In ninety-seven of the largest English towns 8,507 births and 4,421 deaths were registered during the week ended Saturday, July 4th. The annual rate of mortality in these towns, which had been 13.5, 12.9, and 12.1 per 1,000 in the three preceding weeks, rose to 12.7 per 1,000 in the week under notice. In London the death-rate was equal to 13.3, against 12.8, 12.2, and 12.1 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 5.1 in Edmonton, 5.5 in Devonport, and 5.9 in Ealing and in Swindon to 19.3 in Barnsley, 19.4 in Walsall, 19.9 in Bootle, and 20.0 in Oldham. Measles caused a death-rate of 1.3 in Liverpool and in Preston, 1.7 in Rochdale and 3.5 in Oldham; whooping-cough of 1.3 in Salford, 1.5 in West Bromwich, 1.8 in Great Yarmouth, and 1.9 in Barnsley; and diphtheria of 1.1 in Cardiff. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 33, or 0.7 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 5 were recorded in Liverpool, and 3 each in Birmingham and in Darlington. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 2,993, 3,038 and 3,088 in the three preceding weeks, further rose to 3,092 on Saturday, July 4th; 442 new cases were admitted during the week, against 391, 405, and 440 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,216 births and 621 deaths were registered during the week ended Saturday, July 4th. The annual rate of mortality in these towns, which had been 14.4, 14.6, and 13.8 per 1,000 in the three preceding weeks, rose to 14.1 per 1,000 in the week under notice, and was 1.4 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 3.1 in Falkirk, 9.7 in Paisley, and 12.1 in Coatbridge to 15.7 in Ayr, 18.0 in Aberdeen, and 20.2 in Hamilton. The mortality from the principal infective diseases averaged 0.9 per 1,000, and was highest in Motherwell and Hamilton. The 395 deaths from all causes in Glasgow included 10 from whooping-cough, 4 each from measles and from infantile diarrhoeal diseases, and three from diphtheria. Diarrhoea caused 3 deaths in Hamilton and 2 in Aberdeen, and measles 3 in Dundee.

Naval and Military Appointments.

CHANGES OF STATION.

The following changes of station amongst the officers of the Army Medical Service have been officially reported to have taken place during May:

	FROM	TO
Colonel R. W. Ford, D.S.O.	Aldershot	York.
,, T. P. Woodhouse	—	Aldershot.
,, R. Kirkpatrick, C.M.G., M.D.	Calcutta	Darjeeling.
,, C. Birt	Poona	Bombay.

		FROM		TO
Lieut.-Col.	C. H. Hale, D.S.O.	Maymyo		Sialkot.
,,	H. I. Pocock	Campbellpore		Murree.
Major	A. G. Thompson, M.B.	Pachmarhi		Honiton.
,,	B. W. Longhurst	Ambala		Sabathu.
,,	W. Tibbits, M.B.	,,		Multan.
,,	S. W. Sweetnam	—		Sheerness.
,,	C. W. Mainprise	Rawal Pindi		Kuldana.
,,	G. M. Goldsmith, M. B.	Lebong		Dublin.
,,	R. H. Lloyd	Multan		Dagshai.
,,	J. G. Gill	Rangoon		Devizes.
,,	V. J. Crawford	—		Hilsea.
,,	H. M. Nicholls, M.B.	Poona		Edinburgh.
,,	E. P. Connolly	Rawal Pindi		Murree.
,,	L. M. Purser, M.B.	Meerut		Ranikhet.
,,	W. R. P Goodwin	Fyzabad		Landour.
,,	R. L. Popham	Nowshera		Peshawar.
,,	H. G. Pinches	Sheerness		Dover.
,,	A. W. Gibson	Lahore		Dalhousie.
,,	E. V. Aylen	Rawal Pindi		Barian.
,,	L. Cotterill, M.B.	Nowshera		Cherat.
Captain	R. Storrs	Portland		Winchester.
,,	F. A. H. Clarke	Calcutta		Lebong.
,,	D. Abern	Dublin		Curragh.
,,	D. G. Carmichael, M.B.	Sialkot		Cliffden.
,,	J. H. Duguid, M.B.	Secunderabad		Bellary.
,,	P. S. Stewart, M.B.	Malta		Tidworth.
,,	J. A. B. Sim, M.B.	R.A.M. Coll.		Aldershot.
,,	E. D. Caddell, M.B.	Dublin		Chatham.
,,	J. R. Foster	Kilbride		Dublin.
,,	E. C. Phelan, M.B.	Barrackpore		Belfast.
,,	M. O. Wilson, M.B.	Chatham		Sheerness.
,,	G. F. Rudkin	Dublin		Kilbride.
,,	H. V. B. Byatt	Poona		Karachi.
,,	D. B. McGrigor, M.B.	Agra		Landour.
,,	H. W. Carson, M.B.	Peshawar		Khanspur.
,,	A. Hendry, M.B.	Colaba		Satara.
,,	H. H. Blake, M.B.	Peshawar		Cherat.
,,	M. Leckie	—		Tidworth.
,,	A. G. Wells	Ambala		Inverness.
,,	D. H. C. MacArthur, M.D.	Dalhousie		Sabathu.
,,	H. Gall	Sialkot		Gharial.
,,	J. W. Lane, M.D.	Lahore		Dalhousie.
,,	F. W. M. Cunningham, M.D.	Sialkot		Murree.
,,	J. J. H. Beckton	,,		Rawal Pindi.
Lieutenant	B. H. H. Spence, M.B.	Rawal Pindi		Barian.
,,	J. M. Elliott, M.B.	,,		Baracao.
,,	F. R. B. Skrimshire	Bangalore		Madras.
,,	E. G. H. Cohen, M.B.	Agra		Chakrata.
,,	L. Buckley, M.B.	Ferozepore		Tret.
,,	W. Stewart, M.B.	Agra		Chakrata.
,,	A. S. Heale	Rawal Pindi		Campbellpore.
,,	R. K. Mallam, M.B.	,,		Ambala.
,,	W. McNaughtan, M.B.	Karachi		Quetta.
,,	W. W. Pratt, M B.	Poona		Nasirabad.
,,	M. Burnett	,,		Colaba.
,,	W. B. Stevenson, M.B.	Rawal Pindi		Ambala.
,,	J. L. Ritchie, M.B., F.R.C.S.	,,		Murree.
,,	C. J. H. Little, M.B.	,,		Sialkot.
,,	T. H. Balfour, M.B.	Inverness		Fort George.
,,	P. M. J. Power	Winchester		Gosport.
,,	N. W. Stevens, M.B.	Dover		Woolwich.
,,	J. C. Sproule	Taunton		West Down Camp.
,,	H. F. Panton, M.B.	Rawal Pindi		Ambala.
,,	S. D. Large	Ewshott		S. Command.
,,	H. N. Sealy	Kildare		Belfast.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

ARGYLL AND BUTE DISTRICT ASYLUM, Lochgilphead.—Medical Superintendent. Salary, £500 per annum.

BARROW-IN-FURNESS: NORTH LONSDALE HOSPITAL.—Male House-Surgeon. Salary, £150 per annum.

BEDFORD COUNTY HOSPITAL.—Assistant House-Surgeon. Salary, £100 per annum.

BIRKENHEAD BOROUGH HOSPITAL. — Senior House-Surgeon (male). Salary, £120 per annum.

BIRMINGHAM: CITY FEVER HOSPITAL, Little Bromwich.—Male Assistant Medical Officer. Salary, £200 per annum.

BIRMINGHAM: CITY MENTAL HOSPITAL.—Assistant Medical Officer (male). Salary, £200 per annum.

BIRMINGHAM GENERAL DISPENSARY.—Resident Medical Officer. Salary, £240 per annum.

BIRMINGHAM GENERAL HOSPITAL. — (1) House-Physician. (2) Resident Pathologist. (3) Obstetric House-Surgeon. (4) Resident Medical and Surgical Officer at the Jaffray Branch. Salary for (1), (2), and (3) £50 per annum, and for (4) £150 per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum and £5 laundry allowance.

BIRMINGHAM: QUEEN'S HOSPITAL. — (1) House-Physician; (2) Two House-Surgeons. Salary at the rate of £50 per annum.

BIRMINGHAM UNION. — (1) Assistant Medical Officer at Dudley Road Infirmary. (2) Assistant Medical Officer at Selly Oak Infirmary and House. Salary, £140 and £160 per annum respectively.

BIRKENHEAD UNION INFIRMARY.—Senior Resident Assistant Medical Officer (male). Salary, £175 per annum.

BLACKBURN AND EAST LANCASHIRE INFIRMARY.—Junior House-Surgeon. Salary, £100 per annum.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.—House-Surgeon (male). Salary at the rate of £75 per annum.

BRADFORD ROYAL INFIRMARY.—Two House-Surgeons (males). Salary, £100 per annum each.

BRISTOL ROYAL INFIRMARY.—Honorary Ophthalmic Surgeon.

BURY ST. EDMUNDS: WEST SUFFOLK GENERAL HOSPITAL. —Resident Medical Officer. Salary, £120 per annum.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. Salary, £100 per annum.

CAMBERWELL: PARISH OF ST. GILES.—Second and Third Assistant Medical Officers for the Infirmary, etc. Salary, £170 and £150 per annum, rising to £180 and £170 respectively.

CARDIFF AND COUNTY PUBLIC HEALTH LABORATORY.—Bacteriologist. Salary, £300 per annum.

CARDIFF: GLAMORGAN COUNTY COUNCIL.—Medical Officer for the Inspection of School Children. Salary, £250 per annum, rising to £350.

CARDIFF: KING EDWARD VII HOSPITAL.—Two House-Surgeons. Salary, £60 per annum.

CHELSEA PARISH.—(1) Medical Superintendent of the Infirmary and Medical Officer of the Workhouse. (2) Second Assistant Medical Officer to the Infirmary. Salary, £500 and £160 per annum respectively.

CHESHIRE COUNTY ASYLUM, Parkside, Macclesfield.—Locumtenent. Salary, 5 guineas per week.

CHORLEY: RAWCLIFFE HOSPITAL.—House-Surgeon (male). Salary, £100 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, Victoria Park, E.—House-Physician (male). Salary at the rate of £75 per annum.

COLCHESTER: ESSEX COUNTY HOSPITAL.—(1) House-Surgeon. (2) House-Physician. Salary, £100 per annum each.

CROYDON COUNTY BOROUGH.—Assistant Medical Officer of Health and Assistant School Medical Officer. Salary, £250 per annum, rising to £300.

DERBY: DERBYSHIRE ROYAL INFIRMARY.—(1) House-Physician. (2) Assistant House-Surgeon. Salary, £125 and £80 per annum respectively.

DEVONPORT: ROYAL ALBERT HOSPITAL.—House-Surgeon. Salary at the rate of £150 per annum.

ESSEX EDUCATION COMMITTEE.—Medical Inspector. Salary, £300 per annum, rising to £400.

FALKLAND ISLANDS.—Assistant Colonial Surgeon. Salary, £400 per annum.

GREENWICH UNION INFIRMARY. — First Assistant Medical Officer. Salary, £175 per annum.

GLOUCESTERSHIRE EDUCATION COMMITTEE.—Medical Inspector of School Children. Salary, £250 per annum, rising to £300.

HALIFAX: ROYAL HALIFAX INFIRMARY.—Second and Third House-Surgeons. Salary, £120 and £100 per annum respectively.

HANTS COUNTY ASYLUM, Fareham.—Third Assistant Medical Officer. Salary, £250 per annum.

HEREFORDSHIRE COUNTY COUNCIL. — Assistant to Medical Officer of Health. Salary, £300 per annum.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton.—House-Physician. Honorarium, 30 guineas for six months.

HULL: ROYAL INFIRMARY. — (1) Casualty House-Surgeon. (2) Assistant House-Surgeon. Salary, £80 and £100 per annum respectively.

HULL: VICTORIA HOSPITAL FOR SICK CHILDREN.—Lady Assistant House-Surgeon. Salary, £45 per annum.

KENT COUNTY ASYLUM, Maidstone.—Fourth Assistant Medical Officer (male). Salary, £250 per annum.

KIDDERMINSTER INFIRMARY AND CHILDREN'S HOSPITAL. —House-Surgeon. Salary, £100 per annum.

LEEDS GENERAL INFIRMARY.—(1) Resident Obstetric Officer; salary at the rate of £50 per annum. (2) Two House-Physicians.

LEEDS PUBLIC DISPENSARY.—Junior Resident Medical Officer. Salary, £130 per annum.

LEICESTER ROYAL INFIRMARY.—Assistant House-Physician. Salary at the rate of £100 per annum.

LIVERPOOL INFECTIOUS DISEASES HOSPITAL. — Assistant Resident Medical Officer. Salary, £150 per annum.

LIVERPOOL PARISH.—Assistant Medical Officer for the Highfield Infirmary. Salary, £180 per annum.

LIVERPOOL SCHOOL OF TROPICAL MEDICINE. — Research Assistant in the Runcorn Research Laboratory. Salary, £150 per annum.

LONDON MEDICAL MISSION, Endell Street, W.C. — Resident Medical Officer. Salary, £120 per annum.

LONDON THROAT HOSPITAL, Great Portland Street, W.—Non-resident House-Surgeon. Salary, £50 per annum.

LOWESTOFT AND NORTH SUFFOLK HOSPITAL. — House-Surgeon. Salary at the rate of £150 per annum.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, increasing to £200.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—House-Surgeon. Salary, £120 per annum.

MANCHESTER: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN. — (1) House-Surgeon to Children's Department. (2) House-Surgeon for Obstetrical and Gynaecological Departments. Honorarium, £25 for six months each.

NEWARK-UPON-TRENT HOSPITAL.—Lady Resident Medical Officer. Salary, £100 per annum.

NORTHAMPTON GENERAL HOSPITAL.—Two House-Surgeons. Salary, £120 per annum each.

NORWICH: JENNY LIND HOSPITAL FOR SICK CHILDREN.—Lady Resident Medical Officer. Salary, £80 per annum.

NOTTINGHAM EDUCATION COMMITTEE. — School Dentist. Salary, £250 per annum, rising to £300.

NOTTINGHAM GENERAL DISPENSARY. — Assistant Resident Surgeon (male). Salary, £180 per annum.

NOTTINGHAM GENERAL HOSPITAL. — Assistant House-Physician. Salary at the rate of £100 per annum.

OGMORE AND GARW URBAN DISTRICT COUNCIL.—Medical Officer of Health. Salary, £325 per annum, rising to £400.

ORKNEY: PARISH OF SHAPANSEY.—Medical Officer and Public Vaccinator. Salary, £90 per annum.

PETERBOROUGH INFIRMARY AND DISPENSARY. — House-Surgeon (male). Salary, £120 per annum.

PLAISTOW: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—Male Assistant Resident Medical Officer. Salary at the rate of £100 per annum and £10 honorarium on completion of six months.

PLYMOUTH: SOUTH DEVON AND EAST CORNWALL HOSPITAL.—House-Physician. Salary, £90 per annum.

POPLAR HOSPITAL FOR ACCIDENTS, E.—Assistant House-Surgeon. Salary at the rate of £80 per annum.

PORTSMOUTH PARISH.—Second Assistant Resident Medical Officer (male) to the Workhouse Infirmary, etc. Salary, £150 per annum, rising to £160.

PORTSMOUTH: ROYAL PORTSMOUTH HOSPITAL. — House-Surgeon (male). Salary at the rate of £110 per annum.

PRESTON COUNTY BOROUGH.—School Medical Officer. Salary, £350 per annum.

PRINCE OF WALES'S GENERAL HOSPITAL, Tottenham, N.—(1) Junior House-Physician. (2) Junior House-Surgeon. Salary, £75 per annum each.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeon. Salary at the rate of £80 per annum.

RAMSGATE GENERAL HOSPITAL AND DISPENSARY.—Resident House-Surgeon. Salary, £100 per annum.

ROCHDALE INFIRMARY AND DISPENSARY.—Senior House-Surgeon (male). Salary, £120 per annum.

ROYAL EAR HOSPITAL, Soho, W.—House-Surgeon, non-resident. Honorarium, £40 per annum.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—(1) Resident Medical Officer. (2) House-Physician. Salary at the rate of £120 and £60 per annum respectively.

ROYAL WATERLOO HOSPITAL FOR CHILDREN AND WOMEN, S.E.—(1) Surgeon to Out-patients. (2) Junior Resident Medical Officer. Salary at the rate of £50 per annum.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL, King William Street, W.C.—Assistant Surgeon.

ST. MARY'S HOSPITAL, Paddington, W. — Resident Assistant Anaesthetist Salary at the rate of £100 per annum.

SALFORD ROYAL HOSPITAL. — (1) House-Surgeon. (2) Junior House-Surgeon. (3) Casualty House-Surgeon. Salary at the rate of £100 per annum each.

SALOP INFIRMARY.—House-Physician. Salary at the rate of £110 per annum.

SCARBOROUGH HOSPITAL AND DISPENSARY. — Senior and Junior House-Surgeons. Salary, £100 and £80 per annum respectively.

SHEFFIELD: CHILDREN'S HOSPITAL.—House-Surgeon for the East End Branch. Salary, £120 per annum.

SHEFFIELD: JESSOP HOSPITAL FOR WOMEN. — Senior and Junior Lady House-Surgeons. Salary, £100 and £80 per annum respectively.

SHREWSBURY: COUNTY ASYLUM. — Second Assistant Medical Officer (male). Salary, £230 per annum, rising to £250.

SOMERSET COUNTY COUNCIL.—Assistant Tuberculosis Officer. Salary, £300 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

STAFFORD: STAFFORDSHIRE GENERAL INFIRMARY.—House-Physician. Salary, £100 per annum.

SUNDERLAND; MONKWEARMOUTH AND SOUTHWICK HOSPITAL.—House-Surgeon. Salary, £130 per annum, rising to £150.

SURREY COUNTY COUNCIL.—Assistant Medical Officer of Health. Salary, £400 per annum.

SWANSEA GENERAL AND EYE HOSPITAL.—House-Physician. Salary, £125 per annum.

THROAT HOSPITAL, Golden Square, W.—Two Resident House-Surgeons. Salary at the rate of £75 per annum each.

TRURO: ROYAL CORNWALL INFIRMARY. — House-Surgeon (male). Salary, £100 per annum.

VICTORIA HOSPITAL FOR CHILDREN, Tite Street, S.W.—(1) House-Physician. (2) House-Surgeon. Honorarium, £40 for six months each.

WALSALL AND DISTRICT HOSPITAL.—Assistant House-Surgeon. Salary, £110 per annum.

WALSALL AND WEST BROMWICH COUNTY BOROUGHS.—Tuberculosis Officer. Salary, £500 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL. — Assistant Resident House-Surgeon and Anaesthetist. Salary, £100 per annum.

WEST HAM COUNTY BOROUGH. — Assistant School Medical Officer. Salary, £250 per annum, rising to £400.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford.—(1) Junior House-Physician. (2) Junior House-Surgeon. Salary at the rate of £75 per annum.

WEST HARTLEPOOL: CAMERON HOSPITAL.—House-Surgeon. Salary, £150 per annum.

WESTON-SUPER-MARE HOSPITAL.—House-Surgeon. Salary, £120 per annum.

WINSLEY SANATORIUM FOR CONSUMPTION.—Assistant Resident Medical Officer. Salary, £150 per annum.

WINCHESTER: ROYAL HAMPSHIRE COUNTY HOSPITAL.—House-Physician (male). Salary, £80 per annum.

WREXHAM INFIRMARY.—Resident House-Surgeon. Salary, £120 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Malton (Yorks), Runcorn (Chester), Shardlow (Derby).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTHS.

BOOTH.—On July 8th, at 78, Southampton Street, Reading, the wife of Norman Booth, M.B., B.S.Lond., of a son.

MARSHALL.—On July 4th, at Old Court, Ealing, the wife of C. F. Marshall, M.D., F.R.C.S., of a son.

MARRIAGE.

DIGGLE—HORROX.—At Newington South U. F. Church, Edinburgh, on the 1st instant, by the Rev. Joseph Muir, B.D., assisted by the Rev. Dr. Young, the ex-Moderator of the U. F. Church of Scotland, Frank Holt Diggle, F.R.C.S.Eng. and Edin., son of James Diggle, Esq., C.E., J.P., St. Albans, Herts, to Mary Leah, daughter of Edward Horrox, Esq., of 14, Maclaren Road, Edinburgh. At Home, 40, Marlborough Road, Bradford, October 7th and 8th.

APPOINTMENTS.

UNIVERSITY COLLEGE HOSPITAL, W.C.—The following appointments have been made:

House-Surgeon.—H. W. Davies, M.B., B.S.
House-Physician.—H. V. Deakin, B.A., M.R.C.S., L.R.C.P.
Obstetric Assistant.—F. H. Rees, M.B., B.S.
Clinical Assistant in Dental Department.—B. Underwood, M.B., B.S.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses and Lectures are to be given next week at the following schools, colleges, and hospitals:

CENTRAL LONDON THROAT AND EAR HOSPITAL, Gray's Inn Road, W.C.
HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton, S.W.
HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.
LONDON HOSPITAL MEDICAL COLLEGE, Turner Street, E.
MANCHESTER HOSPITALS: Post-Graduate Clinics.
MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, Chenies Street, London, W.C.
NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.
ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.
WEST END HOSPITAL FOR DISEASES OF THE NERVOUS SYSTEM, Welbeck Street, W.
WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[*Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.*]

DIARY OF THE ASSOCIATION.

Date.		Meetings to be Held.
		JULY.
11	Sat.	London: Science Committee, 10.30 a.m.
14	Tues.	London: Annual Representative Meeting Agenda Committee, 2.30 p.m.
		London: Standing Ethical Subcommittee, 2.30 p.m.
		London: Metropolitan Counties Branch Council, 4 p.m.
		North Wales Branch, Annual Meeting, Benllech, Anglesey, 2.45 p.m. Luncheon, 2 p.m.
		South-West Wales Division, Annual Meeting, Carmarthen, 3 p.m.
16	Thur.	Welsh Committee, Raven Hotel, Shrewsbury, 2.30 p.m.
17	Fri.	Coventry Division, Coventry Hospital, 4.15 p.m.
19	Sun.	Holland Division, Sleaford, 3 p.m.

Date.		Meetings to be Held.
		JULY (*continued*).

ANNUAL MEETING, ABERDEEN, 1914.

Annual Representative Meeting, Friday, July 24th, and following days.
Special Representative Meeting, July 27th.
Presidential Address, Tuesday, July 28th.
Sections—July 29th, July 30th, and July 31st.
Annual Exhibition, July 28th–31st.
Excursions, August 1st.

(*See also p. 35 et seq.*)

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, JULY 18TH, 1914.

CONTENTS.

British Medical Association.

SCIENCE COMMITTEE.

THE Science Committee has presented to the Council particulars of the report of the work done by research scholars and recipients of scientific grants during the year.

(A) REPORTS OF SCHOLARS.

RELATIVE FREQUENCY OF BOVINE AND HUMAN TYPES OF TUBERCLE BACILLI IN HUMAN TUBERCULOSIS.

By A. PHILP MITCHELL, M.D., F.R.C.S.Edin.,
Ernest Hart Memorial Scholar.

INVESTIGATIONS with regard to the relative frequency of the bovine and human types of tubercle bacilli occurring in certain forms of human tuberculosis, and also investigations upon the transmission of bovine tuberculosis by cow's milk have been continued.

The results of some of these investigations were embodied in a thesis ("A study of tuberculosis of the tonsils and cervical lymph glands in children") which was submitted to the University of Edinburgh for the degree of Ch.M. (Master of Surgery) and awarded a Gold Medal at the Graduation Ceremonial in July, 1913.

During October and part of November the scholar devoted most of his time to the preparation of a report—"The infection of children with the bovine tubercle bacillus"—which appeared in the BRITISH MEDICAL JOURNAL of January 17th, 1914.

Having demonstrated that a large percentage of cases of tuberculous cervical glands in children residing in Edinburgh and district was due to the bovine tubercle bacillus, there seemed great need for an investigation of the milk supply. Accordingly towards the end of November a systematic examination of the Edinburgh milk supply was commenced. Samples of mixed milk were collected from the milk shops (which number fully 400) in each municipal ward. The deposit from each sample was inoculated into two guinea-pigs. A paper entitled, "The milk question in Edinburgh," dealing with the investigation of 201 samples of mixed milk, was published in the April number of the *Edinburgh Medical Journal*. The examination of the milk supply was completed recently, and a report—Tuberculous milk in Edinburgh: its relation to surgical tuberculosis in children—was published in the BRITISH MEDICAL JOURNAL of July 11th, p. 71.

Some other points of interest will be fully dealt with in a report on tuberculosis of the lymphatic glands in children, to be read at the Edinburgh Public Health Congress (July, 1914).

THE EXPERIMENTAL PRODUCTION OF PNEUMONIA.

By RICHARD ROBINS ARMSTRONG, M.B., B.C.Cantab.,
Research Scholar.

THE precise means by which infection reaches the lungs in pneumonia has long been discussed. While it is admitted that in bronchopneumonia infection travels by way of the air passages, a large number of authorities consider that lobar pneumonia is primarily an infection of the blood stream with preferential incidence in the lungs.

So lately as 1912, Kidd,[1] reviewing the whole subject of lobar pneumonia, apparently arrived at the conclusion that the balance of evidence is in favour of this disease arising primarily as a blood infection. Amongst pathologists it is generally recognized that many gradations exist between the forms of lobar, lobular and bronchial pneumonia, so that whether by microscopic or macroscopic examination it is at times difficult to assign to a particular specimen a place in any one group.

The frequency with which positive results are obtained on cultivation of the blood in cases of lobar pneumonia

[1] Lumleian Lectures. *Lancet*, 1912, vol. i.

and the comparative scarcity of positive results in the bronchial forms, have supported the view that lobar and bronchial pneumonia are the results of infection of the lung by different channels. Again, the experience of physicians affords strong evidence of an essential difference between the two types of the disease although many typical cases of lobar pneumonia arise resembling in their course the less acute bronchopneumonic forms.

It will be admitted, therefore, that an exact understanding of the etiology of the disease is of practical value. A conviction of the true channel by which the lungs are invaded in lobar pneumonia may serve to indicate a more vigorous line of treatment in the early stages than has hitherto been attempted, and disinfectants of the respiratory tract might be used with more confidence than formerly if it can be shown that the infection is by the air passages only. Moreover, a sound knowledge of the intimate pathology of pneumonia must surely afford a more rational introduction to specific treatment, and a better chance of success than has hitherto attended the somewhat empirical administration of antipneumococcal serums or vaccines.

Such considerations led the scholar to undertake an exhaustive study of the changes found in the lungs in all forms of pneumonia at all ages, attention being paid to the clinical course, bacteriology, and morbid anatomy in every case. In preparing microscopic sections the new method of embedding in gelatine, devised by Gaskell,[2] was employed, as this obviates the necessity of passing sections through alcohols to paraffin, and thus preserves intact the fatty elements, and almost completely prevents shrinkage of the delicate contents of the alveoli.

Certain conclusions based on this work bear directly on results obtained during the present year.

1. There seems reason to believe that all forms of pneumonia, not excepting lobar pneumonia, are inhalation infections.

2. Microscopic study of completely consolidated lungs revealed the fact that, in almost every case, many stages, ranging from early congestion with sero-fibrinous exudate to advancing resolution, could often be demonstrated at one time in adjacent parts of a lobe which was apparently the site of a homogeneous change. In fact, no essential differences could be found between lobar and bronchial pneumonia microscopically.

3. The changes which occur in the lungs in true septicaemic infections were studied, and it was found that a small group of cases may be recognized, particularly in young infants, in which the pulmonary changes are truly septicaemic in origin and the lesions altogether peculiar. Capillary congestion and proliferation of the endothelial constituents of the alveolar walls are conspicuous, alveolar collapse is invariable, but interalveolar exudate is scanty, and the bronchial epithelium untouched, affording a marked contrast to all other forms of pneumonia.

No definite information with regard to the nature of "the crisis" was obtained, there being no definite difference in the appearances in a lung just before or after crisis.

It soon became obvious that many stages of pneumonia could not be investigated in *post-mortem* material, particularly those important changes which lead to resolution, and which occur when recovery takes place. Attempts were therefore made to produce the disease in animals under experimental conditions.

In attempting to produce experimental pneumonia certain difficulties were encountered. For several reasons it was not possible to use dogs for the experiments, and the rabbit was the only animal of sufficient size which was available. It is well known that rabbits are extremely susceptible to pneumococcal infection, and almost invariably die within from twenty-four to forty-eight hours of a virulent septicaemia, and it became obvious that if a method of inoculation of the lungs were to be successful, simultaneous infection of a raw surface with pneumococci must be avoided for this reason.

Intravenous inoculation of cultures of pneumococci caused death within forty-eight hours of septicaemia with pericarditis, pleurisy with effusion, and sometimes some congestion and collapse of the lung bases. Microscopically, in some of these cases pneumococci were found in the veins of the lungs, in the interalveolar capillaries, and rarely within the alveoli. No true pneumonia was present, but areas of lung were virtually consolidated as a result of a combination of collapse, with enormous congestion and thickening of the interalveolar septa. Exudate within the alveoli was very scanty. The condition closely resembled the septicaemic pneumonia found in young infants, and has also close resemblance to the lesions found in the acute pneumonic form of bubonic plague—undoubtedly an infection of the lungs by way of the blood stream.

Direct injection of broth cultures of pneumococci into the lung at the lowest angle of the scapula caused death from septicaemia, but the difficulty of ascertaining the proper depth to insert the needle and the uncertainty of the method were strongly against its employment.

Intertracheal injection through the unbroken skin of the neck seemed a simple and obvious method but proved unsatisfactory in practice; either a local abscess was produced or, if the rather attenuated cultures used entered the trachea, in most cases no lesion followed.

To make certain of entering the trachea, a rabbit which had been been partly immunized by a dose of avirulent pneumococci three weeks before, was anaesthetized and the trachea exposed at the root of the neck: 5 c.cm. of an emulsion of dead *Bacillus coli*, followed by 5 c.cm. of an attenuated strain of pneumococci, were then injected into the trachea—the *coli* emulsion being used in the belief that it would predispose the bronchial and alveolar epithelium to infection. The animal did not appear much the worse, but on killing it four days later a lobular pneumonia in a stage of resolution was found.

The experiments of Lamar and Meltzer suggested that intubation and insufflation of cultures into the trachea would be a far more satisfactory method, but it was found that the long muzzle and narrow fauces of the rabbit with the small size of its larynx rendered intubation either with a hard or soft catheter extremely difficult.

Wintemitz and Hirschfelder[3] have recently succeeded in producing lesions in rabbits by this method, however, and their results have been published whilst the work here described was in progress.

Finally, the simple expedient was taken of opening the trachea at the root of the neck in a rabbit anaesthetized by chloroform, and introducing a soft rubber catheter of No. 6 or No. 7 size, with its lower end cut off. The catheter causes no respiratory distress, provided that it be not large enough to completely fill the trachea; it is passed gently downwards until its lower end engages in a main bronchus. The culture is injected by piercing the catheter with the needle of the syringe, and blowing the fluid into the lung by two puffs of a rubber insufflator attached to the external end of the catheter.

Injection by this means of 5 c.cm. of a virulent culture of pneumococci in broth caused the death of a rabbit in less than twenty-four hours with typical lobar consolidation of the whole of one lung. The solid lung sank in water, was dry and slightly granular on section; it was deep red in colour at its margin, and of greyish hue in its central portions, and a typical loosely adherent mesh of fibrinous exudate covered the pleura over its base and hinder margin. Microscopic examination showed the alveoli tensely distended with exudate in the stages of red or early grey hepatization. *Post mortem* the heart's blood swarmed with pneumococci.

If the virulence of the cultures were depressed by many subcultivations on agar or in broth it was found that the injection of 5 c.cm. of broth culture forty-eight hours' old did not cause death, although there was considerable diminution in the number of leucocytes present in the blood, the count falling to about 2,500 cells.

In such cases blood culture was negative. The rabbits were killed by chloroform on the fourth or fifth day after injection and the lesions studied. In most of the experiments massive consolidation of the greater part of a lobe was found, showing under the microscope an advanced stage of resolution.

The bulk of culture injected was found to be an important factor in determining the extent of the lesion produced. A larger area of lung was affected if 5 c.cm. of fluid containing 1 c.cm. of broth culture were injected than if 1 c.cm. of the undiluted culture were used.

Two parallel experiments are of interest as bearing on this point. The animals used were nearly all full-grown

[2] *Journ. of Path. and Bact.*, 1913.

[3] *Journ. Exper. Med.*, Baltimore, 1913, vol. xvii, p. 657.

rabbits of the same litter and approximately equal weight.

Into the first, 5 c.cm. of a very attenuated strain of pneumococci was insufflated in the manner described. The second received about 0.25 c.cm. of the heart's blood and spleen-pulp of a mouse diluted to 5 c.cm. with sterile broth; the mouse had died after twelve hours' illness of a pneumonic septicaemia. Twenty-four hours later, the first rabbit seemed a little distressed. Cultivation of the blood in both cases was negative, the leucocyte counts very low, 2,600 and 3,800 cells respectively as compared with 4,000 to 6,000 cells per cubic millimetre in the normal rabbit. Both animals died 24 hours later. The first showed a condition both macro- and micro-scopically resembling an acute bronchopneumonia affecting the whole of the right lung; the second showed massive consolidation of the lower half of the right lower lobe. In both animals, blood culture was positive *post mortem*. (Positive cultures were obtained in all fatal cases.)

Agar slopes were inoculated with a platinum loopful of each of the cultures employed. From the avirulent culture a very large number of colonies were grown within twenty-four hours, from the virulent dilution very few.

One strain of pneumococci from a single source—a fatal case of lobar pneumonia in a man of 30 years—was used in all the experiments. The virulence of subcultivations could be attenuated by subculture on ordinary media, or rapidly enhanced by passage through a feeble white mouse. Cultivation on blood agar or blood broth prepared from my own blood also served to increase virulence, but to a less degree.

Conclusions.

These and other similar experiments already appear to justify the following conclusions:

1. That lobar pneumonia may be produced by infection of the lung by way of the air passages with virulent cultures of pneumococci, and therefore this disease is probably not primarily a septicaemia.

2. That animals suffering from a lobar pneumonia may at first yield negative blood culture, but if the case progresses and terminates fatally, a positive blood culture is invariably found.

3. That animals may develop but recover from a lobar pneumonia, and, in such cases, the blood culture is persistently negative.

From these considerations it seems highly probable that lobar pneumonia is not primarily a blood infection, but that a secondary invasion of the blood stream is very prone to occur, and is of bad import.

The introduction into the lung of attenuated cultures gives rise in some cases to lesions apparently broncho-pneumonic in type, and the conclusion seems already justified that by altering the virulence of the infecting strain any variety of pneumonia—septicaemic, lobar, or bronchial—may be produced.

In certain cases, fatal in about twenty-one hours, with positive blood culture, it is found macroscopically that much collapse with some consolidation is present. Microscopically, there is evidence of an early affection of the lung by the blood stream, with secondary infection of the alveoli following rupture of infected interalveolar capillaries. The microscopic appearances exactly resemble those often found in lung lesions in cases of subacute experimental pneumonic plague, and the mechanism of infection in such cases may be similarly by way of the blood stream, and later of the respiratory passages.

The above brief account may serve to indicate the stage to which the inquiry has so far progressed.

The lesions of lobar and bronchial pneumonia have been successfully reproduced, and the type of disease can be foretold with a fair degree of accuracy if the approximate virulence of the infecting organs be known.

Subcutaneous inoculation of mice has served as a means of estimating the virulence of cultures, but there is a considerable variation in their individual susceptibility. In future experiments it is proposed to use large numbers of mice in order to eliminate this difficulty, and it is also proposed that the opsonic index of the several strains shall be tested against the blood of a standard normal rabbit.

So far as the inquiry has progressed, no information as to the nature of crisis has been obtained; as yet no similar phenomenon has been observed in any of the rabbits inoculated. The course of the disease in these animals appears to be nearly twice as rapid as in man; and this fact, together with the uncertain information which the temperature chart and leucocyte count afford in rabbits, seems to increase to some extent the difficulty of recognizing the phenomenon if it occur in them.

Further investigation may perhaps throw light on this important subject.

AN INVESTIGATION OF THE EFFECT OF NUCLEIN AND NUCLEIC ACID ON THE NORMAL ANTIBODY.

By S. PHILLIPS BEDSON, M.B., B.S.Durh.,
Research Scholar.

IT has long been known that the administration of nuclein or nucleic acid increases the resistance to infection both in man and animals, and this was at first thought to be due to the power of either body of producing a leucocytosis.

More recently Ledingham and Bulloch went into this question, investigating chiefly the effect of leucocytosis-producing substances on the opsonin content of the serum, and found that nuclein alone produced an increase in the opsonic power of the serum. In October, 1913, the scholar undertook an investigation of the effect of nuclein and nucleic acid on the normally occurring immune bodies, with a view to determining the manner in which these substances augmented the general resistance of the organism to infection, and with the hope that at the same time, by working with the simplest forms of antigen, some light might be thrown on antibody response in general. The first series of experiments performed confirmed the work of Ledingham and Bulloch, it being found that a yeast nuclein (Parke Davis; sol. No. 1) injected intravenously in rabbits in doses of 3 c.cm. produced a marked rise in the opsonic content of the serum in four hours, whereas similar injections of sodium cinnamate and pallianine (substances which both give rise to a well-marked leucocytosis) were without effect.

Time of Onset and Duration of Rise.

Experiments were next performed to determine the time of onset of this rise and its duration. The first indication of any change in the opsonic power of the serum was found to be twenty to thirty minutes after the injection; the rise was still marked eight hours later, but had completely disappeared in twenty-four hours. The most striking feature about this rise was the rapidity with which it fell on dilution and on heating as compared with rate of fall of the opsonic value of a normal serum on similar treatment. Thus in a dilution of 1 in 5 in normal saline the phagocytic index of the serum after injection usually fell below that of the normal serum, despite the fact that in the undiluted state it was twice, three, or even four times as great. An equally rapid fall was observed after heating the serums for thirty minutes at 56° C. It appeared, therefore, that there was no increase in the thermostable opsonin normally present in the serum.

Effect of Different Preparations of Nucleic Acid.

Different preparations of nucleic acid were then tested, with the result that, whilst a sodium nucleinate (Merck) was almost as active as the Parke Davis preparation, a yeast nucleic acid (Boehringer and Sohne) and a tissue nucleic acid, kindly supplied by Dr. Levene, gave no rise at all. As these two latter preparations were the purest of the four, it would appear probable that this effect was not due to the nucleic acid radicle, but to the presence of some impurity.

Effect of a Series of Injections on Opsonin Content of Serum.

The effect of a series of injections was next tested in order to see if a more stable opsonin would be produced than that which resulted from a single injection. Two preparations were employed, the Parke Davis nuclein and the Levene nucleic acid. The latter proved to have no effect either on the thermolabile or heat stable opsonins, whereas the former produced a distinct increase in the thermostable opsonin of the serum, although the opsonic power of the fresh serum was little augmented. This serum, however, when inactivated and complemented gave

a greater phagocytic index than did a normal rabbit serum. This thermostable opsonin could be completely removed from the serum by absorption with an emulsion of *Staphylococcus pyogenes aureus*, and the cocci so treated were much more readily phagocyted in the presence of fresh normal rabbit serum than were those treated with an inactive normal serum.

Effect of Nucleic Acid on the Opsonin of the Serum "in Vitro."

This question was now gone into, but, contrary to the results obtained *in vivo*, the effect of nucleic acid *in vitro* was markedly to diminish phagocytosis. Experiments showed that this was not due to any action of these substances on the leucocytes or on the cocci, but was probably to be attributed to a strong anticomplementary action, which could be readily demonstrated by means of a haemolytic system.

Nature of Response to a Single Injection of Nuclein.

Having concluded that the increased opsonic power of the serum, following a single injection, was not due to any increase on the part of the heat stable opsonins, the question arose, What was the nature of the response to a single injection? The possibility of an increase in the complement content of the serum was gone into, but this was found not to be the case. It was then thought that they were perhaps dealing with a thermolabile body of the nature of an amboceptor. It was therefore attempted to remove this body by absorbing the serum in the cold with an emulsion of *Staphylococcus pyogenes aureus*. The results of these experiments bore out to a certain extent this hypothesis, so in order to test it further an attempt was made to remove the complement from the serum by means of sensitized red-cell stromata, and to then test the opsonic power remaining in the serum. Controls with normal serums showed that the thermolabile portion of the opsonin was successfully removed by this means. After treating the serum of an injected rabbit in this manner it was found that the opsonic power of the serum fell to that of a normal serum from which the complement had been removed by red-cell stromata or which had been inactivated, but cocci sensitized with such a serum were phagocyted much more readily than those sensitized with an inactive normal serum when placed in the presence of fresh normal rabbit serum. It would appear therefore that in response to a single injection a body of true amboceptor nature is formed, which is, however, incapable of any action by itself unlike the thermostable opsonins produced by immunization. The question of the exact temperature at which this body is destroyed is now under investigation.

What is the Active Impurity in these Preparations of Nuclein and Nucleic Acid?

Seeing that this effect on the opsonin content of the serum could not be attributed to the nucleic acid radicle, it was decided to try to determine the nature of the impurity which was producing this effect.

Numerous authors have come to the conclusion that pure nucleic acid is without antigenic properties, and that those preparations which act as antigens are enabled to do so owing to the presence of some protein impurity. The usual chemical tests for protein were found to be inapplicable owing to the original colour of the solutions, and to the fact that the nucleic acid was thrown down as a heavy white precipitate by those reagents employed to precipitate proteins. It was therefore attempted to demonstrate the presence of proteins in these active preparations of nucleic acid by means of the anaphylactic reaction in guinea-pigs. This also had to be abandoned owing to the fact that the Parke Davis preparation was so toxic for the animals that controls and sensitized animals reacted alike, showing anaphylactic symptoms (convulsive symptoms, marked sudden fall in temperature, paresis of hind quarters). Finally, rabbits were immunized with the various preparations and their serums tested for complement fixation bodies. Here again difficulties arose. The nucleic acid preparations were found to be strongly anticomplementary, necessitating titration of complement in the presence of the antigen. Even when this was done several of the normal control rabbits employed at different times were found to deviate complement more strongly than did the injected rabbits, so that this method was also finally abandoned.

It is proposed now to commence with yeast, test its power of increasing the opsonic content of the serum, then prepare from it the yeast nucleo-proteins. By gradual purification this nucleo-protein is to be carried through the various stages of nuclein and impure nucleic acid up to pure nucleic acid, its effect on the antibody content of the normal serum being tested in each stage.

The question of the behaviour of the serum of the injected animal on dilution already referred to, will be gone into in more detail, and, finally, it is proposed to conclude this piece of work with a more complete study of the antibody produced in response to a single injection.

PES VALGUS, SWEATING, ETC.

By Edward G. Schlesinger, M.B., B.S.Lond.,

Research Scholar (January 1st to September 30th, 1914).

1. Investigations have been made of the pathology and treatment of that form of pes valgus known as spasmodic flat-foot. The theory that it is a protective spasm, secondary to arthritis of the tarsal joints, appears to be wrong, and it would seem that the primary condition is a spasm of peronei muscles. This has been found to be readily controlled by the injection of alcohol into the musculo-cutaneous nerve high up in the leg, followed by manipulation of the soft parts of the foot. All the usual operative and mechanical treatments for the condition, when well developed, have been tried and found inefficient compared to the method mentioned above.

2. In conjunction with Dr. Pembrey, investigations are being carried out on the subject of sweating and its relation to various influences. The apparatus used has been a specially constructed electrical hot-air bath, wherein, by a proper combination of moisture and heat, controlled by observations of the surface temperature of the skin, visible sweating of the arms and legs is readily produced. The cases investigated so far are various forms of nerve lesion, cord lesions, cases of skin grafting, as well as the influence of various drugs, etc,

3. Experiments are being carried out on the subject of adherent pericardium and pericardial reflexes. Adherent pericardium has been produced by the use of turpentine and scratching of the sac, and the animals observed for some time afterwards. A condition of chronic heart failure without myocardial changes has been observed, but further experiments are needed before any conclusion can be reached. A method of forming a new pericardium, by utilizing the omentum, is being worked out, but as yet certain technical difficulties remain to be dealt with.

4. Some preliminary work has been done with a view to attempting to produce and study hyperthyroidism in animals, by grafting in additional thyroids by means of direct vessel anastomosis.

(B) REPORTS OF GRANTEES.

A. E. Boycott, M.D.Oxon.

INVESTIGATION OF WATER DISTRIBUTION IN EXPERIMENTAL NEPHRITIS.

An inquiry has been made, in conjunction with Dr. J. S. C. Douglas, into the passage of liquid from the tissues to the blood which may be induced by the injection of strong solutions of, for example, dextrose into the circulation. It was found that the passage into the blood was slower in nephritic than in normal rabbits, as was also the subsequent expulsion of the extra liquid into the tissues. The results are in course of publication in the nineteenth volume of the *Journal of Pathology*. Subsequently attention has been paid to the composition of the liquid which may be drawn out of the tissues in this way. This investigation is still in progress.

R. A. Chisolm, M.D.Oxon.

I. THE WATER CONTENT OF THE TISSUES IN EXPERIMENTAL NEPHRITIS.

The results of this investigation have already been published in the *Journal of Pathology and Bacteriology*, vol. xviii, 1914.

II. THE REGULATION OF THE BLOOD VOLUME IN EXPERIMENTAL NEPHRITIS.

If a normal rabbit receives intravenously its estimated volume of Ringer's fluid of either normal, double, or half strength, it is found that the blood volume, as calculated from the percentage of haemoglobin, is restored to normal, both more quickly and more effectually than is the case with rabbits suffering from nephritis produced by the injection of potassium chromate, and treated in the same way. It is therefore probable that in chromate nephritis there is an alteration in the permeability of the vessel wall similar to that found by Boycott in the case of nephritis due to the injection of uranium nitrate.

The results have been published in full in the *Journal of Pathology and Bacteriology*, vol. xviii, April, 1914.

MYER COPLANS, M.D.Lond.

THE NATURE OF TOXINS AND ANTITOXINS, WITH SPECIAL REFERENCE TO ABSORPTION AND OTHER PHENOMENA BY ASBESTOS AND OTHER FINELY DIVIDED SUBSTANCES.

THE research deals with the effects of the silicates, more particularly the "asbestos" group of minerals, meerschaum, and the zeolites, both natural and synthetic, upon bacterial growth with special reference to immunity.

A. A study has been made with regard to the asbestos minerals and meerschaum on the absorption of the various toxins of tubercle, diphtheria, tetanus, and glanders, and search has been made in particular for phenomena of differential absorption, an example of which is seen in the behaviour of Ural asbestos towards Koch's old tuberculin, the proteoses, apparently non-specific and toxic, being removed before the specific anaphylactic substance.

Clinical tests are being carried out with this comparatively atoxic tuberculin both with regard to its diagnostic and therapeutic value.

Further, it has been noted that tetanus toxin is removed by the fibrous silicate from solution at a greater rate than diphtheria toxin, while in similar circumstances complement disappears more readily than haemolytic amboceptor, in the presence of fired asbestos.

B. (1) The influence on the morphology and other characteristics of various pathogenic organisms, such as *B. tuberculosis*, *B. diphtheriae*, *B. anthracis*, *and B. tetani*, by continuous growth in broth media in presence of "asbestos" minerals and other silicates, including the zeolites, has been studied.

B. tuberculosis.—In the presence of asbestos fibre racemose forms, non-acid-fast in character, have been observed, together with apparently normal forms. On inoculation into guinea-pigs a general tuberculosis ultimately appears, all the organisms in the tissues apparently being acid-fast.

The expressed and filtered broth from this series of cultures is found to be comparatively proteose-free, while it yields a specific cutaneous action with tuberculous subjects.

B. diphtheriae.—A toxigenetic strain when cultured upon broth to which has been added any of the "asbestos" group of minerals, meerschaum, or the zeolites, fails to produce toxin in appreciable quantity under conditions in which a control broth culture yields a toxin containing over 100 minimum lethal doses per c.cm.

After growth upon broth in the presence of asbestos-fibre a secondary culture of the organism upon normal broth yields a toxin which is diminished in strength by over 90 per cent. as compared with the original strain.

In similar circumstances a slightly toxigenetic strain derived from a case of clinical diphtheria of virulent type has been converted into a strain which now fails to produce toxin in appreciable quantity, although its rate of growth in nutrient media and its morphological characteristics appear to be unchanged.

In prolonged culture in presence of asbestos fibre in broth a number of long thread and branching forms appear. The organism maintains its vitality in such cultures for over a year.

B. anthracis.—The most notable change has been found in a three months old culture of a virulent variety upon broth containing sodium zeolite. The bacillus becomes markedly pleomorphic, coccoid and even sporothrix-like forms being found. Some of these forms have been isolated. Spore formation is scanty, and the virulence is greatly diminished.

(2) A possible interpretation of these results may be found in terms of gradual ionic substitution. With regard to the zeolites, bases of lime and magnesia in solution are replaced by those of soda or of potash derived from the zeolite, while under certain conditions the reaction is reversible. Salts of iron become oxidized and eventually are precipitated from solution upon the surface of a manganese-zeolite as ferric hydroxide.

In the case of the asbestos group of minerals the comparative basicity of the silicate under investigation may prove of importance in the practice of differential absorption from a mixture of substance. Thus, of the serpentine group, *chrysolite-asbestos* from Quebec, which is comparatively basic in character, may exercise a greater affinity for an acid-protein than would *actinolite*, a member of the hornblende series, which is comparatively an acid silicate, and might be therefore expected to manifest a preferential absorption towards alkali-protein.

It has been found in the case of a dilute solution of Witte's peptone placed in contact with Ural asbestos fibre that the phenomenon of absorption is accompanied by a marked rise in electro-conductivity of the liquid, coupled with a complete disappearance of the peptones and proteoses from the solution. A possible interpretation may be found in the increased rate of degeneration of the surface of the absorbing fibre which passes into the solution in the form of electrolytes.

E. W. HEY GROVES, M.D., M.S.Lond., F.R.C.S.Eng.

THE UNION OF BONES IN THE OPERATIVE TREATMENT OF FRACTURES.

MR. HEY GROVES reported that he had published the two following papers:

(i) An experimental study of the operative treatment of fractures. (Vide *British Journal of Surgery*, vol. i, No. 3, 1914.)

(ii) Hunterian lecture on the experimental principles of the operative treatment of fractures and their clinical application, delivered before the Royal College of Surgeons of England on February 6th, 1914. (Reprinted from the *Lancet*, February 14th and 21st, 1914.)

W. D. HALLIBURTON, M.D., F.R.C.P., F.R.S.

CEREBRO-SPINAL FLUID.

THIS research has been continued in conjunction with Professor W. E. Dixon, F.R.S. One paper relating to the secretion of the fluid has already appeared in the *Journal of Physiology*; a second, on the pressure of the fluid, is in the press, and further papers are in preparation. The main outcome of the work so far published is that the fluid is secreted by the epithelium of the choroid plexuses; this may be stimulated by the intravenous injection of extracts of the choroid gland, and of the brain, but not by the ordinary lymphagogues. Carbonic acid and the volatile anaesthetics in small doses also cause an increased secretion. The pressure of the fluid is influenced to a small extent by the variations in general arterial and venous pressure, but is mainly an independent secretory pressure, which is not secondary to changes in blood pressure.

E. L. KENNAWAY, M.B., B.Ch.Oxon.

1. The accuracy of Shaffer's method for the estimation of acetone bodies in urine has been tested, and this method has been combined with Scott-Wilson's procedure for the estimation of acetone. (Vide *Biochemical Journal*, July, 1914.)

2. An investigation has been made of the output of acetone bodies in diabetes and in other conditions, in conjunction with the work of Drs. Pembrey and Poulton upon the alveolar carbon dioxide pressure. (Vide *Journal of Physiology*, vol. xlvii, x.)

3. A number of estimations of the proportions of the different acetone bodies excreted in various forms of acidosis in man have been made, and the results are now ready for publication.

Kate Knowles, M.B., B.S.Lond.

OSTEOMALACIA.

The grantee has only just collected together instruments for examining blood pressure, blood, and urine—the latter too recently to use—and is further handicapped by the fact that her work lies among a people—the Kashmiri—from whom it is almost impossible to extract reliable information, for they seem unable to give straight answers to straight questions. They know nothing of self-discipline, are very impatient, and are therefore difficult subjects on which to carry out prolonged and careful observations, especially if they are really suffering; with coaxing and bribing they can now be held for one or more months.

The grantee has investigated (since January, 1914) more or less thoroughly, according to the will of the patient, 27 cases. These include only marked acute cases. They are Hindu and Mohammedan women, living in the crowded, insanitary city of Srinagar.

Their diet is mainly rice, with vegetables. The Hindus may eat mutton and fish, but no other meat.

Children marry young—Hindus from 8 years of age upwards—but sexual intercourse is not supposed to take place until menstruation is well established, usually not before the girl is 16. Immorality, however, is said to be rife among both sexes, possibly due to the fact that the wife always goes to her own home for several months in the year. Menstruation usually normal. The most active exercise they have is beating the rice for the two daily meals. But both Hindus and Mohammedans walk tremendous distances.

One child is suckled until the next is born, if the mother has milk. There is usually an interval of over a year between the pregnancies.

Nearly all cases of osteomalacia suffer from pyorrhoea alveolaris and tetany, though these two diseases are common among all the women.

Rickets is rare among the children. The grantee regards the two diseases as quite distinct, and rejected two cases which would be usually considered osteomalacia, as they occurred in young unmarried girls, and had a history of lameness dating from childhood.

Among the 27 cases there have been 4 Caesarean sections since Christmas; from 3 of these one ovary was removed and sent to Dr. Blair Bell, who is kindly helping with the investigation. The veins were markedly congested and tortuous. So far it has not been possible to obtain any other specimens. The centrifugalizer arrived too recently for investigation of calcium in the urine. Examinations of blood will be commenced shortly.

Pelvic measurements all show marked contraction.

	I.	II.	III.	IV.
Interspinous	6½ in.	7½ in.	7½ in.	6½ in.
Intercristal	8½ in.	8½ in.	8¼ in.	8½ in.
External conjugate	6½ in.	6¾ in.	6½ in.	*7 in.

* The vertebrae are so sunk together that this measurement is not a reliable one.

The outlet is, in many of the worse cases, so narrowed that the grantee could only introduce one finger at the back by pressing back the perineum (and her fingers are very thin) not far enough in to reach the promontory. The *blood pressure* is low, usually 100; the *pulse* rapid, about 100.

Treatment.

It is made a rule to keep the patients at rest on a diet from which meat and eggs, though allowing fish, are excluded, and give them syr. ferri iod. before putting them on any special drug, because in the past the grantee found marked improvement from so doing. A local Hindu woman, who has a reputation as a healer of osteomalacia, also allows fish only.

Of extracts of ductless glands the following have been used: Pituitary, thyroid, thymus, suprarenal, ovarian, in the form of tablets. Hypodermic injections of pituitrin were tried, but the patient objected so strongly that they were given up.

Each drug was given to two patients at the same time. The only one giving at all satisfactory results so far is pituitary extract; there has not been enough time on patients to be at all certain as yet about the others.

In taking the blood pressure, as far as possible one time of day has been kept to, and physical or mental strain for at least one hour previously guarded against.

Action of Drugs.

Pituitary Extract.

This was tried on three cases with markedly beneficial results.

1. A Mohammedan. Symptoms appeared after birth of first child three years previously. She was an absolute cripple, legs and thighs markedly flexed, with contraction of ham strings. She was given in her home pituitary extract, gr. ii, twice daily for two months, with marked disappearance of all pain, but she steadily refused to come into the in-patient department for treatment of the contractures.

2. A Mohammedan, on whom Caesarean section was performed, came into the dispensary as in-patient on March 22nd, three weeks after operation. She was unable to stand or extend her thighs.

Date.	Blood Pressure.	Pulse.	Temperature.	Treatment.
March 24th ...	110	88	Between 97.4° and 98.4° daily	Pituitary extract gr. ii daily
,, 25th ...	112	80		,, ,,
,, 26th ...	112	80		,, ,,
,, 28th ...	112	80		Pituitary extract gr. iv daily
,, 31st ...	136	88		,, ,,
April 1st ...	130	78		,, ,,
,, 3rd ...	150	78		,, ,,
,, 6th ...	154	80		,, ,,
,, 13th ...	160	88		,, ,,

There was marked lessening of pain; she walked on the 6th, and ran away on the 13th.

3. Hindu. Had four children, lame after the second, three years ago; unable to walk for one year and while carrying the last child. The grantee was called in when

Date.	Treatment.	Blood Pressure.	Pulse	Result.

,, 20th	,, ,,	150	80	
,, 22nd	,, ,,	150	84	
,, 25th	Patient had not taken medicine for 2 days; medicine resumed	138	80	Patient walked more firmly and briskly, but still complained of pain in limbs.
,, 28th	—	144	76	
,, 30th	—	152	92	
May 2nd	Pituitary extract gr. iv daily	132	96	
,, 4th	—	140	76	Patient markedly improved, walked quite quickly, though, of course, there was still deformity.
,, 6th	Pituitary extract gr. iv daily	124	80	
,, 8th	,, ,,	128	88	
,, 11th	,, ,,	122	88	
,, 13th	,, ,,	110	84	
,, 15th	,, ,,	110	84	
,, 18th	,, ,,	120	96	

the patient was in labour, got her away and did a Caesarean section. No ovary removed. Veins extremely congested and tortuous. Began treatment with pituitary extract on March 12th, three weeks after operation. Patient a little doubled up mass, shrieking when touched.

Patient had dysentery, so treatment stopped.

Ovarian Extract.

This was tried on two patients for one month; in both there was a slight rise of blood pressure to 10 mm., but no change in the pulse, and no marked lessening of pain so grantee tried—

Suprarenal Extract.

CASE I.—Mohammedan; has had three children, last three years ago; is now pregnant. Lame for the last three years; when admitted unable to straighten limbs, and, as *in all these cases*, shrieking with pain when touched.

Date.	Treatment.	Blood Pressure.	Pulse.	Result.
May 1st ...	Suprarenal gland gr. v daily	120	94	Some slight diminution in pain, but nothing marked.
,, 4th ...	,, ,,	106	94	
,, 6th ...	,, ,,	106	88	
,, 8th ...	,, ,,	106	96	
,, 13th ...	,, ,,	100	100	
,, 14th ...	,, ,,	98	100	
,, 15th ...	,, ,,	98	100	
,, 18th ...	,, ,,	98	100	
,, 20th ...	,, ,,	92	100	

Suprarenal will now be stopped and pituitary extract given if the patient refuses to have ovaries removed.

CASE II.—Mohammedan. This patient was previously on ovarian extract.

Date.	Treatment.	Blood Pressure.	Pulse.	Result.
May 1st ...	Suprarenal gland gr. v daily	104	80	No marked diminution of pain.
,, 4th ...	,, ,,	104	80	
,, 6th ...	Increased to gr. x daily	104	76	
,, 8th ...	,, ,,	108	76	
,, 14th ...	,, ,,	110	76	
,, 15th ...	,, ,,	100	80	
,, 18th ...	,, ,,	92	80	
,, 20th ...	,, ,,	92	88	

Pituitary extract will now be tried on this case.

Thymus Extract.

The two cases which had been on this for one month showed no signs of improvement nor change in pulse or blood pressure.

Thyroid Extract.

This was tried on one case only; she ran away after a week's treatment. She said she was much better, but the improvement began with syr. ferri iodidi and rest.

W. MACADAM, M.B., Ch.B.Glas.

THE result of this grantee's research into (1) the hepatic insufficiency as estimated from the nitrogen partition of urine, has been published in the *Journal of Pathology and Bacteriology*, vol. xviii (1913), and (2) the significance of the urinary excretion of creatin and creatinin, has been published in the *Practitioner* for April, 1914.

NATHAN MUTCH, M.B., B.C.Camb.

VARIATIONS IN THE EXCRETORY POWERS OF THE KIDNEYS IN HEALTH AND DISEASE.

1. Experiments have been performed which demonstrate the presence of an ileal flora capable of forming β iminazolylethylamine from histidine in a small group of constipated subjects. These same patients exhibit subnormal blood pressures. The bacteria found in the ileums of constipated patients with normal or raised blood pressures are unable to bring about this chemical change. β iminazolylethylamine was shown to bring about a fall in blood pressure when taken by the mouth. The significance of this observation is that it correlates the production of an intestinal toxin with the presence of the symptoms of poisoning by this toxin in the same patient.

2. More recently this grantee has isolated from the urine of constipated subjects, pure crystals of parahydroxyphenyl-acetic acid which is excreted when tyramine is taken by the mouth. This observation suggests the formation of a toxic substance, tyramine, from the proteolytic product tyrosine, by intestinal bacteria. Parahydroxyphenyl-acetic acid is readily detected by applying Millon's test to an ethereal extract of acidulated urine.

3. In conjunction with Mr. E. J. Cooke, the presence of urobilin in the urine of patients suffering from heart failure who are not jaundiced has been shown to be independent of any coincident pigmentation, and has been correlated with the tenderness of the liver.

4. A considerable number of unfinished experiments have been carried out to investigate the relationship between the excretion of urea by the kidney and the concentration of that substance in the blood. A corrected coefficient of the excreting power of the kidney for this compound has been found.

5. In conjunction with Mr. Ryffel and Dr. Eyre, an attempt is being made to correlate the bacteriology of the small intestine, the chemistry of the urine and stomach, the clinical signs and symptoms, the radiographic appearances, and the operation findings in patients suffering from constipation.

DAVID ORR, M.D.Edin.

THE INFLUENCE OF TOXINS ON THE CENTRAL NERVOUS SYSTEM.

IN this series of experiments conducted by Dr. Orr in conjunction with Dr. Rose, the effect on the spinal cord of a bacterial intoxication was studied, and the abdominal cavity chosen as the site of experiment for three reasons:

1. This site is the most suitable for an experiment in which one wishes to exclude infection of the lymph system of the spinal nerves.

2. To reproduce as closely as possible a gastro-intestinal intoxication, and observe the effects upon the spinal cord.

3. To ascertain in how far such toxic infection affected the sympathetic ganglion chain.

Celloidin capsules containing a broth culture of the *Staphylococcus pyogenes aureus* were placed in various parts of the abdomen, where they became attached to the various viscera by adhesive exudation. The experiments were conducted upon rabbits and dogs.

The changes found in the spinal cord were as follows:

1. The most highly developed structures, the nerve cells, suffer least of all.

2. There is primary degeneration of the myelin sheath round the cord margin and along the postero-median septum.

3. The myelin degeneration is greatest in the upper part of the cord.

4. There is oedema of the cord.

5. The perivascular neuroglia is actively proliferating.

6. The vessels are dilated and congested, are hyaline, and contain thrombi of the same nature.

The appearances, therefore, are characterized for the most part by *degenerative* changes, and differ very widely from those found in lymphagenous infections, where the morbid phenomena are of an *inflammatory* type, and all the fixed tissues are in a state of active proliferation.

M. S. Pembrey, M.D., M.A.Oxon.

THE INFLUENCE OF NARCOTICS AND ANAESTHETICS ON METABOLISM.

In conjunction with Drs. Kennaway and Poulton a preliminary account of further observations in acidosis in diabetes has been published (*Proc. Physiol. Soc.*, October 18th, 1913; *Journal of Physiol.*, vol. xlvii).

Observations upon the pulmonary ventilation and gaseous exchange in man during intratracheal anaesthesia have been made in conjunction with Dr. Shipway. A preliminary account of this work was published in the *Trans. Roy. Soc. Med.*, February 6th, 1914.

E. P. Poulton, M.B., B.Ch.Oxon.

OBSERVATIONS ON CO_2 IN ALVEOLAR AIR OF DIABETICS.

This grantee read a paper on the above subject in the Section of Medicine of the Royal Society of Medicine, a report of which appeared in the British Medical Journal of May 9th, 1914.

J. H. Ryffel, B.C., M.A.Camb.

LACTIC ACID.

The formation of lactic acid in the alimentary canal in accordance with diet and the nature of the organisms present is being investigated. Stools that are not acid have as yet been found to contain only traces of lactic acid, while acid stools frequently contain considerable quantities; thus the acid stools of an infant, whose diet contained a large proportion of carbohydrate, contained over 1 per cent. of lactic acid in the wet stool, the amount of lactic acid and the acidity of the stool to phenolphthalein being nearly equal. When the organisms are grown in dextrose peptone solution, the highest yield of acid and lactic acid is given by a Gram-positive bacillus similar to the Oppler-Boas bacillus, which occurs occasionally in faeces and when present will overgrow the other organisms in this medium. Faecal streptococci also produce considerable acid.

Observations are being made, with Dr. T. B. Heaton, on the chloride in urine and serum concurrently both in normal and pathological cases. The observations are not yet sufficiently complete for generalization, but there is clearly a much less definite relation between the chloride in urine and in serum than that which hold for urea.

On the influence of anaesthetics and narcotics on respiration and metabolism, studied with Dr. M. S. Pembrey, a preliminary account will shortly be published.

W. L. Symes, M.R.C.S.

ACTIVITY AND STABILITY OF TINCTURE OF DIGITALIS.

The result of this investigation was published in the British Medical Journal of June 20th, 1914, p. 1343 *et seq.*

W. W. C. Topley, M.B., B.C.Cantab.

CHANGES PRODUCED IN THE CENTRAL NERVOUS SYSTEM OF MONKEYS BY THE DIRECT INOCULATION OF THE SPIROCHAETA PALLIDA INTO THE CEREBRO-SPINAL CANAL.

The following experiments have been carried out in conjunction with Dr. F. W. Mott:

(*a*) Inoculation of a culture of the *Spirochaeta pallida* into the cerebro-spinal canal of a rhesus monkey.

(*b*) A similar inoculation with the cerebro-spinal fluid from a patient suffering from active syphilitic meningitis.

(*c*) The subdural inoculation of an emulsion of the cerebral cortex obtained *post mortem* from a case of general paralysis, and which was shown to contain numerous spirochaetes.

Two other monkeys are awaiting inoculation with suitable material.

The results so far have been entirely negative.

British Medical Association.

EIGHTY-SECOND ANNUAL MEETING, ABERDEEN, JULY, 1914.

The Eighty-second Annual Meeting of the British Medical Association will be held in Aberdeen in July, 1914. The President's Address will be delivered on Tuesday, July 28th, and the Sections will meet on the three following days. The Annual Representative Meeting will begin on Friday, July 24th, at 10 a.m.

Honorary Local Treasurer—
George Williamson, M.B.,
256, Union Street, Aberdeen.

Honorary Local Secretaries—
Thomas Fraser, M.B.,
16, Albyn Place, Aberdeen.
Fred. K. Smith, M.B.,
7, East Craibstone Street, Aberdeen.

PROVISIONAL PROGRAMME.

The following is the provisional time-table for the Aberdeen Meeting:

Friday, July 24th.
10 A.M.—Annual Representative Meeting.

Saturday, July 25th.
9.30 A.M.—Representative Meeting.

Monday, July 27th.
9.30 A.M.—Council Meeting.
10 A.M.—Representative Meeting.

Tuesday, July 28th.
9 A.M.—Exhibition of Surgical Instruments, Drugs, etc. The Exhibition will remain open until 6 p.m. on this and the three following days.
9.30 A.M.—Representative Meeting.
2 P.M.—Annual General Meeting.
*8.30 P.M.—Adjourned General Meeting, President's Address.

Wednesday, July 29th.
*9 A.M.—Religious Services.
10 A.M. to 1 P.M.—Sectional Meetings.
12.30 P.M.—Address in Medicine.
1.15 P.M.—Irish Medical Schools' and Graduates' Association, Luncheon.
2.30 P.M.—Secretaries' Conference, followed by Dinner.
3.30 P.M.—Garden Party by Town Council in Duthie Park.
*8.30 P.M.—Reception by University in Marischal College.

Thursday, July 30th.
8 A.M.—National Temperance League Breakfast.
9 A.M.—Council Meeting.
10 A.M. to 1 P.M.—Sectional Meetings.
12.30 P.M.—Address in Surgery.
7.30 P.M.—Annual Dinner.

Friday, July 31st.
9 A.M.—Council Meeting.
10 A.M. to 1 P.M.—Sectional Meetings.
*12.30 P.M.—Graduation Ceremony in Marischal College.
6 P.M.—Annual Exhibition closes.
8 P.M.—Popular Lecture, Marischal College.
*8.30 P.M.—Reception by Branch (Music Hall).

Saturday, August 1st.
Excursions.

*Academic dress or uniform should be worn on these occasions. Members desiring to have robes provided for them at Aberdeen should communicate with Messrs. Ede, Son and Ravenscroft, 93 and 94, Chancery Lane, London, W.C.; Mr. William Northam, 9, Henrietta Street, Strand, London, W.C.; or Messrs. L. Y. and J. Nathan, 4, Hardman Street, Liverpool.

THE SECTIONS.

The scientific business of the meeting will be conducted in sixteen Sections, which will meet on Wednesday, July 29th, Thursday, July 30th, and Friday, July 31st.

The President, Vice-Presidents, and Honorary Secretaries of each Section constitute a Committee of Reference for that Section, and exercise the power of inviting, accepting, or declining any paper, and of arranging the

order in which accepted papers shall be read. Communications with respect to papers should be addressed to one of the Honorary Secretaries.

A paper read in the Section must not exceed fifteen minutes, and no subsequent speech must exceed ten minutes.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL *without special permission.*

SECTION OF MEDICINE.

In addition to the discussions on headache to be introduced by Dr. Harry Campbell, on artificial pneumothorax in pulmonary tuberculosis to be opened by Dr. Rist (Paris), and the joint discussion with the Section of Diseases of Children on the diagnosis of chronic pulmonary tuberculosis in infancy and childhood (see SUPPLEMENT, July 4th, page 4), it is proposed that the following papers shall be read:

BROWN, D. Durward (Harrogate). Rheumatoid Arthritis: Comparison of Medical and Surgical Standpoints.
EVE, F. C. (Hull). (1) Acute Atrophy of the Thyroid. (2) Transient Babinski's Sign in Functional Affections.
GRIFFITH, T. Wardrop (Leeds). On Two Cases of Patency of the Ductus Arteriosus—a Lantern Demonstration.
HAIG, William (Crieff). Rapid Relief in Acute Lumbago by Manipulation and Active Movement.
LISTER, A. H. (Aberdeen). On the Diastase Reaction, with Special Reference to its Presence in the Urine of a Case of Ruptured Duodenum.
MCKENDRICK, J. S. (Glasgow). Splenectomy in Relation to the Treatment of Anaemia.
PHILLIPS, L. P. (Cairo). (1) An Acute Case of Myelaemia (Splenomedullary Leukaemia) in a Child Treated with Benzol. (2) Banti's Disease associated with Diabetes.
TURNER, W. Aldren (London). The Outlook in Epilepsy.
WOODCOCK, H. de Carle, and CLARE, J. A. M. (Leeds). Artificial Pneumothorax.

SECTION OF NEUROLOGY AND PSYCHOLOGICAL MEDICINE.

The following note indicates the line that will be taken by the openers of the discussion on the importance of the unconscious in psycho-pathology:

Dr. JUNG: The unconscious may be defined as "the sum of all those psychological events which are not apperceived." It contains all the psychic events which are unable to pass through the threshold of consciousness because of their lack of the necessary intensity. As an illustration of the unconscious, take the case of a merchant who, according to his conscious view, is happily married, successful, self-respecting, hard-working, enlightened, artistic, public-spirited. But, though unaware of it himself, he is also careless, indifferent, untrustworthy (for example, he is careless over his wife's requests, minimizes his income to income tax authorities, has misgivings about transactions on Fridays, etc.). The latter are compensating unconscious vices, and there may exist in him also unconscious compensating virtues, but the effect of either is liable to be influenced by essential hereditary dispositions, as also by the existence of motives for virtuous or vicious actions. Still the general result of the functioning of the unconscious in normal individuals is to produce a balance, all extreme conscious tendencies being toned down through effective opposite impulses in the unconscious. This is not the case in abnormal persons. In them the functioning of unconscious processes breaks through into the conscious mind in an abnormal manner and disturbs the adaptation of the individual to his environment. A normal person can unconsciously utilize his unconscious psychic tendencies to correct any one-sided conscious attitude, but the abnormal individual cannot do this; he even increases his one-sidedness by defending himself against his own compensating influences, and the result is a great lack of harmony between his conscious and unconscious attitudes. The unconscious begins to intrude violently on his conscious mental processes, and does so in forms which are altogether unacceptable to him so far as his conscious mind is concerned. This unacceptability of form is due to the distortion inevitably undergone by the compensating influence before it can make headway against the resistance of his unconscious mind, and to the necessity of the compensating influence presenting itself in the language of the unconscious—that is to say, in psychic material of the most heterogeneous and fantastic nature. The author also deals with Liebnitz's "perceptions insensibles," Kant's "shadowy conceptions," Freud's "Symtomhandlungen," and the latter's views as to the help offered by study of dreams in understanding the unconscious.

Dr. ERNEST JONES: The term "unconscious" should denote that region of the mind of which the subject is either temporarily or permanently unaware. The unconscious mental processes that can be experimentally demonstrated have been termed "subconscious" by Janet, "co-conscious" by Prince, and "pre-conscious" by Freud, and they contribute a great part of the structure of delusions, hallucinations, and other insane productions. It has long been suspected that still more buried mental processes exist, and by means of his psycho-analytic method Freud has been able to penetrate into this region, which he calls the "unconscious proper." Studies by this method have shown the etiological importance of emotional conflicts in general and of infantile and sexual factors in particular. This knowledge has afforded a consistent interpretation of manifestations previously incomprehensible, and revealed their coherent structure; it has determined the mechanisms causing their apparent unintelligibility, and bridged over the gap between the normal and abnormal by demonstrating that the same processes go on in both. Finally, it has provided a consistent guide for therapeutic efforts, which has already proved of the highest value in the field of the psychoneuroses.

SECTION OF OBSTETRICS AND GYNAECOLOGY.

Dr. ARCHIBALD DONALD has sent the following outline of his introduction to the discussion on the treatment of fibromyomata of the uterus:

(1) *Expectant treatment* should now be given up in all cases of fibroids causing symptoms, save in exceptional cases. Additional experience confirms the view arrived at some years ago that the climacteric does not always bring relief. The tumours may not disappear, and may not even diminish. Old age may cause complications from changes in position or from degenerations of the tumours. (2) *Palliative treatment* is not discussed. (3) *Operative treatment.* (i) Vaginal operations are only advised in exceptional cases (polypoid tumours projecting through or felt through a dilated cervix, and especially sloughing polypi). Vaginal hysterectomy should be abandoned. (ii) Abdominal operations. (*a*) Double oöphorectomy for fibroids is now given up. (*b*) Myomectomy should always be performed, if possible, in women of child-bearing age. (*c*) Hysterectomy—either partial or total. The writer's personal bias is toward the subtotal method. The risk of cancer in the cervix after this operation is not worth considering. The mortality of abdominal hysterectomy is discussed, and the opinion is expressed that it is one of the safest of operations in abdominal surgery. The mortality seems to bear some relation to the age of the patient. Some points of technique are briefly discussed. Technical difficulties are chiefly met with in cervical fibroids, and in tumours with intraligamentous development. The writer believes that it is better as a rule to remove both ovaries. If they are left they may cause trouble by subsequent cystic degeneration, or by becoming adherent to the pelvic scar. Reasons are given for the opinion that the symptoms of the artificially induced climacteric are not so severe as is commonly supposed. The chief danger up to recent years was thrombosis and embolism in patients profoundly anaemic, but has become a less serious risk with the observance of scrupulous asepsis. The writer holds strong views on the *x*-ray treatment of fibroids. He classifies the objections to this treatment under the following heads: (1) Difficulties in diagnosis—mistakes are not uncommon (*a*) in cases of pelvic inflammation; (*b*) in cases of ovarian and tubal disease associated with uterine fibroids; (*c*) in cases of solid or tense ovarian cysts; (*d*) in sarcomata; and (*e*) in adenomata of the uterus. (2) Sufficient time has not elapsed to show what troubles may ultimately be caused by later changes in the tumours after the haemorrhage has been stopped; its seems probable that many tumours which seem to have been successfully treated by *x* rays will cause serious trouble in the future. (3) The risks of operations undertaken for degenerative or other changes after the climacteric are much greater than in operations for fibroids which are still active. In favour of operative or contrasted with *x*-ray treatment it is noted: (i) The mortality of the

operation in cases which are suitable for *x*-ray treatment (uncomplicated fibroids) is now very small; the mortality of *x*-ray treatment cannot be estimated for many years yet. (ii) The cases in which operation was most dangerous (profound anaemia) are now undertaken with little risk if the most rigid asepsis is observed. (iii) The patient after operation is once and for all relieved of all anxiety concerning the tumour.

SECTION OF OPHTHALMOLOGY.

Additional papers:

EDRIDGE-GREEN, F. W. An Analysis of the Results of the New Sight Tests of the Board of Trade.
GRIFFITH, A. Hill. Cases of Late Infection after Elliot's Operation.
HARMAN, N. Bishop. On the Necessity for a Definite Scheme of Co-operation for the Blind Schools of the Country.
MARSHALL, Devereux. Demonstration of a Simplified Edridge-Green Lantern (for Dr. Harrison Butler).
RAMSAY, Maitland. Epidiascopic Display of Colour Photographs.
WILSON, J. A. The Factor of Heredity in Short Sight.

SECTION OF SURGERY.

Additional paper:

FULLERTON, Andrew. Treatment of Two Cases of Intravesical Growth by the High-frequency Current.

RECEPTION ROOM.

THE reception room will be open during the Annual Meeting in the Advocates' Hall, Broad Street, Aberdeen, and members are advised to call there as soon as possible after their arrival in Aberdeen. They will there find full information at their disposal and will be able to obtain a copy of the *Daily Journal*.

ACCOMMODATION IN ABERDEEN.

A LIST of hotels and lodgings available in Aberdeen during the Annual Meeting is published in the advertisement pages (6 and 7) of this issue. Members desiring further information on this subject are asked to communicate with Dr. F. Philip, Honorary Secretary of the Hotels and Lodgings Committee, 29, King Street, Aberdeen.

At a recent meeting of the General Committee, consisting of influential citizens, the intention to give a hearty welcome to members of the Association was made evident, and a very large amount of private hospitality is likely to be offered. The Local Executive Committee hopes that members will not be led by the answers they may get from some of the hotels to suppose that the accommodation available in Aberdeen is filled up; any member who has difficulty in finding accommodation should not hesitate to communicate either with Dr. F. Philip, as above, or with Dr. Thomas Fraser, the other honorary local secretary, at the same address.

ARRANGEMENTS FOR LADIES.

A COMMITTEE of ladies has been formed to look after the comfort and interests of ladies accompanying members to Aberdeen. The Aberdeen Medico-Chirurgical Society has granted the use of its rooms at 29, King Street, as reception rooms for ladies from July 24th to 31st. There will be provided a rest-room, a writing-room, a tea-room, and a dressing-room. There will also be an office in the building where information regarding ladies' entertainments and motor drives will be given and tickets supplied. A member of the Ladies' Committee has given the use of her flat at 245, Union Street, where ladies living out of the town may dress for the evening entertainments. It is hoped that a corps of lady guides will be available for the assistance of visitors. For further particulars see SUPPLEMENT, July 4th, p. 11.

RELIGIOUS SERVICES.

THE annual service for the Association will be held in the West Parish Church of St. Nicholas (Church of Scotland) at 9 a.m. on Wednesday, July 29th. At the same hour a Roman Catholic service will be held in St. Mary's Cathedral (celebrant, the Bishop of Aberdeen; preacher, the Right Rev. Monsignor Meany), and a service of the Episcopal Church in Scotland in the Cathedral Church of St. Andrew's. Collections at these services will be made on behalf of the Royal Medical Benevolent Fund.

THE JOURNEY TO ABERDEEN.

Special Vouchers.—Railway facilities similar to those offered in previous years will be available this year—that is to say, return tickets, valid from July 22nd to August 3rd, will be issued at a single fare and a third on the presentation of a voucher, which will be supplied, to members who intend to go to Aberdeen, by the Financial Secretary and Business Manager, British Medical Association, 429, Strand, London, W.C., on receipt of the notification form. A separate voucher is required for each passenger.

Tourist Tickets.—The attention of those who intend to travel to Inverness or other places north of Aberdeen is drawn to the tourist ticket arrangements. The advantage of a tourist ticket is that it is available for six months, and the holder has the privilege of breaking the journey at many places *en route*. The tourist ticket from London to Inverness costs £3 3s., third class. In many instances a member travelling from England may find it more advantageous to take a tourist ticket than to make use of the special voucher.

London to Aberdeen by Sea.—Members travelling from the south may like to be reminded that they can make the journey from London by sea. The boats of the Aberdeen Steam Navigation Company, which are lighted by electricity and in every way well appointed, sail from Aberdeen Wharf, Limehouse, E., every Wednesday and Saturday (see advertisement, page 60). The return fares, available for six months, are—first cabin 45s., second cabin 25s.; private cabins can be obtained for an extra fee. A boat will leave on Wednesday, July 22nd, at 11 a.m., and on Saturday, July 25th, at 1 p.m. Further particulars can be obtained on application to the company at Aberdeen Wharf, Limehouse, or the City Passenger Agency, 25, Cannon Street, E.C.

RAILWAY FACILITIES FOR MEMBERS STAYING IN THE NEIGHBOURHOOD OF ABERDEEN.

DURING the meeting reduced fares, with a minimum of 1s., will be granted to places within a radius of fifty miles from Aberdeen. Members who propose travelling to and from Aberdeen daily should use the first half of the ticket on the first journey and the return half on the last journey; the reduced fares for the intermediate journeys will be granted on production, at the time of booking, of the card of membership.

Weekly Season Tickets.

Members staying at Banchory or Cruden Bay can obtain season tickets enabling them to travel to and from Aberdeen daily during the week of the Annual Meeting at the following rates: Cruden Bay, 10s.; Banchory, 8s. 8d. The season tickets will be issued from intermediate stations at proportional rates.

On the Caledonian Railway to Stonehaven and intermediate stations, during the meeting, return tickets will be issued at Aberdeen to places where members wish to reside. These tickets will be available for the day of issue or following day, or from Saturday to Monday, at a single fare and a third for the double journey, minimum 1s. Season tickets are also available for more than one journey, at a charge of not less than the accumulated fares per day as above, the minimum being 1s. a day.

ANNUAL EXHIBITION.

THE annual exhibition of surgical instruments, drugs, foods, etc., held during the annual meetings of the British Medical Association, will be arranged this year in the Marischal College, where also the Sections will meet, where the General and Representative Meetings of the Association will take place, and where the Addresses in Medicine and Surgery will be delivered. The exhibition on this occasion will, therefore, occupy a central and convenient position, and members will have an excellent opportunity of inspecting the exhibits.

GARDEN PARTIES.

IN addition to the garden party to be given by the Provost and Town Council of Aberdeen in Duthie Park on the afternoon of Wednesday, July 29th, garden parties will be given at the Deeside Hydropathic, which has a nine-hole approaching and putting course, and

tennis, croquet and bowls; at Inchmarlo House, on the north bank of the Dee about two miles beyond Banchory, which has first-class provision for tennis; at Parkhill House on the Don, surrounded by fine woods and within easy reach of three small lochs; at Banchory House, on a beautiful sweep of the river Dee about a mile beyond the historic bridge of Dee; and at Nordrach-on-Dee, which has extensive and beautiful grounds.

GOLFING ARRANGEMENTS.

THE competition for the Ulster Cup will be played over the Royal Aberdeen Golf Links, Balgownie, Bridge of Don, on Thursday, July 30th, beginning at 9 a.m. Intending competitors are requested to send their names and addresses along with their club handicap to Dr. H. do M. Alexander, 29, King Street, Aberdeen. The time for starting will be as nearly as possible that selected by the competitor, but late applicants may have to play at any unappropriated time, as the time-sheet must be rigidly adhered to. Other facilities offered by this and other clubs were mentioned in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of July 4th.

EXCURSIONS.

Alterations.

OWING to the difficulty in the guaranteeing of numbers, catering and transport arrangements, certain alterations in the excursions announced in the SUPPLEMENT of July 4th will be made.

The excursions to Grantown and Speyside on Wednesday, July 29th, and Saturday, August 1st, have been cancelled. The ordinary excursion for the public on those days leaves Aberdeen at 1 p.m. and arrives back at Aberdeen at 10.15 p.m. The fare is 2s. 6d., and luncheon can be obtained on the train at 2s. a head for a number limited to 72. Tickets can be obtained at the railway station. Certain alterations are being made in connexion with the excursion to Ballater, Balmoral, and Braemar, of which details will be announced in the *Daily Journal* and in the Reception Room.

The Great North of Scotland Railway will endorse at the Reception Room any tourists' tickets to Inverness, Strathpeffer, Nairn, etc., so that the same may be used for the return journey via Dunkeld.

Meetings of Branches and Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

BORDER COUNTIES BRANCH:

DUMFRIES AND GALLOWAY DIVISION.

A MEETING of the Dumfries and Galloway Division was held at the Dumfries Royal Infirmary on June 10th, when fifteen members were present.

Library of Division.—It was decided to accept the gift of books by Dr. Robertson (late of Penpont), and to purchase a bookcase for the same with a view to forming a nucleus of a library for the Division to be located in the Dumfries Infirmary.

Supplementary Report of Council.—The recommendations of the Council were considered and the Representative instructed as to his voting at the Representative Meeting.

Insurance Act.—The meeting agreed to the answers to be given to the schedule of questions regarding future developments of the Insurance Act.

Clinical Cases.—After the meeting Dr. LIVINGSTON submitted several interesting cases, showing excellent results after operation.

CONNAUGHT BRANCH.

THE annual general meeting of the Connaught Branch was held on June 19th at the Railway Hotel, Galway, when Dr. M. McDONAGH was in the chair.

Election of Officers.—The following officers were unanimously appointed:

President: Dr. E. C. MacDowel (Sligo).
President-elect: Dr. Conor Maguire.
Honorary Secretary: Dr. John Mills (Ballinasloe).
Representative to Representative Meeting: Dr. T. B. Costello (Tuam).
Deputy Representative: Dr. D. J. Crowley (Loughrea). Failing the attendance of the Representative or Deputy Representative the Honorary Secretary was given power to arrange for a Representative.
Representative of the Branch on the Irish Committee, B.M.A.: Dr. R. B. Mahon.
Executive Committee: Drs. C. L. Birmingham, J. Carroll, D. J. Crowley, Joseph MacDonnell (Roscommon), M. J. McDonagh, J. A. Hanrahan, T. B. Costello, C. H. Foley, John Mills (Honorary Secretary).

Irish Medical Secretary.—Dr. HENNESSY, Medical Secretary for Ireland, addressed the meeting and detailed the events of the recent interview with Mr. Masterman which the Irish Medical Committee had obtained through the good offices of Dr. Cox, Medical Secretary, British Medical Association, and Dr. C. Addison, M.P. A general discussion followed, and on the motion of Dr. FOLEY, seconded by Dr. MILLS, it was unanimously resolved:

> That the Connaught Branch views with the greatest satisfaction the appointment of a permanent secretary for Ireland, and congratulates the Association on the selection of Dr. Hennessy, who has the complete confidence of the profession in Ireland.

Annual Report of Council.—The report of the Council, dated May 2nd, was considered, and it was unanimously agreed to allow the Representative to vote at Representative Meetings as he thought fit, subject to resolutions passed by the Branch.

Ethical Rules.—Various letters from the Medical Secretary were read. It was agreed unanimously to approve of the new Ethical Rules for each Division of the Branch.

Resignations.—Notices of resignation were read from twenty-one members of the Branch and accepted with regret.

Next Annual Meeting.—It was agreed tentatively that the next annual meeting should be held in Sligo or Claremorris.

New Members.—Drs. P. D. Daly and B. J. Mullin have been elected members.

KENT BRANCH:

ROCHESTER, CHATHAM, GILLINGHAM, AND DARTFORD DIVISIONS.

A COMBINED meeting of these Divisions was held at St. Bartholomew's Hospital, Rochester, on June 25th, when the chair was occupied by Dr. SALISBURY.

Assistant Medical Secretary.—The HONORARY SECRETARY announced that he had been elected by the Council to the post of Assistant Medical Secretary at the head office of the British Medical Association, whereupon the following motion, proposed by Dr. W. G. NIALL, and seconded by Dr. BURNER, was carried unanimously and ordered to be entered on the minutes:

> That this Division of the British Medical Association to which Dr. Courtenay Lord has for several years given such valuable services as honorary secretary heartily congratulates him on his election to the post of Assistant Medical Secretary to the British Medical Association, and expresses its confidence that his services in his new position will be of the greatest advantage to the Association and to the profession generally.

Election of Representative.—The Honorary Secretary was elected Representative for the Aberdeen meeting, and Dr. Chisholm Will, of Sidcup, was elected Deputy, and will attend the meeting.

Trade Unionism.—A discussion took place on the relative merits of trade union and trust for purposes of protection of funds, and the following resolution was passed:

> That in the interests of the Association it is desirable that the Council should obtain the opinion of the members of the Association as to whether the special fund should be protected by a trust or a trade union by means of the referendum.

School Medical Service.—The Representative was instructed to support the resolutions put down by the School Medical Officers' Association, and on other matters was given a free hand.

Expenses of Representatives.—It was decided to continue the special levy of 5s., out of which a grant is to be made for the Representatives' expenses. This levy is now due and may be sent to Dr. Barnes, New Road, Chatham.

LANCASHIRE AND CHESHIRE BRANCH:

St. Helens Division.

The annual meeting of the St. Helens Division was held on July 7th.

Election of Officers.—The following officers were duly elected:

Chairman: Dr. Joseph Unsworth.
Vice-Chairman: Dr. Robert Jackson.
Honorary Secretary and Treasurer: Dr. F. J. Knowles, Victoria Square, St. Helens (re-elected).
Representative for Representative Meeting and Representative on Branch Council: Dr. F. Pickering Bassett.
Executive Committee: Dr. C. H. Wilde (Prescot), Dr. W. Valentine (Earlestown), Dr. J. Masson (St. Helens), Dr. S. B. Siddall (St. Helens).

Insurance Acts.—Various matters affecting the profession, particularly with reference to National Insurance, were discussed.

METROPOLITAN COUNTIES BRANCH:

City Division.

Special Meeting.

A special general meeting of the Division was held in Balfour Hall, Kingsland Road, on July 7th, when Dr. C. F. Hadfield, Chairman of the Division, presided.

Model Organization Rules.—The meeting adopted the Model Organization Rules for Divisions, with certain alterations and additions, which have been forwarded for the consideration of the Council.

General Meeting.

An ordinary general meeting of the Division was held after the special meeting.

Supplementary Report of Council.—The supplementary report of Council was considered. Instructions on the various recommendations were given to the Representatives, and the following resolution, proposed by Dr. Major Greenwood, and seconded by Dr. Leslie Burns, was unanimously adopted, and directed to be forwarded as a notice of motion for the Supplementary Agenda of the Representative Meeting:

> That the Council be instructed to formulate a new by-law prohibiting any member of the Council becoming a candidate for a salaried appointment under the same unless he shall have ceased to be a member of the Council at least six months before an advertisement for such appointment shall have been issued.

Executive Committee.—Dr. Howard Stratford, F.R.C.S. Eng., was elected a member of the Executive Committee.

North Middlesex Division.

An ordinary meeting of the North Middlesex Division was held on July 9th, when Dr. Reginald Fuller was in the chair.

Appointments.—Dr. Marjoribanks was appointed to the Medical Charities Committee of the Branch and Drs. Brackenbury and Distin to the Insurance Committee.

Supplementary Report of Council.—The meeting resolved that adequate representation must be obtained if the proposed federation of Local Medical and Panel Committees was to be a success, and the Representative was instructed to urge this at the Annual Representative Meeting, so that London and Middlesex, the largest and third largest insurance areas, be represented.

Referee-Consultants and Specialists.

It was resolved that referee-consultants should be men of at least ten years' standing in general practice, and that they be whole-time officers with a salary of at least £750 per annum. With regard to specialists it was decided that these appointed should practise a recognized speciality, and need not be whole-time officers.

Division Model Rules of Organization.—The Division decided not to adopt the model rules of organization.

SOUTHERN BRANCH.

The annual meeting of the Branch was held at the South-Western Hotel, Southampton, on July 9th. In the unavoidable absence of the President, Dr. Cowper (Shanklin), the chair was taken by Dr. Carling (Southsea), Vice-President, and forty other members were present.

Election of Officers.—The scrutineers' report on the voting for the election of officers for 1914–1915 was read; 118 members had voted, unanimously accepting the nominations of the Branch Council, namely:

President-elect: Dr. C. G. B. Kempe (Salisbury).
Vice-Presidents: Dr. J. Cowper (Shanklin) and Dr. P. B. Bentlif (Jersey).
Honorary Secretary and Treasurer: Dr. James Green (Portsmouth).

Annual Report.—The annual report and balance sheet were submitted and unanimously adopted.

Expenses of Secretaries of Divisions.—On the motion of Dr. Ward Cousins, seconded by Dr. Hackman, it was resolved:

> That the first-class travelling expenses of secretaries of Divisions attending meetings of the Branch Council be in future paid by the Branch.

Rules of Organization.—The rules of organization, dated July 3rd, 1903, were repealed and new (draft) rules adopted, subject to any verbal alterations which the Council of the Association might require, and which the Branch Council was authorized to agree to.

Presidential Address.—Dr. Carling then vacated the chair in favour of Mr. G. H. Cowen, the President for the year, who moved a vote of thanks to Dr. Cowper for his services to the Branch as President for 1913–1914. This was seconded by Dr. Ward Cousins, and carried by acclamation. He then delivered an address on "Fashion in Medicine."

Vote of Thanks.—A vote of thanks, moved by Dr. Ward Cousins, and seconded by Mr. Franklin, was carried with enthusiasm.

Luncheon.—The members were entertained to luncheon by the President. A collection for Epsom College was made, and realized £7 2s. 6d. The health of the President, proposed in felicitous terms by Dr. Purvis, was cordially received, and the President very briefly responded.

Entertainments.—After luncheon the guests dispersed, some to the competition for the Childe Golf Cup, which resulted in a tie between Dr. Atkinson Dove and Dr. Leslie Wright; others went over the ss. *Edinburgh Castle* (Union Castle line); others inspected the cold storage, and yet others the White Star laundry. At 4 o'clock many members, with lady friends, returned to the hotel to afternoon tea, and so ended a very pleasant meeting.

SOUTH MIDLAND BRANCH.

The annual meeting of the South Midland Branch was held on June 25th at Berry Wood Asylum, Northampton, under the presidency of Dr. Harding. In accordance with the President's wishes, the meeting partook largely of the character of a social function. Previous to the meeting, the members were most hospitably entertained to luncheon, and it is a matter of great regret that only thirty members availed themselves of the President's kindness.

New Members.—The election of the following new members by Branch Council was announced: Dr. Muriset (County Hall, Northampton), Dr. Scargill (Luton, Bedfordshire), Dr. Spence (Bedford Hospital).

Transfer of District.—The meeting gave its assent to the transfer of Rugby and district to the Warwick and Leamington Division.

Benevolent Fund Committee.—Mr. Olgers submitted a report of the proceedings of the Benevolent Fund Committee, and suggested that a charity bag should be passed round the meetings to defray the expenses of the committee. After some discussion, it was decided that the expenses up to date should be defrayed from old Branch funds, and that in future a levy of 6d. per annum should be made on all members of the Branch to defray expenses and to use any surplus in the form of a subscription to Epsom College and the Royal Medical Benevolent Fund.

Model Organization Rules.—The following change was made in the Branch model rules:

> Rule 6. The number of members of Branch Council annually elected by the Divisions shall be respectively: Northamptonshire 4, Bedfordshire 3, Buckinghamshire 3.

Votes of Thanks.—On the motion of Mr. Percival, seconded by Dr. Kennish, a cordial vote of thanks was accorded to the retiring President (Dr. Hartley).

Presidential Address.—Dr. Harding then delivered his presidential address on the Mental Deficiency Act. He alluded, first, to the conditions which led to the intro-

duction of the bill, and expressed the opinion that had full advantage been taken of the powers available under the Lunacy Acts, while legislation would still have been called for, yet some of the evils which necessitated it might have been minimized. He referred to the difficulties which would be met with in certifying mental defectives. He then gave a sketch of the duties of local authorities under the Act. He advocated the separation of ineducable cases from those who had possibilities for training, and pointed out that, in order to have institutions of such size that they might be managed economically, it would be desirable and almost necessary for some local authorities to combine. The President was heartily thanked for his address, on the proposition of Dr. HICHENS, seconded by Dr. BIRKS.

Tea.—The members, together with many ladies, were then entertained to tea by Mrs. Harding, after which there was tennis and croquet for those who wished to play.

SURREY BRANCH.

THE first annual meeting of the Surrey Branch was held, by the invitation of the Reigate Division, at Reigate on June 17th, and, by the kind permission of the Mayor, took place in the council chamber of the municipal buildings.

Luncheon.—Previous to the meeting, members to the number of nearly forty were entertained to lunch at the White Hart Hotel by the Reigate Division.

Election of Officers.—The following officers for the ensuing year were appointed:

President: Dr. Alexander Radclyffe Walters (Reigate).
Vice-Presidents: Dr. Arthur Martin Mitchell (Guildford), Dr. James Hewetson (Reigate).
Honorary Secretary and Treasurer: Mr. Cecil P. Lankester (Guildford).
Honorary Auditors: Dr. A. M. Mitchell, Dr. F. Kearsley Weaver.

Annual Report.—The report for the past year was read and adopted.

Presidential Address.—The PRESIDENT delivered an interesting address, in the course of which he dealt especially with the changed conditions under which the profession had now to carry on its work.

Excursion.—Following the meeting, there was an excursion to Gatton Hall, the residence of Sir J. Colman, Bart., whose splendid show of orchids and flowers was much appreciated.

Dinner.—A successful dinner took place at the White Hart at 6.30.

SUSSEX BRANCH:

LEWES AND EAST GRINSTEAD DIVISION.

THE annual meeting of the Lewes and East Grinstead Division of the Sussex Branch was held at the County Hall, Lewes, on July 10th, when Dr. GOSTLING was appointed Chairman *pro tem.*

Model Rules of Organization.—The model rules were adopted.

Ethical Rules.—The ethical rules in the form recommended by the Annual Representative Meeting, 1912, were adopted.

Election of Officers.—The following officers were elected:

Chairman: Dr. Dow (Lewes).
Vice-Chairman: Dr. Steinhaeuser (Lewes).
Honorary Secretary: Dr. Vallance (Lewes).
Representative: Dr. Collins (East Grinstead).
Executive Committee: Drs. Fazan (Wadhurst), Loud (Lewes), Orton (Chailey), Preston (Hayward's Heath).

Scientific Meetings.—The question of undertaking work of clinical and scientific interest was considered, but no definite decision was arrived at.

Votes of Thanks.—It was resolved that the best thanks of the Division be given to Drs. Gostling and Allfrey for attending and assisting at the first meeting of this Division.

SHIP SURGEONS SUBCOMMITTEE.

THE following practitioners have consented to act as "Correspondents" of the Ship Surgeons Subcommittee, and are prepared to discuss with any ship surgeon in their area any matter of interest either to that surgeon or to ship surgeons in general, and to forward representations to the Subcommittee in regard to any question in connexion with which central action seems desirable:

Correspondent.	*Port.*
Dr. J. Godding, 56, Leadenhall Street, London, E.C.	London.
Dr. A. G. Hinks, 40, St. Vincent Row, Southend-on Sea	London.
Dr. H. T. Bates, Church Road, Wavertree, Liverpool	Liverpool.
Dr. C. Carlyle, 13, Menlove Avenue, Mossley Hill, Liverpool	Liverpool.
Dr. C. J. Cooke, 1, Sussex Terrace, Plymouth	Plymouth.
Dr. J. C. H. Beaumont, Chinsura, Khartoum Hill Road, Southampton	Southampton.
Dr. O. V. Currie, Union Castle Buildings, 58, Adderley Street, Capetown	Capetown.

Ship surgeons visiting these ports and desiring to discuss matters of interest to the service are invited to place themselves in communication with the correspondent for the port.

The Medical Secretary, 429, Strand, London, W.C., will be glad to hear from practitioners in passenger ports not mentioned above who are willing to act as correspondents to the Subcommittee.

Ship surgeons are also asked to forward for the guidance of the Subcommittee, either to one of the above correspondents or to the Medical Secretary, British Medical Association, 429, Strand, London, W.C., their views upon the following questions:

(1) Whether ship surgeons should receive full sea pay while in port *plus* a subsistence allowance at the same rate granted to the chief officer, with a possible liability to have to report every day at the office of the company, or whether they would prefer to receive full sea pay only in port without such liability; subsistence pay, however, to be paid upon those days in port when any duty connected with the ship is performed.

(2) Their views generally on the question of annual leave being granted with full pay to permanent ship surgeons.

Association Notices.

Special Representative Meeting, Aberdeen.

ON the requisition of the Council, notice is hereby given under Article 31 and By-laws 36 and 73, that a Special Representative Meeting of the Association will be held on Monday, July 27th, 1914, at 12 noon, at the Marischal College, Aberdeen, for the purpose of considering the following Report and Recommendation of Council (paragraphs 211 and 212 of Supplementary Report of Council, 1913–14), and, if considered advisable, amending By-law 67 accordingly:

SCOTTISH COMMITTEE.

211. The work of the Scottish Committee is growing, and it is found increasingly difficult for the Chairman to be able to attend all the Committee meetings in Scotland and Council and Committees in London as well. The Committee consequently desires to be able to elect a Deputy Chairman as well as Chairman. By-law 67 provides that each Standing Committee shall appoint from its own number a member of Council as Chairman, in order that the Council may be able to keep in touch with each Committee. The Scottish Committee wishes to be an exception to this By-law and to be able to have a Chairman not necessarily a member of Council, but that effective co-ordination shall be maintained by insisting that one of its three officers—Chairman, Deputy Chairman, or Honorary Secretary—shall be on the Council. As the Scottish members desire the change as early as possible, the Council has arranged that a special session of the Representative Body shall be held at Aberdeen on Monday, July 27th, 1914, at 12 noon, for the purpose (only one month's notice of such an alteration of By-laws being required in the case of a Special Representative Meeting).

212. The Council recommends:

RECOMMENDATION GG.—That the Special Representative Meeting, Aberdeen, amend existing By-law 67 of the Association, which reads as follows:

67. Each Standing Committee shall appoint from its own number a Member of Council as Chairman,

to read as follows:

67. Each Standing Committee except the Scottish Committee shall appoint from its own number a

Member of Council as Chairman. The Scottish Committee shall appoint from its own number a Deputy Chairman, as well as a Chairman, and either the Chairman or the Deputy Chairman or the Honorary Secretary of that Committee shall be appointed from amongst members of Council.

T. Jenner Verrall,
Chairman of Representative Meetings.

June 24th, 1914.

ELECTION OF MEMBERS OF COUNCIL BY GROUPED REPRESENTATIVES.

Notice is hereby given that Nominations for Candidates for election of Members of Council by grouped Representatives for the year 1914–15 will be received by the Medical Secretary up to the end of the first hour of the proceedings of the Annual Representative Meeting on Friday, July 24th, 1914. Each Nomination must be on the prescribed form, copies of which will be forwarded by the Medical Secretary on application.

Separate forms have been prepared: (I) For Nomination by a Division (through its Representative), and (II) for Nomination by a Representative of a Constituency included in the Group, and those applying are requested to state for which purpose the form is desired.

The voting papers will be issued at the Representative Meeting to each Representative or Deputy Representative of a Constituency in the United Kingdom in attendance at the Meeting.

By order of the Council,
Alfred Cox,
Medical Secretary.

June 24th, 1914.

CHANGES OF BOUNDARIES.

Divisions in Cheshire.

The following changes have been made in accordance with the Articles and By-laws of the Association, and take effect as from the date of publication of this notice:

That the following Divisions be substituted for the existing scheme of Divisions in Cheshire:

1. *Birkenhead Division:*—Birkenhead and Wallasey C.B.s, Higher Bebington, Lower Bebington, Bromborough, Neston and Parkgate, Ellesmere Port and Whitby, and Hoylake and West Kirby U.D.s, and Wirral R.D.

2. *Chester Division:*—Chester C.B., Hoole, Runcorn and Tarporley U.D.s, and Chester, Tarvin and Runcorn R.D.s (with the exception in the case of Runcorn R.D., of Appleton, Grappenhall, Hatton, Keckwick, Moore, Stockton Heath, Stretton, Thelwall, Higher Whitley, Lower Whitley, Walton Superior, and Walton Inferior C.P.s and Antrobus, Crowley, Daresbury, Latchford Without, and Sevenoaks townships, all of which are assigned to the Warrington Division, and Great Budworth C.P., which is assigned to the Mid-Cheshire Division).

3. *Crewe Division:*—Crewe M.B., Nantwich, Alsager, Buglawton, and Sandbach U.D.s and Nantwich, Malpas and Congleton R.D.s.

4. *Hyde Division:*—Dukinfield, Hyde, and Stalybridge M.B.s, Bredbury and Romiley, Compstall, Hollingworth, Marple, and Mottram-in-Longdendale U.D.s, and Tintwistle R.D.

5. *Mid-Cheshire Division:* — Ashton-on-Mersey, Sale, Altrincham, Bowden, Hale, Knutsford, Lymm, Wilmslow, Northwich, Middlewich and Winsford U.D.s, Bucklow and Northwich R.D.s, and Great Budworth C.P. in Runcorn R.D.

6. *Stockport, Macclesfield and East Cheshire Division:*—Stockport C.B., Macclesfield and Congleton M.B.s, Alderley Edge, Bollington, Yeardsley-cum-Whaley, Cheadle and Gatley, Handforth, and Hazel Grove and Bramhall U.D.s, and Macclesfield and Disley R.D.s.

Representation in Representative Body.—As regards the year 1914–5 the Cheshire members are represented on the basis of the Divisions as existing at April 30th, 1914. The question of the representation of the new and altered Divisions in the Representative Body, 1915–16, will be determined in due course by the Council.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Midland Branch: Holland Division.—Dr. R. Tuxford, Honorary Secretary, 12, Wide Bargate, Boston, gives notice that a meeting of the Holland and Kesteven Divisions will be held at the Carre Arms Hotel, Sleaford, on Sunday, July 19th, at 3 p.m. Business: To instruct the joint Representative to annual meeting.

PRESENTATION TO DR. WALLACE HENRY.

In recognition of the services rendered by Dr. Wallace Henry to the medical profession in connexion with the administration of the Insurance Act, a presentation was made to him and Mrs. Henry on July 8th at a reception attended by some 160 members of the profession in the town of Leicester and the county districts.

Dr. Higgs, who spoke on behalf of the borough practitioners, said that a great debt of gratitude was due to the executive of the British Medical Association for the manner in which it brought together the members of the profession and for the splendid fight it made on their behalf, and they were grateful to Dr. Henry as their representative on that executive. Further, Dr. Henry had shown remarkable energy and untiring zeal in connexion with the inauguration of the Leicestershire and Rutland Public Medical Service, and his work in connexion with the formation of the union of medical practitioners had been conspicuously successful. The fact that 98 per cent. of the practitioners in the district now belonged to the union spoke volumes for the organizing ability, tact, and zeal displayed by Dr. Henry, who was the leading spirit in the enterprise. There had been need for organization and unity at the outset of the campaign, but there would still be greater need for cohesion when the fight was renewed, as it would be next year. The medical profession was credited with much of the failure the Act had encountered; doctors were accused of carelessness in giving certificates of incapacity, whereas the difficulties of the societies were particularly due to actuarial miscalculations based upon false premisses. If the old friendly societies had exercised as little care in the admission of members as the approved societies, there would have been no surplus millions. Accusations were also made with regard to extravagant prescribing instead of costly dispensing. It behoved the members of the profession to stick together and to cling to those principles of trade unionism which they had so reluctantly been forced to adopt. Sanatorium benefit had not worked as successfully as had been anticipated, and he understood that it was proposed that the 6d. for the domiciliary treatment of tuberculous persons should be stopped and paid to a fund to be used for the employment of whole-time medical officers. That proposition would have to be fought tooth and nail, because consumptives, like others, had a right to free choice of doctor.

Dr. Burkitt, of Whitwick, who spoke on behalf of the county practitioners, said that Dr. Henry had not spared time or trouble, and as a result the profession was united in the counties of Leicester and Rutland. The Public Medical Service, which had been of inestimable value in the borough, was now spreading its benefits throughout the county districts. He believed that an effort would be made to introduce a whole-time State medical service, and it was to prevent such a scheme that Dr. Henry had laboured, and so far as Leicestershire was concerned, certainly not in vain.

Dr. Fulton, of Nottingham, speaking as a member of the Council of the British Medical Association, praised Dr. Henry's work for the profession.

Dr. Henry, in reply, said that Leicestershire, by inaugurating the Public Medical Service and the Medical Practitioners' Union, had set an example to the rest of the country. Next year the special grant in aid given to provide the extra 2s. 6d. would expire, and its renewal would have to be considered. The profession must be prepared for that emergency, and also to deal with proposals for the inclusion of dependants and to meet efforts by the friendly societies to regain control over medical benefit.

The presentation consisted of a silver tea and coffee service with kettle and tray, the inscription on the latter being: "Presented to Dr. R. Wallace Henry, originator, founder, and first President of the Union of Medical Practitioners and of the Leicestershire and Rutland Public Medical Service. A mark of love and esteem from his colleagues."

THE POSITION OF THE DRUG FUND.

PHARMACEUTICAL DEPUTATION TO MR. MASTERMAN.

MR. MASTERMAN, on July 15th, received a deputation from the Pharmaceutical Society of Great Britain. It was introduced by Mr. W. S. Glyn Jones, M.P., Parliamentary Secretary to the Pharmaceutical Society of Great Britain, and consisted of Mr. Edmund White, president of the society; Mr. Sargeant (Leeds), a member of the Leeds Insurance Committee; Mr. P. F. Rowsell, J.P. (Exeter), a member of the Advisory Committee; Mr. Roper (Plymouth), a member of the Plymouth Insurance Committee; Mr. E. S. Waring (Messrs. Boots, Ltd.); Mr. Joseph (Cardiff); Mr. Deakin (Cheshire), a member of the Cheshire Insurance Committee; Mr. J. P. Gilmour (Glasgow), a member of the Joint Advisory Committee and of the Glasgow Insurance Committee; Mr. J. R. Hill, Resident Secretary of the Pharmaceutical Society in Scotland; and Mr. W. J. Uglow Woolcock, Secretary and Registrar of the Pharmaceutical Society.

MR. GLYN JONES said that he wished to make it plain that the chemists who undertook work under the Insurance Act had always recognized the difficulties which must arise in the first period of the Act's working, but that their position had now reached a critical stage.

MR. WHITE, the president of the society, said that he gratefully recognized the change which the Act had made in the position of the chemists, in that it had removed the greater part of the dispensing done for the working-class population from the hands of the doctors and entrusted it to the chemists. At the outset they decided that it was impossible to arrange payment on a capitation basis, and the present method of payment by tariff was arrived at after consultation between the society and the Commissioners. The society were of the opinion that the amount allocated for the supply of the drugs and appliances supplied from the tariff would, with proper safeguards, be sufficient. They thought that the experience of the past year had shown that the sickness-rate amongst insured women had a great effect in increasing the amount of drugs and appliances above what was estimated would be required. They also considered that a large amount of drugs for persons who were tuberculous but were not in receipt of sanatorium benefit were charged to the drug fund, but they were still of opinion that for the amount allocated insured persons generally could be supplied with all the drugs and appliances necessary, and the experience throughout the country justified this view. The agreement signed by the pharmacist contained a clause that if the 2s. did not provide a sufficient fund to pay the chemists' accounts in full a discount should be made. This undertaking was entered into because of the belief that the provision would in practice be unnecessary. The deputation did not wish to submit the results in detail, as the Commissioners already had this information. Broadly speaking, the fund had been sufficient in 150 areas in Great Britain out of 196. In the areas in which a deficiency had arisen the amount varied in percentage from 5 per cent. to 30 per cent. Unless something was done to enable the chemists in the latter areas to have their accounts, when they had been submitted to check and scrutiny, paid promptly and in full, a serious situation would arise. The net remuneration received by the chemists on the panel when their accounts were paid in full was so small that no margin was left for such discounting. Whatever other views might be held on the position, it was manifestly unjust that pharmacists who had no voice in what might be ordered were to supply at their own cost anything which medical men might choose to order. The deputation urged that when the Commissioners were satisfied that the accounts were correct and that all the provisions of the Regulations had been complied with as far as the Pharmaceutical Committee were concerned, the deficiency which had resulted should be made good. The deputation freely recognized that the position which had arisen could not be allowed to continue; they asked that steps should be taken in the interest of the service to prevent its recurrence.

MR. ROPER, MR. SARGEANT, and MR. JOSEPH spoke in support of these views, and gave details of the experience of chemists in their own areas; and, in reply to MR. MASTERMAN, MR. WOOLCOCK made certain concrete suggestions for dealing with the difficulties which the deputation raised.

Reply.

MR. MASTERMAN said: I have been very glad, with my colleagues, to receive you here this afternoon, and I should like to thank you for the tone and temper in which you submitted your propositions. I thoroughly endorse Mr. Glyn Jones's statement at the beginning of the deputation as to the very friendly way in which negotiations have been carried on from the beginning between your society and the Insurance Commission, and I am quite sure that in any changes or suggestions we may be able to elaborate you will find you lose nothing by having conducted the negotiations in such a spirit of goodwill.

Mr. White gave us an outline of the conditions which have led up to the present state of affairs. I must make it clear from the beginning what those conditions are, not so much for you as for the benefit of the other people outside who do not fully realize what they are. After long discussion it was originally agreed that the service of the provision of drugs should be undertaken experimentally on a system of what I may call a tariff and a discount; a tariff elaborated by you yourselves which, I think, has been adopted in every English and Welsh area—I believe there is some variation in Scotland—and which, in consequence of the discounting provisions, has not been examined by us, or I think examined in detail by the Insurance Committees. You agreed to try the experiment of working this tariff, on the distinct condition that supposing the money available in any area was less than the amount required at the tariff rates, the bills should be discounted in order to come within that amount. It is quite untrue for any one to say, therefore, that either the Commission, the Insurance Committee, the Government, or the insurance fund owes any individual chemist anything at all. There may be a very strong appeal for a variation in terms, but that must be of the nature of an appeal for adjustment owing to conditions having turned out differently from what was expected, and not an appeal or a demand which could be justified in a court of law, or which, indeed, represents any moral obligation at all on the part of the Government.

Then those conditions were subject to a special provision. It is a provision which has been mentioned this afternoon, and it is a provision to which we attach considerable importance. Clause 40 of the Regulations does definitely lay an obligation upon the Insurance Committee to proceed, upon a report of the Panel Committee prepared in response to action initiated by the Pharmaceutical Committee, to make surcharges where an excessive demand upon the drug fund has arisen owing to orders given which are extravagant either in character or in quantity.

You have given me some figures, Mr. White, about the effect of the experience of the year. I think you will agree that one of the most remarkable facts about those figures—one of the facts that requires careful investigation—is the enormous fluctuations and variations that such figures exhibit. You have the cost of drugs per insured person in the counties varying from as low as 1s. per head to 2s. per head—a variation of 100 per cent. You have variations in the county boroughs ranging from 1s. 6d. and 1s. 8d. in some of the smaller towns up to a little over 2s. in London, and the amazing figure of 3s. 2¼d. in Manchester, which I cannot help identifying not so much with excessive sickness as with the special system which the doctors have there adopted. Any one may say this may be due to variations in the conditions of life, or to the sickness incidence. But the next thing we find is enormous variations in boroughs which really are very similar in character and population. We have figures of 1s. 6d., 1s. 9d., and 2s. 3d. respectively in three towns, all situated in the same Midland area, and mostly engaged in the same type of occupation.

Then, I think, two of the gentlemen who spoke suggested—and I agree with them very cordially—that there is a loading of the drug fund in the case of women, due to the excessive sickness which we now acknowledge exists among the women insured population. But, then, in towns quite similar in character, engaged in the same occupations largely, with women working in the factories and mills, you have just the same enormous variations. Here, for example, in Lancashire, are four towns with figures of 2s. 2d., 2s. 3d., 2s. 9d., and 3s. respectively, all cotton towns, all with women workers. Then we have Mr. Glyn Jones's huge area, Middlesex, where I think

the figures are down to 1s. 9d.; while all round, in areas with populations exactly similar—in London and West Ham and such like committee areas—you have considerably higher drug expenditure. It is therefore necessary, before we consider anything in the nature of a policy, that we should understand the meaning of those variations.

Then I come to the much more serious question that was also dealt with by Mr. Woolcock—of the variations, not between areas, but within the same area, as between different doctors' lists of patients. There, I must confess, the statistics with which I have been furnished seem to me to show that some further explanation than that suggested by Mr. Glyn Jones is required, and that idea which Mr. Woolcock, I think, holds, that some doctors—if, as I hope, only a small minority—are quite careless and wasteful about prescribing, and that some doctors may be trying to compete unfairly with their colleagues by means of the quantity of medicine they are giving, seems to receive some *prima facie* justification.

Let me give you one or two figures that have been submitted to me in connexion with committees that have really investigated the question of over-prescription. Here, in the case of one committee in Lancashire, there is one doctor with a panel of 500, who shows an average cost of 11d. per person; while another doctor, with a panel of 1,100, shows an average cost of 9s. 10d. per person. Those are variations within the same committee area, and I have just chosen them at random. A doctor with a panel of 1,400, 1s. 4d.; another of 1,400, 2s. 6d.; a panel of 1,600, 3s. 5d.; a panel of 1,900, 3s. 11d.; and then, again, a panel of 2,000, with an average of 2s. per insured person. As far as I know, these are dealing with a homogeneous population, and not in a particularly poor borough, and such vast variations as these must mean an extraordinarily different standard of prescription between doctor and doctor.

In another borough in Lancashire I find variations of as much as from 1s. 8d. to 11s. 5d. I find an average cost per prescription (which is quite a different question from excessive sickness) varying from 5d. to 10d., which is 100 per cent. variation. And I find, what I think is more serious, that the average number of prescriptions per person varies between 1.8 and 4.3, over 100 per cent. Then again, in other areas where they have investigated individual cases, I find the same few doctors appear as ordering the most expensive medicines, as ordering medicines most frequently, and generally as running up the charge upon the drug fund far beyond the average of their colleagues. I need hardly say that, as you know, we want to give the insured persons through the Act good and adequate drugs. If we do not the Act is a failure. But either the majority of the doctors in the case of these areas are not doing their duty in prescribing, or the particular doctors I have referred to are doing something which is very different from their duty. Either one is wrong or the other. I think everything would seem to show that it is these few people who show such enormous excesses over the average who are the persons really to blame. And I am confident that we shall have the support of the overwhelming majority of the medical profession in any action which may be necessary to set these things right.

Then I come on to the apparatus for dealing with this problem. There I agree with Mr. Woolcock that it is time that we considered the whole of the present arrangements with a view to increasing their efficiency and economy. On the other hand, I must say that, as far as the present deficits are concerned, we cannot consider any question of assistance towards those districts where there has been proved to be excess beyond the amount provided, until such checks as are already provided by the Regulations have been put into the fullest operation. I want to make that statement as categorical and definite as possible. We have a small fund at our disposal to deal with drugs for excessive sickness, but this can only be applied towards excessive sickness, not excessive prescribing. And the first thing, therefore, that I must ask those you represent to do, however unwilling and however invidious the work appears, is to attempt seriously to put into operation Clause 40 of the Regulations. Some Pharmaceutical Committees are doing it, and are producing very remarkable results.

But my information, derived through Insurance Committees, is—you will correct me if I am wrong—that a very large number of your committees, in areas where discounting will otherwise take place, are taking no action at all in the matter. I must honestly tell those committees, through you, that if they for any reason think it inexpedient, or are unwilling, to take action, they can look for no help from us. The only committees which we can consider the question of assisting are those who have really tried to put the Regulations into operation. I have here—and I can give you the list at the end of the deputation—a list of some twenty areas where I am informed no action of any sort has been, or is being, taken, all of which would be subject to the discounting provisions, and here are the sorts of reasons which are given to us for not putting them into operation. "The chemists are unwilling to raise the question as a matter of policy, because they feel that to do so would be injurious to their interests, apart from National Health Insurance, as between doctors and chemists." Here is another, and a very important one, with a substantial deficit: "All parties appear to be fighting shy of the potential ill will the process involves." Here is another and a very important committee: "Abortive action taken, but chemists, instead of pressing, ask the Insurance Committee to make representations to the Commissioners for payment." Here are others: "No action contemplated"; "No action"; "Chemists are averse from bringing charges and do not wish to offend doctors." Another committee says: "No action taken; relations between doctors and chemists are cordial," and so on. Those are the most serious cases we are dealing with.

The first thing I want you to do is, by circulars or otherwise, to use what influence you can with these committees, and to tell them that, having represented their case to the Commissioners—and I may say very ably represented that case—you have had the intimation that they cannot expect any assistance at all unless this regulation has been made fully operative.

Mr. Glyn Jones: Would I be right in putting it in this way? There are certain duties resting upon the chemists and their committee in regard to preventing over-spending, and the obligation will be upon that committee to satisfy the Commissioners that they have to the full exercised such powers as they have got. But their action will not be dependent upon anything the Panel Committee or the Local Committee will do. They can only do what they are empowered as a Pharmaceutical Committee to do, and they must satisfy you that they have left nothing undone which under those powers they ought to have done.

Mr. Masterman: Certainly; and if you have found that all your applications are in vain, we shall have to see what action we will take in connexion with the Insurance Committee and the Panel Committee. I am not holding out any suggestion of a grant at the present moment either from the excessive drug fund or any other possible source, because I do not think in any case that could be given until we could either assure the auditors in the one case, or the Government and the House of Commons in the other, that the money was being given because of excessive sickness and not because of excessive prescribing in normal sickness.

Mr. Glyn Jones: I think I may say that we are keenly alive to this, that the whole system is on its trial, and we do realize it is absolutely in our interests to see that no call is made for fresh funds. It is as much to our interest to prevent waste as it is to anybody's interest.

Mr. Masterman: I am bringing no charge against anybody. I only ask you to look into these facts as my officials give them to me. Beyond that there comes the question of the future. There is the question of the tariff. Neither the Insurance Commission nor the Insurance Committees have made any attempt to discuss the tariffs with the representatives of the Pharmaceutical Society, because of the safeguard of discounting. I think the first thing you ought to be willing to consent to, if we are to make changes, is an examination of the tariff by representatives of all parties concerned.

I do not ask you to commit yourselves to this to-day, but I ask you to be willing that this should be done also—that in special or selected areas some kind of investigation should be held, immediately it was found that the time was ripe for it, into the actual amounts received and the money expended on insurance work by the chemists of those areas. You will remember that when we were discussing the whole question of the payment of the doctors, such

investigations were held by Sir William Plender in connexion with certain special areas. They were, of course, confidential in character. These investigations ought to be held by some one quite impartial as between chemists, doctors, insured persons, and the Commissioners. But I think your case might be strengthened for further action if you were willing to agree to such an investigation. Beyond that, I think investigations should be held into such points as those which Mr. Woolcock and Mr. White especially put forward this afternoon. What I really propose, then, is that we should establish immediately a committee of investigation on these subjects. I should like to have a small committee, and I should like to ask you to nominate some representatives. I do not mean to say that I want this committee to avoid or prevent any action we may take in other directions. The committee, on which you might appoint representatives—I think the Commission should have representation, and we would have some doctors also—might undertake to deal both with the tariff and with certain other points affecting it.

The last question that you raise is the question of some strengthening of the check which is now provided against excessive prescribing, or which ought to be provided by the Regulations. The question of the regulations under which the doctors will work next year is coming before the Commission in a very short time, and variations will have to be made in those regulations—if variations are made—fairly speedily in order to give the doctors an opportunity of deciding whether, when the variations are made, they will be prepared to serve again on the panel system. I will certainly note with interest and considerable sympathy the suggestions that you have made this afternoon. I do think that facts have shown us that we want something much more drastic in the nature of a check than Clause 40 as it at present operates, and I shall certainly see that your claims and contentions, supported as they are by statistics, are placed before those who will be negotiating from the doctors' point of view before we finally decide what regulations shall be made.

I have only one last word to say on the whole question. Your action in undertaking the dispensing and provision of drugs under the Act was experimental; so was the action of the doctors in working under the panel system. And no one, I think, can be quite clear at this moment what the ultimate form of the service will be, either as regards the dispensing service or the medical service. It depends very largely on the experience which is now being collected and examined, and it will be for Parliament ultimately to decide. I am quite sure that those doctors who, for whatever reason, are causing, through excessive prescribing, what is a serious situation as regards the drug supply in some of these areas, are seriously jeopardizing the continuance of the panel system itself.

I am sure that those who have a claim to speak for the medical profession as a whole will realize that fact, and co-operate with us in effecting reform. You are perfectly justified in putting before me the contention that, when we have said everything we have to say, even if we revise the tariff, even if we ask you to alter certain conditions, even if we take from you certain liabilities which you do not think you should justly bear, ultimately you are entirely in the hands of the doctors. No chemist can refuse to dispense the prescriptions for medicines handed in to him by any insured person, however numerous or extravagant, in special and particular cases, such prescriptions may be. Therefore, if from carelessness or any other undesirable quality, the kind of thing that Mr. Woolcock suggests is going on—that drugs are being wasted wholesale, that men and women are receiving drugs which there is no need for them to receive, and that some at least of the doctors on the panel are indifferent to the obligations which the panel service carries with it—then there will be an irresistible demand for a variation in the panel system by the time Parliament has to reconsider the whole question in the light of actual experience.

Gentlemen, I thank you for having listened so patiently to my remarks. I am asking you now to do two things: First of all, to press upon all the Pharmaceutical Committees for such action under Clause 40 as the Regulations provide. Until that has been done and we have come to a conclusion upon that question in each individual committee, I can make no promise as to any further provision of funds. Secondly, I ask you to join with me and appoint representatives on the committee which will examine the whole of this question. And, lastly, I promise that, apart from any question of deficits which have been already incurred, we will endeavour carefully to consider with the doctors and with you any further provision which may be necessary in order to prevent a recurrence of those deficits in the immediate future.

LOCAL MEDICAL AND PANEL COMMITTEES.

LEICESTER.

Meeting of Practitioners.

A MEETING of practitioners on the panel was held on June 26th.

Report.—The SECRETARY presented a report of the proceedings of the Leicester Panel Committee, which showed that since its appointment in December last the Committee had met thirteen times, and the attendance of members had been very good. Dr. R. Wallace Henry had been elected Chairman, Dr. W. Moffat Holmes Vice-Chairman, and Dr. E. W. Holyoak, 2, Tower Street, Leicester, Secretary. The question of the allocation of funds available on account of insured persons who had not chosen or who had difficulty in being accepted by a doctor had been considered, and a resolution passed recommending the Insurance Committee to adopt a scheme whereby the funds available would be distributed, in direct proportion to the number of insured persons on each doctor's list, amongst the doctors signifying their willingness to give medical attendance, if and when required, to insured persons in their respective areas who had not chosen a doctor.

Record Cards.—The Committee had considered the matter of record cards, and a circular letter has been sent to every practitioner on the panel, pointing out the importance of keeping the records in a full and complete manner, including attendances on members of friendly societies who had contracted out of the Act.

Prescriptions.—The Panel Committee was requested by the Pharmaceutical Committee to make an investigation into sixty-seven prescriptions given by a practitioner on the panel, and report to the Insurance Committee whether in its opinion the cost of the supply of the drugs and appliances was in excess of what might reasonably be necessary for the adequate treatment of the patients. After a very thorough investigation into the circumstances, during which the practitioner concerned and representatives of the Pharmaceutical Committee were heard, the following resolution had been adopted:

> With reference to this complaint the Panel Committee has interviewed both the doctor and the representatives of the Pharmaceutical Committee. The Committee has heard the doctor's statement, and entirely believe in his bona fides in the matter. The complaint, however, raises a general question which has been considered and settled in many areas, and we recommend that proprietary articles shall only be dispensed when the Panel Committee has approved of their inclusion in a list, on the recommendation of the medical practitioner desiring to prescribe it.

The resolution was subsequently brought before the Insurance Committee, and the recommendation with regard to proprietary articles was accepted. The Pharmaceutical Committee having made further representations to the Panel Committee with regard to prescriptions given by nearly every doctor on the panel, a subcommittee was appointed to examine the prescriptions forwarded, and as a result of their investigations the following report was drawn up:

> The Panel Committee has carefully investigated 3,870 prescription forms, priced 1s. and over, sent in by the Pharmaceutical Committee of Leicester in accordance with the National Health Insurance (Medical Benefit) Regulations, part 4.40 (1) and (2), and is of opinion that the request for an inquiry in the form in which it was received was frivolous and vexatious. The Committee has come to this conclusion for the following reasons:
>
> 1. *Method of Selecting Prescriptions.*—To select all the prescription forms 1s. and over in value, quite irrespective of the number of prescriptions (such as mixtures, lotions, gargles, dressings, etc.) upon each form, is a misleading and fallacious method. Thus in 3,870 prescription forms there were 7,605 separate prescriptions given at a

total cost of £252 3s. 9d., and an average cost of 7.95d. per prescription, inclusive of dispensing fees, water, and overcharges.

In many cases these prescription forms have been used for the repetition of mixtures, a method suggested by the Chemists' Association in the first instance. (Thus a doctor has ordered two bottles of the same mixture on one form, and the adoption of this course has raised the apparent cost per prescription, and has now led to the suggestion of excessive and extravagant subscribing.)

2. *Cost of Dispensing.*—The Committee desires to point out that the dispensing fees amount to 27 per cent., or £70 7s. out of the total £252 3s. 9d., notwithstanding that in these prescriptions many of the items do not carry a dispensing fee, the chemists' remuneration having been provided in the tariff price for the articles.

The charge for water was also found to be a very considerable item, the amount allowed for on the tariff being ½d. for 6 oz. or under.

3. *Overcharges.*—Among the 3,870 prescriptions are 429 instances of overcharging.

There are also a very few instances of undercharging.

The Committee had been put to considerable expense (quite apart from the time and trouble involved) in having the prescriptions examined, and desired to ask if there was any means of recovering the cost of the investigation.

Expenses of Pharmaceutical Committee.—An application by the Local Pharmaceutical Committee to the Insurance Committee for the sum of £72 10s. for administrative expenses had been referred to the Panel Committee, which, after considering the matter, adopted the following resolution:

> That the Panel Committee, in order to save the Medical Benefit Fund, has raised the necessary funds to meet its administrative expenses in other ways, and is of opinion that the Pharmaceutical Committee should act in a similar manner.

TYNEMOUTH.

PANEL COMMITTEE.

A MEETING of the County Borough of Tynemouth Panel Committee was held on June 29th.

Pharmacopoeia.—The report of the Pharmaceutical Subcommittee was received in which it was recommended that a fuller pharmacopoeia should be drawn up for the use of practitioners on the panel. On the motion of Dr. FRASER, seconded by Dr. TINDLE, it was resolved that the pharmacopoeia submitted by the Subcommittee be printed.

Medical Certificates.—Dr. MEARS and Dr. BOWER reported upon the conference in London with reference to the medical certificates. They said that a new form of certificate was to be submitted, and that the Commissioners desired that a certificate should have upon it a diagnosis. The Commissioners were proposing to hold further meetings, with reference to the certificates, in the country, and it was arranged that before the meeting was held a further meeting of the Panel Committee should be held to decide upon the course to be taken at the meeting.

INSURANCE COMMITTEES.

BRISTOL.

THE monthly meeting was held on July 6th, Dr. WALTER SAISE being in the chair.

Work of Medical Adviser.—In moving the adoption of the report of the Medical Service Subcommittee Mr. BROWN stated that 82 cases had been referred to the Medical Adviser, of which 34 were found fit to work, 19 did not attend, and 29 were not fit to work. Of these, 65 cases had been sent by Approved Societies, and 17 by the doctors. The results of the 65 cases were 20 fit, 17 did not attend, and 28 were pronounced unfit to work; of the doctor's cases 14 were fit, 2 did not attend, and 1 was unfit. The report was adopted.

Medical Benefit Committee.—Mr. MORRIS, in introducing the medical benefit report, said that the Pharmaceutical Committee had applied for the sum of £10 to be paid under Section 33 of the Act, and that this had been approved by the Panel Committee. The consent of the Commissioners was required. The Panel Committee had decided to make a levy on the practitioners on the panel other than that provided by Sec. 33 (2), and had requested the Insurance Committee to pay to its secretary from the practitioners' fund such sums as it might request, not exceeding £250 in any one year. The Committee agreed to accede to this request provided a signed authority was received from each individual practitioner on the panel. It was also reported that the recalculated provisional credit for medical benefits which had been received from the Commissioners represented an average of 113,725 insured persons entitled to medical benefits for the year ending January 11th, 1914.

Sanatorium Benefit.—The Sanatorium Benefit Subcommittee's report stated that 36 applications had been received since May 26th for sanatorium treatment. In the discussion that took place on the report, Mr. BROWN emphasized the importance of after-care. He thought that some means should be devised whereby patients on their return could be placed in circumstances to earn their living under better conditions, for unless something was done this part of the Act was being wasted. Mr. HILLIER spoke of the importance of the better housing, and the CHAIRMAN replied that the city authorities were fully alive to the fact and had done a great deal already in that direction. Dr. MICHELL CLARKE said that it was well recognized that of working men attacked with tuberculosis few were able to return to laborious work again. A great deal of money might be spent on sanatoriums to little purpose so long as the patients were not looked after on their return home. Light jobs for them were not easy to get, but it was one of the things that would have to be provided in the future. Too much reliance must not be placed on sanatorium treatment, and though the results were good, the system must be regarded as open to improvement and addition. The report was adopted.

Payment of Members.—The General Purposes Subcommittee reported that a reply had been received from the Commissioners to the resolution passed at the last meeting on the payment of members, expressing their inability to agree with the scheme proposed.

The Budget Proposals.—On the motion of Mr. MORRIS, a resolution was passed welcoming the appointment of medical referees and of nurses, the provision of facilities of modern methods of exact diagnosis, and opportunities of obtaining medical and surgical appliances.

CROYDON.

THE two medical representatives elected to serve on the Insurance Committee for the county borough of Croydon are Mr. E. H. Willock and Dr. G. Gilbert Genge.

INSURANCE NOTES.

MEDICAL REFEREES.

THE Insurance Commissioners (England) have issued a memorandum, A.S. 104 (*a*), to approved societies, stating that the arrangements for a general system of medical referees cannot be completed before the end of this year. The Administration Expenses Regulations will be amended so as to allow a total sum of 2d. a member instead of 1d. to be available in respect of expenditure on medical referees in the fifteen months, October 1st, 1913, to December 31st, 1914, of which not more than 1d. will be allowed in respect of the period ending January 11th, 1914.

DISABLEMENT BENEFIT.

Disablement benefit under the Insurance Act began on Monday last, July 13th. The benefit amounts to 5s. a week, for men and women alike, payable from the date when sickness benefit ceases—that is, after 26 weeks—as long as the insured person remains disabled, but not after the age of 70, when the old-age pension begins. Only persons who have been insured for 104 weeks and have paid 104 weekly contributions are eligible for the benefit. The paragraphs in the Act of 1911 as amended by the Act of 1913 are as follows:

SECTION 8.

Sickness Benefit.

(1) (*c*) Periodical payments whilst rendered incapable of work by some specific disease or by bodily or mental disablement, of which notice has been given, commencing on the fourth day of such incapacity, and continuing for a period not exceeding twenty-six weeks.

Disablement Benefit.

(*d*) In the case of the disease or disablement continuing after the determination of sickness benefit, periodical payments so long as so rendered incapable of work by the disease or disablement.

(3) In the case of insured persons who have attained the age of 70 the right to sickness benefit and disablement benefit shall cease.

(8) Notwithstanding anything in this part of the Act, no insured person shall be entitled

(*c*) to disablement benefit unless and until one hundred and four weeks have elapsed since his entry

into insurance, and at least one hundred and four weekly contributions have been paid by or in respect of him.

By Section 11 disablement benefit may be reduced or suspended in the case of an insured person in receipt of, or entitled to, compensation or damages in respect of any injury or disease, and by Section 12 no disablement benefit is payable to an inmate of any hospital, etc.

Section 14 (2) empowers an approved society with the consent of the Insurance Commissioners to make rules for, among other things, the infliction and enforcement of penalties for breach of any such rule, but enacts that—

> (*b*) No such rule shall provide for the suspension of any benefit for a period exceeding one year.
> (*c*) No such rule shall prescribe any penalty, nor shall any insured person be subject to any penalty, whether by suspension of benefit or otherwise, on account of the refusal by any such person to submit to a surgical operation, or vaccination, or inoculation of any kind, unless such refusal in the case of a surgical operation of a minor character is considered by the society, or on appeal the Insurance Commissioners, unreasonable.

No special regulations for the administration of Disablement Benefit have been issued, but the English Commissioners have issued the following circular (A.S. 138) on the subject.

Preliminary Notice.

Disablement benefit is in effect the continuation of sickness benefit, at a reduced rate, subject to the special condition that the member must have been 104 weeks in insurance and had 104 weekly contributions paid by or in respect of him.

It is payable only after a member's right to 26 weeks' sickness benefit is exhausted, either in one illness, or in illnesses "linked up" under Section 8 (5) of the Act of 1911 (Circular A.S. 129).

It is, like sickness benefit, subject to the condition that the member is "rendered incapable of work by some specific disease or by bodily or mental disablement." Societies will determine whether the member is, and continues to be, incapable of work on the same evidence as in the case of sickness benefit—that is, periodical medical certificates, sick visiting, medical referees, etc., and members are subject to the same rules as to behaviour during sickness, etc.

One hundred and four weeks from the earliest date of entry into insurance elapsed on July 12th, 1914; the week commencing July 13th, 1914, is therefore the first in respect of which any disablement benefit can be payable.

If a member has been in insurance for 104 weeks, but has not had 104 contributions paid in respect of him, he is entitled to pay up the contributions necessary to complete the number in order to qualify for disablement benefit.

Contributions so paid up by a member who is incapacitated by illness must always be at the full weekly rate. In the case of an employed contribntor, however, arrears contracted during unemployment since July 14th, 1913, which are paid off at the reduced rate (ordinarily 4d. for men, 3d. for women) will count as full contributions towards the necessary 104.

The ordinary rate of disablement benefit is 5s. a week. For female members under 21, however, it is 4s. a week, and for Class H contributors 3s. a week.

FORMATION OF A PANEL MEDICO-POLITICAL UNION.

A MEETING of panel practitioners was held at the Caxton Hall on July 10th in connexion with an organization to be called the "Panel Medico-Political Union." Dr. H. J. CARDALE, a member of the London Panel Committee, presided, and with him on the platform were Dr. J. A. Angus (Paddington) and Dr. A. Welply, who acted as honorary secretary. It was stated that every member of the London panel had been invited to the meeting; about eighty practitioners were present.

Dr. WELPLY explained that a meeting to form a medico-political association was held a few weeks ago at the Queen's Hall. Owing to the fact that they had no funds the organizers felt they could not summon all the 1,600 practitioners on the panel, and therefore summoned 400 from all over the area. There had been some grumbles on the part of those who were not invited, and he hoped this explanation would be accepted. Dr. Welply read a letter from the editor of the *Medical World* offering the new body free use of the offices of the paper, with free typewriting assistance. The committee elected at the Queen's Hall meeting (six representatives of the south and six of the north side of the Thames) had decided to accept that offer. The committee also considered the question of the unallotted funds in London, and called a protest meeting of practitioners at the Caxton Hall (see BRITISH MEDICAL JOURNAL SUPPLEMENT, July 11th, p. 52). At a second meeting the committee considered the rules and constitution of the new association, and decided to recommend that it should be a trade union and be called the "Panel Medico-Political Union."

The suggested name was forthwith approved.

Adoption of the Trade Union Principle.

Dr. YOUNG proposed and Dr. A. SALTER seconded that the Union be conducted on the principles of a trade union.

Dr. DRAPER asked how the medical profession would be protected by resorting to trade unionism. It would still be possible to sue the individual member, as in the case of a labourers' union. The difference was that in the labourers' union the individual member had nothing, whereas in the case of doctors this might not be so.

The CHAIRMAN said the secretary undoubtedly was a person liable to be shot at, and Dr. Wallace Henry, of Leicester, in a memorandum on this point explained that the secretary was therefore "usually reliable but impecunious." (Laughter.)

The resolution having been carried, Dr. SALTER asked if the meeting was now acting as a trade union.

The CHAIRMAN: No, because we are not at present registered; we are considering draft rules to be submitted to the Registrar of Trade Unions.

Dr. SALTER raised the question whether it was possible for those present to approve rules unless they were actually members of a trade union and had paid their subscriptions.

Dr. ANGUS thought the association would not be a trade union until it was registered.

Dr. P. C. RAIMENT observed that the meeting seemed to be in a difficulty, and perhaps the experience of the National Medical Union would be of assistance. It was incorrect to say that the association would not be a trade union until it was registered. Registration meant nothing whatever; if a body of persons undertook certain duties or did certain acts having for their object the restraint of trade, those persons became *per se* a trade union and registration mattered nothing at all. It would be necessary for seven members, presumably members of the Executive Committee to sign two draft copies of the rules and send them with a sovereign to the Registrar. It had nothing to do with anybody except those who signed; members could be received on production of the rules. It was of great importance that the rules should be carefully considered, because, after registration, there was great difficulty in altering them.

Objects of the Union.

Dr. WELPLY explained that some of the proposed rules were still under consideration by a solicitor; but he read to the meeting such of the rules as were ready. These provided that the officers of the union should be a president, vice-president, treasurer, and secretary, an executive committee of twelve members and a general committee of twenty-nine members. The annual subscription would be one guinea, and the membership would be confined to practitioners engaged in service under the National Insurance Act. The right to admit or refuse any candidate was reserved to the Executive Committee. The objects of the union were to protect the interests of panel practitioners by supporting parliamentary candidates friendly to panel service and opposing those who were hostile, and by supporting the candidature of friendly representatives to Insurance Committees or other bodies concerned in the administration of the Act; to make representations to such bodies and to assist any other medical organization in its efforts on behalf of the insurance service. Special attention would be paid to proposed developments of the service and proposals to revise the remuneration or add to clerical duties. It was intended to establish a register of reliable *locumtenents* and assistants, and to help in the disposal of panel practices, especially in case of death. Subscriptions would be made to medical charities with a view to helping dependants of deceased practitioners, and, if practicable, a superannuation or pension scheme would be instituted.

The suggestion was made that as the general committee was to consist of twenty-nine members there should be upon it one representative of each panel area in London; but Dr. H. G. COWIE said that the union was not to be confined to London.

It was then urged that as the Executive Committee had been elected by representatives of a section of London

panel practitioners, it should only be regarded as provisional.

Dr. T. F. Keenan (a member of the Committee) agreed, and said it was desirable to avoid any suggestion that there had been packing. The Chairman gave an undertaking that at any early date the Committee would resign.

Dr. Welply stated that communications in support of the union had been received from many parts of the country.

The meeting expressed its general approval of the constitution and rules of the union, and the proceedings then terminated. The Chairman mentioned that the expenses to date amounted to £32 and the income to £21, and a collection was taken to make up the deficit.

Voluntary Insurance and Friendly Society Control.

The attention of the meeting was called to the bill introduced into Parliament by Sir R. Cooper providing for amendment of the Insurance Act on a voluntary basis and for a return to friendly society administration. Although it was suggested that the bill was a "window-dressing" measure and had no chance of passing, the meeting decided to express by resolution its disapproval of any interference with the basic principles of the Act, and especially of friendly society control.

Allocation of Patients.

Dr. A. R. Eates (Marylebone) has addressed a letter to the Insurance Commissioners in which he makes the following observations:

I took service under the Act in May, 1913, on the clear understanding that the terms of the Act in respect of the allocation of insured persons would be carried out in the year 1913, and that I should be allotted from 1,500 to 2,000 persons whose medical treatment I should be responsible for. I came to start practice in this neighbourhood on this understanding and on the written recommendation of the Clerk of the London Insurance Committee.

As time went on I was assured time and again that the allocation as required by the Act would be made. Then came, in the autumn of 1913, your memorandum stating that experience had discovered that an exhaustive allocation was impossible. While accepting your finding and recognizing the difficulties in the making of an exhaustive allocation, I yet had the hope and expectation that an allocation as far as practicable could and would be proceeded with.

It now transpires that in the month of August or September, 1913, a command from you to the London Insurance Committee postponed the allocation on the ground that the panel was not complete. The Insurance Committee, while claiming that they have traced and could allocate 80 per cent. of insured persons in their area, repudiate all responsibility for non-fulfilment of the terms of the Act, and would appear to fix the responsibility upon you.

The allocation not having been attempted has resulted in my having had applications to be placed on my list, mostly by persons requiring medical aid; and hence my list for thirteen and a half months represents 550 acceptances, for whom in the same period there have been required and given no less than 2,504 consultations and visits, while the remuneration for the same work comes out at about 8d. an attendance. I am well aware that I am not being paid per attendance, but on a capitation basis, and I bring to your notice the rate per attendance only to show you how your prohibiting the allocation affects my pay; for I am sure it was never in the contemplation of any one that adequate attendance should be paid for at the rate of 8d. per attendance.

At the risk of going beyond the legitimate subject of my statement, I would respectfully point out that in dealing with the method of disbursing the so-called "surplus" funds, and in a numerical allocation of the persons still not attached to any doctor's list there exist means for finding such an equitable alternative.

Salford Insurance Committee.

Statements have from time to time been made that the present system of administering medical benefit in Salford —namely, by payment per attendance, according to a fixed scale of fees—was accountable for numerous abuses, that the complete freedom of choice of doctor, with liberty to change a doctor even during an illness, tended to encourage malingering, seeing that if a patient were refused a certificate by one doctor he could go about from one doctor to another until he found one ready to grant a certificate, and that in this way the sickness funds of the approved societies were suffering unduly. Other charges have also been made, supposed to be inherent in the Salford system, and the Insurance Committee accordingly several months ago appointed a special subcommittee from its members to inquire into the system. At its first meeting the subcommittee resolved to inform all the larger approved societies having members in the area of its intended inquiry, and to request those that desired to give evidence to communicate with the clerk. It was also resolved to advertise in several of the Manchester and Salford newspapers inviting any insured person and persons connected with approved societies to give evidence. This has now been done, and the subcommittee has drawn up a long list of special questions which will be placed before any persons desirous of giving evidence, as a guide to the general line of inquiry which is proposed, though it is understood that witnesses will not be confined to these questions, but will be at liberty to bring forward any matter which is germane to the inquiry. The committee hopes to be able to report to the Insurance Committee during the autumn in plenty of time to allow of fresh arrangements being made, if thought desirable, for next year.

IRELAND.

Doctors and Insurance Certificates.

At the last meeting of the North Dublin Union a guardian brought to the notice of the board "the refusal of Dr. Walsh, Benburb Street Dispensary, and Dr. Donnelly, Clarence Street Dispensary, to grant certificates under the National Insurance Act, thus preventing their Poor Law patients receiving their sick benefits." He said that portion of Dr. Donnelly's salary came from granting certificates under his agreement with the board. He thought a person getting medical relief was just as much entitled to get a certificate from Dr. Donnelly as a person was to get a copy of the registration when death occurred. Dr. Donnelly denied that payments for certificates formed part of his salary. He thanked the board for allowing him the opportunity to give an explanation in person. Neither the guardians nor the Local Government Board were responsible for or had anything to do with the question of certificates. They did not, and could not, administer the National Insurance Act. The guardians might think that giving certificates was a matter of form. Since he unwittingly gave a false certificate nearly thirty years ago he made up his mind that he would not give certificates he could not stand cross-examination upon. Until the Commissioners arranged with the profession to make the thing bona fide and above board he would not give certificates. He would not submit to the indignity of anybody being able to say that he issued a false certificate. The guardian said that while the Commissioners and the doctors disputed the poor were deprived of their certicates, and asked Dr. Donnelly if it was fair that a person to whom he had to give medical relief had to go, owing to the doctor's action, to another doctor for a certificate. Another guardian said that the system was wrong, but the doctor was not responsible for that. Dr. Donnelly said that the certificates were the means of utilizing the knowledge of the doctors to safeguard the friendly societies. No action was taken in the matter.

Arrears in Ireland.

In Ireland the contributors, as a rule, who are in arrear may be regarded as casual labourers, who reside, for the most part, in urban areas. It has been assumed that there is an abnormal number of casual labourers in Ireland in arrear, but statistics prove the contrary. An analysis has been made of the contribution returns of a number of societies likely to have a considerable urban casual membership for the quarter ending October, 1912, and for the quarter ended April, 1913. These returns comprise about 152,000 men and 77,500 women, and they show that 10.4 per cent. of men and 10.5 per cent. of women would have been in arrear not exceeding eighteen contributions a year; 3 per cent. of men and 2.7 per cent. of women exceeding eighteen and not exceeding twenty-six contributions a year; and 5.2 per cent. of men and 4.1 per cent. of women exceeding twenty-six contributions a year. For a purely rural society containing 4,472 men and 639 women the figures were: 7.1 per cent. of men and 6.5 per cent. of women not exceeding eighteen contributions in arrear; 2.6 per cent. of men and 2.5 per cent. of women exceeding eighteen but not exceeding twenty-six contributions; and 4.3 per cent. of men and 3.4 per cent. of women exceeding twenty-six contributions. These figures are for a normal period, and it is expected a similar result would be found on the figures for the current quarter. As a matter of fact, many societies having members employed casually pay the arrears to

their members. The Dublin Brick and Stone Layers' Society do this, and some others. Hence the arrears in Ireland compare very favourably with those due in other parts of the United Kingdom.

Financial Status of Irish Societies.

On the whole, the financial status of the Irish societies is said to be good, with the possible exception of those societies which have a large female membership, and even these are not so bad from the actuarial standpoint as are some similar societies in England. An expert discussing the question recently said that some of the women's societies in Ireland were exceedingly good and some were pretty bad. These matters are at present being considered by the Advisory Board of the Insurance Commissioners of the three kingdoms, and it is expected that defects will be rectified prior to the valuation next year. A great deal depends on the grants under the present Budget becoming available in sufficient time. The grants for married women, especially the maternity benefits, have proved an exceptional drain on many societies, and in some districts there has admittedly been a great deal of malingering. There will have to be a decided improvement in regard to certification before the national insurance schemes can be worked on a sound actuarial basis. At present there are only eleven areas out of thirty-nine in which there are panel doctors, and on the whole the panel system has not been found successful in Ireland. Most of the assistance now given in regard to sickness is by clergymen and local magistrates, and by officials of the various societies, but there is too much tendency in Ireland to act as the good Samaritan and put on an insured person for benefit "just for a week or two—he is a very deserving fellow, you know." Such a policy plays ducks and drakes with any system of insurance, no matter how carefully it may have been thought out. At present a scheme, which it is believed will meet the wishes of the medical profession, is being considered by the Cabinet, and if this can be arranged the trouble regarding certification will be obviated, and matters will progress more satisfactorily in the future; an increase in the grants for administration is considered necessary as there are all-round complaints that these are entirely insufficient.

OFFICIAL PUBLICATIONS.

QUESTION OF THE NEED FOR OPERATIONS.

THE Insurance Commissioners have made the following rules, dated July 4th, 1914, under Article 50 of the National Health Insurance (Medical Benefit) Regulations (England), 1913, as to operations:

1. In these Rules, unless the context otherwise requires—

"The Commissioners" means the Insurance Commissioners:

"Question" means a question as to whether an operation or other service is of a kind which can consistently with the best interests of the patient be properly undertaken by a general practitioner of ordinary professional competence and skill.

2. Where an Insurance Committee and a Local Medical Committee fail to agree as to the decision of any question, the Insurance Committee shall prepare and submit to the Local Medical Committee:

(*a*) a written statement of the facts in connexion with which the question has arisen; and

(*b*) a written statement of the decision given by it and the grounds on which the decision is based.

3. The Local Medical Committee shall, as soon as may be after receipt of the said statements, furnish to the Insurance Committee a written statement of the decision given by it and the grounds on which the decision is based, and shall inform the Insurance Committee whether it concurs in the statement of facts prepared by the Insurance Committee, and, if not, in what respects it does not concur in that statement.

4. The Insurance Committee shall send the statements prepared by both Committees to the Commissioners and the Commissioners may, if they think fit, require both or either of the said Committees to furnish further particulars either with regard to the facts of the case or to the decision or the grounds of the decision.

5. The Commissioners shall furnish copies of all such statements or further statements to each of the Referees appointed by them for the purpose of deciding the question.

6. After consideration of the said statements the Referees shall inform the Commissioners whether, in their opinion, a hearing is desirable, and in the event of a hearing being required, the Commissioners shall fix the time and place of the hearing, and shall give not less than seven days' notice thereof to the Insurance Committee and the Local Medical Committee.

7. Each Committee shall be entitled to appear at the hearing by the chairman, clerk, or secretary of the Committee, or by counsel or solicitor, and produce such evidence, whether orally or in writing, as in the opinion of the Referees may be relevant to the matters at issue.

8. The Referees shall, as soon as may be after the hearing, report to the Commissioners the decision at which they have arrived.

9. While in the opinion of the Referees a hearing is not required, the Referees shall, as soon as may be after the matter has been referred to them, meet and consider the question and report to the Commissioners the decision at which they have arrived.

10. (1) Where the Commissioners think fit to refer for decision to Referees any question on which the Insurance Committee and the Local Medical Committee are agreed, the Commissioners may require either or both of the said Committees to furnish written statements of the facts in connexion with which the question has arisen and of their decision and the grounds on which the decision was based, and the Commissioners shall thereupon request the Referees appointed by them for the purpose to fix a day for the hearing.

(2) The statement or statements furnished in accordance with the provisions of the last preceding paragraph shall, for the purposes of the hearing, be evidence of the facts therein alleged.

(3) The Insurance Committee and the Local Medical Committee shall be given by the Commissioners not less than seven days' notice of a hearing held under this Rule, and shall be entitled to appear at the hearing by any of the persons mentioned in Rule 7.

11. At any hearing held under these Rules the Commissioners may produce such evidence, whether orally or in writing, as in the opinion of the Referees may be relevant to the matters at issue, and may appear by any one of themselves or of their officers or by counsel or solicitor.

12. The Commissioners may, if they think fit, dispense with any requirement of these Rules in any case where, regard being had to all the circumstances, it appears just or convenient to do so.

13. These Rules shall apply, with the necessary modifications, in the case of any question arising under Article 55 of the National Health Insurance (Administration of Medical Benefit) Regulations, 1912.

INSURANCE ACT IN PARLIAMENT.

CONTRIBUTION CARDS.

IN reply to Mr. Murray Macdonald, Mr. Wedgwood Benn said that the distribution of the contribution cards for the second half of the year had already been completed, and that any supplementary demands for cards were being immediately dealt with.

DRUGS DISPENSED BY DOCTORS.

Mr. Mills asked whether the Middlesex Insurance Committee had not yet paid the dispensing fees to the doctors on the panel in that county since the National Insurance Act came into operation on January 16th, 1913; that medical men in rural districts where chemists were few had done their own dispensing at their own cost, and that these doctors had had to pay out of their own money to their druggists since January, 1913, with the result that in one case about £67 10s., representing the fee for dispensing at the rate of 2s. a head per annum, was now due to one doctor in the area, and larger and smaller sums to other doctors; whether frequent applications had been made to the Insurance Committee for repayment without result; and what steps would be taken to ensure that the Middlesex Insurance Committee should forthwith pay these long overdue accounts.—Mr. Wedgwood Benn replied that it was understood that arrangements had now been made by the Middlesex Insurance Committee for the payment of the remuneration in question for the year 1913, and for the payment of advances from time to time on account of similar remuneration for the current year.

CORRESPONDENCE.

An Insurance Trust.

Dr. Henry George Dixon (London, E.C.) writes: In your issue of July 11th, page 48, you gave some extracts from the second annual report of the Insurance Commissioners; among others, one from their chief actuary, who insinuates that in many quarters the medical profession has betrayed the "trust" reposed in it by Parliament as regards medical benefit and the interests of the societies.

Now, the medical man's duty, first and last and all the time, is to his patients; but what the chief actuary is thinking of is the gigantic insurance trust constituted by the eighteen societies whose representatives met at Westminster the other day, and who form, in the opinion of many, a grave peril to the profession and even to the State.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following notifications are announced by the Admiralty: Fleet Surgeon Ernest A. Penfold, M.B., to the *Dido*, vice Knapp, July 7th. Staff Surgeon Patrick D. M. Campbell to the *Wildfire*, additional, for disposal, July 3rd. Staff Surgeon Frederick G. Wilson to the *Victory*, additional, for disposal on Surgeon Hole rejoining Dartmouth College, undated. Staff Surgeon Alfred J. Gailleton, M.B., to the *Falmouth* on recommissioning, August 11th. Staff Surgeon Frederick F. Mahon has been promoted to the rank of Fleet Surgeon, July 11th. Surgeon Charles H. L. Petch to the *Ajax*, July 15th. Surgeon Gustavus W. M. Custance to the *Hawke*, vice Petch, July 15th.

ARMY MEDICAL SERVICE.

Surgeon-General William W. Kenny, M.B., is placed on retired pay, July 14th.

Colonel (temporary Surgeon-General) William G. Macpherson, C.M.G., M.B., to be Surgeon-General, to complete establishment, July 14th.

Colonel Tom P. Woodhouse to be Surgeon-General, vice W. W. Kenny, M.B., retired, July 14th.

Colonel Harry S. McGill, from the half-pay list, retires on retired pay, July 8th.

Colonel Thomas J. O'Donnell, D.S.O., on completion of four years' service in his rank, is placed on the half-pay list, July 7th.

Bravet-Colonel Samuel Hickson, M.B., Honorary Surgeon to the King, from the Royal Army Medical Corps, to be Colonel, vice T. J. O'Donnell, D.S.O., to half-pay, July 7th.

Lieutenant-Colonel Frederick W. C. Jones, M.B., from the R.A.M.C., to be Colonel, vice T. P. Woodhouse, promoted, July 14th.

Lieutenant-Colonel Thomas W. Gibbard, M.B., R.A.M.C., is appointed an Honorary Surgeon to the King, and granted the brevet rank of Colonel, vice Surgeon-General W. W. Kenny, M.B., July 14th.

Royal Army Medical Corps.

Major John Hennessy, M.B., to be Lieutenant-Colonel, July 7th.

Major Lionel A. Mitchell, M.B., to be Lieutenant-Colonel, July 14th.

Captain Francis R. Coppinger, from the Indian Medical Service, to be Captain, vice J. B. Hanafin, M.B., who exchanges, July 15th.

Captain William W. Boyce from the half-pay list is restored to the establishment, June 29th.

Lieutenant Spence and Lieutenant Brett have been selected for employment with the Egyptian Army.

SPECIAL RESERVE OF OFFICERS.

Royal Army Medical Corps.

Lieutenant-Colonel (Honorary Major in the Army) Andrew A. Watson, R.A.M.C. Territorial, to be Lieutenant-Colonel, No. 18 Field Ambulance, May 1st.

Captain Wilson H. P. Hey, M.B., F.R.C.S., No. 18 Field Ambulance, resigns his commission, July 4th.

The following Captains to be Majors: William H. G. H. Best, April 30th; James O. Furness, June 18th.

Lieutenant Hubert Cox resigns his commission, July 8th.

The following have been appointed Lieutenants on probation: Cadet Corporal William S. Dawson, Cadet Griffith I. Evans, and Cadet George H. Rossdale, from the Oxford University Contingent, Officers' Training Corps, May 20th and June 18th respectively. Cadet Sergeant Thomas W. Clarke, M.B., from the Edinburgh University Contingent, Officers' Training Corps, May 26th; Cadet Sergeant John Cullenan, from the Belfast University Contingent, Officers' Training Corps, June 4th; Cadet Arthur G. Fisher, from the Dublin University Contingent, Officers' Training Corps, June 6th; Cadet Staff Sergeant Francis D. Annesley, from the London University Contingent, Officers' Training Corps, May 26th; Cadet Corporal Ian D. Suttie, M.B., from the Glasgow University Contingent, Officers' Training Corps, June 15th. Henry C. Bazett, M.B., June 19th.

INDIAN MEDICAL SERVICE.

The Honourable Sir C. P. Lukis, K.C.S.I., M.D., F.R.C.S., K.H.S., Director-General, Indian Medical Service, is appointed to hold charge of the current duties of the office of the Sanitary Commissioner in addition to his own during the absence on leave of the Honourable Major J. C. Robertson, C.I.E., M.B., or until further orders.

Surgeon-General Aylmer M. Crofts, C.I.E., K.H.S., has retired, May 25th.

Colonel A. O. Evans, Inspector-General of Civil Hospitals, Burma, is granted, with effect from May 28th, combined leave for eight months.

The following officers have been promoted to the rank of Colonel: H. E. Banatvala, with effect from April 2nd; P. C. H. Strickland, with effect from May 15th.

Lieutenant-Colonel C. R. Pearce, I.M.S., has been appointed to the Bacteriological Department and posted to the Pasteur Institute, Burma.

The services of Major M. Corry, M.D., are placed temporarily at the disposal of Chief Commissioner, Delhi.

Major F. P. Mackie, M.B., F.R.C.S., Officer on special duty for the investigation of kala-azar, is granted privilege leave for three months with effect from June 27th.

The services of Major M. Mackelvie are placed permanently at the disposal of the Government of Bengal, with effect from October 10th, 1913.

The Honourable Major J. C. Robertson, C.I.E., M.B., Sanitary Commissioner with the Government of India, is granted privilege leave for two months with effect from the date on which he makes over charge by telegram on the completion of his special work at Aden.

The services of Captain N. N. G. C. McVean have been placed at the disposal of the Bombay Government for civil employ.

Subject to his having passed the examination held in April, 1914, H. S. Cormack, M.B., F.R.C.S.E., is promoted to the rank of Captain, with effect from January 28th, 1914.

The services of Captain C. H. Cross are placed temporarily at the disposal of the Government of Madras.

The services of Captain S. C. Chuckerbutty are placed temporarily at the disposal of the Chief Commissioner, Assam.

Captain C. Newcomb, M.B., is appointed to be a probationer in the Chemical Examiner's Department, and is attached to the Chemical Examiner's Laboratory at Calcutta.

Captain A. N. Dickson is appointed to officiate as an Agency Surgeon of the second class, and is posted as Agency Surgeon, Maskat, with effect from June 11th.

Captain N. W. Mackworth, M.B., F.R.C.S.E., has been promoted to Major, January 26th.

The services of Captain McGillivray, M.D., have been placed temporarily at the disposal of the Government of Burma.

Indian Subordinate Medical Department.

Senior Assistant Surgeon with the honorary rank of Lieutenant to be Senior Assistant Surgeon with the honorary rank of Captain: Harry W. De Lanty, January 28th.

To be Senior Assistant Surgeons with the honorary rank of Lieutenant, January 28th: First Class Assistant Surgeons Percival B. Mills, John J. A. Brachio, George P. O'Brien, Christopher G. Thompson, Henry Mansfield, and Edward J. Archer.

TERRITORIAL FORCE.

Royal Army Medical Corps.

Highland Mounted Brigade Field Ambulance.—John Broadfoot, M.B., to be Lieutenant, May 1st.

Third East Lancashire Field Ambulance.—Captain Wilson H. P. Hey, M.B., F.R.C.S., resigns his commission, July 4th.

Attached to Units other than Medical Units.—Captain John Orr, M.B., resigns his commission and is granted permission to retain his rank and to wear the prescribed uniform, July 4th. Lieutenant-Colonel (Honorary Major in the army) Andrew A. Watson is seconded for service with No. 18 Field Ambulance, R.A.M.C. (Special Reserve), May 1st. Captain Samuel M. Sloan, M.B., to be Major, May 22nd. Maurice C. Anderson to be Lieutenant, June 11th. Lieutenant Kenneth Mackinson, M.B., resigns his commission, July 11th.

Supernumerary for Service with the Officers' Training Corps.—Lieutenant Patrick Nicol, M.B., serving with the Aberdeen University Contingent, Senior Division, Officers' Training Corps, resigns his commission, July 4th.

Second South-Western Mounted Brigade Field Ambulance.—Lieutenant Rupert Waterhouse, M.D., to be Captain, October 15th.

First West Lancashire Field Ambulance.—Samuel McCausland to be Lieutenant, June 1st.

First London (City of London) Field Ambulance. — Cadet Lance-Corporal Eric Donaldson, from the University of London Contingent, Senior Division, Officers' Training Corps, to be Lieutenant, July 11th.

Second London Sanitary Company.—William J. M. Slowan, M.D., to be Lieutenant, June 9th.

For Attachment to Units other than Medical Units.—John Livingston, F.R.C.S.Edin., to be Lieutenant, May 23rd.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 9,091 births and 4,000 deaths were registered during the week ended Saturday, July 11th. The annual rate of mortality in these towns, which had been 12.9, 12.1, and 12.7 per 1,000 in the three preceding weeks, fell to 11.5 per 1,000 in the week under notice. In London the death-rate was equal to 10.6, against 12.2, 12.1, and 13.3 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 2.8 in Eastbourne, 4.3 in Exeter, 4.7 in Hornsey, and 6.0 in Enfield to 17.0 in Gateshead and in Tynemouth, 17.6 in Liverpool, and 22.8 in Bootle. Measles caused a death-rate of 1.4 in Sheffield, 1.7 in Rochdale, 1.8 in Liverpool, and 2.1 in Oldham; and whooping-cough of 1.5 in Birkenhead and 2.1 in Warrington. The mortality from the remaining infective diseases showed no marked excess in any of the large towns. One fatal case of small-pox was registered in Rochdale. The causes of 29, or 0.7 per cent. of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 8 were recorded in Birmingham, 4 in Liverpool, and 3 in Stoke-on-Trent. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,038, 3,088, and 3,092 in the three preceding weeks, further rose to 3,109 on Saturday last; 414 new cases were admitted during the week, against 405, 449, and 442 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,158 births and 597 deaths were registered during the week ended Saturday, July 11th. The annual rate of mortality in these towns, which had been 14.6, 13.8, and 14.1 in the three preceding weeks, fell to 13.6 per 1,000 in the week under notice, and was 2.1 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 7.0 in Clydebank and 7.3 in Paisley and Kilmarnock to 15.7 in Edinburgh, 16.9 in Dundee, and 22.0 in Ayr. The mortality from the principal infective diseases averaged 0.9 per 1,000, and was highest in Hamilton and Coatbridge. The 283 deaths from all causes in Glasgow included 9 from whooping-cough, 6 from measles, 6 from infantile diarrhoeal diseases, and 2 each from enteric fever, scarlet fever, and diphtheria. Whooping-cough caused 2 deaths in Coatbridge, and infantile diarrhoeal diseases 2 in Aberdeen.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, July 4th, 615 births and 375 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 665 births and 364 deaths in the preceding period. These deaths represent a mortality of 16.2 per 1,000 of the aggregate population in the districts in question, as against 15.7 per 1,000 in the previous period. The mortality in these Irish areas was therefore 3.5 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 26.6 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 16.3 (as against an average of 17.0 for the previous four weeks), in Dublin city 16.6 (as against 18.0), in Belfast 17.0 (as against 17.1), in Cork 20.4 (as against 18.4), in Londonderry 14.0 (as against 11.4), in Limerick 20.3 (as against 19.6), and in Waterford 9.5 (as against 16.6). The zymotic death-rate was 2.1, as against 1.6 in the previous week.

During the week ending Saturday, July 11th, 671 births and 368 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 615 births and 375 deaths in the preceding period. These deaths represent a mortality of 15.9 per 1,000 of the aggregate population in the districts in question, as against 16.2 per 1,000 in the previous period. The mortality in these Irish areas was therefore 4.4 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 29.0 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 15.0 (as against an average of 16.1 for the previous four weeks), in Dublin city 16.0 (as against 17.1), in Belfast 17.0 (as against 17.1), in Cork 15.6 (as against 17.0), in Londonderry 26.6 (as against 15.15), in Limerick 12.2 (as against 16.9), and in Waterford 17.1 (as against 17.6). The zymotic death-rate was 1.6, as against 2.1 in the previous week.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BARROW-IN FURNESS: NORTH LONSDALE HOSPITAL.—Male House-Surgeon. Salary, £150 per annum.

BEDFORD COUNTY HOSPITAL.—Assistant House-Surgeon. Salary, £100 per annum.

BETHNAL GREEN INFIRMARY.—Assistant Medical Officer. Salary, £160 per annum, increasing to £180.

BIRKENHEAD BOROUGH HOSPITAL. — Senior House-Surgeon (male). Salary, £120 per annum.

BIRMINGHAM: CITY FEVER HOSPITAL, Little Bromwich.—Male Assistant Medical Officer. Salary, £200 per annum.

BIRMINGHAM: CITY MENTAL HOSPITAL.—Assistant Medical Officer (male). Salary, £200 per annum.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—House-Surgeon. Salary, £100 per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum and £5 laundry allowance.

BIRMINGHAM: QUEEN'S HOSPITAL.—House-Surgeon. Salary at the rate of £50 per annum, and £10 bonus on satisfactory completion of six months' service.

BIRMINGHAM UNION.—(1) Assistant Medical Officer at Dudley Road Infirmary. (2) Assistant Medical Officer at Selly Oak Infirmary and House. Salary, £140 and £160 per annum respectively.

BIRMINGHAM UNIVERSITY.—Walter Myers Travelling Fellowship. Value, £150 for one year.

BLACKBURN AND EAST LANCASHIRE ROYAL INFIRMARY.—Junior House-Surgeon. Salary, £100 per annum.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.—House-Surgeon (male). Salary at the rate of £75 per annum.

BOLTON INFIRMARY AND DISPENSARY.—Two Honorary Aural Surgeons.

BRADFORD CITY HOSPITAL FOR CONSUMPTIVES.—Resident Medical Officer. Salary, £200 per annum.

BRADFORD ROYAL INFIRMARY.—Two House-Surgeons (males). Salary, £100 per annum each.

BRIGHTON THROAT AND EAR HOSPITAL.—Non-Resident House-Surgeon. Salary at the rate of £150 per annum.

BRISTOL CITY ASYLUM. — Second Assistant Medical Officer. Salary, £200 per annum, rising to £250.

BURY ST. EDMUNDS: WEST SUFFOLK GENERAL HOSPITAL.—Resident Medical Officer. Salary, £120 per annum.

CANNING TOWN WOMEN'S SETTLEMENT HOSPITAL, Plaistow, E.—Senior Resident Medical Officer (female). Salary, £120 per annum.

CARDIFF AND COUNTY PUBLIC HEALTH LABORATORY.—Bacteriologist. Salary, £300 per annum.

CARDIFF: KING EDWARD VII HOSPITAL.—Two House-Surgeons. Salary, £100 per annum.

CHORLEY: RAWCLIFFE HOSPITAL. — House-Surgeon (male). Salary, £100 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, Victoria Park, E.—House-Physician (male). Salary at the rate of £75 per annum.

COLCHESTER: ESSEX COUNTY HOSPITAL.—(1) House-Physician; (2) House-Surgeon; (males). Salary, £100 per annum each.

DERBYSHIRE ROYAL INFIRMARY. — Honorary Assistant Physician.

DEVONPORT: ROYAL ALBERT HOSPITAL.—(1) House-Surgeon; salary at the rate of £150 per annum. (2) Locumtenent as House-Surgeon; salary, £5 5s. per week.

FALKLAND ISLANDS.—Assistant Colonial Surgeon. Salary, £400 per annum.

FIFE AND KINROSS EDUCATION COMMITTEE. — Assistant School Medical Officer. Salary, £250 per annum, rising to £300.

GLASGOW UNIVERSITY.—(1) Lecturer in Materia Medica and Pharmacology; salary, £350 to £400 per annum. (2) Assistant to Professor of Physiology; stipend, £150 per annum.

GREENWICH UNION INFIRMARY. — First Assistant Medical Officer. Salary, £175 per annum.

HALIFAX: ROYAL HALIFAX INFIRMARY. — Third House-Surgeon. Salary, £100 per annum.

HANTS COUNTY ASYLUM, Fareham.—Third Assistant Medical Officer. Salary, £250 per annum.

HEREFORDSHIRE COUNTY COUNCIL.—(1) Assistant to Medical Officer of Health; salary, £300 per annum. (2) Locumtenent for Tuberculosis Department; salary, £6 6s. per week.

HUDDERSFIELD EDUCATION AUTHORITY.—Assistant School Medical Officer. Salary, £300 per annum.

HUDDERSFIELD ROYAL INFIRMARY.—Assistant House-Surgeon (male). Salary, £80 per annum.

HULL: ROYAL INFIRMARY.—(1) Senior House-Surgeon. (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

HULL: VICTORIA HOSPITAL FOR SICK CHILDREN.—Lady Assistant House-Surgeon. Salary, £45 per annum.

KENT COUNTY ASYLUM, Maidstone.—Fourth Assistant Medical Officer (male). Salary, £250 per annum.

KIDDERMINSTER INFIRMARY AND CHILDREN'S HOSPITAL.—House-Surgeon. Salary, £100 per annum.

KING'S COLLEGE HOSPITAL, Denmark Hill, S.E. — Assistant Obstetric Physician.

LEAMINGTON SPA, WARNEFORD, LEAMINGTON AND SOUTH WARWICKSHIRE GENERAL HOSPITAL.—(1) House-Surgeon. (2) House-Physician. Salary, £100 and £85 per annum respectively.

LEEDS PUBLIC DISPENSARY.—Junior Resident Medical Officer. Salary, £130 per annum.

LEICESTER PARISH.—Senior and Junior Assistant Medical Officers at the North Evington Poor Law Infirmary. Salary, £200 and £150 per annum respectively.

LIVERPOOL DISPENSARIES.—Assistant Surgeon. Salary, £120 per annum.

LIVERPOOL SCHOOL OF TROPICAL MEDICINE. — Research Assistant in the Runcorn Research Laboratory. Salary, £150 per annum.

LIVERPOOL STANLEY HOSPITAL.—(1) Two House-Physicians. (2) Two House-Surgeons. Salary, £80 per annum each.

LOWESTOFT AND NORTH SUFFOLK HOSPITAL. — House-Surgeon. Salary at the rate of £150 per annum.

MAIDSTONE: WEST KENT GENERAL HOSPITAL. — Assistant House-Surgeon. Salary, £80 per annum.

MANCHESTER HOSPITAL FOR CONSUMPTION AND DISEASES OF THE THROAT AND CHEST.—Assistant Medical Officer and Pathologist. Salary, £60 per annum.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, increasing to £200.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL EYE HOSPITAL.—Junior House-Surgeon. Salary, £80 per annum.

MANCHESTER ROYAL INFIRMARY. — Medical Officer for Out-patients and Accidents to the Central Branch. Salary at the rate of £100 per annum.

METROPOLITAN ASYLUMS BOARD.—Assistant Medical Officers for the Infectious Hospitals Service. Salary, £250 per annum.

NATIONAL HOSPITAL FOR DISEASES OF THE HEART, Westmoreland Street, W.—Resident Medical Officer (male). Salary at the rate of £80 per annum.

NEWARK-ON-TRENT HOSPITAL.—Lady Resident Medical Officer. Salary, £100 per annum.

NORTHAMPTON GENERAL HOSPITAL.—House-Surgeon. Salary, £120 per annum.

NOTTINGHAM CITY.—Resident Assistant Medical Officer at the Bagthorpe Institution and Infirmary. Salary at the rate of £165 per annum.

NOTTINGHAM GENERAL DISPENSARY. — Assistant Resident Surgeon (male). Salary, £180 per annum.

ORKNEY: PARISH OF SHAPANSEY.—Medical Officer and Public Vaccinator. Salary, £90 per annum.

PETERBOROUGH INFIRMARY AND DISPENSARY. — House-Surgeon (male). Salary at the rate of £120 per annum.

PLAISTOW: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—Male Assistant Resident Medical Officer. Salary at the rate of £100 per annum and £10 honorarium on completion of six months.

PRESTON: COUNTY ASYLUM, Whittingham.—Assistant Medical Officer. Salary, £250 per annum, rising to £300.

PUTNEY HOSPITAL, Putney Common, S.W.—Resident Medical Officer. Salary, £100 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeon. Salary at the rate of £80 per annum.

ROCHDALE INFIRMARY AND DISPENSARY. — Senior House-Surgeon (male). Salary, £120 per annum.

ROYAL EAR HOSPITAL, Soho, W.—House-Surgeon, non-resident. Honorarium, £40 per annum.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—(1) Resident Medical Officer. (2) House-Physician. Salary at the rate of £120 and £60 per annum respectively.

ROYAL WATERLOO HOSPITAL FOR CHILDREN AND WOMEN, S.E.—Junior Resident Medical Officer. Salary at the rate of £70 per annum.

ST. PAUL'S HOSPITAL FOR SKIN AND GENITO-URINARY DISEASES, Red Lion Square, W.C.—Assistant Surgeon.

SALFORD ROYAL HOSPITAL.—(1) House-Surgeon. (2) Junior House-Surgeon. (3) Casualty House-Surgeon. Salary at the rate of £100 per annum each.

SALFORD UNION INFIRMARY.—Male Resident Assistant Medical Officer. Salary, £150 per annum.

SALOP INFIRMARY.—House-Physician. Salary at the rate of £110 per annum.

SCARBOROUGH HOSPITAL AND DISPENSARY. — Senior and Junior House-Surgeons. Salary, £100 and £80 per annum respectively.

SHEFFIELD: CHILDREN'S HOSPITAL.—House-Surgeon for the East End Branch. Salary, £120 per annum.

SHREWSBURY: COUNTY ASYLUM. — Second Assistant Medical Officer (male). Salary, £230 per annum, rising to £250.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOU SHIELDS AND WESTOE DISPENSARY. — Junior House-S on (male). Salary, £115 per annum.

STAFFORD: STAFFORDSHIRE GENERAL INFIRMARY.—House-Physician. Salary, £100 per annum.

STAFFORDSHIRE, WOLVERHAMPTON, AND DUDLEY JOINT COMMITTEE FOR TUBERCULOSIS. — Locumtenent Tuberculosis Officer. Salary, £7 7s. per week.

SWANSEA GENERAL AND EYE HOSPITAL. — Two House-Surgeons. Salary, £125 per annum.

THROAT HOSPITAL, Golden Square, W.—Two Resident House-Surgeons. Salary at the rate of £75 per annum each.

TRURO: ROYAL CORNWALL INFIRMARY. — House-Surgeon (male). Salary, £100 per annum.

WALSALL AND DISTRICT HOSPITAL.—Assistant House-Surgeon. Salary, £110 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL. — Assistant Resident House-Surgeon and Anaesthetist. Salary, £100 per annum.

WEST HAM COUNTY BOROUGH.—Assistant School Medical Officer. Salary, £250 per annum, rising to £400.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford.—(1) Senior House-Physician. (2) Senior House-Surgeon. Salary at the rate of £100 per annum each.

WESTMINSTER UNION INFIRMARY.—Third Assistant Medical Officer. Salary, £140 per annum, rising to £160.

WINSLEY SANATORIUM FOR CONSUMPTION.—Assistant Resident Medical Officer. Salary, £150 per annum.

WINCHESTER: ROYAL HAMPSHIRE COUNTY HOSPITAL.—House-Physician (male). Salary, £80 per annum.

WREXHAM INFIRMARY.—Resident House-Surgeon. Salary, £120 per annum.

YORK COUNTY HOSPITAL.—House-Physician. Salary at the rate of £100 per annum.

CERTIFYING FACTORY SURGEONS. — The Chief Inspector of Factories announces the following vacant appointments: East Newcastle (Northumberland), Maiden Newton (Dorset), West Newcastle (Northumberland).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

ASHBY, Hugh T., B.A., M.B., B.C.Cantab., M.R.C.P.Lond., Honorary Physician to the Salford Royal Hospital.

BARRINGTON-WARD, L. E., Ch.M., F.R.C.S., Surgeon (Out-patients) to the Great Northern Central Hospital.

GREENE, Arthur, M.A., M.D., F.R.C.S.I., Honorary Ophthalmic Surgeon to Watt's Naval Training School, Norfolk.

GREGOR, Alexander, M.D., Medical Referee under the Workmen's Compensation Act for County Court Circuit No. 59, and to be attached more particularly to Penzance, Helston, Redruth, Falmouth, Truro, St. Austell, and St. Columb Major County Courts, vice Dr. Sharp, resigned.

HOWELL, James B., M.R.C.S., L.R.C.P., D.P.H., Medical Officer of Health for Hammersmith.

HUDSON, R., M.D.Durh., L.R.C.P.and S.Irel., for the Pontymister District, co. Monmouth.

JONES, William E., M.R.C.S.Eng., L.R.C.P., Honorary Anaesthetist at the Blackburn and East Lancashire Royal Infirmary.

MACRAY, D. Matheson, M.D., C.M.Edin., M.R.C.S.Eng., L.R.C.P.Loud., Honorary Ophthalmic Surgeon to the Hull Royal Infirmary.

PINCHIN, A. J. Scott, M.D.Lond., M.R.C.P.Eng., Physician to Out-patients at the Hampstead General and North-West London Hospital.

POSTLETHWAITE, J. M., M.R.C.S., L.R.C.P., for the Whalley District, co. Lancaster.

POTTS, W. A., M.A., M.D., Medical Officer to the Birmingham Committee for the Care of the Mentally Defective.

RUSSELL, J. R., M.D.Durh., M.R.C.S., for the Westerham District, co. Kent.

SEDGWICK, Richard Ernest, M.D.Camb., Medical Referee under the Workmen's Compensation Act for County Court Circuit No. 3, and to be attached more particularly to the Carlisle, Haltwistle and Alston, Brampton, Penrith, Wigton, Appleby, and Keswick County Courts, vice Dr. Roderick Maclaren, deceased.

SYMES, John, M.B., Medical Referee under the Workmen's Compensation Act for County Court Circuit No. 59, and to be attached more particularly to Penzance, Helston, Redruth, Falmouth, Truro, St. Austell, and St. Columb Major County Courts, vice Dr. Sharp, resigned.

WATT, R. H., M.D.Edin., for the Longholm District, co. Dumfries.

WILLIS, Morley, F.R.C.S., Medical Referee under the Workmen's Compensation Act for County Court Circuit No. 18, and to be attached more particularly to the Nottingham and Newark County Courts.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTH.

MCCARDIE. — On July 13th, at 39, Frederick Road, Edgbaston, Birmingham, the wife of Dr. McCardie of a son.

MARRIAGES.

HICKS—JAMES.—On July 8th, at Holy Trinity, South Hampstead, by the Rev. Arthur Griffiths, John Athelstan Braxton Hicks, M.D., M.R.C.P., only son of the late A. Braxton Hicks, Barrister-at-Law, H.M. Coroner, and Mrs. A. Braxton Hicks, of 3A, Perham Road, W., to Adeline Stephanie, only daughter of Wm. Lamprey James, Esq., of Exeter, and Mrs. Hall, of Westcliff-on-Sea.

TRAYLEN—KERSS.—On the 11th July, at St. Peter's Church, Belsize Park, Hampstead, by the Rev. H. M. M. Hackett, M.A., LL.D., Vicar, Charles Leonard Traylen, M.R.C.S., L.R.C.P., second son of the late J. C. Traylen, A.R.I.B.A., of Stamford, Lincolnshire, to Jane Douglas Kerss, daughter of J. J. Douglas Kerss, Esq., and Mrs. Kerss, of 3, Crossfield Road, Hampstead.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses and Lectures are to be given next week at the following schools, colleges, and hospitals:

CENTRAL LONDON THROAT AND EAR HOSPITAL, Gray's Inn Road, W.C.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.

LONDON HOSPITAL MEDICAL COLLEGE, Turner Street, E.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, Chenies Street, London, W.C.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.

WEST END HOSPITAL FOR DISEASES OF THE NERVOUS SYSTEM, Welbeck Street, W.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[*Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.*]

DIARY OF THE ASSOCIATION.

Date.	Meetings to be Held.
	JULY.
19 Sun.	Holland Division, Sleaford, 3 p.m.
	ANNUAL MEETING, ABERDEEN, 1914.
	Annual Representative Meeting, Friday, July 24th, and following days.
	Special Representative Meeting, July 27th.
	Presidential Address, Tuesday, July 28th.
	ANNUAL MEETING (*continued*).
	Sections—July 29th, July 30th, and July 31st.
	Annual Exhibition, July 28th–31st.
	Excursions, August 1st.
	(*See also p. 64 et seq.*)
29 Wed.	Scottish Committee, Scottish Committee Room, Aberdeen, 2 p.m.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, JULY 25TH, 1914.

CONTENTS.

FUTURE DEVELOPMENTS OF THE INSURANCE ACT.

BUDGET PROPOSALS.

THE following Report of the Future Developments of the Insurance Acts Committee concerning the Budget proposals as to developments of the medical service under the Insurance Acts will be presented to the Annual Representative Meeting, and is here printed for the information of Divisions.

REPORT.

1. In par. 265 of the Supplementary Report of Council (page 479, SUPPLEMENT, June 27th, 1914) the Council reported that the Divisions had been asked to express their opinion on certain suggestions which were made after consideration of the proposals of the Chancellor for the development of the medical service under the Insurance Acts; and that it was hoped to issue a further report after these questions had been considered.

2. For the Report and Questions submitted to the Divisions *see* SUPPLEMENT, June 13th, p. 433.

ANALYSIS OF REPLIES.

3. The replies of the Divisions have now been analysed and the Chairman of the Committee, on behalf of the Committee, presents the following statement to the Representative Body.

4. The Report and Questions were sent out June 10th, 1914, to the following Divisions:

England	... 157
Scotland	... 25
Wales	... 8
Ireland	... 11
	201

Up to July 10th, 75 replies had been received, classified as follows:

England	... 64
Scotland	... 9
Wales	... 2
Ireland	... —
	75

5. Since July 10th about a dozen other replies have been received. Although time has not allowed of them being analysed, they are on very similar lines to those mentioned above.

