hunger and thirst. At length, on a Friday, the day and hour of the Passion, Godfrey stood victorious on the walls of Jerusalem; his example was followed on every side by the emulation of valour; and, about 460 years after the conquest of Omar, the Holy City was rescued from the Mohammedan yoke. A bloody sacrifice was offered to the God of the Christians; resistance might provoke, but neither age nor sex could modify their implacable rage: they indulged themselves three days in a promiscuous massacre, and the infection of the dead bodies produced an epidemic disease.' (Gibbon, xi. 84.) Saladin, 88 years afterwards, appeared in arms before Jerusalem: some feeble and hasty efforts were made for its defence, but within 14 days the banners of the Prophet were erected on its walls. Saphadin, the brother of Saladin, destroyed, in 1218, all that remained of the fortifications of this devoted city, and reduced the population to a servile subjection to the Mohammedans. A series of changes subsequently occurred; but Jerusalem came finally into the hands of Selim in 1519, since which the Turkish flag has always floated over its sacred places. For more than three centuries its fortunes have been stationary: crowds of pilgrims fill its streets at one season of the year, creating a temporary activity, and increasing the revenues of the Turkish officers; but at all other times its condition recalls forcibly the complaint of Jeremiah:—'The city sits solitary that was full of people: she is become as a widow: she that was great among the provinces is become tributary. Her gates are desolate. . . . All her beauty is departed. . . . Filthiness is in her skirts.'

JESI (an. *Æsium*), a town of Central Italy, prov. Ancona, on the Fiumesino (an. *Æsis*), 16 m. WSW. Ancona, on the railway from Ancona to Rome. Pop. 18,786 in 1864. The town is walled, and has a handsome main street, three large squares, a cathedral, and six other churches, many convents, and a theatre. It is a bishop's see. It has manufactures of silk and worsted stockings. Æsium anciently bore the rank of a Roman colony. Numerous antiquities exist on the banks of the river in its neighbourhood.

JESSELMERE, or JAYSULMEER, a territory of NW. Hindostan, prov. Rajpootana, and formerly one of the five principal Rajpoot principalities, between the 25th and 28th parallels of N. lat., and the 69th and 72nd of E. long. Area 10,000 sq. m. Pop. estimated at 300,000. Surface uneven, and intersected with rocky hills: it is not watered by any considerable stream, has little arable land, and is hardly more productive than the sandy desert that encompasses it. Cultivation is, consequently, very limited; and the parts which are cultivated yield only the coarser grains, which form the food of the inhab. Irrigation is effected with great labour chiefly by means of very deep wells and tanks; but large and spacious tanks occur every 2 or 3 m., and rain water is carefully preserved, the periodical rains being scanty and uncertain. The heat of summer is oppressive, but the cold of winter is sufficiently great for the tanks to be covered with ice every morning during a part of Jan. Mineral products few; the chief are primary limestone and lithographic stone: no metals appear to be found. Wood is scarce. The better kind of houses are of stone; the others mere conical grass huts. The open nature of the country frees it from the most formidable wild animals. Foxes, wolves, hyenas, and jackals are met with, as are several kinds of antilopes, game of various kinds, and wild ducks; but the uncertainty of water hinders both the animal and vegetable kingdom from thriving. Jesselmere is better suited for grazing than agriculture; but neither herds nor flocks are numerous. The horned cattle are of medium size, and indifferent quality: the sheep, though small, have excellent wool. The mass of the pop. consists of Bhattee Rajpoots. The commerce of Jesselmere is insignificant; what little wealth it does possess arises from its being on the chief road between Central India and the Indus.

Digitized by Google

It has no exports of its own; and its only manufacture is that of woollen cloth of a very fine texture, but in no demand elsewhere. Indigo and cotton cloths are imported from Malwah, sugar from Jeypoor and Delhi, iron and brass from Nagore. From 20 to 25 thousand maunds of opium pass annually through Jesselmere to Sinde, the return articles of transit thence being sulphur, assafœtida, rice, and tobacco. Jesselmere contains 2 towns and 84 villages, but, except in its cap., everywhere betrays the strongest marks of poverty.

JESSELMERE, a town of NW. Hindostan, prov. Rajpootana, cap. of the above rajahship, 120 m. WNW. Joudpoor; lat. 26° 56′ N., long. 70° 54′ E. Pop. estim. at 20,000. It is of an oval shape, about 2 m. in circuit, and surrounded by a rampart of loose stones. At its SW. angle is a fort built on a scarped rock about 80 or 100 ft. higher than the city; and it presents a commanding appearance externally, and is in reality a place of considerable strength. It is of a triangular shape, its two longest sides, about 300 yards in length each, facing the W. and N. The only entrance is on the N. side, leading through several narrow and strong gates. The whole of the works are of firm substantial masonry, and comprise a vast number of towers. These stud the brow of the hill on all sides, and give it a very remarkable appearance; some are as much as 40 ft. in height. The fortress is supplied with water from wells 80 fathoms deep. The town is regularly laid out, and, for an eastern city, its streets are wide. Its houses are lofty, spacious, terrace-roofed, and built entirely of a hard yellow limestone, sometimes elegantly carved. Some opulent merchants reside at Jesselmere, it being on the great commercial route from Malwah to the port of Kurachee.

JESSORE, a distr. of British India, presid. and prov. Bengal, chiefly between the 22nd and 24th degs. of N. lat.; and the 89th and 90th of E. long.; having N. the main stream of the Ganges, separating it from the distr. Rajeshaye; E. Dacca and Backergunge; W. Nuddea and the 24 pergunnahs, and S. the Bay of Bengal. Length, N. to S., about 160 m.; average breadth 32 m. Area 3,512 sq. m.; pop. 381,744 in 1861. It is a flat country, intersected by numerous interlacing branches of the Ganges; its S. part comprises a portion of the region called the Sunderbunds; and, on the shore, are many extensive marshes, in which salt is largely made on government account. The soil is very fertile, and a good deal of rice is grown. Indigo, tobacco, mulberry, betel nut, and long pepper are also raised; but a great proportion of the land is uncultivated, and covered with jungle. Chief towns, Jessore or Moorley, the residence of the Zillah authorities, Culna, and Mahnudpoor.

JEYPOOR, or JYEPORE, a city of NW. Hindostan, prov. Rajpootana, former cap. of a subsidiary state of the same name, in a barren valley, 150 m. SW. Delhi; lat. 26° 55′ N., long. 75° 37′ E. Pop. estimated at 60,000. Jeypoor is one of the handsomest and most regularly built cities of Hindostan. It is surrounded by a battlemented wall of grey stone, flanked with towers, and defended or commanded by a citadel and a line of forts on the adjacent heights, a few hundred feet in elevation. Jeypore is laid out, like most modern European and American cities, in regularly square blocks of houses. A main street, 2 m. long, and about 40 yards broad, traverses it W. to E., and is crossed at right angles by four others of equal width, though much shorter. At the points of intersection are spacious market-places, and there are two good squares, which, like the principal streets, are crowded with shops. The great thoroughfares are, however, disfigured by hovels, platforms, and stalls, erected along the centre of them, which detract greatly from their appearance, The houses are generally two stories high, but some are 3 or 4 stories, with ornamented windows and balconies, and are often adorned with frescoes and sculptures. The chief public edifice of Jeypoor is a magnificent palace, constructed, it is said, by an Italian architect, in the 15th century, for the rajah Jey Singh, under whose reign this city was one of the principal seats of Hindoo learning. This palace, with its fine gardens, occupies about one-sixth part of the city. Jeypoor has numerous temples, in the purest Hindoo style, and some are of larger dimensions than are to be found in any other city of Upper Hindostan.

JHYLUM, JELUM, or BEHUT (an. *Hydaspes*), a river of the Punjab, Hindostan, which rises in the SE. extremity of Cashmere, and, after a course of about 450 m., at first NW. or W., and afterwards SW., joins the Chenab (Acesines), about lat. 31° 10′ N. During most part of its course it is not fordable: and at Jelalpoor, in lat. 32° 40′, it has been found, even when not at its highest point, 1,800 yards broad, and 14 ft. deep. It is correctly described by Arrian as 'muddy and rapid,' having a current of 3 or 4 m. an hour. Its banks are interesting as the scenes of several of the exploits of Alexander, but it is impossible to indicate their localities. Not far from the Jhylum is the famous *tope* of Manykiala. (See PUNJAB and INDUS.)

JOHANNISBERG, a village famous for its vineyards, with a castle, in the duchy of Nassau, near the E. bank of the Rhine, on the N. confines of the distr. called the *Rheingau*, 16 m. W. by N. Mentz, on the railway from Coblenz to Frankfort-on-the-Main. Pop. 874 in 1861. The village, situated on the slope of a hill, or berg—berg of St. John—formerly belonged to an abbey, the monks of which planted the vineyard towards the end of the 11th century. The hill comprises, excluding the portion which produces only ordinary wine, about 63 arpents; and its produce in average years is estimated at about 25 tuns of 1,300 bottles each. The soil is composed of the *débris* of various coloured stratified marl. The grapes are gathered as late as possible, or when they are dead ripe. Its choicest produce, called Schloss-Johannisberger, is admitted to be the very finest of all the Rhenish wines, being distinguished by its high flavour and perfume, by an almost total want of acidity, and by its being improved the longer it is kept. The finest growth in the best years fetch enormous prices, sometimes as much as 5*l.* the bottle. The vintages of 1779, 1783, 1801, 1811, and 1822, enjoy a high reputation. After the secularisation of the abbey of Fulda, this celebrated vineyard became successively the property of the late king of the Netherlands, Marshal Kellerman, and Prince Metternich, father of the present owner, to whom it was presented by the late emperor of Austria. The prince has repaired the castle, which he occasionally occupies.

JOHN'S (ST.), a city and sea-port of New Brunswick, on its S. coast, and the largest and most important town, though not the cap. of that colony. It is built on rocky and very irregular ground on a small peninsula, on the N. side of the St. John river, near its mouth, in the Bay of Fundy, 130 m. WSW. Halifax, and 190 m. ENE. Augusta, in the state of Maine; lat. 45° 20′ N., long. 66° 3′ W. Pop. 20,715 in 1861. Its harbour is commodious and spacious; and though a bar across its entrance dries at low water, the rise of the tides is such (from 25 to 30 ft.) that large vessels enter the port at high water. The en-

Digitized by Google

trance to the harbour is between a bold headland bounding the river to the E., and Partridge Island, about 2 m. S. of the town, which has a lighthouse and a fort. Another fortress guards the harbour, at Carleton, opposite St. John's, and on a commanding height immediately above the town itself is Fort Howe, now in ruins. At ebb tide a mud flat extends for some distance in front of St. John's; but at high water it is covered, and the aspect of the place is most imposing. A projecting rock separates the town into the upper and lower coves. The former, containing the wharfs and warehouses, is the principal division; but the lower has been much improved by the erection of a line of barracks. Several of the streets are inconveniently steep, and in winter even dangerous, though much labour has been employed to level and adapt them for carriages. The houses, principally of brick, are regularly arranged, and on the whole handsome; but ornament has not been much studied. The chief public buildings are, a handsome stone court-house, recently erected on high ground above the middle of the town, the marine hospital, poor-house, gaol, two episcopal churches, a Scotch church, and Roman Cath., Methodist and Baptist chapels. The grammar school has an endowment of 135*l*, a year, and there are other schools, and several religious and charitable associations. St. John's has a chamber of commerce, a savings' bank and a marine insurance company, two public libraries, and a good news-room.

On the opposite bank of the river is the little town of Carletown, under the municipal government of St. John's, comprising many new buildings, a church, with some saw-mills, and building docks. St. John's is a corporate city, which, including Carleton, is divided into six wards, and governed by a mayor, recorder, six aldermen, and six assistants. The mayor, recorder, and other chief officers, are appointed by the governor; the aldermen being elected annually by the freemen.

St. John's is a free port, and the great commercial emporium of New Brunswick. In 1862 there entered 1,644 vessels, of a total burthen of 347,708 tons, and there cleared 1,439 vessels, of 366,652 tons burthen. The tonnage of the port, in 1862, amounted to considerably more than one-half of the whole shipping of New Brunswick.

At the end of the last century the site of this thriving city, with the exception of a few straggling huts, was covered with trees. This was its condition at the peace of 1783, since which time its growth has been extraordinary. Its chief importance is in its position, which must ever command the trade of the vast and fertile country watered by the lakes and streams of the river St. John.

JOHN (ST.), or the ST. JOHN'S RIVER, called by the Indians *Looshtook*, 'the long river;' the principal river of New Brunswick, and, next to the St. Lawrence, the finest in British America. The area of its basin is estimated at 19,200 sq. m. The St. John rises from two principal sources, about lat. 46° 10′ N. and long. 70° W., in the territory N. of the state of Maine, disputed between Great Britain and the U. States. It flows through this territory, at first NE., for about 100 m.; and then takes a bold curved sweep to the E., as far as long. 67° 50′, where it leaves the disputed country, and enters the prov. of New Brunswick. It then flows, first in a S. direction for about one-fourth part of its course; then E. for perhaps 80 m.; and lastly S. for at least 50 more; when it discharges itself into the Bay of Fundy, a little below the city of St. John, about lat. 45° 20′ and long. 66°, after an entire course of 380 m.

Independent of any artificial improvement, the St. John is, in the greatest part of its course, one of the most navigable of the Atlantic rivers, being much less impeded by rapids, shoals, or falls, than any other stream between it and the Hudson. At its mouth, which forms St. John's harbour, it is 5 m. wide: and at Fredericton, 85 m. up, it is half a mile wide. Vessels of 50 tons come up to Fredericton, and barks of 20 tons ascend to the Great Falls, about 200 m. from its mouth, above which it is fitted only for boats. It is unfortunate, however, that almost at the very entrance of this river, about a mile above St. John's, its bed contracts to about 400 ft. in width, and is crossed by a formidable rocky bar, on which there is seldom more than 17 ft. water, and which only admits of the passage of vessels at certain times of the tide. The waters of the river at low ebb are in this place about 12 ft. higher than the sea, and at high water about 5 ft. lower; so that in every tide there are two falls,—one outwards, and one inwards. The only time of passing with safety is when the waters on either side of the bar are about level, which happens twice in a tide, continuing nearly 20 minutes at a time. The tide is not perceptible much above Fredericton; where it rises to from 6 to 10 inches. The Great Falls, near lat. 47°, consist of one principal cataract, perhaps 50 ft. high, and some smaller ones of several feet each, extending altogether for ½ m. along the stream, and having a total fall of about 75 ft. Though very inferior in respect of magnitude compared with that of Niagara, the Falls of the St. John are said to be more picturesque. Its entire descent, from its mouth to its source, is estimated at above 1,000 ft.

Besides St. John's, Carleton, Gage-town and Fredericton, there is no place of any consequence on the banks of the St. John; but the country through which it flows is well cleared, and settled, and is said to be greatly superior in fertility to the river basins of New England. (See MAINE.)

JOHN'S (ST.), a town of the island of Newfoundland, of which it is the cap., on its SE. coast. Lat. 47° 32′ N., long. 52° 29′ W. Pop. 25,229 in 1861. The town stands at the inner end of an excellent harbour, the narrow entrance to which has 12 fathoms water in the centre of the channel. It is protected by several strong batteries and forts, and a light-house is constructed on a rock at the N. side of its entrance. The town, which extends along nearly the whole N. side of the port, principally consists of one main street, more than a mile in length, and from 40 to 50 ft. broad, from which, at almost every step, stages, called *fish-flakes*, project into the sea. There are some good stone and brick houses, and other handsome buildings, erected principally since the great fires that devastated St. John's in 1816 and 1817.

The population of St. John's fluctuates greatly. Sometimes, during the fishing season, the town appears full of inhabitants: at others it seems half deserted. At one time many of the inhabs. depart for the seal fishery; at another to different cod-fishing stations. In the fall of the year the fishermen arrive from all quarters to settle their accounts with the merchants, and procure supplies for the winter. At this period St. John's is crowded with people; swarms of whom depart for Prince Edward Island, Nova Scotia, and Cape Breton, to procure a livelihood in those places, among the farmers, during winter. Many of them never return again to the fisheries, but remain in those colonies, or often in the U. States.

Fort Townshend, on a steep height above the town, was formerly the residence of the governor;

Digitized by Google

but a new edifice has been more recently built at a cost of 50,000*l*. The custom-house, church, and other public buildings present nothing remarkable. The inhab. are generally possessed of the rudiments of education, and many of them pretty well informed. Most of the pop. are R. Catholics, and this is the see of a Rom. Catholic bishop. It is a good deal agitated by party contentions.

In 1862 there entered the port of St. John's 786 vessels, of a total burthen of 108,630 tons, and there cleared 729 vessels, of 102,783 tons burthen. Agriculture is scarcely pursued at all in the neighbourhood, the ground being rugged and stony. Potatoes form the chief crop. Provisions and other commodities are dearer than on the American continent, from which they are mostly imported.

JOHNSTON, a manufacturing town of Scotland, par. of Paisley, co. Renfrew, on the Black Cart, 3 m. W. Paisley, and 18 m. W. by S. Glasgow, on the railway from Glasgow to Ayr. Pop. 6,404 in 1861. The rise of this town is remarkable, having been, for a time, more rapid than that of any other in Scotland. The ground on which it stands began, for the first time, to be let on building leases, in 1781, when it contained only *ten* persons. In Oct. 1782, 9 houses were built, and 2 more were being erected. In 1792 the inhabitants amounted to 1,434; in 1811 to 3,647; and in 1831 to 5,617. The increase from 1831 to 1861, it will be seen, was not very considerable. The place was formerly called 'the Brig o'Johnston,' from a bridge over the river in the immediate vicinity. It is built on a regular plan and lighted with gas. There are two squares, besides numerous streets, and public works. The houses are, for the most part, two and three stories in height. To each house is attached an adequate extent of garden ground. The town has an established church, and various dissenting places of worship. In its immediate neighbourhood is Johnston Castle, the residence of Mr. Houston, lord of the manor. There are excellent grammar and English schools. The civil polity of the town is managed by a committee elected annually by the feuars.

Johnston is chiefly distinguished for its manufactures, consisting of numerous cotton mills. There are, besides, brass and iron foundries, on an extensive scale; with machine manufactories, as well as various minor branches of industry. The Glasgow and Ardrossan canal, projected in 1806, has been completed only from Glasgow to Johnston. It was on this canal that light iron boats, or gig-boats, for the rapid conveyance of passengers, were first (1831), tried and established. Near Johnston are four collieries.

JOIGNY (an. *Joviniacum*), a town of France, dép. Yonne, cap. arrond., on the Yonne, 15 m. NW. by N. Auxerre. Pop. 5,971 in 1861. A handsome quay runs along the bank of the river, above which the town rises on a steep declivity, crowned with the remains of an ancient castle. Joigny is surrounded with old walls, and entered by 6 gates; it has 2 suburbs, with one of which it is connected by a handsome stone bridge of 6 arches across the Yonne. The streets are narrow, steep, and inconvenient; but some of the houses are good. It has a cathedral built in the fifteenth century, two other Gothic churches, and cavalry barracks, with vinegar and other factories.

JORDAN (Arab. *Sheriat-el-Kebir*), a river of Palestine, famous in sacred history; it rises in lat. 32° 35′ N., long. 33° 26′ E., a few miles N. of Banias (the an. *Cæsarea Philippi*), in a small pool formerly called *Phiala*, on the W. slope of Djebel-es-Sheikh, the *Antilibanus* or *Mount Hermon* of antiquity. After a S. course of about 40 m., during which it crosses the fenny Bahr-el-Hool (an. *L. Merom*), it opens into the lake Tabariah or *Gennesareth*, close to the ancient town of Bethsaida. At the S. end of this fine sheet of water (15 m. long, and about 7 broad), on and near which occurred so many striking scenes in the history of Christ, the Jordan enters a narrow, pent-up valley called el-Ghor, and after running through it with a tortuous southerly course of about 90 m., empties its waters into the Dead Sea, its entire length being about 150 m. The discoveries of Burckhardt in the Wady-el-Araby, which he traced completely up from the Red Sea to the lake Asphaltites, have led to the supposition that before the volcanic movement which so altered the surface, this river had a continuous course down this valley to the Gulf of Akabah (see DEAD SEA). Its tributaries on the W. side are mere torrents, one of the largest of which is the brook *Kedron*, rising in the suburbs of Jerusalem: the E. affluents comprise the Sheriat-el-Mandhur (an. *Jarmok*, Gr. Ἱεράμαξ), and the Wady Zerka, which is the scriptural *Jabbok* (see Deut. iii. 16). The breadth and rapidity of the stream vary in different parts and at different seasons. The floods occur in February and March, and at that season, when filled with the melted snow of Mount Lebanon, it is from 30 to 70 yards wide, and about 17 ft. deep, with a current so rapid that it is not safe even for an expert swimmer to bathe in it. In the dry seasons it is low, and has a comparatively languid current; and to this circumstance, probably, may be attributed the discrepancies in the statements respecting the nature and magnitude of the river. The channel, however, having cut its way through a loose sandy soil, is much deeper now than formerly, and the waters, even in floods, run within narrower limits. A second and higher bank now skirts the actual bank at about a furlong's distance on either side, and the intervening space is so filled up with bushes and trees (tamarisks, willows, oleanders, and myrtles), that the stream is completely hidden from view till its upper and dry channel has been passed. Lord Lindsay says:—'The river is concealed till you are close upon it, by dense thickets of trees, reeds, and bushes "the pride of Jordan" (Zech. xi. 3), growing luxuriantly to the very water's edge. The lions, hippopotami, &c. (Jer. xlix. 19), that formerly haunted these thickets are extinct; but wild boars are still found there.' 'The nightingales,' says the same writer, 'sung in the cool starlight night from the trees; and the scene altogether was most delightful.' (Travels in Egypt and the Holy Land, vol. ii. p. 65.)

The water is described as being rather warm than cold, of a white sulphureous colour, but free from any taste or smell. On analysis, however, it proves to be strikingly dissimilar to that of the Dead Sea; for while the latter contains ¼ part of its weight of salts, the former has only 1-300th part of the proportion of solid matter contained in the water of the lake. (Dr. Marcet, Phil. Trans. for 1807.)

The Jordan has been the scene of many events in which biblical scholars must be deeply interested. This river valley was the dwelling of Lot, who 'pitched his tents towards Sodom,' the men whereof 'were wicked, and sinners before the Lord exceedingly.' Here the four kings, persecuted by the five powerful princes close to the Salt (or Dead) Sea, fought and regained their liberty; and the power of the latter was afterwards destroyed by divine interference. (Comp. Gen. xiv. 1-12, with xix. 24-26.) At a later, but still very early historical period, when the clans of Israel were returning, after an absence of four centuries, to the possessions of Abraham, the great sheikh of a

Digitized by Google

nation that was yet only in the nomad state, the ark, by command of Jehovah, was carried by the priests before the people, fell into the stream, and 'the waters which came down from above, stood and rose up upon an heap: and those that came down towards the sea of the plain, even the Salt Sea, failed, and were cut off; and the people passed over right against Jericho.' (Josh. iii. 14-16.) It is said that the prophets Elijah and Elisha afterwards divided its waters to prove their divine mission, and the special fact that 'the spirit of Elijah doth rest on Elisha.' (2 Kings ii.) In Christian times it has been celebrated as the stream in which Jesus Christ received from John the baptism which prepared him for the ministrations destined to exercise so important an influence over mankind. By modern devotees in Palestine, the spirit of this institution has been forgotten, and a superstitious attention to the form substituted in its stead; hence every year pilgrims, at the great Easter season (about April), are found rushing, young and old, rich and poor, sick and sound, men, women, and children, into the stream. 'All,' says Mr. Elliott (an English clergyman), 'carried with them the piece of cloth with which they wished to be enveloped after death.' The Moslems ridicule these vain ablutions, and their violation of decorum; and the Protestant cannot but lament the degradation they exhibit. (Elliott's Travels, ii. 476; Robinson's Palestine, i. 69-75.)

JORULLO, JURUYO, or XURULLO, an active volcano of Mexico, state of Valladolid, in an extensive plain, 70 m. SSW. the city of that name, and 80 m. from the Pacific; remarkable not only for its extent, but as being the only volcano of any consequence that has originated in New Spain since its conquest by Europeans. Its origin was, perhaps, one of the most tremendous and extraordinary phenomena that has ever been witnessed; for, in one night, there issued from the earth a volcano 1,600 ft. high, surrounded by more than 2,000 apertures, which still continue to emit smoke. Humboldt, who visited Jorullo, describes its appearance and formation nearly as follows:—'A vast plain extends from the hills of Aguasarco, to near the villages of Teipa and Petatlan, from 2,460 to 2,624 ft. above the level of the sea. In the midst of a tract of ground, in which porphyry, with a base of greenstone, predominates, basaltic cones appear, the summits of which are crowned with evergreen oaks and small palm trees, their beautiful vegetation forming a singular contrast with the aridity of the plain, laid waste by volcanic fire. Till the middle of the 18th century, fields cultivated with sugar-cane and indigo occupied the extent of ground between the rivers Cuitamba and San Pedro. From June, 1759, hollow subterranean noises, accompanied by frequent earthquakes, succeeded one another for from 50 to 60 days. At length, in the night between the 28th and 29th of Sept., a tract of ground from 3 to 4 sq. m. in extent, which goes by the name of *Malpays*, rose up in the shape of a bladder. The bounds of this convulsion are still distinguishable in the fractured strata. The *Malpays*, near its edges, is only 39 ft. above the old level of the plain called the *Playas de Jorullo*; but the convexity of the ground thus thrown up increases progressively towards the centre to an elevation of 524 feet. Flames were now seen to issue forth, it is said, for an extent of more than ½ sq. league; fragments of burning rocks were thrown up to prodigious heights; and, through a thick cloud of ashes, illumined by volcanic fire, the softened surface of the earth was seen to swell up like an agitated sea. The rivers of Cuitamba and San Pedro precipitated themselves into the burning chasms. Thousands of small cones, from 6 to 9 ft. in height, called by the natives *hornitos* (ovens), issued forth from the *Malpays*, from each of which a thick vapour ascends to the height of from 30 to 50 ft. In many of them a subterranean noise is heard, which appears to announce the proximity of a fluid in ebullition. In the midst of the *ovens*, six large masses, elevated from 1,312 to 1,640 ft. each above the old level of the plains, spring up from a chasm, the direction of which is from NNW. to SSE. The most elevated of these enormous masses, the great volcano of Jorullo, bears some resemblance in shape to the *Puys* of Auvergne, in France. It is continually burning, and has thrown up from the N. side an immense quantity of scorified and basaltic lavas, containing fragments of primitive rocks. These great eruptions of the central volcano continued till Feb. 1760. In the following years they became gradually less frequent; but the plains of Jorullo, even at a great distance from the scene of the explosion, were long uninhabitable, from the excessive heat which prevailed in them.'

The Cuitamba and San Pedro totally disappeared on the occasion above mentioned; but two new streams are now seen bursting through the argillaceous vault of the *hornitos*, having the appearance of mineral waters, in which the thermometer rises to 126° Fahr. The Indians give these streams the names of the former rivers, because, in several parts of the Malpays, great masses of water, with which they are supposed to be continuous, are heard to run in the direction from E. to W., as the Cuitamba and San Pedro did originally. Jorullo is situated in the great volcanic band of Mexico, which runs E. and W., nearly at right angles to the Cordillera, including the peaks of Orizaba, Puebla, Toluca, Tancitaro, and Colima; and of which Humboldt conjectures the Revillagigedo islands, in the Pacific, may mark the continuation.

JOUDPOOR, or MARWAR, a state of NW. Hindostan, under the British government, between 24° 36′ and 27° 40′ N. lat., and 70° 4′ and 75° 33′ E. long. Area, 35,672 sq. m. Pop. 1,783,600 in 1861.

Joudpoor and Jesselmere, may be taken as pretty fair types of the old Rajpoot states of NW. India; the former being, however, the most extensive and valuable of any, and the latter the least so. The wealth of Joudpoor has been much undervalued, and it has been erroneously considered as a portion of the sandy desert. Its exports in wheat are considerable, the soil is favourable to many other kinds of grain, and its central parts are highly productive. The country consists generally of open plains, the hills being almost confined to the S. The soil is not arid as in Jesselmere and Bicanere, but is almost every where watered by torrents, and affluents of the Loonee or Salt river. This river rises in Ajmere, and flows through the centre of Joudpoor to enter the Runn of Cutch. Its waters are distributed over the adjacent wheat lands, which extend along its banks from Ajmere to the Runn, by means of earth aqueducts, sometimes a mile in length. The fields are surrounded with dykes to prevent the egress of the water; and being thus irrigated, Joudpoor produces heavy crops of barley, *bajree*, *jouaree*, and other kinds of grain. Neither the climate nor soil is favourable to the poppy, but an inferior kind of opium is grown in the E., where it is an article of large consumption and export. Tobacco is produced in some parts, but not in a sufficient quantity to supersede the necessity of importing it from Gujrat. Cotton is an important article of produce. Marwar is celebrated

Digitized by Google

for its camels, which may be purchased in every village, at from 50 to 60 rupees each, and which have contributed greatly to the commercial importance of the state, by facilitating the conveyance of almost every kind of goods. Goats, sheep, and hogs are numerous; mutton is good, but the wool is not so much prized as that of the poorer countries. Salt is a very important article of produce. Large tracts are impregnated with it, especially about Punchpuddur, on the Loonee towards Cutch. It is got by digging pits of about 120 ft. by 40, and about 10 ft. deep in the saline soil. A jungle shrub is then thrown in upon the water which exudes; this assists the crystallisation, and in the course of two years, the moisture having evaporated, a mass of salt, sometimes from 4 to 5 ft. deep, is left. The commerce of Joudpoor is extensive, its great emporium being Pallee, about 40 m. SE. of the cap. This town is the entrepôt between the W. coast and Upper India, and the channel by which the Malwah opium is exported to China and W. Asia. The chief trade of Pallee is in opium, which is sent by land to Kurachee in Sinde, a distance of 500 m., whence it is shipped to Damaun. It is customary with the Pallee merchants to consign their opium to contractors, who agree to deliver it safe at Damaun, uninjured by weather, plunder, or otherwise, on the receipt of 300 rupees for each camel-load. Marwar exports wheat of superior quality to Ajmere and Bicanere, and has most extensive dealings in salt, with which it supplies the upper provs. of Bengal, and, indeed, all parts of Upper India. It imports from Sinde, by its return camels, rice, assafœtida, and sulphur; from Lahore, Cashmere shawls; from Delhi and Jeypore, metals, woollen and cotton cloths, and sugar. From Cutch it receives spices, cocoa-nuts, coffee, and dates; ivory from Africa, and European goods from Bombay. Its commercial importance has risen wholly within the last seventy years. The inhab. are chiefly Khatore Rajpoots, a handsome and brave race of men of the purest castes. Bhats, Chunars, and Jauts, the last of whom are the cultivators, comprise most of the remaining inhab. Within the limits of Marwar there are several thousand towns and villages, many consisting of from 500 to 1,000 houses. Chief towns, Joudpoor, the cap., Pallee, Nagore, and Meerta.

JOUDPOOR, a town of Hindostan, prov. Rajpootana, cap. of the above rajahship; in a hollow surrounded by rocky eminences, and on a soil destitute of water; 100 m. W. Ajmere. Pop. estim. at 80,000. Near it is the residence of the rajah of Joudpoor, a fort about ¾ m. in circuit, placed on a low mountain, and said to have some resemblance to Windsor Castle.

JUAN-DEL-RIO (ST.), a town of Mexico, state of Querétaro, and cap. dist. of its own name, 81 m. NW. Mexico, and 164 m. SW. Tampico. Pop. 10,295 in 1864. It is a neat and tolerably well-built town, in an extensive plain, 6,490 ft. above the sea, and on the S. bank of a stream, crossed here by a fine bridge of 5 stone arches: S. of it rises a hill of basaltic rock, the summit of which is crowned with a pretty chapel and spire. The private residences are of stone, and are large, roomy, and well furnished. The town is surrounded by gardens and orchards; and nothing can exceed the beauty and fertility of the neighbouring country. Indian corn is the chief article of culture, but the ear is much smaller than that of the corn grown in the United States.

JUAN-DE-LA-FRONTERA (SAN), a town of the Argentine republic, near the Chilian frontier, cap. prov., and on the river of same name, 125 m. N. Mendoza. Pop. estimated at 16,000. The territory round San Juan, besides being highly productive, has the advantage of being free from the incursions of the Indians. The prov. San Juan produces wheat, barley, maize, olives, figs, pasturage, garden vegetables, and all the fruits of the temperate zone in great luxuriance; and, in times of scarcity, corn has been sent from San Juan to Buenos Ayres, a distance of above 1,000 m. The mountain ranges in the neighbourhood of San Juan yield fine statuary marble, gypsum, sulphur, alum rock, and copperas, and the earth in its vicinity is strongly impregnated with sulphate of soda, which is extracted by washing for medical purposes.

JUAN-FERNANDEZ, a group comprising two chief and several smaller islands in the S. Pacific Ocean, about 400 m. W. of the coast of Chili: lat. 33° 40′ S., long. 79° W. The largest of these islands, and the only one inhabited, is called *Mas-a-tierra*, to distinguish it from *Mas-a-fuera*, a lofty volcanic rock, about 90 m. W. It is from 10 to 12 m. long, and about 6 m. broad, its area being nearly 70 sq. m. The coast line is very irregular, with frequent bays and headlands; and the chief harbours are Port English, on the S. side, visited by Anson in 1741; Port Juan, on the W.; and Cumberland Bay, on the N. side of the island. Its northern half is a lofty basaltic formation, intersected with narrow, but fruitful and well-wooded, valleys while to the S. the land, though less elevated, is rocky and barren. The fig and vine flourish on the hill sides, and among the larger trees are the sandal, cork, and a species of palm called *chuta*, bearing a rich fruit. Goats are found in a wild state, and on the rocky shores are seals and walruses: fish are plentiful, especially cod. The island is very subject to earthquakes, two of which (in 1751 and 1835) are described as having done great damage. In the earthquake of 1835, an eruption burst through the sea about a mile from the land, where the depth is from 50 to 80 fathoms; smoke and water were ejected during the day, and flames were seen at night. (Geog. Journ., vi. 1.)

Juan-Fernandez (which is popularly applied only to the island of *Mas-a-tierra*) was discovered by a Spanish navigator, who gave to it his own name, and formed an establishment, which was afterwards abandoned. The buccaneers of the 17th century made it a place of resort during their cruises on the coast of Peru; and subsequently it became the solitary dwelling, during four years, of a Scotchman, called Alexander Selkirk, whose adventures are supposed to have given rise to De Foe's inimitable novel of *Robinson Crusoe*. In 1750, the Spanish government formed a settlement and built a fort; which, however, with the town, was all but destroyed by an earthquake in the following year. They were rebuilt somewhat further from the shore; and were still inhabited, and in good order, when Carteret visited the island in 1767, but they were soon after abandoned. (Geog. Journ., iv. 2.) The Chilian government established a penal colony here in 1819; but this has been discontinued, on account of its expense. The island has lately been taken on lease from the Chilian government by an enterprising American, who has brought thither about 150 families of Tahitians, with the intention of cultivating the land, rearing cattle, and so improving the port of Cumberland Bay, that it may become the resort of whalers and other vessels navigating the Pacific Ocean.

JUANPORE, a distr. of British India, prov. Allahabad, chiefly between the 25th and 26th degs. of N. lat., and the 82d and 83d of E. long.; having N. Oude, and the distr. Azimghur; E.

Digitized by Google

Benares; S. the Ganges, separating it from Mirzapoor; and W. Allahabad. Area, 1,552 sq. m. Pop. 798,503 in 1861. The surface of the district is slightly undulating. The river Goompty runs through it in a SE. direction. The soil is sandy, but generally well cultivated, and irrigated with care, except towards the Oude frontier, where there is much waste land covered with jungle. This distr. has improved greatly since it has been brought under the British government, and it is now the principal seat of the sugar cultivation in the central provs. of the Bengal presidency. Some sugar lands in Juanpore let as high as 10 rupees the begah, from 6 to 8 rupees being the average rent of sugar lands in the adjacent districts. The buildings and villages, though still very indifferent, have been latterly much improved. The land is generally divided into such small portions, that the incomes of very few landholders exceeded 50*l*. Education is at a low ebb, and the people have always been rather celebrated for turbulence. The remains of many mud forts are to be seen, but none of stone exists, except that of the cap., Juanpore.

JUANPORE, a town of British India, presid. Bengal, cap. of the above distr., on the Goompty, 38 m. NW. Benares. Pop. 27,200 in 1861. Though now decayed and comparatively insignificant, it was previously to the middle of the 15th century a place of importance, and the cap. of an indep. sovereignty. It was annexed to the Mogul empire by Akbar, under whom was built its magnificent bridge over the Goompty, which is now in perfect preservation, and is one of the finest works of the kind in India. A stone fort, a mosque of great beauty, and a number of ruined edifices and monuments, attest the former greatness of Juanpore. The modern town is wholly built of mud; it is, however, the residence of the collector, judge, and other chief British authorities of the district.

JUGGERNAUT (*Jagannat'ha*, 'the lord of the world'), a town and celebrated temple of Hindostan, the latter being one of the chief places of Hindoo pilgrimage, and according to Hamilton, the most sacred of all the religious establishments of the natives of India. The town stands on the sea coast of the distr. of Cuttack, presid. Bengal, prov. Orissa, beside a branch of the Mahanudda, 45 m. S. Cuttack, and 260 m. SW. Calcutta; lat. 19° 49′ N., long. 85° 54′ E. It contains nearly 5,800 houses, with 30,000 inhabs. It is for the most part mean and dirty, consisting of low brick buildings, with here and there large *serais* and some handsome residences. The chief street is wholly composed of religious edifices, interspersed with plantations; and at its S. end stands the great temple of the divinity or idol. This structure is imposing only from its immensity; its execution is rude and inelegant, and its form unpleasing to the eye. It is built of coarse red granite, and was completed in 1198, at a cost of from 40 to 50 lacs of rupees (400,000*l*. to 500,000*l*.) The establishment of which it forms a part comprises about 50 temples dedicated to various deities, within a nearly square area inclosed by a stone wall 24 ft. high, and measuring 676 ft. in length on two of its sides, and 670 ft. on the two others. The principal gate of entrance to this area is on the E. side, from which a broad flight of 22 steps leads to a terrace raised about 25 ft., and inclosed by a second wall 445 ft. square. On this terrace is the first apartment, called the Bhog Mandap, a building 60 ft. square, in which the great idol is worshipped during the bathing festival; and in a line, and connected with it by a low portico, is the antechamber opening into the great tower or sanctuary. This tower rises to 180 ft. above the area on which it is raised, or rather more than 200 ft. above the ground, and forms a valuable landmark to mariners on this dangerous coast. Its ground plan is 28 ft. square within the building; its shape is conical, its walls are externally covered with stone statues in relief, and its roof is ornamented with representations of monsters of various kinds. Little pains, however, appear to have been taken in the sculpture of these decorations, and of late the temple has had an outer coating of *chunam* or mortar, while its figures have been daubed with red paint. Within this sanctuary, seated on their thrones, are the rude statues of three of the most revered deities of Hindoo faith—Juggernaut or Vishnu, his brother Balarama or Mahadeo, and his sister Subhadra or Kali, the temple being devoted to all three, though particularly to the first. Adjacent to this edifice are two other temples, much smaller, and of a pyramidal form. The E. gate of entrance to the outer enclosure is flanked by colossal figures of lions or griffins in a sitting posture, and porters of Hindoo mythology. In front of it is a column, remarkable for its light and elegant appearance, composed of a single block of dark basalt, 40 ft. high and 8 in diameter, supporting a sitting figure of the god Huniman. This pillar was brought thither from the half ruined black pagoda of Kanarak (which see), less than a century since. On the NE. side of the temple is the collection of bungalows forming the European station.

All the land within a distance of 20 m. from the pagoda is accounted holy by the Hindoos, and is held rent-free by the cultivators and others, on condition of their performing certain services in and about the temple. The priests and other persons deriving their subsistence from the establishment, are said to amount to 3,000 families, exclusive of 400 families of cooks, to prepare the holy food so much sought after by pilgrims.

'The provisions furnished daily for the *idol* and his attendants consist of 220 seers of rice, 97 seers of *kallai*, 24 of *mung*, 188 of clarified buffaloes' butter, 90 of molasses, 35 of vegetables, 100 of milk, 13 of spices, 20 of salt, and 22 of lamp oil. The holy food is presented to the idol three times a day, and the gates are cautiously shut during this presentation, and none but a few personal servants of the idol are allowed to be present. This meal lasts for about an hour, during which period, the dancing-girls attached to the temple (consisting of 120), dance and sing in the room with many pillars. On the ringing of a large bell, the doors are thrown open, the food is removed, and the rajah of *Khurda*, as high priest of the temple, divides it with the priests.' (Trans. As. Soc., iii. 255.)

The images of Juggernaut, Balarama, and Subhadra, are nothing more than wooden busts, about 6 ft. high, fashioned into a rude resemblance of a human head, resting on a sort of pedestal. They are painted white, black, and yellow respectively, with grim distorted features, and decorated with different coloured head-dresses. The two brothers have arms projecting forward, horizontally, from the ears: the sister is without arms. These monstrous figures may, in general, be seen daily, and are publicly exposed twice a year; when Juggernaut and his brother, after undergoing certain ablutions, assume the form of Ganesa, the elephant-headed god, a transformation effected by means of a mask. Thus dressed, they are placed on the high terrace, overlooking the outer wall of the temple, surrounded by crowds of priests, who fan them to drive away the flies, whilst the multitude below gaze in stupid admiration. But the grand festival, or *rat'h iatra*, takes place in March, when the

Digitized by Google

sun has entered Aries. This has been described as follows, by a British eye-witness, for some years resident at Poori, Juggernaut. 'Three large *rat'hs*, or cars of wood, are prepared for the occasion, of which the first (intended for Jaggannat'ha) has 16 wheels, each 6 ft. in diameter; the platform, to receive the idol, is 26 ft. square, and the whole car is fully 45 ft. from the ground. The wood-work is ornamented with images of different idols, and painted, and the car has a lofty dome covered with English woollens of the most gaudy colours, bought at the import warehouse in Calcutta; a large wooden image is placed on one side as a charioteer, and several wooden horses are suspended in front of the car with their legs in the air. (An exact model of the car of Juggernaut, about 3 ft. square and 4 ft. in height, is in the museum of the Royal Asiatic Society.) Six strong cables are fastened to the *rat'h*, by which it is dragged on its journey. The concourse of pilgrims is always very great, and a loud shout from the multitude announces the approach of Jaggannat'ha, who is carried from the temple by a number of priests, appointed for the purpose. A short time after, the rajah of Khurda, as hereditary high priest, makes his appearance in a state-palanquin of a strange construction, followed by large state elephants, and generally alights near the rat'h of the idol Balabhadra. The latter, and Subhadra, are placed upon two separate rat'hs, like that of Jaggannat'ha, except being a little smaller, the one having only 14 wheels, and the other 12. The rajah is surrounded by a large train of priests, and immediately prostrates himself before the idol Jaggannat'ha, amidst the shouts of pilgrims and the piercing notes of the shrill silver trumpets; he then with a broom sweeps the floor of the car, and is presented by the priests with a silver vessel, containing essence of sandal-wood, with which the floor is sprinkled all around the idol. The rajah receives from Jaggannat'ha, as a mark of honour, a garland of flowers, which the priests take from the image, and put round the rajah's neck. The rajah then descends from the principal car, and proceeds bare-footed to the car of each of the other idols, and endeavours to propel them forward, without which ceremonies it is supposed they could not afterwards be moved. On a signal being given, a most active scene commences, and several thousand men, each holding a small green branch in his hand, come running to the ra'ths, clearing their way through the crowd for a considerable distance in regular files. They immediately lay hold of the cables, each man having first touched the car with his branch; and then aided by the pilgrims (men and women), pull the rat'hs to their destination, taking care to keep their faces towards the idol, who is driven to his garden-house, where he is worshipped for four days, and then returns in the same way to the temple.' (Mansbach in Trans. Asiat. Soc., iii. 258–259.) Besides that described, 12 other principal, and many minor, festivals are celebrated during the year. The worship of Juggernaut is attended by every sect and class of Hindoos, who meet on equal terms, *all caste being abolished within the precincts of the temple.*

That excess of fanaticism, which is said to have prompted the pilgrims to court death by throwing themselves, in crowds, under the wheels of Juggernaut, either never existed, or has long ceased to actuate the worshippers of the idol. During four years that Mr. Mansbach witnessed the festivals, only three cases of self-immolation occurred; one of these was probably accidental, and the two others were suicides, committed by sufferers to rid themselves of painful diseases. The greatest misrepresentations were formerly circulated in Europe respecting the number of widow-burnings, pilgrims, and loss of life, at Juggernaut. It is true that, for many miles round the temple, the sides of the roads are literally whitened with the bones of devotees, who have perished by the way-side. But this is not the result of any violent modes of destruction, voluntary or otherwise. If a Hindoo has reason to believe dissolution at hand, he forthwith collects his remaining strength, and should he fortunately succeed in dragging his diseased body within sight of the sacred edifice, he will lie down in peace, and die with a perfect confidence of future happiness; besides which, thousands set out on a pilgrimage thither in health, and in the full intention of returning, whose subsistence failing by the way, devote themselves, simply because they can do nothing else, to death by starvation. An unfounded clamour was long raised in England against the government of British India for promoting idolatry, as it was said, by continuing to exact taxes on the pilgrims to Juggernaut, Gaya, and other places, as had previously been done by the native sovereigns. But though the levy of taxes on pilgrims seems rather an odd way of promoting idolatry, yet, in deference to the well-intentioned, though absurd, misrepresentations propagated in England on the subject, these taxes have been repealed, to the great satisfaction of the 'idolaters.' The number of pilgrims to this and other shrines has since greatly increased; and the natives are extremely well pleased by this act of liberality on the part of government. It may be right to mention that no part of the pilgrim-tax ever came into the general funds of the government, but was wholly laid out on the repair of roads, and the maintenance of a proper police at the different places of pilgrimage. (Asiatic Researches, vols. viii. x. xv.; Trans. of the Royal Asiat. Soc., vol. iii.)

JULIERS (Germ. *Jülich*), a town of Prussia, cap. circle, on the Roër, a tributary of the Maese, 23½ m. W. Cologne, and 16½ m. NE. Aix-la-Chapelle, on the railway from Aix-la-Chapelle to Cleves. Pop. 5,181 in 1861. The town has a strong citadel, 3 churches, a fine old town-hall, circle court of justice, police court, and high school, and manufactures of woollen cloth, leather, and vinegar.

Juliers is believed to be identical with *Juliacum*, in Antonine's Itinerary. After the extinction of the Roman dominion, it became the property of independent counts of the Germanic empire, who were created dukes by the emperor Charles IV., in 1356. The family of the dukes of Juliers becoming extinct in 1609, the town was taken by Prince Maurice of Nassau in the following year; in 1622 it was taken by the Spaniards, who held it till 1659. In 1794 it was taken by the French, who afterwards made it the cap. of the dép. Roër. The former duchy of Juliers is the most W. portion of the Prussian dom., and is remarkable for its fertility, and its linen manufacture.

JUMBOSEER, a town of British India, presid. Bombay, distr. Baroach, on a river of the same name, 25 m. NNW. Baroach. Pop. estim. at 10,000. It carries on a considerable trade with Bombay, to which it sends cotton, grain, oil, and piece goods.

JUMILLA, a town of Spain, prov. Murcia, 36 m. N. by W. Murcia, and 75 m. SSW. Valencia. Pop. 9,613 in 1857. The town is situated on the S. slope of a hill, at the summit of which is a castle commanding the town; streets straight and of moderate width, but not paved. The public buildings comprise 2 churches, 2 convents, a public granary, and a hospital. The town contains about 30 oil and corn mills, 2 soap manufactories, and an establishment for making fire-arms; also

Digitized by Google

several salt-pans under the direction of government. A considerable fair is held here, Dec. 2. The climate, though not so genial as in neighbouring towns situated at a less elevation, is salubrious; and corn and fruit are abundant. Grazing, however, is the principal pursuit of the people in and near the town.

Jumilla was taken from the Moors, who, having founded or rebuilt it, gave it its present name, by a king of Arragon: it was again taken from Arragon by Henry of Trastamare, who made it subject to the crown of Castile.

JUMNA (Sanscr. *Yamuna*, the *Jomanes* of Pliny), a river of Hindostan, and the chief tributary of the Ganges. It rises on the SW. side of the great Himalaya range, about lat. 30° 55′ N., and long. 78° 24′ E.; and has been traced to an elevation of about 11,200 ft. above the sea, at the foot of an abrupt mountain nearly 4,000 ft. higher. Over the wall of this mountain falls a streamlet, probably caused by the melting of the snows on the summit, and which appears to be the true source of the river. For some miles the Jumna proceeds through a glen no more than about 40 yards in width at its bottom, and bounded by mural precipices of granite many thousand feet in height. The stream is here concealed by a thick bed of frozen snow, which arches over the course of the river beneath, supported by the shelving walls of the ravine. About half a mile below the point to which the Jumna has been traced, is Jumnotri, a celebrated place of pilgrimage and ablution with the Hindoos. At this spot are numerous hot ferruginous springs, some of which rise in the rocky wall 10 or 12 ft. above the bed of the river; and having melted the snow for 20 or 30 yards round, mix with the waters of the Jumna, rendering them sensibly warm. Some of the springs are hot enough to boil rice, their temperature having been found as high as 194·7° Fah., or near the point at which water is converted into steam at that elevation, about 10,840 ft. above the sea. Before arriving at them, the Jumna is only about 3 ft. in width and a few inches deep; but these, causing a continual melting of the snow, contribute greatly to augment its supply of water. About 50 m. below its source, the Tonse unites with the Jumna; and, though double the size of the latter, takes its name. From this point to Delhi the river flows generally in a S. direction; it thenceforward gradually declines to the SE. Throughout its whole course it usually runs parallel to the Ganges, the tract between the two rivers, called the *Doab*, varying from 20 to 80 m. in width. At its emerging from the hilly region, about lat. 30° 15′, the bed of the Jumna, which is 1,000 yards broad, is full in the rains, though in the dry season the river is not more than 100 yards across. It is not usually very deep, being fordable in several places above Agra; in its progress through the prov. of Delhi it divides into various branches inclosing large islands. It joins the Ganges at Allahabad, where its breadth is fully equal to that of the latter river. Its entire length is estimated at 780 m. It receives no tributaries of any consequence in the upper part of its course; but in the lower, the Chumbul, Sind, Betwah, and Cane join it from the S., and the Rinde from the N. Delhi, Agra, Allahabad, Etaweh, and Kalpee are on its banks. From its shallowness, the Jumna is little serviceable to commerce, and its waters in the great plain of the upper provs. are so impregnated with natron, that vegetation is rather hindered than promoted by its inundations. The country to the W. of Delhi is, however, fertilised by the canal of Ali Mordan Khan, cut from it immediately after its leaving the hills; and the upper portion of the Doab is irrigated in a similar manner by the Zabeta Khan's canal, 200 m. in length, which also commences at the foot of the hilly region, and proceeds to Delhi.

JUNGEYPOOR, a town of Hindostan, prov. Bengal, distr. Moorshedabad, on an arm of the Ganges, 25 m. NNW. Moorshedabad. It is one of the principal stations in the British territories for the culture of the silk-worm. The mulberry is cultivated to a great extent from annual shoots, and large quantities of indigo are also grown in the neighbourhood.

JURA, a frontier dép. of France, region of the E., formerly included in Franche Comté, between lat. 46° 16′ and 47° 18′ N., and long. 5° 19′ and 6° 12′ E., having N. Haute Saône, E. Doubs and a part of Switzerland, S. Ain, and W. Saône-et-Loire and Côte d'Or. Length, NW. to SE., 70 m. Area, 499,401 hectares; pop. 298,053 in 1861. More than two-thirds of the surface, principally in the S. and E., is covered with mountain ranges belonging to the Jura system, the principal summit of which, the Reculet, 5,633 ft. high, is in this dép. Rivers numerous: the chief are the Doubs and Ain. There are several small lakes, and in the NW. some large marshes. In the plains the atmosphere is moist and heavy, while in the mountains it is dry, and the winters long and severe. The arable lands are estimated at 183,113 hectares; meadows at 50,547; vineyards at 21,027; forests at 115,614; and heaths and wastes at 79,000 do. Sufficient corn is grown for home consumption, chiefly wheat, barley, maize, and oats. Upwards of 400,000 hectol. of wine are produced annually, some of which is very good. The mountains afford excellent pasture, on which many black cattle are fed; and *châlets* are established on them, as in Switzerland. The butter and cheese of the dép. are much esteemed. Horses and mules are extensively bred; and hogs, poultry, and bees are also very plentiful. The number of large properties is much below the average of the déps. There are several iron mines, and quarries of marble, alabaster, and gypsum. The dép. has also ores of lead, coal, copper, and even gold, but no mines of these metals are at present wrought. Iron forges and paper factories are numerous; cotton and linen fabrics, chamois and other leather, glue, mineral acids, and marble ornaments, are among the other chief manufactures. Watches and trinkets are made at Morez, and ivory, bone, horn, marble, and wooden articles are sent all over Europe from the turning establishments of St. Claude. Jura is divided into 4 arrond.: chief towns, Lons-le-Saulnier, the cap., Dôle, Poligny, and St. Claude.

JURA MOUNTAINS, a chain of Central Europe, usually classed with the Alpine system, and including the mountains of W. Switzerland, and those between the Lake of Geneva, the Rhone, the Saone, and the Doubs. The range commonly thus designated has a length of about 160 m., with an average breadth of 30 m., commencing S. on the banks of the Rhone, and running NE. to the junction of the Rhine and Aar; but connected mountains of analogous composition run N. through Suabia and Franconia, and SW. along the right bank of the Rhone to the vicinity of Narbonne, so that the Jura range, in its most extended sense, has a length of about 600 m. The Swiss Jura consists of several long parallel chains, inclosing narrow longitudinal valleys, such as the Val de Joux (in which is the mountain-lake of the same name, 3,260 ft. above the sea), the Val Travers, the Val de Ruz, and the valleys of the Valserine, Doubs, Birs, and other rivers. Transverse valleys, similar to those in the main Alpine system, are of rare occurrence, and the range throws off only one lateral spur, viz. the chain of Mount Jorat, passing

Digitized by Google

between the lakes of Geneva and Neuchâtel, and joining the Bernese Alps. The slope is rapid on the Swiss side, but more gentle towards France; and the ridge, as seen from a distance, presents a regular undulating line with rounded dome-like summits, contrasting strongly with the abrupt crags and towering peaks of the Alps. The chain sinks, as it advances N.: the culminating point, *le Reculet*, is 5,633 ft. high, and 8 others rise above 5,000 ft.: the roads across the ridge have an elevation varying from 3,600 to 2,500 ft. above the sea. Snow lies on the highest ground about seven months in the year, and there are no glaciers. The geological constitution of the Jura mountains is limestone of the oolitic series. The strata comprises most of the varieties lying between the lias and the compact limestone, answering to the Portland stone of English geologists; and the beds are thrown up at high elevations, thus causing the formation of those longitudinal valleys which are a characteristic feature of the Jura. On the SE. slopes, and, as Lyell observes, exactly opposite the principal openings by which great rivers descend from the Alps, lie numerous 'erratic' blocks of extraordinary magnitude. How these granite fragments came to their present situation is wholly matter of conjecture; but if it be true, as Lyell supposes, that the limestone layers of the Jura were upraised by some internal commotion, it is not improbable that these boulders were detached from the Alpine summits, and transported to lower platforms, which have been subsequently elevated. (Princ. of Geol., vol. iii. p. 424.) The vegetation of the Jura nearly resembles that of the Alps: box-trees are very abundant on the NW. side, and the hills near Poligny are covered with firs, the timber of which furnishes materials for the industry of the pop. during the winter months, and is also a considerable article of trade with the surrounding districts. Many of the villagers, also, on the mountain sides, and in the valleys, are employed in making watch-movements, which find a ready market at Geneva and other towns.

JUTLAND, a large prov. of Denmark, formerly comprising the whole continental portion of the Danish dominions, but which is now restricted to the part of the peninsula belonging to Denmark to the N. of Schleswig, extending from about 55½° to nearly 58° N. lat., being about 170 m. in length, and from 60 to 80 in breadth, comprising an area of 9,550 sq. m. Pop. 611,552 in 1860, of whom 92,061 in the towns. The province is of an oblong form, with the addition of a triangle towards the N. Surface generally flat. It has few rivers, and none of any considerable magnitude; but it is deeply indented, and in part traversed by inlets or arms (fiords) of the sea. Soil various. In the middle it is dry, sandy, and occupied by extensive heaths; on both shores it is more fertile; and on the W. coast, particularly towards the S., there are large tracts of very rich marsh-land, defended by dykes from being overflowed by the sea. Agriculture, though still backward, has made great progress during the present century. Rye, oats, and buckwheat are the crops most generally raised; and they, along with cattle of excellent quality, horses, and butter, form the principal articles of export. Hogs are very plentiful, and Jutland has sometimes been called 'the land of bacon and rye bread.' Fish very abundant in the fiords or inlets of the sea. Minerals and manufactures unimportant.. The principal towns are Aalborg, Aarhuus, and Wyborg

K.

KAFFA, or THEODOSIA, a sea-port town of European Russia, on the SE. coast of the Crimea, lat. 45° 1′ 37″ N., long. 35° 23′ 37″ E. Pop. 7,580 in 1858. The town is believed to stand on the site of the ancient Theodosia, founded by Milesian colonists in remote antiquity. The Athenians carried on a great trade with this city, importing from it vast quantities of corn, with slaves, lumber, and naval stores, hides, and honey. After undergoing many revolutions, it fell, in the 13th century, into the possession of the Genoese, who rebuilt it, and made it the chief seat of their power during the lengthened period of their ascendancy in the Black Sea. In 1475 it was taken by the Turks; but it continued, down to its conquest by the Russians, to be a large, populous town. It, however, suffered severely from this event, partly in consequence of the devastations committed by the Russian soldiery, and partly through the emigration of its Tartar inhab. Latterly, however, it has begun to revive; though, owing to the superior advantages enjoyed by Kertsch as an *entrepôt* for the trade of the sea of Azoff, it does not seem very probable that Kaffa will ever recover her former importance. The road, or bay, of Kaffa is very extensive, and capable of accommodating a great number of vessels. It has deep water throughout; the holding ground is good; and, with the exception of the E., it is sheltered from all winds.

KAIRA, a town of Hindostan, cap. of a collectorate, 113 m. NNW. Surat; lat. 22° 47′ N., long. 72° 48′ E. It is a neat town, surrounded by bastioned ramparts and walls in good repair. Its streets are narrow, but tolerably clean, and its houses are solid, lofty, and adorned with a great deal of carving. Its chief public buildings are the district court-house, a handsome Grecian edifice, a large and secure prison, a church, an English school, and, near the centre of the town, a large Jain temple. The cantonment of Kaira, about 1½ m. distant, is unfortunately (like many of the settlements in India founded by the British), in a very unhealthy situation; but it is extensive and well laid out, with good barracks, a hospital, a regimental school, and a tolerable English library.

KAIRWAN, or KEERWAN, a large city of N. Africa, regency Tunis, 85 m. S. from the city of Tunis; lat. 35° 36′ N., long. 95° 57′ E. Pop. estimated at 50,000. It is situated in a barren sandy plain, and is surrounded by a low wall; the public buildings comprise a large citadel and several mosques, two of which are richly adorned. The houses are clean and respectable, and the streets wide and ornamented with columns, capitals, and highly raised Cufic inscriptions. It is regarded as the second town in the regency; and its Kadee, or governor, is almost independent of the bey of Tunis.

Kairwan is famous for its yellow Morocco boots and slippers, the delicate dye of which it has hitherto been found impossible to equal. It was formerly a place of great literary eminence, possessing well-endowed institutions and good libraries, from which Europeans have derived a large portion of their knowledge of Arabic literature.

Digitized by Google

Kairwan is supposed by Shaw to occupy the site of the *Vicus Augusti* in Antonine's Itinerary; but, notwithstanding the deference due to so great an authority, this supposition is contested on good grounds. The present city was built about A.D. 670, about the time when Africa was invaded by the general of the Ommiyade, caliph Moawyad I. In 802, the governor of W. Africa threw off his allegiance to the caliph, declared himself independent, and established his capital at Kairwan. In 969, the seat of government was transferred to Cairo, since which its importance, though still considerable, has materially declined.

KAISARIAH (an. *Mazaca*, and afterwards *Cæsarea*), a town of Asiatic Turkey, prov. Karamania, sandjiak of its own name, on the Karasa (an. *Milas*), a tributary of the Euphrates, 140 m. ENE. Konieh, and 135 m. SE. Angora; lat. 38° 42′ N., long. 35° 20′ 20″ E. Pop. about 25,000, of whom 2,000 are Armenians, Greeks, and Jews. It is situated on the E. side of a fertile plain of great length, and in a recess formed between two spurs projecting from the lofty, snow-covered Mount Erdjisk, the *Argæus* of antiquity. The houses, though built of stone and brick, have a mean appearance. It is surrounded by a wall now in ruins, and in the suburb are some interesting remains of a Roman city. Several mosques, one Greek and two Armenian churches, a convent, and some mausoleums, are the chief public buildings. Kaisariah is the emporium of an extensive trade, and the resort of merchants from all parts of Asia Minor and Syria, who come to purchase cotton, cultivated in the vicinity in great quantities, and sold either in a raw state, or when manufactured into cloth. Cotton thread and cloth constitute the chief articles of industry, and there are some tanneries of yellow Morocco leather. The land in the neighbourhood is fertilised by the inundations of the Karasa, and produces an abundance of large and delicious-flavoured fruits and vegetables. The climate is very healthy, except within the town, where epidemics prevail, owing to the offal left in the streets to decay and infect the air.

Mazaca, the ancient capital of Cappadocia, took the name of Cæsarea in honour of Tiberius. Its antiquity is attested by Strabo, who also gives an excellent description of the neighbouring mountain. It was the residence of the kings of Cappadocia previously to its being annexed to the Roman empire, after which it continued to increase in size and beauty. An amphitheatre and many temples were erected; and in the reign of Valerian, when Shapoor I., king of Persia, pillaged the city and massacred its inhabs., it is said to have had a pop. of 400,000 persons, though this is most probably beyond the mark. (Gibbon, i. 439.) Its dimensions were contracted by Justinian, who rebuilt the walls: it was raised to the dignity of an apostolic see, and gave birth to St. Basil. Having been destroyed by an earthquake, it was afterwards rebuilt, and by turns became subject to the sultan of Iconium, the princes of Karaman, and the grand seignior.

KAISARIAH, a ruined town and sea-port of Palestine. (See CÆSAREA.)

KALISZ, a city of Poland, and the most westerly in the Russian dominions, cap. palat. of the same name, on an island in the Prosna, immediately within the Russian frontier, 128 m. WSW. Warsaw, and 70 m. SE. Posen. Pop. 12,253 in 1858, of whom about one-fourth are Jews. Kalisz is surrounded by old walls flanked with towers, and entered by five gates, and has a citadel founded by Cassimir the Great. Its streets are broad and well paved, and several are planted with trees: its houses are generally good. The most remarkable public edifices are the former palace of the voivodes, now occupied by the courts of law, the cathedral, church of St. Nicholas, and the Lutheran church. Besides the cathedral, there are five R. Catholic churches and six convents, several synagogues, a R. Catholic gymnasium or lyceum, with a fine library and large scientific collections, a military school with 200 students, and many elementary schools. It has also a theatre, a house of charity, and three hospitals. Kalisz is a town of some industry, having manufactures of linen and woollen cloths, and leather. A fine road leads to Opatowek, a village about 6 m. distant ESE., celebrated for its large manufacture of woollens, and its gardens, which form the favourite resort of the inhabitants of Kalisz.

The city was founded about 655, and was long the residence of the dukes of Great Poland. Near it, in 1706, the Poles totally defeated the Swedes; and in Sept. 1835, a grand military muster and review took place at Kalisz, attended by the sovereigns of Russia, Austria, and Prussia.

KALPEE, or CALPEE, a large and populous town of British India, presid. and prov. Agra, on the S. bank of the Jumna, 45 m. SW. Cawnpore. It is a place of considerable trade, being an entrepôt for the transport of cotton from the SW. of India to the Gangetic provs.; and has also manufactures of sugar-candy and paper.

KALUGA, a government of Russia in Europe, near its centre; chiefly between lat. 53° 30′ and 55° 30′ N., and long. 33° 40′ and 37° E., having W. the gov. of Smolensk, N. the latter and Moscow, E. Tula, and S. Orel. Area, 11,470 sq. m. Pop. 1,007,471 in 1858. Surface an almost uninterrupted plain, watered by numerous rivers, of which the Oka and its tributaries are the principal. Climate tolerably mild for the lat. Soil mostly either sandy or hard clay, and not fertile. Forests occupy more than half the surface; arable lands rather more than two-fifths; but a good deal of manure is required to render the latter even moderately productive, and the agricultural produce is not adequate to the consumption of the inhabitants. Rye is principally grown; but oats, wheat, and barley are also cultivated; as are hemp and flax. Cattle not numerous, and but little valued; but there are in the gov. two extensive studs for the breeding of superior horses. The fisheries are insignificant: little game is met with. Bog-iron is found, but in no great quantity, and a good deal has to be imported to supply the various iron works. This government being so little suitable for agriculture, the attention of its inhabitants has been turned towards manufacturing industry; in this respect Kaluga ranks immediately after the governments of Moscow and Vladimir. On an average about 20,000 workmen are employed in distilleries and manufactures of sail-cloth, linen and cotton goods, leather, soap, candles, and hardware. The manufacture of beet-root sugar has been lately introduced. Nearly all the peasants' families employ a considerable portion of their time in weaving. Many of the merchants in this government are opulent, and some have commercial transactions with foreign countries, through Archangel. The chief exports are oils, spirits, potash, honey, linen, sail-cloth, and other manufactured goods. The chief commercial towns are Kaluga and Borofsk. Kaluga is divided into 11 districts, and is under the same military governor with Tula. Its scholastic institutions are under the university of Moscow.

KALUGA, a town of Russia in Europe, cap. of the above government, on the Oka, near where it suddenly turns eastward, 105 m. SE. Moscow. Pop. 32,335 in 1858. The town is said to occupy

Digitized by Google

a space of 10 versts, or little short of 7 m., in circ., and is divided into three quarters by the Oka and its tributary the Kaloujeka. It is an ill built place, with narrow, crooked, and ill paved streets and wooden houses. There are, however, some good public edifices, as the high church, government-house, town-hall, and theatre. Of the 24 churches, 23 are of stone; a convent, also a stone building, gymnasium, seminary for poor children of noble birth, foundling asylum, several work-houses and hospitals, and a house of correction, are the other chief public establishments. Kaluga is one of the most important manufacturing and commercial towns in the empire: it has 5 sail-cloth factories, employing 400 weavers and 1,000 spinners, between 30 and 40 oil factories, numerous tan-yards, some sugar refineries, and manufactures of woollen cloth, cotton fabrics, hats, paper hangings, earthenware, soap, and vitriol. Besides carrying on an extensive internal trade, its merchants make large exports of lamb-skins, Russia leather, and wax, to Dantzic, Breslau, and Berlin.

KAMINIETZ (Polish, *Kaminiec Podolski*), a town of Russian Poland, gov. Podolia, of which it is the cap., on the Smotryez, about 12 m. from its junction with the Dneistr, 215 m. SE. Kief, and 300 m. NW. Odessa. Pop. 15,230 in 1858, many of whom were Jews. It is irregularly laid out, with narrow streets, and wooden houses. It has, however, some conspicuous edifices of stone and other solid materials; including the cathedral, dedicated to St. Peter and St. Paul, a Gothic building, containing fifteen altars and a nave supported by 150 columns. Near it is a column supporting a statue of the Saviour. The church of the Dominicans, originally constructed of wood, in 1360, was rebuilt in stone after the expulsion of the Turks in the 18th century. There are in all five R. Catholic and four Greek churches, and one Armenian church, a fine edifice, completed in 1767. The R. Catholics have several convents. The other chief public buildings are the government library, circle school, and new gymnasium, commenced in 1837.

The town was formerly walled, but its works were levelled, by order of the Russian government, in 1812. It is, however, still defended by a citadel and other fortifications. The former, situated on a steep isolated rock overlooking the town, might be made impregnable, were it not commanded by some more lofty adjacent heights. Kaminiec was, for a lengthened period, the principal bulwark of Poland on the side of Turkey. It was founded by the sons of Olgherd, in 1331, after that prince had wrested Podolia from the Tartars. It was soon after fortified, and in 1374 attained the rank of a city. It remained attached to Poland till its final capture by the Russians in 1793, except from 1672 to 1699, during which it was in the possession of the Turks.

KAMTSCHATKA, a large peninsula at the NE. extremity of Asia, forming a part of the Russian gov. of Irkutsk, and bounded N. by the country of the Tchuktchi, E. by the Aleutian archipelago, and W. by the sea of Okhotsk. It lies between the 51st and 62d parallels of N. lat., and the 166th and 167th deg. of E. long.; has a length of about 800 m., and a breadth varying from 100 to 250 m., the area being estimated at 80,000 sq. m. Supposed population 6,000, of whom about 1,500 are Russians. The coast line on the W. side is tolerably regular, the Gulf of Penginsky, at its N. end, forming the only considerable exception; but on the E. side are several extensive bays, enclosing respectively between the capes Chipunsky, Kronotzky, Kamtschatka, Ozernoy, and Olutorsky, the last of which is near the NE. end of the peninsula: C. Lopatka (lat. 51° 0′ 15″ N., long. 152° 2′ 15″ E.) is the S. extremity of Kamtschatka. The coast, generally speaking, is abrupt and rocky, especially on the E. side, and the peninsula, when viewed from the sea, presents the appearance of a barren and desolate rock; but in the interior there are plains of considerable extent, having a soil well adapted for tillage. The high lands, which cover about two-thirds of the entire surface, consist of a chain of volcanic mountains, running in a SSW. direction. Many volcanoes in this chain have been ascertained by Erman and Lutké to be in a high state of action; and it seems very probable that, geologically considered, they form only one extremity of a great volcanic belt, continued through the Kurile and Japanese islands, Formosa, and the islands of the E. Indian archipelago.

The following statements are drawn up from the observations of the naturalists in Commodore Lutké's expedition, in 1827-30, and of Prof. Erman, who visited Kamtschatka in 1829. In the main range running N. from C. Lopatka, 13 summits, with craters and hot springs, have been observed within the 51st and 56th parallels, one other height being isolated, and lying W. of the principal chain. The elevation of nine summits has been accurately measured, and is stated to be as follows:—

Assatchinsky	8,340 ft.	Kronotsky	10,610 ft.
Vilutchinsky	6,846	Klutchewsky	16,500
Avatcha	8,760	Tolbanchin	8,250
Koriata	11,120	Chevelutch	10,590
Juponov	9,060		

The most active are Assatchinsky, Avatcha, and Klutchewsky. The scoriæ and ashes thrown from the first, in 1828, were carried as far as Petropaulowsky, 120 versts distant; and it appears to be more or less in continual activity. In 1827 there was a violent eruption of Mount Avatcha, during which, besides lava and stones, a very large quantity of water was ejected; a phenomenon remarked also by Humboldt in the volcano of Karkuarizo, a little N. of Chimborazo, in the Colombian Andes, and known to have occurred, though in a less degree, during the eruptions of Etna and Vesuvius. At the summit is a crater several hundred yards in circ., formed by a wall 30 ft. high, composed of porphyry, felspar, and trachyte; and on the E. side, at an elevation of about 5,000 ft., is another crater, now extinct, and similar both in origin and appearance to the Somma of Mount Vesuvius. Klutchewsky, which, in common with six others, continually emits smoke, was during the last century in very violent action, sometimes for a year or two at a time, sending forth vitrified stones, lava, pumice, and water: after having been comparatively quiet for about 40 years, it broke out again during Erman's visit in 1829. It presents a large base, swelling in an elliptic curve, and crowned by four cones: its geological components are trachyte, Labrador felspar, obsidian, and lava, and on its sides are numerous thermal springs of high temperature. Indeed, the general formation of Kamtschatka is of igneous origin, comprising porphyry, jasper, felspar, schist, trachyte, and dolomite; the W. side, however, is composed of Neptunian, secondary, and tertiary rocks, among which may be distinguished various beds of lignites, sandstone, iron-sand, and chalk, in the last of which are found large quantities of yellow amber: fossil shells in great variety have been discovered in all the secondary and tertiary formations of this interesting peninsula. The shape of Kamtschatka precludes the possibility of there being any extensive rivers; and, accordingly, those met with resemble torrents more than rivers,

Digitized by Google

being either nearly dry, or flooded and rapid: the Kamtschatka river, however, is alleged to be capable of admitting vessels of 100 tons about 150 m. up the stream.

The severity of the climate, though considerable, has been greatly exaggerated. The average temperature in the middle of winter is about 10° Réaum.; that of summer is about 7°; but the difference seems greater, owing to the prevalence of raw piercing winds and thick fogs. Still, if any judgment may be formed from the health of the inhabs., it cannot be unwholesome, for they are robust and long-lived, and there are few diseases, except small-pox and syphilis, introduced by the Russians, who also corrupted the pop. by familiarising them with the use of ardent spirits. (Dobell's Travels, vol. i. p. 87.) The vegetation is generally considered to be very limited; but the limits are prescribed by man rather than by nature. Rye, barley, potatoes, cabbages, turnips, hemp, and flax, with several other plants peculiar to the country, may be raised successfully, with moderate attention; but the people are, with few exceptions, devoted to hunting, able to live on game and dried fish, and extremely loth to engage in the more civilising, though less exciting pursuit of agriculture, the first attempts at which date no further back than 1810. Among the fruits are the raspberry, red-currant, whortle-berry, cranberry, a delicious species of strawberry called *knejnika*, a wild cherry called *cheroonka*, and a kind of apricot or plum. The forest trees comprise the birch, fir, larch, poplar, cedar, willow, and juniper. Pasturage has hitherto been little followed; but the abundance of grass shows that if there was an inclination towards it, the pursuit would be profitable. The animals usually hunted comprise bears, lynxes, sea and river otters, reindeer, foxes of different colours, sables, and beavers, and the number of skins exported is supposed to average about 30,000 a year, chiefly of foxes and sables. Among the birds, the principal are moor-game of different kinds, and many varieties of waterfowl, the eggs of which, saturated with oil, constitute the chief food of the inhabs. The fish caught in the rivers comprise many varieties of salmon, some of which are peculiar to the country, all serving most essentially to supply winter food: the sea also abounds with cod, herrings, and seals; walruses and whales furnish oil, exclusively employed for domestic purposes.

The trade of Kamtschatka, owing to the exactions of the Russian governors, who, in consequence of their great distance from Petersburg, or even Tobolsk, have few checks on their own cupidity, is extremely limited. Taxes are taken in skins; and the people complain that no equitable system of taxation has been authorised by the imperial government. Hence, wholly left to the mercy of individual officers, they justly apprehend the insecurity of property, and want the chief motive for improving the natural resources of the country: labour is confined to the supply of merely temporary necessities, domestic comforts are little known or cared for, and affluence is scarcely ever attained even by the most provident and laborious. Furs and dried fish are exported from Petropaulowsky, chiefly by the Russians and Dutch, who bring in exchange rice, flour, coffee, sugar, brandy, and whisky.

The natives, comprising the two tribes of the Kamtschatdales and Koriaks, who differ more in mode of life than in physical conformation, are of low stature, but stout and broad in the shoulders, with large heads, flat and broad faces, prominent cheek-bones, thin lips, lank black hair, and eyes deeply sunk in the head. Their features seem to identify them with the Mongolian race, to which they are certainly more closely allied than to the Esquimaux, with whom some writers have erroneously classed them. The Kamtschatdales are described by Dobell as being shy and averse to strangers, but at the same time intelligent, and fully capable of improvement, if endeavours were made to instruct them in the arts of civilised life. Honesty, openness of character, and extreme hospitality are prevailing features among them; but it has been remarked by more than one traveller, that their morals have been much debased by the introduction of felons from Siberia, and the quartering of Russian troops at Petropaulowsky: drunkenness has since that period been an increasing evil, and now threatens to be as destructive to the Kamtschatdales as to the Indian tribes of N. America. Their employment, when not agricultural, is hunting and fishing. They live in fixed habitations; but their dwellings are low, comfortless, and extremely filthy, sunk in the ground in the winter months, and raised on posts during summer, to facilitate the curing of fish, which is hung up on lines to dry. In travelling they use dogs instead of horses. These animals somewhat resemble the English shepherd-dog, are extremely intelligent, and endure an almost incredible degree of labour and privation. They are fed during the winter, when they are principally used, on offal and decayed fish, and in the summer are allowed to roam abroad, and shift for themselves. Few Kamtschatdales have less than six, and some upwards of twenty, the whole number of dogs being estimated at 3,000. When used for draught they are harnessed, two and two to a sledge, one particularly well trained being placed in front as leader. The sledge is in the shape of an oblong basket about 3 ft. long, and raised 3 ft. from the ground: the driver usually sits sideways, like a lady on horseback, and urges the dogs by throwing at them a stick, which he afterwards catches with great dexterity. Occasionally parties travel in company; 'and then,' says Dobell, 'the eagerness and impatience of the dogs, and the rivalry of the *kyoorshiks*, or drivers, are worthy to be compared with the exertions of the high-blooded coursers of Newmarket; nor does the management and driving of the dogs require much less skill and attention than are needed in the latter case, to arrive at perfection, and gain the palm of victory.' The Koriaks, who inhabit the N. part of the peninsula, a wandering tribe, subsist on the produce of their herds of rein-deer, which they also use to draw their sledges. The number of Koriaks is unknown, and they are not included in the estimates of the population.

Kamtschatka was first known to the Russians in 1696, when Vladimir Atlassov invaded the peninsula, and made great part of it tributary to Peter the Great. The conquest was completed in 1706, since which, regular tribute has been paid, in furs, to the governor of Irkutsk. There are 4 districts, each of which is governed by a *toion*, or lieutenant, whose business is to preserve peace, enforce the orders of government, and collect the tribute, the quantity of which varies according to the character of the governor, and the favour which particular persons happen to enjoy. The commander of the troops resides at Petropaulowsky, which for some years has been the principal place. Its population, however, does not exceed 700, while that of Nishni-Kamtschatk, the former capital, has scarcely 150 persons. Bolcheresk, a small harbour on the W. side of Kamtschatka has a pop. of about 200. (Erman, Reise um die Erde, i. 415–420; Dobell's Kamtschatka, i. 1–188.)

KANDAHAR. See CANDAHAR.

KANNAGHERRY (*Khanagiri*), a town of Hindostan, prov. Bejapoor, formerly the cap. of a Hindoo principality, 19 m. NW. Bijnagur. It is beautifully situated in a valley, enclosed by wooded declivities, and partially encircled by a rivulet. The principal street is very spacious, and at one extremity is a fine pagoda to Krishna, the interior of which is elaborately ornamented with stucco bas-reliefs. Various other temples have been converted into dwelling houses or stables by the Mussulman pop.; and the vicinity abounds with fragments of Hindoo monuments.

KANOJE (*Kanyacubja*), a town of Hindostan, prov. Agra, possibly the an. *Culinipaxa* mentioned by Pliny, about 2 m. from the Ganges, 118 m. E. by S. Agra, and 67 m. WNW. Lucknow; lat. 27° 4′ N., long. 79° 47′ E. It is now a second-rate town of the district of Etaweh; but is mentioned by Ferishta as having been once the cap. of the principal kingdom along the Ganges, comprising the mod. provs. of Delhi, Agra, Oude, and Serinagur. The Indian histories are full of accounts of its grandeur and extent; and for a distance of 6 m. the traveller now wanders over a tract covered with scattered ruins of brick and other buildings. The most perfect vestige of the an. Hindoo city is a portion of a small and rude pagoda, its interior adorned with figures of Lakshmi and Rama, surrounded by the Hindoo pantheon in miniature. There are several handsome tombs, mosques, and other Mohammedan edifices in stone, Kanoje having been taken by the Mohammedans under Mahmoud of Ghizni, in 1018. Under the Moguls it gave its name to a circar; but it soon lost its importance, and, to complete its ruin, it was sacked by the Mahrattas in 1761. The mod. Kanoje consists of only a single street, and presents nothing worthy of note, except a citadel, close to which is the termination of a canal communicating with the Ganges.

KARA-HISSAR. See AFIUM KARA-HISSAR.

KARAK, or KHARRACK (the *Icarus* of Arrian), an island of the Persian Gulf, now belonging to Great Britain, lat. 29° 13′ N., long. 50° 21′ E., 35 m. NW. Bushire. It has an area of 12 or 13 sq. m., with a pop. of about 300 or 400. 'It affords a safe anchorage at all seasons, but more particularly during the severe gales which blow from the NW., and are the prevailing winds in this sea. The greater part of the island is so rocky, that little use can be made of it; but the E. side, being somewhat lower than the other parts, is capable of being cultivated. It has abundance of water. The inhab. gain a livelihood by gardening and fishing, and manufacture a small quantity of common cloth for their own consumption. The island of Corgo, lying about 1¼ m. or 2 m. N. Karak, contains about 2 sq. m., and is of a light sandy soil. It has also plenty of water, but not of so good a quality as that of Karak; and although not inhabited at present, it is capable of being cultivated, and will produce both wheat and barley during the rainy seasons.' (Kinneir's Pers. Empire, p. 18, 19.) Pearls of a superior colour and description are fished around the coasts of both islands. The Dutch, after having been obliged to abandon their factory at Bussorah, founded an establishment at Karak in 1748. They were, however, driven from it by the Arabs, about 1765. Karak was subsequently occupied by the Persians; and in 1807, for a short period, by the French. During the disagreement with the shah of Persia, the British resident, previously stationed at Bushire, removed thither; and the island was taken possession of by an English force in 1830. Karak is of some importance as offering a secure anchorage for ships, and a station where they may water and refit.

KARAMAN, a town of Asiatic Turkey in Karamania, 58 m. SSE. Konieh; lat. 37° 10′ N., long. 33° 5′ E. Pop. estim. at 14,000. The town stands at the S. extremity of a large plain, and at the foot of the lofty range of Bedlerin-dagh, a branch of Mount Taurus: it covers with its squares and gardens a large area; the houses are of mud and sun-dried bricks, and have a mean wretched appearance; but the climate is salubrious, and water abundant. The public buildings comprise four mosques, with the ruins of others, numerous khans and hummums, and a castle on a height, now mouldering to decay. Karaman trades with Kaisariah, Smyrna, and Tarsus, in cotton fabrics, hides, and nut-galls; and it has a pretty extensive manufacture of blue cotton cloth, worn by the lower classes.

Karaman, which occupies the site of the ancient *Laranda*, is said to have been founded by Karaman Oghe, a powerful prince living in the 14th century. It was the cap. of a Turkish kingdom, which lasted from the time of the partition of the Seljuck dominions of Iconium till 1486, when Karamania was subjected by the Ottoman emperor Bajazet II. Konieh then became the seat of the pachalic, and from that period Karaman has been gradually falling into decay.

KARAMANIA. See TURKEY IN ASIA.

KARASUBASAR, a town of European Russia, Crimea, 15 m. E. Simpheropol. Pop. 15,034 in 1858. The inhabitants are a mixture of races, chiefly Tartars, Greeks, Russians, Jews, and Armenians. Streets narrow, winding, and dirty. There are several graceful looking mosques, a new Rom. Catholic church, and a large building, or khan, occupied by shops. The town is celebrated for the manufacture of a very superior sort of red and yellow morocco leather, and contains several tanneries, candle and soap works, potteries and tile-works. It is also the great mart of the Crimea for fruit, wine, and cattle. There is a weekly market, and a great annual fair.

KARLSBURG. See CARLSBURG.

KARS, a town of Turkish Armenia, formerly cap. of a pachalic of the same name, on the Arpah-Chai, a tributary of the Aras, or Araxes, 85 m. NE. Erzeroum, and 160 m. E. by S. Trebisond. Pop. estimated at 12,300 in 1860. The town is situated on the N. side of a plain, which, though about 4,000 ft. high, is extremely fertile: a part of it is walled, and there is a citadel, which, however, is commanded by heights within musket-shot on the other side the river. Two stone bridges unite the two portions of the city divided by the river, which encircles the walled portion on three sides. The houses of the citadel are tolerably large and well-built, but those of the town below are of the underground architecture usual in the Armenian villages. The public buildings comprise several mosques, and one Armenian church outside the walls: the Armenian convent is uninhabited and in ruins. Kars being the centre of a fine corn-growing district, had formerly a considerable trade in farming produce; but it was nearly destroyed during the Russian invasion, and is only slowly recovering.

Kars, the origin of which is doubtful, was formerly a large town, with a pop. of nearly 8,000 families; but it is now little better than a heap of ruins. During the Russian occupation at the beginning of the century, a large part of the Turkish pop. abandoned it, while at the same time the Armenians emigrated with the retreating army of the Russians, leaving many deserted villages and much unoccupied land. Kars was

Digitized by Google

again besieged by the Russians in the war between Russia and Turkey 1854-55, and after a gallant defence by the Turks, under Colonel Williams, had to capitulate Dec. 12, 1855.

KASAN, one of the eastern governments of Russia in Europe, having N. Viatka, E. Orenburg, S. Simbirsk, and W. Nijegorod. Area, 24,000 sq. m. Pop. 1,543,344 in 1858. The inhabs. are partly Russians and partly Tchouvaches, of Finnish origin, and Tartars. The government is traversed for a considerable distance by the Wolga, the Kama, one of the principal affluents of the latter, and by some lesser streams, and is interspersed with numerous lakes. Surface generally flat, but in parts undulating and hilly; soil almost everywhere fertile, producing, with very imperfect culture, abundant crops of rye, wheat, hemp and flax. Forests very extensive, covering nearly half the surface. Climate in winter very severe; but the summer, though short, is generally fine. Grazing is not well understood, and but little attention is given to the rearing of cattle. The fishery in the Kama is very productive. There are numerous distilleries, saw-mills, and potash works, with tanneries. More than half the landed property within the government belongs to the crown, or to members of the Imperial family.

KASAN, a city of European Russia, cap. of the above government, on the Kasanka, about 4 m. above where it falls into the Wolga. Pop. 58,159 in 1858. After being burnt down by Pougatcheff in 1774, Kasan was rebuilt, by order of Catherine II., on a more regular plan. It was again the prey of an accidental conflagration in September 1815, by which it was more than half destroyed; but, like Moscow, it has risen from its ashes larger and better built than ever. It stands on very uneven ground, interspersed with lakes, and consists, like most other Russian cities, of three parts: the kremlin or citadel, on a considerable eminence; the town, properly so called; and the *slobodes*, or suburbs. The town is well built, and has broad and spacious squares and market-places. In the suburbs, which are principally occupied by the Tartar pop., the houses are of wood, and the streets filthy. Principal buildings, the grand cathedral, founded in 1552; the cathedrals of St. Peter and St. Paul, with several other cathedrals and churches, some of them built in the course of the present century. There are, further remarkable, the convent of Bogoroditskoi Kasanskoi, rebuilt by the emperor Alexander; the hotel of the general governor; the archiepiscopal palace; the hotel of the nobles; the bazaar; the military hospital, and the arsenal. Kasan is one of the most literary towns in Russia. It has a university, founded in 1804, but which was not opened till 1814, with 70 principal and subordinate professors, about 300 pupils, and a library of above 28,500 volumes. Its principal object is to supply instruction in the eastern languages, or in Arabic, Persian, Turkish, Tartar, Mogul, and Chinese language and literature. The city has also a theological academy, with a gymnasium, an observatory, a grammar-school, a Tartar school, and a school for the instruction of schoolmasters. A great cloth manufactory, established by Peter the Great, is now the property of private individuals, and employs about 1,000 work-people; and there are besides manufactories of cottons, hardware, earthenware, and tiles, with tanneries, soap-works, and distilleries. Kasan is the seat of an admiralty, and vessels are constructed for the navigation of the Wolga and the Caspian. It also carries on an extensive trade, for which its situation adjoining the Wolga gives it peculiar facilities. About 15,000 of the pop. are Mohammedans. The rest, with the exception of a few Protestants, belong to the established Greek church.

KASCHAU, a royal free city of Hungary, in the circ. on this side the Theiss, co. Abaujvar, on the Hernad, 123 m. NE. Pesth, with which city it is connected by railway. Pop. 17,150 in 1858. The town is well built, with fine squares, and regularly laid out streets; and has 13 Rom. Cath. and 2 Lutheran churches, besides a theatre, and several other handsome public buildings. The chief public establishments are a royal academy, with a library of 10,000 vols., and a fine collection of natural history, a gymnasium, an episcopal seminary, a school for nobles (*ad leges Kouvikt*), and a military asylum: it is the seat of a county-assembly and court of justice, and has manufactures of tobacco, cutlery, earthenware, and paper, and a large transit trade with Poland.

KATRINE (LOCH), a lake of Scotland, in the district of Monteith, in the SW. part of Perthshire, on the confines of Stirlingshire, 8 m. W. Callander, and 5 m. E. from Loch Lomond. This, which is the most westerly and largest of a chain of lochs, consisting of lochs Venacher, Achray, and Katrine, the principal feeders of the Teith, is about 10½ m. in length, and from 1½ to 2 m. in width, of a serpentine form, and very deep. It is embosomed among lofty mountains, divided by deep ravines, whose sides, in parts clothed with wood down to the water's edge, and in parts consisting of bold rugged precipices, give it every variety of wild, picturesque scenery. Still, however, it was but seldom visited, and little known, till Scott made it the scene of his fine poem of *The Lady of the Lake*, when it at once attained the maximum of celebrity, and has since been annually resorted to by crowds of visitors. At the E. end of the loch, between it and Loch Achray, is the celebrated pass of the Trosachs, so beautifully described in stanzas 11-13, of the first canto of *The Lady of the Lake.*

KAZAMEEN, a town of Asiatic Turkey, prov. Irak-Arabi, on the W. bank of the Tigris, 3 m. N. Bagdad. Pop. estim. at 7,000, chiefly Persians, who have been induced to settle here on account of its being the burying-place of two celebrated imâms, to whose memory a noble mosque has been erected. It is ornamented with two gilded cupolas, and, like those of Meshed Ali and Kerbela, is supported by the contributions of pilgrims. The town has a bazaar, many coffee-houses, 3 *hummums*, and a caravanserai; and on the opposite side of the river is the tomb of Imâm Abn Hanafi, a Mohammedan saint.

KEDGEREE, a town of British India, prov. Bengal, on the W. side of the Hooghly river, near its mouth, lat. 21° 55′ N., long. 88° 16′ E. It stands in a low, swampy situation; but is, notwithstanding, much healthier than Diamond Harbour. A lighthouse has been erected a few miles further down the river. There is also a government marine officer stationed at this town, who has to make daily reports of the ships which arrive and sail.

KEDJE, a town of Beloochistan, prov. Mukran, of which it is the cap., on a rivulet, by which the surrounding district is well irrigated, 274 m. SW. Khelat; lat. 26° 24′ N., long. 62° 28′ E. Pop. estim. at 3,000. The town stands clustered around the base of a precipice, on which is a fortress; and was formerly a place of considerable trade, which having declined, it has fallen into decay.

KEHL, a town of Baden, circ. Middle Rhine, on the Rhine, immediately opposite Strasbourg, and 10 m. NW. Offenburg, on the railway from Strasbourg into Baden. Pop. 1,623 in 1861. Kehl was formerly a fortress, and was esteemed an im-

Digitized by Google

portant bulwark of Germany. It was fortified by Vauban in 1688, ceded by France to Baden in 1697, taken by the French in 1703, 1733, 1793, and 1796; by the Austrians, also, in the latter year; and re-taken by the French in the year succeeding. After the peace, its works were dismantled, Germersheim being fortified by the Germ. Confed. in its stead. The town is connected by a fine bridge with the opposite bank of the Rhine, and Strasbourg. Its inhab. employ themselves chiefly in transit trade.

KEIGHLEY, or KIGHLEY, a market town and par. of England, in the W. riding of co. York, wap. Staincliff and Ewcross, on an affluent of the Aire, 16 m. WNW. Leeds; 178 m. NNW. London by road, and 218½ m. by Great Northern railway. Pop. of town, 15,005, and of par. 18,819 in 1861. The town is beautifully situated in a valley close to the range called the Blackstone Edge; and, though irregularly built, comprises many handsome stone houses: it is well paved, sufficiently supplied with water, and lighted with gas. A neat and commodious court-house and a spacious market-place were erected in 1833, and more recently a mechanics' institute has been built on ground given by the Earl of Burlington, who has large possessions in and near the town. The parish church was built in 1805, on the site of one erected in the reign of Henry I., and is a large and handsome structure, with a lofty steeple, containing a fine peal of bells: the living is a rectory in the gift of the Duke of Devonshire. There are also places of worship for Independents, Baptists, Wesleyan New Connection, and Primitive Methodists, Swedenborgians, and the Society of Friends; and to all of these, as well as to the churches, large Sunday-schools are attached, furnishing religious instruction to about 1,800 children of both sexes; A free grammar-school, founded and well endowed in 1713, a girls' national school, and an infant school, are the chief educational establishments; and a mechanics' institute, founded in 1825, and now in union with that at Leeds, has conferred many benefits on the working classes. The worsted manufacture, especially of coarse stuffs, merinos, and worsted yarns, is carried on to a considerable extent; and the produce is chiefly sold in the piece-halls of Halifax and Bradford. The Leeds and Liverpool canal, which passes near the town, affords cheap conveyance for manufactures, and establishes a communication with Hull on the one hand, and Liverpool on the other. Under the Boundary Act Keighley is a polling place for the W. riding. It is also the head of a union, comprising 6 pars. Markets, well supplied, on Wednesday: fairs, May 8 and 9, and Nov. 7, 8, and 9.

Keighley is known in the history of the great civil war, as having been the scene of an encounter, in 1645, between the king's troops and a division of the parliamentary army, under Col. Lambert. Its name is derived from an old family called Keighley, one of whose members married a Lord Cavendish, from whom the present Duke of Devonshire and the Earl of Burlington are descended.

KELLS, a town of Ireland, prov. Leinster, co. Meath, adjacent to the Blackwater, on the top and sides of a gentle hill, 35 m. NW. Dublin, and 21 W. Drogheda, on a branch line of the Midland Great Western railway. Pop. 3,224 in 1861, against 4,205 in 1841. The town consists of three principal and some smaller streets, and has some good houses; but, generally speaking, is a poor, mean place. Here is a fine old church, contiguous to which is a pillar or round tower 99 ft. in height. It has, also, a R. Cath. chapel, a court-house, market-house, bridewell, fever hospital, and a national school.

Kells is a very old town, a synod having been held here in 1152, and a castle erected on the site of the market-place in 1178. Here, also, was a monastery, some remains of which still exist, and are called St. Columb Kill's House, from the name of its reputed founder. In one of the streets is a fine stone cross. The bor. returned two mems. to the Irish H. of C., but was disfranchised at the Union. The magnificent seat of the Headfort family is in its vicinity.

KEITH, a market-town of Scotland, co. Banff, on both sides the Isla, a tributary of the Deveron, 41½ m. NW. Aberdeen, on the Great North of Scotland railway. Pop. 2,648 in 1861. Keith is divided into three towns, namely Old Keith and New Keith, on the S. of the river, and Fife Keith, on the N., the whole lying in the centre of an amphitheatre of hills. The first, which is very old, is but of mean appearance and irregular shape; the second, begun to be erected in 1750, stands on a gentle eminence to the SE. of the former, and consists of one principal street divided into several portions; the third, or Fife Keith, which had its origin in 1816, is connected with the two former towns by two bridges over the Isla. New Keith is the largest and best built of the three divisions in question, and in it most part of the public buildings are situated, such as the par. church, a Gothic building, with a tower 104 ft. high, and a R. Cath. chapel, after the plan of St. Maria de Vittoria at Rome. It has also an episcopal chapel, and two meeting-houses belonging to the Associate Synod. The means of education are very ample. There are four subscription libraries. A considerable number of persons are employed in weaving woollen and linen cloth for the Aberdeen manufacturers. In addition to weekly markets, Keith has four annual fairs, all of considerable importance. Summer-eve fair, held in September, is the greatest fair in the north for cattle and horses.

A skirmish took place in 1745 at Old Keith, between the forces of the Pretender and those in the royal service, in which the former had the advantage, and carried off 150 prisoners. James Ferguson, the celebrated self-taught astronomer, was born in the vicinity of Keith: the only school he ever attended was one at Keith, and that for only three months. He died in 1776. His 'Autobiography' is well known.

KELSO, an inland market-town of Scotland, co. Roxburgh, beautifully situated on the left bank of the Tweed, near the point where it is joined by the Teviot, 38 m. SE. Edinburgh, 20½ m. SW. Berwick-upon-Tweed, and 366 m. N. London, by Great Northern railway. Pop. 4,309 in 1861. The town, which is neat and handsome, consists of four principal and some smaller streets. The former meet in a square or market-place in the centre of the town, consisting of well-built houses, mostly of freestone and slated. On the E. side of this square is the town-house, an edifice of two stories, with a pediment in front supported by four Ionic columns, surmounted by a handsome balustrade and dome springing from the centre of the roof. The old par. church being a 'misshapen pile,' a new or second par. church was built here in 1837 in the Elizabethan style, with a quadrangular tower 70 ft. high. The bridge across the Tweed, from a plan of Rennie, is said to have been the prototype of Waterloo Bridge over the Thames by the same architect. It has five elliptical arches; its total length is 494 ft.; the breadth of the road-way is 25 ft., and the greatest height from the bed of the river 42 ft. It was finished in 1803 at an

Digitized by Google

expense of 18,000*l*. In the immediate vicinity of the town, on the W., is Fleurs, the seat of the ducal family of Roxburgh, the feudal superiors of the bor. A mansion erected in 1718, and recently repaired and modernised, combining, as Sir W. Scott observed, 'the ideas of ancient baronial grandeur with those of modern taste.' But the most prominent object in or round Kelso is its venerable abbey, founded in 1128 by David I. for Tyronensian monks, and endowed with immense possessions and privileges. Its form is that of a Latin cross, and it affords a fine specimen of the Saxon or early Norman style of architecture. It has long been in a state of dilapidation; but the Scotch reformers are guiltless of the demolition of this noble fabric, for, having been occupied as a place of security by the townspeople in 1545, it was then battered down by the English under the Earl of Hertford. The parts now remaining are the N. and S. aisles, each having two round towers, with two sides of the central tower, now only 91 ft. high. The thickness of the lower walls is 5½ ft. The pillars are clustered; the arches circular. Part of the ruin served as the par. church from 1649 till 1771, when it was deserted, from the idea of insecurity, for another place of worship. The Roxburgh family have of late laudably exerted themselves to repair and perpetuate this fine ruin. Kelso has been characterised by Scott, in his 'Autobiography,' as 'the most beautiful, if not the most romantic, village in Scotland.' 'It presents objects,' he says, 'not only grand in themselves, but venerable from their associations.' The best view of the town and environs is from the bridge.

In addition to the old and new par. churches already noticed, there are a number of other places of worship in the town, belonging to the Episcopalians, Cameronians, Original Seceders, Relief and Associate Synod. There are ten schools in the bor. and par., attended by about 700 scholars; so that about a seventh part of the people are, at the same time, being educated; and this without including Sunday schools. Kelso has six subscription libraries; the oldest, containing about 5,000 vols., having been instituted in 1750. There is also a 'Kelso Physical and Antiquarian Society.' Kelso was the first provincial town in Scotland that introduced the printing-press. (Irving's Scot. Poets, i. 75.) The first edition of Scott's 'Minstrelsy of the Scottish Border' was printed in Kelso by James Ballantyne, who afterwards brought the typographical art to high perfection in Edinburgh, where he carried on the printing business in partnership with Scott.

Kelso was originally a kind of suburb to the bor. of Roxburgh, on the opposite bank of the Tweed. But the foundation of the abbey gave Kelso a more important character; and, on the final destruction of Roxburgh, in the fifteenth century, its inhabs. transferred themselves thither. No traces now remain of the bor. of Roxburgh, and but few of its castle; though the latter was for centuries one of the most important Border fortresses. In 1460, James II., having taken the town of Roxburgh and demolished it, laid siege to the castle, during which he was killed by the bursting of a cannon. The queen, attended by her infant son, James III., encouraged the besiegers, and, in a few days, the fortress was compelled to surrender. It was then destroyed; since which time it has remained in ruins, though partially repaired by the English, under Somerset, in 1547. Soon after the Reformation, the lands and possessions of the abbey were conferred on the ancient family of Kerr, of Cessford, in the hands of whose descendants, the family of Roxburgh, they still remain. Kelso has repeatedly suffered from conflagrations, not in warlike times merely, but in pacific, as in 1686 and 1738.

KEMPTEN (an. *Campodunum*), a town of Bavaria, circ. Swabia and Neuberg, cap. distr. of same name, on the Iller, 50 m. SSW. Augsburg, on the railway from Augsburg to the lake of Constance. Pop. 10,370 in 1861. Kempten consists of two parts, an old town surrounded with walls nearly encircled by the new town. The former is the commercial portion of Kempton: the latter, seated on higher ground, comprises the abbey, where was formerly held the court of the abbot of Kempten, an ecclesiastic possessing, besides the town, an independent territory of 340 sq. m., ceded to Bavaria in 1802. Kempten has a fine collegiate church, aqueduct, and theatre, a hospital, foundling asylum, and public library; and is the seat of the council for the circle, courts of law for the circle and town, a board of tolls, a gymnasium, and high-school. It has manufactures of linen and cotton fabrics, and a brisk trade in these goods, and in wool, cattle, and Italian produce. The Iller becomes navigable near Kempten. Adjacent to the town is the eminence of Hilarmont, on which are the ruins of a fortress supposed to be Roman, and where various Roman coins have been found.

KENDAL (KIRBY), a market town, parl. bor. and par. of England. co. Westmoreland, ward of same name, 40 m. S. Carlisle, 219 m. NNW. London by road, and 252½ m. by London and North Western railway. Pop. of bor. 12,029, and of par. 18,600 in 1861. The town on the side of a hill, at the bottom of which the river Kent (crossed here by three bridges), runs nearly N. and S., consists principally of one long street on the line of the Carlisle road, and a lateral street leading down to the river on the Appleby road. The houses are well built of stone, and being whitened, and roofed with blue slate, have a remarkably clean and neat appearance. The town-hall is an elegant building, and the market, for butchers' meat, is neat and commodious. At the NW. end of the town is a large and well arranged workhouse, and near it is a house of correction. The other principal buildings are a handsome hall, belonging to the society of 'odd fellows,' the assembly and news rooms, theatre, and several extensive factories. The parish church, near the S. entrance of the town, is a large Gothic structure, with a square tower: the living is a vicarage in the gift of Trinity College, Cambridge. There are two other churches, and 11 chapels belonging to different denominations of dissenters. Among the educational establishments are a well endowed grammar-school with university exhibitions, a blue-coat charity, a green-coat school, a large national school, supported both by endowment and subscription, a school of industry, an infant school, and several Sunday schools: there is also a thriving mechanics' institute. The charitable institutions comprise a hospital for old unmarried women, endowed with 100*l*. a year, a dispensary, and a lying-in charity; and the corporation has the trust of charitable funds to a considerable amount.

Kendal has long been noted for its weaving industry; and, in the reigns of Richard II. and Henry IV., special laws were enacted for the protection of its manufactures. The present manufactures comprise linseys, serges, baizes, the coarser kinds of kerseymere, and carpets. There are about 3,000 persons employed in weaving, and otherwise preparing cloth. The marble works, for cutting and polishing marble, quarried at Kendal Fell, employ also a number of hands; and the

Digitized by Google

machinery is very ingenious. There is water-communication by a canal with Lancaster.

Kendal was first incorporated by Queen Elizabeth, and a second charter was granted by Charles I. Under the Municipal Reform Act, it is divided into three wards, the municipal officers being a recorder, a mayor, and 5 other aldermen, with 18 councillors. Corporation revenue, 1,110*l.* in 1862. The Reform Act conferred on Kendal the privilege of sending 1 mem. to the H. of C.: the electoral boundaries include the townships of Kendal and Kirkland, with those parts of Nethergraveship which adjoin Kendal. Registered electors 405 in 1865. Markets, well attended, on Saturday: cattle fairs, March 22, April 29, and November 8.

Near Kendal, on the opposite side of the river, are the ruins of a castle, commandingly situated on a rocky eminence, and celebrated as the birthplace of Catherine Parr, one of the queens of Henry VIII. A large portion of the outer wall, and two towers, still remain to mark its former extent.

KENILWORTH, a market town and par. of England, co. Warwick, hundred Knightlow, 5 m. N. Warwick, 18 m. SE. Birmingham, and 96 m. NNW. London, by London and North Western railway. Pop. 3,013 in 1861. The town is delightfully situated on an affluent of the Avon, and consists chiefly of one long street, about 1 m. in length, part of the road from Warwick to Coventry. In the lower part of the town is the church, a Gothic building of different periods, having a handsome tower and spire; and near it are the ruins of an abbey, valued at the dissolution of the monasteries at 644*l.* On the higher ground are several handsome houses; and at the top of the hill on which the town stands are the ruins of a castle, the ancient fame of which has been made familiar by Sir Walter Scott. There are several places of worship for dissenters, to each of which, as well as to the church, are attached well attended Sunday schools. A free-school was founded in 1724, and there is a large national school. Among other charities, are almshouses for 16 widows, and an apprentice fund. Ribands, gauzes, and combs are made here; and there are chemical works for the preparation of Glauber salts, sal-ammoniac, and Prussian blue; but they are not important. Markets on Wednesday; horse and cattle fairs, April 30 and Sept. 30.

Kenilworth Castle, whose extensive ruins bear ample testimony to its ancient splendour and magnificence, was erected in 1120 by Geoffry de Clinton, treasurer and chamberlain to Henry I., and in the reign of Edward I. the earl of Leicester held a tournament here, which was attended by 100 knights with their ladies. The estate afterwards reverted to the crown, and was given by Queen Elizabeth to her favourite, Dudley, earl of Leicester, who is said to have expended on its improvement 60,000*l.*—a vast sum for those days. 'The outer wall,' says Sir W. Scott, 'inclosed seven acres, a part of which was occupied by extensive stables and by a pleasure-garden, with its trim arbours and parterres; and the rest formed the large base-court or outer yard of the noble castle, which was itself composed of a huge pile of castellated buildings surrounding an inner court. A large and massive keep, called Cæsar's Tower, was of uncertain though great antiquity; and that noble and massive pile, which yet bears the name of Lancaster's Buildings, was erected by John of Gaunt, 'time-honoured Lancaster.' The external wall was on the S. and W. sides adorned and defended by a lake partly artificial, across which was a stately bridge, and on the N. side was a barbican, which, even in its present ruinous state, is equal in extent and superior in architecture to the baronial castle of many a northern chief. Beyond the lake lay an extensive chase, full of deer and game, and abounding with lofty trees. Queen Elizabeth twice visited this noble palace; and here, in 1575, she was entertained, with her whole court, with princely magnificence during 17 days, at the enormous expense of 1,000*l.* *per diem.* The castle was plundered and ultimately left in a state of ruin by Cromwell's soldiers, who appropriated to themselves the adjacent lands. After various changes, the estate came into the possession of Hyde, earl of Clarendon, and is still held by that noble family.' (Sir W. Scott's 'Kenilworth,' vol ii. with notes.)

KENNERY (CAVE-TEMPLES OF). See SALSETTE.

KENSINGTON, a town and par. of England, co. Middlesex, hund. Ossulston, forming one of the western suburbs of London, 1½ m. W. Hyde Park Corner, comprising (with the hamlets of Bayswater, Earl's Court, Brompton, and Little Chelsea) an area of 2,680 acres. Pop. of par. 70,108, and of town 51,910, in 1861. The town consists of a main street forming a part of the London road, and of many streets running from it N. and S. The houses are well built, and many large detached residences are scattered in the outskirts. The par. church is a plain but spacious building, erected in 1690; and the living is a vicarage in the gift of the Bishop of London. There are also many district churches, and a great number of places of worship for dissenters. A large charity school, national and Lancastrian schools, and private boarding schools, furnish instruction to all classes: and there are numerous charities for the relief of the aged and sick poor. The trade of the town chiefly depends on the many families of rank and wealth resident in and around it.

Kensington Palace, which, with its gardens, forms the chief object of attraction, is an irregular brick building, purchased by William III. of the Earl of Nottingham. Among other additions made by that monarch, the whole S. front was rebuilt under the direction of Sir C. Wren, and the interior received great improvements and embellishments: the W. front was rebuilt by Kent, in the reign of George II. The state rooms comprise 12 handsome chambers, well adapted for occasions of ceremony; but few of them, except the galleries, are of commanding proportions. The staircase, painted by Kent, is intended to represent a number of spectators on a court day; and the artist has introduced several portraits of characters connected with the court of George I.: the style, however, is *bizarre*, and in very bad taste. The presence chamber is now hung with pictures, many of which were highly valued by the late president West. This palace was the residence of William and Mary, Anne, George I., and George II., all of whom (except George I.) died within its walls. George III. removed the town residence of the court to St. James's; and Kensington Palace has since been allotted to junior members of the royal family. The childhood of Queen Victoria was spent in it; and it was for many years the town residence of the Duke of Sussex. The duke's library, which has been sold, was very valuable, especially the collection of bibles and biblical works, inc. about 300 rare MSS. The gardens occupy an area of about 350 acres, and have been for many years an attractive public promenade. Holland House, a brick structure, in the Elizabethan style, at the W. end of Kensington, was built in 1607, and descended in the reign of Charles I. to the Earl of Holland. Addison

Digitized by Google

occupied it after his marriage with the Dowager Countess of Warwick. In 1766 it was purchased by Henry Fox, lord Holland, in whose family it still remains. The library is 112 ft. in length, and contains a valuable collection of books, especially in Spanish and Portuguese literature. There are many good pictures, and in the hall is a sitting statue of C. J. Fox. About 200 acres of land are attached to the house, which is one of the finest residences in the vicinity of London. (For a full anecdotal history of Kensington and its neighbourhood, see Leigh Hunt's book, 'The Old Court Suburb,' 2 vols. London, 1855.)

KENT, a marit. co. in the SE. part of England, being the nearest of any in the kingdom to the Continent, having N. the Thames and its æstuary, E. and SE. the German Ocean and the Straits of Dover, S. Sussex, and W. Surrey. Its greatest length, from Deptford to the N. Foreland, is about 64, and its greatest breadth about 30 m. Area 1,627 sq. m., or 1,039,419 acres, of which above 900,000 are arable, meadow, and pasture. This is a finely diversified and beautiful co. Two parallel ridges of hills traverse its whole extent from E. to W. The upper, or most northerly of these ranges, extending from Westerham, on the confines of Surrey, to Dover, being composed chiefly of chalk, and thence called the chalk ridge; while the lower, or most southerly range, about 8 m. from the former, is usually called the ragstone range, from its consisting principally of ragstone and ironstone. The country to the N. of the upper range, including the isles of Sheppey, Grain, and Thanet (see THANET), is generally very fertile, and contains a good deal of marshy and of rich loamy land, producing the finest wheat. Romney Marsh, a celebrated grazing district (see ROMNEY MARSH), and the *Weald*, lie to the S. of the lower or ragstone range. The latter, which extends into Sussex and Surrey, is a very singular tract. Its soil is generally stiff and clayey, but in parts sand predominates. For a lengthened period it formed an immense forest; but was gradually, though slowly, brought into tillage. Its soil continues to be particularly well adapted to the growth of timber, especially oak, which here attains to the greatest luxuriance. Most inclosures in the weald are surrounded with oaks, and every wood and coppice is full of them. 'When viewed from the adjoining hills, which command a prospect over the whole of it, the Weald exhibits the most delightful scene that can be imagined. It appears to the eye an extensive level country (the few hills in it being so small and inferior to those whence it is viewed), covered with all the richness of both art and nature; the variety of small inclosures of corn and meadow, and the houses, seats, and villages, promiscuously interspersed among the large and towering oaks, which grow over the whole face of it, have the most pleasing effect, and represent to us, even at this time, something, though a great improvement of its original state, in the idea of an inhabited and well cultivated forest.' (Hasted's Kent, i. 293,298, 8vo. ed.) From its proximity to the Continent the climate of Kent is colder in winter, and the E. winds in spring are said to be more piercing than in other cos. in the same parallel more to the W.; but, on the other hand, the summers are warmer, and its autumns less liable to wet, which renders it especially fitted for the production of corn and fruit. Agriculture is in a very advanced state in Kent, and it has a greater variety of products than any other co. in the kingdom. Its wheat, barley, beans, and peas are all excellent. With the exception of the Isle of Thanet, turnips are extensively raised on the light soils. Hops are produced in large quantities, especially in the district between Maidstone and Canterbury. Most part of the cherries, filberts, plums, and other fruits brought to the London markets, are supplied by the orchards between Maidstone and Tonbridge, while the Isle of Thanet and other places furnish supplies of spinach and of various seeds. Though Kent feeds large numbers of cattle, it cannot be called a grazing co.: the stock of sheep is, however, very large. Romney Marsh has a peculiar breed that furnishes long, combing wool. There is a great deal of timber in other parts of the co., exclusive of the weald. Property much divided, and there are no great estates. Size of farms various; but, owing to the sort of garden culture carried on in many parts, they are mostly rather small; many varying in extent from 10 to 30 acres, while there are but few above 200 or 250 acres.

The yeomanry of Kent are a very superior class; and, besides their own, some of them occupy extensive hired farms. All lands in Kent, unless specially exempted by an act of the legislature, are held by the tenure of *gavelkind;* descending, in the event of the father dying intestate, not to the eldest son, but to all the sons alike in equal portions; and if there be no sons, they divide equally among the daughters. This is supposed to have been the common tenure in England before the Conquest; but, exclusive of Kent, it now obtains in but a few places. Some estates have been *disgavelled*, or excepted by a special act of parliament, from this tenure; and partition is now, in most instances, prevented by testament. But such lands as are not disgavelled, or settled by testament are invariably disposed of in the way stated above. (Hasted's Kent, i. 311–321, 8vo. ed.) Ironstone is abundant in many parts; and, previously to the employment of coal in the making of iron, the weald, from the abundance of its timber, was a principal seat of the iron trade; but this has been long abandoned. With the exception of ship-building carried on at Deptford, Woolwich, Chatham, and other places, and the industry of the metropolitan part of Kent, manufactures are unimportant; they consist of paper, made at Maidstone and Dover, gunpowder at Dartford and Faversham; and toys at Tonbridge. Exclusive of the Thames, the principal rivers are the Medway (which see), Stour, Rothe, Darent, and Ravensbourne. Kent is divided into the two nearly equal divisions of E. and W. Kent, each having its own court of sessions. Principal towns, Greenwich, Deptford, Chatham, Rochester, Canterbury, and Dover. It is divided into 5 lathes, 63 hundreds, and 15 liberties, and 411 parishes. It sends 18 mems. to the H. of C., viz. 2 for each of the 2 divisions of the co.; 2 for each of the bors. of Canterbury, Rochester, Dover, Greenwich, Maidstone, and Sandwich, and 1 each for Chatham and Rye. Registered electors for the co. 18,061 in 1865, being 8,250 for the eastern division, and 9,811 for the western division. Pop. 738,699 in 1861, of which 193,427 metropolitan, and 545,272 extra-metropolitan. Amount assessed to property-tax, 2,555,438*l.* in 1862.

KENTUCKY, one of the U. S. of America, in the central part of the Union, between lat. 36° 30′ and 38° 30′ N., and long. 86° and 89° W.; having N. the states of Ohio, Indiana, and Illinois, from all which it is separated by the Ohio river, W. Missouri, from which the Mississippi divides it, S. Tennessee, and E. Virginia. Length, E. to W., nearly 400 m.; breadth, varying from 40 to 175 m. Area, 37,680 sq. m. Pop. 1,555,684 in 1860, of whom 225,483 were slaves. The general slope is

Digitized by Google

towards the NW. The E. extremity of the state is occupied by some offsets of the Alleghany mountains; and along the Ohio the country is broken, and contains many abrupt hills, and deep and fertile valleys, often densely wooded. Towards the centre of Kentucky the surface is undulating; the W. is comparatively level. In the latter direction is an extensive tract called the 'barrens,' not sterile, however, as its name would seem to imply, but comprising some of the fine pasture land for which Kentucky is distinguished, and studded with oak and other forest trees. Next to the Ohio and Mississippi, the chief rivers are the Cumberland, Green, Kentucky, Licking, and Tennessee, which have numerous affluents, and are all tributary to the Ohio. Most of them rise in the SE. and mountainous part of the state. Cumberland river, the course of which is principally in Kentucky, has an entire length of 440 m., and is navigable for steam-vessels to Nashville in Tennessee, and for boats to near its source. Most of the other rivers above mentioned are navigable for more than 100 m. in the winter; but in summer the large streams are diminished to a greater extent than those of any other state in the union, and the small ones are entirely dried up. The whole of Kentucky appears to rest upon a bed of limestone, which rock is usually met with about 8 ft. below the surface. Bituminous coal is found along the banks of some of the rivers, and iron of excellent quality in numerous places. There are many salt springs, from which salt is obtained in sufficient quantities, not only for the supply of Kentucky itself, but of a great part of Ohio and Tennessee. Nitre and fine white marble are plentiful. In the limestone formation, in the SW., are several stupendous caverns, one of which, Mammoth Cave, in Warren co., is supposed to be 8 or 10 m. in extent. The climate in the E. and central parts is highly salubrious; but in the W., especially along the Mississippi, it is unhealthy, no year elapsing without a considerable mortality from fevers. Great extremes of heat and cold are experienced in the state; and, considering its lat., its winters are both long and severe. The soil is generally fertile: of 83 cos., into which Kentucky is divided, 50 consist of rich land, and are comprised in the tract called the 'Garden of Kentucky,' 150 m. in length, and from 50 to 100 m. in breadth, in the centre of the state. Nearly all the European grains, Indian corn, and tobacco are cultivated. The hills along the N. boundary are under culture wherever their declivities are not too steep for the plough; and in those places they are generally covered with forest trees of vigorous growth, as oak, pine, elm, sycamore, chestnut, black walnut, and locust trees. The vine, mulberry, and a great variety of other fruits are grown. Hemp is a staple product. In the central tracts the land is generally well cultivated, and the farmhouses and offices are good. Artificial grasses and red clover are sown; white clover is of spontaneous growth. The chief branch of rural industry is the rearing of horses and cattle. The Kentucky horses are of acknowledged excellence, and bred in large numbers. Their superiority is so great that many are sent over the mountains to the Atlantic states, and the principal supply of saddle and carriage horses for the lower country is drawn from Kentucky, the horses being sent down the Mississippi in flat-bottomed boats. Mules are numerous, and of excellent quality; when full grown they average from 15 to 16 hands, and are sometimes 17 hands, high: their price varies from 80 to 160 dollars. Many of the central counties are cultivated by large proprietors, who rear cattle very extensively, with which they supply the W. markets. Large droves of the first quality are also exported to Virginia and Pennsylvania. Hogs are reared in large numbers on the barrens. Manufactures are of secondary importance: the chief are those of cotton and woollen cloths, cordage, salt, iron goods, and maple sugar. Cattle, hemp, wheat, and tobacco are the principal articles of export. Most of the external trade is carried on through New Orleans. The means of internal communication are very complete, including a well-planned network of railways. Improvements in the river navigation are at the charge of the state; the construction of locks and dams on Green River was begun by the government in 1834. A canal near Louisville, 2 m. long, by which the rapids are avoided, was completed in 1831. Frankfort, on the Kentucky, is the cap., and seat of the legislative government; but Louisville is the largest commercial emporium. Lexington is the other principal town.

The legislative power is vested in a senate, which consisted, in 1864, of 38 mems., and in a house of representatives of 100 mems. The senators are elected for four years, one-fourth of their whole number being returned yearly. The representatives are elected annually. The right of election is in every free male citizen, 21 years of age, who has resided in the state for two years preceding the election, or for one year in the county for which he desires to vote. The governor and lieutenant-governor hold office for four years; and are re-eligible only after the lapse of seven years. Justice is administered in a supreme court, a court of chancery, and 16 district courts. The U. S. circuit-court is held at Frankfort. There are many superior schools in the chief towns. Transylvania University, the oldest establishment of the kind in the W. part of the union, is at Lexington (which see). Centre college, at Danville, founded in 1822, has an average attendance of 180 students. St. Joseph's college, at Bardstown, founded 1819, has a library of 7,000 vols., and generally about 130 students. There are colleges at Augusta, on the Ohio, Princeton, and Georgetown; a state literary fund, several lunatic and deaf-and-dumb asylums, and hospitals.

The earliest permanent settlement of this territory was made by settlers from N. Carolina, in 1773. Kentucky continued to form a part of Virginia till 1790, when a separation was effected; and in 1792 it was admitted into the union as an independent state. It sends nine mems. to Congress.

KERBELA, or MESHED HOSSEIN, a town of Asiatic Turkey, prov. Irak-Arabi, 50 m. SW. Bagdad. Pop. estimated at 20,000. The town stands on a plain, about 6 m. W. of the Euphrates, with which it is connected by a canal said to be more ancient even than the era of Alexander. It has five gates, a well-supplied bazaar, and seven caravanserais; but the chief ornaments of the city are the tomb of Hossein, adorned with a gilded cupola and a noble mosque. Its chief lustre has been derived from Hossein, son of Ali by Fatima, the daughter of the Prophet, who was slain near it, and to whose tomb numerous pilgrims of the sect of Ali flock from all quarters, but especially from Persia, to pay their devotions. It is subject to the Turks, but still the majority of the inhab. are Persians; and it has always been a favourite object of their king to obtain possession of this place, as well as of Meshed Ali and Kazameen, both of which are, like Kerbela, the resort of pilgrims. The environs of the town and borders of the canal are shaded by extensive plantations of palm-trees, and the walls, which are upwards of 2 m. in circuit, are kept in good repair, to secure

Digitized by Google

the riches of the holy city against the predatory excursions of the Wahabees, by whom it was plundered some years ago.

Kerbela occupies the site of *Vologesia*, a small town built by Vologese, one of the Parthian kings, contemporary with Nero and Vespasian.

KERESOUN (an. *Cerasus*), a town and sea-port of Asiatic Turkey, on the S. shore of the Black Sea, pach. Trebizond, from the town of which name it is distant 88 m. W. by S.; lat. 40° 57′ 10″ N., and long. 38° 24′ E. Pop. about 3,000, half being Armenian and Greek. It stands on an elevated rocky promontory bounding an extensive bay to the E., and appears to have been formerly a place of great strength. A considerable part of the ancient wall still exists; but the present town is in a ruinous condition, and the people bear the appearance of being in abject poverty. There is some little trade in corn with the Crimea; and trading vessels are built in the bay under the city walls.

Cerasus was visited by Xenophon on his return with the ten thousand; and he calls it a 'Hellenic colony, situated in the country of the Colchi.' (Anab. v. 3.) It is also said to be the native country of the cherry, which hence received its name. It was here that Mithridates ordered his wives and sisters to be poisoned after the battle of Cabira, when it fell into the hands of Lucullus; but that it was, as Arrian states, identical with the Pharnacia which was the residence of the kings of Pontus is, to say the least, extremely doubtful. (Cramer's Asia Minor, i. 281.) Keresoun was conquered by Mahmoud II., and has since been attached to the Turkish empire.

KERKOUK (*Demetrias*, Strab.; *Corcura*, Ptol.), a large town of Asiatic Turkey, in Lower Kurdistan, cap. sandjiak, 100 m. SE. Mosul, and 130 m. N. Bagdad. Pop. estim. at 13,000. The town is situated on a commanding eminence nearly perpendicular on all sides, below which is an extensive suburb: it is surrounded by a mud wall, but beyond this are extensive suburbs. Besides numerous mosques, it has three R. Catholic churches and one Armenian ditto. The surrounding district is uneven and hilly; and on the N. side a low range of barren and rocky mountains separates it from the fine plain of Altun-Kupri. In the pass through these mountains are numerous naphtha pits, yielding an inexhaustible supply of that useful commodity, which is sent in earthen jars all over the neighbouring country.

KERMAN (an. *Caramania*), a prov. of Persia, between lat. 25° 30′ and 31° 20′ N., and long. 54° 30′ and 60° 20′ E., having N. Khorassan, E. Affghanistan and Beloochistan, S. the Persian Gulf, and W. the provs. Fars and Laristan. Shape triangular; extreme length, 380 m.: breadth, 250 m.; supposed area, 65,000 sq. m. Pop. alleged to be under 600,000, having greatly decreased of late years through the wars of extermination waged by the Persians on the Guebres or Parsees. Kerman, generally speaking, is mountainous; but the elevation of the high ground varies considerably, from mere hills to lofty ridges, scarcely lower than those of the great mass in which they originate. The principal range divides Nurmansheer from Laristan, and thence runs W. with many ramifications. The interior of the prov. is not irrigated by a single river, and the natives could not possibly exist, but for a few mountain springs, and the diligence used in cutting *karezes*, or subterranean reservoirs for watering the land. The Rud Shuir, which runs through the S. part of Kerman into the Persian Gulf, is very imperfectly known. The climate is accounted the least healthy of any part of Persia; the hills, which are clad with snow nearly all the year, being extremely cold, and the long narrow valleys between them oppressively hot. The winds from the mountains are cool; but, as they bring with them agues and epidemic fevers, the natives prefer sultry weather. The N. portion of the prov., and that close on the coast, are arid, sterile deserts; but in Nurmansheer and a few other central districts, where irrigation has been properly followed up, layers of alluvial soil and rich vegetable mould are found to be exceedingly productive. Wheat, maize, and barley; cotton, tobacco, saffron, and madder are raised with facility, and in the greatest perfection. Dates, oranges, lemons, grapes, almonds, and pistachios, with other fruits of S. Europe, are of common occurrence; and mulberry trees are largely cultivated for the silk-worms, in breeding which the inhabs. have attained considerable celebrity. The gum-plants, the produce of which is not less esteemed than that from Arabia, comprise the assafœtidá, mastic galbanum, sandaric ammoniac, sarcacolla, and tragacanth. Much attention is likewise given to the cultivation of the white rose, from which is distilled an *attar*, or essence, highly valued in Asia. Pasturage, however, is a more favourite pursuit than tillage. The breed of sheep peculiar to this prov., called *dumbedor*, is small and short-legged, with a long bushy tail; its wool fetches a higher price in the market than that of any other variety in Persia. Camels also, and goats, are bred in great numbers, as their hair is thought to make a fibre at once stronger and more delicate than that of animals reared elsewhere. Oxen and horses are little attended to. The forests are infested with wild beasts of the cat and bear tribe, and there are many species of serpents, some being highly venomous. On the S. coast sea-fish is abundant; but the pearl-fishery, once very profitable, has been abandoned in consequence of the too great depth of the oyster-beds. The mineral riches might be made a source of considerable wealth, for most metals are abundant; but iron, copper, and sulphur are the only products hitherto obtained. The manufactures comprise fine woollen fabrics, carpets, goats' and camels' hair shawls, coarse linens, and a peculiar kind of matchlock, much esteemed in the E. These articles, with *chenna*, a yellow dye, fruits, and gums, are either sent N. by caravans, or exported from the port of Gombroon.

The inhabs. were formerly almost exclusively Guebres, but the number of these is now less than 40,000. The Persians constitute the chief mass of the pop., but there are also many Belooches and Arabs of different tribes. The government is vested in a beglerbeg, and the prov. is divided into 9 districts, each of which is under a hakun or lieutenant. The taxes on land, and imposts on manufactured goods, are very oppressive, and operate as a great hinderance to industry. The S. part of Kerman, called Moghostan, is not subject to Persia, but to the imâm of Muscat, who receives from it a yearly tribute of 7,000 tomauns. The Arabs of various tribes are governed by their respective sheiks.

KERMAN, or SERJAN (an. *Carmana*), a city of Persia, and cap. of the above prov., 230 m. E. Shiraz, and 340 m. SE. Ispahan; lat. 29° 56′ N., long. 56° E. Pop. estimated at 30,000. This city, which was once more prosperous and extensive than at present, stands on the W. side of an extensive plain, so close to the mountains as to be completely commanded by two of them. The walls, pierced by 4 gates, are high and built of mud, flanked outside by a dry ditch, 20 yards wide, and 10 yards deep. On the S. side of the town is a citadel, in which the governor resides.

Digitized by Google

The bazaar, well supplied with every article of necessity and luxury, is covered in with very elegant domes, built of a beautiful blue stone procured in the adjoining mountains. There are nine good caravanserais within the walls, several mosques and baths, but most of them are in a ruinous condition. The trade of Kerman, however, is still very considerable, and it is celebrated for its manufactures of shawls, carpets, and matchlocks, which are exported to Khorassan, Balk, and Khiva, Arabia, Sinde, and all parts of India. The shawls of Kerman are of coarser quality, but approaching nearly in colour and general appearance to the inferior cashmeres. Immense quantities of the commoner kinds are sent to all parts of Turkey; they are about two yards square, very low in price, and are generally worn by the lower classes in W. Asia.

Kerman, formerly one of the most celebrated cities of the Persian empire, owed much of its former opulence to its situation on the road from Bokhara to Gombroon, a port which has been almost superseded by Bushire. Domestic and foreign wars, however, with repeated pillages, have all but ruined it. In 1794 it was besieged and taken by Aga Mahommed Khan; the walls and public buildings were then levelled to the ground, a licentious soldiery were allowed to pillage it during three months, vast numbers of the inhabs. were put to death, and 30,000 are said to have been sent into exile. From these calamities Kerman is only very slowly recovering, nor does the present state of its trade warrant the conclusion that it will ever attain its former importance.

KERMANSHAW, or KERMANSHAH, a city of Persia, the cap. of Persian Kudistan and of a district bearing its own name; 82 m. WSW. Hamadan, and 320 m. SW. Ispahan; lat. 34° 26′ N., long. 47° 15′ 15″ E. Pop. estimated at 12,000. The city stands a short distance from the right bank of the Kerkah or Karasu, in a beautiful plain open to the S., but inclosed on every other side by lofty mountains. It is surrounded by a substantial brick wall, having round towers at its four angles and a deep ditch in front. The citadel, strongly fortified, is the residence of the beglerbeg, who belongs to the royal family of Persia. The streets are narrow, crooked, and unpaved; but the town is adorned with many gardens, has 14 *hummums* or public baths, 4 mosques, several bazaars, and a spacious caravanserai kept in tolerable repair. Its manufactures consist chiefly of woollen carpets and swords, mostly sent to Bagdad, with cotton, very delicious grapes, and other products of the rich soil belonging to the district. Considerable advantages accrue to the town in consequence of its situation on the great caravan road between Persia, Caubul, and Asiatic Turkey. Great improvements have been made by the existing dynasty in its fortifications and public buildings, and it has become the residence of one of the members of the reigning family, so that its pop. and general importance have been steadily increasing during the present century.

About 6 m. E. of Kermanshaw, on the road to Hamadan and in the N. range of mountains, are the excavations and sculptures of Taki-Bostan. The most considerable of these is an arch cut in the rock, 60 ft. high, 20 ft. deep, and 24 ft. wide; on the top is an emblematic figure flanked by two angels, the sculpture of which is tolerably perfect and in good taste. At the extremity of the arch is the figure of a mounted warrior clothed in chain armour, with a shield on his left arm, a lance in his right hand, a quiver at his side, and a tiara on his head. The horse is well proportioned, and tolerably carved. The representation of a boar-hunt occupies the entire left side of the arch; it is remarkably well executed. At the upper end of another cave, similar in shape and size, is a *basso-relievo* of two kings in the costume of Persepolis, and wearing globular crowns identifying them with members of the Shapour dynasty. Near the entrance of this cave, also, are three figures, two of which are treading on the third, who is prostrate. The origin of these sculptures is a matter of doubtful conjecture: some attribute them to Semiramis, while by others they are ascribed to the successors of Alexander; but, if Silvestre de Sacy's translations of the Pehlvi Inscriptions be correct, they must be attributed to the monarchs of the Sassanian dynasty. (Ritter's Erdkunde von Asien, part ix. p. 367–386.)

The date of the foundation of Kermanshaw is not accurately known, but it is generally attributed to Bahram (Vararanes IV.), the son of Shapour II., about 400 years after Christ. Kobad improved it, and built a citadel, which, after having been almost destroyed by the Turks, was re-established by Kouli-khan, when he restored its independence in 1723.

KERRY, a marit. co. in the SW. part of Ireland, prov. Munster, having N. the estuary of the Shannon, E. and S. the cos. of Limerick and Cork, and W. the Atlantic Ocean. Area, 1,159,356 acres, of which 552,862 are unimproved mountain and bog, and 14,669 water, including the lakes of Killarney, so famous for their scenery (see KILLARNEY). This co. is particularly wild, rugged, and mountainous. Macgillicuddy's Reeks, the highest mountains in Ireland, lie to the W. of Killarney; and several other mountain ridges rise to above 2,000 ft. in height. The coast is deeply indented by Tralee and Dingle bays and the estuary of the Kenmare: Dunmore Head, between the bays now named, in lat. 52° 7′ 30″ N., long. 10° 28′ W., is the most westerly land in Ireland, and consequently in the U. Kingdom. The climate is mild, but also extremely moist. The soil in the low grounds mostly rests on a limestone bottom; it is very fertile, and produces fine herbage, which the mildness and moisture of the climate maintains in a constant state of verdure throughout the year. The arbutus flourishes in the greatest vigour round Killarney, and other places in this co. Large flocks of goats are fed on the mountains, which also depasture great numbers of the pure Irish breed of middle-horned cattle. There are some rather extensive dairy farms; but, speaking generally, agriculture is at the lowest ebb. Tillage farms are, for the most part, very small, and the occupiers miserably poor. The potato is the only article they reserve to themselves; cattle, corn, butter, pigs, and eggs all go to market to make up the rent. Still, however, improvements are taking place; good roads now lead into districts that were formerly next to impervious; and some landlords have laboured, with considerable success, to introduce an improved system of management on their estates, and to meliorate the condition of the occupiers. In some parishes the greater part of the tillage is performed by means of the *loy* or spade, but Scotch and other improved ploughs have recently been introduced. The sea-weed, which abounds along the sea-shore, furnishes an ample supply of manure; but it is in most parts neglected, or injudiciously applied. Property mostly in very large estates, but some of them are leased for ever. The Irish language is in many parts used to the exclusion of the English; and, in consequence, old customs and habits maintain their ground in a remarkable degree. Minerals, though in a great measure unexplored, are of considerable value and importance. Copper mines have been

Digitized by Google

wrought near Killarney, and Valentia Island produces good slate for roofing and flagging. Manufactures can hardly be said to exist. Principal rivers, Feale, Lane, the outlet of the lakes of Killarney, Roughan, and Mang. Principal towns, Tralee, Killarney, and Dingle. Kerry is divided into 8 baronies and 83 parishes; and sends 3 mems. to the H. of C., viz. 2 for the co. and 1 for the bor. Tralee. Registered electors for the co., 5,415 in 1865. In 1861, Kerry had a pop. of 201,800, or 36,259 families, living in 32,178 houses. In the 20 years 1841–61 the pop. declined by 92,080.

KERTSCH, a sea-port town of European Russia, in the Crimea, on a spacious bay on the W. side of the straits of Yenikale. Pop. 12,787 in 1858. The town occupies the site of the ancient *Panticapæum*, the seat of the Bosphorian kings, and once the residence of Mithridates. The quarantine for the sea of Azoff has been established here; and it seems probable that it will, at no distant period, supersede Taganrog as the emporium of that sea. Corn, salt, and hides are the principal articles of export. In the outer road, 5 or 6 m. from the town, there are 19 ft. water; in the inner bay there are 14 ft., and close in shore it shoals to from 9 to 11 ft. During the last war between Russia and Turkey, the allied Anglo-French squadron entered the bay, May 24, 1855, capturing 250 Russian vessels, and a large quantity of guns and stores.

KESMARK (Germ. *Kaisersmarkt*), a royal free town of Hungary, co. Zips, on the Poprad, a tributary of the Vistula, at the foot of the Tatra mountains, 130 m. NE. Pesth. Pop. 3,924 in 1857, of whom about 2,500 are Protestants. The town is surrounded with old and decayed double walls, and entered by three gates, near one of which the Emp. Sigismund, in 1433, erected a large tower, to protect the town against the attacks of the Hussites. Kesmark has several handsome public buildings, as the town-hall, with an elegant tower, and the large Rom. Catholic church; besides a Rom. Catholic high school, Protestant lyceum, and girls' school. Many of its inhabs. are linen weavers and dyers; others carry on a brisk trade with Galicia in wine and garden produce.

KESWICK, a market town of England, co. Cumberland, ward of Allerdale, par. of Crossthwaite, on the Greta, in a well-cultivated valley at the foot of Skiddaw, and contiguous to the N. end of Derwent-water, or Keswick lake, 22 m. S. by W. Carlisle, and 18 m. E. by N. Whitehaven. Pop. 2,610 in 1861. This neat and finely situated town, which may be regarded as the cap. of the English lakes, consists principally of one long street of well-built houses. It has manufactures of linsey-woolsey stuffs and fancy waistcoatings; black lead pencils are also made in the town, of lead from the famous mine in Borrowdale; and the potting of char taken in the lake is a considerable business. Copper mines were formerly wrought in the vicinity, but they have been long abandoned. The principal dependence of the place is on the crowds of visitors to the adjacent lakes and mountains, who are here supplied with lodgings, guides, and conveyances. It has a free school, a national school, a workhouse, and two museums, containing many fine specimens of natural history peculiar to the county. Property, which at present produces above 200*l.* a year, was bequeathed in 1642, by Sir John Banks, chief justice of the Common Pleas, for behoof of the poor of this, his native town.

Keswick lake, or Derwent-water, is about 3 m. in length, by rather more than 1 m. in breadth, extending over an area of 1,282 acres. It has numerous small islands, is embosomed among lofty mountains, and, from its picturesque scenery, is deservedly called the 'gem' of the lakes.

KESZDI-VASARTHELY (Germ. *Neumarkt*), a town of Transylvania, in the Szekler-Land, 45 m. NE. Cronstadt. Pop. 3,460 in 1857. The town has a Protestant gymnasium, several breweries and distilleries, and manufactures of hats, paper, and cloth; but it is chiefly noted for its military establishments. It is the head-quarters of the second regiment of Szekler infantry, in the Transylvanian military frontier, and has a celebrated military school. This institution was founded by the late emperor, Ferdinand I. of Austria, and is supported partly by a royal grant and partly by the Szeklers themselves. The regulation of it is entirely in the hands of the government. On the foundation there are 100 boys, from 6 to 18 years of age, who are fed, clothed, and taught, free of all expense. A few additional scholars are admitted on the payment of about 16*s.* per month. The children, when they have finished their education, are drafted into the infantry, and often rise to the rank of officers. The course of education, besides drilling, includes writing, reading, arithmetic, geography, mathematics, military drawing, and the German language. In fact, all the lessons are given in German, all the books are German, and the children are even obliged to speak German to each other. The national language is never heard within the walls of the school. Hence the Szeklers affirm, that the grand object of the school is to denationalise their children, and make them renounce their native language.

KESZTHELY, a market town of Hungary, in the circ. on the other side the Danube, co. Szalad, near the W. end of lake Balaton, 38 m. SW. Veszprim, and 98 m. S. Presburg. Pop. 3,995 in 1857. Keszthely is a thriving little town, and of considerable importance from the great school of agriculture founded here by Count George Festetits, and known as the Georgicon, which, though no longer in so flourishing a state as formerly, has still several professors and practical teachers. The object of this establishment is to form useful and well-instructed officers and accountants for the management of estates, to give instruction in particular branches of husbandry to the peasantry, and to furnish opportunities for farmers to improve their knowledge of agriculture. The school is divided into six sections: 1. for scientific agriculture and its auxiliary sciences; 2. for the law of property, as affecting landlords and tenants; 3. for practical husbandry, as taught to the peasantry; 4. for forest-planting and the chase; 5. for horse-breeding and training; and, 6. for teaching girls the branches of knowledge connected with housekeeping. The complete course appointed for the pensioners lasts 3 years; but others may select their pursuits, and limit themselves to one or two years, as they think proper, the theoretical course lasting from the beginning of Nov. to the end of Aug. In the Georgicon, large apartments are fitted up as lecture-rooms, depositories for philosophical instruments, and museums; chambers are set apart for the pensioners; and the lower floors are occupied by the farming servants and their families, and by a spacious workshop for carpenters and coopers. The outbuildings comprise stalls for fattening cattle, a shed for sheep, a granary, brew-house, and a house for silkworms and the winding of silk; gardens and orchards of different kinds are laid out for the purpose of teaching horticulture in all its branches, and on a farm set apart for the purpose practical instruction is given in the rotation of crops after the Norfolk system. The other educational institutions are a

Digitized by Google

Catholic gymnasium, a high and normal school. The public buildings comprise, besides the Georgicon, a fine castle, which contains a library of 15,000 vols., 2 Catholic churches, a convent, and a hospital. Wine, from the extensive vineyards in the neighbourhood, is a considerable article of trade, and several hands are employed in weaving woollen fabrics. (Bright's Travels in Lower Hungary, pp. 360–389.)

KETSKEMET, or KUZKEMET, a market town of Hungary, circ. on the N. side the Danube, co. Pesth, 50 m. SE. the cap., on the railway from Pesth to Szegedin. Pop. 42,890 in 1857. The houses are generally low, the streets long, narrow, and crooked, and the surrounding districts of a monotonous character. There are five churches (two Rom. Cath., and one each belonging to Greeks, Lutherans, and Calvinists), a Franciscan convent, a reformed college and gymnasium, a *Piarist* college, a normal school and a school of design, an orphan asylum, and a military hospital. The breeding of horses, cattle, and sheep is the chief employment of the pop.; and there are some tanneries and soap factories.

KETTERING, a market town and par. of England, co. Northampton, Huxloe hund., on an affluent of the Nen, 14 m. NE. Northampton, and 65 m. NNW. London, on the Midland railway. Pop. of town 5,498 and of par. 5,845 in 1861. Area of par., 2,840 acres. The centre of the town comprises a spacious area, surrounded by well-built houses and shops, with a commodious sessions-house; but in the suburbs are many low thatched tenements of a mean and wretched appearance. The church, considered a fine specimen of ecclesiastical architecture, has an elegant embattled tower at its W. end, surmounted by a light crocketted spire: the living is a rectory. There are places of worship also for Wesleyan Methodists, Baptists, Independents, and the Society of Friends. Sunday schools are attached to all, except the last; and there is a small free school. This, and an almshouse for 6 poor widows, are the only endowed charities of the town. Several hundred weavers are engaged at Kettering, and the neighbouring villages of Rothwell and Desborough, in making silk plush for hats. A great number of hands were formerly employed in woollen and worsted weaving, but this branch of industry appears to have declined of late years.

KEW, a village and par. of England, co. Surrey, hund. Kingston, on the S. bank of the Thames, 7 m. W. London, on the London and South Western railway. Pop. of parish, 1,099 in 1861. Area, 230 acres. This village, which is connected with Brentford on the opposite side of the river by a stone bridge of 7 arches, consists principally of the houses on and near a large and neatly kept green. The par. church is a small brick structure with a turret at the W. end. Many handsome residences are scattered over the village, but none deserves particular mention except Kew House, or Palace, a red brick building of the age of James I., for many years the favourite residence of George III. and his queen. It was taken on lease from S. Molyneux, esq., by Frederick, prince of Wales, and was greatly improved in its interior fittings by Kent. George III. acquired the property in fee simple, and it is still occupied by members of the royal family, or persons belonging to their households. Near this house, and close to the river's bank, a new palace was commenced by George III., but the situation and plan of the building proved to be ill chosen. It was never completed, and was ultimately taken down in 1827. The grounds, which were first laid out by Sir William Chambers for Frederick, prince of Wales, have since been greatly improved. They are under the management of the commissioners of woods and forests, and consist, at present, of what are called the pleasure grounds, comprising about 130 acres, and of the royal gardens, comprising about 75 acres, the whole open to the public every day including Sunday. The improvements in Kew Gardens, which began in 1840, have been on a very grand scale, and they now form one of the favourite resorts of the Londoners, having been visited in 1861, by 480,070; in 1862, by 550,182; and in 1863, by 408,418 persons. Rather more than one-half of the whole of these visitors came on Sundays. The palm-house, completed in 1848, is somewhat in the form of the hull of a large ship with the keel upwards, having attached to it the hulls of smaller ships, one at each end, the ribs being of cast-iron, and the intermediate spaces of glass. It is 362 ft. in length, the central compartment is 100 ft. in width, and 66 ft. in height, and the wings respectively 50 ft. wide and 30 ft. high. The central portion has a gallery all round, reached by a spiral stair, at the height of 30 ft. from the floor. The glass is tinted green to mitigate the intensity of the light, and the structure is heated by hot-water pipes distributed beneath the floor, the smoke being conveyed by an under-ground flue to an ornamental tower at a little distance. Opposite the palm-house is a fine piece of water; and the whole garden, whether reference be made to its arrangements, or to the infinite variety of rare and valuable plants with which it is furnished, reflects the highest credit on the public liberality, and on the taste of those by whom it has been planned and directed. In the pleasure-gardens are different grotesque, if not very elegant, buildings. The largest and most celebrated of these is an octagonal Chinese pagoda of 10 stories and 163 ft. high, from the top of which is an extensive view of the surrounding country.

KEYNSHAM, a market town and par. of England, co. Somerset, hund. of its own name, at the confluence of the Chew with the Avon, 5 m. ESE. Bristol, 100 m. W. London by road, and 118¼ m. by Great Western railway. Pop. of par. 2,190 in 1861. Area of par. 3,830 acres. The town is built on a rock, and consists of a single street, about a mile long. The church, which stands in the centre of the town, is a large and handsome edifice, with a fine lofty tower at its W. end, and some curious monuments: the living is a vicarage, in the gift of the duke of Buckingham. The Wesleyan Methodists and Baptists have places of worship, to each of which, as well as to the church, Sunday schools are attached. A well conducted charity school also furnishes a plain education to poor children of both sexes. The river Chew runs through the E. end of Keynsham, and falls into the Avon at the bridge, which is of stone, and consists of 15 arches: another bridge crosses the Chew on the Bath road. The tides of the Avon ascend up to the town. The clothing trade, formerly considerable, has now almost wholly fallen to decay, though a few people are still employed in spinning and winding for the clothiers of Bradford and Shepton Mallet. Coarse linen-weaving has been introduced within the last 30 years, with little success; but a good deal is done in malting.

KEY-WEST, a small island from 5 to 6 m. in length, by 1 in width; 56 m. SW. from Cape Sable, in Florida. It is one of the Florida keys, or of that extensive circular range of low islands, banks, and reefs, which fences the coast of Florida, and forms the northern boundary of the Gulf Stream, from the Tortugas islands on the W. round to Cape Florida on the N. A lighthouse erected on

Digitized by Google

the SW. point of the island lat. 24° 29′ N., long. 81° 55′ W., has a fixed light elevated 83 ft. 6 in. above the sea. The town of Key-West, near the NW. part of the island, has about 2,500 inhabs., and has an excellent harbour, with about 25 ft. water. A safe passage, about 6 m. in length, leads by Key-West from the Gulf Stream to the Gulf of Mexico. It has 12 ft. water at ebb tide, and vessels from the N. bound for New Orleans and Mobile, or from the latter for the former, by passing through it, avoid the delay and danger of the more westerly passage round the Tortugas.

Owing to the frequent accidents to shipping from coming in contact with the banks and reefs in this dangerous vicinity, the American government have organised an establishment at Key-West for the assistance of ships in distress, and made it the seat of an admiralty court for the adjudication of claims for salvage. The former consists of 15 licensed vessels with crews of about 10 men each. These are kept constantly cruising about on the look-out for ships in distress or wanting pilots.

KHARKOFF, a government of European Russia, having on the N. Tchernigoff and Koursk, on the E. Voronetz, on the S. Ekaterinoslaff, and on the W. Poltava. Area, 20,931 sq. m., pop. 1,582,571 in 1858. This, like the other governments of Little Russia, has a flat, monotonous surface, and a very fertile soil. It has nearly 470,000 deciatines of forests. Principal rivers, Donetz, Orkol, and Vorskla; but none of them are navigable, at least, for any considerable distance. All sorts of corn are raised, the produce in ordinary years amounting to above 5,000,000 chetwerts, of which about 1,000,000 are exported. Flax and hemp, tobacco, and hops, are also raised, and the potato is extensively grown. Cattle excellent; there are few peasants without bees. With the exception of distilleries, which are numerous, and some tanneries, and establishments for the preparation of tallow and saltpetre, manufacturing industry can hardly be said to exist. The pop. consists of Little Russians, Great Russians, and Cossacks. Some regiments of cavalry are colonised in this government.

KHARKOFF, the cap. of the above government, on the Lopanh, 295 m. NWN. Odessa. Pop. 45,156 in 1858. The town is built of wood; has narrow, crooked, and dirty streets; the ramparts by which it was formerly surrounded have been converted into gardens and public walks. It is the residence of the provincial authorities, and has a cathedral, a gymnasium, and an ecclesiastical seminary. Kharkoff is the seat of a university, founded in 1804, which has 90 professors and masters, and, on the average, about 500 pupils. It possesses a pretty good library, and a valuable collection of medals. This town is the seat of a considerable commerce. Four fairs are held each year, of which that called Krechtchenski (Jan. 3–15), and that of the Trinity, are the most extensive. One of the other fairs is principally for wool.

KHELAT, or KELAT, a city of Beloochistan, of which it is the cap., and a fortress of considerable strength, now in possession of the British; on an elevated site, on the W. side of a highly cultivated plain about 250 m. N. the Indian Ocean, and 240 m. S. by W. Candahar; lat. 29° 7′ N., long. 65° 45′ E. Pop. estimated at 20,000, chiefly Beloochees, Brahooes, Hindoos, and Affghans. The town, of an oblong form, is encompassed on three sides by a mud wall, 18 or 20 ft. high, flanked at intervals of 250 paces, by bastions pierced, as well as the wall itself, with numberless loopholes for matchlocks. The defence of the fourth side is formed by the W. face of the hill, on which the town is partly built, being cut away perpendicularly. On the summit of this eminence stands the palace of the khan, enclosed by a mud wall, with bastions, kept in better repair than any other portion of the fortifications. In 1839, Major Willshire said, 'The defences of the fort, as in the case of Ghiznee, far exceeded in strength what I had been led to suppose from previous report; and the towering height of the inner citadel was most formidable both in appearance and reality.' (Parl. Report on Khelat.) The town is, however, commanded by heights to the N. and W.; it has three gates, and above 2,500 houses within the walls; and about half as many more were comprised in the suburbs. The houses are of half-burnt brick, on wooden frames, and plastered over with mud or chunam. The streets are generally broader than is common in the E., and have a raised footway on either side; but their centre is a receptacle for all sorts of filth; and they are dark and gloomy, from the upper stories of the houses nearly meeting. The markets are well furnished with flesh, vegetables, and other necessaries, at a cheap rate; and the town is supplied with excellent water by a spring, which is tepid during the night, but after sunrise becomes cold, and remains so the whole day. Some water-mills are turned by the stream from this source. Khelat has some trade and manufactures, respecting which see BELOOCHISTAN.

KHERSON, a gov. in the S. part of Russia in Europe, on the N. shore of the Black Sea, between the rivers Dniestr, on the W., and Dniepr, on the E. Area, 28,305 sq. m. Pop. 1,027,459 in 1861. Besides the great boundary rivers, already specified, it is divided into two not very unequal portions by the Bug. In the N. part of the government, the surface is undulating and covered with immense forests; but elsewhere it consists mostly of an immense steppe, without trees, and covered with grass the height of a man. Generally, the portion on the W. side of the Bug is decidedly more fertile than that on the E. side. Climate in extremes, the rivers being mostly frozen over for a short time during winter, while in summer the thermometer rises sometimes to above 25° Réaum. Agriculture has made little progress, and is but a secondary pursuit, the rearing of cattle and sheep forming the chief employment of the inhab. The breed of sheep has been much improved, and is now the best in the empire. Among the horned cattle, buffaloes are common. Flax and hemp, tobacco, saffron, and liquorice, are all cultivated; and a good deal of an inferior acid wine is made. There are establishments for the cleaning and sorting of wool, tanneries, tallow and candle works, with manufactories of cloth. The commerce of the government centres entirely at Odessa and Kherson, and is very extensive.

KHERSON, the cap. of the above government, on an eminence on the right bank of the Dniepr, about 60 m. above Kinbourn Fort, at the entrance of the æstuary to that river. Pop. 40,430 in 1858. The town was founded in 1778; was fortified in 1780; and soon after became a large and flourishing town. Owing, however, to the difficulty of navigating the Dniepr, which, for 15 m. below Kherson, is shallow and encumbered with shifting sand banks, Odessa, founded in 1792, soon took precedence of it as a commercial emporium, and it began to decline. It is divided into four distinct parts: the citadel, the admiralty, and the Greek and military suburbs. Within the first are the government buildings, arsenal, prison, barracks, and the cathedral. The latter is the burial-place of the celebrated Prince Potemkin, the powerful favourite of Catherine II., who died near Yassy,

Digitized by Google

in 1791. In the admiralty are the docks, for constructing ships of war, cut out of the limestone rock. They are sent down the river on machines, called camels, but only when there is a large flood. The Greek suburb is inhabited by the burgesses, and the military suburb by sailors and artizans. Within these few years a part of the mast trade that used formerly to be confined to Riga, has been transferred to Kherson; and, besides masts, staves, planks, flax and hemp, corn, cordage, tallow, wool, of which it is a principal market, are sent down the Dniepr to Kherson.

John Howard, the celebrated English philanthropist, expired at Kherson, on the 20th of Jan., 1790; and is interred about 3 m. N. from the town, where an obelisk has been erected to his memory.

KHIVA, KHARESM, or ORGUNJE (an. *Chorasmia*), an indep. khanat of Turkestan, in Central Asia, properly comprising only a narrow strip of fertile land along the Oxus, in the lower portion of its course. Of late years, however, it has established a supremacy over the wandering Turkman hordes to the S. and W., and holds Mervè (Murù), with its territory, on the road between Khorassan and Bokhara. The dominion of the khan extends between the 36th and 44th degrees of N. lat., and 52nd and 64th of E. long., having E. the Karakalpack territories and Bokhara, S. Afghanistan and the Persian prov. of Khorassan, W. the Caspian, and N. the Kirghiz Steppe and the Sea of Aral. The Oxus is the great fertiliser of the tract it passes through; many canals communicating with it have been cut for the purpose of irrigation, some of which are 30 m. in length; and the cultivated lands in the neighbourhood of the capital are surrounded with wet ditches. The climate and products are much the same as in Bokhara; the summer is warm, the air dry, and evaporation rapid; the winter is short, and ice lasts only a few days at a time. Agriculture is better attended to in the small extent of productive land comprised in this khanat than in some of the neighbouring countries. The lands, after being irrigated, are manured; but animal manure is scarce, from the fæces of the cattle being used as fuel, and their being seldom stalled. Wheat, barley, *djugari* (*Holcus saccharatus*), millet, sesamum, oleaginous plants, lentils, fruits, linseed, cotton, hemp, flax, and some rice are grown. The vine thrives well; but the inhab., being chiefly Mohammedans, little wine is made. The distillation of brandy from raisins has, however, been introduced by the Persians; and, out of the capital, the inhab. indulge pretty freely in its use. An intoxicating liquor, as well as a narcotic product for smoking, is obtained from hemp. Little tobacco is grown. Many of the fruits are good, and the melons are excellent; but the culture of fruit-trees is nearly abandoned for that of grain or fodder. Wood is sufficiently abundant in the N., and is not dear in the capital; but over all the desert the only vegetation is a few stunted bushes. Horned cattle are few; sheep and goats are much more numerous, their flesh, with that of the horse, forming the chief animal food of the inhab. Camels are the principal beasts of burden, and almost every khivan possesses one. Agriculture and cattle rearing occupy most of the settled pop.; but some cotton and silk stuffs and shawls are made by the women, and exported to the neighbouring countries. The dominant race in Khiva, as in Bokhara, is the Uzbek, to which the khan belongs; the rest of the pop. consists of Ouigours, Turkmans, Karakalpacks, Tadjiks, about 2,000 families, chiefly prisoners of war from Bokhara, and a few Afghans, Jews, Armenians, Persians, Eimauks, and Kirghiz. The Uzbeks enjoy no privileges over the rest, but they compose the chief portion of the khan's army. The Turkmans are altogether nomadic, and live principally by plunder, especially the capture and sale of slaves. They seize upon the subjects of Russia on the Caspian, and make many inroads into Khorassan: Bokhara and the whole of the Turkestan is supplied by them with Persian captives. It is estimated that from 30,000 to 40,000 of the pop. of the khanat are slaves. They have frequently a piece of land given to them to cultivate, or are permitted to exercise some handicraft, paying an annual rent to their masters for the privilege, from the produce of which they are afterwards frequently able to ransom themselves. No foreign slave, however, even after the purchase of his liberty, is permitted to leave the country. Meyendorf, in comparing this khanat with that of Bokhara, observes:—'Though the inhab. of the two countries are of the same race, and profess the same religion, the schools of Khiva have never enjoyed the same reputation as those of Bokhara; the Khivans are more barbarous than the Bokharese, as is attested by an inferior agriculture, worse habitations, a more limited commerce, less wealth, and a more savage mode of life.' (Voyage à Boukhara, p. 111.) According to Burnes, the Khivans are at best but an organised banditti, protected by the natural strength of their country. Dreadful scenes of cruelty and barbarism are occasionally witnessed even at the capital. M. Arminius Vambery, a Hungarian gentleman, who travelled through the country, in 1860-61, in the disguise of a dervish, describes one of these atrocious spectacles:—'In the last court (of a prison, at the city of Khiva), I found about 300 Tchaudors, prisoners of war, covered with rags; they were so tormented by the dread of their approaching fate and the hunger which they had endured several days, that they looked as if they had just risen from their graves. They were separated into two divisions, namely, such as had not yet reached their fortieth year, and were to be sold as slaves, or to be made use of as presents, and such as from their rank or age were regarded as Aksakals (grey beards) or leaders, and who were to suffer the punishment imposed by the khan. The former, chained together by their iron collars in numbers of ten to fifteen, were led away; the latter submissively awaited the punishment awarded. They looked like lambs in the hands of their executioners. Whilst several were led to the gallows or the block, I saw how, at a sign from the executioner, eight aged men placed themselves down on their backs upon the earth. They were then bound hand and foot, and the executioner gouged out their eyes in turn, kneeling to do so on the breast of each poor wretch; and after every operation he wiped his knife, dripping with blood, upon the white beard of the hoary unfortunate. Ah! cruel spectacle! As each fearful act was completed, the victim liberated from his bonds, groping around with his hands, sought to gain his feet. Some fell against each other, head against head; others sank powerless to the earth again, uttering low groans, the memory of which will make me shudder as long as I live.' (Travels in Central Asia, by A. Vambery, 8vo., London, 1864.) M. Arminius Vambery and other travellers express fears that Russia will gradually take possession of Khiva. After reading the above, any civilised being must exclaim 'God speed Russia!'

The trade of such a country may be described in a few words. Four routes exist for communication with Russia: one through the Kirghiz steppe, W. of the Aral sea, to Orenburg; a second

Digitized by Google

by way of Sarachak, or Sarachik, on the Oural, also to Orenburg; a third through Sarachak to Astrakhan; and a fourth from Khiva to Karaghan, on the E. shore of the Caspian, whence goods are sent by sea to Astrakhan. About 2,000 camels go annually to Orenburg, Astrakhan, and some towns of Caubul and Persia, with wheat, barley, silk and cotton fabrics, and yarn; and about a dozen large boats come annually from Astrakhan to Karaghan and the Gulf of Manghislak, with the products of Russia and the West, to be exchanged for those brought by the caravans from Khiva. The chief imports are slaves, coin, iron and copper, wrought and unwrought; handkerchiefs, wax, honey, sugar, tea, which, as in Bokhara, is a favourite article; cochineal, spices; and hardware. The commerce with Persia is insignificant. The merchandise which goes to Asterabad is conveyed on camels, at a charge averaging from 3½ to 4 roubles per *pood*, under the conduct of Turkman guides. The trade of Khiva is solely in the hands of Turkmans, Khivans, and Persians; none but Mohammedan merchants being suffered to transact business within the khanat. No foreign merchants pass through or into the country with ease or safety; when not openly robbed of a large portion of their goods, the caravans are delayed by the khan's officers, the bales of merchandise are opened, and much property has been at times extorted. The khan demands duties at the port of Manghislak on the Caspian, which lies opposite Astrakhan, and sometimes on the Jaxartes, E. of the Aral Sea. In order to reach Bokhara by a route avoiding Khiva altogether, the Russians attempted, in 1820, to send caravans by way of the latter river; but the khan took umbrage at a measure which turned the traffic from his own territories, and sent an army to the Jaxartes, which intercepted a caravan, and occasioned the destruction of its merchandise. The commercial duties realised by the khan amount to, perhaps, half his total revenue, which latter is roughly estimated at 2,000,000 roubles, the remainder of this sum being made up of 1-5th of the produce of every predatory excursion of his subjects, a family tax of 3 ducats a year, taxes on war-horses, and on land cultivated by slaves. A regular transit duty of 2½ per cent. *ad valorem* is levied on all kinds of merchandise passing through the country.

