It is a well-known fact that the most effective way to prevent and control pests is through integrated pest management. This approach combines various methods such as biological control, physical control, and chemical control, to manage pests in a sustainable and environmentally friendly way. Insects play a significant role in our ecosystem, and it is important to understand their life cycles and behaviors to effectively manage them. Pest management techniques can vary depending on the type of pest and the environment. Some common methods include crop rotation, natural enemies, and physical barriers. Biological control involves using natural predators or parasites to control pest populations. Physical control includes physical barriers like nets or traps, and chemical control involves the use of pesticides. It is important to use these methods in a responsible and sustainable way to protect both the environment and human health.

I. INTRODUCTION

The State of Idaho Admissions Act of July 3, 1890, granted Sections 16 and 36 of each surveyed township to the State Government. These lands were to be managed for endowment funds to beneficiary institutions. Since some of the endowment lands were already in private ownership or dedicated to some other land use at the time of the Admissions Act, the State is now allowed to select equal lands from the remaining unappropriated Public Lands. The lands administered by the Bureau of Land Management (BLM) are those lands from which the State may select for endowment purposes, the lieu selection. The state has an outstanding balance due to them of 27,073.74 acres.

The State of Idaho has applied for 27,226.99 acres, in their application. Although the State is entitled to 27,073.74 acres, the applications include excess acreage. This was done intentionally because it is suspected that some tracts will be dropped because of the mining claims or other resource conflicts. Legal descriptions of the selected tracts can be found in Appendix A.

II. PROPOSED ACTION AND ALTERNATIVES

A. Proposed Action

The proposed action is to transfer ownership and administration of 27,226.99 acres of Public Lands administered by the BLM in the Boise and Coeur d'Alene Districts to the State of Idaho as described in the State's applications. These selected tracts are found in five specific areas known as the Hoodoo, Grandmother Mountain, Little Salmon Blocks, S.W. Idaho, and Payette Lakes (see Maps A, B, C, and D). The analysis of environmental impacts of the State Lieu Selection proposed action was based upon the differences of philosophies and capabilities to manage the lands between the State of Idaho and the BLM. The basic policy for managing State lands by the State of Idaho is the following:

IDAHO DEPARTMENT OF LANDS MISSION STATEMENT

The mission of the Idaho Department of Lands, consistent with the Admissions Act, the State Constitution, the State Statutes, and the policies of the State Board of Land Commissioners shall be to:

1. Exercise management, protection, control and disposition of the state endowment lands and resources therefrom. These lands shall be administered to maximize revenues over time for the endowments to the beneficiary institutions consistent with long-term management practices based on land capabilities.

2. Perform all regulatory functions in an unobtrusive, fair and impartial fashion. Primary emphasis shall be placed on preventing or avoiding harm to, abuse of, or loss of lands and resources, and shall be based upon educational and cooperative programs with the public whenever possible.

3. Provide technical assistance, research support and other cooperative services to the citizens of Idaho and governmental entities. Information shall be practical, relative and clear to enhance beneficial management and utilization of lands and resources, and shall be dispensed in an equitable and impartial manner.

It is the policy of the State Department of Lands to administer lands acquired through indemnity selections as follows:

1. Reserve from sale and set aside as state forests, land chiefly valuable for forestry, reforestation, recreation, and watershed protection.
2. Make available the multiple use of all forest land.
3. Control or extinguish fires on forest land.
4. Promote and protect the growth of new forests on lands chiefly for that purpose.
5. Harvest forest and range crops to prevent destruction of the resources and promote wildlife habitat, aquatic habitat, and protect watersheds.

The basic policy for managing Public Lands by the BLM is in the Declaration of Policy of the Federal Land Policy and Management Act 1976 and is as follows:

Declaration of Policy

Sec. 102. (a) The Congress declares that it is the policy of the United States that --

(1) The Public Lands be retained in Federal ownership, unless a result of the land use planning procedure provided for in the Act, it is determined that disposal of a particular parcel will serve the national interest;

(2) The national interest will be best realized if the Public Lands and their resources are periodically and systematically inventoried and their present and future use is projected through a land use planning process coordinated with other Federal and State planning efforts;

(3) Public Lands not previously designated for any specific use and all existing classification of Public Lands that were affected by executive action or statute before the date of enactment of the Act be reviewed in accordance with the provisions of this Act;

(4) The Congress exercised its constitutional authority to withdraw or otherwise designate or dedicate Federal lands for specified purposes and that Congress delineate the extent to which the Executive may withdraw lands without legislative action;

(5) In administering Public Land statutes and exercising discretionary authority granted by them, the Secretary be required to establish comprehensive rules and regulations after considering the views of the general public; and to structure adjudication procedures to assure adequate third party participation, objective administrative review of initial decisions, and expeditious decisionmaking;

(6) Judicial review of Public Land adjudication decisions be provided by law;

(7) Goals and objectives be established by law guidelines for Public Land use planning, and that management be on the basis of multiple use and sustained yield unless otherwise specified by law;

(8) The Public Lands be managed in a manner that will protect the quality of scientific, scenic, historical, ecological, environmental, air and atmosphere, water resource, and archaeological values; that, where appropriate, will preserve and protect certain Public Lands in their natural condition; that will provide food and habitat for fish and wildlife and domestic animals; and that will provide for outdoor recreation and human occupancy and use;

(9) The United States receive fair market value of the use of the Public Lands and their resources unless otherwise provided for by statute;

(10) Uniform procedures for any disposal of Public Land, acquisition of non-Federal land for public purposes, and the exchange of such lands be established by statute, requiring each disposal, acquisition, and exchange to be consistent with the prescribed mission of the department or agency involved, and reserving to the Congress review of disposals in excess of a specified acreage;

(11) Regulations and plans for the protection of Public Land areas of critical environmental concern be promptly developed;

(12) The Public Lands be managed in a manner which recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber from the Public Lands including implementation of the Mining and Minerals Policy Act of 1970 (84 Stat. 1876, 30 U.S.C. 21a) as it pertains to the Public Lands; and

(13) The Federal Government should, on a basis equitable to both Federal and local taxpayer, provide for payments to compensate States and local governments for burdens created as a result of the immunity of Federal lands from State and local taxation.