Provision of Institutional Treatment.

Question I. (a)—Is there sufficient hospital accommodation at present in the area of the Division to meet the requirements of the population?

Divisions answering "Yes"	... 39
,, ,, "No"	... 40

The Divisions answering "yes" may be divided into 24, which are mainly urban in character, and 6 which are mainly rural in character.

The 40 Divisions answering "no" may be divided into 30 mainly urban and 10 mainly rural.

Question I. (b)—Is the Division in favour of the suggestion as to the provision of capital by the Government to enable more hospital accommodation to be provided?

41 Divisions are in favour of the suggestions.

18 are against.

Of the Divisions in favour many express qualifications such as "if necessary," "if it does not involve interference with staff," "it seems to be inevitable," etc. Strong expressions of concern are made by several Divisions, which fear that the present voluntary hospital system may be upset.

Question I. (c)—If not in favour of the above suggestion, does the Division make any alternative suggestion?

5 Divisions suggest that vigorous efforts should be made to obtain more money from voluntary contributions.

Question I. (d)—Does the Division agree with the principle.....that patients whose treatment is subsidised by the State or other public authority could not be regarded by the profession as proper subjects for charitable treatment, and that those giving the treatment should be paid for their services?

56 Divisions agree with the principle.

8 do not agree with it.

One says the time is not ripe for consideration, and one reports that opinion was equally divided.

Of those agreeing with the principle 10 express the opinion that they would rather preserve the voluntary system in its entirety if possible.

Excessive Claims for Sickness Benefit and Medical Attendance.

Question II. (a)—Does the Division agree with the suggestion that the demand for medical attendance and sickness benefit beyond what was anticipated by actuarial estimate is due mainly to the existence among the insured of a large amount of sickness previously untreated or inadequately treated?

All except 4 agree to this proposition.

Question II. (b)—Is there any other cause which can be suggested for the increase?

Inclusion of women	12
Over insurance	9
Admission of bad lives	9
Desire to get something for their compulsory payments	6
Actuarial calculation based on picked lives	6
Inclusion of diseases due to misconduct	4
Novelty of system (now passing off)	3
Pregnancy claims	3
Lack of feeling of personal responsibility on part of insured	3
Initial three days without sick pay	3
Malingering	3
Low wages among women workers	2
Inclusion of domestic servants	2

The following are also suggested as reasons for the increase:—

(a) Activity of agents in getting persons to apply for benefits; (b) many people who are now insured are more fastidious than old club patients were as to the quantity and quality of their treatment; (c) patients have a higher standard of what their condition of health should be before returning to work; (d) unlimited panels—less time for proper examination and treatment; (e) the weakness of some practitioners in encouraging people to apply unnecessarily; (f) the open panel system allowing inclusion of "some doctors who will sign anything."

Question II. (c)—Does the present system tend to encourage patients to consult the doctor unnecessarily? Should any check be put on the patient's right to consult the doctor whenever he chooses? or does the Division think that on the whole it is better that the patient should be encouraged to see the doctor early even in cases which may (or may not) prove to be trivial?

Divisions which think present system encourages patients to consult doctor unnecessarily	35
Divisions which are not of this opinion	24
Doubtful	3
Divisions which consider that a check should be put on the right of the patient to consult the doctor whenever he chooses	1
Divisions which consider such a check desirable but impracticable	3
Divisions which do not wish for a check	60
Divisions which are of opinion that patients should be encouraged to see the doctor early in all cases	48
Divisions which state that they consider that any such encouragement is unnecessary	3

Question II. (d)—If the Division considers that there should be a check of the kind above alluded to the Committee would be glad to have any suggestions as to the nature of the check.

Most Divisions replying on this say that such a check even if desirable would not be practicable. Several suggest vaguely "a financial check."

Proposed New Services.

Control.

Question 1 (a)—Does the Division agree that it would be unwise to place clinical arrangements under the control of the Public Health Authority and consequently in all probability under the control of the Medical Officer of Health?

72 Divisions state, many of them with great emphasis, that they are of opinion that it would be unwise to place the proposed clinical arrangements under the control of the Public Health Authority. No Division gives an opinion in favour of control by the Public Health Authority.

Question 1. (b)—If the answer to the above is in the affirmative, does the Division agree with the proposal to set up a new Joint Committee or other new clinical authority?

Divisions which agree with the proposal to set up a new authority	60
Divisions which disagree with the proposal	8

Of the 8 Divisions which disagree with the proposal, one would prefer the Insurance Committee; another the Insurance Committee plus representatives of hospital staffs and managers; another suggests that the clinical arrangements should be under a "medical director" responsible to a Minister of Public Health; another that the authority should be a sub-committee of the Public Health Authority with representatives from Insurance, Education and Panel Committees, and from the Hospitals—the Sub-Committee to have a Clinical Medical Officer (not the M.O.H.) responsible to it. Many indicate that failing the institution of a new Joint Committee they would prefer the Insurance Committee to be the clinical authority.

Question I (c)—If the Division disagrees with the proposal the Committee would be glad to have alternative suggestions either as to principle, or as to the details of the proposed Joint Committee.

The following suggestions are made as regards the composition of the proposed new authority:

(a) Representatives of Local Division of B.M.A. instead of Local Medical Committee;

(b) Medical profession should be in the majority;

(c) Both Panel and Local Medical Committees to have representatives;

(d) Representatives of local medical profession and University Medical Colleges and Queen's Nurses, instead of representatives of Local Medical Committee;

(e) Nursing service to be represented, medical and clinical matters to be referred to an Advisory Committee of medical men.

QUESTION 2.—*Details as to Services (Laboratories).*

Question 2 (a).—Has the Division any suggestion to make as to the detailed work of the proposed clinical laboratories.

Suggestions are made that the work of the laboratories should include X-ray work: that local practitioners should be encouraged to attend the laboratories; and that great stress should be laid upon the personality of the head of the laboratory, who should be a whole-time and well qualified pathologist.

Many Divisions say that in the absence of fuller information they cannot give any answer to this question.

Question 2 (b).—Does the Division approve of the suggestion that the new laboratories should be linked up as far as possible with the Universities and other similar institutions?

Practically all the Divisions approve of the linking up of the laboratories with Universities and similar institutions.

One Division suggests that when the work is well done by the health authorities it should be left to them; two Divisions prefer that matter should be left to local hospitals; West Cornwall states that the linking up with the Universities would hardly affect that area as there is no University near enough; and Derbyshire considers that paragraphs 23 and 24 of the Report do not go far enough—to have the laboratory which served the Borough of Derby dependent upon the University Pathologist of Sheffield or Birmingham would render the laboratory of little or no *clinical* benefit. Boroughs such as Derby, of the size to have a good general hospital, ought to have a resident Pathologist, and he, possibly by virtue of his appointment, would be on the staff of all clinical institutions in the district and so be in close touch with all the clinical work which was going on.

Nursing.

Question (a)—Is the Division in favour of the provision of a nursing service to be utilised for the whole working class population?

All the Divisions replying are in favour except two, which think the work is adequately done now by charitable associations.

Question (b) Does the Division agree with the proposals made in paragraph 27 for the institution of such a service? and has it any additional suggestions to make on the subject?

Several Divisions think there should be a wage limit for persons entitled to use the nursing service. Many urge the necessity of safeguards lest nurses be used as independent practitioners. Several point out the necessity of the Model Rules of the Association as regards Nursing Associations being incorporated in any Rules for a nursing service. All agree that the existing associations should be utilised.

Several Divisions urge the necessity of pressing for state registration of nurses before the new service is instituted so that a proper standard may be maintained; two Divisions think that the service should be under the Insurance Committee; all the other Divisions prefer the proposed new Joint Committee if possible.

Referee-Consultants.

Question—Does the Division agree with the suggestions regarding these officers as laid down in this paragraph (paragraph 29)?

To deal with the suggestions *seriatim:*

(a) That as already agreed by the Special Representative Meeting, December, 1913 (Minute 70) they should be appointed by the Commissioners and only be removable by them; that they should be whole time officers and practitioners of not less than ten years' standing; that the commencing salary should not be less than £750 per annum; and that the appointment should be pensionable.

---

55 Divisions agree.

1 Division disagrees.

2 Divisions think the referee duties should be entirely separate from the consultant duties.

4 Divisions prefer part-time officers.

(b) That they should be advisers on medical questions to the proposed Joint Committee, or failing it to the Insurance Committees.

---

56 Divisions agree with the suggestion.

4 Divisions disagree.

(c) That in ordinary circumstances the specialist, or consultant, should be called in by the referee after consultation with the practitioner in attendance, but that arrangements should be made whereby in cases of emergency the practitioner should be entitled to call in a consultant and afterwards to report to the referee.

---

47 Divisions agree with the suggestion.

4 Divisions disagree.

(d) That consultants should not be whole-time officers.

All the Divisions replying agree except one.

(e) That with a view to preventing excessive use being made of the services of the referee, practitioners should be required to furnish a report of the case to the referee whenever that officer is called in on the practitioner's initiative, and should also be required to attend the consultation.

All the Divisions replying except seven, either definitely agree or make no comment.

Only four definitely disagree: One protests against any further reports being expected from a practitioner; another thinks that reports should only be expected in exceptional cases; another agrees with the proposition if the practitioner is required *either* to furnish a report *or* to attend a consultation.

(f) That approved Societies desiring the services of the referee should be required to make a full report as to their reasons therefor. Possibly the Societies might be expected to make a small payment for each case referred, as a further check on undue use of the referee's services.

All the Divisions replying agree unconditionally to the above suggestion except 5, and these make the following suggestions:

(a) deposit to be forfeited if the referee thinks the case is a frivolous one;
(b) Society should not pay anything;
(c) Societies should be definitely required to make an adequate payment.

Treatment Centres.

Question: Does the Division agree with the suggestions made in this paragraph? Has it any further suggestions to make on this subject?

---

55 Divisions agree with the suggestions.
11 disagree.

One Division agrees if it is understood that no deduction is to be made from the payments due to the panel doctor.

Furness Division makes the following comment:

"The Division considers the idea of Treatment Centres would be difficult to carry out in this area. Consultants would have to travel from Manchester, 100 miles, and a large fee paid to see quite a few. More economical method would be to send patients to Manchester. The Division is at a loss to know who would treat the patients at the Treatment Centre in an area similar to this, in view of the above fact, i.e., distance from consultants. Any such centre should be under control of new Joint Committee proposed."

The following further remarks are made on this subject:—

(a) "The Centre should be available for those insured persons who have made their own arrangements and whose doctors desire the opportunity of treating them at the Centre."

(b) "The word 'Clinic' appears to be preferable. The principle of the Clinics is agreed with, but all treatment, &c., undertaken by medical practitioners in such clinics should be paid for independently of capitation or other payment for attendance on insured persons."

"(c) These centres to be the district hospitals and to serve in *country districts*:

1. For treatment of urgent medical and surgical cases.
2. Treatment of school children.
3. Tuberculosis dispensaries.
4. Places where consultations can take place between patient, doctor, and consultants or tuberculosis officers."

(d) The work mentioned in this paragraph should be carried out at the Hospital and furthermore arrangements should be made by which all practitioners should have the opportunity of consulting with the staff and their fellow practitioners.

COMMENT ON ABOVE BY CHAIRMAN OF COMMITTEE.

In placing this Report before the Representative Body, the Chairman trusts that the practical unanimity of the Divisions on the suggestions submitted to them will enable the Representative Body to give such instructions as will enable the Council to press on the Government the views of the Association on these important and urgent matters. It is noted that the Insurance Act Committee, in considering this subject,

makes the following recommendation which the Chairman submits for the consideration of the Representative Body:—

Recommendation.—That the decisions of the Representative Body arising out of the Report of the Future Developments of the Insurance Acts Committee upon the matters referred to in the Budget Speech of the Chancellor of the Exchequer be forwarded immediately to the proper authority as the opinion of the medical profession thereon.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

Panel Committee.

At the first meeting of the newly-elected Panel Committee for London, held on July 21st, Dr. H. J. Cardale was appointed chairman, Dr. J. A. Angus vice-chairman, and Dr. Lauriston E. Shaw treasurer.

The Drug Fund.—It was reported that the cost of drugs and appliances for the first quarter of the medical year, 1914, was about £60,000, whereas the total amount available for the year was only about £150,000. As it appeared that some practitioners prescribed unduly expensive or excessive quantities of drugs, a letter had been sent to every practitioner on the panel calling attention to the matter.

Co-option of Members.—The Chairman said that the Committee had recently passed a resolution that it was desirable that the personnel of the Panel and Local Medical Committees should be identical. By means of co-option that desire might be accomplished. Dr. Major Greenwood thought it would be well to co-opt non-panel doctors elected on the Local Medical Committee. In no better way could harmony be promoted in the profession. A special subcommittee was appointed to report on the subject.

A List of Prohibited Drugs.—The meeting gave informal consideration to an extensive list, which the Insurance Committee considered on July 23rd, of preparations to be disallowed if supplied at the cost of the drug fund. The view was strongly expressed that although the meeting was in sympathy with the prohibition of practically all the items on the list, the Panel Committee should have been consulted before the Insurance Committee was recommended to take definite action. Mr. Atteridge moved that on this ground the Panel Committee Representatives be asked to seek postponement of the consideration of the list at the meeting of the Insurance Committee. This was voted down as it was felt that it might convey the impression that the Panel Committee sympathized with the prescribing of the prohibited articles. A motion was then carried expressing a desire for the insertion in the Insurance Committee's resolution of the words, "subject to the approval of the Panel Committee."

"*Rep. Mist.*"—The Pharmacy Subcommittee recommended that until an official pharmacopoeia was recognized by the Insurance, Panel, and Pharmaceutical Committees, or some modification was made in the method of ordering drugs and appliances, practitioners should be permitted to use the form "Rep. mist.," provided that the date of the original prescription was given and that the original prescription was supplied during the same calendar month. Dr. E. G. Geldie objected to this proposal on the ground that it would add to the work of the busy doctor. Dr. Major Greenwood spoke on the other side, and the recommendation was carried by 27 votes to 4.

CROYDON.

Local Medical Committee.

At a meeting of the Local Medical Committee, held on July 17th, Dr. Willock was elected chairman, Dr. Gilbert Genge honorary secretary, and Dr. Murphy treasurer.

Medical Service Subcommittee. — Dr. Nicholls was elected a member of the Medical Service Subcommittee.

Amendments to Drug Tariff.—A report relating to amendments required to the drug tariff was adopted and sent to the British Medical Association.

Panel Committee.

At a meeting of the Panel Committee, held on July 16th, Dr. C. G. C. Scudamore was elected chairman, and Dr. G. Gilbert Genge honorary secretary and treasurer. Drs. Willock, Genge, and Simmons were elected to serve on the Medical Service Subcommittee, and Dr. J. A. Howard was elected to complete the total number of elected members of the Committee.

Reports of Medical Service Subcommittee.—In reply to an inquiry, the Honorary Secretary was instructed to inform the Medical Secretary of the British Medical Association that the Croydon Insurance Committee already had a standing order as follows:

The names of persons concerned in cases of complaint reported upon by the Medical Service Subcommittee shall not be printed in the reports of that Subcommittee to the Committee.

BRISTOL.

Annual Report.

The first annual report of the Bristol Panel Committee has just been issued in pamphlet form, and summarizes most of the principal matters which have been before the Committee. Since it came into office last January it had held, down to the end of June, fourteen meetings, and the average attendance of 90 per cent. of the members shows the interest taken in its work. In its financial statement the liabilities up to June 30th are put down at about £92, but of this sum £60 is the half year's contribution of the Committee towards the salary of the medical adviser and referee, this being at the rate of 10s. a case on the number referred to him by the doctors themselves last year. It is understood that approved societies which use his services shall also contribute, but the payment by the Panel Committee is made as a matter of convenience to the panel practitioners and without prejudice to the question of the liability of the profession to pay any portion of such salary. It is subject to quarterly revision, and is given on the understanding that the approved societies will make use of his services without appointing their own referees.

On the question of the unallocated funds for 1913, the Panel Committee resolved in February that the distribution should be made *pro rata* to the doctors' acceptances up to January, 1914. The Insurance Committee, however, declined to accept this, but as the result of correspondence and an interview it was mutually agreed that the fund should be divided into two equal parts, one half being equally divided amongst all the practitioners on the panel, and the other half *pro rata* to their acceptances during the year, whole-time medical officers of institutions and assistants who accept no patients in their own name being excepted from the distribution.

Questions having arisen as to co-operation with approved societies, a conference with representatives of societies was arranged, and as a result the Panel Committee recommended that all panel practitioners should welcome and give fullest consideration to all information about the habits and conduct of insured persons, provided that it be sent in writing by the chief district officers of approved societies, but that professional confidence could only be maintained by refusing to give society officers any information other than can be conveyed by the certificates, and refusing personal interview with any agent, sick visitor, or other official of a society.

At the conference of Local Medical and Panel Committees convened by the British Medical Association in March, the Panel Committee was represented by its chairman, Dr. Devis, who was elected as a member of the provisional committee by that conference, and the Panel Committee resolved to guarantee a subscription of £6 towards the expenses.

In February the Committee urged the Bristol Insurance Committee to adopt a more generous attitude in allowing insured persons to make their own arrangements for medical benefit, but so far the Insurance Committee had hardly modified its attitude.

Early in the year the Insurance Committee applied to the Panel Committee for a payment towards the cost of the special continuous scrutiny of prescriptions issued by panel practitioners, with a view to controlling any tendency to excessive claims on the drug fund, and the sum of £50 per annum was suggested, but in spite of a second application the Panel Committee resolved to take no action. This may, perhaps, be read in conjunction with

the application of the Panel Committee under Section 33 of the Insurance Act, 1913, that a levy of ½d. a quarter for each insured person should be made for the expenses of the Committee. In reply to this application the Insurance Committee sought to make it a condition that the Panel Committee should pay £12 10s. a quarter towards the cost of checking prescriptions. As this condition was resented, the Panel Committee withdrew the application for a compulsory levy, and a voluntary levy of the same amount has been agreed on; this gives complete freedom from outside interference. The Bristol Panel Committee is not the only one that feels that it is under no legal obligation to contribute towards the cost of checking prescriptions.

The question of certificates for obtaining compensation under the Workmen's Compensation Act was fully considered in June, and it was resolved that such certificates should be withheld unless payment of 2s. 6d. for a simple certificate and 10s. 6d. for a full report is made or guaranteed, and the report quotes the two sections of the Compensation Act which make it incumbent on the employer to pay for any such certificate he requires a workman to obtain.

In accordance with a letter from the Medical Secretary of the British Medical Association, the Committee resolved to recommend the Insurance Committee to adopt a standing order providing that the names of doctors and persons concerned in cases of complaints reported on by the Medical Service Subcommittee shall not be printed in the reports to the Insurance Committee, so that identification may be impossible while the Insurance Committee has the question under discussion. At the same time it is evident that such complaints are extremely rare in Bristol.

The report concludes by quoting the form of indemnity which the Insurance Committee will accept as sufficient to enable it to deduct from sums due to practitioners such amount as may be resolved on and requisitioned by the Panel Committee, the aggregate not to exceed £250 in a year. As this is in the nature of a voluntary levy, to take the place of the compulsory levy which might be made under the Act of 1913, but which carries with it certain disabilities, every practitioner on the panel is urged to sign the indemnity.

NORTH RIDING OF YORKSHIRE.

Panel Committee.

THE third meeting of the Panel Committee was held at York on July 9th, when Dr. CANDLER-HOPE was in the chair, and fifteen practitioners, Mr. A. E. Walster (solicitor), and the clerk to the North Riding Insurance Committee were present.

Voluntary Levy.—On the motion of Dr. SCOTT, seconded by Dr. MURRAY, it was resolved that the motion of March 26th last be rescinded, and that a voluntary levy be adopted.

Finance.—Dr. MILLS, treasurer, presented his statement of accounts.

Scarborough Chemists' Claim on Panel Fund.—On the motion of Dr. ELVINS, seconded by Dr. CANDLER-HOPE, the Committee declined to consider the request of the Pharmaceutical Committee for the payment of their expenses out of the funds available for medical treatment.

Allocation.—It was agreed, on the motion of Dr. BAIGENT, seconded by Dr. TOWNSEND, that the allocation for 1914 be by unit as follows:

1 unit for 25
2 units for 25–50
3 units for 50 up to 100
4 units above 100 (equal shares)

Half these for border men, who are to be defined as "practitioners not residing in the area, but on the North Riding panel, and also on the panel of another county."

Pharmacopoeia.—It was agreed to appoint a committee to draw up a pharmacopoeia for the North Riding if the Insurance Committee agreed and to consider the ordering of drugs and medicine in connexion with domiciliary treatment of tuberculosis.

Domiciliary Treatment.—It was resolved, on the proposition of Dr. BAIGENT, that all cases of tuberculosis be treated as domiciliary cases.

District Medical Centres.—The following scheme for district medical centres was sanctioned: Barnard Castle, Leyburn, Malton, Northallerton, Pickering, Richmond, East Cleveland (Saltburn), Scarborough, Central Cleveland (South Bank), Thirsk, Thornaby-on-Tees, Whitby, West Cleveland (Yarm), York. It was suggested that all the doctors who collectively compose the fourteen North Riding medical centres should remain loyal to the referees of their own choice.

Mode of Election.—On the motion of Dr. LONG, seconded by Dr. SCOTT, it was agreed that Model Scheme B be accepted for this election only, and the expenses thereof to be paid by the Insurance Commissioners. It was agreed, on the motion of Dr. BAIGENT, seconded by Dr. STEELE, that there should be five centres (electoral) for the returning officer to meet the North Riding practitioners.

Certification.—The HONORARY SECRETARY briefly outlined the business of the conference held in London on June 16th, which he and Dr. Burnett had attended.

Agreement for 1915.—The Honorary Secretary was instructed to forward a letter to the Insurance Committee requesting that the agreement with the practitioners for the year 1915 be in their hands by September, or as early afterwards as possible, so that there may be time for the consideration of the same before the end of the year 1914, and it was decided to ask the Insurance Committee for a copy of the Mileage Scheme for 1914.

Local Medical Committee.

The tenth meeting of the Local Medical Committee was held at York on July 9th, when Dr. CANDLER-HOPE was in the chair, and seven members and Mr. A. E. Walster (solicitor), were present.

Finance.—Dr. MILLS, treasurer, submitted a statement of accounts, which was directed to be audited on the completion of the term of office of the Committee on July 15th, 1914.

Election of New Committee.—It was decided that the personnel of the Local Medical and Panel Committees should be identical.

Secretaryship.—Mr. A. E. Walster, solicitor, was appointed co-secretary of the Local Medical and Panel Committees, along with Dr. Mills.

EDINBURGH.

A MEETING of the Burgh of Edinburgh Panel Committee was held on July 8th, when Dr. DEWAR occupied the chair, and eleven members were present.

Provisional Credits.—The SECRETARY read a letter from the Burgh Insurance Committee dealing with provisional credits, July, 1914, and the Pharmaceutical Committee's expenses. The Panel Committee was asked:

(*a*) To make arrangements with the Insurance Committee for enabling any insured person who makes application, to be assigned to a practitioner on the panel (Reg. XXI, 4).
(*b*) To consider the Insurance Committee's method of calculation of the doctor's remuneration, and the distribution of the unallocated money for the half year to 11th inst. (Reg. XXXV, 1 and 3).

After discussion, copies of the letter were directed to be sent to the members of the Committee for further consideration.

Payments to Panel Practitioners.—A Subcommittee, consisting of the Chairman and Secretary (*ex officiis*), Drs. McIntosh, Martin, and Robertson, was appointed to consider the payments already made to panel practitioners for the year 1913, and to consider and report on the Insurance Committee's scheme for the payment of the unallotted money for the half year to 11th current.

Allocation of Insured Persons.—A Subcommittee, consisting of the Chairman and Secretary (*ex officiis*), Drs. Souter, McLaren, and Wilson, was appointed to devise a scheme to enable any uninsured person who makes application, to be assigned to a practitioner on the panel.

Expenses of Pharmaceutical Committee.—It was agreed to hold a joint meeting of the Panel and Pharmaceutical Committees with regard to the question of the Pharmaceutical Committee's expenses.

Donation to the Royal Infirmary.—The CHAIRMAN reported that, as a result of the postcard issued to panel practitioners, 50 per cent. had authorized a deduction of 10 per cent. from their share of the 1913 unallotted money, one or two had given a modified consent, five had refused to allow the deduction, and fifty-three had not replied. The Secretary was instructed to write the Clerk to the Insurance Committee regarding the donation. On the motion of Dr. ROBERTSON, seconded by Dr. WILSON, it was

unanimously agreed to approve the Chairman's action in issuing the postcard referred to.

Transfers.—Attention was drawn by Dr. CRAIG to a case of transfer by the Insurance Committee of an insured person from the list of one doctor to that of another during the medical year within the Edinburgh insurance area without the knowledge or consent of the doctor on whose list the patient originally was. After consideration, it was unanimously resolved:

> That, with reference to the transfer of insured persons from one doctor to another during the medical year within the Edinburgh insurance area—due regard being had to the mileage limit of certain doctors—Regulation XXVI, 6 and 7, should be strictly adhered to.

The Secretary was instructed to write the Clerk to the Insurance Committee accordingly.

Domiciliary Treatment Extras.—The CHAIRMAN explained the position as regards Edinburgh. Domiciliary treatment was only granted by the Insurance Committee if the housing conditions met the requirements of the Local Government Board. The Insurance Commissioners would not sanction the prescribing of medical comforts for insured persons who received domiciliary treatment—that is, meat, eggs, butter, and milk. It would only allow articles which could be dispensed by a chemist up to the limit of 5s. a week, such as malt and cod-liver oil emulsions, tonics, and bovril. A letter was read from Dr. Gray, in which he expressed the opinion that without medical comforts domiciliary treatment was only a name. After discussion, the following motions were agreed to unanimously:

1. That the Insurance Committee should use every means at their disposal to urge upon the local authority the need for so altering and improving the home conditions of insured persons discharged from sanatorium institutional treatment as to entitle them to domiciliary treatment.
2. That patients removed from the sanatorium should automatically be put upon domiciliary treatment.

The Secretary was instructed to convey the Committee's decision to the Clerk to the Insurance Committee.

A meeting of the Burgh of Edinburgh Panel Committee was held on July 17th, when Dr. DEWAR occupied the chair and nine members were present.

Treatment of Unallotted Insured Persons.—The report of the Subcommittee appointed to devise a scheme for enabling any insured person who makes application to be assigned to a practitioner on the panel (Regulation XXI, 4) was presented. The following recommendation contained therein was unanimously agreed to:

> That the city be divided into areas, and where an application is made by an insured person for a doctor the clerk should assign such person to one or other of the doctors in the area in regular rotation. Each doctor will, on assignment, be responsible for the medical care of the insured person.

Remuneration.—The Insurance Committee's method of calculation of the doctor's remuneration and the distribution of the unallocated money for the half year to July 11th (Regulation XXXV, 1 and 3) were discussed. The Panel Committee agreed with the Insurance Committee's method of crediting to each practitioner on the panel, with respect to each of the persons included in his list at the beginning of each quarter, an amount calculated in accordance with the rate contained in his agreement with the Committee. With reference to such further capitation fees to be allotted, Dr. ROBERTSON moved and Dr. SENTER seconded the following, which were carried unanimously:

1. That there be a *pro rata* distribution among all the doctors on the Edinburgh panel.
2. That doctors resident in Leith and Midlothian should be credited with the fees so ascertained.
3. That the credit fees falling to doctors resident in Edinburgh should be pooled and divided amongst such doctors equally.

Budget Proposals and National Insurance.—The administration of Budget proposals, so far as they affect the national insurance scheme, was considered, and it was unanimously decided, on the motion of Dr. ORR, seconded by Dr. ROBERTSON, that the motion carried on June 24th in favour of the administration being placed in the hands of a new committee, be rescinded, and that the administration be placed in the hands of the Insurance Committees. The Secretary was instructed to write acquainting the local members of Parliament with the Committee's decision.

ROXBURGHSHIRE.

PANEL COMMITTEE.

A MEETING of the Panel Committee was held in the Railway Hotel, St. Boswells, on July 2nd, when Dr. CULLEN presided, and six members and the clerk were present.

Mileage Grant.—From correspondence with the County Insurance Committee regarding the mileage grant, it appeared that since the matter was discussed at the last meeting the Commissioners had sent instructions to the County Committee to distribute £48 of the grant in accordance with a schedule prepared by them, so that only £48 remained to be distributed, and the opinion of the Panel Committee was asked as to how the latter sum should be divided. Considerable discussion took place as to the unfair and unbusinesslike method adopted by the Commissioners in dealing with this matter, and the clerk was instructed to send the following reply to the Clerk of the Insurance Committee:

Mileage Grant.

I submitted your letter of 29th inst. to a meeting of my Committee held on Thursday last.

In the first place my Committee note that, since the last occasion on which this matter was before them the Commissioners have allocated £48 of the grant to certain doctors, so that only £48 remains to be allocated.

I am to point out that my Committee resent very much indeed, and most strongly protest against, the procedure adopted by the Commissioners in connexion with this matter. Seeing that this money was to be allocated among the doctors on the panel, my Committee consider that the matter ought to have been submitted to them for at least their observations and suggestions before any distribution of the grant was made. Indeed, they consider that it would only have been courteous on the part of the Commissioners to have done so. Instead of that, the Commissioners have apparently thought it proper to ignore my Committee, and to accept the representations made to them by their own inspectors, who can have no reliable knowledge of the special difficulties experienced by each individual panel practitioner in this area, and that for the perfectly obvious reason that each individual panel practitioner was not consulted, either by the Commissioners or by any one on their behalf, on the points which you state weighed with them in coming to a decision as to the distribution of a portion of the grant. Moreover, my Committee is informed that even the Insurance Committee as a body were not consulted by the Commissioners in connexion with this matter. The Commissioners have thus ignored both the Insurance Committee and the Panel Committee, which bodies are alone capable of giving the Commissioners the necessary information with regard to the proper allocation of the grant in question.

The members of my Committee, who were present at the meeting on Thursday first, and who had received a portion of the grant, expressed the view that they would have preferred the whole matter to have been submitted to and disposed of by the Panel Committee before any distribution of the grant was made to them, and they are willing, even yet, to refund the money paid to them in order that this may be done.

In the whole circumstances, I am instructed to inform you that my Committee refuse to express any opinion as to the allocation of the remaining portion of the grant, on the grounds that (1) they ought to have been consulted regarding the allocation of the whole of the grant, and (2) that the portion of the grant already allocated has been so allocated in an unfair and improper manner.

Emergency Drugs and Appliances.—A letter was read from the Insurance Commissioners dealing with the list of emergency drugs and appliances submitted to them by the Pharmaceutical and this Committee, and the clerk was instructed to reply that sal-alembroth would not do as a substitute for corrosive sublimate wool, and that the usefulness in an emergency of the drugs mentioned was sufficiently proved by local customs and conditions.

Budget Proposals affecting the National Insurance Scheme.—A letter was submitted from the Chairman of the Local Medical Committee of the County of Lanark, along with the memorandum prepared by the Scottish Association of Insurance Committees regarding the recent Budget proposals affecting the national insurance scheme. The meeting, while sympathizing and concurring with the view expressed by the Insurance Committee, was of opinion that a Local Medical Committee should not take upon itself to circularize other Local Medical Committees throughout the country on such matters, but should communicate with a central body such as the British Medical Association, and allow it to circularize committees on subjects of universal importance.

Communication from the British Medical Association.—A circular from the British Medical Association, dated June 20th, relating to certain subjects was considered. The meeting expressed approval of the view that in

discussing reports of Medical Service Subcommittees the Insurance Committee should not mention either the name of the practitioner or the name of the patient, and the clerk was instructed to communicate to the Insurance Committee of this area the Model Standing Order securing secrecy on this point, based on that of the London Insurance Committee. The opinion that where a mistress wished a consultation in respect of her servant who was an insured person the panel practitioner concerned was entitled to charge a fee under such circumstances was noted. The meeting expressed the opinion that the discounting of chemists' accounts by Insurance Committees was very unfair and ought to be discontinued. It was also suggested that a meeting should be held with the Pharmaceutical Committee for the area for the purpose of drawing up a list of expensive and cheap drugs, to be circulated for the information of all concerned, with a view to conserving the drug fund.

Finance.—The Clerk reported that although the grant authorized in terms of Section 33, Subsection (2) of the Insurance Act, 1913, had been applied for jointly by the Pharmaceutical Committee and the Panel Committee on March 4th last, it was evidently the intention of the Commissioners not to make any grant until the end of the year. They had stated that until an estimate of the expenditure was prepared and submitted they would not consider the question of the grant. The Clerk reported that the administration expenses of Panel Committees had been met by voluntary levy in a number of insurance areas, and had apparently worked well. The voluntary levy would be deducted from the moneys payable to individual panel practitioners not exceeding one penny per insured person per annum on each list, as may from time to time be resolved upon and requisitioned by the Panel Committee, and that a form of application addressed to the Insurance Committee would require to be signed by each panel practitioner to authorize the deduction of this levy from the moneys payable. It was unanimously resolved to adopt the voluntary levy, and to intimate the withdrawal of the application for the grant referred to, so far as the Panel Committee was concerned.

INSURANCE ACT COMMITTEE.

THE eighteenth meeting of the Insurance Act Committee was held at the office of the Association on Thursday, July 16th. Dr. J. A. MACDONALD was in the chair, and the other members present were:—*England and Wales:* Dr. Mina L. Dobbie (London), Dr. E. R. Fothergill (Hove), Dr. Major Greenwood (London), Miss M. F. Ivens, M.S. (Liverpool), Dr. C. H. Milburn (Hull), Dr. I. W. Johnson (Bury), Mr. Herbert Jones (Hereford), Dr. G. K. Smiley (Derby), Mr. D. F. Todd (Sunderland), Dr. W. B. Crawford Treasure (Cardiff), Mr. E. B. Turner (London). *Scotland:* Dr. John Adams (Glasgow), Dr. R. McKenzie Johnston (Edinburgh). *Ireland:* Dr. J. S. Darling (Lurgan). *Ex officio:* Mr. T. Jenner Verrall, Chairman of Representative Meetings.

CERTIFICATES.

The Committee expressed the opinion that a practitioner who attended an insured person who was dissatisfied with his own panel practitioner, and supplied a certificate for Insurance Act purposes, was entitled to charge a fee for the same.

COMPLETE RECORDS.

It was decided, on the recommendation of the Defence Subcommittee, to draw the attention of Local Medical and Panel Committees to the desirability of impressing on practitioners the importance of keeping complete records of work done by them under the Insurance Act in view especially of the probability of it being necessary to collect further information at the end of the present year.

DRUG TARIFF—PRESCRIBING.

The Committee had before it the report of the Drug Tariff Subcommittee, and resolved to suggest to the Association members of the Advisory Committee certain emendations, and also authorized the Subcommittee to inform the representatives of the Pharmaceutical Society that the British Medical Association would use every effort to move Panel Committees to take full advantage of their powers in the matter of excessive prescribing given to them by Medical Regulation 40.

AGREEMENTS FOR 1915.

The following reply, dated July 6th, to an inquiry addressed to the Insurance Commissioners on April 1st, 1914, as to the time-table for medical agreements for the year 1915, was read:

> The Commissioners have now had an opportunity of reviewing the general situation in connexion with the continuance of the provision of medical benefit after the close of the current year, and they are accordingly now in a position to indicate the time-table which they propose to follow as regards the various stages in the consideration of the 1915 arrangements.
>
> The question of any revision of the current Regulations and agreement is already under consideration, and the Commissioners propose very shortly to fix dates for the preliminary discussion of any amendments which may prove in their opinion to be necessary or desirable. It is the intention of the Commissioners to hold the requisite conferences sufficiently early to enable them to make public and to issue to Insurance Committees the revised Regulations and Model Agreements, embodying such amendments as may ultimately be decided upon, by the first week in September. This will allow a period of seven weeks to be spent in collective discussion and negotiation between the medical profession and the Insurance Committee locally, it being essential that the form of the agreement should be finally settled by October 24th, at the very latest, to enable the Insurance Committee to prepare and print the necessary documents and to issue them to every practitioner on the panel without fail before November 5th.
>
> This time-table appears to the Commissioners to afford the fullest opportunity for consideration of the 1915 arrangements of which the circumstances will permit. They will use their best efforts to secure that it is strictly adhered to in practice.

It was resolved to obtain the opinion of the solicitor to the Association upon certain questions arising out of the judgement in the Salter case.

Regulations for 1915.

The Committee spent a considerable time in considering various suggestions for the amendment of the present regulations and instructed the Association members of the Advisory Committee thereon.

TITLE OF PANEL COMMITTEE.

On April 1st a letter written by the instructions of the Committee was forwarded to the Insurance Commissioners with reference to the title of Panel Committees. It was reported that the Commissioners had replied on June 9th to the following effect:

> (1) That the Commissioners had no special desire to retain the present title of Panel Committee provided some other title of equal appropriateness and general convenience can be found. (2) That the title "Practitioners Committee" proposed by the Association was hardly appropriate to a body expressly representative only of those practitioners who were under contract with the Insurance Commissioners. (3) That the Commissioners would be pleased to consider any observations or alternative suggestions which the Association might desire to offer on the subject with a view to meeting the desires of the Association, so far as they are in a position to do so.

UNALLOTTED FUNDS.

A communication was read from the General Secretary of the Scottish Clerks' Association forwarding copy of a resolution passed by the Committee of Management of that body, urging that the unallotted funds of Insurance Committees should not be distributed among the doctors on the panel but applied to the provision of more sanatorium accommodation and nurses.

The Insurance Act Committee resolved to inform the Scottish Clerks' Association that the Association had adopted the following resolution on the subject (Special Representative Meeting, December, 1913):

> *Minute 73.*—That such portion of the unallocated funds in the hands of Insurance Committees as are attributable to insured persons who have been attended individually as private patients should be distributed as a set-off to the medical bills of these patients,

and to state also that the Committee disagreed with the suggestion that any part of the funds should be diverted for any purpose whatsoever from the doctors who had attended, or were liable to attend, insured persons.

COMPENSATION CASES.

A letter of thanks was read from a brother of a deceased practitioner expressing, on behalf of himself and the

widow, their thanks for the assistance rendered. Two applications for assistance were considered. The Committee made a grant in one case, and regretted its inability to do so in the other. The Committee adhered to its previous decision in another case in which it had been unable to recommend a grant.

Appointment and Reference to the Committee.

In view of the resolution of the Council of June 24th, 1914, authorizing the Insurance Act Committee to report direct to the Representative Body as to the constitution and reference of the Insurance Act Committee for 1914–15 after consideration of the constitution, powers, and objects of the proposed Federation of Local Medical and Panel Committees, the Insurance Act Committee resolved to recommend to the Representative Body:

A. That an Insurance Act Committee be appointed for the forthcoming session with the same reference as that appointed by the Annual Representative Meeting, 1913, namely:

> To deal with all matters arising under the National Insurance Act that are dealt with by the National Insurance Commissioners, Insurance Committees, and Local Medical Committees; to watch the interests of the profession in relation to the National Insurance Act; and report to the Council.

B. That the Insurance Act Committee consist of the four *ex officio* members, two members to be elected by the Council, twelve members to be elected on a territorial basis by the grouped Representatives, one representative of each of the following organizations to be elected by the Council on the nomination of these bodies respectively, such nominees to be also members of the British Medical Association:

(*a*) the Association of Registered Medical Women together with the Northern Association of Registered Medical Women;
(*b*) the Society of Medical Officers of Health;
(*c*) The Poor Law Medical Officers Association of England and Wales.

C. That in the event of terms of co-operation being agreed to as between the proposed Federation and the Association, permission be given to the Insurance Act Committee to co-opt, on the nomination of the proposed Federation, seven additional members.

Subcommittees.

The Committee authorized the continuance in office of the existing Subcommittees until the first meeting of the Committee for the session 1914-15.

INSURANCE COMMITTEES.

Isle of Wight.

The Budget Proposals.—At a meeting of the Isle of Wight Insurance Committee on June 27th, the General Purposes Committee recommended that any schemes in connexion with nursing, medical referees, the establishment of clinics and pathological laboratories should be administered by the Insurance Committee. Dr. Robertson moved an amendment that the matter be referred back. This was seconded by Dr. Wood, and supported by Dr. Walker, the County Medical Officer of Health, who considered that medical referees should be appointed by the Commissioners. After some discussion the amendment was carried by 12 to 6. The question of the payment to be made to the County Council in respect of the services rendered by the County Medical Officer, Dr. Walker, in connexion with the applications for sanatorium benefit, the General Purposes Committee, having considered a recomendation from the Sanatorium Benefit Subcommittee that £60 should be paid for those services, suggested that the sum be paid subject to the approval of the Commissioners. An amendment proposing that £100 should be paid, having been moved and seconded, was put to the meeting, when seven voted for, and seven against, and the Chairman refusing to give his casting vote, the matter was referred back to the Committee.

Payments to Practitioners.—The Finance Committee reported the receipt of a notification from the Commissioners that the sum of £9,355 11s. had been credited to the Insurance Committee for the past year for the purposes of medical benefit, and recommended that on July 11th 80 per cent. only be paid on account to the doctors for the quarter ending on that day, in accordance with the number of insured persons on their lists at the beginning of the quarter. Contrary to the practice of most Insurance Committees, the Isle of Wight Committee has published the amounts paid for the quarter to all the doctors on the panel.

INSURANCE NOTES.

SCOTLAND.

Suspension of Sanatorium Treatment at Ayr.

Recently the Ayr Burgh Insurance Committee resolved to cease further sanatorium treatment of phthisis cases because it had been unable to obtain the funds to which it considers it is entitled. The Local Government Board having been appealed to decided (1) that where Insurance Committees, from want of funds or any other reason, discontinued the treatment of insured persons, it fell to the local authority to treat these cases if further treatment was necessary; and (2) that it rested with the local authority to determine the nature of the treatment, and that in doing so it ought to be guided by the medical officer of health. In the view of the Board it was advisable that the patients should not be removed until it was determined what further treatment was to be given to them.

IRELAND.

Maternity Benefit.

It appears from a report in the *Freeman's Journal* that Samuel Wilson, insured through the Irish National Foresters, applied to that society for maternity benefit (30s.) in respect of a child born last December, but was put off on one pretext or another from time to time. At the June session of the County Court at Tralee, he brought process against the society, but on the day of the hearing he received a cheque for 35s., being the amount of the maternity claim, and 5s. for costs of the process. The county court judge gave a decree for £2 10s. with costs 6s. 9d., and expenses £1. An appeal was heard at the Kerry assizes before Mr. Justice Kenny, who said that it was a mean and disgraceful thing for the society to appeal in the circumstances. He affirmed the decision of the county court judge with costs, and 25s. expenses.

The case will go far to confirm the truth of the strong criticisms of the methods of some of the societies in Ireland made by correspondents in that country.

ORGANIZATION OF AN EFFICIENT SERVICE.

[At a meeting of the Stockport, Macclesfield, and East Cheshire Division on March 5th, Dr. Picton read a paper in which he discussed the question, How best provision could be made for the work of the special departments of medicine and surgery in panel and general practice amongst the industrial classes. After the introduction of the Budget he modified the paper in accordance with the present situation as follows:]

When a young medical graduate has completed his series of hospital appointments, it sometimes happens that he passes straight into a single-handed private practice. Without any knowledge of medical life other than he has obtained within the walls of a hospital, he plunges suddenly into his untried duties outside. He may be good at his work and fitted for his career by familiarity with a large and varied range of diseases, but he finds himself confronted with a new series of problems.

In hospital he will have found that judgement is difficult and experience is fallacious; in private practice he will discover that not only the principles of medicine count, but also ways and means, improvization, arrangement, opportunity. He will soon come to appreciate his limitations. For a fracture he can get no radiogram; apparatus that he would have used in hospital is beyond the patient's means; for the school child he cannot, perhaps, perform a retinoscopy, because he has not possessed himself of a set of test glasses; for an operation he requires an anaesthetist, for haematuria a cystoscopy, for mastoid suppuration a Stacke's operation, for a spinal curvature systematic calisthenics. Faced with this situation, he will take one of two courses, according to his courage, his ideals, and his nature. He will either accept the fact that private practice is largely managed without things that he has been used to regard as requisites and acquiesce in the incomplete examination and treatment that can be carried on without them, or, on the other hand, he will do his best to provide them—by ingenuity, by improvization, and often to his own pecuniary loss.

True, in not a few neighbourhoods hospitals will be available to relieve him of many of his difficulties—and of a corresponding amount of his practice. But distance makes hospital treatment difficult in great tracts of rural England and many of the more scattered industrial districts. Again, such is the demand for beds that patients who require prolonged courses of treatment have little chance of remaining in hospital till cured; whilst the same cause leads to congested waiting lists and long delayed admission. In the result, therefore, great numbers of people who should have hospital treatment do not get it.

The practitioner who deems it his duty to cope with this state of things is doomed to many disappointments. His efficiency in such subjects as ophthalmology, orthopaedics, and major surgery, which may have seemed to him in his hospital surroundings to be thoroughly well grounded, recedes with the passage of time. His special skill, called for only occasionally, and at odd intervals, rusts with the appliances pertaining to it—if he be fortunate enough to possess them. In the midst of a single-handed general practice it requires exceptional determination to maintain in readiness the apparatus, the knowledge, and the practical skill requisite to deal with the varied and more special requirements of modern medicine.

The regulations of panel practice recognize this and do not require such work. Major operations, for instance, are outside the scope of the insurance doctor, except in emergency. Pity the general practitioner whose only excursions into abdominal surgery take place always in circumstances of exceptional difficulty—at night perhaps, and in a lamp-lit cottage. It is small wonder that the risk of moving a patient suffering with an acute abdominal condition into a distant institution is in these circumstances preferred to an attempt to carry out the letter of the law. For law it is since January 14th, 1913.

In the same way, but in less urgent matters, the occasional opportunities of using special skill are allowed to slip by. The hoarse voice suggests a benzoin inhalation, not a laryngoscopic examination; the hard pulse and ringing second sound indicate a mixture of acetate of iron without confirmation of their significance by the sphygmomanometer and the ophthalmoscope; the coexistence of carbuncles with loss of weight and a beefy tongue suggest a "tonic for the blood" rather than an examination for sugar, though these different investigations are, of course, part of the routine of a well-conducted practice.

The divorce of general practitioners from the special departments of medical work has gone too far. If each practitioner were, from his student days onwards, to retain a *pied-à-terre* in any one of them his general work would be stimulated by the fact that in one branch he was abreast of modern thought, and by that a standard would be set which would react favourably on the rest of his practice. The fullness of his knowledge in his special line would constantly remind him that his acquaintance with other special lines was elementary, and cause him to seek for his patients, when necessary, the aid of other doctors who specialized in those directions.

I suppose that roughly about a tenth of the patients who visit our surgeries require treatment demanding expert skill beyond the average powers of an ordinary practitioner. How many of them get it? The answer must vary according to the district and its hospital facilities, and the doctor and his energy and enthusiasm. But there are few neighbourhoods where the provision for that tenth of the patients is full and complete, while there are very many where the only provision is remote, costly, and haphazard.

Any foreigner hearing of our Insurance Act would suppose that this was no longer true of insured persons, but the surprising part is that it is just as true of them as of any others. The Act promised medical attendance and treatment, but this by the Regulations has hitherto been curtailed to what can be provided by a general practitioner of ordinary competence.

The hope raised by Section 8 (*a*)—that the treatment afforded would be full and complete—has not, so far, been realized. The as yet unexplained medical grants under the Budget may, however, mark the beginning of a fuller system. The logic of the situation demands that, whether we like it or not, the Act shall expand and treatment shall increase, both qualitatively and quantitatively—that is to say, so as to include specialist treatment and also to provide in its operation for dependants for all purposes of medical benefit.

How can special departments of medicine be best provided for in panel and general practice in industrial areas?

The simple answer "by the hospital" is, I am sure, not enough. Gratuitous work has now done all that can be asked of it—perhaps more than should be asked of it. On the other hand, general practitioners are suffering because they have not access to facilities for following some one or other of the special branches.

I do not want it to be supposed that I am going to suggest any such absurdity as that general practitioners should have the unrestricted right to follow their cases into hospitals. That system answers well in some cottage hospitals—to a point—but in a large institution, other than a mere nursing home, it would mean chaos. Nor do I think it, in the interest of the work, desirable. Concentration in the more elaborate branches of medicine is essential to success. Concentration of study, of patients, of appliances, and even of time—that is, the days and hours when the work is to be done—the out-patients attended to, and the wards visited.

But I do think that the one-tenth of our surgery patients that I spoke of earlier as requiring special treatment ought to be catered for in expanded out-patient departments of existing hospitals and cottage hospitals, or in similar institutions and departments to be newly formed; and that these departments should be officered largely by the general practitioners themselves. Let me add, at once, that consultants who devoted their whole time to special work—men of acknowledged standing—must necessarily be associated with any such proposal, either as the heads of the larger clinics, or as periodic visitors, or for assistance, in particular cases. It is to be hoped that the clinics mentioned in the Budget are to be clinics of this nature, and that it is not the intention that they should be officered by whole-time specialists.

Suppose that the newly-fledged practitioner with whom I started was attached on his entry into practice for two afternoons a week to such a clinic, dealing, say, with the ear or with the nose and throat. He would work there in association with other officers of the clinic, consisting, occasionally at least, of specialists, together with general practitioners already ripe in their speciality. Thus he would follow his chosen line under auspices and with facilities which would well-nigh ensure even a moderately gifted man attaining full competence. The objection will at once be raised that he would be treating his neighbours' patients, who would regard him as a specialist, and that that would give him an unfair advantage in the competition of general practice. Objections of this sort have already, to my knowledge, proved fatal to the co-operation of general practitioners in the work of the new tuberculosis dispensaries in at least one county. As a consequence that field of work is now closed to general practitioners. But need such objections be sustained in a system where many of the patients have not the right to seek in the doctor's surgery the treatment they obtain at the clinic, and where each doctor is recognized as doing special work of equal standing in the special subject of the clinic to which he is attached? School children with errors of refraction, who are now either not treated at all, or whose spectacles are provided by an optician or at a hospital after an expensive train journey, would be properly examined by refraction and otherwise at the local ophthalmic clinic. The child with adenoids, if his private doctor declined dealing with such a case, would be dealt with at the throat clinic, where also the panel practitioner could refer the workman with a brassy cough for laryngoscopic examination. The existence of the department would not preclude the practitioner from making such an examination himself had he the time and disposition to do so, but it would be there to relieve him of the responsibility if he had not.

Would practitioners object to being thus relieved of those patients for whose treatment they find it hard to efficiently provide? Would they not, on the other hand, welcome the opportunity themselves of taking part in the work of some speciality?

With regard to finance, I would propose that all doctors should be paid in respect of their work in the out-patient

departments or in clinics for a stated number of hours' work—say one or two hours once or twice a week. This would neutralize a tendency that might arise, if they were to be paid for the number of cases seen, to attract patients to attend the clinic whose case would be better dealt with by the panel or private doctor. One safeguard would have to be imposed. It would be probably wise to stipulate that no patient should attend a clinic except on production of a written request from his doctor.

The proposal with regard to some of the tuberculosis dispensaries now in process of creation differs from this. They are to be free to all comers for one consultation at least, after which the patient's doctor—and not the patient—is to be informed of the upshot of the examination. That system seems to me to require very anxious consideration before it is approved by the profession.

This tuberculosis dispensary system now coming into being is indicative of the rapid changes impending in the method of medical practice. Long ago sanitation was taken out of the hands of general practitioners. Scarlet fever and typhoid fever and diphtheria are diseases we are allowed to diagnose, but seldom to treat. School clinics in some districts already threaten to absorb the care of diseases of children, hitherto the undisputed province of the general practitioner. Midwives, under the Midwives Act, have done good work; but the ultimate effect of that legislation, by lessening the interest and the experience of general practitioners in obstetrics, is very doubtful. The village nurses are an enormous improvement on the Gamps of a dying generation; but they have their own tendencies to an abuse of their semi-official position. They often prescribe.

On the top of all these agencies which bit by bit have limited the field of our labours come the tuberculosis dispensaries, and the Budget proposals for clinics. In the distance looms the possible whole-time medical service. We ought to face the situation, to sink old prejudices, and to move with the times.

We, and we alone, have real and intimate knowledge of the medical needs of the people. The specialists who advise the Government are often out of touch with the field of our labours. On the other hand, we are so absorbed in our daily duties that we have scant time to pause and think of the impending possibilities. We cannot guide the nation if we remain inarticulate.

We know that it is better that family practitioners—all-round men—should remain, on the old intimate terms, amongst the population; but at the same time there is a demand for something new, and we must prepare to offer it. Medicine has moved on, and become more complex. It has developed a high degree of success in technical matters requiring special knowledge. The family practitioners cannot individually master each of these lines; but each practitioner could master one, and together, co-operatively, the present medical community could deal with them all. But then comes the objection, we should be dealing with each others' patients. To this I reply that medical customs and etiquette are only good feelings and good sense crystallized into rules. When times change, good sense will dictate new rules and new customs which will supersede the old.

Assume the clinics formed, who is to control them? I believe in Leicester friendly societies already charge a premium for the provision of specialist treatment at a special clinic not controlled by them. Insurance Committees already pay for beds per case in sanatoriums which are under private or independent public auspices.

The system I have outlined no more means that the control of the clinics or the hospital should pass into Government hands, than that a Government contractor's business should do so.

The Local Government Board might insist on a certain standard being maintained. It already does so in regard to the sanitation of sanatoriums used by Insurance Committees, but that does not imply Government control of the institutions. Education Committees could make contributions for the treatment of school children to the clinics I have suggested, without claiming to take over their management.

If the clinics are to be worth while, they must deal with practically the whole population; and, doing so, they will overlap the work and interests of several distinct existing bodies. The Education Committees and Public Health Committees of the county councils will both be interested in this new field of work. Clearly the medical practitioners, represented by the Local Medical Committees, will be deeply concerned—so will the Insurance Committees in the interest of the third of the population which they represent. So, finally, will be the local hospitals in which, or in connexion with which, the greater clinics should be organized. Surely, therefore, a joint committee composed of representatives of all five interests is the ideal controlling body to organize the clinics in any area.

Our profession has of late inevitably been distracted from its main work. The organization of these clinics now urgently demands our interest and watchful care. It is more worthy of our attention than mere trade unionism.

Organization for resistance to an infringement of our rights is well and necessary. But except in face of a threat which unites us, it is futile; in face of a proposal which divides us, it is sterile.

Organization for offering a more efficient medical service to the public is, I venture to think, an endeavour more in accord with our traditions and more likely to maintain the status and, incidentally, the emoluments of our ancient calling.

CORRESPONDENCE.

Panel Committees and Panel Practitioners.

We have received the following letter:

Sir,—What are the obligations of Panel Committees and the representatives who compose them towards the practitioners who elect them? Probably we shall all agree that they are bound to forward the interests of their constituents to the best of their ability, but opinions seem to differ as to whether they should act on their own judgement in matters of importance, or endeavour to discover the opinions and wishes of their constituents and act as far as possible in accordance with them. Does a representative cease to be a representative and become a free lance as soon as he is elected? Legally, it seems, he does, for the law gives Panel Committees power to decide various important questions, and does not provide that such decisions shall be reached after consultation with the general body of practitioners, though it nowhere forbids such consultation. Morally, however, many—perhaps most—of us hold that our representative should represent our views in committee, and should consult us on important matters, and that the committee should act in accordance with those views whenever possible. Moreover, many of us feel that we have the moral if not the legal right to lay our views before the committee through our representative on any action taken or proposed which concerns us as panel practitioners. The question is not merely an academic one: it has assumed practical importance in this neighbourhood recently, as the Lancashire Panel Committee adopts the purely legal view, and the representatives who compose it, with very few exceptions, regard themselves as free lances, and repudiate the suggestion that the areas have any right to interfere in "their" business. In this area quite a goodly number of men take an interest in affairs, attend meetings, and speak their minds on matters which concern them, but when they made certain representations through their representative to the Panel Committee the committee passed a resolution "regretting" their action!

There are 25 areas of varying size in the county, some containing less than 20, others more than 100, practitioners, and each has one representative. The Commissioners have decided that the new Panel Committee may have 40 members (there is only one committee for the whole county), but the present committee has adopted a scheme allowing for only 30, one representative from each area, and five to be co-opted. We feel that the larger areas should have an extra representative, so as to give something like proportional representation. The committee considers that this is no business of ours. Each panel practitioner, however, has the legal right to consider and object to any scheme for constituting a Panel Committee before such scheme is formally submitted to the Commissioners for approval, and we must conclude that the committee, in adopting this scheme and submitting it to the Commissioners without allowing us to consider it, was exercising some moral right hitherto unrecognized.

We think we ought to have an opportunity of considering and discussing with our representative any important

matter which is to be decided at the next Panel Committee meeting, and suggest that notice of such matters should be sent to area secretaries in time to allow this. The committee considers that this is a matter of procedure which they have the right to settle for themselves.

The Panel Committee decided that the money required by it could best be raised by a voluntary levy of ½d. a head of insured persons per annum, and sent round forms of agreement for signature allowing the deduction. From the fund so raised the committee proposes to defray its own necessary expenses, to allow £250 for the expenses of the twenty-five areas, and to keep the balance in its own hands, presumably to be applied to such purposes as it may decide upon. The practitioners of this area consider that it would be fairer for the committee to deduct from the fund what it requires, and to return to each area the proportion of the balance contributed by that area, thus giving each area the control of its own money after it has paid its proper proportion towards the expenses of the Panel Committee. This proposal was negatived by the committee almost unanimously, but we have good reason to believe that many of the representatives had not consulted their constituents on this matter.

In each area a Local Medical Committee was formed early in 1913, and these committees were recognized by the Commissioners, but the Panel Committee tells us that the Commissioners will no longer recognize them, and implies that there is therefore no longer any obligation on the Panel Committee to recognize them. Hitherto, if any trouble has arisen in connexion with medical benefit, the honorary secretary of the area has received notice of it from head quarters, and has worked overtime investigating it, if necessary calling a meeting of the committee or even of all practitioners in the area. In future the Panel Committee will doubtless deal with such matters itself, as it cannot well delegate its duties to "unrecognized" individuals. Wherever the Panel Committee takes a purely legal view of its obligations the panel practitioner is in this position—he may be inadequately represented in a large area, or he may be practically unrepresented, his representative being a free lance. He has no opportunity of expressing his opinions on matters which concern him nearly, as he may receive no intimation that they are to be considered; even if he does express his views through resolution at a general meeting, or through his committee, the Panel Committee need not recognize him. He is compelled (under the compulsory scheme) or morally bound (under the voluntary scheme) to allow a deduction from his earnings knowing that he will have no voice in deciding how the deducted money shall be used. In such circumstances he must soon come to regard the Panel Committee as a bureau within a bureau rather than as a committee representing him and his interests, and a proper sense of loyalty to the committee will hardly be his predominant feeling.

County Panel Committees should naturally be the heads of county defence organizations in the fights which are bound to come sooner or later (the first probably not later than the end of 1915), and it would be disastrous if the influence of any of these committees were undermined by lack of proper understanding between them and the general body of the practitioners whom they represent. As the new Panel Committees are being formed, now is the time for representatives and their constituents to come to such an understanding, and nothing should be taken for granted on either side.

In view of the importance of the principles involved in this question not merely to themselves, but to all panel practitioners, the practitioners of this area have felt justified in declining to agree to the voluntary levy asked for by the Panel Committee (at any rate for the present), in the hope that a little friction here at present may, by leading to a recognized *modus vivendi* here and elsewhere, tend to avert serious disorganization at some critical moment in the future.—We are, Sir,

J. PRICE WILLIAMS,
Chairman of Committee.
E. HIGSON,
Hon. Sec., Area 22 (Lancs.).

Swinton, Manchester, July 11th, 1914.

CONFERENCES WITH THE COMMISSIONERS.

Dr. S. NOY SCOTT (Plymstock) writes: I venture to suggest to doctors who attend any of the conferences which are now being held that they should be very careful in what they say or admit. I have just returned from one, and the impression I have formed is that the conference is a very subtle method of entrapping doctors to make certain admissions which will ultimately be used against them. The Commissioners were three very astute and able men—one being a lawyer able to take the quickest advantage of any opponent, one being a medical man whom the profession once trusted, and the other a quiet, observant man, who said practically nothing. It was noteworthy that although the conference was "confidential" yet the Commissioners were accompanied by an official shorthand writer, who took down the names of those who spoke and what they said. The two Commissioners who spoke were very suave and complimentary to us who were present, but had very hard things to say of doctors in other neighbourhoods, and I presume they say the same wherever they go, so that in another district we, the perfect ones here, are referred to as careless and slack behind our backs! Had I to attend another conference I should refuse to enter into any discussion until I had obtained from the Commissioners an absolute assurance that whatever was said by the doctors should not be used by the Commissioners as reasons for the issue of new regulations (to be ultimately enforced) until the doctors had definitely consented to accept them at a subsequent meeting. I say this because I very much fear that the Commissioners desire to obtain further "control" over the panel practitioners. It was repeated *ad nauseam* that the object of these conferences was improved "certification" (with which we probably all agree), but such improved certification has—it was admitted—for its ultimate end the lessening of the financial demands on the funds of the approved societies. That object may be good, but it is not one with which doctors are immediately concerned. If certain doctors, admittedly a very small minority, are careless or negligent, why do not the Commissioners use the power they already have of removing them from the panel? Why endeavour to make the work of all more irksome because a few black sheep, who, it must never be forgotten, are on the panel by the express intention and desire of the Commissioners, do not do their duty? Why should all the doctors be lectured and appealed to with a view of making the Act a financial success? In other words, to cover up the mistake of a too enthusiastic actuary who would not believe that the sickness-rate would be higher than he estimated!

Again, why should doctors be compelled to play the part of detectives? Will not doctors be guilty of breach of professional confidence if they disclose (as they were asked) on a certificate the primary cause of a person's illness? Is it permissible for a medical man to give away his patient (whether insured or otherwise) by saying on a certificate that the cause of a salpingitis is gonorrhoea? Or the cause of a miscarriage is a self-administered drug? Or that the cause of a pneumonia is alcoholism? I take it that the certificate is given simply to prove the fact that a person is unfit to work, and not that the illness is the result of a breach of the moral law. Should we not firmly refuse to disclose *all* we know of a patient's illness, except with that patient's full and expressed consent?

The Commissioners are trying very hard to induce us to break all the traditions of our profession, and I for one hope we shall be able to assume and maintain an attitude of defiance.

THE DRUG TARIFF.

Dr. F. E. H. DAUNT (Clapham Road, S.W.) writes: As one who had to serve three years' apprenticeship to a surgeon-apothecary in my young days before I could present myself for the much-derided L.A.H.Dub., may I point out the weak spots in the whole drug system? They may be classified thus: (*a*) A ridiculous price list without proper formulae; (*b*) the want of teaching of the modern practitioner to build up a prescription without the aid of such formulae (the only way they are taught at the hospitals), also the kind American houses who dictate the drugs that are to be given. I take the first point first. I prescribe a most ordinary prescription with regard to economic doses (the charges allowed are shown in parentheses), say:

Pulv. rhei	gr. lxiv	(1½d.)
Magnes. carb.	gr. clx	(½d.)
Sod. bicarb.	gr. clx	(½d.)
Ammon. carb.	gr. lxiv	(½d.)
Ol. menth. pip.	ɱ iv	(¼d.)
Aq. (supposed to be distilled ad ...	ʒ viii	(1d.)

Dose, ʒ iv ex aqua.

Now the amount of these drugs that I am allowed to order at the above prices is as follows:

Rhei rad. pulv.	ʒ ij
Magnes. carb. lev.	ʒ iv
Sod. bicarb.	ʒ j
Ol. menth. pip.	♏ v
Ammon. carb.	ʒ iv
Aq. (directed to be distilled)	℥ xii (1d.)

I have not counted dispensing fees. It is obvious what a waste there is on this, and, one might say, every prescription ordered. And why aq. dest.? Do the Committee think chemists get it in by the puncheon? I am far from saying they don't, but surely one could find out. Its use is, however, quite unnecessary for most mixtures, and doctors ought to order aq. font.

Final instance; though I could keep on; liq. arsenicalis, ʒ j (½d.), same price for ℥ j.

Secondly, the modern formulas of all hospitals are deemed sufficient, and also the American houses, with their formulas for this and that, simplify the matter to many men; but when confronted with a drug tariff the weak points are quickly found out; an official pharmacopœia of concentrated formulae is absolutely necessary. Personally, I have had a circular saying that So-and-so's cod-liver oil and malt will be allowed to be prescribed by the Committee! What is the Committee thinking of? It costs double the price of the ordinary commercial article, and where is the advantage?

Reduced Payments in Scotland.

Dr. W. R. MARTINE, Chairman, and Dr. T. P. CAVERHILL, Secretary, of the East Lothian Panel Committee, write:

> In every year for every person whose name stands on his list throughout the year as eligible for medical benefit and domiciliary treatment under sanatorium benefit, the doctor on the panel will get 7s. This sum may rise further to 7s. 6d. if the drug bill for the year is low.

This is an extract from a circular letter, dated December 20th, 1912, issued to Scottish medical practitioners by the Scottish Insurance Commissioners. We now learn that this guarantee is by no means being fulfilled. At a recent meeting of the East Lothian Panel Committee we were more than surprised to learn that, instead of receiving the guaranteed 7s. per insured person *plus* the floating sixpence to which the drug bill for the year 1913 proves we are entitled, we find that we are to be paid at a rate of about 6s. 6d.

Instead of receiving the "floating sixpence" as a "floating sixpence," we find to our amazement this sum—amounting to about £350—has been transferred, by order of the Commissioners, to the general panel fund, evidently with a view to making us believe that we are still getting 1s. 9d. a quarter per patient.

One doctor in our area, who has got at least 2,000 on his panel, instead of receiving 6d. for every person on his list, has now been asked to refund the sum of £10, with an explanation that he had been overpaid for the first three quarters. This doctor was not overpaid; he had received cheques for the first three quarters at the rate of 1s. 9d. per insured person per quarter. But the Commissioners now find that they are not in a position to fulfil the above-mentioned agreement, with the result that the medical profession as a whole are evidently being penalized because the approved societies and their members have not adhered to the regulations, especially Regulations 28 and 29.

The medical practitioners in East Lothian think that it is quite time that some drastic measures should be taken by a responsible body to have a thorough investigation of this serious state of affairs, and would like to know if a similar position exists in any other area. If this is so, we would like to hear if they are going to accept this position "lying down" or make a combined agitation, through the British Medical Association to the Commissioners, to have this very serious position inquired into.

Protest Meeting of London Panel Practitioners.

Dr. J. ALEXANDER ANGUS (London, W.) writes: Dr. Coode Adams has drawn my attention to a letter of Dr. Bazett's which appeared in your issue of July 11th (SUPPLEMENT, p. 52). I should have written you immediately, but have been away for a few days. In fairness, however, to Dr. Coode Adams, the statements of Dr. Bazett should not pass uncontradicted. The meeting at the Caxton Hall was perhaps the largest gathering of London practitioners ever held, and from first to last the Chairman was in perfect touch with his audience; his ruling was eminently fair, and the resolution was passed with only one dissentient. So much for the Botha-like methods of the chairman.

With regard to my being permitted to advocate certain forms of distribution of the unallotted funds, Dr. Bazett is again absolutely incorrect, and he seemingly confuses two separate matters. In giving a summary of the proceedings of the London Insurance Committee I stated merely the action of that Committee, and did not express one word otherwise about any scheme of distribution. The following were the words used:

> On the 23rd of April the London Insurance Committee decided that a scheme should be prepared for the distribution of the money. We thought this was an eleventh-hour repentance, and the Medical Benefit Subcommittee, in response to the desire of the Insurance Committee, submitted a scheme for the payment of the money *pro rata*—this being in accordance with the original terms of the Act, and there being no question of a limit there would be less to quibble about.

As will be seen, these remarks were merely part of the history of the London Insurance Committee, and therefore it follows that Dr. Bazett's attack on Dr. Coode Adams is both unjust and uncalled for.

INSURANCE ACT IN PARLIAMENT.

Payments to Medical Men.

MR. WORTHINGTON EVANS asked whether the Middlesex Insurance Committee had yet distributed among the panel doctors any of the surplus funds for 1913; if not, what was the reason of the delay; and what addition it had made to the fixed remuneration per head of persons treated. Mr. W. Benn said that advances had been made to a total amount in excess of the amounts due in respect of insured persons on doctors' lists only; but the difference between the amounts due on the latter basis and the amount due in respect of the total insured population of the area entitled to treatment by doctors on the panel could not be ascertained until the completion of the settlement now in progress.

Mr. Worthington Evans also asked whether the Middlesex Insurance Committee had distributed among the panel doctors of its area any sum for tuberculosis treatment; and, if no such distribution had taken place, what was the cause of the delay.—Mr. W. Benn replied that the answer to the first part of the question was in the affirmative; the second, therefore, did not arise.

Drugs and Medicine supplied by Doctors.

Mr. Pratt asked whether it had been the practice in districts where there was no chemist available for the Local Insurance Committee to arrange with the doctors on the panel to supply drugs and medicine for a capitation payment of 1s. 6d. per insured person on their list; whether the Commissioners had sanctioned this arrangement, and whether it had worked satisfactorily; and whether the Commissioners had recommended in any such cases that instead of the capitation payment the doctors should be required to dispense their prescriptions in the same manner as chemists on a tariff rate.—Mr. W. Benn replied: The arrangement to which the hon. member refers is expressly provided for in the Regulations, and has generally been found to work satisfactorily. With regard to the last part of the question, if the hon. member will give particulars of any cases he has in mind, I will make inquiries.

Cost of Act to Exchequer.

In reply to Colonel Weston, Mr. W. Benn said that for the financial year, April 1st, 1913, to March 31st, 1914, the first complete financial year since the general commencement of benefits under the Act, the figures were as follows:

	£
Actuarial estimate [Cd. 5983, paragraph 16]	4,050,000
Approximate expenditure	5,906,500

The latter figure was based on the Annual Estimates (Original and Supplementary) laid before Parliament, the actual expenditure not being ascertainable until the Appropriation Accounts for the year were closed. It did not include sums of £305,000 voted for the treatment of tuberculosis (Class VIII, Vote 10), and £45,000 voted for the expenses of the Highlands and Islands Medical Service Board, which were only in a minor degree Insurance Act

services. The cost of central administration (Insurance Commissions, audit, etc.) was also excluded, as no original estimate of the cost was available for purposes of comparison.

ADMINISTRATION EXPENSES.

In reply to Major Hope, Mr. W. Benn said that no part of the sanatorium benefit funds of an insurance committee could be applied to defray the cost of any administration expenses other than those actually incurred, either directly or indirectly, in the administration of sanatorium benefit. The amount so applied necessarily varied in different areas, but was in all cases subject to review by the Treasury auditors. He did not think it would be practicable to keep the administration expenses of sanatorium and other benefits separate.

British Medical Association.

EIGHTY-SECOND ANNUAL MEETING, ABERDEEN, JULY, 1914.

THE Eighty-second Annual Meeting of the British Medical Association will be held in Aberdeen in July, 1914. The President's Address will be delivered on Tuesday, July 28th, and the Sections will meet on the three following days. The Annual Representative Meeting will begin on Friday, July 24th, at 10 a.m.

PROVISIONAL PROGRAMME.

The following is the provisional time-table for the Aberdeen Meeting:

FRIDAY, JULY 24TH.

10 A.M.—Annual Representative Meeting.

SATURDAY, JULY 25TH.

9.30 A.M.—Representative Meeting.

MONDAY, JULY 27TH.

9.30 A.M.—Council Meeting.
10 A.M.—Representative Meeting.

TUESDAY, JULY 28TH.

9 A.M.—Exhibition of Surgical Instruments, Drugs, etc. The Exhibition will remain open until 6 p.m. on this and the three following days.
9.30 A.M.—Representative Meeting.
2 P.M.—Annual General Meeting.
*8.30 P.M.—Adjourned General Meeting, President's Address.

WEDNESDAY, JULY 29TH.

*9 A.M.—Religious Services.
10 A.M. to 1 P.M.—Sectional Meetings.
12.30 P.M.—Address in Medicine.
1.15 P.M.—Irish Medical Schools' and Graduates' Association, Luncheon.
2.30 P.M.—Secretaries' Conference, followed by Dinner.
3.30 P.M.—Garden Party by Town Council in Duthie Park.
*8.30 P.M.—Reception by University in Marischal College.

THURSDAY, JULY 30TH.

8 A.M.—National Temperance League Breakfast.
9 A.M.—Council Meeting.
10 A.M. to 1 P.M.—Sectional Meetings.
12.30 P.M.—Address in Surgery.
7.30 P.M.—Annual Dinner.

FRIDAY, JULY 31ST.

9 A.M.—Council Meeting.
10 A.M. to 1 P.M.—Sectional Meetings.
*12.30 P.M.—Graduation Ceremony in Marischal College.
6 P.M.—Annual Exhibition closes.
8 P.M.—Popular Lecture, Marischal College.
*8.30 P.M.—Reception by Branch (Music Hall).

SATURDAY, AUGUST 1ST.

Excursions.

*Academic dress or uniform should be worn on these occasions. Members desiring to have robes provided for them at Aberdeen should communicate with Messrs. Ede, Son and Ravenscroft, 93 and 94, Chancery Lane, London, W.C.; Mr. William Northam, 9, Henrietta Street, Strand, London, W.C.; or Messrs. L. Y. and J. Nathan, 4, Hardman Street, Liverpool.

Honorary Local Treasurer—
GEORGE WILLIAMSON, M.B.,
256, Union Street, Aberdeen.
Honorary Local Secretaries—
THOMAS FRASER, M.B.,
16, Albyn Place, Aberdeen.
FRED. K. SMITH, M.B.,
7, East Craibstone Street, Aberdeen.

THE SECTIONS.

The scientific business of the meeting will be conducted in sixteen Sections, which will meet on Wednesday, July 29th, Thursday, July 30th, and Friday, July 31st.

The President, Vice-Presidents, and Honorary Secretaries of each Section constitute a Committee of Reference for that Section, and exercise the power of inviting, accepting, or declining any paper, and of arranging the order in which accepted papers shall be read. Communications with respect to papers should be addressed to one of the Honorary Secretaries.

A paper read in the Section must not exceed fifteen minutes, and no subsequent speech must exceed ten minutes.

Papers read are the property of the British Medical Association, and cannot be published elsewhere than in the BRITISH MEDICAL JOURNAL *without special permission.*

SECTION OF ELECTRO-THERAPEUTICS AND RADIOLOGY.

The proceedings will include an *x*-ray cinematographic demonstration by Professor BERGONIÉ.

The following are synopses of the papers introductory to the discussion on the comparative value of *x* rays and radium in the treatment of malignant growths.

Dr. HERNAMAN-JOHNSON: *X* rays and gamma rays differ chiefly in penetrative power. Within limits, the healing of a lesion is as much dependent on the hardness of the rays applied to it as upon their quantity. Generally speaking, increased hardness means increased therapeutic effect. Two principal advantages over *x* rays are claimed for radium: (*a*) The gamma ray is, *caeteris paribus*, intrinsically more valuable than the *x* ray. There is some justification for this claim, but it is only in rare cases that rays so hard as the gamma type are necessary to effect improvement; (*b*) Radium tubes can be brought into intimate contact with malignant neoplasms. This consideration makes radium-therapy the method of choice in disease of the vagina, uterus, rectum, oesophagus and naso-pharynx; also, in large irremovable tumours in any situation. But supplementary treatment by *x* rays to surrounding areas is necessary, as the law of inverse squares determines that only parts closely adjacent to the radium tube are efficiently irradiated. Stimulation of normal tissues to resist cancerous invasion is no less important than actual attack upon malignant cells. *X*-ray applications can now be made so as to exalt the normal and depress the abnormal. Radium, as at present used, is very uncertain in its action on healthy tissues. Hence, *x* rays are to be preferred for pre-operative and post-operative irradiation; they are also the method of choice in breast cases. As to comparative permanence of results, sufficient time has not yet elapsed to enable us to say whether radium "cures" are any more lasting than those accomplished by *x* rays.

Dr. JOHN MACINTYRE: (1) A careful consideration in the present state of our knowledge with regard to the different rays emitted by the *x*-ray tube and radium. (2) Comparison between the dangers from both and the therapeutic advantages. (3) Technique, with special reference to obtaining beneficial results and the avoidance of injury. (4) The action upon the superficial and deep tissues. (5) The limitation of agents on account of the anatomical situation. (6) That in selecting cases for either or both agents it should never be forgotten that malignant diseases may be classified into: (*a*) Operable cases in which the disease does not return; (*b*) cases operated upon in which the disease has returned once or more frequently; (*c*) cases that are inoperable and in which some such treatment may be of use; and (*d*) cases that are untreatable. (7) Conclusions arrived at should only be in cases where the diagnosis has been made absolute by microscopic or other examinations. (8) That all other lesions, such as syphilis,

tubercle, etc., which might possibly be present, should be carefully excluded. (9) That it should be remembered that one or more affections may be present at the same time. (10) That, while other methods of treatment may be tried in a case, the most valuable opinion can only be got in cases where the agents themselves only have been used.

The following are synopses of the papers introductory to the discussion on electro-therapy in neurasthenia:

Dr. Agnes F. Savill: Before any useful purpose can be served by a discussion on the electro-therapeutic treatment of neurasthenia, it is essential to have a clear idea as to the meaning of that somewhat loosely employed diagnosis. There are two opposing methods of treatment, employed respectively by those who consider that neurasthenia is primarily a disease of mental origin and by those who are equally confident that it is due to physical causes. Observers of the French school lead the van of psycho-therapeutists. Dejerine treats his cases by persuasive reasoning and moral re-education. Other workers obtain good results by attacking the physical symptoms, and these can be better treated by electrical methods than by drugs or "change of air." Neurasthenia affects the entire nervous system; the organs are disturbed because their metabolism is disordered when the nervous control is out of gear. When the brain and spinal cord are chiefly affected galvanism to brain and cord forms the best method of treatment. When the symptoms are due to alimentary toxaemia the sinusoidal current, applied to the abdomen, yields the best results. In all cases except those originating in alimentary toxaemia, psycho-therapeutic treatment is a valuable adjunct to physical methods, and should never be omitted. Even where the physician does not consciously employ psycho-therapeutics his success is probably due in part to the unconscious power attaching to that misunderstood and mysterious force—personality.

Dr. W. F. Somerville, after speaking of the importance of isolating a neurasthenic patient from all worries and exciting influences, of the value of the assistance of an observant nurse, and the importance of medical and dietary treatment, of massage and physical exercises, will show that since he began to employ high-frequency currents he has obtained better and more lasting results than previously in the treatment of neurasthenics. These currents improve the general circulation and overcome the want of proportion in the excretion of urea and uric acid usual in these patients. He is opposed to giving high-frequency treatment merely twice or thrice a week, and gives it twice daily on a condenser couch. It lasts ten minutes, the milliampèrage being from 250 to 800.

Section of Laryngology, Rhinology, and Otology.

We have received the following abstracts of two of the papers initiatory of the discussion on the treatment of inoperable growths of the nose and throat by diathermy:

Dr. W. Douglas Harmer: Description of the apparatus required and the results produced by the cautery. For the operation a general anaesthetic is necessary. Every part of the growth should be treated if possible, taking care that the surrounding tissues do not become too much heated. The surgeon must be prepared for tracheotomy, and must not tear away the sloughs roughly for fear of haemorrhage. The latter is never caused by the cautery. Notes of 20 patients follow, mostly cases of carcinoma of the tonsil, tongue, palate, or pharynx. From these it appears that pain has been slight; that little inflammation of surrounding parts has been caused; that temperature is rarely raised; that sepsis is uncommon; that there is an absence of shock; that sloughs separate in five to ten days, leaving a healthy wound without discharge, salivation, or haemorrhage. Patients have left the hospital on the average in six days. Unfavourable cases are those in which bone is involved. Complications have been rare, but in one case there was secondary haemorrhage, and two others died of septic pneumonia. The results obtained in each case are noted, and from these it is claimed that diathermy is a valuable treatment for massive ulcers in the nose or throat, especially when associated with dysphagia, blood-spitting, or constant expectoration. Although the relief is only temporary the patients have a less miserable life. The growth and glandular enlargement progress less rapidly, and there may be less tendency to recurrence than after a cutting operation. The obvious advantages over the knife are the rapidity of the operation, the possibility of removing a large growth without loss of blood, the fact that the vessels and lymphatics are sealed by the burning, and the quick recovery. With vascular naevi the results are excellent. It remains to be seen whether the treatment is useful for extensive carcinoma of the larynx, tuberculous laryngitis, or impermeable stricture of the oesophagus.

Dr. John Macintyre: (1) A comparison between the different agents should be kept in view. (2) Consideration of the resemblances and the different agents and their differences. (3) That all these agents act differently in different cases. (4) That in selecting cases for either or both agents it should never be forgotten that malignant disease may be classified into: (*a*) Operable cases in which the disease does not return; (*b*) cases operated upon in which the disease has returned once or more frequently; (*c*) cases that are inoperable and in which some such treatment may be of use; and (*d*) cases that are untreatable. (5) That different parts of the respiratory tract show great differences in responding to treatment. (6) That there is a difference in the anatomical tissues, particularly in the mucous membranes. (7) Necessity of elimination by careful examination of other lesions, such as syphilis and tubercle, which may be present as well as malignant disease. (8) Instances of cases which have failed to respond to one agent and have responded to another. (9) That the differences arise from the anatomical position of the diseased part. (10) The state of our knowledge about *x* rays and a definition as to what is meant by this, with particular reference to deep-seated therapy. (11) References to special cases; and (12) the importance of classifying our results as far as possible into groups which will enable us to judge best from these which have proved, by microscopic or other examination, to be truly malignant disease.

Section of Neurology and Psychological Medicine.

We are informed that the title of the demonstration to be given by Dr. L. Campbell Bruce has been changed to The relation of bacterial infections to various forms of insanity.

RECEPTION ROOM.

The reception room will be open during the Annual Meeting in the Advocates' Hall, Broad Street, Aberdeen, and members are advised to call there as soon as possible after their arrival in Aberdeen. They will there find full information at their disposal and will be able to obtain a copy of the *Daily Journal*.

ACCOMMODATION IN ABERDEEN.

A list of hotels and lodgings available in Aberdeen during the Annual Meeting was published in the advertisement pages (6 and 7) last week. Members desiring further information on this subject are asked to communicate with Dr. F. Philip, Honorary Secretary of the Hotels and Lodgings Committee, 29, King Street, Aberdeen.

For the convenience of members who may not previously have arranged for accommodation in Aberdeen the Executive Committee will have an office in a room at the railway station, where members on arrival may inspect a register of available apartments. In this office there will be a staff of assistants to give information and to direct inquirers.

The citizens of Aberdeen intend to give a hearty welcome to members of the Association, and a very large amount of private hospitality is offered. The Local Executive Committee hopes that members will not be led by the answers they may get from some of the hotels to suppose that the accommodation available in Aberdeen is filled up; any member who has difficulty in finding accommodation should not hesitate to communicate either with Dr. F. Philip, as above, or with Dr. Thomas Fraser, the other honorary local secretary, at the same address.

ARRANGEMENTS FOR LADIES.

A committee of ladies has been formed to look after the comfort and interests of ladies accompanying members to Aberdeen. The Aberdeen Medico-Chirurgical Society has granted the use of its rooms at 29, King Street,

as reception rooms for ladies from July 24th to 31st. There will be provided a rest-room, a writing-room, a tea-room, and a dressing-room. There will also be an office in the building where information regarding ladies' entertainments and motor drives will be given and tickets supplied. A member of the Ladies' Committee has given the use of her flat at 245, Union Street, where ladies living out of the town may dress for the evening entertainments. It is hoped that a corps of lady guides will be available for the assistance of visitors. For further particulars see SUPPLEMENT, July 4th, p. 11.

RELIGIOUS SERVICES.

THE annual service for the Association will be held in the West Parish Church of St. Nicholas (Church of Scotland) at 9 a.m. on Wednesday, July 29th. At the same hour a Roman Catholic service will be held in St. Mary's Cathedral (celebrant, the Bishop of Aberdeen; preacher, the Right Rev. Monsignor Meany), and a service of the Episcopal Church in Scotland in the Cathedral Church of St. Andrew's. Collections at these services will be made on behalf of the Royal Medical Benevolent Fund.

LUNCHEON TO SIR ALEXANDER OGSTON.

THE luncheon at which Sir Alexander Ogston is to be entertained by his former dressers and house-surgeons will take place at the Grand Hotel, Aberdeen, at 1.30 p.m. on Thursday, July 30th, when the chair will be taken by Sir James Porter, K.C.B., late Medical Director, R.N. Any former dresser or house-surgeon who wishes to attend to show his esteem and affection for Sir Alexander Ogston, and has not yet informed one of the honorary secretaries, is asked to communicate at once with Dr. J. W. Cook, 26, Manchester Road, Bury, Lancs.; or Dr. W. Sinclair, Royal Infirmary, Aberdeen.

PRESENTATION TO PROFESSOR STEPHENSON.

SUBSCRIBERS to the testimonial to Emeritus Professor William Stephenson, M.D., LL.D., F.R.C.S.E., are asked to note that the presentation of the portraits will take place in the Midwifery Class Room, Marischal College, on Tuesday, July 28th, at 3 p.m. (see also page 200 of this week's JOURNAL).

THE JOURNEY TO ABERDEEN.

Special Vouchers.—Railway facilities similar to those offered in previous years will be available this year—that is to say, return tickets, valid from July 22nd to August 3rd, will be issued at a single fare and a third on the presentation of a voucher, which will be supplied, to members who intend to go to Aberdeen, by the Financial Secretary and Business Manager, British Medical Association, 429, Strand, London, W.C., on receipt of the notification form. A separate voucher is required for each passenger.

Tourist Tickets.—The attention of those who intend to travel to Inverness or other places north of Aberdeen is drawn to the tourist ticket arrangements. The advantage of a tourist ticket is that it is available for six months, and the holder has the privilege of breaking the journey at many places *en route*. The tourist ticket from London to Inverness costs £3 3s., third class. In many instances a member travelling from England may find it more advantageous to take a tourist ticket than to make use of the special voucher.

RAILWAY FACILITIES FOR MEMBERS STAYING IN THE NEIGHBOURHOOD OF ABERDEEN.

DURING the meeting reduced fares, with a minimum of 1s., will be granted to places within a radius of fifty miles from Aberdeen. Members who propose travelling to and from Aberdeen daily should use the first half of the ticket on the first journey and the return half on the last journey; the reduced fares for the intermediate journeys will be granted on production, at the time of booking, of the card of membership.

Weekly Season Tickets.

Members staying at Banchory or Cruden Bay can obtain season tickets enabling them to travel to and from Aberdeen daily during the week of the Annual Meeting at the following rates: Cruden Bay, 10s.; Banchory, 8s. 8d. The season tickets will be issued from intermediate stations at proportional rates.

On the Caledonian Railway to Stonehaven and intermediate stations, during the meeting, return tickets will be issued at Aberdeen to places where members wish to reside. These tickets will be available for the day of issue or following day, or from Saturday to Monday, at a single fare and a third for the double journey, minimum 1s. Season tickets are also available for more than one journey, at a charge of not less than the accumulated fares per day as above, the minimum being 1s. a day.

ANNUAL EXHIBITION.

THE annual exhibition of surgical instruments, drugs, foods, etc., held during the annual meetings of the British Medical Association, will be arranged this year in the Marischal College, where also the Sections will meet, where the General and Representative Meetings of the Association will take place, and where the Addresses in Medicine and Surgery will be delivered. The exhibition on this occasion will, therefore, occupy a central and convenient position, and members will have an excellent opportunity of inspecting the exhibits.

GARDEN PARTIES.

IN addition to the garden party to be given by the Provost and Town Council of Aberdeen in Duthie Park on the afternoon of Wednesday, July 29th, garden parties will be given at the Deeside Hydropathic, which has a nine-hole approaching and putting course, and tennis, croquet and bowls; at Inchmarlo House, on the north bank of the Dee about two miles beyond Banchory, which has first-class provision for tennis; at Parkhill House, on the Don, surrounded by fine woods and within easy reach of three small lochs; at Banchory House, on a beautiful sweep of the river Dee about a mile beyond the historic bridge of Dee; and at Nordrach-on-Dee, which has extensive and beautiful grounds.

GOLFING ARRANGEMENTS.

THE competition for the Ulster Cup will be played over the Royal Aberdeen Golf Links, Balgownie, Bridge of Don, on Thursday, July 30th, beginning at 9 a.m. Intending competitors are requested to send their names and addresses along with their club handicap to Dr. H. de M. Alexander, 29, King Street, Aberdeen. The time for starting will be as nearly as possible that selected by the competitor, but late applicants may have to play at any unappropriated time, as the time-sheet must be rigidly adhered to. Other facilities offered by this and other clubs were mentioned in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of July 4th.

EXCURSIONS.

Alterations.

OWING to the difficulty in the guaranteeing of numbers, catering and transport arrangements, certain alterations in the excursions announced in the SUPPLEMENT of July 4th will be made.

The excursions to Grantown and Speyside on Wednesday, July 29th, and Saturday, August 1st, have been cancelled. The ordinary excursion for the public on those days leaves Aberdeen at 1 p.m. and arrives back at Aberdeen at 10.15 p.m. The fare is 2s. 6d., and luncheon can be obtained on the train at 2s. a head for a number limited to 72. Tickets can be obtained at the railway station. Certain alterations are being made in connexion with the excursion to Ballater, Balmoral, and Braemar, of which details will be announced in the *Daily Journal* and in the Reception Room.

The Great North of Scotland Railway will endorse at the Reception Room any tourists' tickets to Inverness, Strathpeffer, Nairn, etc., so that the same may be used for the return journey via Dunkeld.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the Journal.*]*

CAMBRIDGE AND HUNTINGDON BRANCH:

Isle of Ely Division.

The annual general meeting of the Isle of Ely Division was held at March on July 7th. In the absence of Dr. Curl, the Vice-Chairman, Dr. Gunson, presided, and there were nine others present.

Election of Officers.—The following officers were elected for the ensuing year:

Chairman: Dr. C. H. Gunson (Wisbech).
Vice-Chairman: Dr. H. Clapham.
Honorary Secretary: Dr. A. C. S. Waters.
Executive Committee: Drs. Barrett, Beckett, Butterworth, Clapham, Curl, Fegan, Gunson, Harding, Hamilton, Howe, Hendley, Lucas, Mawby, Martin, Stephens, Tylor, Waters.

METROPOLITAN COUNTIES BRANCH:

Wandsworth Division.

A special meeting of the Wandsworth Division was held on July 17th, when Dr. Nobbs presided. After reading the requisition calling the special meeting, the Chairman made a plea for the avoidance of all bitterness in any discussion which might follow.

Dr. Richards then formally moved:

> That the Representatives of the Wandsworth Division are hereby instructed to give notice that they will move at the Representative Meeting that any resolution standing in the records of the Association that service under the National Insurance Acts is derogatory to the profession be rescinded and expunged from the records of the Association.

Dr. Ll. Williams, in seconding, referred to the mischievous effects on the minds of panel practitioners of any resolutions declaring work under the Insurance Acts as derogatory to the profession.

Dr. M. G. Biggs, one of the Representatives, pointed out the difficulties in the way of bringing forward the resolution at the Representative Meeting.

After some further discussion, in which Drs. McMurtry, Knight, Gay, and A. C. Biggs took part, a vote was taken, and 13 voted in favour of the motion and 11 against. The motion was therefore carried.

Another motion before the meeting was:

> That this special meeting of the Division hereby rescinds the resolution passed at the annual meeting of this Division a few days ago by the casting vote of the Chairman that service under the Insurance Acts is derogatory.

It was pointed out that the motion was somewhat out of order, but Dr. Biggs, one of the Representatives, said that as the first motion had been passed he would undertake to vote against the St. Pancras and Islington motion, as this was evidently the mind of the meeting. This was agreed to unanimously. The meeting ended in a happy vein.

NORTH WALES BRANCH.

The annual meeting of this Branch was held at Benllech, Anglesey, on Tuesday, July 14th, at 2.45 p.m. The day being beautifully fine the meeting was held in the open air, on the lawn in front of the Glanrafon Hotel, a picturesque spot overlooking Benllech Bay on the north-east coast of the island. Owing to the unavoidable absence of the President, Dr. Enoch Moss (Wrexham), and the President-elect, Dr. J. D. Lloyd (Chirk), Dr. Evan Williams (Llangefni), the Senior Past President, was voted to the chair; twenty-seven other members were present, together with Dr. George Osborne Hughes of Winnipeg, who was accorded a hearty welcome.

General Business.

Report of Council.—The Honorary Secretary read the annual report of the Branch Council. Whilst congratulating the Branch on, in many respects, a very successful year, the Council regretted to record a decrease in membership. There were 157 non-members within the area of the Branch, a number which it was hoped would be lessened, and every member was asked to do his best to reduce it. Suitable reference was made to the death of two past Presidents, Dr. H. Grey Edwards of Bangor, and Dr. J. Lloyd Roberts of Abergele, who had in addition filled the office of Honorary Secretary for several years. The Council noted with satisfaction the establishment by the Association of a Welsh Committee having the same duties and powers as the Scottish and Irish Committees. North Wales having been deprived of its separate representative on the Central Council, it was recommended that a strong protest be entered, as if the Branch was to succeed, and its strength to be maintained, it was of the utmost importance that it should be in close touch with the central body. On the motion of Dr. R. M. Williams (Menai Bridge), seconded by Dr. Emyr O. Price (Bangor), the report was adopted, and the Honorary Secretary directed to forward the protest against the non-representation of the Branch on the Central Council both to the Welsh Committee and the Organization Committee.

Election of Officers.—Dr. Harry Drinkwater, F.R.S.Edin., of Wrexham, was elected President for 1915–16. Dr. H. Jones Roberts, of Penygroes, was re-elected Honorary Secretary, a special vote of thanks being accorded to him for his services, on the proposal of Dr. Hugh Jones (Dolgelly), seconded by Dr. J. W. Rowlands (Llanaelhaiarn). Dr. E. D. Evans (Wrexham) was elected as representative of the Branch on the Welsh Committee.

Places of Meeting for 1915.—It was decided to hold the intermediate meeting at Bettws-y-Coed and the annual meeting at Colwyn Bay.

Annual Meeting of the Association.—It was decided to invite the Association to hold its annual meeting at Bangor in 1917 or 1918.

Presentation to Dr. Emyr O. Price.

In recognition of his services to the Branch and to the profession in North Wales, particularly in connexion with the National Insurance Act, a Belsize two-seater motor car was presented to Dr. Emyr O. Price (Bangor). An account of the fund, and the ready way in which it was raised, having been given by Dr. J. R. Prytherch (Llangefni) and Dr. J. E. Thomas (Bangor), the secretary and treasurer of the movement, the Chairman formally made the presentation. Drs. Lloyd Williams (Llanberis), J. W. Rowlands (Llanaelhaiarn), Richard Jones (Blaenau Festiniog), R. M. Williams (Menai Bridge), and H. Jones Roberts (Penygroes) afterwards spoke in acknowledgment of the work of Dr. Price, who thanked the speakers and subscribers, adding that the profession had reason to be grateful to the Association, as, whatever its enemies might say, it had achieved much during the last few years for the profession.

Papers.

The following papers were read: Dr. A. Norman Leeming (Old Colwyn), on some fractures treated by Lane's plates and screws, with photographs before and after; Dr. H. Drinkwater (Wrexham), on the longevity of eminent medical men.

Dr. John Elliott (Chester) showed specimens from a case of lymphatic leukaemia, and reported a case of chronic pneumonia treated with pneumococcus vaccine.

Excursion.

Vote of Thanks.—On the proposal of the Honorary Secretary, seconded by Dr. Robert Parry (Carnarvon), a hearty vote of thanks was accorded to the Chairman, to Lord Boston for his invitation to visit Llugwy, and to the readers of the papers.

Luncheon and Tea.—Prior to the meeting the members lunched together at the Glanrafon Hotel, and at the close Dr. Emyr O. Price entertained them to tea.

Excursion to Llugwy.—After the meeting several of the members drove to Llugwy, at the invitation of Lord Boston, to view the old British encampment, which has a further inner enclosure either of Roman origin or showing Roman influence. The party was conducted by Mr. S. J. Evans, M.A., head master of the Llangefni County School.

SUSSEX BRANCH.

The first annual meeting of the Sussex Branch was held at Worthing on June 26th, when forty-one members were present.

Luncheon.—Lunch was very kindly provided by the President, Dr. W. AYTON GOSTLING, at his own house, when the health of Dr. Ainslie Hollis, President of the Association (who made a special effort to be present at the meeting), was drunk with full honours. After lunch the members adjourned to the Town Hall for business.

Election of Officers.—All the officers appointed at the inaugural meeting held last November were installed, with the exception of the Honorary Secretary, Dr. Rawdon Wood, who had recently left the district. Dr. F. H. Allfrey was elected in his place. The officers are:

President: Dr. W. Ayton Gostling.
Vice-Presidents: Dr. Ewart and Dr. Hobhouse.
Honorary Secretary and Treasurer: Dr. Allfrey.
Representatives on Branch Council: Drs. Benham, Fothergill, Burchell, Rawdon Wood, Morris, Gostling, Ewart, Muir-Smith, Culhane, Locke, and Boxall.
Auditors: Drs. Milbank-Smith and Bailey.

Annual Report.—The annual report was read and accepted. It showed that the Branch as organized on November 14th, 1913, consisted of 472 members, but that the list now only included 400. No expenses were incurred during 1913, and a sum of £38 1s. 4d. was received as the proportionate share of the credit balance on the dissolution of the South-Eastern Branch.

Treatment of School Children.—After some discussion it was, on the motion of Dr. BURCHELL, seconded by Dr. PARRY, resolved:

> That in the opinion of the Branch children attending elementary schools found to be suffering with the scheduled diseases should not be referred by the school medical officer to the voluntary hospitals or medical charities for treatment, and that such hospitals and medical charities be approached through the secretaries of the several Divisions with a view to their adoption of by-laws, rules, or regulations to prevent the use of the several institutions by the Education Authorities to relieve them of their statutory duties, and that a copy of this resolution be sent to each secretary of Division.

Cinematograph Demonstration.—After the meeting a cinematograph demonstration was provided by the Worthing Division, the subjects including the effect of "606" on the *Spirochaeta pallida*, the movements of the isolated heart and of the blood vessels, the life-history of the mosquito, etc.

Garden Party.—The Branch again enjoyed the hospitality of the President at a garden party at his house, where a most excellent musical programme was carried out.

Vote of Thanks.—Votes of thanks were accorded to Dr. Ayton Gostling for his hospitality, and to Dr. Morton Palmer for discharging temporarily the duties of honorary secretary.

SOUTH WALES AND MONMOUTHSHIRE BRANCH:

SOUTH-WEST WALES DIVISION.

THE annual meeting of the Division was held at the Ivy Bush Hotel, Carmarthen, on July 14th.

Election of Officers.—The following officers were elected for the ensuing year:

Chairman: Dr. David Phillips (Llandilo).
Vice-Chairman: Dr. Samuel Williams (Llanelly).
Secretary and Treasurer: Dr. D. R. Price (Ammanford) (re-elected).
Members of Branch Council: Drs. Evan Jones (Llanybyther), H. H. Roberts (Llanelly) and Y. H. Mills (Haverfordwest).
Members of Contract Practice Committee: Drs. J. Edgar P. Davies (Llanelly), Tom Morgan (Llandovery), and Owen Williams (Burry Port).
Members of the Executive Committee: Drs. Evan Evans (Llanelly), John Davies (Aberayron), Edgar Davies (Llanelly), Richard Hopkin (Llangadock), Evan Evans (Lampeter), T. J. Jenkins (Henllan), D. G. Lloyd (Newcastle-Emlyn), C. D. Mathias (Tenby), T. Morgan (Llandovery), E. R. Williams (Carmarthen), C. A. Brigstocke (Haverfordwest), D. Lewis Williams (Ferry Side), and Owen Williams (Burry Port).

Vote of Thanks.—On taking the chair Dr. PHILLIPS proposed a hearty vote of thanks to Dr. C. A. Brigstocke for the able manner in which he had carried out the duties of the chair during the past year. This was carried with applause.

Annual Representative Meeting.—The Representative for the Aberdeen meeting, Dr. Richard Hopkin, was instructed as to various matters that would be brought before the Representatives.

Association Notices.

Special Representative Meeting, Aberdeen.

ON the requisition of the Council, notice is hereby given under Article 31 and By-laws 36 and 73, that a Special Representative Meeting of the Association will be held on Monday, July 27th, 1914, at 12 noon, at the Marischal College, Aberdeen, for the purpose of considering the following Report and Recommendation of Council (paragraphs 211 and 212 of Supplementary Report of Council, 1913–14), and, if considered advisable, amending By-law 67 accordingly:

SCOTTISH COMMITTEE.

211. The work of the Scottish Committee is growing, and it is found increasingly difficult for the Chairman to be able to attend all the Committee meetings in Scotland and Council and Committees in London as well. The Committee consequently desires to be able to elect a Deputy Chairman as well as Chairman. By-law 67 provides that each Standing Committee shall appoint from its own number a member of Council as Chairman, in order that the Council may be able to keep in touch with each Committee. The Scottish Committee wishes to be an exception to this By-law and to be able to have a Chairman not necessarily a member of Council, but that effective co-ordination shall be maintained by insisting that one of its three officers—Chairman, Deputy Chairman, or Honorary Secretary—shall be on the Council. As the Scottish members desire the change as early as possible, the Council has arranged that a special session of the Representative Body shall be held at Aberdeen on Monday, July 27th, 1914, at 12 noon, for the purpose (only one month's notice of such an alteration of By-laws being required in the case of a Special Representative Meeting).

212. The Council recommends:

> RECOMMENDATION GG. — That the Special Representative Meeting, Aberdeen, amend existing By-law 67 of the Association, which reads as follows:
>
> 67. Each Standing Committee shall appoint from its own number a Member of Council as Chairman,

to read as follows:

> 67. Each Standing Committee except the Scottish Committee shall appoint from its own number a Member of Council as Chairman. The Scottish Committee shall appoint from its own number a Deputy Chairman, as well as a Chairman, and either the Chairman or the Deputy Chairman or the Honorary Secretary of that Committee shall be appointed from amongst members of Council.

T. JENNER VERRALL,
Chairman of Representative Meetings.

June 24th, 1914.

ELECTION OF MEMBERS OF COUNCIL BY GROUPED REPRESENTATIVES.

NOTICE is hereby given that Nominations for Candidates for election of Members of Council by grouped Representatives for the year 1914–15 will be received by the Medical Secretary up to the end of the first hour of the proceedings of the Annual Representative Meeting on Friday, July 24th, 1914. Each Nomination must be on the prescribed form, copies of which will be forwarded by the Medical Secretary on application.

Separate forms have been prepared: (I) For Nomination by a Division (through its Representative), and (II) for Nomination by a Representative of a Constituency included in the Group, and those applying are requested to state for which purpose the form is desired.

The voting papers will be issued at the Representative Meeting to each Representative or Deputy Representative of a Constituency in the United Kingdom in attendance at the Meeting.

By order of the Council,
ALFRED COX,
Medical Secretary.

June 24th, 1914.

CHANGES OF BOUNDARIES.

THE following changes have been made in accordance with the Articles and By-laws of the Association, and take effect as from the date of publication of this notice.

1. AMALGAMATION OF THE MANCHESTER DIVISIONS.

That the areas of the Manchester (Central), Manchester (North), Manchester (South), and Manchester (West) Divisons be amalgamated to form one Division, to be known as the Manchester Division.

Representation in Representative Body.—On the existing membership figures the new Manchester Division would be entitled to return three Representatives for 1915–16.

2. NEW SEVENOAKS DIVISION.

That a new Division, to be known as the Sevenoaks Division, be formed, of area as follows:

The urban and rural districts of Sevenoaks and the civil parishes of Stanstead, Shipbourne, and Ightham; the new Division to form part of the Kent Branch, and the areas of the Maidstone and Tunbridge Wells Divisions to be modified accordingly.

Representation in Representative Body.—For the year 1914–15 the area of the new Division is represented with the Maidstone and Tunbridge Wells Divisions respectively. The question of its representation for 1915–16 will be determined by the Council in due course.

SUGGESTED CHANGES OF BOUNDARIES.

PROPOSED DISCONTINUANCE OF EAST ANGLIAN BRANCH AND FORMATION OF ESSEX, NORFOLK AND SUFFOLK BRANCHES.

NOTICE is hereby given under Article 13 and By-law 73 to all concerned of a proposal made by the East Anglian Branch that that Branch be discontinued, and that new Branches as follows be substituted therefor:

1. ESSEX BRANCH.—*Area:* The county of Essex, such portion thereof as at present lies within the area of the East Anglian Branch, or such other portion of the county as may hereafter be arranged;
2. NORFOLK BRANCH.—*Area:* Norfolk;
3. SUFFOLK BRANCH.—*Area:* Suffolk;

the Divisions of the new Branches to be those included at present in the respective counties, subject as above in the case of Essex.

Written notice of the proposal has been given under Article 13 to the Divisions of the East Anglian Branch, to the Metropolitan Counties Branch and to the Essex Divisions of that Branch, and the matter will be determined in due course by or on behalf of the Council. Any member affected by the proposed change and objecting thereto is requested to notify the fact, and his or her reason therefor, to the Medical Secretary, 429, Strand, W.C., not later than September 5th, 1914.

IRISH MEDICAL COMMITTEE.

ANNUAL MEETING.

THE annual meeting of the Irish Medical Committee was held in the Royal College of Surgeons, Dublin, on July 14th. In the absence of Dr. P. J. McNamara, Chairman, Dr. R. J. JOHNSTONE, Vice-Chairman, occupied the chair, and the following members of the Committee attended: Drs. J. S. Darling, T. Hennessy, D. Forde, S. F. Gawn, P. J. O'Brien, J. J. O'Connor, J. Giusani, J. M. S. Kenny, W. M. Murphy, R. M. Blake, W. A. Moreton, K. F. Lynn, J. F. Fagan, W. J. O'Sullivan, W. F. Delaney, P. McKenna, W. Doolin, B. C. Powell. Dr. M. R. J. Hayes, Medical Secretary, and Mr. C. H. Gick, Assistant Secretary, were also in attendance. Apologies for inability to attend were received from Drs. J. Power, R. J. Rowlette, T. A. Davidson, J. Wolpherts, A. McBride, H. T. Warnock, J. J. Waters, P. J. McNamara, R. W. Leslie, J. J. O'Sullivan, P. J. Hamilton, E. W. Allson, E. C. Thompson.

Election of Officers for 1914–15.—The following officers were elected:

Chairman: Dr. P. J. McNamara.
Vice-Chairman: Mr. R. J. Johnstone.
Honorary Treasurer: Dr. P. J. McNamara.
Medical Secretary: Dr. T. Hennessy.
Assistant Secretary: Mr. C. H. Gick.

Subcommittees.

Finance and Executive: Drs. M. R. J. Hayes, R. J. Rowlette, R. M. Blake, J. Power, W. Doolin, A. A. McConnell, J. S. Darling, P. J. O'Brien, W. J. O'Sullivan.

Sanatorium: Drs. T. J. Kelly, R. J. Rowlette, J. J. O'Sullivan, J. Power, M. R. J. Hayes, S. Agnew, P. J. Hamilton, T. A. Davidson, R. P. McDonnell, J. J. Giusani, L. Kidd, D. Forde.

Poor Law: Drs. G. E. Greene, O. P. Kerrigan, W. W. Murphy, T. J. Kelly, C. H. Foley, W. J. Burns, T. T. Collins, T. Donnelly, A. C. Callaghan, J. J. O'Connor, G. A. Hickey, J. M. S. Kenny, J. F. Fagan, P. Donnellan.

Hospital: Drs. Rowlette, Kinkead, Hickey, E. C. Thompson, Allsom, Darling, Warnock, R. C. Peacocke, S. Pringle, W. A. Fogarty, Cotter, L. Kidd, G. Mackesy, L. A. Byrne, Sir John Lentaigne, Sir John Byers, Sir Alexander Dempsey, Sir Andrew Horne, Surgeon McArdle.

Dr. Thomas Hennessy, Medical Secretary, is *ex-officio* member of the above subcommittees.

Medical Secretary.—Dr. M. R. J. Hayes was requested to act as Honorary Medical Secretary until August 1st, when Dr. Hennessy would assume his duties as Medical Secretary to the Irish Medical Committee. A very cordial vote of thanks was unanimously passed to Dr. Hayes for his invaluable services to the Irish Medical Committee as Medical Secretary.

Vote of Condolence.—The Medical Secretary was requested to convey to Mrs. Porter Newell the sympathy of the meeting on the death of her husband, Dr. F. T. Porter Newell, who had been a valued member of the committee.

Finance.—A report dealing with the financial position of the Irish Medical Committee was read and approved.

Insurance Act.—Dr. O'BRIEN (Cork) stated that the County Cork Local Medical Committee had nominated Dr. O'Leary and Dr. Barry as representatives on the Local Insurance Committee, but he was informed that the Irish Insurance Commissioners had ignored the nomination of Dr. O'Leary. The Insurance Commissioners refused the nomination of Dr. O'Leary contrary to the undertaking given in their letter of March 7th, 1913, in which they stated "that in case of all future appointments of medical representatives on Insurance Committees the Commission will select representatives only from the nominees of the Local Medical Committees recognized under the Act." The County Cork Local Medical Committee is recognized under the Act, but it is understood the Commissioners have appointed on their own account a "medical adviser" who is not the nominee of the County Cork doctors or their Local Medical Committee.

Short Payments.—Dr. Davison (Ballymena) wrote in reference to short payments made to panel doctors for medical certification. The Medical Secretary was directed to inform Dr. Davison that each doctor concerned should take legal proceedings to recover the amount due, but that the Irish Medical Committee had no fund at its disposal which would enable it to undertake the expense of such legal proceedings.

Circular Letter.—A circular letter of June 25th last from the Secretaries of the Irish Medical Committee to the Medical Secretary of each panel area was unanimously approved of by the Committee.

WELSH COMMITTEE.

A MEETING of the Welsh Committee appointed by the Council on October 31st, 1913, was held at the Raven Hotel, Shrewsbury, on Thursday, July 16th, when there were present: Mr. W. F. BROOK (Swansea) (in the chair), Dr. W. Bickerton Edwards (Seven Sisters), Mr. E. D. Evans (Wrexham), Mr. D. R. Price (Ammanford), and Mr. James Neal (Deputy Medical Secretary, British Medical Association). Apologies for absence were received from Mr. J. E. H. Davies (Wrexham), Dr. A. Martin (Cardiff), Mr. C. E. Morris (Holywell), and Dr. W. B. Crawford Treasure (Cardiff).

Mr. W. F. Brook was appointed Chairman of the Committee, and Dr. W. Bickerton Edwards Honorary Secretary. In view of the fact that no further meeting of the Committee would be held this session, it was decided not to co-opt an additional member to represent Radnor and Montgomery.

The recommendation to be submitted by the Council to the Annual Representative Meeting respecting the future constitution of the Welsh Committee as a Standing Committee of the Association was carefully considered and approved.

The Committee also considered the future work to be undertaken by the Welsh Committee, and more especially the urgent need for the appointment of a medical organizer, who could personally visit any area in which difficulties arose. It was felt that the most pressing question requiring attention was the continued growth of "schemes" established under Section 15 (3) of the National Insurance Act, and that successful opposition to these schemes depended upon the Committee being able to send an organizer promptly to any area where a dispute became acute. Until the Council was prepared to appoint a whole-time Medical Secretary for Wales, the Committee determined that an effort must be made to obtain the services of a practitioner with sufficient leisure to visit personally any area affected; this would require funds, and it was decided to make certain recommendations on this matter to the Council.

It is proposed that quarterly meetings of the Welsh Committee should be held at Shrewsbury, and that an Executive Subcommittee shall be appointed to carry out the work in the interval, to meet when and where required.

SHIP SURGEONS SUBCOMMITTEE.

THE following practitioners have consented to act as "Correspondents" of the Ship Surgeons Subcommittee, and are prepared to discuss with any ship surgeon in their area any matter of interest either to that surgeon or to ship surgeons in general, and to forward representations to the Subcommittee in regard to any question in connexion with which central action seems desirable:

Correspondent.	*Port.*
Dr. J. Godding, 56, Leadenhall Street, London, E.C.	London.
Dr. A. G. Hinks, 40, St. Vincent Row, Southend-on Sea	London.
Dr. H. T. Bates, Church Road, Wavertree, Liverpool	Liverpool.
Dr. C. Carlyle, 13, Menlove Avenue, Mossley Hill, Liverpool	Liverpool.
Dr. C. J. Cooke, 1, Sussex Terrace, Plymouth	Plymouth.
Dr. J. C. H. Beaumont, Chinsura, Khartoum Hill Road, Southampton	Southampton.
Dr. O. V. Currie, Union Castle Buildings, 58, Adderley Street, Capetown	Capetown.

Ship surgeons visiting these ports and desiring to discuss matters of interest to the service are invited to place themselves in communication with the correspondent for the port.

The Medical Secretary, 429, Strand, London, W.C., will be glad to hear from practitioners in passenger ports not mentioned above who are willing to act as correspondents to the Subcommittee.

Ship surgeons are also asked to forward for the guidance of the Subcommittee, either to one of the above correspondents or to the Medical Secretary, British Medical Association, 429, Strand, London, W.C., their views upon the following questions:

(1) Whether ship surgeons should receive full sea pay while in port *plus* a subsistence allowance at the same rate granted to the chief officer, with a possible liability to have to report every day at the office of the company, or whether they would prefer to receive full sea pay only in port without such liability; subsistence pay, however, to be paid upon those days in port when any duty connected with the ship is performed.

(2) Their views generally on the question of annual leave being granted with full pay to permanent ship surgeons.

THE LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

THE following volumes were added to the Library during January–March, 1914:

Presented by the Authors.

Seton, Major B. C.: The Indian Medical Service. 1912
Taylor, Gerard C.: The Statistical Ready Reckoner. 1913

Presented by Dr. Branthwaite.

Report of the Inspector under the Inebriates Act for 1912.

Presented by George Bethell, Esq. (Medical Society of London).

General Index to the Journal of Mental Science, vols. xxxix to liv.

Presented by Dr. Hearsey.

Nyasaland Protectorate Sleeping Sickness Diary, xxii. 1914

Presented by Dr. Jepson, Worthing.

Elder: Ship Surgeon's Handbook, second edition. 1911

Presented by the Medical Officer, Local Government Board.

Drs. Eastwood and Griffith: Tuberculosis Infection. 1914
Drs. Eastwood and Griffith: Localized Tuberculosis in Swine. 1914
Dr. Farrar: On Enteric at Ashington. 1913
Dr. Seymour: On Lead Poisoning at Guisborough. 1913
Statistics on Notifiable Infectious Disease. 1914

Presented by the Pharmaceutical Society of Great Britain.

The British Pharmaceutical Codex, new edition. 1911

Presented by Dr. Winckworth, Taunton.

Halford, Sir H.: Essays and Orations. 1831
Lawrence, W.: Lectures on Comparative Anatomy. 1838
Regan: Medico-Chirurgical Pharmacopoeia. 1838
Scott: Commentaries on the use of Lavements. 1824
Trousseau and Reveil: Prescribers' Handbook. 1852

Presented to the Library through the "British Medical Journal."

GENERAL MEDICAL COUNCIL.

MEETING OF THE EXECUTIVE COMMITTEE.

A MEETING of the Executive Committee of the General Medical Council was held on July 13th, Sir Donald MacAlister, President, in the chair.

INSPECTION OF QUALIFYING EXAMINATIONS.

The committee considered the resolution adopted by the General Council on June 1st, instructing it to make arrangements for the inspection of qualifying examinations to begin in 1915. The standing orders direct that three inspectors, for medicine, surgery, and midwifery respectively, must be appointed, for definite periods, at a remuneration of five guineas a day, together with an allowance for actual travelling expenses. The committee authorized the Registrar to obtain from the licensing bodies the dates of their qualifying examination to be held during the year 1915.

INSPECTION OF PUBLIC HEALTH EXAMINATIONS.

In accordance with the resolution of the General Council on June 1st, the committee resolved to recommend as follows:

(*a*) That an inspection of all the examinations for diplomas in public health should be commenced in 1915. Those bodies whose examinations in public health have been instituted since the last inspection should be first inspected.

(*b*) That one inspector should be appointed for all the examinations, and should be remunerated on the same scale as the inspectors of the final examinations. Where practicable a member of the Council should accompany the inspector as visitor.

"BRITISH PHARMACOPOEIA."

The committee resolved, as stated last week, that the new *British Pharmacopoeia* should be published on Friday, October 9th, and suggested that the price should be 10s. 6d. net. The committee placed on record its high appreciation of the skilful and assiduous work of Dr. Tirard and Professor Greenish, the editors.

HIGHLANDS AND ISLANDS BOARD.

The committee considered the draft scheme submitted by the Highlands and Islands (Medical Service) Board for the constitution of committees for the administration of grants, and directed the Board to be informed that it took no exception to the provisions of the draft scheme.

MADRAS MEDICAL REGISTRATION BILL.

The committee had before it the Medical Registration Bill for the Madras Presidency, which received the assent of the Governor-General on April 27th, 1914. The committee expressed its regret that the Act did not contain any provision for the prevention of practice by unqualified persons in the Presidency of Madras, and the hope that it would soon be practicable to require that those who undertook to practise any branch of medicine in the Presidency should be fully qualified for that responsible duty.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following notifications are announced by the Admiralty: Fleet Surgeon RAMSAY M. RICHARDS to the *President*, additional, for recruiting head quarters, temporary, undated. Staff Surgeon WILLIAM N. BLACKFORD to the *Pembroke*, additional, for disposal, July 25th. Staff Surgeon ERNEST F. ELLIS to the *Assistance*, vice Richards, July 28th. Surgeon GEORGE N. LEVICK promoted to the rank of Staff Surgeon with seniority, November 21st, 1910. Surgeon FRANK H. STEPHENS to the *Victory*, additional, for disposal. Surgeon ALBERT V. J. RICHARDSON, M.B., to the *Attentive*, vice Cox, July 25th. Surgeon JOHN H. BURDETT to the *Bulwark*, July 25th. Surgeon WILLIAM MEARNS, M.B., to the *Pembroke*, additional, for disposal, undated. Surgeon ARCHIBALD L. ROBINSON, M.B., to the *Pembroke*, additional, for disposal, undated.

ARMY MEDICAL SERVICE.

SURGEON-GENERAL R. W. FORD, D.S.O., has been appointed Deputy Director-General of Medical Services, Northern Command, vice Surgeon-General W. W. Kenny, K.H.I.

Lieutenant-Colonel J. S. DAVIDSON has been granted six months' leave.

Major F. A. STEPHENS has been appointed to the Central London Recruiting Dépôt.

Captain S. G. WALKER has been granted four months' leave.

Lieutenant BASIL H. H. SPENCE, M.B., is seconded for service with the Egyptian Army, June 30th.

Lieutenant PIERCE M. J. BRETT, M.B., is seconded for service with the Egyptian Army, July 1st.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT EBEN S. B. HAMILTON, M.D., to be Captain, June 29th.

Lieutenant WILLIAM CRYMBLE to be Captain, July 15th.

Lieutenants ALEXANDER J. GIBSON, M.B., and THOMAS W. WYLIE, M.B., are confirmed in their rank.

Cadet Corporal GEORGE PERRINS from the Oxford University Contingent, Officers' Training Corps, to be Lieutenant on probation, May 20th.

INDIAN MEDICAL SERVICE.

LIEUTENANT-COLONEL J. FISHER, D.S.O., an Agency Surgeon of the second class is granted privilege leave for one month, with effect from June 1st, 1914.

Lieutenant-Colonel J. G. HULBERT, M.B., has been permitted to retire from the service, with effect from May 12th, 1914.

The services of Captain A. A. C. MCNEILL, M.B., have been placed at the disposal of the Government of India, Home Department, for civil employ.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Second South-Western Mounted Brigade Field Ambulance.—The order as to precedence of the undermentioned Captains, whose appointments were announced in the *London Gazette* of May 15th, is to be as now shown: JOHN M. DUPONT, M.D., HENRY NORMAN BARNETT, F.R.C.S.E.

East Anglian Clearing Hospital.—WILLIAM REDFATH, M.B., to be Lieutenant, July 18th.

Wessex Clearing Hospital.—ALFRED J. H. ILES to be Lieutenant, June 9th.

Third South Midland Field Ambulance.—HENRY J. D. SMYTHE to be Lieutenant, June 18th.

Attached to Units other than Medical Units.—Lieutenant ROBERT HENRY to be Captain, July 9th, 1914. Lieutenant-Colonel and Honorary Surgeon-Colonel DAVID LENNOX, M.D., resigns his commission, and is granted permission to retain his rank and to wear the prescribed uniform, July 22nd, 1914. Captain THOMAS HARPER, M.B., resigns his commission, and is granted permission to retain his rank and to wear the prescribed uniform, July 22nd, 1914. Captain GEORGE B. GILL, M.B., resigns his commission, July 22nd, 1914.

Vital Statistics.

VITAL STATISTICS OF LONDON DURING THE SECOND QUARTER OF 1914.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

In the accompanying table will be found summarized the vital statistics of the metropolitan boroughs and of the City of London, based upon the Registrar-General's returns for the second quarter of the year. The mortality figures in the table relate to the deaths of persons actually belonging to the several boroughs, and are obtained by distributing the deaths in institutions among the boroughs in which the deceased persons had previously resided. The 28,378 births registered during the quarter under notice were equal to an annual rate of 25.2 per 1,000 of the population, estimated at 4,516,612 persons in the middle of the year; in the corresponding quarters of the three preceding years the birth-rates were 25.2, 24.7, and 25.2 per 1,000 respectively. The lowest birth-rates last quarter were 12.1 in the City of Westminster, 14.6 in Holborn, 14.7 in Hampstead, 18.6 in Kensington, and 19.5 in Lewisham; among the highest rates were 30.4 in Bethnal Green, 30.9 in Bermondsey and in Stepney, 31.1 in Poplar, 31.4 in Shoreditch, and 39.2 in Finsbury.

During the last quarter the deaths of 14,711 London residents were registered, equal to an annual rate of 13.1 per 1,000; in the corresponding quarters of the three preceding years the rates were 13.2, 12.4, and 13.3 per 1,000 respectively. The death-rates last quarter ranged from 9.6 in Wandsworth, 10.0 in Lewisham, 10.6 in Hampstead, 11.5 in Paddington, and 11.8 in Fulham and in the City of Westminster to 15.7 in Stepney, 15.8 in Holborn, 16.0 in Southwark, 16.9 in Shoreditch, 17.1 in Bermondsey, and 18.8 in Finsbury.

The 14,711 deaths from all causes included 32 from enteric fever, 346 from measles, 69 from scarlet fever, 310 from whooping-cough, 143 from diphtheria, and 230 from diarrhoea and enteritis among children under 2 years of age. Enteric fever was proportionately most fatal in Fulham, St. Marylebone, Holborn, Lambeth, and Deptford; measles in Finsbury, Shoreditch, Stepney, Bermondsey, and Greenwich; scarlet fever in Fulham, Finsbury, the City of London, Southwark, Deptford, and Woolwich; whooping-cough in Finsbury, the City of London, Shoreditch, Bethnal Green, and Stepney; and diphtheria in Hackney, Stepney, Poplar, Deptford, and Woolwich. The mortality from diarrhoea and enteritis among children under 2 years of age in proportion to the births registered during the quarter was greatest in Islington, Stoke Newington, Hackney, Shoreditch, Bethnal Green, Poplar, and Bermondsey.

The deaths from phthisis among London residents last quarter numbered 1,445, and were equal to a rate of 1.28 per 1,000, against 1.21 and 1.27 per 1,000 in the corresponding quarters of the two preceding years. The death-rates from this disease last quarter ranged from 0.47 in the City of London, 0.55 in Hampstead, 0.63 in Lewisham, 0.79 in Wandsworth, and 0.96 in Paddington and in Kensington to 1.57 in Chelsea and in St. Pancras, 1.69 in Shoreditch, 1.78 in Poplar, 1.84 in Bermondsey, 2.10 in Holborn, and 2.22 in Finsbury.

Infant mortality, measured by the proportion of deaths under 1 year of age to registered births, was equal to 79 per 1,000 last quarter, against 89, 82, and 81 in the corresponding quarters of the three preceding years. Among the lowest rates recorded last quarter were 35 in Chelsea, 54 in the City of London, 55 in Lambeth, 63 in Paddington and in Lewisham, and 66 in Deptford; the highest rates were 100 in Stepney, 101 in Southwark, 104 in Bermondsey, 109 in Shoreditch, and 110 in Bethnal Green.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 8,744 births and 4,018 deaths were registered during the week ended Saturday, July 18th. The annual rate of mortality in these towns, which had been 12.1, 12.7, and 11.5 per 1,000 in the three preceding weeks, rose to 11.6 per 1,000 in the week under notice. In London the death-rate was equal to 11.8, against 12.1, 13.3, and 10.6 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 3.7 in Ealing, 4.6 in Walthamstow, 4.9 in Devonport, 5.2 in Ilford, 5.6 in Easthourne, and 5.9 in Wakefield to 15.8 in Stockton-on-Tees, 16.9 in South Shields, 17.2 in Preston, 17.7 in Middlesbrough, 20.1 in Blackpool, and 23.5 in Bootle. Measles caused a death-rate of 1.4 in Liverpool and in Bootle, and 1.7 in Newport (Mon.). The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 44, or 1.1 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 12 were recorded in Birmingham, 8 in Liverpool, 3 in Gloucester, and 2 each in Bootle, Warrington, Preston, Hull, and Tynemouth. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,088, 3,092, and 3,109 at the end of the three preceding weeks, had further risen to 3,126 on Saturday last; 430 new cases were admitted during the week, against 440, 442, and 414 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,216 births and 559 deaths were registered during the week ended Saturday, July 18th. The annual rate of mortality in these towns, which had been 13.8, 14.1, and 13.6 per 1,000 in the three preceding weeks, further fell to 12.7 in the week under notice, but was 1.1 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 10.3 in Kilmarnock, 10.9 in Dundee and in Paisley, and 11.2 in Edinburgh to 17.0 in Coatbridge, 18.4 in Perth, and 18.9 in Hamilton. The mortality from the principal infective diseases averaged 1.3 per 1,000, and was highest in Falkirk and Hamilton. The 256 deaths from all causes in Glasgow included 11 from whooping-cough, 11 from infantile diarrhoeal diseases, 2 from measles, 2 from diphtheria, 1 from enteric fever, and 1 from scarlet fever. Five deaths from measles were recorded in Dundee and 2 in Hamilton; and from whooping-cough, 2 deaths in Falkirk.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, July 18th, 574 births and 371 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 671 births and 368 deaths in the preceding period. These deaths represent a mortality of 16.1 per 1,000 of the aggregate population in the districts in question, as against 15.9 per 1,000 in the previous period. The mortality in these Irish areas was therefore 4.5 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 24.8 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 17.2 (as against an average of 16.0 for the previous four weeks), in Dublin city 19.0 (as against 17.3), in Belfast 13.5 (as against 16.2), in Cork 14.3 (as against 15.8), in Londonderry 22.8 (as against 18.4), in Limerick 19.0 (as against 15.9), and in Waterford 24.7 (as against 16.1). The zymotic death-rate was 1.9 as against 1.6 in the previous week.

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Death occurring in Public Institutions during the Second Quarter of 1914.

PORTSMOUTH: ROYAL PORTSMOUTH HOSPITAL.—House-Surgeon (male). Salary at the rate of £90 per annum.

PUTNEY HOSPITAL, Putney Common, S.W.—Resident Medical Officer. Salary, £100 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeon. Salary at the rate of £80 per annum.

READING EDUCATION COMMITTEE.—Assistant School Medical Officer. Salary, £300 per annum.

ROCHDALE INFIRMARY AND DISPENSARY.—Senior House-Surgeon (male). Salary, £120 per annum.

ROCHDALE UNION WORKHOUSE.—Temporary Resident Medical Officer. Salary, £6 6s. per week.

ROYAL DENTAL HOSPITAL, Leicester Square, W.C.—Two House-Anæsthetists.

ROYAL EYE HOSPITAL, Southwark, S.E.—Junior House-Surgeon. Salary, £50 per annum.

ST. MARY'S HOSPITAL MEDICAL SCHOOL, Paddington, W.—Demonstrator of Physiology. Salary, £150 per annum.

ST. MARY'S HOSPITAL, Paddington, W.—Resident Assistant Anæsthetist. Salary at the rate of £100 per annum.

SALFORD ROYAL HOSPITAL.—(1) Junior House-Surgeon. (2) Casualty House-Surgeon. Salary, £100 per annum each.

SALFORD UNION INFIRMARY.—Male Resident Assistant Medical Officer. Salary, £150 per annum.

SCARBOROUGH HOSPITAL AND DISPENSARY.—Senior and Junior House-Surgeons. Salary, £100 and £30 per annum respectively.

SHEFFIELD: CHILDREN'S HOSPITAL.—House-Surgeon for the East End Branch. Salary, £120 per annum.

SHEFFIELD: CITY HOSPITALS FOR INFECTIOUS DISEASES AND TUBERCULOSIS.—Assistant Medical Officer. Salary, £150 per annum.

SHREWSBURY: COUNTY ASYLUM.—Second Assistant Medical Officer (male). Salary, £230 per annum, rising to £250.

SOUTH AFRICA UNION.—Medical Inspector of Schools throughout Natal. Salary, £700 per annum, increasing to £800.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

SOUTHWARK UNION INFIRMARY.—Third Assistant Medical Officer. Salary at the rate of £160 per annum, rising to £170.

STAFFORD: STAFFORDSHIRE GENERAL INFIRMARY.—House-Physician. Salary, £100 per annum.

STATE CRIMINAL LUNATIC ASYLUM, Retford.—Assistant Medical Officer (male). Salary, £225 per annum, increasing to £350.

STOKE-UPON-TRENT UNION.—Assistant Resident Medical Officer for the Workhouse and Hospital. Salary, £160 per annum.

SWANSEA GENERAL AND EYE HOSPITAL.—(1) House-Physician. (2) House-Surgeon. Salary, £125 per annum each.

TRURO: ROYAL CORNWALL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

WAKEFIELD: WEST RIDING COUNTY COUNCIL.—School Medical Inspector. Salary, £325 per annum, rising to £400.

WALSALL AND DISTRICT HOSPITAL.—Junior House-Surgeon. Salary, £110 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL.—Assistant Resident House-Surgeon and Anaesthetist. Salary, £100 per annum.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.—(1) Resident Medical Officer. (2) Senior House-Surgeon. (3) Senior House-Physician. (4) Junior House-Surgeon. (5) Junior House-Physician. Salary for (1), £160; for (2) and (3), £120; and for (4) and (5), £100 per annum.

WEST LONDON HOSPITAL, Hammersmith Road, W.—Resident Casualty Officer and Anaesthetist. Salary at the rate of £40 per annum.

WEST RIDING: STORTHES HALL ASYLUM, Kirkburton.—Assistant Medical Officer. Salary, £230 per annum, rising to £270.

WESTON-SUPER-MARE HOSPITAL.—House-Surgeon. Salary, £120 per annum.

WINCHESTER: ROYAL HAMPSHIRE COUNTY HOSPITAL.—House-Physician (male). Salary, £80 per annum.

WOOLWICH INFIRMARY.—Assistant Medical Officer at the Infirmary, Plumstead. Salary, £180 per annum, rising to £200.

YORK COUNTY HOSPITAL.—House-Physician. Salary at the rate of £100 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Ashton-under-Lyne (Lancaster), Uppingham (Rutland).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BAINBRIDGE, William, M.B., Ch.B.Edin., Assistant Ophthalmic Surgeon to the Hull Royal Infirmary, vice D. Matheson Mackay, M.D.Edin., appointed Honorary Ophthalmic Surgeon.

BRIDE, T. Milnes, M.D., Honorary Surgeon to the Manchester Royal Eye Hospital.

BROWNLEE, Alex., F.R.C.S.E., Resident Medical Officer of the Glan Ely Hospital for Consumptives.

CAMERON, A. F., M.D.Edin., Medical Superintendent of the Hospital Service of the Metropolitan Asylums Board.

CHETWOOD, Thomas, M.B.Lond., D.P.H.Oxford, School Medical Officer and Deputy Medical Officer of Health for the City of Sheffield, vice Dr. Ralph Williams.

CLARK, R. L., M.B., C.M.Edin., Medical Officer of the Flimby Lodge Schools of the Cockermouth Union.

CRAIG, F. W., M.B., Ch.B.Edin., Medical Superintendent of Health and Tuberculosis Officer for Londonderry.

CREGAN, G. T., M.B., Assistant Medical Officer to the South Infirmary, etc., of the Parish of St. Pancras.

CUSCADEN, G. S., M.R.C.S., Surgeon to In-patients at the Women's Hospital, Melbourne.

CUTHBERTSON, J. O., M.B., Ch.B.Oxon., District Medical Officer of the Droitwich Union.

DAVIES, A. V., M.B., District Medical Officer of the Oldham Union.

DICKSON, W. E. Carnegie, M.D., F.R.C.P.Edin., Director of the Pathological Department of the Royal Hospital for Diseases of the Chest, City Road, E.C.

EHRKE, F., M.D.Edin., District Medical Officer of the Great Yarmouth Union.

HARRIS, Wilfred, M.D.Camb., F.R.C.P., Physician to the Royal Westminster Ophthalmic Hospital.

HERKLOTS, G. A., M.R.C.S., L.R.C.P., Assistant Medical Officer of the Brighton Parish Workhouse.

HOGG, A. H., M.B. B.S.Durh., District Medical Officer of the Barnsley Union.

HORNE, G., M.D.Melb., Surgeon to In-patients at the Women's Hospital, Melbourne.

KERLEY, Patrick, M.B., B.Ch., R.U.I., Medical Officer to the Athlone No. 2 Dispensary District.

LOOSELY, Chas. J., L.R.C.P., M.R.C.S., Honorary Assistant Anaesthetist to the Royal Dental Hospital, London.

MCCULLAGH, W. McK., M.B., Assistant Medical Officer, St. Marylebone Parish Infirmary.

MACGREGOR, Alastair, M.D., C.M.Edin., Chief Assistant in the Electrical Department, St. Bartholomew's Hospital, E.C.

MARTIN, W. Y., M.B., District Medical Officer of the Leigh Union.

MASON, P. J., M.B., Ch.B.Birm., District Medical Officer of the Dudley Union.

MURRAY, D. S., M.D.Edin., Medical Officer Stratford-on-Avon Union Workhouse.

NATTRASS, J. H., M.B.Melb., Surgeon to Out-patients at the Women's Hospital, Melbourne.

PATERSON, M. W., M.R.C.S., L.R.C.P.Lond., Resident Assistant Medical Officer of the Salford Union Infirmary.

PLATT, H., M.R.C.S., L.R.C.P.Lond., Assistant Tuberculosis Officer under the Essex County Council.

SHAW, T. D. S., M.B., C.M.Edin., District Medical Officer of the Lichfield Union.

SMITH, Miss M. E. E., M.B., B.S.Lond., Assistant Medical Officer, Birkenhead Union Workhouse.

SPROTT, Barbara, M.B., B.S., Anaesthetist to the Chelsea Hospital for Women.

SUTHERLAND, R. Tate, M.D.Melb., Surgeon to Out-patients at the Women's Hospital, Melbourne.

TORNEY, J. H., M.B., B.Ch.Dub., District Medical Officer of the Plymouth Incorporation.

WATKIN, P. J., M.R.C.S., L.R.C.P., Assistant Medical Officer, Lambeth Parish Infirmary.

WRIGHT, F. R. E., M.B.Lond., District Medical Officer of the Barnstaple Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTH.

ROBERTS.—On July 17th, at 104, Midland Road, Bedford, to Dr. and Mrs. E. Cleaton Roberts, a daughter.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses and Lectures are to be given next week at the following schools, colleges, and hospitals:

CENTRAL LONDON THROAT AND EAR HOSPITAL, Gray's Inn Road, W.C.

MEDICAL GRADUATES' COLLEGE AND POLYCLINIC, Chenies Street, London, W.C.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.

WEST END HOSPITAL FOR DISEASES OF THE NERVOUS SYSTEM, Welbeck Street, W.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[*Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.*]

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, AUGUST 1ST, 1914.

CONTENTS.

Eighty-second Annual Meeting of the British Medical Association, Aberdeen.

[For Meetings of Branches and Divisions; Local Medical, Panel, and Insurance Committees; Insurance Notes and Correspondence; Vacancies and Appointments, etc., see pages 131 et seq.]

EIGHTY-SECOND ANNUAL MEETING

OF THE

British Medical Association.

ABERDEEN, 1914.

ANNUAL REPRESENTATIVE MEETING.

Mr. T. Jenner Verrall (Chairman of Representative Meetings) in the Chair.

The proceedings of the Annual Representative Meeting began on Friday, July 24th, 1914, in the Mitchell Hall, Marischal College, Aberdeen, at 10 a.m.

The return of the election of Representatives of Divisions for the year 1914-15 was received, approved and entered on the minutes. Notices of appointment of substitutes for Representatives were also received.

Admission of the Lay Press.

The meeting decided to admit representatives of the lay press on the understanding that if the meeting expressed a desire that any part of the proceedings should not be reported that request would be respected.

The President's Illness.

The Chairman said he was convinced that the Representative Body would approve of the following motion:

> The Representative Body greatly regrets that the President, in consequence of his recent serious illness, is unable to attend the annual meeting, but congratulates him on his progress, and hopes that he will soon be quite restored to health.

The Chairman of Council seconded the motion, which was carried.

Standing Orders.

The Standing Orders of the last Representative Meeting were adopted, with certain modifications intended to facilitate the conduct of business.

The Council having found that the following Standing Order was *ultra vires*:

> (i.) In addition to members nominated by the Council it shall be open to any member of the Representative Body to nominate a candidate for election as a service member of Council,

the following new Standing Order was substituted:

> 49. *Election of Service Members of Council.*—The election of members to represent the Royal Navy Medical Service, the Army Medical Service, and the Indian Medical Service on the Council shall be conducted as follows:
>
> At the commencement of the afternoon session of the first day of the Annual Representative Meeting the names of the candidates nominated by the Council to represent the respective services shall be submitted to the Annual Representative Meeting by the Chairman for election, in such way as the Chairman may think fit. The result shall in each case be declared by him as soon as possible.
>
> Except where otherwise decided by the Representative Body in respect of any specific appointment, the members representing the respective services on the Council shall hold office for a period of three years.

Standing Order 18 was altered to provide that local honorary secretaries, as well as members of the Representative Body, shall receive copies of the minutes of the Representative Meeting.

The late Dr. J. H. Keay.

The Chairman alluded to the death since the last Representative Meeting of Dr. J. H. Keay, who represented the Greenwich Division from 1910 to 1913, and a motion of sympathy and condolence was passed.

Order of Business.

The Chairman submitted the report of the Agenda Committee, and resolutions were passed embodying the meeting's decision as to the order in which the business would be taken.

The University's Welcome to the Association.

The Chairman introduced to the meeting Principal George Adam Smith, Principal of the University, by whose courtesy the Representative Body was meeting in the Marischal College; and also the President-elect of the Association, Sir Alexander Ogston, K.C.V.O.

Principal Adam Smith, who was received with loud applause, welcomed the meeting to the University of Aberdeen. It was proud to place its halls at the disposal of the Representatives during the coming week, and the University in the course of the proceedings would be at home to the members of the British Medical Association. To himself and his colleagues of the Medical School of the University it was a particular pleasure to welcome amongst the members of the Association attending the meeting very many old students of medicine in Aberdeen. The University was proud of the place those students had taken in the profession and bade them a hearty welcome on their return to their *Alma mater*.

Emeritus Professor Sir Alexander Ogston, K.C.V.O., said the members had had quite a characteristic reception from the north wind of the boreal region they had come to visit. He hoped that cold and inclement as was their exterior, there would be found underlying it a great and warm welcome. (Applause.)

The Chairman returned thanks on behalf of the Representative Meeting, remarking that they expected nothing less from a city so noted for its hospitality and geniality.

ANNUAL AND SUPPLEMENTARY REPORTS OF COUNCIL.

The Annual and Supplementary Reports of Council for 1913–14, published in the Supplement of the Journal of May 2nd and June 27th, were received.

Annual Meeting, 1915.

A motion was carried with acclamation that the Annual Meeting of 1915 be held in Cambridge from July 2nd to July 10th; the Chairman explaining that the early date was necessary to meet local requirements. Sir T. Clifford Allbutt, K.C.B., was elected President-elect for 1915–16.

Vice-Presidents.

On the motion of the Chairman of Council it was unanimously agreed that Dr. W. Ainslie Hollis, President of the Association for 1913–14, and Dr. W. T. Hayward, Chairman of the Australian Federal Committee, be elected Vice-Presidents. Dr. Macdonald remarked that Dr. Hollis had admirably carried out his duties as President, and that he had a peculiar personal pleasure, after his recent visit to Australasia, in moving the election of Dr. Hayward, who had been a distinguished member of the Association there for many years—in fact, he was one of the original members who first formed a Branch of the Association in Australasia (the South Australian Branch), and more than any other was responsible for the success of the Association in Australasia.

The motion was carried with acclamation.

Preliminary Paragraphs.

The remainder of the annual report of Council under the heading "Preliminary" was carried (Supplement, May 2nd, pp. 266–7).

FINANCE.

The Treasurer, Dr. Rayner, had a sympathetic greeting after his recent illness. On moving that the paragraphs of the annual report of Council dealing with finance (Supplement, May 2nd, p. 267) be approved, Dr. Rayner thanked the meeting, and said that if there was any one who should be congratulated it was himself in being able again to take part in the meeting and strive to do his duty by the Association. (Applause.)

In reply to a question, Dr. Rayner explained that the item in the Journal account, "Contributions (General) and Reporting, £2,703," was principally made up of contributions, and did not represent the cost of reporting.

Answering Dr. Fothergill, who asked if the estimated surplus of £6,500 announced in the Supplement, May 2nd, p. 276, was still correct, Dr. Rayner said the estimate was drawn up in December last, and since then certain expenditure had been incurred. Although the Stevens action had been won by the Association, he was afraid it would have to pay certain expenses. Then, in December there was a financial slump, and the value of the securities of

the Association was written down; they had now, however, increased in value.

Dr. Cuming Askin (South Suffolk) asked if any members of Parliament sent reports to the Journal; if they were paid for their work; and, if so, how much.

The Treasurer said that members of Parliament had sent reports to the Journal so long as he could recollect. The sum paid depended on the amount of work done.

In dealing further with the question of the estimated surplus, the Treasurer said, in reply to Dr. Haslip (Westminster), that since December further charges had been incurred, amounting to about £1,000. The matter had been very carefully estimated on a conservative basis, and it was calculated that the surplus would be £6,000.

Dr. R. M. Beaton (Council) mentioned the wages of the office staff; not the men at the top but the men near the bottom. He regretted to say that these employees were not well paid; some of the men in the office were receiving the same salary that they had eleven, twelve, and thirteen years ago. The Association was a democratic body, and wanted to do the best it could for the community, and yet this state of affairs existed, although the cost of living had gone up seriously. He moved that the Representative Meeting instruct the Finance Committee to give the matter very favourable consideration. Medical practitioners looked for fair remuneration for their work, and they should deal with their staff in the same way.

Several Representatives rose to second the proposal.

The Treasurer said he quite agreed with Dr. Beaton, and he thought it was only fair that the matter should receive consideration. Down to the end of last year the Association really could not afford to pay more wages. The expenses had been so heavy that the reserve fund had been drained to such an extent that the members of the staff had had to be satisfied, although they had suggested an increase. Now things were getting much easier for the Association and for the Treasurer, and he was more than willing—he was desirous—that the matter should be fully considered at an early date, so that the Association might not have to rest under the charge that it was paying its servants less than they ought to receive. There was no company or association in the country that was better served by its servants than the British Medical Association.

The resolution was adopted.

Dr. Haslip (Westminster) suggested that the Association was being conducted extravagantly. There were now practically three organizing secretaries: one for the general office, one for Ireland, and one for Scotland, and soon there would be a request from Wales. London would not be behind; it was a constituency that numbered 5,000 members, yet London was a black spot on the Association's record. The Association's present financial position did not justify the payment of additional medical secretaries. A supplementary report should have been issued showing the latest financial position. In 1912 the Association had a deficiency of £8,000, and in 1913 of £4,000, and he thought a reserve should be built up.

Dr. Duncan (Chesterfield) said that 5 per cent. of the income was written off under the head of bad debts and 10 per cent. appeared amongst the assets as "arrears." In other words, 15 per cent. of the income was either totally or problematically lost. Was that good business management? He had never heard a better argument for the appointment of several organizing secretaries than Dr. Haslip's speech. The aim of the Association was that it should be conducted on a business footing. If London was a black spot, the sooner an organizing secretary was appointed for London the better; he would bring in more than his salary in additional subscriptions.

The Treasurer said he quite agreed with the remarks of the last speaker. It would be the duty of the extra secretaries to do such work as would pay their expenses; otherwise they would have failed in the object for which they were appointed. As to the unpaid subscriptions, many medical men left their widows unprovided for at their death, and the Association could not ask the widows or children to pay the arrears in those circumstances. As to the arrears, amounting to £1,480, written off, the Association, he had no doubt, would receive half of this amount in the course of next year. The total loss by deaths and arrears amounted to only 2 per cent. of the subscriptions, and on a turnover of between £30,000 and £35,000 a year that was not bad business.

The financial report was then approved.

Mr. D. F. Todd (Sunderland) moved the following rider:

> That all matters of finance shall be dealt with by a Finance Committee of the Council.

The Finance Committee only met once a quarter, and as a rule things were cut and dried for it. The result was that the Finance Committee could have practically no check on the work or the expenditure. He considered that financial matters should not be dealt with by the Organization Committee.

Mr. Larkin (Chairman of the Organization Committee) thought this would be the wrong way of obtaining financial control. The rider involved an alteration of the by-laws. Each committee had to prepare its own work, and the Finance Committee supervised them all.

The Chairman of Council said that every committee must consider its own business and come to a conclusion as to the way in which it should be carried out. Each committee submitted an estimate to the Finance Committee, which considered whether the financial position of the Association justified the expenditure. The rider would mean putting work on the Finance Committee which it would be nearly impossible for it to do.

The rider was lost.

Dr. Southcombe (City) proposed a rider that a request for renewal of subscriptions be inserted in the Journal instead of being sent by post at considerable expense. Subscriptions might then be obtained more rapidly, and several thousands of pounds be received at the beginning of the year.

The Treasurer said that various methods had been tried in order to get the subscriptions in early, and many had been found unsatisfactory.

The rider was lost.

ORGANIZATION.

Amendment of By-laws.

On the motion of the Chairman of the Organization Committee, the special report of Council as to amendment of articles and by-laws (Supplement, May 2nd, pp. 293-308) was received.

The recommendation of Council as to new by-laws providing that Councils of Branches and Executive Committees of Divisions should contain representatives of Local Medical Committees, and medical members of Insurance Committees (Supplement, May 2nd, p. 293), was submitted by Mr. Larkin.

Dr. B. G. Morison (St. Pancras and Islington) objected that such an alteration in the by-laws was unnecessary. He strongly objected to the Association becoming the champion of a section of the profession. The Association should represent the profession as a whole and not any section in particular.

Dr. Southcombe (City) moved the following amendment:

> That the recommendation be referred back for further consideration, and information as to the numerical proportion of such members of committees under the National Insurance Act to the members of the Executive Committees of Divisions.

He said the amendment was proposed because the Division felt that the matter required further consideration, as the by-laws, if adopted, would be for the benefit of one section only—namely, the insurance practitioners. The by-laws, if adopted, would allow insurance practitioners to be co-opted to the Executive Committees of Divisions, while the non-insurance practitioners would have no corresponding representation given them. That seemed unjust and unwise. The Divisions should be given the power of co-opting whom they wished and should not be limited to one section of the profession. His Division contained 175 members, of whom 100 were not working the Insurance Act. Why should 75 members have special representation on the Committee and 100 not have it?

Dr. Cuthbertson Walker (Rochdale) stated that he was instructed by his Division to support the amendment by the City, not quite for the reasons given by the City, but

because it felt that the Council was acting too hastily in the matter. The proposed by-laws gave to the Divisions special powers in regard to certain practitioners; this was already covered by an existing by-law. The proposed by-law was also open to objection in that it would allow a mere quorum of an Executive Committee to co-opt members without reference to the Division as a whole, and thus would confer excessive power upon that Committee.

The Chairman of the Organization Committee, replying to Mr. Todd, explained that the by-law passed last year on this matter had not been found effective, and this revision was proposed.

Dr. E. A. Starling (Tunbridge Wells), in supporting the recommendation, expressed the hope that it would be agreed to by a large majority, because it was good for the profession and a great advantage to the Association. Last year the Branch with which he was connected—the South-Eastern—was divided, and it was found that the work was better done.

Mr. J. T. Macnamara (Lewisham) supported the amendment proposed by the City. Nearly 50 per cent. of the members of the Association were not on the panel. If those who thought they were giving security and unity to the organization by offering special privileges and powers to those working the Insurance Act would visit a few districts in London, they would realize that the proposals in the draft by-laws were not wise.

Dr. John Stevens (Edinburgh) hoped that, for the sake of maintaining harmony in the profession, the attempt at the representation of sectional interests in the Branches and Divisions would be defeated. If direct representation on the committees was to be given to the panel practitioners, then in justice representation must be given to the non-panel men also.

The Chairman of Council explained that the suggestion before the meeting was that the by-laws should be altered in a certain way in accordance with what the meeting had decided last year.

The amendment by the City was defeated.

Dr. Macnamara (Lewisham) desired to move an amendment that the members so co-opted should not exceed two.

The Chairman said he could not accept the amendment, as it would mean altering the words of the proposed by-laws and so adjourning the whole question.

The recommendation of Council was approved by 98 votes to 30.

REFERENDUM AND POSTAL VOTE.

The Chairman of the Organization Committee moved the adoption of the proposed draft, new, and amended articles and by-laws on the subject of the Referendum and Postal Vote (see Report of Council, Supplement, May 2nd, p. 298).

The Chairman of Council said that the eternal tinkering with the articles was the worst thing that could possibly happen to the Association. The paragraphs recommended for adoption introduced the principle of taking a referendum of all the members of the profession, many of whom were not members of the Association. It was desirable that the Representatives, if they were to commit themselves to these paragraphs, should do so with their eyes open. He appealed to them to be careful not to go on tinkering with the articles, because it would lead to unlimited trouble.

The Chairman of the Organization Committee said that this question was put perfectly clearly last year, and the Representatives then came to the conclusion that they wanted to make the Representative Body more elastic. He did not wish to say now whether they were right or wrong in so deciding—as a matter of fact he did not consider this was the time to raise that point—but it could not be disputed that the decision was made by the Representative Body with its eyes open. No one deprecated more than he did any tinkering with the articles, but he also deprecated a disposition on the part of the Representative Body to overturn just a year later its previous decision.

The Chairman (Mr. Verrall) said the draft by-laws which had been drawn up and had involved the expenditure of time and money, represented the views which the Representative Body expressed at Brighton last year.

The new articles and by-laws were then put to the vote, but not receiving the requisite two thirds majority the motion was defeated.

In announcing this result, the Chairman remarked that he did not mean to suggest that the Representatives did not know what they had done, but in fact the meeting was now just where it was a year ago.

Subscription of Channel Islands Members.

The Chairman of the Organization Committee moved the adoption of the recommendation of Council (para. 37, Supplement, May 2nd, p. 298) with regard to by-laws regulating subscriptions of members in the Channel Islands and Isle of Man. The amended by-laws carried out the instructions of the Representative Body to exclude members living in the Channel Islands and the Isle of Man from the increased subscription, on the ground that members of the profession there were on the same footing as those in the colonies. The by-law was unanimously approved.

Subscription of Junior Members.

The following draft by-law was approved:

Provided as follows:

(c) In the case of a member resident in the British Islands and admitted before the expiration of two years from the date of his registration under the Medical Acts, the annual subscription shall be 25s. until December 31st next occurring after the expiration of the period of four years from the date of such registration.

Composition of Branch Councils.

The Chairman of the Organization Committee, in moving the draft by-laws on this matter (Supplement, May 2nd, p. 298), said that they were almost entirely verbal amendments. They were approved.

Proposed Change in Nature of Representative Body.

On the recommendations of Council on this matter (Supplement, May 2nd, p. 299), as follows:

(4) In speaking and voting upon any matter the Representative or Representatives of any constituency shall have regard and so far as may be conform to the preponderance of opinion of the members of that constituency so far as such opinion is known to him or them.

The Chairman said that the recommendations involved a most important and almost entire change in the nature of the Representative Meeting. The Representatives decided upon the change last year.

The recommendation was approved.

A Standing Welsh Committee.

The Chairman of the Organization Committee moved that part of the Report of Council proposing to set up a Standing Welsh Committee (Supplement, May 2nd, p. 300). The recommendation was approved.

Further Amendments of By-laws.

The meeting approved a number of amendments of by-laws, mainly of a verbal character. The remainder of the Report on matters of organization was then approved.

The Federation of Other Medical Bodies with the Association.

Dr. Fothergill (Brighton), in moving a rider to the motion that the report of the Organization Committee be approved, said that special interests arose, such as those of members connected with hospitals, the Poor Law, and public health, which did not find expression in the Divisions, and the result was that special societies were formed. The time had come to consider whether the British Medical Association should allow other associations to take from it the power to deal with their peculiar interests. The suggestion was that the Association should recognize these bodies by allowing them into the organization of the Association by direct representation. The question should be considered by a committee, which should propose the necessary alterations in the by-laws and articles as the Solicitor thought desirable. Organizations such as the Society of Medical Officers of Health, the Association of Women Practitioners, and others should send forward nominations to the Annual Representative Meeting, which would elect their representatives to the Council. In that way the Council would be able to voice the feelings of the whole profession.

The Chairman of Council said he was prepared to support the rider if it was made a reference to the Council and not to a committee specially appointed. The multiplication of committees was inconvenient and expensive.

Dr. Wallace Henry (Leicester) supported the proposal. In many instances resignations which had been received during the past year came from the members of sectional medical bodies. In his Division the resignations were chiefly from asylum officers, Poor Law officers, medical officers of health, education officers, and so on. All would agree that it was necessary to bind together the members of the medical profession, and he would like the suggestion to be widened to include the panel federations and non-panel organizations now being formed.

After some further discussion, the rider was agreed to in the following terms:

> That it be referred to the Council to consider and report what alterations and additions to the articles and by-laws, and in the organization of the British Medical Association in the United Kingdom would allow of it becoming also a Federation for other medical bodies formed to safeguard the interests of one or more sections of the medical profession, while allowing all such bodies to continue their separate existence.

Annual Conference of Secretaries.

With regard to the Annual Conference of Secretaries, Dr. Southcombe (City) moved:

> That the conference be empowered to appoint a subcommittee to consider matters of interest to honorary secretaries during the ensuing twelve months and to report to the next conference.

He urged that this was not a revolutionary proposal, and might be, in the opinion of many honorary secretaries, a very useful one. The motion was lost.

Candidates for Appointments.

On the report of the Council as to the appointment of an Assistant Medical Secretary (Supplement, May 2nd, p. 277), Dr. Major Greenwood (City) moved the following rider:

> That the Council be instructed to formulate a new by-law prohibiting any member of the Council becoming a candidate for a salaried appointment under the same unless he shall have ceased to be a member of the Council at least six months before an advertisement for such an appointment shall have been issued.

While his Division did not want to criticize the action of the Council, it was strongly of opinion that a very important principle was broken by a member of the Council resigning to become a candidate for a post under the Association.

The Chairman of Council said it would be absurd for the Association to tie its hands and prevent itself from getting the best men. It would be a mistake for the Association to say that a man who had served it well should be debarred from taking an appointment under it.

The rider was rejected.

Advice to Non-Members.

Dr. Fothergill (Brighton) moved the following rider by Brighton:

> That it be referred to the Council to consider and report on what terms and conditions, if any, the assistance, if asked for, of the British Medical Association in medico-political subjects shall be placed at the disposal of any registered medical practitioner who has resigned his membership or has never become a member.

Dr. Fothergill said that when a doctor, not a member of the Association, and especially one who had resigned, wrote to the Medical Secretary asking his advice in a case of difficulty, a fee should be charged.

The rider was carried after a brief discussion, during which it was suggested that the fee should be two guineas.

Entrance Fees on Rejoining.

Dr. Fothergill moved a further rider as follows:

> That it be an instruction to the Council to consider and report, with any consequent amendments of the by-laws thought desirable, on the proposal that should any registered medical practitioner who has resigned his membership desire to become once more a member he be required to pay an entrance fee in addition to the annual subscription.

The time, he said, had come when the Association should refuse to allow doctors to go in and out of the Association when it suited their purpose temporarily.

Dr. Duncan (Chesterfield) questioned whether the proposal in the rider could be carried out. When a crisis came the Association must present a united face to the enemy. If those who stood aloof could be persuaded to join the Association it would be more to the benefit of the profession than a policy of excluding them.

Dr. R. M. Beaton (Islington and St. Pancras) thought it would be unfortunate to place a new impediment in the way of any member who had resigned from the Association but wished to rejoin.

The rider was rejected.

Representation of Divisions.

A proposal by Chester and Crewe that any Division, however small, should have a representative vote on all matters, was not accepted.

Dr. Batt (West Suffolk), in making a somewhat similar proposal, said that the Division he represented, though numerically very small, covered a large area. It felt very strongly that if independent representation were denied to small Divisions they would have no means of voicing their opinions.

Mr. Larkin said that the Council sympathized strongly with the view expressed by Dr. Batt, but it had to be remembered that the Representative Body was already large, and it was felt to be necessary that its numerical strength be kept down.

Dr. Asein (South Suffolk) and Dr. Douglas supported Dr. Batt, the latter observing that he had represented three or four constituencies grouped together, and the plan was most unsatisfactory. While it was not desirable to make the Representative Body larger than could be helped, the meeting should think two or three times before denying independent representation.

The Chairman of Council said that the motion was ineffective, because it was indefinite. The Organization Committee always considered sympathetically representations of the kind from a scattered area.

The amendment was lost.

Expenses of Representatives.

A rider by Greenwich and Deptford dealing with the question of expenses of Representatives was withdrawn, and in regard to another by Sunderland, to the effect that members attending executive meetings in London should be paid one guinea a day for expenses beside the railway fare, the Treasurer said he would be glad to support it if the members provided the funds. The rider was lost.

Composition of Representative Body.

Another rider by Sunderland was that the Council be instructed to submit a by-law to the Divisions embodying the principle that no Division should have more than one Representative at Representative Meetings.

Mr. Larkin said that although the country districts were badly represented, numerically they were much better represented in that meeting than the larger towns. The rider was rejected.

JOURNAL COMMITTEE.

The Chairman of the Journal Committee, Mr. Albert Lucas, moved that the section of the Annual Report of the Council referring to the British Medical Journal be approved.

An amendment by West Herts was to the following effect:

> That this meeting is of opinion that the British Medical Journal does not satisfactorily fulfil the requirements of modern medical journalism, and requests the Council to revise the scheme of publication and its expenditure.

Dr. Hall said that the West Herts Division consisted of general practitioners. He considered that the general run of articles in the Journal was not of sufficient interest to the average general practitioner. He had been instructed to put forward the suggestion that each clinical or scientific article should be prefaced by an abstract of its contents in order to encourage men to read the article. There was a feeling that the leader writers were not sufficiently under control; the tone of the article which appeared on July 11th on "A Trade Union" seemed to be against trade unions. By what authority did that article appear? According to

the balance sheet, fees were paid to the editor in chief and his assistants for contributions in addition to salaries. It was suggested that there should be an inclusive salary for all work done by the editorial staff.

Mr. C. G. Meade said that if the Journal did not fulfil all the requirements of the general practitioner, why should he not take in some other periodical—such as, for instance, the *Daily Mail*?

Dr. Laffan (South of Ireland) said that the Journal did not represent the views of the members of the Association. He was proceeding to read from a recent letter he had addressed to the Journal, which had not been published, when a point of order was raised, and the Chairman ruled that the speaker could not read a letter involving personal charges against a gentleman who was not present to reply.

Dr. Laffan concluded by observing that if it was felt that the Journal as a technical and scientific journal was managed in the best interests of the Association he had nothing more to say.

The amendment was lost, on a show of hands, by a large majority.

Dr. Tuxford (Holland and Kesteven) proposed the following amendment:

> That a more detailed account be given in the accounts of the Journal, showing the actual amounts paid to contributors and their number other than the Editor and Sub-Editors.

The Chairman asked if Dr. Tuxford would indicate to the meeting what additional information he desired.

Dr. Tuxford said he was desirous of getting more data under the heading "General."

The Treasurer explained that the word "General" referred to contributions, and these formed the greater part of the sum.

The Chairman of Council said that this was a matter which came up year after year. A journal such as theirs required careful selection in regard to the men who contributed to it. Questions arose upon which articles had to be written on the shortest notice, and in such circumstances their Editor must be given a very free hand.

The amendment was defeated by a large majority.

Publication of Insurance Matters.

Dr. A. Tennyson Smith (Bromley) moved:

> That it be an instruction to Council that all matter referring to national insurance be printed in the Supplements of the Journal after "Association Notices."

He was of the opinion that the reporting of matters concerning Branches and Divisions was relatively much more important than matters dealing with Insurance Committees and insurance work generally and ought to have precedence. Lately that had been carried out, but for some time before matters pertaining to insurance had appeared at the beginning of the Supplement to the Journal.

Dr. Macnamara (Lewisham) thought this a small matter of detail; he might, for instance, suggest that the work of the Poor Law service should be given more prominence.

The Chairman of the Journal Committee thought the complaint was not a very serious one. They must trust their Editor to exercise his discretion in giving the most important place to those subjects which were engaging the greatest attention of the profession at the moment.

The amendment was rejected, and the motion approving the Section of the Report of Council under the heading "Journal" (Supplement, May 22nd, p. 279) was approved.

Inadequate Salaries.

Whereupon Dr. Fothergill (Brighton) proposed the following rider:

> That in the opinion of this meeting the whole-time staff of the Association should receive an inclusive salary, which should include all contributions to the Journal.

The rider was not intended to be an attack on the officials. These officials, in his opinion, were seriously underpaid, especially when consideration was paid to the status they should occupy in the public eye. His proposal was that the Association should pay its editorial staff an inclusive salary commensurate to the position they occupied and the duties they were expected to discharge. If the Editor, his assistants, and the Medical Secretary were to be called upon in moments of urgency to prepare special articles for the Journal, then the Association should be prepared to pay them a sufficiently large inclusive salary to cover that work.

The Chairman of the Journal Committee observed that there was something to be said for this rider. Long before this question was raised at the Annual Representative Meeting it had been taken into consideration by the Journal Committee, and he had personally discussed it with a number of journalists connected with the large daily newspapers. The Representatives had to remember that there was a very considerable difference between a technical and scientific journal such as theirs and daily newspapers. As matters stood, if the Association did not pay their editorial staff a small lineage rate, it would have to give them considerably larger salaries. At present the amount involved in these payments was very small, and he was inclined to think that the system of paying the staff for lineage was an incentive to them to do the work. Possibly, when making future arrangements or changes in the editorial staff, the point could be taken into consideration.

The Chairman of Council said that he believed the Association would get better results from a continuance of the present arrangement than by paying the staff an inclusive whole-time salary.

The rider was carried, with the concurrence of the Chairman of the Journal Committee, in the form of a reference to the Committee.

Science Committee.

Dr. F. J. Smith, Chairman of the Science Committee, moved that the Annual Report of Council under heading "Science" (Supplement, May 2nd, p. 279, paras. 72-78) be approved.

Dr. Carruthers, referring to the Middlemore Prize dealt with in the Report, asked if there would be any objection to publishing the names of the adjudicators, and suggested that in future competitors should be informed that the prize would be withheld in the event of a sufficiently high standard of merit not being attained.

Dr. F. J. Smith said that the terms under which the Middlemore Prize was offered were such that it need not be given if the adjudicators considered a sufficiently high standard of merit had not been reached.

Dr. C. E. S. Flemming said that the Science Committee had been asked to take steps to promote scientific work amongst the Branches and Divisions of the Association, but beyond sending out a somewhat colourless memorandum little had been done. He hoped that greater initiative would be shown in the future.

Dr. F. J. Smith detailed the steps which the Committee had taken to stimulate interest amongst the Divisions by getting them to form scientific committees. The response, he said, had been disappointing.

Dr. Beaton said the Science Committee ought not to ask the Divisions to send in reports and suggestions, but should submit proposals and suggestions for the consideration of the Divisions.

The Petition of Sir Ronald Ross.

Mr. E. B. Turner (Kensington) moved the following rider:

> That in the opinion of the Representative Meeting of the British Medical Association the petition of Sir Ronald Ross, K.C.B., F.R.S., to the House of Commons for remuneration for his services to the empire in having discovered how malarial fever can be prevented, should be granted.

A petition to the House of Commons was, he said, the only way in which recognition of the services of Sir Ronald Ross with regard to malaria could be obtained. There was no fund from which money could be granted, only a Civil List pension given as a matter of grace by the Ministry of the day.

Dr. F. J. Smith, Chairman of the Science Committee, in supporting the rider, said he felt it was to the lasting shame of Great Britain that it should allow its medical officers in the various protectorates and colonies to go into the by-ways of nature to battle with the diseases of man and beast and to sacrifice their health, practice, and even their lives, and yet give them nothing for it.

The Chairman of Council considered it was a disgrace to the nation that the work of such men was not recognized. Some time ago a distinguished soldier was granted an earldom and £100,000 for having performed great

services to the empire, and, while all admitted the worth of what he had done, still the work done by such men as Ross was a greater work for humanity.

The rider was approved and, on the motion of Mr. TURNER, it was agreed to transmit it to the Chancellor of the Exchequer.

ELECTIONS TO COUNCIL BY GROUPED REPRESENTATIVES.

The CHAIRMAN announced as follows the result of the election of twelve members of Council by grouped Representatives. He remarked that there had been contests in two groups only (indicated by the word "elected" in the subjoined list), and that there had been no nomination by the Representatives of the Leinster, Connaught, and South-Eastern of Ireland Branches.

OLDHAM, Dr. H. F., Morecambe	North of England Branch. North Lancashire and South Westmorland Branch. Yorkshire Branch.
GARSTANG, Mr. T. W. H., Altrincham.	Lancashire and Cheshire Branch.
MILBURN, Dr. C. H., Hull...	East York and North Lincoln Branch. Midland Branch. Cambridge and Huntingdon Branch. East Anglian Branch. South Midland Branch.
MACTIER, Dr. H. C., Wolverhampton (*elected*).	Birmingham Branch. Staffordshire Branch. North Wales Branch. Shropshire and Mid-Wales Branch. South Wales and Monmouthshire Branch.
GREENWOOD, Dr. MAJOR, London, N.W. (*elected*).	Metropolitan Counties Branch. Central, East and North Metropolitan Group: City, East Hertfordshire, Finchley and Hendon, Hampstead, Harrow, Marylebone, North Middlesex, South-West Essex, St. Pancras and Islington, Stratford, Tower Hamlets, and Willesden Constituencies.
BIGGS, Dr. M. G., London, S.E.	South and West Metropolitan Group: Camberwell, Chelsea, Ealing, Greenwich and Deptford, Kensington, Lambeth, Lewisham with Woolwich, South Middlesex, Wandsworth, West Hertfordshire, and Westminster Constituencies.
FINLAY, Dr. D. E., Gloucester.	Bath and Bristol Branch. Gloucestershire Branch. West Somerset Branch. Worcestershire and Herefordshire Branch. Dorset and West Hants Branch. South-Western Branch.
FOTHERGILL, Dr. E. R., Brighton.	Oxford and Reading Branch. Southern Branch. Kent Branch. Surrey Branch. Sussex Branch.
MOIR, Dr. J. MUNRO, Inverness.	Aberdeen, Northern Counties, Dundee, and Perth Branches. Edinburgh and Fife Branches.
MOORHOUSE, Dr. J. E., Stirling	Glasgow and West of Scotland Branch (4 City Divisions). Glasgow and West of Scotland Branch (5 County Divisions). Border Counties and Stirling Branches.
(Vacancy)	Connaught and South-Eastern of Ireland Branches. Leinster Branch.
DARLING, Dr. J. S., Lurgan	Munster Branch. Ulster Branch.

MEDICAL ETHICS.

Dr. BIGGS, Chairman of the Central Ethical Committee, presented the Annual Report of the Council under heading "Medical Ethics" (SUPPLEMENT, May 2nd, page 280, paragraphs 79-87).

ACTION OF DIVISIONS.

Dr. FOTHERGILL (Brighton) moved the following rider:

That it be referred to the Council to consider and report what steps should be taken to avoid incurring any financial loss for any libel action which may be brought against the Association owing to the conduct of any member, Division, or Branch acting in opposition to the advice and instructions of the Council.

The rider was adopted.

PUBLICATIONS TO THE PUBLIC ON MEDICAL SUBJECTS.

On the motion of the CHAIRMAN of the Central Ethical Committee, the following recommendation of Council was adopted:

That every medical practitioner who contributes to or in any way assists in the preparation of any publication on medical subjects intended for the use of the public must hold himself responsible for any undue or improper advertising that may take place in connexion with such publication, and also for the scope and distribution of the work.

WARNING NOTICES.

The CHAIRMAN of the Central Ethical Committee moved the following recommendation of Council:

That the Representative Body rescinds all its previous decisions relating to the Warning Notice, and empowers the Council to approve and adopt regulations which, in the opinion of the Council, are appropriate, relative to the insertion in the BRITISH MEDICAL JOURNAL of notices regarding appointments, and that the control of these notices be in future left entirely in the hands of the Council.

The Standing Orders were suspended, and the CHAIRMAN of the Central Ethical Committee explained that the motion had been drawn up with the intention of providing against any legal error in procedure.

The SOLICITOR said, in reply to a question by Dr. FOTHERGILL through the Chairman, that it did not appear to him that the proposal to delegate the matter to the Council would be contrary to the spirit or the letter of the Regulations.

In reply to Dr. TREASURE (Cardiff), who asked what would be done in a case which had to be dealt with quickly, the CHAIRMAN of the Central Ethical Committee said that the Committee had instructed him to deal with emergencies, and he had power to summon a special subcommittee if necessary.

The motion was approved.

"THE FAMILY ENCYCLOPAEDIA OF MEDICINE."

On the recommendation that the remainder of the Supplementary Report of Council under heading "Medical Ethics" be approved, Dr. J. SHAW (Buckinghamshire) drew attention to the publication of names in connexion with *The Family Encyclopaedia of Medicine*, and moved an amendment.

Dr. BIGGS explained the steps which had been taken in the matter, and the amendment was by leave withdrawn.

THE CONDUCT OF ETHICAL CASES.

Dr. L. L. PRESTON (Isle of Wight) moved the following rider:

That in view of the numerous technical legal difficulties in connexion with the conduct of ethical cases, the Council be requested to instruct the Medical Secretary that no correspondence be conducted in these cases without the direct supervision of the Solicitor to the British Medical Association.

Dr. BIGGS explained that in practice the Solicitor could not be consulted in every case, but he was called in whenever occasion arose.

The rider was withdrawn, and the remainder of the report of the Committee approved.

MEDICO-POLITICAL COMMITTEE.

STATE REGISTRATION OF NURSES.

Mr. GARSTANG (Chairman of the Medico-Political Committee) moved the recommendation:

That the Representative Body reaffirms its opinion that the State registration of nurses is desirable.

This was carried; and Dr. FOTHERGILL moved to add the following rider, which he said embodied the three conditions laid down by the Prime Minister in his reply to a deputation a short time ago:

That it be an instruction to Council to take afresh such steps as it considers desirable in order to obtain:

1. Unanimity amongst the various interests concerned as to the essentials of a Nurses' Registration Bill.
2. Satisfactory evidence that there is a large body of professional opinion in support of these essentials.
3. The support of the Government for legislation next session on the lines of these essentials.

Mr. Garstang said that practically everything the rider asked for had been done, and the rider was carried.

Mr. C. E. S. Flemming moved the following rider:

That this meeting views with concern the increasing number of insufficiently trained nurses, and instructs the Council to call upon the Government and the other authorities concerned to take steps to remedy this evil.

He said that the object of the rider was not only to support the movement for the registration of nurses, but to endeavour to obtain some more immediate action than could be expected by way of legislation. The number of inadequately trained nurses practising in the country was increasing rapidly, and constituted a danger not only to the patients but also to the profession. In many instances nurses—district nurses especially—after working for a short time in that capacity engaged themselves with nursing homes or other institutions, and posed before the public as fully trained nurses. He thought it was time to call upon the authorities to improve the position, and insist upon every nurse having a proper training. It would be well for the Divisions to make representations locally against this want of system.

Dr. J. S. Darling (Portadown and West Down) said that if the profession did not watch very narrowly there was a great danger of the standard of nursing being lowered all over the country, and of every district being flooded with half-trained women or women with no training at all.

The rider was approved.

Practitioners called in by Midwives.

Mr. Garstang moved the recommendation of Council inviting the Representative Body to express its opinion on the conditions which should govern the giving of assistance by private practitioners when called in by midwives.

Dr. G. K. Smiley (Derby) moved an amendment to replace the words "providing for three subsequent visits for the inclusive fee" by "subsequent necessary visits during the first ten days."

Dr. L. J. Picton seconded.

Dr. Fothergill (Brighton) objected to the amendment on the ground that if more than three subsequent visits were required the practitioner should receive further remuneration. Cases might last for two or three months, and medical practitioners would be doing a great deal of work for charity.

The amendment was carried.

Dr. Milburn moved that the attendance for the inclusive fee should last for one week instead of ten days.

The amendment was negatived after a brief discussion.

On the suggestion of Dr. Macnamara it was agreed that the figure for attendance at cases of operative interference and subsequent visits should be 2 guineas instead of £2.

It was further agreed that the hours of day visits should be from 8 a.m. to 8 p.m., and night visits from 8 p.m. to 8 a.m. The motion was then carried in the following form:

(*a*) That midwives could depend upon the assistance of the medical profession being forthcoming whenever required, provided the profession were assured of adequate provision being made for (i) free choice of doctor by patient, and (ii) payment of the medical practitioner called in.

(*b*) That payment of the medical practitioner so selected should be assured to him by a public authority such as the county or county borough councils in England and Wales.

(*c*) That the following should be the minimum scale of fees for the payment of medical practitioners called in on the advice of midwives, but power should be obtained to pay special fees in special cases:

	£	s.	d.
Attendance at cases of operative interference and necessary subsequent visits if during the first ten days	2	2	0
Attendance at cases without operative interference and three subsequent necessary visits during the first ten days	1	1	0
Assistance for administration of an anæsthetic...	1	1	0
Visit (including any necessary prescription):			
Day (8 a.m. to 8 p.m.)...	0	3	6
Night (8 p.m. to 8 a.m.)	0	7	6

Note.—The above fees apply to visits within two miles of the doctor's house; if beyond that distance an additional mileage fee of not less than 1s. per mile (outwards) or in outlying and sparsely populated districts such sum as is suitable to local circumstances and the local customs of the profession should be paid.

Dental Clinics.

Dr. Biggs proposed:

That the Representative Body approve the principle of the establishment of dental clinics, inasmuch as such clinics are calculated to diminish the amount of unqualified dental practice now in existence.

The motion was carried unanimously.

Practice of Dentistry by Unqualified Persons.

Mr. R. Harding (Hereford) moved a rider, which after discussion was, on the suggestion of the Chairman of Council, adopted in the following form:

That this Representative Meeting, being alarmed at the continued rapid increase in unqualified persons practising "dentistry," to the very great damage to the public health, and considering that from the standpoint of the general health the profession should endeavour to safeguard the nation from these dangers, instructs the Council to confer with the British Dental Association as to the best means of combating this particular evil.

The meeting adjourned at 6.30 p.m.

Saturday, July 25th.

The proceedings were resumed on Saturday, July 25th, at 9.30 a.m., Mr. T. Jenner Verrall (Chairman of Representative Meetings) in the chair.

The minutes of the previous day's proceedings were corrected and confirmed.

THE PROPOSED SPECIAL FUND.

The Chairman advised the Representatives in discussing the question—especially in relation to administration by a trust or trade union—to adhere to broad principles, and to remember the uncertainties of the law as regard trade unions. In reply to a question on the agenda by the Bromley Division, the Chairman said that he would adhere to his ruling last year, that a motion to form either a trust or a trade union would require a two-thirds majority to render the decision binding as the policy of the Association.

On the motion of Dr. Buttar, Chairman of the Special Fund Committee, the Report of Council on the Special Fund question (Supplement, May 2nd, p. 319-20) was received.

Dr. Buttar then moved the first of the Council's recommendations:

That immediate steps be taken to inaugurate a fund.

The report, he said, dealt with very difficult and controversial matters. The recommendation involved two questions: (1) Did the medical profession need such a fund; (2) If the fund was needed, ought it to be started immediately? Both these questions the Special Fund Committee answered in the affirmative. Historically there was no doubt that the need for a fund had been absolutely shown, and, as to the future, he asked whether it was likely to be so smooth that no fund would be needed. Was it not much more likely to be fraught with possibilities of disaster unless there were really a large fund in existence? The argument he relied on was that at some future date—he was not sure that it would be as soon as some thought—the dependants of insured persons would be included in the Insurance Act. If that came about, then, on the lowest estimate, four-fifths of the population of the country would be treated under the Insurance Act. If in the future any such proposal were made in a form which did not meet the conditions it considered necessary, the profession should be in a position to step in and enforce its authority. The next question which would arise was in reference to the special grant towards the cost of medical benefit. He did not think that the grant would be taken away, for it would be extraordinary if, having once paid the profession 7s. a head, it was proposed to cut the amount down after a few years to, say, 4s. 6d. a head, or any such sum; but if the Government desired to develop the Insurance Act service, in the matter of consultants under the Act, for instance, an attempt might be made to get the profession to do more work for the same pay as it was now receiving. If well protected by a fund, the profession might be able to meet such an attack successfully. Another danger—he thought it was much more imminent than any of the others suggested—was

that the profession might have to counter attempts to reinstitute friendly society control. There was a large party in the country anxious to put medical benefit under that control, and if that party succeeded in convincing the Government the profession would need once more to fight, and would require behind it a very large fund. Even if the proposed Special Fund were inaugurated now it would be some time before it could be adequate. If the question before the meeting were once more shelved he was afraid that very serious difficulties would result. In debating the controversial questions which would arise in the discussion, it seemed to him essential to keep two points constantly in view—the future good, first, of the profession, and, secondly, of the British Medical Association. He desired as much as any one the good of the British Medical Association, but he was bound to say he placed even before that the future good of the profession as a whole.

Dr. R. A. Lundie (Edinburgh and Leith) moved the following amendment:

> That the subject of an Emergency Fund be remitted to the Council for further consideration.

The object of the amendment, he said, was not to oppose the principle of the formation of a fund, but his Division had come to the conclusion that it was not desirable that the fund should be established at present. In the first place the Representative Meeting was very poorly informed as to the mind of members of the Association throughout the country on this question. The Special Representative Meeting last December had instructed the Divisions to take the opinion of practitioners resident within their areas by means of a postal vote. He did not know whether that postal vote had been taken in any of the Divisions, but he understood that nothing had been done by the central executive in the matter. In the Edinburgh and Leith Division the postal vote had certainly not been taken, and that Division felt that, if a fund were started without being fully assured of the support of a considerable bulk of opinion in the profession, it would be courting failure and disaster. There was a sharp line of division in the Council with regard to the administration of the fund. The division of opinion in the Council only reflected the division throughout the country. If a fund were established on trade union lines there would be a large number of resignations from the Association.

Dr. Fothergill said that on this question the Representatives had to act as statesmen on behalf of their professional brethren. Time would bring troubles, and when those arose the Association would be expected to act. There was no need to send the matter back to the Council. It was the Association's duty to start the fund. The fact that no one could see into the future was no reason for hesitating to take the step.

Dr. G. E. Hasip (London) said his Division opposed the immediate inauguration of the fund. Speaking as a member of the Council, he thought the question had not been sufficiently discussed by that body. The Council recommended that the fund should be collected and administered by a body separate from the British Medical Association. The administration of the fund would decide whether it was to be a success or failure, and, unless that point were settled, it would be useless to proceed. The proposal was to ask for subscriptions to a fund to be administered by a committee outside the Association. That, he contended, was impracticable; the greater the success of the outside fund, the stronger would be its position if it took up a course of action in opposition to the Association. The meeting should thoroughly consider the question before going further, and the only way to do so was to send it back to the Council. He admitted there might be a fight meanwhile, but that would affect members who were working the Insurance Act, and surely they would be alive to their own interests and be ready for it. He believed in having a strong fund, but money was not the only thing that would win a battle. The profession could win any battle simply by being united.

Dr. R. M. Beaton (Council) recalled his chairmanship of the last Special Fund Committee, whose finding was rejected at Brighton. The Association needed a special fund. The reasons advanced to the contrary were nearly always the same. The Representative Meeting was told that it did not know the mind of the Association, but if it waited until it got the mind of the last member the fund would never be started. The Council had had the matter before it time after time, and if it was returned to the Council again the Association would be in the same position next year. He agreed that money did not make the victory or the defeat. That lay with the men themselves, and if the individuals weakened it was no use saying that the leaders failed them. In the insurance fight the profession would have been successful if the individual practitioners had supported their leaders. They did not. The profession might have a great deal of money in the bank, but if the soldiers ran away the leaders would be defeated. The recommendation of Council that the fund should be administered by a body separate from the British Medical Association should be thoroughly debated. It was a momentous question, and if it was to be carried he would not vote for the special fund. The special fund should be administered by those who raised it, and not by an outside body, but he urged the members to put that matter out of their minds at present, and to consider the simple question of the inauguration of the fund.

Dr. J. R. Ratcliffe (Birmingham Central) said his Division opposed very strongly the postponement of the formation of the fund. Emergencies arose suddenly, and any day the profession might be in a position which would find it unprepared. He urged the formation of the fund on the ground of pure policy, for if the fight came the profession would have to meet attempts to reduce its remuneration. Members who were on Insurance Committees knew the strength of the desire of representatives of approved societies in that direction. Another claim the profession would have to meet was the desire of the approved societies to get control of the administration of medical benefit, which would very probably lead to a reduction in the amount to be paid to the doctors. The fund should be established so that the profession should be in the same position as the approved societies, which had huge funds they could use for fighting purposes. Union was a great thing in an army, but it was of no avail if the soldiers had no bullets. He urged them to have union and bullets. It was well known to the friendly societies that the profession had no fund; if it were raised it would have a moral effect on their opponents.

Dr. J. Ratcliff-Gaylard (Birkenhead) supported the proposal to form a fund, and urged that the meeting was not at present concerned with the question of how it should be administered. The plain issue was whether a fund was necessary. He was certain there was a consensus of opinion as to the necessity for a fund. Many practitioners were perfectly willing to be united with their fellows, but could not afford to be; not only unity, but the sinews of war, were needed. Their own welfare and the future welfare of the profession lay in the establishment of the fund at once.

Dr. J. T. Macnamara (Lewisham) was instructed to oppose the immediate establishment of the fund. He was a trade unionist in principle and a member of the National Medical Guild and the National Medical Union, but he contended it was quite possible to be loyal to either body and not be disloyal to the Association. It was inadvisable in the interest of unity to proceed with the establishment of a special fund. Having approved the establishment of the fund, the meeting would have to consider into whose hands it should entrust the money, and then disunion would spread in the Association. He asked the meeting to postpone the establishment of the fund.

Mr. E. B. Turner (Deputy Chairman of Representative Meetings) thought the meeting should decide the matter of the establishment of the fund once and for all. The sands were running out, and the half-crown which had been budgeted for came to an end next year, when the whole administration of the Act and the remuneration to the profession would come under review. Whatever might happen in the political world in the future, the profession would be between the upper and the nether millstone. Its members were not in numbers sufficient to be considered as a voting power in the State, and they would be used by either political party for its own ends. If the profession was prepared, it might be able to hold its own, or even get better terms. He was certain that unless there was money behind the profession nothing would be accomplished. It was not only those who were working under the Act who would be affected, but every member of the profession more or less. The fund should not be

raised by a part of the profession only; it must be the work of the whole.

Mr. C. G. Meade (York) said he had been given by his Division an absolutely free hand on everything that came before the meeting. The profession would not only want a fund, but the Bank of England at its back, because doctors earning £2,000 would have to be compensated as well as those earning £300. There must be a fund, but now was not the time to raise it, because of the apathy in most Divisions. Interest should be stirred up in the Divisions on the question.

The meeting agreed that the question be now put, and the amendment for postponement was negatived.

Dr. J. S. Darling (Portadown), continuing the debate on the Council's recommendation, said that the idea that the fund was to be what was commonly called a "strike fund" was so preposterous that it must be dismissed at once. The profession wanted a strong fund for propaganda to bring about union, and for kindred objects.

In reply to a question as to how much money was promised to the Defence Fund, and how much was actually received, the Chairman said that approximately £140,000 was guaranteed, and about 20 per cent. called up. The 20 per cent. represented £28,000, and about £20,000 was actually received.

The Chairman of Council assured the meeting that the work done in the way of compensating men for loss in carrying out the policy of the Association had been gratefully acknowledged by the recipients. He had no doubt as to the necessity for the fund if the interests of the profession were to be protected against the encroachments of either the friendly societies or the Government. Every doctor who had the interest of the profession at heart must put his shoulder to the wheel if the fund was to be of any use. He agreed with Dr. Darling that the doctors could never hope to carry out anything like a strike in the ordinary sense. A strike by the medical profession was an unthinkable thing, but that did not alter the fact that it might be necessary for them to combine against suggested legislation, and to refuse to sign, for instance, a proposed agreement. For those purposes a fund was required; it could not be accumulated in a few days, and in spite of the present apathy of the profession—a very deplorable circumstance—the only way the fund could be made effective was to begin now. Possibly the beginning would be small, but he hoped there would be rapid accretions, so that the fund would ultimately be one on which they could depend.