The government is despotic: for judicial affairs, each town has its *atalyk*, or judge; and in the cap. is a central court of justice in the last resort, composed of the *cadi* or chief priest, the four ministers, and other members nominated by the khan. The khan may sometimes raise a force of 10,000 men, and has a park of nine pieces of ordnance. His troops, which are mostly cavalry, are entirely composed of Uzbeks and Turkmans, and armed like those of Bokhara: some of the Turkmans carry bows and arrows. There are in the khanat, besides Mervè, only two towns worth notice,—Khiva, the cap. and seat of government, and Orgunje, the chief commercial town, and largest of the two. Khiva was tributary to Bokhara till the late khan rendered it independent, early in the present century. Political relations have long existed between Russia and Khiva, envoys having been sent from the one to the other as early as the time of Peter the Great. Latterly, the Russians have determined to put an end to the robberies committed by this horde; and though the impracticable nature of the country has hitherto hindered them from reaching Khiva, there is little doubt of their ultimate success.

Khiva, a town of Central Asia, cap. of the above khanet, and residence of the khan; in an irrigated and fertile plain near the Oxus, 290 m. WNW. Bokhara, and 720 m. SSE. Orenburg, on the high road between those two cities. Pop. probably from 10,000 to 12,000. The town is surrounded by a mud wall and wet ditch, and contains about 700 houses, the suburbs comprising 1,200 more. Khiva has a palace, which, like nearly all the rest of the dwellings in the town, and in the khanat generally, is of mud, though placed upon an eminence composed of stone. The only stone buildings in the town are three mosques, one having a handsome minaret, a school, and a caravansary. Khiva is externally picturesque, being surrounded with gardens; but its streets are so narrow as scarcely to admit a laden camel. Its pop. is very mixed; its chief trade is in slaves, for which it is the largest mart in Independent Turkestan. The way in which slaves and prisoners of war are brought into Khiva is thus described by M. Arminius Vambery, the Hungarian traveller, mentioned in the preceding article:—'Next morning I did really see about a hundred horsemen arrive from the camp covered with dust. Each of them brought at least one prisoner with him, and amongst the number, children and women, also bound either to the tail of the horse or to the pommel of the saddle; besides all which, he had buckled behind him a large sack containing the heads of his enemies, the evidence of his heroic exploits. On coming up he handed over the prisoners as presents to the khan, or some other great personage, then loosened his sack, seized it by the two lower corners, as if he were about to empty potatoes, and there rolled the bearded or beardless heads before the accountant, who kicked them together with his feet until a large heap was composed, consisting of several hundreds. Each hero had a receipt given to him for the number of heads delivered, and a few days later came the day of payment.' (Travels in Central Asia, by A. Vambery, London, 1864.)

KHOI, a town of Persia, prov. Azerbijan, and cap. of a distr. 70 m. NW. Tabriz. Pop. about 5,000 families, or 30,000 inhab. It is situated on a tributary of the Kur, about 25 m. N. from the lake of Urmiah, and is a handsome, well built town, in much better repair than most others in Persia. It has few mosques or large public buildings; but the regular streets, shaded with avenues of trees, give the town, on the whole, an appearance of respectability and even grandeur. A large and handsome bazaar, with a caravansary, furnishes ample accommodation to the merchants, who carry on a considerable trade with Turkey and E. Persia. The suburbs were formerly inhabited by about 600 Armenians; but their number has greatly decreased since the war with Russia, when most of them migrated N. of the Araxes. The plain of Khoi is celebrated as the scene of a great battle fought in 1514 between Shah Ismael and Selim I., in which the Turks, though the most numerous, were signally defeated.

KHOJEND, a town of Indep. Turkestan, in Central Asia, knanat of Khokan, near its W. extremity, cap. distr. of same name, on the Jaxartes, 90 m. W. Khokan, and said to be as populous as that city, or Samarcand, from which it is 150 m. NE. It is built on rising ground, and protected by walls, which, however, are much decayed on the S. and W. sides. It is surrounded by wet ditches, and intersected by canals. It is of high antiquity; and near it, Nazarov says, are some remarkable ruins. Khojend has manufactures of coarse cotton goods, and a brisk trade in these, and in Russian merchandise. It is the station at which the caravans entering the khanat from

Digitized by Google

Bokhara pay toll, as the town of Usch is for those entering from the Chinese dominions.

KHOKAN, KOKAN, or FERGHANA, an indep. khanat of Turkestan, in Central Asia, between lat. 40° and 45° N., and long. 67° and 75° E.; having N. the Kirghiz steppe, E. and SE. Chinese Turkestan, S. the table-land of Pamere and Bokhara, and W. the desert territory of the Karakalpacks. It is, for the most part, mountainous, comprising a portion of the region which forms the W. wall of the great table-land of E. Asia. (See ASIA.) The Jaxartes (Sir or Sihoon), which rises not far beyond the E. boundary, traverses it E. to W., about its centre, watering many fertile tracts. Khokan is divided into 8 provinces or districts. Great extremes of climate are experienced at different seasons. The products are very similar to those of the countries to the S. and W. This khanat has a greater extent of cultivable and pasture land than Bokhara. In the S., corn and fruits, especially grapes and melons, grow in great perfection; and a proverb of Central Asia praises the 'pomegranates of Khojend with the apples of Samarcand.' This was the patrimonial kingdom of the Emperor Baber, who celebrates in lively terms its beauty and fertility. Cotton and the mulberry are articles of constant culture, silk being the chief staple, and one for which Khokan is famous. The pastures on the Jaxartes are excellent: sheep are the principal live stock, and wool is an important product. The camel, horse, and ass are extensively used; and horse-flesh is a common article of food. Game is very plentiful. Coal, iron, copper, jasper, and lapis lazuli are the chief mineral products. The use of coal has been long known in Khokan, since Abulfeda speaks of 'stones that flame and burn' being found there; and this important mineral may, at no very distant period, become a powerful auxiliary in civilising this, at present, semi-barbarous region. The inhabs. are mostly Uzbeks; to which race, as in Bokhara and Khiva, the khan belongs. They are Mohammedans, and equally bigoted and strict in their religious customs with the Bokharese. The dialect they use is the Jagatai-Turkish. The rest of the pop. are chiefly Tadjiks (see BOKHARA) and Kirghiz, who inhabit the N. and E. The Tadjiks are deprived of the right of property, which they enjoy in Khiva and Bokhara, and are only suffered to cultivate the soil under the Uzbeks. After agriculture, and the rearing of sheep and silkworms, the chief occupation of the people is the manufacture of embroidered silks and cotton goods. The former are much worn by the Kirghiz hordes; the latter are sent in large quantities to Bokhara, the returns being made in Russian goods, as iron, steel, woollen cloths, otter-skins, cochineal, vitriol, and sandal-wood. Shawls and other Indian manufactures come from Cashmere and the Punjab, by Caubul and Balkh. The trade between Khokan and China has been long established. It is related by Ferishta, that 'when Baber was prince of Fergham, a rich caravan of Chitta and China, which was crossing the mountains of Andijan, was buried in the snow. He ordered all the goods to be collected, and sent messengers to China to proclaim the accident, and bring the owners or their heirs to his court. Upon their arrival, at the end of *two years*, he entertained them hospitably.'

Besides the roads to Bokhara, Kabul, and Yarkand, there is a caravan route of 70 days' journey to Semipalatinsk (lat. 50° 30′ N., long. 80° E.) on the Irtisch, one of the principal seats of Russian trade; to which there is a shorter road, of 50 or 55 days, from Tashkand (lat. 43° N., long. 69° E.), one of the chief towns of Khokan. The direct routes to Peshawur over the Pamir steppe are extremely difficult, and can be attempted only in summer. About 300 or 350 m. from Khokan, and about 400 m. from the Sea of Aral, is the Russian fort of Ak Masjid, on the Sir. Steamers can approach within 30 m. of Tashkand. (Report on the Trade of Central Asia (Official), London, 1864.) A duty of 2½ per cent., *ad valorem*, is laid on all merchandise imported by Soonite Mussulmans, and 5 per cent. on the goods of all other individuals passing the frontier; but these duties are levied with little regularity. Internal commerce is entirely free, as in Bokhara, and the trade is second only to that of the last-named country. Each town possesses at least one caravansary, and has stated fairs, at which a good deal of business is transacted. The following are the subdivisions of Khokan:—Khokan, Marghilan, Andiján, Narmangán, Shehr-i-Khán, Khojand, Nou, Urctappa, Chúst, Kásán, Ispárah, Kelwa, Karakchi, Tashkand, Hazrat Sultán, Gultala, and Peskak. Besides the cap., the chief towns are Andejan, Khojend, Turkestan, and the others which give name to the several provs. The government is despotic; the khan maintains an army of about 10,000 cavalry, which he can, on an emergency, increase to 30,000. According to some Chinese records, it would appear that this country was formerly subject to China; it has however, for many ages, thrown off its allegiance. In the early part of the present century, many of the adjacent Kirghiz tribes were reduced to subjection; but, about 1830, the khan having supported the Mohammedans of Cashgar against their Chinese masters, was totally defeated in a great battle, and his territories invaded by the latter; since which the power of Khokan has been on the decline. This and the neighbouring countries are interesting, from having been the seats of nations whose armies have frequently changed the political face of Asia, and even in some degree of Europe. Besides giving birth to Baber, the conqueror of Hindostan, who ascended the throne of Ferghana in 1494, Khokan and its vicinity abound with localities intimately connected with the history of Jenghiz Khan and Timour.

It is probable that this country will, at no distant period, be united to Russia. The boundary between Russia and Khokan, as determined about 1828, was fixed at the Kuk-su, or 'Blue river,' but the Russians have long ago crossed that river, and erected forts on the Khokan side.

KHOKAN, a city of Central Asia, cap. of the above khanat, and seat of its gov., on the Jaxartes, 230 m. NE. Samarcand, and about the same NW. Cashgar. Pop. estim. at 75,000. Khokan is an open town, but contains a palace fortified with a wall of mud, of which material most of the houses in the town are constructed. The only exceptions are three bazaars, built of stone, open twice a week for the purposes of trade; some ancient monuments in different parts of the city, and some large stables constructed of brick, and belonging to the khan. There are a great many mosques and public schools, and several caravansaries. Wheeled carts, or 'arabahs,' are common. Among the pop. are many Cashmerians, and some Hindoos, Jews, Nogai-Tartars, and Russians. The streets are narrow and unpaved, but its vicinity is very productive, and sprinkled with numerous gardens, cultivated fields, meadows, and villages.

KHONSAR, a town of Persia, prov. Irak-Adjimi, 82 m. WNW. Ispahan; lat. 30° 7′ N., long. 50° 26′ E. It is said to contain 2,500 families, or from 12,000 to 13,000 people. Its situation is singularly interesting and romantic, at the base of

Digitized by Google

two ranges of mountains, running parallel to each other, and so very close, that the houses occupy the bottom, and, at the same time, the face of the hills to some height. The town is about 6 m. long, but only ½ m. broad, and each house is separated and surrounded by its own garden. The hills afford an ample supply of water; and the appearance of the black and barren rocks, without a particle of vegetation hanging over the gardens, forms a striking contrast with the luxuriant and variegated foliage of the plantation. No corn of any kind is grown in the valley, but the fruit is so abundant, that it alone enables the inhab. to procure in return every article either of necessity or convenience.

KHOOLOOM, KHULM, or TASH-KURGHAN, a town of the khanat of Koondooz, in Central Asia, on the Khulm river, a tributary of the Oxus, and on the high road between Balkh and Koondooz, 40 m. E. by S. the former, and 68 m. W. by S. the latter city. Pop. estimated at 15,000. The houses are built of clay and sun-dried bricks, of one story, with domes, in the usual fashion of the country, and each stands by itself in a walled inclosure, often containing fruit trees. The streets are straight, of a moderate breadth, intersecting each other at right angles, and have commonly a stream of water running through them. The town is surrounded by a wall of earth, with wooden gates; a sufficient protection against sudden incursions of horsemen. It is also guarded by two forts, one on an eminence, on the right bank of the river to the SE.; the other on the left bank, and on the plain: both are of earth, and of no strength. There are 4 tolerably good serais for travellers. The inhabs. are chiefly Tadjiks and Caubulees, with a sprinkling of Uzbeks. The shops for dyes and drugs are usually kept by Hindoos, who also act, in a small way, as bankers. The vendors of dried fruits are mostly from Caubul. The Uzbeks engage little in traffic. They are all, rich and poor, dressed much alike, in long gowns of striped cotton ginghams. Bazaars are held every Monday and Thursday, when horses, asses, mules, camels, cows, sheep, and goats, are brought to their respective markets. A sheep sells at from two to four rupees; they are of the large tail variety, and the fat of the tail, and along the back, is commonly one-third of the weight of the sheep, including the bones. Cotton cloths, cotton in the pod, tanned leather, raw hides, fuel, grapes, raisins, pistachio nuts, pomegranates, dried plums, rock salt, brown leather boots with iron-shod heels, dyes, as the pomegranate bark, madder (indigenous), and indigo, from Hindostan, are exposed for sale, along with blankets of fine wool from Chitral, and raw wool from thence and Budukhshan. Printed chintzes, quilts, and turbans are also brought from India. Coarse saddlery is much in request. There is one market entirely for melons, which are raised in this neighbourhood in great quantities.

Old Khulm (now entirely destroyed), is situated about 4 m. from Tash Kurghan. It was a place of importance in the time of Khilich Ali (a former chief of Balkh); but its situation on the plain exposed it to predatory incursions; and the Hazaurehs dammed up or diverted the course of the river, upon which the fertilisation of its soil depended. The chief therefore removed his capital to Tash-Kurghan, much to the regret of the people of Khulm, whose orchards had been celebrated throughout the E. for the quantity and quality of their produce.

KHORASSAN (*country of the sun*), a prov. of Persia, lying between the 31st and 38th parallels of N. lat., and the 53rd and 62nd degrees of E. long., being bounded NE. and N. by the Oxus and country of Balkh; S. by Caubul and Seistan; and W. by Irak, Asterabad, and Daghestan. Its boundaries, however, have been very different at different times; and its present area, which is small comparatively with the great extent of country that it comprised prior to the invasion of the Affghans, is roughly estimated at about 80,000 sq. m. Pop. believed to amount to 1,900,000. Its surface is much diversified by plains and mountains; a large portion consists of arid rocks, destitute of vegetation or fresh water, and of salt and sandy deserts, among which may be found a few fertile oases. The Elburz range of mountains crosses the N. part of the prov. eastward, and between this lofty ridge and the Caspian Sea is an immense uninterrupted plain, which includes the steppe of Khiva, and forms a part of that extensive flat called by the natives Dusht-el-Kipchauk. That portion of the plain which belongs to Khorassan is without a single cultivated spot or permanent habitation, and its scanty pop. comprises only a few tribes of wandering Turkmans. At the foot of the mountains, however, there are many rich valleys, watered by numerous rivulets, and formerly well peopled and cultivated. This district, known in Persia as the *Attock*, once comprised several large towns, all of which are now in ruins, and totally deserted, in consequence of the incessant attacks of the Turkmans, who have obtained full possession of the whole tract. The Elburz mountains send ramifications southward, which penetrate from 60 to 100 m. into the plain. This range contains considerable quantities of iron, which, however, is not wrought: the turquoise mines of Nishapoor are rich, and if managed with skill would yield large revenues; but the exorbitant demands of the Persian government on the tenants of the land have led to the closing of many of the most productive mines. (See NISHAPOOR.) In this portion of the country are many fertile tracts, which, were there any security for property, would no doubt be cultivated and well peopled. The valley of Mushed is of great length, commencing about 10 m. NW. of Sheerwan, and extending in a SW. direction for upwards of 50 m. beyond Mushed. Its breadth varies from 12 to 30 m., and it comprises, besides Mushed (which has a pop. of 30,000), the towns of Chinnarán, Radkan, and Koochan, with a great extent of good land, cultivated by Koordish settlers. The W. limit of Khorassan is nearly that of the great saline desert, which forms its predominating feature. This tract, which, though considerably more lofty, is considered to be connected with the desert N. of the Elburz ridge, skirts the districts of Teheran, Kashan, and Ispahan, insulates that of Yezd, and extends from Toorsheez southward to the confines of Fars, Kerman, and Seistan, including hardly any habitable country except that near Beerjoon and Ghayn. Its E. limit is indicated by a line connecting the towns of Herat, Subzawar, Furrah, and Dooshak. The nature of this desert varies much in different parts. In some places it produces a few of those plants that thrive in a salt soil, while in others it consists of a crackling crust of dry earth, covered with salt efflorence: a considerable portion is marshy, and in the lower parts water accumulates during winter, which is evaporated in the hot weather, leaving lakes of salt on a bed of mud. Again, in certain districts, sand abounds in plains, interspersed with waving hillocks, easily moved by the wind, and sometimes so light and impalpable as to prove not only disagreeable but extremely dangerous to travellers, who not unfrequently are buried in its heaps. Of the rivers of Khorassan, the Tedzen (an. *Ochus*) is

Digitized by Google

next in size to the Oxus: it appears to rise near Seraks, and after receiving the Meshed and other streams, falls into the Caspian Sea in lat. 38° 41′ N. The rivers of the interior are few and inconsiderable, and for the most part are lost in the sand, like the Zenderoon of Ispahan.

The climate of Khorassan varies according to the nature and elevation of the districts into which it is divided. In some parts it is temperate, in others extremely cold. The deserts are infested by the *simoom*, which is as fatal here as in Arabia. The cultivated districts produce the grains and fruits of S. Europe, with asafœtida, tragacanth, and other gums; but timber is rare. Cattle-feeding is the chief employment of the nomad race that roam over the desert; and the camels and goats of Khorassan are celebrated for their fine soft hair, which is a valuable article of trade in the markets of Meshed and Nishapoor, the two largest towns of the province. The inhab. of the settled districts are Tadjiks or Persians, properly so called, and their number has been estimated at 1,200,000. The Ilyats, or nomads, comprise Turkmans, Djelers, and other Turkish tribes, and there are about 30,000 Kurds in the N. part of the province. The religion of all the inhab. is Mohammedan, and most of them belong to the sect of Ali. The province is divided into several governments; but the authority of the king of Persia extends only over the city of Meshed, Nishapoor, Turskish, and Tabas, with their dependencies. The S. parts belong to the Affghans, and the Uzbek Tartars and Turkmans wander over the N. and E., acknowledging only their own native khans. These wild tribes carry on incessant hostilities, invading each other's territories with bodies of irregular horse, who, after ravaging the country and burning the villages, carry off the inhabitants into slavery.

KHOTAN, or ILLITSI, a town of Chinese Turkestan, prov. Yarkund, on the high road between that city and Lassa, 260 m. ESE. the former: lat. 37° 10′ N., long. about 78° E. It is principally occupied by Uzbeks, and is said to be celebrated for 'its musk, and the beauty of its inhabs.' Khotan, according to Abulfeda and other Mohammedan geographers, was formerly a town of great consequence: it is still a place of considerable size, enclosed by ramparts of earth, and, though ill built, has broad streets. It is the station of a Chinese governor and garrison: has manufactures of silk fabrics, leather, and paper, and a brisk trade in these and various other articles, including *yu*, the jasper of the ancients.

KIACHTA, or KIAKHTA, a town of Asiatic Russia, gov. and prov. Irkutsk, being the centre of the trade and political intercourse between the Russian and Chinese empires. It stands immediately within the Siberian frontier, on a rivulet of the same name, a tributary of the Selenga, and upon a plateau elevated about 2,220 ft. above the sea, 55 m. S. by E. Selengiusk, and 180 m. SE. Irkutsk. Pop. estim. at 5,000. Kiachta is divided into an upper and lower town: the former, or the fortress of *Troiskoi Sawsk*, was founded when the first commercial treaty took place between Russia and China, in 1728. The town within is regularly laid out, in the form of a square; in the centre of which is the bazaar, or market place, a wooden building. Except a chapel of stone, and some of the public offices, built partly with brick, Kiachta is constructed wholly of wood. The church, government-house, barracks, and watch tower are the chief public edifices within the town: the various courts and government offices, imperial rhubarb depôt, and custom-house are in one of the suburbs. The lower town, a few versts distant, consists of only about 50 houses, inhabited by merchants, who conduct the trade with the Chinese, and some of whom are said to be very rich. The circulation of gold is entirely prohibited at Kiachta, and no person can pass the gates without being searched. (Travels in the Regions of the Upper and Lower Amoor, by T. W. Atkinson, London, 1860.)

On the Chinese side of the boundary is the Mongolian village of *Mia-mia-tchin* (the place of trade), which, like the Russian town, is laid out in a square form, and surrounded by a palisade. It is ill built, and has only from 1,200 to 1,500 inhab., all males, no women being allowed to reside in it. All the mercantile transactions are conducted between this village and Lower Kiachta, and the merchants of the two places visit each other without let or hindrance. The goods bought by the Russians are immediately sent to Upper Kiachta, to be examined by the custom-house authorities. The Russians exchange furs, sheep and lamb skins, Russian and Silesian broad-cloths, Russian and morocco leather, coarse linens, cattle, and especially bullion, for tea, raw and manufactured silks, nankeens, porcelain, sugar candy, rhubarb, tobacco, and musk. At the Kiachta Dec. fair, the tea bought by the Russians is, at an average, said to amount to 60,000 chests, or 4,200,000 lbs., of fine Pekoe; besides a large quantity of an inferior kind, much of which is consumed by the Siberians and nomadic Tartars. Goods may be conveyed from Kiachta to European Russia either by land or water (by the Lake of Baikal, the Angarà and Yeneisei); in the former mode the journey occupies a year, and in the latter three short summers, the rivers being for a great part of the year frozen over.

KIDDERMINSTER, an important manufacturing and market town, parl. bor. and par. of England, co. Worcester, hund. Halfshire, on the Stour, an affluent of the Severn, 13 m. N. Worcester, 16 m. WSW. Birmingham, 118 m. NW. London by road, and 134¾ m. by West Midland railway. Pop. of bor. 15,399, and of par. 20,870 in 1861. Area of par., 11,160 acres. The town, divided by the river into two unequal parts, is irregularly built, but has several good streets, and is well paved, lighted with gas, and kept clean by an underground sewerage. In the centre of the market place is the town-hall, a capacious brick structure, comprising, besides several other rooms, a large council-chamber for corporation meetings and quarter sessions. The church, which stands in a fine open space, on the brow of a hill, and close to the river, is a large Gothic edifice, richly adorned, and surmounted by a lofty pinnacled tower, the whole being in excellent repair. The interior has accommodation for 2,000 persons, and contains several fine old monuments. Connected with the church, at its E. end, is a Gothic chapel or chantry, now appropriated to the use of the grammar-school. On the E. side of the town is the fine district church of St. George, erected in 1823, at an expense of 18,131*l.*; the altar-piece is embellished with a representation of the descent from the cross, in carpet-work, executed with much taste and brilliancy of colouring. There are also places of worship for Independents, Baptists, Wesleyan Methodists, and Unitarians. The grammar-school, chartered by Charles I., has estates attached to it worth about 500*l.* a year; but though all the inhab. are entitled to send their sons here to be educated, free of expense, it is of little practical utility, and is attended only by a few boys. A free school, founded in 1795, provides instruction for about 25 boys, chiefly dissenters. There are numerous Sunday schools,

Digitized by Google

attended by about 3,000 children; and 3 national schools and 3 Lancastrian schools furnish instruction to above 1,100 children. The charitable institutions comprise several almshouses and a dispensary, with some clothing and benefit societies. Near the town is a chalybeate spring, the road to which is an agreeable and fashionable promenade, and in the suburbs are some elegant villas, inhabited by the wealthy manufacturers.

Kidderminster has been noted for its weaving industry since the time of Henry VIII., in whose reign it had a considerable trade in broad cloth. Linsey-woolseys were afterwards introduced, and were superseded, in their turn, by poplins, bombazeens, and carpets. The fabrics now made are carpets, finger-rugs, bombazeens, coverings for buttons, and waistcoat-pieces. The carpet manufacture, introduced in 1735, has long been the staple business of the town. The carpet fabrics comprise Brussels or *pile* carpets, Kidderminster or *in-grain* carpets, and Venetian carpets.

Kidderminster is a bor. by prescription, and received its charter of incorporation in 12 Charles I. Since the Mun. Reform Act it has been divided into three wards, the government being vested in a recorder, 6 aldermen, and 18 councillors. Quarter and petty sessions are held in the town-hall. It is also the seat of a county court. Corp. revenues, 5,156*l.* in 1862. In the reign of Edward I., Kidderminster sent 2 mems. to the H. of C., but the privilege being either lost or disused, it ceased to be represented, and the town had no voice in the legislature till the Reform Act conferred on it the privilege of sending 1 mem. to the H. of C. The electoral limits comprise the old mun. bor. and a small portion of the 'foreign' district. It had 614 reg. electors in 1865. Markets on Thursday: fairs, Holy Thursday, June 20, Sept. 4, and Nov. 26, for horses, cattle, linen and woollen cloth.

KIDWELLY, or CIDWELL, a mun. bor., market-town, and par. of S. Wales, co. Caermarthen, and hund. of its own name, on the Gwendraeth-Vechan, 9 m. S. Caermarthen, 179 m. W. London by road, and 234½ by Great Western railway. Pop. of par. 1,652 in 1861. Kidwelly is divided by the river into 2 townships, Old Kidwelly being on the W., and New Kidwelly on the E. or left bank. The former was once surrounded by walls with 3 gates, one of which is yet standing; but the houses have fallen to decay, and consist at present of little more than hovels. New Kidwelly, which is joined to the other by a stone bridge, has several respectable houses and numerous cottages. On a rocky eminence overlooking the old town stands the castle, said to have been built soon after the Norman Conquest, and now a large and imposing ruin in tolerable preservation, with many of its apartments and staircases still entire. The W. gateway is a noble specimen of architecture, and some of the towers at the angles retain their arched roofs of stone. The battlements command magnificent views of Caermarthen Bay and the country on both sides the Towy. The church, which is in the new town, is an old cruciform structure, with a tower and spire 170 ft. high: the transepts are now in ruins, and the centre aisle is the only part used for service. The ruins of a priory of black monks adjoin the church. The living is a vicarage in the gift of the crown, and connected with it is a rural deanery in the diocese of St. David's. There are places of worship also for Calvinist and Wesleyan Methodists, Presbyterians and other dissenters. A free-school is supported by funds in the hands of the corporation, and one other school is maintained by subscription. The industry of Kidwelly is chiefly employed in working coal, smelting iron, and making tin plates. It is not a place of much trade, however, owing to the choking up of the river, which is almost useless. There is canal communication with Pembrey, where there is a commodious quay; and a canal and tram-road connect it also with Llanelly, which has a flourishing and increasing trade. Kidwelly forms a part of the duchy of Lancaster, but is governed by its own mayor and 12 aldermen, whose privileges were not affected by the Mun. Reform Act. Markets on Friday: cattle fairs, May 24, July 22, and Oct. 29.

KIEF, a government of Russia in Europe, lying lengthwise along the right bank of the Dniepr, having N. the government of Minsk, W. Volhynia and Podolia, and S. Kherson. Area 19,184 sq. m.; pop. 1,944,334 in 1858. Principal rivers, Dniepr, by which it is bounded all along the E., Pripet, which traverses its N. division, Teteriff, and other affluents of the Dniepr. Surface flat; soil very fertile, so much so that, though agriculture is very indifferent, the return to most sorts of grain is said to be as 6 to 1. Cattle numerous, large, and of a fine breed. Horses small. Forests extensive. In its N. parts there are considerable marshes. Manufactures, exclusive of those carried on in the houses of the peasantry, can hardly be said to exist. Commerce trifling, and mostly in the hands of the Jews. Principal town Kief.

KIEF, the cap. of the above government, and the former residence of the grand dukes of Russia, on the Dniepr, a little below the confluence of the Desna with that river, 273 m. N. Odessa. Pop. 60,682 in 1858. Kief is a very ancient city. It was the earliest seat of the Christian religion in Russia, and was for a considerable period the cap. of the empire. But it subsequently underwent many vicissitudes, being sometimes subject to the Lithuanians, and sometimes to the Tartars, and the Poles. In 1686, however, it was finally ceded to Russia, and has ever since continued in her possession. The town consists of three parts—the old town, on an eminence elevated considerably above the river; Pitchersk, or the citadel, more to the S., and on a still higher eminence; and the lower town, or Podolsk, on a plain along the river. The first or old town contains the cathedral of St. Sophia, founded in 1037, and an object of the greatest veneration on the part of the Russians. The citadel is surrounded by a rampart. Within it is the arsenal, erected by Catharine II., a large handsome building, containing an extensive supply of arms. But the principal object of curiosity in the citadel is the famous monastery of Pitchersk, with its cathedral. It derives its name from *pitchora*, a cavern, because in the vaults beneath are preserved the bodies of several Russian saints. The tower or belfry of the cathedral, deemed by the Russians a master-piece of architecture, rises to the height of 304½ ft. The theological academy of Kief, founded in 1661, in the Podolsk, is one of the most celebrated in Russia. In 1833 a university was founded at Kief, intended to replace that of Wilna, suppressed after the Polish revolution. It has about 90 professors and assistants, with 600 pupils, and a library with more than 35,000 vols. The university buildings are at once large and handsome. One of the most remarkable edifices in the lower town is the exchange, a very large building, the great hall of which can accommodate 3,000 persons. The houses are, for the most part, of wood, and the streets narrow and crooked. The town is principally dependent on the pilgrimages to the cathedral and the

Digitized by Google

monastery, and on the academy. In 1798 a fair, formerly held at Dubno, was transferred thither. It takes place from the 10th to the 30th January, and is attended by all the surrounding nobles, as well as by great numbers of merchants and other descriptions of people.

KIEL, a town of the duchy of Holstein, Germany, on the N. shore of the prov. at the bottom of a beautiful bay, and at the terminus of a line of railway from Hamburg. Pop. 17,543 in 1861. Kiel is handsome, well-built, and thriving. The university, founded in 1665, has many distinguished men among its professors: it has a valuable library comprising 70,000 volumes, and is attended at present by about 200 students. There is also an excellent grammar school, with an orphan-house and a workhouse. The church of St. Nicholas is a fine old building; a handsome palace—formerly inhabited, at occasional visits, by the kings of Denmark—stands on a hill adjoining the town.

Kiel has manufactures of hats, starch, tobacco, and refined sugar. The harbour is safe, and has water sufficient for large ships. A good deal of trade and ship-building is carried on. The Holstein canal, forming a navigable communication between the Eyder and the Baltic, unites with the latter 2 m. from the town. There is a great annual fair in January.

KILDA (ST.), or HIRT, a small island belonging to Scotland, the most remote of the Hebrides, or Western Islands, in the Atlantic Ocean, 60 m. W. from Uist. It is about 3 m. in length by 2 m. in breadth, and contains about 4,000 acres, having attached to it a few dependent and inferior islets. Except at the landing place on its S. side, and at a rocky bay on the N., the island is wholly fenced round with lofty inaccessible precipices. The landing place affords, except during southerly winds, good anchorage. St. Kilda is principally occupied by four hills, and though the soil is but thin and poor, it is, owing to the moisture and mildness of the climate, covered with luxuriant verdure, and affords pasture for some hundreds of sheep and a few cows. A small portion of the surface is in tillage, and produces the variety of barley called bere or big, and oats; but owing to the frequent and tremendous storms by which the island is visited, the crops are exceedingly precarious, and are not unfrequently destroyed. The inhabs. consist of about 30 families, of 5 or 6 individuals each, who live together in one poor hamlet. The island being resorted to by a vast number of sea-fowl, the inhabs. are principally engaged in fowling, and are mainly dependent on the eggs, flesh, and feathers of the birds. Fowling is here, as in all similar localities, an extremely perilous occupation, and one requiring great nerve and dexterity. Fishing is, also, a considerable resource. The people are dirty in their habits, destitute of most of the comforts of life, and apparently unhealthy and short-lived. The island belongs to a single proprietor, who lets it to a middleman, by whom it is let to the inhabs. The latter pay their rents in feathers and bere. The pop. has long been nearly stationary.

KILDARE, an inland county of Ireland, prov. Leinster, having N. Meath, E. Dublin and Wicklow, S. Carlow, and W. King's and Queen's Cos. It contains 418,415 statute acres, of which 66,447 are unimproved bog and waste, consisting principally of portions of the bog of Allen (which see). Surface mostly flat or but slightly undulating; and, with the exception of the bog, the soil is mostly clayey and fertile. The famous common, called the *curragh* of Kildare, in the centre of the co., contains about 5,000 acres, and is said to be unmatched for the softness of its turf and the richness of its verdure. Agriculture in this co. has been materially improved in recent years, and better implements, better stock, and improved processes have been generally introduced. There are some very large estates; but property is, notwithstanding, a good deal divided. Farms vary in size from 5 up to 200 and even 500 acres; and have, indeed, been less subdivided in this than in most Irish counties. Minerals and manufactures unimportant. Principal rivers Barrow, Liffey, and Boyne; the last-mentioned river having its principal source in this co. near Carbury. It is also intersected by the Grand Canal, and by its branch leading to Monastereven and Athy. It has no considerable town, Athy being the most populous. Kildare contains 10 baronies and 113 parishes; it returns 2 mems. to the H. of C., both for the co. Registered electors, 3,055 in 1865. In 1861, the co. had 14,596 inhab. houses, 15,874 families, and 90,946 inhabitants; while in 1841, it had 18,556 inhabited houses, 20,338 families, and 114,488 inhabs.

KILIA, a small town of European Russia, in Bessarabia, on the N. bank of the Kilia, an arm of the Danube, about 8 m. from its mouth. It has some trade; but owing to the shallowness of the water over the bar at the mouth of this arm of the river, it is not likely ever to become a place of any importance.

KILKENNY, an inland co. of Ireland, prov. Leinster, having N. Queen's Co.; E. Carlow and Wexford, from which it is separated by the Barrow; S. Waterford, from which it is separated by the Suir; and W. the latter and Tipperary. Area, 506,833 statute acres, of which 96,569 are unimproved mountain and bog. Though in parts hilly, the surface is mostly either flat, or but slightly undulating. Soil of various qualities; but, for the most part, it rests on a limestone bottom, and is light, loamy, and in the valleys particularly fertile. In some districts the dairy husbandry is extensively carried on. Property mostly in very large estates. Farms of various sizes, but generally small. Partnership tenures are not uncommon; and farm houses and cottages are, in general, very inferior. There are extensive beds of coal in this co., and collieries have been wrought at Castlecomer for more than a century; but, owing to the excess of sulphur, the coal is but little used for domestic purposes, and is principally employed in malting and lime-burning. The woollen manufactures formerly established in this co. are nearly extinct, and, except the grinding of corn into meal and flour, and some breweries, distilleries, and tanneries, the manufactures now carried on are quite inconsiderable. Kilkenny is intersected by the Nore, and bounded on the E. by the Barrow, and on the S. by the Suir; so that it has peculiar facilities for the shipping of its produce, which may be conveyed either to Waterford by the Barrow and the Suir, or to Dublin by the Barrow and the Grand Canal. It contains 9 baronies and 127 pars.; and sends 3 mems. to the H. of C., being 2 for the co. and 1 for the bor. of Kilkenny. Registered electors for the co. 5,151 in 1865. In 1861, the co. had 19,884 inhabited houses, 21,111 families, and 110,341 inhabitants; while, in 1841, Kilkenny had 32,147 inhabited houses, 34,805 families, and 202,420 inhabs.

KILKENNY, an inland city and parl. bor. of Ireland, prov. Leinster, cap. of the above co., on the Nore, 72 m. SW. Dublin, and 27 m. N. by W. Waterford, on the South Eastern railway. Pop. 14,174 in 1861, against 23,625 in 1841. The parl. bor. extends over a space of 17,012 imp. acres, and forms a co. of itself; the portion on the E. side the

Digitized by Google

river, called St. Cannice, or Irishtown, being on the estate of the Bishop of Ossory. Kilkenny is well-built, excepting the suburbs, and beautifully situated. The principal streets are parallel to the river, but there are many cross streets. The principal structures are the castle and cathedral. The former, which is of great antiquity, having been built by Strongbow, has been long the property and residence of the Ormonde family. It has in modern times been almost entirely rebuilt, and has been rendered a commodious as well as magnificent residence. The church of St. Cannice, the cathedral of the see of Ossory, is a large venerable pile of Gothic architecture: it has several monuments, and near it is a round or pillar tower 108 ft. high: the bishop's palace and the deanery are also close by. The co. of the city comprises the parishes of St. Mary, St. Patrick, St. John, and St. Cannice. The church of St. Mary is an elegant modern building; that of St. John, which was the chapel of the monastery of the same name, has been restored, so as to preserve the character of its former singular style of architecture, in which the windows are replicated in such close succession, that the intervals are merely mullions, whence it is called the Lantern of Kilkenny. There is a Rom. Catholic chapel in each parish, that of St. Mary's being looked upon as the bishop's cathedral. Chapels are also attached to the Presentation Convent, and to the Dominican and Capuchin friaries. The ruins of the Franciscan and of the Dominican, or Black Abbey, add greatly to the interest of the place.

A public grammar-school, endowed by one of the earls of Ormonde, and elevated to the rank of a royal college by James II., has accommodation for eighty resident pupils: the house, which stands in a retired situation, on the banks of the Nore, was rebuilt, at the public expense, towards the close of last century: the children of the inhab. of Kilkenny are admitted at half price. Here is also a charter-school in which twenty-four boys are instructed in weaving, a seminary for candidates for the R. Catholic priesthood at Birchfield, a large female school, conducted in the best possible manner by the nuns of the Presentation Convent, a parochial school, and a female orphan house. There are about 1,500 pupils in the public, and 1,600 in the private schools. The principal charitable institutions are the infirmary for the co., the fever hospital, and a lunatic asylum, independent of the county district asylum. There are several almshouses, and two loan funds. The charitable society affords relief to sick tradesmen and to their widows: the benevolent society to the bedridden poor. The workhouse for the Kilkenny union, opened in 1842, is an extensive building, having accommodation for 2,000 inmates. A public walk, called the Mall, extends upwards of a mile along the bank of the Nore.

A charter, granted to the city by William earl marshal, was repeatedly confirmed by successive sovereigns. Elizabeth combined the two boroughs into a single corporation. Under the Municipal Reform Act, the corporation consists of a mayor, two aldermen, and eighteen councillors. Previously to the union, Kilkenny and Irishtown sent 4 mems. to the Irish H. of C.; and, since then, they have sent 1 mem. to the imperial H. of C. The right of voting was formerly in the freemen and freeholders of the co. of the city, the freedom of the city being obtained by birth, servitude, or by gift of the corporation. Registered electors, 574 in 1865.

The Ormonde family have exerted themselves at different periods to introduce manufactures into Kilkenny. In this view, Pierce, the third earl, brought over a colony of Flemings skilled in the making of tapestry and carpets, but without success. The first marquis expended large sums in attempts to establish the linen manufacture. That of frieze, after being carried on for a considerable period, was eventually transferred to the neighbouring town of Carrick-on-Suir. Wool-combing was also introduced, and the manufacture of blankets was extensively carried on; but this also has all but entirely failed. Several flour and corn mills have been erected in or near the city, and there are several distilleries, breweries, and tanneries, and a starch manufactory: but the principal dependence of the town is on its retail trade. A great number of pigs are also killed in the city, and it has an extensive butter trade. Within about 1 m. from the city are some marble quarries and a sawing and polishing mill. The marble is extremely beautiful: it has a black ground variegated with madrepore, bivalve shells, and other organic matter; it takes a fine polish, and makes beautiful chimney-pieces and such like articles. Kilkenny coal neither emits flame nor smoke; but its sulphureous exhalations unfit it for domestic purposes. Markets on Wednesdays and Saturdays, in the covered area of the Tholsel or town-house. Fairs on the 28th of March and Corpus Christi day, for cattle and wool, are frequented by purchasers from all parts of the country.

Kilkenny derived its name from a church or cell dedicated to St. Cannice, or Kenny. It appears to have been a place of some importance before the arrival of the English; for Strongbow built a fortress here, which was enlarged and strengthened by William earl marshal, and subsequently by the earls of Ormonde, in whose possession it has continued for centuries. Parliaments were frequently held in this city; and a famous statute, passed in 1371, for regulating the intercourse between the English and the native Irish, is still quoted by the title of the Statute of Kilkenny. In the wars of 1641, the assembly of the confederated Catholics held its meetings here, in a building which is still, on that account, an object of curiosity to strangers. In 1650, it surrendered to Cromwell.

KILLARNEY, a town of Ireland, co. Kerry, celebrated for the fine scenery in its vicinity, 1½ m. from the E. margin of the lake of the same name, 162 m. SW. Dublin, and 44 m. E. by N. Cork, on a branch line of the Great Southern and Western railway. Pop. 5,187 in 1861, against 7,127 in 1841. The town took its rise from iron and copper works in its neighbourhood, now discontinued from want of fuel; but, for a lengthened period, it has been principally indebted for its support and celebrity to the attractions of the surrounding scenery. It has three pretty good streets, with many bad alleys, and close filthy lanes and yards inhabited by vast colonies of beggars. The principal buildings are the par. church, built in 1802; a large heavy Rom. Cath. chapel, a Methodist meeting-house, a national school, a fever hospital with a dispensary, an almshouse for aged females, founded and endowed by Lady Kenmare, a market-house, theatre, court-house, and bridewell. In New Street is a convent for nuns of the order of the Presentation. Attached to their convent is a school, in which the nuns give gratuitous instruction to about 400 girls. General sessions are held four times a year; petty sessions on Tuesdays, and a manor court monthly: a party of the constabulary has a station here. The town has several good inns, which, in the visiting season, are much frequented. The only manufactures carried on in the town, are

Digitized by Google

those of toys and fancy articles, made of the wood of the arbutus, which is here very abundant. It has a considerable trade in corn, groceries, woollens, and coarse linens; and it has some tanneries, two breweries, and a large flour-mill. Markets on Saturdays; fairs on 4th July, 8th Aug., 7th Oct., 11th and 28th Nov., and 28th Dec. The town is built on the estate of the Earl of Kenmare, whose house and grounds lie between it and the lakes.

The lake of Killarney, or Lough Lane, consists properly of three lakes connected by a winding channel, through which vessels pass from the one to the other. It lies at the E. extremity of the extensive range of mountains called Macgillicuddy's Reeks, and has in its immediate vicinity, or rather, indeed, rising from its banks, the highest summits in Ireland. The largest division of the lake, or that portion called the lower lake, occupies an area of about 3,000 acres; its W. shore is formed by the mountains of Tomies and Glenna, respectively, 2,150 and 2,090 ft. above the level of the sea, having their precipitous sides well clothed with forest trees: on the opposite shore is the striking contrast of flat land in a high state of cultivation, ornamented by the fine demesne of Lord Kenmare. There are said to be no fewer than thirty-three islands, many of which are extremely picturesque in the lower lake. One of these islands, Innisfallen, has been admired by every traveller. Arthur Young says that it is the most beautiful spot in the United Kingdom, and perhaps in Europe. It contains about twenty acres, is extremely well wooded, and has every variety of tranquil beauty and sylvan scenery. On the S. shore of this lake is the fine ruin of Muckross Abbey. The lake is, in some parts, very deep. Between Glenna Mountain and Ross Island, the largest in the lake, the soundings give 42 fathoms. The middle lake occupies about 640 acres: it lies immediately under the Fore or Turk Mountain, elevated about 1,900 ft. above the level of the sea. The strait which joins the middle and upper lake is about 3 m. in length, having, in many places, the appearance of a beautiful river. The upper lake contains about 720 acres. It lies in a hollow, formed by some stupendous mountains, among which are Gurran Tual, the highest in Ireland, rising 3,404 ft. above the level of the sea; so that its scenery is in the highest degree magnificent and sublime. 'Here,' says Mr. Wakefield, 'Nature assumes her roughest and most terrific attire to astonish the gazing spectator, who, lost amid wonder and surprise, thinks he treads enchanted ground; and while he scarcely knows to which side he shall direct his attention, can hardly believe that the scenes he sees around him are not the effects of delusion, or the airy phantoms of the brain, called into momentary existence by the creative powers of a fervid imagination. Here rocks piled upon rocks rise to a towering height; there one mountain rears its head in succession above another, and sometimes a gigantic range seems to overhang you, forming a scene that may be more easily conceived than described. Such sublime scenes cannot be beheld but with a mixed sensation of pleasure and awe, and on a contemplative mind they must make a deep and lasting impression.' (Vol. i. p. 66.) In other places, however, especially on the E. shores of the lower and middle lakes, the scenery is of the softest and most agreeable kind, consisting of finely wooded promontories, ornamented with rivers and seats, and verdant islands; and it is in the contrast between these and whatever is most wild and rugged that lies the great charm of Killarney.

The lakes of Killarney receive the Flesk and several other streams, their refluent waters being carried off by the Lane. The latter issues from the NW. extremity of the Lower Lake, and, after pursuing a WNW. course for about 10 m., falls into Castlemaine Harbour, at the bottom of Dingle Bay. It is well stocked with salmon and white trout, and also with pearl oysters, whence pearls have been repeatedly taken. It is said that the Lane might, at a small expense, be made navigable from the sea to the lake.

KILLIECRANKIE, a celebrated pass through the Grampian mountains in Scotland, co. Perth, about 15 m. above Dunkeld. It is about ½ m. in length. The road is cut out of the side of one of the contiguous mountains; and below it, at the foot of a high precipice, in the bottom of the ravine, the river Garry dashes along over rugged rocks, but so shaded with trees as hardly to be seen. At the N. extremity of this pass, the Revolutionary army under Mackay was defeated in 1689, by the troops of James II., under the famous Graham of Claverhouse, viscount Dundee, who fell in the moment of victory.

KILMARNOCK, a manufacturing town, parl. bor., bor. of barony, and par. of Scotland, district of Cunningham, co. Ayr, on level ground on the N. bank of the Irvine, and on the small stream Kilmarnock or Fenwick, a tributary of the former; 20 m. SW. by S. Glasgow, and 12 m. NNE. Ayr, on the Glasgow, Dumfries and Carlisle railway. Pop. 22,619 in 1861. The main street, forming part of the high road between Ayr and Glasgow, is upwards of 1 m. in length, and is regularly built. The houses, generally of freestone (which is found in great abundance in the immediate vicinity), are erected in a handsome substantial style. Kilmarnock has recently been extended greatly towards the S. and E., and in these directions there are many handsome buildings. The older streets are narrow and irregular; but the magistrates having obtained an act for improving the town, about the beginning of the present century, judicious measures were adopted to carry its objects into effect; and Kilmarnock is now, on the whole, one of the neatest and best built manufacturing towns in Scotland.

Among the public buildings are the two parish churches, one of which, the High Church, after the plan of St. Martin's in London, is surmounted by a tower 80 feet in height; the academy; and the town-hall, a neat modern building in the centre of the town, on an arch over the water of Kilmarnock. The merchants' society have built a spacious inn, which, in point of architecture, is a great ornament to the town. There are five bridges over the Kilmarnock within the town, and two over the Irvine between Kilmarnock and Riccarton, all substantial structures. In addition to the two parish churches, one of which is collegiate, there are four free churches, and several chapels belonging to the U. Presbyterian Associate Synod; and the Relief, Cameronians, Independents, and Rom. Catholics have each a chapel.

Kilmarnock is chiefly eminent as a place of trade and manufacture. It seems originally to have been distinguished for its manufacture of woollen bonnets, formerly worn by all the peasantry; and of striped nightcaps. These articles, called 'Kilmarnock' bonnets and caps, are still manufactured to a very considerable extent, as are forage caps for the army. The carpet manufacture was introduced more than a century ago. There are, besides, manufactures of printed shawls and *Delaine* goods, besides large tanneries. Machinery is also produced, and there are a number

Digitized by Google

of inferior manufactures. Coal is abundant in the neighbourhood, and is extensively exported.

The port of Kilmarnock is at Troon, on the Ayrshire coast, with which it is connected by a railroad 9½ m. in length. This was the first public railway constructed in Scotland, the act for its construction having passed in 1808, though it was not finished till 1812.

Kilmarnock was originally a mere appendage of the baronial manor of the Boyds, lords of Kilmarnock, attainted in 1745, who had their seat in the neighbourhood. Its first charter as a free bor. of barony was granted by James VI. in 1591; a second was granted in 1672. The Reform Bill erected Kilmarnock into a parl. bor., conferring on it, along with Renfrew, Port Glasgow, Dumbarton, and Rutherglen, the privilege of sending a member to the H of C. Constituency 1,550 in 1865. Corp. rev. 545*l.* in 1863–64. Under the Municipal Reform Act it is governed by a provost, 4 bailies, a treasurer, and 12 councillors.

KILRENNY, a royal and parl. bor., sea-port, and par. of Scotland, co. Fife, on the NE. shore of the Frith of Forth, near the mouth of that great estuary, 20 m. NE. Edinburgh, and 9½ m. S. by W. St. Andrews. Pop. 2,145 in 1861. Its burghal privileges embrace Cellardykes, sometimes called Nether Kilrenny, distant ¾ m. SE. Kilrenny is a place of no importance; but Cellardykes engages extensively in the herring and whale fishery, and is a thriving village. Kilrenny, which was created a royal bor. in 1707, unites with Cupar, St. Andrews, and three small adjacent bors., in sending a member to the H. of C. Registered electors 71 in 1865. Municipal revenue, 62*l.* in 1863–64.

KILRUSH, a sea-port town of Ireland, SW. part of the co. Clare, on the innermost extremity of a creek on the N. side of the estuary of the Shannon, 37 m. W. Limerick, and 20 m. E. by N. from Loophead, at the mouth of the Shannon. Pop. 4,565 in 1861, against 5,070 in 1841. It exports considerable quantities of corn, meal, and flour: the herring fishery is also carried on to some extent; and it has a pier and a patent slip for the repair of vessels. It is a creek belonging to the port of Limerick. Its chief buildings are the par. church, R. Catholic chapel, Methodist meeting-house, market-house, custom-house, court-house, and bridewell. It has a school on the foundation of Erasmus Smith, and some other schools. A manor-court is held monthly: general sessions at Easter and Michaelmas, and petty sessions on Tuesdays. It is a coast-guard and constabulary station. Markets on Saturdays: fairs, May 10 and Oct. 12.

KILSYTH, a bor. of barony, market and manufacturing town of Scotland, co. Stirling, in a valley 10½ m. N. by E. Glasgow, and 16 m. SW. by S. Stirling, on the railway from Glasgow to Stirling. Pop. 4,692 in 1861. The town is irregularly built. The only public buildings are the parish church, with a lofty spire, and a chapel belonging to the Relief. The inhabs. are chiefly employed as cotton-weavers in connection with the manufacturers of Glasgow. The Forth and Clyde canal passes within ½ m. to the S., and contributes greatly to the prosperity of the district.

Of the *præsidia*, or forts, erected by Agricola in his fourth campaign, several mouldering remains may yet be traced. (Taciti Agricola, cap. 23.) They were generally about 2 m. apart, and built nearly in the direction afterwards occupied by the wall of Antoninus. This wall, or *Graham's Dyke*, as it is vulgarly termed, built by the Emperor Antoninus Pius, about the year 140, as a protection against the Caledonians on the N., ran across the isthmus between the Forth and Clyde, and passed within five furlongs of Kilsyth on the S.

Kilsyth gives its name to a great victory gained in its vicinity (15th Aug. 1645), by the Marquis of Montrose over the Covenanters, commanded by General Baillie. Sir James Livingston (a branch of the noble house of Linlithgow) was created Viscount Kilsyth (1661), on account of his loyalty during the civil wars; but the title was attainted, and the estates forfeited in the person of the third viscount, who joined the rebellion in 1715. 'Religious revivals,' as certain fanatical displays got up in various places throughout Scotland, in 1839, have been termed, originated at Kilsyth.

KILWINNING, a market and manufacturing town and bor. of barony, Scotland, in the district of Cunningham, co. Ayr, on a rising ground on the right bank of the Garnock, 3 m. NNW. Irvine, and 21 m. SW. Glasgow, on the railway from Glasgow to Irvine. Pop. 3,921 in 1861. The town consists chiefly of one street, but there are various narrow lanes. The modern additions to the town are substantial and elegant. The only public buildings are the parish church and several dissenting chapels. Eglinton Castle, famous for the tournament held there in 1839, is in the immediate vicinity. The inhabs. are chiefly employed in the weaving of cottons and gauzes, for the Paisley and Glasgow manufacturers. Lime and coal abound in the district around.

Kilwinning is celebrated for its abbey, founded by Hugh de Moreville, constable of Scotland, in 1140, and dedicated to St. Winning. It was, at the Reformation, one of the richest in the kingdom. It is said that the foreign architect who built the abbey was the first to introduce the craft of Freemasonry into Scotland. The lodge of Kilwinning, as the mother lodge of the kingdom, was in the habit of granting charters to other lodges, all of which append the word Kilwinning to their name; but the institution of the Grand Lodge of Scotland at Edinburgh has nearly superseded the dignity of Kilwinning as a mother lodge. Kilwinning is the seat of a body of archers, which existed at least as early as 1488, and is still in a flourishing condition.

KINCARDINESHIRE, or THE MEARNS, a marit. co. of Scotland, having N. the county of Aberdeen, from which it is for the most part separated by the Dee and Avon, E. the German Ocean, by which it is bordered for above 30 m., and S. and W. Forfar. It is of a triangular shape. Area, 394 sq. m., or 252,250 acres, of which 1,280 are water. The Grampian mountains occupy the western, central, and most of the northern parts of the county, extending from Battock-hill, 2,611 ft. high, on its W. confines, to Stonehaven on the E. coast. The arable land consists principally of the district denominated the *How of the Mearns*, being a portion of Strathmore, or a continuation of the *How of Angus*, extending from Strathcathro and Marykirk to within a few miles of Stonehaven. It comprises about 50,000 acres of comparatively low, fertile, and well cultivated land, with many thriving plantations. On the E., the *How* is divided by a range of low hills which separate it from what is called the *Coast* district, containing about 68,000 acres, about a half of which is in a high state of cultivation. There is also a narrow glen or district of arable land along the Dee. Property in a few hands. Arable farms of all sizes, many small, some from 400 to 500 acres, and the proportion of small farms decreasing. Hill pastures let in immense tracts. Improvements began in this county about the middle of the last century, and have been carried on since the close of the American war, and especially during

Digitized by Google

the last thirty years, with great spirit and extraordinary success. Commodious farm-houses have been erected, and new and level roads constructed in districts where formerly there were only wretched footpaths. Lime is the only mineral of any importance. The manufacture of the jointed and painted wooden snuff-boxes originated at Laurencekirk, in this co., about 1790; but Cumnock and Mauchline, in Ayrshire, have become the principal seats of the manufacture. Principal rivers, Dee, N. Esk, Bervie, and Dye, on some of which are considerable salmon fisheries. It contains 19 parishes, and one roy. bor., Inverbervie, which is quite inconsiderable. It sends 1 mem. to the H. of C. for the county, and Inverbervie joins with Montrose, Arbroath and other bors., in returning a mem. Registered electors for county, 987 in 1865. In 1861, the co. had 6,697 inhabited houses, and 34,466 inhabitants, while, in 1841, there were 7,304 inhab. houses, and 33,075 individuals. The old valued rent was 6,243*l.*, and the new valuation 197.133*l.* for 1864-65.

KINCARDINE, a sea-port town of Scotland, in a detached part of the co. Perth, par. of Tulliallan, on the N. side of the Frith of Forth, 21 m. WNW. Edinburgh, on the Scottish Central railway. Pop. 2,166 in 1861. The streets are mostly narrow, irregular, and dirty; but the houses are good, especially those in the newest parts of the town. It has a good quay and harbour, and a good roadstead, affording convenient anchorage for vessels of large burden. Ship-building is carried on to a considerable extent, and the town has an extensive coasting trade. The different parties in the town to whom vessels belong have formed themselves into a Kincardine Mutual Assurance Company, the value of the property so insured being estimated at about 80,000*l.* A regular ferry is established with the opposite side of the river.

KINGHORN, a royal and parl. bor., sea-port, and par. of Scotland, co. Fife, on an eminence, overhanging a small bay, on the N. banks of the Frith of Forth, 9 m. N. by E. Edinburgh, and 3 m. SW. Kirkcaldy, on the Edinburgh-Perth railway. Pop. 1,426 in 1861. The town was not long since one of the most irregularly built in Scotland; but it has of late undergone many improvements in this respect, and most of the older houses (which had two flats or stories, with outside stairs facing the street) have been superseded by more modern and better buildings. The only public edifices are the par. church, a dissenting chapel, a town-hall, gaol, and a handsome school-house erected by subscription. Fifty poor children are educated gratuitously on the bequest of the late Mr. Philip of Kirkcaldy, and are clothed and provided with books and other school utensils. The chief branch of industry is flax-spinning, and weaving of different linen fabrics. A few persons engage in fishing. The harbour is bad, and has scarcely any shipping. Pettycur, about a mile W., is a better harbour; but its chief business derived from its being one of the seats of the ferry across the Frith of Forth, is now all but wholly superseded.

Kinghorn lays claim to great antiquity; it is certain that it was created a royal bor. as early as the 13th century. It was originally a royal residence, but lost that dignity on the death of Alex. III., who was killed (1285) by falling over a rugged and lofty eminence about a mile W. of the town. Kinghorn unites with Burntisland, Dysart, and Kirkcaldy in sending 1 mem. to the H. of C. Registered voters, 61 in 1865.

KING'S COUNTY, an inland co. of Ireland, prov. Leinster, having N. Westmeath, E. Kildare, S. Tipperary and Queen's County, and W. Roscommon, Galway, and Tipperary. Area 493,019 statute acres. A portion of the bog of Allen covers a very considerable tract in the more northerly parts of this co., while on the S. it is partially encumbered with ramifications of the Devils' Bit and Sliebhbloom mountains. On the whole, the unimproved bog and mountain occupy 133,349 acres, of which, however, the far greater portion belongs to the bog. Soil of an average degree of fertility. Estates mostly very large. Tillage farms small, but some of those devoted to grazing are very extensive. Subtenancy is less common here than in most parts of Ireland; but its rural economy is, notwithstanding, but little different from that of the surrounding cos. Silver has been found at Edenderry, but, except limestone, it has no minerals of any real importance; manufactures can hardly be said to exist. Its chief town is Birt or Parsonstown. It is bounded on the W. by the Shannon, and on the S. by the Little Brosna, while it is intersected by the Greater Brosna and the Grand Canal. It is divided into 11 baronies and 52 pars., and returns 2 mems. to the H. of C., both for the co. Registered electors, 3,380 in 1865. In 1861 the co. had 16,365 inhab. houses, 17,879 families, and 90,043 inhabitants, while in 1841 King's County had 24,534 inhab. houses, 26,683 families, and 146,857 inhab.

KINGSTON-ON-THAMES, a munic. bor., market town, and par. of England, co. Surrey, loc. cit. in hund. of its own name, but with separate jurisdiction, on the London and South Western railway, 12 m. SW. London. Pop. of bor. 9,790, and of par. 17,792 in 1861. The town extends from N. to S. about a mile along the Thames, crossed here by a stone bridge of 5 arches opened in 1828. Nearly continuous lines of houses, however, diverge from the body of the town along the two principal high roads towards London, to the bottom of Kingston Hill, and on the road to Portsmouth as far as the par. boundary, 1½ m. from the town. On the opposite side of the river is Hampton-wick, which may be considered to constitute a part of Kingston. The town is well paved and lighted with gas. The streets are narrow and irregular; but there is a spacious market-place, in which is the town-hall, erected in the reign of James I., containing some curious pictures and carvings of high antiquity. The Lent assizes for the co., which were formerly held in it, have been for some years transferred to a neighbouring brick edifice built for the purpose; and attached to it is a small gaol, used for the temporary accommodation of prisoners. The church is large but plain, with a low square tower, and appears to have been erected at different periods, commencing with the reign of Richard II.: the living is a vicarage, in the patronage of King's College, Cambridge. There are places of worship for several denominations of Dissenters. It has a grammar school, founded in 1560, furnishing instruction to between 30 and 40 boys; a boys' and girls' national school, supported by subscriptions; an almshouse for 6 aged men and as many women; and a dispensary.

Kingston is not a place of much trade. Considerable business is done in malting, there being a large number of malting-houses in or near the town; and there are also some flax and oil mills; but most of the townspeople are dependent on their retail dealings with the neighbouring gentry. A large and well-attended corn market is held every Saturday: and the fairs are on Thursday, Friday, and Saturday in Whitsun week, Aug. 2, 3, and 4, and Nov. 13, for horses, toys, and pedlery.

Kingston, first incorporated by King John in 1199, and chartered by many subsequent monarchs, has been governed since the passing of the Mu-

Digitized by Google

nicipal Reform Act, by a recorder, 6 aldermen, and 18 councillors, the bor. being divided into 3 wards. Members were sent by it to the H. of C. in the reigns of Edward I. and II.; but the burgesses were relieved from the burden on petition, and the franchise has not since been renewed. Roman coins, urns, and other antiquities, that have been dug up in considerable quantities, prove Kingston to have been inhabited by those early conquerors of Britain. It received its name, *King's-town* (its more ancient appellation being *More-ford*), from its having been the residence of our Saxon monarchs, eight of whom were crowned here, some in the market-place—the supposed throne, a rude *stone*, still preserved as a monument, near the spot —and others in a very ancient chapel once attached to the church, but now destroyed. A general council was held here by Egbert in 838, and attended by the chief prelates and nobility of the realm. The town continued during several centuries to be a place of high consideration, and in royal favour.

KINGSTON, the largest and most commercial city of Jamaica, though not the cap. of the isl.; on its S. coast, on the N. side of a fine harbour, on the verge of an alluvial plain surrounded by an amphitheatre of mountains. Pop. 35,930 in 1861. The city is built on ground gently shelving to the verge of the sea, and was originally comprised in an oblong space, 1 m. in length by ½ m. in breadth, but it has of late years extended considerably beyond these limits. The streets in Lower Kingston are long and straight, crossing each other at right angles; the houses in general are two stories high, with verandahs above and below. There are two churches, an English and a Presbyterian, both handsome structures, especially the former, which is built on an elevated spot overlooking the city. Kingston has several dissenting chapels, two synagogues, a hospital founded in 1776, numerous other charitable institutions, a free school established in 1729, with an endowment of 1,500*l.* a year, a workhouse and house of correction, commercial subscription rooms, an athenæum, a society of agriculture, arts, and sciences, a savings' bank, and a theatre.

The mountain chain forming the boundary of the plain on which Kingston stands, terminates to the E. in a narrow ridge, whence a long narrow tongue of land extends to Port Royal, forming the S. boundary of the Kingston harbour, a land-locked basin, in which ships of the largest burden may anchor in perfect security. It is strongly fortified. Its entrance, between Port Royal on the E., at the extremity of the tongue of land already noticed, and the opposite coast, is defended by Fort Charles, near Port Royal, on the one hand, and by the Apostles' Battery, Fort Anderson, and Fort Augustus, on the other. The depth of water in the centre of the channel leading to the harbour is, where shallowest, 4 fathoms, and in the harbour itself it varies from 6 to 10 fathoms. About 2 m. N. of Kingston is Up-Park Camp, the only government barracks in the island, consisting of two long and parallel lines of buildings, two stories high, occupying, together with the parade ground, between 200 and 300 acres. Not far from this station is the 'Admiral's Pen,' the former residence of the naval commander-in-chief, but which has been abandoned for several years. Stoney-hill garrison is about 7 m. N. Kingston, at an elevation of about 2000 ft. above the sea.

Kingston engrosses by far the largest portion of the trade of the island. The total shipping of Jamaica, in 1862, consisted of 506 vessels, of 112,642 tons, which entered, and 523 vessels, of 117,474 tons, which cleared. Of these there entered at Kingston, 313 vessels, of 69,006 tons, and there cleared 234 vessels, of 45,058 tons. The staple article of export is sugar.

The corporation of Kingston consists of a mayor, 12 aldermen, and 12 common-councilmen. The town was founded in 1693, in consequence of the destruction of Port Royal by an earthquake; but it was not incorporated till 1802.

KINGSTON, a town of Upper Canada, British North America, Midland dist., on the site of Fort Frontenac, at the NE. extremity of Lake Ontario, and at the mouth of the Cataraqui, 150 m. ENE. Toronto. Pop. 12,100 in 1861. The town covers a large surface, has many stone buildings, with a good harbour, and is the entrepôt of the trade between Upper and Lower Canada. Since the completion of the internal canals, its carrying trade has much declined.

KINROSS, a small inland co. of Scotland, on the W. confines of Fife, being entirely surrounded by the latter co. and that of Perth. Area, 77 sq. m., or 49,531 acres, of which 4,480 are water, consisting principally of Lochleven. Surface varied: in the lower district, to the N. and W. of the lake, the soil is clayey, sandy, and moderately fertile; but in the upper districts it is mostly moorish, mossy, and unproductive. Agriculture a good deal improved; but it labours under great disadvantages from the backwardness of the climate. Property much subdivided, being mostly occupied by resident proprietors holding of the estate of Kinross under payment of a feu or quit rent. The manufactures are of little importance; and though it has limestone and freestone quarries, it has no coal. Kinross and Milnathort are the only towns. It is divided into seven parishes, and is united with Clackmannan and certain parishes in the SW. part of Perth in returning a mem. to the H. of C. Registered electors in this co. 485 in 1865. In 1861 the co. had 1,664 inhab. houses, and 7,977 inhabitants, while in 1841 Kinross had 1,812 inhab. houses, and 8,763 inhab. The old valued rent was 1,674*l.*, and the new valuation, 58,069*l.* in 1864–65.

KINROSS, a market town of Scotland, co. Kinross, of which it is the cap., in an open vale on the W. shore of Lochleven, and on the high road between Edinburgh and Perth, 21 m. NW. by N. Edinburgh, and 13½ m. S. by E. Perth. Pop. 2,083 in 1861. The town formerly consisted of a series of narrow tortuous lanes, but the main street, along the public road, of comparatively recent erection, is wide and substantially built, though not entirely straight. The other portions of the town are irregular, narrow, and of an inferior description. The public buildings are the par. church, built in 1832, in the Gothic style, the co. hall, which also contains the public gaol, erected in 1826; a Free church; and several places of worship in connection with the Associate Synod. On the margin of the lake, in the immediate vicinity of the town, is Kinross House, built on the site of an ancient castle, long the residence of the earls of Morton, by Sir William Bruce, architect to Charles II., and now the seat of the feudal superior of the burgh (Sir Graham Montgomery). This mansion was originally intended for the residence of the Duke of York, afterwards James VII. of Scotland, in the event of his being prevented by the Exclusion Bill from succeeding to his brother.

Kinross was famous of old for its cutlery, afterwards for the manufacture of Silesia linen; but both these have ceased. Cotton weaving, in connection with Glasgow, and more recently the manufacture of tartan shawls, plaiding, and such like articles, are now the principal employments. Damask weaving, for the Dunfermline manufacturers, has also been introduced. There are four

Digitized by Google

annual fairs, chiefly for cattle, held at Kinross; and it has branches of the B. Linen Company and of the Edin. and Glasgow banks.

Lochleven, on the banks of which the town is built, has of late been subjected to a considerable drainage. Its circuit is 12 m., being three less than formerly; and its mean depth has been reduced from 18½ to 14 ft. Its fishery, which opens on 1st Jan., and closes on 1st Sept., yields a yearly rent of about 200*l.* Notwithstanding its diminished size, Lochleven is still a very fine sheet of water. It contains three islands, of which two are important; St. Serf's, on the E., on which are the ruins of a priory belonging to the canons regular of St. Augustine; and the Castle Isle, on the W., so named from its castle, once a royal residence, and in which, as every body knows, Queen Mary was confined from 16th June, 1567, to 2nd May, 1568. During her imprisonment here she was forced to sign an instrument resigning the crown to her infant son. The battle of Langside, which decided her fate in Scotland, took place on the 13th May, only eleven days after her escape from Lochleven. Andrew Wintsun, author of the *Cronykil of Scotland*, was prior of the monastery of St. Serf. Michael Bruce, the poet, who died in 1767, in the 21st year of his age, was born in Kinneswood, on the NE. shore of Lochleven, and received the principal part of his education in Kinross.

KINSALE, a parl. bor. and sea-port town of Ireland, co. Cork, on the E. side of the Bandon, a little way above its mouth in St. George's Channel, 14 m. S. Cork, with which it is connected by railway, and 7 m. N. from the lighthouse on the Old Head of Kinsale. Pop. 4,003 in 1861, against 6,918 in 1841. The town is mostly built along the water's edge, but extends in parts up a steep hill, so that many of its streets are of inconvenient access; they are generally also narrow and dirty; the houses have for the most part an antiquated appearance, and some of them are built in the Spanish fashion. The harbour is excellent. There are 12 ft. water over the bar at the river's mouth at low ebb; and at the anchorage within the bar, off Cove, there are 4 or 5 fathoms water within half a cable's length of the shore, and large vessels may lie close to the town. It was formerly strongly fortified; Fort Charles, on the E. side the river, is now converted into a barrack. It has an ancient par. church, a modern and handsome R. Catholic chapel, another R. Catholic chapel attached to a convent, and two Methodist meeting-houses; with a suite of assembly-rooms, a town-hall, prison, fever hospital, and dispensary. Exclusive of Fort Charles, there is another extensive barrack adjoining the town. Here is an endowed school, founded in 1767; it has also charity schools for R. Catholics and Protestants, and Sunday-schools. The former corporation was dissolved under the Municipal Corporation Act, and its revenues, which were but of trifling amount, made over to the 'town's commissioners.' Previously to the union, Kinsale returned 2 mems. to the Irish H. of C.; and it has since returned 1 m. to the Imperial H. of C., who, down to the passing of the Reform Act, was elected by the sovereign, burgesses, and freemen. The village of Scilly, contiguous to the town, is comprised within the limits of the present parl. bor., which includes a space of 290 acres, and had 144 registered electors in 1865.

Notwithstanding the excellence of its port and its fine river, which is navigable for a considerable way above the town, the trade of Kinsale is but trifling. It is, consequently, in rather a depressed condition. The principal dependence of the town is on its fisheries, which supply Cork and the surrounding country. Every kind of fish is taken, and the sales of fresh fish average 500*l.* per week. The fishermen are esteemed the most skilful of any in Ireland; and, being well acquainted with the coasts, they are good pilots, which obtained for them an exception from impressment during the French war. Oysters of a large size were formerly abundant, but are said to be decreasing, from the want of a judicious and properly enforced code of fishery regulations. The Kinsale fishing district extends from Flathead to the east side of Inchy Bridge, comprising 60 m. of coast.

Kinsale is a place of some note in Irish history. It was taken in 1601 by a Spanish armament, but was retaken during the same year. James II. landed here in March, 1689; but it was taken by the troops of William III., under the Earl, afterwards Duke, of Marlborough, in the following year. It had formerly a royal dockyard; and, during the French war, the harbour was a good deal resorted to by ships of the royal navy.

KINTORE, a royal and parl. bor. and market town of Scotland, co. Aberdeen, on the railway from Aberdeen to Inverness, 11 m. NW. Aberdeen, and 3 m. SE. by S. Inverury. Pop. 568 in 1861. It is a place of no importance. The Aberdeenshire canal passes it on the W. The bor. lays claim to great antiquity; its earliest extant charter is dated 1506, confirming others of older date.

Kintore gives the title of earl to a branch of the ancient family of Keith, descended, in the 17th century, from a younger son of the sixth earl marischal. It unites with Elgin, Banff, Cullen, Inverury, and Peterhead in sending 1 member to the H. of C. Registered voters, 44 in 1865.

KIRBY-MOORSIDE, a market town and par. of England, N. riding co. York, wap. Ryedale, on the Dove, an affluent of the Derwent, 22 m. N. by E. York, and 192 m. N. by W. London. Pop. of par. 2,659 in 1861. Area of par., comprising five townships, 19,920 acres. The town, which is very small, stands on the side of the N. York moors, and is nearly encompassed by steep hills. The par. church, in a romantic situation, is about 1 m. distant. There are places of worship for Calvinistic and Wesleyan Methodists, and for the Society of Friends. The river turns several corn-mills, limestone is dug in the neighbourhood and the malting trade is carried on, the surrounding district being very productive of grain. Its only historical celebrity is owing to the fact that George Villiers, second duke of Buckingham, the favourite of Charles II. (a part of whose estates lay here), retired thither after his disgrace at court, and ended his days, on the 16th of April, 1688, in seclusion and poverty. Pope has described the circumstances attending his death in some of the finest verses in the English language. (Moral Essays, epist. iii. lin. 229.) Markets on Wednesday; cattle and horse fairs, Whit-Wednesday and Sept. 18.

KIRGHIS (STEPPE OF THE), a country of W. Asia in the N. part of Independent Turkestan between the 44th and 55th parallels N. lat., and 53° and 82° E. long.; bounded N. by the Oui, a trib. of the Tobol, and a line of forts connecting Zverenogolovsk, Petropavlowsk, and Omsk; E. by the Irtish and the Chinese stations, extending S. as far as the 42nd parallel; S. by the khanates of Kokan, Bokhara, and Khiva; and W. by the Oural and the Caspian Sea. Length, about 1,400 m.; breadth, 1,100 m.: probable area, 1,533,000 sq. m. Pop. of the three hordes composing the Kirghis nation, 2,300,000. The Kirghis steppe is not, as the word seems to imply, a mere flat and unvaried plain, but is intersected by numerous

Digitized by Google

mountain ridges, and even in its more level parts is covered with round hillocks, causing considerable undulations on the surface. Offsets of the Oural range occupy a large amount of surface in the W. and NW. parts of the steppe. The W. continuations of the Altai range run in very irregular ridges close to the Chinese frontier, and finally connect themselves about the 42d parallel with the W. part of the Muztagh or Thian-chan range. The principal ridges are N. of the 48th deg. of N. lat. The Kara-taou mountains separate the Kirghis steppe southward from the khanate of Khokan. The geological constituents and mineral riches of these mountains are little understood; the central masses appear to consist of granite, gneiss, and serpentine quartz, on which are superimposed silicious and clay-slate, blue limestone, coal strata, with various secondary and other rocks. Lead, copper, and iron, with a small quantity of silver, are found in these mountains, but the present state of the country makes mining wholly impossible.

The waters of the Kirghis steppe comprise, besides the two land-locked seas, the Caspian and the Aral, a considerable number of lakes and rivers. Among the former, most of which are salt, the largest are the Balkat, 115 m. long; the Isik, 90 m. by 30 m., in the SE. angle of the steppe; the Kourdalgiane, Tenis, Tehagli, Oubagan Denghis, and Alksakel-Barbi lakes, with many others of smaller extent. The chief rivers are, 1. the Sir-Daria, rising in the Mus-tagh, about lat. 40° N. and long. 76° E., having a course SW. to Khokan, and thence NW. through the sandy plains of Kisil-koum and Kara-koum into the sea of Aral, its entire length somewhat exceeding 800 m.; and, 2. the Irtish, rising in Chinese Turkestan on the W. side of the great Altai, entering the steppe in the 49th par., forming its E. boundary up to 55° N., and receiving on its W. banks the Ichim, the Tobol, and other tributaries, which intersect with their streams the entire N. half of the steppe. Numerous smaller rivers fall into the different lakes, and many others are almost unknown to Europeans.

The climate is remarkable for its extremes of heat and cold. In the middle and little hordes, that is, in the N. and NW. parts of the steppe, the therm. often falls to 20°, and sometimes 30° below freezing point (Réaum.). The rivers and plains are covered with ice, and the hills with a thick coating of snow; while strong winds from the NE. increase the intensity of the cold, and hurricanes, called *bouranas*, often uproot forest trees, and carry away both man and beast, causing dreadful, and often irremediable, destruction. In summer, on the contrary, the temp. often rises to 36° Réaum. (112° Fahr.) in the shade: the oppressiveness of the heat is much increased also by the sandy nature of the soil, and the paucity of rivers and forests over so vast an extent of country. This great variability of temp., however, and the rapid transition from one extreme to the other, are said not to be so prejudicial to the health either of natives or travellers as might have been expected: agues, indeed, and fevers are common in the marshy districts; but, generally speaking, the people are robust and long-lived. Rain is very rare, even on the mountain sides: dews refresh the soil in some parts, but by far the largest portion of the surface is dried up and rendered useless, by the entire absence of atmospheric moisture. Trees and shrubs are only found on the banks of rivers, and at the foot of the mountains near the Russian frontier, where the soil is the most capable of cultivation: the principal are elms, poplars, willows, wild plum, juniper, and liquorice trees (the latter very abundant, and their produce forming a principal article of trade), wormwood, alkanet, tragacanth, various kinds of euphorbia, anemonies, camomile, asparagus, garlic and onions, horse-radish, wild oats, and rye. Short coarse grass generally covers the plains, on which also the salsola plant grows in great perfection. Agriculture, as a branch of industry, cannot be said to exist. Some land about the rivers is roughly tilled, for the purpose of raising millet, rye, and barley; but the pursuit, except by the Karakalpaks, S. of the Sir-Daria, is generally despised, being only followed by the poorest classes, and then chiefly by women. The wild animals of this region comprise the wolf, wild boar, fox, Cossack dog, wild goat, and hare, all of which roam in great numbers over every part of the steppe: the boar, buffalo, antelope, wild horse, beaver, and water-rat are plentiful in some districts; and there are likewise tigers, lynxes, and other varieties of the cat tribe, in the S. Among the birds may be mentioned the eagle, falcon, cormorant, pelican, stork, heron, goose, and pheasant, with many smaller birds. The lakes and rivers abound with seals, and with several kinds of fish, sturgeon, pike, perch, and carp being the most common. The domestic animals of the Kirghis are the sheep, goat, horse, and camel, the rearing of which constitutes the chief employment of this nomad race. Larger flocks of sheep are nowhere to be found, some of the richer inhabs. possessing upwards of 20,000 head. The animals are strong and large, weighing from 100 to 150 lbs., and they have long coarse wool and enormous tails, sometimes 30 lbs. in weight. They endure with great patience the long privations of food and drink to which they are subject, soon recovering in spring their plump and healthy appearance.

The advantages derived by the people from these animals are immense; their flesh and milk supply them with food, and the wool furnishes felt for covering the tents and other purposes, while at the same time they serve as a standard of value, and form a chief article of export. About 1,000,000 sheep are sent off every year and sold in Russia, Bucharia, and China. Goats, very similar to those of Thibet, are chiefly used as guides in leading the sheep from pasture to pasture, as the latter will not move without them; their flesh is eaten, and the down concealed under their red shaggy hair is a valuable article of trade. The camels (most of which have two humps, the single-humped variety being too delicate for the climate) are here, as elsewhere in Asia, the chief beasts of burden. They are indispensable to the Kirghis, for transporting their women and children, their property and trading stock; nor is it unusual for the rich to possess 300 or even 400 of these animals. Their hair is spun and made into garments, the milk and flesh are used as food, and the skins of the younger animals make warm pelisses. The camels are extremely docile, and carry burdens varying from 14 to 18 *poods* (from 5 to 6 cwt.), travelling during long journeys at the rate of 25 or 35 m. a day. Camel breeding is pursued to a considerable extent in the great (or S.) horde, and great numbers are sent to Persia and India. Horned cattle are very little bred, except in the middle horde; and they were not introduced into the country till about a hundred years ago. Horses are reared in immense numbers, particularly in the N. part of the steppe, where there is a grass called *kovil* admirably suited for horse pasture. A kirghis's wealth is usually reckoned by the number of his horses, and the richest among them have as many as 6,000 or 8,000. They are small but strong, and extremely

Digitized by Google

rapid in their movements; they can travel from 30 to 50 m. without stopping for days together, and, like the other domestic animals, are inured to great privations and long abstinence from food and water. Various expedients are adopted to procure pasturage for the cattle during winter, by making enclosures and raking away the snow; but still they feel most severely the absence of nourishing food, and great numbers, especially of sheep, are lost every year. (Lévchine, La Description des Hordes et des Steppes des Kirghis-Kazaks, p. 406–415.)

The pop. of the Kirghis steppe, however different the origin of the various tribes, has long become amalgamated; and they are now but one people, inhabiting the same kind of country, speaking the same language, professing the same religion, and characterised by nearly uniform habits and customs. The following table of the races and tribes of the three great hordes gives also some insight into the distribution of the population:

Hordes and Races	No. of Tribes	Tents	Individuals
1. Little Horde:—			
Alimonly . . .	6	160,000	900,000
Baionly . . .	12		
Djetir-ourang .	7		
2. Middle Horde:—			
Arghina . . .	17	165,000	960,000
Naïmanes. . .	9		
Kiptohak . . .	9		
Orwak-Ghiris .	3		
3. Great Horde:—			
Ouisuin . . .	10	75,000	400,000
Toulatai . . .			
Sargam . . .			
Kodkrat . . .	9		
Total . . .	82	400,000	2,260,000

Hence it appears that the terms 'great' and 'little' are wholly misapplied. The little horde was still greater in the 14th century than at present; the great horde, however, is generally respected, as being the most ancient.

The Kirghis, physically considered, are closely allied to the Mongol Turkmans. Their faces are not so flat and broad as those of the Kalmuks; but their small black eyes, small mouths, prominent cheek-bones, and almost beardless chins, prove their similarity to the Mongols, which has been strengthened also in recent years by frequent marriages with Kalmuk and Mongol women, whom they often bring away by force into their own country. The hair of the men is usually dark brown; but the women have black hair, fresh complexions, and brilliant animated eyes, which, however, are ill-contrasted with lean cheek-bones, coarse skins, and a shapeless slovenly person. Both sexes are strong and healthy, long-lived, and capable of enduring, to an extraordinary extent, both cold and hunger; in fact, if they were not thoroughly inured to every kind of privation, they could not live in this country. The men take the most violent exercise, being often almost wholly on horseback for days together; but in the height of summer, and during the winter, they spend their time in listless indolence, sleeping, drinking *koumis*, their favourite beverage, and listening either to stories or the rude music of their national instruments, a reed pipe and a rude kind of violin. Household labour and tillage are undertaken wholly by the women, who, as in other parts of Asia, are treated almost like slaves. The Kirghis language is a very corrupt dialect of the Turkish, so interlarded with local words that it is almost unintelligible by the Turks of Kazan and Khiva. Few can read, still fewer are able to write, and he that knows enough of Arabic to read the Koran is reckoned a paragon of erudition. Their poetry, however, clearly shows them to be an imaginative people. The dwellings of the Kirghis, who are distinctly pastoral, having no fixed station except in winter, consist of rude tents composed of wooden trellis-work covered with felt, having an opening at top serving at once for window and chimney: their dimensions average about 30 ft. in diam. and 12 ft. in height; the ground (bare earth) is covered with felt or carpeting; the inside is hung with straw mats or red cloth; and the furniture consists only of a few boxes and warlike implements. The food of the people is very simple, consisting almost altogether of the flesh and milk of their flocks and herds. Bread is not known; but *balamik*, or porridge made of millet, rye, or wheat, is in common use. Rice, being an article of import, is very dear, and is used only by the rich. Smoked horse-hams, colts' haunches, and camels' humps are esteemed great delicacies. *Eremetchik*, a rich cheese made from mares' milk, is likewise highly valued; a thinner and inferior kind, called *kroute*, is much used by the lower orders, and constitutes almost the only article of food on those marauding expeditions, which give such zest to the life of a Kirghis. Fish are eaten only by the lowest orders, chiefly by those living on the banks of rivers; and game is little valued. The favourite drinks are the *koumis*, a whey made from mares' milk, and a spirit distilled from koumis, alleged to be both strong and palatable. Arak (made by distilling rice) and tea are luxuries enjoyed only by the wealthy classes. The dress of the people is long and full, and, to European notions, little suited for horse exercise, in which they are chiefly engaged: two or more *tchapanes*, or loose gowns of velvet, silk, or cotton, according to rank; a leathern belt fastening the robe and securing a knife and tobacco bag; and a round cap surmounted by another when abroad, of felt or other warm materials, conically shaped, and with broad flaps. Very full and highly ornamented trowsers are worn, by the men at least, over the gown, which is tucked underneath; and large pointed, high heeled boots complete the costume. The heads of the men are usually kept shaved, with the exception of a forelock; but those of the women are adorned with long plaits running down the back. The female costume, in other respects, differs little from that of the males, except that the robe is close in front, and the bonnets are high, shaped like truncated cones, and surrounded by veils, which serve both for shade and warmth.

The employments of the men consist in an attendance on their flocks and herds, and in hunting antelopes, boars, and wild horses. Very generally, however, they join with the life of a huntsman that of the robber attacking and plundering caravans crossing their steppe, or seeking vengeance for some real or imagined insult from a neighbouring tribe. They are cowards in regular warfare, soon discouraged, and, when unhorsed in close conflict, wholly vanquished. The feuds, or barantas, had become so frequent and extensive in 1812–1820, that the pop. of the hordes, especially the little horde, was much thinned; the trade in cattle was all but destroyed; and thousands of families, unable to support life in their own country, emigrated to the government of Orenburg, and other parts of Russia.

The arms of the warrior Kirghis are the lance, sabre, bow and arrows, a long-handled axe, called

Digitized by Google

tchakane, and a clumsy kind of gun, their defensive armour being a coat of mail, and sometimes a helmet. Among a people so disorderly it is impossible that internal industry should flourish. Weaving is carried on for the supply of family wants, cordage is manufactured from horses' and goats' hair, a coarse soap is made of grease and vegetable ashes, and the skins of sheep and goats are converted into a rude kind of leather. Blacksmiths. and other workers in metal, make the ornaments attached to horse-furniture, belts, sword-blades, and spears; but every article is of the coarsest quality and worst make. The trade now carried on by the people with other nations is much less considerable than it was half a century ago, in consequence of the loss of cattle and horses by the barantas. The Russians and Chinese have large dealings with them, and a brisk trade is also carried on with Khiva, Khokan, and Little Bucharia. The trading posts of the Russians are at Orenburg (the most important of all), Troïtsk, Petropavlowsk, Omsk, Semipalatinsk, and Ouralsk, those of the Chinese being at Tchugutchak (Chin. *Talbazatai*) and Kuldsha (Chin. *Ili*).

The business, usually carried on in summer and autumn, is conducted wholly by barter, the Kirghis furnishing sheep, horses, horned cattle, camels, goats, goats' hair and wool, the skins of horses, sheep, and other animals, wild as well as domestic, and antelopes' horns; in return for which they receive from the Russians iron and copper implements, thimbles, needles, cutlery, padlocks, hatchets, velvets, brocades, silk-stuffs, linens, ribands, looking-glasses, and snuff; from the Chinese, silver, silk goods, porcelain, japanned wares, and tea; and from the Khurians and Bokharians, cotton goods, quilted dresses, rice, swords, fire-arms, and powder. Independently of the trade they carry on at the outposts, considerable traffic takes place with the caravans crossing the steppe between Khiva, Khokan, and the Russian frontier. The Kirghis are usually employed as protectors and guides in the journey over these wilds; great delays often occur owing to the caprice of the guides; and the travellers, if they are not entirely plundered of their property, are in general heavily mulcted by the khans, through whose pastures they are obliged to pass. The chief caravan routes are, 1. from Kalmikof to Khiva, across the Oust-ourt plateau, between the Aral and Caspian Seas; 2. from Orenburg to Bokhara (64 days), over the Mogodjar mountains and across the Karakoum and Kizil-koum deserts; 3. from Petropavlowsk to Bokhara (90 days); and 4. from Semipalatinsk to Khokan (40 days). These roads, however, are so vaguely laid down, and so often varied, that distances cannot be computed with any accuracy.

The government to which these people are subject cannot be properly compared with any form common to civilised countries. Geographers have termed it patriarchal and despotic; but, in fact, there is no system of government, for even where a khan, or sovereign, is chosen, he is usually elected only by a few of the tribes, who obey only so long as they are pleased with their ruler, while the rest refuse all obedience, and probably take arms against him. He may issue orders, but he cannot enforce compliance; and even where there is an absolute infraction of the laws of the Koran, by which they profess to be guided, the delinquent's punishment is more frequently inflicted by private revenge than by the decision of a public judge. The punishments are founded on the *lex talionis*, and consist commonly of the bastinado, maiming, and strangling; but, if the offending party consent, almost all crimes may be atoned for by payments of sheep or horses. The khan must be elected from the highest class, known as the *white kost*, those, in fact, who can lay claim to noble descent: the rest of the people belong to the *black kost*. These are the only remaining distinctions among a people who, a century ago, were, of all others, the nicest in establishing family preeminence.

With respect to religion it is difficult to say whether the Kirghis have any particular form. They acknowledge a supreme creative intelligence; but some worship according to the dogmas of the Koran, and others mingle Islamism with an old kind of idolatry, while a third section of the pop. believe in the existence not only of a good deity, called *Koudaï*, but also of a wicked spirit *Chaitane*, the author of all evil. In the existence of inferior spirits, and in witchcraft and sorcery, the people have universally the most implicit faith; and the hadjis travelling through the steppe reap great pecuniary advantages by imposing on their credulity. The exercises of religion meet with little attention; long and frequent prayers do not suit the Kirghis; they fast too often by compulsion to do so by choice; and they are not so friendly to cleanliness as to relish the ablutions enjoined by the Mohammedan religion. In fact, with the exception of extreme credulity, there is hardly a trace of religious sentiment among them.

The history of the *Kirghis-Kazaks* cannot be traced with much probability beyond the 16th century. Earlier historians, commencing even with Herodotus, say that the steppe was inhab. by a people living in felt tents, and otherwise assimilated to the great Mongolian family; but these were *Nogais*, not Kirghis, being more civilised, and in all probability the builders of those temples and houses the ruins of which are still visible. (See Herod., iv. 24, 46, and Heeren's Researches, Asia, ii. 285-298.) The name of the Kirghis first appears in Russian history about the middle of the 16th century. But Ferdusi, in the 11th century, speaks of Kazaks characterised by the same habits as the Kirghis, though it does not appear that they then lived on the great steppe E. of the Aral. They first became nominally subject to Russia in 1740, but the rule of that country has never been felt but by the tribes adjoining the frontier. As to the native khans, so also to the Russian government, obedience is paid only when it is convenient, a rapid journey into the interior soon carrying them out of reach, when it suits their purpose to plunder rather than trade. It remains to be proved whether the efforts now in progress at Orenburg, to introduce civilisation into the steppe by educating young Kirghis, will accomplish the professed object of making them, instead of a burden and nuisance, useful and obedient subjects of Russia.

KIRKCALDY, a royal and parl. bor., sea-port, and manufacturing town of Scotland, co. Fife, on the N. shore of the Frith of Forth, 10 m. N. Leith, on the Edinburgh-Perth railway. Pop. 10,841 in 1861. The town consists principally of a single street, parallel to the shore, 2 m. in length. Having been originally laid out and built with no attention to any general plan, but according to the taste, convenience, and means of the parties, this street was formerly of the most irregular description, being narrow, crooked, and the houses frequently mean and poor. In 1811, however, an act was obtained for widening, paving, and lighting the streets, and otherwise improving the town; and since that period several new lines of houses have been constructed, and many important im-

Digitized by Google

provements effected. The houses in the main street are now mostly of a very respectable class, and the shops are good, and handsomely fitted up. The town is well supplied with water, paved, and lighted with gas. Among the public buildings are, the par. church, rebuilt in 1807; Abbotshall church, within the parl. bor.; several chapels belonging to the Free Church; various dissenting chapels; and a handsome town-house, including a gaol, with a spire erected in 1828. Besides the parochial schools, and a variety of private seminaries, there are two charity schools for the education of children of both sexes, on an endowment by Mr. Philp, merchant, who bequeathed 70,000*l.* for the foundation and maintenance of these and similar schools in Pathhead and Kinghorn.

The staple manufacture of the town is that of coarse linen, including sheetings, ticks, dowlas, and canvass. There are also rope-walks, bleachfields, iron foundries, and breweries. The harbour, near the E. end of the town, consists of an inner and outer basin. It is wholly artificial, being formed of three piers, and dries at low water; but notwithstanding this drawback, the town possesses a good deal of shipping, and carries on a pretty extensive trade. There belonged to the port on the 1st Jan. 1864, 26 sailing vessels under 50, and 32 above 50 tons, besides two steamers, one of 35, and the other of 86 tons. There is a good deal of trade with the N. of Europe, whence hemp, flax, timber, and tar are imported, and to which manufactured goods and coal are exported. Gross customs' revenue, 10,764*l.* in 1863. There is a weekly corn market, which is well attended.

Kirkcaldy was made a royal bor. by Charles I. in 1644. It had attained about this period to considerable wealth and distinction; but it subsequently encountered severe losses, and, about the middle of last century, it had only two ferry-boats and one coasting vessel. But since 1763, and especially since the close of the American war, its manufactures, commerce, and population have steadily increased. It is now governed by a provost, two bailies, and eighteen councillors. Corporation revenue 699*l.* in 1863-64. Kirkcaldy unites with Burntisland, Dysart, and Kinghorn, in sending one mem. to the H. of C. Registered electors in the bor. 431 in 1865.

Kirkcaldy is the birth-place of Adam Smith, the author of the 'Wealth of Nations,' born here on the 5th of June, 1723. His father being comptroller of customs at this port, Smith received the rudiments of his education in the parish-school; and he afterwards resided here, with little interruption, from 1766 to 1776, occupied in the elaboration of his great work, which appeared in the last-mentioned year. Raith, the seat of the Ferguson family, is in the immediate vicinity of the town.

KIRKCUDBRIGHT, a marit. co. of Scotland, or, as it is more frequently termed, a stewartry, in the most southerly portion of that kingdom, comprising the E. half of the district known by the name of Galloway. It is bounded on the E., N., and W. by the counties of Dumfries, Ayr, and Wigtown, and on the S. by the Irish Sea and the Solway Frith. Area, 954 sq. m., or 610,734 acres, of which from one-fourth to one-third part are arable. Surface much diversified, but in general hilly, and in extensive districts mountainous. The highest part of the Kell's range has an elevation of 2,652 ft.; and Cairnsmoor of Fleet, on the bay of Wigtown, rises to the height of 2,329 ft. The greater number of the hills are bleak and barren; but in parts, particularly on the confines of Ayrshire, they afford good sheep pasture. The arable lands lie principally to the S. of a line drawn from the middle of the par. of Irongray to Gatehouse; but Criffel, 1,831 ft. high, on the Solway Frith, and some other considerable hills, lie within this tract. Climate in the lower districts mild but moist; in the upper districts it is sometimes severe. Except along the Solway Frith, the soil even of the arable land of the stewartry has seldom a smooth, continuous surface: it is very often broken with gravelly knolls, but the hollows between these consist principally of a gravelly or hazelly loam, and are often extremely productive, and particularly well adapted for turnip husbandry. In wet summers the arable knolls are covered with luxuriant crops, while many of those that do not admit of cultivation yield excellent pasture. Principal crops, barley and oats, but wheat is also raised. Within the last few years the turnip culture has made great progress. Arable husbandry has been greatly improved since the peace: furrow draining is now extensively practised, and latterly bone-dust has been successfully employed in the raising of turnips. But the soil and climate are better suited for grazing than cropping, and the principal attention of the farmer is given to the former. The breed of polled cattle, peculiar to this co. and that of Wigtown, is one of the best in the empire: they are principally sent up by land when half fat to the Norfolk fairs; but they are also, with sheep, sometimes fattened off on turnip and sent by steam to Liverpool. Farm buildings have been vastly improved, and the roads, which were formerly execrable, are now nowise inferior to those of any other co. in the empire. There are some very large estates; but property is, notwithstanding, more subdivided in this than in most other Scotch cos. Farms of medium size, and all let on 19 year leases. This co. and Wigtown are mostly subdivided by the dry stone walls known, from this district, by the name of 'Galloway dykes,' and which, when well built, make an excellent fence. Manufactures and minerals unimportant; lime, coal, and freestone are all imported principally from Whitehaven, on the opposite side of the Solway Frith. The granite used in the construction of the Liverpool docks is mostly obtained from near Creetown, in this co. Principal rivers, Dee, Fleet, and Urr; the salmon fisheries on the first are valuable. Principal town, Kirkcudbright. The co. has twenty-eight parishes, and sends one mem. to the H. of C., for the co., while the bor. of Kirkcudbright joins with Dumfries, Annan, and other bors. in returning a mem. Registered electors for the co. 1,353 in 1865. In 1861, the co. had 7,326 inhab. houses, and 42,495 inhabs.; while, in 1841, it had 8,162 inhab. houses, and 41,119 inhabs. The old valued rent was 9,549*l.*; the new valuation was 279,820*l.* for 1864-65.

KIRKCUDBRIGHT, a royal and parl. bor., and sea-port of Scotland, cap. of the above co., on the Dee, about 6 m. above its confluence with the Solway Frith, 24 m. SW. Dumfries, and 83 SSW. Edinburgh, on a branch line of the Glasgow, Dumfries, and Carlisle railway. Pop. 2,638 in 1861, against 2,692 in 1841. It is a finely situated, well built town. The streets intersect each other at right angles, and the houses are mostly two stories high. A large Gothic church, with a spire, was erected in 1838, at an expense of 6,782*l.*; it has also a gaol erected in 1816; an academy, with a room for the public subscription library; and the ruins of an old castle, once the property of the lords Kirkcudbright. Exclusive of the parish church, the Free Church, United Secession, and Rom. Catholics have places of wor-

Digitized by Google

ship. A school founded and endowed by Mr. W. Johnston, a native of Kirkcudbright, and intended to furnish the children of the poorer classes with a good English education, was opened in 1848. A workhouse for the use of this and the adjoining parishes of Tongland, Twynholm, Borgue, and Rerwick, has been erected at a little distance from the town. The harbour of Kirkcudbright is the best in the S. of Scotland. At low ebb in neap tides there is about 10 ft. water in the river; and as the tide then rises about 18 ft., there is at all times water to float the largest ships. The access to the Dee is much facilitated by the lighthouse erected in 1843, on the little Ross at its mouth. But, despite its fine harbour, Kirkcudbright, owing to the thinness of the population in the vicinity, has very little trade. The harbour revenue amounts to 250*l.* a year. Ship-building is carried on to some extent, but it has no other manufacture worth notice.

Kirkcudbright was made a royal bor. by James II. in 1455. Under the Municipal Reform Act it is governed by a provost, two bailies, and fourteen councillors. It unites with Dumfries, Annan, Sanquhar, and Lochmaben, in sending one mem. to the H. of C. Registered electors, 121 in 1865. Corporation revenue 1,399*l.* in 1863–64. Its pecuniary affairs have been exceedingly well managed, and it has at this moment the whole property contained in the charter of James II. The town's revenues are employed to defray the expenses of the academy, and the charges on account of lighting the town and supplying it with water, for which no assessment is imposed on the inhabitants. The environs of the town are extremely beautiful. The rising grounds on each side the river, from Tongland to the sea, are embellished with plantations. St. Mary's Isle, the residence of the earls of Selkirk, adjoins the town on the S.

KIRKHAM, a manufacturing and market town and par. of England, co. Lancaster, hund. Amounderness, in the low district, called the Fylde, 7 m. W. by N. Preston, 27 m. N. Liverpool, and 220 m. NNW. London, on the London and North Western railway. Pop. of town, 3,380 and of par. 11,445 in 1861. The town, though small, is handsome and well built. The church, a large modern structure, was erected, in 1822, at an expense of 5,000*l.*: its interior, which accommodates nearly 2,000 persons, is ornamented with several fine old monuments, carefully replaced in the new building. The living is a vicarage, in the patrimony of the dean and canons of Christchurch, Oxford, the chapelries in the out-townships being in the gift of the incumbent. Within the town are places of worship for Wesleyan Methodists, Independents, Swedenborgians, and Rom. Catholics, with attached Sunday schools, attended by about 500 children; and connected with the church is a national school for boys and girls. A grammar school, founded in 1670, is attended by 80 or 100 boys: it is managed by a principal and two under-masters; the instruction given is purely classical. A charity school, established in 1760, for clothing and educating 40 girls, is respectably conducted. The Rom. Catholics have also large schools for the children of that religion, which has numerous adherents in and round the town. The industry of Kirkham, 20 years ago, was confined to the manufacture of sail-cloth, cordage, and coarse linens, of materials brought from the Baltic; but now, the cotton manufacture is extensively carried on. The Lancaster Canal, the Lancaster and Preston railway (opened in 1840), and the Preston and Wyre railway, afford conveyance both for passengers and goods. Petty sessions are held once a fortnight, and a court of requests for debts under 40*s.* sits monthly. Markets on Thursday: fairs, Feb. 4 and 5, April 29, and Oct. 18.

KIRKLESI, KIRK-EKLESI, or KIRK-KILISSA (meaning *the Town of Forty Churches*), a town of European Turkey, prov. Roumelia, cap. circ. of its own name, 30 m. E. Adrianople and 106 m. WNW. Constantinople; lat. 41° 50′ N., long. 16° 55′ E. Pop. estimat. at 5,500 families, or 28,000 individuals, about one-half of them Greeks. It is a large, dirty, ruinous town, surrounded with old walls defended by a citadel, and has a bazaar, several mosques and hummums and Greek places of worship. The neighbourhood produces an abundance of grapes, melons, and other fruits; and a good deal of wine is made. The Turkish inhab. are rude, brutal, and ignorant, but the Greeks are a large and thriving community, who have established two good schools on the monitorial system for the instruction of their children, a degree of refinement to be met with in few other towns of Turkey.

KIRKWALL, a royal and parl. bor., market town, and sea-port of Scotland, in Mainland, or Pomona, the largest of the Orkney Islands, of which it is the cap., on the NE. side of the island, at the head of an open bay exposed to the N.; 26 m. N. by E. John O'Groats, and 208 m. N. Edinburgh. Pop. 3,519 in 1861. The town consists chiefly of one narrow and inconvenient street, about 1 m. in length, parallel to the bay. The houses have generally their gables to the street, and most of them bear the marks of antiquity. But new and handsome houses are gradually being erected, both in the town and neighbourhood. Here most of the country gentry reside, at least during winter, and the society of this remote place is esteemed equal, if not superior, to that of any provincial town of its size in Scotland. The only public building of a modern date is the town hall, with piazzas in front, containing a gaol, assembly-rooms, and court-room. The principal building in Kirkwall is the cathedral, erected in the 12th century, and dedicated to Magnus, one of the Scandinavian earls of Orkney, who, having been assassinated in 1110, was canonised after his death. This venerable Gothic structure, which has been enlarged at different times, is, after the cathedral of Glasgow, the most entire in Scotland; it is in the form of a cross, its extreme length being 236 ft., its greatest width 56 ft., the height of the roof 71 ft., and that of the spire 140 ft. But the original spire having been destroyed by lightning in 1671, the present spire is modern, and it is, also, unworthy of the building. About 100 yds. S. from the cathedral are the ruins of two ancient edifices, viz. the Earl's Palace, built by Patrick Stewart, earl of Orkney, and the Bishop's Palace. In the latter, Haco, king of Norway, died on his return to Orkney, after the unsuccessful battle of Largs, in 1263, and James V. occupied it on his visit to the island in 1540. The remains of Kirkwall Castle, on the W., are still visible. The cathedral formed the cemetery of many Scandinavian kings, nobles, and warriors. The par. church, consisting of the choir of the cathedral, is collegiate. There are also chapels belonging respectively to the Associate Synod, Original Seceders, and Independents. The town has numerous and well attended schools, several libraries, a museum, and a printing-press. Malcolm Laing, the historian of Scotland, was born in the vicinity of Kirkwall, and educated at the grammar-school of the bor.; and at his death, in 1818, his remains were interred in St. Magnus' cathedral.

Digitized by Google

Rye straw raised in Orkney having been found to be peculiarly suitable for the manufacture of straw plait for ladies' bonnets, the business is carried on in Kirkwall to a considerable extent, though not so much so as formerly. It has also distilleries, and some weaving is carried on for domestic use. The herring, cod, and lobster fishery is prosecuted to a considerable extent. The town is the seat of the courts of law for the whole of Orkney. Kirkwall has a custom-house, which comprises all the harbours in the Orkneys; its revenues amounted to 981*l.* in 1859; to 138*l.* in 1861; and to 114*l.* in 1863. A steam-boat plies between Leith and Kirkwall, touching at Aberdeen, Wick, and intermediate ports: in summer it goes as far as Lerwick, in Shetland. Kirkwall has an annual fair in the month of August, which lasts about two weeks; and the greater part of all the mercantile business of the Orkney Islands is negotiated at this fair.

Kirkwall was made a royal bor. by James III. in 1486. It unites with Cromarty, Wick, Dingwall, Dornoch, and Tain in sending a member to the H. of C. Registered electors, 157 in 1865.

KIRRIEMUIR, a bor. of barony, market and manufacturing town and par. of Scotland, co. Forfar, in a pleasant situation, partly on a flat and partly on an inclined plain, along the N. brow of a picturesque glen, through which the streamlet Garry runs, 15 m. N. by W. Dundee, and 5 m. NW. Forfar. Pop. 3,275 in 1861. The Grampians are within 3 m. of the town, on the N. The view from its upper part, about 400 ft. above the level of the sea, is most extensive and striking, having the Grampian range on the N., and the whole extent of the splendid valley of Strathmore on the S. The form of the town has some analogy to an anchor. The only public buildings are, the trades' hall, the property of 12 friendly societies of the town and parish; the parish church; and chapels belonging respectively to the Associate Synod, the Relief, the Original Seceders, and the Episcopalians. There are 16 schools in the par., of which 3 are endowed, 1 supported by subscriptions, and 12 unendowed. There are 2 bequests for education, the one educating about 50 boys, the other 20 boys and 50 girls. Dr. M'Crie, the biographer of John Knox, and Dr. Jamieson, the Scotch lexicographer, were once dissenting clergymen in Kirriemuir.

Though inland, and devoid of ready communication with the sea, Kirriemuir has attained to considerable eminence in the manufacture of the coarser kinds of linen fabrics, such as Osnaburgs, sail-cloth, bagging, and imitation Russia sheeting. This branch of business, which is carried on chiefly in connection with the Dundee manufacturers, was introduced soon after the rebellion of 1745.

Kirriemuir is governed by a bailie, nominated by the feudal superior (Lord Douglas). The peace is preserved by a body of constables, chosen annually.

KISHM (the *Oaracta* of an. Greek authors), the largest island in the Persian Gulf, and the chief of a group situated near its mouth, extending between lat. 55° and 56° 30′ N., and long. 26° and 27° E., comprising Ormuz, Kenn, Anjar, Larak, and many smaller islands. Kishm is of an elongated shape, nearly 60 m. in length E. to W., and 12 m. in its greatest breadth. Pop. estimated at 5,000. It is separated from the main land by Clarence Straits, a narrow and intricate channel, navigable, however, for large ships, the soundings varying from 4 to 12 fathoms. A ridge of hills extends from one extremity to the other of the island on its S. side; the rest of the surface is mostly plain. Sandstone is the predominant formation. The surface is generally arid and barren, and is in parts extensively incrusted with saline efflorescence; but a few portions are remarkably productive. The N. part of the island is the most fertile and populous: the soil there consists of a black loam, on which wheat, barley, vegetables, melons, grapes, and dates in large quantities are produced. The island at present yields corn enough for home consumption. Boats from all parts of the gulf come to Kishm for wood. Cattle and poultry are reared: the former are scarce, but goats are bred in considerable numbers, and thrive well. The greatest enemies of the goats are jackals, with which the island is much infested; antelopes of a superior breed, partridges, and rock pigeons abound, and wildfowl in winter. The inhab. are chiefly Arabs; they employ themselves in fishing, agriculture, and the manufacture of cloth, and reside chiefly in villages and hamlets scattered along the coasts. Kishm is said to have once contained upwards of 300 towns and villages, but at present it has not half that number. The chief towns are Kishm at its E., and Basidoh at its W. extremity, and Left on its N. side. Kishm, with about 2,000 inhab., seems to have been formerly of considerable commercial importance. It is surrounded by a high mud wall, flanked with towers, on which a few old guns are mounted. Streets narrow and dirty; houses flat roofed, and some of them large and neatly fitted up. The bazaar is plentifully supplied with many kinds of vegetables and fruits from Persia; and good wines, dried fruits, silk and cotton cloths, and carpets of the richest patterns, may be obtained. The town has a brisk trade and a bustling appearance, many native vessels calling for food and water, or to take pilots for the Kishm channel. It is the residence of the sheikh. A few coasting vessels are built here with timber from the Malabar coast. Basidoh, or Bassadore, once belonged to the Portuguese, and the ruins of their town and fort may still be traced. It is admirably situated in most respects and healthy, but ill supplied with water. Being the principal station in the gulf for ships of the Indian navy, it has several European houses and public buildings, including a hospital, store and guard houses, and is the residence of the commander of the Indian squadron. Its port is difficult to enter, but vessels have good anchorage in 6 or 7 fathoms, ½ m. from the shore. Left is at present a town of only 600 inhab.: it was bombarded by the English in 1809. Vessels may lie before it in 4½ fathoms water completely landlocked.

The island of Anjar, 3 m. S. of Kishm, is of volcanic origin, 5 or 6 m. in circuit, and uninhabited, though the remains of a town and reservoir be still visible on its N. side. It is covered with pits of salt and metallic ores, and between it and Kishm is an excellent anchorage. Larak, to the SE., is also of volcanic origin, and inhabited only by a few fishermen. The Great and Little Tombs, about 25 m. SW. Kishm, are low and uninhabited. The small islets between Kishm and the main land are verdant and covered with wood, a circumstance rare in the adjacent parts of Persia. Nearchus visited and described this island group; and Arrian affirms that in his time was to be seen in Kishm the sepulchre of its first king Erythras, from whom the gulf was named *Mare Erythræum.* These islands are now governed by a sheikh, tributary to the imâm of Muscat.

KLATTAU, a town of Bohemia, cap. circ. of same name, on the Bradlenka, 70 m. SW. Prague, on the railway from Prague to Ratisbon. Pop. 7,382 in 1857. The town is well built, and has a castle, some handsome churches, a council-house, with a tower 150 ft. in height, containing a bell

Digitized by Google

weighing 90 *centners*, a gymnasium, high school, two hospitals, and manufactures of woollen cloth and stockings. It is said to have been founded in the eighth century.

KNARESBOROUGH, a parl. bor., market town, and par. of England, co. York, W. Riding, wap. Claro, 16½ m. W. by N. York, the same distance N. Leeds, and 182 m. N. by W. London on the Great Northern railway. Pop. of parl. bor. 5,402 in 1861. The town is beautifully situated on a slope, NE. of the Nidd, the stream of which is rapid, deep, and very serviceable for turning the wheels of mills and machinery connected with the linen trade. Two stone bridges cross it, one above and the other below the town; and on a beetling crag, close over the torrent, stands a ruined castle, opposite to which, on the other side the river, is a curious dropping well, the water of which runs from a source 50 ft. above, and trickles through a porous limestone rock with sufficient rapidity to deliver about 20 gallons per minute. At no great distance is an oratory, carved out of the rock, and a mile lower down the stream are the ruins of a priory, founded by Richard, brother of Henry III., and a cavern known as St. Robert's Cave, where Eugene Aram, now so well known through Sir Lytton Bulwer's novel, committed the murder in 1745, of which he was convicted fifteen years after. The streets of Knaresborough are broad, regularly laid out, well paved, and lighted with gas: the houses are almost wholly of stone, and many of them large and handsome. The market-place is extensive, and there is a good market-house. The court-house occupies the centre of the old castle, and another part of it is used as a prison for the liberty of the forest of Knaresborough. The par. church is of considerable antiquity, but little beauty. The Independents, Wesleyan Methodists, and R. Catholics have also places of worship, and the Sunday schools of the church and chapels are attended by upwards of 800 children. A charity school, two national schools, an infant school, a school of industry, and two other schools, furnish instruction to about 600 children, chiefly belonging to the working classes.

The public institutions of the town comprise a public library, dispensary, lying-in charity, savings' bank, and Bible society.

The industry of Knaresborough is chiefly confined to linen-weaving. The trade has been long established, and a large amount of capital is vested in mills, warehouses, and machinery. Knaresborough has a great corn market, and from this place and Ripon the manufacturing districts of the W. Riding are principally supplied.

Knaresborough is a bor. by prescription, governed by a bailiff. Amount assessed to property tax, 12,694*l*. in 1862. The parl. franchise was granted in 1 Mary (1553), since which the bor. has sent two mems. to the H. of C. The right of voting, till 1832, was vested in the owners of 84 burgage tenures, all of which, excepting four, being the property of the duke of Devonshire, the members were his nominees. The Boundary Act enlarged the limits of the bor. by including in it parts of the townships of Scriven and Knaresborough. Registered electors, 271 in 1865. Markets on Wed., and on alternate Weds. for cattle. Sheep fairs, Wed. and Thurs. after Jan. 13, Wed. after March 12, May 6 and 7, Aug. 12. Statute fairs, Tues. and Wed. after October 10, and Wed. after Nov. 22.

KNIGHTON, a market town, parl. bor., and par. of N. Wales, co. Radnor, on the Teme, 28 m. SSW. Shrewsbury, and 138 m. WNW. London. Pop. of parl. bor. 1,655, and of par. 1,853 in 1861. Area of parish, 252 acres. The town comprises two chief streets, intersecting each other at right angles, and the gentle acclivity on which it stands, not only gives it a picturesque appearance, but greatly contributes to its cleanliness. A small modern-built church, subordinate to that of Stowe in Shropshire, and a chapel for Methodists, are the only places of worship; and the charities comprise a free-school and an almshouse. Knighton is principally occupied by tradesmen, mechanics, and maltsters. It has no manufactures, the wool-dyeing and spinning business having ceased to exist. Wool-stapling is carried on to some extent, though much less than before 1811, when a large establishment failed. The market is large, and is attended by dealers from Birmingham and its neighbourhood, who come for meat, poultry, eggs, butter, and cheese. Petty sessions are held monthly. The officers of the borough are a bailiff, burgesses, and constables; but they have little or no authority, and the bailiff's only business is to collect the chief rents of the manor, which belongs to the earl of Oxford. The boundaries of the parl. bor. were not changed by the Boundary Act of 1832, and in 1865 there were 401 registered electors in the bor. of New Radnor, to which Knighton is contributory.

Knighton is called by the Welsh *Tref-y-Clawd*, or 'the town on the dyke,' from the circumstance of its position close to Offa's dyke, which enters the parish on the N., and running due S. about 2 m., may be traced through several parishes into the co. of Hereford.

KNUTSFORD (corrupted from *C'nute's Ford*, so called because the Danish Canute crossed here with his army), a market town and par. of England, co. Chester, hund. Bucklow, 11½ m. W. by N. Macclesfield, 13½ m. S. by W. Manchester, and 154 m. NW. London, on the London and North Western railway. Pop. of town, 3,575, and of par. 4,194 in 1861. Area of parish, 4,300 acres. The town is divided into two parts, called Over and Nether Knutsford. by the brook Birken, an affluent of the Bodlin, which rises about ½ m. S. In Nether Knutsford are the market-place, sessions-house, and county-gaol. The church, a modern structure of brick and stone, with a square tower, was built in 1741, when the parish was separated from that of Rostherne. The living is a vicarage in private patronage. Another church, at Over Knutsford, is in the patronage of Lord de Tabley. The other places of worship are for Wesleyan Methodists, Independents, and Unitarians; and Sunday schools are connected with the two former, as well as the churches. The charities of the town comprise a free school, founded in the reign of Edward VI., and well endowed by an ancestor of the Legh family, a school of industry for 100 girls, supported by the Egerton family (who support also another school at Rostherne), and a parochial school for 70 boys. The manufactures of shag, cotton velvet, sewing thread, worsted, and leather, employ many hands; but the supply of the wants of the opulent gentry in the neighbourhood is a chief source of support to the tradespeople. Races are held annually in July, and are well attended. Knutsford is the election town for the N. division of Cheshire, and sessions are held in July and October. Markets on Saturdays. Cloth and cattle fairs, Whit-Tues., July 10, and Nov. 8.

KOMORN. See COMORN.

KONIEH (an. *Iconium*), a town of Asiatic Turkey, prov. Karamania, cap. of a pach. and sandjiak of its own name, 27 m. E. by S. Smyrna, and 132 m. S. Angora. Pop. about 30,000, chiefly Turks. It extends over the plain E. and S. far beyond the walls, which are about 2 m. in circ.

Digitized by Google

Snow-covered mountains surround the level country on every side except the E., where a dreary plain extends to the horizon. The walls were built by the Suljek sultans, of materials taken from more ancient edifices; and the figures in *alto relievo* which ornament the gates are alleged to be amongst the finest in Turkey. In the middle of the town a small eminence is covered with the remains of a fortified palace, once inhabited by the Seljuk princes. The present public buildings comprise 12 large and numerous smaller mosques (that of Sultan Selim having been built on the model of St. Sophia at Constantinople), several madressas or colleges, 2 Armenian churches, 4 public baths, and 7 khans for the accommodation of merchants. The importance of Konieh belongs to the past, for it has now dwindled into insignificance, and exhibits every mark of desolation and decay. A few carpets and some morocco leather are manufactured here; but trade is in a very languishing state, and far the greater portion of the adjacent territory is permitted to lie waste.

Iconium, the cap. of Lycaonia, mentioned by Herodotus and Xenophon as being on the great post road between Sardis and Susa, is reported by Strabo to have been a well-built town, situated in a fine country, and is celebrated in gospel history as having been the scene of St. Paul's persecution by the unbelieving inhab. (Acts xiv. 1—7.) After the taking of Nicæa by the Crusaders in 1099, it became the residence of the Seljuk sultans of Roum, by whom it was much embellished and enlarged. Frederick Barbarossa expelled them in 1189; but, after his death, they re-entered their capital, and lived in splendour till the irruption of Jenghis-Khan and his son Holukow, who broke the power of the Seljuks. Konieh has been included in the dominions of the Grand Seignior since the time of Bajazet, who finally extirpated the Ameers of Karamania.

KONIGGRATZ (Boh. *Kralowy-Hradecz*, a town of Bohemia, cap. circ. of same name, on the Elbe, 63 m. ENE. Prague, with which it is connected by railway. Pop. 5,061 in 1857. The town is fortified, and has 3 suburbs, some large barracks, a fine cathedral, Jesuits' college, episcopal seminary, gymnasium, high school, and a celebrated orphan asylum. Woollen cloth weaving is the chief employment of the inhabitants. It was taken several times by the Prussians during the last century.

KÖNIGSBERG, a large city of the Prussian states, cap. of the prov. of Prussia Proper, and of a reg. and circ. of the same name, 320 m. N. Berlin, on the railway from Berlin to Wilna and St. Petersburg. Pop. 94,580 in 1861. A bar at the mouth of the Pregal prevents vessels drawing more than 5 or 6 ft. water ascending the river to Königsberg, so that its port is properly at Pillau, at the junction of the Frische Haff with the Baltic. A part of Königsberg is built on an island formed by the Pregel, the houses being founded on piles, as at Venice and Amsterdam. Opposite to this island, and on the N. bank of the river, stands the rest of the city, consisting of the old town, and a quarter to the E. called Lobenicht. The circ. of these 3 quarters, which properly form the city, hardly exceeds 2 m.; but the suburbs are very widely spread, and the wall that encloses the whole is no less than 9 m. in circ. A large portion of the included space, however, consists of gardens and open fields. The streets of the old town are long, narrow, and ill-paved, lined by lofty old-fashioned houses, the basement stories of which project far out in the shape of terraces, with their flights of steps guarded by antiquated brass railings. The old town contains the town-house, rebuilt in 1774; an anatomical theatre, a hospital for the widows and orphans of citizens, and many large warehouses. The quarter to the E. of the old town contains a large hospital on the river side, a mint, theatre, an orphan house. Here also is the old royal palace or castle, now the government-house. The insulated part of the town contains the council-house, exchange, and university buildings. Its orphan-house is also a conspicuous edifice, but none of these rival the cathedral, which, besides its architecture and ornaments, is remarkable for its organ, erected in 1721, containing 5,000 pipes, and for several monuments of the old dukes of Brandenburg, the founders of the monarchy. There are 7 bridges over the arms of the Pregel.

Königsberg is the seat of the government of the prov., and of a court of appeal and a tribunal of commerce. Its university, founded in 1544, had Kant, who died here in 1804, for one of its professors, and is attended by about 350 students. The city has, besides, three gymnasiums, two seminaries for preachers, with numerous schools, a royal literary society, a celebrated observatory, and various other literary establishments, and a blind asylum. There are manufactures of woollens, cottons, leather, gloves, lace, wax, soap, and refined sugar, with breweries and distilleries on a large scale. The great articles of export consist of wheat, rye, barley, oats, pease, tares, flax and hemp, timber, linseed, ashes, and bristles; the imports being colonial products, cotton and cotton twist, wine, dye stuffs, spices, oil, and coals.

KOOM, a city of Persia, prov. Irak-Adjemi, district of its own name, 186 m. N. by W. Ispahan, and 60 m. S. by W. Teheran; lat. 34° 45′ N., long. 50° 29′ E. Pop. estim. at 7,000. The city stands in an extensive plain, and on the banks of a small river rising at no great distance, and lost eastward in the great salt desert. On approaching the city, the remains of habitations, gardens, and tombs become so numerous as to evince that this district was formerly very populous. Among the sepulchral ruins are upwards of 100 tombs of *imâm zadehs* (descendants of imâms), distinguished by their tiled cupolas. There is a very beautiful college, with a celebrated mosque and mausoleum dedicated to the memory of Fatima, the daughter of Imâm Reza, and containing the tombs also of Sefi I. and Shah Abbas II. The dome is lofty, and with the interior covered with gilt plates. Koom, although formerly a place of some trade in fruit, silk, soap, sword-blades, and white earthenware, has sunk into utter insignificance. The bazaars hardly contain 40 shops, and the only employment of the inhab. is the cultivation of a little corn and rice. In fact, the place is little more than a mass of ruins, and at least two-thirds of the buildings have been untenanted for half-a-century. Its sanctity, however, as a place of refuge and pilgrimage, is generally celebrated throughout Persia, and devotees still order their bones to be brought here for sepulture.

Koom is conjectured to stand on the site of the ancient *Choana*, visited by Alexander. In the Shah Nameh it is named as an ancient city, and its foundation assigned to Kai-Kobad. More dependence, however, may be placed on the statement, that it was either founded or rebuilt by the Saracens, about the beginning of the ninth century. Timur-Leng destroyed it, but it regained its importance under the Sefi dynasty. In Chardin's time there were 15,000 houses, 20 large mosques, extensive bazaars and a handsome bridge over the river; but in 1722, when the Affghans invaded Persia, they pillaged and all but destroyed

Digitized by Google

the city. Repeated earthquakes have also much damaged the remaining buildings, and Koom is now only a melancholy ruin.

KOONDOOZ, an indep. khanat of Central Asia, between the 35th and 38th deg. N. lat., and the 86th and 72nd E. long., at present comprising, as tributary states, Budukshan, and many other small chiefships N. of the Hindoo Koosh. It has N. the territ. of Hissar and Durwaz, E. the Bolor-Tagh mountains, separating it from the Chinese dom.; S. Caufiristan and the Hindoo Koosh, which divides it from Caubul; and W. a part of Affghanistan and the territ. of Balkh. The central part of this dom., or Koondooz Proper, seems to be situated on a lower level than the surrounding provs. It is of limited dimensions, is enclosed by ranges of low hills, and watered by two of the principal tributaries of the Oxus, in the upper part of its course. It is in many parts so marshy, that the roads are obliged to be constructed on piles of wood, fixed among noxious and rank vegetation. The climate is pestiferous; snow lies for three months in winter, but the heat in summer is often excessive. The soil is, however, very fertile; and produces abundant crops of grain. In the marshy grounds rice is the chief product, and in the drier grounds wheat and barley. The revenues of the chief are derived, as in the other E. states, from the land: they are paid principally in kind, and are said to amount to a third part of the produce of the soil. Apricots, plums, and cherries, are plentiful, as are most necessaries of life; a good deal of silk, also, is produced on the banks of the Oxus. Since the conquest of Budukshan, that prov. has been, in a great measure, depopulated, its inhab. being carried off to cultivate the lands of Koondooz, where they die rapidly from the effects of the climate. The surrounding provs. have mostly both a rich soil and a good climate. The inhabs. of Koondooz are mostly Tadjiks. (See BOKHARA.) The khan or *meer* is, however, an Uzbek, Koondooz appearing to be the most southerly region into which the Uzbeks ever penetrated, and afterwards succeeded in establishing their dominion. The army, comprising about 20,000 cavalry with six pieces of artillery, consists chiefly of Uzbeks; but most of the civil employments under the state remain in the hands of the native pop. The khan frequently makes '*chupawals*,' or predatory incursions into the neighbouring territ. of Balkh, and the Hazaureh country, for prisoners, whom he sells for slaves; and the chief of Chitral pays his tribute in human beings, who, being also sold by the Khan, form a principal article of export from Koondooz. There is a considerable trade between Koondooz and the Chinese prov. of Yarkund, and sometimes an exchange of presents. Tea is an important article of consumption. European and other foreign luxuries are derived from Bokhara, in exchange for slaves and cattle sent to its markets. At present, of all the Uzbek states, Koondooz is the most adverse to British influence.

KOONDOOZ, the nominal cap., is in a wide valley, near the confluence of two rivers, about lat. 36° 50′ N., and long. 69° 10′ E. It has formerly been a large town, but its pop. does not now exceed 1,500. It has a mud fort, surrounded by a ditch, and the winter residence of the chief. The largest town in the khan's dom. is Khooloom.

KOROTCHA, or KAROTCHA, a town of Russia in Europe, gov. Koursk, cap. circ., on the river of the same name, and on the road from Voroneje to Kharkoff, 100 m. SW. the former city. Pop. 6,171 in 1858. The town is well built, and surrounded by numerous gardens, and has several churches, nearly all, however, constructed of timber. It has also a saltpetre manufactory, with an extensive trade in apples, for which its vicinity is famous. Korotcha was founded by Michael Fedorovitch in 1658, as a barrier against the incursions of the Crim-Tartars.

KOSTENDIL, or GHIUSTENDIL (*Justiniana secunda*), a town of European Turkey, prov. Roumelia, and cap. sandjiak of its own name, 107 m. N. Salonica, and 192 m. WNW. Adrianople. Pop. estimat. at 8,000. It stands on the N. declivity of the Karasu mountains, at a short distance from the right bank of the Strouma (the an. *Strymon*), and is defended by a crenellated wall flanked with square towers. A bazaar, governor's palace, and several sulphur baths are the only public establishments. Employment is given to a portion of the pop. by the silver and iron mines of the neighbouring mountains.

KOSTROMA, a gov. of Russia in Europe, between 56° 45′ and 59° 12′ N. lat., and 40° 27′ and 48° E. long., having N. the gov. of Vologda, W. Jaroslavl, S. Wladmir and Nijegorod, and E. Viatka. Area 30,400 sq. m. Pop. 1,076,988 in 1858. Surface flat, with some undulations. It is indifferently fertile, being marshy in the N., while in the S. it is sandy and clayey. Climate severe, but healthy. It is watered by the Wolga, and by its important tributaries the Ounja and Vetlouga. Principal corn crop rye, but the quantity grown is insufficient for the consumption. Flax and hemp are largely produced. Cattle few, and but little attended to. This, however, is not the case with the forests, which are extensive, valuable, and better taken care of than those of most other governments. The rivers and lakes furnish abundance of fish. The inhabs. particularly excel in the preparation of Russia leather, and there are various fabrics of cloth and linen. Many of the peasants are masons, carpenters, &c., who seek for employment in the summer season in the contiguous governments; and many are employed at home, in the making of charcoal, pitch and tar, mats, of which there is an immense consumption, boats, and rafts.

KOSTROMA, the cap. of the above gov., on the Wolga, at the confluence of the Kostroma with that river. Pop. 20,630 in 1858. The situation of the town is elevated and agreeable; houses mostly of stone; the rampart of earth by which it was formerly surrounded has been converted into a promenade. It has a handsome cathedral, two large convents, a great number of churches, and a large stone building, or bazaar, for the security, exhibition, and sale of merchandise. There are several tanneries, with manufactures of linen, Prussian blue, soap, and tallow, a bell-foundry. Various fairs, and a considerable commerce.

KOTAH, a town of Hindostan, prov. Rajpootana, on the Chumbul, 195 m. SW. Agra. Pop. estim. at 25,000. The town has some good and well stocked bazaars, and a great number of temples and substantial private houses. The entrances to Kotah are through double gateways, and its walls are surrounded by a fosse hewn in the solid rock. Its chief public edifice is the palace of the rajah, rendered conspicuous by its lofty white turrets, and enclosed by a separate line of works. Kotah has manufactures of cloth and other articles of native consumption. Its territory is among the most flourishing of India.

KOURSK, a government in the S. part of European Russia, having that of Orloff on the N., Voronetz on the E., Kharkoff on the S., and Tchernigoff on the W. Area 17,382 sq. m. Pop. 1,811,972 in 1858. Surface flat, or slightly undulating; soil very fertile; forests not very extensive, and in some parts there is a scarcity of wood.

Digitized by Google

There are no navigable rivers, the want of which is one of the greatest drawbacks on the government. The climate is mild and healthy. Corn is kept in *silos*, or caves, sometimes for 6 or 10 years together, and there is always a large surplus for exportation. Hemp and flax, tobacco and hops, are also produced. The pastures, which are excellent, afford ample provision for large herds of oxen, with horses and sheep. Manufactures considerable and improving, consisting of coarse cloth for the army and the peasantry, leather, soap, saltpetre, spirits, and earthenware.

Koursk, a town of European Russia, cap. of the above gov., 268 m. S. Moscow. Pop. 27,056 in 1858. The town once had a citadel and ramparts; but the former is in ruins, and the latter has been converted into public walks. Situation elevated; houses principally of wood, but many of stone; streets narrow, crooked, and ill paved. There are two convents, numerous churches, with a gymnasium, a normal school, a hospital, and a foundling hospital. It is a thriving, industrious town, having numerous tanneries, tile and earthenware, and wax and tallow works. It carries on an extensive commerce with Petersburg, Moscow, and Odessa, sending to them cattle and horses, tallow, leather, wax and honey, hemp and furs.

Korennaia Poustyn, a convent in the vicinity of Koursk, is celebrated for a miraculous image of the Virgin, and for a great fair held annually on the ninth Friday after Easter, resorted to equally by merchants and pilgrims.

KRASNOJARSK, or KRASNOYERSK, a town of Asiatic Russia, gov. Yeniseisk, of which it is the cap., in a plain of great beauty and fertility, on the Yenesei, and on the high road between Tobolsk and Irkutsk, 290 m. E. by S. Tomsk. Pop. 7,628 in 1858. Though small, this is a town of some importance, being the emporium of a wide extent of country. It is well built; its two principal streets are broad, and its houses, which are mostly faced with planks, are painted in bright colours. Its chief public buildings are, several churches; an edifice, partly of stone, occupied by the government offices; and a large factory, devoted to several branches of industry, especially coach-building, and the manufacture of Russia leather. The district subordinate to this town is the most productive in the prov. Irkutsk, of grain, cattle, and horses. Within the last fifty years this town has been rising considerably in importance, and it has now a brisk traffic in Chinese and agricultural produce.

KREMNITZ (Hung. *Kormöcz-Banya*), a royal town of Hungary, co. Bacs, and one of the principal mining and coining towns of the kingdom; in a deep valley 10 m. W. Neusohl, and 88 m. ENE. Presburg. Pop. 8,603 in 1857. The walled town comprises a castle and about 40 houses, one of which is the mint, ranged round an open space in which the market is held. In the suburbs are many mining offices, and about ½ m. distant are the smelting furnaces. Kremnitz is ill paved, dirty, and disagreeable. It has 5 churches; one with a lofty gilt and coppered steeple and very gaudy internal ornaments, 3 chapels, a Protestant meeting-house, 2 hospitals, a royal infirmary for miners, a gymnasium, normal and girls' schools, and a Lutheran grammar school; and it is the seat of municipal and mining tribunals, and of a mint, and councils of mines and forests.

The Kremnitz mines have 11 or 12 principal shafts, attached to which are 18 or 20 washing works (*pochwerken*). The best mines belong to private companies, but the richest veins of Kremnitz are for the most part exhausted, and a considerable portion of the former working is under water. The mines at present yield about 15,000 marcs of silver, and 250 do. of gold a year. These metals, however, are rarely found pure, but much intermixed with copper, lead, and arsenic. Quartz is the matrix of the ore, which is first reduced by the hammer, to small pieces about the size of stones used for Macadamising roads. The ore is next exposed to the stamping-mill, by which it is pulverised: it is then washed over slanting frames; sometimes roasted, to drive off the sulphur and arsenic; and is finally smelted. The object of this process, which lasts four and twenty hours, is to separate the noble from the ignoble metals, which is effected by the oxydation of the latter. At the moment the oxydation is complete, a bright bluish-white metallic lustre spreads itself over the whole surface of the liquid metal. The impure metals are then allowed to run off, a stream of warm water is passed over the gold and silver to cool them; the solid mass is taken out, cut up into bars, weighed, and sent off to the mint, where the gold and silver are separated and coined. The amount of gold and silver coined at Kremnitz is about 250,000*l.* a year (2,500,000 flor.). The silver is mostly coined into pieces of 20 kreutzers (*zwanzigers*), and the gold into ducats and half ducats. Kremnitz has also a royal vitriol factory, 2 paper-mills, and manufactures of earthenware and vermilion. It is abundantly supplied with excellent water by a water-course carried by a former archbishop of Gran, at his own expense, from the Thurocz to Kremnitz, a distance of 50 m.

KRISHNA, or KISTNAH (the name of a supposed incarnation of Vishnu), a river of Hindostan, and one which bounds an important division of that country; the S. part of the peninsula being entitled 'India S. of the Krishna.' It rises in the W. ghauts, near lat. 18° N. and long 74°, not far from Sattarah; and runs with a very tortuous course E. for about 700 m., through the provs. Bejapoor, Beeder, and Hyderabad, and between Masulipatam and Guntoor; falling into the ocean on the Coromandel coast by several mouths, near lat. 16°, long 81°. Its course lies mostly through a mountainous country, greatly elevated above the sea; its channel is of very irregular depth, much broken by rocks and rapids; and it is altogether ill-adapted for navigation, except in the N. Circars, where it is available for large boats. In the highlands the craft usually employed on it are round bamboo wicker baskets, covered with half-tanned hides, and directed with paddles. Its chief tributaries are the Joongabudra, Gutpurba, and Malpurba, from the S.; and the Seema and Mussy, from the N. Satarah is the principal city on its banks. It is said to be much more productive of gems than the Godavery, diamonds, chalcedonies, onyx, and other precious stones, and some gold, being found in its sediment in the dry season.

KULDSHA, GULDSCHA, or ILI, a city of Chinese Turkestan, cap. prov. Ili or Elè, in lat. 42° 46′ N., long. 82° 48′ 15″, about 450 m. NE. Yarkund. It is said to be 18 Chinese *li* (about 5 m.) in circuit, surrounded by mud walls and wet ditches, and entered by six gates. The town is much better built than either Kotan or Bokhara: the houses are either of stone or wood, seldom of earth, and the streets are traversed by running streams. The inhab. are mostly Chinese; there are, however, about 1,500 Toorkee families, who profess Mohammedanism, but whose dress and customs resemble those of the rest of the pop. The inhab. of Kuldsha are very industrious, and devoted to commerce. Almost every house has a shop, frequently filled with expensive merchan-

Digitized by Google

dise; besides which, the streets abound with moveable stalls, and hawkers going about to sell their wares, Kuldsha being the entrepôt of an extensive region, peopled by nomadic Kalmuck tribes. It is the residence of a Chinese governor.

KUMAON, or KEMAON, a prov. of N. Hindostan, presid. of Bengal, comprising, with Kumaon Proper, that portion of Gherwal SE. of the Alcananda river; chiefly between lat. 29° and 31° N., and long. 78° and 81° E., having NW. Independent Gherwal, NE. the great range of the Himalaya, separating it from Thibet, SE. Nepaul, and SW. the prov. Delhi. Area 6,962 sq. m.; pop. 166,755. The whole country is overspread by mountains successively ascending from SW. to NE., till they reach the height of 25,000 ft. The Ganges in the upper part of its course, the Kalee, and a few of their tributaries, are the chief rivers; there are no lakes of any consequence. The lower portion of the prov. is covered with jungle interspersed with groups of saul, sisso, and other timber trees, and tracts of high reedy grass. The central hilly region is an almost uninterrupted forest; above the elevation of 2,500 ft. the vegetation of the tropics gives place to the pine, oak, and rhododendron. The fruits and vegetables of Europe are common, and thrive well. Wheat, *mandua*, and other dry grains are those principally grown, but rice also is cultivated alternately with the foregoing, a regular rotation of crops being pursued. Hemp is raised in large quantities, and grows luxuriantly to the height of 12 or 14 ft.; little cotton is raised, though it is of excellent quality. The sovereign has the entire property of the soil; and the great functionaries under the native gov. were always paid by grants of land, or by perquisites arising from the soil. The operations of tillage, except ploughing and harrowing, are chiefly performed by women. The implements and operations of husbandry are similar to those in the plains of Hindostan. Irrigation is frequently effected by aqueducts carried a considerable distance, and water-mills, scarce in Hindostan, are here common. The breeds of horned cattle are small, but yield very good milk; there are domestic camels, but they are small, and goats and sheep are principally used for the transport of goods. Elephants, tigers, leopards, and various kinds of deer abound. Copper, iron and lead mines are wrought to some extent; and garnets, rock crystal, and bitumen are met with. Manufactures very few; they include blankets, coarse camlets, hempen cloths, coarse cottons, bamboo mats and baskets, and wooden vessels. Artisans are sufficiently numerous in the towns, but their work exhibits little neatness. It is singular that, though the saw, plane, and turning-lathe be unknown to joiners, the goldsmiths are acquainted with the use of the spirit blow-pipe. The inhabs. at large are more inclined to commerce than agriculture. They carry iron, copper, ginger, turmeric, and other hill drugs and roots into the plain of N. Hindostan, where they exchange them for coarse chintz, cotton cloths, sugar, tobacco, coloured glass, beads, and hardware; and they frequently travel to execute mercantile commissions as far as Furruckabad and Lucknow. The traders of more capital send the products of India across the mountains into Thibet, where they are exchanged for hawks, musk, coarse camlets, wax, incense, and other drugs and roots, the produce of that country; and borax, salt, and gold-dust from Tartary. In the marts of Kumaon, the chief of which are Mandi, Kasipoor, Chilkia, Afzelghur, and Najibadad, sugar-candy, spices, European broad cloths and coral, from the S., are exchanged for shawl wool, coarse shawls, China silks, saffron and hides. Large periodical fairs are held at the above places, whence necessaries are procured, there being no village markets in Kumaon. The country is thinly peopled; the inhabs. are of two distinct races, the dominant being the Hindoo, and the supposed aborigines a race apparently of Tartar origin, many of whom, called *doms*, appear to have been reduced to a state of slavery by their Hindoo conquerors. The native government was despotic in an oppressive degree till the British took possession of the country in 1815; since which the condition of Kumaon and its inhabs. has been progressively ameliorated. Kumaon, like many other parts of N. Hindostan, contains numerous places of Hindoo pilgrimage, and many Hindoo temples.

KUR (an. *Cyrus*), a river of Western Asia, in Georgia, having its rise within the Turkish dominions, not far from Kars, on a S. offset of the Caucasian range, dividing the tributaries of the Caspian from those of the Black Sea, in lat. 41° N., and long. 42° 30′ E. It assumes its name near the town of Akiskar, whence it flows about 80 m. ENE. to Gori. Its course thenceforward is SE., by Tiflis, through the plain of Kara, and afterwards through a lower plain abounding with salt marshes, and in which are several mud volcanoes and petroleum springs. The latter of these plains is frequently overflowed by the river. The total length of the Kur, as measured along its windings, somewhat exceeds 520 m. Its chief affluents are—1. the Alazan, from the main Caucasian ridge, joining the main stream in lat. 40° 56′ N., and long. 46° 51′ E.; and 2nd, the Aras (an. *Araxes*), which rises near Erzeroum, curves northward round Mount Ararat, and thence runs SE., and afterwards NE., to its juncture with the Kur, at Djwat. The Kur at this point is 140 yards broad, and may be navigated by large boats to its mouth on the W. side of the Caspian Sea, a distance of about 100 m. Fishing villages are established on its lower banks, and great wealth is accumulated from the proceeds of these fisheries. A delta at the mouth projects considerably into the Caspian Sea.

KURACHEE, or KARACHEE, the principal sea-port of Sinde, NW. Hindostan, on the E. side of an inlet of the Indian Ocean, 80 m. SW. Hyderabad, and about 18 m. from the W. arm of the Indus. Pop. 22,237 in 1861. Kurachee is built on a low, barren, sandy shore, and is walled. The town is irregularly laid out, and the streets are so narrow that two people can scarcely walk abreast. The houses are chiefly of mud and sandstone, obtained in great abundance from the coast. Kurachee has a considerable trade with Cutch, Bombay, and the principal ports on the Malabar coast. Its harbour is commodious, perfectly safe in all winds, and, though not deep, is capable of sheltering vessels of 200 or 300 tons; so that it is of greater commercial importance than any of the ports on the Indus, which can only be reached from the sea by flat-bottomed boats. Nearly all the Malwa opium exported seaward is shipped at Kurachee. Most of the men engaged in the fisheries of Sinde are from Kurachee, and are superior in intelligence and appearance to the other inhab. of the coast. Kurachee was bombarded and taken in a few hours by a small British force, on the 2nd of Feb., 1839.

KURDISTAN, an extensive country of W. Asia, comprised chiefly within the basin of the Tigris, and belonging partly to Turkey and partly also to Persia; being bounded N. by Armenia, E. by Azerbijan and Irak-Adjimi, S. by Khuzistan and the pach. of Bagdad, and W. by Diarbekir and Algezira. Area roughly estimated at 52,000

Digitized by Google

sq. m.; and pop. at 1,000,000, of whom more than three-fourths are Kurds. The surface of the country is very unequal; but the mountains are much loftier and more frequent in its N. part, the plains in the latter being also considerably more elevated than in S. Kurdistan. Hence there is a great difference of climate in the two sections into which the country is divided. The principal ranges are the Djebel-tagh and Nimrod; the culminating summit being the snow-covered Mount Bisutum, rising 7,500 ft. above the surrounding plain, and about 12,000 ft. above the sea. The geological constitution of these mountains consist of serpentine hornblende and other primary rocks, covered, except in the highest parts, by transition limestone, old red sandstone, and various saliferous formations with other rocks, ascending even, in some parts, to the London clay. The principal rivers are the Tigris, Diala, Great and Little Zab, Kerah, and Kabur. Extensive and rich pasture grounds support great numbers of sheep and goats, the rearing of which constitutes the chief employment of the pop., and their produce almost the whole wealth of the country. Hence, in the Kurd dialect (which is a patois, composed chiefly, though not entirely, of Arabic and Persian), the word *maAl*, which means wealth generally, applies in a primary and more particular sense to flocks of sheep. It is estimated that 500,000 sheep and goats are annually supplied to Constantinople from Kurdistan. Each flock comprises from 1,500 to 2,000 animals, and the time required to take them to their destination is somewhat more than seventeen months. The N. part produces the grains and fruits of middle Europe, while in the S. the plains and valleys produce, in addition, rice, cotton, tobacco, with a great variety of fruits. Excellent timber is found in the forests, and nutgalls form a large article of export at Iskenderoon and Smyrna. Good cultivation prevails in the vicinity of the towns, and more especially between Mosul and Bagdad. The agriculture of Kurdistan is elsewhere, however, in the most primitive condition; and the implements of husbandry are less effective, even, than those of the neighbouring provinces, which owe almost everything to nature and very little to industry.

The Kurds, who inhabit this country, and give to it its distinctive appellation, are commonly considered as a mixed breed of Mongols and Uzbek Tartars, though this is doubtful. They are Mohammedans, of the sect of Omar: their dress much resembles that of the Turks, but it is lighter, and they do not wear the turbans or the long beard. A red bonnet is their usual head-dress, and the outer garment is a cloak of black goat-skin. They are excellent horsemen, and the exercise of the lance, with other military amusements, are points in which they particularly excel. Improvisation is commonly, and, on the whole, not unsuccessfully practised; and their music, though rude, proves that they have a tolerable acquaintance with the art. There are two castes of Kurds, characterised by very different habits. Those of Turkish Kurdistan have fixed habitations, are acquainted with the working of metals, weaving, and other arts, and live subject to their native princes, and governed by their own laws. The nomad Kurds are chiefly found in Persian Kurdistan and in the pachaliks of Diarbekr and Mosul; often roaming over the desert in search of plunder to the neighbourhood even of Damascus and Aleppo. The love of theft and brigandage is a marked feature in the whole race, without exception; and this accounts for their usual carelessness and improvidence about property, for which there is no security. At the same time, all writers agree, that when visited by travellers they exercise the most generous hospitality, and often force handsome presents on their departing guests. The tents of the wandering tribes are low, hastily put together, constructed of coarse black cloth, and generally divided into two parts for the men and women. A defence of reed hurdles surrounds the enclosure in which the tents are pitched, and the horses ready saddled are tied to stakes close to the encampment. Females meet with better treatment among them than in the rest of Asia; neither sex can marry without the permission of relatives, and the constancy of the contracting parties is commonly tried during a long engagement previously to marriage, which with them is considered a sacred and indissoluble tie. Hence the women are considered more as companions than slaves; they are treated with respect, and there is a freedom and openness in their character not to be found in other women of Turkey or Persia.

Turkish Kurdistan comprises the pachaliks of Mosul and Chehrezour, with small parts of the pachaliks of Van and Bagdad. Persian Kurdistan is divided into four districts, Ardelan, Kermanshah, and Kinghiavor, Kermanshah being the cap. and the residence of a beglerbeg. Neither the sultan, however, nor the king of Persia, has any substantial power, their utmost authority being limited to the exaction of tribute, the payment of which they cannot always enforce.

KURILE ISLANDS, a chain of small islands, twenty-five in number, connecting the peninsula of Kamtschatka with the large islands forming the empire of Japan: they are chiefly dependent on Russia, but the three farthest S. belong to Japan. They extend between lat. 43° 40′ and 51° N., and long. 143° 50′ and 156° 20′ E., and occupy a length of more than 700 m. Pop. estimated at 1,200 in 1862. The surface is very irregular, some of the heights rising nearly 6,000 ft. above the ocean, while in other parts deep and narrow valleys are almost on a level with the sea. Volcanic eruptions and earthquakes are of common occurrence, the islands being wholly of igneous origin, indubitably show their connection with the great volcanic band passing SSW. from Kamtschatka to the island of Formosa, through more than 30 deg. of lat. The shores are abrupt and difficult of approach; the coast currents are very violent, especially on the E. or ocean side; and continual fogs, hovering over the islands, render access extremely difficult. The animals and plants differ little from those found in Kamtschatka; and the minerals consist chiefly of iron, copper, and sulphur. The inhab. mostly engage in hunting and fishing; the former supplying them not only with meat, but also with furs, which serve as money for the Russian Americans, Japanese, and Dutch; while the latter furnishes oil, whalebone, and spermaceti. Agriculture is confined to the islands belonging to Japan. The inhab. of the N. islands resemble the Kamtschatdales in honesty, openness of character, hospitality, and shyness to strangers. Those in the S. islands are Ainos, a race similar to the Japanese. These islands were discovered between 1713 and 1720; but they are very little known even now, after the lapse of a century and a half.

KURNOUL, a town of British India, presid. Madras, cap. of a subdivision of the Balaghaut ceded districts, which formerly composed an independent Patan principality. Pop. 21,230 in 1861. The town stands on the Toombuddra, 90 m. NE. Bellary, defended on two sides by that river and its tributary the Hundry, and on the W. strongly fortified, three of its bastions being 50 ft. high, and covered to the parapets of the curtain by a

Digitized by Google

steep glacis. S. of the fort is the *pettah*, or open town, of considerable extent and pop. Kurnoul was considered impregnable by the natives, and neither Hyder nor Tippoo ever attempted its capture; but it was taken by the British, in 1815, after a siege and bombardment of a single day.

KUTAIAH (an. *Cotyæum*), a town of Asiatic Turkey, cap. of the prov. Anatoli and of a sanjiak, 180 m. ENE. Smyrna, and 134 m. W. by S. Angora. Pop. estimated at 60,000, of whom about 10,000 are Armenians, and 5,000 Greeks. The city stands at the foot of a cluster of mountains called the Pursak-Dagh, in which rises the Pursak (an. *Thymbrius*), flowing N. to the Black Sea. The streets, though steep and narrow, contain many handsome and well-supplied fountains, and many of the private houses are large and well furnished. Besides 50 mosques, 20 of which have stone minarets, 1 Greek and 4 Armenian churches, there are 30 *hummums* or public baths, and 20 khans. The house architecture is very similar to that of Constantinople; and good gardens attached to many of the private residences take off much of thé sombre appearance common to Turkish towns. The surrounding country is well watered, and extremely productive. Grain, cotton, nut-galls, and different fruits are raised in large quantities for exportation; and goats and sheep are pastured for their hair and wool, which fetch high prices in the markets of Smyrna and Constantinople.

KUTCH, or CUTCH, a small territory of NW. Hindostan, between lat. 22° 45′ and 23° 45′ N., and long. 68° 35′ and 71° 5′ E., having N. and E. the Runn, separating it from Sinde Rajpootana and Gujrat, S. the Gulf of Kutch, and W. the ocean, and an arm of the Indus, which divides it from Sinde. Its shape is elongated; greatest length, E. to W., 160 m.; average breadth, 45 m. Area, 6,764 sq. m.; pop. estim. at 500,536. It is in general arid and barren; but its scenery is bold, forming a great contrast to that of the adjacent provs. on the W. and N. A chain of rocky hills runs through it in its whole length, dividing it into two nearly equal parts. This chain is of no great height, but its peaks rise in wild and volcanic cones of primary formation. It unites at its W. end with another mountain chain, running nearly parallel to it on the N. side, and from both many ramifications are given off. The streams of the prov. are mere torrents, dry when the rains have ceased; there is no navigable river. The scarcity of water is, in fact, one of the greatest drawbacks on the country; and the streams flowing N. of the mountains are all so brackish that, in the hot season, they are not drunk even by the cattle. Good water is, however, usually found 30 ft. below ground. The surface is mostly sandy, the sand resting on strata of clay; but near the hills the country is covered with volcanic matters, which in India are of rare occurrence. Coal and iron of good quality, bituminous and ligneous petrifactions, and fossil animals of a late geological period, are found; and there are some mineral springs yielding alum and other salts in large quantities. The country is generally bare of wood; date trees are pretty common, and the neem, peepul, and babool are met with round the villages, but the tamarind, banyan, and mango are rare, and the cocoa-nut is reared with difficulty even on the sea coast. The arable land is chiefly in the narrow valleys between the mountain ranges towards the S. shore, which latter is the best watered portion of Kutch. Less corn is grown than is necessary for home consumption, and it is imported from Gujrat, Malabar, and Sinde, in return for cotton, &c. The Kutch horse is of a good breed; but other domestic animals, except goats, are generally very inferior.

The singular tract called the Runn of Kutch, extends from the Indus to the W. confines of Gujrat, a distance of about 200 English m. In breadth it is about 35 m.; but there are, besides, various belts and ramifications, which give it an extent of about 7,000 sq. m. It has no herbage, and vegetable life is only discernible in the shape of stunted tamarisk bushes, which thrive by the suction of the rain water. It differs as widely from the sandy desert as it does from the cultivated plain; neither does it resemble the steppes of Russia, but may justly be considered of a nature peculiar to itself. It has none of the characteristics of a marsh; it is not covered or saturated with water, but at certain periods; it has neither weeds nor grass in its bed, which, instead of being slimy, is hard, dry, and sandy, of such a consistency as never to become clayey, unless from a long continuance of water on an individual spot; nor is it otherwise fenny or swampy. It is a vast expanse of flat, hardened sand, encrusted with salt sometimes an inch deep (the water having been evaporated by the sun), and, at others, beautifully crystallised in large lumps. So much is the whole surrounding country imbued with this mineral, that all the wells dug on a level with the Runn become salt. Fresh water is, in fact, obtained only on what may be called the peninsulas and islands of the Runn, tracts of land elevated above the rest of that region, covered with verdure, and moderately peopled by a pastoral race. The Runn has every appearance of having been an inland sea; and the natives of Kutch have a tradition, that it was such about three centuries ago, and that Nerona, Bitaro, and other places on its limits, were formerly sea-ports. This is apparently confirmed by ship nails, and stones shaped like those still used as anchors, being frequently met with; and in one instance the hull of a vessel of some size was found imbedded in the soil. During the SW. monsoon the sea overflows a large part of the Runn; and it is also sometimes partially inundated by the Loonee, Bunass, Sundrawuttee, and other rivers, which lose their waters in it.

The *mirage* is here continually presented in wonderful perfection; and the wild ass, the only inhab. of this desolate region, appears often to the traveller at a distance as large as an elephant.

Kutch has undergone many political vicissitudes which have been singularly connected with natural phenomena. In 1762, the ruler of Sinde, unable to conquer this prov., threw a *bund* or dam across the Phurraun, the E. arm of the Indus, and converted the NW. portion of Kutch from a fruitful rice district into a sandy waste. In 1819, a violent earthquake shook every fortress throughout Kutch; destroyed Bhooj and Anjar; submerged Sindree; and upheaved the *Ullah bund* (mound of God) across the former course of the Phunnaur, a tract of soft clay and shells, 50 m. long, perhaps 16 broad, and many feet in height. In 1826, the Indus burst through the *Ullah bund*, and, after an interval of 65 years, resumed its former channel, with a depth at Sindree of three fathoms; a circumstance which may perhaps restore to Kutch a portion of its former commercial importance.

The chief towns of the prov. are Bhooj, the cap., Mandavee, the principal port, Luckput, Moondra, Anjar, and Kotara. The exports are chiefly cotton, glue, and oil, which are transported in coasting vessels of from 25 to 220 tons. The natives excel in naval architecture, and are noted for their skill and daring as seamen and pilots. The social organisation is analogous to that which prevailed in many countries of Europe, in the middle ages.

The rao is the head of a kind of feudal aristocracy, each member of which is absolute within his own domains. The rao can summon them all to his standard, with their followers, but he must pay them; the number of chieftains is about 200, their annual revenue varying from 100 to 30,000 rupees each. The Jharejahs, to which sect the rao and his chieftains belong, are of Sindian origin, and are a degraded, ignorant, and sensual race, who pass their lives in indolence and drunkenness. They uniformly marry Rajpoot women; and their pride is so great, that, lest their daughters should disgrace them by marrying into inferior ranks, they are said sometimes to destroy them in infancy. The abolition of female infanticide formed the subject of an express stipulation between the British government and the rao; but there is reason to believe that it still prevails. The religion of the pop. is a mixture of the Hindoo and Mohammedan.

KUTTENBERG (Boh. *Kuttnahora*), a town of Bohemia, and, after Prague, Reichenberg, and Eger, the most populous in the kingdom, circle Czaslau, 38 m. ESE. Prague. Pop. 12,727 in 1857. The town had a larger number of inhab. before the failure of the veins of silver in the mines near it. The latter, however, still furnish copper, lead, arsenic, and zinc; and mining industry is the principal dependence of the inhab. The town has several public edifices, the principal being the church of St. Barbara, a fine Gothic building. It has also a high school, a military school, an Ursuline convent, a hospital, and factories for printing cottons and spinning cotton yarn. A good deal of starch is made for exportation to Silesia. The first German coins, called silver groschens, were struck here in 1300.

KUZISTAN (an. *Susiana*), a prov. of Persia, sit. between lat. 30° and 33° N., and long. 47° and 51° 30′ E., being bounded NW. by the pachalik of Bagdad, N. by Louristan, E. by Farsistan, and S. by the Persian Gulf. Length about 240 m., breadth 130 m.: supposed area. 9,600 sq. m. The country is divided between the territories of the Chab-Sheikh and those forming the government of Shuster. The Chab territories extend from the Chab to the confluence of the Karoon and Abzal, and from the shore of the Caspian Sea to the range of hills skirting the valley of Ram-Hormuz. This part of the country consists principally of sandy plains and morasses, wholly destitute of vegetation. Eastward, also, intersected by the river Tab, on the banks of which are a few cultivated spots, is a desert about 30 fursungs long, and varying in breadth from 10 to 16 fursungs. The most fertile spots in this part of Kuzistan are near Dorak, the capital of the Chab territories, and in the delta of the Euphrates: in the latter, dates and rice are produced in great abundance on well-irrigated lands, the rice harvest taking place in August and September. The grain-harvest is in April and May; but the produce is insufficient for the consumption of the district. The N. and W. parts of the country afford tolerable pasturage; and here the wandering tribes, comprising the greater part of the pop., pitch their tents. The chief towns of the Chab territory are Dorak (the capital, with a pop. of 8,000, and a manufacture of Arabian cloaks, largely exported), Ahwaz, Endian, and Mashoor. The territories attached to the government of Shuster comprise the fairest part of Kuzistan: four noble rivers, with their tributaries, irrigate the plain in every direction. Its riches in Strabo's time consisted of cotton, rice, sugar, and grain, yielding a hundred-fold; but it is at present little better than a forsaken waste, the only signs of cultivation being near Bundekeel and Haweeza.

L.

LABRADOR, an immense peninsula of British N. America, opposite the island of Newfoundland, from which it is separated by the strait of Belleisle, extending between the 50th and 64th parallels of N. lat., and between long. 56° and 78° W.; being bounded S. by Canada and the Gulf of St. Lawrence, E. by the Atlantic Ocean, N. by Hudson's Straits, and W. by Hudson's Bay. Area estimated at 170,000 sq. m., with a fixed pop. of 5,000, consisting chiefly of Esquimaux, with but a few Europeans. Labrador is generally described as one of the most dreary and naked regions of the globe, exhibiting scarcely any thing except rocks destitute of vegetation. But, though this be its appearance when seen from off the coast, on penetrating a little into its interior, the surface is found to be thickly clothed with pines, birches and poplars, and with a profusion of delicate berries. It is everywhere most copiously irrigated by brooks, streams, ponds, and lakes. A chain of high mountains appears inland, but their height is not correctly known. Mount Thoresby, near the coast, is 2,730 ft. high. The Labrador felspar is found chiefly in the vicinity of Nain. The prevailing rock is gneiss, overlaid by a bed of sandstone, alternately red and white, and strongly marked with iron near the surface: above this again are varieties of secondary limestone, arranged in parallel strata, and full of shells. A few miles from the shore, the secondary formations disappear, leaving gneiss and mica-slate on the surface. (Geog. Journ., vol. iv. p. 208.) The climate is extremely severe, the thermometer occasionally falling below zero of Fahr.; the summers are of short duration, with an average day temperature of 58°. The prevailing winds, on the E. coast, are from WSW. to NW.: there is less fog than on the neighbouring island of Newfoundland, and the straits of Belleisle are never frozen over. Corn will not ripen; but potatoes, cabbages, spinach, and turnips answer pretty well. The wealth of the country, however, consists chiefly in the abundance of fish on its coasts. Whales, cod, salmon, and herrings are extremely plentiful. The Labrador fishery is nearly confined to the SE. tract, opposite Newfoundland: within a few years it has increased six-fold, and it now rivals that of Newfoundland. During the fishing season, about 300 schooners come from the latter to the fishing stations of Labrador, and about half the produce is sent to St. John's, the remainder being exported to England, Lisbon, and the Mediterranean, by English and Jersey houses unconnected with Newfoundland. The American fishing vessels average about 400, principally sloops and schooners, manned by crews varying from 9 to 13 hands, making a total of about 6,000 men. Each man catches, at an average, about 100 quintals of fish during the season; and the oil is in the proportion of 1 ton to 200 quintals. They frequent chiefly the N. part of the coast, clean their fish on board, and leave Labrador early in September. About 10 ships from Quebec, and 120 from Nova Scotia and New Brunswick, carry away fish and

Digitized by Google

furs to the value of about 60,000*l.* a year: the French, also, send a few vessels, but they are not successful fishermen. From 16,000 to 18,000 seals are taken in the spring and autumn, producing about 350 tons of oil; and the export of furs of wolves, bears, foxes, and beavers caught in the interior, averages 4,000*l.* per annum.

The native pop. of Labrador, the Esquimaux, are of small stature, and in their language, persons, and manners, bear a near resemblance to the Greenlanders. Their food consists chiefly of the flesh of seal, rein-deer, and fish; and their dress is entirely of skins. Their houses in winter resemble caverns sunk in the earth, and consist only of one apartment, which, though not very large, generally contains several brothers, or other relatives, with their wives and children. In summer, they dwell in tents of a circular form, constructed of poles, and covered with skins sewed together, which they are continually moving from place to place. They have always a great number of dogs about their camp; which, besides serving to guard the habitation, and to draw the sledges, are occasionally used as food, and their skins made into clothing. The European residents are English, Irish, or Jersey servants, left in charge of the property in the fishing-rooms, and who also employ themselves in catching seals. Their principal settlements are at Bradore Bay, l'Anse-le-blanc, and Forteau Bay, the last being by far the most considerable. The Moravians formed their first settlement in 1752. Their habits, and quiet, unobtrusive life, render them comparatively unknown. They trade with the Esquimaux, bartering coarse cloths, powder, shot, guns, and edge-tools for furs and oils. Their influence is alleged to have been very beneficial to the natives, not only in changing their religious belief, but in improving both their moral and physical condition. Murder, and acts of violence, are much less frequent than formerly, and mutual enmities have been removed. Their boats, houses, and fishing implements are better constructed, and many of them have begun to exercise foresight and economy. The Moravian settlements are at Nain, Okkak, Hopedale, and Hebron, all on the E. coast.

The coast of Labrador was first discovered by Sebastian Cabot, in 1496; but it was not visited till 1501, when Corte Real called it *Terra Labrador* (cultivable land), to distinguish it from Greenland, which he named *Terra verde.* The name is now applied not only to the E. coast but to the whole peninsula, including that part on Hudson's Bay called the E. main.