Sec. 102. (b) The policies of this Act shall become effective only as specific statutory authority for their implementation is enacted by this Act or by subsequent legislation and shall then be construed as supplemental to and not in derogation of the purposes for which Public Lands are administered under other provisions of law.

Philosophical differences drawn from the Idaho Department of Lands' Mission Statement and the BLM Declaration of Policy, were analyzed in relation to environmental impacts.

Differences in capabilities to manage the land were analyzed from a directory of personnel in the Coeur d'Alene and Boise District Offices and Idaho State Office, (see Appendixes B and C respectively).

B. Alternatives

No Action

No additional alternatives to the proposed action were offered.

III. DESCRIPTION OF THE EXISTING ENVIRONMENT

Due to the scattered nature of the land involved in the proposed action coupled with the size of parcels a specific description by parcel is not practical. There are only a few generalizations that can be made for all the parcels included. All the lands are timbered and are highly productive for the growth of timber. All the parcels provide wildlife habitat for many wildlife species. More specific description on wildlife follows but only species deemed most important to man are listed.

The following is a description of the environment by major areas which were identified in the proposed action.

	<u>Air</u>	<u>Elevation</u>	<u>Slopes</u>	<u>Bed Rock</u>	<u>Precipitation</u>
<u>Hoodoo Area</u>	Clean & Clear	2,400 to 4,700 ft.	Generally 30-60%	Mainly metamorphosed sedimentary rock	20 to 60 inches
<u>Grandmother Mountain</u>	Clean & Clear	3,000 to 6,000 ft.	Generally 30-60%	Mainly metamorphosed sedimentary rock	20 to 60 inches
<u>Little Salmon</u>	Clean & Clear	3,000 to 6,800 ft.	Generally 30-60%	Metamorphosed sedimentary and volcanic rock	20 to 60 inches
<u>S.W. Idaho</u>	Clean & Clear	3,500 to 6,000 ft.	0-80%	Generally granites	15 to 30 inches
<u>Payette Lakes</u>	Clean & Clear	5,000 to 6,600 ft.	0-70%	Basalts and granites	30 to 35 inches

<u>Recent Runoff</u>	<u>Soil Depth</u>	<u>Soil Texture</u>	<u>Erosion Hazard</u>	<u>Slump Hazard (from road building)</u>
<u>Hoodoo Area</u>	Approximately 25% mostly in spring	Shallow to deep loam	Gravelly and stony loam	Moderate
<u>Grandmother Mountain</u>	Approximately 25% mostly in spring	Shallow to deep	Great variation	Moderate
<u>6 Little Salmon</u>	Approximately 25% mostly in spring	Shallow to deep	Great variation	High
<u>S.W. Idaho</u>	Moderate runoff in spring	20 to 60 inches	Surface and sub-surface coarse loams	Moderate to high
<u>Payette Lakes</u>	Approximately 15% in spring	20 inches to 6 feet	Surface - loams and sandy loams Subsoils - silty loams and gravelly to stony silt loams	Low to moderate

Sub-Alpine Fir/Tall Huckleberry
Sub-Alpine Fir/Dwarf Huckleberry
Sub-Alpine Fir/White Spirea
Sub-Alpine Fir/Beargrass
Sub-Alpine Fir/Elk Sedge

(These species are candidates
for such status by the Federal
Government through the Office
of Endangered Species.)

Species proposed for the
Threatened and Endangered
Plant list

Hoodoo Area

None known or expected
to exist on subject land
Steironema laevigatum Howell, Syn.
S. ciliatum and Tofieldia glutinosa,
var. Abscona. Both plants are
riparian species, found in most
meadows, near ponds, streambanks
and bog edges.

Grandmother Mountain

None known or expected
to exist on subject land

Proposed threatened: Synthyris
platycarpa, Gail & Penel. Found
in openings and beneath cedar,
grand and subalpine fir climax
overstory.

Corydalis caseana Gray. Found
in riparian zones - cedar-hemlock
forests. 3000' -5000' elevation
zones.

Calamagrostis tweedyi, associated
with elk sedge or subalpine fir.
Waldsteinia idahoensis Piper,
common in subalpine, grand fir
and cedar forest zones.

Little Salmon

None known or expected
to exist on subject land

Proposed threatened: Trifolium
plumosum Dougl. var. amplifolium
Martin.
Halimolobos perplexa var. per-
plexa, common in ponderosa pine
zones.

Proposed endangered: Primula
cusickiana Gray. Found in grassy
meadows or sagebrush, grass covers.
Silene spauldingii Wats. Found
in pacific grass and shrub
communities.

(These species are candidates for such status by the Federal Government through the Office of Endangered Species.)

Species proposed for the Threatened and Endangered Plant list

Threatened and Endangered Plants

None known or expected to exist on subject land

Proposed threatened: *Chaenactis evermannii* Greene. Varies from open Douglas-fir/elk sedge communities to white bark pine/sub-alpine fir communities on shifting granitic talus.
Chaenactis evermannii Greene, see (E) for habitat.

None known or expected to exist on subject land

Proposed threatened: *Calomogrostis Tweedyi* (Scribner). Found in sub-alpine fir zone on timbered slopes with elk sedge.