Dr. Buttar, replying to the discussion, urged that a start should be made, however small it might be.

The motion—

That immediate steps be taken to inaugurate a fund—

was then carried by a large majority, and the announcement of the result was received with applause.

The Suggested Objects of the Fund.

In moving the next recommendation of Council:

That the object of the fund shall be to protect the interests of the medical profession (*a*) by the formation of a reserve and (*b*) by doing such work as the British Medical Association is precluded by its constitution from undertaking,

Dr. Buttar said that the present work of the Association could be carried on by means of its ordinary subscriptions. The proposed fund would have nothing to do with its ordinary work; it was to be created to meet future emergencies. Most important was it that the fund should be in the nature of a reserve; that was its bedrock principle. Further, there was certain work which the constitution of the British Medical Association precluded it from doing, and the Special Fund Committee considered that the reserve fund would be valuable in that direction. Amongst these matters were operations which must be described as in restraint of trade. It had been said that under no conditions whatever could the medical profession strike, but it would be able to strike with regard to certain conditions. To say that the medical profession would "down tools" and attend no patients was absurd, but it could place itself in a position to refuse to sign contracts repugnant to it. If the Association tried to lead the profession in a refusal to sign further contracts under the Insurance Act it would be acting in restraint of trade, and would be prevented by its Articles of Association from carrying out such a policy. Therefore, in regard to the Insurance Act, it might be that action could be taken by other means which the Association was unable to use. There were many other things which the Articles and Memorandum precluded the Association from doing, and for which a special fund might be used.

Dr. J. Wishart Kerr (Glasgow Eastern) moved an amendment to omit the last part of the recommendation, so that it would read:

That the object of the fund shall be to protect the interests of the medical profession.

He thought it inadvisable to say precisely what the money raised was to be used for, as the effect might be to limit its availability.

Dr. J. D. Robson (Dumfries and Galloway) seconded.

Dr. Buttar agreed that the meeting should not be too definite as to the uses of a fund, but should keep it as a reserve. Without the last words, "by the formation of a reserve," the amendment would leave matters too indefinite.

By a majority the motion was carried in the following form:

That the fundamental object of the fund shall be to protect the interests of the medical profession in the United Kingdom by the formation of a reserve.

Dr. Fothergill asked the Solicitor for what purpose it would be possible to draw on the reserve fund after it had been constituted as such.

The Solicitor said that the phrase "reserve fund," used in a hard and concrete sense, had a certain interpretation placed upon it, but in this resolution he accepted its use merely as an indication of what was in the mind of the meeting. If it was to be argued and maintained hereafter that because the resolution had been passed this was to be a reserve fund which could only be used for one purpose, it would be a dangerous term to employ. He did not think it was intended in that sense, and if, as Solicitor, he was called upon to give a ruling, he would consider what was in the mind of the meeting at the time it passed the motion. Dr. Fothergill had put a question which it was practically impossible for him to answer. Until the meeting came to framing the rules and regulations in connexion with the trust, or whatever might be formed, it would be misleading for him to give a specific answer to the question. He believed he was rightly interpreting their minds when he said that there was to be placed upon the word "reserve" a certain latitude of construction.

Dr. Wallace Henry (Leicester) asked if the addition of the words "to be used at the discretion of the Committee" would not remove any technical objection which might be taken later on.

The Solicitor said that would be a somewhat dangerous thing to do. The suggestion he would make was that the motion should merely state that the fund was to protect the interests of the profession.

Dr. R. M. Beaton said the Articles of Association stated that one of the objects of the British Medical Association was "to promote and maintain the honour and interests of the medical profession." He moved those words as an amendment.

The amendment was lost.

Dr. J. R. Ratcliffe (Birmingham Central) proposed the introduction of the words "in the United Kingdom" after the word "profession," on the ground that overseas members would not be concerned in matters relative to the Special Fund.

Dr. Johnson Smyth (Bournemouth) seconded, and it was agreed to.

The recommendation of Council was then carried in the following amended form:

That the fundamental object of the fund shall be the protection of the interests of the medical profession in the United Kingdom by the formation of a reserve.

Administration of the Fund.

Dr. Buttar then moved the next recommendation of Council:

That the fund shall be collected and administered by a body separate from the British Medical Association.

He explained that the recommendation followed the lines of the report of the Committee which considered this question under the chairmanship of Dr. Beaton.

Dr. A. Fulton (Nottingham) moved, and Dr. C. H. Milburn (East York) seconded, an amendment that the following words be added:

But composed exclusively of members of the Association.

Dr. Haslip (Westminster) said that supposing the members of the Association who formed the administrators of the fund decided that it should be carried out on trade union lines, and then acted in a manner against the interest of the Association, what would be the position of the Association towards those members?

The Chairman said that the position would be governed and determined entirely by what were the rules or exact form of trust laid down by the governing body—points upon which the meeting had yet to express an opinion.

Dr. Haslip suggested that before going further into details the meeting should consider by what kind of body the fund should be administered, and that a later recommendation of Council should now be considered, namely:

That the collection and administration of the Special Fund shall be placed in the hands of a trade union.

The meeting agreed to follow this course.

At the instance of Dr. Johnson Smyth (Bournemouth) a question was addressed to the Solicitor as to whether, supposing a body composed of and controlled by members of the British Medical Association acted in restraint of trade, would that be considered as action by the British Medical Association itself and therefore lead to confiscation of the Special Fund?

The Solicitor said that he would not content himself by answering with a barren negative. There seemed to him to be a certain confusion in the minds of the Representatives as to what they were doing. The British Medical Association, with its present constitution, had not the power to do those acts for which the Special Fund would be required. It was desired and intended that a special fund should be raised for purposes which had been referred to as a war fund, a war chest, and a reserve fund for fighting purposes. They must not mix it up with the finances of the British Medical Association at all; although the fund might be raised under the aegis of the Association, it must be kept absolutely separate and distinct—apart from the funds of the British Medical Association. It must have a separate existence and be a separate entity to be totally and entirely apart from the British Medical Association. It might be a coincidence, an accident of circumstances, or whatever other term they liked to apply to it, but those who were in the position of controlling or governing the fund would be members of the Association. That was merely a qualification entitling them to be on the directorate. It did not link that fund up to the Association as being part of the Association. The perils in contemplation in the minds of the gentlemen who asked the question did not, in his opinion, exist.

The Trade Union Question.

Dr. Buttar then, in accordance with the desire expressed by the meeting, moved the recommendation:

That the collection and administration of the Special Fund shall be placed in the hands of a trade union.

He reminded the meeting that it had decided that the fund was to be a reserve to be used as occasion arose as a fighting fund. It would probably be agreed that in any fight which might arise it would be necessary to act in what was called "restraint of trade." If the fund was used in that manner certain dangers would be involved against which it must be protected by every available means. Acts had been passed which conferred immunity on funds in certain respects and in regard to what were called "torts." These Acts were known as the Trade Disputes Acts, and they applied to trade unions. The Council had examined carefully all the means proposed to protect the fund, and it recommended that the most effective way was by means of a trade union. There were only three types of bodies that could deal with the fund—the British Medical Association, some form of trust, or a trade union. The Association was completely ruled out. The next possibility—the trust—had been very thoroughly gone into. Mr. Colquhoun Dill's opinion was definitely that a trust was not the proper method of dealing with the matter. A trade union was not one merely because it was registered (there were such bodies as unregistered trade unions), and if a trust were employed in restraint of trade then it became an unregistered trade union, which had not the same protection at law as a registered trade union. How was a trust deed to be framed so as to protect the fund? The prime object of the fund was to compensate practitioners for any loss they might sustain in carrying out the declared policy of the Association, and he did not see how that could be done except by a trade union. One of the objects of the fund was that it should be used quickly for the defence of the profession. The only way of securing absolute immunity for the fund was by a trade union.

Dr. Tennyson Smith (Bromley), on behalf of his Division, moved:

That the Chairman of Council be requested to explain what special circumstances have arisen since the Annual Representative Meeting, 1913, to warrant the present "Majority Report" (on the trade union question) being put forward as the suggested policy of the Association.

The Bromley Division could not understand the reason for the vacillation of the Council in recommending one year that the Association should have nothing to do with a trade union, and then in the following year recommending it to adopt the trade union principle. He believed that when this subject was discussed in the Council only twenty-one members were present. Of that number, eleven voted for the recommendation now made, eight voted against it, and two did not vote. He thought on a question of such vital importance as this a majority of three could not be said to represent the opinion of the profession.

The Chairman of Council said that the statement made by Dr. Tennyson Smith as to the constitution of the Council at the time the decision was reached was perfectly correct. It was impossible for him to make any statement as to the mind of the Council in regard to the effect its recommendation would have on the various Divisions. All he could explain was the effect which the recommendation had on his own mind. Frankly, it left him astonished.

The meeting next considered the following amendment, proposed by Dr. Fothergill (Brighton), as an alternative to the trade union proposal:

That the collection and administration of the Central Fund shall be placed in the hands of a trust.

Dr. Fothergill doubted whether the British Medical Association could co-operate with a trade union. If a trade union were started, the two bodies, he believed, would tend to become rivals. Which body did the Representatives as members of the Association consider should be paramount? He hoped they would answer, "The British Medical Association." The question as to how the British Medical Association could keep control of the fund if it was under a trust had been raised. How had the Association kept control of the defence fund? Obviously by members of the Council looking after the Defence Fund in their private capacity, and appointing a committee to act on their behalf. The Association would lose its hold upon public opinion if it were a trade union. They wanted one united profession, one Association for the profession, and one policy for the profession.

Dr. Napier Jones (Reading) said that two other courses than those already suggested were open to the Association. One was the adoption of the political party method of a secret fund, but probably the Association was too democratic to accept that. The other method was that of a company. He was sorry that the committee which went into the question did not put before the constituencies the advantages of a company as compared with the advantages of a trade union. Whichever method was adopted the fund would not be absolutely safeguarded. A method which would bring Nemesis upon them was to tar themselves with the title of trade unionists.

Dr. Haslip said his Division was dead against the trade union proposal. It had failed to appreciate any of the arguments brought forward up to the present. He would tell Dr. Buttar and those supporting him that a trade union would be absolutely useless for London, at any rate until one opinion prevailed in the area in regard to the Insurance Act. If a trade union method were approved, the Association would have to come under the Trades Disputes Acts; members of the profession did not consider themselves the employees of their patients. The position was that the Association was being asked to form an

association in direct opposition to itself. If a trade union were decided upon, the JOURNAL could not assist it, nor could all the machinery which had taken years to build up be placed at the disposal of a trade union. His objection to trade unionism was that it killed individualism. Though through a trade union the profession might get a minimum remuneration, it might also get a maximum..

Mr. E. B. TURNER (Deputy Chairman of Representative Meetings) thought the one thing the meeting had at heart was the success of the fund. He would not speak with regard to the success of the fund among the Representatives themselves,who might be called the leaders of the Association. Their position would make it a question of honour on their part to support the fund, but he would look at it from the point of view of the medical "man in the street," who might ask whether the money he subscribed would be in danger or not. Personally he had come to the conclusion that the money would not be safe unless it were protected by a trade union. When first he had anything to do with the Association—three years ago—he was as strong an opponent of trade unions and their methods as any one could be, but from the moment he was elected to a committee of the Association he commenced to participate in and carry on trade union action, and if he did a thing he did not mind being called by the name of those persons who did it. The very fact that the Association fought against the Insurance Act in its committees, in the Defence Fund, and in the common pledges made him feel that now they were straining at a gnat if they did not call themselves what they in fact were. Trade unions had power to raise a levy for direct representation in Parliament, and one of the most important things members could do was to send to Parliament some one well versed in industrial practice to voice there the needs of the profession. He wanted to make it perfectly clear that he and those who thought with him believed that by what they suggested they would be helping the Association, and that if the fund were properly established it would be for the benefit of every one who held a medical degree.

Dr. BEATON quoted Mr. Dill's opinion that it was competent for the Association or the Council or the officials to act as trustees of a separate fund raised by voluntary contributions from the members of the British Medical Association and applicable for their benefit, the fund being kept wholly distinct from the funds of the Association, and bearing its own expenses of administration. Mr. Dill said the money would then be as safe as in a trade union. Trade union funds might be safe, but there were considerable difficulties, and he asked the meeting to consider seriously what the man in the street would think of the medical profession if it became a trade union. Mr. Turner said they should act as trade unionists. Did that mean they should have peaceful picketing, the throwing of bricks, and all the rest of it? As a matter of fact it was impossible for doctors to be trade unionists. All their training was individualistic, and they would find it difficult to submit to trade union discipline.

The CHAIRMAN OF COUNCIL thought this was one of the most serious debates in which members of the Association had ever taken part. The question was as between a trust fund and a fund to be administered by a trade union. The greatest argument he had heard on behalf of the trade union was that it would secure the fund. He put it to the meeting that that was practically a phantom idea; at any rate the difference between the security of the fund under a trade union scheme and under a trust or other scheme was so thin as to be a phantom. The opinion of a distinguished member of the Bar had, on his instructions as Chairman of Council, been obtained with regard to the relation between a trade union and a trust. Put in simple language, this was that any incorporated body which did any act which could be construed by the courts as interfering with trade was practically a trade union, whether it was registered or not, and its funds would be protected just as if it were a registered trade union. If that were the case, why should the members trouble to register themselves as a trade union? They could establish funds and carry out schemes in exactly the same way as a trade union. It was also said that if a trade union were formed, it would run on parallel lines to and be correlated with the British Medical Association, but he asked how that was possible. To show what was the ultimate object of the trade union supporters, Dr. Macdonald pointed to a proposal on the agenda. The proposition was that the British Medical Association should surrender all the work it had been doing in defence of the profession in the past and become simply a scientific body. Were they prepared to extinguish themselves, because that was what it really amounted to? There would be no further need for the Representative Meeting, the Insurance Act Committee, the Medico-Political Committee, or the Ethical Committee. He wanted every Representative who was a loyal member of the Association to recognize the ultimate aim of those who wished the fund to be governed by means of a trade union. Some of them had gone through very strenuous work during the past ten or twelve years to build the Association up as an effective power. Were they, he asked, going to destroy all that had been done hitherto? He appealed to them to abandon the idea of making themselves into a trade union. He thought it was much better that they should establish a fund under a trust or some other association, because then the British Medical Association could retain some power of control. This was one of the most serious positions in which the Association had found itself, and he hoped when voting the Representatives would consider carefully what their votes involved.

Dr. MAJOR GREENWOOD asked if the funds of an unregistered trade union were as safe as those of a registered trade union under the Trades Disputes Act.

The SOLICITOR said he thought the meeting had got a little confused in its mind as to what a trade union was. He wanted them clearly to understand that it was not registration that made it a trade union, but the constitution, the powers extended to it, and the primary objects with which it was invested and which it had to discharge. In regard to the case of "Dallimore *v.* Williams," it was important to point out that that case had not been decided on the question of a registered trade union. The case was really decided under Section IV of the Trades Disputes Act, the principal question which arose being whether a bona fide trade dispute was prevailing at the time. The decision in that case had a certain bearing upon the question addressed to him by Dr. Major Greenwood. He (the Solicitor) was of opinion—and that opinion was fortified by opinions which were of weight and authority, and were derived from greater experience than his own—that an unregistered body which exercised the powers of a trade union could plead Section IV of the Trades Disputes Act, and could get protection under it.

The Brighton amendment in favour of a trust was then carried by a large majority, and the motion in favour of a trade union accordingly fell.

On the amendment as a substantive motion several further amendments were introduced, and it was finally carried by the requisite two-thirds majority in the following form:

> That the collection and administration of the Special Fund shall be placed in the hands of a trust or association, or other form of organization not being a registered trade union.

TRUST FUND COMMITTEE.

On the motion of Dr. FOTHERGILL, the following rider was adopted:

> That this Representative Meeting do elect six of its number, not members of the Council, who, together with six members of the Council elected by the Council, shall form a provisional committee to establish the Trust Fund and shall hold office either until the fund is completely inaugurated or until the next Annual Representative Meeting, whichever shall first occur;

and motions referring to the constitution and administration of the fund were referred to it.

Dr. MILBURN proposed that the meeting should decide the point which had already been raised on the first of the recommendations of Council, whether the fund was to be administered by members of the Association only or by members and non-members. He objected to its being administered by non-members. He moved accordingly, and Dr. MAJOR GREENWOOD seconded.

Dr. BUTTAR thought the Committee should not be tied but left to thresh the thing out, and present a scheme to the Representative Meeting.

Dr. WALLACE HENRY, while agreeing that it would be undesirable to fetter the Committee to the extent proposed, suggested that nine-tenths of the Committee should be composed of members of the Association. It was possible

that a considerable amount of money might be received from practitioners who were not members, and the Association would be more likely to receive contributions from outsiders if they had a small representation on the Committee.

Dr. B. G. MORISON said that the fittest persons to administer funds in the hands of the Association were its members.

The motion was carried in the following form:

That the fund shall be collected and administered by a body separate from the British Medical Association, composed exclusively of members of the Association.

SCIENTIFIC WORK OF THE ASSOCIATION.

Dr. NOY SCOTT (Plymouth and West Cornwall), in view of the meeting's decision, withdrew the following rider:

That it is desirable for the future that the British Medical Association should confine its policy to promoting the scientific and social welfare of the medical profession by leaving all medico-political work to be done by some other body formed for such purpose and registered as a trade union.

He desired to place on record the expression of the Division's very strong opinion that the scientific work of the Association was suffering owing to the attention which was being devoted to the medico-political part of the Association's work.

NATIONAL MEDICAL GUILD.

Mr. GARSTANG (Mid-Cheshire) withdrew the following rider, in view of all that had happened since it was drafted:

That this Representative Meeting is of opinion that the members of the British Medical Association should be officially advised to become members of the National Medical Guild, and that the Council be instructed to give effect to this opinion.

FUTURE MEDICO-POLITICAL POSITION OF THE ASSOCIATION.

The SOLICITOR dealt with a motion sent in by Dr. Cuthbertson Walker, that the Annual Representative Meeting, 1914, instruct the Council of the Association to take the opinion of counsel on the legal position and powers of the Association with respect to medico-political work consequent on the decision as to the formation of a trust taken in conjunction with the Memorandum of Association, and report to the Divisions. The Solicitor said he was perplexed to know how this question arose. If counsel raised any objection to the Association continuing its medical-political work, the objection would certainly be very embarrassing. So far as he was concerned, he might say quite candidly that he did not feel that he needed the opinion of counsel at all, because there was nothing in the resolutions which had been passed to create that necessity.

Dr. J. CUTHBERTSON WALKER said he would not press the question, but he merely wished to put it forward because of the feeling which existed amongst many members in the North of England, who might be led to reconsider their relations with the Association.

MEDICAL INSPECTION AND TREATMENT OF SCHOOL CHILDREN.

Mr. GARSTANG, Chairman of the Medico-Political Committee, said that before submitting a memorandum embodying a new policy of the Association in regard to medical inspection and treatment of school children, it would be necessary to ask the Representative Body to rescind all previous decisions having reference to any question of the medical inspection and treatment of school children.

After some discussion and explanations from the Chair, the motion was agreed to.

Mr. GARSTANG then moved the recommendation of Council embodying the proposed policy of the Association on this matter (SUPPLEMENT, May 2nd, p. 281). He said there had been meetings between representatives of the Medico-Political Committee and representatives of the school medical officers before these arrangements were proposed.

Dr. W. H. F. OXLEY (Tower Hamlets) proposed as an amendment to refer back the memorandum to the Council for further consideration. In London the profession, after hard fighting, had obtained a position which was superior to that laid down by the memorandum. In London treatment was given wholly by general medical practitioners. The memorandum seemed in one part to lay it down that the proper way to give treatment was through the general medical practitioner, but in another that if the local Education Committee were not satisfied that that way was the best way the Association would agree. That was a weak position to take up. He criticized the proposed composition of the committee, which was to administer a centre, as members of the Education Committee were to be in the majority. In London the profession had obtained the position that the committee managing the treatment centre was composed solely of medical men practising in the area. If the report was adopted as the policy of the Association, while it might be satisfactory in the country, it would compromise the position in London.

Dr. B. G. MORISON (St. Pancras), in seconding the amendment, said that in all the areas in London the work was done by general practitioners, and no difficulty had been experienced. The profession in London did not want the specialist or the whole-time doctor introduced, as the general practitioner could do the work well.

Dr. BEATON said that there were about twenty centres in London all worked by general practitioners. What was proposed now for London was something worse, and he urged that the matter should be referred back.

Dr. WALLACE HENRY said that it was regrettable that the position in London had not been put more clearly before the Committee. If a clause to exempt London could be inserted it would be desirable. He urged strongly upon the meeting that it should allow the memorandum to be adopted for provincial areas. Outside London education authorities would not at present sanction schemes of the same character as existed in London, and the Board of Education was stiffening its requirements.

Dr. RATCLIFFE (Birmingham Central) said that it was not possible in all large centres to get the conditions which prevailed in London, but he agreed that it would not be advisable to disturb these arrangements.

Mr. GARSTANG was prepared to agree that London might be excepted.

Dr. GOODBODY (Marylebone) said the difficulty appeared to be that the proposal to exclude London might tempt the London County Council to reduce the London terms to the level of those in the country.

Mr. GARSTANG said that if the whole memorandum were referred back the Medico-Political Committee would be put in an awkward position, because the Association would be asking it to insist on arrangements which it knew could not be carried out in certain districts.

The amendment to refer the whole memorandum back to the Council for further consideration was defeated.

Dr. OXLEY moved that the memorandum should not apply to London.

On the suggestion of the CHAIRMAN, the motion before the meeting was amended and adopted with a rider in the following form:

That the memorandum submitted by the Council be approved as the minimum policy of the Association in the matter of medical inspection and treatment of school children.

Rider:

That the support of the Association should be given to all schemes which local Divisions consider are superior to that in the memorandum.

Mr. GARSTANG opposed the following amendment by Plymouth:

That assistant whole-time medical officers whose duties include school medical work shall commence at a salary of not less than £350 per annum, rising by annual increments of £25 to a maximum of not less than £500.

The amount, he said, had been £250, and the Committee came to the conclusion that it would be unwise to jump to £350 at one step.

The amendment was lost.

Dr. TENNYSON SMITH (Bromley) withdrew an amendment to delete from the report of the Council a model scheme for school treatment centres (SUPPLEMENT, May 2nd, p. 314). Since his Division had discussed this subject, a similar scheme had come into existence in Leicester and had been working very well, so that it was possible that similar schemes might be approved by the Board of Education in other areas.

ELECTION OF CHAIRMAN AND DEPUTY CHAIRMAN.

The CHAIRMAN announced that he and Mr. Turner had been re-elected to the Chairmanship and Deputy-Chairmanship of the Representative Meetings respectively. The announcement was received with applause.

The meeting adjourned at 6.30 p.m.

Monday, July 27th.

THE proceedings of the Representative Meetings were continued on Monday, July 27th, at 10 a.m. Mr. T. JENNER VERRALL (Chairman of Representative Meetings) presided. The minutes of Saturday were corrected and confirmed.

ELECTION OF MEMBERS OF COUNCIL.

The CHAIRMAN announced that the result of the election of four members of Council by the Representative Body as a whole, which had been carried out on the principle of the transferable vote, was as follows: Mr. E. B. Turner (London), Dr. W. J. Greer (Newport, Mon.), Sir James Barr (Liverpool), and Dr. Wallace Henry (Leicester).

GROUPING OF BRANCHES OUTSIDE UNITED KINGDOM FOR 1915–16.

On the motion of the CHAIRMAN of the Organization Committee, the following recommendations of Council (SUPPLEMENT, June 27th, p. 474) were adopted:

That the Branches outside the United Kingdom be grouped for the election of seven members of Council for the year 1915–16 in the same way as for the year 1914–15, except that Ceylon be grouped with the Indian Branches instead of with Hong Kong and China and Malaya, and that the new Orange Free State, Natal Coastal, Natal Inland, Pretoria, and Witwatersrand Branches be incorporated in the group containing the other African Branches.

That the Hong Kong and China and Malaya Branches form a separate group for the election of a member of Council, 1915–16, as was the case in 1913–14.

Dr. J. MITFORD ATKINSON (Hong Kong and China and Malaya Branches) thanked the meeting for granting this facility.

BRANCHES OUTSIDE THE UNITED KINGDOM.

On the motion of the CHAIRMAN OF COUNCIL (in the absence of the Chairman of the Dominions Committee), the Annual Report of the Council on this subject (SUPPLEMENT, June 27th, p. 481) was approved.

SOUTH AFRICAN MEDICAL CONGRESS.

On the following rider by Border (South Africa) Branch,

That the Council of the Association send a representative to attend a South African Medical Congress,

Dr. W. T. HAYWARD said that as an Australian, who had the advantage of knowing the benefits Australia had received from the visit of a representative of the Association, he wished to say a word in favour of the proposal to give the members in their fellow Dominion of South Africa the same advantage as Australia had recently enjoyed. He might also say that if it were possible to obtain the services of Dr. Macdonald he felt sure that the good work that he did in Australia would be repeated in South Africa. Dr. Macdonald's visit had greatly cemented the affection between the Branches in Australia and the parent Association, and he was certain the same thing would happen in South Africa.

Dr. CRAGO (Sydney) also added his testimony of appreciation to the work done in Australia by the Chairman of Council.

Dr. MACDONALD thanked Dr. Hayward and Dr. Crago, and said that to these two gentlemen, perhaps more than any one else, was due the success of his Australian tour. He believed that his Australian visit had been of great benefit to the Association. It was not a personal question at all, but a visit from a man who had done something in connexion with the central work of the Association to the Branches of the dominions overseas was appreciated by them, and he thought that a considerable accession of strength both to the dominions and the home country would result from the visit.

The rider was adopted.

NATIONAL INSURANCE BUSINESS.

The Representative Meeting proceeded to consider national insurance business.

Dr. MACDONALD, as Chairman of the Insurance Act Committee, moved that the Representative Body approve the Model Scheme for the Treatment of Tuberculosis, published in the SUPPLEMENT of May 2nd, p. 316.

On the motion of Mr. E. J. DOMVILLE, Chairman of the Public Health Committee, certain verbal amendments proposed by that Committtee were agreed to.

Dr. C. E. S. FLEMMING (Wilts) moved the insertion of the words in italics in the following clause:

That; *if possible*, no patient shall be treated at the dispensary except on the recommendation of a medical practitioner.

The amendment, he said, was intended to meet the case of very poor persons, uninsured, who, if treated by a general practitioner, could not pay. It was felt that absolute prohibition of any treatment by the tuberculosis officer would make the working of this scheme impracticable.

The amendment was carried.

RELATIONS WITH VOLUNTARY INSTITUTIONS.

Dr. L. T. GILES (Scarborough) moved an amendment intended to relieve the members of a medical staff of a voluntary institution of the onus of having to settle whether they would take the money for their personal benefit or not. If money were paid for the services of the staff it was only fair that it should be their own. But at one hospital the money might be devoted to the payment of the staff and in another it might be handed to the board for use in the hospital. But differences of opinion might arise, and ill-feeling might be created under these proposals between neighbouring hospitals.

Dr. T. H. W. ALEXANDER (Banff, Elgin, and Nairn), who seconded, said the matter should be left to the local hospitals, as in different areas different conditions existed. It would be better to have the matter settled locally than by a general resolution.

Dr. FOTHERGILL said that the Association's policy was that if the State paid any voluntary institution the medical staff must be paid. The amount of money the State would give to a hospital, either directly or indirectly, in this matter was infinitesimal when compared with the services rendered by the staffs. Let the Representatives look ahead to the developments of the future as to hospitals.

Dr. G. PARKER (Bristol) said he was instructed by his Division to oppose the payment of hospital staffs, as it was felt that there were serious difficulties in the way of honorary staffs of hospitals accepting such payments; it would place them in an awkward position in regard to practitioners in the town. Members of hospital staffs thought also that it would place them in a difficult position with the committees of their institutions, and that there would be difficulties in keeping the accounts of the dispensary separate from those of the hospital.

Dr. HASLIP (Westminster) said this was a channel through which a State medical service might be introduced. Honorary staffs felt that if they accepted money from the Government it would want a voice in the management of the hospitals. No Government would give money without having some control, and the Representative Meeting must face the fact that the Government meant to have control of the hospitals in the future. Who asked the Government to interfere in the health of the nation? The medical profession did so by pointing out to the Government that people suffering from certain diseases should be isolated from others. One of the large general hospitals in London was seriously considering whether it should not in future become entirely a paying hospital, because it would then not be liable to interference by the Government.

The CHAIRMAN OF COUNCIL called attention to the fact that the Representative Meeting had definitely laid down the policy of the Association to be that medical practitioners should not give gratuitous aid to those who were assisted by the State.

Mr. LARKIN (Liverpool) admitted that as a member of a hospital staff he would be placed in an awkward position with his lay committee if the resolution were passed, but that was not a reason why it should be rejected. The Representatives must stick to the principle that payment for medical services must go to the profession. It must not be supposed that hospital staffs only were affected, as

the matter intimately concerned every member of the profession.

Dr. F. L. POCHIN (Oldham) said his Division objected to the principle of payment, on the ground that, if and when it was extended, surgeons on hospital staffs would have to do an operation for appendicitis for about ten shillings, as no more would be available, and the general public would ask why doctors outside the hospital could not do the operation for the same fee.

Mr. J. FURNEAUX JORDAN (Birmingham Central), speaking from practical experience of the question as an honorary surgeon of a hospital, stated that for every case treated in the institution a sum of five guineas was sent by the city council ostensibly for the medical staff. This, however, the staff did not accept, handing it over to the general funds of the hospital. Honorary surgeons in a hospital should not accept payment for services when the hospital was a charitable institution supported by voluntary contributions. When, however, the State paid, the matter was entirely different, and he did not see why the staffs of hospitals should be put on a different footing to other members of the profession.

Dr. A. C. FARQUHARSON (Bishop Auckland and Durham) hoped the Representative Meeting would recognize the necessity of at least some payment being made by the governing authority to the medical staff of a hospital. In the Durham area a flat rate of 30s. a week for insured and uninsured alike had been agreed with the local hospitals for maintenance. The county council estimated that on this basis cases sent into hospitals would involve an expenditure of about £3,000 a year, but it was to be borne in mind that that money did not come from the State. It had been suggested more than once that it was the State which was doing this, but in his view that was not the case. There was a vast difference between the State and the local or municipal authority, and it was the latter which provided the money out of the county council funds, subject, of course, to the approval of the Local Government Board. It would be much better for the profession if it put forward a valid claim for at least one half of the money available for such purposes instead of leaving the disposal of it entirely in the hands of county councils to do with what they pleased.

Dr. J. R. RATCLIFFE (Birmingham Central) said that speaking as a general practitioner he felt there was a principle at stake as between the consultant and the general practitioner. It was not a fair thing that the consultants of hospitals should say that because they treated poor people in the hospitals who could not afford to pay they should get this money for others who were earning a fairly good wage and were contributing to the insurance funds. Then there was another principle at stake. There was no doubt that the doom of the voluntary hospital in the large industrial centres had been sounded. The hospitals were now finding that they had not the funds to meet the increased work which was being thrust upon them by the Insurance Act. Accordingly, they were asking the Government and the Insurance Committees that they should be paid for the treatment and maintenance of insured persons in the hospitals. If the money was to go to the hospitals for such maintenance and treatment, surely the medical practitioner had the right to a share of it.

Dr. S. W. SWINDELLS (North Lincoln) thought that before the Representative Meeting established a rule to demand payment it should be certain that the profession was able to live up to that position. Every resolution passed by the Representative Body which could not be lived up to involved great damage to the prestige of the profession.

The CHAIRMAN OF COUNCIL remarked that the situation was one which every medical practitioner in the country had to face sooner or later. If the medical profession did not establish the principle that it had a right to be paid for work done then the State would not recognize the claim. The claim must be asserted.

Dr. CRAWFORD TREASURE (Cardiff) said that his Division had gone through a big struggle of this kind recently, and had succeeded in establishing the principle that when the profession gave services to any governing body, whether municipal or State, these should be paid for.

Dr. C. E. ROBERTSON (Glasgow Southern) observed that it must be remembered that the governors of hospitals laid down rules under which the medical staffs acted.

The amendment, which took the form of deleting the following paragraph from the Model Scheme (SUPPLEMENT, May 2nd, p. 317):

> 15. From all moneys received by the governing body of a voluntary tuberculosis dispensary or voluntary medical institution in respect of the Tuberculosis Medical Service, a proportion to be agreed upon between the governing body and the medical staff should be placed to a special fund which shall be distributed as the medical staff shall decide,

was lost by a large majority.

Dr. NEVILLE CROWE (Worcester) moved an amendment to delete from paragraph 16 of the Model Scheme certain suggestions to medical staffs as to ways in which moneys received for treatment might be used for research work, for the purchase of books, or for benevolent or other purposes. He explained that his Division felt that any money so paid should go direct to the medical staff.

The amendment was lost.

Dr. L. J. PICTON (Stockport, etc.) proposed the following amendment:

> The chief tuberculosis officer should be a part-time or whole-time officer, and if a whole-time officer should receive not less than £500 per annum or £400 if resident, or if part-time officer a proportionate salary.

The Association's policy, he said, had been to retain for private practitioners as much as possible of their existing work. Various developments of the Insurance Act threatened to curtail that work. The tuberculosis scheme might be cited as an example, clinics were another, and various other State organizations were about to be established to do medical work. If the Association agreed that only whole-time officers should be employed the profession would give away the principles which it had been insisting upon.

Mr. LARKIN seconded.

Dr. FOTHERGILL objected that if part-time doctors in this matter were to be general practitioners they would be going to see other doctors' patients.

Dr. B. G. MORISON (St. Pancras and Islington) objected to a cast-iron rule, because the conditions varied in different districts. In some a part-time officer was useful, and in others a whole-time appointment would be preferable. From experience, the members of the profession in his part of London had come to the conclusion that the part-time man could do much in dealing with tuberculosis.

The CHAIRMAN, in reply to Mr. DOMVILLE, said it was true that this matter had been fully before the Divisions, and none had sent up dissentient amendments.

The amendment was lost.

Mr. H. P. COSTOBADIE (Bath) proposed an amendment to paragraph 2 of the Model Scheme, dealing with salaries of assistant tuberculosis officers, to the effect that the salary should be exclusive of travelling and other expenses, and this was agreed to.

Dr. L. J. PICTON moved an amendment to provide that part-time officers should be paid a proportionate salary to those of whole-time officers. The existing policy of the Association, he said, was that the chief tuberculosis officer should be a whole-time officer, and that domiciliary treatment should be done by the general practitioner. If the scheme were carried that policy would be reversed. Gradually encroachments were being made in one direction and another on the practice of the general practitioner, and the action the Association was asked to take proposed another encroachment. The Association must establish the right of the general practitioners to treat their own patients.

Mr. LARKIN said the doctors must balance their opportunities against their jealousies. Doctors should sink their jealousies for the sake of their opportunities.

The CHAIRMAN OF COUNCIL hoped the Representatives would understand clearly that they were being asked to approve the suggestion that the appointments of assistant tuberculosis officers should be whole-time. The difficulty arose in connexion with the determination of the insurance areas. Most of them were sufficiently large for a whole-time officer with one or two or more assistants, and the opinion of the Insurance Commissioners was that all those men, for various reasons, should be whole-time officers. If the work was to be carried out efficiently—as every medical practitioner wanted—in the opinion of the Council a whole-time officer would be the more effective. He would be more or less in the capacity of consultant, called in by the general practitioner.

Dr. PICTON, in reply, said his experience was that a sufficiently qualified junior practitioner could not be obtained. This clause of the Model Scheme was ineffective and impracticable, and further had the disadvantages that he had already outlined.

The amendment was lost.

Dr. PICTON moved to delete the clause of the Model Scheme as to dispensary treatment which provides:

> That the medical officer in charge of the dispensary should not be engaged in private practice.

The amendment was lost by a large majority.

Domiciliary Treatment.

In regard to the paragraph of the Scheme providing that for domiciliary treatment of uninsured persons a contract rate should be at the rate of £1 per quarter per patient,

Dr. T. C. ASKIN (South Suffolk) moved to substitute the sum of £1 10s.

Dr. W. DUNCAN (Chesterfield) said that Derbyshire was well advanced in this matter. The county had as many whole-time officers as any county of its size. It was treating uninsured persons. The local authority had already agreed that the treatment of uninsured persons should be paid for at the rate of £1 a month. Local representatives of the profession did not want to go back and ask that the payment should be at the rate of £1 a quarter.

The CHAIRMAN OF COUNCIL observed that possibly the appearance of the figure £1 was due to an error in calculation.

It was eventually agreed that the words, "shall be at the rate of not less than £1 per month per patient," should be introduced in place of the words, "shall be at the rate of £1 per quarter per patient."

Dr. C. E. S. FLEMMING (Trowbridge) moved that the form of report on domiciliary cases required by the Local Government Board was unsatisfactory and might with advantage be simplified and improved. The form, he said, was so elaborate that it defeated its own ends. It would be better that the Board should issue a much simpler form of report. He proposed, therefore, that the Council should make representations to that end, and this was agreed to.

Dr. B. G. MORISON (St. Pancras and Islington) moved the following rider:

> (*a*) That this Representative Meeting, while recognizing that there is a place for the co-operation of sanatoriums and hospitals in the treatment of tuberculosis, is strongly of opinion that the domiciliary treatment of tuberculous persons, as well as that carried out in local dispensaries, ought to be entrusted to the fullest possible extent to practitioners engaged in general practice.
>
> (*b*) That the voluntary hospitals to which medical schools are attached should have the opportunity of having all clinical material they need for teaching purposes.

He said the rider was an endeavour to leave the work as much as possible in the hands of the general practitioner.

Some discussion took place in regard to the words "as well as that carried out in local dispensaries," in the first clause of the rider, and Dr. MORISON, in reply to a question, said that he did not wish to raise the question of whole or part time services. All he said was that general practitioners should be eligible.

Dr. MORISON agreed to the deletion of the words, "as well as that carried out in local dispensaries," and the first portion (*a*) of the rider was agreed to.

With regard to (*b*) the CHAIRMAN OF COUNCIL asked who was going to supply the hospitals with material. If a dispensary was established in an area in which a teaching hospital was established, how could tuberculosis patients be persuaded to go to the hospital to be used as subjects for teaching?

It was agreed that the question raised by rider (*b*) should be referred to the Council.

The Model Scheme as amended was then approved by the requisite two-thirds majority.

CIRCULATION OF THE SCHEME TO INTERESTED BODIES.

On the motion of the CHAIRMAN of the Public Health Committee, the following rider was adopted:

> That the Model Scheme for the Treatment of Tuberculosis be circulated to municipal councils, Insurance Committees, and other bodies whom it might concern, with a view to obtaining their co-operation.

PROPOSED FEDERATION OF LOCAL MEDICAL AND PANEL COMMITTEES.

The Council in its supplementary report published in the SUPPLEMENT of June 27th, p. 478, made the following recommendations, which, it desired, should be understood to be purely tentative and conditional on the establishment of the proposed Federation, and upon the Representative Body being satisfied with its constitution, powers, objects, etc.:

Recommendations.

H.—That in the event of the proposed Federation of Local Medical and Panel Committees being formed, it be granted adequate representation on the Insurance Act Committee of the British Medical Association, and that the decision as to the exact amount of such representation be deferred until the policy of the Federation has been confirmed by the Local Medical and Panel Committees concerned.

I.—That steps be taken to secure that the necessary amendments be made in the Regulations of the Association to allow of two direct representatives being nominated by the proposed Federation of Local Medical and Panel Committees for election by the Representative Body on the Council of the British Medical Association, such representatives to be members of the Association.

J.—That provided other arrangements for co-operation are satisfactory the work of the proposed Federation and Association be carried out by the same staff on the premises of the Association; and that, subject to payment by the Federation on an agreed tariff, the Association place the following facilities at the disposal of the proposed Federation:

(i.) Office accommodation.
(ii.) Clerical assistance.
(iii.) Printing, etc.
(iv.) Space in the SUPPLEMENT of the BRITISH MEDICAL JOURNAL for reporting the proceedings of the Federation and its Branches.

K.—That there should be co-operation between the Scottish, Irish, and Welsh Executive Committees of the proposed Federation and any separate committees set up by the Association in those countries.

L.—That it be understood that if the above proposals are accepted by both the Association and the proposed Federation, the Federation shall not take action independent of the Association in any negotiations with lay bodies.

M. That the whole of the foregoing decisions be provisional only, dependent upon whether the Representative Body is satisfied with the constitution, powers, objects, etc., of the proposed Federation.

The CHAIRMAN OF COUNCIL, in moving the provisional approval of the Recommendations, recalled that at the annual meeting at Brighton it was considered desirable that the work of Local Medical and Panel Committees should be correlated with that of the Association. The proposals were provisional and depended on the Representative Meeting approving of the constitution and aims of the Federation of Local Medical and Panel Committees. The Chairman of Council amended Paragraph L above, by the addition of the words "so long as the Insurance Act Committee retains its present powers."

The CHAIRMAN said that every member of the meeting would be anxious not to make either of two mistakes. First of all they were desirous of not being precipitate in the way of joining with a body which, however complete it might ultimately be, had not as yet elaborated a complete constitution. On the other hand, they desired to show no hesitation in supporting the proposed Federation when once they were thoroughly sure that it was likely to be an effective body with a reasonable chance of permanent existence.

Dr. FOTHERGILL (Brighton) moved:

> That it be an instruction to the Council to issue as soon as possible to the Divisions, Local Medical and Panel Committees, a memorandum placing before them the effect of the proposals to establish a Federation of Local Medical and Panel Committees.

Dr. Fothergill said this proposal was a compromise between agreeing to the suggested Federation and asking the Association to have nothing to do with it. The scheme of federation would introduce the danger of overlapping in the Central Office. It was proposed that the Federation should have rooms there and should use the Association's clerical staff and its whole organization. The Federation, of course, was prepared to pay for these privileges, but the consequent overlapping would be most undesirable. The work of the Medical Secretary and his staff would be duplicated to the production of the greatest confusion.

Dr. Farquharson, who seconded the amendment, said that the only proper and constitutional procedure would be to refer the matter to the Divisions. What was in the minds of the Federation was known only very imperfectly, and the Association ought not to enter into anything in the shape of a hard and fast bargain at this stage.

Mr. D. F. Todd (Sunderland), Chairman of the Provisional Committee in the matter of the proposed Federation of Local Medical and Panel Committees, said he would have preferred to explain his position before an amendment was moved, but he bowed to the Chairman's ruling. He thought the Association should empower the Council to deal with the matter. If there was no call for the formation of a federation of committees, surely the medical men of the country would not have contributed to the funds of the Provisional Committee. The constitution had been drawn up on the broadest possible lines. It was quite true that it had not yet received the considered opinion of the Local Medical and Panel Committees, but it was hoped that it would be considered by them ere long. All members of the proposed Federation were most anxious, in accordance with the instructions given them by their constituents, to work in the most hearty co-operation with the British Medical Association. The framers of the proposal recognized that there was a large number of medical practitioners who were not members of the Association. The membership of the Association was 16,000, whereas on the *Register* there were 30,000 practitioners. It was hoped through direct communication with the Local Medical and Panel Committees, and through the Divisions of the British Medical Association, to get the outsiders into line. There was great necessity for union in the profession, which had common enemies in approved societies, Government departments, and in weak brethren within its own ranks; and it was thought that the Federation would achieve union and combination rapidly and successfully. In what was suggested the British Medical Association would have a direct interest. The profession would be in the midst of a fight in the early part of next year. If it was not agreed to empower the Council to deal with the question, the profession would be in a weak position.

The Chairman of Council said that Mr. Todd and he differed in only one point—what was to be done with the recommendation. Mr. Todd desired that the matter should be delegated to the Council to be dealt with; but he maintained that was not constitutionally possible.

Mr. Napier Jones (Reading), as a member of the Federation Committee, said that there was no desire to form a body which would be antagonistic to the British Medical Association. Overlapping existed to a deplorable extent at the present moment, and he hoped something would be done to reduce it.

Dr. Fothergill replied, and the amendment was carried.

On the amendment being put as a substantive motion, the Chairman of Council moved that it take the following form:

> That the Council be instructed to submit the adoption of the memorandum on the constitution of the proposed Federation of Local Medical and Panel Committees, after that constitution has been approved by the constituent bodies, and to call a Special Representative Meeting if necessary after replies have been received.

Mr. E. B. Turner (London) seconded.

The motion was carried.

APPOINTMENT OF, AND REFERENCE TO, INSURANCE ACT COMMITTEE FOR 1914-15.

Dr. Macdonald, as Chairman of the Insurance Act Committee, presented the following report:

1. It will be noted that the only recommendation on this point is Recommendation N in the Supplementary Report of Council (para. 257, p. 478, Supplement, June 27th):

> *Recommendation N.*—That the Representative Body appoint an Insurance Act Committee for 1914-15.

The Council at the time of issuing that report did not enter into any details, as it was felt that the composition of the Insurance Act Committee might be governed to a considerable extent by the decisions of the Representative Meeting on the question of the relationship between the Association and the proposed Federation of Local Medical and Panel Committees.

2. The Insurance Act Committee, having considered all the information now at its disposal, recommends:

B. That an Insurance Act Committee be appointed for the forthcoming session with the same reference as that contained in Minute 200 of the Annual Representative Meeting, 1913, namely:

> To deal with all matters arising under the National Insurance Acts, to watch the interests of the profession in relation to the National Insurance Acts, and report to the Council.

C. That the Insurance Act Committee consist of the four *ex officio* members; two members to be elected by the Council; twelve members to be elected on a territorial basis by the grouped representatives; and one representative of each of the following organizations, to be elected by the Council on the nomination of those bodies respectively, such nominees to be also members of the British Medical Association:

> (*a*) The Association of Registered Medical Women, together with the Northern Association of Registered Medical Women;
> (*b*) The Society of Medical Officers of Health;
> (*c*) The Poor Law Medical Officers Association of England and Wales.

D. That, in the event of terms of co-operation being agreed to as between the proposed Federation and the Association, permission be given to the Council to co-opt, on the nomination of the proposed Federation, seven additional members.

3. The difference between the proposed committee and the present one, leaving out of consideration for the time being any question of nominees of the proposed Federation, is that there will be two members elected by the Council, instead of four as at present, and one member nominated by the two associations of registered medical women in combination, instead of one member from each of them as at present. The new Committee would, therefore, number twenty-one, exclusive of any representatives of the proposed Federation, as against twenty-four in the present Committee.

Dr. Mark R. Taylor (West Cornwall) asked if it was proposed to include, amongst those who were to be co-opted, non-members of the Association who might be members of Panel Committees.

Dr. Macdonald said he did not think the meeting could acquiesce in the idea of non-members becoming members of an executive committee of the Association.

By agreement the proposals of an amendment by Brighton, with reference to D above, were referred to the Council, and it was agreed that the reference to the Committee should be as follows:

> To deal with all matters arising under the National Insurance Acts; to watch the interests of the profession in relation to the National Insurance Acts, and report to the Council.

VOLUNTARY HOSPITALS AND MATERNITY BENEFIT.

The Special Report of Council on voluntary hospitals and treatment of cases in receipt of maternity benefit (Supplement, May 2nd, pp. 317–8) was received, and the following recommendation in the Special Report was adopted:

I. That as it is necessary for the training in midwifery of medical students and pupil midwives that there should be an adequate supply of clinical material available for that purpose, no parturient woman should be refused treatment in the obstetric department of a voluntary hospital or similar institution on the ground that she is eligible for a maternity benefit.

Dr. Macdonald, as Chairman of the Committee, moved:

II. That women entitled to maternity benefit under the National Insurance Acts should not be regarded as eligible for free treatment except on the recommendation of a medical practitioner.

Dr. G. Parker (Bristol) opposed the motion. His Division did not think it possible for such women to get a certificate from a medical practitioner. The general practitioners did not think it should be part of their duty to grant such certificates. They objected to that duty being enforced upon them by the Association.

The motion was carried by a large majority.

On the next Recommendation:

III. That all women receiving treatment through the obstetric department of a voluntary hospital or similar institution who are entitled to a maternity benefit shall be required to pay such sum to the hospital or institution as shall be determined upon by the governing body.

Dr. H. Grey (Bristol) said that the motion meant discrimination, not as to whether a patient was a fit subject for treatment in a hospital, or whether she was rich enough to pay for treatment outside, but whether the

money in the patient's pocket had come from the State or through some other channel. There was a strong animus against State support. The idea of discriminating between the source of the money of the patients struck at the fundamental principle of the voluntary hospital, which was that treatment was given to patients because they were unable to pay.

The recommendation was eventually approved, and the remainder of the report on this subject was then received.

TREATMENT OF EMPLOYEES OF VOLUNTARY INSTITUTIONS.

The CHAIRMAN OF COUNCIL moved the following motion arising out of the Annual Report of Council (SUPPLEMENT, May 2nd, p. 286):

> That in those cases where the medical officer of any voluntary hospital is required to attend insured members of the staff of such an institution, the moneys paid by the Insurance Committee in respect of the medical attendance and treatment of such insured persons (exclusive of drugs and appliances) shall be paid to the medical officer of the institution who is responsible for such attendance and treatment, irrespective of any salary paid to such officer.

Dr. G. PARKER (Bristol) opposed the resolution, as he considered it was ineffective, in that it would not attain its end and would not pay the men who did the work.

The CHAIRMAN OF COUNCIL said that the proposal was actually being carried out in some hospitals. There was no difficulty at all about it. The Committee of the Taunton Hospital had recognized the fairness of the proposal and granted the request at once.

Sir JAMES BARR thought that any resolution of this kind would be ignored by the hospitals and that the meeting was treading on dangerous ground. Such a resolution might do damage to the Association, and certainly its adoption would do no good to the Association or themselves.

On a division 81 voted for the proposal and 44 against. As a two-thirds majority was necessary the CHAIRMAN announced that the motion was not carried.

FREE CHOICE OF DOCTOR.

Mr. E. B. TURNER (as Chairman of the Non-Panel Committee) moved the following recommendation of Council (SUPPLEMENT, May 2nd, p. 288):

> That the policy of the Association be that such insured persons as may wish to make their "own arrangements" with medical practitioners not on the panel may do so without the necessity of such practitioners entering into any written contract, and with no consequential loss of benefits to the insured persons.

Mr. Turner said the resolution came from a very representative committee, setting forth the opinions of practitioners not on the panel all over the United Kingdom. The policy of the Association was that there should be absolutely free choice of doctor, whether the practitioner were on or off the panel. Any question of making own arrangements under the Insurance Act was at present in the hands of the Insurance Committee. One of the reasons which led the Committee to bring forward the resolution was that, while Insurance Committees gave that privilege with one hand to any practitioner, circumstances took it away with the other. One of the first of these was the tactless document on the subject issued by the Commissioners for signature. A great many gentlemen felt that in signing that document they were practically giving away all the reasons that had led them to withhold their names from the panel; they felt that in a modified way they were in the same position as practitioners on the panel. Non-panel practitioners felt that, if possible, they should attend their own patients practically under pre-insurance conditions. It was not the wish or intention of the Committee that any action by it should imperil the good fight in Wales against the illegal encroachment under the Insurance Act. The agents of many societies, perhaps not so much the old friendly societies as associations which had recently become approved societies, had put a great deal of pressure on these insured persons with the view of getting them to give up the practitioner they had chosen, and pointing out that if they went to some other practitioner on the panel the question of sick pay would be adjusted with greater satisfaction and less trouble to them. In some districts great pressure had been brought to bear on those people to change to gentlemen on the panel.

Dr. MAJOR GREENWOOD asked whether it would be possible to carry this proposal into effect without fresh legislation.

Mr. TURNER admitted that a modification of the Insurance Act would be necessary.

Dr. HASLIP, speaking as a non-panel man, desired to ask whether this resolution was to be taken seriously. Why should the few be privileged to treat patients without a contract any more than the majority who had to work the Act? Further, he asked if there was not a great danger in this proposal. The trouble in South Wales had been caused through combinations of persons being allowed to make their own arrangements. No Government would give money unless it was known that insured persons would receive the same medical treatment as could be got under the Act. He believed there would be no unity in the medical profession until the whole of the profession worked the Insurance Act. They could not, however, guarantee any progress in the future if motions which were merely pious opinions—for they amounted to no more—were continually brought forward and no definite policy was outlined.

Dr. JOHN STEVENS (Edinburgh and Leith) thought the motion did no more than claim a right both for the medical profession and the public in a free country. Why should any practitioner have to attend any patient under a contract? As for the non-panel section of the profession, it would not, as a body, come under the Act. He claimed the support of no less a personage than the Chancellor of the Exchequer, who on May 1st, 1912, said: "There is nothing in this Act that enforces contract practice." This undoubtedly showed that there was no idea in Mr. Lloyd George's mind at that time of forcing the profession under a contract as he subsequently did.

Dr. BIGGS (Marylebone) said non-panel doctors wanted to be able to attend their own patients, upon many of whom they had been in attendance for thirty or forty years. These patients would not be numerous, but naturally they did not like to give them up. The proposal would not encourage the establishment of any such medical aid associations as those in South Wales. It was true the proposal required an amendment of the Act, but there was no reason, though attempts to get amendments had failed before, why they should not try again.

Dr. W. E. THOMAS (North Glamorgan and Brecknock) opposed the motion. The Welsh Commissioners were allowing insured people to contract out, with the consequence that medical aid societies had been started in every part of South Wales. Were the Representative Meeting to pass a resolution that would help these schemes in South Wales? He moved that the meeting proceed to the next business.

In reply to the CHAIRMAN, Dr. THOMAS said that if the resolution were accepted it would be most harmful to the interests of the profession in South Wales.

Dr. W. DUNCAN (Chesterfield) said that every doctor, panel or non-panel, submitted himself to an unwritten contract which would be enforced in the law courts if the patient was wrongly treated. If this resolution was passed no new practitioner would ever join the panel. They would accept the loophole, and the present holders of contracts would repudiate them, so that there would be a perfectly open scheme for the whole country, with a multiplicity of details making smooth working impossible.

Dr. RATCLIFF-GAYLARD (Birkenhead) was certain that a large number of panel practitioners were willing to go a long way towards healing the breach which existed in the profession, if that were possible. But under this motion that was impossible, for it would be detrimental to practitioners all over Great Britain. Another reason why the motion should be rejected was that the Commissioners would not consent to vary the terms of an agreement in the way in which the motion asked.

Dr. BEATON asked if the practitioners who had gone on the panel had not injured men all over the country? In his view they had, and would it not be some recompense that some generous action should be done now? He contended that the resolution would do no injury to those on the panel, and it would be a generous thing to pass it.

Dr. H. H. TOMKINS (S.W. Essex) said it was not to be taken for granted that the money to be paid to non-panel doctors for attendance under contracting-out arrange-

ments could or would be paid to medical aid institutes. The money could not possibly go to the institutes, and therefore could not possibly do any harm to those in the position of the profession in Wales. The non-panel doctor, under this proposal, would only get money in respect of single patients and not from a number in combination. No panel doctor would give up capitation fees to take advantage of the proposed alternative. It was very little for non-panel practitioners to ask from their panel brethren to help them to obtain.

Dr. Goodfellow (Council, Lancashire and Cheshire Branch), on behalf of Manchester (South) Division, moved an amendment to provide that on an insured person signifying in writing to the Local Insurance Committee his intention of contracting out the consent of the Committee should be given. He urged that the question involved was one of common justice, not only to the doctor, but to the insured person.

The Solicitor, in answering a question as to whether a non-panel doctor, if the motion were passed, would have the same responsibility as a panel practitioner, said he could only infer from the document before him what the position would be. If there were no direct contract entered into, and if the insured person was handed over to the medical man without a written agreement, it appeared that the responsibility would not be maintained.

Mr. Turner, replying to the discussion, said he was sorry Dr. Haslip should have the impression that the proposal was not put forward seriously. There were members of the profession in England still who held strongly to those principles on which the Association just a year and a half ago was united. He was indeed sorry these opinions should be supposed to have been put forward in a frivolous spirit. The non-panel practitioners represented the majority of the profession as a whole, and in the near future the Association would require their aid when it found itself impaled on one or other horn of a dilemma—either whether the present Government withdrew the Treasury grant or a Unionist Government brought in an alternative scheme.

The proposal did not receive the support of two-thirds, and was declared not carried.

Title of Panel Committee.

The following amendment, moved by Stratford, was defeated:

That the title of the Panel Committee should be Panel Practitioners Committee in preference to the title of Practitioners Committee suggested by the Council.

Dr. Fothergill (Brighton) moved, in connexion with the appointment of intermediaries between the Non-Panel Committee and non panel practitioners:

That the only intermediaries by whom the views of any section of the medical profession should be obtained are the officials of the Branch or Division concerned.

After some discussion, the Chairman appealed to the Representatives not to accept the amendment, and it was lost on a division.

Reasons why Practitioners will not accept Service under the Insurance Acts.

Dr. Bradbrook (Buckinghamshire) moved:

That Appendix IX to the Annual Report of Council (Supplement, May 2nd, p. 318), on the reasons why medical practitioners will not accept service under the National Health Insurance Acts, be deleted.

He asserted that the appendix consisted of a tissue of unwarranted conclusions based upon erroneous premisses.

Mr. Turner, in reply, maintained that the appendix was strictly accurate.

The motion was lost.

The meeting adjourned at 6.30 p.m.

Tuesday, July 28th.

The Representative Meeting was resumed at 9.30 a.m. on Tuesday, July 28th, Mr. T. Jenner Verrall presiding. The minutes were revised and confirmed.

Working the Insurance Act.

The following amendment by the North Middlesex Division as to future developments of the Insurance Acts (Supplement, May 2nd, p. 288) was withdrawn:

That this Representative Meeting, realizing that the medical clauses of the National Insurance Act in their present or some other amended forms are permanent, instructs the Council to ascertain from the Divisions what alterations in the Act would facilitate its working.

Dr. R. M. Beaton (St. Pancras and Islington) moved:

That this Representative Meeting is of opinion that the working of the medical clauses of the National Insurance Act by members of the profession is derogatory to the profession and against the public interest.

Dr. Beaton said that this was an olive branch from the non-panel practitioners. The non-panel section of the profession was trying in every way to get the two sides united. If this amendment did not satisfy the meeting, he appealed to the Representatives to try and devise something that would. He had been at many informal meetings in Aberdeen on the subject, and the object of all had been to endeavour to find some method of bringing all the members of the profession together again. Dr. Beaton asked leave of the meeting to substitute for his amendment the words of the resolution of the Special Representative Meeting at the Connaught Rooms in January, 1913:

That this meeting records its emphatic protest against the discreditable methods adopted by the Government whereby a position of urgency was created under which many practitioners, finding themselves threatened with financial ruin, were compelled to give unwilling service under the National Insurance Act on terms which this meeting considers to be derogatory to the profession and against the best interests of the public.

The meeting declined to allow this resolution to be substituted.

Dr. Beaton, continuing, said that if the profession, represented by those present, after eighteen months' trial, held to the old position, then he asked them to reaffirm it. If, however, they had come to the conclusion that they were wrong in January, 1913, he was willing to accept the rescission of the "derogatory" resolution, even by a majority of one. He was anxious, above everything, that the meeting should come to a decision.

Mr. Furneaux Jordan (Birmingham) said that if the amendment was meant as an olive branch to bring peace between the panel and non-panel practitioners, his opinion was it was so worded that it would defeat its own object. A large number of practitioners went on the panel unwillingly, but he believed they would come off now as unwillingly.

Dr. Ratcliff-Gaylard (Birkenhead) unhesitatingly declared that the work the panel section were doing could neither be derogatory to the profession nor against the public interest, provided those engaged on the panels performed their duties conscientiously. It was those men who had too many persons on their lists, who rushed through their work, and who thought more of £ s. d. than the honour of the profession, who were doing that which was derogatory to the honour of the profession and against the public interest.

Dr. C. G. Meade (York) appealed to the meeting to "bury the hatchet" once and for all, and so make the Association the great unifying force it ought to be.

Dr. Macdonald moved that the meeting proceed to the next business. He thought it was high time the profession forgot what had happened in the past and made an endeavour to become united again.

The motion to proceed to the next business was carried by a large majority.

Dr. M. G. Biggs (Wandsworth) moved, and Dr. A. Wilson (Wandsworth) seconded, the suspension of the Standing Orders, so that, on behalf of their Division, they might propose that any resolutions stating that service under the Insurance Act was derogatory to the Association should be rescinded and expunged from the records of the Association.

The motion was not carried, and the matter dropped.

The Central Defence Fund.

Mr. D. F. Todd (Sunderland) moved:

That no further calls be made on the guarantors of the Central Insurance Defence Fund.

This was carried.

Dr. Fothergill (Brighton) moved a rider:

That it be an instruction to the Council to consider and report with recommendations, after consulting the

contributors to that fund, what steps, if any, should be taken in order to transfer the contributions to a trust fund or otherwise to deal with the same.

Mr. TODD hoped the rider would not be passed, as it would only delay matters and cause complications and confusion.

Dr. FOTHERGILL said that the question was what was to be done with the money now in hand.

The SOLICITOR, in an explanatory statement, pointed out that the Council of the Association had in hand the balance of a fund which had been voluntarily contributed upon the lines of what he might call a trust, the objects of which were defined when contributions to the fund were solicited. Before the Council could divert into another channel the balance of such fund some procedure of the nature of that indicated by Dr. Fothergill's amendment would have to be resolved upon.

On being put to the meeting the rider was carried.

MEDICAL AID INSTITUTIONS.

Dr. J. BROWNLEE (Cleveland) moved the following rider in connexion with the Report of Council as to concessions to approved institutes (SUPPLEMENT, May 2nd, page 285):

That this Representative Body protests strongly against the immunity from control by the Local Insurance Committee enjoyed by medical aid institutes, and calls on the Council to take action with a view to having this amended, as being unfair both to ordinary medical practitioners on the panel and to those insured persons who are members of such institutes.

The CHAIRMAN OF COUNCIL explained that at present the Council was taking legal action on the whole matter, and it would proceed with strong action, if it could, after the legal opinion was obtained.

MEDICAL REFEREES.

A rider by West Herts, that whole-time medical referees should be appointed as soon as possible, was withdrawn.

FEES OF MEDICAL REFEREES.

Dr. CROWE (Worcester) moved the following rider:

That half a guinea be the minimum fee for examination and report as referee under the National Insurance Act, and that mileage be charged extra at the rate of not less than 1s. a mile beyond one mile.

He said that in his Division approved societies were offering a fee of 7s. 6d. for referees, with no mileage, but that no practitioners had accepted it.

Dr. RATCLIFFE (Birmingham) opposed the rider on the ground that the question of referees was under consideration by the Commissioners.

Mr. C. J. PALMER (Nottingham) said that in his neighbourhood practitioners acted loyally by the resolution passed by the Representative Body, but shortly afterwards in many other parts doctors were found accepting lower fees and no objection was made by the Association.

Dr. E. RAYNER (Treasurer) suggested that instead of "1s. a mile," the words should be "1s. a mile or part of a mile beyond a mile."

The suggestion was approved and the rider was carried.

ARRANGEMENTS WITH HERBALISTS.

Dr. MAJOR GREENWOOD (City) moved a rider:

That the employment by the Worcester Insurance Committee of herbalists in the place of registered medical practitioners is a serious infringement of the Medical Acts, and that the Council be instructed to take legal opinion with the view of testing the matter in the law courts.

Dr. Greenwood said it had been said that before the passing of the Insurance Act herbalists and bonesetters and others were not prevented by law from practising. In one sense that was true. Under the Insurance Act, however, insured persons might choose herbalists, and panel and non-panel practitioners alike were affected.

Dr. CROWE (Worcester) said that it was understood that the decision recently obtained by the Apothecaries Society against a herbalist would be appealed against.

The CHAIRMAN OF COUNCIL said the Council was in constant communication and was working along with the Defence Union in this matter. It was necessary to take care not to follow any course which would raise an outcry such as had been experienced in connexion with the conscientious objector to vaccination.

POWERS OF PANEL COMMITTEES AS TO EXCESSIVE PRESCRIBING.

Dr. WALLACE HENRY moved the following rider:

That this meeting instructs the Council to urge upon all Panel Committees the necessity of availing themselves of their rights under the Regulations to make a careful investigation of chemists' accounts, and to make a full report to the Insurance Committee of all cases of complaints made by the Pharmaceutical Committees respecting excessive and extravagant prescribing.

The question of the drug tariff, he said, was causing a great deal of friction, not only between doctors and chemists but between doctors, Insurance Committees, and the public. The resolution was proposed with the view of stimulating the interest of Panel Committees in the subject through members who might be present at the Representative Meeting. If Panel Committees could be persuaded to exercise their rights—not merely waiting until a complaint was laid, but asking that the chemists' accounts should be submitted to them—it would be of the greatest advantage. When these accounts were received they should be gone into most carefully, and the eyes of the medical profession would be opened to the iniquity of the present drug tariff. The suggestion that there should be a flat rate for pills, tinctures, etc., was preposterous. The profession could bring the facts before Insurance Committees; it would be able to remove a large amount of the prejudice due to allegations as to the excessive cost of prescribing. In Leicester the profession had been so successful in its investigations that the Local Insurance Committee had appointed a special subcommittee to go into the whole question. It was of the greatest importance that the Panel Committees should exercise the power given to them, under the Act and Regulations, of investigating cases in which it was alleged that medical practitioners were grossly extravagant, and if that were done it would be ascertained that the number of such complaints in which the charge was well founded was infinitesimal. Of the prescriptions sent to the Panel Committee by the Pharmaceutical Committee in Leicester not more than half a dozen could reasonably be described as extravagant.

Dr. MARK R. TAYLOR (West Cornwall) said that his Division had been considering how the drug tariff might be cut down, and his own feeling was that spirituous tinctures should be eliminated, although the chemists declared that this could not be done without infringing the Food and Drugs Act.

The motion was agreed to.

THE REGULATIONS FOR CERTIFICATION.

Dr. F. W. POCHIN (Oldham) moved:

That this meeting requests the Insurance Act Commissioners to issue simple and explicit regulations *re* certification printed on cards which can be exhibited in the waiting rooms of doctors for the information of their patients.

He said the Insurance Commissioners had informed him that a suggestion to this effect had already occurred to the Commissioners, and that if the plan would be welcomed by the profession it would be carried out.

Dr. CUTHBERTSON WALKER seconded the motion, which was carried.

RETURNED MEDICAL CARDS.

Dr. MACDONALD moved the recommendation of the Council (SUPPLEMENT, June 27th, p. 478):

That it is no part of the duty of a panel practitioner to correct and keep up to date the list of addresses of insured persons.

The motion, he said, was intended to combat a tendency by Insurance Committees and approved societies to require practitioners to trace removals or be muleted by non-allowance of capitation fees in respect of names not traced.

The motion was carried.

PRIVATE FEES ON NON-PRODUCTION OF MEDICAL CARDS.

The CHAIRMAN OF COUNCIL moved:

That a medical practitioner should be entitled to charge private fees to those insured persons demanding treatment of him but who fail to produce their medical cards, in view of the instruction of the various Insurance Commissioners to Insurance Committees that when the medical card system is in full operation a practitioner would be entitled, on giving treatment, to require insured persons on his list to present their medical cards should such a course appear necessary.

Dr. J. C. Walker (Rochdale) moved an amendment that the motion should open with the words, "That a medical practitioner is entitled to charge private fees," but this was not accepted by the meeting.

The motion was then approved.

Consultants under the Insurance Act.

The Chairman of the Non-Panel Committee, Mr. E. B. Turner, moved the adoption of the recommendation of Council (Supplement, June 27th, p. 478) as follows:

> That the policy of the Association should be opposed (with some possible special exceptions) to whole-time consultative appointments in connexion with the Insurance Acts, and that it should be in support of the performance of such duties being open, under conditions of free choice and adequate remuneration, to all registered medical practitioners qualified to perform them.

The recommendation was approved.

FUTURE DEVELOPMENTS OF THE INSURANCE ACT.

The Chairman of Council then presented the analysis of the replies of Divisions to the questions attached to the report of the Future Developments of Insurance Acts Committee concerning the Budget proposals as to Developments of the Medical Service under the Insurance Acts (Supplement, July 25th, p. 81).

The Chairman of Council also submitted a number of motions bearing on the subject. The first three (*a*, *b*, *c*) were approved without debate as follows:

> (*a*) That in order to carry out the promise made in the National Health Insurance Act, 1911, that insured persons should have "adequate medical treatment," it is the duty of the Government to make provision for the necessary institutional treatment.
>
> (*b*) That the staffs of voluntary hospitals receiving persons for whose treatment a payment is made by or on behalf of the State cannot be expected to treat such persons as charitable cases.
>
> (*c*) That in any future developments of the medical service under the Insurance Acts the clinical arrangements should not be placed under the public health authority, but either (1) under a new clinical authority composed of representatives of the insurance, public health, and education local authorities with representatives of the Local Medical and Panel Committees and of the local hospitals; or (2) under the Insurance Committee strengthened for this purpose by the addition of representatives of the above-named bodies.

The next paragraph was:

> (*d*) That the proposed clinical laboratories should be linked up as far as possible with the local hospitals and the nearest university laboratories.

Dr. C. E. Robertson (Glasgow) said that in that city the whole of the work intended to be done by the insurance institutions was already being done free by the medical officer of health. He thought it was undesirable to stop machinery which had been working for years and transfer it to local hospitals and universities.

Dr. John Adams (Glasgow) said that the work carried on in Glasgow by the medical officer of health and others had to do entirely with the investigation of infectious diseases. The work proposed under the motion was entirely different or supplementary to it.

The resolution was carried, as were also the following paragraphs:—

> (*e*) That the Representative Body welcomes the proposal of the Government to establish a nursing service to be utilized for the whole working-class population, and is of opinion that when established it should be under the control of the proposed new joint clinical authority, or failing that, of the Insurance Committee strengthened as suggested in motion (*c*) above.
>
> (*f*) That the medical referees under the Insurance Acts should be the advisers on all medical questions to the clinical authority referred to in motion (*e*).
>
> (*g*) That the consultants and specialists who are to be placed at the disposal of the referees should not be whole-time officers.
>
> (*h*) That the Representative Body welcomes the proposal to institute treatment centres or clinics in connexion with the medical service under the Insurance Acts, and is of opinion that they should be under the control of the clinical authority referred to in motion (*e*).

It was agreed that these resolutions be sent to the Chancellor of the Exchequer.

On the report of the Future Development of Insurance Acts Committee, as a whole, Mr. E. B. Turner expressed the hope that the Representatives would approve the report, which was an excellent one as far as it went. He trusted that the meeting would give an expression of opinion that the Council should continue the Committee.

The report was approved, with a rider embodying a recommendation to Council as suggested by Mr. Turner.

Dr. Macevoy moved the following amendment to paragraphs 265–6 of the Supplementary Report of Council (Supplement, June 27th, p. 479):

> That, in order that the full medical view of the causes of the excessive claims for sickness benefit and medical benefit revealed by the experience of the National Insurance Act should be stated and the suggestions of the medical profession for checking abuse of sickness and medical benefits should be offered, ample evidence should be collected and considered.
>
> That it be an instruction to the Council to obtain this evidence from the Divisions and from medical practitioners and report thereon.

It was, he said, desirable that the causes of increased attendance on insured persons should be ascertained. He was sorry there was not as much sympathy with non-panel practitioners as there should be. It was the duty of the Association to make conditions such that a non-panel practitioner could go on the panel.

The amendment was adopted.

SCOTTISH MATTERS.

On the motion of the Chairman of the Scottish Committee, Dr. J. R. Hamilton (Hawick), the paragraphs of the Annual Report of Council under heading "Scotland" (Supplement, May 2nd, pages 290–1), also those of the Supplementary Report on this subject (Supplement, June 27th, page 480), were received.

Scottish Office.

Dr. Lundie (Edinburgh and Leith) moved an amendment that the Scottish Office and its staff should be located in Edinburgh, on the grounds that Edinburgh was the capital of Scotland and the city in which the administrative affairs of the country were centred. The Insurance Act Commissioners also had their offices in Edinburgh, and it was most desirable that the Scottish Medical Secretary should have ready access to the Commissioners.

The Chairman of Council suggested that the simplest way would be to leave the matter to be settled by the Scottish Committee.

Dr. Adams (Glasgow) thought that a proposal from Dundee:

> That freedom be given to the Scottish Committee to determine the locus of the office in Scotland,

would be advantageous if the words were added so that it read as follows:

> That the Scottish Committee decide the locus of the Scottish Office after they have consulted the various Scottish Divisions as to where that office shall be, and that they act upon the answers received from the Scottish Divisions.

Dr. Hamilton said that Edinburgh being the seat of the Scottish Insurance Commissioners and the Scottish Local Government Board, it would be more convenient that the Scottish Office of the British Medical Association should also be established in the city. The Scottish Committee was most anxious to get in touch with young graduates in Scotland, and the best centre for that was undoubtedly Edinburgh. In Edinburgh University last year, and up to June 1st of the present year, there were no fewer than 943 graduates and licentiates, while the figures for the other university centres in Scotland were: Glasgow, 329; Aberdeen, 152; and St. Andrews, 41.

Dr. Adams (Glasgow), in opposing the proposal that the Scottish Office should be in Edinburgh, remarked that while Edinburgh was one of the finest cities in the world, it was not a centre of business activity. The proposal to establish a Scottish Office was a serious matter for the Association, as it involved an estimated expenditure of £1,350 annually.

After some further discussion, it was resolved by a large majority that the Scottish Office should be located in Edinburgh.

IRISH BUSINESS.

On the motion of Dr. Darling, acting for the Chairman of the Irish Committee, the Annual Report of Council under heading "Ireland," as to organization of the profession in Ireland (Supplement, May 2nd, p. 291), was approved.

MEDICAL TREATMENT OF SCHOOL CHILDREN.

Model Scheme of Treatment Centres.

The meeting then resumed consideration of the portion of the Report of the Council dealing with medico-political affairs, continuing the discussion of the Model Scheme for school medical treatment centres. The consideration was resumed of an amendment by Bromley making the following suggestions as to the payment of the staffs of treatment centres:

In rural areas remuneration to be as follows:
(*a*) Refraction: 7s. 6d. per case, with a probable average of three attendances per case.
(*b*) Nasal obstructions, adenoids, tonsils, and suppurating ears: 10s. 6d., to include treatment of two or more of those defects in the same child. Attendances being limited to four per case.
(*c*) Ringworm: 21s. per case for medical treatment, 31s. 6d. per case treated by radio-therapy.
(*d*) Administration of anaesthetics: 10s. 6d. per case.

Some general discussion took place on the subject, and the CHAIRMAN OF COUNCIL suggested that the fixing of fees for particular operations might be left to the Divisions. In this suggestion he was supported by Mr. LARKIN.

The amendment was finally carried in the following form:

In rural areas the profession shall receive remuneration for the following diseases: (*a*) Refraction; (*b*) nasal obstructions, adenoids, tonsils, and suppurating ears; and (*c*) ringworm.

Treatment by Private Practitioners.

Dr. TENNYSON SMITH (Bromley) moved an amendment to provide that:

Committees called "Organization Committees, Medical Treatment of School Children," should be formed in each Branch and should report to the Branch Council. The duties of those committees should be (1) to formulate a simple scheme, and (2) to conduct all business with the local education authorities, should the practitioners in any part of its area be desirous of carrying out treatment of school children found on examination to be defective. Each committee on its formation should issue an appeal to all medical practitioners in its area not to deal directly, but indirectly through the committee, with the local education authorities or any Care Committee acting on their behalf. It should also issue an appeal to the medical staffs of all voluntary hospitals in its area not to treat gratuitously at their charitable institutions those school children found defective on examination.

The matter was referred to the Council. Various other minor amendments by Bromley were also referred to the Council, and some verbal amendments were accepted.

Treatment by Medical Charities.

Dr. FOTHERGILL (Brighton) moved the following amendments to the Model Scheme:

1. That no case in the first instance should be referred to a voluntary (charitable) institution for treatment.
2. That the education authority shall be required to pay for all children of their schools receiving treatment at a voluntary hospital such sum as shall be arranged with the governing body.
3. That from such sum an amount agreed upon by the governing body and the Medical Board shall be placed to a special fund which shall be distributed as the Medical Board shall decide.

The amendments were carried.

Remuneration of Whole-time Officers.

The following rider by Hereford was agreed to:

That in the opinion of the Representative Body no whole-time medical officer of health nor school medical officer should accept any wholly new appointment involving fresh duties unless adequate remuneration is added to that previously received by him.

Dr. S. NOY SCOTT (Plymouth) moved the following rider:

That whole-time medical officers whose duties include school work be included in the provisions of the bill to secure superannuation and security of tenure of office.

Mr. GARSTANG, Chairman of the Medico-Political Committee, asked if it was meant that the Association, through its Council, should prepare an independent bill to this effect. If that were so, he did not see that there was any chance of reaching a practical issue. At the same time it was understood that the Government might deal with this matter, and if that happened he would promise to keep in view the object aimed at by the rider, and on this understanding the rider was withdrawn.

Dr. B. G. MORISON moved the addition of the following clause to the Model Scheme:

If a child whose parents or guardians are apparently in the position to afford to pay private fees is presented for treatment, the practitioner concerned shall have the right to refer the case to the Medical Treatment Committee for further investigation.

The proposal was carried unanimously.

Treatment of School Children at Voluntary Hospitals.

Dr. GARSTANG moved the recommendation of Council (SUPPLEMENT, May 2nd, page 281):

That the Representative Body approve the memorandum submitted by the Council on the treatment at voluntary hospitals of school children found to be defective on medical inspection.

This was agreed to.

Dr. BRADBROOK (Buckinghamshire) moved the following amendment, which was agreed to:

That clinics should be started to treat defective school children in place of sending them to the voluntary hospitals.

Legal Risks in Regard to Medical Certificates.

On the motion of Mr. GARSTANG the meeting adopted the Report of the Council in regard to legal risks of practitioners in issuing medical certificates under any Act of Parliament (SUPPLEMENT, May 2nd, p. 282).

Salaries of Medical Women.

On the motion that the remainder of the Report of Council under the heading "Medico-Political" be approved,

Miss IVENS, M.S. (Liverpool), who was received with applause, moved the following rider:

That the salaries paid to medical women be the same as those paid to men.

She hoped the meeting would pass the rider unanimously, and in addition would suggest that a copy be sent to the proper quarters. Equal salaries for equal work was a policy that the Association of Medical Women (to which she belonged) regarded as fundamental. An attempt had recently been made by a Government Department to upset that principle by the appointment of a woman inspector under the Board of Control. She was thankful to say that the two selected women had both withdrawn, and the post was still open. At the same time, it would strengthen their hands if the rider were carried.

This was agreed to.

Medical Inspection of Emigrants.

Mr. GARSTANG, in moving approval of the Council's recommendation that the fee for making examinations of emigrants for the Government of any oversea dominion should not be less than than 5s. a head, said the matter had come before the Medico-Political Committee in connexion with the medical inspection of emigrants for certain lines of steamships. Only a superficial examination was required, and the Committee considered that the fee for examination should be 5s. This was accepted by the Council. Since then additional information had come to hand, and having consulted his Committee, he had its authority to reopen the question, and he hoped the meeting would agree to the amended terms—namely, 5s. for adults and 3s. for children, on the ground that one certificate only was required per family, given on a printed form, which included both parents and children.

The recommendation was approved.

Fees for Life Insurance Examinations.

Mr. GARSTANG moved the following recommendation of Council (SUPPLEMENT, June 27th, page 476):

That the Representative Body decide whether (*a*) fees for life insurance examinations should be based on the amount of evidence required in confirmation of the examiner's professional opinion of the life, or (*b*) there should be a fixed minimum fee for that opinion irrespective of the number of questions to be answered.

The Committee considered that the full certificate should not be given for less than a guinea, but it had been agreed that a "half-way" certificate might be given for half a

guinea and another certificate for 5s. The Council rejected that report and said that no certificate should be issued for less than a guinea. There being a divergence of opinion, it was decided to ask the Representative Meeting what it wished.

Clause (*a*) of the motion was approved, on the proposition of Dr. Johnson (Bury), seconded by Dr. Ratcliffe (Birmingham). Clause (*b*) therefore fell to the ground.

The following rider by Worcester was remitted to the Council:

That the question of fees for medical examinations and reports for life insurance be considered by the Annual Representative Meeting, 1914, with a view to the Council approaching the insurance companies in order to obtain the adoption of a universal rate all over the country.

Remuneration of Ship Surgeons.

Mr. Garstang moved the following recommendation of Council (Supplement, June 27th, pages 476–7) be adopted:

1. That fees for medical and surgical attendance should be payable by first and second class passengers in all cases of illness and injury except those due to the voyage.
2. That in those cases where the ship surgeon is at liberty to charge a fee, the minimum fee shall be 5s. and 2s. 6d. per attendance in the case of first and second class passengers respectively.
3. That accounts for any such fees should not be subject to any preliminary scrutiny by the commander, but it is clearly understood that any passenger questioning the legitimacy of any charge may make representations accordingly to the commander.

Dr. Danvers (Southampton), speaking from personal experience of four large steamship lines, criticized the various recommendations and moved an amendment to refer the matter back for further consideration.

Mr. Garstang expressed sympathy with the objections of Dr. Danvers, and agreed to take the matter back for further consideration.

PUBLIC HEALTH AND POOR LAW MATTERS.

Death of Dr. Mumby.

The Chairman of Council, in moving, in the absence of the Chairman of the Public Health Committee (Mr. Domville), the reception of the part of the Report of the Council dealing with Public Health and Poor Law matters, said he had to express the sympathy of the meeting with the widow of the late Chairman of the Committee (Dr. Mumby), who had died during the year.

Security of Tenure of Medical Officers of Health.

Dr. Macdonald mentioned that the deputation which waited upon the Government in regard to the security of tenure of medical officers of health was received very favourably, and Mr. Samuel had promised to deal with the matter at an early date.

New Poor Law Orders.

On the paragraph of the report dealing with Poor Law Institutions Order, 1913, and the Poor Law Institutions (Nursing) Order, 1913 (Supplement, June 27th, p. 480),

Dr. Macnamara (Lewisham) suggested that the Association should take action to prevent the Local Government Board issuing exemptions from its own Orders before they had been in existence three months.

The Chairman of Council said that if Dr. Macnamara would supply him with particulars he would undertake that the Committee would consider the matter.

The remainder of the Supplementary Report of the Council under heading "Public Health and Poor Law" was then approved.

HOSPITAL QUESTIONS.

The section of the Report of the Council on the subject of hospitals (Supplement, May 2nd, p. 290) was received.

An amendment by Worcester as follows was referred to the Council:

That in order to check the extension of medical aid institutions, and to assist the profession in combating them when established, the Association endeavour to enlist the support of the staffs of voluntary hospitals not only in refusing professional recognition to the medical officers of these institutions, but also refusing treatment to patients sent by them to hospitals, except in cases of grave urgency.

The foregoing resolution shall not apply to those institutions where the medical officer of the institution has retained his post with the consent of the local profession.

NAVAL AND MILITARY.

Surgeon-General Benson, in the absence of the Chairman of the Naval and Military Committee, moved the reception of the Naval and Military Section of the Report of the Council (Supplement, May 2nd, p. 290).

The following motions were adopted:

That the officers elected at the Annual Representative Meeting, 1914, to represent on the Council the Royal Naval Medical Service, the Army Medical Service, and the Indian Medical Service be appointed to serve for a period of three years in each case.

That Director-General Sir James Porter, K.C.B., R.N. (retd.) be elected to represent the Royal Navy Medical Service on the Council for 1914-17.

That Colonel R. I. D. Hackett, A.M.S. (retd.), be elected to represent the Royal Army Medical Service on the Council for 1914-17.

That Surgeon-General P. H. Benson, I.M.S. (retd.), be elected to represent the Indian Medical Service on the Council for 1914-17.

The remainder of the report on this subject was then approved.

The late Dr. Mumby.

The Chairman, Mr. T. Jenner Verrall, moved that a resolution of sympathy and condolence be forwarded to the relatives of Dr. Mumby.

This was carried in silence, the Representatives standing in their places.

Dr. W. T. Hayward.

The Chairman read the following letter from Dr. W. T. Hayward:

"I desire through you to thank the Representative Body for the great honour it has conferred on the medical profession in Australia by the election of one of its members as a Vice-President of the British Medical Association.

"I congratulate myself that I am the recipient of that honour, and most cordially thank the members of the Representative Meeting."

APPROVAL OF THE COUNCIL'S REPORT, AS AMENDED.

It was then agreed, on the motion of the Chairman of Council, that the Report of the Council and the Supplementary Report, as amended, be approved.

Election of Committees.

The Medical Secretary announced the results of the election of the several committees as follows:

Insurance Act Committee.—Dr. A. C. Farquharson (North of England, North Lancashire and South Westmorland, Yorkshire), *Dr. J. W. Johnson (Lancashire and Cheshire), Dr. G. K. Smiley (East York and North Lincoln, Midland, Cambridge and Huntingdon, East Anglian, South Midland), *Dr. W. B. Crawford Treasure (Birmingham, Staffordshire, North Wales, Shropshire and Mid Wales, South Wales and Monmouthshire), Mr. W. McAdam Eccles (Metropolitan Counties—Central, East, and North Divisions), *Mr. E. B. Turner (Metropolitan Counties—South and West Divisions), Dr. D. E. Finlay (Bath and Bristol, Gloucestershire, West Somerset, Worcestershire and Herefordshire, Dorset and West Hants, South-Western), Dr. Rowland Fothergill (Oxford and Reading, Southern, Kent, Surrey, Sussex), *Dr. John Hunter (Aberdeen, Northern Counties of Scotland, Dundee, Perth, Edinburgh, Fife), *Dr. John Adams (Glasgow and West of Scotland—City and County Divisions, Border Counties, Stirling), (No nomination received) (Connaught, South-Eastern of Ireland, Leinster), *Dr. J. Singleton Darling (Munster, Ulster).

Finance Committee.—Dr. G. E. Haslip (Westminster), Dr. D. Lawson (Aberdeen, etc.), Dr. R. L. Langdon-Down (S. Middlesex), Dr. Milner Moore (Eastbourne).

Organization Committee.—Mr. J. A. P. Barnes (N. Middlesex), Dr. A. T. Campbell (Glasgow, North Western), Mr. Russell Coombe (Exeter).

Journal Committee.—Dr. C. H. Hall (West Herts), Mr. Albert Lucas (Birmingham Central), Dr. Johnson Smyth (Bournemouth).

Medico-Political Committee.—Mr. E. J. Domville, Dr. W. Duncan (Chesterfield), Mr. A. C. Farquharson (Bishop Auckland and Durham), Mr. Bishop Harman (Marylebone), Dr. J. T. Macnamara (Lewisham), Mr. Wallace Henry (Leicester).

* Elected unopposed.

Public Health Committee.—Dr. L. J. Blandford (Stockton-on-Tees), Dr. J. Gordon (Aberdeen, etc.), Dr. T. Barrett Heggs (Faversham), Mr. E. J. Domville.

Hospitals Committee.—Professor Bolam (Hexham, etc.), Dr. Bushby Eason (Liverpool), Mr. McAdam Eccles (Marylebone), Mr. Bishop Harman (Marylebone), Dr. H. C. Mactier (South Staffs).

Naval and Military Committee. — Surgeon-General Greany, Colonel Raglan Thomas.

Dominions Committee.—Surgeon-General Benson, Surgeon-General Greany.

THANKS TO THE UNIVERSITY OF ABERDEEN.

The CHAIRMAN proposed from the chair that the best thanks of the meeting be tendered to the Senate of the University of Aberdeen and to the Local Committee for the arrangements made for the comfort and entertainment of the members of the Representative Body.

The resolution was carried by acclamation.

THANKS TO THE CHAIRMAN.

Mr. E. B. TURNER moved a hearty vote of thanks to Mr. T. Jenner Verrall for the manner in which he had presided over the meeting. They were thankful to him for his courtesy, for his impartiality, and for the flashes of humour with which he had enlightened their work.

Dr. DARLING seconded, and the motion was carried by acclamation.

The CHAIRMAN, in acknowledging, said the very occasional attempts of the Representatives at disorderly behaviour were a positive relief to him, as it enabled him, also just occasionally, to exhibit that natural ferocity which generally he kept under control.

The proceedings then terminated.

SPECIAL REPRESENTATIVE MEETING.

FORMATION OF A SCOTTISH COMMITTEE.

THE proceedings of the Annual Representative Meeting were interrupted for a short time on Monday morning, July 27th, when a Special Representative Meeting took place for the purpose of authorizing the formation of a Scottish Committee of the Association. Mr. T. JENNER VERRALL (Chairman of Representative Meetings) presided.

The authority convening the meeting—namely, the notice published in the SUPPLEMENT of June 27th, 1914—was taken as read.

On the motion of Mr. LARKIN (Chairman of the Organization Committee), the recommendation of Council proposing the necessary alteration of by-laws to legalize the formation of a Scottish Committee was approved.

The remainder of the Report of Council on this subject (SUPPLEMENT, June 27th, p. 475) was then approved.

The minutes of the meeting were confirmed, and the proceedings of the Annual Representative Meeting were resumed.

ANNUAL GENERAL MEETING.

THE eighty-second Annual General Meeting of the British Medical Association was opened in the Mitchell Hall, Marischal College, Aberdeen, on Tuesday, July 28th, at 2 p.m.

INDUCTION OF THE PRESIDENT.

Dr. MACDONALD, Chairman of Council, in the unavoidable absence of the President, occupied the chair.

The Financial Secretary, Mr. GUY ELLISTON, having read the notice convening the meeting, the minutes of the last general meeting were confirmed.

The Chairman, Dr. MACDONALD, said that the members of the profession in Aberdeen had selected a President of the Association for the coming year, and the Council of the Association had confirmed that selection. It therefore gave him very great pleasure to ask their distinguished townsman, Sir Alexander Ogston, to occupy the chair of the British Medical Association for the year 1914–15, and to wish him a very successful and prosperous year of office.

Dr. Macdonald then invested Sir Alexander with the President's badge.

The CHAIRMAN OF COUNCIL then vacated the chair in favour of Sir ALEXANDER OGSTON, who was received with loud applause.

THE RETIRING PRESIDENT.

Mr. T. JENNER VERRALL moved:

> That the warmest thanks of the Association be given to William Ainslie Hollis, M.A., M.D., F.R.C.P., for the distinguished services he has rendered to the Association during his year of office.

To any one who had known Dr. Hollis it would be no surprise to learn that he had shown during his year of office a large capacity for the work. Not only had he shown capacity but he had manifested a great willingness to carry it out. As an old personal friend of his own—they were colleagues of long standing at the County Hospital at Brighton—he could testify that Dr. Hollis was a gentleman of very warm feelings, courteous of demeanour and instinct, with a great sense of duty. In carrying out the work of the Association Dr. Hollis was fortunately placed in being resident within a reasonable distance of London, and he availed himself largely of the advantage he enjoyed in that respect by attending very largely the meetings of committees and assisting in the work of the Association at the head office. It was a great regret to them all that, as a result of the serious illness through which he had passed—and from which all would be glad to learn he had in large measure recovered—it had been impossible for him to travel so far north as Aberdeen.

Dr. MACDONALD, in seconding the resolution, said that as Chairman of Council he had had many opportunities of seeing the admirable manner in which the President did his work.

The resolution was unanimously adopted.

THE PRESIDENT-ELECT.

The PRESIDENT said he had much pleasure in introducing to the Representatives the President-elect, Sir Thomas Clifford Allbutt.

Sir CLIFFORD ALLBUTT said he had received the pleasant charge of conveying to the Association an invitation from the Branch of the Association in Cambridgeshire and Huntingdonshire, and also from the University of Cambridge, the borough of Cambridge and the county of Cambridge, to hold its meeting next year in the City of Cambridge. (Applause.) For some years Cambridge had been in a transition state as regarded its medico- and medico-surgical departments, and he regretted that the medical schools were even now only two-thirds completed. A great and new departure had been taken in several directions—such, for example, as the new building for the physiological department, which would start fully in October, and which would be warmed up and in active energetic work by next summer, and the Representatives would be able to judge for themselves. Other departments of great interest had quite recently been established. The psychological laboratory had been at work for many months, but the pathological department was suffering, for it was among those which, pending the completion of the building scheme, were housed in somewhat undignified quarters. The bio-chemical department would be at work fully by next summer. A professor had been engaged in bio-chemical work for the last ten or fifteen years, but it was only quite recently that the university had been in a position to enable him to establish a laboratory to tackle the great work which he was doing. The agricultural department might seem a little remote from medical interests, but its purposes were not altogether alien. In connexion with the pathological department a small estate of ten to fifteen acres had been devoted to the field laboratories, which were concerned in large part with the diseases of animals, and so formed a department of comparative medicine, which, though still young, was in active work; and it would be still more active next summer. That brought them in close touch and co-operation with the larger part of the agricultural department—he would not call it veterinary medicine, but animal medicine — working between the pathological field laboratories and the agricultural department, and by its chemical work closely allied to other departments. Cambridge would have something unique to show in the Research Hospital, which had now been at work for some years, and still remained the only research hospital, so far as he knew, in existence. He had to apologize for asking the Association to alter the date of its annual meeting from the customary time to a period rather earlier than usual. The undergraduates came up in crowds for their serious work in the Long

Vacation. The laboratories were then hard at work and the colleges full, so that it would have been impossible for the University to have taken in the Association in the later half of July. The colleges, he was informed, would exercise a generous hospitality, and their gates could not be open to visitors during the Long Vacation term. He therefore trusted that it might not be found very inconvenient to the members to meet a little earlier than was customary. He offered the Association a most cordial welcome to meet within the walls of Cambridge next summer.

Dr. Macdonald, Chairman of Council, said that the Association gladly accepted the invitation extended to them, through Sir Clifford Allbutt, to hold its annual meeting in Cambridge. He felt sure that he was expressing the feelings of every one when he said that they were looking forward with pleasurable anticipations to their visit.

Appointment of Auditors.

On the motion of Sir Thomas Fitcroft (Bolton), seconded by Dr. Milner Moore (Eastbourne), Messrs. Price, Waterhouse, and Co. were appointed Auditors of the British Medical Association until the next Annual General Meeting, at a remuneration of 150 guineas.

The meeting adjourned until 8.30 the same evening.

PRESIDENT'S ADDRESS.

The proceedings of the Annual General Meeting were resumed in the Music Hall, Union Street, Aberdeen, at 8.30 p.m. on Tuesday, July 28th.

Among those present upon the platform were; Sir Alex. Ogston, K.C.V.O., President; Sir James Barr, Past President; Professor Sir T. Clifford Allbutt, K.C.B. (President-elect), the Lord Provost of Aberdeen and Mrs. Maitland, the Right Honourable Robert Farquharson, M.D., of Finzean; Mrs. Carter, Miss Constance Ogston, Professor and Mrs. Adam Smith, Mr. and Mrs. Wm. Webster, Professor and Mrs. Grierson, Professor Matthew Hay, Bishop Chisholm, Dr. David Nicolson, C.B., Sir James Porter, Professor Nichol, D.D., Moderator of the Church of Scotland, Professor Marnoch, Dr. A. E. Garrod, Dr. and Mrs. Thos. Fraser, and Dr. F. K. Smith.

Civic Welcome to the Association.

Lord Provost Maitland said it was his duty and his very great pleasure, on behalf of the Corporation of Aberdeen, to offer the Association a very hearty welcome to the city of Aberdeen. Aberdonians were proud of their city, and he hoped that the visitors from afar, before they left, would agree that they had something to be proud of. Aberdonians felt very greatly honoured by the Association's visit; they recognized that the British Medical Association was a body of very great distinction and importance, which they had not had the honour of receiving in their city before. Aberdonians were proud of the situation of their city, of their granite, and particularly of their University. They felt and believed that their buildings at Marischal College were well worthy of pride; they were not only proud of them, but of the men and women who had made the building famous, and who were going to make it more famous still. The people of Aberdeen were proud of their Aberdeen doctors. They had gone out all over the world and they had given a very good account of themselves. But those whom they had sent away for the good of their country (laughter) were as nothing to the men they had kept. Aberdeen had always picked the best and kept them, and they were grateful that the Association had chosen one of their most distinguished Aberdeen surgeons to be the President for this year. On behalf of his colleagues in the City Council he extended a most hearty welcome, and expressed the hope that the visitors might enjoy their stay amongst them; that it might not be all work, but a little play and recreation, and a great deal of pleasant intercourse with their professional brethren. He bade them heartily welcome. (Applause.)

Dr. Macdonald (Chairman of Council), on behalf of the British Medical Association, thanked the Lord Provost for the welcome which had been extended to the Association. It was the Association's loss that it had not visited the city before. He was certain that before the members left, that view would be confirmed and that their stay would not only be profitable but a source of pleasure to them all.

Foreign Guests and Visitors.

Dr. Thomas Fraser made the following presentations:

Professor Onodi (Budapest), Professor D. S. Demetriades (Athens), Professor A. Maurice (Paris), Professor Umberto Gabbi (Rome), Professor Gauss (Germany), Dr. C. G. Jung (Zürich), Professor Leduc (Nantes), Professor H. Morestin, M.D. (Paris), Professor Plant (Munich), Dr. Rist (Paris), Professor Frank (Cologne), Professor E. Pontoppidan (Copenhagen), Professor J. J. R. Macleod (Cleveland, U.S.A.), Von Pirquet (Vienna) Dr. Meding (New York), Dr. Greene (San Francisco), Dr. Sandison Brock (Rome), Dr. A. G. Peter (Gold Coast), Dr. Simpson Morland (Switzerland), C. I. Rutherford (Ceylon), Casey A. Wood (Chicago), Professor Reeve (Toronto), and Bergonié (Bordeaux).

Delegates from the Overseas Dominions.

Bombay Branch.—Major E. F. Gordon Tucker.

Border Branch (South Africa) and Natal Branch (Inland).—Dr. P. P. J. Ganteaume, Dr. R. J. Love (Ind. Cape Province).

British Honduras Branch.—Dr. James Cran.

Burma Branch.—Lieut.-Col. J. Penny, I.M.S.

Cape of Good Hope (Western) Branch.—Dr. Julius Petersen.

East Africa and Uganda Branch.—Dr. C. A. Wiggins.

Egyptian Branch.—Dr. Llewellyn Phillips.

Gibraltar Branch.—Dr. Alexander Woodman Dowding.

Hong Kong and China Branch.—Dr. Charles T. Griffin, Dr. G. M. Tharston, Major F. F. Elwes, C.I.E., I.M.S., Captain J. Forrest, I.M.S., Major E. M. Illington, I.M.S., Captain A. C. Ingram, I.M.S., Lieutenant-Colonel R. K. Mitter, I.M.S., Captain D. S. A. O'Keeffe, I.M.S., Major T. H. Symons, I.M.S., Major C. G. Webster, I.M.S.

Tasmanian Branch.—Dr. Hugh Armstrong.

Toronto Branch.—Professor R. A. Reeve, M.D., LL.D.

Victoria Branch.—Dr. H. Cordiner and Dr. Russell Hamilton.

West Australia Branch.—Dr. H. O. Teague.

Malaya Branch.—Dr. G. A. Finlayson, Dr. P. Fowlie.

New South Wales Branch.—Dr. George Allan, Dr. W. H. Crago, Dr. L. Herschell Harris, E. T. Thring, Esq., Dr. J. Grenville Waine, Dr. A. Murray Will.

New Zealand Branch.—Dr. A. A. Martin.

Orange Free State and Basutoland Branch.—Dr. N. M. McFarlane, Dr. D. M. Tomory, Lieutenant-Colonel Basada.

Pretoria Branch.—Dr. J. J. Boyd, Dr. A. W. Sanders.

Punjab Branch.—Captain S. H. L. Abbott, Lieutenant-Colonel Henry Smith.

South Australia Branch.—Dr. A. A. Lendon, Dr. H. Swift, Dr. W. T. Hayward (Vice-President).

South Indian and Madras Branch.—Captain S. H. Lee Abbott.

The Gold Medal of the Association.

Dr. Macdonald, Chairman of Council, said a pleasing duty had fallen to him—to intimate that the Council of the British Medical Association had decided to confer on two members of the Association the medal for distinguished merit. This medal, Dr. Macdonald explained, was conferred for various reasons. It might be given for acts of distinguished bravery; it might be conferred for some distinguished achievement in the advancement of science, or for distinguished work done by a member for the Association and its members. It was for the third reason that medals were to be presented to two members. First, it was with the greatest possible pleasure he asked the President to present the Association's medal to Mr. T. Jenner Verrall, Chairman of the Representative Meeting. (Loud applause.) It was impossible fully to appreciate the work which Mr. Verrall had done for the Association. There was no honour which could be conferred on Mr. Verrall that would at all measure the value of the work he had done for the Association. He had been a member of the Association and one of its most vigorous workers for the last five-and-twenty years: he was General Secretary of the meeting in Brighton in 1886, and he was also Secretary of his Division for many years. The last two or three years had been a very strenuous time in the history of the Association, and during that period Mr. Verrall had held two very difficult positions—those of Chairman of the Insurance Act Committee and Chairman of the Representative Meeting. It was not possible to estimate all that Mr. Verrall had accomplished. It had certainly meant the sacrificing of time, money, and leisure, and had cast much trouble and anxiety on his shoulders.

The President then presented the medal.

Mr. T. Jenner Verrall, who was received with acclamation, on rising to respond, said that he fancied those who knew him would agree that, in general, he had but little difficulty in expressing himself with regard to any matter in which he was personally concerned. If he failed to do

so on this occasion, it would be due not to any want of will on his part, but to want of power. He took it, from the applause they had bestowed upon him, that the audience endorsed the action of the Council, and that they believed he had done good work in the Association for many years. (Applause.) He could assure them that his efforts on behalf of the Association had afforded him a great deal of acute pleasure. No man, he held, could do good work unless he enjoyed the performance of it. If, therefore, he had appeared to be unhappy as Chairman of the Representative Meeting—he did not think so—then he could honestly say that he had entirely belied his feelings. No doubt he had held that office during an anxious time—since the introduction of the Insurance Act—and he was inclined to claim, in regard to the reasons for which Dr. Macdonald said medals were awarded, that the reason why this medal had been given to him was not because of his long services to the Association, but because of his distinguished bravery. (Laughter.) In conclusion, Mr. Verrall remarked that if there was no Standing Order limiting the length of speeches by recipients of gold medals, there certainly ought to be, and the time allowed ought not to exceed two minutes. He thanked the Association for the gift of the medal, and assured the members that it would remain amongst his most treasured possessions. (Applause.)

The Chairman of Council (Dr. MACDONALD) asked the President of the Association to present the medal to Dr. Edwin Rayner, the Treasurer of the Association. All would agree that the Treasurer of an Association such as theirs held a very important position. During the past few years the post of Treasurer to the Association had been a most anxious one, because the Association, as they all knew, had passed through a critical period. In such a time as that questions of finance required to be carefully dealt with in order to ensure that, so far as possible, the Association was maintained in a state of prosperity. There was no doubt that, accepting Mr. Verrall's suggestion, the Association was under a deep debt of gratitude to Dr. Rayner for the distinguished bravery he had shown in administering the finances of the Association during a critical period. Indeed, Dr. Rayner's services, like those of Mr. Verrall, were such that they could not be adequately measured. Dr. Rayner by his personality had endeared himself to every one. He had held the position of Treasurer for seven years—an unprecedented time in the history of the Association.

The President then invested Dr. Rayner with the Gold Medal.

Dr. RAYNER, in acknowledging the presentation, thanked the members of the Association for the reception they had given him, not only on that but on many other occasions, and expressed his indebtedness for the handsome acknowledgement just made of the services he had striven to render to the Association during more years than he cared to think of. He thanked Dr. Macdonald for his kind remarks, and the members of the Council of the Association concerned in this matter. It did not happen to everybody, especially to a civilian, to receive acknowledgement of any service that he did during his lifetime. Monuments were put up to civilians usually after their death, though soldiers and sailors received honours during their lifetime. He had been singularly favoured during his lifetime with presentations and presents; he had received more compliments and won more friends than he deserved. He regarded it as a very great honour and pleasure to have received this medal, and his pleasure was more than doubled by the knowledge that his friend, the Chairman of Representative Meetings, had been equally honoured. Mr. Verrall deserved the honour more than he did, and he hoped that Mr. Verrall would live long, not only to render service to the Association, but that his family would have him with them for many years to be proud of the honour which had just been conferred on him. This had been a very happy day for him. He was getting old, and, though he might live many years longer, at the same time he took that occasion to be one of, if not *the*, crowning glory of his life.

PRESIDENT'S ADDRESS.

The PRESIDENT then delivered his address, which is published at p. 221 of the JOURNAL.

VOTE OF THANKS.

Professor MARNOCH, Professor of Surgery in the University of Aberdeen, said that when the profession in Aberdeen resolved to invite the British Medical Association to meet there and the invitation was accepted, they looked in one direction, and one only, for a President. Sir Alexander Ogston was very reluctant and diffident, but such was their pertinacity and such their unanimity that ultimately he consented to lay aside his hobbies, to come out of his retirement, and to lead them. (Applause.) No more fitting selection could have been made, and no selection could have given more gratification to Aberdeen graduates, or to the profession which Sir Alexander Ogston adorned. (Loud applause.) Sir Alexander Ogston had given them a most interesting and fascinating address—an address which would grow both in interest and fascination when they had time to sit down quietly and peruse it. He proposed:

> That the best thanks of the meeting be given to Sir Alexander Ogston, K.C.V.O., for his interesting and able presidential address on the occasion of the eighty-second annual meeting of the British Medical Association.

Dr. A. E. GARROD said he was privileged in being called upon to second the motion of the Professor of Surgery. He was sure that to all the medical men present it must have added to the pride which they felt in their profession to see a great surgeon wearing so lightly and so gracefully the garment of the historian. It was equally gratifying to them to hear in such felicitous terms of the growth from its earliest beginnings of the intellectual centre of a region familar to many present but, on the other hand, unfamiliar to many who had come to attend the meetings of the British Medical Association. It was well to remember that this was a region which the Roman raided but never ruled, in which the Saxon never settled, and which was such a great seat of learning that for centuries it supported two universities and not one only. (Applause.)

The motion was carried with acclamation.

The President bowed his thanks, and the proceedings terminated to the singing of the National Anthem.

ADDRESS IN MEDICINE.

THE Address in Medicine was delivered in the Mitchell Hall, Marischal College, Aberdeen, on Wednesday, July 29th, at 12.30 p.m., by Dr. A. E. GARROD, M.D., F.R.C.P., F.R.S., physician to St. Bartholomew's Hospital. The chair was occupied by the President of the Association, Sir ALEXANDER OGSTON, K.C.V.O., M.D.

The PRESIDENT briefly introduced Dr. GARROD, who then gave the address published at p. 228 of the JOURNAL.

Sir JAMES BARR, at the conclusion of the address, moved:

> That the best thanks of the Association be accorded to Dr. A. E. Garrod, F.R.S., for his able and interesting address on medicine on the occasion of the eighty-second annual meeting in Aberdeen.

The motion, he felt, had already commended itself to the audience, as shown by the attentive hearing it had given to the lecturer. The address had been extremely able and instructive, and the admirable diction in which it had been couched must have commanded the approval of all present. (Applause.) Dr. Garrod was evidently somewhat of an athlete, for he had covered the whole field of medicine in the space of about an hour, and few men could do that. He did not think any one else present could have delivered an address covering such a wide range. The field Dr. Garrod had described made his hearers realize the extent of the whole sphere of medicine. The lecturer had begun by dealing with the medical student, and in this connexion Sir James Barr remarked that the medical student of the present day was a long-suffering animal. Nowadays he got far too much crammed into him; he had to swallow facts and had little time to digest them. Again the vast field over which Dr. Garrod had travelled showed how chemistry had come to the front at the present day. The audience had been most convincingly shown what chemistry was doing. There was one point which Dr. Garrod omitted to mention, and that was his own work in the field of chemistry. Very few men of the present day had contributed as much as Dr. Garrod to chemical pathology and chemical physiology. Therefore, in thanking him

for the address, their indebtedness to Dr. Garrod for his personal services should be remembered. (Applause.) Dr. Garrod had dealt with some points in relation to digestion, and from his remarks it appeared that the audience would be able to eat its lunch with freedom, for they had been assured that in the matter of diet there should not be too many restrictions. (Laughter and applause.) The restrictions appeared to be that it did not matter much what one ate or did not eat so long as one did not eat too much. The address was bound to meet with approval and would be read with admiration. (Applause.)

Professor IRVING CAMERON (Toronto) said it gave him peculiar pleasure to second the vote of thanks because of the wide divergence there was between the lines of work which he and the lecturer followed. It was evident from the address itself that it emanated from one who had had the advantage of a classical education, and it demonstrated, to his mind, the benefits which come to those who had enjoyed such an education. Dr. Garrod, in his address, had given a wonderful illustration of what could be done in a short space of time by one who really knew his subject. To those who graduated, say, thirty or forty years ago, organic chemistry was very much of a closed book, and they regarded with admiration any one who could dilate on that subject in the way Dr. Garrod had. He had infinite pleasure in seconding the motion.

The motion was carried, and Dr. Garrod having bowed his acknowledgements, the proceedings terminated.

Meetings of Branches and Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

YORKSHIRE BRANCH.

THE annual meeting of the Yorkshire Branch was held at the Bradford Royal Eye and Ear Hospital on June 17th.

Election of Officers.—The officers for the year 1914–15 were elected:

President: Dr. Bronner.
Secretary and Treasurer: Dr. H. J. Campbell.

Report of Council.—The report of the Council was read by Dr. BRONNER.

President's Address.—The PRESIDENT then gave an interesting address on "Twenty-nine years' work at the Bradford Royal Eye and Ear Hospital."

Cases, Specimens, and Papers.—Mr. BASIL HALL showed a number of specimens of growths removed from the abdomen, described the cases, and commented upon the methods of operation employed. Mr. APPLEYARD described a case of osteoma of the frontal sinus. Mr. BASIL HUGHES read a paper upon some points in the treatment of syphilis; and Dr. VINING made a communication advocating the more extended use of whole milk in the artificial feeding of infants.

Vote of Thanks.—A vote of thanks was passed to Dr. STANGER for his able services as President during the past year, and he was elected a permanent Vice-President.

Next Meeting.—It was decided to hold the next meeting of the Branch in October at Scarborough, and the next annual meeting at York in June, 1915.

Annual Dinner.—The annual dinner was held at the Midland Hotel in the evening, and was well attended.

THE LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list. The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

LOCAL MEDICAL AND PANEL COMMITTEES.

LIVERPOOL.

LOCAL MEDICAL COMMITTEE.

A GENERAL meeting of the medical profession of Liverpool was held in the Liverpool Medical Institution on June 30th (Mr. F. CHARLES LARKIN in the chair), to receive the report of the proceedings of the Local Medical Committee during the past year, and to consider the scheme for the constitution of future Local Medical Committees.

Report.—The report showed that the committee had met 23 times, with an average attendance of 14.5, and had dealt with various matters which have arisen, particularly questions on the scope of medical benefit, excessive prescribing, certificates, drug tariff, removal of a practitioner from the panel, etc. As regards the agreement for 1914, the committee emphasized the fact that for some months it endeavoured to secure an early copy of this agreement, so that panel practitioners might have reasonable time to consider it, but the committee was unsuccessful in getting an advance copy. As regards finance the expenses have been met by a voluntary subscription of 5s. Strong comment was made on the fact that out of 210 panel practitioners only 130 subscribed, while 103 non-panel practitioners had responded.

CENTRAL ORGANIZATION OF COMMITTEES.

The meeting approved of the principles and objects of the Central Organization of Local Medical and Panel Committees to work in association with the British Medical Association.

Scheme for future Committee.—A scheme for the constitution of the future committee was agreed upon, namely, that the Local Medical Committee should consist of the Panel Committee, with the addition of seven members to be elected at a general meeting of the profession and that an endeavour should be made for the complete committee to contain among its members, medical practitioners practising specially the following branches:

(1) Surgery, (2) medicine, (3) gynaecology, (4) ophthalmology, (5) otology and laryngology, (6) dermatology.

BERKSHIRE.

LOCAL MEDICAL AND PANEL COMMITTEE.

THE twenty-third meeting of the Berkshire Local Medical Committee and the sixth of the Panel Committee, were held conjointly at the Royal Berkshire Hospital, on July 21st, 1914.

Payments of Arrears for 1913.—The HONORARY SECRETARY explained the position of the Berkshire Insurance Committee with respect to the payments of arrears for 1913. The Committee claimed £1,900 as due to them, but the Commissioners would only promise £875, and had not yet paid this. The Chairman of the Insurance Committee and Chairman of the Finance Subcommittee had interviewed the Commissioners, who acknowledged that the Berks Insurance Committee had a genuine grievance, but stated that they were unable to do anything more. The following resolution was passed:

> This Committee strongly protests against the non-payment of arrears for 1913, and urges the Berkshire Insurance Committee to take immediate action with the Commissioners for the purpose of obtaining them.

Practitioners and Lists of Patients.—The following resolution was also passed, and the Honorary Secretary was instructed to forward it to the Insurance Committee:

> That the Committee is of the opinion that any practitioner on the panel desiring a list of the patients whom he is liable to treat, and for whom the Committee is bound to pay, ought to be supplied with the same by the County Insurance Committee.

Protest against General Meeting in August.—As the new Panel Committee had not been elected in June on account of the dilatory methods of the Commissioners, the Honorary Secretary was instructed to protest against a general meeting being held in August as so many practitioners would be away for their holidays.

HAMPSHIRE.

DR. G. A. E. ROBERTS (Honorary Secretary, Hampshire Panel Committee) writes: I have been asked by the Hampshire Local Medical and Panel Committees to send you a copy of the enclosed letter, which is being sent to all panel practitioners in this county:

Twyford, near Winchester,
July 27th, 1914.

Dear Sir,—At a meeting of the Local Medical and Panel Committees, held at Winchester on July 23rd, it was unanimously agreed that the acceptance of insured persons who wish to transfer from the panel of a deceased doctor within the period of three months from the date of his death would be detrimental to the best interests of the profession.

It should be remembered that the Regulation allowing a practice to be carried on temporarily by a locumtenent appointed by the family of a deceased doctor was put in at the request of the medical profession.—I remain, yours faithfully,

GEO. A. E. ROBERTS,
Honorary Secretary.

MONMOUTHSHIRE.

PANEL COMMITTEE.

THE recently-elected Monmouthshire Panel Committee held its first meeting at St. James's Hall, Pontypool, on July 23rd. It was convened by the Returning Officer, Mr. W. J. EVERETT, solicitor, and the following members were present: Drs. T. W. Bevan, Evans, Frost, Hackett, Hayles, Logic, Lloyd Mulligan, Haslett, O'Keefe, Ryan, Steel, J. D. Sullivan, T. D. Sullivan, and Verity.

The Panel Committee consists of twenty-four members, and, in addition to the fifteen members present at the meeting, includes the following nine gentlemen: Drs. Brown, Barnard, De Grnchy, Drapes, Griffiths, J. O'Sullivan (Cwm), Shoolbred, Wade, Williams.

Election of Officers.—The following officers were appointed:

Chairman: Dr. J. W. Mulligan.
Vice-Chairman: Dr. H. T. Evans.
Secretary: Dr. E. Ryan.

Vote of Thanks to Returning Officer.—A vote of thanks was passed to Mr. W. J. Everett for the courteous and capable manner in which he had performed the duties of Returning Officer.

Formation of Rural and Industrial Subcommittees.—It was decided to form two subcommittees to look after the interests of the rural and industrial areas respectively, the Rural Committee to consist of eight members and the Industrial Committee of sixteen members, both committees to report to the Panel Committee.

Letter to Welsh Commissioners.—The SECRETARY was instructed to write to the Welsh Commissioners, asking them to recognize the Panel Committee as the Local Medical Committee.

Unallocated Funds.—The SECRETARY produced a balance sheet sent him from the Insurance Committee, showing the amount of unallocated funds in the hands of that body. The total amount was £1,859 13s. On the motion of Dr. EVANS, seconded by Dr. LLOYD, and carried unanimously, the following resolution was passed:

> That the unallocated capitation fees for medical attendance be divided *pro rata* to the amounts paid to each panel doctor for the year ending January 14th, 1914, and that the unallocated drug fund be divided on the same basis, taking into consideration the amounts already paid for the supply of drugs to the insured persons outside the mile limit.

On the motion of the CHAIRMAN, seconded by Dr. LLOYD, it was resolved:

> That a committee consisting of Dr. Steel, Dr. Evans, and Dr. Ryan be appointed for the consideration of financial matters and for the division of the unallocated funds, and that plenary powers be given to it.

The SECRETARY pointed out that any member who absents himself from three consecutive meetings must be reported to the Welsh Commissioners unless the Panel Committee considers that he has a reasonable excuse for such absence.

Next Meeting.—It was decided to hold the next meeting at St. James's Hall, Pontypool, on a date to be arranged.

NEWPORT (MON.).

PANEL COMMITTEE.

AT a meeting of the Newport (Mon.) Panel Committee was held on July 24th, when sixteen members were present.

New Local Medical Committee.—Correspondence with the Welsh Insurance Commission was read respecting the Panel Committee's scheme for the election of a new Local Medical Committee, and the Honorary Secretary was instructed to take action thereon.

Panel Committee Expenses.—It was resolved to circularize each panel doctor to pay a levy of one farthing per quarter for each insured person on his list into the above fund.

Suspense Slips.—Resolved that the clerk to the Newport Insurance Committee be requested to supply each panel doctor with the names and addresses of those on his "suspense slips."

Deduction from Payment to Panel Doctors.—A discussion arose on the action of the Newport Insurance Committee in retaining 10 per cent. of the moneys payable to the panel practitioners. This practice was severely criticized and ultimately it was decided to seek legal advice on the matter.

SUTHERLAND.

PANEL COMMITTEE.

Presentation to Dr. Dix.—A presentation of a solid silver tea service was made to Dr. R. H. Dix at the meeting of the committee of Sunderland panel practitioners on July 21st in recognition of his services as honorary secretary of the Local Medical Insurance and Panel Committees since their inception. Dr. MODLIN presided over a numerous gathering of doctors, and made the presentation. Drs. Pearcey (who had kindly undertaken the duties of honorary treasurer and secretary), Todd, Chalmers, Wallace, McNaughton, Milbanke, Rowstron, and others added their appreciation of Dr. Dix's very valuable services to the profession and to the panel doctors in particular. He had been ably assisted in the clerical work by Mrs. Dix, to whom also thanks were expressed. In reply, Dr. DIX thanked his fellow practitioners for their gift, which had come as a complete surprise to him. He had been very glad to act as honorary secretary of the committees, and he hoped the members would co-operate in the future as loyally as they had done in the past. The tray of the tea service is inscribed as follows:

> Presented to Richard Henry Dix, M.D., in recognition of his valuable and untiring services as honorary secretary of the Sunderland Medical Insurance and Panel Committees, July, 1914.

INSURANCE COMMITTEES.

LONDON.

A MEETING of the London Insurance Committee was held on July 23rd, when intimations were received from the Insurance Commissioners and the London County Council of representatives elected or appointed to the Committee for the ensuing three years. Mr. F. Coysh was elected Chairman of the Committee in succession to Mr. J. A. Dawes, M.P.

Unallotted Funds.

Mr. HARRIS called attention to a letter from Dr. Bazett in the BRITISH MEDICAL JOURNAL (SUPPLEMENT, July 11th, p. 52), and asked if any proceedings had been commenced against the Committee by Dr. Bazett in respect of the unallotted portion of the Medical Benefit Fund, 1913.

The CHAIRMAN of the Medical Benefit Subcommittee stated that a writ had been received at the instance of Dr. Bazett.

The Committee, however, proceeded to consider an urgency report by the Subcommittee, which stated that a letter, dated July 22nd, had been received from the Insurance Commissioners with reference to the unallotted funds.

The Commissioners wrote that they understood that some members of the Committee were oppressed by considerations of the possible liabilities to which they might become subject if the unallotted funds were distributed. While the Commissioners had never seen any reason to modify their view as to the legal aspects of the matter, they appreciated the difficulties of the Committee's position, and, after taking further legal advice, made the following suggestion as to a solution of the problem:

The total fund available for the remuneration of practitioners on the panel was derived as to thirteen-eighteenths from moneys credited to approved societies on the insurance fund, and as to five-eighteenths from the Exchequer grant (representing the extra 2s. 6d. voted by Parliament). The sum indisputably due to practitioners was more than covered by the thirteen-eighteenths from the approved societies, and the Commissioners suggested that the Committee should complete its payments (if it had not already done so) so far as sums not in dispute were concerned. The Commissioners would then proceed to distribute the balance in accordance with the Regulations and on the basis of particulars to be supplied by the Committee, using the Exchequer grant for the purpose, and taking from each practitioner his receipt in full discharge of all claims upon the Committee.

The Medical Benefit Subcommittee advised the Committee to accept this suggestion. The members of the Committee who in the past have opposed the distribution of the unallotted funds objected to the letter from the Commissioners being considered at such short notice, but the newly-elected members of the Committee expressed a desire to remove this thorny question from the purview of the Committee in order to concentrate on the improvement of the Insurance Act administration in the metropolis.

The Commissioners' offer was accepted by a large majority.

The Cost of Drugs.

Mr. Edward Smith, Chairman of the Finance Subcommittee, made the announcement that the expenditure on drugs for insured persons was markedly increasing in London. During the first five months of the medical year the bills received from the chemists amounted to £80,000, and if the present rate of increase was maintained the total for the year would amount to £210,000, whereas the total drug fund would not exceed £140,000 or £150,000.

Removal of Dr. Salter's Name from the Panel.

As promised at the last meeting of the Committee, further details were supplied as to the Medical Benefit Subcommittee's action in omitting the name of Dr. A. Salter of Bermondsey from the medical list for 1914. It will be remembered that Dr. Salter succeeded in an action to compel the Committee to restore his name. The Subcommittee stated that its action was taken on the advice of the Insurance Commissioners who, asked if the Committee could include the name of a practitioner who varied the approved form of agreement, replied that the right of a practitioner to be included in the medical list was dependent upon his entering into the agreement approved by the Commissioners, and that where a practitioner refused to enter into such agreement, the Committee had no power to include his name. There was no time to report the matter to the full committee before the medical year began, so the Subcommittee took the action which had led to legal proceedings.

Drugs Administered by Practitioners.

The Committee passed the following resolution relative to the supply of drugs required to be supplied by a doctor personally to his patient:

> That the Committee is of opinion that practitioners on the panel should not order on prescription forms provided by the Committee drugs and appliances required to be administered or applied by them in person in accordance with Clause 12 of their agreement, and that, after July 31st, 1914, accounts rendered by chemists for drugs and appliances so supplied be disallowed.

Application for Injunction.

We are informed by Mr. H. Bazett that application was made on the morning of July 29th before Mr. Justice Bailhache by counsel on his behalf for an interim injunction against the London Insurance Committee to prevent them from acting on the resolution carried at their last meeting, and from disposing of any part of the balance left in the Panel Fund for 1913 until the action brought by Mr. Bazett against the Committee shall have been heard and decided.

A summons for an injunction was granted by Mr. Justice Bailhache, returnable on Friday, July 31st.

Mr. Bazett's action is for a mandamus to compel the Committee to "distribute" the unallotted persons, as required by the Acts and Regulations, and for damages for breach of their agreements with him through their failure and definite refusal to do this for 1913.

INSURANCE NOTES.

The Salford Guardians and Maternity Benefit.

The House Committee of the Salford Board of Guardians have just reported to the board that there is an increasing number of women who are insured under the National Insurance Act who are taking unfair advantage of the accommodation provided by the guardians for maternity cases. They enter the institution when they expect their confinement to take place, and obtain medical treatment and other attention at the expense of the ratepayers, and then on their discharge obtain the maternity benefit to which they are entitled under the Act. The guardians are unable to obtain any part of this benefit towards the cost of their treatment in the institution, and accordingly the committee recommended that the attention of the Insurance Commissioners should be drawn to the matter, and they should be asked to see that the benefit was, if possible, withheld from women who were confined in the wards of the institution. There was some opposition on the part of several of the guardians to the recommendation, but eventually it was approved by the board.

INSURANCE ACT IN PARLIAMENT.

Medical Attendance Arrangements in Middlesex.

Mr. Nield asked the hon. member for St. George's-in-the-East, as representing the Insurance Commissioners, whether the Commissioners will address a remonstrance to the Middlesex Insurance Committee for not permitting Miss Ruby Holt to make her own arrangements for medical attendance, seeing that she has been attended from childhood by Dr. Bennett of Ealing, who has also for years past attended every member of her family.—Mr. Wedgwood Benn said: No, sir.

In further reply to Mr. Nield, Mr. Benn said: Payment has been made to all insured persons entitled to a contribution from the special arrangements fund, except those who have made their own arrangements with the particular doctor referred to. In their case the Insurance Committee is endeavouring, for the special convenience of the doctor and in accordance with his wishes, to obtain the insured person's consent to payment being made to the doctor direct.

Salaries of Panel Doctors.

Mr. Crean asked the Chief Secretary for Ireland whether he was aware that the salaries of the panel doctors in the county of Cork were more than six months in arrear; if he could state who was responsible for this neglect; and if, in view of the fact that any discontent on the part of the doctors for such neglect might cause inconvenience to the insured persons, he would insist on the Irish Insurance Commissioners having these liabilities discharged more regularly.—Mr. Benn said: My right hon. friend is informed by the Irish Insurance Commissioners that the accounts of the doctors in the area referred to who have undertaken to furnish the necessary certificates to insured persons have been settled up to March 31st last. Payment up to June 30th will be made as soon as the necessary particulars have been received.

Medical Benefit.

In reply to Mr. William Thorne, who asked whether medical benefit to insured persons included the provision of proprietary tonic foods; whether in certain conditions of ill health drugs were of little value and that effective treatment could often be given with suitable concentrated food; and if he would allow medical practitioners at their discretion to prescribe on the lines indicated, Mr. Benn said insured persons were entitled to proper and sufficient medicines as part of their medical benefit; and the question whether any particular compound or preparation was included within that category fell to be decided in the first instance by the Insurance Committee on the circumstances of the individual case.

Sickness Benefit.

In reply to Mr. Greene, who asked whether it were still the case that under the National Insurance Act no sickness benefit was paid to members who fell sick outside the United Kingdom, in spite of the fact that their weekly contributions were still levied during the whole of their stay abroad, Mr. Wedgwood Benn said that the hon.

member was under a misapprehension. Sickness benefit was not paid, but neither were contributions compulsorily payable in the circumstances stated.

Payment of Sickness Benefit to Persons in Hospital.

Lord Ninian Crichton-Stuart asked whether an insured woman who was now a paying patient at a convalescent home, and otherwise entitled to sick benefit under the National Insurance Act, has the payment of her benefit postponed until she leaves the home, or whether, by regulations or otherwise, the benefit can be paid to her weekly. Mr. Benn said if the member was an inmate of one of the institutions referred to in Section 12 of the Act of 1911, benefit would not, under the provisions of that section and Section 15 of the Act of 1913, be paid to her until she had left the institution, though it would be payable at once to her dependants if she had any. Whether the above provisions apply in a particular case could not be stated without full information as to the circumstances.

Disablement Benefit.

In reply to Mr. G. Locker-Lampson, Mr. Benn said the Insurance Commissioners had no means of making any precise calculation as to the number of persons who, on July 13th, became entitled to disablement benefit, but on the best estimate of which the circumstances admitted, they were inclined to believe that the number approximates to 80,000.

Sanatorium Benefit.

Mr. Worthington Evans asked how many new sanatoriums had been built by means of grants from the £1,500,000 provided by the Finance Act, 1911, and how many were in course of erection.—Mr. Herbert Samuel said that so far as England was concerned, the number of cases in which building was being aided by capital grants was sixty-nine. The work had been completed in twenty-two cases; in the remaining cases the plans had been approved by the Local Government Board, and in most of them the buildings were, he assumed, in course of erection. In addition, fourteen sites had been approved for the erection of new sanatoriums.

Sanatorium Treatment.

Mr. C. Bathurst asked whether the Commissioners have received resolutions passed by the Insurance Committees of London, Birmingham, Halifax, and other boroughs in support of the proposal to place the insured person who was being treated in a sanatorium in the same position as one who was being treated in an ordinary hospital as regards the application of his benefits; and, if so, what action do the Commissioners propose to take in this matter.—Mr. Benn said resolutions of the kind described in the first part of the question had been received from certain insurance committees. With regard to the second part, the Commissioners had no power to take any action.

Sanatorium Treatment for Postal Workers.

In reply to Mr. Mount, Mr. Hobhouse said the medical attendance provided by the Post Office for its staff did not include the provision of sanatorium treatment. About one half of the established staff were voluntary subscribers to the Post Office Sanatorium Society, an unofficial society controlled by the members themselves. He understood that the staff, in return for the subscription of 2s. a year, were able to obtain sanatorium treatment when required without delay and for as long as might be necessary. In reply to Sir Ryland Adkins, Mr. Hobhouse said that it applied to those who subscribe an annual amount to the society.

Tuberculosis (Kirkintilloch).

In reply to Mr. Barnes, Mr. McKinnon Wood said it was the fact that the Insurance Committee of the county of Dumbarton had declined to recommend for sanatorium benefit certain insured persons suffering from tuberculosis, and that the local authority of the burgh of Kirkintilloch had not yet agreed to treat these cases. From the information before it the Local Government Board for Scotland was not satisfied that the cases of Nellie Woods and Donald McPhee were being properly treated, and it was in communication with the local authority on the whole subject.

Government Nursing Grant.

Mr. C. Bathurst asked the Chancellor of the Exchequer if he could now state whether it was proposed to make the county and borough councils or the Insurance Committees the authorities for the administration of the proposed Government nursing grant; and whether any use would be made of the county nursing associations in establishing a county nursing service with the aid of such grant?—Mr. Montagu said the service referred to would be administered by the Insurance Commissions through the Local Insurance Committees. It was hoped to secure the co-operation of the county nursing associations.

Cost of Printing.

In reply to Mr. Neild, Mr. Benn said the cost of printing done on behalf of the Joint Committee and the several Commissions to March 31st last, and borne upon the Stationery Office Vote was, approximately, £194,000. No information was available as to the expenditure of Insurance Committees on printing.

Approved Societies (Invested Funds.)

In reply to Mr. F. Hall, Mr. W. Benn said the total amount of invested funds of approved societies under the National Insurance Acts in England, Scotland, Ireland, and Wales respectively was as follows:

	Sums standing to the credit of Societies in the Investment Account with the National Debt Commissioners.	Sums paid to Societies for Investment or Invested on their behalf in Specific Securities.	Total.
	£	£	£
England	1,668,690	1,220,840	2,889,530
Scotland	155,168	106,375	261,543
Ireland	103,342	38,370	141,712
Wales	43,998	31,236	75,234

CORRESPONDENCE.

East Sussex Medical and Panel Committee.

The following letter, with proposed circular, having reference to the amount credited to the East Sussex Insurance Committee for the purpose of paying for medical benefit, has been sent by the East Sussex Medical and Panel Committee to the National Health Commissioners (England). A copy has been forwarded to us for publication:

Sir,—The Executive Committee of the East Sussex Panel Committee, at an emergency meeting held on July 20th, considered a memorandum prepared by the Clerk to the East Sussex Insurance Committee with reference to revised provisional credits for the purposes of medical benefit.

They wish to protest emphatically against the method by which the societies are debited on the basis of contribution cards surrendered. They wish to point out that medical practitioners are expected to attend insured persons for whom no contribution cards have been surrendered; more especially cases of continued sickness, who pay no contributions on arrears.

The Executive Committee have also considered the question of attendance on temporary residents, and would desire to point out that no payments have yet been made to practitioners on account of their attendance on temporary residents under the arrangements agreed upon in April, 1913. The Executive have drafted the enclosed circular, which will be brought before the first meeting of the newly elected Panel Committee, together with any explanations which the Commissioners may wish to offer to the medical profession for the continued delay in settling the accounts due.—I am, Sir, yours truly,

H. Vallance,
Honorary Secretary.

199, High Street, Lewes,
July 21st.

The Clerk to the Insurance Commissioners (Eng.),
Buckingham Gate, S.W.

To Practitioners on the Panel for East Sussex.

The Panel Committee at its meeting held on considered—

1. The revised provisional credits in respect of medical benefits.
2. The question of payment for attendance on temporary residents.

1. *Revised Provisional Credits.*—You will have noticed that, whereas your list of patients has probably been continuously increasing, the cheque received by you in July, 1914, was not so large as might have been expected. This is owing to the fact that the Commissioners have reduced the amount of money credited to the Medical Benefit Fund.

They base their justification for this step on figures obtained from the contribution cards surrendered by the insured persons. It is quite evident that a considerable number of insured persons who are on doctors' lists do not surrender their contribution cards regularly for the following reasons amongst others:

(*a*) Because they have only just become entitled to medical benefit.
(*b*) Because no contributions are paid by persons in receipt of sickness benefit (the very patients who give us most trouble are therefore those who are *not credited* to the medical benefit fund).
(*c*) Some persons who should have been suspended for arrears still remain on our lists.

From these considerations it seems evident that the Commissioners are unable or unwilling to pay us the 8s. 6d. per insured person promised, and the panel practitioners must be prepared to receive, in future, remuneration only on the basis of about 95 per cent. of the patients who are actually upon their lists.

2. *Remuneration re Temporary Residents.*—No payment has yet been made on account of temporary residents. The Panel Committee would strongly advise practitioners not to attend any more temporary residents on or after August 15th, 1914, unless a payment on account has been received. They would advise that each practitioner send to the Clerk to the Insurance Committee a letter asking for a payment on account, and informing him that until this is forthcoming no temporary residents will be attended.

Hospitals and Asylums.

ROYAL MATERNITY CHARITY OF LONDON.

THE annual report for the year 1913 of this charity shows that 885 confinements were attended by its medical and nursing staff at a cost of £1 15s. 2d. per patient. There was only 1 death among the mothers (this being due to intercurrent pleuro-pneumonia) and 12 among the infants (13.65 per 1,000), while 29 of the children were stillborn (32.39 per 1,000). The ages of the mothers ranged from 18 to 48, and all were attended in their own homes, primarily by the midwives on the staff of the charity, who called for the assistance of the medical men attached to it in 11.92 per cent. of all cases. Some lessening in the number of cases attended is attributed to the operation of the Insurance Act, and it is stated that, while those in employment, with stamped cards, receive a maternity benefit of 30s., those out of employment, such as casual labourers' wives, street hawkers, and the like, get no aid from the State and still have to look to philanthropic enterprises such as the Royal Maternity Charity.

DEACONESS HOSPITAL, EDINBURGH.

THE annual meeting of contributors to the Church of Scotland Deaconess Hospital was held on March 24th, under the presidency of the Rev. Professor Nicol, D.D. During the year 481 patients were admitted to the hospital, and 440 operations were performed; the mortality was only 3 per cent. The district nurses paid 238 visits, and 1,569 surgical out-patients received attention. The total income was £2,572 6s. 2d., and the expenditure was £2,603 14s. 8d., leaving a deficit of £31 8s. 6d.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN ninety-seven of the largest English towns, 8,759 births and 3,928 deaths were registered during the week ended Saturday, July 25th. The annual rate of mortality in these towns, which had been 12.7, 11.5, and 11.6 per 1,000 in the three preceding weeks, fell to 11.3 per 1,000 in the week under notice. In London the death-rate did not exceed 10.6, against 13.3, 10.6, and 11.8 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 4.5 in Bath, 5.5 in Leyton, in Bournemouth, and in Devonport; 5.9 in Ealing and in Hornsey; and 6.1 in Wimbledon and in Ipswich to 17.1 in St. Helens, 17.2 in Preston, 17.8 in Bootle, 19.0 in Lincoln, 21.9 in Middlesbrough, and 22.0 in Stockton-on-Tees. Measles caused a death-rate of 1.0 in Sheffield and in Leeds, and 1.4 in Bootle and in Oldham; and whooping-cough of 1.1 in Salford, 1.4 in Warrington and in Burnley, and 1.9 in Barnsley. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 30, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 7 were recorded in Birmingham, 4 in Liverpool, and 2 each in London, Barrow-in-Furness, Huddersfield, South Shields, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,092, 3,109, and 3,126 at the end of the three preceding weeks, had further risen to 3,135 on Saturday last; 414 new cases were admitted during the week, against 442, 414, and 430 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

IN the sixteen largest Scottish towns 1,219 births and 592 deaths were registered during the week ended Saturday, July 25th. The annual rate of mortality in these towns, which had been 14.1, 13.6, and 12.7 per 1,000 in the three preceding weeks, rose to 13.5 in the week under notice, and was 2.2 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 4.4 in Kilmarnock, 6.3 in Kirkcaldy, and 9.4 in Ayr to 14.5 in Coatbridge, 16.0 in Aberdeen, and 18.1 Greenock. The mortality from the principal infective diseases averaged 1.1 per 1,000, and was highest in Dundee and Coatbridge. The 287 deaths from all causes in Glasgow included 11 from infantile diarrhoeal diseases, 7 from whooping-cough, 3 from measles, 3 from scarlet fever, and 2 from enteric fever. Three deaths from measles and 3 from scarlet fever were recorded in Dundee and 2 deaths from measles in Coatbridge.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BANBURY: HORTON INFIRMARY.—House-Surgeon. Salary, £120 per annum.

BARROW-IN-FURNESS: NORTH LONSDALE HOSPITAL.—Male House-Surgeon. Salary, £150 per annum.

BEDFORD COUNTY HOSPITAL.—Assistant House-Surgeon. Salary, £100 per annum.

BIRKENHEAD BOROUGH HOSPITAL.—Senior House-Surgeon (male). Salary, £120 per annum.

BIRKENHEAD UNION INFIRMARY.—Senior Male Resident Assistant Medical Officer. Salary, £175 per annum.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—House-Surgeon. Salary, £100 per annum

BIRMINGHAM: QUEEN'S HOSPITAL.—Secretary and General Superintendent. Salary, £400 per annum.

BRADFORD CITY COUNCIL.—Resident Medical Officer for the City Hospital for Consumptives. Salary, £200 per annum.

BRADFORD EDUCATION COMMITTEE.—Chief School Dentist. Salary, £350 per annum.

BRADFORD ROYAL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

BRIDGE OF WEIR CONSUMPTION SANATORIUM.—Lady Assistant. Salary, £75 per annum.

BRIGHTON THROAT AND EAR HOSPITAL.—Non-Resident House-Surgeon. Salary at the rate of £150 per annum.

BURY ST. EDMUNDS: WEST SUFFOLK GENERAL HOSPITAL.—Resident Medical Officer. Salary, £120 per annum.

CANCER HOSPITAL (FREE), Fulham Road, S.W.—House-Surgeon. Salary, £70 per annum.

CARDIFF COMMITTEE FOR THE CARE OF THE MENTALLY DEFECTIVE.—Medical Officer. Salary, £300 per annum.

CHORLEY: RAWCLIFFE HOSPITAL.—House-Surgeon (male). Salary, £100 per annum.

CROYDON BOROUGH HOSPITAL.—Assistant Resident Medical Officer. Salary, £150 per annum.

DERBY: DERBYSHIRE HOSPITAL FOR SICK CHILDREN.—Resident Medical Officer (lady). Salary, £80 per annum.

DEVONPORT: ROYAL ALBERT HOSPITAL.—House-Surgeon. Salary at the rate of £150 per annum.

DORCHESTER: DORSET COUNTY HOSPITAL.—House-Surgeon. Salary, £125 per annum.

DOWNPATRICK: DOWN DISTRICT LUNATIC ASYLUM.—Second Assistant Medical Officer (male). Salary, £170 per annum, rising to £200.

EAST SUSSEX COUNTY ASYLUM, Hellingly.—Third Assistant Medical Officer. Salary, £250 per annum, rising to £275.

EDINBURGH ROYAL ASYLUM, Morningside.—Assistant Physician. Commencing salary, £175 per annum.

EDINBURGH: THE HOSPICE.—Resident Medical Officer (female). Honorarium at the rate of £50 per annum.

ELDWICK SANATORIUM.—Resident Medical Officer (woman). Salary, £100 per annum.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—House-Physician. Salary at the rate of £75 per annum.

GREENWICH UNION INFIRMARY.—First Assistant Medical Officer. Salary, £175 per annum.

HULL: ROYAL INFIRMARY.—(1) Senior House-Surgeon. (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

INVERNESS: NORTHERN INFIRMARY.—House-Surgeon. Salary, £100 per annum.

JARROW-ON-TYNE: PALMER MEMORIAL HOSPITAL.—House-Surgeon (male). Salary, £170 per annum.

KIDDERMINSTER INFIRMARY AND CHILDREN'S HOSPITAL.—House-Surgeon. Salary, £100 per annum.

KIRKMABRECK PARISH COUNCIL.—Medical Officer. Salary, £40 per annum.

LANCASTER ROYAL INFIRMARY.—House-Surgeon. Salary, £110 per annum.

LEAMINGTON SPA: WARNEFORD, LEAMINGTON, AND SOUTH WARWICKSHIRE GENERAL HOSPITAL.—House-Physician. Salary, £85 per annum.

LEEDS CITY HOSPITALS FOR INFECTIOUS DISEASES AND TUBERCULOSIS.—Two Assistant Medical Officers. Salary at the rate of £130 per annum each.

LEEDS TUBERCULOSIS ASSOCIATION.—Resident Medical Officer at the Sanatorium, Gateforth. Salary at the rate of £100 per annum.

LEICESTER POOR-LAW INFIRMARY.—(1) Senior Assistant Medical Officer. Salary, £200 per annum. (2) Junior Assistant Medical Officer. Salary, £150 per annum.

LIVERPOOL EDUCATION COMMITTEE.—Two Assistant School Medical Officers. Salary at the rate of £250 per annum.

LONDON LOCK HOSPITAL, Harrow Road, W.—House-Surgeon to the Female Hospital, Harrow Road. Salary, £100 per annum.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.—(1) Assistant House-Surgeon. (2) Assistant Resident Medical Officer. Salary at the rate of £105 and £80 per annum respectively.

MAIDSTONE: WEST KENT GENERAL HOSPITAL.—Assistant House-Surgeon. Salary, £80 per annum.

MANCHESTER CHILDREN'S HOSPITAL, Pendlebury.—Resident Medical Officer (male). Salary at the rate of £100 per annum, rising to £120.

MANCHESTER CORPORATION.—Fourth Medical Assistant at the Monsall Fever Hospital. Salary, £150 per annum.

MANCHESTER HOSPITAL FOR CONSUMPTION AND DISEASES OF THE THROAT AND CHEST.—Resident Medical Officer for the In-patient Department, Bowdon. Salary, £100 per annum.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, increasing to £200.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL EYE HOSPITAL.—Junior House-Surgeon. Salary, £80 per annum.

MANCHESTER ROYAL INFIRMARY.—Medical Officer for Out-patients and Accidents. Salary at the rate of £100 per annum.

MANCHESTER: ST. JOHN'S HOSPITAL FOR THE EAR.—Honorary Clinical Assistants.

METROPOLITAN HOSPITAL, Kingsland Road, N.E.—(1) House-Surgeon. (2) Assistant House-Surgeon. Salary at the rate of £60 and £40 per annum respectively.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.—Junior House-Surgeon. Salary at the rate of £85 per annum.

NEWARK-UPON-TRENT HOSPITAL.—Resident Medical Officer.

NEWCASTLE-UPON-TYNE: ROYAL VICTORIA INFIRMARY.—Medical and Surgical Registrars. Salary for Medical Registrars at the rate of £50 per annum.

NOTTINGHAM GENERAL DISPENSARY.—Assistant Resident Surgeon (male). Salary, £180 per annum.

NOTTINGHAM GENERAL HOSPITAL.—Assistant House-Physician. Salary at the rate of £100 per annum.

OLDHAM ROYAL INFIRMARY.—Second and Third House-Surgeons. Salary at the rate of £140 and £100 per annum respectively.

OXFORD CITY: Assistant Medical Officer of Health and School Medical Officer (male). Salary, £300 per annum.

PAISLEY INFECTIOUS DISEASES HOSPITAL.—Resident Medical Officer. Salary, £150 per annum.

PLAISTOW: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—Male Assistant Resident Medical Officer. Salary at the rate of £100 per annum and £10 honorarium on completion of six months.

PUTNEY HOSPITAL, Putney Common, S.W.—Resident Medical Officer. Salary, £100 per annum.

ROCHDALE INFIRMARY AND DISPENSARY.—Senior House-Surgeon (male). Salary £120 per annum.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—Assistant to the Pathologist. Salary, £150 per annum.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—(1) Senior Resident Medical Officer. Salary at the rate of £90 per annum. (2) Junior Resident Medical Officer. Salary at the rate of £70 per annum.

ST. BARTHOLOMEW'S HOSPITAL.—Tuberculosis Dispensary Medical Officer. Salary, £300 per annum.

ST. GILES UNION.—(1) Assistant Medical Officer for Infirmary and Gordon Road Institution. Salary, £200 per annum. (2) Assistant Medical Officer for Infirmary. Salary, £190 per annum.

SALFORD ROYAL HOSPITAL.—Casualty House-Surgeon and Junior House-Surgeon. Salary at the rate of £100 each per annum.

SALFORD UNION INFIRMARY.—Resident Assistant Medical Officer (male). Salary, £150 per annum.

SALISBURY GENERAL INFIRMARY.—House-Surgeon. Salary, £100 per annum.

SCARBOROUGH HOSPITAL AND DISPENSARY.—Senior and Junior House-Surgeons. Salary, £100 and £80 per annum respectively.

SHEFFIELD: CHILDREN'S HOSPITAL.—House-Surgeon for the East End Branch. Salary, £120 per annum.

SHREWSBURY: COUNTY ASYLUM.—Second Assistant Medical Officer (male). Salary, £2 0 per annum, rising to £250.

SOUTHEND-ON-SEA TOWN COUNCIL.—Assistant Medical Officer of Health. Salary at the rate of £250 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

SOUTHWARK UNION INFIRMARY.—Third Assistant Medical Officer. Salary at the rate of £160 per annum, rising to £170.

STAFFORD: STAFFORDSHIRE GENERAL INFIRMARY.—House-Physician. Salary, £100 per annum.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY.—House-Physician (male). Salary at the rate of £120 per annum.

STOKE-UPON-TRENT UNION.—Assistant Resident Medical Officer for the Workhouse and Hospital. Salary £160 per annum.

SWANSEA GENERAL AND EYE HOSPITAL.—(1) House-Physician. (2) House-Surgeon. Salary, £125 per annum each.

TRURO: ROYAL CORNWALL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

WAKEFIELD: CLAYTON HOSPITAL.—Junior House-Surgeon. Salary, £150 per annum.

WAKEFIELD: WEST RIDING COUNTY COUNCIL.—School Medical Inspector. Salary, £325 per annum, rising to £400.

WALSALL AND DISTRICT HOSPITAL.—Junior House-Surgeon. Salary, £110 per annum.

WANDSWORTH UNION INFIRMARY.—Second Assistant Medical Officer (male). Salary at the rate of £150 per annum.

WARRINGTON UNION INFIRMARY.—Resident Assistant Medical Officer. Salary, £150 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL.—Assistant Resident House-Surgeon and Anaesthetist. Salary, £100 per annum.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.—(1) Resident Medical Officer. (2) Senior House-Surgeon. (3) Senior House-Physician. (4) Junior House-Surgeon. (5) Junior House-Physician. Salary for (1), £160; for (2) and (3), £120; and for (4) and (5), £100 per annum.

WEST RIDING: STORTHES HALL ASYLUM, Kirkburton.—Assistant Medical Officer. Salary, £230 per annum, rising to £270.

WESTON-SUPER-MARE HOSPITAL.—House-Surgeon. Salary, £120 per annum.

WILLESDEN URBAN DISTRICT COUNCIL.—Male Assistant Medical Superintendent of Isolation Hospital. Salary, £200 per annum.

WINCHESTER: ROYAL HAMPSHIRE COUNTY HOSPITAL.—House-Physician (male). Salary, £80 per annum.

CERTIFYING FACTORY SURGEON.—The Chief Inspector of Factories announces the following vacant appointment: Gargrave (York).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BOURNE, A. W., M.B., B.C., F.R.C.S. Obstetric Surgeon to Out-patients, St. Mary's Hospital, London.

BREND, W. A., M.B., B.Sc., Medical Referee under the Workmen's Compensation Act for County Court Circuits Nos. 42 and 44.

DIXON, Gerald C., M.B., Ch.B.Vict., Second House-Surgeon to the Manchester Royal Eye Hospital.

GAZDAR, Gertrude, M.B., B.S., Curator of the Museum of the Royal Free Hospital.

JONES, G. H., M.R.C.S., L.R.C.P.Loud., District Medical Officer of the Bicester Union.

LLOYD, Muriel A., M.B., B.S., Assistant Anaesthetist to the Royal Free Hospital.

MUMBY, W. Maxwell, M.B., Ch.M.Edin., F.R.C.S.Eng., Surgeon to the Ear, Nose, and Throat Department, Dewsbury and District Infirmary.

NEWSHOLME, H. P., M.B., Ch.B.Oxon., B.Sc.Lond., M.R.C.P., D.P.H., Assistant Medical Officer of Health, Surrey County Council.

OLIVER, M. W. B., M.A., M.B., B.C.Camb., F.R.C.S.Eng., Assistant Ophthalmic Surgeon to the Miller General Hospital.

PIRRIE, R. Reid, M.D., Visiting Medical Officer to the Northern Counties Joint Poor-Law Colony for the Feeble-minded and Epileptics, Prudhoe Hall, Northumberland, and Visiting Physician-in-Charge of the Durham County Council Sanatorium, Sealburn, Ryton-on-Tyne.

POSTLETHWAITE, J. M., M.R.C.S., L.R.C.P.Lond., District Medical Officer of the Clitheroe Union.

STANFORD, W. Bedell, M.D., M.R.C.S., L.R.C.P., Honorary Medical Officer to the King Edward Memorial Hospital, Ealing, W.

STIRLING, William, M.B., Ch.B.Vict., Resident Surgical Officer to the Manchester Royal Eye Hospital.

THOMSON, A., M.B., C.M.Edin., D.P.H.Camb., District Medical Officer of the Stratford-on-Avon Union.

VINEN, Geoffrey, M.D.Lond., F.R.C.S.Eng., Assistant Surgeon to the Royal Westminster Ophthalmic Hospital.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTH.

RORIE.—At 163, Princes Street, Dundee, on Sunday, July 26th, to Dr. and Mrs. G. A. Rorie, a son.

MARRIAGE.

CROSSLEY SKINNER.—On July 29th, at Wavendon, Leonard Crossley, M.D., of Winsley, Wilts, to Iunes Muriel Skinner, of Wavendon, Bucks.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses and Lectures are to be given next week at the following schools, colleges, and hospitals:

LONDON HOSPITAL MEDICAL COLLEGE, Turner Street, E.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.]

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, AUGUST 8TH, 1914.

CONTENTS.

EIGHTY-SECOND ANNUAL MEETING
OF THE
British Medical Association.

ABERDEEN, 1914.

ADDRESS IN SURGERY.

THE Address in Surgery was delivered in the Mitchell Hall, Marischal College, Aberdeen, on Thursday, July 30th, at 12.30 p.m., by Sir JOHN BLAND-SUTTON, F.R.C.S., Surgeon to the Middlesex Hospital, London. Sir ALEXANDER OGSTON, K.C.V.O., M.D., the President of the Association, occupied the chair and formally introduced the lecturer.

THE ADDRESS.

Sir JOHN BLAND-SUTTON then delivered the address, which was published in the last issue of the JOURNAL (page 235).

Professor MARNOCH (Aberdeen) said his colleague, Dr. J. Scott Riddell (Senior Surgeon to the Royal Infirmary, Aberdeen), had been unavoidably deprived of the pleasure of listening to this address and of proposing the motion which he had now been called upon to submit. The address was so scholarly and pregnant with so many bright flashes of humour that it would be quite superfluous on his part to make any appreciative references to it. He had simply to move:

That the best thanks of the Association be given to Sir John Bland-Sutton, F.R.C.S., for the able and interesting address on surgery he had delivered at the eighty-second annual meeting in Aberdeen.

Dr. LISTER (Physician to the Royal Infirmary, Aberdeen) said that he felt it a great honour to be asked as a physician to second this vote of thanks to Sir John Bland-Sutton. He felt this honour more particularly by reason of the fact that he had been at one time house-physician at Middlesex Hospital — the hospital to whose renown the work of Sir John Bland-Sutton had so materially added. After hearing the address —as indeed after reading or hearing any of Sir John's writings or addresses—one felt that it was the work of a man who was not a mere courageous craftsman, but one who was not only renowned as a pathologist, from the point of view of human and comparative pathology, but who was, in addition, a wide scientific observer. (Applause.) Sir John had shown in this address that width and scope of knowledge which afforded a reason why the whole medical profession awaited with so much interest all his utterances and writings. While they thanked him most heartily for the brilliant address he had just delivered, they would always remember it for the rare and rich expression of his sense of humour. (Loud applause.)

The motion was carried with acclamation, and Sir John having bowed his acknowledgements the proceedings terminated.

ANNUAL DINNER.

ON Thursday, July 30th, a large number of members of the Association and guests assembled for the annual dinner in the large hall of the Music Room, Aberdeen, which had been most artistically decorated for the occasion in drapings of rose pink. Dinner was served in traditional Highland style, to the accompaniment of Scottish and other airs rendered by an accomplished orchestra, and of frequent incursions into the hall by pipers of the Gordon Highlanders for such purposes as "playing in the haggis" and making such other demonstrations as immemorial custom dictates at Scottish banquets.

Sir ALEXANDER OGSTON, K.C.V.O., was in the chair, and among those present were: Lord Provost Maitland; the Principal of the University, the Rev. G. A. Smith, D.D., LL.D.; the Secretary of the University, Mr. D. Rose Thom; Sir William Osler, Bart., M.D., F.R.S.; the Right Rev. Professor Nicol, Moderator of the Church of Scotland; the Right Rev. Æneas Chisholm, Roman Catholic Bishop of Aberdeen; the Right Rev. Anthony Mitchell, Bishop of Aberdeen and Orkney; Sir John Fleming, LL.D.; Mr. Duffus, Chairman of Directors, Aberdeen Royal Infirmary; Mr. Ledingham, Chairman of the Royal Asylum Board; Mr. John Michie, H.M. Commissioner, Balmoral; Professor Gabbi, Rome; Professor Leduc, Nantes; Professor Pontoppidan, Copenhagen; Professor Plaut, Munich; Professor Bergonié, Bordeaux; Professor Cowan, Aberdeen.

LOYAL TOASTS.

The PRESIDENT proposed the toasts of "The King" and "The Queen, the Queen Mother, the Prince of Wales, and other members of the Royal Family." These were duly honoured.

THE CITY AND UNIVERSITY OF ABERDEEN.

Mr. T. JENNER VERRALL, Chairman of Representative Meetings, in proposing the toast of "The City and University of Aberdeen," remarked that this was, in effect, the toast of "Our Hosts." Primarily, of course, the members of the Association from various parts of the United Kingdom and the empire and from other countries were in Aberdeen as the guests of their

brethren in the city and its neighbourhood; but in a sense the visitors were all guests of the city and university. The conjunction of the two names in one toast showed the trend of local feeling: it was realized that the health of each meant the prosperity of the other. During the Representative Meeting he noticed, in one of the intervals, in the quadrangle of the university buildings—where by courtesy of the University the meetings were held—rows of the city carts filled with happy, smiling, flag-waving children. It was a sight no doubt familiar to residents, but he liked to think of it as symbolical. The men of business in the city went about their affairs, the lecturers and professors of the University went on with their teaching, but, should occasion demand it, the two streams of life of the city and university would flow towards one another, and form one grand, strong stream for the public good. It was unnecessary in proposing the toast to go into the history of Aberdeen, the more so that the President had so recently delivered a most interesting address on the subject. But out of that past doctors liked to recall one memory—the establishment of the university and the setting up of a chair of medicine—the first in the United Kingdom. From that had grown many important results. Numerous were the products of Aberdeen, but it exported nothing more valuable than its graduates, and, if he might particularize, its medical graduates. These, of course, were not all Aberdonians. The advantages of the Aberdeen degrees attracted many others, but of those who were Aberdonians born and bred he would say that they were known beyond the city, and in thinking of their qualities it must be concluded that into their composition must have entered a considerable portion of the famed local material—polished granite. (Laughter and applause.) He numbered many Aberdonians among his personal friends, and in the future, when speaking with them and the rich resonant "r" rolled out, the gates of memory would be unlocked, and he would see the long, wide street, simple, dignified, severe, leading on to the lovely grey tower of the Marischal College. Mr. Verrall concluded by saying that, although the members of the Association were nearly all strangers to Aberdeen, they had received a welcome that made them feel no longer strangers, but friends.

Lord Provost MAITLAND said he felt it a very great honour, though a heavy responsibility, to respond for the first half of the toast so eloquently proposed by Mr. Verrall. He found some comfort from the fact that most of the guests and visitors had "speired" about Aberdeen during the past three or four days, and that already they must know a very great deal about the city. Aberdeen owed a great deal to Nature; there were in the city and its surroundings many things of which other cities might well be envious. For these things they were most thankful; he did not know that they had any right to be proud of them, but Aberdonians were thankful that they had ancestors of the right sort, men who, over one hundred years ago, did the principal part of the planning and laying out of the city, and were responsible for the construction of beautiful Union Street, of which the citizens were so justly proud. He was particularly proud of those ancestors because they dared to undertake that huge work at a cost which, for their time, was very heavy; in fact they rendered themselves bankrupt in the doing of it. All the same, he honoured them in that they had the courage to do the right thing, and that they had been able to leave to their successors such a heritage. Their example was an inspiration to those who now had some hand in the control and management of the city, that they should strive to leave to those who came after something worthily done that would be both a joy and credit to them. Aberdeen had fortunately a considerable number and variety of industries, and as a consequence it had never suffered times of extreme depression. In this respect they were like the old lady of ample proportions who, when asked how she was, replied: "Weel ye see I'm owre big tae be a' ill at once." (Laughter.) Aberdeen possessed a large and prosperous fishing industry—the second largest in the United Kingdom. The granite industry was famous over the whole of the United Kingdom. Aberdeen and its neighbourhood also had, he believed, the largest output of paper of any part of the United Kingdom, and, in addition, they depended largely on their linen and woollen factories. After all, however, as Mr. Verrall had said, their most important industry was the brain-polishing one, over which Principal Smith so ably presided, and for which he was now to reply. They accepted the tribute paid to their University—it was a tribute often paid to them all—that Aberdeen doctors and students of all kinds had gone forth into the world, speedily won their way to the front and to the top, and remained there as long as they lived. He hoped the guests would carry away from Aberdeen many happy memories, and that they would hasten back again. (Applause.)

Principal GEORGE ADAM SMITH said those connected with the University of Aberdeen were proud to be linked with their good ally, the city of Aberdeen, in greetings and acknowledgements. Lord Provost Maitland and he had run for three years in double harness, and in such good step that he fondly wished their respected civic head was to be re-elected for another period of office. His colleagues and he in the University of Aberdeen had looked forward to this visit from the British Medical Association with high expectations of the honour and advantage it would bring to them, and if their expectations had been high these had been more than fully realized. He would speak, not in the name of the living only, but, as it were, in the presence of those past teachers and students of the university whose labours had contributed to the fame of the medical school, and whose spirits they would like to imagine were not absent from so auspicious an occasion as the first visit of the British Medical Association to their *Alma mata*. (Applause.) What a long and famous list these past teachers and students constituted! Alexander Reid, physician to Charles I. and the author of several works on anatomy and surgery; Arthur Johnston, also physician to the same Charles; George Buchanan, the greatest Latin poet Scotland ever produced; Patrick Dunn, who, he would like to remind his Irish friends, was many times re-elected President of the Royal College of Physicians in Ireland; John Arbuthnot, the physician to Queen Anne and the friend of Pope, the brightest wit in the wittiest age of English letters, and the inventor of the name "John Bull." (Laughter.) Englishmen should be reminded that it was Aberdeenshire which gave them their name, and it was still Aberdeenshire which sent them so much of the best of the roast beef of old England. (Laughter.) Then there was the long succession of the Gregorys, five generations in all, covering no fewer than 220 years, from 1638 to 1858—illustrious, first, as mathematicians and then as medicineers—illustrious, and, he might add, familiar to all, bitterly familiar, on account of the latest of their many inventions, from one's very childhood. (Laughter.) Another of the same clan, Sir James McGrigor, was chief of Wellington's medical staff, the saviour of countless lives in the Peninsular Campaign, and the reformer of the administration of military medicine in Great Britain. Another was Sir William Fordyce, the distinguished London physician, and one of the University's most munificent benefactors. He would mention the name of one other, although it might not be familar to all present, namely, Francis Adams of Banchory—Grecian Adams, as he was called, the translator of Galen and Hippocrates. There were others he might have named, but time would not suffice; there were the anatomists, Allan Thomson, John Struthers, James Matthews Duncan, and George Dean, the untimely end of whose distinguished career in pathology they all lamented. (Applause.) It was most remarkable how many of that list had combined the faithful performance of their medical duties with the cultivation of the Muses—Johnston, Arbuthnot, Adams and several of the Gregorys. Full proof had been afforded in the oration of the President that the same instincts and abilities still lived in their ranks. (Applause.) Long might it be so, for Literature had that to give to Medicine and Medicine had that to give to Literature which neither derived from any other source. With such examples before them, did it not behove the men of this generation to see that they did not allow the far heavier curriculum that science imposed upon medical students of the present day to crowd out these opportunities of a literary culture of which their predecessors had taken such advantage, to the delight of their compeers and contemporaries and the ennoblement of the whole of their profession? (Applause.) These, then, were the traditions inspiring the School of Medicine in Aberdeen, of which he dared to say—not being one of them himself—that its present staff, whether in systematic or clinical teaching or in research, was more than fully

worthy. Those who were charged with the administration of the curriculum were anxious to ensure that there should be given the full freedom, opportunity, and equipment required. On behalf of his colleagues of the University Court and the Senatus he would say that words could not tell what the discussions and demonstrations of the British Medical Association had meant to them during the present meeting. The survey revealed to them during the week of the recent expansion of medicine and the possibilities still lying before it justified the many additions recently made to the medical curriculum and to the medical staff, and encouraged and directed them in their unceasing task of keeping the medical school abreast of the rapid advancement of science. The medical curriculum had, indeed, broadened since Huxley in 1874 in his Rectorial Address sketched his simple programme. The authorities of Aberdeen University would seek to preserve their high standards and endeavour to supply to the ranks of the medical profession men as faithful and as skilled as they had sent out in the past. (Applause.)

The British Medical Association.

The Right Rev. Anthony Mitchell, Bishop of Aberdeen and Orkney, gave the toast of "The British Medical Association." He exercised this privilege, he said, with the greatest possible pleasure, because it gave him an opportunity of saying with what satisfaction and pride the general public of Aberdeen regarded the fact that the Association had chosen the city for its annual meeting. They felt that an honour had been done not only to the local representatives of the medical profession, but also to the city itself, and hoped that the members of the Association from a distance would carry away warm and happy memories of their stay in the Granite City. It was a pity that the weather had not been as warm as he could assure them it sometimes was, but he would remind them that it was at least possible to go further north and fare worse. (Laughter.) In this connexion, the bishop told the story of a visitor from Peterhead, a prosperous centre of population still further north, who spent the winter in Aberdeen, and when he returned to his native place was asked what he thought of the city. His reply was, "It would have been a fine place if it hadna been so 'awfu' relaxin'." (Laughter.) He hoped the relaxing properties of the Aberdeen climate had not affected the health of the members of the Association. In the city of Aberdeen, as Principal Smith had already well demonstrated, they admired and held in high esteem their own local representatives of the medical profession. They had reason to be proud of them. He could claim to have many personal friends amongst the medical men of Aberdeen and its surroundings, and he knew something, both from a professional and non-professional point of view, of their many qualities. He would say of them that, apart from their skill and efficiency in professional work, they were a body of men worthy of the highest admiration for their qualities of head and heart. What they could say of the medical men in Aberdeen was true of the profession throughout the whole world. Mankind generally felt that in the medical profession they had something not only to be thankful for as constituting one of the greatest factors in the evolution of the happiness and welfare of the human race, but also in that splendid devotion to duty at all costs and with the greatest regardlessness for personal comfort and convenience which characterized medical men all over the world. The British Medical Association—he spoke as an outsider and a layman—seemed to him to be a body which was peculiarly fitted not only to advance the professional efficiency of the medical man, but also to uphold those other ideals of which he had spoken. In the first place, it was a world-wide federation. There was something fine about the catholicity of the medical profession; it knew no time and no country. The old theological dictum was perhaps better realized in the medical profession than anywhere else—*quod semper, quod ubique, quod ab omnibus*. No matter where a discovery was made it at once penetrated to the ends of the earth. The clever surgeon or physician in America did not keep his knowledge to himself; he was only too glad to let anything he had discovered go wherever it might find a welcome. In addition to the catholicity of the profession, the Association existed also to advance the status of the members, to defend their interests, as well as to provide a medium for the exchange of progressive thought in medicine or surgery. In these aims of the Association the general public sympathized to the fullest extent. Whatever might be the future of the medical profession there was no doubt that the general public would deplore anything which tended to lessen its present high status. It would be a distinct loss to humanity at large if the profession ceased to attract the best men produced in the universities throughout the world. (Applause.) Medicine was a progressive profession; there was no standing still. It faced the problems of health and disease with open eyes, and it was always ready to follow wherever the truth led. There had been times in the past history of medicine, as in every other human concern, when there had been clouds of ignorance descending to retard its progress, but the public, not only in the city of Aberdeen, but throughout the world, trusted that the progressive spirit would live and go on. (Applause.)

Dr. J. A. Macdonald, who was the first to reply on behalf of the British Medical Association, said that the toast had been proposed in such kindly terms, and with so much eloquence, that it was difficult for one who belonged to a profession whose work lay in deeds and not in words, to make a fitting reply on behalf of the great British Medical Association. It was undoubtedly a great Association, for its Branches were spread all over the wide world. It did its best to advance the interests of the medical profession, and to promote the health and happiness of the community at large. He had just returned from a voyage round the world, on a visit to the various Branches of the British Medical Association in Australasia, China, and Canada, and he came back impressed with the power and the influence of the Association. (Applause.) It seemed to him that the medical profession was not only engaged in the care and alleviation of sickness—thereby adding to the health and happiness of the world—but it was employed, as no other profession in the world was, in trying to get rid, as far as it could, of its means of emolument. (Laughter.) One of the greatest objects of the profession was the prevention of illness, and the Association, with its ramifications all over the world, was one of the best influences for the realization of that object. Side by side with this ideal was the lighter aspect—the social side of the Association—which was strikingly exemplified in that gathering. The members of the Association made it their business to go from one district to another year after year, and wherever they went they met with a most cordial reception. In his long experience of the British Medical Association there had been no visit more pleasurable than this one to the city of Aberdeen. (Applause.) They had proved that inside the Granite City—externally cold and stern—there beat hearts of gold. From Aberdeen the Association had received a reception which it would not easily forget.

Dr. W. T. Hayward (Chairman of the Australian Federal Committee), who also replied, spoke of the links between the medical profession in Australia and their brethren at home. Last year, at the meeting of the South Australian Branch of the British Medical Association, the toast of the evening was not "The South Australian Branch," but "The British Medical Association." On that occasion the President, in replying to the toast, expressed a wish that the hall in which the meeting was held could have been connected by telephone, or some other means, to the Council Chamber of the Association in London, because then the members of the Council would have known from the enthusiasm manifested that the Australian hearts beat in unison with the parent Association in the British Isles. (Applause.) Professionally, they were not lagging behind in Australia, for quite 95 per cent. of the profession belonged to the British Medical Association. Dr. Hayward proceeded to sketch in interesting detail the work of the Australian Branches, and remarked that there also the profession was threatened with the introduction of an Insurance Bill, but had managed to obtain from the Government a promise to consult the British Medical Association in matters in which the interests of the general public and the medical profession were alike concerned. That was an important step because it gave the profession an opportunity of moulding any bill which might be presented. He was impressed with all he had seen in Aberdeen of the Association's work, but what he had seen also prompted the reflection that to advance professionally members of the Association must have peace in their ranks. (Applause.) They should

endeavour to let bygone troubles remain at rest and strive to work together in union. While beneficent progressive work was bound to be done in the higher branches of the profession, it was to the general practitioner that they must look to keep up its reputation as far as the general public was concerned. If practitioners cast aside the scientific aspect of their work, and if humanitarianism gave way to commercialism, then they might say farewell to the honour and glory of the medical profession. (Applause.)

The Guests.

Dr. GORDON (Aberdeen) proposed the toast of "The Guests." The number, renown, and various nationalities of the guests made it difficult to find the "winged word" which would do justice to the toast. One of the great objects of the British Medical Association was to secure the active co-operation of workers in all countries who were endeavouring to prevent disease or to cure it when it had appeared. This great chain of scientific work for the good of humanity encircled the world and bound medical practitioners together in a solid brotherhood of man. The kingdom of science had no barriers, no guarded frontiers. What had been discovered by one investigator was the property of all, and each one tingled with pride to know that a fresh discovery had been made. Members of the profession in this country honoured those who spurned delights and lived laborious days. Friendship was one of those priceless gems which not even scientific emulation could tarnish. In linking the name of Professor Pontoppidan with the toast, Dr. Gordon remarked that their guest came from the small but ardent country of Denmark, which had done so much in early days, by the hammer or war, to weld Great Britain into a nation. Now they welcomed Professor Pontoppidan as a scientific soldier of peace who had gained his laurels in the laboratory. Dr. Nicol, who would also reply to the toast, had received the highest ecclesiastical honour that his Church could bestow.

Dr. NICOL (Moderator of the Church of Scotland) said he had been asked to reply on behalf of the sister and more directly sacred profession of the ministry. The alliance between the two professions had been long and intimate; in earlier times the minister of the parish was often the parish doctor, and in those days there were many men in high places who were at the same time eminent theologians and distinguished and skilful medical practitioners. The progress of medicine in recent years read like a romance, and towards that progress the medical faculty in the University of Aberdeen had substantially contributed. As it was true of the Church so it was true of medicine, that there were no limits to the conquests still to be made. The future before the medical profession was one of increasing splendour in the work of bringing glory to the Creator and relief to man's estate.

Professor ERIK PONTOPPIDAN, who was able to make himself easily understood in English, said that the foreign guests felt it a great honour to have been invited by an Association of such world-wide reputation as the British Medical Association. They were grateful for all they had learnt at the meeting, and no one came to Britain without learning. He was old enough to remember the great work of Lister and Hutchinson, but he had been struck with the way that medicine in this country was being carried forward by the younger workers. The foreign guests united in wishing every prosperity to the British Medical Association in scientific and every other respect. (Applause.)

The Ulster Cup.

At this stage it was announced that Dr. D. Barty King (London), who was unable to be present, was the winner of the Ulster Golf Cup.

The President.

The health of the President was proposed by Sir WILLIAM OSLER, who said the medical profession honoured the President, first, for his splendid record as a surgeon—he was known all over the world in that capacity; secondly, as a teacher—a great and good one whose students were all over the world, carrying with them the best traditions of Scottish surgery; and thirdly, for the splendid example he had given of how to mature. No man in the profession had matured more gracefully or satisfactorily. It might not be known to the modest Scots that for at least 200 years the Adonis of the profession had always been in Scotland. "Since the death of that splendid man and noble-looking Scot, Argyll Robertson, I have always thought," said Sir William Osler, "that my dear old friend of forty-two years has taken his place." (Applause.)

The PRESIDENT, in responding, remarked that this was one of the occasions on which a Scot envied the gifts of those whom they used to designate their old enemies of England—the gift of entrancing oratory, like that of Sir John Bland-Sutton, or the power to emulate the manner in which Dr. Garrod condensed the whole history of the philosophy of medical thought from 400 B.C. to July 29th, 1914—(laughter)—into a lecture of one hour—crystal clear, beautiful, exquisite. He would confine himself to the adequate and yet inadequate word "Thanks." Since the Association honoured him by nominating him Vice-President, with the further hope of becoming President, he had received great encouragement from the officials of the Association, and had had a brotherly word from Dr. Ward Cousins of Portsmouth. Even Dr. Hollis, amid his own illness and trouble, sent a letter of hopes for the success of the meeting. He thanked Sir William Osler for his kind references.

The proceedings concluded with the singing of "Auld Lang Syne" and the National Anthem.

UNIVERSITY OF ABERDEEN.

Honorary Degrees.

A SPECIAL session of the Senate of Aberdeen University was held in the Mitchell Hall, Marischal College, on Friday morning, July 31st, when the honorary degree of Doctor of Laws (LL.D.) was conferred upon Sir John Bland-Sutton, Sir Victor Horsley, Mr. T. Jenner Verrall, Dr. W. T. Hayward, of Adelaide, South Australia, and Dr. A. E. Garrod. Principal GEORGE ADAM SMITH performed the ceremony in the presence of a large assembly.

After an opening prayer, in which reference was made to the war crisis then impending, the PRINCIPAL said: The Senatus Academicus, being desirous of signalizing the visit of the British Medical Association to the city and university, has resolved to confer upon certain representatives of the Association the highest honour which it is in its power to bestow. I call upon the Promoter-in-Law to present these gentlemen for the degree.

The Presentations.

Professor MATTHEW HAY then made the presentations in the following terms:

Mr. Vice-Chancellor,—It is my privilege and duty on behalf of the Senatus Academicus to ask you, as Vice-Chancellor of the University, to confer the honorary degree of Doctor of Laws on the following distinguished members of the great Association whose annual meeting is for the first time in its history being held within our city.

I present to you first Sir John Bland-Sutton, Fellow and Member of the Council of the Royal College of Surgeons, and reader of the brilliant Address in Surgery, which made so deep an impression on all who were privileged to hear it. Sir John is one of those men who would probably have attained to eminence in science without any formal academic training. In his boyhood he had already begun to accumulate accurate observations on the habits and diseases of animals, and it was no surprise to those who knew his remarkable scientific instincts that, within some four years after completing his student curriculum, he should have produced a book on comparative pathology that marked almost a new departure in this highly important, although, as yet, inadequately cultivated field of medical research. This publication was followed within a very few years by his fascinating and inspiring work on the evolution of disease. It is of interest to us in Aberdeen to recall that his earlier book was based on the lectures he delivered as occupant of the lectureship founded at Middlesex Hospital by Sir Erasmus Wilson, the distinguished son of a native of Aberdeen, and the founder of our own Chair of Pathology. Since these earlier years Sir John has published several works of the greatest value to pathologists and surgeons, and all of them characterized by exceptional powers of observation and by a rare philosophic insight. His writings, for example, on tumours and cysts are the best this country possesses, and he is admittedly our highest surgical authority on the diseases peculiar to women. Amid the demands of a great surgical practice his interest in pathological research has continued unabated, as is evidenced,

if evidence were needed, by his recent munificent gift of a pathological institute to the hospital with which his medical career has from first to last been intimately associated. I ask you, Mr. Vice-Chancellor, to confer the degree of Doctor of Laws on Sir John Bland-Sutton.

I have next to present to you Archibald Edward Garrod, a graduate in Arts and Medicine of the University of Oxford, a Fellow of the Royal College of Physicians, a Fellow of the Royal Society, and reader of the Address in Medicine. I hope I may venture to say without disparagement of the readers of addresses in previous years that Aberdeen has been particularly favoured by the selection made for the present meeting of the Association. In the fascinating address of Dr. Garrod we had a masterly and felicitous exposition of some of the most important advances that have been made in the application of chemistry to the unravelling of biological and pathological processes. But for the intimate acquaintance exhibited in the discussion of a highly intricate and difficult subject, one would scarcely have guessed—such was the modesty of the reader—that there is no more original worker and no greater authority on human metabolism than Dr. Garrod. His studies of metabolic anomalies, or metabolic sports, as he is pleased to call them, have not only helped to explain the mysteries of certain obscure diseases but have thrown on the processes of metabolism generally a flood of light which has been welcomed by every worker in biochemistry. It is to Dr. Garrod that we also owe the important discovery of the true nature of the urinary pigments and of their significance in health and disease. We have in these days many able and ingenious workers in biochemistry, but I venture with some confidence to assert that there is no one in this or any other country who surpasses Dr. Garrod in his dual capacity of biochemist and clinician. It does not detract from the honour due to him that his work has been in a territory of medicine, in the exploration of which he has been preceded by his father, the late Sir Alfred Garrod, one of the most brilliant names in English medicine in modern times. I ask you, Mr. Vice-Chancellor, to admit Dr. Archibald Edward Garrod to the degree of Doctor of Laws.

Mr. Vice-Chancellor, while the Senatus of the University has regarded it as a privilege to be given this opportunity of marking with their approval the selection by the Association of the readers of the Addresses in Medicine and Surgery, they are also glad to take advantage of the presence of the Association in our city to show their appreciation of the arduous and distinguished labours of those members who have been taking a leading part in the organization and administration of this great Association of British medical men—an Association that now embraces medical practitioners in every part of the British Empire. I shall submit two names in this connexion.

I first present, as a representative of the Association in our overseas dominions, Dr. William Thornborough Hayward, honorary physician to the Adelaide Hospital, honorary consulting medical officer to the Adelaide Hospital for Children, and for many years lecturer in clinical medicine and therapeutics in the University of Adelaide, and a member of the Council of the University. This city and University, through the numerous sons and alumni that have gone forth year after year to share the burden of empire in all parts of Greater Britain, have a peculiar regard for those whose represent, on occasions like the present, our far-off dominions. We recognize in Dr. Hayward, who comes from one of the greatest of those dominions, a physician who, notwithstanding the claims of an important medical practice and of his work as a teacher, has chosen to devote his great administrative powers to organizing the medical profession not only within his own State of South Australia, but throughout the whole of the Commonwealth of Australia. No one is more trusted and esteemed by his fellow medical men in Australia, who have elected him to the Chairmanship of their Federal Committee of the British Medical Association. The Senatus believes that in asking you, Mr. Vice-Chancellor, to confer the honorary degree of Doctor of Laws on Dr. Hayward, it is bestowing on him an honour which will meet with the approval of the whole Association.

Mr. Vice-Chancellor, I have also much pleasure in presenting to you Mr. Thomas Jenner Verrall, Consulting Surgeon to Sussex County Hospital, and one of the direct representatives of England on the General Medical Council of the United Kingdom, but best known to all of us as the brilliant, and trusted, and popular Chairman of the Representative Meetings of the British Medical Association. Our local newspapers have for several days in their reports of these meetings been giving all of us some notion of the numerous, important, and difficult questions with which this parliament of the medical profession has to deal, and have also given us indications of the quite unusual skill and tact with which the chairman has guided and controlled the deliberations. The Association has been peculiarly fortunate in the most critical period of its history in having had two leaders of such exceptional ability as the Chairman of their Representative Meetings and the Chairman of their Council. The Association has already during the present meeting shown its appreciation of the value of Dr. Verrall's services by awarding to him the Gold Medal of the Association—the highest honour which the Association can bestow, and one which, I believe, is only rarely awarded. The Senatus of the University has gladly availed itself of this opportunity of identifying itself with the honour done to Dr. Verrall by the Association, and asks you, Mr. Vice-Chancellor, to supplement that honour by conferring on him the degree of Doctor of Laws.

I have finally to ask you, Mr. Vice-Chancellor, to bestow the degree of Doctor of Laws, *in absentiâ*, on Sir Victor Horsley, who has been obliged to leave the meeting of the Association before its close.

Sir Victor Horsley, a graduate in Science and Medicine of the University of London, a Fellow of the Royal College of Surgeons, a Fellow of the Royal Society, and Emeritus Professor of Clinical Surgery in University College, is well known as a man of unusually varied gifts and of limitless energy. He is one of the few men connected with the British Medical Association who have found it possible to combine sustained scientific activity with a prominent part in the administration of the Association, for he occupied for a time the onerous post now held by Dr. Verrall. Sir Victor Horsley early achieved a high scientific reputation through his classical researches on the localization of the functions of the brain—an important sphere of investigation in which one of the most distinguished of our own graduates, Sir David Ferrier, has also worked with brilliant success. The researches of Sir Victor on the physiology and pathology of the thyroid body are also of first-rate importance, and have largely led to therapeutic developments that are now universally applied with striking benefit in various diseased conditions that had previously baffled all medical skill. In more recent years Sir Victor Horsley is best known to the medical world as perhaps the greatest living expert in brain surgery—one of the most difficult departments in the whole domain of surgery. Sir Victor Horsley's reputation is as high on the Continent as in his own country, and he has received many marks of honour from abroad, including the Lannelongue International Gold Medal for Surgery.

The degrees having been severally conferred and each recipient having been cordially received, the PRINCIPAL addressed them in the following terms:

"Gentlemen, we are proud to welcome you to the ranks of our honorary graduates, and, as we have already prayed, may the blessing of Almighty God, so manifestly resting upon your great labours in the past, continue with you in health and strength for many more years to come. The University of Aberdeen will follow your careers hereafter with a new and fresh interest."

The ceremony concluded with the Benediction.

EXCURSIONS.

Inverness, Elgin, and Nairn.

MEMBERS of the profession residing in Elgin, Nairn, Inverness, and Strathpeffer arranged very interesting short tours to the Highlands, starting from Aberdeen on Friday evening or Saturday morning. Some members of the party stopped at Nairn, where they were entertained by the medical profession to luncheon, at which they met some of the leading citizens of the town. Dr. Brodie Cruickshank extended a welcome to the guests, and Dr. Smyly of Derby replied. The remainder of the party from Aberdeen went on to Inverness, where they were entertained to luncheon by the Provost and Town Council. After luncheon the visitors were driven to Culloden Moor, where they were met by the party from Nairn. The story of the battle was related by Mr. Bain of Nairn and Colonel Alexander Fraser of Inverness, and the burial places of the clansmen killed in the action—the last stand of the Highlanders for the Stuart dynasty—were visited.

From the battlefield the Nairn party went on to Kilravock Castle, the seat of Colonel Rose, and Mr. Donaldson gave an interesting outline of the history of the ancient building and of the Rose family. Crossing the river Nairn, the excursionists' next halt was at Cawdor

Castle, which had been thrown open to the party by the Dowager Countess of Cawdor, who also provided a welcome cup of tea. The old furnishings, tapestries, and carvings, and the hawthorn tree round which the castle was built, were shown, and in the room approached by a winding staircase in which tradition says that King Duncan was murdered by Macbeth Dr. Cruickshank gave a brief account of the history of the castle. The exquisite flower garden was much admired. Dr. Macdonald, Chairman of Council, conveyed the thanks of the Association to the Countess of Cawdor, to Captain Ian Campbell, and to Mr. and Mrs. Robertson. The Inverness party returned by Croy, Dalcross, and Castle Stewart, a seat of the Earl of Moray, to that town, where in the evening the medical profession of Inverness entertained them to dinner under the chairmanship of Dr. MacFadyen, the senior member of the profession in the town. A pleasant evening was spent, enlivened by song, sentiment, and story.

On Sunday the party drove by the shore of Loch Ness, up Glen Urquhart by Kerrow to Cannich, and down Strath Glass to the Beauly river, which runs through a wild gorge with precipitous walls, affording many picturesque points of view. Passing through Beauly, the party reached Strathpeffer, where they were met by Drs. Bruce (of Dingwall), Douglas, Duncan, Kaye, and hospitably entertained at the Ben Wyvis Hotel, the Spa Hotel, and the Highland Hotel recently built by the Highland Railway Hotel. After luncheon the party was received at the Wells by Sir George Hastings, the managing director of the Spa Syndicate. The baths, electric, and radium departments were visited, and afterwards the new pump-room, where the waters were tasted.

The characteristic waters of Strathpeffer are the three sulphur wells—the Old or Castle Leod, the Upper or Sutherland, the Morrison, and the Cromartie. The last named, which is the strongest, contains 23 cubic inches of sulphuretted hydrogen, and about 38 of carbonic acid to the gallon. The chief mineral constituent is magnesium sulphate, but magnesium carbonate and chloride, sodium sulphate, and calcium carbonate are present also. The Sutherland Well contains more magnesium sulphate than the other springs, and is generally taken in the morning as a mild laxative. There is also a chalybeate spring containing iron carbonate and some free carbonic acid. Strathpeffer is especially used for the treatment of chronic rheumatism and gout, lumbago, sciatica, and similar affections, as well as in gouty eczema and in chronic disorders of digestion. The chalybeate spring is found useful as a tonic after a course of the sulphur waters and baths, and an after-cure may be followed at one of the numerous places on the sea lochs or among the mountains. The bathing establishment has been much enlarged during recent years. The baths include the sulphur baths of the natural water, peat, douche, Russian, and Nauheim baths, Plombières treatment, the Schwalbach bath, and the special Strathpeffer bath of strong sulphur water aërated with carbonic acid. The electric, light, and high-frequency departments have already been mentioned, and a stock of radium is held sufficient to give forty treatments a day. The spa is beautifully situated in a broad valley at the foot of Ben Wyvis; it has an excellent golf course with a well-appointed golf club. There is also a small social club in the pump-room, and a large music room in the gardens which are large and beautifully laid out. Fishing is to be had in the neighbourhood, and it is easy to make excursions to the many beautiful hills and valleys within easy reach.

The party returned by Dingwall and Beauly to Inverness, after a motor run of some ninety miles through some of the most characteristic scenery of the Highlands. Early on Monday morning the party broke up, some making excursions to Loch Maree and others to Loch Duich; others spent the day on the links of the Inverness Golf Club, which had extended the courtesy of its green to the members of the Association during their visit. Others went down the Caledonian Canal to complete their holiday in West Scotland.

The members of the party will always retain a grateful memory of the cordial hospitality they received from the profession in the historic city of Inverness, one of the brightest and most beautifully situated towns in Europe, with the broad peat-stained river Ness here chained, embanked, and bridged, sweeping through it, and from their colleagues in Elgin, Nairn, and Strathpeffer. In particular they are grateful to Dr. J. Munro Moir, of Inverness, Honorary Secretary of the Northern Counties of Scotland Branch, who spared no trouble to make the excursion to the Highlands agreeable to every one who joined and succeeded to the full.

