

United States Department of Agriculture.

OFFICE OF THE SECRETARY.—Circular No. 35.

THE ADULTERATION AND MISBRANDING OF THE SEEDS OF ALFALFA, RED CLOVER, KENTUCKY BLUEGRASS, ORCHARD GRASS, AND REDTOP.

During the calendar year 1910 seeds of orchard grass, Kentucky bluegrass, and redbtop were secured in the open market in accordance with the following paragraph in the act of Congress making appropriations for the Department of Agriculture:

Where such samples [seeds of grasses, clover, or alfalfa secured in the open market] are found to be adulterated or misbranded, the results of the tests shall be published, together with the names of the persons by whom the seeds were offered for sale.

In carrying out the provisions of this act, 1,214 samples of seed were secured and analyzed under the direction of Mr. Edgar Brown, Botanist in Charge of the Seed Laboratory, and publication is here made of 204 samples found to be adulterated or misbranded, together with the names of the seedsmen by whom they were offered for sale.

ALFALFA AND RED CLOVER.

As none of the samples of alfalfa and red clover seed collected during the calendar year 1909 were found to be adulterated or misbranded, these seeds were not collected during the calendar year 1910.

ORCHARD GRASS.

Of the 317 samples obtained as orchard grass seed, 12 were found to be adulterated with seed of meadow fescue or rye-grass, as compared with 55 found in the calendar year 1909.

TABLE I.—Results of tests of samples of seed obtained in the open market as orchard grass seed and found to be adulterated or misbranded.

KENTUCKY BLUEGRASS.

Of 371 samples of seed obtained as Kentucky bluegrass, 16 were found to be wholly or in part seed of Canada bluegrass. This is practically the same number of adulterated and misbranded samples that was found in the calendar year 1909.

¹⁰ Timothy, 8.75 per cent.

¹¹ Redtop or bent-grass, 17.22 per cent.

¹² Redtop or bent-grass, 20.33 per cent.

REDTOP.

Redtop seed was collected for the first time in 1910. Of the 526 samples secured, 176 were found to contain timothy seed. It is recognized that timothy and redtop grow together and that the two seeds are frequently harvested together in varying proportions. Seed buyers when working in the redtop-seed-producing region carry simple apparatus and determine the approximate purity of the seed (including the presence of timothy) before buying. Thus not only the presence but the quantity of timothy seed in redtop seed is known at the time redtop seed comes into the trade. In the samples reported on in Table III no mention was made by the dealer that any other seed was present.

TABLE III.—Results of tests of samples of seed obtained in the open market as redtop seed and found to be adulterated or misbranded.

While the adulteration of red clover and alfalfa seed has apparently ceased and the adulteration or misbranding of orchard grass and Kentucky bluegrass seed has been reduced until it is practically negligible, it is evident that seed merchants are not using the same care in the labeling and selling of redtop seed, which is now being reported on for the first time, that they are using in the case of the other seeds mentioned. Purchasers should, therefore, be especially careful to see that seed offered as redtop is free from timothy.

As has been formerly stated in its publications, the Department of Agriculture will examine and report promptly as to the presence of adulterants and dodder in any samples of seed submitted for that purpose. According to the location of the sender these may be submitted to the Seed Laboratory at Washington, D. C., or to any of the following laboratories maintained through the cooperation of this Department: Branch Seed-Testing Laboratory, Agricultural Experiment Station, Columbia, Mo.; Branch Seed-Testing Laboratory, Agricultural Experiment Station, Lincoln, Nebr.; Branch Seed-Testing Laboratory, Oregon Agricultural College, Corvallis, Oreg.; Branch Seed-Testing Laboratory, Purdue University Agricultural Experiment Station, La Fayette, Ind.; Branch Seed-Testing Laboratory, North Carolina Department of Agriculture, Raleigh, N. C.

WM. A. TAYLOR,
Acting Chief, Bureau of Plant Industry.

Approved:

JAMES WILSON,
Secretary of Agriculture.

WASHINGTON, D. C., March 16, 1911.