Payette Lakes

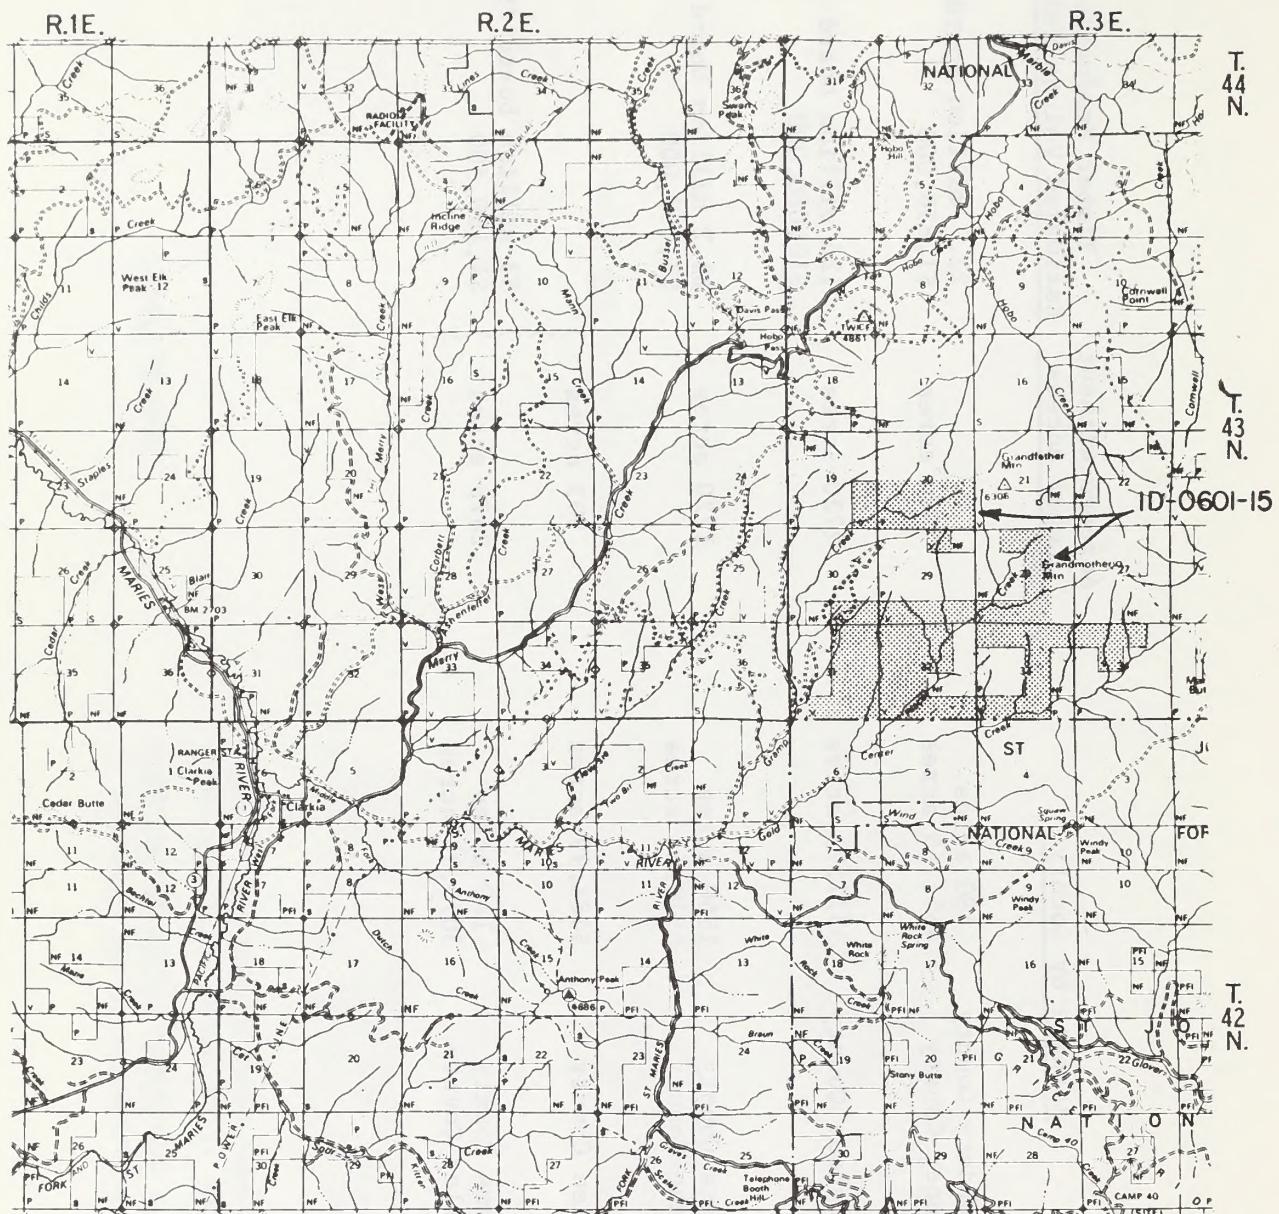

<u>Animal Terrestrial</u>	<u>Animals Aquatic</u>	<u>Threatened and Endangered Animals</u>	<u>Sensitive Species (Sensitive Species defined in Impact Sect)</u>
<u>Hoodoo Area</u>	Excellent white tail deer habitat (year round). Elk and Ruffed grouse habitat.	North Fork of Curtis Creek - little or no fish habitat on the subject land.	Peeble's shrew, Pigmy shrew, Canada lynx, Montana quail Boreal chickadee, Bobcat, wood frog could occur on subject land.
<u>Grandmother Mountain</u>	Elk habitat (year round). Mule deer and white tail deer habitat.	Gold Creek - cutthroat trout Placer Creek - excellent trout habitat for rearing and residential populations. Flewsie Creek, Gramp Creek, Two Bit Creek and Merry Creek may provide habitat for fish.	None known or expected to exist on subject land.
<u>Little Salmon</u>	Elk and deer habitat (year round).	Little Elk Creek - Rainbow and steelhead trout. Fall Creek - Pacific giant salamander sited on subject land.	None known or expected to exist on subject land.
<u>S.W. Idaho</u>	Mule deer and Elk habitat (mainly summer). Habitat for Franklin, Ruffed, and Blue grouse plus snowshoe hare.	Main Gooseberry Creek has rainbow trout population. Intermittent streams may be spawning areas for South Fork and Middle Fork of Payette Rivers.	None known or expected to exist on subject land.
<u>Payette Lakes</u>	Elk and mule deer habitat (spring, summer and fall). Forest grouse habitat. Ospreys (possible nesting).	Brook and rainbow trout in perennial streams. River otter.	None known or expected to exist on subject land.