On Monday the banks of the Findhorn and Glenfernen House (by the kind permission of the Earl of Leven and Melville) were visited from Nairn.

Another party visited the cathedral city of Elgin and its interesting and beautiful surroundings. On Friday, July 31st, an advance party enjoyed a motor excursion to Grantown-on-Spey by Speyside, returning by Dava and the Findhorn, where the beautiful scenery at the Divie Sluie, and Ribyas, was much appreciated. A larger party arrived in Elgin on Saturday forenoon, and were entertained to lunch by the local medical men. In the afternoon the golfers were motored to Lossiemouth, when a pleasant game was enjoyed on this far-famed course. Another party visited Gordon Castle, Fochabers, the northern home of the Duke of Richmond and Gordon, and were shown over the sights of the castle and the gardens. Others went to the ancient Priory of Pluscarden, and in the evening all declared they had spent a delightful day. Sunday forenoon was warm and pleasant, but lowering clouds caused some anxiety to the organizers of a motor trip to Grantown-on-Spey. However, an optimistic and happy party started in five cars lent by local medical men in Elgin and Forres for this delightful run. Rain soon began to fall and a breakdown by one of the cars decided some of the party to shorten the trip, and only Craigellachie was visited by these. Two cars, however, went on bravely, and in spite of adverse weather conditions the whole party enjoyed the day and their visit to the Laich o' Moray.

Association Notices.

CHANGES OF BOUNDARIES.

FORMATION OF A WILTSHIRE BRANCH, WITH SALISBURY, SWINDON, AND TROWBRIDGE DIVISIONS.

THE following changes have been made in accordance with the Articles and By-laws, and take effect as from the date of publication of this notice:

That a new Branch of the Association be formed, to be known as the Wiltshire Branch, coterminous with Wilts county, with Divisions as follows:

1. *Salisbury Division.*—That part of the county south of a line drawn from west to east from north of Warminster to south of Ludgershall;

2. *Swindon Division.*—That part of the county to the north and east of a line drawn from west of Malmesbury to west of Ludgershall (not including Pewsey);

3. *Trowbridge Division.*—That part of the county lying between these two lines;

and that the areas of the Bath, West Dorset, and Winchester Divisions, and Bath and Bristol, Dorset and West Hants and Southern Branches be modified accordingly.

Representation in Representative Body.—For 1914–15 the members of the area will under the By-laws continue to be represented upon the basis of the 1914 Annual List. The arrangements to be made as regards 1915–16 will be determined in due course by the Council.

THE LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

A LIST of periodical publications, official reports, and Blue Books in the Library of the British Medical Association available for issue to members on loan has been printed, and copies can be obtained free on application to the Librarian, at the house of the Association, 429, Strand, W.C. The regulations governing the loan of these publications are stated in the introduction to the list. The Library is open for consultation from 10 a.m. till 5 p.m. (on Saturdays till 2 p.m.).

THE WAR.

NOTIFICATION TO INSURANCE COMMITTEES.

The following letter has been addressed to all Insurance Committees in England:—

National Health Insurance Commission (England),
Buckingham Gate, London, S.W.,
August 5th, 1914.

Sir,—In view of the mobilization of His Majesty's forces, I am directed by the National Health Insurance Commission (England) to invite your attention to the following respects in which the Committee's administration is immediately affected.

Panel Practitioners Enrolled or Embodied for Active Service.

In the event of any practitioner on the panel for the area being enrolled or embodied for active service, and accordingly finding it necessary to relinquish his duties towards the insured persons on his list, it will of course devolve upon the Insurance Committee to see that the requisite arrangements are made for the medical attendance of those persons during his absence. The Commissioners recommend the Committee, therefore, to issue forthwith a circular letter to all practitioners on the panel requesting that the Committee may be informed by any practitioner so situated of the fact of his enrolment or embodiment and of any arrangements which he proposes to make for carrying on his practice by deputy during his absence. Such a circular should also, it is suggested, inform practitioners that in the event of any practitioner so situated not finding it possible to make arrangements prior to his departure for carrying on his panel practice, the Committee will themselves be prepared to arrange with other practitioners on the panel to act as his deputies during his absence on active service.

The Committee will doubtless take any steps necessary to inform themselves as to whether any practitioner on the panel has, prior to the issue of their circular, been obliged to absent himself without notifying the Committee or making any arrangements for the appointment of a deputy. In such cases the Committee will presumably proceed, in consultation with the Panel Committee, to arrange with other practitioners to act as deputies during the absence on active service of the practitioner in question.

In any area in which, owing to mobilization the Committee are deprived of the services of any considerable number of the practitioners on the panel, it may possibly be found more convenient to make some general arrangements in consultation with the Panel Committee. The Commissioners will be pleased to advise committees in any cases of difficulty which they may experience.

Army and Navy Reserves and Territorials.

The calling up of deposit contributors who are in the Army or Navy Reserves or Territorials will materially affect their position as regards insurance from the moment they are so called up. From that moment they will be treated, not as deposit contributors, but in the same way as serving soldiers and sailors who are not members of approved societies; that is, the only benefit they will be entitled to is maternity benefit, and this will be paid out of the Navy and Army Fund.

It will not be necessary for Insurance Committees to take any action at present in regard to the suspension of these contributors from medical and sanatorium benefit.

On receipt of a claim for maternity benefit from the wife of a man who has been called up for service and was previously a deposit contributor, the Committee should forward the usual certificate to the National Health Insurance Commission, Maida Hill, London, W., but should clearly mark it "Now called up for service," quoting his regiment, ship, shore establishment or marine division, and, where the information can be obtained without delay, his regimental or official number. *The vouchers in support of the claim should accompany the certificate.*

Insurance Committees will be informed in due course of the deposit contributors within their areas who have been called up.—I am, Sir, your obedient servant,

S. P. VIVIAN.

AN EXAMPLE FROM SOUTHAMPTON.

At a meeting of the profession in Southampton, held on August 4th, it was unanimously resolved:—

A. That this meeting of the medical profession loyally undertakes to safeguard the interests of those of their colleagues who are called to leave their practices in the service of their country, and also undertakes any medical duties for the sole benefit of the absentees.

B. That a committee of not less than seven, with power to add to their number, be elected to facilitate the carrying out of the above resolution.

Drs. Fox, Gillespie, Hamilton, Harman, Jolliffe, Robson, and Tebbs were elected on the committee.

At a meeting of the Committee, held the same evening, the following resolutions were carried:

1. That each doctor, liable to be called away for duty, be asked to make any arrangements he can with the doctor or doctors in his neighbourhood to do his work, including attendance at confinements.

   Inability to make such arrangements should be notified by telephone to Dr. Hamilton (Telephone, Southampton 39 or 442), who will notify the Committee of the same.

   The Committee will in such cases make the best arrangements possible for the carrying on of the work of the absent doctor.
2. That no deputy doctor be expected to attend at the surgery of any doctor who has been called away, *i.e.*, that all surgery patients be seen at the deputy's surgery.
3. That National Insurance Patients attending the surgery shall be shown a printed list of doctors on the panel who are remaining in the town, all of whom have undertaken this work, and shall be referred to one of them for treatment. The Committee feel that in many cases, owing to the exceptional calls on the deputy's time, it will be impossible for him to keep the usual records.

   NOTE.—About half of the doctors in active practice in Southampton are liable to be called up.
4. In the case of National Insurance Patients paying nine shillings per head, or Southampton Public Medical Service patients, or similar club patients, or private patients, the deputy doctor either—

   (A) Will dispense and charge sixpence a bottle of medicine against the absent doctor, or—

   (B) Will write prescriptions to be dispensed by a chemist, who will be paid by the absent doctor at a contract rate to be settled between such doctor and chemist—unless other arrangements have been made by the absent doctor, *e.g.*, with his own dispenser.
5. That the Local Insurance Committee be notified of the arrangements made under Resolution 3.
6. That the remaining Poor Law Doctors be asked to do the necessary Parish work of the absent Poor Law Doctors.
7. That books with counterfoils be supplied to each deputy doctor to keep the records of the work (apart from Insurance and Parish work) done for his absent colleagues.
8. That a copy of the above resolutions, and of the first resolution carried at the General Meeting, be sent to each doctor in the area of the County Borough of Southampton.
9. That this Committee also send, as soon as possible, copies of the above resolution to the doctors in the County Area of the Old Southampton Division of the British Medical Association, and to the Chairmen of the Winchester and the Portsmouth Divisions of the British Medical Association, asking them to take any steps, in their areas, they think necessary.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

ASHTON-UNDER-LYNE: DISTRICT INFIRMARY AND CHILDREN'S HOSPITAL.—Assistant House-Surgeon. Salary, £100 per annum.

BANBURY: HORTON INFIRMARY.—House-Surgeon. Salary, £120 per annum.

BARROW-IN-FURNESS: NORTH LONSDALE HOSPITAL.—Male House-Surgeon. Salary, £150 per annum.

BEDFORD COUNTY HOSPITAL.—Assistant House-Surgeon. Salary, £100 per annum.

BETHNAL GREEN INFIRMARY.—Second and Third Assistant Medical Officers. Salary, £180 and £160, rising to £200 and £180 per annum respectively.

BIRKENHEAD BOROUGH HOSPITAL.—Senior House-Surgeon (male). Salary, £120 per annum.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—House-Surgeon. Salary, £100 per annum.

BODMIN: CORNWALL COUNTY ASYLUM.—Junior Assistant Medical Officer. Salary, £225.

BRADFORD CITY COUNCIL.—Resident Medical Officer for the City Hospital for Consumptives. Salary, £200 per annum.

BRADFORD EDUCATION COMMITTEE.—Chief School Dentist. Salary, £350 per annum.

BRADFORD ROYAL INFIRMARY.—(1) House-Surgeon. (2) House-Physician (males). Salary, £100 per annum each.

BRENTFORD UNION.—Second Assistant to the Medical Superintendent of the Infirmary and Medical Officer of Warkworth House, etc. Salary, £200 per annum.

BRIDGE OF WEIR CONSUMPTION SANATORIUM.—Lady Assistant. Salary, £75 per annum.

BRIGHTON THROAT AND EAR HOSPITAL. — Non-Resident House-Surgeon. Salary at the rate of £150 per annum.

BRISTOL CITY LUNATIC ASYLUM.—Assistant Medical Officer. Salary, £250 per annum, rising to £300.

BRISTOL GUARDIANS.—Two Assistant Medical Officers at the new Infirmary, Southmead. Salary, £150 per annum each.

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN.—House-Physician. Salary, £100 per annum.

BURY ST. EDMUNDS: WEST SUFFOLK GENERAL HOSPITAL. —Resident Medical Officer. Salary, £120 per annum.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. Salary at the rate of £100 per annum.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL. — Second House-Surgeon. Salary, £80 per annum.

CANCER HOSPITAL (FREE), Fulham Road, S.W.—House-Surgeon. Salary, £70 per annum.

CARDIFF COMMITTEE FOR THE CARE OF THE MENTALLY DEFECTIVE.—Medical Officer. Salary, £300 per annum.

CARNARVONSHIRE EDUCATION COMMITTEE.—School Dentist. Salary, £250 per annum.

CHORLEY: RAWCLIFFE HOSPITAL. — House-Surgeon (male). Salary, £100 per annum.

COLONIAL OFFICE. — Bacteriologist for British Guiana. Salary, £350 to £600 by annual increments of £25.

CROYDON BOROUGH HOSPITAL.—Assistant Resident Medical Officer. Salary, £150 per annum.

DERBY: DERBYSHIRE HOSPITAL FOR SICK CHILDREN. — Resident Medical Officer (lady). Salary, £80 per annum.

DEVONPORT: ROYAL ALBERT HOSPITAL. — House-Surgeon. Salary at the rate of £150 per annum.

DORCHESTER: DORSET COUNTY HOSPITAL.—House-Surgeon. Salary, £125 per annum.

DOWNPATRICK: DOWN DISTRICT LUNATIC ASYLUM.—Second Assistant Medical Officer (male). Salary, £170 per annum, rising to £200.

EAST SUSSEX COUNTY ASYLUM, Hellingly.—Third Assistant Medical Officer. Salary, £250 per annum, rising to £275.

EDINBURGH ROYAL ASYLUM, Morningside.—Assistant Physician. Commencing salary, £175 per annum.

ESSEX COUNTY HOSPITAL, Colchester.—House-Surgeon (male). Salary, £100 per annum.

GLENELG PARISH COUNCIL.—Medical Officer. Salary, £140 per annum.

HULL: ROYAL INFIRMARY.— — (1) Senior House-Surgeon, (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

JARROW-ON-TYNE: PALMER MEMORIAL HOSPITAL.—House-Surgeon (male). Salary, £170 per annum.

KIDDERMINSTER INFIRMARY AND CHILDREN'S HOSPITAL. —House-Surgeon. Salary, £100 per annum

LANCASHIRE COUNTY COUNCIL.—Two Junior Assistant Tuberculosis Officers. Salary, £300 per annum, rising to £350.

LEAMINGTON SPA: WARNEFORD, LEAMINGTON, AND SOUTH WARWICKSHIRE GENERAL HOSPITAL.— House-Physician. Salary, £85 per annum.

LEICESTER ROYAL INFIRMARY. — Assistant House-Surgeon. Salary at the rate of £100 per annum.

LIVERPOOL EDUCATION COMMITTEE.—Two Assistant School Medical Officers. Salary at the rate of £250 per annum.

LONDON LOCK HOSPITAL.—House-Surgeon to the Female Hospital. Salary, £100 per annum.

MAIDSTONE: WEST KENT GENERAL HOSPITAL.—Assistant House-Surgeon. Salary, £100.

MANCHESTER CHILDREN'S HOSPITAL, Pendlebury. — Resident Medical Officer (male). Salary for first six months at the rate of £100 per annum, rising to £120.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, increasing to £200.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL EYE HOSPITAL.—Junior House-Surgeon. Salary, £80 per annum.

MANCHESTER ROYAL INFIRMARY.—(1) Two House-Physicians. (2) Four Junior House-Surgeons.

MANCHESTER TOWNSHIP.—Junior Resident Assistant Medical Officer to the Workhouse, Crumpsall. Salary, £120 per annum.

MANSFIELD AND DISTRICT HOSPITAL.—Resident House-Surgeon. Salary, £200 per annum.

METROPOLITAN HOSPITAL, Kingsland Road, N.E.—(1) House-Surgeon. (2) Assistant House-Surgeon. Salary at the rate of £60 and £40 per annum respectively.

NATIONAL SANATORIUM, Benenden.— Assistant Medical Officer. Salary, £120 per annum.

NEWPORT: ROYAL GWENT HOSPITAL.—Resident Medical Officer. Salary for first six months at the rate of £100 per annum, rising to £150.

NORWICH CITY ASYLUM, Hellesdon.—Assistant Medical Officer. Salary, £250 per annum, rising to £300.

NOTTINGHAM GENERAL DISPENSARY. — Assistant Resident Surgeon (male). Salary, £180 per annum.

PLAISTOW: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—Male Assistant Resident Medical Officer. Salary at the rate of £100 per annum, and £10 honorarium on completion of six months.

PRESTON: COUNTY ASYLUM, Whittingham.—Assistant Medical Officer. Salary, £250 per annum, rising to £300.

PRESTON ROYAL INFIRMARY.—House-Physician. Salary, £120 per annum.

PUTNEY HOSPITAL, Putney Common, S.W.—Resident Medical Officer. Salary, £100 per annum.

ROCHDALE INFIRMARY AND DISPENSARY. — Senior House-Surgeon (male). Salary, £120 per annum.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—(1) Senior Resident Medical Officer. Salary at the rate of £90 per annum. (2) Junior Resident Medical Officer. Salary at the rate of £70 per annum.

ST. MARY'S HOSPITAL, Paddington, W.—Resident Assistant Anæsthetist. Salary at the rate of £100 per annum.

SALFORD ROYAL HOSPITAL.—Casualty House-Surgeon. Salary at the rate of £100 per annum.

SALFORD UNION INFIRMARY.—Male Resident Assistant Medical Officer. Salary, £150 per annum.

SCARBOROUGH HOSPITAL AND DISPENSARY. — Senior and Junior House-Surgeons. Salary, £100 and £80 per annum respectively.

SHEFFIELD: EAST END BRANCH OF THE CHILDREN'S HOSPITAL.—House-Surgeon. Salary, £120 per annum.

SHREWSBURY: COUNTY ASYLUM.—Second Assistant Medical Officer (male). Salary, £230 per annum, rising to £250.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

STAFFORD: STAFFORDSHIRE GENERAL INFIRMARY.—House-Physician. Salary, £100 per annum.

STATE CRIMINAL LUNATIC ASYLUM, Retford. — Locumtenent (male). Salary, £5 5s. per week.

SUNDERLAND ROYAL INFIRMARY.—(1) House-Physician. (2) Junior House-Surgeon (males). Salary, £120 and £100 per annum respectively.

SWANSEA GENERAL AND EYE HOSPITAL.—(1) House-Physician. (2) House-Surgeon. Salary, £125 per annum each.

TRURO: ROYAL CORNWALL INFIRMARY. — House-Surgeon (male). Salary, £100 per annum.

WAKEFIELD: CLAYTON HOSPITAL. — Junior House-Surgeon. Salary, £150 per annum.

WALSALL AND DISTRICT HOSPITAL.—Junior House Surgeon. Salary, £110 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL. — Assistant Resident House-Surgeon and Anæsthetist. Salary, £100 per annum.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.— (1) Resident Medical Officer. (2) Senior House-Surgeon. (3) Senior House-Physician. (4) Junior House-Surgeon. (5) Junior House-Physician. Salary for (1), £160; for (2) and (3), £120, and for (4) and (5), £100 per annum.

WESTON-SUPER-MARE HOSPITAL.—House-Surgeon. Salary, £120 per annum.

WEST RIDING OF YORK.—Assistant Medical Officer at the Storthes Hall Asylum. Salary, £230 per annum, rising to £270.

WINCHESTER: ROYAL HAMPSHIRE COUNTY HOSPITAL.— House-Physician (male). Salary, £80 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Dunstable (Beds.), Trillick (co. Tyrone).

MEDICAL REFEREES.—The Home Secretary announces vacancies as Medical Referees under the Workmen's Compensation Act, 1906, for Cardiff and Barry County Courts in Circuit No. 24; and also for the Shetland District in the Sheriffdom of Caithness, Orkney, and Shetland.

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

COADY, E. T., F.R.C.S.I., Surgeon to the Drogheda Memorial Hospital.

DONALDSON, T. C., M.D., M.Ch.R.U.I., B.A.O., District Medical Officer to the Staines Union.

ELLIOT, T. S., L.R.C.P., M.R.C.S., Certifying Factory Surgeon for the Southwell District, co. Nottingham.

HENDERSON, W., M.B., Ch.B.Aberd., Assistent Medical Officer of the Paddington Parish Infirmary and Workhouse.

NEWSHOLME, H. B., M.B., Ch.B., M.R.C.P.Lond., D.P.H., Assistant Medical Officer of Health for Surrey.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is **5s.**, *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTH.

WILDMAN.—On July 27th, at 1, Highfield, Doncaster Gate, Rotherham, the wife of W. Stanley Wildman, F.R.C.S., of a daughter.

MARRIAGE.

LUNDHOLM—AUCHENCLOSS.—At Gardens Church, Cape Town, on July 28th, by the Reverend Mr. McClure, Gösta Lundholm, second son of Mr. and Mrs. C. O. Lundholm, Upper Norwood, London (formerly of Ardeer), to Agnes Barr Auchencloss, M.B. and Ch.B.Glas., eldest daughter of the late James Currie Auchencloss (formerly of Glenfield, Paisley), and Mrs. Auchencloss, Saltcoats. (By cable.) Residence: Modderfontein, Transvaal.

DEATH.

GARNER.—On July 28th, Colin Garner, L.R.C.P.E., elder son of the late J. E. Garner, M.D., 6, Winckley Square, Preston, aged 34.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses and Lectures are to be given next week at the following schools, colleges, and hospitals:

LONDON HOSPITAL MEDICAL SCHOOL, Turner Street, E.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.]

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

Association Intelligence.

PROCEEDINGS OF COUNCIL.

A MEETING of the Council was held at Aberdeen on Monday, July 27th, 1914.

Present.

Dr. J. A. MACDONALD (Taunton), Chairman of Council, in the Chair.

Mr. T. JENNER VERRALL (Bath), Chairman of Representative Meetings.

Dr. EDWIN RAYNER (Stockport), Treasurer.

Sir JAMES BARR (Liverpool), Past-President.

Dr. JOHN ADAMS, Glasgow
Dr. R. M. BEATON, London
Dr. M. G. BIGGS, London
Dr. CHARLES BUTTAR, London
Dr. J. SINGLETON DARLING, Lurgan
Mr. E. J. DOMVILLE, Chelwood
Dr. D. E. FINLAY, Gloucester
Dr. FRANK FOWLER, Bournemouth
Dr. ADAM FULTON, Basford, Nottingham
Mr. T. W. H. GARSTANG, Altrincham
Dr. JOHN GORDON, Aberdeen
Dr. MAJOR GREENWOOD, London
Dr. J. R. HAMILTON, Hawick, N.B.
Dr. G. E. HASLIP, London
Mr. W. T. HAYWARD, Reading (Victorian, South and West Australian Branches)
Mr. F. CHARLES LARKIN, Liverpool
Dr. J. LIVINGSTONE LOUDON, Hamilton, N.B.
Mr. ALBERT LUCAS, Birmingham
Dr. C. H. MILBURN, Hull
Dr. J. MUNRO MOIR, Inverness
Mr. E. C. MONTGOMERY-SMITH, London
Dr. J. E. MOORHOUSE, Stirling
Dr. H. FALCONER OLDHAM, Morecambe
Dr. GEORGE PARKER, Bristol
Dr. F. J. SMITH, London
Mr. D. F. TODD, Sunderland
Mr. E. B. TURNER, London
Mr. DENIS WALSHE, Graigue
Mr. E. H. WILLOCK, Croydon
Dr. O. R. M. WOOD, Woolpit.

APOLOGIES.

Letters of apology for non-attendance were read from Mr. W. F. Brook, Dr. H. J. Campbell, Dr. David Ewart, and Dr. W. Ainslie Hollis.

ROYAL COMMISSION ON VENEREAL DISEASES.

A communication from the Ladies' National Association for the Promotion of Social Purity, asking for the support of the Association to a Memorial to the Royal Commission on Venereal Diseases, was considered, but the Council, while thanking the Ladies' National Association for the invitation, stated that it would prefer to act independently in the matter.

SCIENCE COMMITTEE.

ROYAL PHOTOGRAPHIC SOCIETY OF GREAT BRITAIN.

The Chairman of the Science Committee was empowered to appoint a representative of the Association when he has received the opinion of the officers of the Section of Electro-Therapeutics and Radiology.

ERNEST HART MEMORIAL SCHOLARSHIP.

Dr. Richard Robins Armstrong was reappointed Ernest Hart Memorial Scholar for a period of one year, to continue his research into (1) "The causation, method of infection and spread, and the treatment of all forms of pneumonia"; (2) "Experimental production of pneumonia in animals."

ORDINARY RESEARCH SCHOLARSHIPS.

Dr. S. Phillips Bedson was reappointed to a scholarship for a continuation of the investigation on the effect of nuclein and nucleic acid on the normal antibody, and also an experimental inquiry into purpura and allied conditions.

Dr. Edward G. Schlesinger was reappointed to continue his researches: (1) The regulation of sweating, and its relation to internal and external changes. (2) The influence of the pericardium on the circulation, and the possibilities and effects of its surgery. (3) The surgical applications of variations in blood supply by means of vessel anastomosis.

Dr. Orlando Inchley was appointed to investigate the influence of the constant current on the absorption of drugs.

GRANTS.

Grants in varying sums, amounting to £335, were voted to Drs. Edward Bach, J. O. W. Barratt, W. L. Cassells, Robt. Alex. Chisolm, Alfred J. Clark, Myer Coplans, Henry R. Dean, John Donald, J. S. C. Douglas, Leonard Findlay, Gordon W. Goodhart, Ernest W. Hey Groves, E. L. Kennaway, Kate Knowles, P. P. Laidlaw, Ivy McKenzie, Nathan Mutch, Andrew Peden, M. S. Pembrey, E. P. Poulton, J. H. Ryffel, M. J. Stewart, and W. L. Symes.

AWARD OF GOLD MEDALS FOR DISTINGUISHED MERIT.

Mr. T. Jenner Verrall.

The Gold Medal of the Association was awarded to Thomas Jenner Verrall, M.R.C.S., L.R.C.P., of Bath, Consulting Surgeon, Sussex County Hospital, for his eminent services to the British Medical Association in many capacities: as a member and sometime as Chairman of the Insurance Act Committee of the Association during the strenuous period of the introduction and passing into law of the National Insurance Act; as a member of Council for several years; as Chairman of Representative Meetings; and as a direct representative of the medical profession on the General Medical Council.

Dr. Edwin Rayner.

The Gold Medal of the Association was awarded to Edwin Rayner, M.D., F.R.C.S., Consulting Surgeon, Stockport Infirmary, for his eminent services to the British Medical Association both as a member of the Council and various Committees for many years; as Chairman of the Finance Committee; and as Treasurer of the Association for the unparalleled period of seven years, and during a time of great financial stress.

VOTE OF THANKS.

A hearty vote of thanks was passed to the Chairman of Council and Sir James Barr, Deputy Chairman of Council, for their services during the past year.

A further meeting of the Council was held in Aberdeen on Thursday, July 30th, Dr. J. A. MACDONALD, Chairman of Council, in the chair.

NEW MEMBERS.

The CHAIRMAN welcomed the new members on attending the 1914–15 Council for the first time.

APOLOGIES.

Letters of apology for non-attendance were read from Mr. H. B. Brackenbury, Dr. E. R. Fothergill, Dr. A. Fulton, Dr. D. E. Finlay, Dr. James Galloway, Dr. R. Wallace Henry, and Mr. D. F. Todd.

RETURNS OF THE ELECTION OF MEMBERS OF COUNCIL BY THE REPRESENTATIVE MEETING.

Elected by the Groups.

The CHAIRMAN of Representative Meetings reported the returns of the election to the Council by grouped Representatives:

Dr. M. G. Biggs, Dr. J. S. Darling, Dr. D. E. Finlay, Dr. E. R. Fothergill, Mr. T. W. H. Garstang, Dr. Major Greenwood, Dr. H. C. Mactier, Dr. C. H. Milburn, Dr. J. Munro Moir, Dr. J. E. Moorhouse, and Dr. H. F. Oldham.

By the Representative Body as a Whole.

Sir James Barr, Mr. W. J. Greer, Dr. R. Wallace Henry, and Mr. E. B. Turner.

ANNUAL MEETINGS, 1916–17–18.

The CHAIRMAN reported that the North Wales Branch had forwarded an invitation to the Association to meet at Bangor in 1917 or 1918.

Arising out of the foregoing invitation Mr. JAMES GREEN asked how the invitation from the Portsmouth Division to hold the Annual Meeting at Portsmouth in 1916 stood. The CHAIRMAN, in reply, stated that the invitation had been duly recorded and entered on the minutes for future consideration.

CENTRAL NURSING COUNCIL FOR LONDON.

In response to a request from the Chairman of the Provisional Committee of the Central Nursing Council for London (Sir Arthur Downes, of the Local Government Board), that the Association should nominate a representative of the medical profession in London to serve on the Central Council now being established, Mr. E. B. Turner was nominated.

QUESTION OF THE APPOINTMENT OF A SCOTTISH MEDICAL SECRETARY.

This matter was referred back to the Scottish Committee for further consideration and report at the October meeting of the Council.

ELECTION OF COMMITTEES, 1914–15.

Committees for 1914–15 are constituted as follows:

The President, the Chairman of Representative Meetings, the Chairman of Council, and the Treasurer are *ex officio* members of all Committees.

FINANCE COMMITTEE.

The Chairman of the Organization, Journal, Science, Medico-Political, and Central Ethical Committees.

By the Representative Meeting.	*By the Council.*
Dr. G. E. Haslip, London.	Sir James Barr, M.D., LL.D., Liverpool.
Dr. David Lawson, Banchory.	Dr. Charles Buttar, London.
Dr. R. Langdon-Down, London.	Dr. George Parker, Bristol.
Dr. J. Milner Moore, Eastbourne.	Mr. D. F. Todd, Sunderland.

ORGANIZATION COMMITTEE.

By the Representative Meeting.	*By the Council.*
Mr. J. A. Percival Barnes, London.	Mr. T. W. H. Garstang, Altrincham.
Dr. A. T. Campbell, Glasgow.	Mr. W. J. Greer, Newport, Mon.
Mr. Russell Coombe, Exeter.	Mr. F. Chas. Larkin, Liverpool.

JOURNAL COMMITTEE.

By the Representative Meeting.	*By the Council.*
Dr. C. H. Hall, Watford.	Sir James Barr, M.D., LL.D., Liverpool.
Mr. Albert Lucas, Birmingham.	Dr. James Galloway, London.
Dr. W. Johnson Smyth, Bournemouth.	Dr. J. Munro Moir, Inverness.

SCIENCE COMMITTEE.

By the Council.

Dr. Charles Bolton, London.	Dr. R. Wallace Henry, Leicester.
Professor W. E. Dixon, F.R.S., Cambridge.	Dr. C. J. Martin, F.R.S., London.
Mr. W. J. Greer, Newport, Mon.	Dr. F. J. Smith, London.
Dr. J. S. Haldane, F.R.S., Oxford.	Professor Ralph Stockman, Glasgow.

CENTRAL ETHICAL COMMITTEE.

By the Representative Meeting.	*By the Council.*
Dr. A. G. Bateman, London.	Dr. M. G. Biggs, London.
Mr. J. Henry Ewart, Eastbourne.	Dr. Thomas A. Goodfellow, Manchester.
Mr. J. Furneaux Jordan, Birmingham.	Mr. P. Napier Jones, Crowthorne, Berks.
Dr. J. Wishart Kerr, Glasgow.	Dr. C. H. Milburn, Hull.
Dr. R. Langdon-Down, London.	Dr. Milner Moore, Eastbourne.
Mr. P. G. Lee, Cork.	Mr. E. B. Turner, London.

MEDICO-POLITICAL COMMITTEE.

By the Representative Meeting.	*By the Council.*
Mr. E. J. Domville, Bristol.	Mr. H. B. Brackenbury, London.
Dr. W. Duncan, Chesterfield.	Dr. Adam Fulton, Nottingham.
Dr. A. C. Farquharson, Spennymoor.	Mr. T. W. H. Garstang, Altrincham.
Mr. N. Bishop Harman, London.	Dr. John Gordon, Aberdeen.
Mr. J. T. Macnamara, London.	Dr. H. C. Mactier, Wolverhampton.
Dr. R. Wallace Henry, Leicester.	Dr. J. Ratcliff-Gaylard, Birkenhead.

PUBLIC HEALTH COMMITTEE.

By the Representative Meeting.	*By the Council.*
Dr. L. J. Blandford, Stockton-on-Tees.	Mr. James Green, Portsmouth.
Mr. E. J. Domville, Bristol.	Dr. Major Greenwood, London.
Dr. John Gordon, Aberdeen.	Mr. Herbert Jones, Hereford.
Dr. T. Barrett Heggs, Sittingbourne.	Dr. J. Livingstone Loudon, Hamilton, N.B.

HOSPITALS COMMITTEE.

By the Representative Meeting.	*By the Council.*
Professor R. A. Bolam, Newcastle-on-Tyne.	Dr. M. G. Biggs, London.
Dr. T. H. Bushby, Liverpool.	Dr. H. J. Campbell, Bradford.
Dr. John Eason, Edinburgh.	Dr. James Galloway, London.
Mr. W. McAdam Eccles, London.	Mr. R. J. Johnstone, Belfast.
Mr. N. Bishop Harman, London.	Dr. D. J. Mackintosh, M.V.O., Glasgow.
Dr. H. C. Mactier, Wolverhampton.	Professor J. Rutherford Morison, Newcastle-on-Tyne.

NAVAL AND MILITARY COMMITTEE.

The Representatives on the Council of the Royal Navy Medical Service, the Army Medical Service, and the Indian Medical Service, namely: Sir James Porter, K.C.B., R.N., Colonel R. I. D. Hackett, A.M.S., and Surgeon-General P. H. Benson, I.M.S.

By the Representative Meeting.	*By the Council.*
Surgeon-General J. P. Greany, I.M.S., London.	Colonel W. H. Bull, Stony Stratford.
Colonel J. Raglan Thomas, Exeter.	Lieut.-Colonel R. H. Elliot, London.

DOMINIONS COMMITTEE.

Members of the Council who represent Colonial Branches, namely: Captain S. H. Lee Abbott, Dr. David Ewart, Dr. Chas. T. Griffin, Mr. W. T. Hayward, and Dr. C. J. Martin, F.R.S.

By the Representative Meeting.	*By the Council.*
Surgeon-General P. H. Benson, I.M.S., Walmer.	Dr. T. D. Greenlees, Weymouth.
Surgeon-General J. P. Greany, I.M.S., London.	Mr. C. G. D. Morier, London.

ARRANGEMENTS COMMITTEE.

By the Council.

Dr. H. J. Campbell, Bradford.	Dr. J. R. Hamilton, Hawick.
Dr. Thomas Fraser, Aberdeen.	Mr. R. J. Johnstone, Belfast.
Dr. James Galloway, London.	Mr. Albert Lucas, Birmingham.

And six members to be appointed by the Local Executive.

INSURANCE ACT COMMITTEE.

One Representative of each of the following organizations: Association of Registered Medical Women together with the Northern Association of Registered Medical Women; Society of Medical Officers of Health; and Poor Law Medical Officers' Association of England and Wales.

By the Representative Meeting.

Dr. John Adams, Glasgow.	Dr. E. Rowland Fothergill, Hove.
Dr. J. Singleton Darling, Lurgan.	Dr. John Hunter, Edinburgh.
Mr. W. McAdam Eccles, London.	Dr. I. W. Johnson, Bury.
Dr. A. C. Farquharson, Spennymoor.	Dr. G. K. Smiley, Derby.
Dr. D. E. Finlay, Gloucester.	Dr. W. B. Crawford Treasure, Cardiff.
	Mr. E. B. Turner, London.

By the Council.

Dr. W. A. Ainslie Hollis, Hove.	Mr. D. F. Todd, Sunderland.

Future Developments of Insurance Act Committee.

By the Council.

Mr. H. B. Brackenbury, London.
Mr. Russell Combe, Exeter.
Dr. E. R. Fothergill, Hove.
Miss Mary F. Ivens, M.S., Liverpool.
Mr. F. Chas. Larkin, Liverpool.
Dr. A. E. Larking, Buckingham.
Dr. L. J. Picton, Holmes Chapel, Cheshire.
Mr. D. F. Todd, Sunderland.
Dr. O. R. M. Wood, Woolpit, Suffolk.

And with power to co-opt six additional members.

Special Fund Committee.

By the Representative Meeting.	*By the Council.*
Prof. R. A. Bolam, Newcastle-on-Tyne.	Mr. W. F. Brook, Swansea.
Dr. W. Duncan, Chesterfield.	Dr. E. R. Fothergill, Hove.
Mr. J. H. Ewart, Eastbourne.	Dr. R. McKenzie Johnston, Edinburgh.
Dr. W. E. Thomas, Ystrad Rhondda.	Dr. A. Tennyson Smith, Orpington, Kent.
Dr. D. G. Thomson, Norwich.	Mr. D. F. Todd, Sunderland.
Dr. C. S. Young, Dundee.	Mr. H. H. Tomkins, London.

Non-Panel Committee.

Concerning the appointment of a Non-Panel Committee, Dr. Biggs gave notice that he would move at the next meeting of Council that the Non-Panel Committee be re-appointed.

THE PATHOLOGICAL MUSEUM.

We have already paid a preliminary tribute to the work of this department, and have now to detail some of the more interesting exhibits therein found. Though the specimens were not so numerous as those in some of the previous meetings, which, perhaps, is an advantage, seeing that the time at the disposal of members is limited, there were many novelties which repaid those who journeyed round the museum.

The specimens were arranged in fourteen sections, and first and foremost was the microscope room, in which a very large number of microscopes were exhibited, owing to the kindness of the University of Aberdeen and the Bausch and Lomb Optical Company. In the Tropical Medicine Section Dr. Bahr had arranged a large and comprehensive collection of specimens illustrating sprue, and including sections of the alimentary tract from the tongue downwards, in which yeast cells and mycelium elements were well demonstrated. In another room Dr. Bahr showed various viscera from cases of sprue and a collection of intestines the seat of bacillary and amoebic dysentery respectively, and also numerous photographs and coloured drawings from cases of yaws.

The Royal Naval College, Greenwich, exhibited many microscopical specimens of *Schistosoma haematobium*, *S. japonicum*, and other species, and Fleet Surgeon Bassett-Smith showed macroscopic specimens of these diseases. He also demonstrated the Leishman bodies in specimens from liver and spleen punctures and other material, and amongst these were some of the flagellate forms of the *Leishmania* parasite from kala-azar, together with some living flagellate forms of *L. donovani* that he had grown in culture media.

Dr. Daniel E. Anderson, of the Honeyman-Gillespie Trust, brought an interesting collection of specimens illustrative of diseases in the West Indies, including venomous and non-venomous snakes, ankylostomes, ticks, and various flukes. These latter were of great interest, for, in investigating the cause of certain imperfections in meats imported in this country, he had shown that this was due to the *Fasciola hepatica* in the liver of these cattle, which viscus, however, was never supplied with the meats, but was minced up in the slaughter-house together with the other viscera. He also exhibited a fetus, instancing pre-natal small-pox, the mother having died from the disease. A specimen so rare as this, we would suggest, ought to be presented to the Royal College of Surgeons.

The Liverpool School of Tropical Medicine also contributed various specimens, of which we noted particularly the small intestine of a dog the seat of numerous *Taenia echinococcus*, the dog having been fed on human hydatids. Dr. Williamson showed a case of biting flies.

In the Section of Laryngology, Rhinology, and Otology, Dr. Fraser showed a most valuable collection of histological specimens illustrating the various inflammatory changes in the middle ear and labyrinth, which we have never seen equalled in any collection, and elsewhere he also exhibited a most instructive reconstructed model of the middle and inner ear. In this Section we also saw a demonstration of malignant disease consisting of specimens contributed by the Throat Hospital, Golden Square, whilst the work of the Manchester school was well represented by Sir W. Milligan's collection of foreign bodies removed from the air and food passages and *x*-ray photographs in general.

A new departure was a section devoted to recent research. Great interest was aroused by the exhibit of Mr. James M. Graham (Edinburgh University), shewing his experimental work on sutures of blood vessels; this included the healed vessels, casts of the lumen to show that there was no occlusion, and various specimens of the aorta and other vessels from the cat and the dog.

The most recent work on the ductless glands included an exhibit by Mr. Rupert Farrant (London). This consisted of slides showing the various changes in the thyroid glands in the different toxaemias and infective diseases, a work which has already brought Mr. Farrant forward as one of our best and most active original investigators. His photographs from cases under treatment and other specimens showed the valuable results he has obtained by treatment based upon his experimental findings.

Dr. Haig was responsible for a histological exhibit showing the developmental stages of the pituitary bodies in the guinea-pig, cat and other animals. There were many *x*-ray photographs also bearing upon the diseases of the pituitary body and changes in the pituitary fossa shown by Drs. Finzi (London), Gilbert Scott (London), Professor MacIntosh and Dr. Fearnside.

In the section devoted to the circulatory system, Dr. Carey Coombs (Bristol) showed histological sections illustrating rheumatic carditis from cases of chorea and acute rheumatism, whilst Dr. Falconer showed a specimen of thrombosis of the artery of the auricular-ventricular bundle, and of infiltration of the auricular-ventricular bundle in cases of complete heart-block and tachycardia respectively. The subject of auricular flutter was also illustrated by sections of the intraventricular septum, the sinus node, etc., from his own cases. Elsewhere were electrocardiograms from various cases shown by Dr. W. T. Ritchie, some fine specimens of infective endocarditis (Dr. Teacher), and a specimen of aneurysm of the interauricular septum from a case of heart-block; this, together with a pulmonary valve, the seat of four cusps, came from the Aberdeen University Pathological Department.

In the Section of Dermatology there were numerous lifelike casts, photographs, etc., illustrating the various lesions, and amongst these, of particular note, were the direct coloured photographs exhibited by Mr. Haldin Davis (London).

The Section of Radiology and Electro-therapeutics was made of special interest on account of Dr. Thurstan Holland and Dr. E. Spriggs showing radiograms of gall stones, and also by the photographs of bismuth meals, especially those taken after the operation of gastro-jejunostomy, and of rectal injections of bismuth; these latter were included in a large exhibit by Dr. W. F. Somerville (Glasgow). There were also some specimens by Dr. Gilbert Scott showing the use of collargol in diagnosing the various renal lesions.

In the Section of Ophthalmology there was a fine series of coloured photographs, illustrating diseases of the external eye, by Dr. Maitland Ramsay.

Other coloured photomicrographs which aroused attention was a series illustrating some diseases of the nervous system, exhibited by Dr. Mott.

In the Section of Surgery drawings and photographs appeared to preponderate; these included photographs illustrating cancer of the tongue, shown by Mr. W. G. Spencer (London), a collection by Mr. G. L. Chiene (Edinburgh), illustrating his various operations for hernia, etc., and some sketches of operations by Professor F. M. Caird. There were several specimens of diverticulitis, shewn by Mr. W. McAdam Eccles and Mr. Gordon Watson; the spleen from a case of splenic anaemia (Aberdeen University), and a much enlarged spleen removed by operation from a case of chronic acholuric jaundice.

There was a small Section of Anatomy, by Dr. N. Calder, in which were displayed various abnormalities, including an extra lobe of the lung and an accessory thyroid.

The final section, devoted to the history of medicine, was most complete and most interesting of all. This was divided into: (1) Egyptian; (2) Greek and Roman; (3) early and middle English; (4) old pharmacy instruments; (5) old medical instruments; (6) old surgical instruments; (7) eye instruments; (8) dental instruments; and lastly, a large collection of portraits of eminent medical men of the past. This had been collected and arranged by Mr. Dilling, and the unique collection of engravings was kindly lent by Mr. J. F. Kellas Johnstone. The portraits were arranged in the catalogue in alphabetical order, and aroused much interest.

A printed catalogue, was, as usual, supplied to visitors, but, as we have pointed out on previous occasions, it lost a little of its value by not containing clinical descriptions of the specimens shown, though this is, perhaps, expecting too much of the hard-worked Secretaries and Museum Committee.

We, personally, have to express our thanks to Dr. J. M. Duncan, Chairman of this Committee, for so kindly taking us round the museum and pointing out the more important features therein.

Meetings of Branches and Divisions.

EAST ANGLIAN BRANCH.

THE annual meeting of the East Anglian Branch for 1914 was held at Great Yarmouth on July 1st. In the absence of the president, Dr. JAMES RYLEY, President-elect, was voted to the chair.

Report of Council.—The annual report of council stated that the Branch was in a prosperous condition, with a membership of about 500. The annual meeting held at Ipswich under the presidency of Dr. Herbert H. Brown (when luncheon was kindly given by the President) had been largely attended, and was most successful. The council expressed its warm thanks to Dr. Brown for his unbounded hospitality to all present on that occasion. The autumn meeting was held at King's Lynn and the spring meeting at Lowestoft. All had been well attended and many valuable papers were read. Three special meetings of the council had been held at Ipswich and two meetings of the Ethical Committee. The meeting at Lowestoft resolved to invite Dr. Silva Jones of Southend-on-Sea to become President in 1915, which honour he had accepted. The report was approved.

Election of Officers.—The following officers were elected:

President: Dr. Ryley (Great Yarmouth).
President-elect: Dr. Silva Jones (Southend-on-Sea).
Vice-Presidents: Drs. Burton Fanning, John Turner, Herbert H. Brown.
Secretary for Essex: Dr. B. H. Nicholson (Colchester).
Secretary for Norfolk: Mr. Hamilton A. Ballance (Norwich).
Secretary for Suffolk: Dr. J. Gutch (Ipswich).
General Secretary and Treasurer: Dr. B. H. Nicholson (Colchester).

Financial Statement. The financial report of the Branch was approved.

Clinical Cases.—Dr. JAMES RYLEY (Great Yarmouth) and Dr. CLEVELAND (Norwich) showed some interesting radiographs, and Dr. Ryley showed two cases of simple chronic glaucoma treated by Colonel Elliot's operation.

Luncheon.—The members present, to the number of about forty, then partook of luncheon in the Assembly Rooms, by kind invitation of the President-elect, Dr. JAMES RYLEY, who proposed the health of the King, and Dr. THOMSON that of Dr. Ryley.

Induction of President.—The general meeting was resumed after lunch, when Dr. Thomson was voted into the chair for the purpose of introducing the President-elect, Dr. James Ryley, who thereupon entered into office as President of the Branch for the year, and took the chair of the meeting.

On the motion of Dr. BARTON, seconded by Mr. A. C. MAYO, it was unanimously resolved:

That a hearty vote of thanks be accorded to Dr. H. H. Brown of Ipswich for the assiduous way in which he has performed the duties of President of the Branch for the past year and for his great hospitality during his year of office, and that he be hereby elected a Vice-President of the Branch for the term of three years.

Division of Branch.—Dr. D. G. THOMSON (Norwich) moved and Dr. H. E. ROWELL (East Rudham) seconded:

That this general meeting of members of the East Anglian Branch, having received the final memorandum of the Subcommittee upon the proposed subdivision of the Branch, is of opinion that the time has now arrived when, in the best interests of the members, the Branch should be divided into three Branches, following, so far as possible, the County boundaries of Norfolk, Suffolk and Essex, and instructs the General Secretary to communicate the wishes of the Branch to Head Office without delay.

The meeting had before it the final memorandum of the division of Branch Subcommittee of April 23rd, 1914. Drs. WOOD, FREEMAN, BIDEN, and MAYO took part in the discussion, and the resolution was carried by 15 to 2.

On the motion of Dr. THOMSON, seconded by Mr. H. POTTS (Great Yarmouth), the following resolutions were carried *nemine contradicente:*

This meeting delegates to the Branch Council:

1. The duty of fixing the most suitable date on which the above resolution, if approved by the Central Council, shall come into operation.
2. Full power to deal with and settle all matters, financial or otherwise, which may arise in connexion with the dissolution of the Branch.
3. The duty of taking such steps as may be necessary to secure that, upon the dissolution of the East Anglian Branch, the Norfolk, Suffolk, and Essex Branches shall be constituted with the least possible delay.

This meeting is further of opinion that after the dissolution of the East Anglian Branch it will be advantageous to hold from time to time combined meetings, for social and scientific purposes, of two or more of the newly formed Branches.

Excursions.—At the termination of the general meeting some of the members took a trip to sea, others going by motor to Burgh Castle.

Tea.—Dr. and Mrs. James Ryley kindly entertained the members present, with the ladies accompanying them, to tea at their house in Gorleston.

OXFORD AND READING BRANCH.

THE annual meeting of the Oxford and Reading Branch was held in the library of the Royal Berkshire Hospital, Reading, on July 23rd, when Sir WILLIAM OSLER, Bart., President, was in the chair, and twenty-four members were present.

Election of Officers.—The following officers were elected for the ensuing year:

President: Sir William Osler, Bart., Oxford (re-elected).
Vice-President: Dr. W. J. Maurice, Reading (re elected).
Treasurer: W. T. Freeman (re-elected).
Secretary: E. W. Squire (re-elected).
Branch Council: The three vacancies on the Council were filled by P. Napier Jones, Chairman of the Reading Division; E. C. Montgomery, and A. J. Edge, of Maidenhead. Dr. G. H. R. Holden, Representative for Reading, becomes *ex officio* a member of the Branch Council.

Finance.—The TREASURER announced a balance in hand of £20 8s. 7d. It was then unanimously resolved:

That the Branch should be regularly paid its capitation fee of 2s. per member per annum, and that the Branch Council should have entire control of the expenditure of its funds.

Division Reports.—The reports of the Oxford and Reading Divisions were read and adopted. The former reported seventeen resignations since January.

Examination of Insured Persons.—It was unanimously resolved:

That no member of the Branch should accept a lower fee than one guinea for a second opinion upon an insured person.

The scientific proceedings are reported in the JOURNAL, p. 335.

Association Notices.

SUGGESTED CHANGES OF BOUNDARIES.

PROPOSED FORMATION OF A CHANNEL ISLANDS DIVISION.

NOTICE is hereby given to all concerned of a proposal made on behalf of the Guernsey and Alderney Division and Southern Branch Council for formation of a Channel Islands Division, to include Alderney, Guernsey, Jersey, and Sark.

The matter will be determined in due course by or on behalf of the Council of the Association. Any member affected by the proposed change, and objecting thereto, is requested to notify the fact, and his or her reason therefor, to the Medical Secretary, 429, Strand, London, W.C., not later than September 26th, 1914.

Proposed Transfer of Bottesford from Leicester and Rutland to Nottingham Division.

Notice is hereby given under Article 13 to all concerned of a proposal made on behalf of the Leicester and Rutland Division for the transfer of the civil parish of Bottesford from the area of that Division to the area of the Nottingham Division.

Written notice of the proposal has been given to the Nottingham Division and Midland Branch and the matter will be determined in due course by or on behalf of the Council. Any member affected by the proposed change and objecting thereto is requested to notify the fact, and his or her reason therefor, to the Medical Secretary, 429, Strand, W.C., not later than September 15th, 1914.

CLASSIFICATION OF PRACTITIONERS IN GREAT BRITAIN.

A document was placed before the Annual Representative Meeting at Aberdeen which had been prepared by instruction of the Council, giving the results of a careful analysis of the practitioners in Great Britain in their relation to the Insurance Act, and the information it contained will probably be of interest to many members of the profession.

The analysis was only rendered possible by the existence at the Central Office of a very complete card register of the profession, supplemented by the assistance of the honorary secretaries of the Divisions of the Association throughout the country. The Council desired to ascertain—first, how many individual practitioners were serving under the Insurance Act; and, secondly, how many of those who were not so serving were in general practice and therefore to be reckoned as eligible for panel work. The first point could have been answered, in a fashion, simply by getting all the panel lists and adding the numbers of panel doctors together, but this would not have shown how many practitioners were on more than one panel. A complete set of the panel lists throughout Great Britain was therefore obtained and used for marking the card register so as to show whether a given practitioner was on the panel or not. A list of the non-panel practitioners in each Division was then prepared and sent to the honorary secretary of the Division for correction. He was asked to state either from own local knowledge or after consulting others, whether the practitioners on the list were in active practice, and, if so, in what kind of practice they were engaged.

On July 20th all the lists, with the exception of 17, had been returned. These latter were classified in the Central Office by means of the *Medical Directory* and other information at the disposal of the Association. The figures thus obtained may be taken as approximately correct and as certainly the most complete and accurate set of figures on this subject which are likely to be compiled by anyone.

Classification of Practitioners as on July 20th, 1914.

	Panel.	Non-Panel.	Total.
England	11,825	12,441	24,266
Wales	901	506	1,407
Scotland	1,796	2,020	3,816
Totals	14,522	14,967	29,489

On discriminating between the non-panel practitioners who are in general practice and those who are not, the following results emerge:

Classification of Non-Panel Practitioners.

	In General Practice.	Not in General Practice	Total.
England	3,818	8,623	12,441
Wales	188	318	506
Scotland	416	1,604	2,020
Totals	4,422	10,545	14,967

Those not in general practice consist of retired practitioners; those in the services; whole-time medical officers of health, school medical officers, tuberculosis officers, and resident medical officers of various kinds; those engaged in whole-time teaching appointments; and specialists and consultants.

Duplicates—that is to say, practitioners on more than one panel—have been eliminated; but no account has been taken of the fact, on which comment was made by many of the secretaries of Divisions in returning their lists, that a considerable number of practitioners who are themselves not on the panel have partners or assistants who are.

It is interesting to compare the above figures with those given by the Insurance Commissioners in their second annual report. On page 176 of that document, the strength of the panel in England on May 31st, 1914, is given as 16,059, but it is stated that practitioners on the panel of more than one Insurance Committee were necessarily included more than once in this figure. The Insurance Commissioners' figures for Wales, again not allowing for duplicates, are 1,246, as against 901, which the Association's analysis shows to be the true figure. The Scottish Commissioners have attempted to eliminate duplicates, and they give a total of 1,790 individual doctors on the panel, which, it will be seen, closely approximates to the Association's figures. The difference is easily accounted for by the fact that the Commissioners' figures are dated January 12th, 1914, whereas those of the Association were made up on various dates between February and July.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

Panel Committee.

Legal Questions in Regard to the New Agreement.

At a meeting of the London Panel Committee on July 28th it was reported that the Insurance Commissioners had under consideration the revision of the medical benefit regulations and the terms of service of practitioners on the panel for the medical year 1915, and that it was proposed to issue the revised regulations and the model agreements, embodying any amendments, by the first week in September.

Having regard to the result of the recent action brought by Dr. Salter against the London Insurance Committee in regard to the variation of the terms of his agreement, and various points of difficulty arising from time to time in connexion with the interpretation of agreements, it was decided to take the opinion of counsel on the whole question, and especially as to whether a practitioner could delete an objectionable clause from the agreement. A subcommittee was empowered to prepare a case for submission to counsel.

Co-opted and Representative Members.

Dr. Ethel Bentham and Dr. R. V. Donnellan were appointed members of the Medical Service Subcommittee of the London Insurance Committee for the ensuing year, and the following practitioners were co-opted upon the Panel Committee:

Drs. W. Coode Adams, Ethel Bentham, E. Burnet, H. G. Cowie, James Galloway, T. D. Lister, H. H. Mills, H. H. Norton, Lauriston E. Shaw, D. L. Thomas, and R. T. Williams.

Free Treatment of those Affected by the War.

A special meeting of the London Panel Committee was held on August 7th to consider the proposal mentioned in the last issue of the Journal, that practitioners on the panel should undertake free of charge the treatment of necessitous dependants of reservists on their lists and insured persons unemployed as a result of the war, and should act on behalf of panel colleagues absent on military duty.

The Chairman, Dr. H. J. Cardale, moved the resolution, which was received with applause.

Dr. J. A. Angus (Vice-Chairman) suggested that some means would have to be adopted to keep medicines prescribed under the resolution separate from those paid for by the insurance fund. Subsequent speakers expressed the opinion that practitioners should make themselves responsible for the cost of drugs, and Dr. Angus said he

was glad to note the feeling of the meeting and to withdraw his suggestion.

Dr. R. V. DONNELLAN thought the resolution would press more severely upon practitioners in some districts than upon others. He wished the proposal could be extended so that they could work in conjunction with practitioners not on the panel, and a more equal distribution of the work be arrived at.

Dr. B. A. RICHMOND (Secretary of the Committee) said it was very desirable not to interfere with the natural desire of the non-panel section to render similar service. The Panel Committee could not speak for other than panel practitioners.

Dr. CLAUDE TAYLOR hoped the profession would include in the scope of the resolution persons who belonged to nations with whom this country was at war. He hoped also that doctors would not be encouraged to leave their work at home, when there were probably sufficient men unattached to take up duties at the front.

Dr. A. REID agreed that practitioners should make no difference in respect of nationality in their treatment of patients.

The resolution was carried.

Co-operation for the Relief of Distress.—A subcommittee of six, with powers of co option, was appointed to advise as to any arrangements suggested by the Government or any other body appointed to deal with the problem of sickness, unemployment, or destitution in the county of London which might result from the state of war.

The Shortage of Drugs.—A letter was received from the Secretary of the Pharmaceutical Committee, stating that the supplies of certain drugs would be affected by the war, and asking the Panel Committee to exercise its influence in husbanding stocks. It was notified that amongst the drugs of which there was a shortage were the following:

Salicylates, acetyl-salicylic acid, all preparations such as phenacetin, phenazone (antipyrin) and acetanilide.
All syrups and glycerine preparations.
Carbolic acid and all antiseptic dressings, especially lint, boric lint, and absorbent wool.
All bismuth, quinine, and cinchona preparations.
Citric acid, citrates, tartaric acid, tartrates, and Epsom salts.

The Committee decided to call the attention of practitioners to the matter.

CAMBRIDGESHIRE.

PANEL COMMITTEE.

A MEETING of the Panel Committee was held at Cambridge on July 28th.

Election of Officers.—The following officers were elected:

Chairman: Dr. Apthorpe Webb.
Secretary: Dr. Stevenson.

Voluntary Levy.—The SECRETARY reported that sixty-five out of sixty-eight men on the panel were subscribing to the voluntary levy of 1d. per annum per insured patient, which was considered very satisfactory.

Suppression of Names of Parties before a Medical Service Committee.—The Standing Order proposed by the British Medical Association whereby names of parties before a Medical Service Subcommittee should be suppressed was approved, and it was resolved that the Insurance Committee should be approached with regard to it.

Unallotted Persons.—The scheme for dealing with unallotted persons was approved. It was drafted to avoid any allocation of patients by a third party. It provided that doctors must give immediate treatment to and accept on their lists all insured persons who applied to them, but provided an appeal to the Insurance Committee if there were good grounds for refusing the person as a permanent patient. Doctors who failed to comply with these rules might be excluded from sharing in the surplus moneys from the Panel Fund, which were to be distributed proportionately to the members on doctors' lists.

Federation of Panel and Local Medical Committees.—The scheme for the federation of Panel and Local Medical Committees was held over to be considered in detail at a later meeting, though the Committee had approved of it in principle and had subscribed to the Provisional Committee.

PERTHSHIRE.

A MEETING of the Panel Committees of Perth and Perthshire was held at Perth on August 6th, when six members were present.

On the motion of Dr. TROTTER, seconded by Dr. ROBERTSON, it was resolved:

That in the event of any member of the panel being called on as a Territorial officer, and being unable to secure a substitute, the other panel practitioners will attend, as far as possible, to the patients of that doctor, undertaking the duty collectively, this arrangement only to apply meanwhile until the end of the current quarter. This motion to apply to the county, leaving out the words "undertaking . . . collectively."

It was also resolved, on the motion of Dr. TROTTER:

That the Scottish Committee of the British Medical Association is the best co-ordinating body for the Local Medical and Panel Committees of Scotland.

INSURANCE COMMITTEES.

MANCHESTER.

At the first meeting of the new Insurance Committee for Manchester Mr. Walter Davies was re-elected chairman. In the minutes of the Medical Benefit Subcommittee reference was made to a letter sent by the honorary secretary of the Manchester Panel Committee requesting that in future issues of medical certificates there should be printed on them the words, "This certificate must not be used for any other purposes than those of the National Health Insurance Acts." Dr. McGowan explained that it had frequently happened that certificates given to insured persons to entitle them to obtain sickness benefit from their approved society had been used for other purposes. For example, when patients were members of one or several other societies in addition to their approved society, the certificate given for the approved society had been also used for non-approved societies, and the Panel Committee thought that this was an abuse which might be prevented by the insertion of the words suggested. A member of the Committee expressed the opinion that the friendly societies had dealt fairly with the doctors in the past, and for the doctors to impose this restriction was driving the nail in too far. The Chairman, however, pointed out that the Panel Committee had merely made a suggestion, but the societies were under no compulsion to accept it.

SALFORD.

A MEETING of the Salford Insurance Committee was held on July 30th, and Alderman Huddart was re-elected chairman for the ensuing year. After the election of the various subcommittees, the clerk announced that the total charges for visits and attendance by the panel practitioners for the month of May was £3,900, and towards this, on the basis of 85,000 insured persons, there was available £3,249, which would permit of payment to the doctors of about 90 per cent. of their credit notes. During the month 14,702 patients had received treatment at an average cost of 5s. 3d. per patient for medical attendance apart from drugs and appliances. The claims sent in by the chemists for prescriptions dispensed during the month amounted to £606, the cost per patient being 9.9d. for drugs and appliances. There were 29,706 prescriptions dispensed, the average cost per prescription being 4.9d. This last item is a considerable reduction on the year 1913, when the average cost per prescription was 7.1d. Taking the whole period from January 12th to May 31st, the total claims by the chemists for prescriptions dispensed amounted to £3,688, and the amount of money available, based on the estimate of 85,000 insured persons at 2s. per head per year, was £3,260, which enabled a payment of 88 per cent. of the credits. The balance of chemists' accounts that were left unpaid was about £443, a sum of £15 being kept in hand. In the corresponding period of last year the amount left unpaid to the chemists was £787, showing a considerable decrease in the cost for drugs and appliances.

INSURANCE ACT IN PARLIAMENT.

STATE MEDICAL SERVICE.

Mr. BENN, in reply to Mr. Charles Bathurst, stated that the Government had definitely decided not to establish a State Medical Service in connexion with the National Health Insurance scheme.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 9,464 births and 4,192 deaths were registered during the week ended Saturday, August 1st. The annual rate of mortality in these towns, which had been 11.5, 11.6, and 11.3 per 1,000 in the three preceding weeks, rose to 12.1 per 1,000 in the week under notice. In London the death-rate was equal to 12.1, against 10.6, 11.8, and 10.7 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 3.4 in Exeter, 4.4 in Wimbledon and in Southport, 4.9 in Merthyr Tydfil, 5.0 in Walthamstow, 6.6 in Ealing and in Coventry, and 6.7 in Oxford and in Devonport, to 17.2 in Bolton, 17.3 in Middlesbrough, 17.4 in Barnsley, 18.5 in Aberdare, 18.6 in Birkenhead, and 19.0 in Huddersfield. Measles caused a death-rate of 1.4 in Liverpool, 1.6 in West Hartlepool, and 1.7 in Wigan and in Oldham; and whooping-cough of 1.4 in Huddersfield and in Cardiff. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 112, 151, and 209 in the three preceding weeks, further rose to 302 in the week under notice, and included 67 in London, 31 in Sheffield, 19 in Liverpool, 15 in Hull, 14 in Birmingham, 13 in Leeds, and 12 in Birkenhead. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 39 or 0.9 per cent. of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 12 were recorded in Birmingham, 6 in Liverpool, 5 in Stoke-on-Trent, 3 in Sheffield, 3 in Gateshead, 2 in Reading, and 2 in Barrow-in-Furness. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,109, 3,126, and 3,135 at the end of the three preceding weeks, further rose to 3,154 on Saturday, August 1st; 405 new cases were admitted during the week, against 414, 430, and 414 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,167 births and 569 deaths were registered during the week ended Saturday, August 1st. The annual rate of mortality in these towns, which had been 13.6, 12.7, and 13.5 per 1,000 in the three preceding weeks, fell to 12.9 in the week under notice, but was 0.8 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 5.9 in Kilmarnock, 7.0 in Clydebank, and 9.7 in Paisley, to 17.8 in Dundee, 21.5 in Perth, and 21.8 in Coatbridge. The mortality from the principal infective diseases averaged 1.1 per 1,000, and was highest in Motherwell and Hamilton. The 238 deaths from all causes in Glasgow included 15 from infantile diarrhoeal diseases, 3 from measles, and 5 from whooping-cough. Six deaths from infantile diarrhoea were recorded in Dundee, 3 in Edinburgh, and 2 in Hamilton.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, July 25th, 604 births and 335 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 574 births and 371 deaths in the preceding period. These deaths represent a mortality of 14.5 per 1,000 of the aggregate population in the districts in question, as against 16.1 per 1,000 in the previous period. The mortality in these Irish areas was, therefore, 3.2 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 26.1 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 15.3 (as against an average of 15.9 for the previous four weeks), in Dublin City 17.1, in Belfast 14.5, in Cork 13.6, in Londonderry 15.2, in Limerick 12.2, and in Waterford 13.3. The zymotic death-rate was 1.8, as against 1.9 in the previous week.

Naval and Military Appointments.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel Blenkinsop is granted leave for four months.

Lieutenant-Colonel W. T. Swan has been transferred from the Southern to the Western Command, taking up the duties of Deputy Director-General of Medical Services.

Major H. R. Bateman has been appointed a Specialist in Bacteriology at Shorncliffe.

Captain C. A. T. Conyngham has been transferred from the Fifth (Mhow) to the Ninth Division.

INDIAN MEDICAL SERVICE.

The services of Captain P. K. Tarapore, Superintendent, Central Gaol, Mandalay, are placed permanently at the disposal of the Burma Government for employment in the Gaol Department.

Lieutenant-Colonel J. L. Macrae, M.B., Civil Surgeon, Coorg, is granted privilege leave for three months with furlough for one year in continuation, with effect from September 1st, 1914.

The following officers are appointed permanently to the Bacteriological Department, with effect from February 14th, 1914:—Captains E. C. Hodgson, W. D. H. Stevenson, M.B., J. Taylor, M.D., H. W. Acton, J. Morison, M.B., F. W. Cragg, M.D., J. A. Cruickshank, M.B., R. E. Wright, M.B. The following officers are appointed *pro tempore*, with effect from February 14th:—Captains J. H. Horne, M.B., R. Knowles, H. C. Brown, M.B.

Captain R. A. Needham is confirmed in the appointment of Health Officer, Simla, with effect from February 14th.

The services of Captain V. N. Whitamore have been placed at the disposal of the Government of India, Department of Education, for employment with travelling dispensaries in the United Provinces.

The services of Captain A. A. C. McNeill, M.B., are placed temporarily at the disposal of the Government of Bengal for civil employment.

The following promotions are made:

To be Surgeon-General.—Colonel T. Grainger, C.B., M.D., vice Surgeon-General A. M. Crofts, C.I.E., K.H.S. (ret.), dated May 25th, 1914.

To be Colonel.—Lieutenant-Colonel W. R. Edwards, C.M.G., M.D., vice Colonel T. Grainger, C.B., M.D., dated May 25th, 1914.

To be Majors.—Captain W. S. Patton, M.B., dated January 26th, 1914; Captain (and Brevet-Major) S. R. Christophers, M.B., dated March 1st, 1914.

INDIAN SUBORDINATE MEDICAL DEPARTMENT.

Senior Assistant Surgeon with honorary rank of Lieutenant to be Senior Assistant Surgeon with honorary rank of Captain: John Oswald Weston, February 1st.

To be Senior Assistant Surgeon with honorary rank of Lieutenant: First Class Assistant Surgeons William J. Key Stone and Edmund J. Culpeper.

CHANGES OF STATION.

The following changes of station amongst the officers of the Army Medical Service have been officially reported to have taken place during June:

	FROM	TO
Surg.-Gen. Sir A. T. Sloggett, Kt., C.B., C.M.G., K.H.S.	—	War Office.
,, H. G. Hathaway, C.B.	Lucknow ...	Darjeeling.
Colonel F. H. Treherne, F.R.C.S. Edin.	Meerut ...	Mussoorie.
,, H. J. Barratt	Bareilly ...	Ranikhet.
,, W. W. Pike, D.S.O., F.R.C.S.I.	Sialkot ...	Abbottabad.
Lieut.-Col. F. W. C. Jones, M.B.	Meerut ...	Tidworth.
,, R. H. Hall, M.D. ...	Aldershot ...	,,
,, A. P. Blenkinsop ...	Delhi ...	Simla.
,, W. E. Hardy	Cawnpore ...	Calcutta.
Major E. H. Condon, M.B. ...	Bareilly ...	Meerut.
,, J. C. B. Statham	London District	West Africa.
,, R. A. Cunningham, M.B. ...	Meerut ...	Mussoorie.
,, P. H. Falkner, F.R.C.S.I. ...	London ...	Parkeet.
,, A. H. Safford	Warley ...	Colchester.
,, P. H. Henderson, M.B. ...	Portsmouth ...	Gosport.
,, R. L. Popham	Peshawar ...	Nowshera.
,, R. McK. Skinner	Lahore ...	Calcutta.
,, H. F. Shea, M.B. ...	Ambala ...	Kasauli.
Captain J. E. H. Gatt, M.D. ...	Deneres ...	Murree.
,, D. P. Watson, M.B. ...	—	Curragh.
,, J. T. McEntire, M.B. ...	Cork ...	Tralee.
,, J. Fairbairn, M.B. ...	—	Scottish Comd.
,, H. W. Russell, M.D. ...	Ambala ...	Kasauli.
,, A. D. O'Carroll, M.B. ...	Aldershot ...	Ewshott.
,, C. Scaife, M.D. ...	Belgaum ...	Pontefract.
,, D. M. Corbett, M.B. ...	Ambala ...	Wrexham.
,, E. D. Caddell, M.B. ...	Chatham ...	London.
,, E. C. Phelan, M.B. ...	Belfast ...	Londonderry.
,, C. H. Denyer	Agra ...	Parkhurst.
,, F. T. Turner	—	Southern Comd.
,, M. O. Wilson, M.B. ...	Sheerness ...	Chatham.
,, G. Petit	Multan ...	Benares.
,, R. F. O'T. Dickinson ...	Bareilly ...	Irish Command.
,, A. Shepherd, M.B. ...	Shwebo ...	Mandalay.
,, W. H. S. Burney	Ferozepore ...	Solon.
,, W. J. Tobin	Bangalore ...	Nasirabad.
,, C. L. Franklin, M.B. ...	Potchefstroom ...	Cape Town.
,, A. S. M. Winder, M.B. ...	Lucknow ...	Sitapur.
,, J. M. Weddell	Delhi ...	Fyzabad.
,, H. G. Robertson, M.B. ...	Malta ...	Sentari.
,, R. C. G. M. Kinkead, M.B.	Bloemfontein ...	Potchefstroom.
,, E. C. Stoney, M.B. ...	Bhamo ...	Maymyo.
,, C. H. H. Harold, M.D. ...	Ambala ...	Dagshai.
,, T. J. Hallinan, M.B. ...	Multan ...	Kalabagh.
,, J. K. Gaunt, M.B. ...	Scutari ...	Malta.
Lieutenant C. M. Finny, M.B. ...	Rawal Pindi ...	Upper Topa.
,, C. D. K. Seaver ...	Jullundur ...	Dalhousie.
,, B. H. H. Speuce, M.D.	Barian ...	Egypt.
,, J. M. Elliott, M.B. ...	Baracao ...	Rawal Pindi.
,, D. W. Bruce, M.B. ...	Lahore ...	Multan.
,, L. Buckley, M.B. ...	Tret ...	Gharial.
,, S. P. Sykes, M.B. ...	Jutogh ...	Khyra Gali.
,, A. G. Biggam, M.B. ...	Rawal Pindi ...	Jutogh.
,, A. Hood, M.B. ...	,,	Agra.
,, C. M. Ingoldby ...	,,	Jullundur.
,, S. J. Higgins	Sitapur ...	Lucknow.
,, W. V. Corbett	London ...	Pirbright.
,, J. C. Sproule	West Down Camp	Rollestone Camp.
,, A. F. C. Martyn ...	Aldershot ...	Egypt.
,, H. F. Panton, M.B. ...	Ambala ...	Mhow.
,, H. Beddingfield, M.B.	Hounslow ...	Woolwich.
,, S. D. Large	Ewshott ...	Edinburgh.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

AYLESBURY: ROYAL BUCKINGHAMSHIRE HOSPITAL.—Male House-Surgeon. Salary, £100 per annum, rising to £120.

BANBURY: HORTON INFIRMARY.—House-Surgeon. Salary, £120 per annum.

BARROW-IN-FURNESS: NORTH LONSDALE HOSPITAL.—Male House-Surgeon. Salary, £150 per annum.

BEDFORD COUNTY HOSPITAL.—Assistant House-Surgeon. Salary, £100 per annum.

BIRKENHEAD BOROUGH HOSPITAL.—Senior House-Surgeon (male). Salary, £120 per annum.

BOOTLE BOROUGH INFECTIOUS DISEASES HOSPITAL.—Resident Medical Officer. Salary, £150 per annum.

BRADFORD EDUCATION COMMITTEE.—Chief School Dentist. Salary, £350 per annum.

BRADFORD ROYAL INFIRMARY.—House-Physician (male). Salary, £100 per annum.

BRIDGE OF WEIR CONSUMPTION SANATORIUM.—Lady Assistant. Salary, £75 per annum.

BRIGHTON THROAT AND EAR HOSPITAL.—Non-Resident House-Surgeon. Salary at the rate of £150 per annum.

BRISTOL CITY LUNATIC ASYLUM.—Assistant Medical Officer. Salary, £250 per annum, rising to £300.

BRISTOL GUARDIANS.—Two Assistant Medical Officers at the new Infirmary, Southmead. Salary, £150 per annum each.

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN.—House-Physician and House-Surgeon. Salary, £100 each per annum.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—Second House-Surgeon. Salary, £80 per annum.

CANCER HOSPITAL (FREE), Fulham Road, S.W.—House-Surgeon. Salary, £70 per annum.

CANNING TOWN WOMEN'S SETTLEMENT HOSPITAL, Plaistow.—Senior Resident Medical Officer. Salary, £120 per annum.

CARDIFF COMMITTEE FOR THE CARE OF THE MENTALLY DEFECTIVE.—Medical Officer. Salary, £300 per annum.

CARNARVONSHIRE EDUCATION COMMITTEE.—School Dentist. Salary, £250 per annum.

CENTRAL LONDON OPHTHALMIC HOSPITAL.—House-Surgeon. Salary at the rate of £50 per annum.

CHORLEY: RAWCLIFFE HOSPITAL.—House Surgeon (male). Salary, £100 per annum.

COLONIAL OFFICE.—Bacteriologist for British Guiana. Salary, £350 per annum, rising to £600 by annual increments of £25.

CORNWALL COUNTY ASYLUM, Bodmin.—Junior Assistant Medical Officer. Salary, £225.

CROYDON BOROUGH HOSPITAL.—Assistant Resident Medical Officer. Salary, £150 per annum.

DERBYSHIRE HOSPITAL FOR SICK CHILDREN.—Resident Medical Officer (lady). Salary, £80 per annum.

DEVONPORT: ROYAL ALBERT HOSPITAL.—House-Surgeon. Salary at the rate of £150 per annum.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, AUGUST 22ND, 1914.

CONTENTS.

British Medical Association.

SOUTH AFRICAN COMMITTEE.

THE annual meeting was held at Kimberley on July 11th, 1914, when Sir KENDAL FRANKS was in the chair. The members present were:

1. *Western Branch.*—Drs. L. A. W. Beck, Hugh Smith and Simpson Wells.
2. *Eastern Province Branch.*—Dr. Seale.
3. *Border Branch.*—Drs. Barcroft Anderson and Hill.
4. *Griqualand West Branch.*—Drs. Chas. Symington and A. Fuller.
5. *Natal Coastal Branch.*—Dr. A. McKenzie.
6. *Natal Inland Branch.*—Dr. Campbell Watt.
7. *Witwatersrand Branch.*—Sir Kendal Franks, and Drs. Maynard and Napier.
8. *Pretoria Branch.*—Dr. Troup.
9. *Orange Free State Branch.*—Dr. Manning.

Payment of Members' Travelling Expenses.—The Honorary Secretary, Dr. D. CAMPBELL, reported that, of the Branches which replied, only one stated it was not in a position to pay travelling expenses.

Unethical Conduct.—Each Branch which had replied had accepted the Committee's suggestion that it should be asked by Branches for an opinion upon the evidence taken at inquiries.

Delegate from the Association.—Regret was expressed that the Association at home had not found it possible to send a delegate to the congress; it was trusted that it might be practicable to do so on a future occasion.

Finance.—The annual report and balance sheet for 1913 showed a balance of £64 4s. in hand, but it was stated that certain Branches were considerably in arrears, and it was resolved to inform Branches that all moneys due by them to the Committee should be paid to its treasurer by December 1st in each year.

Medical Witnesses' Fees.—The SECRETARY read the reply from the Secretary for Justice to the Committee's letter advocating an advance in the subsistence and travelling rates. The reply was of an encouraging nature, but it appeared that the only increase was in the subsistence rate, which was raised from 20s. to 30s. a day. Dissatisfaction was expressed at the absence of any advance in travelling rates, and of a special fee for giving evidence. A subcommittee was appointed to report to the next meeting.

Railway Medical Officers.—The SECRETARY reported that he had received returns from a large majority of these officers, and had tabulated the proposed amendments. After considerable discussion a subcommittee was appointed to take further steps in the matter.

Medical Defence Fund.—The sub-committee appointed to draw up a scheme presented an interim report, in which it was stated that it was necessary to take legal advice on certain points, the subcommittee to obtain such advice.

Fees for Medical Boards.—The replies received from Branches were discussed, and it was resolved that a minimum fee of £2 2s. should be paid for each examination to each member; that Government should be responsible for the fee, but that this should not apply to district surgeons if in their own areas.

Association Notices.

SUGGESTED CHANGES OF BOUNDARIES.

PROPOSED FORMATION OF A HYDERABAD AND CENTRAL PROVINCES BRANCH.

NOTICE is hereby given to all concerned of a proposal made by members and non-members of the Association resident in the Nizam's Dominions and Central Provinces for formation of a Branch of the Association, to include these combined areas and to be known as the Hyderabad and Central Provinces Branch. The matter will be determined in due course by or on behalf of the Council. Any member affected by the proposed change and objecting thereto is requested to notify the fact and his or her reason therefor to the Medical Secretary, 429, Strand, W.C., not later than October 22nd, 1914.

LOCAL MEDICAL AND PANEL COMMITTEES.

ESSEX.

THE first meeting of the session was held on August 13th, having been called under schemes "B" and "D" by the returning officer for Essex (Dr. HARDING H. TOMKINS), who reported that the Representatives elected or returned were for both Committees, thus securing identical personnel. The total cost was only £5 13s. 8d.

Election of Officers.—Dr. Leigh Day was re-elected Chairman, and Dr. J. Douglas Wells Vice-Chairman, but as he had joined his regiment Dr. C. E. Brunton was appointed Deputy Vice-Chairman. Dr. Harding H. Tomkins was re-elected Secretary, Dr. Erskine was appointed for areas 5 and 6, Dr. J. A. T. White for area 17, and Dr. C. Gordon Roberts for area 21, all previously members. Dr. H. Reynolds Brown was co-opted, as also Dr. J. Harrison, Dr. A. Butler Harris, Dr. J. H. Salter, Dr. J. Gidley-Moore and Dr. A. Berrill. All these elections, appointments and co-options were for both Committees.

Balance Sheet of Panel Moneys.—A request was made for a statement of all moneys due to panel doctors, and all payments made, in order to ascertain if all panel, urban area dispensing fees, and money due for unallotted persons and drug suspense fund had been paid.

Shortage of Drugs.—The Insurance Committee was asked to circularize all panel doctors as to the shortage of drugs due to the war. It was agreed to pay one-third of the cost of checking prescriptions: since last year there was a surplus of £1,750, while the first six months of this year showed a deficit of £3,300 odd. Two members were appointed to a joint subcommittee to consider all matters as between the Pharmaceutical, Panel, and Insurance Committees.

The War and Doctors on Service.—The following resolution was sent to the Insurance Committee:

> That whilst we are willing to undertake the treatment (without charge to the practitioner) of panel patients as deputy for any practitioner called up for active service, it is impossible to keep the record cards for these patients.

The hope was expressed that a meeting would be called in every area to consider the steps to be adopted in order to attend the patients of doctors on service and the

necessitous dependants of reservists and Territorials pending arrangements by local lay committees—representative of charitable organizations, friendly societies, local councils, etc.—which are now being formed.

District Subcommittees.—The Insurance Committee was requested to make proper provision for the adequate representation of the profession upon the new district subcommittees, and it was agreed that the areas should be rearranged so as to be coterminous with the twenty-one panel areas of Essex.

New Agreements.—A resolution requesting the Insurance Committee to send a draft copy of new agreements at least two months before signature was required was passed unanimously.

INSURANCE COMMITTEES.

Manchester.

The War.

A special meeting of the Manchester Insurance Committee was held on August 11th to consider, in the first place, the circular from the Insurance Commissioners calling attention to the necessity of making adequate arrangements for the medical treatment of insured persons in districts where panel doctors had been called to the front or to serve with the Territorials. It is not anticipated, however, that any great difficulty will arise in this respect in either Manchester or Salford. A communication was also received from the Panel Committee containing suggestions for maintaining the service as complete as possible. In order to safeguard the interests of any panel practitioner called away on active service, it was suggested that a sum of money should be reserved out of the panel fund equal to what would have accrued to them if they had not been called up. It may be pointed out that under the Manchester and Salford system of payment by attendance the panel fund is a pool out of which the panel doctors are paid according to the number of attendances given to the insured. Up to the present the doctors' accounts have never been paid in full, as the pool has only sufficed to pay a percentage. It can therefore matter little to the Insurance Committee if the panel doctors themselves agree that part of the pool should be reserved for such a special purpose. Some legal difficulties, however, may possibly arise, as the Insurance Committee has to submit all its payments to the official auditors, and the suggestion for safeguarding the interests of those called up for service may have to be somewhat modified. The Committee, however, decided, in view of the extra calls that are sure to be made on the panel doctors, to pay as large a percentage of the doctors' accounts as can possibly be arranged. It was also decided to address to doctors and chemists a circular calling attention to the difficulty that may arise from the lessened supply, owing to the war, of certain drugs in common use.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 7,478 births and 4,164 deaths were registered during the week ended Saturday, August 8th. The annual rate of mortality in these towns, which had been 11.6, 11.3, and 12.1 per 1,000 in the three preceeding weeks, fell to 12.0 per 1,000 in the week under notice. In London the death-rate was equal to 11.9, against 11.8, 10.7, and 12.1 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 2.2 in Ealing, 5.2 in Reading and in Bath, 5.7 in Ilford, 6.1 in Wimbledon and in Bournemouth, 6.2 in Brighton, and 6.6 in Croydon to 16.7 in Southport, 17.0 in Liverpool, 17.1 in Swansea, 18.5 in Bootle, and 19.3 in Dewsbury. The deaths of children under 2 years of age from diarrhœa and enteritis, which had been 151, 209, and 302 in the three preceding weeks, further rose to 332; of this number, 69 were recorded in London, 27 in Birmingham, 26 in Sheffield, 22 in Liverpool, 17 in Hull, and 16 in West Ham. Measles caused a death-rate of 1.5 in Leeds and 3.5 in Oldham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 42, or 1 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of these, 7 were recorded in Birmingham, 6 in Liverpool, 5 in Gateshead, 3 in London, and 3 in Southport. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,126, 3,135, and 3,154 at the end of the three preceding weeks, had further risen to 3,155 on Saturday, August 8th; 378 new cases were admitted during the week, against 430, 414, and 405 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In sixteen of the largest Scottish towns 1,057 births and 509 deaths were registered during the week ended Saturday, August 8th. The annual rate of mortality in these towns, which had been 12.7, 13.5, and 12.9 per 1,000 in the three preceding weeks, fell to 11.6 in the week under notice, and was 0.4 per 1,000 below the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 4.6 in Perth, 5.4 in Hamilton, and 6.3 in Motherwell and in Falkirk to 13.3 in Paisley, 17.0 in Coatbridge, and 17.8 in Kirkcaldy. The mortality from the principal infective diseases averaged 1.5 per 1,000, and was highest in Dundee, Coatbridge, and Greenock. The 238 deaths from all causes in Glasgow included 19 from infantile diarrhœa, 11 from whooping-cough, 3 from enteric fever, 2 from diphtheria, 2 from scarlet fever, and 1 from measles. Four deaths from measles were recorded in Dundee; from diphtheria, 2 deaths in Edinburgh; from whooping-cough, 2 deaths in Greenock; and from infantile diarrhœa, 3 deaths in Dundee, and 3 in Leith.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, August 1st, 598 births and 363 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 604 births and 335 deaths in the preceding period. These deaths represent a mortality of 15.7 per 1,000 of the aggregate population in the districts in question, as against 14.5 per 1,000 in the previous period. The mortality in these Irish areas was therefore 3.6 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.9 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 17.3 (as against an average of 15.9 for the previous four weeks): in Dublin city, 18.3; in Belfast, 15.0; in Cork, 15.6; in Londonderry, 17.8; in Limerick, 14.9; and in Waterford, 11.4. The zymotic death-rate was 2.3, as against 1.8 in the previous week.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following notifications are announced by the Admiralty: Deputy Surgeon-General C. J. Mansfield, M.V.O., to the *Pembroke*, for R.N. Barracks, Chatham, July 29th. Fleet Surgeon P. H. Boyden, to the *Collingwood*, on recommissioning, August 26th. Fleet Surgeon G. Taylor, to the *Formidable*, on recommissioning, August 26th. Fleet Surgeon E. J. Finch to the Chatham Division, Royal Marines, for Royal Marine Battalion, August 5th. Fleet Surgeon E. A. Shaw (retired), to Chatham Dockyard, vice Iredell, August 5th. Fleet Surgeon J. J. Walsh, M.B., to the *Drake*, on becoming parent ship. Fleet Surgeon E. D. J. O'Malley to the *Europa*, on becoming parent ship. Fleet Surgeon E. H. H. de C. Henry, M.D., to the *Euryalus*, on becoming parent ship. Staff Surgeon A. B. Marsh, to the *Collingwood*, on recommissioning, August 26th. Staff Surgeon A. A. Forrester, to the *Formidable*, on recommissioning, August 26th. Staff Surgeon C. E. Stanford to the Eastney Division, Royal Marine Artillery, for Royal Marine Battalion. Staff Surgeon E. B. Kenny to the *Victory*, for Royal Naval Barracks, August 5th. Staff Surgeon J. A. Thompson, M.B., to the *Goliath*, on becoming parent ship. Staff Surgeon T. W. Myles, M.D., to the *Pembroke*, additional for disposal, June 29th. Staff Surgeon A. R. Thomas to the *Pembroke*, additional for disposal, June 29th. Surgeon T. C. Patterson, to the *Vivid*, additional, for Royal Naval Hospital, Plymouth, July 25th. Surgeon J. H. Wright to the *Vivid*, for Royal Naval Barracks, August 5th. Temporary Surgeons R. W. Brander, D. P. Brown, A. M. Russell, R. A. Barlow, D. K. Adams, J. C. Walker, W. Meikle, and S. Robertson, to the *Pembroke*, for disposal, August 5th. Stanley S. H. Shannon, formerly a Staff Surgeon has been placed on the Emergency List, August 9th.

ARMY MEDICAL SERVICE.

Colonel Richard H. S. Sawyer, M.B., on completion of four years in his rank, is placed on the half-pay list, August 3rd.

Colonel John C. Culling, on completion of four years' service in his rank, is placed on the half-pay list, August 8th.

Lieutenant-Colonel James Meek, M.D., from the Royal Army Medical Corps, to be Colonel, vice R. H. S. Sawyer, August 3rd.

Lieutenant-Colonel William T. Swan, M.B., from the R.A.M.C., to be Colonel, vice J. C. Culling, August 8th.

Royal Army Medical Corps.

Majors S. W. Sweetnam and A. E. Milner have been placed on retired pay, July 28th.

Major Claude B. Martin, M.B., to be Lieutenant-Colonel, and to be supernumerary, August 3rd.

Major Charles B. Lawson, M.B., to be Lieutenant-Colonel, August 3rd.

Major Joseph F. M. Kelly, M.B., to be Lieutenant-Colonel, August 8th.

Captain P. C. Field is seconded for service with the Egyptian Army, July 1st.

Captain Robert J. B. Buchanan is placed temporarily on the half-pay list on account of ill-health, August 8th.

CONTENTS.

Association Notices.

CHANGES OF BOUNDARIES.

LEICESTER AND RUTLAND AND NOTTS DIVISIONS.

THE following change has been made in accordance with the Articles and By-laws, and takes effect as from the date of publication of this notice:

That the civil parish of Bottesford be transferred from the area of the Leicester and Rutland Division of the Midland Branch to that of the Notts Division of the same Branch, the areas of the two Divisions being modified accordingly.

Representation in Representative Body.—Unaffected.

ADJUSTMENT OF AREAS OF DUNDEE, PERTH, AND STIRLING BRANCHES AND FORFARSHIRE DIVISION.

The following changes have been made in accordance with the Articles and By-laws, and take effect as from the date of publication of this notice:

That (1) Alyth be transferred from the area of the Forfarshire Division of the Dundee Branch to that of the Perth Branch; (2) that the portion of Perthshire served by the railway from Callender to Stirling be transferred from the area of the Stirling Branch to that of the Perth Branch, the areas of the three Branches and of the Forfarshire Division being modified accordingly.

Representation in Representative Body.—Unaffected.

LOCAL MEDICAL AND PANEL COMMITTEES.

STAFFORDSHIRE.

PANEL COMMITTEE.

A MEETING was held at Stafford on August 20th, when Dr. T. RIDLEY BAILEY was in the chair, and sixteen other members were present. Dr. Lefevre was appointed secretary during the absence of Dr. Hodder on military duty, and Dr. H. A. Bull treasurer.

The War.—The following resolutions were adopted:

That the attendance of panel patients of doctors in the county called to active military service will be carried on by their colleagues in the various districts in those cases where the doctors have been unable to make their own arrangements for such treatment.

That this meeting of the Staffordshire Panel and Local Medical Committees, representing the whole of the medical profession in the county, is willing on its behalf to undertake the gratuitous treatment of the dependants of non-commissioned officers and men called to the colours during the war on the representation of the Local Distress Committees or other competent organizations.

Medical Service and Benefit Subcommittees.—Dr. W. Mitchell Smith was appointed Representative of the Local Medical Committee on the Medical Service Subcommittee, and on the invitation of the General Purposes Committee of the County Insurance Committee the Chairman undertook, during Dr. Hodder's absence, to act as his deputy on the Medical Benefit Committee. Dr. Lefevre will act as Dr. Hodder's deputy on the Medical Service Subcommittee.

Allocation of Insured Persons.—A scheme for the allocation of insured persons who experience difficulty in finding acceptance and for the distribution of the unallotted fees under Articles 21 (4) and 35 (1) of the 1913 Regulations was approved.

Executive Committee.—An executive committee of seven members, together with the Chairman and Secretary, was appointed, and cases of excessive prescribing were referred to it, with power to act.

SURREY.

PANEL COMMITTEE.

THE first meeting of the second Panel Committee was held at Surbiton Cottage Hospital on Friday, August 21st.

Elections.—The following officers were elected:

Chairman: Dr. Lankester (Guildford); *Honorary Treasurer:* Dr. Walters (Reigate); *Honorary Secretary:* Dr. Cran (New Malden).

The following were nominated to fill vacancies: Dr. Howlett (Kingston-on-Thames); Dr. Hodgson (Chertsey); Drs. Cowie and Hill (Wimbledon); Dr. Bentley (Mitcham); Dr. Dottridge (Godalming).

Finance.—The HONORARY TREASURER reported that 158 panel practitioners out of 421 in the county had signed the declaration authorizing the clerk to make a deduction towards the expenses of the Panel and Local Medical Committees.

Emergency Committee.—The following were elected to deal with any matter of emergency: Drs. Lankester, Walters, Lyndon and Cran, together with the Vice-Chairman (when appointed).

Federation of Panel and Local Medical Committees.—It was decided to support this scheme as long as the liability of any individual committee was limited.

NORTH RIDING OF YORKSHIRE.

THE Emergency Committee has issued a circular to all doctors resident in the North Riding or named on the county panel asking them loyally to comply with the following suggestions:

1. To undertake to safeguard the interests of their colleagues who are called to leave their practices in the service of their country, and also undertake any medical duties for the sole benefit of the absentees.

2. To secure the medical treatment by practitioners on the North Riding panel of insured persons on the lists of their colleagues who are absent on military and naval duties, and have been unable to make suitable arrangements.

3. To express their willingness to undertake, free of charge, the medical treatment of necessitous dependants of reservists on their lists, and of all insured persons who have become unemployed as a result of the war.

HULL.

DR. JOHN DIVINE, Honorary Secretary of the Hull Local Medical and Panel Committees, reports that all the members of the profession resident in the area (panel and non-panel) have been circularized, asking those willing to give gratuitous attendance to necessitous dependants of soldiers and sailors on active service to register their names, the practitioners attending such cases only in their own immediate neighbourhoods, or where their previous knowledge of the families disposes them to do so. Consultants are not asked to undertake any of the

general work, but it is expected that they will indicate their willingness to give gratuitous consultations in such cases; the proposed arrangements are to hold good during the period of active service or until the necessity for another and better plan becomes apparent.

COUNTY OF GLAMORGAN.

Panel Committee.

At the first meeting of the new Panel Committee, held in the Glamorgan County Hall on August 18th, Dr. W. E. Thomas (Ystrad Rhondda) was re-elected Chairman, and Dr. J. Shaw Lyttle (Creigian) Secretary. It was announced that nineteen members out of a total of thirty-two had been declared elected, and it was decided to fill the vacancies at the next meeting.

The War and Doctors on Service.—The Secretary was instructed to send the following resolution to the Insurance Committee:

> That this Committee is of opinion that panel doctors should do their utmost to carry on the work of those doctors who have been called upon for duty in connexion with the war, and that all the dependants of those called up should be attended free of charge,

and to point out to the Insurance Committee that the surplus panel money would be of great service at the present time.

Local Medical Committee.—Letters from the Insurance Commissioners were read regarding a scheme for the constitution of a Local Medical Committee for the county, and the Secretary was instructed to write to the Commissioners stating that while it was agreed that it would be advisable in many instances that the members of the Local Medical Committee should be the same as the members of the Panel Committee, the meeting was of opinion that the Local Medical Committee should be elected in accordance with the Act.

INSURANCE NOTES.

IRELAND.

Certification of Insured Persons.

At a recent meeting of the Insurance Committee of the county borough of Dublin the following resolution was unanimously passed:

> That we, the Insurance Committee of the borough of Dublin, are of opinion that the Irish Insurance Commissioners should come to some satisfactory arrangement with the approved societies and doctors so that insured persons in Dublin may get the benefit of the moneys voted by Parliament for the purpose of furnishing sickness certificates free of cost by the establishment of a certifying panel for this district. We earnestly appeal to their patriotism as Irishmen to the members of the medical profession in Dublin to endeavour by mutual agreement with the Irish Commissioners to retain this money voted specially for certification work in Ireland, and so avoid its being returned from year to year to the British Treasury.

The present system of certification for sickness benefit in Dublin and throughout most of Ireland is that carried on by a comparatively small body of doctors called "Medical Advisers." These medical advisers not only certify for their own patients, but, being part of their duty, they intrude themselves on the insured patients of other doctors for the purpose of certifying for sickness benefits. In several instances they have entered the metropolitan hospitals to certify patients on whom serious operations had been performed. One of the leading surgeons in Dublin relates a curious incident: an insured person on whom he had operated for a bunion was subsequently visited by a medical adviser who relied on the patient's history of his case for a diagnosis, with the result that he considered he was dealing with a case of tuberculosis, cut off his weekly sick pay, and recommended the patient to apply for tuberculosis benefit. Several glaring cases of injustice to the insured in Ireland have occurred at the hands of the medical advisers, who, not being the medical attendants of the insured, are not in a position to form a fair estimate of the claims of the insured to sick benefits. Notwithstanding that the Chancellor of the Exchequer twelve months ago promised to find all the money the profession in Ireland demanded for certification, the Irish Commissioners, apparently at the instigation of certain officials of politico-religious societies in Ireland, will have nothing but a scheme based on the present system of medical advisers. This scheme is strenuously opposed by a united profession in Ireland who consider it a national insult that, unlike the profession in Great Britain, they are not to be trusted to certify their own patients for sickness benefit. The scheme of medical advisers recommends itself to the societies' officials chiefly on the grounds that the doctors who will staff this scheme will owe their appointments to the influences of these officials, and thus will not be in a position to act independently towards the insured. Practically in all cases where the insured were allowed to express an opinion on the scheme advocated by the society officials it was strongly unfavourable. All the public bodies in Ireland having either a direct or indirect interest in the administration of the Insurance Act have also pronounced against the employment of part or whole time certifiers on the basis of the medical advisers. Almost half the population of Ireland receive medical treatment, in the first instance, at the hands of the Irish dispensary doctors, whose miserable salaries in the aggregate amount to something over £100,000 per annum, yet instead of supplementing the Poor Law medical officers' salaries and the small fees of these doctors in cities and towns who afford medical attendance on a number of the insured, it is proposed to spend £91,000—Ireland's grant for certification—on some one hundred and thirty medical advisers, whose only duty will be to certify for sickness benefit without affording any medical attendance on the insured. This grotesque proposal is the latest achievement of Irish officialdom.

SCOTLAND.

Medical Referees.

The Insurance Commissioners for Scotland have issued a circular renewing their recommendation to approved societies to make only temporary arrangements for medical referees, and stating that they have decided to continue the present provisional arrangements and to amend the Administration Expenses Regulations so as to allow such further amount, not exceeding Id. a member, to be carried to the Administration Account as is required to meet any deficiency shown to be due to expenditure on medical referees up to December 31st, 1914.

The effect will be that an extra 2d. per member in all (in addition to any sum that can be spared from the ordinary administration allowance) will be available in respect of expenditure on medical referees in the fifteen months October 1st, 1913, to December 31st, 1914, of which not more than 1d. will be allowed in respect of the period ending January 11th, 1914.

SICKNESS AND DISABLEMENT BENEFITS DURING PREGNANCY.

In response to inquiries from societies, the English Commissioners on August 21st issued a circular (A.S. 143) stating that no distinction should be drawn as regards the payment of sickness or disablement benefit between incapacity due to pregnancy and incapacity due to other causes. So far as this interpretation of the Act involves a charge upon societies' funds in excess of that assumed in the actuarial estimates upon which the finances of the Act were based, provision has been made for meeting this charge from a special grant voted by Parliament. The circular is to be read subject to the express provision of the Act by which Married Women Special Voluntary Contributors (Class H) are debarred from receiving sickness or disablement benefit for two weeks before and four weeks after confinement, except in respect of a disease or disablement neither directly nor indirectly connected with childbirth.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following notifications are announced by the Admiralty: Deputy Surgeon-General Donald T. Hoskyn, M.B., has been promoted to the rank of Surgeon-General, August 7th. Fleet Surgeon Daniel J. P. McNabb has been promoted to the rank of Deputy Surgeon-General, August 7th.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns, 9,707 births and 4,366 deaths were registered during the week ended Saturday, August 15th. The annual rate of mortality in these towns, which had been 11.3, 12.1, and 12.0 per 1,000 in the three preceding weeks, rose to 12.6 per 1,000 in the week under notice. In London the death-rate was equal to 12.2, against 10.7, 12.1, and 11.9 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 5.1 in Southport, 5.9 in Swindon, 6.0 in Enfield, 6.9 in Ilford, 7.0 in Wimbledon, and 7.1 in East Ham, to 17.0 in Gateshead, 18.1 in Sunderland, 18.4 in Barnsley, 18.7 in Tynemouth, 19.2 in Liverpool, and 19.9 in Cambridge. Measles caused a death-rate of 1.6 in Leeds and 2.4 in Oldham. The deaths of children (under 2 years) from diarrhœa and enteritis, which had been 209, 302, and 332 in the three preceding weeks, further rose to 348, of which 102 occurred in London, 28 in Liverpool, 22 in Sheffield, 16 in Manchester, 15 in Leeds, and 13 in Birmingham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 34, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 8 were recorded in Birmingham, 5 in Liverpool, and 2 each in Preston, Blackpool, Sunderland, and South Shields. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,135, 3,154, and 3,155 at the end of the three preceding weeks, had fallen to 3,072 on Saturday, August 15th; 335 new cases were admitted during the week, against 414, 405, and 378 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns, 1,215 births and 608 deaths were registered during the week ended Saturday, August 15th. The annual rate of mortality in these towns, which had been 13.5, 12.9, and 11.6 per 1,000 in the three preceding weeks, rose to 13.8 in the week under notice, and was 1.2 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 2.7 in Hamilton, 8.2 in Clydebank, and 8.8 in Kilmarnock, to 15.7 in Aberdeen, 16.9 in Perth, and 17.3 in Ayr. The mortality from the principal infective diseases averaged 1.7 per 1,000, and was highest in Falkirk and Ayr. The 293 deaths from all causes registered in Glasgow included 18 from infantile diarrhœal diseases, 12 from whooping-cough, 2 from scarlet fever, 2 from enteric fever, and 1 from diphtheria. Three deaths from measles were recorded in Dundee; from diphtheria 4 deaths in Edinburgh; and from infantile diarrhœa 4 deaths in Dundee and 3 in Edinburgh.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, August 8th, 544 births and 378 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 598 births and 363 deaths in the preceding period. These deaths represent a mortality of 16.4 per 1,000 of the aggregate population in the districts in question, as against 15.7 per 1,000 in the previous period. The mortality in these Irish areas was therefore 4.4 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 23.5 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 17.3 (as against an average of 16.2 for the previous four weeks), in Dublin city 18.3 (as against 17.6), in Belfast 17.9 (as against 15.0), in Cork 14.3 (as against 14.8), in Londonderry 12.7 (as against 20.6), in Limerick 12.2 (as against 14.6), and in Waterford 9.5 (as against 16.6). The zymotic death-rate was 1.8, as against 2.3 in the previous week.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BANBURY: HORTON INFIRMARY.—House-Surgeon. Salary, £120 per annum.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, SEPTEMBER 5TH, 1914.

CONTENTS.

THE WAR.

PROVISION OF FREE MEDICAL ATTENDANCE FOR DEPENDANTS OF MEN SERVING WITH THE COLOURS.

RECENT issues of the BRITISH MEDICAL JOURNAL have contained ample evidence of the desire of the medical profession throughout Great Britain to give gratuitous medical attendance to the necessitous dependants of men called away from their ordinary employment to do military service for the country. The movement was entirely spontaneous, and began simultaneously in many widely separated parts of the country. It was strongly reinforced when it became known that the pharmacists in many districts were prepared to undertake to supply medicines without charging a dispensing fee to the dependants of all those to whom the medical profession had offered to give gratuitous attendance.

As it was evident that both general and local organization would be necessary to ensure that the work should be done without friction and without abuse, the Chairman of the Council and the Medical Secretary of the British Medical Association, acting with the President and the Parliamentary Secretary of the Pharmaceutical Society of Great Britain, put certain suggestions before the Government, and offered the services of these two bodies in the organization of the proffered gratuitous medical and pharmaceutical service.

The offer has been most sympathetically received by the Government, but, owing to the careful consideration which so large a scheme demands, particularly in its financial aspects in regard to meeting the cost of drugs, we understand that an official announcement cannot yet be made. It is, however, to be anticipated that doctors and chemists will receive a communication on the subject in the course of next week. In the meantime it would seem advisable that local action should be limited to meeting provisionally any emergencies which have already arisen, and that the final and definite arrangements should be deferred so that all districts may co-operate in a uniform manner in the national scheme which is being evolved.

WEST SUFFOLK.

A meeting of medical men resident in West Suffolk, summoned by the West Suffolk Division, was held at the Town Hall, Bury St. Edmunds, on August 25th. It was unanimously resolved to undertake to safeguard the interests of any practitioner called up on service, and to give free medical attendance to all necessitous cases resulting from the war on the production of a voucher from the Relief Committee of the borough of Bury St. Edmunds or the county of West Suffolk. It was agreed to ask practitioners to refer to the Secretary if unable to obtain assistance when required as a result of the war, and the Secretary is collecting the names of any retired practitioners who may be willing to offer their services.

DUMBARTONSHIRE.

At a combined meeting of the Dumbartonshire Division and the County Panel and Local Medical Committees, on August 26th, it was unanimously resolved to give medical attendance free of charge to the necessitous dependants of all men on active service at home or abroad vouched for by the Soldiers' and Sailors' Families Association, or its local committees, and to co-operate with the official relief committees. It was resolved also to safeguard the interests of medical practitioners absent on military service, and it was stated that all such had already made arrangements. It was resolved, further, that members should be at liberty to give first aid or home nursing lectures in connexion with Voluntary Aid Detachments, without fee during the war.

EDINBURGH AND LEITH.

A special meeting of the Division, the large attendance at which included non-members who had been invited to be present, was held on August 28th. A resolution was adopted pledging those present to safeguard the interests of professional brethren called to the service of the country in this national crisis. The Senior Secretary, Dr. G. K. Paterson, reported that twenty-eight practitioners in Edinburgh and Leith had been called to whole-time service, but all had made satisfactory private arrangements for their medical work. Dr. Norman Walker, Chairman of the Scottish Medical Emergency Committee, said that the whole of the medical service in Scotland was at present adequately arranged for, but that stress, especially in the country districts, might be expected in the future. The Chairman of the Division, Dr. R. A. Lundie, said that medical men wished to take their fair share of the burden of distress that might arise among the families of those called to service or as a result of unemployment. Many patients of this class would go to the dispensaries, and others who had private medical attendants should be encouraged to continue to employ them. He had already discussed the medical organization to meet distress with

the Soldiers' and Sailors' Families Association and with the Town Clerks of Edinburgh and Leith, who were acting secretaries of the National Relief Fund in these cities. It was unanimously agreed:

> That it is desirable that the medical profession in Edinburgh and Leith should systematically co-operate with the Soldiers' and Sailors' Families Association, and with the Local Committees of the National Relief Fund, with regard to the provision of medical attendance on persons rendered necessitous by the war.

Dr. John Stevens said the work should be entirely voluntary; should be undertaken by the profession as a whole; and that there should be no kind of binding agreement. It would not apply to persons under the Insurance Act, or invade the work of the Poor Law or charitable institutions. The meeting expressed the opinion that there should be medical representation on the Central Relief Committee and on the ward committees. The meeting appointed a special emergency committee of sixteen, with power of co-option.

Greenock.

At a meeting of the practitioners of Greenock, on August 25th, it was resolved to safeguard the interests of practitioners called out on active service, and to attend private patients on the basis of an equal division of fees received between the absent practitioner and the practitioner who did the work, but that full midwifery fees should be paid to the doctor doing the work. With regard to insured patients, it was agreed that where no arrangements had been made by the practitioner before leaving, the relation should be the same as in regard to insured patients on his own list till the return of the absent practitioner, and it was decided to give the necessary attendance, keep records, etc., on the understanding that the absent practitioner pay at the rate of 1s. a visit and 6d. for attendance at consulting room. Where arrangements had been made as to insured patients by the practitioner before leaving, any such patients not accepting the arrangement of the absent practitioner should be regarded as private patients and charged accordingly. It was further agreed not to accept any persons from the list of a practitioner absent on active service unless by that practitioner's consent. A reference committee of three was appointed to settle any matter of dispute which might arise.

RECEPTION OF THE WOUNDED AND SICK.

The first detachments of wounded soldiers are now reaching this country and are being sent, as far as possible, to hospitals in the neighbourhood of their homes. It has been noted by various observers that for the most part the wounded men landed in this country do not appear to be seriously hurt, and have been able, for example, to walk from the trains to the conveyances provided for them. The reason, of course, is that the more serious cases have not been subjected to the trials of a long journey, but are being treated at base hospitals in France.

The London Hospital.

At the London Hospital a telephone message was received on Sunday morning, August 30th, asking the hospital to receive 100 cases that night. For some time past the hospital authorities have been making ready for a sudden call, and operations of expediency that could be postponed have not been undertaken, although many operations for varicoceles, hydroceles, and varicose veins have been done to fit men for active service. For the conveyance of the wounded from Waterloo Station to the hospital, Messrs. J. Lyons and Co., Ltd., through the kind offices of a member of the hospital board, lent a number of their vans, whose shape and construction rendered them very suitable for the purpose. Other cases were conveyed in taxicabs. The transfer was superintended by members of the hospital medical staff and students of the medical school, under the direction of the military officer in charge. The 100 men arrived at the hospital at 9.5 p.m. and by 10 p.m. all were in bed and many asleep.

Another 200 men were received on Monday morning. The London Hospital undertook to provide 250 beds for soldiers and a like number for sailors. So far, there has been no call upon accommodation for sailors, but the provision for soldiers has overflowed into that department. When the 300 patients came to be examined it was noted that their wounds were completely aseptic, and the excellence of the treatment by the Royal Army Medical Corps was generally commented upon. One soldier coming from Mons had had a limb in a splint for four days. With the exception of one or two chest wounds the cases were for the most part leg and arm wounds. The worst case is that of a sergeant who was struck in the shoulder while lying on the ground firing. The bullet ploughed its way through the upper part of the trunk and came out in the lower part of the back. There were 38 cases of fracture in the first 100; many were due to bullet wounds; bad leg wounds were caused by bayonet thrusts. Shrapnel caused ragged wounds with loss of substance. Some cases of retention of urine had suffered considerably from forty-three hours' continuous travelling. There were many cases of sore feet due to the severity of forced marches both before and after the thirty-six hours' fighting near Mons. A distance of 104 miles was covered in three days by some regiments; one man who had lost his boots did this march in a pair of slippers given him by a Belgian woman. To make it possible to wear them he had to cut away the toes of the slippers. All the men were suffering from strain and lack of sleep.

The *x*-ray department of the hospital has been very busy; as many as 40 cases have been examined in a day, and the value of this aid to surgical science has been amply demonstrated. In addition to bullets, in a good many cases fragments of bullets and shrapnel are embedded. No evidence of the use of dum-dum bullets was found.

We were informed that the men were "perfectly cheery," and that about 40 per cent. of them will be able to leave the hospital in a week, and go back to the front in a fortnight.

2nd Eastern General Hospital (Brighton).

On Monday, August 31st, just under a month from the declaration of war, the 2nd Eastern General Hospital (Territorial) received intimation from the War Office that 300 wounded from the front would arrive within a few hours. Up to this time only about 50 beds in the hospital had been occupied, mainly by Territorials taken ill or suffering from slight injuries received in their work, although a few operations, such as for appendicitis, for the radical cure of hernia, and for removal of loose cartilage in the knee, had been performed.

Major Rooth, the commanding officer, at once placed each of his medical and surgical officers in charge of certain wards, and transport for the wounded from the station to the hospital was organized.

The men had been landed at Southampton, and the first train carrying them reached Brighton at 8.30 a.m. on September 1st. The railway and police authorities had made excellent provision, and Major Rooth had half his company with him at the station to superintend the removal of the men from the train to the fleet of motor cars, motor and horse ambulances, and railway vans in waiting. As each soldier was placed in his vehicle he was given a paper with the name of the ward to which he had been assigned. As each vehicle arrived it was met by the registrar, Lieutenant Walker, who directed it to the proper ward, and as car after car rapidly succeeded each other one could only marvel at the really splendid organization which rendered it possible to remove from train to ward 300 wounded men, many of them requiring to be carried—some on stretchers—without flurry or hitch in less than two hours.

When the patients reached their wards, the more seriously injured were put at once to bed, but those who were well enough were sent to the bathrooms, and as some of them had not had their clothes off for three weeks this luxury was appreciated. The medical officer then made his rounds, examined the cases, made his diagnosis, and ordered the treatment and diet of the men.

The following is an example of the kind of cases admitted. One surgeon with 26 admissions, had about twenty men with bullet, shell, or shrapnel wounds. In seven of these the bullet required extraction, and in these cases the *x* rays were used previous to operation. Among other cases were a few examples of bruises of bones, one or two of abdominal injuries, and one of traumatic orchitis.

The men, who were of all ranks—officers, non commissioned officers, and men, both English and Belgian—were in excellent spirits, and delighted to be so comfortably housed and fed. It was magnificent to see their eagerness to get back to the front. They had no complaints to make of their treatment since they had received their wounds; the Belgians had done everything they could to make them comfortable, but many of them had had a very severe time. No sooner were they in one hospital than they were shelled out and had to be taken to another, and to many this happened more than once.

Too much praise cannot be given to the administrator, Major Rooth, to the registrar, Lieutenant Walker, to the quartermaster, Lieutenant Ross, and to the non-commissioned officers and men for carrying out so successfully in every detail the first great task imposed upon the hospital.

PORTSMOUTH.

A batch of sick and wounded—121 cases—reached Portsmouth soon after 8 a.m. on September 1st. They had arrived at Southampton the previous night, were conveyed to Fratton railway station in a hospital train and removed to the 5th Southern General Hospital (T.F.), established in a municipal school. The care and comfort with which this was accomplished reflect great credit on the staff under the direction of Lieutenant-Colonel J. Kyffin, R.A.M.C. (T.F.), the officer commanding the hospital. The wounded are from the battle of Mons; there are many cases of rheumatism due to exposure. Some are wounded in the legs and feet. The men generally look as if they had passed through a rough time. There are about 16 serious cases; the others are not of a critical character, and will probably soon be able to get into the comfortable recreation rooms which have been provided.

LIVERPOOL.

1st Western General Hospital.

The officer commanding the 1st Western General Hospital (Liverpool) sends us a diary of the mobilization of this hospital, from which it appears that the telegram to mobilize was received at 9 p.m. on Tuesday, August 4th, and by the following evening the nucleus staff—39 N.C.O.'s and men—had been medically examined and found fit, except two who were returning from Wales. All the officers whose services were available on mobilization resided in Liverpool, and nurses had been warned and could be available in a few hours, so that the unit as regards its personnel was then already mobilized. Authority to occupy the Liverpool City Hospital at Fazakerley was received on August 7th, and under arrangement with the authorities the annexe was occupied by the unit on August 8th, when 120 beds were ready and an increase of 100 a day prepared for. Surgical and medical equipment and *x*-ray apparatus had been accepted on loan and the services of a bacteriologist and a specialist for the venereal wards had been arranged for. On August 9th the men's quarters were transferred to the annexe and administrative block, all stores arranged and labelled, and the men detailed to various duties. The hospital was inspected on Tuesday, August 11th, by G.O.C. in C. and D.D.M.S., who expressed satisfaction with the arrangements, and the first two patients were admitted at 9.30 p.m., when the first officers whose services were available on mobilization were called on, and the War Office was informed that 250 beds were provided. Since that date patients have been regularly admitted and dismissed, and all arrangements in this respect are working smoothly. Skiagrams have been taken; swabs, blood, etc., examined; and the venereal wards attended by a specialist; throat, nose, and ear work is in charge of one of the officers who is a specialist in these diseases. Down to August 28th 236 patients had been admitted, 49 discharged, and 187 remained. The greatest credit is due to the West Lancashire County Association and the Liverpool Corporation for a scheme which permitted this unit to occupy such excellent and appropriate premises in so short a space of time, and to the corporation officials and staff for the rapidity with which the whole hospital was prepared and handed over.

2ND CITY OF LONDON GENERAL HOSPITAL.

The Territorial scheme for general hospitals provided four for London. Of these one has been established in the new buildings of King's College Hospital, and a second has been installed in St. Mark's College, King's Road, Chelsea, S.W., and the adjoining London County Council secondary school. Colonel Eustace M. Callender, on taking over the buildings, found that his chief difficulty would be to provide adequate sanitary appliances, and it has been necessary to build a series of sanitary annexes and to make a number of temporary structural alterations in the buildings to fit them for their new purpose. The Medical Section of 260 beds is organized in the college, where, on two stories, there are a series of wards varying very much in size, but providing cubic space of 1,200 to a minimum of 1,000 cubic feet. The nurses are comfortably housed in the third story and have in addition a dining-room and sitting-rooms. The Surgical Section, with the same number of beds, is established in the secondary school, which is on an adjoining site, direct connexion having been established by taking down a section of the party wall. An operating room, with sterilizer and all the necessary fittings, is complete, and the beds are all practically ready for occupation. It is proposed to use the smaller rooms, in which four or five beds can be placed, for specially serious cases or for officers.

The male personnel is accommodated in a detached building. A large sterilizer and complete appliances for disinfection have also been installed. The kitchens are established in the basement, and were fitted up by the gas company in forty-eight hours. The grounds of the building on one side open on to the platform of Chelsea station, which is in communication with all the principal lines in the country, so that patients can be brought to the doors of the hospital direct by the ambulance trains. The hospital will be ready to receive patients before the end of this week. In addition to the officer commanding, the resident staff will consist of the registrar, quartermaster, and six newly gazetted lieutenants of the Royal Army Medical Corps. The consulting staff will be furnished by members of the visiting staffs of St. Thomas's, Guy's, and the London Hospitals. Pending the final adjustment of the arrangements at this hospital, some 120 wounded men who would have been directed to it have been admitted to St. Thomas's Hospital.

Wounded soldiers have also been received at the Royal Herbert Hospital, Woolwich (300), at Plymouth (100), Bishop's Stortford (140), Birmingham, and elsewhere.

THE BRITISH RED CROSS SOCIETY.

SIR FREDERICK TREVES expressed to our representative the opinion that the arrangements of the Army Medical Department for the wounded are exceedingly complete in every detail. They would be better looked after in this war, he said, than in any campaign in history. The manner in which the department had expanded to meet the requirements of the situation had been extraordinarily complete. The War Office was affording to the British Red Cross Society every assistance in its power.

The Rest Station.

Owing to the present position of the fighting line the rest station, which it was reported last week would be established at Havre, has not yet been set up, but is ready to be placed wherever the War Office may direct.

Increased Financial Aid.

Thanks to powerful aid given by the daily press, anxiety as to funds for Red Cross work is now in some measure relieved. The total on September 2nd was nearly £142,000.

A Hospital near Paris.

A unit composed of 10 surgeons, 10 dressers, and 20 nurses is being sent to France to take charge of a hospital to be established in a house near Paris, placed at the disposal of the Society by a French nobleman. Another house in the same district has been handed over to the Society by a member of the Rothschild family. The unit is taking over stores and a complete equipment, and will land at Cherbourg. It will be accompanied by Mr. Bennett, one of the Commissioners of the Red Cross Society in France.

The Unit in Brussels.

News has been received of the unit in Brussels, to which reference was made last week; it is entirely of a satisfactory nature.

THE MEDICAL SERVICE OF THE NEW ARMY.

The history of the Boer war afforded ample evidence that hastily enrolled and dispatched civil surgeons were at first handicapped by their ignorance of military routine.

We are now face to face with a prolonged struggle for our existence, and it is realized that it will be necessary to increase enormously our available army. The first hundred thousand men have already been enlisted. It will be necessary to increase this force during the campaign before us, and to supply it with an adequate medical staff. The hands of the military officials are full at the present moment, supplying the immediate wants of the campaign, and they can have little time for preparation for the future. The question arises whether the British Medical Association can help in supplying the need.

A correspondent makes the suggestion that a special committee of men acquainted with army medical methods should be formed, with a view to establishing a reserve of medical men instructed in the elementary principles of army medical work, so that when occasion arises the medical profession may offer to the War Office men having some knowledge of military routine. He suggests that the central office of the Association should be responsible for dealing with correspondence, keeping a register of medical men available and of the direction in which their services can be used, and for furnishing information to those willing to render assistance to the country. He proposes that as soon as possible classes should be started in suitable centres at which lectures and instruction in the duties of army medical officers should be given, and that if possible the services of a sergeant should be obtained to teach the elements of such matters as "stretcher drill." The manuals in use in the Royal Army Medical Corps would be indicated.

He considers that if the organization of the British Medical Association were used in this manner, much time might be saved later on when more men are required for active service, while the path of the medical recruit would be smoothed by the possession of some elementary knowledge of his duties.

NOTES.

Casualties in the Medical Service.

The first list of casualties among British officers, dated September 1st, appears to refer only to three infantry divisions and one cavalry brigade. It contains the names of the following medical officers:

Wounded.—Gibbon, Captain T. H.

Missing.—Brown, Lieutenant A. J.; Cahill, Captain R. J.; Collingwood, Major P. H.; Egan, Captain W.; Hattersley, Lieutenant S. M.; Hills, Lieutenant H. W.; Irvine, Major F. S.; Lauder, Lieutenant C. L.; Lynch, Captain J. P.; Priestley, Captain H. E.; Routh, Lieutenant L. M.; Sutcliff, Captain A. A.; Thompson, Colonel H. N.

The large number of missing of all arms is to be attributed to the fact that the British Force had been fighting a rear-guard action for over a week. It is, of course, possible that many of the medical officers are with ambulance units in the country overrun by the Germans.

Canadian Women's Hospital.

The women of the Dominion of Canada have, through H.R.H. the Duchess of Connaught, presented a naval hospital, which has been accepted by the Admiralty with deep gratitude. It is being established and equipped to supplement the Royal Naval Hospital at Haslar, and will be known as the "Canadian Women's Hospital."

First Aid Lectures.

The British Red Cross Society has issued (through the Oxford University Press, and Hodder and Stoughton, London) a note-book with diagrams for use during attendance at Red Cross courses and first aid. On the left-hand page are clear reproductions of the diagrams shown during the lectures; the right-hand page is blank for notes. The illustrations have been prepared, under the direction of the Education Subcommittee of the British Red Cross Society, by Dr. Georges Dupuy. The price of the note-book, which is quarto shape, is 1s. net.

Life Insurance.

In reply to questions in the House of Commons as to the demand of certain insurance companies that sailors and soldiers should pay an additional 5 per cent. on their life insurance policies to cover war risks, the Prime Minister, on August 27th, said that he hoped that the matter would be settled satisfactorily without the intervention of the State.

As was pointed out in the Journal of August 22nd, the extra premium demanded did not apply to world-wide and unconditional policies issued by the best offices, but to policies of restricted type. We are informed that at a meeting of the Life Offices Association on August 31st it was resolved, so far as Territorials at home or abroad are concerned, to recommend all life offices to waive the proposed extra charge. This applies only to policies in existence before the declaration of war. Any member who considers it possible that he may be called to active military service at home or abroad should look into the exact terms of his policy, and obtain a written guarantee from the life office. Those already called up who did not take these precautions before leaving should authorize some reliable person to attend to this matter.

School Medical Service.

In view of the fact that in a number of areas school medical officers and others engaged in the work of the School Medical Service are serving with the navy or army, the Board of Education has issued a circular to local education authorities, pointing out the great importance of maintaining the work of the School Medical Service. The Board appeals to these authorities "to do their best to make good working arrangements for carrying on the work of school medical officers, assistant school medical officers, specialist officers, school nurses, and other officers engaged in the work of the School Medical Service, who are absent on duties connected with the present crisis." The Board, on its part, undertakes to make every allowance for the difficulties with which local education authorities are confronted.

Ambulance Courses in Dublin.

Classes in first aid and home nursing will be given at the Alexandra College, Dublin, under the St. John Ambulance Association and the Department of Agriculture and Technical Instruction for Ireland, whose syllabus for instruction in first aid to the injured, hygiene, and emergency nursing, and ambulance work will be followed. All qualified members, past and present, of the college ambulance classes are eligible to join the college unit of the St. John Brigade, and arrangements are being made to convert this unit into a Voluntary Aid Detachment.

A number of ladies have gone into residence at the Richmond, Whitworth, and Hardwicke Hospitals with the object of providing a continuous supply of persons having a preliminary knowledge of emergency nursing. Lectures and classes in accordance with the scheme approved by the Department of Technical Instruction for nurses will be held in the hospitals and will be open to members of the public desirous of obtaining the certificate of the Department.

The Dublin Centre of the St. John Ambulance Association has arranged, for the benefit of those attending ambulance lectures, a special evening course, to be delivered as follows at the Royal Dublin Society's Lecture Theatre:

September 2nd.—Asepsis and Antiseptics, by Mr. William Taylor, Vice-President, Royal College of Surgeons of Ireland.

September 9th.—The Prevention of Enteric Fever in War Time, by Dr. Coleman, C.M.G.

September 16th.—Wounds and their Treatment, by Mr. Conway Dwyer, President, Royal College of Surgeons of Ireland.

September 23rd.—Professor McWeeney.

September 30th.—Women's Work in War, by Dr. MacDowel Cosgrave.

October 7th.—Water: Its Danger and Methods for its Purification, by Sir Charles Cameron.

Questions in Parliament.

The following are brief reports of answers made to questions in the House of Commons touching matters of interest to medical men serving in the Territorial Force:

Pay.

Mr. Sanders asked the Under-Secretary of State for War if his attention had been called to the case of country doctors

and veterinary surgeons called out with Territorial units whose pay was 15s. 6d. a day, while they lost their private practice, whereas a civilian practitioner newly joined for war service got 24s. a day and £60 bounty at the end of the war; and whether he would take steps to remedy this inequality of treatment.—Mr. Baker replied that all such officers commissioned in peace drew, under the terms of their contract, the pay and allowance of the regular army, varying according to rank. The rate quoted, 15s. 6d. a day, was that of a captain R.A.M.C., but field allowance of 3s. 6d. a day was also allowable, so that the total drawn was 19s. It was necessary to give higher rates to those commissioned on emergency, but there was no intention of making this universal.

Vaccination Regulations.

In reply to Mr. Chancellor, the Under-Secretary of State for War (Mr. Tennant) stated on August 26th that a circular had been issued recently informing general officers commanding that members of the Territorial Force who had conscientious objections should not be vaccinated. It was considered that the danger of an outbreak among a body of insufficiently vaccinated troops was very real, and every effort was consequently being made to persuade men to undergo vaccination; those who objected were being informed that unless they submitted to vaccination they were not likely to be of service in the field.

ORGANIZATION OF THE RELIEF OF DISTRESS.

A NUMBER of circulars have been issued by the Local Government Board for the guidance of bodies concerned with the relief of distress arising in consequence of the war.

In a memorandum to the distress committees the Board states that, as far as it is possible to discriminate, cases of ordinary poverty should not be dealt with, but left to the Poor Law authorities. The local committees should co-operate closely with labour exchanges, and, where the demands of the normal labour market are inadequate, should consult the local authorities with a view to expediting public works. Men engaged should conform to ordinary standards of competence. When relief works are set up each man should only be employed a certain number of days a week, and single men capable of service with the forces should not receive assistance until other applicants have been provided for. Relief without work should only be given as a last resort, and then only on a minimum scale; it should take the form of tickets for food, and be given to the wives rather than the husbands. The principles upon which relief is given should be definitely laid down in order to secure uniformity of treatment.

The circular does not deal specifically with the large class of men and women clerks, shops assistants, etc., who at present appear to be seriously affected by the war.

A separate circular has been issued to the mayors of the London boroughs in which it is suggested that to avoid overlapping, and to ascertain the relative needs of applicants, each local committee should set up a register for persons—

(1) In receipt of poor relief;
(2) Registered by the distress committee:
(3) Dealt with by the Soldiers' and Sailors' Families Association, and
(4) All other applicants for assistance.

Full particulars are to be recorded of the qualifications for employment, and any income of each applicant, including assistance already received from public or charitable sources.

The boards of guardians have been informed that any out-relief granted to dependants of soldiers or sailors or members of the Territorial Force since August 2nd will be refunded from the Prince of Wales's Fund, and the guardians are to erase from their records all entries which would identify the recipients with the receipt of Poor Law relief, and to notify such persons that this has been done, and that the help given to them has come from the Prince of Wales's Fund and not from the Poor Law.

The Invalid Kitchens of London.

The organization known by this name, which has been at work for four years, and at present has five kitchens, proposes to extend its organization to all the boroughs in London. Its object is to provide a suitable meal daily to women recovering from childbirth, convalescents from hospitals and dispensaries, phthisical cases waiting for admission to sanatorium, and to sick and ailing children, and milk for infants. The kitchens habitually work in co-operation with the hospitals, district nurses, and the Charity Organization Committee, and arrangements have now been made with the Soldiers' and Sailors' Families Association, by which the kitchens have undertaken to supply food to invalids, children, maternity and all other cases recommended by the Association. Each kitchen has a Visitors' Committee, which recommends each case. The charge of one penny is made to the recipient. We have had an opportunity of visiting this week two of the kitchens, and can say that the meals are excellent and the joints of prime quality supplied by local butchers at special terms. The milk is also of first-rate quality, and is supplied by the Pure Food Committee. The average cost of the meals to the organization is 5d., or, if administrative expenses are included, 7d.

The kitchens fulfil a distinct place in the organization to meet the present emergency, and their existence should be widely known to the medical profession. The Southwark Invalid Kitchen is at 273, Scovell Road, Borough, S.E.; the Bermondsey and Rotherhithe at 104, Jamaica Road, S.E.; Hoxton at 139, East Road, N.; Stepney and Limehouse at 40, White Horse Street, Commercial Road, E.; and Victoria Docks at Butcher's Road, Custom House, E. The central organization is conducted by Lady Muriel Paget, 31, Dover Street, W.

THE WORK OF PARLIAMENT.

THE pressure on our space has prevented our continuing a connected account of the proceedings in Parliament. The proceedings, however, have been of so unique a character, and necessarily so disconnected, that perhaps a more useful purpose will be served by piecing them together in a general summary.

Legislation has been introduced and passed into law with such astonishing rapidity that even members of Parliament themselves have been left breathless in the rear when they have attempted to keep up with what was going on. Many of the bills introduced were passed into law on the same day, and scarcely any with more than a day's interval. Some of them also have been of a very drastic, indeed almost of a revolutionary, character, and in ordinary times would have given rise to weeks, perhaps months, of controversy. Not many of them are of a professional character, but a summary of them may be of interest.

On Monday, August 3rd, when Sir Edward Grey's great statement was made, the bill establishing a moratorium for a month and known as the "Postponement of Payments Bill," was passed into law and received the Royal assent.

On Tuesday, August 4th, the War Risks State Insurance Scheme was announced and approved. The Anglo-Persian Oil Companies Bill and the Expiring Laws Continuance Bill, together with a Committee Stage of all the Votes in Supply, totalling many millions, were passed in the space of about an hour.

On Wednesday, August 5th, the vote of credit for one hundred millions was adopted, the Milk and Dairies Bill (Scotland) passed through its report stage and was read a third time, and many minor measures also were passed. The bills relating to procedure of prize courts, and the restrictions on aliens were also introduced and passed through all their stages. The Housing Bill, relating to provision of housing at Rosyth and at other places where Government employees are located, went through its remaining stages, and was read a third time.

On Thursday, August 6th, the Currency of Bank Notes Bill establishing the new paper money as a legal tender was introduced and passed through all its stages, and received the Royal assent, and a bill to exempt from electoral disabilities all those who were absent in the naval or military services of the Crown was passed through all its stages, as was also a bill authorizing allowances to police reservists, and many minor measures, together with a Consolidated Fund Appropriation Bill.

On Friday, August 7th, a bill authorizing compensation for injuries at war was introduced, and passed through all its stages, and the Provision of Meals Act was extended to Ireland. The Elementary Education (Defective and Epileptic Children's) Bill also passed through all its stages, as well as the Defence of the Realm Bill relating to the treatment of spies. Patent Design and Trade Mark bills were introduced and passed through all their stages.

On Saturday, August 8th, an important bill relating to the powers of the Board of Trade to deal with persons who unreasonably withhold foodstuffs and if found necessary to control supplies passed through all its stages.

On Monday, August 10th, a most important Housing Reform measure was introduced and passed through all its stages; it represented the substance of the original Housing Bill which had been dropped, and authorized the expenditure of 4 millions in providing and in assisting the provision of housing for the purposes of the bill. The expression "housing purposes" to which the money may be devoted means the provision, maintenance, improvement, and management of dwellings and gardens and other works or buildings for the convenience of persons belonging to the working classes. The plan of the bill is that loans should be made either through a local authority or to an authorized society. An authorized society means a society, company, or body of persons approved by the Treasury whose objects include the erection, improvement, or management of dwellings for working classes which does not trade for profit, or whose conditions forbid the payment of any interest or dividend at a rate exceeding 5 per cent. per annum.

On Monday, August 10th, the House adjourned until Tuesday, the 25th, when a large number of further emergency bills were introduced relating to the control of the hours of opening licensed premises, provision of superannuation for teachers, control of patents, an amendment of the Currency of Bank Notes Act, the detention and treatment of aliens, and various minor matters. The majority of these bills passed through

their final stages on Wednesday, August 26th, as did other bills extending the Provision of Meals Act to Scotland, and the Housing Bill to Ireland. The Intoxicating Liquor (Temporary Restriction) Bill occupied some considerable time. It was finally passed on August 28th, and before the adjournment of the House on Monday, the 31st, a further bill relating to exemptions in respect of payment of death duties in connexion with persons killed in the war was passed into law.

Asylums Officers.

Mr. McKenna stated on August 27th that the years of service of asylums officers called to the colours would be aggregated and reckoned with their future period of service in the same capacity if they returned to their duties after the war.

Insurance Act Sanatorium Benefit.

Mr. Wedgwood Benn has stated, in reply to Major Hope, that Insurance Committees were under no obligation to defray the cost of treatment obtained otherwise than in the general arrangements made by them, and usually the whole of a committee's income available for the purpose was already earmarked, so that it was not in a position to contribute to the cost of accommodation privately obtained. He added, however, that he would make inquiries into any particular case submitted to him.

Medical News.

Owing to the necessary curtailment of the number of pages in the weekly issues of the British Medical Journal, all correspondents are particularly requested to write as succinctly as possible.

The post of Secretary to the American Ambulance in Paris has been filled.

Dr. William Percy Gowland, F.R.C.S.Eng., Senior Demonstrator and Assistant Lecturer on Anatomy in the University of Liverpool, has been appointed to the Chair of Anatomy at the University of Otago, Dunedin, New Zealand.

The usual course of lectures and demonstrations for sanitary officers arranged by the Royal Sanitary Institute will begin on September 21st. Particulars can be obtained from the Secretary of the Institute, 90, Buckingham Palace Road, S.W.

The Hoffmann-La Roche Chemical Works ask us to state that their head offices and laboratories are at Basle, Switzerland, though they have laboratories and works also at Grenzach in Baden. They inform us that they have in this country large stocks of omnopon and their other products, and that they do not propose to increase the prices.

The Chadwick Trustees are making arrangements for providing, or assisting in the provision of, lectures and demonstrations on naval, military, and hospital hygiene. They have resolved also to award, at the close of this year, the Chadwick Gold Medal and £50 each to the naval and military medical officer respectively in the British service who shall have distinguished himself most in promoting the health of the men in the navy and the army.

LOCAL MEDICAL AND PANEL COMMITTEES.

DUMBARTONSHIRE.

At a meeting on August 26th, the Local Medical and Panel Committees resolved to protest against the objection made by the Commissioners to the proposal to grant an honorarium to the Secretary.

The Secretary reported that during the first quarter of this year there had been an increase in chemists' accounts of about 50 per cent. compared with the same period last year, and of about 30 per cent. in the second quarter. At this rate the Drug Fund must fail to meet claims against it at the end of the year, and "the floating 6d." would be absorbed in part if not altogether. The Committee had no evidence of an abnormal amount of illness in the county during the first half of this year, but had reason to believe that in great part the increase in the chemists' accounts was due to lavish prescribing, and to extravagance both as to the quantity and nature of the drugs and appliances ordered. The Secretary was instructed to issue a warning circular drawing attention to the extraordinary increase and the means by which it might be checked without impairing efficiency of treatment, and also to point out that any practitioner found to have prescribed in an excessive or extravagant manner was liable to be compelled to refund the abnormal expenditure so caused.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 9,213 births and 4,272 deaths were registered during the week ended Saturday, August 22nd. The annual rate of mortality in these towns, which had been 12.1, 12.0, and 12.6 per 1,000 in the three preceding weeks, fell to 12.3 per 1,000 in the week under notice. In London the death-rate was equal to 12.8, against 12.1, 11.9, and 12.2 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 3.5 in Coventry, 4.1 in Reading, 4.2 in Blackpool, 5.1 in Enfield, 5.8 in Oxford, and 5.9 in Tynemouth, to 17.6 in Bury and in Rotherham, 17.7 in Wigan, 18.5 in Bootle, 18.8 in Warrington, 21.2 in Dewsbury, and 22.2 in Sunderland. The deaths of children under 2 years of age from diarrhœa and enteritis, which had been 302, 332, and 348 in the three preceding weeks, further rose to 446; of this number 109 were recorded in London, 31 in Sheffield, 30 in Liverpool, 25 in Birmingham, 18 in Sunderland, 15 in Manchester, and 15 in Newcastle-on-Tyne. Measles caused a death-rate of 1.1 in West Ham, 1.6 in St. Helens, and 2.8 in Oldham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 36, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of these, 6 were recorded in Birmingham, 6 in Liverpool, 3 in West Bromwich and in Bootle, and 2 each in Blackburn, Sheffield, Sunderland, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,154, 3,155, and 3,072 at the end of the three preceding weeks, had further fallen to 3,071 on Saturday, August 22nd; 414 new cases were admitted during the week, against 405, 378, and 355 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In sixteen of the largest Scottish towns 1,186 births and 638 deaths were registered during the week ended Saturday, August 22nd. The annual rate of mortality in these towns, which had been 12.9, 11.6, and 13.8 per 1,000 in the three preceding weeks, rose to 15.0 in the week under notice, and was 2.7 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 10.8 in Hamilton, 11.0 in Falkirk, and 11.7 in Clydebank to 16.7 in Aberdeen, 17.6 in Motherwell and in Kilmarnock, and 18.9 in Ayr. The mortality from the principal infective diseases averaged 1.8 per 1,000, and was highest in Motherwell and Kilmarnock. The 300 deaths from all causes in Glasgow included 26 from infantile diarrhœa, 9 from whooping-cough, 5 from diphtheria, 5 from enteric fever, 5 from scarlet fever, and 1 from measles. Two deaths from diphtheria were recorded in Edinburgh, and from diarrhœa and enteritis, 3 deaths in Dundee and 3 in Leith.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, August 15th, 597 births and 354 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 544 births and 378 deaths in the preceding period. These deaths represent a mortality of 15.3 per 1,000 of the aggregate population in the districts in question, as against 16.4 per 1,000 in the previous period. The mortality in these Irish areas was therefore 2.7 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.8 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 19.1 (as against an average of 16.8 for the previous four weeks), in Dublin city 20.0 (as against 18.2), in Belfast 14.8 (as against 15.2), in Cork 11.6 (as against 14.5), in Londonderry 17.8 (as against 17.1), in Limerick 4.1 (as against 14.6), and in Waterford 15.3 (as against 14.7). The zymotic death-rate was 2.2, as against 1.8 in the previous week.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

Royal Naval Volunteer Reserve.

William C. Macartney, M.B., and David James Williamson, M.D., have been appointed August 21st and 9th, respectively.

William G. Evans, M.D., has been appointed a Surgeon, August 26th.

ARMY MEDICAL SERVICE.

Royal Army Medical Corps.

The following have been granted the temporary rank of Lieutenant: Francis W. O'Connor and Charles N. Binney, M.B., August 10th; Leonard L. Hadley, M.B., Herbert M. Harrison, and Harold E. M. Wall, August 11th; Charles H. Evans, F.R.C.S.E., and James R. C. Greenlees, M.B., August 12th; William A. Stewart, Trevor A. Lawden, M.B., Donald K. McDowell, George W. Smith, M.B., Alan D. Anderson, and Arthur A. Martin, M.D., F.R.C.S Edin., August 13th; John Hewat, M.D., Gilbert L. K. Finlay, M.B., Edward O'Connor, M.B., Aleck W. Bourne, M.B., F.R.C.S., John D. Carroll, M.B., William Duguid, M.B., Robert H. C. Lyons, M.B., Arthur S. Plant, Cecil Bluett, Hubert A. Pallant, John W. Pell, John F. G. Richards, M.B., Arthur H. Bindloss, M.B., Edward J. Nangle, Robert M. Alcorn, August 14th; George C. M. M'Gonigle, M.D., Wilberforce Smith, F.R.C.S., Cameron R. Gibson, M.B., Leslie Meakin, Richard W. Smith, M.B., Sidney T. Davies, Edward A. Seagar, M.B., James N. Armstrong, M.B., Hugh P. Costobaddie, F.R.C.S.Edin., Victor F. Soothill, M.B., Arthur N. Hodges, M.B., Lieutenant Edward Ercell Steele, M.D., Canadian Army Medical Corps, Oscar R. L. Wilson, M.B., Charles E. Hibbard, Henry G. Peake, M.B., Arthur Tilbury, and Edward M. Thomson, August 15th; Henry Corbould, M.B., Francis Hernaman-Johnson, M.D., Frank D. Cairns, M.B., Bernard H. Wedd, M.D., and Geoffrey M. Fleming, M.B., August 16th; Arthur Turnbull, M.B., and Henry C. E. Quinn, August 17th; Frederick C. K. Austin, M.B., Allan L. Christie, M.B., and Alexander T. I. Macdonald, M.D., August 18th; Major Thomas Kay, M.B., R.A.M.C., August 20th.

INDIAN MEDICAL SERVICE.

An exchange is sanctioned between Captain F. R. COPPINGER, M.B., I.M.S., and Captain J. B. HANAFIN, F.R.C.S.I., R.A.M.C., with effect from July 15th, 1914.

The services of Captain G. G. JOLLY, I.M.S., have been placed at the disposal of the Government of Bombay for employment in the Sanitary Department.

Captain W. L. HARNETT, I.M.S., has been appointed as Surgeon to the Governor of Bengal.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

To be Lieutenants: PHILIP S. VICKERMAN, M.B., late Lieutenant R.A.M.C., Special Reserve, August 11th; JOHN W. MCNEE, M.B., August 13th.

Cadets and ex-Cadets of the Officers' Training Corps to be Lieutenants: JOHN M. WATT, August 4th; JAMES E. JAMESON, JOHN F. LYONS, CYRIL E. H. GATER, THOMAS C. STUDLEY, CHARLES D. M. BUCKLEY, M.B., JOHN C. A. DOWSE, M.B., HARRY E. B. WHITE, M.B., MORTIMER MCG. RUSSELL, JOSEPH P. QUINN, EDGAR LL. F. NASH, August 5th; ROBERT L. IMPEY, BERTRAND C. O. SHERIDAN, DOUGLAS C. PIM, August 6th; JOHN S. DOCKRILL, DOUGLAS CRAN, THOMAS C. OWEN, and GEORGE DALZIEL, M.B., August 8th; JOHN A. C. KIDD, JOHN L. PERCEVAL, EDWARD N. H. GRAY, RICHARD E. GRANDY, M.B., and MAURICE B. KING, August 9th; ERIC S. MAWE, August 11th; JAMES C. OGILVIE, August 12th; CECIL M. WEST and FRANK P. FREEMAN, August 13th.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Eastern Mounted Brigade Field Ambulance.—MEREDITH S. DOUBBLE (late Captain Eastern Mountain Brigade Field Ambulance) to be Captain, August 26th.

Second London (City of London) Field Ambulance.—LOUIS COURTAULD, M.B., to be Lieutenant, August 26th.

Black, M.B., Ch.B.Edin., D.P.H.Camb., has been selected for appointment as a Medical Officer in the Federated Malay States; P. W. H. Burne, M.B., B.S.Lond., has been selected for appointment as a Medical Officer in the Straits Settlements.

THE TECHNICAL STAFF OF A GENERAL HOSPITAL IN WAR.

SURGEON-GENERAL G. J. H. EVATT, C.B., writes: There are two officials in a war general hospital of whom I would like to say a few words.

1. *The Secretary or Executive Officer* holds a post of truly great strain. On his efficiency, devotion, and self-sacrifice hangs much of the hospital efficiency. If he be defective failure ensues. But to officers of this line of duty no "specialist" pay is granted. This is an error, for it is a true specialism to effectively run a huge war hospital. Indeed, specialist pay falls short of what such payment should be. A larger extra pay is needed to compensate for the extreme stress of the work. It is to train such executive officers I keep on urging the need of a Professor of Hospital Administration at the Milbank College. I urge in vain, for no one has as yet been appointed, devoted *solely* to this highly technical duty.

2. *The Registrar or Statistical Officer.*—I know no one specially in training for this important office, nor does any specialist pay come to him; yet to keep the statistics of this ever-changing crowded institution skill is needed. In addition he should compile the technical report on the medical and surgical history of the hospital, and the lessons to be learnt from that history for future campaigns. The case papers of all men dying should come into his records, and he is responsible for the accuracy of technical papers of patients transferred to other hospitals. On the registrars in the field and in the base hospitals, as well as those in the great receiving military hospitals in England, really depends the fulness of that professional history of wars for which we so constantly look and are so often disappointed. Whoever acts as registrar-general and chief statistical officer at the base should take back with him to England a mass of technical information of real value in the future study of the campaign. To deny specialist pay to these officials is quite shortsighted and needs urgent remedy.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

The following have been appointed Medical Referees under the Workmen's Compensation Act, 1906, with a view to their being employed in all cases of telegraphist's cramp and writer's cramp in the circuits indicated in which the services of a medical referee are required: Arthur S. Barnes, M.D., M.R.C.P. (Circuits 21, 22, 25, and 26); J. Michell Clarke, M.D., F.R.C.P. (Circuit 54); T. Wardrop Griffith, M.D., F.R.C.P. (Circuits 11, 12, 13, and 14); Astley V. Clarke, M.D. (Circuit 20); Theodore Thompson, M.D., F.R.C.P. (Circuits 38 to 48 and 51, and the County Court of the City of London); George Hall, M.D., M.R.C.P. (Circuits 1 and 2); Joseph Wilkie Scott, M.D. (Circuits 18 and 19); Judson S. Bury, M.D., F.R.C.P.Lond. (Circuits 4 to 9); Harold A. Scholberg, M.B.Lond. (Circuits 24 and 30); Edwin Bramwell, M.B.Edin., F.R.C.P.Lond. (Sheriffdoms of Fife and Kinross and the Lothians and Peebles).

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

DEATH.

VISGER.—August 30th, at Beachcroft, Clevedon, Nesta Gwynne, the dearly loved wife of Charles Visger, aged 38 years.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses and Lectures are to be given next week at the following schools, colleges, and hospitals:

DUBLIN: ROTUNDA HOSPITAL.

LONDON HOSPITAL MEDICAL SCHOOL, Turner Street, E.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.]

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, SEPTEMBER 12TH, 1914.

CONTENTS.

PROVISION OF FREE MEDICAL ATTENDANCE FOR DEPENDANTS OF MEN SERVING WITH THE COLOURS.

Proposed Government Scheme.

We are informed that it has not been found possible to complete this week the scheme for organizing the provision of free medical attendance for dependants of men serving with the colours as had been hoped. Full details, it is expected, will be ready for publication next week.

Burgh of Edinburgh Panel Committee.

A meeting of this Committee, convened to make arrangements for meeting medical emergencies during the war, was held at 5, St. Andrew Square, on September 3rd. Resolutions were passed to safeguard the interests of insurance practitioners called out for service at home or abroad, and to undertake their medical work free of charge to the absentees; to co-operate with the local relief committee in providing free medical attendance at their homes for the necessitous dependants of soldiers, sailors, reservists, and territorials on active service; and to recommend that permanent transfers of patients from the insurance list of absent practitioners should not be sanctioned during the continuance of the war. Suggestions were also adopted to the effect that every insurance practitioner be invited by post-card to guarantee free medical attendance to those dependants who may require it, and who are provided with a voucher by the local relief committee; that chemists be invited to supply medicines, etc., at the tariff rate—no dispensing fee to be charged; when the family is absolutely necessitous the charge for medicines might be met by the local relief committee, or, alternatively, the local relief committee might refer such patients for medicine to any of the provident dispensaries; that consultants should be invited to give free consultations to dependants when necessary, at the request of the medical attendant; that in maternity cases the doctor and patient should make arrangements whereby a modified fee should be paid—say 15s.; it was also suggested that the local relief committee take steps to endeavour to secure payment of this fee out of the maternity benefit; that the local relief committee, acting in co-operation with the Soldiers' and Sailors' Families' Association, should be communicated with for the purpose of carrying out these objects; and that the relief committee in granting vouchers to those deserving of free medical attendance should be requested to distribute the work as equally as possible among practitioners, due regard being had to the propinquity of doctor and patient. It was recommended that the local relief committee should avail itself of the provident dispensaries existing in or near these districts, where adequate attendance could easily be obtained, to supplement the services of the doctors above referred to.

Thirteen members of the Edinburgh panel are giving their whole services to the country in the present crisis, and all have provided for the carrying on of their work by deputies.

A copy of these resolutions and suggestions was sent to every practitioner on the Edinburgh panel with a post-card for reply.

Staffordshire Branch.

At a meeting of the Council of the Branch held on September 1st, at which representatives from Panel Committees were present, the following resolutions were unanimously passed:

1. That all members of the profession remaining in Staffordshire should take every means to safeguard the interests of medical men on military duty, at home or abroad, and should undertake any medical duties for the sole benefit of the absentees;
2. That after the return of a practitioner from service the deputy should, for a period of twelve months, refuse on any consideration, except that of urgency, to treat any of the returned practitioner's patients whom he had seen as deputy; and
3. That medical men in Staffordshire should undertake, free of charge, the medical treatment of all such dependants, not already provided for, of men engaged in the service of the Empire, in the Navy, Army, Reserves, and Territorial Forces, called to the colours, as may be recommended by a competent authority, and should undertake to give all necessary medical and surgical attendance that may be required in connexion with any emergency hospital, convalescent hospital, or sanatorium for sailors or soldiers, wounded or invalided, and generally give professional advice and assistance in regard to any scheme that may be devised for the alleviation of sickness and distress consequent upon the war.

Liverpool.

At a meeting of the Executive Committee of the Liverpool Division, held at the Liverpool Medical Institution on September 4th, the following resolution was passed, and the Honorary Secretary requested to forward it to the Lord Mayor and to all the practitioners within the area of the Division:

> This committee recommends the medical practitioners of Liverpool to give their services gratuitously to the necessitous dependants of men on active service who are recommended as such by any recognized relief committee, provided that arrangements are made for supplying them with medicines and appliances, and that the hospitals remain open to receive such cases as cannot be attended satisfactorily at their own homes.

PATENTS AMENDING ACT.

In introducing this measure, which afterwards received the Royal assent, the President of the Board of Trade said that its object was to suspend and not to confiscate the right of aliens in patents they had previously exercised in this country. Power, however, was taken in issuing a licence to a British subject to exercise a patent in this country to provide that the licence should be not only for the period of the war but also for the full period of the patent. In this way manufacturers who took up these licences would have some justification for feeling that throughout the life of the patent their property would not be jeopardized.

It was subsequently announced that the President had appointed a committee to consider and advise as to the

best means of obtaining for the use of British industry sufficient supplies of chemical products, colours and dyestuffs of kinds hitherto largely imported from countries with which we are at present at war.

The Lord Chancellor is chairman, and other members are: Dr. George T. Beilby, F.R.S., Dr. J. J. Dobbie, F.R.S., Mr. David Howard, Mr. Ivan Levinstein, Professor Raphael Meldola, D.Sc., F.R.S., Mr. Max Muspratt, Professor W. H. Perkin, Ph.D., D.Sc., F.R.S., Mr. Milton Sharp, Sir Arthur J. Tedder, Mr. Joseph Turner, Mr. T. Tyrer, together with Mr. John Anderson, of the National Health Insurance Commission, and a representative of the Board of Trade. The secretary of the committee is Mr. F. Gossling (of the Patent Office).

Price of Drugs.

The Pharmaceutical Committee, which is advising the Government on the question of the rise in price of various drugs, is holding frequent meetings. It consists of Messrs. Edmund White, E. T. Nethercoat, C. A. Hill, John C. Umney, and W. J. U. Woolcock. Information is in the hands of the Committee to the effect that the prices of certain drugs are inflated by reason of the action of particular dealers; and recommendations will probably be made that the Government should exercise its powers under the recent Act in order to prevent such inflation.

CORRESPONDENCE.

A State Medical Service and Free Choice of Doctor.

DR. MILSON RUSSEN RHODES (Wendover) writes: Will you permit me to demonstrate once and for all that the State Medical Service scheme has included from its commencement the principle of free choice of doctor? Again and again I note in the JOURNAL unfounded statements such as was made by Dr. Michael Dewar in his paper in the Section of Medical Sociology, reported in the JOURNAL of August 8th, page 290. My contribution to this discussion unfortunately had to be read in my unavoidable absence, else in your report of it on page 291 would have been included my reply to the following statement of Dr. Dewar:

> A State service would necessarily abolish the great principle of "free choice," which was fought for strenuously and granted by an overwhelming majority in Parliament. Is it considered now we were wrong in fighting for that principle?

Why—necessarily! This and all arguments in this paragraph might be used for pointing out that free choice would be included in a State Medical Service, because we had already fought for it strenuously, and it was granted us by an overwhelming majority in Parliament.

Evidently on the face of it there was as much reason, justification, and "absence of sentiment" in the minds of the profession for believing free choice of doctor could or would not be embodied in the Insurance Act, as there is now in the minds of the opponents of a State Medical Service that such free choice could or would not be included in a State Service Act or amending Act to the Insurance Act.

We fought for it, and, as Dr. Dewar states, we gained it—then the question is settled, and in any system or scheme of State medicine it will naturally be included. But we have seen it can be included in an Insurance Act, though one of the great reasons the profession was opposed to the Insurance Act was that it could not be included. Is it not time that mere catch statements, such as this, should be given up for sound reason and common-sense arguments?

In the article you refer to in your report of my contribution to the Section of Medical Sociology as appearing as long ago as April 20th, 1912, in the JOURNAL, the principle of free choice was laid down in the basis of a State Medical Service, principle No. 3 being, "Let every householder or lodger already in or coming into a neighbourhood put his name down to the medical man of his choice." And this principle has been adopted by the majority of advocates of a State Medical Service ever since.

But this scheme (published in pamphlet form, "A National Medical Service"; 1912, Cornish, St. Ann's Square, Manchester) has this great improvement on the present unlimited number of patients allowed to any panel man under the Insurance Act, and anticipates the taking in of the dependants of insured persons—namely: Principle No. 5, "Let such medical man be allowed only a certain number of families (or households)—say 300 to 500—and as soon as the number is made up for one doctor, then the neighbourhood must choose one of the others."

The individual relationship will be in every way maintained as well as under the Insurance Act, and there will be in every way as much inducement to look after his patients well on the part of the medical officer as there is under the Insurance Act.

I trust, Sir, this will for ever lay this spectre created by our opponents, just as the Insurance Act has laid it new both in the minds of the profession and the public.

Vital Statistics.

THE REGISTRAR-GENERAL'S QUARTERLY RETURN.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

THE quarterly return of the Registrar-General dealing with the births and deaths in the second quarter of the year, and with the marriages during the three months ending March last, has just been issued. The annual marriage-rate during that period was equal to 11.1 per 1,000 of the population, and was 0.1 per 1,000 less than the mean rate in the corresponding quarters of the ten preceding years.

The 226,013 births registered in England and Wales last quarter were equal to an annual rate of 24.3 per 1,000 of the population, estimated at 37,302,983 persons in the middle of the year. The birth-rate last quarter was 2.3 per 1,000 below the average for the corresponding period of the ten preceding years, and 0.4 per 1,000 below the rate in the second quarter of 1913. The birth-rates in the several counties ranged from 16.7 in Rutlandshire, 17.1 in Cardiganshire, 17.2 in Sussex, 17.9 in Carnarvonshire, 18.4 in Oxfordshire, and 18.5 in Dorsetshire to 27.3 in Carmarthenshire, 27.6 in Northumberland, 28.8 in Staffordshire, 29.7 in Monmouthshire, 29.8 in Glamorganshire, and 32.3 in Durham. In ninety-seven of the largest towns the birth-rate averaged 25.5 per 1,000, and ranged from 13.1 in Hastings, 14.1 in Southport, 14.2 in Bournemouth, 15.7 in Blackpool, and 15.9 in Bath to 33.3 in Sunderland, 33.5 in Stoke-on-Trent and in St. Helens, 33.7 in Bootle, 34.2 in Rhondda, and 34.4 in Middlesbrough; in London the rate was 25.2 per 1,000.

The excess of births over deaths during the quarter was 101,879, against 105,808, 102,293, and 105,620 in the second quarters of the three preceding years. From a return issued by the Board of Trade it appears that the passenger movement between the United Kingdom and places outside Europe resulted in a net balance outward of 7,030 passengers of British nationality, and a balance inwards of 13,566 aliens. Between Europe and the United Kingdom there was a net balance inward of 19,308 British and of 15,887 aliens. Thus the total passenger movement resulted in a net balance inward of 41,731 persons.

The deaths registered in England and Wales last quarter numbered 124,134, and were in the proportion of 13.3 annually per 1,000 persons living; the rate in the second quarters of the ten preceding years averaged 13.9 per 1,000. The lowest county death-rates last quarter were 8.8 in Middlesex, 10.2 in Rutlandshire, 10.5 in Buckinghamshire, 10.7 in Berkshire and in Essex, and 10.9 in Surrey; the highest rates were 15.6 in Cardiganshire and in Carnarvonshire, 15.8 in Yorkshire North Riding and in Radnorshire, 16.1 in Lancashire, and 16.7 in Merionethshire. In ninety-seven of the largest towns the death-rate averaged 13.8 per 1,000; in London the rate was 13.1 per 1,000, while among the other towns it ranged from 7.1 in Ilford, 8.6 in Ealing, 8.8 in Eastbourne, 8.9 in Enfield, 9.0 in Willesden and in East Ham, and 9.1 in Edmonton to 17.2 in Stockton-on-Tees, 17.4 in Stoke-on-Trent and in Manchester, 18.3 in Liverpool, 18.6 in Oldham, and 19.5 in Middlesbrough.

The 124,134 deaths from all causes included 3 from small-pox, 307 from enteric fever, 2,677 from measles, 645 from scarlet fever, 2,658 from whooping-cough, 1,122 from diphtheria, and 1,428 from diarrhœa and enteritis among children under 2 years of age. The mortality from whooping-cough and diphtheria was approximately equal to the average; that from scarlet fever was slightly below the average; and that from enteric fever and measles was about two-thirds of the average.

The rate of infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 88 per 1,000, or 10 per 1,000 less than the average proportion in the ten preceding second quarters. Among the several counties the rates of infant mortality last quarter ranged from 45 in Buckinghamshire and in Rutlandshire, 47 in Berkshire, 48 in Wiltshire, and 49 in Montgomeryshire to 101 in Warwickshire, 102 in Nottinghamshire, 103 in Carnarvonshire, 104 in Yorkshire North and West Ridings, 105 in Denbighshire, 106 in Durham, 108 in Carmarthenshire, 110 in Merionethshire, and 111 in Lancashire. In ninety-seven of the largest towns the rate averaged 93 per 1,000; in London it was 79 per 1,000, while among the other towns it ranged from 36 in Bath, 37 in Eastbourne, 41 in Hastings, and 47 in Hornsey to 130 in Stoke-on-Trent, 133 in Bradford, 138 in Rochdale, 139 in Barnsley, and 143 in Middlesbrough. The deaths among persons aged 1 to 65 years were equal to an annual rate of 7.6 per 1,000, and those among persons aged 65 years and upwards to a rate of 79.8 per 1,000 of the population estimated to be living at those ages.

The mean temperature of the air last quarter was from one to two degrees above the average; the rainfall was below the average; and the duration of bright sunshine exceeded the average throughout the country.

HEALTH OF ENGLISH TOWNS.

IN ninety-seven of the largest English towns 8,834 births and 4,720 deaths were registered during the week ended Saturday, August 29th. The annual rate of mortality in these towns, which had been 12.0, 12.6, and 12.3 per 1,000 in the three preceding weeks, rose to 13.6 per 1,000 in the week under notice. In London the death-rate was equal to 13.6, against 11.9, 12.2, and 12.8 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 5.3 in East Ham, 5.9 in Ealing, 6.3 in Ilford, 6.7 in Bath, and 6.8 in Enfield and in Southend-on-Sea to 21.6 in Gloucester, 21.7 in Oldham, 22.0 in South Shields, 22.9 in Tynemouth, 23.2 in Sunderland, and 26.3 in Bootle. The deaths of children (under

2 years) from diarrhœa and enteritis, which had been 332, 348, and 446 in the three preceding weeks, further rose to 677, of which 161 occurred in London, 61 in Liverpool, 37 in Birmingham, 30 in Leeds, 28 in Manchester, and 23 in West Ham and in Sheffield. Measles caused a death-rate of 1.6 in Rotherham and 2.8 in Oldham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 33, or 0.7 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 6 were recorded in Birmingham, 4 in South Shields, and 3 in Liverpool. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,155, 3,072, and 3,071 at the end of the three preceding weeks, had risen to 3,216 on Saturday, August 29th; 536 new cases were admitted during the week, against 378, 335, and 414 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,059 births and 631 deaths were registered during the week ended Saturday, August 29th. The annual rate of mortality in these towns, which had been 11.6, 13.8, and 15.0 per 1,000 in the three preceding weeks, fell to 14.4 in the week under notice, but was 0.8 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 4.1 in Hamilton, 5.1 in Kirkcaldy, and 7.3 in Kilmarnock to 20.0 in Perth, 21.1 in Clydebank, and 23.6 in Ayr. The mortality from the principal infective diseases averaged 2.3 per 1,000, and was highest in Greenock and Glasgow. The 303 deaths from all causes in Glasgow included 46 from infantile diarrhœal diseases, 12 from whooping-cough, 6 from scarlet fever, 6 from enteric fever, 3 from diphtheria, and 1 from measles. Two deaths from diphtheria were recorded in Edinburgh, and from infantile diarrhœa 3 deaths in Edinburgh, 3 in Dundee, and 3 in Greenock.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following announcements are notified by the Admiralty: Deputy Surgeon-General O. W. Andrews to Portsmouth Dockyard; Fleet Surgeon A. G. Eastment to the *Defiance*; Fleet Surgeon W. J. Bearblock to the *Invincible*; Staff Surgeon W. Bastian to the *Aurora*; Surgeon (temporary) M. B. Hay to the *Gibraltar*; Surgeon W. H. King to the Royal Marine Infirmary, Deal.

ROYAL NAVAL VOLUNTEER RESERVE.

Probationary Surgeon H. B. Padwick to the *Pembroke*, for Royal Naval Hospital, Chatham.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel Arthur E. Morris, M.D., retained on active list under provisions of Article 120, Royal Warrant for Pay and Promotion, 1913, to be Supernumerary, August 31st, 1914.

Major Edmund P. Hewitt from the Half-pay List, is restored to the Establishment, August 21st.

The following are granted the temporary ranks indicated, while serving with the Australian Medical Unit, dated September 2nd:—To be Lieutenant-Colonel: Lieutenant-Colonel William L'Estrange Eames, C.B., Australian Army Medical Corps. To be Majors: George Horne, Robert Dick. To be Captains: Robert A. R. Wallace, William B. Studdy, Walter R. Reynell, M.B., Randall V. McDonnell, Herschell L. L. Harris, Sydney W. Patterson, Mark C. Gardner, M.B.

The following Captains have been appointed Majors, dated September 1st: John W. S. Seccombe, Herbert V. Bagshawe, Robert J. Franklin, Maurice G. Winder, George H. J. Brown, M.B.

Supernumerary Captain Harry S. Ranken, from the Seconded List, is restored to the Establishment, August 8th.

The following have been granted the temporary rank of Lieutenants: Edward W. Archer, M.B., Galvin A. E. Argo, M.B., R. H. Alexander, M.B., L. Adamson, M.D., John S. Buchanan, M.B., Mark B. Baines, M.D., Gideon R. E. Colquhoun, Michael J. Cronin, M.B., Spencer S. Crosse, Durie A. Chamberlain, David D. Craig, M.B., Walter Dawson, M.B., Cosmo W. Fowler, M.B., Rudolf W. Galloway, M.B., Harry L. S. Griffiths, Thomas Gilchrist, M.B., Ronald N. Hunter, Charles H. Hart, M.B., Robert H. Hodges, William Henderson, M.B., Thomas H. W. Idris, Francis H. Moxon, M.B., James M. McLaggan, M.B., Douglas McAlpine, M.B., Francis L. Nash-Wortham, F.R.C.S.Edin., John Proctor, M.B., Cresswell L. Pattison, M.B., William D. Reid, M.B., Gerald N. B. Sebastian, Isachar R. Smith, M.B., Thomas S. Stafford, Andrew Topping, M.B., Edward H. Udall, John M. Wilson, Ralfr J. Tait, M.B., Robert W. W. Vaughan, M.B., John M. Johnston, M.B., Robert F. Young, M.B., Douglas B. Spence, Herbert C. Lucey, M.D., Walter J. Paramore, John P. Charles, M.B., John Higgins, William W. Ingram, M.B., Edmund B. Jardine, Roy R. Kerr, M.B., David A. Laird, M.B., John G. Priestly, M.B., Henry A. Ronn, M.B., Aubrey W. Vénables, Tom Bragg, Arthur V. Poyser, M.B., Frank A. Hampton, M.B.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

The following Lieutenants have been confirmed in their rank: John McC. Orme, John Cullenan, George Perkins, Edward S. Rowbotham, Frederick McKibbin.

The following to be Lieutenants: John Fraser, late Lieutenant, R.A.M.C., Special Reserve, August 11th. On probation: Henry S. Baker (August 13th); Oswald C. S. Tandy, M.B. (August 14th); John L. Kilbride, M.B. (August 16th); David C. L. Vey (August 8th); William Fotheringham, M.B., Austin Smith, M.B. (August 20th); Archibald W. Russell, M.B. (August 21st); Ernest A. Dyson, M.B. (August 24th).

The following Cadets and ex-Cadets of the Officers' Training Corps to be Lieutenants on probation: John D. Steele, Samuel D. Lodge, John J. D. La Touche, Francis H. Goss, George V. Stockdale, M.B., Charles G. Todd, Henry Evers, Frank C. Harrison, James Purdie, M.B., Geoffrey S. Trower, Alexander Glen, M.B., Peter W. Edwards, George C. L. Woodroffe, Oswald D. Jarvis, William Barclay, M.B., Alfred L. Robertson, M.B., William W. S. Sharpe, William C. B. Meyer, M.B., David S. Martin, Robert McKinlay, John A. Musgrave, Harold L. Mooney, John P. Macnamara, Joseph C. A. McCalden, M.B., Archibald B. Mitchell, M.B., Frederick R. S. Shaw, John J. B. Edmond, Arthur C. Bateman, James R. McCurdie, M.B., David C. Barron, M.B., Thomas Parr, Douglas M. M. Fraser, John W. Malcolm, Clement Lovell, M.D., Bernard Goldsmith,

INDIAN MEDICAL SERVICE.

The following promotions are made:

Majors to be Lieutenant-Colonels.—T. A. Granger, M.B., Brevet Lieutenant-Colonel; H. J. K. Bamfield, J. W. Grant, M.B., A. H. Moorhead, M.B., W. D. Hayward, M.B., W. E. Scott-Moncrieff, M.D., F.R.C.S.E., dated July 28th, 1914; S. Evans, M.B., A. Gwyther, M.B., F.R.C.S.E., J. A. Hamilton, M.B., F.R.C.S.E., J. H. McDonald, M.B., dated July 29th, 1914.

Captains to be Majors.—W. C. Ross, M.B., H. Hallilay, M.B., A. J. V. Betts, M.B., F. E. Wilson, M.B., B. B. Paymaster, H. Ross, M.B., J. Forrest, M.B., L. Hirsch, D. S. A. O'Keeffe, M.B., dated July 26th, 1914; H. H. Broome, M.B., F.R.C.S., F. N. White, M.D., D. Heron, M.B., F.R.C.S.E., H. C. Keaties, M.D., L. Reynolds, M.B., R. A. Needham, M.B., J. Kirkwood, M.D., F.R.C.S.E., dated July 31st, 1914.

Lieutenant-Colonel W. E. Scott-Moncrieff, M.D., F.R.C.S.E., is permitted to retire from the service, with effect from July 29th, 1914.

Major L. J. M. Deas, Agency Surgeon, Southern States of Central India, is appointed temporarily to hold charge of the current duties of the office of Political Agent, Southern States of Central India, in addition to his own duties, with effect from July 18th, 1914.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

Second South Midland Field Ambulance.—Kenneth A. P. R Murray to be Lieutenant, August 29th.

Fourth London General Hospital.—Captain William Turner M.B., F.R.C.S., is seconded under the conditions of paragraph 112 of the Territorial Force Regulations, August 29th.

Sanitary Service.—Captain Middleton Connon, M.D., is seconded, August 29th.

Attached to Units other than Medical Units.—Surgeon Lieutenant S. E. Rigg to be Surgeon-Captain, July 15th.

For Attachment to Units other than Medical Units.—Reginald S. S. Statham, M.D., to be Lieutenant, August 29th.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BANBURY: HORTON INFIRMARY.—House-Surgeon. Salary, £120 per annum.

BARNSTAPLE: NORTH DEVON INFIRMARY.—House-Surgeon. Salary, £100 per annum.

BELGRAVE HOSPITAL FOR CHILDREN, Clapham Road, S.W.—1) House-Surgeon (male); (2) House-Physician (male). Salary, £75 each per annum.

BENENDEN NATIONAL SANATORIUM.—Assistant Medical Officer. Salary, £120 per annum.

BIRMINGHAM AND MIDLAND HOSPITAL FOR SKIN AND URINARY DISEASES.—Clinical Assistant. Honorarium at the rate of 52 guineas per annum.

BIRMINGHAM CITY ASYLUM, Rubery Hill.—Junior Assistant Medical Officer (male). Salary, £200 per annum.

BIRMINGHAM FEVER HOSPITAL.—Assistant Medical Officer. Salary, £200 per annum.

BIRMINGHAM GENERAL DISPENSARY.—Resident Medical Officer (lady). Commencing salary, £240 per annum.

BIRMINGHAM MENTAL HOSPITAL.—Assistant Medical Officer (male). Commencing salary, £200 per annum.

BIRMINGHAM UNION INFIRMARY.—(1) First Assistant Medical Officer; salary at the rate of £225 per annum. (2) Second Assistant Medical Officer; salary at the rate of £180 per annum. (3) Fourth Assistant Medical Officer; salary at the rate of £160 per annum. (4) Assistant Medical Officer for Erdington Infirmary and Cottage Homes; salary at the rate of £180 per annum. (5) Assistant Medical Officer for Selly Oak Infirmary; salary at the rate of £160 per annum.

BRENTFORD UNION INFIRMARY.—Second Assistant Medical Superintendent. Salary, £200 per annum.

BRIDGE OF WEIR: CONSUMPTION SANATORIA OF SCOTLAND.—Lady Doctor as Resident Assistant. Salary, £75 per annum.

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN.—House-Physician (lady). Salary, £100 per annum.

BRISTOL ROYAL INFIRMARY.—Dental House-Surgeon. Salary at the rate of £100 per annum.

BROMPTON HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, S.W.—House-Physician. Honorarium of 30 guineas for six months.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House Physician. Salary, £100 per annum.

CANCER HOSPITAL (FREE), Fulham Road, S.W.—Two House-Surgeons. Salary, £100 per annum.

CHELSEA UNION INFIRMARY.—First Assistant Medical Officer. Commencing salary, £200 per annum.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, SEPTEMBER 19TH, 1914.

CONTENTS.

PROVISION OF FREE MEDICAL ATTENDANCE FOR DEPENDANTS OF MEN SERVING WITH THE COLOURS.

THE letter which the President of the Board of Education has addressed to the press is printed below, together with the letter from the Chairman of Council and Medical Secretary of the British Medical Association stating the nature of the arrangements made:

17th September, 1914.

Dear Sir,—The public will be glad to learn that a scheme has been devised for providing, wherever practicable, free medical attendance, with medicine and appliances, to those dependants of soldiers and sailors serving with the colours whose circumstances are such as to render them not unsuitable recipients.

The scheme originated in an offer made by the British Medical Association and the Pharmaceutical Society of Great Britain, who recently informed the Government that in view of the marked desire shown by medical men and pharmacists throughout the country to help in the present crisis, they felt justified in promising the co-operation of their professions in a scheme for providing medical attendance without charge, and medicine and appliances at cost price.

This generous offer has been gratefully accepted by the Government, who fully recognize the magnitude of the sacrifice which it will entail on the two professions and the expenditure and labour involved on the part of the British Medical Association and the Pharmaceutical Society. I am glad to say that the Executive Committee of the Prince of Wales's Fund have decided to defray the cost of medicine and appliances supplied in connexion with the scheme, so that the benefits of the scheme will be available entirely free of cost to those for whom they are intended.

The Central Committee for the Prevention and Relief of Distress have set up the following special Subcommittee to bring the scheme into operation on a properly organized and comprehensive basis; it includes representatives of the British Medical Association and of the Pharmaceutical Society and also of the National Health Insurance Commission—a department whose experience will be helpful in bringing this scheme into operation.

Duke of Devonshire, Chairman.
Dr. C. Addison, M.P. (Parliamentary Secretary of the Board of Education), Vice-Chairman.
Dr. Alfred Cox, Medical Secretary of the British Medical Association.
Mr. W. S. Glyn-Jones, M.P., Parliamentary Secretary of the Pharmaceutical Society.
Dr. J. A. Macdonald, Chairman of Council of the British Medical Association.
Dr. B. A. Richmond, Secretary of the London Panel Committee.
Mr. S. P. Vivian, Assistant Secretary of the National Health Insurance Commission (England).
Mr. J. Smith Whitaker, Deputy Chairman of the National Health Insurance Commission (England) and member of the National Health Insurance Joint Committee.
Mr. Edmund White, President of the Pharmaceutical Society.
Mr. W. J. U. Woolcock, Secretary of the Pharmaceutical Society.
With Mr. J. A. Barlow (of the Board of Education) and Mr. J. Rae (of the National Health Insurance Commission) as Joint Secretaries.

The British Medical Association and the Pharmaceutical Society are now communicating the arrangements proposed to the individual members of the professions, and are inviting their co-operation. The Subcommittee will shortly make a further announcement on the subject, and will as soon as possible inform local relief committees of the names of those doctors and chemists who offer their services under the scheme, and of the machinery for putting it into operation.

Any communications with regard to the scheme should be addressed to the "Secretaries of the Subcommittee on Medical Provision for Dependants of Men serving with the Colours, Wellington House, Buckingham Gate, London, S.W.," or, in the case of doctors or chemists, to their respective professional associations.

I am, yours faithfully,
JOSEPH A. PEASE.

The following is the text of the letter issued to the profession in Great Britain by the British Medical Association:

OFFER OF FREE MEDICAL ATTENDANCE TO DEPENDANTS OF MEN SERVING WITH THE COLOURS.

To the Members of the Medical Profession in England, Wales, and Scotland.

Dear Sir,—Seeing that the medical profession and pharmacists all over the country were spontaneously offering to give their services gratuitously to dependants of those serving with the colours, the Pharmaceutical Society of Great Britain and the British Medical Association felt it advisable to offer to the Government their assistance in placing this service on a properly organized basis. The Government has gratefully accepted the offer, and the Cabinet Committee for the Prevention and Relief of Distress has appointed a Subcommittee to bring the scheme into operation. The Duke of Devonshire is Chairman of the Subcommittee, and the signatories of this letter have been appointed as members. Further particulars as to the reference to and composition of the Subcommittee will be found in the BRITISH MEDICAL JOURNAL and *Lancet* of September 19th, 1914.

The scheme contemplates that lists of practitioners willing to give gratuitous medical attendance (not including midwifery) and of pharmacists willing to provide drugs, medicines and those appliances scheduled in the Insurance Act Regulations at cost price to themselves and without any fee for dispensing, shall be compiled and furnished to the local relief committees all over the country by the British Medical Association and the Pharmaceutical Society respectively, through the Central Subcommittee. The beneficiaries under the scheme will be those dependants of men serving with the colours whose circumstances are, in the opinion of the local relief committee, such as to justify their receiving the benefit of this service. The scheme in outline is as follows:

1. The person requiring medical assistance will apply to the local relief committee—doctors will, of course, refer suitable cases themselves.

2. On that committee being satisfied that the person is dependent on someone serving with the colours, and

is a suitable recipient of the benefit of the service, he or she will be supplied with a voucher which will be accepted by all doctors on the list as evidence of bona fides.

3. The voucher will be in the form of a booklet having leaves (perforated) for prescriptions. Prescriptions on other forms cannot be accepted by the chemists.

4. The pharmacists will tear out the prescriptions and will send them at weekly intervals to the offices of the Pharmaceutical Society of Great Britain, at 17, Bloomsbury Square, W.C., who will price and check them free of cost. Payment will be made out of the Prince of Wales's Fund for prescriptions supplied in conformity with the provisions of the scheme.

Doctors practising in rural areas where no chemist is available, in order to obtain payment on the basis above referred to, should detach and forward the prescriptions in the same way.

5. The book will be so arranged that a duplicate of the prescription will remain for the information of the doctor when he sees the patient again.

6. All persons applying to the local relief committee will be referred to the doctor who usually attends them (if he is on the list) or, if they have no family doctor, will be referred to the doctor on the list who is nearest to them.

7. Local relief committees are being formed in (1) counties, (2) county boroughs, (3) boroughs of over 20,000 population, (4) urban districts with over 20,000.

The British Medical Association has undertaken the compilation of the lists of doctors without cost to the Fund, and appeals with confidence to all general practitioners, whether members of the Association or not, to assist it in providing for the dependants of those who are fighting the battles of the country or may be called upon to do so, a medical service which the profession will be proud to look back on in years to come. This appeal is not made to consultants or specialists, because it is believed that, as always, any person provided with a recommendation from a general practitioner will be seen gratuitously at any of the hospitals. The profession may be assured that the Government thoroughly appreciates the magnitude of the offer made on behalf of the profession.

It is very important that the lists of those willing to offer their services should be in the hands of the Central Subcommittee at an early date, and the Honorary Secretary of the local Division of the Association has been asked to forward his list not later than September 29th. If your name is to be included in the list it is necessary that you should notify him *at once*.

The enclosed form should be used for the purpose. If you are willing to give your services you should sign in the space provided, and at the same time mark on the map by means of a rough circle the district covered by your practice. This is necessary in order that each local relief committee may be furnished with a complete list of the doctors offering their services whose practices extend into their area. Should your practice touch more than one relief committee area the circle drawn by you should indicate the fact, and your name will then be furnished to each of the relief committees concerned.

If you feel unable to offer your services in connexion with the above arrangements you should insert the words "do not" in the blank space. In this event it will not be necessary to insert on the map the area of your practice.

On the completion of the form it should be folded as shown on the back, and sent to the Honorary Secretary of the local Division of the Association.

In view of the urgency of the matter we should be obliged if you would give it your immediate attention.—We are, yours faithfully,

J. A. MACDONALD,
Chairman of Council.
ALFRED COX,
Medical Secretary.

British Medical Association,
Sept. 18th, 1914.

THE ASSOCIATION IN AUSTRALASIA.

The following letter has been received from the Honorary Secretary of the South Australian Branch with reference to the election by the annual meeting at Aberdeen of Dr. W. T. Hayward, Chairman of the Australian Federal Committee, to be a Vice-President of the British Medical Association:

BRITISH MEDICAL ASSOCIATION.
South Australian Branch.

Dear Sir,—I am directed to acknowledge the receipt of your cable notifying this Branch of the election of Dr. W. T. Hayward as a Vice-President of the Association.

The Council of this Branch regards the honour which has been conferred upon Dr. Hayward not only as a compliment to the profession in Australia, but also as a well-merited recognition of the distinguished services of Dr. Hayward to the Association in the Commonwealth of Australia.—Yours faithfully,

H. S. NEWLAND,
Honorary Secretary.

Professional Chambers, Adelaide,
August 4th.

CORRESPONDENCE.

OWING to the necessary curtailment of the number of pages in the weekly issues of the BRITISH MEDICAL JOURNAL and SUPPLEMENT, all correspondents are particularly requested to write as succinctly as possible.

A State Medical Service and Free Choice of Doctor.

DR. LAURISTON SHAW (London, W.) writes: I hope you will agree with me that medical men should follow the example of politicians and postpone the public discussion of controversial questions until a more convenient season. There is plenty for us all to do during the present crisis in trying to secure a constant flow of qualified men into the profession and the suitable distribution of their services amongst the civilian and military population. I would only therefore ask Dr. Milson Russen Rhodes not to conclude because no immediate answer is forthcoming to his letter in your last issue that his attempt "to demonstrate once and for all" the truth of a proposition so many deny has been attended by success. When the war is over I should be glad of the opportunity of maintaining against Dr. Rhodes's severest criticism the truth of the proposition that no form of "State Medical Service" approved by any considerable body of laymen is compatible with a degree of "free choice of doctor" which would be regarded as reasonable by any considerable body of medical men.

DR. MICHAEL DEWAR (Edinburgh) writes: I am sorry that, after reading Dr. Milson Rhodes's letter, I am still unable to see eye to eye with him. The purport of his letter is simply to say that "free choice" would be included in a State Medical Service. I do not suppose that any one denies the proposition, but what value will it have in practice? It would be a dead letter, and certainly the mere statement that the principle of "free choice" will form part of a State Medical Service cannot lay for ever the so-called "spectre" created by his opponents. It is futile to enter into an argument with one who is obsessed with the one idea of a State Medical Service, and thinks that a mere statement should be accepted as proof that it could by any possibility materialize into an actual and workable fact.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following notifications are announced by the Admiralty: Fleet Surgeon J. MARTIN to the *Vivid*, additional for the *Benbow*, to date on joining and on commissioning, undated. Fleet Surgeon G. E. KENNEDY (retired) to the *Pembroke* for Royal Naval Barracks, vice Holyoake, undated. Fleet Surgeon G. STRICKLAND has been placed on the retired list, September 14th. Staff Surgeon J. D. KEIR to the *Dolphin*, undated. Staff Surgeon J. STODDART, M.B., to the *President*, additional for duty with Naval Division at Crystal Palace, September 7th. Staff Surgeon G. P. SILVER to the *Vivid*, for Royal Naval Barracks, vice Lewis, September 11th. Acting Surgeon W. G. THWAITES, M.B., to the *Neptune*, September 8th. Surgeon G. A. JACKSON, M.B., has been placed on the retired list, September 7th. Surgeons J. M. HORAN (acting) and R. E. CAMERON, M.B. (temporary), to the *Vivid*, additional for the *Benbow*, to date on joining and on commissioning, undated. Surgeon F. C. BLAKESTON to the *Vivid* for Royal Naval Barracks, vice Haydon, undated. Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN ninety-seven of the largest English towns 8,817 births and 5,016 deaths were registered during the week ended Saturday, September 5th. The annual rate of mortality in these towns, which had been 12.6, 12.3, and 13.6 per 1,000 in the three preceding weeks, further rose to 14.4 per 1,000 in the week under notice. In London the death-rate was equal to 15.4, against 12.2, 12.8, and 13.6 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 4.3 in Bournemouth, 5.2 in Reading, 6.5 in Southport, 6.6 in Ealing and in Eastbourne, 7.0 in Darlington, and 7.4 in Bath, to 21.0 in Gateshead, 21.2 in Stoke-on-Trent and in Tynemouth, 21.6 in Liverpool, 23.9 in Middlesbrough, and 24.8 in South Shields. The deaths of children (under 2 years) from diarrhœa and enteritis, which had been 348, 446, and 677 in the three preceding weeks, further rose to 947, of which 269 occurred in London, 71 in Liverpool, 50 in Birmingham, 31 in Manchester, and 25 in West Ham, in Stoke-on-Trent, and in Leeds. Measles caused a death-rate of 1.1 in West Ham and in Leeds, and 4.5 in Oldham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 44, or 0.9 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number 7 were recorded in Birmingham, 6 in Gateshead, 5 in Liverpool, 3 in London, and 3 in Tynemouth. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,072, 3,071, and 3,216 at the end of the three preceding weeks, had further risen to 3,318 on Saturday, September 5th; 548 new cases were admitted during the week, against 535, 414, and 536 in the three preceding weeks.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, August 22nd, 606 births and 373 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 597 births and 354 deaths in the preceding period. These deaths represent a mortality of 16.1 per 1,000 of the aggregate population in the districts in question, as against 15.3 per 1,000 in the previous period. The mortality in these Irish areas was therefore 3.8 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 26.2 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 16.6 (as against an average of 17.3 for the previous four weeks), in Dublin city 16.3 (as against 18.4), in Belfast 17.6 (as against 15.6), in Cork 24.5 (as against 13.8), in Londonderry 10.1 (as against 15.9), in Limerick 13.5 (as against 10.9), and in Waterford 17.1 (as against 11.9). The zymotic death-rate was 2.3, as against 2.2 in the previous week.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BANBURY: HORTON INFIRMARY.—House-Surgeon. Salary, £120 per annum.

BARNSTAPLE: NORTH DEVON INFIRMARY.—House-Surgeon. Salary, £100 per annum.

BELGRAVE HOSPITAL FOR CHILDREN, Clapham Road, S.W.—(1) House-Surgeon (male); (2) House-Physician (male). Salary, £75 each per annum.

BIRKENHEAD: BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum.

BIRMINGHAM AND MIDLAND FREE HOSPITAL FOR SICK CHILDREN.—Physician for Out-patients. Salary, £40 per annum.

BIRMINGHAM AND MIDLAND HOSPITAL FOR SKIN AND URINARY DISEASES.—Clinical Assistant. Honorarium at the rate of 52 guineas per annum.

BIRMINGHAM CITY ASYLUM, Rubery Hill.—Junior Assistant Medical Officer (male). Salary, £200 per annum.

BIRMINGHAM EDUCATION COMMITTEE.—(1) Temporary School Medical Officer; (2) Assistant School Medical Officer. Salary, £500 and £300 per annum respectively, the latter increasing to £450.

BIRMINGHAM FEVER HOSPITAL.—Assistant Medical Officer. Salary, £200 per annum.

BIRMINGHAM UNION.—(1) First, Second, and Fourth Assistant Medical Officers at the Dudley Road Infirmary; salary, £225, £180, and £160 per annum respectively. (2) Assistant Medical Officer at the Erdington Infirmary and Cottage Homes; salary, £220 per annum. (3) Assistant Medical Officer at the Selly Oak Infirmary; salary, £180 per annum.

BIRMINGHAM: YARDLEY ROAD SANATORIUM AND ANTI-TUBERCULOSIS CENTRE.—Third Assistant Medical Officer. Salary, £200 per annum.

BRIDGE OF WEIR: CONSUMPTION SANATORIA OF SCOTLAND.—Lady Doctor as Resident Assistant. Salary, £75 per annum.

BRISTOL ROYAL INFIRMARY.—Dental House-Surgeon. Salary at the rate of £100 per annum.

BURNLEY: VICTORIA HOSPITAL.—Second House-Surgeon. Salary, £135 per annum.

BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician. Salary, £100 per annum.

CAMBERWELL: PARISH OF ST. GILES.—Assistant Medical Officer for the Infirmary. Salary, £190 per annum, rising to £200.

CARDIFF: KING EDWARD VII HOSPITAL.—(1) House-Surgeon for Ophthalmic and Ear, Nose, and Throat Departments; (2) Two House-Surgeons. Salary at the rate of £100 per annum each.

CHELTENHAM GENERAL HOSPITAL.—(1) House-Physician; (2) House-Surgeon (males). Salary, £100 per annum each.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, Victoria Park, E.—House-Physician (male). Salary at the rate of £75 per annum.

COLCHESTER: ESSEX COUNTY HOSPITAL.—House-Surgeon (male). Salary, £100 per annum.