LABUAN, a small island off the NW. coast of Borneo, a dependency of the British crown, about 6 m. distant from the nearest point of the mainland, and 30 m. N. from the city of Borneo or Bruni; lat. 5° 12′ N., long. 115° 19′ 36″ E. It is from 25 to 30 m. in circ., flat and covered with wood. Pop. 3,345 in 1863, of whom only 40 Europeans. The anchorage, on the E. side of the island, is protected by the greater and three smaller islands; and the town of Victoria has been founded at the embouchure of a rivulet in a small bay, at the head of the anchorage. Coal of good quality is found on the island, and it is well supplied with fresh water. It was ceded by the Sultan of Borneo to Great Britain in 1846; and Sir James Brooke, who negotiated its cession, was appointed the first governor, and retained his post till 1848. The government is administered by a governor and a legislative council, consisting of the governor and two justices of the peace. Justice is administered by the general court established by a local ordinance, which consists of a governor as president, with two or any greater even number of justices of the peace. Cases of treason and murder are tried with a jury of seven persons, and a verdict may be returned by a majority of five. The expense of the establishments at Labuan has been, for the most part, defrayed from imperial funds. The amount voted by parliament in 1860–1 for Labuan was 6,655*l.*; 1862–3, 4,374*l.*; 1863–4, 5,250*l.* Amount voted, 1864–5, 4,233*l.*

The imports of Labuan amounted to 37,842*l.* in 1860, and to 71,365*l.* in 1863; the exports to 12,603*l.* in 1860, and to 22,322*l.* in 1863. The products at present are small, but coal of good quality abounds; it is expected that its supply will be of great service to the ships trading between Singapore and China. Labuan has a fine port; there are no duties on imports or exports. The temperature varies little during the year, ordinarily the thermometer stands at 75° at daybreak, and 86° during the heat of the day; the extreme ranges are from 71° to 90°. The average fall of rain is 160 inches for the year, and it generally falls at night.

The governor of Labuan is also British consul at Borneo. Borneo, or Bruni, on the adjacent shore of the mainland, the residence of the sultan of Borneo Proper, has been termed the Venice of the East. It contains from 30,000 to 40,000 inhabitants, mostly Malays, and it appears as if floating on the waves. It is situated on an estuary, and though built with little regard to regularity, it is intersected crosswise by two main streets, which divide it into four portions, one only of which stands on dry land. The houses in the other three parts are of wood built on piles, which support them above the water, with streets, if so they may be called, to admit the passage of canoes. The steamer which conveyed Sir James Brooke to Borneo, when Labuan was ceded, anchored in the main street, in the centre of the town.

The greatest novelty at Bruni is the floating bazaar. There are no shops in the city, and the market is held every day in canoes. These come in at sunrise every morning from every part of the river, laden with fresh fruit, tobacco, pepper, and every other article which is produced in the vicinity; a few European productions, such as handkerchiefs, check-cotton prints, &c., also make their appearance. Congregated in the main streets, the canoes are tacked together, forming lanes through which the purchasers in their own canoes paddle, selecting and bargaining for goods with as much convenience as if the whole were transacted on *terra firma*. The gold mines of Borneo are amongst the richest of the world. At the beginning of the present century, about 32,000 Chinese labourers were employed in these mines on the W. coast of Borneo; and it is not easy to say how productive they might become, were the miners in a condition to prosecute their undertakings in safety, and to bring the resources of science and of capital to their aid. Antimony is also found in abundance in Borneo, especially in the district of Sarawak; and the diamonds of Borneo rival those of India and Brazil. The sago palm grows in great perfection in many parts of the island, and sago is largely exported in a rough state to Singapore. The areca nut, rattans, gutta percha, gum-benjamin, camphor, and birds' nests are also considerable articles of export; and sugar, pepper, and nearly all the products of tropical regions are raised in most parts of the island.

LACCADIVE ISLANDS (*Laksha-Dwipa*, 'a lac of isles'), a group in the Indian Ocean, lying chiefly between lat. 10° and 12° N., and long. 72° and 74° E., about 75 m. from the Malabar coast

Digitized by Google

There are 19 principal isles, but the largest is not more than 6 sq. m. in extent. Most of them are surrounded by rocks and coral reefs: the water near them, however, is deep, and they are separated by several wide channels, frequented by ships passing from India to Persia and Arabia. They are inhabited by a race of Mohammedans called Moplays. They do not yield grain, but produce an infinite quantity of cocoa-nuts, from the husks of which the inhab. form *coir* cables, which are more elastic and durable than hemp, as the sea-water, instead of rotting, preserves them. These islands are well supplied with fish, and export the small shells called cowries, which pass as coin all over India. Jaghery, a little betel-nut, plantains, a few eggs and poultry, and coral for conversion into lime, are their remaining exports; but they are of little importance, and the inhab. are wretchedly poor. Vasco de Gama discovered these islands in 1499: they were dependent on Cananore till ceded by Tippoo, in 1792, and came into British possession with the rest of that sovereign's dominions.

LADAKH, an independent country of W. Thibet, between 32° and 36° N. lat., and 76° and 79° E. long.; bounded on the N. and NE. by the Karakorum mountains, which divide it from the Chinese provinces of Yarkund and Khoten, E. by Chanthan, Rodokh, and Gardokh; S. and SE. by the Himalaya, separating it from Cashmere, and the territories of Bissahar, Kulu, and Chambu; and W. by Baltea, or Little Thibet. Length, N. to S., rather more than 200 m.; average breadth, 150 m. Area estimated at about 30,000 sq. m., with a pop. of from 150,000 to 180,000, chiefly of the Thibetan race. The country is divided into 4 districts; Ladakh Proper in the centre, Nobra to the N., Zanskar SW., and Piti SE. It is an inhospitable land, its surface being, for the most part, a succession of lateral mountain ranges belonging to the Himalaya, the lowest range rising nearly to the limit of perpetual snow. Lé, the cap., is more than 11,000 ft. above the level of the sea, and some parts of the prov. Nobra are 2,000 ft. higher. The passes that lead into Ladakh from the S. are above 16,000 ft. high, and many summits in the central part of the country are much more lofty. Narrow and deep valleys, of great length, watered by considerable rivers, intervene between the mountain ranges, and comprise nearly all the cultivable land of the country. The chief of these valleys is that of the Upper Indus here called the Singh-kha-bab. This extends SE. and NW. through the greatest part of the country. The Indus, while within Ladakh, receives the Zanskar, Zakat, and Dras rivers; the Shakut, its chief affluent N. of the Himalaya, flows principally through Ladakh, but does not join the main stream till it has passed into Little Thibet. Nearly all the rivers of Ladakh are tributary to the Indus; in the S., however, are several which join the Sutlege, of which the Piti is the chief. There are some considerable lakes. The country is subject to extremes of temperature. Frost, snow, and sleet commence early in Sept., and continue, with little intermission, till the beginning of May. From the middle of Dec. to the beginning of Feb., Moorcroft found the thermometer out of doors at night seldom above 15° Fahr. But during the summer the sun has great power; and at Lé, in July, the thermometer has been found, at noon, to stand, in the sun, at 134° Fahr., and between Lé and Piti, at 10° higher. The atmosphere is, in general, dry and clear; what little rain occurs falls chiefly during the summer months. The mountains being of primitive formation, the soil consists almost entirely of disintegrated rocks washed into the bottoms by the action of thaws and torrents. The decomposed granite and felspar clothes these portions of the surface with a coating of clay, sand, gravel, and pebbles, which skill and industry can only render productive. Both climate and soil being thus hostile to vegetable life, the general aspect of the country, where not cultivated, is of extreme sterility; a few willows and poplars are the only timber trees; and the chief verdure consists of the Tartaric furze, with a few tufts of wormwood, hyssop, dog-rose, and other plants of the desert.

Notwithstanding these unpromising circumstances, the harvests of Ladakh are by no means niggard; and year after year equally abundant crops are raised from the same land, without its ever being suffered to lie fallow, and without any attempt at an alternation of produce. The mountain sides are formed into a succession of terraces, supported by stone breast-works, down which stone channels conduct a plentiful supply of water, and the *detritus* from the rock. The stone dykes are not only disposed to form terraces near the towns and villages, but in spots remote from human habitations, where they are constructed by the peasantry, and suffered to remain undisturbed for many years, perhaps for some generations, till a quantity of earth is collected.

The field thus gained from the mountain has next to be supplied with manure. As wood is very scarce, the fæces of cattle are mostly used as fuel. The floors of the houses are strewed with a coating of gravel, three or four inches thick, which is removed from time to time, and this, with the ashes of the burnt fuel, forms almost the only manure that sustains the nutritive properties of the soil. Wheat, barley, and buckwheat are the chief grains cultivated. The wheat is of three, the barley of two varieties: one of the latter, the *sherokh*, or naked barley, is a superior kind, especially for malting, but it degenerates in a lower level, as in the adjacent plains of Hindostan. Wheat and barley are usually sown in May, and reaped in September, the great heat of the sun in summer fully compensating for the shortness of that season. At Pituk, near Lé, more than 10,000 ft. above the sea, barley is ready for the sickle in two months from the time of sowing. The plough is entirely of wood, generally willow, except the point, which is formed of a small piece of iron. The furrow is not more than four or five inches deep; but the earth is well broken, and the seed is afterwards carefully covered over. Ploughing is performed by a pair of zhos (a hybrid male between the yaik, *bos grunniens*, and common cow), or zebus, driven without reins, but, with the utmost precision, by the voice, or by a wand. The ground is ploughed twice; the grain is sown broad cast in the furrow, or planted by the dibble. Corn is frequently reaped while green, and laid on the ground in flat bundles to ripen more completely. In very dry soils the grain is pulled up by the roots, the straw being valuable for fodder; in moist soils, it is cut close to the ground by a curved, short-bladed sickle. There is no great variety of kitchen vegetables; but onions, carrots, turnips, and cabbages are raised in some places, and carraway, mustard, and tobacco are grown in a few gardens. Plenty of apricots and apples are raised everywhere, but few other kinds of fruits. Pears, grapes, and melons are imported from the neighbouring countries. Lucerne grows with great luxuriance in some parts, and a species of saintfoin is met with in the mountains; but the most valuable source of fodder is, perhaps, the

Digitized by Google

prangos (*Prang. patularia*, Lindley). This plant, which is a perennial delighting in a poor sterile soil, but growing in every variety of site, except actual swamp, is common in the W. of Ladakh, and varies in size, from a cluster of leaves and flowers, to from 12 to 18 ft. in circ. In August or September, the plants are cut to within two or three inches from the ground, on which they are laid in bundles to dry, and afterwards piled like other kinds of fodder, on the house tops. The prangos require no shelter. In the winter, about 1 cwt. for 24 hours is considered sufficient for 20 sheep, or 30 lambs. Healthy sheep fed upon it become fat in 20 days; it is also excellent food for cattle and horses, though perhaps less so than for sheep. Rhubarb is an abundant indigenous product.

The yaik-mule, or zho, is principally used for the transport of burdens; horses are few and small, though active and hardy. The native breeds of sheep, though mostly larger than those of India, are much smaller than the sheep of Chan-than. One species, the Purik sheep, is very diminutive; but it gives 2 lambs in 12 months, about 3 lbs. of wool a year, at two shearings, and its mutton is excellent. Being domesticated like the dog, it is maintained at a very small cost. The shawl-wool goat is the common breed in this and the neighbouring countries; the fleece is finer in Ladakh than elsewhere. The latter is cut once a year; the wool picked out is sent to Cashmere, and the hair made into ropes, coarse sacking, and blankets, for home consumption. The wild animals are not numerous: the ibex, wild sheep, *ovis ammon*, and a kind of wild horse, are the principal. The leopard, jaguar, ounce, bear, and lynx are rare. Fish are very plentiful, but the prevailing religion prevents their being used as food.

Sulphur is found in some places, and soda in great plenty on the Indus, and in the N., lead, iron, and copper are said to exist, and gold in the sands of the Shayuk; but the government, from politic or superstitious motives, has prohibited the search for this metal.

The native trade of Ladakh is of no great amount; but its transit trade is important from the country being the great thoroughfare for the commercial intercourse between Thibet, Turkestan, China, and even Russia, on the one hand, and Cashmere, the Punjab, and the plains of Hindostan, on the other. Ladakh is the entrepôt for the goats' wool, of which the Cashmere shawls are made, and which is partly supplied from this country, but chiefly from Rodokh and Chan-than. About 800 camel loads are annually exported to Cashmere, to which country, by ancient custom and engagements, the export is exclusively confined, all attempts to convey it elsewhere being punished by confiscation. In like manner it is considered illegal in Rodokh and Chan-than to allow a trade in shawl-wool except through Ladakh; and, in the latter, impediments are opposed to any import from Yarkund, though the wool of that province be of superior quality and cheaper. The fleece of the wild goat is exported in smaller quantities to Cashmere, and wrought into shawls, soft cloth, and linings for shawl-wool stockings; this material is softer and warmer than the ordinary shawl wool, but is much less used for shawls. Sheeps' wool is wrought into cloths exported to Kotoch and Kulu; and many Chan-than sheep are exported to the mountain-states, where they are extensively used as beasts of burden, carrying from 25 lbs. to 30 lbs. weight. Tea comes from China through Lassa and Yarkund, and is exported in considerable quantities to Cashmere and the Punjab: inferior kinds of the same shrub are imported from the British territories of Bissahar, and used by the lower classes in Ladakh. Borax and salt from Thibet; silks, silver ingots, and various manufactured articles from China; felts, camlets, dried sheep-skins, steel, boots, Russia leather, brocades, velvets, and broad cloths, horses, and drugs from Yarkund; cooking vessels, water-pots, and about 300 maunds of dried apricots, yearly from Baltee; shawls, chintzes, copper-tinned vessels, and other domestic utensils, and grain, from Cashmere and the Punjab; ghee, honey, raisins, and grain, from Hindostan; and iron and hardware manufactures, wooden tea-cups in large numbers, from Bissahar, are the remaining principal imports into Ladakh. The imports from Yarkund, of Russian goods, are mostly intended for the Punjab. The dried fruits from Baltee are exchanged for foreign wool, and the goods from Cashmere and the Punjab are partly re-exported into the Thibet provinces.

The government is despotic; but the rajah has very little real power, being controlled by the *lamas*, or priesthood, by whom he is occasionally deposed. The business of the state is carried on by the khalun, or prime minister, the deputy khalun, the lom-pa, or chief military officer, the treasurer, who is a lama, and the master of the horse. The towns and districts are governed by inferior khaluns; and the magistracy is discharged by officers called nar-pas, and by the head men of villages. Most of these are paid by assignments of land, and by claims on the people for contributions or articles of daily use. The rajah, khalun, and lom-pa divide among them the produce of the imports on merchandise in transit, and carry on a trade in shawl wool and tea, from which most of their income is derived.

In spiritual affairs Ladakh is subordinate to the authority of the supreme pontiff of the Buddhists, the grand lama of Thibet, who appoints the chief lamas of this country. The lamas are very numerous, every family in which there is more than one son furnishing one, who is a family priest, attached to a monastic institution or college, though living ordinarily among the people, and conducting the rites of their daily worship. All profess poverty and celibacy, though a man who has been married is admissible into their order. The lamas do not confine themselves to strictly religious duties, but cultivate the land, rear sheep and goats, and take an active share in the fiscal and political administration. There are many conventual establishments for females.

Mohammedanism has of late made great progress in the S. and W., but the mass of the pop. are still Buddhists. Their religious belief and practice is a strange mixture of metaphysics, mysticism, morality, fortune-telling, juggling, and idolatry. The doctrine of the metempsychosis is curiously blended with tenets and precepts very similar to those of Christianity, and with the worship of grotesque divinities. The lamas recognise a sort of trinity, or a triad consisting of a paramount deity, a prophet, and a book; and the people are exhorted to truth, chastity, resignation, mutual forbearance, and good-will. The religious service performed daily at the temples attached to monasteries consists chiefly of prayers and chanting, in which the mystic sentence, '*Oom mane paee me oom*,' is frequently repeated, and the whole is accompanied with the music of wind instruments, chiefly harmonising with tabrets and drums.

The military force consists of a peasant militia, very ill equipped and inefficient; and there is little to prevent Ladakh falling permanently under

Digitized by Google

the dominion of some one of its more powerful neighbours.

There is little wealth in the country, but what exists is equally diffused, and the great body of the people are in easy circumstances. They pay no money taxes to the state, but are bound to suit and service, both domestic and military, and furnish contributions in kind for the support of the rajah and the governors of districts. The people are in general mild and timid, frank, honest, and moral, when not corrupted by communication with the dissolute Cashmerians; but they are indolent, exceedingly dirty, and addicted to intoxication. Their food is nourishing, and consists chiefly of rice, meal porridge, bread, vegetables, tea, wheaten cakes, and once a day the flesh of sheep, goats, or yaiks. The wealthy drink grape juice and water or sherbet, the poorer classes a kind of beer, called chang, made of fermented barley. All orders and both sexes dress chiefly in woollens; to which the men add mantles of flowered chintz, and brocade or velvet caps, and the women cloaks of cotton, China satin, or Benares brocade lined with sheep skin, the wool inwards, and numerous ornaments. Both sexes wear leather boots, in which they take great pride. Some curious domestic customs prevail: among others, polyandry is common, the younger sons of a family being subordinate husbands to the wife of the elder brother; and when the latter dies, his property, authority, and widow, devolve upon the next brother.

History.—Ladakh originally formed one of the provs. of the kingdom of Thibet; but when the Chinese conquered that country, they did not extend their sway to Ladakh, which seems to have retained its own princes. About 200 years ago, the Kalmuck Tartars invaded Ladakh, and the rajah fled to the governor of Cashmere, who, with the permission of Aurungzebe, reconquered the country for the rajah. From that time a small annual present was made to the emperor of Delhi through the governor of Cashmere. Runjeet Singh took possession of Ladakh, and exacted a tribute; but, after his death, the country recovered its former independence. A small annual tribute or present is, however, sent to the authorities of Gardokh, on behalf of the government of Lassa.

LADAKH, or LÉ, the cap. of the above country. See LÉ.

LADOGA (LAKE), a lake of Russia in Europe, surrounded by the governments of Petersburg, Olonetz, and Wyborg in Finland, and extending from lat. 59° 58′ to 61° 46′, and from long. 29° 50′ to 32° 55′ E. The Ladoga is the largest collection of fresh water in Europe. Its length, NW. to SE., is about 125 m.; greatest breadth about 70 m. Area estimated at from 6,200 to 6,300 sq. m. Its depth is very unequal. It receives about 60 rivers, the chief of which are the Vuox, connecting it with the Saima Lake in Finland; the Svir, by which the surplus waters of the Lake Onega are poured into it; the Volkhov, by which it communicates with Lake Ilmen; and the Siass, like the latter, from the S. It discharges its surplus waters by the Neva into the Gulf of Finland. Its shores are generally low; on its NW. and S. banks are situated Serdobal, Kronsborg, Keksholm, Schlusselburg, and New Ladoga. It has several islands, chiefly towards its N. extremity; and is so full of rocks and quicksands, and subject to storms, that, to avoid it, Peter the Great began, in 1718, the Ladoga Canal, from New Ladoga, on the Volkhov, to Schlusselburg, on the Neva, along the S. shore of the lake, a distance of about 70 m. This work was finished under the Empress Anne, in 1732: it is 74 ft. broad, and, according to the season, from 4 to 8 or 9 ft. deep, and has 20 large, besides many smaller, sluices. It is annually navigated by an immense number of boats, chiefly with merchandise for Petersburg. The canals of Siass and Svir form, with that of Ladoga, a continuous chain of communication round the S. and SE. shores of the lake; and the canal of Tikhvine (Novgorod) places it in direct connection with the Wolga.

LADRONES, or MARIANNE ISLANDS, a group of islands in the N. Pacific Ocean, belonging to Spain, between the 13th and 21st deg. of N. lat., and the 144th and 146th of E. long. There are about twenty of them; but five only are inhabited, and these lie near the S. extremity of the cluster. They are so close together, and are also so broken, as well as irregular in their form and position, as to appear like fragments, disjointed from each other, at remote periods, by some sudden convulsion of nature. Those fragments have a very barren and unpromising aspect. In particular spots there are scattered patches of verdure; but, in general, little better than naked rocks appear, and scarcely a tree or shrub is visible among them. The coast of the islands consists mostly of black or dark brown rocks, honeycombed in many parts by the action of the waves. Their geological constitution is almost wholly volcanic, and some volcanoes have been in action in modern times. The climate is generally serene and temperate, the tropical heats being much diminished by the regular sea-breezes. During the months of July and Aug., however, the weather is intolerably hot; and at the season of the W. monsoons, between June and Oct., the most tremendous hurricanes are experienced at the full and change of the moon. The surface of the interior is much broken, and rises into high hills and even mountains; but the soil in the valleys is of great fertility, and, if properly cultivated, would produce abundantly most of the intertropical plants. Anson visited the Ladrones in 1742, and describes Tinian as abounding with every thing necessary to human subsistence and comfort, and being withal of a most pleasant and delightful appearance, diversified by a happy intermixture of valleys and gently rising hills, the woods consisting of tall and well spread trees, with fine lawns interspersed. The same island being, however, visited by subsequent navigators, was found to have become an uninhabitable wilderness, overgrown with impenetrable thickets. The reason of this change was, that the Spaniards, by whom these islands had been conquered, had, for what reason it seems difficult to conjecture, removed the inhab. from Tinian to another island, and after their departure it soon degenerated into a state of nature, and, when last visited, was nothing better than a wild and savage wilderness. This statement, however, does not apply to the whole group; for cotton, indigo, rice, Indian corn, sugar, and the plantain thrive in other islands, and produce abundant supplies for the pop. Cattle, horses, mules, and asses are numerous, and the llama has been introduced with success from Peru. Wild hogs also are found in great numbers, many of them of a large size, weighing 200 lbs., particularly on the island of Saypan. They are very fierce, and when hunted by dogs make a formidable resistance. The fish that are found on the coast are said to be very unwholesome. The tripang, or holothuria, is caught by the natives, and sold to the Chinese. The country is infested with musquitoes, and with endless varieties of loathsome insects. The natives are tall, robust, and active; the men wear scarcely any covering,

Digitized by Google

and the women only a petticoat of mat. Both sexes stain their teeth black, and many tattoo their bodies. Their huts are formed of wood from the palm tree, and divided by mats into several apartments devoted to distinct uses. They are good swimmers, and extremely clever in managing their canoes, in which, with a good wind, they will sail at the rate of 20 m. an hour. Their number, in the middle of the 17th century, is supposed to have amounted to 150,000, though this is probably far beyond the mark; but the race has been so much thinned by the cruelties practised on them by the Spaniards, that the present Indian pop. scarcely exceeds 4,000. Guajan, the largest island, contained in 1856 only one Indian family, its inhab. consisting of settlers from Mexico and the Philippine Islands. The cap. is San Ygnacia de Agana, the seat of the Spanish governor. The number of Spaniards is very small.

The Ladrone Islands were originally discovered by Magellan, who called them *Las Islas de las Ladrones*, or *The Islands of Thieves*, because the Indians stole every thing made of iron within their reach. At the latter end of the 17th century they obtained the name of the Mariana, or Marianne Islands, from the queen of Spain, Mary Ann of Austria, mother of Charles II., at whose expense missionaries were sent thither to propagate the Christian faith.

LAGO-NEGRO, or LAGONERO, a town of South Italy, prov. Potenza, on the high road from Naples to Calabria, 12 m. NE. Policastro. Pop. 5,718 in 1862. The town—situated near the lake of the same name—is well built, and has an old castle, a hospital, and several other charitable institutions, with manufactures of woollen cloth and caps, and a large weekly market.

LAGOS, a fortified sea-port town of Portugal, prov. Algarve, cap. of a comarca of its own name, 18 m. E. by N. Cape St. Vincent, and 114 m. S. by E. Lisbon. Pop. 7,100 in 1858. The town is built on the shore of a large bay sheltered N. and W. by hills covered with vines and fruit trees. The streets are narrow, and the houses generally small; but there are several handsome and regularly-built public edifices, among which are 2 parish churches, a military asylum, town hospital, and 3 convents, two of which are in the suburbs. The neighbourhood abounds in wine, figs, and other fruits, with pulse of different kinds; but, as in the rest of Algarve, there is a great scarcity of corn, which is imported from Alemtejo and the ports of Spain. The fishery of tunnies and anchovies is very considerable, and the produce, after being salted, is sent by sea to other parts of the kingdom.

LAGUNA. See TENERIFFE.

LAHORE, an independent kingdom of Hindostan. See PUNJAB.

LAHORE, a city of the Punjab, Hindostan, and, in Runjeet Singh's time, the cap. of his dominions, on the Ravee (*Hydraotes*), 230 m. NE. Delhi. Pop. estimated at 120,000. Lahore is surrounded by a brick wall about 30 ft. high, which extends for about 7 m., and is continuous with the fort. The latter, in which the rajah resides, is surrounded by a wall of no great strength, with loop-holes for musketry; a branch of the Ravee washes the foot of its N. face, but it has no moat on either of the remaining sides. The palace within this enclosure is of many stories, and entirely faced with a kind of porcelain enamel, on which processions and combats of men and animals are depicted. Several of the old buildings are in ruins; others are entire, and throw into shade the meaner structures of more recent date. Lahore is said to have been formerly 12 coss (about 19 m.) in circ. The ancient cap. extended E. to W. for 5 m., and had an average breadth of 3 m., as may be learned by the ruins. The modern city occupies the W. angle of the ancient cap. The houses are in general of brick, and 5 stories high, but many in a very crazy condition. The chief bazaar follows the direction of the city wall, and is not far distant from it. The street is narrow, and this inconvenience is aggravated by platforms in front of the shops, on which the goods are displayed under projecting pent-houses of straw to protect them from the sun and rain. Through the centre of the remaining contracted space runs a deep and dirty drain, the smell from which is very offensive. The pop. consists of Mohammedans, Hindoos, and Sikhs, the former in the greatest number. Across the Ravee, about 2 m. N. Lahore, is the 'Shah Dura,' or mausoleum of the emperor Jehangire, a monument of great beauty. 'It is a quadrangular building, with a minaret at each corner rising to the height of 70 ft. It is built chiefly of marble and red stone, which are alternately interlaid in all parts of the building. The sepulchre is of most chaste workmanship, with its inscriptions and ornaments arranged in beautiful mosaic; the shading of some roses and other flowers is even preserved by the different colours of the stone. Two lines of black letters, on a ground of white marble, announce the name and title of the 'Conqueror of the World,' Jehangire; and about a hundred different words in Arabic and Persian, with the signal signification of God, are distributed on different parts of the sepulchre. The floor of the building is also mosaic. It is probable that this beautiful monument will soon be washed into the Ravee, which is capricious in its course near Lahore, and has lately overwhelmed a portion of the garden wall that environs the tomb.' (Burnes' Bokhara, i. 137.) The Shalimar, or garden of Shah Jehan, is another magnificent remnant of Mogul grandeur. It is about ½ m. in length, and has 3 terraces, each rising above the other. A canal, brought from a great distance, intersects it, and throws up numerous fountains to cool the atmosphere. Runjeet Singh removed some of its marble houses, and replaced them by others of stone. The bazaars of Lahore do not exhibit much appearance of wealth; the commerce of the Punjab is centred at Umritzir.

Lahore was captured by Sultan Baber in 1520, and was for some time the seat of the Mogul government in India. It was for a while in the possession of the Affghans, and was repeatedly sacked by Shah Zemaun, ex-king of Caubul.

LALAND or LAALAND, an island of the Danish archipelago, in the Baltic, between lat. 54° 38′ and 54° 58′ N., and long. 11° 53′ E.; forming, with Falster, from which it is separated by the narrow but now navigable channel of Guldborg, a prov. of the kingdom. Length, E. to W., 35 m.; average breadth about 13 m. Area, 460 sq. m. Pop. 60,971 in 1860. The island is low, and is in parts liable to inundations; its shores are much indented by the sea, and it has some considerable bays. In its centre is the lake of Marieböe, 5 m. in length by 2 in breadth. The climate is said to be unhealthy; but the soil is very fertile, and it is looked upon as the most productive of the Danish islands. Principal crops, wheat, rye, barley, and oats. Hemp and hops are also produced, and great quantities or apples. Oak and other kinds of timber abound. Mineral products and manufactures few and insignificant. Laland has an active trade in agricultural produce, the chief seat of which is Nakshow, the cap., a town of 2,200 inhab., on the W. coast.

LALITA-PATAN, a considerable town of Ne-

Digitized by Google

paul, N. Hindostan, about 1½ m. S. Catmandoo, with an estimated pop. of 24,000. It is said to be a handsomer town than Catmandoo, and to possess some fine public edifices.

LAMBALLE, a town of France, dép. Côtes-du-Nord, cap. cant., on the declivity of a hill, beneath which runs the railway from Paris to Brest, 12 m. ESE., St. Brieuc. Pop. 4,256 in 1861. The town is well built, has an industrious and thriving pop., is surrounded by old walls, and has two suburbs, a communal college, public library, with manufactures of woollens, linens, parchment, and leather; and a considerable trade in agricultural produse.

LAMEGO, a city of Portugal, prov. Beira, and cap. of a comarca of its own name, near the left bank of the Douro, 44 m. E. Oporto, and 192 m. NNE. Lisbon. Pop. 10,170 in 1858. The town stands at the foot of the Sierra de Penide (an offset of the Sierra Estrella), on the little river Balsamone, just before its junction with the Douro, and is divided into three quarters, two of which are occupied by the cathedral and bishop's palace, while the third comprises the square, and a long street crossed by others of smaller size. A cathedral of Gothic architecture, built by order of Don Henrique, the father of the first king of Portugal, 4 convents, and a hospital, are the chief public establishments. The marshy lands, near the town, are very rich, producing an abundance of fine wines and delicious fruits; but these advantages are more than countervailed by the badness of the roads, which makes communication with Oporto and other places all but impossible.

LAMPEDUSA, LAMPION, and LINOSA; three islands in the Mediterranean, collectively called the Pelagian Isles, belonging to Italy, between lat. 35° 30′ and 36° N., and long. 12° and 13° E., about midway between Malta and the shore of Tunis. Lampedusa, the an. *Lopadusa*, by far the largest, is about 13½ m. in circuit. Its shores are precipitous, but it has a tolerable harbour on its S. side. Its surface is level; the E. extremity has been cultivated by an English speculator; the W. end of the isl. is covered with dwarf olive trees and other wood, much of which is cut for fuel, and sent to Malta and Tripoli. Both Lampion and Linosa are uninhabited, except by rabbits and goats; the former island has, however, some interesting traces of ancient buildings; the latter presents distinct marks of volcanic origin.

LANARKSHIRE, or CLYDESDALE, an inland co. of Scotland, having N. the cos. of Dumbarton and Stirling; E. West Lothian, Mid Lothian, and Peebles; S. Dumfries; and W. Ayr and Renfrew. It extends from Queensberry Hill, on the borders of Dumfries-shire, to near Renfrew, a distance of 55 m., comprising nearly the whole country drained by the Clyde (which see) and its tributaries, the Douglas, Avon, N. and S. Calder. Area, 987 sq. m., or 631,719 acres, of which from a third to a half are supposed to be arable. It is divided into three wards, each of which is characterised by peculiarities of surface, soil, and climate. The *upper ward*, of which Lanark is the principal town, includes nearly two-thirds of the co., comprising the district bounded by Peebles on the E., Dumfries on the S., and Ayr on the W. This district consists for the most part of mountains, hills, and wide dreary moors; the only cultivable land lying along the banks of the Clyde and Douglas. Some of the mountains in this ward have an elevation of above 2,300 ft. The *middle ward*, having Hamilton in its centre, has a comparatively level surface, the low grounds along the Clyde extending to a much greater distance, and the hills by which they are bounded on either side being of very inferior altitude. The *lower ward*, though of small dimensions as compared with either of the others, is the most fertile and best cultivated; and, having the city of Glasgow within its limits, it is by far the most populous, important, and wealthy of the three. The climate in the upper ward is often very severe; in the middle and lower ward it is comparatively mild and humid, especially in the latter. The soil of the middle and lower wards is principally a retentive clay, but in parts it is loamy, sandy, and gravelly. Agriculture, though formerly backward, has of late been greatly improved: drainage, which is here quite essential, is now prosecuted with the greatest vigour, and bone dust is extensively employed in the raising of turnips. The draught horses of this co. have long enjoyed the highest reputation of any in Scotland. Ayrshire cows are generally introduced, and a good deal of cheese is made in imitation of Dunlop. There are several valuable orchards in what is called the *trough* of the Clyde, between the mouth of the S. Calder and the lowest waterfall. Farm houses and offices rank with those in the best improved districts. Property mostly in very large estates; farms of all sizes, and let generally on leases for 19 years. The minerals of this co., particularly its iron and coal, are of the highest importance. The command of cheap and abundant supplies of the latter has been the principal cause of the extraordinary progress made by Glasgow in manufacturing industry; and, more recently, the command of coal, added to the discovery of the peculiarly valuable carboniferous iron-stone (provincially *black-band*), have made Lanarkshire one of the principal seats of the British iron trade. The principal iron works are those of Gartsherrie, Dundyvan, Monkland, Summerlee, and Calder. Lead is also rather extensively produced at Leadhills in this co. The manufactures and commerce are of the highest importance, and principally concentrated at Glasgow. Each of the three wards into which this co. is divided has a sheriff substitute to superintend its judicial affairs. The Forth and Clyde canal is partly, and the Monkland canal wholly, in the co., and it has also numerous lines of railways. It is divided into 47 pars., and sends 3 members to the H. of C., 1 being for the co. and 2 for the city of Glasgow; the bors. of Lanark, Airdrie, and Hamilton unite with Linlithgow and Falkirk in returning a mem. Registered electors for the co. 5,184 in 1865. At the census of 1861, the co. had 46,675 inhab. houses and 631,566 inhabitants, while in 1841 Lanarkshire had 81,458 inhab. houses; and 426,972 inhab. The old valued rent was 13,511*l.*, while the new valuation for 1863–64 was 1,153,338*l.*, inclusive of railways and canals.

LANARK, a royal and parl. bor. and market town of Scotland, co. Lanark, of which it is the cap., on an elevated plateau, 1½ m. from the Clyde, 30 m. SW. Edinburgh, and 23 m. SE. by E. of Glasgow, on the Caledonian railway. Pop. 5,384 in 1861, against 4,467 in 1841. The town consists of one leading street in the direction of E. and W., with several subsidiary streets and lanes. The streets are well-paved, but many of the houses are mean, being thatched with broom, heath, or straw, and exhibiting strong marks of poverty or decay; but the older buildings are gradually being superseded by new and better edifices. The only public buildings are the county hall, including a gaol, the par. church, a free church, two chapels belonging to the Relief, and one to the Associate Synod. Various sums have been bequeathed, at different times, for the pro-

Digitized by Google

motion of education. Twenty-eight boys are supported at the grammar-school; and, in addition to the school fees being paid, each gets an annual sum, varying from 2*l.* to 3*l.* There is, besides, a charity school for 50 children. The chief manufactures are weaving and lace embroidery. Wm. Lithgow, the traveller, and Gavin Hamilton, the historical painter, were natives of the bor.; and General Roy, the celebrated engineer, and author of 'The Military Antiquities of the Romans in Britain,' was educated at the grammar-school. Corp. rev. 1,084*l.* in 1863–4.

Lanark and its vicinity have many remains of antiquities. The Castle Hill, on the S. of the town, was once the site of a royal residence; but every trace of it has disappeared. The old church, the date of which is unknown, and St. Nicholas's chapel, have been allowed to go to ruins. There are, in the neighbourhood, distinct vestiges of two Roman camps, supposed to have been the work of Agricola: one of them measures 600 yds. in length, and 420 in breadth. The bor. seems to have been more important in ancient than in modern times. In 978 Kenneth II. held in it an assembly of the states of the realm. It was a royal bor. as early as the 12th century. Lanark was the scene of the first military exploit of Sir William Wallace. During his residence here, after his marriage with the co-heiress of Leamington, he killed, in 1298, Hazelrigg, the English sheriff, and expelled his soldiers from the town. This bor. formerly had the custody of the standard weights of Scotland: they are still preserved; but the act of 1826, introducing the imperial standard, has superseded their use.

Lanark unites with Falkirk, Linlithgow, Airdrie, and Hamilton in sending a mem. to the H. of C. Registered voters 232 in 1865. The Falls of Clyde are in the near vicinity of the town; Bonnington Linn, 30 ft.; Corra Linn, 120 ft.; and Stonebyres, 84 ft.: the two former are to the E.; the latter to the W. of the town. Another remarkable object is the Cartland Crags, a deep chasm formed by the Mouse, a small tributary of the Clyde, over which a bridge of three arches was thrown in 1825.

LANARK (NEW), a manufacturing village of Scotland, co. Lanark, on the bank of the Clyde, close to the river, and bounded on the N. by steep and beautifully wooded hills, 1 m. S. of the bor. of Lanark. Pop. 1,396 in 1861. The village consists of a series of cotton mills and of two streets, in which the work-people live; and so little space intervenes between the river and the hills, that there is room for only two lines of edifices. The mills were founded, in 1784, by Mr. David Dale; and Arkwright, the father of the cotton manufacture, was for a while a partner in them. (Baines' Hist. of the Cotton Manufacture, p. 193.) Mr. Dale was afterwards succeeded by his son-in-law, Robert Owen, whose attempts (first made at New Lanark) to reduce to practice his projects for the renovation of society, are well known. Owen ceased, in 1827, to have any interest in the business. The mills give employment to above 1,000 individuals, of whom nearly 400 are under 18 years of age. The hours of labour are limited to 10½ a day throughout the year, and the people are peculiarly respectable. A school is established in the works, for the education of the children, and is attended by about 500 pupils. It may be mentioned that teaching by objects, and what is called the *intellectual* system of education, was originally practised at the mills of New Lanark, about the beginning of the century.

LANCASHIRE, or LANCASTER, a marit. co. of England, on its W. coast, having N. Cumberland and Westmoreland, E. Yorkshire, S. Derbyshire and Cheshire, and W. the Irish Sea, by which it is in various parts deeply indented. Its most northerly portion, consisting of the hundred of Furness, is separated from the main body of the co. by the intervention of Morecambe Bay and a small portion of Westmoreland. Area, 1,905 sq. m., or 1,219,221 acres, of which about 850,000 are supposed to be arable, meadow, and pasture. The hundred of Furness is generally rugged and mountainous; and the E. parts of the county along the Yorkshire border are occupied by portions of, or offsets from, the great central or inner range of English mountains; but, with these exceptions, the country is generally flat; and in the S. part of the co. an extensive plain stretches from Formby Point and Liverpool on the W., to Oldham on the E. Sandy loam and sand are the prevailing soils in the lower districts, in which, however, there are several extensive mosses: peat soil prevails in the moors. The climate is mild and salubrious, but more humid than any other in England. The co. is wholly indebted to manufactures and commerce for its vast population, wealth, and importance; for, as respects agriculture, it is, though considerably improved, one of the most backward in the empire. There is a great want of drainage. Potatoes are more extensively cultivated in this than in any other English co.; and this is one cause why few turnips are raised. Grazing is more attended to than tillage husbandry; large quantities of hay are produced, and there is a good deal of dairying. Lancashire is believed to be the original seat of the long-horned breed of cattle; but they are now so crossed and intermixed with others, as to be seldom found pure. There are some large estates; but property is, notwithstanding, a good deal subdivided. Tillage farms for the most part rather small, and usually held on seven years' leases, a tenure too short to admit of the occupiers undertaking any very expensive improvements. Farm buildings generally good. Exclusive of other minerals, this co. has vast beds of coal, and to that, more perhaps than any thing else, its extraordinary progress in manufactures is to be ascribed. It is the grand seat of the cotton manufacture, which has grown up with a rapidity wholly unexampled in the history of industry. Manchester, Preston, Bolton, Oldham, Blackburn, Ashton, Bury, Chorley, Wigan, and other towns, where the manufacture is principally carried on, and Liverpool, the grand emporium of the trade of the county, have increased with equal rapidity. Manchester is now the first manufacturing town in the world; and the trade and navigation of Liverpool are inferior only to those of London. Besides that of cotton the woollen manufacture is extensively carried on at Rochdale and other places in this co., as is that of silk, flax, paper, hats, and many other branches of industry. The extension of manufactures and trade has been at once a cause and a consequence of the extension of the facilities for conveyance, by means of canals, railways, and ordinary roads, which traverse this co. in every direction, and bring it, as it were, into immediate communication with almost every other part of the empire. Lancashire was the first co. to construct a navigable canal (the Duke of Bridgewater's); and the opening of the Manchester and Liverpool railway, with locomotive engines, in 1830, formed a new and most important æra in the history of internal communication. Lancashire is a co. palatine, and contains 7 hundreds, 4 boroughs, and 70 parishes, many of which are very extensive. It sends 26 mems. to the H. of C., being 4 for the co., 2 each for the bors. of Manchester, Liverpool, Oldham,

Digitized by Google

Bolton, Preston, Lancaster, Wigan, and Blackburn, and 1 each for Rochdale, Bury, Clitheroe, Ashton, Salford, and Warrington. Registered electors for co. 34,561 in 1865, being 13,006 for North Lancashire, and 21,555 for South Lancashire. At the census of 1861, the co. had 438,503 inhab. houses, with 2,465,366 inhabitants, while in 1841 Lancashire had 289,184 inhab. houses, and 1,667,054 inhab. The gross annual value of real property assessed to income-tax under schedule (A.) amounted, in 1862, to 1,836,639*l.* in the northern division, and to 2,967,159*l.* in the southern division.

LANCASTER, a mun. and parl. bor. and sea-port town and par. of England, cap. of the above co., locally situated in hunds. Amounderness and Lonsdale, but with separate jurisdiction, on the S. bank of the Lune, 46 m. N. by E. Liverpool, and 232 m. NW. London by London and North Western railway. Pop. of municipal bor. 14,487, and of parl. bor. 16,005 in 1861. The town stands on a gentle slope facing the Lune, which is crossed here by a handsome stone bridge of five arches; and the summit of the hill is crowned by the bastions of its fine old castle, and the lofty tower of the par. church. Nearly the whole town is built of freestone, from quarries in the neighbourhood: the houses are generally well constructed, and many are large and handsome. The streets however, with one or two exceptions, are inconveniently narrow, and badly paved. Lancaster is lighted with gas, under an act passed in 1824, and is well supplied with water from springs and wells. The principal public building is the castle, once a magnificent structure, originally built in the eleventh century, but renovated by John of Gaunt, duke of Lancaster, during the reign of Edward III. It was repaired at the end of the sixteenth century, and much enlarged in 1788, when it was converted, at an expense of 140,000*l.*, into assize and county courts, gaol, and female penitentiary. The walls enclose an area of 10,525 sq. yards. The prison is conducted on the system of classification and silent labour: above 160 debtors and 200 criminals have been confined in it at an average of the last few years. Among the other public buildings, exclusive of the churches, are the town-hall, erected in 1781, the custom-house, on St. George's Quay, having a portico and pediment supported by four Ionic columns, the assize house, the assembly-room, the theatre, the public baths, and the market-houses. The county lunatic asylum, on Lancaster Moor, is a quadrangular building, with a handsome Doric front, occupying, with its grounds, about 5 acres: it accommodates 550 patients, and is said to be humanely and judiciously conducted. The par. church, which stands on the green and shapely knoll of Castle hill, is of the same date as the castle, and consists of a central and two side aisles of equal length, terminated by a well-proportioned and lofty tower at its W. end: it was all but rebuilt in 1759. Its richly-carved stalls, and other curious carvings in the chancel, and its fine monuments, are universally admired. The living is a vicarage, of the clear annual value of 1,700*l.*; and the incumbent nominates the ministers of St. John's and St. Ann's, the two district churches, as well as those of all the chapelries within the par. There are also places of worship for R. Catholics, Presbyterians, Independents, Quakers, and Wesleyan and Association Methodists, to each of which, as well as to the churches, Sunday schools are attached, furnishing religious instruction to about 2,000 children. The school charities comprise an ancient grammar school, under two masters, greatly modified in 1824, and now furnishing a good classical and general education to about 60 boys; a boys' national school, united with an old Bluecoat charity, attended by 360 boys (80 of whom are clothed); a girls' national school, established in 1820, and attended by 130 girls; a charity school, for clothing and instructing 60 girls; a Catholic charity school, attended by 90 children of both sexes; and a Lancastrian school, with 200 children. Among the other public charities are Mrs. Ripley's hospital for 300 children, founded in 1853, with a building in the Gothic style; Penny's hospital, endowed with land worth 340*l.* a year, and affording a residence, clothing, and small stipend to twelve poor men; Gillison's hospital, for the reception of eight unmarried women, each of whom has a stipend of 4*l.* a year; Gardyner's alms-houses, for four old men, a dispensary, and house of recovery; a lying-in charity, and a benevolent society. Bible, church missionary, and tract societies are also well supported.

Lancaster had formerly a considerable share in the trade with the W. Indies; for it appears that, in 1799, there came 57 vessels, of the burden of 12,820 tons, from the W. Indies only. In consequence, however, of the superior facilities enjoyed by Liverpool, this branch of commerce is now all but extinct. The great bulk of the shipping belonging to the port consists of coasters. On the 1st of January, 1864, there were registered 35 sailing vessels under 50, and 113 above 50, tons; besides 4 steamers under, and 6 steamers above, 50 tons. The navigation of the Lune being obstructed by shallows, vessels of above 200 tons load and unload in Glasson dock, constructed in 1787, about 5 m. below the town, to and from which their cargoes are conveyed by means of lighters. Gross customs' revenue, 17,019*l.* in the year 1863. The manufactures of Lancaster comprise cotton fabrics, silk thread, linen thread, and sail-cloth. The cotton trade, introduced in 1806, is in a thriving condition; but the sail-cloth business has declined. Cabinet-work and upholstery are made in considerable quantities for exportation, and there are candle and soap establishments and two extensive ship-yards. The Lancaster canal skirts the town, and about ½ m. to the NE. it crosses the Lune by a noble aqueduct bridge of five arches, erected by Rennie at a cost of 48,000*l.* The Lancaster and Preston junction-railway, forming a portion of the Great North Western line, intersects the town.

Lancaster is one of the most ancient of the English bors., its first charter having been granted by King John, and confirmed by subsequent monarchs. The present mun. bor. is divided into three wards, and governed by six aldermen (one of whom is mayor) and eighteen councillors: it has a commission of the peace under a recorder. Corporation revenue, 2,027*l.* in 1863. Assizes are held in Lent and summer, and the quarter sessions on Jan. 4, April 5, June 28, and Oct. 19. A bor. court sits every fourth Thursday for the recovery of debts *to any amount* incurred within the bor.; and it is the seat of a county court. The right to send representatives to parliament was first exercised in 1293 (23 Edward I.), but it ceased in 1359, and was not resumed till 1547, since which Lancaster has regularly sent two mems. to the H. of C. Previously to the Reform Act, the right of election was vested in the freemen and inhabs. The limits of the old parl. bor. were extended by the Boundary Act, so as to include parts of the townships of Skerton and Bulk. Registered electors, 1,394 in 1865. Lancaster has two weekly markets on Wednesday and Saturday, but chiefly on the latter; and fairs are held 1st May, 5th July, and 10th October, for cattle and cheese.

Lancaster is supposed to have been a Roman station. Urns, altars, and other antiquities have

Digitized by Google

been discovered, and the affix *caester* given by the Saxons, serves to confirm the fact. The Normans found the town in a state of decay; the ancient city reduced to a village, and the Roman castrum little better than a ruin. It was given by William the Conqueror to Roger de Poictou, who built a castle on the site of the ruined castrum: a flourishing town soon gathered round; the burgesses of Lancaster acquired extensive privileges from their lords, and it continued to increase in importance. King John conferred 'the honour of Lancaster' on his favourite Gilbert Fitz-Reinfrede, and gave it a charter. The first earl of Lancaster was created in 1266; and, in 1351, Henry earl of Derby was advanced, by special charter, to the title and dignity of duke of Lancaster, with power to have a chancery in the county, and 'to enjoy all other liberties and regalities belonging to a count palatine.' John of Gaunt, fourth son of Edward III., married Blanche, the duke's daughter, and, by virtue of this alliance, succeeded to the title. His son, Henry of Bolingbroke, first earl of Derby, and afterwards duke of Hereford, became duke of Lancaster on his father's death in 1398, and finally king of England in 1399, from which time to the present this duchy has been associated with the regal dignity. Lancaster espoused the royalist cause during the parliamentary war, and was visited by the Jacobite troops in the rebellions of 1715 and 1745.

LANCASTER, a town of the U. States of N America, Pennsylvania, cap. co. of its own name, near Conestoga Creek, a tributary of the Susquehanna, 56 m. W. by N. Philadelphia, on the railway from Philadelphia to New York. Pop. 17,623 in 1860, against 8,417 in 1840. The town is pleasant, healthy, and flourishing, in a fertile and highly cultivated vicinity. Its streets are regular; the houses are chiefly of brick and stone, and many are spacious and elegant. There are numerous places of public worship, 8 of which for Germans; a courthouse, gaol, 3 banks, several charitable and religious societies, an academy for the classics and English literature; a school of mutual instruction, and several other schools. The pop. is mostly of German descent; and some of the newspapers are in the German language. Lancaster has been long famous for its manufacture of rifle muskets, and the excellence of the stage coaches built in it. Latterly several large cotton factories have been erected. Exclusive of cotton it has also manufactures of saddlery, hats, nails, hand-screws, and other tools; and many breweries, distilleries, tanneries, and potteries. Its general trade is extensive: it is connected with Philadelphia and Harrisburg by railroads, and with the Susquehanna below Colombia by a canal. It is the seat of the district judicial court for the S. division of the county.

LANCIANO, a town of South Italy, prov. Chieti, cap. dist. and cant., or *circondario*, 6 m. from the Adriatic, and 18 m. S. Pescara. Pop. 16,620 in 1862. The town is built on the summit of three hills, in a healthy and pleasant situation; and has a cathedral, several churches and convents, an archbishop's palace, a diocesan seminary, and other schools, and a tribunal of primary jurisdiction. This is a very ancient city; and, in the middle ages, it was distinguished by its proficiency in manufactures, and by the extent of the commerce carried on at its fairs; but these have both greatly declined.

LANDAFF, or LLANDAFF (*Llan-Tâf*, church of the Tâf), a town and par. of S. Wales, co. Glamorgan, hund. Kibber, on the W. bank of the Tâf, 2 m. NW. Cardiff, and 27 m. W. Bristol, on the Taff Vale railway. Pop. of par. 6,585 in 1861; area of par., 2,386 acres. Landaff is at present little more than an inconsiderable village, with about a dozen respectable residences and several cottages; nor would it be worth notice, except from its being a bishop's see, and containing a handsome cathedral. This sacred edifice was built early in the 12th century on the site of one still more ancient; but its W. end, with its fine front, and rich Norman doorways, and elegant pinnacled towers, has been allowed to fall into decay. The cathedral now comprises a choir, short nave and transepts: its total length, from E. to W., including the Ladye-chapel behind the altar, is 263 ft., breadth of the body 65 ft., and height, from the floor to the centre of the roof, 119 ft. Very extensive repairs, but in very bad taste, were effected in 1751, at an expense of 7,000*l.* The new front, built about 80 ft. within the original Norman W. end, has a Venetian window, Ionic pilasters, and flower-pot jars on the parapet; and till lately the fine Gothic altar was enclosed within a Grecian portico. The chapter-house, S. of the church, is in the decorated English style, with a central pillar; but it is fast falling into the same ruinous condition as the monuments and the episcopal palace, which were defaced and all but destroyed by Owen Glendwr. The choral services have been disused for some years, and the building is now employed as a parish church, the service being occasionally in the Welsh language. The see of Llandaff (created in the 6th century) comprises all the county in which it is situated, and Monmouthshire, except 7 pars. It was formerly the poorest of all the English bishoprics, the annual income, including preferments, at an average of the 3 years ending with 1831, being only 924*l.*; and it was held for some time *in commendam* with the deanery of St. Paul's, London, and the rectory of Bedwas. Since the last voidance of the see, however, the sum of 3150*l.* has been paid out of the episcopal augmentation fund, to raise the income to 4,200*l.*, and a further allowance of 300*l.* is to be made till the residence be restored. The patronage of the see comprises the cathedral appointments with 8 livings, and the chapter comprises 11 dignitaries, besides the bishop: there are also 2 vicars-choral. Llandaff has no market, and is wholly dependent for its supplies on Cardiff, except for vegetables, which it sends in considerable quantities to that market. Cattle fairs, Feb. 9 and Whit-Monday.

LANDAU, a strongly fortified town belonging to the German confederation, in Rhenish Bavaria, on the Queich, a tributary of the Rhine, 54 m. S. by W. Mayence, and 46 m. NNE. Strasburg. Pop., according to Berghaus, 6,100, exclusive of the Bavarian garrison of 6,000 men. This fortress is considered a *chef-d'œuvre* of Vauban, who commenced the construction of its works in 1680. It is an octagon, with seven bastions, as many demi-lunettes, and several other outworks: its ditches are filled from the Queich. The barracks and magazine are bomb-proof. The town was almost entirely consumed by fire in 1686, since which it has been regularly laid out, and has some good public edifices, including the principal church with a lofty tower, two convents, the town-hall, court of justice, and a civil and military hospital. In the centre of the town is a spacious parade ground. Some extensive vinegar factories have been established here within the last few years. The gates are closed at an early hour, after which, neither ingress nor egress is permitted.

The history of Landau is little else than that of a succession of sieges, blockades, captures, and other military events. It was founded by the

Digitized by Google

Emperor Rodolph of Hapsburg, and made a free town of the empire in the 14th century. During the 30 years' war it was repeatedly taken and retaken by the Swedes, Imperialists, French, &c., and in the 18th century it was many times taken or besieged by the French and Germans. It was generally held by the French from the peace of Nimeguen, in 1680 to 1815, when it was restored to Germany by the second treaty of Paris.

LANDERNEAU, a town and river-port of France, dép. Finistère, on the Elorn, 12 m. ENE. Brest, on the railway from Brest to St. Brieux. Pop. 6,959 in 1861. The town is ill-built, and badly paved; but its quays are good, and its port admits vessels of from 300 to 400 tons. It has a large and fine marine hospital, formerly an Ursuline convent, and considerable manufactures of linen cloth and leather.

LANDES, a dép. of France, and one of the largest, though the poorest, in the kingdom, reg. SW., chiefly between lat. 43° 30′ and 44° 30′ N., and long. 0° 7′ and 1° 32′ W., having N. Gironde, E. Lot-et-Garonne and Gers, S. Basses Pyrenées, and W. the Bay of Biscay. Length and greatest breadth about 70 m. each. Area, 932,131 hectares; pop. 300,839 in 1861. The dép. derives its name from an extensive tract of heath, marsh, and other waste land, with a loose sandy soil, about 300 ft. above the level of the sea, termed the 'Landes,' which occupies 731,142 hect., or nearly 4-5ths of its total surface, besides a considerable portion of the adjacent dép. of the Gironde. This extensive and almost desert plain is for the most part a dead flat, interspersed with patches of pasture or cultivated land, clumps of pines, scattered habitations of a miserable kind, and a few wretched hamlets; and bounded towards the sea by a chain of *dunes* or sandy dowds, inside which is a succession of lagoons frequently communicating with each other, and occasionally with the sea by openings between the *dunes*. The *dunes* extend along the shore nearly from the mouth of the Gironde to the Pyrenees, forming a chain from 140 to 150 m. in length, by about 5 m. in width and from 100 to 150 ft. in height. They consist of loose shifting sand thrown up by the sea. They are continually changing in form and position, according to the prevalent winds; but have a general tendency to move easterly, in which direction they are said to advance about 25 yards a year; and in process of time they would infallibly overspread the whole country, unless arrested and fixed by planting them with pines or other trees, as is done in Holland. Occasionally immense masses of sand have shifted their position through the agency of tempests, as in the African and Arabian deserts. The church and a considerable part of the village of Mimizan was overwhelmed by an inundation of this sort. The increase of the *dunes* having prevented the egress into the sea of many small rivulets, the lagoons have been formed, the largest of which is 7 m. in length and about as many in width. These also continue to extend, since the shifting sands have been gradually shallowing the channels by which they communicate with the sea. The surface of the 'Landes' is usually parched and arid, except for about four months of the year, when the rains form extensive pools in its depressed portions, varying to the depth of several feet. These are often covered with sand carried over them by the wind, when they are called *blouses*, and are exceedingly dangerous to strangers. To avoid such dangers, and to travel more speedily through the loose soil, the inhab. use long staffs having notches for the feet 1, 2, or 3 ft. above their lower extremity; so that a person of ordinary stature, when in walking order, has at a distance the appearance of a giant 8 ft. high. The inhab. are very expert at the use of these singular helps to locomotion. The Adour, and its tributary the Midouze, bound the 'Landes' to the SE., and form the N. limit of the fertile portion of this dép. The soil is there light, but productive. Maize, millet, wheat, rye, saffron, hemp, and flax, are grown: in the arrond. St. Sever, about 250,000 kilog. of linseed-oil are produced annually, and about 320,000 hectol. of wine, certain kinds of which, termed the *vins de sables*, rival some of the growths of the Gironde. The culture of the mulberry is on the increase.

Agriculture in the Landes was in an exceedingly backward state till the year 1857, when, on the initiative of the Emperor Napoleon III., the French legislative assembly voted considerable sums for the drainage and general improvement of the soil. Since then, immense districts, which formerly were not only entirely unproductive, but frequently engendered disease, have been brought under cultivation. The work still continues, to the same good effect. Goats, hogs, and poultry are frequently kept by the peasantry, and bees are numerous. The pine forests furnish abundance of deals, pitch, tar, and rosin; and coal, iron ore, and potters' clay are met with. Manufactures unimportant; some smelting furnaces and forges, employing about 500 hands, and some tanneries, oil-mills, and glass and earthenware factories, comprise almost all the manufacturing establishments. The trade of the dép. is chiefly in cattle, wines, timber, and agricultural produce. Landes is divided into 3 arronds., and sends 3 mems. to the cham. of dep. Chief towns, Mont-de-Marsan, the cap., St. Sever, and Dax.

LANDSBERG, a town of Prussia, prov. Brandenburg, gov. Frankfort, cap. circ., on the Warta, a tributary of the Netz, here crossed by an excellent bridge, 38 m. NE. Frankfort on the Oder, on the railway from Berlin to Königsberg. Pop. 76,131 in 1861. Landsberg is divided into the Old and New Town, and has several suburbs. It is walled, and is one of the best built towns in the prov. It has several churches, a house of correction, the inmates of which are made to support themselves by the manufacture of woollen cloths, a hospital, an orphan asylum, and a high school. It is a principal mart for corn and wool, the greater part of the produce of Pomerania, the Neumark, and W. Prussia being brought thither for export by the Oder. The town has also brisk manufactures of woollen goods, leather and paper, and numerous breweries and distilleries. Landsberg is the seat of a circle assembly, a circle and town tribunal of the first class, boards of taxation, forest economy, and agriculture, and the superintendency of the drainage of the vale of the Warta. The town was repeatedly taken and retaken by the Swedes and the Imperialists in the 30 years' war.

LANDSCRONA, a fortified sea-port town of Sweden, prov. Malmæ, on a tongue of land projecting into the Sound, 16 m. NE. Copenhagen. Pop. 6,276 in 1861. The town has strong walls, a citadel, and other works; is well laid out, and has a safe and well sheltered harbour, with 20 ft. water.

LAND'S END, a headland at the W. extremity of the co. Cornwall, celebrated as being the most westerly land in England; lat. 50° 4′ 8″ N., long. 5° 41′ 31″ W. It is formed of granite cliffs, which rise about 60 ft. above the level of the sea. These assume, in some places, the appearance of shafts, and are as regular as if they had been cut by the chisel. About 1 m. W. from the Land's End are the rocks called the Longships, on the largest of which is a light-house, with a fixed light, having the lantern elevated 88 ft. above high water mark.

LANDSHUT, a town of Bavaria, circ. Lower Bavaria, on the Isar, 38 m. NE. Münich, on the railway from Münich to Ratisbon. Pop. 12,134 in 1861. Landshut is divided into an old and a new town, has a suburb on an island in the Isar, with which it is united by two bridges, and is partly surrounded by old walls and ditches. It consists of two principal and many smaller streets; the houses, which are of brick, are mostly environed by gardens. The town has a very picturesque appearance, from the antique architecture of its buildings, and the number of its towers and spires, that of St. Martin's church being one of the loftiest in Germany. It has an old castle, the residence of the dukes of Bavaria in the 13th century; a Cistercian abbey, in which they were buried; a royal palace, an old town-hall, a hospital for decayed citizens, 2 other hospitals, 3 convents, a lyceum, gymnasium, chirurgical and ecclesiastical seminaries, and various other schools. In 1800, the university of Ingolstadt was removed thither; but in 1826 it was transferred to Münich. Landshut has manufactures of woollen cloths, stockings, tobacco, paper, and cards, with numerous distilleries and breweries, and some trade in corn, cattle, and wool.

LANE-END. See POTTERIES.

LANGELAND, an island of the Danish archipelago, in the Baltic, between Laland and Funen, extending from lat. 54° 43′ to 55° 20′ N., and between long. 10° 40′ and 11° E. Length NNE. to SSW. 32 m.; average breadth 2½ m. Area, 80 sq. m. Pop. 17,105 in 1860. Its shores are generally uniform, except on the W., where they are broken by numerous inlets. Its surface is more elevated than that of the adjacent islands, but it is generally quite flat. Climate healthy. Chief products, corn, potatoes, fruits, and flax. A good many cattle are reared, and the fisheries are productive. Rudkiöbing, on the W. coast, with 1,580 inhab., is the chief town, and centre of the trade, which is tolerably active.

LANGENSALZA, a town of Prussia, gov. Erfurt, cap. circ. of its own name, on the Salza, 19½ m. NW. Erfurt. Pop. 8,672 in 1861. The town is well built, walled, and further defended by a castle; and has 4 churches, 4 hospitals, a lazaretto, an orphan asylum, a high school, a public library, and a theatre. It is the seat of a district council, a board of taxation, judicial courts for the town and circle, and the Thuringian Agronomical Society. It has manufactures of various descriptions of woollen, linen, and cotton fabrics, a saltpetre factory, with dyeing houses, breweries, distilleries, and paper mills.

LANGHOLM, a bor. of barony and market-town of Scotland, co. Dumfries, in the bosom of a wooded valley on the Esk, and on the railway between Edinburgh and Carlisle, 21½ m. N. by W. the latter, and 59 m. S. by E. the former. Pop. 2,990 in 1861. The town is intersected by the Esk, New Langholm (founded in 1778) being on the W. side of the river. The latter is regularly built, of a triangular form. The old town consists chiefly of one street on the line of the road. In it are the town-hall and gaol, ornamented with a spire, and the par. church. There are, also, chapels belonging respectively to the Associate Synod and Relief. The communication between the different parts of the bor. is maintained by a fine bridge. There are sundry schools in the parish, of which two are endowed; average attendance, about one-tenth pop. There are two subscription libraries, to one of which the late Thomas Telford, the celebrated engineer, a native of the district, bequeathed 1,000*l*. William Julius Mickle, the translator of the 'Lusiad,' was a native of the bor.; and Sir John and Sir Pulteney Malcolm were born in the neighbourhood.

Langholm was created a burgh of barony in 1610. Gilnockie Tower, the residence of 'Johnie Armstrong,' the famous border freebooter in the time of James V., is in the neighbourhood, but has long been in ruins. Langholm Lodge, a seat of the Duke of Buccleugh, is also in the neighbourhood.

LANGRES (an. *Andematunum* and *Civitas Lingonum*), a town of France, dép. Haute-Marne, cap. of arrond., 18 m. SSE. Chaumont, and 39 m. NNE. Dijon, on the railway from Paris to Mulhouse. Pop. 7,940 in 1861. The town is surrounded with walls flanked by towers, and is well built, its streets being regular, wide, and clean. The principal public edifice of Langres, its ancient cathedral, has a choir, the peristyle of which, of the Corinthian order, is supposed to have formed part of a Roman temple: the edifice itself, though of uncertain date, is very ancient, excepting the grand entrance, constructed in the 18th century. The bishopric of Langres was founded as early as the 3rd century. Langres has a handsome town-hall, a theatre, a public library with 3,000 vols., a school of drawing, several hospitals, and a fine public promenade. It is distinguished by its cutlery, which is its chief branch of industry.

The *Lingones* are noticed by Cæsar as being attached to the Romans (De Bello Gallico, lib. i. § 26, 40); they afterwards became *fœderati*, or allies of the Romans; and their city is characterised by Frontinus as *opulentissima*. (Lib. iv. cap. 3.) Among the remains of antiquity of which it has still to boast, are several triumphal arches; one of which, now included in the town-walls, supposed to have been erected in honour of the two Gordians, *circa anno* 240, has a frieze on its entablature, indicating a high state of the arts. It suffered numerous disasters in the dark ages, being taken and burnt by Attila, and again destroyed by the Vandals, in 407. Louis VII. annexed it to the French crown. Diderot was a native of Langres, where he was born, in 1712.

LANGUEDOC, one of the old provs. of France, in the S. part of the kingdom, now distributed among the dépts. of Ardèche, Aude, Gard, Haute Garonne, Hérault, Haute-Loire, Lozère, and Tarn.

LANNION, a town and river port of France, dép. Côtes-du-Nord, cap. arrond., on the Guer, 35 m. WNW. St. Brieuc. Pop. 6,598 in 1861. Its port on the river is bordered by a spacious quay, but within the last 40 years vessels of 250 tons have been unable to come up to the latter. It has a church erected in the 12th century, two hospitals, barracks, and a communal college. It is the seat of a sub-prefecture, and a court of primary jurisdiction, and has manufactures of linen fabrics, and an active trade in agricultural produce.

LANZEROTA, one of the Canary Islands, which see.

LAODICEA AD LYCUM, an ancient city of Phrygia, in Asia Minor, chiefly interesting as being the site of one of the seven primitive Christian churches, on the Lycus, a tributary of the Meander, 120 m. ESE. Smyrna, lat. 37° 56′ N., long. 29° 15′ N. The site of this town, once ranking as the second in Phrygia, is marked only by the deserted ruins of public buildings; and hence the neighbouring hamlet, inhabited only by a few squalid Turks, has received the name of *Eski-hissar*, 'old castle.' The remains are very extensive; and the whole surface within the walls is strewed with pedestals and fragments, indicating by their size and workmanship the former luxury and magnificence of the city. The largest ruin is that of an oblong amphitheatre, having an area of 1,000 sq. ft. Many of the seats are still in tolerable

Digitized by Google

preservation, and at the W. end is a vaulted passage about 140 ft. long, and designed for the horses and chariots entering the arena. A Greek inscription on the mouldings states that it was completed in the reign of the emperor Vespasian, A.D. 82, after having occupied twelve years in building. There are remains also of an odeum, two theatres, and a fabric which Chandler supposed had been a senate-house and exchange. The soil in and about the city is hard, dry, and porous, bearing many indications of an igneous origin; and Laodicea has at many different times suffered greatly from earthquakes.

Laodicea, so called from the wife of its founder, Antiochus II., was long an inconsiderable place, notwithstanding the beneficence of Hiero, Zeno the philosopher, and his son Polemo. After its sufferings, however, in a siege by Mithridates, the Romans strengthened and enlarged it, so that at length, about the Christian era, it became, next to Apamea Cibotos, the largest city of Phrygia, and vied in importance with the cities on the coast. There can be little doubt that it was visited by St. Paul in the course of his missionary tour through Asia Minor, and perhaps the Christian converts of Laodicea, as well as those of Colosse and Hierapolis (*Pambouk*), both neighbouring towns, were the results of the apostle's preaching. In the epistle to the Colossians (iv. 16), mention is made of an epistle to the Laodiceans; and though some critics have maintained that it is identical with that to the Ephesians, the more probable conjecture is that it has not come down to modern times. The persecution which raged in Asia Minor during the latter part of the first century tended somewhat to abate the zeal of the Laodicean Christians, and hence the rebuke in the Revelations. Of the subsequent history of this city for several centuries little is known. It was generally in a prosperous condition under the Roman emperors, and was flourishing even in 1190, when Frederic Barbarossa visited it on his way to the third crusade. Soon afterwards, however, it was repeatedly attacked and ravaged by the Turks, and finally came into their hands in the beginning of the 14th century, since which it has been a mere ruin, 'wretched, and miserable, and poor, and naked.' (Rev. iii. 14–22.)

Laodicea *ad Lycum* must not be confounded with Laodicea *combusta* (now *Ladik*), 19 m. NW. Konieh, also a considerable city, of which there are extensive ruins.

LAODICEA AD MARE, in Syria. See Latakia.

LAON (Lat. *Landunum*), a town of France, dép. Aisne, of which it is the cap., on the summit of a steep hill, 52 m. WSW. Mezières, and 74 m. NE. Paris, on the railway from Rheims to Amiens. Pop. 10,090 in 1861. The town is about 1 m. in length, narrow in the centre, expanded at either extremity, and surrounded by old walls, flanked with numerous small towers. Except its main street, it is ill built, but it has pleasant promenades, a healthy situation, and fertile neighbourhood. It has a large Gothic cathedral, with 4 towers, rebuilt in 1114; a large old abbey, now occupied by the prefecture; a public library, comprising 17,000 vols.; extensive barracks, a remarkable leaning tower, 2 hospitals, a town-hall, communal college, and theatre. It is the seat of a tribunal of original jurisdiction; and has manufactures of nails, leather, copperas, and earthenware.

Laon has been sometimes supposed, but on no good grounds, to occupy the site of the *Bibrax* mentioned by Cæsar. In the middle ages it was distinguished by its industry and wealth; its bishopric was one of the most lucrative in the kingdom; and the position and importance of the town made it be regarded as a kind of second capital. It was, however, far more distinguished by the spirit which animated its inhabitants, and by their persevering efforts to emancipate themselves from the feudal tyranny of their bishops, and to establish a municipal government, and the regular administration of justice under magistrates of their own selection. They succeeded in establishing an independent government so early as the year 1110; and maintained it, at the cost of many great sacrifices, for above two centuries, or till 1331, when it was finally abolished by royal ordonnance. (For an account of the *commune* of Laon, see the work of M. Thierry, Lettres sur l'Histoire de France, Nos. 16–18.)

Laon was, in 1814, the scene of some severe fighting between the French and the Allies. The Prussians under Blucher having occupied the town, their position was unsuccessfully attacked on the 9th of March, by the French, under Napoleon; and the Prussians having cut to pieces and dispersed the corps of Marmont during the night, Napoleon was obliged to withdraw from before the town on the 11th.

LAOS, or the SHAN COUNTRY, a country of India beyond the Brahmaputra, extending between lat. 15° and 24° N. and long. 98° and 103° E.; having N. the Chinese prov. Yun-nan; W. the Birmese empire, from which it is separated by the Than-lweng river; S. the Tenasserim provs., Siam and Camboja; and E. Tonquin and Cochin China, from which a lofty mountain chain divides it. The country lies in the basins of two large rivers, the Menam, which afterwards waters Siam, and the Menamkong, or river of Camboja, in the middle portion of its course. The Laos territories formerly comprised eight or nine larger and several smaller distinct states; but of late the Siamese have conquered most of these, and the rest are principally tributary to the surrounding nations, especially the Birmese and Chinese. The Laos pop. in the Siamese dom. is estimated at 840,000; to which must be added nearly 200,000 for the pop. of N. Laos, making a total of somewhat more than a million. The country is fertile; but it is in general very poorly cultivated and thinly inhabited. The smaller villages are mere collections of huts; and a great part of the pop. consists of small migratory hordes, who have no permanent habitation. The labour of cultivation is thrown principally on the women. The fields are ploughed about the beginning of the rains in August, and the crop is reaped in February. The *Oryza glutinosa* is the only variety of rice that is raised; and, as there is no market for surplus grain, it sells in plentiful years at an extremely low price. The implements of husbandry are, rude ploughs, drawn by two oxen or buffaloes, harrows, spades, and hoes. The hire of a labourer averages a quarter of a rupee a day; but hired labourers are few, and the cultivators assist each other by turns in their various operations. The grain is cut with the common sickle, and thrashed by treading out with oxen. Tobacco, with sugar-canes and mulberries, are generally raised; and the country yields pepper, cardamoms, different sorts of indigo, benzoin, stick lac, and other gums, betel, numerous fruits, an abundance of teak and sapan-wood, and a species of sandal-wood. It abounds with elephants, which are exported in considerable numbers; and with buffaloes, oxen, and other animals found in the adjacent countries. There are, however, no sheep. Asses are used as beasts of burden, but waggons are frequently employed in the conveyance of goods. Gold is found in parts of N. Laos, but in such trifling

Digitized by Google

quantities as hardly to afford the ordinary low rate of wages of the country to those engaged in sifting and washing the sand in which it is found. Tin ore is abundant, and iron, lead, copper, antimony, and silver are met with. Some of these metals are smelted and wrought, but the ores are principally sent in a rough state to Birmah. Silk and cotton fabrics, paper made from the bark of a creeping plant, leather, date-sugar, and gunpowder are the chief manufactures. There are, however, gold, silver, and iron smiths, mat-makers, potters, embroiderers, and a variety of petty artisans. Spinning and weaving are usually performed by women, who, as in Birmah, conduct a good deal of the retail trade. Some commerce is carried on with the immediately adjacent countries. The inhab. exchange their lac, sapan-wood, and other dyes, paroquet skins, ivory, rhinoceros' horns, wax, tin and lead, with the Tonquinese for sulphur, cinnabar, gamboge, orpiment, borax, musk, silks, gold thread, embroidery, steel, cutlery, and paper crockery. About fifty merchants come annually from Tonquin, each with twenty or thirty horse-loads of merchandise. Large quantities of salt, with spices and woollen cloths, are imported from Rangoon, to which the Laos merchants take jaghery, drugs, dyes, silks, cottons, lacquered wares, gold, silver, copper, and other metals, partly native produce, and partly obtained from China. The intercourse with the Tenasserim provs. is increasing; and some British cotton and woollen goods are bought by the Shans at Martaban. In N. Laos, however, the people are not dependent on the coast for salt, a good deal, though of inferior quality, being there collected in the plains. A caravan occasionally comes from Siam.

The form of government is a pure despotism. The king is assisted by four councillors. The laws, derived from the Institutes of Menu, are administered by the councillors, under whom are eight inferior judges. Their general tenor is the same as that of the Siamese laws, but they are not generally enforced with so much rigour. Unlike most E. countries, the people have a right of property in the soil, and may dispose of it at pleasure; waste land may be occupied by any one, and if he cultivate it, he establishes a right to its exclusive possession. In N. Laos a small military force is kept up. The Shans somewhat resemble the Birmese; to whose dress, habits, and customs, their own are very similar. Various books have been written in the Shan language, which is little different from the Pali: it is written in a character similar to the Birmese.

Some of the most striking and venerated Buddhist temples exist in this country. The most noted is that of Nang-rung, NW. of Zimmai, the cap. of N. Laos. The chief city of S. Laos, Lanchang, is reported to be both populous and comparatively well built. The inhab. assert that they are the stock whence the Siamese sprung, and this the latter do not hesitate to acknowledge. The emigration of the Siamese southward from Laos is conjectured by Captain Low to have been about the year 638. (Low's Hist. of Tenasserim, in Journ. of Royal Asiatic Soc., v. 245-263.)

LAPLAND, the most northerly country of Europe, belonging partly to Russia and partly to Sweden, between lat. 64° and 71° N. and long. 10° and 42° E.; bounded N. by the Arctic Ocean, E. by the White Sea, S. by Sweden and Finland, and W. by the Atlantic Ocean. Area 150,000 sq. m., about two-thirds of which belong to Russia. Pop. vaguely estimated at 60,000, of whom only 9,000 are Laplanders, the rest being Swedes, Norwegians, and Russians. That part of Lapland which lies along the N. shore of the Gulf of Bothnia, is an extensive plain, abounding in immense forests of spruce and Scotch fir; but at the distance of 80 m. from the sea, the ground becomes gradually elevated, and is at last full of lofty mountains, composed chiefly of primitive and transition rocks, very rich in copper and other metallic ores. These, between the lat. of 67° and 68° 30′, rise to a height of from 5,500 to 6,200 ft., which, in this hyperborean region, is 2,700 ft. above the line of perpetual congelation. These central mountains are the highest in Lapland. The ranges continue all the way to the N. Cape, but decline gradually in height. The principal rivers of Lapland are the Torneo, which, taking its rise in the highest mountains, near lat. 68° 20′, holds a course first SE., and afterwards nearly S., receiving tributary streams from the right and left, till it reaches the N. extremity of the Gulf of Bothnia, at the town of Torneo. The Kemi, a river almost equally large, rises in the NE., flows S., and falls into the Gulf of Bothnia, not far from the Torneo. The Lulea and Pitea both rise in the mountains of the NW., in about lat. 68°, and flow SE., nearly parallel to each other, till they also reach the Gulf of Bothnia. In N. Lapland, above lat. 68° 30′, the slope of the ground is N. The Tana, which is the principal river in the NE., and the Alten, the largest in the NW., both run into the Arctic Ocean. All these, like the rivers of Switzerland, are comparatively small in winter, and become mighty streams in summer, on the melting of the snows. Lapland abounds in Lakes: that called Enare, or Indiager, in Russian Lapland, in lat. 69°, is of great size. Several of the others are likewise extensive, and are traversed by considerable rivers.

The climate of Lapland is noted for extreme coldness; but, in fact, it is milder than that of any other region under the same parallel. The coasts of Norwegian Lapland and Finmark are free from ice early in May, whereas the sea of Siberia is never open till the end of July. The climate of one part of the country, also, differs very much from that of another. In the maritime districts the temperature is pretty uniform: the winters are not severe, but the summers are raw and foggy; while, in the interior, the winter is intensely cold, but the heat of summer is steady and fructifying. The mean annual temperature at the N. Cape (lat. 71° 11′ 30″) is 6° higher than at Enontekis in the interior (in lat. 68° 30′). Yet, at the latter, the thermometer rises in July to 64°), while at the Cape it seldom reaches 50°. In both, the summer begins in May and ends in September; but in the valleys, among the mountains, corn ripens in the short space of three months. The sun being so many hours above the horizon, the heat is then intense, and the clouds of insects are exceedingly troublesome. The cold of winter, on the contrary, is frequently so intense as to freeze brandy or spirits of wine; and the rivers in the interior are covered with ice to the depth of several feet. Towards the N., the sun remains for many weeks below the horizon in winter, and in summer is as long without setting. During the long night of winter, however, the darkness is relieved by the brightness of the moon and stars, and the vivid coruscations of the aurora borealis. The twilight is also such that, during several hours each day, it is possible to read without a lamp or candle.

The vegetable productions of the maritime and mountainous district differ as widely as the climate. In the low country, particularly near the shores of the Gulf of Bothnia, are large forests of spruce, Scotch fir, and other resinous

Digitized by Google

trees; potatoes, turnips, and other vegetables are cultivated; and roses and carnations deck the gardens during the brief months of summer. In a colder region the spruce disappears, the Scotch fir being the only tree of that class that braves its severity. It, in its turn, declines in vigour, till it totally disappears; and its place is supplied by the birch, which again yields to the *Salix glauca*, a plant unknown in Britain, and peculiar to cold climates. The ***Rubus Chamæmorus***, ***Rubus arcticus***, and other berry-bearing plants, are here numerous, and support even an additional degree of cold; but we arrive soon after at a climate where nothing is to be seen but a few of the hardiest plants, such as the dwarf birch, with the *Salix laponica*, *Orchis hyperborea*, and other trees and shrubs peculiar to the country. A few mosses still keep their ground; but, before reaching the point of perpetual congelation, there is here, as in other countries quite destitute of every species of vegetation, neither plant nor animal to be seen. The rein-deer's lichen is of a bright yellow colour, which, as the plant withers, becomes snow white: it thrives better near the fir forests than in the loftier regions of birches, and a plain covered with this moss forms a Lapland meadow. It is the winter food of the cattle, and, when ground, is used as flour by the inhab. Rich pastures also are furnished by the bear's moss (*Muscus polytricha*), which, on account of its softness and elasticity, is made into beds and mattresses, alleged by travellers to be superior to any in Europe. The root of the *Angelica* and the stem of the *Fonchus* are used as food, and of all the grains barley is that which thrives best; but the potato yields a surer harvest, and, if generally cultivated, might afford sufficient sustenance for the inhabs. The turnip and cabbage, introduced by the Russians, succeed well on the low lands. The best agriculturists are the Finnish colonists, who have raised corn at Alten in lat. 70°, which may safely be pronounced the N. limit of husbandry; but tillage, generally, is in a very backward state.

Among the animals of Lapland, the rein-deer is the most valuable. It serves as the principal beast of burden; its milk is highly valued; its flesh supplies the chief nourishment of the people during a part of the year; its sinews are made into thread; its horns into spoons, and other domestic utensils; and its skin furnishes a great part of their dress. The rein-deer bears a great resemblance to the stag, but is much smaller, being in general only four feet in height from the foot to the top of the back, and but two feet long in the body. It is remarkable equally for the elegance of its shape, the beauty of its palmated horns, and the ease with which it supports itself during a long winter of nine months. In summer it feeds on grass, and is extremely fond of the herb called the great water horse-tail; but in winter it refuses hay, and obtains its whole nourishment from the rein-deer moss. It thrives best in the cold dry regions of Central Lapland, where numerous herds roam at large the whole year round, under the care of shepherds assisted by dogs. The rein-deer, indeed, form the chief wealth of the natives. The poorer classes have from 50 to 200, the middle classes from 300 to 700, and the affluent often above 1,000 head. The females are driven home morning and evening to be milked, and yield about as much milk as the goat. Horses, oxen, goats, and sheep are common; and in the forests are bears, gluttons, wolves, elks, hares, martens, squirrels, and lemming-rats. Birds of passage arrive in flocks every summer; capercailies, grouse, partridges, and aquatic fowl are very plentiful near the coast, and lammergeyers and eagles soar nearly to the line of perpetual snow. The rivers are stored with salmon, herring, and other fish; and in July and Aug. insects abound in such enormous quantities, that Wahlenberg has supposed that their dead bodies serve as an excellent manure for the soil.

The Laplanders, who call themselves *Same*, are most probably a tribe of Tschoude or Finns, though difference of situation has, in the course of ages, produced a fundamental difference of character. The Finns, an industrious though unpolished race, were encouraged to form colonies in Lapland about a century ago; and their number has since increased rapidly, while that of the Laplanders has been stationary, perhaps on the decline. Of the 27,000 inhabitants of Norwegian Lapland, there are not, it is thought, above 6,000 Laplanders. They have swarthy complexions, black short hair, wide mouths, hollow cheeks, and long and pointed chins. They are strong, active, and hardy; but they suffer much from disease, and few live beyond fifty. Dishonesty is general among them, and dram-drinking is often carried to a fatal excess. They were not converted to Christianity till the 17th century. Those of the Russian province are professedly of the Greek church, while those subject to Sweden are Lutherans. But notwithstanding the efforts of the missionaries, they are still very ignorant both of the doctrines and duties of Christianity, and retain many heathen superstitions.

The rein-deer Laplanders live either wholly or principally on the produce of their herds, building their rude huts during summer in the moss pastures of the elevated country, and in winter on the level tracts inhabited by other nations; but the fishing Laplanders confine themselves to the banks of lakes and rivers, and catch fish and beavers, which, as well as skins and venison, they exchange with the Russians and Swedes for spirituous liquors, meal, salt, and tobacco.

The clothing of these half-civilised tribes is abundantly coarse, consisting of a woollen cap, a coat commonly of sheepskin, with the wool inwards, and a great coat, either of kersey or of rein-deer skin, with the hair outwards. They have no stockings, but a kind of pantaloons of coarse cloth, or tanned leather, fitted close to the legs; their shoes are made of rein-deer's skin, the sole being taken from the forehead, and the upper leather from the legs. The women dress nearly in the same manner, but with the addition of some rude ornaments; and, in the case of the more affluent, of mantles and aprons of Russia linen or cotton. These, and leather for the boots of the men, are obtained in the petty traffic of the Laplanders with the Swedes. When travelling, and exposed to the winter blast, it is customary for the natives to cast a hood over the head, neck, and shoulders, leaving only a small opening, through which they see and breathe.

The language of the Laplanders is a Finnish dialect; but it contains so many obsolete and foreign words, that they are not intelligible by the inhabitants of Finland, nor indeed can the tribes in one part understand the language spoken by those of another. The Laponic has been mixed more than the other Finnish tongues with the German and Scandinavian, and hence its principal roots and derivations bear much less affinity with those in the languages of Upper Asia.

LAR, a town of Persia, cap. of the prov. of Laristan, 130 m. WNW. Gombroon, and 182 m. SE. Shiraz. Pop. estim. at 12,000. The town stands at the foot of a range of hills in an extensive plain, covered with palm trees. The houses gene-

Digitized by Google

ally are commodious and neatly furnished, and there are several handsome public buildings. The governor's house, in the middle of the city, is surrounded by a strong wall flanked with towers. The bazaar, which is in good repair, is alleged to be the best structure of the kind in Persia: it is very ancient, and built on a similar plan to that of Shiraz, but on a much greater scale, with loftier arches, greater length and breadth, and superior workmanship. The castle, on the top of a hill, overlooking the town, is now in ruins. Rain-water being the only water to be found in this parched and arid country, is collected during the wet season in large cisterns, similar to those in the island of Ormuz.

Lar was formerly the capital of an Arabic kingdom destroyed by Shah Abbas II. It is at present in a state of decay; but it still manufactures fire-arms, gunpowder, and cotton fabrics, exchanged at Shiraz and Gombroon for coffee, sugar, Indian silks, and European merchandise.

LARGS, a bor. of barony and sea-port of Scotland, co. Ayr, beautifully situated on a bay of the same name, and overhung on the land side by richly-wooded hills, 22 m. W. by S. Glasgow. Pop. 2,638 in 1861. The town, which is much frequented by visitors, for the purpose of sea-bathing, has an elegant suite of public baths, with a reading-room and library, and various circulating libraries. Though not built on any regular plan, it contains many excellent and substantial houses. The par. church, with its spire and clock, is conspicuous. Many gentlemen's seats are in the neighbourhood.

Largs is celebrated in history as the scene of a great battle, fought in 1263, between Haco, king of Norway, and the troops of Alexander II., in which the former was signally defeated. The cairns and tumuli, erected by permission of the conquerors, by the Norwegians over their slain, are still visible on the S. side of the village.

LARISSA (Turk. *Yenitcher*), a town of European Turkey, prov. Trikala, 25 m. NW. Volo, and 70 m. ESE. Yanina. Pop. estimated at 15,000. It is a walled town, and is situated on the Selembria (an. *Peneius*), crossed here by a bridge of ten arches. This river approaches it through a tract of woodland, almost concealing it from view, and then flows close at the foot of a convent of dervishes, two large Turkish mosques, and several groups of lofty buildings, soon after disappearing among the woods. The winter floods, which come down from the mountains with great force, frequently occasion damage to the clay-built houses in the lower part of the town. Internally, Larissa is mean and irregular; near its centre is an open space, having some good bazaars; but the streets are generally ill built, narrow, and filthy; and both houses and people seem to be in the most abject condition. Besides the mosques, there is a Greek metropolitan church; and these, with some baths and a khan, constitute all the public buildings of the place. There is very little trade, and the bazaars are ill supplied with manufactured goods. The plains surrounding Larissa consist of a fine alluvial soil, and are extremely fertile. They produce large crops of Indian corn, wheat, and tobacco, and northward are found rich sheep pastures.

Modern Larissa is supposed to occupy the site of the ancient city of the same name, claiming, in competition with Phthia, the honour of being the birthplace of Achilles, hence called *Larissean*, and being probably identical with the Πελασγικὸν Ἄργος mentioned by Homer in his catalogue of the Greek forces. (Il. B. 681.) At a subsequent period it acquired some celebrity from its adoption of the democratical form of government, and from its zealous support of the Athenian cause during the Peloponnesian war. (Comp. Aristot. Pol. v. 6, with Thuc. ii. c. 32.) It afterwards fell into the hands of Philip of Macedon and his successors, under whom it remained till the subversion of their empire by the Romans. It appears to have declined under the early Roman emperors from its ancient importance. Lucan says of it:

> 'Atque olim Larissa potens' . . . .
> Lib. vi. line 355.

The town and neighbourhood were subject in ancient times to the same violent and sudden inundations which now cause such extensive mischief.

LARISTAN, a small prov. of Persia, part of the an. *Caramania*, extending along the N. shore of the gulf of that name, between 26° and 29° N. lat., and 55° and 58' E. long., bounded NW. by Fars, and NE. by Kerman. Area, 16,000 sq. m. It is the poorest and least productive prov. of Persia, diversified indeed with plains and mountains, extending to the sea; but so arid and so destitute of wholesome water, that, were it not for the periodical rains, which fill the cisterns of the natives, and enable them to cultivate the date tree, with small quantities of wheat and barley, it would be quite uninhabitable. The coast is in the possession of different Arab tribes, who, under their respective sheikhs, maintain their independence, paying only a trifling tribute to the king. They are chiefly pirates, and reside in small towns or mud forts scattered along the shores of the gulf: the chief of these are, Congoon, having about 5,000 inhab.; Nakhilo, opposite the island of Shitwar; and Mogoo, which has one of the most secure roadsteads in the gulf. The interior of the country has seldom been visited by Europeans.

LARNE, a sea-port town of Ireland, co. Antrim, on a creek of the inlet of the sea called Larne Lough, 18 m. N. by E. Belfast, on the railway from Belfast to Carrickfergus. Pop. 2,768 in 1861, against 3,345 in 1841. Larne consists of an old and a new town, and has, besides, the parish church, a R. Catholic chapel, 3 Presbyterian, and 1 Methodist meeting-houses, and a national school. A manor-court is held every six weeks, and petty sessions every fortnight. It formerly carried on a brisk trade in salt; but its traffic is now chiefly confined to the export of linen, grain, and provisions. Coal is the principal article of importation. The harbour is land-locked, and is admirable for the smaller class of vessels, which enter and depart at all times of the tide. Fish is abundant, particularly mackerel, hake, cod, and mullet; salmon is taken near the entrance of the bay. The fishermen do not restrict themselves to the fishing, but are also agriculturists, and go to sea only when there is a prospect of a large take.

LARNICA, a sea-port town of the island of Cyprus, on its SE. shore, at the bottom of the bay of Salines, 23 m. SE. Nicosia. Pop. estimated at 5,000. It consists of an upper and a lower town; the latter, called the Marina, is built along the sea-shore; the other is a little more inland, and on higher ground. The houses, with the exception of a few belonging to the Frank merchants, are built of mud bricks dried in the sun, and are mean; they have mostly, however, very fine gardens, but these being inclosed by high walls, contribute little or nothing to the beauty of the town, as seen from the streets. It is the seat of a Greek bishopric, and in the Upper Town is the cathedral and convent of St. Saviour, and the Lower has a mosque, a convent, the chapel of St. Lazarus, and the remains of a castle constructed by the princes of the house of

Digitized by Google

Lusignan. Being situated on the verge of a marshy plain, screened by high mountains from the cooling influence of the N. winds, and having near it extensive lagoons, which in summer produce large quantities of salt, Larnica is hot, and, at certain seasons, unhealthy. It has no good water, except what is brought to it by an aqueduct constructed, in 1747, by a Turkish emir. There is no harbour; but the bay, which opens to the SE., and derives its name from the salt lagoons, affords good anchorage in deep water, at no great distance off shore. Larnica is the second city of Cyprus, the emporium of its commerce, and the principal residence of the foreign consuls. The exports consist of wheat, several cargoes of which are exported to Spain and Portugal with barley, cotton, silk, wine, and drugs; the imports are rice and sugar from Egypt, and cloth, hardware, and colonial produce, from Malta and Smyrna.

Drummond, Pococke, and the Abbé Mariti, concur in opinion that Larnica occupies the site of the ancient *Cittium*; while Kinneir and others suppose the latter to have been near a cape, still called Chitti, a few miles SW. from Larnica, where there are numerous tumuli and hillocks of rubbish. The probability, however, seems to be in favour of the supposition that the site of Larnica and Cittium are really identical. (Drummond, p. 250; Clarke, iv. 39, 8vo. ed.) Cittium was founded by the Phœnicians at a very remote period, and will be for ever memorable as the birthplace of Zeno, the founder of the stoical system of philosophy. Cimon, the great Athenian commander, either died at the siege of Cittium or immediately after he had taken it. The epoch of the destruction of the city is unknown.

LASSA, or H'LASSA (*Land of the Divine Intelligence*), the cap. of Thibet, prov. Oui, 860 m. E. by N. Katmandoo, the cap. of Nepaul; lat. 29° 30′ N., long. 91° 40′ E. Pop. conjectured to be about 24,000. It is situated on the Galdjao, a tributary of the Sanpo, about 28 m. from its confluence with that river, in an extensive and fertile plain about 60 m. long and 35 m. broad, surrounded by lofty mountains. The houses are built of a brown stone, are two or three stories high, with tolerably lofty rooms, and give the idea of wealth and respectability. The great temple of Buddha, which is likewise the residence of the Dalai Lama, the pontifical sovereign of Thibet, stands on the hill Bota-la, in the W. part of the city, and consists of an extensive range of square-shaped buildings, crowned in the centre with a gilded dome, and occupying altogether an area of about 40 begahs. It comprises, according to the Chinese geographers, 10,000 apartments, varying in size and grandeur according to the supposed dignity of the idols which they respectively contain. Contiguous to the temple, on its four sides, are the four celebrated monasteries of Brephung, Sera, Ghaldan, and Samyii, alleged to be inhabited by upwards of 4,000 monks, and much resorted to by the Chinese and Mongols as schools of philosophy and Buddhism. In and near the city are five other temples, built on the same general plan, but very inferior in size and splendour to that just described. Lassa, besides being the resort of zealous Buddhists from all parts of China, Turkestan, and Nepaul, is a place of considerable trade in silk, wool, and goats' hair, woollen cloths and Cashmeres, velvets, linens, asafœtida, bezoar, various kinds of fruit, silver bullion, gold dust, and precious stones, chiefly with N. Hindostan, Nepaul, Bhootan, Great Bucharia, and China; and in the markets, where the goods are exposed for sale on mats, regularly appointed market-inspectors fix the prices, from which no deviation is allowed. Handicraft is much followed, and with great success; and the lapidaries, workers in metal, and engravers are not inferior to the Chinese.

LATAKIA, or LADAKIEH (an. *Laodicea ad mare*), a town of Syria, in the pach. of Aleppo, 90 m. SW. Aleppo, and 74 m. S. by E. Iskenderoon. Pop. estimated at from 6,000 to 10,000. The town comprises an upper and a lower part, separated by gardens and plantations. The lower portion, called the *Scala*, consists of a double street, running parallel to the shore, and another leading down to it from the upper town, having coffee-houses and places of resort for seafaring people. The port is a small shallow basin with a narrow entrance, and well sheltered, except westward: on its N. side is a ruined castle, standing on a rock connected by arches with the main land; and at the E. end are the custom-house, landing-place, and several large warehouses. The upper town, which is in a very dilapidated state, in consequence of the damage occasioned by frequent earthquakes, consists of several narrow and irregular streets: the houses are constructed of cut stone, flat-roofed, usually two stories high, with an inner court. The greatest ornament of the place is a triumphal gate, between 30 ft. and 40 ft. in height, encircled near its summit by a handsome entablature: its four arches are in the Roman style of architecture, and, as the general appearance of the building denotes great antiquity, it was probably erected in honour of Julius Cæsar, or, perhaps, Germanicus. The corners are adorned with handsome Corinthian pilasters, and one of its fronts exhibits a basso-relievo, with arms and martial instruments. At no great distance is a mosque, built from the ruins of another ancient edifice, with Corinthian columns; and amidst the rocks and crags N. of the town is a large necropolis, containing numerous square sarcophagi, similar to those seen in the island of Milo. There are 3 other mosques and 2 Greek churches. The bazaars are poor and insignificant, and the only considerable article of trade is tobacco, raised near the town in large quantities, and highly prized all over the Levant.

Latakia is the representative of the ancient Laodicea, so named by its founder, Seleucus Nicator, in honour of his mother, and was a town of considerable importance before the conquest of Syria by the Romans. It was visited by Julius Cæsar, when on his way from Egypt to Pontus, and is styled Juliopolis on some of its medals. During the civil wars, Dolabella, with his fleet and army, was shut up in it by Cassius, and obliged to surrender. It became a bishop's see early in the Christian era, and was held by the Christians when the Crusaders invaded Syria. It was afterwards included in the empire of Saladin, and was finally added to the Turkish dominions by Selim I., in 1517. The ruins of the ancient city fully attest its size and grandeur, and offer ready building materials to the modern inhab. The acropolis stood on a tabular summit SE. of the town, but nothing remains of it beyond a few wells and cisterns.

LAUBEN, or LÜBEN, a town of Prussia, gov. Liegnitz, cap. circ. of its own name, on the Queis, 40 m. WSW. Liegnitz. Pop. 4,550 in 1861. The town is surrounded with old walls, and garrisoned by invalids. It is the seat of judicial courts for the town and circle; has a Rom. Cath. and three Protestant churches, a gymnasium, an orphan asylum, two hospitals, a school for teaching the art of spinning woollen yarn, and some trade in woollen and linen fabrics.

LAUDER, a royal and parl. bor. and market town of Scotland, co. Berwick, dist. of Lauderdale, of which it is the cap., near the Lauder, a tributary of the Tweed, on the road between Edinburgh and Coldstream, 24 m. SE. of the former, and 23 m. NW. by W. of the latter. Pop. 1,137 in 1861, and 1,148 in 1841. The only public buildings are the par. church, a dissenting chapel, the town-house, and gaol. Thirlstane Castle, the ancient residence of the noble family of Lauderdale, is within ¼ m. of the town. It has a branch bank, various schools, and subscription libraries. A common, comprising 1,695 acres, is divided among the burgesses. In 1482, Cochrane and other minions of James III. were hanged by order of the Earl of Arran and other noblemen, over the parapet of a bridge in the vicinity of this town. Lauder unites with Haddington, Dunbar, Jedburgh, and N. Berwick in sending one member to the H. of C. Registered electors, 66 in 1865.

LAUENBURG, a duchy of the German Confederation, belonging to the king of Prussia, situated between lat. 52° 21′ and 53° 48′ N., long. 10° 13′ and 11° 3′ E., bounded N. by Lübeck, E. Mecklenburg Schwerin, S. by the Elbe, and W. by Holstein. Area 455 sq. m. Pop. 50,147 in 1860. Surface flat, sandy in centre, and marshy in S. On its E. borders are several lakes, the chief of which are the Ratzeburger See and Schaal See. Principal rivers, the Stecknitz and Delvenaue. It is divided into three amts., Ratzeburg, Lauenburg, and Schwarzenbek. The duchy formerly was an appendage of the crown of Denmark, but was taken from it by Austria and Prussia in the war of 1863–4. It was ceded to these two powers by the king of Denmark at the treaty of Vienna, signed October 30, 1864; but the emperor of Austria sold his share in the duchy to the king of Prussia—in the convention of Gastein, Aug. 15, 1865—for the sum of 2,500,000 thalers, or 375,000*l.*, which was paid out of the private purse of the Prussian sovereign. The duchy thus became the 'personal property' of the latter, without being incorporated with the kingdom of Prussia.

LAUENBURG, a town of Germany, cap. of the duchy of same name, on the Elbe, 28 m. SE. Hamburg, on a branch line of the railway from Hamburg to Berlin. Pop. 4,086 in 1860. The town has the ruins of a castle formerly occupied by the dukes of Saxe Lauenburg, a church, a hospital, and a large market-place. A brisk transit trade is carried on between the Elbe and Lubeck. Except a beetroot-sugar factory, Lauenburg has no manufactures of any kind.

LAUNCESTON, a parl. and mun. bor., market town, and par. of England, co. Cornwall, in the N. division of hund. East, on the Attery, a tributary of the Tamar, 19 m. ENE. Bodmin, 20 m. NNW. Plymouth, 200 m. W. by S. London by road, and 264 m. by Great Western railway. Pop. of parl. bor. (which comprises, besides the old bor., the parishes of St. Stephen, St. Thomas, Lawhitton, and St. Petherwin), 5,140 in 1861, and of munic. bor. 2,790. The town consists of two chief avenues on the London and Tavistock roads, intersecting each other almost at right angles, crossed by several narrow and mean-looking streets. It was formerly surrounded by walls, parts of which are yet standing. The ruins of an ancient castle cover a large extent of ground, and attest its former strength and importance. A part of its keep was once used as a county gaol; but the prisoners are now sent to Bodmin, which has been the assize town since 1838. A small guildhall is the only public building devoted to civil purposes. The church, a handsome Gothic structure built of granite blocks, enriched with curiously carved ornaments, has a lofty tower at its W. end. There are places of worship also for Wesleyans and Baptists, with attached Sunday schools. A grammar school, founded by Queen Elizabeth, has, according to the charity commissioners, fallen into a state of decay, there having been no master since 1821. Baron's charity school is in nearly as useless a condition, and the only place of instruction for the poor is the national school, attended by about 260 children. Numerous money charities are chiefly distributed by the corporation. Launceston is neither a manufacturing nor a commercial town. Serge-weaving and wool-spinning formerly employed a considerable number of hands, but the trade has wholly disappeared. The removal of the assizes and quarter sessions has, also, deprived the town of much of its activity, and it now depends chiefly on its retail trade and on its markets, which are large and well attended. Market-day, Saturday. Cattle fairs, first Thursday in March, third ditto in April, Whit-Monday, July 6, Nov. and Dec. 6.

Launceston, otherwise called *Dunheved*, received its first charter from Richard, earl of Cornwall, in the thirteenth century, and its privileges were confirmed by Richard II., and many subsequent sovereigns. It is governed under the Mun. Reform Act by four aldermen and twelve councillors; but it has no commission of the peace. Corp. revenue, 315*l.* in 1862. Launceston returned two mems. to the H. of C. from the 23rd Edward I. down to the passing of the Reform Act, which deprived it of one member. Previously to this act, the mems., though formally elected by the corporation, were, in fact, mere nominees of the proprietor, the duke of Northumberland. Besides depriving it of one member, the Reform Act enlarged the limits of the bor., as stated above. Reg. electors, 443 in 1865.

LAURENCE, or LAWRENCE (ST.), the principal river of N. America, and when considered, as it should be, in connection with the chain of lakes or inland seas of which it is the outlet, it is one of the largest rivers in the world, extending from W. to E. through about 27° of long., and about 8° of lat. Regarding the St. Lawrence in this point of view, or as a general name for the connecting line of that great river or water system that unites with the Atlantic in the Gulf of St. Laurence, its remotest source will be found to be the St. Louis, an affluent of Lake Superior, rising in the table land of the Huron country, near the sources of the Mississippi, flowing S., and of the Red River, flowing N. It receives different names in different parts of its course, being at first the St. Louis; between Lake Superior and Lake Huron, the St. Mary; between Lakes Huron and Erie, the St. Clair and Detroit; between Lakes Erie and Ontario, the Niagara; and from Ontario to Montreal it is sometimes called the Cataraqui or Iroquois, its course from Montreal to the sea being the St. Laurence, properly so called, but it is now usually called the St. Laurence from Lake Ontario to the sea. Considered in this point of view, its entire course, from its source to its mouth in the Gulf of St. Laurence, in about long. 64° 30′ W., may be estimated at upwards of 2,000 m. Besides traversing Lake Superior, Huron, Erie, and Ontario, the Lake St. Clair, and some similar sheets of water, are mere enlargements of its bed. Lake Michigan also is included in its basin, which is roughly estimated by Darby to comprise an area of upwards of 500,000 sq. m., including the largest collection of fresh water to be found on the surface of the globe. (Darby's Geog. View, 200, 201, 218, 231.) For considerably more than half its extent the St. Laurence forms the boundary line between

Digitized by Google

the British N. American territories and those of the U. States.

The source of the St. Louis is estimated at about 1,192 ft. above the sea level. The elevation of the river in succeeding portions of its course, with the estimated area of the great inland seas and smaller lakes, of which it is the connecting link and outlet, are exhibited in the following table:—

	Elevation above tide level	Mean depth	Mean length	Mean breadth	Area
	Feet	Feet	Miles	Miles	Sq. M.
Lake Superior .	641	900	300	80	24,000
„ Huron .	596	900	200	95	19,000
„ Michigan .	600	900	300	50	15,000
„ Erie . .	565	120	230	35	8,030
„ Ontario .	231	492	180	30	5,400
River St. Laurence and smaller Lakes	..	20	..	..	1,500
Total Water Surface .	..	..	..	..	72,930

The St. Laurence varies very considerably in breadth, in the middle part of its course inclosing a great many islands, and forming numerous rapids. In those parts of St. Mary, St. Clair, Detroit, and Niagara rivers, where no large islands are met with, the breadth of the stream is usually from ½ m. to 2 or 3 m. At the Sault of St. Louis, 5 m. above Montreal, the river narrows to 5 furlongs; and at Quebec it is not more than 1,314 yards across; but between those cities its average width is 2 m. From Quebec, the breadth of the St. Laurence begins to increase rapidly. Immediately beyond the island of Orleans it is 11 m. broad; where the Saguenay joins it, 18 m.; at Point Pelee, upwards of 30 m.; at the Bay of Seven Islands, 70 m.; and at the island of Anticosti, about 350 m. from Quebec, it rolls a flood into the ocean nearly 100 m. across.

The basin of the St. Laurence is supposed by Darby to contain 'more than the half of all the fresh water on this planet.' Taking the area and mean depth of the lakes, as given above, their solid contents will amount to 1,547,011,792,360,000 cubic ft. of water, being sufficient to envelope the entire earth with a watery covering 3 in. in depth. (Darby, Geogr. View, p. 232.)

The annual discharge, however, though prodigiously great, does not, from the nature of the basin, bear so considerable a proportion to the contained body of fluid as might be expected. Darby, from observations made at three different places, estimated the hourly discharge at the enormous amount of 1,672,704,000 cubic ft. This estimate, continues Darby, 'exceeds by more than a half the quantity which, on another occasion, I estimated for the Mississippi; and though contrary to my own opinion when I first arrived on the banks of the St. Laurence, I am convinced it falls below reality.' (Geogr. View, 238.)

The source of the St. Lawrence (St. Louis) being 1,192 ft. above the level of the sea, the average fall of the river will, perhaps, be somewhat more than 6 inches a mile. But this fall is very unequally distributed, on account of the many, and in one instance stupendous, cataracts, rapids, &c. interspersed along the river's course. The Niagara, between Lakes Erie and Ontario, has within the short distance of 35 m. a descent of at least 334 ft., 164 of which are contributed by the Great Falls. The St. Mary, between Lakes Superior and Huron, has a fall of 23 ft. in 900 yards; and the rapids are so numerous and dangerous between Kingston and Montreal, that an extensive line of canal navigation has been cut, at a vast expense, to connect Lake Ontario with the Ottawa, and enable ships to avoid this portion of the river. (For a more particular description of the great falls, the chief lakes through which the St. Laurence passes, and other parts of the basin, see arts. NIAGARA, and Lakes SUPERIOR, HURON, and ERIE.)

The great Canadian lakes, especially the three upper lakes, receive few tributaries of any consequence; but the St. Laurence, in the middle and lower part of its course, is augmented by several considerable rivers, of which the Ottawa, from the N., uniting with it near Montreal, and the Saguenay, also from the N., uniting with it 130 m. below Quebec, are the most important.

The St. Laurence is said by Darby to be as remarkable for its uniformity throughout the year in the diurnal and monthly expenditure of its waters, as the Mississippi is for its continual change. A rise of 3 ft. is a more remarkable phenomenon in the former than a rise of 30 would be in the latter. The two rivers differ widely also in numerous other particulars. The waters of the Mississippi are turbid; those of the St. Laurence and its lakes are highly transparent. In the course of the Mississippi few lakes or enlargements occur, its banks are low, much of the surface within its basin consists of open grassy plains, and before it disembogues it divides into numerous channels; the St. Laurence, on the contrary, consists, in great part, of a chain of vast lakes; as its bed enlarges, it has shelving or precipitous banks, generally covered with primeval forests; and, instead of a delta, it forms at its mouth a large estuary.

The St. Laurence is the great commercial thoroughfare of the Canadian provinces, and the northern states of the American union. Its banks, and those of its lower lakes, are studded with flourishing cities and towns, as Quebec, Montreal, St. Francis, Cape Vincent, Kingston, Toronto, Buffalo, Oswego, and others are daily springing into existence. The rise of the tide is perceptible as high as St. Francis, or Three Rivers, 432 m. up the St. Laurence, and nearly midway between Quebec and Montreal. The river is navigable for ships of the line to Quebec, and for ships of 600 tons to Montreal, 580 m. from the sea, though the navigation is in some places obstructed by rocks and shoals. Beyond the latter point, however, a succession of rapids, especially between Cornwall and Johnston, unfits it for the navigation of other than flat-bottomed boats of from 10 to 15 tons. Further up, Ontario and Erie are navigable for ships of the largest size, as is the Niagara river, both above and below the falls. The Falls of Niagara are avoided by the Welland canal, a work undertaken by a company incorporated in 1825. This canal, into the formation of which the Ouse, Welland, and Chippeway rivers enter, is 43½ m. in length, 56 ft. in breadth at its surface, and 26 ft. at its base, 8½ ft. deep; and has 37 wooden locks, 10 ft. long, 22 ft. wide, and capable of admitting ships of 125 tons. Detroit river is no more than 7 or 8 ft. in depth, and the lake and river of St. Clair are navigable only for steam-boats and schooners; but, beyond this, a wide navigation for ships of any magnitude extends nearly to the falls of St. Mary. Boats of 6 ft. draught may reach the foot of these falls, but they cannot ascend them, though canoes, at great risk, sometimes venture to shoot downwards. The falls of St. Mary are generally avoided by a portage of 2 m.

It is thus seen that there is a continued navigation for vessels of medium burden from the head of Lake Huron to Kingston on Lake Ontario, and from Montreal to the mouth of the St. Laurence. The water communication between Kingston and

Digitized by Google

Montreal is effected chiefly by a chain of canals, the principal being the Rideau canal, constructed by the Canadian, or rather the English gov., connecting Lake Ontario with the Ottawa. Rideau river and lake, the Indian lake, and the Little Cataraqui, form parts of its course. It admits vessels of about 125 tons. The Grenville and La Chine canals, with the Ottawa, continue the communication to Montreal; the Grenville canal is, however, only adapted for vessels not exceeding 20 ft. in width. On the side of the U. States, the Grand Erie, Oswego, and Champlain canals (see NEW YORK and ERIE) unite the basin of the St. Laurence with the basins of the Hudson and Susquehanna; as the Ohio and Pennsylvania canals (see OHIO, PENNSYLVANIA) do with the basin of the Mississippi. There is another line of canals in Upper Canada between Lakes Huron and Ontario.

Strong tides prevent the St. Laurence being covered with compact ice below Quebec; but the enormous masses driven in every direction by the winds and currents render that portion of the river unnavigable for nearly half the year. Between Quebec and Montreal the water communication is totally suspended by the frost from the beginning of Dec. to the middle of April. The navigation of Ontario closes in Oct. During the winter the NE. part of that lake, from the Bay of Quinto to Sackett's Harbour, is frozen across, and the rest of its surface is usually frozen to a considerable distance from the shore. Lake Erie is not so much encumbered with ice as Lake Ontario, while Lakes Huron and Michigan are more encumbered. On Lake Superior the ice often extends to 70 m. from its shores. The frost, however, by no means stops commercial intercourse, but forms the rivers and lakes into excellent roads, on which vehicles of all descriptions are used. Among these are *ice-boats*, built like other vessels with a rudder, mast, and sail, and resting on iron skates attached at either end to cross-bars under stem and stern. One of these ice-boats has, it is said, *sailed* before the wind from Toronto to Fort George on Niagara, a distance of 40 m., in little more than three-quarters of an hour. (Darby, Geog. View, St. Laurence Basin, pp. 200–251.)

LAURENCE, or LAWRENCE (ST.), GULF OF, a bay of the Atlantic, chiefly between the 45th and 51st deg. of N. lat., and the 57th and 65th of W. long., bounded N. by Lower Canada and Labrador, E. by Newfoundland, S. by Nova Scotia and Cape Breton, and W. by New Brunswick and the peninsula of Gaspé (Lower Canada). At its NW. extremity it receives the river St. Laurence; and it communicates with the ocean on the NE. by the Strait of Belle-isle, between Labrador and Newfoundland, on the SE. by its principal outlet, the channel called St. Paul's, between Newfoundland and Cape Breton, and on the S. by the Gut of Canso, between Cape Breton and Nova Scotia. It contains the large islands of Anticosti and Prince Edward; and the Magdalen Islands, a group about lat. 47° 30′, and between long. 61° 27′ and 62′ W., inhabited by about 1,000 Canadians, French, English, and Irish settlers, who carry on a profitable fishery. The shores of the gulf are generally precipitous, barren, and inhospitable; and dense fogs are very prevalent. A powerful current sets continually from Hudson's Strait into the gulf, through the Strait of Belle-isle, and meeting the stream from the estuary of the St. Laurence, forms a dangerous race off the S. coast of Newfoundland. (Purdy's Memoir of the Atlantic, pp. 105, 144.)

LAUSANNE, a city of Switzerland, cap. canton of Vaud, at the termination of a spur from the chain of the Jura, 480 ft. above the level of the Lake of Geneva, from the N. shore of which it is about 1 m. distant, and 30 m. NE. Geneva, on the railway from Bern to Geneva. Pop. 20,515 in 1860. The city is finely situated on three eminences, and their intervening valleys; but, from being on uneven ground, its streets are steep and irregular. They are also generally narrow and ill-paved, and the interior of Lausanne by no means corresponds with its exterior appearance. It is divided into 6 quarters, the city and 5 suburbs, and is now an open town, but on its S. side are some remains of ancient walls. At the highest point of the city is the castle, a massive square building of stone, flanked at its angles by four brick towers. It was originally the residence of the bishops of Lausanne, but is now the council-house of the canton: its terrace, and that of the cathedral, commands magnificent views of the vicinity, the lake, and, far beyond, the mountains of Savoy. The church, formerly the cathedral, a vast Gothic building, founded about 1000, but not finished till the 13th century, is the finest religious edifice in Switzerland. It has two large towers, one supporting an elegant spire, the summit of which is 240 ft. above the ground, and a fine round window of stained glass, 30 ft. in diameter: in its interior are some singular specimens of architecture; and amongst others the tomb of Amadeus VIII., duke of Savoy. This personage, after abdicating the dukedom, which he had greatly enlarged, and governed with singular ability, was elected pope, by the title of Felix V., under which name he is best known in history. But another pope having been elected, about the same time, by a different party in the church, Felix, to terminate the schism, resigned the tiara in 1449. He died within two years of this event. (Biographie Universelle, art. 'Savoie, Amé VIII.') The church of St. Francis; the cantonal college with a library and museum, comprising collections of antiquities and minerals found in the neighbourhood; the bishop's palace, now appropriated to a school of mutual instruction and the district prison; the cantonal hospital, a fine edifice in the Tuscan order; the lunatic asylum of Champ d'Air; the new penitentiary, established in 1822, and organised like that of Philadelphia; the barracks, theatre, charity schools, and post-office, are the other chief public buildings.

Lausanne is famous in literary history, from its having been the residence of Haller, Tissot, Voltaire, and Gibbon. The house occupied by the latter, and in which he wrote the last half of his great work, is still in good preservation, and is an object of attraction to all travellers to Lausanne. 'It was here,' to borrow the passage in which Gibbon has perpetuated the memory of the event, 'it was here, on the day or rather night of the 27th of June, 1787, between the hours of 11 and 12, that I wrote the last lines of the last page, in a summer-house in my garden. After laying down my pen I took several turns in a *berceau*, or covered walk of acacias, which commands a prospect of the country, the lake, and the mountains. The air was temperate, the sky was serene, the silver orb of the moon was reflected from the waters, and all nature was silent. I will not dissemble the first emotions of joy on recovery of my freedom, and, perhaps, the establishment of my fame. But my pride was soon humbled, and a sober melancholy was spread over my mind, by the idea that I had taken an everlasting leave of an old and agreeable companion, and that, whatsoever might be the future date of my history, the life of the historian must be short and precarious.' Voltaire, previously to his settling at Ferney, lived at Monrepos, a little distance from Lausanne, on

Digitized by Google

the Bern road; and Byron wrote his 'Prisoner of Chillon' at Ouchy, the port of Lausanne, on the lake.

Lausanne is the seat of the superior courts of justice, and authorities of the canton of Vaud, of the councils of health and public instruction, the inspector of militia, and military commandant of the canton. It has an academy, with 14 professors, founded in 1537, a college for the French language, with schools of military science, and numerous literary societies. Its manufactures are of little importance. Woollen cloths, paper, leather, and a few other articles, are made, but in small quantities. The celebrated actor, John Kemble, is buried in the cemetery of St. Pierre, about 2 m. from Lausanne, where a monument is erected to his memory.

Lausanne derived its name from the an. *Lausonium*, which stood a little to the W., in the plain of Vidy. Various Roman remains have been discovered there and elsewhere in the vicinity. Before the Reformation, Lausanne was a rich bishopric. It was taken in 1536 by the Bernese, and governed by an officer from Bern till 1798, when it fell into the hands of the French, who made it the cap. of the dép. of the Leman.

LAVAL, a town of France, dép. Mayenne, of which it is the cap., on the Mayenne, and on railway from Paris to Brest, 150 m. WSW. the former city, and 42 m. E. Rennes. Pop. 22,892 in 1861. The town proper is on a steep declivity on the W. bank of the river, across which it communicates with a suburb of about half its own size by 2 stone bridges, one built within the last 16 years. It is surrounded with old walls, parts of which are in good repair; and contains many antiquated buildings, among which is the château, formerly the residence of the dukes of Laval, with a ponderous round tower, now serving for a prison. Many of the private houses have stood for centuries, and are curious specimens of Gothic architecture, though chiefly built of timber. The church of the Trinity, on the site of a former temple of Jupiter, those of *des Cordeliers* and St. Venerand, and the new linen hall, are handsome edifices; but the prefecture, town-hall, theatre, and most of the other public buildings, are of a very ordinary description. It is the seat of tribunals of original jurisdiction and commerce, and has two hospitals, a communal college, a public library with 10,000 vols., and a Trappist convent. It has considerable manufactures of linen-stuffs and thread, with fabrics of cotton handkerchiefs, calicoes, flannel, numerous bleaching grounds, tanneries, and marble works. It is also the entrepôt for the linen fabrics and yarn made in the adjacent cantons; markets being held in it every Saturday for such goods, and for wines, brandy, timber, iron, and wool, in which it has a considerable traffic. Laval was founded by Charles-le-Chauve, in the 9th century, to arrest the incursions of the Bretons. It was taken by Earl Talbot in 1466, but retaken by the French in the succeeding year. It suffered greatly in the Vendean war at the close of last century.

LAVAUR, a town of France, dép. Tarn, cap. arrond. on the Agout, here crossed by a stone bridge, 32 miles SW. Alby. Pop. 7,438 in 1861. Lavaur is divided into an old and a new town, both of which are ill-built. It has a communal college, a public library, with 3,500 vols., with manufactures of silk stuffs, chiefly for furniture; and is the entrepôt for the silk goods of Upper Languedoc. In the 13th century it was a stronghold of the Albigenses; but, after a lengthened and vigorous resistance, it was taken in 1211 by Simon de Montfort, by whom it was treated with the utmost barbarity.

LAVENHAM, or LANHAM, a market town and par. of England, co. Suffolk, hund. Babergh, 15 m. WNW. Ipswich, and 57 m. NE. London, on the Great Eastern railway. Pop. of par. 1,823 in 1861: area of par., 2,800 acres. The town stands on a branch of the river Bret, in a valley encompassed by hills on all sides except the S., and comprises several small streets, with a spacious market-place, having a stone cross in its centre. The church, which has a steeple 142 ft. high, is a handsome structure, partly of freestone, but partly, also, of curious inlaid flint-work: the porch is of highly ornamental architecture, and the timber ceiling and several pews in the interior are exquisitely carved, somewhat in the style of Henry VII.'s chapel in Westminster Abbey: the living is a rectory in the patronage of Caius College, Cambridge. There are also places of worship for Wesleyan Methodists and Independents, with attached Sunday schools. The charities comprise a free school, founded in 1647, and endowed with about 21*l.* a year, some almshouses, and minor bequests for the poor. Lavenham had formerly a considerable business in the weaving of blue cloths, serges, and other woollen stuffs; but this has fallen to decay, and has been replaced of late years by the manufacture of hempen cloth, which here, as well as at Haverhill, employs a considerable number of hands. Lavenham is a bor. by prescription; and land within the manor descends to the youngest son, according to the custom of borough-English. It is one of the polling places for the co. Markets, small and ill-attended, on Tuesday. Fairs for butter and cheese, Shrove-Tuesday and Oct. 10.

LAYBACH (Germ. *Laibach*, Illyr. *Lublana*, an. *Æmona*), a city of the Austrian dom., cap. Illyria, and of the circ. of the same name, on the navigable river Laybach, a tributary of the Save, 80 m. SW. Gratz, 72 m. ESE. Agram, and 54 m. NE. Trieste, on the railway from Vienna to Trieste. Pop. 21,170 in 1857. Laybach consists of the town proper, 5 suburbs, and 3 adjacent hamlets. The town is situated on uneven ground, and has narrow and irregular streets, which, however, are well paved, and have foot-paths, while most of them are kept clean by running streams. Though ill laid out Laybach is tolerably well built; and has several handsome public edifices, among which are the cathedral, St. James's church, and that of the Ursuline nuns, the Gothic town hall, the lyceum, to which an agricultural garden is attached; the theatre, masquerade-hall, barracks, military school, and Auersperg palace. The town is grouped round the castle hill; the castle being now converted into a house of correction and state prison. Laybach has 12 churches, 2 hospitals, 2 convents, a gymnasium, a female school, a normal school, an ecclesiastical seminary, and orphan, lunatic, and other asylums. It is the see of a bishop, and the seat of the government of the circ., and of criminal, commercial, and mining tribunals for the prov., town and district judicial courts, the board of tolls, salt duties, and customs for the kingd. of Illyria, the agricultural society of Carniola, the museum for the duchy, and a philharmonic society. It has 2 large sugar-refineries, and fabrics of linen stuffs, porcelain, paper, and leather; its silk and woollen manufactures have fallen into decay. A considerable transit trade is carried on between Laybach and Trieste, Croatia, and S. Germany. Within the last 30 years some extensive marshes in its vicinity have been in a great measure drained, which has rendered the town much more healthy. Æmona was destroyed

Digitized by Google

by Attila in 452, but having been restored, is said to have been enlarged and fortified by Narses. It is celebrated in diplomatic history for the congress held here in 1821.

LE', or LEH, improperly called LADAKH, a city of Central Asia, and the cap. of the principality of Ladakh, in Thibet; in the valley of the Upper Indus, at the foot and on the slope of some low hills on the N. side of the river, from which it is separated by a sandy plain about 2 m. broad, 150 m. SE. Iskardo, and 930 m. NW. by W. Lassa. Lat. 34° 10′ N., long. 77° 45′ E. It is enclosed by a wall, furnished at intervals with conical and square towers, and extending on either side to the summit of the hills. The streets are disposed without any order, and form a most intricate labyrinth; and the houses are built contiguously, and run into each other so strangely, that from without it is difficult to determine the extent of each. The number of houses is said, by the natives, to be about 1,000. They usually vary from 1 to 2 or 3 stories in height, and are furnished with light wooden balconies. The walls are sometimes wholly or in part of stone, but in general of large unburnt bricks, whitened outside with lime. The roofs are flat, and, like the ceilings, formed of small trunks of poplar trees, above which a layer of willow shoots is laid, covered by a coating of straw, and that again by a bed of earth. They constitute a very insufficient defence against the weather, as during rain the water soon softens the earth, and pours down into the apartment. The rooms, though frequently of good size, are rarely above 7 or 8 ft. high, and unprovided with chimneys, though in the kitchen there is sometimes a square hole, which acts as an imperfect ventilator. The doors are made of planks of poplar mortised together; iron nails are rarely used, as they are too costly, the iron ore of the country being little wrought for want of fuel. A few felts and sheep-skins, and a bench or two with a large box, constitute the principal articles of furniture. The temples are built of the same materials as the houses, and pillars of timber, like those in private dwellings, support the beams, being little more, in fact, than the stems of the poplar or willow, stripped of their bark and painted. The most considerable building in Lé is the palace of the rajah, which has a front of 250 ft., and is several stories in height. The pop. is chiefly of the Thibetan stock, but numerous Cashmerians have settled in Lé, and intermixed with the natives. Lé is the seat of an active commerce in shawl-wool, brought thither from the surrounding territory, from Lassa and Chinese Turkestan, to be transported to Cashmere; and a silver coin is struck at this city, from bars of silver imported from China, which is in general circulation throughout the whole of Western Thibet.

LEADHILLS, a mining village of Scotland, co. Lanark, in an alpine region, in an irregular valley 1,800 ft. above the level of the sea, and surrounded by wild heathy hills rising to the height of 2,450 ft. Pop. 842 in 1861. The mining village of Wanlockhead, though only 1 m. distant, is in the co. of Dumfries. Both villages are inhabited solely by persons connected with the mines; which, however, belong to different proprietors, and are wrought by different companies. At Leadhills, the mineral district comprises a space about 3 m. in length by 2½ in breadth, and is principally composed of greywacke and greywacke slate, which range from SW. to NE. These strata are associated with transition clay-slate, called edge matter, from its vertical position, through which the metalliferous veins pass. The principal lead veins run SE. to NW., with a dip to the E. of 1 ft. in 3. The common and compact galena, or lead glance, are the principal ores, and furnish all the lead used in the arts. The vein stones are quartz, calcareous spar, brown spar, sparry ironstone, and heavy spar. Silver is contained in the lead, but in too small quantity to repay its extraction. The mines have been wrought from a very remote period. Gold is found in all the neighbouring streams, disseminated in minute particles among the clay more immediately covering the rocks, and also occasionally interspersed in quartz. The search for this precious metal was formerly conducted on a large scale, under royal authority, but never with much success; and all attempts of the kind, except by the curious, have long since ceased.

Leadhills has a chapel belonging to the established church, a school, and an excellent library founded in 1741. Allan Ramsay, the poet, was a native of this place. The miners of Leadhills are regarded as more than usually intelligent, moral, and respectable.

LEAMINGTON PRIORS, a town, par., and watering-place of England, co. Warwick, in Kenilworth, div. of hund. Knightlow, on the Leam, a trib. of the Avon, 2 m. E. Warwick, and 97½ m. NW. London, by London and North Western railway. Pop. of town 17,958, and of par. 17,402 in 1861. Area of par. 1,720 acres. The town which, 60 years ago, was an inconsiderable village, has now many noble and opulent residents; and the elegance of its squares, streets, crescents, and terraces, and of its numerous public and private edifices, entitle it to a place among the handsomest and best built towns in the kingdom. It formerly stood only on the S. of the river; but in recent years it has been extended to the opposite side, with which it is connected by several handsome bridges. One of these, widened and beautified in 1840, has received the name of 'Victoria Bridge;' another, about a ¼ m. lower down the Leam, built of stone, was opened in 1840. The numerous hotels are nowise inferior to those of Bath, Cheltenham, and other fashionable watering-places. It has, also, many suburban villas and detached residences.

The waters, to which Leamington owes its celebrity, embrace 11 different streams, uniting, in a single spot, saline, sulphureous, and chalybeate waters. That which most abounds, and which is known as 'the Leamington waters,' consists chiefly of the sulphate of magnesia and soda, in combination with muriate of soda, or common salt: the waters are used internally by dyspeptic and chronic patients, and have been found useful when applied externally in cutaneous diseases and rheumatism. The following Table shows the number of grains of mineral salts contained in a gallon of water from two of the principal springs:—

Description of Salts	Old Bath	New Bath
Carbonate of Iron . .	.75	
Muriate of Magnesia .	11·5	58·6
" Soda . . .	430·	330·
Sulphate of Lime . .	112·	62·7
" Soda . . .	152·	146·

The *pump-rooms* and *baths* are fitted up with every degree of elegance, combined with comfort and utility. They are constantly supplied with water from the springs; and these, with the assembly rooms, public libraries, music hall, and numerous promenades and pleasure gardens, form the principal attractions, and contribute chiefly to the amusement of the visitors. The parish church

Digitized by Google

is a good specimen of Gothic architecture; there are also several district churches, and places of worship for Rom. Catholics, Wesleyan Methodists, and other sects. A national school, an infant school, and several Sunday schools are well supported. There are also several charitable institutions, particularly the 'Warneford Hospital,' endowed by Dr. Warneford, where the poor have the benefit of gratuitous baths and of medical advice. The business of the town is confined to the supply and retailing of articles required by the resident gentry and visitors; and the latter are generally so numerous, as to make it a scene of bustle and activity during the greater part of the year.

The surrounding country, which is highly picturesque, furnishes an almost endless variety of pleasing rides and excursions, diversified by the fine residences of the Warwick, Clarendon, Leigh, Willoughby, and other families; the ruins of Kenilworth Castle, Guy's Cliff, and other spots equally interesting to the tourist and the antiquary.

LEBANON, an extensive and very celebrated range of mountains in W. Asia, connected northward with the table-land of Anatolia, thence running SSW. in two nearly parallel chains through Syria and Palestine, and finally connecting itself with Mounts Horeb and Sinai near the Gulf of Suez. The W. chain, called Djebel-Liban, the *Libanus* proper of antiquity, detaches itself from the mountains of Asia Minor at the Gulf of Iskenderoon; it is cut through by the deep channel of the Orontes, in lat. 37° 7′, and as it proceeds southward, at an average distance of 24 m. from the Mediterranean, it increases in height, till, in lat. 34° 12′, the culminating point of the chain, Djebel Makmel, attains an elevation of 12,000 ft. above the sea. Many summits in this part rise considerably above the limits of perpetual snow; and even in lat. 32° 50′ the ancient *Carmel* and the twin summits of *Ebal* and *Gerizim*, so famous in the history of the Israelites (Deut. xi. 29), are conspicuous from their towering height; but more southward the mountains sink much lower, and are traced with some difficulty S. of Gaza. The E. chain, now called Djebel-es-Sheikh, and identical with the *Anti-Libanus* of Strabo (lib. xvi.), detaches itself from the range of Taurus, about 60 m. E. of that last mentioned; it attains the extreme altitude of about 5,000 ft. in lat. 33° 20′, under the ancient name of *Mount Hermon*, and after maintaining a considerable elevation as far S. as the 32d parallel, becomes lower and less regular as it skirts the Dead Sea on its E. side, and finally is connected with the sandy hills of Arabia: this chain, indeed, is much less defined throughout its course, and inferior in proportion to the chain running along the coast. The valley of Bakaah (an. *Cœle-Syria*), which separates these chains, is about 100 m. long, and varies from 10 to 20 m. in breadth, having an elevation near the sources of the Orontes exceeding 2,000 ft. above the sea; and southward is the valley of the Jordan, which may be traced through Arabia to the Gulf of Akabah. (See JORDAN.) Besides the Orontes and Jordan, which are the two great rivers of this mountain system, a smaller stream, called the Leittanie, rises near Baalbec, and flows SW. into the Mediterranean, a few miles N. of Tyre. The general formation of Mount Lebanon consists of carboniferous and mountain-limestone, with greywacke and slate rising to the surface in the higher parts. The limestone in many parts is very porous, easily acted on by air and water, and rapidly worn into hollows of various shapes and sizes, which have been formed into sepulchres and caves, formerly the hiding-places of the persecuted Jews and Christians. Basalt, and other igneous rocks appear E. and S. of Lake Tiberias, and the heights skirting the Dead Sea present granite, gneiss, and dolomite. Iron and coal are abundant in some parts of the range. The former is wrought in two districts; but, owing to the distance from which the fuel has to be brought for smelting the ore, the produce of the mines is scarcely sufficient for the consumption of the pachalik. The coal-mines which, during several years, have been wrought by the government, are situated about 8 hours' distance from Beyrout, at an elevation of about 2,500 ft. above the sea. The seams vary from 3 ft. to 4½ ft. in thickness; but the coal, though abundant, is rather sulphureous. Iron pyrites are found mixed with the coal, and smelting furnaces have been erected near the pits; but the returns are quite insignificant.

The principal animals found on Mount Lebanon are, the roe-deer, the antelope, the goat, the mountain-sheep, and the jerboa; with eagles, hawks, ravens, herons, and pelicans. The general aspect of the mountain scenery is thus described by an English clergyman Mr. Elliot:—'Our route lay directly across Mount Lebanon, the chief part of which is nearly barren. Almost the only tree which it nourishes is the fir, and consequently the view is not of a character to interest a lover of scenery. From the sea and the plains the range forms a noble object for the eye to rest on; but when once the ascent is begun, few of the component elements of a beautiful prospect are discernible. Deep ravines, indeed, and rugged beetling precipices meet one at every turn, and render travelling both painful and hazardous; but there are neither glaciers nor waterfalls, neither lakes nor rivers, no verdant fields nor smiling valleys, no extensive forests, no floral richness, and no rural villages: even the cedars, once 'the glory of Lebanon' (Isa. lx. 13) have deserted it, and are replaced by the umbrella-topped fir. In one spot only called Bisharri, nearly opposite Tripoli, eight gigantic cedars, and a few of inferior size, attest the splendour of their by-gone race. The large trees measure about 36 ft. round the trunk, and more than 100 ft. between the extreme points of the opposite branches; while at the base, or a little above, they send out five limbs, each measuring 12 or 15 ft. in circ. At another spot W. of Bisharri, little known and seldom visited, this same interesting tree is found in much greater numbers, but of inferior growth. The mountaineers cut down the cedars for their charcoal and tar, which latter article is used medicinally to heal the wounds and diseases of the camel and the other animals.' (Elliot's Travels, vol. ii. p. 255.)

'In fact,' says another traveller, 'it is impossible to view these patriarchs of the vegetable world, the remains of vast forests that once supplied Jerusalem with its finest timber and its choicest incense, without feeling the truth, aptness, and precision of the prophecies concerning them:—"The rest of the trees of his forest shall be few, that a child may write them. Lebanon is ashamed and hewn down. The high ones of stature shall be hewn down: Lebanon shall fall by the mighty one."' (Isaiah x. 19, 33, 34; and xxxiii. 9.) It must not be supposed, however, from these sketches, that the *whole* mountain region is barren and uninteresting; for there are many fertile and well-peopled valleys, inhabited by an industrious people, chiefly Maronite Christians, occupied in the silk and dyeing trades, and in raising wine, corn, tobacco, and cotton. The Maronites are an active and laborious race, who

Digitized by Google

turn to good account such parts of the soil as are suited to tillage, and in no part of Syria is there so obvious an activity, and in none are the inhabitants so prosperous. The agricultural implements are rude; the plough is occasionally seen, but spade husbandry is much more used; and the steepness of the hill sides requires a succession of terraces for cultivation. Almost every male inhabitant is a small proprietor of land, and some of the emirs are large owners, either cultivating their estates themselves, or letting them out to tenants.

Some of the convents produce a wine called *Vino d'Oro*, of good quality, both red and white; but it is often spoiled by the practice of boiling, and the use of skins. The tobacco of Mount Lebanon ranks also as the best in Syria. The quantity of raw silk produced in the district, exclusive of Tripoli, amounts annually to 240,000 okes, the price being from 120 to 125 piastres per oke: of this quantity 2-3rds are exported, and the rest consumed in the country. The manufacture and weaving of silk thread is pursued to a considerable extent, and the annual consumption of gold for this trade averages about 50,000 drachms. Exorbitant taxes are, however, a great hindrance to the industry of the Lebanon.

LEBRIJA (an. *Nebrissa*), a town of Spain, prov. Cadiz, in the flat of the Guadalquivir, 29 m. S. by W. Seville, and 33 m. N. Cadiz. Pop. 10,338 in 1857. A par. church, built of the materials of an old mosque, 4 convents, a hospital, and a well-endowed classical college are the chief public buildings, and there is also a ruined castle of considerable extent. Being situated in the midst of an extensive and marshy flat, Lebrija is extremely unhealthy, especially during the heats of summer, but the circumjacent alluvial soil is highly productive. The town has fabrics of glass, earthenware, blankets and sacking, soap, bricks, tiles, and mortar.

LECCE (an. *Sybaris* and *Lupiæ*), a city of South Italy, cap. of prov. of same name, on the railway from Brindisi to the Gulf of Taranto, about 22 m. SSE. the former city. Pop. 19,419 in 1862. The city is fortified by a wall and towers, above a deep ditch, and possesses a castle or citadel. It comprises the usual appendages of a provincial cap., a seminary, tribunal, and theatre; and adds to these a large manufactory of tobacco, the produce of which, as snuff, is highly esteemed throughout the kingdom. The principal gate of entrance to Lecce is very magnificent, though in a strange overloaded style of architecture. The facility with which the stone of the country is wrought has proved of great advantage to the architectural embellishments of Lecce; but it has also afforded a fatal facility of propagating the extravagant taste exemplified in every building of consequence. Among these edifices the churches are pre-eminent; they exhibit all the grotesque barbarity of the Gothic, without any of its spiry lightness. In the principal square is an antique column brought from Brindisi: it supports the statue of St. Oronzio, the protecting saint. The inhabs. of Lecce are mostly in easy circumstances, and renowned for their courteous polished manners. The climate is oppressively hot during the summer. The surrounding distr. is one of great fertility. It supplies, however, silk, wool, flax, cotton, oil, and wine, of good quality, in which the city is said to have an active trade. Lecce has also manufactures of lace, linen thread, woollen cloth, and cotton and silk fabrics. The produce of Lecce is mostly exported from Otranto, or from San Cataldo on the Adriatic.

Sybaris, or Lupiæ, on the site of Lecce, was very ancient. Augustus remained in it for some days after his return to Italy on hearing of the death of Cæsar. In the middle ages it was called *Lycium*. It was made the fief of an earl soon after the establishment of the Normans; and Tancred, one of its earls, succeeded to the crown of Naples in 1189. The novelist Ammirato, and the anatomist Baglivi, were natives of Lecce.

LECHLADE, a market town and par. of England, co. Gloucester, hund. Brightwell's Barrow, at the confluence of the Lech with the Isis, 13 m. E. Cirencester, and 68 m. W. by N. London. Pop. of par. 1,328 in 1861; area of par. 3,980 acres. The town consists chiefly of a single, long, wide, and well-built street; and the river (which is navigable up to this place, a distance, by water, of 146½ m. from London) is crossed by a good stone bridge. The church, a handsome stone structure, built in the reign of Henry VII., has a tower and spire at its W. end. There are also places of worship for Wesleyan Methodists and Baptists, and two Sunday schools. The principal importance of Lechlade is derived from its site at the junction of the Thames navigation with the Thames and Severn Canal, which makes it the seat of a somewhat extensive transit trade in butter, cheese, corn, and malt. Markets on Tuesday; fairs, Aug. 5 and 12 and Sept. 9, for cattle and cheese.

LECTOURE (an. *Lactora*, and *Civitas Lactoratensis*), a town of France, dép. Gers, cap. arrond., on the summit of a steep isolated rock, 19 m. N. Auch. Pop. 5,914 in 1861. The town was formerly surrounded with a triple range of strong walls, the remains of which still exist. It is traversed by a wide, regularly built, and clean street, at one end of which is a hospital occupying the site of an ancient castle, and at the other a handsome Gothic church, built by the English. Near the church is the old episcopal palace, now the town-hall, sub-prefecture, and court of primary jurisdiction. In the town-hall are portraits of Marshal Lannes, duc de Montebello, and other distinguished individuals, natives of the town; a marble statue of the marshal is also erected on the public esplanade. Lectoure has manufactures of serge and coarse woollen cloths, and a considerable trade in cattle, wines, brandy, and agricultural produce.

Lectoure, though not mentioned by the ancient geographers, has several Roman antiquities; the chief is a votive altar, in good preservation, which dates from the time of Gratian. At the foot of the hill on which the town is built is a fountain of excellent water; its modern name is *Hondelia*, derived, it is said, from its ancient name, *Fons Deliæ*; having been consecrated to Diana, who had a temple in the vicinity. Lectoure belonged, for a lengthened period, to the counts of Armagnac. The last of that family having been besieged in it in 1473, by the troops of Louis XI., commanded by the cardinal of Alby, surrendered on terms which the cardinal offered and swore to observe. No sooner, however, had the perfidious ecclesiastic got the count into his power, than he ordered him to be assassinated, and gave up the town to military execution.

LEDBURY, a market town and par. of England, co. Hereford, hund. Radlow, near the Leden, a trib. of the Severn, on the railway between Hereford and Worcester, 13 m. E. Hereford, 14 m. SW. Worcester, and 105 m. WNW. London. Pop. of town 3,263, and of par. 5,598 in 1861: area of par. 8,630 acres. The town, situated on the slope of a hill, at the extremity of the Malvern hills, comprises two principal intersecting streets, with others of inferior character. Many of the houses are handsome, and built of stone

Digitized by Google

quarried in the neighbourhood. The church, which is of Norman architecture, with more recent alterations and additions, comprises a nave, aisles, and chancel, with a chapel; and the tower, which is detached from the rest of the building, is surmounted by a fine spire 60 ft. high: the living is a vicarage, in private patronage. There are, also, places of worship for Independents, Baptists, and Wesleyan Methodists, with well-attended Sunday schools attached to each; a national school for both sexes, partly supported by the produce of two or three old charities; and a school of industry for girls. The free school, founded in the 16th century, formerly had the reputation of being a good classical school; but the endowment is very trifling, and the instruction is now confined to reading, writing, and arithmetic. St. Catherine's hospital, for poor men and women, founded by Hugh Folyot, bishop of Hereford, in 1232, comprises a master, chaplain, 7 brethren, and 3 sisters, each of whom, in addition to a comfortable dwelling and some yearly allowances, receives a stipend of 6s. a week. The hospital is a handsome structure, with two wings, and a chapel and hall in the centre. The par. is unusually rich in money charities, distributed chiefly by the clergy and churchwardens. Ledbury was celebrated during the reigns of Elizabeth and James I. for its extensive manufactures of broad cloth and silk; but they are now quite extinct. Malting, tanning, and the weaving of sacking, employ a considerable number of hands; but the present importance of the town is derived from its being the chief market of a district producing large quantities of hops, cider, and perry. Stone and marble are quarried in the neighbourhood.

Ledbury was anciently a parl. bor., and, in the reign of Edward I., twice returned mems. to the H. of C.; but the privilege was not preserved.

LEEDS, a parl. and mun. bor., par., and celebrated manufacturing town of England, being the great centre of the woollen cloth trade, co. York, W. riding, locally situated in wap. Skyrack, on both sides the navigable river Aire, 23 m. WSW. York, 29 m. N. Sheffield, 170 m. N. by W. London by road, and 192½ m. by Great Northern railway. Pop. of par. and of bor., which are co-extensive, 207,165 in 1861. In 1841 the pop. was 151,874. The principal and best part of Leeds stands on the slope of a hill N. of the Aire, and the buildings cover a space of about 1,000 acres. The town, speaking generally, is irregularly built, with narrow and crooked streets; but the centre and W. end comprise several handsome streets lined with fine houses. Briggate, in the centre of the town, is the largest, and is as wide as Oxford Street, London. Three stone bridges, and two of cast iron, on the bow and string principle, cross the river Aire, on the S. side of which are the extensive suburbs of Holbeck and Hunslet, containing many large factories. The town is well paved, flagged, and lighted with gas. Formerly the supply of water was rather deficient; but extensive works have been completed within the last thirty years, by which an abundant supply of excellent water is conveyed into the town from the Harewood hills, 5 or 6 m. distant, at an expense of about 130,000l. Chief among the public buildings is the new town hall, a handsome Corinthian pile, 250 ft. by 200, with a dome 250 ft. high, which was opened by Queen Victoria, in 1858. In the vestibule is a statue of her majesty, in white marble, and in the hall, 161 ft. long, are statues of Edward Baines and Robert Hall. Other notable public buildings are the cloth-halls. The Mixed-cloth Hall, at the corner of Wellington Street, built in 1758, is a quadrangular building, 380 ft. long and 200 ft. broad, enclosing an open area, and having about 1,800 stands. The White-cloth Hall, for the sale of undyed goods, on the plan of the former, was erected in 1775: it has about 1,200 stands. A third building of the same description, in Albion Street, but smaller, intended to accommodate traders not licensed to sell in the other halls, has been long abandoned. Close to the Mixed-cloth Hall is a handsome edifice, called the 'Commercial Buildings,' appropriated chiefly to news-rooms and bankruptcy courts, but partly also to trading purposes. Near the Commercial Building is a statue of Sir Robert Peel, erected in 1852. The court-house, in which the petty and quarter sessions of the bor. and the Michaelmas sessions of the W. riding are held, is a well-arranged building for police purposes; but the gaol attached to it being too small for the wants of the town and borough, a gaol on the most approved construction, to accommodate in separate cells about 300 prisoners, was erected in 1847, on Armley Hill, at a cost of 30,000l. The corn exchange faces Briggate: its front is of the Ionic order, and has a niche in the centre, with a statue of Queen Anne. The stock exchange was opened in 1847. The central market, erected at an expense of 35,000l., is large, handsome, and commodious: there are also two other markets. The cavalry barracks, erected in 1820, on the N. side of the town, are well built and very extensive, occupying, with the parade grounds, nearly 12 acres. The workhouse, in the Elizabethan style, has room for about 800 inmates. In 1862 the gross estimated rental assessed to poor rate was 598,242l. Among the other public buildings are the hall of the Philosophical and Literary Society, a theatre on the S. side of the town, and two commodious bath establishments. The places of worship in the town comprise 27 churches and 49 chapels. The par. church, rebuilt, on the site of an old Gothic edifice, in the perpendicular English style, is one of the largest and handsomest churches in England: the living is a vicarage, worth above 1,200l. Among the other notable churches are St. John's, St. George's, and St. Saviour's, the latter built in 1843, in the pointed style, with a tall spire. The dissenting places of worship include two large Wesleyan chapels, an Unitarian chapel in the pointed style, and four Roman Catholic chapels, one with a tower 150 ft. high. An Independent chapel, erected in East Parade, at a cost of 12,000l., has a handsome Doric portico. A spacious cemetery, near Woodhouse Moor, occupying 10 acres of ground, was opened in 1835, for the use of persons of all religious denominations: in the centre is a chapel, beneath which are large vaults. There are also two large parochial cemeteries, one at Burmantofts, and the other at Hunslet, purchased by rates on the inhabitants, and each having an unconsecrated as well as a consecrated portion of ground, and two chapels for the accommodation of dissenters as well as churchmen. The establishments for general education comprise, 1. A well endowed grammar-school, founded in 1552, and rebuilt, in 1860, in the Gothic style, at a cost of 15,000l. It gives free instruction in classics and the elements of mathematics to the sons of all residents in Leeds, and enjoys the reputation of being ably and successfully conducted; 4 scholarships in Magdalen College, Cambridge, and an exhibition in Queen's College, Oxford, are open to the competition of its pupils. 2. A national school, attended by upwards of 600 children. 3. A Lancastrian school, established in 1811, and giving instruction to 300 boys. 4. A model infant school, where a considerable number of persons have been trained for the teaching of

Digitized by Google

infant schools, and where about 120 children receive regular instruction. 5. Marshall's schools, comprising a boys', girls', and infants' schools. 6. Burmantoft's Industrial Schools, with a building in the Elizabethan style, 276 ft. long. Numerous other public schools are supported by the Church, the Wesleyans, the Independents, and other religious bodies. St. John's Charity, founded in 1705, has for its object the training of girls to become household servants; its management is vested in a committee of subscribers. The chief societies for the promotion of literature and science are the Philosophical and Literary Society, which has a handsome hall and museum in Park Row; and the Mechanics' Institution and Literary Society, which has a hall in South Parade, a library of 10,000 volumes, and upwards of 2,000 members, with a large day school, a school of design, and numerous evening classes. Leeds has also a school of medicine, a society for the promotion of the fine arts, and five subscription libraries. The charitable institutions comprise, besides the schools already mentioned, an infirmary, founded in 1767, supported by subscriptions, and accommodating 150 in-patients; a fever hospital, called the 'House of Recovery;' a lying-in hospital, an eye and ear infirmary, and a public dispensary. There are likewise several endowed charities for the aged poor, and other benevolent institutions, the gross revenues of which exceed 4,000*l*. a year.

Leeds owes its great and long-continued eminence as a manufacturing town, partly to its advantageous situation, and partly to the industry and ingenuity of its inhabs. It stands in a fertile country intersected with rivers, and possessing rich and all but inexhaustible beds of coal. The natural facilities afforded by its position for procuring raw materials, and for disposing of its manufactured produce, have been vastly extended by artificial means. On the one hand it communicates with the Humber, and, consequently, with the German Ocean, by means of the Aire and Calder Navigation, which allows vessels of 120 tons to come up to the town; and, on the other hand, it communicates with the Mersey and Liverpool by the Leeds and Liverpool Canal. Railways have also been opened in every direction,—to York, Hull, Manchester, Liverpool, Skipton, Lancaster, and two by Derby and Lincoln to London.

The staple manufacture is the production of woollen cloths, but the spinning of flax and worsted is also an important branch of industry. The woollen manufacture of Leeds and its neighbourhood is carried on in two ways—on the domestic system, and by means of factories. According to the former plan, the business is conducted by a number of small masters, generally possessed of very limited capital, who have in their houses from two to four looms, and employ, besides themselves and their families, from three to seven journeymen. Formerly they used to carry the wool by hand-labour through all the stages of its manufacture, till it was made into undressed cloth; but for years past they have availed themselves, in the performance of various processes, of the *public mills* that have been erected, mostly on a joint-stock principle, in all the villages within the district where this system prevails. By this means, the domestic cloths are produced as good and cheap as those made in factories. The wages of hand-loom weavers in and about Leeds vary from 12*s*. to 18*s*. a week. The factory system owes its existence to the improvements of machinery subsequent to 1790; and, though strongly opposed by the domestic clothiers, has greatly improved the manufacture, and raised Leeds to its present eminence as a mart for superfine broad cloths. The master manufacturers, who necessarily either possess or have the command of large capital, employ a greater or less number of workmen, in one or more large factories, under their own inspection, or that of their superintendents. In these factories the whole processes are carried forward, from the breaking of the wool to the finishing of the cloth for the consumer. The woollen fabrics manufactured at Leeds comprise broad cloths, ladies' cloths, kerseys, swansdowns, and beavers. The goods sold to the merchants in a rough or undressed state are finished in dyehouses and dressing-shops, which of themselves give employment to upwards of 3,000 persons. The sale of cloths was formerly effected in the different cloth-halls, on the mornings of Tuesday and Saturday, between 11 and 12; but of late years, or since the manufacturers began wholly to finish their goods, the cloth-halls have lost a good deal of their importance, and a great deal of the business that used to be entirely carried on in them is now transacted in private counting-houses. Shalloons, stuffs, and camlets are made to some extent; and immense quantities of unfinished stuffs are brought here to be finished from Bradford and Halifax. Some of the flax mills are immense establishments; large quantities of linen yarn are sent to Barnsley to be manufactured into linens, and large quantities are also sent to Ireland and France: canvass, sacking, and linens are also made to some extent in the town. The manufacture of machinery employs a great number of hands; and there are likewise extensive chemical works, large glass-houses, potteries making goods almost exclusively for exportation, extensive tobacco-mills, and soap-works. The total number of occupations to which the cloth manufacture alone gives rise has been estimated at 120. The woollen trade is supposed to employ about 18,000, and the flax trade 10,000 hands.

Leeds was first incorporated as a mun. bor. in the reign of Charles I., and received its charter in the 13th of Charles II. Under the Municipal Reform Act it is divided into 12 wards, and the government is vested in a recorder, mayor, 16 aldermen, and 48 councillors: corporation revenue, 58,860*l*. in 1862. An efficient body of police has been organised, similar to that of the metropolis. Notwithstanding its importance, as the first clothing town of the British empire, Leeds was not represented in parliament till 1832, when the Reform Act conferred on it the important privilege of sending two mems. to the H. of C. Registered electors, 7,966 in 1865. Markets on Tuesday and Saturday; cattle fairs on alternate Wednesdays; and for horses and hardware, July 10, 11, Oct. 8, and Nov. 9.

Leeds is mentioned by Bede and in the Domesday survey. Leland, early in the 16th century, describes it as a market town, subsisting chiefly by clothing, reasonably well built, and as large as Bradford, but considerably less than Wakefield. The clothing trade had been introduced about 60 years before Leland's time, and the town has since gradually risen, by the industry of its inhabs., till it has become the third manufacturing town of the first manufacturing nation of the world.

LEEK, a manufacturing market town and par. of England, co. Stafford, hund. Totmonslow, on the Churnet, a tributary of the Trent, 12 m. S. Macclesfield, and 134 m. N. by W. London, by London and North Western railway. Pop. of par. 14,326 in 1861. Area of par. (comprising 10 townships), 34,370 acres. It is situated in the moun-

Digitized by Google

tainous part of the co. called the Moorlands, on the road between London and Manchester, and consists of a principal street lined with some good modern houses, and crossed by several narrow and irregular avenues. The parish church is an old Gothic structure, with a square tower: in the churchyard are the remains of a Danish cross, 10 ft. high. There are places of worship for Independents, Wesleyan and New Connexion Methodists, and the Society of Friends. A mechanics' institute confers important benefits on the manufacturing population. An almshouse for eight widows and some other charities have endowments amounting to 180*l.* a year.

Leek has long been the seat of a manufacture of broad silks and plain ribands, many of the latter being woven by power-looms. The silk-mills embrace not only the weaving of ribands by power-looms, but the throwing and spinning of silk, and its twisting into sewing-silk and braid. The hand-loom weavers are chiefly employed on checked or figured silk neckerchiefs, and a few gros-de-Naples and figured gown-pieces, the best black ribands, and silk serges of superior quality. These goods are prepared chiefly for the London market; but the sewing-silks, twist, and ribands are mostly for exportation. The hand-loom work is given out warped and wound to *undertakers*, who possess a varying number of looms, and employ journeymen and apprentices, to the former of whom they pay the warehouse price, after deducting for loom-rent. There are numerous undertakers in the broad trade, and they appear to be superior both in habits and condition to the same class in most other places, many of them possessing convenient and substantial dwelling-houses, the highest stories of which are used as workshops. The journeymen are an inferior class, living in very small cottages; but though their houses be poor and mean, they are clean, as are also the persons and dress of the weavers and their families. The wives are commonly piecers and doublers, or overlookers in the factories, or else, if at home, wind silk; the children also get employment in the factories. The weekly earnings of the broad-loom weavers vary from 7*s.* 6*d.* to 9*s.* nett. The weekly nett wages of the power-loom weavers average 16*s.*, and the women working in the mills usually earn from 5*s.* to 5*s.* 6*d.* From these rates there has been little variation; and the trade of Leek generally appears to be of a steadier character than that of other towns engaged in the same manufacture. The cotton trade, which has extended itself thither from Lancashire, is not extensive. Coal is procured from the neighbouring Blue hills, in quantities amply sufficient for the wants both of the manufacturers and the pop. generally.

Leek is one of the polling places for the N division of Staffordshire. Courts leet and baron are held annually by the lord of the manor (Earl Mansfield), who elects a constable for the civil government of the town. Markets on Wednesday: fairs for cattle and pedlery, Feb. 7, Easter-Wednesday, May 18, Whit-Wednesday, July 3 and 28, Oct. 10, and Nov. 13.

LEEUWARDEN, a town of Holland, prov. Friesland, of which it is the cap., on the Ee, 31 m. W. Groningen, on the railway from Groningen to Haarlingen. Pop. 25,409 in 1861. The town is surrounded by an earth rampart and ditch, and intersected by numerous canals, the banks of which, like the ramparts, are planted with trees. It is well built; its streets are wide and regular; and it has several handsome public edifices, including the palace of the prince of Orange, the town-hall, arsenal, exchange, and house of correction. It has twelve churches, in one of which the princes of Orange are buried, a synagogue, a Latin school, a branch of the Society of Public Good, a printing establishment, and considerable manufactures of linen fabrics, paper, Friesland-green, and a large general trade. It is the seat of tribunals of primary jurisdiction and commerce, and the residence of a provincial commandant, a military governor, a provincial head of police, and a receiver of taxes for the prov. It sends 4 mems. to the provincial assembly.

LEGHORN (Ital. *Livorno*, Fr. *Livourne*), a city and sea-port of Italy, prov. Pisa, on the Mediterranean, 62 m. WSW. Florence, on the railway from Genoa to Rome. Pop. 91,432 in 1862. The city is of a square form, and about 2½ m. in circ., surrounded with new walls, and entered by five gates. It is neat, clean, and well built, and its general air of animation, activity, and business is singularly opposed to the listless idleness of the inland towns of Italy. Its streets are in general wide and well paved, especially that which runs in a direct line from the gate of Pisa to the harbour, enlarging near its centre into a spacious square. The N. part of the city, called *Venezia Nova*, is intersected by canals, and comprises numerous wharfs, warehouses, and other buildings adapted to commerce. Leghorn has an outer and inner harbour, and a good roadstead. The outer harbour is protected by a fine mole, which runs NNW. upwards of ½ m. into the sea. The port is apt to become encumbered with mud, and the water within is rather shallow, varying from 8 ft. in the inner basin to 18 or 19 ft. at the end of the mole. The outer harbour is unfit for ships of more than 400 tons; and the inner harbour, called the *Darsena dei navicelli*, is only used for repairing ships, and for the reception of galleys and other small craft. A lighthouse, the lantern of which is 170 ft. above the sea, is built on a rock a little SW. from the mole. The roadstead lies WNW. from the harbour, between it and the Melora bank. The latter is a sand, 4 m. in length by 2 in breadth, lying N. and S. about 4 m. from shore. It has mostly from 3 to ½ fathoms water over it; but towards its S. extremity, on some rocky points which project above the water, the Melora tower has been constructed to serve as a sea-mark. During S. winds there is sometimes a heavy sea in the roads, but the holding ground is good, and with sufficient anchors and cables, and ordinary precaution, there is no danger. The lazaretto, one of the best in Europe, lies on a little island to the S., about 1 m. from the tower.

The public and private buildings of Leghorn are generally well adapted to their purposes, without being magnificent. The chief public edifices are the former ducal palace, the arsenal, the *duomo* or cathedral, a Gothic building, designed by Vasari, six other par. churches, two Greek churches, chapels belonging to the English factory, and the Dutch and German Protestants, an Armenian, and a Maronite-Arab church, a large and beautiful synagogue, a mosque, 3 hospitals, the female charity school of St. Peter and St. Paul, the theatre, and the public baths. Leghorn has also a citadel, an old castle, constructed in 1595, 2 lazarets, a workhouse, a house of refuge, a savings' bank, a large public school, established 1746, and which has about 350 pupils, schools of navigation and artillery, architecture and painting, and an academy of sciences, letters, and arts, with a library of 6,000 vols. open to the public. The city possesses few works of art, except a fine marble statue of grand duke Ferdinand I. of Tuscany, supported by four kneeling figures in bronze. It stands on the quay of the inner harbour, and is said to have been executed by John of Bologna.

Digitized by Google

In the cemeteries beyond the walls are some good specimens of sculpture. The English burial-ground, or *Campo Inglese*, contains the remains of Smollett, and of several other distinguished Englishmen.

From being in a marshy situation, Leghorn is not quite salubrious, though great improvements in draining have been recently effected, by which the public health has been much benefited. There are no good wells in the city, and water is brought by an aqueduct from Colognole 12 m. distant. One of the most remarkable monuments in the town is the *Cisterna*, belonging to this aqueduct, whence water is distributed through the town.

Leghorn has a considerable coral fishery, but the greater portion of its inhab. are engaged in manufactures and commerce: it produces woollen caps, straw hats, glass, paper, soap, starch, and cream of tartar; and it has numerous coral and alabaster factories, rope walks, building docks for merchant vessels, and tanneries. It was made a free port by Cosmo I., about the middle of the 16th century; and the comparative security and freedom which foreigners long enjoyed in Tuscany, still more than its advantageous situation, rendered Leghorn for a time one of the first commercial cities of Italy. Its exports are similar to those from the other Italian ports, consisting principally of raw and manufactured silks, straw hats, straw platting, and straw for platting, all excellent; oil, fruits, wines, wool, boracic acid, rags, cheese, marble, argol, paper, anchovies, coral, manna, hemp, lamb-skins, timber, with wheat and other species of corn from the Black Sea, Egypt, and Barbary; cotton from Egypt, and brimstone from Sicily. The export at secondhand of produce from the Euxine and the Levant has, however, greatly declined of late years; the English, Americans, and other nations, now generally importing such produce direct from Odessa, Smyrna, and Alexandria. The imports comprise sugar, coffee, and all sorts of colonial produce; raw cotton, cotton and woollen stuffs, cotton twist, and other manufactured goods; salted fish, indigo, and other dye-stuffs, rice, hardware, earthenware, and metals.

Leghorn is supposed to be the anc. ***Portus Herculis*** or ***Labronis***; but it has no remains of antiquity. In the 15th century it was a mere village surrounded by swamps, and it owes much of its eminence and prosperity to the munificence of the Medici family, and the liberality of the former rulers of Tuscany.

LEGNAGO, a fortified town of Italy, prov. Verona, 22 m. SE. the city of that name, on the Adige, and on the high road from Mantua to Padua. Pop. 10,318 in 1862. Its situation is unhealthy. It has several churches, convents, and barracks; a powder magazine, a theatre, a hospital, a royal gymnasium, a manufacture of dyed leather, and some trade in corn, rice, and silk. Legnago is supposed to have been founded towards the latter period of the Lombard monarchy. It was fortified in the 16th century, and taken by the French, in 1796, after a 3 days' siege.