<u>Visual Quality</u>	<u>Current Recreational Use Made on the Land</u>	<u>Cultural Resources</u>	<u>Estimated Potential (Additional information in Appendix E)</u>	<u>Wilderness Potential</u>	<u>Licensed Grazing Use on the Areas</u>
<u>Hoodoo Area</u>	Common to the area. Fall season highest quality.	Moderate--ORV use, cross-country skiing, firewood cutting, hiking, snowmobiling, and hunting.	Cabin of unknown age. Values associated with mining.	None	None
<u>Grandmother Mountain</u>	Common to the area.	Moderate--hunting, hiking, cross-country skiing, ORV use, snowmobiling, fishing.	Moderate potential for sites.	2320 acres adjacent to National Forest Rare II area.	None
<u>Little Salmon</u>	Common to the area.	Moderate--hunting, hiking, ORV use, rock hounding.	High potential for sites.	1560 acres adjacent to National Forest Rare II area.	7 grazing leases for a total of 918 AUMs.
<u>S.W. Idaho</u>	Common to the area.	Low use--hunting, firewood gathering, fishing and sightseeing.	Low potential for sites.	None	11 grazing operations for a total of 1131 AUMs.
<u>Payette Lakes</u>	Common to the area.	Low use--sightseeing, fishing and hunting.	Low potential for sites.	800 acres adjacent to National Forest Rare II area, No. 4-45.	1 grazing operation for a total of 17 AUMs.

	<u>Improvements on the Land and Cost for Legal Access to the Land</u>	<u>Mining Claims</u>
<u>Hoodoo Area</u>		
<u>Grandmother Mountain</u>	Roads 10.36 miles, \$222,980 value Easement acquisition cost, \$3300	
<u>Little Salmon</u>	Roads 11.90 miles, \$162,900 value Easement acquisition, \$13,502	
<u>S.W. Idaho</u>	Roads 34.4 miles, \$145,496 Slash and erosion control, \$26,480 Seeding 350 acres, \$1174 Tree Planting 20 acres, \$566	Roads 11.36 miles, \$174,275 value Easement acquisition cost, \$7685 Campground development, \$20,000
<u>Payette Lakes</u>		Roads 50.1 miles, \$267,429 value Fences 1 mile, \$1000 Slash and erosion control, \$61,703 Spring development 1, \$1000 Tree planting 690 acres, \$7952 Contouring 600 acres, \$3704