DERBY COUNTY ASYLUM, Mickleover.—Junior Assistant Medical Officer (male). Salary, £200 per annum.

DERBYSHIRE EDUCATION COMMITTEE.—Temporary Assistant School Medical Officer. Salary, £300 per annum.

DORSET COUNTY COUNCIL, Dorchester.—Temporary Assistant County Medical Officer of Health. Salary at the rate of £250 per annum.

DUNDEE: ROYAL INFIRMARY.—Three Resident Medical Officers. Salary at the rate of £40 per annum.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—(1) House-Physician; (2) House-Surgeon; (3) Ten Clinical Assistants. Salary for (1) and (2) at the rate of £75 per annum.

GLENELG PARISH COUNCIL.—Medical Officer for Southern Division. Salary, £160 per annum.

GREAT YARMOUTH HOSPITAL.—House-Surgeon (male). Salary, £140 per annum.

HALIFAX ROYAL INFIRMARY.—(1) Second House-Surgeon; salary, £120 per annum. (2) Third House-Surgeon; salary, £100 per annum.

HAMPSHIRE COUNTY COUNCIL, Winchester.—Assistant County Medical Officers of Health. Salary, £300 per annum, rising to £400.

HULL ROYAL INFIRMARY.—(1) Senior House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

HULL: VICTORIA CHILDREN'S HOSPITAL.—Lady House-Surgeon (resident). Salary, £50 per annum.

ILFORD URBAN DISTRICT COUNCIL.—Medical Officer of Health, etc. Salary, £525 per annum, rising to £600.

JOHANNESBURG: SOUTH AFRICAN INSTITUTE FOR MEDICAL RESEARCH.—Superintendent of Routine Division. Salary, £700 per annum, rising to £750.

KENT COUNTY ASYLUM, Chartham.—Third Junior Assistant Medical Officer (male). Salary, £250 per annum.

KENT COUNTY ASYLUM, Maidstone.—Second Assistant Medical Officer (male). Salary, £280 per annum.

KING'S LYNN: WEST NORFOLK AND LYNN HOSPITAL.—House-Surgeon. Salary, £150 per annum.

LANCASHIRE COUNTY ASYLUM, Winwick.—Assistant Medical Officer to act as Pathologist. Salary, £250 per annum, rising to £300.

LEEDS PUBLIC DISPENSARY.—Two Resident Medical Officers. Salary, £130 per annum.

LIVERPOOL INFIRMARY FOR CHILDREN.—Resident House-Physician. Salary, £30 for six months.

MANCHESTER: COUNTY ASYLUM, Prestwich.—Assistant Medical Officer. Salary, £250 per annum, rising to £300, and upon promotion to £450.

MANCHESTER: HULME DISPENSARY. House-Surgeon. Salary, £180 per annum, rising to £200.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL INFIRMARY.—(1) Three House-Physicians; (2) Four Junior House-Surgeons; (3) Medical Officer for Out-patients and Accidents to the Central Branch; (4) Assistant Medical Officer to the Convalescent Hospital, Cheadle. Salary for (1), £20 for six months; for (3) and (4) at the rate of £100 and £80 per annum respectively.

MERTHYR TYDFIL COUNTY BOROUGH.—Assistant School Medical Officer. Salary, £300 per annum, rising to £400.

MIDDLESBROUGH: NORTH RIDING INFIRMARY.—Senior House-Surgeon (male). Salary at the rate of £100 per annum.

MIDDLESEX COUNTY ASYLUM, Napsbury.—Temporary Assistant Medical Officer. Salary, 5 guineas a week.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.—(1) Resident Medical Officer; (2) Junior House-Surgeon. Salary, £150 and £65 per annum respectively.

NEWPORT: ROYAL GWENT HOSPITAL.—Resident Medical Officer. Salary for first six months at the rate of £100 per annum, rising to £150.

NORTHAMPTON COUNTY COUNCIL EDUCATION COMMITTEE.—Assistant School Medical Officer (temporary). Salary, £25 per month.

NOTTINGHAM GENERAL DISPENSARY.—Assistant Resident Surgeon (male). Salary, £180 per annum.

NOTTINGHAM GENERAL HOSPITAL.—Senior House-Physician. Salary, £120 per annum, rising to £140.

PADDINGTON INFIRMARY.—Second Assistant to Medical Superintendent of Infirmary and Medical Officer of Workhouse. Salary, £140 per annum, rising to £150.

PLAISTOW FEVER HOSPITAL, E.—Second Assistant Medical Officer (female). Salary at the rate of £100 per annum.

PRESTON: ROYAL INFIRMARY.—(1) Resident Medical and Surgical Officer; (2) Assistant Resident Medical and Surgical Officer. Salary, £150 and £120 per annum respectively.

QUEEN MARY'S HOSPITAL FOR CHILDREN, Carshalton.—Assistant Medical Officers. Salary at the rate of £250 per annum.

RAMSGATE GENERAL HOSPITAL AND DISPENSARY.—Resident House-Surgeon. Salary, £100 per annum.

ROTHERHAM HOSPITAL.—Assistant House-Surgeon (male). Salary, £110 per annum.

ROYAL EAR HOSPITAL, Soho, W.—Honorary Radiographer.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—Junior Resident Medical Officer. Salary at the rate of £70 per annum.

ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN, Plaistow, E.—Assistant Resident Medical Officer (male). Salary, at the rate of £100 per annum.

ST. PANCRAS PARISH.—Senior Assistant Medical Superintendent of the South Infirmary, etc. Salary, £175 per annum.

ST. PETER'S HOSPITAL FOR STONE, Etc., Henrietta Street, W.C.—Junior House-Surgeon. Salary at the rate of £75 per annum.

SALFORD ROYAL HOSPITAL.—(1) Resident Surgical Officer; (2) Casualty House-Surgeon. Salary at the rate of £120 and £100 per annum respectively.

SALISBURY GENERAL INFIRMARY.—Assistant House-Surgeon. Salary, £75 per annum.

SAMARITAN FREE HOSPITAL FOR WOMEN, Marylebone Road, N.W.—Anaesthetist. Honorarium, £15 per annum.

SHEFFIELD: CHILDREN'S HOSPITAL.—(1) House-Surgeon; (2) House-Surgeon to the East End Branch. Salary, £150 and £120 per annum respectively.

SHREWSBURY: ROYAL SALOP INFIRMARY.—House-Physician. Salary at the rate of £110 per annum.

SOUTHAMPTON FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

SOUTHAMPTON: ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL.—House-Physician. Salary, £120 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

SUNDERLAND ROYAL INFIRMARY.—House-Physician (male). Salary, £120 per annum.

SWANSEA GENERAL AND EYE HOSPITAL.—House Surgeon. Salary, £125 per annum.

TRURO: ROYAL CORNWALL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

TUNBRIDGE WELLS GENERAL HOSPITAL.—House-Physician (male). Salary, £100 per annum.

VICTORIA HOSPITAL FOR CHILDREN, Chelsea, S.W.—House-Surgeon. Honorarium of £40 for six months.

WAKEFIELD: CLAYTON HOSPITAL.—Junior House-Surgeon. Salary, £150 per annum.

WALSALL AND DISTRICT HOSPITAL.—Senior House-Surgeon. Salary, £150 per annum.

WARRINGTON INFIRMARY AND DISPENSARY.—Junior House-Surgeon. Commencing salary at the rate of £120 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL. Assistant Resident House-Surgeon and Anaesthetist. Salary, £100 per annum.

WHITEHAVEN AND WEST CUMBERLAND INFIRMARY.—Resident House-Surgeon. Salary, £150 per annum.

WINSLEY SANATORIUM FOR CONSUMPTION, near Bath.—(1) Senior Resident Medical Officer; (2) Assistant Resident Medical Officer. Salary, £300 and £150 per annum respectively.

WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—Resident Medical Officer. Salary at the rate of £125 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Beith (Ayr), Hucknall Torkard (Notts).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BUPROWS, Arthur, M.D.Lond., Radiologist to the Manchester and District Radium Institute, the Royal Infirmary, Manchester.

BURSTAL, E., M.B., Ch.B.Oxon., Medical Officer of the West London District School, Ashford.

CLARKE, A. I., L.R.C.P.Edin., L.R.C.S.Edin., L.R.F.P.S.Glasg., Assistant Medical Officer of the Infirmary, Bagthorpe, Nottingham.

CRAWFORD, Robert, M.B., Ch.B.Glasg., Medical Referee under the Workmen's Compensation Act, 1906, for the Sheriffdom of Fife and Kinross, to be attached more particularly to the Kirkcaldy District.

HAMILTON, Graeme, M.B., Ch.B., Certifying Factory Surgeon for the Ashton-under-Lyne District, Medical Officer for No. 10 District of the Ashton-under-Lyne Union, and Public Vaccinator for the No. 10 District of the Ashton-under-Lyne Union, vice Dr. Alexander Hamilton, resigned.

WADE, Henry, F.R.C.S.E., reappointed Assistant to the Edinburgh Infirmary.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTH.

HOLFORD.—On September 9th, at Burton-on-Trent, the wife of Chris. Tredwell Holford, F.R.C.S.Edin., M.R.C.S., L.R.C.P.Lond., of a daughter.

MARRIAGE.

BIGGART—TODD.—The marriage took place at the Parish Church, Westbury-on-Trym, of Dr. Arnold Samuel Longbotham Biggart, M.B., Ch.B.Edin., younger son of Dr. Samuel Biggart, of West Hartlepool, and Miss Edith Mary Todd, youngest daughter of Mr. Arthur Todd, of Cote Lodge, Westbury-on-Trym. The bride's brothers were unable to be present owing to military duties. The ceremony was performed by the Rev. S. Wilkins, assisted by the Rev. J. H. Little, formerly of West Hartlepool.

DEATHS.

WIGLESWORTH.—August 24th, at 13, Esplanade, Waterloo, aged 80 years, Arthur Wiglesworth, M.R.C.S., L.R.C.P., L.S.A. (Univ. Coll., London), sometime Acting Assistant Surgeon, Osmanli Irregular Cavalry, Crimean war, youngest son of the late Thomas Wiglesworth, of Bolton Hall, Lancashire.

WILSON.—On 15th September, at Roseneath, St. Marks, Cheltenham, Abram, son of the late Thomas Wilson, of Fairbank, Westmorland, and beloved husband of Sarah Wilson, M.B., aged 75 years. Interment at Selside, Westmorland, Saturday, 19th inst.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses and Lectures are to be given next week at the following schools, colleges, and hospitals:

DUBLIN: ROTUNDA HOSPITAL.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.]

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, SEPTEMBER 26TH, 1914.

CONTENTS.

REPORT OF CONFERENCE AND DINNER OF HONORARY SECRETARIES OF DIVISIONS AND BRANCHES, ABERDEEN, 1914.

THIS Conference was held at Marischal College, Aberdeen, on Wednesday, July 29th, when there were present the following secretaries:

Dr. A. C. Adeney, Tunbridge Wells Division; Dr. R. Alcock, North Staffordshire Division; Dr. George Alexander, Furness Division; Dr. F. H. Allfrey, Sussex Branch; Dr. B. E. A. Batt, West Suffolk Division; Dr. F. Beaton, Morpeth Division; Dr. David Blair, Lancaster Division; Dr. Eleanor C. Bond, Bournemouth Division; Dr. W. Bryce, Glasgow and West of Scotland Branch; Dr. Joseph A. Clarke, Argyllshire Division; Dr. H. Neville Crowe, Worcester Division; Dr. J. Singleton Darling, Portadown and West Down Division; Dr. James Don, North of England Branch; Dr. R. Eager, Exeter Division; Dr. W. Eardley, Wakefield, Pontefract and Castleford Division; Dr. Frank Fowler, Dorset and West Hants Branch; Dr. Thomas Fraser, Aberdeen Branch; Dr. J. Gardner, Glasgow Southern Division; Mr. James Green, Southern Branch; Mr. W. J. Greer, South Wales and Monmouthshire Branch; Dr. G. S. Haynes, Cambridge and Huntingdon Branch; Dr. C. Jephcott, Chester and Crewe Division; Dr. H. D. Ledward, East Herts Division; Mr. S. Colen Legge, Worcestershire and Herefordshire Branch; Mr. C. Courtenay Lord, Rochester, Chatham, and Gillingham Division; Dr. J. H. Lyell, Perth Branch; Dr. H. C. Mactier, South Staffordshire Division; Dr. H. A. McLean, Glasgow Eastern Division; Mr. J. B. Maxwell, South Essex Division; Dr. James Melvin, Rochdale Division; Dr. John Mills, Connaught Branch; Dr. J. Munro Moir, Northern Counties of Scotland Branch; Dr. J. M. Morris, Swansea Division; Dr. W. T. Mullings, Westminster Division; Dr. B. H. Nicholson, East Anglian Branch; Dr. W. H. F. Oxley, Tower Hamlets Division; Dr. L. A. Parry, Brighton Division; Dr. R. C. Peacocke, East Leinster Division; Dr. G. Pollock, Wandsworth Division; Dr. D. R. Price, South-West Wales Division; Dr. E. J. Primrose, Glasgow North-Western Division; Dr. David Riddell, Kendal Division; Dr. C. H. D. Robbs, Kesteven Division; Dr. S. Robson, Gateshead Division; Mr. C. G. C. Scudamore, Croydon Division; Dr. J. Shearer, Blackburn Division; Dr. A. Tennyson Smith, Bromley Division; Dr. F. K. Smith, Aberdeen Branch; Dr. W. Muir Smith, Eastbourne Division; Dr. A. G. Southcombe, City Division; Dr. E. A. Starling, Kent Branch; Dr. J. A. Stephen, Banff, Elgin, and Nairn Division; Dr. J. Stevens, Edinburgh Branch; Dr. J. Barr Stevens, Renfrewshire and Buteshire Division; Dr. W. S. Syme, Glasgow Central Division; Dr. D. G. Thomson, East Norfolk Division; Dr. F. G. Thomson, Bath and Bristol Branch; Mr. H. Chisholm Will, Bromley Division; Dr. Sophia M. V. Witts, Sheffield Division; Dr. F. E. Wynne, Wigan Division.

Dr. A. G. SOUTHCOMBE, Honorary Secretary of the City Division, was elected to the chair.

The Conference nominated the three retiring members to serve on the Conference of Secretaries Subcommittee of the Organization Committee—namely, Dr. A. G. Southcombe, Mr. W. J. Greer, and Dr. Tennyson Smith

The MEDICAL SECRETARY opened a discussion on matters of special interest to secretaries. He stated that it was the desire of the Organization Committee that the Conference should be really a conference in which opinions should be freely interchanged, and not merely an address by himself. He laid great stress on the need of active and friendly co-operation between the head office and the Division and Branch secretaries, and said that he looked upon the latter as not only the backbone of the local work of the Association, but also as the eyes and ears of the head office. He urged that secretaries should keep him fully informed of local matters of medical interest by sending newspaper cuttings which were often of the greatest use. He was afraid that many secretaries had been greatly discouraged by the apathy shown by the average member during the past year, but he saw no need for discouragement in a state of things which might well have been anticipated after the strenuous work of the previous years, especially seeing that many of our best workers had been perforce occupied in working the Local Medical and Panel Committees. Except in times of stress and excitement secretaries must resign themselves to the fact that the Association, like all other bodies of the kind, was normally carried on by a few enthusiasts. The problem was how to increase the number of steady workers. He suggested that Division meetings should be held at regular stated intervals, so that every member would know exactly when the meetings were to be held, and that the work of the Divisions should be spread out as much as possible. He was aware that secretaries generally were imbued with the wisdom of the adage, "If you want a thing done well, do it yourself," but this was a feeling to be resisted. Secretaries should insist on every member of the Executive doing a fair share of the work, and especially on each one being responsible for looking after the interests of the Association in his own particular area. One way in which members of all types could be interested was by getting different members to specialize on the different reports which were sent down from head quarters. Taking the recent annual report of the Council as an example, a member of a hospital staff might well have been asked to deal with those sections which recommend a change in the relations of hospital staffs to their governing bodies, and asked to introduce the subject to the Division meeting. This would have the double effect of interesting the member who was asked to undertake the task, and making the Division meeting more interesting. He urged that senior practitioners, members of hospital staffs and teaching institutions, should be pressed into the service, as although they were not directly interested in some of the subjects which came before the Divisions, they were often the ablest men in the district, and their very freedom from personal interest in matters under discussion might enable them to deal with certain subjects in a more effective manner. He pointed out how many of the best workers of the Association were not general practitioners but gave their services from love of the work and *esprit de corps*. He urged that secretaries should send reports of all their meetings for publication in the SUPPLEMENT, but that the reports should be condensed so as to give special prominence to general principles and items of local interest which might serve as a guide to other areas. Another advantage of reporting local meetings in the SUPPLEMENT was to induce members to read the SUPPLEMENT, and he pointed out what a great gain it would be to all of the

workers of the Association if members could be induced to do this. Probably half the work of the local secretaries might be obviated, and certainly half his correspondence at the head office, if members would read their SUPPLEMENTS. On the question of the finance of Divisions he dealt with the recent pronouncement of the Council in favour of the Branches making a definite grant to each of their Divisions, based on the experience of the work of those Divisions during the previous year. The Council was strongly of opinion that the Divisions should not be kept too much in leading strings, and that it was better that they should have some funds which they could call their own. It was quite easy for the Branches to regulate the amounts given by the needs of the Divisions, and thus to prevent anything like extravagance. He pointed out that there were still some Branches and Divisions which had not adopted rules or whose rules were hopelessly out of date, and he reminded the meeting that those Branches and Divisions which had not adopted the Model Ethical Rules would not be allowed to use the Warning Notice in the JOURNAL. He then proceeded to deal with the new policy as regards the Warning Notices, which will come into operation at the beginning of October next, and as to which secretaries might expect to be fully informed by circular. The new policy had been approved not only because of a desire to obviate certain legal difficulties, but because it was felt that the present system threw an unnecessary burden upon the honorary secretaries, which burden it was proposed to transfer to the head office. This would, however, mean that he and his colleagues at the head office would be more dependent than ever on the good will of the local secretaries for the information without which no notice could be inserted. In fact, the Council had made up its mind that before any notice of the kind could be inserted the fullest information must be in the hands of the head office. This would mean that sometimes, in cases of emergency, some one from the head office would have to go down to meet the Executive of the Division in order to collect information, and make sure that local professional opinion demanded the insertion of a notice. In this connexion he drew the attention of the meeting to the fact that the Council, in making an addition to the central staff, in appointing an Irish Medical Secretary, and in determining shortly to appoint a Scottish Medical Secretary, was largely guided by a desire to place more personal service at the disposal of the honorary secretaries. It was intended that in all cases where Divisions believed that the interests of the Association or the local profession would be advanced by personal help from the head quarters staff some one should be sent down to give this assistance. He knew that such assistance had often been of great service in the past, and he hoped that secretaries would make still fuller use of it in the future when the staff had been increased. He desired specially to bring before the Conference the risk of "short cuts" being taken either locally or centrally. Nearly everybody had a natural distaste for anything which looked like red tape, but it must be remembered that the business of a big Association like ours could not be conducted without a due regard for procedure. It was no use passing resolutions which were intended to be binding unless those it was intended to bind had ample opportunity of discussing the resolutions beforehand. He drew attention to the necessity of passing resolutions of this kind under Ethical Rule 2, which provided for ample notice and a sufficient majority before a resolution could be made binding. If a resolution laying down a policy as regards remuneration or other conditions was passed, either without notice or without sufficient notice they could not be surprised if some men declined to be bound by it. But if passed in accordance with Ethical Rule 2 it would be impossible for any member of the Division concerned, at any rate, to plead ignorance. The same thing applied to resolutions which were to come before the Representative Meeting, and he was sure that some of the resolutions which had been passed by that body had been carried without full consideration being given beforehand. As an example he mentioned the resolution fixing the rate of payment for referee work under the Insurance Act at 10s. 6d. It was evident that this resolution did not receive the attention it ought to have done in the Divisions when they instructed their Representatives how to vote at the annual meeting, because after that resolution was carried a considerable number of Divisions found great trouble in enforcing it, and many of them had never tried to do so. He hoped that secretaries, either personally or by getting the various members of their Executives to deal with different parts of the Council report and the agenda for the Representative Meeting, would insist upon the Divisions giving careful consideration to resolutions of this kind, so that when they came to be discussed in the Representative Meeting they might have more security than they had now for feeling that if passed they would not merely be pious resolutions. The result of merely pious resolutions was to make things extremely uncomfortable both for local secretaries and the head office, and to lower the Association as an organization in the eyes of the public and the profession. He then dealt with the procedure as regards resignations, and showed what steps were taken between the forwarding of the resignation by a member and the time when that resignation became a *fait accompli*—how within a week of the posting of the resignation secretaries of Divisions and Branches were notified of it and asked to use their influence to secure its withdrawal. A good many members were in this way prevailed on to withdraw their resignations, but he hoped that if those present had any suggestions to make for the improvement of the procedure they would not fail to state them. In acknowledging many acts of personal kindness and forbearance to himself and his colleagues on the part of the honorary secretaries, the Medical Secretary appealed not only for a continuance of this friendly attitude which was so greatly valued, but for free criticism and any suggestions which were calculated to make the central staff more useful to the honorary secretaries and through them to the members of the Association.

Mr. C. G. C. SCUDAMORE (Croydon) responded to the invitation of the Medical Secretary to secretaries of Divisions which had tried new methods of making their meetings more interesting by telling how at Croydon they had recently instituted a series of visits to local medical institutions which he believed had been greatly appreciated.

Dr. E. A. STARLING (Kent Branch) spoke of the necessity for keeping up the interest in the scientific work by means of clinical meetings in which the interests of the local hospital staffs could be enlisted. He believed more good would often be done by utilizing local consultants and specialists than by bringing down consultants from town.

Dr. BARR STEVENS (Renfrewshire and Buteshire) said his Division had recently paid a successful visit to some large works, and thought it had been useful in interesting a certain class of members to whom the ordinary meetings did not appeal. He asked whether the subscription could not be lowered for those members who for various reasons did not want to receive the JOURNAL.

Mr. JAMES GREEN (Southern Branch) gave some personal experiences of the extremely trivial reasons given by some members for resigning. He mentioned some criticisms he had heard of the JOURNAL—for example, that it was too bulky. Coming from an area in which there was a large number of service practitioners, he thought the present time was very opportune for urging them to join the Association, seeing that the Association was engaged on a campaign in favour of the improvement of the conditions of service of the Naval and Indian Medical Services. He laid a good deal of stress, based upon local experience, on the necessity for the head office being consulted at the very earliest stage of any ethical dispute.

Dr. L. A. PARRY (Brighton) mentioned some of their experiences in holding scientific meetings of the Division, and emphasized the need for interesting those members of the profession who could not be induced to participate in the medico-political work.

Dr. JOHN MILLS (Connaught Branch) asked how far it was expedient to help non-members of the Association who asked for advice or assistance. Personally, he had always looked upon the opportunity of giving such assistance as one of the best ways of advertising the Association. The raising of the subscription had been the means of them losing a good many members in Ireland, and he wished to have any suggestions as to how to prevent these resignations.

Dr. J. SINGLETON DARLING (Portadown and West Down) spoke of the complaints raised by some members who had

two or more Journals coming into their practices, and wondered whether some means could not be found to obviate the difficulty. His Division had found scientific meetings helpful.

Dr. James Melvin (Rochdale) remarked that his Division had on more than one occasion sent up resolutions to the Representative Meeting urging that there should be differentiation of subscription in certain cases, such as those alluded to by Dr. Darling, but the Representative Meeting had not accepted the suggestions.

Dr. Frank Fowler (Dorset and West Hants Branch) was of opinion that secretaries need not worry much about many of the resignations which had taken place. They came largely from men who had been rushed into the Association over the Insurance Act fight, but never took any real interest in the work of the Association, and who were probably as well outside.

Mr. C. Courtenay Lord (Rochester, Chatham, and Gillingham) dealt with the tendency of some members to look upon the Journal as the only thing they got for their subscription, whereas in his opinion it was only one of the advantages, and by no means the greatest. He thought that the resignations from Ireland were less pardonable than those from other parts of the kingdom, seeing that the Council had devoted a considerable sum resulting from the rise in subscription to providing Ireland with a separate office and an Irish Medical Secretary. He classified those who had left the Association recently and came to the conclusion that few of those who were really in earnest had resigned. He was not at all pessimistic about the future of the Association.

Drs. Eardley (Wakefield, Pontefract, and Castleford), J. A. Steven (Banff, Elgin, and Nairn), and J. A. Clarke (Argyllshire) raised certain points in connexion with Division organization, the latter dwelling chiefly on the great difficulty of getting meetings over such a widely scattered and thinly populated area as Argyllshire.

The Chairman dealt with several of the questions raised by different speakers, and especially emphasized the advisability of enlarging the size of executive committees of Divisions, so that every member who desired to take an active part in the work of the Division might have the opportunity of serving upon the executive; and also that the Division rules should exclude from re-election on the committee those members who had failed to attend one meeting during the year. He also spoke of the delay experienced by many of the Divisions in getting their annual grants. He dealt with the question of the procedure *re* resignations, and explained that the Metropolitan Counties Branch had put the duty of seeing what influence could be brought upon those intending to resign upon its Organization Committee. He was of opinion that it would be a useful thing if the head office took steps to ascertain and classify the reasons given for resignation.

The Medical Secretary, in reply, stated that the question of those members who for various reasons did not want their Journals had often been considered, and that on each occasion it had been decided to be impossible to allow such members to pay a reduced subscription. The Journal was the official means of communication between the Association and its members, and those who did not receive it would have a good excuse for pleading ignorance of the intentions and resolutions of the Association, an excuse which he thought it would be unwise to give them. In addition, the effect of such a policy on the circulation of the Journal, and through it on the income received from advertising, should be kept in mind. In reply to those who thought the Journal was too bulky, he would ask which part of should be reduced or eliminated, and he would not mind wagering that there would be almost as many opinions as there were persons present in that room. They must rely upon the Editor to do his best to gauge the desires of the members of the Association. He thought that Dr. Mills's attitude towards non-members was the correct one, though personally he was inclined to take a different line with those who had recently left the Association. These, he thought, might well have a polite intimation that the Association could not afford to spend time and trouble over those who did not think it worth while to remain inside its ranks. He was afraid there was no other means of preventing men from resigning, because they thought the subscription too high, other than by convincing them that it would not pay them to be outside the Association, and therefore all of them must try to make the Association more useful than ever it had been. In reply to the observations of the Chairman on the delay which some of the Divisions experienced in getting their grant, he pointed out that if a Branch sent in its annual report by the appointed date it could always rely upon getting its grant by about the middle of May. If it did so, there was nothing to prevent the Branch making its grants to the Divisions soon after this, and at the same time each year, so that the delay was really not the fault of the Council but of the Branch, either in not sending in its annual report at the proper time or in not distributing the money when received from head quarters as quickly as it might.

Mr. Guy Elliston, the Financial Secretary and Business Manager, dealt with several points which had been raised in the course of the discussion, bearing upon the make-up and circulation of the Journal and its Supplement. His clear explanation of certain technical points was evidently very acceptable to the Conference.

Provision of Bound Volumes of Supplement to Secretaries.

During discussion of this item the Chairman pointed out that his Division had sent up a proposal to rescind the resolution to abandon the supply of bound volumes to secretaries to the Representative Meeting at Brighton, but that it was not supported, and that if the custom, which was much to be desired, was to be resumed, Divisions must instruct their Representatives to vote for it, as the Council would most probably not reverse a decision of the Representative Meeting.

During the proceedings Dr. Eleanor Bond (Bournemouth) spoke of the inconvenience caused to secretaries by the withdrawal of the half-yearly bound volumes of the Supplement, which had for some years been forwarded to secretaries of Divisions and Branches. She said she did not think it right that secretaries should be expected to use their own copies of the Supplement for official purposes, and if they did, these copies were apt to get so worn that they were not suitable for binding. If a secretary was to do his work efficiently it was absolutely essential that he should have bound copies of the Supplement for reference. She moved that the Council be asked to consider whether it would not be possible to send as from January 1st, 1915, half-yearly bound volumes of the Supplements of the British Medical Journal to the honorary secretaries of Divisions and Branches. This was seconded by Dr. C. H. Mactier (South Staffs) and carried unanimously.

Introduction of New Central Officials.

The Medical Secretary took the opportunity of introducing to the meeting Dr. T. Hennessy, the newly appointed Irish Medical Secretary, and Mr. C. Courtenay Lord, who will take office as Assistant Medical Secretary on October 1st, 1914.

The meeting ended with cordial votes of thanks to the Chairman and Medical Secretary.

Annual Dinner of Secretaries.

The annual dinner of secretaries was held on the same evening at the Grand Hotel and was attended by over forty secretaries and also by the Chairman of Representative Meetings, Chairman of Council and the Solicitor of the Association. The chair was taken by Dr. A. Tennyson Smith—the Chairman of last year's Conference. The only toast beside that of the King was the health of the Chairman of Representative Meetings, and Dr. Tennyson Smith in proposing it explained that although it was against the precedent of the dinner to have any toasts he felt that those present would wish to offer Mr. Verrall their hearty congratulations on the great honour done to him by the Association in presenting him with the Gold Medal, an honour which those who had worked with Mr. Verrall in any capacity for the Association felt to be richly deserved. Mr. Verrall, in thanking those present, said that though he had been told there were no toasts at that dinner and had thus been taken quite by surprise, he greatly appreciated the compliment paid to him by that gathering, not only because they were fellow workers for the Association but because he had been for many years secretary of the old South-Eastern Branch.

OFFICIAL PUBLICATIONS.

The following memorandum (Memo. 199/I.C.) was issued by the National Health Insurance Commission (England) on September 17th:

NATIONAL HEALTH INSURANCE.

Medical Benefit.

MEMORANDUM TO INSURANCE COMMITTEES ON THE SUPPLY OF DRUGS AND APPLIANCES.

1. The Commissioners have been giving close attention to the present cost of the supply of drugs and appliances as part of medical benefit; and in this connexion they have had occasion to consider very carefully the question whether the funds available for the purpose are being applied to the best advantage. As a result of such investigations as they have been in a position to make, and from reports which they have received from all quarters, the Commissioners are satisfied that a considerable portion of the charges upon the drug funds of Insurance Committees could have been avoided, without loss of efficiency and even with positive advantage to insured patients, by properly directed economy in prescribing.

2. This conclusion is based upon returns and statistical analyses too voluminous to be cited at length in the course of this Memorandum. Cases, however, will probably be within the knowledge of most Insurance Committees in which a medicine has been prescribed in such quantities or with such frequency as to make it practically certain that it has been either wasted or consumed by persons other than the patient for whom it was ordered. But such extreme and easily recognizable cases of excessive prescribing are less dangerous (because more easily detected) than the case of a general level or habit of prescribing, on the part either of individual practitioners or of the practitioners in particular districts, in excess of what may reasonably be regarded as necessary for the health of the patients attended. Such excess may take two main forms. Apart from the extreme cases referred to, a practitioner may as a matter of general practice prescribe medicines unnecessarily, in deference to the wishes of patients or for other reasons; or the excess may take the form of a habit of prescribing unnecessarily expensive (for example, proprietary) forms of the medicine required by the patient when other equally efficacious and less expensive forms are accessible. The term "excessive prescribing," therefore, as used in this Memorandum is intended to denote, whether in particular cases or as a settled practice, not only the giving of unnecessary prescriptions or the prescribing of unnecessarily lavish quantities, but also the prescribing of medicines in an unnecessarily costly form.

3. The statistical information before the Commissioners discloses differences in the cost of the prescribing, both as between individual practitioners on the same panel and as between different panel areas, of such magnitude that they cannot be satisfactorily explained either by a difference in the health average of the areas or the individual practitioners' lists, or by legitimate variations in the standards of prescribing observed by individual practitioners. This evidence can only point to one of two conclusions. Either the great majority of practitioners on the panel refrain from prescribing for their insured patients the medicines which they ought to have; or, if that hypothesis is rejected, a minority are prescribing on a scale or in a manner which is extravagant, judged by the standard of their colleagues. The Commissioners prefer the second hypothesis; and they are, moreover, confident that Committees may rely, in any efforts to place the matter on a more satisfactory basis, upon the support and co-operation of the medical profession itself, upon whom, under the present panel system, the control of extravagance necessarily devolves, and who, with the knowledge of the facts which is now available, are, it is believed, becoming more fully alive to their responsibilities in this connexion.

4. But in view both of the magnitude of the sums involved and of the continuous rise in the cost of the drug supply, the Commissioners cannot contemplate with equanimity the continuance of a system under which, through the absence of effective control, an unnecessary burden is cast upon insurance funds, and, through them, upon the funds of approved societies. The future will in this respect obviously, therefore, depend upon the extent to which the machinery of control established, or capable of being established, under the present system can be made operative. It may in any event be found necessary as a result of experience to modify and strengthen that machinery; but it will of course be realized that the effectiveness of the machinery, however it is strengthened, must depend upon its thorough application and utilization by the persons locally concerned. In the present Memorandum, therefore, the Commissioners desire to represent very strongly to Insurance Committees, and through them to the medical organizations whose advice and co-operation they enjoy, the imperative necessity for taking the fullest advantage of the present provisions of the Regulations; and they propose at the same time to indicate certain methods by which the best use can be made of those provisions, particularly as against the more dangerous forms of excessive prescribing, which, while less easy to detect, are, it is believed, responsible for the bulk of the excessive expenditure.

5. The Commissioners would urge upon Insurance Committees the need for action even where no financial stringency has arisen. It is observed that in many areas, according to the Commissioners' information, the parties concerned have refrained from considering the adoption of the necessary procedure on the ground that no actual deficit on their drug funds had arisen or was expected. This, however, is a mistaken view. It by no means follows that, because the drug funds of a given area are amply sufficient for the payment of chemists' accounts, there has been no excessive prescribing, inasmuch as a low average cost of drugs, etc., may be due to a comparatively low sickness incidence. Moreover, the considerable increase in the cost of the drug supply for the current year has already in many areas seriously encroached upon the margin previously thought to be available; and it is not only possible but inevitable that, if excessive prescribing is allowed to continue without any steps being taken for its repression, it will ultimately absorb any margin, however large, and produce a state of deficit. The drug accounts should accordingly be strictly scrutinized for excessive prescribing even where the drug funds are apparently ample; and extravagance, if detected in such cases, should be firmly repressed, both for the avoidance of a wasteful application of public moneys and in justice to the persons possessed of a residuary interest in any savings.

6. In conclusion of these introductory paragraphs the Commissioners take the opportunity of pointing out that the validity of the inferences drawn from the comparative statistics referred to is not, of course, affected by the questions which are understood to have been raised by the medical profession in some quarters as to the reasonableness of the prices contained in the drug tariffs, since these are practically the same in every area. But if it is the opinion of the practitioners in any area that increased facilities and opportunities for proper economy in prescribing could be secured by any revision or extension of the tariff at present in force, without prejudice to the treatment of insured persons or injustice to chemists, the Commissioners would regard it as of the greatest importance that the problem of economy should be attacked from this other aspect also, and they feel sure that Committees would welcome any practicable suggestions designed to this end.

Provisions of Current Regulations (Article 40).

7. Turning now to the procedure at present available for the repression of excessive prescribing, this is embodied, as Insurance Committees are aware, in Article 40 of the current Regulations (replacing Article 46 of last year's Regulations).

The effect of this article, and the precise relations which it establishes between the several parties concerned, do not in all cases appear to be fully apprehended. The article contemplates machinery under which any necessary duties of *investigation* are performed by the Panel Committee, the actual process of surcharging being performed by the Insurance Committee upon consideration of a report submitted by the Panel Committee as a result of their investigation. Further, while it is open to the Panel Committee to conduct an investigation at any time, it is *obligatory* upon them to investigate and report if representations are made to them by the Pharmaceutical Committee to the effect that excessive prescribing has taken place. Such representations must, of course, be reasoned representations, setting forth the *prima facie* case of the Pharmaceutical Committee for suggesting the existence of excessive prescribing, but it is no part of the duties of the Pharmaceutical Committee in this connexion to investigate, this duty being expressly reserved under the Regulation for the Panel Committee. Where, therefore, proper representations are made to the Panel Committee by the Pharmaceutical Committee, the former have under the Regulations no alternative but to investigate and to

report to the Insurance Committee, who are similarly under an obligation to give proper consideration to the report, and to make any appropriate surcharges.

8. It will be seen, therefore, that it rests with either the Panel Committee or the Pharmaceutical Committee to set the machinery in motion, the Panel Committee being entitled to investigate and report on their own initiative, while the Pharmaceutical Committee may require them to do so. The Insurance Committee have, under the Regulations, no formal right of initiative in the matter. Nevertheless, as the authority responsible for the disbursement of public money and for the standard of the medical service in the area, they will doubtless be interested in and favourably disposed towards any steps which may conduce to the repression of extravagance and the more efficient direction of methods of prescribing; and the Commissioners would urge upon Committees the importance of facilitating, so far as it is in their power to do so, the operation of the machinery in question by advising the other parties involved, where necessary, as to their respective powers and duties, and by removing any misconceptions or other obstacles which may militate against the utilization of the existing provisions to their fullest advantage. The matter is, of course, one of urgency, as the result of delay must be to intensify and perpetuate the influences leading to extravagance, and early action is, accordingly, likely to be doubly effective. The Commissioners have, therefore, to request that Committees will take the whole subject into their earnest consideration at a very early date, if this has not already been done, as a matter of considerable moment to the satisfactory administration of medical benefit in their respective areas.

Joint Administrative Arrangements for Checking and Scrutiny.

9. Whilst dealing with this subject, the Commissioners desire to advert to an administrative expedient which has been adopted in several areas with success, and which cannot fail to be of considerable assistance, namely, a conjoint arrangement between the Insurance, Panel, and Pharmaceutical Committees for the checking and statistical analysis of prescriptions and chemists' accounts. On the Insurance Committee, in the first place, devolves the duty of an arithmetical check of the chemists' accounts submitted, for the purpose of verifying the correctness of the charges made; although both the Panel and the Pharmaceutical Committee have the right to examine the accounts, and the Regulations contain special provisions as to the passing of the accounts where these rights are exercised. But further, where action under Article 40 is contemplated, some preliminary examination of the prescriptions on the part of the Pharmaceutical Committee will probably be necessary in order to support their representations, while as a result of those representations the Panel Committee are bound to accept the responsibility for a full investigation into the details of prescribing in order to make their report. Where, therefore, as in the case of action under Article 40, circumstances arise in which it would otherwise be necessary for the three separate Committees to examine and analyse the prescriptions, each in pursuance of its own statutory duty, overlapping and waste of money can be avoided by the simultaneous performance of the necessary checking and statistical analysis by a single staff under the joint control of the three Committees. Such joint arrangements have, where adopted, proved to be both efficient and economical: and the establishment of an analytical scrutiny as part of the normal continuous checking system has proved invaluable in practice, as enabling a steady and continuous watch to be kept over the current fluctuations in the cost and frequency of prescriptions, both in the case of individual practitioners and as regards the panel as a whole. The Commissioners are strongly inclined to the view that a continuous examination, throughout the year, of this character is essential to the promotion and maintenance of due economy in prescribing, and they recommend such arrangements to the favourable consideration of all parties concerned.

Issue of Circulars on the Subject of Prescribing.

10. It has come to the knowledge of the Commissioners that some Committees have proposed to issue circulars to doctors and chemists containing general prohibitions as to the prescribing of certain articles or preparations. While, of course, certain clear cases may arise in which the Committee might properly point out on a particular occasion that a given article is not allowable as part of medical benefit (for example, an appliance not included in the Schedule), it appears to the Commissioners that the issue by the Insurance Committee of such a warning on general and comprehensive lines would place the Committee in a position inconsistent in some respects with the proper discharge of their statutory duties. In the first place, the insured person is entitled under the National Insurance Act, 1911, to such proper and sufficient medicines and prescribed appliances as are ordered for him by the practitioner in attendance upon him under the Act; and any question which may arise as to what is proper and sufficient in the case of a given individual patient must be decided on the circumstances and requirements of his actual case. Hence any general prohibition on the part of the Insurance Committee may conceivably conflict in a particular instance with their duty to an insured person; and the issue of such prohibition is to a certain extent, therefore, inconsistent with their position as guardians of the rights of insured persons. To take another instance, an insured person is not, of course, entitled to what is in excess of sufficient for his individual treatment, and a doctor may therefore be surcharged who prescribes a medicine or preparation in an expensive form if it can be prescribed and dispensed at a lower cost with equal efficacy. But the prohibition of specific articles on this ground, though doubtless in many cases entirely justifiable, involves the exercise of a therapeutic judgement upon matters upon which the Insurance Committee are not in a position to decide.

11. Hence it appears that any circular of the nature which has been contemplated should rather be issued, with the assent of the Insurance Committee, by the Panel Committee, acting both in the capacity of expert advisers to their constituents as to methods of prescribing and as warning them of the policy in future to be adopted in the matter of the scrutiny and surcharge of excess. Such a circular might be issued by Panel Committees to doctors on the panel with considerable advantage in most areas, and it is suggested that the Insurance Committee should consult with the Panel Committee on the subject. The specific preparations or compounds as to which it is desired to caution panel practitioners will, of course, vary with the experience of the area and the views of the Panel Committee. For convenience, however, in the framing of such a circular, the Commissioners have outlined the following heads under which, it is believed, most of the articles or preparations as to which a caution is desirable may be classified, together with a note as to the form of warning which, in the Commissioners' opinion, is appropriate to each category.

HEADS OF CIRCULARS.

Foods, Toilet Preparations, Disinfectants.—Note: Insured persons are entitled as part of their medical benefit to proper and sufficient drugs, medicines and prescribed appliances, but not to any articles or preparations that do not fall within that description. Hence, foods, toilet preparations, disinfectants, etc., cannot be prescribed as such; and while a doubt may arise in connexion with any particular article in the following list, as to whether in an individual case it may not be prescribed as a medicine, the responsibility in any such case for showing that the prescription was allowable and ought not to be surcharged will rest with the doctor himself. [*Here will follow list.*]

Prescriptions which could be Otherwise Prescribed and Dispensed at a Lower Cost and with Equal Efficacy.—Note: A practitioner is not entitled to prescribe at the cost of the insurance funds medicines which exceed in cost what is proper and sufficient for his patients' treatment, and any prescription in the following list will be automatically reported for surcharge. Should any case arise in which, owing to any special circumstances, the more expensive preparation is, in the doctor's judgement, essential for the treatment of the case and no other prescription would be equally efficacious, it will devolve upon the doctor prescribing to show cause on these grounds why he should not be surcharged.* [*Here will follow list.*]

Appliances not Prescribed in the Second Schedule.—Note: Insured persons are not entitled to any medical or surgical appliances other than those prescribed in the Second Schedule to the Regulations. In the event of any unscheduled appliance being prescribed, or in any case of doubt, the chemist should refuse to dispense pending instructions from the Insurance Committee, and should immediately notify the doctor and report to the Insurance Committee.

National Health Insurance Commission (England),
Buckingham Gate, London, S.W.
1914.

* In cases of this class no pressure should, of course, be put upon the chemists on the panel to dispense some other preparation than that prescribed, having regard to their obligations under the law. The responsibility in the matter of prescribing rests with the doctor, who should accordingly be warned as to the consequences of any disregard of his duties in this connexion.

PROVISION OF MEDICAL ATTENDANCE FOR DEPENDANTS OF MEN SERVING WITH THE COLOURS.

The publication of Mr. Pease's letter announcing that the offer made through the British Medical Association and the Pharmaceutical Society, expressing the general desires of doctors and pharmacists to co-operate in providing medical attendance without charge, and medicines and appliances at cost prices, had been accepted, and that a scheme had been drawn up for carrying it out, led to a number of appreciative comments in the daily press.

The *Daily Telegraph* wrote:

The appearance of Mr. Pease's letter, which we print to-day, makes the welcome announcement that free medical service is to be provided for those dependent upon soldiers and sailors serving with the colours. The patriotic generosity of the medical men and pharmacists throughout the country, which has enabled the Government to organize this service, entitles them to the grateful recognition of the nation. The scheme originated in an offer from these professions, and it is a peculiarly striking example of the spirit of patriotic helpfulness which inspires the whole nation, and makes us all prouder than ever of the name of Briton.

The *Daily News* wrote:

Mr. Pease's announcement is that arrangements have been made for providing the dependants of soldiers and sailors with free medical attendance, medicine, and appliances. The Prince of Wales's Fund will meet the cost of medicine and appliances, but the doctors and the chemists will volunteer their time and skill. This is a scheme which should be highly beneficial, and it reflects the utmost credit on the British Medical Association and the Pharmaceutical Society, who are largely responsible for its coming into being.

The *Daily Chronicle* wrote:

Through the liberality of the British Medical Association and the Pharmaceutical Society, the Government have framed a scheme for free medical attendance, with medicine and appliances, for the dependants of soldiers and sailors on active service. The scheme, which it is hoped will soon be in full operation, redounds to the honour of the medical profession. Both doctors and chemists are giving their services gratuitously. This admirable public spirit will be gratefully appreciated by the nation.

The *Evening Standard* wrote:

As an example of public spirit at a time of exceptional stress on the resources of many who can ill afford to battle with such adverse circumstances, the scheme made practicable by the generosity of the British Medical Association and the Pharmaceutical Society deserves the highest praise. Nor will the soldiers and sailors in the fighting line be slow to recognize with gratitude the benefits thus offered. Free medical attendance, with medicine and appliances for those left behind, will go far to ensure a clean bill of health, where in many instances it would otherwise have been difficult, if not impossible, of attainment. Not the least recommendation of the scheme is that its administration will guard against any attempted misuse of it.

The *Manchester Guardian* wrote:

The medical profession is meeting the national need in a way well worthy of its great traditions. It is not content to give its men to the army and the fleet in numbers which have more than met the demands even of this time. We give to-day particulars of the offer the British Medical Association, and also the Pharmaceutical Society, have made of free medical attendance, and medicines at cost price, for the dependants of men with the colours. The sacrifice which this will mean to doctors and chemists is a very considerable one. It is as though we all set out to do our day's work over again in leisure hours without reward. But the comfort which the news of it will bring to our soldiers and sailors and those they have left is a reward which other non-combatants may well envy. Every doctor and chemist must be proud and glad at this time to belong to professions which have the power to render such service, and which render it so readily.

Dundee.

The Subcommittee of the Local Medical Committee in charge of the Emergency Medical Service in Dundee reports that the service, instituted on August 17th, is working satisfactorily.

During the three weeks ending September 5th the average daily attendance at the consulting-rooms at the Royal Infirmary was 110. The number of patients taken charge of at their homes was 523, and 21 confinements were undertaken by the maternity department. These numbers included the insured and the non-insured patients of the doctors, and, while careful records were kept in all cases, no discrimination was exercised between the two classes. By the establishment of a fixed rota, it had been found possible to obtain continuity of attendance and treatment by the same practitioner.

The scheme provides that no sickness certificate will be signed unless the patient has been seen by the doctor who signs it. The doctors in attendance at the consulting rooms are the doctors on the Dundee panel, assisted by several of the senior practitioners of the city, who have very kindly offered their services.

Mr. Wedgwood Benn, M.P., Chairman of the Executive Committee of the National Relief Fund, gives notice that the dependants of men at the front needing help should apply to the local representative of the Soldiers' and Sailors' Families Association, or if its address is not known, to the mayor, or chairman of the urban council or chairman of the county council, as the case may be, who will either himself give them the necessary help or refer them to the nearest branch of the association. General inquiries should be addressed to the head office of the Soldiers' and Sailors' Families Association, 23, Queen Anne's Gate, London, S.W.

Effect of the War on Insurance Panels.

Under an instruction of the officers of the Association the Medical Secretary has addressed a letter to the Insurance Commissioners urging that some detailed statement should be made by them as to the effect of the calling away from their homes of insured persons who are serving with the colours on practitioners under agreement with Insurance Committees. A reply has been received, dated September 23rd, which states that the Commissioners recognize the desirability of issuing at an early date an authoritative statement upon the points referred to in the letter of the Association, and that they have given instructions for the preparation of a memorandum dealing comprehensively with the whole subject.

GENERAL MEDICAL COUNCIL.

EXECUTIVE COMMITTEE.

A meeting of the Executive Committee of the General Medical Council was held on September 15th, when Sir Donald MacAlister, President, was in the chair. The following members were present: Dr. Norman Moore, Sir Henry Morris, Mr. Tomes, Dr. Langley Browne, Mr. Hodsdon, Dr. Norman Walker, Sir John Moore, and Sir Charles Ball. Mr. N. C. King, the Registrar, was also present, although the Council was notified that as Mr. King had been called to serve as major in His Majesty's Territorial Force, he would be unable to give regular attendance at the office for the present. The Committee expressed its good wishes to Major King, and gave him leave of absence from September 15th. Mr. A. J. Cockington was appointed Acting-Registrar in his place.

Unqualified Locumtenents.

The President made a statement in regard to certain correspondence received by the Registrar respecting unqualified locumtenents and kindred matters, and read a letter sent to the practitioners concerned, which was published in the Journal of last week, page 522. The action of the President was approved.

Students and the War.

The President read correspondence with several of the licensing bodies in regard to the position of students absent on service during the war. The following answer, drafted by the President, was approved:

With regard to the courses of study and examinations prescribed for professional qualifications, it is the statutory duty of the General Medical Council to secure the maintenance of such a standard of proficiency as shall sufficiently guarantee the possession by candidates of the knowledge and skill requisite for the efficient practice of their profession.

To this end the Council has formulated, for the guidance of the licensing bodies, a series of recommendations respecting such courses. These recommendations represent in general terms the minimum curriculum which, in the Council's opinion, should be required by the licensing bodies, and the Council notes with satisfaction that the regulations of the several bodies give effect to them.

Cases may arise in which, during the present national emergency, the bodies deem it expedient to modify or suspend the application of their regulations to particular

candidates; but the Council expects that all such cases shall be duly recorded and reported to the Council in the usual way.

The Council feels sure that, in dealing with applications for modification or suspension of their regulations, the bodies concerned will recognize the importance, in the public interest, of maintaining unimpaired the present standard of knowledge and skill required of all who seek to be admitted to the status and privileges of registered practitioners; and will accordingly agree with the Council that it is desirable to secure, in every instance, that the requirements of the minimum curriculum are substantially fulfilled.

Visitation and Inspection of Examinations—Revision of Register.

The Committee resolved to advise the Council that, in view of the present unusual conditions of national emergency, it would be inexpedient to proceed with the proposed inspection and visitation of qualifying examinations, and of examinations for diplomas in public health, during 1915, or to issue circulars to registered practitioners in connexion with the revision of the *Register* now in progress.

The British Pharmacopoeia.

A report was received from Dr. Tirard, the medical editor of the *British Pharmacopoeia*, 1914, representing that grave inconvenience might result to the public services and to manufacturers if a new issue of the *British Pharmacopoeia* containing changes in the strength of various drugs—for instance, such as were used as anaesthetics and dressings—were published at the date originally appointed. The Executive Committee resolved that advance copies of the new *Pharmacopoeia* should be placed for the inspection of the public at the Registrars' offices in London, Edinburgh, and Dublin on October 1st, 1914, and that the statutory notices of publication should be inserted in the official *Gazettes* on December 31st, 1914. The Treasury has approved the recommendation of the Council that the price of the volume should be 10s. 6d.

Membership of the Council.

It was reported that Dr. Edward Magennis had been appointed the representative of the Apothecaries' Hall of Ireland for one year from August 1st, 1914. A vote of condolence with the family of the late Sir Christopher Nixon was adopted.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

The following notifications are made by the Admiralty: Fleet Surgeon C. Strickland (retired) to R.M. Infirmary, Portsmouth, temporary, September 14th. Fleet Surgeon E. B. Pickthorn (retired) to the *Victory*, additional for the *Kent*, and on commissioning, undated. Fleet Surgeon G. R. MacMahon (retired) to the *Vivid*, additional for the *Donegal*, and on recommissioning, undated. Staff Surgeon E. Cox, M.B., to the *Pembroke*, additional for disposal, September 18th. Staff Surgeon L. Warren, M.B., to the *Pomone*, additional for Dartmouth Sick Quarters, temporary, September 14th. Surgeon V. L. Matthews to the R.M.A. Division, Portsmouth, vice Eykyn, September 18th. Surgeon Hildred B. Carlill, M.D., to the *New Zealand*. Surgeon C. D. Bell, M.B., to the *Victory*, additional for the *Broke*, and on commissioning, undated. Temporary Surgeons G. Hamilton, M.B., B. A. Playne, M.B., and G. Sparrow, M.B., to the *Victory*, for R.N. Division, Walmer, September 11th; H. V. Deakin to the *Attentive*, vice Cox, September 18th; A. H. Moore to the *Halcyon*, additional, September 19th; E. Rayner, M.B., and C. H. S. Taylor, M.D., to the *Victory*, for R.N. Division, Walmer; F. B. Eykyn to the *Victory*, additional for R.M. Brigade, and E. M. Molesworth, M.B., to the *Victory*, additional for R.N. Division at Crystal Palace, September 16th; J. T. E. Evans to the *President*, additional for service at Hendon Air Station, September 17th; R. F. R. Burn to the *Victory*, additional for the *Kent*, and on commissioning; H. M. Scott to the *Victory*, additional for Portsmouth Yard, vice Pickthorn, undated; L. Mandel, M.D., and R. K. Shaw, M.B., to the *Vivid*, additional for the *Donegal*, and on commissioning, undated; W. P. Cowper to the *Vivid*, additional for Devonport Yard, vice MacMahon, undated.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, OCTOBER 3RD, 1914.

CONTENTS.

Meetings of Branches and Divisions.

[The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the JOURNAL.*]*

DORSET AND WEST HANTS BRANCH:
WEST DORSET DIVISION.

The War.—A meeting of the West Dorset Division was held on September 25th, when the following resolutions were passed:

1. That all practitioners should undertake to treat the patients and safeguard the interests of those who are serving with the forces.
2. That they should regard themselves as deputies for those on active service, the remuneration recommended by this Division being one-third of the accounts of private patients, and one-third of all appointments.
3. That after the return of a practitioner from service the deputy shall refuse, on any consideration except that of urgency, to treat any of the returned practitioner's patients whom he has seen as deputy for a period of twelve months.
4. That the practitioners in the district undertake the gratuitous treatment of the dependants of all non-commissioned officers and men called to the colours during the war if recommended by the distress committees.

It was decided to send the resolutions to all practitioners in the Division.

PERTH BRANCH.

A MEETING of the medical practitioners of the city and county, summoned by the Perth Branch, was held at Perth on September 25th. Dr. J. HUME was in the chair, and eleven members of the Association and other medical men were present.

Free Medical Attendance on Dependants of Men Serving with the Colours.—This scheme, as detailed in letters to the Secretary and to practitioners (SUPPLEMENT, September 19th), was generally approved of by the meeting. The Secretary was asked to write to the Secretary of the Local Relief Committee inquiring as to the appointment of a medical man as a member of the committee.

Fees for Ambulance Lectures.—The Secretary read correspondence with the Secretary of the St. Andrew's Ambulance Association, and after full discussion it was resolved by the meeting that the Branch sees no reason for departing from the original resolution to charge one guinea a lecture. The question of there being a charge for judging in ambulance competitions held by private bodies (not under the St. Andrew's Association) and any other ambulance examinations was raised, and it was resolved that a charge of not less than £1 1s., with expenses, be made.

Appointment of co-Secretary.—The matter of the appointment of a co-secretary was raised, but it was decided that the Branch had no power to make such an appointment save at the properly constituted annual meeting in June, in accordance with the model rules of organization.

SOUTH-EASTERN OF IRELAND BRANCH.

AT an ordinary meeting of the Branch at Waterford, on September 2nd, Dr. MACKESY was in the chair, and ten other members were present. The following resolution, proposed by Dr. JELLETT and seconded by Dr. MITCHELL, was carried by 10 votes to 1:

That the Secretary be instructed to apply to each member of the Branch for an early reply in writing to each of the two following questions:

(*a*) Are you now or have you been at any time discharging the duties of medical adviser (certifier) under the National Insurance Act, either permanently or temporarily?

(*b*) Are you now or have you been in the habit of issuing certificates under the above Act, either gratis or on payment of a fee?

The meeting then adjourned and the members dined together.

Association Notices.

SUGGESTED CHANGES OF BOUNDARIES.

PROPOSED AMALGAMATION OF DUNDEE AND FORFARSHIRE DIVISIONS.

NOTICE is hereby given to all concerned of proposals made by the Dundee and Forfarshire Divisions: (1) That the Dundee Division and the Forfarshire portion of the Forfarshire Division be amalgamated to form a Branch of one Division, to be known as the Dundee Branch; (2) That Bervie and district, at present contained within the area of the Forfarshire Division, be transferred to the Aberdeen Division and Branch.

Written notice of these proposals has been given to the Divisions and Branches concerned, and the matter will be determined in due course by or on behalf of the Council. Any member affected by either proposed change, and objecting thereto, is requested to notify the fact and his or her reason therefor to the Medical Secretary, 429, Strand, W.C., not later than November 4th, 1914.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH.—Drs. R. E. Crosse and N. Bishop Harman, Honorary Secretaries, give notice that the monthly meetings of the Branch Council will be discontinued until further notice.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.
PANEL COMMITTEE.

Ambulance for the Red Cross Society.

AT a meeting of the London Panel Committee on September 29th it was agreed to invite panel practitioners in the metropolis to forward contributions not exceeding £1 1s. towards the cost of a motor ambulance to be presented to the British Red Cross Society. The Chairman, Dr. H. J.

Cardale, in making the proposal, suggested that as the panel practitioners were receiving this week the £90,000 due in respect of insured persons who did not choose a doctor in 1913 it was fitting that a thank-offering should be made and it could not take a better form at the present time.

The Local Medical and Panel Committee Federation.

The Committee considered the question of membership of the Local Medical and Panel Committee Federation (England) proposed to be formed under the aegis of the British Medical Association. The General Purposes Subcommittee raised objection to Rule 7 of the draft constitution, which provides that no step of general importance to the federation shall be taken by any federated committee without previous consultation with the executive committee. On the executive London would only have two representatives out of fifteen. The basis of £1 for every 20,000 insured persons as the subscription to the federation was also criticized, and the subcommittee recommended the Panel Committee not to accept membership of the federation. Dr. Major Greenwood thought it would be premature to give a direct negative. The draft constitution had been referred to the local committees throughout the country and was in no sense a final document. The Chairman said the Committee was asked to give a definite answer. The questions of subscription and representation were subsidiary ones. London had so many special problems which arose nowhere else in the same form that it was undesirable to tie the Committee to the federation, on which it would only have a small representation. Objection was also taken to the fact that the federation was bound to the Insurance Act Committee of the British Medical Association. Dr. Cunnington proposed that the qualifying phrase "as at present drafted" be added, and in that form the recommendation was carried.

Alleged Excessive Prescribing.

Discussion took place with regard to a list promulgated by the Insurance Committee and the Pharmaceutical Committee of various proprietary and other drugs and appliances which it was suggested should be definitely excluded from the scope of insurance prescribing. It was felt undesirable that the precedent should be established of an Insurance Committe defining what should or should not be prescribed by practitioners, and that the best way of controlling alleged extravagant or excessive prescribing would be to require practitioners to justify to the Panel Committee prescriptions to which objection was taken. Resolutions embodying this view were passed.

BUCKINGHAMSHIRE.

A meeting of the Bucks Local Medical and Panel Committee was held at the Royal Bucks Hospital on September 25th, when thirteen members were present.

The New Panel Committee.—The new Panel Committee is composed of eighteen instead of twenty-four members, and it was decided to ask Dr. Selbourne Bailey (Bourne End) and Dr. Bell (High Wycombe) to join the Committee. Dr. J. C. Baker was re-elected Chairman; Dr. Dickson, Vice-Chairman; and Dr. Larking, Secretary and Treasurer.

Medical Service Subcommittee.—This subcommittee was filled by the election of Drs. Benson, Churchill, and Reynolds.

Finance Committee.—The Finance Committee, consisting of Drs. Baker, E. O. Turner, Henderson, Larking, Rose, and Deyns, was re-elected.

Resignation.—A letter was read from Dr. Deyns, in which he asked to be relieved from his offices as member of the Insurance Committee owing to the fact that he was on active service. It was resolved that Dr. E. O. Turner should be nominated to fill his place until his return.

Treatment of Unallocated Persons.—The agreement with the Insurance Commissioners, signed on behalf of the medical men by the Chairman and Secretary of this Committee, dealing with the treatment of persons who had not selected a doctor, was read and agreed to.

Finance.—The medical benefit account for 1913 was submitted by the Clerk to the Insurance Committee. There would have been a balance of over £500 had not this amount been paid by mistake to the doctors at the rate of 9s. per annum for unallotted persons instead of 7s. It had been found by the Commissioners, on totalling the medical lists sent in by Insurance Committees, that there was an excess of about 10 per cent. over the actual number of insured persons in the kingdom, and they had therefore deducted this amount proportionally from the money paid to Insurance Committees. This diminished amount more than equalized the amount of the "floating sixpence" fund, and therefore none of this was available. The balance sheet for the last year and three-quarters was submitted and adopted.

Prescribing.—A subcommittee, consisting of Drs. Selbourne Bailey, Harwood Yarrel, Rose, and the Secretary, was appointed to meet the Pharmaceutical Subcommittee to consider and report on the question of over-prescribing.

Proposed Federation of Panel and Local Medical Committees.—Drs. Reynolds and Larking were deputed to report on this scheme.

Panel Practitioners and the War.—It was resolved:

> That this Committee is of opinion that in the event of medical members on the panel who are called out to active service suffering serious pecuniary loss or expense, steps should be taken to meet these as far as possible from county or other funds.

Continuance of Local Medical Committee.—It was resolved to continue the Local Medical Committee.

Railway Fares of Members.—In reply to a letter from the Cumberland Committee complaining that the railway fares of members were not allowed to be paid out of the compulsory levy under Section 33 (2), the Secretary was instructed to suggest that the method of voluntary levy so successfully carried out in Buckinghamshire should be adopted. A grant of three guineas was made to the Clerk to the Insurance Committee for deducting the voluntary levy.

GLAMORGAN.

Panel Committee.

A meeting of the Glamorgan Panel Committee was held in the Glamorgan County Hall on September 23rd, when Dr. W. E. Thomas was in the chair and nine other members were present, as well as the Secretary.

New Members.—The following were elected to fill the vacancies on the Panel Committee for their respective areas:

Aberdare: Dr. Thomas Finney, Cwmamman.
Swansea: Dr. John Owen, Cwmllynfell; Dr. M. W. Williams, Pentrepoeth.
Barry, Penarth, etc.: Dr. John Arthur, Llandaff; Dr. John H. Rees, Penarth.
Bridgend: Dr. D. J. Thomas, Nantymoel; Dr. J. B. McCutcheon, Blaengarw.
Neath: Dr. W. Bickerton Edwards, Seven Sisters; Dr. E. Vernon Pegge, Briton Ferry.
Port Talbot and Maesteg: Dr. R. T. Williams, Cwmavon; Dr. Walter Kirkby, Maesteg.
Llantrisant, etc: Dr W. Naunton Davies.

Honorarium to Secretary.—It was resolved that Dr. J. Shaw Lyttle should be paid an honorarium of fifty guineas for his services as returning officer and Secretary to the Committee.

ROXBURGHSHIRE.

Local Medical and Panel Committees.

Meetings of the Local Medical and Panel Committees were held at St. Boswells on September 15th, when Dr. Cullen was in the chair.

Checking of Prescriptions.—The Panel Committee received a report, submitted by the Pharmaceutical Committee, on the checking of prescriptions for the quarter ending April 14th, 1914. The report expressed the opinion that on the whole the pricing had been done with remarkable accuracy.

Administration Expenses.—The Panel Committee having ascertained that the Pharmaceutical Committee adhered to its application for the portion of the grant to which it was entitled, the Clerk was instructed to write to the Insurance Committee that the Panel Committee agreed to the Pharmaceutical Committee obtaining its portion of the grant, and to sign a joint application to that effect along with the Secretary of the Pharmaceutical Committee, in compliance with the Act.

Payment of Midwifery Fees.—A practitioner having written that he had difficulty in recovering his midwifery fees from certain societies, and asking for the assistance of the Panel Committee, it was decided to send the applicant the form adopted by the Committee last year enabling the practitioner to obtain his fees direct from the society at the request of the patient.

Drug Fund.—It was decided to print and circulate a list of proprietary articles with their official equivalents, prepared by the Pharmaceutical Committee. It was decided to notify the panel practitioners that unless the name of the proprietary article prescribed was underlined the official equivalent, which was much cheaper, would be prescribed.

Medical Referees.—The following motion was adopted *nemine contradicente*:

> No panel practitioner will undertake to examine another panel practitioner's case without in the first place communicating with the panel practitioner on whose list the case in question may happen to be, and in no circumstances shall the panel practitioner act as referee except at the rates laid down by the Panel Committee, namely, 10s. 6d. for each case, with mileage in addition.

Inquiries.—The following motion was unanimously adopted:

> A panel practitioner desiring information with regard to any point on which he is doubtful, such as his conduct in a particular case or his power of charging for special services, etc., should in the first instance address his inquiry to the Clerk of the Panel Committee, who will either give the information required or, if necessary, make investigations from the appointed authorities, and report the result of such investigations to the practitioner at the earliest opportunity, all such inquiries to be reported to the Panel Committee at its first meeting, and all such inquiries to be referred by them to their Committee.

The Chairman explained that inquiries had been addressed by panel practitioners to the County Insurance Committee first. In some instances the inquiries were most absurd.

Medical Practitioners and the War.—The Local Medical Committee unanimously approved the recommendations of the British Medical Association with regard to the giving of medical attendance to the patients of medical practitioners called away in connexion with the war, and the provision of free medical attendance to dependants of men serving with the colours.

INSURANCE COMMITTEES.

LONDON.

Panel Practitioners and the War.

At the first meeting of the London Insurance Committee after the summer recess, which took place on September 24th, the Chairman, Mr. F. Coysh, alluded to the probable effects of the war upon the funds of approved societies and upon the sickness-rate, and congratulated the medical profession upon its action in undertaking the free treatment of dependants of insured persons called to the colours.

The Cost of Prescriptions.

The Drugs and Appliances Subcommittee presented a report, showing that 5,041,555 prescriptions were examined during 1913, and accounts passed amounting to £155,516, the average cost of the prescriptions being 7.4d. each. During 1914 the average cost had risen, being 9.6d. in May and June. The prescriptions of 240 individual practitioners appeared to require special examination; in 132 cases the average was between 9.7d. and 1s., and in a few cases an average of over 2s. was reached.

At the suggestion of medical members of the Committee, consideration of the report was postponed pending the receipt of the observations of the Panel Committee.

Relations with Pharmacists.

The Insurance Committee undertook to issue a pharmacopœia, to be prepared by representatives of the Insurance, Panel, and Pharmaceutical Committees, and also passed a resolution that the form "rep. mist." should not be used.

Complaint against a Practitioner.

The Committee decided to make representations to the Insurance Commissioners with a view to the removal of a practitioner's name from the panel in a case in which it was alleged improper inducements were offered to insured persons to persuade them to engage the practitioner's services instead of those of a midwife. The complaint was brought by the Panel Committee.

CORRESPONDENCE.

Proposed Federation for Panel and Local Medical Committees.

Dr. E. Rowland Fothergill (Hove) writes: A provisional committee was appointed at the Conference of Panel and Local Medical Committee representatives held in March, 1914, when the formation of a Federation was decided on:

> To prepare and submit to the Local Committees a memorandum embodying the name, constitution, objects, and powers of the new organization and the nature and method of its association with the British Medical Association.

The British Medical Association is in no way responsible for this proposal nor for the scheme that has been prepared and recently issued. The late Representative Meeting decided to refrain from consideration of the scheme, possibly because the whole proposal might abort, and in such case it would be a waste of time to have done so.

It is sincerely to be hoped that a very large majority of the profession will reply, through their Panel and Local Medical Committees, that in their opinion such a Federation as is now proposed would prove to be cumbersome, redundant, and therefore quite unnecessary.

The main proposals in the scheme are that the Federation shall deal with all subjects having reference to the National Insurance Acts, and shall represent *the whole profession* with reference to the same.

The reasons for opposing the formation of such a Federation are many, and include the following:

1. To all intents and purposes such a Federation means a new British Medical Association, but under another name. That is, the formation of a rival body.

2. The British Medical Association is now recognized by all departments in the State in the United Kingdom, and also in certain Dominions, as the mouthpiece of the profession.

3. The existence of two independent bodies authorized to deal with the same subject would lead to overlapping in work, confusion in policy, and undoubted consequent defeat for the profession in treating with public bodies.

4. The number of medical practitioners actively interested in medical politics is limited, all their spare time being required by the British Medical Association. Every one who is induced to transfer his activities to a new and rival body would be a direct loss to the Association.

5. The medical profession will not find sufficient money to make a success of two bodies with similar objects. It considers that when it pays £2 2s. a head to the Association it is paying quite enough.

6. The National Insurance Acts cannot be dealt with apart from other medico-political subjects, as if they existed in a water-tight compartment; as they are concerned with subjects constantly being considered, and at great expense, by the Ethical, Hospitals, Army and Navy, Public Health, and Medico-Political standing committees of the Association.

7. It is proposed, after the central committee of the Federation has obtained the final opinion of the profession on a subject by means of four Branch Federations (English, Scottish, Irish, and Welsh), each of which in turn has to consult its own group of Panel and Local Medical Committees—which will consult those of the profession they represent—that the British Medical Association shall voice this opinion to public bodies. What security is there that this opinion will agree with the opinion of the Representative Body? This procedure has been advanced as a means for arriving at prompt decisions and action in a crisis!

8. As both bodies will be consulting from time to time the same practitioners on exactly the same problems, although these practitioners may be differently grouped together, the profession will be expected to attend two meetings in order to express their ideas twice over. It is very difficult to get practitioners to attend one meeting. It would not be long before we heard "that they were sick of the whole subject," and that they were "fed up."

9. Those favouring a Federation considered it to be a strong card that funds can be formed from voluntary levies deducted from the accounts of panel practitioners. Such levies, obtained in exactly the same way, can be obtained by the Association.

10. Those urging the formation of a Federation state that in some way, but which they seem unable to define, it will be possible to secure more loyalty and co-ordination of purpose in the profession than the Association has succeeded in doing. They propose to make

silk purses out of sows' ears, and to produce blood out of stones.

It is to be hoped that the Panel and Local Medical Committees will see the absurdity of the whole proposal, and determine to solve the problem of co-ordination of themselves by and through the Association.

I would venture to suggest that the following resolutions offer a solution which these Committees might urge the Council to adopt.

(*a*) That the Insurance Acts Committee of the Association be a standing committee.

(*b*) That it consist of the *ex officio* members of the Association, the chairmen of the Hospital, Public Health, Medico-Political, and Organization Standing Committees, *together with twelve members to be nominated by the Panel Committees of the United Kingdom* (on a similar territorial basis as is adopted for the twelve members of Council in grouped areas), and elected by the Representative Body.

In this way we would have one body representing the profession; an opportunity offered for one policy; whilst the Panel Committees can influence that policy so far as the Insurance Acts are concerned.

Hospitals and Asylums.

EXPENDITURE OF LONDON HOSPITALS.

THE statistical report[1] of King Edward's Hospital Fund for London on the ordinary expenditure of the institutions which supply it with copies of their accounts consists, like its ten predecessors, of some eighty or ninety pages of statistical tables. They supply an immense amount of information as to hospital expenditure on various items, and are made all the more useful to the institutions concerned by the fact that in the majority of tables the institutions are grouped under nine headings according to the character of the work they undertake. Taking the tables as a whole and comparing them with those of earlier years, they show that in six out of the nine classified groups the steady fall in expenditure which occurred between 1903 and 1910 has been replaced during the last couple of years by a considerable rise; the total excess in 1913 as compared with 1912 was some £27,000. In many individual instances this increase is no doubt due to a general rise in prices and the introduction of numbers of special and costly treatments; but that this is not always the case would appear to be proved by the fact that in the groups that show increases such income is not common to all members of the group. The hospitals whose accounts are analysed in the report number 106 and provide a total of 10,535 beds, of which 9,034.71 were daily occupied. Their new out-patients aggregated to 1,315,536, the patients attending a total of 4,368,092 times.

MATER MISERICORDIAE HOSPITAL, DUBLIN.

THE report for the year 1913 states that there were 4,044 admissions, while the total attendances in the extern department, including dispensary patients, accidents, and electricity patients, numbered 29,714. The total number of cases radiographed in the electro-therapeutic department, which was built in 1906, apart from the main building, since its foundation up to December 31st, 1913, was 2,784. During the first year 241 examinations were made; the number for 1913 was 580. Six patients were examined who had accidentally swallowed artificial teeth. Carelessness and inexperience in the use of toy rifles and pistols by boys had caused many personal accidents. In one such case a bullet was localized in the posterior cranial fossa near the foramen magnum and successfully removed by operation. In one of the kidney cases radiographed a shadow simulating a stone was found. To this patient, however, contrary to the general rule, a purgative had not been administered on the night preceding the *x*-ray examination, and the shadows in the kidney region were produced by faecal matter. High-frequency currents proved most satisfactory in the treatment of chronic sciatica and lumbago; one case of hemicrania was also cured by this method. In the medical wards the total admissions for the year amounted to 1,330. There were 26 cases of diphtheria, 41 of scarlet fever, 29 of measles, 43 of enteric fever, 4 of typhus fever, 4 of tetanus, etc. The surgical report deals with a total of 2,227 operations, not including minor operations performed in the extern department. There was one case of excision of spleen, 168 cases of appendicectomy, 64 of gastro-enterostomy, 36 of cholecystotomy, 13 of ilio-sigmoidostomy, wiring and plating bones 50, on the Gasserian ganglion 3, thyroidectomy 50, raclage 50, etc. In the gynaecological, aural, and ophthalmic departments the operations performed numbered respectively 219, 587, and 142. The clinical teaching of the hospital is largely used by medical students of the Dublin schools, and there is a training school for nurses, under the charge of the Sisters of Mercy. The Mater Misericordiae Hospital is under the control of the Sisters of Mercy, but the poor of every denomination have always been admitted to the wards and their clergymen allowed free access to their co-religionists.

[1] Statistical Report of the Ordinary Expenditure of One Hundred and Six London Hospitals for the year 1913. London: Spottiswoode and Co. (1s.)

Vital Statistics.

ENGLISH URBAN MORTALITY IN THE SECOND QUARTER OF 1914.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

IN the accompanying table (p. 189) will be found summarized the vital statistics of ninety-seven of the largest English towns based upon the Registrar-General's weekly returns for the second quarter of the year. The 115,120 births registered in these towns during the quarter were equal to an annual rate of 25.5 per 1,000 of the population, estimated at 18,120,059 persons in the middle of the year. In London the birth-rate was equal to 25.2 per 1,000, while among the other large towns it ranged from 13.1 in Hastings, 14.1 in Southport, 14.2 in Bournemouth, 15.7 in Blackpool, 15.9 in Bath, 16.8 in Ilford, 17.0 in Cambridge, and 17.2 in Hornsey, to 33.1 in West Bromwich, 33.3 in Sunderland, 33.5 in Stoke-on-Trent and in St. Helens, 33.7 in Bootle, 34.2 in Rhondda, and 34.4 in Middlesbrough.

The 62,244 deaths in these towns during the quarter were equal to a rate of 13.8 per 1,000; in London the rate was 13.1 per 1,000, while among the other towns the lowest rates were 7.1 in Ilford, 8.6 in Ealing, 8.8 in Easthourne, 8.9 in Enfield, 9.0 in Willesden and in East Ham, 9.1 in Edmonton, and 9.3 in Hornsey and in Southend-on-Sea; and the highest rates were 17.0 in Sunderland, 17.1 in Dudley and in Rochdale, 17.2 in Stockton-on-Tees, 17.4 in Stoke-on-Trent and in Manchester, 18.3 in Liverpool, 18.6 in Oldham, and 19.5 in Middlesbrough. The deaths included 1 from small-pox, 160 from enteric fever, 1,813 from measles, 389 from scarlet fever, 1,631 from whooping-cough, 587 from diphtheria, and 929 from diarrhoea and enteritis among children under 2 years of age. The fatal case of small-pox belonged to Dewsbury. The 160 deaths from enteric were equal to an annual rate of 0.04 per 1,000; in London the death-rate from this disease was 0.03 per 1,000, while among the other towns the rates ranged upwards to 0.10 in Norwich, 0.13 in Gateshead, 0.14 in Devonport, 0.15 in Grimsby and in Nottingham, 0.21 in Rochdale, and 0.30 in Wakefield. The 1,813 deaths from measles were equal to a rate of 0.40 per 1,000; in London the rate was 0.51 per 1,000, while among the other towns the rates ranged upwards to 0.95 in Burnley, 0.96 in Kingston-upon-Hull, 0.97 in Barnsley, 0.99 in Nottingham, 1.10 in Bootle, 1.23 in Warrington, 1.39 in Dudley, 1.42 in Stockton-on-Tees, 1.45 in Sheffield, and 1.49 in Rochdale. The 389 deaths from scarlet fever corresponded to a rate of 0.09 per 1,000; in London the death-rate from this disease was only 0.05 per 1,000, while among the other towns the highest rates were 0.20 in Liverpool, 0.21 in Ipswich, Smethwick and in Sheffield, 0.22 in Newport (Mon.), 0.23 in West Bromwich, 0.25 in Manchester, 0.29 in Middlesbrough, 0.38 in Salford, and 0.40 in Oldham. The 1,631 fatal cases of whooping-cough were equal to an annual rate of 0.36 per 1,000; in London the rate was 0.28 per 1,000, while among the other large towns it ranged upwards to 0.72 in Salford and in Rochdale, 0.73 in Manchester and in Barrow-in-Furness, 0.85 in Walsall, 0.86 in Sheffield, 0.89 in Middlesbrough, 1.05 in Swansea, and 1.12 in South Shields. The 587 deaths from diphtheria were equal to a rate of 0.13 per 1,000; in London the rate was equal to the average for all the towns, among which the highest rates recorded were 0.21 in Cambridge and in Walsall, 0.22 in Birmingham and in Newport (Mon.), 0.24 in Merthyr Tydfil, 0.26 in Sunderland, 0.28 in Great Yarmouth, 0.29 in York, and 0.30 in Stoke-on-Trent and in Bolton. The 929 deaths from diarrhoea and enteritis among children under 2 years of age were in the proportion of 8.07 to 1,000 of the births registered during the quarter; in London the proportion was 8.10 per 1,000, while among the other towns it ranged upwards to 15.01 in Bootle, 13.62 in Dudley, 14.27 in Burnley, 14.91 in Birkenhead, 20.65 in Dewsbury, 22.13 in Smethwick, and 23.04 in Middlesbrough.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 93 per 1,000; in London the rate of infant mortality was 79 per 1,000, while among the other large towns it ranged from 36 in Bath, 37 in Easthourne, 41 in Hastings, 47 in Hornsey, 54 in Enfield, 55 in Edmonton and in Ilford, 57 in Exeter, and 59 in Swindon, to 122 in St. Helens, 124 in Burnley, 126 in Walsall and in Oldham, 128 in Blackpool, 130 in Stoke-on-Trent, 133 in Bradford, 138 in Rochdale, 139 in Barnsley, and 143 in Middlesbrough.

The causes of 456, or 0.7 per cent., of the deaths registered in the ninety-seven towns last quarter were not certified either by a registered medical practitioner or by a coroner. In 42 of the towns the causes of all the deaths were duly certified; among the other towns the highest proportions of uncertified deaths were 3.3 in Gillingham, 3.7 in Bootle and in Warrington, 3.9 in Gateshead, 4.1 in St. Helens, 4.6 in Southend-on-Sea, and 6.4 in Darlington.

HEALTH OF ENGLISH TOWNS.

In the ninety-seven largest English towns 8,597 births and 5,291 deaths were registered during the week ended Saturday, September 12th. The annual rate of mortality in these towns, which had been 12.3, 13.6, and 14.4 per 1,000 in the three preceding weeks, further rose to 15.2 per 1,000 in the week under notice. In London the rate was equal to 16.1, against 12.8, 13.6, and 15.4 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 3.7 in Bournemouth, 4.0 in Barrow-in-Furness, 4.4 in Ealing, 4.9 in Swindon, 5.1 in Exeter, 6.2 in Gloucester, and 6.3 in Ilford, to 23.4 in Wigan, 23.5 in Stoke-on-Trent and in Middlesbrough, 23.7 in Carlisle, 24.5 in Gateshead, and 25.5 in Stockton-on-Tees. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 446, 677, and 947 in the three preceding weeks, further rose to 1,172, and included 321 in London, 93 in Liverpool, 62 in Birmingham, 38 in Stoke-on-Trent, 35 in Sheffield, 33 in Leeds, and 32 in Manchester and in Hull. Measles caused a death-rate of 4.1 in Oldham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 45, or 0.9 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of this number, 10 were recorded in Liverpool, 6 in Birmingham, and 2 each in London, Southend, Bootle, Blackpool, Sheffield, Sunderland, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,071, 3,216, and 3,318 at the end of the three preceding weeks, had further risen to 3,500 on Saturday, September 12th; 619 new cases were admitted during the week, against 414, 536, and 548 in the three preceding weeks.

In ninety-seven of the largest English towns 8,515 births and 5,259 deaths were registered during the week ended Saturday, September 19th. The annual rate of mortality in these towns, which had been 13.6, 14.4, and 15.2 per 1,000 in the three preceding weeks, fell to 15.1 per 1,000 in the week under notice. In London the death-rate was 15.6,

against 13.6, 15.4, and 16.1 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 3.1 in Southend, 5.5 in Bournemouth, 6.2 in Leyton, 6.3 in Ilford, 6.7 in Oxford, 7.0 in Hornsey and in Hastings, and 8.1 in Walthamstow, to 24.2 in Barnsley, 24.5 in Great Yarmouth and in Sunderland, 25.2 in Middlesbrough, 26.6 in Gateshead, and 27.9 in Stoke-on-Trent. The deaths of children (under 2 years) from diarrhœa and enteritis, which had been 677, 947, and 1,172 in the three preceding weeks, further rose to 1,223, and included 325 in London, 94 in Liverpool, 57 in Birmingham, 54 in Stoke-on-Trent, 51 in Manchester, and 50 in Sunderland. Measles caused a death-rate of 3.5 in Oldham, and diphtheria of 1.2 in Middlesbrough. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal cases of small-pox was registered during the week. The causes of 43, or 0.8 per cent. of the total deaths, were not certified either by a medical practitioner or by a coroner after inquest; of this number, 12 were recorded in Birmingham, 7 in Liverpool, 6 in Gateshead, 3 in Bury, and 2 in West Bromwich, in St. Helens, and in Sheffield. The number of scarlet fever patients under treatment in the Metropolitan Hospitals and the London Fever Hospital, which had been 3,216, 3,318, and 3,500 at the end of the three preceding weeks, had further increased to 3,669 on Saturday, September 19th; 551 new cases were admitted during the week, against 536, 548, and 619 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,145 births and 703 deaths were registered during the week ended Saturday, September 5th. The annual rate of mortality in these towns, which had been 13.8, 15.0, and 14.4 per 1,000 in the three preceding weeks, rose to 15.0 in the week under notice, and was 1.6 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 10.1 in Motherwell, 10.5 in Leith, and 10.8 in Hamilton to 18.1 in Glasgow, 18.8 in Paisley, and 18.9 in Ayr. The mortality from the principal infective diseases averaged 2.8 per 1,000, and was highest in Coatbridge and Greenock. The 365 deaths from all causes in Glasgow included 61 from infantile diarrhœal diseases, 13 from whooping-cough, 2 from measles, 2 from scarlet fever, and 1 from diphtheria. Three deaths from diphtheria were recorded in Aberdeen; from whooping-cough, 2 deaths in Greenock; and from infantile diarrhœa, 5 deaths in Edinburgh, in Dundee, and in Greenock, and 4 deaths in Coatbridge.

In the sixteen largest Scottish towns 1,048 births and 727 deaths were registered during the week ended Saturday, September 12th. The annual rate of mortality in these towns, which had been 15.0, 14.4, and 16.0 per 1,000 in the three preceding weeks, further rose to 16.5 in the week under notice, and was 1.3 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 9.4 in Falkirk, 11.0 in Ayr, and 12.3 in Perth to 19.9 in Edinburgh, 21.4 in Greenock, and 22.5 in Dundee. The mortality from the principal infective diseases averaged 3.1 per 1,000, and was highest in Paisley and Glasgow. The 554 deaths from all causes in Glasgow included 67 from infantile diarrhœal diseases, 13 from whooping-cough, 7 from scarlet fever, 3 from diphtheria, and 2 from enteric fever. Seven deaths from infantile diarrhœa were recorded in Dundee, 7 in Paisley, 6 in Edinburgh, and 4 in Greenock; and from scarlet fever 2 deaths in Leith.

In the sixteen largest Scottish towns 1,157 births and 699 deaths were registered during the week ended Saturday, September 19th. The annual rate of mortality in these towns, which had been 14.4, 16.0, and 16.5 per 1,000 in the three preceding weeks, fell to 15.9 in the week under notice, but was 0.8 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 7.6 in Motherwell, 9.4 in Ayr, and 10.2 in Kirkcaldy to 18.4 in Perth, 21.8 in Coatbridge, and 23.0 in Hamilton. The mortality from the principal infective diseases averaged 2.7 per 1,000, and was highest in Coatbridge and Hamilton. The 336 deaths from all causes in Glasgow included 54 from infantile diarrhœa, 6 from whooping-cough, 4 from scarlet fever, 2 from measles, and 2 from enteric fever. Two deaths from diphtheria were recorded in Edinburgh and 2 in Aberdeen, and from infantile diarrhœa 11 deaths in Dundee, 10 in Edinburgh, 4 in Greenock, and 4 in Hamilton.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, September 12th, 599 births and 394 deaths were registered in the twenty-seven principal urban districts of Ireland. These deaths represent a mortality of 17.0 per 1,000 of the aggregate population in the districts in question, or 1.8 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.9 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 17.1, in Dublin city 18.3, in Belfast 18.0, in Cork 17.7, in Londonderry 12.7, in Limerick 24.4, and in Waterford 22.8. The zymotic death-rate was 4.0.

During the week ending Saturday, September 19th, 556 births and 459 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 559 births and 394 deaths in the preceding period. These deaths represent a mortality of 19.2 per 1,000 of the aggregate population in the districts in question, as against 17.0 per 1,000 in the previous period. The mortality in these Irish areas was therefore 4.1 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 24.1 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 19.4 (as against an average of 17.8 for the previous four weeks), in Dublin city 20.8 (as against 19.0), in Belfast 17.6 (as against 18.7), in Cork 19.7 (as against 17.0), in Londonderry 11.0 (as against 11.4), in Limerick 17.6 (as against 19.3), and in Waterford 13.3 (as against 13.0). The zymotic death-rate was 4.4 as against 4.0 in the previous week.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following announcements are notified by the Admiralty: Fleet Surgeon ARTHUR GASKELL to the *Victory*, additional for Naval Division, Deal, as P.M.O., September 22nd; Fleet Surgeon G. First South Midland Mounted Brigade Field Ambulance.—Captain T. H. FORREST, M.B., to be Major, September 19th.

Third South Midland Field Ambulance.—Captain J. S. MATHER to be Major, September 19th. Lieutenant G. S. WILLIAMSON to be Captain, September 23rd.

First East Anglian Field Ambulance.—Captains to be Majors, September 26th: GERALD M. HEATHERINGTON, OCTAVIUS R. ENNION.

First East Lancashire Field Ambulance.—Captain G. W. FITZGERALD, M.D., to be Major, September 19th; Lieutenant W. R. DOUGLAS, M.B., to be Captain, September 19th. The date of appointment of the following Lieutenants is as now shown, and not as stated in the *London Gazette* of August 21st: A. M. MACKAY, August 5th; J. MORLEY, August 5th; F. S. BEDALE, August 8th.

Second East Lancashire Field Ambulance.—The following Captains to be Majors, September 19th: G. ASHTON, M.D., H. W. PRITCHARD. The date of the appointment of the following Lieutenants is as now shown, and not as stated in the *London Gazette* of September 4th: G. B. JAMESON, August 12th; F. C. BENTZ, August 15th.

Third East Lancashire Field Ambulance.—Captain E. H. COX, M.B., to be Major, September 19th. Lieutenant J. K. LUND to be Captain, September 19th. The date of appointment of the following Lieutenants is as now shown, and not as stated in the *London Gazette* of August 21st: F. K. TOMLINSON, July 6th; J. C. JEFFERSON, August 4th; N. H. H. HASKINS, August 9th; O. H. BLACKLAY, M.D., September 1st.

First West Riding Field Ambulance.—Major A. D. SHARP to be Lieutenant-Colonel, August 31st.

Third West Riding Field Ambulance.—Major J. W. STOKES to be Lieutenant-Colonel, August 31st. W. B. ALLEN, M.B., and R. A. STARK, M.B., to be Lieutenants, August 8th.

Third Southern General Hospital.—Captain R. E. HUMPHRY is seconded, September 19th.

Fifth Southern General Hospital.—Announcement substituted for that which appeared in the *London Gazette* of September 4th: Major JOHN RYFFIN to be Lieutenant-Colonel, September 5th.

First Northern General Hospital.—Major T. GOWANS, M.B., to be Lieutenant-Colonel, August 6th; SYDNEY J. CLEGG, M.B., to be Captain, September 30th.

Fifth Northern General Hospital.—Major L. K. HARRISON, M.B., to be Lieutenant-Colonel, August 6th.

First Northumbrian Field Ambulance.—Captain J. M. GOVER to be Major, August 23rd.

Third Lowland Field Ambulance.—Announcement substituted for that which appeared in the *London Gazette* of August 28th: ARCHIBALD C. MCMASTER, M.B., to be Lieutenant, August 10th. Announcement substituted for that which appeared in the *London Gazette* of August 21st: JAMES A. HENDERSON, M.B., to be Lieutenant, August 10th.

First Welsh Field Ambulance.—Major J. HOWARD-JONES, M.B., from attached to units other than Medical Units, to be Major, August 5th, and Major EVELYN J. R. EVATT, M.B., from the unattached list to be Major, September 30th.

Sanitary Officers.—Captain J. M. HAMILL, from attached to units other than Medical Units, to be Sanitary Officer to the 2nd London Territorial Division, September 23rd.

Sanitary Services.—R. BRIERCLIFFE, M.B., to be Captain, and is appointed Sanitary Officer, East Lancashire Territorial Division, September 1st.

Attached to Units other than Medical Units.—Captain F. G. PROUDFOOT to be Major, August 12th. Surgeon-Lieutenant W. MARLEY-CASSEL, from the Fifth (Cumberland) Battalion Border Regiment, to be Lieutenant, August 23rd; L. C. BRUCE, M.D., to be Lieutenant, September 19th; Major R. W. FORREST is seconded, August 30th; Captain W. H. GALLOWAY to be Major, July 26th; Captain G. W. SUTCLIFFE is restored to the establishment, September 23rd. The notice which appeared in the *London Gazette* of July 21st, announcing the resignation of Captain G. B. GILL, M.B., is cancelled. A. E. HINCES to be Lieutenant, August 31st; E. BROMET to be Lieutenant, September 23rd; Captain JOHN B. MCBRIDE to be Major, September 26th; Lieutenant CHRISTOPHER F. MURPHY to be Captain, September 1st; Surgeon-Lieutenant-Colonel CHARLES DOWNING is seconded, September 30th; Surgeon-Captain HENRY J. TAYLOR to be Major, September 30th; Captain EDGAR V. PHILLIPS, from the 5th Northern General Hospital, to be Captain, August 6th; Surgeon-Captain JONAS W. ANDERSON, M.B., from 4th Battalion Royal Welsh Fusiliers, to be Captain, September 30th; Captain WINSTAN ST. A. ST. JOHN resigns his commission on account of ill health, September 30th; Lieutenant ERIC D. GAIRDNER, M.D., to be Captain, August 10th; Lieutenant HUGH L. MUNRO, M.D., to be Captain, August 28th; Lieutenant ERNEST W. REED, M.B., to be Captain, September 1st; Lieutenant ALEXANDER G. LOVETT-CAMPBELL, M.B., to be Captain, September 3rd; Lieutenant CHARLES DOUGLAS, M.B., to be Captain, September 8th; GEORGE B. FORGE to be Lieutenant, August 8th; JAMES Y. MOORE to be Lieutenant, September 3rd; Captain CHARLES J. MARTIN, M.B., to be Major, September 30th; Surgeon-Captain JOHN LIVINGSTONE, M.B., from the Westmorland and Cumberland Yeomanry, to be Captain, September 16th; FRANCIS H. SPRAGUE to be Lieutenant, September 30th. The announcement which appeared in the *Gazette* of September 11th, appointing ARTHUR H. SMITH (late Captain and Honorary Major 8th (Ardwick) Battalion Manchester Regiment) to be Captain is cancelled.

YEOMANRY.

Bedfordshire.—Surgeon-Captain HENRY SKELDING, M.B., to be Surgeon-Major, August 10th.

Oxfordshire.—Surgeon-Lieutenant ARCHIBALD H. HOGARTH to be Surgeon-Captain, August 12th.

ROYAL FIELD ARTILLERY.

First Welsh Howitzer Brigade.—Surgeon-Major A. DAVIES, M.B., resigns his commission on account of ill health, and is granted permission to retain his rank and wear the prescribed uniform of his rank, September 19th.

INFANTRY.

Fifth Battalion East Surrey Regiment.—Surgeon-Captain JOHN E. BATES, M.B., to be Surgeon-Major, September 19th.

Vacancies and Appointments.

WARNING NOTICE.—Attention is called to a Notice (see Index to Advertisements—Warning Notice) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application

VACANCIES.

BANBURY: HORTON INFIRMARY.—House-Surgeon. Salary, £120 per annum.

BARNSTAPLE: NORTH DEVON INFIRMARY.—House-Surgeon. Salary, £100 per annum.

BELGRAVE HOSPITAL FOR SICK CHILDREN, Clapham Road, S.W.—Assistant Physician.

BIRKENHEAD: BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum.

BIRMINGHAM UNION.—(1) Third and Fourth Assistant Medical Officers at the Dudley Road Infirmary; salary, £170 and £160 per annum respectively. (2) Assistant Medical Officer at the Selly Oak Infirmary; salary, £160 per annum.

BLACKBURN COUNTY BOROUGH.—Temporary Resident Medical Officer at the Infectious Diseases Hospital. Salary, £200 per annum.

BOURNEMOUTH: ROYAL VICTORIA AND WEST HANTS HOSPITAL.—House-Surgeon. Salary, £100 per annum.

BRADFORD: ROYAL EYE AND EAR HOSPITAL.—House-Surgeon (non-resident). Salary, £200.

BRADFORD ROYAL INFIRMARY.—(1) Resident Medical Officer; (2) Male House-Surgeon. Salary, £150 and £100 per annum respectively.

BRENTFORD UNION.—First and Second Assistants to the Medical Superintendent of the Infirmary, etc. Salary, £225 and £200 per annum respectively.

BRISTOL CITY ASYLUM, Fishponds.—Second Assistant Medical Officer. Salary, £250 per annum, rising to £300.

BRISTOL GENERAL HOSPITAL.—(1) First and Second House-Physicians; (2) House-Surgeon; (3) Casualty House-Surgeon. Salary at the rate of £120 per annum.

BOOTLE HOSPITAL FOR INFECTIOUS DISEASES.—Resident Medical Officer. Salary, £150 per annum.

BURNLEY: VICTORIA HOSPITAL.—Second House-Surgeon. Salary, £135 per annum.

BURY ST. EDMUNDS: WEST SUFFOLK GENERAL HOSPITAL.—Resident Medical Officer. Salary, £120 per annum.

CAMBERWELL: PARISH OF ST. GILES.—(1) Assistant Medical Officer for the Infirmary; (2) Assistant and Junior Medical Officers for the Infirmary and Gordon Road Institution. Salary for (1) £190 per annum, increasing to £200, and for (2) at the rate of £200 and £180 per annum respectively.

CANCER HOSPITAL, Fulham Road, S.W.—Surgical Registrar. Honorarium, £100 per annum.

CAPETOWN CORPORATION.—Assistant Medical Officer of Health. Salary, £600 per annum.

CARDIFF AND COUNTY PUBLIC HEALTH LABORATORY.—Bacteriologist. Salary, £200 per annum, rising to £250.

CARDIFF: CITY MENTAL HOSPITAL.—Second Assistant Medical Officer (male). Salary, £250 per annum, rising to £280.

CHELTENHAM GENERAL HOSPITAL.—(1) House-Physician. (2) House-Surgeon. Salary, £100 per annum each.

CHESTERFIELD AND NORTH DERBYSHIRE HOSPITAL.—Senior House-Surgeon. Salary, £120 per annum.

COLCHESTER: ESSEX COUNTY HOSPITAL.—House-Surgeon (male). Salary, £100 per annum.

CONWAY AND PENMAENMAWR JOINT HOSPITAL BOARD.—Non-resident Medical Officer for Isolation Hospital. Salary, £55 per annum.

DEPTFORD BOROUGH.—Woman Sanitary Inspector and Health Visitor. Salary, £100 per annum, rising to £130.

DERBYSHIRE HOSPITAL FOR SICK CHILDREN.—Resident Medical Officer (female). Salary, £100 per annum.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—House-Physician. Salary, £75 per annum.

FLORENCE NIGHTINGALE HOSPITAL FOR GENTLEWOMEN, Lisson Grove, N.W.—Non-resident Medical Officer. Salary, £120 per annum.

GREAT YARMOUTH HOSPITAL.—House-Surgeon (male). Salary, £140 per annum.

HALIFAX ROYAL INFIRMARY.—(1) Second House-Surgeon; salary, £120 per annum. (2) Third House-Surgeon; salary, £100 per annum.

HARTLEPOOLS HOSPITAL.—House-Surgeon. Salary, £125 per annum.

HASTINGS: EAST SUSSEX HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton.—House-Physician. Honorarium, £5 5s. per month.

HULL ROYAL INFIRMARY.—(1) Senior House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively. (3) Honorary Surgeon.

KENT COUNTY ASYLUM, Chartham.—Third Junior Assistant Medical Officer (male). Salary, £250 per annum.

KING'S LYNN: WEST NORFOLK AND LYNN HOSPITAL.—House-Surgeon. Salary, £150 per annum.

LEICESTER ROYAL INFIRMARY.—(1) Resident House-Surgeons; (2) Assistant House-Surgeons.

LEICESTERSHIRE AND RUTLAND MENTAL HOSPITAL, Narborough.—Junior Medical Officer (male). Salary, £200 per annum.

LINCOLN COUNTY HOSPITAL.—Junior Male House-Surgeon. Salary, £100 per annum.

LIVERPOOL: ROYAL SOUTHERN HOSPITAL.—(1) House-Physician. (2) House-Surgeon. Salary, £60 per annum each.

LONDON COUNTY ASYLUM, Claybury.—Fifth and Sixth Assistant Medical Officers. Salary, £200 per annum, rising to £220.

MANCHESTER CORPORATION.—(1) Assistant Tuberculosis Officer; salary, £350 per annum. (2) Third and Fourth Medical Assistants at the Monsall Fever Hospital. Salary, £150 per annum each.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, rising to £200.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL EYE HOSPITAL.—Junior House-Surgeon. Salary, £80 per annum.

MIDDLESBROUGH: NORTH RIDING INFIRMARY.—Senior House-Surgeon (male). Salary at the rate of £100 per annum.

NEWCASTLE-UPON-TYNE: HOSPITAL FOR SICK CHILDREN.—(1) Senior Medical Officer. (2) Junior Medical Officer. Salary, £160 and £80 per annum respectively.

NEWCASTLE-UPON-TYNE POOR LAW INSTITUTION.—Second Assistant Resident Medical Officer (female). Salary, £150 per annum, rising to £200.

NEWPORT: ROYAL GWENT HOSPITAL.—Resident Medical Officer. Salary for first six months at the rate of £100 per annum, rising to £150.

NEW ZEALAND: UNIVERSITY OF OTAGO.—Professor of Clinical Pathology. Salary, £600 per annum, rising to £800.

NORWICH: NORFOLK AND NORWICH HOSPITAL.—(1) Physician; (2) Casualty House-Surgeon. Salary, £100 per annum each, rising to £150.

NOTTINGHAM EDUCATION COMMITTEE.—Third Medical Inspector. Salary, £300 per annum.

NOTTINGHAM: GENERAL HOSPITAL.—(1) Senior House-Physician; (2) Assistant House-Physician; (3) Assistant House-Surgeon. Salary for (1) £130 per annum, and for (2) and (3) £100 per annum each.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeon. Salary at the rate of £80 per annum.

RAMSGATE GENERAL HOSPITAL AND DISPENSARY.—Resident House-Surgeon. Salary, £120 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Resident House-Physician. Salary at the rate of £110 per annum.

ROTHERHAM HOSPITAL.—Assistant House-Surgeon (male). Salary, £110 per annum.

ROYAL EAR HOSPITAL, Dean Street, Soho, W.—Honorary Assistant Anæsthetist.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—(1) Male and Female House-Physicians and House-Surgeons. (2) Junior Obstetric Assistant.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.—Senior House-Surgeon. Salary, £100 per annum.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—Junior Resident Medical Officer. Salary at the rate of £70 per annum.

RYDE: ROYAL ISLE OF WIGHT COUNTY HOSPITAL.—Resident House-Surgeon. Salary, £115 per annum.

SALFORD ROYAL HOSPITAL.—(1) Resident Surgical Officer. (2) Casualty House-Surgeon. Salary at the rate of £120 and £100 per annum respectively.

SALISBURY GENERAL INFIRMARY.—Assistant House-Surgeon. Salary, £75 per annum.

SAMARITAN FREE HOSPITAL FOR WOMEN, Marylebone Road, N.W.—Assistant Surgical Registrar.

SHEFFIELD: CHILDREN'S HOSPITAL.—(1) House-Surgeon. (2) House-Surgeon at the East End Hospital. Salary, £150 and £120 per annum respectively.

SHEFFIELD ROYAL INFIRMARY.—(1) Two House-Surgeons. (2) Assistant House-Physician. Salary, £100 per annum each.

SHOREDITCH: PARISH OF ST. LEONARD.—Junior Assistant Medical Officer for the Infirmary. Salary, £150 per annum.

SOUTHAMPTON FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—House-Surgeon (male). Salary, £120 per annum, rising £10 annually.

SUNDERLAND ROYAL INFIRMARY.—House-Physician (male). Salary, £120 per annum.

SWANSEA GENERAL AND EYE HOSPITAL.—House-Surgeon. Salary, £125 per annum.

SWANSEA UNION INSTITUTION.—Resident Assistant Medical Officer. Salary, £295 per annum, rising £50 after five years' service, and £80 in lieu of house till accommodation be provided.

TRURO: ROYAL CORNWALL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

VENTNOR: ROYAL NATIONAL HOSPITAL FOR CONSUMPTION.—Asaistant Resident Medical Officer. Salary, £100 per annum.

WAKEFIELD: CLAYTON HOSPITAL.—Junior House-Surgeon. Salary, £150 per annum.

WAKEFIELD: WEST RIDING ASYLUM.—Assistant Medical Officer (male). Salary, £200 per annum, rising to £230, and upon promotion to £340.

WALSALL AND DISTRICT HOSPITAL.—Senior House Surgeon. Salary, £150 per annum.

WARRINGTON INFIRMARY AND DISPENSARY.—Junior House-Surgeon. Salary, £120 per annum, rising to £140 after six months.

WEST BROMWICH AND DISTRICT HOSPITAL.—Assistant Resident House-Surgeon and Anæsthetist. Salary, £100 per annum.

WEST BROMWICH UNION.—Medical Superintendent of the Walsall and West Bromwich School District. Salary, £800 per annum and £100 in lieu of house until residence is provided.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.—(1) Senior House-Physician; (2) Junior House-Physician. Salary for (1) £120 and for (2) £100 per annum.

WEST HAM UNION INFIRMARY.—Third Assistant Resident Medical Officer (male); salary, £180 per annum, increasing to £200.

WEST HARTLEPOOL COUNTY BOROUGH.—Medical Officer of Health. Salary, £500 per annum.

WESTERN GENERAL DISPENSARY, Marylebone Road, N.W.—Honorary Surgical Accoucheur.

WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—(1) Pathologist; (2) Resident Medical Officer; (3) House-Surgeon. Salary for (1) £230 and for (2) and (3) £125 per annum.

YORK COUNTY HOSPITAL.—(1) House-Physician. (2) House-Surgeon. Salary at the rate of £100 per annum each.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Alford (Aberdeen), Framlingham (Suffolk), Rathfriland (co. Down).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

DA CUNHA, F., M.B., Ch.B.Vict.Manch., Assistant Medical Officer of the South Manchester Township Workhouse.

HAMILTON, G., M.B., Ch.B.Edin., District Medical Officer of the Ashton-under-Lyne Union.

HUDSON, E., M.D.Durh., District Medical Officer of the Newport (Mon.) Union.

WADE, N. N., M.D.Edin., District Medical Officer of the Newport (Mon.) Union.

WALKER, John F., M.R.Lond., M.R.C.S.Eng., L.R.C.P.Lond., District Medical Officer and Public Vaccinator to the Rochford (Essex) Union, Western District.

WEBB, C. C., M.B., District Medical Officer of the Long Ashton Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Order or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTH.

BROWN.—On September 26th, at The Uplands, Minchinhampton, Glos., the wife of Alfred Brown, M.D.Edin., of a daughter.

MARRIAGE.

GREENFIELD—STANSFIELD.—On September 26th, at All Saints Church, Reading, by the Rev. W. J. Holloway, M.A., Percy, son of J. H. Greenfield, of Carisbrooke, I.W., to Elsie, daughter of T. W. Stansfield, M.D., of Reading.

DEATHS.

BALLANTYNE.—On September 28th, at 19, Rothesay Terrace, Edinburgh, E. Rosa Mathew, daughter of the late George Mathew, Esq., Worsted Lodge, Cambridgeshire, and wife of J. W. Ballantyne, M.D., F.R.C.P.Edin.

MAY.—On September 25rd, at his residence, High Cross, Tottenham, Edward Hooper May, M.D., F.R.C.S.Eng., in his 85rd year.

MAYBURY.—On September 6th, suddenly, the result of an accident, Horace Mansell Maybury, M.D., of 27, Almeida Street, Islington, in his 67th year, third son of the late William Augustus Maybury, M.R.C.S., and Clara Maybury, of Cedar Lodge, Frimley, Surrey.

DIARY FOR THE WEEK.

POST-GRADUATE COURSES AND LECTURES.

Post-Graduate Courses are to be given next week at the following schools, colleges, and hospitals:

DUBLIN: ROTUNDA HOSPITAL.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.

WEST LONDON POST-GRADUATE COLLEGE, Hammersmith, W.

[Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.]

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

NATIONAL INSURANCE ACTS.

NEW DRAFT REGULATIONS.

(A) THE QUESTION OF OVER-PRESCRIBING.

SINCE the appearance of the leading article on the above subject in our issue of September 26th we have received some correspondence in which certain points of considerable importance are raised. With these we propose to deal in order not only to try to satisfy our correspondents, but also to emphasize the importance which we think the profession should attach to this subject.

One correspondent asks that it should be stated precisely how the opinion that 2s., or even 1s. 6d., per head per year was a sufficient figure for drugs and appliances was arrived at. He goes on to adduce his own experience, which is that of one having a panel of 1,200; about 70 per cent. of these consult him. His average prescription "works out at about 8d. and totals out per year at about 3s. 6d. per head; perhaps a little more." That is, his prescription rate per patient is a little over 5 and the rate per insured person is 3½. On reference to Appendix I of the important Memorandum of the Scottish Commission on the question (page 195) it will be found that throughout the whole of Scotland—and we do not know that the circumstances there differ materially from those of England and Wales—the average number of prescriptions per insured person during 1913 was 1.97 in the counties and 2.35 in the burghs, and that in only two of the latter was the number of prescriptions per insured person more than 3. We cannot believe that in the areas where the doctors contrived to limit their prescriptions (as they did for example in Edinburgh, Falkirk and Perth) to less than 2 per insured person per annum, the insured persons were less efficiently treated than in the areas where more drugs were given. This really answers the question as to how the opinion was reached that 2s. or even 1s. 6d. is sufficient to cover the average cost of drugs per insured person. The evidence furnished by the Scottish Commissioners' figures and by the statement of the English Commissioners that they are in possession of similar figures seems sufficiently decisive on this point. When we find, for example, that in 26 Scottish counties the expenditure on drugs per insured person for 1913 was 1s. 6d. or less, and none exceeded the 2s. limit; that in the 25 burghs the majority did not exceed 1s. 6d. and only two exceeded the 2s.; that in 37 English counties 16 out of 37 provided their drugs at 1s. 6d. or less, the impartial observer is driven to one of two conclusions: Either the doctors in all the areas below the 2s. rate (many of which had not, so far as can be ascertained, any lower sickness incidence than the more expensive areas) have deprived their patients of drugs or appliances which they ought to have had; or the doctors in the more expensive areas have prescribed with a freedom which seems to require explanation. It was with the hope that some explanation might be found in the special circumstances of some of the more expensive areas that we urged Panel Committees to make full use of their powers of inquiry into this subject. We prefer to accept the explanation of extravagant prescribing in the expensive areas because the alternative would cast a slur on a great body of the profession. After careful inquiries in many quarters we are unable to find the slightest grounds for believing that in those areas where the drugs and appliances have cost less than 2s. per head, the patients have been deprived of the remedies they have a right to expect.

But our belief that extravagance is at any rate one of the causes in the more expensive areas is borne out over and over again by the investigations of Panel Committees. Many appeals by these committees to their constituents have been published, in which the latter have been told that the committees have convinced themselves by inquiry that, among a small section of the panel, medicines and appliances have been ordered unnecessarily, or, more often, that medicines have been ordered in quite unnecessarily expensive forms. In a recent report of a Panel Committee in a large industrial area it is pointed out that unnecessary expense has been caused by (*a*) multiplo prescriptions; (*b*) ordering malt and cod-liver oil in excessive quantities; (*c*) ordering medicines in small supplies with large doses; and (*d*) (and most important of all) ordering articles with proprietary names and fancy prices, when identically the same thing is available at probably less than half the price. These and similar statements are made by committees of medical practitioners—men who would, we may be sure, much rather find that the large cost of drugs and appliances was due to a really genuine need for them. When the reports of Panel Committees are compared with the statements made in the reports of the English and Scottish Commissions, one is bound to admit that there is need for the strictest inquiry and for the use of the disciplinary powers of the Panel Committees in some cases. Our correspondent suggests that as the demand for drugs and appliances "rests with the people," it might be arranged that patients could get a limited number of prescriptions in a year free, and after that pay for any others required. We demur entirely to the statement that the demand rests "with the people." The doctor has and must firmly retain the sole right of saying whether a patient needs medicines, and if so, which. It is because the demand for drugs is to such a great extent under the control of the doctor, that the responsibility for inquiry into demands on the fund exceeding the average is rightly imposed on the Panel Committees.

Another correspondent takes exception to the assumption in the article of September 26th that the existence of over-prescribing has been proved, and vigorously protests that practitioners who try not to differentiate in their prescribing between their panel and private patients are "unable to do the work within the allotted sum." We can only invite our correspondent to study the figures quoted above, and ask him what conclusion he arrives at as regards the thousands of practitioners in the kingdom who during 1913 treated their insured persons at less than 2s. a head. We are driven to the conclusion that, generally speaking, practitioners whose rate works out at more than 2s. per head would find on investigation that there were many ways in which, without any detriment to their patients, their drug bill could be cut down. The investigations made by Sir W. Plender and his staff of accountants into the practices—private, club, and hospital—in five selected towns seem to show that the cost of drugs and dressings supplied to all classes of patients was well under 1s. per head of the population. We do not desire to lay stress on this item because the conditions are now so much changed, but it is worth keeping in mind.

We submit that all the evidence goes to confirm the opinion of many expert pharmacists and a large number of general practitioners, together with the collective experience in many insurance areas—namely, that if prescribing were done by all practitioners on the panel in the

same way that it is by most, the average cost per insured person need not exceed 2s. per annum, while the patient would get all that was necessary.

We much regret that the correspondent last alluded to considers that our article of September 26th did not voice the feelings of the best kind of panel practitioners. As to that, we must venture to differ. We have much evidence of the distress which has been caused to responsible men who look after the interests of insurance practitioners in various areas, by the investigations of Panel Committees into this subject; and we hold the view very strongly that the Association is bound to use every means in its power to impress the importance of the subject on every panel practitioner.

To summarize the situation as it appears to us:

1. Experience seems to show that if properly used the drug fund of 2s. a head should cover all the legitimate needs of the insured patient.

2. In some areas the demands on the fund have exceeded this sum and the general tendency is a gradual rise in the demands on the fund.

3. Machinery is provided in the Regulations for dealing with such abuses as may be found, and the essential part of that machinery is in the hands of members of the profession, who may be trusted not to abuse it, the difficulty being to induce them to undertake a difficult and invidious task.

4. If, after that machinery is used fearlessly and thoroughly, it is proved that the increased demand on the drug fund is due to inadequate provision on the part of the Government the profession and the Association must agitate for more money.

5. If, on the other hand, it is proved to the satisfaction of the medical profession that the increased demand is due to extravagance, the fault should be placed on the right shoulders and the power of surcharge should be used.

The action outlined in 3 or 4 seems to be necessary in the ultimate interests of the profession, as that section of the community which demands a State whole-time service or the abolition of choice of doctor on the part of the patient has always insisted that the present method of employment of doctors and chemists is expensive and inefficient. To burk this question would be a very short-sighted policy, and if the demands on the Drug Fund continue to increase there seems to be a serious risk of radical changes in the Regulations which might prove very unpopular with the profession.

Once more we urge that every Panel Committee should deal with the subject in a thorough and systematic fashion.

(B) The Proposed Alterations in the Medical Agreement for 1915.

The Commissioners have issued to Insurance Committees a Memorandum (201/I.C.) in which they deal with proposals for alteration of the Regulations for 1915. In this Memorandum is embodied a model letter to doctors and chemists which, as it includes the gist of the Memorandum, is printed here, together with the suggested time-table, which is to govern the negotiations between doctors and chemists and the various Committees and Commissioners.

Model Letter for Issue by Insurance Committees to Doctors at the Appropriate Times (*see Time-table below*).

Sir,—I am directed by the Insurance Committee for the County of to inform you that the Insurance Commissioners have prepared draft regulations which will come into operation on January 1st, 1915, and will amend the existing Regulations for the administration of medical benefit. The material portion of the draft regulations is set out in Part I of the Appendix, which appears below.

In explanation I am to inform you that the preparation of revised Regulations to come into force on January 1st next had been engaging the careful attention of the Commissioners for some time prior to the outbreak of the present hostilities. In view, however, of the exceptional circumstances now prevailing (involving in many instances unusual demands on the time and attention of the members of the medical and pharmaceutical professions), it has been deemed advisable to postpone, until a more suitable time, any substantial revision of the Regulations. The amending Regulations have been prepared in order that the revision may not be postponed longer than is absolutely necessary, and also to afford an opportunity for dealing with unexpected problems which might conceivably arise consequent upon the abnormal conditions.

It should be pointed out that the amending Regulations in no way extend the powers of the Committee or the Commissioners as to the procedure for amending the terms of service, nor do they dispense with the requisite notices. They merely provide that in the event of the Commissioners fixing a date during the course of 1915 for the introduction of amendments in the terms of service such as would normally have been introduced at the end of the current year or are necessitated by unexpected problems arising from the abnormal conditions, that date shall to all intents and purposes conclude a "medical year"; and the whole series of notices prescribed by the current Regulations for the protection of practitioners will require to be given (reckoning backwards from the date fixed), thus preserving the right of the practitioner to terminate his agreement as from that date in the event of his being unwilling to continue to serve under the modified conditions. The Commissioners state that it is unlikely that any date would be fixed under the amending Regulations other than the first day of one of the "quarters" of the medical year, and that for general reasons it is highly improbable that any changes so arrived at will be arranged to take effect sooner than June 30th, 1915.

In accordance with the terms of Clause 1 of your agreement with the Committee the amending regulations will, as from the date on which they come into operation, be incorporated in and form part of that agreement.

I am further directed to give you notice on behalf of the Committee that it is proposed to alter the terms of the First Schedule to your agreement with the Committee in the manner set out in Part II of the Appendix below. The objects and effect of this alteration are as follows: Under the existing agreement the conditions of the grant which are set out in the First Schedule to the agreement provide that such certificates are to be furnished to an insured person as are required to be furnished in pursuance of the rules of the society of which he is a member or of the Insurance Committee, as the case may be. In view of the fact that the Commissioners propose to introduce a uniform scheme of certification, it is intended that the conditions of the grant for the year 1915 shall be altered so as to secure that as soon as the proposed procedure has been finally determined, the obligation laid on the practitioner will be to furnish certificates in conformity with that procedure and not, as heretofore, in accordance with the rules of the particular society or Committee.

If you desire your name to be removed from the medical list at the end of the current year, notice in writing to that effect must be given to the Committee by November 19th. Failing such notice you will be deemed, in accordance with Article 17 (2) of the Regulations, to have undertaken service during 1915, on the terms of your agreement as modified in the manner of which the Committee have given notice.

Appendix.

Part I.

By the National Health Insurance (Medical Benefit) Regulations, 1914, it is provided as follows:

The power conferred on the Committee by Article 16 of the principal Regulations of altering the terms of service of practitioners on the panel shall, as respects the year 1915, be deemed to include a power for the Committee to alter those terms as from such date in that year as the Commissioners may approve, upon giving notice of such alteration to those practitioners not later than eight weeks before that date, and accordingly the provisions of Article 16 and of paragraph (2) of Article 17 of those Regulations (which relates to the length of notice required to be given by the practitioner of his intention to withdraw from the panel) shall apply as though the date so approved were the commencement of a year.

Part II.

There shall be substituted in the First Schedule to your agreement with the Committee for the words from "that such certificates" in line 3 to "of calculating arrears" in line 10 the following words:

That certificates shall be furnished to every insured person, where he so desires and requests, in such form, on such occasions, and generally in such manner as the Commissioners may determine, for the purposes of any claim made by him for sickness or disablement benefit or for the purpose of determining or calculating the period during which sickness benefit is or would, but for any section of the principal Act disentitling him, have been payable, or of calculating arrears, and that unless and until the Commissioners so determine, such certificates shall be furnished for the purposes aforesaid as are required to be furnished in pursuance of the rules of the society of which the insured person is a member or of the Committee, as the case may be.

I am, Sir, your obedient Servant,

Clerk to the Insurance Committee.

TIME-TABLE.

17. It is considered by the Commissioners that the submission to them for approval of any proposed alterations, either as affecting the doctors or the chemists, cannot safely be postponed beyond October 19th, in view of the imperative necessity for the issue of the notices referred to by the prescribed dates. The Commissioners will require to be furnished, on the expiration of the periods respectively allowed to doctors and chemists for notifying their desire to discontinue service, with a report as to the extent to which (if at all) the strength of their panels are affected by resignations. The time-table will therefore be as follows:

DOCTORS AND CHEMISTS.

Conclusion of consultations and submission to Commissioners of proposed amendments both as regards doctors and chemists	*19th October.*

Doctors.

Issue of Notices, by registered post, to reach individual doctors not later than... ...	*5th November.*
Expiration of period for resignation ...	*19th November.*
Report to Commissioners	*20th November.*

Chemists.

Issue of Notices, by registered post, to reach individual chemists not later than... ...	*19th November.*
Expiration of period for resignation ...	*3rd December.*
Report to Commissioners	*4th December.*
Issue of new panel lists	*17th December.*

It will be noted that on account of abnormal conditions obtaining at present the Commissioners are virtually foregoing their right to make at the present time certain alterations in the regulations, and consequently in the agreements of doctors and chemists with committees. It is well known that if the war had not supervened important changes were in the air, and would no doubt before now have been submitted to the profession. As it is, the Commissioners reserve their right to make alterations in the Regulations before the usual time next year if this should be found necessary or desirable. Much will necessarily depend on the course of the war. If the Commissioners should, however, desire to bring new Regulations into force, say in March or April of next year instead of at the beginning of 1916, it will be necessary for them to give due notice to Local Medical and Panel Committees and individual doctors just as if the period were the normal time for alteration of the Regulations; but the memorandum indicates the improbability of any further alterations being suggested to take effect before June.

The only alteration in the agreement is that necessitated by the introduction, we presume at an early date, of the system of uniform certification, the need of which has been urged on the Commissioners by the Association, and also at conferences of the profession with the Commissioners. It must be clearly understood that if the proposed amendment to the agreement is accepted it binds the practitioner to give his certificates in the way laid down by the Commissioners when their uniform system is introduced, and practitioners should not forget that in securing the undoubted advantage of the one uniform form of certificate and avoiding the difficulties as regards signing certificates on one particular day in the week, they will be expected to give their certificates subject to those restrictions and safeguards which were outlined in the many conferences which have been held in different parts of the country between the Commissioners and members of Local Medical and Panel Committees. As the details of the new form of certification are not yet published the decision of the members of panels as to signing the altered agreement must be governed to a large extent by the indications of the intentions of the Commissioners given at these conferences.

EXPENDITURE ON MEDICINES AND APPLIANCES.

THE following Memorandum (587) regarding expenditure on medicines and appliances, founded on a special inquiry made by the Scottish Insurance Commission, was issued on October 5th:

MEMORANDUM.

I. *Variation in Rate of Expenditure as between Insurance Committees.*

At the close of the medical year ended January, 1914, it was observed by the Scottish Insurance Commission that the rate of expenditure in Scotland on drugs and appliances during the year had varied notably as between different Insurance Committees. The figures on which this observation was based were printed in tabular form in Appendix XXXIII, p. 540, to the Annual Report of the Commission for 1913-14. They are summarized in column 2 of Appendix 1 to this Memorandum.

For the thirty-one Scottish Counties the year's expenditure per insured person ran from 7½d. to 1s. 10½d. Twenty-six counties were within the rate of 1s. 6d. per insured person per annum, the amount of the Drug Fund proper, while none exceeded the limit of 2s., the total of the Drug Fund together with the (so-called) floating sixpence.

For the twenty-five burghs, the range of cost was from 8½d. upwards. The majority stood at less than 1s. 6d. Seven, however, had exceeded this figure, and had encroached upon, without consuming, the floating sixpence. Two burghs, as it appeared, had consumed the whole of the floating sixpence, and had passed the 2s. limit. Of these, however, it is possible that one, for reasons affecting its Index Register, had a lower drug bill than the records showed. The result of going beyond the 2s. mark is well known to be that the Committee concerned cannot meet the claims of its chemists without some discounting of bills.

II. *Upward Movement of Drug Fund Charges.*

The import of these facts was not diminished by a consideration of the expenditure of Committees on Drugs during the first quarter of 1913 as compared with the first quarter of 1914. The figures appear in Appendix II to this Memorandum.

Of the thirty-one County Committees all but four showed an increase in the first quarter of 1914. In two cases the rate of increase was over 100 per cent. In the remaining cases it ranged from 32 to 98 per cent. The average rate of increase for all counties was 52 per cent.

Of the twenty-five burghs all but one revealed an increase in the first quarter of 1914 as contrasted with the first quarter of 1913. In one case the rate of increase was 100 per cent. In the remaining cases it ranged from 9 to 95 per cent. The average rate of increase for all burghs was 46 per cent.

The difference on the average for counties and burghs together is equivalent to an increase as between the two quarters of 48 per cent. It reflects a well marked upward movement of charges upon Drug Funds under the Insurance Scheme.

III. *Special Enquiry.*

With the view of ascertaining the causes which underlay the varying experiences of Insurance areas, the Commission desired an Enquiry and Report to be made as to the prescribing and dispensing of medicines under the Insurance scheme. They obtained for these purposes the services of Mr. J. F. Tocher, D.Sc., F.I.C., Public Analyst and Lecturer on Statistics in the University of Aberdeen. It is the object of the Commission in this Memorandum to bring their Reporter's principal findings, together with their own views on the question of drug expenditure generally, to the knowledge of Committees.

IV. *Quality of Medicinal Treatment under National Insurance.*

A careful scrutiny was made by the Commission's Reporter of 156,424 prescriptions selected from Burgh and County areas, out of 3,018,598, the total Scottish prescriptions for the year, with respect to the character and quality of the drugs ordered for the insured.

It was found that insurance practitioners throughout Scotland had, as a rule, selected the most modern drugs and those of best repute, denying to their insured patients no medicines usually available in private practice.

V. *Variety of Drugs.*

An examination was made, with respect to drugs ordered, of a group of prescriptions for certain Scottish Burghs during a portion of the year.

It was found that in this group the drug most frequently ordered was Sodium Bicarbonate, which occurred 349 times out of a total of 8,940. Next in sequence came Sodium Salicylate and Glycerine, each of which appeared 327 times. They were succeeded by Tincture of Nux Vomica, 282 times, and Syrup of Orange, 262 times.

These were prescribed from 151 to 200 times—Infusion of Gentian, Compound Tincture of Camphor, Ipecacuanha Wine, Peppermint Water, Potassium Iodide, and Aromatic Spirit of Ammonia; and these from 101 to 150 times—Syrup of Tolu, Bismuth Carbonate, Potassium Bicarbonate, Extract of Malt with Cod Liver Oil, Quinine Hydrochloride, Chloroform Water, Phenacetin, Easton's Syrup, Ammonium Carbonate, Potassium Bromide, and Spirit of Nitrous Ether.

Of twenty-seven other drugs which were ordered, from 51 to 100 times the following were ordered from 85 to 100 times:—

Iron and Ammonium Citrate, Infusion of Senega, Spirit of Chloroform, Compound Syrup of Hypophosphites, and Compound Tincture of Cardamoms. Thirteen drugs were ordered from 41 to 50 times; 18 from 31 to 40 times; 29 from 21 to 30 times; 49 from 11 to 20 times; 86 from 2 to 10 times; and 54 once.

The total number of drugs which came under notice in course of the investigation of this group of prescriptions was 278.

VI. *Forms of Medicament.*

In order to determine the frequency with which various forms of medicament were ordered, an analysis was made of 54,834 prescriptions. It emerged that mixtures formed 56.17 per cent. of the total. Next in order came powders at 6.99 per cent.; then appliances at 5.90 per cent.; then liniments at 4.63 per cent., ointments at 4.33 per cent., and pills at 3.04 per cent. All other forms were less than 3 per cent. Gargles, Capsules, Cachets, Suppositories, Plasters, and Blisters were severally under 1 per cent.

VII. *Seasonal Influence.*

It is reasonable to expect that there should be a certain relation between the prevalence of sickness in an Insurance area at various seasons, as shown by the attendances and visits of doctors, and the cost incurred for drugs by the Insurance Committee during the corresponding periods. At the date of the Reporter's investigation, the medical records for three Scottish Insurance areas—two Counties and one Burgh—had been taken out. The numbers of visits and attendances for the year gradually rose in each case from a moderate figure in January, the month of the inception of Medical Benefit, to a high level in March, declining to a low figure in June and then gradually rising again to a high level in December. The number of prescriptions and the cost of drugs during the four quarters of the year in each area were in rough agreement with the number of attendances and visits.

Seasonal variation in the incidence of sickness, however, while it may explain the oscillation of the Drug Bill in any particular Insurance area, cannot account for the wide differences between the Drug Accounts of different Committees. Nor can these differences be wholly ascribed to local circumstances affecting the incidence of sickness in one area as compared with another. Any contention that the costly experience of a particular County or Burgh as contrasted with the majority of Scottish areas was in whole or in part the result of abnormally prevalent illness is probably in the meantime incapable of demonstration, owing to the disturbing effect of the differences in the methods of drug prescribing pursued in different areas.

VIII. *Prescription Frequency.*

Prescription frequency is one of the respects in which methods of prescribing reveal variety. A statement of the average number of prescriptions per insured person for the medical year ended January, 1914, in Scottish counties and burghs is shown in Column 3 of Appendix I to this Memorandum.

High prescription frequency, where it is known to exist in an area, might usefully form the subject of a conference between the Insurance and Panel Committees.

IX. *Price-Classes of Prescriptions.*

A similar difference was found to obtain as regards the price of prescriptions. An analysis was made by the Commission's Reporter of 520,630 scripts, representing approximately 650,700 prescriptions, for a period of six months in sixteen Scottish burghs. The prescriptions were divided into four classes. Class I included prescriptions whose price ranged from ¼d. to 1s. inclusive; Class II from 1s. 0½d. to 2s.; Class III from 2s. 0½d. to 3s.; and Class IV from 3s. 0½d. upwards. It was found that in Price-Classes I and II, which contained over 96 per cent. of all prescriptions, the general experience of the sixteen burghs was in Class I, 80.5 per cent. of prescriptions, and in Class II, 16.2 per cent. In one of the burghs the experience was for Class I, 75.3 per cent., and for Class II, 21.0 per cent. In this burgh, therefore, there were written some 5 per cent. more prescriptions of the class costing from 1s. 0½d. to 2s., and some 5 per cent. less of the class costing from ¼d. to 1s. There was a transference in the burgh as compared with the burghs generally from the lower priced class to the higher, without any indication that treatment in the burghs generally was to that extent inferior.

X. *Responsibility for Costly Prescribing.*

In several areas an investigation was made with the view of discovering whether high charges against the Drug Fund, in so far as due to prescribing customs, were the result of methods followed in the area by the practitioners as a whole, or were due to the procedure of a section of the profession, or of individual practitioners. The facts with regard to a particular burgh are here briefly summarized.

An examination was made of all prescriptions written by the burgh practitioners during the closing quarter of the medical year 1913-14 in order to determine the total charge per insured person on his list incurred by each practitioner, and the names of practitioners were then arranged in descending series according to the cost ascertained. The great majority of practitioners were found to be under 9d. per insured person for the quarter. A minority at the head of the list were over that figure.

There was nothing which seemed to indicate that this minority as a class were more assiduous in attendance on their patients than their more economical fellow-practitioners. An investigation was made of the number of visits and attendances given during the year, and the practitioners were again arranged in order, on this occasion according to the frequency of their visits and attendances expressed per insured person on their lists. In the resulting series a new set of names came to the surface. The costly prescribers were indifferently distributed over the remainder of the list.

The experience narrated would not appear to be peculiar to the burgh in question. In the view of the Commission's Reporter it is a minority of the medical profession in any area who run up a Drug Bill beyond the expected limits.

XI. *Excessive Quantities.*

The following are examples of methods of prescribing which have come under notice partly in course of the Enquiry, partly from other sources.

Six ounces of a syrup in teaspoonful doses were ordered by a practitioner. The amount was sufficient to last 12 days. The practitioner repeated the prescription five times running at intervals of 4 to 5 days.

A practitioner with a panel list somewhat over 1,000 ordered 100 lb. of malt extract in three months.

A practitioner ordered 2 lb. of compound lobelia powder at one time.

A practitioner ordered at one time 18 ounces of compound syrup of hypophosphites.

Twenty ounces of cod-liver oil were habitually ordered by a practitioner. The same practitioner frequently ordered forty ounces.

A practitioner frequently ordered at one time 4 lb. of petroleum emulsion. The same practitioner frequently ordered 6 ounces of glyco-heroin at one time.

One doctor gave five prescription orders in a month, the five bottles as prescribed containing more than two quarts of pure alcohol. The cost of the five forms was respectively £1 14s. 6d., 17s. 4d., 15s. 9d., 14s. 3d., and 14s. 3d., or in all, £4 16s. 1d.

A chemist by orders from one doctor supplied to eighty patients 76 lb. of cod-liver oil emulsion, and to forty patients 74 lb. of malt and cod-liver oil emulsion in one month.

As the legitimate claims upon the Drug Fund of a Committee may from time to time be high, owing to the price of certain indispensable remedies, it appears to the Commission to be matter for regret that any portion of the Fund should be consumed in defraying the cost of prescriptions which are excessive in quantity or which include preparations whose action, if any, is mainly nutritive. Waste, under such conditions, would appear to be almost inevitable and the risk of misappropiation great, as in a recent case where large quantities of cod liver oil, repeatedly prescribed for an insured person, were alleged to have been used on his whippets.

A method of dealing with the prescription of excessive quantities in an Insurance area is offered by Article 40 of the Medical Benefit Regulations, which runs as follows:

> Where it appears to the Panel Committee that by reason of the character or amount of the drugs or appliances ordered for insured persons by any practitioner or practitioners on the panel, the cost of the supply of those drugs and appliances is in excess of what may reasonably be necessary for the adequate treatment of those persons, the Panel Committee may, and if any representations to that effect are made to them by the Pharmaceutical Committee, shall, make an investigation into the circumstances of the case, whether in respect of the drugs and appliances ordered by an individual practitioner or generally as to the orders given for drugs and appliances by practitioners on the panel.
>
> The Panel Committee shall, after hearing the Pharmaceutical Committee and any practitioner concerned, make a report to the Committee, and if, after considering the report, the Committee are of opinion that an excessive demand upon the Drug Fund has arisen owing to orders given by a practitioner which are extravagant either in character or in quantity they may, if they think fit, make such deduction from the amount payable to that practitioner by the Committee as they think fit, and shall pay the amount so deducted to the credit of the Drug Fund: Provided that the practitioner shall be entitled to appeal to the Commissioners, whose decision shall be final.

XII. *Extravagant Prescribing.*

Insurance Committees are aware that certain drugs and medicinal substances are relatively cheap, while others are comparatively costly. Even of drugs which are in common and necessary use a number are somewhat expensive. Expense, however, by itself should never be a bar to the supply of a drug under National Insurance. The insured person, subject to the provisions of the Acts, is entitled to receive proper and sufficient medicines, but in order that he may do so restrictions must be imposed on improper or excessive prescribing. Preparations which are the same in substance may figure under different titles, varying in cost according to the proprietary or other names by which they are designated in prescriptions. In this connexion Circular 389 was issued by the Commission for the general guidance of Insurance Committees and others in endeavouring to arrive at a decision with regard to particular questions which might emerge, and in cases of reasonable doubt the Commission have been prepared to advise Committees, if requested to do so, without prejudice to their own position in determining matters formally submitted to them as a dispute.

If the Panel Committee in any Insurance area, acting as expert advisers on methods of prescribing, desire to inform the Insurance practitioners of the method which they as a Committee propose to adopt in the scrutiny of prescriptions, and if it be their considered opinion that certain preparations should not be supplied, or that certain others should only be prescribed in a particular form or under a particular name, they would in the view of the Commission be entitled to declare their method and express their opinion by means of a circular issued by them to practitioners on the panel. The specific compounds or preparations which the Panel Committee regard with disfavour will necessarily vary to some extent with local medical custom, and the views of the Panel Committee could not be held as binding on a particular doctor in the administration of a particular form of a remedy to a particular patient; but if the doctor, knowing the opinion of the Panel Committee to be opposed to the use of the particular form, and being advised of the method which they propose to adopt in scrutinizing prescriptions, elects to prescribe the remedy in the particular form, it would devolve upon him to justify his procedure and to show cause why he should not be surcharged.

Panel Committees in a number of Scottish areas have already taken useful action by circularizing their practitioners on these matters. In any area where the Panel Committee desire to take this course, the Insurance Committee should offer them every facility, by conference and otherwise, towards carrying out their design.

XIII. *Repeat Prescribing.*

In the course of an analysis, made by the Commission's Reporter, of 54,834 prescriptions it emerged that 66 per cent. were original prescriptions, while 34 per cent. were repeats. From these results it is estimated that during the medical year 1913-14, Insurance practitioners in Scotland wrote about a million repeat orders, valued at £30,000. There is a good deal to be said for the view that the ordering of repeats tends to careless or excessive prescribing. That risk may attach to the work of only a minority of practitioners, but unfortunately the majority may have to bear part of the resulting inconvenience. Repeat prescribing has the further disadvantage of limiting the insured person's choice of chemist. Several Scottish Insurance Committees, including some with large insured populations under their charge, have already declared against it. If any Committee after consideration were to resolve that repeat orders, bearing such words only as "Repeat," "Repeat Mixture," or their equivalents, and showing no prescription written out in due form, should not be paid for if dispensed by chemists, the Commission would raise no objection.

XIV. *Emergency Drugs and Appliances.*

In approving schemes of Committees for the issue to their practitioners of emergency drugs and appliances the Commission have required that the quantities ordered at one time should be restricted within definite limits. Their object in so determining has been to enable Committees to control the frequency and amount of such orders by reference to the number of insured persons on the panel lists of practitioners and other relevant circumstances.

Any Insurance Committee which has not yet submitted a scheme for approval by the Commission should now proceed to do so.

XV. *Unscheduled Appliances.*

The drug tariff under the Medical Benefit Regulations is the list of prices for drugs ordinarily supplied, and for prescribed appliances. There are ex-list drugs, not on the tariff, which may be ordered also, and the manner of calculating payment for these is provided for in the Regulations; but the only appliances which may be supplied are those named in the Second Schedule to the Regulations.

It has come under notice that in certain areas such appliances as douches, syringes, trusses, nebulizers, throat brushes, and jaconette have been ordered. Articles of this kind are not prescribed appliances; and if supplied should not be paid for by an Insurance Committee.

XVI. *Tuberculosis and the Drug Fund.*

Consideration of the prescriptions investigated in course of the inquiry indicated a certain amount of overlapping between Medical and Sanatorium Benefits. When substances commonly regarded as remedies for consumption figured in large quantities under the Drug Fund, the question emerged whether, owing to the failure of practitioners to write the appropriate index marks on prescription forms, the medicines of patients recommended for domiciliary treatment under Sanatorium Benefit were being improperly charged to the Drug Fund, or whether patients who were qualified for domiciliary treatment under Sanatorium Benefit were being retained for any reason under Medical Benefit. On either alternative the Drug Fund would be called upon to bear a burden from which it should be immune, and the general tendency to shortage would be accentuated.

The Commission are of opinion that procedure under this head is worthy of careful consideration by Committees.

XVII. *Temporary Residents.*

Similar precautions should be observed in the case of temporary residents receiving medical treatment within the area of a Committee. Care should be taken by practitioners to mark prescriptions for such persons in the manner directed by the Committee, in order that the cost may be duly charged against the Central Medical Benefit Fund.

The Commission recommend Committees to take steps with a view to protecting their Drug Funds against improper claims from this source.

XVIII. *Shortage of Drugs Owing to State of War.*

Reference may be made here to a serious question which has arisen since the close of the period covered by the Special Inquiry.

One consequence of the state of war now existing in Europe has been to produce in this country a shortage in the supply of certain drugs and prescribed appliances. In the case of some preparations it is probable that no further consignments can be obtained from Continental firms until the termination of hostilities; in the case of others it may be possible to procure quantities from sources not hitherto drawn upon. The duration of shortage will vary with different substances, to an extent which it is not possible at this juncture to foresee.

The question at issue with regard to the use of such articles is not wholly or mainly one of price. Nor is it one which solely affects the Insurance Medical Service. Apart from these considerations, it is essential at present that all existing stocks of remedies for disease should, as far as possible, be husbanded, by reserving drugs in which there is a shortage for cases to whose treatment they are indispensable, and endeavouring to provide for the needs of others by other remedies of similar action.

The whole position has been brought under the notice of practitioners by a statement recently issued from the Home Office; and the Commission are confident that the medical profession in the country will in this as in other matters prove equal to the exigencies of the time. They suggest that Insurance Committees for their part should, as far as possible, co-operate with Panel Committees in the adoption of any recommendations or other measures which may seem likely to prove of service.

XIX. *Conclusion.*

The Commission have no doubt that Insurance Committees will appreciate the necessity of taking appropriate steps to deal with the causes of wastage of Drug Funds which have been the subject of the foregoing comments.

The ordinary causes may be recapitulated as follows:

(1) High prescription frequency. (VIII.)
(2) Prescription of excessive quantities. (XI.)
(3) Extravagant prescribing. (XII.)
(4) Repeat prescribing. (XIII.)
(5) Excessive ordering of emergency drugs and appliances. (XIV.)
(6) Ordering of unscheduled appliances. (XV.)

(7) Confusion between medical and sanatorium benefit cases. (XVI.)
(8) Confusion between temporary residents and persons on panel lists. (XVII.)

The results of the existing state of war (XVIII) have not been included in the list. They are not ordinary causes and they stand in a class apart, but they impress with added force the need for a careful use of drugs.

It is not suggested that all the influences above enumerated are equally active in every insurance area. It is certain, however, that in many areas they are prevalent in varying degrees. A few Committees may appear to be exempt; yet it by no means follows from the fact that the funds of a Committee were sufficient last year for the payment of their chemists' accounts that excessive ordering did not take place. The economical prescribing of a majority of the profession in the area may have neutralized the influence of a costly minority. Further, the upward movement of Drug Fund charges in the country generally, as shown in Appendix II, suggests that precaution is called for. It appears to the Commission that the above list of causes, together with the recommendations made regarding them in the course of this Memorandum, might usefully engage the attention of all Committees, even of those whose recorded experience has not in the past been unfavourable.

The Commission are aware of the difficulty which has been felt by Committees in making a detailed scrutiny of prescriptions with a view to appropriate control. They recognize that an acquaintance with the facts is an essential preliminary to action, and they have now under consideration proposals whereby Committees may carry out a systematic check of prescriptions.

While, however, it is desirable that there should be a complete scrutiny of prescriptions in the manner above foreshadowed, it must nevertheless be kept in view that much may be done in the meantime towards the reduction of irregularities by the exercise of vigilance on the part of those concerned.

The procedure at present available for the repression of excessive or extravagant prescribing is embodied in Article 40 of the Medical Benefit Regulations, quoted under Section XI above. Under this Article duties of investigation are performed by the Panel Committee, and the actual process of surcharging, upon consideration of a report by the Panel Committee, is carried out by the Insurance Committee.

It is open to the Panel Committee to conduct an investigation at any time, as they may deem proper; but it is also obligatory upon them to investigate and report if representations are made to them by the Pharmaceutical Committee that excessive prescribing has taken place. In making representations the Pharmaceutical Committee should set forth their *prima facie* case; but the specific duty of investigation is not for them; it lies with the Panel Committee. Where, therefore, proper representations are made to the Panel Committee by the Pharmaceutical Committee, the Panel Committee, under the Regulations, are bound to investigate and to report to the Insurance Committee, who are similarly bound to consider the report and to make any surcharges which they may think appropriate.

While Insurance Committees will doubtless be prepared to assist, so far as it is in their power, the procedure above described, by conferring with the Panel and Pharmaceutical Committees, where necessary, as to their respective duties, and by seeking to remove any misunderstandings or other hindrances to full use of the formal provision, they would appear nevertheless, as authorities responsible for the disbursement of public money and for the standard of their own medical service, to have themselves a direct interest in accounts rendered against them, and so to be warranted, in the event of erroneous or excessive prescribing coming under their notice through another channel than that marked out by Regulation 40, in taking such steps as may be fair and reasonable to safeguard their Drug Fund.

It is probable that some of the facts disclosed by the Commission's Reporter as a result of his inquiry were known to individual members of Insurance Committees or of Panel and Pharmaceutical Committees in the areas concerned; and it cannot be supposed that these bodies, had they been informed of the facts by their members, would have failed to take suitable measures. There can be no doubt that in these cases intervention by Panel and Pharmaceutical Committees or by Insurance Committees would have led to salutary results. The intervention of Panel Committees would have been likely to be of special value in view of the opinion already referred to, that a minority of practitioners is in general responsible for excess prescribing. It therefore appears to the Commission that the appropriate Committees in Insurance areas should, wherever possible, proceed to take action now, and should not delay until such time as the system of checking mentioned above may become operative.

No system of check, however elaborate, can do more than disclose the facts. Responsibility for action, whether penal or otherwise, will continue to lie with Insurance Committees, who will act with the Pharmaceutical and Panel Committees where prescribed by the Medical Benefit Regulations.

APPENDIX I.

SCOTTISH INSURANCE COMMITTEES.

CORRESPONDENCE.

PROPOSED FEDERATION FOR PANEL AND LOCAL MEDICAL COMMITTEES.

DR. D. G. THOMSON (Thorpe, Norwich) writes: I would strongly urge all Panel Committees to read and approve the outspoken but sound letter of Dr. Fothergill in the SUPPLEMENT to JOURNAL of October 3rd, p. 187. Surely the comprehension, time and money of all practitioners is already sufficiently taxed by the numerous committees - British Medical Association, Local Medical, Panel, etc.— without another organization being dangled before their weary contemplation. Any worker in the Association knows that within the Association is to be found all the necessary machinery for the protection and furthering of the interests of all kinds of practice. The Norfolk Panel Committee will have nothing to do with the proposed federation of Panel Committees, and I hope other Panel Committees will be of the same opinion.

DR. H. C. MACTIER (Wolverhampton) writes: The letter of Dr. Fothergill *re* the proposed federation of the Local Medical and Panel Committees in the SUPPLEMENT of October 3rd has interested me much. The Wolverhampton Local Medical and Panel Committee at its last meeting on September 24th had the draft scheme before it, but decided to postpone consideration of it pending further information, since it appeared to them the cost of working such a comprehensive scheme would be prohibitive.

As an active member of the British Medical Association, I am convinced a new organization could not command the prestige of the older body; and the proposal that the British Medical Association should act as its subordinate and voice its opinions to the Government is to my mind so preposterous I believe it can only have emanated from that group in the profession who are, like my countrymen, "always agin the Government," no matter how it works for their benefit.

Should the proposed federation be floated I have no hesitation in predicting its failure, since it will be run by men whose views are at variance with those of their professional brethren, and who hope to coerce those brethren, as represented by the British Medical Association, into voicing the opinion of the minority.

Further, both the medical profession and the National Association of Insurance Committees have been for some time and now are in favour of co-ordination, preferably through a Ministry of Health, but this proposed scheme seems to me to make for disintegration, and for that reason would doubtless be welcomed by opponents of the profession, and our greatest asset in any future controversy would be lost.

MR. W. J. GREER (Newport, Mon.) writes: The letter of Dr. E. R. Fothergill does, I venture to think, good service to the profession in calling attention to what appears to be a frequently recurring danger to the solidarity of the medical profession, namely, the formation of new associations, which to a casual observer have some attraction. Those of us who have worked for the British Medical Association know thoroughly how adaptable that machine is to all the needs of the profession; the real difficulty is to induce men to use our magnificent organization.

I sincerely trust that Panel and Local Medical Committees will give this point of view most serious consideration. I feel that to set up an association which would contain potentialities of rivalry and disunion in our Association would be disastrous. We have recently increased our subscription to 2 guineas, and it is only reasonable to expect that for this increase all the necessary work on behalf of panel practitioners and others can be well done. All matters which affect panel practitioners sooner or later affect other members of the profession, hence the extreme necessity of concentrating and co-ordinating all our efforts in perfecting the only strong and virile body which can represent the whole mass of the profession, that is, the British Medical Association.

DR. JAMES W. SMITH (Ryton-on-Tyne) writes: I wish to oppose strongly the proposed federation for Panel and Local and Medical Committees as being detrimental to the interests of the British Medical Association.

⁂ Other letters on this subject have been received, but their publication is unavoidably postponed.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

DORSET AND WEST HANTS BRANCH.—Dr. Frank Fowler, 29, Poole Road, and Mr. Percy A. Ross, Kensington, Boscombe Spa Road, Bournemouth, Honorary Secretaries, give notice that the autumn meeting of the Branch will be held at the Hôtel Mont Dore, Bournemouth, on Wednesday, October 21st, at 3 p.m., when Dr. Eleanor C. Bond, Vice-President, will open a discussion on uterine haemorrhages. Election of officers for 1915-16. The Bournemouth practitioners invite members to luncheon at 1.30 p.m., and will be pleased to see members and ladies at tea after the meeting.

Vacancies and Appointments.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, OCTOBER 17TH, 1914.

CONTENTS.

FREE MEDICAL ATTENDANCE TO DEPENDANTS OF MEN SERVING WITH THE COLOURS.

THE following letter has been addressed to the chairmen of county councils, the lord mayors or mayors of boroughs, and the chairmen of urban district councils in England and Wales by the Secretary to the Government Committee for the Prevention and Relief of Distress. The letter and memorandum do not apply to Scotland and Ireland, where special arrangements are being made, but it is understood that the memorandum applying to Scotland is practically in the same terms as that printed below.

Local Government Board, Whitehall, S.W.,
10th October, 1914.

Sir,—I am directed by the Government Committee on the Prevention and Relief of Distress to inform you that a scheme has been devised for providing free medical attendance with medicine and appliances to dependants of soldiers and sailors serving with the colours. A memorandum explaining how the scheme is to be put into operation is enclosed.

As will be seen from the memorandum, the scheme originated in an offer of free voluntary assistance by the British Medical Association and the Pharmaceutical Society of Great Britain. In view of the generosity of the offer and in order to ensure the smooth working of the scheme, the Government Committee recommend that representatives of the doctors and chemists should be appointed to the local representative committee. The local secretary of the British Medical Association and the local secretary of the Pharmaceutical Society will be glad to suggest suitable names. The names and addresses of the local secretaries are given below.—I am, Sir, your obedient servant,

A. V. SYMONDS,
Secretary to the Government Committee.

Local Secretary, British Medical Association:

Local Secretary, Pharmaceutical Society:

The following circular (1/D.M.T.) has been issued to local representative committees in England and Wales:

GOVERNMENT COMMITTEE ON THE PREVENTION AND RELIEF OF DISTRESS.

Memorandum relating to the Provision of Free Medical Attendance and Medicine to Dependants of Men serving with the Colours.

It will probably be within the knowledge of the local representative committee that the British Medical Association and the Pharmaceutical Society of Great Britain recently addressed a joint letter to the Government, stating that, in view of the marked desire shown by doctors and pharmacists throughout the country to be of assistance in the present crisis, they felt justified in promising the co-operation of the medical and pharmaceutical professions in a scheme for the provision of medical attendance without charge, and medicine and appliances at cost price, to dependants of men serving with the colours, except those whose circumstances are such as to render them unsuitable recipients. The letter further offered the assistance of the Association and the Society in organizing the service.

This offer has been gratefully accepted, and the Government Committee on the Prevention and Relief of Distress have been in communication on the subject with the National Relief Fund Committee, who have undertaken to defray for the present, out of that fund, the cost price of the medicine and appliances supplied in connexion with the scheme.

A special committee (including representatives of the British Medical Association and the Pharmaceutical Society, with the Duke of Devonshire as chairman) have been constituted for the purpose of bringing the scheme into operation on a properly organized and comprehensive basis. The necessary arrangements having been made by this committee, the British Medical Association and Pharmaceutical Society communicated with the individual members of the medical and pharmaceutical professions, informing them of the detailed arrangements adopted and inviting their co-operation. To this appeal a generous response has been received from doctors and chemists in all parts of the country, intimating their willingness to give their services in accordance with the scheme, as set forth below.

The cordial co-operation of local representative committees in the scheme is accordingly invited.

The special committee charged with the duty of bringing the scheme into operation will be pleased to advise on any points of difficulty which may arise. Communications should be addressed to, "The Joint Secretaries, Naval and Military Dependants (Medical Treatment) Committee, Wellington House, Buckingham Gate, London, S.W." Postage need not be prepaid on communications so addressed.

10th October, 1914.

Arrangements for the Provision of Free Medical Attendance and Medicine to Dependants of Men serving with the Colours.

1. The person requiring medical assistance will apply to the local representative committee either direct or through the local branch of the Soldiers' and Sailors' Families Association. In areas where dependants are being dealt with by the local branch of the Soldiers' and Sailors' Families Association, applications made to the branch will be dealt with thereat, the branch being furnished for the purpose by the local representative committee with a supply of the medical book referred to below. Where local circumstances so require, arrangements can be made for local branches of the Soldiers' and Sailors' Families Association to apply direct, in the manner indicated in paragraph 17 below, for supplies of the medical book.

2. Upon being satisfied that the applicant is dependent upon a man serving with the colours, the committee or the local branch, as the case may be, will issue a medical book, unless they have reason to believe that, in any particular case, the means of the applicant are such that he or she should not receive free medical attendance. It will not be necessary to make the detailed inquiries which are required in the other cases which come before the committee or branch, but representations made by doctors or chemists or information in the possession of the committee will indicate in particular cases that, in view of the means of the applicant, he or she should not receive the benefit of the scheme. Medical books should not, of course, be issued to persons entitled to medical benefit under the National Insurance Act. In making arrangements for the issue of medical books the committee will doubtless recognize the necessity for providing special facilities in rural and distant parts of the area.

3. A specimen copy of the medical book is enclosed, and a supply is being forwarded to the local representative committee under separate cover.

4. It will be observed that the book is available for the dependant of the soldier or sailor to whom it is issued. In cases of emergency, however, a book may be used to obtain treatment for another member of the family dependent on the particular soldier or sailor, but application should be made as soon as possible in such cases for a separate book for that member.

5. Before issue each book should be completed by the insertion of the requisite particulars on the front page and in instruction 8 on page 3 (*see* paragraph 10 below). The address of the local representative committee or the local branch of the Soldiers' and Sailors' Families Association issuing the book may conveniently be inserted in the space provided on the front page by means of a rubber stamp.

6. The book will be accepted as evidence of bona fides by all doctors and chemists who have offered their services, and must be produced whenever medical attendance or medicine is required. It will be open to doctors or chemists to make representations to the committee where it would appear that the circumstances of a person applying for treatment or medicine with a medical book make it unnecessary for him or her to be admitted to the benefits of the scheme.

7. The patient is instructed to present the book to his or her usual doctor if that doctor's services are available under these arrangements, or, if not, to the nearest available doctor.

8. Any medicine or appliance required will be prescribed by the doctor on one of the prescription forms in the book. The book will be handed back to the patient, and it must then be taken to the patient's usual chemist if his services are available under these arrangements, or, if not, to the nearest available chemist. In rural areas where no chemist is available the medicine and appliances will be supplied by the doctor. The appliances which may be supplied under these arrangements are enumerated on page 4 of the medical book.

9. Prescriptions for the medicine or appliances supplied will be detached from the book, retained by the chemist (or doctor), and transmitted by him, not less frequently than once a month, to the Pharmaceutical Society of Great Britain, at 17, Bloomsbury Square, London, W.C., who will deal with them. Payment for medicine will be made direct to the individual chemist or doctor under arrangements conducted centrally.

10. A medical book is current for one month from the date of issue. Upon the expiration of that period the medical book should be renewed, if necessary, for a further period, either by an endorsement on the front page or by the issue of a new book, as the case may be, according to the number of unused prescription forms in the book. It is suggested that the old book should be endorsed if six or more prescriptions remain for use, and that a new book should only be issued if a less number is available.

11. In the event of the prescription forms being exhausted during the currency of the book, the doctor will sign in the space provided on the back page. As in these cases the patient will be actually under treatment, the committee or local branch, as the case may be, will doubtless arrange for a new book to be issued forthwith.

12. Whenever a new book is issued on the surrender of an old one the doctor's name on the latter should be inserted on the new book by the committee or the branch.

13. A list should be kept by the local representative committee of all books issued, together with the date of issue, for the purposes of a return which will be required to be furnished by the committee periodically. A form for use in connexion with this return will be issued later. Where medical books are issued by the local branch of the Soldiers' and Sailors' Families Association, the branch will furnish the local representative committee weekly with a list of the books issued by the branch.

14. A list of the doctors and chemists who have offered their services in the area of the local representative committee on the terms and conditions set forth herein will be forwarded to the committee within a few days. The committee is asked to consider at an early date the most convenient method of making the information available to persons to whom medical books may be issued. Copies of the list might with advantage be furnished to the offices of all subcommittees of the committee and to the local branch office of the Soldiers' and Sailors' Families Association. The question of any steps to be taken to give such further publicity to the list as may be necessary is one upon which the representatives of the doctors and chemists should be consulted. Care should be taken to indicate on page 3 of each medical book issued the place most convenient to the applicant where the list may be seen. Printed copies of the list will be supplied for distribution purposes on receipt of information as to the number required. (See paragraph 17 below.)

15. As indicated above, information regarding the detailed arrangements has already been furnished to the doctors and chemists concerned. It will not, therefore, be necessary for the committee to issue any circular to them on the subject. An announcement indicating the nature of the arrangements might, however, be inserted in the local press, and any other suitable steps should be taken to make them known to persons for whose benefit they have been devised.

16. A copy of this circular is being sent to the local branch of the Soldiers' and Sailors' Families Association.

17. Applications for copies of this circular, or for further supplies of the medical book, or other matter, should be made to "The Joint Secretaries, Naval and Military Dependants (Medical Treatment) Committee, Wellington House, Buckingham Gate, London, S.W." Medical books should be requisitioned at least ten days before the supply will actually be required.

18. In conclusion, the duties of the local representative committee in connexion with the scheme outlined above may be briefly summarized as follows:

(*a*) To arrange for the issue of medical books to suitable recipients; and

(*b*) To keep a list of persons to whom books have been issued.

The medical book contains prescription forms with duplicating paper and duplicating forms, and a set of rules which the patient must observe. The book is endorsed to the effect that it "will enable the undermentioned, being dependant on (name of soldier or sailor), who is serving with H.M. forces, to receive free medical attendance from Dr. ———— and free medicine for a period of one month up to and including ————." It is indicated that the medical attendance under these arrangements does not include attendance at confinement, and there is a note to the effect that in cases of emergency the book may be used to obtain treatment for another member of the family dependent on a soldier or sailor, but that application should immediately be made to the local committee for a separate book for that member.

INSURANCE ACT COMMITTEE.

The following letter has been addressed to the honorary secretaries of Panel Committees and Local Medical Committees and Divisions and Branches:

October 13th, 1914.

Dear Sir,—The Insurance Act Committee of the Association, at its meeting on Friday, October 9th, discussed several matters in connexion with the pending revision of Medical Benefit Regulations and the agreements between doctors and Insurance Committees, and instructed me to inform the secretaries of all Local Medical and Panel Committees of their views on the points dealt with in detail below.

Regulations and Agreements for 1915.

1. Local Medical and Panel Committees no doubt appreciate the fact that owing to the present unsettled state of the country the Commissioners are practically foregoing their right to make alterations in the Regulations until some more convenient time, and are taking power to reopen the question at any period next year, not waiting for the end of the insurance year if it should be found expedient to deal with the matter earlier. This seems to the Committee reasonable in the circumstances, especially as no alteration in either Regulations or Agreement can be made without the prescribed two months' notice being given.

2. The only point of importance which arises under the alteration of the Agreement is the power taken to require practitioners to give their certificates in future in a form prescribed by the Commissioners instead of, as at present, on forms prescribed by the various approved societies. This means that the various safeguards (which the Commissioners have informed conferences with the Panel Committees all over the country form a necessary part of the new system of uniform certification) will form part of the scheme, and practitioners in signing their agreements must be prepared for this. In view, however, of the persistent demand on the part of the profession for a uniform method of certification the Insurance Act Committee believes that the advantages of the scheme so far as it is known far outweigh any possible disadvantages to the profession. The Committee therefore does not think that the

proposed early introduction of the new scheme need prevent any practitioner from signing the agreement for 1915.

Arrangements re Drug Tariff for 1915.

3. The Committee has been in conference with representatives of the Pharmaceutical Society of Great Britain, and has arrived at certain provisional arrangements with that body which they believe will be welcomed by all insurance practitioners.

The Use of the Term "Aqua."

4. The representatives of the Pharmaceutical Society have agreed to urge the Pharmaceutical Committees throughout the country to agree to the insertion in the tariff of words which will provide that where the term "aqua" is used in an insurance prescription it will be taken as meaning ordinary water. There will thus be no need in future if this arrangement is carried out for the use of the word "font," to show that distilled water is not required. There will, of course, still be a price in the tariff for distilled water when it is specifically prescribed as "aqua destill.," and distilled water would necessarily be used where the use of ordinary water would lead to a dangerous incompatability.

Prices of Drugs Affected by the War.

5. At the Conference above mentioned the representatives of the Pharmaceutical Society raised the question of the pricing of a certain number of drugs, the prices of which have been affected by the war. It would be impossible at the present moment to fix prices for these drugs in any tariff, and pharmacists naturally desire to avoid the necessity for doing this periodically in each insurance area, as this would possibly result in different prices being fixed in different areas, and would in any case entail a needless multiplication of labour. The suggestion has been made by the Pharmaceutical Society and approved by the Insurance Act Committee, subject, of course, to the approval of the Panel Committees in the country, that in the forthcoming tariff all such items as are above referred to should be marked with an asterisk, and that the prices of these drugs should be settled each month centrally by conference between three representatives of the Pharmaceutical Society and three representatives of the British Medical Association, the latter representatives being, of course, practitioners who are members of Local Medical or Panel Committees, and fully conversant with the subject. The final decision as regards the prices of such articles rests with the Commissioners, but we have reason to believe that the Commissioners would be willing to accept the decision of the representatives of the two bodies above mentioned when they were agreed, and would settle the price or prices at issue when the two parties could not agree.

6. The above arrangement appears to the Insurance Act Committee to be a reasonable one and one which would save a great deal of trouble to both Panel and Pharmaceutical Committees. If your Committee agrees with the suggestion, it is hoped that you will inform the Insurance and Pharmaceutical Committees of your area to that effect. If this is done generally throughout the country and a considerable majority of the Insurance Committees agree to it, we have little doubt that the system will be adopted by the Commissioners for general use. It must be understood that the Pharmaceutical Society attaches a good deal of importance to this suggestion. If the Panel Committees do not fall in with this suggestion, it is probable that they may find considerable difficulties put in the way of settling the distilled water question, which we know has all along been a serious difficulty with the profession.

If the arrangements as regards the pricing of drugs receive general approval, the first meeting of the representatives of the Pharmaceutical Society and the British Medical Association will be held about December 15th.

7. It is suggested that the prices of the other items of the tariff remain for the present unaltered. The Association has for some time had under consideration the question of the general revision of the tariff, but this is not possible in the short time now at the disposal of the profession, and would doubtless be resisted by the pharmacists, pending the deliberations of the Departmental Committee, to which the whole matter has been referred for consideration and report.

Regulations regarding Supply of Drugs and Appliances.

8. The Committee has given a considerable amount of attention to the recent circular of the Insurance Commissioners (Memorandum 193 I.C.) dealing generally with the question of supply of drugs and appliances, and is of opinion that the principle of co-operation between Panel Committees, Pharmaceutical Committees, and Insurance Committees in the necessary checking and statistical analysis of prescriptions by a single staff under the joint control of three Committees is a sound one. The Committee would, however, urge Panel Committees to see that in any such arrangements their powers under Regulation 40 are not interfered with—that is to say, that care should be taken that a clear line of demarcation is drawn between the "necessary checking and statistical analysis" and the duties imposed on the Panel Committee of investigating into the circumstances of each case of alleged over-prescribing and making a report to the Insurance Committee.

9. As regards the cost of the triple arrangement suggested by the Insurance Commissioners and already adopted in some insurance areas, the Insurance Act Committee is of opinion that in view of the statutory duties of the various committees concerned a reasonable arrangement would be that the Insurance Committee should pay one-half and the Panel and Pharmaceutical Committees each a quarter of the total cost.

Repeat Mixtures.

10. The Insurance Act Committee considered representations which have been made to it from various parts as regards the advisability of allowing the use of "Rept. Mist.," and on this question consulted the representatives of the Pharmaceutical Society. The opinion of both bodies is that it is desirable that Panel and Pharmaceutical Committees in every area should come to an arrangement whereby the use of "Rept. Mist." should be limited to a period not exceeding one month, the date of the original prescription being stated on each repetition.

Conference between British Medical Association and Pharmaceutical Society.

11. It has been agreed that regular conferences be held from time to time between representatives of the British Medical Association and Pharmaceutical Society, and the latter body has asked that the questions of over-prescribing and the administrative expenses of Panel and Pharmaceutical Committees be placed on the agenda of the next conference.

Necessity of Keeping Full and Correct Records.

12. My Committee instructs me to ask the secretaries of Local Medical and Panel Committees to take the first opportunity of impressing once more on the practitioners on the panel how important it is that they should keep full and correct records of all their insurance work. In the early part of this year the Committee, believing that the question of the remuneration of practitioners acting on the panel might be raised by the Government during 1914, tried to collect a considerable body of figures on which they could rely. The Committee was surprised to find evidence of considerable laxity among practitioners in regard to this important question. It is probable that no attempt will be made for the present moment by the Government to revise the terms of remuneration under the Insurance Act, but the profession must be prepared to face this question when the time comes, and my Committee is convinced that it will not be possible to make out a satisfactory case unless all panel practitioners will take the trouble to keep a record of every item of work done. I trust you will urge this matter upon the attention of the panel practitioners in your area, so that when we next attempt to collect information we may get a much better result than we did last time.

Transfers at End of Insurance Year.

13. Last year many abuses in connexion with the transfer of patients at the end of the insurance year were brought to the notice of the Association and were submitted to the Commissioners and General Medical Council with results which were only partly satisfactory owing to the difficulty of substantiating all the evidence. The Commissioners, however, assured the Association that in their opinion the then newly established medical card system would abolish many of the abuses complained of. The Committee trusts that in every area, and especially those where combinations of workmen or approved societies exist, great care will be taken to ascertain whether any organized attempt is being made to transfer patients from the practices of individual doctors to those connected with the combinations above referred to, and I shall be glad to advise how to proceed in any case if the matter be brought to my notice before any local complaint is laid, and particularly before any legal advice has been taken. The Association will take all steps in its power to suppress attempts to organize wholesale transfers, and will be grateful to Local Medical or Panel Committees if they will at once bring any such cases to my notice.

Appointment of Local Medical and Panel Subcommittee.

14. The Insurance Act Committee has decided that it is desirable in the interests of practitioners who are in agreement with Insurance Committees to establish a strong Subcommittee with the above title and with the following reference:

To consider all subjects referred to it by the Insurance Acts Committee, and to take action when authorized; to keep in close touch with and assist in the co-ordination of all Local Medical and Panel Committees, advising them on all circulars, memorandums, and documents issued locally or centrally having reference to the medical service under the Insurance Acts; and generally to advise the Insurance Acts Committee.

The Subcommittee will consist of from 13 to 16 members, all of whom, with the exception of three who may be co-opted, must be members of Local Medical or Panel Committees. The composition of the Subcommittee is not yet settled, but it is hoped to announce it very shortly in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL. The Insurance Act Committee hopes that Local Medical and Panel Committees will make full use of this Subcommittee, and will be glad of any suggestions for making it helpful to those committees.

15. I shall be glad to hear at an early date from Secretaries of Local Medical and Panel Committees as to what their committees have done in regard to the suggestion made in paragraph 5 concerning the pricing of drugs affected by the war.

16. This letter is being sent to the Chairmen of Local Medical and Panel Committees in cases in which we have been informed that the secretaries are away on military duty and do not know who is acting as secretary. In some cases we have not been informed of the name of either Chairman or acting Secretary, and have been obliged to send the letter c/o the Clerk of the Insurance Committee. It will greatly facilitate our work and yours if notices as to any changes in the personnel of the officers of the committees are notified here promptly, and I should esteem such information as a great favour.

I am, yours faithfully,
ALFRED COX.
Medical Secretary.

To Honorary Secretaries of Panel Committees and Local Medical Committees and Divisions and Branches.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

PANEL COMMITTEE.

Alleged Excessive Prescribing.

A SPECIAL meeting of the London Panel Committee was held on October 13th to consider a proposal that the Pharmacy Subcommittee should be authorized to conduct inquiries in cases in which excessive or extravagant prescribing was alleged against practitioners. The Regulations merely stated that the Panel Committee shall hold inquiries, and in practice it would not be convenient for a body having so considerable a membership to do so.

Dr. R. V. DONNELLAN moved an amendment that the opinion of the Commissioners be obtained as to the legality of the Panel Committee deputing its duties. It was stated, however, that the Commissioners had already expressed the opinion that such a course was legal, and it was pointed out that in each case the findings of the Subcommittee would be reported to the Panel Committee, and each practitioner would have the right of appeal to the Commissioners.

Dr. HOGARTH declared that there could be no doubt that excessive prescribing had been going on. The following examples from prescriptions were given by the CHAIRMAN (Dr. H. J. Cardale): Ordering urotropin under that name; ordering 16 oz. cough mixtures, quinine and iron mixtures, and bismuth mixtures; 8 lb. of cod-liver oil within a week; the repetition of prescriptions at unduly short intervals, etc. The amendment was withdrawn, and the Committee authorized the Pharmacy Subcommittee to hear evidence and to report its findings.

The Question of "Rep. Mist."

An informal discussion took place in which a circular issued by the Insurance Committee deprecating the use in prescriptions of the form "Rep. mist." was criticized. It was objected that the Insurance Committee ignored the fact that the Panel and Pharmaceutical Committees had come to an agreement that the form "Rep. mist." should be permitted, provided that it was used only in the same calendar month as the original prescription and that the name and address of the patient appeared on each prescription form. It was reported that a letter of protest had been sent to the Insurance Committee.

Representation of the Local Medical Committee.

The CHAIRMAN stated that there had been considerable difficulty in finding members of the Local Medical Committee who were able to serve on the Panel Committee, in pursuance of a recent decision that representation should be given on the Panel Committee to the Local Medical Committee, Mr. W. McAdam Eccles and Dr. Burnhill had intimated that they could not act as co-opted members, and there was one other vacancy.

The Present to the Red Cross Society.

It was reported that an ambulance for presentation to the British Red Cross Society had been purchased for £550, and that £20 was still required to complete this sum.

LONDON MEDICAL COMMITTEE.

SIR,—I have resigned my seat on the London Medical Committee. In the present condition of the country I do not wish to enter into my reasons.—I am, etc.,

London, W., October 3rd. FRED. J. SMITH.

CORRESPONDENCE.

PROPOSED FEDERATION FOR PANEL AND LOCAL MEDICAL COMMITTEES.

DR. EDWIN A. STARLING (Tunbridge Wells) writes: I hope that every member of the British Medical Association, and especially every member of a Panel or Local Medical Committee, will read and ponder the statesmanlike letter from Dr. E. Rowland Fothergill in the issue of October 3rd, p. 187.

His ten points against the proposed Federation of Panel and Local Medical Committees, any one of which is a strong argument by itself, cover the whole ground. But I would specially enforce the first point—that this proposed federation would be in reality a rival association. Whatever the wishes and intentions of its founders may be, the natural development of the federation would inevitably make it such.

Is this the time—indeed, is there any time—when it is wise to set up another body likely to rival the Association? One strong body will do far more for the profession than two bodies, neither of which can speak for the majority of the profession.

The annual meeting of the Representative Body at Aberdeen was quite decided that by no side issue must there be weakening of the authority and influence of the Association.

I trust that all members of Panel and Local Medical Committees will thoroughly assimilate Dr. Fothergill's points, so that when the question of a federation is before them there will be no doubt about the majority by which they will reject it.

The suggestions (*a*) and (*b*) at the end of the letter appear to me not only a fair but a wise alternative. The panel practitioners will have a majority on the Insurance Acts Committee, they will represent all parts of the country, and will obtain strength and influence by the inclusion of the various officers of the Association named. We need one strong Association and no rivals.

DR. W. B. CRAWFORD TREASURE (Honorary Secretary Cardiff Panel and Local Medical Committees) writes: I am glad to note that Dr. Fothergill has drawn attention to the danger of the proposed Federation of Local Medical and Panel Committees.

My committee was among the first to realize the peril, and we considered there was nothing which the federation could possibly do that the British Medical Association, with its accumulated experience and able officers, could not do better, and we decided not to identify ourselves with the new organization. Subsequent events have only tended to confirm and strengthen this impression. The multiplication of bodies professing to safeguard the interests of the profession can only have one tendency—to weaken the one existing Association which has stood

the storm and stress of the fiercest fight in which we have ever been engaged. I sincerely hope, therefore, committees will pause before joining an association which, however disinterested the aims of the promoters may be, is bound to damage the British Medical Association.

Dr. Francis J. Baildon (Southport) writes: I hope the proposed scheme for the amalgamation or fusion of the Local Medical and Panel Committees will not be accepted without very careful consideration—at any rate, for the purpose of representing the profession. So little importance is attached to the proceedings of these Committees that matters of vital interest to the profession might be rushed through without proper consideration and debate. I would strongly urge that all proposals of this nature should be debated and decided by the Representative Body. There can be no urgent need for immediate decision, and the creation of the proposed federation can only lead to confusion and disaster.

Dr. W. Jonnson Smyth (Bournemouth) writes: It is to be sincerely hoped that those entrusted with the guidance of the Panel Committees may grasp at the suggestion made at the end of Dr. Fothergill's letter in the Journal of October 3rd, p. 188. The alliance suggested would ensure for the panel practitioners the commanding striking force of a world-wide and powerful Association. It would secure equal certainty that the war chest would be full for the next fight, yet the panel workers would essentially control all matters falling under the Insurance Act. An independent panel association cannot coexist as a flourishing body alongside of a progressive British Medical Association. One of these bodies is certain to find itself in "shallows and misfortunes." Before it is too late, let us remember, "United we stand."

Dr. Harding H. Tomkins (Representative South-West Essex Division) writes: The *raison d'être* of federation was rapidity of action, and other reasons were ability to bind all panel men together, there being funds available from which to deduct for every man on the panel.

Judged by the action from March till October it will be useless. My Committee has tried three times to go into the matter, but, failing any answer to questions, has been unable. The Commissioners refuse to allow the money to be deducted for a subscription; the draft rules of the Federation forbid individuals to join. Even a voluntary "levy" cannot be taken from the panel money in many areas, consequently I cannot personally see the slightest use in collecting thousands of pounds to waste over work which the British Medical Association has been steadily doing during the seven months in which the Federation has done nothing.

New Draft Regulations.

Dr. C. R. O. Garrard (Pendleton) writes: In your comment on the new draft Regulations (column 1, page 195, Supplement, October 10th) you say: "It will be noted that on account of abnormal conditions obtaining at present the Commissioners are virtually foregoing their right to make alterations in the Regulations, and consequently in the agreements of doctors and chemists with committees." So accepting in good faith the reason the Commissioners give in their Memorandum (Memo. 201 I.C.).

This explanation is given in paragraph 3 of the Memorandum and is as follows:

> 3. In the first place it was thought desirable, at a time when members of Insurance Committees and of the medical and pharmaceutical professions were preoccupied with special problems, local or national, or were voluntarily undertaking exceptional duties in the public interest or the service of their country, to avoid, so far as possible, imposing on them the additional task of consultation and negotiation which any substantial revision of the Regulations must necessarily involve. Further, in view of the number of panel practitioners who are at present abroad on active service, the Commissioners were disinclined to introduce changes with regard to which no notice of their intentions had been given to a section of the medical profession so specially entitled to consideration.

In the preceding paragraph of this Memorandum they say:

> The preparation of revised regulations, to come into force on January 1st next, had for some time prior to the outbreak of the present hostilities been engaging the careful attention of the Commissioners, etc.

From this it is clear that the Commissioners have already decided on the alterations in the agreements that they wish the profession to accept, and can publish them at once.

The practitioners on the panels are being asked to give the Commissioners a free hand to select any date they consider favourable for pressing these reforms upon them, and it is only common prudence for the Association to ask for some definite information as to the nature and scope of the desired changes; for either they are such as the profession would be disposed to agree to after friendly discussion, or they are not. In the unfortunate event of the second alternative being the true one, the date foreshadowed—"the close of the war"—would be of all times the one at which the profession would be least able to defend its own interests.

Now, when every available doctor is needed for military service, it would be impossible to force an unfair bargain upon the profession, but when the war is over and the medical labour market is flooded with some thousands released from the service (many of them of necessity in no position to refuse work on any terms), it might be almost hopeless to resist. If the Commissioners' proposals, when disclosed at the end of the war, are found to be such as they well know the profession will resent, adverse comment on the tactics employed to carry them is inevitable, and to prevent any such unfortunate misunderstanding in the future, it is desirable in the interests of all parties that they should be published immediately.

Dr. James Hamilton (Chelsea) writes: Boiled down, what do the rather diffuse memorandum of the Commissioners and your articles on extravagant and over-prescribing come to? Neither is very definite. The Lambeth Insurance Practitioners' Association is more definite, as it has gone out from them that doctors should only order ½-oz. doses—they do not say the number. Is it the policy of our Association that panel patients should be prescribed for differently from what was the rule when they were private patients? If so, I think it a very short-sighted policy. In this district the usual thing was to give surgery patients an 8-oz. bottle of medicine and 1-oz. doses, and these we still supply to private surgery patients. Why should we alter the old custom? If we do, the wives and family who are not insured will clamour for ½-oz. doses and double or treble quantity of medicine, and they will not pay any more. I can quite understand that men with big panels which they cannot properly attend to (as some with big panels have told me) can only see people once a week or fortnight instead of the usual two or three times a week, and so give 12 or 16-oz. bottles, with ½-oz. doses; but is this honest, or right, or fair to the patients? Consultants do not order, unless in very exceptional cases, such large quantities of medicine in private prescriptions. Up to the present I have given prescriptions for the same drugs and for the same quantities as formerly, and I contend I am by so doing upholding the status of the profession. Another matter. If such infrequent attendances only are entered on the record cards the payment will seem excessive for the work done. In a letter from the Medical Secretary a year ago he agreed with my contention, and stated he had pointed out the same to some panel men. You seem to imply that patients would not be any worse off if they got less medicine. From my personal experience this is an unmerited slur on the doctors. I hope you will reconsider your article, and drop out multiple prescriptions.

Association Notices.

CHANGES OF BOUNDARIES.

Formation of a Channel Islands Division.

The following change has been made in accordance with the Articles and By-laws, and takes effect as from the date of publication of this notice:

> That the existing Guernsey and Alderney and Jersey Divisions be amalgamated to form a new Division, to include Alderney, Guernsey, Jersey, and Sark, and to be known as the Channel Islands Division, the new Division to form part of the Southern Branch.

Representation in Representative Body.—Unaffected.

ELECTION OF MEMBERS OF COUNCIL, 1915-16, BY BRANCHES OUTSIDE THE UNITED KINGDOM.

Notice is hereby given that in accordance with By-law 49 nominations for candidates for election as members of Council by the grouped Branches outside the United Kingdom for a period not exceeding three years as prescribed by By-law 52 (2) must be forwarded in writing so as to reach me on or before February 15th, 1915.

Nomination papers may be signed by not less than three members of any Branch comprised in the group, and must be in the form prescribed below or in a form to the like effect.

Election will be by voting papers, which will contain the names of all duly nominated candidates, and will be issued from the head office in London to each member of every Branch comprised in the group.

By order of the Council,

Guy Elliston.

Financial Secretary and Business Manager.

429, Strand, London, W.C.,
October 17th, 1914.

NOMINATION FORM.
BY NOT LESS THAN THREE MEMBERS OF THE GROUPED BRANCHES.

We, the undersigned, hereby nominate

.....

of.....

.....

[*Full name and address must be given*]

as a candidate for election by the (*here state the names of the Branches in the group*) Branches as a member of the Council of the Association.

Names and addresses of nominators, and Branches to which they belong.

Signature and Address.	*Branch.*
.....	.....
.....	.....
.....	.....

Date....., 19...

This form should be forwarded to the Financial Secretary and Business Manager, 429, Strand, London, W.C., so as to be received not later than February 15th, 1915.

Not later than the second week in June, 1915, a notice of the result of the election will be published in the Journal.

N.B.—The foregoing notice is not intended to apply to the New Zealand Branch, or the New South Wales and Queensland grouped Branches, which have appointed their respective Members of Council for a period of three years under By-law 52 (2).

By-laws 49 and 52 (2) are as follows:

By-law 49.

Mode of Election by Groups not in the United Kingdom.

49. (1) The election of seven members of Council by the groups of Branches not in the United Kingdom shall be conducted in the manner prescribed by this By-law.

(2) All nominations of candidates shall be in writing sent to the Association so as to be received at the head office on or before such day, not being later than the 15th February in each year, as shall be specified for the purpose by a notice published in the Journal during the second or third week of October in the preceding year, and no nomination paper received after the day so specified shall be valid.

(3) The said notice shall prescribe a form in which the nominations are to be made, and the nominations shall be made in the form so prescribed, or in a form to the like effect. Nomination papers may be signed by not less than three members of any Branch comprised in the group.

(4) As soon as may be after the 15th day of February in each year:

(*a*) In the case of any group for which one candidate only has been duly nominated, there shall be published in the Journal a notice that such candidate has been elected as member for that group; and

(*b*) In the case of any group for which more candidates than one have been duly nominated, a voting paper shall be sent by post from the head office to each member of every Branch comprised in that group.

(5) Every voting paper shall contain a statement that the same must be returned to the Association so as to be received at the head office on or before a specified day (not being later than the succeeding 15th of May), and no voting paper received after the day so specified shall be counted.

(6) Not later than the second week in the succeeding month of June, a notice of the result of the elections shall be published in the Journal.

By-law 52 (2).

52. (2) Each member of Council elected by a Branch or Group not in the United Kingdom or elected to represent the Royal Navy Medical Service, the Army Medical Service, or the Indian Medical Service, shall hold office for such period not exceeding three years as the electing body may determine and at the expiration of such period shall be eligible for re-election provided that no such member shall be re-elected so as to make his period of continuous service as the Representative on the Council of one and the same Branch or Group exceed six years.

(3) Each of the terms of office mentioned in this By-law shall be calculated from the close of an Annual Representative Meeting.

GROUPING OF BRANCHES NOT IN THE UNITED KINGDOM FOR REPRESENTATION ON COUNCIL OF ASSOCIATION, 1915–16.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Dorset and West Hants Branch.—Dr. Frank Fowler, 29, Poole Road, and Mr. Percy A. Ross, Kensington, Boscombe Spa Road, Bournemouth, Honorary Secretaries, give notice that the autumn meeting of the Branch will be held at the Hôtel Mont Dore, Bournemouth, on Wednesday, October 21st, at 3 p.m., when Dr. Eleanor C. Bond, Vice-President, will open a discussion on uterine haemorrhages. Election of officers for 1915-16. The Bournemouth practitioners invite members to luncheon at 1.30 p.m., and will be pleased to see members and ladies at tea after the meeting.

Metropolitan Counties Branch.—Dr. R. E. Crosse and Mr. N. Bishop Harman, Honorary Secretaries, give notice that a Council meeting will be held at 429, Strand, W.C., on Tuesday, November 10th, at 4 p.m.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following notifications are announced by the Admiralty: Fleet Surgeon P. M. May to the *Victory*, additional. Staff Surgeon A. F. Fleming to the *Victory*, for R.N. Division, Walmer; Staff Surgeon E. C. Sawdy to the *Vivid*, additional, for disposal. Surgeon Robert M. Riggall to the *Pembroke* for Royal Naval Barracks, vice Ward; Surgeon R. A. Rankine, M.B., to the *Cyclops*, additional; Surgeon K. H. Holt, M.B., to the *Victory*, additional. Temporary Surgeons F. W. Nunneley, M.B., to the *Dreadnought*; G. P. O'Donnell, M.B., to the *Vivid*, additional, for Devonport Dockyard, vice MacMahon;

ROBERT A. BROWN to the *Audacious*; G. W. C. HOLLIS to the *Excellent*, additional, for the *Sirius*, on commissioning; G. J. C. FAILL to the *Victory*, additional; A. R. MACMULLEN, J. ROTHWELL, M.B., H. L. G. FOXELL, P. B. KELLY, G. E. W. LACEY, M.B., A. A. BALLANCE, M.B., H. C. WALDO, M. ONSLOW-FORD, to the *Victory*, additional, for R.N. Division; H. G. BROWN to the *Victory*, for R.N. Division, Crystal Palace; L. R. WARBORTON to R.N. Division, Plymouth, vice Barrett; C. WARNER, M.B., to the *Devonshire*; H. WILKS to the *Ganges* for Shotley Sick Quarters; R. W. MELLOR to *Victory*, for R.N. Division, Walmer; F. G. L. SCOTT to R.N. Division, Portsmouth, vice Fleming; T. S. BRADBURN to the *Cyclops*; R. C. J. MEYER to the *Hyacinth*, additional, for Marine Garrison, St. Helena.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon R. N. CRAIG (probationer) to the *Lucifer*; Surgeon S. R. PRALL (probationer) to the *Woolwich*, additional, for the *Badger*, vice C. E. Meryon; WILLIAM J. A. QUINE, M.B., appointed Surgeon, unattached. The following have been appointed Surgeon-Probationers for temporary service: S. R. PRALL, J. A. D. SKINNER, A. F. G. GUINNESS, J. M. HARRISON, E. D. SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, OCTOBER 24TH, 1914.

CONTENTS.

British Medical Association.

INSURANCE ACTS COMMITTEE.

THE first meeting of the new Insurance Acts Committee was held at the office of the Association on Friday, October 9th. Mr. T. JENNER VERRALL, LL.D., Chairman of Representative Meetings, was in the chair, and the other members present were: *England and Wales*—Dr. E. R. Fothergill (Hove), Dr. Major Greenwood (London), Dr. W. Ainslie Hollis (Brighton), Dr. G. K. Smiley (Derby), Dr. W. B. Crawford Treasure (Cardiff), Mr. E. B. Turner (London). *Scotland*—Dr. John Adams (Glasgow), Dr. John Hunter (Edinburgh); *ex-officio*, Dr. Edwin Rayner (Stockport) (Treasurer).

Much of the business transacted by the Committee was reported in the letter addressed to the honorary secretaries of Panel Committees and Local Medical Committees and Divisions and Branches published in the SUPPLEMENT for last week, p. 202.

MEMBERSHIP OF THE COMMITTEE.

The Council was recommended, in accordance with the instructions of the Annual Representative Meeting, to appoint Mr. Herbert Jones and Dr. Major Greenwood, representing the Society of Medical Officers of Health and the Poor Law Medical Officers' Association of England and Wales respectively, and the nominee of the Associated Registered Women and the Northern Association of Registered Medical Women to be members of the Committee.

SUBCOMMITTEES.

Drug Tariff Subcommittee.

The Chairman, Dr. A. C. Farquharson (Durham), Dr. E. R. Fothergill (Hove), Dr. I. W. Johnson (Bury), Dr. A. E. Larking (Buckingham), Mr. E. L. Lilley (Leicester), Dr. B. A. Richmond (London), and Dr. Purves (Burnley) were appointed a Subcommittee to consider and report on all matters concerned with the Drug Tariff under the Insurance Act, and to arrange for conferences between representatives of the Association and the Pharmaceutical Society thereon.