LEICESTER, an inland co. of England, nearly in its centre, having N. the cos. of Derby and Nottingham, E. Lincoln and Rutland, S. Northampton and Warwick, and W. Stafford and Derby. It is of an oblong form; greatest length, about 48 m.; greatest breadth, about 28 m. Area, 803 sq. m., or 514,164 acres, of which about 480,000 are supposed to be arable, meadow, and pasture. Surface, varied and uneven; but, except in the district of Charnwood Forest, to the S. of Loughborough, the hills do not attain to any considerable elevation, and are susceptible of the highest cultivation. The soil consists mostly of clayey and sandy loams; and in some parts, especially along the Soar, there are very rich and extensive meadows. The pastures are generally excellent; and it is much more a grazing than an agricultural co. It is famous for its breeds of cattle, sheep, and horses; all of which were much improved through the skill and long-continued exertions of the celebrated Mr. Robert Bakewell, of Dishley, in this co. It is, however, true, that the Dishley breed of long-horned cattle, so famous a few years ago, are everywhere losing ground; and that even in this, their native co., they are now very generally superseded by the short-horns and other breeds. The fine rich cheese called Stilton is principally made in this co., in the farms round Melton Mowbray. The Leicester sheep, though of different varieties, all yield long combing wool. Horses are reared in considerable numbers. Barley is the principal corn crop, but wheat and oats are also extensively cultivated. Property mostly in large estates; farms of all sizes, and mostly held at will. Coal is wrought at Ashby-de-la-Zouch, Whitwick, and other places; and iron and lead, with lime and slates, are also products of this co. Leicestershire is the principal seat of the manufacture of woollen stockings and shirts, gloves, and fancy hosiery; the business being principally carried on in the towns of Leicester, Loughborough, and Hinckley; but it is also widely diffused throughout the co. Hats are made at Loughborough and other places; and this is one of the principal malting counties. Owing to the openness of the country, the number of resident gentry, and other recommendations, Leicester has been long famous as a hunting co. Melton-Mowbray, in the centre of the sporting district, has accommodations for a vast number of horses; and during the season is crowded with visitors, foreign as well as domestic. Principal river Soar; and the co. is intersected by several canals and railways. Leicester is divided into 6 hundreds and 216 parishes. It sends 6 mems. to the H. of C., being 4 for the co. and 2 for the borough of Leicester. Registered electors of the co., 11,050 in 1865, being 4,767 for North Leicestershire, and 6,283 for South. At the census of 1861, Leicestershire had 51,894 inhabited houses and 243,648 inhabits., while, in 1841, there were in this co. 44,774 inhabited houses and 215,867 inhab. Gross annual value of real property assessed to income tax, under schedule (A), in the Northern division 668,533*l.*, and in the Southern division 590,184*l.* in 1862.

Leicester, a parl. and mun. bor., and cap. co. the same name, hund. W. Goscote, on the E. bank of the Soar, 25 m. SSE. Derby, 34 m. E. by N. Birmingham, and 87 m. N. by W. London, on the Midland railway. Pop. of bor. 68,056 in 1861. Area of mun. and parl. bor. (which are co-extensive, and include the old bor. and its liberties, with the part called the Castle view), 3,960 acres. The town, though irregularly built, has a respectable appearance, the streets being clean, and the houses in the principal thoroughfares substantial and neat. The main street is joined near its centre by several other handsome streets: at the corner of one of these stands the news-room, a square building of Ionic architecture, forming one of the chief ornaments of the place; and in it also is the New Hall, built in 1831; having apartments for concerts, and the Mechanics' Institute. The paving, lighting, and general economy of the town are well conducted, and have been greatly improved within recent years. Water is obtained from Thornton, a distance of 9 m. The public buildings devoted to civil purposes comprise, among others, the guild-

Digitized by Google

hall, an old and unpretending building, in which is a library of ancient printed books and a few MSS., one of which, the '*Codex Leicestrensis*,' is of considerable value; the assembly-rooms, with a commodious adjoining theatre; and a town-museum, established by the corporation, under the Museums' Act. The greater part of the objects in the latter were presented to it by the Literary and Philosophical Society, who have commodious rooms in the building: among its rarities is the celebrated Roman *milliare* or mile-stone, inscribed to the Emperor Hadrian, found in the neighbourhood in 1771, and valuable as deciding the disputed point whether Leicester was the *Ratæ* or *Ragæ* of the Romans. (Gough's Camden's Britannia, ii. 314.) A market-house is in the market-place, which has been considerably enlarged. The assize hall, formerly the Castle Hall, is 178 feet long. The bor. gaol is too small for the proper classification of the prisoners; this, however, is effected in the co. gaol, a massive structure, enclosing an area of 4 acres, built in 1824 at a cost of 75,000*l.*, and subsequently enlarged at a farther cost of 25,000*l.* An infirmary and fever hospital were erected in 1771; and a co. lunatic asylum, a spacious and imposing building, with extensive grounds, erected in 1837, and since greatly enlarged at a total cost of 45,000*l.*, affords accommodation for 237 patients. There are also public baths, partly supported by the corporation. Among the ecclesiastical edifices are 9 parish or district churches, and 30 places of worship for dissenters. St. Nicholas, the oldest church, is a structure of Norman architecture, supposed to have been built of the materials of the adjoining Roman wall; it has a square W. tower between the nave and chancel. St. Mary's, in the Saxon and early English style, has a lofty tower and steeple. St. Martin's, the largest church in the town, is a cruciform structure, erected at different periods between the 12th and 16th centuries, and surmounted by a plain spire. St. Margaret's, in the early English and later styles, occupies the site of the Saxon cathedral and bishop's palace; it is remarkable for its handsome and lofty tower. All these churches have recently been restored. The other churches, four of which are modern, are commodious. The old Baptist chapel in Harvey Lane (now used as a school-room) deserves notice, as being the scene of the pastoral labours of Robert Hall, one of the most able and eloquent divines of his day. A public cemetery of 25 acres, established by the corporation, was opened in 1850. It has chapels in the decorated style connected by extensive cloisters, and cost above 12,000*l.*, exclusive of the land. Connected with the various places of worship are numerous Sunday schools, furnishing religious instruction to nearly 5,000 children; besides which, 1 national, 2 Lancastrian, and 3 infant schools are attended by about 1,300 scholars, and 2 parochial schools by 220 boys, who are clothed as well as educated. A collegiate school, established in 1836, for members of the Church of England, has a building in the Tudor style. The Female Asylum clothes, maintains, and educates 16 girls, between the ages of 13 and 16, and afterwards provides them with situations of domestic service.

Leicester possesses many valuable charities, some of which are in the trust of the corporation and of the trustees of general and church charities, and others connected with particular parishes. Newton's charity possesses funds amounting to 750*l.* a year, and supports, either wholly or in part, 12 schools in Leicester and other towns mentioned by the testator. The school at Leicester is a substantial brick building, near St. Nicholas's church, with a house adjoining, in which the master lives rent free. He has a salary of 100*l.* a year besides coal and candle, and the use of a large garden. There are 100 boys in the school, sons of poor inhabs. belonging to the established church, who are clothed as well as instructed. Trinity Hospital is an extensive establishment, comprising a chapel, and range of apartments for 80 old men and women, who receive each 3*s.* a week, with other advantages. In the chapel is the tomb of the Countess of Derby, first wife of Henry IV. Wigston's Hospital is a structure of perpendicular architecture in St. Martin's churchyard, erected in 1521, and endowed with estates, the rental of which exceeds 500*l.* a year, but which, it is affirmed, if let like the estates of private individuals, would produce upwards of 5,000*l.* a year. Each of the 24 inmates has an apartment and garden, with 4*s.* a week, and the chaplain, or confrater, has a stipend of 27*l.* a year, with a house and garden. It may be worth mentioning that both Chillingworth and the learned Dr. Samuel Clarke filled this situation. Some smaller almshouses, loan funds, and bequests to a considerable amount, assist in relieving the distress of the poor of the town and neighbourhood.

Leicester is a principal seat of the manufacture of woollen hosiery, including stockings, shirts, caps, and fancy hosiery, and of woollen, Berlin, and Lisle thread gloves. Manufacturing operations are greatly facilitated by a plentiful supply of coal from the Whitwick, Snibston, and Derbyshire coal-fields. A canal, joining the Trent, and several lines of railway, furnish abundant means of transport for manufactured produce, and are of essential service to the town.

Leicester is a bor. by prescription, incorporated by King John, and governed till 1835 by a charter of the 41st Eliz. The old corporation was a self-elected, close, and irresponsible body; and was long distinguished by its political exclusiveness and intolerance. The mun. officers under the Mun. Reform Act are a recorder, mayor, 14 aldermen, and 42 councillors, the bor. being divided into 7 wards. Corporat. revenue, 45,820*l.* in 1862. Assizes and quarter sessions are held here. The bor. has sent two mems. to the H. of C. since the reign of Edward I.; the franchise, till the Reform Act, being vested in the freemen (by birth, servitude, or gift), and the inhab. paying scot and lot. The boundaries of the present parl. bor. include, as already stated, besides the old bor., the liberties (which comprise part of the pars. of St. Mary and St. Margaret, together with the Newarke) and the extra-parochial part, called the Castle-view. Registered electors, 4,616 in 1865. Markets on Wednesday and Saturday: horse and cattle fairs, March, Saturday before and after Easter, May 12, 13, 14, July 5, and Oct. 10.

Leicester occupies the site of Ratæ, an important Roman station mentioned in Antonine's *Itinerary*. A ruin, called the Jewry wall, has been supposed, but on no good grounds, to be the remains of a temple of Janus. Near it a fine Roman pavement was discovered in 1830. Before the Norman Conquest, a castle was built here by the earls of Mercia, which, being demolished by Henry II. in 1176, was restored by Simon de Montfort, earl of Leicester. It afterwards became a favourite residence of the earls and dukes of Lancaster. Several parliaments were held in the great hall in the latter end of the fourteenth and the commencement of the fifteenth centuries. The castle having ceased to be a royal residence after the elevation of Henry IV. to the throne, was allowed to fall into decay; and, in the reign of Charles I., it

Digitized by Google

was pulled down, with the exception of the great hall, which, being new fronted, is now used for the assizes. Two of the gateways also remain, one a fine specimen of the period. During the great civil war, the town was successively occupied by the king and the parliamentary troops. In a meadow near the town are some remains of a monastery of Black Canons, founded in 1143, the revenues of which amounted at its dissolution to 1,062*l.* Cardinal Wolsey expired in this abbey on the 29th Nov. 1530, having been compelled by sickness to take refuge here when on his way to London, to be tried for high treason. The stocking-frame was introduced into Leicester about the close of the seventeenth century, since which time it has been steadily rising in manufacturing importance.

LEIGH, a manufacturing market town and par. of England, co. Lancaster, hund. W. Derby, 12 m. W. Manchester, and 21 m. ENE. Liverpool on the railway from Manchester to Liverpool. Pop. of town, 10,621, and of par. 30,052 in 1861. Area of par. (comprising the townships of West Leigh, Astley, Atherton, Bedford, Pennington, and Tildesley), 11,820 acres. The town, consisting of two chief and other subordinate streets, has a few well-built houses, mixed with others of an inferior character. The parish church is a lofty stone structure, but low and decayed on the N. side: the living is a vicarage in the gift of Lord Lilford. Chapels of ease and district churches have also been erected in the townships of Astley, Chowbent, and Tildesley, the patronage of which is vested in the incumbent of Leigh. There are places of worship for R. Catholics, Independents, Wesleyan and New Connexion Methodists, and Swedenborgians, exclusive of others in the out-townships; and upwards of 4,000 children are taught in the Sunday schools connected with the churches and chapels. The charities of the par. comprise the grammar school, founded in 1655, but poorly endowed, and the free schools of Pennington and Astley, with some apprentice-funds and minor bequests.

Leigh occupies a very respectable station among the cotton-manufacturing towns of Lancashire. The business, which was formerly almost confined to weaving fustians, now embraces all the processes and branches of the cotton and mixed goods manufacture. These branches of industry are greatly promoted by the abundance of coal and lime in the neighbourhood, and by canal and railway communication with Liverpool and Manchester. A branch of the Duke of Bridgewater's canal unites here with the Leeds and Liverpool canal, and the Leigh and Kenyon line connects the town with the Liverpool and Manchester railway, the communication being continued N. by the Bolton and Leigh railway: the latter, 7½ m. in length, was constructed at an expense of 10,000*l.* per mile. The grass lands of the par. are particularly rich, and the dairies round the town yield a cheese held in deserved estimation. Market on Saturday; and fairs, well attended, for cattle, cheese, &c., April 24 and Dec. 7.

LEIGHTON-BUZZARD (or, more properly, Leighton-*Beau-desert*), a market town and par. of England, co. Bedford, hund. Manshead, on the Ouzel, a trib. of the Ouse, 5 m. S. by W. Woburn, and 35 m. NNW. London by the London and North Western railway. Pop. of town, 4,330, and of par. 7,312 in 1861; area of par., including five townships, 8,990 acres. The streets are irregularly laid out, ill paved, and the supply of water is chiefly derived from wells. The town has a fine pentagonal cross in an open area near the market house, supposed to have been erected at the beginning of the fourteenth century: it consists of two stories, and is 38 ft. high. The church, formerly collegiate, is a large cruciform Gothic structure, with a tower and steeple rising from the intersection of its nave and transepts: the living is a vicarage, attached to a prebend in Lincoln cathedral. There are places of worship for Baptists and Wesleyan Methodists, and the Society of Friends (here a numerous body) have a large meeting house. Besides Sunday schools, there is a well-endowed charity school for the gratuitous instruction of poor children; and a large Lancastrian school, for both sexes, supported by voluntary contributions. Wilkes's almshouses, founded in 1630, have an average yearly income of 200*l.*, and furnish lodgings and stipend to eight poor widows. There are several other charitable foundations. Lace-making, formerly a considerable branch of industry in Leighton-Buzzard, has been all but extinguished by the frame-lace trade of Nottingham. Straw-plaiting here, as in other towns of Bedfordshire, employs many females; but the principal trade is in corn and timber, the conveyance of which to the London market is greatly facilitated by the Grand Junction canal and the London and North Western railway, which has a station at this place. One of the largest horse fairs in the S. of England is held on Whit-Tuesday.

LEINSTER, one of the four large provs. into which Ireland is divided, on the E. side of the island, comprising the cos. of Dublin, Kildare, Carlow, Kilkenny, King's and Queen's, Longford, Louth, Meath, Westmeath, Wicklow, and Wexford.

LEIPSIC (Germ. *Leipzig*) a celebrated commercial city of Germany, in the kingdom of Saxony, on the White Elster (a tributary of the Saale), where it is joined by the Pleisse and Parde. and on the railway from Dresden to Halle, 60 m. WNW. Dresden, and 20 m. SE. Halle. Pop. 78,495 in 1861. The appearance of the city, at a distance, is not imposing: it stands in a wide plain, which, though fertile, is unvaried by a single eminence to relieve its sameness. It occupies but a small extent of ground compared with its pop., the houses being very lofty; many of them six stories high, independent of three or four additional in the pyramidal roof; and each story, like the houses in the old town of Edinburgh, usually occupied by a separate family. Few towns exhibit so much of the carved masonry which characterised the old German style of building, joined with so much stateliness. The streets are narrow, but the various markets and squares are large, clean, and neat. Leipsic is far inferior in elegance and beauty to Dresden; but it is better built than Frankfort, and has a decided air of comfort and substantiality. The suburbs are well laid out, and separated from the town by a succession of pleasant gardens, occupying the glacis and other parts of the ancient fortifications. The great market-place, in the centre of the town, is rendered one of the most striking squares in Europe, by the quaint architecture of its surrounding buildings. In one of these, the *Rathhaus*, the allied sovereigns met to congratulate each other after the battle of Leipsic (see *post*). The *Königshaus*, formerly a residence of the electors and kings of Saxony, was occupied by Napoleon in 1813. The Auerbach cellar, at no great distance, is noted as that in which Göthe has laid the celebrated carousal scene in Faust; tradition says that Faust himself used to frequent it. At the SE. part of the town is the castle of Pleissenburg, which withstood the attacks of Tilly in the 30 years' war, long after the town had surrendered. Its lower part is now a wool magazine, and its upper part an observatory 228 ft.

Digitized by Google

high, from the summit of which a commanding view is obtained of Leipsic and its plain. The ramparts of the town have been laid out as public walks, and its gates have been recently removed. The church of St. Nicholas is a handsome square edifice, and of a species of Corinthian architecture; its interior is ornamented with numerous paintings by Œser, a celebrated Saxon artist of the last century. The other most remarkable public buildings are the *Augusteum* and *Paulinum*, belonging to the university, the cloth hall, booksellers' exchange, and new post office.

The university is the only one in Saxony, and ranks as one of the first, as well as most ancient, in Germany. It was founded in 1409 by some professors and students from the university of Prague. It is divided into 4 nations, the Saxon, Misnian, Franconian, and Silesian; and has faculties of theology, law, medicine, and philosophy. It has about 40 ordinary professors, besides many extraordinary professors teaching modern languages, and other branches of knowledge, who do not belong to the Senatus Academicus.

The greater number of lecture-rooms are here, as in Heidelberg, within the university buildings. Most of the students live within the walls of the Old Paulinum, without reference to their particular department of study; the only qualification necessary to entitle them to the bursary enjoyed there, being an examination as to their proficiency in learning. Some students are allowed both board and lodging in the Paulinum; others are only entitled to a seat at the public table. The university is rich in endowments for stipends to scholars; but with respect to such funds as are applicable to its maintenance and to scientific purposes, it is one of the poorest in Germany. An inventory of its property, which has been made public, states its means towards these latter objects to amount to 5,699 thalers per annum only, not more than 800*l.* It appears, from a statement of its yearly disbursements, that Saxony does not expend as much on this, its sole university, as the Prussian treasury expends upon the least of its provincial universities. The property of the university is valued at 1,100,000 thalers (about 156,000*l.*); and out of this capital, which consists chiefly of house property, besides a small portion of meadow and arable land, some wood, and a few shares of mines, the yearly interest on 650,000 thalers is applicable to benevolent purposes; the interest on the remainder, about 450,000 thalers, is therefore all that is available for the current expenses of the university. The *Augusteum* contains a library of 100,000 vols., and the university has also a museum of natural history, a botanic garden, anatomical theatre, laboratory, and clinical and lying-in establishments. Leipsic has, besides, a civic school, and attached to it a school of general knowledge, opened in 1834, several other superior and free schools, primary schools, numerous learned associations, a public library, with 60,000 printed vols. and 2,000 MSS., and various scientific collections. Several hospitals, orphan, foundling, deaf and dumb, and lunatic asylums, and a house of correction, complete the public establishments. There are some private galleries of paintings and other works of art.

Leipsic is a manufacturing town of considerable importance. Among its chief manufactures are silken and half-silken goods, stockings, leather, hats, playing and other cards, paper hangings, oil cloth, wax lights, starch, soap, sealing-wax, parchment, tobacco, gold and silver articles, liqueurs, and chocolate. Artisans of almost every kind reside in the town. There are also various silk-dyeing and woollen spinning factories; and a large wool market is held annually in May. But the distinguishing characteristic of the commerce of Leipsic is its book trade. Leipsic is, in fact, the grand emporium of the literature of Germany; a distinction of great importance, seeing that the number of readers and writers is greater in that than in any other country of Europe. The literary deluge which commenced in Germany immediately after the peace of 1814, continues to increase. Instead of 2,000 works, which were then about the annual complement, there are now from 8,000 to 10,000. In the German book-trade it is the custom for almost every house, either in the country or abroad, which publishes or sells German books, to have its agent at Leipsic, who receives and distributes its publications in the same way that the London booksellers receive and distribute English publications. The great sale of new works takes place at the Easter fair. The fairs of Leipsic are the most celebrated in Germany. They are held at the new year, at Easter, and at Michaelmas. The last two are the most important. They should close in eight days, but they generally last three weeks; and, while they continue, Leipsic is the great mart of Central Europe for all kinds of merchandise. Of late, however, these fairs have been greatly falling off, both in the number of dealers and purchasers, and in the amount of their transactions. The cause is to be sought in the simple fact that, as railways and other cheap and easy means of national and international intercommunication come to extend, these meetings of merchants, brought about at a great loss of time and personal inconvenience, become unnecessary, their business being transacted, in an infinitely more commodious way, by travelling agents.

The following table shows the quantities of goods in centners—1 centner = 110½ lbs. avoirdupois—the manufacture of the states of the German Customs' Union, brought to the Leipsic fairs in the year 1864:—

Description of Goods	New Year's Fair	Easter Fair	Michaelmas Fair
	Centners	Centners	Centners
Cotton Manufactures	14,696	29,103	30,557
Iron Manufactures	2,338	4,875	4,790
Yarn (Cotton and Wool)	871	1,637	1,618
Glass and Mirrors	480	1,803	2,821
Fine Wood Manufactures	224	1,069	2,132
Instruments	304	612	838
Made-up Clothes	277	862	1,270
Copper and Brass Manufactures	197	436	643
Hard and Small Wares	1,289	8,289	9,516
Leather	14,299	29,043	32,487
Leather Wares	779	2,644	4,290
Linen Manufactures	4,780	10,984	11,128
Paper	1,869	1,743	1,155
Porcelain and Stoneware	977	2,948	3,826
Furs	189	1,422	1,140
Silk Manufactures	765	2,220	2,413
Mixed Silk Manufactures	201	769	632
Straw Manufactures	17	588	131
Carpets	102	230	391
Woollen Manufactures	28,659	44,307	60,986
Weighing Machines	..	334	306
Other Articles	848	2,152	1,886
Total	74,161	148,070	174,956
Grand Total	397,187 Centners		

The Leipsic and other German booksellers have, since 1834, erected an exchange for their exclusive use. The building is three stories high, 112 ft. in length, and 48 ft. in depth; and the cost of its erection was 5,000*l.*

Leipsic is the cap. of the prov. and district of

Digitized by Google

same name, and the seat of the judicial courts. At the end of the 10th century it was only a little Slavonian village; but, during the 12th, it was fortified, and its 2 principal fairs established. Its new year's fair commenced in 1458, and its book trade originated in 1545.

The vicinity of Leipsic, and, indeed, the town itself, was, in October, 1813, the scene of a most tremendous conflict. Napoleon having concentrated at this point such of his forces as he had been able to collect from the different parts of Germany, to the amou..t of about 135,000 men, was attacked on the 16th by the allied army, under Prince Schwartzenberg, Blucher, and other generals, accompanied by the emperors of Russia and Austria, and the king of Prussia. The allied forces amounted to at least 250,000 men. The struggle, which was fierce, obstinate, and bloody in the extreme, terminated at nightfall without any decided advantage to either party. It was renewed on the 18th, when a Saxon brigade went over, during the heat of the action, from the French to the Allies, which, combined with their superior force, gave the latter an advantage that all the genius of Napoleon, seconded by the valour and devotion of the French, could not counteract. Though the French maintained their ground during the day, a retreat became indispensable; and, owing to the accidental blowing up of a bridge, a part of the French army was cut off; so that Napoleon lost 25,000 men, who fell into the hands of the Allies as prisoners, exclusive of the far greater number who fell in the previous battles. Prince Poniatowski, who may emphatically be said to have been the last of the Poles, after displaying prodigies of valour, lost his life in the retreat on the 19th, having been drowned in attempting to cross the Elster. This great victory completely emancipated Germany from the yoke of the French, and opened the road to Paris to the Allies.

LEIRIA, a city of Portugal, prov. Estremadura, on the small river Lis, 42 m. SSW. Coimbra, and 72 m. NNE. Lisbon. Pop. 3,520 in 1858. The town, which, though in a fine country, is small and wretched-looking, has no fewer than 19 parish churches (one of which is likewise a cathedral), and 3 convents. A considerable fair is held here on the 25th of March.

LEITH, a sea-port and parl. bor. of Scotland, co. Mid Lothian, on both sides of a small river of the same name, at its confluence with the Frith of Forth, on a flat sandy shore, 2 m. N. by E. of the centre of Edinburgh, of which city it is the port, and with which it is connected by two lines of railway. Pop. 33,628 in 1861, against 25,984 in 1841. The river divides the town into two portions, called N. and S. Leith. They are connected by several drawbridges, and by an elegant stone bridge at the W. extremity of the town. Leith is united to Edinburgh besides by its two lines of railway—one reaching it in a wide easterly sweep, *via* Portobello—by a road, called Leith Walk, so filled up with buildings that it may be regarded rather as a street than a road. Part of the town of Edinburgh on the W. stretches into the parish of S. Leith. The buildings in the older parts of Leith are huddled together without order or regularity, and the streets and lanes are, for the most part, narrow, crooked, and filthy. The new streets to the S. and E., however, form striking exceptions, being not much inferior to the best in Edinburgh. In S. Leith, the only two leading streets (Constitutional Street and the Kirkgate) branch off from the N. termination of Leith Walk in the form of an acute angle. The street called the Shore, fronting the harbour on the S., is lofty and substantial. On the SE. of S. Leith are Leith Links, or downs, a common belonging to the bor., ¾ m. in length, by nearly ¼ m. in breadth. The best buildings are erected on its skirts, chiefly on its N. and W. sides. Both N. and S. Leith are lighted with gas, and supplied with water by the Edinburgh Water Company. The length of the bor., from E. to W., is 1½ m., the mean breadth ½ m. The mean and dirty village of Newhaven, ½ m. to the W., is inhabited almost exclusively by fishermen, who chiefly supply Leith and Edinburgh with fish.

The public buildings in Leith are numerous. The Trinity-house, of Grecian architecture, on the W. side of the Kirkgate, was founded in 1555, and rebuilt in 1817. The par. church of S. Leith, opposite the Trinity-house, built in the 16th century, has recently been much improved both internally and externally. The parish church was at Restalrig, 1 m. E. of the bor., till the Reformation, when it fell a sacrifice to the destructive zeal of the Presbyterians; since which the present building, originally a chapel dedicated to St. Mary, has served that purpose. The Free church of St. John in Constitution Street, originally erected as a *quoad sacra* church, is a spacious Gothic edifice: it has a lofty octagonal spire, with two schools attached to it, and forms one of the most imposing objects in the bor. The present parish church of N. Leith is a modern structure of Grecian architecture, on an elevated situation, with a spire 158 ft. high. A handsome place of worship, in connection with the establishment, was erected in 1841 in S. Leith, and endowed by Sir John Gladstone, of Fasque, a native of the bor.; it has attached to it a school and a hospital for females labouring under incurable diseases. The buildings, which are in the Gothic style, form three sides of a square, and cost about 21,000*l*., exclusive of the endowment. Among the other public buildings may be mentioned the gaol, a new edifice of Saxon architecture: the town-hall, in Constitution Street, erected in 1828, perhaps the most chaste and elegant specimen of modern architecture in the town; the Exchange Buildings, a large Grecian structure, extending to 180 ft. in front, and comprising an hotel, assembly rooms, and a reading room; the Leith bank; the Custom-house, close to the harbour on the N.; the Nautical School, opened in 1853; the High-school, at the S. corner of Leith Links; Dr. Bell's school; various dissenting chapels, particularly an episcopal one; and the Seafield Baths, erected by a joint-stock company in 1813, at the E. extremity of the town, at an expense of 8,000*l*.

In regard to religious instruction, in addition to the two parish churches and Sir John Gladstone's chapel, 5 places of worship belong to the Free Church, four to the Associate Synod, and one respectively to the Relief, Independents, Methodists, R. Catholics, and Episcopalians. The living of N. Leith is, Greenock perhaps excepted, the highest in the Scottish church, being about 800*l*. a year, arising principally from the tithe of fish landed at Newhaven, and from the rent of the glebe, which is *feued* or let on building leases. The church of S. Leith is collegiate, or is served by two ministers. There are several schools for the instruction of the poorer classes, inc. a school, attended by about 700 children, founded by Dr. Bell of Madras, who left a bequest of 10,000*l*. for that purpose. There are several subscription libraries, and a philharmonic society for the cultivation of music, both vocal and instrumental. Dr. Henry Hunter, translator of Lavater's 'Physiognomy,' and John Logan, author of 'Sermons and Poems,' were successively ministers of S.

Digitized by Google

Leith; and John Home, author of 'Douglas,' and Hugo Arnot, the historian of Edinburgh, were natives of the bor.

With the exception of the Trinity-house, Bell's bequest, and Gladstone's hospital and school, Leith has no important charities. The Trinity-house, the funds of which are devoted to the relief of decayed sailors or their widows, supports, by monthly or quarterly payments, from 170 to 180 pensioners of various classes, besides assisting sailors who have been shipwrecked, or are otherwise in distress. The recipients of the charity formerly lived in the house, but now they are all out-pensioners. There was a charity called King James's Hospital, for the support of old women; but the building has disappeared, though the funds, which are trifling, are still devoted to their original object. The other charitable institutions are the humane society, dispensary, and casualty hospital; the society for the relief of the destitute sick, and Leith boys' charity school. There are various friendly societies.

Leith labours under great disadvantages in respect to its port. At low water, the tide recedes above a mile from the shore; and the stream of the rivulet by which the town is bisected is so tiny, that it is even insufficient to clear away the mud from the harbour. Various efforts have been made to overcome these natural difficulties, but hitherto with no very marked success. In 1720, a dock was formed on the E. side of the river, and that portion of the present pier which is of stone was erected; and in 1777 a small quay, called the custom-house quay, was built. But the increasing commerce of Leith soon rendered these trifling improvements quite inadequate to the demands of the port; and accordingly, in 1799, the magistrates of Edinburgh, who had the uncontrolled management of all public matters connected with the town and port of Leith, obtained an act of parliament, authorising them to borrow 160,000*l.* for the construction of wet docks. In consequence two docks were constructed on the N. side of the harbour, between 1800 and 1817, each measuring 250 yards in length by 100 in breadth, and comprising together about 10¼ imp. acres. Attached to them are three graving-docks, each 136 ft. long by 45 ft. wide at bottom; and 150 ft. long by 73 ft. wide at the top; with an entrance 36 ft. wide. At average spring tides the depth of water in the docks is 16 ft. 9 inches, and at neap tides 4 ft. less. The total expense was 285,000*l.*, of which 265,000*l.* was borrowed by the city from government, at 5 per cent.; of which 3 per cent. was to be paid annually, and 2 per cent. to be accumulated as a sinking fund for the liquidation of the debt. The city gave as security a mortgage over all their Leith property, and a concurrent claim, with other creditors, over the entire municipal property of Edinburgh, besides ceding certain effects to the admiralty. In addition to these great works, others were undertaken in 1831-32, viz. an addition to the E. pier, of the extent of 500 yards, and the formation of a covering bulwark on the opposite side, 1,500 ft. in extent. The expense of the former (28,000*l.*) was borne by the city of Edinburgh; the latter (12,000*l.*) by government. The object of these works was to deepen the water in the channel, which was effected to the extent of about 2 ft. But, after this had been done, the harbour was all but dry at low water, and there were only 17 ft. water over the bar at its mouth, at high water spring tides, and but 14 ft. at neap tides. In fact, no vessel of above 400 tons burden could approach the harbour at the highest tides, and sometimes not even vessels of that burden. Under these circumstances it was determined to make still further improvements. A statute having been passed in 1839, vesting the management of the harbour and docks in parliamentary trustees, and authorising the expenditure of certain sums on their improvement, various extensive works were subsequently carried out. They comprised an addition of 2,000 ft. to the E. pier, and of 2,100 to the W. do.; and the construction of a new wet dock of nearly 5 acres in extent, fitted to accommodate the largest class of steam-ships. The object of carrying out the piers to so great a distance was to secure such a depth of water as to make them accessible at all times of the tide. This was secured so far that there is now 8 ft. water at low ebb, which may be increased to 14 ft. by dredging. At their extremities the piers approach to within about 250 ft. of each other. The W. pier has a railway which communicates with the Edinburgh, Perth, and other railways; so that vessels may, by using it, either discharge the whole of their cargoes, or be lightened so that they may come up to the inner port.

In addition to this harbour at Leith, Edinburgh possesses another at Granton, one mile westward, connected with it by railway. Granton harbour was constructed at the expense of the Duke of Buccleugh; the pier projects into the sea about 1,700 ft., shaped like a T, with its head to the N., having harbours and landing-places on both sides. The harbour is protected by a large breakwater, which adds to the accommodation for and security of shipping.

The commerce of Leith, from its being the port of Edinburgh, is very considerable, and has been slowly but steadily improving. It carries on a considerable trade with Australia, the E. and W. Indies, China, the Mediterranean, Canada, and the United States; but its principal foreign trade is with Holland and the N. of Europe. With regard to its domestic trade, there are various companies which employ steam and other vessels in trading to London, Hull, Newcastle, Liverpool, Greenock, Glasgow, Aberdeen, Wick, Helmsdale, Orkney, Shetland, Dundee, Stirling, and other British ports, and to Hamburg and other continental ports. The gross amount of customs' dues collected at Leith amounted, in 1845, to 520,124*l.*, in 1849 to 545,885*l.*, in 1859 to 512,872*l.*, in 1861 to 472,433*l.*, and in 1863 to 439,706*l.* There belonged to Leith in January, 1850, 185 sailing vessels, of the aggregate burden of 20,625 tons, ex. 21 steamers; while, on the 1st of January, 1864, the registered shipping amounted to 136 sailing vessels, of 23,614 tons, besides 63 steamers, of 18,984 *tons burden*. Ship-building has long been carried on to a considerable extent, and employs more capital than any other business in Leith. There are various extensive rope and sail works, distilleries, breweries, and iron foundries.

Leith existed as a town as early as the 12th century. The old church of N. Leith, long disused as a place of worship, was founded in 1493. It is now in ruins, but its cemetery is still used as a burial ground. A bridge over the river, built, in 1493, by Robert Bellenden, abbot of Holyrood-house, was used till 1788, when the first draw-bridge was erected. Leith is of no small note in the history of Scotland, having been the scene of more military service than perhaps any other town in the kingdom. It was once walled on the land side, but all traces of its fortifications have disappeared. Leith was taken possession of by Cromwell, who laid a heavy assessment on the inhabitants, and erected a citadel, of which some portions still remain. It formerly had races, which took place at ebb-tide, on the sands E. of

Digitized by Google

the town; but they were transferred to Musselburgh Links in 1816. A martello tower on the sands, at some distance from the pier-head, was built, at an expense of 17,000*l.*, for the defence of the port, during the French war: the port is farther defended, by a battery of nine guns, a little to the W. of Cromwell's fort.

Leith was long dependent on Edinburgh. So early as the 14th century, the latter obtained a grant from king Robert Bruce, of its harbour and mill; a right which was confirmed or extended by subsequent grants either from the crown, or Logan of Restalrig, the baronial superior of the place. The municipal government of the burgh was, as already stated, substantially vested in the town-council of Edinburgh, who had the entire management of the port. But the Scottish Bor. Reform Bill, which came into operation in November, 1833, totally changed this state of things, and conferred on the inhab. of Leith what they had long struggled to obtain, the uncontrolled direction of their own municipal affairs; vesting them in a provost, 4 bailies, and 10 councillors, chosen by popular election. This act did not, however, affect the rights of Edinburgh over the harbour and docks, or the revenue arising therefrom. But the Edinburgh and Leith Agreement Bill (July, 1838) made each town, in every respect, independent of the other. By this statute, the affairs of the harbour and docks are vested in 11 commissioners (of whom 5 are nominated by her majesty's treasury, and 3 by the town-councils of Edinburgh and Leith respectively), whose proceedings, however, require the sanction of the treasury. The debt on the docks due to government, at the date of the passing of the act, was 228,374*l.*; and the commissioners were empowered to borrow a sum not exceeding 125,000*l.* (the government postponing the security granted to it *pro tanto*), for the improvement of the port, provided the whole particulars and estimates receive the authority of the treasury. Government also postponed its claims to such annual sums as might be required for maintaining or extending the efficiency of the port.

Previously to the passing of the Reform Bill in 1832, Leith had no parliamentary representative. But that act conferred on it, with Portobello and Musselburgh, the right to send 1 mem. to the H. of C. Registered voters, 2,501 in 1865.

LEITMERITZ, a fortified town of Bohemia, cap. circ. of its own name, on the Elbe, 33½ m. NNE. Prague, on the railway from Prague to Dresden. Pop. 7,458 in 1861. The town is well built, and has a handsome cathedral and other churches, a gymnasium, a theological seminary, a high school and girls' school, with manufactures of straw hats and chicory, and a considerable traffic in agricultural produce, and fish caught in the Elbe. The wines of its circle are the best of any in Bohemia, which, however, is no very high recommendation. It is a bishop's see, and the seat of a circle council.

LEITRIM, a marit. co. of Ireland, prov. Connaught, having N. Donegal Bay, E. Fermanagh and Cavan, S. Longford, and W. Roscommon and Sligo. It is long and narrow, stretching NNW. and SSE. nearly 50 m. Area 376,212 statute acres, of which 128,167 are mountain and bog, and 25,568 water, including Lough Allen, near the source of the Shannon, which is also in this co. Leitrim is wild, and generally mountainous; but in the valleys and low grounds the soil, which is incumbent on limestone, is mostly fertile. Property in very large estates. Tillage farms small and not unfrequently let on partnership leases. Agriculture improving, but, till recently, in an excessively backward and depressed state. There is no rotation: corn follows corn as long as the soil will bear any thing: or, if the series be interrupted, it is only to make way for potatoes or flax; and, when the land is exhausted, its recovery is left to the *vis medicatrix naturæ*. Clover and turnips are nearly unknown; and here, as in most other districts of Ireland, the potato is the all but sole dependence of the bulk of the pop. The habitations of the occupiers are mostly miserable huts; and, except in a few instances, office-houses, in the proper sense of the term, can hardly be said to exist. Some coarse linen is made for home consumption. Leitrim contains 5 baronies and 17 pars. It sends 2 mems. to the H. of C., both for the co. Registered electors, 2,389 in 1865. At the census of 1861, the co. had 18,691 inhab. houses, 19,541 families, and 104,744 inhabitants; while, in 1841, Leitrim had 25,912 inhab. houses, 27,192 families, and 155,297 inhabs.

LEMBERG (Polish *Lwow*; Latin, *Leopolis*), a city of the Austrian dominions, cap. Galicia, on the Peltew, a tributary of the Bug, 185 m. E. by S. Cracow, and 370 m. NE. Vienna, at the terminus of the Vienna-Cracow and Lemberg railway. Pop. 70,384 in 1857. Lemberg was formerly an important fortress; but the demolition of its fortifications was begun early in the last century, and completed under Joseph II., when its ramparts were planted with trees, and laid out in public walks. It has still, however, 2 castles, one within the town, and the other, the ruined castle of Lowenburg, on an adjacent eminence to the N. The city proper is small, but it has 4 suburbs, each equalling it in extent, and comprising the handsomest buildings. The lofty towers and cupolas of the cathedral and other churches, and the massiveness of its public structures, give Lemberg an air of grandeur, particularly when viewed from a distance. The city has narrow dirty streets and old houses, but the suburbs are generally well built, and have several wide, straight, and tolerably well paved streets, and some spacious squares. The houses are mostly of freestone, two or three stories high, but roofed only with shingles. The chief public edifices are the palace of the Armenian archbishop in the Cracow suburb; the Dominican church, which has a fine monument by Thorwaldsen; one of the two synagogues, the old Jesuits' college, the new council-house, the governor's residence, the general hospital, and the large barracks in the Zolkiew suburb. Lemberg has upwards of 20 churches, including a Greek and an Armenian cathedral, 9 Rom. Cath. par. churches, and Lutheran and Calvinist meeting-houses; a Greek, an Armenian, and 6 Rom. Cath. convents, 5 hospitals, and a theatre. Its university, established in 1784, and remodelled in 1817, has, on an average, about 1,500 students. The town has also an imperial academy, a Rom. Cath. and a Greek ecclesiastical seminary, 2 gymnasia, 2 high schools, a school of arts and sciences, a normal school, a Jewish female and many elementary schools; a provincial museum, chiefly for the natural and other products of Galicia, and a valuable public library, said to be rich in works in Polish literature. It is the seat of the provincial government; of the courts for the city and circle, and a court of appeal for the prov.; and has Rom. Cath., united Greek and Armenian archbishops, and Lutheran and Calvinist superintendents.

Lemberg has manufactures of cotton and woollen stuffs, with dye works, distilleries, tanneries, and a few printing establishments; but it is much more a commercial than a manufacturing city. Next to Brody, with which it has a constant intercourse, it is the chief trading town of Galicia.

Digitized by Google

Its position, on the high road from Odessa to Silesia and Warsaw, and on the railway to Cracow and Vienna, renders it an emporium for much of the produce of S. Russia, Moldavia, and Wallachia, in its transit to Central Europe. Large fairs are held at Lemberg, the most important is that called Drei Königs Messe (Three Kings' Fair), which lasts six weeks from Jan. 14, and attracts a vast concourse of Jewish, Christian, and even Mohammedan merchants. The Russians bring to the fairs large quantities of peltry from Siberia and Tartary, which they exchange for the woollen and cotton goods and hardware of Austria. Large herds of cattle arrive at Lemberg from Moldavia and Bessarabia, being thence distributed to different parts of Austria and Silesia. Lemberg is also one of the principal corn-markets of the Austrian empire. Corn is sent from it to Przemysl, on the San, where it is shipped for Dantzic; and it is also, though more rarely, sent from it to some of the nearest stations on the Dniestr, for shipment for Odessa.

Lemberg was founded in the 13th century. It was taken by Casimir I. of Poland, in 1340. It was besieged in 1648 by the famous Cossack chief, Bogdan Khmielnicki, who threatened its extermination, but withdrew on receiving a large ransom. In 1672 it was taken by the Turks, and in 1705 it was taken and sacked by Charles XII. of Sweden, when it ceased to be of much consequence as a fortress. It came into the possession of Austria in 1772, since which it has progressively advanced in wealth and population.

LEMGO, a town of Germany. See LIPPE-DETMOLD.

LEMNOS (Turk. *Stalimene*), an island of the Grecian Archipelago, belonging to the dom. of the Porte, 43 m. SE. the promontory of Mount Athos, and about the same distance W. from the mouth of the Hellespont, Mount Therma being in lat. 39° 53′ 46″ N., long. 25° 8′ 32″ E. Area about 150 sq. m. Pop. said to amount to 12,000, chiefly Greeks. It is of an irregular quadrilateral shape, being nearly divided into two peninsulas, by two deep bays or indentations of the sea, Port Paradise on its N., and Port St. Antonio on its S. side. The latter, which is capacious and land-locked, has good anchorage for large ships. The E. side presents to the sea a bold rock, *Monte Santo*, called by Æschylus the Ἑρμαῖον λέπας Λήμνου, in his brilliant description of the watch-fires between Mount Ida and Mycenæ: a rocky bank projects from it upwards of 8 m. into the sea. The appearance of Lemnos is far from picturesque: barren, rocky, though not very high, mountains cover about two-thirds of its surface, and scarcely a tree is to be seen, except in some of its narrow valleys, which are verdant and fertile, especially on its W. side. The whole island bears the strongest marks of volcanic action: the two highest mountains have craters; there are several thermal springs, and the rocks in many parts resemble the burnt and vitrified scoriæ of furnaces. One of its mountains, indeed, appears, from a fragment of a Greek poet preserved by Nicander, to have been constantly emitting flame and smoke; and hence we may account for the fact of this island being sacred to Vulcan, who, when precipitated from heaven, is said to have fallen on its hospitable shores:—

> 'Lemnos cara deo: nec famæ notior Ætna
> Aut Lipares domus.'
>
> Val. Flaccus, lib. ii. line 95.

This island has been long famous for its furnishing a peculiar silicious earth or bole, celebrated for its detergent and medical qualities, called *Terra Lemnia* and *Terra Sigillata*, from its being impressed with a peculiar seal or mark. Galen visited the island in the second century, for the express purpose of making himself acquainted with this earth; and he states that it was then dug up with many religious ceremonies. (De Simpl. Medic., lib. ix.) This practice has been continued down to our own times, or, at all events, to a very late period. The earth is dug up on the 6th of August, in the presence of the chief men of the island: when a sufficient quantity is extracted, the hole is filled up; the bags or parcels are then sealed, and, a few being sent to the grand seignior, the governor is accountable for the value of the others. But the reputation of the Lemnian earth is now much fallen off, and the demand for it has proportionally declined. (Ancient Universal History, viii. 346, 8vo. ed.)

At present the high grounds of the island are grazed by sheep, but the W. and S. valleys produce corn, good grapes and figs, cotton and mulberry trees. The climate, however, is too cold to ripen oranges and lemons, and the island frequently suffers from the locust.

The wine of Lemnos is of two sorts, both red; the best fetches about 8 paras per oke, or 2*s.* 3*d.* per bottle. It produces more than sufficient grain for its own consumption, the rest, with some wine, being sent to Mytilene; but its chief exports are ewe-milk cheese, silk, cotton, and wool. The inhabs. are divided between agriculture and fishing, and the women (celebrated for their beauty) are employed in weaving cotton cloths. The Turks resemble those of the other islands, both in dress and manners; but the costume of the Greek women is remarkable as well as picturesque. It consists of a short scarlet jacket, with long sleeves, loose in front, and reaching only a few inches down the back, very short petticoats, white calico trowsers gathered at the ankles, yellow Turkish slippers, and a white handkerchief tied like a turban round the head. The principal town Castro (the ancient *Myrina*), on the W. side, contains three Greek churches; and its port, or rather cove, is defended by a little pier, and commanded by a citadel on the overhanging rocks. Ships are built here, and the natives are excellent seamen. The other port is St. Antonio on its S. side, at the bottom of the bay already noticed.

Lemnos, according to Pliny, had a labyrinth more remarkable than that of Crete or of Egypt. It was supported by 140 columns, and its gates were so admirably adjusted, as to be turned by a child. '*Quarum in officina turbines ita libratæ pependerunt, ut puero circumagente tornarentur.*' It was the work of three architects, one of whom, Theodorus, was a native of the island. Its remains are said to have been extant in Pliny's time. (Hist. Nat., lib. xxxvi. cap. 13.) No certain traces of this famous edifice have been discovered in modern times; but this is probably a consequence of the island having been seldom visited by scientific travellers, or of the changes occasioned by the action of volcanoes, or other natural convulsions.

The first inhab. of the island are said to have been Thracians. In the reign of Thoas, the only Lemnian king mentioned in history, the Lemnian women are said, in imitation of the Amazons, to have treacherously killed all the males (Herodot., lib. vi. cap. 138); and hence any premeditated and detestable murder, or other crime, was long after called a 'Lemnian action.' Miltiades reduced the Lemnians under the sway of Athens.

LENA, a large river of N. Asia, the principal in E. Siberia, extending through 19° N. lat., and falling into the Arctic Ocean. It rises in lat. 42° 30′ N., and long. 106° E., on the W. slope of the

Digitized by Google

lofty granitic range, skirting the NW. shore of the lake Baikal; and from the source as far as Ust Kulsk, a distance of 350 m., it pursues a N. course; but at that point it is turned E. by a chain of hills, and runs in a very tortuous channel ENE. for about 1,000 m. to Yakutsk, the metropolis of E. Siberia, where it is a wide and noble river. Its general course from Yakutsk is N. down to the apex of the extensive delta formed at its mouth, the distance between these two points being about 700 m. The entire length of this gigantic river is probably somewhat more than 2,100 m. The basin of the Lena covers an area of about 800,000 sq. m., the principal tributaries above Yakutsk being the Kirenga, Vitum, and Olekma, on its E. side, while below that city, the main stream is joined E. by the Aldan, rising by several sources in the Stanovoi range, and W. by the Bilui, which rises on the E. side of the hills dividing the Lena basin from that of the Yenisei. The Lena has an extremely tortuous course with a sluggish stream, and encloses numerous islands. Mr. Dobell, who travelled up the stream from Yakutsk to Irkutsk, describes it as one of the safest navigable rivers, of its size, in the whole world, its course being only very rapid in the spring, at the breaking up of the frost, when numerous tributary rivers and torrents, bursting their icy fetters, rush with impetuosity into the maternal bosom of the Lena. The river, at these times, is a truly sublime spectacle, particularly where it passes through what are called *the gates*, which confine it in a narrow channel between rugged cliffs rising perpendicularly nearly 300 ft. above the stream. The dashing and eddying of the stream in its course from one side to the other is terribly grand; and yet the native boatmen manage to descend the river without injury, even at this season. The forests on its banks are principally of spruce and the yellow pine, both of a large growth; and the soil on the mountains appears rich and good, and capable of producing grain of all sorts. Most of the farming settlements, however, are either on the level spots along the edge of the river, or on the declivities of the mountains. Below Yakutsk, the face of the country is very different: the river rolls thence through vast and almost uninhabited plains, covered with snow and ice, which never wholly melts, and beneath which have been found the carcases of mammoths, rhinoceroses, and other fossil animals.' (Dobell's Siberia, ii. 68–82.)

LENHAM, a decayed market town and par. of England, co. Kent, lathe of Aylesford, hund. Eythorne, near the source of the Len, a trib. of the Medway, 13 m. W. Canterbury, and 40 m. ESE. London. Pop. of par. 2,016 in 1861. Area of par. 6,890 acres. The town consists of a principal street, on the high road between Maidstone and Canterbury, intersected by another of smaller size. The church has a square tower and 16 curiously carved stalls in its interior, which are supposed to have belonged to the abbot and monks of St. Augustine, at Canterbury, who had large estates within the par. The market has been long disused, and the inhab. are almost entirely engaged in agriculture.

LENTINI (an. *Leontium*), a town of Sicily, prov. Syracuse, on a hill, washed by the river Porcari (an. *Lissus*), near the lake of Lentini, or Biveri, 14 m. SSW. Catania, and 20 m. NW. Syracuse. Pop. 7,962 in 1862. The country round is now, as of old, extremely fertile; and the inhab. are chiefly employed in its culture, in the fishery on the lake, and the sale of the produce so obtained. In the winter season the lake, which is the largest in Sicily, is about 19 m. in circ.; but in summer its circ. is reduced to 8 or 9 m., the exhalations from the mud that is thus left dry rendering the town and district very unhealthy. The fishery yields its proprietor, the prince of Butera, a considerable sum.

The ancient city of Leontium, founded by a colony of Chalcidians in the first year of the 13th Olympiad (Thucydides, lib. vi.), most probably occupied the exact site of the modern town; but the ground has been so much shaken and changed by natural convulsions, such as that of the great earthquake of 1693, that few vestiges of the ancient city can now be traced. When it was taken by the Romans under Marcellus, it was one of the principal cities of Sicily, as is sufficiently evinced by the notices of it in various writers, and especially by the detailed description which Polybius has left of its state at that period. 'The city of Leontium,' says he, 'considered in its general position, faces the N. Through the middle of it runs a level valley, which contains the public buildings allotted to the administration of government and justice, and, in a word, the whole that is called the forum. The two sides of the valley are enclosed by two hills, which are rough and broken along their whole extent. But the summit of these hills is flat and plain, and is covered with temples and houses. There are two gates to the city: one of them is in the southern extremity of the city, and conducts to Syracuse; the other is on the opposite side, and leads to those lands so famed for their fertility, called the Leontine fields. Below the hill that stands on the W. side of the valley flows the river Lissus; and on the same side, likewise, there is a row of houses built under the very precipice, and in a line parallel to the river. Between these houses and the river lies the road that has been mentioned.' (Hampton's Polybius, iii. 105.)

In his third oration against Verres, Cicero repeatedly refers to Leontium, and celebrates the extraordinary fertility of its territory, '*Campus Leontinus caput est rei frumentariæ.*' (In Verrem, lib. iii. cap. 18.) The famous orator, Gorgias, whose eloquence was instrumental in persuading the Athenians to undertake their fatal expedition against Sicily, was a native of Leontium.

LEOMINSTER, a parl. bor., market town, and par. of England, co. Hereford, hund. Wolphy on the Lugg, an affluent of the Wye, 11 m. N. Hereford, 121 m. WNW. London, and 157 m. by Great Western and Shrewsbury and Hereford railway. Pop. 5,658 in 1861. Area of par. and parl. bor., which are co-extensive, 9,290 acres. The town consists of a good principal street, about ¾ m. long, intersected by narrow and inconvenient lanes. There are several handsome private residences, and being well paved and well lighted, it has, on the whole, a respectable appearance. The new town-hall and corn-exchange is in the Gothic style, 160 ft. long.; the old town-hall, called the butter-cross, in consequence of the butter-market being held in the lower part, is an odd-looking structure of timber and plaster, standing on oak pillars, with Ionic capitals. A market house was erected in 1803, near which is a small gaol. The parish church, which exhibits the architecture of several periods, has a tower 100 ft. high. The Baptists, Wesleyan Methodists, Moravians, and the Society of Friends have each places of worship, and well-attended Sunday schools are attached to the church and to various chapels. A free grammar-school, founded and endowed by Queen Mary, 'has entirely ceased to furnish gratuitous education, and has become a private school: the corporation appoints the master; but, beyond paying him an annual stipend of 20*l*., they have no concern in the management of the school.'

Digitized by Google

(Mun. Corp. Rep.) An almshouse, dispensary, and house of industry are the only other public establishments. The gross annual value of real property assessed to income tax was 19,168 in 1857, and 33,502*l*. in 1862.

Leominster was formerly one of the principal seats of the glove manufacture, but latterly the business has been on the decline. Hats are made, and coarse woollens, but the latter only to a small extent. Tanning is extensively carried on. The principal dependence of the town is, however, on its retail trade with the adjacent county. Coal is brought from Shropshire, partly by canal and partly by railway, from the Clee Hills. The land in the borough and in the out-parish is in a great degree held, often in small portions, by the residents in the town. The country round produces, besides the common agricultural produce, apples and hops in great abundance. Some lands and houses belonging to the corporation are let for long terms, subject to three joint lives, but renewable, as the lives fall in, for fines certain. There are some leases for terms of years; but the greatest number of holdings are from year to year, the leases for years expiring, and the tenant holding on. A considerable quantity of the land is occupied by the proprietors.

Leominster is a bor. by prescription, and received several charters between 1554 and 1706, the governing charter till 1835 having been 36 Charles II. The mun. officers are, a mayor, 4 aldermen, and 12 councillors. Quarter and petty sessions are held in the town-hall, and there is a court for the recovery of debts under 100*l*. The parl. franchise was granted in 23 Edward I., since which time the bor. has sent 2 mem. to the H. of C., the voters, down to the passing of the Reform Act, being resident burgesses and inhab. paying scot and lot. The Boundary Act made the parl. bor. co-extensive with the par. Reg. electors, 349 in 1865. Markets on Friday: large fairs for cattle, farming produce, &c., Feb. 13, May 13, Sept. 4, and Nov. 8.

LEON, an ancient kingdom of Spain, between lat. 40° 10′ and 43° N., and long. 4° and 7° W.; bounded N. by Asturias, E. by Old Castile, S. by Estremadura, and W. by Galicia: greatest length, 200 m.; breadth, 138 m.: area, 10,573 sq. m. The old kingdom comprises the modern provinces of Leon, Zamora, and Salamanca. The whole of this region is included in the basin of the Douro, and is intersected by several large tributaries of that river, the principal being the Pisuerga, Elsa, and Tormes. The N. and S. districts are mountainous, the former comprising various offsets from the Asturian chain, and the latter being skirted by the central chain of the peninsula, two of the highest summits of which are the Sierra de Gredos, 10,552 ft., and the Pena de Francia, 5,689 ft. This hilly country produces the loftiest and best oaks in Spain, and is rich in iron ore, some portion of which is smelted and made into hardware goods. The inhab. of the Asturian mountains are a distinct race, robust, and simple in their manners, engaged during summer in pasturing cattle, mules, and the migratory flocks of sheep that pass at that season through their country, and at other times employed in tillage and in collecting Iceland moss, which is here very abundant, madder, and medicinal plants, which they sell in the markets of Leon and Madrid.

The less elevated parts of Leon contain many tracts which afford excellent pasture, and dairy-farming might be pursued with great profit, were it not for the want of enterprise, security, and even tolerable roads. Maize, olives, wheat, and flax are cultivated in some parts; but there is a great want of irrigation. The wine of Salamanca is said to be of good quality, but that raised on the borders of Galicia is execrably bad. Leon has no public manufactures worth notice, except that of hardware; but there is a good deal of domestic manufacturing of woollen and linen stuffs for home consumption. The canal of Castile, constructed about fifty years ago, passes northward up the valley of the Pisuerga; but it was never finished, and contributes very little to the advantage of the districts through which it passes.

The kingdom of Leon was anciently inhabited by the *Vettones* and *Callaici*, and formed a part of the Roman *Tarraconensis*. Don Pelayo and his successors during the 8th century, formed this district into a kingdom, called after its capital, and connected with that of Asturias. It was first added to Castile in 1037, but continued in an unsettled state till 1230, when it was finally united to the dominions of Ferdinand III., king of Castile.

Leon, a city of Spain, cap. of former kingd. and prov. of same name, 59 m. S. Oviedo, and 176 m. NW. Madrid, on the railway from Madrid to Corunna. Pop. 9,603 in 1857. This ancient city, once the cap. of an independent kingdom and the residence of its sovereigns, stands on a kind of peninsula formed by the Bermesga and the Torio. It is surrounded by decayed walls, and bears in its narrow, unpaved streets, and almost ruinous houses, the indications of poverty and wretchedness. Among the public buildings the largest is the cathedral, a Gothic structure, with a lofty spire deservedly admired for its lightness and elegance: the ecclesiastical establishment comprises a bishop and 40 canons. There are 13 par. churches in the town and suburbs, and 2 canonical houses for Augustinian monks, with 7 other monasteries. There are also 4 hospitals, one of which is for foundlings. The inhab. are employed in linen weaving, in knitting stockings and caps, and making leather gloves; there are, also, some tanneries and soap-factories. The surrounding country is bold and beautiful, but agriculture is in the most degraded state. Hay-making, however, though common here, is not usual in other parts of Spain.

Leon was founded prior to the reign of the Roman emperor, Galba: it was called by the Romans *Legio septima Germanica*, from the circumstance of that legion being stationed here; it was the first large town recovered from the Moors, after whose expulsion, in 722, it was the residence of Christian kings, during more than three centuries.

Leon, a town of Mexico, prov. Guanaxuato, in a fertile plain, and on the road from Guanaxuato to Lagos, 36 m. WNW. the former city. Pop. estimated at 6,500. It has 8 convents, a college, and a hospital, and carries on some trade in corn.

LEON (ISLA DE), a long and narrow island close to the S. coast of Spain, prov. Cadiz, and separated from the mainland only by the narrow but deep channel of Santri Petri, crossed by the bridge of Zuarzo, which being the only point of approach to the city of Cadiz, is defended by strong redoubts. It is about 8 m. long by about 2 m. in breadth, and consists almost entirely of a dreary sandy waste, abounding with salt-water marshes. Cadiz occupies a small peninsula at the extremity of a long sandy isthmus, separated from the rest of the island by a line of fortifications called the Cortadura. (See Cadiz.)

LEON DE NICARAGUA, a city of Central America, and the former cap. of the state of Nicaragua; in a savannah near a volcano, by whose eruptions it has occasionally suffered: about 90 m. NW. Grenada, and 5 m. from the NW. shore of the Lake of Leon. Pop. estimated at 38,000. It

Digitized by Google

is surrounded by old walls; and has several suburbs, a cathedral and 3 other churches, several convents, a hospital, and a college. It is a bishop's see, and was originally founded, in 1523, on the spot now called Old Leon, but was removed to its present site in 1532.

LEONARD (ST.), a town of France, dép. Haute Vienne, cap. cant., on a hill near the Vienne, here crossed by a handsome bridge, 12 m. E. Limoges. Pop. in 1836, ex. com., 3,504. It was fortified in the 15th century, and has manufactures of coarse woollens, paper, earthenware, &c.

LEONESSA, a town of Central Italy, in the Neapolitan dominions, prov. Abruzzo Ultra, 36 m. WSW. Teramo, and 14 m. NNE. Rieti. Pop. 6,196 in 1861. The town has several churches and convents, and some large annual fairs. It is situated in a wild rugged country, in an amphitheatre, surrounded by mountains which, in winter, intercept the sun's rays for half the day, and render the climate very severe.

LEONFORTE, a town of Sicily, intend. Catania, dist. Nicosia, cap. cant., in a hollow of M. Tavi, near the Giaretta, and 37 m. WNW. Catania. Pop. 11,522 in 1862. Leonforte is a fine town, in a healthy situation. It is surrounded with walls, and has a large square, from which two long and well-built streets diverge. Its trade in corn, wine, oil, and silk is considerable, and it has a large annual fair. A good deal of asphaltum is found in its vicinity.

LEPANTO (TOWN AND GULF OF), Lepanto (an. *Naupactus*), a sea-port town of W. Greece, on the N. shore of the Gulf of Lepanto, about 3½ m. ENE. from the castle of Roumelia at its entrance, and 1 m. W. from the mouth of the Morino. Pop. 2,600 in 1861. The town is built on the side of a hill surmounted by a castle of little strength, whence two walls come down to the sea, enclosing the town on either side. The harbour, within the town, is shallow, and fit only for small craft, and the place has very little trade. In antiquity Naupactus was a place of considerable importance. It was occupied by the Athenians during the Peloponnesian war; and, after many vicissitudes, was nearly destroyed by an earthquake during the reign of Justinian. Its present walls are built on the foundations of those by which it was surrounded in antiquity.

Lepanto has given its name to the extensive gulf on which it is situated, anciently the *Corinthiacus Sinus*, or Bay of Corinth. The entrance to the gulf, between the ruined castles of the Morea and Roumelia, at the bottom of the Gulf of Patras, is only about 1 m. across. Within, it expands into a magnificent basin, stretching E. with a little inclination to the S. to Mazi, a distance of about 78 m., being, where widest, about 20 m. across. Corinth, whence it formerly derived its name, is situated near its S. extremity. It has many fine bays and harbours; and, in antiquity, there were several considerable towns on its banks. Between the castles, at its entrance, there are from 30 to 35 fathoms water; and within the gulf the water is generally very deep, there being no soundings in the centre at 300 fathoms.

Lepanto has, also, given its name to one of the greatest conflicts of modern times. Philip II., king of Spain, the Pope, and the Venetians, entered, in 1570, into a league against the Turkish sultan Selim, who, having conquered Cyprus, and become very powerful at sea, threatened to invade Italy. The Turks, being apprised of the intentions of the confederates, assembled a powerful fleet in the Gulf of Lepanto, having a large land force on board. The allies, commanded by Don John of Austria, having made equally great preparations, the two armaments encountered each other on the 7th of October, near the mouth of the Gulf of Lepanto. The contest was long, bloody, and destructive; and was maintained, on both sides, with invincible courage and resolution. In the end, however, the allies gained a complete victory. The Turks lost above 25,000 men, killed, and 10,000 taken prisoners, and with the exception of 30 or 40 galleys, that effected their escape, their whole fleet was either taken or destroyed. The Christians lost about 10,000 men, killed in the engagement, or who died of their wounds. Estimating it by the number of men engaged, this was certainly the greatest sea-fight that has taken place in modern times. It was, also, the first signal victory achieved over the Turks, and diffused the greatest joy throughout Christendom.

LERIDA (an. *Ilerda*), a fortified town of Spain, Catalonia, 85 m. W. Barcelona, and 72 m. E. by S. Saragossa, on the railway from Saragossa to Barcelona. Pop. 19,560, in 1857. The town is situated on the Segre (crossed here by a handsome bridge), under the protection of a hill, on which are seen the ruins of a castle now going to decay, but formerly of considerable strength. Owing to the excess of stagnant water in the vicinity, Lerida is unhealthy, and fevers prevail in spring and summer. A good quay, however, has been constructed, which not only keeps out the river, but forms a fine promenade. Its principal street is nearly 1 m. long; but the rest of the town is confined, and the houses are generally ill built. A cathedral, three parish churches, a military hospital, and a priests' college (formerly celebrated as a university, but suppressed by Philip V.), are the chief public buildings; but none requires notice except the cathedral. A double flight of steps leads to the terrace on which the church gates open; the principal front is embellished with six fluted Corinthian pilasters, between which are three doors with finely-wrought iron gates, and the building is surmounted by two handsome square towers. The surrounding country, being thoroughly irrigated, is extremely productive, particularly in wine, for which its gravelly silicious soil is well suited. Silkworms, also, are reared in considerable quantities. It has some silk and other fabrics, but they are not very important.

Lerida derives its chief celebrity from its connection with Roman history. In the plain below *Ilerda*, Scipio (anno 216 A.C.) gained a signal victory over the Carthaginian Hanno; and about 150 years afterwards it was rendered famous by the difficulties under which Julius Cæsar was placed when encamped in its neighbourhood. He had taken possession of a plain shut in between the rivers *Cinga* and *Sicoris*, and defended by a deep intrenchment, whilst at the same time Petreius and Afranius, Pompey's generals, were encamped on a hill between him and Ilerda. In the intermediate space is a small plain, in the centre of which rises an eminence, which, if seized and fortified, would enable its occupier to cut off all communication with the city. For this, during five hours, the opposing armies maintained a doubtful conflict; but, in the end, fortune declared in favour of Afranius, and Cæsar retreated to his camp. At the same time, also, the disastrous intelligence was brought to him that, by the melting of the snow, his bridges had been broken down, the country laid under water, and all communication cut off with those districts by which his army was provisioned. Famine was the immediate consequence; and Cæsar himself says: '*Militum vires inopia frumenti diminuerat, atque incommoda in dies augebantur; et tam paucis diebus magna erat rerum*

Digitized by Google

facta commutatio, ac se fortuna inclinaverat, ut nostri magnâ inopiâ rerum conflictarentur; illi omnibus abundarent rebus, superioresque haberentur.' Cæsar however, without loss of time, set his men to work, and having made a sufficient number of light and portable canoes, sent a party up the river during the night, who, with these boats, effected a landing, and fortified a camp. '*Huc legionem postea transducit; atque ex utrâque parte pontem institutum perficit biduo. Ita comitatus, et qui frumenti causâ processerant, tuto ad se recipit.*' (Cæs. de Bell. Civ., i. c. 52, 54.) Lerida has sustained many sieges; it was taken by storm in 1707, during the war of the succession; and the French again besieged it in 1810.

LERWICK, an eminent fishing station and bor. of barony, on Mainland, the largest of the Shetland or Zetland Islands, of which it is the cap., on the W. margin of the Sound of Bressay, opposite Bressay Island. Pop. 3,061 in 1861. The town is built along the curvature of the bay, and consists of a number of white houses, of from two to three stories in height, with their gables in the Norwegian style, turned to the street, but disposed with the utmost irregularity, and an utter disregard of every convenience, except that of being as near as possible to the water. The town-hall, parish church, and three dissenting chapels are the only public buildings. The harbour, which is entirely land-locked by Bressay Island, is so ample that it might contain nearly the whole British navy. Bressay Sound is a rendezvous for Davis Straits and Greenland whale ships, which here take on board supplies of provisions, and complete their crews with seamen belonging to the islands, whom they part with on their return. This has always been one of the principal stations of the Dutch herring fishery; but the fishery is now chiefly in the hands, not merely of the inhab. of Lerwick, but of the islanders generally, who resort thither for the purpose. Cod and other species of white fish are caught in the bay and neighbouring sea, and are also extensively exported. There is a manufactory of straw-plaiting for gentlemen's hats and ladies' bonnets; a branch of business carried on both in the Orkneys and Zetland Islands. Woollen stockings, under clothing, and gloves, all wrought with the hand, and sometimes of extraordinary fineness, are exported from Lerwick. It has a custom house, the gross revenue of which, in 1863, was 124*l.*; in 1860, it was but 47*l.* The shopkeepers are in the habit of shutting their shops during breakfast and dinner. Provisions are abundant, and about a half cheaper than on the main land of Scotland.

Lerwick was built above 200 years ago, principally for the accommodation of the Dutch fishermen, 2,000 of whose busses were then said to have been often collected in Bressay Sound. It has, however, been more prosperous during the last 30 years than at any previous period. Fort Charlotte, for the protection of the town from attacks by sea, stands a little to the S. The inhab. are of Scandinavian descent.

LESINA, and LISSA, two islands of the Adriatic, belonging to the circle of Spalatro, in Dalmatia, the first 25 m. S., and the second 33 m. SW. Spalatro. United area, 260 sq. m. Pop. of Lesina 12,539, and of Lissa 5,210 in 1857. Both islands are in great part mountainous, but they have, notwithstanding, a considerable extent of lower and productive land. Lesina (an. *Pharos*, or *Pharia*) is said to be one of the most fertile islands in the Adriatic, with a great variety of valuable products. Corn is raised on the low grounds, but the quantity is insufficient to supply the consumption of the inhab.: among its other products are wine, oil, figs, almonds, saffron, oranges, aloes, and honey. It has considerable numbers of sheep, and these, with wool and cheese, are among the articles of export. The products of Lissa (the an. *Issa*) are similar to the above, and in it, also, the supply of corn is insufficient for the consumption. The wine of Lissa, which was commended by Athenæus, is now sadly degenerated. The inhab. of these islands are chiefly employed in fishing, and great quantities of fish are taken round their shores. They both furnish good marble, and prepare rosemary oil, liqueurs, &c. The town of Lesina, near the W. extremity of the island of same name, had 2,820 inhabitants in 1857. It is the see of a bishop, whose diocese comprises the islands Lesina, Lissa, and Brazza. In Lissa, which in antiquity had several flourishing towns, is also San Giorgio, with one of the best harbours in Dalmatia.

LESLIE, a bor. of barony and manufacturing town of Scotland, co. Fife, on an eminence on the left bank of the Leven, 1½ m. N. of the public road between Kirkcaldy and Cupar-Fife, 7½ m. N. by W. the former, and 9½ SW. by S. the latter. Pop. 2,264 in 1861. The town consists chiefly of one street, and contains a par. church and several dissenting chapels. Leslie House, the seat of the noble family of Rothes, is in the immediate vicinity. Leslie has mills for flax-spinning, employing above 500 hands. Weaving of cotton, in connection with the Glasgow manufacturers, and of the coarser species of linen fabrics, prevails to a considerable extent. There are also three rather extensive bleach-fields. Leslie has existed as a town for upwards of 300 years. Dr. Pitcairn, the celebrated physician and Latin poet, was born at Pitcairn, the family seat, in the neighbourhood of the town. At Strathhenry, near this place, the seat of his maternal grandfather, Adam Smith, author of the 'Wealth of Nations,' when only three years of age, was carried away by a party of gipsies. The inhabs. of the place have long been noted for their rage for religious and political discussions. The first 'Political Union' formed in Scotland was at Leslie, in 1831.

LETTERKENNY, an inland town and river port of Ireland, co. Donegal, prov. Ulster, on the Swilly, 4 m. from the SW. extremity of the lough of the same name, and 18 m. WSW. Londonderry. Pop. 2,160 in 1861. The number of inhabitants was exactly the same in 1831. The town consists of a square and a single street, and has a parish church, a Rom. Cath. chapel, three Presbyterian meeting houses, a national school, a fever hospital, with a dispensary, court house, and bridewell. General sessions are held in April and Oct., petty sessions every Wednesday, and it is a constabulary station. Markets on Fridays; fairs on the first Friday in Jan., 12th May, 10th July, third Friday in August, and 8th Nov. Some trade is carried on in the export of corn and other raw produce, the river admitting vessels of 150 tons to come up from the lough to near the town.

LEUCTRA, an ancient village of Greece, in the Theban territories, now Leftra or Lefka, 9 or 10 m. WSW. Thebes. It is at present only a heap of ruins, but is famous in ancient history for the victory gained in its vicinity, on the 8th of July, *anno* 371 B.C., by the Thebans, under Epaminondas and Pelopidas, over the Spartans. The latter were superior in number and perhaps, also, in discipline and military skill, to their adversaries; but the ability of their generals enabled the Thebans to achieve, despite every disadvantage, the greatest triumph ever won by one Greek army over another. Cleombrotus, the Spartan king, was left dead on the field, with many of his principal officers, and the flower of his troops. Sparta lost with this

Digitized by Google

battle the ascendancy she had long enjoyed among the Grecian states. (Xenophon, Hellan., lib. vi. cap. 4; Diodorus Siculus, lib. xv.)

LEUTSCHAU (Hungar. *Löcze*), a royal free town of Hungary, co. Zips, of which it is the cap., on a hill 120 m. NE. Pesth. Pop. 5,364 in 1857. The town is old and ill built, but has a large and handsome square, a Gothic church, with the largest organ in Hungary, a large old town-hall, a new council-house, and several other edifices, the oldest Lutheran gymnasium in Hungary, a Rom. Cath. gymnasium, a high school, a noble female seminary, and an asylum for soldiers' children. It produces linen fabrics and mead, of which last a good deal is sent into Poland.

LEVANT, a term applied to designate the coasts of Europe, Asia, and Africa, along the Mediterranean, from Cape Matapan round the Ægean Sea, Asia Minor, and Syria, to the western confines of Egypt. In the middle ages, the trade with these countries was almost exclusively in the hands of the Venetians, Genoese, and other Italians, who gave to them the general designation of *Levante*, or Eastern countries. But the term Levant, being no longer vernacular in the languages of the nations now principally engaged in the trade with the countries referred to, seems to be falling into disuse.

LEVEN, a bor. of barony, sea-port, and manufacturing town of Scotland, co. Fife, on a level at the mouth of the river of the same name, on the N. shore of the Frith of Forth, 19½ m. N. by E. Edinburgh: on the W. of the river is its suburb of Dubbieside, or Inverleven. Pop. 2,723 in 1861. Leven consists of two principal, and not very regular, streets, running parallel to each other E. and W., with a variety of bye-lanes and detached houses. The communication between Leven and its suburb was long maintained by a suspension-bridge over the river, but a stone bridge was built in 1840. The only public buildings are the par. church, a Free church, and chapels belonging to the Relief and the Associate Synod. There is, also, a small congregation of Independents. There are two libraries, a mechanics' institute, and a great variety of friendly societies.

Leven is chiefly remarkable for its manufactures. There are a number of mills for spinning flax, driven partly by water and partly by steam, employing about 600 hands. There are, besides, many hand-loom weavers of coarse linens. It has also foundries for cast-iron, brick and tile works, and other manufactures. The harbour is formed by a creek at the mouth of the river. At spring-tides it admits vessels of about 300 tons, but it dries at low water, and is, owing to sand-banks, difficult of access.

LEWES, a parl. bor., market town, and par. of England, co. Sussex, rape and hund. of its own name, on the Ouse (crossed here by a stone bridge), 7 m. NE. Brighton, 43 m. S. London by road, and 50 m. by London, Brighton, and South Coast railway. Pop. of parl. bor., which comprises, with the old bor., parts of four out-parishes, 9,716 in 1861, against 9,282 in 1841. The town is principally situated on a steep declivity W. of the Ouse, which here cuts through the chalk hills; but it partly, also, stands on the level ground on the E. side, sheltered by the South Downs, that rise abruptly almost close to the river banks. The streets are broad, well-built, paved, and lighted with gas; and the town generally has an appearance of wealth and respectability. The chief public building is the assize-hall, in High Street, erected in 1812, at an expense of 15,000*l*., comprising two courts, a council chamber, and other apartments. The house of correction, built on the plan of Howard, in 1794, was greatly enlarged in 1817, and now contains about 70 capacious rooms for prisoners, with 15 cells for solitary confinement. The silent system, with hard labour, is rigidly enforced. There are eight churches; and the ecclesiastical livings comprise four rectories, two of which are in the patronage of the crown. There are, likewise, eight places of worship for Wesleyan and Calvinist Methodists, Baptists, Independents, and Unitarians, to which, as well as to the churches, are attached well-attended Sunday schools. The free grammar school, supposed to have been founded in 1512, and rebuilt in 1850, in the Elizabethan style, provides gratuitous instruction in classics to 12 boys, the sons of burgesses; and there is a university exhibition for the scholars, tenable for four years, of the annual value of 35*l*. There is also a diocesan school. National, Lancastrian, and infant schools furnish elementary instruction for the children of the poor; and there are several endowed charities and benevolent institutions for the relief of the aged, sick, and indigent. Lewes had formerly an extensive trade in wool; but this has greatly declined; and the present traffic of the place, independently of a very considerable retail trade with the resident gentry of the district, is chiefly in grain, malt, sheep, and cattle. It is estimated that upwards of 80,000 sheep are sold annually at the Sept. and Oct. fairs. The Ouse is navigable up to the town, and there is a considerable trade with London, through Newhaven, its port. (See NEWHAVEN.) Lewes is a bor. by prescription, and is governed by two headboroughs and two constables, elected by the burgesses; but these officers are subject to the jurisdiction of the co. magistrates. The Lent and summer assizes are held here, and the quarter sessions for the E. division of Sussex are held in Jan., April, June, and Oct. This bor. has sent 2 mems. to the H. of C. since the reign of Edward I., the franchise down to the passing of the Reform Act being vested in the scot and lot payers within the bor. The Boundary Act enlarged the limits of the bor. so as to include with the old bor. parts of the pars. of Southover, St. Anne's, St. Thomas-in-the-Cliffe, and South Malling. Registered electors, 643 in 1865. Lewes is the place of election for the mems. for the E. division of Sussex, and the head of a poor law union, comprising 7 pars. Markets on Tuesday; cattle fairs, May 8 and Whit-Tuesday; large sheep fairs, Sept. 21 and Oct. 2.

The fact of Lewes being a Roman station seems extremely doubtful; but it had acquired its present name (said to be derived from *lewes*, the Anglo-Saxon word for pastures) at least two centuries before the Norman Conquest. William the Conqueror fixed on Lewes as the site of one of those fortresses by which he kept in awe his Saxon subjects; and considerable remains of it still exist, on a commanding height, NW. of the town. One gateway is nearly entire; and the keep, which is in tolerable preservation, has recently been repaired. E. of the town also are the ruins of a very ancient and wealthy priory, the walls of which enclosed an area of about 33 acres: at the dissolution of the monasteries, its revenues amounted to 1,090*l*.

LEWISHAM, a populous village and par. of England, co. Kent, lathe Sutton-at-Hone, and half-hund. Blackheath, on the Ravensbourne, a trib. of the Thames, 4½ m. SE. London, on the South Eastern railway. Pop. of Lewisham village, 7,372, and of par. 22,808, in 1861. Area of par., which includes the hamlet of Sydenham, 5,220 acres. The village consists chiefly of a long street, lined with good houses, and extending about 2 m. along the Hastings road. The lanes leading in

Digitized by Google

different directions abound with handsome villas and detached residences, inhabited by opulent merchants and retired citizens, attracted thither by the beauty of the scenery and superior salubrity of the air. The parish church, which stands near the centre of the village, is a handsome structure, erected in 1832, on the site of an older but still modern building, accidentally destroyed by fire. There are also places of worship for Wesleyan Methodists, Independents, and other dissenters; in Sydenham, besides a district church and episcopal chapel, there are five dissenters' meeting-houses. A grammar-school, founded in 1647, and now under the trusteeship of the Leather-sellers' Company of London, is conducted by an upper and under master, and well attended. A charity school, three subscription day schools, and several Sunday schools, have been established for teaching poor children; and there are almshouses for six poor women, and minor charitable bequests. The trade of the village is almost confined to the supply of the families resident within the par.; but at Loampit Hill some marl and chalk pits furnish considerable quantities of lime, and there are some large brick and tile fields.

LEXINGTON, a town of Kentucky, U. States, co. Fayette, of which it is the cap., on Town-forte, a tributary of the Elkhorn river, 25 m. ESE. Frankfort, and 70 m. S. Cincinnati. Pop. 12,395 in 1860. The town stands in the heart of a fine district, with a great many comfortable-looking villas and farm-houses in the neighbourhood. The chief street is a mile and a quarter in length, and 80 feet wide. Lexington is one of the most ancient towns in the state, and for a long time was its political, as it still is its commercial, cap. Its chief public estab. is Transylvania university, the oldest institution of the kind in the W. states. It was incorporated in 1788, and has 13 professors, and usually about 300 students. In 1829 the principal edifice, with the library, was destroyed by fire; but another library of 4,400 vols. has been collected. There are several superior private schools. The state lunatic asylum, founded in 1824, the U. States branch bank, court-house, market-house, a large masonic hall, and eight churches, are the other chief public edifices. Lexington has manufactures of cotton bagging, cordage, woollen cloths and yarn, carpets, and machinery. The town derived its name from a party of hunters, who first heard, while encamped on the spot where it stands, of the memorable engagement between the American and British troops at Lexington, in Massachusetts, in 1775. A railroad, 28 m. in length, connecting this town with Frankfort, is continued to Louisville, on the Ohio.

LEYDEN (Lat. *Lugdunum Batavorum*), a celebrated city of the Netherlands, on the Old Rhine, 21 m. SW. Amsterdam, and 10 m. NE. the Hague. on the railway from Amsterdam to the Hague. Pop. 37,191 in 1861. The city is surrounded by ramparts and a wet ditch, and is entered by ancient gateways. On the outer side of the *cingel*, or ditch, which everywhere encompasses the town except where it is cut by the Rhine, is planted a beautiful double avenue of trees, and on the inner side rise the low green mounds, which serve the purpose of walls. Like other Dutch towns, Leyden is traversed by canals, crossed by numerous bridges; though, as its trade is but trifling, the canals are of little use. The streets are usually long, broad, and well built; there are some striking public edifices, and the town has an antique venerable appearance. The *Breede Straat* (Broad Street) of Leyden is not unlike the High Street of Oxford, reckoned among the finest in Europe. The houses in the Breede Straat are generally picturesque; and, though the number of colleges of ancient architecture, with their turrets, towers, and spires, in the High Street of Oxford, exceed the number of public buildings in the Broad Street of Leyden, there is one, at least, that will bear comparison with the most picturesque college in High Street. This is the old Hôtel de Ville, built, as appears by an inscription in front, in the year 1574. It has a tall spire, somewhat remarkable in its architecture, and not inelegant. It is built of a dark blue stone, which has the appearance of black marble, and its prominent parts are tipped with gilding. The body of the building has nearly thirty windows on a line in front, three pediments, or gables, highly ornamented, a handsome balustrade, surmounted by a ridge of stone globes, and the whole front of this remarkable piece of architecture may be said to be

'With glist'ning spires, and pinnacles adorn'd.'

The ground-floor of the town-house is appropriated as a market for butchers' meat, but this is not seen from the street. Nothing can exceed the cleanliness of Leyden in all its streets, whether those with or those without canals. The former, with their quays, are particularly neat, and the bridges are mostly of stone: there are not fewer than 150 bridges. In the council and audience chambers, on the first-floor of the town-hall, are several valuable paintings, as the Last Judgment, by Lucas Van Leyden; a large picture, representing the state of the city and its inhab. during its siege by the Spaniards, including a portrait of the heroic burgomaster Vanderwerf. The church of St. Peter, founded in 1321, one of the finest Gothic edifices in Holland, contains the tombs of Boerhaave, the Meermans, Scaliger, and Camper. Near this church is a large open square, ornamented with trees, and having a canal in its centre; it was formerly covered with houses, accidentally destroyed by the blowing up of a boat laden with gunpowder in the canal, in 1807. About 150 persons lost their lives on this occasion. The church of St. Pancras has also a most imposing front, and the tomb of Vanderwerf. In the centre of the city is a ruined tower, called the burg., of uncertain but ancient date, erected on the only elevated spot of ground for many miles round.

Leyden is a very dull, inanimate town, without manufactures, trade, or bustle of any kind. But it is, notwithstanding, a pleasant residence for men of learning and research. Its university, which, for a lengthened period, was one of the most celebrated in Europe, was founded by the prince of Orange, in 1575, to reward the inhab. for their bravery, and as some compensation for the sufferings they sustained during the siege of the city by the Spaniards. It soon attained to the highest estimation, being deservedly esteemed one of the very best of the continental schools for the study of classics, law, medicine, and divinity. Among its professors are the illustrious names of Douza, Joseph Scaliger, Daniel Heinsius, Gomarus, Arminius, Boerhaave, Van Swieten, Leeuenhoeck, Sgravesande, Burman, and Ruhnken. Grotius and Descartes were of the number of its pupils, as were Evelyn, Fielding, and Goldsmith; and though no longer so celebrated as formerly, it is still extremely well conducted, has valuable libraries and scientific collections, and able and learned professors. There are about 700 students on the average. The college buildings are detached, and, in fact, are placed at considerable distances from each other, in different streets; they are all plain stone and brick, and sufficiently evince, by their appearance, that they have been intended for use and not for ornament. The prin-

Digitized by Google

cipal of these buildings, which is very old, and was formerly a religious house, stands on the W. side of the city; its hall, in which the *senatus academicus* meets, is adorned with a fine portrait of William prince of Orange, founder of the university, and upwards of 100 portraits of professors in historical succession. The senatus consists of 83 professors; and as Leyden University requires no test of religious faith, either from its professors or scholars, it comprises all sects and denominations, both Christian and Jewish. Most of the lectures are delivered in Latin, and the public announcement of the courses is in that language. The students, who wear no particular dress, reside in lodgings in the town; and the greater number subscribe to a club-house and reading-room, supplied with German and French publications. The students of Leyden bear a high character for diligence.

The museum of natural history, attached to the university, surpasses most others in Europe, being mainly indebted for its excellence to the public spirit of the Dutch naval officers and foreign *employés*, who take every opportunity of forwarding natural curiosities to their native country; but it also owes much to the acquisition of the valuable collection of birds by Temminck, and to the labours of travellers and collectors sent by the *senatus* to Africa, S. America, and other parts of the globe. The museum, which is open *gratis* to all classes, consists of an upper and under story, occupying four sides of a large court. The classification of the animal kingdom is according to the system of Cuvier; and such is the zeal manifested in perfecting the collections, that at one time, not very long ago, 2,500 guilders, or 208*l.* sterling, were paid by the university for one shell of a *nautilus*, to complete the series of such specimens. The museum of Egyptian antiquities is particularly rich in *papyri*, jewellery, and gold ornaments; and comprises monuments from the ruins of Carthage, and the largest collection of Etruscan bronzes N. of the Alps. Siebold's extensive and valuable Japanese museum is also in Leyden. The library of the university has nearly 100,000 printed volumes, and 14,000 MSS., more than 2,000 of which are Arabic. The botanic garden, which comprises several acres, and is extremely well laid out, has an extensive series of specimens, arranged according to the systems of Linnæus and Jussieu, with extensive conservatories for rearing and preserving tropical plants.

Leyden has a good observatory, seventeen churches (one of which is Rom. Cath.); two hospitals; a naval and military asylum; an arsenal; custom-house; chamber of commerce; societies of Dutch literature, science, and poetry; branches of the Society of Public Good, the National Economical Society, and the Dutch Society of the Fine Arts, and an academy of design. It is said that all the children belonging to the city are being instructed, and that there is not one person unable to read and write.

In the 17th century the manufacture of fine woollen cloth was extensively carried on at Leyden, and the city is said to have had, in 1659, about 3,000 houses and 100,000 inhab. Its cloth manufacture has been for a lengthened period comparatively unimportant; but it is still carried on to some extent, particularly the manufacture of coarse cloths, and of counterpanes and rugs. It also carries on some other branches of industry, and has a considerable traffic in wool, butter, and other articles of agricultural produce. It is connected by canals, as well as railway, with Amsterdam, Haarlem, Delft, and the Hague.

During the latter part of the 17th and the greater part of the 18th century, the most celebrated branch of industry carried on at Leyden was that of printing and publishing. Many of the best and most beautiful of the Dutch editions of the classics, in 12mo., 8vo., and 4to., including most of those by the Elzevirs, issued from the presses of this city, and conferred on it renown. A good deal of printing and publishing is still carried on, but the works now published bear no comparison with the old *chefs-d'œuvre*.

The siege of Leyden by the Spaniards in 1574 is one of the most memorable events in the history of the great struggle made by the United Provinces to emancipate themselves from the blind and brutal despotism of Spain. The inhabitants displayed the most invincible courage and resolution. Valdez, the Spanish general, despairing of being able to carry the town by storm, endeavoured to cut off all communication between it and the surrounding country, and to effect its reduction by famine. He completed his lines of circumvallation, and so far succeeded in his object, as to entail the most tremendous suffering on the inhabitants, without, however, shaking their determination to die rather than give up their city to the enemy. At length the country round the town having been laid under water, a squadron of flat-bottomed boats laden with provisions and stores made its way through the Spanish lines to the city. This was decisive of the fate of the siege, the Spaniards being obliged immediately to raise it, after having incurred a very heavy loss.

Leyden has given birth to some highly distinguished individuals. Rembrandt was born (in 1606) in its immediate vicinity; and it is the native place of Gerard Douw, Vandervelde, Mieris, Jan Steen, and other distinguished painters; and of Vossius, Heinsius, Muschenbrock, Van Swieten, John Bocholt, better known as John of Leyden, founder of the Anabaptists. The learned and laborious geographer Philip Cluvier, or *Cluverius*, a native of Dantzic, resided principally in Leyden, where his excellent works on the geography of ancient Germany, Sicily, and Italy, and his valuable *Introductio in Universam Geographiam* were published. He died here, in depressed circumstances, in 1623, at the early age of 43.

LEYTON (LOW), a village and par. of England, co. Essex, hund. Becontree, 6½ m. NE. London, on the Great Eastern railway. Pop. of par. 4,794 in 1861. Area of par. 2,820 acres. Low Leyton is situated on the low grounds near the E. bank of the river Lea; but further E., connected by a long straggling street, is Leytonstone, on an eminence, comprising several handsome villas, chiefly tenanted by London merchants and traders. The church, a brick building with a low tower, is remarkable only as having been the scene of the pastoral labours of Strype the antiquary, who held the vicarage 68 years, and was buried here in 1737. A Rom. Cath. chapel and chapels for Wesleyan Methodists and other dissenters are the other places of worship; and the parish has, besides Sunday schools, a boys' free school, a school of industry for girls, and several minor charities.

LIBAU (Lettish, *Lepëia*), a sea-port town of Russia, gov. Courland, on the Baltic, beside the lake Libau; 105 m. W. by S. Mittau. Pop. 10,126 in 1858. The town is walled, and entered by a gate from the N. Its streets are narrow, and mostly unpaved; and its market-place, though large, is irregular. The houses are of timber, and mostly one story high. It has Lutheran, R. Catholic, and Calvinistic churches, a hospital, and an orphan asylum. The port, though commodious, has only from 8 to 12 ft. water, and

Digitized by Google

cannot, therefore, be entered by large vessels. It has, however, a considerable trade; most part of the produce of Courland, as cattle, linseed, corn, hides, and tallow, being exported from it. Its imports are chiefly colonial products and manufactured goods.

LIBERIA, a republican state of W. Africa, founded, in 1822, by free negroes from the U. States of N. America, under the auspices of the American Colonisation Society. Its territory extends along the Guinea coast for about 225 m., with a breadth inland of 20 or 30 m., chiefly between lat. 4° and 7° N., and long. 9° and 12° W. Pop. estimated in 1862, at 500,000, of whom about 16,000 were immigrants from America, and the rest natives of Africa. The coast is generally low, but the country gradually rises towards the interior, and at about 20 or 30 m. from the sea, the hills are of considerable elevation. Several rivers fall into the Atlantic within the republic—as the St. John, St. Paul, and Mesurado; but they are navigable only by small vessels for short distances. The soil is fruitful, and the climate better, or rather less destructive, than in most other part of the coast. Rice, cotton, coffee, sugar, indigo, bananas, cassava, and yams are raised; and camwood, palm-oil, ivory, hides, wax, and pepper are among the exports. The state, founded, as already mentioned, in 1822, was, on August 24, 1847, proclaimed a free and independent state, as the Republic of Liberia. The state was first acknowledged by England, afterwards by France, Belgium, Prussia, Brazil, Denmark, and Portugal, and, in 1861, by the United States.

The constitution of the Republic of Liberia is on the model of that of the United States of America. The executive is vested in a president and a non-active vice-president, and the legislative power is exercised by a parliament of two houses, called the senate and the house of representatives. The president and vice-president are elected for two years; the house of representatives also for two years, and the senate for four years. There are 13 members of the lower house, and 8 of the upper house, each county sending 2 members to the senate. It is provided that, on the increase of the population, each 10,000 persons will be entitled to an additional representative. Both the president and the vice-president must be thirty-five years of age, and have real property to the value of 600 dollars, or 120*l.* In case of the absence or death of the president, his post is filled by the vice-president. The latter is also president of the senate, which, in addition to being one of the branches of the legislature, is a council for the president of the republic, he being required to submit treaties for ratification and appointments to public office for confirmation. For political and judicial purposes, the republic is divided into counties, which are further subdivided into townships. The counties are four in number, and called Montserrado, Grand Bassa, Sinoe, and Maryland. The townships are commonly about eight miles in extent. Each town is a corporation, its affairs being managed by officers chosen by the inhabitants. Courts of monthly and quarter sessions are held in each county. The civil business of the county is administered by four superintendents appointed by the president with the advice and consent of the senate. In the year 1862 the public revenue amounted to 30,190*l.*, and the expenditure to 29,973*l.* The Liberians have built and manned 30 coast traders, and they have a number of large vessels engaged in commerce with Great Britain and the United States. The capital of the republic and chief port is Monrovia, founded in 1821, a year before the establishment of the republic. Monrovia had an estim. pop. of 10,000 in 1862, and several good schools, together with a public library.

LIBOURNE, a town and river-port of France, dép. Gironde, cap. arrond., on the Dordogne, at its junction with the Isle, 26 m. ENE. Bordeaux, on the railway from Paris to Bordeaux. Pop. 13,565 in 1861. The town is regularly and well built. Its streets are wide and clean, its houses elegant, and it is surrounded with good walls and agreeable promenades. Among the chief public edifices are extensive cavalry barracks, a theatre, a public library, with 3,000 vols., and a handsome stone bridge of 9 arches across the Dordogne. The port, at high water, has from 10 to 16 ft. water, admitting vessels of 300 tons burden. Libourne is the seat of a sub-prefecture, of tribunals of primary jurisdiction and commerce, and a sub-commissariat of marine. It has manufactures of woollen stuffs, articles of military equipment, glass and cordage, and docks for ship-building. It is an entrepôt for salt and agricultural produce destined for Bordeaux.

LICHFIELD, a city, parl. bor., and co. of itself, locally situated in co. Stafford, hund. Offlow, 15 m. N. Birmingham, 29 m. W. Leicester, 108 m. NW. London, by road, and 116½ m. by London and North Western railway. Pop. of city, 6,893, in 1861, area co. of city (which is co-extensive with the parl. bor.), 3,180 acres. The city, which stands in a fine valley, on a small affluent of the Trent, is irregularly built with narrow streets; but it is well paved and lighted, many of the houses are handsome, and its general appearance is respectable. The chief public buildings, besides the churches, are the guildhall, a neat stone edifice, on the top of which are carved the city arms; the market-house, occupying the site of an old market-cross; the bishop's palace, in the Close, and a small theatre. Lichfield is an episcopal see, and has a noble cathedral on the N. side of the town, close to a fine sheet of water. It is built chiefly in the decorated Gothic style peculiar to the 12th and 13th centuries, and comprises a nave, choir, and transepts, with a ladye chapel. It measures, from E. to W., 410 ft., and is 153 ft. wide, measured along the transepts. There are three towers, the central one of which, rising from the intersection, is surmounted by a light steeple and has a total height of 280 ft.: the towers at the W. end are each 180 ft. high. The body of the church is spacious and lofty, supported by pillars formed of clustered columns with neat foliated capitals: the roof is beautifully groined, the choir is elegantly furnished, and there are several fine monuments, one of which is to Dr. Johnson, the lexicographer, a native of this city, where he first saw the light on the 18th of September, 1709. The exterior parts of the building are highly ornamented with sculpture and tracery-work; the W. front displays a multitude of figures in *alto-relievo*, illustrative of passages in Bible history; and on the roof is a statue of Charles II., erected by Bishop Hacket, who exerted himself during many years to repair the damages inflicted on the cathedral by the parliamentary troops in the great civil war. The whole building was thoroughly repaired in 1787–90, at an expense of 6,000*l.* The chapter comprises a dean, 6 residentiary canons, 14 prebendaries, and 5 priest vicars. In the city are 1 par. church and 3 district churches, in the patronage of the dean and chapter; besides which, there are places of worship for Independents, Wesleyan Methodists, Rom. Catholics, and other bodies of dissenters. Among the educational establishments are several

Digitized by Google

Sunday schools, 8 national schools, an English charity school, and a free grammar-school, founded by Edward VI., and rebuilt, in 1850, in the Elizabethan style. The school has 21 free boys and several stipendiary pupils boarding with the masters: among the former pupils of this school are the illustrious names of Ashmole, Addison, Garrick, Johnson, and Woollaston. The charitable institutions comprise two almshouses, a hospital for clergymen's widows and orphans, a mendicity society, and a dispensary. Lichfield has no trade or manufactures of importance. Its trade is chiefly local, arising out of the wants of the town and neighbourhood, and there is little show of activity amongst those engaged in business. The Grand Junction Canal passes the city, and it is, also, extremely well supplied with railway accommodation. It was anciently governed by a guild, dissolved by Edward VI., who gave it a charter of incorporation, subsequently confirmed by Charles II. Under the Municipal Reform Act, the bor. is divided into 2 wards, and the municipal officers are, a recorder, mayor, and 5 other aldermen, and 18 councillors. Corp. rev., 944*l.* in 1862. Quarter and petty sessions are held in the guildhall, and it has a county-court, before which 508 plaints were entered in 1848. Since the 33d Edward I., Lichfield has, with some intermissions, sent 2 mems. to the H. of C. Previously to the Reform Act, the franchise was vested in the freeholders of the co. of the city of Lichfield, and in the freemen and burgage-holders of the city. The boundaries of the present parl. bor. include the co. of the city, and the place called 'the Close,' belonging to the cathedral. Registered electors 704 in 1865. Markets on Tuesday and Friday; fairs, Jan. 10, Shrove-Tuesday, and Ash-Wednesday, for cattle, sheep, bacon, and cheese; May 12, for sheep and cattle; and first Tuesday in November for cheese.

LICHTENSTEIN (PRINCIPALITY OF), an indep. state of S. Germany, and the least in extent and pop. throughout Europe; between lat. 47° 5′ and 47° 18′ N., and long. 9° 26′ and 9° 38′ E.; having S. the Swiss canton of the Grisons; W. the canton St. Gall, from which it is separated by the Rhine; and E. the Austrian duchy of Vorarlberg. Area, 64 sq. m. Pop. 7150 in 1861. The surface is mostly mountainous: a range of the Grison Alps traverses it, separating the Rhine from the Samina, a tributary of the Ill. Cattle breeding, agriculture, timber-cutting, and cotton-spinning, especially the first, are the chief occupations of the inhabs. Corn, wine, fruit, and flax are the principal articles of culture. The government is vested in the prince, and in an assembly of 15 members, elected by 'all citizens who can read and write.' Appeal from the court of original jurisdiction in Vadutz, lies to the court of chancery in Vienna, in which the prince has a seat; and thence to the court of appeal at Innspruck. Vadutz, or Lichtenstein, the cap., is a town of less than 1,000 inhabs. The princip. furnishes a contingent of 91 men to the army of the German confederation: it has one vote in the full council of that body, and together with other small states (see GERMANY), a vote in the committee, and the 16th place in the German diet. The Prince of Lichtenstein is one of the richest proprietors of Europe: his estates in other parts of Germany, but especially in Moravia, extend over nearly 2,200 sq. m.; and his annual revenue is estimated at 1,200,000 florins, or 120,000*l.*; to which, however, his independent sovereignty contributes nothing.

LIEGE (Dutch, *Luyk*; Germ., *Lüttich*), an important commercial and manufacturing city and river port of Belgium, cap. prov. of same name; on the Maese, 13½ m. S. by W. Maestricht, and 54 m. E. by S. Brussels, on the railway from Brussels to Cologne. Pop. 97,544 in 1860. The city is surrounded by a neighbourhood with a dense pop., employed in branches of industry similar to its own. Its pop. in the middle of the 15th century is said to have amounted to 120,000. It is situated on the declivity and at the foot of a hill, and is divided into an upper and lower town. The latter stands at the confluence of the Ourthe with the Maese, and is intersected by many branches of the last named river, which are enclosed by stone walls, and crossed by numerous bridges. The chief bridge, the *Ponte de l'Arche*, thrown across the main stream of the Maese, is 158 yards in length, 49 ft. in breadth, and has 6 arches, varying in diameter from 50 to 55 ft. A convenient quay for commercial purposes extends both above and below this bridge, for the whole length of the town along the Maese, which is navigable for small vessels as far as this city. Liege was formerly fortified, but its fortifications have been almost entirely destroyed. It is defended on the NW. by a large citadel, lately rebuilt, and on the ESE. by Fort Chartreuse; besides which there are only a few outworks. There are 10 suburbs. Liege is, generally speaking, ill built. In both the lower and upper town, the streets are narrow, and in the latter they have the additional disadvantage of being so steep as to be ascended in many places by flights of steps. Among the 11 squares are 2 tolerably spacious; in one of which stands the town-hall, and in the other the theatre. The town-hall, comprising the provincial court-house and prison, is a dark stone building, of great extent and magnificence, with two open courts, surrounded with a colonnade resembling that of the ducal palace at Venice. It was formerly the residence of the prince-bishops of Liege. The cathedral of St. Lambert stood in this square; but it was destroyed by the French revolutionary forces in 1794, and no traces of it exist. The church of St. Jacques, in the decorated Gothic, is the architectural glory of the city. It was completed in 1552. Its interior is astonishingly magnificent, and displays some of the finest specimens of tracery and fret-work that are any where to be met with. It has a noble organ, but its statues and paintings are inferior. St. Croix, and some of the other churches, of which there are 21 R. Catholic and 1 Protestant, are also fine structures. The theatre is a handsome modern building, surrounded by an arcade: from the square in which it stands a piece of water runs to encircle the town on its W. side, bordered by a promenade planted with trees. The buildings of the university stand beside the Maese, on the ruins of a church of the Jesuits. This institution, founded in 1816, has faculties of theology, law, and physic; 46 professors, and usually from 400 to 500 students. It possesses a cabinet of mineralogy, with upwards of 5,600 specimens, a cabinet of 3,000 fossils, found in the vicinity, and other scientific collections, and a library comprising many curious MSS.

Liege is the Birmingham of the continent. It owes this distinction to its situation in a district abounding with coal and iron, and which also affords zinc, lead, copper, sulphur, alum, marble, and slate. The coal-field of Liege is the most extensive in the prov. of the same name, being 5 leagues in length, with a breadth varying up to 2 leagues.

The manufacture of cannons and fire-arms is that for which Liege and its environs are most celebrated. The royal cannon-foundry in this city, instituted in 1802, produces at an average 9

Digitized by Google

pieces of ordnance weekly, partly brass and partly iron. There are numerous manufactories of fowling pieces, muskets, and pistols. The guns of Liege are cheaper than those of England, but not quite so well made. The export of small arms, which amounted to 5,989,000 francs in 1851, rose to 11,151,000 francs in 1857, and to 18,132,217 francs in 1861. (Report of Mr. Barron, British Secretary of Legation.) The manufacture of arms is principally carried on by the men in their own houses. All fire-arms manufactured at Liege, except those turned out for the army at the royal foundry, must be tested at the '*banc d'epreuves*.'

Steam-engines and machinery are largely produced in Liege and in the adjacent busy and populous village of Seraing, about 2 m. to the SW., on the opposite bank of the Meuse. The palace of the former prince-bishops at that place having been bought in 1817 by an Englishman, Mr. John Cockerill, he established in it the largest hardware manufacturing establishment in Belgium, or indeed on the Continent. It is devoted to the construction of steam-engines and other descriptions of machinery, and to forging and manufacturing iron and iron goods. One of the first coke-blast furnaces was established in 1823 at Seraing, by Mr. John Cockerill. The king of the Netherlands, William I., took so much interest in the undertaking as to assist actively in its establishment, and at the end of a few years, in 1825, he even became a joint proprietor by purchasing the share belonging to Mr. Cockerill's brother. The factory was long without a rival on the Continent, both for its gigantic size and perfect internal economy. Mr. Cockerill showed no less genius in his financial than in his mechanical combinations, and became one of the founders of the National Bank. Unfortunately his restless spirit impelled him to embark in a great number (no less than sixty) of other enterprises in distant countries, even in Surinam. The Belgian revolution was the first event that checked his career. The new government claimed to succeed to the rights of king William, until Mr. Cockerill, by a great financial effort, made himself sole master of Seraing, and brought it to its highest pitch of prosperity in 1838. The National Bank having suspended payment in that year, Cockerill was obliged to adopt the same course. He died in 1840, leaving an untarnished reputation as a liberal employer of labour, a daring but honourable speculator, and a father of Belgian manufacturing industry. The Seraing works are now carried on by a flourishing '*anonyme*' company, under the name of 'Société de John Cockerill,' and still enjoy an European celebrity and custom. They include within the same area a coal mine, six blast furnaces, an iron factory provided with every apparatus, a steel puddling-mill, and a machine factory. Most of the locomotive engines upon the Belgian railways, the engines for steam-vessels, &c., used in Belgium, have been made here, and many have also been sent to other parts.

Liege has also manufactories of files, nails, stoves, and hardware of all kinds; watches, jewellery, bronze, and other ornaments; woollen and cotton fabrics, hats, glue, tobacco, paper, and chemical products; with numerous dyeing houses, tanneries, and distilleries. It has an exchange, a chamber of commerce, a bank, with the privilege of coining money, a savings' bank, numerous hospitals, and benevolent institutions, superior and elementary schools, and various learned societies.

In the 7th century, a village named *Legia* occupied a part of the site of the present city. In 712, the ancient cathedral was founded, and Liege was erected into a bishopric. In the 10th century its bishops were raised to the rank of independent sovereign princes. In the succeeding ages continual wars and disturbances prevailed between the burghers, who were ardently attached to popular institutions and the prince-bishops. It was taken on the 30th of October, 1408, by Charles the Bold, duke of Burgundy, and barbarously delivered up to military execution. During the French ascendancy, it became the cap. of the dep. of Ourthe.

LIEGNITZ, a town of Prussia, prov. Silesia, cap. gov. and circ. of Liegnitz, on the Katzbach, at its confluence with the Schwarzwasser, 46 m. W. by N. Breslau, on the railway from Berlin to Breslau. Pop. 18,662 in 1861, excl. of a garrison of 1,308. Liegnitz was formerly a fortress of some strength, but now has only gates without walls; and its ramparts being planted with trees and laid out in gardens, serve for public walks. It is an old, but a handsome, well built town: it has several suburbs, 2 Lutheran and 3 R. Cath. churches; a fine chapel—the *Furstencapelle*—in which are buried the princes of the line of Piast, a dynasty which gave 24 kings to Poland and 123 dukes to Liegnitz, from 775 to 1675, when the family became extinct. The old castellated palace of those princes in the centre of the town, surrounded by a wet ditch, an ancient council-house, a gymnasium, an academy, established in 1810 for the sons of Silesian gentlemen, whether R. Catholics or Protestants, an orphan asylum, a workhouse, and a hospital, are the principal buildings. Outside the town is a good cemetery. Liegnitz is the seat of the superior judicial courts, boards of taxation, and weights and measures, for its gov., and the head-quarters of several battalions of fusileers, of a *landwehr* or militia battalion, and of a commandant of police. It manufactures woollen, cotton, and linen stuffs, stockings, lace, Prussian blue, and starch, and has breweries and bleaching grounds, and an active trade in its own produce, and in madder and other products raised in the adjacent country. The gardeners in the vicinity are said to be the most expert of any in Silesia. On the 16th of August, 1760, Frederick the Great totally defeated the Austrian general Laudun in the neighbourhood of this town; Frederick made his dispositions with so much skill as to render it impossible for Marshal Daun, who commanded another Austrian army, to come to Laudun's assistance.

LIERRE, a town of Belgium, prov. Antwerp, cap. canton, at the confluence of the Great and Little Nethe, 10 m. SE. Antwerp, on the railway from Antwerp to Turnhout. Pop. 13,875 in 1860. The town is well built, and has several churches, a convent, a hospital, manufactures of cotton and woollen stuffs, with cotton-printing establishments, distilleries, breweries, and a number of oil mills, rape seed being largely cultivated in its vicinity.

LIFFORD, an inland town of Ireland, prov. Ulster, co. Donegal, of which it is the cap. It is situated on the extreme E. verge of the co., on the Foyle, immediately below the confluence of the Finn and Morne rivers, 14 m. SSW. Londonderry, on the railway from Londonderry to Enniskillen. Pop. incl. Strabane, 4,146 in 1861. Lifford is connected by a fine bridge over the Foyle with the town of Strabane in Tyrone, of which it is now merely a dependency. Lifford consists of two small streets, and has a par. church, a Rom. Cath. chapel, a Presbyterian meeting-house, a barrack, and a courthouse and prison for the co. Donegal. It sent 2 mems. to the Irish

parliament till the Union, when it was disfranchised.

LIGOR, a town of SE. Asia, cap. of a Malay principality, dependent on Siam, on the Ta-yung, near its mouth in the Gulf of Siam, about lat. 8° 17′ N., long. 100° 12′ E. Pop., estimated at 5,000; chiefly Siamese, Malays, and Chinese. It appears to have been formerly more populous; but it was captured by the Burmese, and its inhabs. carried off, in 1760, and again in 1785. It has brick ramparts and a wet ditch, and some cannon were mounted on its walls. Within the town are many brick temples and pyramids, one having a gilt spire, a conspicuous object at sea; but all the dwelling-houses are of less solid materials. Two or three Chinese junks trade with Ligor, bringing cotton, and taking back tin, black pepper, rattans, and other articles of native produce. The rajah of Ligor has extensive authority, with the power of capital punishment, over all the Malay states, tributary to Siam.

LILLE (Flem. *Ryssel*), a strongly fortified city of France, dép. du Nord, of which it is the cap., on the canal connecting the Scarpe and Lys, in a spacious plain 9 m. from the Belgian frontier, and 124 m. NNE. Paris, on the Northern railway. Pop. 131,827 in 1861. The city is surrounded by a line of walls and bastions; beyond which, on its NW. side, is the citadel, a regular pentagon, with a double ditch and extensive outworks, containing excellent barracks, officers' quarters, and magazines. The city was formerly entered by 7 gates, the most southerly of which, the *Porte de Paris*, a handsome Doric arch, built in 1682, to commemorate the military exploits of Louis XIV., was pulled down in 1864, to extend the city towards the south. Few French towns are generally so well laid out as this, though some parts, principally inhabited by the manufacturing population, are of very poor aspect. There are nearly 300 streets, the principal of which are straight and wide; and 32 squares and market places, the largest, the *Grande Place*, being 170 yards in length by nearly 80 in breadth. The houses are mostly modern, and in a solid, plain style, built chiefly of brick, but in part of stone from the neighbouring quarries. Few have more than 2 or 3 stories. Of late years, many have been built with areas in front, and foot pavements are becoming pretty general in the principal thoroughfares.

Lille has many large and conspicuous public edifices. The new *Hotel de Ville*, built in 1846, has taken the place of the old town-hall, a heterogeneous assemblage of buildings of different epochs. The new *Hotel de Ville*, in the Renaissance style, and embellished with statues, is the seat of the tribunal of commerce, council of *prud'hommes*, *dépôt* for the *octrois*, police office, the residences of the chief civil and military authorities, society of sciences and arts, museum of natural history, cabinet of physical objects, and library of archives. The old *Hotel de Ville* was originally a palace, constructed by the dukes of Burgundy in the 13th century, and was inhabited in 1524 by the Emperor Charles V. In 1700 it was partially destroyed by fire; its ancient hall of conclave was ornamented with some fine wainscoting, and several good paintings by Arnold de Vuez. Here were preserved the portraits of all the counts and countesses of Flanders, of the house of Burgundy. The largest and handsomest of the ecclesiastical edifices is the church of Notre Dame de la Treille et St. Pierre, the first stone of which was laid in 1855. It replaces the ancient church of St. Pierre, erected in 1046 by Baldwin of Lille, and destroyed during the revolution. The church of St. Catherine, of simple and elegant architecture, is unfortunately hidden by mean buildings: it possesses the magnificent painting by Rubens, of the martyrdom of St. Catherine, which escaped destruction during the revolution, though the elaborately ornamented door of the choir was then carried off. The church of St. Maurice, built in the 12th century, is the largest and oldest in the city; but its tower, which had become unsafe, has been removed. Previously to the revolution it possessed numerous excellent paintings, and it has still a St. Nicholas by Vanderburgh, and a martyrdom of St. Maurice by L. Jan. St. Madeline, with a handsome cupola, is the only other church worthy of remark. There are 5 hospitals. The *Hôpital Général*, founded in 1733, is a fine pile of building, of great extent, and usually accommodating 1,500 patients. The *Hôpital Comtesse*, founded in the 13th century by the daughter of Baldwin, count of Flanders, and emperor of Constantinople, though it suffered greatly from fire in 1467, preserves all the characteristics of its original style of architecture. Its chapel has some good paintings by Vuez. The military hospital is large, well aired, and altogether one of the best in France. In 1814 a school of military surgery was established in it. Several large barracks are situated in different parts of the city. Lille has had a mint since a very early period, and of late steam has been used in its machinery. The Protestant church, synagogue, *abattoir* or public slaughter-house, exchange, the prisons, the theatre, constructed in 1785, concert-hall, and prefecture, the last three being handsome buildings, are the remaining principal public edifices.

Lille has numerous benevolent institutions, a communal college, a public library with 21,000 volumes, well arranged, and comprising some valuable MSS., and a gallery of paintings comprising some admirable works of Vandyke, Rubens, Vuez, and other masters of the Flemish, French, and other schools. In 1834, this gallery was enriched by a collection of designs from the Italian school. A royal academy of music, academies of drawing, and architecture, a botanic garden, and various learned societies, nearly complete the list of public establishments. The canal on which Lille is built has several branches navigable for small trading vessels, which pervade the city. In its progress by and through Lille, different parts of this canal are called the upper, middle, and lower Doule; along the middle Doule, or portion between the town and the citadel, is a fine *esplanade*, the favourite resort of the upper classes. The middle Doule is here crossed by a handsome bridge, the *Pont Napoléon*; the other bridges are in no wise remarkable. Lille has several suburbs, some beyond the walls, and others, within the last few years, included in the fortifications. They are chiefly inhabited by the manufacturing pop. By a decree of October 13, 1858, the four southern suburbs, called Vazemmes, Moulins-Lille, Fives, and Esquermes, were united to the city. It was in consequence of this decree, which enlarged Lille to a considerable extent, in the interest of its manufacturing activity, that the fine old *Porte de Paris*, before mentioned, had to be pulled down. The process of demolition caused five out of the seven old gates of the city to disappear, the only two left standing being the *Porte de Gard* and the *Porte de Roubaix*, the latter, built in the Renaissance style, of coloured bricks, dating from 1662.

Lille is one of the chief seats of the French cotton manufacture. Calicoes, cotton, handkerchiefs, *indiennes*, stockings, and cotton yarn are

Digitized by Google

the goods principally produced. The manufacture of table linen, linen thread, and lace is also considerable; and fine woollen cloths, velvets, serges, hats, leather, paper, beet-root sugar, Geneva, soap, and mineral acids are made, some to a greater, and some to a less extent. The government has here a tobacco manufactory and a saltpetre refinery, and the neighbourhood is studded with bleaching grounds and oil mills; and it is in the centre of some very extensive beet-root plantations. Steam power is extensively employed in the different manufactures.

Lille is the seat of courts of primary jurisdiction and commerce, a *conseil des prud'hommes*, and forest inspection, and is the head-quarters of the 16th military division of France.

The city is supposed to have been founded in 640. It successively belonged to the counts of Flanders, the kings of France, and the dukes of Burgundy. In 1667 it was taken by Louis XIV.; and, being improved and fortified by Vauban, was definitively annexed to the crown of France. It has sustained several sieges, of which the most celebrated was that by the allies, under the Duke of Marlborough and Prince Eugene, in 1708. It was bravely defended by Marshal Boufflers; but notwithstanding the gallantry of the garrison, and the fact that the French had a powerful army in the field, it was ultimately obliged to surrender. In 1792 it was bombarded by the Austrians.

LIMA, the cap. city of Peru, and, next to Mexico, the most magnificent in the countries formerly comprised in Spanish America, on the Rimac, in a delightful valley, from 500 to 600 ft. above the level of the ocean, 6 m. from its port of Callao, on the Pacific, and about 300 m. SSE. Truxillo. Pop. estimat. at 75,000 in 1863. The great chain of the Andes passes within 20 leagues of the city, but its spurs approach to within three-fourths of a league from its gates, and form an amphitheatre, within which Lima is built. The Rimac, which separates the city from its suburb, San Lazaro, is crossed by an excellent stone bridge of six arches, which, being furnished with recesses and seats, is a favourite promenade. The city, about 2 m. in length E. to W., by 1¼ m. in its greatest breadth, is of a triangular, or rather semicircular, shape, the base, or long diameter, being formed by the river. Elsewhere, Lima is surrounded by a parapet wall, about 7 m. in circuit, from 18 to 25 ft. high, and about 9 ft. thick; it is pierced by six gates, and is defended by 35 bastions. Except at some of the bastions, the wall is too narrow for the mounting of artillery; and it is merely sufficient to protect the town against any sudden attack by an Indian force, for which purpose it was constructed, in 1685. At the SE. extremity of the city is a small citadel, in which are the artillery barracks and a military dépôt. When seen from Callao roads, or even from a less distance, Lima has an imposing appearance, its numerous domes and spires giving it an Oriental aspect. Like the other Spanish cities of America, it is laid out in *quadras*, or squares of houses, 400 ft. each way, and divided by streets 33½ ft. wide, intersecting each other at right angles. The courses of the streets do not follow the cardinal points, but vary from E. to SE. in order that the walls may cast a shade both in the morning and afternoon. Through the centre of nearly all the streets directed E. to W. runs a stream of water, 3 ft. wide, used as a receptacle for all the filth thrown out from private dwellings. Most of the refuse is, however, got rid of by the Turkey buzzards, which swarm in Lima, and are the most efficient, or rather the only, scavengers. The streets are paved with round pebbles, and the narrow foot-paths with flat stones, in very bad repair. The same plan extends to the suburb of San Lazaro. The city is divided into 4 quarters, and each of these into 35 *barrios*. For each barrio an *alcalde*, or district magistrate, is selected from among the inhab. For religious purposes, it is divided into 8 parishes. On account of the frequency of earthquakes, few houses are more than one story high; or, if there be two stories, the walls of the upper consist of only cane, or wattled reeds, plastered over with clay, and whitewashed or painted. This kind of architecture is applied to even the churches and other public edifices, their upper parts being of wood-work, covered with stucco. The lower parts of the houses are mostly constructed of *adobes*, or sun-dried bricks, made of clay and chopped straw. The roofs are uniformly flat. Some of the better sort of houses have a terrace on the top, formed of large thin baked bricks; the common dwellings are usually roofed only with thin rafters, cane, and mats, covered with a layer of earth an inch or more thick; but as it rarely or never rains with any violence in Lima, these light roofs sufficiently answer their purpose, at the same time that they are not so easily thrown down by an earthquake, and when thrown down are incomparably less dangerous than if they were constructed of more solid materials. Most of the houses have a *patio*, or court yard in front, with a large arched gateway opening to the street, over which is a heavy balcony. The walls of the *patios* are painted without and within with various devices, in fresco. Till of late years, few of the windows had either glass or sashes. Almost every house has a stream of water running through its precincts, which is used for domestic purposes. Gardens are rare.

In the centre of the city is the *Plaça Mayor*, or *de la Independencia*, the principal square and market-place. It is a fine open space, the size of a squadra. On its E. side are the cathedral, the *sugrario* or principal parish church, and the archbishop's palace; the last, a large superior edifice, is partly occupied by the Peruvian senate. On the N. is what was once the viceroy's residence, an old unsightly structure, now appropriated to the courts of justice and other government offices. On the W. side are the *cabildo* or town-hall, a Chinese looking edifice, the city gaol, and other offices; and on the fourth side is a colonnade before a row of private houses. The above public buildings have all ranges of mean-looking shops in their lower story. The booths of small traders cover nearly a third part of the area of the square. In the centre is a fine bronze public fountain, 40 feet high, raised upon a level table of masonry 40 feet on each side, ornamented with eight lions supporting a statue of Fame, and supplied with excellent water from the Rimac.

A considerable portion of the area of the city is occupied by convents and churches. Besides a great many convents and nunneries, with churches attached, Lima has 57 churches, and 25 chapels belonging to hospitals and colleges. The cathedral founded by Pizarro, and in which he is buried, is a large fine edifice, 186 ft. in front by 320 deep; but its effect is injured by gaudy colouring and grotesque ornaments. At either corner of the front is an octagonal tower, rising nearly 200 ft. from its base, which is 40 ft. high. These towers, having been thrown down by the earthquake of 1746, were rebuilt in 1800. In the belfries are several fine-toned bells, the largest of which weighs 310 quintals. The interior of the cathedral is magnificent. It is divided into three naves, and paved with large earthen tiles. The roof, which is beautifully panelled and carved, is supported by

Digitized by Google

arches springing from a double row of square stone pillars. The high altar is in the Corinthian order, and its columns, cornices, and mouldings, are either cased with pure silver or are richly gilt. The seats and pulpit in the choir are exquisitely carved, and there are two large and fine-toned organs. 'The riches which have been lavished at various times upon the interior of this edifice, are scarcely to be credited anywhere but in a city which once paved a street with ingots of silver to do honour to a new viceroy. The balustrades surrounding the great altar, and the pipes of the organ, were of silver. It may be mentioned, as a proof of the abundance of silver ornaments, that in 1821, 1½ ton of silver was taken from the various churches in Lima without being missed, to meet the exigencies of the state' (Caldcleugh's Travels in S. America, ii. 56.) The *sagrario* has a fine façade, and its interior is very splendid and richly adorned. The roof is lofty and beautifully panelled, and in the centre is a cupola resting on the four corners formed by the intersection of the cross aisle. Several of the other par. churches are worthy a visit. Some of the conventual churches are remarkably rich. That of the Dominicans, 300 ft. long by 80 broad, has a steeple 180 ft. high, being the loftiest in Lima.

The revolution secularised a good deal of church property; but, previously to that event, the Dominican convent is said to have had a rental of 80,000 dollars a year and a large library, some good paintings, and numerous reliques, including a statue of the Madonna studded with gems, said to be of immense value. Some of the cells belonging to it were richly furnished. The Franciscan convent is among the oldest and largest in Lima. Its buildings cover two quadras, and its church, which is next in size to the cathedral, is gorgeously adorned. Its monks derive a considerable revenue from the manufacture of shrouds. In addition to the convents, there are *casas de exercicio*, into which females retire during Lent, to perform acts of penance; and in the convent of Recoleto are similar cells for men. The number of monks and nuns here and in other parts of Peru was formerly very great, but it is now otherwise. There are two foundling asylums and eleven public hospitals, one of the latter, St. Andres, having 600 beds. Attached to it is an indifferent botanic garden, and adjoining it is the medical college of San Fernando, established in 1809. Lima has a university, founded in 1571; it occupies a handsome building, and is partly supported by congress and partly by private contributions. The students generally reside within the walls of the institution. The Peruvian house of representatives holds its sittings in an apartment in the university. The former palace of the Inquisition is now appropriated to a gaol, and to the national museum, which possesses valuable collections of minerals and Peruvian antiquities. Lima has several ecclesiastical colleges and seminaries, and a nautical academy. The colleges, however, are not in a flourishing state; but, on the other hand, numerous Lancastrian and other primary schools have sprung up, and all the white children are taught to read and write. It is reported that education has made a great advance in the Peruvian capital since the revolution, and its emancipation from the control of the priests is, at all events, an immense step in advance. A considerable number of modern scientific and other works are annually imported from Europe.

There is a good theatre, but of rather a singular form, it being a long oval, with the stage occupying the greater part of one of its sides. Bull-fights were formerly celebrated at Lima with an *éclat* that rivalled those of Seville; and, though abolished by San-Martin in 1822, they appear to have revived. The amphitheatre, *Plaça del Acho*, in the suburb of San Lazaro, where they are held, has an area 400 ft. in diameter, surrounded by a barrier 7 ft. high, and three tiers of boxes raised on brick pillars, with accommodations for from 10,000 to 12,000 spectators. Cock-fighting is a favourite public diversion; the cock-pit, or *coliseum*, is an area 50 ft. in diameter, surrounded by nine benches and a tier of boxes, which, on Sundays and holydays, are usually crowded by visitors. Outside the walls is the pantheon, a general cemetery established early in the present century. It is a square inclosure, laid out in walks and gardens, the surrounding wall being full of niches for the reception of corpses. These are generally deposited without coffins, their decay being accelerated by the application of unslacked lime. Before the establishment of the pantheon, the dead were always buried in churches; but this is now prohibited, and hearses belonging to the pantheon are provided for the performance of funerals, which are not allowed to traverse the streets after noon. Immediately without the suburb San Lazaro are some excellent public baths. The road from Callao to Lima is quite straight, and for nearly the last 2 m. is fenced on either side by a brick wall and parapet, shaded with trees, and irrigated by running streams. At intervals of 100 yards are ornamental stone seats; but the whole work, together with the fine gateway at its upper end, by which the city is entered, has been suffered to fall into decay.

The vicinity of Lima, where not covered with villas and pleasure-grounds, is very productive of maize, barley, various other grains, beans, kitchen vegetables, fruits, sugar, rice, tobacco, yams, and potatoes; grapes are abundant, and yield some pretty good wine; olives thrive well; and water-melons are important articles of culture, being largely consumed in the city during the hot months. But agriculture and horticulture is much neglected. As very little rain falls at Lima, artificial irrigation is indispensable. The Incas had cut numerous trenches and canals in the neighbourhood, which the Spaniards finding ready to their hands, took some care to keep in order; but at present the drains for conveying the water from the city are so bad, that the water is either suffered to run to waste, or to stagnate and generate noxious effluvia. Live stock are fed in great numbers near Lima, large quantities of animal food being consumed in the city. The demand for poultry is immense, especially for geese and turkeys. Cook-stands for fish (which are good and cheap) and fried pork are to be found at the corner of every square. Pastry and sweatmeat criers are seen everywhere in the streets; and *masamorias* or pap-shops are very common. Pap boiled with or without fruit or vegetable acid, and sweetened with sugar or molasses, constitutes the Limenian dish '*masamora*,' which is as great a favourite in Lima as roast beef in London. Few of the dishes, however, suit the taste of strangers, from their being, with the exception of poultry, either steeped in lard, or highly seasoned with pepper. Most families in inferior circumstances provide themselves with ready cooked food from the streets. Water for drinking, which is almost wholly supplied from the large fountain in the *Plaça Mayor*, is carried round the city by asses and other beasts of burden, carriages of most kinds being rare.

The climate of Lima has been much praised: the extremes of heat and cold are never experienced; within the city the thermometer, in the

Digitized by Google

shade, never falls in winter under 60° F., nor rises in summer above 82°, its usual station being about 80° in well-aired apartments. The ordinary daily range of temp. is only 3° or 4°. The year is divided between the dry and the moist season; the former begins in Nov., the latter in May; and throughout the winter (May to Oct.) a drizzly mist often prevails in the morning and evening. Cool breezes from the SW. blow for three-fourths of the year, and the hot rays of the sun are generally intercepted by a layer of clouds. Earthquakes occur every year, particularly after the mists disperse, and have usually been very destructive at intervals of 50 or 60 years; but Lima is free from storms. Epidemics are few. The climate however, or rather, perhaps, the neglect of sanatory regulations and of cleanliness, seems to have an enervating tendency, as shown in the degeneracy of most of the inhab., especially the whites. The population is made up of whites and creoles, *mestizos*, Indians, and about 20,000 negroes. The negroes are chiefly employed as domestics and mechanics; the mestizos in trade and agriculture. The physical and moral character of the white inhab. of Lima is Andalusian. The ladies are celebrated for beauty and fineness of figure, but want freshness of complexion. They wear a very remarkable walking dress, peculiar to this city and Truxillo. 'This dress consists of two parts, one called the *saya*, the other the *manto*. The first is a petticoat made to fit so tightly, that, being at the same time quite elastic, the form of the limbs is rendered distinctly visible. The manto, or cloak, is also a petticoat, but instead of hanging about the heels, as all honest petticoats ought to do, it is drawn over the head, breast, and face; and is kept so close by the hands, which it also conceals, that no part of the body, except one eye, and sometimes only a small portion of one eye, is perceptible. A rich coloured handkerchief, or a silk band and tassel, are frequently tied round the waist, and hang nearly to the ground in front. (Hall's Travels, i. 108, 109.) Within doors the ladies adopt the English or French costume, with a profusion of jewellery. The morals of both sexes have been represented as lax in a high degree, but they are probably not worse (which, however, is not saying much) than in most other large cities of South America. Extravagance in living, dress, and gambling are carried to a great extent; and smoking is universal among both men and women.

Lima was made an archbishop's see in the 16th century, and was long the grand *entrepôt* for the trade of all the W. coast of S. America; but a considerable part of the foreign trade of Peru is now carried on through Buenos Ayres, and the former is also in the habit of importing European goods at second-hand from Valparaiso, and other parts in Chili. It is still, however, the great emporium of Peru. Its exports consist principally of bullion and specie, vicunna, and sheeps' wool, bark, chinchilla skins, saltpetre, copper, tin, and sugar. The imports are principally woollen and cotton stuffs, cutlery, and hardware from England; silks, brandy, and wines from Spain and France; stock fish from the U. States; snuff, indigo, tar, and naphtha, from Mexico; tobacco from Colombia, with timber for the construction of ships and houses from Guayaquil; wheat, flour, dried fruits, and bullion from Chili; Paraguay tea from Paraguay, spices, quicksilver, and perfumery. (For details, see PERU.)

About 3 leagues to the SE. is the favourite watering-place Chorrillos, resorted to by people of rank and fashion for several months in the summer, and by invalids during the winter. It is only a small fishing village, constructed of cane and mud. The Indian owners of the houses let them to the bathers at a high rate during the bathing season; and some persons either take them for a term of years, or construct other light summer houses for themselves. Chorrillos is sheltered from the SW. blast by an elevated promontory, called the Moro-Solar. Numerous Peruvian antiquities lie scattered over the rich but now partly waste and desolate plain between this town and Lima.

Lima was founded by Pizarro in 1535, under the title of *Ciudad de los Reyes*, 'City of Kings.' It suffered severely from the earthquakes of 1678 and 1746, the latter leaving only 20 houses standing out of 3,000; and again by those of 1764, 1822, and 1828. San Martin entered it on the 12th July, 1821, and proclaimed the independence of Peru at Lima on the 28th of the same month.

LIMERICK, an inland co. of Ireland, prov. Munster, having N. the estuary of the Shannon, by which it is separated from Clare, E. Tipperary, S. Cork, and W. Kerry. Area 660,898 statute acres, of which about 90,000 are unimproved mountain and bog. Except on the S., W., and NE. extremities, the surface is generally flat. Climate mild, but very humid. Soil for the most part excellent, and applicable to every purpose of husbandry. Tillage has of late years been much extended in this co., but is, speaking generally, very backward: still, however, there is a good deal of grass land, and grazing husbandry and the dairy are both extensively pursued. Some fine long-horned cattle are bred and fattened in this co., particularly in the low grounds along the Shannon. The pernicious system of *con acre* (see IRELAND) has been widely spread in Limerick; and, though there has been a great increase in the exportation of wheat, wheat-flour, oats, butter, and most other articles from the co., and a material improvement in stock, and in the implements of husbandry, it is believed that the condition of the cottiers, and the smaller class of occupiers, has been but little, if at all, improved. The latter, in fact, are in the most abject state; and it would seem that in Ireland the peasantry are frequently most wretched where the land is finest. Property in very large estates; tillage farms, mostly very small, but some of the grazing farms are extensive. Minerals and manufactures, excepting some departments of the latter carried on in the city of Limerick, of no importance. Principal rivers, exclusive of the Shannon, Maig, Deale, and Mulkerna. Limerick is divided into 9 baronies and 125 parishes, and sends 4 mems. to the H. of C., viz. 2 for the co. and 2 for the city of Limerick. Registered electors for the co. 6,318 in 1865. At the census of 1861 Limerick co. had 27,948 inhab. houses, 31,280 families, and 172,801 inhabitants, while, in 1841, the co. had 48,127 inhab. houses, 56,358 families, and 330,029 inhab.

LIMERICK, a city, parl. bor., river port, and co. of a city in Ireland, prov. Munster, on the Shannon, and on the Great Southern and Western railway, 107 m. SW. Dublin, and 55 m. E. Loophead at the mouth of the Shannon. Pop. of city 44,626 in 1861, against 48,391 in 1841. The city is principally situated on the SE. side of the river, within the co. of Limerick, but partly also on its N. side, within the co. Clare. The co. of the city, which is identical with the parl. bor., includes an area of 33,863 imp. acres. Limerick is the fourth city of Ireland in respect of size and importance. It owes this distinction to its situation at the head of the estuary of the Shannon, which has made it the emporium of the extensive and fertile districts watered by that great river.

Digitized by Google

It is divided into—1. The English town, now the oldest and most decayed portion, on King's Island, formed by a detached arm of the Shannon; 2. Irish-town, immediately S. of the above; and 3. the New Town, to the W. of the latter, called Newtown-Pery, from Pery the family name of the earl of Limerick, on whose estate it is built. Popularly the first two divisions are called the Old, and the latter the New Town. The country part of the city of the co., including Thomond Bridge on the W. side of the river, and many other extensive lines of cottages, is called the Liberties. The contrast between the different parts of the city is very striking. The Old Town is said, in the Municipal Boundary Report, to be 'one vast mass of filth, dilapidation, and misery, which nothing but the general employment of the people throughout the country can correct, because the unemployed poor are attached to the large crumbling city, where they can find, at a cheap rate, something like a roof to cover them.' The New Town, on the other hand, which has been wholly constructed within the last half century, is well-built, and the streets, which are broad and straight, cross each other at right angles. It has a handsome square, in which is a column surmounted by a statue of Lord Monteagle. The houses in the liberties are mostly mere cabins, occupied by a very poor agricultural population. The main arm of the Shannon is crossed by two bridges, one of which, Thomond Bridge, originally constructed in the early part of the 18th century, has been rebuilt; the other, or Wellesley Bridge, of 5 arches, each 70 ft. in span, a handsome structure, was completed in 1827. There are three bridges over the smaller arm of the Shannon, between English-town and Irish-town.

The co. of the city has thirteen parishes and eight parts of parishes, besides an extra-parochial district; six of the parishes being within the city properly so called, which is also the seat of the see of Limerick. The cathedral, a large Gothic pile, has a lofty tower, a handsome interior, and many monuments, among which is that of Donogh O'Brien, king of Thomond. The embattled tower of this cathedral, 120 ft. in height, commands a fine view of the city and adjacent country, including the course of the Shannon. None of the parochial churches are worth notice, except St. Minichin's church, formerly the most ancient in the kingdom, but rebuilt, which, though small, is for situation and architecture by far the handsomest sacred edifice in the city. According to the Rom. Cath. divisions, the city consists of five parishes, that of St. John being the bishop's mensal, and its church is considered the cathedral. The other places of worship are large, and some of elegant structure. There are friaries of the Augustine, Dominican, and Franciscan orders, all of which have large chapels attached to them. Nearly nine-tenths of the inhab. are Catholics. The Presbyterians, Quakers, Wesleyan and Primitive Methodists, and Independents have each a place of worship. The literary and scientific institutions are the Limerick Institution, the Mechanics' Institute, and the Literary and Scientific Society. Those for charitable purposes connected with education are the Bluecoat school, founded in 1717, and free schools attached to the parishes and friaries, in which great numbers of children are instructed. No fewer than 1,200 children are educated in the schools of the 'Christian Brothers,' to whom the city is much indebted. There are also schools founded on bequests of Mrs. Villiers and Dr. Hall. In the Old Town is a school for females, conducted by the 'Sisters of Mercy,' assisted by a small grant from the Education Board: a Sunday school is also established in it, for the females employed during the week at the lace factories. In the New Town is a large female school, conducted by the nuns of the Presentation Convent. In another school for females, 120 poor children are educated and clothed. The other charitable institutions are the county hospital; Barrington's Hospital and City of Limerick Infirmary, a large building, containing 125 beds, built and munificently presented to the city by Sir Joseph Barrington and his four sons; the Lunatic Asylum for Limerick, Clare, and Kerry, opened in 1822, cost about 30,000*l.*; it has accommodation for about 340 patients. Here is also a fever and lock hospital, and a lying-in hospital; several endowed almshouses; a Magdalen asylum; an asylum for the blind; a mendicity institution; a charitable loan fund; and a charitable pawn-office, founded by Matt. Barrington, esq., on the plan of the *Mont-de-Piété* at Paris. The Limerick union workhouse, opened in 1841, is on a large scale, being fitted to accommodate 3,450 inmates. Places of public amusement are not much encouraged. The theatre, a handsome building, was sold to the Augustine monks, and has been fitted up by them for a chapel, and a suite of assembly-rooms is applied to other purposes; but there is a small 'circus,' occasionally used as a theatre. The hanging gardens, built by Mr. Roche, are formed of tiers of terraces, raised upon arches, on the uppermost of which is a range of greenhouses, commanding a fine view of the city, river, and adjacent country. Limerick is the head-quarters of the SW. military district, and has barracks for 1,450 men.

The old corporation, which laid claim to prescriptive privileges, confirmed by a series of charters from the time of King John, consisted of a mayor, two sheriffs, and an indefinite number of aldermen, burgesses, and freemen. The corporation now consists, under the Municipal Reform Act, of a mayor, ten aldermen, and thirty councillors. The city sent two mems. to the Irish H. of C.; and from the Union to the passing of the Reform Act it sent one member to the Imperial H. of C. The last-mentioned act conferred on it the privilege of sending two mems. to the Imperial H. of C. Registered electors, 2,018 in 1865.

Assizes are held twice a year for the co. of the city, by the judges of circuit; courts of general sessions every quarter, and petty sessions every week, at which the mayor and city magistrates preside. A court of civil jurisdiction, which is empowered to hold pleas to any amount, is held on Wednesdays; and a court of conscience for suits under 40*s.* every Thursday. Civil bill cases are tried before the assistant barrister of the co., who holds a court for this purpose within the city twice a year. The income of the corporation amounts to between 7,000 and 8,000*l.* per annum. The city court-house is a plain building: the co. court-house, a handsome structure, was erected in 1810, at an expense of 12,000*l.* The prisons for the co. and city are within the municipal limits. The former, erected in 1821, at an expense of 25,000*l.*, has a Doric portico, and is, perhaps, the finest building in the city; it is constructed on the radiating plan, and is said to be well managed. The city gaol, a gloomy quadrangular edifice, is comparatively ill adapted for its purpose.

There are three institutions for the promotion of manufactures and trade; the chamber of commerce, a society of merchants, incorporated by royal charter in 1815, for the promotion and protection of trade, and who have expended considerable sums of money for these objects; the agricultural association; and the trustees for the

Digitized by Google

promotion of industry, in whom a fund of 7,000*l.* was vested by the London distress committee. Limerick, however, can hardly be said to have any manufactures. The linen manufacture, which had attained to some magnitude, and that of cotton, which had been introduced, are all but extinct. The manufacture of leather gloves, for which the city was once famous, has not entirely disappeared; though gloves, sold under the name of 'Limerick gloves,' are now not unfrequently made in Cork. There is a great deal of embroidering in lace, and three lace factories give employment to about a thousand females. Several large flour mills have also been erected; and the town has distilleries, breweries, tanneries, foundries, and a paper mill. Limerick has for many years been famed for its fishing-hooks, sent to all parts of the United Kingdom and America.

The great support of Limerick is her trade, which is very extensive. She is, as already stated, the great mart for the country traversed by the Shannon, and that immediately connected with it. Her exports, like those of most Irish towns, consist mostly of corn and provisions, including beef, pork, butter, and other agricultural produce. The imports consist principally of manufactured goods, coal and iron, tea, sugar, tobacco, wine, salt fish, and timber. The gross customs' duties amounted, in 1845, to 193,497*l.*; in 1848, to 201,855*l.*; in 1859, to 173,466*l.*; in 1861, to 155,213*l.*; and in 1863, to 153,797*l.*

This city has derived great advantages from the improvements made in the navigation of the Shannon, and the steamers introduced on that river. The estuary of the Shannon forms one of the finest bays in the world: vessels of very large burden approach within a few miles of the city; and ships of 400 or 500 tons unload at its quays. The port is managed by commissioners. On the 1st of January, 1864, there belonged to Limerick 27 sailing vessels under 50, and 16 sailing vessels above 50, tons, besides four steamers above 50 tons—the latter of a total burden of 1,299 tons. The total tonnage, sailing and steam, was 5,825 on the 1st of January, 1864; while, on the 1st of January, 1850, it amounted to 13,829, showing an immense decline within the 14 years.

Limerick was formerly fortified, and, from its commanding the first bridge above the embouchure of the Shannon, was an important military station. It was occupied, after the battle of Aghrim, by the troops of James II.: it capitulated to the English army under Ginkell, afterwards earl of Athlone, on the 3rd of October, 1691. The capitulation, or, as it has been usually called, the treaty of Limerick, was very favourable to the besieged, or, at all events, to the Catholics. But it was afterwards most shamefully violated by the conquering party, and its most important stipulations were openly set aside and trampled upon. The remains of its fortifications add considerable beauty and interest to this ancient city. 'King John's Castle,' from which the city arms are taken, forms part of the castle barracks, and the stone upon which the capitulation was signed is still in existence, and is regarded with watchful care by the citizens.

LIMOGES (an. *Lemovicum*), a city of France, dép. Haute Vienne, of which it is the cap., on the declivity of a hill, at the foot of which is the Vienne, which is here crossed by an old stone bridge of six arches, 110 m. NE. Bordeaux, and 215 m. SSW. Paris, on the railway from Paris to Bordeaux. Pop. 51,053 in 1861. Limoges is divided into the 'city' and the 'town.' The former occupies the site of the ancient Celtic and Roman city near the river, and is ill built; its streets being narrow and ill paved, and its houses built of wood above the ground floor. The latter division, which is of modern date, on the upper part of the hill, is open, well built, surrounded with pleasant promenades, and particularly healthy. The cathedral, built in the 13th century, is of granite, and in the Gothic style. It has an imposing appearance at the first glance; but, when examined in detail, it presents many incongruities. Another church, which stands in the highest part of the town, has an elegant steeple, 226 ft. in height, a conspicuous object at a great distance. The bishop's palace is a handsome modern granite building, surrounded with gardens. Limoges has a good town-hall, several hospitals, an exchange, mint, theatre, prison, cavalry barracks, public baths, and many public fountains. One of the latter, the *Fontaine d'Aigoulène*, has a basin 38 ft. in circ., supposed to be hewn out of a single piece of granite, and supplies the upper part of the town with abundance of good water, derived from an ancient subterranean aqueduct. Besides this aqueduct, few Roman antiquities are found in Limoges: the site of an amphitheatre, the traces of which existed in 1823, is now occupied by the *Place d'Orsay*. Limoges is the seat of a prefecture and royal court, tribunals of primary jurisdiction and commerce, and a chamber of manufactures. It has a royal college, university academy, diocesan seminary, royal societies of agriculture, arts, and sciences, schools of drawing and commerce, a public library with 12,000 vols., museums of natural history, antiquities, the fine arts, and machinery, a *mont-de-piété*, and many charities. Its manufactures, which are important, include glass and earthenware, broad cloths, cassimeres, druggets, and other woollen fabrics, calicoes, cotton, linen, and hempen yarn, hats, wax candles, cards, paper, glue, and other articles. It has numerous tanneries, cotton and woollen dyeing houses, and iron forges: its wax bleaching factories rival those of Mans, and its brandy and liqueurs are in high repute. Being situated at the junction of several great roads, it is an entrepôt for the trade of several déps. with Toulouse and the S. of France, and deals extensively, not only in its own manufactured goods, but in agricultural produce, salt, iron, copper, and brass wares. Marshal Jourdan, and Dupuytren, the famous surgeon, were natives of Limoges.

LIMOUSIN, one of the old provs. of France, in the central part of the kingdom, now distributed among the déps. of Corrèze, Creuse, Haute Vienne, and Dordogne.

LIMOUX, a town of France, dép. Aude, cap. arrond., on the Aude, 13 m. SSE. Carcassonne, on a branch line of the railway from Toulouse to Cette. Pop. 6,937 in 1861. The town is generally well built, paved, and lighted, and has a large parish church, a hospital, two public halls, a theatre, and a small picture gallery. It is the seat of tribunals of primary jurisdiction and commerce, and a chamber of manufactures. Its woollen manufactures produce annually from 11,000 to 12,000 pieces of broad cloth: it has also several woollen yarn factories, tanneries, and oil mills; and is an entrepôt for iron goods, in which, and in wines, oil, soap, and leather it has an active trade. Its environs are highly picturesque and fertile.

LINCOLN, a marit. co. of England, on the E. coast, having N. the Humber, E. the German Ocean, S. the cos. of Cambridge, Northampton, and Rutland, and W. Leicester, Nottingham, and York. This is a very extensive co., comprising 2,776 sq. miles, or 1,775,457 acres, of which about 1,465,000 are arable, meadow, and pasture. Though

Digitized by Google

but little diversified in respect of surface, Lincoln is naturally divided into the districts of the *Wolds*, the *Moors*, and the *Fens*. The Wolds, a ridge from 8 to 10 m. in breadth, extend from Spilsby N. to Barton on the Humber; the soil is principally sandy loam on a chalk bottom, of very various degrees of fertility, but now much improved, and generally producing very excellent crops. The Moors stretch N. and S., from the Humber to Grantham; the heath by which they were formerly covered has now mostly disappeared, and they are very productive of oats. The Fens comprise all the flat parts of the co., from Wainfleet on the Wash round by the mouth of the Nen to the borders of Rutland: most part of this district is usually included within the great level of the Fens. (See BEDFORD LEVEL.) Lincoln is one of the most productive cos. in the empire; and improvements of all sorts have been prosecuted in it for many years past with extraordinary spirit and success. Large tracts in the Wolds and Moors, which sixty years ago were all but unproductive, now yield heavy crops of barley, oats, and turnips. This great improvement has been chiefly brought about by the liberal use of bone manure, which has been applied for a longer period and on a more extensive scale in this than in any other co.

The excellence of the pastures in the Fens is well known; immense sums have been expended on their drainage, and in the recovering of land from the sea. Formerly the Fens were frequented by vast numbers of aquatic fowl; but since their drainage these have much fallen off, and the *decoys* for their capture are now of much less importance: geese, however, are still bred in considerable numbers, and are regularly plucked four or five times a year for their feathers. Previously to the improvement of the Wolds, rabbit warrens were very common, but they are now comparatively scarce. The native sheep of the Fens were remarkable for their size and the extraordinary length of their wool; they have, however, been so much crossed with New Leicesters, that it is difficult to find one of the genuine breed. Some of the finest of the London dray-horses are bred in the Fens. The cattle depastured in the Fens are principally short-horns, and attain to a great size.

Property very variously divided, there being estates of all sizes, from 25,000*l.* a year down to 5*l.*, but the great majority small. In the district called the Isle of Ancholme, in the NW. part of the co., between the rivers Trent and Ancholme, the inhab. live together in hamlets or villages as in France, and almost every householder is a proprietor, their properties varying from 1 to 50 acres. They are very industrious and thrifty. Size of farms various: in the Wolds and Moorish district they are mostly very large, but elsewhere they are rather small. They are generally held under leases of 7 and 14 years. Manufactures and minerals of little importance. The custom of *borough English*, by which, if the father die intestate, the younger son succeeds to the paternal property, to the exclusion of his elder brothers, prevails at Stamford in this co. Principal rivers, Trent, Witham, Welland, and Ancholme. The Witham has been made navigable from Boston to Lincoln; and the Fossdyke canal extends from the latter to the Trent, near Torksey, completing an internal navigation between the Wash and the Humber. The co. is popularly divided into the parts of *Lindsey* on the N., *Kestevan* on the SW., and *Holland* on the SE., and contains 33 hundreds, wapentakes, and sokes, with the city of Lincoln and the bors. of Stamford, Boston, and Grantham. It is divided into 629 parishes, and sends 13 mems. to the H. of C., viz. 4 for the co., 2 for the city of Lincoln, 2 each for the bors. of Boston, Grantham, and Stamford, and 1 for Great Grimsby. Registered electors for the co., 21,632 in 1865, being 12,372 for North Lincolnshire, and 9,260 for South Lincolnshire. At the census of 1861, the co. had 86,626 inhab. houses, and 404,143 inhabs., while in 1841 it had 72,964 inhab. houses, and 362,602 inhab. Gross annual value of real property assessed to income tax under schedule (A) in 1862: for North Lincolnshire, 1,650,176*l.*, and for South Lincolnshire, 1,398,096*l.*

LINCOLN, a city, par. and mun. bor., and market town of England, cap. of the above co., on the Witham, 36 m. S. Hull, and 121 m. N. London by road, and 138½ by Great Northern railway. Pop. of city, 20,999 in 1861. The city is situated on the S. slope and at the foot of a hill, on the top of which is the cathedral, a striking object for many miles round. The streets are irregularly laid out; the largest and handsomest runs N. and S. up the hill on which the cathedral stands. A small part of the town, comprising two pars., is on the S. side of the river, and is connected with the main body by one principal and two smaller bridges. The streets are well paved, lighted with gas, and supplied with water from public conduits. The principal and most interesting public building is the cathedral, erected at different times, from the 12th to the 15th century, and exhibiting several varieties of architecture: the prevailing style, however, is early English, of a particularly rich and beautiful character. The closeness of the surrounding buildings is a great disadvantage to the display of architectural effect; but there is a tolerably open space towards the E. The church consists of a nave with its aisles, four transepts, a choir, chancel, and ladye-chapel: three towers rise above the building, two at the W. end, 180 ft. high, and one at the intersection of the nave and transepts, rising 303 ft. above the floor: they are all gorgeously decorated with varied tracery, pillars, pilasters, and windows. The W. and principal front, in which are three fine doors, is distinguished by its beauty and magnificence; and, from the variety of its styles, is certainly the workmanship of three distinct and distant eras. The interior dimensions are as follows:—'Entire length, 482 ft., of which 222 ft. belong to the nave, and the rest to the choir and ladye-chapel; width of choir and nave, 80 ft.: height of ditto, 80 ft.; and width of W. front 174 ft.; length of principal transepts, 222 ft.; breadth of ditto, 66 ft. The great transepts, at the ends of which are circular windows, exhibit a good specimen of the English style; and the aisles on the E. side are divided into chapels and vestries: the choir, which is parted off from the nave by a stone screen, is of most elaborate composition; and the great E. window ranks as the second in England, in point of size and fine proportions. Attached to the E. side of the cathedral is the chapter-house, a structure differing from most others of the same nature in being *ten-sided*, and not octagonal: its groined roof is supported by an umbilical pillar, consisting of a circular shaft, cased by ten small fluted columns. The cloisters are on the N. side, and over them is the library, built by Dean Honeywood, at the end of the 17th century, containing a large collection of books, with some curious specimens of Roman antiquities. The cathedral bell, or 'Great Tom of Lincoln,' originally cast in 1610, having been cracked, was recast, with 6 other bells, into the present large bell and 2 quarter bells. The diameter of the great bell is 6 ft. 10½ in., and its weight 5½ tons, or about a ton

Digitized by Google

heavier than the old one. At the time of the dissolution, Lincoln cathedral was one of the finest and most sumptuously adorned in the kingdom. There were then taken from it 2,621 oz. gold, and 4,285 oz. silver plate, besides precious stones of great value. It had formerly many costly sepulchres and monumental records; but the zealots at the Reformation either pulled them down or defaced them, so that, in 1549, scarcely a perfect tomb remained; and the little they left undestroyed was demolished by Cromwell's soldiers, by whom the cathedral was converted into barracks. The ruins of the bishop's palace, which was destroyed at the last mentioned epoch, stand S. of the church, and comprise a fine hall, an old gateway, and part of the kitchen. Adjoining these ruins, a modern house has been erected, which is occupied by the bishop during his stay in Lincoln. (See Britton's Account of Lincoln Cathedral.)

Among the tombs yet in a tolerably perfect state are those of Catherine Swinford, wife of John of Gaunt, duke of Lancaster, of their daughter Joan, and of several bishops and deans of the cathedral. The present establishment comprises a bishop, dean, precentor, subdean, chancellor, and 38 prebendaries, with 4 vicars-choral and 20 choristers. The cathedral revenues, which nett 6,986*l.* a year, are equally divided between the dean, precentor, subdean, and chancellor; and the vicars-choral divide 115*l.* yearly. Besides monasteries, nunneries, and other buildings devoted to pious uses, Lincoln had formerly upwards of 50 churches; but of these only 12 remain, exclusive of the cathedral, most of them being small and much mutilated. St. Peter's at Gowts, evidently an old conventual church, and 3 other churches S. of the Witham, have lofty square Norman towers. Some new churches have been recently built by subscription. There are several places of worship for R. Catholics, Wesleyan Methodists, and other Dissenters, and attached to them are Sunday schools. The national school (also a Sunday school) has, on the average, above 500 pupils. The grammar school, held in the Grey Friars chapel, was founded in 1583: it is well endowed, and the instruction, not confined to classics, is given by an upper and under master, who, in addition to their salaries from the corporation, receive fees from the boys, and take boarders. The Bluecoat school, established in 1602, is endowed with landed property worth above 2,000*l.* a year, and furnishes clothing and instruction (with apprentice-premiums on leaving) to 56 boys. Wilkinson's school furnishes instruction to 16 boys. Lincoln is very rich in endowed charities, among which, as one of the principal and most useful, may be mentioned Sir Thomas White's loan-fund, for deserving and needy tradesmen, the assets of which are estimated at 850*l.* A general dispensary, lunatic asylum, county hospital, and lying-in hospital, are the chief modern charities; and a flourishing mechanics' institute, several libraries, 2 news-rooms, and some book societies, are well supported. Among the buildings devoted to civil purposes are the co. gaol and court-house, rebuilt from Smirke's designs, on the site of the old castle, a few remains of which are still standing on the hill W. of the cathedral. The co. gaol, constructed on Howard's plan, is well conducted. The guildhall is an ancient Gothic building, but the borough court-house is modern, and the gaol is stated to be too small to admit of the classification of prisoners. The market-house, a small theatre, and an assembly-room, are the only other public buildings; but there are several markets. W. of the town is a good race-course, near which is a large building now dismantled, but used during the late war as a military *dépôt*. As respects ancient remains, few towns in England exhibit so many and so interesting as Lincoln. Saxon, Norman, and pointed arches, doorways with turrets, walls, mullions of windows, and other fragments, appear in every direction. Leland says there were '5 gates in the waulls of the citie;' and of these the Chequer Gate in the Close, and the Stonebow crossing the High Street, are still in good preservation. John of Gaunt's palace and stables present some good examples of the Norman and early English style.

The trade of Lincoln consists chiefly in the exchange of the raw produce of the surrounding district for manufactured and other commodities. Large quantities of flour are sent to Manchester and London. There are some tanyards, malthouses, and tobacco manufactories, and extensive breweries produce excellent ale. It communicates by the Foss-dyke canal with the Trent; and the Witham navigation, running SE. past Boston, connects it with the North Sea. It has two railway stations, and is connected by railways with all parts of the country.

Lincoln received its first charter from Henry II., which was confirmed by several subsequent monarchs, its governing charter till 1837 being that of Charles I. Under the Municipal Reform Act the city is divided into 2 wards, and is governed by 6 aldermen (one of whom is mayor), and 18 councillors. It has also a commission of the peace under a recorder. The assizes and quarter sessions are held for the city and co. Corporation revenue 6,086*l.* in 1862.

Lincoln has regularly sent two mems. to the H. of C. since the reign of Henry III., the electors previously to the Reform Act being the freemen of the city. The Boundary Act includes the insulated part called the bail and close in the parl. bor.; and those districts round the city called the liberties, which previously had not been represented, were added to the co. Registered electors 1,688 in 1865. Lincoln is likewise the election town for the N. division of the co.

Lincoln stands on the line of the great Roman road called *Ermine Street*, and derives its name from its occupying the site of the Roman military station called *Lindum*. It was fortified by the Saxons; and, at the time of the Domesday survey, was one of the richest and most populous cities of England, having 1,070 houses and an extensive trade. The castle was built by William the Conqueror in 1086; and the prosperity of the town was further advanced by Henry I., who cleared out the foss-dyke, and made it navigable. The town was annexed to the duchy of Lancaster at the end of the 13th century; and, about the middle of the 14th century, it was inhabited by the celebrated John of Gaunt, duke of Lancaster, who not only improved the castle, but procured for the town many valuable privileges. In the civil wars of Charles I. the king came to Lincoln, and convened the nobility and freeholders of the co. The inhabitants promised to support the royal cause, but in 1643 the city was in the hands of the parliamentarians. The royalists recaptured it, but were again dispossessed, both of the town and castle, on the 5th of May, 1644.

LINDFIELD, a town and par. of England, co. Sussex, hund. Burley-Arches, rape of Pevensey, 14 m. N. by E. Brighton, and 33 m. S. London. Pop. of par. 1,917 in 1861; area, 5,350 acres. The town deserves notice for its useful institution for instructing poor children of both sexes not only in reading and writing, but also in the processes of agriculture, and various manual operations, as spinning and netting, printing and shoemaking.

Digitized by Google

There is a benevolent society, giving pecuniary and other relief to poor persons not willing to receive parochial aid. The church is an old structure of plain exterior, with a low square tower; the living is a curacy in the gift of the archbishop of Canterbury. There are two places of worship for Dissenters. Fairs for cattle and horses, May 12; and for sheep and lambs, Aug. 5.

LINGEN, an isl. of the E. Archipelago, off the NE. coast of Sumatra, lying on the equator, and near lat. 105°. It is about 50 m. in length, by 30 in its greatest breadth; having a healthy climate, and producing abundant supplies of fruit and poultry. Its geological formation indicates the presence of tin, and it furnishes some little gold. Its inhabs. may be considered as presenting the type of the Malay race in its greatest purity.

LINLITHGOW, a royal and parl. bor. of Scotland, co. Linlithgow, of which it is the cap., in a valley on the S. bank of a lake of the same name, 15 m. W. by S. Edinburgh, on the railway from Edinburgh to Glasgow. Pop. 3,693 in 1861. The town consists of one main street, along the line of road between Edinburgh and Falkirk, with several lanes branching off on both sides. The houses, with few exceptions, have an ancient and decayed appearance; the streets are lighted with gas, and macadamised. In addition to the townhall and gaol, the most prominent public building is the parish church, erected in the 12th century, but afterwards much enlarged and repaired. This, which is one of the best specimens of Gothic architecture in Scotland, is 182 ft. in length, 100 in breadth, including the aisles, and 90 in height, exclusive of the steeple; the latter, rising about 140 ft. above ground, terminates in an imperial crown. The exterior had formerly a row of statues, of which one only remains, that of St. Michael, the tutelary saint of the borough. It is divided by a partition wall, the eastern half only being used as the parish church, the other is unemployed.

The royal palace of Linlithgow is finely situated on an eminence projecting into the lake. This magnificent ruin is of a quadrangular form. It was begun so early as the 12th century, and was greatly enlarged and improved by James V.; but was not finished till the reign of James VI. (James I. of England), who built the N. side of the quadrangle, after his visit to Scotland in 1617. The W. side of the palace is the most ancient, and here the apartment is still pointed out where the unfortunate Queen Mary first saw the light on the 7th of December, 1542. The palace was entire and habitable till 1746, when it was burnt, either intentionally, or through accident, by the troops under general Hawley. It covers an acre of ground, and though roofless, ruined, and desolate, its appearance sufficiently justifies the not very poetical eulogium of Scott:—

> 'Of all the palaces so fair,
> Built for the royal dwelling,
> In Scotland, far beyond compare,
> Linlithgow is excelling.'
> Marmion, canto 4, stanza 15.

The hexagonal Cross Well, in front of the townhouse, about 20 ft. in height, is surmounted by a lion rampant supporting the arms of Scotland. The sculpture, by which it is adorned, is very complex; and the water is made to pour in great profusion from the mouths of 13 grotesque figures. This well, constructed in 1805, is said to be a facsimile of one previously existing, constructed in 1620.

The Free Church, the Associate Synod, and Independents have places of worship. The poor, as in other Scotch towns, are supported partly by the interest of certain funds left in mortmain for the purpose, and by the church collections, and partly by a rate. There is a bor. school endowed by the town, but no parish school. There are sundry schools in the parish, all unendowed except the one referred to; and it is supposed that about 1-9th part of the pop. is at school. There are various reading-rooms and a mechanics' library. Linlithgow has little or no trade, but depends chiefly on its advantages as a provincial capital. Tanning and preparing leather, said to have been introduced by the soldiers of Cromwell, is the oldest and the staple branch of business, giving employment to nearly 100 hands. There are two extensive distilleries, a brewery, and a small glue manufactory, and a few hand-loom weavers (cotton and linen). The Union Canal, between Edinburgh and Glasgow, and the Edinburgh and Glasgow railway, pass close along side the town. Blackness, on the Frith of Forth, 5 m. distant, is its port.

Linlithgow was made a royal bor. in the 12th century. In 1513, in an aisle of the par. church, the apparition is said to have appeared to James IV., that warned him against the expedition into England which terminated in the fatal battle of Flodden. (Pitscottie's Hist. of Scotland, i. 264, 265.) When passing through this town, on the 23d Jan. 1570, the Regent Murray (illegitimate brother of Q. Mary) was shot by Hamilton, of Bothwellhaugh, partly in revenge for a private injury, and partly from political motives. The house whence the shot was fired has been taken down and replaced by a modern edifice. The White or Carmelite Friars had a monastery here, founded in 1290; but all traces of it have disappeared. In addition to certain town dues, the municipal property consists chiefly of land; and the ancient custom of annually *riding the marches*, though disused in almost every other bor. in Scotland, is here regularly observed. Corporation revenue, 380*l.* in 1863–4; number of councillors, 16. Linlithgow unites with Falkirk, Airdrie, Lanark, and Hamilton, in sending a mem. to the H. of C. Registered voters 131 in 1865.