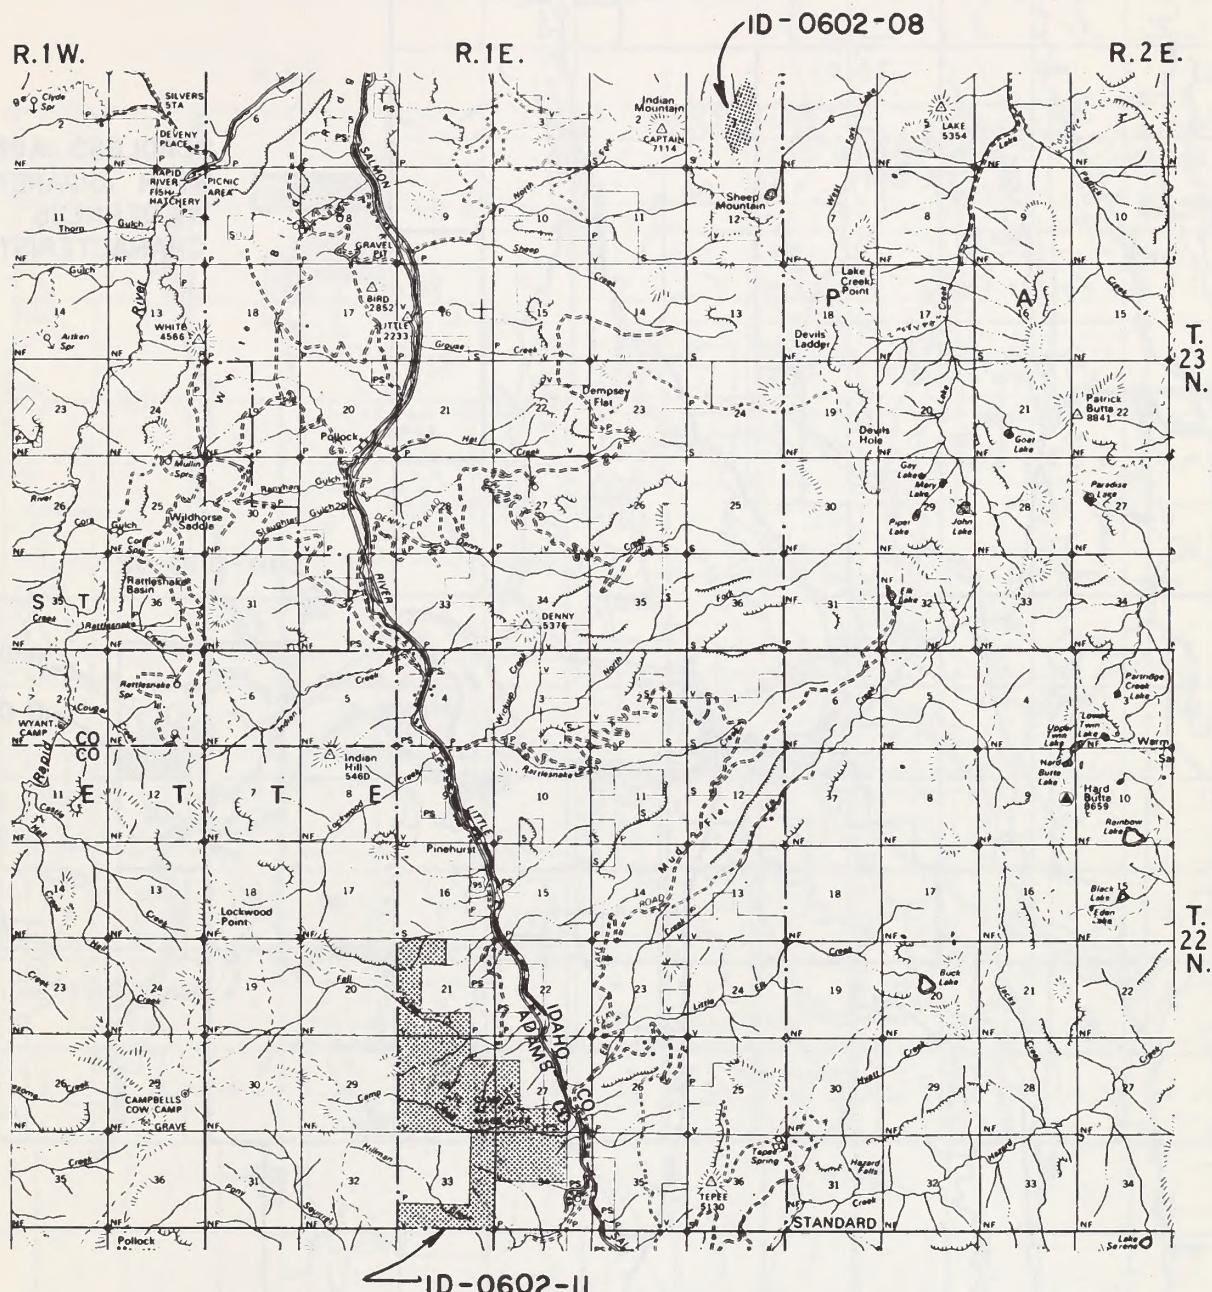

<u>Acreage by County</u>	<u>Acreage without Legal Access</u>	<u>Timber Production Estimated Volume and Value</u>

PUBLIC LANDS ENCUMBERED
WITH MINING CLAIMS

IV. ANALYSIS OF THE PROPOSED ACTION AND ALTERNATIVES

A. Proposed Action

1. Air

The BLM or Idaho Department of Lands if they acquire the lands would harvest the forest resource. There would be increased levels of particulate matter when logging occurs. It is impossible to predict if there would be any difference in level from one agency or another's management of the lands.

2. Geology and Soil

Timber harvesting activities by either agency would cause soil disturbance from road building and logging methods. Management philosophies of both agencies are directed toward protecting the basic resource. There could be greater impacts to the soil resource in terms of magnitude due to the difference in capabilities of the agencies to develop a timber harvesting plan.

There are no soil scientists and geologist on the roster of State Employees. Therefore, there could be an impact upon the resources because of lack of capabilities to be able to identify the areas of possible mass soil failures and geologic hazards and other areas of potential damage due to road location and different methods of timber harvesting.

It is impossible to quantify this potential impact. Overall potential (areawise) for soil erosion and slump activity from road building and logging is moderate to high, with the highest potential in the Little Salmon area.

3. Water

The responsibility to manage water resources by both the State of Idaho and the BLM are basically similar. Both agencies must strive for non-degradation of water quality as mandated by State water quality standards. Management and protection of watershed values are inherent to the mission of both the State of Idaho and the BLM.

The lack of hydrologic personnel to provide management with water resource management information is the biggest difference between the two agencies. The area offices attached to the State Department of Lands lack capabilities to provide hydrologic expertise when inventorying and reviewing proposed activities. The Coeur d'Alene District Office, BLM, which administers the Hoodoo, Grandmother, and Little Salmon areas, has a hydrologist within the Division of Resource Management who provides hydrologic reviews for all major BLM actions on the district.

It is impossible to predict if additional impacts would occur nor quantify potential impacts to the water resource.

4. Vegetation

Management philosophies and agency capabilities are similar therefore, not impacts are expected to occur to vegetation.

5. Vegetation, Threatened and Endangered Species

None are known or expected to exist.

There are no officially listed endangered and threatened plants in Idaho that are found in the Federal Register. However, the list of plants consisting of 68 species proposed for endangered and threatened status are included in the Federal Register of July 1, 1975. These species are candidates for such status by the Federal Government through the Office of Endangered Species.

Actions that disturb the flora or change the vegetation community could adversely affect proposed endangered and threatened plants listed in the description of the environment.

6. Animals (Aquatic and Terrestrial)

Management of the natural resources on a given tract of land may result in adverse or beneficial impacts to the wildlife resource. The Bureau of Land Management coordinates the needs of the wildlife resource through staff wildlife expertise at the district level.

The Idaho Department of Lands does not have wildlife expertise on staff. Expertise is available in the Department of Fish and Game through coordination between the agencies personnel.

The following wildlife considerations may not be fully coordinated with other resource entities resulting in adverse impacts on wildlife and neglected opportunities to benefit wildlife.

a. The forage:cover requirements of elk and deer. In particular, the application of the Elk Habitat Coordination Guidelines for Northern Idaho.

b. The habitat requirements of cavity dwelling birds and mammals. The need exists for a definitive snag management program.

c. The protection and preservation of riparian zones.

d. The evaluation of natural unique habitats (e.g., talus slides) which are the habitat to limited distribution species (e.g., the pika).

e. The protection of the streams and existing resident fishery or rearing habitat. The enhancement of habitat in streams where such opportunities exist.

7. Animals Treated and Endangered

None are known or expected to exist.

However, several sensitive species occur on one or several of the areas. Sensitive species are: Preble's shrew, Canada lynx, bobcat, boreal chickadee, wood frog, pygmy shrew, mountain quail, osprey, and river otter.

Sensitive Animals - Animals classified by the BLM and Idaho Fish and Game Department are those:

-- not yet officially listed but which are undergoing a status review or are proposed for listing according to Federal Register notices published by the Secretary of the Interior or the Secretary of Commerce, or according to comparable State documents published by State officials;

-- whose populations are consistently small and widely dispersed, or whose ranges are restricted to a few localities, such that any appreciable reduction in numbers, habitat availability, or habitat condition might lead toward extinction; and

-- whose numbers are declining so rapidly that official listing may become necessary as a conservation measure. Declines may be the cause of one or more of several factors including: destruction, modification, or curtailment of the species' habitat or range; overutilization for commercial, sporting, scientific, or educational purposes; disease or predation; the inadequacy of existing regulatory mechanisms; and/or other natural or manmade factors adversely affecting the species' continued existence.

Any actions that would adversely affect the habitat of sensitive species could displace or cause the loss of sensitive species.

8. Recreation

Both the Idaho State Department of Lands and the Bureau of Land Management are charged with recognizing the recreational values. Both agencies are directed to protect and enhance the recreational values of lands under their respective jurisdiction.

No impacts are predicted on the recreational resource. However, since the Idaho Department of Lands is not a recreational agency, the Gold Center Creek campground constructed on public land in the Grandmother area could deteriorate, resulting in loss of visual and recreational quality within the area.