Local Medical and Panel Subcommittee.

A Local Medical and Panel Subcommittee was appointed, consisting of members of the Association, all of whom, except as regards three members to be co-opted, must be members of either Local Medical or Panel Committees. The reference to the Subcommittee was to consider all subjects referred to it by the Insurance Acts Committee and to take action when authorized; to keep in close touch with and assist in the co-ordination of all Local Medical and Panel Committees, advising them on all circulars, memorandums, and documents issued locally or centrally, having reference to the medical service under the Insurance Acts; and generally to advise the Insurance Acts Committee.

The members appointed were as follows: The Chairman of the Insurance Acts Committee, Dr. John Adams (Glasgow), Dr. G. W. Eustace (Arundel), Dr. Major Greenwood (London), Mr. W. J. Greer (Newport), Mr. H. H. Tomkins (Essex), Dr. J. Hunter (Edinburgh), Dr. E. R. Fothergill (Hove), Mr. W. Doolin (Dublin), Mr. H. F. Devis (Bristol), Mr. P. Napier Jones (Crowthorne, Berks), Dr. B. A. Richmond (London), Dr. W. B. Crawford Treasure (Cardiff).

The Committee recommended the Council to authorize the Chairmen of the various Standing Committees of the Association to attend at meetings of and to assist the Local Medical and Panel Subcommittee of the Insurance Acts Committee, if and when, in the opinion of the Subcommittee, such attendance would prove useful.

DEPARTMENTAL COMMITTEE ON DRUG TARIFF.

The CHAIRMAN reported that the Council had appointed Dr. John Adams and Dr. R. W. Wallace Henry to represent the Association on the Departmental Committee appointed to consider and report what margin of profit (apart from discounting) is yielded by the present drug tariff: what revision, if any, of prices is required to place that tariff on a commercial basis, and whether any extension or rearrangement of the list of priced drugs and mixtures is desirable; to make such investigations as they may think necessary for this purpose, either generally or in particular areas, and to submit a tariff in accordance with their recommendations.

CENTRAL INSURANCE DEFENCE FUND.

The financial statement for the period from July 1st to September 30th was presented and passed.

Communications were received from two medical practitioners thanking the Committee for assistance granted from the fund. Three applications for grants were considered; in one instance a further loan of £50 was approved, the second was postponed for further inquiry, and the third was refused.

DEDUCTIONS FROM AMOUNTS DUE TO PANEL PRACTITIONERS.

The Local Medical and Panel Subcommittee was requested to consider and report on the question of deductions made by Insurance Committees from amounts due to panel practitioners in view of the alleged reduction in the number of insured persons on their lists.

LAY OFFICIALS OF APPROVED SOCIETIES AND INTERFERENCE WITH MEDICAL TREATMENT OF INSURED PERSONS.

The Committee had before it the reply of the Scottish Commissioners to a communication sent to them in the following circumstances:

An insured person (a blacksmith) sought the advice of his panel doctor on the 20th of the month with a poisoned and suppurating finger. The finger was incised, diseased tissue removed, and the finger dressed, the initial certificate being given to the patient. The case was seen and dressed on the 21st, 23rd, 25th, and 28th, and made rapid progress. On the 24th the patient saw an official of this approved society in reference to his sickness benefit, when, according to the patient's account, the official asked to see the finger, and on the removal of the dressing expressed the opinion that there was very little wrong with the finger, and that the patient was quite able to resume work. On the practitioner asking for an explanation the official admitted examining the finger, and stated that, finding the suppuration had ceased and that the slight wound resulting was nearly healed, he had expressed his opinion that the patient was able to resume work, basing that opinion on his long experience as a practical mechanic. The practitioner strongly objected to the examination of the finger by the official,

and asked for an apology for the unwarrantable interference, also for an undertaking that he would not in future take down or allow to be taken down the dressings of a wound under active medical treatment. Neither apology nor undertaking were forthcoming, and an inconclusive correspondence ensued during which the practitioner formulated the following statement to which he asked the adherence of the official:

> That no lay person is entitled to touch, examine, interfere with, or express any opinion on any wound or injury which is being actively attended to by a medical practitioner.

The case was then brought by the practitioner to the attention of the Insurance Acts Committee, which directed that the attention of the Joint Commission be drawn to the point, and also asked the representatives of the Association on the Advisory Committee to raise the matter at a meeting of that body which was then pending. At that meeting the matter was raised, and the representatives of some of the more important societies present expressed their astonishment at, and disagreement with, any such lay interference with medical treatment, and no defence of it was put forward by any one. The Commissioners were urged to impress on approved societies that the rules of these societies defining the nature of the proof required for the purposes of sickness or disablement benefit should make it clear that any investigation for the purpose of testing the validity of a medical certificate should be made by a medical practitioner *whenever such investigation involved questions of professional opinion.* The Joint Commission referred the Association to the National Commission in whose area the incident had occurred (Scotland). The facts were then placed before the Scottish Commission and it was now reported to the Committee that the secretary of that Commission had addressed a letter to the secretary of the approved society in question, which, after reciting the facts which the Association had brought to the knowledge of the Commission, went on to say, "I am accordingly directed to point out that a sick visitor or society official should not remove or ask a patient to remove a surgical dressing."

The Committee was of opinion that this went far to establish an important principle, to which the attention of the medical profession should be drawn.

Attendance on Insured Persons at Request of Police.

The Committee received the opinion of the Solicitor of the Association on the following questions raised by the Honorary Secretary of a Division:

> A medical practitioner called by the police to a street accident finds that the injured man is one of his insured patients. The police refuse to pay the doctor's charges.
>
> (*a*) Are the police within their right in so refusing? If so, why?
>
> (*b*) Do you consider the refusal of the police in any way connected with the fact that the injured man was a panel patient of the doctor called in?

The opinion of the Solicitor was as follows:

I take it that you wish me first to advise irrespective of any claim that may lie as against the police for services rendered at their request upon a person meeting with an accident in the street who is not an insured person, and with this presumption I deal with the points raised by you seriatim.

(*a*) Having regard to Clause 2 (ii) of the agreement between medical practitioners and the Insurance Committee for the county of London and Clause 4 (ii) of the First Schedule of the Medical Benefit Regulations at present in force, it seems to me clear that a panel practitioner could not possibly claim upon the police for any services rendered by him to any person who is upon his panel even though he were summoned by the police to attend such person in the event of his meeting with an accident in the street, any more than he could claim upon the employer of an insured person upon his panel who informed him that such insured person was in need of medical attendance by him.

Clause 2 (ii) of the agreement expressly provides that the practitioner shall not accept any fee in respect of treatment which he is required to give under the terms of his agreement except as provided in such agreement, and there is contained in such agreement no such provision for circumstances such as those set out in your letter. This is, of course, provided that the attendance is within the radius fixed for the particular locality under Clause 4 (ii) of the First Schedule of the Medical Benefit Regulations.

(*b*) It is exceedingly difficult for me to answer this question, as the answer would be determined by the particular circumstances governing each case, such as the inquiries made of the injured person, or failing that, the knowledge in the possession of the police constable who might summon the doctor.

There is, so far as I can gather, no fixed regulation or rule governing the actions of the police with regard to summoning medical men to attend in cases of street accidents, nor the power which may be given to them to pledge the Police Fund for liability to meet the fee of any medical man called in in any such circumstances, though in any case it would be well for the medical men if the case of accident, in the event of an insured person, were outside the radius prescribed by Clause 4 (ii), or if the case were not one of an insured person, to obtain from the police officer who has summoned him a note of his attendance, and a record of the fact that such attendance was made at the express request of the police officer.

I can well understand that an event of this sort might have been altogether outside the contemplation of medical practitioners when entering into their agreement with the Panel Committee and taking upon their list panel patients, but for all that I think, having regard to the terms of the agreement and the regulations, the attendance in question would come within the terms of the same.

(Signed) W. E. Hempson.

IRISH COMMITTEE.

A quarterly meeting of the Irish Committee was held at the Irish Offices, 16, South Frederick Street, Dublin, on October 7th, when Mr. R. J. Johnstone was in the chair, and the following were present: Dr. J. S. Darling, Dr. W. J. Story, Dr. J. M. Kenny, Professor H. Corby, Dr. John Mills, Dr. H. T. Warnock, Dr. D. Walshe, Dr. James Craig, Dr. J. G. Cooke, Dr. T. B. Costello, and Dr. T. Hennessy, Irish Medical Secretary.

Mr. R. J. Johnstone was re-elected Chairman, and Drs. Power, Warnock, and Mahon were co-opted members of the Committee.

Treatment of Dependants.—Dr. T. Hennessy was nominated as the Irish medical representative on the Duke of Devonshire's committee dealing with the medical treatment of dependants of soldiers and sailors.

Well-to-do Patients in Workhouses.—In accordance with a suggestion contained in a letter from Dr. Darling, he, with Dr. Walshe and the Irish Medical Secretary, were appointed a deputation to wait on the Irish Local Government Board in connexion with the admission of well-to-do patients to Irish workhouses and their free treatment in those institutions.

Salaries of Poor Law Medical Officers.—The same deputation was instructed, in accordance with the suggestion of Dr. P. Stephenson (Carrick-on-Suir), to represent to the Local Government Board the need for fixing graded scales of salaries for Poor Law medical officers in those unions which had not already done so. It was also resolved to communicate to the Honorary Secretaries of Branches and Divisions the suggestion that they should arrange for applications to be made by Poor Law medical officers for graded salaries in the outstanding unions.

Finance.—The audited quarterly statement and accounts were submitted to the committee and found correct. Drs. White, Darling, Craig, and Walshe were elected members of the Finance and Executive Committee, with Mr. R. J. Johnstone as Chairman.

Organization.—It was resolved to arrange for the attendance of the Irish Medical Secretary at meetings of Branches and Divisions for the present quarter.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Metropolitan Counties Branch.—Dr. R. E. Crosse and Mr. N. Bishop Harman, Honorary Secretaries, give notice that a Council meeting will be held at 429, Strand, W.C., on Tuesday, November 10th, at 4 p.m.

LOCAL MEDICAL AND PANEL COMMITTEES.

WEST SUFFOLK.

PANEL COMMITTEE.

THE first meeting of the Panel Committee, elected June, 1914, was held at Bury St. Edmunds, on September 29th. Dr. WILKIN was in the chair, and three other members were present. Dr. Batt was elected Secretary.

Payments.—Dr. WOOD stated that the Finance Subcommittee of the Insurance Committee had decided that payments should be made immediately on the expiration of each quarter.

Unallotted Funds for 1913.—It was reported that the total amount of unallotted fund for 1913 was £533 9s. 1d., to be distributed as set out in the Commissioners' letter to the Insurance Committee of June 20th, 1914. It was agreed that it would be impossible to hand over this sum to the Red Cross Society, as had been proposed at a general meeting of practitioners held in August, when the sum to be allotted was stated to amount only to about £200. It was further agreed to accept the amount of allocation indicated by the Commissioners.

Supply of Drugs.—The Secretary was instructed to inform the Insurance Committee that the Committee considered that it would be to the advantage of everybody concerned that the continuous checking and analyses of prescriptions suggested in paragraph 9 of Memo. 199 I.C. should be carried out.

Contracts for 1915.—The Committee approved of the Commissioners' decision not to alter the terms of the existing contracts at the end of this year, except in the two points indicated in Memo. 201 I.C.

Expenses for 1914.—It was decided that the expenses for 1914 would best be met by a voluntary deduction from each practitioner's quarterly cheque from the Insurance Committee. It was calculated that a sum of one farthing per insured person per annum would bring in approximately £30, which would be ample, the form of agreement to be signed by each practitioner printed in British Medical Association circular M. 12, dated June 20th, 1914, was adopted. The Secretary was instructed to ask the Insurance Committee to authorize the Clerk to make the necessary deductions upon the production of the agreements duly signed, the Committee being willing to offer him an honorarium for extra trouble involved. The Secretary was further instructed to issue the agreements to every practitioner on the panel as soon as necessary arrangements had been made with the Insurance Committee.

Payment for Temporary Residents.—The Commissioners' proposals *re* payment for temporary residents for 1913 and a payment of 75 per cent. on account of services for temporary residents during the current year were accepted. It was stated that £110 9s. 8d. was available for discharging the accounts for 1913.

Suspense Slips.—The Committee considered a letter from the Clerk to the Insurance Committee, dated September 29th, 1914. The Panel Committee agreed that it was desirable the suspense register should, so far as possible, be abolished, but entirely disapproved of the proposal to remove these persons from doctors' lists without further inquiry, and expressed the strong opinion that the fact that the Insurance Committee held no index slip for these persons and that no application had been made for medical cards was by no means conclusive evidence that they were not resident in the area. It was decided to ask the Insurance Committee to furnish a list of the names of persons in the suspense register of each of the following doctors: Barwell, Batt, Wilkin, and Wood, who undertook to make a thorough investigation with a view to ascertaining whether any of the persons in the list were still resident in their neighbourhood and to report to a future meeting of the Panel Committee.

LIVERPOOL.

PANEL COMMITTEE.

THE following is a list of the twenty-eight members of the committee:

North District.—Dr. Moyles, Dr. G. Oldershaw, Dr. W. H. Wright, Dr. Wild.

North Central District.—Dr. Miller Wilson, Dr. House, Dr. R. Paterson, Dr. Sheldon, Dr. Unsworth.

South District.—Dr. W. B. Bennett, Dr. Donnelly, Dr. Parkinson, Dr. Tinne.

East District.—Dr. Baxter, Dr. Dodd, Dr. Robertson Dunn, Dr. Richardson.

South Central District.—Dr. W. T. D. Allen, Dr. H. Jones, Dr. Hamilton Shaw, Dr. Stott.

Co-opted by the Elected Members.—Mr. F. C. Larkin, Dr. T. R. Bradshaw, Miss Ivens, M.S., Dr. T. Clarke, Dr. Given, Dr. F. H. Barendt, Dr. Scott Sugden.

At the first meeting of the complete Committee held at the Liverpool Medical Institution on September 29th, Mr. F. Charles Larkin was elected chairman, Dr. Richardson vice-chairman, Dr. Hamilton Shaw treasurer, and Dr. W. T. D. Allen honorary secretary. Drs. Richardson, Bennett, and Paterson were appointed representatives on the Medical Service Subcommittee of the Liverpool Insurance Committee.

NORTHAMPTONSHIRE.

PANEL COMMITTEE.

THE Panel Committee is constituted as follows:

Chairman.—Dr. Baxter (Wollaston).

Secretary.—Dr. Alfred Linnell (Paulerspury, Towcester).

Drs. Dryland (Kettering), Roughton (Kettering), *Tolputt (Kettering), More (Rothwell), Stone (Northampton), Beatty (Northampton), Darley (West Haddon), Churchouse (Long Buckby), *Greenfield (Rushden), Arthur (Wellingborough), Robb (Irthlingborough), Jeafferson (Blisworth), O'Rafferty (Daventry), Hope (Byfield).

Medical Service Subcommittee.—Drs. Baxter, Dryland, and Linnell.

Deaths and Suspensions.—A suggestion from the Clerk to the Insurance Committee that doctors should notify to him deaths, removals, or suspensions of panel patients as soon as they occur has been agreed to, and the Clerk was asked to circularize the doctors to that effect. The Committee agreed to continue the authorization of the practice of taking off deaths and suspensions and removal as from the date of notification.

Unallotted Persons.—The question of the treatment of unallotted persons was raised, and some dissatisfaction was expressed at the present methods of procedure and calculation for payment, but after discussion it was decided to continue on the old lines of attending any who might apply.

COUNTY OF DENBIGH.

THE following resolutions and recommendations have been adopted by the Panel and Pharmaceutical Committees acting jointly:

Prescribing and Dispensing.

That a suggestion should be made to the practitioners in the county that they should, as a general rule, prescribe 8-ounce mixtures with ½-ounce doses.

That "repeat" prescriptions may be written, subject to the following conditions:

(*a*) That no other item be prescribed on a form ordering any repeat.

(*b*) That the date of the original prescription be given on the form ordering any repeat.

(*c*) That no repeat may be ordered when the original prescription was given more than twenty-one days previously.

(*d*) That the practitioner shall supply a copy if requested by the chemist.

That this joint meeting of Panel and Pharmaceutical Committees recommends the Insurance Committee to allow extra dispensing fees for prescriptions dispensed by chemists outside their ordinary hours of business; such prescriptions to be marked "urgent."

That in future prescription forms be marked "Panel," "Sanatorium," "Temporary Resident," and that this be a recommendation to the Insurance Committee.

Stock Mixtures.

That this Committee is of opinion that the question of stock mixtures could best be dealt with by the individual practitioners and pharmacists in their several areas.

That no proprietary stock mixtures nor any formula bearing the name of any firm may be dispensed.

Cod-liver Oil and Extract of Malt with Oil.

That no quantity exceeding 1 lb. may be prescribed for any insured patient at one time, and that the container be labelled with directions to the patient as to the size and frequency of the dose to be taken.

Cod-Liver Oil and Petroleum Emulsions.

That a dispensing fee of 2d. for quantities up to 8 oz. or 3d. for quantities exceeding 8 oz. only be charged on cod-liver oil and petroleum emulsions except when prescribed "Recentis," in which case an extra emulsion fee of 2d. is to be added.

Homœopathic Remedies.

That only official tinctures and those contained in the *British Pharmaceutical Codex* shall be recognized in prescriptions

*Co-opted under Rule 29 of scheme.

for insured persons. This resolution is not intended to interfere with the prescribing of the homœopathic medicines of the British hospital pharmacopœia by homœopathic practitioners on the panel.

Linimentum Ovi.

That linimentum ovi be charged at the rate of 1d. per oz. together with the appropriate dispensing and emulsion fees.

Lozenges.

That when medicated lozenges are prescribed they should be charged for at a price based on the cost per pound, and not at the rate of, and bearing the dispensing fees applicable to tablets not included in the tariff.

Emergency Dressings and Bandages.

That the Insurance Committee be recommended to authorize each practitioner on the panel to obtain from persons, firms, and bodies corporate under agreement with the Insurance Committee for the supply of drugs and appliances in rotation, a small supply of dressings and bandages for use for insured persons in emergency and surgery cases only in each quarter; that if this quantity be found by any practitioner to be insufficient the practitioner shall make application to the Insurance Committee for authority to obtain a further supply, showing reasons why the quantity supplied has been found to be inadequate: Provided that if the Panel Committee consider that any practitioner has used a quantity in excess of that which might reasonably be necessary, they shall report to that effect to the Insurance Committee and the Insurance Committee shall surcharge the practitioner accordingly.

Excessive Prescribing.

That any cases of prescribing which might appear to the chemist to be excessive either as to the cost or the frequency of the supply of medicines should be brought to the notice of the Panel Committee, who would deal with the matter.

Prescribed Appliances.

That it be a recommendation from this Committee to the Insurance Committee that eye shades be included in the schedule of appliances which may be prescribed for insured persons.

DUMBARTONSHIRE.

Instructions as to Prescribing of Medicines, etc.

The following circular letter was issued to medical practitioners on the panel by the Dumbarton County Panel Committee last month:

Dear Sir,—The Panel Committee has instructed us to bring to your notice the position in the county in regard to the Drug Fund and the consequent action which must be taken. For the first half of this "medical year" the chemists' accounts show an increase of about 35 per cent., and if the same rate of increase is maintained the Drug Fund will not suffice to meet all claims against it at the end of the year. The Drug Suspense Fund ("floating sixpence") will be absorbed sooner or later, and ultimately the chemists may not get full payment.

While to a certain extent insured persons are availing themselves more freely of the benefits of the Act, there is no evidence of any increase in the amount of sickness sufficient to account for the increased expenditure on drugs, but the Committee has reason to believe that it is largely due to lavish and wasteful methods of prescribing, to orders being given which are extravagant in character or quantity, to ordering proprietary articles for which there are satisfactory chemical equivalents or corresponding official preparations, and to ordering "appliances" which are excessive in quantity or not on the tariff.

The Committee is of opinion that considerable economy can be effected without interference with adequate treatment; accordingly practitioners are required to give particular attention to the following instructions:

Patients should be discouraged from thinking that there can be no treatment unless medicine is ordered.

The dose of a mixture should be 2 drachms or less; half-ounce doses involve too frequent "repeats" and consequent dispensing fees.

Patent medicines the composition of which is unknown must not be prescribed, and charges for these will not be passed.

Expensive proprietary articles must not be ordered when there are corresponding non-proprietary chemical equivalents or official preparations.

Excessively large quantities should not be ordered, as wastefulness is thereby encouraged.

Medicated wines, foods, and all preparations not strictly intended for medicinal use should not be prescribed.

Appliances not on the tariff must not be prescribed.

Finally, the Committee has to draw attention to the fact that where the orders given by any practitioner are found to be extravagant either in character or in quantity, and so to cause excessive demands on the Drug Fund, the excess may be deducted from the payments due to him.

Yours faithfully,

W. S. Young, Chairman.

A. W. Sutherland, Honorary Secretary.

A list of proprietary medicines and their chemical equivalents, and a list of proprietary preparations with official preparations of similar composition, is appended to the circular for the guidance of panel practitioners. In this connexion reference may be made to the second article, published last week, on the new *British Pharmacopœia*. When it comes into force on the first day of next year the problem will be materially simplified.

CORRESPONDENCE.

The Proposed Federation of Local Medical and Panel Committees.

Dr. Arthur E. Larking (Honorary Secretary, Bucks Division, and Secretary of the Bucks Local Medical and Panel Committee) writes: The inherent fallacy in the arguments of Dr. Fothergill against the formation of the proposed Federation is that he assumes that the British Medical Association represents the whole profession. However much we may desire this, nobody knows better than he that such is not the case. Probably little more than half the panel practitioners, possibly even less, belong to the British Medical Association.

A large number of the members of the British Medical Association are not panel practitioners and take very little interest in the working of the Act and know nothing of its practical working. Many of the more active and influential members are actively hostile to it, and the Council has recently elected as assistant medical secretary one who is well known to hold extreme views on the Act. Is it at all likely that panel practitioners are going to entrust their interests entirely to the Association and its Representative Body?

The Conference of the Local Medical and Panel Committees has already decided by a large majority to work in conjunction and co-operation with the British Medical Association. What right has any one to assume that the Federation will be hostile to the British Medical Association? On the contrary, it will strengthen the Association. The object of those who are forming the Federation, and who will succeed in spite of absurd ideas of disruption, is to connect up and voice the views of panel practitioners and through the British Medical Association represent them to the proper authorities just in the same way as the views of those who form the Public Health, Ethical, Naval and Military, and other Committees of the British Medical Association voice the opinions of each of their particular section.

It is essential for the Local Medical and Panel Practitioners' Committees to hold conferences and be in communication with each other. These committees are composed of the men who are working the Act, and are brought into actual touch with difficulties, and who are the most competent to decide on the best policy of the profession with regard to the Act. It is quite hopeless to expect the Representative Meeting, already overloaded with other business, to give that special consideration to Insurance Act affairs in the time at its disposal.

Even with a subscription of 2 guineas a year the British Medical Association cannot afford to give proper attention to the Insurance Act in all its details. The Association does a tremendous amount now, but much more ought to be done. The more it gives to Insurance Act matters the more it neglects its scientific and educational work. The experience of the last years shows this. Moreover, it is not fair or just that men who do not belong to the British Medical Association should get the same advantages as the members.

The Federation will pay for the privilege of being connected up with the British Medical Association, and the subscriptions will come from the pockets of those who derive all the advantages, and one section of the profession—the willing few—will not have to pay whilst others escape. In addition to this, out of the levies raised by the various committees a Reserve Fund will be formed to protect the interests of panel practitioners—a result that would

never be attained by any special levy made by the British Medical Association, as past experience has clearly shown.

In my opinion the letter of Dr. Fothergill in the Supplement of October 3rd is wrong or misleading in every one of his ten paragraphs. It is also mischievous from the point of view of the unity of the profession, and conceived in a spirit full of pessimism and want of confidence in the commonsense of his professional brethren who are on the panels.

Dr. J. Wishart Kerr (Glasgow) writes: The proposed federation for Panel and Local Medical Committees is not just the simple thing it looks. It is nothing more or less than another of those attempts which are always being made to set up a rival body to the British Medical Association. It is to be hoped the good sense of the profession will give it its quietus.

New Draft Regulations.

Dr. Percy D. Pywell (Honorary Secretary, Borough of Lambeth Insurance Practitioners' Association, S.E.) writes: With regard to Dr. James Hamilton's criticism in the Supplement of October 17th, p. 205, of the advice of the Lambeth Insurance Practitioners' Association as to prescribing ½-oz. doses of medicine, it would appear on the face of it that Dr. Hamilton is not aware that it has always been usual to order ½-oz. doses for club or other contract patients. There has always been some difference between contract and private practice with respect to prescribing. Then a vast number of insured persons used formerly to go to hospitals and dispensaries, and invariably received four days' medicine at least. I would also mention that a large number of doctors give their private patients ½-oz. doses. The dispensary fee is a mighty factor. Last year the number of prescriptions reached at least 5½ millions, and supposing a quarter of that number was in 8-oz., 8-pts.. or 6-oz. 6-pts., and for persons requiring three or four bottles of the same mixture, then there was an unnecessary call on the drug fund—in the case of 6-oz. mixtures to the extent of 2d. on every two mixtures, for one 6-oz. bottle in 12 doses only cost 2d. dispensing fee. just the same as one 6-oz. 6-pts.

The ordering of 1-oz. doses in cases such as influenza, bronchitis. anaemia. and numberless other illnesses requiring the same medication for some days, or even weeks, must obviously cause an undue call on the drug fund.

I beg to maintain that the Lambeth recommendation, without causing any harm to either doctor or patient. would be of the greatest service in keeping the cost of drugs, etc., well within the 2s. if it does not bring the amount down to 1s. 6d. Although the Act has been in force twenty-one months and the majority of Lambeth men have been ordering ½-oz. doses. no clamouring has been heard on the part of wives and children (or babies) for the same doses.

In conclusion, I need hardly mention that the honour and glory of the profession is as jealously guarded in Lambeth as in Chelsea, and that the prescribing in the former borough will not lose by comparison with even that of South-West London.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Deputy Surgeon-General Octavius W. Andrews (ret.) to the *Revenge*, on commissioning; Fleet Surgeon George Hewlett, M.B. (ret.), to Portsmouth Dockyard, vice Andrews; Staff Surgeon John H. Lightfoot to the *Pembroke*, additional for the *Cornwallis*, on commissioning; Staff Surgeons A. F. Fleming, to the *Victory*, for R.N. Division, Walmer; E. C. Sawdy to the *Indus* I.; P. T. Nicholls to the *Pembroke*, additional, for Isle of Grain Flying Station, temporarily; Staff Surgeon H. W. Nicholls to the *Speedwell*, vice Robinson; Temporary Surgeons R. W. Mellor, to *Victory*, for R.N. Division, Walmer; F. G. L. Scott to R.N. Division, Portsmouth, vice Fleming; F. S. Bradburn to the *Cyclops*; K. C. J. Meyer to the *Hyacinth*, additional, for Marine Garrison, St. Helena; H. C. Billings and W. M. Ash to the *Columbine*, additional, for Queensferry Sick Quarters; R. W. Townley and E. P. Fisher to the *Indus* I.; C. J. C. Faill to R.M. Division at Portsmouth, vice Nicholls; H. G. McCaw to the *Revenge*, on commissioning; Frank P. Pocock to the *Colossus*; Archibald Todrick, M.B., to the *Collingwood*; William W. Robke, M.B., to the *Hercules*; Alexander J. Macdiarmid to the *Vanguard*; Alfred D. E. Baylis, M.D., to the *Iron Duke*; John Rothwell, M.B., to the *Commonwealth*; George E. W. Lacey, M.B., to the *Dominion*; A. C. Morson, F.R.C.S., to the *Zealandia*; Henry C. Waldo to the *Lowestoft*; H. L. G. Foxwell to the *Cornwallis*, on commissioning; B. H. Pain and E. J. Parry to the *Vivid*, additional, for disposal; B. Malaher, to the *Wildfire*, additional, for disposal; A. B. Slater, M.D., H. Harvey, and N. F. Lloyd, M.B., to the *Pembroke*, additional, for Chatham Hospital; E. R. Bailey, W. D. Galloway, G. C. Fairchild, G. L. Harke, M.B., and E. H. Hugo, M.B., to the *Vivid*, additional, for Plymouth Hospital; O. D. Brownfield to the *Victory*, additional, to Haslar Hospital.

Royal Naval Volunteer Reserve.

Leonard C. P. Irvine to the *Pembroke*, additional, for the *Cornwallis*, on commissioning.

ARMY MEDICAL SERVICE.

Royal Army Medical Corps.

Captain William B. Studdy, of the Australian Medical Unit, relinquishes his temporary commission.

Lieutenants confirmed in their rank: Ernest W. Wade, Bernard Woodhouse, William K. Morrison, Edgar Percival, Stanley J. Linzell, Lewis R. Shore.

To be temporary Lieutenants: Richard H. C. Gompertz, M.B., Arthur B. Le Mesurier, M.B., Geoffrey Hadfield, M.D., William A. Todd, M.B., John McFadden, M.B., Robert B. Blair, M.B., F.R.C.S., Philip J. Waren, Matthew Murphy, Francis F. Mueckе, M.B., F.R.C.S., John N. Clark, William H. Laslett, M.B., Jeffery W. Parker, Malcolm A. MacDonald, M.B., Arthur Owen Playford Reynolds, M.B., Arthur Ainslie Hudson, M.D., F.R.C.S.Edin., Edmund R. Dermer, Godfrey M. Huggins, F.R.C.S., Charles M. Kennedy, F.R.C.S., Charles D. Roberts, James H. Aikman, M.B., Delvine Bell, M.B., Edwin B. Barton, M.B., John S. Knox Boyd, M.B., Douglas M. Borland, M.B., Dudley T. Bird, M.B., Alan W. Gaye, M.B., William S. Garden, M.D., John H. C. Green, M.B., Aubrey Goodwin, M.B., Stanley Honeyman, M.B., Alfred E. Hallinan, M.B., Thomas H. Houston, M.B., Robert M. Hill, M.B., William J. Cardine, M.B., Courtnay C. Keates, James W. Littlejohn, M.D., David Matthew, M.B., William S. Martin, M.B., Daniel McVicker, M.B., Henry M. Mackenzie, M.B., Field W. Mackenzie, M.B., John T. Morrison, M.B., F.R.C.S., Hugh L. Neil, M.B., Ralph S. Oldham, M.D., William B. C. Patterson, M.B., George Rankine, M.B., John S. Stewart, M.B., William R. Snodgrass, M.B., James J. Sinclair, M.B., Neil F. Sinclair, James Taylor, F.R.C.S.Edin., James H. Grove-White, M.D., and Donald Wainwright.

INDIAN MEDICAL SERVICE.

The provisional promotion of the undermentioned Captains has been confirmed: W. H. Hamilton, J. F. Boyd, P. S. Mills.

E. R. Armstrong, M.B., is provisionally promoted to the rank of Captain, with effect from July 29th.

The services of Major R. A. Needham, M.B., are placed temporarily at the disposal of His Excellency the Commander-in-Chief.

The following substantive changes are sanctioned among Agency Surgeons, with effect from May 25th, 1914: Lieutenant-Colonel T. W. Irvine to be confirmed as an Agency Surgeon, First Class, and Chief Medical Officer, North-West Frontier Province. Captain C. I. Brierley to be confirmed as an Agency Surgeon, Second Class. Captain J. B. D. Hunter is confirmed as an Agency Surgeon, Second Class, with effect from July 28th, 1914.

The undermentioned officers have been finally admitted to the service. Their commissions bear date January 31st, 1914: G. H. Mahony, M.B., B.Sc., G. Covell, M.B., W. R. Stewart, M.B., K. V. R. Rao, J. G. O. Mosrs. M.B., H. Chand, V. Mahadevan, A. C. L. O'S. Bilderbeck, M.B., J. W. van Reenen, M.B., B. F. Beatson, M. J. Roche, M.B., N. D. Puri, M.B., P. C. Roy, M.B., J. B. Vaidya, J. M. R. Hennessy, A. G. Cowper, W. M. Lutton, H. H. Brown, C. H. N. Baker.

The following promotions are made:—To be Surgeon-General: Colonel G. F. A. Harris, C.S.I., M.D., F.R.C.P., V.H.S., April 1st, 1912. To be Colonel: Lieutenant-Colonel F. J. Drury, M.B., April 1st, 1912. Lieutenants to be Captains (provisionally subject to passing the Departmental Examination at the earliest possible opportunity): E. R. Armstrong, M.B., July 29th, 1914; C. J. Stocken, M.B., July 29th, 1914.

TERRITORIAL FORCE.

Royal Army Medical Corps.

Third Northern General Hospital.—John H. Cobb, M.B., to be Captain.

Sanitary Service.—Cuthbert B. Moss-Blundell, M.D., to be Captain.

Supernumerary for Service with the Officers' Training Corps.—Frederick J. Cleminson to be Lieutenant for service with the University of London Contingent, Senior Division, Officers' Training Corps.

First Highland Field Ambulance.—William H. E. Brand, F.R.C.S.Eng., to be Lieutenant; Captain John H. Stephen, M.B., and Captain Cuthbert D. S. Agassiz, M.B., from attached to units other than medical units to be Captains; Lieutenant James A. Morris, M.B., and James E. G. Thomson, M.B., from attached to units other than medical units, and Daniel M. Grant, M.B., James McConnachie, M.B., Charles A. Whyte, and George Davidson, M.D., to be Lieutenants.

Second Home Counties Field Ambulance.—Captain William H. Flint to be Major; Lieutenant Bernard B. Billings to be Captain.

Attached to Units other than Medical Units.—Frank R. Armitage, M.B., to be Lieutenant; Robert A. Kerr, M.B., to be Lieutenant; Lieutenant Dudley R. Harris, to be Captain; William L. Burgess, to be Lieutenant; Frederick A. W. Drinkwater, to be Captain; Frank W. Lawson, to be Lieutenant; Charles Butler to be Lieutenant; Francis R. Eddison to be Lieutenant; Robert E. T. Tatlow, M.D., to be Lieutenant; Captain John E. Molson, M.B., to be Major; Cresswell Burrows, M.D., to be Lieutenant; Humphry J. Wheller, M.D. (late Surgeon-Captain, 1st Buckingham R.V.C.), to be Lieutenant; Lieutenant Lee D. B. Cogan to be Captain; Cecil A. Ensor to be Captain; Herbert Connop to be Lieutenant; Captain Francis W. Goodrody, M.D., from the 3rd London General Hospital, to be Captain; Major William K. Paull, from the Territorial Force Reserve, to be Major; Major Herman Stedman, F.R.C.S.Edin., resigns his commission, and is granted permission to retain his rank and wear the prescribed uniform; Captain Charles Arthur Morris, C.V.O., M.B., F.R.C.S., to be Major; Supply Captain Matthew B. Ray, M.D., is absorbed into the establishment; Lieutenant Alan C. Ransford to be Captain; Thomas V. Oldham, M.B., to be Lieutenant; James G. F. Hosken to be Lieutenant; Edward L. Martin, M.D., to be Lieutenant; the date of appointment of Lieutenant Leonard West, M.B., is August 5th, 1914 and not as stated in the *London Gazette* of August 25th, 1914; Lieutenant Angus McNab, M.B., to be Captain.

South Wales Mounted Brigade Field Ambulance.—To be Lieutenants: HERBERT M. PENTREATH, GUY S. THOMSON, ARCHIBALD J. CAMPBELL, and ERNEST L. SANDLAND, M.B.

Vital Statistics.

EPIDEMIC MORTALITY IN LONDON.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

THE accompanying diagram shows the prevalence of the principal epidemic diseases during the second quarter of the year. The fluctuations of each disease and its relative fatality compared with the average in the corresponding periods of recent years can thus be readily seen, except in the case of diarrhoea and enteritis among children under 2 years of age, for which the average mortality is not available.

Enteric Fever.—The fatal cases of enteric fever, which had been 28, 37, and 47 in the three preceding quarters, declined again last quarter to 32, but were 11 in excess of the corrected average number in the corresponding period of the five preceding years. This disease was proportionally most fatal last quarter in Fulham, St. Marylebone, Holborn, Lambeth, and Deptford. The Metropolitan Asylums Hospitals contained 40 enteric fever patients at the end of last quarter, against 56, 51, and 66 at the end of the three preceding quarters; 88 new cases were admitted during the quarter, against 148 and 147 in the two preceding quarters.

Small-pox.—No death from small-pox was registered last quarter in London, and no case of this disease was under treatment in any of the Metropolitan Asylums Hospitals.

Measles.—The deaths from measles, which had been 124, 52, and 148 in the three preceding quarters, rose again last quarter to 346, but were 266 below the corrected average number in the corresponding period of the five preceding years. The highest death-rates last quarter from this disease were recorded in Finsbury, Shoreditch, Stepney, Bermondsey, and Greenwich.

Scarlet Fever.—The fatal cases of scarlet fever, which had been 46, 49, and 66 in the three preceding quarters, further rose last quarter to 69, and were 11 in excess of the corrected average number. Among the several boroughs this disease was proportionally most fatal in Fulham, Finsbury, the City of London, Southwark, Deptford, and Woolwich. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals, which had been 2,552, 3,810, and 3,138, had further declined to 3,046 at the end of last quarter; 4,731 new cases were admitted during the quarter, against 4,203, 7,113, and 4,799 in the three preceding quarters.

Whooping-cough.—The deaths from whooping-cough, which had been 120, 116, and 281 in the three preceding quarters, further increased to 310 last quarter, but were 59 fewer than the corrected average number in the corresponding period of the five preceding years. The greatest proportional mortality from this disease was recorded in Finsbury, the City of London, Shoreditch, Bethnal Green, and Stepney.

Diphtheria.—The fatal cases of diphtheria, which had been 73, 138, and 161 in the three preceding quarters, declined again last quarter to 143, but were 35 in excess of the corrected average number. The highest death-rates from this disease occurred in Hackney, Stepney, Poplar, Deptford and Woolwich. There were 1,079 diphtheria patients under treatment in the Metropolitan Asylums Hospitals at the end of last quarter, against 909, 1,099, and 1,307 at the end of the three preceding quarters; 1,673 new cases were admitted during the quarter, against 1,624, 2,281, and 2,069 in the three preceding quarters.

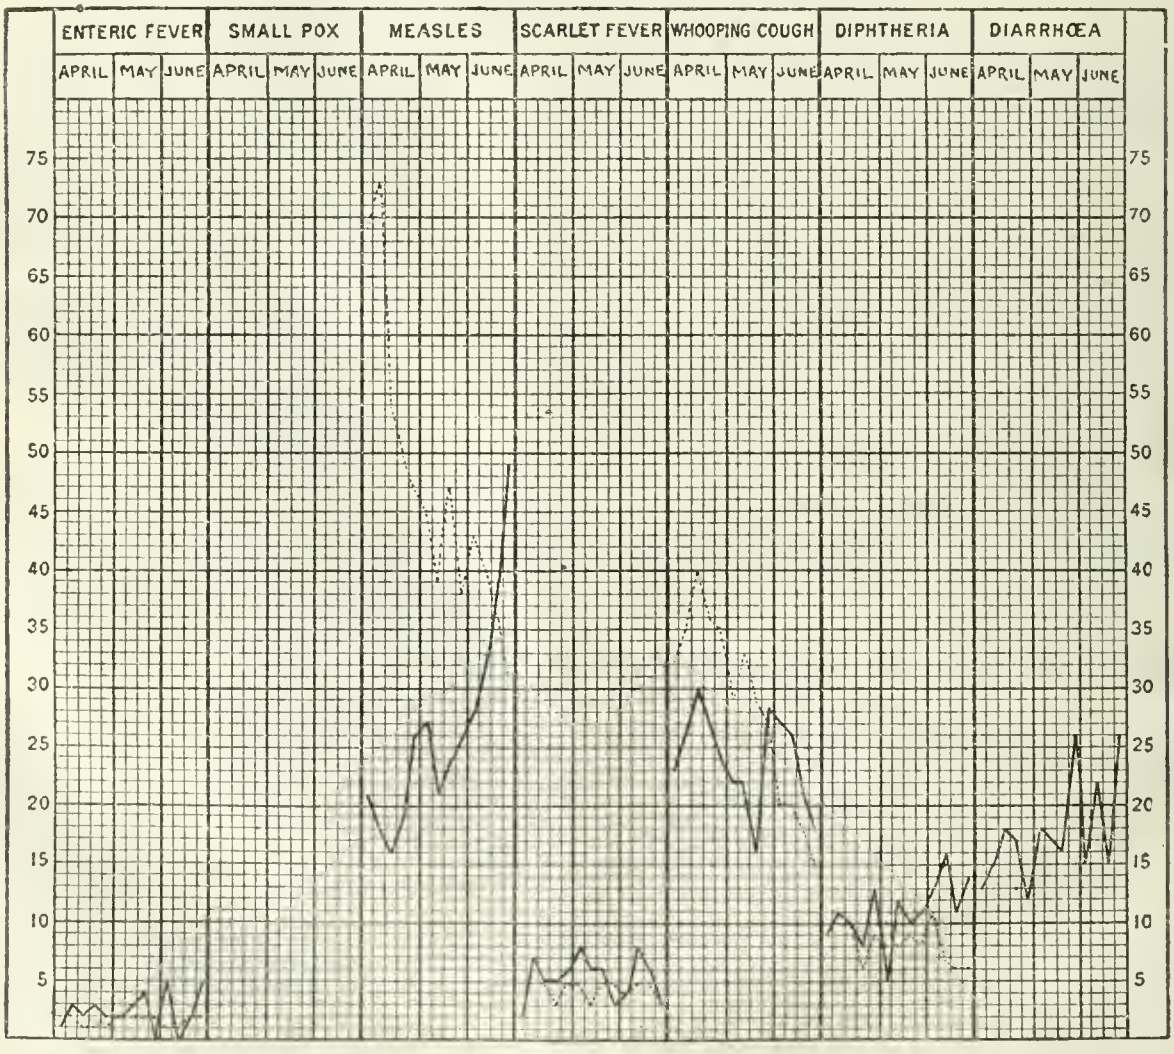
Diarrhoea.—The deaths under this heading are those attributed to diarrhoea and enteritis among children under two years of age; measured in proportion to the births registered during the quarter the mortality from this cause was greatest in Islington, Stoke Newington, Hackney, Shoreditch, Bethnal Green, Poplar and Bermondsey.

In conclusion it may be stated that the aggregate mortality last quarter from these epidemic diseases, excluding diarrhoea, was 22.9 per cent. below the average.

HEALTH OF ENGLISH TOWNS.

IN the ninety-seven largest English towns 9,246 births and 5,441 deaths were registered during the week ended Saturday, September 26th. The annual rate of mortality in these towns, which had been 14.4, 15.2, and 15.1 per 1,000 in the three preceding weeks, rose to 15.7 per 1,000 in the week under notice. In London the rate was equal to 15.5, against 15.4, 16.1, and 15.6 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 6.2 in Southend, 6.6 in Eastbourne, 6.7 in Bournemouth, 7.9 in Swindon, 8.1 in Ealing, and 8.4 in Wallasey to 22.0 in Preston, 22.7 in Middles-

DEATHS FROM EPIDEMIC DISEASES IN LONDON DURING THE SECOND QUARTER OF 1914.



NOTE.—The black lines show the *recorded* number of deaths from each disease during each week of the quarter. The dotted lines show the *average* number of deaths in the corresponding weeks of the five preceding years, 1909–13. Under the heading "Diarrhoea" are given the deaths from diarrhoea and enteritis among children under 2 years of age; the corrected average number of these deaths is not available.

brough, 22.9 in South Shields, 23.2 in Liverpool, 23.8 in St. Helens, 31.0 in Gateshead, and 34.6 in Wigan. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 947, 1,172, and 1,223 in the three preceding weeks, fell to 1,004, and included 245 in London, 106 in Liverpool, 47 in Birmingham, 46 in Manchester, 32 in Stoke-on-Trent, and 29 in Newcastle-on-Tyne. Measles caused a death-rate of 1.7 in Oldham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 44, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of this number 9 were recorded in Liverpool, 6 in Birmingham, 4 in Gateshead, 3 in Lou on, and 3 in Newcastle-on-Tyne. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,318, 3,500, and 3,659 at the end of the three preceding weeks, had risen to 3,964 on Saturday, September 19th; 674 new cases were admitted during the week, against 548, 619, and 551 in the three preceding weeks.

In the ninety-seven largest English towns 8,659 births and 4,966 deaths were registered during the week ended Saturday, October 3rd. The annual rate of mortality in these towns, which had been 15.2, 15.1, and 15.7 per 1,000 in the three preceding weeks, fell to 14.3 per 1,000 in the week under notice. In London the death-rate was equal to 14.9, against 16.1, 15.6, and 15.5 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death rate ranged from 3.0 in Dudley, 5.6 in Gillingham, 7.2 in Cambridge, 7.7 in Oxford, 8.2 in Hornsey, and 8.6 in Croydon to 21.2 in Tynemouth, 21.6 in Warrington, 21.8 in Great Yarmouth and in Wakefield, 22.0 in Stockton-on-Tees, and 22.3 in Birkenhead. Measles caused a death-rate of 1.6 in West Hartlepool and 1.9 in Birkenhead; diphtheria of 1.2 in Leyton, 1.3 in Stoke-on-Trent, and 1.6 in Middlesbrough; enteric fever of 1.4 in South Shields; and whooping-cough of 1.0 in Newcastle-on-Tyne. The death of children (under 2 years) from diarrhoea and enteritis, which had been 1,172, 1,223, and 1,004 in the three preceding weeks, further fell to 651, and included 183 in London, 60 in Liverpool, 26 in Stoke-on-Trent, 19 in Birmingham, 17 in Hull, and 15 in Sheffield. The mortality from scarlet fever showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 36, or 0.7 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of this number, 4 were recorded in Birmingham; 4 in Liverpool, 3 in Rochdale, 3 in Gateshead, and 2 each in Nottingham, Bootle, St. Helens, and Sheffield. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,500, 3,669, and 3,964 at the end of the the three preceding weeks, had further increased to 4,196 on Saturday, October 3rd; 640 new cases were admitted during the week, against 619, 551, and 674 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,124 births and 717 deaths were registered during the week ended Saturday, September 26th. The annual rate of mortality in these towns, which had been 16.0 16.5, and 15.9 per 1,000 in the three preceding weeks, rose to 16.3 in the week under notice, and was 0.6 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 7.3 in Kilmarnock, 12.5 in Falkirk, and 12.6 in Motherwell and in Ayr to 17.4 in Greenock, 17.7 in Glasgow, and 19.4 in Paisley. The mortality from the principal infective diseases averaged 2.9 per 1,000, and was highest in Motherwell and Greenock. The 356 deaths from all causes in Glasgow included 54 from infantile diarrhoea, 11 from whooping-cough, 5 from scarlet fever, 2 from diphtheria, 2 from enteric fever, and 1 from measles. Three deaths from scarlet fever and 5 from diphtheria were recorded in Aberdeen; 2 deaths from scarlet fever in Edinburgh; and from infantile diarrhoea 9 deaths in Edinburgh, 8 in Dundee, 5 in Greenock, and 3 in Motherwell.

In the sixteen largest Scottish towns 1,110 births and 687 deaths were registered during the week ended Saturday, October 3rd. The annual rate of mortality in these towns, which had been 16.5, 15.9, and 16.3 per 1,000 in the three preceding weeks, fell to 15.6 in the week under notice, but was 1.3 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 10.8 in Hamilton, 13.8 in Edinburgh and in Perth, and 14.0 in Kirkcaldy to 18.1 in Greenock, 18.2 in Coatbridge, and 19.8 in Dundee. The mortality from the principal infective diseases averaged 2.1 per 1,000, and was highest in Dundee and Aberdeen. The 312 deaths from all causes in Glasgow included 28 from infantile diarrhoea, 11 from whooping-cough, 3 from scarlet fever, 2 from enteric fever, 2 from diphtheria, and 1 from measles. Nine deaths from infantile diarrhoea were recorded in Edinburgh and 5 in Dundee; from scarlet fever 3 deaths in Aberdeen and 2 in Dundee; and from diphtheria, 4 deaths in Aberdeen.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, September 26th, 598 births and 443 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 556 births and 459 deaths in the preceding period. These deaths represent a mortality of 19.2 per 1,000 of the aggregate population in the districts in question, or the same as in the previous period. The mortality in these Irish areas was therefore 3.5 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.9 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 18.4 (as against an average of 18.5 for the previous four weeks), in Dublin city 20.5 (as against 20.1), in Belfast 22.1 (as against 18.7), in Cork 22.4 (as against 15.8), in Londonderry 22.8 (as against 12.4), in Limerick 23.0 (as against 20.3), and in Waterford 17.1 (or the same as the average four weeks). The zymotic death-rate was 4.2, as against 4.4 in the previous week.

During the week ending Saturday, October 3rd, 676 births and 491 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 598 births and 443 deaths in the preceding period. These deaths represent a mortality of 17.3 per 1,000 of the aggregate population in the districts in question, as against 19.2 per 1,000 in the previous period. The mortality in these Irish areas was therefore 3.0 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 29.2 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 19.1 (as against an average of 18.5 for the previous four weeks), in Dublin city 19.0 (as against 20.0), in Belfast 17.4 (as against 20.0), in Cork 14.3 (as against 17.9), in Londonderry 14.0 (as against 15.6), in Limerick 16.2 (as against 20.6), and in Waterford 17.1, or the same as in the previous period. The zymotic death-rate was 2.6, as against 4.2 in the previous week.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, OCTOBER 31ST, 1914.

CONTENTS.

Meetings of Branches and Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

DORSET AND WEST HANTS BRANCH.

THE autumn meeting of the Branch was held at the Hotel Mont Dore, Bournemouth, on October 21st, when the President, Mr. H. H. DU BOULAY, was in the chair; thirty-six members signed the attendance register.

Extension of Branch.—The SECRETARY informed the meeting of the inclusion of Shaftesbury and Handley in the Branch area.

Election of Officers.—The following were elected officers for the year 1915–16:

President: Dr. C. D. Muspratt (Bournemouth).
Vice-Presidents: Dr. V. Milner, Mr. H. C. Unwin.
Honorary Secretaries: Dr. F. Fowler and Mr. P. A. Ross (re elected).

Uterine Haemorrhage.—Dr. ELEANOR BOND, Vice-President, read a paper on uterine haemorrhage, which was discussed by the PRESIDENT, Mr. MAHOMED, Dr. SABERTON, Dr. LYS, Dr. SIMMONS, Mr. RAMSAY, and Dr. MIDELTON. Dr. BOND replied, and on the motion of Dr. MOORHEAD a vote of thanks was accorded to her for her excellent paper.

Abdominal Cases.—Dr. NORMAN FLOWER read notes of two interesting abdominal cases.

Next Meeting.—On the motion of Dr. LYS, seconded by Dr. SIMMONS, it was agreed that the next meeting be held at Weymouth in May, 1915.

Luncheon.—The Bournemouth practitioners entertained the Branch to luncheon and tea.

GLASGOW AND WEST OF SCOTLAND BRANCH: DUMBARTONSHILE DIVISION.

A SPECIAL meeting of the Division was held in Glasgow on October 3rd, under the chairmanship of Dr. GILMOUR, to consider the following resolution of the Clydebank Medical Committee:

> It having been suggested by the Clydebank Insurance Committee that the members of the local panel should give a temporary donation to the nursing association to provide after-treatment to tuberculous patients until such time as a tuberculosis officer and nurse are appointed, the granting or refusing of this request be referred by the local panel to the Dumbartonshire Division of the British Medical Association for its opinion.

On the motion of Dr. W. S. YOUNG, seconded by Dr. BLAKELEY, it was resolved by a large majority:

> That this Division of the British Medical Association considers that it is inexpedient for medical practitioners in the Division to give a donation to any nursing association to provide after-treatment for tuberculous patients.

SOUTH-EASTERN OF IRELAND BRANCH.

AT an ordinary meeting of this Branch, held in Kilkenny on October 14th, the President, Dr. O'CONNELL, occupied the chair, and sixteen other members were present.

Scheme of Free Medical Attendance for the Dependants of those Serving with the Colours.—A circular letter from the Medical Secretary, London (dated September 17th), also a letter from the Irish Medical Secretary (dated September 22nd), were read referring to the steps taken to inaugurate a system of free medical attendance for the necessitous dependants of men serving with the colours. The meeting unanimously decided to fall in with the scheme, and it was proposed by Dr. POWER, seconded by Dr. WALSHE, and passed unanimously:

> That, in view of the present national emergency, the South Eastern of Ireland Branch of the British Medical Association requests all medical practitioners to give free medical attendance to the dependants of soldiers and sailors on active service.

Medical Certificates under the Insurance Act.—On the motion of Dr. POWER, seconded by Dr. WALSHE, the following resolution was carried by 16 votes to 1:

> That no medical certificates be issued for sickness benefits to insured persons under the Insurance Act as applied to Ireland, and where sickness benefits have been denied to insured persons in consequence of their being unable to obtain medical certificates, particulars of such cases be furnished to the Irish Insurance Commissioners and to the Secretaries of the Irish Medical Committee, and that the medical attendant in each case be requested to use his best endeavours to give effect to above proposal, and any member violating this resolution should be reported to the Ethical Committee of this Branch.

Notices of Motion.—Notices of motion, in the name of Dr. Laffan, dealing with "undercutting of professional fees," "gratuitous professional services in hospitals, lecture rooms, and for first-aid services, etc.," and the "stampede of well-to-do patients for medical treatment to Dublin," were adjourned to the first meeting in the next session to afford sufficient time for their consideration.

Medical Adviser's Intrusion.—A letter was read from a member of the Branch narrating the history of one of his insured patients who was suffering from chronic pericarditis with tachycardia (auricular fibrillation) and dyspnoea, and who was certified as fit to work by a medical adviser employed by the Irish Insurance Commissioners to provide certificates free of cost to insured persons but without affording medical attendance. Some time afterwards, when the medical attendant visited this patient, he found him in great distress, with mitral bruit, swollen feet, and failing compensation.

Branch Council.—A special meeting of the Branch Council was subsequently held, when Dr. O'CONNELL occupied the chair, and ten other members were present.

Ethical Committee.—The following members were elected on the Ethical Committee: Drs. R. R. O'Brien, Power, Laffan, Charles Ryan, Morris, Mackesy, Morrissey, Jellett, D. Walshe, James Shee, J. V. Ryan, President and Honorary Secretary (*ex officio*). Five members to form a quorum.

Dinner.—The meeting then adjourned and the members dined together.

WILTSHIRE BRANCH: TROWBRIDGE DIVISION.

THE final meeting of the Trowbridge Division as a unit of the Bath and Bristol Branch was held at the Town Hall, Trowbridge, on October 15th, when Dr. RUMBOLL was in the chair, and eight other members were present.

Dissolution of Division.—On the motion of Dr. TUBB-THOMAS, seconded by Dr. FERGUSON, it was resolved;

> That the Trowbridge Division of the Bath and Bristol Branch be and hereby is dissolved.

The first general meeting of the new Division as a unit of the Wiltshire Branch was held at the close of the meeting dissolving the old Division. Dr. Rumboll was appointed to the chair and Dr. Bond was elected secretary *pro tem.*

Election of Officers.—The officers elected at the annual meeting of the old Division on May 27th, 1914, were re-elected with the substitution of the name of Dr. Tubb-Thomas for that of Dr. Rattray as Representative on the Branch Council.

Rules.—The rules and Ethical Rules adopted by the old Division were readopted with the following alterations: Rule 1. Omit the words "and Somerset." Rule 2. For "Bath and Bristol" read "Wiltshire."

Swindon Division.—The Secretary was instructed to write to Dr. Dismorr (Wroughton) asking him to arrange a meeting in Swindon to inaugurate the Swindon Division.

Branch Meeting.—It was recommended that a Branch meeting be held in November.

Treatment of Dependants of Men Serving with the Colours.—A letter from the Secretary of the Wilts War Relief Committee was read, and Dr. Bond was elected representative of medical men on the Committee. The following recommendations were referred to the Committee:

1. That books to be given to dependants (of which a specimen was produced) be supplied to doctors for use in cases of emergency—to be taken by the patient to the office of the Relief Committee before being presented to the doctor a second time.
2. That patients be entitled to free choice of the doctor willing to serve.
3. That patients must attend during panel hours.

Medical Inspection of School Children.—Dr. Tubb-Thomas explained the scheme under which medical men were asked to carry out the work of medical inspection in certain areas of the county at a fee of 2s. per child examined. It was resolved that members be recommended to accept the terms offered.

Insurance Act Committee.—A communication from the Insurance Act Committee of the British Medical Association in connexion with the pending revision of Medical Benefit Regulations and the agreements between doctors and Insurance Committees (see Supplement, October 17th, p. 202) was received and approved.

IRISH MEDICAL COMMITTEE.

A meeting of the Irish Medical Committee was held at the Royal College of Surgeons on October 7th. In the absence of Dr. Macnamara, the Chairman, Mr. R. J. Johnstone, Vice-Chairman, presided. The other members present were:

Drs. R. Marley Blake, H. T. Warnock, E. Thompson, S. Gawn, T. Donnelly, W. W. Murphy, J. M. S. Kenny, J. W. Olpherts, D. Walshe, J. J. O'Connor, K. F. Lynn, W. J. O'Sullivan, J. J. O'Sullivan, J. S. Darling, W. A. Morton, A. A. McConnell, P. J. Hamilton, R. J. Rowlette, W. F. Delaney, A. MacBride, B. Costello, T. F. Higgins, B. C. Powell, D. Forde; Dr. M. R. J. Hayes, Medical Secretary, and Mr. C. H. Gick, Secretary, were also in attendance.

Representatives of Local Medical Committees on the Insurance Committee.—It was decided to protest against the failure of the Insurance Commissioners to carry out their promise of March 7th, 1913, to appoint the nominees of Local Medical Committees on the Insurance Committee, and Secretaries of Local Medical Committees in the various areas are requested to intimate at once cases where their nominees have not both been appointed.

Medical Secretaries.—Dr. Hayes, Acting Medical Secretary, stated that Dr. Hennessy was now in a position to take up the duties of Medical Secretary, and that communications should be addressed to him at 16, South Frederick Street, Dublin, or to the Joint Secretary, Mr. C. H. Gick, 58, Dame Street, Dublin.

First Aid Lectures.—After discussion, the meeting adopted a resolution approving of ambulance lectures being given.

Certification.—Dr. Hayes explained the present position of negotiations regarding certification, and after a lengthened discussion it was unanimously resolved:

That the Irish Medical Committee, representative of the profession, will not under the present conditions raise any objection to the medical men in the panel areas continuing for the present the existing arrangements with the Insurance Commissioners.

The meeting also adopted the following resolution, and decided to ask the honorary secretaries of the Local Medical Committees to carry it into effect:

That each Local Medical Committee be requested to ask the M.P.'s for their respective counties to receive a deputation with reference to the certification question.

Contributions from Local Medical Committees.—The following resolution was adopted:

That the Local Medical Committee be asked to pay 2s. 6d. per practitioner as affiliation fee to Central Body for administration purposes.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

Local Medical Committee.

A meeting of the Local Medical Committee for the County of London was held on October 21st, at the offices of the Metropolitan Asylums Board, Victoria Embankment, E.C. Dr. James Galloway, Chairman of the Committee, presided.

The principal business was the consideration of a report from a special subcommittee upon the constitution, powers, duties, and finance of the Committee, and the following recommendations were adopted:

(*a*) That the Local Medical Committee are of opinion that, in the interests of the profession and in view of the fact that the Committee have no statutory income, the personnel of the Local Medical and Panel Committees for the County of London should be identical; and that the Insurance Commissioners, the Insurance Committee, and the Panel Committee be so informed.

(*b*) That, until such time as it is possible to secure that the personnel of the Local Medical and Panel Committees is identical, the Local Medical Committee do offer advice on matters connected with the administration of the benefits of insured persons only when that advice is sought.

(*c*) That the Local Medical Committee do exercise their powers and duties in the closest co-operation with the Panel Committee.

(*d*) That an executive committee be appointed to consider and report, from time to time as may be required, upon all matters referred to the Local Medical Committee; and that the executive committee do consist of the chairman and secretary of the committee, together with ten other members to be appointed by the committee.

The executive committee appointed will consist of Dr. James Galloway (chairman), Dr. B. A. Richmond (secretary), together with Drs. J. A. Butler, H. J. Cardale, J. V. C. Denning, Mina Dobbie, W. McAdam Eccles, M. Greenwood, W. Kingdon, J. T. Richards, J. J. Scanlan, and A. G. Southcombe.

The Committee decided, under Article 50 of the Medical Benefit Regulations, that a practitioner was required by the terms of his agreement with the Committee to administer salvarsan injections to insured persons, but in response to an inquiry from the Insurance Committee whether treatment for nasal polypus was within the range of services which should be expected from such a practitioner, it decided to reply that the details were not sufficiently fully set forth to enable them to express an opinion.

With regard to the proposed federation of Local Medical and Panel Committees, the Committee resolved that it was unable to accept membership of the federation under its constitution as at present drafted.

Panel Committee.

A meeting of the London Panel Committee was held on October 27th.

Treatment of Dependants of Men with the Colours.

It was reported that 1,150 practitioners on the panel in London had intimated their willingness to undertake the medical treatment, free of charge during the war, of necessitous dependants of reservists and dependants of insured persons unemployed because of the war. Dr. Richmond, the secretary of the committee, remarked that as 70 practitioners had been called up for military duty, the proportion of practitioners on the panel who had responded to the committee's appeal was very satisfactory. The committee could congratulate itself on having gone so far as to undertake the free treatment of dependants of insured persons out of work through the war. With regard

to the Government scheme formulated at the instance of the British Medical Association and the Pharmaceutical Society, some practitioners on the panel in London objected to receiving notices from the British Medical Association, seeing that the Panel Committee had decided upon its line of action. But in order to avoid any jealousy or clashing he suggested that the names of panel practitioners willing to give free treatment be sent to the local relief committees in the various areas, and this was agreed to.

The Government and Pathological Laboratories.

The deputation appointed to wait upon the Local Government Board to express the views of panel practitioners with regard to the proposed establishment of pathological laboratories reported that it was very cordially received by Mr. Willis and Dr. Newsholme, but it was intimated that, owing to the war, the proposed grants-in-aid must be withheld for the present. The officials of the Board agreed with the views expressed by the deputation that the laboratories should be limited in number, so that they might be fully staffed with specialists and well equipped with modern scientific apparatus. The deputation urged the importance of the pathologist being in touch with individual practitioners, and it was understood that provision would be made for specimens to be taken, where necessary, by the pathologist himself. It appeared that the assistance of the laboratories—which would be established, where possible, in connexion with hospitals—would be available for both insured and uninsured persons.

Assignment of Unallotted Persons.

Some discussion took place with regard to the scheme for the assignment to practitioners of insured persons who have not chosen a doctor and the crediting of additional capitation fees in respect of such persons. The London Insurance Committee on October 22nd decided to incorporate in the draft scheme agreed upon with the Panel Committee a proviso that in calculating the additional capitation fees no account should be taken of removals or persons changing their doctor at the end of the medical year, so that further capitation fees should be restricted to those persons who had not previously made a selection. In view of the fact that a practitioner did not receive payment during a particular quarter in respect of persons transferred to him during that quarter, the Panel Service Subcommittee advised the Panel Committee not to acquiesce in the amendment.

Dr. R. V. Donnellan moved, and Dr. H. H. Mills seconded, an amendment that the suggestion of the Insurance Committee be accepted, and Dr. Cowie urged that the calculation of the unallotted funds must not be complicated by the introduction of persons who were in no sense unallotted. Dr. H. J. Cardale claimed that the scheme as originally approved by the Panel Committee did justice to small-list practitioners, and would be an inducement to doctors to go on the panel. If transfers were excluded and a doctor's old patient went back to him the doctor would receive no share of the unallotted funds. On a division the scheme, as amended by the Insurance Committee, was accepted by 41 votes to 8.

Excessive Prescribing.

The first cases came before the Committee in which allegations of excessive prescribing had been investigated and reported upon. Only one was dealt with by the meeting, and in this the Committee expressed the opinion that the cost of the drugs and appliances ordered was in excess of what was reasonably necessary. The practitioner had 1,341 persons on his list, and the cost of 465 prescription forms issued by him in a certain period averaged 2s. 1d., the average cost per insured person 3¾d. Eighty per cent. exceeded 1s. in value. It was held that, apart from too frequent repetition of a medicine, the practitioner ordered larger quantities than were necessary. One patient received 10 lb. of cod-liver oil and malt in seven days, and another in six days received 180 doses of various mixtures. In defence the practitioner urged that he could not be held responsible if an insured person took medicine in larger quantities than was intended, or gave the medicine to other members of the family, and that a practitioner could not refuse to prescribe if the patient stated that the medicine had been consumed.

The Panel Committee was asked to state whether it would continue to contribute £800 a year for the statistical analysis of prescriptions. In reply to Dr. Butler, who deprecated the expense as unnecessary, Dr. Coode Adams remarked that the drain on the Drug Fund was becoming so severe that the very existence of the Insurance Act was endangered. The chemists were extremely dissatisfied, and in London threatened not to accept the agreements next year. If panel practitioners wished the Insurance Act to continue they must deal strictly with over-prescribing, and the expenditure on the examination of prescriptions was necessary to that end. Dr. Richards hoped that members had read the Scottish report in the British Medical Journal, from which it appeared that in Scotland only one or two cities exceeded the 2s., and in a large number the total was below 1s. 6d.; it was clear, therefore, that there was great scope for economy. Dr. Donnellan mentioned that in London the total drug fund for 1914 had been expended at the end of September. The Committee decided, with only two dissentients, to renew its contribution towards the examination of prescriptions.

SURREY.

Panel Committee.

The monthly meeting of the County of Surrey Panel Committee was held at Surbiton Cottage Hospital on October 16th. Dr. Wiggins (East Sheen), and Dr. Crichton (Redhill) were nominated to fill vacancies in the Barnes and Reigate areas respectively.

Medical Benefit Regulations.—It was decided to agree to the proposed alterations in the regulations of medical benefit for next year, and that the Panel Committee should join with the Insurance Committee and the Pharmaceutical Committee in paying the cost of checking prescriptions subject to the control being in the hands of the three committees jointly.

Temporary Residents.—Owing to the fact that the payment of services rendered to temporary residents is so long delayed after the close of the medical year, it was decided to ask the County Committee to pay an advance of 75 per cent. on the account on January 1st.

Expenses of Committee.—The Honorary Treasurer stated that out of 418 practitioners on the panel, 181 had sent an undertaking to allow a deduction to be made by the clerk of the Insurance Committee from money due to them, and 34 had sent a contribution towards the cost of the committee.

Prescribing: Drug Tariff.—A subcommittee was appointed to look into the matter of economy in prescribing, and to draw up a pharmacopoeia for the county. The only alteration made in the drug tariff was to leave the price of drugs affected by the war blank, the prices to be settled monthly by a central joint committee.

Medical Referees.—Complaints were received from two areas that a certain industrial company had been trying to get practitioners to undertake the duties of medical referee at a lower fee than half a guinea. All practitioners who may be approached on this matter are requested to at once bring it to the notice of the Medical Secretary of the British Medical Association.

GLOUCESTERSHIRE.

Panel Committee.

The first meeting of the new Panel Committee for Gloucestershire was held at the Royal Infirmary, Gloucester, on October 15th, when fourteen members were present. Dr. A. J. Campbell was re-elected Chairman. Drs. Bell, Turner, and Cox were elected for the vacancies for Gloucester, Tewkesbury, and Winchcombe respectively. Drs. W. R. Awdry (Berkeley), Hugh Powell (Cheltenham), and H. Cairns Terry (Gloucester) were co-opted.

Finance.—It was decided to obtain clerical assistance for the Secretary. The accounts were considered and adopted. As the collection of the voluntary rate caused considerable difficulty, it was recommended that the members be circularized to forward their subscriptions on receipt of their quarterly payments.

Economies in Drugs.—Drs. Buchanan and Perrott were appointed a committee to meet the Pharmaceutical Committee on the subject of economies in drugs.

Medical Referees.—It was unanimously agreed that for referee work a fee of 10s. 6d. be required for examination of a patient at the surgery, and 21s. for a visit at the

patient's house for the purpose of report, this being in accordance with the resolutions of the first Local Medical Committee.

Treatment of Dependants.—After a short discussion on the subject of the treatment of dependants of soldiers and sailors, it was resolved to adhere to the original resolution passed on August 22nd, that the Committee were prepared to consider such cases according to their merits.

CHESHIRE.

COUNTY LOCAL MEDICAL AND PANEL COMMITTEES.

THE Honorary Secretary, Dr. Picton, being away on service, the post is temporarily held by Dr. J. B. Hughes, 65, Roe Street, Macclesfield.

DRUG TARIFF.

THE following circular letter, 49 I.C., has been issued by the Insurance Commission (England):

National Health Insurance Commission (England),
19th October, 1914.

Sir,—I am directed by the National Health Insurance Commission (England) to state that they have received numerous inquiries with regard to certain proposals which, it is understood, have been put forward locally for the modification of the drug tariff as from the beginning of the ensuing medical year. In these circumstances the Commissioners have thought it desirable to communicate generally with the Insurance Committees on the subject, and they accordingly suggested to Committees on the 17th instant that they should postpone for the present the submission of their drug tariff proposals in order that they might have an opportunity of considering the contents of the present circular.

In the first place, it should be borne in mind that the special concessions announced in I.C.L. 102 are of a temporary nature only, and, as the Commissioners have stated in reply to inquiries, cannot in any event be expected to operate beyond December 31st next.

The proposals above referred to were concerned with the method to be adopted of pricing those drugs which are subject to fluctuation owing to the war; and, in the form in which they were in some cases propounded, were not such as the Commissioners could approve without modification. The Commissioners have had under their notice, however, a suggested tariff for 1915 (dated October 17th, 1914, in the bottom left hand corner), which, it is understood, is being issued by the Pharmaceutical Standing Committee on Insurance to Pharmaceutical Committees throughout England, and in which these proposals are definitely formulated. The Commissioners have considered this tariff, and they desire me to state that, if adopted by the Committee, it would meet with their approval subject to the insertion of a suitable provision dealing with the following point, and subject also to the consideration of any other modifications which in view of local circumstances the Committee may desire to submit. With regard, however, to the inclusion or exclusion of the "Notes for Dispensers" at the end of the tariff, and the provision for the payment of a copying fee, the Committee will presumably adopt the same course as they adopted, with the approval of the Commissioners, in connexion with the current year's tariff. The point above referred to, upon which the Commissioners will require the amendment of the printed tariff of October 17th, 1914, is as follows:

MIXTURES COMMONLY PRESCRIBED.

In a large number of areas, formularies, or lists of mixtures have already been compiled for the convenience of doctors in prescribing and of chemists in dispensing; while it is probable that a similar course will be followed elsewhere. Where owing to the adoption of such a formulary certain mixtures are regularly prescribed and are therefore dispensed in considerable quantities, the chemist, in lieu of dispensing each prescription separately, is enabled to obtain a supply of the mixture in bulk, provided that the mixture in question is of such a character as to be capable of being stocked without deterioration in quality.

The present scale of dispensing fees contained in the tariff makes no provision for any adjustment in price consequent upon the economics to the chemist which the above-mentioned practice renders possible. But it appears to the Commissioners that where a given mixture is stocked in bulk by the chemist and prescriptions for that mixture dispensed from his bulk supply, there is no justification for the prescription being priced in accordance with principles which have been adopted on the assumption that the separate ingredients of each prescription are specially compounded by the chemist on each occasion the medicine is dispensed.

In these circumstances the Commissioners are of opinion that where, owing to the adoption of a formulary, special economies in dispensing are rendered possible, the advantage of these economies should be shared by the Drug Fund of the Insurance Committee; and they accordingly consider that a provision should be inserted in the tariff to provide for a reduced dispensing fee in the case of mixtures (up to a maximum number) included in local formularies which can be obtained and stocked in bulk by the chemist without deterioration.

The following clause for insertion after the fourth line of print on page 14 of the tariff above mentioned has been prepared for the assistance of Committees in their consideration of this matter, and the Commissioners will require the insertion thereof or a clause to similar effect before giving their approval to the tariff:

> If a formulary or special pharmacopœia is adopted locally for use in prescribing by practitioners on the panel, dispensing fees will be charged at half the rates set forth above in respect of such of the mixtures specified therein, not exceeding ten at any one time, as may from time to time be selected for the purpose by the Panel Committee, the reduced rates to take effect as regards any mixtures so selected one calendar month after notice of the intention to apply those rates thereto has been issued by the Insurance Committee to persons supplying drugs and appliances. Provided that the reduced rates will only apply to those mixtures which have been agreed by the Panel Committee and the Pharmaceutical Committee, or, failing agreement between them, adjudged by the Commissioners, to be capable of being stocked in bulk without deterioration. The application of the reduced rates to any particular mixture is liable to be terminated by the Panel Committee, with the consent of the Insurance Committee, on notice being issued by the Insurance Committee to persons supplying drugs and appliances, as from the date specified in such notice.

It will be seen that this provision obviates the necessity for inserting in the tariff any specific mixtures to which the reduced rates are to apply. It would be open to the Panel and Pharmaceutical Committees under this paragraph to prepare a list of such mixtures at any time, and to revise or add to the list (within the limits of the maximum number) in the light of actual experience.

SUBMISSION OF ARRANGEMENTS FOR APPROVAL.

These observations may make it necessary for the Committee to confer further with the Panel and Pharmaceutical Committees in their area. In these circumstances the Commissioners have decided to postpone the date for submission of the Committee's arrangements in regard to the drug tariff until *October 30th at latest*. Those arrangements should of course be submitted earlier, if possible; and in any event the arrangements as regards the doctors' agreements, in respect of which longer notice is necessary under the regulations, should on no account be delayed. If these have not already been submitted, this should at once be done.—I am, Sir, your obedient servant,

JOHN ANDERSON.

OFFICIAL PUBLICATIONS.

ENGLAND.

INCAPACITY DUE TO PREGNANCY.

THE Commissioners have recently issued a circular to approved societies informing them that no distinction should be drawn as regards the payment of sickness or disablement benefit between incapacity due to pregnancy and incapacity due to other causes. Some approved societies have in the past followed a different practice, and the Commissioners therefore think it well to inform practitioners on the panel that where they are satisfied as to the incapacity for work of the patient a certificate should not be withheld on the ground that the incapacity is due to or accompanied by pregnancy.

A special grant has been provided in respect of the payment of claims for sickness benefit arising out of pregnancy. In these circumstances, it is essential from the point of view of societies who may claim a share of the grant that, where the incapacity for work is either directly or indirectly due to pregnancy, that fact should be clearly indicated on the certificate.

Any change in practice consequent upon the recent announcement to approved societies does not in any way affect the criterion of incapacity, on which alone the grant

of a certificate depends. In the case of women who are pregnant, as in all other cases, certificates should only be given where the doctor is satisfied that the insured person is rendered incapable of work.

CORRESPONDENCE.

New Draft Regulations.

Dr. James Hamilton (Chelsea, S.W.) writes: The letter of Dr. Percy D. Pywell necessitates my asking you to spare me a little of your valuable space.

I did not mention the advice given by the Lambeth Insurance Practitioners' Association by way of criticism. I gave it as an example of definiteness as to what was meant by over-prescribing in contradistinction to the Memorandum of the Insurance Commissioners, which was vague. The letter of Dr. Pywell states plainly the reason for prescribing a large number of doses to be to avoid paying the chemist a dispensing fee for customary quantities of medicine. He also states that there has always been some difference between contract and private practice with respect to prescribing and dose. I was not aware of it, but, if true, I do not think it fair to contract patients. My club experience was very limited. Insured persons were promised the same attendance under the panel as they formerly received when private patients, and it was the wish to ascertain whether it was the policy of the British Medical Association that they should be prescribed for as formerly that caused me to ask for information. I have no means of knowing of or making comparisons between the prescriptions of the two Boroughs of Lambeth and Chelsea, but it is satisfactory to hear that "the honour of the profession is so jealously guarded" in Lambeth and the prescribing of such a high order, yet I think I might hazard the criticism that Dr. Pywell was unfortunate in two of the diseases which he mentioned as requiring the same medication for days or weeks at a time. My experience is that there are no diseases in which more frequent changes of treatment are required than in influenza and acute bronchitis. I see by a report in one of your contemporaries it was stated at the last meeting of the Lambeth Association that no prescription should contain more than two drugs and that a prescriber's pharmacopœia should constantly be used. Comment on this method of guarding the pocket as well as the honour of the profession would only weaken it.

Proposed Federation for Panel and Local Medical Committees.

Dr. S. J. Ross (Bedford) writes: Let us remember, in considering this proposal, one indisputable fact—namely, that the British Medical Association has the machinery necessary for safeguarding the interests of the profession. Moreover, it has the power. It is recognized by the Government as the spokesman for the profession. Any new federation would weaken the Association. There would be introduced that unhealthy rivalry which ever exists between two bodies one of which is firmly rooted while the other is endeavouring to obtain a foothold—the art of playing to the gallery in order to obtain support. Unity is our goal, and this unity can best be attained by the loyal and whole-hearted support of every member of the profession given to the Association.

Circular on Supply of Drugs and Appliances.

Dr. C. R. Willans (Bournemouth) writes: It is very important that Panel Committees should take Circular 199 I.C., issued to Insurance Committees on the supply of drugs and appliances, into careful consideration. It will have far-reaching results, and if consented to by Panel Committees, will saddle those Committees for all time with very expensive and exacting duties.

The circular is too long to go through *in extenso*, but I should like to point out that it definitely puts the duty of investigating cases of excessive prescribing, etc., and the expenses thereby entailed on to the Panel Committees. It also puts the onus of circularizing the panel and, I think, also the pharmacists in cases of "general prohibitions as to the prescribing of certain articles and preparations" on to the Panel Committees, so that the Insurance Committee may be in a position to say to the insured person, "We should like you to have all these nice expensive drugs, but the Panel Committee will not allow it, because the doctors might lose their floating sixpence."

To sum up, Circular 199 I.C. puts the burthen of a lot of unpleasant work on to the shoulders of the doctors' representatives, and for it the panel doctors will have to pay.

I hope every Panel Committee in the country will give this circular very careful consideration before in any way subscribing to it.

Alleged Over-Prescribing.

Dr. D. N. Cooper (London) writes: Referring to the alleged over-prescribing stated at the meeting of the London Panel Committee, I have prescribed in 16 oz. quantity only during the holiday week. This serves the double purpose of relieving the chemist and the doctor on the holidays and enabling the patient to go away.

Errata.—In Dr. Percy D. Pywell's letter on the New Draft Regulations, in last week's Supplement (p. 213), there were two printer's errors. In line 13 of the letter, for "four" read "fourteen"; in line 15, for "dispensary" read "dispensing."

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

Lancashire and Cheshire Branch: Chester Division.—Dr. C. Jephcott, Honorary Secretary, 12, Upper Northgate Street, Chester, gives notice that a meeting of the Division will be held in the Board room of the Chester Royal Infirmary, on November 10th, at 8.15 p.m., to adopt the model organization and ethical rules for the Division, to appoint a representative on the Chester Council of Social Welfare (this refers to the medical attendance on dependants), one or more representatives on a similar committee for the county; also for Sale, and any other borough that invites the British Medical Association to nominate one or more representatives.

Metropolitan Counties Branch.—Dr. R. E. Crosse and Mr. N. Bishop Harman, Honorary Secretaries, give notice that a Council meeting will be held at 429, Strand, W.C., on Tuesday, November 10th, at 4 p.m.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeon Oswald Rees to the *Pembroke*, additional, for disposal. Staff Surgeon Percival T. Nicholls and Staff Surgeon W. R. Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN the ninety-seven largest English towns 8,544 births and 4,847 deaths were registered during the week ended Saturday, October 10th. The annual rate of mortality in these towns, which had been 15.1, 15.7, and 14.3 per 1,000 in the three preceding weeks, fell to 13.9 per 1,000 in the week under notice. In London the death-rate was equal to 13.8, against 15.6, 15.5, and 14.9 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 3.2 in Acton, 5.1 in Enfield, 6.2 in Gloucester, 7.8 in Lincoln, 8.0 in Ilford, and 8.2 in Smethwick, to 19.3 in Stockton-on-Tees, 19.4 in Liverpool, 19.9 in Great Yarmouth, 20.2 in Warrington, 20.5 in Gateshead, and 21.1 in Southport. Measles caused a death-rate of 1.9 in Birkenhead, scarlet fever of 2.1 in Warrington; and diphtheria of 1.4 in South Shields. The mortality from enteric fever and whooping-cough showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The deaths of children (under 2 years) from diarrhœa and enteritis, which had been 1,223, 1,004, and 651 in the three preceding weeks, further fell to 485, and included 123 in London, 49 in Liverpool, 32 in Birmingham, 20 in Manchester, and 19 in Sheffield. The deaths of 45, or 0.9 per cent. of the total deaths, were not certified either by a registered medical practitioner or by a coroner, of which 9 were recorded in Liverpool, 7 in Birmingham, 3 in St. Helens, and 2 each in London, Southend, Nottingham, Blackpool, Sunderland, and South Shields. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,669, 3,964, and 4,196 at the end of the three preceding weeks, had further risen to 4,363 on Saturday, October 10th; 670 new cases were admitted during the week, against 551, 674, and 640 in the three preceding weeks.

In the ninety-seven largest English towns 8,052 births and 4,653 deaths were registered during the week ended Saturday, October 17th. The annual rate of mortality in these towns, which had been 15.7, 14.3,

and 13.9 per 1,000 in the three preceding weeks, declined to 13.4 per 1,000 in the week under notice. In London the death-rate was equal to 13.9, against 15.5, 14.9, and 13.8 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 5.9 in Ealing, 6.2 in Southend, 6.3 in Ilford, 6.4 in Hornsey, 6.9 in Lincoln, 7.3 in Walthamstow and in Bolton, and 7.5 in Gillingham, to 18.2 in Liverpool and in Wigan, 18.4 in Barnsley, 19.2 in Rotherham, 19.7 in Gateshead, 20.6 in Middlesbrough, and 23.1 in Dewsbury. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 1,004, 651, and 485 in the three preceding weeks, further fell to 322, and included 91 in London, 32 in Liverpool, 19 in Birmingham, 14 in Manchester, and 7 in Middlesbrough. Measles caused a death-rate of 1.7 in Wigan and 2.3 in Birkenhead. The mortality for the remaining infective diseases showed no great excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 26, or 0.6 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner, of which 5 were recorded in Birmingham, 3 in Gateshead, and 2 in Smethwick. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 3,964, 4,196, and 4,363 at the end of the three preceding weeks, had further risen to 4,473 on Saturday, October 17th; 650 new cases were admitted during the week, against 674, 640, and 670, in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,228 births and 698 deaths were registered during the week ended Saturday, October 10th. The annual rate of mortality in these towns, which had been 15.9, 16.3, and 15.6 per 1,000 in the three preceding weeks, rose to 15 9 and was 2.0 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 10 2 in Kirkcaldy, 10 3 in Kilmarnock, and 11.0 in Falkirk, to 18.6 in Aberdeen and 20.7 in Dundee and in Greenock The mortality from the principal infective diseases averaged 2.2 per 1,000, and was highest in Dundee and Clydebank. The 309 deaths from all causes in Glasgow included 26 from infantile diarrhoeal diseases, 6 from scarlet fever, 6 from whooping-cough, 5 from enteric fever, 3 from diphtheria, and 1 from measles. Ten deaths from infantile diarrhoea were recorded in Dundee, 4 in Edinburgh, 3 in Aberdeen, and 3 in Clydebank; from scarlet fever, 4 deaths in Aberdeen and 2 in Dundee; and from diphtheria, 4 deaths in Aberdeen, 3 in Edinburgh, and 2 in Paisley.

In the sixteen largest Scottish towns 1,128 births and 646 deaths were registered during the week ended Saturday, October 17th. The annual rate of mortality in these towns, which had been 16.3, 15.6, and 15.9 per 1,000 in the three preceding weeks, fell to 14.7 in the week under notice, but was 1.3 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 4.1 in Hamilton, 8.5 in Coatbridge, and 8.8 in Kilmarnock, to 16.9 in Edinburgh and in Dundee, and 18.7 in Greenock. The mortality from the principal infective diseases averaged 1.8 per 1,000, and was highest in Aberdeen and Paisley. The 308 deaths from all causes in Glasgow included 13 from infantile diarrhoea, 9 from scarlet fever, 8 from whooping-cough, 5 from diphtheria, 4 from enteric fever, and 1 from measles. Eight deaths from diphtheria, 2 from scarlet fever, 2 from enteric fever, and 3 from infantile diarrhoea were recorded in Edinburgh; 5 from diphtheria and 2 from scarlet fever in Aberdeen; 3 from scarlet fever and 3 from infantile diarrhoea in Paisley; and 3 from infantile diarrhoea in Dundee.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, October 10th, 630 births and 355 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 676 births and 401 deaths in the preceding period. These deaths represent a mortality of 15.4 per 1,000 of the aggregate population in the districts in question, as against 17.3 per 1,000 in the previous period. The mortality in these Irish areas was therefore 1.5 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 27.3 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 17.5 (as against an average of 18.5 for the previous four weeks), in Dublin city 19.1 (as against 19.6), in Belfast 14.5 (as against 19.3), in Cork 12.9 (as against 18.5), in Londonderry 12.7 (as against 15.9), in Limerick 21.7 (as against 20.3), and in Waterford 22.8 (as against 17.6). The zymotic death-rate was 2.6, or the same as in the previous week.

During the week ending Saturday, October 17th, 546 births and 375 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 630 births and 355 deaths in the preceding period. These deaths represent a mortality of 16.2 per 1,000 of the aggregate population in the districts in question, as against 15.4 per 1,000 in the previous period. The mortality in these Irish areas was therefore 2.8 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 23.6 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 17.0 (as against an average of 18.6 for the previous four weeks), in Dublin city 18.3 (as against 19.8), in Belfast 17.3 (as against 18.4), in Cork 19.0 (as against 17.3), in Londonderry 10.1 (as against 15.9), in Limerick 17.6 (as against 19.6), and in Waterford 17.1 (as against 17.6). The zymotic death-rate was 2.7, as against 2.6 in the previous week.

PRESTON: ROYAL INFIRMARY.—Assistant Resident Medical and Surgical Officer. Salary, £120 per annum.

PUTNEY HOSPITAL, S.W.—Resident Medical Officer. Salary, £150 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Resident House-Physician. Salary, £110 per annum.

ROYAL NATIONAL HOSPITAL FOR CONSUMPTION FOR IRELAND, Newcastle.—(1) Assistant Resident Medical Officer. Salary, £200 per annum. (2) Laboratory Assistant. Salary, £1 per week with cottage.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—Junior Resident Medical Officer. Salary at the rate of £70 per annum.

RYDE: ROYAL ISLE OF WIGHT COUNTY HOSPITAL.—Resident House-Surgeon. Salary, £115 per annum.

ST. PANCRAS PARISH.—(1) Senior Assistant Medical Superintendent at the South Infirmary, etc. Salary, £225 per annum. (2) Senior and Junior Assistant Medical Officers at the North Infirmary. Salary, £175 and £140 per annum respectively.

SALFORD ROYAL HOSPITAL.—(1) Resident Surgical Officer. (2) Casualty House-Surgeon. Salary, £120 and £100 per annum respectively.

SALISBURY GENERAL INFIRMARY.—Assistant House-Surgeon. Salary, £75 per annum.

SHEFFIELD: EAST END BRANCH OF THE CHILDREN'S HOSPITAL.—House-Surgeon. Salary, £120 per annum.

SHEFFIELD ROYAL INFIRMARY.—(1) Two House-Surgeons. (2) Assistant House-Physician. Salary, £100 per annum each.

SOMERSET COUNTY COUNCIL.—Assistant School Medical Officer (temporary). Salary, £300 per annum.

SOUTHAMPTON FREE EYE HOSPITAL.—House-Surgeon. Salary, £100 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

SOUTHWARK UNION INFIRMARY.—Second and Third Assistant Medical Officers. Salary, £170 and £160, rising to £180 and £170 per annum respectively.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—House-Surgeon (male). Salary, £120 per annum, rising £10 annually.

STROUD GENERAL HOSPITAL.—House-Surgeon. Salary, £120 per annum.

SUNDERLAND: ROYAL INFIRMARY.—Junior House-Surgeon. (male). Salary, £100 per annum.

TAUNTON AND SOMERSET HOSPITAL.—Senior and Assistant House-Surgeons. Salary, £120 and £80 per annum respectively.

TRURO: ROYAL CORNWALL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

WAKEFIELD: CLAYTON HOSPITAL.—Junior House-Surgeon. Salary, £150 per annum.

WAKEFIELD: WEST RIDING ASYLUM.—(1) Assistant Medical Officers (male and female); (2) Locumtenent Assistant Medical Officer (male). Salary for (1) £230 and £235 per annum rising to £270 and £275 respectively, and the male officer on promotion to £340.

WALSALL AND DISTRICT HOSPITAL.—(1) Senior House-Surgeon. (2) Junior House Surgeon and Anaesthetist. Salary, £150 and £110 per annum respectively.

WALSALL COUNTY BOROUGH.—School Medical Inspector and Assistant Medical Officer of Health. Salary, £300 per annum.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.—Senior House-Physician. Salary, £120 per annum.

WESTMINSTER HOSPITAL.—Ophthalmic Surgeon.

WESTMINSTER UNION INFIRMARY.—Second and Third Assistant Medical Officers. Salary, £160 and £140 per annum, rising to £180 and £160 respectively.

WIGAN: ROYAL ALBERT EDWARD INFIRMARY.—Senior House-Surgeon. Salary, £170 per annum.

WORCESTERSHIRE ASYLUM, Bromsgrove.—(1) Deputy Medical Superintendent; (2) Second Assistant Medical Officer (males). Salary, £300 and £225 per annum, rising to £350 and £250 respectively.

WORCESTER: COUNTY AND CITY ASYLUM, Powick.—Junior Assistant Medical Officer. Salary, £200 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointment: Battersea (London).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BEAUMONT, A. R., F.R.C.S.Edin., M.R.C.S., L.R.C.P.Lond., District and Workhouse Medical Officer of the Uppingham Union.

COATES, W. H., M.R.C.S.Eng., L.S.A., Certifying Factory Surgeon for the Hucknall Torkard District, co. Nottingham.

FLETCHER, J., M.B., C.M., D.P.H.Glas., District Medical Officer of the Cockermouth Union.

GAY, S. B., L.R.C.P. and S.Edin., L.F.P.S.Glas., Certifying Factory Surgeon for the Shardlow District, co. Derby.

HAWKINS, Arthur, M.R.C.S., L.R.C.P.Lond., Assistant Physician to Nordrach-on-Dee Sanatorium, Banchory, Scotland.

JOHNSTONE, G. Gordon, M.B., B.C., Clinical Assistant in Ophthalmic Department to University College Hospital, W.C.

LAWRENCE, H. H., L.R.C.P. and S.Edin., Certifying Factory Surgeon for the Patterdale District, co. Westmorland.

MACNICOL, M., M.D.Glas., Certifying Factory Surgeon for the Leven District, co. Fife.

MARTIN, E. K., M.B., F.R.C.S., Junior Surgical Registrar to University College Hospital, W.C.

MOON, G. B., L.R.C.P. and S.Edin., L.F.P.S.Glasg., Second Assistant Medical Officer at the Surrey County Asylum, Netherne.

O'SULLIVAN, P. J., M.D., District Medical Officer of the Shoreditch Parish.

PARMITER, B. R., M.B., B.S.Lond., Second Assistant Medical Officer, Lewisham Union Infirmary.

READER, N. L. M., M.B., B.S.Lond., Assistant Medical Officer, Lambeth Parish Infirmary, etc.

REECE, L. N., M.R.C.S., L.R.C.P., Assistant Medical Officer, Camberwell Parish Infirmary and Gordon Road Workhouse.

SALISBURY, Walter, M.B., B.S.Lond., Resident Medical Officer, Queen Charlotte's Lying-in Hospital.

SMITH, W. Maule, M.D., M.R.C.P.Edin., Medical Superintendent, West Bromwich and Walsall Joint Unions.

TYRRELL, T. A. F., M.B., B.S.Lond., District Medical Officer of the Horncastle Union.

WALFORD, Harold R. S., M.R.C.S., L.R.C.P., Second Medical Officer, Kent County Asylum, Barming, Maidstone.

WALSH, Harold V., M.B., B.Ch.Belf. Univ., Assistant Resident Medical Officer, Queen Charlotte's Lying-in Hospital.

WILLIAMS, Jos. R., M.D.Edin., non-resident Medical Officer to the Conway and Penmaenmawr Joint Isolation Hospital.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.—The following appointments have been made:

Acting Assistant Surgeons: Henry Blakeway, F.R.C.S.; Harold Gardiner, F.R.C.S.

Resident House-Physicians: Miss M. Lloyd, M.B., B.S.; Miss M. R. Paterson, M.R.C.S., L.R.C.P.

Resident House-Surgeons: Miss M. E. C. Pillman, M.R.C.S., L.R.C.P.; Miss E. M. Powell, M.R.C.S., L.R.C.P.

Senior Clinical Assistant Gynaecological Department: Miss A. Blair, M.B., B.S.

Clinical Assistant Skin Department: Mrs. Addison, M.B., B.S.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is **5s.**, *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTHS.

BOURHILL.—At Pretoria, on the 3rd inst, May F. W. Bourhill, M.B., Ch.B. (*née* Davidson), wife of Charles G. J. Bourhill, M.D., of a daughter.

LINDSAY.—On October 28th, at 35, Cotham Road, Bristol, to Dr. and Mrs. John Ker Lindsay, a daughter.

MARRIAGE.

CUMMING-BIDDULPH.—On the 10th instant, at Holy Trinity Church, Sliema, by the Rev. Canon H. Shaw, Major C. C. Cumming, R.A.M.C., to Muriel, youngest daughter of Deputy Surgeon-General Biddulph, R.N.

DEATHS.

MARSH.—On the 24th inst., at 49, Sackville Road, Hove, George Ryding Marsh, M.D.Lond., youngest son of the late Lory Marsh, M.D., aged 56 years.

SHINE.—On October 22nd, at Gallee More, Darnsley, John Power Shine, M.B., Ch.B., R.U.I., aged 45.

DIARY FOR THE WEEK.

MONDAY.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Museum Demonstration. Mr. Shattock: Specimens Illustrating Repair.

TUESDAY.

ROENTGEN SOCIETY, Institution of Electrical Engineers, Victoria Embankment, W.C., 8.15 p.m.—Agenda: Minutes of last meeting. Nominations. General Meeting. Presidential Address.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—Bradshaw Lecture: Dr. Nestor Tirard: Some Clinical Contributions to the Study of Glycosuria.

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF OPHTHALMOLOGY, 8 p.m.—(1) Cases and Specimens. (2) Papers: Mr. Holmes Spicer: Bubbles in the Anterior Chamber. Mr. H. B. Grimsdale: The Necessity of a Definition of Blindness.

THURSDAY.

NORTH-EAST LONDON CLINICAL SOCIETY, Prince of Wales's Hospital, Tottenham, 4.15 p.m.—Clinical Meeting.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W., 5 p.m.—FitzPatrick Lecture: Dr. C. A. Mercier: Leper Houses and Mediæval Hospitals.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF LARYNGOLOGY, 4 p.m.—Exhibition of Cases and Specimens.

POST-GRADUATE COURSES AND LECTURES.

DUBLIN: ROTUNDA HOSPITAL.

MANCHESTER HOSPITALS POST-GRADUATE CLINICS.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.

NORTH-EAST LONDON POST GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

SUPPLEMENT
TO THE
BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, NOVEMBER 7TH, 1914.

CONTENTS.

CONJOINT ARRANGEMENTS FOR DEALING WITH OVER-PRESCRIBING.

In a letter addressed to the Local Medical and Panel Committees on October 13th, the Insurance Act Committee of the British Medical Association expressed the opinion that the principle of co-operation between Panel, Pharmaceutical, and Insurance Committees, in the necessary checking and statistical analysis of prescriptions by means of a single staff under the joint control of the three committees was sound. A note of warning was given in that Panel Committees were urged to see that in any such arrangement their powers under Regulation 40 are not interfered with. This regulation embodies a principle on which members of the profession have rightly laid great emphasis—namely, that intraprofessional questions which affect the relations between members of the panel should be dealt with as far as possible by a professional body. It provides that where it appears to the Panel Committee that any practitioner or practitioners have been ordering drugs or appliances in excess of what may reasonably be considered necessary for the adequate treatment of their patients, an investigation into the subject may, and, if representations are made by the Pharmaceutical Committee shall, be made by the Panel Committee. The Panel Committee further is bound to hear the practitioner concerned in his defence, and it is only after a report by that Committee that the Insurance Committee is entitled to surcharge practitioners who, in its opinion, are guilty of prescribing which is extravagant either in character or in quantity.

The Local Medical and Panel Subcommittee of the Insurance Act Committee is devoting considerable attention to the various arrangements which have been suggested whereby the detailed work of examination and analysis of prescriptions may be carried out before the Pharmaceutical and Panel Committees commence their special work, and has already come to the conclusion that much overlapping may be saved by the triplicate arrangement already in operation in some areas, which has been recommended by both English and Scottish Commissioners, and is approved by the Insurance Act Committee. The Subcommittee hopes shortly to be in a position to advise Panel Committees more in detail on this subject. In the meantime, however, the Subcommittee is anxious to emphasize the danger which was indicated in the letter of the Insurance Act Committee, namely, that of the usurpation of the functions of the Pharmaceutical and Panel Committees, purely professional bodies, by a joint lay and medical committee. So long as the joint committee confines its attention to working out the statistical information without which the Pharmaceutical Committee and the Panel Committees cannot efficiently fulfil the duties imposed on them by the regulations, well and good, but in some of the arrangements which have been suggested in certain areas, there has been an indication of a desire on the part of joint committees not only to superintend the analysis of the prescriptions and provide statistical information for the Panel and Pharmaceutical Committees, but to deal with that information in such a way as practically to forestall the Pharmaceutical and Panel Committees in their work and prejudge the practitioners whose prescriptions may at first sight seem to suggest extravagance. This is a danger which should be carefully guarded against in every insurance area. When it comes to the final analysis of the prescriptions alleged to show extravagance it is certain that the duties are of the most delicate and difficult nature, and quite beyond the capacity of any lay body. We understand that the Local Medical and Panel Subcommittee intends to work out a triplicate arrangement on the lines of that suggested in Scotland, which will combine the advantage of the economies to be obtained by legitimate co-operation, with an avoidance of any entrenchment on the prerogative of the Panel Committee.

THE NEW DRUG TARIFF AND MEDICAL MEN WHO DISPENSE THEIR OWN MEDICINES.

Certain correspondents have raised the question whether medical men who dispense their own medicines in connexion with the Insurance Act should decline to sign their agreements for 1915 unless they receive an assurance that some special consideration will be given as regards the drugs which are temporarily greatly increased in price.

The Drug Tariff Subcommittee considered the matter at its meeting on October 29th, and decided to recommend the Insurance Acts Committee that if any special consideration in this matter were given to pharmacists during the war the same consideration should be claimed for doctors who dispense their own medicines. The Subcommittee is also recommending that a monthly record should be made in the Journal of the prices of those drugs which are specially affected, so that due discretion may be used in dispensing them.

LOCAL MEDICAL AND PANEL COMMITTEES.

EDINBURGH.

Panel Committee.

A meeting of the Burgh of Edinburgh Panel Committee was held on October 6th, when Dr. Dewar occupied the chair, and twelve members were present.

Treatment of Dependants.—The Secretary reported that, in response to the circular issued by the Committee on September 4th regarding free medical attendance on the necessitous dependants of soldiers, sailors, reservists, and territorials on active service during the continuance of the war, out of 118 practitioners on the Edinburgh panel 84 had indicated their willingness to act, 15 were on active service, and the remainder had either not replied, or indicated their unwillingness to co-operate.

Donation to the Royal Infirmary.—Intimation was made that of the balance in the Panel Fund for 1913, the sum of £104 14s. had been deducted from the respective shares of those panel practitioners who had agreed to it, for the purpose of making a donation to the Royal Infirmary, etc. (since this meeting was held, a further sum of £5 10s. has been received, making a total of £110 4s.).

Assignment of Insured Persons.—It was unanimously agreed that the parliamentary divisions of the city be taken as a basis for arranging the areas of the assignment scheme, Medical Benefit Regulations 21 (4).

Attendance on Dependants of Men with the Colours.—The Chairman drew attention to the particulars wherein the scheme of the Edinburgh and Leith Medical Emergency Committee differed from that of the Panel Committee, namely: (1) That attendance is to be given to those

persons who become unemployed indirectly on account of the war, as well as dependants of those on active service; (2) that no list of doctors willing to act is to be obtained. After discussion, it was agreed to intimate to the Medical Emergency Committee that the Panel Committee would attend the necessitous dependants of those men on active service and no others; and to ask their co-operation with the Panel Committee. It was further agreed to request the Soldiers' and Sailors' Families Association to ask the Medical Emergency Committee to supply a list of non-panel doctors willing to undertake the work.

Excessive Prescribing.—A letter was read from the Insurance Committee dealing with excessive prescribing. The Committee also had before it the Commissioners' Memorandum No. 587 regarding expenditure on medicines and appliances; a report on checking prescriptions from May 15th to June 14th, 1914, and a memorandum from the Insurance Committee showing the total number of panel patients on each doctor's list, together with the total value of prescriptions ordered by the doctor, and the average cost per form for the month May 15th to June 14th, 1914. After full consideration of the above it agreed to take immediate steps to acquaint those practitioners who are prescribing excessively of their position and the possible consequences. It was agreed to ask the Insurance Committee to institute a further analysis of the prescription forms for the months of October, 1914, and January or February, 1915.

Transfer of Patients.—A complaint was made to the Committee by one of the members to the effect that the Insurance Committee had transferred one of his insured patients from his list to that of another doctor in the Edinburgh area during the medical year without his knowledge or consent, contrary to Regulation XXVI, 6 and 7. The Committee unanimously reaffirmed the decision of July 8th last, when a similar complaint was preferred:

> That with reference to the transfer of insured persons from one doctor to another during the medical year within the Edinburgh insurance area, due regard being had to the mileage limit of certain doctors, Regulation XXVI, 6 and 7, should be strictly adhered to.

The Secretary was instructed to again write the Insurance Committee to this effect.

Temporary Treasurer.—As the Honorary Treasurer (Dr. Morrison McIntosh) is at present on active service, the Honorary Secretary (Dr. Craig) was appointed interim Treasurer during his absence.

New Draft Regulations.—An emergency meeting of the Committee was held on October 13th, when Dr. Dewar occupied the chair, and ten members were present. The meeting was convened to consider the new Draft Regulations and the proposed alterations in the agreement between the Insurance Committee and insurance practitioners for 1915. After discussion these were unanimously approved. A meeting of the Local Medical Committee on the same date came to the same decision.

Treatment of Dependants.—The Chairman intimated that it had been suggested by the Medical Emergency Committee that the Panel Committee should withdraw the list of practitioners willing to attend necessitous dependants of men on service during the war. After consideration the Committee reaffirmed its decision to adhere to the resolutions of September 4th, and to carry on the work as therein suggested.

Arrears.—The Secretary was instructed to ascertain the Insurance Committee's intentions with regard to medical attendance on insured persons in arrears.

ROXBURGHSHIRE.

Panel Committee.

A meeting of the Panel Committee of Roxburghshire was held at St. Boswells on October 15th, when Dr. Cullen was in the chair, and five other members were present in addition to the Clerk.

Syringing Ears.—It was reported that the Panel Committees of some other areas had expressed the opinion that "syringing ears" was a service which ought to be given by panel practitioners under the Act, and that accordingly the patient should not be charged a fee. The question of communicating the decisions of the Committee with regard to such points to all panel practitioners for their guidance was discussed, and the Clerk was instructed to submit a list of such decisions to the next meeting.

Domiciliary Treatment.—Correspondence was submitted from the Commissioners and from the Insurance Committee regarding the action of certain panel practitioners in ordering medical foods for patients not recommended for domiciliary treatment. It was pointed out that the prescriptions which were submitted did not contain anything that could be considered medical foods in the proper sense of the term, but that in one or two of the prescriptions the proprietary article was ordered when its official equivalent might have done as well, and expense would thus have been saved. It was also pointed out that no intimation was sent to the panel practitioner when his patient was declared "on" or "off" for domiciliary treatment, and that, in consequence, the practitioner might continue prescribing for the patient in respect of domiciliary treatment in ignorance of the fact that the patient was not entitled to such treatment. The Clerk was instructed to communicate with the Insurance Committee, drawing its attention to this fact, and to reply to the other points raised in the correspondence.

Incapacity Due to Pregnancy.—The memorandum issued by the Commissioners on the subject of incapacity due to pregnancy (Supplement, October 31st, p. 220) was read and noted.

Checking of Prescriptions.—The Pharmaceutical Committee submitted a report on the checking of prescriptions for the quarter ending July, 1914. The Clerk was instructed to suggest to the Pharmaceutical Committee that some method of drawing attention to the position of certain chemists should be adopted.

Voluntary Levy for Administration Expenses.—A letter was submitted from the Insurance Committee intimating approval of the arrangement made by the Panel Committee in connexion with a voluntary levy for administration expenses, provided that the Clerk of the Insurance Committee was paid five guineas for his trouble in connexion with the matter. The opinion was expressed that a much smaller fee might meet the circumstances, and it was agreed to offer two guineas each time a requisition was made.

Remuneration.—The Clerk reported that, as a result of his investigations with regard to the payments owing to panel practitioners since the commencement of the Insurance Act, he had found that a considerable sum was being withheld by the Insurance Committee, and a letter on the subject was directed to be addressed to the Insurance Committee.

Condition of Medical Service for 1915.—The draft Regulations and Conditions of Medical Service for 1915, together with the Memorandum from the Commissioners, were considered, along with a communication from the British Medical Association on the subject. After considerable discussion it was unanimously agreed that the proposal to take power to alter the terms of service at any time during the year upon giving six weeks' notice to panel practitioners prior to the date of such alteration, should be resisted for the reason that only two weeks would thereby be given to practitioners to consider any proposed alterations, seeing that under Article 17 (2) of the present Regulations they had still to give four weeks' notice to the Insurance Committee as to giving their consent to any proposed alterations or not. It was felt that a reasonable time ought to be given for practitioners to consider any proposed alterations in their agreements. It was agreed to bring this matter especially before the Insurance Committee, and impress upon them the necessity of affording a more reasonable time. A conference with the Medical Benefit Subcommittee and the Pharmaceutical Committee was arranged to discuss the draft Regulations and Conditions of Medical Service for 1915.

Conference.

A conference of the Medical Benefit Subcommittee, the Panel Committee, and the Pharmaceutical Committee was held on October 23rd.

New Agreements.—With regard to the proposal to terminate agreements at any time during the year on six months' notice, which was not acceptable, it was suggested that the agreements should be left as they were, or three months' notice given of any proposed alterations.

Uniform Certificates.—The scheme for a uniform certificate to be prescribed by the Commissioners was approved, provided that the terms were satisfactory to the Panel Committee.

Prescribing.—It was decided that when *aqua* appeared on prescriptions ordinary tap water was intended, and not distilled water, which would only be dispensed when specifically prescribed.

Price of Drugs.—The meeting approved of the proposed arrangement to have the price of drugs settled each month by a conference between representatives of the Pharmaceutical Society and the British Medical Association.

Repeat Mixtures.—It was suggested that the words "Rep. Mist." be continued, especially in cases of epilepsy, and that arrangements be made whereby the use of the words should be limited to one month, the date of the original prescription being stated on each repetition.

DUMBARTONSHIRE.

PANEL AND LOCAL MEDICAL COMMITTEE.

Repeat Prescriptions.—At a meeting of this Committee in Glasgow on October 21st, when Dr. W. SEMPLE YOUNG was in the chair, it was resolved to request the Insurance Committee to adopt, as from January 1st, 1915, an arrangement by which a prescription may be repeated during the calendar month for which the original is dated without being rewritten in full. Representatives of the Pharmaceutical Committee were in attendance and agreed to support this request.

Expenses.—It was unanimously resolved to protest to the Commissioners, the Insurance Committee, and the British Medical Association against the refusal of the Insurance Commissioners to allow the travelling expenses of members attending committee meetings to be paid out of the funds available for administrative expenses.

New Agreements.—The proposals made in Memorandum 201, I.C. [Scotland] as to alterations in regulations and conditions of agreement for 1915 were considered, and it was decided to raise no objection.

Checking Prescriptions.—The proposal of the Commissioners to establish a central bureau to check prescriptions was unanimously welcomed and approved. It was resolved that the proportion of the cost to be borne by the Panel Committee should be not more than one quarter of the share of the expenses of the bureau allotted to this insurance area. [The scheme for a central bureau is set out in Circular 598. The bureau will check and price prescriptions, and will also make an analytical report showing, for example, the number of prescriptions written by each doctor per month, number of insured persons on his panel list, cost per prescription, cost per head of insured persons, number of prescriptions per head of insured persons. It will thus be possible without undue delay to detect and deal with "extravagant prescribing."]

PERTHSHIRE.

LOCAL MEDICAL AND PANEL COMMITTEES.

A MEETING of the Local Medical and Panel Committees of Perth and Perthshire was held on October 23rd, when eighteen members were present.

New Agreements.—It was agreed to accept and sign the new agreements, and also to approve of the new system of uniform certificates.

Over-prescribing by Practitioners.—Dr. TROTTER read a letter from the Secretary of the Pharmaceutical Committee of the county, calling attention to the growing tendency for the average price of the prescriptions to increase, and giving various data in proof of the fact. The cause assigned was that certain medical men had a large proportion of expensive proprietary articles in their prescriptions, examples being given. The meeting agreed to support the action of the Pharmaceutical Committee in surcharging chemists for supplying drugs and appliances outwith the tariff. With regard to the medical men involved, it was suggested a special meeting of the Panel Committee be held at an early date, at which those doctors will be expected to attend or lodge defences.

Repeat Prescriptions.—Dr. TROTTER reported that he had arranged with the chemists that prescriptions bearing the words "Rep. Mist.," etc., would continue to be dispensed as formerly.

Checking Prescriptions.—The scheme, proposed for the checking of prescriptions by a central bureau, was not approved of, it being considered that it was too expensive, and that the work could be done more cheaply locally.

Recommendations by the British Medical Association.—The circular letter from Dr. Cox (Medical Secretary, British Medical Association) was intimated to the meeting by the SECRETARY, and various points in it were discussed. In a general way the recommendations were accepted by the meeting.

Attendance on Dependants of Men at the Front.—The SECRETARY intimated that the Executive Committee of the Soldiers' and Sailors' Families Association, Perth, had agreed that two medical men should be co-opted, their names to be chosen by the Branch Council—two for the burgh and two for the county.

GLAMORGAN.

LOCAL MEDICAL COMMITTEE.

A MEETING of practitioners of the Glamorgan county area was held in the Old University Buildings, Cardiff, on October 20th, for the election of the Local Medical Committee, when it was agreed that the members of the Panel Committee should be the Local Medical Committee.

The following are the areas with their representatives:

Rhondda Valley.—Dr. W. E. Thomas (Ystrad Rhondda), Dr. Ed. Morgan, Dr. Alfred Jones (Tonypandy), Dr. D. N. Morgan (Gilfach Goch).

Aberdare and Mountain Ash.—Dr. Ieuan G. Thomas (Hirwain), Dr. A. T. Jones (Mountain Ash), Dr. A. J. Griffith (Abercynon).

Bridgend, Ogmore, etc.—Dr. D. J. Thomas (Nantymoel), Dr. C. B. Meller (Cowbridge), Dr. W. Edmund Thomas (Bridgend).

Neath.—Dr. W. B. Edwards (Seven Sisters).

Swansea.—Dr. A. Lloyd Jones (Mumbles), Dr. John Owen (Cwmllynfell), Dr. M. W. Williams (Pentrepoeth).

Barry, Penarth, and Llandaff.—Dr. P. J. O'Donnell (Barry), Dr. John H. Rees (Penarth), Dr. John Arthur (Llandaff).

Aber Valley and Gelligaer.—Dr. C. Reidy, Dr. B. H. E. McCrea (Bargoed), Dr. T. W. Thomas (Caerphilly).

Pontypridd, Llantrisant, etc.—Dr. Howard Davies, Dr. J. Morgan Rees, Dr. B. M. Lewis (Pontypridd), Dr. W. Naunton Davies (Llantrisant).

Port Talbot and Maesteg.—Dr. J. Arnallt Jones (Aberavon), Dr. Henry Davies (Abergwynfi), Dr. R. T. Williams (Cwmavon), Dr. Walter Kirkby (Maesteg).

GLOUCESTERSHIRE.

PANEL COMMITTEE.

AT the meeting of the committee on October 31st Dr. Johns (Cheltenham) and Dr. Carter (Westbury-on-Trym) were co-opted members.

New Agreements.—The committee decided to communicate direct with the Commissioners with reference to revision of agreement, the absence of a copy of the proposed agreement, and also the forms of certification being considered sufficient reasons to withhold promises to sign.

Examination of Prescriptions.—It was pointed out that the Commissioners were trying to make the Panel Committee closely investigate prescriptions, etc., for the county, a task which the Panel Committee considered impossible, its duties in that respect at present being sufficiently onerous. As the county expenditure with the chemists had been only 1s. 7d. per head, and as about 50 per cent. of the doctors dispensed, further investigation did not appear to be very necessary. Allusion was made to the fact that the last quarter's payments were not yet to hand, nor had any attempt been made to pay "surplus," temporary residents' fees, or mileage made.

LONDON.

WE have received the following letter:

Sir,—There has come to hand this week, it would seem from Staple House, a print which apparently is the medium for circulating the well-considered and responsible advice of the London Panel Committee, passed for issue to the practitioners more than a month ago, on economy in prescribing. The sheet contains, in addition, various remarks and embellishments which place it in a class of literature probably never before distributed on this wise, but usually sold for a suitable coin. The preparation of these may well have led to delay. As no name is on the paper, except the printer's, I have no idea to whom we are indebted for the gift. But I desire to express regret and surprise, which I feel that many colleagues must share, at this method of communicating an important official message to those concerned.—Yours faithfully,

J. T. RICHARDS,

October 31st. Member of the Pharmacy Subcommittee.

INSURANCE NOTES.

LAMBETH INSURANCE PRACTITIONERS' ASSOCIATION.

THE annual meeting of the Lambeth Insurance Practitioners' Association was held on September 30th at the residence of Dr. Victor Partridge, Camberwell.

Dr. Lane was elected Chairman, three retiring members of the Committee—Dr. R. J. Farman, Dr. P. D. Pywell, and Dr. Taylor—were re-elected, and vacancies on the Committee were filled by the election of Dr. Wallace Smith, Dr. Dunn, and Dr. F. Norman. The Honorary Secretary, Dr. Pywell, presented a report showing that during the year much active work had been done in connexion with the medical aspects of insurance administration. The financial statement showed a balance in hand. It was decided that new members should be required to pay an entrance subscription of 10s. 6d. but that a levy of 5s. upon old members would suffice for immediate requirements.

A resolution of congratulation to Dr. C. Addison, M.P., on his appointment as Secretary to the Board of Education was passed.

Dr. R. J. FARMAN gave an address in which he dealt with the questions of excessive prescribing and gave some examples which had come to the notice of the Panel Committee. He believed there would be no question amongst the profession generally but that surcharges in some cases would be quite justifiable.

Dr. J. A. ANGUS discussed the political possibilities of the future in regard to the Insurance Act and urged that practitioners could do a great deal to educate their patients as to the national advantages of better provision for the medical attendance of the people. To prevent encroachments upon the rights of the profession by politicians, and interference with their means of livelihood, he advocated the adoption by practitioners on the panel of the principles of trade unionism.

SURCHARGES IN RESPECT OF PRESCRIPTIONS.

The Panel Committee has reported to the Northampton Borough Insurance Committee in respect of allegations by the Pharmaceutical Committee of over-prescribing. The Panel Committee stated that it was satisfied that during 1913 there had not been over-prescribing, but that instances had occurred during the first quarter of 1914. The Insurance Committee decided, subject to the approval of the Insurance Commissioners, to surcharge nine practitioners in amounts varying from 6s. 11d. to £75 10s. 3d., and totalling £197 15s. 6d.

MEDICAL BENEFIT SURPLUS FUNDS.

The Council of the National Medical Union has lodged with the Insurance Commissioners a protest against the allotment of the £90,000 medical benefit surplus. This surplus had, it was contended, accrued because nearly a quarter of a million insured persons would not elect a panel doctor to attend them during illness, and because the authorities entrusted with the fulfilment of the Insurance Act did not distribute these insured persons severally amongst the panel doctors, and thus disregarded Section 15 (2) (*d*) of the Act, which provides for such system as will secure "the distribution amongst, and, so far as practicable, under arrangements made by, the several practitioners whose names are on the lists, of the insured persons who after due notice have failed to make any selection, or who have been refused by the practitioner whom they have selected." It was urged also that according to Section 14 (1) of the Act, it was provided that medical benefit shall be in all cases administered by and through the Insurance Committees and not by the Commissioners.

SOUTH TIPPERARY MEDICAL COMMITTEE.

At the request of Dr. McEniry, Ballymacarberry, a meeting of the Local Medical Committee (of which he is a member) was convened at Clonmel, on October 9th, to consider what attitude he should adopt in connexion with the offer made him of £200 a year and expenses for undertaking medical certification for the Dungarvan and Lismore areas of co. Waterford under the Insurance Act. Dr. McEniry stated the facts and informed the meeting that his ambition was to assist the profession in coming to a settlement fair to all its members and beneficial to the insured persons. He put aside the personal advantage, and said, "Whatever decision you arrive at will have my loyal support." A discussion followed, after which Dr. McEniry deprecated injustice to the poor, the ratepayers, and the doctors, and therefore refused to accept the appointment.

CORRESPONDENCE.

AFTER THE WAR.

DR. GEOFFREY PRICE, M.R.C.S., L.R.C.P. (Kineton, Warwick), writes: There is a feeling within me that, ever since Mr. Lloyd George gave way on the question of the 9s. capitation fee, he has been insidiously trying to get his own back.

For instance, the temporary resident scheme was foisted on us; also, in a certain county, a ridiculously inadequate capitation fee has been substituted for the fees on account of emergency drugs and dressings, the Clerk to the Insurance Committee now acts as Secretary to the Panel Committee, and the details accompanying the remittance of fees are too meagre to enable one to check any discrepancies.

At the present moment, when a great many panel doctors, *in esse* and *in posse*, are at the front, the Insurance Commissioners are proceeding cautiously, since they could hardly hope to provide adequate medical attendance if they provoked even a small number of doctors to "down stethoscopes." But, at the termination of the war, when many ex-naval and military surgeons will be seeking civil occupation, I anticipate that the Commissioners will seek to wrest further advantages from us, trusting to find substitutes for any recalcitrants. We should prepare for such a move:

1. By forming a fund for wounded ex-service men, their widows and orphans.
2. By installing ex-service men as locumtenents while we take a long vacation (thus lessening unemployment).
3. By appointing a solicitor or chartered accountant to each Panel Committee to look after our interests and warn us of dangers ahead.
4. By more united action.
5. By endeavouring to obtain more adequate medical representation on county Insurance Committees and in the Insurance Commission.

Meetings of Branches and Divisions.

LANCASHIRE AND CHESHIRE BRANCH:

BOLTON DIVISION.

Presentation to Secretary.

AT a meeting of the practitioners of Bolton and district held on October 23rd, the Secretary, Dr. Thomas O'Neill, was presented with an antique grandmother clock bearing the following inscription:

Presented to Dr. Thomas O'Neill by the Medical Practitioners of Bolton and District as a token of appreciation of the valuable services rendered by him during the passing of the National Insurance Act.

Association Notices.

CHANGES OF BOUNDARIES.

FORMATION OF A HYDERABAD AND CENTRAL PROVINCES BRANCH.

THE following change has been made in accordance with the regulations of the Association, and takes effect as from the date of publication of this notice:

That a new Branch of the Association be formed, to be known as the Hyderabad and Central Provinces Branch, and that the Branch area consist of (1) the Nizam's Dominions; (2) the Central Provinces and Berar.

Representation in Representative Body.—Under the general principle adopted by the Council with regard to representation in the Representative Body for Branches outside the United Kingdom, the new Branch will be entitled to separate representation for 1915–16, to return one Representative.

BRANCH AND DIVISION MEETINGS TO BE HELD.

LANCASHIRE AND CHESHIRE BRANCH: CHESTER DIVISION.—Dr. C. Jephcott, Honorary Secretary, 12, Upper Northgate Street, Chester, gives notice that a meeting of the Division will be held in the Board room of the Chester Royal Infirmary, on November 10th, at 8.15 p.m., to adopt the model organization

and ethical rules for the Division, to appoint a representative on the Chester Council of Social Welfare (this refers to the medical attendance on dependants), one or more representatives on a similar committee for the county; also for Sale, and any other borough that invites the British Medical Association to nominate one or more representatives.

METROPOLITAN COUNTIES BRANCH.—Dr. R. E. Crosse and Mr. N. Bishop Harman, Honorary Secretaries, give notice that a Council meeting will be held at 429, Strand, W.C., on Tuesday, November 10th, at 4 p.m.

SOUTHERN BRANCH: SOUTHAMPTON DIVISION.—Dr. W. A. Simpson, Honorary Secretary, 3, Waterloo Road, Southampton, gives notice that a special general meeting of the Division will be held at the Royal South Hants and Southampton Hospital, on Wednesday, November 11th, at 3 o'clock. Business: The adoption of certain resolutions; the adoption of the new rules of the Division: attendance on patients of doctors on war service; free attendance on dependants of men serving with the colours.

MIDLAND BRANCH: HOLLAND DIVISION.—Dr. R. Tuxford, Honorary Secretary, 12, Wide Bargate, Boston, gives notice that a meeting of the Holland Division will be held at the White Hart Hotel, Boston, on Friday, November 13th, at 3.45 p.m., when the following resolution will be proposed: "That no medical practitioner within the area of the Division should accept a fee of less than 10s. 6d. per case for acting as medical referee to any insurance company under the National Health Insurance Act."

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH: HEREFORD DIVISION.—Dr. F. H. Thompson, Chairman (Hereford), gives notice that a meeting of this Division will be held on Monday, November 9th, at 3 p.m., in the Board Room of the Hereford General Hospital. Agenda: To elect a temporary Secretary during the absence of Dr. Ainslie at the war. Any other business.

IRELAND.

POOR LAW MEDICAL SERVICE.

THE Local Government Board (Ireland), in reply to a request from the Irish Committee of the British Medical Association to meet a deputation from their body, has forwarded the following important letter to the Irish Medical Secretary:

Local Government Board, Dublin,
28th October, 1914.

Sir,—I am directed by the Local Government Board for Ireland to acknowledge the receipt of your letter of the 21st instant, requesting them to receive a deputation from the Irish Branch of the British Medical Association in regard to the following questions:

No. 1.—The admission of well-to-do patients to workhouse hospitals.

No. 2.—The adoption of graded scales of salaries for Poor Law medical officers, and

No. 3.—The action of certain boards of guardians in making it a condition of appointment of dispensary medical officers that they shall attend private patients at certain fixed fees.

With reference to No. 1, the Local Government Board desire me in the first place to point out that workhouse hospitals are not general hospitals open to all classes of the community, but are primarily hospitals for the use of the destitute poor, though "poor persons" and members of the constabulary force are declared to be admissible thereto, but there can be no "private patients" in such institutions.

The Board would further point out that medical officers have no direct power, by order or otherwise, to admit any person to the workhouse hospitals, but they think that the relieving officer or master would incur a serious responsibility in refusing to admit an urgent case on the recommendation of a medical practitioner.

The medical officers are bound, at their fixed salaries, to afford their professional attendance to all the patients, and cannot demand or accept fees from such patients, or any class of them, for services rendered to them whilst under treatment in the union hospitals.

No. 2.—The Local Government Board received a communication, dated the 10th instant, from the Irish Medical Association requesting them to receive a deputation from that body on this subject, and replied on the 13th instant that, whilst they were in sympathy with the desire to see graded scales of salaries in all unions in Ireland, they considered that the present time would not be opportune for pressing the matter on boards of guardians, and for that reason they saw no useful purpose in receiving the deputation.

No. 3. The Board observed from the Minutes of Proceedings of the Board of Guardians of Trim Union on the 3rd inst. that it was proposed to make it a condition of appointment to a then vacant dispensary medical officership in the Union, that the medical officer should attend small farmers with valuations under £25 at 5s. a visit; and, in accordance with their usual practice, the Local Government Board addressed a communication to the guardians on the 9th inst., informing them that the stipulation would be *ultra vires*, and should be withdrawn, and the guardians acted upon this recommendation.

The Board trust that the above statement of their views on the points raised in your communication will be satisfactory and answer the purposes of the Irish Branch of the British Medical Association, and that a deputation, as proposed, is not necessary in the circumstances.—I am, Sir, your obedient Servant,

J. E. DEVLIN,
Assistant Secretary.

Dr. T. Hennessy, Secretary,
Irish Branch, British Medical Association.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Fleet Surgeon K. H. JONES to the *Pembroke*, additional, for disposal. Staff Surgeon J. H. MCDOWALL, M.B., to the *Vivid*, additional, for War College, Devonport; Staff Surgeon E. M. W. HEARN, M.D., to the *Vivid*, additional, for the *Reliance*. Surgeon F. J. BURKE, M.B., to the *Victory*, additional for disposal. Temporary Surgeons: E. M. THOMPSON to the *Vivid*, additional, for War College, Devonport; J. C. BAGGS and H. T. DEPREE, to the *Vivid*, additional, for Plymouth Hospital; J. D. CLARKE, B. FLACK, and K. WOLFERSTAN to the *Pembroke*, additional, for disposal; G. E. SCOTT, to the *Wildfire*, additional, for disposal; J. A. WATSON, H. HEMSTED, and P. W. CARRUTHERS, to the *Victory*, additional, for Haslar Hospital; R. N. MCKINSTRY, to the *Victory*, additional, for disposal; H. M. SCOTT to the *Revenge*. Surgeons for temporary service: DOUGLAS K. ADAMS, JOHN W. ADAMS, M.B., ALFRED F. ADAMSON, M.B., HENRY G. ANDERSON, CHARLES W. ARCHER, WALTER M. ASH, CLAUD H. B. AVARNE, ALARIC BALLANCE, EDWIN R. BAILEY, RICHARD A. BARLOW, JOHN R. BARROW-CLOUGH, ALFRED D. E. BAYLISS, M.D., HUGH W. BAYLY, THOMAS BEATON, M.D., WALTER G. BIGGAR, HENRY C. BILLINGS, THOMAS C. BLACKWELL, FREDERICK C. BLAKISTON, JOHN BOSTOCK, EDGAR J. BOYD, THOMAS S. BRADBURN, ROBERT W. BRANDER, BERTRAM J. BREWITT, RALPH C. BRISCOE, RALPH ST. L. BROCKMAN, DAVID P. BROWN, HORACE G. BROWN, ROBERT A. BROWN, OWEN D. BROWNFIELD, JAMES W. K. BRUCE, ROGER BUDDLE, RONALD E. R. BURN, EDWARD S. CALTHROP, M.B., ROBERT E. CAMERON, RICHARD S. CAREY, HILDRED B. CARLILL, M.A., M.B., EDGAR G. CARPENTER, GEOFFRY W. CARTE, CLIFFORD C. CHANCE, FREDERICK E. CHAPMAN, WILLIAM H. W. CHEYNE, WILLIAM G. CLARK, FREDERICK W. T. CLEMENS, HARRY CLOUGH, GEORGE COCHRANE, M.B., JOHN R. COLLIE, WILLIAM P. COWPER, THOMAS M'C. CREIGHTON, THOMAS H. CRESSWELL, WILLIAM L. CRIPPS, M.B., F.R.C.S.Ed., FREDERICK H. L. CUNNINGHAM, HECTOR W. DAVIES, HOWARD V. DEAKIN, HENRY L. D'OLIER DUCKWORTH, EDGAR L. ELLIOTT, CARLTON A. ELLIS, FREDERICK C. ENDEAN, ABEL EVANS, ARTHUR G. EVANS, JULIAN T. E. EVANS, FREDERICK B. EYKYN, M.B., CHARLES J. CAMPBELL FAILL, GEORGE C. FAIRCHILD, EDWARD G. FISHER, B.A., EDWARD L. FISHER, F.R.C.S., M.B., RICHARD A. W. FORD, WALTER E. FOX, HUMPHRY L. G. FOXELL, R. S. FRENCH, B.A., M.B., HENRY E. K. FRETZ, WILLIAM D. GALLOWAY, FRANK R. GILHESPY, CHARLES H. GIMLETTE, ROBERT L. GLASS, WALTER L. M. GOLDIE, ALEXANDER E. GOW, ARTHUR C. V. GREEN, PETER M. GRUNDY, M.B., GEORGE HAMILTON, M.B., SYDNEY L. HARKE, M.B., ARTHUR H. HARKNESS, MAURICE H. DE J. HARPER, CHARLES EDWARD SMITH HARRIS, ARTHUR HARRY HARTY, HAROLD HARVEY, WILLIAM HASSARD, MALCOLM B. HAY, CHARLES B. HEALD, ASHLEY E. HERMAN, ROLAND A. HOBBS, WILLIAM H. S. HODGE, GERALD W. C. HOLLEST, EDWARD H. HUGO, M.B., FREDERICK J. HUMPHREYS, WILLIAM IBBOTSON, WILLIAM J. JAGO, WALTER F. JONES, PERCIVAL M. KEANE, PETER B. KELLY, REGINALD H. KNOWLES, M.D., ALBERT E. F. KYNASTON, GEORGE E. W. LACEY, JOHN LAMBERT, FREDERICK G. LLOYD, NIGEL F. LLOYD, M.B., GERALD R. LYNCH, M.B., RONALD G. LYSTER, HUGH J. MCCAW, M.B., WILLIAM A. MCKERROW, ARNOLD MCMILLAN, ARTHUR J. MCNAIR, JOHN S. D. MACCORMACK, ALEXANDER J. MACDIARMID, ALFRED R. MACMULLEN, BRUCE MALAHER, LEOPOLD MANDEL, M.D., HAROLD C. MANN, CHARLES A. MARRETT, GERALD N. MARTIN, LIONEL A. MARTIN, CHARLES A. MASSON, M.B., EDWIN MAYNARD, CYRIL F. MAYNE, WILLIAM MEIKLE, ROBERT W. MELLER, THOMAS R. G. MELROSE, EDWARD R. A. MEREWETHER, M.B., REINHARD C. J. MEYER, ERIC M. MOLESWORTH, RICHARD J. MONAHAN, ALAN H. MOORE, ARCHIBALD A. MORISON, ALBERT C. MORSON, GAVIN D. MUIR, M.B., F.R.C.S.Ed., DONALD J. MUNRO, M.B., JOHN H. NEWMARCH, THOMAS NORMAN, FRANCIS W. NUNNELEY, CHARLES O'BRIEN, GERALD P. O'DONNELL, MAX ONSLOW-FORD, ROBERT S. OVERTON, HARRY G. PARKER, M.B., BASIL H. PAIN, EVAN PARRY, ERIC PEARCE-GOULD, ALFRED L. PEARCE-GOULD, HUGH R. PHILLIPS, M.D., DUDLEY D. PINNOCK, BASIL A. PLAYNE, FRANK P. POCOCK, WILLIAM A. POCOCK, MARTIN O. RAVEN, EDWARD RAYNER, STANLEY RIVERS, STANLEY ROBERTSON, WILLIAM W. ROBEE, DOUGLAS ROSS, JAMES E. R. ROSS, JAMES N. MCB. ROSS, HAROLD T. ROSSITER, JOHN ROTHWELL, ARCHIBALD C. ROXBURGH, ARTHUR N. RUSHWORTH, ARCHIBALD MCK. RUSSELL, JAMES A. RUSSELL-CARGILL, ALEXANDER E. SAUNDERSON, EDWARD G. SCHLESINGER, ALEXANDER SCOTT, FREDERICK G. L. SCOTT, HAROLD M. SCOTT, CHARLES F. SCHULER, HENRY W. SCOTT, HERBERT E. SCOWCROFT, ARCHIBALD C. SHAW, REGINALD K. SHAW, M.B., CHARLES W. SHEPHERD, ALFRED G. SIMMINS, ALAN B. SLATER, M.D., REGINALD E. SMITH, M.B., F.R.C.S.Ed., GEORGE J. C. SMYTH, GEOFFREY SPARROW, JOHN SPENCER DANIELL, GERALD N. STATHERS, M.B., GEORGE F. STEBBING, THOMAS L. G. STEWART, ALAN L. SUTCLIFFE, CHARLES L. SUTHERLAND, HALLIDAY G. SUTHERLAND, G. CHARLES H. S. TAYLOR, M.D., EDMUND F. THOMAS, EDWARD M. THOMSON, HAROLD E. THORN, ARCHIBALD TODRICK, REGINALD W. TOWNLEY, F.R.C.S., WILLIAM R. E. UNTHANK, M.D., WALTER P. VICARY, ARNOLD VINEY, MICHAEL

VLASTO, HENRY C. WALDO, GODFREY A. WALKER, JOHN C. WALKER' LLEWELLYN R. WARBURTON, JOHN G. WARDROP, CUTHBERT WARNER JOHN N. WATSON, WALTER G. WATSON, JAMES O. WATT, SYDNEY WELHAM, HUGH WETHERLEE, HENRY WILKS, NORMAN V. WILLIAMS, FRANCIS S. WILLIAMS, FREDERICK V. WILLIAMSON, ALEXANDER F. R. WOLLASTON, THOMAS WYNDHAM.

ROYAL NAVAL VOLUNTEER RESERVE.

Staff Surgeon W. K. WILLS, M.B., to the *Vivid*, additional, for Royal Naval Barracks, vice Caldwell.

Surgeon W. J. A. QUINE, M.B., to the *Vivid*, additional, for disposal, vice McDowall.

ARMY MEDICAL SERVICE.

THE following to be temporary Colonels: Lieutenant-Colonel Sir WILMOT P. HERRINGHAM, Kt., M.D., First London (City of London) General Hospital, R.A.M.C.T.F.; Sir ALMROTH E. WRIGHT, M.D., F.R.C.S.I., F.R.S.; Captain FREDERIC F. BURGHARD, M.D., F.R.C.S., Fourth London General Hospital, R.A.M.C.T.F.; Major Sir JOHN R. BRADFORD, K.C.M.G., F.R.S., M.D., Third London General Hospital, R.A.M.C.T.F.

Taylor, M.R.C.S.Eng., L.R.C.P.Lond., M.B., B.C.Camb., has been selected for appointment as a temporary Medical Officer, Uganda. N. Crichlow, M.B., Ch.B.Glas., has been selected for appointment as a Medical Officer in the Solomon Islands Protectorate. W. M. W. Shepherd, M.B., Ch.B.Edin., has been selected for appointment as a Medical Officer in Zanzibar.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN the ninety-seven largest English towns 8,377 births and 4,788 deaths were registered during the week ended Saturday, October 24th. The annual rate of mortality in these towns, which had declined from 14.3 to 13.4 per 1,000 in the three preceding weeks, rose to 13.8 per 1,000 in the week under notice. In London the death-rate was equal to 14.7, against 14.9, 13.8, and 13.9 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 3.5 in Wimbledon, 4.9 in Acton, 5.9 in Ealing, 6.1 in Bournemouth, 6.4 in Hornsey, and 6.8 in Southend, to 17.0 in Sunderland, 17.2 in Great Yarmouth, 19.7 in Exeter, 20.0 in Huddersfield, 21.1 in Liverpool, and 22.3 in Birkenhead. Measles caused a death-rate of 2.3 in Birkenhead and in Wigan and 2.4 in Oldham, and diphtheria of 1.6 in Middlesbrough. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 651, 485, and 322 in the three preceding weeks, further fell to 269, of which 76 were registered in London, 32 in Liverpool, 17 in Birmingham, 9 in Sheffield, 8 in Manchester, and 7 in Nottingham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small pox was registered during the week. The causes of 48, or 1.0 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of this number, 13 were recorded in Birmingham, 10 in Liverpool, and 2 each in Stoke-on-Trent, Prestou, Barrow-in-Furness, Darlington, and Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 4,196, 4,263, and 4,473 at the end of the three preceding weeks, had further risen to 4,617 on Saturday, October 24th; 657 new cases were admitted during the week, against 640, 670, and 650 in the three preceding weeks.

In the ninety-seven largest English towns 8,529 births and 4,708 deaths were registered during the week ended Saturday, October 31st. The annual rate of mortality in these towns, which had been 13.9, 13.4, and 13.8 per 1,000 in the three preceding weeks, fell to 13.5 per 1,000 in the week under notice. In London the death-rate was equal to 14.1, against 13.8, 13.9, and 14.7 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 4.7 in Hornsey, 5.1 in Exeter, 5.3 in Darlington, 5.7 in Ilford, 6.3 in Cambridge, and 7.3 in Ealing, to 18.5 in Stockton-on-Tees, 20.4 in Liverpool, 20.5 in Gateshead, 20.8 in Newcastle-on-Tyne, 22.3 in Middlesbrough, and 24.7 in Bury. Measles caused a death-rate of 1.7 in Wigan and in Newcastle-on-Tyne, 1.8 in Liverpool, 2.0 in Wakefield, and 2.3 in Birkenhead. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 485,

322, and 269 in the three preceding weeks, fell further to 238, and included 44 in London, 19 in Liverpool, 14 in Birmingham, 11 in Manchester, and 10 in Newcastle-on-Tyne. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 29, or 0.6 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of this number 9 were recorded in Birmingham, 6 in Liverpool, and 4 in Gateshead. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 4,365, 4,473, and 4,617 at the end of the three preceding weeks, had further risen to 4,683 on Saturday, October 31st; 598 new cases were admitted during the week, against 670, 650, and 657 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,215 births and 659 deaths were registered during the week ended Saturday, October 24th. The annual rate of mortality in these towns, which had been 15.6, 15.9, and 14.7 per 1,000 in the three preceding weeks, rose to 15.0 in the week under notice, and was 1.2 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 1.2 in Clydebank, 7.9 in Ayr, and 11.3 in Motherwell, to 19.6 in Aberdeen, 20.6 in Kilmarnock, and 22.8 in Kirkcaldy. The mortality from the principal infective diseases averaged 1.8 per 1,000, and was highest in Aberdeen and Motherwell. The 303 deaths from all causes in Glasgow included 16 from infantile diarrhœa, 8 from scarlet fever, 7 from whooping-cough, 4 from diphtheria, and 3 from enteric fever. Five deaths from diphtheria were recorded in Edinburgh, 7 in Aberdeen, and 2 in Kirkcaldy; from scarlet fever 6 deaths in Aberdeen; and from infantile diarrhœa 5 deaths in Motherwell and 3 in Dundee.

In the sixteen largest Scottish towns 1,127 births and 640 deaths were registered during the week ended Saturday, October 31st. The annual rate of mortality in these towns, which had been 15.9, 14.7, and 15.0 per 1,000 in the three preceding weeks, fell to 14.6 in the week under notice, but was 1.1 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 6.8 in Hamilton and 7.6 in Motherwell and in Kirkcaldy, to 15.0 in Leith, 15.7 in Aberdeen, and 16.5 in Glasgow. The mortality from the principal infective diseases averaged 1.8 per 1,000, and was highest in Clydebank and Aberdeen. The 332 deaths from all causes in Glasgow included 14 from infantile diarrhœal diseases, 9 from whooping-cough, 7 from scarlet fever, 4 from diphtheria, 3 from enteric fever, and 2 from measles. Six deaths from diphtheria were recorded in Edinburgh; 5 deaths from infantile diarrhœa, 3 from scarlet fever, and 3 from diphtheria in Aberdeen; 2 deaths from whooping-cough in Paisley; and 2 from scarlet fever in Leith.

HEALTH OF IRISH TOWNS.

DURING the week ending October 24th 575 births and 365 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 546 births and 375 deaths in the preceding period. These deaths represent a mortality of 15.8 per 1,000 of the aggregate population in the districts in question, as against 16.2 per 1,000 in the previous period. The mortality in these Irish areas was therefore 2.0 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 24.9 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 15.3 (as against an average of 18.0 for the previous four weeks), in Dublin city 15.8 (as against 19.2), in Belfast 16.9 (as against 17.8), in Cork 17.0 (as against 17.1), in Londonderry 8.9 as against 14.9), in Limerick 20.3 (as against 19.6), and in Waterford 22.8 (as against 18.5). The zymotic death-rate was 1.9, as against 2.7 in the previous week.

During the week ending Saturday, October 31st, 592 births and 352 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 575 births and 365 deaths in the preceding period. These deaths represent a mortality of 15.2 per 1,000 of the aggregate population in the districts in question, as against 15.8 per 1,000 in the previous period. The mortality in these Irish areas was therefore 1.5 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.6 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 14.4 (as against an average of 17.2 for the previous four weeks), in Dublin city 15.3 (as against 18.0), in Belfast 14.0 (as against 16.5), in Cork 21.8 (as against 15.8), in Londonderry 11.4 (or the same as in the previous period), in Limerick 21.7 (as against 18.9), and in Waterford 22.8 (as against 19.9). The zymotic death-rate was 2.2, as against 1.9 in the previous week.

Hospitals and Asylums.

EARLSWOOD ASYLUM.

THE annual report for 1913 (which, it is interesting to note, is printed by the patients at the asylum) draws attention to the removal of the London offices of the asylum to 14 and 16, Ludgate Hill, E.C. The financial statement unfortunately shows a deficit of £1,629 on the year's working, due to a falling off in annual subscriptions and a large expenditure necessitated for special repairs. There are outstanding loans, obtained in the main to defray the costs of reconstruction of the building, which amount to £6,500; and it is to be regretted that an institution which has done so much for the mentally deficient class should not be better supported. About £16,700—more than half of the year's ordinary income—is derived from payments for patients, and about £7,000 from subscriptions and donations, not including legacies.

From the report of Dr. Charles Caldecott, the medical superintendent, we learn that during the year 1912 60 fresh cases were admitted, 31 were discharged "relieved," and 32 had died. The aggregate number of patients on December 31st, 1912, was 495 (339 males, 157 females), and the average number resident during the year, 493. The percentage death-rate (calculated on the latter figure) was 6.49, the number of deaths having been 32, the largest number recorded during the last 16 years. No explanation of this exceptional mortality is given in the report, but we notice that 9 are deaths of inmates aged 45 and upwards, one patient having attained the advanced age of 84. Amongst the assigned causes of death we notice pulmonary tuberculosis in 10 cases, and general tuberculosis in 2, pneumonia in 9, and scarlatina in 2. An epidemic of the last named disease is recorded extending to 24 cases, but attended with "no unpleasant complications or sequelæ" beyond 3 cases subsequently developing tuberculous disease; 55 patients had 3,566 fits during the year, and 2 deaths are attributed to epilepsy. Reports of the schoolmaster and head governess are appended, and set forth the methods of scholastic instruction adopted; but perhaps the most successful and satisfactory part of the training is that given in the workshops and on the land, which moreover seem to furnish a fair profit.

It is to be hoped that under the Mental Deficiency Act the resources and experience of Earlswood may be still further utilized.

ADELAIDE HOSPITAL, DUBLIN.

AT the twenty-sixth annual meeting of the supporters of the Adelaide Hospital the Chairman said that the hospital spent each year from £2,000 to £2,500 more than its ordinary income, and that to make up for this deficiency it was necessary to fall back upon bequests. If the committee had not done this during the past years, it was safe to say that there would be no such thing as the Adelaide Hospital—certainly not as it now existed. The report stated that the total number of patients admitted during the year was 1,374—an increase of 80 over the previous year. An extension is being built with a sum of money left to the hospital, and it will, when completed, contain, on the ground floor—(1) increased accommodation for out-patients; (2) extra consulting rooms for doctors and surgeons; (3) an improved *x*-ray department. The medical and surgical staff attach great importance to this latter addition. The other floors will provide—(1) further accommodation in the Alexandra Home; (2) new rooms for the matron and sisters; and (3) new sleeping accommodation for an increased number of nurses. The attendances of out-patients in the dispensary during the year were 34,612. It is intended to equip the *x*-ray department as completely as possible, and it is estimated that at least £500 will be needed for this purpose.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

ALTON: LORD MAYOR TRELOAR'S CRIPPLES HOSPITAL AND COLLEGE.—Two Assistant Medical Officers (ladies). Salary at the rate of £120 and £100 per annum respectively.

BIRMINGHAM CORPORATION.—(1) Assistant Resident Medical Officer. (2) Lady Medical Officer for Infant Consultation Work. Salary, £200 and £300 per annum respectively.

BIRMINGHAM: GENERAL HOSPITAL.—House-Governor and Secretary. Salary, £500 per annum.

BIRKENHEAD: BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum.

BIRMINGHAM UNION.—(1) Third and Fourth Medical Officers at Dudley Road Infirmary. (2) Assistant Medical Officer at the Erdington Infirmary and Cottage Homes. (3) Assistant Medical Officer at the Selly Oak Infirmary. Salary for (1) £170 and £160 respectively, for (2) £200, and (3) £130 per annum.

BOARD OF CONTROL, MENTAL DEFICIENCY ACT.—Assistant Medical Officer at the State Institution for Mental Defectives near Liverpool. Salary not less than £300 per annum, rising to £400.

BOLTON INFIRMARY AND DISPENSARY.—Second House-Surgeon, Salary, £120 per annum.

BRADFORD EDUCATION COMMITTEE.—Assistant School Medical Officer Salary, £350 per annum, rising to £400.

BRADFORD POOR LAW UNION.—Assistant Resident Medical Officer for the St. Luke's Hospital and Union House. Salary, £150 per annum.

BRADFORD ROYAL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

CHELSEA INFIRMARY. Cale Street, S.W.—Second Assistant Medical Officer. Salary, £160 per annum.

CHESHIRE COUNTY ASYLUM, Parkside, Macclesfield.—Locumtenent. Salary, £5 5s. a week.

CHESTER COUNTY, PARKSIDE ASYLUM, Macclesfield.—Medical Superintendent. Salary, £650 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, Victoria Park, E.—House-Physician (male). Salary at the rate of £75 per annum.

DERBY BOROUGH ISOLATION HOSPITAL AND SANATORIUM.—Resident Medical Officer. Salary, £200 per annum.

DERBYSHIRE COUNTY COUNCIL.—Assistant Tuberculosis Medical Officer. Salary, £400 per annum.

EDMONTON INFIRMARY.—Second Assistant Medical Officer. Salary, £160 per annum.

GLOUCESTERSHIRE ROYAL INFIRMARY AND EYE INSTITUTION.—Assistant House-Surgeon. Salary, £80 per annum.

GREAT YARMOUTH HOSPITAL.—House-Surgeon (male). Salary, £140 per annum.

HALIFAX: ROYAL HALIFAX INFIRMARY.—Second and Third House-Surgeons. Salary, £120 and £100 per annum respectively.

HALIFAX UNION.—Resident Medical Officer for the Poor-Law Hospital. Salary, £120 per annum and £20 for dispensing medicines.

HANTS COUNTY ASYLUM.—Third Assistant Medical Officer (male). Salary, £250 per annum.

HEREFORD COUNTY AND CITY ASYLUM.—Junior Assistant Medical Officer (male). Salary, £200 per annum, rising to £225.

HERTS COUNTY ASYLUM, Hill End.—Second Assistant Medical Officer (male). Salary, £250 per annum.

HUDDERSFIELD ROYAL INFIRMARY.—Senior and Junior Assistant House-Surgeons (males). Salary, £80 per annum each.

HULL ROYAL INFIRMARY.—(1) Senior House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £100 per annum respectively.

KENT COUNTY ASYLUM, Chartham.—Third Junior Assistant Medical Officer (male). Salary, £250 per annum.

KENT COUNTY ASYLUM, Maidstone.—Male Junior Assistant Medical Officer. Salary, £250 per annum.

LEEDS HOSPITALS FOR INFECTIOUS DISEASES AND TUBERCULOSIS.—Assistant Medical Officer. Salary at the rate of £150 per annum.

LEICESTERSHIRE EDUCATION COMMITTEE.—Temporary Assistant School Medical Officer. Salary, £300 per annum.

LINCOLN CITY.—Assistant Medical Officer of Health. Salary, £250 per annum.

LIVERPOOL UNIVERSITY.—Assistant Lecturer and Demonstrator in Anatomy. Salary, £175 per annum.

LONDON HOMOEOPATHIC HOSPITAL, Great Ormond Street, W.C.—Assistant Physician.

LONDON UNIVERSITY.—(1) University Chair of Anatomy at King's College. (2) University Chair of Physiology at the London Hospital Medical College. Salary, £600 per annum each.

MANCHESTER CHILDREN'S HOSPITAL.—Resident Medical Officer. Salary at the rate of £100 per annum.

MANCHESTER CORPORATION.—Assistant Tuberculosis Officer. Salary, £350 per annum.

MANCHESTER COUNTY ASYLUM, Prestwich.—Assistant Medical Officer. Salary, £250 per annum, increasing to £300, and on promotion to £450.

MANCHESTER HOSPITAL FOR CONSUMPTION AND DISEASES OF THE THROAT AND CHEST.—Assistant Medical Officer at the Crossley Sanatorium. Salary, £100 per annum.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, rising to £200.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—House-Surgeon. Salary, £120 per annum.

MANCHESTER ROYAL EYE HOSPITAL.—Junior House-Surgeon. Salary, £80 per annum.

MIDDLESBROUGH: NORTH ORMESBY HOSPITAL.—House-Surgeon. Salary, £120 per annum.

MOUNT VERNON HOSPITAL FOR CONSUMPTION, ETC., Northwood.—House-Physician. Salary, £100 per annum.

NATIONAL HOSPITAL FOR DISEASES OF THE HEART, Westmoreland Street, W.—Honorary Assistant Physician.

NEWCASTLE-UPON-TYNE AND NORTHUMBERLAND SANATORIUM FOR CONSUMPTIVES.—Resident Medical Officer (male). Salary, £350 per annum, rising to £400.

NEWPORT: ROYAL GWENT HOSPITAL.—Resident Medical Officer. Salary for first six months at the rate of £100 per annum, rising to £150.

NOTTINGHAM CHILDREN'S HOSPITAL.—Lady House-Surgeon. Salary at the rate of £130 per annum.

NOTTINGHAM GENERAL DISPENSARY.—Resident Surgeon (male). Salary, £250 per annum.

NOTTINGHAM: GENERAL HOSPITAL.—(1) Senior House-Physician; (2) Assistant House-Surgeon. Salary for (1) £120 per annum, and for (2) £100 per annum. (Women eligible.)

OCHIL HILLS SANATORIUM, Milnathort.—Junior Resident Physician. Salary, £200 per annum, rising to £250.

OLDHAM ROYAL INFIRMARY.—Third House-Surgeon. Salary at the rate of £100 per annum.

PRESTON: COUNTY ASYLUM, Whittingham.—(1) Junior Assistant Medical Officer. (2) Assistant Medical Officer to act also as Pathologist. Salary, £250 per annum, rising to £300.

PRESTON: ROYAL INFIRMARY.—Assistant Resident Medical and Surgical Officer. Salary, £120 per annum.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—Junior Resident Medical Officer. Salary at the rate of £70 per annum.

RYDE: ROYAL ISLE OF WIGHT COUNTY HOSPITAL.—Resident House-Surgeon (male). Salary, £115 per annum.

SALFORD ROYAL HOSPITAL.—(1) Resident Surgical Officer. (2) Casualty House-Surgeon. Salary, £120 and £100 per annum respectively.

SALFORD UNION INFIRMARY.—Resident Assistant Medical Officer (male). Salary, £150 per annum.

SCARBOROUGH HOSPITAL AND DISPENSARY.—Senior and Junior House-Surgeons. Salary, £100 and £80 per annum respectively.

SHEFFIELD CITY HOSPITALS.—Assistant Medical Officer. Salary, £180 per annum, rising to £200.

SHEFFIELD: EAST END BRANCH OF THE CHILDREN'S HOSPITAL.—House-Surgeon. Salary, £120 per annum.

SHEFFIELD ROYAL HOSPITAL.—Assistant House-Physician. Salary, £80 per annum.

SHEFFIELD ROYAL INFIRMARY.—(1) Two House-Surgeons. (2) Assistant House-Physician. Salary, £100 per annum each.

SOMERSET COUNTY COUNCIL.—Assistant School Medical Officer (temporary). Salary, £300 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

STIRLING DISTRICT ASYLUM, Larbert.—Third Assistant Medical Officer (lady). Salary, £140 per annum.

STOKE-ON-TRENT INFECTIOUS DISEASES HOSPITAL.—Resident Assistant Medical Officer (lady). Salary, £150 per annum.

SUNDERLAND: ROYAL INFIRMARY.—Junior House-Surgeon (male). Salary, £100 per annum.

WALSALL AND DISTRICT HOSPITAL.—(1) Senior House-Surgeon, (2) Junior House-Surgeon and Anæsthetist. Salary, £150 and £110 per annum respectively.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, NOVEMBER 14TH, 1914.

CONTENTS.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

PANEL COMMITTEE.

Alleged Excessive Prescribing.

A SPECIAL meeting of the London Panel Committee was held on November 10th, when the recommendations of the Pharmacy Subcommittee were approved in a number of cases in which the Pharmaceutical Committee alleged that excessive prescribing had occurred. The Subcommittee found that in 17 cases the cost of drugs ordered had been excessive, in 9 it had not been in excess, in 7 cases the period under review was not long enough for a decision to be given, and in 5 cases no investigation could take place because the practitioners were absent on military duty. It was stated that two hundred other cases had been remitted by the Pharmaceutical Committee.

Relations with Tuberculosis Dispensaries.

It was reported that the Local Government Board had received a deputation from the Panel Committee on the subject of the relation of practitioners to the medical officers of tuberculosis dispensaries, and had expressed agreement with the principle that insured persons should not be treated at dispensaries without the knowledge of the practitioner responsible for their treatment. On this a discussion took place in which the importance of the retention by the general practitioner of a share in tuberculosis treatment was emphasized.

Breaches of Medical Etiquette.

In view of irregularities which took place in the transfer of insured persons at the end of the medical year 1913, the Panel Service Subcommittee advised the Panel Committee to report to the proper authority any case in which a practitioner exhibited publicly notices regarding the date of revision, printed or circulated transfer forms, canvassed in any manner whatsoever for patients or secured the transfer to his list of large numbers of insured persons on the lists of practitioners absent on military duty. The Panel Committee instructed the Subcommittee to investigate any such cases.

Reduction of Lists owing to the War.

A report by the Panel Service Subcommittee suggested that, although exact figures were not yet available, the number of insured persons in London serving with the forces, and therefore disentitled for the time being to medical benefit, might amount to 250,000. The necessary adjustments of lists would inflict loss on a number of practitioners, but the Subcommittee observed that the rights of individual practitioners would not permit an arrangement whereby the depleted medical benefit fund should be distributed on the basis of the numbers on lists before the war.

BEDFORDSHIRE.

PANEL COMMITTEE.

A MEETING of the Bedfordshire Panel Committee was held at the County Hospital, Bedford, on October 20th, when Dr. WAUGH was in the chair, and seventeen other members were present, as well as Drs. Winckworth and Holmes, who attended as members of the Medical Committee.

Assignment Subcommittee.—The following were elected members of the Assignment Subcommittee, and the names were directed to be notified to the clerk of the Insurance Committee:

Bedford Area.—Drs. Parbury and A. F. Goldsmith.
Biggleswade Area.—Drs. Milburn and Dixon.
Leighton Buzzard Area.—Drs. Waugh and Wagstaff.
Ampthill Area.—Drs. K. Roberts and Street.
Luton Area.—Drs. Bone and Rose.

Secretaryship.—Drs. Rose, Bone, and Stanbury Phillips were appointed a subcommittee to make inquiries with a view to appointing a paid secretary, preferably a soliciter, if the cost would not be prohibitive, since the secretary had reported that he was unable to fulfil the duties owing to his having joined the Royal Army Medical Corps, and the uncertainty of his movements. It was further arranged that the present secretary should continue the work for the time being.

Honorarium to Returning Officer.—On the motion of Dr. BUTTERS, seconded by Dr. POLLARD, a fee of one guinea was granted to Mr. Carter for his services as returning officer.

Prescribing.—Drs. Pollard, Bone, and Butters were appointed a subcommittee without executive powers to confer with a subcommittee of the Pharmaceutical Committee with regard to the cost of prescribing and of the expenses of the Pharmaceutical Committee. A communication having been read from the clerk to the Insurance Committee *re* Memorandum 199/I.C. on the scheme for the checking and the scrutiny of prescriptions, the Committee expressed the following opinions, which were ordered to be communicated to the clerk of the Insurance Committee.

1. An investigation into the cost of prescribing is desirable.
2. A suitable method would be the appointment of a clerk to serve under the three committees concerned—Insurance Committee, Pharmaceutical Committee, and Panel Committee.
3. No part of the cost should be borne by the "Practitioners' Fund" (that is, the money definitely promised for medical services and not subject to deduction).
4. A suitable arrangement for the cost of checking prescriptions would be that half should be paid by the Insurance

Committee and that the other half should be paid from the funds available to pay the cost of drugs supplied by chemists.

New Regulations.—The Committee considered Memo. 201/I.C., in which the Insurance Commissioners suggested certain alterations in the regulations for the coming year: (1) The introduction of a uniform system of certification; (2) that alteration in the regulations may be made during the insurance year on giving two months' notice. The latter provision was said to be intended to avoid making more alterations than could be helped during the war. The Committee agreed to the suggestions in the Memorandum.

Voluntary List.—The Secretary was instructed to ask the clerk to the Insurance Committee for the promised list of those who were paying towards the voluntary levy towards the expenses of the Committee.

WEST SUFFOLK.

PANEL COMMITTEE.

A MEETING of the West Suffolk Panel Committee was held at Bury St. Edmunds on November 3rd, when Dr. WILKIN, temporary Chairman, presided, and ten other members were present.

Election of Chairman.—On the motion of Dr. WOOD, seconded by Dr. MAUND, Dr. Wilkin was appointed Chairman of both the Panel and Local Medical Committee. A vote of thanks was accorded to Dr. Wood for his services as Chairman of the Committees since their inauguration.

Medical Benefit Subcommittee.—The following representatives were appointed: Local Medical Committee, Dr. Batt; Panel Committee, Drs. Wilkin and Wood.

Unallotted Funds.—The matter of unallotted funds having been referred back by the Medical Benefit Subcommittee in order that the Panel Committee might state definitely that they accepted the method of division of the funds submitted by the Medical Subcommittee as well as the Commissioners' suggestion, the Secretary was instructed to notify the Clerk that the Panel Committee approved of the method.

Memorandum 199/I.C. Joint Committee.—Drs. Batt and Wood were appointed representatives of the Panel Committee on the Joint Committee consisting of two members each from the Medical Benefit, Pharmaceutical, and Panel Committees to consider paragraph 9 of the Memorandum.

Expenses.—The Medical Benefit Subcommittee intimated its approval of the proposal to meet the expenses of a voluntary levy, and authorized their clerk to make the necessary deductions upon the production of the agreements duly signed and provided that no expense was incurred by the office in making the deductions.

Suspense Slips.—After hearing statements by certain members with regard to the number of insured persons on their lists and on the index registers, it was unanimously resolved:

> That, as there is general dissatisfaction among the practitioners on the panel in West Suffolk in regard to the manner in which payments have been made, the issue of medical cards, and the number of suspense slips held by the Insurance Committee, the Commissioners be asked to hold an independent inquiry into the matter at the earliest possible moment.

A special subcommittee consisting of Drs. Barwell, Batt, Wilkin, Wisdom and Wood was appointed to deal with the matter on behalf of the Panel Committee with instructions to refer to the full Committee when necessary. The secretary was instructed to inform the Medical Benefit Subcommittee of the action of the Panel Committee.

Consideration of Circular Letter from Insurance Act Committee of the British Medical Association.

Drug Tariff.—The Committee approved the proposal to establish a joint committee of representatives of the Pharmaceutical Society and the British Medical Association to settle the prices of drugs affected by the war, and noted the suggestion that the expenses of the joint committee proposed to be set up to check the supply of drugs and appliances should be paid one-half by the Insurance Committee and one-quarter each by the Panel and Pharmaceutical Committees.

Circular 49 I.C. was considered and approved.

Records.—It was decided to remind practitioners of the necessity of keeping records up to date.

Local Medical and Panel Subcommittee.—Approval was expressed of the action of the Insurance Act Committee in this matter.

Proposed Federation of Local Medical and Panel Committees.

A letter from the Provisional Committee of the proposed federation dated July, 1914, having been considered, it was decided to reply that in the opinion of the Panel Committee the special subcommittee appointed by the British Medical Association was quite adequate to perform the work, and that it was not in favour of the establishment of the proposed federation.

PERTH.

A SPECIAL meeting of the Panel Committee of the county of Perth was held at Perth on November 6th.

Extravagant Prescribing.—Dr. LYELL, in the absence of Dr. Trotter, stated that as previously arranged a meeting had been held to consider the report of the Pharmaceutical Committee with reference to extravagant prescribing, and that after full consideration of the statements made by the practitioners concerned, it was resolved:

> That no practitioner be surcharged for any proprietary medicine ordered previous to July 11th, the date of the warning circular sent out by the Panel and Pharmaceutical Committees giving instructions as to prescribing and dispensing of medicines, etc.

Instructions for Prescribing.—A suggestion by Dr. STUART that the instructions for prescribing should be issued in a handy and wear-proof booklet was favourably considered.

Dispensing by Practitioners.—The question of dispensing by doctors in certain districts having been raised by the Pharamaceutical Committee it was decided to advise the medical men concerned to appoint a deputation to attend the next meeting of the County Insurance Committee.

ROXBURGHSHIRE.

A MEETING of the Panel Committee of Roxburghshire was held at St. Boswells on November 6th, when Dr. CULLEN was in the chair.

Checking Prescriptions.—Memorandum No. 598 issued by the Commissioners containing particulars as to the scheme for the proposed central bureau for checking prescriptions, etc., was discussed. Mr. CAIRNS, who attended to represent the Pharmaceutical Committee, explained that the Pharmaceutical Society for the area had resolved by three to two to approve of this scheme. All the chemists in Roxburghshire had been consulted; six were in favour and four against the proposed bureau. In reply to a question, Mr. Cairns said that the present cost of checking and tabulating the prescriptions incurred by his committee was £12 per annum, which sum was charged to administration expenses. For £2 or £3 more, any further information that might be required by the Insurance Committee could be furnished. After fully considering the matter, the committee expressed the opinion that the system in force in the area was working eminently satisfactory, and it was decided not to approve of the scheme.

Mileage Fund.—The committee agreed to the distribution of the mileage fund for 1914, amounting to £870, on the same basis as last year. It was decided that a sum of £48 available from the grant for 1913 should be distributed among practitioners who did not participate in the sum allocated by the Commissioners in July last.

Agreements for 1915.—A letter was submitted from the Commissioners intimating that they could not agree to the proposals made by the committee to either allow the agreements to remain as they were for next year or that three months' notice should be given of any proposed alterations. The Commissioners also declined to give any information at the present juncture as to the nature of the alterations proposed to be introduced into the agreements for 1915 as indicated. The Clerk was instructed to point out that the proposals made by the committee were considered to be fair and reasonable, and to mention that the English Commissioners proposed to give eight weeks' notice of any alterations as compared with six weeks in Scotland.

[In the report of the conference published last week, p. 226, on the seventh line from the bottom, second column, the word "months" should read "weeks."]

MANCHESTER PANEL COMMITTEE.

The vast amount of work done by the Manchester panel doctors for the insured is shown in a way that cannot be questioned in the official annual statement for the year 1913, just issued by the Manchester Medical Committee, and signed by the honorary treasurer. In October, 1912, the number of insured persons in the area was put down at 254,034. Since then there has been a gradual but steady increase, until in October of this year the number was given as 299,865. Of these, 187,086 are men, and 112,779 women—that is to say, about 11 out of every 30 insured persons are women workers, and this proportion may reasonably be assumed to have existed throughout the year 1913. It is doubtful whether any other town of the size of Manchester can show any larger proportion of women insured, and beyond all doubt this explains to a very great extent the enormous amount of work required from the panel doctors, and the very heavy demands that have been made on the drug funds.

The work done by the panel doctors is summarized as follows: Attendances, 1,333,275; visits, 270,516; special visits at request of patient during day, 7,789; special visits at request of patient during night, 2,790; operations, 1,426; anaesthetics, 192; fractures, dislocations, etc., 202. According to the scale in use the doctors are credited with 2s. for each ordinary attendance, 2s. 6d. for each ordinary visit, and special fees for operations, fractures, etc., and on this scale the total amount due to the doctors was £154,919. The amount available to meet this was only £86,101—that is, about 55.5 per cent. of the amount credited. This is about 11s. 1½d. in the £; or, roughly, it may be put down that the doctors have received 1s. 1½d. per ordinary attendance and 1s. 4¾d. per visit. No one who knows anything about medical practice in Manchester can doubt for a moment that this is very greatly below the average fees received from working-class private patients.

It has been urged repeatedly that the system of medical attendance in Manchester encourages doctors to put in as many attendances and visits as possible, as payment is according to the work done. Prima facie such an assumption might seem reasonable, but there is another side of the matter which is only properly realized by the doctors themselves. They have known from the beginning that they could not possibly be paid in full for their work, and would only receive a little over 11s. in the £ on their bills. It is quite possible that a few "sixpenny doctors" would be fairly well satisfied with that, which would materially increase their former incomes; but the great majority felt that they were doing work at a much cheaper rate than they had ever done it before, and the apparent temptation to increase the number of their attendances has not appealed to them. They have attended because they were, in fact, bound to attend by the condition of their patients. Moreover, they knew quite well that it was no use sending in a bill for every attendance actually given, as by the arrangement made by the Panel Committee only a certain average number of attendances per patient per month would be allowed to count, any excess being simply crossed out of their accounts before they were allowed to rank for the dividend. On this account there cannot be the least doubt that a considerable number of the doctors have not entered up on their day-sheets every attendance actually rendered. This, of course, cannot be defended for a moment, though there is only too much reason for believing that in this respect the Manchester doctors are only like the panel doctors in some other parts of the country. Indeed, they have not sufficiently kept in mind the fact that by carelessness in not entering up every single attendance given they are furnishing a weighty argument, which will be used to the utmost against them if there is any attempt in the future to reduce the amount available for medical benefit. There is little doubt that the number of visits and attendances actually rendered by the Manchester panel doctors is really considerably higher than the number entered by them on their day-sheets and recorded in the above figures. In any case it is certain that the insured are not being neglected so far as the number of attendances and visits is concerned.

The total chemists' bills for the year amounted to £45,248, towards which there was available £25,345, which is equivalent to about 60 per cent. The total number of prescriptions given by the panel doctors was 1,268,330, which averages 2.49 per patient actually treated per month, and the average cost per prescription was 7.98d., so that each patient on the monthly day-sheets cost 19.83d. It has not been found possible as yet to state the actual number of separate insured persons that have received treatment, as names that occur on successive monthly record sheets are counted as if they were separate insured persons, though many of them may have had several months' attendance. It is to be noted that during the present year there has been a distinct lowering of the average cost per prescription which in June last was only 6.3d. as compared with 7.98d. in the year 1913. The number of prescriptions per patient per month has also fallen from 2.49 in 1913, to 2.12 in June last. Thus the monthly cost for drugs and appliances per patient was only 13.37d. in June, as compared with 19.83d. for the year 1913. It is thus practically certain that the chemists will receive a much higher dividend in the present year than in 1913, but even at the present rate of cost, the 2s. per insured person will hardly be found sufficient to pay the chemists' bills in full.

So far as the insured are concerned there is no hiding the fact that there is a distinct danger that in the present anxiety to lessen the drug bill, the number of prescriptions and the cost per prescription may be reduced further than the interest of the patients really requires. The sickness incidence in Manchester is undoubtedly higher than in a great part of the rest of the country. This is partly accounted for by the relatively higher proportion of women workers and partly by the general condition of labour in the Manchester district. It thus seems to be established that the sum of 2s. for drugs and appliances, which may be adequate taking the country as a whole, is not sufficient in an industrial centre like Manchester with a large proportion of women workers. On the whole it may be said that of the three parties to medical benefit in Manchester, namely, the insured, the doctors and the chemists, the insured are the only party that are getting in full their just dues, but this is partly at the expense of the doctors and the chemists.

CORRESPONDENCE.

The London Panel Committee's Inquisition into Panel Doctors' Prescribing.

Dr. Henry Bazett (Paddington) writes: I have received a notice from the Secretary of the London Panel Committee that they are, at the request of the Pharmaceutical Committee, making "investigations in respect of the drugs and appliances ordered by sixty-five practitioners during the period 12th to 30th April, 1914." I am then informed that, while for this period, "the average cost of the prescriptions issued by all the practitioners on the panel was 9.7 pence," in my "individual case the average cost per prescription was nearly 1s. 1d."!

I should like to dilate on the futility of an inquiry of this sort, in which no account is taken of the length of the period for which medicine is supplied by each prescription, as a number of weekly prescriptions costing, say, an average of 2s., are a less demand on the Drug Fund than a correspondingly larger number of two-day prescriptions covering the same period, and costing an average of 9d. I should also like to know whether several prescriptions on one form, such as I am habitually writing, are counted as one or as many. In either case, by rewriting the prescriptions on new but more forms, and breaking them up, it would be perfectly easy, without at all altering the total amounts prescribed, to reduce one's "average"—calculated in this absurd way—to almost any figure one wished.

But I am writing on a far more important matter, which deeply concerns the other sixty-four practitioners alluded to. The Panel and Pharmaceutical Committees claim, in this notice, that they are carrying out the provisions of Article 40 of the Regulations of 1913. Now this article only empowers an "investigation . . . where it appears to the Panel Committee . . . that the cost of the supply of . . . the drugs or appliances ordered for insured persons . . . is in excess of what may reasonably be necessary for the adequate treatment of those persons." That is to say, it authorizes an investigation into prescriptions written for insured persons to be made while those persons are taking those prescriptions. It cannot therefore apply to

an inquiry into a number of prescriptions six months or more after the persons prescribed for have ceased to be under that treatment. Even if the wording of the article were not plain (which it is), common sense—which does not appear to be a strong point of the committees concerned—should show the impossibility of determining "what may reasonably be necessary for the adequate treatment" of any one except when that person's ailment, symptoms, and idiosyncrasies (which, *pace* these Pharmaceutical and Panel Committees, even panel patients are human enough to have) can be actually examined and reported upon.

Another important point is that the Panel Committee is only empowered to "make a report to the (Insurance) Committee," on which alone the latter can act, "after hearing any practitioner concerned." Now, no practitioner can be "heard" unless he voluntarily goes to the inquiry and, when there, speaks. The Act and Regulations give the Panel Committee no power to compel him either to attend or to speak if he does attend, and get no power to do anything without "hearing" him.

I therefore advise my sixty-four brethren to reply, as I have done, that the "investigation" authorized by Article 40 is one to be undertaken during the treatment of the persons concerned, that this inquiry is therefore illegal, and that they must decline to give the Panel Committee the assistance of their presence, and will hold them legally responsible for any consequences that may ensue from their continuing to so conduct it.

For my part I welcome the "unsolicited testimonial" thus given me to the thoroughness of my treatment of my insured patients, for whom I, at all events, practically never order anything not in the *British Pharmacopœia*.

Panel Practitioners with Small Lists.

Dr. M. A. CURRY, D.P.H. (Kensington, W.) writes: Your readers will, perhaps, be interested to learn that at last an action has been commenced in the High Court regarding the allocation money.

I understand that most of the money has been disbursed according to the Commissioners' decision, and in proportion to the amount standing to the credit of each doctor as capitation fees for 1913. The method of distribution, to say the least of it, is unfair and unsound in principle, and I still say contrary to the resolution passed by the London Insurance Committee. According to this some will have a total income of from £100 to £200 for the year, less than many individuals in humbler positions of life. I, personally, have not received a penny either in capitation fees or allocation money, and up to now they have declined to pay me. Thus I have been penalized, persecuted, and robbed for taking up the cudgels against the powers that be in this struggle for justice for the profession. I worked for 1913 and part of this year. I warn all those affected—that is, the small list men—against signing the last issued circular requesting them "to return it," etc., which would exonerate the London Insurance Committee from all responsibility, likewise interdicting or foregoing any claim for further allocation money that they may have against the London Insurance Committee as a *sine qua non* for payment of their cheques. It is for the Insurance Committee to find the money either by deductions from the big list men or wherever it has been wrongly placed, spent, or otherwise. It is not for me to decide for them. No intimidation or futile threats or advice from any quarter insidiously sent by the defendants will hinder my attempts to obtain justice and good law. In conclusion, I appeal to all those interested in the big battle for justice to lend me all their support, as the whole of our future depends on it and even of those of our sons who may happen to enter into the profession, and therefore the far-reaching consequences to us are colossal.

After the War.

Dr. R. J. LEEPER, L.R.C.S.I. (Bamber Bridge), writes: In reference to Dr. Price's letter, we are showing the same apathy that England showed over the present war. Owing to a blunder of the Government actuary, panel doctors' accounts have been discounted, and next year they are to be further discounted, to make good the chemists' claims. But we as a profession take everything lying down. I agree with Dr. Price, Mr. Lloyd George will have his own back again with a vengeance.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

SOUTHERN BRANCH.—Dr. James Green, Honorary Secretary and Treasurer (Brandon House, Mile End, Landport, Portsmouth), gives notice that the half-yearly general meeting of the Southern Branch will be held at the Royal Hotel, Above Bar, Southampton, on Wednesday, November 25th, at 3 p.m. After the transaction of the ordinary business of the Branch, papers will be read and cases and specimens shown. Members desirous of showing specimens or cases of clinical interest or of reading papers will oblige by sending in their names, with the title or description of their contributions to the Honorary Secretary at their earliest convenience.

STAFFORDSHIRE BRANCH.—Dr. Harold Hartley, Honorary General Secretary (Basford, Stoke-on-Trent), gives notice that the first general meeting of the session will be held at the North Stafford Hotel, Stoke-on-Trent, on Thursday, November 19th, when the President, Dr. John Russell, will take the chair at 3.45 p.m. Business: Correspondence. Exhibition of living cases. Papers: (1) The Consequences of Neglected Adenoids, by G. A. Carter; (2) Spastic Constipation, by Edgar Somerville; (3) The Effect of Military Training on Lead Workers, by Frank Shufflebotham. Exhibition of pathological specimens, etc. Dinner at 6.30 p.m., charge 5s.

THE ROYAL COLLEGE OF SURGEONS OF ENGLAND.

The Annual Report.

THE annual report of the Council for the year 1914, which will be presented to the meeting of Fellows and Members at the Royal College of Surgeons, Lincoln's Inn Fields, on Thursday, November 19th, at 3 p.m., deals with the following among other matters:

Record of the Year's Work.

At the last annual meeting resolutions were carried favouring (1) the admission of Members to direct representation on the Council, (2) the inclusion in the annual report of a complete balance sheet, and (3) the discussion of the administration of the College finances as carried out by the Council, with a view to the remedy of the same by the annual meeting, or, if the meeting has no power, that steps should be taken to secure for it the proper authority. With regard to the first and second resolutions, the Council decided to take no action, and as regards the third the Council remains of opinion that the satisfactory financial position of the College is sufficiently evident to any Fellow or Member who studies the published accounts. At a meeting of the Council in March a motion favouring direct representation of Members on the Council was negatived by a large majority after prolonged discussion.

Medical Officers of Health.

In February the Council was asked to take part in a deputation to the Government on the position of medical officers of health as regards security of tenure and superannuation; this proposal was declined, but the President and Vice-Presidents had a conference with representative medical officers of health, and the Council subsequently addressed a letter to the President of the Local Government Board dwelling on the justice of the claims, and expressing the hope that the Government would favourably consider the representations made to it.

National Insurance.

The College submitted a protest to the National Insurance Commission (England) against the recognition, according to the terms of one of the Commission's regulations, by the National Insurance Joint Committee and the Insurance Commissioners of practitioners other than those who are duly qualified.

Royal Commission on Venereal Diseases.

At the request of the Council, Mr. F. Richardson Cross gave evidence before the Royal Commission on Venereal Diseases, regarding the effects of syphilis upon the eyes, Mr. D'Arcy Power upon the general effects of syphilis, and Mr. Shattock on the remote pathological effects of syphilis, the Wassermann test as applied to the diagnosis of the later effects of syphilis, and the latent distribution of syphilis.

Committee on Factory Lighting.

Mr. F. Richardson Cross had also given evidence before the Committee on Factory Lighting, as requested by the Council, and had been able to lay before the Committee answers to a letter circulated by him among members of the Ophthalmological Society bearing on the questions under consideration.

Central Midwives Board.

In his report Mr. Golding-Bird, who had been reappointed a member of the Central Midwives Board, pointed out that the great increase in number of midwives—37,019 as against 35,210 last year—was worthy of note; 2,109 had passed the examination, the total being 1,813 a year ago; 76 midwives had resigned, 70 were struck off the roll, with regard to 10 the Board had adjourned its decision, 9 had been censured, and 4 cautioned.

Examinations for Licence in Dental Surgery.

It has been decided to hold examinations for the licence three times instead of twice yearly.

Diploma of Tropical Medicine and Hygiene.

This examination will in future be divided into two parts, the first comprising pathology and haematology, bacteriology, general parasitology and protozoology; the second helminthology, protozoology and zoology and entomology in their relations to clinical medicine.

Prizes.

The Jacksonian Prize for the year 1913 has been awarded to Mr. John Howell Evans, M.A., M.Ch.Oxon., F.R.C.S., for his essay on malformations of the small intestine, and the Sir Gilbert Blane Medal to Surgeon Gilbert Francis Lyons, R.N.

Gift of Clock.

A clock for the Common Room has been presented by Mrs. Mary Fifield King, of Milton, Massachusetts, in memory of her father, the late William Cranch Bond Fifield, M.R.C.S., of Boston, U.S.A. Dr. Fifield, who was born at Weymouth, Massachusetts, was a graduate of Phillips Exeter Academy and of the Harvard Medical College, and became a member of the Royal College of Surgeons of England on May 29th, 1854. He was on the staff of the Boston City Hospital for fifteen years, and was on the consulting staff at the time of his death in 1895.

Finance.

The gross income of the college, not including trust funds, amounts to £26,833, an increase of £819 on the amount for 1913; the expenditure in respect of revenue amounts to £21,425, being £336 less than in the previous year.

Examinations and Diplomas.

Of 251 candidates who presented themselves for the first examination for the Fellowship, 84 passed and 167 were referred, whilst out of 143 candidates who submitted themselves to the Final Examination 70 passed, 69 were referred for six months and 4 for one year. The total number of candidates at the Anatomy and Physiology Examination held by the Conjoint Board was 324; of these, 192 passed. In the Final Examination 674 candidates were examined in medicine, with 232 rejections; 675 in surgery, with 235 rejections; and 545 in midwifery, with 178 rejections. For the diploma in public health, 68 candidates appeared at the first part of the examination, 14 being referred; and 61 at the second part, with 9 rejections. In the two parts of the examination for the diploma in tropical medicine, there were 7 candidates for the first, 3 being referred, and 4 for the second, all satisfying the examiners; 152 candidates presented themselves for the general surgery examination for the licence in dental surgery, 56 being referred, and 169 for the dental surgery examination, 59 being referred.

The contents of the *Calendar* and of the annual report on the museum have already been noticed.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

The following appointments are announced by the Admiralty: Fleet Surgeon Edward C. Ward, to the *Victory*, additional, vice May. Staff Surgeon P. T. Nicholls, to the *Vivid*, vice Cooper. The following Acting Surgeons have been confirmed in the rank of Surgeon: Arthur E. Pantlr, Henry B. Parkle, Julian L. Priston, Richard F. Quinton, Mark J. Aitken, M.B., Joseph A. Maxwell, M.B., Maurice S. Moore, M.D., William G. Thwaytes, M.B., Clarence E. Greeson, M.D., William F. Beattie, M.B., Herbert W. Fitzroy-Williams, M.B., Francis E. Fitzmaurice, Timothy J. O'Riordan, M.B., James C. Kelly, M.D., James M. Horan, Gilbert M. Graham, M.B., Frank C. Hunot. Temporary Surgeons: Harold G. Chaplin and Frederick L. Duckworth, to the *Victory*, additional, for disposal; Basil A. Playne, to be lent to the *Pembroke*, temporary; Frank W. Lawson, S. D. Kilner, and William G. Robertson, M.D., to the *Pembroke*, additional, for disposal; Cecil W. Greenhill, M.B., John D. J. Bruce, and W. C. P. White, M.B., to the *Victory*, for Haslar Hospital; Thomas S. Harrison and Edwin L. Sturdee, to the *Pembroke*, additional, for Chatham Hospital; Gomer Williams, M.B., to the *Vivid*, for Plymouth Hospital; William J. McCracken, Hugh K. Shaw, John C. Hill, to the *Victory*, for Royal Naval Division; William J. Greehy, to the *Vivid*, additional; S. D. Kilner, to *Empress*; G. D. Muir, to the *Pekin*; W. J. Jago, to the *Pembroke*, additional.

Royal Naval Volunteer Reserve.

Surgeon Charles S. Brewer to the *Eagle*. Surgeon D. J. Forbes to the *Victory*, additional, for Portsmouth Dockyard. Surgeons (probationers) A. G. Bec to the *Hecla*, additional for the *Garland*, vice Scott; E. D. Broster to the *Dido*, additional, for the *Lysander*, vice Bull.

ARMY MEDICAL SERVICE.

Supernumerary Surgeon-General Sir David Bruce, C.B., F.R.S., is restored to the establishment.

Lieutenant-Colonel R. R. Sleman, M.D., First London (City of London) Field Ambulance, T.F., is granted the local rank of Colonel whilst serving at Malta.

Royal Army Medical Corps.

Major James G. McNaught, M.D., to be Lieutenant-Colonel, vice R. Caldwell, supernumerary.

Alexander G. Paterson, M.D., is granted the honorary rank of Major.

Supernumerary Major Sir Edward S. Worthington, M.V.O., is restored to the establishment.

Lieutenant James R. Hill, M.B., to be Captain.

The following have been granted temporarily the honorary rank of Lieutenant-Colonel: Major H. R. Kenwood, M.B., R.A.M.C.T., John Robertson, M.D.; Lieutenant Donald Armour, F.R.C.S., R.A.M.C. Special Reserve: William N. Barron, M.V.O.; Lieutenant Arthur S. Woodware, M.D.; Lieutenant James R. Hill, M.B., from the Reserve of Officers, to be Lieutenant.

The following have been granted temporary rank as indicated whilst serving with the Red Cross Hospital, Netley:—*Majors:* C. H. Miller, C. Wallace. *Captains:* C. Christopherson, J. L. Dickie, M.B., J. A. Hayward, M.D., C. Hitch, H. L. Tidy, M.D., A. C. Hudson. *Lieutenants:* W. A. Anderson, M. S. Ester, J. G. Ferguson, M.D., C. Gibson, M.B., J. D. Lyle, M.B., J. F. Mackay, M.D., L. E. C. Norbury, C. Pearson, M.D.

Joseph Dalrymple to be temporary Captain.

The following have been appointed temporary Lieutenants: Claude G. Colyer, Horace C. Colyer, Stanley A. Ridett, Charles Weller, Frederick W. Brodrick, George G. Timpson, William P. Morgan, M.B., Douglas G. Cheyne, M.D., Francis F. Brown, M.B., Thomas W. R. Strode, James A. Torrens, M.B., Thomas A. Peel, M.B., Edgar A. Pearson, M.B., William J. Nisbet, M.B., Michall J. Murray, M.B., Newton Matthews, M.B., Ernest W. Adcock, M.B., Magnus R. Mackay, M.B., John E. Cox, Herbert T. Retallack-Moloney, Arthur F. Palmer, Percy J. Chissell, Cecil H. Treadgold, M.D., Claude Kingston, Daniel Boylan, M.B., William H. Brown, M.D., Joseph H. Campain, M.B., Gerald Cock, Victor L. Conolly, M.B., David H. Collingham, Walter J. Ignatius Dwyer, Sydney H. Gibson, John C. B. Grant, M.B., F.R.C.S.Edin., Alexander K. Hamilton, M.B., James G. Higgins, Douglas F. Kennard, Charles J. Kelly, Thomas J. Latham, Charles G. H. Moore, M.B., Albert G. Miller, M.B., Albert J. McC. C. Morrison, M.B., Alexander T. McWhirter, M.B., Frederick G. Norbury, John W. O'Farrell, Patrick J. O'Reilly, John A. Pringle, M.D., Edmund G. C. Price, M.B., David W. Reid, M.B., Thomas T. Rankin, M.D., Percy C. Raiment, John T. W. Stewart, M.B., Alexander Stephen, M.B., Garnet W. Twigg, M.D., Ronald J. T. Thornhill, M.B., Charles H. Thompson, Henry A. Treadgold, M.D., George H. Urquhart, F.R.C.S.Edin., Alfred W. Weston, M.B., William M. Will, M.B., John J. Walsh, Richard Williams, William S. Milne, M.B.

The first Christian name of Lieutenant Daniel J. Mulholland, M.D., is as now described, and not as stated in the *London Gazette* of September 29th.

SPECIAL RESERVE OF OFFICERS.

Royal Army Medical Corps.

Lieutenants to be Captains: John H. Bell, John P. Charnock, Harold F. Vallacott, John J. McI. Shaw.

The following Lieutenants have been confirmed in their rank: Alexander K. Robe, Thomas Clifford Owen, Maurice A. O'Callaghan, William Fotheringham, Archibald W. Russell, George A. Bridge, Archibald J. Gilchrist, Eric K. Ryan, John W. Cannon, Charles A. McGuire, Herbert M. Pope, William T. Quinlan, Edward B. Marsh, James McCusker, Leonard J. Sheil, Wm. F. Wood, A. E. H. Reid, Verner Wiley.