Linlithgow. See Lothian (West).

LINTON, a market town and par. of England, co. Cambridge, hund. Chilford, 10 m. SSE. Cambridge, 42 m. N. by E. London, on the Great Eastern railway. Pop. of par. 1,833 in 1861. Area of par. 3,663 acres. The town, which stands on the line of a Roman road, and at the foot of the chalk downs communicating with the Chiltern range, comprises several irregular streets and lanes, lined in part with good brick houses, but with a much greater number of low thatched cottages. The church is a low structure in the pointed style with a high embattled tower and handsome interior, the living being a vicarage in the gift of the bishop of Ely. There are places of worship, also, for Wesleyan Methodists and Baptists, and two Sunday schools, one of which belongs to the church. The market house is a small square building. Tanning is the chief trade of the place, and in the neighbourhood are extensive nursery grounds occupied by gardeners, florists, and seedsmen, who take their produce to the Cambridge market. Markets on Thursday; fairs for horses and lambs, Holy Thursday and July 30.

LINTZ, or LINZ, a city of the Austrian dom., cap. of Upper Austria, on the Danube, 41 m. SE. Passau, and 96 m. W. by N. Vienna, on the railway from Vienna to Munich. Pop. 30,323 in 1857. Linz consists of the city proper and three suburbs, which, as in Vienna, are more extensive

Digitized by Google

than the city itself. The houses are stuccoed and painted, chiefly white, but many yellow or light brown. Almost all have architectural decorations and columns, friezes over the windows, and Venetian blinds outside. Balconies with flowers meet the eye at every turn; and not only on the broad, spacious 'Place,' but in the back streets also, the houses are lofty and elegant. The principal streets are wide and regular, though most of them badly paved, and the houses shingle-roofed. Linz has few remarkable public buildings. The churches are generally handsome; several have glittering cupolas, and many are richly gilded and adorned with good paintings. The *Landhaus*, formerly a Franciscan convent, is the place of assembly for the states of the prov., and accommodates the principal government offices. The *schloss*, or castle, on an eminence overlooking the Danube, was once the residence of the dukes of Austria, but is now the prison and penitentiary for the prov. A bridge, 280 yards in length, connects the city with the opposite bank of the Danube. In the principal square is a marble column, erected in 1723, between statues of Jupiter and Neptune, to commemorate the escape of the city from the double attack of the plague and the Turks.

Lintz is among the few German towns not encircled with continuous walls. Under the superintendence of the late archduke Maximilian, it has been surrounded with a chain of 32 isolated forts, 23 being on the right, and 9 on the left bank of the Danube, at the distance of 1, 2, or 3 m. from the town. They communicate with each other by a covered way, and are placed at regular intervals in the plain or along the slopes and tops of the hills, in a circuit of 9 m. The highest eminence near the city, the Pöstlingberg, on the opposite side of the Danube, is surrounded by a circlet of 5 towers, forming a citadel. Each tower is 30 ft. high and 80 ft. in diameter, built within a hill of sand, and sunk into the earth, so that the roof alone projects; and each has a glacis on the side farthest from the town. Each consists of 3 stories, the lower serving as a storehouse and a powder-magazine, the middle as a lodging for troops, the third being the platform on the summit, which, when not used, is covered by a temporary roof. The platform is mounted with 10 guns, so arranged that they can be brought to bear upon any point with the greatest facility, and command the glacis by a cross-fire in every direction.

Lintz is the seat of the provincial government, and the assembly of nobles for Upper Austria, and of tribunals and councils for the Mühl circle and the city, and is the see of a bishop. It has a lyceum, where courses of lectures are given in theology, philosophy, and medicine: the library belonging to this institution comprises about 40,000 vols. Drawing-schools and collections of mathematical and philosophical instruments are attached to the lyceum. It has also a gymnasium, an ecclesiastical seminary, a provincial academy of arts, an imperial collection of economical models, a normal high school, and school of arts, with 3 subordinate schools, 2 military schools, a school of engineering, a female school attached to the convent of the Ursuline nuns, and other seminaries; a military and another large hospital, various charitable institutions, a private deaf-and-dumb asylum, and a musical society, with large barracks, a custom-house, a bank, and a small but fine theatre. The public gardens in the vicinity are favourite places of resort.

Lintz has a large imperial factory of broad cloth, carpets, and other woollen stuffs, which occupies 7 contiguous houses, and is said, at one period, to have employed directly and indirectly 23,000 individuals; but the introduction of machinery has since occasioned a material diminution of the numbers employed. Considerable quantities of the red woollen caps made here are sent to Turkey. Lintz has other woollen factories, with manufactures of cotton and silk goods, leather, gold lace, cards, and tobacco. Two fairs are held annually, one at Easter and the other at the Assumption; and the transit trade by the Danube, since Lintz became a station for the steamers on the river, is very considerable. Two railways meet at Lintz: one goes N. to Budwies in Bohemia, 67 m., and was one of the first constructed in Germany, and the other to Salzburg and Munich.

Lintz is supposed to have been known to the Romans, and it is said to possess some Roman antiquities. It was purchased by Leopold II., margrave of Austria, in 1036. In 1626, during the civil war of Upper Austria, it opposed a long and successful resistance to Fahdinger, the peasant leader, who was mortally wounded before its walls. The suburbs were then, however, destroyed by fire, and the castle and a part of the city suffered severely from the same cause in 1800.

LIPARI ISLANDS, a group in that part of the Mediterranean, called the Tyrrhenian Sea: they are a dependency of Sicily, from the N. coast, of which they are from 10 to 40 m. distant, forming a part of the intend. of Messina, between lat. 38° 20′ and 38° 55′ N., and long. 14° 15′ and 15° 15′ E. Aggregate pop. of the group estimated at 22,000, of whom about 12,500 belong to the town of Lipari. There are 7 principal islands, Lipari, Vulcano, Stromboli, Salini, Panaria, Felicudi, and Alicudi, and a number of adjacent islets and rocks. They are all mountainous, rising abruptly on their W. side, and shelving down gradually towards the E.; and, in addition to this uniformity, each island, with scarcely an exception, has a high isolated rock off its N. shore, a peculiarity extending even to the distant isle of Ustica. They are evidently of volcanic origin, being composed chiefly of hornstone and granite, covered with lava, scoriæ, pumice stone, and other volcanic products. Stromboli (which see), the most northerly of the islands, has the only volcano in Europe which is in constant activity. Lipari and Vulcano have also craters in which volcanic phenomena are occasionally manifest. Dolomieu and others suppose, with some show of reason, that Panaria, and the adjacent islets of Dattolo, Basiluzza, Lisca, &c., which are circularly disposed, once formed parts of the rim of the crater of an immense volcano, which has now disappeared under the waves, but which may have been the *Evonymus* of the ancients. (Dolomieu, pp. 105–108.)

The climate is highly salubrious, and the air pure and refreshing; storms and earthquakes are, however, frequent. Where the volcanic substances have been decomposed so as to form soil, it is very fertile; but it absorbs moisture so rapidly, that the inhab. are obliged to construct capacious cisterns, in which rain-water is carefully preserved for irrigation and other purposes. Lipari, the central and largest of these islands, is about 18 m. in circuit. It was peopled by a colony of Cnidians, and is described by Strabo as having a fleet, and commanding the other islands. (Strabo, lib. vi.) Its interior is rugged and broken, presenting hills of vitrified volcanic substances, which, though at least 3,000 years old, present no symptoms of decomposition; but it has, notwithstanding, two considerable plains and some deep valleys, which are well cultivated and productive. Exclusive of about a three months' supply of corn, it produces large quantities of fruit, especially grapes, with figs, prickly pears, olives, &c.: it also produces cotton,

Digitized by Google

beans, and peas. Some wine is made; that called Malvasia being highly esteemed in Naples. Most of the grapes are, however, converted into raisins: they are prepared by placing the ripened grapes in an alkaline ley of ashes, more or less impregnated with salt, and afterwards exposing them to the meridian sun. By this means, an extremely luscious raisin is produced. The agricultural products of the other islands are much the same as those of Lipari: in some, a few oxen are reared, but cattle are generally scarce and lean, the pastures being fit only for goats. Lipari was celebrated in antiquity for its hot springs and sudatories; they are now, however, but little used. The only spring in the island is hot. (Russell's Sicily, p. 274.) Lipari is the great magazine whence Europe is supplied with pumice-stone, its surface being almost wholly composed of that singular substance. Though so abundant in that island and Vulcano, pumice-stone is not found either in the neighbourhood of Etna or in the regions of extinct volcanoes on continental Europe, and only in small quantities in Vesuvius. It is of various kinds and degrees of specific gravity, one variety being so light as to float on water. It is used to polish marble, metals, pasteboard, &c., and fetches from 8*l.* to 10*l.* a ton in the London market. Other volcanic products, as sulphur, nitre, sal ammoniac, pozzolana, bitumen, &c., are among the chief exports from the Lipari Islands, and in these an active trade is carried on. The principal crater in Vulcano, the most S. of the islands, is covered with efflorescences and incrustations of the above products. Alum, however, which was formerly a great staple, and from which the Romans anciently derived a considerable revenue, and the Lipariot merchants great profits, now scarcely exists as an article of commerce: the failure of its production is supposed to be owing to a diminution in the intensity of the subterranean fires.

Sulphur is still exported, but not to the extent that it might be, from the notion that the vapour arising from its purification infects the air and injures vegetation. Salina is so called from the salt-pans on its SE. shore, which produce enough of that article for the supply of all the islands. The *pinna marina*, from whose silky filaments the Romans made imperial robes, abounds on the shores of Salina. Next to pumice stone, wine, raisins, currants, olives, salt, and sulphur, soda. capers, coral, and fish are the chief articles of export. The natives are generally poor, though few are in the extreme of poverty. They are industrious, hardy, and make good seamen; but they are immoral, filthy in their habits, and infested with scabies. (Dolomieu, Voyage aux Iles de Lipari, 1–140; Smyth's Sicily, 248–279.)

These islands were called *Hephæstiades* by the Greeks, and *Vulcaniæ* by the Romans, from their emitting smoke and flames; such places being supposed to be either inhabited by, or under the immediate protection of, Vulcan. Vulcano, however, was more especially sacred to the god of fire, and is said by Virgil to be

'Vulcani domus, et Vulcania nomine tellus.'

They were also frequently called *Æolian* Isles, from Æolus, one of their sovereigns. This prince having learned, according to Pliny, to foretell, from observations made on the smoke of the volcanoes, the coming changes of the winds, was said by the poets to have the latter under his command. (Hist. Nat., lib. iii. cap. 9.) Virgil has described the power and functions of Æolus, as ruler of the winds, in one of the finest passages of the Æneid:—

'Hic vasto rex Æolus antro
Luctantes ventos tempestatesque sonoras
Imperio premit ac vinclis et carcere frænat.
Illi indignantes magno cum murmure montis
Circum claustra fremunt. Celsâ sedet Æolus arce,
Sceptra tenens, mollitque animos et temperat iras.
Ni faciat, maria ac terras cœlumque profundum
Quippe ferant rapidi secum verrantque per auras.'
Æneid, i. lin. 56–63.

LIPARI, the cap. town of the above group of islands, and of a canton under the intend. of Messina, in Sicily, on a steep declivity on the E. side of Lipari Island; lat. 38° 27′ 56″ N., long. 14° 57′ 50″ E. Pop. 19,237 in 1862. The town is healthy but crowded, irregular, and dirty, with narrow streets and ruinous public edifices; of which last the finest are the Capuchin convent, a hospital, a nunnery, and the bishop's palace. The castle, which encloses the cathedral and some other edifices, is erected in a commanding situation, on the summit of a huge volcanic rock. From fragments of a Cyclopean wall and other remains, it is conjectured that this was the identical Acropolis which the Romans, about *anno* 259 B.C., attempted to carry by escalade, but were repulsed and driven back with great loss by the Carthaginians under Hamilcar. The greater part of the present fortress was built by Charles V., after Barbarossa had plundered the town in 1544. The cathedral is a neat edifice, but has been much injured by lightning. A college is established here, under which are 8 schools in different parts of the islands. Several Greek and other antiquities exist in and round the town: an excellent statue on the Marina, supposed to have been erected in honour of Timasitheus, has, 'by the addition of a copper nimbus, been converted into a saint.' Lipari has an active trade in the produce of the islands with Messina, Palermo, Naples, &c. Its bay or harbour, nearly 2 m. in circuit, has deep water and tolerably good holding ground, but, from want of a mole, it is not at all times secure. (Smyth's Sicily, 263, 264, and Appendix.)

LIPETZK, a town of Russia in Europe, gov. Tambof, on the Voroneje, an affluent of the Don, 80 m. W. by S. Tambof. Pop. 12,335 in 1858. The town has several churches, most of them of wood. It had, at the end of the last century, an imperial cannon foundry, employing nearly 1,500 hands, but it appears to be no longer in activity. A mineral spring, frequented by numerous visitors, was converted into a spa under the auspices of Peter the Great, a statue of whom was erected in the town by one of its citizens, in 1839.

LIPPE-DETMOLD, a principality of NW. Germany, between lat. 51° 47′ 30″ and 52° 11′ N., and long. 8° 35′ and 9° 20′ E., having NE. and E. territories belonging to Hesse-Cassel, Hanover, Waldeck, and Prussia, and being elsewhere surrounded by Prussian Westphalia. Area, 445 sq. m. Pop. 108,513 in 1861. The great majority of the inhabitants, with the reigning family, are Calvinists. The country is in general hilly, especially its SW. part, where the *Teutobergerwald* separates the basins of the Rhine and the Weser. The latter river forms a part of the N. boundary: the Werra, one of its tributaries, is the other principal stream of Lippe-Detmold. The climate is one of the mildest and most agreeable in N. Germany. The mean temperature of the year, in the valleys and plains, is about 49° Fah.; and that of the winter, no lower than 35° Fah. Agriculture is the chief occupation of the inhabs. Corn, of various descriptions, beans and peas, rape seed, flax, and hemp are the principal articles of culture. The country is well wooded, particularly with oak and beech; and timber is one of its most important products. A good many sheep

Digitized by Google

and hogs, and excellent horses, are bred; and the rearing of bees is extensively pursued. About 20,000 centners of salt are annually produced from salt springs; and marble, lime, and iron are obtained in small quantities. The weaving of linen fabrics, and the spinning of linen yarn from the flax produced in the territory, partially occupy the rural pop. There are some woollen cloth and glass factories, tanneries, distilleries, and paper-mills; and Lemgo, the chief town, has a manufacture of *meerschaum* pipe-bowls. These articles, after timber, linen stuffs, and yarn, and cattle, are the chief articles of export. The government is a constitutional and hereditary monarchy, remodelled in 1836; and vested in the prince and a representative body, or diet, of 14 members; 7 elected by the nobility and knights and 7 by the inhabs. of towns and rural distr. The diet is convoked every 2 years, and no new tax can be imposed without its consent. Appeal lies from the civil and criminal tribunals of the principality to the high court at Wolfenbuttel. The people are better informed than in many parts of Germany, the princes of Lippe-Detmold having, for a lengthened period, been liberal patrons of public instruction. The gymnasium at Lemgo, and the high school and teachers' seminary at Detmold, are in high estimation, many celebrated scholars of Germany having received the early portion of their education at one or other of those establishments. Lippe-Detmold furnishes 1,202 men to the army of the German Confederation: it has one vote in the full council of that body; and, along with other small states, a vote in the committee.

Detmold, the capital, and residence of the prince, and seat of government and of the superior judicial courts, on the Werra, 54 m. E. Munster, had 4,012 inhabs. in 1861. Lemgo, on the Bega, the largest town in the principality, had, in the same year, 5,130 inhabs., with a seminary for noble females, and an orphan asylum.

LIPPE SCHAUMBURG. See Schaumburg-Lippe.

LIRIA, a city of Spain, prov. Valencia, 18 m. NW. Valencia. Pop. 8,920 in 1857. The city partly occupies a space between two hills; but it is partly, also, on an acclivity, the summit of which is crowned by the ancient public church *de la Sangre*. Another parish church, a chapel, and two monasteries are the only public buildings; and the town generally has a mean and neglected appearance. Its inhab. are principally employed in the distillation of brandy, soap-boiling, tanning, tile-making, and the weaving of linen fabrics. The neighbourhood is well irrigated, and extremely productive. The marble quarried near Liria is celebrated for its whiteness and fineness of grain. Its existence is traced by the Spaniards up to the time of the Carthaginians, who founded here the town of *Edera*. Under the Romans it was called *Edeta*, and was the cap. of the country of the *Edetani*. Having passed successively into the hands of the Goths and Moors, it was finally added to the crown of Arragon in 1252.

LISBON (Port *Lisboa*; an. *Olisipo*, and afterwards *Felicitas Julia*), the cap. city and principal seaport of Portugal, in the comarca of its own name, on the right bank, and near the mouth of the Tagus, 172 m. S. Oporto, 220 m. NW. Cadiz, and 320 m. WSW. Madrid, on the terminus of lines of railway from Oporto and Madrid. Pop. 250,682 in 1858. The city, seen from the river, covering several hills with palaces, churches, convents, and dazzling white houses, that rise more or less abruptly from the quays, has a magnificent and imposing appearance; but, when the traveller has landed, the delusion vanishes. Nothing can be more literally correct than Byron's description of Lisbon:—

> 'Whoso entereth within this town,
> That, sheening far, celestial seems to be,
> Disconsolate will wander up and down,
> 'Mid many things unsightly to strange ee;
> For hut and palace show like filthily;
> The dingy denizens are rear'd in dirt;
> Ne personage of high or mean degree
> Doth care for cleanness of surtout or shirt;
> Though shent with Egypt's plague, unkempt, unwash'd, unhurt.'
> Childe Harold, cant. 1.

The streets are badly paved and generally narrow, and the houses, with here and there a latticed window, have a melancholy appearance; while in filthiness and impurity of every description Lisbon may vie with Constantinople. Mrs. Baillie, who resided here for more than two years, describes its streets as sending forth 'the most pestilential effluvia. Dogs of every mongrel breed, lank, lean, and voracious, lie about the streets in alarming numbers. Indeed, Lisbon maintains no other scavengers.' The police, however, has been improved, and scavengers now cleanse the wider streets; but the greater part of the city is still worthy its ancient notoriety for the want of cleanliness and even decency. The E. quarter of the town not having been destroyed by the earthquake of 1755, is the oldest, and has very narrow irregular lanes, skirted by high old-fashioned and half-ruinous houses; but lower down in the plain to which the ravages of that calamity were confined, the town has been rebuilt in a regular manner, and excellently paved, and there are a few squares and open spaces, which contrast strikingly with the mean appearance of other parts.

Lisbon is an open town; and its suburbs are so nearly connected with it, that it is difficult to define its limits. Measuring from the small river Alcantara eastward to the termination of the continuous buildings, it is found to be about 3½ m. in length; the breadth varies from 1 m. to 1½ m., so that its total area comprises about 3,000 acres. The whole of this space, however, is not covered with buildings; for in many parts there are extensive plantations and gardens, public squares, and a vast extent of ground unoccupied except by ruins and rubbish, the monuments of the catastrophe of 1755. Some houses also have been thrown down, and others greatly injured by subsequent shocks; and there is, perhaps, no great presumption in anticipating, owing to the frequency of these phenomena, that Lisbon may one day or other again become the subject of a similar calamity to that by which it was so nearly destroyed. One of the largest squares is the *Praça do Commercio*, in the centre of which is the equestrian statue, in bronze, of Joseph I. The front, towards the river, is open, and flights of stone steps descend from it to the water: on the E. side are the custom house, E. India house, and exchange; the public library is on the W. side, and facing the river stands a fine building called the *Junta do Commercio*. The *Rocio* is another fine square, communicating with that last mentioned by several well-built and uniform streets. In this square were celebrated the *Autos da fé*, which once disgraced Portugal even more than the rest of Catholic Europe. Of these streets, one, the *Rua d'Ouro*, is chiefly occupied by goldsmiths and jewellers: the silversmiths live in the *Rua da Prata* (Silver Street), and a third is filled with the shops of cloth merchants and embroiderers. The haberdashers and other tradesmen have likewise their streets, called after the trade to which they are appropriated. Among the other squares and remarkable places of Lisbon may be mentioned

Digitized by Google

the *Praça da Figueira*, used as a market for fowls and vegetables; the *Praça das Amoreiras*, in the centre of which is a large reservoir, whence water is supplied to the various fountains of the city; and the *Praça de Alegria*, now as formerly celebrated as the Rag-fair of Lisbon. The *Salitre*, leading from the *Passeio Publico* in the N. quarter of Lisbon, forms a cool and shady promenade; the quarter of Buenos Ayres, on the slopes W. of the town, is airy and pleasant, comprising many handsome residences; and a line of good streets runs westward over the bridge of Alcantara, connecting Lisbon with the suburb of Belem. The houses above the shops, and many others also, are let in separate floors, as at Madrid and Paris; and a common passage, not remarkable for cleanliness, leads to the door and staircase of each. The police, so inefficient during the peninsular war, that Byron might correctly have pictured Lisbon as

'That purple land, where law secures not life.'

was much improved after the peace by the establishment of Novion's police; but this useful body was broken up at the time of Don Miguel's expulsion, and property as well as life are almost as unsafe as ever. The streets, with the exception of a few great thoroughfares, are scarcely lighted at all. There are plenty of fountains; but water is not used to clean the streets, and there is no attempt at sewerage. Fires are frequent; but they are not destructive, owing, in part, to the solid construction of the buildings, and in part to the unfrequent use of domestic fires, and the formation of the *agoadeiros* or Galician water-carriers into corps, stationed at different parts, to convey water from the fountains on the first alarm. These, of whom there are about 7,000, are generally employed in Lisbon to carry burdens and perform the more severe labour. The work of porters, however, at the custom-house and India house is done by the Portuguese, to the entire exclusion of the Gallegos.

Few cities of Europe are so scantily supplied with fine public buildings. The custom-house, exchange, and India-house are large and handsome; but, besides these, there are scarcely any except the churches and convents, which crown the hills, and look like palaces and fortresses. Some of the former, rebuilt since the earthquake, are very spacious, and profusely decorated in the worst taste. The principal of these are, 1. the cathedral, a large Moorish building, restored in 1770, and situated on the slope of the hill on which is the *castello*, or citadel; 2. the church *Do Coraçao de Jesus*, the largest and most sumptuous sacred edifice built since 1755, surmounted by a finely-proportioned dome, and remarkable as containing a mausoleum dedicated to its foundress, the queen Maria; 3. the ancient church of the Martyrs, erected on the spot where Alphonso I. mounted the walls of Lisbon, and took it from the Moors; and, lastly, the elegant but still unfinished church of Santa Engracia, which not having been touched for the last fifty years, a proverb has come into use, entitling all incomplete undertakings as *obras de Santa Engracia*. Here also stands the church of San Geronimo, at Belem, built by King Emanuel in 1499, and exhibiting a fine specimen of the ornamental Gothic and Arabic styles: in the interior is a royal mausoleum. The convents, which are of large size, form a principal feature in the town; but, since the suppression of the monasteries in 1835, Lisbon has lost much of its monkish appearance; the buildings have been converted to public uses, or sold to private individuals, and the wealth has been thrown into the national treasury. The English built a Protestant chapel in 1823, contiguous to a cemetery, in which lie the remains of the celebrated Henry Fielding, who died here on the 8th of October, 1754, at the early age of 48.

Among the other public structures, the fine aqueduct of *Agoas livres* deserves mention as one of the greatest works of modern Europe, and which will bear comparison even with the grand specimens of ancient bridge-architecture. It brings water from several springs about 8 leagues NW. of the city. Its course is partly underground; but as it approaches Lisbon, and crosses the deep valley of the Alcantara, it is carried over 35 bold marble arches for a length of about 2,400 ft. The water enters the town at the *Praça das Amoreiras*, where, as before mentioned, is the great reservoir from which water is distributed to the various fountains, and whence the Galician agoadeiros draw the supplies, which they sell from house to house, and hawk about the streets. The palace of Necessidades, the residence, at times, of the royal family, is small and mean-looking, and the palace of Bemposta is equally poor. But the royal palace of Ajuda, near Belem, more recently constructed, is a large building, and, notwithstanding its faults of architecture, may rank as one of the finest in Europe. The arsenal, post-office, mint, corn exchange, two public hospitals (one of which, called the hospital of San Joseph, is extremely well conducted, and has accommodation for 1,500 patients, with an attached school of medicine), the nobles' college, and the palace of Calhariz, are the only other national buildings of any importance, except the theatres. The opera-house of San Carlos is a large building of good proportions, with a noble box in the centre for the royal family. There is a theatre for the performance of the national drama; but it is small and mean, and the plays, as well as the performers, are of a very inferior character. Lisbon also, like Madrid and Seville, has a bull-ring, the size of which, however, will bear no comparison with the latter, nor are the performances so splendidly appointed or well managed. It must be observed, however, that the people of Lisbon visit the opera rather in obedience to fashion than from any desire for amusement: the bull-fights are not attended, as in Spain, by the *élite* of society, and the national drama is chiefly supported by the middle classes. Out-of-door amusements are seldom sought, except water excursions, in which the people generally take great pleasure. The shores of the Tagus are most beautiful; the country on the opposite side offers many interesting objects, as Almada, Barreiro, Seixal, Setubal, and the convent of Arrabida.

The literary and educational institutions of the Portuguese cap. comprise, 1. a royal academy of sciences, founded in 1778, having a good library and museum, and publishing memoirs and scientific works; 2. a patriotic literary society, established in 1822, and sending forth a journal of its proceedings, a society for promoting national industry, and the following establishments, either wholly or in part supported by the government, viz. a school of commerce attended by about 150 pupils, a royal naval academy, a royal academy of engineering, a school of surgery, a music school, twelve schools of logic and rhetoric, twelve others for classical instruction, and eighteen primary schools. The national public library of Lisbon, in the Praça do Commercio, has been much enriched by the addition of books formerly belonging to the monasteries, and now contains about 150,000 printed vols., besides MSS. The library of the Cortes in the *Hospicio real de nossa Senhora das Necessidades*, where that body holds its sittings, comprises about 30,000 vols.; and that belonging

Digitized by Google

to the theological seminary of San Vicente de Fora has about 18,000 vols.; but the books in these collections are chiefly ecclesiastical, while the departments of science, modern literature, and modern history are almost entirely neglected. Besides the establishments already described may be mentioned the royal printing office, and the cabinet of natural history and botanic garden at Ajuda.

The harbour, or road of Lisbon, is one of the finest in the world; and the quays, which extend nearly 2½ m. along the banks, are at once convenient and beautiful. Fort St. Julian, built on a steep projecting rock, marks the N. entrance of the Tagus; and on it is a light-house, rising 120 ft. above the sea level. Two large banks, called the N. and S. Cachops, obstruct the river mouth, and on the middle of the latter stands the Bugio fort and lighthouse, the latter being 66 ft. high. The least depth of water on the bar in the N. channel is 4 fathoms. and in the S. 6 fathoms; and there is little danger in entering the port, except during ebb tides, which run out at the rate of 7 m. an hour. Inside the harbour the water from nearly 20 fathoms in mid-channel shoals gradually to the edge; but in some parts vessels may come within 200 yards of the shore.

The foreign trade of Lisbon, formerly of considerable importance, but perhaps, at all times, much overrated, has rapidly declined since the emancipation of Brazil. She had formerly about 400 ships, varying in burden from 300 to 600 tons, engaged in the South American trade; but at present only 50 vessels are employed in that trade, the average burden of which does not exceed 150 tons. Indeed, the produce of Portugal now sent to foreign countries is almost entirely conveyed to its destination in foreign ships. A small number of sea-going ships belonging to the port are engaged in foreign trade, partly with the E. Indies and China, but chiefly between Setubal (or St. Ubes) and Cork, exporting salt in return for butter, and about 1,000 small craft are employed in the coasting trade. The following table shows the number and tonnage of the vessels of various countries that entered and cleared the port of Lisbon in the year 1862:—

The exports comprise wine, oil, fruit, and salt; among the imports are, hemp, flax, and linen cloths from Russia, iron, steel, salt fish, timber, pitch, and tar from the Baltic; linens and corn from Holland and Germany; silks from France; and cotton and woollen goods, cod-fish, hardware, ale and porter, linen, coals, and earthenware from England, which engrosses fully 7-8ths of the trade in foreign bottoms. The following table gives the value of the imports and of the exports at the port of Lisbon in the year 1862:—

Countries	Imports	Exports
	Milreis	Milreis

The port of Lisbon is open to all nations, all articles, except corn and flour, being allowed to be warehoused. All exported articles pay a duty of 4 per cent. *ad valorem*. There is no regular warehousing and bonding system at Lisbon; all imported dry goods are allowed to lie in the custom-house stores 2 years, and liquids 6 months, without charge, provided they are intended for consumption, and pay duty accordingly; otherwise, if re-exported, they pay 2 per cent. The port charges on a foreign ship of 300 tons, entering with a general or mixed cargo, and clearing out with the same, average 56,260 reis, or 11*l*. 6*s*., nearly 4-5ths of which are tonnage and light dues, the former being 100 reis, and the latter 50 reis, per ton.

Lisbon has some fabrics of silk, paper, and soap; there are sugar refineries, tan-yards, and potteries; and its goldsmiths and jewellers are amongst the most expert in Europe; but in every pursuit is to be perceived a want of energy and industry, to be traced perhaps to the character of the people as well as to political causes.

The climate of Lisbon is variable, but, on the whole, healthy and genial, notwithstanding the cold piercing winds from the sea, which are disagreeable even during the scorching heats of summer, with the thermometer at 96° and 100°: heavy rains prevail in Nov. and Dec., but it seldom snows: cold clear weather is usual in Jan., and spring commences about the middle of Feb.

The pop. of Lisbon is of an extremely varied character: nearly a third of the lower orders are Gallegos, blacks, or mulattoes, who, though the worst used and least considered, have a just claim to rank as the most hardy and industrious people of the cap. Genoese, Spaniards, and a few French, also, are employed, as gardeners or as innkeepers, cooks, and stewards. The lower orders of the

Digitized by Google

Portuguese, who are seen, perhaps, to more disadvantage in Lisbon than in any other part of the kingdom, are remarkable for their indolence and disregard of the comforts of life; these evils are owing, in a great measure, to the total want of education. Garlick, rancid oil, dried fish, and goat-cheese, which constitute their favourite food, are easily procurable; and so unconquerable is the predilection for the *dolce far niente*, occasioned in part, no doubt, by the climate, that they very seldom work, except for a bare subsistence. That contempt of cleanliness, which is more or less evinced by all but the very highest classes, is most striking and revolting in the lower orders, whom a recent traveller has well described as 'a swarthy meagre race, generally clothed in rags, and filthy beyond endurance.' Irascibility and revengefulness are features of character common to all the inhab. of the peninsula; but to these the Portuguese adds cowardice, and hence assassinations and night attacks are far more common than in Spain. Honesty and veracity are virtues seldom met with, unless among the merchants and better class of tradesmen; but there are some exceptions, particularly among domestic servants, who are usually respectful, attentive, and attached to the families by whom they are employed. The merchants are an important body, not inactive in business, and tolerably wealthy, considering the great diminution of their resources since the separation of Brazil from the crown of Portugal; but their habits are modelled on those of foreign countries, or from intercourse with the English and French, many of whom, especially the former, have considerable commercial establishments in Lisbon, and constitute, in fact, its best society. The Portuguese of the aristocratic classes are more grave, reserved, and proud than the Spaniards, against whom all orders of the people entertain a deep-rooted, national antipathy. Their neighbours, however, are not far behind them in the violence of their prejudices, to judge from the Spanish proverb: 'Strip a Spaniard of all his virtues, and you make him a good Portuguese.'

Lisbon, as a place of residence, is somewhat dull, especially compared with Madrid. There are no public walks or lounges, like the Prado and the Puerta de Sol, unless, indeed, the 'Tapada,' a kind of paddock, on the road to Belem, may be reckoned among them. Nor are the evenings rendered less tedious by the nightly tertulia, a pleasing feature in the society of Madrid. Families live much among themselves, seldom seeing company; neither sex is disposed to much exercise; and their chief pleasure is during summer, when they live in the retirement of their beautiful quintas, a great number of which are situated where

> 'Cintra's glorious Eden intervenes
> In variegated maze of mount and glen.'

The dress of the middle and higher classes of men differs little from that in England, except that a cloak or loose great coat is commonly worn over the dress both in winter and summer. The ladies spend absurdly large sums on their wardrobe; but their dress is tawdry and showy. Jewellery and gay-coloured shawls and mantillas are highly fashionable, coloured shoes being worn by walkers even in the filthiest streets of the city; indeed, ostentation and glare are prevailing features in the costume of Lisbon females, which forms a striking but unfavourable contrast with the sombre but luxurious dress of the ladies of Madrid.

The diet of the people of Lisbon differs exceedingly from that of the French or Spaniards. Oil and garlick, the former usually thick and rancid, are unvarying ingredients at breakfast and supper, which are the principal meals. Indian corn and barley often supply the place of wheat; tea is little used, but chocolate is indispensable at breakfast, the accompaniments being hot beef steaks and fish. Rice is the invariable accompaniment of dinner, served up with boiled beef, ham, and fried sausages, all which are eaten promiscuously. The *cuisine*, however, of the higher classes is somewhat better conducted; but want of taste in these matters is universal. Fish is excellent and cheap; and its market, in quality and variety at least, might vie with that of London. Abstemiousness in eating is little practised, even by the tender sex; but temperance in the use of wine is almost universal. Domestic habits are much more common among the middle classes in Lisbon than in Madrid; but both men and women marry at a very early age, and the parties are generally indifferent, often even unknown, to each other, the parents being the only negotiators of these unions, which may justly be called *mariages de convenance*. This accounts for the prevalence of conjugal infidelity, which is quite as common here, though scarcely so obtrusive, as in Spain.

The vicinity of Lisbon, ugly and uninteresting as is the city itself, presents most striking and delightful scenery. Orange and olive trees, cypresses, and judas-trees, grow not only in the gardens, but in the open country. To the E. and N. of Lisbon are numerous quintas or country-houses, with rich plantations and vineyards; and about 6 m. NW. of the cap. is Cintra, a place that holds the same relation to Lisbon as a resort of Sunday visitors, that Richmond does to London. The romantic beauties of Cintra have been celebrated by Byron, in language full of poetic beauty, and admirably descriptive of the scenery:—

> 'The horrid crags, by toppling convent crown'd,
> The cork-trees hoar that clothe the shaggy steep,
> The mountain-moss by scorching skies imbrown'd,
> The sunken glen, whose sunless shrubs must weep,
> The tender azure of the unruffled deep,
> The orange tints that gild the greenest bough,
> The torrents that from cliff to valley leap,
> The vine on high, the willow-branch below,
> Mix'd in one mighty scene, with varied beauty glow.'
> Childe Harold, c. 1.

The valley of Collares, extending W. from Cintra, is one of the best cultivated, as well as richest spots, in the kingdom, and may be termed the nursery-garden of Lisbon, since the markets of that city are chiefly supplied from this quarter with fruit and vegetables: the genuine Carcavella wine is made from a peculiar grape raised in this district. About 8 m. from Cintra is the palace and convent of Mafra, called, though very improperly, the Escurial of Portugal. (See MAFRA.) W. and SW. of Lisbon the country is not so well cultivated, the hills (formed of basalt, covered with limestone) being more rocky and naked, and extending W. several miles beyond Belem. This suburb (for though Belem is 2½ m. from the Praça do Commercio, it is connected by a nearly continuous line of streets), inhabited by a pop. of about 8,000 persons, chiefly belonging to the nobility and wealthy citizens, may justly be called the west end of Lisbon. The church of San Geronimo has already been mentioned. The tower of Belem, another striking object, is the great customs-station of the port, whence the officers board all vessels entering the Tagus: close to it is a good quay, and without the village are the castle of Ajuda and the *quinta da Rainha*, with gardens and menageries, open to strangers.

Lisbon was anciently called *Olisipo*, a name

Digitized by Google

derived, as some say, from a legend that it was founded by Ulysses. The Romans changed its name to *Felicitas Julia*, giving it the privileges of a *municipium*: the ruins of an ancient theatre near the cathedral warrant the inference that it was then a place of some note. The Moors captured the city in A.D. 716, and, with some slight exceptions, it remained under their power till, in 1145, Alphonso I. made it one of the capitals of Christendom. In the 14th century, Ferdinand I. surrounded the city with walls; but it attained no great importance till the reign of Emanuel the Great (1495–1521), who made it the principal port of the kingdom at a time when the Portuguese were distinguishing themselves above the other nations of Europe in maritime discovery, and wealth was fast pouring in from the recently explored regions of the East. Its subsequent history is intimately connected with that of Portugal. One of the most extraordinary events that happened to the city was the earthquake of 1755, by far the most tremendous, and most extensively felt, that has occurred in modern times. On the first of November, in the above year (a festival-day, on which all the churches were lighted up, and crowded with devotees), a sound like that of thunder was heard under ground, and immediately afterwards a violent shock threw down the greater part of the city, destroying about 60,000 human beings in six minutes. The sea first retired and laid the bar dry; it then rolled in, rising 50 feet, or more, above its ordinary level. The neighbouring mountains, among the highest in Portugal, were impetuously shaken, and some of them opened at their summits, which were split and rent, huge masses of rock being thrown down into the subjacent valleys. But the most extraordinary circumstance was the subsidence of an extensive marble quay, on which great crowds had collected for safety. It suddenly sank with all the people on it, and not one of their bodies ever floated to the surface; nor were those in boats and vessels, on the Tagus, much more fortunate, great numbers being destroyed in the whirlpool occasioned by this catastrophe. This earthquake destroyed also the sea-port of Setubal, and a village about 20 m. from Morocco, with nearly all their inhab.; violent shocks being, at the same time, felt all over W. Europe, in N. Africa, and even in the W. Indies and S. America. (Lyell's Geology, ii. 239.) From this disaster, Lisbon has never entirely recovered. The celebrated Marquis de Pombal, the chief minister of Portugal at the time, exerted himself to have it rebuilt on a regular plan, and to him it owes the few good streets in the neighbourhood of Rocio, the rest of the city presenting either ancient and crazy buildings crowded together in the greatest disorder, or heaps of ruins and rubbish allowed to lie where they fell more than a century ago, monuments at once of the indolence of the Portuguese, and of a calamity which all but annihilated one of the capitals of Europe. In 1807, the French army, under Junot, occupied Lisbon for a short time after their defeat at Vimiera; but they were soon driven from it by the combined Anglo-Portuguese army. Lord Wellington, in the same year, fortified the famous lines of Torres Vedras, which, in 1809, proved a sufficient defence against a fresh invasion of the French under Massena.

LISBURN, an inland town and parl. bor. of Ireland, co. Antrim, prov. Ulster, on the Lagan, and on the railway from Belfast to Dublin, 8 m. SSW. the former, and 80 m. N. by E. the latter. Pop. 7,484 in 1861, against 7,524 in 1841. Lisburn is one of the handsomest, best built, and cleanest towns in the N. of Ireland. It consists principally of a main street along the old high road from Belfast to Dublin. Its church has been constituted the cathedral of the united dioceses of Down and Connor. It has also a R. Cath. chapel, a Presbyterian, 2 Methodist, and 1 Quaker meeting-house; a national school, 2 infant schools, and a school for the education of Quaker children, supported by the voluntary subscriptions of its members, several almshouses, the infirmary for the co., a market-house, which contains a suite of assembly rooms, and a court-house, formerly a place of worship for the Huguenot settlers. The Lagan river, on which the town is situated, runs into the head of Belfast Lough, and divides the co. of Antrim from that of Down: it also separates a small suburb from Lisburn, no part of which is in the bor., though in the same par. Great improvements have been effected within the last forty years in Lisburn by the Marquis of Hertford, who is the owner of the fee of the old town, and of a considerable part of the surrounding country. A canal runs from Lough Neagh into the river Lagan near the town, by which agricultural produce is conveyed to Belfast. Damask of the most beautiful description is manufactured in the town, as well as muslin and linen, though the two latter branches have fallen off considerably. There are also extensive vitriol works on an island formed by the canal and river.

Under a patent from Charles II., Lisburn sent 2 mems. to the Irish H. of C. The franchise was originally vested in the potwallopers; but was restricted by the 35 Geo. III. cap. 29, to the 5*l.* householders. Since the Union it has sent 1 mem. to the Imperial H. of C. Registered electors, 314 in 1865.

Lisburn, which was long an obscure place, owed its first rise to the erection of a castle by Lord Conway, about 1627. It repulsed the Irish forces under Sir Phelim O'Neil with great slaughter, at the breaking out of the rebellion of 1641, and in 1644 baffled a similar attempt by General Monroe, who, a few years afterwards, was defeated near the town by the parliamentary forces. Shortly after the Revolution, a body of Huguenots, who emigrated from France on the revocation of the edict of Nantes, settled here, and introduced the finer branches of the linen manufacture, to which the town is mainly indebted for its prosperity. The castle, which was burnt down with a part of the town in 1707, has never been rebuilt.

LISIEUX (an. *Lexovium*), a town of France, dép. Calvados, cap. arrond. on the Toncques, 27 m. E. by S. Caen, on the railway from Paris to Caen. Pop. 13,121 in 1861. The town has but one good street, which forms part of the road between Caen and Evreux; all the others are narrow and crooked, and the houses built of wood, and antiquated. It is, however, very well situated, and has environs of much beauty. Its cathedral, a Gothic edifice of the 12th century, has attached to it a fine chapel, dedicated to the Virgin, of a later date than the rest of the building. The bishop's palace, surrounded by noble gardens, the hospital, and the theatre, are all good buildings. Lisieux is the seat of courts of primary jurisdiction and commerce, and of a communal college, and has manufactures of woollen and cotton cloth, flannel, cotton and linen yarn, leather and brandy, and many bleaching factories and dyeing-houses. It was formerly a fortress of some consequence, and was frequently besieged and captured during the middle ages.

LISKEARD, or LESKARET, a parl. and mun. bor., market town, and par. of England, co. Cornwall, hund. West, 11 m. E. Bodmin, 205 m. W. by S. London, by road, and 242 m. by Great

Digitized by Google

Western and Cornwall railway. Pop. of munic. bor. 4,689, and of parl. bor. 6,585 in 1861. Area of par., which is very nearly co-extensive with the parl. bor., 7,740 acres. The town, which is meanly built with narrow streets, appears still more irregular in consequence of its site, partly in a hollow and partly on rocky heights, the foundations of some of the houses being on a level with the chimneys of others. Of late years, however, it has been considerably improved by the erection of large and handsome modern houses in the immediate environs. The town-hall, built at the beginning of the 18th century, is a large and elegant building supported by granite pillars, in the Italian style. The church is a spacious Gothic structure, with a tower of more recent erection. An ancient free grammar school has been allowed, with other charities, to go to decay; but a national school for both sexes, and a school of industry for girls, are efficiently conducted and well attended.

Liskeard, once a town of some consequence in the duchy as the principal place for the coining and stamping of tin, has at present neither manufactures nor commerce, but it is the market of an extensive agricultural district. It has some trade in the metals of the adjacent mining districts, and there are likewise tanneries and ropewalks. Markets on Saturday; fairs, Shrove Monday, Monday before Palm Sunday, Holy Thursday, Aug. 15, Oct. 2, and the Monday after Dec. 6, for horses, cattle, sheep, and corn.

Liskeard (an. *Lis-kerrat*, meaning a fortified post) received its charter of incorporation in 1240, from Richard earl of Cornwall, which was subsequently confirmed by several sovereigns, and among others by Queen Elizabeth. According to the Municipal Reform Act, it is governed by a mayor, 8 other aldermen, and 12 councillors; it has a commission of the peace under a recorder. Corp. revenue, 700*l.* in 1862. From the reign of Edward III. down to the passing of the Reform Act this bor. enjoyed the privilege of sending 2 mems. to the H. of C., who, for many years previously, though formerly elected by the freemen, were, in fact, nominees of the Earl of St. Germains. The Reform Act deprived Liskeard of *one* of its mems., and at the same time enlarged the bor. so as to comprise the entire par. with such parts of the old bor. as are without the par. Reg. electors, 429 in 1865.

L'ISLE, or L'ILE, a town of France, dép. Vaucluse, cap. cant., on an island in the Sorgues, a tributary of the Rhone, 12 m. E. by S. Avignon. Pop. 6,517 in 1861. The town manufactures woollen fabrics and yarn, tram and organzine silk, and leather, and has some trade in silk, madder, oil, and wine.

LISMORE, an inland town of Ireland, cos. Waterford and Cork, on the Blackwater, 28 m. ENE. Cork. Pop. 2,089 in 1861, against 3,007 in 1841. The town has been much improved of late years, principally through the exertions, and at the expense, of the Devonshire family, who have large possessions in this part of Ireland. It stands on an eminence overlooking the river, across which is a bridge, built at the expense of the Duke of Devonshire. Lisburn was formerly the seat of a bishopric, now united with Cashel and Waterford. The cathedral is in good preservation, and handsomely fitted up: it has also a large R. Cath. chapel, a Presbyterian and a Methodist meeting-house, an excellent grammar-school, built and endowed by the Devonshire family, some alms-houses, a court-house, a fever hospital, and a dispensary. But the great attraction of Lismore is its magnificent old castle, founded by King John, in 1195. It is nobly situated on a rock rising perpendicularly from the river. This large and venerable pile was once the property of Sir Walter Raleigh; and, after numerous vicissitudes, came, through the Boyles, into the possession of the Devonshire family, by whom it has been greatly improved and embellished. It is now in complete repair, and is occasionally visited by its noble owner. It has withstood several sieges. In 1785, the Duke of Rutland, then lord lieutenant of Ireland, held a court here, and issued some proclamations, dated from the castle.

Lismore returned 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. A manor court holds pleas to the extent of 10*l.* every third week. Petty sessions are held on alternate Wednesdays. It is a constabulary station. The trade of the town is inconsiderable, though a canal has been constructed, by the Duke of Devonshire, from it to near Cappoquin, where the river becomes navigable. There is a salmon fishery close to the town, the produce of which is mostly sent to London.

LISSA (Polish *Leszno*), a town of Prussia, prov. Posen, circ. Fraustadt, near the border of Silesia, 12 m. ENE. Fraustadt, on the railway from Posen to Breslau. Pop. 10,192 in 1861, excl. of garrison of 960. The town is walled, and has three Lutheran churches, a Rom. Cath. church, a synagogue and Jewish school, a gymnasium, two hospitals, a fine council-house, and a theatre. Its streets are mostly narrow and dirty, and the greater number of the houses are of wood. The neighbouring castle was formerly the property of the Leczinsky family, of which Stanislaus, the last king of Poland, was a member; but it is now the residence of the princes Sulkowski, to whom the town belongs. Lissa is the seat of a police court, and a board of taxation: a considerable manufacture of woollen cloth is carried on in it and its neighbourhood; and, besides woollen stuffs, it trades in furs, wines, and hardware. Lissa was an unimportant village, when a number of Protestants, driven from Silesia, Bohemia, and Moravia, by the persecutions of the 17th century, settled in it; and to these immigrants it owes its present consequence.

LISSA. See LESINA.

LITHUANIA, a country comprising a considerable portion of the ancient kingdom of Poland, at present parcelled amongst the Russian governments of Wilna, Grodno, and Minsk.

LIVADIA (an. *Lebadéa*, or *Lebadeia*), a city of Greece, which, under the Turks, gave its name to the prov. comprising E and W. Hellas, in Bœotia, on the Hercyna, about 6 m. W. the Lake Copais, 25 m. WNW. Thebes, and 50 m. NW. Athens. Pop. 9,755 in 1861. The streets of the city are narrow and inconvenient. Its site is very striking, occupying several fantastic knolls and crags at the entrance of a deep defile in a branch of the Heliconian chain. The river Hercyna, which rises in a full stream and with great force from beneath a rock close to the town, rolls in foaming torrents over masses of rock: it is augmented near its source by a tributary stream from the cavern of Trophonius. The ancient city, called Mideia by Homer, is supposed to have been built, in part at least, upon the lofty heights which overhang the modern town, and upon which the remnants of a citadel are still visible; with additional buildings constructed by the Catalans, when they were in possession of this country.

Previously to the revolution, Livadia was the seat of a voivode or governor, and a cadi, and had 6 mosques, and as many Greek churches. It had also a considerable trade in the produce of the surrounding territory, and of Attica, with Constantinople, and foreign countries. Madder, corn, oil,

Digitized by Google

kermes, cotton, and honey were among its principal exports, which it formerly sent to Trieste, Venice, Leghorn, Genoa, and even London. Its port at Aspropiti, the an. *Anticyra*, on the Corinthian Gulf, is 18 m. WSW. from the town. Livadia was burned by the Turks in 1821, and subsequently in part destroyed by the Greeks in an attack upon the Turkish garrison. Since the revolution it has recovered some portion of its former trade and prosperity. Its greatest drawback is the unhealthiness of its situation. It suffers from great extremes of temperature; the air is frequently loaded with dense fogs, and in summer is vitiated by pestilential effluvia from the neighbouring lake of Copais. In 1785-86, the plague carried off 6,000 of the inhab. (Clarke's Travels, vii. 146-170.)

The celebrity of Livadia was owing to its being the seat of the famous oracle or cavern of Trophonius. Dr. Clarke has sufficiently identified the site of this celebrated cavern; but the reasons he has alleged in favour of the hypothesis, that the Hercyna is identical with the fountain of *Lethe*, or waters of oblivion, are far from conclusive. (Clarke, vii. 161, 8vo. ed.) Clarke supposes the fountain that now issues from below the cavern to be that which anciently received the name of *Mnemosyne*, or waters of memory; but this fountain may formerly have been divided into two, or one of the ancient fountains may have disappeared through some convulsion of nature: at all events, it would seem to be clear from the statement of Pausanias, that there were within the sacred precinct the two fountains of Lethe and Mnemosyne, exclusive of the source of the Hercyna. (Pausanias, lib. ix. cap. 39.)

This was one of the most formidable of the Greek oracles. The *Hieron*, or sacred cavern, was surrounded by bare, rugged, and high precipitous rocks. Thither those anxious to consult the oracle were, after long preparation, conducted at night through a grove; and could not fail to be deeply impressed by the solemnity of the place, and by the roaring of the waters of the Hercyna bursting forth from their subterranean caverns. Having arrived at the *Hieron*, the votary, after addressing a prayer to the statue of Trophonius by Dædalus, descended into the *adytum*, a narrow and deep aperture excavated in the rock, and, no doubt, leading to some great natural cave or chasm. Those who ventured down into this hidden recess seem, generally, to have experienced rather rough treatment. Trophonius was not to be questioned with impunity. The votaries, when they came forth from the abyss, were usually much exhausted, and had no distinct recollection of what they either heard or saw. Generally, however, the mysteries of this dread cavern made a deep impression on their minds, and entailed upon them a settled melancholy for the remainder of their lives; so that it was a proverbial expression in Greece to say of a gloomy or melancholy individual, that 'he had come from the cave of Trophonius.' No doubt, however, the priests took care to modify their treatment of the votaries, as well as their responses, according to their rank and their bounty to the temple. Pausanias, who descended into the adytum, and describes what occurred to himself, states that when he came out he was so confused as to have lost his senses. But this visit must have taken place so late as the middle of the 2nd century, after the oracle had been long on the decline; and when, probably, it had been stripped of half the horrors by which it had formerly struck terror into those who attempted to penetrate by its means through the veil that conceals futurity from mortal eyes.

The accounts of Trophonius, the reputed founder of the oracle, vary extremely. This much, however, seems to be agreed upon,—that he was a mortal to whom, after his death, divine honours were paid; and that he was supposed to be endowed, like Apollo, with the power of foreseeing and predicting future events. It is probable that the gloomy grandeur of the place, and the discovery of some hidden cavern, where all sorts of impostures might be easily practised, first suggested the idea of making it the seat of an oracle; and there seems little doubt that it was indebted to the same circumstances for its celebrity and its votaries. According to Dr. Clarke the present town of Livadia occupies that part of the consecrated ground formerly covered by the grove of Trophonius; but this is merely a conjecture. Pausanias says that Lebadéa was as much ornamented by temples, statues, and other splendid works of art as any city of Greece. A statue of Trophonius by Praxiteles was deservedly reckoned among its principal treasures. (Pausanias, lib. ix. cap. 39; Voyage d'Anacharsis, cap. 34; Potter's Grecian Antiquities, book ii. cap. 10.)

LIVERPOOL, a parl. and mun. bor. and seaport of England, being, next to London, the most populous town of the British empire, in the co. Lancaster, hund. W. Derby, on the E. or right bank of the Mersey, 32 m. W. by S. Manchester, 67 m. WSW. Leeds, 196 m. NNW. London by road, and 202 m. by London and North Western railway. Pop. of bor. 443,938 in 1861. The bor. includes the townships of Liverpool, Kirkdale, Everton, West Derby, and Foxteth Park. Its total population was 375,955 in 1851, and 82,857 in 1801. The progressive increase of population from 1801 to 1841 was as follows:—

Townships	1801	1811	1821	1831	1841
Liverpool . .	77,653	93,376	118,972	165,175	223,008
Kirkdale . .	..	..	..	2,591	4,268
Everton . .	499	913	2,109	4,518	9,221
W. Derby . .	2,636	3,692	6,304	9,613	9,760
Toxteth Park .	2,069	5,864	12,829	24,067	40,235
Total Parl. Bor.	82,857	103,851	140,214	205,964	286,487

It will be seen that Liverpool doubled its population nearly every twenty years since the beginning of the century.

Liverpool stands partly on flat ground, along the edge of the river, and partly and principally on a gently rising declivity. Besides quintupling its population during the last sixty years, it has been more improved during that period than any other town in England, not excepting Manchester. Before that time narrow, inconvenient, and ill-paved streets, lined with dull, heavy-looking houses, were its characteristic features; but so great is the alteration effected chiefly through the exertions of the corporation and the public spirit of the citizens, that at present no town or city in the three kingdoms, except their capitals, has wider or handsomer streets, more sumptuous public buildings, or better constructed and more substantial private dwellings. The present limits of the town comprise about 2-3rds of the parl. bor.: its length from N. to S. is about 3 m., its breadth from the river to Edgehill, 2 m., and its area somewhat exceeds 3,000 acres. The central point, from which many of the principal avenues diverge, is the open space partly occupied by St. John's church, and the railway station: the diverging roads are,—1, Dale Street, a fine broad avenue running SW. to the Town-hall and Exchange Buildings, and continued, under the name of

Digitized by Google

Water Street, to George's Dock; 2, Whitechapel and Paradise Street, leading to the Custom House; 3, Lime Street, Renshaw Street, Berry Street, and Great George Street, running nearly S. towards Toxteth Park; 4, the London Road, taking an E. direction towards the Zoological Gardens; and, lastly, Byrom Street and Scotland Road, leading to the House of Correction in Kirkdale. The principal streets, independent of those above mentioned, are Castle Street, opposite the Town-hall, Lord Street, Church Street, Hanover Street, Bold Street, Rodney Street, Mount Pleasant, St. Anne's Street, and the Vauxhall Road; and among the principal squares may be mentioned Great George's, Queen's, Abercrombie, Falkney, Clayton, and Cleveland. Liverpool was formerly supplied with water from wells sunk in the red sandstone in various parts of the town, belonging to two companies; but the supply being deficient for the growing wants of the pop., the corporation bought up the rights and property of the companies, in 1848, for 554,807*l.*; and obtained an act of Parliament authorising them to bring an additional supply of water from Rivington Pike, 26 m. distant. The new waterworks, constructed at a cost of 700,000*l.*, and containing a reservoir of 500 acres, with three thousand millions of gallons, were opened in 1856.

Corporation and Government Buildings.—The town-hall, which stands at the N. end of Castle Street, was commenced in 1749: its interior having been destroyed by fire in 1795, it has been since rebuilt at a cost of above 110,000*l.* It has a rustic basement, supporting a range of Corinthian columns and pilasters; in the S. front is a handsome portico, and the building is surmounted by a light and elegant cupola, above which is a colossal figure of Britannia. The interior comprises, besides a handsome suite of apartments for the mayor, a ball-room, 90 feet in length by 40 feet in breadth and height; a council-room, committee rooms, town-clerk's, treasurer's, and surveyor's offices: the grand staircase, under the cupola, is a magnificent specimen of modern architecture: on the landing is a colossal statue of Canning.

The Exchange Buildings, which form three sides of the square in which the town-hall stands, were completed in 1809, at a cost of 110,848*l.*, raised by 100*l.* shares. The principal front is 197 ft. in length; and the area, enclosed by the entire building, somewhat above 11,000 sq. yards: in the N. and S. fronts are two magnificent porticos, each supported by 8 Corinthian columns, and surmounted by a carved entablature with stone figures: a very handsome balustrade runs round the entire building. Piazzas extend round the basement for the convenience of the merchants in hot and rainy weather. In the interior is a magnificent news-room, originally 94 but now 125 ft. in length, by 51 ft. 9 in. in width, having an arched roof supported by two rows of columns; above this is a splendid room for the underwriters, while, in other parts of the building, are numerous counting-houses, and offices, and warehouses. The Exchange is held to be one of the best specimens of Grecian architecture in England, and the noblest structure erected in modern times for purely commercial purposes. In the centre of the square is a monument of Nelson, executed in bronze, on a marble basement: it represents the dying hero receiving a naval crown from Victory. W. of the exchange stands the session-house, a low, plain, stone building with two principal entrances; in the interior are two spacious rooms, used as nisi prius and crown courts, with other apartments for the use of the judges, magistrates, and jurors; the whole was built, in 1828, at a cost of 19,312*l.*, exclusive of subsequent alterations occasioned by the removal of the assizes of the W. Derby and Salford hund. from Lancaster.

The custom-house, excise-office, post-office, and other public offices are comprised in the immense pile of building erected at the South end of Castle Street, on the site of the old dock, which was filled up for the purpose. It covers an area of 6,700 square yards, has an extreme length of 467 ft. measured from E. to W., with a total height of 67 ft., the length of its wings being 225 ft., and their breadth 94 ft., and is remarkable not merely for its size, but also for its massiveness. Porticoes, supported by Ionic columns, are attached to the centre, and to the E. and W. fronts; and it has a large dome, lighted by 16 windows, and embellished with pilasters. The basement, through which there is a public passage connecting Castle Street with Park Lane, is used for storing bonded goods. The central portion is occupied by the great staircases and the long room, 146 ft. in length, 70 ft. wide, and 45 ft. high, lighted from the dome; the W. or river wing contains the various offices of the custom-house; and the E. wing contains the excise-office, dock-offices, post-office, and stamp-office. This useful, though heavy-looking, building was erected in consequence of an arrangement between the corporation and the government, negotiated by Messrs. Canning and Huskisson. The corporation gave the land, valued at 90,000*l.*, and erected the building, on condition of its being ceded to government for the sum of 150,000*l.*, by annual instalments of 25,000*l.*, commencing 20 years after the completion of the building. The most magnificent edifice in Liverpool is that for the assize courts, inc. St. George's Hall, in Lime Street, opposite to the railway station. It is of the Corinthian order, the eastern front being 420 ft. in length, and the columns 45 ft. in height. St. George's Hall, in the centre of the building, with a spacious court on each side, is a noble apartment 175 ft. in length by 75 ft. in width, and 75 ft. in height. St. George's Hall has a statue of George Stephenson, by Gibson. When the courts are not sitting, it is appropriated to public meetings, concerts, and other entertainments. This building cost in all about 192,000*l.* The hall in Hope Street, built by the Philharmonic Society, is also of very large dimensions, and is well suited to its object.

Literary Establishments and Places of Recreation.—Though extensively busied in trade and commerce, the merchants of Liverpool are honourably distinguished by their attention to, and patronage of, science and literature; and the town has several valuable institutions for their promotion. The Royal Institution in Colquitt Street, formed in 1814 at the suggestion of the late Mr. Roscoe, by the subscription of 100*l.* shares, and chartered in 1822, comprises academical schools, public lectures on various subjects, laboratories and philosophical apparatus, a collection of books, and a museum. The lecture room is capable of accommodating 500 persons, and the natural history department of the museum, occupying two floors of the building, is perhaps the largest and most valuable in the kingdom, after the British Museum, and that of the Zoological Society of London. The institution has also a fine collection of casts from the Elgin, Æginetan, and Phigalian marbles, and from some of the most celebrated statues of antiquity. The collegiate institution in Shaw Street, a fine building in the Tudor style, opened in 1842, cost about 30,000*l.* Its principal

Digitized by Google

front is 280 ft. in length. It has accommodation in separate schools and classes for 1,500 pupils; and is conducted according to the principles of the Church of England, the bishop of Chester being the visitor. Another educational institution, said to be admirably managed, but of a scope different from that of the Collegiate Institution, is Queen's College, founded in 1857. A truly noble establishment, worthy of the town and its spirited inhabitants, is the public museum and library, founded by W. Brown, esq., subsequently Sir William Brown, bart. The edifice, which stands on Shaw's Brow, is in the classical style, and was built in the years 1858–60. It is 220 ft. long, and its total cost exceeded 40,000*l.* The mechanics' institute in Mount Street, near St. James's cemetery, intended not only to meet the wants of the working classes, but also to bring them in contact with those in higher spheres of life, was opened in 1837. Its buildings, which cover nearly an acre of land, given by the corporation, were erected at a cost of above 15,000*l.* The grand theatre is capable of accommodating 1,200 persons: it has a museum and a library, with 15,000 vols. It has attached to it schools meeting at different hours, and intended, like those in the collegiate institution, to accommodate various classes of the population.

The Medical Institution in Mount Pleasant, built at a cost of about 2,000*l.* (½ of which, with the land, was contributed by the corporation, and the rest by the medical practitioners of the town), has a circular-shaped front, of the Ionic order, 108 ft. in length, and 35 ft. in height; and in the interior are various large apartments, used as libraries, museums, and lecture-rooms. Apothecaries' hall, belonging to a joint-stock company, may be mentioned here, not as a place of medical instruction, but as conferring important benefits on the profession and the public by importing and manufacturing medicines of the best quality: the building is handsome, and all the arrangements most complete. The school of medicine formerly attached to the Royal Institution has been removed to the infirmary.

Closely connected with the above institutions are the news-rooms, among which the Athenæum holds the highest station, The building, opened in 1799, is large, but plain; 500 proprietors subscribe to form a yearly income of 1,320*l.*; the library comprises 17,500 volumes; and the news-room is spacious, and well provided with the publications of the day. The Lyceum, a much handsomer building, erected at an expense of above 11,000*l.*, supported by about 800 proprietors, paying guinea subscriptions, has a library of about 35,000 volumes, in an elegant circular room lighted from a cupola. The Union news-room in Duke Street is also a respectable building; and there is an important news-room, already noticed, in the Exchange.

Liverpool has four theatres—the Theatre Royal, the Adelphi Theatre, the Amphitheatre, and the Prince of Wales's Theatre. The Theatre Royal, in Williamson Square, built in 1817, has a plain exterior, but the interior is comfortably fitted up and is well suited for hearing. The Amphitheatre, in Great Charlotte Street, is used mainly for equestrian exercises, but is frequently occupied with public meetings. The people of Liverpool, like those of the metropolis, seem to have little taste for theatrical exhibitions. Of the new kind of places of amusement, called music-halls, Liverpool has several, the oldest known as Cunningham's, established in 1849. There is a race-course at Aintree, about 5 m. distant from the town; one at Hoylake, distant 9 m.; and a third on the Rood-eye at Chester. From the facilities afforded by railway communication, Aintree and Chester are practically the race-courses of Liverpool.

The Zoological Gardens, on the eastern verge of the borough, occupy an area of about 10 acres, and the collection is regarded as extremely good. In the summer season, other attractions are added for visitors and subscribers, including fireworks, feats of strength, skill, and agility. The grounds are well laid out, and the disposition of the buildings is well suited to the disposition of the animals. The Botanic Garden, formerly on the borders of the parish, has been removed beyond Edge Hill. It was formerly the property of shareholders, but now belongs to the town, and is supported by a rate. It is constantly open, and is an agreeable outlet, especially for those in its neighbourhood. Within the borough, and bounded by its southern limit, the beautiful enclosure, called Prince's Park, has been purchased and laid out by Richard Vaughan Yates, esq., at a cost of about 40,000*l.* It occupies about 45 acres, and is open to the public. The Prince's Parade, between Prince's Dock and the river, St. James's Cemetery, and St. James's Mount, on one side of the cemetery, are public promenades, which are kept in good order.

Markets.—The markets of Liverpool are better supplied, perhaps, than those of any other town in the empire. Ireland and Scotland, particularly the former, furnish grain, live stock, bacon, and butter; and the Isle of Man, Anglesea, North Wales, and Cheshire send excellent poultry and eggs, with butter and other farm produce; neither can any town in England, the metropolis not excepted, boast of market accommodation equal to Liverpool. The largest market building is St. John's, completed in 1822, at a cost of 36,813*l.*, covering a space of nearly two acres, being 183 yards in length, by 46 in breadth. It is a light and lofty structure, having its roof supported by 116 cast-iron pillars; the walls are lined with 58 shops, and upwards of 400 stalls and standings run in four ranges up and down the interior. It is brilliantly lighted with gas; and, on the whole, the regulations are so good, that it may be said to be unrivalled both for size and convenience. St. James's Market, at the end of Great George Street though only half the size of that last mentioned, is still a large and well-constructed building, regulated by the corporation; as is St. Martin's Market in Scotland Road. There are eleven other markets. The total expenditure by the corporation for these buildings has amounted to about 400,000*l.* The corn exchange in Brunswick Street, erected by a subscription of 10,000*l.* in 100*l.* shares, has a plain but handsome front. It was erected in 1807; but, owing to the increase of business, it had to be enlarged not very long ago. The principal other markets are the Pedlers' Market, for small wares, and the fish hall and fish market; both the latter, as indicated by the name, devoted to the sale of fish, the consumption of which is very great in Liverpool.

Churches, Chapels, and Schools.—Liverpool, which, till 1699, was a chapelry attached to Walton-on-the-Hill, was constituted by act 10 & 11 Will. III. c. 36, a distinct parish divided into 2 medieties, the parish churches being St. Nicholas and St. Peter's. With the enormous increase of population, however, a great many other churches had to be opened. Of these, some were built by the corporation, who, though they have sold the patronage, are bound to keep the churches in repair, and to pay certain salaries to the incumbents.

Digitized by Google

Other churches were built by associations, and others by private parties. The census of 1861 gave the population of the eighteen ecclesiastical districts as follows:—

Ecclesiastical Districts	Population
All Saints . . .	9,204
St. Aidan . . .	12,718
St. Anne . . .	10,330
St. Barnabas . .	7,544
St. Bartholomew .	8,777
St. Bridget . .	3,954
St. Catherine . .	9,679
St. David . . .	7,442
St. George . . .	4,002
St. John . . .	5,561
St. Mark . . .	10,066
St. Martin . . .	26,961
St. Michael . .	8,819
St. Paul . . .	7,637
St. Saviour . .	4,615
St. Silas . . .	7,019
St. Simon . . .	5,716
St. Thomas . .	4,964

The most remarkable churches of Liverpool are St. Nicholas, rebuilt 1774; St. Luke's, a handsome modern church, by Foster; and St. George's, which stands on the site of the old castle. The rectory is worth 2000*l.* a year. The emoluments of the established clergy in Liverpool, as in most large English towns, are mainly dependent upon the voluntary principle, or arise chiefly from pew rents. Some of the new churches are endowed with 150*l.* per annum, in consideration of the body of the church being appropriated to the use of the poor. In a few other churches there are endowments from Queen Anne's Bounty, or other ecclesiastical funds, or from the interest of sums subscribed for the purpose; but in many, perhaps the majority, of cases, there is no endowment whatever. The clerical incomes are, therefore, extremely fluctuating. In the lower and central parts of the town, there has latterly been a steady decrease in the amount of pew rents, as the higher classes remove further out of town, and their successors sometimes cannot, and sometimes will not, pay. The range of payments is from 100*l.* to 600*l.* per annum, perhaps not more than two reaching either this maximum or minimum limit, if so many. The average may be stated at the mean between these, or 350*l.*

The dissenters in Liverpool are highly important and respectable, whether considered in respect of station, numbers, or character. The first Presbyterian congregation was established in 1672, and a second about thirty years afterwards: the Baptists settled themselves here in 1714, and the Independents in 1777. The first Wesleyan Methodist chapel was opened in Mount Pleasant in 1791; and the New Connexion Methodists (or Kilhamites) built a chapel in 1798. Many of these places of worship are large and commodious, and a few exhibit much exterior elegance. Among the most notable of these are the two Roman Catholic churches of the Holy Cross and of St. Vincent de Paul. The first named, by Pugin, is 102 feet long, in a decorated Gothic style; the second is 150 feet long. The number of Roman Catholics in Liverpool is constantly on the increase, owing to the continued immigration of Irish labourers.

Among the endowed schools, the principal are the corporation schools, formed in 1825, on the foundation of an old grammar-school, that had been extinct since 1803: they are conducted on the national system, and infant schools are attached to each, so that, in all, above 1,000 children are taught in them. The N. and S. Church of England schools instruct 485 boys, 350 girls, and 453 infants. The Bluecoat Hospital, instituted in 1709, provides clothing, food, diet, and instruction for 250 boys and 100 girls. The building, which is of brick, has a handsome appearance, and the instruction, on the Madras system, is said to be as perfect as that of any school in England conducted on the same plan. The school of industry, established in 1810, is intended for training girls for domestic service. The number is limited to 100, and a few of the more deserving scholars have board and lodging, as well as a good plain education. Christ-church National schools educate 250 boys, 260 girls, and 200 infants; and Everton National school has 66 boys and 60 girls. Among the other schools may be specified Waterworth's school, in Hunter Street; St. Patrick's charity-school; the Duncan Street schools, supported by the Society of Friends; the Renshaw Street school, maintained by the Unitarians; and the Caledonian school in Oldham Street. There is likewise a blind school, and a school for the deaf and dumb.

Charitable Institutions. — Liverpool has many extensive and respectable edifices devoted to charitable purposes, among which may be mentioned the Charitable Institution-house in Slater Street, intended to give gratuitous accommodation to all religious and charitable institutions established in Liverpool, for committees, public meetings, and lectures. The infirmary in Brownlow Street (removed from Shaw's Brow in 1824) was erected at a cost of 27,800*l.*: it is a chaste and elegant structure, with an extent of masonry, and a number of front windows, that give it, when seen from the street, an appearance of grandeur exceeded by few other buildings in the town. There are 20 wards, comprising excellent accommodation for 234 patients, and the medical staff attached to the institution equals in ability and attention that of any hospital out of the metropolis. The fever hospital, with 110 beds, supported by the poor-rate, is a valuable institution. The lunatic asylum, erected not many years ago, at a cost of 11,000*l.*, to supply the place of an older establishment, has a handsome exterior, and comprises accommodation, with spacious airing-grounds for 60 patients, many of whom, as at York, belong to the higher classes. The Lock Hospital, connected with the infirmary, was opened in 1834, with accommodation for 60 patients. The Northern and Southern hospitals are extensive buildings. Three dispensaries (one of which, in Vauxhall Road, is a large and elegant building, comprising accommodation for in-patients and medical students) furnish gratuitous advice and medicine for the sick poor, who are likewise attended by the resident officers at their own habitations. There is also an ophthalmic infirmary and dispensary, with which is connected an institution for diseases of the ear. The ladies' charity affords relief to about 1,200 lying-in women every year, with supplies of linen and medicines.

The other principal charities are the Strangers' Friend Society, relieving about 1,000 persons yearly, with a similar institution called the Charitable Society, the Penitentiary and Refuge for the Destitute, both intended for the reformation of degraded females, the Marine Humane Society, and the District Provident Society. The Sailors' Home, a large handsome building near the custom-house, comprises a savings' bank for seamen, and a reading-room, with lodgings for a considerable number of men, and lists of those lodging-houses in the town where they will be best accommodated. The plan seems to be successful in improving the

Digitized by Google

habits, as well as in adding to the comforts, of the seamen frequenting the port. There is also a deaf and dumb institution, and two asylums for the blind, one of which is supported by the Roman Catholics. There are likewise many religious societies, the chief of which are the Bible Society (by far the largest in point of income), the Society for Promoting Christian Knowledge, and the Mariners' Church Society.

Port and Docks.—The rapid rise of the port of Liverpool to its present consequence, though, no doubt, principally due, like that of the town itself, to the astonishing increase of manufactures and population in the extensive district of which it is the grand emporium, is also, in part, owing to the facilities which have been given to navigation and commerce by the construction of wet and dry docks. The estuary of the Mersey may be properly termed an arm of the sea, opening to this port a ready access to the Western sea; and ships of any burden may come up fully laden to the town, though the sand-banks which enclose the channels are continually shifting. The main entrance to the estuary of the Mersey is crossed by a bar, which however has, at low water spring tides, 11 ft. water; and as the tides rise 21 ft. at neap and 31 ft. at spring tides, there is water for the largest ships. The channels being indicated by light vessels, and well marked with buoys, there is no difficulty in making the port.

The land around being low, the ships in the river are exposed to risk from gales of wind; and to obviate this inconvenience, and to facilitate their loading and unloading, a number of gigantic docks have been constructed which constitute the great glory of the town. The first wet dock in the British empire was opened here in 1718, the act for its formation, the 8 Anne, c. 12, having been passed in 1709. Another act was passed in 1738, the 11 Geo. II. c. 32, authorising the construction of a second dock. Since that period many more docks have been constructed on a very extensive scale, so that the aggregate area of those now in use amounts to nearly 300 acres, and the quay-space to about 17 m. in length. The total cost of the existing docks amounts to above 13,000,000*l.* sterling, including 3,000,000*l.* spent upon the magnificent floating basin at Birkenhead, opened in 1860, containing 120 acres of water space, besides 120 acres of quays, which extend lineally for nearly nine miles.

Among the largest of the docks are the Brunswick, Queen's, King's, Albert, Salthouse, Canning, George's, Prince's, Waterloo, Victoria, Trafalgar, Clarence, Nelson, Bramleymoore, Wellington, Huskisson, Sandon, Salisbury, Collingwood, and Stanley. The three last are connected with the Leeds and Liverpool canal, and most of the others have half tide locks and wet basins.

Of the old docks of Liverpool, the King's Dock, being contiguous to the King's Tobacco Warehouse, receives all vessels from Virginia and other parts laden with tobacco; the Queen's and Brunswick Docks are occupied by ships laden with timber from Honduras, Canada, and the Baltic; the Canning Dock receives coasting vessels, which exchange corn and provisions for colonial produce, and other docks are appropriated to other purposes. All these works are defended on the side next the river by a strong sea-wall upwards of 5 m. in length. Every precaution is taken to prevent the accumulation of mud in the docks by the use of steam-dredging machines; and strict rules, enforced by a vigilant police force, are established to maintain good order, and prevent both fire and depredations.

The docks are all under the management of a Mersey Dock and Harbour Board, appointed by the corporation. Many of the bonding and other warehouses, however, do not belong to the dock estate, but are private property. Most of them are in the immediate vicinity of the docks, but some are at a considerable distance. The difference in the situation of the warehouses in the two ports of London and Liverpool leads to a difference in the mode of discharging and loading ships in each; in London this is done by the servants of the different dock companies; whereas, in the port of Liverpool, it is effected by gangs of private labourers, called *lumpers*, who contract for a specific sum to load or unload a vessel. A great reduction was effected in the scale of the Liverpool dock dues in 1836, and again in 1848, and they are now extremely moderate.

Commerce.—Liverpool is of old renown as a commercial emporium. In the reign of Henry VIII. it is noticed by Leland as a place to which merchants resorted because of her moderate customs, and as being a great mart for Irish yarn. At a later period Liverpool is described by Camden as being 'the most convenient and frequented passage to Ireland,' and more celebrated for her 'beauty and populousness than for her antiquity.' (Gough's Camden, iii. 376, ed. 1806.) Liverpool was once joined for fiscal purposes with Chester, but had more trade than the latter, and therefore could not have been correctly described, as has been reported, as 'the little creek of Liverpool.' In the year 1709, Liverpool had about 8,000 inhab. (a large pop. for that period), and nearly 6,000 tons of shipping; and, as has been stated already, an act was obtained in that year for the construction of a wet dock. Since then her progress in commerce, and in the accumulation of wealth and population, has fully kept pace with the progress of manufacturing industry in Lancashire and the northern counties, for the products of which Liverpool is the natural outlet. Besides, the situation of Liverpool necessarily renders her a principal seat of the trade between Ireland and Great Britain; and as the population and trade of the former increased, it could not fail proportionally to increase the trade of this port.

The gradual filling up of the Dee, and the consequent decline of Chester as a harbour, has also proved of no little advantage to Liverpool, by rendering her the great mart for the salt of Nantwich, and other places in Cheshire, the exportation of which to foreign parts employs a great amount of shipping. Unquestionably, however, Liverpool would never have attained to half her present size or importance, but for the cotton manufacture. Being the port through which Manchester, Oldham, Bury, Bolton, Ashton, and other great seats of that manufacture, could most conveniently obtain supplies of the raw material, and export their manufactured products, she has increased with every increase in this great department of industry; and it is no exaggeration to affirm that the creative influence of the wonderful inventions and discoveries of Hargreaves, Arkwright, Crompton, Cartwright, and the other founders and improvers of the cotton manufacture, has been, though not so direct, quite as powerful in the docks and warehouses of Liverpool, as in the mills of Manchester.

The vast commerce of Liverpool is shown in the following two tables, illustrative of the shipping of the year 1863. The first table shows the total number and tonnage of vessels, both sailing and steam, which entered the port, from various countries, in the year 1863. The table likewise gives the proportion of vessels and tonnage under the British flag, distinct from the total shipping.

In 1864, the total number of vessels entering the port amounted to 4,045, of which number there were 2,898 British vessels, of 1,372,203 tons burthen, and 1,147 foreign vessels, of 498,292 tons burthen. From British colonies there came 1,127 British and 106 foreign vessels, while from foreign countries there came 1,771 British and 1,041 foreign vessels.

The following table gives the number and tonnage of vessels which cleared the port of Liverpool, to various destinations, in the year 1863:—

As regards the quantity of shipping, the port of Liverpool is inferior to that of London, less in amount of tonnage than in number of vessels. On the other hand, as regards the exports of British and Irish produce and manufactures, Liverpool stands far above any port in the United Kingdom, and the value of them, indeed, is nearly equal to that of all the other ports together. The total value of these exports amounted to 50,297,135*l.* in 1862; to 65,154,232*l.* in 1863, and to 72,748,031*l.*, in 1864. In the last-named year, the exports of home produce from London were of the value of 36,554,913*l.*, or only one-half the amount of those from 'the little creek of Liverpool.'

Next to the consequence of Liverpool as a trading port, is its high importance as a packet station, second probably to none in the world, except London. The steamers to New York and other parts of the United States, which, for size, excellent accommodation, and speed, are justly the objects of general admiration, leave the port almost daily, and a splendid fleet of steam ships of unexampled magnitude are engaged in the trade to New York, Boston, Halifax, Rio de Janeiro, Buenos Ayres, Lima, Lisbon, Oporto, and the Mediterranean. There is, also, daily communication with Dublin; and with Waterford, Belfast, Glasgow, the Isle of Man, Drogheda, Wexford, Cork, Bristol, Dumfries, Carlisle, Whitehaven, Wigtown, and other places in the United Kingdom. A host of river steamers are constantly plying for passengers at the various ferries of the Mersey, or running up and down the stream. The gross amount of customs duties received at the port of Liverpool, amounted to 3,661,662*l.* in 1859; to 3,380,937*l.* in 1861; to 3,138,401*l.* in 1863; and to 2,898,445*l.* in 1864.

Manufactures.—Liverpool is not, properly speaking, a manufacturing town; but the vast magnitude of its foreign commerce necessarily demands the practice of a great number of domestic trades, some connected with shipping, and others dependent on the peculiar nature of the traffic of the port. There are several large sugar refineries, iron and brass foundries, public breweries, roperies, glass-staining, and alkali works. The manufacture of soap is more extensively carried on here than in any town of the kingdom, but the business of ship-building has fallen off, and, in this respect, Liverpool is now very inferior to Sunderland, and to her great transatlantic rival New York. Efforts are now, however, being made to recover and revivify the trade.

There are numerous and large manufactories of chain, cables, anchors, and compasses. The making of watches, and watch-movements employs a great number of hands, and large quantities of these articles are exported, with files and tools, produced on a large scale in and near the town. Steam-engines of the best and most powerful kind are made in several establishments, from which have proceeded many of the engines employed on board the largest steam-ships; and this business is every year increasing in importance.

Canals and Railroads.—The commerce of Liverpool has been greatly promoted by the facilities which it enjoys for inland transport, greater perhaps than those belonging to any other town of Great Britain, except Manchester. The Irwell and Mersey navigation (for which an act was obtained in 1720) was the first effort to improve on the resources of nature, almost contemporary with which was the Weaver navigation. By means of the former, raw cotton and cotton goods were conveyed by water to and from Manchester, while, by the latter, the salt of Cheshire was furnished with equal facilities for its transit to Liverpool. The Sankey Brook navigation, completed in 1768, the Duke of Bridgewater's canals, the Trent and Mersey or Grand Trunk canals, and the Leeds and Liverpool canal, were finished in rapid succession, so that, in 1816, the port of Liverpool had a complete water communication, directly or indirectly, not only with the great manufacturing towns of Lancashire, Cheshire, and Yorkshire, from which it derives its chief articles of export, but likewise with the S. cos., and, in fact, nearly every part of England. The following table exhibits some particulars respecting the size and levels of the above-mentioned undertakings.

Canals	Length	Surface Breadth	Depth	Rise and Fall	Estimated Cost
	Miles	Feet	Feet	Feet	£
Mersey and Irwell Navigation . . .	50	..	..	R. 70	*
Weaver do. . .	24	..	..	F. 50	*
Sankey Brook do.	12	48	5½	F. 78	*
Duke of Bridgewater's Canal	38½	..	..	F. 82½	220,000 ?
Trent and Mersey	93	..	..	R. 326 F. 134	335,000
Leeds & Liverpool . . .	134	42	5	R. 418 F. 433½	1,200,000
Total Length of Canal Communication	351½				

Very large fortunes have been realised by the above undertakings; and, notwithstanding the successful competition of railways, they still bring considerable incomes to their proprietors. The facility of transit, however, both for passengers and goods, has been vastly increased since the opening of the railways, by which Liverpool is brought within an hour's distance of Manchester, and both are brought within three hours of Birmingham, and six hours of the metropolis. The act for the Liverpool and Manchester railway was obtained in 1826; the works were completed in 1830, at a cost of 876,000*l.*, or more than double the estimate laid before parliament; and the line was finally opened on the 15th of September of that year, a day that will be long remembered, from its connection with the melancholy death of Mr. Huskisson, one of the most enlightened commercial statesmen of Great Britain. This railway is now incorporated with the London and Birmingham, Grand Junction, and North Union, under the name of the London and North Western Railway,

Digitized by Google

and affords, partly by itself, and partly by the innumerable lines connected with it, an easy and safe means of transit to all parts of the United Kingdom. The station of the Liverpool and Manchester and NW. railway, in the centre of the town, opposite St. George's Hall, is at once a magnificent and a commodious structure. The front, in the Corinthian order, cost 7,000*l.* The Lancashire and Yorkshire, East Lancashire, Chester, and Birkenhead railways have also termini in Liverpool. A plan for connecting these lines with Birkenhead, and the railways in Cheshire, by a tunnel under the river Mersey, has long been in contemplation.

Corporate Establishment.—Liverpool received its first charter of incorporation from King John in 1207, with others from subsequent monarchs. William III. granted it a new charter in 1695, which was confirmed, with a few alterations, by George II. and III.; and by the provisions of this charter the town was governed down to the passing of the Mun. Reform Act in 1835. The bor. is now divided into 16 wards, the corporate officers comprising a mayor, with 15 other aldermen, and 48 councillors. The corporation has the right, under an act passed in 1835, to nominate persons to fill subordinate corporate offices, and is empowered to make 'laws for regulating the police of the town, the docks and the port generally, for lighting and watching the town, and for the suppression of disorderly and immoral practices.' Quarter and petty sessions are held by the recorder, who is appointed by the crown, and the assizes for W. Derby and Salford have been removed hither from Lancaster. The police, organised in 1836, and conducted by a commissioner, is formed, like that of the metropolis, into divisions, with superintendents, inspectors, and sergeants, and is said to be extremely efficient in suppressing crime, and maintaining order both in the town and port. The force consisted in 1864, of 982 men, including a chief constable, with a salary of 800*l.*, 12 superintendents, and 72 inspectors.

There is great scope for the committal of offences in Liverpool; and, owing to the number of sailors frequenting the town, and the number of destitute immigrants, Irish and others, that are thrown upon its streets, there is a vast number of petty offences. The number of serious crimes, however, is not very considerable; less, indeed, than might have been anticipated in so motley and excitable a population. Drunkenness is here, as in most similar places, the grand source of disorder.

The bor. jail, erected on the plan of Howard, and formerly used as a depôt for French prisoners, having become too small to admit of the proper classification of the prisoners, a new, enlarged, and improved prison has been recently erected to the N. of the town. The bridewell is well managed. The county house of correction is situated at Kirkdale.

The provision for the poor, in so populous a town as Liverpool, is, of course, on a large scale. The total rental assessed to poor rate was 1,982,635*l.*, in 1863. The poor-house, which, from its extent, might be called a little town, is one of the largest in the kingdom. It admits of the perfect classification of the inmates, according to the principles of the Poor Law Amendment Act, and of considerable indulgence being granted to the sick and aged. The pauper children have been removed from this building to the industrial school prepared for their reception at Kirkdale.

The bor. has enjoyed the privilege of sending 2 mems. to the H. of C., since the 25th of Edward I. Down to the passing of the Reform Act, the elective franchise was vested in the freemen and free burgesses. The Boundary Act enlarged the bor. so as to include the out-townships of Kirkdale, Everton, W. Derby, and Toxeth Park. Reg. electors, 17,750 in 1865. The gross annual value of real property assessed to income tax under schedule (A.) was 1,850,408*l.*, in 1857, and 2,149,174*l.*, in 1862, showing an immense increase of wealth in the short space of five years. The value of real property in Liverpool, assessed to income tax, was as high, in 1862, as that of the whole of the boroughs of Ireland.

LIVONIA (Russ. *Lifliandïa*, Germ. *Livland*, or *Liefland*), a marit. gov. of European Russia, on the Baltic, having N. the gov. of Revel, E. the lake Peipus, separating it from the gov. of Petersburg and the govs. of Pskov and Vitebsk, S. the latter and Courland, and W. the Gulf of Livonia. Length, N. to S., about 150 m.; average breadth, 117 miles. Area, including the island Œsel, in the Baltic, 17,500 sq. m. Pop. 883,681 in 1858. The coast and the greater part of the surface are flat and marshy; but in the districts of Venden and Dorpat are some hills of considerable elevation: Eierberg, one of these, being nearly 1,100 ft. in height. There are several extensive lakes: the principal, Virtserf, 24 m. in length by from 2 to 6 m. in breadth, communicates with the lake Peipus by the Embach. Besides the last named, the chief rivers are the Dwina, which forms the south boundary, the Evst, and the Bolder-Aa. The soil, though in some parts loamy, is in general sandy, but being abundantly watered, it is, by proper manuring, rendered very productive. Rye and barley are the principal crops, and more of both is grown than is required for home consumption. Wheat and oats are less cultivated; buckwheat is raised on sandy soils: flax, hops, and pulse are also produced; and the potato culture is on the increase: fruits are of very indifferent quality. In some districts agriculture is tolerably well conducted. The forests are an important source of wealth, and supply excellent timber; they abound, not only with game, but also with wolves, which are sometimes very destructive to the cattle. The rearing of live stock, though not altogether neglected, does not receive adequate attention; the breed of black cattle is, however, in the course of being improved. Horses and sheep are very inferior. The fisheries, both on the coast and in the fresh waters, are important. Chalk, alabaster, and other calcareous materials are abundant.

Rural industry and the distillation of spirits are by far the most important occupations. The manufactures of this government are, however, more extensive than those in its vicinity. The peasantry spin linen yarn, and weave their own cloths; and in the towns, especially Riga, there are sugar refineries, and tobacco, woollen cloth, cotton, linen, glass, and other factories. The N. part of Livonia formerly constituted a portion of Esthonia, and the S. a part of Lithuania. The pop. consists of Esthonians, Lithuanians, Russians, Germans, and (along a portion of the coast) Lifes, the most ancient inhab. of the country, and from whom it has derived its name. About 82,000 of the inhab. reside in the towns, and these, as well as the nobles and clergy, are chiefly of German descent. The prevailing religion is the Lutheran; there are only about 12,000 individuals of the Greek church and other professions of faith. Education is tolerably advanced in the towns, and the university of Dorpat, in this government, is the first in the empire. Livonia has a governor-general, whose authority extends over the government Pskov and the other Baltic provinces; but it has its own provincial assembly and magistracy, and has preserved many peculiar privileges,

Digitized by Google

among which is that of exemption from the state monopoly of ardent spirits. It was divided into 9 districts by Catherine II.: Riga is the capital and centre of its commerce; the other chief towns are Dorpat, Pernau, Fellin, and Arensburg in the island Œsel.

Livonia was conquered by the Danes in the 12th century, and held by the Teutonic knights from 1346 to 1561. It afterwards belonged to Poland, and next to Sweden; but was definitively annexed to Russia, by the treaty of Nystadt, in 1721.

LIXURI. See Cephalonia.

LIZARD POINT, a bold headland, on the British Channel, being the most southerly promontory of England, on the S. coast of Cornwall, 23 m. ESE. the Land's End; lat. of highest lighthouse, 49° 57′ 41″ N., long. 5° 11′ 5″ W. The Lizard is famous in navigation, from its being the point whence ships usually take their departure from the Channel, and being, also, the best place for a land-fall when homeward bound. It is surmounted by 2 light-houses with *fixed* lights, at a short distance from each other, the lantern of the one being 225 ft. and of the other 221 ft. above the level of the sea. Some steep rocks, called the Stags, lie to the S. of the Lizard.

LLAMPETER, or LAMPETER, a parl. bor., market town and par. of S. Wales, co. Cardigan, hund. Moyddyn, 25 m. E. by N. Cardigan, and 180 m. W. by N. London. Pop. of parl. bor., which is contributory to Cardigan, 989, and of par. 1,426 in 1861. The town, which stands on a slope about ½ m. N. of the Teify (crossed here by a stone bridge), appears to have been larger formerly than at present, when a score of tolerably built houses and about 100 cottages comprised the whole of its private dwellings. The church, which stands on an eminence at the N. end of the town, is very ancient, and being shaded with venerable yews, has a picturesque appearance. There are also two chapels for Calvinistic Methodists and Presbyterians. The chief ornament of the place is the College of St. David's, a handsome Gothic structure erected in 1825. This institution, founded by George IV. in 1822, at the suggestion of the bishop of St. David's, and endowed with 6 livings, is intended to furnish clerical instruction for the clergy of the S. part of the principality. The students reside within the college, the business of which is conducted by the principal, who gives theological instruction, and is assisted by Greek, Hebrew, Welsh, and other professors. The course of instruction lasts two years, and is attended, at an average, by about 60 students, whose necessary expenses do not exceed 55*l.* a year. The bishop of the diocese, who is the visitor, ordains none except graduates of the English universities, or certificated students of Llampeter College. The town is of little trading importance. Markets on Saturday. Fairs, well attended, for horses, cattle, and hogs, Jan. 11, Wednesday in Whitsun-week, July 10, first Saturdays in Aug. and Sept., Oct. 19, and first Saturday in Nov. The town is incorporate, governed by a portreeve, and sessions are held annually by the co. magistrates on the second Wednesday in Oct.

LLANDEILO-FAWR, a market town and par. of S. Wales, co. Caermarthen, hunds. Caro and Perfedd, on the Towy, 13 m. E. by N. Caermarthen, and 169 m. W. by N. London. Pop. of par. (including 10 hamlets), 5,440 in 1861. The town, situated in the beautiful and interesting vale of the Towy, is small and ill-built, the only public buildings being an old church, and 4 places of worship for dissenters. Newton Park, the residence of Lord Dynevor, and Golden Grove, belonging to Earl Cawdor, are the principal country-seats of the neighbourhood, which is very productive, and has some rich mines of coal and iron. A railway connects this coal-field with the port of Llanelly. Quarter sessions are held here, and Llandeilo-fawr is one of the polling places for the co. Markets well-supplied with corn, on Saturday: fairs, Feb. 20, May 5 and 12, June 21, Aug. 23, and Nov. 12.

LLANDOVERY, a mun. bor. and market town of S. Wales, par. Llandingad, co. Caermarthen, hund. Perfedd, 23 m. ENE. Caermarthen and 162 m. W. by N. London, on the South Wales railway. Pop. of bor. 1,855 in 1861. The town, agreeably situated in the upper part of the vale of the Towy, at a short distance from that river, has one principal avenue, and 8 other streets lined with respectable houses. The keep of an old castle, destroyed by Cromwell, occupies the summit of an insulated rock, and forms a chief feature of the place. The par. church stands a little S. of the town, and there are likewise 4 places of worship for dissenters, with attached Sunday schools. National and Lancastrian schools are established, and there are almshouses and other charities for the aged poor. There is little trade or traffic of any kind in Llandovery. It is a mun. bor., governed since the Municipal Reform Act, by a mayor and 3 other aldermen, with 12 councillors. The petty sessions for the hund. of Perfedd are held here, and Llandovery is one of the polling places at the elections for the co. Markets on Wednesday and Saturday: cattle fairs, Wednesday after Jan 17, the 2d Wednesday after Easter, Whit-Tuesday, July 31, and Nov. 26.

LLANELLY, a parl. bor., sea-port, market town, and par. of S. Wales, co. Caermarthen, hund. Caernwallon, 13 m. SE. Caermarthen, 10½ m. WNW. Swansea, 174 m. W. by N. London by road, and 225 m. by Great Western railway. Pop. of parl. bor. 11,446, and of par. 17,279 in 1861. The town is irregularly built, on a creek near the sea-shore; but some of the houses are good, and the place, on the whole, appears to be thriving. The church is an old irregular structure, remarkable as having two towers, one embattled, and the other surmounted by a steeple: the living is a vicarage, and within the par. are two chapels-of-ease. Dissenters also of different denominations have places of worship. A free school and two other schools, chiefly supported by subscription, furnish instruction to the children of the poor; and there are four charities for the relief of the sick and aged. Llanelly is situated in the midst of the rich mineral basin of S. Wales. Four large collieries at Llangenneck employ upwards of 500 persons; and the abundance of excellent coal, a part of which is exported to France, Spain, and the Mediterranean, for the use of steam-boats, has caused the establishment of the Llanelly and Cambrian copper-works. The ore is imported chiefly from Cornwall; and the copper-cakes and sheathing are sent to Liverpool, and other ports of the kingdom. There are also two iron-foundries, but both are air-furnaces, and of no great importance. The town has four docks, two of which are floating basins, the largest being capable of accommodating no less than 50 vessels of 500 tons register. On the 1st of January, 1864, there belonged to the port 31 sailing vessels under 50, and 48 above 50 tons, besides 4 small steamers, of a total burthen of 98 tons. The gross customs revenue amounted to 2,926*l.* in the year 1863.

The interests of the town have been recently much promoted by the construction of a railway, with branches into different parts of the fine coal-field near Llandeilo; and it is probable that Llanelly

Digitized by Google

will, at no distant period, become one of the principal trading ports of the principality. The parl. bor., which is contributory to that of Caermarthen, includes the bor. hamlet, with some additions. Registered electors in both bors., 838 in 1865. The bor. is governed by a portreeve and burgesses, and had formerly both civil and criminal jurisdiction. Markets on Thursday and Saturday: fairs on Ascension Day and Sept. 30.

LLANGADOG-FAWR, a market town and par. of S. Wales, co. Caermarthen, hund. Perfedd, on the Towy, here crossed by a handsome stone bridge, 19 m. E. by N. Caermarthen, and 167 m. W. by N. London. Pop. of par. 2,789 in 1861. The town has two wide streets, with a few well-built houses and numerous cottages. An old church and 3 dissenting places of worship are the only public buildings, besides a ruinous old castle. Woollen stockings and coarse woollen cloths are made here; but the chief business is the sale of farm produce at the fairs and markets, which are very considerable. Markets on Thursday; fairs, March 12, July 9, Thurs. after Sept. 11, and 2d Thurs. after Oct. 10.

LLANGOLLEN, a town of N. Wales, co. Denbigh, hund. Chirk, on the Dee, 20 m. SW. Chester, 166 m. NW. London, and 201¼ m. by Great Wstern railway. Pop. of par. 5,799 in 1861. The town, beautifully situate in a deep, narrow vale, enclosed by lofty mountains, and watered by the Dee, which is crossed here by a good stone bridge, consists of one principal and a few smaller streets, lined with old and mean houses, interspersed with a few handsome modern dwellings. The church, in the early English style, has services both in English and Welsh: there is a chapel-of-ease at a hamlet within the par., and the dissenters have three places of worship. The inhab. derive their chief support from summer visitors, who, in making the tour of N. Wales, usually make some stay here, in order to enjoy the fine scenery of this vale, which in some respects excels that of the vale of Clwyd and Festiniog. Many families, also, reside here during summer, so that Llangollen may be considered as a sort of watering-place. The Reform Act made it a polling-place for the county. Markets on Saturdays. Fairs, March 17, May 31, and Aug. 21.

About 1 m. from Llangollen, situated on a high and steep conical hill, are the ruins of the castle of Dinas Bran, once a fortress of considerable strength; and about 1 m. beyond, nearly in the same direction, are the majestic remains of Vale-crucis Abbey, still in tolerable preservation: the name of this abbey is derived from a pillar or cross, situated in an adjoining field, supposed to be of high antiquity. Four miles from the town, and in another direction, is the Cysylltau aqueduct, by which the Ellesmere canal is conveyed across the Dee, a noble structure of nineteen arches, raised 126 ft. above the river, at a cost of 47,000*l.*

LLANIDLOES, a parl. bor., market town and par. of N. Wales, co. of Montgomery, hund. Llanidloes, at the confluence of the Clevedoz with the Severn, 37 m. WSW. Shrewsbury, 158 WNW. London, and 232 m. by London and North Western railway. Pop. of bor. 3,127, and of par. 3,987 in 1861. The town is situated in a valley on the E. bank of the Severn (crossed here by a handsome stone bridge of three arches), and is surrounded on all sides by lofty hills: the buildings have increased rapidly, and several respectable houses have been substituted for others composed of wood and plaster, which formerly gave the place a mean appearance. A new town-hall stands nearly in the centre of the town. The church, built in 1542 on the site of an older structure, and very recently repaired, is chiefly remarkable for a ceiling of delicately carved oak, and for a square tower of great antiquity. There are also places of worship for Independents, Wesleyans, Calvinistic Methodists, Baptists, and the Society of Friends.

Flannel and other woollens are the principal articles manufactured in Llanidloes, and the present improved condition of the town is wholly attributable to its trade in these articles. The spinning of wool is conducted in mills, but the cloth is wholly made by hand-looms. The wages of the best weavers are 10*s.* a week, but the average is about 7*s.* Spinners earn about 12*s.* Within the par. is the lofty mountain of Plinlimon, or, more properly, *Pumlummon*, 'the five-peaked hill,' on which are the sources of the Severn, Wye, and Rheidiol; and at the foot of the range there are slate quarries and lead mines, the produce of which contributes to the support of the place.

Llanidloes is a corporate town, having a mayor, coroner, and other officers, elected at a court-leet: it was not considered sufficiently important to be included in the provisions of the Municipal Reform Act. The Reform Act made it a parl. bor., contributory to Montgomery, which sends one mem. to the H. of C.; and the electoral limits comprise, besides the town, a considerable extent of surface on both sides the Severn. Registered electors in all the bors., 954 in 1865. Markets on Saturday: fairs, April 5, May 11, June 21, July 17, Sept. 13, Oct. 2 and 28.

LLANRWST, a town of N. Wales, partly in co. Caernarvon and partly also in co. Denbigh, on the Conway, 37 m. W. Chester, and 183 m. NW. London, on a short branch line of the Chester and Holyhead railway. Pop. of par. 3,993 in 1861. The town, in a spacious vale, surrounded by lofty and well-wooded hills, stands chiefly on the E., but partly also on the W. bank of the Conway, which is crossed here by an elegant bridge, constructed in 1636, from the designs of Inigo Jones. Three considerable streets, lined with tolerably built houses, branch from a spacious market-place, in the middle of which is the town-hall, a substantial brick structure. The church, an old and small building, has adjoining to it the Gwydir chapel, a square castellated edifice, originally erected as a family mausoleum, by the Wynne family, and now used as a place of worship. It has many monuments; but its chief celebrity is owing to its containing the remains of the great Lewellyn, removed thither from the abbey of Aberconway, in which they were originally interred. There are also a number of chapels for dissenters within the par., and some good Sunday schools. Llanrwst, formerly noted for its harp manufacture, depends at present almost entirely on its retail trade, for the spinning and knitting of wool has become quite insignificant. It derives considerable advantages from its position on the Conway, which brings up vessels of 60 tons burden to Trefriew with coal, lime, and timber, in return for slate and iron. Gwydir Castle, a rather large and very elegant modern structure, is situated about ½ m. from the town. Markets on Tuesdays and Saturdays. Fairs on March 8, April 25, June 10, Aug. 10, Sept. 17, Oct. 25, and Dec. 11.

LLANTRISSENT, a parl. bor., market town, and par of S. Wales, co. Glamorgan, hund. Miskin, 10 m. NW. Cardiff, 140 m. W. London, 181½ by Great Western railway. Pop. of parl. bor. 1,493, and of par. 5,492 in 1861. The town, which stands on a commanding eminence overlooking the vale of Glamorgan, consists of only three or four narrow and irregular streets, lined with old and ill-built

Digitized by Google

houses. The town-hall and market-house were erected by the Bute family, who are lords of the manor, and the principal landowners in the par. The church is a large structure in the Norman style, the living being a vicarage in the gift of the dean and chapter of Gloucester cathedral. There are also two chapels of ease in the out-townships, and several places of worship for dissenters, with attached Sunday schools. The ruins of an old castle with a high tower stand close to the town; and, at a short distance, are some interesting remains of an old monastery. Llantrissent has very little trade; but coal, lead, and iron are found in considerable quantities, in the hamlet of Pentyrch, and sent to Cardiff for exportation. The charter of the bor. was granted by Edward III., and the government is vested in a portreeve, constable, and twelve aldermen, whose privileges were left untouched by the Municipal Reform Act. Llantrissent is a parl. bor., contributory with Cowbridge to Cardiff, which sends one mem. to the H. of C. Registered electors in all the bors., 1,669 in 1865. Markets on Friday; fairs, Feb. 13, May 12, Aug. 12, and Oct. 29.

LLERENA, a town of Spain, Estremadura, prov. Badajoz, 59 m. N. Seville, and 200 m. SW. Madrid. Pop. 6,215 in 1857. The town stands on a plain at the foot of the Sierra San Bernardo, which separates Estremadura from Seville; and has two par. churches, four convents, and a hospital. The inhab. are chiefly engaged in grazing sheep and cattle on the rich pastures of the vicinity, and in collecting oak-bark, galls, and timber from the neighbouring forests.

LO (ST.) (an. *Briovera*), a town of France, dép. La Manche, of which it is the cap., on the Vire, and on the railway between Paris and Cherbourg, 156 m. W. by N. the former. Pop. 9,810 in 1861. The town is ill laid out; streets steep and irregular; they mostly lead from a square in the highest and central part of the town, which has several of the principal public buildings. Among the few that deserve notice are, the church of Notre Dame, with two lofty spires; that of St. Croix, built in 805, and considered the best specimen of Saxon architecture in France; the prefecture, a handsome new edifice; the town-hall, judicial court, prison, hospital, theatre, and a bridge of six arches over the Vire. The environs are picturesque and agreeable. St. Lo is the seat of tribunals of original jurisdiction and commerce, a chamber of manufactures, and a communal college. It has a public library with 2,500 vols., a philharmonic society, societies of agriculture and commerce, manufactures of fine woollen cloths, druggets, canvass, serges, calicoes, lace, and cutlery, and considerable trade in thread, iron, salt butter, cider, honey, and cattle. It derives its present name from a bishop of Coutances in the 6th century.

LOANGO, a kingdom of W. Africa, on the Atlantic Ocean, bounded N. by Mayomba, and S. by Congo, from which it is separated by the Zaire. The coast is high and abrupt, but the hills are covered with earth and luxuriant vegetation. The soil is generally a stiff loam, and very productive; but near the coast is an extremely fine sand, that is carried about by the lightest breeze. The lakes and rivers, of which there is a considerable number, abound with fish, and in the forests are found tiger-cats, ounces, hyenas, monkeys, antelopes, hares, and other game. The climate is excessively hot; it sometimes rains, but the dews are sufficient for vegetation. Almost the only grains are manioc, maize, and a species of pulse called *manges*, rudely cultivated by women, who merely stir the ground to the depth of an inch, and cover up the grain, to prevent its being devoured by birds, and even this slender culture is confined to small patches round the villages. The rest of the country is covered with luxuriant herbage, rising to the height of 8 feet, allowed by the people to grow, ripen, and wither, without being applied to any use. Sometimes, however, they set fire to it, producing a wide-extended conflagration over the whole country, the coast appearing from the sea to be on fire. The finest fruits grow wild, and the sugar-cane attains an extraordinary size. The tree called the mapou is distinguished, like the baobab, by the enormous dimensions of its trunk. Palm trees are very plentiful, particularly that species from which the natives extract their favourite liquor. The potato and yam are also abundant. The Chinese hog is the only animal reared for domestic use, the natives having altogether neglected the breeding of sheep, cattle, and horses, formerly introduced by the Portuguese, and still abundant at their settlement of St. Paul de Loanda. The inhabs. usually reside in villages or clusters of straw huts in the midst of palm groves. They seem to be in the lowest state of degradation, being incorrigibly indolent, debauched, filthy, cowardly, and superstitious in the extreme. The country is divided among several chiefs, who, though often at war with each other, acknowledge the supreme authority of the king of Loango, the cap. The latter is elective and absolute, but the judicial power is vested in the *cabals* or assemblies of the different villages. Loango, called *Borai* by the natives, about 2 m. from the coast, in lat. 4° 36′ S., long. 12° 20′ E., has been said to have a pop. of 15,000 persons. It is nothing more than a collection of huts. This and the ports of Kabenda and Mayomba, also, in Loango, were formerly among the principal slave marts on the coast of Guinea.

LOCHES, a town of France, dép. Indre-et-Loire, cap. arrond., on a hill beside the Indre, 23½ m. SE. Tours. Pop. 5,267 in 1861. The town is irregularly laid out, and its streets are narrow; but it is clean, and has many good houses. Its castle, on a plateau, at the summit of the hill on which the town is situated, has gained considerable notoriety in French history. It appears to have been built in the last ages of the Western Empire, and is one of the most remarkable remains of that period now existing in France. Charles VII. defended it successfully against the English; Louis XI. made it a state prison; and here Cardinal Balue, of infamous memory, was confined in an iron cage for eleven years. It is now mostly destroyed, what remains being occupied by the sub-prefecture and the prison. The palace of Charles VII., now the municipality, is a large oblong building on the bank of the Indre: it was long the residence of Agnes Sorel, whose remains are deposited in a chapel in a tower of her erection. The church of Loches, originally founded in 450, is a singular piece of architecture with four steeples, two of which are about 160 ft. high. Loches communicates with the little town of Beaulieu by several bridges over the Indre. It is the seat of a tribunal of primary jurisdiction, and a communal college; and has manufactures of linens and coarse woollen cloths, paper, and leather.

LOCHMABEN, a royal and parl. bor. and market town of Scotland, co. Dumfries, in a level country, surrounded by several lochs or lakes, 10 m. NE. Dumfries, and 82 m. NW. Carlisle, on the Caledonian railway. Pop. 1,544 in 1861. The town consists of one extremely wide street, more or less overgrown with grass. The public buildings are a town-house, parish church, and a dissenting chapel. It has no manufactures, and was lately,

Digitized by Google

and perhaps still is, the poorest royal bor. in Scotland. Lochmaben owes its origin to the protection afforded by a castle of the same name, built in the twelfth century by the Bruces, lords of Annandale, from whence King Robert Bruce was descended. The site of this fortress, surrounded by a deep fosse and moat, is still called the castle hill. Robert Bruce built another strong castle on a peninsula, on the SE. side of the Castle Loch, which, with its outworks, covered nearly 16 acres. The walls, in the few places where they are still entire, are 12 ft. thick. It was preserved as a border fortress till the union of the crowns, since which it has gradually gone to decay. Bruce parcelled out the barony of Lochmaben, called the 'Four Towns,' as it contains four villages, among his retainers, in small patches, on the condition that the occupants should furnish a certain amount of provisions for the use of the royal fortress. These persons, who are called the 'king's kindly tenants,' had no written title to the lands; and at present, in case of a sale, a simple deed of conveyance is sufficient; and the succession is taken up without any feudal service. Owing to a misunderstanding between these tenants and the keeper of Lochmaben Palace, Charles II., in 1664, guaranteed to them the perpetuity of their leases, and relieved them from every burden, except the rents and services paid by their ancestors in 1602, which are nominal merely. The tenants are a poor but contented class, having little intercourse with the rest of the community. Many of the inhab. of the bor., like the 'king's kindly tenants,' are owners of small patches of land, there being within the bor. no fewer than 141 small proprietors. Lochmaben unites with Annan, Sanquhar, Dumfries, and Kirkcudbright in sending a member to the H. of C. Registered voters, 52 in 1865.

LOCHWINNOCH, a manufacturing town of Scotland, co. Renfrew, on the Calder, a stream which terminates in Castle Semple Loch, and on the railway from Glasgow to Ayr, 15½ m. SW. Glasgow, and 25½ m. N. Ayr. Pop. 1,910 in 1861. The town, which is sheltered in every direction except the SE., either by rising grounds, or thick plantations, has a main street (½ m. long), with others crossing it at right angles. It also has a parish church, a free church, a chapel belonging to the Associate Synod, several public libraries, and various friendly societies. Manufactures were early introduced into Lochwinnoch, but those of linen and silk have disappeared. Thread-making was introduced in 1723: at one time there were about 20 thread-mills in the place; but the business is now nearly discontinued. Cotton is the staple manufacture. Three cotton mills employ about 600 persons and there are above 200 weavers employed by the manufacturers of Glasgow and Paisley. There is a mill for carding and spinning wool, and one of the best corn-mills in Scotland.

LOCKERBIE, a market town of Scotland, co. Dumfries, in the centre of a rich and fertile country, on the railway between Carlisle and Glasgow, 37 m. NW. the former, and 66 m. SE. the latter. Pop 1,709 in 1861. The town is neat and regularly built, and has been materially increased and improved since the opening of the Caledonian railway, which passes close by the town. It has a par. church, a free church, and a chapel belonging to the Associate Synod. Lockerbie has long been distinguished for its excellent schools. There are two fairs and ten markets annually. The fairs are exclusively, or at least principally, for lambs and wool. When the border feuds had so far ceased (after the union of the crowns) as to allow a slight intercourse between the English and Scotch, the sheep farmers of the S. of Scotland assembled here to meet the English dealers. This was the origin of these fairs, which have been long very important. The Lammas fair (2nd Monday in Aug.) is the largest lamb fair in Scotland. The ten markets have each a somewhat different object; one of them being for hiring servants, another for black cattle and horses; while those in winter are principally for pork, which is largely produced in the vicinity.

LODEVE, a town of France, dép. Herault, cap. arrond., on the Ergue, at the foot of the Cevennes, 27 m. WNW. Montpellier, on a branch line of the railway from Montpellier to Toulouse. Pop. 11,864 in 1861. The town is ill built; is surrounded by old fortifications; and has an old cathedral, formerly a bishop's see. In Lodève and its neighbourhood, from 7,000 to 8,000 workpeople are employed in the manufacture of woollen cloth for the army, and nearly all the inhab. of the town are in some manner connected with this business, at least three-fourths of the pop. belonging to weavers' families. The government demand for this cloth being constant, the people engaged in its manufacture have nearly always employment, and their condition is consequently better than that of most of those in the ordinary departments of industry. The workpeople are said to be active, industrious, and particularly sober. But there has been but a very slight increase of population within the last twenty or thirty years.

LODI, a city of North Italy, prov. Milan, on the Adda, here crossed by a wooden bridge, and on the road from Milan to Piacenza, 18 m. SE. Milan. Pop. 21,540 in 1862. The town is situated on slightly rising ground, and is surrounded by old walls, and entered by four gates. It is generally well-built, and has broad and regular streets, an old citadel, now dismantled, and converted into barracks, numerous churches, a large hospital, a theatre, several handsome palaces, and a large market place surrounded with arcades. The church *della Incoronata* is said to have been designed by Bramante; it has a fine rotunda, and is ornamented with frescoes and paintings by Calisto, a pupil of Titian. In the cathedral is the 'Murder of the Innocents,' by the same artist. Lodi is a bishop's see; and it has a royal and ecclesiastical gymnasium, a public library, a normal school, orphan and foundling asylums, a workhouse, a large porcelain factory, and manufactures of linen fabrics. It is the centre of the trade in Parmesan cheese.

Lodi is famous in modern history for the victory achieved here on the 10th of May, 1796, by Napoleon in his first Italian campaign. The cannon of the Austrians swept the bridge behind which they were drawn up; but it was, notwithstanding, forced by the French at the point of the bayonet, and the Austrian army totally defeated. On this occasion, the intrepidity and gallantry of Napoleon shone as conspicuously as his skill as a tactician.

LOFFODEN ISLES, a group of islands on the coast of Norway, between lat. 67° 40′ and 69° 30′ N., and long. 11° 40′ and 16° 20′ E. There are five larger and several smaller islands, having in all from 3,000 to 4,000 inhab. The principal (taking a SW. direction) are, Andöen, Langöen, and Hindöen, which is the largest of the whole group, and, with six others, forms, on the side of the Norwegian continent, the great gulf of West Fiord. The coasts of these islands are extremely irregular, and they rise into lofty and rugged mountains, covered with perpetual snow, and in some places with glaciers. There are no trees, but only a few stunted shrubs, grass, and cryptogamous plants; nor are these islands of any impor-

Digitized by Google

tance, except on account of the fisheries, which are very extensive and valuable. 'In the beginning of February the cod-fish set in from the ocean and occupy the banks in West Fiord. These banks are from 3 to 10 m. out on the Fiord, at a depth of from 60 to 80 fathoms; and the fish crowd so much together while depositing their spawn, that it is said a deep sea lead is often interrupted in its descent to the bottom through these *fish-hills.* The fishermen assemble in the month of January at the different stations, and the fish are caught by nets and long lines, set at night, and taken up in the morning. An outfit, or company, consists of 2 boats, each having 5 men, and provided with 6 or 8 nets; and every 20 or 30 of these companies have a large tender to bring out their provisions, nets and lines, and to take the produce to market. The fish are cured as round or stock fish till April, after which they are split, salted, and carried to Drontheim, or other places to be dried on the rocks, like the Scotch-dried cod. The stock-fish are merely gutted and hung up, two together, across poles, and are dried, without salt, in the wind. In a medium year there were 2,916 boats fishing in 83 different stations, accompanied by 124 tenders, the number of men in all being 15,324. The produce amounted to 16,456,620 fish, which, when dried, would weigh 8,800 tons; there were also 21,530 barrels of cod-oil, and 6,000 barrels of cod-roe. This important winter-fishery ends in the middle of April. The herring fishery on these shores is of much less consequence.' (Laing's Norway, p. 399–403.)

LOGHUR (*Lohagur*, 'the iron fort'), a strong hill fort of Hindostan, prov. Aurungabad, in the British territories, 30 m. NW. Poonah. From the perpendicular height of the rock on which it is built, this fortress could not, if properly defended, be taken by storm. It is supplied with water by numerous tanks and springs, and has extensive excavated magazines. It came into the possession of the British in 1818.

LOGRONO (an. *Juliobriga*), a town of Spain, in Old Castile, prov. Soria, on a spacious plain on the Ebro, which is here crossed by a handsome bridge, 57 m. WSW. Pampeluña, and 158 m. NE. Madrid. Pop. 10,466 in 1857. The town comprises, besides several good streets, two fine squares, with a collegiate church, 5 par. churches, 8 convents, and 2 hospitals. It has tanneries, distilleries, and fabrics of saddles, hats, and candles.

LOHEIA, a sea-port town of Arabia, the most northerly in the territ. of Yemen, on the Red Sea, 175 m. NNW. Mocha, lat. 15° 41′ 20″, long. 42° 46′ 14″. It stands on low ground, sometimes inundated by the sea. Its port is so shallow that vessels of even small burden are obliged to anchor at a considerable distance off shore. The environs are arid and sterile, and the town is ill supplied with water. It is not walled, but is defended by several towers at equal distances round it, though only one of these is defensible by cannon. A few houses are of stone, but the greater part are mere mud huts, thatched with grass, with a straw mat for the door, and rarely any windows. The chief edifices are, a mosque, with the tomb of the Mohammedan saint who founded the town; the governor's residence; the custom-house, and some coffee warehouses. The coffee shipped at Loheia is inferior to that of Mocha, but it notwithstanding carries on a considerable trade in it with Cairo, through Djidda. Lime is prepared in the neighbourhood by the calcination of coral, and near the town is a salt mine.

LOIR-ET-CHER, a dép. of France, reg. centre, between lat. 47° 15′ and 48° 10′ N., and long. 0° 30′ and 2° 15′ E., having N. Eure-et-Loire, E. Loiret and Cher, S. Indre and Indre-et-Loire, and W. the latter and Sarthe. Length, NW. to SE., 80 m.; breadth varying from 20 to 45 m. Area, 635,092 hectares; pop. 269,029 in 1861. Surface mostly plain, with a general inclination towards the W. The Loire intersects the dép. nearly in its centre in a direction from E. to W.; the other chief rivers are, in the N. the Loir, a tributary of the Sarthe; and in the S. the Cher, Bouncheure, and Cosson, affluents of the Loire. In the S. of the department are numerous pools and marshes, which in the arrondissement of Romorantin cover nearly 3,400 hectares. It is estimated that 369,627 hectares of the surface are arable, 31,634 occupied with pastures, 26,591 with vineyards, 70,210 with woods, and 80,096 with heaths, wastes, &c. More corn is grown than is required for home consumption. The annual produce of wine is estimated at above 900,000 hectolitres, some of which is of mediocre quality. The wines are principally made into brandy and vinegar; but a peculiar variety, of a very deep dark hue, is extensively employed to deepen the colour of other red wines, and to give a reddish tint to white wines. Beans and peas, fruit, hemp, liquorice, and beet-root are raised in considerable quantities. A good many poultry and bees are reared. The rural pop. is in a very depressed condition; the labouring class occupy miserable huts, and in one village the habitations are said to be mere caves dug in the rock. Landed property is much subdivided, though not more so than in the neighbouring departments. Iron, turf, and alabaster are met with, but the most valuable mineral product is flint: the most extensive beds of which in France are in the S. part of this dép., which furnished the greater part of the gun-flints formerly used in France. The employment was very injurious to the health, and most workmen died of chest diseases before they attained to 30 years of age. The dép. has several iron forges, tile and glass factories, and potteries, with manufactures, though on a small scale, of serge, woollen cloth, and other woollen fabrics, cotton and hempen cloths, paper, leather, and chemical products. It is divided into 3 arronds.; chief towns, Blois, the capital, Romorantin, and Vendôme.

LOIRE (an. *Liger*), the principal river of France, through the central part of which it flows in a W. direction to its *embouchure* in the Atlantic. Its basin, which comprises nearly 1-4th part of the country, has the basin of the Seine on the NE., that of the Garonne on the SW., and that of the Rhone on the E. It rises in Mount Gerbier de Jonca, on the W. declivity of the Cevennes, in the dép. Ardèche, about lat. 44° 38′ N., long. 4° 30′ E., at an elevation of 4,593 ft. above the sea. Its general direction is NNW. to near Orleans, after which it flows mostly WSW. to its mouth near Paimbœuf, in about lat. 47° 15′ N., and long. 2° 15′ W. Its entire course is estimated at 670 m., of which 512 are navigable. Before losing itself in the ocean it spreads out into a considerable æstuary; below Nantes it is between 2 and 3 m. in width; but its navigation in the lower part of its course is rendered difficult by shallows and numerous islands. Ships of 900 tons, though built at Nantes, are loaded at Paimbœuf or St. Nazaire; and all ships of considerable burden unload nearly 30 m. below Nantes, their cargoes being conveyed to that city by lighters. During the first 40 m. of its course, the Loire has an average descent of more than 50 ft. a mile; its rate of descent afterwards averages 4 ft. a mile. Its current is everywhere rapid, and its inundations are frequently productive of much damage;

Digitized by Google

to prevent which extensive embankments have been erected along its banks below Orleans.

The tide of the Loire rises to about 5 m. below Nantes. Its chief tributaries are the Maine, Endre, and Brive from the N.; and the Allier, Loiret, Cher, Indre, Vienne, and Sevre-Nantaise from the S. It is connected with the Seine, by means of the Orleans, Briare, and Nivernais canals; with the Rhone by the Canal du Centre; and with Brest Harbour and the English Channel by the Nantes and Brest canal. To obviate the impediments to navigation from sandbanks, above Orleans, a lateral canal, commenced in 1822, has been constructed along the river; it begins opposite the mouth of the Briare canal, in the dép. of Loiret, and runs along its SW. bank till it terminates opposite the Canal du Centre, in the dép. of Allier. The entire length of this canal is 123 m. The scenery along the Loire, though in parts very fine, is generally surpassed by that of the Rhone. Some very important cities stand on its banks, among which, reckoning from its source, may be specified, Roanne, Nevers, Orleans, Blois, Tours, Saumur, Ancenis, and Nantes.

LOIRE-HAUTE, an inland dép. of France, between lat. 44° 45′ and 45° 24′ N., and long. 3° and 4° 40′ E., having N. Puy-de-Dôme and Loire, SE. Ardèche, and SW. Lozère and Cantal. Area, 496,225 hectares. Pop. 305,521 in 1861. It is generally mountainous, with a slope to the N. The Cevennes mountains run along its SW. border, and a range, passing off laterally from them, intersects the dép. about its centre, and afterwards bounds the dép. of Loire on the W. But most of its mountains belong to the volcanic system of France. The Loire and Allier are the principal rivers, and receive numerous small streams within the dép.: there are many small lakes and pools around Le Puy and elsewhere. The bottoms of the valleys are fertile, but not the other parts of the dép., by far the greater portion of the surface being stony or sandy. It is estimated that there are 226,072 hectares of arable land, 79,432 ditto meadow, 74,030 ditto woods and forests, and 90,239 ditto heaths. Agriculture is extremely backward; half the arable land is constantly in fallow, and the occupiers are poor. Sufficient corn, chiefly rye with some wheat, is, however, grown for home consumption; and about 50,000 hectol. of wine are annually imported. The natural pastures are good, and their irrigation is pretty well conducted. There are about 188,000 head of cattle and 278,000 sheep in the dép.; the latter yielding about 350,000 kilog. a year of wool. The rural pop. is, in general, very poor, and about 3,000 individuals annually leave the dép. in search of employment in the other déps. as reapers, road-makers, and day labourers, and usually return, after about six months' absence, with sums supposed to average about 70 fr. each. The land is very much subdivided, and there are fewer large properties in this than in any other dép. of France, Corrèze only excepted. Haute-Loire yields annually about 200,000 metrical quintals of coal, worth as many francs, and a little iron, zinc, and antimony. Manufactures are confined to common linen fabrics, lace, tiles, bricks, earthenware, silk, riband, and organzine in small quantities. Le Puy has a small lace manufacture, and is the great entrepôt for the small bells (*grelots*) used by the muleteers and waggoners of the S. of France. Haute-Loire is divided into three arronds.; chief towns, Le Puy, the cap., Brioude, and Yessengeaux.

LOIRE-INFERIEURE, a maritime dép. of France, formerly included in the prov. of Brittany, between lat. 46° 50′ and 47° 50′ N., and long. 1° and 2° 30′ W., having N. Morbihan and Ille-et-Vilaine, E. Maine-et-Loire, S. Vendée, and W. the Atlantic. Area, 687,456 hectares. Pop. 580,207 in 1861. The Loire has its mouth in this dép., which it intersects from E. to W. near its centre. The Erdre, Sevre-Nantaise, Maine and Moine, affluents of the Loire, are the other chief rivers, all of them being navigable for some distance. The Vilaine skirts the NW. extremity of the dép., and communicates with the Loire by the canal between Nantes and Brest. Lakes and pools are estimated to cover 7,200 hectares; the chief of these is the *Grand Lieu*, in the S., 4 m. in length by about the same in breadth. There are only a few hills of insignificant elevation in the NE.; but along a part of the coast is a succession of sandy downs (*dunes*), which, not having been fixed by any artificial method, are gradually extending themselves, and have quite buried the old village of Escoublac. On various parts of the shore, as at Guerande, the sea has receded to a considerable extent. The isles of Noir-Moutiers and Bacin belong to this dép. It is estimated that about 321,600 hectares are arable, and 105,062 in pasture; that vineyards occupy 29,346 hectares, orchards 10,984 hectares, woods 33,075 hectares, and heaths, wastes, &c., 129,352 hect., or nearly one-fifth part of the entire surface. The country, on the S. bank of the Loire, is much superior in fertility to that on the N., and it is nearly all under culture; but agriculture is everywhere in the most backward state. There are a great number of little proprietors, many of whom engage themselves as labourers on the larger farms, who hold from one to ten acres of land, farmed by their families. Very few properties yield a rental of 6,000 francs (1,500*l.* a year). The largest farms seldom extend beyond 300 acres, the greater number varying from 160 to 200. Leases generally run from three to five and seven years, seldom beyond the latter term. Few farms are let for a money rent. Some farmers pay a stipulated quantity of grain for the arable, and money for the pasture land; but the far greater number hold on the métayer principle, paying half the gross produce to the proprietor. The usual wages of farm labourers vary from 7½*d.* to 9½*d.* a day: women get from 4*d.* to 7½*d.* During harvest wages are about half as much higher. Little butchers' meat is consumed by the agricultural pop. Their food consists principally of bread, butter, or fat, cabbage soup, buckwheat, pancakes and potatoes. Paupers are very numerous in winter, and in the rural districts there is no adequate provision for their support. The occupiers are in general miserably lodged, frequently sleeping in the same apartment with their cattle. They are not in debt, but have no money; are strongly attached to routine practices, and move on without an effort to improve their condition. (Consular Report.)

The produce of corn is estimated at about 1,400,000 hectolitres a year, principally wheat, buckwheat, and rye; a good many turnips are raised as food for cattle and sheep. The produce of wine is estimated at 900,000 hectolitres, but the quality is inferior; about 300,000 hectolitres are consumed in the dép., the rest being principally converted into brandy. The annual produce of cider may be about 130,000 hectolitres. The pastures on the banks of the Loire are excellent, and feed great numbers of cattle. The cows are good milkers, and the vicinity of Nantes is famous for its butter. The sheep are estimated to amount to 239,000 head, producing 250,000 kilog. of wool. The horses, though not large, are strong and handsome. The forests, which abound with oaks,

Digitized by Google

feed a good many hogs. Bees are numerous, and the honey and wax of the dép. have a high reputation. The pilchard and herring fisheries are important, the former employs 3,000 fishermen on the water, and a great many women in salting and barrelling the pilchards on shore. The manufacture of salt, from the extensive salt-pans at Noirmoutiers, Guerande, and Croisic, employs about 7,000 hands, and furnishes produce worth above 900,000 fr. a year. Bog iron is plentiful, and is smelted in the arronds. of Ancenis and Châteaubriant. A tin mine is wrought at Piriac. Granite, coal, turf, porcelain, and clay are the other chief mineral products. There are two cannon foundries and several building docks in the dép., and manufactures of sail-cloth, rope, glass, porcelain, tiles, paper, and leather. The trade of this department centres almost entirely in Nantes (which see). It is divided into 5 arronds.; chief towns, Nantes, the cap., Châteaubriant, Ancenis, Paimbœuf, and Savenay.

LOIRET, a dép. of France, region centre, between lat. 45° 13′ and 46° 18′ N., and long. 3° 42′ and 4° 45′ E., having N. Eure-et-Loir, Seine-et-Oise, and Seine-et-Marne, E. Yonne, S. Nièvre, Cher, and Loir-et-Cher, W. the last-named dép. Area, 677,119 hectares. Pop. 352,757 in 1861. Surface, for the most part, level; but in the N. is a chain of hills separating the basins of the Loire and the Seine. The Loire traverses the S. half of the dép., generally in a W. direction. It receives the Loiret, which rises within the dép., and joins the Loire after a short course; being, however, navigable for boats nearly to its source. S. of the Loire, the country is marshy, uncultivated, and infertile; but, in other parts, it is very productive, particularly in the W. districts. The arable lands comprise 394,590 hectares, meadows 24,464 ditto, vineyards 39,882 ditto, and forests 99,474 ditto. Agriculture is in a comparatively forward state. The corn grown, which is chiefly oats and wheat, exceeds the quantity required for home consumption. The annual produce of wine is estimated at 1,200,000 hectolitres; two-thirds of which is exported, under the name of *vins d'Orléans*, and the rest consumed at home, or converted into brandy or vinegar. None of the wine is of a superior quality, but the better sorts are esteemed as *vins ordinaires*. Cider is made in the arrond. of Montargis. Various fruits, with flax, hemp, and saffron, are grown; and of late the culture of beet-root for sugar has gained ground. The different branches of rural industry are all pursued by the same individuals who simultaneously grow corn, garden produce, and wine; and rear cattle, sheep, and poultry. It is estimated that there are in the dép. 100,000 head of black cattle, and 400,000 sheep. The latter have been improved by crossing with English breeds. Property is less divided than in the neighbouring departments, and there are many large estates. The manufacture of coarse broad cloths and other woollen fabrics employ a large number of hands; and Orleans has manufactures of fine cloth, flannels, and woollen yarn. Cotton yarn, vinegar, white lead, paper, parchment, and earthenware are also produced; and there are numerous distilleries. Meung is celebrated for its leather; Montargis and Pithiviers are the chief seats of the French saffron trade; and the latter town is celebrated for its *gâteaux d'amandes* and *patés d'alouettes*. The dép. is divided into 4 arronds.: chief towns, Orleans, Gien, Montargis, and Pithiviers.

LOKEREN, a town of Belgium, prov. E. Flanders, cap. canton, on the Deurne, and on the railway from Ghent to Antwerp, 12 m. ENE. Ghent. Pop. 18,125 in 1860. The place looks like a large, quiet, Flemish village. It is celebrated for its linen fabrics, and has also manufactures of cotton goods, flannels, lace, hats, and soap, with cotton printing establishments, bleaching grounds, breweries, distilleries, and oil mills. It has large weekly markets, and a considerable trade in its native products, and those of the adjacent country.

LOMBOK, an island of the Eastern Archipelago, between lat. 8° and 9° N., and long. 116° and 117° E., separated on the W. from Bali by the strait of Lombok, and on the E. from Sumbawa by the strait of Allas, the last being the most commodious passage through the Sunda chain of islands.

Lombok is of a rhomboidal shape; its length may be estimated at 53 m.; average breadth, 45 m. Area, probably 2,400 sq. m. A mountain chain covered with forests, runs W. to E. through the S. portion of the island; and an isolated height, the peak of Lombok, rises in the N. to 8,000 ft. above the sea. Several rivers disembogue on the N., E., and W. coasts. The country is populous, fertile, and well cultivated. Rice is raised by artificial irrigation, as in the Carnatic; and abundant supplies of bullocks, hogs, poultry and vegetables may be obtained at the port of Ampannan, on the W. coast. The inhab. are Mohammedans, and more civilised than the E. islanders in general. They carry on a considerable trade with Java, Borneo, and other Malay islands. Lombok and Mataram are the chief towns; the last is the residence of the rajah, who is tributary to the sultan of Bali.

LOMOND (BEN), a mountain of Scotland, which attains to an elevation of 3,195 ft. above the level of the sea. From its vicinity to Glasgow, from which it is distant NW. 27 m., and its position between Lochs Lomond and Katrine, it is by far the best known and most frequently visited of any of the highland mountains. Its summit, which is composed of micaceous slate, mixed with quartz, commands a great extent of view. The whole extent of Loch Lomond, with its wooded isles, appears just beneath. Loch Long, Loch Katrine, Loch Earn, and the river Clyde, form the principal waters. The mountains of Arran appear very distinct; and to the N. alps upon alps fill up the view.

LOMOND (LOCH), a lake of Scotland, between the cos. of Stirling and Dumbarton, its most southerly extremity being 6½ m. N. from the town of Dumbarton. This, which is the largest of the Scotch, and, indeed, of the British lakes, is a noble sheet of water, of a triangular shape, about 24 m. in length NNW. and SSE., and where broadest, along its S. shores, it is from 7 to 8 m. across; but its upper portion, from Rowerdinnan Inn, N. to Ardleesh, is comparatively narrow, being only about 1 m. in breadth. Its area is estimated at about 25,000 acres: its general depth is about 20 fathoms; but, in some places, it has a depth of 80, and even of 120 fathoms. It is studded with numerous islands, some of which are of considerable size and finely wooded. The scenery of the lake is varied and magnificent. Its N. extremity stretches into a wild, rugged, and dreary country. On the E. side Ben Lomond, one of the most stupendous of the Grampian mountains, rises from its margin; but, on descending the lake, the character of the scenery changes; the mountains become less precipitous; the glens between them are well wooded, and filled with gentlemen's seats; and on the S. it is bounded by a low, rich, fertile, and well cultivated country. Its surface level is from 3 to 5 ft. higher in winter than in summer; and it is generally about 22 ft. above the sea level. It

Digitized by Google

receives several streams, of which the Endrick, which flows into its SE. corner, is the most considerable. Its surplus waters are conveyed away by the river Leven, which, issuing from its S. extremity, falls into the Frith of Clyde, close to Dumbarton. In summer it is much resorted to by tourists, and a steamer is established on the lake for their accommodation. The waters of this lake were violently agitated at the period of the great earthquake which destroyed Lisbon in 1755.

LONATO, a town of North Italy, prov. Brescia, cap. distr. on the summit of a hill, 13 m. ESE. Brescia. Pop. 6,780 in 1862. The town is walled and defended by a castle, has four churches, a hospital, cavalry barracks, and manufactures of silk twist and saltpetre.

LONDERZEEL, a town of Belgium, prov. S. Brabant, 11 m. NW. Brussels, on the railway between Mechlin and Ghent. Pop. 4,725 in 1864. The town has several large tanneries, breweries, and distilleries, the latter producing gin, which is exported in considerable quantities.

LONDON (Lat. *Londinium*, Fr. *Londres*), the metropolis of the U. Kingdom of Great Britain and Ireland, and the most populous, wealthy, and commercial city of the world. It is situated partly and principally on the N. bank of the Thames, in the co. of Middlesex, and partly on its S. bank, in the co. of Surrey, about 45 m. above the river's mouth at the Nore, and 15 below the highest tideway. The site on the N. side is high and dry, but on the S. it is so low as to be under the level of the highest tides; though, by a well constructed system of drainage, it is kept perfectly free from wet. The subsoil is a hard clay, known to geologists by the name of London clay, lying in the middle of the great chalk basin, extending from Berkshire to the E. coast. In several places the clay is covered by thick beds of gravel. Exclusive of the city of London, properly so called, the metropolis comprises the city of Westminster, the bors. of Tower Hamlets, Southwark, Lambeth, and Marylebone, and other contiguous districts, which, though formerly distinct, are now combined into one vast mass of houses.

The limits of 'the metropolis' have been defined from time to time in acts of parliament and by various authorities for certain specified purposes. One of the earliest examples of such a district was that first included within the weekly bills of mortality, or weekly reports of the parish clerks relative to christenings and burials, established about the year 1592-3, in consequence of the prevalence of the plague in London. Additional parishes figured from time to time in the bills, but subsequently to 1726 no actual addition was made to the area which they embraced. The parishes of Marylebone, St. Pancras, Paddington, Chelsea, and Kensington were not within the bills, but the census commissioners considered it proper to include them within the 'metropolis' in the census abstracts 1801 to 1831. To this area several additions were made by the registrar-general on the establishment of the new weekly tables of mortality in London in 1840, bringing in the parishes of Camberwell, Bow, Hammersmith, Fulham, and others, together with the parishes comprised in the Greenwich Union. A further addition was made in 1844 of the parishes in the Wandsworth and Clapham Union; and, three years later, were added those in the Lewisham Union and the parish of Hampstead. During the last twenty years these limits have remained unaltered.

The subjoined tabular statement gives the population of London for the last seven decennial censuses:—

Date of each Census	Population	Increase between each Census	Decennial Rate of Increase (per Cent.)
1801	958,863		
		179,952	18
1811	1,138,815		
		240,132	21
1821	1,378,947		
		276,047	20
1831	1,654,994		
		293,375	17
1841	1,948,369		
		413,867	21
1851	2,362,236		
		441,753	19
1861	2,803,989		
Increase in 60 Years		1,845,126	193

According to the census returns of 1861, the birthplaces of the population of London were as follows:—

Where born.	Of the 2,803,989 Inhabitants of London the Number born in the several Groups of Counties and elsewhere	Of 100 Inhabitants of London the Proportion born in the several Groups of Counties and elsewhere
1. London . . .	1,741,177	62·096
2. South-eastern Counties	222,319	7·929

The preceding table may correct some popular errors. Thus it will be noticed that the tendency of the Scotch to go to London is less than the tendency of the people of any other parts of Great Britain, except Lancashire and Cheshire. Taking 1,000 as the population basis, there are to 1,000 people in Scotland nearly 12 Scotchmen in London, to 1,000 people in Yorkshire 13 Yorkshiremen in London, to 1,000 people in Wales and Monmouthshire 15 of Welsh birth in London, to 1,000 people in the Northern counties 16 Northern men by birth in London.

London is the metropolis of the empire, and thither the representatives of other nations, of the colonies, and of Scotland and Ireland, resort; but it is chiefly the field in which the populations of the several counties of England find scope for their talents and their industry. The majority of its inhabitants are, it is true, indigenous, for 1,741,177 were born within its limits; but of the 1,062,812 who were born elsewhere 852,994 were born in the extra-metropolitan counties and parts of counties of England and Wales. 62 in 100 of the inhabitants were born in London, 19 in the counties of the three divisions around London, 7 in the South-western and the West Midland Counties, 4 in the North Midland and all the Northern Counties. In 100 inhabitants little more than 1¼ were natives of Scotland, nearly 4 (3·8) were natives of Ireland, ·5 were natives of British colonies, 1·7 were natives of Foreign countries.

From the counties between the Wash and the

Digitized by Google

Humber there is a small but constant stream of emigrants to London; for Lincoln, Leicester, Derby, and Nottingham have to 1,000 inhabitants 26 of their natives in London; while the counties around the Severn have the somewhat larger proportion of 31 natives in London to 1,000 inhabitants. The stream to London from the south grows larger, and the counties of Cornwall, Devon, Somerset, Dorset, and Wilts send 128,442 of their natives to be enumerated in London,—70 natives to every 1,000 of the inhabitants of these South-western counties. The influx of the inhabitants of counties immediately about London rises to still higher proportions, and to 1,000 inhabitants the South Midland counties had 114 natives, the South-eastern counties 123 natives, the Eastern counties 133 natives resident in London. Proximity to the metropolis, and the absence of manufactures at home, first drew the natives of these counties to London, and the migration continues to flow thither in unabated force. Labourers, artisans of various kinds, and the professional classes, go to London probably in less unequal proportions from the various counties.

London is of great antiquity. It is said by Tacitus to have been in the days of Nero, '*copiâ negotiatorum et commeatuum maximè celebre.*' (Annal. lib. xiv. § 33.) It suffered severely in the revolt of Boadicea, but it speedily recovered from that disaster, and has always been the largest and most important of British towns. It is mainly indebted for its early and long-continued prosperity to its admirable situation. Though 45 m. from the sea, it enjoys, owing to its position on a great navigable river, all the advantages of an excellent sea-port, vessels of 2,000 tons burden coming up to London Bridge. Had it been built lower down, it would have been less healthy and more exposed to hostile attacks; and had it been higher up, it would have been deprived of the inestimable advantage of a deep-water harbour.

The Romans surrounded London with walls. It is probable that its limits were then commensurate with the part of the city said to be 'within the walls,' reaching from the end of Leadenhall Street to the top of Ludgate Hill, and from the Thames to London Wall and Little Britain. The wall appears to have inclosed it along the water as well as on the land sides. The great Roman roads, called Watling Street and Ermin Street, as well as the *viæ vicinales*, centred in London.

The continued and rapid increase of buildings renders it difficult to ascertain the extent of the metropolis at any particular period. If included in those parts is only the area presenting a solid mass of houses, its length, from E. to W., may be taken at 7 m., and its breadth, from N. to S., at about 5 m. The extent of surface covered by buildings is estimated at about 20 sq. m., so that M. Say, the celebrated French economist, did not really indulge in hyperbole when he said, '*Londres n'est plus une ville: c'est une province couverte de maisons!*'

Notwithstanding its immense size, it is not difficult for strangers to make their way in London. The Thames runs through it lengthwise from W. to E., and most of the great lines of streets are parallel to the river, being intersected at variable distances by lines of cross streets, or of streets running N. and S. Of the former, or of the longitudinal streets parallel to the river, there are two principal lines. The most northerly of these enters London on the W. by the Bayswater Road, passing in front of the fine terraces facing the N. side of Hyde Park. It then runs along Oxford Street, about 1¾ m. in length, till, after passing the S. or lower end of Tottenham Court Road, it unites with and is prolonged by Holborn, a wide and handsome street about 1 m. in length; whence it proceeds through Skinner Street and Newgate Street, till it reaches Cheapside, one of the greatest thoroughfares in the city, adorned at its western limit by a statue of Sir Robert Peel. The road next passes through the Poultry, having the Bank and the Exchange on the one hand, and the Mansion House on the other, along Cornhill to Leadenhall Street; from which it is continued by Whitechapel and the Mile End Road, into the country. Its entire length, from Hyde Park to the Regent's Canal, Mile End, is above 6 m.

The other great longitudinal street, to the S. of that now traced, enters London on the W. after passing through Kensington. This is by far the finest of the avenues to the metropolis. On the left Kensington Gardens appear like an ornamental forest; Hyde Park gradually rises to the splendid terraces on the N., and is bordered on the E. by magnificent houses, or rather palaces; and on entering Piccadilly is the handsome approach to Hyde Park and the W. front of Apsley House, formerly the residence of the great Duke of Wellington. On the right are the bold arch and gate leading to Buckingham Palace, surmounted by the statue of the 'Iron Duke;' the Green Park apparently stretching to the towers of Westminster Abbey; and a long line of splendid buildings, with the Norwood Hills in the distance. The promise of a magnificent city is not belied by an advance through Piccadilly. This, which is the first of the London streets traversed by the traveller from the W., is 1 m. in length, and is principally built only on the N. side, the other being open to the Green Park. It contains many splendid private residences and shops. On reaching the E. end of Piccadilly, the continuous line of street divides into two main lines: one of these runs on through Coventry Street, Leicester Square, Long Acre, and Great Queen Street, till it unites with Holborn: the other line deflects to the right through the Haymarket, whence it proceeds to the E. along the line of E. Pall Mall, through Trafalgar Square, and past St. Martin's Church, till it unites with the Strand. This, though formerly in many places narrow and encumbered, is now a magnificent street: it follows pretty closely the line of the river, from which it is not far distant; and besides two churches in its centre, and the imposing front of the South Eastern railway station at Charing Cross, has Exeter Hall on its N., and Somerset House on its S. side. Contiguous to the latter is Wellington Street, leading to Waterloo Bridge. The Strand terminates at the ancient gate of Temple Bar, the boundary of the city on the W. The great line of street is thence prolonged through Fleet Street, at the E. end of which, on the right, is a fine street leading to Blackfriars Bridge; and on the left Farringdon Street, one of the widest in the city, which is prolonged by the new Victoria Road to Islington. From Fleet Street the line continues up Ludgate Hill—much disfigured recently by the viaduct of the London, Chatham, and Dover railway, heavy and ugly as all railway architecture—till it reaches St. Paul's, the noblest edifice in the kingdom.

At the E. end of St. Paul's Churchyard, the wider channel of communication joins in Cheapside the grand northern line already traced, coming from Oxford Street and Holborn; but another branch of the former line runs nearer the river, through Cannon Street, full of warehouses of immense height, Eastcheap, and Tower Street, to the wide area of Tower Hill, whence it may be traced either in a straight line through Ratcliffe

Digitized by Google

Highway, N. of the London Docks, or close by the river along Wapping and Shadwell, where the lines again form a single street leading to the W. India Docks. The streets E. of the Tower are narrow, and lined with mean houses, mostly occupied by persons connected with shipping. This line is altogether about 6 m. in length.

Another line of street which unites with that last described, may be considered as beginning at Vauxhall Bridge, close to which is an open quay, ½ m. in length, commanding a view of the river and of the archiepiscopal palace of Lambeth. The line of road is, however, soon separated from the river by ranges of buildings, along which it passes, till it reaches Abingdon Street. At the termination of the latter it runs on, having Westminster Abbey on the left, and the Houses of Parliament with Westminster Hall and Bridge on the right: after leaving these, it connects with Parliament Street, and then with the spacious street called Whitehall, in which are the Treasury, Horse Guards and Admiralty, separating it from St. James's Park on the left, and the Banqueting Hall, with other handsome mansions shutting out the view of the river. The magnificence of the buildings in this short line of street is unequalled, except by those at the W. entrance of Piccadilly, and by the terraces of the Regent's Park. Beyond Whitehall is Charing Cross and Trafalgar Square, with the Nelson monument in its centre, and the National Gallery on its NW. side. Here the line, bending E. with the river, unites with the Strand, already noticed.

Among the principal streets running from N. to S., the first and most westerly is the Edgeware Road, with its continuations, Park Lane, Grosvenor Place, and Vauxhall Bridge Road. The second street, proceeding eastward, is the line formed of Portland Place, Regent Street, and Waterloo Place, extending between the Regent's and St. James's Parks, and forming one of the most splendid public thoroughfares in London, as well from the width of road as from the grandeur of the houses and shops on either side. At its S. termination is a granite column, surmounted by a bronze statue of the Duke of York, brother to George IV., while close to it is the 'Guards Memorial,' by John Bell, in commemoration of the Crimean campaign. A little N. of Piccadilly the line curves through the Quadrant, a handsome range of buildings. From this point it continues northward to Oxford Street, where it expands into a circus, and then, resuming its former dimensions, proceeds to the church in Langham Place: here, by a slight curve westwards, it opens into Portland Place, a wide and well built street, formerly a favourite residence of the foreign ambassadors, but latterly declining in the scale of fashion. Park Crescent and Park Square, opening into the Regent's Park, form an appropriate completion to the whole. The third great N. and S. line is a continuation southwards of the road from Hampstead: it passes along Tottenham Court Road to the E. end of Oxford Street, from which point its course may be traced through narrow streets down St. Martin's Lane to Charing Cross: but though a busy, it is an intricate thoroughfare, and is devoid of architectural interest. The other principal N. and S. lines consist of Gray's Inn Lane and Chancery Lane; Goswell Street and Aldersgate Street; and the line of street commencing at the Regent's Canal on the N., successively called Kingsland Road, Shoreditch, Norton Folgate, Bishopsgate Street, and Gracechurch Street: at the S. termination of the latter this line passes over London Bridge, and is thence prolonged across the Borough as far as Kennington Church in Surrey: its length is about 4 m., which may be considered the breadth of London in this quarter. The portion of this line at and near London Bridge affords some of the finest points for viewing London and the scenery on the river. Exclusive of the above, there are an infinite number of cross streets, some of which are of great importance. Among others, there is a spacious road from Finsbury Square through Moorgate Street, Princes Street, and King William Street, to London Bridge,

In addition to the various routes intercepting each other in different directions, a broad line of road embraces the greater part of London on the N., in a manner not unlike that in which the Boulevards encircle Paris. It commences in the Uxbridge Road, and has a NE. course as far as King's Cross, St. Pancras, where, turning eastward, it ascends Pentonville Hill, and entering the City Road, terminates in Finsbury Square. Underneath this road lies the Metropolitan, or Underground railway.

In Southwark, the great roads from the different bridges unite at the old posting house called the Elephant and Castle. They are generally wide and well-built streets, though, with the exception of Blackfriars Road, inferior to the principal thoroughfares N. of the river. A line of street, extending from Westminster Road to the Borough, connects these several roads with each other.

Unlike Edinburgh and many other great towns, the houses in London are not, with the exception of those in the Temple and Inns of Court, divided into stories, or so-called 'flats,' but in the vast majority of instances belong to or are hired by one individual, by whom, however, portions of them are frequently let to lodgers. They have usually a story sunk below the level of the street, comprising the kitchen and other offices, above which are usually 3 or 4, or more stories. The smaller and by far the most numerous class of houses have narrow fronts, containing one room or shop in the front of the street floor, and that immediately above it, the stair and a smaller apartment occupying the back part; the two upper floors are frequently divided into smaller apartments. Every house has the advantage of having an abundant supply of water; and in all the better class of houses it is supplied to the top as well as to the under story. The refuse water and drainage of every house is conveyed by a covered drain to the sewer, or grand receptacle in the centre of the street, sunk below the line of the lateral drains. Most houses have cellars opposite to them under the street for the stowage of coal, and such like articles. No filth is ever laid down upon the streets, which have universally flagged foot-paths along each side; and notwithstanding the concourse of horses, and the grinding of the pavement by carriages, the streets are, speaking generally, extremely well kept.

Until a comparatively late period the external appearance of the houses of London was little in harmony with the wealth of their occupiers and the richness of their interiors. Internal comfort was long the only, as it still is the chief, object of the Londoner. Provided his house were clean, commodious, and well and handsomely furnished, he cared little about its outside. Hence it was that the interminable rows of dull-looking brick houses, erected with little or no regard to uniformity, led strangers to remark that the best streets resembled long walls pierced with holes for doors and windows. Even Bond Street was said, in 1810, by an intelligent foreigner, to be 'an ugly inconvenient street, the attractions of which it is difficult to understand.' But the same

Digitized by Google

author (*Simond*) adds—'You cannot pass the threshold without being struck with the look of order and neatness of the interior. Instead of the abominable filth of the common entrance and common stairs of a French house, here you step from the very street on a neat floorcloth or carpet, the wall painted or papered, a lamp in its glass ball hanging from the ceiling, and every apartment in the same style. All is neat, compact, and independent.'

With the exception, indeed, of St. Paul's, Westminster Abbey, Somerset House, and a few more churches and public buildings, London displayed, till within the last 40 or 50 years, little architectural elegance. In more recent times, however, the erection of magnificent ranges of buildings, in every direction, has made the British metropolis as superior to most capitals in appearance, as it has long been in wealth, cleanliness, and comfort. The line of Regent Street has been already mentioned, to which may be added the Regent's Park, 'affording a landscape bounded by hills, and more than half surrounded by a large circuit of buildings, worthy the capital of the world. Belgrave and Eaton Squares, and the adjoining streets and squares on the estate of the Marquis of Westminster, with the terraces in Carlton Gardens, have all been raised within the last half a century, and are probably unequalled for symmetry and magnificence. Within a still shorter space a splendid city has been built on the elevated ground on the north and west side of Hyde Park, and Kensington Gardens; and another a little further northwards, on ground commonly designated as 'Tyburnia.' These, and a vast number of other streets and blocks of houses, in the town as well as the outlying suburbs, render the W. end of London a residence worthy the wealthiest aristocracy in the world. But the improvements effected of late years in the city, or oldest part of the town, have been equally great and striking. The new streets that lead from the Bank to London Bridge on the one hand, and to Moorfields on the other, as well as the noble thoroughfare known as Cannon Street, are on a grand scale; and when it is borne in mind that the ground which they traverse was previously occupied by a dense mass of houses which had to be purchased at a high price, it will be seen that they do as much credit to the public spirit as to the taste of the citizens. A number of new bridges over the Thames forms no small addition to the improvements of the last fifty years.

The houses of London, with very few exceptions, are built of brick. But within the last few years those in the principal streets have been mostly plastered or stuccoed over, and their fronts made to imitate freestone. This method of 'dressing up' houses has contributed, as some think, materially to the improved appearance of the town. The cheapness of 'stucco,' however, allows it to be applied to the inferior class of houses, where the elaborateness of ornament that could not be executed in stone at many times the cost, seems rather out of place, and not altogether in good taste. But the insides, as well as the outsides, of the houses have been greatly improved within the last 30 or 40 years; those now and lately built being far more conveniently constructed than formerly, and better suited to the accommodation, the comfort, and the health of their inmates.

It is frequently both a difficult and a dangerous matter to get across a crowded street, or one much frequented by carriages. This difficulty has, however, been in some parts lessened by constructing raised landing-places in the middle of the streets, protected by pillars and lamps, to which passengers may resort. But though these conveniences do not cause any sensible obstruction to carriages, their supply is scanty in the extreme; there not being, in fact, one where there should be ten. A better method still for obviating the dangers of the 'crossings' would be subterranean footpaths at the most crowded spots, which might be made at a small expense—or, at any rate, an expense less than commensurate with the importance of the subject. It appears from official returns that the number of people killed in the streets of London by 'accidents,' from the 12th of March, 1864, to the 1st of April, 1865, amounted to 233. Considering that the number of people killed by railway 'accidents' in the United Kingdom amounts to but 25 per annum on the average, there is something frightful in this slaughter of the streets of London.

Parliamentary and other Divisions.—The most popular division of London is into three parts: the City, the West End, and the Borough; Temple Bar dividing the city from the west end, and the river separating both these portions from the Borough. This division is necessarily vague, and, for specific purposes, different divisions are made. The city of London is situated nearly in the centre of the metropolis, and is the seat of commerce on the largest scale. The city of Westminster, W. of the city of London, contains the royal palaces, the houses of parl., the law courts, most of the public offices, and the town residences of nearly all the nobility and aristocracy. The cities of London and Westminster, however, do not comprise above a tenth part of the area, or a sixth part of the pop. of the whole of the metropolis. For parliamentary elections, the metropolis is divided into 7 districts: the cities of London and Westminster; the borough of Finsbury, N. of the city of London; the Tower Hamlets, E. of Finsbury and the city; Marylebone, N. of the city of Westminster; and 2 districts S. of the river, Southwark on the E., and Lambeth on the W. side.

The area of the city of London, which comprises only a small portion of the metropolis, is estimated at about 570 acres. Its boundary line, leaving the Thames at Temple Lane, passes northwards, crossing Fleet Street at Temple Bar, and Holborn at 'Holborn Bars.' Turning eastward, it thence takes an undulating course, inclosing Smithfield, Finsbury Circus, and Bishopsgate Street S. of Spittal Square. It thence passes SE. through Petticoat Lane to Aldgate, from which point the boundary, pursuing a SSW. course, reaches the Thames by a very irregular line, excluding the Tower. The city is divided into 108 parishes, of which 97 are said to be 'within,' and 11 'without' the walls. This division is now merely nominal, the ancient city boundary having long disappeared, although the city gates, where the walls passed the great thoroughfares, were standing in the last half of the 18th century.

The E. boundary of the city of Westminster coincides with the W. boundary of London at the Thames and Temple; it thence runs NW. to the junction of Tottenham Court Road and Oxford Street. The latter street constitutes the whole N. boundary as far as the W. extremity at Kensington Gardens. From this point a very irregular line, running to Chelsea Hospital, forms the W. boundary. It then turns to the SW. along the Serpentine river, on leaving which it goes S. until it reaches the Thames near Chelsea Hospital.

The five metropolitan boroughs are only parliamentary, and not municipal, divisions, Maryle-

Digitized by Google

bone includes the three parishes of Marylebone, Paddington, and St. Pancras: Finsbury comprises nine parishes, and the Rolls' Liberty; and the Tower Hamlets includes fifteen; Southwark embraces not only the municipal borough, but the parishes of Bermondsey and Rotherhithe; and Lambeth comprises Camberwell and Newington, as well as the parish of its own name.

At the general election of 1865, the seven parliamentary divisions of the metropolis had 137,777 electors, who returned sixteen members. The city, returning four members, had 17,593 electors; Westminster, returning two members, had 13,522 electors; Marylebone, returning two members, had 24,210 electors; Finsbury, returning two members, had 24,106 electors; the Tower Hamlets, returning two members, had 31,251 electors; Southwark, returning two members, had 12,058 electors; and, finally, Lambeth, returning two members, had 25,037 electors inscribed on the rolls.

Parks and Squares.—The W. end of the town is beautified and rendered healthy by four extensive parks, appropriately called the lungs of London. They are open to the public; and, though each has a different character, they all afford ample scope for recreation and exercise. Hyde Park (once the manor of Hyde, and belonging to the Abbey of Westminster), lying W. of Piccadilly and Oxford Street, and between the roads leading therefrom, contains about 400 acres, and has a large and deep artificial lake, crossed by a handsome bridge of five arches. This lake, which is slightly bent, is, by an absurd misnomer, called the Serpentine river. The whole of this park was, till within recent years, an open field, dotted with trees, and traversed by carriage ways It is now laid out, in parts, as a garden, with well-kept flower beds, ornamental walks, statues, and fountains. The whole of the grounds, as well as Kensington Gardens, lying W. of Hyde Park, and separated from it by a trench and wall, are open to the public. St. James's Park, between the Horse Guards and Buckingham Palace, is less than a fourth part of Hyde Park, and not so open; its site being low, damp, and marshy. Within recent years, however, the central part has been tastefully laid out, and what was a dirty straight canal, running through a marsh, has been converted into a varied sheet of water, interspersed with islands affording a secure retreat to numerous aquatic birds, and surrounded by lawns, shrubberies, and trees. The avenues on the N. side of this park are open to all pedestrians, but only to the horses and carriages of some privileged members of the aristocracy. The S. drive is open to all private and hackney carriages. The Green Park, a triangular piece of ground, about as large as St. James's, from which it gradually rises to Piccadilly, is open, well aired, and forms a sort of miniature Hyde Park. Along its E. margin are some of the most splendid houses in the metropolis, incl. those of Earl Spencer, the Duke of Sutherland, and the Earl of Ellesmere. The latter, in the Palladian style, is a noble palace, and one of the most magnificent private residences in London.

The Regent's Park, which is nearly as large as Hyde Park, with an equally varied surface, was formed during the regency, in the latter years of the reign of George III. It is sit. N. of Portland Place, on high ground, surrounded by elegant buildings. But it has a clay subsoil, and is rather damp, although being tolerably well drained. Neither is it, like most of the other parks, a place wholly appropriated to the accommodation and recreation of the public; but, on the contrary, the public is shut out from a considerable portion of its extent, and some even of its finest parts have been let to private individuals who have built villas upon them. This cannot but be held a gross abuse of public property; and it is somewhat surprising that it should have been allowed to be perpetrated, almost without notice. The gardens of the Zoological Society are situated on the N. side of this park, and the central portion is occupied by the gardens of the Botanical Society.

A portion of the advantages so long enjoyed by the W. end of the town in the possession of its four parks, has been conferred, more recently, on the eastern and the south-western parts of the metropolis, where large open spaces, respectively called Victoria Park and Battersea Park, have been laid out in grass plots, and handsomely ornamented with fine trees, flower beds, fountains, and even artificial lakes. Victoria Park, comprising about 300 acres, is situated a little to the NE. of Bethnal Green; and Battersea Park, the only public park of London adjoining the river Thames, is W. of Lambeth, right opposite Chelsea Hospital. The cost of buying the land and making both these parks was borne by the government.

The squares of London are pretty numerous in all parts, but the largest and handsomest are in the W. end. In many the houses are on a grand scale, and the central gardens well laid out. Grosvenor, Berkeley, and Hanover Squares, which lie between Oxford Street and Piccadilly, were formerly, and still are, favourite resorts of the aristocracy. Belgrave Square, however, with the surrounding streets and squares, and Carlton Terrace are still more fashionable quarters. St. James's Square, between Piccadilly and Pall Mall, and Cavendish, Portman, and Manchester Squares, on the N. side of Oxford Street, are mostly occupied by persons of distinction. Further E. are Russell and Bedford Squares, and a cluster of squares to the N. of these, chiefly occupied by merchants and tradesmen. Lincoln's Inn Fields, S. of Holborn, is a large and well-built square, and its inclosure is more tastefully laid out than any other in this part of the metropolis. Finsbury Square lies N. of the city, and near it is Finsbury Circus. Other squares, formed of good houses, are to be found in all parts of the town and neighbourhood.

Statues and Public Monuments.—Several of the best squares are decorated with statues; among which may be remarked those of Charles II., William III., Anne, and George I. in Soho, St. James's, Queen's, and Leicester Spuares; that of George I. in Grosvenor Square; of William, duke of Cumberland, in Cavendish Square; of Pitt, by Chantrey, in Hanover Square; of Fox, by Westmacott, in Bloomsbury Square; of the Duke of Bedford, by the same sculptor, in Russell Square; and of George IV., by Chantrey, in Trafalgar Square. Other statues and monuments are placed in different parts of the metropolis, among which are the equestrian statue of Charles I., by Le Soeur, at Charing Cross; of James II., by Gibbons, behind Whitehall; of Anne, by Bird, in front of St. Paul's; of George III., by Wyatt, Pall Mall; of the Duke of Kent, in Park Crescent; of William IV., in King William Street, city; of Canning, by Chantrey, in Palace Yard; of General Napier, by Behnes, at Charing Cross; of the Duke of Wellington, by Wyatt, over the grand arch at the junction of the street, at Hyde Park Corner, with the road leading by Constitution Hill to Buckingham Palace; and another statue of the duke, by Chantrey, opposite to the Bank of England in the city. At the bottom of Waterloo Place and the junction of Pall Mall, stands the 'Guards Memorial,' a monument in honour of the Guards who fell in the Crimean war; and near the E. entrance to Hyde Park is a statue copied from a figure at

Digitized by Google

Rome, said, but without any authority, to be that of Achilles. It is of brass, and was formed out of cannon captured by the Duke of Wellington, in whose honour it was erected, and to whom it is inscribed 'by the ladies of England.'