9. Cultural Resources

Legislation mandated Federal agencies to inventory and evaluate all cultural resources that may be adversely impacted prior to any land transfer out of Federal ownership. Thus, it is Bureau policy to inventory, evaluate, plan for and manage cultural resources on lands administered by the Bureau and in areas of Bureau responsibility.

The objectives of the Bureau's cultural resource management program are:

- a. Protect and preserve representative samples of the full array of cultural resources for the benefit of scientific and socio-cultural use by present and future generations.
- b. Insure that cultural resources are given full consideration in all land-use planning and management decisions.
- c. Manage cultural resources so that scientific and socio-cultural values are not diminished, but rather maintained and enhanced.
- d. Insure that the Bureau's undertakings avoid inadvertent damage to cultural resources, both Federal and non-Federal.

The Bureau receives authorization to manage cultural resources from 19 pieces of legislation.

Some of the responsibilities and requirements of Federal agencies derived from the legislation are as follows:

- a. Inventory lands for cultural resources

Historic Sites Act of 1935
National Historic Preservation Act of October 25, 1966
Executive Order 11593
Federal Land Policy and Management Act of 1976

- b. Evaluate cultural resources for significance.

Executive Order 11593

- c. Nominate sites that meet criteria of significance to the National Register of Historic Places.

Executive Order 11593
Procedures of the Advisory Council on Historic Preservation

- d. Preserve the quality of cultural resources.

Federal Land Policy and Management Act of 1976

e. Evaluate all Bureau and Bureau sanctioned actions with regards to possible adverse impacts toward cultural resources.

Procedures of the Advisory Council on Historic Preservation

f. Allow for formal review by the Advisory Council on Historic Preservation through the State Historic Preservation Officer.

National Historic Preservation Act of 1966

Procedures of the Advisory Council on Historic Preservation

The State's authority for cultural resource management stems from the State Antiquities Act. Highlights of this legislation follow:

a. Preservation of historical site and monuments S.L. 1967, ch. 142, compiled herein as Sec. 67-4114--67-4118.

1. The governor is authorized to designate historic sites upon the recommendation of the Idaho State Historical Society.

2. Sites will be marked and markers will be maintained.

3. Markers must have approval of the Idaho Historical Society.

4. Penalties for violation of this act.

b. Protection of archaeological and vertebrate paleontological sites and resources S.L. 1963, ch. 181 compiled herein as Sec. 67-4119--67-4122.

1. Permit is needed for excavation of a designated site.

2. No person shall remove artifacts without approval of the board of trustees of the Idaho State Historical Society.

3. Penalties for violation of this act.

With present legislation and policy, the State of Idaho does not have the authority to manage the cultural resources on endowment lands in the same manner as the Bureau is required by law.

As it is Bureau policy that the Bureau protects and manages the cultural resources under its jurisdiction or control, and avoids inadvertent loss or destruction of cultural resources, the Bureau normally would be required (under the above mentioned Federal legislation) to inventory and evaluate those resources on the selected lands before the subject lands can be transferred to the State of Idaho. Failure to do so would result in non-compliance with the various Federal laws and Bureau directives concerning cultural resources and their proper management.

If, as a result of a cultural resource survey and inventory, significant (relative importance, determined by its socio-cultural and/or scientific

value) resources are located, those resources are subject, under the provisions of Section 106 of the National Historic Preservation Act of 1966, to review and comment by the Advisory Council. The Advisory Council must be afforded an opportunity to comment on Federal, Federally assisted, or Federally licensed undertakings which may affect properties listed in or eligible for listing in the National Register of Historic Places. These procedures are directed by NHPA, Section 106, to be taken into account prior to the undertaking of the herein proposed action by the Bureau.

10. Wilderness

A team of trained evaluators have examined the subject lands and have identified those tracts which have apparent wilderness characteristics. These are those tracts which are comprised of at least 5,000 acres of contiguous public land or which are adjacent to the U.S. Forest Service RARE II areas.

Acreage involved that would not be available for the further consideration of wilderness values and use is as follows:

Grandmother Mountain	2,320 acres
Little Salmon	1,560 "
Payette Lakes	<u>800</u> "
	4,680 acres

11. Livestock Grazing Use

Livestock are licensed on the public land as follows:

Hoodoo	None
Grandmother Mountain	None
Little Salmon	918 AUMs
S.W. Idaho	1,131 AUMs
Payette Lakes	<u>17</u> AUMs
Total	2,166 AUMs

BLM collects \$1.51 an AUM for annual grazing fees. This would total \$3270.66 annual income no longer available to the Federal Government. The State of Idaho would increase their annual income from indemnity land by approximately the same amount.

12. Timber Production and Value

Timber production and value on the land parcels involved is estimated to be as follows:

	<u>Million Board Feet</u>	<u>Dollars</u>
Hoodoo	22.7	1,816,000
Grandmother Mountain	126.0	10,080,000
Little Salmon	61.2	3,060,000
Payette Lakes and S.W. Idaho	83.0	4,160,500
	292.9	19,116,500

The annual allowable cut that could be expected on these lands is 7.44 million board feet. This would approximate \$528,000 annual income no longer available to the U.S. Treasury. The State of Idaho could increase their annual income from indemnity land by approximately the same amount.

13. Improvements on the Public Lands in the Proposed Action Plus Costs for Legal Access to Portions of the Land

	<u>Improvement Value</u>	<u>Easement Costs</u>
Hoodoo	\$222,980	\$ 3,300
Grandmother Mountain	\$194,275	\$ 7,685
Little Salmon	\$162,900	\$13,502
S.W. Idaho	\$173,714	
Payette Lakes	\$342,788	
	1,096,657	\$24,487

These investments of Federal lands would be transferred to the State of Idaho.

14. Mining Claims

Any mining claims located on the lands prior to the filing of the lieu selection applications will be considered as valid existing rights.

Unpatented mining claims must be examined to determine whether or not they contain valuable mineral deposits. This is an involved time consuming process.

If the claims are found to contain valuable mineral deposits the lands involved could not be patented to the State of Idaho. The affected subdivisions would have to be rejected or relinquished from the applications.

If found not to have mineral value, contest action must be undertaken. A hearing is held before an administrative judge. If the contest ruling is in favor of the Government the mining claimant has right of appeal to the IBLA. If the claimant receives an unfavorable ruling he can appeal to Federal District Court, and upward. These actions could lead to from 4 to 12 years completing the process.

