Challenges

Challenges in Wikidata

Accessibility

Accessibility ranges from many different aspects. One of the most prominent here is the lack of localization of Wikidata elements and contents, in languages spoken in Indonesia.

Guides

The community is asking for more guides that can be used by them: video tutorials, presentations, and tutorials inside Wikidata.

Communication

There are many inputs from the community, but they are hesitant to say it. Although they know that the project itself is done by crowdsourcing, but they didn't realize that the changes in the software can also be done.

Monitoring

As a chapter, throughout the years, we used to mainly focus on creating more events in order to gain contributors. It is also very important to step back, analyze, and evaluate the approaches that have been used in nurturing the community.