The Monument on Fish Street Hill, built in 1671-77, to commemorate the burning of London, is a fluted Doric column, 202 ft. in height, designed by Sir Christopher Wren. The pedestal is decorated by a representation, in relief, of the destruction of the city, sculptured by Cibber: at the top of the column is a gallery affording a view of the E. part of the metropolis, and on the summit is a blazing urn. The York Column is a plain Doric pillar of granite, surmounted by a bronze colossal statue of the Duke of York. The height of the column is 124 ft., and above the capital is an iron gallery, from which a good view is obtained of the W. end of the town. This column, erected in 1833, is situated on the N. side of St. James's Park, at the lower end of Waterloo Place. A fluted Corinthian column, with a capital of cast metal, has been erected in Trafalgar Square in honour of Nelson. It is surmounted by a statue in stone of the hero; and on its pedestal are some spirited sculptures in *alto relievo*, in bronze, representing his death, and some of the most striking events of his life. It is 176 ft. 6 in. high from the base to the top of the statue; but, on the whole, it has a poor effect, expressed by the wits in the saying that government here has 'mast-headed the admiral.'

Bridges.—The Thames, which, in its course through London, has a medium width of about 1,000 ft., is crossed by thirteen bridges, of which eight are devoted to the ordinary traffic, and five to railways. The oldest bridge over the Thames of which there is any record, was a wooden structure thrown across the river early in the 11th century; but the frequent and costly repairs indispensable for its maintenance led to the construction of one of more durable materials. A stone bridge, of pointed architecture, was completed in 1209, which, by means of occasional renovations, was kept standing till 1834. Down to the middle of last century, this was the only bridge between London and Southwark. The great inconvenience of a circuitous journey from the west end of the town to the city before the river could be crossed by carriages, induced parliament, in 1738, to make a grant for the erection of Westminster Bridge at the court-end of the metropolis. Old Blackfriars Bridge (intended by its projectors to have been called Pitt Bridge, in honour of the first great statesman of the name of Pitt), was built about 20 years after, the expense of its construction being defrayed by a toll exacted during 19 years. Westminster and Blackfriars Bridges were built of Portland stone, which, being too soft to resist the constant attrition of the water, and of the ice of winter, their piers were so much worn as to threaten their entire destruction; the former, therefore, had to be taken down in 1861, and the latter in 1865. The new bridge at Westminster, built after the designs of Mr. Page, was opened in 1863, and the new bridge at Blackfriars, likewise designed by Mr. Page, is to be completed in 1867. New Westminster Bridge, built at an expense of near 400,000*l.*, is generally considered the handsomest as well as most convenient bridge of the metropolis. It is quite level, and has two footways of 15 ft. width; two tramways for heavy traffic, each 7 ft. 6 in., and a roadway of 40 ft. for light traffic. The new bridge at Blackfriars, the estimated cost of which is 250,000*l.*, will be 9 ft. narrower than Westminster Bridge. Southwark Bridge, which was once held the most splendid structure of its kind, was completed in 1819. It is of iron, and has only three arches, the span of that in the centre being 240 ft., and the weight of metal in it 1,665 tons. Waterloo Bridge, which Canova said was 'worth a visit from the remotest corner of the earth,' is of granite, and has 9 elliptical arches, each 120 ft. in width. It was built by a joint stock company, at a cost of 1,150,000*l.*, and opened to the public in 1817. A toll of one half-penny is charged on this bridge for all foot passengers, and of 2*d.* for hackney carriages. London Bridge, like the Southwark and Waterloo Bridges, was planned by John Rennie. It is built of granite, the span of the centre arch being 150 ft., and is a noble specimen of bridge architecture. The heavy expense of this fabric, amounting to 2,000,000*l.* sterling, was partly defrayed by a duty on all coal brought into the pool, and partly from the revenues of property appropriated for the support of 'London Bridge.'

Of the five railway bridges that cross the river Thames within the metropolis, the best that can be said is that they are undoubtedly useful structures, built at a comparatively small cost. Two of these bridges belong to the South Eastern railway company—that at Charing Cross taking the site of a former suspension bridge, transferred to Clifton—while one accommodates the traffic of the London, Chatham, and Dover line; another that of the lines terminating at Victoria station, Pimlico; and the highest on the river, that of the South Western and Great Western railways.

The famous Thames Tunnel, which passes under the river between Wapping and Rotherhithe, effects a connection between its banks nearly 2 m. below London Bridge. The erection of a bridge in the centre of the port was of course impracticable, and the mode of uniting the two shores, without injury to the shipping interest, was long a difficult problem for engineers. It was at length solved by Sir I. Brunel, who designed and completed the tunnel. It consists of a hollow brick cylinder, or tube, subdivided into two road-ways, each 15 ft. high and 12 ft. broad. Notwithstanding the danger attending the execution of the work, owing to the perpetual oozing through and occasional bursting in of the river, the loss of life during the 15 years it occupied was very inconsiderable. But it has hitherto been a most unprofitable speculation, and will probably have to be turned into a railway tunnel. Projects to this effect have long been entertained, but the great difficulty in their execution has been the neighbourhood of the great docks, far too deep to allow the subterranean approach of railways.

Palaces and Houses of Parliament.—St. James's Palace at the west end of Pall Mall, is an irregular, mean-looking brick building, totally unworthy the name of palace: it was erected by Henry VIII., on the site of a hospital for female lepers, which existed in the 11th century. The interior, however, is handsomely fitted up, and it is well adapted for court levees and drawing-rooms, which are mostly held in it. The chapel attached to this edifice is that used for the ancient hospital.

Buckingham Palace, at the W. end of St. James's Park, occupies the site of Arlington House, pulled down by John Sheffield, duke of Buckingham, who erected in its stead a plain respectable mansion. Having been purchased by George III. in 1762, it became the favourite abode of Queen Charlotte. Under George IV., whose rage for building was as decided as his taste was equivocal, Buckingham House was entirely rebuilt; and became, in 1837, the town-residence of the Queen. Till recently the principal front to the E. consisted of three sides of a square, a marble arch (a minia-

Digitized by Google

ture imitation of that of Constantine at Rome) being a little in advance of its narrow projecting wings. But this arch, which did not harmonise with the rest of the building, and was, at the same time, mean and paltry, was removed in 1850. A new eastern front has, also, been given to the building, which is now quadrangular. This new portion is of great magnitude; and though, perhaps, some of its details may be objected to, it is, on the whole, an imposing structure. The apartments in it are more lofty than those in the other portions of the building, and are better fitted for state-display. The garden façade, an elevation of the Corinthian order on a rustic basement, is the best part of the palace built by George IV. The gallery, about 160 ft. in length, contains some good pictures. Except in the new front, the rooms in the basement story are low, and some of them, with the greater number of the corridors and passages, are badly lighted.

The situation of this palace is not favourable. It is closely hemmed in on the S. side by inferior houses; while, on the W. side, the grounds are overlooked by the tall houses in Grosvenor Place. Until the year 1865, the road in front of the palace, and along the Mall, not being paved, but covered with a compound of gravel and clay, became in wet weather a mere puddle.

The old Houses of Parliament stood upon ground formerly occupied by the palace of Westminster. Their appearance was far from imposing; but a certain degree of antiquated splendour, the associations connected with their history, and the importance of the purposes to which they were appropriated, made them respectable in the eyes of Englishmen. They were, however, wholly destroyed by fire on the 16th October, 1834. Preparations were made immediately after for the erection of a new edifice, on a scale infinitely larger and more sumptuous than the old one. The new palace, built after the designs, and under the direction of Mr. Barry, was not completed till the year 1864, so that its erection took thirty years. The expenditure in money was equivalent to that of time, for it cost above two millions sterling. The space occupied by the Houses of Parliament is about eight acres; the buildings have a river frontage of 900 ft., with a terrace of Aberdeen granite 680 ft. long by 30 ft. broad. The Victoria Tower, chiefly designed for correcting the low situation of the edifice, commanded, as it is, by Westminster Abbey, rises to the height of 340 ft. The clock, at the opposite, or eastern end, is 320 ft. high, and the central spire 300 ft. The royal entrance in the Victoria Tower is a majestic gateway, 65 ft. in height. The palace is altogether an edifice with the stamp of grandeur visibly impressed upon it, though adverse critics contend that it is overlaid with an endless profusion of minute ornaments, which detract from its simplicity, appear paltry, and catch soot and smoke, besides forming convenient receptacles for swallows' nests. The passages inside, being in the last degree complicated, are also more like the mazes in a labyrinth than the corridors in a palace. The House of Lords is as gorgeous as gilding and painting can make it; but the House of Commons has greater simplicity.

The Government Offices, including the Treasury, Home Office, and Board of Trade, on the W. side of Whitehall, have been much improved by the erection of a uniform and handsome palatial front. The Board of Control has an Ionic portico, but is, otherwise, a plain building. The Ordnance and Admiralty offices make no pretensions to display; and the 'Horse Guards,' which does pretend to it, is in very bad taste. Many of the public offices are in Somerset House, once a palace, occupied by Edward VI. and Elizabeth. The old building was taken down in 1775; and the present quadrangular structure, designed by Sir William Chambers, was completed in 1782, and distributed into government offices. The street front is only 200 ft. in length, but that facing the river is 800 ft. in length, and is one of the noblest elevations in London. An eastern wing was added by King's College, in 1830, in completion of the architect's design.

On the river's bank, in the E. part of the city, is *the Tower*,

'With many a foul and midnight murder fed.'

This rude fortress, about ½ m. below London Bridge, was begun by William the Conqueror in 1078. The original building, now called the White Tower, was completed in 1098. Additions were made by Henry III. in 1240, by Edward IV. in 1465, and the whole was substantially repaired by Charles II. in 1663. The Grand Storehouse, a large building N. of the White Tower, begun by James II. and completed by William III., was burnt down in 1841, when about 280,000 stand of muskets and small arms were destroyed. On the site of this storehouse a large semi-Gothic structure, called the Wellington Barracks, and serving partly as such, and partly as an armoury, has been erected. It is fire-proof, and is constructed so that it could not easily be taken, unless artillery were employed against it. The tower was a royal palace during more than five centuries. It was long, and still in fact is, a state prison; and several royal personages and many nobles, and distinguished commoners, perished in this edifice, some by the hands of public executioners, and some by the dagger and bowl of the assassin. It anciently contained several detached masses of building, most of which have now disappeared. The original tower, now called the White Tower, still remains the principal edifice. The Martin Tower is now called the Jewel Tower. The Lantern Tower, the Royal Palace, and the Mint have been pulled down. Of the remainder of the old building vestiges may be traced under altered names. The present edifices consist, exclusive of the barracks already referred to, of the church of St. Peter, the ordnance office, the record office, the jewel office, and the armouries. The whole is surrounded by a moat filled with water from the Thames, and the outer bank has been turned into pleasure grounds. The Tower is open to visitors, who pay 6*d.* to see the armouries and a similar sum to inspect the regalia. The menagerie, formerly the best in England, having been superseded by that belonging to the Zoological Society in the Regent's Park, was dispersed many years ago. The *Mint*, formerly in the Tower, but now on Tower Hill, is a stone building of Greek architecture, consisting of a centre and wings. The workshops and offices occupy about 8,000 square yards, and the machinery for coining is complete and efficient.

Post Office.—The Post Office, in the centre of the metropolis, near St. Paul's, a large, handsome building, completed in 1829, of Portland stone, is 390 ft. in length, 130 ft. in width, and 64 ft. high. The façade has three Ionic porticoes, over the central and largest of which is a plain pediment. Within this portico is the great hall, 80 ft. by 64 ft., divided into three compartments by rows of Ionic columns on granite pedestals: passages lead from it to the principal offices.

The business transacted in this building, embracing, as it does, the internal correspondence of this immense city, and its external correspondence

Digitized by Google

with all parts of the U. Kingdom and of the world, is necessarily of vast extent; and is conducted with a degree of despatch, regularity, and accuracy, that is quite extraordinary. There are about 1,000 houses and pillar-boxes for receiving letters within what is called the 'town district' of the metropolis. The number of letters collected in this district alone amounted to 13 millions in 1839, the year preceding the general reduction of postage. In 1840, the first year of the penny post, the number of London district letters rose to 21 millions, while the total number of letters passing through the General Post Office was 132 millions. In 1860, the total number of letters amounted to 462 millions, and the local correspondence to 63 millions. Finally, in 1864, the total reached 471 millions, while the London district alone produced 70 millions of letters.

Religious Establishments and Buildings.—London is a bishop's see, the highest in rank in the kingdom under the archbishops. The diocese formerly comprised 199 parishes in Middlesex, 398 in Essex, 56 in Hertfordshire, and 4 in Buckinghamshire, in all 650; but under the new ecclesiastical arrangements it comprises all the parishes of Middlesex, 23 in Surrey, 10 in Essex, and 9 in Kent, making a total of 241 parishes, and 313 benefices. Westminster contains 10 parishes, 4 of which were formed early in the last century, in consequence of the great increase of pop. at the W. end of the town, and one more recently; 2 only of these parishes, St. Margaret's and St. John's, are considered to form the city of Westminster, the other 8 being denominated the liberties. Westminster was erected into a bishopric by Hen. VIII. in 1541, when the whole of Middlesex, exclusive of the city of London and the parish of Fulham, was assigned as its diocese; but this bishopric existed only nine years, at the expiration of which the ecclesiastical government reverted to its former channel.

St. Paul's, the cathedral church of London, is not only the great architectural glory of the metropolis, but of the empire. It stands in an elevated situation at the top of Ludgate Hill, on the site of the former cathedral, destroyed during the great fire of 1666. Its foundations were laid on the 21st of June, 1675; and Sir Christopher Wren, by whom it was designed, and under whose directions the works was carried on, lived to complete the stupendous edifice, the last stone of which was laid by his son in 1710. It is built in the form of a Latin Cross, with an additional arm or transept at the W. end to give breadth to the front, and has a semicircular projection at the E. end for the altar, and semicircular porticoes at either end of the transepts. It is 510 ft. in length, E. to W., the length of the cross, exclusive of the circular porticoes, is 250 ft., the breadth of the W. façade with the turrets 180 ft., and the height of the walls 110 ft. An immense dome, or cupola, rising over the centre, is surmounted by a lantern, ball, and cross, the latter being elevated 362 ft. above the level of the floor, and 370 ft. above the pavement of the churchyard. The two turrets, or belfries, in the W. front, are each 222 ft. in height. The walls are decorated by two stories of coupled pilasters arranged at regular distances, those below being of the Corinthian and those above of the Composite order. The whole building is of Portland stone; and the excellence of its foundations, and the massive solidity of its walls and piers, warrant the inference that it will be as lasting as it is magnificent.

St. Paul's, it is frequently said, is copied, or at least closely imitated, from St. Peter's at Rome; and to some extent this is true. But it is a copy that bears the impress of transcendent genius; and may be said to be to St. Peter's what the Æneid is to the Iliad and Odyssey. The fronts of both cathedrals are the parts, perhaps, in which they are most deficient; but, in neither instance, was the architect allowed to follow out his own conceptions. Bramante and Michael Angelo wished to have the portico of St. Peter's formed on the plan of the Pantheon, and Wren was obliged to modify his masterly designs so as to make them acceptable to those to whom he was obliged to defer. The belfries of St. Paul's give it a character very different from that of St. Peter's. Neither is the dome of the latter so spherical as that of the British cathedral, nor is it so striking a feature of the building, being placed so far behind the lofty façade as to be almost invisible to a person standing near the edifice. But in the vastness of its proportions St. Peter's as far exceeds St. Paul's as the latter does the largest of the English churches. Perhaps, also, it is superior to St. Paul's in the harmony of its parts; the dome, though so grand a feature in the latter, being, it is very generally admitted, too large for the other parts of the building. But the English cathedral is, though *longo intervallo*, second only to St. Peter's; and is unquestionably the noblest of transalpine and of Protestant temples.

The interior of St. Paul's is chaste and imposing; but, owing to the want of ornament, it has rather a naked and austere appearance. Within the last fifty years, it has been attempted to obviate this defect by placing within the cathedral monuments erected at the public expense to eminent individuals, among whom may be specified Marquis Cornwallis, Earl St. Vincent, Lord Nelson, Abercrombie, Earl Howe, Howard the Philanthropist, Dr. Johnson, Sir William Jones, Sir Joshua Reynolds, the Duke of Wellington, and others. But these, with few exceptions, do no credit either to the artist or the country, and are totally unworthy of the temple which they only encumber.

The remains of Sir Christopher Wren are deposited in one of the vaults of the cathedral; and before the entrance to the choir is the following appropriate inscription to his memory:—

SUBTUS. CONDITUR. HUJUS. ECCLESIÆ. ET. URBIS.
CONDITOR. CHRISTOPHORUS WREN. QUI. VIXIT.
ANNOS. ULTRA. NONAGINTA. NON. SIBI. SED.

BONO. PUBLICO. LECTOR. SI. MONUMENTUM. REQUIRIS.
CIRCUMSPICE.

OBIIT. XXV. FEB. ANNO. MDCCXXIII.
ÆTAT. 91.

Visitors ascend by an inside stair to the stone gallery which surrounds the exterior gallery above the colonnade; and, by a more difficult ascent, they reach the Golden Gallery, which crowns the apex of the dome, at the base of the lantern. The view from this latter point, on a clear day, is unrivalled. The entire metropolis, vast as it is, appears to be spread out at the spectator's feet. The broad and silvery line of the river, crossed by numerous bridges, and bearing on its bosom thousands of vessels, gives infinite grandeur and variety to the scene. At this height, the people, horses, and carriages in the streets, and everything else on the surface, appear so greatly diminished, that the bustle of the crowd has been, not inaptly, compared to that of a swarm of emmets. Owing to the usual density of the smoke, this splendid view is seldom seen in perfection. It appears to the greatest advantage early on a clear summer morning, before the fires are lighted. The more adventurous visitors not

Digitized by Google

only ascend to the top of the cupola, but enter the lantern, and thence make their way into the copper ball by which it is crowned. The diameter of the latter is 6 ft. 2 in.

The whole cost of this noble structure amounted to only 747,954*l.*, or less, less than a fourth part of the sum spent on the new Houses of Parliament. St. Paul's cathedral was finished in 35 years, under the superintendence of one architect, by one master mason (Mr. Strong), and during the incumbency of one bishop of London (Dr. Henry Compton). St. Peter's church at Rome, on the other hand, was 145 years in building, during which time no fewer than 12 architects were employed upon it, and 19 popes sat in the papal chair. (See Brayley's Account of St. Paul's, in the Survey of London and Middlesex, ii. 249–310; Aikin's Essay on St. Paul's; Britton's Account of St. Paul's; and Elme's Life of Sir Christopher Wren.

It is to be regretted that St. Paul's is so much hemmed in by the surrounding buildings. The view of the grand façade, with the dome rising above it, from the foot of Ludgate Hill, was, previous to 1865, generally held the most favourable; but it was almost entirely destroyed by the ugly railway bridge of the London, Chatham and Dover line, which, in this year, was thrown across the street, at the very point where the noble edifice presented itself most strikingly. At present, the dome appears to best advantage from the bridges and the river; and is seen at a great distance from all parts of the surrounding country, towering above the smoke by which the city is generally enveloped. The effect of the smoke on the structure is not a little curious. In the parts protected from the weather it adheres, and the building has, in consequence, a black and sooty appearance; while, on the other hand, the parts exposed to the weather seem bleached or whitened.

Westminster Abbey, which, next to St. Paul's, is the noblest ecclesiastical edifice in London, dates from the 13th century, though portions of the edifice, erected by Edward the Confessor, may still form part of the building. Great additions, were made to it by Henry VII., who built the splendid chapel that still bears his name; and, at the beginning of the last century, the two towers of the W. front were added, from designs furnished by Sir Christopher Wren. In 1803 a considerable part of the building was destroyed by fire; but it has since been completely repaired, and Henry VIIth's chapel renovated in its original style. It is 360 ft. in length, and 195 wide, within the walls. Though built at many different times between the reigns of Henry III. and Henry VII., and never quite completed, it offers one of the best specimens of the pointed style in England. It is in the form of a cross, the shape of which, externally at least, at the E. end, is almost obliterated by 12 minor chapels, of which that of Henry VII. is the largest and finest. The great variety of the abbey renders any thing like a general description impossible. The N. side, with its beautiful gate, may be considered the principal front; but the view is much injured by the interference of St. Margaret's church, which immediately adjoins the abbey. It presents a line of ornamental turreted buttresses and pointed windows, with a fanciful sculptured porch, decorated with immense flying buttresses, lofty pinnacles, and a large wheel window 32 ft. in diameter. The most striking view of the interior is from the W. entrance, where the lofty pointed aisles, clustered columns, rich tracery work, and monumental decorations, judiciously lighted by painted windows, present a harmonious effect well calculated to arrest the attention of the most insensible. Many of the most illustrious of the statesmen, orators, warriors, philosophers, divines, and poets, of Great Britain, from Chaucer to Macaulay, and from Clarendon to Palmerston, are either buried or have their monuments within its precincts; and the statues and other memorials which are distributed all over the abbey, give it the highest interest, and deeply impress the mind. Since its restoration, in 1820, Henry VIIth's Chapel has formed the most beautiful of the subordinate portions of the abbey: it is universally considered a gem, and is, undoubtedly, a very choice specimen of its style.

The other churches of London have no pretensions to be compared with those last mentioned. Of those which escaped the great fire of 1666, St. Saviour's in the Borough and the Temple Church deserve special mention. The former, restored to much of its ancient freshness, is a good specimen of the architecture of the 14th century: the latter, which has also been restored recently, is still more ancient, and is remarkable for its peculiar architecture, and for the fine Norman arch forming the entrance to the building. After the fire, several churches were built by Sir Christopher Wren, but the fame of St. Paul's has obscured the lustre of his other works. Bow Church, in Cheapside, St. Bride's, Fleet Street, and St. Stephen's, Walbrook, are the most admired of Sir Christopher's churches. In the early part of last century several noble churches were erected, of which St. Martin's, St. George's, Hanover Square, and St. George's, Bloomsbury, are good specimens. Within the last 60 years, however, a complete change, and great deterioration, took place in our ecclesiastical architecture. St. Pancras Church and some others may, perhaps, be excepted from this censure; but an extreme poverty of architectural talent was shown in designing new churches, which are quite unworthy of those formerly erected and of the city. More recently, however, the taste has been again improved; though the Gothic or mediæval style is now, perhaps, too universally followed. The places of worship for dissenters are, with few exceptions, very plain brick buildings, well arranged for the accommodation of large congregations, but constructed with little attention to ornament or taste.

Lambeth Palace.—One of the most extensive and imposing buildings S. of the Thames is Lambeth Palace, on the river's bank, nearly opposite the new houses of parliament. The original building, erected in 1191, was first intended for a college of canons; but as the pope refused his consent to its establishment, it was converted into an archiepiscopal palace, and has ever since been the town residence of the primate of all England. Great additions were made to it about 1250, and, in the 15th century, Archbishop Chichele built a square stone tower towards the river, called the Lollard's Tower, from the fact of some of those early reformers having been confined in it. Subsequent additions were made by Cranmer, Pole, Parker, Juxton, Sancroft, and Tillotson; but the whole, as seen from the outside, is a heavy, dull-looking brick structure, little interesting except from its antiquity. Recent additions, however, completed in 1833, at a cost, including internal fittings, of nearly 80,000*l.*, are executed in better taste. The new buildings, of Bath stone, stand in the gardens, E. of the old palace: the principal edifice is a splendid structure, the ornamental portions, which are particularly rich, being copied from Westminster and St. Alban's Abbeys. The entrance front, flanked with square towers, is 160 ft. in length, the opposite or garden front being 80 ft. longer. The principal rooms are of fine proportions, and richly though chastely embellished,

Digitized by Google

the wood-work being almost wholly of oak. The library is perhaps one of the finest parts of the interior; and though remarkably plain in its decorations and furniture, produces, from its great size, a very imposing effect. It contains upwards of 25,000 vols., among which are many rare works in classics and divinity; and the MSS., some connected with the history of the see, and others of a miscellaneous character, are said to be very valuable. In the older parts of the building the chief rooms are the long gallery, containing a curious collection of paintings, chiefly portraits of former prelates; the great hall, with an open roof of oak, presenting one of the best specimens in the country of internal Gothic decorations; and the chapel, a small but extremely elegant apartment, fitted up with oak stalls, pews, and an exquisitely carved pulpit and screen. The park and gardens belonging to the palace occupy about eighteen acres; they are completely walled round; nearly four acres are appropriated to the kitchen garden, the rest being planted and laid out in shrubberies.

Cemeteries.—The crowded state of most of the metropolitan churchyards, and the growing conviction of their injurious influence over the health of the neighbourhoods in which they are placed, have, within the last generation, suggested the establishment of public cemeteries at some distance from town. The first of these, at Kensal Green, occupying a piece of ground 48 acres in extent, tastefully planted and laid out, was opened in 1832. It is situated in the NW. suburb of London, and has chapels, where the funeral service is performed according to the rites of the Church of England, and of other religious persuasions. The success of this undertaking, which was long opposed by ignorant prejudice, led to the construction of other cemeteries. That at Highgate, consecrated in 1838, and occupying about 40 acres, in an elevated situation N. of the city, commands a very extensive view. The Norwood cemetery, 6 m. S. of the city, is about the size of that last mentioned. Other cemeteries have been completed at Woking, on the London and South Western railway—to which the coffins are daily conveyed in the 'dead train'—at Colney Hatch, on the Great Northern railway—which has likewise its diurnal train for the dead—at Abney Park, Stoke Newington; at Earl's Court, Brompton; and at Victoria Park and Bow Common in the E. The Woking cemetery is known as 'the Necropolis.' At first the new cemeteries were found too expensive to be used by the poorer classes, but various changes in the tariff of burials gradually adapted them to their use. The act of the 13 & 14 Vict. c. 52 (1850), providing for the abolition of intramural interment, provides, also, for the formation of new burial grounds in convenient situations, and at reasonable rates of charge.

Commercial Establishments.—The establishments connected with commerce are on a scale commensurate with the amount of business to be transacted. The public buildings for commercial purposes consist chiefly of the Bank of England, Royal Exchange, Stock Exchange, Custom House, Corn Exchange, and Coal Exchange. The Bank of England, from its first incorporation in 1694 to 1734, transacted its affairs at Grocers' Hall, in the Poultry. The first stone of the present building was laid in 1732; forty years afterwards the E. and W. wings were added; and in 1781 the church of St. Christopher was taken down to make room for further additions. Until 1825, this edifice exhibited a great variety of incongruous styles; but endeavours have since been made, and with some success, to produce uniformity. The building is insulated, and covers 8 acres: its shape is an irregular parallelogram, the longest side measuring 440 ft. Many of the rooms in the interior, such as the court-room, pay-hall, and dividend-office, are spacious and well-proportioned: the largest and loftiest of all is the rotunda, a circular hall, 57 ft. in diameter, and crowned by a handsome cupola and lantern. The chief transactions connected with the funds take place in this apartment. The affairs of the Bank of England are managed by a governor, deputy governor, and twenty-four directors, elected annually. The business is conducted by about 800 clerks, whose salaries amount to nearly 200,000*l.* A valuable library, intended for their especial use, has been established in the bank.

The Royal Exchange, originally erected by Sir Thomas Gresham in 1566, was burnt down in the great fire. It was rebuilt within three years, and extensively repaired between 1820 and 1826. Having been again destroyed by fire on the 10th of January, 1838, it was once more rebuilt, from a design by Mr. Tite, and is now one of the most notable edifices of the city. It is quadrangular, and has a colonnade and pediment fronting Cornhill. The court inside is surrounded by piazzas; but the merchants and others frequenting the building are not sufficiently protected from the weather, a defect which is much complained of. In the quadrangle is a statue of Queen Victoria, by Lough, and it is further ornamented with statues of Queen Elizabeth, Sir Thomas Gresham, and Sir Hugh Myddelton. Lloyds, and other mercantile corporations, have their offices in the building. It was opened on the 28th of October, 1844.

The Coal Exchange, in Lower Thames Street, is a magnificent, though rather incongruous, building. The great hall, which is circular, is 60 ft. in diameter, and 74 ft. to the apex of the glazed dome by which it is covered. The structure cost about 40,000*l.*

The Custom House, a large building by the river side, between London Bridge and the Tower, was open for business in 1817. The old one was burnt down in 1814, though not before the present building was begun, the former having been inconveniently small. The river front, 480 ft. in length, is built of Portland stone, and, though rather plain, is decorated by three porticoes, each supported by six Ionic columns. The *long room*, where the public business is transacted, is 185 ft. in length, 66 ft. in width, and 55 ft. in height. Owing to the insufficiency of its foundations, this structure became insecure, and had to undergo some very extensive repairs in 1825.

River and Port.—The river Thames, formerly looked upon as entirely destined for the use, and not in the least for the ornament, of the great metropolis, which stands at its banks, has in recent years been more kindly treated. By the establishment of a gigantic system of drainage (see *post*) it has ceased to be the main sewer of London, while the erection of long lines of magnificent quays will make both banks of the river the finest streets and promenades in the world. A bill for the embankment of the river Thames on the Middlesex side was laid before parliament in the session of 1862, and another for a partial embankment on the Surrey side in 1863, and both having eventually become law, the works were commenced in the latter part of 1864. The undertaking, which, at the lowest estimate, will cost from three to four millions sterling, is to be completed about the year 1870; its main features are a roadway, from 100 to 200 ft. wide, running right along the banks of the river, on a level, at Westminster, with the existing

Digitized by Google

houses of parliament, and sloping down eastward so as to pass under all the bridges farther down. The construction of the Thames embankment is entrusted to the Metropolitan Board of Works.

What is legally termed the port of London extends 6½ m. below London Bridge to Bugsby's Hole, beyond Blackwall; though the actual port, consisting of the upper, middle, and lower pools, does not reach beyond Limehouse. The whole of the latter space is generally covered with vessels; a channel, only 300 ft. wide, being left clear for craft passing up and down the river. The port having been long insufficient for the proper accommodation of the shipping resorting to London, and being often blocked up by fleets of merchantmen; the quays also being heaped with bales, boxes, bags, and barrels in such confusion that the most barefaced robberies were committed with impunity, the necessity of further protection for merchandise became evident. Accordingly, at the close of last century, it was determined to excavate wet docks, capable of accommodating a large number of ships, with contiguous warehouses, the whole being enclosed by high walls. The West India Docks, the first of these establishments, and the largest belonging to the port, were opened in 1802. They are situated about 4 m. down the river: including the City Canal, a work intended for another object, but now a part of this establishment, they comprise about 295 acres, ¼ part of which is covered with water, the rest being occupied with quays and warehouses, the latter of great magnitude, and furnished with every convenience. They have an import and an export dock, with sufficient accommodation for 500 large merchantmen. The London Docks, about 1½ m. from London Bridge, were opened in 1805. They cover about 100 acres of ground, of which nearly a third part is water. The vaults beneath the warehouses have cellarage for 65,000 pipes of wine, and one of them has an area of 7 acres. The tobacco warehouses are very extensive. The East India Docks, smaller than those above described, and further down the river, were opened in 1808. Their water-area is 30 acres, and their great depth (23 ft.) enables them to accommodate vessels of very large size. The E. and W. India Dock Companies are now incorporated, and form only one association. The Commercial Docks, on the S. side of the river, consist principally of the old docks for the Greenland ships, enlarged and provided with warehouses for bonding foreign corn. They comprise 49 acres, 40 of which are water; and are principally used by vessels engaged in the Baltic and E. country commerce and the importation of timber. The St. Katherine's Docks, opened in 1828, are the nearest to London Bridge, being just below the Tower. They enclose 24 acres, of which 11½ are water. The warehouses, which are on a very extensive scale, are close to the quays, having the lower or basement story open for the purpose of receiving or delivering goods from and to vessels that are being laden or unladen: the arcades are supported by iron columns of great strength. These docks have all been constructed at a vast expense, by joint-stock companies; and have, on the whole, been profitable concerns, though they have redounded more to the advantage of the port than to that of their projectors.

The number of colliers frequenting the port has often suggested the idea of excavating docks for their accommodation in the Isle of Dogs, opposite Greenwich; but nothing has yet been effected towards the execution of this plan, although the sea-borne coal trade with London is immense. In the year 1864 there entered the port 3,116,703 tons of coal, in 8,214 ships; and to this immense tonnage Newcastle-upon-Tyne contributed 1,286,352 tons, in 2,712 ships; Seaham, 149,841 tons, in 616 ships; Sunderland, 903,721 tons, in 2,072 ships; Middlesborough, 77,640 tons, in 259 ships; Hartlepool and West Hartlepool, 509,692 tons, in 1,786 ships; Blyth, 9,836 tons, in 35 ships; while there came from Scotland, 17,004 tons, in 113 ships; from Wales, 92,647 tons, in 252 ships; from Yorkshire, 26,640 tons, in 198 ships; of small coal, 30,913 tons, in 74 ships; 12,290 tons cinders, in 97 ships, and 307 tons from Duff.

Exclusive of the above, a vast quantity of coal, amounting to 2,359,723 tons in 1864, is brought into London by railway. The London and North Western railway alone brought 916,697 tons in the year 1864.

The immense extent of the trade of London will be apparent from the subjoined statement of the gross customs revenue of the port in the undermentioned years:—

Years	£	Years	£
1835	11,773,616	1859	12,740,242
1840	11,088,053	1861	11,905,555
1845	11,033,806	1862	12,156,115
1849	11,070,176	1863	11,974,397

The total customs revenue for England and Wales, in the year 1863, amounted to 18,386,359*l.*, of which, it will be seen, London produced about two-thirds. This, however, does not exactly represent the proportion which the commerce of London bears to that of England. The imports into several of the other great ports, including Liverpool, Hull, and Newcastle, consist principally of cotton, wool, flax, and other raw materials of British manufactures, which are mostly admitted free of duty; whereas the imports into London consist principally of articles of consumption, including tobacco, sugar, tea, coffee, wine, and spirits, on which high duties are paid. Hence it is that the amounts of the import duties collected in different ports afford no fair criterion of the real extent of their import trade. In regard to exports, the articles produced in London are intended more for the home than for foreign demand, and do not constitute any very large proportion of the shipments to foreign parts. These, however, are notwithstanding very large; for, owing to the extreme facility of communication between London and the manufacturing districts, and the low rates at which goods may be lodged in the dock warehouses, London has greater facilities than any other port for the making up of mixed or assorted cargoes, and has, in consequence, a large export trade. Thus, in 1863, the declared value of British and Irish produce exported from London amounted to 36,211,510*l.*, while the exports from Liverpool, in the same year, amounted to no less than 65,154,232*l.*, or nearly double the value of the exports from London. In 1864, the total value of home produce exported from London was 36,554,913*l.*; while Liverpool exported, in the same year, goods of the value of 74,748,031*l.* The declared value of cotton manufactures alone, exported from Liverpool in 1864, amounted to above 32 millions sterling. There can, therefore, be no doubt that, as respects foreign trade, London is surpassed by Liverpool. But, as regards foreign and home trade taken together, London is at least equal to any other place in the world—truly the *universi orbis terrarum emporium.*

The subjoined table shows the total number and tonnage of vessels, both sailing and steam, which entered the port of London in the year 1863. The first column gives the number and tonnage of British vessels, and the second the total shipping, including foreign, which arrived in the port.

On the 1st of January, 1864, there belonged to the port of London 731 sailing vessels under 50 tons, of a total burthen of 25,364 tons; 1,873 sailing vessels above 50 tons, of a total burthen of 801,200 tons; 175 steamers under 50 tons, of a total burthen of 5,060 tons, and 437 steamers above 50 tons, of a total burthen of 227,732 tons.

The *insurance* of houses, ships, and lives is carried on to a far greater extent in London than anywhere else. Marine insurances are often effected by private parties; but other insurances are generally made by joint stock companies.

Manufactures, Retail Trade, and Markets.—London presents itself under too many points of view to be called a manufacturing city; yet it is the seat of many, and of some very extensive, manufactures, several of which have their distinct quarters.

The silk manufacture is conducted on a large scale in Spitalfields, Bethnal Green, and Mile-end. The trade fluctuates extremely, owing chiefly to the caprices of fashion, and great numbers of workmen are often thrown out of employment; but the distress, so often said to prevail in this densely-peopled district, is owing at least as much to the improvident habits of many of the weavers as to any falling off in the demand for labour. The nett wages of plain silk weavers, when fully employed, range from 9*s.* to 11*s.* 6*d.*, and those of velvet weavers from 15*s.* to 23*s.* a week. With respect to physical condition, this numerous body are, speaking generally, diminutive, impoverished, and feeble, unable to withstand disease, and not long-lived, circumstances attributable to close in-door employment, bad air, bad lodging, and bad food. There is a great tendency to epidemic fevers in close and ill-drained neighbourhoods, and in no part of London are the fatal effects of lodging in close courts and cellars more visible than in Spitalfields and Bethnal Green.

Porter is the favourite beverage of the lower and also of a considerable portion of the middle classes of London. The breweries in which this favourite liquor is prepared are mostly on a very large scale; and are, indeed, among the greatest manufacturing establishments in the metropolis, much exceeding the breweries to be found any where else. In addition to the capital vested in buildings, machinery, and horses, a first-rate brewery has, also, a large amount of capital vested in public-houses in all parts of the town. The principal establishments produce from 250,000 to 300,000 barrels a year, principally porter and stout, but partly also ale. It has been estimated that about 1,200,000 barrels, or 43,200,000 gallons, of porter and ale are brewed for consumption in London only, besides which great quantities are sent to different parts of the United Kingdom, and exported to the E. and W. Indies, the United States, and Continental Europe. The splendid teams of horses in the drays belonging to the chief breweries are objects of general admiration in the metropolis. There are several very extensive distilleries, vinegar-factories, chemical works, and soap-boiling houses, most of which are situated on the S. side of the river. About 40 large engineering establishments employ many thousand workmen in making steam-engines and other machinery, chiefly in Lambeth, Southwark, Deptford, and Greenwich.

The principal sugar refineries are in Whitechapel, E. of the city. Clock and watchmakers, who are numerous, reside principally in Clerkenwell. The finest cutlery and hardware are produced, and the manufacture of metals of all kinds is carried on to a great extent. About 5,000

Digitized by Google

ounces of gold plate and 1,000,000 ounces of silver are annually assayed in London. Coach-building is an important business, and the carriages of London are not only the handsomest, but the best built and most durable of any in the empire. Great numbers are made for exportation. Many hands are employed in type-founding; and the manufacture of musical instruments, particularly pianofortes and harmoniums, is conducted on the largest scale. The tanning, currying and dressing of leather is carried on more extensively in Bermondsey than elsewhere in the U. K. And, notwithstanding large numbers of shoes are imported ready made from Northampton and other places, their manufacture and that of harness gives employment to an immense number of hands in the metropolis. Ship-building, and the infinite variety of trades connected with shipping, are extensively carried on E. of London Bridge. Owing to the extent to which the division of labour is carried, the tradesmen and artisans of London have attained to the greatest proficiency; and it is generally admitted that the jewellers, silversmiths, engravers, cabinet-makers, printers, tailors, shoemakers, and book-binders of the metropolis are quite unrivalled in their respective crafts.

There are no means of forming anything like even a rough estimate of the extent of the retail trade of London, but it must be immense. The trades, generally speaking, are mixed indiscriminately, though some remains may yet be traced of the ancient custom of particular trades congregating in particular places. Thus there are still numerous coach-makers in Long Acre, booksellers in Paternoster Row, and bankers in Lombard Street. A good deal of business was formerly transacted by itinerant vendors, who were producers at the same time; but these are now seldom met with. Fashionable shops attract attention by the magnificence and georgeousness of their wares, and intense competition has cheapened the price of all commodities to such an extent, that it has become absolutely impossible for even the smallest manufacturers to hawk about their wares.

The *Markets* of London are supplied at all seasons, and with all sorts of articles, whether produced in the U. Kingdom, or in the most distant countries, with a facility and a regularity that are truly marvellous, and could not *à priori* have been deemed possible. In the great provision markets articles are sold, partly by wholesale and partly by retail. Generally, however, the inhabs. prefer purchasing at shops distinct from the markets. The great market for live stock, which is sold on Mondays and Fridays, is Copenhagen Market, situated at Copenhagen Fields, an elevated plateau, at the top of Caledonian Road, Islington. The market, which was opened in 1856, occupies an equal-sided rectangle, of 15 arches, on ground sloping from the west. In the midst of the market stands a lofty clock-tower, visible at a distance of 12 miles, and around are a number of storehouses, taverns, and various other buildings. Accommodation is provided for 34,980 sheep; 6,116 bullocks, and about 3,000 calves and pigs, all being kept in separate pens. Exclusive of the stock brought to Copenhagen Market, a good many cattle and sheep are imported in steamers, and privately sold; and in the colder months slaughtered cattle and sheep are extensively imported, particularly from the ports on the E. coast. Newgate and Leadenhall markets, with the Whitechapel carcass butchers, supply most part of the butchers of the town and neighbourhood.

Covent Garden is the principal vegetable market, and the immense supply of the finest fruits and vegetables, and the beauty of the plants on sale, make it well worth a visit. Billingsgate is the great fish market, whence fish of all sorts are distributed to the shops and markets in different parts of the town, particularly on Fridays, when the demand—owing to the consumption of the Roman Catholic population—is of extraordinary proportions. The corn market, held in a fine Doric building, in Mark Lane, is attended almost exclusively by wholesale dealers.

Leadenhall is the principal market for the sale of poultry and game; but great quantities are sold in Newgate and other markets, and many poulterers in all parts of the town, and private families, are supplied in whole or in part direct from the country, and not at second-hand from the markets. In severe winters there are large supplies of wild ducks, principally from Holland, as well as woodcocks. Snipes come principally from Ireland. Three-fourths of the pigeons come from France. Black-cocks are all from Scotland. Sometimes, after a grand *battue*, there is a glut of hares and pheasants in Leadenhall Market.

Exclusive of those brought from the different parts of the U. Kingdom, about two millions of 'great hundreds' of eggs are annually imported into London from France and other foreign countries. The imports amounted to 1,936,010 great hundreds of eggs in 1862, and to 2,224,414 great hundreds in 1863. About 20,000 cows are kept in the city and its environs for the supply of milk and cream. The consumption of wheat may, perhaps, be estimated at about 2,000,000 quarters a year, and the vast number of horses in London, and their high keep, occasions an immense consumption of oats. The imports of salmon from Scotland and other parts of the U. K. may be estimated at from 2,500,000 lbs. to 3,000,000 lbs. a year; and to this have to be added large quantities that are imported from Holland and the N. of Europe. The supplies of turbot, cod, lobsters, oysters and shrimps are quite immense. The best cod is brought from the Dogger Bank, and the greater number of the lobsters from Norway. The value of the fish, vegetables, and other food consumed in the metropolis has been set down by some intrepid calculators; but the data on which they formed their estimates were too loose and unsatisfactory to entitle them to any credit.

External and Internal Communication.—The communication between London and foreign countries is carried on chiefly by steamers, regular lines being established with the principal foreign and colonial ports. These, also, are the media of communication between London and the various ports of Great Britain and Ireland. The intercourse with the interior is mainly by railways, but partly still by canals and ordinary roads. There is not a town of 2,000 inhabs., within a radius of 100 miles from London, that cannot be reached by railways. What are called 'pleasure trains,' or 'excursions,' at extremely low fares for the accommodation of the lower classes, are frequent in summer, and carry vast numbers of passengers. In addition to the great lines of communication, short lines are opened to Blackwall, Greenwich, Kew, Richmond, Windsor, and other places in the vicinity of town, on which trains are run every five or ten minutes. But most serviceable of all to the inhabitants of London is the Metropolitan or Underground railway, running from the terminus of the Great Western railway at Paddington to the heart of the city, mostly following the course of the circular line of thoroughfare known as the New Road. The Metropolitan railway, opened in 1863, carries annually above 15 millions of passengers, equal to five times the population of London. There travelled over the line, in the

Digitized by Google

first six months of 1865, no less than 7,462,823 persons, of which 832,112 were first-class; 1,519,887 second-class; and 5,110,823 third-class passengers.

There are seven great railways centring in London, besides numerous smaller lines. The Great Western at Paddington, the London and North Western at Euston Square, the Great Northern at King's Cross, and the South Eastern at Charing Cross and Cannon Street, have noble stations, of immense size, worthy of the metropolis. The Doric portico, at the terminus of the Great North Western railway at Euston Square, and the hall inside, are amongst the most magnificent structures of their kind anywhere to be met with. The hall is 130 ft. in length by 62 ft. in width, and 64 ft. in height.

The Thames is, also, a grand line of communication; the intercourse between the E. and W. ends of the city, and with the different places above and below the bridges, such as Putney, Barnes, Kew, Richmond, and Kingston on the one hand, and Greenwich, Woolwich, Gravesend, and Margate on the other, being kept up by means of steamers. Of these about 70 ply, during the summer season, between the limits above referred to, those plying between the bridges passing and repassing almost incessantly. In fine weather, especially on Sundays, they convey vast numbers of passengers. It is estimated that the receipts of the river steamers amount in the season to nearly 10,000*l.* a week.

The port of London is connected with the Irish Sea by a chain of canals, of which the Regent's Canal, passing along the N. of the city, is the first link. Nearly all the railways are connected with the port.

Hackney coaches were introduced more than 200 years ago; and previously to the introduction of cabriolets, in 1820, were very numerous, but they are now all but wholly superseded by the latter, and by 'Hansom' cabs. It is a singular and not easily explained fact that, with but few exceptions, the hackney coaches and cabs to be found in the streets of London are the dirtiest, shabbiest, and most uncomfortable carriages that are anywhere to be met with. The drivers are worthy of the carriages; the one and the other being a disgrace to the city, and such as would not be employed anywhere else.

Literature.—London ranks still higher as a literary than as a commercial city. Notwithstanding the encouragement given to learning and science in Oxford and Cambridge, London is the favourite resort of literary and scientific men. Its immense population, the wealth and intelligence of its inhab., and the circumstance of its being the seat of government, attract aspiring individuals from all parts of the empire, especially those ambitious to distinguish themselves in literature or politics. The practical, common-sense character of the philosophy and literature of England is probably, indeed, in no small degree owing to its being principally cultivated in London, where the writers, by mixing with the world, learn to avoid those over-refined theories and fanciful distinctions in which recluse speculators are so apt to indulge. With the exception of the provincial newspapers, the whole periodical literature of England centres in London. The number of persons engaged in this department, as authors, publishers, printers, and kindred occupations is very great. London, in 1865, had 16 daily newspapers, and more than two hundred appearing at other intervals. Many of these journals display great, and some consummate, talent; and, considering the extreme rapidity with which articles for the daily papers must be written, and the want of time for revision, they are certainly skilful, though not always admirable performances. So far as respects its newspaper press, London is infinitely superior to every other city in the United Kingdom; and however one-sided, prejudiced, and little to be depended on these newspapers are in party matters, they are unsurpassed in ability, variety, and interest. A prodigious number of weekly, monthly, and quarterly magazines, reviews, and other publications, issue from the London press; and though many of these are of a very trashy and worthless description, a considerable number are of a widely different character, well fitted to amuse and instruct all classes of readers. In 1865 the aggregate issue of newspapers published in London was estimated as follows:—Daily, 248,000, which multiplied by 6, gives a weekly issue of 1,488,000; and again multiplying these by 52, they give for a total the annual issue of 77,376,000 copies.

Weekly Publications.

Newspapers (proper)	1,149,000
Illustrated Newspapers	510,400
Sporting ditto	252,500
Horticultural and Agricultural ditto	47,000
Building, Engineering, Mining, and Railway ditto	44,050
Literature, Science, Art, also Literature with Political Leaders	40,750
Medical and Chemical	15,300
Law	12,000
Musical	8,500
Religious	183,700

Aggregate weekly issue of the whole 2,263,200 multiplied by 52 shows the annual issue to be 117,686,400, which added to the yearly issue of daily, as above, shows the grand total of a year's issue of newspapers for London to be 195,062,400.

Education.—London, unlike most other European capitals, had no university empowered to grant degrees till 1836, when one was established by royal charter (renewed in 1837) for the 'advancement of religion and morality, and the promotion of useful knowledge,' without distinction of rank, sect, or party. This institution differs from most other universities, in its having nothing to do with the business of education, being constituted for the sole purpose of ascertaining the proficiency of candidates for academical distinctions. It is, in fact, a board of examiners, empowered to grant degrees in science and literature to such candidates as are found, on examination, to have attained the required proficiency. The senate, or board, consists of a chancellor, vice-chancellor, and thirty-five other members. The faculties are those of arts, law, and medicine, in each of which are several examiners, some of whom are members of the senate. The sittings are held in Somerset House, and the examinations are half-yearly. The greatest number of candidates for degrees are usually furnished by the University and King's Colleges, both of which are proprietary establishments. The former of these, opened in 1828, is governed by a council and senate of professors: the course of education embraces classics, pure and mixed science, history, jurisprudence, and medicine, religion being wholly excluded. The success of the medical school, which has for some years been the largest in London, has led to the erection of a good hospital close to the college. King's College is a similar establishment to that last mentioned, and is similarly conducted, except that religion is taught in it in accordance with the principles of the Church of England. The general classes are well attended, as is the junior school. The buildings of these establishments are

Digitized by Google

handsome and commodious: the portico of University College is one of the finest in London.

Among the numerous endowed schools in the metropolis, the most celebrated are, 1. Westminster School, founded by Queen Elizabeth in 1560, for the free instruction, clothing, board, and lodgment of 40 boys, called king's scholars. But, in point of fact, their education is not free, but costs, with board and lodging, about 45*l.* a year. The school is attended by other boys, partly boarders and partly day-boarders, the number of whom varies according to circumstances. The king's scholars are selected for merit from the whole school. At the end of the fourth year, 8 or 10 of the senior boys are elected off, according to the vacancies occurring, as students to Christchurch, Oxford, or as scholars to Trinity College, Cambridge. The school forms part of the collegiate establishment of the abbey. Dryden and Locke were educated in it; and William Murray, the famous Earl Mansfield, was a king's scholar, and dux in 1723. 2. The Charterhouse (corrupted from *Chartreux*), founded in 1611, and endowed with property, the gross rental of which amounts to above 25,000*l.* a year. There are on the foundation boys of two classes, pensioners and scholars, both nominated by the governors, among whom are usually some of the most distinguished personages in the country. The number of pensioners is limited to 80, and that of scholars to 44. The former are boarded and lodged at the expense of the hospital, and have, in addition, a pension of 25*l.* a year (whence their name) and a gown: the scholars are educated wholly at the expense of the hospital, but have no pension. The exhibitions to the universities belonging to this school do not appear to be limited in point of number. Boys elected to them have their option both as to college and university; and are allowed 80*l.* a year for the first three years, and 100*l.* for proceeding to the degree of B.A. Gratuities of 100*l.* are given to those scholars who do not proceed to either university. Besides the foundation-boys, the school is attended by others, whose number fluctuates according to the reputation of the masters. 3. Merchant-Tailors' School, founded in 1561, in Suffolk Lane, Thames Street. The statutes provide that a classical education be furnished gratis for 100 boys, and for 150 others at rates varying from 5*s.* to 2*s.* 6*d.* a quarter. The scholars are examined once a year, and the most advanced are sent to Oxford, where the school has 43 fellowships, of which 37 were founded in St. John's by Sir Thomas White. It has, also, 7 fellowships at Cambridge. 4. St. Paul's School, established in 1509 by Dean Colet, and placed by him under the direction of the Mercers' Company, provides a free education for 153 boys, the most advanced of whom are sent to Oxford and Cambridge, with exhibitions varying from 50*l.*, or less, to 120*l.* in value. The present building was erected in 1824; the gross income of the school is upwards of 6,000*l.* It has to boast of having had Milton for a pupil. 5. Christ's Hospital, more commonly known as the Bluecoat School, was incorporated by Edward VI. in 1553, and owes its origin to the active benevolence of some distinguished citizens. It was, whatever may be the case at present, originally intended to maintain, clothe, and educate the young and helpless; and 340 boys and girls were admitted soon after its foundation. A second charter from Charles II., in 1673, provided for the education of 40 boys in mathematics and other learning calculated to qualify them for the sea-service. The management of the institution is vested in a body of governors, who must have each contributed at least 500*l.* to the funds of the institution. An individual, on becoming a governor, is entitled to present one boy; and he has usually a presentation once every succeeding three years. The revenue of the hospital, arising from rents and all other sources, amounts to above 60,000*l.* a year, and its expenditure to nearly as much. Its establishment in London, on the site of the Old Grey Friars' monastery, accommodates 920 boys; and it has attached to it a subsidiary establishment at Hertford, for the younger children, where there are usually about 450 boys and 80 girls; making in all about 1,450 children, maintained, clothed, and educated by the establishment. There are schools for grammar, mathematics, writing, and drawing. The *Grecians*, or those most advanced in the grammar school, are sent with valuable exhibitions to Oxford and Cambridge, and those in the mathematical school are placed with commanders of ships, and equipped with clothing and nautical instruments, at the hospital's expense. Others are apprenticed to different trades. A magnificent building, called the Great Hall, erected by public subscription, and finished in 1829, opens towards Newgate Street, and is one of the ornaments of the city. The hall, in which the children breakfast, dine, and sup, is 187 ft. in length, 51 in width, and 46½ ft. high. Occasionally they sup, though with questionable propriety, in public, and on these occasions there is a great concourse of strangers to witness the spectacle. The interior arrangements deserve praise; and every attention is paid to the health and comfort of the children. The well-known dress of the boys, which has not been changed since the formation of the institution, is, however, not merely antiquated, but inconvenient and uncomfortable. Presentations can only be obtained from the governors. 6. The City of London School, established in 1835, may be said to have resulted from the inquiries of the Charity Commissioners. A Mr. Carpenter had left an estate for a school, and the value of the property had greatly increased without any proper application of the funds. Repeated inquiries and remonstrances at length induced the corporation to establish a school on the site of Honey Lane Market, Cheapside. The system of instruction is said to be good, and the school is attended by upwards of 500 boys. The buildings, occupying a space 180 ft. long and 80 ft. broad, are commodiously contrived, and have externally some pretensions to architectural elegance.

Independently of these and other endowed schools, almost every parish supports a free school by voluntary contributions, and thus about 14,000 children of both sexes are clothed and educated. The number of private and Sunday schools is extremely great, but cannot be accurately estimated. The National Society, in connection with the Church of England, has done much to diffuse education. In Middlesex only it supplies instruction in week-day and Sunday schools to no fewer than 80,000 children; of whom about 22,000 attend week-day schools only, and 19,000 Sunday schools only. The model school of this society is in the Sanctuary, Westminster. Great numbers of children are also taught in the Lancastrian method by the British and Foreign School Society. The model boys' school belonging to this society in the Borough Road has about 700 boys, and the model girls' school, about 300 girls in constant attendance. Both this and the National Society have normal schools for the instruction of school-masters and school-mistresses. Much, however, still remains to be done towards giving a sound elementary education to the children of the industrious classes.

The charges on account of education at most of

Digitized by Google

the superior schools in London, except to boys on the foundation, are oppressively high, the most reasonable being three times as expensive as the High School of Edinburgh, which is quite equal to the best of them. This circumstance, combined with the want of schools in many districts, and the wish to improve their health, has led to the practice, so general in London, of sending children to the outskirts of the town to be boarded and educated. But the education in many of these boarding establishments is of a very worthless description; and it is surprising that no effort should have been made by subjecting the masters to examination, or otherwise to improve the quality of these suburban seminaries.

British Museum.—This national institution, established in 1753, comprises an immense repository of books, MSS., statues, coins, and other antiquities, specimens of animals, minerals, and works of art, and is, in most respects, one of the richest in Europe. The museum consists of a group of buildings raised on the site of Montague House, formerly the residence of the Duke of Montague, Great Russell Street, Bloomsbury. The nucleus of the collection was purchased by government of Sir Hans Sloane's executors for 20,000*l.*, and the museum was first opened to the public in January, 1759. But Montague House, though spacious as a private residence, having been found inadequate to the proper accommodation of the vast and continually increasing collections that belong to the museum, a new quadrangular building, on a very extensive plan, was designed by Sir R. Smirke, and is now open to the public. In 1755 the Harleian MSS. were purchased, and the Cottonian library was removed from Dean's Yard, Westminster: in 1757 the Royal library, founded by Henry VIII. out of the libraries of the suppressed monasteries, and enlarged by his different successors, was presented by George II. George III., in 1763, gave a valuable collection of pamphlets on the civil wars; and, between 1806 and 1818, the Lansdowne, Hargrave, and Burney MSS. were purchased at an expense of 26.400*l.* Various presents have been made from time to time: the most valuable additions of late years having been the library of George III., collected at an expense of 200,000*l.*, and presented to the museum by his successor; and the sumptuous collection of Mr. George Grenville, valued at 60,000*l.*, and bequeathed by him to the nation. Modern English publications are added, free of expense, in consequence of a privilege which this establishment enjoys in common with the two universities, and some other bodies, of receiving *gratis* a copy of every book entered at Stationers' Hall. A considerable sum is expended in the purchase of old and foreign books, to which departments very extensive and valuable additions have been made of late years. The collection comprises in all about 700,000 printed books, and 31,000 MSS. exclusive of charters. The want of a catalogue *raisonné*, or rather, perhaps, of a series of such catalogues, is much complained of by the great majority of persons who resort to the library for study or research. The great reading room, erected in the inner quadrangle, and opened in 1860, forms the noblest public library in the United Kingdom, and, indeed, in the world. The reading room is open from 9 till 4 in winter; till 6 in the evening during the 4 summer months; and from 9 to 5 during spring and autumn. Admission is procured by a recommendatory letter to the chief librarian; and every facility is given by the numerous attendants for the most extensive research. No books, however, are allowed to be taken out, it being supposed that such permission would lead to frequent losses. In the department of antiquities, belonging to the British Museum, may be mentioned the collection of Egyptian monuments, including the famous Rosetta Stone, acquired at the capitulation of Alexandria, in 1801; the Townley Marbles, purchased for 28,000*l.*; and the Phigalian and the Elgin Marbles, the cost of which was 35 000*l.* The latter include the statues of Theseus and Ilissus, and the sculptures in *alto relievo*, from the friezes of the Parthenon. In recent years, the stock of antiquities has been much increased by the winged bulls and other interesting remains dug up from the ruins of Nineveh, and sent home by Mr. Layard. The collection of minerals was, for many years, deficient in various important particulars; but the additions purchased from Messrs. Hawkins and Mantell are extremely valuable; and now, both for size and classification, this department will bear to be compared with any mineralogical collection in Europe. The department of zoology is held to be rich; but there are those who cannot see the advantage of filling the museum with stuffed representations of animals that may be seen alive in the Zoological Gardens and in every menagerie. The collection of medals, which has been accumulating since the foundation of the museum, consists of about 20,000 coins, above 6,000 being purchased with the Hamilton collection of Herculanean antiquities, in 1772. The coins can only be seen by an order from a trustee, or a private introduction to the officer to whose charge they are entrusted. The public days at the museum are Mondays, Wednesdays, Fridays, and Saturdays, when all persons have free admission. The building is closed during the first weeks of January, May, and September. The establishment is governed by 48 trustees, 23 of whom are official; and to these the officers are responsible. The acting trustees, with whom the appointment of the officers chiefly rests, are the archbishop of Canterbury, the lord chancellor, and the speaker of the House of Commons.

The Royal College of Surgeons, in Lincoln's Inn Fields, has a fine portico. Its museum contains the anatomical collections of the celebrated John Hunter, bought by government and deposited in it.

The Museum of Practical Geology, in Piccadilly and Jermyn Street, is of much utility, not merely to scientific men, but to those practically engaged in the business of mining. The building was erected at the expense of government.

Literary and Scientific Societies.—Among the literary and scientific establishments of the metropolis, one of the best supported is the Royal Institution in Albemarle Street. The building, the front of which is in good taste, with 14 Corinthian columns, comprises a good library and reading room, a theatre for lectures, capable of accommodating 900 persons, and a chemical laboratory supposed to be one of the largest and best supplied with apparatus in Europe. Lectures on various subjects are delivered by the professors and other gentlemen temporarily engaged; and the important investigations made here by the late Sir Humphry Davy, Mr. Faraday, and others, have conferred on the institution a well-merited celebrity. Before the present century the learned societies of London were few in number, and very comprehensive in their objects. The great advancement of the physical sciences in recent times, and the increased ardour with which every branch of knowledge has been cultivated, have produced a corresponding increase in the number of learned associations, and in all recent instances each body has confined its operations within a limited sphere. The following list comprises some of the principal

Digitized by Google

societies, with the dates of their formation, the objects contemplated by them, when not sufficiently indicated by their names, and the publications made at their expense:—

The Royal Society; physical and mathematical sciences. Instituted early in the 17th century; incorporated 1663. 'Philosophical Transactions,' from the year 1665.

The Society of Antiquaries. Instituted 1717; incorporated 1751; but now split into two societies—the Archæological Institute of Great Britain and Ireland, and the British Archæological Association. 'Archæologia,' from the year 1770.

Medical Society. Established 1773. 'Vetusta Monumenta,' from 1747.

Society of Arts. Established 1754, for the encouragement of the arts, commerce, and manufactures of Great Britain, by granting rewards. 'Transactions,' from the year 1783.

Linnæan Society; natural history. Established 1788; incorporated 1802. 'Transactions,' from the year 1791.

Royal Institution. Established 1799, for the application of science to the ordinary purposes of life. 'Journal,' from 1810.

Horticultural Society. Established 1804; incorporated 1809. 'Transactions,' from 1812.

Royal Medico-Chirurgical Society. Established 1805. Chartered 1831. 'Transactions,' from the year 1808.

Geological Society. Established 1807; incorporated 1826. 'Transactions,' from 1811.

Society of Civil Engineers. Established 1817; incorporated 1828. 'Transactions,' from 1834.

Royal Astronomical Society. Established 1820; incorporated 1831. 'Memoirs,' from 1822.

Medico-Botanical Society. Established 1821. 'Transactions,' from 1834.

Royal Asiatic Society. Established 1823; incorporated 1824. 'Transactions,' from 1827 to 1835; 'Journal,' from 1834.

Royal Society of Literature. Founded 1821; incorporated 1825. 'Transactions,' from 1827.

Zoological Society. Instituted 1825; incorporated 1829. 'Transactions,' from 1833.

Royal Geographical Society. Chartered 1830. 'Journal,' from 1831.

Entomological Society. Established 1833 or 1834.

Statistical Society. Established 1834. 'Journal,' from 1837.

Architectural Society. Established 1831.

Royal Institute of British Architects. Established 1835; incorporated 1838. 'Transactions,' from 1836.

Royal Botanic Society. Chartered 1839.

Nearly all these societies hold meetings twice a month, from November to June inclusive, at which papers are read illustrative of matters connected with the objects of each association.

Picture Galleries.—The present national collection of pictures is of recent foundation, and, though valuable, can only be looked upon as the nucleus of one that may hereafter be worthy of the country. It occupies the W. wing of the National Gallery, erected 1834–37, at the public expense, on the NW. side of Trafalgar Square, facing Whitehall and Parliament Street, unquestionably the finest situation in the metropolis. The building has a front of 460 ft., with a portico and dome in its centre, supported by Corinthian columns. But whether owing to the limited means at the disposal of the architect, or to some incapacity on his part, the fabric is neither worthy of its site, its object, nor of the country. Unfortunately, too, the defects of its exterior are not countervailed by any superiority of internal economy, the apartments for the exhibition of the pictures being miserably deficient in point of size, and ill-arranged. The pictures, which consist of the Angerstein collection, purchased in 1824; of Sir G. Beaumont's collection, given by him in 1826; and of others, partly presented and partly purchased, are arranged in seven rooms, of diminutive size and imperfectly lighted. About half the pictures belong to the Italian school; and of these the *Ecce Homo*, and the Mercury, Venus, and Cupid, of Correggio; the Raising of Lazarus, by Sebastian del Piombo; the Bacchus and Ariadne, of Titian, and the Holy Family, by Murillo, are reckoned the most valuable. The works of the two Caracci, N. and G. Poussin, and Claude, may be here seen in their highest perfection; and there are some fine specimens of the English school, by Reynolds, Hogarth, Gainsborough, Wilson, Wilkie, and Lawrence. The gallery is open to the public on the first four days of the week: on Friday and Saturday students are permitted to copy the pictures.

The Royal Academy, which occupies part of the building devoted to the National Gallery, was established in 1768, for the instruction of young artists: lectures are delivered in anatomy, painting, sculpture, and architecture, and daily instructions are given to the students by the keeper, and other academicians. The annual exhibition of this corporate society usually comprises about 1,200 specimens of art, and is one of the favourite lounges during the summer months. The profits of the exhibition, besides paying the expenses of the schools, contribute to form incomes for the most deserving artists, while studying at Rome.

The Society of British Artists exhibits annually a good collection of pictures; but, as a whole, they are inferior to those exhibited by the Academy. The British Institution and Society of Painters in Water Colours have, also, exhibitions, and their rooms are crowded during the fashionable season. Many private individuals have splendid galleries, among which may be specified those of the Earl of Ellesmere, the Marquis of Westminster, the Duke of Sutherland, Sir Robert Peel, Mr. Hope, and others. At the Kensington Museum likewise is a valuable collection of pictures, open to the public.

Theatres and Music.—The great theatres of modern London present a curious contrast to the rude and confined buildings called the Globe, Blackfriars, and Old Drury, in the time of Shakspeare, in which neither scenery nor the comfort of the audience was at all considered. The two oldest theatres—oldest, at least in name—Drury Lane and Covent Garden, contiguous to each other, have handsome exteriors, and very extensive and highly decorated interiors. They formerly enjoyed the exclusive privilege of representing what was called the legitimate drama. But this monopoly has long ceased to be of any value. Late dinner hours, the changes or caprices of fashion, the inferiority of the actors, and other causes, contributed to weaken the taste for the regular drama, and concerts, operas, and 'entertainments' at present enjoy the largest share of public favour. Tragedy and comedy have long ceased to be performed at Covent Garden. For a while it was leased by the Anti-Corn-Law Society; and having been burnt down, and rebuilt in 1859, on a scale of great magnitude—240 by 123 ft., and 100 ft. high—it has now become an Italian opera-house, with occasional 'English opera' performances. Nearly as large as Covent Garden is 'Her Majesty's Theatre,' the other Italian opera-house. The Haymarket Theatre, which is of smaller size than the immense houses above mentioned, is open for about eight months of the year. Besides these, the chief theatres are, the Princess's, Oxford Street; the Lyceum, Wellington Street, Strand; the Olympic, Wych Street, Strand; St. James's, King Street, St. James Square; and Astley's Theatre, near Westminster Bridge. The whole of these theatres, as well as half a dozen other theatrical establishments, in the west and east end of the metropolis, are very inferior structures, badly ventilated, narrow and confined—in no proper sense 'places of amusement.'

The established London concerts consist of the

Digitized by Google

philharmonic and sacred harmonic concerts, all of which are well and fashionably attended. Many others are given by professional persons, for their own benefit, in the different public rooms in the W. end. Promenade concerts are also given in imitation of those of Paris, and numerous so-called 'music halls' have grown up within the last few years. In the latter the business of drinking and smoking holds the first rank, and music has to display its charms amidst the rattling of glasses and dense clouds of tobacco smoke. The growth of these music-halls appears to be chiefly due to the wretched state of the London theatres, which absolutely repel pleasure seekers by exorbitant prices, bad accommodation, immense difficulties of entrance and exit, and last, not least, an absolutely poisonous atmosphere.

Benevolent Institutions.—There are a vast many establishments in London for the cure of disease; consisting partly of hospitals properly so called; partly dispensaries, where medicine and advice are gratuitously administered; and partly of infirmaries for special diseases; with lying-in charities. Asylums for orphans and otherwise destitute persons, and other benevolent establishments, are also very numerous, and some of them are well endowed and liberally supported. The principal are the following:—

1. St. Bartholomew's Hospital, in West Smithfield, was first founded in the twelfth century, and refounded by Henry VIII. in 1546. The building, a spacious quadrangular structure, is principally modern, having been finished in 1770. It makes up 580 beds. Necessity is the only recommendation to this institution, and patients are received without limitation. The medical staff is equal to any in the metropolis. The staircase was gratuitously painted by Hogarth. 2. Guy's Hospital, St. Thomas's Street, Southwark, founded in 1721, contains accommodation for 580 in-patients, and has an excellent museum and theatre of anatomy. This magnificent hospital, which consists of two quadrangles and two wings, was founded and endowed by Thomas Guy, a bookseller, who expended 18,793*l.* upon the building, and left 219,419*l.* for its endowment—the largest sum, perhaps, that has ever been given by any individual for similar purposes. More recently, however, Guy's hospital met with another benefactor, but little inferior, in point of liberality, to its founder; a citizen, of the name of Thomas Hunt, having bequeathed to it, in 1829, the princely sum of 200,000*l.* The medical school attached to this hospital, while under the superintendence of the late Sir Astley Cooper, was one of the most extensive, and probably, also, the best in the empire. 3. St. Thomas's Hospital, formerly in High Street, Borough—from which site it was driven by the Charing Cross extension of the South Eastern railway—is rebuilding near Westminster Bridge, close to the river, and opposite the houses of parliament. It has an income of about 25,000*l.* a year, derived almost wholly from rents of estates in London and the country. 4. St. George's Hospital, near Hyde Park corner, has a fine front, 200 ft. in length, facing the Green Park. It accommodates 460 in-patients. 5. The Middlesex Hospital, near Oxford Street, founded in 1745, has 285 beds, and relieves numerous out-patients. 6. London Hospital, in Whitechapel, was founded in 1740. Its wards accommodate about 250 patients. 7. Westminster Hospital, rebuilt in 1833, near the Abbey, has 174 beds. 8. The Mary-le-Bone and Paddington Hospital, opened in 1850, has 300 beds. The four last-mentioned hospitals depend wholly, or almost wholly, on voluntary subscriptions, which are said to be very insufficient to meet the demands upon them. The University College and King's College Hospitals, and Charing Cross Hospital, are smaller establishments of the same nature, each accommodating about 120 patients. Besides the above, there are a number of smaller institutions for the cure and relief of the sick and suffering poor. Medical schools are conncted with the chief hospitals.

Bethlehem Hospital, or Bedlam, is appropriated exclusively to the insane poor; it was founded in 1546, in Moorfields, whence it was removed, in 1815, to St. George's Fields. The present building received some extensive additions in 1839, and is now 697 ft. in length. The rooms are large and airy, well warmed and ventilated, and are sufficient for the accommodation of above 400 patients. St. Luke's, Old Street Road, established for a similar purpose in the year 1751, accommodates 260 persons.

The Foundling Hospital, Brunswick Square, was founded by Captain Coram, in 1739, but the building was not commenced till 1742. It was established for the indiscriminate admission of deserted children; but the numbers were found to increase so rapidly that the funds failed, and in 1760 the mode of admission was so much altered, that it is now nominally only a Foundling Hospital. The number of childeren averages about 500, and they are maintained till the age of 12, when they are either apprenticed or otherwise provided for. The revenue is about 10,000*l.* per annum, and is gradually increasing, as the leases fall in of the houses built on its estate.

The Magdalen Hospital, Blackfriars Road, was established in 1748, for the reformation of females who have fallen into vicious courses. The Philanthropic Institution, St. George's Fields, was founded, in 1788, for the reception and reform of young criminals discharged from prison. It provides them with immediate means of subsistence, and instructs them in some trade, so as to prevent the otherwise almost inevitable necessity of their returning to their former habits. There are an immense number of other charitable institutions in and around the metropolis, the enumeration of which would fill a volume.

Clubs.—There are about 40 clubs in the metropolis. A few of these establishments, such as White's, Brookes's, Boodle's, and Arthur's, are of ancient date; but their present arrangements and constitution are of recent introduction. The accommodation they afford to gentlemen only occasionally visiting town, and to others desirous of enjoying the luxuries of a splendid establishment, at a moderate expense, and of meeting with a great variety of society, has made them popular among the upper classes. The club-houses are mostly edifices of a very superior character, and add much to the magnificence of the squares and streets in which they are situated. Each club consists of a limited number of members, varying from 700 to 1,500; they are admitted by ballot, pay a certain sum at entrance, from 10 to 25 guineas, and an annual subscription, varying from 5 to 10 guineas. The club-houses are fitted up with every luxury of a fashionable hotel, have excellent libraries, take in the best periodical publications, and provide dinners, coffee, and wines, at reasonable prices. Some of the clubs are avowedly of a political character, and others are devoted exclusively to certain classes. Among these may be specified the Carlton, Reform, Athenæum, Conservative, United Service, Oxford and Cambridge, Travellers', Oriental, West Indian, Army and Navy, and others devoted to certain classes and professions. The majority of clubs, however, are open, on election, to all gentlemen

Digitized by Google

without reference to party or profession. Most of the club-houses are at the W. end of the town, particularly in Pall Mall and St. James's Street. The building erected for the Reform Club, by Mr. Barry, is one of the finest structures belonging to this class of edifices, and is fitted up with equal taste and magnificence. The city of London has two club-houses, which, in point of elegance and luxury, may vie with those of the W. end. The number of members in the different clubs may be about 30,000.

Courts of Law.—The Courts of Chancery, Queen's Bench, Common Pleas, and Exchequer (the respective provinces of which are described in the art. ENGLAND AND WALES), occupy apartments on the W. side of Westminster Hall. This hall measures 238 ft. in length by 66 ft. in breadth, and is 110 ft. high. Westminster Hall, ordinarily, is used as a promenade for lawyers and their clients during the sitting of the courts. The lord chancellor sits out of term-time in the hall of Lincoln's Inn. The master of the Rolls sits in the Rolls' Court, Westminster, and in the Rolls' Court in the Rolls' House, Chancery Lane. The vice-chancellors sit in Westminster Hall and in Lincoln's Inn.

The Central Criminal Court, the jurisdiction of which extends to all places within 10 m. of St. Paul's, was established in 1834. Its sittings are held at the Old Bailey, a stone building close to Newgate, once a month, and generally last five or six days at a time. There are two halls, of confined dimensions, in both of which the judges are engaged in trying prisoners during the sessions. The Lord Mayor's Court, of which the recorder of London is judge, will be noticed subsequently. The Court of Bankruptcy is in Basinghall Street, within the city of London, and the Ecclesiastical, Divorce, and Admiralty Courts are in Doctors' Commons, near St. Paul's Cathedral, and at Westminster Hall.

Inns of Court.—The Inns of Court, originally colleges for legal study, are now little more than residences for lawyers, or indeed for all persons who choose to hire chambers in them. They are not incorporated, and cannot, consequently, make bye-laws; but, by prescription, their customs have obtained the force of laws. A law student, before being called to the bar, has now only to be entered as member of one of these inns, and to dine a certain number of times in the common hall, in order to qualify himself for the exercise of his profession. This is termed 'eating' his way to the bar.

Among the chief inns are the Inner and Middle Temple, in the liberty or district so called adjoining Temple Bar, and between the Strand, Fleet Street, and the Thames. This district originally belonged to and took its name from the knights templars; and having, after their downfal, been held in lease by students of the common law, the property, which had come into the possession of the crown, was conferred by James I. on the two societies, and their successors. The Temple Gardens, which have some fine trees, and are well laid out, are skirted by the Thames, or rather the new Thames Embankment. The Middle Temple Hall, 100 ft. in length, the Library, and the Temple Church, are especially worth notice. The latter consists of a circular and a rectangular portion. The former, which is a perfect circle, of three stories, in the Norman style, was erected in 1185; and the latter, in the Early English style, in 1240. This venerable structure was completely repaired and renovated in 1839-42, the original style of its different parts being carefully preserved, at an expense of about 70,000*l.* It is now, in all respects, one of the most interesting ecclesiastical edifices in London. Besides various monuments of the age of the Crusades, it has some of a more modern date, inc. one in honour of the learned and excellent John Seldon, buried within its walls. Hooker, the 'judicious,' author of the Ecclesiastical Polity, was, for six years, one of its preachers. Subordinate to the Temple are Clifford's, Clement's, Lyon's, and New Inns.

Lincoln's Inn is situated between Chancery Lane and Lincoln's Inn Fields. The lord chancellor, as before stated, holds his sittings during a portion of the year in the hall; and the vice-chancellors sit in adjoining buildings. The society erected in the gardens, in 1845, a hall and library, from the designs of Mr. Hardwick. It is in the Tudor style, brick, with stone dressings. The hall is 120 ft. in length, by 45 ft. in width, and 62 ft. in height; the library, 80 ft. in length, 40 ft. in width, and 44 ft. in height, is furnished with a valuable collection of books.

There are, also, Gray's Inn, on the N. side of Holborn, having attached to it Staples' Inn, and Barnard's Inn. Furnival's Inn is subordinate to Lincoln's Inn. Thavies' Inn, and some others, are mere private residences.

Prisons and the Police.—There are about a dozen criminal prisons, the most important of which are the following:—1. Newgate, under the control of the corporation, is a building, the architecture of which is singularly appropriate to and characteristic of its destination. It was a prison early in the 13th century; but the present edifice was erected in 1779, and again repaired after the riots of 1780. This, which may be called the great metropolitan gaol, contains proper accommodation for 300 or 400 prisoners; but, before the meeting of sessions, it has sometimes as many as 1000 or more crowded within its walls waiting for trial; and it then, no doubt, deserves some portion, at least, of the reproaches which have been made against it. In front of this prison all the criminals of London and Middlesex, capitally convicted, suffer the last penalty of the law. 2. City of London Prison, Holloway, erected in 1855. It is a building in the 'castellated style,' and it is said that, 'when mildewed with age,' it will 'present all the appearance of a baronial stronghold of the middle ages.' To unpoetic observers, the structure may appear very ugly. The prison is used as a place of confinement for all prisoners tried at the Central Criminal Court and the London sessions, and convicted within the jurisdiction of the city magistrates. 3. Cold-Bath-Fields Prison, a very extensive brick building, near Gray's Inn Lane, is a house of correction for Middlesex; and contains felons, misdemeanants, rogues, and vagabonds. It is an insulated brick building, containing spacious courts and airing grounds. The classification is good, and the silent system is followed, connected with hard labour. A large treadmill employs 320 prisoners at a time. This prison accommodates upwards of 1,200. 4. The Westminster House of Correction, in Tothill Fields, for criminals from all parts of Middlesex, begun in 1831 and finished in 1834, is surrounded by a lofty wall, with a complete roadway outside. It is built on the panopticon principle, and has a court-yard in the centre 250 ft. in diameter, with prisons round it for 600 persons; but the average number confined is 350. The arrangement of the building is said to be excellent, and the window of the governor's house commands a complete view of all the day-rooms and yards, and of the 2 tread-wheels. Instruction is given to juvenile offenders. The silent system is adopted, and a good classification maintained. 5. The Penitentiary at Milbank, West-

Digitized by Google

minster, built on the panopticon principle, has no peculiar connection with the metropolis, but is for the confinement and reformation of criminals whose sentence of transportation or death has not been executed, or has been commuted. It contains accommodation for 1,120 prisoners, the number of inmates averaging about 600. The building is insulated, and is surrounded by a wall enclosing 18 acres of ground. 6. The Pentonville Prison, Pentonville, is appropriated to the confinement of male prisoners under sentence of transportation. 7. The Surrey County Gaol is in Horsemonger Lane, Newington Causeway. It contains about 250 prisoners, and there is little classification. The top of the building is used as a place of execution. 8. The Brixton House of Correction is exclusively for prisoners sentenced to hard labour at the assizes and sessions, or by magistrates, under summary convictions. Hard labour and the silent system are rigorously enforced.

The principal prisons for debtors are: 1. The Queen's Bench, in the Borough, chiefly used for debtors on process from the Court of Queen's Bench, but also for persons committed for libels and contempts. It is a spacious prison, containing 207 rooms, in which 500 persons have occasionally been confined at once. The 5 & 6 Vict. c. 22 abolished the former practice of granting day rules, and of permitting prisoners to reside within the rules, which comprised a space of nearly 1 sq. m. 2. Whitecross Street Prison, in the street of that name, in the city, is inconveniently built, and said to be badly managed. Its confined extent, when compared with the average number of the inmates, and the disorder prevalent in every part of it, are not a little discreditable to the corporation of London. The prisons for debtors have been comparatively deserted since the changes introduced within the last few years respecting imprisonment for debt. Formerly they were often very much crowded, and persons were confined in them for long periods of years.

A great deal has been effected, of late years, in regard to the improvement of prisons and of prison accommodation; but it seems doubtful whether the chief object of a prison has not been very frequently lost sight of in these philanthropic reforms. The metropolitan police is held to be one of the most efficient in the world, since its reorganisation in 1828-9. Till then, the police of London had the reputation of being the most defective establishment of the kind in Europe. Under the present organisation, there are 13 police offices, 2 of which are in the city, and one in Southwark. These are—

The Guildhall, in the City.	Vincent Square, Westminster.
The Mansion House, do.	High Street, Marylebone.
Bow Street, near Covent Garden.	Great Marlborough Street, Oxford Street.
Clerkenwell, Bagnigge Wells Road.	Worship Street, Finsbury Square.
Hammersmith and Wandsworth, in Wandsworth.	Kennington Lane.
	Union Office, Southwark.
Greenwich and Woolwich.	Thames Police, Wapping.

The first two of these offices are regulated by the city authorities; the rest are under the control of the secretary of state. Magistrates sit every day at each office, to hear and determime cases of misdemeanour and breaches of the peace, as well as to examine and commit for trial all persons accused of felonies, to administer oaths, swear in constables, and perform other magisterial functions. A number of officers are appropriated to each establishment, and a river police is attached to the Thames office.

The reorganisation of the metropolitan police was chiefly effected by Sir R. Peel in 1829. The metropolitan police is dispersed over the whole of London, excepting the city, which is protected by a distinct body, of similar character, but said to be less effective and not so well disciplined. The city police is under the control of the corporation; the other force is governed by two commissioners, who communicate directly with the secretary of state for the Home Department. The metropolitan police numbered 7,191 officers and men on the 1st of January, 1865, and its total cost in the year 1864 amounted to 560,864*l*. The pay of the men is from 19*s*. upwards. The sphere of their duties reaches beyond the metropolis; and comprises, with the exception of the city of London, the whole country within 15 m. of Charing Cross. The expense is defrayed by an assessment limited to 8*d*. in the pound on the parish rates, the deficiency being made up by the treasury. The city, as before said, is not under the charge of the metropolitan police, but is protected by a separate division, organised on the plan, and in imitation of the arrangements of that body, but placed under the city authorities. The city police is divided into six companies, to each of which belong inspectors, serjeants, and constables, and the whole is immediately under the control of a superintendent. All the constables, both of the city and metropolitan police, wear a blue uniform, with the number of each man, and a letter designating the division to which he belongs, on the collar of his coat. They are constantly on duty, day and night; but the force is increased at night.

Waterworks and Sewers.—The supply of London with water was anciently procured from brooks running through the city. The increase of inhabitants made these sources insufficient; while, at the same time, they became less accessible, owing to the encroachment of buildings. To remedy this inconvenience, water was brought by leaden pipes in the 13th century from Tyburn, then a mere country village, into the city, where it flowed into conduits from which the inhab. drew it at pleasure. In the beginning of the 17th century Sir Hugh Myddleton projected, and, despite the greatest difficulties, carried into effect, in 1618, his plan for bringing the water of two copious springs in Hertfordshire to London, by an aqueduct, called the New River, 40 m. in length, including windings. The Thames has long been one of the great sources of supply; and, as early as 1581, water-wheels and other hydraulic machinery were established at London Bridge. These wheels, which at one time raised 45,000 hhds. per day, were wholly removed when the old bridge was pulled down. The greater number, however, of the existing water companies derive their supply from the Thames, the water being filtered in immense reservoirs.

In every street in London there are fire-plugs or cocks, at any of which a copious supply of water should be obtained in a few minutes in case of fire; though it must be admitted that the supply has sometimes, through neglect, been very long delayed, to the great injury of property. Much water is also required in watering the streets and improving the drainage: indeed, scarcely one-half of the supply is used for purposes strictly domestic. Abundant springs of the finest water may be procured in all parts of London, by boring below the clay strata; but no public measures have yet been taken to ensure a supply from this source, or (excepting the New River) from springs at a distance. It is probable, however, that steps will, at no distant period, have to be taken to effect this object.

The sewers of London, which began to be constructed as early as 1428, constitute a system of drainage unknown to most modern cities; and, though out of sight and little noticed, in former years, except by engineers, they must, in their new form, excite the astonishment of all who investigate the subject. Their depth is, in all cases, sufficient to drain the deepest cellars in each neighbourhood, and the size of the main branches rivals that of the celebrated Roman Cloacæ.

The gigantic system of new sewers, constituting the main drainage of the metropolis, was completed in 1865, and opened, with some ceremony, by the Prince of Wales, on the 4th of April, of that year. The metropolis, it need scarcely be repeated, stands on the north and south sides of the Thames, and slopes down to the bed of the valley occupied by the river. The old sewers by which the inhabited area was drained ran down the slopes from the upper ground to the lower, and discharged themselves into the stream. Those arrangements, until the execution of the new works, represented the whole system of metropolitan drainage. On the south side of the Thames, houses had been built on such low-lying land that the river sometimes ran into the drains instead of the drains into the river, and the same anomaly was occasionally visible even on the north side when high tides came in. In the best of cases the enormous volume of daily refuse yielded by the capital was poured into a tidal river, and tossed backwards and forwards with the ebb and flow until the whole stream was polluted with corruption. The Thames, in fact, was a great open sewer, running through the centre of the metropolis, and poisoning the atmosphere with its noisome exhalations. It became, therefore, necessary to construct certain main sewers of great length and capacity, by which the contents of the metropolitan drains might be effectually intercepted from the stream. These are now seen in the great sewers which, on different levels, run, like the Thames, from west to east, and so cut the drains of the city at right angles. There are three of these enormous culverts on the north side of the river and two on the south. On the north the three sewers converge at Abbey Mills, near Stratford, and their contents are there thrown, by means of a 'lift,' into what is called the 'Northern Outfall' Sewer, and conducted through that channel into the reservoir at the opening of Barking Creek. On the south side of the Thames, the two intercepting sewers converge in like manner at a point on Deptford Creek, are then merged in an 'outfall sewer' of their own, and so discharge their contents into the southern reservoir at Crossness. Here are immense steam-pumps, which constantly throw—at the rate of about 24 millions of gallons per diem—the drainage into the river, at a point so far below London as to be beyond the reach of the tide. The total pumping power employed is 2,380 *nominal* horse-power; and if at full work night and day 44,000 tons of coal per annum would be consumed. The sewage on the north side of the Thames at present amounts to 10 million cubic feet a day, and on the south side to 4 million cubic feet per day; but provision is made for an anticipated increase up to 11½ millions on the north side, and 5¾ millions on the south side, in addition to 28½ million cubic feet of rainfall per diem on the north side, and 17¼ million cubic feet per diem on the south side, or a total of 63 million cubic feet per diem, which is equal to a lake of 482 acres, 3 feet deep, or fifteen times as large as the Serpentine in Hyde Park. There are, altogether, about 1,300 miles of sewers in London, and 82 miles of main intercepting sewers. Three hundred and eighteen millions of bricks and 880,000 cubic yards of concrete were consumed and 3½ million cubic yards of earth were excavated in the execution of these main drainage works.

The cost of these stupendous works amounted to little more than 4,000,000*l.* The sum for defraying this expense was raised by loan, and is to be paid off by a 3*d.* rate levied on the metropolis, which produces 180,262*l.* per annum, the rateable value being 14,421,011*l.*, and the principal and the interest of the loan will be paid off in 40 years.

Local Government and City Corporation.—The city of London is under the government of the lord mayor, 2 sheriffs, 25 aldermen, 206 common-councilmen, a recorder, and other officers, and is divided for municipal purposes into 26 wards, each of which is under the government of an alderman. The Saxon denomination for the governor of London was *portgraf* or *portreeve*, which, about a century after the Conquest, was changed to mayor. This officer was appointed by the crown till 1215, when the citizens obtained the right of electing their own mayor. The mode of election now followed was fixed in 1476 by an act of common council.

The lord mayor is annually chosen from the body of aldermen, at a court held at Guildhall on Michaelmas Day, and is sworn in to the duties of his office on the 9th of Nov. following. A procession, known as 'the Lord Mayor's Show,' takes place on the occasion, followed by a dinner and ball at Guildhall. In most instances, though not always, the alderman next in seniority to the lord mayor is elected his successor. He must be free of one of the great city companies, and must have served the office of sheriff. The lord mayor is, in theory, second only to the sovereign within the city, and at the sovereign's death he takes his seat at the privy council, and signs before every other subject. His powers are similar to those of a lord-lieutenant of a county, and his authority extends over the whole city and a portion of the suburbs.

The division of the city into wards appears to have been made very early in the 13th century; there were twenty-four wards, which became twenty-five in the year 1393 by a division of the ward of Farringdon. In 1550 a great part of the bor. of Southwark was formed into a ward, and called Bridge Ward Without; but it is now merely a nominal ward, giving a name to the senior alderman, who, on the occasion of a vacancy, is removed to it from his own ward, and is then called 'the father of the city.'

The following is an alphabetical list of the names of the wards, with an indication of their situation, and the number of common councilmen:

1. Aldersgate, on both sides of Aldersgate Street, including the Post-office. Com. coun. 8.
2. Aldgate, at the E. end of the city, includes the E. ends of Leadenhall Street and Fenchurch Street, and Crutched Friars, called Alegate in the old list of 1285, given by Maitland. Com. coun. 8.
3. Bassishaw (corrupted from Basinge's-haugh) includes little more than Basinghall Street. Com. coun. 4.
4. Billingsgate, from Billingsgate Market to near Fenchurch Street. Com. coun. 8.
5. Bishopsgate, both sides of Bishopsgate Street. Com. coun. 14.
6. Bread Street, E. of St. Paul's, and SW. of Cheapside. Com. coun. 8.
7. Bridge Within, London Bridge and Fish Street Hill, includes the Monument. Com. coun. 8.
8. Bridge Without, part of the Borough of Southwark.
9. Broad Street, between Bishopsgate Ward and Coleman Street, includes the Bank; this is apparently the Lodingeber of the ancient list. Com. coun. 8.
10. Candlewick, between Lombard Street and London

Digitized by Google

Bridge, named from Cannon Street, which was formerly called Candlewick Street. Com. coun. 8.

11. Castle Baynard, from St. Paul's to the Thames. Com. coun. 8.

12. Cheap, both sides of the E. end of Cheapside and the Poultry, including Guildhall. This is probably Ward Fori in the ancient list. Com. coun. 8.

13. Coleman Street, includes Lothbury, part of London Wall and Finsbury Circus. Com. coun. 8.

14. Cordwainers, SE. of Cheapside; includes Bow Church. Com. coun. 6.

15. Cornhill, a small ward on both sides of Cornhill, includes the Exchange. Com. coun. 6.

16. Cripplegate, reaches from Wood Street, Cheapside, to the boundary of the city on the N.; it includes Fore Street and the Barbican. Com. coun. 16.

17. Dowgate, between Southwark Bridge and London Bridge, includes Merchant Taylors' School. Com. coun. 6.

18. Farringdon Within, includes St. Paul's Cathedral, part of Cheapside, Newgate Street, and Ludgate Street, and reaches the river near Blackfriars Bridge; this and the following are the 'Lodgate and Newgate' of the old list. Com. coun. 14.

19. Farringdon Without, includes Smithfield, the Old Bailey, the Fleet, part of Holborn, and the whole of Fleet Street. Com. coun. 16.

20. Langbourne, includes Fenchurch Street and a part of Lombard Street. Com. coun. 8.

21. Lime Street, includes the East India House and a small space around it. Com. coun. 4.

22. Portsoken, Eastward of Houndsditch and the Minories. Com. coun. 8.

23. Queenhithe on the River, W. of Southwark Bridge. Com. coun. 6.

24. Tower, from Tower Hill to Billingsgate, includes the Custom House. Com. coun. 8.

25. Vintry, on the Thames, and both sides of Southwark Bridge. Com. coun. 6.

26. Walbrook, S. of the Mansion House, includes the Mansion House, and the church of St. Stephen's, Walbrook. Com. coun. 6.

The aldermen are chosen by such householders as are freemen, and pay an annual rent of 10*l.* Each alderman is elected for life, and has the direction of the business of his ward, under the superintendence of the lord mayor. They are all justices of the peace within the city. The sheriffs are elected every year, on Midsummer Day, by the corporation and freemen, and are sheriffs of the county of Middlesex, as well as of the city of London: they enter on their duties, and are sworn in at Westminster on Michaelmas Day. The common councilmen are chosen by the householders in all the wards except Bridge Without. The common councilmen are the representatives of the inhabitants in the 'Court of Common Council,' which is composed of the lord mayor, aldermen, and common councilmen. This court disposes of the corporation funds, makes laws for the regulation of the city, and nominates certain of the city officers. Its sittings are usually public, and its title 'honourable.'

It must, however, be admitted that here, as in most other great towns, civic dignities have been long declining in the public estimation. The principal bankers, merchants, and tradesmen, all but uniformly decline serving in any civic office, and rather than do this will submit to pay very heavy fines. In consequence, the offices in question have been filled, for years past, by an inferior, though still very respectable class of citizens. It has been customary, on certain occasions, to advance lord mayors, and other city functionaries, to the rank of knights and baronets.

The livery consists of freemen of the city, who are also free of one or other of the city companies. Each of these companies was, at its formation, intended to comprise the different individuals within the city, properly so called, engaged in the peculiar department of industry called by its name; and had power to enact bye-laws, and to lay down regulations for the government of the trade. Thus, no one could commence business within the city of London as grocer, mercer, or goldsmith, without being free of the grocers', mercers', or goldsmiths' companies. This freedom could only be acquired by inheritance, serving an apprenticeship to a freeman, or paying a fine, or otherwise, as the company might choose to order; and, after admission, all individuals had to conform in the conduct of their business to the rules and regulations laid down by the company. But the inconveniences of this system gradually became obvious; and it has, in consequence, been so much modified, that the privileges of the different incorporated companies no longer oppose any obstacle to individuals from distant parts of the country establishing themselves in business within the city, nor interfere in any degree with the management of their concerns. In fact, any one who pleases may now purchase at Guildhall a licence entitling him to trade within the city for 5*l.* without being free of, or having anything to do with, any company. The city companies have, in truth, become charitable rather than political, or even municipal, institutions. Some of them have a great deal of property. The principal companies obtained very large grants of land in Ulster during the reign of James I.; and most of them are trustees for sums of money and other property bequeathed by benevolent individuals. They expend their revenues partly in festivities, but principally in pensions to widows and decayed brethren, and the support of schools. There are in all 91 companies, of which 40 have halls, where they transact business, keep their records, and hold festivals. Some of these halls are very fine structures, such as that of the goldsmiths in Foster Lane, and that of the fishmongers at London Bridge.

The following 12 are called the *Great Companies*, and from one or other of them the lord mayor must be elected:—

Mercers.	Merchant Taylors.
Grocers.	Haberdashers.
Drapers.	Salters.
Fishmongers.	Ironmongers.
Goldsmiths.	Vintners.
Skinners.	Clothworkers.

There are about 12,000 liverymen, in whom, previously to the passing of the Reform Act, in 1832, the right of returning the 4 mems. of the H. of C. for the city was exclusively vested. A common hall is an assembly of the liverymen, called together at the requisition of a considerable number of their body: the lord mayor is the president by right of office.

The Guildhall, where the corporation meetings, festivals, and common halls are held, stands at the N. end of King Street, Cheapside. Having been much damaged in the great fire of 1666, it was replaced by the present edifice, constructed of the materials of the old building. The front, added in 1789, is in a heterogeneous style. The great hall, 153 ft. in length, by 48 in breadth, and 53 in height, built and paved of stone, is capable of accommodating 6,000 persons. At each end of the hall is a magnificent painted glass window in the pointed style. In the hall are statues erected by the corporation in honour of Lord Chatham and his son the Right Hon. William Pitt, Nelson, and Alderman Beckford. On the pedestal of the latter is inscribed the famous reply made, or rather said to have been made, in 1770, by Beckford, who was then lord mayor, and one of the mems. for the city, to the answer of his majesty (George III.) to an address and remonstrance of the common council. At the W. end of the hall are the two wooden giants called Gog and Magog, the subject of so many nursery

Digitized by Google

tales. In the council chamber, where the lord mayor, aldermen, and common council hold their courts, is a statue of George III. by Chantrey; it has also a library containing books of reference, relative chiefly to the history of London and the affairs of the city, and various other rooms for the use of the corporation.

The city has its peculiar courts of law, most of which are held in the Guildhall. The lord mayor's court, for actions of debts and trespass, and for appeals, is presided over by the recorder of the city. The sheriffs hold courts of record four days every week. The chamberlain's court, held daily, decides disputes between masters and apprentices, and admits qualified persons to the freedom of the city. Courts of petty session for small offences are held daily at the Mansion House, by the lord mayor and an alderman, and at the Guildhall by two aldermen. There are also several minor courts.

The revenues of the corporation of London are very large, amounting to nearly 200,000*l.* per annum. These large funds are derived from rents of houses and land, market tolls, bequests, interest on government securities, and a few other sources. The chief items of expenditure consist of salaries to municipal officers, maintenance of police and prisons, corporation entertainments, purchase of securities, and payment of debts. The lord mayor has 8,000*l.* a year allowed him to support the dignity of his office, and a splendid official residence, the Mansion House, at the E. end of the Poultry, nearly opposite the Bank. This is a large structure, begun in 1739, and finished in 1753, with a Corinthian portico on a rustic basement. The grand or Egyptian Hall, the ballroom, and the saloon, are magnificent apartments, but some of the private apartments, occupied by the lord mayor, are but indifferently lighted. The plate used at civic entertainments belongs to the corporation, and is very valuable.

The government of that immense district of the metropolis not within the city was, till the year 1855, in a very unsettled state. It was placed upon a better footing in this year by the act 18 and 19 Victoria, cap. 120, known as the Metropolis Local Management Act. By this law the administration of the various parishes was made over to vestries and district boards, the vestries in the larger parishes forming corporate bodies. The number of vestries so constituted is 23, and the number of district boards 13; but, as a great centralised authority, there is a Metropolitan Board of Works, consisting of 45 members. Three members of this board are elected by the common council for the city, two members by each of the six larger parishes, one member by each of the 17 smaller parishes, and one member by each of the 13 districts. The chairman of this board has a salary of 2,000*l.*, and is appointed by the secretary of state from among three candidates presented by the Metropolitan Board.

Every vestry and district board is bound to appoint one or more legally qualified medical practitioners of skill and experience, called 'medical officers of health,' to inspect and report upon the sanitary state of the parish or district; to ascertain the existence of diseases, and especially of epidemics; to point out the most efficient mode of preventing their spreading; and to have regard to the ventilation of churches, chapels, schools, lodging-houses, and other public buildings. Further, every vestry and district board must appoint such number of persons to be 'inspectors of nuisances' as may be thought fit.

The Metropolitan Board of Works has extensive duties and powers. Its higher executive has the control of all the main sewers, which were previously vested in commissioners. The Metropolitan Board may regulate the naming of streets and the number of houses, and may alter the name of any street. This is, indeed, a very needful power; for great is the perplexity with the Charlotte Streets, the George Streets, and the King Streets, of every quarter. The Metropolitan Board has also large powers to make improvements in widening streets, and facilitating the traffic of various parts of the capital.

The expenses incurred by the vestries and district boards under their various powers are levied by rate, distinguishing the three several heads of sewers rate, lighting rate, and general rate. The Metropolitan Board levies a rate upon the same principle as the county rate. There is a general power to district boards and vestries to borrow, upon the credit of the rates, any sums necessary for carrying on their works.

Historical Notice.—Nothing is known of London previously to the invasion of the Romans; and it may be doubted, from the silence of Julius Cæsar, whether it then existed, or, at all events, whether it had attained to any considerable magnitude. But, however this may be, it is clear, from the statement of Tacitus (Annal., lib. xiv. cap. 33), already referred to, that so early as the reign of Nero it was an important emporium, though not distinguished by the title of colony; and it is doubtful whether it ever attained to that distinction.

After the Romans had left Britain, and the Saxons had divided the country among themselves, London is supposed to have become the capital of the E. Saxon kingdom. On the introduction of Christianity into England, it was one of the first places to embrace the new faith, and early became a bishop's see. St. Paul's, and St. Peter's in Westminster, were first founded about this time. In the paucity of intelligence concerning the period of the heptarchy, all we hear of London is, that it suffered severely from fire in 764, 798, and 801, on each of which occasions it is said to have been nearly destroyed. As soon as England had been united under one monarch, it appears to have become the metropolis of the empire; and, in 833, a wittenagemote, or parliament, was held in it to consult on the best means of repelling the Danes, who were ravaging the eastern counties. It was, however, sacked by the Danes in 839; in 982 it was nearly destroyed by fire; and in 994 the inhab. purchased a temporary remission from the attacks of the Danes, by paying them a high ransom.

At the Conquest, London submitted to William, and soon after received a charter in the English language, the original of which is still preserved. Within the 60 years following the Norman Conquest it suffered severely by fire on five different occasions; but, being then built principally of wood, it was easily repaired from the timber furnished by the extensive forests of Islington and Hornsey, which still existed when Fitzstephen wrote in the succeeding century. London was then unpaved, and, according to the statement of contemporary historians, the rafters of the roof of Bow Church, which were blown off by a hurricane in 1091, struck into the ground to a depth of 20 ft. The same hurricane caused so high a tide in the Thames, that the wooden bridge, which had stood 200 years, was carried away by the stream. On the accession of Henry I. in 1100 a new charter was granted to the city, which restored its ancient privileges, as they existed before the Norman Conquest, relieved the inhab. from many oppressive services, such as compulsory entertainment of the

Digitized by Google

king's household, and abolished several barbarous customs of the Saxon period. The citizens acquired by this charter the privilege of choosing their own magistrates. The Norman monarchs seldom respected corporate privileges, even when conceded by themselves; but still this charter was valuable as furnishing a standard to which to refer in future disputes with the crown, and it is said to have served as the model from which Magna Charta was taken. About the middle of the 12th century it was determined to build a stone bridge over the Thames. The first wooden bridge having, as already stated, been carried away in 1091, was replaced by another, which was burned down in 1136. The bridge erected instead of the latter became so ruinous in less than 30 years, that it was thought a stone bridge would be less costly in the end than the continual repairs required to keep up these unsubstantial, though cheaper structures. The latter, begun in 1176, and finished in 1209, was an extraordinary work for the time, as it remained standing for above six centuries, till the year 1832, though frequent alterations, additions, and repairs materially impaired its identity. Three years after its erection a dreadful loss of human life was occasioned by a fire on the bridge, described in Stow's Chronicle:—'The tenth of July at night the city of London upon the S. side of the river of Thames, with the church of our Ladie of the Canons in Southwarke, being on fire, and an exceeding great multitude of people passing the bridge, sodainely the N. parte, by blowing of the S. winde, was also set on fire, and the people which were even now passing the bridge, perceiving the same, would have returned, but were stopped with fire, and it came to passe, that as they protracted time, the S. ende was fired, so that people thronging themselves betwixt the two fires, there came to aide them many ships and vessels, into the which the multitude so undiscreetly pressed, that the ships being drowned, it was saide, there were destroyed about three thousand persons.' About this time an order was made by the court of aldermen that no house should be built without party walls 3 ft. in thickness, and 16 ft. in height. This order, dated in 1191, was doubtless intended to obviate the recurrence of the fires by which the city had been often partially destroyed; but it was little, if at all, attended to, and is interesting principally from its being the first document in which the chief magistrate of London is designated lord mayor. He had hitherto been called chief bailiff.

In the year 1211 the citizens began to form a deep ditch, 200 ft. in width, without the city wall on all sides, as a means of defence against King John. In 1218 the forest of Middlesex was cleared, and the citizens of London were permitted to purchase land and build thereon. Thus was begun that part of the metropolis which stands N. of the city, and is now so populous. In 1221, Henry III. laid the first stone of the present Westminster Abbey. In 1236 water pipes began to be laid down in the city, which had previously been supplied with water from wells and rivulets running through it into the Thames, the names, at least, of some of which are still preserved. The pipes now referred to brought a copious stream from springs at Tyburn, a village on the site of the present Oxford Street, near its W. end, to the city of London. Various leaden cisterns, named conduits, were afterwards constructed for the reception of the water, whence it was drawn by the inhabitants. In 1282, during a great frost, such masses of ice were brought down the Thames, that 5 arches of London Bridge were destroyed. In 1304 the first recorder was appointed.

Early in the 14th century coal began to be imported into London; and a notion having got abroad that its smoke was injurious to the public health, parliament petitioned the king, Edward I., in 1316, to prohibit the burning of coal, on the ground of its being an intolerable nuisance. But experience served, in no very lengthened period, to dissipate this groundless prejudice. The imports of coal have continued progressively to increase, and its ample supply has been one of the circumstances that have contributed most to the unexampled magnitude of the city, and the comfort of the inhabitants.

In 1328, in consequence of the facility with which felons made their escape from London across the bridge into the adjoining village of Southwark, which, until then, was beyond the mayor's jurisdiction, Edward III. granted a charter assigning this village to the city for ever, and empowering the city magistrates to act in Southwark as in London.

In 1349, the kingdom was scourged by a pestilence, which is said to have raged with extreme severity in London. The city was again visited by the plague in 1361; and it is worth notice, that this visitation was ascribed, and probably with good reason, to the corruption occasioned by the slaughter of cattle and sheep in the city. In consequence, his majesty, Edward III., issued a proclamation, forbidding the slaughter of all animals nearer than Stratford and Knightsbridge. But the butchers, tavern-keepers, and others, interested in the support of the Smithfield nuisance, had then influence enough to set at naught the authority of the monarch, and to perpetuate their abomination. (Stow's Survey, i. 2, ed. 1754.)

In 1381 the rebellion of Wat Tyler, and his death by the hands of the lord mayor, occasioned the addition of the dagger to the city arms, where it still appears. During this century various reforms were effected in the cleaning and paving of the streets. But an effectual stop was put to these and all other improvements in 1392, when, in consequence of the refusal of a loan of 10,000*l.* to King Richard by the corporation, the mayor, sheriffs, aldermen, and principal citizens were imprisoned, heavy penalties exacted, the city franchises abrogated, and the courts removed to York. Heavy bribes effected a removal of several of these grievances, but the city did not recover its proper influence till the accession of Henry IV.

In the following century the progress of improvement was still more rapid. Lamps were introduced in 1416. Holborn, a part of the Strand, and other principal thoroughfares, were paved; additional conduits and water-pipes were laid down; and wooden houses began to be replaced by others of brick, made in Moorfields. Stocks, for the punishment of disorderly persons, were erected in the different wards. Guildhall, Leadenhall, and Crosby House, Bishopsgate Street, were built in the 15th century.

In the 16th century the advance was much greater. An unusually long exemption from those civil wars which had, under the Plantagenets, inflicted great injury on London, and the kingdom generally, gave leisure to introduce those improvements which distinguish a modern town from a town of the middle ages. The city watch was improved, various nuisances were removed, and street paving became more general. The removal of monasteries had also a great effect in improving London: 54 large and many smaller establishments made way for factories, schools, charitable asylums, and hospitals. St. James's Palace was built, the park was laid out, and many new buildings were erected in Westminster. The

Digitized by Google

two cities were now first joined by a number of mansions of the nobility on the N. side of the river; one of which, Northumberland House, still keeps its place. The streets S. of the Strand indicate by their names the site of other mansions that have disappeared. The Royal Exchange was built, and commerce began to flourish. Towards the end of this century water began to be conveyed by machinery into private houses, and the New River was projected.

In the 17th century, London assumed its present form, with the exception of the part destroyed by the great fire of 1666. Spitalfields was covered with houses; and before 1666 the space N. of the Strand as far as Holborn, and from Temple Bar to St. Martin's Lane, had been extensively built upon. The parts of Westminster also, from Charing Cross to St. James's Palace, began to have the appearance of a town. The New River was completed, and many houses were supplied with water. Sewers were dug, smooth pavements were laid down for foot passengers, and hackney-coaches became general.

But all these were only imperfect palliatives of nearly incorrigible disorders. The narrow, dirty, and filthy state of the streets and houses of the city in the 17th century, constantly engendered the plague, and from its ravages the city was then rarely, if ever, exempted. It would have been extremely difficult to have introduced a different and improved state of things by legislative or municipal regulations, but what they could not effect was done by widely different means. On the 2nd of Sept. 1666, the great fire broke out in Pudding Lane, near the spot were the Monument was subsequently erected in commemoration of the occurrence. It raged till the 5th, when it ceased, rather by pulling down houses in the line of its course, than by the success of the exertions directly to extinguish the flames. The ruins, covering 336 acres, comprised 13,200 houses, 90 churches, and many public buildings; the property destroyed being estimated at 10,000,000*l*. Though productive of great loss, and of much temporary distress and suffering, this conflagration was, in its results at least, of signal advantage. Its destructive agency was required to get rid of the vast mass of old wooden houses, and narrow and filthy lanes and courts, that had for centuries been the permanent abode of the plague and other pestilential diseases. No doubt it must ever be regretted, that the designs of Sir Christopher Wren for the renovation of the city were not adopted. But notwithstanding the numerous defects of the new plan, it was a vast improvement on that by which it had been preceded. Though still too narrow, the streets were materially widened; the new houses were constructed of brick instead of wood; party walls were introduced; the old practice of making each story project over that immediately below was abandoned; obstructions and filth of all sorts were removed; and the sewerage and pavement of the streets were vastly improved. A fire which happened in Southwark ten years afterwards, afforded an opportunity for carrying similar improvements into that part of the metropolis. The population and trade of the city now increased more rapidly than before. The revocation of the edict of Nantes occasioned the immigration of a great number of French, who settled in Spitalfields and St. Giles's. The parishes of St. Anne and St. James were formed, the district called the Seven Dials was built, Piccadilly began to extend W., and Soho and Golden Squares were laid out. St. Paul's Cathedral was almost completed; the parish of Wapping was formed E. of the city; the Post Office was instituted; and several miscalled asylums (such as Alsatia and the Mint), where robbery and crime had been protected, were abolished.

From this period the increase of London and the progress of improvement continuously advanced. In the early part of the 18th century an act was passed for building fifty new churches in and about the metropolis, most of which were completed within a few years, and some of them are still among its ornaments. Houses sprang up on every side; and, by the middle of the century, the W. end of the town, as far as Hyde Park, became a compact mass of buildings, reaching beyond Oxford Street on the N., and extending E. from Portman Square, across Tottenham Court Road, past Montague House and Gray's Inn Gardens, through Clerkenwell, Finsbury Square, Spitalfields, and Whitechapel to Wapping. Before this time water-works had been formed at Chelsea in aid of the supply furnished by the New River. Sewers had become more general, lamps had been fixed in all the principal streets, the Bank of England and Westminster Bridge were built, St. Paul's completed, and Fleet Ditch arched over. In the last half century old Blackfriars Bridge—taken down in 1865—was built, the houses encumbering London Bridge were removed, the Mansion House was finished, and Somerset House erected. At the same time, many unsightly and inconvenient buildings were removed; lamps were much increased in number, and lighted during the whole night; raised footways became universal, and the shops, which before were mere stalls, assumed a size and splendour evincing the wealth of their occupiers, and greatly contributing to the ornament of the town.

The citizens of London have, generally speaking, been distinguished by their orderly behaviour and respect for the laws. In 1780, however, the peace, and even, in some degree, the existence of the metropolis, were compromised by the excesses of the mob. Certain concessions made in the course of the previous year to the Roman Catholics, had provoked a good deal of religious excitement in all parts of the kingdom. The contagion spread to London; and the weakness of the government, and the folly, or rather madness, of Lord George Gordon and other leaders of the ultra Protestant party, led to a dangerous riot. The mob were, in fact, for about two days, masters of the city. They took possession of the prisons, and turned the inmates out of doors; destroyed the chapels of the ambassadors of the different Catholic powers; many private houses, including that of Lord Mansfield, were plundered and set on fire; a great distillery belonging to a Catholic firm shared the same fate; and an attack was made on the bank, which, however, was happily repelled. At length, this formidable riot was effectually put down, though not till a considerable number of the rioters had been killed and wounded. Since this disgraceful epoch, the peace of the city has not been seriously endangered; and the troops in and about town, added to the effective police force that now exists, seem quite adequate, under ordinary circumstances, to ensure the public tranquillity and the safety of the peaceable part of the community.

During the present century London has made great advances. Within this period eight bridges have been built, extensive docks have been excavated, gas has been introduced into every street and alley; a gigantic system of drainage has been completed; steam, on the river, the sea, and on railways, has given it an almost unlimited power of intercourse with every part of the kingdom and of the world; new and handsome markets have been erected; great thoroughfares, lined with

Digitized by Google

elegant shops, have been formed; and wide lines of communication have been opened through close and densely crowded neighbourhoods. Several new parks have been laid out; an improved police has given additional security to person and property; abundant supplies of water have been furnished to every separate dwelling; and the formation of spacious cemeteries in the suburbs and at longer distances from London, has led to the disuse of interments within the town. At the same time the establishment of colleges and proprietary schools has increased the facilities for procuring good education; the formation of post-office savings' banks, by affording a safe and convenient place of deposit for the smallest savings, has tended to diffuse habits of economy among the lower classes; while the institution of a National Gallery and School of Design has done something to improve the national taste, and to add to the intellectual pleasures of the inhabitants of the greatest city in the world.

LONDONDERRY, a marit. co. in the N. of Ireland, prov. Ulster, having N. Lough Foyle and the Atlantic Ocean; E. Antrim, from which it is separated by the Lower Bann and Lough Neagh; S. Tyrone; and W. Donegal. Area, 513,388 statute acres, of which 136,038 are unimproved mountain and bog, and 9,565 water, being mostly included in the portion of Lough Neagh, belonging to this co. Surface in some parts mountainous and uneven; but there is, notwithstanding, a great extent of low, fertile ground. With the exception of lands belonging to the church and to corporations, the entire property of this co. was granted by James I. to twelve of the principal London companies, from whom most part of the land is now held, partly under terminable, and partly under interminable leases. Farms vary in size from 2 to 200 acres, but the average may be from 5 to 20 acres. 'Where there has been a perpetuity or a long lease, it is *split*; that is, the children are settled upon divisions of the father's farm; by which means leases of 40 acres come to be parcelled, in two or three generations, into patches of 4 or 5 acres. It seems as if the newly let lands were disposed of under some similar system of parcelling. I could give instances where whole districts are subdivided into patches of 6 or 7 acres, and rarely can boast a farm of 12 or 14.' (Sampson's Survey of Londonderry, p. 249.) Some landlords have exerted themselves to counteract this wretched system, but hitherto without much effect. Agriculture is in a very backward state, though in recent years some improvements have been effected. Oats, potatoes, and flax are the principal crops, but a good deal of wheat is also raised. Condition of the small farmers and cottiers very unprosperous. Various minerals have been discovered, but they are of no great importance. The linen manufacture was, a few years ago, widely diffused, but has latterly been a good deal contracted, the mill-spun yarn being cheaper and better than that spun by handwheels. Exclusive of the Bann, the principal rivers are the Foyle, Faughan, and Roe. Principal towns, Londonderry, Coleraine, and Newtown-Limavady. The co. is divided into 6 baronies and liberties, and 31 parishes; and sends 4 mems. to the H. of C., being 2 for the co., 1 for Londonderry, and 1 for Coleraine. Registered electors for the co., 5,512 in 1865. At the census of 1861, the co. had 33,645 inhab. houses, 36,070 families, and 184,209 inhab., while in 1841, Londonderry had 38,657 inhab. houses, 41,114 families, and 222,174 inhab.

LONDONDERRY, or DERRY, a city, parl. bor., and river-port of Ireland, cap. co. of same name, and a co. by itself, situated on the W. bank of the Foyle, about 5 m. above where it falls into Lough Foyle, 121 m. N. by W. Dublin, on the Irish North Western railway. Pop. 20,153 in 1861. The city was originally confined to the hill on which the greater part of it still stands; and which, from its projection into the river, is called the 'Island of Derry.' This portion is surrounded by the old city walls, but it is now rapidly extending beyond its former limits, particularly along the river towards the Lough. There is also a suburb on the opposite bank of the river, called Waterside. The communication between the latter and the city is kept up by means of a wooden bridge, 1,068 ft. in length, and 40 ft. wide, erected in 1789 at an expense of above 16,000*l.* and rebuilt in 1814–15 at a further cost of 16,801*l.* Derry is well built; many of the houses in the main streets within the walls are old-fashioned, with high pyramidal gables; but many modern mansions have been erected in this part of the town; and, without the walls, rows of mud cabins have been superseded by respectable houses. The principal city streets are broad and clean, well paved and well lighted; some of them, however, are inconveniently steep, and there are many narrow lanes and closes. In the centre of the city is an open square space, called the Diamond, from each side of which a handsome street leads to one of the four city gates. The summit of the hill is crowned by the cathedral, court-house, and bishop's palace.

The cathedral, which is also the parish church, was built in 1633; it is a large, handsome, Gothic structure, 240 ft. in length, and has a tower and spire 228 ft. high, erected in 1778; but this having become dangerous, was taken down in 1802, and was soon after rebuilt, with the addition of Gothic pinnacles. The view from the top is very fine. In the interior is a handsome monument to Bishop Knox, and in it also are displayed the colours taken at the siege of Derry. The bishop's palace is a large plain building, with extensive pleasure grounds. There are two other Protestant episcopal places of worship, the chapel of ease and the free church. The latter, which is without the city, was built in 1830, by Bishop Knox, and was intended for the use of the poorer classes, but it is no longer confined to them. There is also a R. Catholic chapel, and places of worship for Presbyterians, Primitive and Wesleyan Methodists, Seceders, Covenanters, and Independents. Among the public buildings, exclusive of churches, and other ecclesiastical edifices, may be specified the Corporation Hall, in the centre of Diamond Square; it was originally constructed in 1692, but received so thorough a repair in 1823, as to be tantamount to a re-erection. The court-house, adjoining the cathedral, erected in 1813, at an expense of 30,480*l.*, is a spacious and a fine building, partly constructed on the model of the temple of Erectheus at Athens. The new gaol is a very extensive structure, being 242ft. in front, by 400 ft. in depth; it is built on the radiating or panoptic principle, and cost above 30,000*l.* Among the chief ornaments of the city is the fluted column, erected, in 1827, in honour of the Rev. George Walker, its heroic defender. It stands on the central W. bastion, and is a well-proportioned pillar, 81 ft. in height, bearing a statue of Walker, 9 ft. high. It cost 4,200*l.*, raised by subscriptions.

The diocesan school, called Foyle College, stands on an eminence near the river; it is a plain but handsome building, erected in 1814, having accommodations for 80 resident pupils; it was built by subscriptions from the bishop of the diocese, the Irish Society, and other sources, and is maintained by similar means: the head-master's salary, from

Digitized by Google

these sources, is about 200*l.* per ann. There is a parish school connected with the church, for the education of 100 boys and 100 girls. The Presbyterian congregation also supports a free school. A school called St. Columb's national school, was established by the R. Catholic bishop and clergy, but it is now under the National Board of Education. In 1829, a Mr. John Gwynn left the munificent sum of above 40,000*l.* for the education of as many boys as the funds will afford in the useful parts of a good English education; and, exclusive of the above, there is an infant school, and a number of Sunday and other schools. Templemoyle Agricultural Seminary, founded in 1827, is within 5 m. of the city. The building is fitted to accommodate 80 boarders, and the farm attached contains 172 acres. The institution is said to be well managed. Among the charitable institutions is the district lunatic asylum for the counties of Londonderry, Donegal, and Tyrone; it was opened in 1829, and cost 25,678*l.*; it can accommodate about 190 patients. Here is also an infirmary and fever hospital, a dispensary, a charitable loan fund, a mendicity association, and a clergymen's widows' fund, with several minor institutions of a similar description. The workhouse for Derry union, opened in 1840, has accommodation for 1,100 inmates. Among the literary itstitutions is the Literary Association, with a reading-room and a good library; the Literary Society, in which lectures are given, and discussions take place; a news-room; and a mechanics' institute.

The walls or ramparts by which the city proper is surrounded remain nearlyin their original state, except that the ditch has been filled up. They afford a fine broad walk all round the city.

Londonderry was originally granted by Edward II. to Richard de Burgh, earl of Ulster, but the late corporation held its privileges under a charter granted by James I. in 1613. The government of the city is now vested in a mayor, 8 aldermen, and 18 councillors. The city sent 2 mem. to the Irish H. of C.; and, since the union, it has sent 1 mem. to the Imp. H. of C. Previously to the Reform Act the right of voting was in the burgesses and freemen. Registered electors 844 in 1865. The mayor and aldermen, who have filled the office of mayor, are justices of the peace within the liberties. The mayor and recorder hold a court of record every Monday, for pleas to any amount. A court of general sessions is held quarterly, one of petty sessions weekly. The assizes for the county and city, and the general sessions for the county, are held here twice a year.

The revenue of the corporation, arising from the tolls of the bridge, and dues on tonnage, quayage, &c., amounted some time ago to about 7,000*l.* a year; but, owing to the expense of improvements, mismanagement, or some other cause, the corporation became involved in difficulties, and their property has since been so reduced that it produces only 663*l.*

Manufactures are not very considerable. There are, however, 2 flax spinning mills, several flour mills, 3 distilleries, 2 breweries, 2 foundries, with rope works, tan-yards, &c. There were here formerly a sugar-house and a glass-house, but these are now relinquished. Some table-linen is manufactured. A valuable salmon fishery is carried on in the river and in Lough Foyle.

The trade of Londonderry is very extensive, and is increasing. Its fine river makes it the emporium of a large extent of country, and it is to this that its great commerce is principally to be ascribed. Its exports, like those of most other Irish towns, consist principally of agricultural produce, but a good deal of linen is also shipped from the port. The number and tonnage of vessels registered as belonging to the port, on the 1st of January, 1864, was as follows:—Sailing vessels under 50 tons, 6 of 176 tons, and over 50 tons, 25 of 8,440 tons; steamers, 6 of 1,358 tons. Among the exports, corn, provisions, and eggs are the most important. The imports consist principally of manufactured goods and haberdashery; iron, sugar and tea, timber, wine, coal, glass, and earthenware. A great portion of the increase in the trade of the port has taken place in recent years, owing chiefly to the establishment of steam-boats, which now ply regularly between the city and Glasgow and Liverpool.

The gross customs' revenue collected at Londonderry in 1844 amounted to 105,830*l.*; in 1848 to 104,991*l.*; in 1859 to 128,184*l.*; in 1861 to 129,045*l.*, and in 1863 to 116,645*l.*

Lough Foyle is properly the outer harbour of Londonderry. It is a triangular basin, about 18 m. long, and 10½ m. where widest; but a great part of it is occupied by sand-banks and mud-flats. The navigable channel stretches along the Donegal or Innishowen shore; and, by following it, the largest men-of-war reach the anchorage at Moville, while merchantmen of 500 tons, without difficulty, ascend to the city quays, 5 m. above the lough and 28 m. from the sea. The river is navigable by barges from the city to St. Johnstone, and there is a canal from the latter to Strabane. A portion of the wooden bridge at the city is constructed so as to open and admit the ascent and descent of vessels.

Derry was colonised and fortified in the reign of James I. by the London companies, who had purchased large tracts of the confiscated estates of the Earl of Tyrone; at which period it took the name of Londonderry. It is famous in Irish history for the memorable siege it sustained in 1689 against the forces of James II. Though ill fortified, and without any disciplined troops, the heroism of the citizens, and the enthusiasm inspired by their brave leader, the Rev. George Walker, enabled them to repel all the attacks of the enemy, and to sustain the more dreadful sufferings occasioned by the pressure of famine. The besiegers lost 8,000 men in the course of the siege, which was raised on the 105th day. Derry continued, for a lengthened period after this epoch in its history, to be, as it were, the head-quarters of Protestantism, or rather of Orangeism, in the N. of Ireland; but even in Derry the Catholics now greatly outnumber the Protestants.

LONG ISLAND, an island on the E. coast of the U. States, forming part of the state of New York, between lat. 40° 34′ and 41° 10′ N., and long. 72° and 74° N., being separated from the continent on the N. by Long Island Sound, and on the E. by East River, New York Harbour, &c. Its length from SW. to NE. is about 120 m., its breadth varying from 10 to 20 m. Surface mostly a level plain, broken only by a range of hills in the N., extending for about 60 m., with an elevation varying from 100 ft. to 400 ft.: among these are Brooklyn, and other heights memorable in the revolutionary war. The soil of the plain is chiefly sandy or loamy. Long Island is not well watered; but in many parts it is well suited for raising corn, particularly maize, the climate being much milder than that of the adjacent mainland. The island has numerous bays and inlets, the principal being Sag Harbour, in the NE.: a great many smaller islands surround its shores. It is divided into 3 counties: Brooklyn, Bedford, Flatbush, N. Hampstead, River-head, and Jamaica are its chief towns.

LONG ISLAND SOUND, a strait of the At-

Digitized by Google

lantic, between Long Island on the S. and the states of Connecticut and New York on the N. In the greater part of its extent it is a noble expanse of water with bold shores, and many commodious havens on either side. But W. of the promontory called Lloyd's neck, the channel becomes rocky, and much interrupted by islets; and a few miles above New York is the dangerous pass of *Hell-gut*, where the flow and ebb tide form cataracts and vortices, sufficient to dash to pieces or engulph large vessels. This formidable strait may, however, be passed with the greatest ease either at high or low water.

LONGFORD, an inland co. of Ireland, prov. Leinster, having N. Cavan and Leitrim, E. Westmeath, and W. Roscommon, from which it is separated by the Shannon. Area 257,222 statute acres, of which 55,247 are unimproved bog and mountain, and 15,892 lakes. The arable soil is, for the most part, level and fertile. Property mostly in large estates. Tillage farms small, the state of agriculture and the condition of the occupiers being much the same as in the adjoining cos. Grazing, however, is extensively carried on. The co. is divided into 6 baronies and 23 parishes; and sends 2 mems. to the H. of C., both for the co. Registered electors, 2,767 in 1865. At the census of 1861, the co. had 13,030 inhab. houses, 14,032 families, and 71,694 inhabitants; while, in 1841, it had 19,195 inhab. houses, 20,579 families, and 115,491 inhab.

LONGFORD, an inland town of Ireland, cap. of the above co., prov. Leinster, on the Camlin, an affluent of the Shannon, 65 m. NNW. Dublin, on the Midland Great Western railway. Pop. 4,535 in 1861, against 4,966 in 1841. Longford has a large market for grain; great quantities being exported by the Royal canal, a branch of which comes to the town. It has a par. church, a R. Cath. chapel, meeting houses for Presbyterians and Methodists, a market-house, the co. court-house, prison, infirmary, and dispensary, with large cavalry and artillery barracks. The corporation, which, under a charter of Charles II. in 1657, consisted of a sovereign, 2 bailiffs, 12 burgesses, and a commonalty, sent 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. The county assizes and general sessions are held here; and courts for petty causes are held on Mondays and Saturdays. It is a constabulary station. Some linen is manufactured; and there is a tannery, a brewery, and a distillery; but the great business of the town consists in its trade in corn and other raw produce. Markets on Wednesdays and Saturdays: fairs on March 25, June 10, Aug. 19, and Oct. 22.

LONGOBUCCO, a town of South Italy, prov. Cosenza, 19 m. ENE. Cosenza. Pop. 8,989 in 1862. The town lies in a deep valley, very little cultivated, and the inhabitants are chiefly employed in working metals and burning charcoal. The horses for hunting in Naples are bred in the neighbourhood.

LONS-LE-SAULNIER, a town of France, dép. Jura, of which it is the cap., in a deep valley, 50 m. SE. Dijon, on the railway from Besançon to Macon. Pop. 9,862 in 1861. The town is generally well built, clean, and furnished with numerous public fountains, one of which, in the *Place d'Armes*, is ornamented with a statue of Pichegru, in white marble. At the N. extremity of the town is the salt spring from which it derived its ancient name of *Ledo Salinaris*: this spring continues to yield great quantities of table salt; four pumps are kept constantly at work, and the evaporating houses (*bâtimens de graduation*) are very extensive. Lons has a theatre, a public library with 3,000 vols., a gallery of paintings and antiquities, tribunals of primary jurisdiction and commerce, and a communal college. It is the entrepôt of the agricultural produce, iron goods, timber, and wines of the dép., and has a fair on the 15th of every month.

LOO-CHOO, or LIEOU-KIEOU ISLANDS, a group tributary to the Chinese, in the N. Pacific Ocean, nearly midway between Japan and Formosa, and comprised within lat. 26° and 28° N., and long. 127° and 129° E. There are in all about 36 islands; but, excepting the Great Loo-Choo Island, towards the centre of the group, 70 m. in length, by from 12 to 15 m. broad, they are mostly of very inferior dimensions. The islands have a delightful climate, and a soil of great richness, producing the fruits and vegetables of countries the most remote from each other. Rice is cultivated with great care. Cattle, goats, and pigs are diminutive, but poultry are large and excellent. The islands yield sulphur and salt, and have rich mines of copper and tin. The natives appear to be of the same race as the Japanese; and have not merely adopted the costume, but speak the language of that people. Their religion is a species of Buddhism, and their government, like that of other Asiatic countries, of a despotical character. The Loo-Choo Islands were for some time subject to Japan, but were conquered by China about 1372. Kintching, the cap., is about 5 m. from its port Napkiang, near the SW. extremity of Great Loo-Choo; lat. about 26° 14′ N., long. 127° 52′ E.

LOOE (EAST and WEST), two contiguous anc. bors. and market-towns of England, co. Cornwall, hund. West, on both banks and close to the mouth of the Looe, 12 m. SE. Bodmin, and 210 m. W. by S. London. Pop. of Looe East 1,154, and of Looe West, 770 in 1861. Both towns are mean places, connected by a narrow, old bridge of 13 arches. In past times, each of them enjoyed the privilege of sending 2 mems. to the H. of C. from the reigns of Edward VI. and Elizabeth down to the passing of the Reform Act, when they were disfranchised.

LORCA (an. *Cliocroca*), a considerable town of Spain, prov. Murcia, cap. of a partido of its own name, on the Guadalentin, a tributary of the Segura, 42 m. WSW. Murcia, and 116 m. ENE. Granada. Pop. 19,297 in 1861. The vale of Lorca is remarkable for picturesque beauty and great fertility; and the town, close under the Sierra del Cano that bounds it on the left, and the fine old castle on a rock hanging over it, adds greatly to the beauty of the picture. This has evidently been a considerable place; but the lower part of the town being concealed by trees, nothing is seen on approaching it but a number of low houses crowded on the side of the mountain, and from the similarity of colour seeming almost to belong to it. This is the old or Moorish town, and is very irregular and mean in appearance; but the new town, on the plain, is much more regularly laid out, and better built. A collegiate (once episcopal) and seven parish churches, two hospitals, an episcopal palace, and a royal college, are the chief buildings and establishments. Saltpetre is manufactured on a large scale, and soap, thread, and linens are produced in small quantities; but the chief resources of the town consist in its great September fair, its markets, and the produce of its neighbourhood, both in flocks and agricultural produce.

Lorca, supposed to be the *Cliocroca* mentioned in Antonine's Itinerary, was exposed to frequent attacks during the contests between the Moors and the crown of Castile, and has at various times sustained sieges. It was nearly destroyed at the commencement of this century. In 1792, a spe-

Digitized by Google

culator, with the permission of government, collected at a great expense all the waters of the district into a common reservoir (*pantano*) resembling that of Alicante. The basin was said to be capable of containing water sufficient to irrigate for years the entire vale of Lorca. Ten years afterwards (30th April, 1802) the waters, which had for some time been undermining the reservoir, rushed out with an impetuosity that swept everything before it, men and cattle, public buildings, and even trees and rocks. About 600 houses, a church, 2 convents, 2 hospitals, several mills and fountains, were at once swallowed up and disappeared, about 6,000 human beings and 24,000 cattle being at the same time destroyed. The agricultural districts were covered over with sand and rubbish, and the total loss occasioned by the catastrophe is supposed to have exceeded a million sterling.

LORETTO, a town of Central Italy, prov. Ancona, on a bold and commanding eminence, 3 m. from the Adriatic, and 12 m. SE. Ancona, on the railway from Ancona to Naples. Pop. 8,701 in 1862. The town is surrounded with walls, constructed in 1587. Loretto is indebted for its existence to its having the good fortune to possess the *Santissima Casa*, or house occupied by the Virgin Mary, in Nazareth, conveyed by angels, first to Tersato in Dalmatia, and thence, by the same agency, in 1294, to its present site. The *Santissima Casa* is a mean-looking hovel, about 30 ft. in length, by 13 or 14 ft. in width, and 18 ft. in height; apparently built of Apennine limestone, with a modern vault of timber-work. It is incased in a shell of marble, sculptured with bas reliefs, representing the history of the Virgin; the whole being under the dome of a splendid church, built to protect the sacred edifice. In a niche within the latter, once fenced in with gratings of solid gold, but now with pieces of gilt wood, is the image of the Virgin, affirmed to be the work of St. Luke, to whose talents as an artist it does little credit, being, according to Mr. Moore (Italy, i. 291), 'a little old woman about 4 ft. in height, with the features and complexion of a negro.' Her dress is tawdry, and in the worst possible taste: she literally glitters in jewels and brocade, and reigns 'amid the continual glare and smoke of lamps and candles, held by figures of angels.' The church, which encloses the *santissima casa* is said to have been designed by Bramante. According to Eustace (Classical Tour, i. 200), it is a 'very noble structure;' but it is less favourably spoken of by other travellers. Its gates, which are of bronze, are embellished with *basso relievos* of the most admirable workmanship; in the area before it is a handsome marble fountain, and a large statue of Pope Pius VI. The riches formerly accumulated within this sanctuary were a subject of astonishment to all travellers. The popes are believed to have occasionally abstracted some of the gold offerings, and to have substituted false for real gems. But, when the French acquired possession of Loretto, they acted with less reserve; and, undismayed by the sanctity of the place, rifled its repositories, and carried off every article of value, applying them to secular purposes.

A lucrative trade was formerly carried on at Loretto in rosaries, crucifixes, *agnus Dei*, and such like articles, partly taken off by pilgrims to the shrine, and partly exported. But this trade has now much fallen off. The number of pilgrims, though still very considerable, has also greatly declined; and they are now mostly of the lowest and poorest classes. On their arrival in town, they were formerly received into a hospital, where they were boarded and lodged for three days; and this privilege had probably as much to do as superstition in attracting them to Loretto.

L'ORIENT, a strongly fortified sea-port town of France, dép. Morbihan, cap. arrond., at the confluence of the Scorff with the Blavet, at the head of the bay of Port Louis, about 3 m. from the Atlantic, and 29 m. W. by N. Vannes, on the railway from Vannes to Brest. Pop. 34,536 in 1861. The population doubled in the twenty years 1841-61. About 6,000 of the inhabitants are employed in the dockyard and its appendages. L'Orient is clean and regularly built; the streets are wide, straight, and well pavéd; and the houses well constructed and handsome. One of its public squares, the *Place Royale*, is planted with lime-trees, and it has other good promenades. The principal church is very large and has a lofty spire, which is a conspicuous landmark. The prefecture, auction-hall, town-hall, and theatre are handsome edifices. The public slaughter-houses (*abattoir*) are remarkably clean; and the meat, fish, and bread markets are, next to those of Rennes, the best constructed and most extensive in Brittany. In the centre of the market-place is a granite column erected to the memory of Commander Bisson.

L'Orient, like Brest, is a natural dockyard: as a port of war it ranks third, and as a construction port it is the first in France. The port is secure, commodious, and of easy entrance. It is bordered by fine quays, on which are extensive buildings and establishments connected with the government dockyard; an observatory 120 ft. in height, which serves also for a telegraph and a light-house, and a very handsome public fountain. The naval establishment is on a smaller scale at L'Orient than at Brest; it has no *bagne*, but it has a place of confinement for soldiers guilty of insubordination. More ships of war are now built in the dockyard of L'Orient than at any other in France, and the greater number of the ironclads of the Imperial marine were constructed here. L'Orient has slips enough for the construction of 30 vessels of all sizes; frigates and gunboats are, however, the classes of ships chiefly built. A new dockyard, of twice the size of the old port, and with a mile of first-class building slips on the Blavet, opposite the town, was in course of construction in 1865. L'Orient has excellent sheers for masting vessels, and good block sheds, the machinery in which, as well as a portion of that for cable-making, is wrought by steam. There are also numerous establishments for the construction of steam-engines for ships of war. The buildings formerly belonging to the French E. I. Company are now converted into barracks. The arsenal and naval stores are very extensive, and the artillery barracks are capable of accommodating 2,500 men. The lazaret is on a small island to the S., between L'Orient and Port Louis. L'Orient has a school of naval artillery and a spacious artillery ground near the town, a school of hydrography, established 1771, a large and well-arranged commercial college, a preparatory school for training for the government schools, a communal college, gratuitous schools of drawing, geometry, and arithmetic, a public and a good naval library, museums of chemistry and mineralogy, an agricultural society, and various educational societies. It is the seat of tribunals of primary jurisdiction and commerce, and a chamber of commerce.

The manufactures of L'Orient, chiefly consisting of hats, linens, gold lace, and earthenware, are not very important. Its trade, however, has latterly begun to increase. The chief exports are wax, honey, butter, corn, cattle, and pilchards, the latter being taken in great quantities on the

Digitized by Google

adjacent coast, are sent to Nantes to be prepared for exportation.

Though at present little eminent for trade, L'Orient owes its origin and former importance almost wholly to commerce. It was but an insignificant village when, in 1728, the French E. I. Company made it their principal naval *dépôt*; and such was the influence of the change, that in 1738 its pop. is said to have amounted to 14,000. On the dissolution of the company in 1770, L'Orient was made one of the stations for the French navy, and a free commercial port.

LORRAINE (Germ. *Lothringen*), one of the largest of the an. provs. of France, in the NE. part of the kingdom, now distributed among the déps. of Meurthe, Meuse, Moselle, Vosges, and Bas-Rhin.

LOSTWITHIEL, or LESTWITHIEL, an an. bor., market town, and par. of England, co. Cornwall, hund. Powder, on the W. bank of the Fowey, 5 m. SSE. Bodmin, and 211 m. W. by S. London on the railway from Plymouth to Falmouth. Pop. of par. 1,017 in 1861. The houses are chiefly of stone, roofed with slate; but the streets narrow and ill-paved. The church, a curious old building, has a large E. window, and a fine tower and spire at the opposite end: the living is a vicarage, in the gift of Earl Mount-Edgecombe. It has also places of worship for Independents, Wesleyan and Primitive Methodists, with attached Sunday schools. The corporation support a grammar and writing school; another school, for poor children, is slenderly endowed by the trustees of the late Rev. St. John Eliot; and there are a few money bequests. Near the church, an ancient building, supposed to have been either a palace of the duke of Cornwall, or a court-house for the stannaries, was, till recently, used as a prison during the winter and summer co. sessions, now removed to Bodmin. There is a town-hall, where petty sessions are held, and under it is a small gaol. Tanning and wool stapling are the principal trades, and the town derives some importance from its situation on the Fowey, by which iron and copper ore are exported. Lostwithiel was made a free bor. by Richard, earl of Cornwall, and incorporated by James I. It sent two mems. to the H. of C. from the 19th Edward II. down to the Reform Act, by which it was disfranchised. It is not included in the Municipal Reform Act; but is now, as formerly, governed by a mayor, six capital and seventeen inferior burgesses. Markets on Friday; cattle fairs, July 10, Sept. 6, and Nov. 13.

About 1 m. N. of Lostwithiel, on the summit of a hill, is Restormel Castle, the ancient seat of the baronial family of Cardinan, and subsequently of the earls of Cornwall. It was ruinous even so early as the time of Henry VIII., but was repaired and occupied during the civil war.

LOT, a dép. of France, reg. S., chiefly between lat. 44° 15′ N., and long. 1° 2° E., having N. Corrèze, E. and SE. Cantal and Aveyron, S. Tarn-et-Garonne, and W. Lot-et-Garonne and Dordogne. Area, 521,174 hectares; pop. 295,542 in 1861. The dép. is mountainous, with a general slope towards the SW. Its mountains are ramifications of those of Cantal, and rise in the E. about 2,500 ft. above the sea. Its chief rivers are the Lot and the Dordogne; from the first of which it derives its name. The Lot, which rises in Lozère, about lat. 44° 30′ N., long. 3° 45′ E., runs with a very tortuous course, generally W., through Aveyron, the S. part of Lot, and the centre of Lot-et-Garonne and Gironde; uniting with the Garonne at Aiguillon, about lat. 44° 18′ and long. 0° 19′ E. It is navigable, during four months of the year, for nearly 190 m.; Mende, Cahors, and Villeneuve d'Agen are on its banks. There are an immense number of narrow valleys, watered by small rivulets; these have frequently an alluvial soil of great fertility, but the soil in most parts is either calcareous, or stony and gravelly. There are about 252,533 hectares arable, 25,825 in pasture, 58,627 in vineyards, 87,255 in woods, and 71,284 occupied by heaths and wastes. Lot produces more corn than is required for its own consumption, but chestnut-flour forms an important article of food among the rural pop. The corn grown is principally wheat, maize, and rye; and the total annual produce of all kinds is estimated at between 1,500,000 and 1,600,000 hectol. Agriculture is extremely backward, and there is a great want of capital, a consequence mainly of the splitting up of the land into an immense number of small properties. The plough employed was, till within the last few years, a facsimile of that described by Virgil, and drawn by oxen: the spade or hoe is, however, chiefly used in the culture of thin soils. The produce of wine amounts to about 600,000 hectol. a year, a third part of which is consumed by the inhab., and the rest sold or converted into brandy. The wines known in the market as *vins de Cahors* are strong and very dark coloured, and are principally employed to give body and colour to other wines, for which purpose they are principally sent to Bordeaux. Tobacco is grown to some extent, and about 1,850 hectares are appropriated to its culture. The climate is favourable for the mulberry, but the silkworm does not thrive. A few proprietors have flocks of Merino sheep, but the pastures are badly irrigated and attended to, and most kinds of live stock are indifferent. The goats' hair of the dép. is, however, highly esteemed. The produce of sheep's wool is estimated at 500,000 kilog. a year. A great many hogs are fattened for sale in the neighbouring déps.; and about 60,000 turkeys and geese are annually exported, preserved in their fat. A considerable proportion of the truffles used in *Pâtés de Périgord* come from this dép. There are some iron and coal mines, but both mining and manufacturing industry are little attended to. A few copper and iron forges, woollen, cotton, and linen cloth factories, paper mills, and tanneries are the chief manufacturing establishments; but the inhabitants are usually supplied with cloths and leather in exchange for their wool and skins from the adjacent industrial déps. There are nearly 1,000 flour mills in the dép. Lot is divided into three arronds; chief towns, Cahors, the cap., Gourdon, and Figeac.

LOT-ET-GARONNE, a dép. of France, reg. SW., formerly included in Guienne; chiefly between lat. 44° and 44° 40′ N., and long. 0° and 1° E., having N. Dordogne, W. and SW. Gironde and Landes, S. Gers, and E. Tarn-et-Garonne and Lot. Length and breadth about 50 m. each; area 535,396 hectares. Pop. 332,065 in 1861. The surface is mostly level, with a slope to the W. The Garonne intersects the dép. from SE. to NW., and receives about its centre the Lot from the E. The banks of these rivers may be classed among the most productive portions of France; but 265,496 hectares consist of a chalky soil, and about one-eighth part of the surface in the W. of the dép. is composed of *landes*, or sandy plains, sprinkled with marshes, analogous to those of the adjoining déps. of Gironde and Landes. The dép. is principally agricultural. The corn grown exceeds what is required for home consumption: it is chiefly wheat and maize on the richer lands, and rye on the poorer. The produce of wine is estimated at about 650,000 hectolitres a year, of which nearly a half is exported. The N. part of the dép. produces

Digitized by Google

about 40,000 hectols. a year of chestnuts, from 7,000 to 8,000 hect. of which are sent to Bordeaux and the neighbouring déps.: 2,030 hectares are occupied with tobacco, which produced in 1833 746,526 kilogs., valued at about 560,000 fr. Excellent hemp is grown. The prunes of Agen are highly esteemed, and are exported to the value of 600,000 fr. a year: the dried figs of Clairac are also celebrated. On the *landes* are many fir plantations, which furnish about 800,000 kilogs. of resin, and 300,000 kilogs. turpentine a year, besides pitch and deals. The cork tree grows in a few communes, and its produce is valuable. Artificial pasture lands are rare. Large flocks of geese are reared, especially near Agen; they are fattened on maize, and preserved in their fat. Landed property is greatly subdivided, and of 122,558 properties subject to the *contribution foncière*, 51,246 are assessed under 5 fr., and 19,780 at from 5 to 10 fr. Mining industry is insignificant; but some iron ore is smelted by means of charcoal, there being no coal mine in the dép. There are numerous distilleries. At Nerac, Mezin, and Barbaste are cork factories, which together employ about 700 hands; and at Agen is a sail-cloth factory, with 300 looms, for the service of the French navy; with extensive rope-walks. Lot-et-Garonne has also manufactures of woollen thread, serge, linen and cotton cloths, gloves, paper, starch, glass, and earthenware, besides tanneries and iron works. The dép. is divided into four arrond.; chief towns, Agen, the cap., Marmande, Nerac, and Villeneuve d'Agen.

LOTHIAN, an extensive, fertile, well cultivated, and rich district of Scotland, lying along the S. shore of the Frith of Forth. It is divided into the cos. of East Lothian, or Haddington; Mid Lothian, or Edinburgh; and West Lothian, or Linlithgow.

1st. *East Lothian*, which, as its name implies, is the most easterly division of the Lothians, has the Frith of Forth on the N., the German Ocean on the E., Berwickshire, on the S., and Mid Lothian on the W. It is of an elliptical shape, and has an area of 291 sq. m., or 185,937 acres, of which about four-fifths are capable of cultivation. The S. portion of the co. is occupied by the Lammermuir Hills, which divide the co. from Berwick; but with this exception it is mostly level, or merely undulating; and when viewed from the adjacent heights, appears like an extensive, rich, and beautiful plain, gradually sloping to the sea. The district along its E. coast, comprising about 20,000 acres, has a reddish, loamy, and very fertile soil. The soil gradually becomes more clayey as it recedes from the sea; and, except in the district now referred to, its general character is that of a clay bottom. The climate is comparatively dry and early; but the E. winds, in April and May, are often very severe. This is one of the best cultivated districts of the empire, and is remarkable for the intelligence and skill of its farmers, and their superior husbandry. The best farming is seen in the district along the E. coast, the soil being there adapted alike to the growth of turnips and of wheat. The turnip culture, indeed, is carried on here to a greater extent, on more correct principles, and with better success than in any other part of the empire. In the clayey lands, or those that have a wet retentive subsoil, summer fallow is extensively practised, and is found to be the best foundation of a profitable system of cultivation. The fatting of cattle of all kinds for the butcher is an important part of the economy of every well conducted farm; and a great extent of land is kept in grass for a long period. Exclusive of the Lammermuir district, which is principally devoted to the breeding of sheep, the farms in the other parts of the co. extend from 60 acres up to 500 acres, or more, the average being about 250 acres. Every farm has a thrashing machine, and most of these are driven by steam. Rents are commonly fixed in corn, convertible into money at the *fiar* prices of the co. Eight bushels of wheat may be taken as the average rent of the wheat lands of the district, which, taking the wheat at 6*s.* a bushel, will be equivalent to a money rent of 48*s.* an acre.

Notwithstanding its present highly advanced and improved condition, agriculture was in an extremely backward and depressed state in this co. even so late as 1770. The land was then not half tilled; a rotation of crops was comparatively unknown; the stock and implements of husbandry were alike defective; much of the land was injured by the want of drainage; the hinds, or farm labourers, were badly fed and badly clothed; and the ague regularly made its appearance in spring in every hamlet and village, and almost, indeed, in every house. The change in the interval has been most striking and beneficial. Even within the last thirty years many important improvements have been made, principally by the introduction of furrow draining and bone manure, a better rotation of crops, and a more efficient and skilful management. The farm houses and offices are excellent; but while everything else has been vastly improved, the cottages have not, in the majority of cases, been sensibly ameliorated, and their condition is discreditable alike to the farmers and the landlords. Except, however, as respects their lodging, the labourers are well off; and the hinds, or farm labourers, now receive each 24 bushels of oats a year more than they did previously to the commencement of the improvements. Estates of various sizes; some very valuable. There are about 7,500 acres of wood. The W. division of the co. has valuable beds of coal, and limestone is very generally diffused. Except some considerable distilleries, manufactures are all but unknown. The Tyne, which flows through the centre of the co., is the only considerable stream. The co. sends one mem. to the H. of C.; and the bors. of Haddington, N. Berwick, and Dunbar join with Lauder and Jedburgh in returning one mem. Registered electors for the co., 673 in 1865. At the census of 1861, the co. had 6,802 inhab. houses, and 37,634 inhab., while in 1841 E. Lothian had 8,010 inhab. houses, and 35,886 inhab. The old valued rent was 14,072*l.*; the new valuation for 1864–65 was 254,252*l.* exclusive of railways.

2. *Mid Lothian*, or Edinburghshire, has the Frith of Forth on the N., E. Lothian on the E. Roxburgh, Selkirk, Peebles, and Lanark on the S., and W. Lothian on the W. Area, 397 sq. m., or 254,300 acres, of which about two-thirds are supposed to be arable. In some parts, especially along its S. border, it is rugged, and even mountainous; the ridge of the Pentland Hills, which approaches within a short distance of Edinburgh, divides its low grounds into two portions, that unite towards the sea. Soil for the most part clayey, and not in general very fertile. Agriculture similar to that of E. Lothian, but inferior, its details being also a good deal modified by the demand of the capital for milk, butter, and potatoes. Improvements of all sorts have been prosecuted with great zeal and industry. In 1727, a small field of wheat, within a short distance from Edinburgh, was reckoned so extraordinary a phenomenon that persons came from a great distance to see it. (Robertson's Recollections, p. 267.) But at present wheat is the principal object of the

Digitized by Google

farmer's attention, and there may be from 20,000 to 22,000 acres under that crop. There are a considerable number of rather large estates; but property is, on the whole, pretty well divided. There are large beds of coal in this co. For details as to its trade, manufactures, literary establishments, and other particulars, the reader is referred to the articles Edinburgh and Leith. The co. has, exclusive of Edinburgh, 27 parishes: it returns 4 mems. to the H. of C., viz. 1 for the co., 2 for the city of Edinburgh, and 1 for Leith and Musselburgh. Registered electors for the co., 1,656 in 1865. At the census of 1861, the co. had 24,162 inhab. houses, and 273,997 inhabitants; while in 1841 Mid Lothian had 38,927 inhab. houses, and 225,454 inhab. The old valued rent was 15,921*l.*, while the new valuation for 1864–65 was 403,420*l.*, exclusive of railways.

3. *West Lothian*, or Linlithgowshire, the smallest of the divisions of Lothian, has the Frith of Forth on the N., Mid Lothian on the E. and S., and Lanark and Stirling on the W. It is of a triangular shape, and has an area of 101 sq. m., or 64,375 acres, of which about three-fourths are arable. Surface varied with knolls: there are, however, but few hills, and no mountains. In the S. part of the co. the ground is moorish, and there are some morasses; but elsewhere it is comparatively fertile. Agriculture similar to that of Mid Lothian, with this difference, that more turnips are raised, and fewer potatoes. Estates large; farms of a middle size. Coal is found in most parts of the co. Manufactures of no importance. W. Lothian is divided into 13 parishes: it sends 1 mem. to the H. of C. for the co., and the bors. of Linlithgow and Queensferry join with others in returning representatives. Reg. electors for the co., 813 in 1865. At the census of 1861, the co. had 5,392 inhab. houses, and 38,645 inhabitants; while in 1841 W. Lothian had 5,333 inhab. houses, and 26,872 inhab. The old valued rent was 6,237*l.*; the new valuation for 1864–65 was 163,464*l.*, exclusive of railways.

LOUDUN, a town of France, dép. Vienne, cap. arrond., on a hill, 31 m. NNW. Poitiers. Pop. 4,504 in 1861. The town was formerly of considerable importance, and has still many large houses and wide streets; but its inhab. being principally Protestants, it suffered much from the revocation of the edict of Nantes, from the effect of which it has never recovered. It has a hospital, a theatre, the remains of an ancient castle, a tribunal of original jurisdiction, and manufactures of woollen cloth and lace.

This town is famous in the history of fanaticism for a judicial murder committed in it, in 1634, when a curate, of the name of Grandier, accused and convicted of sorcery and magic, was burnt alive. The unfortunate curate appears to have had but little respect for that rule of the R. Cath. religion which enjoins the celibacy of the clergy; and he is said to have practised his arts with most success on the nuns belonging to an Ursuline convent in the town.

LOUGHBOROUGH, a market town and par. of England, co. Leicester, hund. W. Goscote, near the left bank of the Soar, 10 m. N. Leicester, 98 m. N. by W. London, and 110 m. by Midland railway. Pop. 10,830 in 1861. It is a clean and respectable-looking town, with several streets lined with modern brick houses, meeting the principal avenue on the old London road. The market-place, in which is the town-hall, was formerly narrow and confined, but has been more recently laid open by the pulling down of the old market-house. The church, a large and handsome structure in the perpendicular style, has a lofty and well-proportioned tower: the living is a rectory in the gift of Emanuel College, Cambridge. There are places of worship for Presbyterians, Independents, Baptists, Unitarians, Wesleyan and Primitive Methodists, and the Society of Friends, connected with which are 7 Sunday schools, furnishing religious instruction to between 2,000 and 3,000 children of both sexes. Besides a well-endowed grammar-school, Loughborough has a charity-school for clothing and instructing 80 boys, a subscription-school, and a school of industry. A dispensary and several charitable societies confer essential benefits on the poor, and there is also a large public library and news-room. Fleecy-hosiery and bobbin-net lace are the chief branches of industry, the former occupying nearly 1,000 hands in the town and neighbourhood; many persons are employed in making cotton hose and gloves; there are many makers of machinery, and a considerable number of shoemakers, working for the London market. The prosperity of the town has been increased by the facility of transit afforded by the Leicester Navigation and Loughborough Canal; and it has derived still greater benefit from the opening of the Midland Counties' railway, which brings it within 4 hours' distance of the metropolis. Petty sessions every market-day. Loughborough is the election town and principal polling place for the N. division of the co. Markets on Thursday: large fairs for horses, cattle, and sheep, Feb. 14, March 28, April 25, Holy Thursday, Aug. 12, and Nov. 13: cheese fairs, Mar. 24 and Sept. 30.

LOUGHREA, an inland town of Ireland, co. Galway, prov. Connaught, on Loughrea Lake, 21 m. E. by S. Galway. Pop. 3,063 in 1861, against 5,458 in 1841. The town, which was formerly fortified, consists of several irregular streets and lanes. The public buildings are—the par. church, the spire of which was thrown down by lightning in 1832; 3 R. Cath. chapels, several large schools, and a barrack. General sessions are held twice a year; petty sessions on Thursdays. It is a constabulary and revenue guard station. Markets on Thursday: fairs on Feb. 11, May 26, Aug. 20, and Dec. 5.

LOUIS (ST.), a city of the U. States of N. America, being, though not the cap., the principal place in the state of Missouri, and the cap. of the judicial district and co. of its own name; admirably situated on the Mississippi, 18 m. below the mouth of the Missouri, and nearly 200 m. above the mouth of the Ohio, on the terminus of the Ohio and Mississippi railway. Pop. 160,773 in 1860, against 77,860 in 1850, and 5,852 in 1830. The town extends along the margin of the river, from which the ground rises by a gentle ascent to a second plateau, about 40 ft. above the level of the first. Fortifications were erected on this terrace at an early period in the history of St. Louis; but these have been removed to make way for buildings, and their site is now occupied by streets and houses. In the older part of the town, by the brink of the river, which is the chief seat of trade, the streets are narrow and inconvenient; but of late they have been much improved. The more modern sections, on the high grounds, are laid out in broad avenues and streets, in which are most of the residences of the merchants and professional men. The old town of St. Louis was chiefly built of wood; but a large portion of these having been burnt down in a great fire in 1849, they are now constructed of a kind of limestone found on the spot, which is soft when first quarried, but becomes very hard and durable after exposure to the air. Many of the warehouses in the lower town have 3 or 4 stories,

Digitized by Google

and there are some large castellated private mansions.

St. Louis has a handsome Rom. Cath. cathedral, 136 ft. in length, 84 ft. in breadth, with a tower 90 ft. high, surmounted by a spire. This edifice is of the Doric order, and is roofed with copper. It has several bells, cast in Normandy, one of which weighs 2,600 lbs. There are churches belonging to the Baptists, Episcopalians, Presbyterians, Methodists, Unitarians, and other sects, most of them large and commodious buildings. St. Louis Rom. Cath. university, founded and conducted by Jesuits, has about 200 students. It is intended chiefly for the study of the classics and *belles-lettres*, but has also a medical department. Its library comprises 12,000 vols. St. Louis has a convent, a hospital, an orphan asylum, a female charitable association, and many primary and grammar schools. Among the most ornamental public buildings are the court-house and market-house, with the town-hall above it. It has also several theatres. Nearly all the houses are supplied separately with water from a large reservoir.

Vessels of the largest class come close up to the quays, and St. Louis has become the grand emporium of the countries on the Missouri and the Upper Mississippi. The value of the produce received at her quays in 1864 was estimated at above 30 millions dollars. There belonged to St. Louis, at the end of 1863, above 60,000 tons of shipping, mostly steamers. The city, besides being one of the headquarters of the Mississippi steam navigation, is also the principal seat of the American fur trade, and of the overland trade with Mexico. The inhab. are now chiefly Americans; but, till lately, they were principally descendants of the French, by whom the city was founded in 1764.

LOUIS (ST.), a town of Western Africa, and the cap. of the French possessions in Senegambia, on an island of its own name in the Senegal, about 7 m. from its mouth; lat. 16° 21′ N., long. 16° 13′ 45″ W. Pop. 18,530 in 1861. The town is laid out on a regular plan, nearly a mile in length, by about 200 yards broad. Fort St. Louis, with its esplanade, occupies the centre of the town; and from two of its opposite faces, a street is prolonged, and crossed at right angles by several others. The town has about 250 brick houses, half of which have only a ground floor, and the other half rarely more than an additional story: the rest of the dwellings are mere huts of mud and straw. The chief public buildings are the governor's residence, the barracks, and the new hospital. The last is a superior edifice of its kind for a colony of such inferior rank, and has 122 beds, a number sufficient to accommodate the greatest average number of sick. There is good anchorage in the river on both sides the island, but especially in the E. channel, where ships may lie quite close to the quay. There are neither brooks nor public fountains in St. Louis; and the water for daily use, which has to be brought from the river, is brackish. St. Louis is the seat of a tribunal of primary jurisdiction and of commerce, and a council of appeal. It is also the residence of the apostolic prefect of the colony, and the chief officers of the colonial government. Boat-building and a little weaving are its principal branches of industry.

LOUISBOURG. See CAPE BRETON.

LOUISIANA, one of the U. States of N. America, in the S. portion of the Union, between lat. 29° and 33° N., and long. 88° 40′ and 94° 25′ W., having N. Arkansas and Mississippi, E. the latter state, W. Texas, and S. and SE. the Gulf of Mexico: length N. to S. 240 m., breadth varying from 100 to 210 m.; area, 46,341 square miles. Pop. 791,305 in 1861, against 352,411 in 1840. The surface, which is generally level, and slopes gradually towards the S., is traversed in its N. part by a few hill-ranges of inconsiderable height. Its shores, especially those of the delta of the Mississippi, are so very low that they are apt to be inundated by high spring tides. The delta, which comprises an alluvial flat of about 12,000 sq. m., is no where, indeed, raised much more than 10 ft. above the level of the gulf. Beyond the salt marshes and cypress swamps of the coast the land is heavily timbered; but most part of the interior, and the W. portions of the country, consist of immense prairies, generally without timber. In the NW. and to the E. of the Mississippi, the surface is much broken, and covered with extensive pine forests. Besides the Mississippi, which forms the E. boundary of Louisiana for 150 m., and traverses it for 220 m. more, the chief rivers are the Red River, Washita, and Teche, tributaries of the former; the Atchafalaya and Sabine rivers fall separately into the Gulf of Mexico; and Pearl River, flowing to the Atlantic, forms part of the E. boundary of the state. Lakes of considerable size are numerous in the low country: that of Pontchartrain is 40 m. in length by 24 in breadth. Lakes Borgue, Pontchartrain, and Maurepas compose a continuous water communication, though navigable only for small vessels, being shallow, except in the centre. The coast has numerous bays and inlets, but, owing to their insufficient depth, it has no good harbour. There is, however, a good roadstead on the W. side of the Chandeleur Islands, much used by the navy of the United States during the insurrection of the Southern States, in the years 1861–63. Besides Chandeleur, sundry islands are scattered along the coast, as Barataria, Thomas, St. Croix, and Ascension. These islands are more elevated than the mainland, being from 30 to 100 ft. above the level of the sea: they are covered with dense forests, abounding with deer and game.