The resulting impact is to the Idaho State Department of Lands and would be a delay in receiving title to the land plus loss of income from the land while the process of mining claim violating determination is made and rejection process followed.

Mining claims occur on primarily 220 acres within the S.W. Idaho area.

15. Acreage by County

Seven counties in the State of Idaho would not receive payment in lieu of taxes for the acreage involved in the proposed action as follows:

Boundary County	480	acres
Bonner County	4,601.65	acres
Shoshone County	5,377.73	acres
Adams County	1,680	acres
Idaho County	6,528.47	acres
Boise County	5,488.99	acres
Valley County	3,079.93	acres

In lieu of taxes payment ranges from 10¢ to 75¢ per acre.

16. Legal Access

Another impact resulting from the title transfer to the State, will be loss of public access to the subject tracts for recreational purposes. The State of Idaho does not acquire legal access rights for the general public when obtaining easements or permits over private lands to conduct administrative management of their lands. If no legal access exists at the time the land title changes to the State, then it is doubtful that the general public will have future access to the subject lands.

Present Acreage Without Legal Access is:

Hoodoo	680	acres
Grandmother Mountain	2,720	acres
Little Salmon	1,720	acres
S.W. Idaho	903	acres
Payette Lakes	<u>2,479</u>	acres
	<u>8,502</u>	acres

B. Alternative

No Action

Impacts from the proposed action would not occur. The State of Idaho would still have an outstanding lieu selection of 27,073.74 acres. Income from the lands within the proposed action would not accrue to the State of Idaho. Probable income is estimated to be as follows:

Grazing Leases	\$ 3,270
Timber Sales	\$ 186,950
Total	\$ 190,220

V. MITIGATING MEASURES

Cultural Resources

Representatives from BLM and the State of Idaho agreed to negotiate a Memorandum of Agreement whereby the State of Idaho would assume the management responsibilities of the cultural resources on the subject lands. This Memorandum of Agreement must insure that the State of Idaho will fulfill all responsibilities and requirements that the Bureau has toward cultural resources as required by law.

If such an agreement is reached prior to the land transfer, then the State Historic Preservation Officer will issue a Statement of no adverse effect toward cultural resources as a result of the proposed action. If a Memorandum of Agreement is not established, then an inventory and evaluation of all cultural resources on the subject land will be made.

If, as a result of a cultural resource survey and inventory, significant (relative importance, determined by its socio-cultural and/or scientific value) resources are located, those resources are subject, under the provisions of Section 106 of the National Historic Preservation Act of 1966, to review and comment by the Advisory Council. The Advisory Council must be afforded an opportunity to comment on Federal, Federally assisted, or Federally licensed undertakings which may affect properties listed in or eligible for listing in the National Register of Historic Places. These procedures are directed by the NHPA, Section 106, to be taken into account prior to the undertaking of the herein proposed action by the Bureau.

Wilderness

A. The State of Idaho could withdraw the 4,680 acres from their applications.

B. If the State does not wish to withdraw these lands from their application, an accelerated study would be made on the tracts to determine if they fulfill criteria established by Congress in Section 2 (c) of the Wilderness Act be designated as wilderness. If the tracts meet the criteria they will be retained in Federal ownership and designated for this use.

VI. RESIDUAL IMPACTS

Impacts would remain the same as identified in Section IV on all resources and resource values except for the following:

Cultural Resources and Wilderness - Mitigation identified would assure protection of the cultural and wilderness resources.

VII. IRREVERSIBLE AND IRRETRIEVABLE COMMITMENT OF RESOURCES

The permanent transfer of 27,073.74 acres from Federal ownership to State ownership.

IX. INTENSITY OF PUBLIC INTEREST

Comments obtained during the BLM land planning process in 1974-75 in the Coeur d'Alene District indicated that the public favored approving state lieu selections in general, but recommended retaining the Hoodoo and Grandmother Mountain area in Federal ownership.

To date, several articles on State Lieu Selection Lands have appeared in the Idaho Statesman. We have received no public contacts concerning the issue and we feel that the overall, the public has small interest in the proposal.

X. PARTICIPATING STAFF

The Environmental Assessment Record on the Idaho State lieu selected lands was prepared by an interdisciplinary team composed of the following individuals:

Coeur d'Alene District

Joe Zimmer	District Manager
Wayne Zinne	Chief, Division of Resources
	Resource Management
Jerry Kidd	Team Coordinator
Paul Baker	Engineering and Transportation Analyst
Larcie Brnett	Archaeological Analyst
Craig Johnson	Grazing Analyst
Jerry Kidd	Recreation Analyst
Terry Kincaid	Recreation Analyst
Joe Lint	Wildlife Analyst
Clarence Munk	Lands Analyst
Steve Sagstad	Hydrological Analyst
Gus Vitolins	Forestry Analyst
Vern Webb	Soil Analyst

Boise District

Harold D. Sherrets	Cascade Area Manager
Gary Hall	Cascade Area Realty Specialist
Chuck Hopson	Cascade Area Forester
Tom Seiner	Cascade Area Range Conservationist
Alan Sands	Staff Wildlife Biologist
Wally Meyer	Staff Outdoor Recreation Planner
Max MacFarlane	Staff Range Specialist
Dan Lechefsky	Staff Wilderness Specialist
Larry Hanlon	Staff Forester
Inez Graetzer	Staff Environmental Coordinator
Terry Anstett	Jarbidge Resource Area Geologist

Idaho State Office

Harold E. Isaacson	Branch Chief, Environmental Coordination
Robert Korfhage	Wildlife Biologist

APPENDIX E

The following appendices contain tables which describe the results of the analysis of the data collected by the various methods. These tables are intended to complement the descriptive statistics presented in the previous sections. The tables are organized by the type of variable and the type of analysis used.

Tables

Tables A1 through A10 present descriptive statistics for each of the variables. The first four tables present descriptive statistics for the continuous variables. The fifth table presents descriptive statistics for the categorical variables. The sixth table presents descriptive statistics for the ordinal variables. The seventh table presents descriptive statistics for the ratio variables. The eighth table presents descriptive statistics for the interval variables. The ninth table presents descriptive statistics for the dichotomous variables. The tenth table presents descriptive statistics for the nominal variables.