Cadets and ex-Cadets of the Officers' Training Corps to be Lieutenants on probation: Harold A. Crouch, Francis A. Roddy, M.B., Charles A. Mason, M.B.

To be Lieutenants on probation: Donald C. Scott, Wilfrid B. Wood, M.D., Herbert S. Milne, M.D., John S. Pooley, Quentin V. B. Wallace, M.D., Gilbert A. Harvey, M.B., William H. Nicholls, Henry Alcock, John Kennedy, Thomas F. Kennedy.

INDIAN MEDICAL SERVICE.

Lieutenant-Colonel R. C. Macwatt, an agency surgeon of the second class, is appointed to officiate as an agency surgeon of the first class and as civil surgeon, Ajmere, and Chief Medical Officer in Rajputana, with effect from September 21st, 1914.

Major F. D. S. Fayrer is posted as Residency Surgeon, Gwalior, with effect from September 14th.

Major C. B. McConaghy is posted as Civil Surgeon, Dera Ismail Khan, with effect from September 12th.

Captain H. W. Acton is placed on special duty under the orders of the Director-General, Indian Medical Service.

The following have been admitted Lieutenants: J. W. Pigeon, M.L. Treston, P. Vieyra, M.B., B. M. Mitra, P. Savage, T. B. Paul, A. Chand, M.B., R. Lee, M.B., N. S. Jatar, T. S. Sastry, Jamaluddin, M.B., F. B. Chenoy, S. B. Venugopal, C. de C. Martin, M.B., J. H. Smith, M.B.

Lieutenant-Colonel C. Duer, M.B., F.R.C.S., has been permitted to retire, with effect from November 28th, 1915.

The following promotions are made, September 1st:—Captains to be Majors: A. T. Pridham, M.B., J. O'Leary, M.B., G. A. Jolly, M.B., F.R.C.S.E., A. K. Lauddie, M.B., C. L. Dunn, W. H. Odlum, R. D. Saigol, F.R.C.S.E., C. E. Bultell, J. L. Lunham, M.B., F.R.C.S.I., F. C. Rogers, C. A. F. Hingston.

Captain R. L. Gamlen, M.D., has been permitted to retire, with effect from August 28th, 1914.

TERRITORIAL FORCE.

Army Medical Services.

Major Gerald C. Taylor, from the list of officers, Sanitary Service, to be Deputy Assistant Director of Medical Services, Second Mounted Division, Central Force.

Royal Army Medical Corps.

GWYNN, M.D., resigns his commission and is granted permission to retain his rank and wear the prescribed uniform. Captains JOHN LIVINGSTONE, M.B., FREDERICK N. GRINLING, WILLIAM F. McA. RAWLINGS, M.B., and WILLIAM S. GRIFFITH, M.B., to be Majors. Lieutenants JAMES L. BROWNRIDGE and ALEXANDER P. WATSON, M.B., to be Captains. Captain WILLIAM A. MALCOLM, M.B., to be Major. *To be Lieutenants:* GEORGE S. GLASS, M.B., WILLIAM DALE (late Lance-Corporal, London University Contingent, Senior Division, Officers' Training Corps), ROBERT U. MOFFAT, C.M.G., M.D., ARCHIBALD OLIVER, M.D., ARTHUR SCOTT TURNER (late Lieutenant, Second Volunteer Battalion, East Surrey Regiment), ROBERT G. McD. LADELL, M.B., Cadet ARTHUR H. PEMBERTON (from the London University Contingent, Senior Division, Officers' Training Corps).

Vital Statistics.

VITAL STATISTICS OF LONDON DURING THE THIRD QUARTER OF 1914.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

In the accompanying table will be found summarized the vital statistics of the City of London and of the metropolitan boroughs based upon the Registrar-General's returns for the third quarter of the year. The mortality figures in the table relate to the deaths of persons actually belonging to the several boroughs, and are obtained by distributing the deaths in institutions among the boroughs in which the deceased persons had previously resided. The 27,990 births registered in the quarter under notice were equal to an annual rate of 25.0 per 1,000 of the population, estimated at 4,516,612 persons in the middle of the year: in the corresponding quarters of the three preceding years the birth-rates were 24.9, 24.6, and 24.7 per 1,000 respectively. The lowest birth-rates last quarter were 11.6 in the City of Westminster, 14.8 in Holborn, 15.2 in Hampstead, 17.1 in Kensington, and 19.0 in Paddington; among the highest rates were 30.1 in Poplar, 30.2 in Bermondsey, 30.4 in Stepney, 32.4 in Shoreditch, and 39.8 in Finsbury.

During last quarter the deaths of 14,992 London residents were registered, equal to an annual rate of 13.3 per 1,000; in the corresponding quarters of the three preceding years the rates were 15.5, 11.5, and 11.8 per 1,000. The death-rates last quarter ranged from 7.7 in the Hampstead, 9.4 in Lewisham, 9.9 in Wandsworth, 10.1 in the City of London, and 10.7 in the City of Westminster, to 17.2 in Southwark, 17.9 in Poplar and in Bermondsey, 19.1 in Finsbury, and 21.1 in Shoreditch.

The 14,992 deaths from all causes included 36 from enteric fever, 412 from measles, 73 from scarlet fever, 206 from whooping-cough, 158 from diphtheria, and 1,944 from diarrhœa and enteritis among children under 2 years of age. Enteric fever was proportionally most fatal in Chelsea, the City of Westminster, Bethnal Green, and Battersea; measles in Finsbury, Shoreditch, Bethnal Green, Stepney, Poplar, Southwark, and Bermondsey; scarlet fever in Fulham, Chelsea, St. Marylebone, Stepney, Bermondsey, Camberwell, and Greenwich; whooping-cough in Paddington, Finsbury, Shoreditch, Bethnal Green, Southwark, and Camberwell; and diphtheria in St. Pancras, Bethnal Green, Stepney, Poplar, Southwark, Lambeth, Deptford, and Greenwich. The mortality from diarrhœa and enteritis among children under 2 years of age in proportion to the births registered during the quarter was greatest in Shoreditch, Bethnal Green, Stepney, Poplar, Southwark, Bermondsey, and Deptford.

The deaths from phthisis among London residents last quarter numbered 1,381, and were equal to a rate of 1.23 per 1,000, against 1.20, 1.18, and 1.07 in the corresponding quarters of the three preceding years. The death-rates from this disease last quarter ranged from 0.42 in Hampstead, 0.60 in Lewisham, 0.75 in Wandsworth, 0.87 in Kensington, and 0.88 in Paddington, to 1.57 in Bethnal Green, 1.62 in Shoreditch, 1.65 in Bermondsey, 1.74 in St. Pancras, 1.78 in Finsbury and in Stepney, and 2.27 in Holborn.

Infant mortality, measured by the proportion of deaths under 1 year of age to registered births, was equal to 127 per 1,000 last quarter, against 103, 81, and 105 in the corresponding quarters of the three preceding years. Among the lowest rates recorded last quarter were 25 in the City of London, 82 in Chelsea, 84 in Woolwich, 89 in

Analysis of the Vital Statistics of the Metropolitan Boroughs and of the City of London after Distribution of Death occurring in Public Institutions during the Third Quarter of 1914.

* No correction is made for births in lying-in institutions; the boroughs principally affected are marked thus (*).

Lewisham, 91 in the City of Westminster, and 92 in Stoke Newington; the highest rates were 154 in Stepney, 168 in Bethnal Green, 169 in Southwark, 171 in Bermondsey, 172 in Poplar, and 203 in Shoreditch.

HEALTH OF ENGLISH TOWNS.

In the ninety-seven largest English towns 8,457 births and 4,664 deaths were registered during the week ended Saturday, November 7th. The annual rate of mortality in these towns, which had been 13.4, 13.8, and 13 5 per 1,000 in the three preceding weeks, fell to 13.4 per 1,000 in the week under notice In Loudon the death-rate was equal to 13 9, against 13.9, 14.7, and 14.1 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 4.4 in Southend, 5 1 in Gloucester, 5 6 in Eastbourne, 5.7 in East Ham, 6 0 in Exeter, and 6.2 in York, to 18.8 in Wigan, 18.9 in Salford, 20.1 in Gateshead, 20.2 in Merthyr Tydfil, 21.1 in Liverpool, and 23.1 in Dudley. Measles caused a death-rate of 1.2 in Liverpool and in Leeds, 1 3 in Preston, 1.4 in Plymouth, 1.7 in Oldham, 2.0 in Wakefield, 2.7 in Grimsby, 3.2 in Newcastle-on-Tyne, and 3 4 in Wigan; and diphtheria of 1.2 in Walthamstow and in Middlesbrough, 1.5 in Edmonton, and 5.0 in Wakefield. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 322, 269, and 204 in the three preceding weeks, fell to 169, of which 49 were registered in London, 16 in Liverpool, 11 in Birmingham, and 10 in Manchester. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 28, or 0.6 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner, and included 9 in Liverpool, 5 in Birmingham, 2 in Preston, and 2 in Tynemouth. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 4,473, 4,617, and 4,683, at the end of the three preceding weeks, had further risen to 4,769 on Saturday, November 7th; 690 new cases were admitted during the week, against 650, 657, and 598 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,140 births and 696 deaths were registered during the week ended Saturday, November 7th. The annual rate of mortality in these towns, which had been 14.7, 15.0, and 14.6 per 1,000 in the three preceding weeks, rose to 15.8 in the week under notice, and was 2.4 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 8.1 in Hamilton, 10.1 in Motherwell, and 11.7 in Clydebank to 18.7 in Greenock, 19.0 in Leith, and 20.0 in Aberdeen. The mortality from the principal infective diseases averaged 1.8 per 1 000, and was highest in Kirkcaldy and Aberdeen. The 327 deaths from all causes in Glasgow included 13 from infantile diarrhoea, 9 from whooping-cough, 7 from scarlet fever, 5 from measles, and 4 from diphtheria. Two deaths from diphtheria were recorded in Edinburgh; 7 from scarlet fever, 7 from diphtheria, and 3 from infantile diarrhoea in Aberdeen; and 3 from infantile diarrhoea in Dundee.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, November 7th, 597 births and 420 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 592 births and 352 deaths in the preceding period. These deaths represent a mortality of 18.2 per 1,000 of the aggregate population in the districts in question, as against 15.2 per 1,000 in the previous period. The mortality in these Irish areas was therefore 4.8 per 1.000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.8 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 18.0 (as against an average of 16.0 for the previous four weeks), in Dublin city 19.3 (as against 17.1), in Belfast 19 2 (as against 15.7), in Cork 19.7 (as against 17 7), in Londonderry 14.0 (as against 10.8), in Limerick 17.6 (as against 20.3), and in Waterford 36.1 (as against 21 4). The zymotic death-rate was 2.2, or the same as in the previous week.

Hospitals and Asylums.

ROYAL CITY OF DUBLIN HOSPITAL.

The annual report of the Royal City of Dublin Hospital recently published states that 1,536 patients were admitted; in the out-patient department 2,171 emergency and accident cases were treated, and there were 27,774 attendances at the dispensaries. The income for the year, exclusive of legacies, was £5,305, and the expenditure £7,760. The result is that the bank overdraft on December 31st, 1913, was £6,281. The hospital was founded eighty-two years ago, and was then quite small; it has been rebuilt and enlarged since, till it is now a thoroughly equipped modern hospital with 124 beds; there is a special fever wing, and special wards for gynaecological, throat, ear, nose, and eye cases. For many years, also, the hospital has had two Finsen light lamps in constant use. There has been a substantial decrease in the amount of legacies received, and the subscription list has also shown a falling off. It is feared that many of the usual supporters of the hospital have refrained from subscribing in the belief that the Insurance Act affords some set-off as against the expense of dealing with sickness in hospitals. This, the report states, is by no means the case, as many instances could be adduced showing that, although persons treated in the hospitals may have been insured under the Act, the hospital, which affords them gratuitous treatment, has not been in any way compensated by means of sickness benefit. So far as the directors are aware, none of the approved societies have as yet made any payments to the hospital. They fear, therefore, that unless the public comes forward to support the institution, some compulsory reduction in the number of beds will have to be made.

BOOTHAM PARK, YORK.

The annual report for the year 1913 of Dr. G. R. Jeffrey, the Medical Superintendent of this hospital for the insane, shows that on January 1st, 1913, there were 114 certified patients and 3 voluntary boarders in the hospital, and on the last day of the year 129 certified patients and 4 voluntary boarders. The total number of cases under treatment during the year was 160 certified patients and 15 voluntary boarders, whilst the average daily number on the registers was 123. During the year 46 certified patients and 12 voluntary boarders were admitted. Of the certified direct admissions in 13 the attacks were first attacks within three, and in 6 more within twelve months of admission; in 11 not-first attacks within twelve months, and in only 3 were the attacks of more than twelve months' duration on admission. There were no congenital cases. The direct admissions, 33 in number, were classified into: Recent mania 11, recurrent 2; recent melancholia 7, recurrent 1; delusional insanity, 5; confusional insanity and dementia praecox, 3 each; and general paralysis, 1. As to causation, alcohol was assigned in 7, syphilis in 1, and other toxins in 4; nervous diseases in 2, other bodily affections in 7, critical periods in 10, bodily trauma in 3, and mental stress in 21. An insane heredity was ascertained in 11, and an alcoholic heredity in 1. During the year 15 were discharged as recovered, giving a recovery-rate, calculated on the direct admissions, of 45.4 per cent.—a satisfactory recovery-rate having regard to the class of admissions; 1 was relieved, and 10 not improved. During the year 5 died, giving a death-rate on the average number resident of 4.06 per cent. All deaths were due to natural causes, and do not call for special remark. The general health was very good throughout the year and no zymotic disease occurred.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

ALTON: LORD MAYOR TRELOAR'S CRIPPLES HOSPITAL AND COLLEGE.—Two Assistant Medical Officers (ladies). Salary at the rate of £120 and £100 per annum respectively.

BELFAST COUNTY BOROUGH.—Resident Medical Superintendent at the Municipal Sanatorium, Whiteabbey. Salary, £500 per annum.

BIRKENHEAD: BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.—Two Refraction Assistants. Salary at the rate of £50 per annum.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—Junior Resident Medical Officer. Salary at the rate of £70 per annum.

ST. PANCRAS INFIRMARY.—Senior Assistant Medical Superintendent, etc. Salary, £225 per annum.

SALFORD ROYAL HOSPITAL.—(1) Resident Surgical Officer. (2) Casualty House-Surgeon. Salary, £120 and £100 per annum respectively.

SALFORD UNION INFIRMARY.—Resident Assistant Medical Officer (male). Salary, £150 per annum.

SHEFFIELD: EAST END BRANCH OF THE CHILDREN'S HOSPITAL.—House-Surgeon. Salary, £120 per annum.

SHEFFIELD ROYAL HOSPITAL.—Assistant House-Physician. Salary, £80 per annum.

SHEFFIELD ROYAL INFIRMARY.—(1) Two House-Surgeons. (2) Assistant House-Physician. Salary, £100 per annum each.

SHOREDITCH: PARISH OF ST. LEONARD.—Junior Assistant Medical Officer at the Infirmary. Salary, £150 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

STIRLING DISTRICT ASYLUM, Larbert.—Third Assistant Medical Officer (lady). Salary, £140 per annum.

STOKE-ON-TRENT INFECTIOUS DISEASES HOSPITAL.—Resident Assistant Medical Officer (lady). Salary, £150 per annum.

SUNDERLAND: ROYAL INFIRMARY.—Junior House-Surgeon (male). Salary, £100 per annum.

SWANSEA UNION.—Resident Assistant Medical Officer. Salary, £295 per annum, rising £50 after three years' service.

TAUNTON AND SOMERSET HOSPITAL.—Senior and Assistant House-Surgeons. Salary, £120 and £80 per annum respectively.

TUNBRIDGE WELLS GENERAL HOSPITAL.—House-Physician. Salary, £100 per annum.

VICTORIA HOSPITAL FOR CHILDREN, Tite Street, S.W.—House-Surgeon. Honorarium, £40 for six months.

WALSALL AND DISTRICT HOSPITAL.—(1) Senior House-Surgeon. (2) Junior House-Surgeon and Anaesthetist. Salary, £150 and £110 per annum respectively.

WEST HAM AND EASTERN GENERAL HOSPITAL, Stratford, E.—Senior House-Physician. Salary, £120 per annum.

WESTMINSTER UNION INFIRMARY.—Second and Third Assistant Medical Officers. Salary, £160 and £140 per annum, increasing to £180 and £160 respectively.

WEST RIDING OF YORKSHIRE.—Assistant Medical Officer at the Storthes Hall Asylum, Kirkburton. Salary, £230 per annum, rising to £270.

WORCESTER GENERAL INFIRMARY.—Resident Medical Officer. Salary, £150 per annum.

WOMEN'S HOSPITAL FOR CHILDREN, Harrow Road, W.—Assistant Surgeon.

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

BARBER, A., B.C.Camb., District Medical Officer of the Bishop Stortford Union.

ESCHWEGE, F. S., M.R.C.S., L.R.C.P., Certifying Factory Surgeon for the Rowfont District, co. Sussex.

JONES, G. J., M.B., B.Ch., R.U.I., Certifying Factory Surgeon for the Ballyfriland District, co. Down.

MILLIGAN, Henry Joseph, M.B., Ch.B.Glasg., D.P.H.Cantab., Tuberculosis Officer and Deputy Medical Officer of Health to the Borough of Bootle.

RECKITT, E. B., M.D., District Medical Officer of the Bishop Stortford Union.

SYLVESTER, H. M., M.R.C.S., L.R.C.P., District Medical Officer of the Blything Union.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is 5s., *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

BIRTHS.

ALLOTT.—On November 5th, at Hillersdon, Nenthead, Cumberland, to Dr. and Mrs. H. Cyril W. Allott, a son.

MACKINNON.—On October 26th, at Nairobi, British East Africa, the wife of Murdoch Mackinnon, M.D., D.P.H., of a daughter. (By cable—delayed.)

DEATH.

WENHAM.—On the 4th inst., at Peking, of pneumonia, Herbert Victor Wenham, F.R.C.S., second son of Arthur and Frances Wenham, of 11, Beauchamp Avenue, Leamington.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 8.30 p.m.—Discussion: Surgical Experiences of the Present War, to be opened by Sir Watson Cheyne, Bart., F.R.C.S.

TUESDAY.

LONDON DERMATOLOGICAL SOCIETY, St. John's Hospital for Diseases of the Skin, Leicester Square, W.C.—4.15 p.m., Tea. 4.30 p.m., Exhibition of Pathological Specimens and Clinical Cases; Cases for Consultation. 5.15 p.m., Resumed Discussion on Syphilis.

MEDICO-LEGAL SOCIETY, 11, Chandos Street, W.—Exhibition of Specimens. President's Address. Andrew Balfour, C.M.G., M.D.: Medico-Legal Experiences in the Sudan.

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF THE HISTORY OF MEDICINE, 5 p.m.—Papers: Dr. Raymond Crawfurd: Oliver Goldsmith and Medicine. Mr. Macleod Yearsley: Autograph of Joseph Ignace Guillotin, with note on his death.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF DERMATOLOGY, 5 p.m.—Exhibition of Cases.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:
SECTION OF OTOLOGY, 5 p.m.—Cases and Specimens.

SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 11, Chandos Street, W., 8.30 p.m.—Paper: Enteric in War, with Means for its Prevention, by Sir William Osler, Bart., M.D.

POST-GRADUATE COURSES AND LECTURES.

Post-graduate Courses are to be given next week at the following schools, colleges, and hospitals:

DUBLIN: ROTUNDA HOSPITAL.

MANCHESTER HOSPITALS POST-GRADUATE CLINICS.

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.

[*Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.*]

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, NOVEMBER 21ST, 1914.

CONTENTS.

Meetings of Branches and Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* JOURNAL.]

EAST ANGLIAN BRANCH:

South Essex Division.

THE annual general meeting of the Division was held at the Victoria Hospital, Southend-on-Sea, on October 27th, when several matters of local interest were discussed.

Election of Officers.—The following officers were appointed for the ensuing year:

Chairman: Dr. Watson.
Vice-Chairman: Dr. V. Hodgson.
Honorary Secretaries: Drs. Walker and Maxwell.
Representative: Dr. Walker or Dr. Maxwell.
Executive Committee: Drs. Blake, Wragg, Adams, Bridger, Forsyth, Baldwin, Poole, Lloyd, and Simpson.

Votes of Thanks.—Votes of thanks were passed to the retiring Chairman (Dr. Hodgson) and the Honorary Secretaries.

METROPOLITAN COUNTIES BRANCH:

Lambeth Division.

THE Executive Committee of the Division unanimously adopted the following resolution at its meeting on November 17th:

> That a letter be written to Dr. Cox requesting him to report to the General Medical Council all practitioners exhibiting cards in their windows canvassing for patients under the National Insurance Act.

Wandsworth Division.

AT a meeting of the Executive Committee on November 16th, the Secretary, Dr. G. Pollock, was directed, in reply to an inquiry from the local Belgian Refugee Committee, to state that there was no doubt that medical practitioners would be willing when asked to attend refugees, and to point out that wherever possible doctors should be expected to give prescriptions only, and not free drugs in addition to free attendance.

MIDLAND BRANCH:

Holland Division.

A MEETING of the Holland Division was held at Boston on November 13th, when Dr. PILCHER was in the chair, and eight other members were present.

Medical Referees.—It was proposed by Dr. TUXFORD and seconded by Dr. RENDALL:

> That no practitioner within the area of the Division should accept a fee of less than 10s. 6d. per case for acting as medical referee to any insurance company under the National Health Insurance Act.

Considerable discussion took place, and ultimately an amendment, proposed by Dr. WITHAM and seconded by Dr. WHITE, "That no fee less than 7s. 6d. per case be accepted," was carried, it being understood that it was merely an expression of opinion.

WILTSHIRE BRANCH:

Swindon Division.

THE inaugural meeting of the Swindon Division was held on November 10th. Owing to the war and other causes, the attendance was small, but Dr. Tubb-Thomas and Dr. Bond (Trowbridge) attended to give assistance.

Formation of Division.—It was decided that the Swindon Division should be formed in accordance with the area of the county mapped out by the Council of the Association.

Election of Officers.—The following officers were elected:

Chairman.—Dr. Powell (Highworth).
Secretary.—Dr. Dismorr (Wroughton).
Representatives on Branch Council.—The Chairman, the Secretary, and Dr. Heaton (Malmesbury).
Executive Committee.—Drs. Powell, Heaton, and Dismorr, with power to add to their number.

Rules.—The model organization and the new ethical rules were adopted.

Annual Meeting.—It was arranged to hold the annual meeting of the Division in June.

Election of Representative.—It was decided to combine with the Trowbridge Division for the purpose of electing a Representative.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

SOUTHERN BRANCH.—Dr. James Green, Honorary Secretary and Treasurer (Brandon House, Mile End, Landport, Portsmouth), gives notice that the half-yearly general meeting of the Southern Branch will be held at the Royal Hotel, Above Bar, Southampton, on Wednesday, November 25th, at 3 p.m. After the transaction of the ordinary business of the Branch, papers will be read and cases and specimens shown. Members desirous of showing specimens or cases of clinical interest or of reading papers will oblige by sending in their names, with the title or description of their contributions, to the Honorary Secretary at their earliest convenience.

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.—Dr. P. S. Hichens, Honorary Secretary, 47, Sheep Street, Northampton, gives notice that a meeting of the Division will be held in the Board Room of the Northampton General Hospital on Tuesday, December 1st, at 3 o'clock, when there will be a discussion on certain questions which have arisen out of the working of the Insurance Act.

THE LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

THE following volumes were added to the Library during April, May, and June, 1914:

Presented by the Authors.

Burkholder, J.: Anatomy of the Brain. 1912
Mott, F. W.: Archives of Neurology, vols. v and vi. 1912–14
Owen, Edmund: Appendicitis. 1914
Peachey, G. C.: History of St. George's Hospital, Part I. 1910
Pearson, S. V.: State Provision of Sanatoriums. 1914
Saundby, R.: Treatment of Diseases of the Digestive System (second edition). 1914
Taylor, G. C.: Statistical Ready Reckoner. 1914
Ward, Gordon: Bedside Haematology. 1914

Presented by Dr. O. Beddard, London.

Li Documenti chimici in cui si vedono li miracoli di questa grand' arte. n.d.
Pitt, R.: The Craft and Frauds of Physic Exposed. 1703

Presented by Dr. S. H. Bown, Kensington.

Transactions of the Seventeenth International Congress of Medicine, 1913.
General Volume and Dermatology Section. 1914

Presented by W. McAdam Eccles, Esq., F.R.C.S.Eng.

Transactions of the Seventeenth International Congress of Medicine, London, 1913.
Subsection 7A, Part II, Orthopaedics. 1914

Presented by Dr. Lennox-Gordon, Capetown.

Watkins-Pitchford: Industrial Diseases of South Africa. 1914

Presented by Dr. J. B. Hurry, Reading.

Transactions of the Seventeenth International Congress of Medicine, 1913
General Volume and History of Medicine Section. 1914

Presented by the Medical Officer of the Local Government Board.

Report by Dr. Arnold: On Diphtheria at Dorchester. 1913
Report by Dr. Farrar: Sanitary Administration of Wigton. 1913
Report by Dr. Gordon: On Mumps and Parotitis. 1914
Report by Dr. Manby: On Enteric at Kenilworth. 1914
Report by Dr. Mivart: Sanitary Administration, Dartmouth. 1914

(To be continued.)

INSURED PERSONS IN MILITARY EMPLOY.

THE Clerk to the Dundee Burgh Insurance Committee has received the following letter, dated November 11th, from the Scottish Insurance Commission:

Sir,—I have to refer to your letter of 5th instant, in which you inquire whether an insured person who is on the panel of a doctor in your area and who has joined the Territorial Forces, but is at present located in Dundee either at his own house or in barracks, is entitled to be treated by his panel doctor and to receive medicines at the expense of the drug fund. In reply I have to state that the matter of soldiers, reservists, and Territorials returning from the front or from their training centres, as the case may be, wounded or sick, is at present before the Commission, who are in correspondence on the subject with the Scottish Head Quarters Command and also with the Joint Committee, with the view to the issue of a circular on questions of difficulty arising out of the present situation.

Generally, however, it may be said that in terms of the National Insurance (Army and Navy) Act, 1914, of September 18th last, members of the Territorial Forces came on embodiment under the provisions of Section 46 of the National Insurance Act, 1911, and remain, until discharge, members of the Navy and Army Fund, and as such entitled only to maternity benefit. If, therefore, a man applies to his panel doctor for treatment or to his society for any benefit other than the maternity benefit, it would be proper that he should be asked to produce his discharge certificate as evidence that he is no longer on the establishment and in receipt of army pay.

Instances, however, may arise in the case of recruits who have joined the Territorial Forces since the date of embodiment and have not been "finally accepted" in the sense of Section 22 of the Act of 1913. In such cases it would be necessary to apply to the regimental authorities in order to learn what the position in regard to such persons is.

As indicated above, the matter is engaging the attention of the Commissioners, who hope to be able to circulate a statement on the subject at an early date.—I am, Sir, your obedient servant,

JOHN JEFFREY, Secretary.

David Duncan, Esq.

LOCAL MEDICAL AND PANEL COMMITTEES.

BUCKINGHAM.

LOCAL MEDICAL AND PANEL COMMITTEE.

A MEETING of the Local Medical and Panel Committee was held at the Royal Bucks Hospital on October 29th. Dr. BAKER was in the chair, and thirteen other members were present. The minutes of the last meeting were read and confirmed.

Prescribing.—It was decided to adopt and act upon the report of the subcommittee appointed to meet and discuss with the chemists how to deal with extravagant prescribing.

Pharmacopoeia.—The advisability of adopting a special pharmacopoeia was discussed, but it was thought that in a county like Bucks the best plan was for the medical men in each locality to give their special formulae to the chemists and thus obviate the necessity of writing every prescription in full.

Drug Tariff.—The suggested drug tariff for 1915 was presented and adopted after a letter had been read from the British Medical Association stating that they advised it.

Agreements.—Memo. 201/I.C., dealing with the agreements for 1915, was considered, and it was decided to agree to it.

Annual Report.—The annual report was read and adopted after emendation.

MEETING OF PRACTITIONERS.

The annual general meeting of Bucks practitioners took place subsequently, when Dr. BAKER was voted to the chair. About twenty-five members of the profession were present.

Annual Report.—The annual report and financial statement was adopted.

Rept. Mist.—A discussion took place on the use of the term "Rept. Mist."; some were in favour of it and others against. Chemists were unanimously against its use even if paid a fee for copying. Some members of the Panel Committee who had inspected prescriptions gave instances of extraordinary prescribing. Dr. LINNELL, the Secretary of the Northampton Committee, stated that in their area the term "Rept. Mist." was not allowed, and there were no stock mixtures; it had been decided to have the prescriptions examined, as, while some practitioners cost on an average 3d., others cost 2s., and that grave irregularities occurred. It had been decided to surcharge certain practitioners. He thought that an investigation ought to be made to ascertain the average length of time patients remained on the list of each practitioner. It would then be found whether certain doctors were more lenient than others. The cost of examining the prescriptions should be paid by the three committees, the Insurance Committee paying half and the two others a quarter each. It was suggested that those practitioners who used the term "Rept. Mist." should pay the cost and not those who did not.

Federation of Local Medical and Panel Committees.—After a discussion, in which Drs. Reynolds, Larking, Rose, Churchill, Baker, and Linnell took part, it was decided to join the proposed Federation of Local Medical and Panel Committees.

Certificates.—It was pointed out that a medical man should never sign a certificate and date it back or forward. He should date it on the day he signs it and cross out the word "to-day," if on the form. He should put the date when he saw the patient and write underneath, "Signed on ——." Certificates should not be signed for patients who were in a hospital, special provision being made for those cases.

CARDIFF.

Panel Committee.

Six meetings of the Panel Committee have been held since the beginning of June, and have been mainly concerned with the drug fund and the excessive cost of prescriptions issued by panel practitioners. In consequence of a report received in June from the Pharmaceutical Committee alleging excessive prescribing in the Cardiff area, a conference was held between the Panel and Pharmaceutical Committees, when it was reported that the drug fund for 1914 would not exceed £6,000, and that of that sum £2,400 had already been expended. It was also stated that the individual scrips ranged from 5¾d. to 1s. 6¾d., while many prescriptions had exceeded 2s. 6d., some costing over 5s. A subcommittee was appointed to investigate the whole question, and in consequence of its recommendations a communication was sent to each of the practitioners whose prescriptions had been questioned, warning him of the high cost of his prescriptions, and pointing out in detail the items which had contributed to make them expensive.

In consequence of the chemists' representations it had been decided to appoint a whole-time officer at £150 a year to check the prescriptions, the salary being divided equally among the Insurance, Panel, and Pharmaceutical Committees. This officer subsequently presented reports giving information with regard to the number on each panel, the total number of prescriptions issued, the ratio to number on the panel, the total cost and average price.

Further representations were subsequently received from the chemists that the general average was too high, and as the result of a report presented after another conference between the chemists and the subcommittee it was decided to issue a general circular to all practitioners on the panel regarding the matter, and impressing upon them their liability to be surcharged. A general meeting of the panel practitioners was held on October 13th, when the members were explicitly warned of their danger and the necessary steps to be adopted. In consequence of instructions, the Secretary has sent out a circular explanatory of the present situation, and indicating what could be done to improve the position during the remainder of 1914.

The Pharmacopoeia Subcommittee has, in co-operation with the chemists, prepared a new pharmacopoeia, containing a considerable number of formulae, which, while being efficient, are not expensive. This is now awaiting confirmation by the Insurance Committee. Subsequently the chemists forwarded a statement showing the actual figures of last year's working with their comments: these figures showed some remarkable disclosures. No report has yet been made by the Panel Committee to the Insurance Committee, as it was deemed advisable to wait until the complete figures for 1914 had been received.

MONMOUTHSHIRE.

A meeting of the Monmouthshire Panel Committee was held at Newport on November 13th, when Dr. J. W. Mulligan presided.

Delay in Payment.—In view of the fact that the Insurance Committee had not sent out the cheques for the October quarter until the end of that month, the Secretary was instructed to write to the Clerk asking that the cheques be paid when due.

Mileage.—A letter from the Secretary of the Welsh Insurance Commissioners relating to mileage was referred to the Rural Practitioners' Subcommittee.

Cost of Medicines and Appliances.—A letter was read from the Secretary of the Monmouthshire Pharmaceutical Committee calling the attention of the Panel Committee to the enormous increase of the cost of medicines and appliances prescribed for insured persons, and asking the Committee to take the matter into consideration. The Secretary explained that on receipt of the Memorandum 199 I.C. issued by the Welsh Commissioners a subcommittee, consisting of Drs. W. D. Steel, H. T. Evans, R. J. S. Verity and the Secretary, had been appointed, and had held several meetings. The subcommittee now reported that it had examined several thousand prescriptions issued by ten practitioners on the panel, and were unanimously of opinion that there had been excessive prescribing both in number and quality. The figures given in reference to some of the practitioners were somewhat startling; and on the motion of Dr. J. D. O'Sullivan, seconded by Dr. J. O'Keefe, it was unanimously resolved that a circular should be issued to panel practitioners calling their attention to the matter, and pointing out that the Panel Committee, in cases in which over-prescribing had been proved to its satisfaction, would recommend the practitioners concerned to the Insurance Committee for surcharge. The Secretary was instructed to call a meeting of the panel practitioners, to be held at St. James's Hall, Pontypool, on November 26th, at 3.30 p.m., to consider the whole matter.

Expenses of Pharmaceutical Committee.—The Pharmaceutical Committee made another request for the Panel Committee's approval of a grant of £10 towards its administrative expenses, and the Secretary explained that the Panel Committee had already decided that the money would have to come out of the panel doctors' remuneration, and that it thought that the Pharmaceutical Committee should pay its own expenses out of its own funds. The Panel Committee considered that no good reasons had been brought forward to justify reversing its decision. On the motion of Dr. Verity, seconded by Dr. O'Keefe, it was resolved:

> That inasmuch as the Panel Committee has no funds at its disposal, it cannot accede to the Pharmaceutical Committee's request of its approval of a grant to it of £10 for administrative expenses.

Panel Practitioners on Active Service.—The Committee expressed general approval of the suggestion contained in a letter from the Secretary of the Welsh Insurance Commissioners proposing that, in order to keep intact the practices of doctors engaged in war duties, no panel practitioner should accept transfer of insured persons on such doctors' lists.

EDINBURGH.

Panel Committee.

The Burgh of Edinburgh Panel Committee met on October 27th, when Dr. Dewar was in the chair.

Donation to Edinburgh Royal Infirmary.—A letter was received from the treasurer of the infirmary acknowledging a donation of £104 12s. from a large number of insurance practitioners, and conveying the satisfaction of the managers to the practitioners, who had thus recognized the work done by the institution on behalf of insured patients.

Free Medical Attendance on Service Dependants.—It was reported that at its meeting on October 1st the Burgh Insurance Committee decided to record its hearty appreciation of the prompt and generous action taken by the Panel Committee to secure that necessitous dependants of men on active service should have free medical attendance at their homes.

Examination and Analysis of Prescription Forms.—It was agreed to take no further action meantime as to the proposed examination of certain prescription forms, in view of the early establishment of a central bureau for checking prescription forms. The Insurance Commissioners' scheme for the systematic checking of prescriptions and chemists' accounts (Memorandum 598) was discussed, and it was resolved:

> That the Panel Committee approve generally of Memo. No. 598, and note that on page 8, paragraph 3, the expenses appear to have been provided for by Parliament.

Transfer of Patients during the Medical Year.—In connexion with the complaint preferred at the preceding meeting regarding transfer of patients in the Edinburgh area during the medical year, a satisfactory reply was read from the Insurance Committee promising that in future no transfer to another doctor would be allowed except by mutual consent.

Disablement Certificates.—A letter was read from the Insurance Commissioners intimating that an official

announcement would shortly be made with regard to disablement certificates.

Soldiers' and Sailors' Families Association.—It was agreed to ask that panel practitioners should be given representation on the committees of the Soldiers' and Sailors' Families Association.

Medical Attendance on Insured Persons in Arrears.—A letter was read from the Insurance Committee stating that on intimation of such cases being made by the approved societies to the Committee, the relative index slips would be withdrawn from the Committee's register, and the doctor on whose lists the patients' names appeared would be notified of the suspension.

Incapacity due to Pregnancy.—The Insurance Commissioners' Memo. 204 I.C. (Scotland), on incapacity due to pregnancy (SUPPLEMENT, October 31st, p. 221), was approved.

Interference with Doctors' Treatment.—The CHAIRMAN intimated that, after long negotiations, the Scottish Commissioners, on representations made by the British Medical Association, had ruled that under the Act "a sick visitor or society official should not remove or ask a patient to remove a surgical dressing."

Position of Medical Referee.—A communication was read from the Medical Secretary of the British Medical Association pointing out that the action of medical referees was governed by the rules approved by the Annual Representative Meeting, 1911, as modified by the 1912 meeting. In accordance with these rules, the medical referee should give the medical attendant notice of the date, time, and purpose of any visit he proposed to make, and in the event of any of the exceptions provided for in the rules it was the duty of the medical referee to inform the medical attendant (if any) of the fact of his visit.

INSURANCE COMMITTEES.

IRELAND.

COUNTY CLARE.

AT the last meeting of the Insurance Committee for the County of Clare a letter was read from the Insurance Commissioners intimating the appointment of Dr. Cornelius Martin as medical certifier in respect of insured persons resident in the rural districts of Ennis, Tulla, Scariff, and Limerick No. 2, and in the urban district of Ennis. A lengthy discussion took place, and on the motion of Lady INCHIQUIN, seconded by Mrs. BULGER, it was resolved:

> That we disagree with the Insurance Commissioners in appointing Dr. Martin for the certification of tuberculosis patients, to the exclusion of the local medical profession. We do so on two grounds—namely:
>
> (1) We believe that the local profession would have more readily brought under their notice early tuberculosis cases than would Dr. Martin.
>
> (2) The doctors of the county have hitherto assisted the County Insurance Committee in the working of the tuberculosis portion of the Insurance Act, and we consider it unbecoming and ungrateful to now dispense with their services.

CORRESPONDENCE.

CENTRAL BUREAU FOR CHECKING PRESCRIPTIONS.

DR. MICHAEL DEWAR (Edinburgh) writes: As we are all aware, the Scottish Commissioners propose to establish a Central Bureau for Scotland for the purpose of checking prescription forms. In their Memo. 593, p. 5, paragraph 25, the Commissioners, acting on a suggestion made at a recent conference of Insurance Committees of Scotland, propose that the expenses of the bureau should be borne by Insurance, Panel, and Pharmaceutical Committees. They say

> that they have not yet been able to obtain information as to the attitude of panel practitioners towards the matter, but they have been informed that at a recent meeting of panel chemists (Scotland) the proposal to establish a Central Bureau for the pricing and scrutiny of prescriptions was favourably received, and that a recommendation will be made to Pharmaceutical Committees that they should contribute out of the sums available for their administrative expenses under Section 33 (2) of the 1913 Act, a sum not exceeding one-third of the expenses of such a bureau, payable by each Insurance Committee, provided that panel chemists are directly represented on the Committee of Management of the Bureau.

Further, in their circular (Memo., Appendix I) issued to Insurance Committees on September 22nd, 1914, they point out

> that the financial situation has now been relieved. Parliament has voted a special grant in aid of the expenses of administration of medical benefit for the present year. The special expense was mainly due to the issue of medical cards. Parliament has also sanctioned an alteration in the basis of distribution of the grant in aid of the administration of medical benefit—the flat rate of 1½d. per insured person having been found to be inappropriate. . . . By these measures the Commissioners hope that it will now be possible to secure to every Insurance Committee a sufficient income to enable them in a satisfactory manner to carry on their duties, including the establishment of a system of checking chemists' accounts.

At a meeting of the Edinburgh Insurance Committee on November 12th, the following recommendation was submitted by the Medical Benefits Subcommittee:

> That the general principle of a centralized scheme for checking be approved by the Insurance Committee, on the express condition that the Local Panel and Pharmaceutical Committees each bear one-third of the relative cost of the scheme.

This was met by an amendment that the words from "on" to the end of the sentence be deleted. On a division, the recommendation was carried by 18 to 6. From the point of view of the medical members of the Committee, there is no question of any opposition whatever to the establishment of a central bureau, but they are of opinion that as the checking of prescriptions is part of the administration of medical benefit, and as the Insurance Committee is entirely responsible for its administration, the expense should be borne by that Committee itself. This is an evident attempt on the part of the Commissioners and Insurance Committees to transfer part of their administrative obligations to other shoulders, whenever they find themselves in a financial difficulty, and when once a precedent is established, it will be an easy matter to repeat the dose whenever it is thought expedient, on the ground of any slight interest which the doctors and chemists may have in the question involved. By such methods the process of whittling down the doctors' remuneration may go on indefinitely. It may not mean much each time, but if repeated too often, it will aggregate a considerable sum by and by. I may point out in passing that while the Edinburgh Pharmaceutical Committee took advantage of Section 33 (2) to meet its expenses, the Panel Committee, like many others, could not see its way to do so owing to the intolerable restrictions which the Commissioners placed on its disbursements. A levy was made on insurance practitioners in the area, which was heartily responded to. It will be seen, therefore, that neither Panel nor Pharmaceutical Committees have any funds except what comes out of their own pockets; and, incidentally, if the drug bill should exceed 1s. 6d., the whole of the expenses of both Committees will automatically come out of the doctors' pockets.

The present system of checking accounts by the Edinburgh Insurance Committees, which has been in force for some time, has been perfectly satisfactory, and has been carried out at a very small cost compared with the proportion which would have to be paid under the bureau system.

I submit two questions for elucidation:

1. Is the checking of prescription forms a part of the administration of medical benefit or not?

2. If so, can the Commissioners compel the panel doctors to pay a share of the Insurance Committee's administrative expenses?

ALLEGED OVER-PRESCRIBING.

DR. F. E. H. DAUNT (Clapham Road, S.W.), in a letter on this subject, writes: We had a meeting lately of the Lambeth Panel Committee at which I was present. The meeting was summoned "urgently to address itself to the excessive drug bill." Sixty-five doctors out of about fifteen hundred were indicted for over-prescribing and were threatened to be surcharged. The question I ask is this, and it ought to be answered without any beating about the bush: Suppose these sixty-five doctors were not only surcharged but absolutely paid for every prescription they wrote, including dispensing fees, would then the drugs, etc., ordered by the remaining fourteen hundred

odd whose prescriptions were passed still keep the drug bill under the estimate?

Of course not. We are up against an impossible proposition. Look at our extraordinary price list. Another business will afford an example. I go into a grocer's shop and ask for half a pound of "two-shilling" tea, and put down my shilling. Oh, no; it is two shillings a pound "or any lesser quantity." Well, I have my remedy, but what is the remedy for a man who only wants fifteen minims of dilute sulphuric acid and has to pay for an ounce?

The point is simply this, that an official pharmacopœia compiled from the various London hospitals should be issued and priced by the 8-oz. or 10-oz. mixture as the case may be. We would then get the official price for the article supplied.

THE LONDON PANEL COMMITTEE'S INQUISITION INTO PANEL DOCTORS' PRESCRIBING.

Dr. JOHN W. TAYLOR (Bristol) writes: The fact of Dr. Bazett's average cost of prescriptions being nearly 1s. 1d. is by no means a testimonial of thoroughness of treatment of insured patients. It must be decidedly unpleasant to have treatment in any way called in question, but there is a fair amount of extravagant prescribing under the Act which requires to be curtailed.

A weekly prescription costing on an average 2s., and a two days' prescription 9d., unless in the case of severe surgical cases requiring medicines and dressings, should rarely, if ever, occur. We in Bristol have an excellent little pharmacopœia, beyond the limits of which it is seldom necessary to wander. The utility of elaborate prescribing is always questionable, and it often shows a lamentable ignorance of elementary chemistry, to say nothing of therapeutics.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following announcements are notified by the Admiralty: Fleet Surgeon J. W. W. STANTON is placed on the retired list. Staff Surgeon G. L. MORRISON, M.B., JOHN L. GREEN, HERBERT ROBERTSON, M.B., PHILIP H. G. GOSSE, GEORGE J. WILSON, M.B., HENRY E. FOX, M.B.

Vital Statistics.

ENGLISH URBAN MORTALITY IN THE THIRD QUARTER OF 1914.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

IN the accompanying table will be found summarized the vital statistics of ninety-seven of the largest English towns, based upon the Registrar-General's weekly returns for the third quarter of the year. The 115,121 births registered in these towns during the quarter under notice corresponded to an annual rate of 25.5 per 1,000 of the population, estimated at 18,120,059 persons in the middle of the year. In London the birth-rate last quarter was 24.9 per 1,000, while among the other towns it ranged from 15.2 in Bournemouth, 15.3 in Eastbourne, 15.5 in Hastings and in Southport, 15.9 in Ilford and in Bath, 16.2 in Oxford, and 16.4 in Blackpool, to 32.0 in Gateshead, 32.1 in West Bromwich, 32.7 in Rhondda, 32.8 in Stoke-on-Trent, 33.2 in Middlesbrough, 33.6 in Sunderland, and 34.1 in St Helens.

The 59,620 deaths registered in these towns were equal to a rate of 13.2 per 1,000; in London the death-rate was 13.3 per 1,000, while among the other towns the lowest rates were 7.2 in Bournemouth, 7.4 in

Analysis of the Vital Statistics of Ninety-seven of the Largest English Towns during the Third Quarter of 1914.

Towns.	Population estimated to the middle of Year 1914.	Births.	Deaths.	Annual rate per 1,000.		Deaths from Principal Infectious Diseases.							Deaths under 1 year per 1,000 Births.	Uncertified Deaths per Cent. of Total.
				Births.	Deaths.	Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping-cough.	Diphtheria.	Diarrhœa and Enteritis (under 2 years.)

Ealing and in Ilford, 7.5 in Southend, 7.8 in Hornsey, 8.0 in Exeter, and 8.1 in Eastbourne, and the highest rates were 17.2 in Barnsley, 17.5 in Sunderland, 17.7 in Stoke-on-Trent and in Wigan, 18.6 in Middlesbrough and in Gateshead, 18.7 in Bootle, and 19.1 in Liverpool.

The deaths from all causes included 1 from small-pox, 191 from enteric fever, 1,171 from measles, 315 from scarlet fever, 784 from whooping-cough, 559 from diphtheria, and 7,575 from diarrhoea and enteritis among children under two years of age. The fatal case of small-pox belonged to Rochdale. The 191 deaths from enteric fever were equal to an annual rate of 0.04 per 1,000; in London the death-rate from this disease was 0.03, while among the other towns it ranged upwards to 0.15 in Wakefield, 0.18 in Wigan and in South Shields, 0.19 in Devonport and in York, 0.20 in Tynemouth, 0.21 in Hull, and 0.25 in Portsmouth. The 1,171 fatal cases of measles corresponded to a rate of 0.26 per 1,000; in London the rate was 0.37 per 1,000, and among the other towns it reached 0.44 per 1,000 in Wigan, 0.45 in Bolton, 0.47 in Rochdale, 0.50 in Sheffield 0.55 in Rotherham and in Bootle, 0.76 in Liverpool, 0.84 in Leeds, and 2.47 in Oldham. The 315 deaths from scarlet fever were equal to an annual rate of 0.07 per 1,000; in London the death-rate from this disease was 0.06 per 1,000, and among the other large towns it ranged upwards to 0.20 in Manchester, 0.21 in Smethwick, 0.23 in West Bromwich, 0.24 in Salford and in Preston, 0.25 in Rotherham, 0.30 in Carlisle, and 0.48 in Warrington. The 784 fatal cases of whooping-cough corresponded to an annual rate of 0.17 per 1,000; in London the rate was 0.13 per 1,000, while among the other large towns the highest rates were 0.37 in Preston, 0.44 in Birkenhead, 0.47 in Ipswich and in Burnley, 0.48 in Warrington, and 0.67 in Barnsley. The 559 deaths from diphtheria were equal to an annual rate of 0.12 per 1,000; in London the rate corresponded to the average for all the large towns, among which the rates ranged upwards to 0.27 in Walthamstow and in Darlington, 0.28 in Cambridge and in Merthyr Tydfil, 0.29 in Gillingham, 0.33 in Leyton, 0.35 in Great Yarmouth, 0.45 in Stoke-on-Trent, and 0.54 in Middlesbrough. The fatal cases of diarrhoea and enteritis among children under 2 years of age numbered 7,575, and were in the proportion of 65.80 to 1,000 of the births registered during the quarter; the highest proportions recorded were 102.52 in Grimsby, 102.56 in Barnsley, 105.55 in Liverpool, 113.92 in Stoke-on-Trent, 115.53 in Sunderland, 119.78 in Bootle, 120.00 in Bolton, and 130.25 in Wigan and in Gateshead.

Infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 128 per 1,000; in London the proportion was 127 per 1,000, while it ranged, among the other towns, from 39 in Bournemouth, 43 in Bath, 52 in Eastbourne, 53 in Ealing and in Gillingham, and 60 in Southend and in Exeter, to 169 in Middlesbrough, 171 in Liverpool, 175 in Sunderland, 183 in Bootle, 186 in Stoke-on-Trent, 187 in Grimsby, 190 in Wigan, 196 in Gateshead, 199 in Preston, and 200 in Barnsley.

The causes of 499, or 0.8 per cent., of the deaths registered in the ninety-seven towns last quarter were not certified, either by a registered medical practitioner or by a coroner. In thirty-seven of the towns the causes of all the deaths were duly certified; among the other towns the highest proportions of uncertified deaths recorded were 3.8 per cent. in Southport, 4.1 in Darlington, 4.2 in Coventry, 4.4 in Bootle and in Tynemouth, 4.5 in Southend, 4.6 in West Bromwich, 4.7 in Blackpool, and 6.7 in Gateshead.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 8,083 births and 4,517 deaths were registered during the week ended Saturday, November 14th. The annual rate of mortality in these towns, which had been 13.8, 13.5, and 13.4 per 1,000 in the three preceding weeks, further declined to 13.0 per 1,000 in the week under notice. In London the death-rate was equal to 13.3, against 14.7, 14.1, and 13.9 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 2.7 in Great Yarmouth, 3.0 in Carlisle, 5.2 in Wimbledon, 6.6 in Gillingham and in Eastbourne, 6.7 in Devonport, and 6.8 in Smethwick and in York, to 17.1 in Wigan, 17.6 in Blackpool, 17.8 in Merthyr Tydfil, 18.6 in Huddersfield, 22.3 in Newcastle-on-Tyne, and 22.5 in Liverpool. Measles caused a death-rate of 1.4 in Plymouth and in Oldham, 1.5 in Edmonton, 1.9 in Huddersfield, 2.0 in Grimsby and in Wakefield, 2.2 in Gateshead, 3.4 in Wigan, and 4.6 in Newcastle-on-Tyne; and from diphtheria, 1.6 in Middlesbrough. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 269, 204, and 169 in the three preceding weeks, further fell to 131, of which 36 occurred in London, 13 in Liverpool, 11 in Manchester, and 5 in Birmingham. The mortality from the remaining infective diseases showed no marked excess in any of the large towns and no fatal case of small-pox was registered during the week. The causes of 36, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner, and included 7 in Birmingham, 7 in Liverpool, 4 in Stoke-on-Trent, and 3 in London. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 4,617, 4,683, and 4,769 at the end of the three preceding weeks, further rose to 4,976 on Saturday, November 14th; 751 new cases were admitted during the week, against 657, 593, and 690 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,071 births and 668 deaths were registered during the week ended Saturday, November 14th. The annual rate of mortality in these towns, which had been 15.0, 14.6, and 15.8 per 1,000 in the preceding weeks, fell to 15.2 in the week under notice, but was 2.2 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 5.0 in Motherwell, 6.5 in Ayr, and 8.8 in Kilmarnock, to 18.6 in Dundee, 18.7 in Greenock, and 18.9 in Hamilton. The mortality from the principal epidemic diseases averaged 1.1 per 1,000, and was highest in Greenock and Coatbridge. The 308 deaths from all causes in Glasgow included 7 from infantile diarrhoea, 6 from whooping-cough, 5 from scarlet fever, 3 from diphtheria, 2 from measles, and 1 from enteric fever. Four deaths from infantile diarrhoea were recorded in Edinburgh, 2 in Dundee, 2 in Paisley, and 2 in Coatbridge; 2 deaths from scarlet fever in Aberdeen; and 2 from diphtheria and 1 from typhus in Dundee.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, November 14th, 514 births and 408 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 597 births and 420 deaths in the preceding period. These deaths represent a mortality of 17.7 per 1,000 of the aggregate population in the districts in question, as against 18.2 per 1,000 in the previous period. The mortality in these Irish areas was therefore 4.7 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 22.2 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 18.1 (as against an average of 16.2 for the previous four weeks), in Dublin city 19.1 (as against 17.2), in Belfast 16.6 (as against 16.8), in Cork 15.6 (as against 19.4), in Londonderry 20.3 (as against 11.1), in Limerick 16.2 (as against 19.3), and in Waterford 26.6 (as against 24.7). The zymotic death-rate was 1.8 as against 2.2 in the previous week.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, NOVEMBER 28TH, 1914.

CONTENTS.

GENERAL COUNCIL
OF
MEDICAL EDUCATION AND REGISTRATION.

WINTER SESSION, 1914.

Tuesday, November 24th, 1914.

Sir DONALD MACALISTER, K.C.B., President, in the Chair.

THE one-hundredth session of the General Council of Medical Education and Registration began at the offices of the Council, 299, Oxford Street, on Tuesday, November 24th, 1914, at 2 p.m.

NEW MEMBER.

Dr. E. MAGENNIS, introduced by Sir LAMBERT ORMSBY, took his seat as Representative of the Apothecaries' Hall of Ireland for one year from August 1st, 1914.

PRESIDENT'S ADDRESS.

The PRESIDENT then delivered his address.

GENTLEMEN,—We begin to-day the hundredth session of the Council. In ordinary times the President might be tempted to improve the occasion by offering you his reflections on the Council's past history. But these are not ordinary times. New history is in the making, day by day, for the British Empire and for the world. The Council is called upon to take an active part in meeting the national emergencies that have arisen, and will arise, in connexion with the civil and military medical services of the country. Its members and officers are preoccupied with the urgent duties of the present hour. They have neither leisure nor inclination to indulge in retrospect. I content myself therefore with the remark that the Council, during the fifty-six years of its existence, has steadily advanced in usefulness and influence. It has successfully endeavoured, within the narrow limits of its statutory powers, to improve medical education and discipline. It possesses to an increasing extent the confidence of the administrative and professional authorities of the nation. All over the Empire bodies of similar constitution and powers have by degrees been constituted, for the promotion in the several dominions of the same purposes; and the methods of these bodies follow closely the model which the Council has evolved, and which it has proved, in the course of its long experience, to be effective.

Before I pass to matters that must forthwith occupy our attention, I have once again to record with regret the loss of a valued colleague by death. The Right Hon. Sir Christopher Nixon, who was to the last earnestly interested in the Council and its work, passed away in July of this year. Dr. Adye-Curran, who had represented the Apothecaries' Hall of Ireland since 1905, completed his last term of service on August 1st. His place is taken by Dr. E. Magennis, Governor of the Hall, to whom on your behalf I have just now offered a welcome.

The war has deprived us of the able assistance at this session of our General Registrar, Mr. N. C. King. He has long been an officer in the Territorial Force. When the London Rifle Brigade, in which he now holds the rank of Major, volunteered for foreign service, he felt it his duty to respond to his country's call, and he is now with his regiment at the front. An expression of our sincere good wishes for his safety and success, and of sympathy with his young wife in her natural anxiety, has been conveyed to Major King by direction of the Executive Committee. Mr. Cockington has been appointed Acting-Registrar in the meantime. Thanks to his devotion and that of his colleagues in the office, the current work has been carried out to the complete satisfaction of the President and Treasurers.

Two meetings of the Executive Committee have been held to deal with this and other emergencies created by the national situation. It is proper that I should make public reference to some of these.

The British Pharmacopœia, 1914.

The steps necessary for the official publication of the *British Pharmacopœia, 1914*, were entrusted to the Executive Committee at your last session. The work was completed in July, and was ready for issue in October; under normal conditions it would have been duly published early in that month. After the outbreak of war, it was considered inopportune to order publication without giving longer notice than was originally deemed sufficient. It was accordingly arranged that for three months advance copies should be made freely accessible for reference by persons interested, and the date of publication was postponed to the last day of the year of issue. The postponement has given the editors time to re-examine minutely the typography of these advance copies, and they have prepared a short list of *corrigenda*, to be made in the text as published.

Inspection and Visitation of Examinations.

The Executive Committee had also to consider whether the inspection and visitation of qualifying examinations and of examinations for Diplomas in Public Health, which were provisionally arranged for the year 1915, should in

the altered circumstances be proceeded with. It was known that some of the licensing bodies were about to hold special examinations to meet the case of candidates who had completed the curriculum and were desirous of offering themselves without delay for military service. It was foreseen that, during the next year, occasion would arise for holding such examinations at other than the usual times. It was accordingly decided to represent to the Council the expediency of deferring the proposed inspection for the present, with a view to its resumption when normal arrangements are re-established.

Medical Students and the War.

Communications were received from several professional authorities inquiring as to the propriety of modifying or suspending some of the existing regulations in the case of students whose regular course of study for a medical qualification might be interrupted by reason of military service. The Executive Committee thought it right to intimate, by means of a circular addressed to all the licensing bodies, the answer it gave in the name of the Council to the general question thus raised. In view of its importance to the public and to the profession, I think it well to repeat here the words of the answer:

> With regard to the courses of study and examination prescribed for professional qualifications, it is the statutory duty of the General Medical Council to secure the maintenance of such a standard of proficiency as shall sufficiently guarantee the possession by candidates of the knowledge and skill requisite for the efficient practice of their profession.
>
> To this end the Council has formulated, for the guidance of the licensing bodies, a series of recommendations respecting such courses of study and examination. These recommendations represent in general terms the minimum curriculum which, in the Council's opinion, should be required by the licensing bodies; and the Council notes with satisfaction that the regulations of the several bodies give effect to them.
>
> Cases may arise in which, during the present national emergency, the bodies deem it expedient to modify or suspend the application of their regulations to particular candidates; but the Council expects that all such cases shall be duly recorded and reported to the Council in the usual way.
>
> The Council feels sure that, in dealing with applications for modification or suspension of their regulations, the bodies concerned will recognize the importance, in the public interest, of maintaining unimpaired the present standard of knowledge and skill required of all who seek to be admitted to the status and privileges of registered practitioners; and will accordingly agree with the Council that it is desirable to secure, in every instance, that the requirements of the minimum curriculum are substantially fulfilled.

We have reason to believe that this statement has commended itself to the authorities concerned, and to the profession at large. Multitudes of our medical brethren have nobly offered themselves for service with our troops at home and abroad. Many have already laid down their lives in the performance of that humane duty. The toll of war is not yet complete. We must face the certainty that ere long the ranks of our profession will be sadly depleted. Ample reserves are necessary to supply the places of those who fall on the field of honour. These reserves will be constituted by those whom we are now admitting to the status and privileges of registered practitioners. We shall best honour the memory of the fallen, and most surely safeguard the welfare of our forces and our people, if we do all in our power to secure that the men who enter the profession now are as fully and efficiently trained as their predecessors for the service they will soon be called to render. The need for efficient physicians and surgeons, in the field and at home, is not less urgent than the need for efficient soldiers and sailors. I have felt it my duty to press this consideration upon senior students who, though they have nearly completed their curriculum, are ready to forego the prospect of early qualification and to enrol themselves straightway in the combatant forces.

Possible Shortage of Practitioners.

It is currently reported that, owing to the war, the number of students, of all years, enrolled for the present *annus medicus* is much below the average. If this be true, the risk of a serious shortage in the future supply of qualified practitioners would appear to be imminent. The data in the possession of the Council do not enable me to furnish an answer to the inquiries that have reached me from various public authorities who are interested in the subject. I have therefore thought it desirable to procure, so far as I could do so on my own responsibility, materials for a trustworthy estimate of the aggregate numbers likely to be ready for qualification in the next two or three years. The statistics, if I succeed in procuring them, may prove of value from more than one point of view.

An inevitable dislocation of civil practice, both under the National Insurance Act and in general, arose in August and September from the mobilization of practitioners, who were attached as surgeons to military hospitals and to Territorial and other service units. We have gratifying evidence that, throughout the country, the fraternal spirit shown by their colleagues did much to diminish the resulting difficulties experienced by such practitioners in providing for the care of their patients. In most localities a temporary working arrangement has been made, by which the needs of the civil community will be met for the present. Plans have moreover been devised, in consultation with the National Insurance and the military authorities, which may, it is hoped, have the effect of removing certain defects in existing arrangements that actual experience has made manifest. The Executive Committee has had submitted to it various proposals bearing on these subjects, and so far as they lay within its province it has offered advice upon them.

Canada.

The magnificent rally of the Overseas Dominions to the defence of the Empire has cheered but not surprised us at home. Their troops, fully equipped for service in Europe, are accompanied by a number of able and efficient surgeons. In virtue of the reciprocal relations which the Council has succeeded in establishing throughout the greater part of the Empire, the majority of these surgeons are qualified for immediate registration at home, and are thus eligible for commissions in the Army Medical Service. Unfortunately some of the provinces of Canada have so far omitted to entertain the overtures for reciprocity which this country has made. The result is that certain of the surgeons, fully qualified under the provincial law, find themselves debarred from acquiring what may be described as an imperial status in the British *Register*. The remedy lies solely with the provincial authorities. I am not without hope that the representations which have been addressed to these authorities, in the interest of the imperial services, will induce them to consider afresh the question of reciprocity with this country. The war has made it clear that account must now be taken of its imperial as well as its local aspects of reciprocity.

India.

In India the legislation for the regulation of medical practice, of which I spoke last May, has now been extended to Madras. Communications from other parts of India, bearing on the same subject, have been under the consideration of the Executive Committee, and have been promptly dealt with. Negotiations with the India Office and the Government of India, which were entered into at the instance of the Examination Committee, in relation to Indian students of medicine and to members of the Subordinate Medical Services, are still proceeding.

Legislation.

The necessary preoccupation of Parliament with measures of emergency has prevented progress with the Midwives (Scotland) Bill, and with the bill introduced on behalf of the Privy Council Office for improving the procedure in elections of Direct Representatives to the Medical Council. The Highlands and Islands (Medical Service) Board, which includes three members of the Council, has been endeavouring to carry forward its statutory work under the difficulties incident to the present situation. It has framed regulations for the service, which have to be submitted for approval to the Treasury and the Secretary for Scotland. The draft was courteously communicated to the Executive Committee, and after examination was found to contain no proposals to which the Council could object. We have learnt also that the National Insurance Commissioners have taken up the question of sickness and disability certification, with a view to such modifications of the existing practice as will

remove the professional objections urged against it by the Insurance Act Committee on your behalf. In this connexion it is satisfactory to observe that the action taken by the Council to impress on practitioners their special responsibility in relation to certificates, and to methods of procuring patients, has had a wholesome effect. The complaint of laxity in these respects, which were not infrequent at the beginning of this year, have now practically ceased.

Select Committee on Patent Medicines.

On August 4th, when war was declared, the House of Commons ordered to be printed the Report of the Select Committee on Patent Medicines. The findings and recommendations of the Committee deserve the Council's most careful attention. They testify in vigorous terms, more vigorous, perhaps, than we should care to use ourselves, to the existence of a "grave and widespread public evil," and of an "intolerable state of things," for which new legislation, "rather than merely the amendment of existing laws, is urgently needed in the public interest." The Council, at the instance of its Unqualified Practice Committee, to which this report has been referred, has more than once expressed similar conclusions; but hitherto without practical result so far as the Legislature is concerned. It is earnestly to be desired that, even in days like these, when the conservation of the public safety is the paramount objective of the Government, some earnest thought should also be given to the conservation of the public health, which is preyed upon by insidious and unscrupulous mercenaries.

The Board of Education and Unregistered Dentists.

The report of a Departmental Committee of the Board of Education, appointed to consider the "practice of the Board with regard to the acceptance of certificates from unregistered practitioners in dentistry," which was issued in July, may be taken as an indication that the State authorities recognize some at least of the dangers of *laisser faire* in the matter of unqualified practice. After stating that, "whatever may have been the intentions of Parliament in passing the Dentists Act of 1878, the position now is that no person may describe himself as a dentist or have his name inscribed in the *Dentists' Register* who has not obtained the qualifications required by the body entrusted by the State with the charge of the *Register*," the Departmental Committee adds: "It would very ill become the Board of Education to adopt a lower standard of general or special education than the minimum prescribed by the State." And the Committee's unanimous recommendation is to this effect—that the Board should not agree to the request that the certificates of unregistered practitioners "should be accepted equally with those of registered dentists."

The recent changes in the regulations for death certification, issued by authority of the Registrar-General, mark a similar advance in the official position. We have reason to regret that progress is still so slow. But we have reason also to persevere in our efforts to accelerate it. *E pur se muove.*

Executive Committee.

The report of the Executive Committee on matters delegated to it by the Council at its previous meeting was received and the recommendations contained therein agreed to. An abstract of the minutes of the meeting of the Executive Committee was published in the Supplement of September 26th, p. 182, and the subjects were discussed by the President in the address printed above.

The "Medical Register."

The Council acceded to the request of Mr. Robert Ramsay, M.B., Ch.B.Glasg., F.R.C.S.Edin. (Glasgow), for the removal of his name from the *Medical Register* on the ground of his having ceased to practise.

The oral report of the Executive Committee in regard to applications for restoration of names to the *Medical Register* having been considered *in camera*, the President announced that the Registrar had been directed to restore to the *Medical Register* the name of Walter Randall Knightley.

University of Allahabad.

On the recommendation of the Executive Committee, it was resolved:

That any person who holds the degrees of M.B., B.S. of the University of Allahabad shall be entitled to be registered in the *Colonial List* of the *Medical Register*, provided he satisfies the Registrar of the General Medical Council regarding the other particulars set forth in Part II of the Medical Act, 1886.

The Council went into *camera* and adjourned at 4 p.m. in order to enable certain committees to meet for the completion of their reports.

MEDICAL TREATMENT OF INSURED PERSONS CALLED UP FOR SERVICE WITH HIS MAJESTY'S FORCES.

The following Memorandum (210,I.C.) has been issued this week to Insurance Committees by the Insurance Commission (England):

1. The Insurance Commissioners have been asked for information as to the medical treatment during the war of insured persons who belong to the Naval or Army Reserve, or to the Territorial Forces, or have enlisted in the New Army.

2. It may be stated generally that such persons are regarded as serving sailors or soldiers from the moment at which they are called up, or enlisted, and accepted for service until disembodiment or discharge. During this period they are not entitled to medical or sanatorium benefits under the National Insurance Acts, and accordingly, no liability for their treatment rests on the panel practitioners by whom they have been accepted.

3. The position of such persons is not affected by the fact that they may be permitted temporarily to continue to reside at home, even though they may be concurrently engaged in civil employment.

An insured person who has been sent home owing to illness, or in consequence of having been wounded, must also be regarded as a serving sailor or soldier until the date o his discharge.

4. A member of the Naval or Army Reserve, Territorial Force, or New Army, who, while not entitled to treatment under the National Insurance Acts, applies for treatment to a practitioner on the panel or to an Insurance Committee, should be dealt with as follows:

(1) A member of the Naval Reserves should be referred to the Naval Surgeon and Agent, if there is one in the district, and in the absence of a Naval Surgeon and Agent should be directed to make his own arrangements with a qualified civil practitioner for treatment. In the former case the Surgeon and Agent will receive his fees from the Admiralty; in the latter the patient will be responsible for settling the doctor's charges, but will be eligible to receive Sick Allowance under the King's Regulations and Admiralty Instructions on making application for the same through his Commanding Officer.

(2) A member of the Army Reserve, Territorial Force or New Army on furlough should be referred to the Officer Commanding the nearest military station, who in every case will communicate with the Assistant Director of medical services of the area in which the soldier is temporarily residing. In case of emergency, or when a soldier unfit to travel resides at a distance from a military hospital, the soldier may apply to a civil practitioner to whom he will show his furlough paper, and who will be allowed to charge for attendance at the rate laid down under Army Regulations (A.F. O 1667), provided that the soldier immediately reports to the Officer Commanding the nearest military station, as directed above.

5. Upon discharge, or, in the case of a member of the Reserve or Territorial Forces, upon the demobilization or disembodiment of these Forces, the insured person will again become entitled to medical benefit under the National Insurance Acts (unless otherwise disentitled); and he will then be entitled to make a selection of the method by which he desires to obtain treatment as though he had newly entered into insurance.

In such cases where an insured person on return from service takes up a new residence, the arrangements which are already in existence for "removals" and "temporary residents" will apply.

National Health Insurance Commission (England),
Buckingham Gate, London, S.W.,
November, 1914.

INSURANCE ACT COMMITTEE.

A MEETING of the Insurance Act Committee was held at the office of the Association on Thursday, November 12th. Mr. T. JENNER VERRALL, LL.D., Chairman of Representative Meetings, was in the chair, and the other members present were: *England and Wales*—Dr. E. R. Fothergill (Hove), Dr. Major Greenwood (London), Dr. R. Harding (Radnor), Dr. W. A. Hollis (Brighton), Dr. T. W. Johnson (Bury), Dr. G. K. Smiley (Derby), Mr. D. F. Todd (Sunderland), Mr. E. B. Turner (London), Dr. W. B. C. Treasure (Cardiff); *Scotland*—Dr. John Adams (Glasgow), Dr. John Hunter (Edinburgh); *Ireland*: Dr. J. S. Darling (Lurgan); *ex officio*, Dr. E. Rayner (Stockport) (Treasurer).

CHAIRMAN.

Dr. J. A. Macdonald was appointed Chairman of the Committee for the ensuing year.

DRUGS AND THE WAR.

It was decided to make representations to the Insurance Commissioners that the equivalent of any special concessions referred to in Memo. I.C.L./102 allowed to chemists owing to the high price of drugs on account of the war should be extended to medical practitioners who dispense drugs for insured patients.

CONFERENCE ON DRUG PRICES.

It was resolved that the representatives of the Association at the conference on drug pricing with the representatives of the Pharmaceutical Society should be medical practitioners. It was also decided that the Drug Tariff Subcommittee should be authorized to avail itself of the services of a technical adviser. It was further resolved that in the event of any of the practitioners appointed to represent the Association at the conference not being members of the Drug Tariff Subcommittee the Subcommittee should have power to co-opt such practitioners, and Mr. E. B. Turner was appointed a member of the Subcommittee.

OVERLAPPING IN REFERENCES OF INSURANCE ACT AND SCOTTISH COMMITTEES.

The Local Medical and Panel Subcommittee was authorized to invite three members of the Scottish Committee to confer in London with it as regards the relation of the Scottish Committee under its reference in the by-laws to the Insurance Act Committee, and, if considered necessary, to appoint three members of the Association to attend and confer in Scotland with the Scottish Committee on the subject.

THE FORTHCOMING SCHEME OF UNIFORM CERTIFICATION.

The following reply has been received to the communication addressed to the Chairman of the English Commission concerning the notice to be given to medical practitioners of any alterations in the certification arrangements about to be put into operation.

National Health Insurance Commission (England),
Buckingham Gate, London, S.W.
November 24th, 1914.

Sir,—The Insurance Commissioners understand from a recent inquiry received from you that there is some uncertainty in the minds of medical practitioners as to the procedure which would be followed should it be found desirable hereafter to modify the new arrangements for uniform certification under the Insurance Acts which are about to be introduced. They understand that, in particular, practitioners wish to have some assurance that modifications of their obligations in this respect would not be made by the Commissioners without reasonable notice and opportunity for discussion.

For technical reasons, into which it is unnecessary to enter for the purpose of the present letter, the rules governing the practitioners' procedure in the matter of certification will not be embodied in formal regulations; but the Commissioners apprehend that it would meet the wishes of practitioners if they could be assured of receiving such notice of any changes in this matter as it would be necessary to give before making any change in regulations.

They accordingly direct me to convey their formal assurance that should it be contemplated hereafter to make any changes, in substance, in the obligations of medical practitioners as to certification the profession may rely on receiving at least as liberal notice and as good an opportunity for discussion and criticism as if the changes were to be made by way of amendment of regulations.

As the British Medical Association are aware, the new arrangements to be brought into force on January 1st have been discussed in great detail not only with the Advisory Committees but also with representative members of the profession throughout the country, and have commanded their general assent.—I am, Sir, your obedient servant,

(Signed) JOHN ANDERSON.

The Secretary,
British Medical Association,
429, Strand, W.C.

NON-PANEL PRACTITIONERS' CERTIFICATES AND APPROVED SOCIETIES.

With reference to the refusal of a branch of an approved society to accept a certificate of a panel practitioner as to which representations had been made on behalf of the Committee, it was reported that the society had now given instructions to its branch secretaries to accept medical certificates from practitioners whether on the panel or not.

OVER-PRESCRIBING.

The Committee expressed the opinion that in all cases where inquiries by panel committees into charges against medical practitioners for alleged over-prescribing were determined in favour of the practitioner the name of the practitioner concerned should not appear in the report of the panel committee to the Insurance Committee.

It was decided to intimate this opinion to the various bodies of Commissioners.

CIRCULAR LETTER TO LOCAL MEDICAL AND PANEL COMMITTEES.

The Committee considered an important letter which had been prepared by the Local Medical and Panel Subcommittee for circulation to the Committees concerned and expressed approval of it.

CENTRAL INSURANCE DEFENCE FUND.

The Committee considered an application for a grant from the fund and made a grant of £100 partly as a gift and partly as a loan.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

PANEL COMMITTEE.

Stock Mixtures and the Drug Tariff.

THE London Panel Committee on November 24th agreed, in consideration of the chemists accepting the inclusion of stock mixtures (to be dispensed at a reduced fee) in the new drug tariff, not to decide upon the stock mixtures during the life of the present Committee. The Chairman (Dr. H. J. CARDALE) explained that the alternative was reversion to the old tariff, with all its anomalies, and the loss by practitioners of the value of an agreement as to distilled water, by which a saving of £15,000 a year would be effected.

Relations with Chemists.

It was decided to ask the Insurance Committee to call a conference on the question of emergency dispensing by practitioners, the desire of the Panel Committee being to secure that the system of rendering and paying accounts in such cases should be simplified. It was also decided to call the attention of the Commissioners to the fact that no machinery exists under the Medical Benefit Regulations for dealing with a complaint by a practitioner against a chemist.

BOLTON.

LOCAL MEDICAL AND PANEL COMMITTEE.

A MEETING of the Bolton Local Medical and Panel Committee was held at the Central Hall on November 20th. In the absence of the Chairman (Sir Thomas Fliteroft), the chair was taken by Dr. MOTHERSOLE.

Co-ordination of Work of Local Medical and Panel Committees.—The letter "M. 2" from the Local Medical and Panel Subcommittee of the British Medical Association

was read and approved. The schedule of questions was answered as far as possible, and the Secretary was instructed to forward to the Medical Secretary of the Association a copy of the agenda and minutes of every committee meeting.

Drug Tariff.—The Secretary reported that a conference was held on November 10th between the representatives of the Panel, Pharmaceutical, and Insurance Committees with reference to the tariff of drugs, appliances, and dispensing charges. The representatives of the Panel Committee were of opinion that the dispensing fees were excessive, and examples were mentioned. With regard to notes for dispensers, it was decided that they should not be embodied in the tariff, but should be for the guidance only of dispensers. The conference agreed that a list of the charges allowed by the Insurance Committee for certain of the *British Pharmacopœia Codex* formulae should be printed at the end of the tariff. The report of the conference was received by the Committee, and with reference to the clause in the Memorandum 49 I.C., it was, on the motion of Dr. Rolland, seconded by Dr. Johnstone, resolved:

> That a Subcommittee of the Panel Committee be instructed to compile a list of twenty stock mixtures, from which the practitioners of this area may select ten to form a special pharmacopœia, to be adopted locally according to the terms of the clause.

SOUTHPORT.

Local Medical and Panel Committees.

A meeting of the Local Medical and Panel Committees was held on November 19th.

Co-ordination of Work.—The Secretary read Circular M.2 from the British Medical Association concerning the measures the Association was taking to co-ordinate the work of the Local Medical and Panel Committees. It pointed out the necessity for such co-ordination, and invited the Committees to take advantage of the measures proposed by keeping the Central Body informed of the details of the work done and by submitting matters of difficulty for advice. It was resolved:

> That this Committee cordially approves of the suggestions and agrees to the secretary forwarding the agenda and minutes of the meetings to the Medical Secretary of the British Medical Association.

The Secretary was instructed as to the replies to be made to the schedule of questions M.3 in relation to the above, and was empowered to employ any clerical assistance he might require on account of the extra work involved.

NEWPORT.

Panel Committee.

A meeting of the Newport Panel Committee was held on October 30th, when Mr. Greer was in the chair.

Co-operation with British Medical Association.—Communications from the Insurance Act Committee of the British Medical Association were read, and it was agreed that copies of the minutes and agenda of the Committee be sent to the head office of the British Medical Association.

New Drug Tariff.—Communications were received from the Insurance Committee relative to Circular 94 I.C. On the question of stock mixtures dealt with in this circular, it was resolved to take no action, as the Committee had decided not to adopt a formulary.

Local Medical Committee.—A letter was received from the Welsh Insurance Commission approving the Local Medical Committee to July, 1916.

FIFE.

Panel Committee.

A meeting of the Fife County Panel Committee was held at Kirkcaldy on November 10th, when Dr. Orr was in the chair.

Agreements.—The meeting having considered the revision of the terms and conditions of medical service for 1915, decided to agree to the same owing to the abnormal conditions prevailing due to the war.

Checking Prescriptions.—A circular received from the Insurance Commissioners anent the systematic checking of prescriptions and chemists' accounts was considered. After considerable discussion, the meeting unanimously decided in favour of the establishment of a central bureau on the lines laid down in the circular, but objected most emphatically to any encroachment upon the Panel Fund to pay for the cost of such bureau. It was considered that the Commissioners should arrange for the payment by a special grant.

Index Register.—Correspondence with the Commissioners as to the unsatisfactory state of the index register and the medical benefit fund for the county was read. It was unanimously agreed to recommend to the Insurance Committee that a medical card should be refused to every applicant for whom no index slip was forthcoming.

Honorarium to Honorary Secretary.—The Committee unanimously decided to vote an honorarium of £15 to the Honorary Secretary.

GALWAY.

Local Medical Committee.

A meeting of the County Galway Local Medical Committee was held on November 3rd, when Dr. McDonnell (Letterfrack) was in the chair.

Vote of Condolence.—Dr. Crowley proposed, Dr. McDonnell seconded, and it was passed in silence:

> That the County Galway Medical Committee has heard with the greatest regret that Captain Kinkead, R.A.M.C., the gallant son of our President, Dr. R. J. Kinkead, has been killed in action in France, and desires to convey its deepest sympathy to Dr. and Mrs. Kinkead in their affliction.

Election of Officers.—The following officers were elected:

President.—Dr. R. J. Kinkead.
Honorary Secretary.—Dr. John Mills.
Representatives on Irish Medical Committee.—Dr. T. B. Costello (County Galway), Dr. J. P. McEnri (Galway City).
County Insurance Subcommittee.—Dr. T. B. Costello (Tuam) and Dr. Geraghty (Longhrea).

Refusal of Recognition.—The refusal of the Irish Insurance Commissioners to recognize the County Galway Local Medical Committee under Section 62 of the Act of 1911 was considered, and it was unanimously resolved:

> That the Irish Medical Committee be requested to bring at once under the notice of the Chancellor of the Exchequer the action of the National Health Insurance Commission in refusing to recognize the County Galway Local Medical Committee, and that this meeting is of opinion that the attitude of the present members of the Irish Insurance Commission is so unreasonably hostile and bitter to the Irish medical profession that it threatens the collapse of the Act in Ireland.

The following were appointed to interview the members of Parliament for the County Galway: J. J. McDonnell, W. A. Sandys, T. B. Costello, D. Crowley, A. C. Callaghan, T. T. Collins, J. F. Ryan, T. J. Rossiter, J. Geraghty.

Medical Certificates for Insured Persons.—It was unanimously resolved:

> That the Committee reiterates its strong opposition to any scheme for certification of insured persons other than by the medical attendant, and objects to the appointment of part or whole-time medical certifiers.

Medical Attendance on Dependants.—The Committee unanimously approved of the scheme of free medical attendance for the dependants of those serving with the colours.

INSURANCE COMMITTEES.

London.

Drug Fund Deficiency.

It was reported to the London Insurance Committee on November 26th that the amount available in the drug fund for the medical year 1914 would be limited to about 75 per cent. of the total amount of the accounts. For the year 1913 the drug fund was insufficient to make the claims fully, the sum paid to persons supplying drugs and appliances, namely, £147,785, representing about 5 per cent. less than the total of the accounts. The chemists' accounts for August, 1914, amounted to £12,509.

Change of Doctor by Insured Persons.

The Committee has issued a public announcement that insured persons desiring to change their doctor for the medical year 1915 must give notice to the Committee before December 1st.

CORRESPONDENCE.

INSURED PERSONS IN MILITARY EMPLOY.

DR. S. K. VINES (Brierley Hill, Staffs) writes: With reference to the letter of the Scottish Insurance Commission, quoted under the above heading in your issue of November 21st, the enclosed may be of general interest. It will be noted that the English Commissioners simply wash their hands of the matter.

May I be allowed to congratulate the Clerk to the Dundee Burgh Insurance Committee on having extracted an answer from his Commission in six days! This probably constitutes a record.

National Health Insurance Commission (England),
Buckingham Gate, London, S.W.,
November 13th, 1914.

Sir,—In reply to your letter of the 1st instant, I am directed by the National Health Insurance Commission (England) to state that insured persons embodied for service in the army and navy are not entitled to medical benefit under the National Insurance Acts, and that any question arising as to the medical treatment of such persons should be addressed to the military or naval authorities.—I am, Sir, your obedient servant,

S. P. VIVIAN.

Dr. S. K. Vines,
24, Dudley Road, Brierley Hill, Staffs.

INSURANCE ACT IN PARLIAMENT.

MEDICAL CERTIFICATION IN IRELAND.

MR. GINNELL asked the Chancellor of the Exchequer why cases of alleged malingering under the National Insurance Act were not dealt with in accordance with the statutory provisions for that purpose; whether the general inquiry into alleged malingering was conducted in secret in Great Britain as in Ireland; whether there was any substantial difference in the findings in the two countries; on what law or findings the difference of treatment was based instead of making the system of medical referees and the amount of remuneration for certification uniform; and would he state the scale of remuneration for certification in Great Britain and in Ireland respectively.—Dr. Addison said: The report of the Departmental Committee on Sickness Benefit Claims in England has been laid before the House. No similar inquiry has been held in Ireland, and the absence of medical benefit in Ireland renders it impossible to compare the systems of certification in Great Britain and in Ireland. I may point out, however, that the agreements entered into by doctors on the panel in Great Britain do not provide for specific payments for certification as distinct from other duties required by the agreements. Mr. Ginnell: Will the hon. gentleman say whether any inquiry has been held in Ireland into malingering? Dr. Addison: I said that a similar kind of inquiry has not been held. Mr. Ginnell: What kind of inquiry has been held? Dr. Addison: An inquiry has been held in Ireland for the information of the department.

SANATORIUM BENEFIT IN IRELAND.

In reply to Mr. Kelly, Mr. T. W. Russell said that the amount of money at present earmarked for county Donegal from the Sanatorium Grant on a population basis was £4,606, and up to the present the only liabilities, so far as the Local Government Board was aware, were for twenty beds at Peamount Sanatorium. The Board, therefore, saw no reason to doubt that the council would have an ample margin for the completion of the moderate building scheme at Letterkenny before the council at present.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH: TOWER HAMLETS DIVISION.—Dr. W. H. F. Oxley, Honorary Secretary (119, East India Road, E.) gives notice that a meeting of the Division will be held at the Public Health Offices, White Horse Street, Stepney, on Tuesday, December 1st, at 4 p.m. Mr. J. E. R. McDonagh, F.R.C.S., will give a clinical demonstration on the Modern Diagnosis and Treatment of Syphilis, illustrated by microscopical specimens and the injection of patients. Note.—The London Local Medical Committee has decided that the administration of salvarsan falls within the duties of panel practitioners.

SOUTH MIDLAND BRANCH: BUCKINGHAMSHIRE DIVISION.—Dr. Arthur E. Larking, Honorary Secretary (Buckingham), gives notice that a meeting of the Division will be held at the Red Lion Hotel, High Wycombe, on Tuesday, December 8th, at 2.15 p.m., preceded by lunch at 1.30 (charge 2s. 6d.). There will be a paper on a medical or surgical subject, and discussions on the following will take place:—(1) Private Clubs: Are they necessary, and how should they be managed? Introduced by Dr. Stolterforth. (2) Voluntary Aid Detachments and the relation of Private Practitioners to them. Introduced by Dr. Baker. (3) Dr. Bradbrooke will give a summary of the last Annual Representative Meeting. (4) The Relation of the Association to the Local Medical and Panel Committees. Members are invited to attend, and also to bring one or more medical friends with them. Dr. Larking would be glad to hear from members wishing to bring any matter forward for discussion, and the names of those who will attend the luncheon. Tea will be provided.

SOUTH MIDLAND BRANCH: NORTHAMPTONSHIRE DIVISION.—Dr. P. S. Hichens, Honorary Secretary, 47, Sheep Street, Northampton, gives notice that a meeting of the Division will be held in the Board Room of the Northampton General Hospital on Tuesday, December 1st, at 3 o'clock, when there will be a discussion on certain questions which have arisen out of the working of the Insurance Act.

Naval and Military Appointments.

ROYAL NAVY MEDICAL SERVICE.

THE following announcements are notified by the Admiralty: Deputy Inspector-General ROBERT F. BOWIE to the *Orion*, vice Burns. Fleet Surgeon M. H. KNAPP to the *Pembroke*, additional for disposal. Staff Surgeon G. D. BATEMAN to the *Victory*, additional for the *Carolina*. Surgeons to be Staff Surgeons: W. H. HASTINGS, S. F. DUDLEY, WM. W. D. CHILCOTT, CYRIL V. GRIFFITHS, and G. P. ADSHEAD. Surgeon C. W. F. GREENHILL to the *Columbine*, additional for Queensferry Sick Quarters, vice Bateman. Surgeon P. B. WALLIS to the *Pembroke*, additional for disposal. Surgeons appointed to be Staff Surgeons: THOMAS CREASER, M.D., HARRY M. LANGDALE. Temporary Surgeons: JOHN P. WALKER to the *Ganges* for Shotley Sick Quarters, vice Stewart. M. H. DE J. HARPER to the *Pembroke* for duty in connexion with transport of wounded, vice Rowle. J. PRATT to the *Victory* for Royal Naval Division at Crystal Palace. D. K. ADAMS to the *Vivid*, additional for disposal. ROLF CREASY to the *Victory*, additional for Royal Naval Division.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon THOMAS TURNER to the *Duncan*, vice Watson. Surgeon E. F. MURRAY, M.D., to the *Victory*, additional for the *Carolina*.

The following have entered as temporary surgeon probationers: C. N. RATCLIFFE, A. G. BRETT, P. R. RIGGALL, A. F. WYATT, E. A. HARDY, D. B. S. JONES, E. A. FIDDIAN, S. R. JOHNSTON, P. E. F. FROSSARD, G. N. TOULMIN, B. H. FIDCOCK, H. W. EDDISON, C. J. C. COOKE, E. A. CLEGG, G. R. SHARP, G. BLURTON, R. S. CALDWELL, T. W. DRUMMOND, A. J. MUIRHEAD, E. J. COOMBE, A. G. MCKEE, D. H. FERRIS, G. S. BARNETT, E. W. DRURY, T. J. SUMNER, G. E. MULLINS, E. A. LEAK, D. HEARD, R. T. STONEY, T. J. LANE, W. P. ELFORD, N. R. WALLACE, J. BROOKS.

Friedlander, Gordon Whitehead, M.B., James S. Clarke, M.B.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 8,097 births and 4,966 deaths were registered during the week ended Saturday, November 21st. The annual rate of mortality in these towns, which had been 13.5, 13.4, and 13.0 per 1,000 in the three preceding weeks, rose to 14.3 per 1,000 in the week under notice. In London the death-rate was equal to 14.6, against 14.1, 13.9, and 13.3 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 5.8 in Leyton and in Oxford, 5.9 in Hornsey, 6.7 in Bath, 6.9 in Swindon, 7.5 in Eastbourne, and 7.9 in Devonport, to 20.3 in Barnsley, 20.9 in Great Yarmouth, 21.0 in Middlesbrough, 21.2 in Grimsby, 22.3 in Birkenhead, 22.4 in Rotherham, and 23.1 in Newcastle-on-Tyne. Measles caused a death-rate of 1.6 in Salford, 1.8 in Plymouth, 1.9 in Birkenhead, 2.4 in Rotherham, 2.6 in Gateshead, 2.8 in Wigan, 3.0 in Wakefield, and 3.4 in Newcastle-on-Tyne. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 204, 169, and 151 in the three preceding weeks, rose to 138, and included 54 in London, 9 in Liverpool, 8 in Birmingham, 7 in Nottingham, and 6 each in Manchester, Sheffield, and Newcastle-on-Tyne. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 57, or 1.1 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of these, 11 were recorded in Birmingham, 9 in Liverpool, 3 in Hull, and 2 each in Southend-on-Sea, Bootle, Bradford, Sheffield, Darlington, and Sunderland. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 4,683, 4,763, and 4,976 at the end of the three preceding weeks, further rose to 5,005 on Saturday, November 21st; 627 new cases were admitted during the week, against 598, 690, and 751 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,099 births and 730 deaths were registered during the week ended Saturday, November 21st. The annual rate of mortality in these towns, which had been 14.6, 15.8, and 15.2 per 1,000 in the three preceding weeks, rose to 16.6 in the week under notice, and was 2.3 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 7.0 in Clydebank, 7.6 in Kirkcaldy, and 8.8 in Kilmarnock, to 18.8 in Falkirk, 22.5 in Dundee, and 23.5 in Leith. The mortality from the principal infective diseases averaged 1.6 per 1,000, and was highest in Aberdeen and Dundee. The 334 deaths from all causes in Glasgow included 9 from whooping-cough, 9 from diphtheria, 8 from scarlet fever, 6 from infantile diarrhoea, 2 from enteric fever, and 1 from measles. Three deaths from scarlet fever were recorded in Aberdeen, 2 in Dundee, and 2 in Paisley; 4 deaths from diphtheria in Edinburgh and 2 in Aberdeen; and from infantile diarrhoea 4 deaths in Dundee and 3 in Edinburgh.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, DECEMBER 5TH, 1914.

CONTENTS.

GENERAL COUNCIL
OF
MEDICAL EDUCATION AND REGISTRATION.

WINTER SESSION, 1914.

Sir DONALD MACALISTER, K.C.B., President, in the Chair.

MEDICAL DISCIPLINARY CASES.

THE Council on November 25th considered the following cases in which judgement had been suspended at the summer session. Mr. Bodkin attended as Legal Assessor and Mr. Harper as Solicitor to the Council.

Irregularity in Issue of Sickness Certificate.

The first case was that of Dr. William Blaikie Mason[1] who had been called to answer the charge of signing an untrue, misleading, or improper certificate that one Patrick Matthews of Southsea was suffering from gastric colic and was unable to follow his occupation, whereas he (Dr. Mason) had neither seen nor examined the said Patrick Matthews.

Mr. HARPER stated that he had communicated with the Admiralty and had been informed that no further cases of irregular certificates had been brought to knowledge. The Admiralty therefore offered no further evidence.

Dr. MASON read to the Council statutory declarations from many prominent citizens, and also many doctors of Southsea testifying to the rectitude of his conduct as a professional man. He trusted the Council would take a lenient view of the case; he had done wrong, but it should not occur again.

Strangers and parties were directed to withdraw. On readmission, the PRESIDENT announced the Council's judgement as follows:

Mr. William Blaikie Mason, I have to inform you that the Council does not see fit to direct the Acting Registrar to erase from the *Medical Register* the name of William Blaikie Mason.

Irregular Death Certificate.

The next case was that of Dr. Alexander Girvan of Palace Street, Buckingham Gate, S.W.,[2] who had been called upon to answer the charge of being convicted at the Westminster Police Court of unlawfully and wilfully making a false declaration under and for the purpose of a certain Act relating to the registration of deaths, and fined £10 and £10 costs.

Mr. HARPER, on behalf of the Council, offered no further evidence.

Mr. WICKHAM read testimonials from several medical men, including Mr. Charles Stonham and Dr. Salusbury Trevor, as to the excellence of Dr. Girvan's character.

Strangers and parties withdrew. On readmission, the PRESIDENT announced the decision of the Council as follows:

Mr. Girvan, I have to inform you that the Council has considered once more the conviction which has been proved against you; that the Council takes a very grave view of the misdemeanour of which you have been convicted, but in view of the certificates of character which have been put in on your behalf, the Council has not seen fit to direct the Acting Registrar to erase your name from the *Medical Register*.

Medical Aid Association: Alleged Canvassing.

The case against Haripado Chatterjee, L.R.C.P. and S. Edin., L.R.F.P.S.Glas. of South Moor, Stanley, co. Durham,[3] was that he had accepted a post of medical officer of the South Moor Medical Association, which canvassed members of the Miners' Union in the South Moor District to become members thereof, and who, on joining, would become the patients of the medical officer thereof.

The PRESIDENT pointed out that the complainants being the British Medical Association, members of Council who were also members of the Association could take no part in the proceedings.

Mr. Hempson (solicitor) represented the British Medical Association; Dr. Chatterjee appeared in person.

Mr. HEMPSON in reply to the PRESIDENT, said he had no additional facts to bring before the Council, neither did he doubt the accuracy of the further evidence Dr. Chatterjee had put in, nor desired to challenge it in any way.

Dr. CHATTERJEE put in a statutory declaration by himself in which he stated that immediately after the decision of the Council in May last he gave notice to the South Moor Medical Association terminating his engagement as medical officer to the association, and his connexion with it had ceased. He much regretted having made the speech complained of, but he did it without appreciating its effect, and assured the Council there would be no cause for similar complaint in the future. He also put in two statutory declarations by Dr. Charles and Dr. Johnson respectively, testifying that they had had opportunities of observing Dr. Chatterjee's professional conduct since May last and it had in every respect been satisfactory.

By the PRESIDENT: He had no means of knowing the methods since pursued by the South Moor Medical Association.

[1] SUPPLEMENT to the BRITISH MEDICAL JOURNAL, June 6th, p. 414.
[2] Ibid., p. 414.
[3] Ibid, p. 409.

Strangers and parties were directed to withdraw. On readmission, the PRESIDENT announced the decision of the Council as follows:

Mr. Chatterjee, the Council has carefully considered the evidence which you have given on your own behalf, and brought from two registered practitioners, and, being satisfied that as you severed your connexion with the South Moor Medical Association without delay, you could not bring the other evidence which you were required to furnish, as to the methods by which this association is now conducted, the Council has not seen fit to direct the Acting Registrar to erase your name from the *Medical Register*.

Conviction for Drunkenness.

The case of Caspar Denis Downing, L.A.H.Dub.,[4] on charges of being found guilty at certain police-courts of disorderly conduct while drunk, was considered.

Mr. Harper appeared in support of the charge; Mr. Caspar Denis Downing did not appear, and was not represented.

Mr. HARPER reminded the Council that in May last Mr. Downing did not appear, but wrote saying he could not deny the charges of drunkenness, and pleaded for leniency on the ground that on the occasion of the first offence he had just returned from the West Coast of Africa, where he had contracted malarial fever, and on the other occasions he was labouring under great domestic trouble. He expressed his regret for having committed the offence, and also said he was not aware that the form of offence was punishable by removal of the name from the *Register*. Mr. Harper informed the Council that Mr. Downing was again convicted on September 9th, 1914, for drunkenness, at the Court of Summary Jurisdiction, Dale Street, Liverpool, and fined 10s. and 3s. 6d. costs, or, alternatively, 14 days' imprisonment. He put in a certificate copy of the conviction. Mr. Downing was communicated with in regard to this conviction, and on October 21st he replied, admitting the fact, but stating it took place owing to depression due to the recent death of his mother; and pointing out that he had never been convicted of drunkenness while on duty. He further telegraphed from Liverpool on November 24th: "Regret unable to attend Council meeting to-morrow."

Strangers and the parties were directed to withdraw. On readmission, the PRESIDENT announced the decision of the Council as follows:

I have to announce that Caspar Denis Downing having been proved to have been convicted of the misdemeanours alleged against him in the notice, the Council has directed the Acting Registrar to erase from the *Medical Register* the name of Caspar Denis Downing.

Irregular Certificates.

The Council considered the following cases:

(1) James Shirran Abernethy Walker, registered as of 416, Oldham Road, Manchester, M.B., C.M. 1887, M.D. 1898, Univ. Aberd., who had been summoned to appear before the Council on the following charge:

That being a registered medical practitioner you gave under the National Insurance Acts, 1911 to 1913, four certificates dated July 19th and August 7th, 18th, and 25th, 1913, respectively, certifying that you had on those days respectively seen one Henrietta Horridge, and that she was suffering from chest affection and was thereby still totally incapable of work, whereas you had not on any of those days either seen or examined the said Henrietta Horridge. And that you authorized John Watt, a registered medical practitioner, to furnish similar certificates on your behalf in respect of the said Henrietta Horridge which were dated respectively July 28th and August 5th, 1913, whereas neither you nor the said John Watt had either examined or seen her on either of those days.

All of which certificates were untrue, misleading or improper. And that in relation thereto you have been guilty of infamous conduct in a professional respect.

The complainants were the Manchester Insurance Committee.

(2) John Watt, registered as of 416, Oldham Road, Newton Heath, Manchester, M.B., C.M. 1892, Univ. Glasg., who had been summoned to appear before the Council on the following charge:

That being a registered medical practitioner you gave under the National Insurance Acts, 1911 to 1913, two certificates dated July 28th and August 5th, 1913, respectively, certifying that you had on those days respectively seen one Henrietta Horridge, and that she was suffering from chest affection and was thereby still totally incapable of work, whereas you had not on either of those days seen or examined the said Henrietta Horridge both of which certificates were untrue, misleading, or improper. And that in relation thereto you have been guilty of infamous conduct in a professional respect.

The Council's attention was called to this case by the Manchester Insurance Committee.

Mr. Clayton appeared for the Manchester Insurance Committee; Mr. Wedderburn, solicitor, appeared for Dr. Walker and Dr. Watt.

In reply to the PRESIDENT, Mr. WEDDERBURN stated that it would be convenient to take the two cases together, as they arose out of the same set of facts.

Mr. CLAYTON said the case was brought forward because it was considered that the facts, which he understood were admitted, required some explanation, and the Manchester Insurance Committee did not care to take steps which would have meant the deletion of Dr. Walker's name from the *Medical Register*. He was not concerned so much with regard to Dr. Watt, as the latter was not acting under the Insurance Committee. Dr. Walker was, and in that capacity attended Miss Henrietta Horridge, since deceased, for a considerable time prior to the date of the certificates complained of. On July 10th, 1913, sanatorium treatment was accorded to Miss Horridge, and she entered the Baguley Sanatorium, where she remained until October 25th, which covered the period mentioned in the certificates referred to in the Notice of Inquiry. It would not be alleged that Dr. Walker saw her during that period to ascertain whether she was incapable of following any employment. Under the National Insurance Act, the money which otherwise would be paid to an insured person's dependants (and Miss Horridge had none) during the time she was in the sanatorium, should have been paid not to her but to the Manchester Insurance Committee. Upon these facts coming to the knowledge of the Medical Subcommittee, it was considered desirable to bring the matter before this Council to get a pronouncement not only with regard to the facts of this case, but in the interests of other medical men and the profession generally. The Manchester Insurance Committee had no desire to press the matter unduly, because at the time these events occurred the regulations with regard to the giving of certificates by medical men were not as well known, nor in so well-defined a form as they have since become. It was now one of the regulations of the Insurance Commissioners that a doctor giving such a certificate must see the patient on the day, and only give it for the day on which he actually saw the patient; and that was what the complainants thought was being carried out in this case. He formally put in the six certificates in question, four being in the handwriting of Dr. Walker and two in the handwriting of Dr. Watt.

In reply to the PRESIDENT, Mr. WEDDERBURN admitted the signatures to the certificate and also the correspondence with the Manchester Insurance Committee. Dr. WALKER, examined by Mr. WEDDERBURN, said he had practised at Newton Heath, Manchester, for over twenty-two years and Dr. Watt had been his assistant for seven or eight years. He had a large industrial practice and acted for a number of societies. He had attended Miss Horridge's family for about fourteen years. Before the National Insurance Act came into force he had been in the habit of giving certificates of incapacity to members of different societies which, whether initial certificates or continuing certificates, simply certified the illness and the date of the certificate. He had a printed form of certificate of incapacity which he still used with regard to patients who were not members of a society. After the Insurance Act came into force a form of initial certificate was issued by the Insurance Commissioners which stated that the doctor had seen the patient on the day on which the certificate was granted, but many approved societies under the Act continued to use a different form for the continuing certificate. That simply had a column for the doctor's signature and in signing it he regarded it as sufficient if, as far as a medical man could be, he was certain that on the date it was granted the patient was unfit for work. He then identified seven different forms of continuing certificates issued by approved societies for which he acted which had been in force since the date of the Insurance Act, in none of which the date of examination appeared. The continuing certificate was always brought by the patient, who obtained it from the society. He regarded the

[4] SUPPLEMENT to the BRITISH MEDICAL JOURNAL, June 6th, p. 415.

essential part of a certificate to be the certification that the person was not doing any work, and the cause. The mind of a doctor would be more concerned with the filling in of the blanks than with the printed matter on the certificate. With regard to Miss Horridge, who was a member of the National Amalgamated Approved Society, which had a very large membership in Manchester, Dr. Walker was called in to attend her in April, 1913. She was suffering from pulmonary tuberculosis. An initial certificate was granted on the form required by the Insurance Commissioners. Dr. Walker saw Miss Horridge regularly until she went into the sanatorium, granting each week a continuing certificate of incapacity. She never did become fit to follow her occupation again. The first continuation certificate granted after she was sent to the sanatorium was the one mentioned in the charge, July 19th. Mrs. Horridge brought him the certificate, and he said he did not think he could sign it as Miss Horridge was not then under his treatment. Mrs. Horridge said it would be all right because the insurance agent told her to take the certificate to Dr. Walker. He signed the certificate, there being no doubt about the incapacity of the girl for work; that was the only thing which was in his, the witness's, mind. He did not suppose he read the printed words on the certificate. If he had been asked to write the whole of the certificate, he would have thought before doing so; but, at the same time, he had sufficient knowledge of Mrs. Horridge to know that she was not trying to do anything fraudulent. He (Dr. Walker) knew nothing at all as to the law that people getting sanatorium treatment were not entitled to sickness benefit.

In answer to the PRESIDENT, he said that he knew the certificate was for the purpose of getting sickness benefit, and, in answer to Mr. WEDDERBURN, that he did not know that the girl was not entitled to it. He had no recollection of the other certificates, though he did not doubt they were granted in the same way.

In answer to the LEGAL ASSESSOR he said that the certificates were all granted at the request of the mother, and in reply to the PRESIDENT said that he recognized now that he made a mistake in not being more careful in attending to the form of the certificate.

Further, in answer to Mr. WEDDERBURN, he said he felt the charge against him very keenly and was very sorry he made the mistake.

Dr. WATT, in answer to Mr. WEDDERBURN, said he had been assistant to Dr. Walker for eight years. He confirmed the evidence as to the nature of the practice and the different forms of certificates that had been in use. He recollected granting one certificate, which he admitted having signed. He also recognized the necessity for more care, the matter having been brought to his notice. He would not now grant a certificate without seeing the patient on the day it was granted, and very much regretted having made the mistake.

On Mrs. Horridge being called Mr. CLAYTON admitted that Mrs. Horridge got the certificates from the insurance agent, took them to the doctors and told them she was requested to get them signed. Admittedly, she had no knowledge that she was not entitled to payment under the Act. No allegation was made that any portion of the money went to Dr. Walker or Dr. Watt.

Mr. SMITH, a member of the Insurance Committee, said, in answer to Mr. WEDDERBURN, that he did not know Dr. Walker before the occurrence in question. He had since inquired into Dr. Walker's practice, and found he was one of the hardest working doctors in Manchester, and that he attended well to his insurance patients. As a member of the committee, and as manager of a large society, he had been aware of the great confusion with regard to certificates.

Mr. WEDDERBURN said the charge made was one of having issued certain certificates, that issue being admitted. No point was made of the fact that the person certified as being unfit was not unfit, but that on none of the dates on the certificates did the medical men see the patients. All along it had been conceded that Miss Horridge was during the period covered by the certificates in a state of incapacity for work. It was also conceded that that knowledge was personal knowledge on the part of Dr. Walker and Dr. Watt. The complainants admitted that, although an irregularity had been committed, they did not regard it as a serious case; the Manchester Insurance Committee did not desire that any punishment should be inflicted which would have the effect of depriving the doctors of their professional status, or depriving the Manchester Insurance Committee of one of its hardest working doctors. He (Mr. Wedderburn) thought the committee would regret anything being done which would impair the usefulness of Dr. Walker as a medical man For a quarter of a century he had carried on a large industrial practice in Manchester, and this involved the granting of certificates almost daily. They were of two kinds: first, there was the primary certificate, which was necessary to entitle the member to benefit, and secondly, a continuing certificate given each week during the illness. Previous to the Insurance Act, in the case of all the societies Dr. Walker represented the initial and continuing certificates were practically in the same form, the medical man certifying that at the date of the certificate he was satisfied that the person in question was suffering from a particular ailment which unfitted him for work. The certificates were always printed, and what the doctor naturally applied his mind to were the blanks which he had to fill in from his personal knowledge. When the Act came into force there was introduced by the Insurance Commissioners a new form of certificate, so far as regarded the primary certificate. That contained the words "I have this day examined" so and so. Continuing certificates, in the case of the majority of the approved societies, continued to be in the same form as those which Dr. Walker and Dr. Watt had been in the habit of granting before the Act came into force. With regard to Miss Horridge, the two practitioners had been attending her more or less regularly, granting weekly certificates, no doubt in the same terms as those brought by Mrs. Horridge. Dr. Walker was aware that Miss Horridge ultimately went into a sanatorium, but unfortunately did not know the law that a patient who was getting sanatorium treatment was not entitled to sickness benefit. It had to be admitted that the doctors had acted irregularly, but he (Mr. Wedderburn) submitted it was not gross irregularity, and did not deserve the epithet of infamous professional misconduct. In all the circumstances he submitted that the bringing of Dr. Walker and Dr. Watt before the Council, and the laying of the facts before it, should be regarded as a sufficient punishment. Both were wiser men in the matter of attending to the form of the certificate, and he appealed earnestly to the Council to send them away not sadder men, but happier than they were at that moment.

Strangers and parties withdrew. On readmission, the PRESIDENT announced the decision of the Council as follows:

Dr. Walker and Dr. Watt, I have to inform you that the Council have carefully considered the matters brought to their notice during this inquiry and have decided that the facts alleged against you in the notice of inquiry have been proved to the satisfaction of the Council. The Council take a very grave view of any laxity on the part of medical men with respect to the giving of certificates, which is a responsibility honourably imposed upon them by the State. But they have taken account of the explanations of your conduct in this matter that you have offered and of the assurances with regard to the care you will exercise in this respect in the future; and they have taken those explanations and assurances as given by you in good faith. They have accordingly not seen fit to direct the Registrar to remove your names from the *Medical Register*.

DENTAL DISCIPLINARY CASES.

The Council at its summer session considered a report by the Dental Committee on the allegation made against Valleck Cartwright Mallan[6] of advertising, but the further consideration was deferred till the present session.

Mr. Hart, instructed by Messrs. Bowman and Curtis-Hayward, appeared for the British Dental Association; Mr. Mallan appeared in person. The REGISTRAR read a further report on the case, dated November 23rd, 1914, from the Dental Committee.

Mr. MALLAN considered he had faithfully and thoroughly carried out his undertaking. There was nothing in the Dentists Act prohibiting a dentist showing his handiwork in his window. He referred to a resolution of the Council dated May 20th, 1894, which had stated that the issue of advertisements of an objectionable character, especially such as claimed superiority over other practitioners or depreciation of them, might easily be carried so far as to constitute infamous or disgraceful conduct in a professional respect. Mr. Mallan contended that that referred

[6] SUPPLEMENT, Jun 6th, p. 413.

to the distribution of circulars having in them claims of superiority over other practitioners. It had become recognized in London that practitioners were permitted to make a window display. He regretted giving out circulars, and had stopped doing so, that being the offence with regard to which he gave his undertaking.

Mr. Hart suggested that the undertaking as given, and as the Council took it, had not been fulfilled.

Strangers and parties were directed to withdraw. On readmission, the President announced the judgement of the Council as follows:

Mr. Mallan, I have to call your particular attention to what I am going to say to you now. The charge made against you included the following statement:—

> "That being a registered dentist you have extensively advertised your practice:
>
> "... (c) by means of various conspicuous notices on the outside and inside of your premises at 106, Edgware Road, W., where you carry on your profession, of a shop window on the ground floor thereof filled with shelves of false teeth, and notices advertising your practice. ..."

The Council are not entirely satisfied that you fully understood the undertaking which you gave to them to be an undertaking to discontinue advertising by the particular means set forth in this paragraph of the charge. The Council recognize that you have carried out an undertaking to discontinue advertising by the other means specified in the charge. The Council desire me to impress upon you that the means of advertising specified in paragraph (c) of the charge are no less objectionable than the others, and fall within the resolution of May 28th, 1894, of which you are aware.

They propose to give you a further opportunity of discontinuing the objectionable forms of advertising which you have continued to adopt, and for this purpose postpone their judgement in your case until May next.

A copy of this pronouncement will be sent to you in due course.

Mr. Mallan: I thank you for the courtesy you have shown me. May I now tender my resignation from off the *Register*?

The President directed Mr. Mallan's attention to Standing Orders with which he would have to comply to procure erasure from the *Dentists Register*.

The Council then considered the case of Cartwright Davis, with regard to whom the Dental Committee had made the following report, dated November 23rd, 1914:

The *Dentists Register* contains the following entry:

Name.	Address.	Date of Registration.	Description and Date of Qualification.
Cartwright Davis	81, Knightsbridge, London, S.W.	1878 Dec. 31	In practice on July 22nd, 1878

Information having reached the British Dental Association early in the present year that the person practising as above was neither Cartwright Davis nor a dentist, the association, with the assistance of the officials of the Council, made careful and thorough inquiry, and ascertained the following facts:

Cartwright Davis was a name under which a Mr. Mallan practised dentistry, and in 1878 registered under the Dentists Act. Some years ago he took as an assistant one John Edwin Sutton, who, however, never qualified as a dentist or registered. On the death of Mallan his widow carried on the practice through Sutton, who married her daughter, and since 1903 Sutton had regularly signed the returns to the Registrar of the Council in the name of Cartwright Davis, thereby maintaining that name upon the *Register*, and himself practising as a dentist under that name.

The British Dental Association prosecuted Sutton under the Perjury Act, 1911, and pressed for his committal for trial at the Central Criminal Court. He was tried on July 21st, 1914, at the Central Criminal Court before the Common Serjeant, and pleaded guilty to the charge of unlawfully procuring himself to be registered in the name of Cartwright Davis on the Register of persons qualified to practise as dentists. The Common Serjeant bound Sutton over in a recognizance of £20 to come up for judgement if called upon, but seeing that this was the first case brought forward under the new Act he did not impose any other penalty.

The facts as above stated have been formally brought to the attention of the Council by the British Dental Association, and the Committee is advised that as Sutton, by pleading guilty, admitted the facts, it is not necessary, in dealing with the question of the removal or the name of Cartwright Davis from the *Dentists Register*, to hold a formal inquiry and require further proof of the facts. The Committee therefore, being satisfied that the facts are as above stated, report them to the Council.

By Section 13 of the Dentists Act the Council shall cause to be erased from the *Dentists Register* any entry which has been inaccurately or fraudulently made.

Strangers were directed to withdraw. On readmission, the President announced the judgment of the Council as follows:

I have to announce that the Council, having considered the report from the Dental Committee, have directed the Acting Registrar to erase from the *Dentists Register* the entry containing the name Cartwright Davis with the appended address, 81, Knightsbridge, London, S.W., which they are satisfied has been incorrectly or fraudulently made.

Dental Business.

British Columbia.

The Dental Education and Examination Committee in its report stated that it had received a copy of an amending Act of the Province of British Columbia, dated March 4th, 1914. The Act instituted qualifying examinations, and a Dental Council, which, for disciplinary purposes, was empowered to associate with it a County Court judge, and might subpoena witnesses and call for documents. It provided also for the payment of witnesses so called. There was an appeal from its decisions to the Supreme Court, and a further appeal to the Appeal Court. Unqualified practice was prohibited by the Act, and practice was defined as the receipt of payment in any form for professional services. The unqualified employees of a registered dentist were brought within its scope, the employer being also concomitantly liable. Registered medical practitioners were exempted from the operation of the Act. The Committee noted with satisfaction that the prohibitory sections were directed against the act of practice and did not merely prohibit the improper assumption of title.

Hong Kong.

The Hong Kong Ordinance, 1914, which had been communicated by the Colonial Secretary, established a Register and an Advisory Dental Board. It did not establish any form of diploma, but left large discretion to the Governor in Council in the recognition of grounds of admission to the Register, such as long practice in the colony, or other grounds deemed sufficient. Practice, or the offer to practice, or the wrongful assumption of titles, were prohibited under penalty. Unsuccessful attempts at legislation were made in 1905, the difficulty being the small number of practitioners holding any qualification and the large number of Chinese practitioners. In a reasoned report upon the measure by the local Attorney-General the opinion was expressed that it was the best compromise attainable in the circumstances obtaining in the colony.

The Supply of Dentists.

On the motion for the approval of the report of the Committee, made by Mr. Tomes, and seconded by Dr. Knox,

Dr. Newsholme moved as an addendum:

> That in view of the large amount of practice in dentistry by unqualified persons, and of the fact that the number of dentists on the *Dental Register* has not increased since the *Register* was formed, the several licensing bodies be asked to make suggestions as to any modifications in the tables of the curriculum or curtailments which in their opinion would be practicable without lowering the standard of dental practice.

In 1879, the first year in which it was opened, the *Dentists Register* contained 5,289 names; in 1914 it contained only 5,275. After making allowance for the fact that at the beginning a large number of dentists who were already in practice were admitted, it could not be regarded as satisfactory that during thirty-four years there should not have been any increase in the number of qualified dentists in this country. During the last thirty years the population of the United Kingdom had increased by 13 per cent., and the population of England and Wales by nearly 30 per cent. During the period from 1889 to 1912 the number of medical men on the *Register* had increased by 46 per cent., and yet during that period there had been no increase in the number of qualified dentists. It could not be said that the demand for dentists had decreased; it had increased, on the contrary. It was notorious that the number of unqualified unregistered dentists in this country considerably exceeded the number of qualified; that was a very serious matter both from a dental and public health point of view; it was necessary, therefore, that the matter should be looked into with the view of ascertaining whether some improvement might not be secured. He was not certain that a modification of

the curriculum would necessarily bring that about, but that aspect might be considered, and the resolution, if adopted, would lead to expressions of opinion being received from the various licensing bodies on that point. He was well aware that his proposal was contrary to the opinion of the General Medical Council formally expressed as far back as March 26th, 1879, which involved a minimum curriculum of four years, a standard which he suggested was too high. The Council might ascertain definitely from the licensing bodies whether, in their opinion, the four years' curriculum was needed, and, if not, what modification should be made to remedy the evil.

Mr. VERRALL seconded. This matter had been discussed in the Representative Meeting of the British Medical Association, of which he was chairman. The members felt very strongly on the question of the shortage of dentists. He would be glad to support any step designed to discover a remedy.

Dr. MACKAY looked on the motion as exceedingly grave. The Council, he thought, was not in a position at the present moment to come to a decision. The proposal should be remitted to the Dental Education Committee for its consideration and report, and as he understood from Mr. Verrall's speech that other bodies were considering the matter, public opinion should be educated on the subject.

The PRESIDENT suggested that it was conceivable that curtailments of the curriculum might be introduced lowering the standard, which was a point of principle on which the Council had to make up its mind after discussion. Therefore he thought the proper course to adopt would be that suggested by Dr. Mackay.

Mr. TOMES remarked that in whatever way the resolution was dealt with, his committee would accept the principle of it. He took the opportunity of pointing out that the number of duly qualified men coming on the *Dentists Register* holding the diploma had largely increased since 1878, and that they had now risen to a little over 68 per cent. of the whole number. He admitted that the increase in numbers had not been such as might have been expected, but he doubted whether the severity of the curriculum very largely affected the question. What did more largely affect the question was the weakness of the legislation.

Dr. NORMAN MOORE thought the question really urgent. The practice of dentistry had enormously increased in a great variety of ways.

Dr. CATON agreed that the matter was very urgent and of extreme public importance, more especially when the large increase in unregistered dentists was noted. He thought it would be necessary to lower the standard as a temporary measure, and to take steps to secure a reversal of the disastrous decision given by the House of Lords a short time ago.

Dr. MACDONALD observed that Dr. Newsholme at the last meeting of the Council suggested that the standard should be reduced for the purpose of getting more men to enter, and this resolution seemed to be a step in the same direction. He hoped the Council would not adopt any course such as that. He agreed with Dr. Mackay that the matter should be referred to the Dental Education Committee in order that no suggestion of a reduction of the standard of efficiency should come from the Council.

Dr. NEWSHOLME had no wish to reduce the standard of efficiency. He merely made certain suggestions, and wished for further information before forming any opinion upon the matter.

Dr. MACDONALD, at the suggestion of the PRESIDENT, moved that the motion be remitted to the Dental Education Committee for consideration and report on the questions therein raised, the Committee to have power, if it thought fit, to communicate with the licensing bodies on the subject.

Mr. HODSDON seconded.

Dr. NEWSHOLME accepted the suggested amendment, which was then put and carried.

APOTHECARIES' HALL OF IRELAND.

Sir CHARLES BALL, Chairman, presented a report from the Examination Committee on the examinations held in the Apothecaries' Hall of Ireland, 1913–14, embodying a report by Dr. J. Magee Finny and remarks by the Apothecaries' Hall. The Examination Committee, whose report was dated November 24th, 1914, made the following recommendations:

Recommendations.

That the General Council take into consideration the question of representing to His Majesty's Most Honourable Privy Council that the course of study and examinations, to be gone through in order to obtain the qualification of Licentiate of the Apothecaries' Hall of Ireland, are not such as to secure the possession by persons obtaining that qualification of the requisite knowledge and skill for the efficient practice of their profession.

That the Irish Branch Council be authorized to appoint for a period of one year a deputy to attend and be present on behalf of the General Council at the professional examinations held by the Apothecaries' Hall, for the purposes set forth in Section 18 of the Medical Act, 1858; that the deputy so appointed present to the Council a report on the general character of such examinations; and that he be paid a salary of £50 for the year.

Sir Charles Ball, in dealing with the first recommendation, said that did not bind the Council to any opinion on the matter, but the Examination Committee thought that it was the duty of the Council to discuss the question. A great deal had been said with reference to the question of individual bias and so on, but the Examination Committee, which contained a large number of members who did not come from Ireland, had, without the slightest dissent, agreed to the recommendation. The Council was charged officially with the duty of maintaining a proper course of examination and education before persons could be admitted to the *Register*. Section 19 of the Medical Act provided that if the Council neglected that duty the Privy Council could take it up.

Mr. VERRALL, as one not a member of the Examination Committee, desired to associate himself with the Chairman of the Committee in the resolution brought forward. The production of Dr. Finny's report, which seemed very fair and full, certainly to his mind established a case for taking the matter into consideration. The mere fact that the Council thought it necessary and wise that such a supervision of the examinations as Dr. Finny carried out should take place, indicated that it was not quite satisfied that there was not room and necessity for an inquiry into this particular examination. Whatever else the report proved, it certainly proved that the Council would only do its duty if it took the matter into consideration.

Dr. MAGENNIS, as the Representative of the Apothecaries' Hall, said that the report by the Examination Committee had fallen upon him like a bomb. He had been perfectly bona fide in giving notice of a motion to the effect that the time had come when any exceptional treatment of the Apothecaries' Hall of Dublin as regards inspection of its examinations and reports upon them should cease. The grounds for giving that notice were the reports of the examiners and the inspectors appointed by the Council, and the fact that a report was given by a gentleman appointed and paid by the Council. He thought it would have been more courteous if the Council had appointed some other person than a member of a rival licensing body; but he took the report to be honest, painstaking, and conscientious report, and such a report as one would expect from the high professional status of Dr. Finny. Statements were to be found in the minutes of the Council, containing reports by examiners, to the effect that the examinations by the Apothecaries' Hall might be considered thoroughly adequate, and not inferior in any way to the examinations held by other licensing bodies. That was a sample of the sort of thing that had been said within the last few years. With regard to Dr. Finny's report, he challenged any licensing body to produce a more favourable report than that, conducted in such a manner as it had been conducted, with regard to the Apothecaries' Hall of Ireland. Every sentence of the report almost was in praise of it. He would content himself with reading the final paragraphs of Dr. Finny's report:

I was present at and attended four final examinations in medicine and midwifery—namely, July and October, 1913, January and May, 1914, and a special examination in medicine alone on March 31st, 1914.

I was favourably impressed with the practical character of these examinations, the patient and painstaking conduct of the examiners, and the facilities afforded for clinical work in the wards of a general hospital and, in the case of midwifery, in

those of a special hospital. There was generally an ample supply of material and apparatus.

I extend this commendation to the subjects of medical jurisprudence and hygiene, and also to that of pathology, now that it was given a special place to itself in 1914. Previous to this change it was open to grave objections.

I notice, however, that there is no examination in mental disease, although evidence in clinical instruction in mental diseases is laid down in the regulations (p. 6).

He did not see, in face of that report alone, how the Examination Committee could ask the Council to pass such a recommendation as Sir Charles Ball had read. The Apothecaries' Hall was not in the least afraid to meet the Privy Council on the matter. He did not think it was at all opportune for the Privy Council in such a grave time as this to be occupied with a matter which, perhaps, was of minor importance, and he believed that the Hall was at least entitled to consideration, which he was sure it would receive at the hands of the Council, and that the recommendation would not be passed.

Dr. Mackay thought the report of the Examination Committee called for the most serious consideration of every member of Council. It was their absolute duty to take up the matter. He hoped that the Council would vote for the recommendation and that the consideration of the report would be taken up at some future time, say the next session. The Council would then have time to consider the report of the committee and of the special inspector, and perhaps the objections which some members had consistently taken to the examination in question might by that time be removed.

Sir Charles Ball, in reply, reminded the Council that one of the objections taken on previous occasions as to the assistant examiners, whose reports had been dealt with by Dr. Magennis, was that, though nominally appointed by the Council, these examiners were invariably the representatives suggested by the Apothecaries' Hall. He entirely appreciated Dr. Mackay's remarks, and, while hoping the Council would express an opinion on the facts brought forward in the report, he would support any application for the postponing a report to the Privy Council. A further report should have been before the Council as to recent examinations, a report by the assistant examiners in surgery, and a return by the Apothecaries' Hall on the table approved by the Council. A comparison of that table with the reports of the examiners revealed most extraordinary inconsistencies. He asked for the authority of the Council to enable the Examination Committee to transmit the report of the examiners and the tables to the Apothecaries' Hall asking for its observations thereon, in order that the Committee might report at a future meeting of the Council, which might then have an explanation of some very remarkable features in the tables.

The first recommendation was put and carried.

Sir Charles Ball then moved the second recommendation. The Examination Committee, he said, was quite convinced that it was absolutely necessary that the examinations should continue to be carefully watched.

The recommendation having been seconded, Dr. Magennis moved as an amendment:

> That the time has come when any exceptional treatment of the Apothecaries' Hall of Dublin as regards inspection of its examinations and reports upon them should cease.

He did so, not only on the strength of the reports of the assistant examiners, but of the exceptional manner of appointing them. If the recommendation was postponed for twelve months he, as representing the Apothecaries' Hall, would pledge his word that no act would be done which would not be entirely approved by the Council.

The amendment was not seconded.

The recommendation, on being put to the Council, was carried.

On the motion of Sir Charles Ball, seconded by Dr. Saundby, it was agreed to instruct the Examination Committee to forward the reports of the assistant examiners and the tables to the Apothecaries' Hall for any explanation it might wish to make.

On the motion of Sir Charles Ball the further consideration of the report was deferred until the next session.

It was also agreed to authorize the Examination Committee to communicate with the Apothecaries' Hall for an explanation of certain tables.

The Royal Institute of Public Health.

A report presented by the Public Health Committee was approved. The report was to the effect that Rule 3 [or] (2) (i) of the rules for Diplomas in Public Health did not admit of the inclusion of the Royal Institute of Public Health as a department of public health as a recognized medical school, and that no addition of words without a complete alteration of the rule could effect such admission.

Students' Registration Committee.

The report of the Students' Registration Committee was received, entered on the minutes, and approved. It recommended:

1. That satisfactory evidence as to visitation having been received, Cranleigh School, Exeter School, Highgate School, King's College School, Wimbledon, and the Municipal Secondary School, Ipswich, be added to the list of recognized institutions approved by the Council.
2. That the Municipal Technical School, Blackburn, and the Technical Institute, Ipswich, be added to the list of recognized institutions approved by the Council.

Select Committee on Patent Medicines.

Dr. Langley Browne, the Chairman of the Unqualified Practice Prevention Committee, presented a report of the Committee on the report of the Select Committee on Patent Medicines. The report, after setting out the recommendations of the Select Committee for the amendment and better administration of the law on the subject, advised the Council to convey to the Lord President of the Privy Council an expression of its complete approval of the recommendations of the Select Committee, and to recommend to the Government through the Lord President the necessity for the creation of a Ministry of Public Health in pursuance of the recommendations of the Select Committee.

Elections to Committees.

The following were elected the representatives of the Irish Branch Council on the Committees indicated:

Penal Cases Committee: Dr. Little.
Education Committee: Sir Lambert Ormsby.
Public Health Committee: Dr. Magennis.

Votes of Thanks.

At the conclusion of the business for the session on November 26th a vote of thanks was unanimously accorded to the President for his conduct in the chair.

Meetings of Branches and Divisions.

[*The proceedings of the Divisions and Branches of the Association relating to Scientific and Clinical Medicine, when reported by the Honorary Secretaries, are published in the body of the* Journal.]

WILTSHIRE BRANCH.

The inaugural meeting of the Wiltshire Branch was held at the Trowbridge Town Hall on November 25th, when fourteen members were present. Dr. Rumboll was elected to the chair.

Rules.—The model rules and ethical rules were adopted.

Election of Officers.—The following officers were elected:

President: Dr. Tubb Thomas.
President-elect: Dr. Kemp.
Vice-Presidents: Dr. Stratton, Dr. Haydon.
Honorary Secretary: Dr. Bond.

Representation on Representative Body.—It was resolved to recommend that there should be two Representatives for the Branch—one for the Salisbury Division, and one for the Trowbridge and Swindon Divisions combined.

Annual Meeting.—An invitation from the Salisbury Division to hold the next annual meeting in Salisbury was accepted.

Grant for 1914-15.—It was resolved that a grant of 4s. per member should be applied for.

Meetings.—Dr. Fleming proposed that a meeting of the Branch be held during the winter, to which members of the R.A.M.C. stationed in the county should be invited, and at which a member of the R.A.M.C. should be asked

to read a paper to open a discussion, and that they should be entertained to luncheon or dinner. The meeting agreed to the proposal, which was referred to the Branch Council.

Association Notices.

CHANGES OF BOUNDARIES.

AMALGAMATION OF DUNDEE AND FORFARSHIRE DIVISIONS. The following changes have been made in accordance with the regulations of the Association, and take effect as from the date of publication of this notice:

(*a*) That the Dundee Division and the Forfarshire portion of the Forfarshire Division be amalgamated to form a Branch of one Division, to be known as the Dundee Branch;

(*b*) That Bervie and district, at present contained within the area of the Forfarshire Division, be transferred to the Aberdeen Division and Branch.

Representation in Representative Body.—The Forfarshire and Dundee Divisions being at present grouped to form one constituency in the Representative Body, no change will be involved.

BRANCH AND DIVISION MEETINGS TO BE HELD.

NORTH WALES BRANCH: SOUTH CARNARVON AND MERIONETH DIVISION.—Drs. D. R. Griffith (Portmadoc) and E. Lewys-Lloyd (Towyn) give notice that a special meeting of the Division will be held at the Cors-y-gedol Hotel, Barmouth, on Thursday, December 10th, at 1.30 p.m. Luncheon at 1 p.m. All members of the Division are requested to make every effort to attend this meeting. Agenda: Correspondence; to appoint Chairman for 1914-1915, Vice-Chairman, Secretary, Representatives on Branch Council, and members of the Executive Committee of the Division; and any other business. Members desiring lunch are requested to communicate with Dr. Lewys-Lloyd, Towyn, by Tuesday, December 8th.

SOUTH MIDLAND BRANCH: BUCKINGHAMSHIRE DIVISION.—Dr. Arthur E. Larking, Honorary Secretary (Buckingham), gives notice that a meeting of the Division will be held at the Red Lion Hotel, High Wycombe, on Tuesday, December 8th, at 2.15 p.m., preceded by lunch at 1.30 (charge 2s. 6d.). There will be a paper on a medical or surgical subject, and discussions on the following will take place:—(1) Private Clubs: Are they necessary, and how should they be managed? Introduced by Dr. Stalterforth. (2) Voluntary Aid Detachments and the relation of Private Practitioners to them. Introduced by Dr. Baker. (3) Dr. Bradbrooke will give a summary of the last Annual Representative Meeting. (4) The Relation of the Association to the Local Medical and Panel Committees. Members are invited to attend, and also to bring one or more medical friends with them. Dr. Larking would be glad to hear from members wishing to bring any matter forward for discussion, and the names of those who will attend the luncheon. Tea will be provided.

THE LIBRARY OF THE BRITISH MEDICAL ASSOCIATION.

BOOKS NEEDED TO COMPLETE SERIES.

THE Librarian will be glad to receive any of the following volumes, which are needed to complete series in the Library:

American Association of Genito-Urinary Surgeons. Transactions. 1906.
American Climatological Transactions. Vols. 1, 4, 5, 6.
American Dermatological Association Transactions. Vols. 5, 7, 8, 11, and 29.
American Journal of the Medical Sciences. New series, vols. 4, 5, 1842-3; vols. 14, 15, 1847-8; vols. 18-30, 1850; vol. 33, 1857; vol. 46, 1864-5; vol. 59; or any parts of these vols.
American Journal of Ophthalmology. Vols. 1-9.
American Laryngological Association. Transactions. Vols. 1-6, 8-9.
American Medical Association. Transactions, 2, 4, 6, 7, 11, 12, 14, 15, 16, 19, 20, 22, 31, after vol. 33, and the *Journal*, up to 1903 inclusive.
American Medico-Psychological Association. Transactions. Vol. 13, 1906.
American Otological Society. Transactions. Vol. 3, part 2, 1883.
American Public Health Association. Transactions. Any vols.
Watt. Bibliographia Britannica, 4 vols., 1824.
Yearbook of Pharmacy, 1912.

LOCAL MEDICAL AND PANEL COMMITTEES.

LIVERPOOL.

PANEL COMMITTEE.

A MEETING of the Liverpool Panel Committee was held at the Liverpool Medical Institution on November 17th, when Mr. F. CHARLES LARKIN was in the chair, and twenty other members were present.

Expenses of Pharmaceutical Committee.—A letter was read from the Secretary of the Liverpool Pharmaceutical Committee regarding estimate of expenses of that Committee, and explaining some items about which the Panel Committee had inquired. It was resolved that the estimate of the Pharmaceutical Committee be approved.

Advertising on Bottle Labels.—A communication was read from the Secretary of the Pharmaceutical Committee regarding alleged advertising on labels of bottles supplied to insured persons, and alleged dispensing of smaller quantities than prescribed. It was resolved:

That the Secretary of the Panel Committee obtain particulars of these practices and forward the same to the Pharmaceutical Committee.

Repetitions and Duplicate Prescriptions.—A letter was read from the Insurance Commissioners in reply to a communication addressed to them by the Secretary of the Committee on November 5th. The reply stated that the Commissioners were communicating with the Liverpool Insurance Committee on the matter of "Rept. Mist.," and duplicate prescriptions.

Medical Attendance on Hospital Staffs.—A letter was read from the Administrative Officer of the Liverpool Insurance Committee, stating that the Medical Benefit Subcommittee would be glad to consider any suggestions of the Panel Committee regarding arrangements for attendance on hospital staffs. A reply was directed to be forwarded stating that in the view of the Committee employees of hospitals and kindred institutions should have full liberty to choose their doctor from the whole panel, in the same manner as other insured persons. It was resolved:

That the Chairman and Secretary report the views of the Panel Committee to the Administrative Officer.

Allocation.—The circular letter sent by the Administrative Officer to the Liverpool panel practitioners regarding allocation was read and it was resolved:

That the Secretary offer to assist the Administrative Officer in any difficulties he may have with practitioners in this matter.

Checking Prescriptions.—It was resolved:

That the appointment of representatives on the Joint Committee to be formed for the purpose of making arrangements in regard to the checking of prescriptions be deferred until the terms of agreement constituting the Committee are settled.

Co-ordination of Work of Local Medical and Panel Committees.—A letter was read from the British Medical Association regarding the work of the Local Medical and Panel Subcommittee of the Insurance Act Committee, together with a series of questions to which the Secretary was instructed to reply. It was further resolved:

That the Secretary keep in close touch with the above Subcommittee, forwarding such agenda, minutes, and circulars as he may consider advisable.

Stock Mixtures.—Letters from the Administrative Officer and Secretary of the Pharmaceutical Committee having been read, it was resolved:

That the Administrative Officer be asked if the views expressed in his letter are those of the Liverpool Insurance Committee, as it is understood that this question has not yet been considered by that body.

That the Panel Committee is strongly of opinion that the suggestion of the Circular 49 I.C. should be carried out.

BATH.

A MEETING of the Panel Committee was held on December 1st at the Royal United Hospital, Bath.

Checking Prescriptions.—On the motion of Dr. MARSH, seconded by Dr. DUNN, it was resolved:

That the Bath Insurance Committee be informed that the Panel Committee is willing to adopt the suggestion of the

Insurance Commissioners that the cost of checking prescriptions should be borne equally by the Insurance Panel and Pharmaceutical Committees, but is not willing to accept the suggestion of the Bath Insurance Committee that the whole cost of the checking should come out of the medical benefit and drug funds.

GLAMORGAN.

PANEL COMMITTEE.

A MEETING of the Glamorgan Panel Committee was held in the County Hall, Cardiff, on November 24th. Dr. J. MORGAN REES was in the chair.

Excessive Prescribing.—A long discussion took place on cases of alleged excessive prescribing as to which the Pharmaceutical Committee asked the Panel Committee to take action under Regulation 40. It was agreed to ask two of the doctors concerned for a report on the cases.

Drug Tariff.—The Panel Committee discussed with the Pharmaceutical Committee the tariff for next year, the basis for surcharging, and the mode of checking, since the present system of checking in London had not been found satisfactory. It was decided to recommend that the checking should be done by the county of Glamorgan or by a central bureau in Wales, the former method being considered preferable.

Transference of Patients.—A circular was read from the Welsh Insurance Commissioners in regard to insured persons on the lists of practitioners serving with His Majesty's Forces who may wish to transfer to another practitioner. It was unanimously agreed to send a letter to each practitioner in accordance with the recommendations of this circular.

ROXBURGHSHIRE.

A MEETING of the Panel Committee of Roxburghshire was held at St. Boswells on November 24th. Dr. SAMUEL DAVIDSON (Kelso) was appointed interim chairman during the absence of Dr. Cullen at the war.

Checking of Prescriptions.—Dr. CARLYLE JOHNSTONE reported that the proposed bureau for checking prescriptions was discussed at a recent meeting of the Insurance Committee, when it was decided by a large majority to approve of the scheme.

Agreements.—Dr. CARLYLE JOHNSTONE intimated that at a meeting of the Medical Benefit Subcommittee sympathy was expressed with the position taken up by the Panel Committee in objecting to the proposal made by the Commissioners to give only six weeks' notice of any alterations in the agreements for next year.

Treatment of Tuberculosis.—Dr. CARLYLE JOHNSTONE also informed the committee that the subject of prescribing for patients suffering from tuberculosis had been discussed at the recent meeting of the Insurance Committee in connexion with the complaint made by the Commissioners regarding the alleged prescribing of medical foods for patients not recommended for domiciliary treatment. Dr. Johnstone said the Commissioners had stated, in reply to an inquiry, that the medicines which might properly be prescribed for insured persons suffering from tuberculosis who were not recommended by the committee for sanatorium benefit were those referred to in Section 8 (1) (*a*) of the National Insurance Act, 1911.

Mileage Grants.—A letter was read from the County Insurance Committee intimating that of the £870 assigned to the Roxburgh County Insurance Committee out of the mileage grant for 1914 an order for £652 had been received, and the scheme of distribution was approved. In view of the Panel Committee having taken the distribution of the mileage into its own hands with the consent of the Insurance Committee, the clerk was instructed to open a bank account, and distribute the sums due to each panel practitioner by cheque.

Local Medical and Panel Subcommittee of the British Medical Association.—A circular was submitted from the British Medical Association, intimating the appointment of a Local Medical and Panel Subcommittee to keep in close touch with, and assist in the co-ordination of, all Local Medical and Panel Committees. The Committee welcomed the appointment of the Subcommittee, and considered that if it carried out the scope of work outlined in the circular, it would be of inestimable assistance to Local Medical and Panel Committees throughout the kingdom.

THE MODEL AGREEMENT BETWEEN PANEL PRACTITIONERS AND INSURANCE COMMITTEES.

THE Insurance Commissioners have issued the revised model agreement between panel practitioners and Insurance Committees (Form Med. 29, revised, January, 1915). Taken as a whole, there is but little practical difference between this and the form now in operation, except in the following particulars. The first alteration occurs in Sect. 2 (2), which has been considerably shortened. That subsection commences by stating that the practitioner shall not accept from his panel patients any fee, except as provided in the agreement, but this was followed in the full form of 1914 by a proviso that nothing in the agreement should prohibit the practitioner receiving any agreed fees from patients who, though living at a considerable distance, voluntarily agreed with that particular practitioner to attend them, in spite of the fact that another panel practitioner might have been obtained who lived much nearer to the insured person. This proviso was omitted in several areas even in the year 1914, and its final disappearance from the model for 1915 can hardly prevent any such private arrangements, which are purely voluntary on the part of the insured.

In Section 7 the provision of the 1914 agreement that certificates shall be written in ink and signed in ink by the practitioner in his own handwriting has now finally disappeared. It has been mostly quite inoperative, and its disappearance will make no difference in actual practice.

In the old agreement a practitioner desiring to withdraw from the panel had to give four weeks' notice before the beginning of the succeeding year, but, in accordance with the alteration in Regulation 17 (2) made at the beginning of 1914, six weeks' notice will in future have to be given.

With regard to certificates, an important alteration occurs in the first schedule of the agreement. In the form for 1914 it was provided that such certificates had to be given as are required by the society of which the patient is a member. This particular provision is now altered to read as follows: "That certificates shall be furnished to every insured person where he so desires and requests in such form, on such occasions, and generally in such manner as the Commissioners may determine for the purposes of any claim . . . and that unless and until the Commissioners so determine, such certificates shall be furnished for the purposes aforesaid as are required to be furnished in pursuance of the rules of the society of which the insured person is a member, or of the Committee, as the case may be, etc." It is understood that the object of this alteration is to allow the Commissioners to introduce a uniform system of certificates which may be binding on all the societies and committees, instead of the multitudinous variety of forms now in use, some of which may be good, though others entail an unnecessary amount of trouble to practitioners. The sooner such a uniformity is introduced by the Commissioners the better.

In the second schedule only Section 3 now remains, the first two sections of the 1914 form, which occurred in many areas, being omitted as being practically redundant. In other respects than those mentioned above, the 1915 agreement remains practically the same as that of the present year.

THE DRUG FUND IN SOUTH WALES.

GLAMORGANSHIRE.

AT a meeting of the Glamorgan Insurance Committee it was reported that the total sum available in respect of the drug fund at 1s. 6d. per insured person, and the drug suspense fund at 6d. per insured person, was £22,800, from which certain deductions, including £3,878 to doctors for dispensing, had to be made, leaving the amount of £16,420 available for the payment of chemists' accounts. As against this the chemists' accounts up to October 11th totalled £18,526, and it was estimated that by the end of the year they will amount to £24,252, showing a deficit on the year's working of £8,032. The average cost of the prescriptions dispensed to October 11th was 9.68d., as compared with 7.80d. for the corresponding period of last

year. Examination of the prescriptions dispensed by some chemists in the two districts where the average cost was highest last year showed that the average cost of the prescriptions by the doctors concerned varied from 9.84d. to 1s. 3.77d. per prescription. The accountant made the following observations on his report:

The cost of drugs, etc., supplied to insured persons in receipt of domiciliary treatment of tuberculosis is payable out of the sanatorium fund by the Welsh National Memorial Association if the insured persons have been recommended to them by the committee for treatment. There is not the slightest doubt that a considerable amount has been charged against the drug fund during the year for extracts of malt, hypophosphites, cod-liver oil, emulsions, etc., which is a proper charge against the sanatorium fund, and the committee should consider the desirability of transferring an amount from the sanatorium fund to cover these charges. The supply of dressings in bulk to doctors since July last has been a very heavy drain upon the drug fund, and it seems to me that the committee should place a limit on the quantities to be obtained by doctors, based on the number of insured persons on their respective registers.

The Committee had before it a resolution passed at a meeting of panel chemists expressing regret that the Pharmaceutical Committee had not been in possession of the necessary information at an earlier date.

Dr. W. E. THOMAS said that in Glamorgan a mining community had to be dealt with, amongst whom sickness was far above the average and the number of accidents enormous. The chairman observed that this was the root of the mischief, but a member of the Committee expressed the opinion that there was over-prescribing.

The CHAIRMAN of the Finance Committee moved that the Committee should co-operate with the Panel Committee and Pharmaceutical Committee in order to secure as much money as possible for the chemists under Section 40, which provided that doctors could be surcharged when there had been over-prescribing. The deficiency, however, he said, could not be made up in that way, and he proposed that the Commissioners should be approached in reference to the matter. The motion was seconded by Dr. W. E. THOMAS and passed. It was also agreed to appoint three members respectively of the Insurance Committee, the Finance Committee, the Medical Benefit Committee, and the Pharmaceutical Committee to make immediate investigation and report to a special meeting of the Insurance Committee.

MONMOUTHSHIRE.

A DULY-CONVENED meeting of Monmouthshire panel practitioners was held at St. James's Hall, Pontypool, on November 26th. Dr. J. W. MULLIGAN was in the chair and there was a fair attendance. Dr. E. Ryan acted as Secretary.

Drug Fund.—The CHAIRMAN explained that the meeting was called to consider the serious condition in which the Drug Fund for the county stood; there would, he said, probably be a very large deficiency at the end of the year. The SECRETARY gave official figures by which it was seen that some doctors had spent more than the 2s. in the first quarter of the year. One had spent 2s. 9d. per insured person for that quarter. A long discussion ensued, and the general feeling was that there had been excessive prescribing. Eventually the following resolutions were adopted:

1. That at the end of the year, if it be found that the 2s. per insured person be insufficient to pay the chemist's accounts, the deficiency shall be surcharged on those panel practitioners who have exceeded the 2s. limit in proportion to such excess.
2. That after this year the Monmouthshire Panel Committee shall recommend for surcharge all panel practitioners who exceed the sum provided by law for the payment of chemist's accounts.
3. That practitioners, the cost of whose prescriptions have exceeded the 2s. limit, shall not receive any of the Floating Sixpence Fund, and other practitioners shall be paid from that fund in proportion to the charges their prescriptions have made upon it.

INSURANCE ACT: IRELAND.

OUTWORKERS.

THE report of the Committee appointed to consider and advise in regard to the application of the National Insurance Act to outworkers in Ireland was issued as a White Paper last week. On a first consideration of the problem submitted to the Committee, it appeared desirable to recommend the inclusion within the scope of the National Insurance Act of all outworkers in Ireland, under conditions similar to those which apply to the outworkers in England, Wales and Scotland. There is, however, a grave consideration which militates strongly against the immediate adoption of a scheme for the insurance of all outworkers—namely, the fact that the Act, as applied to Ireland, makes no provision for medical benefit. The report of the Committee appointed to consider the extension of medical benefit to Ireland recommends the exclusion from any such extension of wide areas, including most of the districts in which the peasant outworkers reside. If, therefore, this proposal is carried into effect, these rural outworkers, for probably a very considerable time, will be almost wholly excluded from participating in medical benefits. The Committee considers that some amendment of the Act will, in the course of time, be found desirable to meet the necessities of such workers, but holds that at the present time the conditions appertaining to the Irish peasant outworkers excluded by reason of Section 81 (4) of the National Insurance Act are such that no practicable scheme can be suggested which would enable them to benefit adequately from inclusion under the Act. The Committee accordingly recommends that no change should at present be made in the application of the Act to outworkers in Ireland, those mainly dependent on their outwork remaining insurable, and the rest continuing to be regarded as outside the scope of the Act.

INSURANCE ACT IN PARLIAMENT.

Panel Chemists (London).

MR. TOUCHE asked why a deduction of 40 per cent. has been made by the Insurance Committee for London from the accounts of panel chemists for the month of August.—Dr. Addison said that the question was founded on a misapprehension. Any such monthly payments as those referred to were advances only on account of the total remuneration due to each chemist in respect of the whole year. The rate of which these advances were made was a matter for agreement between the Insurance Committee and the committee representing the panel chemists, and did not necessarily bear any relation to the actual remuneration payable.

Stock Mixtures.

Mr. Keir Hardie asked whether a protest had been received from the Merthyr Tydvil Borough Insurance Committee against having the new model, or stock medicine, clause of the Insurance Commissioners forced upon them: whether this proposal was a return to the discarded Poor Law system; and what action it was proposed to take to safeguard the rights of local Insurance Committees in this matter.—Dr. Addison said that the reply to the first part of the question was in the affirmative. The provision referred to, however, which merely related to the pricing of certain mixtures, in no way affected the standard of quality either of the medical treatment or of the drugs required to be supplied, which continued to be subject to the same conditions and safeguards as hitherto. There was no ground for the apprehensions expressed in the question.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following notifications are announced by the Admiralty: Fleet Surgeons OSWALD REES to the *Powerful*, temporary, vice Boyan; WALTER H. O. GARSE to the *Pembroke*, additional for disposal; FREDERICK F. MAHON to the *Vivid*, additional for disposal; MONTAGUE H. KNAIT to the *Bloke*, vice Robertson; ERNEST C. LOMAS, M.B., F.R.C.S., D.S.O., to hospital ship *Garth Castle*. Surgeons: J. L. CHRISTIAN to the R.M. Artillery, vice Matthews; MAURICE S. MOORE, M.D., to R.M. Division, Plymouth, vice Joy. MARK J. ATEEN to the R.M. Division, Chatham, vice Cheesman; WILLIAM H. MURRAY to the *Wildfire*, for Barracks and Yard, Sheerness, vice Ormesby; JOSEPH A. MAXWELL, M.B., to the *Impregnable*, vice Vickery; H. B. PARKER, M.B., additional for Chatham Hospital, vice Creaser. Temporary Surgeons: A. F. BARRETT, G. F. JONES, M.B., C. H. BROWNE, G. W. KING to the *Pembroke*, additional for Chatham Hospital; CHARLES A. ANDERSON to the *Victory*, additional for R.N. Division; FREDERICK C. S. BROOME, MALCOLM B. HAY, and GODFREY H. LATHAM to the *Victory*, for disposal; HENRY HEMSTED, M.D., and PETER W. CARRUTHERS, M.B., to the *Hyacinth*, additional for Cape Hospital, additional for disposal: JAMES W. K. BRUCE to the *Pembroke*, for

disposal; ROGER BUDDLE, M.D., to the *Actaeon*, vice LaNau; J. T. J. BRUCE to the *Magnificent*, vice Macpherson; EDWIN B. BAILEY to the *Vernon*, additional for R.N. Air Service; ALFRED R. MACMULLIN to the *Pembroke III*, for R.N. Air Service; THOMAS H. CRESSWELL to hospital ship *Garth Castle*; C. W. WHEELER-BENNET to the hospital ship *Garth Castle*; THOMAS S. HARRISON to the *Victory*, additional for Portland Hospital, vice Briscoe. Appointed temporary Surgeons: CHARLES S. ARCHER, HERBERT R. BASTARD, ARTHUR L. DYKES, JAMES A. MCVAE, WILLIAM L. ANDERSON, M.B., HERBERT DANYERS.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Probationers: ERIC A. FIDDIAN to the *Blake*, additional for the *Nereide*; ALFRED F. WYATT to the *Blake*, additional for the *Fury*; PHILIP E. F. FROSSARD to the *Blake*, additional for the *Tadpole*; GILBERT BLURTON to the *Hecla*, for the *Cockatrice*; HERBERT W. EDDISON to the *Hecla*, additional for the *Acasta*; CYRIL J. C. COOKE to the *Hecla*, additional for the *Ambuscade*; STEWART N. TOULMIN to the *Blake*, additional for the *Ruby*; CECIL N. RATCLIFFE to the *Blake*, additional for the *Acorn*; PAUL R. RIGGALL to the *Blake*, additional for the *Brisk*; ARTHUR G. BRETT to the *Blake*, additional for the *Alarm*; STEWART R. JOHNSTON to the *Blake*, additional for the *Nymphe*; A. J MUIRHEAD to the *Hecla*, additional for the *Midge*; Surgeons HERBERT L. MURRAY, ALFRED E. W. HIRD, and LIONEL S. ASHCROFT, M.B., to the hospital ship, *Garth Castle*.

MILES PRIOR, M.B., to be Surgeon for temporary service.

ARMY MEDICAL SERVICE.

LIEUTENANT-COLONEL ALFRED P. BLENKINSOPP to be Assistant Director-General.

Captain Sir BERTRAND E. DAWSON, K.C.V.O., M.D., 2nd London General Hospital, Territorial Force, to be temporary Colonel.

ROYAL ARMY MEDICAL CORPS.

Lieutenant-Colonel CHARLES H. BURTCHALL, M.B., is restored to the establishment.

The following are granted temporary rank as indicated whilst serving with the Allied Forces Base Hospital: To be Majors: ARTHUR G. WHITEHORNE-COLE, BERNARD HUDSON, M.D., PHILIP M. HEATH, F.R.C.S. To be Captains: NORMAN DUGGAN, M.B., F.R.C.S., SIDNEY R. RADLEY, M.B., F.R.C.S., ERNEST D. ROBERTS. To be Lieutenants: DOUGLAS E. DERRY, M.B., OSWALD T. DINNICK, M.D., WILLIAM M. S. ROBINSON, F.R.C.S.E., ROBERT H. LISCOMBE.

To be temporary Lieutenants: SAMUEL E. PICKIN, M.B., ROBERT S. TAGGART, M.B., JOSEPH G. JOHNSTON, M.B., JOHN H. O'NEILL, ANDREW R. HAMILTON, M.B., HERBERT EMERSON, M.B., ERNEST F. W. BUCKELL, RICHARD O. H. JONES, RICHARD L. BARWICK, JOHN I. RUSSELL, M.B., HAROLD T. MANT, M.B., F.R.C.S., GEORGE E. MILES, JAMES B. MITTON, M.B., JAMES P. O'FLYNN, M.B., WILLIAM ELWOOD, M.B., KENNETH J. YEO, ARTHUR N. HOOPER, WALTER H. KIEP, M.B., FREDERICK CARSON, M.B., ALEXANDER JOHN KENDREW, M.B., D'ARCY R. W. COWAN, M.B., CHARLES F. CONSTANT, HORACE P. W. WHITE, M.B., GEORGE D. YATES, M.B., FRANCIS J. MORRIS, PHILIP L. DAVIES, M.B., ROBERT C. MACLACHLAN, M.B., ARTHUR E. MOORE, M.D., ALBERT E. M. WOOLF, M.B., F.R.C.S., ATHELSTANE NOBBS, M.D., MAURICE C. TURIANSKY, M.B., JOHN B. FISHER, M.B., WALLIS C. P. BREMNER, M.B., ARCHIBALD L. MCLEAN, M.D., ANDREW B. RAFFLE, M.D., HENRY CATLING, THOMAS F. MURPHY, CECIL CLARKE, M.D., PETERSWALD PATTISON, M.B., JOHN I. SHEPHERD, M.D.

Lieutenants ROBERT D. M. MACPHERSON, M.B., and JOHN B. MOOR, M.D., have resigned their temporary commissions.

TERRITORIAL FORCE.

ROYAL ARMY MEDICAL CORPS.

London Mounted Brigade Field Ambulance.—To be Lieutenants: FREDERICK P. RANKIN, M.B., THOMAS W. S. PATERSON, EDWARD B. HARTNELL.

First London (City of London) Sanitary Company.—To be Lieutenants: JOHN H. BALDWIN, EVELYN A. COOPER.

LIEUTENANT-COLONEL JAMES C. RENTON M.D., from the Fourth Scottish General Hospital, to be Lieutenant-Colonel.

Captain WILLIAM A. HOOTON, from the Second Western General Hospital, to be Captain.

Vital Statistics.

THE REGISTRAR-GENERAL'S QUARTERLY RETURN.

[SPECIALLY REPORTED FOR THE "BRITISH MEDICAL JOURNAL."]

THE Registrar-General has just issued his returns relating to the births and deaths in the third quarter of the year, and the marriages registered during the three months ending June last. The marriage-rate during that period was equal to 17.4 per 1,000 annually of the population, and was 1.2 per 1,000 above the mean rate in the corresponding period of the ten preceding years.

The 226,998 births registered in England and Wales last quarter were equal to an annual rate of 24.1 per 1,000 of the population, estimated at 37,302,983 persons in the middle of the year; this rate is 1.8 per 1,000 below the average for the ten preceding third quarters. The birth-rates in the several counties last quarter ranged from 16.7 in Sussex, 16.8 in Rutlandshire, 17.4 in Cardiganshire, 17.9 in Carnarvonshire, and 18.0 in Dorsetshire and in Somersetshire, to 28.3 in Northumberland, 29.0 in Staffordshire, 29.6 in Glamorganshire, 30.1 in Monmouthshire, and 31.8 in Durham. In ninety-seven of the largest towns the birth-rate averaged 25.5 per 1,000, and ranged from 13.2 in Bournemouth, 15.3 in Eastbourne, 15.5 in Hastings and in Southport, and 15.9 in Ilford and in Bath, to 32.7 in Rhondda, 32.8 in Stoke-on-Trent, 33.2 in Middlesbrough, 33.6 in Sunderland, and 34.1 in St. Helens; in London the birth-rate was 24.9 per 1,000.

The excess of births over deaths last quarter was 111,445, against 81,557, 117,552, and 111,976 respectively in the corresponding quarter of the preceding years. From a return issued by the Board of Trade it appears that the passenger movement between the United Kingdom and places outside Europe resulted in a net balance outward of 27,314 British and of 30,619 alien passengers: the movement between the United Kingdom and the Continent of Europe resulted in an inward balance of 76,715 passengers; thus there was a net balance inward of 18,782 persons.

The 115,553 deaths registered in England and Wales during the quarter under notice were equal to an annual rate of 12.3 per 1,000; in the corresponding quarters of the ten preceding years the rate was 13.2 per 1,000. The death-rates in the several counties last quarter ranged from 8.2 in Rutlandshire, 8.8 in Dorsetshire, 8.9 in Middlesex, 9.1 in Surrey, 9.4 in Wiltshire, and 9.5 in Buckinghamshire, to 13.6 in the East Riding of Yorkshire, 13.7 in the West Riding, 14.2 in the North Riding, 14.6 in Northumberland, 14.7 in Lancashire, and 15.9 in Durham. In ninety-seven of the largest towns the death-rate averaged 13.2 per 1,000, and ranged from 7.2 in Bournemouth, 7.4 in Ealing and in Ilford, 7.5 in Southend, and 7.8 in Hornsey, to 17.7 in Stoke-on-Trent and in Wigan, 18.6 in Middlesbrough and in Gateshead, 18.7 in Bootle, and 19.1 in Liverpool; the death-rate in London was 13.3 per 1,000.

The 115,553 deaths from all causes last quarter included 412 which were attributed to enteric fever, 1,694 to measles, 567 to scarlet fever, 1,623 to whooping-cough, 1,058 to diphtheria, 11,181 to diarrhœa and enteritis among children under 2 years of age, and 1 to small-pox. The mortality from enteric fever was rather more than half the average, while that from measles, scarlet fever, whooping-cough, and diphtheria was only slightly below the average.

The rate of infant mortality, measured by the proportion of deaths among children under 1 year of age to registered births, was equal to 112 per 1,000, which was 22 per 1,000 less than the average in the ten preceding third quarters. Among the several counties the rates of infant mortality ranged from 46 in Dorsetshire, 51 in Oxfordshire and in Westmorland, 54 in Wiltshire, 55 in Somersetshire, and 56 in Buckinghamshire and in Radnorshire, to 130 in the East Riding of Yorkshire, 135 in the North Riding, 136 in Lancashire, 137 in the West Riding, 143 in Northumberland, and 172 in Durham. In the ninety-seven large towns the rate of infant mortality averaged 128 per 1,000, and ranged from 39 in Bournemouth, 43 in Bath, 52 in Eastbourne, and 53 in Ealing and in Gillingham, to 193 in Wigan, 196 in Gateshead, 199 in Preston, and 200 in Barnsley; in London the rate of infant mortality was 127 per 1,000.

The death-rate among persons aged 1 to 65 years of age was equal to 6.8 per 1,000 of the population at this group of ages; in the ninety-seven large towns the death-rate at these ages averaged 7.5 per 1,000, and ranged from 3.9 in Ealing, 4.0 in Ilford, Eastbourne, and Bournemouth, and 4.2 in Hornsey, to 10.0 in Sunderland, 10.3 in Oldham, 10.9 in Bootle, 11.1 in Middlesbrough, and 11.8 in Liverpool.

Among persons aged 65 years and upwards the death-rate was 63.8 per 1,000; the rate in the ninety-seven large towns averaged 65.9 per 1,000, and ranged from 34.6 in Exeter, 40.8 in Bournemouth, 45.6 in

Southend, 46.9 in Devonport and 47.5 in Swindon, to 93.3 in Bolton, 94.0 in Stockton-on-Tees, 95.8 in St. Helens, 96.9 in Huddersfield, and 102.4 in Warrington.

The mean temperature of the air last quarter was above the average in all parts of the country, the rainfall was below the average, and bright sunshine was more prevalent than in the corresponding quarter of either of the two preceding years.

HEALTH OF ENGLISH TOWNS.

In ninety-seven of the largest English towns 7,943 births and 5,760 deaths were registered during the week ended Saturday, November 28th. The annual rate of mortality in these towns, which had been 13.4, 13.0, and 14.3 per 1,000 in the three preceding weeks, further rose to 16.6 per 1,000 in the week under notice. In London the death-rate was equal to 16.4, against 13.9, 13.3, and 14.6 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 5.2 in Ilford, 7.5 in Reading, 8.5 in Enfield, 8.7 in Lincoln, 8.8 in Hornsey, and 8.9 in Ipswich, to 22.9 in Barrow, 23.2 in Rhondda, 23.3 in Newcastle-on-Tyne, 23.6 in Liverpool, 24.8 in Plymouth, and 25.5 in Rotherham. Measles caused a death-rate of 1.2 in Liverpool, 1.3 in Preston and in Rhondda, 1.4 in Plymouth, 2.1 in Oldham, 2.4 in Wallasey, 4.0 in Wigan, and 5.1 in Newcastle-on-Tyne. The deaths of children (under 2 years) from diarrhoea and enteritis, which had been 169, 131, and 138 in the three preceding weeks, fell to 102, and included 28 in London, 8 in Birmingham, 8 in Manchester, and 7 in Liverpool. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 54, or 0.9 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of this number, 13 were recorded in Birmingham, 10 in Liverpool, 5 in Bootle, 3 in St. Helens, and 3 in Blackburn. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 4,769, 4,976, and 5,035 at the end of the three preceding weeks, further rose to 5,035 on Saturday, November 28th; 623 new cases were admitted during the week, against 690, 751, and 627 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

In the sixteen largest Scottish towns 1,093 births and 808 deaths were registered during the week ended Saturday, November 28th. The annual rate of mortality in these towns, which had been 15.8, 15.2, and 16.6 per 1,000 in the three preceding weeks, rose to 18.4 in the week under notice, and was 1.8 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 7.6 in Kirkcaldy, 8.8 in Motherwell, and 13.5 in Edinburgh, to 21.5 in Perth, 24.3 in Hamilton, and 24.9 in Dundee. The mortality from the principal infective diseases averaged 1.9 per 1,000, and was highest in Dundee and Aberdeen. The 397 deaths from all causes in Glasgow included 22 from whooping-cough, 13 from scarlet fever, 6 from infantile diarrhoea, 3 from diphtheria, 1 from measles, and 1 from enteric fever. Six deaths from diphtheria were recorded in Edinburgh, and 2 in Aberdeen; 2 deaths from measles in Dundee, and 2 in Aberdeen; and 6 deaths from scarlet fever in Aberdeen, and 3 in Dundee.

HEALTH OF IRISH TOWNS.

During the week ending Saturday, November 21st, 580 births and 423 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 514 births and 408 deaths in the preceding period. These deaths represent a mortality of 18.3 per 1,000 of the aggregate population in the districts in question, as against 17.7 per 1,000 in the previous period. The mortality in these Irish areas was therefore 4.0 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.1 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 18.8 (as against an average of 16.5 for the previous four weeks), in Dublin city 20.2 (as against 17.4), in Belfast 19.1 (as against 16.7), in Cork 27.9 (as against 18.5), in Londonderry 15.2 (as against 13.7), in Limerick 6.8 (as against 18.9), and in Waterford 32.3 (as against 27.1). The zymotic death-rate was 2.0, as against 1.8 in the previous week.

During the week ending Saturday, November 28th, 594 births and 449 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 580 births and 423 deaths in the preceding period. These deaths represent a mortality of 19.4 per 1,000 of the aggregate population in the districts in question, as against 18.3 per 1,000 in the previous period. The mortality in these Irish areas was therefore 2.8 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 25.7 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 18.9 (as against an average of 17.3 for the previous four weeks), in Dublin city 19.8 (as against 18.5), in Belfast 20.8 (as against 17.2), in Cork 19.7 (as against 21.2), in Londonderry 15.2 (or the same as in the previous period), in Limerick 19.0 (as against 15.6), and in Waterford 20.9 (as against 29.4). The zymotic death-rate was 1.8, as against 2.0 in the previous week.

Hospitals and Asylums.

ENNISCORTHY ASYLUM.

The Resident Medical Superintendent of the Enniscorthy Asylum (Dr. Thomas Draper), in his report for 1913, notes a reduction of eight patients at the close of the year as compared with the number in residence at its commencement, and also a reduction of 2.5 in the daily average. Only twice within the last fifteen years has the daily average shown a decrease, and then only of one, there having been a steady increase in numbers in all the other years, that for 1911 and 1912 having been twelve and nine respectively. Comparing the last three five-year periods, it is found that during the first of these the average increase was 10.2, in the second 8.6, and in the last 5.7. There has therefore been a marked reduction in the rate of increase, whilst last year the reduction was not merely relative but absolute. Such facts encouraged the hope that the asylum might be within measurable distance of being in a position to report a cessation of increase, possibly even a decrease, in the number of insane under detention.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

ROSE.—On November 24th, at Ladye Margaret Cottage, Russell Road, Hall Green, the wife of F. G. Rose, B.A., B.C.Cantab., etc., of a daughter.

DEATHS.

ALEXANDER.—At his residence, at 38, Glenloch Road, Haverstock Hill, N.W., of Robert Reid Alexander, M.D.Aberd., late Medical Superintendent of the London County Asylum, Harwell, on November 14th.

BARENDT.—November 26th, at 65, Rodney Street, Liverpool W., after a short illness, aged nearly 1 year, Peter Julian, the dearly-loved fifth son of Dr. and Mrs. Frank H. Barendt.

DIARY FOR THE WEEK.

MONDAY.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W., 8.30 p.m.—Discussion on Tetanus, with special reference to (*a*) Prophylaxis, (*b*) the Serum Treatment of Established Tetanus-Dosage, and Method of Administration. To be opened by Major D. Embleton, M.B., R.A.M.C.(T.)

WEDNESDAY.

HUNTERIAN SOCIETY.—Clinical and Pathological Evening at the Barbers' Hall, Monkwell Street, E.C., 9 p.m. In addition to Cases and Specimens skiagrams of war wounds will be shown.

FRIDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION FOR THE STUDY OF DISEASE IN CHILDREN, 4.30 p.m.—Specimens and Cases.

CLINICAL SECTION, 8 p.m.—(1) Clinical Cases:—Dr. Alexander Morison: Case of Precordial Thoracostomy for Heart Disease. (2) Paper:—Dr. A. F. Hertz and Mr. C. H. Tagge: Case of Spontaneous Gastro-enterostomy with Subsequent Perforation, and Recovery after Operation.

POST-GRADUATE COURSES AND LECTURES.

Post-graduate Courses are to be given next week at the following schools, colleges, and hospitals:

NATIONAL HOSPITAL FOR THE PARALYSED AND EPILEPTIC, Queen Square, W.C.

[Further particulars can be obtained on application to the Deans of the several institutions, or in some instances from our advertisement columns.]

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, DECEMBER 12TH, 1914.

CONTENTS.

British Medical Association

ANNUAL AND SPECIAL REPRESENTATIVE MEETINGS, JULY, 1914.

SYNOPSIS OF PROCEEDINGS.

[NOTE.—It is particularly requested that Members of the Association will preserve this Synopsis for reference.]

Composition and General Proceedings.

ONE HUNDRED AND SEVENTY-TWO Constituencies entitled to appoint Representatives made returns out of a possible 228. Of the fifty-six Constituencies making no return forty were Constituencies outside the United Kingdom, eleven in England, three in Ireland, and two in Scotland. One hundred and seventy-eight Representatives attended, a decrease of five on last year's attendance at Brighton.

Of sixty-seven members of the Council (including in this number the 1913–14 Council and members of the 1914–15 Council elected at the time of the Meeting) thirty-nine were present, fifteen of them as Representatives.

The Meeting sat on Friday, July 24th, from 10 a.m. to 6.30 p.m., on Saturday from 9.30 a.m. to 6.30 p.m., on Monday from 10 a.m. to 6.30 p.m., and on Tuesday from 9.30 a.m. to 5 p.m.

A Representatives' dinner, organized by the local Entertainments Committee, was held at the Grand Hotel on Friday, July 24th, under the presidency of Dr. T. Jenner Verrall, LL.D. It was well attended, and was successful from every point of view.

Arrangement of Decisions of Meeting.

Mere expressions of approval of reports are not noted in this synopsis, but other decisions of the meeting are classified under the various departments of the Association's work into which they naturally fall, as:

1. Declarations of policy of the Association.
2. Instructions to the Council to take action.
3. References to the Council for consideration and report.

The concluding section of the synopsis contains decisions which affected the internal business of the Meeting itself.

FINANCE.

Reference to Council for Consideration.

Salaries of Clerical Staff.

(Minute 40.)

That the question of the salaries of the Clerical Staff be referred to the Council for favourable consideration.

ORGANIZATION.

(See also under Intended Alterations of Articles and Alterations of By-laws (page 270).)

Declaration of Policy.

Question of making Insurance Act Committee a Standing Committee.

(Minute 63.)

That the addition to the Schedule to the By-laws of a provision setting up a Standing Insurance Act Committee of the Association be left over until the Annual Representative Meeting, 1915.

Instructions to Council.

Grouping of Branches in United Kingdom for 1915–16.

(Minute 82.)

That the Branches in the United Kingdom be grouped for election of Members of Council, 1915–16, in the same way as for 1914–15, the new Kent, Surrey, and Sussex Branches taking the place of the South-Eastern Branch, now discontinued.

Grouping of Branches outside United Kingdom for 1915–16.

(Minute 193.)

That the Branches outside the United Kingdom be grouped for the election of seven Members of Council for the year 1915–16 in the same way as for the year 1914–15, except that Ceylon be grouped with the Indian Branches instead of with Hong Kong and China and Malaya, and that the new Orange Free State, Natal Coastal, Natal Inland, Pretoria and Witwatersrand Branches be incorporated in the group containing the other African Branches.

Grouping of Constituencies in United Kingdom for 1915–16.

(Minute 91.)

That the grouping of constituencies for election of twelve Members of Council, 1915–16, be similar to that for 1914–15, discretion being, however, left to the Council to make any modifications in the grouping rendered neces-

sary or desirable owing to numerical changes or formation of new Divisions or constituencies or modification of those bodies as at present existing.

References to Council for Consideration.

Question of Association Becoming also a Federation for Other Medical Bodies.

(Minute 81.)

That it be referred to the Council to consider what alterations and additions to the Articles and By-laws and in the organization of the British Medical Association in the United Kingdom would be necessary to allow of it becoming also a Federation for other medical bodies formed to safeguard the interests of one or more sections of the medical profession, while allowing all such bodies to continue their separate existence, and to issue a report on the whole matter to the Representative Body.

Assistance to Non-Members in Medico-Political Matters.

(Minute 89.)

That it be referred to the Council to consider and report on what terms and conditions, if any, the assistance, if asked for, of the British Medical Association in medico-political subjects shall be placed at the disposal of any registered medical practitioner who has resigned his membership or has never become a member.

INTENDED ALTERATIONS OF ARTICLES.

Declaration of Policy.

Article 4, as to Eligibility for Membership.

(Minute 68.)

That steps be taken for amendment of Article 4 to read as follows (words proposed to be inserted are shown in italics):

Eligibility.

4. Any Medical Practitioner registered in the United Kingdom under the Medical Acts, *and any Medical Practitioner who does not reside within the area of any Branch of the Association and who though not so registered is possessed of any of the qualifications described in Schedule (A) of the Medical Act, 1858*, and any Medical Practitioner residing within the area of any Branch of the Association situate in any part of the British Empire other than the United Kingdom, who is so registered or possesses such medical qualification as shall, subject to the By-laws, be prescribed by the Rules of the said Branch, shall be eligible as an ordinary Member of the Association. Subject as aforesaid the mode and conditions of election to membership shall from time to time be determined by or in accordance with the By-laws.

Instructions to Council.

Article 3, as to Existing and Future Members.

(Minute 75.)

That steps be taken for the deletion of (obsolete) Article 3 as to existing and future Members of the Association.

Article 9, as to Duration of Membership.

(Minute 76.)

That steps be taken for the deletion of the obsolete words:

"Whether an existing Member or a future Member," in the first and second lines of Article 9, as to duration of membership.

Articles 43 and 44, as to "By-laws" and "Saving for Existing Constitution," respectively.

(Minute 77.)

That steps be taken for the deletion of (obsolete) Articles 43 and 44 as to "By-laws," and "Saving for Existing Constitution," respectively.

Verbal Amendments of Articles.

(Minute 78.)

That steps be taken to make the following verbal amendments in the Articles:

(*a*) *Article 12.*—For present heading "Divisions or Branches" *read* "Divisions and Branches."

(*b*) *Article 28, as to Procedure at General Meetings.*—For "provision as to Referendum hereafter contained" *read* "provisions as to Referendum hereinafter contained."

General Meetings to give Effect to Foregoing Alterations of Articles.

(Minute 69.)

That it be left to the Council to call the two necessary meetings of the Association to carry into effect such resolutions of this Representative Meeting as necessitate alterations of Articles of the Association, at a convenient time.

Referendum and Postal Vote.

(Minute 48.)

Draft new Articles and By-laws submitted by the Council to give effect to the resolutions of the Annual Representative Meeting, 1913, as to referendum and postal vote, were considered, but on being put to the vote did not receive the requisite two-thirds majority.

ALTERATIONS OF BY-LAWS.

Declarations of Policy.

Possible Insurance Members of Branch Councils and of Division Executive Committees.

(Minutes 45-7.)

That the following paragraphs be incorporated in By-laws 16 and 18 (now 19), as to composition of Branch Councils and Division Executive Committees, respectively, to be paragraphs 16 (*d*) and 18 (*d*):

16 (*d*). Such Members (if any) of any Local Medical Committee formed under the National Insurance Act, 1911, and such Medical Members (if any) of any Insurance Committee constituted under that Act, being (in either case) ordinary Members of the Association resident within the area of the Branch as the Branch may appoint, or the Branch Council may co-opt, to be Members of the Branch Council.

18 (*d*) (new 19 (*d*)). Such Members (if any) of any Local Medical Committee formed under the National Insurance Act, 1911, and such Medical Members (if any) of any Insurance Committee constituted under that Act, being (in either case) ordinary Members of the Association resident within the area of the Division as the Division may appoint, or the Executive Committee may co-opt, to be Members of the Executive Committee.

Exemption of Channel Islands and Isle of Man Members, and Members who are Newly Qualified Practitioners, from the Two Guinea Subscription.

(Minutes 51-3.)

That By-law 11, as to subscriptions, be amended to read as follows (new wording is shown in italics):

Subscriptions.

Amount.

11.—(1) On and after the 1st of January, *1915*, and except *as hereinafter provided*, the Annual Subscription to the Association shall be:

(*a*) For a Member resident in any part of the *United Kingdom*, Two Guineas.

(*b*) For a Member resident elsewhere, Twenty-five Shillings.

Provided as follows:

(*c*) *In the case of a Member resident in the United Kingdom and admitted before the expiration of two years from the date of his registration under the Medical Acts, the Annual Subscription shall be Twenty-five Shillings until the 31st of December next occurring after the expiration of the period of four years from the date of such registration.*

(*d*) A Member admitted on or after the 1st of July in any year shall pay half *his* current subscription for that year.

(2) For the purposes of this By-law a Member shall be deemed to reside in that place in which his ordinary place of abode is situate at the time at which according to the Regulations his subscription is considered due.

Composition of Branch Councils.

(Minute 55.)

That By-law 16 (*e*), which reads as follows:

(*e*) In the case of a Branch comprising more Divisions than one, Members elected by such Divisions in such manner that the number to be elected by each Division shall be as nearly as possible proportionate to the membership of such Division,

be amended to read as follows:

(*e*) Such other Members as the Branch may by its Rules decide.

Co-ordination of Policy of Divisions in Branch.

(Minute 56.)

That the following new By-law 16*x* be adopted:

16*x* (now 17). It shall be the duty of every Branch Council to advise the Divisions forming the Branch in matters of policy affecting the medical profession, with a view to promoting a common policy throughout those Divisions. The Branch Council shall report to the Representative Body or to the Council upon the questions dealt with by such advice in all cases in which such a report is considered by the Branch Council to be necessary or desirable or is requested by the Representative Body or by the Council.

Relations between Divisions and Branches.

(Minute 57.)

That the following new By-law 18*x* be adopted:

18*x* (now 20). The Executive Committee of every Division shall, as soon as may be, notify to the Council of the Branch comprising that Division each decision of the Division or of the Executive Committee relating to or affecting the organization or policy of the Branch or of any Division comprised in the Branch.

Subdivisions: Joint Committees of Divisions.

(Minute 58.)

That the following new By-law 18*y* be adopted:

18*y* (now 21). (1) Any Division by resolution from time to time may divide the local area of the Division into Subdivisions, and may appoint local bodies consisting of Members of the Division, for the exercise within such Subdivisions of any powers or functions of the Division which in the opinion of the Division can and ought to be exercised by such local bodies, and may specify the powers and duties of such local bodies and provide for their constitution and term of office.

(2) Any Division may concur with any other Division or Divisions in appointing a Joint Committee for any purpose in which those Divisions are jointly interested, and in conferring with or without conditions or restrictions on any such Joint Committee any powers which each appointing Division might exercise if the purpose related exclusively to the area of such appointing Division, and in providing for the constitution and term of office of such Joint Committee.

(3) Meetings of the Members of more Divisions than one shall be convened (if the Divisions are comprised in a single Branch by the Secretary of that Branch, and if the Divisions are comprised in more Branches than one by the Secretaries of those Branches jointly) upon the requisition of any of those Divisions for the purpose of discussing matters in which those Divisions are jointly interested, and appointing any such Joint Committees as aforesaid.

Representatives.

(Minute 59.)

That By-law 33 (now 36) be amended to read as follows (words inserted are shown in italics):

Term of Office: *Resignation.*

33. (*1*) Every Representative of a Constituency shall come into office at the commencement of the Annual Representative Meeting next succeeding the date of his election, and shall (*unless he shall die or resign*) continue in office until the commencement of the Annual Representative Meeting in the following year, and shall be re-eligible.

(*2*) *Any Representative of a Constituency may resign his office by notice in writing to the Secretary of the Division or of one of the Divisions forming the Constituency.*

(*3*) *A Constituency may, by a resolution passed by a majority of not less than two-thirds of the Members present and voting at a meeting of the Constituency specially convened for the purpose, request any Representative of that Constituency to resign his office. Any such meeting shall be convened (in the manner provided by the last preceding By-law) upon a request in writing signed by not less than 10 members of the Constituency and delivered to the Secretary of the Division or of one of the Divisions forming the Constituency. A copy of any resolution passed at such meeting shall be sent as soon as may be by the convener of the meeting to the Representative in question.*

(*4*) *A casual vacancy caused by the death or resignation of a Representative shall be filled as soon as may be by an election to be conducted in accordance with the provisions of the last preceding By-law.*

Change in Nature of Representative Body.

(Minutes 61-2.)

That By-law 32 (3) (now 35 (3)) be amended by inserting in the seventh line, before the word "instructing," the words "passing resolutions and."

Election of Representatives.

32. (3) Where the election is by voting papers, a Meeting of the Members of the Constituency (convened as aforesaid) shall be held after the election, and not less than twenty-one days before the date of the Annual Representative Meeting, for the purpose of considering the Agenda of that Representative Meeting, and instructing the Representative or Representatives thereon, and if such Meeting of the Members of the Constituency shall not be held, no Representative of the Constituency shall be entitled to attend the Representative Meeting.

That for existing By-law 39 (4) (now 42 (4)) as to voting in Representative Meetings, there be substituted the following revised wording:

39 (4). In speaking and voting upon any matter, the Representative or Representatives of any Constituency shall have regard and so far as may be conform to the preponderance of opinion of the members of that constituency so far as such opinion is known to him or them.

A Standing Welsh Committee.

(Minutes 64-5.)

That the following be added to the Schedule to the By-laws as to Standing Committees:

Name of Committee.	*Additional Members ex officio.*	*Otherwise appointed.*	*Duties, Powers, etc.*
Welsh	The Secretaries of the North Wales and the South Wales and Monmouthshire Branches. All the Members of the Council who represent Branches in Wales or Monmouthshire.	1 Member appointed by the North Wales Branch, 2 Members appointed by the South Wales and Monmouthshire Branch, 1 Member appointed by the Members of the Shropshire and Mid Wales Branch resident in Wales.	To consider all matters specially concerning Wales or Monmouthshire. It shall have an Honorary Secretary resident in Wales or Monmouthshire and shall meet at such place and time as the Committee may itself direct.

That, consequentially, the heading of column 5 of the Schedule to the By-laws be altered throughout to read, for "Appointed by other bodies," "Otherwise appointed."

Division Officers and Executive Committees.

(Minute 70.)

That the following new paragraph, to be paragraph (*e*), be incorporated in By-law 18 (now 19), as to composition of Division Executive Committees:

"(*e*) Such Officers of the Division as the Division shall by its Rules declare to be Members *ex officio* of the Executive Committee."

Branch Officers and Branch Councils.

(Minute 71.)

That By-law 16 (*c*) (now 17 (*c*)) be amended by inserting after the word "shall" the words "by its Rules," the paragraph, as amended, to read as follows (words proposed to be added are shown in italics):—

"(*c*) Such Officers of the Branch as the Branch shall *by its Rules* declare to be members *ex officio* of the Branch Council."

Business of Annual Representative Meeting.

(Minute 72.)

That By-law 37, (now 40), as to business of Annual Representative Meeting, be amended to read, in the last line, for "three months," "two months."

[Late By-law 37:

Business of Annual Representative Meeting.

37. The business of the Annual Representative Meeting shall be to elect a Representative of a Constituency as the Chairman of Representative Meetings, and also a Representative of a Constituency as Deputy-Chairman; to elect a President of the Association; to elect twelve Members of the Council, and such other Officers and such Members of Committees as by the Regulations or By-laws may be required to be so elected; to consider the election of Honorary Members when recommended by the Council; to appoint a place at which the next Annual Representative Meeting shall be held; to consider the Annual Financial Statement and Balance Sheet presented by the Council; to consider Reports of the Council, Reports of Committees instructed to report to such Meeting, and Reports of Branches and motions relating to the adoption of such Reports in whole or in part; to make new By-laws, and alter and repeal By-laws, and to consider any Resolution relating to the honour and interests of the medical profession or of the Association which shall have been adopted by any Division or Branch; provided that any such Resolution proposing material alteration of the Constitution or Policy of the Association shall have been submitted through the JOURNAL for the consideration of all the Divisions not less than three months previously.]

Casual Vacancies on Committees.

(Minutes 73-4.)

That the following new By-law be adopted, to follow immediately after existing By-law 67:

67a (now 71). Each Standing Committee shall have power to fill any casual vacancy arising amongst its appointed Members.

That the last clause of By-law 68 (now 72) be amended to read, for the words "and that Committee shall fill the vacancy so created": "and a casual vacancy shall thereupon arise."

[Late By-law 68:

68. If any appointed Member of a Standing Committee shall be absent from three successive Meetings of that Committee (except in case of illness or for some reason approved by the Chairman of that Committee) he shall be deemed to have resigned his membership of that Committee, and that Committee shall fill the vacancy so created.]

Scottish Committee.

(Minutes 195 of Annual Representative Meeting and 3 of Special Representative Meeting respectively.)

That the following words be added to the definition of the duties and powers of the Scottish Committee, contained in the Schedule to the By-laws:

"The Committee shall have power to add to its number not more than four Members specially qualified to assist in the business of the Committee."

That existing By-law 67 (now 70), which reads as follows:

67. Each Standing Committee shall appoint from its own number a member of Council as Chairman,

be amended to read as follows:

67. Each Standing Committee except the Scottish Committee shall appoint from its own number a member of Council as Chairman. The Scottish Committee shall appoint from its own number a Deputy-Chairman, as well as a Chairman, and either the Chairman or the Deputy-Chairman or the Honorary Secretary of that Committee shall be appointed from amongst Members of Council.

JOURNAL.

Reference to Council for Consideration.

Salaries of Staff of Association.

(Minute 104.)

That the following motion be referred to the Council for consideration and report:

That in the opinion of this Meeting the whole-time staff of the Association should receive an inclusive salary, which should include all contributions to the JOURNAL.

SCIENCE.

Declaration of Policy.

The Petition of Sir Ronald Ross.

(Minutes 108-9.)

That in the opinion of the Representative Body of the British Medical Association the petition of Sir Ronald Ross, K.C.B., F.R.S., to the House of Commons for remuneration for his services to the Empire in having discovered how malarial fever can be prevented, should be granted.

That a copy of the foregoing Resolution be forwarded to the Chancellor of the Exchequer.

Reference to Council for Consideration.

Middlemore Prize in Ophthalmology.

(Minute 103.)

That the question be considered as to the desirability of stating, in future advertisements inviting competition for the Middlemore Prize, that it will not be awarded in the event of none of the essays being of sufficient merit.

MEDICAL ETHICS.

Declarations of Policy.

Position of Medical Practitioners in connexion with Publications to the Public on Medical Subjects.

(Minute 114.)

That every medical practitioner who contributes to or in any way assists in the preparation of any publication on medical subjects intended for the use of the public must hold himself responsible for any undue or improper advertising that may take place in connexion with such publication, and also for the scope and distribution of the work.

Warning Notices.

(Minutes 116-18.)

That the Representative Body rescinds all its previous decisions relating to the Warning Notice, and empowers the Council to approve and adopt Regulations which in the opinion of the Council are appropriate relative to the insertion in the BRITISH MEDICAL JOURNAL of Notices regarding Appointments, and that the control of these Notices be in future left entirely in the hands of the Council.

Reference to Council for Consideration.

Possible Libel Actions.

(Minute 113.)

That it be referred to the Council to consider and report as to what steps can be taken to avoid incurring any financial loss for any libel action which may be brought against the Association owing to the conduct of any member, Division, or Branch acting in opposition to the advice and instructions of the Council.

MEDICO-POLITICAL.

Declarations of Policy.

State Registration of Nurses.

(Minutes 123-4.)

That the Representative Body reaffirm its opinion that the State registration of nurses is desirable.

That it be an instruction to Council to take afresh such steps as it considers desirable in order to obtain:

1. Unanimity amongst the various interests concerned as to the essentials of a Nurses' Registration Bill.

2. Satisfactory evidence that there is a large body of professional opinion in support of these essentials.

3. The support of the Government for legislation next session on the lines of these essentials.

Payment of Medical Practitioners called in on Advice of Midwives.

(Minutes 128-32.)

That the Representative Body express the following opinions:

(*a*) That midwives could depend upon the assistance of the medical profession being forthcoming whenever required, provided the profession were assured of adequate provision being made for (i.) free choice of doctor by patient, and (ii.) payment of the medical practitioner called in.

(*b*) That payment of the medical practitioner so selected should be assured to him by a public authority such as the County or County Borough Councils in England and Wales.