The soil of Louisiana is of every quality, from the most productive to the most sterile. Some portions of the great alluvial plain, and of lands on the banks of the rivers, are as fertile as any in the Union; but the prairies consist for the most part of second-rate lands. The red colour of the soil on Red River, and some of the other streams, is owing to an admixture of oxide of iron, which, with salt, is very largely dispersed through it. Iron is found in the W., and coal in the N.; but, except these, the mineral products are insignificant.

Both heat and cold are experienced in a greater degree than in the other states in the same lat. The orange and sugar cane, which are cultivated on the Atlantic coast as high as 33° 30′ N., are not met with here much above the 31st deg. In the S. the winter is usually characterised by a short period of NW. winds and white frosts at night; but in the N. and central parts sharp frosts and sometimes falls of snow occur. In summer the climate of the N. is mild and comparatively healthy; while in the S. intense heats last for a long time, thunder-storms and hurricanes are frequent, and the yellow fever and other pestilential diseases are prevalent.

Cotton and sugar are the great staples of Louisiana: rice, maize, and tobacco come next in order; but the raising of these has been neglected for that of cotton, and the culture of indigo is now almost abandoned. The crop of cotton, which is of various kinds, was estimated, previous to the breaking out of the civil war in the United States,

Digitized by Google

at half a million bales a year. It is raised principally in the NE. part of the state. Sugar is the principal product as far N. as the 31st deg. of N. lat., except on the lands immediately adjacent to the Mississippi, which, being easily irrigated, are appropriated to rice. The cane, however, though more precarious, is raised still further N., and its culture has latterly extended to the higher parts of the country. The crop, at an average, may be taken at about 160,000 hhds. Maize yields sometimes 70 bushels an acre, and barley and oats thrive well; but the climate is not suitable for wheat and rye. The vine arrives at perfection, and many kinds of wild fruits are met with, but the apple does not succeed, and the cherry is wholly unproductive. Neither the palmetto nor the long-leaved pine, which grow in the other Atlantic states, are met with. Pine-timber is, however, an important article of export, and the pine forests afford great quantities of pitch, tar, and turpentine. Some cotton is grown in different parts of the prairies, but these tracts are mostly appropriated to the feeding of large herds of cattle and horses. The sheep supply good mutton, but their wool is coarse. Vast herds of elks, deer, and buffaloes wander wild over the prairies on the banks of Sabine River. Louisiana is almost wholly an agricultural state, its manufactures being quite unimportant. The commerce of the state is centred in New Orleans (which see). To facilitate internal water communication, various canals have been cut between the Mississippi and the lakes of the low country. Railways also connect the principal towns.

Louisiana is subdivided into two great districts, —the E. and W.; the former comprising 22, and the latter 10 parishes, equal in point of extent to the counties in the other states. New Orleans is by far the most considerable town in the state, and is, indeed, one of the greatest emporiums, not of the Union merely, but of the New World. Baton Rouge, also on the Mississippi, is the seat of government. The latter is vested in a governor, a senate, and house of representatives. The senate consists of 32 members, chosen every four years, each of whom must be resident in the district, and possessed of landed property of the value of 1,000 dollars. The house of representatives consists of 98 members, chosen every two years, each of whom must be 21 years of age, and have landed property worth 500 dollars. The right of election is in every white male citizen, who has resided in the county for which he claims to vote for the year next preceding the election, and has paid a state tax in the last six months. The members of the house of representatives receive each four dollars a day during the session. The governor is chosen by the joint ballot of both houses, for four years, and is ineligible to office during a similar succeeding term. The resolutions of 2-3ds of the members, in both houses of the legislature, become law without the concurrence of the governor. The legal code of Louisiana is a modification of the old French and Spanish laws, interwoven with those in force in other parts of the Union. Justice is administered in a supreme court, circuit courts, and inferior tribunals, presided over by judges appointed by the governor, with consent of the senate, and who hold office during good behaviour. The judges of the supreme court have each 5,500, and those of the circuit courts 3,500 dollars a year. Education is not conducted on any uniform plan in this state; but it has a large extent of valuable reserved school lands, and three colleges, Louisiana College at Jackson, Franklin College at Opelousa, and Jefferson College, par. of St. James, each of which have a grant of 15,000 dollars a year. But the cause of education, as well as the general prosperity of the state, suffered much in the civil war, in which the citizens took an active part, on the side of the so-called Confederate States. The 'ordinance of secession' was voted by the Louisiana convention Jan. 25, 1861; but the city of New Orleans was taken by the United States troops on the 28th April, 1862, and the rest of the state occupied in 1863.

The region W. of the Mississippi was first explored by Europeans in 1512; but no effective settlement was made in it till about the end of the 17th century, when it was in part colonised by the French. The latter ceded it to Spain in 1763, but again recovered its possession in 1800. At that period, the whole territory, from the Gulf of Mexico to about the 50th deg. of N. lat., and from the Mississippi on the E. to the Rocky Mountains on the W., was comprised under the term Louisiana; and the whole of this immense territory, the possession of which was of such vast consequence to the United States, was purchased by them, in 1803, from France for 15,000,000 dollars. In 1804, the present state of Louisiana was constituted a territory under its existing limits; and, in 1812, it was admitted into the Union as an independent state. It sends 5 representatives to congress.

LOUISVILLE, a flourishing commercial city of the U. States, being the largest and most populous in Kentucky, cap. co. Jefferson; on the Ohio, above, but contiguous to, the rapids, 50 m. W. Frankfort, and 85 m. SW. Cincinnati. The pop., which in 1800 amounted to only 600, had in 1830 increased to 10,336, in 1840 to 21,210, and in 1860 to 69,740. The town, which is in a picturesque situation, is regularly laid out. Three broad and well paved streets, running parallel to the river, are intersected by others at right angles. The houses are compactly built of brick and stone, and, though generally of an ordinary description, many are in very good taste. The chief public buildings are the city-hall, gaol, some forty churches, a theatre, a free school, the U. States' branch bank, the union-hall, an asylum for disabled boatmen, and some workhouses. The free-school, built in 1829, has accommodation for 700 or 800 pupils. A medical school was instituted in 1837, and is in a flourishing state.

Louisville has manufactures of cotton yarn and stuffs, woollen goods, cotton bagging, iron, cordage, and hats, in which steam power is largely employed, and many type and brass foundries, tanneries, and flour mills. The falls of the Ohio are no serious obstruction to navigation, at least when the river is full, the whole descent being only 22 ft. in 2 m. To avoid them, however, the Louisville and Portland canal has been excavated in part through a solid ridge of limestone, to the depth of 12 ft. This canal is 2 m. in length, in some places 40 ft. deep, and of sufficient width to admit the largest class of steamers. There belonged to Louisville, in 1864, about 25,000 tons shipping, being all, or mostly all, steamers. The commercial transactions of the town are very large; and it has, with the exception of New Orleans and St. Louis, a more extensive trade than any town in the western part of the Union. Louisville was founded in 1780, and incorporated as a city in 1828.

LOUTH, a marit. co. of Ireland, on its E. coast, being the most northerly in the prov. of Leinster, having E. the Irish Sea; N. Carlingford Bay, which separates it from Down and Armagh; and W. and S. Monaghan and Meath. Area, 200,955 statute acres, of which 14,916 are unimproved

Digitized by Google

mountain and bog. Surface rugged in the N., but in other parts generally flat or undulating. Soil generally fertile. Estates of a medium size. Farms of all sizes, but the great majority small. Its crops and agriculture are similar to those of Meath (which see). Minerals unimportant. The linen manufacture is carried on to a considerable extent, especially at Drogheda, but the business has materially declined. Principal rivers Boyne and Dee. Principal towns Drogheda, Dundalk, and Ardee. Louth is divided into 4 baronies and 61 parishes; and sends 4 m. to the H. of C., viz. 2 for the co., and 1 each for Drogheda and Dundalk. Registered electors for co. 2,441 in 1865. At the census of 1861 the co. had 14,655 inhabited houses, and 75,978 inhabs.; while, in 1841, it had 22,856 inhab. houses, and 128,240 inhabs.

LOUTH, a mun. bor., market town, and par. of England, co. Lincoln, in the Wold div. of Louth-Eske hund., parts of Lindsey, 22 m. ENE. Lincoln, 127 m. N. London by road, and 141 m. by Great Northern railway. Pop. of bor., 10,560 in 1861. The town, agreeably situated in a fertile valley SE. of the wolds of N. Lincoln, has of late been much improved, and is well paved and lighted with gas. It has several handsome, and a few elegant buildings, the houses generally being of brick roofed with slate. The principal public buildings are the mansion-house, town-hall, sessions-house, and a theatre. The church is a large Gothic structure, with a beautiful E. window, and one of the finest towers in the country, above which rises a light octangular spire, to a height of 290 ft. from the ground. The living is a vicarage attached to a prebend in Lincoln cathedral. A second par. church, once existing, is now destroyed; but its site is marked by the cemetery still used as a place of interment. There are district churches and a Rom. Cath. chapel; and the Wesleyan and Primitive Methodists, Baptists, and Independents have each places of worship; to which, as well as the churches, well-attended Sunday schools are attached. The free grammar-school, founded in 1552 by Edw. VI., is endowed with landed property producing 700*l.* a year; the half going as salary to the master, the fourth to the usher, and the residue to the support of 12 poor women. A school, established in 1677, provides instruction in English and mathematics to 20 free boys and 30 pay scholars. There is also a national school; and among the charitable institutions are almshouses, a dispensary, benevolent society, and Bible society.

Louth contains little or no manufacture, there being few establishments of any importance. The river Ludd flows round a considerable portion of the town: it is not navigable, but feeds a canal beginning at the NE. extremity of Louth, and communicating with the Humber. The principal traffic outwards is that of corn for London, and the W. riding of Yorkshire; the inland freight being chiefly coal, most of which comes down the Humber from York. Louth was incorporated in the 5th of Edward VI., whose charter was confirmed by other subsequent monarchs, and, lastly, by Geo. IV. Under the Municipal Reform Act, the bor. is divided into two wards, and is governed by a mayor, and three other aldermen, with twelve councillors: it has a commission of the peace under a recorder. Louth is also one of the polling-places for the N. or Lindsey div. of the co., and the quarter-sessions for the co. are held here in Jan., July, and Oct., the April sessions being at Spilsby. Markets on Wed. and Sat.: considerable horse fairs, April 30, 3rd Monday after Easter, Aug. 5, and a large cattle fair, Nov. 23.

LOUVAIN (Dutch *Leuven*), a town of Belgium, and formerly one of the most populous and industrious in that country, prov. S. Brabant, cap. arrond. and cant., on the Dyle, a tributary of the Scheldt, and on the railway between Brussels and Liege, 14 m. ENE. the former. Pop. 32,026 in 1861. The town is partly surrounded by walls, and partly by an earth rampart from 80 to 100 ft. high, with a deep fosse outside, the total circuit of both being about 7 m.: a great part of the inclosed area consists, however, of fields and gardens. But its fortifications are now cut through by different roads, and are mostly converted into boulevards. The castle, now in ruins, on a hill near the Dyle, is of considerable, but uncertain, antiquity: it was long the residence of the counts of Louvain. The town which, though regularly laid out, is not generally well built, has several interesting public edifices. The town-hall, begun in 1440, and completed about ten years afterwards, one of the finest specimens of the florid Gothic in Europe, has been recently repaired, or rather restored, with great skill, at the joint expense of the town and government. It is lofty, has six light and elegant minarets, and is most elaborately ornamented. The collegiate church of St. Peter, a curious old edifice probably of the 14th century, with some good paintings, has a finely carved pulpit, and had, formerly, a steeple, blown down in 1604, which is said to have been of the extraordinary height of 533 ft., with two magnificent lateral towers. The university of Louvain was founded by John IV. duke of Brabant, in 1426; but it was not till 1631 that it obtained the privilege of teaching theology, for which it was afterwards so celebrated. It had, in the days of its prosperity, more than 40 colleges, some of which were established in halls that had previously belonged to the clothiers. This famous seminary, after being suppressed by the French in 1797, was re-established in 1817. It has at present 20 colleges, some of which are handsome buildings. Its library, originally the drapers' hall, is richly decorated with antique wooden carvings. Edward III. of England resided for a year, and the emperor Charles V. was brought up in the castle of Louvain. The town has seven churches, five nunneries, eight hospitals and charitable asylums, a royal college, and a college for ecclesiastics; and is the seat of tribunals of primary jurisdiction and commerce, a chamber of commerce and manufactures, and a board of forest inspection.

In the 14th century Louvain was one of the great seats of the woollen and linen manufacture, which supported, it is said, no fewer than 150,000 individuals within the city. But the manufacturers having revolted, in 1382, against the Duke of Brabant, many of them emigrated, on the revolt being suppressed, to foreign countries, and among others to England; where, being hospitably received by Edward III., they assisted in laying the foundations of the woollen manufacture. Louvain seems never to have recovered from this disaster. It has still some inconsiderable woollen fabrics; but it is now principally celebrated for its beer, said to be the best in Belgium. The different breweries produce about 200,000 barrels a year, a large proportion of which is sent to Antwerp and into Flanders. Louvain has also manufactures of lace and cotton yarn, and several dyeing and cotton-printing establishments, with tanneries, distilleries, and glass works, and numerous oil and flour mills. It is connected with the Demer near Mechlin by the canal of Louvain, navigable for vessels of 150 tons; and has a considerable trade in corn, clover seed, flax, and hemp, the produce of the surrounding country. Under the French it was included in the dép. of the Dyle.

LOUVIERS, a manufacturing town of France, dép. Eure, cap. arrond., on the Eure, and on the road from Rouen to Evereux, 12½ m. N. the latter, and 16 m. SSE. the former city. Pop. 10,841 in 1861. Louviers consists of an old and new town; the former is built chiefly of wood; the latter, which is the residence of the principal manufacturers, has a broad and elegant main street, and many well-built brick and stone houses. The Eure, which is navigable from the Seine as far as Louviers, is here crossed by several good bridges. A large church, supposed to have been constructed during the early crusades, a hall built by the Templars towards the end of the 12th century, a theatre, and a public library are the chief public buildings. Louviers was formerly a fortress of some strength, and portions of its wall still exist. It is now, however, distinguished wholly by its industry, and ranks as one of the first seats of the woollen manufacture of France. Fine broad cloths and woollen yarn are its chief products; but, of late years, other fine woollen goods have been introduced. Cotton yarn, linen thread, and soap are made; and there are many dyeing establishments, and bleaching grounds, tanneries, sugar refineries, and factories for looms and other machinery. The woollen manufacture employs about 7,000 hands, and the annual value of the goods produced is estimated at 12,500,000 francs, or about half a million sterling.

The peace between Philip Augustus and Richard I., in 1196, was concluded at Louviers. The town was taken and sacked by Edw. III. and Henry V.

LOWELL, a considerable and rapidly increasing town or city of Massachusetts, U. States, co. Middlesex, on the Merrimac, where it is joined by river Concord, considerably below Pawtucket Falls, 24 m. NW. Boston. The pop., which in 1830 was only 6,474, had risen to 36,830 in 1860. The rapid rise of Lowell is wholly owing to the great extension of its cotton manufactures. Though founded so late as 1813, it is now one of the most important manufacturing towns of the Union. Its situation is healthy and picturesque; it is well laid out, with wide streets, neat and often elegant houses, and numerous and well built public edifices. The Merrimac affords an ample supply of water-power to the cotton and other mills. A canal, 1½ m. in length, 60 ft. in width, and 8 ft. in depth, extends from the head of Pawtucket Falls to Concord River, whence water is conveyed by lateral canals to the different factories. This canal is the property of a company with a capital of 600,000 dollars, which owns a large establishment for the manufacture of machinery, and by which the mills at Lowell are usually built. Besides this extensive factory, there are a great number of other mills at Lowell, mostly built of brick, and from four to seven stories in height, besides machine shops and print works, and numerous joint-stock companies are engaged in the cotton manufacture. The goods principally manufactured are of a coarse description, consisting of sheetings, shirtings, drillings, printed cloths, calicoes, and negro cloth. Great quantities of cotton yarn also are spun. Including machinery for mills and railway engines and cars, the annual value of the goods made in the mills of Lowell is estimated at 25,000,000 dolls. Lowell has also manufactures of gunpowder, glass, flannels, cards, whips, harness, carriages, boots and shoes, brass, copper, and iron wares, planing and reed machines, and bleaching works. A railroad 26 m. in length connects Lowell with Boston. Lowell was incorporated as a town in 1824, and erected into a city in 1835. Under the amended constitution of Massachusetts of 1840, it sends 9 mems. to the H. of Rep.

The progress which the cotton manufacture has made and is making at Lowell, appears to have led many persons to suppose that it is destined to become, at no distant period, a formidable rival to Manchester and Glasgow. But there seems little cause for such a supposition. The manufactures of Lowell, and of America in general, will necessarily, for very many years, be confined to the coarser fabrics; and it appears unlikely that they should, under existing circumstances, be able to come into competition with the finer descriptions of British goods. The wages of labour are higher in the U. States than in Great Britain; and machinery is also more expensive, and the profits of stock higher. In fact, the only advantage on the side of the Americans is the greater cheapness of the raw material; and this, in the case of Lowell, and, indeed, of New England generally, amounts to so little as not to compensate by any means for the higher rate of wages.

LOWESTOFF, or LOWESTOFT, a market town, sea-port, and par. of England, E. coast, co. Suffolk, hund. Mutford and Lothingland, 22 m. SE. Norwich, 104 m. NNE. London by road, and 117 m. by Great Eastern railway. Pop. 10,663 in 1861. The town consists of one principal street, which has a gradual descent from N. to S.; and from this main avenue proceed several other streets towards the W.; but though well paved and lighted, they are narrow and irregular. In the market-place is a building open below, the upper part of which is used for assembly-rooms and other purposes; and there is a small theatre. The church is a handsome Gothic building, with a tower and steeple 182 ft. high, the living being a vicarage, in the gift of the Bishop of Norwich. There are also several district churches; and the Independents, Baptists, and Wesl. Methodists have places of worship, with attached Sunday schools. A free-school furnishes instruction for 40 boys, and there is a good national school. A friendly and benevolent society, a lying-in charity, and dispensary are the principal charities. Several handsome lodging-houses and hotels have been built for visitors coming here for bathing in the summer months; and there are warm baths, reading-rooms, and libraries. At the S. end of Lowestoff is a battery, with 13 pieces of cannon, and two others are placed at the N. end, near which latter, on a high point of land, stands a round tower, the upper lighthouse (first built in 1676, and rebuilt in 1778). On the beach, below the cliff, is another lighthouse; and by keeping both in a line, vessels are directed safely through the sand banks, which render this coast especially dangerous. The harbour, or rather road, is defended on the E. by the Corton Sand, the channel between the latter being marked by a light vessel, and well buoyed. Since 1827, an artificial harbour has been formed on a grand scale at Lowestoff, which communicates with the lake Lothing to the W. of the town; and then, by a short canal, with the Waveney, which is navigable to Beccles. Another canal joins the Waveney with the Yare, which has been rendered navigable for vessels drawing 10 ft. water as far as Norwich. Owing to the flatness of the ground, no locks, except the sea-lock at Lowestoff, are required on either line of navigation. This improved communication has been of great service to the country which it intersects, and especially to Beccles and the city of Norwich, on which, indeed, it has conferred most of the advantages of a sea-port.

The chief consequence of Lowestoff, as a port, is owing to its herring fisheries: the quantity of fish annually taken and cured is very large; while, at the same time, their quality is considered supe-

Digitized by Google

rior, and they fetch higher prices in the London market than those sent from Yarmouth. Sail-making, boat-building, and the manufacture of rope and twine, are extensively carried on; and many hands are employed in making barrels in which to pack the cured fish previous to their being sent to market or exported. Markets on Wednesday: fairs, May 12, Michaelmas Day, and Oct. 10.

Lowestoff derives historical celebrity from the fact, that, on 3d June, 1665, a sanguinary naval engagement was fought off the coast between the English and Dutch, the fleet of the former being commanded by the Duke of York, afterwards James II.; and that of the latter by Admiral Opdam, who was killed in the battle.

LOXA, or LOJA, a town of Spain, in Andalusia, prov. Granada, on the Xenil, 26 m. W. Granada, and 92 m. E. by S. Seville, Pop. 11,850 in 1857. The town stands on the S. side of a rocky gorge, by which the Xenil escapes from the fertile *Vega* of Granada; and its situation is peculiarly picturesque, being built on a steep acclivity, embosomed in groves of fruit trees, and overlooked by a toppling mountain, forming one of the offsets of the Sierra Nevada. It contains 8 parish churches, with 2 hospitals; and on an eminence, at its S. extremity, is a ruined Moorish castle, once of great strength and celebrity, but now the residence of a few hermits. Loja is proverbially noted for the fertility of its gardens, olive-grounds, and orchards, and the abundance and purity of its springs.

LOZERE, a dép. of France, reg. S., between lat. 44° and 45° N., and long. 3° and 4° E., having N. Haute-Loire and Cantal, W. the latter dép. and Aveyron, S. Gard and E. Gard and Ardèche. Length, NW. to SE., 65 m.; greatest breadth nearly 50 m. Area, 516,973 hectares; pop. 137,367 in 1861. This dép. lies chiefly on the NW. slope of the Cevennes, with the ramifications of which it is mostly covered. The surface varies from 2,500 to 5,000 ft. above the level of the sea; but its average elevation may be estimated at 3,800 ft. The dép. derives its name from the mountain Lozère in the SE., one of the principal summits of the Cevennes, 4,888 ft. in height. The rivers Lot, Tarn, Allier, and Gard have their sources within this dép., which is not, however, watered by any stream of magnitude. There are several small lakes, one of which appears to occupy the crater of an extinct volcano. The climate is cold; snow remains on the mountains during the greater part of the year, and fogs are frequent. The soil is mostly stony in the N. and S., and calcareous in the centre. The surface is distributed as follows, viz. arable land 208,660 hectares, meadows 35,166 h., forests 44,589 h., and heaths, wastes, &c., 179,000 h. Agriculture is very backward, and there is a great subdivision of property, and smallness of the farms. Rye and wheat are raised, but not in sufficient quantities to supply the consumption. In the Cevennes potatoes are extensively cultivated, and form, with chestnuts, the chief food of the inhabitants. About 50,000 hectolitres a year of inferior wine, and some oil and silk are produced: the sharp winds experienced in the dép. are, however, unfavourable to the silk-worm. Hemp and flax succeed well, but the culture of madder and saffron has been abandoned. The mountain pastures are excellent, and feed many sheep; coarse woollens and serges are made in almost every peasant's family. The dép. is rich in mineral products, but the mines are but little attended to. Lozère is divided into 3 arronds.; chief towns, Mende, the cap., Florac, and Marvejols.

LÜBECK, a city and republic of N. Germany: the city, which is the nominal cap. of the Hanseatic Towns, and the seat of their high court of appeal, is sit. on the Trave, about 10 m. (direct distance) from Travemunde, at its mouth in the Gulf of Lübeck, in the Baltic, 36 m. NE. Hamburg, and 38 m. SE. Kiel, with both which towns it is connected by railway. Pop. of city, 26,672; and of city and state, 49,482, in 1861. Area of state, 127 square miles. The city is built on a gentle ridge, on one side of which runs the Trave, and on the other the Wackenik. The environs are well wooded, and enlivened with cheerful villas, particularly those along the banks of the Trave. The streets, which are steep, are wider than those of Hamburg. The houses generally appear to be old, and mostly built of stone; like those of Hamburg and Antwerp, their gable ends face the street. They are in general very lofty, 6 or 7 stories not being uncommon. On the old ramparts of the city is a promenade shaded with fine trees. The principal buildings are the cathedral, 5 churches, and the town-hall. The cathedral is a curious old building with spires much out of the perpendicular. The church of St. Mary is handsome in the interior, and some good paintings of ancient date. Among them is the celebrated picture of the Dance of Death, usually attributed to Holbein, but which belonged to the town for at least 35 years before Holbein's birth. Behind the high altar is an old astronomical clock, constructed in 1405. which exhibits at a certain hour figures representing the Twelve Apostles, who sally forth and march in regular succession, passing a figure of the Saviour, to whom they each face round, and having made a quick and familiar nod of the head, they then march onwards to a door on the opposite side, which closes upon them the moment the twelfth apostle has entered. The church has also a fine organ, erected in 1855.

The cathedral, begun in 1170, and finished in 1341, has many monuments of the senatorial families of Lübeck, some of which are well executed, and, among others, a curious picture, by Hans Hemling, dated 1471, the subject of which is the Passion of Christ, treated in 23 distinct groups. The town-hall, a turreted Gothic building, faces the market-place. It was the place of assembly for the deputies from the cities formerly comprised in the Hanseatic League; but the hall in which they held their meetings was destroyed in 1817. Lübeck has a Calvinist and a R. Cath. church, an exchange, arsenal, and mint, several hospitals and benevolent institutions, a gymnasium, a city-school, ecclesiastical and teachers' seminaries, schools of surgery, midwifery, navigation, drawing, swimming, and numerous other schools, a public library of 60,000 vols., a society of useful sciences and arts, a bible society, a house of correction and prison, and a theatre.

Lübeck, though by no means so prosperous and important as formerly, is still a thriving commercial town. Many of its modern-built houses are on a grand scale. Their basement-stories are used as magazines or warehouses, and they have commonly large court-yards into which the carriages of the proprietors are driven. In Lübeck and its territory are numerous breweries, distilleries, iron forges, and linen yarn factories; besides manufactures of hats, vinegar, starch, tobacco and snuff, wax lights, paper and cards, musical instruments, with numerous oil and other mills, several printing establishments, and a few woollen, cotton, and golden and silver lace factories. Its trade is principally confined to the N. and W. of Europe. Upwards of 1,600 vessels a year enter

Digitized by Google

and leave its port; they are principally Danish, the rest being Russian, Swedish, Lübeck, Dutch, English, and Prussian. Lübeck communicates by means of the Trave and a canal, as well as by railway, with Hamburg, with which it has an extensive intercourse. The principal article of export is corn: the principal articles of import are wines and silks, from France; cottons, hardware, and other manufactured goods, from England. It has an extensive commission and transit trade, and considerable markets for wool, cattle, and horses. Vessels of considerable burden load and unload by means of lighters at Travemunde, at the mouth of the river, which is properly the port of Lübeck. Steam-boats, of small draught of water, ply on the river between the city and its port. Steamers also sail at fixed periods for Petersburg, Stockholm, and Copenhagen.

Accounts are kept in marks of the value of 1*s.* 2·67*d.* each, divided into 16 schellings of 12 pfennigs. The Lübeck rix-dollar, equivalent to 3 marks, is worth 4*s.* 6·72. The lb. = about 18 oz. avoird.; 112 lbs. = 1 centner.

The territory subject to Lübeck consists of a district of 82 sq. m., immediately adjacent to the city, surrounded by the territories of Mecklenburg, Holstein, and Oldenburg, and the Baltic; of numerous small detached portions of surface enclosed by Holstein; and of the *Vierländer*, and town of Bergedorf, the sovereignty over which it shares with Hamburg. The land is very productive, yielding good crops of corn, fruit, and kitchen vegetables; but the rearing of live stock is the chief occupation of the rural pop. The government is vested according to the constitution of 1851, in the senate and house of burgesses (bürgerschaft); the former consists of 14 members, elected for life, and is presided over by two burgomasters, who hold office for two years each and retire in rotation. There are 120 members in the house of burgesses, elected by all citizens, who are members of any of the twelve guilds of the city. The house of burgesses has the initiative in all deliberations relative to the public expenditure, foreign treaties, &c.; the senate is entrusted chiefly with the executive duties, but its sanction is necessary to the passing of new laws. Public revenue, 1,303,371 marks, or 76,663*l.* in 1862; expenditure about equal. Lübeck has one vote in the full council of the German Confederation, and, along with the other Hanse Towns, a vote in the committee. It furnishes a contingent of 679 men to the army of the Confederation.

It is uncertain when or by whom this city was founded, but no doubt it existed *anno* 1140. Early in the 13th century, the emperor Frederick II. made it one of the free towns of the empire; and, from 1260 to 1669, Lübeck was the repository of the archives of the powerful association of cities included in the Hanseatic League, and the station of the confederated fleet. The dissolution of the League marked the epoch of the decline of Lübeck. After the battle of Jena, Blucher threw himself into Lübeck, which, after a severe engagement, was taken by the French, and sacked. In 1810 it was made the cap. of an arrond. in the dép. Bouches de l'Elbe; but was restored to rank, as a free city, by the Congress of Vienna in 1815. Sir Godfrey Kneller, the painter, Mosheim, the historian, Meibomius, and H. Muller, were natives of Lubeck.

LUBLIN, a city of Russian Poland, cap. of the palatinate of Lublin, in a marshy situation, on the Bistrzyca a tributary of the Wieprz, 97 m. SE. Warsaw. Pop. 18,304 in 1858. Lublin is subdivided into the old and new town, the former situated on an eminence, and the latter on the bank of the river. Formerly, the city was fortified by a wall and ditch, but these works were destroyed in the civil wars towards the end of the 18th century. It has still, however, a citadel standing on a high rock, and the ruins of a castle built by Casimir the Great. Its streets are irregular and its houses mostly of wood. The principal edifices are a handsome town-hall, the Sobieski palace, the cathedral, the churches of the Dominicans and Carmelites, and that formerly belonging to the Jesuits. There are in all 18 churches and 12 convents, 6 nunneries, a spacious synagogue, an episcopal seminary, a Piarist college, several civil and military hospitals, an orphan asylum, and a theatre. Lublin is a bishop's see, and the seat of the second court of appeal in Poland. It has manufactures of coarse woollens; considerable trade in woollen cloth, corn, and Hungarian wines; and three large yearly fairs, each lasting a month, and attended by German, Greek, Armenian, Arabian, Russian, Turkish, and other traders.

LUCCA, a former state of Central Italy, now composing the province of Lucca. Pop. 242,542 in 1862; area, 1,450 square chilos, or about 420 square miles. The Apennines skirt the N. part of the province, 2-3ds of which they cover with their ramifications; but none of these rise to the height of 4,000 ft. The rest of the surface is a low but fertile plain, which becomes marshy towards the coast. The general slope of the province is from N. to S., in which direction it is traversed by the Serchio near its centre. This river is not navigable, but is of great use for irrigation; most of the other streams in the prov. are its tributaries. Near the shore are some small lakes. The soil, which is calcareous and stony in the N., is sandy in the S., and rich in the intermediate region. The pop. is chiefly agricultural, but the corn produced is not sufficient for home consumption; the deficiency being principally supplied by beans, which are largely cultivated, and partly, also, in the mountainous districts by chestnut flour. The latter is sometimes exported to the neighbouring provinces, the price varying from 6*s.* 8*d.* to 10*s.* a sack. The culture is extending of all the articles for the production of which the soil and climate afford facilities. The number of mulberry trees has rapidly increased of late, and the manufacture of olive oil has been materially improved. The latter is esteemed the best in Italy and fetches the highest price, especially that grown on high grounds. It is exported to the value of about 32,000*l.* a year. Wine is said to give a fair return to the cultivator; hemp and flax are raised, and the produce of silk is very considerable. Lucca was early distinguished by proficiency in the silk manufacture; and, in 1319, the culture of the mulberry became an object of public attention. Rice is grown near the coast, in which neighbourhood also most of the cattle in the province are reared. There are nearly 25,000 landed proprietors, of whom a large part have necessarily very small properties, and belong to the class of agricultural or manufacturing labourers. The principal causes which have led to this subdivision of the land, as well as to the rapid increase and great density of the pop., appear to be the habit of dividing leasehold property equally among the males of a family, the suppression of monasteries, and the abolition of entails.

The *métayer* system of agriculture is not so prevalent here as in other parts of Italy. The ordinary wages of country labourers vary from 5*d.* to 6½*d.* a day with food: farm labourers, who dwell with their masters, get from 45 to 55 lire a year,

The mountaineers, who depend almost entirely upon the culture of the chestnut, are said to be in a better condition than the peasantry of the hills and plains. The inhabitants of the districts of Pontito and Sciappa are in particular distinguished by their robust and healthy appearance, and by the beautiful complexion and regular features of the women. This last circumstance is the more remarkable, as, during a great part of the year, these women have to bear the whole burden of domestic labour; while their husbands, fathers, and brothers emigrate to the Tuscan Maremme, and the North Italian provinces, in search of harvest and other work. During winter, about 2,600 labourers set out for these territories, and return in summer, bringing with them their small savings, the aggregate of which may amount to 10,000*l.* Most of the Italian image and plaster-cast-makers, in other countries of Europe, are emigrants from this province. Mining is little or not at all pursued, though copper, iron, and lead ores are met with. Statuary marble and other fine marbles are found in great abundance. From 5,000 to 6,000 hands are employed in the manufacture of silk, wool, and cotton; and there are about 30 paper factories, and others of linen cloth, straw and beaver hats, leather, glass, and iron goods. The city of Lucca is the chief seat of manufacturing industry.

The value of the exports of the province amounts to about 4 million lire a year, more than 1-4th part of which is derived from oil and silk. These articles go chiefly to other parts of Italy, and to France, England, and the Levant. Grain, seeds, wine, liqueurs, live stock, lambskins, and fresh fish are sent to Florence and Rome, and woollen goods to the rest of Italy and the Levant. The imports, which mostly come through Leghorn, consist principally of grain, seeds, rice, fine wines, hemp, flax, cotton, colonial products, and salted provisions.

Lucca, like the rest of Italy, experienced many changes in the middle ages. The city of Lucca attained its liberty after the decease of the Countess Matilda, in 1115, when it became an independent republic. In the next century it again fell under feudal authority, and afterwards belonged successively to Louis the Bavarian, and to noble Genoese, Parmesan, Veronese, and Florentine families. In 1370, it again obtained its liberty, by purchase, from the emperor Charles IV., for 100,000 crowns; and from that date to 1805, it was governed by its own *gonfalonieri*. Napoleon united Lucca with Piombino in a principality; the Congress of Vienna, in 1814, erected it into a duchy. But in virtue of arrangements consequent on the death, in 1847, of the Archduchess Maria Louisa, the greater part of Lucca was added to Tuscany, and the rest to Modena, until the whole of it was annexed, in 1860, to the new kingdom of Italy.

LUCCA (anc. *Luca*), a city of Italy, cap. of prov. of same name, in a plain near the left bank of the Serchio, 11 m. NE. Pisa, and 38 m. W. Florence, on the railway from Bologna to Leghorn. Pop. 64,666 in 1862. The city is surrounded with walls; which would form, however, but a very feeble defence against an enemy. The towers of the churches, rising above the ramparts, have a fine effect in the rich and beautiful landscape, the view being bounded by vine-clad hills spotted with villas, over which tower the craggy Apennines. On a nearer inspection, the public buildings are less pleasing in their architecture than in their distant effect; yet many of them are very curious structures. The churches are all, more or less, imitations of the cathedral at Pisa; smaller, indeed, in size, but some of them superior in the proportions and disposition of the parts. Most of the churches are built of Carrara marble. The cathedral, mostly constructed in the 11th century, has much carved, inlaid, and mosaic work; a rich display of stained glass; a Madonna, by Fra Bartolommeo, and some pictures of the Venetian school. The churches of San Michele and San Frediano are both ancient. The latter belonged to a monastery restored and enriched towards the close of the 7th century. The former ducal palace, now converted into the seat of the provincial government, is a large structure, the exterior of which presents nothing remarkable. The *Palazzo Pubblico*, the residence of the *gonfalonieri*, in the days of the republic, is an immense and noble edifice, which makes the city round it look little. There is a small but handsome theatre. Lucca is generally well built; many of the private houses are very good, though their pointed roofs and gable ends give it the aspect rather of a Flemish than an Italian city. The streets, though crooked, are broad and well-paved; and the ramparts, planted with trees, form pleasing promenades. It has several colleges, a seminary, founded by Eliza, princess Bacciochi, sister of Napoleon, for 100 young ladies, a botanic garden, a ducal library with 21,000 vols., a university library with 16,000 vols., and a savings' bank. The city enjoys the title of *l'industriosa*, and is one of the principal inland commercial towns in Italy. Its manufactures mostly consist of silk and woollen fabrics. The city has also a considerable trade in olive oil. About 12 or 13 m. up the valley of the Serchio are the baths of Lucca, picturesquely situated, and frequented by numerous visitors. The temperature of the hottest spring is about 128° Fah.

Lucca was colonised by the Romans A.U.C. 575. It was a municipal town, and frequently the head quarters of Cæsar, during his command in Gaul. Traces of a Roman amphitheatre are still discoverable. This city was taken by the French in 1799; and, in 1805, Napoleon made it the cap. of a principality he erected for his sister's husband, Bacciochi.

LUCENA (an. *Elisana*), a town of Spain, in Andalusia, prov. Cordova, 31 m. SSE. Cordova, and 82 m. E. Seville. Pop. 14,800 in 1857. The town stands on the slope and at the foot of a hill, comprising some respectable streets, lined with good houses, two squares, and agreeable suburbs. The neighbourhood is distinguished for the abundance of its produce in fruit and grain, which chiefly contributes to the support of the pop.; but the processes of tillage are of the rudest description.

LUCERA (an. *Luceria*), a city of South Italy, prov. Foggia, cap. canton, on a height abrupt towards its N. side, 12 m. WNW. Foggia. Pop. 14,517 in 1861. The houses of the city, which are all tiled, are generally good; but the streets are narrow, ill-paved, and dirty. Some ancient walls, in very bad condition, inclose it; and 5 gateways open from them to an outward road, which winds entirely round the town. A few gardens and convents are scattered about, and these, with some olive plantations and vineyards, in which the natives have small country houses, contribute greatly to enliven and diversify the prospect. The vines are trained low, and supply the proprietors with a good strong white wine. About ½ m. from the city, on the edge of the same eminence, is the castle of Lucera, a ruined Gothic fortress, erected by the emperor, Frederick II. The extent of its walls would almost lead to the belief that they surround a second city; but they at present encircle only an empty area, overgrown with grass.

Digitized by Google

There can be no doubt, from the Roman inscriptions and pieces of sculpture found within the area of this building, that its situation is identical with that of the citadel of the anc. *Luceria*, taken by the Samnites, after the defeat of the Romans at the Caudine Forks, and afterwards retaken by L. Papirius. This castle is a very conspicuous object; it has a deep moat, a drawbridge, 2 large round towers, one supporting the telegraph which communicates with Foggia, and the other a piece of masonry, built with consummate skill: in the interior of its area are traces of extensive cisterns. The cathedral of Lucera was formerly a Saracenic mosque, and preserves, on the exterior, some marks of its origin. It has a pulpit adorned with that kind of Byzantine mosaic, of which the cathedral of Salerno offers so fine a specimen; but its principal ornaments are 18 beautiful pillars of verd antique, originally found under the cathedral itself, and supposed to have belonged to a temple of Apollo: the capitals are modern. Facing this church is the bishop's palace, considered the finest piece of architecture in Apulia. The tribunal and other public edifices render the appearance of this part of the city somewhat imposing. The *Tribunale* includes the criminal and civil courts for the prov., the register-office, the notarial chamber, the residences of the president and judges, and the public prisons. Lucera has a royal college, and an extensive private collection of coins, medals, and antiquities. Great numbers of cattle are kept in its neighbourhood, and its cheese is held in great repute.

Lucera is said to have been founded by Diomed, and was the cap. of Daunia under the Greeks; it afterwards became a Roman colony. Having fallen into decay, it was renovated in 1339, by Frederick II., who transported thither a colony of Saracens from Sicily, to whom he gave great privileges. In 1369, however, Charles of Anjou expelled from the Neapolitan dominions such Moors as refused to embrace Christianity, and converted the mosque of Lucera into a church. Numerous antiquities of various ages have been discovered in and about Lucera.

LUCERNE (CANTON OF), a canton of Switzerland, ranking third in the Confederation, between lat. 46° 47′ and 47° 17′ N., and long. 7° 50′ and 8° 29′ E.; having N. Solothurn and Aargau, E. Zug, Schwytz, and Unterwalden, and S. and W. Berne: length NE. and SW. 36 m., breadth varying from 8 to 30 m.; area, 587 sq. m. Pop. 130,975 in 1860. The great bulk of the pop. are Roman Catholics. The surface in the N. is generally plain, undulating in the centre, and rising gradually towards the S., where are several mountain-ranges of considerable height. The principal of these is M. Pilate, between Lucerne and Unterwalden, its highest summit, the Tomlishorn, being estimated at 7,128 ft. above the level of the sea. The S. and E. parts of the canton are watered by the Reuss and Little Emmen; the other rivers are the Wigger, Sur, and Vinon, all having a N. course, and joining the Aar in Aargau. The Lake of Lucerne (which see) forms a part of its E. boundary, and the cant. comprises several small lakes, as that of Sempach, 4 m. in length, and memorable for the battle fought on its banks, 9th July, 1386 (see SEMPACH), those of Baldegg, 3 m. in length, and of Mauen. The climate is mild, and the soil more favourable to agriculture than that of most of the neighbouring cantons. More corn is grown than is required for home consumption. But industry is not nearly so active as in the neighbouring cantons of Berne and Zurich. The vine flourishes in some parts, fruit is plentiful, and wine and cider are produced; but the chief occupations of the people are cattle breeding and dairy-husbandry. The Entlibuch, or valley of the Little Emmen, about 25 m. in length, affords pasturage for about 7,000 head of cattle, and 11,000 sheep and goats: the inhab. make large quantities of cheese, which, though not so good as that of the Emmenthal in Berne, is exported as the produce of the latter district. The inhab. of this valley are remarkable for their vigour, intelligence, and independent spirit, and are usually richer than those of the rest of the canton; but they are neither so well clothed, nor have such neat cottages as the peasantry of the Emmenthal. Traces of various metals are met with in this canton, but no mines are wrought. Manufacturing industry is unimportant, and is mostly confined to domestic linen weaving and spinning. The inhab. are more occupied in the transit trade from N. Switzerland across the St. Gothard, than in any commercial dealings of their own.

The government is vested in the Council of One Hundred, 50 of whose members are chosen from among the citizens of the cap., and 50 from the inhab. of other parts of the canton. The 18 arrondissements into which the cant. is subdivided, and the three municipalities of Sursee, Sempach, and Villisau, send one mem. each to the council, and the remaining 29 mems. from the rural districts, are chosen by the council itself. The council also nominates 40 of the dépS. from the town of Lucerne, the remaining 10 being sent by that municipality. The right of election belongs to every native (bourgeois) of the canton 20 years of age, having property to the amount of 400 fr., and who has not been penally condemned, or is bankrupt. Members of the council must be 25 years of age, and pay taxes on property to the amount of 4,000 fr., or have rendered important services to the state. A body of 36 members, 30 years of age, chosen from among the council, and holding office for life, forms the senate, to which is confided all the executive power. The council meets regularly three times a year, but may be convoked oftener, at the pleasure of the senate. Two *avoyers*, or presidents, are chosen annually from among the senate, by the council, one to preside at the council and the other in the court of appeal. The latter tribunal is composed of 12 mems., chosen from the senate, and has authority in all legal causes, except in cases of capital punishment, when the senate is assembled to pronounce judgment. In ecclesiastical matters, Lucerne is subordinate to the bishop of Basle; but, being at the head of the Roman Catholic cantons of Switzerland, it was the permanent residence of the papal nuncio till 1835, when, in consequence of a dispute with the government, the nuncio removed into the canton of Schwytz. Public instruction is under the direction of a commission of senators; it has been till lately indifferently conducted, but is improving. The public revenue amounted, in 1862, to 982,646 francs, and the expenditure to 887,001 francs. A contingent of 1,734 troops is furnished to the army of the Confederacy.

LUCERNE, a town of Switzerland, cap. of the above canton, on both sides the Reuss, where it issues from the W. extremity of the Lake of Lucerne, 25 m. SSW. Zurich, and 43 m. ENE. Berne, with both which towns it is connected by railway. Pop. 11,522 in 1860. Its situation is highly picturesque, and its environs abound with pleasant promenades. The town is surrounded by a circle of watchtowers, and on the land side is enclosed by a continuous wall. It is pretty well built, and has several fine public edifices. The cathedral, said to be founded in 695, has a paint-

Digitized by Google

ing of Christ on the Mount of Olives, by Lanfranc, and an organ with nearly 3,000 pipes. The churches of St. Peter and the Jesuits are handsome buildings, and there are several convents; that of the Jesuits has, however, been converted into a lyceum. The most remarkable objects in Lucerne are the four bridges over the Reuss, connecting the great and little towns. Some of these are of considerable length; all of them are covered and ornamented with pictures illustrative of Swiss and Scripture history, or copied from the 'Dance of Death.' The town-hall, where the cantonal council meet, erected in 1606, is, though small, a handsome building. In the arsenal are several suits of ancient armour, including the coat of mail worn by Leopold of Austria, killed at the battle of Sempach. Lucerne has 2 hospitals, an orphan asylum, a mint, a gaol, a theatre, public libraries belonging to the town, the Jesuits, Cordeliers, and Capuchins, and a lyceum with 14 professors of theology, law, natural and moral philosophy, history, mathematics, and the fine arts. Attached to the lyceum is a large public school. Into this school every child until the age of twelve is admitted, upon payment of six francs a year, and is taught reading, writing, arithmetic, and the first principles of Latin. This privilege of acquiring, in early years, the rudiments of learning, is not confined to the city of Lucerne, nor even to the canton; persons may claim admittance from any other of the Swiss cantons, and even from foreign countries. The college and the school are one establishment; and every one who has received his education in the school is immediately received as a pupil of the college, and pays nothing for his instruction there. The original fund for this establishment amounted to 400,000 fr., but has subsequently been greatly increased by donations. The institutions for the intellectual and moral improvement of the inhab. are on a scale of great liberality, though education is far from being widely diffused either in the city or the canton generally. In the town is the celebrated model in relief of Switzerland, made by General Pfyffer; and in the Pfyffer Garden, outside the walls, is a monument, from a design by Thorwaldsen, to commemorate the Swiss guards who fell at Paris in the memorable attack on the Tuilleries, on the 10th of August, 1792. It represents a lion of colossal size, wounded to death, with a spear sticking in his side, yet endeavouring with his last gasp to protect from injury a shield bearing the fleur-de-lis of the Bourbons, which he holds in his paws. The figure, hewn out of the sandstone rock, is 28 ft. long and 18 ft. high, and its execution merits great praise.

The city of Lucerne was given by Pepin in 768 to the abbots of Murbach and Alsace; to whom it belonged till towards the end of the 13th century, when it was sold to the house of Hapsburg. But in 1332, the citizens, impatient of the Austrian yoke, rebelled, and joined the three primitive cantons of the Swiss Confederacy. In less than 30 years they conquered the territory which now forms the canton. The town was taken by the French, May 1, 1798, and was for eight months the cap. of the Helvetic government.

LUCERNE (LAKE OF), (Germ. *Vier-Waldstätter See*, or the Lake of the Four Forest Cantons), a lake of Switzerland, in nearly the centre of that country, between the cantons of Lucerne on the W., Schwytz N., Uri E., and Unterwalden S. It is the largest and decidedly the finest lake in the interior of Switzerland, and one of the most picturesque in Europe. It is of a singular cruciform shape, with an addition to its E. end, termed the Lake of Uri. Its greatest length is about 25 m.; but the breadth of any of its arms is seldom more than 2 or 3 m. Area estimated at 43 sq. m.; height of its surface above the level of the sea, 1,380 ft.; depth varying from 300 ft. near Lucerne to 900 ft. near its E. end. The Reuss traverses this lake in its entire length, emerging from it near its W. extremity. Its banks exhibit every gradation of scenery, from a gently rising and fertile country at its W. end, to rugged and savage sublimity on the Lake of Uri. Its E. and S. parts are surrounded by mountains rising to many thousand feet above the sea, the chief of which are Mounts Pilate and Righi. Its shores abound in localities memorable in early Swiss history. At the N. extremity of what is called the Lake of Uri is the little town of Brunnen, where, in 1315, a treaty was entered into by Uri, Schwytz, and Unterwalden, which gave birth to the Helvetic Confederacy. Like all mountain lakes, it is subject to violent tempests; and in consequence of the different positions of its different arms, and the influence of the surrounding mountains, different winds seem to prevail in different parts of its extent at the same time. Steamers ply regularly between Lucerne at its W. and Fluelen at its E. extremity, calling at the intermediate ports.

LUCIA (ST.), one of the British West India islands, belonging to the Windward group; in lat. 14° N., and long. 61° W., about 20 m. NNE. St. Vincent, and 25 m. S. Martinique. It is of an oblong shape, being nearly 32 m. in length by about 12 m. in its greatest breadth. Its area comprises 158,620 acres, with a population, in 1863, of 28,135, of whom about 27,000 coloured people. The central and E. parts of the island are occupied by the table-land called Capisterre; the W. part, which has a much less elevation, is called Basseterre. These two districts differ widely in physical aspect; but each, in an eminent degree, is subject to the operation of those agencies which are supposed to exert a baneful influence on the health of Europeans in tropical climates. Basseterre, the best cultivated portion of the island, abounds in swamps and marshes. Capisterre consists of a succession of abrupt mountains of the most picturesque and fantastic shapes, covered to the summit with forest trees and dense underwood, and intersected by numerous ravines, which, being too narrow to admit of free ventilation, are at all times replete with moisture, and choked up with decayed vegetation in every stage of decomposition. The climate is principally characterised by extreme moisture and variableness. During several months, but particularly in Oct. and Nov., rain is incessant, and showers are frequent for at least nine months of the year. Cool dry weather generally sets in about Christmas, and continues three or four months, at which time the climate is exceedingly pleasant, though not more healthy, since it is at that period of the year that the greatest mortality prevails. During the rest of the year the weather is sometimes dry and sultry, at others cold and damp, exhibiting a difference of 10 or 12 degs. of temperature in a few hours. The range of the thermometer is much the same as at Dominica. Nearly 9,500 acres are under crops, and 4,700 in pasture. The mountains are feathered to the top with tall forest trees, and the valleys at their feet abound with excellent timber.

St. Lucia has several good harbours, the chief being the Carenage on the W. coast, within which thirty ships of the line may lie in perfect security, without even, as is stated, being moored. The wish to command this admirable harbour was the motive which made the island formerly so much coveted by the European powers.

Digitized by Google

The quantities and value of the principal articles exported from St. Lucia, in each of the years 1861 and 1862, was as follows:—

Principal Articles	Quantities		Value	
	1861	1862	1861	1862
			£	£
Cocoa . lbs.	238,213	191,392	5,757	2,770
Molasses gals.	115,680	104,800	3,711	3,668
Rum . „	11,040	8,275	848	443
Sugar . lbs.	9,594,000	8,762,415	80,027	76,714
Total Value of Exports . .			96,321	87,992

The total imports, in 1863, amounted to 69,583*l*., and the total exports to 83,711*l*.

The island is divided into 9 parishes. Castries, the cap., lies in a low and marshy situation, at the extremity of a long and winding bay of the same name. The fort, where most of the troops in the island are stationed, is built on the summit of a steep hill, called Morne Fortuné, about 1½ m. from Castries, and 850 ft. above the level of the sea. Near it is the principal hospital. Another hospital and some barracks are erected on Pigeon Island, a small, conical, and extremely unhealthy islet, near the N. extremity of the island. St. Lucia is governed by a governor and council, acting under orders from England. The mutual jealousies of England and France prevented, for a lengthened period, a permanent settlement being made on the island, which was then regarded as a sort of neutral territory. At length it was ceded to the French in 1763. But being taken by English troops in 1803, it was definitively assigned to Great Britain by the treaty of Paris.

LUCKIPOOR, a town of Hindostan, prov. Bengal, distr. Tiperah, a few miles from the mouth of the Brahmaputra, with which it communicates by a small river, 156 m. ENE. Calcutta; lat. 22° 56′ N., long. 90° 43′ E. Coarse cotton cloths of a substantial kind are made here; and the neighbourhood is so fertile and productive, that Luckipoor is one of the cheapest towns in British India.

LUCKNOW (Hind. *Lakshmanavate*), a large city of Hindostan, cap. of the former kingdom of Oude, on the Goomty, a tributary of the Ganges, about 150 m. NW. Benares, and 265 SE. by E. Delhi, on the 'Indian branch' of the East Indian railway. Pop. estim. at 250,000 in 1862. The city, when viewed from the summit of a lofty edifice, presents a confusion of gilded cupolas and pinnacles, turrets, minarets, and arches, bounded by the winding Goomty, and so thickly interspersed with the richest tropical foliage, as apparently to realise the most fantastic visions of Oriental splendour. A nearer inspection, however, does not fulfil the anticipations which a bird's-eye survey is calculated to excite. It may be divided into 3 quarters. The first is the city, properly so called, containing the shops and private dwellings of the inhabs. The streets here are sunk 10 or 12 ft. below the surface, and are so narrow that two carts cannot pass; besides being filthy in the extreme. The chowk, and one or two bazaars in its vicinity, are good streets; but, on the whole, this extensive quarter is more meanly built than, perhaps, any city of the same rank in Hindostan. The second quarter of Lucknow was built mostly by the late nabob, Saadet Ali. It stands near the Goomty, towards the SE., and consists of one very handsome street, after the European fashion, above a mile in length, with bazaars striking out at right angles, and a well-built *chowk* or market-place in the centre, with a lofty gateway at each extremity, which presents a Grecian front on one side, and a Moorish one on the other. The houses that compose the remainder of this street are, for the most part, in the English style, but with an occasional mixture of Eastern architecture. The same remark applies to the palaces that occupy the space between this street and the river. All these palaces are filled with European furniture and pictures, and may rank with comfortable English houses; but none is on a scale of royal magnificence. The former royal residence only excels the others in being approached through spacious courts, with reservoirs, fountains, and innumerable pieces of cast statuary. The adjacent buildings of the British Residency terminate the great street to the N. At its opposite extremity is the entrance of the Delkusha Park, an artificial wilderness of high grass, with which Saadet Ali clothed the arid tract between Lucknow and Constantia, and well stocked with deer, antelopes, and peacocks. The third quarter of the city adjoins the Goomty to the NW., being only separated by a bazaar from the second. It consists chiefly of religious buildings; and being in a style more purely oriental than the modern portion of the city, is the most interesting quarter to a stranger. The magnificent pile of *Imaum-bârah*, with its noble gateway, called the *Roumi-derwasseh*; the new palace built, but never finished, by Saadet Ali, the *Dowlet-khanah*, and other edifices are the chief ornaments of this division of Lucknow.

There are many stately *khans*, and some handsome mosques and pagodas scattered in different parts of the wretched alleys, of which the city chiefly consists; but the most striking buildings, as in other Mohammedan capitals, are the royal tombs and mosques. Of these the *Imaum-bârah*, or tomb and mosque of Asophud Dowlah, is the chief. The *Roumi-Derwazah*, so called from being supposed a copy of one of the gates at Constantinople, is in a light and elegant, though fantastic style, and a mixture of Gothic and Moorish architecture.

About 3 m. from Lucknow is Baroun, a country seat of the former ruler of Oude. It is in a Grecian style of architecture, and ornamented by a very fine portico, rising the whole height of the house in front. Near the city is also Constantia, the former residence of a general in the E. I. Company's service, and erected at an expense of 7 lacs of rupees; but this building is in wretched taste, and only imposing at a distance.

Lucknow is traditionally said to have been founded by *Lakshman*, the brother of *Rama*; who had his residence here, to extinguish the recollection of which Aurungzebe erected a mosque with two minarets on its site. After the battle of Buxar, Shuja ud Dowlah removed his court from Lucknow to Fyzabad; but on his death, in 1775, his successor made this city again the capital of Oude. Lucknow acquired a tragic fame in the great Indian mutiny, when it was the seat of one of the hardest contests between the British troops and the rebellious native soldiers. The revolt broke out on the evening of the 30th of May, 1857, at the Sepoy cantonments, 2 miles from the city. After some unsuccessful efforts to suppress the mutiny, the small British force, numbering scarce 800 men, had to retire into the Residency, which was immediately besieged by an army of at least 10,000 natives. The heroic defence of the handful of British troops, in a building not designed for a fortress, lasted nearly four months, at the end of which, on the 25th of September, 1857, General Havelock, at the head of two regiments, succeeded in fighting his way through, and dispersing the

Digitized by Google

insurgents. The Defence of Lucknow forms one of the most brilliant chapters in the tragic history of the Indian mutiny.

LUCKPUT-BUNDER, a town of Hindostan, prov. Cutch, of which it is the chief port after Mandavee, on the Khoree, or most easterly branch of the Indus, on the high road from Mandavee to Hyderabad and Tatta, 82 m. SE. by S. the last-named city, and 67 m. WNW. Bhooj. It is defended by a good fort. Early in the present century, it had but 2,000 inhabs.; and, owing to the shallowness of the river, could only be approached by very small craft; but, by an earthquake in 1819, the Indus was deepened at Luckput to more than 18 ft. at low water, and there is now 20 ft. water in its channel from the ocean to Busta, 8 m. below this town.

LUDLOW, a mun. and parl. bor., market town, and par. of England, co. Salop, hund. Munslow, on the Teme, 24 miles S. Shrewsbury, 32 miles W. by S. Birmingham, 126 miles WSW. London by road, and 143 miles by Shrewsbury and Hereford railway. Pop. of municipal borough 5,178 and of parl. bor. 6,033 in 1861. The town is neat and well-built, and the streets are generally wide, well-paved, and lighted. On a bold rock, overhanging the river, at the NW. angle of the town, stands the castle, supposed to have been built in 1130. The walls and towers which still remain present a mass of extensive and magnificent ruins; and round the castle are public walks shaded with trees, from which there is a fine prospect of the surrounding country. Near the centre of the town is 'the Cross,' a handsome stone building, with rooms over it used as a school; and in Castle Street is the market-house, the lower part of which is open, and serves as a corn-market, the upper part comprising several large rooms, used for corporation meetings, assemblies and public balls. The guildhall, where the quarter sessions and court of record are held, is a commodious modern structure; and there is a prison called Gaolford's Tower. Performances are given in a small theatre during the races, which are held in the neighbourhood. The parish church, which stands at the upper end of the town, is a large cruciform building of perpendicular architecture, surmounted by a square embattled tower, rising from the intersection. The interior is very beautiful: lofty pointed arches divide the nave from the aisles; and at the end E. of a very spacious choir is a noble window, entirely filled with painted glass: the whole church is ceiled with fine oak, and embellished with carving. The S. entrance is peculiar, consisting of a hexagonal porch richly ornamented. There are places of worship for dissenters, and to both the churches and chapels Sunday schools are attached. The grammar school, founded in the reign of Edward VI., is intended to give free instruction, in English and classical learning, to the sons of all residents within the bor. The pupils comprise about 30 free boys, and the same number of pay scholars boarding with the master, who receives a yearly salary of 100*l.*, and is assisted by an usher. The master holds, also, the office of preacher, with a salary of 48*l.* a year. A national school, under the superintendence of the rector and a committee, is well attended by boys and girls; and is liberally supported, partly by contributions, and partly, also, by the funds of a Bluecoat charity merged into it.

Ludlow, as a place of trade, is of little importance. The glove trade formerly employed several hundred hands; but of late it has greatly diminished. Malting and tanning are carried on to some extent; but the chief business is confined to the retailing of goods consumed in the town and neighbourhood. The corporation charter was granted by Edward IV., and has been subsequently confirmed by 9 different monarchs. Under the Municipal Reform Act, the government is vested in a recorder, 4 aldermen, and 12 councillors. The bor. has returned 2 mems. to the H. of C. since 12 Edward IV.; the right of election, previously to the Reform Act, being nominally vested in the resident burgesses, but substantially in the lord of the manor, Earl Powis. The electoral limits were enlarged by the Boundary Act, so as to include, with the old bor., the township of Ludford, and a part of the par. of Stanton Lacey. Registered electors, 382 in 1865. Market on Monday; fairs, chiefly for horses, cattle, and pigs, Monday before Feb. 13, Tues. before Easter, Wed. in Whitsun. week, Aug. 21, Sept. 28, and Dec. 6; on the two last of which large quantities of hops are exposed for sale.

The history of Ludlow is closely connected with that of its castle, which, being erected by the barons of Montgomery in the 12th century, continued in a habitable state till the suppression of the council of the Marches of Wales by William III. To all lovers of English poetry this castle is interesting, as having been the scene where Milton's 'Comus' was performed, in 1631, by the family of the earl of Bridgewater.

LUDWIGSBURG, a town of Würtemberg, circ. Neckar, of which it is the cap., on rising ground, about 1 m. W. of the Neckar, and 8 m. N. Stuttgard, on the railway from Stuttgard to Heidelberg. Pop. 11,201 in 1861. It is one of the best laid out and handsomest towns of the kingdom. Charles Street, by which it is traversed from end to end, is 1 m. in length, and, like most of the other streets, is lined with rows of trees. From 1727 to 1738, Ludwigsburg was the chief residence of the court: its palace, though now deserted, is one of the largest and finest in Germany; and it has a gallery of old German, Dutch, and Flemish pictures, and a theatre. The palace-gardens, formerly celebrated for their beauty, are now falling into disorder from neglect. Ludwigsburg has a Lutheran parish church, three other churches, an arsenal, a military school for 20 officers' sons, a lyceum, an orphan asylum and workhouse, house of correction for females, school for poor children (*kinderrettungsanstalt*), a cannon-foundry, and manufactures of woollen and cotton cloth, earthenware, and buttons. In the neighbourhood are the royal summer palaces of Favourite and Monrepos, and the fine statue of Count Zeppelin, erected by King Frederick of Würtemberg. About 6 m. distant is Marbach, the birthplace of Schiller, and the mathematician Mayer.

LUGANO, a town of the Swiss canton of Tessin, on a bay on the W. bank of the lake of same name, 15 m. NNW. Como, on the railway from Como to Bellinzona. Pop. 5,397 in 1860. Lugano is a well built, handsome town, finely situated round the curve of a beautiful bay, surrounded by an amphitheatre of hills, having their slopes studded with villas, vineyards, gardens, and forests; while in the distance are seen the snowy pinnacles and craggy masses of the Alps. Among the principal public buildings are the church or cathedral of San Lorenzo, on an eminence above the town, commanding a fine view, with a finely sculptured portal and a façade, said to be by Bramante; the church of the Franciscan friars, remarkable for two paintings of first-rate excellence, by Bernardo Luini. It has also some extensive silk manufactures, a large theatre, and a hospital. The town derives its principal support from being on the route, and one of the entrepôts, of a considerable portion of the trade carried on be-

Digitized by Google

tween Italy and Switzerland, and Germany, by the pass of St. Gothard. Though nominally and politically Swiss, the Luganese are Italians in dress, language, manners, and appearance. Monte Caprino, near Lugano, has a great number of natural caverns or grottoes, which, on account of their coolness, are used by the inhabs. in summer as cellars for their wine, meat, and other provisions.

The Lake of Lugano (formerly the *Lacus Ceresius*), is principally within the canton of Tessin, in Switzerland, but partly also in Italy, between the Lago Maggiore and the Lago di Como. It is of an extremely irregular figure: its greatest length from Porlezza at its NE. to Porto at its S. extremity, is about 16 m.; but, in addition to its main body, it has two great arms, one stretching SSE. to Lago, and the other N. to Agno. It is nowhere above 2 m. in width, and is mostly surrounded by high mountains, overhanging woods, and bold, abrupt precipices. One of the mountains, San Salvador, on a promontory, washed on two of its sides by the lake, rising to the height of nearly 2,000 ft. above its level, is a sublime object from the lake, and commands from its summit a most magnificent and varied prospect. In some parts, however, the banks of the lake slope gently down to the water's edge, and are covered with villages, vineyards, and gardens. The bay of Lugano on its W. side, with its surrounding amphitheatre of hills, is particularly fine. Its waters are quite transparent, and so very deep, that in some places no soundings are said to have been attained. It is above 190 ft. above the level of the lakes of Como and Maggiore, into the latter of which the Tresa conveys its surplus waters.

LUGGERSHALL, or LUDGERSHALL, a decayed bor., market town, and par. of England, co. Wilts, hund. Amesbury, 25 m. NE. Salisbury, and 68 m. W. by S. London. Area of par. and bor., 1,660 acres. Pop. 595 in 1861. The town, now in a wretched and decaying state, contains nothing worth mention, except an old ruinous church, and a place of worship for Baptists; the inhab. are chiefly supported by agricultural labour. Formerly, however, it must have been a place of more importance; for a large castle existed here soon after the Conquest; it was also one of the most ancient parl. bors., and notwithstanding its insignificance in modern times, sent 2 mems. to the H. of C. down to the passing of the Reform Act, by which it was disfranchised.

LUGO, a town of Spain, prov. Galicia, and a bishop's see, on the Minho, 47 m. ESE. Corunna, and 142 m. NNE. Oporto. Pop. 8,054 in 1857. The town occupies an eminence on the E. bank of the river, and is surrounded by an ancient wall of great thickness, with circular projecting towers. The streets are mean and irregularly built: the chief buildings are a Gothic cathedral, 4 convents, 2 hospitals, a singular-looking prison, a foundling asylum, and public seminary. The climate is alleged to be colder than that in other parts of Galicia: snow is frequent, and N. winds are common during the winter months. The place appears to be in a languishing condition; the only fabrics are those of thread stockings and Morocco leather. In the neighbourhood are bred great numbers of cattle, horses, mules, sheep, and hogs, which meet with a ready sale at the monthly fairs, and the great fair in October.

Lugo is a place of great antiquity, having been the cap. of a *conventus*, or district, under the Romans, who called it *Lucus Augusti*. Many monuments of Roman art were existing till the last century, but they have nearly all been since destroyed. The Roman medicinal baths are still, however, used, and the works formed to protect them from the floods of the Minho may yet be traced. Alonzo the Catholic wrested Lugo from the Moors, and re-established its bishopric.

LUND, a city of Sweden, near its S. extremity, prov. Malmæ, 20 m. NE. Malmæ, on the railway from Malmæ to Stockholm. Pop. 9,323 in 1861. The city is open and irregularly built, but clean. It is an archbishopric, and has a cathedral, an ancient irregular building, raised at different periods. But it is chiefly remarkable for its university, founded in 1666. This institution has 22 regular and 7 assistant professors, and is attended by about 600 pupils. It has a library of 50,000 printed vols. and 1,000 MSS., with museums of natural history and mineralogy, antiquities and medals, an observatory, a chemical laboratory, and a botanical garden. Puffendorf, who, next to Grotius, is the great authority in matters of public law, was appointed professor of the Law of Nature and Nations in this university in 1670; and here, in 1672, he published his work *De Jure Naturæ et Gentium*. 'Without,' to use the words of a distinguished authority, the genius of Grotius, and with very inferior learning, he has yet treated this subject with sound sense, with clear method, with extensive and accurate knowledge, and with a copiousness of detail sometimes indeed tedious, but always instructive and satisfactory.' (Mackintosh on the Law of Nature and Nations, p. 21.) Linnæus was for some time a pupil in the university of Lund. The town has manufactures of woollen cloths and tobacco, tanneries and sugar refineries, a discount bank, and some foreign trade. It has also a recently erected statue of the poet Tegner. The ancient kings of Scania were chosen on the hill of Lybers, near the town.

LÜNEBURG, a town of the kingd. of Hanover, cap. of the distr. and principality of Lüneburg, on the Ilmenau, 67 m. NNE. Hanover, and 27 m. SE. Hamburg, on the railway from Hamburg to Hanover. Pop. 14,411 in 1861. The town is surrounded by walls of no great strength, and entered by 6 gates. It has dark and narrow streets, and old-fashioned houses. The castle, or palace of the prince, the town-hall, council-house, academy, gymnasium, exchange, and cavalry barracks, are the principal public buildings. The academy, until 1850, devoted to the education of young nobles, and as such called *Ritterakademie*, is at present a training-school for teachers; it has a library of 14,000 vols. Lüneburg has 4 churches, in one of which are the tombs and monuments of many of the ancient dukes of Lüneburg, several superior schools, and an orphan asylum.

Lüneburg was formerly a Hanse Town, was governed by magistrates of its own selection, and had an extensive trade. It took part in the Baltic herring fishery, and had numerous breweries and manufactures of woollen stuffs, now much fallen off. Lime-burning and the making of salt are at present the chief branches of industry. A large and singular rock of gypsum, rising nearly 170 ft. above the Ilmenau, in the immediate vicinity of the town, furnishes abundant materials for the former business. About 20,000 tons of lime a year are sent to Hamburg, Altona, and Holland. About 160,000 centners a year of salt are procured from some adjacent salt-springs; the evaporation is effected by means of turf, and is conducted under a special commission, the government having a monopoly of the article. Lüneburg has also some fabrics of woollen and cotton and linen goods, tobacco, paper, cards, and soap; with distilleries, breweries, and chemical works. There is a trade in horses, and a large transit trade between Hamburg and the Elbe, and the interior provs. of Hanover.

LUNEL, a town of France, dép. Hérault, cap. cant., on the canal of Lunel, 14 m. ENE. Montpellier, on the railway from Montpellier to Nismes. Pop. 6,737 in 1861. The town has a fine promenade, infantry and cavalry barracks, numerous liqueur and brandy distilleries, and a brisk trade in corn, wines, and raisins. The muscadine wine, produced from vineyards situated on gently rising grounds to the N. of the town, and bearing its name, is reckoned by some connoisseurs as the best of its class, and is rivalled only by the Frontignan. The *canal de Lunel* forms part of a great water communication between the Rhone and the Gironde.

LUNEVILLE, a town of France, dép. Meurthe, cap. arrond., on the Vezouze, and on the railway from Paris to Strasbourg, 16 m. SE. Nancy. Pop. 15,528 in 1861. The town is generally well built, and has a good square, a *château* erected by Leopold, duke of Lorraine, early in the last century, and long the residence of Stanislaus, king of Poland, a handsome par. church, very extensive cavalry barracks, a parade ground of 200 hectares, a large covered riding arena, two hospitals, a synagogue, theatre, and manufactures of woollen cloth, woollen and cotton yarn, gloves, and earthenware. Luneville is one of the principal cavalry stations in France. The origin of the town is uncertain, but its name seems to indicate that Diana was anciently worshipped here; and several Roman medals, with the impress of that divinity, have been found near a fountain in the neighbourhood. The peace between France and the German Confederation, in 1801, by which the former acquired the territory on the left bank of the Rhine, was concluded in this town.

LURGAN, an inland town of Ireland, co. Armagh, prov. Ulster, about 3 m. from the S. border of Lough Neagh, and 18 m. WSW. Belfast, on the railway from Belfast to Armagh. Pop. 7,766 in 1861. Lurgan is a clean, thriving, and well-built town, consisting principally of one wide street. It has a par. church, a R. Cath. chapel, meeting-houses for Presbyterians and Quakers, a court-house, and a bridewell. A manor-court is held every three weeks, and general sessions and petty sessions every Friday. It is a constabulary station, and has 2 schools on the foundation of Erasmus Smith, and a subscription school. The linen manufacture, particularly that of diapers and damasks, is extensively carried on, as is that of tobacco; there are 2 breweries and an extensive distillery. Markets on Fridays; fairs, August 5, and November 22. The nearness of the town to the point where the Lagan and Newry navigation joins Lough Neagh, as well as its situation on the Ulster railway, afford great facilities for inland traffic.

The town is on the estate and in the immediate vicinity of the residence of the Brownlow family, to the head of which it gives the title of baron.

LUTON, a market town and par. of England, co. Bedford, hund. Flitt, 16 m. WNW. Hertford, 28 m. NW. London by road, and 32½ m. by Great Northern railway. Pop. of town 15,329, and of par. 17,821 in 1861. The town, pleasantly situated between two hills in the Chiltern chalk range, is irregularly built with three long streets, running from the market-place in the form of the letter Y. The church is an interesting specimen of Gothic architecture, with a square embattled tower surmounted at the angles by hexagonal pinnacles, and a handsomely decorated W. door: the interior contains, besides some painted windows, a curiously carved font, and some fine old monuments. There are also places of worship for Wesleyan Methodists, Baptists, and the Society of Friends. Several well-attended Sunday schools, a national and Lancastrian school, furnish instruction to the children of the poor; and there is a well endowed hospital for lodging and clothing 24 aged widows. The inhab. are principally engaged in the manufacture of straw hats, and especially of the variety called the Tuscan grass-plait. Lace-making used also to be carried on to a considerable extent; but this business has been all but extinguished by the rise of the Nottingham frame-lace trade. Two miles E. of the town is Luton Hoo Park, formerly a seat of the Bute family, erected by Lord Bute, the favourite of George III. Markets on Monday; large cattle fairs, April 18 and Oct. 18.

LUTTERWORTH, a market-town and par. of England, co. Leicester, hund. Guthlaxton, 12 m. S. Leicester, 72 m. NNW. London by road, and 92 m. by London and North Western railway. Pop. 2,289 in 1861. The town, situated on the Swift, a tributary of the Avon, comprises one main and well built street, with others of inferior size: there are some good houses, but a large proportion of the tenements are mere mud-walled thatched cottages. The church is a large and very handsome structure, in the pointed style, with a high square tower having turrets at the angles: the interior is elegantly fitted up. But it is principally remarkable from having been the scene of the pastoral labours of John Wyckliffe, and from its containing his pulpit and portrait. This early reformer and eminent divine was appointed rector of Lutterworth in 1374, where he expired 10 years afterwards, on the 31st December, 1384. In 1415, the Council of Constance endeavoured to gratify their rage against his memory, by ordering his remains to be disinterred and cast upon a dunghill. This disgraceful sentence was carried into effect; for the bones of Wycliffe being taken up were burned, and the ashes thrown into the Swift. 'Thus,' as Fuller has ingeniously expressed it, 'this brook (the Swift) has conveyed his ashes into Avon, Avon into Severn, Severn into the narrow seas, they into the main ocean: and thus the ashes of Wycliffe are the emblem of his doctrine, which now is dispersed all the world over.'

Lutterworth has 3 places of worship for dissenters, 4 Sunday schools, an endowed free school, and 3 smaller subscription schools. Its chief manufacture is that of coarse hosiery, but it is not extensive. It has a considerable trade in farm and dairy produce, chiefly carried on at its 7 annual fairs. Markets on Thursday: fairs, Thursday after Feb. 19, March 10, April 15, July 23, and Oct. 10; also on Holy Thursday.

LUTZEN, a town of the Prussian states, prov. Saxony, circ. Merseburg, 12 m. SW. Leipsic, near the railway from Leipsic to Frankfort-on-the-Maine. Pop. 2,714 in 1861. The town is celebrated for having been the scene of two of the most memorable conflicts of modern times. The first, which occurred on the 16th of November, 1632, took place between the Imperialists, under Wallenstein, and the Swedes, under their heroic monarch, Gustavus Adolphus. The latter were victorious, but the victory was dearly purchased by the death of their king, who fell in the action. Besides their king, the Swedes lost about 3,000 men; but the loss of the Imperialists amounted to double that number, and their artillery fell into the hands of the conquerors.

The other great conflict took place nearly on the same ground on the 2d of May, 1813, between the French, under Napoleon, and the allied army, under the Emperor Alexander and the King of Prussia. The struggle was most obstinate and bloody; but in the end victory declared in favour of the French. The allies lost 20,000 men, killed

Digitized by Google

and wounded; but the loss of the French was also very severe.

LUXEMBURG (GRAND DUCHY and PROVINCE OF), a territory of W. Europe, between lat. 49° 25′ and 50° 28′ N., and long. 5° and 6° 30′ E.; having N. the Belgian prov. of Liege, W. that of Namur, E. Rhenish Prussia, and S. France. Greatest length and breadth about 65 m. each. Area 2,700 sq. m. Pop. 413,831 in 1861. By the treaty of the 19th April, 1839, the territory was partitioned between Holland and Belgium; the E. portion, with an area of about 1,000 sq. m., and a pop. of 186,500, being assigned to the former, and the W. portion, with an area of 1,695 sq. m., and a pop. of 187,978 to the latter. The title of the Grand Duke of Luxemburg, with the suffrage in the councils of the German Confederation, are enjoyed by the king of the Netherlands.

A chain of hills, branching from the Ardennes, traverses the country from SW. to NE. It no where rises to more than 2,000 ft. above the sea; but it forms the dividing line between the basins of the Meuse and the Moselle. The last-named river and the Sur form the E. boundary of the grand duchy; the other principal streams are the Ourte, Our, Alzette, and Semoy, tributaries of either the Meuse or the Moselle. The valleys are fertile, but the rest of the country has mostly a stony and barren soil; and, in some parts, especially about the centre of Belgian Luxemburg, a good deal of the surface is occupied with marshes, heaths, and poor waste land. The entire surface is estimated at 690,000 *bonniers* (a measure nearly answering to hectares), of which about 240,000 are supposed to be in tillage, 211,000 in woods, 127,000 in heaths and wastes, and 112,000 altogether unproductive, or occupied by roads and rivers. It is mostly divided into small properties. Rye, barley, oats, and wheat are the principal corn crops; and potatoes, with flax, hemp, and beetroot, are raised. The agricultural course almost invariably occupies 3 years; the first year, wheat, maslin, or rye is sown; in the second oats, barley, or potatoes; and in the third, the land is left fallow. The vine is grown on the banks of the Moselle. The chief branch of rural industry is, however, the rearing of cattle for exportation. The sheep yield indifferent wool, but their flesh is excellent. Horses are good. A great many hogs are reared, and exported to France. The meadow-lands, especially in the valleys of the Alzette, Chiers, and Semois, are carefully irrigated and manured. The woods are an important source of wealth, the annual produce of timber and fire-wood being estimated at 1,100,000 *steres*. Nearly 93,000 hectares of woods belong to communes, there being scarcely a commune without a certain portion of forest land. There are few countries in which iron is more abundant, and about 9,200,000 kilog. of metal are produced annually. The slate of Luxemburg is of a superior quality. Viel-Salm, in the N. of Belgian Luxemburg, furnishes about 4 millions of slates a year; and in the S., the quarries of Herbenmont and Geripont produce about 10 millions a year, mostly exported to the neighbouring countries. Slate-pencils, marble, and a little lead, zinc, copper, and manganese are the other chief mineral products. Next to forges and potteries, woollen cloth, lace, leather, and glue factories, distilleries, and breweries, are the most numerous manufacturing establishments. The commerce of Luxemburg, however, except in iron, slate, and cattle, is insignificant. The inhabs., partly of Saxon extraction and partly Walloons, are all R. Catholics. The whole territory is subdivided into 3 districts; those of Luxemburg, Diekirch, and Grevenmacher; each has in it a tribunal of original jurisdiction; and the first, which is identical with the Dutch prov., is placed under a Prussian military governor and a Dutch civil commissary. Belgian Luxemburg is governed in the same way as the other Belgian provs. Dutch Luxemburg has the 11th place in the German Confederation, with 3 votes in the full council, and one in the committee. It has, since 1839, furnished a contingent of 1,850 men to the army of the confederation; the contingent previously to the division of the duchy having been 2,556 men.

The territory of Luxemburg was governed by its own counts from the time of the Carlovingian Frankish kings to 1354, when the Emperor Charles IV. erected it into a duchy. It was taken by the French in 1794, and subdivided among the dépts. of Forets, Ardennes, Sambre-et-Meuse, and Ourthe; but, in 1814, it was erected into a grand duchy, and given to the king of Holland, in exchange for the renunciation of his claims upon Nassau.

LUXEMBURG (Germ. *Lutzelburg*), a town belonging to the kingdom of the Netherlands, the cap. of the above grand duchy, and one of the strongest fortresses of Europe; on the Alzette, a tributary of the Sur, 22 m. SW. Treves, and 77 m. SSE. Liege, at the junction of the railways from Treves to Brussels, and from Liege to Metz. Pop. 12,195 in 1861, excl. of garrison. The town is built partly on a steep, rocky height, and partly in the valley beneath; being, consequently, divided into the upper and lower towns, which communicate by flights of steps, and streets running zigzag, so as to be passable for carriages. Both towns are fortified; and the works, which are partly excavated in the solid rock, have been greatly strengthened by the successive possessors of the town—Spaniards, Austrians, French, and Dutch. Great improvements have in recent years been made in them; and, since 1837, a new fort has been constructed outside the Treves gate. The casemates of that part of the fortifications called *Le Bouc*, resemble those of Gibraltar, and are capable of accommodating 4,000 men. Luxemburg is tolerably well built, but has no remarkable public buildings. It has some iron forges, and manufactures of linen fabrics, leather, and tobacco. The fortress is garrisoned by about 3,000 Prussian troops.

LUXEUIL (an. *Luxovium*), a town of France, dép. Haute-Saône, cap. cant., on the Breuchin, 15 m. NE. Vesoul. Pop. 3,855 in 1861. The town is well built and clean, and has a good town-hall, a large hospital, a communal college, and manufactures of hats, leather, tin and iron goods; but it is chiefly remarkable for its hot or thermal springs, which are annually frequented by from 500 to 600 visitors. The hot baths of *Luxovium* were known to the Romans, who decorated them with fine buildings. The traces of several Roman roads, aqueducts, and edifices, with various statues and medals, have been discovered in and round the town.

LUZON, the largest and most N. of the Philippine Islands, which see.

LYME-REGIS, a parl. and mun. bor., market town, sea-port, and par. of England, co. Dorset, in Bridport div. of lib. Loders and Bothenhampton, 20½ m. SSE. Taunton, 132 m. WSW. London by road, and 138 by London and South Western railway *viâ* Axminster. Pop. of munic. bor. 2,318, and of parl. bor. 3,215 in 1861. Lyme is a small and irregularly built town, situated among hills, which render it difficult of access. It is frequented in the summer as a watering-place, and many respectable families are settled in the neighbour-

Digitized by Google

hood. The pier or cobb (originally erected in the reign of Edward III., and greatly lengthened in 1826, at the expense of government) is 680 ft. long and 12 ft. broad, furnishing good shelter for shipping between Start Point and the Isle of Portland; and close to the pier is the custom-house. The regular trade of the place, however, is small. There belonged to the port, on the 1st of January, 1864, five sailing vessels under 50, and 18 above fifty tons. The gross customs revenue amounted to but 503*l.* in 1863; while in 1846 it was 2,142*l.*, and, at the close of the last century, is said to have amounted to about 16,000*l.* a year. This change is ascribed partly to the decay of its once considerable Newfoundland fishery and Mediterranean trade, and partly also to the separation of Bridport, united with Lyme till 1833. An old church, three places of worship for dissenters, a house used for assemblies, and an old town-hall, are the chief public buildings. Two schools for poor children are supported by subscription, and there are almshouses and other charities for the sick and aged.

The bor. of Lyme is undoubtedly very ancient, and claims to be one by prescription. Its first charter is dated 12 Edward I.; and its early consequence as a port is shown by the fact, that in the war with France under Edward III. it furnished four ships to serve at the siege of Calais. The mun. bor. is now governed by a mayor, 3 other aldermen, and 12 councillors, but has no commission of the peace. Corporation revenue, 250*l.* in 1862. The bor. sent 2 mems. to the H. of C. from the reign of Edward I. down to the passing of the Reform Act, which deprived it of *one* mem.: previously to that act the right of election was vested in the cap. burgesses and freemen. The Boundary Act enlarged its limits, so as to include the entire pars. of Lyme and Charmouth. Reg. electors 251 in 1865. Markets on Friday; large cattle fairs, Feb. 13 and Oct. 2.

LYMINGTON, a parl. and mun. bor., sea-port, and market town of England, co. Hants, in the E. division of the New Forest, close to the mouth of a river of its own name, which falls into the Solent, 23 m. SSW. Winchester, 93 m. WSW. London by road, and 99 m. by London and South Western railway. Pop. of mun bor. 2,621, and of parl. bor. 5,179 in 1861. The town, situated on the W. bank of the river, is well paved and lighted with gas, and consists of one well-built and wide street, crossed by two others of inferior description. On the E. bank is the village of Undershore, comprising several villas and houses of a superior kind, inhabited by persons of fortune; it is connected with the town by a bridge, and forms a suburb of Lymington. Among the public buildings are a town-hall, a theatre, assembly rooms, literary institution, and a custom-house. The port, though sufficient for vessels of 300 tons, and provided with wharfs and storehouses, is subordinate to that of Southampton. The church is an irregular building of brick and stone, the living a curacy dependent on the vicarage of Boldre. There are likewise places of worship for Wesleyan Methodists and other dissenters. A free school for both sexes, a girls' national school, and an infant school, provide instruction for the children of the poor, and there are several minor charities.

Lymington is a bor. by prescription, its corporate officers since the Municipal Reform Act being a mayor, 3 other aldermen, and 12 councillors; but it has no commission of the peace. Corporation revenues chiefly from quay and river dues 250*l.* in 1862.

Lymington has sent 2 mems. to the H. of C. since the 27th of Elizabeth, the right of election being vested, till the Reform Act, in the resident burgesses, of whom there were only 38 in 1831. The Boundary Act enlarged the limits of the bor., so as to include the entire par. of Lymington with a part of the par. of Boldre. Registered electors 328 in 1865. Lymington is also a polling place for the S. division of Hampshire. Markets on Saturday; large fairs for cheese, bacon, and cattle, May 12 and Oct. 2.

LYNCHBURG, a town of the U. States, cap. Campbell co., in Virginia, on James River, here crossed by two bridges, about 20 m. below its great falls, and 90 m. WSW. Richmond. Pop. 10,370 in 1860. The town is mostly on the declivity of a hill, and has a court-house, a gaol, a market-house, several churches, a Friends' meeting-house, a Lancastrian and other schools. A large proportion of the houses are of 2, 3, and 4 stories. Lynchburg is one of the most flourishing commercial towns in the state, as, from its situation, it commands an extensive trade not only with the W. part of Virginia, but with N. Carolina, Tennessee, Kentucky, and Ohio. It is one of the largest marts for tobacco in the Union, from 16,000 to 20,000 hhds. having been inspected in it annually for the last 10 years. It has many tobacco factories and warehouses for dry goods; and manufactures of cotton and woollen goods are carried on, and there are extensive flour-mills in its vicinity. The chief articles brought to its markets are tobacco, wheat, flour, hemp, butter, peach and apple spirits, whisky, cider, beef, live hogs, lead, and iron, a considerable proportion of which is sent down the river to Richmond for exportation.

LYNN-REGIS, or KING'S LYNN, a parl. and mun. bor., sea-port and market town of England, co. Norfolk, locally situated in hund. Freebridge-Lynn, at the mouth and on the E. bank of the Ouse, 38 m. W. by N. Norwich, 90 m. N. by E. London by road, and 99 m. by Great Eastern railway. Pop. 16,170 in 1861. The town, about 1 m. in length, by ½ m. in breadth, comprising two principal with other smaller streets, is, generally speaking, well-built, and contains many excellent houses, and extensive premises calculated for trade. It is well paved, lighted with gas, supplied with good water, and very clean. The public walks, also, in the E. part of the town deserve notice, for their extent, and the neatness with which they are kept. Lynn was formerly encompassed on the land-side by a wall and deep wet ditch, defended by 9 bastions: it is also divided into several parts by 4 small streams here called *fleets* (from the Dutch *vliet*), over which are 11 bridges. The market-place, called by way of distinction the Tuesday's market-place, is an area of 3 acres, situated at the N. end of the town, having a sculptured stone cross in its centre, and surrounded by good houses. A smaller market is held on Saturday in an open space near St. Margaret's church, and outside the town is a cattle-market. The custom-house, built in 1683, and intended for a merchants' exchange, is a handsome building of freestone, with an ornamental front, and a statue of Charles II.: the guildhall is an old-fashioned building of stone and flint, with suitable apartments for the transacting of municipal business; and near it is the borough gaol, a respectable stone structure. A new theatre has supplied the place of an older one, now converted into warehouses. The parl. bor. comprises 2 pars., that of the St. Margaret's (the living of which is a perpetual curacy in the gift of the dean and chapter of Norwich), and that of All Saints (a vicarage in the patronage of the bishop of Ely). St. Margaret's church in N. Lynn, built in the 12th century, is one of the largest par.

Digitized by Google

churches in England, and had formerly a lofty steeple blown down by a tempest in 1741: its W. end is still distinguished by 2 square towers of dissimilar architecture, the upper parts of which are of modern construction. St. Nicholas, a Gothic structure, with a bell-tower and light octangular spire 170 ft. high, is a chapel of ease to the above parish church. All Saints' church, in S. Lynn, is a well-built cruciform edifice, occupying the site of an old convent of White Friars; and the district church of St. John's, in St. Margaret's parish, erected in 1846, is in the early English style. The Roman Catholics have a church, built in 1844, in the decorated style, after designs by Pugin. There are also 10 chapels, belonging to Wesleyan Methodists, Independents, Baptists, Unitarians, and the Society of Friends. The grammar-school is in the patronage of the corporation: it has two or three small exhibitions in the university of Cambridge. Various charity-schools have likewise been established, which, with a well-conducted Lancastrian school, furnish instruction to numerous children of both sexes. Gaywood's hospital provides lodging, and a weekly stipend of 5s. to 53 poor widows: there are also 8 other well-endowed sets of almshouses, and many minor bequests, for the relief of the aged poor.

On the 1st of January, 1864, there belonged to the port 61 sailing vessels under, and 92 above 50 tons, but no steamers. In 1850, there belonged to the port 175 vessels, of the aggregate burden of 20,021 tons; besides which, upwards of 2,000 coasters, chiefly colliers. Gross customs' revenue, 15,777*l.* in 1863, against 49,618*l.* in 1846. The harbour is capacious; but the approach to it is rendered both difficult and hazardous by numerous and perpetually shifting sand-banks, occasioned by the action of the tide on the light silt and sand forming the bed of the river. The estuary of the Ouse is nearly 1,000 ft. broad, and there is accommodation in the port for about 300 merchant-ships. Spring-tides rise about 18 ft., and, during the prevalence of N. and NE. winds, are thrown in with such violence and rapidity as sometimes to damage the shipping. The harbour has also been injured since the completion of the Eau-brink cut, which has caused a great accumulation of alluvial soil along the King's staith and other quays lining the E. bank of the river; but this evil is now somewhat lessened by the erection of jetties on the opposite shore, which direct the course of the river more to the E. bank, by means whereof these deposits are scoured away.

King's Lynn (called Bishop's Lynn before Henry VIII. conferred on it its present name) received its first charter from King John, in return for valuable services done him by its inhabitants during the baronial wars. Its corporate privileges were confirmed and enlarged by several monarchs, and lastly by Charles II. The bor. is now divided into three wards, the municipal officers being a mayor and five other aldermen, with eighteen councillors. Quarter and petty sessions are held under a recorder; and it is the seat of a county-court, before which 937 plaints were entered in 1848. Corp. rev. 8,311*l.* in 1862. Lynn has sent two mems. to the H. of C. since the 6th of Edward II., the right of election down to the Reform Act being vested in freemen by birth, servitude, gift, or purchase. Registered electors, 1,176 in 1865. Lynn is also a polling place for the W. division of Norfolk. Markets principally on Tuesday, but also on Saturday. Fairs, Feb. 14 and five succeeding days; also for cheese a week after old Michaelmas, lasting two days.

LYONS (Fr. *Lyon*; an. *Lugdunum*), a large city of France, in the dép. of the Rhone, of which it is the cap., 275 m. ENE. Bordeaux, 172 m. NNW. Marseilles, 245 m. SE. Paris, and 70 m. WSW. Geneva, on the Paris-Mediterranean railway. Pop. 318,803 in 1861. The city is situated at the junction of the Rhone and the Saône, chiefly on a tongue of land or peninsula between those two rivers, the length of which is nearly 3 m. and its average breadth about 8 furlongs, though in the N. part of the city increasing to upwards of 1 m. Some extensive and important quarters, as St. Just, St. George, St. Irénée, and Vaise, included in the census return of 1861, above given, are, however, situated on the W. or right bank of the Saône, on and round the hill of Fourvières; and in the E., on the left bank of the Rhone, are the *Faubourg Guillotière* and the *Quartier des Brotteaux*. S. of the city, the handsome and regular suburb of *Perache* is extending towards the extremity of the peninsula; while on the N., beyond the fortifications, on the declivity of a hill extending from one river to the other, is the municipal commune of La Croix Rousse, comprising the suburbs of Serin and St. Clair. A tower on the hill of Fourvières, 680 ft. above the Saône, commands a landscape which combines the rich and the grand in the highest degree. At the spectator's feet is Lyons, with its two noble rivers; its bridges, squares, quays, and public edifices, the vessels that crowd the Saône, and the busy activity that pervades its streets, announcing a highly civilised, prosperous, and opulent community. Unlike Paris and many other French towns, which stand isolated, as it were, in the country, with ploughed land and meadows coming close up to the barriers, Lyons appears as the nucleus of a vast population, melting gradually by its suburbs into clusters of villages, which break up into smaller villages, hamlets, villas, and manufactories. Even at the distance of 10 m., the country is thickly dotted with buildings, some of which are seen sweetly perched on the S. and W. declivities of the hills which enclose the plain. The high and mountainous land on the W. side of the city is scarcely an exception; for, sterile as it seems, it is enlivened by country houses, villages, and manufactories. Beyond the hills which bound the plain on the NE. is seen Mount Jura; on the E. are the Alps; above which, at the distance of 100 m. from the town, Mont Blanc is distinctly seen like a white cloud or a mass of snow.

The interior of the most busy part of Lyons exhibits little regularity, and chiefly consists of narrow, winding streets, rendered dark by the extreme loftiness of the houses. These are chiefly of stone, and solidly built, but old; and several of the streets leading up steep declivities are inconvenient for carriages. The *quartier St. George* is greatly inferior in appearance to the suburbs of Croix Rousse and des Brotteaux, which, like it, are chiefly inhabited by the working classes. But the wretched aspect of some parts of the city is in some degree countervailed by the magnificence of others. Three ranges of quays, two on the Saône and one on the Rhone, interspersed with above twenty bridges, nearly all of modern construction, with the glacis and hill of Fourvières, encompass all that is situated between the two rivers, and form a noble and imposing outline. The Saône, which is far more useful to Lyons in a commercial point of view than the Rhone, is lined with numerous wharfs and landing-places; and along the Rhone, from the Faubourg St. Clair to Port Perache, a distance of several miles, is a line of elegant public and private edifices, and a public walk, planted with a double row of trees, commanding a fine prospect over the fertile plain to the E. The waters of the Rhone are rapid, cold,

Digitized by Google

and clear, and it forms in every respect a remarkable contrast to the Saône, which has a sluggish current and a muddy stream. The Rhone is very liable to sudden inundations, to prevent the devastating effects of which some extensive embankments have been raised on its left bank. Still the river, when swollen, frequently does much damage, as evinced in the autumn of 1840, and again, in 1852, when the inundations carried away some of the bridges, laid a considerable portion of Lyons, and of the surrounding country, under water, and occasioned great damage. Previously to 1840 there were ten bridges within the city, three of which crossed the Rhone. These were the *Pont de la Guillotière*, originally built in 1190, 539 yards in length by 24 ft. wide, with seventeen stone arches, but only eight over the water; the *Pont Morand*, constructed of wood in 1774, 228½ yards long by 14 wide; and between the two the *Pont Lafayette* (formerly *Charles X.*), a handsome bridge, 235 yards in length, the piers of stone, and the upper part of wood. To these there were added, in 1860, the *Pont St. Clair*, a suspension bridge, connecting the Quay St. Clair—held the finest quay in the world—with the Jardin d'Hiver, on the other side of the river; and the *Pont Napoléon*, opened in 1861. Just below the Pont Napoléon is the railway bridge of the Paris-Mediterranean line. Another fine railway bridge, called *Pont de la Mulatière*, and which carries the line from Lyons to St. Etienne, is thrown over the Saône, close to its confluence with the Rhone. The bridges over the Saône vary in length from 120 to 140 yards; the principal is the *Pont de Tilsit*, leading from the centre of the city, a stone bridge of five arches, 130 yards long by 15 wide, erected at a cost of 3,000,000 fr., or 120,000*l.* sterling.

Lyons has seventy *places* or squares, some large and regular, but, as may readily be inferred from their number, the great majority are very much the reverse. The *Place Bellecour* (formerly *Louis-le-Grand*), one of the largest and handsomest in France, and perhaps in Europe, in the very heart of the city, has two of its sides nearly 340 yards in length, the two others measuring 246 and 218 yards. One of the principal streets forms part of its N. face; its two shorter sides consist of symmetrical ranges of handsome buildings; and, on its S. side, is a fine plantation of linden trees. This square is ornamented with an equestrian bronze statue of Louis XIV., and forms, with the quays, the favourite promenade of all classes. The *Place Louis XVIII.* leads into the *Cours du Midi*, a broad and fine thoroughfare, planted with trees. which separates the city from the new town of Perache. The other principal squares are the *Places des Terreaux*, containing the town-hall and *Palais des Arts*; *des Cordeliers*, with a fluted column upwards of 60 ft. in height, supporting a colossal statue of Urania; *de Comédie*, in which is the entrance to the *Grand Théâtre*; *Sathonay*; and the *Place Louis XVI.*, in the Quartier des Brotteaux. In the N. part of the city a covered arcade has been formed, called the *Galerie de l'Argue*, nearly 500 ft. in length, and containing many good shops. Lyons is supplied with water from the Rhone, and has numerous public fountains.

The town-hall holds the first rank among the public buildings. This edifice, the finest of its kind in France, was erected between 1646 and 1655, and restored in 1863–4. It has a front nearly 160 ft. in width, flanked with a square tower and dome at either end. Its balustrade is ornamented with two large statues of Hercules and Minerva, and in the centre is a clock tower, surmounted by a cupola, which rises to the height of 157 ft. above ground. The depth of the building is 383 yards, at the end of which another handsome front faces the Place de Comédie. Its interior contains a vestibule, in which are two colossal bronze groups emblematical of the Rhone and Saône; a fine staircase, and a saloon 87 ft. long by 40 wide, which formerly contained many fine paintings, destroyed during the revolution. Of the forty or fifty churches, none is very remarkable either for size or elegance. The cathedral of St. John, on the right bank of the Saône, was begun in the seventh century, but not completed till the reign of Louis XI. It is a Gothic edifice, having at its four corners four heavy square towers, in one of which is a bell weighing 35,000 French lbs. The W. entrance is very much ornamented; the interior is characterised chiefly by simplicity. In this church is a remarkable clock, constructed at the end of the sixteenth century by a native of Basle, which formerly indicated, besides the year, month, day, hour, minute, and second, the sun's place, the phase of the moon, and the saints' day, as they occurred. This curious piece of mechanism had been suffered to fall into decay, till it was repaired—the best clockmakers having been found incapable of the task—by a simple stonemason, in 1862. The church of Ainay, erected on the site of an ancient temple dedicated to the Emperor Augustus, has four granite columns and a bas-relief, originally forming parts of that edifice. Several of the other churches date from the time of Charlemagne. There is also a Protestant church and a synagogue.

The hospitals are the largest public buildings in Lyons. The *Hotel Dieu*, the most ancient establishment of its kind in France, was founded by Childebert and his queen at the beginning of the 6th century. The present edifice consists of a continuous range of building, extending along the Rhone. It has a noble front, a fine entrance, and two domes, which, as well as the distribution and arrangements of its interior, are generally admired. This establishment receives annually 12,000 in-patients, besides affording medical aid to many persons without its walls. The *Hospice de la Charité*, also, on the banks of the Rhone, occupies little less space than the former, and is an asylum for 400 infirm persons of both sexes, besides many orphans, foundlings, and women *enceinte*. The *Hospice de l'Antiquailles*, for syphilitic and insane patients, stands on the hill of Fourvières, on the site of the Roman palace in which the emperors Claudius and Caracalla were born. The *Hospice de la Providence* has established numerous schools of instruction with the view of checking mendicity. There are about a dozen other hospitals.

The prefecture occupies a spacious building, formerly a Dominican convent; its interior is well adapted to its present purpose, and attached to it are some fine gardens. The *Palais du Commerce et de la Bourse*, the Exchange of Lyons, a fine new building, opened the 18th of August, 1860, faces the Place de la Bourse on the one side, and the Place des Cordeliers on the other. In the centre of this building is a vast hall, with eight statues. representing the four 'elements' and the four seasons. The hall of justice and the archbishop's palace present little deserving of notice. The *Palais des Arts*, formerly the Benedictine convent of St. Pierre, consists of four large piles of building, enclosing a square court: different portions of this edifice are devoted to the museums of painting, antiquities, and natural history, cabinet of medals, gallery of casts from the antique, *dépot* of machinery for the silk manufacture, the academy, and schools of drawing and natural history. The collection of paintings comprises some works

Digitized by Google

of great excellence; and that of antiquities is rich in Roman and middle age specimens of art found in and about Lyons, mosaics, and Egyptian antiquities. The public library, and library of Adamaly (so called from having been presented by a citizen of that name) are deposited in the royal college, and together comprise 100,000 vols., among which are some valuable Oriental works and old MSS. The prefecture, mint, grand theatre, theatre *des Célestins*, court of justice, archbishop's palace, new prison, and salt magazine, are among the other chief edifices. The botanic garden is situated within the city, and is a favourite place of public resort. About 1½ m. above Lyons is the beautiful *Ile Barbe* in the Saône, connected with its left bank by a handsome new suspension bridge.

Manufactures and Commerce.—Substituting silk for cotton, Lyons is in France what Manchester is in England. The position of the city is peculiarly favourable: situated at the point of junction of two large navigable rivers, and with a ready communication with the Mediterranean, on the one hand, she is at the same time the *entrepôt* of a vast extent of inland country. The districts of France which produce the largest quantities of silk are immediately adjacent, while Lyons is the natural depôt and place of transit for the silk of Italy, in its way to the great manufacturing countries. Added to which, the silk manufacture has here had, for centuries, its principal seat: the pop. have been thoroughly trained and habituated to it; so that, though frequently disturbed by political events, and once or twice nearly annihilated, it has never failed, on tranquillity being restored, to return to its former locality. The silks manufactured here are distinguished by the equality and perfection of the fabric, the brilliancy of their dyes, and by the unrivalled superiority of their patterns, and the taste displayed in the designs. This superiority has been ascribed to the School of Arts (*Institution de la Martinière*), and the liberal encouragement of this branch of science by the city authorities and the government. About 200 students are gratuitously instructed in the various branches of drawing and modelling, and there is a professor, who teaches the '*mise en carte*,' that is, the adaptation of designs to the loom. The gross produce of the Lyonese looms, in 1838, was estimated at 135,000,000 francs, being considerably more than half the estimated value of all the silk goods manufactured in France. In 1864, the produce was estimated, on official authority, at 300,000,000 francs, three-fourths of which was exported. The consumption of raw material was as follows in each of the years 1862 and 1863:—

	1862	1863
	Kilos.	Kilos.
Silk, Raw	2,051,661	2,400,146
„ Thrown . . .	676,095	819,715
„ Waste (in masses) .	849,935	969,965
„ Waste (carded) .	67,904	76,313
„ Spun . . .	329,370	352,540

The estimated value of the raw material in 1863 was 180,000,000 francs.

There were about 70,000 looms engaged in the manufacture in 1863, about two-thirds of them in the city and suburbs, and the rest in the dép. du Rhône, and neighbouring departments. The total number of master weavers (*chefs d'attelier* or *maître-ouvriers*) in Lyons and its suburbs amounts to about 10,000; and the journeymen, or *compagnons*, number about 60,000; but the *compagnons* include the wives and children of many of the master weavers. The number of individuals employed in accessory occupations, that is, in the culture of silk, the manufacture of looms, &c., has been estimated at 70,000; so that, altogether, 140,000 persons in or about Lyons are supported, directly or indirectly, by the silk manufacture.

Silk weaving at Lyons is not generally conducted in large buildings or factories belonging to the silk merchants (*fabricans*), but, on the domestic system, in the dwellings of the master weavers, each of whom has usually from 2 to 6 or 8 looms, which, with the greater portion of their fittings, are his own property. Himself and his family keep as many of these looms at work as they can, and employ *compagnons* for the remainder. The latter are not settled in Lyons; but visit it, and stay a longer or shorter time according to the demand for their labour. Apprentices and *lanceurs* make up the remainder of the working classes. The former are usually apprenticed from the ages of 15 to 18; the latter are children from 9 to 14, who prepare bobbins, and weave fabrics demanding less nicety than others. About three-sevenths of the looms are wrought by master weavers, nearly an equal number by *compagnons*, and the remaining seventh by apprentices and children. The *fabricans*, or silk merchants, of whom there are between 500 and 600 in Lyons, supply the patterns and silk to the owners of looms, to whom is entrusted the task of producing the web in a finished state. Half the wages paid by the silk merchants go to the owner of the loom, and half to the labouring weaver. A master weaver may gain by his own labour from 2 to 3½ fr. a day; and he who has 3 looms is supposed to receive from the two at which he does not himself work, about 900 fr., or 36*l.* a year. His rental may be about 150 fr.; the cost of lodging his two journeymen 80 fr.; and there remains, besides his own labour, a surplus of 670 fr. Those weavers are, of course, the most prosperous, who, having 3 or 4 looms, employ their children to weave on them, and thus receive the whole wages paid by the manufacturer. 3 looms will clear to a family from 1,500 to 1,600 fr. (60 to 64*l.*) a year. The hours of work usually vary from 12 to 16 hours; but when the demand is brisk, they reach to 16, 18, and even 20. The weaving pop. is ill lodged, the master weavers generally having but two rooms at most, and these kept in a filthy state. But they live very well; that is, they have abundance of nourishing food, much more than the pop. of other manufacturing towns in France. Most of the journeymen are boarded by their employers at from 45 to 50 c. a day, and have about 1½ lb. of good bread, ½ litre of wine, a dinner of soup and butchers' meat, with cheese or salad at supper. They rarely save money, and few of the *compagnons* raise themselves to become *chefs d'atteliers*. The weavers, speaking generally, are very ignorant; some years since not one-fourth part of the children in Lyons could read or write. But, according to official returns, there is less profligacy in Lyons than in many other of the French manufacturing towns. The proportion of illegitimate to the total number of births was indeed in some years as high as 1 in 3; but a good many of the connections out of which these births arise are really but little different from matrimony. The weavers, to escape the *octrois*, frequently visit the *cabarets* beyond the barriers, to drink their wine, and play billiards on Sundays and Mondays; but they are not addicted to intoxication or rioting, and it is affirmed that they are at present improving in morals, manners, and cleanliness. However, the best French authorities admit that the Lyonnese weavers are physically an inferior and degraded race, remarkably subject to scrofulous and scorbutic complaints, spinal diseases, and rheu-

Digitized by Google

matism. Nearly half the young men in Lyons liable to military service are exempted on account of weakness, deformity, or deficiency of height.

The upper and middle classes of Lyons, the latter comprising most part of the shopkeepers and many of the master weavers, are eminently comfortable, rich, and thriving. It is stated that there are three times more villas round Lyons than round Paris; and the number of private and public works erected in and near the city during the last 20 years sufficiently evince the rapid increase of wealth and enterprise.

Lyons has numerous dyeing establishments and printing offices, and manufactories of jewellery and liqueurs, but all these are insignificant compared with its chief branch of industry. It is the seat of a royal court, of tribunals of primary jurisdiction and commerce, a chamber of commerce, one of the five royal libraries of the kingdom, a university, academy, royal college, and academy of sciences; and has schools of theology, medicine, veterinary medicine, and rural economy; a royal society of agriculture; societies of medicine, jurisprudence and literature, a Protestant Bible society, deaf and dumb asylum, savings' bank, maternity, and many other charitable institutions.

The early history of Lyons is involved in much obscurity. But it appears certain, from the statement of Dion Cassius, that Munatius Plancus, about *anno* 40 B.C., settled in it fugitives from some adjoining towns. (lib. xlvi.) Augustus made Lugdunum the cap. of a prov., and being embellished and enlarged by succeeding Roman emperors, it became one of the principal cities of the Roman world. The old city was principally built on the hill of Fourvières, which, in fact, is merely a corruption of its ancient name of *Forum Vetus*. (D'Anville, Notice de la Gaule, p. 423.) Among the Roman antiquities which still exist at Lyons are the remains of four aqueducts, several cisterns, a theatre, traces of a palace, and a naumachia, recently discovered within the limits of the botanic garden.

From the 5th to the 13th century, Lyons belonged successively to the Burgundians, Saracens, Franks, its feudal archbishops, and its municipal council. In 1312 it was annexed to the crown of France; and in the same century, owing to the immigration of many merchants from Italy, it began to be distinguished by its manufactures. It suffered much during the religious wars of the 16th century, but far more from the revolutionary frenzy of 1793. Its ancient fortifications were then destroyed, but it has been since enclosed on the N. by a line of earth ramparts. Among the distinguished individuals, natives of Lyons, were, in antiquity, the emperors Claudius and Caracalla, and Sidonius Apollinaris; and, in modern times, Jussieu, the botanist; J. B. Say, the economist; Jacquard, the inventor of the loom which bears his name; and Degerando, the author of the able and elaborate work, 'Sur la Bienfaisance Publique.'

M.

MAAD (Hung. *Mada*), a town of Hungary, co. Zemplin, in the Hegyallya mountains, about 6 m. NW. Tokay. Pop. 1,261 in 1857. It is one of the places at which the Tokay wine is grown in the greatest perfection, and near it is the imperial vineyard of Theresienberg.

MAASSLUIS, or MAASLANDSLUIS, a town of S. Holland, on a branch of the Maas, 9 m. W. by N. Rotterdam, on the railway from Rotterdam to Utrecht. Pop. 3,626 in 1861. The town has manufactures of sailcloth, cordage, and leather, and some building docks; and its inhab. take an active share in the herring and cod fisheries.

MACAO, a sea-port town and settlement of the Portuguese in China, prov. Quang-tong, on a peninsula projecting from the SW. corner of the island Macao, on the W. side of the estuary formed at the mouth of the Tigre or Canton river, 84 m. S. by W. Canton; lat. 20° 11′ 30″ N., long. 113° 32′ 30″ E. The pop. was estimated, in 1862, to amount to 52,000, of whom about 40,000 were Chinese, 10,000 Portuguese and other Europeans, and 2,000 Malays.

The peninsula on which Macao stands is less than 2½ m. in its greatest length from NE. to SW., and not 1 m. in its greatest breadth. It is connected with the rest of the island by a long, low, and sandy neck, in one part 400 yards broad, but generally less. Across this isthmus a wall is erected, having in its middle a gate and a guard-house, called *Casa branca*, for Chinese soldiers; by means of which barrier, all communication between the peninsula and the rest of the island may be cut off. The Portuguese inhab. of Macao seldom pass beyond this wall. The town has a very imposing appearance from the sea. It is built chiefly on the declivities of two hills, meeting each other at a right angle, in front of a small semicircular bay forming the harbour. A handsome row of houses faces this bay, with a parade in front embanked with stone to resist the encroachments of the sea, and interrupted by granite quays with steps leading down to the water. Behind this terrace the houses are arranged in a confused manner, and the gable ends of European residences and the steeples of the churches appear curiously intermixed with Chinese houses and temples. Macao has 12 churches, one of which, that of St. Joseph, is collegiate. There are few other edifices of any note. A spacious senate-house, in the heart of the town, forms a termination to the principal street. The Portuguese governor's residence, near the landing-place, is nowise remarkable, and the contiguous English factory is a plain commodious building. The Chinese live chiefly together in the central and back parts of the town, and along the inner harbour: some of them have well furnished shops, and they principally supply Europeans with provisions. Besides the college of St. Joseph, there are in Macao a royal grammar-school and several other Portuguese schools, a female orphan asylum, and other charitable institutions. It is defended by six forts, two of which are placed on a lofty height at either end of the harbour, and it is usually garrisoned by about 400 Portuguese soldiers. At one extremity of the town is a mansion called the *Casa*; in the grounds belonging to which is the celebrated cave of Camoens, sheltered on one side by a lofty rock, and on the other by a grove of bamboos, above which a tower commanding a fine view has been erected. In this sequestered retreat Camoens is said to have composed great part of the 'Lusiad,' while holding the office of Portuguese judge at Macao. The land immediately around the town is fertile, and is appropriated to vegetable gardens and rice-grounds.

The harbour is on the W. side of the town, between it and Priests' Island, a small circular island, which formerly belonged to the Jesuits; but it has not depth enough to admit large ships, which

Digitized by Google

accordingly anchor in the roads on the other side of the peninsula, from 5 to 10 m. E. of the town. All foreign vessels coming into the roads send their boats to the custom-house, and pay a duty for all goods landed, however trifling. When a ship arrives among the islands, she is generally boarded by a pilot, who reports to the Chinese custom-house officer the nature of her cargo, and obtains a *chop* or permit allowing her to enter the Bogue or Bocca Tigris, with the understanding that she has nothing on board that is contraband. All females must, however, be landed at Macao, as the ship will not be allowed to proceed to Whampoa with them on board. The Chinese regulations do not allow any vessels, except such as belong to Portuguese or Spaniards, to trade at Macao. But the Portuguese inhab. lend their names for a trifling consideration to such foreigners as wish to be associated with them for the purpose of trading from the port; and vessels of other nations seldom experience any difficulty in obtaining the connivance of the Chinese officers to the landing or receiving of goods in the roads by means of Portuguese boats. Vessels of other nations, if in distress, and not engaged in the contraband trade, are admitted into the harbour for repair, on application to the senate. The latter is composed of the bishop, the chief justice, the military commandant, and several of the chief Portuguese inhab.; but a Chinese mandarin has nominally the supreme authority in the town.

Macao was given to the Portuguese by the Chinese emperor in 1586, in return for assistance afforded by them against pirates that had infested the coast.

MACASSAR. See Celebes.

MACCLESFIELD, a large manufacturing town, parl. and mun. bor. of England, co. Chester, locally situated in Prestbury div., of the hund. of its own name, on the Bollin, 16 m. S. by E. Manchester, 163 m. NNW., London, by road, and 170 m. by London and North Western railway. Pop. of bor., 36,101 in 1861. The town, which is pleasantly situated on a slope near the borders of Macclesfield forest, has greatly increased in size during the last 40 years, and is now about 2 m. long by 1 m. in breadth, consisting of one principal thoroughfare on the London Road, crossed by two others leading to numerous subordinate streets. The buildings, in the more conspicuous parts of the town, are of superior construction; the streets also are well lighted, and the inhab. have plentiful supplies of good water, conveyed from springs on the adjacent hills. An open market-place, with excellent shambles and a covered corn-market, stand near the centre of the town; and the town-hall, rebuilt in 1826, is a commodious and handsome building, tastefully decorated, and containing, besides courts of justice, a large assembly aud concert-room. The old church is a large structure, partly Gothic, with a handsome tower, formerly surmounted by a lofty steeple: it was originally erected by Edward I., in 1278, but has, at different times, been almost rebuilt, so that few parts of it can lay claim to any great antiquity. It affords accommodation for about 1,700 persons, and has an adjoining chapel containing several interesting monuments. Christchurch was erected, in 1775, at the private expense of Charles Roe, esq., who endowed it with 100*l.* a year; it is a regular building, with a neat tower, having, in the interior, an elegant marble monument of the founder, by Bacon. Trinity church, in Hurdsfield, a more recent erection, is beautifully situated on an eminence, and may accommodate about 900 persons. St. George's in Sutton (built in 1822) has accommodation for 1,500, and in the S. suburbs of the town is a fifth church, remarkable for its neat construction and light spire. There are also several places of worship for Wesleyan Methodists, Roman Catholics, and other dissenters. A free grammar-school, originally founded in 1502, was endowed by Edward VI. with property then producing only 25*l.*, but now estimated at 1,300*l.* a year, and rapidly increasing in value. A head and under-master give instruction in classics, elementary mathematics, history, and geography. Another school, called the 'Modern Free School,' endowed with 350*l.* a year, is furnishing instruction in those branches of knowledge best calculated to enable the scholars to carry on the trades and support the commerce of Macclesfield. A charity school, national school, and several Sunday schools, with others maintained by voluntary subscription, educate the children of the poor; and there are almshouses, various money charities, a dispensary, lying-in-charity, and provident society. A public park of sixteen acres was enclosed in 1854.

The silk manufacture of Macclesfield affords employment to the largest part of the pop.; a portion, however, are employed in cotton factories. There were, in 1861, about 70 factories, giving employment to 16,000 hands. The greater number of these are engaged in weaving silk fabrics, chiefly silk handkerchiefs and scarfs of every description, sarsenets, Persians, silk ferret, and galloon, with a few gros-de-Naples. The cotton manufacture, which was introduced about thirty years ago, is in a thriving condition, and hat-making is carried on to some extent. Numerous mechanics and makers of machinery depend indirectly on the staple trade of the town. The Bollin turns several mills, and the neighbourhood furnishes abundant supplies of excellent coal for the required steam power. Stone and slate also are quarried near the town, and form a considerable object of trade with the surrounding districts. The transit of heavy goods is facilitated by the North Western railway, as well as by the Macclesfield canal, which connects it N. and S. with the great canal lines of England.

Macclesfield, which was incorporated by a charter of Prince Edward, son of Henry III., and subsequently by various sovereigns of England, has been divided by the Mun. Reform Act into six wards, and is governed by a mayor and 11 other aldermen, with 36 councillors. Corp. revenues, 7,329*l.* in 1862. It has also a commission of the peace, with petty sessions, under a recorder. The town had no voice in the legislature till the Reform Act conferred on it the privilege of sending 2 mems. to the H. of C. Registered electors, 956 in 1865. Macclesfield is also one of the polling places for the NE. division of Cheshire. Markets on Tuesday and Saturday: cattle, wool, and cloth fairs, May 6, June 22, July 11, Oct. 6, and Nov. 11.

MACERATA, a city of Central Italy, cap. of prov. of same name, on a hill between Chieti and Potenza, 21 m. S. by W. Ancona, and 170 m. NE. Rome, on the railway from Ancona to Perugia. Pop. 19,622 in 1862. The city is well built, surrounded with walls, and entered by 6 gates. In the centre is an irregular open space ornamented with several good buildings, including the cathedral, the palace of the prefect, and the theatre. Including the cathedral, there are 7 churches, in one of which are some good paintings, 13 convents, several literary associations, and a secondary university for theology, philosophy, and medicine, founded by pope Leo XII. in 1824. The city presents nothing antique, and its most interesting feature is the fine view it commands of the Adriatic, and occasionally of the mountains of Dalmatia.

'Macerata,' says a traveller (Forsyth's Italy,

Digitized by Google

p. 320), contains a number of *palazzi*, and therefore a swarm of provincial nobility. The peasants observe an established uniformity in dress, of which orange appears the prevailing colour. So constant are the women of this class to local costume, that the female head becomes a kind of geographical index. At Macerata they adhere to the ancient mode of plaiting and coiling the hair, which they transfix with long silver wire tipt at both ends with large knobs, evidently the antique *acus crinalis* —

'Figat acus tortas sustineatque comas.'
Martial.

Macerata is a bishop's see, and the seat of a court of appeal for the provinces of Macerata, Ancona, and Ascoli. Its manufactures and commerce are insignificant. About 2 m. to the N., on the Potenza, are the remains of a theatre of considerable size, with vaults and foundations of other edifices, supposed to indicate the site of *Helvia Ricina*, colonised by Septimius Severus, and destroyed by the Goths.

MACHYNLLETH, a market town and parl. bor. of N. Wales, co. Montgomery, near the Dyfi, 30 m. W. Montgomery, and 175 m. WNW. London, on the railway from Montgomery to Aberystwith. Pop. of parl. bor., 1,645 in 1861. Machynlleth is an ancient, well-built town, superior to most in N. Wales for cleanness and respectability, the streets being remarkably broad and regular. The town-hall, a plain building, was erected by the Wynn family, in whom the manor is vested: the co. sessions are held alternately here and at Montgomery, and the magistrates sit here occasionally in petty sessions for the hundred. The church, a handsome structure, was rebuilt in 1827: the interior is conveniently fitted up, and the W. tower is embattled, and surmounted with crocketted pinnacles. There are places of worship for Independents, Calvinists, and Wesleyan Methodists, with attached Sunday schools, and a well-endowed national school furnishes instruction to poor children of both sexes. The flannel trade has long existed at Machynlleth, being chiefly carried on at farm-houses: the fabrics are sent for sale to Newtown. The town formerly possessed an excellent shipping trade, and was, in fact, the port of Montgomery; but since the canal was brought to Newtown, and facilities were opened direct between Wales and the commercial districts of England, the carrying trade is in barges, and few ships now come to Machynlleth. The bor. unites with Montgomery and others in sending 1 mem. to the H. of C. Registered electors in the entire district, 954 in 1865. Machynlleth is celebrated in the history of the principality as the place in which Owen Glendwr, in 1402, convoked a parliament, where he was inaugurated Prince of Wales.

MACON (an *Matisco*), a town of France, dép. Saône-et-Loire, of which it is the cap.; on the Saône, on the railway from Paris to Lyons. Pop. 18,006 in 1861. The town is pleasantly situated, but is generally ill built; the streets are narrow, crooked, and paved with rounded pebbles; the squares are mostly small, and destitute of ornament; and the houses, though of stone, devoid of symmetry. It was once partially fortified, but the works were never completed, and they are now laid out in public walks. A handsome quay borders the Saône, and is continuous with a planted promenade at either extremity. The ancient *hôtel de Montrevel*, now occupied by the town hall, theatre, and public library, with 9,000 vols.; the general hospital, two *hospices*, some of the churches, the prefecture, and the new prison, are the chief public buildings. Mâcon is the seat of tribunals of primary jurisdiction and commerce, a communal college, schools of mutual instruction and linear design, and of a society of agriculture, arts, and *belles lettres*; and has manufactures of coverlets, clocks and watches, copper and earthenware, pump machinery, and barrels. But Mâcon is principally dependent on its wine trade. The same chain of hills that overhang the rich vineyards of the Côte d'Or extends through the dép. of the Saône-et Loire, and the part of the dép. of the Rhone called the Beaujolais. In commerce the wines both of the Mâconnais, or district round Mâcon, and of the Beaujolais, are known by the name of Mâcon wines, from Mâcon being the emporium where they are mostly sold. They are strong and durable, and in general may be regarded as ranking next to the Beaune wines. The best growths are those of Torins, Romanèche, Chenas, and Pouilly. Many Roman antiquities have been found at Mâcon, and the ruins of its cathedral, destroyed during the revolutionary frenzy in 1793, form a very picturesque object. On the opposite bank of the Saône is the flourishing suburb of St. Laurent, the seat of a large corn-market.

MACROOM, an inland town of Ireland, co. Cork, prov. Munster, on the Sullane, 20 m. W. Cork, with which it is connected by railway. Pop. 3,283 in 1861. The town has a par. church, a R. Cath. chapel, a large school, a court-house, market-house, and a constabulary barrack. A manor-court for the recovery of debts to the extent of 2*l.* is held every three weeks. General sessions are held in Dec., and petty sessions on alternate Tuesdays. Markets on Saturday. Near the town is a large cavern, the interior of which has not been thoroughly explored.

MADAGASCAR, a large island of the Indian Ocean, off the E. coast of Africa (from which it is separated by the Mozambique Channel), between lat. 12° 2' and 25° 40' N., and long. 44° 20' and 51° 30' E. Length, 930 m.; average breadth, 300 m. Area estimated at about 234,400 sq. m. being somewhat greater than that of France. The coast is generally flat and low; but the interior is considerably diversified, and, though it is not traversed by any continuous chain, many parts, especially the E., N., and S. districts, may be called mountainous. The highest point, Ankaratra, in lat. 19° 40' N., long. 47° 20' E., is about 11,000 ft. above the sea. These mountains consist of granite, sienite, and quartz, covered in the lower parts with clay-slate, primitive limestone, and old red standstone: volcanic rocks occur in several places, and coal strata, abounding with iron, are widely distributed through the island. Rock-salt and nitre occur near the coast; and iron pyrites, oxide of manganese, and plumbago have been found in some districts. The rivers of Madagascar are numerous, and many of considerable size, the greater number flowing into the sea on the W. side; but most of them are choked with sand, have frequent falls and rapids, and are almost entirely unnavigable. There are likewise numerous lakes, not only in the central parts of the island, but also in the low alluvial districts near the sea, some of which are remarkable for their size and beauty. The most fertile parts are the valleys, most of which produce rice or other vegetables, or else are clothed with a rich and luxuriant verdure. The climate of Madagascar is extremely diversified, that of the coast being oppressively hot, while in the interior the temperature seldom exceeds 85° Fahr. The heat at Antananarivo, the cap., fluctuates between 40° and 85°: the middle of the day in summer is often extremely sultry, but the mornings and evenings

Digitized by Google

are always pleasant. From May to October (the winter months of this island) the ground is often covered with hoar-frost, and the heat seldom exceeds 44°. At other seasons, however, the fluctuations between heat and cold are extreme and sudden, the temperature in the morning being seldom more than 40°, whereas, in the same day, the afternoon heat often exceeds 80°. The climate of Madagascar is generally considered to be prejudicial to Europeans, in consequence chiefly of the effluvia rising from stagnant lakes and swamps near the coast; but in the central parts, and especially in Ankova, the metropolitan prov. of the island, the marsh-fever does not exist. The weather on the coast is usually hot and damp or rainy; but in the interior the rains are periodical, in a great measure regulating the divisions or seasons of the year. The trade winds from the E. and SE. prevail during the greater part of the year; but the rains are often accompanied by violent gales from the NW., W., and SW. Earthquakes are occasionally felt, and the capital has more than once suffered considerable damage from such visitations.

Among the animals peculiar to Madagascar are five varieties of the monkey, foxes, wild dogs and cats, hogs, goats, and a peculiar kind of cattle and sheep similar to those of the Cape of Good Hope. Crocodiles swarm in nearly all the rivers and lakes, and are objects of great dread to the natives: serpents, also, some of large size, abound in the woods; and lizards, scorpions, and centipedes, are very numerous and troublesome. Birds also, of various kinds, are found in the forests, the principal of which are the paroquet, flamingo, falcon, kite, turtle-dove, pigeon, turkey, and different varieties of land and water fowls. The sea abounds with fish of various kinds, and oysters are numerous on the coast. The soil in many parts is prolific and highly susceptible of improvement, and the island produces numerous and highly valuable plants. The forests yield abundance of trees of varied durability and value; some used as dye-woods, others in building, with ebony, betel, mangrove, dragon-tree, bamboo, sugar-cane, locust-tree, *Urania speciosa*, caoutchouc tree, plantain, banana, zahana (*Bignonia articulata*), hibiscus, mimosa, castor-oil plant, longoza (*Curcuma zedoaria*), cotton, indigo, and tobacco plants, allspice, pepper, ginger, turmeric, and rice. Various other vegetable productions have been introduced, such as the cocoa-nut, bread-fruit, yam, manioc, lemon, orange, peach, mulberry, quince, fig, and pomegranate. Several varieties of the Cape vine have been found to thrive well, the coffee-plant has been brought from the Mauritius, and the potato is largely cultivated as well as highly esteemed; but the common European *cerealia* have met with little encouragement. The Flora of the country is abundant; but the brilliant aspect usual to the gardens of tropical countries is here missed, in consequence of the rapid alternations of heavy rains and extreme drought.

The husbandry of Madagascar, pursued by a distinct class, consists, in a great measure, in the cultivation of rice, which is conducted with great care and success. Seed time is in September; at which season the grain, after being steeped in water, and subsequently kept in a warm place till it begins to sprout, is very thickly sown in a fine mould, almost covered with water artificially introduced into the fields. The water is afterwards drained off, manure is thrown over the seed, and as soon as the sprouts appear above the surface, moisture is again applied. The average produce in inferior grounds is said to be about fifty for one; but the best cultivated grounds are alleged to produce seventy and even one hundred fold, the harvest being in Jan. and Feb. Each rice field is separated from those adjoining by banks rising about six inches above the field, and affording great convenience to the labourers. Neither waggon, cart, sledge, nor beast of burden, is used in getting in the harvest, and the threshing is conducted either against a stone, or on the floor, by simply beating the ears with the hand. The secure storing of the grain, however, is an object of special attention: the Ovahs, the prevailing tribe of the island, have underground storehouses, made with extreme ingenuity; but other tribes have granaries above ground, bee-hive shaped, about 16 ft. high, made of thick, clay-built walls, and entered only from the top. Manioc is another great object of farming industry; it is raised from cuttings, and about 18 months elapse between the planting and harvest. The roots, usually about 10 inches in length by 3 in diameter, are prepared for use by scraping and boiling, and are sometimes made into cakes. Cotton is cultivated to a considerable extent; and the pigeon-pea (*cytisus cajan*) is raised for the purpose of rearing silk-worms. The European *cerealia* have been introduced by the missionaries; the plough and harrow have likewise been brought into use, and oxen broken in to cultivate the ground; but the natives prefer their old and imperfect methods of preparing the soil, to the adoption of readier plans and superior implements. Next to the cultivation of the soil, the working of iron is the most important occupation of the people. In some parts the iron ore is found in large quantities on or near the surface, whence it is gathered in baskets and smelted for use; but when it is dug out of the ground, numerous small pits are made about 6 ft. in depth, and no further attempt is made to explore the riches of the interior. The ore is first crushed, then broken into small pieces, and afterwards submitted to the action of a charcoal fire in a rude furnace of stone-work, built up to the height of 2 or 3 ft. without mortar, and thickly plastered with clay on the outside, the blast being obtained by means of wooden cylinders, in which a rude sort of piston is fitted to drive the air through a bamboo cane into the fire. The native forges are equally simple; the anvil, about the size of a sledge hammer, is fixed in the ground near the fire, the water-trough is close by, and the smith, when at work, squats on a piece of board while his attendants surround him, armed with large hammers, and ready to strike the metal according to his directions. The articles thus manufactured comprise spears and javelins, knives, hatchets and spades, chisels and hammers, a rude sort of plane-irons, files, pots, spoons, lamps, and nails; besides which they have been taught to make hinges, screws, and locks, as well as to draw copper and iron wire. The manufacture of swords and fire-arms was introduced by the French a few years ago, and the native goldsmiths and silversmiths evince considerable ingenuity in making rings, chains, and other gold ornaments, silver dishes, mugs, and spoons. The felling of timber employs about 1,000 men; the pit-saw has been brought into general use, and the native carpentry has been so much improved by the application of European tools, that their work is really well finished. The art of turning wood is practised by the best workmen of the capital; earthenware is made with considerable skill and taste, and many hands are employed in making rope and twine, as well as in tanning leather. The chief occupation of the people, however, next to the cultivation of rice, is the spinning and weaving of silk, cotton, and

Digitized by Google

linen fabrics; but all the processes are extremely simple, imperfect, and tedious. The art of dyeing is also practised, and several of the native dyes produce bright and durable colours.

The pop. of Madagascar consists of 4 chief political divisions, the numbers of which are estimated to be as follows:—

The Ovahs (in the central table-land)	800,000
Sakalavas (W. side of the island)	1,200,000
Betsileos (S. of the Ovahs)	1,500,000
Betanimana and Betsimasarka (on the E. coast	1,200,000
	4,700,000

The inhabs. differ materially in appearance and character, nor is there any doubt, though the people are nominally comprised in one political empire, and speak one language, that they include several distinct and peculiar nations. The distinction of colour separates the pop. into two great classes, the Ovahs, and a few other tribes, having olive complexions, handsome features, graceful persons, and lank dark hair; whereas the inhab. of the shore, and indeed the majority of the people, greatly resemble the Papuas, being short and stout, almost black, with low foreheads, broad flat faces, large eyes and mouth, and long crisped hair. There are differences also in the languages spoken by various sections of the pop., and many of their customs vary so much, as to make it clear that, however amalgamated, they are not one nation, but a combination of several distinct races. With the exception, however, of the Ovahs, they are little better than barbarians, run almost naked, despise a fixed life, are extremely superstitious, and practise most of the vices so generally prevalent among the savages of the neighbouring continent. Circumcision is universal, marriages are formed in very early life, and divorces are very common, and easily effected. The law permits polygamy, restricting the husband to 12 wives; but few have more than two, or at most three. Fidelity to the marriage engagement, however, forms no part of the female character, and modesty is a virtue almost unknown. Their houses are usually of rude construction, except in the cap. of the Ovah country, where European improvements have been partially introduced. The diet of the people consists, in great part, of rice and manioc, with smaller portions of beef and poultry, and the cookery is extremely simple.

Pedlery and hawking are favourite, though not profitable, occupations. The markets are great places of resort for all classes; and not only is there a daily general market at Tananarivo, but 4 or 5 large markets are held in different parts of the province, and well attended by a vast concourse of people from the adjoining districts. Animal and vegetable productions, native and foreign manufactures and cattle are exposed promiscuously; and in no nation are there more clever and persevering bargainers than in Madagascar. The greater part of the trade is carried on by barter. Most goods are sold by measure: rice by the bushel, meat by the *eye*, snuff by the spoon, fuel by the bundle. Rice, which may be considered the standard of value, costs about 1*s.* a bushel; 20 ducks or fowls may be purchased for a dollar, geese cost about 9*d.* each, and a fine turkey may be got for 1*s.* A bullock costs from 3 to 8 dollars, sheep average about 1*s.* 6*d.* each, and 20 good pine apples may be had for 3*d.* Labour is also extremely low, many working for mere food, and others gaining only 2*d.*, or at most 4*d.* a day. An intercourse has long been carried on with Madagascar by Arabs from Muscat, Indians from the presidency of Bombay, Europeans from the Cape of Good Hope, and Americans from Brazil and the United States. The taste of the people for foreign goods is also on the increase; and horses, saddles, and bridles, scarlet cloth, gold lace, red satin, purple, green, and yellow silk, silk handkerchiefs, sewing silk, calico and printed goods, hosiery, gloves, finger rings, watches and musical boxes, hardware, salt, and, above all, arrack and rum, are sought after in the markets of Ankova. The great obstacle to trade, however, is an entire want of roads. Owing to an idea which has long been entertained by the Hovas, that the best means of preserving their country from foreign invasion is to have no roads, none have ever been made. Travellers, as well as merchandise for the interior, have, therefore, to be conveyed over extensive tracts on men's shoulders. (Report by Mr. Consul Pakenham on the Trade of Madagascar, in 'Commercial Reports received at the Foreign Office.' London, 1865.)

Madagascar is divided into 28 provinces, all of which have their separate chiefs, but for years past the Ovahs have been reckoned the prevailing tribe, the chief of which is, in effect, the king of the island, receiving tribute from, and exercising sovereignty over, all the rest. The government is despotic, and the succession to the throne is commonly hereditary, the monarch having the right not only to appoint his immediate successor, but also to settle the line through future generations. He is the father of his kingdom, appoints every subordinate officer, enacts laws and orders their execution, decides cases and raises armies; but he often convokes assemblies of the people, for the purpose of obtaining information or advice on matters requiring mature deliberation, or in cases where the wishes of the aristocracy have to be consulted. The royal family is highly honoured, and tenacious of etiquette, and the respect due to rank. The judges, who rank next to the blood royal, hear causes, decide disputes, and are exclusively privileged to communicate between the sovereign and people. Subordinate to these are the *farantsa*, the police and tax-gatherers of the country; the *ambouin-jats*, or local magistrates; the *maroserana*, or military governors of provinces, a very powerful and important body; and the *vadintany*, or royal courtiers, who not only carry government despatches, but constitute a general patrol for the country. The king receives tithes of all produce, enjoys the monopoly of timber, and is exceedingly rich both in slaves and cattle, receiving also a considerable *ad valorem* duty from the possessors of these valuable articles. The sovereign is also high priest of the realm, and presides over the great national sacrifices. The religion of the country is a rude species of polytheistic idolatry, and the people almost without exception believe in witchcraft and the efficacy of charms. Christianity was introduced with temporary success by English and French missionaries, in 1818–1830; but is at present almost powerless, in consequence of various edicts which forbid its public profession.

Madagascar, the earliest accounts of which were given by Marco Polo, from the narrative of others, was discovered in 1506 by the Portuguese, who established a settlement close to the S. end of the island, and soon after tried, though with little success, to introduce the Rom. Cath. religion. It was at first resorted to merely as a place of refuge and provisioning station for ships; but in 1642 an attempt was made by the French to make it one of their colonies, which however proved futile, in consequence of its extreme unhealthiness; and in 1664 most of the colonists removed to the neighbouring island of Bourbon. The Jesuits

Digitized by Google

meanwhile continued to exert themselves in the establishment of Christianity; but owing to the injudicious zeal of Father Stephens, the superior of the mission in Madagascar, the natives were exasperated at the innovations of the foreigners, some of the missionaries were massacred, and the rest were glad to escape from the island. Various attempts have subsequently been made by the French to establish a permanent settlement, and since the general peace of 1815 they have formed four small colonies on the E. coast, as well as on the contiguous island of Madame St. Mary. The English missionaries were allowed to visit Madagascar in 1818-1825, with full permission to disseminate their moral and religious views; and the sovereign Radáma, a man of singular ability, even formed an alliance with Great Britain, suppressed the slave trade, established a general system of education, introduced Christianity into the heart of the country, formed a native army upon the European model, promoted the reduction of the language to grammatical form, and established a native press. He also favoured the diffusion of numerous arts and handicrafts calculated to extend the advantages of civilisation among his subjects. But whilst raising his country into the happiness that springs from civilisation, Radama himself fell a victim to its vices. He died in 1828, in consequence of his passionate addiction to intoxicating liquors, at the age of thirty-seven years. On the death of Radama one of his eleven wives, who was also his cousin, named Ranavolona, succeeded in getting herself elected to the throne, and now followed a period of darkness, retrogression, and persecution. The native Christians, of whom there were now great numbers scattered throughout the country, were hunted like wild beasts: they were put to death with all the cruel tortures which could be devised by the imagination of savages heated with the most enthusiastic zeal. The observance of Sunday was abolished. The missionaries were forbidden to teach the natives, and were shortly afterwards ordered to withdraw from the island. Queen Ranavolona, having revelled in blood for thirty-three years, died in 1861, and was succeeded by her son, Radama II. The accession of this prince caused a complete revulsion of feeling, and an entire change of policy in Madagascar; and on the very day of his accession, Radama II. proclaimed equal protection and universal toleration. However Radama II. was murdered after but a short reign, and the country underwent fresh troubles, due, to some extent, to the interference of foreign adventurers, chiefly from France. (L. B. M'Leod, Madagascar and its People. London, 1864.)

MADDALONI, a town of S. Italy, prov. Caserta, cap. canton, 14 m. NNE. Naples. Pop. 16,946 in 1862. The town has several churches and convents, a house of refuge, a royal college, and a noble aqueduct, which conveys water to the royal palace at Caserta.

MADERA, a great river of S. America, a tributary of the Amazon (which see).

MADEIRA, a famous island in the N. Atlantic Ocean, belonging to Portugal, Funchal, its cap., on its SE. side, being in lat. 32° 38′ N., long. 16° 54′ 26″ W.: length of Madeira, about 46 m.; breadth about 7 m. Area, estimated at above 300 sq. m. It is a mass of basaltic rock, presenting to those approaching its N. coast, numerous disjointed crags and tall isolated peaks, interspersed here and there with less elevated spots of verdure, the whole being based on enormous, dark-looking columns, rising perpendicularly several hundred ft. from the sea; which is usually so deep, even close in shore, that soundings are not found in less than 50 fathoms and upwards, except in Funchal roads, where ships anchor in from 30 to 35 fathoms. The cliffs on all sides are very lofty: the *Peña d'Ageria* (eagle's rock) on its N. coast, a black cubic-shaped mass of rock, is upwards of 1,000 ft. high; and C. Pargo, at the NW. extremity of the island, rises 4,000 ft. above the sea; but the most curious feature on the coast is the Punta S. Lorenzo, at its E. extremity, a ledge of rock 6 m. in length by 1 m. in breadth, which, though less lofty than other parts, is remarkable for its bold projection into the sea, and its fantastically-broken cliffs and peaks. The rapid declivities of the island are furrowed by deep and narrow valleys, at the bottom of which flow rills of pure spring water; and up their sides vineyards are formed by means of successive terraces, to the height of 2,300 ft. above the sea. The mountain scenery of the interior is bold and highly romantic; one part, a few miles NW. of Funchal, being called, by way of distinction, 'the Switzerland of Madeira.' Here is a deep valley, or crater, inclosed on all sides, except seaward, by a range of magnificent precipices, rising upwards of 1,000 ft. above the vale, the summits and sides of which are broken into every variety of dark beetling pinnacle, or flattened and tree-clad buttress; while far below smiles a fair region of cultivation and fruitfulness, rich in every species of vegetation, though itself rather more than 2,000 ft. above the sea level. The culminating point of the island is Pico Ruivo, rising 5,450 ft. above the sea, and covered with vegetation to its summit. Three rivers, or rather torrents, rise on its sides, and cross the island in several directions, contributing greatly to its fertility. The streams are carefully collected, and rendered more available for the purposes of agriculture, by means of artificial channels, or *levadas*, with sluices, constructed with vast labour. In 1840 was completed a great work of this kind, by which a copious stream, precipitated from the top of a cliff 1,000 feet in height, was made subservient to the purposes of irrigation.

The climate of Madeira fluctuates less than that of any country N. of the equator: its mean annual temperature having been found, in a period of 18 years, not to exceed 65 Fahr., that of the hottest months (Aug. and Sept.) being 74°, and that of the coldest (Dec. and Jan.) 63°, the glass seldom falling below 58° even in the severest weather. The heat of summer, however, is considerably higher, being increased from 10° to 15° during the prevalence of the hot and parching E. winds (the *scirocco*) that blow off the African continent. The temperature of Funchal, however, is considerably higher than that of the island in general: there dews are slight, and the rains few and far between; but, in the higher parts of the island, a cool climate is rendered more delicious by frequent dews and rains enriching vegetation, and rendering the air fresh and salubrious. This remarkable equality of climate, not only through the year, but during the days and nights, constitutes the chief recommendation of Madeira to invalids. Persons subject to chronic pulmonary complaints, unattended by any material disorganisation, have derived much benefit from a voyage to Madeira; as have others afflicted with diseases of the windpipe; and a still greater number who are the victims of dyspepsia, or other maladies of the stomach, the cure of which is hastened by the regular habits and exercise usually taken by invalid residents in the island. The efficacy of the climate, however, in cases of confirmed *tubercular* consumption has been absurdly exaggerated. It may then, indeed, lengthen life a little, but

Digitized by Google

it cannot effect a cure. During the last half century, vast numbers of invalids, of whose recovery no rational hope could be entertained, and who should have been left quietly to expire at home, have been hurried off to this island, at an expense which they could often but ill afford, for no purpose unless it were to amuse them with false hopes, or that they might occupy a place in Funchal church-yard. Invalids should not attempt the voyage before the middle of June, nor later than the end of September. Spring is a trying season, owing to the prevalence of NE. winds; and October is the first month of the rainy season of autumn.

Every part of Madeira, not encumbered with rocks, is extremely fertile; the hills are covered with luxuriant vegetation, and the most delicate flowers grow on their summits, which are constantly moistened with dew from the clouds overhanging the island. Trees and shrubs of the finest kinds are everywhere abundant, and tropical plants which have strayed from the gardens soon become naturalised to the soil. 'Here,' says a traveller (Wilde's Narrative, i. 89), 'all is sunshine: the green bananas, with their beautiful feathery tops, tell the visitor that he has bid farewell to Europe; the orange trees hold out to him their branches, laden with golden fruit. Plantations of coffee trees fill the spaces between the houses, the splendid coral tree hangs over his head, and the snowy bells of the tulip tree mingle with the scarlet hybiscus. If he wish for exercise, he has the most inviting walks, and the most tempting shades to shelter him: wide-spreading plane trees, and willows of gigantic growth, bend their slender arms over the streams that murmur from the hills. As he begins to ascend from Funchal, the beauty increases, and the sea-view opens to his sight. The roads, though steep, are well paved, and the horses trained to an easy pace. He rides through a perfect vineyard, where in many places the vines are carried on trellises over the road, and large bunches of grapes hang within his reach. Hedges of geraniums, fuschias, and heliotropes border those narrow paths, and shade him from the sun; the *Ficus indicus* clothes the cottages; the *Salvia fulgens* and Guernsey lily are sprinkled over the vineyards; and the *Camellia japonica*, with its delicate white flower and waxy leaf, adorns every quinta. Higher up grow the yam, prickly pear, dragon-tree and cedar, the aloe, agave and hydrangea, the sweet potato, and the *Phormium tenax*; and heaths and pines crown the highest summits of the island.' Thus it appears that, below the elevation of 1,200 ft., many of the most useful tropical plants, as the date, palm, guava, banana, and coffee-plant, are found, with numerous others peculiar to the warmer part of the temperate zone. Up to 2,500 ft., the fruits and grains of Europe, especially maize and corn, are raised; and nearly the whole of this district is covered with vineyards, the chestnut, which is extremely abundant, the beech, and other European trees, with the mahogany, grow up to an elevation of 3,400 ft., above which rise pines, heath, ferns, and grasses. Pasture is scanty: few cows are kept, and the products of the dairy are here expensive luxuries. Horses are little used, their place as beasts of burden being supplied by mules and asses of the Spanish breed. Goats and hogs are very numerous, and are allowed to run wild on the mountains, where also are found large quantities of rabbits. Poultry is abundant and cheap, and small birds of magnificent plumage occupy the groves. Myriads of finely variegated lizards crowd the gardens and vineyards, occasionally doing much damage to the grapes; but there are no venomous reptiles, and the inhabs. are free from that insect plague that is usually one of the drawbacks of warm countries. The honey bee is abundant, and produces fine honey. Many varieties of fish are caught on the coast, especially tunnies and eels, which are the favourite food of the inhab.

Agriculture is chiefly confined to the raising of vines. Land is usually let out in small holdings, varying from 10 to 40 or 50 acres, and the rent is estimated, on the *métayer* principle, at half the produce, according to a yearly valuation of the crops. Wheat, barley, and rye are produced; but the crops average little more than a third part of the annual consumption. The wheat is sown in Oct., and reaped in June, this crop being followed by another of beans or sweet potatoes. Rice is cultivated more as an ornamental grass than for any useful purpose; and Indian corn, which is admirably adapted to the climate, and is much used as an article of food, has till very lately been little grown.

Considerable attention has lately been devoted to the cultivation of the coffee plant, which may become of considerable importance. Fruits and vegetables are raised with little trouble, and the show in the fruit-market of Funchal, in a grove of noble palm-trees, is of extraordinary abundance. Here, besides all the ordinary fruits and garden vegetables of S. Europe, as oranges and lemons, green figs, grapes, pomegranates, water and Valencia melons, and pumpkins, are bananas and guavas, finer even than those grown in the W. Indies, custard-apples, alligator-pears (the fruit of the *Laurus Persea*), numerous tribes of cucurbitæ, the exquisitely flavoured fruit of the *Cactus triangularis*, the Cape gooseberry, sent as a preserve to Europe, and the *tchoo-tchoo*. But its wine is the great glory of Madeira. The grape is not indigenous to the island; and it is said to have received its first plants from Crete, carried thither by order of the famous Prince Henry of Portugal, under whose auspices it was settled by the Portuguese in 1421. Many other varieties of the grape have since been carried to the island, its mild climate and volcanic soil being especially suitable for their growth.

The steepness of the hill sides, on which the vines chiefly grow, and the necessity of economising valuable space, have led to the practice of raising the vine-beds on successive terraces, supported by retaining walls. The vines are trellised on bamboo and other supports for the purpose of exposing the grapes to the ripening influence of the sun, and the bunches are frequently of enormous size. The usual method of cultivation is to trench the ground from 4 to 7 ft. deep, according to the soil, and to lay a quantity of loose or stony earth at the bottom, to prevent the roots from reaching the clayey soil beneath, which would otherwise hinder their growth. The ground is watered three times, if the summer be very dry, and each time it is thoroughly saturated; but the less it is watered the better is the wine, though the quantity, of course, be diminished.

The N. side of the island, though sufficiently fertile, being the most exposed to cold winds and fogs, is not so favourable to the culture of the vine as the S., where all the finest growths are raised. The best Madeira-malmsey, or *Malvoisia*, is produced on rocky grounds exposed to the full influence of the sun's rays, the grapes being allowed to hang till they are dead ripe. The *Sercial* grape will, also, only succeed on particular spots. The wine made from it is, when new, harsh and austere, and requires to be long kept. The best Madeira wine is produced on the S. side of the island; but

Digitized by Google

it is alleged that not less than two-thirds of the wine grown even in this quarter is of secondary quality; so that in Madeira, as in all wine countries, the first growths (*premiers crus*) are both scarce and dear. The process of making the wine is very simple. The grapes are picked from the stalk, thrown into a vat, pressed, first with the feet, and afterwards with a weighted wooden lever. The proprietor of the land, and the collector of taxes for the crown, both attend at the press; the latter takes out of the tub his *tenth* of the whole *must*, the remainder being equally divided between the landowner and the tenant. Each takes with him a sufficient number of porters to carry away their respective shares, sometimes in barrels, but more frequently in goat skins, *borrachas*, to the cellars in Funchal, where the English merchants have extensive yards and vats for storing the wine, and carrying it through the different processes of fermentation and mixture. They usually advance money beforehand to the growers, to enable them to defray the expenses of cultivation.

Though naturally strong, a quantity of brandy is added to Madeira wine when racked from the vessels in which it has been fermented, and another portion is added when it is about to be exported. The demand for Madeira wine in the E. and W. Indies, where it is highly esteemed, first led to a knowledge of the improvement it derives from being carried to a warm climate; and it has long been customary for ships outward bound for India and China to touch at Madeira, and take large quantities of wine on board, which they bring home to England. But it must not be supposed that all the Madeira wine that has gone to Calcutta and Canton is necessarily better than any brought direct from the island, as much must obviously depend on the quality of the wine sent to the East. But, if due care be taken in the selection of the wine sent to India and China, it is very much improved and matured by the voyage; and it not only fetches a higher price, but is in all respects superior to the direct importations. Most of the adventitious spirit is dissipated in the course of the Indian voyage, and the full flavour of the wine is evolved.

The wines of Madeira have fallen of late years into disrepute in England. The growth of the island is very limited, not exceeding 15,000 or 18,000 pipes, of which a considerable quantity goes to the East and West Indies, and America. Hence, when Madeira was a fashionable wine in England, every sort of deception was practised with respect to it, and large quantities of spurious trash were disposed of for the genuine vintage of the island. This naturally brought the wine into discredit. In 1827, 308,295 gallons Madeira were entered for home consumption, whereas the quantity entered for home consumption in 1863 amounted to only 29,809 gallons of white and 350 gallons of red wine, and in 1864 had further sunk to 24,012 gallons of white and 324 gallons of red wine. The computed real value of the Madeira wine imported in 1864 amounted to 12,229*l.*

The commerce of Madeira is very considerable; the exports consist principally of wine. Among the minor articles of export are fruits, both fresh and preserved, dragon's blood (the gum of the *Calamus draco*), honey and wax, orchil (a white lichen used in purple-dyeing), tobacco, and provisions for ships. Its imports comprise manufactured goods, sheep, salted provisions, fish (especially herring and cod), oil, corn, and some tropical productions. The subjoined table gives—on the report of Mr. Erskine, British consul—the estimated value of imports and exports of Madeira in the years 1859–63:—

Years	Estimated Value of Imports		Estimated Value of Exports	
	In British Vessels	In Foreign Vessels	In British Vessels	In Foreign Vessels
	£	£	£	£
1859	115,710	71,498	56,660	37,886
1860	118,370	103,858	54,661	27,190
1861	95,900	83,469	62,180	25,255
1862	98,250	69,918	44,198	36,310
1863	104,450	76,375	44,110	35,898

The imports from the United Kingdom comprise cotton, woollen and linen fabrics, and haberdashery, with coal, earthenware, butter and cheese, salt meat, rice, and sugar. The Americans, chief importers next to the British, send timber, whale-oil, salt fish and meat, spermaceti candles, with other articles, in small quantities.

The government of Madeira has at its head a lieutenant-governor, whose power is so extensive that the comfort and happiness of the inhabs., especially the British, are greatly dependent on his character and acquaintance with the island. Justice is administered by a tribunal in whose favour little can be said, from which there is an appeal to the courts at Lisbon. The crown revenues are derived partly from a duty of 20 per cent. on all imports, except provisions; but the most productive source is the tithe of wine, with an additional duty per pipe on the quantity exported. A revenue is also derived from the monopoly of snuff, cards, and soap. The revenue is sufficient to defray the expenses of the civil, military, and ecclesiastical establishments; considerable sums are likewise expended in public works and roads, and frequently there remains a surplus, which is remitted to Portugal. The number of clergy, including monks and nuns, is stated to be somewhat under 300; they are partly supported by the crown revenues, the tithe on wine being originally intended for their maintenance. But the present government allowance, which they receive in lieu of it, is extremely small; so that the monks and clergy traffic in wine, or engage in other secular business, while the nuns gain a considerable income by making artificial flowers of wax and feathers, which are admired for their delicacy and beauty, and purchased by visitors and shippers at high prices.

The pop. of Madeira was ascertained by the census of Dec. 31, 1863, to amount to 110,741, while the adjoining island of Porto Santo had 1,423. The inhabitants are of a mixed race, sprung principally from Portuguese and Moors; but in Funchal many of the labouring classes show, by their English faces and complexions, that there has been a considerable intermixture with British settlers. Negro slaves, also, are still numerous, but they seldom intermarry with those of European origin. On the whole, the natives are a finer and more comely race than the Portuguese; they are of the middle size, well formed, and strongly knit, with masculine features, hair, and complexion. The women are almost universally under the standard height, and, when young, display handsome features, which, however, soon become coarse and unattractive, owing to their laborious field occupations. The men are dressed somewhat in the costume of English sailors, with large full leather boots, and a little funnel-shaped cap on their heads. This curious headgear is worn also by the women over the white muslin handkerchief, which covers the head and hangs down over the shoulders; and their gay chintz gowns and scarlet pelerines give them a light and picturesque appearance. 'It is delightful,' says the

Digitized by Google

traveller already cited, 'to see groups of these peasantry in companies of eight or ten sitting in some places under the umbrageous palms, eating their morning's meal, or completing their toilet, before entering the town, while others are hastening along, loaded with the various produce of their gardens, consisting of bunches of yellow bananas and strings of crimson pomegranates, or carrying fowl, firewood, and fish to the market of Funchal, each little party preceded by its mandolin-player, who at times accompanies the wire-strung instrument with his voice, and is joined at intervals by the hearty chorus of the whole group.' But the condition of a people is not to be learned from such holyday descriptions as this; and the truth is, that the native inhabitants of Funchal are meagre, sallow, and short-lived. 'This,' says another traveller, Sir John Barrow, 'is not to be attributed to the climate, but to the poverty of their food, which chiefly consists of pumpkins, sour wine, or pernicious spirits; to a life of drudgery and exposure to the great vicissitude of climate, by daily ascending the steep and lofty mountains in search of fuel; and, above all, to a total disregard of cleanliness.' In fact, almost all the natives of the island are infected with a species of itch, which they regard as incurable, and which is accompanied with a great degree of inflammation. Among the richer inhabs. are many Portuguese *fidalgos*; but by far the larger part are merchants and private residents belonging to almost every commercial country, especially Great Britain. These hold little intercourse with the other inhab., but live either in their town-houses at Funchal, or at their villas or *quintas* higher up the island, where they exercise the most liberal hospitality. A small tax on wine sent to England is levied by the British consul, to form a fund for charitable purposes, which is further increased by the benevolent contributions of the merchants, who also support an English episcopal church.

Funchal, the only town of Madeira requiring any special notice, is situated on the SE. side of the island, and stretches nearly a mile along the margin of the bay. It is irregular, inconvenient, and meanly built, with narrow, crooked, steep, and dirty streets, some of which, being paved with sharp-pointed pebbles, are painful to walk upon. Streamlets of water run down some of the streets from the overhanging mountains. The houses are commonly low, not often exceeding one story in height, with white outsides. Those belonging to the fidalgos or rich merchants are comparatively large and handsome, having at the top a *torrinha* or turret, commanding a view of the harbour, used for reconnoitring vessels as they arrive in the offing. The governor's castle is a large clumsy-looking Gothic structure, near the beach. The cathedral has a *parvis*, or open space, before its W. door; and beyond it is the *Terreiro da Sé*, a pleasant promenade under several parallel rows of trees, enclosed by a low wall, and overlooked by pretty houses with balconies. In one of the wings of the Franciscan convent is a chamber, the walls and ceilings of which were formerly covered with human skulls and thigh bones. The English church in the suburbs is an elegant and commodious building, literally embosomed in ever springing roses and white daturas. The convent of *Nossa Senhora do Monte*, amid groves of chesnut-trees half way up the mountain, commands a very fine view. Funchal roads labour under several disadvantages: the anchorage is in 35 or 40 fathoms; land squalls are often extremely violent; a heavy surf on the beach, especially in spring, makes a landing at all times unpleasant, and sometimes unsafe, except in the shore-boats, in managing which the natives are very skilful. From the autumnal to the vernal equinox, when strong southerly gales throw in a heavy sea, the roads are peculiarly dangerous, and many accidents have then occurred.

A few inconsiderable islands in the vicinity of Madeira are included under its government. Of these Porto Santo, 35 m. NW., is the only one that is inhabited. It has a parched barren aspect, and has but one fountain of good water. Its products comprise wine of an inferior quality, good barley, water-melons, and other fruits; but it is wholly destitute of wood. The town is insignificant, and is occasionally used as a place of exile from Madeira. The entire pop. of the island, as already stated, amounted to 1,423 on the 31st of Dec. 1863. The little islands called the Desertas, are occasionally visited by a few fishermen and smugglers, and the rest are mere rocks.

Madeira is said to have been discovered in 1344, by Macham, an Englishman, who was wrecked, and cast on its shores. But this story is very doubtful; and it seems most probable that Juan Gonzalez, who had been despatched on a voyage of discovery by Prince Henry of Portugal, and who fell in with this island in 1419, was its real discoverer. When discovered it was uninhabited, and covered with wood, and was on that account called *Madeira*, that being the Portuguese term for timber. It was settled by the Portuguese in 1421, and has since continued in their possession. Madeira was occupied by the English during the war with France, but merely in order to prevent its falling into the hands of the French, and it was restored to Portugal at the peace of 1814.

MADELEY, a market town and par. of England, co. Salop, franchise Wenlock, on the banks of the Severn, 13 m. ESE. Shrewsbury, 126 m. NW. London by road, and 149 m. by London and North Western railway. Pop. of par. 9,469 in 1861. Area of par. 2,750 acres. The town, which is of considerable antiquity, and celebrated in history as having given refuge to Charles II. after the battle of Worcester, derives its present importance from its proximity to the great coal and iron district of Coalbrookdale. The church is a handsome modern structure, the living being a vicarage in private patronage. The Rom. Caths., Wesleyan, and Primitive Methodists have also their respective places of worship, and there is a meeting-house for the Society of Friends. A national school is connected with the church, and there are four Sunday schools. The iron trade, carried on here to a considerable extent, is much facilitated by means of the Shropshire canal, which joins the Birmingham and Liverpool junction canal, and connects Madeley and the Ketley ironworks with the great manufacturing districts of Dudley, Wolverhampton, and Birmingham. About 2 m. W. of the town, and near the romantic village of Colebrookdale, is a cast-iron bridge, erected in 1780, of one arch, 100 ft. in span, 40 ft. above the river, and containing 375 tons of metal, being the first structure of the kind raised in the kingdom. This beautiful rural district, embosomed between high and well-wooded hills, has, within the last half century, been converted into one of active mining and manufacturing industry, the furnaces now at work in this vicinity being estimated to produce 60,000 tons of iron a year. At Coalport, about 2 m. from the above mentioned bridge, is a considerable manufactory of china. Markets on Friday; fairs May 29, and last Tuesday in Oct.

The neighbourhood of Madeley is remarkable for an extraordinary convulsion of the earth, that took place in 1773, when about 30 acres of land

Digitized by Google

were shifted from their site, and broken into irregular chasms, large oak trees were uprooted, and the Severn, blocked up for more than 200 yards by the displaced soil and fallen trees, was compelled to find a new channel, in which it now flows.

MADRAS (PRESIDENCY OF), an extensive division of British India, being the second in rank and the most southerly of the three presidencies. It comprises the whole of Hindostan S. of the river Krishna, the N. Circars, and Canara, extending from 8° to 20° N. lat., and from 74° to 85° E. long. It is of a triangular shape; the base of the triangle being formed by a line drawn from Ganjam, on the coast of Coromandel, to Sadasharagur, near the 15th degree of lat., on the coast of Malabar, the sides by their coasts, and the apex by Cape Comorin, at the southern extremity of India. It is consequently bounded on two of its sides, the E. and W., by the ocean, while on the third, or N., it has the dom. of the Nizam and the rajah of Berar, parts of the presids. of Bengal and Bombay, and the Portuguese territory of Goa. Its greatest length, N. to S., is about 950 m. The total area of the presidency is 140,917 sq. m., while the pop., according to an official return of the year 1862, amounted to 23,180,823. (Statistical Tables relating to the Colonial and other Possessions of the United Kingdom.)

Physical Geography.—Mountains.—The surface consists of a central table-land, surrounded on all sides by an undulating or plain country gradually diminishing in elevation as it approaches the sea. The mountain-ranges bounding the table-land on either side are the E. and W. Ghauts, which diverge from each other at the knot of mountains termed the Neilgherries, in about 11° N. lat., and from 76° 30′ to about 77° E. long. The W. Ghauts approach much nearer to the sea than the E., so that there is a much greater extent of plain country in the E. than in the W. portion of the presid. The Neilgherry Hills, which may be considered the nucleus of the mountain system in S. Hindostan, extend 84 m. E. to W. by 15 m. N. to S., having numerous peaks rising to between 5,000 and 6,000 ft., and one, Dodabettas, estimated at 8,760 ft. above the level of the sea. The W. Ghauts are more continuous and generally more elevated than the E.: the latter, even in the district of Salem, where they are highest, seldom attaining to an elevation of 6,000 ft., while the former frequently rise 2,000 ft. higher. The table-land above or between the Ghauts averages in Coorg nearly 5,000 ft. in elevation, and, in Canara, Balaghaut varies from 3,000 to 5,000 ft.; but it decreases rapidly in height as we proceed E. and N., and even in Mysore, Bangalore is only 2,807 ft., and Hurryhur only 1,831 ft. above the sea. S. of the Neilgherries is the Paulgautcherry Pass, in Coimbatoor, 16 m. in width, extending from sea to sea, and forming a complete break in the mountain-system of S. India. S. of this pass, a mountain chain, little inferior in height to the Neilgherries, stretches nearly due S. to Cape Comorin. This chain separates Cochin and Travancore, on the W., from the district of Madura and Tinnevelly, on the E. The Ghauts elsewhere form the chief line of separation between the British territories and those of the subsidiary states.