Cultural Resource Information

The cultural resources within the selected lands are diverse and only partially inventoried. They reflect a variety of land use activities by several distinct groups. The recorded archaeological and historical sites, potential areas for additional sites and a brief description of the past land use activities comprise the existing environment for cultural resources.

Hoodoo

While some studies have been made of early man in northern Idaho (Butler 1968, Swanson 1968), the majority of the knowledge about the Indian groups stems from ethnographic reports. Consequently, the settlement distributions in northern Idaho for the Indian groups are described for the period just prior to Euro-American settlement. The subject land in the Hoodoo area fall within the Kalispel cultural area as delineated by Ray (1936). The Kalispel are salish speaking Indians and are linguistically grouped with the Chewelah, Upper Spokane and Middle Spokane. Ray further defines the Kalispel as part of the Northeastern Interior Salish cultural group. It should be noted that while the Kalispel shared a common dialect and cultural characteristics, they were not politically structured into a tribe. Instead, the Kalispel were segregated into several autonomous village groups. The name Kalispel is from the Calispel lake camas grounds (Ray 1926:121).

Walker (1973) and Teit (1917) describe the subsistence pattern of the Kalispel as seasonal with a combination of hunting, fishing and gathering activities. Transportation was by foot or canoe with only a limited use of horses. Winter villages were generally located along waterways.

There were several important trails in the Idaho panhandle. One later became known as the Wild Horse Trail. This trail linked the Walla Walla area with the Wild Horse area in Canada. Peterson noted that the trail went up the Hoodoo Valley and along the north side of the Pend d'Oreille River (Boreson 1977).

While there are Kalispel village sites noted in the Idaho State Survey File, no aboriginal sites are recorded on the subject lands. There was prehistoric use of the area and some cultural resources may be anticipated on the subject lands. However, no systematic survey of the land has been made for indications of prehistoric quarries, campsites, or other archaeological sites.

The first Euro-American known to travel in the vicinity was David Thompson in 1809 (Boreson 1977:20). Until the 1860's only a few fur traders and homesteaders lived in the Kalispel country.

The placer mining in the Boulder Creek area in the 1860's attracted miners to the Idaho panhandle. Miners from the Walla Walla area used the Wild Horse Trail. By 1894, ore was being transported south via the Northern Railroad and wagon roads.

The early General Land Office survey of the area indicated a well defined transportation network of trails and wagon roads by 1910. The lakes and rivers were also important means of travel to the early settlers, fur trappers and miners. Several cabins and homesites were noted on the original survey plats. In Section 34, T. 56N., R. 5W., a trash dump dating from around 1910 to 1930 is indicated as a potential site in the Idaho State Site Survey Records. Two historic sites, 10BR82 and 10BR84, are located in Section 35, T. 55N., R. 5W. very near the subject lands. A cabin, historic dump, several wooden structures and the remains of a railroad boxcar remain; however, their present condition is unknown.

While no historic sites are listed on the Idaho State Site Survey Record for the selected lands field reconnaissance by BLM employees indicated at least two potential sites. A cabin of unknown age is located in Section 2, T. 55N., R. 5W. Several prospecting pits and other artifacts associated with mining are located in Section 27, T. 61N., R. 1E. These potential sites should be recorded and evaluated for significance.

Grandmother Mountain

The subject lands in the Grandmother Mountain and Little Salmon River areas fall within the Nez Perce culture group. The Nez Perce are affiliated linguistically with the Sahaptin Stock. Geographically, the Nez Perce were located between the Plateau and Plains cultural regions and ethnographically exhibited characteristics of both. While the Nez Perce were organized into generally autonomous villages, there was some political solidarity especially during war times. The Nez Perce recognized a tribal council and war chief. (Marshall 1976, Spinden 1908, Swanton 1953, Walker 1973).

The Nez Perce subsistence pattern was seasonal with dependence on both salmon and bison. Camas roots were another important food source. Winter villages were generally located on waterways and many are identified in Schwede (1970).

An important Indian trail in the Grandmother area was the Clarkia-Montana trail. Boreson (1977:12) describes the numerous names this trail was referred to on the early maps and GLO plats. The trail linked Clarkia and St. Maries areas with DeBorgio and Moose City. It was first used by the Indians and later by miners. Parts of the trail pass through the subject land in Section 28, 32 and 33, of T. 43N., R. 3E. The trail is noted on maps at the University of Idaho. A portion of the trail system is being nominated to the National Register of Trails in conjunction with the Forest Service.

Euro-American influx into the Grandmother Mountain area followed the general pattern of other parts of northern Idaho; occasional homesteaders, miners, and then loggers. Several cabins are shown on the 1905 GLO plats for the area. Grandmother Mountain was originally designated as Grand Meadow Mountain.

During the early 1900's, extensive logging was done in the Marble Creek drainage just north of the subject lands. The Forest Service has recorded many associated sites and has designated the area as an Historical District. Eligible sites will be nominated to the National Register of Historic Places.

A cabin is located on the subject lands in Section 18, T. 43N., R. 2E. It appears to be associated with fur trapping or a lone settler rather than the extensive logging activities. Another cabin (site 10SE181) is located in Section 11, T. 42N., R. 2E. and may be the only remaining structure of the Gold Center Townsite. A logging camp (10SE150) is located in Section 7, T. 4 N., R. 3E. and a corral in Section 27 of the same township. The subject lands have not been systematically surveyed; however, there is a high probability that additional sites associated with the early logging activities remain. Such sites, when inventoried, should be evaluated with respect to the Marble Creek Historical District.

Little Salmon

The subject lands in the Little Salmon area have not been surveyed for cultural resources. Several sites are recorded on the Idaho State Site Survey Record that are located in the vicinity of the subject lands. 101D45 and 101D46 are located in Section 29, T. 24N., R. 1E. and 101D47 is located in Section 9, T. 22N., R. 1E. Although no historical sites are recorded for the subject lands, several cabins, trails and roads were indicated on the early GLO surveys. Peebles (1971) wrote a comprehensive synopsis of the history of the Salmon River Basin. From his and other works referenced previously, it appears that there is a high probability of sites on the subject lands.