(*c*) That the following should be the minimum scale of fees for the payment of medical practitioners called in on the advice of midwives, but power should be obtained to pay special fees in special cases:

	£	s.	d.
Attendance at cases of operative assistance and subsequent necessary visits during the first ten days	2	2	0
Attendance at cases without operative assistance and subsequent necessary visits during the first ten days ...	1	1	0
Assistance for administration of an anaesthetic	1	1	0
Visit (including any necessary prescription):			
Day (8 a.m. to 8 p.m.)	0	3	6
Night (8 p.m. to 8 a.m.)	0	7	6

NOTE.—The above fees apply to visits within two miles of the doctor's house; if beyond that distance an additional mileage fee of not less than 1s. per mile (outwards), or in outlying and sparsely populated districts such sum as is suitable to local circumstances and the local customs of the profession should be paid.

Question of Establishment of Dental Clinics.

(Minute 133.)

That the Representative Body approve the principle of the establishment of Dental Clinics, inasmuch as such Clinics are calculated to diminish the amount of unqualified dental practice now in existence.

MEDICAL INSPECTION AND TREATMENT OF SCHOOL CHILDREN.

Rescission of Previous Decisions.

(Minute 173.)

That the Representative Body rescind all previous decisions having reference to any question of the medical inspection and treatment of school children.

Memorandum on Policy of Association as to Medical Inspection and Treatment of School Children.

(Minutes 174-299.)

That the Memorandum submitted by the Council be approved, as amended, as the minimum policy of the Association in the matter of medical inspection and treatment of school children (for the Memorandum as thus approved see Appendix I, page 277).

Local Schemes as to Medical Inspection and Treatment of School Children.

(Minute 177.)

That the full support of the Association be given to any scheme which is approved, as superior to the Memorandum, by a Division in the area of which it is to be operative, provided the scheme has also been approved by the Council.

Treatment at Voluntary Hospitals of School Children found defective on Medical Inspection.

(Minutes 200-3.)

That the Representative Body approve, as amended, the Memorandum submitted by the Council on the treatment at voluntary hospitals of school children found to be defective on medical inspection. (For the Memorandum as thus approved see Appendix II, page 279.)

REMUNERATION OF WHOLE-TIME HEALTH AND SCHOOL OFFICERS.

(Minute 294.)

That in the opinion of the Representative Body no whole-time medical officer of health nor school medical officer should accept any wholly new appointment involving fresh duties unless adequate remuneration is added to that previously received by him.

SECURITY OF TENURE AND SUPERANNUATION FOR SCHOOL MEDICAL OFFICERS.

(Minute 295.)

Certain proposed riders on the subject of superannuation and security of tenure for whole-time medical officers whose duties include school work were withdrawn, on the understanding that if a Bill to secure superannuation and security of tenure of office for medical officers were introduced into Parliament those principles would be pressed for.

Medical Certificates.

(Minute 304.)

That the following Report be adopted by the Representative Body:

(*a*) Under the present state of the law medical practitioners are afforded reasonable immunity from any pecuniary risk consequent upon the giving of medical certificates in connexion with any Act of Parliament, provided that in doing so they act in good faith and with reasonable care. No action which could be taken by the Association would be likely to provide absolute immunity from legal action.

(*b*) Medical practitioners can secure themselves from costs incurred in any legal action consequent upon the giving of medical certificates in conformity with any Act of Parliament, by insuring with one of the Medical Protection Societies, which precaution is strongly urged upon all practitioners.

(*c*) As a result of the action of the Association there has been secured to medical practitioners giving medical certificates under the National Insurance Acts, what amounts to practically absolute immunity from legal risk, owing to the wording of the model form of certificate issued by the Insurance Commissioners. This form makes it clear that the certificate is given to the insured person, and that therefore the divulgence of any information contained therein can only be due to the action of the insured.

(*d*) The precedent set by the wording of the model form of certificate issued by the Insurance Commissioners should, whenever possible, be followed by medical practitioners in the case of certificates required of them under any other Act of Parliament.

Fees for Medical Certificates under Mental Deficiency Acts.

(Minute 313.)

That the fee for medical certificates under the Mental Deficiency Acts, signed by the "usual medical attendant," should not be less than £1 1s.

Fees Paid for Examination of Emigrants.

(Minute 308.)

That para. 105 of the Annual Report of Council be modified so as to express approval of the fees now offered for these examinations, namely, 5s. for adults and 3s. for each child.

Fees for Medical Examinations for Life Insurance.

(Minutes 310-11.)

That fees for life insurance examinations should be based on the amount of evidence required in confirmation of the examiner's professional opinion of the life.

That the following proposed rider be referred to the Council with foregoing resolution (Minute 310):

Rider proposed by Worcester.

That the question of fees for medical examinations and reports for life insurance be considered by the Annual Representative Meeting, 1914, with a view to the Council approaching the insurance companies in order to obtain the adoption of a universal rate all over the country.

Instructions to Council.

Insufficiently Trained Nurses.

(Minute 125.)

That this Meeting views with concern the increasing number of insufficiently trained nurses, and instructs the Council to call upon the Government and the other authorities concerned to take steps to remedy this evil.

Practice of Dentistry by Unqualified Persons.

(Minute 134.)

That this Representative Meeting, being alarmed at the continued rapid increase in unqualified persons practising "dentistry," to the very great damage of the public health, and considering that from the standpoint of the general health the profession should endeavour to safeguard the nation from these dangers, instructs the Council to confer with the British Dental Association as to the best means of combating this particular evil.

References to Council for Consideration.

Treatment of School Children by Private Practitioners: Question of Branch "Organization Committees, Medical Treatment of School Children."

(Minute 289.)

Certain motions by the Bromley Division relative to the machinery for dealing locally with the question of Medical Treatment of School Children were referred to the Council.

Payment of Ship Surgeons for Attendance on First and Second Class Passengers.

(Minute 312.)

That the following recommendation (I) of Council, together with certain proposed amendments, be referred back to the Council for reconsideration and report:

I. (i.) That fees for medical and surgical attendance should be payable by first and second class passengers in all cases of illness and injury except those due to the voyage.

(ii.) That in those cases where the ship surgeon is at liberty to charge a fee, the minimum fee shall be 5s. and 2s. 6d. per attendance in the case of first and second class passengers respectively.

(iii.) That accounts for any such fees should not be subject to any preliminary scrutiny by the commander, but it is clearly understood that any passenger questioning the legitimacy of any charge may make representations accordingly to the commander.

NATIONAL INSURANCE.

Declarations of Policy.

Model Scheme for Treatment of Tuberculosis.

(Minutes 185-203.)

The Model Scheme for Treatment of Tuberculosis submitted by the Council was adopted, after amendment in certain respects. (For the scheme as thus approved see Appendix III, page 279.)

Circulation of Tuberculosis Scheme.

(Minute 209.)

That the Model Scheme for the Treatment of Tuberculosis, as approved by the Representative Body, be circulated to Municipal Councils, Insurance Committees, and other bodies whom it may concern, with a view to obtaining their co operation.

Domiciliary Treatment of Tuberculous Persons.

(Minutes 211-12.)

That this Representative Meeting, while recognizing that there is a place for the co-operation of sanatoriums and hospitals in the treatment of tuberculosis, is strongly of opinion that the domiciliary treatment of tuberculous persons ought to be entrusted to the fullest possible extent to practitioners engaged in general practice.

Appointment of and Reference to Insurance Act Committee.

(Minutes 218-25.)

That the Representative Body appoint an Insurance Act Committee for the session 1914-15.

That the Insurance Act Committee consist of the four *ex officio* members; two members to be elected by the Council; twelve members to be elected on a territorial basis by the grouped Representatives; and one representative of each of the following organizations, to be elected by the Council on the nomination of those bodies respectively, such nominees to be also members of the British Medical Association:

(*a*) The Association of Registered Medical Women together with the Northern Association of Registered Medical Women;

(*b*) the Society of Medical Officers of Health;

(*c*) the Poor Law Medical Officers' Association of England and Wales.

That the reference to the Insurance Act Committee read as follows:

To deal with all matters arising under the National Insurance Acts, to watch the interests of the profession in relation to the National Insurance Acts, and report to the Council.

Voluntary Hospitals and Treatment of Cases in Receipt of Maternity Benefit.

(Minutes 227-30.)

1. That as it is necessary for the training in midwifery of medical students and pupil midwives that there should be an adequate supply of clinical material available for that purpose, no parturient woman should be refused treatment in the obstetric department of a voluntary hospital or similar institution* on the ground that she is eligible for a maternity benefit.

2. That women entitled to a maternity benefit under the National Insurance Acts should not be regarded as eligible for free treatment except on the recommendation of a medical practitioner.

3. That all women receiving treatment through the obstetric department of a voluntary hospital or similar institution who are entitled to a maternity benefit shall be required to pay such sum to the hospital or institution as shall be determined upon by the governing body.

4. That from each such sum an amount, to be agreed upon between the governing body and medical staff, shall be placed to a special fund, which shall belong to the medical staff.

Medical Aid Institutions.

(Minute 243.)

That this Representative Body protests strongly against the immunity from control by the Local Insurance Committee enjoyed by Medical Aid Institutes, and calls on the Council to take action with a view to having this amended, as being unfair both to ordinary medical practitioners on the panel and to those insured persons who are members of such institutes.

Fees of Medical Referees under National Insurance Act.

(Minute 250.)

That half-a-guinea be the minimum fee for examination and report as referee under the National Insurance Act, and that mileage be charged extra at the rate of not less than one shilling a mile or part of a mile beyond one mile.

Certification.

(Minute 253.)

That this Meeting requests the Insurance Act Commissioners to issue simple and explicit regulations *re* certification, printed on cards which can (at the option of practitioners on the panel) be exhibited in the waiting rooms of doctors for the information of their patients, and that the same regulations be printed on the cover of the certificate books.

Returned Medical Cards.

(Minutes 254-8.)

That it is no part of the duty of a panel practitioner to correct and keep up to date the list of addresses of insured persons.

That a medical practitioner should be entitled to charge private fees to those insured persons demanding treatment

* By "similar institution" is meant "places of study admitting medical students and recognized by universities and examining bodies whose diplomas are accepted by the General Medical Council, or admitting pupil midwives and recognized by the Central Midwives Board."

of him but who fail to produce their medical cards, in view of the instruction of the various Insurance Commissioners to Insurance Committees that when the medical card system is in full operation a practitioner would be entitled, on giving treatment, to require insured persons on his list to present their medical cards should such a course appear necessary.

Consultants Employed for Purposes of Insurance Act.

(Minute 259.)

That the policy of the Association should be opposed (with some possible special exceptions) to whole-time consultative appointments in connexion with the Insurance Acts, and that it should be in support of the performance of such duties being open, under conditions of free choice and adequate remuneration, to all registered medical practitioners qualified to perform them.

Provision for Institutional Treatment.

(Minute 262.)

That in order to carry out the promise made in the National Health Insurance Act, 1911, that insured persons should have "adequate medical treatment," it is the duty of the Government to make provision for the necessary institutional treatment.

Treatment by Staffs of Voluntary Hospitals.

(Minute 263.)

That the staffs of voluntary hospitals receiving persons for whose treatment a payment is made by or on behalf of the State cannot be expected to treat such persons as charitable cases.

Clinical Arrangements under Insurance Acts.

(Minutes 264–7.)

That in any future developments of the medical service under the Insurance Acts, the clinical arrangements should not be placed under the Public Health Authority, but either (i) under a new Clinical Authority, composed of representatives of the Insurance, Public Health, and Education Local Authorities, with representatives of the Local Medical and Panel Committees and of the local hospitals, or (ii) under the Insurance Committee, strengthened for this purpose by the addition of representatives of the above-named bodies.

Clinical Laboratories.

(Minute 268.)

That the proposed clinical laboratories should be linked up as far as possible with the local hospitals and the nearest university laboratories.

Proposed Nursing Service.

(Minutes 269–70.)

That the Representative Body welcomes the proposal of the Government to establish a nursing service to be utilized for the whole working-class population, and is of opinion that when established it should be under the control of the proposed new Joint Clinical Authority, or, failing that, of the Insurance Committee, strengthened as suggested in Minute 267, para. (ii).

That a copy of foregoing Minute 269 be sent to the proper authority, together with a copy of the resolution of the Meeting as to registration of nurses.

Medical Referees.

(Minute 271.)

That the medical referees under the Insurance Acts should be the advisers on all medical questions to the Clinical Authority referred to in Minute 267.

Consultants and Specialists.

(Minute 272.)

That the consultants and specialists who are to be placed at the disposal of the referees should not be whole-time officers.

Treatment Centres.

(Minute 273.)

That the Representative Body welcomes the proposal to institute treatment centres or clinics in connexion with the medical service under the Insurance Acts, and is of opinion that they should be under the control of the Clinical Authority referred to in Minute 267.

Representations to Government on Above Proposals.

(Minute 275.)

That the decisions of the Representative Body arising out of the Report of the Future Developments of the Insurance Acts Committee upon the matters referred to in the Budget Speech of the Chancellor of the Exchequer be forwarded immediately to the proper authority as the opinion of the medical profession thereon.

Central Insurance Defence Fund.

(Minute 246.)

That no further calls be made on the guarantors to the Central Insurance Defence Fund.

Instructions to Council.

Form of Report on Tuberculous Cases Receiving Domiciliary Treatment.

(Minute 210.)

That the Council be instructed to consider the present form of report on tuberculous cases receiving domiciliary treatment, and, if thought desirable, to make representations to the Local Government Board as to its improvement and simplification.

Proposed Federation of Local Medical and Panel Committees.

(Minutes 214–17.)

That the Council be instructed to submit to the Divisions a memorandum on the constitution of the proposed Federation of Local Medical and Panel Committees after that constitution has been approved by the constituent bodies, calling a Special Representative Meeting, if necessary, after the replies of the Divisions have been received.

That the Honorary Secretaries of Divisions be informed of the foregoing resolution, and of the intention of the Council to issue a memorandum to the Divisions.

Central Insurance Defence Fund.

(Minute 247.)

That it be an instruction to the Council to consider and report with recommendations, after consulting the contributors to the Central Insurance Defence Fund, what steps, if any, should be taken in order to transfer the contributions to a Trust Fund, or otherwise to deal with the same.

Prescribing and Chemists' Accounts.

(Minute 252.)

That this Meeting instructs the Council to urge upon all Panel Committees the necessity of availing themselves of their right, under the Regulations, to make a careful investigation of chemists' accounts, and to make a full report to the Insurance Committee of all cases of complaints made by the Pharmaceutical Committees respecting excessive and extravagant prescribing.

Future Developments of Insurance Acts Committee.

(Minute 276.)

That the Council be instructed to reappoint the Future Developments of Insurance Acts Committee.

Future Developments of the Insurance Acts.

(Minute 277.)

That in order that the full medical view of the causes of the excessive claims for sickness benefit and medical benefit revealed by the experience of the National Insurance Act should be stated and the suggestions of the medical profession for checking abuse of sickness and medical benefits should be offered, ample evidence should be collected and considered.

That it be an instruction to the Council to obtain this evidence from the Divisions and from medical practitioners and report thereon.

References to Council for Consideration.

Voluntary Hospitals to which Medical Schools are attached and Teaching of Tuberculosis Work.

(Minute 213.)

That the following motion by St. Pancras and Islington be referred to the Council for consideration and report:

> That the voluntary hospitals to which medical schools are attached should have the opportunity of

having all clinical material they need for teaching purposes.

Composition of Insurance Act Committee.

(Minute 223.)

That the following motion be referred to the Council for consideration, and, if thought desirable, for report in the Memorandum to be issued in reference to the relation of the Association to the proposed Federation:

That the Insurance Act Committee consist of the *ex officio* members, the Chairmen of the Hospitals, Medico-Political, Organization, and Public Health Standing Committees, together with twelve members to be nominated by the Panel Committees of the United Kingdom on a similar territorial basis as adopted under By-law 43 (*c*) (present By-law 46 (*c*)) for the election of twelve Members of Council, and elected by the Representative Body.

SPECIAL FUND.

Declarations of Policy.

Inauguration of Special Fund.

(Minutes 137-40.)

That immediate steps be taken to inaugurate a Fund.

Objects of Special Fund.

(Minutes 141-7.)

That the fundamental objects of the Fund shall be the protection of the interests of the medical profession in the United Kingdom and the formation of a reserve.

Collection and Administration of Special Fund.

(Minutes 149-62.)

That the collection and administration of the Special Fund shall be placed in the hands of a trust, or an association, or other form of organization, not being a registered trade union.

(See further, below, under Minutes 165–6.)

Provisional Committee to Establish the Trust Fund.

(Minute 163.)

That this Representative Meeting do elect six of its number not Members of the Council who, together with six Members of the Council elected by the Council, shall form a Provisional Committee to establish the Trust Fund, and shall hold office either until the Fund is completely inaugurated or until the next Annual Representative Meeting, whichever shall first occur.

References to Council for Consideration.

Collection and Administration of Special Fund.

(Minutes 165-6.)

That Recommendation C of Council, amended to read as follows (Special Report as to Proposed Special Fund, SUPPLEMENT, May 2nd, p. 320), be referred to the Special Committee appointed under Minute 163:

That the Fund shall be collected and administered by a body separate from the British Medical Association, but composed exclusively of members of the British Medical Association.

That the following motions be referred to the Special Committee appointed under foregoing Minute 163:

That the Fund shall be collected locally through grouped areas and administered centrally by a Committee.

Amendment proposed by Brighton:

(i.) That local funds be inaugurated in areas consisting of one or more Divisions if the medical practitioners resident in such area so desire.

(ii.) That the collection and administration of such local fund be placed in the hands of a trade union or trust, as the local medical profession may decide.

(iii.) That contributions be required to be made to the Central Fund from each such local fund, and also by practitioners who have not subscribed locally.

That the organization of the Association and its JOURNAL shall be used for the promotion of the Fund.

HOSPITALS.

References to Council for Consideration.

Medical Aid Institutions.

(Minute 320.)

The following three motions were referred to the Council for consideration:

Amendment proposed by Worcester.

That in order to check the extension of Medical Aid Institutions and to assist the profession in combating them where established, the Association endeavour to enlist the support of the staffs of voluntary hospitals not only in refusing professional recognition to the medical officers of these institutions, but also by refusing treatment to patients sent by them to hospitals, except in cases of grave urgency.

The foregoing resolution shall not apply to those institutions where the Medical Officer of the Institution has retained his post with the consent of the local profession.

Rider proposed by Worcester.

(*a*) That in future the consent of the Association be asked before a medical officer of these institutions be allowed to retain his post.

(*b*) That previous exemption should justify an exemption by the Council.

(*c*) That exemption should be granted if the institution should come to be carried on in accordance with the wishes of the Council of the Association.

Rider proposed by Brighton.

That it be an instruction to the Council to take or to support any action such as will tend to ensure that medical institutes shall:

(*a*) Pay their medical officers at a rate not less than that provided under the National Insurance Act.

(*b*) Provide adequate medical attendance for all their members.

NAVAL AND MILITARY.

Declaration of Policy.

Election of Service Members of Council.

(Minute 321.)

That the officers elected at the Annual Representative Meeting, 1914, to represent on the Council the Royal Navy Medical Service, the Army Medical Service, and the Indian Medical Service be appointed to serve for a period of three years in each case.

SCOTLAND.

Instruction to Council.

Scottish Office of Association.

(Minute 282.)

That the Scottish Office and whole staff should be located in Edinburgh.

BRANCHES OUTSIDE UNITED KINGDOM.

Instruction to Council.

South African Medical Congress.

(Minute 198.)

That the Council of the Association send a representative to attend a South African Medical Congress.

STANDING ORDERS.

Agenda Committee.

(Minutes 9 and 10.)

Standing Orders 1 and 11 were amended to provide for receipt of the reports of the Agenda Committee in the case of Annual and Special Representative Meetings respectively.

Minutes.

(Minute 11.)

Standing Order 18 was amended by inclusion of the following paragraph:

18 (*b*). As soon as may be after each Representative Meeting, Annual or Special, the corrected Daily Minutes of the Meeting shall be collected into a

volume. A copy of the completed Minutes thus prepared shall as soon as practicable be forwarded to (*a*) each Member of the Representative Body, and (*b*) each Honorary Secretary of a Division or Branch who is not a Member of the Representative Body.

Election of Members of Council.

(Minutes 12-14.)

Standing Orders 36-7 were amended to enable the election of members of Council by the Representative Body to be made earlier.

Returns of Attendances.

(Minutes 15-16.)

Standing Order 39 was amended to provide that in future the returns of attendances up to three weeks before the commencement of the Annual Meeting be prepared by the Financial Secretary and Business Manager instead of by the Election Returns Committee of the Representative Body, and to provide also that the return shall in future include the attendances of Representatives as well as attendances at Council and Committee meetings.

Election of Service Members of Council.

(Minute 17.)

Standing Order 49 was amended to read as follows:—

49. *Election of Service Members of Council.*—The election of Members to represent the Royal Navy Medical Service, the Army Medical Service, and the Indian Medical Service on the Council shall be conducted as follows:

At the commencement of the afternoon session of the first day of the A.R.M. the names of the candidates nominated by the Council to represent the respective Services shall be submitted to the A.R.M. by the Chairman for election, in such way as the Chairman may think fit. The result shall in each case be declared by him as soon as possible.

Except where otherwise decided by the Representative Body in respect of any specific appointment, the members representing the respective Services on the Council shall hold office for a period of three years.

ELECTIONS.

(a) Officers.

Dr. T. Jenner Verrall, LL.D. (Bath), was re-elected Chairman, and Mr. E. B. Turner (Kensington) Deputy-Chairman of Representative Meetings, 1914–15.

Sir T. Clifford Allbutt, K.C.B., LL.D., was elected President-elect of the Association for the year 1914–15.

Dr. W. Ainslie Hollis (Brighton), President of the Association for 1913–14, and Dr. W. T. Hayward, M.R.C.S., LL.D., Chairman of the Australian Federal Committee, were elected Vice-Presidents of the Association.

(b) Council and Committees.

A list of the Council, indicating those members elected by the Branches, by the Representatives, and by the Representative Body respectively, was published in the SUPPLEMENTS of June 20th (page 463), and August 1st (pages 111 and 118). A list of the members of the Committees appeared in the SUPPLEMENT of August 15th (page 146).

MISCELLANEOUS.

Place and Time of Annual Representative Meeting, 1915.

(Minute 32.)

It was decided to hold the Annual Representative Meeting, 1915, at Cambridge, from July 2nd to 10th.

Votes of Condolence.

Votes of condolence were directed to be sent to the relatives (1) of the late Dr. B. H. Mumby, Chairman of the Public Health Committee of the Association, and (2) of the late Dr. J. H. Keay, of Greenwich.

Votes of Sympathy and Congratulation.

The Meeting passed a vote of sympathy with the President on his recent serious illness, and expressed the hope that he would soon be completely restored to health.

The Treasurer was warmly congratulated on his recovery from his recent serious illness.

Votes of Thanks.

The thanks of the Meeting were voted to the Senate of the University of Aberdeen and to the local Committee for the arrangements made for the comfort and entertainment of the members of the Representative Body.

The Meeting also expressed its cordial appreciation of the manner in which the Chairman had conducted the business of the Meeting.

APPENDIX I.

MEMORANDUM, AS APPROVED BY THE ANNUAL REPRESENTATIVE MEETING, 1914, ON THE POLICY OF THE BRITISH MEDICAL ASSOCIATION WITH REGARD TO MEDICAL INSPECTION AND TREATMENT OF SCHOOL CHILDREN.

(NOTE: *Pending consideration by the Medico-Political Committee and Council of the amendments made by the Annual Representative Meeting in the following Memorandum, including consideration of the question of any consequential amendments necessitated by these amendments or by other resolutions of the Meeting, the following print of the Memorandum, in which the amendments made by the Meeting have been incorporated, must be regarded as provisional only.*)

I.—INSPECTION.

(a) CONDITIONS OF EMPLOYMENT.

1. A whole-time Medical Officer of Health who is also School Medical Officer should not as a general rule undertake any of the actual work of Inspection of School Children. Exception may be made in the case of the smaller Education Authorities.

2. The titles of Assistant Medical Officer of Health and Assistant School Medical Officer should not be combined merely for the sake of allowing the holder of these offices to base a claim for an appointment elsewhere as Medical Officer of Health.

Where the title of Assistant Medical Officer of Health is assumed, it is very important that the public health duties of the Officer should be commensurate with the title.

3. Officers in the School Medical Service should have reasonable security of tenure of office, and their appointments should only be terminable with the consent of the Board of Education. They should also be admitted to participation in a Government Superannuation Scheme.

(b) METHODS OF REMUNERATION.

4. Officers of the School Medical Service should be remunerated by a fixed salary, or in the case of part-time officers by payment in proportion to the time they devote to the work. In sparsely populated districts special systems of capitation payment, such as are at present in operation, may be adequate.

(c) AMOUNT OF REMUNERATION.

Part-time School Medical Officers.

5. The remuneration for a part-time School Medical Officer should be at the rate of £50 per school year for attendance on half a school day per week, half a school day being defined to be two and a half hours.

Whole-time School Medical Officers.

6. Practitioners who enter the School Medical Service as whole-time officers are, by reason of longer and special education, justified in expecting a higher rate of remuneration than they would receive in ordinary clinical positions. The minimum whole-time salary should therefore commence at £300 per annum for Assistant School Medical Officers, and it is desirable that such salary should be subject to an annual increment. The minimum salary for a senior responsible whole-time School Medical Officer should be £500 per annum, and should be proportionately greater in the case of large towns or county areas. Such salary should also rise by suitable annual increments. These salaries are net salaries, exclusive of travelling expenses, clerical assistance, postage, etc.

Salaries of Women School Medical Officers.

7. The salaries paid to medical women should not be less than those paid to medical men in respect of the same work.

II.—TREATMENT.

8. Treatment by an education authority should be confined to necessitous children, that is, to those children whose parents cannot afford to pay privately for the treatment recommended as a result of inspection. Parents should always in the first place be recommended to seek treatment for their children from their family doctor.

9. The support of the Association should be given to the schemes by which medical treatment, and the treatment of refractions, should be carried out by local private practitioners (for reasons in favour of the employment of private practitioners, *see* Sub-Appendix A). In these areas the duties of the School Medical Officers and their assistants should consist of inspection and the important work of "following up."

TREATMENT BY PRIVATE PRACTITIONERS.

10. Where treatment by private practitioners is adopted this should be done by means of a "School Centre" (*see* Model Scheme—Sub-Appendix B), or in sparsely populated districts by the "recognition" of places (for example, a room in the school buildings) where the local practitioner or practitioners could carry out the necessary treatment.

The term "private practitioner" includes both specialists and general practitioners.

11. Where practitioners in any area are desirous of carrying out treatment of school children who have been found on examination to be defective, they should through the Division make representations to the Local Education Authority and place before that body a scheme.

12. The duty of the Division should be to place before the Local Education Authority a simple scheme and to present reasons why in its opinion such a scheme would be in the best interests of the public.

13. If the Local Education Authority is not convinced of the superiority of such a scheme it is not part of the policy of the Association to resist the adoption of some other scheme on the ground that it involves the employment of whole or part-time officers for the purpose of treating necessitous children.

A scheme for treatment might be a combination of treatment by whole-time and private practitioners.

14. Divisions desirous of placing a scheme of treatment by local practitioners before the Local Education Authority will have the full support of the Association, but for purposes of co-ordination such Schemes should be submitted to the Central Office of the Association, prior to being forwarded to the Education Authority.

15. The responsibility of the Local Education Authority for seeing that treatment is secured is recognised. If treatment is carried out by a private practitioner the School Medical Officer acting as the agent of the Local Education Authority is fulfilling his duty in "following up" the case to see if treatment has been obtained. Should the school medical officer not be satisfied with the result of treatment said to have been given, he should offer the private practitioner, if any, an opportunity of consultation on the case.

DENTAL INSPECTION AND TREATMENT.

16. The inspection and treatment of the teeth of school children should be carried out by qualified dentists in Treatment Centres (for an outline Model Scheme for treatment by medical practitioners and dentists, *see* Sub-Appendix B).

TREATMENT BY MEDICAL CHARITIES.

17. (i.) No case should in the first instance be referred to a voluntary (charitable) institution for treatment.

(ii.) The Education Authority shall be required to pay for all children of their schools receiving treatment at a voluntary hospital, such sum as shall be arranged with the Governing Body.

(iii.) From such sum an amount agreed upon by the Governing Body and the Medical Board shall be placed to a special fund which shall belong to the medical staff.

18. The medical staffs of voluntary hospitals should do all in their power to prevent the reference in the first instance to those hospitals of school children who have been found on examination to be defective, except under the conditions mentioned in the preceding paragraph.

TREATMENT BY PROVIDENT DISPENSARIES.

19. There is no objection to treatment by Provident Dispensaries, by Public Medical Services, or other contract medical practice organisations, provided that the remuneration of the practitioners is adequate for the work done and that effect is given to the principle of free choice of doctor by the parents of the patient, with a corresponding right on the part of the doctor to refuse any patient.

TREATMENT BY POOR LAW.

20. Any scheme for the provision for the treatment by the Poor Law of school children found upon inspection to be defective should be opposed.

REMUNERATION.

(a) *Of Private Practitioners.*

21. Remuneration of appointments under any scheme in which private practitioners are appointed should be made on a scale agreed upon between the medical profession as represented by the local Branch or Division of the British Medical Association and the Local Education Authority, and should be based on terms laid down in paragraph 5 where the circumstances permit of such an arrangement being made.

(b) *Of Whole-time Medical Officers.*

22. Where whole-time Medical Officers are engaged in the treatment of school children, their salaries should not be less than those paid to School Medical Officers and Assistant School Medical Officers engaged in inspection.

III.—DUTIES OF NURSE.

INSPECTION AND TREATMENT.

23. The School Nurse should always act under the instructions and supervision of a registered medical practitioner.

SUB-APPENDIX A.

REASONS IN FAVOUR OF THE EMPLOYMENT OF PRIVATE PRACTITIONERS AS COMPARED WITH WHOLE-TIME SCHOOL MEDICAL OFFICERS IN THE TREATMENT OF SCHOOL CHILDREN.

1. The medical treatment of school children is a great national undertaking, the ultimate success of which largely depends upon the number of persons who are interested. From this point of view it is better that as many as possible of the medical profession should have personal contact with the work, rather than that familiarity with it should be confined to a small class of public officials.

2. Medical practitioners who are engaged in private practice enjoy the benefit of a wider experience of the treatment of disease in general than those whose work is confined to the treatment (or the treatment and inspection) of school children.

3. Treatment and recurrent supervision of the school children by such praetitioners supplemented by the "following up" work of the School Medical Officer in the opinion of the Association alone gives security that the medical needs of the children will be adequately met.

4. The treatment of diseases of children gives those who carry it out opportunities of obtaining valuable experience. If the work is done by private practitioners who are engaged, apart from their school work, in treating members of the general public, the general public derives great benefit from the profession generally receiving this additional experience.

5. The employment of private practitioners gives the Education Authority a much wider field of choice than if the work is carried out by whole-time officers, and by the employment of part-time officers the authority would be able to adjust the appointment of persons of special skill to its requirements in each direction.

SUB-APPENDIX B.

OUTLINE MODEL SCHEME FOR TREATMENT CENTRE.

I.—PRECAUTIONS TAKEN BY THE LOCAL AUTHORITY TO ENSURE THAT ONLY THOSE CHILDREN SHALL BE TREATED AT THE CENTRE FOR WHOSE TREATMENT ADEQUATE PROVISION CANNOT OTHERWISE BE MADE.

1. Formation by Education Committee of a Committee called the "Medical Treatment Committee."

2. The chief duty of this Committee would be to determine, from information obtained by its Officers, whether any child applying for treatment is necessitous, and, if so, to sign a voucher for treatment. Due regard would be paid to the amount of income of the parent, to the existing facilities for obtaining the special treatment, and to its cost; and the Committee would decide whether the treatment was to be free, or what part, if any, of the charge for any operative treatment to be provided shall be paid by the parent. In default of payment in a case in which the parent was required to contribute, the amount would be recovered summarily as a civil debt.

3. The parents or guardians of all children requiring treatment should in the first place be informed that it is their duty to have the child treated by a doctor of their own choosing, and if he considers the child suitable for treatment at the Centre he would sign a voucher to that effect. The voucher would be endorsed by the Medical Treatment Committee before treatment is given.

4. The parents or guardians of those children who have no medical attendant would be advised to apply direct to the Medical Treatment Committee for a voucher. If a child whose parents or guardians are apparently in a position to afford to pay private fees is presented for treatment, the practitioner concerned should have the right to refer the case to the Medical Treatment Committee for further investigation.

5. In the case of any child sent from school to the School Medical Officer and diagnosed as suffering from a contagious

skin disease, the head teacher would sign a voucher for treatment if the child were known to be necessitous; this would warrant treatment until the next meeting of the Medical Treatment Committee. Any further treatment should only be obtained if the Medical Treatment Committee countersigned the voucher.

II.—METHOD TO BE ADOPTED TO SECURE ADEQUATE TREATMENT OF DEFECTS DISCOVERED ON INSPECTION.

Management of Centre.

6. The Treatment Centre should be managed by a Committee of.....persons to be appointed by the Education Authority as follows:—

.....Members of the Education Committee who shall also be members of the Medical Treatment Committee.

.....Members nominated by the.....Division of the British Medical Association.

.....Members nominated by the.....Division of the British Dental Association.

Note.—The numbers would be so arranged as to place the Education Committee members in a majority.

Supervision of Centre.

7. The carrying out of the practical side of the Centre should be under the supervision of the Senior School Medical Officer, and the whole of the work of the Treatment Centre Committee would be subject to the approval of the Education Authority.

Staff of the Centre.

8. The staff of the Centre should be appointed by the Education Authority on the nomination of the Treatment Centre Committee, and would consist of duly qualified and registered practitioners for each of the medical, surgical, and dental departments it was decided to establish.

9. The members of the staff should hold office for..... years and should at the expiration of that time be eligible for re-election by the Education Committee on the recommendation of the Treatment Centre Committee.

Payment of Staff.

10. Each member of the staff should be remunerated at the rate of not less than £50 per school year for each half-day's attendance per week. In rural districts the profession should receive remuneration for the treatment of the following diseases, on a scale to be settled locally:

(a) Refraction.

(b) Nasal obstruction, adenoids, tonsils and suppurating ears.

(c) Ringworm.

Arrangements as regards Accommodation, etc.

11. All necessary accommodation with suitable lighting and heating should be provided by the Education Authority.

12. All drugs and apparatus required by the staff should be provided by the Local Education Authority.

Provision of Nurses.

13. The Education Committee should provide a nurse or nurses for the assistance of the staff.

Clerical Assistance, Stationery, etc.

14. The Education Committee should provide all necessary stationery, and the services of a clerk, when official returns are required to be made.

Opportunities for Inspection of Centre.

15. The Centre would be open at any time to the medical officers of the Board of Education or of the Local Education Authority; to any of the medical or dental members of the Treatment Centre Committee of the Centre; and, when no medical treatment is actually taking place, to the lay members of the Committee.

APPENDIX II.

MEMORANDUM, AS APPROVED BY THE ANNUAL REPRESENTATIVE MEETING, 1914, ON TREATMENT AT VOLUNTARY HOSPITALS OF SCHOOL CHILDREN FOUND DEFECTIVE ON MEDICAL INSPECTION.

(NOTE: *Pending consideration by the Medico-Political Committee and Council of the following Memorandum as amended by the Annual Representative Meeting, including consideration of the question of any consequential amendments thereof necessitated by these amendments or by other resolutions of the Meeting, the following print of the Memorandum, in which the amendments made by the Meeting have been incorporated, must be regarded as provisional only.*)

1. The results of the medical inspection of elementary school children have shown that very large numbers are suffering from disease and defective conditions urgently calling for treatment.

2. At present provision is not made by Education Authorities to meet this national evil, except in a fragmentary and unorganised manner.

3. In spite of the establishment in certain places of School Clinics or Treatment Centres, many children receive no treatment at all, a few are taken by their parents to voluntary hospitals; and in a very few instances the Education Authority has entered into a restricted arrangement with such institutions.

4. The Association has for six years formulated and published the principles on which, in its opinion, the medical treatment of school children as a national measure of public health should be based.

5. These principles are as follows:

(1) That all treatment must be adequately remunerated by the State;

(2) That no case should be referred in the first instance to a voluntary (charitable) institution for treatment;

(3) That treatment should be carried out, if possible, in a Treatment Centre or School Clinic, staffed by the local medical practitioners, or at a recognised surgery, and under special conditions.

6. The enquiry initiated by the Association during the latter part of 1913, in accordance with the resolution of the Annual Representative Meeting, 1913, shows that though unofficially some cases have drifted to voluntary hospitals, in only a few areas (probably not more than 12-15) have the Education Authorities attempted officially to provide treatment for the children at charitable institutions.

7. The question is therefore one on which the opinion of the Association must be again stated. To secure a comprehensive settlement it is needful that every Division should (as soon as possible) put before the Local Education Authority of the district the scheme of the British Medical Association. Such a scheme has been authorised by the Association (*see* Appendix I., Sub-Appendix B, page 278), and is capable of providing for all such medical treatment as can be furnished without the child becoming an in-patient of an institution. Thus treatment centres or clinics should, wherever possible, be started to treat defective school children in place of sending them to the voluntary hospitals.

8. The provision of hospital or institutional treatment is a further matter which should be dealt with as follows:—

I. The co-operation with the Association of the members of the Medical Staffs of the hospitals must be first obtained in support of the principles laid down by the Association.

II. The Local Education Authority must then be invited to provide such hospital treatment by either

(a) paying the hospital authorities for accommodation and the medical officers for treatment supplied;

or

(b) itself providing hospital accommodation and obtaining the services of private practitioners for treatment of the children.

APPENDIX III.

MODEL SCHEME, AS APPOVED BY THE ANNUAL REPRESENTATIVE MEETING, 1914, FOR THE TREATMENT OF TUBERCULOSIS.

STAFF.

Chief Tuberculosis Officers.

1. The chief tuberculosis officer should be a whole-time officer, and should receive not less than £500 per annum, or £400 if resident, exclusive of office, clerical and travelling expenses.

Assistant Tuberculosis Officers.

2 The assistant tuberculosis officers, where such are needed, should be whole-time officers at a salary of not less than £350 per annum, or £250 if resident, but tuberculosis officers whose duty, whatever their designation, includes the charge of the clinical arrangements concerning tuberculosis cases, and whose relation as regards such cases to the local profession will be that of consultant, should receive not less than £500 per annum, these salaries to be exclusive of office, clerical and travelling expenses.

Consultants.

3. The need for expert medical opinion cannot be met by the appointment of an assistant tuberculosis officer, acting under the administrative control of the medical officer of health, as an officer who could be secured at the salary of an assistant would not have the necessary experience to enable him to act as consultant to the district. When a medical practitioner is called in to act as a consultant, his services should be paid for at the local recognised rate for consultation fees.

Medical Officer of Health as Tuberculosis Officer.

4. The medical officer of health, in his capacity as administrative tuberculosis officer, should have an increase in his

salary corresponding to the increase in his duties. He should not act as clinical tuberculosis officer unless it can be shown:—

(1) that he has ample time for clinical work;

(2) that he fulfils the conditions as to clinical experience laid down by the Interim Report of the Departmental Committee on Tuberculosis (Astor Committee, pars. 27 and 28.):—

"*Whilst not desiring to lay down any hard-and-fast conditions, the Committee are of opinion that preference should be given to registered medical practitioners of suitable qualifications and experience, and not less than twenty-five years of age, who have held house appointments for at least six months in a general hospital, in addition to a similar period of attendance at a special institution for the treatment of tuberculosis. They should also be competent to supervise such laboratory work as may be necessary.*"

"*He should be of suitable age and attainment and enough of an expert on the subject of tuberculosis to command general confidence.*"

Procedure in providing Treatment.

5. For the efficient working of any tuberculosis scheme, it is recommended that any person applying to a tuberculosis officer or authority for any benefit under the scheme should present a statement of his case signed by a medical practitioner.

Domiciliary Treatment.

6. The medical practitioner should confer with the consulting officer at such times and in such circumstances as may be arranged between them in regard to patients under the care of the medical practitioner. (L.G.B. Order, 26th July, 1912, Article II. (6)).

7. The medical practitioner should prepare and transmit to the consulting officer at such times as may be arranged between them, not being less often than once in three months, a report in regard to each patient, giving particulars as to:—

(a) the progress of the patient;

(b) whether the conditions under which the patient is living and receiving the treatment are satisfactory;

(c) the behaviour of the patient in carrying out instructions given to him; and

(d) whether in the opinion of the medical practitioner any form of institutional treatment has become desirable. (L.G.B. Order, 26th July, 1912, Article II. (5)).

8. The medical practitioner should from time to time inform the Medical Officer of Health of the Sanitary District in which the patient resides of any circumstances known to the medical practitioner which may affect adversely the sanitary conditions under which the patient is living, and in respect to which action by the medical officer of health or of the Sanitary Authority would, in the opinion of the medical practitioner, be necessary or desirable. (L.G.B. Order, 26th July, 1912, Article II. (7)).

Remuneration of Profession.

9. Where the local profession of any Insurance area decide that they shall be paid by a capitation fee for the domiciliary treatment of tuberculosis cases of *insured persons* such fee should be not less than 6d., and should be for domiciliary treatment only.

10. Where the local profession of any Insurance area decide that they shall be paid upon a scale of fees for the domiciliary treatment of tuberculosis cases either of insured or uninsured persons, the following should be the minimum scale of fees:—

Scale of Minimum Fees.

	s.	d.
(a) For full medical report (including consultation at the surgery, or visit if within two miles of the doctor's house; if beyond that distance a mileage fee of not less than 1s. per mile (outwards) or in outlying and sparsely populated districts such sum as is suitable to local circumstances and the local customs of the profession)	5	0
(b) Extra for first visit with consulting tuberculosis officer	2	6
(c) Continuous record	5	0
(d) Quarterly reports	5	0
(e) Consultation at doctor's residence or surgery	2	6
(f) Visit at patient's home	2	6
(g) Night visit—that is, visit paid between 8 p.m. and 8 a.m. in response to call within these hours	5	0
(h) Special visit—that is, visit paid in response to call sent after 10 a.m and before 8 p.m.	3	6
(i.) Injection of vaccines (vaccines to be provided by Local Authority)	2	6

Note.—Mileage in (a) will apply to (f), (g), and (h).

Dispensary Treatment, whether attached to an Institution or not.

11. The attendance and treatment of cases of tuberculosis in tuberculosis dispensaries should be carried on in accordance with the following principles:—

A.—General principles, applicable to *all* tuberculosis dispensaries, whether voluntary or otherwise:—

(i.) That the services of all medical practitioners connected with the dispensary should be paid for;

(ii.) that, if possible, no patient should be treated at the dispensary except on the recommendation of a medical practitioner;

(iii.) that it is essential that every tuberculous patient should have his own medical attendant to carry out any necessary domiciliary treatment;

(iv.) that in order to keep the medical practitioner in touch with the work of detection and prevention of tuberculosis it is recommended that he should co-operate with the medical officer of health or tuberculosis officer in all inspection work (including the examination of "contacts" and "suspects");

(v.) that the medical officer in charge of the dispensary should not be engaged in private practice.

B.—Special principles, applicable to tuberculosis dispensaries established in connection with a voluntary institution:—

(i.) that the dispensary should be co-ordinated with the institution but carried on as a separate department.

(ii.) that the accounts of the institution should be kept so as to show the receipts and the approximate expenditure of the dispensary.

12. All attempts to make tuberculosis dispensaries into institutions merely for the application of some form of special treatment should be rigidly discouraged.

Treatment as In-patients in Voluntary Medical Institutions.

13. A voluntary institution providing beds for the treatment of cases of tuberculosis, if the institution accepts payment, should be carried on in accordance with the following principles:—

(i.) that the organisation may run concurrently with that of the institution;

(ii.) that the accounts should be kept so as to show the approximate aggregate cost of the treatment of such patients, including the cost of medical attendance and treatment;

(iii.) that the services of all members either of the resident or honorary medical staff concerned with the treatment of such patients shall be paid for.

14. When a patient is discharged from an institution it is imperative for the continuity of treatment that his usual medical attendant should be advised of the patient's discharge and be supplied with a report and temperature chart covering the period of the patient's residence in the institution.

Method of Payment of Members of Honorary Medical Staffs of Voluntary Tuberculosis Dispensaries and Voluntary Medical Institutions.

15. From all moneys received by the Governing Body of a voluntary tuberculosis dispensary or voluntary medical institution in respect of the Tuberculosis Medical Service, a proportion to be agreed upon between the Governing Body and the medical staff should be placed to a special Fund which shall belong to the medical staff.

Mode of Disposal of Special Fund.

16. Honorary Medical Staffs may find the following suggestions valuable in connection with the disposal of the moneys in the special Fund, and accordingly the Association suggests to the Hospital Staffs concerned that one or more of the following methods of distribution of any moneys in the special Fund may be found suitable:—

(i.) The distribution to the members of honorary medical staffs for their own personal disposal;

(ii.) for the assistance of members of the medical staff in connection with research work;

(iii.) for the purchase of instruments, books, etc., for the use of the medical staff or for lending to other members of the profession;

(iv.) for the initiation or development of post-graduate teaching in the institution;

(v.) the institution of a local medical benevolent fund, administered by the members of the honorary medical staff, for dealing with necessitous cases (*e.g.*, widows and children of former colleagues);

(vi.) grants to any recognised medical benevolent fund or institution; or
(vii.) otherwise as the majority of the medical staff may decide.

TREATMENT OF PERSONS NOT INSURED UNDER THE NATIONAL INSURANCE ACT.

17. The terms and conditions for treatment of uninsured persons, when such is undertaken by the local authority, should be the same, *mutatis mutandis*, as those for treatment of insured persons, except that for domiciliary attendance the terms, where a contract is desired, shall be not less than £1 per month.

IRELAND.

18. Until Medical Benefit is extended to Ireland, payment for domiciliary attendance reports, certificates, and other services should be on a scale of fees for work done.

19. It is hoped that this extension and the treatment of all forms of tuberculosis will be introduced at an early date, in which case it is urged that the arrangements should be similar to those prevailing in England.

BRITISH MEDICAL ASSOCIATION IN IRELAND.

THE Irish Committee of the British Medical Association has issued a circular letter signed by Mr. R. J. Johnstone, F.R.C.S., Chairman, and Dr. Henry Mills, late Honorary Secretary, in the following terms:

British Medical Association in Ireland.

The British Medical Association has made an advance that has not attracted sufficient attention from the practitioners in this country. It has now put its Irish work on a footing that enables it to deal with the local matters promptly and efficiently, by establishing a properly equipped office in Dublin, under the control of Dr. Thomas Hennessy as secretary. It has done this on a scale so liberal that the expenses will demand an outlay considerably in excess of the subscriptions received from Ireland.

All who know Dr. Hennessy are aware that we have in him a man who has always been a champion of the interests of our profession, and of those of the Poor Law service in particular. He now, in his new office, will be able to put his knowledge of our needs and his abilities as adviser and advocate at the disposal of our Branches, Divisions, and individual members in a way that must give fresh vigour to our efforts, and a hitherto unattained measure of cohesion and co-ordination to our organization.

The flexible constitution of the British Medical Association enables us to have practical autonomy in all Irish matters which are under the control of the very representative Irish Committee, to which everything bearing on our interests is referred by the Council, while we have at our back the resources and prestige of a great and powerful body, as well as the services of the most influential medical journal in the world.

The apathy which keeps so many from joining with their fellows in an organization that enables its elected representatives to speak authoritatively in their names gravely imperils the issue of the fight for our most cherished interests, and we appeal to you to set an example by becoming a member of the Association from the new year, and help us to start 1915 with renewed energy in the cause of our profession.

On behalf of the Irish Committee,

R. J. JOHNSTONE, F.R.C.S.,
Chairman.
JOHN MILLS, M.B.,
Late Hon. Secretary.

Irish Office of the British Medical Association,
16, South Frederick Street, Dublin.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH.—Dr. R. E. Crosse and Mr. N. Bishop Harman, Honorary Secretaries, give notice that a Council meeting will be held at 429, Strand, W.C., on Tuesday, January 12th, 1915, at 4 p.m.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—Dr. Arthur T. Todd-White, Honorary Secretary, gives notice that a meeting of the Division will be held in the Wesleyan Church School-room, High Road, Leyton, on Thursday, December 17th, at 4 p.m. Dr. J. H. Dauber, Surgeon to the Hospital for Women, Soho Square, will read a paper on some common complaints of women as observed in a gynaecological clinique.

Meetings of Branches and Divisions.

SOUTH MIDLAND BRANCH:

NORTHAMPTONSHIRE DIVISION.

A MEETING of the Division was held at the Northampton General Hospital on December 1st. In the absence of Colonel Bull, K.H.S., Mr. N. B. ODGERS presided, and seventeen other members were present.

The late Dr. John Terry.—On the proposition of the CHAIRMAN, seconded by Dr. HICHENS, a vote of condolence to Mrs. Terry on the sudden death of her husband Dr. John Terry, of Braunston, was passed.

Insurance Act.—Dr. LINNELL in an address on the working of the Insurance Act began by reading a letter from Dr. Smartt on the incompleteness of the payments made by the Insurance Committee. Dr. Linnell, however, did not think there was much cause for complaint. Mr. YORK GROVES, Clerk to the Northants Insurance Committee, attended and made a long and clear statement on the matter. He pointed out that absolute accuracy was impossible owing to the fact that at any given time a number of patients owing to death and emigration were merely paper patients. Hence, an average must be struck, and the Commissioners found that they had to deduct 5 per cent. for these unavoidable mistakes. Hence, a doctor with 1,000 panel patients only got paid for 950. The Commissioners now advised that only 90 per cent. of the money available should be paid. He contended that members of the medical profession had got all the money due to them from patients' payments, though they appeared not to have got it. Questions were asked and the matter briefly discussed by Dr. CHURCHOUSE, TOLPUTT, ROUGHTON, DRYLAND, BAXTER, and other members.

Belgian Medical Refugees.—Dr. HICHENS read a letter from the Medical Secretary of the Association appealing for subscriptions to help the Belgian doctors and chemists. On the motion of Dr. LINNELL, seconded by Dr. ROBB, it was decided that the profession be circularized and asked to give 10s. a head to the fund.

Annual Representative Meeting.—Dr. ROUGHTON, Deputy Representative, gave a brief report of the Annual Meeting, drawing special attention to the fact that the formation of a trade-union was negatived as not protecting the Association funds any better than is at present the case.

Votes of Thanks.—On the motion of Mr. ODGERS, seconded by Dr. DRYLAND, a vote of thanks was accorded to Dr. Roughton, and the meeting closed with a vote of thanks to Mr. Odgers for taking the chair.

MEDICAL TREATMENT OF PERSONS CALLED UP FOR SERVICE WITH HIS MAJESTY'S FORCES.

MEMORANDUM I.C./210 of the Insurance Commissioners on Medical Treatment of Persons called up for Service with His Majesty's Forces, was published in the JOURNAL of November 28th (p. 251), but was received too late for us to make any comment on it. It is to be hoped that every general practitioner has read it carefully, for it answers many of the questions which, to judge by the correspondence received at the head office, have been puzzling those from whose practices men have gone to serve under the colours.

Its contents may be briefly summarized as follows:

(*a*) The navy and army authorities become responsible for the medical treatment of all men who are called up or enlist, from the moment at which they are called up or enlist until the moment they are discharged. During this period no liability rests on their panel practitioners, whether the men are allowed to remain temporarily at home or not, even though they may be engaged in civil employment.

(*b*) An insured person who has been sent home owing to illness of any kind is still under the charge of the naval and military authorities until he is discharged.

(*c*) If a member of the Navy, Army, Territorial, or Reserve Forces applies for treatment, he should be dealt with as follows:

1. A member of the Naval Reserves should be referred to the naval surgeon and agent, if there is one in the district, and in the absence of a naval surgeon and

agent should be directed to make his own directions with a qualified civil practitioner for treatment. In the former case the surgeon and agent will receive his fees from the Admiralty; in the latter the patient will be responsible for settling the doctor's charges, but will be eligible to receive sick allowance under the King's Regulations and Admiralty Instructions on making application for the same through his commanding officer.

2. A member of the Army Reserve, Territorial Force or New Army on furlough should be referred to the Officer Commanding the nearest military station, who in every case will communicate with the Assistant Director of medical services of the area in which the soldier is temporarily residing. In case of emergency, or when a soldier unfit to travel resides at a distance from a military hospital, the soldier may apply to a civil practitioner to whom he will show his furlough paper, and who will be allowed to charge for attendance at the rate laid down under Army Regulations (A.F. O. 1667), provided that the soldier immediately reports to the Officer Commanding the nearest military station, as directed above.

(*d*) Upon discharge from the service an insured person becomes again entitled to medical benefit under the Insurance Acts, and will be entitled to make a fresh choice of the method by which he desires to obtain treatment, just as if he had freshly entered into insurance.

The memorandum, which refers primarily to the case of insured persons belonging to the Navy or Army Reserve or to the Territorial Forces, or who have enlisted in the New Army, incidentally raises the general question of the treatment by civilian practitioners of persons, insured or uninsured, coming under these categories.

Arising out of paragraph 4 of the Memorandum it may be of assistance to civilian practitioners who may be asked by the men to attend them to have the following information, embodying what are understood to be the latest Regulations of the Navy and Army bearing upon the question of the remuneration of civilian practitioners attending sailors and soldiers respectively.

It is to be hoped that panel practitioners will take due note of this and will decline to attend these persons except at the expense of those authorities who are now responsible for them. Their names having been removed from the lists of panel practitioners, no moneys will be received on their behalf from the Insurance Committees, and there is no reason whatever why they should be attended gratuitously, seeing that from the moment of their entrance into one of the services the authorities undertake full responsibility for them.

It will be noted that in the case of the sailor the patient is responsible for his own bill, and after compliance with certain regulations he can obtain an allowance towards this from the naval authorities. As regards the soldier, he must first apply to the nearest military station, but when this is impracticable he must call in a civilian practitioner, who is entitled to charge him on the scale appended. It is very important to note that the practitioner must insist on the production of the soldier's furlough paper. Without this the doctor has no guarantee that the man has ever been formally accepted, or has not been discharged.

I. NAVY REGULATIONS.

Regulation 880 of the "King's Regulations and Admiralty Instructions" is as follows:

880. *Medical Attendance on Leave.*

4. If the patient is unfit to travel and his residence is not near a ship or coastguard station, the captain of the ship to which he belongs is to require him to furnish a certificate from a duly qualified medical practitioner specifying the nature of the illness, and stating explicitly that the man is unfit to travel. A similar certificate is to be furnished weekly until the man is fit to travel (not necessarily fit for duty) or is removed to a naval hospital or invalided. Upon receipt of the certificates the man may be granted, with Admiralty approval, a sick allowance of 2s. a day, for a period not exceeding one or other of the periods specified in clauses 5 and 6. This allowance is to cover board, lodging, and medical attendance, and it is to be distinctly understood that the Admiralty will not pay the bills of any private practitioner whom the patient or his relations may have called in. The allowance is not to be paid without previous reference to the Accountant-General of the Navy, but the captain, if he thinks fit (particularly in cases of prolonged sickness), may apply for authority to pay the allowance weekly from the ship, such allowance being granted for the purpose of ensuring that the patient is properly cared for, with a view to his speedy cure and return to his ship. The medical certificates should accompany all applications for payment of the allowance.

5. A continuous service man or boy, or a marine borne on the books of one of His Majesty's ships, may be granted the allowance either until pronounced fit for return to his ship or for removal to hospital, or until he is invalided; provided that in no case is payment made for more than 91 days without the express sanction of the Admiralty.

6. A non-continuous service man will not be granted the allowance for more than 30 days, except when specially authorized by the Admiralty.

7. If the officer receiving the report of illness should not be the captain of the ship to which the man or boy belongs, he is to keep such captain fully informed of any action that may be taken in the case, and of the patient's progress and ultimate recovery or otherwise.

8. A special report on the illness of any man or boy sick on shore is to be made by the medical officer of the ship, through his commanding officer, to the Medical Director-General as soon as the man or boy completes the period of sickness for which full pay is allowed under Article 1425, or earlier if the sickness is of such a nature that it is improbable that the patient will again be fit for general service. The Medical Director-General will arrange, if desirable, that a survey shall be held on the man or boy at his own home by a naval or private practitioner, so that, when necessary, the patient may be invalided without delay.

In accordance with paragraph 4 above, the following appears in the "Instructions for the Guidance of Men while on Leave," printed on the back of the leave ticket used in the Navy:

The Admiralty will in no case pay the bills of private medical practitioners called in either by yourself or by your friends; but an allowance to cover board, lodging, and medical attendance may be granted if applied for through the captain of your ship.

II. ARMY REGULATIONS.

The following are the relevant regulations:

A soldier on furlough who requires medical aid should apply to the O.C. the nearest military station. When this is impracticable, he may apply to a civilian practitioner, show him his furlough paper, and he will be allowed to charge for attendance at the rate laid down on A.F. O 1667.

The following instructions must be conformed to in the case of any claim made by a civilian medical practitioner for medical attendance and medicines furnished to soldiers in cases in which the public is liable:

Scale of Charges: Visit and Medicine.

	Under 1 mile.	Over 1 Mile but under 2 Miles.	Over 2 but under 3 Miles.	Over 3 but under 4 Miles.	Over 4 but under 5 Miles.	Greater Distances.
	s. d.	s. d.	s. d.	s. d.	s. d.	
Day	2 6	3 0	4 0	5 0	6 0	An addition of 1s. for each mile over five.
Night, 10 p.m. to 7 a.m.	3 6	4 6	6 6	8 6	10 6	An addition of 2s. for each mile over five.

Secondly, charges for surgical appliances, when necessary, will be allowed according to circumstances.

Thirdly, minor surgical operations (including revaccination), each case, 2s. 6d.

Fourthly, for other operations, and for special cases, remuneration will be allowed according to circumstances and nature of case.

Memorandum.

1. On the face of the bill must be stated nature of the the case, the dates of visits, and whether medicine was supplied.

2. No bill can be approved unless made out in strict conformity with these instructions.

INSURANCE ACT.

MEMORANDUMS BY THE COMMISSIONERS.

Aged and Disabled Members of Societies.

IN Memorandum 205/A.S. the National Health Insurance Commissioners (England) set forth the conditions on which will be paid to approved societies the Exchequer grant of 2s. 6d. towards the cost of medical attendance and treatment of (1) insured members of societies aged 65 and upwards on July 15th, 1912, and (2) aged and disabled members of societies not qualified to become insured persons. It is explained that the grant will be paid for each of these two classes in quarterly instalments at the rate of 7½d. for the first three quarters of the year, but as

the fourth quarter has several days short, owing to the year beginning on January 15th, 1913, and ending on January 11th, 1914, the fourth quarter will only be reckoned as $\frac{355}{365}$ths of 7½d. Thus the total for the past year will not be the full 2s. 6d., but this will probably be put right in succeeding years. The Memorandum is principally of use to approved societies and fully explains how secretaries of societies must make application for the grant, which will not be paid to the branches of societies, but only to the central executives. The provisions now made in accordance with the Amendment Act, 1913, go some way towards alleviating the hardship which was indirectly inflicted by the principal Act on the aged and disabled uninsured members of societies.

Exempt Persons' Benefits.

The Commissioners have also issued Regulations (*Statutory Rules and Orders*, No. 1631, price 1d.) dealing with the benefit of exempt persons under Section (4) of the National Insurance Act, 1911, as amended by Section 9 of the Amending Act. It will be remembered that under Section 9 of the Amending Act the contributions paid by employers on behalf of persons who hold exemption certificates under Section 2 of the principal Act are to be devoted to providing for such persons medical and sanatorium benefits and the costs of administration of these benefits, and the Regulations in question deal with the administration in these cases. In the definition of the term "exempt persons" it is stated that it "includes a person who attains the age of 70 on or after the 12th day of January, 1914, and who, immediately before attaining that age, was an exempt person." This means a rather unexpected addition to the number of persons over 70 years of age who will be entitled to medical attendance and treatment by the panel doctors, and it would appear to be somewhat straining the provisions of the Amending Act at the expense of the panel doctors. This is hardly mitigated, so far as the doctors are concerned, by the provision in Section 6 that "an exempt person in respect of whom less than twenty-seven contributions have been paid shall not be entitled to the benefits, or either of them, after attaining the age of 70," seeing that if twenty-seven or more contributions have been paid these persons shall, on attaining the age of 70, be entitled to the benefits during the remainder of their life. It is further provided that at least twenty weekly contributions must first have been paid on their behalf before exempt persons become entitled to the two benefits, and the right may be suspended if less than thirteen contributions are paid for them in any one "benefit period," there being two such periods in each year, one from April 1st to September 30th, and the other from October 1st to March 31st. There are, however, a number of somewhat elaborate administrative methods set out in Section 5 by which deficiencies in contributions in any "benefit period" may be made up from previous balances of contributions, and in Section 14 provision is made to prevent any hardship in the case of soldiers, sailors, and police constables, who might lose their right to the benefits through serving during the war in the army, navy, or police forces. The contributions paid in respect of exempt persons are to be carried by the Commissioners to the credit of a fund to be called "The Exempt Persons' Fund," and from it will be paid 1s. 3d. per head for sanatorium benefit, not more than 4½d. for the General Medical Benefit Administration Fund, and also "to the General Medical Benefit Fund such sum as is payable in that year out of the Deposit Contributors' Fund in respect of the medical benefit of a deposit contributor entitled to medical benefit multiplied by the number of exempt persons entitled to the benefits," the number of exempt persons entitled to the benefits being determined in such manner as the Commissioners think fit.

Naval and Military Appointments.

ARMY MEDICAL SERVICE.

SIR BERKELEY G. A. MOYNIHAN, M.B., F.R.C.S., to be temporary Colonel.

ROYAL ARMY MEDICAL CORPS.

GUY N. STEPHEN is granted temporarily the honorary rank of Major.

JOHN H. EDWARDS to be temporary Major.

Honorary Captain JOHN GREEN is granted the honorary rank of Captain.

Lieutenants confirmed in their rank: ALAN C. PERRY, HARRY EVANS, BASIL W. BROWN, ARTHUR P. KENNEDY, CLAUD A. SLAUGHTER, STANLEY W. HOYLAND, JOSEPH H. BAIRD, THOMAS O. GRAHAM, OWEN HAIRSINE, RAYMOND J. CLANSEN, GEORGE A. COLE, RICHARD O'KELLY, CLIVE A. WHITTINGHAM, ALBERT F. L. SRIELDS, FREDERICK MCKIBBIN, THOMAS M. DAVIE, CAMPBELL M. CORMACK, JOHN G. RONALDSON, HUBERT C. G. PEDLER, ROBERT L. HORTON, JOHN ALSTON, CHARLES R. MCINTOSH, JOHN CAMERON, JAMES C. BRASH, FRANCIS G. MACNAUGHTON, WILLIAM N. CHESNEY, WILLIAM WALKER, DAVID M. MARR, JOHN M ORME, JOHN A. O'DRISCOLL, IVAN M. PIRRIE, EDGAR S. ROWBOTHAM, JOHN F. W. SANDISON, IDRIS D. EVANS, PATRICK WALSH, THOMAS W. CLARKE, JOHN CULLENAN, FRANCIS D. ANNESLEY, IAN D. SUTTIE, HENRY C. BAZETT, GEORGE PERKINS, CYRIL J. A. GRIFFIN, FRANK COOK, FRANCIS H. GUPPY, ROBERT ELLIS, FRANCIS G. A. SMYTH, CLIFFORD W. SPARKS, HARRY E. CRESWELL, RICHARD A. PRESTON, ARTHUR B. PRESTON, ALBERT G. W. COMPTON, CHARLES H. THOMAS, WILLIAM C. MACKIE, CHARLES D. M. BUCKLEY, FRANK P. FREEMAN, HENRY S. BAKER, FRANK CROSBIE, FRANCIS A. BELAM, AUSTIN SMITH, ERNEST A. DYSON, HAMILTON B. GOULDING, WILLIAM E. TYNDALL, WALTER V. TOTHILL, HARRY NIELD, CYRIL ARMSTRONG, NORMAN L. JOYNT, HUGH S. PEMBERTON, PETER F. WARD, WILLIAM J. ADIE, WILLIAM S. BIRCH, ALEXANDER J. EWING, HAROLD E. ROSE, RICHARD N. O. MOYNAM, MORGAN J. B. F. BURKE-KENNEDY, JOHN V. L GRANT, GEORGE G. MARSHALL, LEONARD F. BROWNE, CUTHBERT H. ATTENBOROUGH, HAROLD J. S. MORTON, REGINALD H. LEIGH, GEORGE M. CHAPMAN, JAMES B. SCOTT, JOHN P. DAVIES, DAVID W. JOHN, JOSEPH B. WILLIAMSON, JOHN C. PYPER, GEOFFREY W. WOOD, TIMOTHY F. HEGARTY, BERNARD MURPHY, WILLIAM H. WOOD, HENRY A. HARBISON, CYRIL POPHAM, ROBERT HAY, CLAUDE J. D. MAY, CHARLES F. HACKER, JAMES K. J. HAWORTH, LAURENCE H. W. IREDALE, CEDRIC O. SHACKLETON, THOMAS C. STOREY, GEORGE H. C. MOLD, JOHN N. MCINTOSH, JOHN H. OWEN, ALEXANDER B. FOOT, JAMES LANIGAN, JEREMIAH J. MAGNER, GERALD C. DIXON, CHARLES F. BURTON, LIONEL A. LEWIS, JOHN P. STALLARD, PATRICK J. CORCORAN, and WALTER A. ELLIOTT.

To be temporary Lieutenants: CHARLES H. FENNELL, M.D., GEORGE J. WILSON, M.B., ALFRED ERNEST SALKELD, HORACE S. BERRY, GEORGE L. ATKINSON, LIONEL C. FERGUSON, ALEXANDER G. HIGGINS, ARTHUR G. M. MIDDLETON, CHARLES J. SINGER, M.D., DONALD CLARK, M.B., HENRY W. TEAGUE, M.B., JAMES MATHESON, M.B., EDWARD H. H. GRANGER, FRED. A. R. HACKER.

To be Lieutenants on probation: JAMES B. FOTHERINGHAM, CECIL S. STADDON, ROBERT I. SULLIVAN, JOHAN F. VAN DER WESTHUYZEN, ANDREW R. ROSS, CLAUDE H. FISCHEL, FREDERICK M. LIPSCOMB, HARRY P. RUDOLF, ROBERT W. S. MURRAY, WILLIAM H. ELLIOTT, CLIFFORD T. VAN DER VYVER, ALLAN B. HAWKINS.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BARNSLEY: BECKETT HOSPITAL AND DISPENSARY.—Second House-Surgeon. Salary, £100 per annum.

BARNSTAPLE: NORTH DEVON INFIRMARY.—House-Surgeon. Salary, £100 per annum.

BARROW-IN-FURNESS: NORTH LONSDALE HOSPITAL.—House-Surgeon (male). Salary, £150 per annum.

BIRKENHEAD: BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum.

BIRMINGHAM GENERAL DISPENSARY. — Resident Medical Officer. Salary, £240 per annum.

BIRMINGHAM: LITTLE BROMWICH FEVER HOSPITAL.—Assistant Resident Medical Officer. Salary, £200 per annum.

BIRMINGHAM UNION.—(1) Second, Third, and Fourth Assistant Medical Officers at Dudley Road Infirmary; salary, £210, £170, and £160 per annum respectively. (2) Assistant Medical Officer at the Selly Oak Infirmary; salary, £180 per annum.

BRADFORD POOR LAW UNION.—Assistant Resident Medical Officer for the St. Luke's Hospital and Union House. Salary, £150 per annum.

BRADFORD ROYAL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

BURY AND DISTRICT JOINT HOSPITAL BOARD.—Medical Superintendent. Salary, £200 per annum.

CARDIFF: KING EDWARD VII HOSPITAL.—House-Surgeons. Salary at the rate of £100 per annum.

CARDIFF: KING EDWARD VII WELSH NATIONAL MEMORIAL ASSOCIATION.—Assistant Resident Medical Officers at Sanatoriums. Salary, £150 per annum.

CHELSEA INFIRMARY, Cale Street, S.W.—Second Assistant Medical Officer. Salary, £180 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, Victoria Park, E.—(1) Physician to Out-patients. (2) House-Physician. Salary at the rate of £75 per annum.

DUDLEY: GUEST HOSPITAL.—Assistant House-Surgeon. Salary at the rate of £100 per annum.

DURHAM; SHERBURN HOSPITAL.—Medical Officer. Salary, £300 per annum.

EVELINA HOSPITAL FOR SICK CHILDREN, Southwark, S.E.—Ten Qualified Clinical Assistants in the Outpatients' Departments.

FALKLAND ISLANDS.—Assistant Colonial Surgeon. Salary, £400 per annum.

FIFE DISTRICT ASYLUM. — Senior Assistant Medical Officer. Salary, £170 per annum.

GLOUCESTERSHIRE ROYAL INFIRMARY AND EYE INSTITUTION.—Assistant House-Surgeon. Salary, £80 per annum.

GREAT NORTHERN CENTRAL HOSPITAL, Holloway Road, N.—Resident Medical Officer. Salary, £120 per annum.

GREAT YARMOUTH HOSPITAL.—House-Surgeon (male). Salary, £200 per annum.

HALIFAX: ROYAL HALIFAX INFIRMARY.—Second and Third House-Surgeons. Salary, £120 and £100 per annum respectively.

HALIFAX UNION POOR LAW HOSPITAL.—Resident Medical Officer. Salary, £140 per annum.

INDIA: JHARIA BOARD OF HEALTH.—Chief Sanitary Officer for the Jharia Mining Settlement. Salary, Rs.1,200, rising to Rs.1,500 a month.

KENSINGTON AND FULHAM GENERAL HOSPITAL, Earl's Court, S.W.—Dental Surgeon.

KENT AND CANTERBURY HOSPITAL.—Senior and Junior House-Surgeons. Salary, £100 and £90 per annum respectively.

KENT COUNTY ASYLUM, Maidstone.—Male Junior Assistant Medical Officer. Salary, £250 per annum.

KING EDWARD VII MEMORIAL SANATORIUM, Shirlett, near Much Wenlock.—Resident Medical Superintendent. Salary, £300 per annum.

LEEDS PUBLIC DISPENSARY.—Resident Medical Officer. Salary, £130 per annum.

LIVERPOOL CITY INFECTIOUS DISEASES HOSPITAL.—Locumtenent Resident Medical Officer. Remuneration, 5 guineas a week.

LIVERPOOL PARISH.—Resident Assistant Medical Officer for the Brownlow Hill Institution. Salary, £200 per annum.

LIVERPOOL ROYAL SOUTHERN HOSPITAL.—House-Surgeon. Salary, £60 per annum.

LONDON HOSPITAL, E.—Surgeon.

LONDON LOCK HOSPITAL, Harrow Road, W.—House-Surgeon at the Female Hospital. Salary, £130 per annum.

MANCHESTER: ANCOATS HOSPITAL.—(1) Resident Medical Officer; (2) Resident House-Physician. Salary, £130 and £80 per annum respectively.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, rising to £200.

MIDLOTHIAN SECONDARY EDUCATION COMMITTEE.—School Medical Officer (temporary). Salary at the rate of £300 per annum.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.—Senior House-Surgeon. Salary at the rate of £100 per annum.

NEWCASTLE-UPON-TYNE: ROYAL VICTORIA INFIRMARY.—Anaesthetist.

NEW HOSPITAL FOR WOMEN, Euston Road, N.W.—Assistant Obstetrician.

NEWPORT: ROYAL GWENT HOSPITAL.—Resident Medical Officer. Salary for first six months at the rate of £100 per annum, rising to £150.

NORTHAMPTON GENERAL HOSPITAL.—House-Surgeon. Salary, £120 per annum.

NORTHAMPTONSHIRE COUNTY COUNCIL EDUCATION COMMITTEE.—Assistant School Medical Officer (temporary). Salary, £25 per month.

NOTTINGHAM: GENERAL HOSPITAL.—Senior House-Physician. Salary, £120 per annum. (Women eligible.)

NOTTS COUNTY COUNCIL.—Resident Medical Officer at the Ransom Sanatorium. Salary, £200 per annum.

PLAISTOW: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—Resident Medical Officer. Salary, £90 per annum.

PRESTON: ROYAL INFIRMARY.—Assistant Resident Medical and Surgical Officer. Salary, £120 per annum.

QUEEN CHARLOTTE'S LYING-IN HOSPITAL, Marylebone Road, N.W.—District Resident Medical Officer. Salary at the rate of £60 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeon. Salary at the rate of £80 per annum.

ROCHDALE INFIRMARY AND DISPENSARY.—Junior House-Surgeon (male). Salary, £110 per annum.

ROYAL HOSPITAL FOR DISEASES OF THE CHEST, City Road, E.C.—House-Physician. Salary at the rate of £75 per annum.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.—Clinical and Chief Clinical Assistants.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—Resident Medical Officer for duration of the war. Salary at the rate of £150 per annum.

SALFORD ROYAL HOSPITAL.—(1) Resident Surgical Officer; (2) Casualty House-Surgeon. (Males.) Salary, £120 and £100 per annum respectively.

SALFORD UNION INFIRMARY.—Male Resident Assistant Medical Officer. Salary, £150 per annum.

SALISBURY INFIRMARY.—Assistant House-Surgeon. Salary, £75 per annum.

SCULCOATES UNION.—Resident Assistant Medical Officer at Workhouse Infirmary. Salary, £200 per annum.

SHEFFIELD ROYAL HOSPITAL.—Assistant House-Physician. Salary, £80 per annum.

SHEFFIELD ROYAL INFIRMARY.—Male House-Surgeon. Salary, £100 per annum.

SHETLAND: PARISH OF NORTHMAVINE.—Medical Officer. Salary, under Poor Law, £50 per annum; Lunacy Acts, £10.

SOMERSET AND BATH ASYLUM, Cotford.—Assistaut Medical Officer. Salary, £250 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

SUNDERLAND ROYAL INFIRMARY.—Senior Resident Medical Officer. Salary, £150 per annum.

TAUNTON AND SOMERSET HOSPITAL.—Senior House-Surgeon. Salary, £120 per annum.

TRINIDAD: LUNATIC ASYLUM.—Assistant Medical Superintendent. Salary, £250 per annum, with £80 ration allowance and £50 quinquennial increments.

TRURO: ROYAL CORNWALL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

TUNBRIDGE WELLS GENERAL HOSPITAL.—House-Surgeon. Salary, £100 per annum.

WAKEFIELD CLAYTON HOSPITAL.—Senior House-Surgeon. Salary, £160 per annum.

WALSALL AND DISTRICT HOSPITAL.—Junior House-Surgeon and Anaesthetist. Salary, £110 per annum.

WARRINGTON INFIRMARY AND DISPENSARY.—Senior House-Surgeon. Salary, £200 per annum.

WEST BROMWICH AND DISTRICT HOSPITAL.—(1) House-Surgeon; (2) Assistant House-Surgeon. Salary, £150 and £120 per annum respectively.

WEST END HOSPITAL FOR DISEASES OF THE NERVOUS SYSTEM, Welbeck Street, W.—(1) Honorary Anaesthetist. (2) Resident House-Physician. Salary, £100 per annum.

WEST HAM COUNTY BOROUGH.—Assistant School Medical Officer. Salary, £300 per annum.

WEST HAM UNION.—(1) Second Assistant (Resident Male) Medical Officer at the Infirmary; (2) Deputy Medical Officer at the Sick Home. Salary, £250 per annum each.

WESTMINSTER HOSPITAL, S.W.—House-Surgeon.

WESTMINSTER UNION INFIRMARY.—Second and Third Assistant Medical Officers. Salary, £160 and £140, rising to £180 and £160 respectively.

WEST RIDING COUNTY COUNCIL, Wakefield.—Temporary School Medical Inspector. Salary, £325 per annum.

WEST RIDING OF YORKSHIRE.—(1) Assistant Medical Officer at the Storthes Hall Asylum; salary, £250 per annum, rising to £300; (2) Assistant Medical Officer at the Scalebor Park Asylum; salary, £250 per annum, or Locumtenent for the winter months, salary £5 5s. per week.

WILTS COUNTY COUNCIL.—Temporary Assistant School Medical Inspector. Salary, £300 per annum.

YORK COUNTY HOSPITAL.—House-Physician (male). Salary, £150 per annum.

YORK: NORTH RIDING ASYLUM, Clifton.—Locumtenent Medical Officer. Salary, £250 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Crowle (Lincoln), Shildon (Durham), Tobermory (Argyle).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

CHRISTIAN, L. de B., M.B., C.M.Edin., Certifying Factory Surgeon for the Hounslow District, co. Middlesex.

DAVIES, T. J., M.R.C.S., L.R.C.P., District Medical Officer of the Pontypridd Union.

HELSBY, H. R., F.R.C.S.Edin., L.R.C.P., District Medical Officer of the Pontypridd Union.

PHILLIPS, G. C. J., M.D., District Medical Officer of the Ampthill Union.

VERRALL, P. J., M.B., B.C.Cantab., F.R.C.S., Medical Officer to Epsom College.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is **5s.**, *which sum should be forwarded in Post Office Orders or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

MARRIAGE.

KEYWORTH-PARSONS.—At St. Thomas' Cathedral, Bombay, on October 23rd, William David Keyworth, B.A., M.B., B.C.Cantab., M.R.C.P.Lond., Captain, I.M.S., to Mary Louisa, eldest daughter of John Parsons, Esq., of Richmond, Surrey.

DEATHS.

MORETON.—On the 5th inst., at Earlscroft, Tarvin, Chester, James Earl Moreton, F.R.C.S., aged 83.

TAYLOR.—On December 2nd, at 180, Kennington Park Road, Herbert Taylor, M.B.Lond., aged 64.

DIARY FOR THE WEEK.

TUESDAY.

LONDON DERMATOLOGICAL SOCIETY, St. John's Hospital for Diseases of the Skin, 49, Leicester Square, W.C., 4.30 p.m.—Pathological Specimens, Clinical Cases, and Cases for Consultation. 5.15 p.m.—Paper by Dr. E. G. Reeve: Intensive Nascent Iodine and the Treatment of Tuberculosis.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C., 5 p.m.—Bradshaw Lecture, by Sir Frederic Eve: Acute Haemorrhagic Pancreatitis, with remarks on the Etiology of Chronic Pancreatitis.

WEDNESDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF THE HISTORY OF MEDICINE, 5 p.m.—Papers:—Dr. George Peachey: A Seventeenth Century Medical Superstition. Mr. C. J. S. Thompson: The Apothecary in England from the Fourteenth to the Sixteenth Century.

THURSDAY.

ROYAL SOCIETY OF MEDICINE:

SECTION OF DERMATOLOGY, 4.30 p.m.—Exhibition of Cases.

FRIDAY.

SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 11, Chandos Street W., 8.30 p.m.—Tropical Problems in the New World by Dr. Andrew Balfour, C.M.G., illustrated by lantern slides.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, DECEMBER 19TH, 1914.

CONTENTS.

Meetings of Branches and Divisions.

SOUTHERN BRANCH.

THE autumn general (and clinical) meeting of the Southern Branch was held at Southampton on November 25th. The President, Mr. G. H. COWEN, F.R.C.S., was in the chair, and about thirty other members were present.

Transfer of Division.—The Council reported that the Salisbury Division having been incorporated in the Wiltshire Branch, a loss of over forty members had been sustained by the Southern Branch. The Council had availed itself of its powers to elect associate members and had honoured Messrs. Luckham, Straton, Willcox, Gordon, March, and Dr. Kempe in this way. The Council's action was heartily endorsed by the meeting.

Epsom College.—The HONORARY TREASURER announced that the sum of £7 2s. 6d. collected at the luncheon at the annual meeting had been sent to Epsom College. The Branch President and Secretary were directed to distribute the votes accruing.

Finance.—The meeting adopted the recommendation of the Council as to the changes necessary in the disposal of the deposit account consequent on the separation of the Salisbury Division, and Mr. C. P. Childe was elected as trustee thereof in conjunction with Dr. R Robertson.

Medical Officers of Reserve Units.—A letter was read from Colonel Mackay appealing for thirty-one medical officers to complete the medical establishments of the Reserve Units.

Medical Attendance on Dependants.—The subject of the medical attendance on the dependants of the men on active service was raised by Dr. ROBERTS (Ventnor), and after discussion was referred to the Council for consideration and report.

Clinical Meeting.

The following papers were read:—(1) Mr. C. P. CHILDE (Southsea): Abdominal hysterectomy for carcinoma of the cervix uteri by the method of clamp and cautery. (2) Dr. W. P. PURVIS (Southampton): The treatment of gunshot wounds. Dr. J. T. LEON (Southsea) showed a specimen of lympho-sarcoma of chest, and read a note on mediastinal growths. Considerable discussion ensued, and a paper by Dr. C. F. Routh (Southsea) on *Bacillis coli* infection of the urinary tract, and a demonstration by Dr. N. E. Aldridge (Southampton), had to be postponed owing to the lateness of the hour.

SUSSEX BRANCH:

CHICHESTER AND WORTHING, AND HORSHAM DIVISIONS

THE following resolutions were passed at a combined meeting of the Chichester and Worthing, and Horsham Divisions, held at the Hospital, Worthing, on December 7th:

1. That this meeting cannot approve of the scale of fees proposed for treatment of school children in the hospitals of West Sussex.
2. That all members of the profession be urged that whenever they may be called to attend the patients of a doctor who is temporarily absent on service with His Majesty's Forces, they should make it a point of honour to impress upon the patients that they will treat them for their absent friend and will hand them over to his care again on his return home.
3. That no medical man shall consent to act as medical referee under the Insurance Act for a fee less than 10s. 6d., with mileage at the rate of not less than 1s. a mile or part of a mile beyond one mile, and that such a referee should not act without previous communication with the doctor in charge of the case.
4. *Re* fees for attendance upon police constables and prisoners: Resolved that the fees for visits to constables and prisoners should remain at 5s. as heretofore and that double fees be charged for attendance between 8 p.m. and 8 a.m.
5. That all medical practitioners in the Division should be invited to contribute to the fund providing aid for Belgian doctors and pharmacists. Subscriptions should be sent to the Honorary Secretary of the Division.
6. That the attention be called of such medical men as have undertaken the treatment of dependants on those serving with the colours to the fact that such treatment need not be given without the production of a voucher from the local relief committee. Such voucher should be a guarantee that the person cannot afford to pay for medical treatment.

ULSTER BRANCH:

BELFAST DIVISION.

THE winter meeting of the Belfast Division was held in the Medical Institute, Belfast, on December 10th, under the presidency of Dr. GEORGE ST. GEORGE, Chairman of the Division. There was a large and representative attendance.

Chairman's Address.—The CHAIRMAN delivered an address on medical work in the early Seventies in a county infirmary, for which the meeting accorded him a hearty vote of thanks.

Heart Muscle.—Dr. J. E. MCILWAINE read a paper entitled "The clinical estimation of the heart muscle," which had involved much research work on his part.

Insurance Act.—A hearty welcome was accorded to the Irish Medical Secretary of the British Medical Association, Dr. T. HENNESSY (Dublin), who gave the latest information as regards the position of the Irish medical profession under the Insurance Act. In moving a vote of thanks to Dr. Hennessy, Dr. R. J. JOHNSTONE voiced the feeling of all present by remarking that the Association was very fortunate in securing the services of Dr. Hennessy as Irish Medical Secretary.

Association Notices.

CHANGES OF BOUNDARIES.

DISCONTINUANCE OF EAST ANGLIAN BRANCH: FORMATION OF ESSEX, NORFOLK, AND SUFFOLK BRANCHES.

THE following changes have been made in accordance with the Articles and By-laws, and take effect as from the date of publication of this notice:

That the East Anglian Branch be discontinued and the following new Branches be formed in substitution therefor:

Branch.	*Area.*
1. Essex.	That portion of Essex contained in the existing East Anglian Branch.
2. Norfolk.	Norfolk.
3. Suffolk.	Suffolk,

the Divisions of the new Branches to be those of the East Anglian Branch contained in the respective counties.

Representation in Representative Body.—For 1914–15 the whole area is represented as determined by the Council (SUPPLEMENT, June 27th, 1914) on the basis of the 1914 Annual List.

As regards representation in the Representative Body, 1915–16, the following are the arrangements proposed:

1. *Divisions of Essex Branch.*—As for 1914–15.

2. *Divisions of Norfolk Branch.*—To form three constituencies, as follows:

(*a*) East Norfolk with Great Yarmouth.
(*b*) Norwich.
(*c*) West Norfolk.

3. *Divisions of Suffolk Branch.*—To form two constituencies, as follows:

(*a*) North Suffolk with South Suffolk.
(*b*) West Suffolk.

BRANCH AND DIVISION MEETINGS TO BE HELD.

METROPOLITAN COUNTIES BRANCH.—Dr. R. E. Crosse and Mr. N. Bishop Harman, Honorary Secretaries, give notice that a Council meeting will be held at 429, Strand, W.C., on Tuesday, January 12th, 1915, at 4 p.m.

LOCAL MEDICAL AND PANEL COMMITTEES.

LONDON.

PANEL COMMITTEE.

A MEETING of the London Panel Committee was held on December 15th, Dr. H. J. CARDALE presiding.

Representation of Non-panel Interests.

The General Purposes Subcommittee reported further as to carrying into effect the opinion expressed both by the Local Medical and the Panel Committees that, in the interests of the profession, the personnel of the two committees should be identical. It was pointed out that Model Scheme A issued by the Commissioners provided that "the Local Medical Committee shall consist of the members for the time being of the Panel Committee," and the Subcommittee understood that the Commissioners would probably approve a scheme for London on this basis provided that the rule as to co-option was altered to permit of a number of the fifteen co-opted members being representative of non-panel interests. The Subcommittee suggested a conference between representatives of the two committees, and proposed as a basis of discussion that Rule 29, which provides that a woman practitioner shall be elected to the Committee by women practitioners on the panel, and that not more than fourteen other practitioners may be co-opted, should be altered as follows:

1. The Committee shall forthwith appoint twelve other duly qualified medical practitioners to be members of the Committee, nominated as follows:

(i) Three representatives of the medical staffs of hospitals.
(ii) Two representatives of medical officers of health.
(iii) Three representatives of non-panel practitioners resident north of the Thames.
(iv) Three representatives of non-panel practitioners resident south of the Thames.
(v) One representative of women practitioners on the panel.

2. The Committee may within three months after its constitution appoint in addition to be members of the Committee any other duly qualified medical practitioners to a number not exceeding three.

The General Purposes Subcommittee urged that such an arrangement would be advantageous, and would tend towards unity in the profession in London. Decisions upon matters devolving only upon the Panel Committee would be conveyed as decisions of the Panel Committee and the views of the dual committee upon matters, such as the range of medical services, which devolved only upon the Local Medical Committee, would be regarded as the views of that Committee. Further, members of the Panel Committee would have an opportunity of deciding such important questions as the range of medical services, and of dealing with those ethical duties which at present devolved only on the Local Medical Committee. In view of the fact that 62 of the 77 members of the Committee, if the proposed modifications were adopted, would be elected by the panel practitioners, the Subcommittee did not think that any serious objections to the proposal would be raised.

The Committee discussed the draft scheme of representation of non-panel interests in some detail. It was agreed, on the suggestion of the CHAIRMAN, to omit from Clause (1) the words "nominated as follows," in order to leave outside bodies entirely free as to the method of choosing their representatives. Subclause (i), as to representation of staffs of hospitals, was agreed. Dr. MAJOR GREENWOOD, on Subclause (ii), proposed that the representation be shared between a medical officer of health and a Poor Law medical officer. Dr. H. H. MILLS suggested as an alternative that the number of non-panel representatives south of the Thames might be reduced by one and the vacant seat allotted to a Poor Law medical officer. Dr. HOGARTH replied that there were quite as many non-panel practitioners south of the Thames as in the north, if Harley Street were excluded. Dr. CLAUDE TAYLOR urged that on the reconstituted committee two medical officers of health would not be too many. Subclause (ii) was then carried as proposed, with the addition that one medical officer of health should represent the north and one the south side of the Thames.

Subclauses (iii) and (iv) were approved. Subclause (v), as to representation of women practitioners, was also agreed. In Clause (2) of the draft scheme of representation an amendment to reduce the number of additional co-opted members to two was lost, and the whole scheme as amended was then adopted.

Relations with the British Medical Association.

The General Purposes Subcommittee reported that it had given careful consideration to a circular letter from the British Medical Association (Local Medical and Panel Subcommittee) suggesting that it would assist the Association in voicing centrally the views of practitioners on the panel if Local Medical and Panel Committees furnished the Association with full information as to their doings, consulted the Association in their difficulties, and authorized it to act on their behalf in matters affecting the whole profession. In particular the Association desired to know whether the Panel Committee would allow its secretary "to enter into steady and close relationship with the central office of the Association." The Subcommittee recommended that the agenda and minutes of meetings of the Committee be sent to the Association, with copies of circulars issued to practitioners on the panel; that replies be made to questions accompanying the Medical Secretary's letter, and that the Secretary be authorized to enter into steady and close relationship with the central office of the Association.

Dr. COWIE moved an amendment that everything be deleted from the recommendation, save the instruction to forward copies of the agenda, minutes, and circulars, and that the Association be asked to send to the Panel Committee copies of the proceedings of the Insurance Act Committee and of circulars issued with reference to the medical service under the Insurance Act. He said the recommendation involved a grave question of policy. While recognizing the expediency and importance of having every assistance in solving the knotty problems arising under the Act, and of having the profession co-ordinated, he felt that the Panel Committee must be exceedingly careful not to compromise its independence.

Dr. R. J. FARMAN seconded the amendment. He was not opposed to the recommendation, but he believed the

Insurance Act Committee of the Association could give the Panel Committee information which would be of great assistance. An interchange of documents would lead to a close relationship.

Dr. Major GREENWOOD, in supporting the Subcommittee's proposal, said that the British Medical Association, which had within its ranks many thousands of panel practitioners, wished to bring into line not only the London Panel Committee, but all panel committees.

Dr. J. A. ANGUS objected to the Association claiming the right to determine all matters affecting the profession, when none of the 8,000 panel practitioners who were not members of the Association could sit upon the Central Committee, although the Insurance Act Committee contained doctors who were not panel practitioners.

Dr. BATTEN had no fear that the Panel Committee would be subordinated to the Association. It was the Committee's duty to lead the way in healing the divisions of the past; the cleavage took place as it were by accident owing to the haste with which the Insurance Act was rushed through. In helping the Association panel practitioners would gain a preponderating influence in its counsels.

Dr. HOGARTH said he would like to join in the healing of old sores, but he did not like being forced to join the British Medical Association.

The Chairman (Dr. CARDALE) quoted a passage from the Medical Secretary's letter to the effect that there was no desire on the part of the Association to interfere with the autonomy of Committees as to purely local matters. He would not remain in the chair if he thought any outside body was going to interfere with the special duties of the Panel Committee.

Dr. ATTERIDGE supported the amendment on the ground that a close relationship should be left to grow and not be forced.

The SECRETARY (Dr. B. A. Richmond), in reply to a question, said that at a recent date nearly 100 out of 124 Local Medical and Panel Committees in England had replied to the Association that they were willing to co-operate.

Dr. CUNNINGTON asked whether, now that the Association offered to help Panel Committees, it was wise to stand aside? They all wanted the Association to get back to a strong position, so that it could fight again, for there was a big battle ahead.

Dr. LAURISTON E. SHAW thought the recommendation was right. The financial basis of the Insurance Act would come up for reconsideration as soon as the war was over. The Association was the only body which could fight for the profession in the whole of the United Kingdom.

The amendment was lost by 23 votes to 11.

Dr. J. A. ANGUS then moved to add the following words to the Subcommittee's recommendation:

> Provided that this Committee is allowed to nominate its own representatives to serve on the proposed central council, and that no panel practitioner be debarred from serving on such council by reason of his not being a member of the British Medical Association.

He thought that the Association should not refuse to allow one or more of the 8,000 non-members among panel practitioners to participate in its counsels.

Dr. BATTEN did not think the Association could add non-members to its Committees without infringement of the Articles of Association, and Dr. GREENWOOD emphasized the same point.

Dr. DENNING thought it unreasonable to ask that practitioners should be admitted to the full privileges of the Association without paying the subscription. Old members of the Association felt sore on that point when they thought of the large sums of money supplied to fight the battles of the profession when non-members of the Association were making no contribution.

The amendment was lost, only three voting in its favour, and the recommendation of the Subcommittee that close co-operation be sought with the British Medical Association was then carried.

Treatment of Soldiers and Sailors.

In regard to Circular 210/I.C. as to arrangements for the medical treatment of insured persons who have joined the forces, Dr. BATTEN mentioned that he frequently received applications for treatment from such persons. They assured him that they had no army medical officer and could get no treatment. He had either to send them to a hospital or treat them at his own expense.

The CHAIRMAN said that as soon as a man joined the colours he ceased to derive any benefit from the Drug Fund, and the practitioner had no right to give him any treatment at the expense of that fund. He hoped that most practitioners would give free treatment in cases in which the circumstances seemed to warrant that course.

It was mentioned that a document issued to soldiers on furlough stated that they could go to any medical practitioner if in need of treatment and the doctor could claim a fee from the War Office by applying for the appropriate form.

Treatment of Tuberculosis.

The Panel Service Subcommittee invited the Committee to pass a series of resolutions calling upon the Local Government Board to secure that a scheme for dispensary treatment of tuberculosis was prepared in every borough of London where arrangements had not yet been made, and expressing the opinion that a consulting officer should be an expert in tuberculosis and experienced in clinical work, and that a medical officer of health not so qualified should not act in that capacity; also that where a dispensary scheme had not been approved, the medical adviser to the Insurance Committee should act as consulting officer in relation to domiciliary treatment.

Dr. LAURISTON SHAW moved an amendment that the reference to medical officers of health should read: "And that a medical officer of health should not in any circumstances act in this capacity." The Panel Committee had asked the Local Government Board to make it clear that the officer should act as a consulting officer, and should not interfere with the work of the panel practitioner; but it was equally important that the medical officers of health, whose function was the care of the health of the community, should not infringe the duties of the private practitioner towards the individual.

The amendment was approved and the recommendations as altered were agreed to.

Ethics of Panel Lists.

The Insurance Committee asked if the Panel Committee would concur in a proposal that a practitioner should not be permitted to have his name included in a borough panel for an area beyond two miles radius from his residence. The Subcommittee thought that no alteration should be made in the present practice. In the discussion, it was urged that doctors frequently visited patients who had removed to distant boroughs, and put their names on the local list in order to treat insured persons in the same households, and that when living on the borders of three boroughs it was necessary for a doctor to be on the list for each. Eventually the opinion expressed by the Subcommittee was endorsed.

Alleged Excessive Prescribing.

The Pharmacy Subcommittee reported that among 20 further cases in which excessive prescribing was alleged, it found in 9 cases that the drugs ordered were not in excess of what was reasonable, and in 11 cases that the period under review was insufficient for a decision. Some discussion took place, and ultimately 1 case was referred back, while with regard to the others the findings of the Subcommittee were endorsed.

In view of the surcharging of practitioners by the Insurance Committee in respect of excessive prescribing, in amounts of from £10 downwards, and in one case of £38, the Pharmacy Subcommittee, feeling that in some cases the amount of the surcharge might be excessive, had asked the Insurance Committee to confer as to the principles on which surcharges would be made.

It was stated that during May last 420,790 prescriptions were issued at a total cost of £16,944 18s. 8d., and at an average cost of 9.6d. a prescription form. In 202 cases in which the average cost was over 1s. a prescription the Pharmaceutical Committee had asked for an investigation.

BIRMINGHAM.

PANEL COMMITTEE.

A MEETING of the Committee was held on December 1st.

Excessive Prescribing.—It was stated that as a result of the inquiry by the Committee into the matter of excessive prescribing several panel practitioners had been recom-

mended to the Insurance Committee for surcharge for the year 1913. In coming to this conclusion the Committee had taken into consideration the size of the list, the nature of the locality, as well as inexperience in the working of the Insurance Act. It was decided to issue a circular letter to every practitioner on the panel drawing attention to the fact that any practitioner in whose case the cost per insured person on his list exceeded 2s. for the year will be liable to surcharge.

Co-ordination of Work of Local Medical and Panel Committees.—The Secretary was instructed to send a reply to the schedule of questions (M.3) to the Medical Secretary of the British Medical Association.

LIVERPOOL.

Panel Committee.

A meeting of the Liverpool Panel Committee was held at the Medical Institution on December 1st, when Mr. F. Charles Larkin was in the chair.

Seaman's National Insurance Society.—Drs. Wild, Oldershaw, and Sheldon were appointed a subcommittee to further consider the arrangements of the Seaman's National Insurance Society and report to the next meeting.

Medical Treatment of Persons called up for Military Service.—The circular from the Commissioners in reference to the medical treatment of insured persons called up for service with His Majesty's Forces (Supplement, December 12th, p. 281) was read. It was resolved:

> That it will be helpful if the Liverpool Insurance Committee can circularize panel practitioners informing them of the names and addresses of the various persons in this locality to whom soldiers and sailors should be referred in accordance with Memo. 210/I.C.

Doctors' Lists.—A circular issued by the Lancashire Insurance Committee as to quarterly statements of the number of patients on each doctor's list was read, and it was resolved:

> That a letter be addressed to the Liverpool Insurance Committee enclosing documents and urging the advisability of similar procedure being adopted in this city.

Patients of Practitioners on Active Service.—The committee having considered the question of protecting, as far as possible, those panel practitioners who are serving with His Majesty's Forces, resolved:

> That a circular letter be sent to all panel practitioners urging upon them the advisability of declining to accept transfers from the lists of those practitioners who are on service with His Majesty's Forces.

Vote of Condolence.—A vote of condolence was directed to be sent to Dr. Barendt and family sympathizing with their recent loss.

NEWPORT.

Panel Committee.

At a meeting of the Newport Panel Committee, held on November 5th, with Dr. Basset in the chair, it was unanimously resolved:

> That the Newport Panel and Local Medical Committee accepts the figures of the Clerk to the Insurance Committee, showing the aggregate amounts credited to each practitioner on the panel and the aggregate amounts credited to all practitioners on the panel for 1913, and requests that the Medical Surplus Benefit Fund be distributed, and that each panel doctor be paid in the same proportion credited to him as the amount in the Panel Fund available for the purpose bears to the aggregate amount so credited to all practitioners in accordance with Article 40 (1) and (3) of the National Health Insurance (Administration of Medical Benefit Regulations) 1912.

The Secretary reported that the medical profession had been accorded three representatives on the Relief Executive Committee. Drs. S. Hamilton, J. Hurley, and Rees Morgan were appointed to represent the Newport doctors.

EDINBURGH.

Panel Committee.

The Burgh of Edinburgh Panel Committee met on November 24th, when Dr. Dewar occupied the chair, and thirteen members were present.

Attendance on Service Dependants.

The Chairman intimated that Dr. Addison's Committee had now issued a circular for Edinburgh and Leith, in which it was stated that the work was to be carried out by the Soldiers' and Sailors' Families Association, and that there was to be no list. Dependants who require free attendance must apply to the Soldiers' and Sailors Families Association for a book of vouchers, which would be taken as a guarantee of their necessitous circumstances.

Transfers during the Medical Year.

Reference was made to the laxity with which transfers were still being negotiated, and the Secretary was instructed to write to the Clerk to the Insurance Committee on the matter.

Central Bureau for Checking Prescriptions.

It was reported that the Commissioners had resolved, after a conference with the Insurance Committees, to establish a central bureau for checking prescriptions. The Insurance Committee resolved, by a majority of 20 to 6, to support the proposal, on the express condition that the Panel and Pharmaceutical Committees should pay one-third each of the expenses. A letter was read from the Clerk to the Scottish Committee of the British Medical Association, recommending Local Medical and Panel Committees to approve of the institution of the Central Bureau, and that the Panel and Pharmaceutical Committees should each pay one-fourth of the expenses. The Secretary was instructed to inform the Scottish Committee that it was *ultra vires* of the Committee to make such a recommendation without consulting the insurance practitioners of Scotland. As it was the opinion of this Committee that this formed a part of the administration of medical benefits, and as the Memo. No. 598 stated that by a parliamentary grant each Committee would be provided with sufficient funds to carry out its work, the Committee did not see its way to agree to the conditions mentioned. For the purpose of eliciting the opinion of insurance practitioners in Edinburgh on the question it was resolved to call a meeting of practitioners at an early date.

Alleged Excessive Prescribing.

The Committee had before it the reports of the checker on excessive prescribing, from July 12th to September 11th, 1914, and returned negative answers to the questions: (1) Has a patient a right to request that only part of a prescription ordered for him or her be supplied? (2) Should a chemist, to avoid possible waste, comply with such a request? To a further question with regard to a prescription evidently intended for a hair stimulant the following motion was adopted:

> That the Committee objects to the ordering of toilet requisites, but agrees that such a prescription might be required in pathological conditions. In such cases it would be advisable that the chemist should communicate with the doctor before dispensing them.

A certain number of forms showing (1) excessive prescribing; (2) the use of proprietary medicines; and (3) the carelessness in taking notice of the number of days during which the medicine should last, were examined. After consideration the Secretary was instructed to write to the doctors concerned.

WEST LOTHIAN.

Panel Committee.

A meeting of the West Lothian Panel Committee was held on December 1st, when, in the absence of Dr. Keay, Dr. Simpson was elected Chairman.

Certification.—Memo. 607 of the Insurance Commissioners, dealing with certification, was approved.

Chemists' Accounts.—Drs. Scott, Dickson, and the Honorary Secretary were appointed to act on the Joint Committee for the purpose of checking chemists' accounts.

Co-ordination of Work of Local Medical and Panel Committee.—Circular letter M. 2 of the British Medical Association was read and met with the approval of the Committee. The Secretary was instructed to send reports of meetings, etc., to the Association.

RENFREW.

A meeting of the Renfrew County Panel Committee was held at Paisley on November 25th, when Dr. Corbett, Chairman, presided.

Checking Prescriptions.—The Secretary intimated that at the last meeting of the Insurance Committee it was unanimously agreed to support the establishment of a central bureau for the systematic checking of prescriptions

and chemists' accounts. The medical members of the Insurance Committee supported the decision of the Panel Committee at its last meeting that the cost should be met, one-half by the Insurance Committee and one-quarter each by the Panel and Pharmaceutical Committees. It was, however, decided by a majority that the Insurance Committee, Panel Committee, and Pharmaceutical Committees should each pay one-third.

Dispensing in Rural Areas.—A letter was read stating the Pharmaceutical Committee desired that the wording of the general resolution regarding dispensing in rural areas, agreed upon at a joint meeting of representatives of the Insurance Committee, the Panel Committee, and the Pharmaceutical Committee in Paisley, January 7th, 1914, and adopted by the Insurance Committee on January 9th, should be altered to read as follows:

> Practitioners shall be allowed to dispense in rural areas provided no panel chemist has a place of business in the same village or town as that in which the doctor's residence is situated.

The Panel Committee adhered to the original resolution, but expressed its willingness to consider on its merits any case which the Pharmaceutical Committee might bring forward, in which the spirit or the letter of the resolution had not been observed.

Co-ordination of Work of Local Medical and Panel Committee.—Circular letters M.2 and M.3 from the British Medical Association were read and approved. It was agreed to print the minutes and circulate a copy to the Medical Secretary of the British Medical Association and to each of the members of committee about a week before the next meeting.

FREE MEDICAL ATTENDANCE TO DEPENDANTS OF MEN SERVING WITH THE COLOURS.

In connexion with the Government scheme for the free medical attendance to dependants of men serving with the colours, as published in the SUPPLEMENT of October 17th, the following resolutions were adopted by the Kent Branch Council at its meeting on December 4th.

> That medical practitioners in the county of Kent are prepared to provide, free of charge, attendance and prescriptions for the necessitous dependants of those called to serve in His Majesty's Forces, provided that such cases be investigated and recommended to them by a properly constituted Local Relief Committee.
>
> That the decision as to which cases are "necessitous" shall rest finally with the Committee.
>
> That in districts not already possessing a Relief Committee, there shall be appointed for each parish or group of parishes, a Relief Committee, for the administration of medical relief, on which at least one medical practitioner shall serve as a member. (This is intended to refer specially to rural areas.)
>
> That medical practitioners be co-opted upon all committees and subcommittees of the Soldiers' and Sailors' Families Association dealing with medical relief.
>
> That "vice-presidents" of the Soldiers' and Sailors' Families Association in any area may issue "books" to any urgent cases, subject to the medical practitioner chosen by the dependant having the right to refer any case back (through any medical member of the committee) for further consideration by the committee or subcommittee.

CORRESPONDENCE.

NEW INSURANCE CERTIFICATE.

DR. J. POLLOCK (Tiverton, N. Devon) writes: I am afraid the new insurance certificate will not receive the welcome you expect from practitioners. It is far too inelastic, at least for country work, and will entail many more journeys on the medical men and ever so many more on the insured.

1. If a patient comes for medicine, say on Thursday, and wishes to start work on Monday, why should I not date the certificate Saturday? He does not want to come up again, and I don't want to see him again.

2. Suppose you see a man in the country on Friday. On Tuesday (market day) the wife comes in, says her husband started work Monday, would I sign him off for Saturday? I am not going to run off miles to look for a man who may be miles away when you get there, and the man will not want to tramp in three or four miles on Saturday.

3. They come in late from the country for a bottle of medicine. Would I come out to see the man? Work made up for that day; when I see him next day, why not antedate his certificate and save the man a day's pay?

4. Again, I am not going out three or four miles to see old varicose ulcers, etc., once a week.

The whole thing is just an attempt to please the societies at the expense of the doctors and to draw the red tape a bit tighter. We waste quite enough time every year filling up record cards without writing out certificates every week with patient's name, illness, and remarks. The certificates as used by Foresters and Druids which one initials once a week are much the best. I have no more time to dilate on the subject, but the whole Act is simply a bad copy of the one "Made in Germany" and all that that means.

*** Paragraph 31 of the Memorandum and the relevant rule seems to be designed to meet the difficulty set out by our correspondent in the paragraph of his letter which we have numbered (1), and the point in the paragraph numbered (4) by paragraph 36 of the Memorandum. As regards (3) the course the doctor could follow would be to date the certificate on the day he examines the insured person, and to add in the space left for remarks that he has reason to believe that the patient was incapable of work on the previous day. The difficulty mentioned in paragraph (2) does not seem to be met by the Memorandum.

ALLEGED EXCESSIVE PRESCRIBING.

DR. H. F. DEVIS (Bristol) writes: May it be taken for granted that the essential justification for the existence of Panel and Local Committees, also for the part taken by the Association, is the protection of the interests of medical men? If I am wrong here, please correct me. Yet, it seems to me, other interests than medical have of late held sway in determining the actions, utterances, and advice of medical bodies.

What, for instance, means the advice of the Association to Panel Committees that they should share the cost of a continuous scrutiny of prescriptions with Insurance and Pharmaceutical Committees? Why are we asked by our own people to pay part of the cost of bolstering up a case against ourselves by our opponents? The answer, I suggest, is that the Commissioners having already given this advice, the Association took the line of least resistance.

With regard to surcharging, does the profession accept 2s. per insured person as a heaven-inspired figure, beyond which no man can go, save at his own cost? My own figure works out at 1s. 9d., my neighbour's at 2s. 3d. He is extravagant, and must be surcharged 3d. With equal logic I should be fined 3d. as being inefficient to that amount. Dare any medical man, or any body of medical men, assert that the fact that a man's rate per head is above the divine 2s. limit is sufficient to condemn him for extravagance in prescribing? Yet this is the true meaning of the automatic surcharge. It is worse than wife beating. It is delivering over your wife, whom you have sworn to protect, bound in the most approved posture for the modern Hun to beat.

Think of the effect on efficiency—a word, by the way, without meaning to our opponents. A man has had throughout the year, say, two or three severe burns, a couple of empyemas, and the usual run of physic-absorbing dyspeptics and chlorotics, and in December, thanks to our kindly system of continuous scrutiny, he is informed that he is dangerously near the 2s. limit. What is he to say to the next man with severe varicose veins, or how will he prescribe for the next gouty or syphilitic case or the girl with threatening gastric ulcer? He can be efficient only at his own cost.

There are many other aspects of this growing movement in the direction of allowing our own comrades to be the scapegoats of a false system, notably the squashing of individualism, but I fear I have already trespassed too long on your space. May I strongly urge one plea? It is that in the matter of surcharging, and in all other important matters committees should hold their hands until the Association reports are to hand. Also that the Association issue no report on important matters until a complete referendum has been obtained. There cannot be urgent haste in questions so important as these, and the principles at issue are too grave to be settled out of hand by a committee which is not representative and has no mandate.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following appointments are announced by the Admiralty: Staff Surgeon W. H. HASTINGS, to the *Victory*, additional, for the *Magic*. Staff Surgeon THOMAS A. SMYTH, to the *Victory*, additional, for disposal. Staff Surgeon OSWALD MILLS, to the *Woolwich*, additional. Staff Surgeon EDGAR S. WILKINSON to the *Pembroke*, additional. Surgeon FREDERICK ST. B. WICKHAM to the *Vivid*, additional for disposal. Surgeon P. B. HULL to the *Vivid*, additional for disposal. Surgeon A. C. WILSON to the *Lynx*, additional for duty with the *Gazelle*. Surgeon F. J. BURKE, to the *Columbine*, additional for general duties at Cromarty, vice Hastings. Surgeon AMBROSE C. WILSON, to the *Victory*, additional, for disposal. HENRY W. HULL, late Surgeon R.N., has been placed on the emergency list. Temporary Surgeons: A. F. ADAMSON and P. M. GRUNDY, to the *Victory*, additional, for the *Magic;* H. HARVEY, to the Hospital Ship *China*, vice Cowburn; H. G. PARKER, to the *Pembroke III*, for R.N. Air Service; J. C. BEGGS, to R.M. Division, Portsmouth, vice Faill; E. M. MOLESWORTH and E. M. CALTHORP, to the *Victory*, for R.N. Division; G. F. JONES, to R.N. Division, Crystal Palace, vice Molesworth; T. C. BLACKWELL, to R.N. Division, Crystal Palace, vice Calthorp; D. D. FINNOCK, to the *Pembroke III*, for R.N. Air Service; A. B. SLATER to Royal Marine Artillery, vice Kennedy; JOSEPH H. BENNETT to the *Vivid*, additional for the *Rinaldo*, vice Adams; MATTHEW NEILSON, M.B., to the *Argonaut*, vice Tivy; JOHN ALLEN, M.B., HARRY O. BLANDFORD, M.B., AUGUSTUS K. ROCHE, M.B., ANDREW E. STRUTHERS, M.B., WILLIAM J. MORRIS, and HORACE C. NIXON, M.D., to the *Victory*, additional for Haslar Hospital; JAMES R. ADAMS, M.B., to the *Victory*, additional for R.N. Division; WILLIAM A. MILLS, M.B., FRANK ELLIOTT, M.B., and G. M. OAKDEN to the *Vivid*, additional for Plymouth Hospital; JOHN MORRISON, M.B., to the *Vivid*, additional for disposal; CHARLES F. SCHULER, M.B., to the *Victory*, for R.N. Division. Appointed Temporary Surgeons: JOHN ALLEN, JOHN G. BAILEY, ERNEST H. HOGG, VINCENT MAGEE, GEORGE B. MOON, ALEXANDER C. MOONEY, AENEAS ROSE, JAMES SOUTER, THOMAS J. T. WILMOT, ERNEST F. COX, EDWARD HEFFERNAN, M.B.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon A. G. L. READE to the *Pembroke* for R.N. Barracks. Surgeon Probationer E. A. HARDY to the *Blake*, additional for the *Larne*. D. B. S. JONES to the *Blake*, additional for the *Minstrel*. B. H. PIDCOCK to the *Blake*, additional for the *Staunch*. E. A. CLEGG to the *Hecla*, additional for the *Ardent*. G. R. S. SHARPE to the *Hecla*, additional for the *Christopher*. R. S. CALDWELL to the *Hecla*, additional for the *Fortune*. T. W. DRUMMOND to the *Hecla*, additional for the *Hardy*. E. J. COOMBE to the *Hecla*, additional for the *Sparrowhawk*. A. G. MCKEE to the *Hecla*, additional for the *Unity*. D. H. FERRIS to the *Hecla*, additional for the *Victor*. T. R. F. KIRBY to the *St. George*, additional for the *Albatross*. J. M. HARRISON to the *St. George*, additional for the *Earnest*. S. R. Y. ELLIOTT to the *St. George*, additional for the *Panther*. T. J. LANE to the *St. George*, additional for the *Quail*. S. G. BARNETT to the *St. George*, additional for the *Seal*. G. E. MULLINS to the *Leander*, additional for the *Orwell*. Surgeon Probationers for temporary service: HARRY C. BROADHURST, JAMES A. STIRLING, THOMAS C. WAKEFIELD, JOHN T. WYLIE, JEFFREY B. LOWE, ANGUS MCA. SCOTT, LEWIS L. FOTHERINGHAM, CEDRIC BORDERN, ALFRED W. COCKING, DUNCAN W. MACKAY, DAVID A. IMRIE, GEORGE O. GRANT, J. D. BYRD, J. A. M. ALCOCK, CHARLES MCDONALD, GODFREY A. FARIS, NORMAN K. HENDERSON, WILLIAM O. LODGE, CHRISTOPHER T. HELSHAM, WILLIAM W. K. BROWN, WILLIAM O'G. DONOGHUE, PETER G. S. DAVIES, KENNETH M. ROSS, WILLIAM J. MCB. ROSS, WALTER A. TURNER, NOEL A. H. PARLOW, JOHN F. SMITH, DAVID S. PRENTICE, PAUL H. S. SMITH.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

To be temporary Lieutenant-Colonels: Major ARTHUR E. J. BARKER, F.R.C.S., 3rd London General Hospital, Territorial Force; Sir THOMAS MYLES, Bart., M.D., F.R.C.S.I.; Sir CHARLES BALL, Bart., M.D., F.R.C.S.I.; Captain Sir WILLIAM A. LANE, M.D., F.R.C.S., 2nd London (City of London) General Hospital, Territorial Force; Major Sir FREDERIC S. EVE, F.R.C.S., 2nd London (City of London) General Hospital, Territorial Force; Major JAMES SWAIN, M.D., F.R.C.S., 2nd Southern General Hospital, Territorial Force; Major WILLIAM A. TURNER, M.D., 4th London General Hospital, Territorial Force.

WILLIAM R. THOMAS, M.D., is granted temporarily the honorary rank of Captain.

HUGH L. BURTON is granted temporarily the honorary rank of Lieutenant.

To be temporary Lieutenants: KEITH D. FALCONER, M.B., WILLIAM A. MURPHY, M.B., LAWRENCE W. BAIN, M.B., BASIL C. ASHTON, M.B., WALTER DE M. HILL, JAMES MACGREGOR, M.D., JOHN C. VENNICKER, M.D., F.R.C.S.E., CUNISON D. RANKIN, M.D., RONALD W. DUNCAN, CHARLES J. A. N. MERCIER, M.B., CRAWFORD LUNDIE, M.B., THOMAS PERRIN, M.D., ALEXANDER GALLETLY, M.B., ARTHUR DAVIES, M.D., JOHN SPENCER-DANIELL, M.B., WILLIAM H. WOTTON, EDWIN FITZG. O'CONNOR, M.B., LEWIS H. I. BELL, M.B., HOLDEN CARSON, M.B., ROBERT J. ENGLISH, M.B., CHARLES J. MORTON, M.D., JOSEPH E. BARNES, M.B., WILLIAM H. NEIL, HAROLD DUNKERLEY, HARRY F. G. NOYES, M.B., BARTHOLOMEW J. MULLIN, RICARDO COPE, RALPH. M. SOAMES, M.B., WILLIAM A. TROUP, M.B., CLAUDE H. MILLS, MEREDITH FFOULKES, JOHN N. GRIFFITHS, M.B., CHARLES H. HARBINSON, M.B., JAMES F. O'MALLEY, F.R.C.S., JOHN H. WILSON, ROBERT W. WILLCOCKS, M.B., ARTHUR N. LEEMING, M.B., NEIL I. SINCLAIR, M.B., WALTER S. EVANS, HENRY M. JOSEPH, M.B., TOBIAS R. H. BEARE, M.B., OSCAR P. N. PEARN, JOHN A. N. SCOTT, M.B., JOHN F. MCG. SLOAN, M.B., DAVID R. WILLIAMS.

Lieutenant EDWARD A. BEAGAR relinquishes his temporary commission.

SPECIAL RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

THE notification of the appointment of Lieutenant H. A. FAWCETT in the *London Gazette* of November 19th is cancelled.

Lieutenant ROBERT A. GREENWOOD to be Captain.

Lieutenants confirmed in their rank: HENRY S. A. ALEXANDER, ARTHUR L. ANTHONY, JOHN DEIGHTON, GERALD C. DIXON, HUGH A. FAWCETT, CROMWELL GAMBLE, HERBERT L. GARSON, GILBERT A. HARVEY, JAMES R. C. MACKINTOSH, MATHEW MCKNIGHT, WILFRID W. PHILLIPS, WILLIAM K. RUSSELL, BERTRAND C. O. SHERIDAN, JOHN S. SLOPER, HARRY N. STAFFORD, ROBERT I. SULLIVAN, CHARLES G. WADDINGTON, JOHN R. N. WARBURTON, GEORGE W. WATSON, COLIN WILSON, WILLIAM A. YOUNG. Lieutenant WILLIAM S. HYDE is dismissed the service by sentence of a General Court-Martial, November 12th, 1914.

TERRITORIAL FORCE.

ARMY MEDICAL SERVICES.

COLONEL DAMER HARRISSON, F.R.C.S.E., retired list, Territorial Force, to be an Assistant Director of Medical Services to a Territorial Force with the rank of Colonel.

Lieutenant-Colonel WALTER C. BEEVOR, C.M.G., M.B., Deputy Assistant Director of Medical Services, to be Assistant Director of Medical Services to a Territorial Division, with the temporary rank of Colonel.

Major JAMES W. JENNINGS, D.S.O., R.A.M.C., to be Deputy Assistant Director of Medical Services to the South Midland Territorial Division.

Captain JOHN B. YEOMAN, M.D., F.R.C.S., from the Welsh Border Mounted Brigade Field Ambulance, to be Deputy Assistant Director of Medical Services to the First Mounted Division.

ROYAL ARMY MEDICAL CORPS.

First Eastern General Hospital.—MICHAEL G. FOSTER, M.D. (late Surgeon-Captain, Second Volunteer Battalion Royal Fusiliers, City of London Regiment), to be Captain. Lieutenant JOHN H. OWENS, from attached to other than medical units, to be Lieutenant.

South-Eastern Mounted Brigade Field Ambulance.—Captain JAMES HAMILTON, from attached to units other than medical units, to be Major.

First London (City of London) Sanitary Company.—Major T. F. BRYETT, M.D., is seconded.

First London (City of London) General Hospital.—Majors to be Lieutenant-Colonels: ARCHIBALD E. GARROD, M.D., F.R.C.P., HOLBURT J. WARING, M.B., F.R.C.S. Captains to be Majors: PERCIVAL HORTON-SMITH-HARTLEY, C.V.O., M.B., GEORGE E. GASK, F.R.C.S.

First London (City of London) Field Ambulance.—JAMES P. N. CASEY to be Lieutenant.

Second London Clearing Hospital.—Captain FREDERICK W. HIGGS, M.D., to be Major.

Third London (City of London) Field Ambulance.—Captain MYER COPLANS, M.D., is seconded.

Third London General Hospital.—Lieutenants seconded: GEORGE H. D. WEBB, EDWARD SMEED.

Fourth London General Hospital.—Major WILLIAM A. TURNER, M.D., is seconded.

Fourth London Field Ambulance.—Lieutenant ALFRED M. HUGHES from the Sixth London Field Ambulance to be Lieutenant.

Sixth London Field Ambulance.—JAMES P. N. CASEY to be Lieutenant.

First South Midland Mounted Brigade Field Ambulance.—To be Lieutenants: GEORGE C. SOUTTER, M.D., JAMES H. W. WILKINSON.

South Midland Clearing Hospital.—HENRY G. L. SMITH, M.B., to be Lieutenant.

Third South Midland Field Ambulance.—FRANK T. BOUCHER to be Lieutenant.

North Midland Mounted Brigade Field Ambulance.—To be Lieutenants: FRED H. DAVIES, M.D., SAMUEL ACHESON, M.B. (late Cadet Lance-Corporal Belfast University Contingent Senior Division Officers' Training Corps.

First North Midland Field Ambulance.—ALEXANDER FORDYCE, M.B., to be Lieutenant.

Second North Midland Field Ambulance.—To be Lieutenant: HENRY PRICE MALCOLM, M.B., ROBERT J. MCCONNELL, M.B.

First Wessex Field Ambulance.—To be Lieutenants: EDWARD L. MEYNELL, M.B., FRED ELLIS, CLAUDE J. E. BENNETT, JOHN A. BELL, M.B.

Second Wessex Field Ambulance.—Major HARRY C. PARSONS, Reserve of Officers, New Zealand Medical Corps, to be Major, temporary. To be Captains, temporary: GERALD DUDLEY FREER, M.B., HAROLD C. ADAMS. To be Lieutenants: WILLIAM T. P. MEADE-KING, HENRY N. COLLIER, CHARLES F. BACKHOUSE.

Third Wessex Field Ambulance.—To be Lieutenants: ARTHUR H. DAVIS, M.B., FREDERICK TOOTH, FREDERICK W. BRUNKER, PHILIP MCRITCHIE, FRANK L. DICKSON, M.B., FREDERICK HARDIE, M.B.

East Anglian Clearing Hospital.—Lieutenant WILLIAM REDPATH, M.B., to be Captain.

First East Anglian Field Ambulance.—Captain FRANCIS WARD to be Major, temporary; ARTHUR W. PATERSON, M.B., to be Lieutenant.

Third Home Counties Field Ambulance.—CHARLES E. M. HEY to be Lieutenant.

First Welsh Field Ambulance.—Captain THOMAS DONOVAN to be Captain; VAUGHAN BATESON to be Lieutenant.

Second Welsh Field Ambulance.—Captain OWEN L. RHYS, M.D., to be Lieutenant-Colonel, temporary. BARRY K. T. COLLINS to be Lieutenant.

Third Welsh Field Ambulance.—Captain DANIEL E. EVANS, M.B., to be Lieutenant-Colonel, temporary.

First South-Western Mounted Brigade Field Ambulance. PHILIP W. MASON, M.B., to be Lieutenant.

First Western General Hospital.—ROBERT WM. MACKENNA, M.D., to be Captain.

Second Western General Hospital.—To be Captains: HERBERT LUND, M.B., F.R.C.S., ROBERT OLLERENSHAW, M.D., F.R.C.S., late Surgeon-Captain, 4th Volunteer Battalion, Cheshire Regiment; ALBERT E. BARCLAY, M.D.

First West Riding Field Ambulance.—Captain WALKER LISTER to be Major (temporary). To be Lieutenants: JOHN H. BLACKBURN, M.B., JOHN PINDER.

Third West Riding Field Ambulance.—WILLIAM W. J. LAWSON, M.B., to be Lieutenant.

Third Northern General Hospital.—Major GEORGE H. POOLEY, F.R.C.S., from the permanent personnel, to be Major, whose services will be available on mobilization. Captain ARTHUR G. YATES, M.D., from the list of officers whose services are available on mobilization, to be Registrar, vice Major Pooley, who resigns that appointment.

First West Lancashire Field Ambulance.—Lieutenant-Colonel DAVID SMART, M.B., from the Sanitary Service, to be Lieutenant-Colonel.

Second West Lancashire Field Ambulance.—Brigade Surgeon-Lieutenant-Colonel WILLIAM J. FLEETWOOD, M.D., retired list, Territorial Force, to be Lieutenant-Colonel.

Third West Lancashire Field Ambulance.—Major and Honorary Lieutenant-Colonel ERNEST W. BARNES, from attached to units other than medical units, to be Lieutenant-Colonel (temporary). Lieutenant MITCHELL J. DICK, M.B., to be Captain.

Third East Lancashire Field Ambulance.—Major WILLIAM R. MATTHEWS, M.B., to be Lieutenant-Colonel (temporary).

Northumbrian Clearing Hospital.—To be Lieutenants: ARTHUR SUTCLIFFE, M.B., ROBERT R. LISHMAN, M.B.

First Lowland Field Ambulance.—Captain WILLIAM BRYCE, M.D., to be Major.

First Scottish General Hospital.—Captain JAMES SMART, M.B., to be Major; HAROLD E. SMITH, M.B., to be Captain. Service will be available on mobilization.

First Highland Field Ambulance.—BERNARD G. BEVERIDGE, M.B., to be Lieutenant.

Third Highland Field Ambulance.—Captain GEORGE W. MILLER, M.B., to be Major.

Second Highland Field Ambulance.—Captain DAVID RORIE, M.D., to be Major; GEORGE MCCONNELL, M.B., to be Lieutenant; Captain CHARLES CAMERON to be Major, temporary; ROBERT T. BRUCE, M.D., to be Lieutenant.

Supernumerary for Service with the Officers' Training Corps.—JOHN P. KINLOCH, M.D., to be Lieutenant; JOHN E. MACILWAINE, M.D., to be Lieutenant for service with the Medical Unit, Belfast University Contingent, Senior Division, Officers' Training Corps.

Attached to Units other than Medical Units.—Captains to be Majors: HORACE C. COLMAN, M.D., JAMES C. TAYLOR, M.B., THOMAS W. BANES, M.B., WILLIAM J. MACKINNON, M.B. Captain ALEXANDER GRAHAM, M.B., from the Third East Anglian Field Ambulance, R.A.M.C., to be Captain; Lieutenant GEORGE H. BRAND, M.B., to be Captain; Lieutenant PERCY R. BOLUS, M.B., to be Captain. Lieutenants to be Captains: JAMES A. SIMPSON, M.B., ROBERT PATERSON, JOHN O. SOMERBAYES. To be Lieutenants: GEORGE H. DOMINY, WILLIAM H. H. BENNETT, M.B., late Surgeon-Lieutenant, First Volunteer Battalion the King's Own, Yorkshire Light Infantry; WILLIAM ROBERTSON, M.B., JAMES K. SYMS, ARTHUR SAMUEL WALKER, M.D., GEORGE E. G. MACKAY, M.B., WILLIAM L. GRIFFITHS, M.D., F.R.C.S., DAVID E. EVANS, DAVID D. BROWN, M.D., HUNTLY N. PEELY, THOMAS P. CAVERHILL. RUSSELL ELLIOTT WOOD, M.B., F.R.C.S., late Surgeon-Lieutenant-Colonel, Lanarkshire Yeomanry, to be Lieutenant-Colonel. Surgeon-Captain GEORGE P. CHAPPEL, M.D., from the 7th Battalion Duke of Cambridge's Own (Middlesex Regiment), to be Captain. Lieutenant ROBERT H. SHAW, M.D., to be Captain. BERTRAM M. FOOTNER, late Lieutenant, 5th Battalion South Staffordshire Regiment, to be Captain. Lieutenant LEONARD B. BAIRD, from the 3rd West Lancashire Field Ambulance, to be Lieutenant. Lieutenant HAROLD D. LANE, from the 3rd North Midland Field Ambulance, to be Lieutenant. Lieutenant ROBERT PROUDFOOT, M.D., to be Captain. THOMAS LOUIS DE COURCY, M.D., to be Lieutenant. ERNEST E. B. LANDON to be Lieutenant. Lieutenant HERBERT W. JOYCE, from the 1st North Midland Field Ambulance, to be Lieutenant. The announcement of the appointment as Lieutenant of REGINALD S. S. STATHAM, M.D., which appeared in the *London Gazette* of August 28th, 1914, is cancelled.

TERRITORIAL FORCE RESERVE.

ROYAL ARMY MEDICAL CORPS.

SURGEON-CAPTAIN REGINALD C. GAYER, from the Surrey (Queen Mary's Regiment) Yeomanry, to be Captain.

Captain THOMAS H. LA N. HEWITT from attached to other than medical units to be Captain.

The following Lieutenant-Colonels, from the Second Northern General Hospital R.A.M.C., to be Lieutenant-Colonels: THOMAS CHURTON, M.D., THOMAS P. TEALE, M.B., F.R.C.S.

Vital Statistics.

HEALTH OF ENGLISH TOWNS.

IN ninety-seven of the largest English towns 7,705 births and 5,329 deaths were registered during the week ended Saturday, December 5th. The annual rate of mortality in these towns, which had been 13.0, 14.3, and 16.6 per 1,000 in the three preceding weeks, fell to 15.3 per 1,000 in the week under notice. In London the death-rate was equal to 15.5, against 13.3, 14.6, and 16.4 per 1,000 in the three preceding weeks. Among the ninety-six other large towns the death-rate ranged from 4.9 in Acton, 7.5 in Gillingham, 8.4 in Eastbourne, 8.5 in Enfield, 8.6 in Ilford and in Bournemouth, and 8.8 in Hornsey, to 19.4 in Wigan, 20.0 in Bath and in Newcastle-on-Tyne, 20.3 in West Bromwich, 21.1 in Stockton-on-Tees, 21.6 in Plymouth, and 21.7 in Gloucester and in Rotherham. Measles caused a death-rate of 1.4 in Smethwick, in Bolton, and in Huddersfield, 1.7 in Wigan and in Gateshead, 2.2 in Wakefield, 2.2 in Edmonton, 2.3 in Northampton, 2.4 in Rotherham, 2.7 in Grimsby, and 4.2 in Newcastle-on-Tyne; whooping-cough of 1.6 in Rhondda, and 1.7 in Tynemouth; and diphtheria of 2.7 in Great Yarmouth. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 44, or 0.8 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner after inquest; of this number, 13 were recorded in Birmingham, 9 in Liverpool, 3 each in Portsmouth, Leicester, and South Shields, and 2 in Barrow. The number of scarlet fever patients under treatment in the Metropolitan Asylums Hospitals and the London Fever Hospital, which had been 4,975, 5,005, and 5,035 at the end of the three preceding weeks, had fallen to 4,980 on Saturday, December 5th; 537 new cases were admitted during the week, against 751, 627, and 623 in the three preceding weeks.

In ninety-seven of the largest English towns 8,149 births and 5,442 deaths were registered during the week ended Saturday, December 12th. The annual rate of mortality in these towns, which had been 14.3, 16.6, and 15.3 per 1,000 in the three preceding weeks, rose to 15.7 per 1,000 in the week under notice. In London the death-rate was equal to 15.5, against 14.6, 16.4, and 15.3 per 1,000 in the three preceding weeks. Among the ninety-six other large towns, the death-rate ranged from 5.7 in Ilford, 6.1 in Darlington, 6.6 in Eastbourne, 6.8 in Aberdare, 6.9 in Carlisle, and 7.3 in Ealing, to 20.9 in Liverpool, 21.2 in York, 21.5 in Southampton, 21.9 in Hastings, 23.9 in Newcastle-on-Tyne, and 24.5 in Wigan. Measles caused a death-rate of 1.4 in Plymouth and in Huddersfield, 1.7 in Liverpool, 1.9 in Birkenhead, 2.6 in Gateshead, 3.2 in Rotherham, 4.6 in Wigan, and 4.8 in Newcastle-on-Tyne; scarlet fever of 1.3 in Preston and 1.4 in Warrington; and diphtheria of 1.0 in Tottenham and 1.7 in Northampton. The mortality from the remaining infective diseases showed no marked excess in any of the large towns, and no fatal case of small-pox was registered during the week. The causes of 47, or 0.9 per cent., of the total deaths were not certified either by a registered medical practitioner or by a coroner; of this number, 12 were recorded in Birmingham, 8 in Liverpool, 4 in Southampton, 3 in Gateshead, 2 in Manchester, and 2 in Preston. The number of scarlet fever patients under treatment in the Metropolitan Asylums hospitals and the London Fever Hospital, which had been 5,005, 5,035, and 4,980 at the end of the three preceding weeks, fell to 4,833 on Saturday, December 12th; 504 new cases were admitted during the week, against 627, 623, and 537 in the three preceding weeks.

HEALTH OF SCOTTISH TOWNS.

IN the sixteen largest Scottish towns 1,015 births and 803 deaths were registered during the week ended Saturday, December 5th. The annual rate of mortality in these towns, which had been 15.2, 16.6, and 18.4 per 1,000 in the three preceding weeks, fell to 18.3 in the week under notice, but was 3.0 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 9.5 in Hamilton, 12.3 in Perth, and 12.5 in Falkirk, to 22.9 in Leith, 23.6 in Ayr, and 25.0 in Kilmarnock. The mortality from the principal infective diseases averaged 1.8 per 1,000, and was highest in Kirkcaldy and Aberdeen. The 384 deaths from all causes in Glasgow included 25 from whooping-cough, 7 from diphtheria, 6 from scarlet fever, 4 from infantile diarrhœa, 2 from measles, and 1 from enteric fever. Four deaths from scarlet fever were recorded in Aberdeen and 2 in Leith; from diphtheria 5 deaths in Aberdeen, 3 in Edinburgh, and 2 in Kirkcaldy; from whooping-cough, 3 deaths in Dundee; and from infantile diarrhœa, 3 deaths in Dundee and 2 in Aberdeen.

In the sixteen largest Scottish towns 1,163 births and 780 deaths were registered during the week ended Saturday, December 12th. The annual rate of mortality in these towns, which had been 16.6, 18.4, and 18.3 per 1,000 in the three preceding weeks, fell to 17.7 in the week under notice, but was 2.0 per 1,000 above the rate in the ninety-seven large English towns. Among the several towns the death-rate ranged from 11.7 in Clydebank, 13.5 in Edinburgh, and 15.3 in Perth, to 20.4 in Falkirk, 20.5 in Ayr, and 23.5 in Kilmarnock. The mortality from the principal infective diseases averaged 1.7 per 1,000, and was highest in Kilmarnock and Motherwell. The 371 deaths from all causes in Glasgow included 24 from whooping-cough, 9 from scarlet fever, 5 from diphtheria, 3 from infantile diarrhœa, 2 from measles, and 1 from enteric fever. Four deaths from diphtheria were recorded in Aberdeen and 3 in Edinburgh; from whooping-cough 2 deaths in Dundee and 2 in Motherwell; and from enteric fever 2 deaths in Edinburgh.

HEALTH OF IRISH TOWNS.

DURING the week ending Saturday, December 5th, 549 births and 464 deaths were registered in the twenty-seven principal urban districts of Ireland, as against 594 births and 449 deaths in the preceding period. These deaths represent a mortality of 19.1 per 1,000 of the aggregate population in the districts in question, as against 19.4 per 1,000 in the previous period. The mortality in these Irish areas was therefore 3.8 per 1,000 higher than the corresponding rate in the ninety-seven English towns during the week ending on the same date. The birth-rate, on the other hand, was equal to 23.8 per 1,000 of population. As for mortality of individual localities, that in the Dublin registration area was 24.5 (as against an average of 18.4 for the previous four weeks), in Dublin city 26.9 (as against 19.6), in Belfast 21.2 (as against 18.9), in Cork 14.8 (as against 20.7), in Londonderry 10.1 (as against 16.2), in Limerick 25.7 (as against 14.9), and in Waterford 13.3 (as against 29.0). The zymotic death-rate was 1.9, as against 1.8 in the previous period.

Vacancies and Appointments.

NOTICES REGARDING APPOINTMENTS.—Attention is called to a Notice (see Index to Advertisements—Important Notice re Appointments) appearing in our advertisement columns, giving particulars of vacancies as to which inquiries should be made before application.

VACANCIES.

BARNSLEY: BECKETT HOSPITAL AND DISPENSARY.—Second House-Surgeon. Salary, £100 per annum.

BARROW-IN-FURNESS: NORTH LONSDALE HOSPITAL.—House-Surgeon (male). Salary, £150 per annum.

BEDFORD COUNTY HOSPITAL.—Assistant House-Surgeon (male). Salary, £100 per annum.

BETHNAL GREEN INFIRMARY.—Assistant Medical Officer. Salary, £200 per annum.

BIRKENHEAD: BOROUGH HOSPITAL.—Junior House-Surgeon. Salary, £100 per annum.

BIRMINGHAM: LITTLE BROMWICH FEVER HOSPITAL.—Assistant Resident Medical Officer. Salary, £200 per annum.

BIRMINGHAM MENTAL HOSPITAL, Rubery Hill.—Junior Assistant Medical Officer (female). Salary, £200 per annum.

BIRMINGHAM UNION.—(1) Second, Third, and Fourth Assistant Medical Officers at the Dudley Road Infirmary; salary, £210, £170, and £160 per annum respectively. (2) Assistant Medical Officer at the Selly Oak Infirmary; salary, £180 per annum.

BRADFORD ROYAL INFIRMARY.—House-Surgeon (male). Salary, £100 per annum.

BRIDGWATER HOSPITAL.—House-Surgeon. Salary, £125 per annum.

BURY COUNTY BOROUGH.—Temporary Assistant to the Medical Officer of Health. Salary at the rate of £350 per annum.

CARDIFF: KING EDWARD VII HOSPITAL.—Two House-Surgeons. Salary, £140 per annum each.

CARDIFF: KING EDWARD VII WELSH NATIONAL MEMORIAL ASSOCIATION.—Assistant Resident Medical Officers at Sanatoriums. Salary, £250 per annum.

CARLISLE: CUMBERLAND AND WESTMORLAND ASYLUM, Garlands.—Junior Assistant Medical Officer. Salary, £250 per annum.

CHICHESTER: WEST SUSSEX COUNTY MENTAL HOSPITAL.—Second Assistant Medical Officer. Salary, £250 per annum, rising to £300.

CITY OF LONDON UNION.—Assistant Medical Officer to the Poor Law Institution and Infirmary. Salary, £200 per annum.

CORK SANATORIUM.—Honorary Visiting Laryngologist.

DEWSBURY AND DISTRICT GENERAL HOSPITAL.—House-Surgeon. Salary, £120 per annum.

DORSET COUNTY COUNCIL, Dorchester.—Assistant County Medical Officer. Salary, £250 per annum.

DUDLEY: GUEST HOSPITAL.—Assistant House-Surgeon. Salary at the rate of £100 per annum.

DURHAM COUNTY COUNCIL.—Assistant School Medical Officer. Salary, £300 per annum, rising to £350.

EAST WILTS UNITED DISTRICTS.—Medical Officer of Health and Assistant School Medical Officer. Salary, £150 per annum.

FALKLAND ISLANDS.—Assistant Colonial Surgeon. Salary, £400 per annum.

GLOUCESTERSHIRE ROYAL INFIRMARY AND EYE INSTITUTION.—Assistant House-Surgeon. Salary, £80 per annum.

GREAT YARMOUTH HOSPITAL. House-Surgeon (male). Salary, £300 per annum.

GUILDFORD: ROYAL SURREY COUNTY HOSPITAL.—House-Surgeon. Salary, £150 per annum.

HALIFAX: ROYAL HALIFAX INFIRMARY.—Second and Third House-Surgeons. Salary, £120 and £100 per annum respectively.

HALIFAX UNION POOR LAW HOSPITAL. Resident Medical Officer. Salary, £140 per annum.

INDIA: JHARIA BOARD OF HEALTH.—Chief Sanitary Officer for the Jharia Mining Settlement. Salary, Rs.1,200, rising to Rs.1,500 a month.

KENT AND CANTERBURY HOSPITAL.—Senior and Junior House-Surgeons. Salary, £100 and £90 per annum respectively.

KENT COUNTY ASYLUM, Chartham.—Junior Assistant (Third) Medical Officer (male). Salary, £250 per annum.

KENT COUNTY ASYLUM, Maidstone.—Male Junior Assistant Medical Officer. Salary, £250 per annum.

LEEDS CITY HOSPITALS FOR INFECTIOUS DISEASES AND TUBERCULOSIS.—Assistant Medical Officer. Salary, £170 per annum.

LEEDS PUBLIC DISPENSARY.—Resident Medical Officer. Salary, £130 per annum.

LEICESTER ROYAL INFIRMARY.—(1) Ophthalmic House-Surgeon and Assistant House-Physician; (2) Two Assistant House-Surgeons; (3) Two Assistant Resident Medical Officers (females). Salary for (1) and (2), £100 per annum.

LIVERPOOL STANLEY HOSPITAL.—House-Surgeon. Salary, £80 per annum.

LONDON LOCK HOSPITAL, Harrow Road, W.—House-Surgeon at the Female Hospital. Salary, £130 per annum.

LONDON THROAT HOSPITAL, Great Portland Street, W.—House-Surgeon (non resident). Salary, £50 per annum.

LOWESTOFT AND NORTH SUFFOLK HOSPITAL.—House-Surgeon. Salary, £150 per annum.

MANCHESTER: ANCOATS HOSPITAL.—(1) Resident Medical Officer; (2) Resident House-Physician. Salary, £130 and £80 per annum respectively.

MANCHESTER: COUNTY ASYLUM, Prestwich.—Assistant Medical Officer. Salary, £250 per annum, rising to £300.

MANCHESTER EDUCATION COMMITTEE.—Assistant School Medical Officer (female). Salary, £300 per annum, rising to £450.

MANCHESTER HOSPITAL FOR CONSUMPTION AND DISEASES OF THE THROAT AND CHEST.—Assistant Medical Officer for the Crossley Sanatorium. Salary, £100 per annum.

MANCHESTER: HULME DISPENSARY.—House-Surgeon. Salary, £180 per annum, increasing to £200.

MANCHESTER ROYAL EYE HOSPITAL.—Junior House Surgeon. Salary, £80 per annum.

MANCHESTER: VICTORIA MEMORIAL JEWISH HOSPITAL, Cheetham.—Resident Medical Officer. Salary, £80 per annum.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.—Senior House-Surgeon. Salary, £100 per annum.

MORPETH DISPENSARY.—House-Surgeon. Salary, £120 per annum.

NEWCASTLE-UPON-TYNE CITY HOSPITAL FOR INFECTIOUS DISEASES.—Resident Medical Assistant (male). Salary, £250 per annum.

NEWCASTLE-UPON-TYNE EDUCATION COMMITTEE.—Assistant School Medical Officers (male and female). Salary, £300 per annum, rising to £350 each.

NEWCASTLE-UPON-TYNE PARISH.—Second Assistant Resident Medical Officer for the Poor Law Institution. Salary, £175 per annum, increasing to £225.

NEWPORT: ROYAL GWENT HOSPITAL.—(1) Honorary Medical Officer to the Ear, Nose, and Throat Department; (2) Resident Medical Officer, salary for first six months at the rate of £100 per annum, rising to £150.

NORTHAMPTONSHIRE COUNTY COUNCIL EDUCATION COMMITTEE.—Assistant School Medical Officer (temporary). Salary, £25 per month.

NORTH RIDING OF YORKSHIRE EDUCATION COMMITTEE.—Temporary Assistant School Medical Officer. Salary at the rate of £300 per annum.

NOTTINGHAM: GENERAL HOSPITAL.—Senior House-Physician. Salary, £120 per annum. (Women eligible.)

NOTTS COUNTY COUNCIL.—Resident Medical Officer at the Ransom Sanatorium. Salary, £200 per annum.

PLAISTOW: ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN.—Resident Medical Officer. Salary, £30 per annum.

PRESTON: ROYAL INFIRMARY.—Assistant Resident Medical and Surgical Officer. Salary, £120 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.—House-Surgeon. Salary at the rate of £80 per annum.

ROCHDALE INFIRMARY AND DISPENSARY. Junior House-Surgeon. Salary, £110 per annum.

ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, S.E.—Resident Medical Officer for duration of the war. Salary at the rate of £150 per annum.

ST. GEORGE'S HOSPITAL, S.W.—Surgical Registrar. Salary, £250 per annum.

ST. THOMAS'S HOSPITAL, S.E.—Ophthalmic Surgeon in charge of Out-patients.

SALFORD FEVER HOSPITAL.—Junior Resident Medical Officer at the Ladywell Sanatorium.

SALFORD ROYAL HOSPITAL.—(1) Resident Surgical Officer; (2) Casualty House-Surgeon. Salary, £120 and £100 per annum respectively.

SALFORD UNION INFIRMARY.—Resident Assistant Medical Officer (male). Salary, £150 per annum.

SALISBURY INFIRMARY.—Assistant House-Surgeon. Salary, £75 per annum.

SCARBOROUGH HOSPITAL AND DISPENSARY.—Senior and Junior House-Surgeons. Salary, £100 and £80 per annum respectively.

SHEFFIELD: CITY HOSPITALS FOR INFECTIOUS DISEASES AND TUBERCULOSIS. Assistant Medical Officer. Salary, £160 per annum.

SHEFFIELD ROYAL HOSPITAL.—Assistant House-Physician. Salary, £80 per annum.

SHEFFIELD ROYAL INFIRMARY.—(1) House-Surgeon; (2) Assistant House Physician. (Males.) Salary, £160 per annum each.

SOMERSET AND BATH ASYLUM, Cotford.—Assistant Medical Officer. Salary, £250 per annum.

SOUTH SHIELDS: INGHAM INFIRMARY AND SOUTH SHIELDS AND WESTOE DISPENSARY.—Junior House-Surgeon (male). Salary, £115 per annum.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE INFIRMARY, Hartshill.—(1) House-Physician; (2) House-Surgeon. Salary, £120 per annum, rising £10 yearly each.

STOKE-UPON-TRENT UNION.—Assistant Medical Officer for the Poor Law Institution and Hospital. Salary, £200 per annum.

WORCESTER GENERAL INFIRMARY.—Resident Medical Officer. Salary, £150 per annum.

YORK: NORTH RIDING ASYLUM, Clifton.—Locumtenent Medical Officer. Salary, £250 per annum.

CERTIFYING FACTORY SURGEONS.—The Chief Inspector of Factories announces the following vacant appointments: Hamilton (Lanarkshire), Rathfriland (co. Down).

To ensure notice in this column—which is compiled from our advertisement columns, where full particulars will be found—it is necessary that advertisements should be received not later than the first post on Wednesday morning. Persons interested should refer also to the Index to Advertisements which follows the Table of Contents in the JOURNAL.

APPOINTMENTS.

FIELD, O., M.D.Edin., Certifying Factory Surgeon for the Battersea District, co. London.

MURRAY, Sydney E., M.B., B.S.Durh., Assistant School Medical Officer to the Sunderland Town Council.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcements of Births, Marriages, and Deaths is **5s.**, *which sum should be forwarded in Post Office Order or Stamps with the notice not later than first post Wednesday morning in order to ensure insertion in the current issue.*

MARRIAGE.

SHAND—JAMES.—On December 3rd, 1914, by special licence, at St. James's, Handsworth, Birmingham, by the Rev. G. H. Harris, B.A. (Vicar, St. Paul's, Balsall Heath), and the Rev. A. E. Clease, M.A., L.Th. (Rector, 'All Saints'), George Ernest Shand, M.D. Aberd., only son of the late George Jolly Shand, M.D.Aberd., Indian Medical Service, and Mrs. Shand, Handsworth, to Helen Caroline (Nellie) James, eldest daughter of Mrs. W. James, West Smethwick, and niece of Mr. and Mrs. Charles Bradsworth, "Melfort," Holyhead Road, Handsworth.

DEATH.

LEACH.—On Saturday, December 12th, at his residence, The Knoll, Oldham, Abraham Leach, M.R.C.S., L.R.C.P., aged 75 years.

Printed and published by the British Medical Association at their Office, No. 429, Strand, in the Parish of St. Martin-in-the-Fields, in the County of Middlesex.

SUPPLEMENT

TO THE

BRITISH MEDICAL JOURNAL.

LONDON: SATURDAY, DECEMBER 26TH, 1914.

CONTENTS.

INSURANCE ACT COMMITTEE.

A MEETING of the Insurance Act Committee was held at the office of the Association on Thursday, December 10th. Dr. J. A. MACDONALD, LL.D., was in the chair, and the other members present were: *England and Wales*—Dr. Olive Claydon (Oldham), Dr. A. C. Farquharson (Spennymoor), Dr. E. R. Fothergill (Hove), Dr. Major Greenwood (London), Dr. R. Harding (Radnor), Dr. I. W. Johnson (Bury), Dr. G. K. Smiley (Derby), Dr. W. B. Crawford Treasure (Cardiff), Mr. E. B. Turner (London); *Scotland*—Dr. John Adams (Glasgow), Dr. John Hunter (Edinburgh); *ex officio*, Mr. T. Jenner Verrall, LL.D. (Bath), Chairman of Representative Meetings, Dr. E. Rayner (Stockport) (Treasurer).

The CHAIRMAN welcomed to the Committee Dr. Olive Claydon, who had been nominated for membership by the Association of Registered Medical Women and the Northern Association of Registered Medical Women.

POSITION OF DEPOSIT CONTRIBUTORS.

It was decided that inquiries should be made of the Insurance Commissioners as to the proposals of the Government with regard to the position of deposit contributors after January 1st, 1915.

OVER-PRESCRIBING.

An answer was read from the English Commissioners in reply to the communication addressed by the Association to the English, Scottish, and Welsh Commissioners, urging that in all cases where inquiries by Panel Committees into charges against medical practitioners for alleged over-prescribing were determined in favour of the practitioner, the name of the practitioner concerned should not appear in the reports of those Committees to the Commissioners. The reply expressed the opinion that when an Insurance Committee, after considering the report of the Panel Committee, arrived at the conclusion that the doctor had not been guilty of over-prescribing, it was not desirable that the name of the doctor should be disclosed. The Commissioners pointed out that the decision in the matter rested with the Insurance Committees and not with the Panel Committees. The Commissioners further promised to take such opportunity as may offer for the purpose of conveying this view to Insurance Committees. It was reported that only formal acknowledgements had been received from the Scottish and Welsh Commissioners. The Insurance Act Committee decided to communicate the reply to Local Medical and Panel Committees, and to suggest that the representatives of the profession on the Insurance Committees should bring the matter to the attention of those Committees with a view to the adoption of a standing order carrying out the view held by the English Commissioners, or of a resolution of the Committee preferably on the recommendation of its Medical Benefit Subcommittee.

CHECKING PRESCRIPTIONS IN SCOTLAND.

The minutes of the Drug Tariff Subcommittee having been received, it was decided that, in view of the fact that a central bureau for the purpose of pricing chemists' accounts and making a systematic check and analysis of of prescriptions would tend to become a permanent burden on the funds of the various committees concerned, the question of the investigation of prescriptions should at present be dealt with locally, the arrangements being set up on a temporary basis only.

TRANSFER OF INSURED PATIENTS OF PRACTITIONERS ON MILITARY DUTY.

It was resolved:

That Panel Committees be recommended (1) to urge all practitioners in their area not to accept transfers of patients of doctors on naval and military duty for one year after they resume their practice, but to attend the patients during the absence of their doctor as deputy; and (2) to inform Insurance Committees of the suggested arrangement, asking them to fall in with such financial arrangements as may be settled locally between the deputy and doctor on military service.

CONSULTATION WITH LOCAL MEDICAL AND PANEL COMMITTEES.

It was decided that the opinion of Local Medical and Panel Committees should, whenever possible, be obtained with regard to questions on which the Insurance Act Committee proposes to take definite action, or to make representations to the Council and Representative Body.

CONFERENCE OF LOCAL MEDICAL AND PANEL COMMITTEES.

It was decided to recommend the Council to authorize the Insurance Act Committee in the event of the Commissioners calling a conference of representatives of Local Medical and Panel Committees on any matter connected with the Insurance Act, to invite such representatives to a preliminary conference to be held immediately prior to the conference with the Commissioners so as to arrange for combined action.

CENTRAL INSURANCE DEFENCE FUND.

A letter of thanks was read from a medical practitioner to whom the committee had granted assistance.

INSURANCE COMMITTEES.

LONDON.

The Adequacy of the Medical Service.

THE Medical Benefit Subcommittee presented to the London Insurance Committee on December 17th an interim report of investigations undertaken in pursuance of an instruction to consider the sufficiency of the arrangements for medical benefit in the different metropolitan boroughs (SUPPLEMENT, January 31st, 1914, p. 50), and as to facilities for obtaining clinical investigation and treatment for insured persons at metropolitan hospitals (SUPPLEMENT, November 1st, 1914, p. 373). The Subcommittee gave an account of facts elicited in respect of four London boroughs—Bermondsey, Camberwell, Lambeth, and Southwark—containing a dense population with comparatively high sickness and mortality-rates and a large proportion of insured workers, with, in two cases, residential districts of a more prosperous class. The following is a summary of the particulars given in respect of each borough:

Bermondsey.—Population, 125,903; distribution varying between 16 and 179 per acre. The existence of numerous block dwellings for workmen gives facilities for the treatment of large numbers of persons by a single practitioner. Number of insured persons on panel lists, 51,111. Number of general practitioners, 38; 3 are not on the panel, but 2 of these are not

in active practice; 26 practitioners have panel lists of less than 2,000; they are responsible for 26,310 insured persons, or 52 per cent. of the whole; 9 practitioners have lists of 2,000 and over; they are responsible for 24,801 persons or 48 per cent. of the whole; the practitioners are fairly evenly distributed. There is no general hospital within the borough, but it is served by Guy's Hospital. The notifications of tuberculosis in adults were 600 in 1912 and 1,305 in 1913. There exists in the borough an arrangement amongst a group of practitioners on the panel whereby the services of any of them can be obtained for an urgent case in the absence of the first practitioner called.

Medical witnesses suggested that there was a sufficient number of doctors in Bermondsey to provide adequate treatment, but representatives of insured persons urged that the number of practitioners was inadequate for both the insured and non-insured population. Owing to the late working hours of insured persons there was great pressure at the surgeries in the evenings, and it was stated that people sometimes had to wait two hours before seeing a doctor. This condition of affairs also made it necessary for dispensing to be done rather late at night and insured persons often waited until the next day before getting prescriptions dispensed. There appeared to be an adequate number of chemists.

No difficulty was experienced in obtaining treatment and further advice for cases referred to Guy's Hospital. In all cases members of the hospital staffs informed the practitioner as to the diagnosis and gave advice as to the treatment. It was stated that great delay was often experienced in obtaining admission for in-patient cases, and generally that there was insufficient hospital accommodation in the district. Owing to the Insurance Act attendances at the out-patient departments of Guy's Hospital had diminished by about 20 per cent. The district nursing service was freely available to the insured, but there was more work than the existing staff could thoroughly attend to.

Southwark.—Population, 191,907; distribution varying between 74 and 249 per acre. There are many workmen's dwellings. Number of insured persons on doctors' lists, 81,736. Number of general practitioners, 60; 13 not on the panel. Twenty-nine practitioners have lists of less than 2,000; they are responsible for 30,847 insured persons, or 38 per cent. Eighteen practitioners have lists of 2,000 and over; they are responsible for 50,889 persons, or 62 per cent. of the whole. The practitioners are not equally distributed; enclosed by main thoroughfares are several large districts in which no doctor resides.

Guy's Hospital serves the district. Nursing facilities exist, but tuberculosis or midwifery cases are not attended. Notifications of tuberculosis were 911 in 1912, and 1,142 in 1913. The opinions of witnesses differed as to the adequacy of the medical service, and the existence of unsatisfactory waiting-room accommodation at some surgeries was alleged. One practitioner not on the panel expressed disapproval of the panel system, and said that under existing arrangements there was no incentive to a practitioner to do good work; practitioners, he said, generally failed to examine their insured patients, preferring in many cases to refer those suffering from slight ailments to the hospitals. An arrangement for mutual assistance between a group of practitioners had been found to work satisfactorily; one of the chemists' shops was always open on early closing day.

Camberwell.—Population, 261,328; distribution varying between 16 and 164 per acre (the average density of Southwark is three times greater). In addition to a large industrial population, there are many clerks, both male and female. Number of insured persons on doctors' lists, 81,591. Number of general practitioners, 100; 21 not on the panel (these mostly reside in the better neighbourhoods to the south). Sixty-six practitioners have lists of less than 2,000; they are responsible for 48,789 insured persons, or 60 per cent. of the whole. Thirteen practitioners have lists of over 2,000; they are responsible for 32,802 persons, or 40 per cent. Notifications of tuberculosis were 905 in 1912 and 1,519 in 1913.

Although medical witnesses were unanimous as to the adequacy of the number of practitioners on the panel, there was conflict of opinion as to the adequacy of the treatment rendered. It was represented that though neglect of patients was evident, it was not so gross in many cases as to allow of action being taken. Arrangements for mutual assistance amongst practitioners were under consideration. There was some conflict of opinion as to the adequacy of arrangements for dispensing (the chemists on the list numbered 42). The relationships between practitioners and hospital authorities were most cordial, and treatment, consultative opinion, and *x*-ray diagnosis were readily obtainable for insured persons at the hospitals. No difficulty was experienced in obtaining nurses for urgent cases.

Lambeth.—Population 298,058; distribution varying between 35 and 147 per acre. The occupations are similar to those of Camberwell. Number of insured persons on doctors' lists 89,539; number of general practitioners 129; 34 not on the panel (nearly all these practise in the better class neighbourhoods); 86 practitioners have lists of less than 2,000; they are responsible for 61,917 insured persons, or 70 per cent.; 9 practitioners have lists of over 2,000; they are responsible for 27,622, or 30 per cent. There are 72 chemists on the list. King's College Hospital and St. Thomas's Hospital are in the borough; it is also served by special institutions. There are fairly extensive nursing facilities. Notifications of tuberculosis were 2,395 in 1912 and 2,026 in 1913.

Witnesses expressed the view that there was a shortage of practitioners in the industrial parts of the borough; especially of women practitioners. All the practitioners had made arrangements amongst themselves for the treatment of emergency cases. The effect of the Insurance Act had been largely to remove from the hospitals the care of chronic cases. In the casualty department of St. Thomas's alone the number of yearly attendances had been reduced by 40,000 since the commencement of medical benefit. Existing facilities for specialist treatment, namely, the out-patient departments of hospitals, were available as a rule only in the mornings and afternoons. It was suggested that in any scheme of clinics provision should be made for evening attendances; also that local clinics for special cases could be conducted by the practitioners in the various areas, as doctors who had specialized in one or other of the various branches of medicine or surgery were usually to be found in populated areas.

Summarizing its investigations, the Subcommittee noted that the number of insured persons accepted by doctors had been constantly increasing since the beginning of 1913. Corresponding with this there had been a marked and constant decrease in the number of applications for permission to make own arrangements, and these were now seldom declined. Very few transfers with the consent of the doctors had been arranged, and at the end of the year 1913 the total number of insured persons who gave notice of a desire to change their doctor did not exceed 12,000. [During the meeting the corresponding figures for 1914 were given as 4,692.] The Subcommittee commented upon the hindrances to the smooth working of medical benefit in some areas owing to social and economic conditions, which prevented so many people from calling upon their doctor until late in the evening. A system of co-operation between the practitioners of such a district might solve the difficulty and be to the advantage of all concerned. The number of practitioners on the panel had increased from 780 in January, 1913, to 1,573 in October, 1914; in the four boroughs now under consideration the increase in this period had been from 160 to 256. There was reason to believe that the accessions to the panel would continue for some time to come, but the Subcommittee considered that even if all the practitioners resident in the four boroughs joined the panel the number of doctors available in the industrial districts would not be adequate. The institution of medical benefit had led to a marked increase in the calls upon practitioners generally. Comparatively few practitioners were responsible for a very large number of insured persons—a condition no doubt due to the exercise of free choice. It was possible, however, that a more equal distribution might lead to a more efficient medical service. In a few cases waiting-room accommodation was insufficient and unsatisfactory. Delays in receiving attention at surgeries had been due to the large lists and the brief hours of respite from work of many insured persons, but the difficulties generally were gradually being reduced. It would be desirable to extend the system of co-operation between practitioners for dealing with urgent cases, and it might be desirable to draw the attention of the Panel Committee to this point. Without desiring to encourage complaints, the Subcommittee was of opinion that approved societies would assist the Insurance Committee by reporting complaints direct rather than attempting themselves to deal with the conditions giving rise to the complaints.

On the whole, the Subcommittee considered that the medical service in the area taken was working well, and that there was no evidence of any general discontent. The number of places for the supply of drugs was adequate. The Subcommittee had noted with great satisfaction the cordial co-operation existing between the practitioners on the panel and the staffs of the three great hospitals in the district. Many of the difficulties in the medical service were of a character that could be overcome by still greater co-operation in this direction. Lack of in-patient accommodation was accentuated by the war; it was particularly noticeable in the case of women patients. Generally speaking, the various nursing agencies were doing excellent work, but there was need for greater co-ordination and the number of nurses should be increased. The bacteriological laboratories of the various borough councils were available to practitioners on the panel, and there was a very great increase in the number of investigations of this character in 1913 as compared with 1912.

Mr. P. ROCKLIFF moved to refer the whole report back to the Subcommittee, giving as his reasons that an opportunity was not afforded to representatives of approved

societies to give evidence, that the report was therefore an incomplete statement of the facts, and that the section which prepared it contained an undue preponderance of medical members.

Mr. R. W. MOFFREY thought there was nothing in the report to which exception could be taken. The reason so few representatives of approved societies were examined was that the majority of those invited declined to assist.

Mr. HANDEL BOOTH, M.P., said that the report of the doctors agreed with the results of investigations made on behalf of a large group of approved societies.

Dr. LAURISTON E. SHAW said that insured persons and those who had been closely watching the working of the Act praised warmly the devotion with which medical services had been performed.

Dr. B. A. RICHMOND denied that there had been any medical bias in the preparation of the report. In its future investigations the Subcommittee, in order to put some limit on its labours, would take certain typical areas, including one in the East End.

The amendment to refer the report back was lost and the report was approved.

Examination of Chemists' Accounts.

The Committee approved the continuance of the joint arrangements with the Panel and Pharmaceutical Committees for the examination of chemists' accounts, but decided to point out to the Panel Committee that it might not be possible for its contribution to remain as low as £800.

Cost of Drugs for Temporary Residents.

As the rule as to the special marking of prescriptions in respect of temporary residents has not been generally followed by practitioners, the Insurance Commissioners notified that the amount available in each area for drugs would be calculated on a ratio of the average cost of drugs to the average rate of medical remuneration. The Committee expressed approval of this method.

The Drug Fund.

Owing to the condition of the Drug Fund it was decided to pay only 60 per cent. of the total of chemists' accounts for the months October to December, 1914, and to make a final payment later of any balance.

New Member.

Mrs. F. M. Dickinson Berry joined the Insurance Committee on the nomination of the Commissioners, in place of Mrs. Florence Willey, resigned.

LOCAL MEDICAL AND PANEL COMMITTEES.

SURREY.

PANEL COMMITTEE.

THE monthly meeting of the Panel Committee for the County of Surrey was held at Surbiton Cottage Hospital on November 20th, when Dr. LANKESTER was in the chair.

Pharmaceutical Committee's Expenses.—On consideration of an application forwarded by the County Committee from the Pharmaceutical Committee to the Commissioners for a grant from the Drug Fund for its administrative expenses, the CHAIRMAN, TREASURER, and SECRETARY undertook to draft a letter to the Insurance Commissioners stating the reasons of the Panel Committee's objection to the deductions being made, seeing that any deduction of this nature was unreasonable, and also that the expenses of the Committee were far too high. It was also agreed that if the expenses were reduced to £50, plus a third of the cost of checking prescriptions, the Panel Committee would not maintain its objection.

Co-ordination of Work of Local Medical and Panel Committees.—The Committee agreed that it was prepared to enter into steady and close relationship with the new Local Medical and Panel Subcommittee of the British Medical Association.

Medical Referees.—The question of medical referees visiting patients without giving notice to the practitioner in attendance was raised. It was decided to make a representation to the Prudential Society that this was contrary to the usual custom of the medical profession. It was also resolved to bring the matter before the Medical Benefit Subcommittee of the County Committee.

Dispensing Fees.—Dr. LYNDON gave an account of the conference of the County Committee and the Pharmaceutical Committee regarding reduced dispensing fees. It was decided to support the action of the Conference not to bring into force the reduced dispensing fees during 1915.

Pharmacopoeia.—It was decided to adopt the Hampshire Pharmacopoeia as altered by the Subcommittee, and submit it to the Insurance Committee. It was also resolved that if the Insurance Committee passed the Pharmacopoeia it should be prepared and circulated to the practitioners if the Emergency Committee considered the cost was reasonable.

Prescribing.—It was decided to adopt and circulate a circular on economy in prescribing, and to continue the present method of checking prescriptions until the end of the present year.

PAYMENTS FOR MEDICAL BENEFIT.

THE PROVISIONAL SETTLEMENT.

DR. J. CAMERON TURNBULL, Honorary Secretary Bury Local Medical and Panel Committee, and a member of Bury Insurance Committee, has made the following analyses of the financial statistics in respect of the "Provisional Settlement" for medical benefit in the county borough. It will probably be found useful by the secretaries of other Committees.

The following brief summary of the provisional balance sheet for medical benefit in the County Borough of Bury for the year 1913 may be of service to Committees and others interested in the financial side of the Insurance Act. The Commissioners in Memo. 192/I.C. dated March 1914, spoke of a "provisional" settlement, but they are careful to hold out no prospect of the sum credited to each Insurance Committee being materially increased, and up to the present no mention has been made of a final settlement.

The aggregate credit, or fund divisible among Insurance Committees, is calculated on the basis of the mean number of members of Approved Societies and deposit contributors. This sum is apportioned among the Insurance Committees on the basis of the average number on their index registers. Now index registers are made up, on the card system, of names of members sent by the various societies and post offices to the Insurance Committees in whose areas the members reside, and the gross total of the index registers should correspond exactly with the aggregate membership of societies, together with the deposit contributors.

The sum credited to Bury in the provisional settlement is £10,461 12s. Adding £615 transferred from the Sanatorium Benefit Fund we get £11,076 12s. This sum represents 362 days (January 15th, 1913, to January 11th, 1914, inclusive) so that the credit works out at the rate of £11,168 8s. per annum. The mean number on the index register for Bury in 1913 was 26,166, counts being taken quarterly, and if we divide this into £11,168 8s. we get a capitation rate of 8s. 6½d. per annum. As the same basis of calculation is used for other areas this sum of 8s. 6½d. should represent the capitation payment for the whole country, and it will be interesting to learn if this is the case. Now the capitation fee on which all estimates have been made is 9s. per annum, and to show that this figure has not been abandoned, the institutions fund in each area is credited with the full amount of 9s. per head per annum. In searching for a possible solution of the discrepancy the only source of error that can be found is the fact that names remain on membership lists after death or after ceasing to be insured. This delay in notifying deaths and lapses is therefore assumed to account for nearly 6 per cent. of error, not to mention the compensating factor of delay in notifying new members. It would be interesting to know on what grounds this percentage is allowed, but presumably we are not to be told.

Index Counts.

The credit to each Committee being based on the counts of the index register, it follows that the higher the counts the greater the income. This means that the committee which possesses a zealous and conscientious clerk, who takes the trouble to cleanse his register of foreign matter by forwarding index slips which do not belong to him to

the proper committees, will suffer in consequence, and a premium is put on carelessness. The index register is further complicated by the fact that persons accepted on doctors' lists have not always a corresponding index card in the register. This is due in some degree to them removing into the area since they joined their societies, or to differences in spelling, but in many cases it is the fault of the societies in transmitting the cards to the wrong committee.

There can be no question that the smaller county boroughs in particular have suffered in this respect. Approved Society officials cannot be expected to be fully conversant with the county borough boundaries, and in many cases have wrongly transmitted cards to the County Committee instead of to the county borough. The staff of a large county such as Lancashire is likewise not so competent to supervise such errors as that of a county borough with its local geographical knowledge. This leakage is aggravated by the fact that the index slip shows the "full postal address" which in some cases gives no indication of the parochial division in which it is situated. This is one of the good arguments for the redistribution of county areas among county boroughs for insurance purposes.

In cases where a person has been accepted by a doctor and no index card is found, "suspense" slips have been made out, but these are *not* included in the count of the register. As an instance of the confusion which has resulted, there were at one time in Bury over 2,000 "suspense" slips, or 10 per cent. of the total on the register. After an immense amount of labour and expense, spread over nearly two years, during which it was found that over 400 index slips proper to Bury had been sent to the Lancashire County Committee and included in its counts, the suspense register still contains nearly 1,000 cards. Who can say, therefore, that the count of the index register bears anything but a very remote relation to the actual number of insured persons in the area?

Temporary Residents.

The amount deducted by the Commissioners in respect of temporary residents was £13 0s. 3d. This represents 15 cases, the case value being 17s. 4d. Reasoning from a private estimate I am convinced that this sum is much too high, but it is possible that practitioners are somewhat to blame in not keeping their record cards accurately.

The various local funds among which the income is divided are (1) Institutions Fund, (2) Panel Fund, (3) Drug Fund, and (4) Drug Suspense Fund.

(1) *Institutions Fund.*—The only institution in the Bury area is the Post Office Medical System, and it is credited on the basis of its mean membership at the rate of 9s. per head per annum, a total of £5 7s. 1d. The account against this fund is £3 19s. 6d., or a capitation rate of 6s. 7½d. Now insured persons in the post office are unestablished, and are therefore not on the capitation lists of post office medical officers. The latter are compelled to attend them and provide medicine, and are paid for the first four attendances only. This is surely not the principle of insurance, and it is surprising that the system should be approved either by the Commissioners or by the Postal Medical Officers' Association.

(2) *Panel Fund.*—Seven-ninths of the remainder is carried to the Panel Fund account, a total of £8,601 1s. 1d. The mean of the total on doctors' lists was 23,861, so that the number to be allocated was 2,305, or in cash £331 9s. 0d. Instead of this the sum allocated was £318 4s. 0d. Assuming that each doctor received 7s. per annum for every person *on his list* the residue of persons who had not made a choice was paid for at the rate of 2s. 8d. per annum.

(3) and (4) *Drug and Drug Suspense Funds.*—Taking two-ninths of the annual income, we get £2,481 17s. per annum for the Drug and Drug Suspense Funds combined. Now 669 persons resided over a mile from a chemist, and the practitioners undertaking their dispensing were paid for them at the rate of 2s. per annum. This left £2,415 10s. 5d., or 1s. 10¾d. per head per annum for the payment of chemists' and doctors' emergency accounts. These accounts in the aggregate amounted to £2,669 17s. 5d., or 2s. 1d. per head for 362 days, so that chemists and doctors were discounted 10 per cent. The estimated revenue for the Drug Fund on the basis of the index register, less "rural" patients, was £2,552 8s. 7d., which would have paid 95.6 per cent. of the accounts. A further analysis of prescriptions, etc., for the purpose of checking over-prescribing is in process of being carried out, but that is apart from the subject of this summary.

I am indebted to the admirable and exhaustive financial report of the Clerk of the Bury Insurance Committee for the statistics on which the above criticism is based.

MEDICAL ATTENDANCE FOR DEPENDANTS OF MEN SERVING WITH THE COLOURS.

The Dundee Local Medical Committee reports that during the month from October 17th to November 17th the work undertaken on behalf of doctors absent on active service was as follows: 758 patients were visited at their own homes; 2,752 consultations were recorded at the central consulting rooms, giving an average of 102 per night; while 9 confinements were undertaken by the maternity department.

Association Notices.

QUARTERLY MEETING OF COUNCIL.

The Quarterly Meeting of Council will be held on Wednesday, January 27th, 1915, in the Council Room, 429, Strand, London, W.C.

By order,
Guy Elliston,
Financial Secretary and Business Manager.

December 24th, 1914.

BRANCH AND DIVISION MEETINGS TO BE HELD

Metropolitan Counties Branch.—Dr. R. E. Crosse and Mr. N. Bishop Harman, Honorary Secretaries, give notice that a Council meeting will be held at 429, Strand, W.C., on Tuesday, January 12th, 1915, at 4 p.m.

Meetings of Branches and Divisions.

SOUTH MIDLAND BRANCH:

Buckinghamshire Division.

A meeting of the Division was held at High Wycombe on December 8th, when the chair was taken by Dr. Dunbar Dickson, Vice-President, and fourteen other members were present.

The War.—Attention was drawn to the large number of practitioners who had given up their practice and gone on active service, entailing in some cases severe pecuniary loss, and it was resolved:

> That any cases of hardship occurring among medical men called on active service or among their families should be dealt with privately by the British Medical Association by means of some fund raised in the profession.

The position of general practitioners in active practice in relation to the new citizens' army was discussed. Many medical men were unable to offer their services in the ordinary way, and in the event of invasion their position might be of a very uncertain nature. Finally it was resolved to discuss the matter at an interview with Lord Lincolnshire and Lord Desborough.

Clinical Paper.—Dr. Bryden Glendenning read a paper on some minor difficulties of obstetric practices, in which, among other matters, he dealt with occipito-posterior presentations, short cords, transverse position of the head and breech presentations. After a discussion a very hearty vote of thanks was accorded to him for his interesting address.

Belgian Medical Relief Fund.—Two subscriptions of one guinea and one of two guineas were subscribed to the Belgian medical men's fund.

Private Clubs.—Dr. Stolterforth raised the subject of private clubs, and suggested some general agreement as to whether they should be taken, and, if so, at what fee? He suggested that 9s. a year for all those who could have joined the National Insurance Scheme and did not was the proper sum to charge, 6s. for those who were too old to join and got no state contribution, 5s. for women, and 3s. for children. He believed that this would pay better than private practice among the labouring class. He gave figures in support of his contention. During the discussion there was a general agreement that all contract work should be managed by the medical men themselves, and not by a friendly society or other body, and that membership should be limited to those accepted by the medical men as proper persons. A committee was appointed to collect information from the other members and medical men in the Division, and to report to a special meeting.

Luncheon.—A lunch took place before the meeting, and teas were provided.

PERTH BRANCH.

THE annual winter meeting of the Perth Branch was held at the Perth New Infirmary, on December 11th, when fourteen members were present.

Report of Council.—The report of the council showed that three ordinary meetings had been held during the year, one of which was a clinical meeting. There was one special meeting, in reference to the free attendance on men at the front. The average attendance at the meetings was seventeen. At the seven Branch Council meetings the average attendance was six. An adjustment, carried out during the year, had made the boundaries of the Branch coterminous with the National Insurance area for the county.

Financial Statement.—The Treasurer's report, which showed a balance in hand of £1 8s. 9d., was approved.

Tea.—At the conclusion of the meeting an "At Home" was held and tea served in the physicians' room of the infirmary; thereafter, by the courtesy of the directors, the whole institution was thrown open for inspection. The visiting and resident staff conducted the members through the wards and the various departments. The pathological laboratory, electrical rooms, operating theatre; medical, surgical, and children's wards were visited in turn, and the opportunity was much appreciated by the members.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

THE following notifications are announced by the Admiralty: Fleet Surgeon HILARY C. ARATHOON, to the *Columbine*, additional for duty at Granton. Fleet Surgeon F. J. BURNS has been placed on the retired list. Fleet Surgeon EDWARD C. WARD, to the *Pembroke*, for R.N. Barracks. Surgeon A. L. ROBINSON has been placed on the retired list. Temporary Surgeons: ARTHUR P. BARRETT, to the *Newmarket*, and for duty in Clacton; J. G. BAILEY, the *Hythe*, and for duty in Folkestone. Appointed temporary Surgeons: B. W. DAKERS, T. E. FRANCIS, T. POWER.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Probationers C. H. BROADHURST, to the *Hecla*, additional for the *Achates*, vice Allen; T. C. WAKEFIELD, L. L. FOTHERINGHAM, J. T. WYLIE, G. B. LOWE, A. McA. SCOTT, to the *Hecla*, additional for the *Leopard*, the *Griffon*, *Lively*, *Locust*, and *Sprightly* respectively; G. GRANT, C. HORDERN, J. D. BYRD, J. A. M. ALCOCK, D. A. IMRIE, to the *St. George*, additional for the *Eden*, *Gale*, *Ettrick*, *Itchen*, and *Ness* respectively.

ARMY MEDICAL SERVICE.

ROYAL ARMY MEDICAL CORPS.

LIEUTENANT-COLONEL C. R. ELLIOTT is appointed to command the Station Hospital, Quetta.

Sir ALEXANDER MACCORMICK, M.D., is granted temporarily the honorary rank of Lieutenant-Colonel whilst serving with the Australian Medical Unit.

To be Lieutenant-Colonels: Major HUBERT A. BRAY and to remain seconded; Major THOMAS McDERMOTT, M.B.

Major FREDERIC W. LAMBALLE, M.B., is placed temporarily on the half-pay list on account of ill-health.

Captain T. J. HALLINAN to be a Specialist in Electrical Science, Third Lahore Division on vacating his appointment as Deputy Assistant Adjutant-General, Army Head Quarters.

Temporary Captains to be temporary Majors: ALFRED E. JOHNSON, M.B., F.R.C.S., ROBERT DAVIES-COLLEY, F.R.C.S.

To be temporary Lieutenants: FRANCIS H. STOREY, M.B., HERBERT H. WHAITE, M.B., JOSEPH G. MACQUEEN, M.B., JOHN M. CLEMENTS, M.D., THOMAS I. BENNETT, M.B., HUGH B. WALLER, ANDREW T. ROSS, M.D., F.R.C.S.E., JOHN F. GIBBONS, ROBERT D. FORBES, F.R.C.S., RAYMOND J. JONES, M.B., REGINALD H. LUCAS, ALEXANDER W. RATTRIE, M.B., ROBERT F. FERRIS, M.B., ESLYN MARJORIBANKS-MAHCAR, CHARLES S. CATO, ROBERT B. ROE, FRANK GARRATT, DAVID D. LOGAN, M.D., JAMES E. M. BROWN, M.B., LUKE S. O'GRADY, EDWARD E. MATHER, M.B., JOHN A. CAMERON, M.B., FREDERICK BARNES, JOHN JARDINE, M.D., F.R.C.S.E., ROBERT S. MILLER, M.D., WILFRED MCFARLANE, M.B., JAMES T. KIRKLAND, M.B., CHARLES J. THOMPSON, GEORGE L. LEGGAT, M.B., HUBERT A. HARRIS, IAN MACDONALD, M.B., F.R.C.S.E., MICHAEL P. POWER, HERBERT H. PRENTISS, M.B., JAMES V. FIDDIAN, JOHN A. K. BRAYTON, LEONARD W. MORTIMER, REGINALD W. CLARKE, CECIL L. WILLIAMSON, CUTHBERT E. DUKES, M.B., JOHN M. LAND, WILFRED H. ALDERTON, BERTIE R. G. RUSSELL, M.D., WILLIAM E. BULLOCK, M.D., HUGH R. MACINTYRE, M.D., JOHN G. MCDOUGALL, M.B., ALEXANDER BREMNER, M.B., JOHN HANSON, M.B., JAMES J. DWYER, WILLIAM J. F. MAYNE, M.B., MACKENZIE DOUGLAS, M.D., JOHN C. LYNMORE DAY, TIMOTHY MEAGHER, M.B., JOHN D. CHERRY, PATRICK J. MAGUIRE, WALTER E. ADAM, M.D., CHARLES V. MACKAY, M.D., HUMPHREY N. STEPHENSON, ARTHUR L. H. RACKHAM, WILLIAM G. HELSBY, NORMAN F. GRAHAM, M.B., ALEXANDER B. CLUCKIE, M.B., JOHN MACARTHUR, WILLIAM H. BRODIE, M.B., HARRY M. GILMOUR, HENRY CAPLAN, M.B., JAMES POTTER, JOHN ANDERSON, M.B., MAURICE H. WHITING, M.B., STEPHEN ROWLAND, M.B., COLIN KING, M.B., DONALD DUFF, F.R.C.S.E., FRANK HARTLEY, M.B., THOMAS E. AMYOT, M.B., CYRIL G. WHORLOW, FREDERICK W. HIRD, M.B., JAMES R. RIGG, M.B., ERNEST L. SHELTON-JONES, WALTER J. RONAN, M.B., EDWARD J. STUBBS, M.B., JOHN L. DUNLOP, M.B., DOUGLAS E. CROSBIE, GEORGE W. REA, M.B., WINSLOW S. S. BERRY, M.B., THOMAS W. G. HOGG, M.B., SAMUEL P. REA, M.B., NORMAN C. PATRICK, NORMAN C. GRAHAM, M.B., THOMAS GRIMSON, M.B., ALEXANDER H. R. DUNCAN.

INDIAN MEDICAL SERVICE.

MAJOR J. MCPHERSON is posted aa Residency Surgeon, Bushire, with effect from October 20th.

Major F. N. WHITE, M.D., is appointed substantively to the post of Assistant Director-General, Indian Medical Service (Sanitary).

The services of Major S. H. LEE-ABBOTT, M.B., are placed permanently at the disposal of the Government of the Punjab.

Captain H. B. DRAKE was posted as Deputy Assay Master, Bombay, with effect from September 5th, 1914, October 23rd.

Lieutenant-Colonel J. J. BOURKE, was posted as Assay Master, Calcutta, with effect from September 10th.

The following Captains have been promoted to the rank of Major: W. S. J. SHAW, M.D., D. P. GOIL, M.B., F.R.C.S.E., July 31st.

The services of 268 Indian Medical Service officers in civil employ have, during the past three months, been replaced at the disposal of His Excellency the Commander-in-Chief for military duty.

Major J. H. MURRAY, Senior Medical Officer and Civil Surgeon, Port Blair, is appointed to hold charge of the office of the Superintendent of the cellular and female gaols, Port Blair, in addition to his own duties, with effect from October 25th, 1914.

The undermentioned officers have been permitted to retire from the service: Lieutenant-Colonel G. Y. C. HUNTER, October 25th, 1914; Lieutenant-Colonel E. WILKINSON, F.R.C.S., November 13th, 1914.

Captain G. L. C. LITTLE, M.B., has been transferred to the temporary half-pay list, with effect from November 15th, 1914.

TERRITORIAL FORCE.

ARMY MEDICAL SERVICES.

CAPTAIN JOHN B. YEOMAN, M.B., F.R.C.S.E., Deputy Assistant Director of Medical Services, to be Major.

Lieutenant-Colonel WILLIAM M. ROOCROFT, from attached to units other than medical units, to be Assistant Director of Medical Services, East Lancashire Territorial Division, with the rank of Colonel, temporary.

ROYAL ARMY MEDICAL CORPS.

London Mounted Brigade Field Ambulance.—Captain JAMES W. MCINTOSH, M.B., to be Major, temporary; Lieutenant W. F. SMART to be Captain, temporary.

First London (City of London) Field Ambulance.—Major EDMOND W. S. VINCENT RYAN to be Lieutenant-Colonel, temporary; Lieutenant DAVID J. SCOTT, M.D., to be Captain, temporary; Lieutenant ARCHIBALD LEITCH, M.D., to be Captain, temporary.

First London (City of London) Sanitary Company.—Captain CHARLES M. FEOEN to be Major, temporary; Lieutenant FREDERICK G. CALEY to be Captain, temporary. To be Lieutenants: CHARTRES A. MOLONY, FRANCIS S. CARSON, M.B.

Second London Clearing Hospital.—To be Lieutenants: ERIC S. TAYLOR, IORWERTH H. LLOYD-WILLIAMS.

Third London (City of London) Field Ambulance.—Major JOHN A. MASTERS, M.D., from attached to units other than medical units, to be Lieutenant-Colonel, temporary; Captain L. L. LAWSON to be Major, temporary; Lieutenant ROBERT CARSWELL, M.B., to be Captain, temporary.

Fourth London Field Ambulance.—Captain THOMAS B. LAYTON, M.B., to be Major, temporary; JOHN M. PLEWS to be Lieutenant.

Fifth London Field Ambulance.—Lieutenants to be Captains, temporary: JOHN E. SANDILANDS, M.D., GEORGE SCOTT, M.B.

First Home Counties Field Ambulance.—Captain ARTHUR T. FALWASSER to be Major, temporary; Captain ANTONY A. MARTIN, M.D., from attached to units other than medical units, to be Captain.

First Wessex Field Ambulance.—Lieutenant CHARLES H. MASKEW to be Lieutenant.

Second Wessex Field Ambulance.—LEONARD L. HANHAM (late Captain, Army Medical Reserve) to be Captain; Lieutenant ARTHUR C. HINCKS, from attached to units other than medical units, to be Lieutenant.

Second East Anglian Field Ambulance.—Major JAMES M. G. BREMNER to be Lieutenant-Colonel, temporary.

First Southern General Hospital.—To be Lieutenants: STEPHEN G. ASKEY, M.B., ALFRED P. PHILLIPS, PERCIVAL C. COLE, and AMBROSE W. OWEN, M.D.

South Midland Clearing Hospital.—To be Captains: Captain CHARLES B. BAXTER, M.B., F.R.C.S.E., and JAMES L. JOYCE, from attached to units other than medical units.

First South Midland Mounted Brigade Field Ambulance.—Lieutenant CYRIL R. WALLACE, from the 2nd South Midland Field Ambulance, to be Lieutenant.

First North Midland Field Ambulance.—To be Lieutenants: CHARLES B. JOHNSTONE, M.B., ARTHUR HEATH, M.D., F.R.C.S.

Second North Midland Field Ambulance.—To be Lieutenants: SAMUER R. FOSTER, M.B. (late Cadet Sergeant, Belfast University Contingent, Senior Division, Officers' Training Corps), EDWARD C. T. EMERSON, M.B.

First South-Western Mounted Brigade Field Ambulance.—LEIGHTON H. HEY, M.B., to be Lieutenant.

First Western General Hospital.—RALPH LAMB to be Lieutenant.

Third Welsh Field Ambulance.—To be Lieutenants: RICHARD J. ISAAC, HARRY M. SODEN, JOSEPH CARROLL, M.B., JOHN J. PORTER.

West Lancashire Clearing Hospital.—WILLIAM P. MOFFET, M.B., to be Lieutenant.

Second East Lancashire Field Ambulance.—Captain ALEXANDER CALLAM, M.B., to be Lieutenant-Colonel, temporary; E. R. COOPER, M.B., to be Lieutenant.

Third East Lancashire Field Ambulance.—GERALD C. WRAY, M.B., to be Lieutenant.

First West Riding Field Ambulance.—LAWRENCE A. MACKENZIE, M.B., to be Lieutenant.

First West Riding Field Ambulance.—HERBERT J. ROBSON (late Captain, Northern Command, R.A.M.C.(Vols.), Leeds Companies), to be Captain; HUGH R. PARTRIDGE, to be Lieutenant.

Second Northern General Hospital.—GEORGE P. ANNING, from attached to units other than medical units, to be Captain.

Third Northern General Hospital.—JOHN BROADLEY, M.B., F.R.C.S.E., to be Captain; ARCHIBALD YOUNG, M.B. (late Major of this unit), to be Captain.