The principal rivers are the Godavery and Krishna, with their tributaries, and the Pennar, Palaur, Punnair, Cavery, Coleroon, and Vighey. These have all an E. course, and disembogue on the Coromandel coast. The Coleroon is the N. branch of the Cavery, which, having separated from the latter, opposite Trichinopoly, bounds the district of Tanjore on the N., and falls into the sea about lat. 11° 30′. The streams running W. have short courses; the longest is the Ponany, which traverses the Paulghautcherry Pass, but it is of little use for navigation, being very shallow in the dry season. There are no lakes of any importance: that of Colair, in Masulipatam, is the principal. There are numerous salt lagoons, or inlets of the sea, on the Coromandel coast, but they are of little use for navigation; and the whole of the Coromandel coast has a shelving shore, and is beat by so heavy a surf, as to be at all times difficult to reach, and, during the monsoon, it is quite unapproachable. The Malabar coast within this presidency is also very destitute of good harbours.

The Climate differs widely in the different portions of the presidency. The W. coast is exposed to all the fury of the SW. monsoon, during which the rains are excessive, and often accompanied by heavy squalls and thunder storms. On the opposite coast, the rains are, on the contrary, brought in by the NE. monsoon, a circumstance explained by the fact, that the Ghauts are elevated enough to intercept the passage of the clouds. The NE. monsoon lasts from October to March, but the monsoon rains are over in December, and much less rain falls on the Coromandel than the Malabar coast, where, as in Canara, the annual fall of rain is sometimes 114 in. The heat is much more oppressive on the E. than the W. side of S. India, owing to the greater prevalence of dry weather and parching winds. At the mouth of the Krishna, in the N. Circars, in about 16° lat., the thermometer has been known to stand at 108° Fah. at midnight. The plain country, in the E. part of the presidency, is frequently very unhealthy; but on the Malabar coast this is not the case. The country above the Ghauts, which has a mean temperature many degrees below that of the plains, is decidedly salubrious; it derives rain from both monsoons, having an equable climate, and an atmosphere usually clear, serene, and highly invigorating.

The Geology of S. India has been noticed with that of the rest of Hindostan. Sienite, granite, quartz, greenstone, mica, and hornblende are among the chief primitive rocks, in the Ghauts and Neilgherries. The upper soil on the coasts is usually sandy, and not very productive; but, in the valleys of the interior, it frequently consists of a rich alluvium or loam. The soil of the Balaghaut districts, N. of Mysore, consists principally of the red and black earth, so prevalent in the Deccan.

Natural Products.—Many portions of the soil in the table-land are highly impregnated with carbonate of soda, nitre, and other salts; iron is generally plentiful, and the iron ore of the district of Salem is extremely rich. Copper is found in Nellore, and a few other districts, and diamonds near Cuddapah. The presidency yields no other mineral products of much value. A considerable extent of surface, especially in the upper part of the country, is covered with forests, comprising teak, sandal, ebony, and other valuable timber trees. Teak grows on the E. as well as the W. Ghauts; but that of the Malabar coast is the most available, and best known in the market, a good deal being floated down to the coast by the small rivers, and sent to Bombay and elsewhere for ship-building. The toddy-palm (*Borassus flabelliformis*), cocoa-nut tree, the products of which form important articles of export from the W. districts, and other palms, flourish on the sandy coast lands, which supply few other useful articles. The sugar cane, areca, yam, plantain, tamarind, jack, mango, melons, and various other fruits, ginger, turmeric,

Digitized by Google

cotton, and hemp, some of which are indigenous, are pretty generally grown. Pepper is an important article of culture on the Malabar coast, and Coimbatoor is celebrated for the excellence of its tobacco. Rice, paddy, wheat, barley, maize, and all the other grains common in India, both wet and dry, are here cultivated: the first is grown chiefly on the plains of the coast; but it forms also the chief export of Coorg, though a high country, and is the great staple of Canara. The Balaghaut districts are almost wholly appropriated to dry grain cultivation.

Animals.—The elephant, tiger, chetah, bear, bison, elk, spotted deer, antelope, jackal, wild hog, and jungle sheep inhabit this as well as other parts of India: tigers, however, are not so numerous as in the countries watered by the Ganges, and other low and jungly portions of Hindostan. Ivory is a product of some consequence in Coimbatoor. Domestic animals are most numerous in the E. and S. districts; Guntoor is celebrated for its cattle; and Coimbatoor for its sheep, which are not hairy and long-legged like those of the Carnatic, but small, yielding good mutton and coarse wool, made into common sorts of clothing, and carpets; and live stock, above the Ghauts, is scarce and inferior.

Agriculture.—The land in the Madras presidency is generally much less fertile than in Bengal and many other parts of British India. Tanjore may be said to be the granary of the presidency, and produces the greatest land revenue. The widest breadth of cultivated land is met with in Rajahmundry, Tanjore, and Coimbatoor. The modes of agriculture pursued in the different provinces will be found briefly noticed in the articles which have especial reference to them. Generally, however, it may be said that agriculture is at a very low ebb; that the occupiers are for the most part miserably poor, and their implements and stock alike bad. Irrigation is extensively practised: and, wherever a sufficient supply of water (whether from rivers, tanks, or wells) can be commanded, as in the delta of Tanjore, S. Arcot, &c., the crops of rice are very heavy. The land under dry grains is generally manured; and cow dung used as fuel in this presidency being subject to a tax, it is generally used as manure. Opium is rarely or not at all grown; and indigo only in small quantities, principally in the N. districts. Coimbatoor exports annually upwards of 4,000 candies of tobacco to Malabar, Cochin, and Travancore; and large quantities to Trichinopoly and Mysore. The superiority of the tobacco grown in this province is attributed to the soil containing much saltpetre and peroxide of iron, as well as to the attention bestowed on its culture. The exhaustion of the land, from its cultivation, is, however, very great: the ground consequently requires frequent and regular manuring, and is cultivated every other year with dry grains. Tobacco costs on the spot where produced about 25 rupees per candy. Cotton is a staple product of Tinnevelly; and it and sugar are raised in various other places.

Manufactures.—The principal manufactures are those of cotton cloth; and formerly cotton fabrics and other piece goods were largely exported, especially from the N. Circars: latterly, however, the lower price and better quality of British piece goods have enabled them, to a great extent, to supersede those of India in most foreign markets; though the latter are still exported, especially from Tinnevelly, to the W. Indies and America. The natives have, however, turned their attention to the imitation of English cottons, and, in some instances, with considerable success. The muslins of Chicacole, the woollen carpets of Ellore, and the silks of Berhampore (Ganjam), are of old celebrity; but in general manufacturing industry flourishes most in the S. districts, and the cloths of Madura are highly esteemed for their fine red dye. The Malabar coast has a singular paucity of manufactures: its chief wealth arises from its large exports of rice to Arabia and Bombay, and of pepper and other spices, areca, cocoa-nuts, &c. A good deal of iron is made in Tinnevelly, and saltpetre and salt are made in various parts; but the latter are inferior to those of the Bengal presidency. Above the Ghauts the arts are in a very rude state. The state of manufactures depends in a great degree on the state of the roads, and means of communication, and in this respect the great lines of railway, recently constructed, have done much to raise industry.

Railways.—The principal railway in the presidency is the great Madras line, 515 miles long, running from the town of Madras to Beypoor, on the Malabar coast, with branches to Bangalore and the Neilgherry Hills. A second railway, 330 miles long, extends from the Arconum station, 42 miles from Madras, on the main line, by Cuddapah and Bellary to Moodgul, where it forms a junction with the 'Great Indian Peninsula' railway coming from Bombay. Finally, a third line, called the 'Great Southern of India,' connects Tanjore with Madras. The total number of passengers conveyed on the railways of the presidency in the year ending the 30th of June, 1864, amounted to 1,659,197; the receipts from passenger traffic in the same year were 129,662*l.*, and those from goods traffic 168,374*l.* The working expenses amounted to 165,265*l.*, or about 60 per cent.

Weights and Measures.—At Madras, the *maund* of 40 seers or 8 ris = 25 lbs. avoird.; the *candy* of 20 maunds = 500 lbs.; the *garee* for grain = 12·8 mds. At Trichinopoly, the *seer* for metals = 9 oz. 8½ dr. In Malabar, the *tolam* of 40 seers = 28 lbs. 8 oz.; the foot = 10·46 in. At Madras, the *mauney* = 2,400 sq. ft.; the *cawney* of 24 mauney = 1·3223 acres.

Revenue.—Subjoined is the account of the gross and net receipts of the presidency of Madras, for the financial year ending April 30, 1864:—

Revenues	Gross Receipts	Repayments: Allowances, Refunds, and Drawback	Net Receipts within the Year, after deducting Repayments
	£	£	£
Land Revenue	4,299,792	3,899	4,295,893
Forest Revenue	24,506	4,014	20,492
Abkaree	405,165	101	405,064
Tributes and Contributions from Native States	344,643	..	344,643
Total Land Revenue, &c.	5,074,106	8,014	5,066,092
Assessed Taxes	164,960	3,238	161,722
Customs	229,852	5,315	224,537
Salt	899,272	..	899,272
Stamps	238,342	3,488	234,854
Mint	111,696	..	111,696
Law and Justice, and Police	44,462	..	44,462
Marine	6,217	..	6,217
Public Works	29,654	..	29,654
Miscellaneous — Civil	61,439	5,206	56,233
Miscellaneous — Military	162,117	..	162,117
Interest	7,162	..	7,162
Total	7,029,279	25,261	7,004,018

Trade.—The following table gives the number and tonnage of British and other European vessels

Digitized by Google

entered and cleared at ports in the presidency of Madras in each of the years, ended 30th April, 1860, 1861, and 1862.

Years ended April 30	Entered		Cleared		Total	
	Vessels	Tons	Vessels	Tons	Vessels	Tons
	British.					
1860	1,479	398,834	1,777	470,877	3,256	869,711
1861	1,550	370,104	1,871	421,775	3,421	791,879
1862	1,590	416,216	1,889	472,242	3,479	888,458
	Other European.					
1860	115	49,357	154	65,135	269	114,492
1861	178	68,904	226	93,510	404	162,414
1862	117	49,242	172	75,901	289	125,143

The total value of the imports into the presidency amounted to 3,000,846*l.* in 1860; to 3,205,097*l.* in 1861; and to 3,474,519*l.* in 1862. About two-thirds of the imports consisted in merchandise and one-third in treasure. The exports were to the amount of 2,492,156*l.* in 1860; of 2,868,767*l.* in 1861; and 3,418,684 in 1862.

Government.—The civil administration is in the hands of a governor, subordinate to the governor-general of India. He is assisted by a council of 3 members, one being the commander-in-chief, and 3 secretaries, placed over the revenue and judicial, political, and military departments. In each of the 20 districts there is a European collector, who exerts also the chief magisterial power. Zillah courts are holden in the principal towns of most of the districts; and there are four provincial courts of appeal at Chittoor, Masulipatam Trichinopoly, and Tellicherry. In Madras is a court of Sudder and Foudjarry Adawlut, an admiralty court, and the high court of judicature for the presidency. The Church of England ecclesiastical establishment consists of the bishop and archdeacon of Madras and 19 chaplains, in different parts of the presidency. There are numerous Protestant-dissenting and R. Cath. chapels, Madras being the see also of a Rom. Cath. bishop.

History.—In the art. India, British, will be found a table, showing the dates of the successive augmentations to the British possessions in the East. The city of Madras, with a territory 5 m. along shore by 1 m. inland, granted in 1639, formed the first nucleus of the Eastern Empire. The Jaghire, or Chingleput, was obtained by the E. I. Comp. from the nabob of Arcot, in 1750 and 1763. In 1792, Malabar, Canara, Coimbatoor, Dindigul, Salem, and the Barramahl, were acquired by conquest from the sultans of Mysore; in 1800, the Balaghaut districts were ceded; and, in 1801, the remainder of the nabob of Arcot's territories were added. The siege and defence of Arcot, the capital of the nabob's dominions in the Carnatic, are among the most interesting events in the history of British India. They were undertaken, in the year 1750, by Lord Clive, who, with a force of about 500 English and native troops, successfully resisted 10,000 natives under Rajah Sahib, assisted by 150 of Dupleix's veterans. This heroic defence of Arcot is only paralleled by that of Lucknow in more modern times.

Madras, a marit. city of Southern India, cap. of the above presidency, in the distr. of the same name, on the Coromandel coast, 650 m. (direct distance) SE. Bombay, 870 m. SW. Calcutta by road, and 707 m. by sea. Pop. estimated at 720,000 in 1862. The city is not well situated, and difficult of access from the sea. There being no indentation on the coast, nor any island to break off the surge, a heavy swell rolls in throughout the year. Vessels anchor in the open roads, the large ones keeping a mile or two from shore. The danger is so great during the SW. monsoon that vessels are not allowed to lie here for several months, and the anchorage seems deserted. Cargoes are loaded and unloaded by boats adapted for passing through the surf: these, called *catamarans*, consist of three flattened timbers, 8 or 10 ft. long, tied together horizontally, and sharpened a little at the point. One or two men propel it with a paddle, flatted at both ends, and dip first on one side and then on the other. When no boat could live five minutes, these catamarans go about in perfect safety. The men are often washed off, but instantly leap on again without alarm. A waterproof cap, for the carriage of letters to and from newly arrived vessels, is almost their only article of dress. The boats used are large and deep, made without ribs or timbers, of thin wide planks, warped by fire to a proper shape, and fastened together by strong twine. Against the seams straw and mud are fastened strongly by the twine, which ties the planks together. No nails are used, for none would keep a boat together with such thumping. The boatmen display energy and skill scarcely to be surpassed. Keeping time to a rude tune, they now take long, and now short pulls, as the waves run past; they at length push the boat forward on a foaming surf, until it is thrown upon the beach.

Madras presents, from the sea, nothing to create great expectations. Only a few public buildings are visible, and not much of the town, as the site is quite level. It is, however, a noble city, and has many fine streets. Fort St. George may be considered the great nucleus and centre of Madras. It is neither so large nor so regular as Fort William, at Calcutta; but it is strong, and has the advantages of requiring a smaller garrison, and of being easily relieved by sea. It occupies a semicircular area, rather more than ½ m. in length, by from 2 to 3 furlongs in width, in a commanding situation, immediately on the beach; and is surrounded by an esplanade traversed by roads and shaded public walks. Within it were formerly, besides many public offices, some streets of private European dwellings, shops, and stores; but these have been mostly cleared away, and the Fort now contains only the barracks, arsenal, a bazaar for the supply of the garrison, the council-house, the old church, the exchange, on which a lighthouse with a lantern 90 ft. high is erected. The merchants and tradesmen have mostly removed their establishments to the new streets, opened in the NE. quarter of the Black Town, and along the skirts of the esplanade. The Black, or native town, which is N. and NE. the fort and esplanade, is well laid out, and is defended by a substantial brick wall. The houses are far better, at an average, than those of the natives in Calcutta. A fine range of public edifices, including the custom-house, office for the board of trade, court-house, granary, and many store-houses, form its frontage towards the beach, protected from the fury of the surf by a breakwater of massy stones. The front of this terrace, and the drives on the esplanade, form the chief promenades of the inhabitants.

Madras differs from Calcutta, in having properly no European town, except the few houses within the fort. Most of the European settlers reside in suburban houses, and repair in the morning to their offices in the Black Town, returning in the afternoon. Their residences are chiefly on the Choultry plain, a large extent of surface, SW. of the fort, and separated from it by the river Triplicane, which, in the neighbourhood of the city, is crossed by numerous bridges. The houses

Digitized by Google

all stand in large plots of ground, shaded by trees, and divided by hedges of bamboo or prickly pear. Few are of more than one story, but they are in a pleasing style of architecture, having their porticoes and verandahs supported by stuccoed pillars. In general, the rooms are not quite so large as those of the houses in either Calcutta or Bombay, but they are more elegant and agreeable. On the Choultry plain, near Fort St. George, is the governor's residence, a large building, with a spacious banqueting-hall. Near it are the Chepauk Gardens, in which is the residence of the Nabob of the Carnatic; and, adjacent to these, is a mosque of greystone, with 5 arches in front, and 2 handsome minarets, the only Mohammedan structure of any note at Madras. The descendants of the former Portuguese inhabitants chiefly reside at San Thomé, a suburb on the shore, about 3 m. S. from the fort, with a small cathedral, and 2 neat chapels under the charge of a Portuguese bishop, and a few priests from Goa. The Protestant places of worship are St. George's cathedral on the Choultry plain, 5 other episcopal churches and chapels, a Scotch and an Armenian church, and Independent, Wesleyan, and Unitarian chapels. There are also 3 Rom. Cath. churches. The number of native Christians is stated to be very small, though increasing. There are male and female orphan asylums, many schools, and other charitable institutions, and numerous missionary establishments, both European and American.

Madras is the seat of all the chief government offices for its presidency, of the supreme court, a board of revenue, marine board, and other establishments. In consequence of its unfortunate maritime position, it has less foreign trade than the capitals of either of the other presidencies. Its commerce is still, however, considerable, as it is the principal emporium of the Coromandel coast, and trades direct with Great Britain, and other European countries, the United States, the South American States, China, the Eastern Islands, the Birman Empire, Calcutta, and Ceylon. The principal articles of import are rice and other grain, chiefly from Bengal; cotton piece-goods, iron, copper, spelter, and other British manufactures; raw silk from Bengal and China, with betel or areca nut, gold dust, tin, and pepper, from the Malay countries; and rice and pepper from the coast of Malabar, with teak timber from Pegu. The exports consist of plain and printed cottons, cotton-wool, indigo, salt, Ceylon pearls, chank shells, tobacco, soap, natron, some dyeing drugs, and coffee, from the table-land of Mysore.

In Madras roads, large ships moor in from 7 to 9 fathoms, with the flagstaff of the fort bearing WNW. 2 m. from shore. From Oct. to Jan. is generally considered the most unsafe season of the year, in consequence of the prevalence of storms and typhoons. On the 15th of Oct. the flagstaff is struck, and not erected again till the 15th of Dec., during which period a ship coming into the roads, or, indeed, any where within soundings on the coast of Coromandel, vitiates her insurance. The light within the fort may be seen from the deck of a large ship at 17 m. distance, or from the mast-head, at a distance of 26 m. By the port regulations, no articles are to be shipped or landed without a permit, or after 6 P.M. Any merchandise attempted to be landed without the prescribed forms, or that is not entered in the manifest, is liable to double duty; and, where a fraudulent intention shall appear, to confiscation.

Meat, poultry, fish, and other provisions are to be procured for shipping at Madras, but they are neither so good nor so cheap as in Bengal. Wood and fuel are rather scarce, and dear in proportion. Water is of very good quality. On account of the dearness of provisions, wages are considerably higher than at Calcutta, and comparatively few servants are kept. The style of living is much the same in Madras as at Calcutta, but visiting is not carried on upon so extensive a scale. In the cool season assemblies are held in the Pantheon, a building erected in the suburb of Vepery, and occasional balls take place throughout the year. During the cool season, also, races are held at St. Thomas's Mount, about 7 m. from Madras. The road to the racecourse is one of the finest in India, and shaded by trees through its whole length. At the foot of Mount St. Thomas is the principal cantonment for the artillery of the Madras army, with a noble parade ground, considered one of the best military stations in S. India.

Madras experiences less extreme heat than Calcutta, taking the average of the year, though so much nearer the equator. The *minimum* temp. in Jan. 1837, was 65° Fah.; the *maximum* in May of the same year, 99°: the mean annual temp. was 81·7°. Several extensive tanks and some swamps surround the city and its territory; but Madras is not said to be particularly unhealthy.

The territory on which Madras is situated formed the first acquisition made on the continent of India by the British, who obtained it by a grant from the rajah of Bijnagur in 1639, with permission to erect a fort thereon. The latter, which was forthwith built, was besieged in 1702 by one of Aurungzebe's generals; and in 1744 by the French under M. de la Bourdonnais, to whom it surrendered after a bombardment of three days. It was restored to the English at the peace of Aix la Chapelle, and sustained, with credit and success, a memorable siege by the French under Lally in 1758–9, since which it has experienced no hostile attack.

MADRID, a celebrated city, and the modern cap. of Spain, on the Manzanares, a tributary of the Tagus, 39 m. N. by E. Toledo, 320 m. ENE. Lisbon, and 240 m. SW. Bayonne, at the centre of the chief lines of railway which traverse the kingdom. Pop. 281,170 in 1857, of whom 136,012 males, and 136,145 females. The city—which till the time of Philip II. was little more than an obscure country town—stands in a stony barren district, more than 2,000 ft. above the sea, having no navigable river near it, and extremely cold in winter and unbearably hot in summer; the thermometer, at the former season, falling to 18°, and, during the latter, rising to 110° or 115° Fahrenheit. The variableness of temperature, combined with the prevalence of piercing E. and NE. winds, during the greater part of the year, renders the climate very unhealthy, and especially prejudicial to persons threatened with pulmonary complaints. All authors, indeed, agree that it would have been difficult to fix on a more unfavourable site. 'From the Somo-Sierra,' says a traveller, 'to the gates of Madrid, a distance of nearly 30 m., not a tree, garden, nor country house is to be seen, scarcely an isolated farm-house or cottage, and only three or four very inconsiderable villages. The land is chiefly uncultivated, and even that part under tillage and producing grain is mostly covered with weeds and stones. In the midst of this desert stands Madrid, which is not visible more than two leagues' distance. From this side it appears small and not striking; and although we may count upwards of 50 spires and towers, none are so elevated or imposing as to awaken curiosity, like that felt on first discovering the towers of churches in other Spanish cities. Even ½ m. from the gate, the traveller might still believe himself to be 100 m. from any habitation: the road stretches away,

Digitized by Google

speckled only by a few mules; there are no carriages, no horsemen, scarcely even a pedestrian; there is, in fact, not one sign of vicinity to a great city.'

Madrid occupies a space of nearly 4 sq. m., on a slope inclining SSW. towards the Manzanares, usually an insignificant stream crossed by two magnificent bridges, the size and beauty of which contrast so strongly with the river beneath as to have given rise to the saying, that 'the kings of Spain should sell the bridges, and purchase water with the money.' The river, however, sometimes swells to a great height, and pours down a magnificent volume of water. The town is surrounded by a brick wall, in which are 15 stone gates, the handsomest being those of Alcala, San Vincente, and Toledo. The interior comprises an old and a more modern quarter, the former built before Madrid was the metropolis of Spain. The E. and more modern part is not devoid of beauty; and its wide and well-paved streets, lined with handsome and lofty houses, chiefly built with brick and grey granite, the extensive and well-planted walks, the squares with their elegant fountains, and the many large and well-built public edifices, remind the traveller that he is in one of the finest, though perhaps also one of the dullest, capitals in Europe. The best entrance to the city is by the Saragossa road, through the gate of Alcala, a noble Ionic structure, with three arches, the central one being 70 ft. high. Within the walls, right and left, is the long, wide *Prado*, with its rows of trees stretching in fine perspective for more than ½ m., and in front is the *Calle de Alcala*, reaching into the heart of the city, ¾ m. in length, of great width, and flanked by a splendid range of unequal buildings, but all of large size and good proportions. At its end is the great centre, in which most of the better streets terminate, called the *Puerta de Sol*. Here, close to the *Bolsa*, or exchange, is the great morning rendezvous, either for business or pleasure. The best streets uniting in this point are the *Calle Mayor*, the *Calle de la Montera*, and the *Calle de las Carretas*, all busy thoroughfares, with good and showy shops. The *Calle del Arsenal* leads to the palace, and the *Carrera de San Geronimo* is the direct road to the gardens of the Buen Retiro. Among the squares of Madrid, the largest, with the exception of the space fronting the palace, is the *Plaza Mayor*, a rectangular area, 430 ft. in length, and 330 ft. broad, surrounded by a uniform range of stone buildings, 5 stories high, the lower part being open in front, and supported by pillars forming a handsome colonnade. The chief streets running into it are those of Atocha and Toledo, the latter passing through the *Plaza de Cebada* (formerly the place of execution for criminals), and through the gate to the bridge of its own name. None of these streets, however, will bear any comparison with the Calle de Alcala: many are good, and very many respectable, tolerably wide, and formed with lofty and well-built houses; but there is no other magnificent street. The bye-streets are narrow and crooked, especially in the SW. quarter, where decay of material, closeness of building, and extreme filth are the almost unvarying characteristics.

Among the public buildings, the most conspicuous is the royal palace, occupying, with its gardens, a space of nearly 80 acres, on the E. bank of the river. It stands on the site of the old Alcazar of Philip II., burnt down in 1734, and has 4 fronts of white stone (each 470 ft. in length and 100 ft. high), enclosing a spacious quadrangle. The interior is fitted up in a style of costly magnificence, perhaps not surpassed in any palace of Europe. The ceilings are *chefs-d'œuvre* of Mengs, Velasquez, Corrado, and Tiepolo; the richest marbles of Spain adorn its walls, and the rooms are hung with paintings by the best masters, and noble mirrors from the manufactory of St. Ildefonso. Many of the best pictures, however, which formerly adorned the palace, have been removed to the royal picture-gallery in the Prado. But the armoury of the palace is especially curious, and presents numerous specimens of arms and accoutrements taken from the Moors by Ferdinand the Catholic and his victorious generals. The other chief public buildings are, the custom-house, a handsome range of building, 320 ft. in length; the Buena-vista palace, now used as a museum of civil engineering; and the palace of the council of Castile, in the Calle de Alcala; the post-office, in the Puerta del Sol; the national printing office, in the Calle de las Carretas; the duke of Liria's palace, containing a fine collection of pictures, near the gate of St. Bernardino, in the N. quarter of the city; the palace of the duke of Berwick; and the national gallery, in the Prado. Madrid, though a bishop's see, has no cathedral; but there are about seventy churches, among which the churches of San Isidro and the Visitation are alone worthy of notice, the rest being externally and internally barbarous. 'No mad architect,' says a modern traveller, 'ever dreamt of a distortion of members so capricious, of a twist of pillars, cornices, or pediments so wild and fantastic, but that a real sample of it may be produced in some one or other of the churches of Madrid. They are, with two or three exceptions, small and poor both in marbles and pictures. Their altars are piles of wooden ornaments heaped up to the ceiling and stuck full of wax-lights, which more than once have set fire to the whole church.' Madrid had formerly several hundred convents; but the greater number of these have been pulled down to widen the streets, while others have been converted to more useful purposes. The walks constitute a grand feature of the city. The *Prado*, or public promenade, is as fashionably attended, especially on Sunday, as Hyde Park in London. It is nearly 2 m. long, and comprises a broad walk, called the *salon*, flanked by several of less width, thickly shaded with elm trees; contiguous to it is the garden of the *Buen Retiro*, the palace of that name having been demolished; and still further S. are the shady gardens called *Las Delicias*, leading to the Canal de Manzanares, which was once intended to connect Madrid with the Tagus at Toledo. These walks, in the afternoons of autumn, are crowded with the most respectable inhab., nor can any better idea of the out-of-door appearance of the pop. be got than by observing them on the Prado. In the spring, however, the scene is varied by visits to Aranjuez, a beautiful park near the Tagus, forming a verdant oasis in the midst of a desert. Nearly all the ladies seen here wear black silk dresses and shawls, or rather mantillas, of various colours, while their head-dress consists only of a slight veil attached to the hair by a comb, and falling on the shoulder; and the graceful manner in which they wear the mantilla and veil gives to them all an attractive air. The dress of the men is in every respect similar to that of the French; but they usually cover their persons with large cloaks, which, from the manner of wearing them, have rather a graceful appearance.

The state of education in Madrid, formerly very defective, has been greatly improved within the last 20 or 30 years. The 2 principal educational establishments are the *Colegio Imperial* and the *Seminario de Nobles*, schools or colleges frequented by the better classes. The instruction given to females is, however, most superficial; reading, writing, and a little geography are taught, in con-

Digitized by Google

nection with music and other accomplishments; but few ladies attain to any thing like literary distinction, and the majority are said to be 'ignorant almost beyond belief.' Closely connected with the educational establishments are the various literary and scientific societies, most of which are under the protection of the crown. The Academy of History, which has a handsome mansion in the Plaza Mayor, was instituted in 1735, for the purpose of collecting authentic materials for the history and geography of Spain and her possessions, and has published, amongst other useful works, an historico-geographical dictionary of Spain and Navarre. The *Academia de la Lengua* has for its object the perfection of the Castilian language, and with this view has published a dictionary, grammar, and other works on Spanish philology. There are also academies of science, the fine arts, medicine, and rural economy, all of which are more or less useful in promoting their respective objects.

The public collections comprise,—1. the royal library, with 200,000 printed volumes, besides many valuable Arabic and other MSS., and a fine collection of coins; 2. the library of San Isidro, formerly belonging to the Jesuits, and containing upwards of 60,000 volumes; 3. the museum of natural history, in which, besides other good specimens, is the great *megatherium*, described by Cuvier; 4. the botanical garden and library; and, 5., the national picture-gallery, equal in extent, and perhaps little inferior in excellence, to the largest in Europe. To the lover of the Spanish school, this gallery possesses attractions which no other can offer. Besides 42 pictures of Murillo, it contains 55 of Velasquez, 29 of Espanoletto, 17 of Juanes, 6 of Alonzo Cano, and many by other native painters; there are also nearly 500 pictures of the Italian schools, and about 300 of the Flemish school; and in the *Sala Reservada* are several master-pieces of Titian and Rubens.

The theatrical amusements of Madrid are confined to two small establishments, managed by the ayuntamiento or city council. At these theatres, called the *Teatro de la Cruz* and the *Teatro del Principe*, Spanish comedy and Italian operas are indiscriminately represented: the musical department is on the whole well conducted: the plays are of the most trifling description, more resembling low farces than regular comedies; but they represent pure and unadulterated pictures of the intrigues and low life of Spain, and exhibit a truth and spirit unknown on any other stage. The great and all-absorbing amusement, however, of the people of Madrid (called by their countrymen, *Madrilenos*), is the bull-fight, held on certain Monday afternoons during the season, in a large open amphitheatre, outside the gate of Alcala. Monday in Madrid is always a kind of holyday, and in the afternoon all the avenues leading to the bull-ring are in commotion: the street of Alcala is filled throughout its whole extent with a dense crowd of all ranks, some on foot and others in carriages, all hastening to the same point. The amphitheatre will accommodate 17,000 spectators; the central area has a diameter of 230 ft., and is surrounded by a double fence, behind the exterior of which the benches rise tier above tier to the outer wall, where, at the top of all, and shaded with awnings and blinds, are the boxes occupied by persons of rank and property. The intense interest which the spectators of all classes, women as well as men, feel in this butcher-like sport, is visible throughout, and often loudly expressed. The expenses of these exhibitions are very heavy; but the receipts are greater. leaving a handsome sum for the General Hospital, which, it is said, draws from them a revenue of 300,000 reals, or 3,000*l.* sterling.

Madrid has numerous benevolent institutions for the relief of indigence and the cure of disease, many of which are supported by handsome endowments. The royal hospital of San Fernando, a very large establishment somewhat like an English workhouse, and the mendicity institution for the reception of beggars, formerly the greatest nuisance in Madrid, are doing much good; and the General Hospital not only gives relief to the sick poor, but serves as a practical school for the students of the Academy of Medicine. A *mont de piété*, like that in Paris, lends money on security, with this difference, that at Madrid *no interest* is taken, the expense of the establishment being borne by the government.

Madrid has scarcely any manufacturing industry; nor is it possible, from its situation, at a distance from any navigable river, and in the midst of a stony, unproductive desert, that it can, in this respect, materially improve, even if that love of the *dolce far niente*, which pervades all classes of the population, should be given up. As it is, the workmen of the city are Catalans, Valencians, Aragonese, Asturians, and Galicians: in short, every article in Madrid, whether of manufacturing or farming industry, is exotic. Its fruit comes from a distance of 50 m., butter from Aragon, oranges and lemons from Valencia, and dates from Murcia. A manufactory of porcelain and another of carpets are carried on at the expense of the government, most probably with little profit. The price of provisions and the general expenses of living are very high, in consequence of the necessity of bringing almost every article from a distance, and the want of water carriage. The markets are well supplied with meat, poultry, and vegetables; but fish and milk are scarce. Coffee is cheaper than in England; but tea and sugar are scarce, dear, and bad. Fruit is abundant and very cheap. Fuel is one of the most expensive articles, and lodgings fetch as high rents as those in the best situations in London.

The state of society in Madrid must be learnt from viewing the habits of the middle classes; for it is next to impossible for a stranger, even with good introductions, to know enough of the aristocracy to form a correct judgment of their domestic habits, owing, in a great measure, to the general poverty, which, with the high rate of living in Madrid, is a very effectual bar to hospitality. Almost all families, except those in the very highest ranks, live, as in Paris and Edinburgh, in stories or flats, each story being a distinct house. The outer door, which is of enormous strength, has a small window or grating, with a sliding shutter, and the usual salutation from the porter, when one rings for admittance, is *Quien es?* to which the proper reply is *Gente de paz* (people of peace); and the door, in ordinary cases, is opened. This precaution of surveying strangers before admission is, perhaps, attributable to a feeling of personal insecurity, consequent on bad government and religious persecution. A suite of apartments usually consists of a large, well lighted, and respectably furnished saloon, with a recess on one side, in which is a bed, wholly unconcealed, and without curtains; and at another side is a door-way leading into a smaller chamber, similarly furnished to that just described. The lady's boudoir is always handsomely decorated; and the worst rooms in an establishment are invariably the library, or study, and the dining-room, both of which are small and wretchedly furnished. The apartments are kept remarkably clean. The manner of living in Madrid is somewhat more gene-

Digitized by Google

rous than in the N. provinces. A rather rich soup is usually added to the everlasting *olla*, or *cochido*, which is much better made and more highly seasoned than in the rest of Spain; and dinner is always followed by cakes, sweetmeats, and fruits, accompanied by a moderate supply of Valdepenas and other good native wines. The inhabs., except the tradespeople, rise late, and breakfast on chocolate between 10 and 11. Lounging, reading, or a stroll to the cafés, occupies the men, dressing and visiting the ladies, till dinner (about three), after which follows the siesta, a season of almost universal repose in Madrid. The shops then are either shut, or a curtain is drawn before the door; the shutters of every window are closed; scarcely a respectable person is seen in the streets; the stall-keepers spread cloths over their wares, and go to sleep; groups of the poor and idle are seen stretched in the shade; and even the Gallician water-carriers, seized with the general drowsiness, make pillows of their water-casks. The siesta over, the ladies sit in the balconies, and the gentlemen smoke their cigars, till the time for the lounge on the Prado; and then comes the *tertulia*, a very pleasant and social meeting for chit-chat and music, closing the day of Madrid. Dinner parties are seldom or never given, and there are no regular *parties* except balls; and those not frequent, and unaccompanied by any refreshment beyond *agua fresca*. The best national manners are not, as in other countries, to be found in the cap., where everything is sacrificed to the rage for imitating the French and English—a feature which distinguishes the *Madrilenos* from all other Spaniards. Morals in all classes, especially the higher, are said to be in the most degraded state.

Madrid occupies the site of the ancient *Mantua Carpetanorum*, a fortified town belonging to the Carpetani. It was afterwards called Majoritum, was taken and sacked in 1109 by the Moors, who gave it its present name. Henry III. repaired and enlarged it at the beginning of the fifteenth century, and Philip II. made it the capital of Spain. Its subsequent history to the time of the French war is unimportant. On the 23rd of March the city was entered by the French troops under Murat, and the royal family was induced to remove into France. Joseph Bonaparte was then made king; but both he and the French army were, two months afterwards, obliged by the inhabs., who rose in a body, to evacuate the town. In the December following, Madrid was occupied by Napoleon in person, and his brother Joseph was reinstated. The English troops occupied it for a short time in 1812, and it was again visited, in 1823, by the French under the Duc d'Angoulême.

MADRIDEJOS, a town of Spain, in New Castile, prov. La Mancha, 39 m. NNE. Ciudad-Real, and 65 m. S. Madrid. Pop. 6,828 in 1857. The town is situated in an extensive and exposed plain, on the great road from Madrid through Aranjuez to Jaen and Granada, the neighbourhood being rendered not only unhealthy, but also, in some parts, unproductive by the inundations of the Amarguillo, which often greatly injure the town, and deprive the people of their means of support. The only public buildings are two par. churches and a hospital; nor are there more than a dozen good houses in the place. A manufactory of serge is the only branch of industry in the town; but the neighbourhood is remarkable for its rich crops of saffron and for extensive sheep-farming.

MADURA and DINDIGUL, a district of British India, presid. Madras, prov. Carnatic, near the S. extremity of Hindostan, between lat. 9° and 10° 45′ N., and long. 77° 10′ and 79° 10′ E., having N. Trichinopoly and Coimbatoor, W. Cochin and Travancore, S. Tinnevelly and the Gulf of Manaar, and E. the latter and Tanjore. Area, 7,656 sq. m. Pop. 1,756,791 in 1862. The pop. are chiefly Hindoos of the Sudra caste. The N. and W. parts of this district are mountainous, the S. and E. level. The hilly parts are interspersed with fertile valleys, the principal being that of Dindigul; but the plain country of Madura is by far the most productive portion of the surface. It is intersected by the river Vighey, which rises in this district, and, after a course eastward for about 145 m., falls into the Gulf of Manaar. A few swamps exist on the shore. The island of Ramisseram belongs to this district. The climate of the hills is cool and healthy, but the wind often blows with great violence. In the S. it is much warmer, the temp. in April and May ranging between 70° and 98° Fahr. Different kinds of paddy are grown in the low country, irrigation being there facilitated by plenty of streams and tanks: the husbandry is tolerably good, though not so perfect as in Tanjore. In Dindigul, the dry culture is to the wet as 4 to 1; and the inhab. are in much less comfortable circumstances than those of the S. Property is much subdivided: some individuals occupy only the 20th part of an acre, and few have more than 135 acres. Madura is celebrated for its piece goods and its dyers; and its artisans in gold and silver are in many places much above mediocrity. Its chief exports are piece goods, cotton, paddy, and chanks; its chief imports, betel nut, chay root, cocoa nuts, and oil seeds. This district is supposed to be the *Regia Pandionis* of Ptolemy, having been anciently governed by a Pandian family, and is one of the holy countries of Southern India. It has numerous fine temples, and other monuments of former Hindoo grandeur. It was transferred to the British by the nabob of Arcot, in 1801.

Madura, a town of S. Hindostan, cap. of the preceding district, on the Vighey, 136 m. NNE. Cape Comorin, and 270 m. SW. Madras, on the Great Southern of India railway. Pop. estim. at 20,000. The town is surrounded by a bastioned but dilapidated stone wall; streets wide and regular, public edifices magnificent, but private dwellings mean and wretched. It has some of the most extraordinary specimens of Hindoo architecture extant. The palace is a vast pile, with a dome 90 ft. in diameter; but it is much dilapidated: the great temple, with its spacious areas, choultries, and four colossal porticoes, each a pyramid of ten stories, covers an extent of ground almost sufficient for the site of a town. In front of the latter is a celebrated choultry, or inn, 312 ft. in length, ornamented with polished green stone columns and grotesque sculptures. During the Carnatic wars, from 1740 to 1760, Madura underwent many sieges.

Madura, an island of the Eastern Archipelago, immediately adjacent to the NE. coast of Java, with which island it is politically included, under the Dutch government. (See Java.)

MAESE. (See Meuse.)

MAESTRICHT (an. *Trajectus ad Mosam*), a fortified town of Holland, prov. Limburg, of which it is the cap., on the Maese, 14 m. N. by E. Liege, and 57 m. E. Brussels, on the railway from Hasselt to Cologne. Pop. 28,080 in 1861. Maestricht is one of the strongest towns in Holland, being defended by numerous bastions and trenches: it is well built, with wide, clean, and well-paved streets. The market is held in the great square, the centre of which is occupied by the town-hall, built in 1652, and said to be one of the finest structures in the kingdom. The *place d'armes* is also a fine open space planted with rows of trees

Digitized by Google

and much frequented as a promenade. Among the other public buildings are comprised the exchange, the church of St. Servais, the arsenal, and the theatre; and in the town are 10 churches, 2 hospitals, 2 orphan asylums, a lazaretto, athenæum, fine public library, and society of agriculture. Maestricht is the residence of the governor of the prov. and the seat of a court of assizes and primary jurisdiction, as well as of a chamber of commerce. The industry of the town comprises the manufacture of woollen cloths and flannels, cotton and woollen yarn, fire-arms, pins, starch, and tobacco; besides which there are soap-factories, tanneries, breweries, and dye-houses. A considerable trade is carried on with various places on the Maese by means of barges, and steamers ply daily between Maestricht, Liege, and Namur. Three large fairs are held here during the year for horses and cattle. On the other side of the river (crossed here by a stone bridge) is the citadel or fort of Petersberg, in the suburb of Wyk, famous for its extensive subterranean stone quarry, containing numerous intricate galleries and passages, and abounding with curious marine and saurian fossils, some specimens of which may be seen in the museum of the Jardin des Plantes at Paris.

MAGDALENA, a river of S. America, and, next to the Orinoco, the principal in the republic of New Granada, through the centre of which it flows, from S. to N., through 9 deg. of latitude. It rises in the small lake of Papas, in the Andes, about lat. 2° N., and long. 76° 25′ W., and runs for at least 500 m. between the middle and E. chains of the Cordillera. Its entire course may be estimated at about 800 m.: it enters the Caribbean Sea about 65 m. NE. Cartagena, and 40 m. SW. Santa Marta. Its principal tributary, the Cauca, flows between the central and W. chains of the Cordillera, and joins it from the W., between 150 and 200 m. from its mouth. Its other affluents are the Sogamoza, Sesar, and Bogota. The towns of Nayva, Honda, and Monpox are on its banks. The descent of the Magdalena is 20 inches a mile, and the strength of its waters is such, that they preserve their freshness to a considerable distance from its mouth. The Magdalena is navigable as far as Honda, in lat. 5° 14′ N., near which the navigation is interrupted by cataracts; but its rapidity is such, that a distance of 10 leagues a day is reckoned very good progress in ascending the river, for a *champan*, or flat-bottomed boat, manned by 24 *bogas*, or rowers. The oppressive heat of the climate, the abundance of caymans, and the swarms of musquitos and other insects that infest the river, contribute to render the navigation both dangerous and unpleasant; but the Magdalena is, notwithstanding, the main route for the commercial and other intercourse of the inland prov. of New Granada with the ocean.

MAGDEBURG, a fortified city of Prussia, cap. of prov. of same name, on the Elbe, and on the railway from Brunswick to Berlin, 74 m. SW. Berlin, and 50 m. ESE. Brunswick. Pop. 67,607 in 1861, excl. of a garrison of 7,304. Magdeburg is a fortress of the first class, and, from the augmentation and improvement of its defences since the war, it is now considered one of the strongest in Europe. The citadel, on an island in the Elbe, serves also as a state prison, Baron Trenck and Lafayette having, among others, been confined in it.

Magdeburg is divided into the Old town, with the suburb Friedrichstadt, together composing the ancient fortress; and the New town—pop. 13,452 in 1861—and suburb of Sudenburg, with a pop. of 5,242 in 1861. The fortifications are so extensive that it would require an army of 50,000 men to invest the city. Magdeburg has one good and spacious street, called the Broadway, but all the other streets are narrow and crooked. There are two large public squares, in one of which is the cathedral. This, which is one of the finest Gothic structures of N. Germany, was erected between 1211 and 1363, and has been recently repaired at a cost of 300,000 dollars. It has two towers, each 340 ft. in height, a lofty vault, a handsome high altar, and numerous tombs and monuments, among which is that of Otho the Great and his empress.

Magdeburg has fifteen churches, one of which is for R. Catholics, a synagogue, an ecclesiastical seminary, a female high school, or royal boarding house for the education of girls, a teachers' seminary, with schools for agriculture, commerce, and surgery; five hospitals, a lunatic asylum, a workhouse, a humane institution, a savings' bank, and various charities; an arsenal, extensive barracks, and other military establishments; several public libraries, and a theatre. It is a bishop's see, and is the seat of the government, of the board of taxation, the superior courts of justice, the council, and the military commandant of Prussian Saxony. From its position on the Elbe, and at the junction of two important lines of railway, it is an *entrepôt* for the merchandise imported into and exported from the central parts of Germany. In other respects, also, it is very favourably situated for commerce. A canal, commencing about 20 m. below the city, connects the Havel with the Elbe, giving Magdeburg a direct water communication with Berlin and Frankfort on the Oder; and it is also the centre of a number of great roads which lead to all the cities and towns of importance within a radius of 50 m. Its manufactures, which are considerable, consist of silk, linen, cotton, and woollen fabrics; oil-cloth, hats, gloves, tobacco, soap, earthenware, refined sugar, chicory, and vinegar, with numerous tanneries, breweries, and distilleries. A large quantity of salt is made in its neighbourhood. It has several native banking establishments, and a branch of the royal bank of Berlin. Several newspapers are published in the town, which has uniformly an air of bustle and activity.

Magdeburg was repaired by Charlemagne, and improved and enlarged by Otho the Great. It has suffered numerous sieges. In 1631 it was taken by assault by the Imperialists under Tilly, by whom it was given up to military execution, and was nearly burned to the ground. It is the birthplace of the celebrated natural philosopher Otto de Guericke, and of the poet Schultz.

MAGELLAN, or MAGELHAENS (STRAIT OF), a strait at the S. extremity of S. America, separating Patagonia from Tierra del Fuego, Clarence Island, and the Isle of Desolation. It extends from Capes de las Virginas and Espiritu Santo, on the Atlantic, to Capes Victoria and de los Pilares, on the Pacific Ocean, a distance of about 300 m., having a breadth varying from 1½ to 40 m. It has an additional communication with the Pacific by Cockburn Channel and Magdalen Sound. Its shores are lofty and generally rugged, and its depth is in some parts very great, no bottom having been found with upwards of 1,500 ft. of line. Some safe and excellent bays communicate with it; but, generally speaking, its passage is extremely dangerous, both from the violence of the currents and the sudden and heavy tempests to which it is subject. It was discovered by Magelhaen, a famous Portuguese navigator in the service of Spain, in 1520. Drake traversed it in his voyage round the world, and it has since been frequently explored by British navigators.

MAGGIORE (LAGO DI), or Lake of Locarno, (an. *Lacus Verbanus*), a famous lake of N. Italy, lying partly in Italy, and partly within the Swiss canton of Tessin. It is long and narrow, stretching above 40 m. from Magadino at its N., to Sesto-Calende at its S. extremity; while in its widest parts, opposite to the mouth of the Toce, it is about 6 m. across, but its ordinary breadth does not exceed from 2 to 3 m. Its general direction is SSW. and NNE., and it may, in fact, be considered as an expansion of the Tessino, which enters it at its N., and leaves it at its S. extremity. In addition to the Upper or N. Tessino, it receives on its W. the waters of the Toce, and on its E. side those of the Tresa, flowing from the Lago di Lugano. Its only outlet is the Lower or S. Tessino. In some places it is not less than 300 fathoms deep; its waters, which are clear and of a greenish tinge, are well stocked with fish; and, like all Alpine lakes, its navigation is dangerous from sudden squalls.

The scenery of the Lago Maggiore is very varied. That of the upper part is bold and mountainous, its northern branch opening into one of the most beautiful valleys of the Rhætian Alps, which form a magnificent amphitheatre in the back ground. Towards the E. and S., the mountains gradually decline to the plain of Lombardy; and the lower part of the lake is of a more quiet and softened character, yet still very beautiful. Its immediate shores are richly fringed with wood, occasionally broken by picturesque crags, topped with castles and churches, and with numerous villages stretching along the water's edge. Though inferior in wildness and sublimity to the Lake of Como, and perhaps, also, to that of Lugano, the softer beauties of this lake are generally allowed to be the more attractive, contrasted, as they are, with the distant grandeur of the Alpine chain.

The Borromean Islands, from which this lake has derived a great portion of its celebrity, are situated in a bay, on its W. side, opposite to the mouths of the Toce. Of these the *Isola Bella* and the *Isola Madre* are the most famous. They are of small size, and, previously to the middle of the 17th century, were little better than bare rocks, but being the property of Count Vitaliano Borromeo, a descendant of the celebrated St. Carlo Borromeo, he resolved to make them his residence, and to convert them, according to the taste of the time, into a sort of Italian paradise. They were consequently covered with earth brought from the adjoining mainland, formed (especially the Isola Bella) into splendid terraces, lined with trees and statues, and ornamented with superb palaces. Unluckily, however, nothing is natural; all is art.

> 'On ev'ry side you look, behold the wall!
> No pleasing intricacies intervene,
> No artful wildness to perplex the scene;
> Grove nods at grove, each alley has a brother,
> And half the platform just reflects the other.
> The suff'ring eye inverted nature sees,
> Trees cut to statues, statues thick as trees!'
> Pope's Moral Essays, iv. l. 114.

For a lengthened period, however, these islands were the theme of universal admiration; but as a simpler and purer taste began to prevail, they came to be regarded with very different feelings, and have latterly, perhaps, been too much depreciated. These are now usually looked upon, by Englishmen at least, as little better than 'quarries above ground;' and as evincing only the wealth, extravagance, and bad taste of their founder.

MAGINDANAO, or MINDANAO, the most S. of the Philippine Islands, which see.

MAGNESIA *ad Sipylum* (now **MANISA**), an ancient town, of some celebrity, in Asiatic Turkey, 28 m. NE. Smyrna. Pop. about 30,000, of whom 4,000 are Greeks, 2,000 Armenians, and a few Jews. It is situated near the Kodus, or an. *Hermus*, embosomed in hills long noted for the production of loadstones, and is one of the cleanest and neatest towns of Asia Minor, being in the width of its streets, and other respects, far superior to Smyrna. The principal buildings are two mosques, with double minarets, indicating a royal foundation, and the interior of each is adorned with paintings, lamps, ivory balls, and ostriches' eggs, such as are to be seen in the mosques of Constantinople. There are 28 other mosques, and the Armenians, Greeks, and Jews have their respective places of worship. A Jewish college, lunatic asylum, and the mausoleum of Amurath II. are the only other public edifices, except the khans, which are numerous and well built. The manufacture of cotton and silk goods, and goats' hair shawls, employs many of the inhab., and the town derives some importance from being on the great road between Smyrna and the interior of Asia Minor.

Magnesia was, in all probability, colonised by the Magnesians of Thessaly, not long after the foundation of Cyme and Smyrna, two other Æolian cities. It is celebrated as the scene of a signal victory obtained by the Romans, under the two Scipios, over the forces of Antiochus the Great, who was consequently obliged to retire beyond the chain of Taurus, and leave Asia Minor at the disposal of the conquerors. The inhab. afterwards displayed great bravery in defending their town against Mithridates. In the reign of Tiberius, A.D. 17, Magnesia, in common with 11 other cities, was all but destroyed by an earthquake, and owed its restoration in a great measure to the emperor's generosity. '*Duodecim celebres Asiæ urbes collapsæ nocturno motu terræ; quo improvisior graviorque pestis fuit. Neque solitum in tali casu effugium subveniebat, in aperta prorumpendi, quia diductis terris hauriebantur........ Asperrima... lues... in eosdem misericordiæ traxit: ... centies sestertium pollicitus Cæsar, et quantum ærario... pendebant, in quinquennium remisit. Magnetes a Sipylo proximi damno ac remedio habiti.*' (Tac. Ann., ii. 47.)

It was a flourishing city at a late period of the Roman empire, but, at the commencement of the 14th century, passed into the hands of Sarkhan, sultan of Ionia, and finally was annexed, in 1448, to the dominions of Mahomet II., the conqueror of Constantinople.

The above city must not be confounded with *Magnesia ad Mæandrum*, close to the modern Inek-bazar, and about 50 m. SSE. Smyrna, which, though a place of some consequence, was greatly inferior to the Magnesia *ad Sipylum*. It is remarkable, however, for the ruins of a theatre, stadium, and magnificent octastyle Ionic temple, said to have surpassed in the harmony of its proportions even the temple of Diana at Ephesus.

MAHABALIPOORAM, or MAVALIPOORAM, a village and a curious assemblage of rock temples in Hindostan, on the Coromandel coast, distr. Chingleput, about 33 m. SSW. Madras; lat. 12° 36′ N., long. 80° 16′ E. The temples in their general character closely resemble those at Ellora and elsewhere, on the W. side of Hindostan; but, from their being cut in a granite rock, they are in better preservation. They have been chiefly consecrated to Vishnu, whose worship appears to have predominated on this, as that of Siva on the opposite coast of India. At the foot of a hill N. of the village is a pagoda, about 26 ft. high, nearly as long,

Digitized by Google

and about half as broad, hewn from a single rock, and covered with sculptures. Near this temple, the surface of the rock, about 90 ft. in extent by 30 in height, is covered with bas-reliefs, including a gigantic figure of Krishna, another of his favourite Arjoon, and representations of a number of animals. Opposite to this, and surrounded by a stone wall, are 2 brick pagodas of great antiquity: adjacent to which are 2 excavations in the rock, one supported by pillars, in a manner somewhat like the cave at Elephanta, and the other fronting a sculptured group, supposed to represent one of Krishna's adventures. Still proceeding S., the traveller crosses a rocky hill, in which is a spacious excavation, in the middle compartment of which is a figure of Siva between Brahma and Vishnu; while at one end of the temple is a gigantic figure of Vishnu sleeping upon a cobra-di-capello, and at the other an eight-armed goddess, mounted on a lion, rescuing a human figure from a buffalo-headed demon. Several of the figures are executed in a very superior style. About a mile further S. are other sculptured rocks, said to surpass those already noticed. One pagoda is about 40 ft. in height, by 29 in length and breadth; and another 49 ft. in length and breadth, and 25 ft. in height, but rent as by some violent convulsion, from top to bottom; besides which there are three smaller structures, and large figures of a lion and an elephant, the last extremely true to nature. E. of the village, and washed by the sea, is an ancient stone pagoda, within which, also, are several sculptured figures. The sea has obviously encroached on this part of the coast, and it has probably submerged many temples that formerly existed here. Mahabalipooram is believed to have been anciently of considerable importance as a metropolis of the kings of the race of Pandion, in Hindoo mythology.

MAHADEO TEMPLE, a celebrated place of Hindoo worship in British India, prov. Gundwanah, on the Nerbudda, 60 m. SE. Hussingabad; lat. 22° 22′ N., long. 78° 35′ E.

MAHANUDDY (*Maha Nadi*, the great river), a considerable river of Hindostan, having its source in the prov. of Gundwanah; lat. 21° 30′ N., long. 81° E., and flowing mostly E. to the Bay of Bengal, which it enters by numerous mouths, about lat. 20° N., and between long. 85° 30′ and 87° E., after a course of more than 500 m. At Cuttack, about 70 m. from the sea, the river, in the rainy season, has a breadth of about 2 m.; but it is, notwithstanding, fordable at this point from Jan. to June. During the rains it is navigable for a distance of almost 300 m. from the sea. Its deposits consist of a coarse sand, hostile to vegetation, but frequently containing diamonds of the first quality, and which are occasionally of considerable size.

MAHE′, a sea-port town of Hindostan. It belongs to the French, and was formerly their principal settlement on the coast of Malabar, but is now of little importance. It is admirably situated on rising ground, beside a small river, navigable for boats to a considerable distance inland, 40 m. NE. Calicut. Pop. 6,000 in 1861, nearly all of native races. The town is well built, and has several handsome houses, with three churches. Its commerce is, however, small, and mostly confined to cocoa-nuts, pepper, and arrack.

MAHIM, a town of Hindostan, prov. Aurungabad, on the island of Bombay, near its N. extremity, in lat. 19° 2′ N., and long. 72° 58′ E. Pop. estimated at 15,000. It has a Portuguese church and a R. Cath. college.

MAIDA, a small town of Southern Italy, prov. Catanzaro, 8 m. S. by E. Nicastro. It is chiefly noted for an engagement fought in its vicinity, on the 4th July, 1806, when an English army under Sir John Stuart entirely defeated a greatly superior French force under Regnier.

MAIDENHEAD, a mun. bor. and market town of England, co. Berks, hund. Bray, on the S. bank of the Thames, 11½ m. E. by N. Reading, 27 m. W. London by road, and 22¾ m. by Great Western railway. Pop. 3,895 in 1861. The town consists almost entirely of one street extending from the river about 1 m. along the high road to Oxford, and lined with numerous respectable and a few handsome houses: it is well flagged and macadamised, and lighted with gas. The guildhall, in the market place, is a spacious stone building: there is also a handsome church, and the Wesleyan Methodists and Baptists have their respective places of worship. A national and infant school, with three Sunday schools, furnish instruction to the children of the poor, and there are almshouses and other charities for the sick and aged. The Bristol, Bath, and Exeter branch of the great western road is here carried over the Thames by a handsome stone bridge of thirteen arches, and about 500 yards S. from it is another bridge of three arches, forming part of the Great Western railway, which skirts the town in its whole extent. Maidenhead appears to be in a thriving condition: it has no manufactures, but is in the centre of an opulent neighbourhood, and derives considerable trading importance from its position on one of the most frequented roads of the empire. The bor. was first chartered by Edward III., and the corporation now comprises a mayor and three other aldermen, with 12 councillors. Markets on Wednesday; horse and cattle fairs, Whit-Wednesday, Sept. 29, and Nov. 30.

MAIDSTONE, a parl. and mun. bor., market town, and par. of England, co. Kent, hund. of its own name, in the E. div. of the lathe of Aylesford, on the E. bank of the Medway: 30½ m. ESE. London, and 35 m. W. Canterbury, on the South Eastern railway. Pop. of munic. bor. 23,016, and of parl. bor. 23,058 in 1861. The town, which is about 2 m. in length from N. to S., consists principally of a well-built street, leading NE. from the bridge to a lengthened narrow street, along the road from Rochester to Tenterden; but, exclusive of these, there are many smaller streets. Among the principal public buildings are the co. hall, a modern structure, decorated in the Italian style; the new gaol, an immense structure, erected, in 1818, at an expense of 200,000*l.*, covering more than 13 acres of land, and ranking as one of the largest and best arranged in England; the barracks near the gaol, the county ball-rooms, and a small but pretty theatre. The market-house, the lower part of which is appropriated to the sale of corn, stands in the centre of the town, and behind it is a market-place, conveniently arranged for the sale of provisions. The church, one of the largest in the kingdom, is an extremely handsome embattled edifice, with a lofty tower, formerly surmounted by a spire, destroyed by lightning in 1730: it was made collegiate in the reign of Richard II., and attached to an ecclesiastical college, destroyed with many others at the Reformation: the living is a perpetual curacy, in the gift of the Archbishop of Canterbury. There is a district church, erected, by the church-building commissioners, at a cost of 13,000*l.*; and places of worship are also supported by the Wesleyan Methodists, Independents, Baptists, Unitarians, and the Society of Friends. A free grammar-school was founded, in the reign of Edward VI., by the corporation, which has two exhibitions at University College, Oxford. Freemen have the privilege of sending their sons here

Digitized by Google

gratis, for classical instruction, the master making a charge for other branches of education. This school is not in a very flourishing state, and its inefficiency has led to the establishment of a proprietary school, which is well supported and attended. A blue-coat hospital was founded, in 1711, for the clothing and education of 58 boys and 43 girls, and there are three other endowed charity schools, and a Lancastrian school. Four sets of almshouses furnish lodging, clothing, and money allowances to 20 old women, and various bequests and charities exist for the relief of the sick and aged poor. A philosophical society was instituted in 1824.

Maidstone is in a very prosperous state, the population having nearly doubled in the course of thirty years. The only manufacture of any importance is that of paper: there are six paper-mills, employing above a thousand hands. The felt, blanket, and hop-bag manufactories are of much less extent. There is a considerable traffic on the river, which has been for many years gradually increasing; and the annual tonnage of vessels passing through Hallington lock, about 2 m. from the town, averages 150,000 tons. The principal articles of merchandise brought up the river are coals and timber for the supply of the neighbourhood, and also of Tonbridge, Sevenoaks, and the whole weald of Kent. A portion of the latter article is imported direct from the Baltic and America. The neighbourhood is celebrated for its abundant produce in hops and fruit, both of which are sent away by railway, or carried down the river.

Maidstone received its charter of incorporation from Edward VI., in 1549, but forfeited it in the following reign, owing to the connection of its inhab. with the insurrection of Sir Thomas Wyatt, Queen Elizabeth granted another charter, with increased privileges; but this also became void, by a *quo warranto*, soon after the Revolution of 1688; and a new charter was granted in 1748, by George II. Under the Municipal Reform Act of 1837 the borough is divided into three wards, the corporate officers being a mayor and 5 other aldermen, with 18 councillors. Corp. revenues 6,584*l.* in 1862, of which 3,703*l.* from rates. The Lent and summer assizes are held here, as also the quarter-sessions for the W. division of Kent. The recorder holds quarter and petty sessions within the borough, and a county court is established in it. Maidstone has sent 2 mems. to the H. of C. from the 6th of Edward VI. Down to the Reform Act, the right of election was vested in the freemen (by birth, apprenticeship, and purchase) not receiving alms. The limits of the borough were not altered by the Boundary Act. In 1865 it had 1,747 registered electors. Maidstone is also the chief place of election for the mems. for the W. division of the county. Large markets on Thursday for hops, corn, horses, and cattle: fairs for cattle, 1st Tuesday in each month, Feb. 13, May 12, June 20, andOct. 17.

MAILCOTTA, a town of Hindostan, prov. Mysore, and a celebrated place of Hindoo worship, on a rocky hill, 17 m. N. Seringapatam; lat. 12° 39′ N., long. 76° 42′ E. The town, which is open and paved, has about 400 good houses, mostly occupied by Brahmins, and several rich pagodas. The most striking edifice is a temple dedicated to Narasingha (the man-lion), which stands on the highest pinnacle of the mountain, and is approached by a staircase cut in the rock, and ornamented at intervals with smaller temples and arches. It has, besides, a temple to Krishna, a square building of vast dimensions, entirely surrounded by a colonnade, and which is said to be extremely rich in jewels and other articles of value; and held in such esteem that Tippoo did not venture to outrage the prejudices of his Hindoo subjects by plundering it. There is also a large and fine reservoir at Mailcotta, surrounded by numerous buildings for the accommodation of devotees. Near this town the Mahrattas defeated Hyder Ali in 1772.

MAINE, one of the U. S. of N. America, being at once the most northerly and easterly state in the Union, extending between lat. 43° 7′ and 47° 20′ N., and between 67° and 71° W. long., having NW. and N. Lower Canada, E. New Brunswick, W. New Hampshire, and S. and SE. the Atlantic. Area, 31,766 sq. m.; pop. 628,276 in 1860. Maine has a greater extent of coast, and more good harbours, than any other state of the Union. Its shores are all along indented by deep bays; and the opposite sea is studded with numerous fine islands, some of considerable size. Near the coast, the surface is level, but it rises on proceeding inland, and most part of the state is hilly. In the NW. a mountain chain forms the watershed between the streams that join the St. Lawrence, and those that fall into the Atlantic; and a lateral branch from this chain, between lat. 46° and 46° 30′, separates the basins of the Kennebec, Penobscot, &c., on the S., from that of the St. John's on the N. Several of the summits in Maine reach an elevation of 4,000 ft.; and Mount Katahdin, near lat. 46°, which rises to 5,335 ft., is reckoned the highest ground between the Atlantic and the St. Lawrence. It has been estimated that 1-6th part of the surface of Maine consists of water: there are numerous lakes, chiefly in the N., the largest of which, Moosehead, is 50 m. in breadth. The St. John's river is elsewhere noticed: the Penobscot, Kennebec, Androscoggin, and St. Croix, have all a general S. direction, and several are navigable for the greater part of their length. The climate is cold: ice and snow last, in the N. and central parts, from October to April, and the summer is short: but the atmosphere is generally clear, the weather uniform, and the country salubrious. The soil on or near the coast is sandy and poor; but it improves greatly as it recedes inwards, especially along the banks of the rivers. The greater portion of the state was originally covered with dense forests of fine fir and beech. In the S., and some of the central parts, these have been mostly cleared; but they are still nearly unbroken in the N., and the value of the lumber cut down annually in the state is estimated at 10,000,000 dollars. Wheat, maize, rye, barley, potatoes, peas, beans, and flax are among the chief agricultural products. Apples and pears grow to perfection; and cherries, plums, and grapes grow in the woods. E. of the Kennebec, and along that river, are some excellent arable lands; and between Kennebec and Penobscot are some of the finest grazing lands in New England. Till lately the rearing of sheep has been the most important branch of rural industry, the annual value of the clip of wool being estimated at about 2,000,000 dollars. Good marble is found in some districts, and lime-burning is extensively carried on. Iron ore is abundant, and some lead has been discovered. Maine has manufactures of cotton and woollen cloths, hats, shoes, leather, cordage, nails, spirits, and maple sugar. The exports consist chiefly of lumber, great quantities of which are shipped for the West India islands, as well as for the neighbouring states; dried fish, pickled salmon, beef, pork, butter, wool, grain, hay, pot and pearl ashes, and marble. The state is intersected by railways in all directions, and has also numerous canals. The value of real estate and personal property was returned 190,211,600 dollars in 1860. The legislative power is vested in a senate of 31 mems., and a house of

Digitized by Google

representatives of 151 mems., who, together with the governor, are chosen annually by all the white male citizens above 21 years of age, who have resided in the state during the 3 months preceding the election, and paid taxes. The governor is assisted by an executive council of 7 mems., elected by the legislature. The general assembly of the 2 houses convenes annually at Augusta. The supreme judicial court has all the usual powers of a court of chancery. The judges are appointed by the governor with the consent of the council, and hold office during good behaviour. All judicial offices are, however, vacated at the age of 70 years. Each town is required by law to raise annually a sum equal to 40 cents for each inhab., which is distributed among the town schools in the ratio of the number of scholars in each. The state has 45 academies, a Baptist college at Waterville, theological seminaries at Bangor and Readfield, and Bowdoin College, with a medical school at Brunswick, established in 1794. Maine is divided into 10 counties. Augusta is the political cap., but it is inferior in point of size to several other towns, as Portland (which see), and Bangor. Bangor, at the head of the tide-water, has lately become the most important place on the Penobscot. The militia of the state, which is in 8 divisions, consisted, in 1864, of 38,514 men. Maine had a public debt of 1,472,000 dollars on the 1st of Jan. 1863, which included a 'war debt' of 800,000 dollars. The state sends 5 mems. to congress. Maine was first permanently settled by the British in 1635, previously to which it had only been transiently occupied by the French. It subsequently became a proprietary government, but in 1652 it was annexed to Massachusetts, to which it remained attached as a subordinate district till 1820, when it was constituted a separate state of the Union.

MAINE, a river of W. Germany. See MAYN.

MAINE, one of the old provs. of France, now distributed between the departments Mayenne and Sarthe.

MAINE-ET-LOIRE, a dép. of France, reg. W., formerly comprising the greater part of the prov. of Anjou, chiefly between lat. 47° and 47° 50' N., and long. 0° and 1° W., having N. the déps. Mayenne and Sarthe, E. Indre-et-Loire, S. Vienne, Deux-Sèvres, and Vendée, and W. Loire-Inférieure. Greatest length, E. to W., about 70 m., breadth usually about 40 m. Area, 712,093 hectares: pop. 526,012 in 1861. The Loire intersects the dép. from E to W., dividing it into two nearly equal parts, and is joined within its limits by the Maine, Anthion, Thonet and Layon. The Maine is a continuation of the Mayenne, which changes its name after it has been joined by the Sarthe. It passes by Angers, and unites with the Loire about 5 m. below that city. Its entire length is 8 m., throughout which it is navigable. About 440,196 hectares of the surface of this dép. are estimated to be arable, 80,023 in pasture, 38,260 in vineyards, 61,838 in woods, and 48,271 in heaths and wastes. More corn is produced than is required for home consumption. Agriculture, as in the contiguous departments, is rather backward: the lands in lease are all held on the *metayer* principle, the rent being a certain proportion, usually about half the produce: the occupiers are poor, uninstructed, and, of course, strongly attached to routine practices. Hemp and flax, prunes, melons, walnuts, apples, and various other fruits are said to be of superior quality. The produce of wine is estimated at about 500,000 hectol. a year. Some of the white wines are well esteemed, but the greater portion of the vintage is either converted into brandy or vinegar. The latter, which enjoys a high reputation, is known in commerce as *vinaigre de Saumur*. Exclusive of wine, this dép. produces annually from 50,000 to 60,000 hectol. of cyder. The industry of the rural pop. is, however, chiefly exercised in rearing and fattening cattle for the Paris markets, and in breeding horses. In 1862 there were stated to be 323,677 head of cattle in Maine-et-Loire—a greater number than in any other dép. of the W. of France; but, on the other hand, the stock of sheep, in the same year, was 135,455. The land is much subdivided, and there are only about 300 properties assessed at more than 1,000 fr. This dép. has the largest and most important slate quarries in France. These are situated near Angers, and are extensive excavations, in one place to the depth of 450 ft. below the surface. They employ more than 3,000 workmen, and several steam-engines, and yield about 80 millions of slates a year. At Chollet and other parts, some extensive woollen, cotton, and other manufactures are established, employing a large number of hands. At Angers is a large sail-cloth factory; wooden shoes are made at Moulicherne; and the department has numerous sugar refineries, breweries, distilleries, paper-mills, and dyeing-houses. At Angers is one of the two great schools of arts and trades established in France, at which about 450 pupils are supported partly or wholly at the expense of government. Maine-et-Loire is divided into 5 arronds.: chief towns, Angers, the cap., Baugé, Beaupréau, Saumur, and Segré.

MAINLAND. See SHETLAND ISLES.

MAJORCA (Span. *Mallorca*), the largest of the Balearic Islands in the Mediterranean Sea belonging to Spain, from the E. coast of which it is 110 m. distant, Palmas, the chief town, being in lat. 39° 38' N., long. 2° 45' E. Greatest length 48 m., do. breadth 42 m., area, 1,340 sq. m. Pop. 204,000 in 1857. Its shape is that of an irregular four-sided figure, the angles of which are formed W. by Cape Tramontana, N. by Cape Formenton, E. by Cape Peri, and S. by Cape Salinos. The surface is extremely uneven, and is divided into two nearly equal parts by a range of mountains, the highest of which, the Silla de Torillos, rises 5,114 feet above the sea. These mountains are not volcanic, but consist chiefly of granite, sienite, and porphyry, over which lie beds of grauwacké, clay slate, and coal; lead and iron are found, but not in sufficient abundance for mining purposes. The rivers or rather torrents of Majorca are short, rapid, and very numerous, affording great facilities to irrigation. The climate is exceedingly mild, salubrious, and agreeable; the thermometer during winter scarcely ever falls below 48°, its average height being 65°, and cold and strong N. winds are of rare occurrence. The temperature of summer varies between 84° and 88° Fahr.; but the heat is seldom oppressive, owing to the constant sea-breezes. The red loamy soil of the mountains, though stony, is extremely rich, producing spontaneously great numbers of wild olives and grapes: in the plains it is much less fertile, owing to the superfluity of moisture, and the absence of any system of drainage. Agriculture is in a very rude state; and the growth of corn, which in wet years totally fails, meets only half the consumption of the island, the annual imports of this article being about 6,000 fanegas, chiefly from Catalonia and Valencia. Olives are raised in very large quantities, the crops averaging about 180,000 arrobas yearly; the fruit is smaller than that of Andalusia, but as juicy as the best of the growth of Provence. Wine, both red and white, is abundant, especially near Banalbufar and Falaniche: considerable quantities are exported,

Digitized by Google

and much is likewise used in the distillation of brandy. Fruit and vegetables, especially oranges, figs, melons, carobs, pumpkins, and cauliflowers, grow plentifully, and attain a large size. Large quantities of saffron also are produced, of preferable quality to that of La Mancha. There is no want of fine pasture in the island, but little attention is paid to cattle-breeding. The sheep are large, and hogs sometimes attain the weight of 600 lbs., or about 38 stone. Mules and asses are reared in great numbers, and sent to Valencia and other provs. in the S. of Spain. Hares and rabbits, partridges, quails, snipes, &c., are abundant, and the coast swarms with fish of various kinds and good quality.

The trade of Majorca is, relatively to its size, very considerable, chiefly with Spain, France, and England: its exports comprise oil, wine, brandy, oranges, and other fruits, capers, saffron, wine, mules, and asses, with smaller quantities of home-made goods, as palm brooms and baskets, turnery wares, and water-proof hats for sailors, its imports consisting of wheat, salt beef, iron, sugar, groceries, woollen and cotton goods, and hardware, chiefly from France, England, and the N. of Europe; but the precise amount of the trade of Majorca cannot be ascertained.

The inhabitants bear a striking resemblance, both in their external appearance and general character, to the Catalans, being equally hardy and courageous, equally blunt and jealous of their honour, equally industrious and ingenious, equally good sailors and skilful farmers, with their continental neighbours: their language is a corrupt dialect of the Catalan.

Majorca comprises only two towns of any importance and 28 villages, the rest being mere hamlets. Numerous detached farms and country houses, however, are scattered over different parts of the island; and in all the fine valleys are numbers of elegant villas, in which the higher classes, who are usually much attached to a country life, spend a greater part of the year. The roads have also been considerably improved in recent years, and there is a tolerably good communication between different parts. The cap. of Majorca is Palma (sometimes also called Majorca), situated in a bay of its own name, on the S. side of the island, with a pop. of 51,871 in 1857. It is agreeably placed in a delightful country, and is strongly fortified; the houses are large and well built; but the streets being narrow, dark, and ill-paved, give it a mean appearance. The chief public buildings are the governor's palace, a large structure with extensive gardens, a cathedral, exchange, town-hall, and theatre. The inhab. are active, enterprising, and laborious; and almost the whole trade of the island is concentrated in its port. The road of Palma affords excellent protection for shipping, except during storms from the SE.; but the little harbour, called Puerto-Pi, is more secure, and furnishes anchorage for the largest frigates: the fort is defended by two well-fortified castles. Among the other towns of Majorca, the largest, with their respective pops., in 1857, are Llumayor 8,559; Campos, remarkable for its mineral waters and saltpans, 4,129; Santenay, celebrated for its stone-quarries, 5,451; Falaniche, where is made the best brandy of the island, 10,309; and Soller, 8,058. The small island of Cabrera lies 8 m. SSW. of Cape Salinas: it is covered with trees, and wholly uninhabited, except by convicts, of whom there is here a small *dépôt*.

The *Balearic Islands*, of which Majorca is the chief, were more anciently known as the Χοιράδες, so called, probably, from rising out of the sea like the backs of hogs. The Phœnicians made settlements in them at a very early period; and they were succeeded by the Carthaginians under Hanno, who founded *Mago* (Mahon), and *Jamnon* (Cindadela), both towns of Minorca. The islanders were celebrated as the most expert slingers in the Carthaginian service during the Punic wars, and were afterwards equally noted as successful pirates, till Quintus Metellus subdued them, and hence obtained the surname of *Balearicus*. He was the founder also of two cities in Majorca, *Palma*, the present cap., and *Pollentia*, now Pollenza, the latter with 7,486 inhab. in 1857. Under the Roman empire, these islands belonged to the judicial district (*conventus juridicus*) of New Carthage in Tarraconensis, and from the reign of Constantine I. to that of Theodosius I., they had their own government. On the breaking up of the W. empire, they became an easy conquest for the Vandals and Huns, from whom they were afterwards wrested by the Moors. The people becoming notorious as pirates and robbers on the coast of Christian Europe, Charlemagne headed an expedition against them, and succeeded, not only in taking the islands, but in keeping possession of them for six years, at the end of which they were retaken by the Moors. The latter were expelled in 1285, when the entire group was formally annexed to the crown of Aragon.

MALABAR, a term usually applied to designate the whole W. coast of Hindostan from Cape Comorin to Bombay, but, strictly speaking, Malabar only extends as far N. as the Malabar language is spoken, or to lat. 12° 30′. The British prov. of Malabar is a district or collectorate under the Madras Presidency, extending between lat. 10° 12′ and 12° 15′ N., and long. 75° 10′ and 76° 50′ E., comprising several portions of territory, as Wynaad, &c., not belonging to Hindoo Malabar; and having N. Canara, Coorg, and Mysore, E. Coimbatoor, S. Cochin, and W. the Indian Ocean. Length, NW. to SE., about 150 m.; average breadth about 42 m. Area, 6,262 sq. m. Pop. 1,140,916, of whom 844,186 Hindoos, 282,027 Mohammedans, and 14,403 Rom. Catholics. In the E. the surface is mountainous, comprising a portion of the range called the W. Ghauts: the coast is low, and indented by many shallow inlets. Between these two regions the country mostly consists of undulating hills, separated by narrow valleys, in general watered by a rivulet. Nearly all the rivers have a W. course. The chief are the Cochin, Beypoor, Baliapatam, and Ponany: the bar of the first is navigable for ships drawing 15 ft. water, and the mouth of the second will admit vessels of 300 tons. Lakes and tanks inconsiderable. The year is divided into three seasons; the hot, from February to May; the wet, from May to October; and the cool during the remaining months. Dense fogs are rare on the coast, but they usually envelope the ghauts from April to the end of the year. The soil on the coast is sandy, but well adapted for the culture of the cocoa nut, jack, areca, plantain, cinnamon, and other trees, pepper, coffee, the sweet potato, and other farinaceous roots and garden vegetables. In the interior the soil is of the red kind common in the S. of India, and highly favourable for rice, which frequently yields two and sometimes three crops a year. The rice lands are sown after the first rains in April, and in four months the grain is ripe for the sickle. The second crops are raised by the transplantation of plants a month old, and are reaped in three months. The third crop is assisted by small reservoirs and tanks, and by turning water from streams. About 788 sq. m. are estimated to be under rice, and 120 in gardens and inclosures of productive trees. The sides of the

Digitized by Google

hills are often formed into terraces for cultivation. The rest of the surface, especially in the uplands, is chiefly covered with forests, among which the teak-tree is very prevalent, and an important source of wealth to the district, the teak of Malabar being considered, upon the whole, superior to every other variety. Besides the above articles of culture, the mulberry, mango, tamarind, sugar-cane, ginger, tumeric, mustard, arrow-root, hemp, and cotton, are grown, and wheat and barley on the hills. There are few cattle. The elephant and wild hog do great damage on the borders of the forests they inhabit: the tiger, bison, elk, and deer are also met with. Towns are rare in the interior, and villages there are spread over a large space, families usually living separate from each other within gardens inclosed by ditches and high banks. Iron is generally found, and gold, though in small quantities, in the sands of some of the rivers. Coarse cotton cloths are manufactured in a few places from the raw produce of the district; coir is made from the fibrous covering of the cocoa-nut; oil from its kernel, and arrack from the toddy in very large quantities. The chief exports consist of the products of the cocoa-palm, but pepper, betel-nut, and cloth from the districts to the E. are also exported. At Calicut, Tellichery, Cananore, and Ponany, the chief commercial towns, there are numerous Parsee and other opulent merchants. The roads throughout the district are in good order, and have convenient bungalows every 10 or 15 m. In Malabar, as in S. Canara, inheritance goes by the female line, among the Nairs and other Hindoo castes which inhabit the country. On the coast, a large proportion of the inhab. are Mohammedans, and many Moplays, a people originally derived from Arabia. The Christian religion appears to have been planted in this part of India at a very early period, and many churches were found existing by the Portuguese. Malabar was governed by various Nair dynasties, previously to its conquest by Hyder Ali, in 1761. On the fall of Tippoo Saib it became subsidiary to the British, and was incorporated with the Madras Presidency in 1803.

MALACCA and NANING, a British colony, on the W. coast of the Malay Peninsula, between lat. 2° and 3° N., and long. 102° and 103° E.; having NW. the territory of Sangalore, NE. those of Rumbowe and Jobole, SE. that of Johore, and SW. the straits of Malacca. Area, 875 sq. m. Pop. estim. at 55,000, of whom 10,600 Chinese, 33,500 Malays, and 2,800 Europeans. Surface mostly undulating; the hills are covered with jungle, and the valleys rendered swampy by the rains. The coast also is swampy S. of the town of Malacca, but to the N. it is generally bold and rocky. There are several rivers, but the largest is only navigable by small vessels for 10 or 12 m. from its mouth. Opposite the coast are many small granitic islands, which serve for burialplaces to the Malay inhab. of the colony. The country is geologically composed of a granitic formation, overlain by laterite, and this again by a layer of vegetable mould, which becomes thicker the nearer the coast. The soil near the sea-shore is very productive, but in the interior it is otherwise; and Naning is much more valuable for its tin mines than for the products of its agriculture. The climate is more salubrious perhaps than that of any other British coast settlement in the East. It has been found that, during a period of seven years, the deaths among the troops stationed here amounted to less than 2 per cent.; and instances of longevity are frequent among both Europeans and natives. The mean annual temperature is about 77° 6′ Fah.; and there is but little change throughout the year in the barometer, which stands at about 30°. Rain falls continually at intervals of a few days; but as rather more occurs between September and January than at any other time, that period is termed the wet season. Violent squalls and storms of lightning occur during the SW. monsoon. The produce of Malacca consists chiefly of rice, jaghery, sago, pepper, rattans, timber, cocoa-nuts, a few nutmegs, cloves, dammer, gambier, gum lac, ivory, gold dust, tin, fruits, poultry, and cattle. A few years ago the rice raised in the colony was scarcely sufficient for four months' consumption, the additional supply being brought from Acheen, Java, and Bengal. A principal cause of this was the former policy of the Dutch, who, while Malacca belonged to them, prohibited the raising of any kind of grain, in the view of rendering the inhab. wholly dependent for their supplies on Java. The British government, however, has given every encouragement to native agriculture. Cocoa-nuts form a considerable portion of the food of the lower classes of natives, who also subsist partly by fishing.

This settlement was formerly included in the presidency of Bengal, but has, since 1851, its own governor, together with Penang and Singapore.

MALACCA, a town on the W. coast of the Malay Peninsula, cap. of the above British colony, at the mouth of the river of the same name, lat. 2° 14′ N., long. 102° 12′ E., about 100 m. NW. Singapore, and 220 m. SSE. Penang. Pop. estim. at 12,120, of whom about 4,000 Chinese, 3,000 Malays, 2,000 Chuliahs, and 2,000 Europeans. The town is divided by the river into two parts, connected by a bridge. On the left bank rises the verdant hill of St. Paul, surrounded by vestiges of an old Portuguese fort. Around its base lie the barracks, lines, and most of the houses of the military; the stadthouse, court-house, gaol, church, civil and military hospitals, the site of the old inquisition, convent, the police-office, the school, post-office, and master attendant's office. On its summit stand the ruins of the ancient church of our Lady *del Monte*, erected by Albuquerque, and the scene of the labours and miracles of that 'Apostle of the East,' St. Francis Xavier; also the light-house and flag-staff. A little to the S. rises the hill of St. John's, and in the rear rises that of St. Francis. On these eminences are the remains of batteries erected by the Portuguese and Dutch, commanding the E. and S. entrances to the town. Smaller knolls intervene, covered with the extensive cemeteries of the Chinese. The tombs are white, and constructed with much care, and surrounded by low walls of brick and chunam, in shape resembling a horse-shoe. The bazaars, and by far the greatest part of the town, are situated on the right bank of the river. The anchoring ground in the roads is secure; and though large vessels are obliged to lie at a distance of 2 m. from the shore, accidents have been rarely known to happen. Native craft anchor much nearer, under the lee of one of the islets close in-shore.

The principal public institution at Malacca is the Anglo-Chinese College, established in 1818. Its main objects are the cultivation of Chinese literature by Europeans, and of European literature by the Chinese, Malays, and surrounding nations, and the diffusion of Christianity. The college has a library, well stocked with European and Chinese books, and Siamese MSS.; and attached to it is an English, Chinese, and Malay press. This college was founded by Dr. Morrison, the Chinese scholar, from whom, also, it received a small endowment. There are also in the town 5 Chinese schools, with about 100 scholars, besides several Hindoo and

Digitized by Google

female schools, and schools established by the Malays, for their own instruction in English. A full account of the mode of education in the Chinese schools may be seen in Newbold's work on Malacca.

Malacca was formerly a place of considerable trade; but, owing to the superior advantages of Penang and Singapore, its commerce has rapidly decreased within the last 10 years, and it is now very limited. It exports small quantities of gold dust, balachong, hides, hogs, fowls, jaghery, pepper, dammer, cordage, a little ebony and ivory; iron implements, fire-arms, and nails, manufactured by the Chinese smiths at Malacca, with rattans, lac, and aloe-wood. The gold and tin are not the produce of the British territory, but of the adjacent native states, whence they are brought to Malacca by native boats, or overland by coolies. The principal imports are earthenware, iron, rice, sago, opium, nankeens, European and Indian piece-goods, woollens, paper, provisions and liqueurs, for the European and Chinese inhab.; salt, sugar, tea, and tobacco, partly for home consumption and partly for re-shipment.

Malacca is said to have been founded in 1252, by Iskander Shah, a chief from Singapore, and it soon became a large and flourishing city, its influence extending over all the peninsula and the adjacent islands. It was first visited by the Portuguese in 1508, and captured by them in 1511. In 1641 it was taken by the Dutch, and in 1795 by the English. The latter held it till 1818, when it was restored to the Dutch; but, in 1825, the latter finally exchanged it in return for the settlements of Bencoollen, on the coast of Sumatra.

MALACCA (STRAITS OF), a channel of the Eastern Seas, extending from lat. 1° and 6° N., and long. 98° and 104° E., between the Malay Peninsula on the NE. and the island of Sumatra, on the SW. Its length, NW. to SE., may be estimated at about 520 m.; its breadth varies from 25 m. opposite the Naning territory, to nearly 200 m. at its N. extremity. It is the best and most frequented passage from the Indian Ocean to the China Sea.

MALAGA, an important city and sea-port of Spain, k. Granada, and prov. of its own name, at the bottom of a deep bay, on the Mediterranean, 68 m. NE. Gibraltar, and 254 m. S. by W. Madrid, with which it is connected by railway. Pop. 94,293 in 1857. The town is built along the shore, at the foot of mountains gradually descending towards the sea: westward is the Vega, watered by the great river of Malaga, which delivers a large body of water from the E. end of the Serrania de Ronda; and, on the other side, rise naked rugged mountains, overhanging the shore, and scarcely leaving room for the town. But the most imposing view of Malaga is from the sea. It stands in the centre of a wide bay, flanked by lofty mountains, and by the picturesque ruins of its ancient fortifications and castle, which cover the hill rising immediately to the E., and seem, from their great extent, like the remains of a former state. The streets, as in all Moorish towns, are very narrow, many being only 8 ft. wide, with others still narrower, badly paved, and dirty to a proverb: the houses are high and large, built round a court, the interior having a clean and neat appearance, owing to the abundant use of whitewash. There is only one square in the town, and the churches, as well as convents, are so crowded among the houses, that their beauty, if they have any, is effectually concealed. The only handsome feature of the town is the Alameda, or public walk, the buildings round which are magnificent: the other parts present a labyrinth of narrow intricate streets, inhabited by the tradespeople. The chief public buildings and establishments are a cathedral, with a chapter, 4 par. churches, a bishop's palace, 4 hospitals (one of which is for military), a legal seminary, royal college of medicine and surgery, a foundling asylum, a large *depôt* for convicts, a custom-house, and 2 endowed schools. Among these, however, the only edifice worth notice is the cathedral, a large building, having a spire 270 ft. in height: like that of Granada, it is in the transition style, between the Gothic and classic: the roof, instead of being groined, is divided into numerous small circular domes, somewhat like the marigold windows of Gothic architecture; and the modern additions to the building, though not quite in keeping, are on the whole designed with good taste. The high altar and the pulpit are of flesh-coloured marble; but the part which most rivets the attention is the choir, called by the biographer Palomino, the eighth wonder of the world, and admirable for the perfection of its carved works, representing in very bold relief the twelve apostles, and most distinguished of the saints.

On a sharp point of rock commanding the city stands a fine old Moorish castle, in good preservation, called the *Gibralfaro* (prob. *Gebel-al-faro*, the great watch-tower), built on the site of a Roman fortress, but still wholly of Arabic architecture: it is altogether, both from its shape and situation, a very curious structure; and, if fortified on the modern system, might be rendered impregnable. Another Moorish building, in tolerable preservation, was formerly the *darsena* or dock for the ancient galleys, now used as a storehouse. The *Alcaçaba*, an Arabian palace, once occupied a site near the shore; but the greater part of it was pulled down to make room for the custom-house. At a short distance from Malaga is one of the magnificent but unfinished undertakings of Charles III., a bridge and aqueduct over the great river of Malaga, which flows about a league distant from the city; but this work, on which a great outlay was incurred, was rendered useless a few years afterwards by a work undertaken by a bishop, who, at his own expense, brought water into the city by a much shorter line.

Malaga not being a ship-building port, the number of registered vessels is not very great. In 1864, there were fifty square-rigged vessels on the list, the whole of them belonging to three or four of the principal merchants. These vessels are usually engaged in voyages to the West Indies, South America, and Newfoundland, carrying the fruits, wine, and oil of the country, and returning either with sugar, coffee, &c. from the Havana and Porto Rico, cocoa and logwood from South America, cotton from the States, or salt fish from Newfoundland. The principal articles of general export are wines and fruit, particularly raisins, almonds, grapes, figs, and lemons: there is likewise a considerable, though smaller, exportation of olive oil, with brandy, anchovies, cummin-seed, aniseed, barilla, and soap. Lead is also brought for shipment from the mines of Alora in Granada. The imports comprise salt-fish, iron-hoops, bar-iron, and nails; cotton fabrics, hides, and earthenware; with woollen cloths, all sorts of colonial produce, butter and cheese from Holland and Ireland, and linens from Germany. The trade with England has been for some time diminishing, owing to the small demand for Malaga wine; but the trade with America has considerably increased, owing to the pretty large consumption both of the fruit and wine shipped at this port.

The following is the official return of the shipping which entered and cleared the port in the year 1863:—

The wines of Malaga are of two sorts, sweet and dry: and of the former of these, there are three varieties: 1st, the common 'Malaga,' known and exported under that name, in which there is a certain proportion of burnt wine, which communicates its peculiar taste to the 'Malaga:' the grape from which this wine is made is white, and every butt of Malaga contains no less than 11 gallons of brandy; 2dly, 'Mountain,' made from the same grape as the other, and, like it, containing colouring matter and brandy, the only difference between the two being, that for 'mountain' the grape is allowed to become riper; 3dly, 'Lagrimas,' the richest and finest of the sweet wines of Malaga; it consists of the droppings of the ripe grape hung up, and is obtained without the application of pressure. The dry wine of Malaga is produced from the same grape as the sweet wine, but pressed when greener: in this wine there is ⅛ more brandy than in the sweet wine; at least 1-12th part of the dry Malaga being brandy. The whole produce of the Malaga vineyards is estimated at from 35,000 to 40,000 butts; but, owing to the increasing stock of old wine in the cellars, it is impossible to be precise in this calculation. The export of Malaga wines may be stated at about 27,000 butts. The principal markets are in the United States and the states of S. America, to which countries the exports are rather on the increase. The average price of the wines shipped from Malaga does not exceed 35 dollars per butt; but wines are occasionally exported at so high a price as 170 dollars. Many attempts have been made at Malaga to produce sherry, but not with perfect success. The Xeres grape has been reared at Malaga, upon a soil very similar to its native soil. One reason of the very low price of the wines of Malaga is the chapness of labour; field labour is paid by 2½ reals a day (4½*d.*), wages during the fruit and vintage time being about double.

Next to its wines, the chief exports of Malaga are fruits; as raisins, almonds, grapes, figs, and lemons. The raisins are of three kinds, muscatel, bloom, or sun raisins and lexias. The muscatel raisin of Malaga is the finest in the world, and in its preparation no art is used, the grape being merely placed in the sun, and frequently turned. The bloom, or sun raisin, is a different grape from the muscatel, but the process of preparing it is the same; like the other, it is merely sun dried. The lexias acquire this name from the liquor in which they are dipped, and which is composed of water, ashes, and oil; these, after being dipped, are also dried in the sun. All muscatel raisins are exported in boxes, and also part of the bloom raisins.

Malaga has an excellent harbour, formed by a fine mole, 700 yds. in length, at the end of which is a lighthouse, furnished with a powerful light, revolving once a minute. A shoal that had grown up round the mole-head has been removed by dredging. The harbour, which will accommodate more than 450 merchant ships, may be entered with all winds, and affords perfect shelter. Communication by steam has considerably increased of late years along the coast of Spain, and its operation has produced a corresponding degree of prosperity. During the prevalence of westerly winds, sailing vessels were frequently unable to pass through the Straits of Gibraltar, the adoption of steam as a motive power, therefore, has materially altered the nature of the navigation in this quarter. The steam vessels on coasting voyages touching at all the available ports round the Spanish Peninsula have almost superseded the coasting trade of the slow lateen craft; and hence one of the sources from which Spain has lately derived her increased prosperity and an infusion of life and vigour into her former inanimate commercial intercourse. Almost daily communication has been established by this means between the ports on the coast, and long lines of steam vessels have been established between Malaga, Gibraltar, Liverpool, and London, with Marseilles and Nantes, Hamburg, and other intermediate stations, to which may be added nearly all the principal ports of the Mediterranean.

Malaga, independently of its export trade, has manufactures of linen and woollen cloths, sail-cloth, ropes, paper, leather, hats, and soap; an iron foundry and a cigar manufactory; but, excepting the latter, they are all on a small scale, and insufficient for the consumption of the inhab. Pilchard and anchovy fisheries also give employment to a considerable number of the lower classes. The market is well supplied, the show of fruit in particular being unequalled in Spain. Melons, pomegranates, and prickly pears, which, with fish, constitute the principal food of the lower orders, are so cheap as scarcely to form an article of expenditure.

The general aspect of the pop. of Malaga is even more Moorish than that of Seville, and affords innumerable pictures of idleness. Hundreds of the lower classes appear in the streets doing nothing, sitting on the ground, lolling against a wall, or lying on the steps of church doors, wrapped in brown, ragged, and patched cloaks. In fact, Malaga is noted for idleness and demoralisation. The necessaries of life being so cheap, there are few motives to industry: begging is very common, and was long encouraged by the ill-judged bounty of the old monasteries, suppressed in 1835. The more respectable classes of the people are agreeable, hospitable, and generally fond of society, the ladies being equally witty and high-spirited with those of Seville, quite as showy in dress, and not a whit more strict in morals. The Italian Opera is a favourite resort, and many ladies are good musicians. Numerous foreigners also reside in Malaga, especially English and Americans, who constitute, with a few of the government officers and merchants, the *élite* of society. Most of these have country seats in the environs, the beauty of which is not surpassed in any part of Andalusia. The weather during summer is intolerably hot, and at this season, especially during the prevalence of the hot S. winds, the inhab. exclude the sun as much as possible, and remain at home during the day; but when the heat is succeeded by the refreshing coolness of the evening, the whole pop. is astir, and after nightfall the young people bathe for hours in the sea, a practice quite as conducive to health

Digitized by Google

as pleasure. Nervous and epidemic fevers are still, however, very prevalent, and sometimes carry off great numbers of people.

Malaga, like most other cities of Spain, has had various masters. Built by the Phœnicians, and called by them *Malacha*, it came successively into the hands of the Carthaginians and Romans, both of whom procured from it considerable supplies of salt-fish and provisions. It then passed into the hands of the Goths; and from them, in 714, to the Moors, who were at length driven hence by Ferdinand the Catholic, in 1487. The yellow fever carried off nearly 22,000 of its inhab. in 1803, and reappeared, though attended with less fatal consequences, in 1813. Malaga was taken by the French in 1810, after an obstinate conflict with a body of Spaniards, officered by monks, and commanded by a Capuchin friar; and remained in their possession till 1812.

MALAY PENINSULA, a long and narrow territory, forming a part of India beyond the Brahmaputra, and the most S. portion of continental Asia, lying chiefly between the 1st and 8th degs. of N. lat., and the 98th and 104th of E. long.: it has N. Lower Siam, with which it is connected by the isthmus of Kraw; and is on all other sides surrounded by the sea, called on the W. and S. the Straits of Malacca and Singapore; and on the E. the China Sea and Gulf of Siam. Length, NNW. to SSE., 450 m.; breadth varying from 50 to 150 m. Area estimated at 45,000 sq. m. As far as lat. 6° S. the country is claimed by the Siamese; but, beyond that point, the peninsula is subdivided among indep. native states and British colonies.

Physical Geography.—The central and longest of the mountain chains, passing S. from the table land of Yuunan, through the Ultra-Gangetic peninsula, traverses this territory in its entire length. This mountain chain diminishes in height as it approaches the equator; and its highest peaks in Rumbowe and Johore probably do not exceed 3,000 ft. in elevation; while many peaks in the N. part of Quedah are supposed to rise to upwards of 6,000 ft. above the sea. M. Ophir, a detached mountain in about lat. 2° 30′ N., and long. 102° 30′ E., has been roughly estimated at nearly 5,700 ft. in height, but it is much more lofty than any other summit in the S. part of the peninsula. Between the above mountain chain and the coast, the surface is undulating, covered with dense primeval forests, or interspersed with grassy plains, which are by far the most numerous and extensive in the N. An abundance of rivers descend to either coast, in their progress frequently forming marshes and lakes, some of which are of considerable size. Their banks are generally low, swampy, and covered with mangrove and other thickets; and though several of them are broad, and moderately deep, the sand-banks, coral reefs, &c. at their mouths, usually preclude their navigation by vessels of any magnitude. A number of verdant islets stud the coasts, especially the northwestern and the southern.

Geology and Minerals.—The Malay mountain chain, as far as it has been hitherto explored, consists chiefly of grey stanniferous granite and clay-slate. At its S. extremity, porphyry occurs; hornblende is met with near Malacca; and quartz is very abundant around M. Ophir and elsewhere. The geology of the E. coast is almost wholly unknown; but, along the W., laterite, similar to that of the Malabar coast, is a very prevalent formation. Clay-slate, sandstone, argillaceous schist, jasper, limestone, grauwacké, and limestone are the other most prevalent rocks. Limestone composes a portion of several of the islands off the W. coast, while those off the S. coast are chiefly of granite or sienite. The Elephant rock in the Quedah territory is a mass of calcareous breccia, having many stalagmitic caverns, and interspersed with an abundance of fossil remains. At the S. extremity of the peninsula are evident traces of volcanic action; and numerous thermal springs, scattered over the country, testify the activity of subterranean heat at no great distance below the surface. These are sulphureous and saline. The springs at Ayer-pannas, near Malacca, were found by Newbold to have a temp. of 120° Fahr. at noon, and of 113½° at 6 A. M.

The Malay Peninsula produces tin, gold, and iron: tin is, in fact, among its principal articles of export. Mr. Crawfurd observes, that tin, wherever found, has a limited geographical distribution; but that, where it does exist, it is always in great abundance. The tin of India has, however, a much wider range of distribution than that of any other region, being found in considerable quantity from long. 98° to 107° E., and from lat. 8° N. to 3° S. It has been latterly stated that it is found in abundance at Sakána, in the interior of Tavoy, lat. 12° 40′, and in Siam even as far N. as 14°. At any rate the Malay Peninsula appears to be the centre of the region in the eastern seas in which tin is distributed; and, including the island of Junk-Ceylon, it has been roughly estimated that its annual produce of this metal amounts to 34,600 piculs of 133⅓ lbs. avoird. The ore of the peninsula is extremely pure, being that which is called stream. The ore of Sunjie-ujong, Naning, and Perak is reported to yield 76 per cent. metal, whereas the ores of Cornwall, with all the advantages of European science and ingenuity, do not yield more than 75 per cent. But the process of smelting, as conducted by the Malays, being very defective, and adulteration frequent, the peninsular tin fetches only from 14½ to 15 dollars the picul; while the tin of Banca, wrought by Chinese, sells at from 16 to 16½ dollars. The export of peninsular tin may amount to about 2,000 tons a year, including from 400 to 500 tons received from the Malacca Straits and Banca.

The Malay Peninsula does not by any means so well merit the term *Aurea Chersonesus*, which has been before applied to it, as the neighbouring island of Sumatra. The exports of gold from the SW. coast of that island average 26,400 oz. a year, while the annual produce of the peninsula is roughly estimated at less than 20,000 oz. It comes chiefly from the E. coast, and M. Ophir, where it occurs disseminated through quartz, in thin granular veins, and in alluvial deposits. Iron is found in Quedah, but only in small quantities.

The Climate is remarkable for its continual moisture, to which circumstance the perpetual verdure of the peninsula is mainly owing. The year is divided into the wet and dry seasons; but the term 'dry season' must not be understood in the same sense as when applied to the climate of Hindostan; for, during its continuance, even three successive days rarely pass without a shower. On the W. coast the dry season comes in with the SW. monsoon in May; the wet season, with the NE. monsoon in October. Thunder storms, whirlwinds, waterspouts, and other atmospherical phenomena are frequent, especially during the SW. monsoon.

Vegetable Products are both numerous and valuable. They include a host of trees, the timber of which is adapted for house and ship-building; the finest fruits of tropical climates, bamboos, canes, and rattans, of which the jungles are in

Digitized by Google

great part composed; the areca, sago, and gomuti palms, the catechu, dragon's blood, and India rubber plants, the upas of the Javanese. It has been denied that teak is indigenous to the country; but the inland Malays affirm that it is occasionally found, and is known under the name of *jâti*. The wild nutmeg is a native of the country. The true nutmeg, cinnamon, and clove have been long introduced, and thrive well. Tobacco, coffee, sugar, cotton, and the true indigo (*Indigofera tinctoria*), are cultivated with much success. Mr. Crawfurd (Embassy to Siam, i. 178) estimates that the Malay Peninsula produces 28,000 piculs of pepper a year, or about 1-13th part of the total produce of the E. Rice and other kinds of grain are not grown in quantities sufficient for home consumption, and are therefore imported chiefly from Bengal and Sumatra.

Elephants roam over the peninsula in great numbers: the rhinoceros, tapir, wild hog, the royal and the spotted black tiger, two kinds of bears, and two species of bison, the axis, plandok, musk-deer, and several other kinds of deer, the vampire, and many varieties of bats, and numerous monkeys, are among the wild animals. The buffalo is a native, and is domesticated; but neither the cow, camel, horse, nor ass are met with in a state of nature. The great density of the jungles is considered unfavourable to the increase of feathered game; but waterfowl are plentiful, and there are a great many pheasants of the richest plumage. Crocodiles, alligators, and several kinds of formidable serpents are met with. The dugong, many turtles, and a plentiful supply of fine fish are caught in the surrounding seas.

People.—The Malays have been ranked by some authors as one of the five great families, or varieties, of the human race. But this opinion is by no means generally entertained. Both their features, and those of the aborigines in the native states around Malacca, are decidedly characterised by the Mongol stamp. And independent of the Malays having no peculiarity of form or feature to entitle them to be called a distinct variety, there appears to be sufficient evidence to show that they are a mixed race, of comparatively recent origin. Antecedent to the twelfth century of our era, the coasts of the peninsula and the adjacent islands were inhabited, though thinly, by a tribe of *icthyophagi*, and the interior by a race of negro savages, by whose descendants it is still occupied. In the course of the above century, a body of colonists, the ancestors of the present race of Malays, arrived on the continent, from Menankabowe, in Sumatra; and whether by intermarriage (as traditionally reported) or by conquest, extended their dominion over the whole peninsula. During the succeeding centuries they conquered Sumatra, the Sunda, Philippine, and Molucca Isles, with many smaller groups; and are now found in all those regions, and in Borneo, but without any centre of unity or power. The chief physical characters of the Malay race consist in a brown colour, varying from a light tawny to a deep brown; black hair, more or less curled, and abundant; the head rather narrow; the bones of the face large and prominent; the nose full, and broad towards the apex; and the mouth large. The average height of the men is about 5 ft. 2 in. A general character can hardly be assigned to a people so widely distributed. The Malay inhab. of the peninsula are, however, active, restless, and courageous; but their courage is not of a steady, deliberate character, but is rather a sudden ungovernable impulse, arising from a paroxysm of rage. To their enemies they are remorseless, to their friends capricious, and to strangers treacherous. Perhaps, their treachery to strangers may, in part at least, be occasioned by the behaviour of the latter, or the antipathy excited against them by the behaviour of former strangers. A propensity to gambling is a distinguishing trait in the Malay character; and more especially a taste for cock-fighting, to which sport the Malay is so passionately addicted, that his last morsel, the covering of his body, his wife and children, are often staked on the issue of a battle to be fought by his favourite cock. A disregard of human life, revenge, idleness, and piracy may be considered common to Malays. The universal practice of going armed makes thoughts of murder familiar. The right of private revenge is universally admitted, even by the chiefs; and the taking of life may be atoned for by a small sum of money. In the arts of peace they are greatly inferior to their neighbours of Java, Japan, Cochin-China, and Siam. The Malay language coincides with monosyllabic tongues in its general construction and analogies, but is properly polysyllabic in its form. It consists chiefly of Polynesian, an intermixture of Sanscrit and Arabic, and a dialect purely Malayan, which last, however, constitutes little more than one-fourth part of the written and spoken language. The literature of the Malays is almost entirely derived from Hindostan, Persia, Arabia, Java, and Siam. Arabic is exclusively their sacred language, and their religion also has been derived from Arabia, all the Malays, with trifling exceptions, being Mohammedans.

The negro tribes which inhabit the interior of the peninsula are called by the Malays *Orang Benua*, men of the soil. They appear to be a distinct variety, differing from and being inferior to both the African and Papuan negro. The average height of the men is only 4 ft. 8 in. The Malay negroes are thinly spread over a considerable extent of territory in and behind Malacca, and thence N. to Mergui; but they probably amount in all to only a few thousands. They are divided into several tribes, some of which are said to dwell altogether in trees or clefts in the mountains. A few have learned a little Malay, and occasionally venture among the adjacent Malay tribes to purchase tobacco and utensils; but of letters they know nothing. (Copious accounts of both the Malays and this people may be found in Newbold's 'Malacca,' vol. ii. ch. 12, 14, 15; and various details respecting the races inhabiting the Malay countries are given in the art. E. ARCHIPELAGO in this Dict. For the *Commerce* of the British settlements, see MALACCA and SINGAPORE.)

The principal articles of export from the native states are tin, gold-dust, spices, elephants' teeth, pepper, sago, sugar, canes, timber for ship and house building, dammer, ebony, bees' wax, betel nut, sapan and eagle woods, hogs, poultry, buffaloes, tiles, and an immense variety of fruits; in return for which, opium, salt, cotton, cloths, tobacco, rice, and some European manufactures are the chief imports. The trade is principally with the British and Dutch settlements in the East, Siam, China, and the adjacent parts of the E. Archipelago.

In the fifteenth century, a large proportion of this peninsula appears to have been under the sway of the Siamese; but, since that time, it has been mostly divided into the petty states before enumerated, the historical details of which are destitute of interest. The successive settlements made by the Portuguese, Dutch, and British at Malacca are elsewhere noticed. The only recent event worthy of mention has been the subjugation of Quedah (or Keddah) by the Siamese, begun in 1821, and completely effected within about ten years afterwards.

MALDA, a town of Hindostan, prov. Bengal, district Dinagepoor, on the Mahanunda, built chiefly of the ruins of Gour, from which it is distant about 12 m. N. Early in the present century it had 3,000 houses huddled together along the bank of the river, which, during the rainy season, nearly insulates the town. The E. I. Company established a factory here as early as the seventeenth century; and there were formerly some prosperous French and Dutch silk and cotton factories in the town; but the trade of Malda has now sunk into irreparable decay, its manufactured goods being unable to withstand the competition of those introduced into India from Europe.

MALDIVE ISLANDS, or MALDIVES, a chain of islands in the Indian Ocean, extending between the 1st deg. of S. and the 7th of N. lat., a distance of about 560 stat. m.; and between 72° 48′ and 73° 48′ E. long. The Laccadive Islands, to the N. of the Maldives, may not improperly be considered a continuation of this island-system. They are of coralline formation, arranged in round or oval groups called *atolls*, separated by several channels, which may be safely navigated by ships of the largest size. The different groups are surrounded by coral reefs, on which the surf beats violently; but between the islands the sea is perfectly smooth, and forms safe harbours for small craft. These islands have been rarely visited by Europeans, though lying in the direct route to India. All that are of any extent are richly clothed with palms and other trees; but no edifice has been seen in sailing past them, whence it may be concluded that none exists higher than a cocoa tree. The Maldives produce millet and other small grains, of which they have two harvests a year; but they are unsuitable for rice and wheat, which are imported. Esculent roots and fruits are found in the greatest profusion; and poultry are extremely abundant, and bred with little or no attention. There are neither horses nor dogs, and but few horned cattle. Fishing is an important occupation, especially that of cowries, a species of shells used as money in small payments in Hindostan and other Asiatic countries, and in extensive districts in Africa. The inhab. trade with Hindostan and Sumatra, arriving at Balasore and other ports of British India during the SW. monsoon with cowries, coir, the produce of the cocoa tree, salted fish, and tortoise-shell; and sailing homeward with the NE. monsoon, taking rice, sugar, manufactured goods, and tobacco. The people of the Maldives are Mohammedans, and probably of an Arabic stock. They live under a sultan, who resides in Male, an island about 3 m. in circuit, fortified by walls and batteries, on which above 100 pieces of artillery are mounted. The sultan, however, considers himself dependent on the British government of Ceylon, to which he sends an annual embassy.

MALDON, a parl. and mun. bor., river port, and market town of England, co. Essex, hund. Dengey, on the Chelmer, 14½ m. SW. Colchester, 37 m. ENE. London by road, and 44 m. by Great Eastern railway. Pop. of mun. bor. 4,785, and of parl. bor. 6,261 in 1861. The town occupies the ridge of a hill on the S. side of the Chelmer, and consists principally of one long street, running parallel to the river, the E. end of this street forming the portion called 'the Hythe:' two other streets, one from the centre of the town, and the other from its W. end, unite at the bottom of the hill, and extend across the Chelmer into an almost insulated flat called 'Potman's Marshes.' The town-hall is an old building, near the junction of the streets at the W. end of the town, and not far from it is an extensive range of barracks: there is also a small bor. gaol. Maldon had formerly 3 pars.; but 2 of them have been long consolidated. The largest church, that of All Saints, near the town-hall, is an ancient and very large edifice, with a square tower, surmounted by a curious *triangular* spire. St. Mary's is a spacious building, at the lower end of the town, said to have been founded before the Norman Conquest; but the tower and W. end were rebuilt in the reign of Charles I. The united vicarage of All Saints and St. Peter's is in private patronage, the rectory of St. Mary's being in the gift of the dean and chapter of Canterbury. St. Peter's tower is the only part now standing of that disused parish church, and annexed to it is a building formed of the old materials, which has long been used as the depository of a valuable library containing 5,330 volumes, bequeathed to the town, in 1704, by Archdeacon Plume, founder of the Plumian professorship of astronomy in the university of Cambridge: the tower part, which has since been much enlarged, is occupied by the national school, furnishing instruction to about 270 poor children of both sexes. The grammar school, founded in 1621, received an additional endowment from Dr. Plume, who also gave it an exhibition in Christ's College, Cambridge. The estates vested in the hands of trustees yield about 52*l.*, which, after some slight deductions for land tax and repairs, are paid over to the head-master; 6 free scholars receive classical instruction gratis, paying a fee for other branches; and there are, besides these, about 12 pay-scholars. Dr. Plume left also a considerable property for the clothing and instruction of 15 poor boys, and the foundation of a week day lecture in the church; besides which, he built a workhouse, lately sold under the provisions of the Poor-law Amendment Act. There is also a large Lancastrian school, with two or three minor charities and money bequests. The Rom. Catholics, Wesleyan Methodists, and Baptists have their respective places of worship; attached to which, as well as to the churches, are Sunday schools. Among the other public buildings are the public hall, library, and institute, in the Italian style, erected 1860. Maldon is not a manufacturing town; but it carries on a considerable home trade in coal, iron, chalk, and timber, which it exchanges for corn and other farming produce. There belonged to the port, on the 1st Jan. 1864, 99 sailing vessels under 50, and 55 above 50 tons. The customs receipts, in the year 1863, amounted to 262*l.*

Maldon claims to be a bor. by prescription; but its first charter dates as far back as 1155, and was confirmed by Edward I. and subsequent monarchs. The present municipal officers comprise a mayor and 3 other aldermen, with 12 councillors; a commission of the peace is held under a recorder. Maldon has sent 2 mems. to the H. of C. since the reign of Edward I. Down to the Reform Act, the franchise was vested in the resident and non-resident freemen by birth, marriage, servitude, gift, or purchase. The Boundary Act enlarged the limits of the bor. by including in it the parish of Heybridge. Registered electors, 924 in 1865. In cases of succession to burgage tenures, the custom of borough-English prevails here. Markets, well attended, on Saturday; cattle-fairs, September 13 and 14.

MALDONADO, a fortified sea-port town of Uruguay, in S. America, on the N. bank of the Plata, not far from the mouth of the æstuary, and 85 m. E. Monte Video. Its harbour is sheltered from SE. winds by the small island of Gorriti, but it has little depth. Pop. estimated at 5,000. Maldonado is a quiet, forlorn little town, built with the streets running at right angles to

Digitized by Google

each other, and having in the middle a large *plaza* or square, which, from its size, renders the scantiness of the population more evident. It possesses scarcely any trade, the exports being confined to a few hides and live cattle. The inhabs. are chiefly landowners, with a few shopkeepers, and the necessary tradesmen, such as blacksmiths and carpenters, who do nearly all the business for a circuit of 50 miles round. The town is separated from the river by a band of sand hillocks about a mile broad: it is surrounded on all other sides by an open, slightly undulating country, covered by one uniform layer of fine green turf, on which countless herds of cattle, sheep, and horses graze.

MALLOW, an inland town and parl. bor. of Ireland, co. Cork, prov. Munster, on the Blackwater, and on the railway between Cork and Limerick, 18 m. N. by W. the former, and 37 m. S. the latter city. Pop. 4,841 in 1861. Mallow, properly so called, is built on the N. side of the river, being united, by a bridge of 15 arches, to its suburb of Ballydaheen on the S. side of the river. The latter is included in the parl. bor. as fixed by the Boundary Act, which comprises an area of 378 acres. It consists principally of one main and well-built street, nearly parallel to the river: and has a handsome parish church, a Roman Catholic chapel, 2 Methodist chapels, an Independent meeting-house, a court-house, a bridewell, barracks, and infirmary, with commodious baths, a public reading-room, and library. On its W. side are the ruins of its old castle, the property of the lord of the manor. There are two schools, one attended by about 200 boys, and the other by about 130 girls, both under the control of the Board of Education. The town is surrounded by thriving plantations, and is situated in a peculiarly rich and well-cultivated part of the country. Though the river is not navigable, and Mallow has no manufactures, it is yet considered one of the best country towns in Ireland. It is resorted to in summer on account of the mineral waters that it possesses, the properties of which are much the same as those of Clifton, and in the neighbourhood there is a very unusual number of country gentlemen's houses, occupied by families of respectability.

Mallow was incorporated by charter of James I. in 1612, which vested the right of sending 2 mems. to the Irish H. of C. in the provost and 12 burgesses. But this charter fell, in no very long time, into disuse; and, for above a century, the corp. has been extinct, and the right of electing the mems. for the bor. vested, down to the Reform Act, in the *freeholders of the manor*, which comprised 1,126 acres. Since the union, Mallow has sent 1 mem. to the Imperial H. of C.; and the Boundary Act altered the limits of the parl. bor., as already stated, by inc. in it the suburb of Ballydaheen, and exc. the country part of the manor. Reg. electors, 243 in 1865. The bor. has a court leet twice a year, and a court for debts under 2*l.* every third Wednesday. General sessions are held in April, and petty sessions every Tuesday. Markets on Tuesdays and Fridays; fairs on the 1st Jan. (for pigs), Shrove Monday, 11th May, 25th July, and 28th Oct.

MALMEDY, a town of Rhenish Prussia, gov. Aix-la-Chapelle, cap. circ. on the Warge, close to the Belgian frontier, and 20 m. S. Aix-la-Chapelle. Pop. 3,850 in 1861. The town has a noble church, formerly belonging to a rich Benedictine abbey, a fine cabinet of medals and antiques, and is the seat of the council for the circle, a police court, and board of taxation. It has some mineral springs, similar to those at Spa, and manufactures of fine woollen cloth, glue, and soap; but it is chiefly noted for its manufacture of leather for boot soles, with which it supplies a considerable portion of Germany. There are about 50 tanneries in active employment: hides are imported principally from South America, and bark from the forest of Ardennes.

MALMESBURY, a parl. bor., market town, and par. of England, co. Wilts, hund. of same name, on the Avon, 17½ m. NNW. Bath, 86 m. W. London by road, and 85 m. by Great Western railway, *viâ* Minety station. Pop. of parl. bor. 6,881 in 1861. The town, formerly fortified and more extensive, is pleasantly situated on a hill close to the Avon, by which it is nearly encircled, and which is here crossed by six bridges. It consists of three principal streets, two of which running parallel are intersected by the third. In an open space, near the centre of the town, is the market cross, an octangular turreted structure, with flying buttresses, and highly carved, supposed to have been erected in the reign of Henry VIII. The new town-hall, a handsome building, is at Cross Hays. There appear to have been formerly several parish churches in Malmesbury; but it now contains only one besides St. Mary's church at Westport. The Wesleyan Methodists, Baptists, Unitarians, and Moravians have places of worship, and there are three Sunday schools. Two free schools, one of which is conducted on the national system, furnish instruction to poor children of both sexes, and there are two sets of almshouses.

The bor., which is of high antiquity, received its governing charter from William III.; and it was considered too insignificant to be included in the provisions of the Municipal Reform Act. It has sent 2 mems. to the H. of C. from the 23d Edward I.; the franchise, previously to the Reform Act, being in the high steward, alderman, and 12 chief burgesses. The Boundary Act enlarged its limits, by including with it the two out-pars., as above mentioned. Registered electors, 373 in 1865. Markets on Saturday, and a cattle market on the last Tuesday of each month, except March, April, and June. Horse and cattle fairs, March 28, April 28, and June 5.

A nunnery was founded here at the close of the 6th century. Other monasteries were formed here in the two following centuries; and it was a place of considerable and rising consequence as the resort of religious recluses, including, among other establishments, an abbey, which afterwards attained to high celebrity. The Danes destroyed the town at the close of the 9th century; but monastic wealth and the beneficence of princes soon restored its prosperity, which it enjoyed almost without interruption till the Reformation. The chief monument of Malmesbury's departed greatness is its abbey, the entire buildings of which, with the church, covered about 45 acres. Little beyond mere foundation walls is now left except the church, which appears to have been a magnificent structure, and presents some fine specimens of different eras of architecture, but chiefly of the early English. It was cruciform, with a tower rising at the intersection of the transepts, and another at the W. end, the front of which was exquisitely finished and adorned with sculpture, having also a very fine window filled with painted glass. During the civil wars, however, when Malmesbury was repeatedly besieged, both by the Royalists and Parliamentarians, the church, already partly dismantled, suffered great injury; both its towers were battered down, its cloisters demolished, and now only a fourth part of the building is standing; but the ruins are highly interesting, and the S. porch is one of the finest

Digitized by Google

specimens of its kind in England. In the town are several other remains of ancient monastic and ecclesiastical buildings; and about 1 m. from it is a field called Cams-hills, in which are evident vestiges of a Roman encampment.

Malmesbury claims the honour of having given birth to Aldhelm and Johannes Scotus, William of Malmesbury, second only to the Venerable Bede among the early historians of England. Hobbes, eminent by his metaphysical and political speculations, was a native of Malmesbury, where he first saw the light in 1588.

MALMO, a strongly fortified sea-port town of Sweden, cap. the lan. Malmöhus, on the Sound, nearly opposite Copenhagen, and 110 m. SW. Christianstadt, with which it is connected by railway. Pop. 25,526 in 1863. The town is irregularly-built, but has wide streets and a fine market place. It has a citadel, two churches, two hospitals, manufactures of woollen cloth, stockings, prepared skins, carpets, hats, gloves, tobacco, starch, soap, and looking-glasses, and a brisk trade in corn; its port, however, admits only small vessels.

MALO (ST.), a fortified sea-port town of France, dép. Ille-et-Vilaine, cap. arrond., on the British Channel, 40 m. NNW. Rennes, and 200 m. W. by S. Paris, on a short branch of the railway from Paris to Brest. Pop. 10,886 in 1861. The town is built at the mouth of the Rance, on the peninsula of Aron, connected with the mainland by a causeway. It is defended by strong walls with four bastions, constructed by Vauban, and a castle built by Anne, duchess of Brittany. On its N. side it is inaccessible; but, from the want of outworks, it could not hold out against a regular siege. The town is in many parts well built, and has some excellent houses. Its chief public edifices are a cathedral, bishop's palace, town-hall, theatre, hospital, foundling asylum, communal college, and exchange. The port, on the S. side of the town, is commodious and secure, but is rather difficult of entrance, and dries at low water; though at high water springs it has a depth of above 40 ft. In 1836, the French Chamber passed a resolution for the construction here of a floating dock or basin, but it was not completed in 1860, when, by a decree of the Emperor Napoleon III., the sum of 5,000,000 francs was assigned for the final resumption of the work. There is a good roadstead NW. of the town, and opposite the mouth of the Rance, which is defended by various forts; the principal, La Conchée, being constructed on all but inaccessible rock, a considerable distance off shore. St. Malo is the seat of tribunals of primary jurisdiction and commerce, and a board of artillery, and is the residence of various foreign consuls. It has a hydrographical school of the first class, a chamber of manufactures, a royal tobacco factory, naval rope-walks, and dry docks for the building of vessels of various sizes. It has also manufactures of fishing-nets and hooks, pulleys, and other marine fittings; a considerable trade in provisions with the French colonies, a brisk coasting trade, and numerous vessels employed in the mackerel, cod, and whale fisheries. St. Malo has given birth to several distinguished persons; among whom may be mentioned Admiral Duguay de Tronin, Jacques Cartier, Maupertuis, and La Bourdonnaye.

MALPAS, a market town and par. of England, co. Chester, hund. Broxton, 18 m. NNW. Chester, and 153 m. NW. London. Area of par., 25,140 acres: ditto of township, 2,110 acres. Pop. of township 1,087 in 1861. The town, which stands on an eminence near the S. extremity of Cheshire, and on the E. side of the valley of the Dee, comprises 8 tolerably built and well-paved streets. The living is divided into 2 rectories, in the patronage of the Egerton and Drake families. The church (formerly the chapel to a Chiniac monastery), a structure of unhewn stone, consists of a nave and chancel, without either aisle or steeple; it is highly ornamented, and some of its decorations are supposed to belong to the Saxon era. There are also 2 chapels of ease within the par., and several denominations of dissenters have their respective places of worship. A grammar school was founded here in the 17th century; but the free instruction is limited to 6 boys, appointed by Lord Cholmondeley. Alport's school (founded in 1719) has property yielding an income of 119*l.*, and furnishes good plain instruction to boys, girls, and recently, also, to infants, with clothing for 14 boys. The other charities comprise an almshouse for 6 poor women, with an allowance of bread and money: large sums have been left, at different times, for the relief of the poor. Malpas is an agricultural town, and derives its chief importance from its large market for cheese, and its position in the centre of a great dairy farm district. Markets on Monday: cattle and cheese fairs, April 5, July 25, and Dec. 8.

MALPLAQUET, a small village of France, dép. du Nord, 16 m. NNW. Avesnes. Pop. 240 in 1861. This place is celebrated as the scene of one of the bloodiest and most obstinate conflicts of modern times. On the 11th of September, 1709, the allied army, under the Duke of Marlborough and Prince Eugene, attacked the French army under Marshal Villars in their entrenched camp near Malplaquet. The combat was maintained on both sides with undaunted courage and resolution; but in the end the allies succeeded in forcing the entrenchments. The victory, however, was purchased by the sacrifice of above 20,000 men, killed and wounded. Though vanquished, the loss of the French did not exceed half that number, and they effected their retreat in good order. According to Voltaire (*Siècle de Louis* XIV. cap. 21), who derived his information from Marshal Villars, the army of the allies amounted to 80,000, and that of the French to 70,000, though other accounts represent each army as about 100,000 strong; but, whichever be the more correct statement, there are certainly very few, if any, instances of so great a carnage.

MALTA (an. *Melita*), an island of the Mediterranean Sea belonging to Great Britain, 62 m. SSW. Cape Passaro, in Sicily, and 198 m. N. Tripoli, in Africa; Valetta, its port and cap., being in lat. 35° 54′ 6″ N., long. 14° 31′ 10″ E. Extreme length, 17 m.; do. breadth, 9 m.: area, 95 sq. m. Pop. 134,055 in 1861, of whom 131,647 natives; 1,274 British residents, and 1,134 other foreigners. The island is of an irregular oval shape, rising precipitously from the water's edge on the S. and SW. The surface presents the appearance of an inclined plane, sloping gradually from its highest elevation (about 1,200 ft. in the SW.) to the more level land on the NE. side, where it dips into the ocean. The substratum consists of soft calcareous sandstone only scantily covered with soil, great part of which has been carried thither from other countries, or artificially created by breaking the surface of the soft rock into small fragments, which crumble by exposure to the air, and in the course of two or three years become good soil. It has neither lake nor river; and from its geological formation, and the absorbent nature of the soil, has no marshy or swampy ground, except, indeed, two spots of very limited extent at the head of the Great Harbour and St. Paul's Bay, where the sea has receded and left an

Digitized by Google

accumulation of moist soil, from which noxious exhalations have been supposed to emanate. There is no exuberant vegetation, brushwood, or forest; the verdure is scanty, and the greater part of the surface is an arid rock. The climate of Malta, from its being exposed to the winds blowing from the African and Syrian deserts, is unusually hot, especially during summer, when the heat almost equals that experienced in tropical regions. This heat not only lasts during the day, but, owing to the radiation of the caloric absorbed while the sun is up, it continues, with little abatement, throughout the night; so that, by an excess of heat for months together, a feeling is induced among the inhabitants of extreme lassitude and oppression. The medium temperature of the three coolest months (Dec., Jan., and Feb.) is 57⅓° Fah., the maximum 61⅝°, and the minimum 53⅓°; while the medium of the four hot months (June, July, Aug., and Sept.) is 78°, the maximum 82⅛°, and the minimum 73⅛°. Frequent showers occur in Sept., increasing in frequency during Oct. and Nov.; but from Dec. to Feb. the rain falls with nearly the same violence as in the tropics, and the atmosphere continues surcharged with moisture till March, when the weather begins to clear; and during the five following months scarcely a drop falls, the sky being generally without a cloud. The most prevalent winds in Malta are from the SE., S., and NW.; the first of which, well known as the *sirocco*, is at once the most prevalent (especially in autumn) and the most disagreeable in its effects on the human frame; neither are there any regular land and sea breezes, as in some southern countries, to modify the temperature. The ordinary rate of mortality is sometimes increased by the prevalence of epidemics, and by plague and cholera, the former of which, in 1813, cut off 4,500 of the inhabitants, being 80 per cent. of those attacked.

Cultivation in Malta is pursued with equal diligence and success. In former times the entire surface was but one mass of barren rock; but continued industry has not only rendered a large part of it capable of tillage, but given it fertility. The rock having first been levelled in terraces, the small particles were pulverised and mixed with soil, while the larger masses were employed in erecting walls to sustain these artificial beds. Soil was also at first brought from Gozzo, and even Sicily; but after a time this was found unnecessary. Owing to this laborious perseverance, Malta is now, on the whole, a fertile island, the cultivated parts yielding annual and often double crops without a fallow, and frequently 80 or 90 fold. Wheat and cotton are the principal products both of Malta and the neighbouring island of Gozzo. The various crops under tillage in Malta alone, in each of the years 1860–62, were as follows:—

Crops	1860	1861	1862
	Acres	Acres	Acres
Wheat	7,904	9,872	8,582
Meschiato . . .	4,014	5,147	5,528
Barley	3,908	3,618	2,396
Beans and other Pulse .	3,061	3,497	2,728
Forage	5,073	5,174	4,761
Cotton	4,447	3,688	7,502
Garden	3,992	6,301	3,345
Sesamum . . .	332	231	228
Cumin Seed . . .	930	1,440	1,485
Pasture	1,346	3,216	1,269
Total Number of Acres in Crop . .	35,007	42,184	37,824
Number of Acres of Uncultivated Land .	8,619	8,043	7,897

The inland of Gozzo is still more highly cultivated than Malta. The total number of acres under crop, in 1862, amounted to 9,547, while of uncultivated land there were only 741 acres. Rather more than one-fourth of the cultivated land in Gozzo is under cotton. Both here and in Malta, cotton is sown in May, and gathered before sunrise in Oct., the chief vent for it being in the ports of Trieste, Leghorn, Genoa, and Marseilles. The corn crops suffice for the supply of the inhab. with bread during four or five months a year: the remainder is imported from Sicily and the Black Sea. The grass of the island, called *sulla*, is similar to saintfoin, and some, though small, crops are raised of cummin and aniseed. The vine has been cultivated with some care; but its produce is very inferior, and wine, as well as oil, is imported from Sicily. Figs and oranges are very abundant, and of superb flavour. The Maltese oranges are considered the finest in the world. The season continues upwards of seven months, from Nov. till the middle of June, during which time the trees are covered with an abundance of delicious fruit. Many of them are of the red kind, and these are certainly the best. They are produced from the common orange bud engrafted on the pomegranate stock, and the juice of the fruit is red as blood. Some good springs of fresh water are made available for the purposes of tillage; and numerous large cisterns and aqueducts are constructed for the purposes of irrigation. Still, however, Malta imports the principal necessaries of life. Sicily and Odessa supply her with corn, oil comes from the ports of Italy, and wine from Naples and Sicily; from which latter, also, snow and ice are brought,—no trifling luxuries in an arid climate like that of Malta. Horses and oxen come chiefly from Barbary, but also from Greece and Albania.

Port and Trade.—The central position, excellent port, and great strength of Malta, make it an admirable naval station for the repair and accommodation of the men-of-war and merchant ships frequenting the Mediterranean, and render its possession of material importance to Great Britain. It is also of considerable consequence, particularly during war, as a commercial *dépôt*, where goods may be safely warehoused, and from which they may be sent, when opportunity offers, to any of the ports belonging to the surrounding countries. Malta likewise presents unusual facilities for becoming the *entrepôt* of the corn trade of the Mediterranean and Black Seas. Her *caricatori* for corn are, like those of Sicily and Barbary, excavated in the rock, and are, perhaps, the best fitted of any in Europe for the safe keeping of grain. The harbour of Valetta, which lies on the NE. side of the island, is divided into two sections by a promontory or tongue of land on which stands the cap., defended by the castle of St. Elmo. The SE. side, called the Grand Port, is the most frequented, having an entrance about 250 fathoms in width, with an average depth of 10 or 12 fathoms: it runs inwards about 1¾ m., has deep water and excellent anchorage throughout, the largest men-of-war coming close up to the quays. NW. Fort St. Elmo is Port Marsamusceit, which is also a noble harbour, used exclusively by ships performing quarantine: near its centre is an island on which are built a castle and lazaretto. The custom-house and storehouses are in the Grand Port, and furnish every facility for landing and warehousing goods. There is an excellent dockyard, victualling office, and hospital for the use of the navy.

The subjoined table shows the quantities and value of the total exports of Malta in the year 1862:—

Digitized by Google

Exports		Quantities	Value
Grain:			£
Wheat	salme	1,308,057	2,485,309
Indian Corn	„	91,549	105,281
Barley	„	179,918	161,926
Manufactured	cantara	19,525	27,288
Oil	caffisi	45,481	38,659
Pulse	salme	68,930	89,609
Spirits	barili	10,371	18,667
Wine (Inferior)	„	18,934	16,094
Total		..	2,990,558

The total value of the imports, in 1862, amounted to 3,697,574*l.* The exports, in 1863, were of the value of 2,420,181*l.*, and the imports of 3,087,593*l.*

The vessels of the island, which rank among the best in the Mediterranean, are built with oak timber from Dalmatia: the Maltese are diligent, expert shipwrights; and their wages being moderate, Valetta is a favourable place for careening. Owing, however, to the want of a dry dock, all ships, above the size of a sloop-of-war, requiring to have their bottoms examined, are obliged to come to England for that purpose. The articles of export are shown in the preceding table. The imports comprise manufactured goods (chiefly from Great Britain), colonial produce, wheat from Sicily and the Black Sea, wine and spirits, tobacco, and salt-fish, with numerous minor articles.

Malta has, within the last thirty years, become the centre of a very extensive steam-packet system, the steamers from and to England, the Ionian Islands, and Alexandria, touching here. The French steamers between Marseilles, Alexandria, and other parts of the Levant, usually perform quarantine at Malta. The industry of the island comprises the manufacture of cotton fabrics, the annual value of which may amount to from 70,000*l.* to 90,000*l.* Cabinet work is made for exportation to Greece and the Ionian Islands; soap, leather, macaroni, and iron bedsteads are made on a smaller scale; and the Maltese goldsmiths are remarkable for the elegance of their gold filagree-work, the exports of which are valued at about 7,000*l.* a year. The currency of Malta consists partly of British silver and copper, introduced in 1825, but partly also of Maltese scudi of the value of 1*s.* 8*d.* English, of Spanish dollars valued at 4*s.* 4*d.*, and of Sicilian dollars at 4*s.* 2*d.* each. The weights most in use are the *rottolo* or pound = 12,216 English grains, and the *cantaro*, comprising 100 rottoli or 147½ lbs. avoird. Corn is measured by the *salma* = 8·221 Winchester bushels, and oil is sold by the *cafiso*, which contains 5½ English gallons. Bills on London are usually drawn at 30 and 60 days' sight; and the deputy commissary-general must, at all times, grant bills on the treasury of Great Britain for British silver tendered to him, at the rate of the 100*l.* bill for every 101*l.* 10*s.* silver, receiving the silver of other countries at a fluctuating rate of exchange. Any person may establish himself as a merchant, and numerous Englishmen, Frenchmen, and Sicilians carry on an extensive commerce; while among the native traders, perhaps the wealthiest of all are those who speculate in articles of consumption for the island, buying a great variety of goods, in small quantities, for ready money, and realising large returns by retail as well as wholesale trade.

Government.—The government is administered by a governor, who is assisted by a council of government, constituted by letters patent of 11th May, 1849, consisting of 18 members—10 official and 8 elected, who are returned by about 3,300 electors. The governor is president. An income of 8*l.* from immovable property, or fragments of a rent of 41*l.* per annum qualifies a person to vote. The principal administrative departments are the chief secretary's office, quarantine department, custom-house, land-revenue department, and audit office. There are numerous courts of justice, in all of which the procedure is both intricate and expensive; besides which, the laws themselves are frequently contradictory, and generally require revision. The public revenue and expenditure were as follows in each of the eight years 1856 to 1863:—

Years	Revenue	Expenditure
	£	£
1856	144,795	129,776
1857	132,682	134,443
1858	142,383	129,781
1859	147,385	147,730
1860	145,944	148,303
1861	144,234	172,523
1862	153,806	148,672
1863	157,831	163,073

The chief sources of revenue are rents of government property, customs and quarantine dues, and internal taxes; and the expenditure comprises not only the salaries of the various government officers, but the expenses attending the maintenance of the public roads, as well as liberal contributions for the support of schools and public charities. The military force of Malta consists almost entirely of British troops, varying between 2,000 and 2,500 men. There is also an engineer and artillery corps, the entire maintenance of which, as well as of the army generally, falls on England. There is likewise a native regiment, comprising about 500 men, called the Malta Fencibles; but their duties being exclusively local, and rather of a civil than military nature, the maintenance of this body is defrayed out of the revenues of the island.

Religion and Education.—The national religion of the Maltese (secured by the English government) is Roman Catholic, to which the people are strongly attached, scrupulously observing its rites, and celebrating its festivals; but, notwithstanding their sincere adherence to the church of Rome, they entertain little or no jealousy of the Protestants: both parties observe the greatest moderation and deference for the religious opinions of each other. There are in all no fewer than 1,000 Rom. Cath. clergymen, the church property producing about one-fourth part the rental of the island. The Protestant places of worship comprise the governor's chapel, naval chapel, church missionary chapel, and Wesleyan mission chapel; besides which there is a church at Valetta, for the exclusive use of the English garrison. The total number of Protestants does not, however, exceed 5,000. Education till recently has been much neglected; but within the last thirty or forty years several new schools have been established, the principal being the Normal free schools at Valetta, Senglea, Notabile, in Malta, and Rabato in Gozzo. Other primary schools are scattered through the villages, and there are about 80 private schools. The university of Valetta, founded in 1771 by the grand master, Pinto, and now occupying the convent of the suppressed Jesuits, is supported by the government at an expense of between 1,000*l.* and 1,200*l.* a year. The bishop has an ecclesiastical seminary at Notabile, giving religious instruction to about 50 boys. Instruction is commonly conveyed in these schools in the Italian language, the mother-tongue of the Maltese (a *patois* of Arabic, mixed with a little Ita-

Digitized by Google

lian), being wholly unwritten, and never applied to the purposes of literature. English is spoken by many of the higher classes, and is making considerable progress even among the lower orders in the cities. In the rural districts, however, Maltese is spoken almost without exception.

Manners of the People.—The Maltese are as dark as the natives of Barbary, but without the Arab features, the men being of middle height but erect stature, robust and active: while the women, though small, and of dark complexions, are graceful, with regular and sometimes handsome features. The working classes are described as laborious and frugal, living on very slender fare, the great bulk of them being employed either in agricultural labour, or quarrying and cutting stone for exportation to Constantinople and Alexandria. The Maltese are celebrated all over the Mediterranean for their good and intrepid seamanship. The dress of the higher orders is similar to that of other Europeans; but, among the inferior or working classes, the dress of the men is a short loose waistcoat, covering a cotton shirt; short loose trowsers leave the leg bare from the knee; and on the feet are worn *korchs*, a kind of sandals, nearly resembling those of the ancient Romans. The women wear short cotton shifts, blue striped petticoats, corsets with sleeves, and a loose jacket covering the whole. A black veil, called the *faldetta*, is the out-of-doors head-dress of the women; whereas the men wear woollen caps in winter and straw hats during summer. The morals of all classes are much higher than in most parts of S. Europe; and if there be less refinement of manners in the Maltese than among their continental neighbours, there is less vindictiveness and intrigue, while drunkenness and gambling are almost unknown. A few of the aristocratic families, ennobled by the knights of Malta, yet remain; but they form a very small portion of the population, and few of them possess large property.

Cities and Towns.—The principal towns are Valetta, built in 1566, by the famous grand master, John de Valetta, as being more conveniently situated for a cap. than the old inland city called Citta Vecchia, the former cap. of the island, and identical with the ancient Melita. Valetta, on the NE. coast, in the centre of a fine double harbour, in lat. 35° 54′ 6″ N., long. 14° 31′ 10″, has a pop. incl. the garrison and its suburb, Vittoriosa (on the SE. side of the great harbour), of about 60,000. It is very strongly fortified, and from its position on a hill, as well as the almost impregnable works and trenches that surround it, has a most imposing appearance; nor is the visitor less struck with its internal beauty. The streets, though generally steep, are wide and well paved with lava, while the public squares and quays along the harbour are of noble proportions, indicative of the former wealth of the knights of Malta. The governor's palace and gardens, lying outside the walls, were formerly occupied by the grand-master: a public library (once belonging to the order) contains upwards of 40,000 vols.; and the general hospital is not only used for the reception of sick troops, but has ample room for stores and other purposes: the Floriana Hospital is also a large building, occupying two sides of a quadrangle; and in the suburb of Vittoriosa is a third military hospital. Other hospitals are open for the relief of the native sick, and among the other public buildings may be mentioned the barracks, prison, theatre, university, collegiate church of St. John, and nineteen other churches, including those in the suburbs. Valetta has a bustling animated appearance, from its being the great centre of the industry and commerce of Malta. Citta Vecchia stands on very high ground, overlooking nearly the whole island, about 7 m. W. of Valetta. The rock on which it is built is excavated into large catacombs, some of which are said to extend 15 m. underground. This old and decayed city is strongly fortified, and the cathedral is an extremely large and lofty structure: underneath is a grotto in which, as the monks inform us, St. Paul concealed himself for some time after his shipwreck. They have equally authentic legends respecting other localities close to the city. The so-called towns are mere villages, besides which there are about forty hamlets, chiefly remarkable for their picturesque and well-built churches. The roads, generally speaking, are good, many of them having been recently much improved; but the inland transport is, notwithstanding, chiefly by horses, mules, and asses.

Neighbouring Islands.—About 4½ m. W. of Malta is the small island of Gozzo. It produces considerable quantities of cotton, the cultivation of which constitutes the chief occupation of the islanders, who differ in no essential respect from the Maltese. An English garrison is stationed at Chambray, a strong fort elevated about 500 ft. above the sea, and there are other military works well adapted for the defence of the island. Between Gozzo and Malta is another, though very small island, called Cumino, which belongs to a single proprietor, who derives from it the title of a prince palatine.

History.—Malta was probably first discovered by the Phœnicians, who communicated to the Greeks its oldest known appellation of 'Ωγύγια. From the Phœnicians it passed to the Carthaginians, from whom it was taken by the Romans in the first Punic war, and made a prefecture subject to the prætor of Sicily. St. Paul, during his voyage from Palestine to Rome, was wrecked here; and, being kindly received by the people, performed some miraculous cures, which made him be 'honoured with many honours, and, when he departed, laden with such things as were necessary.' (Acts xxvii. 39–44, xxviii. 1–10.) On the decline of the Roman empire, Malta fell under the dominion of the Goths, and afterwards of the Saracens. It was subject to the crown of Sicily from 1190 till 1525, when the emperor Charles V. conferred it on the knights hospitallers of St. John of Jerusalem, who had a short while previously been expelled from Rhodes, giving them power to levy taxes, import duties, &c., for the maintenance of the order, on condition that they should wage perpetual war against the Turks and Corsairs. It was besieged by a powerful Turkish armament for 4 months, in 1565, but without success; the knights, under their heroic grand master, John de Valette, founder of the city called by his name, having succeeded in repelling all their attacks, and compelling them in the end to retreat with vast loss. During more than 150 years, the island maintained itself against the Ottoman power; but the order was never sufficiently wealthy to attempt foreign conquests, or equip numerous fleets. At length, however, the inexpediency of the continuance of the piratical contests, in which the knights had been so long engaged, became obvious; and, in 1724, they concluded a truce with the Turks, which secured for the Maltese in Turkey the same privileges as the French. The subsequent history of Malta till its surrender to the French has little worthy of notice. In 1798, a French fleet of 18 ships of the line, with 18 frigates and 400 transports, arrived off Valetta, having Napoleon on board; and the

Digitized by Google

treachery of the French knights, who desired to be the subjects of France rather than Russia, rendered the capture of the island, with its cap., no very tedious or difficult task; and accordingly, after some fighting, the island capitulated 12th July, 1798, one month after the arrival of the fleet, when the Order of Malta was virtually extinguished. In consequence of the irreligious practices and oppressions of the French, the Maltese rose *en masse* to expel them; and compelled them to take refuge in the towns, where they were closely blockaded for upwards of two years. At length, the French, being reduced to extremities, surrendered on the 5th September, 1800. The English immediately took military possession of Valetta, and have since retained it; the treaty of Paris, in 1814, having definitively annexed it to the crown of Great Britain.

MALTON (NEW), a parl. bor., market town, and par. of England, N. riding, co. York, wap. Ryedale, on the Derwent, 16 m. NE. York, 181 m. N. by W. London, by road, and 218 m. by North Eastern railway. Pop. of bor. 8,072 in 1861. Area of parl. bor., which comprises the pars. of St. Leonard and St. Michael in New Malton, with the pars. of Old Malton and Norton, 6,640 acres. The town, which occupies an eminence on the W. bank of the river, is very irregularly laid out; but the buildings, chiefly of stone, are improving in quality: on the opposite side of the Derwent, crossed here by an ancient bridge, shaped somewhat like an inverted Y, is the suburb of Norton in the E. Riding, a thriving and increasing place; and about 1 m. NE. of the town is the village of Old Malton, formerly of some consequence, but now exhibiting all the symptoms of decay. The town-hall, corn exchange, theatre, and workhouse, are handsome modern buildings; and near the bridge stand the remains of a castle, built by the Vesci family, and destroyed by Henry II. There are two churches, one of which is surmounted by a tall unfinished spire: the livings are curacies, dependent on Old Malton, and in the gift of Earl Fitzwilliam. The Wesleyan Methodists, Presbyterians, and the Society of Friends have their respective places of worship; and there are several well attended Sunday schools. New Malton has subscription schools for children of both sexes; but the grammar-school, founded by Archbishop Holgate, is at Old Malton. The Derwent being navigable up to New Malton bridge, is made available for the shipment of large quantities of corn, hams, bacon, and other farm produce. Malting and tanning are carried on to a considerable extent, and there are two large porter breweries; but the chief dependence of the town is on its retail trade with the opulent gentry of the neighbourhood.

New Malton is a bor. by prescription, governed by a bailiff. It has returned 2 mems. to the H. of C. since the 23rd Edward I. Previously to the Reform Act, the franchise was vested in the burgage holders and inhabs. rated to church and poor. The limits of the bor. were enlarged by the Boundary Act so as to include the entire pars. of New Malton, and the pars. of Old Malton and Norton. Registered electors, 605 in 1865. New Malton is also one of the polling places at elections for the N. Riding; and the petty sessions are held here for the E. div. of wap. Ryedale. Markets on Tuesday and Saturday, but chiefly on the latter for horses and cattle, corn, bacon, and farming implements. Very large cattle fairs, Monday before Easter, day before Whitsunday, and Oct. 11.

MALVERN, GREAT, a town, par., and celebrated watering-place of England, co. Worcester, hund. Pershore, 7½ m. SSW. Worcester, and 104 m. WNW. London. Area of par. 5,020 acres. Pop. of town, 4,484 in 1861. The town, which for many years has been a place of fashionable resort, in consequence of its delightful situation in

> 'The vale of Severn, Nature's garden wide,
> By the blue steeps of distant Malvern wall'd,
> Solemnly vast' . . . . Dyer's Fleece.

stands on the E. declivity of the well-known hills bearing its name, and is neat and well built, comprising, besides good houses for the trades-people, several splendid hotels and substantial private residences for visitors. The church, a fine cruciform structure of Anglo-Norman and pointed architecture, is 171 ft. in length, with an embattled and pinnacled tower rising 124 ft. above the intersection of the nave and transepts. It formerly belonged to a Benedictine monastery, founded here in 1083, and long one of the wealthiest and most important religious establishments in England. At the dissolution of the monasteries, when the rest of the property was sold, the church was bought by the inhabitants and made parochial. Malvern has long been noted for two medicinal springs, the chief of which (St. Anne's well) is bituminous, and enjoys a good reputation for the cure of nervous and cutaneous diseases: the other is a simple chalybeate, and little frequented.

About 3 m. S. is the village of Little Malvern, the road to which skirts the Malvern Hills, an extensive range composed of greenstone and quartz covered in parts with blue limestone, and running from N. to S. about 10 m., with an average breadth of 3 m. The acclivities in many parts are very gentle; but the summit of the ridge, which attains a height of 1,444 ft., commands magnificent views over Wales and the cos. of Hereford, Worcester, and Gloucester.

MALWAH, a prov. of Hindostan, chiefly between lat. 22° and 26° N., and long. 74° and 80° E., having N. Rajpootana and Agra, W. Gujrat, E. Allahabad, and S. Gundwanah and Candeish, from which it is separated by the Nerbuddah. The central part of this prov. is a table-land, extending from the Vindhyan mountains on the S. to the Chittore and Mokundra ranges on the N., and E. and W. from Bhopaul to Dohud; but which seldom rises to more than 2,000 ft. above the sea. It declines gently towards the N., in which direction flow most of the principal rivers, as the Chumbul, and its chief affluents, the Kali-Sind and Betwah, tributaries of the Jumna, and the Mhye, which falls into the Gulf of Cambay. The climate is usually mild and salubrious, except for about two months after the rains, when fevers are very prevalent. The total fall of rain from June to September has been estimated at 50 inches. The soil consists either of a loose black loam, or a more compact ferruginous mould, both noted for their fertility. Wheat, grain, pease, jowaree, bajree, mung, and maize are among the chief grains cultivated; the first two furnishing the largest export. Rice is raised only in small quantities sufficient for home consumption; but opium, sugar, tobacco, cotton, linseed, garlic, turmeric, and ginger are grown to a considerable extent. A little indigo, and the root of the *Morinda citrifolia*, which supplies a red dye, are also raised, and fruits, including grapes, flourish in great abundance.

Opium is by far the most valuable product of Malwah, the soil and climate of which appears singularly well adapted for the cultivation of the poppy. The Malwah opium is considered by the Chinese, for whose consumption it is chiefly grown,

Digitized by Google

superior in strength, in the proportion of 7 to 5, to that of Bahar and Benares, though inferior in flavour. In Malwah the culture of opium is freely carried on; the cultivator paying a proportionally heavy land-tax for the land occupied in its culture. Previously to 1830, the Bombay government endeavoured to obtain a monopoly of the sale of opium exported from the ports under that presidency, but with little success; for 2-3rds of the Malwah produce were carried to the Portuguese settlement of Damann and elsewhere, to be exported. But, at the above period, the attempted monopoly was abandoned, and a permit, or transit-duty, similar to that imposed in other states through which the opium passes, was laid on in its stead. Since then 9-10ths of the Malwah opium have been shipped at Bombay. The tobacco of the prov., especially that of the Bilsah district, is also, beyond all comparison, the best in Hindostan.

Malwah is the chief seat of the Bheel race, as it was of the Pindarry and Mahratta powers. It is almost wholly divided among the dominions of native princes, the chief of whom are Scindia, Holkar, and the rajahs of Bhopaul and Kotah. Except the Maharajah of the Punjab, Scindia is the only prince in Hindostan who can be called independent of British authority; but his independence has more of semblance than reality, for the power of his dynasty has been completely broken by a succession of reverses: his dominions are surrounded by the territory of the British, or their allies, who are bound to negotiate with foreign states only through the intervention of the British. The chief cities belonging to Scindia are, Gwalior, his modern, and Oojein, his ancient cap.

MAMERS, a town of France, dép. Sarthe, cap. arrond., 24 m. NNE. Le Mans. Pop. 5,839 in 1861. The town is indifferently built, but has of late been greatly improved. It is a town of great antiquity, and was surrounded with entrenchments by the Normans, some remains of which are called the 'fossés du Robert le Diable.' It has a handsome Gothic parish church, a college, a prison, some public baths, a theatre, manufactures of hempen, cotton, and woollen fabrics, and several tanneries and breweries.

MAN, ISLE OF (an. *Mona*, *Monapia*, or *Monæda*), an island belonging to the United Kingdom, in the Irish Sea; between lat. 54° 4′ and 54° 27′ N., and long. 4° 17′ and 4° 34′ W.; its NE. extremity (the Point of Ayre), being 17 m. from Burrow-head, in Wigtownshire, its E. coast 34 m. from St. Bee's Head, in Cumberland, and the town of Peel, on its W. side, 30 m. from Ballyquintin Point, in Ireland: greatest length, 35 m.; greatest breadth, about 13 m. Area, 280 sq. m., exclusive of the Calf-of-Man, a small disjointed fragment of the island, at its S. extremity. Pop. 52,469 in 1861. Its general aspect, as viewed from the sea, is bold and precipitous; a ridge of mountains runs through its whole length, and three of the highest points reach an elevation of more than 1,600 ft. above the sea; Snafield, the loftiest, being 2,004 ft. high. Several rills and streams flow from the high ground in different directions; but there are no rivers nor lakes of any considerable size. The prevailing feature in the geology of the island is clay-slate, interspersed with mica-slate; and covered, near the coast, with grauwacké and old red sandstone. Limestone also is found on the S. side, near Castleton, intersected in some parts by veins of trap. The clay-slate is quarried at a place called Spanish-head, near Castleton; and stones are raised in blocks averaging about 7 ft. in length by 1 ft. in breadth, and 6 inches in thickness. Drawing and roofing slates are quarried on the W. side of the island, not far from Peel. Close to Castleton, on the shore, are limestone and marble quarries, which have been worked for many years, and furnished a part of the stone for St. Paul's Cathedral, London. The island also produces lead, zinc, and copper. But mining and quarrying are in a very depressed state; the tools employed are of the rudest description; and, until recently, not even a common crane was to be seen in the quarries.

The climate of Man is considered milder during winter than that of the adjacent parts of Great Britain and Ireland. Frost and snow are rare; and, when they do occur, they are seldom of long continuance. Owing, however, to the frequency of fogs and dews, as well as to the prevalence of E. winds, during many weeks of spring, the summers are deficient in heat, and the harvest is generally rather late. The climate however is, on the whole, favourable to health: cases of longevity are frequent, epidemics rare, and agues unknown. The soil is extremely various. Clay and marl, covered with white sand, predominate in the N. and NW. extremity of the island, which is covered with scanty herbage, affording sheep pasture; but, proceeding S. and E., the quality of the soil improves, and, in the valleys especially, are some tracts, partly sand and loam, and partly stiff clay. No part of Man is, however, very productive; nor are any great pains taken to improve its natural resources. The mountains, commons, and other waste lands include about 54,000 acres, leaving above 100,000 acres for tillage. Agriculture has considerably improved since the diminution of the herring fishery has made the men turn their attention to farming, which used to be exclusively the occupation of women: wheat, barley, and potatoes are raised in sufficient quantities for exportation, and within the last few years the turnip husbandry has been introduced with some success by the English and Scotch settlers. The implements, however, are very rude; and the division of land into small farms has combined with the herring fisheries and smuggling to retard improvement. Peas are cultivated in the N. parts, clover is a favourite crop, and flax is raised by almost all the farmers for domestic use. The cattle of Man, which at present consist of a mixture of Irish and British breeds, are small and short-horned, running to fat, and not yielding milk till they are six years old. Ayrshire cows have, however, been introduced with much advantage. The native sheep, which are small, hardy, and usually of a white or grey colour, are slow feeders, long in coming to maturity, and very coarse-woolled: they are now, however, confined to the hills, the lowlands being mostly stocked with improved breeds. The island yields a race of hardy ponies, capable of much labour, and requiring little food; but for draught and farming purposes other breeds, chiefly Irish, have been imported of larger size and strength. Man had formerly a peculiar breed of hogs, now totally extinct, the animals at the present day being of various kinds, some of which resemble the Chinese variety. Red-deer formerly ranged in the mountains; but the game at present consists of hares, rabbits, partridges, snipes, and woodcocks. Foxes and polecats are not found, neither are there any poisonous animals on the island; but weasels and rats are very numerous, and detrimental to the farmers.

The Manks tenures are remarkable: the different pars. are divided into *treens*, each comprising 4 quarterlands, varying in size from 60 to 150 acres, and rising in yearly value from 10*l.* to 125*l.*: there are 760 quarterlands, and they are esteemed

by the islanders as property of the highest nature, in fact strictly entailed estates. Other lands, called *intacks* and cottages, are devisable by will, and on the whole considered to be of a far inferior nature. The yeomen are very proud of these little freeholds, which range from 10 to 200 acres, and usually comprise portions of pasture as well as arable land; 'but there can be no doubt,' says Lord Teignmouth, 'that the system is practically vicious, diminishing the wealth both of the farmers themselves and of the public at large, containing indeed within itself the seeds of its own dissolution.' (Sketches of Scotland and the Isle of Man, vol. ii. p. 202.) Most of the yeomen have large and expensive families, which the law of Man compels them not only to rear and educate, but to provide for; and hence their estates soon become encumbered, and they are effectually prevented from pursuing any improved system of management, even if they felt inclined to its adoption, which is seldom the case; there being no more obstinate adherents to routine and ancient practices than the Manx husbandmen. Many of them thus become involved in debt, and mortgage their property, the redemption of which being seldom in their power, they are dispossessed of it, and compelled to leave the island, or to resort to trade or predial labour. Hence the class of small proprietors is gradually disappearing: numbers of them having been swallowed up in the extending estates of the Scotch and English residents.

Man used to be one of the principal seats of the herring-fishery; but for several years past it has been comparatively deserted by the herring-shoals, and the fishery has, in consequence, become quite inconsiderable, though even now it is the frequent practice of the farmers to purchase a boat, and share in the excitement and profit of the season. This diminution, however, is not to be regretted, as the fishery was carried on from July to October, exactly when the services of the yeomen and others engaged in it, were most necessary at home. Being also a kind of lottery, in which, by a few weeks' labour, large sums were occasionally realised, it attracted crowds of adventurers, without either capital or skill; while the irregular life led during these pursuits tended to encourage intemperance, and was a main cause of the indolence for which the Manx have been long notorious. There has, in fact, been a material improvement in the habits and industry of the people since the decline of the fishery; and there are, perhaps, few things less to be desired for the island than its revival. The herrings appear off the coast of Man in June, remaining till September, when they seek the E. coast of Ireland to deposit their spawn. The fishing vessels now built are much larger than formerly; they are half-decked, with very short keels, and are good sea-boats, though apt to pitch to a dangerous extent in rough weather: they vary from 18 to 30 tons burthen, and are manned by 8 or 10, and sometimes 12 men. Cornish, Welsh, and Irish fishers also visit Man. The cod-fishery has been neglected, owing to the want of adequate capital for the supply of proper vessels and lines.

The manufactures are chiefly domestic, and carried on by women, most of whom, when not in the field or farmyard, are employed at their looms or spinning-wheels, producing woollen, linen, and cotton cloths, both for the home and foreign supply, as well as nets for the use of the fisheries. Bleaching is conducted on a large scale in Laxey Glen, stuffs being sent thither from all parts of the island. A woollen manufactory is established at Douglas; and hats, made of coarse wool, which cost about 2s., are said to wear extremely well. The exports consist principally of corn, potatoes, eggs, lime, and limestone, lead and copper ore, herrings, linen, sail-cloth, and paper. On the 1st of January, 1864, there belonged to the island 278 sailing vessels under 50, and 49 above 50 tons, the former of a total burthen of 6,817 and the latter of 4,161 tons. There were, besides, 3 steamers, of 839 tons burthen.

The condition of the labouring pop. is moderately prosperous. There is no legal provision for the poor, who have to depend wholly on voluntary charity. Generally speaking, the cottages are of a very inferior description: they are frequently built of earth or sod, and thatched with straw, having a funnel of sail-cloth, as a substitute for a chimney. There are, however, a few improved cottages, and their number will, no doubt, increase with the spread of improvement.

The feudal sovereignty of Man, which was a *kingdom* prior to 1504, was held by the Stanleys, afterwards earls of Derby, and their successors, the dukes of Atholl, from 1426 to 1765, when parliament, conscious of the injury which the revenue and the public generally received from the contiguity of an island only feudally subject to the crown, and hence affording refuge to debtors, outlaws, and smugglers, purchased from the duke of Atholl for 70,000*l.*, his civil and military rights and patronage, but with certain reservations as to fiscal matters and titular dignity. A further arrangement was made in 1826, and Great Britain now enjoys all the rights and privileges of sovereign of the island. The constitution, however, was left untouched; and for many years the legislative power has been vested in the House of Keys, a body comprising 24 members, now self-elected, but formerly chosen by the statesmen or owners of entailed estates. Their acts are binding in all cases, and the laws are so few and brief as to admit of being included in a small volume. Attorneys occasionally plead in the courts; but the suitors quite as frequently defend their causes in person: law is cheap, and, as was to be expected, litigation is very common. There are two supreme judges in the island called *deemsters*, or 'awarders of the law,' officers of high antiquity, and exercising jurisdiction over all civil and criminal cases; being the presidents (under the crown and governor) of the two courts of chancery and exchequer, each of which is held eight times a year. The former of these has little more to do than to confirm or annul the decisions of the deemsters, who hold a primary court of judicature; and the exclusive business of the latter is to punish offences against the revenue laws. The common-law courts are held at different places for the 6 different *sheadings* into which the island is divided, and may be considered as courts of 'common pleas,' in which all actions, personal or real, may be tried, as in the deemsters' court, by a jury of 6 in real, or of 4 in personal actions. The appeals from this court are first to the House of Keys, afterwards to the governor, and finally to the Queen's Privy Council. A half-yearly gaol-delivery is made compulsory, and bailiffs act in the five chief towns to hear and determine cases of debt under 40s.

The established religion is that of the Church of England; all sects, however, enjoy full toleration. The clergy are under the bishop of Sodor and Man, suffragan to the archbishop of York, but holding no English barony, and hence having no voice in the legislature, though privileged to sit in the House of Lords. This see has been held by several highly celebrated divines; and, among others, by Barrow, Wilson, and Ward. An ecclesiastical court is held twice a year, either by the bishop or his vicars-general, and an archdeacon regulates

the fabrics and minor concerns of the 17 parishes. These cures are commonly well attended to by respectable clergymen, but their stipends do not average 90*l.* a year; and the churches, though externally pretty, are deficient in accommodation. The dissenters have made considerable progress in the present century; but the Methodists comprise even now only one-eighth of the pop., and the other bodies of dissenters are unimportant. Bishop Wilson and other prelates have done much to promote education, not only by establishing schools, but also by translating the Scriptures and other books into the Manx language. Each parish has its school more or less richly endowed; and while elementary instruction is given in the Manx, every endeavour is made to instruct the natives in the English language. Indeed there can be no doubt that, at no distant period, the pop. will be familiarly acquainted with the English language, which will be the surest method to disabuse them of the prejudices which so many entertain against a union with England.
